The generally firmer tone of the linseed market noted last week strengthened further, thanks to firmness at the centres. The anticipated improvement in arrivals did not materialise and, with sellers reserved and buyers generally keen, ready seeds advanced to Rs. 23.75, a gain of about Re. 1 per maund. Following further sales of linseed cake to the U.K., the local price remained steady, but, with overseas buyers wanting near positions only, any further local advance is likely to prevent fresh business. The oil market was active, although stocks were rather scarce. Shippers showed some interest in anticipation of an improved demand from abroad. It is rumoured that Australia has purchased a limited quantity for prompt shipment.

The latest quotations are: Ready Rs. 23.75 and April-May Rs. 23.25 per maund.

INVESTMENTS OF L.I.C. IN INDUSTRIAL SECURITIES

(Concluded from page 643)

in North-eastern India. Latterly, the concentrated purchases of blue chips like Tata Iron, Indian Iron, A.C.C. and others have led to greater investments in cement and iron and steel shares. But many other industries have not been equally favoured. It is in bringing about a proper proportion between the various industries and in the various regions that there is need for a new policy. The diversification is also necessary to counter indirect attempts to acquire strategic interests in the paid-up capital of particular companies which might lead to nationalisation by the backdoor.

It has been indicated that, as a result of the integration of the investment portfolios of 245 insurers, the percentage of holdings in the shares of particular companies has proved to be fairly high and that it was considered necessary as a consequence to amend Section 27(a) of the Insurance Act, permitting larger holdings. The trends in stock market trading in the past two decades have clearly shown that the market tends to become narrow, when two sizable interests are built up. The managing agents have of necessity to keep holdings which are at least 35 to 40 per cent. of the paid-up capital having voting rights, because, in any emergency, it has always been possible to mobilise another 10 to 15 per cent. of the capital and obtain a simple majority.

If the L.I.C. and other bigger shareholders happen to be ranged on one side, the managing agents will be obliged to remain on the defensive, leading to the acquisition of effective controlling interests. This trend would naturally make for lesser liquidity and dispersal. The L.I.C. can always be the watchdog of the shareholders' interests even if it only owns 10 to 15 per cent. of paid-up capital in particular companies. Besides, in view of the fact that it will be securing only shares of companies which have a regular dividend record and which are under efficient management, the need for alertness may not be compelling. If a greater diversification can be brought about through more judicious purchases and the policy is to subscribe as far as practicable to the new issues of established companies and the flotations of new units sponsored with the help of State Governments or under influential auspicies, the twin objectives, namely, of safeguarding the interests of the policyholders and of putting to use the large sums at the disposal of the monolithic corporation in improving the industrial economy of the country, would be reached.

It has been suggested that one method of diversification and satisfying regional interests would be to plough back as far as possible the net additions to assets brought about by the contribution of new business as well as business in force on account of the various regions. While regional aspirations have some validity, it is rather difficult to frame investment policies in a way which will ensure the investment of available funds in proportion to the contribution to total business by various regions. There are many practical difficulties in the way. The absence of large supplies of floating scrips in Madras has naturally been the greatest handicap in putting through the operations of the L.I.C., while Bombay has had the lion's share so far. Even the Calcutta interests have been complaining of a step-motherly treatment. Though eligible industrial securities are available in greater number and volume, the total of purchases in the Calcutta share market has not been of the same dimensions as in the Bombay market. The policy in regard to purchases of eligible industrial securities will naturally have to be guided by the availability at the various centres and the prospects as they affect new industries at the time of purchase. If in particular directions certain developments have been responsible for attracting larger investment, the effects induced have to be attributed more to the greater enterprise shown by the enormous capital structure of the companies and the liquidity of its shares in specified areas rather than to any other fact. There has been no deliberate policy on the part of the Corporation to favour any particular areas. It can certainly be expected that the Corporation would place larger amounts in new shares issued by established units in Madras, in order to implement large expansion programmes. The requirements in this regard have not been appreciable so far. But it would be reasonable to expect that any vacuum by inadequate support from existing shareholders would be filled by the L.I.C. It is only with a dynamic approach to the various questions at issue and an open mind that the Corporation can be enabled to play a more useful role in developing the industrial economy of the country in the coming months and years.

The L.I.C., therefore, cannot be in a position to attach greater importance to regional interests than to the national interest. For instance, if the L.I.C. was to take up the bulk of shares of any one company in Madras, investment interest by the public would dry up. On the other hand, the L.I.C. should play a more effective role in the expansion of our industrial economy by indirectly fostering public interest in investment of shares.

In short, the L.I.C. has to be guided by certain principles. They have to be always aware that they are the trustees of the policyholders' money. Their investments should fall in line with the Government's avowed policy of creating a Welfare State. They have to consider their investments from the point of view of merit. They should also indirectly foster shareholdedness in the public.—*All Rights Reserved.*

Notice

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the Seventy-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 4th May, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Co. Ltd., an Associate (as defined by Section 2(4) of the Companies Act, 1956) of Balmer Lawrie & Co. Ltd., the Company's Managing Agents, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:

> for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services;

it being a term of the above contract that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 20th April, 1959 to 4th May, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents

21, NETAJI SUBHAS ROAD,
CALCUTTA, *31st March*, 1959.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2509 BOMBAY, 25th APRIL 1959 PRICE: Rs. 2

ROAD TRANSPORT

IN the context of the recent controversy over the alleged diversion of traffic from rail to road transport, the report of the Road Transport Reorganisation Committee (Chairman: Mr. M. R. Masani) acquires topical importance. Although the full text of the report has not been made available to the public, even the official summary of the document shows that the Committee has made a thorough study of the many maladies which afflict road transport today. It is, therefore, to be deplored that the Government should not have released the report to the public which has been looking forward to it for quite sometime now. Its duty has not ended with merely placing a copy of the report on the table of Parliament. The delay in its circulation to the public will, however, be of little consequence, if the Government promptly implements the Committee's salient recommendations which imply no less than a thorough overhaul of the administrative machinery for road transport and also of the policies governing the issue of permits for transport vehicles.

The recent controversy over the road *versus* rail transport—or more appropriately, the revival of the controversy which one thought had been safely buried with the thirties—is deplorable to a degree. For it might conceivably give a setback to the momentum which road transport, after a prolonged period of neglect, has gained for itself. It would be particularly wrong to regard the controversy as a contest between a nationalised service and a private industry. For one thing, transport is too important an economic activity to be treated as the bone of some ideological contention. Secondly, it cannot be too strongly reiterated that road transport is also something of a national enterprise, in that the country's total expenditure on roads, on which the vehicles operate, is not an inconsiderable part of India's national investment; by the end of the second Plan, the investment in roads will be of the order of Rs. 726 crores. Surely, it is of the utmost importance to the taxpayer that the investment in roads should yield a good return. And an important way by which such return could be ensured is to promote road transport industry, which, by putting roads to optimum use, could give an adequate reward for the taxpayers' effort. Further, as the Committee has pointed out, from the users' point of view, the authorities should at all times strive to uphold the principle of unrestricted freedom of choice among the means of transport, to which the International Union of Railways and other world commercial bodies have so unequivocally subscribed.

Appropriately enough, the Committee has emphasised the importance of building up a good and efficient network of roads in the country. It points out how the mileage of roads in relation to territory and population in India compares unfavourably with other countries and even the existing roads are not being adequately utilised. It may be mentioned here that, as against the Nagpur Plan target of 331,000 miles of roads, actual road mileage by 1960-61 will be 379,000 (thereby exceeding the target by 48 000 miles), consisting of national highways 13,800 miles, State highways 35,000 miles, major district roads 95,200 miles, other district roads 78,300 miles and village roads 156,700 miles. In the light of the increase in agricultural and industrial production, which is bound to take place in the second, third and subsequent Five-year Plans, there is urgent need to draw up a bold road plan for the country. Fortunately, the Indian Roads Congress has given a correct lead in that, at its last session, held in Hyderabad, it drew up a Rs. 5,200-crore plan, designed to achieve a road mileage of 657,000 by 1980-81, consisting of national highways 32,000, State highways 70,000, major district roads 150,000, other district roads 180,000 and village roads 225,000. This plan deserves to be implemented speedily enough, so that the programme of industrial and agricultural expansion schemes is not held up through an imperfect and inadequate road system. No less important than the implementation of the road plan is the elimination of the bottlenecks which now hold up traffic along the major roads. The Committee has done well to stress the need for undertaking the construction of bridges on the national highways—there are 116 of them to be built—the absence of which is a serious obstacle to the smooth flow of traffic.

Elaborate recommendations for the reorganisation of the administration of road transport have been made by the Committee. They include the establishment of a transport ministry in each State to deal exclusively with roads and road transport (with two wings—a roads wing under a chief engineer and a transport wing under a transport commissioner) and a transport advisory committee for each State. The strength of the Transport Department at the Centre, it is stated, should be enlarged and strengthened. A number of concrete suggestions have been made for improving the system of permits for plying transport vehicles. The Committee has recommended that all permits for public carrier goods vehicles should be valid for the whole of a State, subject to the provision that an operator may confine himself to a region and pay a somewhat lower rate of tax. An operator, who functions within a State, should own a minimum of five vehicles or be a member of a union which owns five vehicles. It has suggested that the system of granting permits for buses should be liberalised. As regards inter-State traffic, it has recommended that the Inter-State Transport Commission should be armed with the necessary executive staff and invested with powers to issue permits themselves in case of need. In order to be eligible for inter-State operation, an operator should own a minimum of five buses or, in respect of goods transport, a minimum of ten or more trucks. The Government should not find it difficult to accept these suggestions made by the Committee. And, if the Government is determined to promote road transport—its spokesmen have often emphasised that it is—it should also accept the Committee's suggestion that the existing moratorium on the nationalisation of goods transport should be extended for a period of at least ten years from the end of the third Plan period.

Among the factors inhibiting the development of road transport are inadequate road system, rigid load restrictions, lack of encouragement to truck-trailer combinations, inadequate supply of vehicles, absence of viable operating units and of reciprocal arrangements between States, and lack of credit facilities. The Committee has done well to tackle these points, on each of which it has made constructive suggestions. But the removal of these defects will not, by itself, avail the road transport industry anything, unless the burden of taxation on motor vehicles is brought down. The Committee has rightly emphasised the importance of reducing the tax burden on the industry. The taxation per vehicle in 1957-58 was Rs. 2,100, as against Rs. 1,906 in 1954-55, Rs. 1,115 in 1949-50 and Rs. 611 in 1944-45. Thus, in the course of a little over a decade, the taxation on motor vehicle has increased by more than 200 per cent. Such a heavy burden of taxation on top of an increase in the cost of operations and in the value of vehicles is not conducive to the rapid progress of road transport industry, which, both on its own and as a valuable adjunct to rail transport, has a notable role to play in the development of national economy.

CO-OPERATIVE FARMING—II

THE controversy over co-operative farming still holds the field, with both its supporters and opponents harping on it almost daily. The Prime Minister seems to have made it a point to dwell upon the subject in every speech that he makes. He and his colleagues, whether they are in the Congress Party or in Governments, feel convinced that, without co-operative farming, there could not be an adequate increase in agricultural production, and co-operation in all forms of activity in rural areas is indispensable for abolishing poverty. For them, therefore, there can be no retreat from co-operative farming, service co-operatives, co-operative credit societies, marketing societies, etc. Indeed, following Mr. Nehru's passing remark in a couple of public speeches that co-operation should ultimately figure in industries also, the Union Ministry of Commerce and Industry has already begun to change its tune. Perhaps, Mr. Lal Bahadur Shastri's stress on decentralisation of production and encouragement to small manufacturers and his opposition to monopolistic tendencies, as though they exist in this country to any significant extent, are fashioned after Mr. Nehru's advocacy of co-operation in industry. For it is obvious that, just as the programme for country-wide co-operative farming has followed the move towards ceiling on land, so also co-operation in industry has to be preceded by dispersal of ownership of industries and economic power. The fanatical fervour with which co-operation is being advocated as a panacea for all the economic ills of this country gives rise to the fear that the leaders in power may become victims of their slogan, resulting in irreparable damage to the country's economy. The Prime Minister, for instance, made the astounding statement in Madras last week that he could not understand how anybody could be opposed to co-operative approach. This implies that all the reasoned arguments put forward by the critics against co-operative farming have meant nothing to him.

Beyond broad generalisations, neither Mr. Nehru nor his supporters have cared to reply, in any of their numerous speeches, to the specific points made against co-operative farming. In the first place, how is co-operation going to succeed in farming, when it has not been a resounding success even in spheres to which it is ideally suited? In none of the several enquiries into the working of co-operatives that were conducted in recent years has co-operation come out without serious blemishes. Even the report of the Working Group on Co-operative Policy set up by the Ministry of Food and Agriculture, the latest among reports on co-operation, is critical of rushing through with the

expansion of co-operatives without proper planning and adequate safeguards. The facts given therein are by no means complimentary to the co-operatives. Out of the existing 165,000 primary credit societies, at least 100,000 are in such a poor shape that they need revitalisation. Several crores of rupees will have to be spent every year by way of subsidies, apart from providing large-scale loans at cheap rates of interest by the Reserve Bank and the State Governments. Most of the societies are very weak, both financially and administratively. In 1956-57, as many as 37 per cent. of the village societies had overdues exceeding 50 per cent. of the outstandings, while another 27 per cent. of village societies had overdues ranging from 20 per cent. to 50 per cent. of outstandings. A very large number of societies have become inactive, doing little or no business. Similar instances of basic weaknesses in other types of co-operatives as well can be multiplied. They are not figments of the critics but are based on the findings of committees appointed by the Government.

When it was suggested by a Member of Parliament early this month that experiments should first be conducted in certain selected parts of the country in order to test the efficacy of co-operative farming, Mr. Nehru flatly turned it down. He would not even agree to the alternative suggestion that the question be examined by an independent committee of competent persons. He said that the Nagpur resolution was final and that there could be no going back on it. He has also stated on several occasions that the Nagpur resolution itself was arrived at after a careful consideration of the subject by a special committee of Congress men. But this was a committee of persons with preconceived ideas. Nor was its enquiry comprehensive. The committee did not hold even informal discussions with those who have been opposing co-operative farming. As there are grave doubts about the success of co-operative farming, the least the Government should do is to refer the question to an impartial committee, consisting of persons with experience and knowledge of agriculture. It is not too late to accept this suggestion even now. After all, in the three years beginning from 1959, only service co-operatives are to be formed. This gives sufficient time for an expert enquiry into the workability or otherwise of voluntary co-operative farming under Indian conditions. The Government's refusal to concede this reasonable demand would amount to an affirmation of the criticism that its approach is doctrinaire.

It has been repeatedly stated by the Prime Minister that co-operative farming would be introduced only with the consent of the people and that no compulsion would be exercised on farmers. Welcome though this assurance is, it does not seem to have allayed the misgiving that, in actual practice, it may not come to be respected by those who are entrusted with the responsibility of implementing the programme. There is a widespread fear that landowners would be coerced and cajoled into the co-operatives in various ways. Those who know the rural side well enough will readily concede that this fear is not unjustified. Mr. Nehru himself has stated in Parliament that a minority cannot be allowed to stand in the way of implementing this programme. Now, in almost all the villages, the landowners are in minority and, if the landless, who are in majority, decide to form co-operative farming societies, it is inconceivable that the landowners can afford to keep out of them. Even if a few were to decide to continue individual farming, their life could be made miserable by the majority in various ways, especially when the minority's stand does not enjoy the sympathy of those who are in power. Again, Mr. Nehru has stated that he is no admirer of individual farming, that too much individuality in crowded societies is not a good thing, though it might have been so in Vedic ages, and that he is in favour of giving special incentives in order to attract farmers to joint-farming. When it was pointed out that incentives in favour of co-operative farming would amount to discrimination, he retorted that he would exercise discrimination every time for better work and for a better policy. It is thus obvious that he is determined to place individual farming at a discount and give a premium to co-operative farming. Accordingly, another draft on the tax-payer's purse is in the offing.

Further evidence of coercion implied in the drive for co-operatives, whether for farming or service, is provided by the report of the Working Group on Co-operative Policy. The Group, for instance, has suggested that, in order to induce a large number of persons to become members of the village societies, it should be laid down that "only members of village societies should be eligible for the supply of seeds, fertilisers, *taccavi* loans and other facilities made available by Governments or Government agencies." Another instance to show that coercion is very much in the minds of planners and policy-makers is provided by the recommendation of the Working Group in regard to co-operative marketing societies. "It is intended," says the Working Group, "that neither the co-operative nor the trader shall pay the farmer a price higher than that fixed (by the Government) and it will, therefore, be necessary to take adequate measures to see that the private traders do not in actual practice pay the farmer a price higher than that fixed by the Government." If these suggestions for discrimination in favour of co-operatives and creation of monopolistic conditions for them were to be implemented, there could hardly be any scope for individual farming. As even the moderately big landowners are to be eliminated under the Plan for ceiling on landholdings, only small farmers will be left on the scene. They will have neither the resources nor the guts to resist discriminations of the type mentioned above. In these circumstances, Mr. Nehru's assurance that there will be no compulsion on farmers to join the co-operatives is meaningless. On the contrary, the field will become free for regimentation and bureaucratisation of agriculture. Again, since voluntary co-operative farming would take years, if not decades, to fructify in all parts of the country, the chances are that the powers-that-be would soon become impatient and take vigorous steps to force its pace.

In a previous issue of this journal, it was ponited out that co-operative farming would lead to factions and innumerable quarrels in rural areas which in turn would adversely affect agricultural production. This is not a mere theoretical possibility. One has only to try to find the answers to the series of questions posed by Mr. K. M. Munshi early this month, in order to realise the truth of this contention. Some of the posers of Mr. Munshi are worth repetition:

"Who will assign tasks among the members of village co-operative farms? Who will ensure that the tasks so assigned are satisfactorily carried out? Who again will decide on the methods of evaluating work done? How are we to guarantee that the manager or the supervisor, who is elected by a majority vote, will not look to retaining his majority support at the cost of efficiency? And, if there is no collective evaluation, where is the guarantee against inefficiency and light work being overpaid? If there is incorrect evaluation, how and by whom would the personal relations between individual members of the farming co-operative be adjusted? And, if Government officers step in to solve this problem, what will be left of free co-operation? Again, what are we going to do about the acute shortage of trained personnel, even for the service co-operatives? How is the agricultural labour thrown out of employment by mechanisation to be absorbed? These are serious difficulties. We cannot brush them aside lightly. And, during the interval which is bound to be fairly long, when these adjustments will have to be made, what is to happen to food production?"

All these are pertinent questions, but the authors of the Nagpur resolution have not yet cared to answer them. They may say that these are questions of details which can be solved as and when they arise. But this is no answer. Before a programme is drawn up and launched, all the details have to be worked out and solutions found for the difficulties that may arise. To decide first and think later is surely not planning but a leap in the dark.

TAXATION AND HOUSING

It is now becoming clear that the Government's housing schemes, commendable as far as they go, can touch only the fringe of India's growing housing problem. It has been computed that, at the rate at which construction of houses is now taking place and the population is increasing, the housing situation will be more acute in the coming years than it is now. This is by no means a happy prospect, considering that adequate housing accommodation is an important index of national prosperity and one of the vital determining factors of national well-being. The only way in which housing activity could be stimulated is to assure the private builder, whether he is building for his own or for other people's needs, that his valuable services to the community will be not merely recognised but rewarded. Both the magnitude and the urgency of this problem emphasise the need for providing sufficient incentives to private constructional activity.

It is, however, to be feared that the Government, in its pre-occupation with its own housing schemes, has not given any serious attention to what private effort, guided by adequate stimulus, can do to relieve the nation-wide housing shortage. Indeed, little has been done to stimulate private constructional activity, except in the sphere of housing construction for one's own use. On the contrary, one hears expression of sentiments which are bound to scare away even the little private effort that may be found in the country. We refer to the view that tenants of houses in urban areas should, through efflux of time, acquire the status of owners of the houses where they live. This view is borrowed from the rural context in which the tenant is sought to be made the owner of the land he cultivates at the expense of the existing landowners. Apart from the fact that an argument, based on analogy, could be extremely misleading, there is no doubt that frequent expression of views favouring the acquisition of owner-status by urban tenants will drive out altogether private effort in housing in urban areas where housing situation is particularly acute. It is best that men in authority cease indulging in such irresponsible utterances.

The authorities will do well to examine how the present taxation laws are a serious disincentive to private effort in housing. From this point of view, it is interesting to turn to what Mr. D. N. Jalan, in the course of his presidential address at the annual meeting of the Indian Chamber of Commerce, held this week at Calcutta, had to say on the subject. He pointed out how, in Calcutta, property-owners have sometimes to pay more than 100 per cent. of their property income by way of taxes, thanks to the high rate of income-tax and super-tax and the tax on registered firms. Further, the owner's share of the municipal taxes which, in Calcutta, is as high as 11½ per cent., is not allowed as a deduction in income-tax assessments.

Mr. Jalan made quite a few notable suggestions for providing a fillip to private housing activity. He suggested that banks should be encouraged to give loans against house properties in order that more houses may be constructed. It is true that banks are at present averse to tying up their funds in housing which is a long-term proposition from their point of view. Perhaps, it would be better to encourage the formation of a specialised class of building finance institutions of the kind that has done much good work in many Western countries. Be that as it may, Mr. Jalan rightly stressed that the owner's share of taxes payable on his property should be allowed as a deduction in his income-tax assessments. He also emphasised that some depreciation should be allowed on residential buildings. Although houses last more than machines, they also depreciate in course of time, so that there is no reason why depreciation allowance should not be made applicable to houses. Finally, he pleaded for according "earned income" treatment to rental income, for, in the absence of such treatment, income-tax and super-tax take away as much as 84 per cent. of the property income. To this list of suggestions may be added the need for exempting from expenditure tax the sums which may be spent by an owner on the maintenance or improvement of his property. It may be mentioned here that one of the changes introduced by the recent budget is to withdraw the exemption from expenditure tax which expenditure on housing repairs and maintenance enjoyed hitherto. This change is a great anomaly, for it ignores the fact that, in the absence of repairs, housing property will fall into a sad state of disrepair which constitutes an avoidable form of national waste.

There are two considerations which point to the need for special tax and other incentives for housing activity. In the first place, the problem is too vast to be tackled by the Governmental and co-operative effort alone, so that there is a genuine need for pressing into service private effort in the cause of housing. In any case, even Governmental and co-operative effort comes in only when the prospective owner is able to meet at least a part of the total cost of the house. Till he reaches this stage of affluence, there must be houses for him which could be built only by private initiative and effort. Secondly, any fiscal concession granted to housing will be a good national investment, because the constructional activity which will be stimulated thereby will lead to direct employment of skilled and unskilled workers and also to indirect employment opportunities in a wide range of industries manufacturing equipment for houses.

BULLISH MOMENTUM IN EQUITIES SLOWING DOWN

NEW COMPANY TAXATION—U.K. COTTON INDUSTRY—U.S. COTTON POLICY

THURSDAY, 5 P.M.

FOR some days now, an erratic trend has been noticeable in share markets. Although the undertone is still basically bullish, the upward momentum is tending to lose its force. At higher levels, such speculative counters as Tata Steels, Indian Irons, Bombay Dyeings, Centurys, Telcos and National Rayons are meeting with buyers' resistance. At the same time, even a small fall of two to three per cent. attracts support from somebody or other, so that fluctuations, though frequent, are not quite marked. As regards such growth shares on the cash list as Dunlops, Guest Keen Williams, Indian Oxygen, National Carbon, Metal Box and Gwalior Rayon, the buying fervour appears to be tapering off. The feeling is steadily gaining ground that prices are too high and that it will not be advisable to buy equities at current levels. More and more people who frequent stock exchanges are inclined to wait and to buy only at substantial setbacks. This was not the feeling a fortnight ago or early this month. At that time, everyone was saying that inflation was bound to persist, that equities were a safe hedge against it and that one should not be left out of the bull market. Today, the very same people are not so sure. Their mood has changed to some extent, in that, unlike two or three weeks ago, they think of the other risks, such as Indo-Pakistan conflicts and the steadily growing influence of Communists in India, and the need for making allowance for them in one's investment calculations. Again, they are beginning to wonder as to how many companies would be in a position to compensate the shareholders for the loss they would suffer as a result of the abolition of the grossing of dividends, with effect from the current financial year.

MARKET GOSSIP

While this desire for caution is a welcome sign, it must not be taken for granted that the boom in shares is over or a sharp retreat is in the offing. Knowledgeable circles are of the view that much of the rise in equities in recent weeks is mainly the result of speculation. They would not be surprised if an investigation were to show an unhealthy bull position in several counters. It is further stated that option business in Bombay has increased tremendously and that it has spread to quite a few counters which were free from this type of illegal speculation.

Commenting on the latest bull phase of share markets, Messrs. Place, Siddons and Gough, Calcutta, observe in their *Share Market Report* dated the 16th inst., as follows:

"The genuine investor appears to have had little to do with the present rise. It is the speculators who have been following the dictum about making hay while the sun shines. The L.I.C. has done its bit to help and, from a long-term point of view, there can be little doubt that the trend of share prices will be upward. The L.I.C., the nation's biggest investor, with a ceaseless flow of investible funds at its disposal, will absorb more and more of the limited amount of floating scrip in the market. At least up to the present, there has been no sign that new flotations will replenish the shrinking stock of scrip available in the market and the Government has played its part in ensuring that the shortage will continue, by clamping down on bonus issues, even when made out of share premium accounts. Things have come to such a pass that even a slight revival of demand results in a disproportionate rise in share prices. The indications are that such conditions will continue and even gather strength, as time goes on. This is one instance where a rise in share prices does not indicate either an upsurge of investor confidence or prospects of higher dividends or an improvement in the investment outlook, for such a description would hardly fit the picture of a growing proportion of the limited supply of marketable scrip vanishing into the maw of the L.I.C., while the prices of what is left rise continuously."

The best advice of the aforesaid firm of Calcutta brokers to investors is that "the present does not appear to be a suitable time for making *carte blanche* purchases. Buying should be selective. At present prices, most good shares appear to be fully valued, even taking growth prospects into account."

Now that it is generally agreed speculation has been rife on the stock exchanges, one is naturally tempted to ask as to what special steps the authorities of these Exchanges have taken to check it. So far as we are aware, they have done nothing. What are the representatives of the Government on the Boards of the Exchanges doing? Are they satisfied that everything is normal and that margins are being effectively enforced? Do they attend all the meetings of the Boards or at least frequently? According to our information, the Reserve Bank's nominees on the Boards of the Exchanges have either been withdrawn or been told to keep out of them. Is this true? If so, why has not the Government strengthened its representation? Our object in raising these questions is not to criticise anyone, but only to make sure that the Government and the Exchange authorities are on the alert to prevent unhealthy speculation from undermining investors' confidence in equities. More and more small investors are now taking interest in Stock Exchange securities and it is doubly necessary to ensure that they do not become the victims of unhealthy boom in equities.

* * * *

The provisions in the fiscal laws of our country relating to corporate taxation and taxation of dividend income from companies in the hands of shareholders have been found to be far from satisfactory and complicated in practical working. Suggestions have been made from time to time for simplifying the same. In fact, the Taxation Enquiry Commission also suggested some modifications. The Finance Bill, 1959, as is well known, has sought to introduce some far-reaching changes in the provisions relating to the aforesaid incomes. These changes, it has been claimed by the Finance Minister, will not only simplify the scheme of company taxation but, at the same time, not add to the tax burden of either the companies or the shareholders.

That this claim is not well founded is evident from a commendably analytical study, entitled *Taxation of Income of Joint-stock Companies and Dividend Income in the Hands of Shareholders*, prepared by Mr. G. P. Kapadia, the well-known authority on taxation, and published by the Indian Merchants' Chamber, Bombay, and also from the clear and closely argued memorandum on the subject submitted by the Committee of the Chamber to the Union Finance Minister. Both these publications analyse the implications of the provisions of the Finance Bill, 1959, relating to these two incomes and come to the conclusion that, while the new proposals would tend to simplify the determination of the net assessable income of, and the net effective rate of tax payable by, a company, the process relating to preferring of claims for refunds and the disposal thereof is still complicated. Mr. Kapadia's study and the Merchants' Chamber's memorandum further point out that the burden on the companies, as well as on the shareholders, will actually be higher under the latest Finance Bill than at present.

The Finance Bill takes it that the effective rate of tax on profits of companies for purpose of advance payment would be 45 per cent., as against 51.5 per cent. at present. This is based on the assumption that only 60 per cent. of the net income, after paying income-tax and super-tax, is being distributed as dividends and that the balance of 40 per cent. is not being distributed. This percentage of distribution, namely, 60 per cent., in turn, emanates from the study of 1,001 companies made by the Reserve Bank of India, whereas the number of companies and other concerns assessable at company rates was 10,989, according to the *All-India Income-tax Revenue Statistics* for the year 1957-58. The total assessable income of such companies and associations was Rs. 220 crores, as against the total income of Rs. 128 crores for the 1,001 companies chosen by the Reserve Bank. Thus, the Reserve Bank's study, on which the Finance Department has relied, does not cover 42 per cent. of the companies. In assuming that only 60 per cent. of the net income is being distributed, the Finance Department has not, according to Mr. Kapadia, taken into account the subsequent developments in 1957 and 1958, namely, the slower pace of industrial production and the heavy impact of taxes introduced in the 1957 Budget. As a result of these, the tax liability of companies increased and profit margin was crippled, while, in many cases, the dividend distribution had been maintained. "A proper study of the figures for 1957 and 1958 may show," Mr. Kapadia adds, "that the ratio of dividend distribution to the net income after payment of taxes would be of a higher order. Thus, the basic rate of 60 per cent. for determining the effective rate of taxation for future, without taking cognizance of the recent trends, would not give an equitable result."

Even on the basis of distribution of 60 per cent. of the net income, rough calculations have shown that the increase in burden on companies would be of the order of 2.4 per cent. and in cases where the balance of 40 per cent. of the net income is also distributed in course of time, the additional loss would be of the order of 8.9 per cent., so that the total loss to companies under the new scheme would be 11.3 per cent. This position, it is argued, will remain so long as the effective rates of company taxation is not reduced from the present 45 per cent. to 34 per cent. In this connection, Mr. Kapadia makes the following significant observation:

"The grossing up benefit being denied to the shareholders to the extent of 11 per cent. net, the company would have to pay from its own resources an amount equal to this net loss of 11 per cent. to give the shareholders the same amount of dividend. Thus, the higher dividend which the shareholders got as a result of the effective rate of income-tax being reduced by the grossing up rebate and which was, therefore, possible to give to the shareholders at the cost of revenue can now be given only at the cost of the company, that is, by a corresponding burden being placed on the finances of companies."

Another important question which Mr. Kapadia has raised is in respect of accumulated profits and reserves which have already borne income-tax. The grossing up benefit in respect of these profits would be totally lost, as the grossing up device is proposed to be discontinued from 1960-61. The reserves of companies are roughly estimated at about Rs. 500 crores and, even at an average rate of 20 per cent. (as against the existing rate of 31.5 per cent.), the grossing up benefit would be of the order of about Rs. 125 crores. "Unless the grossing up in respect of distributions from accumulated profits and past reserves continues," Mr. Kapadia adds, "companies, desiring to give the same dividend benefit to the shareholders (in lean periods), would have to pay from their own resources extra amounts to make up this loss of about Rs. 125 crores, in respect of the accumulated grossing up benefit."

Both Mr. Kapadia's study and the Merchants' Chamber's memorandum point out that the position of shareholders is definitely worse off under the new scheme. Calculations made for sample cases of a shareholder having an income less than Rs. 10,000 and a shareholder having an income of over Rs. 70,000 show that (assuming that both these two classes of shareholders receive the same amount of dividend) the loss to the latter will be about 0.6 per cent. and that to the former 2.8 per cent. In case, however, the same dividend is not maintained and cash payment of the same amount without the addition of grossing is made, the loss to a shareholder having an income of over Rs. 70,000 would be 7.4 per cent. and that to the one having an income of less than Rs. 10,000 will be of the magnitude of 41.03 per cent. It is thus contended that smaller shareholders stand to lose much more in comparison to shareholders having larger incomes.

In addition to the extra burden that the companies, as well as shareholders, will have to bear, the I.M.C. memorandum observes: "The new scheme is also beset with difficulties relating to the deduction of tax at source at different rates." Even under the new scheme, since deduction of tax from dividend has to be made, the net amount of dividends will have to be adjusted by an addition of the amount of income-tax deducted and the shareholders, whether entitled to a full refund or a part refund, will have to put in refund applications.

Mr. Kapadia's solution to the grossing up and refund procedure and difficulties arising therefrom is to have a simpler formula, whereby "companies are taxed, for the purpose of income-tax levy, on the assessable income less the amount of dividend and the entire amount of dividend is fully taxed in the hands of the recipient shareholders." This procedure would mean that dividend would have to be treated as expenditure for companies. It would also result in keeping collection of large sums of tax in abeyance. Nevertheless, Mr. Kapadia feels that this proposal is worth consideration in detail. The I.M.C. Committee points out that any scheme which does not completely do away with the deduction formula will not ensure a full simplification of the procedure relating to taxation of companies and dividend income. In any case, the Committee feels that the whole scheme should be shelved for the present, till the full implications are thoroughly studied. It is quite possible, as the Committee says, that the Direct Taxes Administration Enquiry Committee might examine this question also and the Government will, therefore, do well to await the recommendations of the Committee.

The various representations made by different sectors of public opinion on this question of corporate taxation have not been in vain. It is gratifying to note that, while replying to the debate on the Finance Bill, Mr. Morarji Desai assured the members yesterday that the Government would consider the question of giving relief in regard to tax burdens on dividends declared out of past reserves and intermediary and subsidiary companies under the new scheme of taxation. He admitted that there was some force in the argument advanced in this connection. He also promised to look into the matter if it was found that the corporate sector could not easily bear, under the new scheme, any additional burden that might possibly fall on it. He added that the new scheme of corporate taxes would come into effect only next year. There would thus be enough time for the Government to work out in detail and give relief wherever it could possibly be given.

* * * *

There is yet no definite news about the ceiling on Indian cotton piecegoods exports to the U.K. All that is known is that negotiations between the textile interests of the two countries have still not been completed. Much interest attaches to the present visit to Britain of Mr. Kasturbhai Lalbhai, President of the Indian Cotton Mills' Federation, who left for London last week. Although Mr. Kasturbhai's visit is said to be a private one, he may be expected to hold further discussions with Lancashire millowners. After his return to India, Mr. Kasturbhai will, we hope, take the public into confidence and say as to what exactly is the position.

Millowners in the U.K. are keenly aware that a mere restriction on duty-free imports of cloth will not solve their problem. Nevertheless, they are not prepared to give up their demand for protection. The Chairman of the Bradford Dyers' Association Ltd., Mr. James Ewing, for instance, concedes that the U.K. cotton industry should undertake the reorganisation necessary to fit its size to foreseeable demand. He has urged the adoption of steps designed to check the continuation of "the slow and wasteful erosion that has been going on for so long." He agrees that redundancy is the first problem of Lancashire which must be dealt with firmly. Coupled with the solution of the redundancy problem is that of re-equipment. These two are really interlocked. At the same time, he has pleaded for protection against imports. His argument is that an efficient textile industry is necessary for national security and as such it should not be allowed to languish through unlimited imports of duty-free textiles. In this connection, he has quoted a report of the U.S.

SHARES RECOVER AT CLOSE

CENTURY IN THE LIMELIGHT

(From Our Own Correspondents)

BOMBAY, 23rd *April*

EQUITIES on the Bombay Stock Exchange presented an irregularly upward trend during the week under review. Earlier in the week, the market was buoyant, with a smart recovery in prices, in refreshing contrast to the mild reaction noted in the previous week. This bullish tone was maintained on the opening day of the new account, that is on Monday last, but there was a sudden setback yesterday, following the Finance Minister's statement in the Lok Sabha on Monday, in the course of his speech initiating the debate on the Finance Bill, to the effect that "at this important juncture of the economic development of the country, we cannot afford to reduce the present level of revenue from the corporate sector, which is the most important single taxpaying unit. The proposed rates of tax have been devised to ensure this."

The overall rate of 45 per cent. might prove to be somewhat high, Mr. Desai admitted, in cases where the incidence of excess dividend tax or wealth tax had been low or in cases where companies enjoyed exemption from wealth tax, or where the dividend distributions exhausted the bulk of the available profits. It might, however, prove to be low, he added, in cases of companies where the incidence of excess dividend tax and wealth tax was high. Referring to the fears that the return to the shareholder would be substantially reduced under the new scheme, Mr. Desai said that companies which had been distributing moderate dividends would be in a position to ensure the full gross return to the shareholders as before, without being put to the necessity of reducing the amount retained as reserves. He, however, added that the rates prescribed were merely for purposes of advance payment of tax and did not represent the final rate for the assessment year 1960-61. As the scheme came into operation, the Government should be able to notice its defects and steps would be taken to correct them.

Today, however, the market staged a recovery on hopes that the corporate sector might get some relief. While declining to consider further revision of direct taxes on the corporate sector, the Finance Minister promised yesterday, in his reply to the debate, to consider the question of giving tax relief in respect of dividends declared out of past reserves, as also the matter of subsidiary companies or intermediary concerns. He agreed that there was some force in the argument advanced in this connection. He promised to look into the question of giving relief to the corporate sector, if it was found that it could not easily bear the burden under the new scheme. Mr. Desai ruled out the question of giving double depreciation allowance to industries on the ground that the development rebate now allowed was itself substantial.

On balance, equity prices showed moderate rises and, in some cases, the gains were substantial. The undertone at the close was bullish.

Tata Ordinaries rallied from Rs. 179.50 to Rs. 183 before giving way to Rs. 179 yesterday. Today, however, they regained to close at Rs. 180.50. The new shares also recorded a gain of Re. 1 to Rs. 178.25. After moving up from Rs. 23.96 to Rs. 24.40, Indian Irons touched a low of Rs. 23.88, but they again recovered at the close to Rs. 24.20.

In the textile group, Centurys provided the highlight with a sharp jump from Rs. 488.25 to Rs. 515. After a reaction to Rs. 500, they improved to Rs. 507.50, the gain over the week being Rs. 19.25. Bombay Dyeings closed at Rs. 60.80, as against the previous week's close of Rs. 60, the highest level touched being Rs. 61.50. Kohinoors were marked up from Rs. 258 to Rs. 264.50 before closing at Rs. 260.50. Central Indias gained Re. 1 to Rs. 95. Khataus recorded a rise of Rs. 9.50 to Rs. 187 and Models Rs. 6.30 to Rs. 100, while New Great dropped a further Rs. 3 to Rs. 175. Shree Niwas Cottons were picked up Rs. 7.50 higher at Rs. 158.50 and Simplex Rs. 3.50 better at Rs. 171. Standards improved by Rs. 7 to Rs. 481 and Svadeshi by Rs. 8 to Rs. 220, following the increase in dividend for the year 1958 from As. 9 to Rs. 10 per share. Tata Mills were featureless at Rs. 35.25, as the dividend for 1958 is proposed to be reduced from Rs. 2 to Re. 1.50 per share.

Sugar shares too participated in the rise, despite the tax relief given to *khandsari* units. Belapurs recorded a gain of Rs. 3 to Rs. 290, Phaltans 50 nP to Rs. 154 and Walchandnagars Rs. 2.50 to Rs. 297.50. Cement shares were conspicuously featureless. Associated Cements moved narrowly between Rs. 150.75 and Rs. 148.25, before finishing at Rs. 149. Digvijay Cements were only a fraction better at Rs. 147, while Orissa Cements shed 8 nP to Rs. 14.28 and Dalmia Cements 24 nP to Rs. 10.88.

In the engineering group, Alcock Ashdowns picked up Rs. 3 to Rs. 270. Tata Locomotives advanced from Rs. 188.75 to Rs. 196.50 and, after a setback to Rs. 189, recovered to Rs. 192.50. Premier Constructions were prominent with a rise of Rs. 30.50 to Rs. 295.50, following the Chairman's announcement that the scheme for conversion of promoters' shares into ordinary shares would be discussed by the Directors in a general way on the 27th inst. Cooper Engineerings rose by Rs. 3 to Rs. 144. The Company proposes to increase its issued capital to Rs. 45.20 lakhs by the issue of 20,000 ordinary shares of Rs. 100 each in the ratio of four new shares for every five shares held. Larsen and Toubros hardened by 44 nP to Rs. 23.12. Texmacos picked up 84 nP to Rs. 25.80, while Mahindras were a shade quiet at Rs. 25 and their new shares at Rs. 21.48. Proximity of dividend brought a spurt in Shivrajpurs from Rs. 100.50 to Rs. 104. Indian Coppers were unchanged at Rs. 4.28.

In the automobile group, Hindustan Motors were a shade quiet at Rs. 9.04, while Premier Automobiles rallied by Rs. 2.50 to Rs. 116.50. Scindias, among shipping shares, ruled quiet with a drop of 20 nP to Rs. 17.68. Great Easterns, however, rose by 24 nP to Rs. 21.20.

After an initial rise from Rs. 498 to Rs. 510, Bombay Burmahs (old) reacted to a low of Rs. 492.50 yesterday. Today, however, they gained some ground to Rs. 503. National Rayons were a bright feature with a smart rise of Rs. 10.75 to Rs. 291. Gwalior Rayons were steady at Rs. 17.12. Tata Chemicals ruled quiet with a drop of 24 nP to Rs. 16.40, while Dhrangadhra Chemicals picked up Rs. 5 to Rs. 106. Amar Dyes were lower by Rs. 3 at Rs. 148, while Indian Deystuffs jumped by Rs. 105 to Rs. 505. Tata Oils were a shade quiet at Rs. 48.50. Voltas staged a smart rise of Rs. 5.50 to Rs. 159.25 and Wimcos Rs. 4 to Rs. 213. Kirloskar Oils were unchanged at Rs. 20, while Killick Industries dropped by Rs. 5.50 to Rs. 140.

Calcutta Stock Exchange

CALCUTTA, 21st *April*

Share prices moved further down on the Calcutta Stock Exchange during the week under review, although selected counters recorded rises. Generally, the break in prices which started last week became more pronounced this week, and once the reaction set in holders exhibited an anxiety to take profits. In the process, offerings increased and not all offerings could meet with buyers. The shrewd among holders thought that this was not the time either to sell or buy. When the uptrend, which set in immediately following the 1959-60 budget proposals persisted and continued, they had prepared themselves for a reaction. This week's trend, as indeed last week's was not, therefore, a surprise to them. They believed, however, that a deep depression was out of question, but the position would become clearer only after the new company taxation system became effective from 1960-61. Such a way of thinking was apparently in the minds of long-term investors, as under grossing according to the proposed system of taxation, shareholders' liability would increase. Dividends could be increased, but relief to companies following scaling down of the tax on profits and abolition of the excess dividend and wealth taxes was considered insignificant to make good the additional burden on shareholders. The reaction (mild so far), therefore, provided an opportunity for real thinking, as it had been apparent that the recent uptrend had taken equity prices far too high.

However, it should also be said that had it not been for the general wave of chillness, such factors as the L.I.C. decision to enter the market to purchase Rs. 5 crores worth of shares, the fall in stock of jute goods with mills, coupled with a striking increase in U.S. consumption of burlap, and the possibility of an increase in coal prices would have had a marked effect on prices. These factors, on the other hand, minimised the rigour of the general chillness, while the excise duty concession to *khandsari* sugar weakened the sugar section.

A mixed trend was in evidence in coals. While Burrakurs lost to Rs. 18.75 from Rs. 19.19 and Raneegunges to Rs. 16.50 from Rs. 16.75, Western Bengals recovered to Rs. 6.65 from Rs. 6.50. New Beerbhooms were fractionally lower at Rs. 20.87, while Equitables closed at Rs. 31.19 after being lower at Rs. 30.87 earlier. Central Indias, after being higher at Rs. 8.50 against Rs. 8.37, closed at Rs. 8.34. Bengals were unchanged at Rs. 318. Pench Valleys recovered to Rs. 25.62 from Rs. 25.50.

In the absence of sustained support, jutes were featureless. Indias fell to Rs. 16.06 from Rs. 16.50, while Nationals, at Rs. 24.50, were unchanged. Howrahs gained to Rs. 25 from Rs. 24 to close at Rs. 24.50, and Kamarhatties closed at Rs. 203, after rising to Rs. 206 from Rs. 200. Champdanies were quiet at Rs. 137 and Barnagores declined to Rs. 150 from Rs. 155. Agarparas reacted to Rs. 13 from Rs. 13.47. Birlas were earlier higher at Rs. 22.25, but gave way to Rs. 21.81 on lack of interest.

Indian Irons, in the engineering section, were affected on account of fresh offerings coming on the heels of release of a large parcel by a Bombay operator a week ago. The rate was as low as Rs. 24.15 and the highest rate of the week was no better than Rs. 24.40. On the other hand, Jessop & Cos. enjoyed steady support and recorded a rise to Rs. 33.75 from Rs. 31.50. Texmacos hardened to Rs. 25.80 from Rs. 25.05, and Burn & Cos. at Rs. 449 were higher by Rs. 8. Kumardhubis, however, gave way to Rs. 9.94 from Rs. 10.25.

Shaw Wallaces, among miscellaneous industrials, were a star feature, as, on interested buying, the scrip spurted to Rs. 19.25 from Rs. 17.62 previously. Continuing the uptrend, Indian Oxygens at Rs. 29 made a further stride, with National Cables recovering to Rs. 33.50 from Rs. 33. At Rs. 14.56, India Steamships made a further addition, while from Rs. 4.36 Indian Coppers receded to Rs. 4.26. B.I.Cs. were fractionally lower at Rs. 5.37, as were Alkali and Chemicals at Rs. 21.94. At Rs. 16.56, Dyer Meakin Breweries added a small gain, but Dharbangas lost to Rs. 21.12 from Rs. 21.50.

Madras Stock Exchange

MADRAS, 21st *April*

Equities on the Madras Stock Exchange generally edged forward during the week under the impetus of sustained buying orders. Operators were inclined to take a somewhat optimistic view of the outlook for the corporate sector, with hopes of capital appreciation in investments and reasonable dividend possibilities. Textiles attracted very good attention on reports of encouraging offtake of piecegoods, domestic and overseas. Tea shares also came in for enquiries. The buying fervour in these shares was the result of firmness of tea prices. It was stated that, as a result of rising foreign purchases, the entire current season's tea crop would have been sold before the new season crop started arriving. In sympathy with teas, rubbers and coffees, too, were well favoured. Coffee shares would have recorded more handsome gains but for the reported delay in the blossom showers in coffee-growing areas which caused anxiety about the size of the coffee crop. Sugars and breweries ruled firm. In the miscellaneous section, there was selective buying by bargain hunters. The undertone of the market was fully firm.

Among textiles, Metturs provided the brightest spot, the quotation advancing from Rs. 390 to Rs. 405. Cannanores rose by Rs. 8 to Rs. 152. Bangalore Woollens jumped up by Rs. 5.50 to Rs. 177.50 *cum-div.* (final). Premiers and Radhakrishnas spurted by Rs. 5 each to Rs. 150 and Rs. 129, respectively. Coimbatore Spinnings hardened by Rs. 4 to Rs. 55. Maduras by Rs. 3.80 to Rs. 30.55, Lakshmis by Rs. 3.50 to Rs. 114 and Rajapalayams by Rs. 3 to Rs. 120. Janardhanas registered a rise of Rs. 2 to Rs. 71. Ranga Vilas gained a like amount to Rs. 53. Anglo-Frenchs and Cauvery Spinnings were better by 25 nP each, the former at Rs. 71 and the latter at Rs. 11.25.

Planting shares tended to move up. The following are the quotations for a few popular scrips:

		21-4-1959 Rs.	13-4-1959 Rs.	Difference nP
Tea:				
Stanes Amalgamated	.. ..	15.10	14.00	110
Mlamallay ..	.. ..	41.75	41.25	50
Hailevburia	.. ..	19.00	18.60	40
Kil Kotagiri	.. ..	8.70*	8.45*	25
Lucky Valley	.. ..	12.05*	12.75*	29

Ouchterlony	.. ..	5.68	5.65	3
Sheveroy ..	.. ..	1.92	1.91	1

* Cum-div.

The highlight of trading in the sugar and brewery section was a further sharp rise of Rs. 25 to Rs. 350 in the quotation for United Breweries, bringing the total increase over the fortnight to Rs. 42.50. E.I.Ds picked up Rs. 1.50 to Rs. 36.50. Travancores put on 13 nP to Rs. 11.75.

Among miscellaneous industrials, Western India Plywoods met with renewed buying support and rallied from Rs. 155 to Rs. 157. Textools strengthened by a rupee to Rs. 181. Mysore Chemical Manufacturings gathered Re. 1.10 to Rs. 25.35 *cum-right*. Singarenis improved by 75 nP to Rs. 18.25 and T. Stanes by 63 nP to Rs. 23.75. India Steel Rollings, Mysore Tobaccos and Standard Motors gained 25 nP each to Rs. 15.50, Rs. 13.25 and Rs. 13.25, respectively. Orissa Cements rose by 20 nP to Rs. 14.20.

U.S. EXPORT-IMPORT BANK

The Export-Import Bank of Washington has named its Secretary, Mr. Sidney Sherwood, to represent it in India to help that country utilise a $150-million credit from the Bank. Mr. Sherwood will work out of the American Embassy in New Delhi during his indefinite stay in India.

Announcing the appointment last week, the Bank President, Mr. Samuel C. Waugh, said that Mr. Sherwood would also work in India with Indian and American business men interested in getting loans of rupees which the Export-Import Bank makes available from funds secured through the sales of American farm reserve products in that country.

A Princeton University graduate, Mr. Sherwood worked for the Bankers Trust Company of New York and Phelps Doge Corporation prior to joining the U.S. Treasury Department. Prior to World War II, he was named Assistant Secretary of the Advisory Commission to the Council of National Defence.

Since 1942, Mr. Sherwood has been associated with U.S. Government overseas economic and financial operations and since 1946 has been Export-Import Bank Secretary. In the latter capacity, he has travelled widely abroad and has served as chief of several missions of the Bank to countries of the Middle East and South Asia.

NEWS IN BRIEF

A PRODUCTION target of 40 million yards of cloth through the Ambar Charka programme has been adopted by the Government for 1959-60.

The Government of Madras has constituted a committee to examine how far factory regulations can be relaxed in the case of small-scale industries.

The Government of India is "very positively" considering the inclusion of a scheme for the development of Tuticorin as a major port in the third Five-year Plan, according to Mr. S. K. Patil.

Negotiations on the purchase of about 198,000 tons of steel during 1959 from the Soviet Union have been completed by the Central Government and a formal agreement is expected to be signed shortly.

An Indian firm, in collaboration with a West German firm, will shortly produce box cameras, according to Mr. Manubhai Shah. The firm will take up manufacture of 35 mm. film strip projectors later.

A one-man committee consisting of Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor of Madras University, has been set up by the Government of India to review the working of the Employees' State Insurance Scheme.

The Madhya Pradesh Vidhana Sabha unanimously passed last week an opposition resolution urging the State Government to continue to press vigorously for the allocation of power from the Rihand Project in Uttar Pradesh on an equitable basis.

What is claimed to be the first W. T. locomotive which is Indian in origin, design and construction has been produced at the Chittaranjan Locomotive Works. The type of the new engine is meant for heavy suburban passenger traffic and is capable of hauling a trainload of 10 bogies at 60 miles per hour. Being a tank engine, it does not need turning round at terminal stations.

Asked whether the Reserve Bank of India had finalised the scheme regarding the credit information bureau, Mrs. Tarkeshwari Sinha said in Parliament last week that some of the banks which had been addressed on the matter had not yet replied. The banks which had replied, she said, had referred to certain administrative and legal difficulties in implementing the scheme; these would have to be carefully examined before any firm decision was taken.

The total investments (purchases less sales) of the Life Insurance Corporation from 23rd August 1958 to 28th March 1959 in equities were Rs. 2,74,06,634, according to Mr. Morarji Desai. The investments in other than equities during the same period (purchases less sales) amounted to Rs. 21,99,56,548. Of this, Government securities accounted for Rs. 13,20,18,657, other approved securities for Rs. 7,19,38,440, debentures for Rs. 82,92,324 and preference shares for Rs. 77,07,127.

India had an adverse balance of trade to the extent of Rs. 21.24 crores during the month of January 1959. The total value of exports (including re-exports of Rs. 37 lakhs) was Rs. 45.34 crores, while imports aggregated Rs. 66.58 crores. These figures do not cover gold and currency notes. Exports and imports of currency notes were Rs. 4 lakhs and Rs. 2.43 crores, respectively. About Rs. 4 lakhs worth of current coins were exported and gold valued at Rs. 5 lakhs was imported.

The sale of steel products by the public sector steel plants will be governed by the provisions of the Iron and Steel (Control) Order 1956, according to Sardar Swaran Singh. Under the present policy, steel is sold to the consumers either directly or through controlled and registered stockists. The same procedure will apply to the public and private sectors. The distribution channels will be strengthened when found necessary. If there is any surplus at any time after meeting the country's requirements, it will be exported. The method and agency for export will be determined from time to time according to the then prevailing conditions.

The Government of India has set up a Board for Promotion of Small Inventions in order to encourage small artisans and technicians with inventive skill. The Board will give awards and financial assistance to persons whose inventions in the sphere of small industries are of a distinctive character. It is presided over by Mr. M. S. Thacker, Secretary, Ministry of Scientific Research and Cultural Affairs. The initial technical scrutiny of the details of the gadgets or inventions will be done by a State Board consisting of the Director of Small Industries Service Institutes in the State, Director of the Industries in the State and three other technical experts. The recommendations made by the various State Boards will be examined by the Central Board.

The Chittaranjan Locomotive Works proposes to establish a steel foundry to produce steel castings for railway rolling stock, as well as for points and crossings used in railway track, according to the General Manager of the Works. Negotiations are already in progress with technical collaborators in the U.K. The capital outlay of the project is put at Rs. 2 crores and production is expected to commence from 1962. Meanwhile, the factory has undertaken the setting up of a galvanising plant at an estimated cost of Rs. 10 lakhs in connection with the electrification projects of the Eastern and South Eastern Railways. The plant, it is said, will result in a saving of foreign exchange to the tune of Rs. 50 lakhs. Proposals are also under consideration for the manufacture of electric locomotives.

The Government of India has decided to accede to the new three-year World Wheat Agreement which will come into effect on 1st August next, that is, after the current Agreement expires. The terms of the new Agreement, it will be recalled, were given final shape at the U.N. Wheat Conference held at Geneva in February-March last. The Agreement fixes the maximum price for wheat at $1.90 per bushel, as against $2.00 under the current Agreement, while the minimum price remains unchanged at $1.50 per bushel. A feature of the new Agreement is that no specific quantity is prescribed for import or export by any member country. Each member importing country only agrees to buy a minimum percentage of its total commercial imports from the exporting countries as long as prices are within the range of the new Agreement. The minimum percentage in the case of India is 70. In the unlikely event of prices going up to the maximum, exporting member countries guarantee to supply at the maximum the average of the commercial imports of the country concerned over a period of four to five years prior to the year of supply.

From Abroad

The construction of a new slipway on which ships of up to 150,000 tons may ultimately be built will commence at Rotterdam, Netherlands, next month.

The main airlines of the European Common Market countries are meeting at The Hague today to resume discussions on the question of establishing "Europe Air."

The U.K. Export Credits Guarantee Department has resumed cover for trade with Egypt with effect from the 20th inst. The cover had been suspended since 2nd August 1956.

The total income of Persia from oil production during 1958 was £88.25 million, as against £76.4 million in 1957. The output of oil aggregated 39.8 million tons, that in the previous year being 34.8 million tons. A sum of £24.5 million was spent by the oil companies on capital projects.

The Association of West German Exporters has urged the Ministry of Economics to raise the insurance cover from 80 per cent. of the risk with the State-controlled Hermes Export Credit Insurance Organisation to 90 per cent. as a means of encouraging business activity.

Nine more industries and 45 products have been accorded by the Malayan Federal Government pioneer status which qualifies them for special income-tax relief. The industries are lawn-mowers, starch, air-conditioners, domestic refrigerators, butter, refined sugar, wheat flour, domestic films, patent medicines and cosmetics. Altogether, 24 industries and 94 products have now been granted tax holidays.

The suggestion from a British Labour backbencher to reduce long-term interest rates was turned down by the Chancellor of the Exchequer in the House of Commons last week. The Chancellor said that there was no direct link between the movements in Bank rate and long-term interest rates maintained and that the level and movements of long-term rates reflected fundamental conditions in the capital market.

The International Nickel Company of Canada will start immediately the construction of a 520-25 million nickel refinery at Thompson, Manitoba. The refinery, which will have a capacity of up to 75 million lbs. of nickel per annum, is expected to commence operations next year, reaching full production in 1960. It will employ a new process developed by Company research scientists and one by-product will be impure sulphur that can be refined for use in pulp making.

Imperial Chemical Industries, Britain, has plans to set up a plant at Wilton to manufacture a new polypropylene plastic under the trade name "propathene." The plant will bring the Company's capacity for alkathene (or polythene) and propathene to 100,000 tons a year. The new production is said to be particularly suitable for moulding uses because of its high rigidity and temperature resistance. It will also find extensive use in film form and as a general extrusion material.

A new plastic called "Delrin" which reportedly will be a competitor to such metals as zinc and aluminium has been announced by the DuPont de Nemours Company. The molecular structure of the material, described as the first usable polymer of formaldehyde, enables it to form chains without branches—an important factor in its strength. Additionally, the Company said, groups of parallel chains in the new material tend to come together tightly due to "internal crystal forces."

The life span of the average American has risen by 6.3 years to 69.6 since 1943, according to the National Health Education Committee. The life expectancy of women has increased by 8.5 years during this period and that of men by 4.3 years. The Committee noted that, despite this progress, there was still a major challenge to medical research in such fields as arteriosclerosis, cancer, mental illness, arthritis, virus disease, the common cold and allergies.

American contribution to major projects in the United Arab Republic such as the Suez Canal development scheme were discussed at a conference at Cairo on the 15th inst. between Mr. Raymond Hare, U.S. Ambassador to the U.A.R., and Dr. Moneim El Kaissuny, U.A.R. Economy Minister. Mr. Eugene Black, President of the World Bank, is expected to arrive in Cairo early next month to discuss the possibility of the World Bank financing the Canal's development. Usually well-informed quarters say that a 50-million-dollar aid programme (about £17.8 million sterling) is envisaged by the World Bank.

Industrial production in the U.S. climbed to an all-time high in March, according to the Federal Reserve Board. Increases were noted in the production of such items as steel, construction materials, farm machinery, producers' goods and automobiles. Production of soft goods in March was six per cent. above the pre-recession peak. Durable goods production also rose during the month, although it was three per cent. below the high recorded in December 1956. The Board's seasonally adjusted index of industrial production advanced by two points to 147 per cent. of the 1947-49 average—one point higher than the previous record set in February 1957 and 21 points higher than the 126 reached at the recession's low in April 1958. Industrial production and prices, housing starts, employment, income, retail sales and bank loans to business advanced and unemployment declined more than seasonally.

A decision on whether the U.S. Administration will grant tax concessions to encourage the flow of American capital abroad is expected to be reached in the near future, possibly within a few weeks. Previously, the Administration has maintained a no-tax relief policy, but Mr. Richard Nixon, the Vice-President, has come out publicly for the creation of a new class of corporation, called foreign business corporation, which would only pay U.S. taxes after income earned abroad had been distributed to U.S. stockholders. This recommendation has been incorporated in a Bill by Mr. Hale Boggs (Democrat, Louisiana), which is believed to have the support of the State and Commerce Departments. It proposes tax-free transfers of assets from domestic to foreign corporations and, where tax reliefs are granted by foreign countries, these amounts could be regarded as taxes paid for purposes of U.S. domestic taxation. There would be other tax concessions.

PERSONAL

MR. M. M. Khan has assumed charge as the General Manager of the Western Railway, *vice* Mr. M. K. Kaul.

Mr. M. L. Shah has been elected President of the Indian Chamber of Commerce, Calcutta, for the year 1959.

Mr. A. K. Roy, Secretary to the Union Ministry of Finance, will represent India at the Commonwealth Conference of economic officials commencing at London on 5th May next.

Dr. B. N. Kaul, formerly Indian Ambassador to Belgium, has been appointed Resident Representative of the United Nations Technical Assistance Board in Jordan.

Mr. P. P. Joshi and Mr. Malik Chand have been elected President and Vice-President, respectively, of the Indian Coal Merchants' Association for 1959-60.

Mr. P. C. Neogi, Chief Engineer, South Eastern Railway, has been appointed the first Director-General of the Research, Design and Standardisation Organisation, Union Ministry of Railways.

Mr. C. L. Gheevala, until recently Deputy Secretary, Indian Merchants' Chamber, Bombay, has taken over charge as the Secretary of the Chamber *vice* Mr. A. C. Ramalingam who has retired.

Mr. Mulchand C. Parekh has been elected Chairman of the Indian Mining Federation for the year 1959. Mr. S. B. Goenka and Mr. M. Sen Gupta have been elected Vice-Chairman and Junior Vice-Chairman, respectively.

Mr. Gulzarilal Nanda, Union Minister for Labour, Employment and Planning, will lead the Indian delegation to the next session of the International Labour Conference commencing at Geneva in the first week of June 1959.

Sir Alexander Clutterbuck, at present Britain's Ambassador to the Republic of Ireland, has been appointed Permanent Under-Secretary of State at the Commonwealth Relations Office in succession to Sir Gilbert Laithwaite, who will retire from public service on 31st August.

Dr. J. N. Aldington, Managing Director of Siemens Ediswan Ltd. and a Director of Associated Electrical Industries, U.K., arrived in Calcutta from Britain on Wednesday last. He is visiting the Durgapur steelworks in West Bengal where Siemens Ediswan cables are being installed. He will be leaving for Australia tomorrow.

Mr. S. Barraclough, a metallurgical expert now back in Britain after spending three months with the Indian Standards Institution, will soon return to India for another period to complete his work. He was assigned to the Indian Standards Institution under the Colombo Plan for assisting in the formulation of standards for alloy and special steels. Mr. Barraclough is a member of the research department of the United Steel Companies Ltd. of Sheffield.

INDIA'S FOREIGN TRADE

MUCH concern over the trends in India's foreign trade was expressed in the course of the debate in the Lok Sabha on the demand for grants by the Union Commerce and Industry Ministry. This shows that the country as a whole appreciates the urgency of the problem of promoting exports and limiting imports. These two planks of the Government's foreign trade policy, therefore, enjoy a wide measure of support. There are, however, bound to be serious differences over individual details of the Government's policy, especially in regard to the role of the State Trading Corporation, the large-scale and small-scale industries and, above all, in respect of the question of compulsory export promotion measures. And yet, it is the way these details of policy are handled that will determine the course of India's foreign trade.

Generally speaking, it is now widely recognised that the scope for further reduction in imports is strictly limited. It is true that demands for imports of some raw material and equipment or other are frequently put forward. But the Government is trying to meet these demands to the best of its ability which is naturally restricted by the availability of foreign exchange. As the Union Minister of Industry, Mr. Manubhai Shah, pointed out, more than 70 per cent. of the annual import bill of some Rs. 700-800 crores consists of raw materials. The next important item is heavy machinery, capital goods and equipment. Efforts are being made to reduce the country's dependence on imports of these goods through increasing domestic production. In 1958, their production was valued at Rs. 80 crores, as against Rs. 10 crores in 1951. The heavy machine building project at Ranchi, which is being undertaken in collaboration with Russia, is expected to produce steel plants, including rolling mill, merchant mill, blooming mill and blast furnaces. The three-member consortium for sugar machinery is expected to produce 80 to 85 per cent. of sugar plants. This group, according to Mr. Shah, is a "friendly combination for a particular task" and as soon as the task is performed each member of the group will produce sugar plants individually; the monopolistic combine will not be perpetuated. All in all, India will require annually some Rs. 300-350 crores worth of machinery by the end of the third Plan, of which it is expected to produce 80 to 85 per cent.

Among other industries, the most important is steel. By the end of 1962, India will produce about 4.5 to 4.8 million tons of finished steel. It is now importing a large quantity of alloy and tool steel. In this connection, Mr. Manubhai Shah appealed to the industrialists to "wake up to this requirement as early as possible" and gave the assurance that the Government would "extend to them the maximum possible help." Since India is deficient in non-ferrous metals, Mr. Shah suggested that industrialists could set up smelter capacity based on imported ore. In the sphere of chemicals and pharmaceuticals, India has reached near self-sufficiency in such heavy chemicals as caustic soda, soda ash and sulphuric acid. The Government, in collaboration with W. Germany, intends setting up a factory which will produce about 61 basic organic intermediates. This factory will enable the country to reach, in the next three years, near self-sufficiency in this group of chemicals. Meanwhile, it is satisfactory to note that the production of drugs, which was valued at Rs. 45 crores last year, is soon expected to go up in value to Rs. 55-60 crores.

Clearly, the problem of foreign exchange can be solved only through increasing agricultural and industrial production to levels at which the country can be reasonably self-sufficient in a wide range of goods and also have a surplus capacity in respect of a few goods and commodities for export purposes. The immediate task is to increase production. If the Government does not follow a doctrinaire policy, it should be possible to build up rapidly industrial and agricultural capacity. It is, therefore, gratifying to note that the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri stated that it was not the Government's intention to come unnecessarily in the way of the private sector, though he felt that, in order to increase production, the public sector would ultimately have to play an important role. He deplored the tendency towards monopoly. He warned that, if the Government failed to reach an understanding with industrialists, it might seek legislative powers to prevent such development. It is not clear to what aspect of industrial production the Minister was referring when he deplored monopolistic trends. The problem, however, should be viewed from the point of view of not merely prospective entrants into the field but also from that of the consumers. Mr. Shastri indicated that the Government wanted to prevent the formation of monopolies without resorting to legislation through the creation of a large number of ancillary industries which could feed the big ones. He warned that, if the Government failed in its efforts, it might secure legislative powers to enforce the scheme. While decentralisation of industrial production, within reasonable limits, is greatly to be desired, and many countries have reached a high degree of industrial efficiency through small-scale units, it is a moot point whether decentralisation could be secured through legislation. If there is an economic basis for a wide diffusion of productive capacity, no legislation is necessary and, where it does not exist, any attempt at forced decentralisation may conceivably lead to high-cost production and production of inferior goods.

Mr. Shastri also warned that, if industries did not undertake a voluntary scheme of export promotion, the Government might take powers in order to ensure that a certain percentage of production was reserved for export; compulsory export would also mean compulsory pre-inspection of goods and quality. He cited with approval the voluntary scheme of exports by cycle manufacturers under which a cess of Rs. 10 on each cycle sold was set aside for purposes of subsidising exports of cycles. While nobody will gainsay the importance and the need for promoting exports, even at a certain measure of sacrifice, it is doubtful if an enduring export market could be built up through legislative compulsion or an elaborative scheme of subsidies. For what is to happen if, even after compulsory diversion of a certain proportion of production to exports, the industries concerned are unable to market the goods? Again, compulsory exports might lead to more and more demands for subsidies which are only a concealed form of devaluation of currency. In any case, no compulsory export promotion scheme could be an effective substitute for positive measures which aim at strengthening the competitive efficiency of Indian agriculture and industry. Mr. Manubhai Shah placed his finger on the right spot when he said: "The cost structure of industry in this country, as we all know, is somewhat lopsided and top-heavy. We are priced out in the foreign markets. We are also heavily priced in our own country as the cost structure is rather high because of the diminutive volume of production on all points, low productivity, inefficient management and many other factors." Continuous attention to remedying these defects is necessary in the interests of export promotion.

U.S. TRADE MISSION ON INDIA

By a strange but happy coincidence, India's Ambassador to the U.S., Mr. M. C. Chagla, and the chief of the seven-man U.S. Trade Mission to Eastern India, Mr. Paul Brent, have spoken almost simultaneously on the scope for investment of American capital in India, the keynote of the statements made by the two being more or less identical. Thus, addressing a meeting of the Far East-American Council of Commerce and Industry at New York on Thursday the 16th inst., Mr. Chagla said that tremendous investment opportunities were available in India and appealed to "hard-headed" business men to take advantage of the same. In his statement made at Calcutta two days earlier—on Tuesday, the 14th inst.—after the conclusion of the Mission's nine-week tour of Northern India, Mr. Paul Brent remarked that India's rapidly expanding economy offered great opportunities for American business men. The other six members of the Mission are in full agreement with this view. In the course of the statement of observations and suggestions drawn up by it, the Mission sums up its impressions as follows:

"Continued improvement in the business climate of India will attract more investment capital to the country. Such improvement could take the form of tax incentives, the conclusion of a double taxation agreement with the United States and of a new commercial treaty, and the widening of the present investment guarantee agreement between India and the United States to cover subjects now included in United States guarantee agreements with other countries. Such measures, together with public statements by Indian leaders consistently emphasising the investment opportunities in India, would undoubtedly enhance the attractiveness of India to potential foreign investors."

This is quite a bright assessment of U.S. investment potential in India, an assessment made by seven American business men on the basis of wide discussions with their Indian confreres. But their qualifications relating to the need for improving the climate should not be overlooked by the powers-that-be. During its nine-week tour of Eastern India, the Mission, we are told, visited 14 cities, met 34 business groups representing nearly 3,000 persons, and, in its four weeks' operation at the Trade Information Centre in the U.S. Small Industries Exhibition at Calcutta (15th March-15th April), met as many as 1,080 persons and "developed a substantial number of trade and investment opportunities which will be disseminated in the United States through the official journal of the U.S. Department of Commerce." Naturally, the suggestions made by the Mission deserve the utmost consideration of both officials and business men in this country, if they are genuinely interested in attracting a large inflow of American private capital. Here are the suggestions of the Mission:

1. Prompt decisions by all concerned in approving investment proposals which will encourage the development of the many industries needed by India in order to reach its Five-year Plan targets.

2. More liberal and more adequate credit facilities in order to finance economic development.

3. A public information programme to help promote better understanding of the importance of banks to the economy of the country and the facilities available to Indian business men desirous of launching new enterprise.

4. Need for shortening loan applications processing time.

The U.S. Trade Mission considers that there are ample opportunities for mutually profitable joint ventures between Indian and American firms; according to Mr. Paul Brent, the Mission has received about 200 inquiries for joint ventures from Indian business men. The promotion of such ventures on a larger and larger scale will undoubtedly strengthen Indo-U.S. economic relations in the coming years. Much, of course, depends on the Indian partners who should, as the Mission rightly emphasises, "analyse the product opportunities and develop well-analysed business proposals for presentation to American firms." In the opinion of the Mission, there is an excellent field for consulting engineering service to satisfy the needs of the many business men desirous of technical help in laying out new plants and production processes; collaboration with American consulting engineers would be mutually beneficial.

Apart from direct U.S. capital investment in India and joint ventures between the business men of the two countries, there are certain other "fertile" fields for the development of closer Indo-American economic ties. Three such fields relate to handicraft products, tourism and export promotion. The Mission's study of these reveals that sales of handicraft products can be stepped up by effectively organising production and marketing on the basis of a study of the American market; central exhibitions in the major U.S. cities is a practical way to display India's wares. Tourism is an important industry by which India can hope to attract dollars. Stress is laid on the need for improving hotel, water and sanitation facilities, as well as rail and road transport; simplifying Government and travel documentation; streamlining air and booking facilities; and accelerating an "aggressive promotion campaign, offering package tours." With regard to the expansion of exports, the Mission observes that the efforts through Export Councils and industrial associations must be strengthened, quality must be guaranteed, and, in the case of certain commodities subject to international competition, adequate pre-inspection facilities and competent inspection certificates are necessary to minimise rejections and causes for complaint.

Some pertinent general observations on the industrial sector have also been made by the Mission. These are reproduced below:

"*Tool and die industry:* As the keystone of a mass production industry, the tool and die industry needs to be developed for producing the many types of machines needed to increase the pace of industrialisation in India. The tool and die industry is the means by which India can make machines to make machines. Low core mass production cannot be accomplished unless training of

people for the tool and die and related fields accompanies the development of steel mills and other major industries.

"*Component parts sub-contracting:* Subcontracting the manufacture of component parts is desirable to broaden India's industrial base; at the same time to offer a field for small shops to lend economic support to India's large industries. As in the United States, small shops in India can be the source of many component parts produced often at lower cost because of their comparative flexibility."

The interest shown thus by the U.S. Trade Mission in the economic development of India generally and in the promotion of closer economic ties between India and the U.S., in particular, is, indeed, commendable. The Mission has stated that the U.S. and its people are sincerely interested in joining with India in the work of economic development, in order to bring about an improved standard of living for all Indians. It should, however, be clear that, unless India itself undertakes positive measures which will attract foreign capital for which there is scope and need in this country, it would be difficult to increase the rate of inflow of capital. An appropriate reduction in the incidence of taxation is the most important incentive that India has to offer. It will be pertinent to recall here what Mr. Brent said on this point at Calcutta. He remarked that, though the tax structure in India was almost the same as in the U.S., the important difference was that, whereas the U.S. was a highly developed country which wanted its capital to flow out, India was a developing country requiring large sums of foreign capital. It is thus obvious that India cannot afford to have the same level of taxation as the U.S. or other developed countries.

PROTECTIVE FOODS

It is a well-known fact that the food of an average Indian is deficient in those ingredients that go to make a balanced diet. It contains too high a percentage of cereals and too little of subsidiary protective foods like milk, sugar, vegetables, etc. Nutrition and dietary surveys have revealed that the average consumption of cereals in rural areas is more than 17.5 ounces per day per adult and that, in many cases, the daily intake is as high as 25 to 30 ounces. Consequently, not only does his health suffer but such a dietary habit puts a severe strain on the country's capacity to produce cereals. According to the composition of a balanced diet, formulated by the Nutritional Advisory Committee of the Indian Council of Medical Research in 1944, not more than 14 ounces of cereals are necessary for an adult consumption unit per day, assuming that 3,000 calories are the daily requirement of an average Indian of moderate activity. It has been estimated that, if only 14 ounces of cereals were to be consumed by each individual, there would be an annual surplus above the balanced diet of at least 11 to 12 million tons of cereals, taking into account both production and import of cereals as of 1956-57.

The need for reducing consumption of cereals, wherever such consumption was high, and for increased intake of subsidiary food, was emphasised by Mr. A. P. Jain, Union Minister for Food and Agriculture, in the course of his address to the two-day meeting of the Scientific Food Advisory Panel of the Ministry held in New Delhi on the 14th and 15th inst. The Panel, it may be noted, was set up early this year to advise the Ministry on ways and means of bringing about a change in the pattern of food consumption in the country, with a view to reducing dependence on cereals and achieving a more healthy and balanced diet, to suggest practical methods for production, storage, utilisation, etc., of non-cereal foods, to test the suitability of research findings in the field of food technology and to suggest suitable programmes of application.

Mr. Jain said that a change in the dietary pattern, with increased emphasis on protective foods and reduced dependence on cereals, would not only help in correcting the dietary deficiencies noticed in the country but would also relieve the pressure on the country's capacity to produce more and more cereals. It involved no radical change in the food habits of the people, because the majority of items recommended as essential for a balanced diet were already known and were consumed by the people. What was required was only a change in the relative proportion of the different items of foodstuffs included in the diet.

Apart from serving as supplementary items in meeting deficiencies in diet, some of the subsidiary foods, according to Mr. Jain, may also be suitable for use as staple foods. Some subsidiary foods such as potatoes and tapioca yield three to four times as much carbohydrates per acre as cereals. Subsidiary foods of this type form a substantial portion of the diet of the people even in advanced countries. For example, while the *per capita* consumption of potatoes in India is about 9 lbs. per year, it is, to quote Mr. Jain, 400 lbs. in some of the Western countries.

For making available more and better food, certain technological aids may have to be sought. Dehydration in some form or other has been one of the common methods used in India from ancient times. By suitable techniques, articles of food hitherto not adequately utilised for human consumption can be converted into nutritious foods. One such relates to the utilisation of oilseed meals, resulting as a by-product of the vegetable oil industry. Another process has been developed in the Central Food Technological Research Institute, Mysore, for preparing edible groundnut flour. The Institute has also prepared macaroni products from a combination of tapioca, groundnut flour and wheat. The possibilities of preparing flour of potato, tapioca, etc., and blending them suitably with wheat flour to prepare nutritious flours similar to *atta* have also been indicated. The enhancement of the utility value of the existing common foods by fortifying and enriching them with suitable nutrient factors such as certain aminoacids, minerals, vitamins, etc., is another approach to the problem.

Mr. Jain did not agree with the idea that any improvement in dietary necessarily involved considerable expenditure which the poor and middle class consumers could not afford. Altering the relative proportions of the various components of the diet, he averred, need not necessarily cost more. A balanced diet could be derived at a high cost, moderate cost or low cost, depending on the choice of the diet components which might vary.

There is a large element of truth in Mr. Jain's view that, except perhaps for the lowest income groups, education in food matters could make up for the poor purchasing power to a considerable degree. The Ministry of Food will, therefore, do well to initiate an educational programme to modify the dietary habits in the country.

LABOUR LEGISLATION

No country in the world can claim to have passed more labour laws than India during the last twelve years. So numerous are the enactments and so wide their range and comprehensiveness that, collectively, they represent a set of welfare legislation which can compare with any in advanced, enlightened countries of the West. True, the cradle-to-grave social protection enjoyed by a British worker is still a distant goal, but, considering what has been done here in the short span of just over a decade, the Indian worker can well be optimistic that his dream of a Beveridgian El Dorado may one day come true.

These legislative measures have been inspired as much by the social need to give workers a fair deal as by the economic necessity of creating a climate of industrial relations that will ensure higher production. Have these goals been achieved? Have the various legislations helped to promote better labour-management relations? A trade unionist, Mr. Raja Kulkarni, a lawyer, Mr. S. D. Vimadlal, and a representative of the employers, Mr. S. C. Joshi, were called upon to express themselves on this question. The occasion was a conference on the impact of labour legislation on industrial relations, sponsored by that enterprising body, the Indian Institute of Personnel Management. Naturally, one would expect divergent opinions on such a question and the speakers did differ in their views. But they were all agreed that labour legislation was progressing in the right direction.

The trade unionist felt that labour laws had benefited workers, despite their many shortcomings. But they had still to get many benefits justly their due. He had no grievance against the number of laws passed but his complaint was against the character and machinery provided in them for giving effect to the provisions of the law.

The lawyer felt that the existing labour laws were too many in number, too vague and, sometimes, conflicting in their meanings and interpretation. This was due, according to him, to the fact that both the Centre and State Governments legislated on the topic. What was required was some kind of co-ordination of the existing laws and their simplification and consolidation so as to avoid confusion. He, however, felt that, but for these laws, however imperfect they might be, the situation would have been worse. Certain provisions of the law, especially those relating to reinstatement of workers, according to him, only encouraged indiscipline among workers.

The employers' spokesman felt that the labour laws were neither an unmixed good nor an unmixed evil. According to him, compulsory adjudication cut at the root of good industrial relations and healthy trade union movement. It created rivalry among trade unions thereby weakening the very foundation of good industrial relations. On the other hand, legislation which provided for better working conditions, welfare measures, and security for workers helped to promote better industrial relations.

These views can broadly be taken as representative of the three parties directly concerned in the matter. To those who do not belong to any of these groups it appears that labour laws, in spite of their good intentions, err on the side of overemphasis on some aspects and underemphasis on some others. They represent an approach which, in effect, has turned out to be largely negative and their restrictive effect on the establishment of new factories and the creation of more employment, at least in the initial stages, is not in doubt. The very fact that, in order to restart closed textile mills, the Government of Bombay felt the need to bring forward legislation enabling it to revise the terms of the workers' employment and to make whatever changes it thought necessary, irrespective of whether they were in accordance with the existing labour laws, awards and agreements, is a striking illustration of this point. What is sauce for the goose is, obviously, sauce for the gander too.

STATE BANK OF HYDERABAD

(Constituted under the Hyderabad State Bank Act, 1941. Renamed and capital transferred to Reserve Bank of India, with limited liability, under the State Bank of Hyderabad Act, 1956.)

All types of Banking and Foreign Exchange Business undertaken through H. O. and branches.

REGIONAL DISPARITIES IN INDUSTRIAL DEVELOPMENT

WILL SMALL INDUSTRIES HELP REMOVE THEM?

From Our Special Correspondent

NEW DELHI, 21*st April*

DELHI LETTER

MR. Manubhai Shah, Minister of Industry, told the Lok Sabha last week that the Government were anxious to remove regional disparities in the setting up of new industries and that the Industries (Development and Regulation) Act was the best instrument to guide development in the private sector in the directions indicated in the Plan. At the same time, he made the point that, unless a provision of upto Rs. 600 crores were made in the third Plan for small-scale industries, it would be difficult to remove regional disparities in industrial development. The Minister was hard put to it to meet the frequent criticism in Parliament that industrial development was tending to be further concentrated in the advanced regions of the country, and his reply was perhaps an implied agreement with the view that the operation of the Industries (Development and Regulation) Act was hardly calculated to remove regional backwardness. Mr. Shah did not, of course, dilate on the pattern of industrial development as revealed by selected approvals, under the said Act, of applications for setting up new units or for effecting substantial expansion of existing units in the scheduled industries. A State-wise analysis of such approvals during the period April 1957-September 1958 is given below to bring out broadly the recent trends:

Serial No.	State	Schemes approved for new units in scheduled industries	Schemes approved for substantial expansion of existing units in scheduled industries
1	Bombay	105	222
2	West Bengal	43	82
3	Madras	33	90
4	Punjab and Delhi ..	39	27
5	Uttar Pradesh	18	24
6	Bihar	10	17
7	Mysore	4	22
8	Andhra	9	10
9	Orissa	9	5
10	Madhya Pradesh ..	7	13
11	Kerala	7	12
12	Rajasthan	4	6
13	Assam	4	1
	Total ..	302	531

The above figures are in respect of the private sector only and the new public sector undertakings are not covered by this picture. All the same, they reveal certain clear trends. One is that considerable expansion of existing industrial undertakings is taking place irrespective of regional disparities; this is but logical and understandable. The other is that new undertakings are coming up in the already industrially advanced States more or less in the same proportion as the respective existing undertakings; it is this trend which has come in for criticism by informed members belonging to all political parties in Parliament. In this criticism the employment potential and the multiplier effect of industries have been very much in the minds of Members of Parliament representing different backward States who have urged the location of more new industries in future in their respective States.

If the aspirations of industrially underdeveloped States cannot be met to some extent by the Industries (Development and Regulation) Act under conditions of planning, it is not inconceivable that large depressed areas will emerge in the country and add to the problems of the future. Of course, such depressed pockets are not unknown even in such industrially advanced countries as the United States and the United Kingdom, and they have necessitated special programmes of development. As far as India is concerned, it is by no means certain that small-scale industries will be able to remove regional disparities to any great extent, especially where such industries are intended to be ancillaries or feeders to existing large-scale industries and may, therefore, come to be located not far away from the large units concerned. How this problem of regional disparities in industrial development—a problem which will be potentially a serious political one—is going to be solved at least partially in the third Plan period is by no means clear yet.

In a number of important industries there has been a substantial fall in production in 1958, as compared with 1956 or 1957. The relevant figures for the three years are given in the following table:

Serial No.	Industry	Unit	1956	1957	1958
1	Automobiles	000 Nos.	32.1	33.1	26.9
2	Conduit pipes ..	000 R. ft.	10,931	11,145	10,622
3	Hurricane lanterns ..	000 Nos.	5,180	4,345	3,378
4	Oil pressure lamps ..	000 Nos.	84	93	78
5	Power transformers ..	000 K.V.A.	919	1,219	1,128
6	Twist drills	000 Nos.	1,550	2,258	1,535
7	Wood screws	000 gross	7,502	8,143	7,176
8	Complete ring spinning frames	Nos.	1,116	1,368	852
9	Electric lamps ..	000 Nos.	29,800	32,100	29,500
10	Grinding wheels ..	000 lbs.	2,491	3,253	2,737
11	Bare copper conductors	000 tons	102	85	73
12	Expanded metal ..	Tons	2,208	2,163	1,735
13	Scooters	Nos.	4,735	6,528	4,391
14	Dry cells	M. Nos.	181	166	168
15	Sulphur black dyes ..	000 lbs.	3,475	3,807	1,858
16	Vat dyes	000 lbs.	845	264	416
17	A.C.S.R.	000 tons	113	154	144
18	Railway wagons ..	000 Nos.	16	16	14
19	Buffers, plungers and castings	000 Nos.	99	119	83
20	Glue	000 tons	1.1	1.3	1.2
21	Plywood (commercial)	Lakh sq. ft.	933	950	882
22	Cotton yarn	Mill. lbs.	1,671	1,780	1,633
23	Cotton cloth	Mill. yds.	5,307	5,317	4,924
24	Bichromates	000 tons	3.3	3.7	3.4
25	Power alcohol	000 gall.	10,271	10,136	8,470
26	Sugar	000 tons	1,854	2,029	1,978
27	Soda ash	000 tons	84	92	89

Some new industrial projects (besides the ones mentioned in the Delhi Letter in *Commerce* of 4th April last) which have come to fruition in the year ended March 1959 or are under consideration are briefly described here. In the plywood industry, two new units—one in Mysore and the other in the Andamans—have been licensed for the production of commercial plywood.

Synthetic resin adhesive for the manufacture of plywood is still being imported from abroad. A Calcutta firm has been permitted to set up a synthetic resin plant with a manufacturing capacity of 180 tons of U.F. resin per month for meeting the demands of timber industries, particularly plywood. Chipboard and fibre board have been manufactured for the first time during the year under report.

It has been estimated that the demand for bicycle tyres by the end of the second Plan period would be of the order of 16.6 million numbers per year. The present capacity is 7.23 million numbers and an additional capacity of over 10 million numbers per year has already been licensed.

The proposal to set up a new plant having a capacity of 20,000 tons per year for production of synthetic rubber (G.R.S.) from indigenously available raw materials, to meet the anticipated shortage by the end of 1960-61, is under active consideration of the Government.

Manufacture of urea formaldehyde moulding powder, an important raw material, has been commenced. A new scheme for the manufacture of polyvinyl chloride has been licensed recently and the production capacity is expected to be sufficient to meet the requirements of the country fully.

Three new plants have started commercial production of solvent extraction of oilcakes.

Manufacture of detergents on commercial scale has been established in the country by one of the firms and the production during 1958 is estimated to have been 240 tons.

Chancellor last week called the Budget an "assignment with the Election," his colleagues are reminding the Government that the memories of electors are short, and that, by the time an election does take place, people will have forgotten that they were given cheaper beer and less taxation in the spring. So, while the Chancellor has been bold from a straightforward consumer point of view, he has probably not been sufficiently bold to exercise a decisive effect in the coming Election.

SECOND THOUGHTS ON THE BUDGET

From Our Own Correspondent

LONDON, 17*th April*

LONDON LETTER

THE British Budget has the reputation of working out under normal conditions extremely closely to the estimates and the Budget recently presented by the Chancellor was no exception; in fact, when he had finished juggling with totals in excess of £5,000 million, he could humorously apologise for an error of £13 million overall!

It is of some interest, therefore, to compare broad heads of income and expenditure for the current year with those for the year just finished. The biggest income earner is, of course, income-tax in its various forms, which produced last year £3,016 million (1½ per cent. more than had been estimated) and which the Chancellor now puts down at £3,050 million. Customs and excise duties produced £2,191 million, almost exactly the estimated figure, and it is assumed that there will be a small buoyancy in the coming year to raise the figure to £2,245 million. Miscellaneous income, which is always the hardest to estimate, was £273 million last year and is expected to bring in £325 million this year. In all, therefore, the Government's revenue for 1958-59 was £5,480 million and the Chancellor estimates that, in the current year, this figure will rise to £5,620 million, subject, of course, to the reductions in taxation which will, in fact account for about £300 million of this figure, i.e., some 5 per cent.

On the expenditure side, all the Civil departments of the Government spent last year £2,849 million and are expected to spend £2,993 million this year. Defence expenditure will not grow quite as fast; last year's figure of £1,468 million is estimated to increase to £1,502 million. The last remaining head of Government expenditure is the service of the National Debt and smaller items. At £786 million, they cost the Government less last year than estimated, because of the drop in interest rates and will cost even less in the coming year for the same reason—a total of £728 million. In total, Government expenditure in the year 1958-59 was £5,103 million, which is likely to rise to £5,223 million in the coming year.

One can summarise the revenue and expenditure position by saying that last year the Government collected in taxation about £41 million more than they had expected to and spent £28 million more than they had expected to, leaving themselves £13 million to the good, while, in the year ahead, they expect to collect another £140 million more and to spend another £120 million more. The Budget, of course, is turning these figures upside down, as the revenue, will, because of the new proposals, *fall* by £155 million, causing the net comparison with last year to be £275 million to the bad.

The Government Opposition in the House is not, of course, attacking the Government for the money which they are giving away, but (a) for not bestowing largesse always where it would do most good, e.g., to old age pensioners and abolishing purchase tax on every day household goods, but (b) (with most force) that the whole of the Budget outcome has shown that far more tax concessions could have been made last year to avoid ending up with a surplus approaching £400 million on Current Account.

These criticisms amount to saying that the Government definitely allowed the economy to stagnate last year, in order to be able to make striking concessions in an Election year. If Mr. Amory is right that a dose of reflation is necessary to expand the economy, why was the dose not applied last year when the economy was clearly running down?

And yet the nature of the concessions—for example, 9*d.* off the income-tax instead of the confidently awaited 6*d.* or the hoped-for shilling point to compromises and a desire to cling to rectitude without too obvious an election appeal; thus an Election in the spring is no longer expected, but it is anticipated that it will take place in the autumn, so, although the shadow

STATE-ASSOCIATED BANKS TO BECOME SUBSIDIARIES OF STATE BANK

MAIN PROVISIONS OF THE BILL ANALYSED

THE Bill to take over some of the State or State-associated banks as subsidiaries of the State Bank of India and for the constitution, management and control of the subsidiary banks so formed was introduced in Lok Sabha last month and has not come up for discussion till the time of writing. The future of these State-associated banks, which are owned in part by their respective State Governments or with which such Governments have been closely associated, has been under consideration for some time. The question was recently re-examined comprehensively, with particular reference to the necessity for making adequate and proper provision for the management of treasuries and sub-treasuries in the areas served by these banks and the need for the expansion of these banks in these areas. According to the "statement of objects and reasons" of the Bill, the views of the banks themselves have been ascertained and the managements and shareholders of the banks (except two) have agreed to the proposal to reconstitute them as subsidiaries of the State Bank.

Amalgamation Not Favoured

The genesis of this measure [called the State Bank of India (Subsidiary Banks) Act, 1959] can be traced back to the recommendations of the All-India Rural Credit Survey Committee, which had suggested that the Imperial Bank of India and the ten State-associated banks (named in the subsequent paragraphs) should be nationalised and amalgamated into one single unit. The Government of India, however, nationalised the Imperial Bank of India, but left out the State-associated banks. Subsequently, when the proposal was again mooted, the Government did not approve of it. It is also stated that neither State-associated banks liked to amalgamate themselves with the State Bank of India nor the State Bank of India agreed to absorb them, on account of various difficulties, such as differences in the standard of working, scales of pay of staff, etc. Very recently, the State Bank of India submitted a proposal to the State-associated banks for taking them as its subsidiaries. The majority of these banks are said to have welcomed the proposal.

Out of the ten State-associated banks, two have opted out of the scheme; they are the Bank of Baroda and the Bank of Rajathan. The main ground on which they refused to become the subsidiaries of the State Bank of India was that they were not in any way associated with the State Governments; nor were the latter shareholders of the banks. The present Bill, therefore, covers the other eight banks, namely, (1) the State Bank of Hyderabad, (2) the State Bank of Saurashtra, (3) the Bank of Bikaner, (4) the Bank of Indore, (5) the Bank of Jaipur, (6) the Bank of Mysore, (7) the Bank of Patiala and (8) the Travancore Bank. Of these banks, the first two are governed by separate measures, namely, the Saurashtra State Banks (Amalgamation) Ordinance 1950 and the State Bank of Hyderabad Act 1956 and their entire share capitals are held by the Government of Bombay and the Reserve Bank of India, respectively. The reconstitution of these two banks to come under the purvey of the present Bill requires the amendment of the two measures mentioned above. The other six banks will constitute themselves under the name of the State Bank of Bikaner, the State Bank of Indore, the State Bank of Jaipur, the State Bank of Mysore, the State Bank of Patiala and the State Bank of Travancore, respectively.

Paid-up Capital

Under the Bill, the body corporate of the subsidiary banks will consist of the State Bank of India and other shareholders, if any, for the time being of the banks. On the "appointed day," the issued capital of these banks will consist of such amount, divided into fully paid-up shares of Rs. 100 each, as the State Bank of India may, with the approval of the Reserve Bank, fix and all the shares will stand allotted to the State Bank.

The Bill provides for the payment of compensation to the existing shareholders (including the State Government and the Reserve Bank of India) of the banks to be taken over as subsidiaries. The compensation will be an amount equal to the value of the assets of the respective bank in excess of the liabilities, representing the real value of the paid-up capital. In the event of a dispute over the amount of compensation, the Central Government will refer the matter to a tribunal, consisting of a chairman and two other members, provided not less than one-fourth in number of the shareholders holding not less than one-third in value of the paid-up share capital of the bank concerned requests the Central Government to do so. In such an event, the amount of compensation will be on the basis of that fixed by the Tribunal.

State Bank to Hold Majority Shares

After the compensation is fixed and accepted by the existing shareholders, and within three months from the date thereof, the shareholders of the existing State-associated banks should apply to the State Bank of India for the transfer to them of the shares in the capital of the new banks in lieu of such compensation or part thereof. For the purpose of such a transfer, the value of each share of the corresponding new bank will be determined by the State Bank with the approval of the Reserve Bank. Each shareholder of an existing bank, who has applied for such a transfer of shares, will be allotted such number of shares, having "such total face value as would bear to 45 per cent. of the issued capital of the corresponding new bank the same proportion as the paid-up value of his shares in the capital of the existing bank in respect of which he is paid compensation bears to the total paid-up capital of that bank." The total number of shares so allotted to the existing shareholders will not, in any case, exceed 45 per cent. of the total number of shares issued by the Bank, so that the State Bank of India will retain for itself not less than 55 per cent. of the issued capital of each of the subsidiary bank.

The Bill also places a restriction on individual holdings in the subsidiary bank. This is limited to 200 shares and even if he holds shares in excess of this limit, as, indeed, he might, because the shares are freely transferable, he will not be entitled to receive any dividend on the excess shares held by him. The provision regarding the limit of holdings will not apply to the State Bank of India, a State Government, a corporation, an insurer as defined under the Insurance Act 1938, a local authority, a co-operative society and a trustee of a public or private religious or charitable trust. The voting rights of individual shareholders are also restricted to 5 per cent. of the issued capital of the subsidiary bank concerned. The shares of a subsidiary bank will be approved securities for the purposes of the Insurance Act 1938 and the Banking Companies Act, 1949.

Management

The management and administration of each subsidiary bank will be entrusted to a Board of Directors, consisting of the Chairman of the State Bank of India (*ex-officio*), an officer of the Reserve Bank to be nominated by it, not more than five directors to be nominated by the State Bank, of whom not more than three shall be officers of that bank, and two directors to be elected by the shareholders other than the State Bank of India.

The State Bank of India has, under the Bill, powers to give directions and instructions to a subsidiary bank in regard to any of its affairs and business and the latter is bound to comply with such directions and instructions. Powers have been conferred on the State Bank to make, with the approval of the Reserve Bank, regulations in respect of a subsidiary bank to provide for all matters for which provision is necessary or expedient for the purpose of enforcing the provisions of this Bill.

The employees of the existing banks will, on the appointed day, automatically become the employees of the newly constituted subsidiary banks on the same remuneration and on the same terms and conditions and with the same rights and privileges as to pension, gratuity and other matters, as they would have held on the appointed day, if the undertaking of the existing banks had not been taken over by the corresponding new banks.

Although the system of subsidiaries is welcomed in preference to amalgamation and as a *via media* between large-scale branch banking and small-scale independent units of regional banking, a section of banking opinion is opposed to the spirit behind the scheme. It is argued that the scheme violates Section 19(1) of the Banking Companies Act, which prohibits formation of subsidiary banks, except for the purpose incidental to the business of banking, like trusts, safe deposit vaults, etc. It is, therefore, felt that the Bill makes a discrimination in favour of the State Bank of India. Further, while no banking company is allowed to hold shares of another bank, whether as a pledgee, mortgagee or absolute owner, of the value in excess of 30 per cent. of its own paid-up capital and reserves or 30 per cent. of the share capital of such other banking company, whichever is less, the State Bank of India is permitted, under the Bill, to hold 55 per cent. of the shares of another bank.

Adverse Effects

The constitution of the Board of Directors, which as stated above, will have three officials of the State Bank of India and one official of the Reserve Bank, besides the Chairman of the State Bank, will, it is feared, deprive the local people from managing their own banking affairs in a manner suited to local conditions and needs and will act as a damper on the imagination, incentive and drive of local people. In effect, the move confers on the State Bank of India a near-monopoly. When all these banks are brought under the ownership, control and direction of the State Bank of India, the ability of other banks to compete with them will be adversely affected to a considerable extent.

It is further pointed out that an effective control over the affairs of a subsidiary can be had without such a large holding in the subsidiary or such a large official representation on its Board as is now proposed. If the pace of growth of these banks is not to be impeded, their management should be given a large measure of autonomy. This will be possible only if their Boards are not dominated by the officers of the State Bank and the Reserve Bank. As an instance in point, it is stated that in France there are some banks, including some nationalised banks, which have a number of subsidiaries, but they hold no more than 5 per cent. of the share capital of the subsidiaries and the number of directors nominated is two or three in a Board of six or seven. Even in the case of the State-associated banks to be taken over by the State Bank of India, the Government holding in a majority of them is said to vary from 5 per cent. to 34.5 per cent. Only in the Hyderabad State Bank, the Government held shares up to 51 per cent. At present, the number of directors nominated by the Governments concerned with these banks is no more than three in a board of six to seven.

It may be contended that a strong official representation may inspire more confidence among depositors and may, therefore, be helpful in attracting more deposits. It is pointed out, in this connection, that a strong directorate is not the only thing which goes to attract deposits. Individual efforts and personal interest in customers' transactions also count. There is already the experience of a bank, operated on lines similar to those proposed for the other State-associated banks, which is by no means happy.

It is also feared that a change in management of the State-associated banks after they became subsidiaries of the State will bring about a change in the policy of the banks. This, in turn, may affect the existing credit arrangements in respect of small and medium-sized traders. Finally, it is argued that, if the system of subsidiaries in banking is to be revived, even if it be only under the auspices of the public sector, it should be done after a thorough enquiry into it by an impartial committee of experts. If such an expert enquiry favours the revival of subsidiary banks, then, it is suggested, the other commercial banks also should be allowed to have their subsidiaries.

NATIONAL AND GRINDLAYS BANK

The Directors of the National and Grindlays Bank have decided to eliminate the uncalled liability on the Bank's shares, as they feel it is no longer necessary. They propose to do it partly by the application of £570,312 from share premium account. The present capital structure of the Bank is £2,851,563 made up of 4,562,500 shares of £1 each, 12s. 6d. paid. Five shillings of the uncalled capital is to be removed by a capital reduction to 15s. shares and the 2s. 6d. then unpaid will be paid up from the share premium account. The shares would then be 15s. fully paid. As soon as the reduction in the share premium account becomes effective, the reserve fund (including share premium) is to be brought up to £3 million by a transfer of £364,151 from internal reserves and £37,582 from profit and loss account.

RECENT TRENDS IN INDIAN BANKING—II

INFLUENCE OF THE STATE—INADEQUATE GROWTH OF CREDIT

By D. Bright Singh, M.A., Ph. D.
READER IN ECONOMICS, MADRAS UNIVERSITY

CONSIDERING the fact that the pattern of economic development in the country is designed by the State, with a view to attaining certain definite social and economic objectives, it appears but proper that the Government should desire banking development also to take place along lines that would fit in with the general pattern of economic growth. In this sense, the nationalisation of the Imperial Bank of India seems to be in order. The State Bank came into existence on 1st July 1955. As a strong integrated State-partnered commercial banking institution, the main purpose in setting up this bank is to stimulate banking development in the rural areas and to follow a banking "policy which would be in effective consonance with national policies adopted by the Government without departing from the canons of sound business." To the same order of things belongs the creation of various credit institutions which have taken over some of the functions performed by commercial banks in some other countries. Reluctance on the part of the commercial banks to provide long-term finance for industries has often-times been mentioned as a serious obstacle to industrial growth. Although, in effect, the practice followed by the Indian joint-stock banks of rolling over a substantial part of their short-term advances to industries amounts to some sort of long-term financing, yet the accommodation provided in this manner is quite insufficient in relation to the needs. The Industrial Finance Corporation of India established in 1948 and the State Financial Corporations set up in the States attempt to cover this lacunæ as far as possible. The Reserve Bank's participation in the share capital of these Corporations, as well as in their management and operation, has resulted in introducing a measure of co-ordination between their activities. In order to meet the medium-term financial needs of medium-sized industrial concerns (that is, those having paid-up capital and reserves not exceeding Rs. 2½ crores) and to secure in this matter the assistance and co-operation of the leading commercial banks which have the advantages of flexibility in operation and wider contact with industry and trade, the Refinance Corporation for Industry Private Ltd. was set up recently (5th June 1958). The resources of this institution, amounting to Rs. 38.5 crores (contributed by the Reserve Bank, the State Bank, the Government, the Life Insurance Corporation and 14 of the larger scheduled banks), are to be utilised to provide re-lending facilities against medium-term loans granted by the member-banks to medium-sized units in the private sector.

These corporations form an institution by themselves and are organised under the direction and with the co-operation and assistance of the State, in order to meet certain specific requirements of industry. The justification for their creation is to be found in the inadequate response of the private sector to the needs of the economy. Also, they are a better means of channelling national savings into lines of investment that are considered desirable and necessary in the context of planned economic development. In a sense, they represent the counterpart, in the banking sphere, of the expansion of the public sector in the industrial sphere. Their establishment has also resulted in the forging of a link between the commercial banks, on the one hand, and the Reserve Bank and the Government, on the other.

Extension of Banking Facilities

The financial needs of business and industrial enterprises rise with the level of economic activity and national income. This need can be met only if banks succeed in mobilising greater resources through the agency of branches already established and by branch expansion in areas where banking is not developed. It is certain that there has of late been substantial increase in the income of the people in the rural areas of our country. Recent price trends indicate that the terms of trade have on the whole been favourable to agriculture. While the index number of wholesale prices of all commodities (Base 1952-53=100) moved up from 101.2 in 1953-54 to above 116 points in the third quarter of 1958, that of food articles went up from 100.1 to 120 and industrial raw materials from 107.4 to about 118 points in the same period. On the other hand, manufactures registered a rise of less than eight points from 100.7 in January 1958 to 108.5 in September. Although this disparity in the trend has been reduced to some extent in the last few months, the fact that the agricultural sector had benefited by this movement of relative prices cannot be disputed. Between 1954-55 and 1956-57 agricultural income increased from Rs. 4,350 crores to Rs. 5,690 crores or by 31 per cent., while income from mining, manufacturing and small enterprises rose from Rs. 1,800 crores to Rs. 1,970 crores or by 9 per cent. It is, therefore, fair to assume that there is much scope for expansion of banking in the rural areas of the country.

But the progress so far has been disappointing. Between January 1951 and November 1958, the number of offices of scheduled and non-scheduled banks in India increased from 4,119 to 4,518, this being the result of an increase in the number of offices of the State Bank from 391 to 696, foreign banks from 64 to 67 and Indian scheduled banks from 2,191 to 2,841 and a decline in the number of non-scheduled banks from 1,473 to 914. What is required is greater diversification and decentralisation in banking. In actual fact, however, there has been a great deal of concentration in particular areas of the country. Of the total number of 392 reporting banks in 1957, only 29 or 7 per cent. had paid-up capital and reserves of over Rs. 50 lakhs. These 29 banks accounted for Rs. 1,072.3 crores out of the total deposits of Rs. 1,203.8 crores, that is, for 89 per cent. There is thus little difference now from the position in 1952 when 6 per cent. of the total reporting banks had capital and reserves of over Rs. 50 lakhs and accounted for 86 per cent. of the total deposits. Apart from this concentration, there is considerable disparity in the development of banking in different areas of the country which cannot be explained by the mere difference in standards of economic advancement. Of the 3,270 offices of scheduled banks in 1957, Bombay had 696, Madras 423, Uttar Pradesh 338, Punjab 271, and Mysore 256. This distribution, however, does not reflect the extent to which banking facilities are really available for the people. Thus, while Punjab had one bank for 59,000 people, the number of people per bank in Bombay was 68,678, in Madras 70,922 and in Mysore 74,219. West Bengal had 197 offices, but one for as many as 132,995 people. *Per capita* deposits ranged from Rs. 3.3 in Orissa to Rs. 94.4 in West Bengal and Rs. 89.8 in Bombay. Thus, in West Bengal, while the number of banks is small considering the population, deposit per head is the highest. It would, therefore, appear that, even if we take into account only developed areas in the country, there is considerable scope for expansion in particular States. At any rate, the disparity in income and standard of development between the different States is not so much as to warrant that degree of variation in the availability of banking facilities as is found at present.

TEXTILE EXPORTS TO AFRICAN MARKETS

DELEGATION SUGGESTS MEASURES FOR PROMOTING THEM

THE Indian textile delegation to British East Africa, Madagascar, Mauritius, Belgian Congo, and Federation of Rhodesia and Nyasaland, sponsored by the Cotton Textiles Export Promotion Council, to the report of which a brief reference was made in these columns last week, has made a thorough and balanced assessment of the outlook for Indian textile exports to these countries and suggested, in clear-cut terms, the ways and means of pushing up the sales. The delegation's report is valuable, because of the continued downward trend in India's export trade in textiles and the need for arresting it with a view not only to earning the much needed foreign exchange but also to ensuring the progress of the domestic industry on a solid export base.

The delegation consisted of Messrs. Chinoobhai C. Javeri, Member of the Committee of Administration of the Cotton Textiles Export Promotion Council (leader), K. K. Mahadevia, a Director of Mafatlal group of mills, S. C. Vakil, Vice-President of the Africa and Overseas Exporters' Chamber, and C. P. Philipose, Overseas Officer of the Council, Mombasa (member-Secretary).

The East and Central African countries, Madagascar and Mauritius are important markets for Indian textiles, accounting as they do for nearly 12—13 per cent. of the aggregate exports of mill piecegoods from India. Out of the 788 million yards of cloth shipped from Bombay port during the year 1957, the share of British East Africa alone was as much as 74.60 million yards. The Federation of Rhodesia and Nyasaland bought 14.19 million yards and Mauritius 8.47 million yards. The purchases made by Zanzibar and Madagascar were comparatively small.

Rationalisation of Mills

At the very outset, the delegation has drawn attention to the changed and changing conditions of textile markets in the aforesaid countries which point to the necessity for taking timely and effective measures to augment shipments of cotton goods. According to the delegation, the East and Central African markets have become increasingly selective in terms of price and quality. Greys and cheaper varieties of coloured and dyed fabrics are going out of the markets and man-made fibre fabrics have caught the imagination of a vast section of Africans; at present, the latter fabrics account for as much as 40—50 per cent. of the total textile imports, as against 25 per cent. a few years ago. Competition from the major textile exporting countries is growing keen every day, with the result that these markets are in the advantageous position of selecting the best and the cheapest which the manufacturing countries of the world have to offer. The buyers' wishes, it is emphasised, have to be respected in every detail, if these markets are to be retained. The delegation attributes the success of India's major competitors to their ability to cater to the most exacting demands of the buyers, thanks to the installation of modern machinery and equipment in their mills. It has clearly warned that India will find it increasingly difficult to compete with these countries in the coming years and accordingly urged the immediate rationalisation of the industry. Here is what the delegation says:

"There is an urgent need for immediate rationalisation of the textile industry, if India is to regain even its present rate of exports, let alone further expansion. Here again, the process of improvement and modernisation should be continuous. With the modernisation of the mill equipment, the objective of quality at competitive price can be achieved. In view of the urgent need to increase our exports, this factor, it is hoped, will receive the attention it deserves in the appropriate quarters. Simultaneously with the modernisation of the mill machinery, the manufacturers must pay special attention to the needs of each individual market and produce new and selective designs and better qualities. Methods of processing and finishing technique have likewise to be improved. In markets such as these, designs and fashions are constantly changing, and it is essential that Indian manufacturers study and cater to the exact requirements of buyers."

The delegation has done well to refer to certain disquieting features in the cotton textile export trade. For instance, mention is made of the inadequacy of Indian sampling methods. The trade samples are often found to be too small in size and unattractive in presentation. By contrast, other exporting countries, we are told, furnish large-size samples the presentation of which is attractive and they are given away freely and liberally. Mention is also made of the standing complaint against Indian mills that they are not sufficiently keen to produce cloth according to buyers' requirements. The delegation has stressed that, in view of the growing demand for printed and dyed goods, the mills should make vigorous and determined efforts to manufacture them in designs and colours suitable for these markets and supply them at competitive prices, even at some sacrifice, since the future of India's textile trade will depend mainly on its ability to make prints and other processed goods at competitive price. In order to help mills in this task, the Textile Research Institutes have been asked to carry out special research to evolve an economic method by which Indian mills are enabled to print small quantities of 5,000 to 7,500 yards per design at competitive prices. In this connection, the delegation calls upon the Export Promotion Council to impress upon the Indian Cotton Mills' Federation to persuade their members manufacturing prints and quality cloth to undertake to sell a certain percentage of their production for export bearing whatever sacrifice it may entail.

Three Specific Suggestions

Three specific suggestions covering study of markets, sampling and packing have been put forward by the delegation. First, Indian manufacturers and exporters must make a continuous and systematic study of the export markets with a view to properly assessing the changing tastes of consumers. Secondly, the method of sampling needs considerable improvement to bring it in line with other countries. Liberal supplies of attractive got-up samples are called for. Likewise, mills must provide a minimum of one shipment sample per bale for non-greys and one per three bales in the case of greys. The relative change in the Standard Contract may be modified. Exporters must also be impressed upon to send to foreign buyers only large size samples attractively presented, instead of small cuttings, as some of them do at present. The mills may be instructed to supply them with such samples freely and liberally. Thirdly, it is necessary to revise and improve the existing packing specifications. All markings on bales must be stencilled in indelible ink. The same mode of packing and marking must also be enforced on processors. A proper machinery will have to be set up to ensure strict compliance of packing and marking regulations. The other suggestions of the delegation are summarised below:

In order to organise the export trade in textiles so as to give better service and greater satisfaction to foreign buyers, all exporters and mills selling cloth for export must be registered with the Textile Commissioner; no fees should be charged for registration and the procedure should be simple. Every application for registration is to be scrutinised in regard to the complaints pending against the applicant. The registration will be subject to annual renewal. An appropriate procedure may be evolved by the Council.

With the abolition of export duties, there is no need for opening cloth bales for customs scrutiny in Indian docks, especially when there is excise inspection before cloth bales are removed from the mills. The practice of opening bales must be discontinued, except in special cases. Alternatively, the Customs might make special arrangements for the repacking of opened bales in their original state.

Second quality cloth used by processors must bear the stamping "seconds" even after it is processed.

The Textile Research Institutes should make a special study of the problem of economic manufacture of materials like prints and other processed goods for export and recommend suitable measures necessary. These institutes must undertake to analyse samples received from exporters charging a nominal fee and furnish the report giving necessary guidance for their manufacture, with the minimum delay.

The use of the Standard Contract for export should be made compulsory on all mills in India; it may be suitably amended to ensure regular supply of proper shipment samples by mills.

Effective machinery must be set up to see that the actual dimensions of cloth pieces do not vary from those marked on the pieces. Any variation therefrom, however, should be in favour of the buyer.

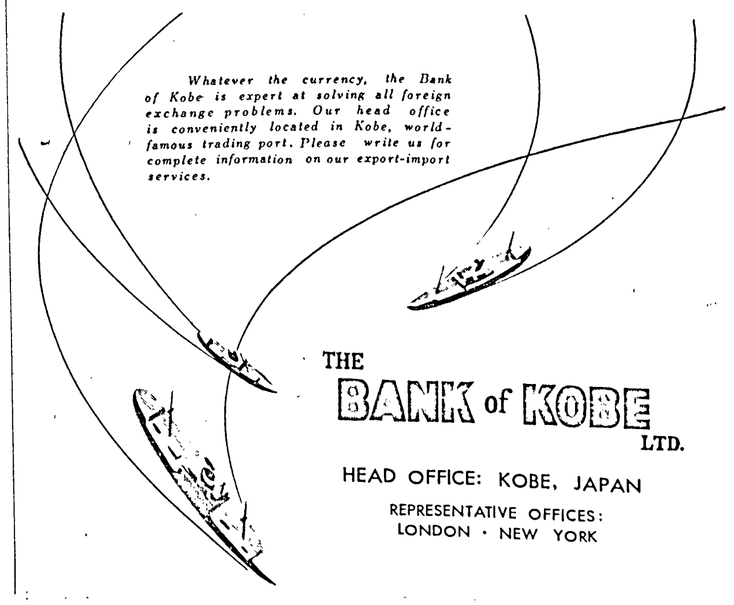
Each mill should establish a quality control section, in order to maintain the minimum standard required for export.

By some method, the mills must be prevailed upon to stamp a distinctly different number on the piece when there is a change in the counts, construction and width.

Since handloom kikoyis are out of the market on account of their prices being non-competitive, the existing restrictions on exports of mill-made kikoyis may be completely removed.

The Export Promotion Council should maintain a well-equipped and up-to-date showroom in Bombay for the benefit of foreign visitors.

All these are certainly very pertinent suggestions. If they are implemented vigorously and in right earnest, they will go a long way towards augmenting exports of Indian cloth to East and Central African countries, Madagascar and Mauritius. It may be recalled that, during the Second World War and in the immediate post-war years, India had virtually been the sole source of supply for most of these territories. The long-term outlook for Indian textile exports to these countries, as, indeed, to any other country, will, of course, depend on the pace at which modernisation of the mill industry will take place in the coming years. As the delegation has very aptly put it, the installation of automatic looms and rationalisation of production constitute the essential prerequisites for increased exports.



Whatever the currency, the Bank of Kobe is expert at solving all foreign exchange problems. Our head office is conveniently located in Kobe, world-famous trading port. Please write us for complete information on our export-import services.

TREND OF WORLD TEXTILE EXPORTS

COTTON BOARD'S ANALYSIS

From A Special Correspondent

MANCHESTER, 14th April

HOWEVER badly Lancashire cotton cloth exports fared during 1958, some consolation can be gained from the fact that practically all the other major exporting countries suffered almost as much. This is made clear in the latest statistical review published by the Cotton Board, which provides details of the overseas shipments recorded by those countries which are traditional suppliers of cotton goods to the rest of the world.

MANCHESTER LETTER

During the year, the decline in exports of cotton cloth was about 13 per cent. as compared with 1957. Only Hong Kong, Italy and the Netherlands made any progress, while the fall in shipments from India was particularly large, amounting to as much as 30 per cent. Comparative figures for the various countries concerned are shown below:—

(In million yards)

	1958			1957		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K. ..	384.1	84.4	468.5	455.8	111.2	567.0
U.S. ..	467.4	145.7	*613.1	559.4	207.9	767.3
Japan ..	1,245.3	1,279.3	2,524.6	1,468.4	1,370.0	2,838.4
India ..	468.1	12.2	†480.3	879.6	2.8	882.4
Holland ..	267.1	48.0	315.1	250.1	43.8	298.9
France ..	308.8	153.0	461.8	317.8	141.4	459.2
Germany ..	149.1	150.1	†299.2	217.6	229.2	446.8
Italy ..	101.1	84.2	*185.3	106.5	122.8	229.3
Belgium ..	139.0	56.9	†195.9	224.4	81.8	306.2
Hong Kong ..	195.7	19.8	*215.5	190.3	38.9	235.2
Portugal ..	123.7	4.6	128.3	127.7	5.1	132.8
Switzerland ..	56.6	31.0	87.6	58.5	24.6	83.1

* Eleven months. † Nine months.

Exports of fabrics from man-made fibres declined by about 9 per cent., with France and Switzerland being the only countries to gain much ground. The decline in world trade in this branch was mainly due to large decreases in shipments from Japan, the United Kingdom and the United States. When textile goods of cotton and man-made fibres are combined, it is noticeable that France has so improved her position that her shipments abroad are only fractionally below those recorded by the United Kingdom. Japan remains far and away the largest world supplier of cotton and rayon goods, followed at a discreet distance by the United States and India.

The survey underlines details already given regarding current Lancashire trade. After recording a fall of 36,000 workers last year, equivalent to 13 per cent. of the labour force, the review observes that the running down of stocks of cloth at all stages of distribution kept production below the reduced level of final offtake brought about by the continuing high rate of imports and the sharp fall in exports. The abandonment of the price maintenance schemes following the judgment of the Restrictive Practices Court did not lead to the expected massive broadening of demand, the survey adds, presumably because of the continuing weakness of raw cotton prices and also possibly because of irregularities in spinners' quotations.

Dealing with the situation abroad, the Cotton Board circular describes a marked improvement in the textile position in the United States in the final months of last year when there was a very large increase in purchases of cloth. In the final quarter of 1958, mill consumption of raw cotton was slightly higher than in the corresponding quarter twelve months previously. Despite strict curtailment of production in Japan, a reduction in stocks did not follow to the extent anticipated. The rate of production curtailment for cotton yarn is likely to be reduced from 30 per cent. to 25 per cent. from July onwards.

An improvement has also occurred in the position of the Indian cotton industry, although stocks of cloth remain higher than expected. At the end of last year, these amounted to 874 million yards and shipments in the fourth quarter, while slightly more than in the preceding quarter, were well below the comparable level for 1957.

Among the European cotton industries, Spain and Portugal were the only large producers to record an advance in output for the last quarter of 1958 as compared with a year previously. Western European output of cotton yarn in 1958 was 4 per cent. less, while exports of cotton cloth from the area fell by 3½ per cent.

Consultations on Cotton

Members of two Lancashire missions which have been engaged in talks with foreign producers of raw cotton have lately returned to this country. Reports from them are now to hand about the prospects of using larger quantities of Sudanese and Pakistani cotton after the decline in the consumption of such types in the past season or two.

The dependence of the Sudan on the country's cotton crop is emphasised in the report submitted to the Manchester Cotton Association by its representative, Mr. W. Williams. Reserves of capital are practically exhausted, he declares, while heavy commitments are still outstanding. There are signs, however, that realism is returning to Sudanese cotton prices after a period when values have been impossibly high, resulting in two seasons when the crops have been very difficult to shift.

Mr. Williams predicts that the present system of selling Sudan cotton with undisclosed reserve prices will continue. The authorities, however, now seem to recognise the importance of securing a shorter staple, an earlier maturing type, and the necessity to lower costs of production.

As the raw material is likely to remain the chief source of the country's foreign exchange, the mission contends that over-pricing will not be repeated, and that the cotton will be sold at competitive prices. Although barter transactions are disliked, this system of trading may be forced on the Sudan by those countries which favour its use.

Both in the Sudan and in Pakistan, the Lancashire envoys received a cordial welcome and the foreign farmers were anxious to obtain their views on the production and marketing of their crops. The delegates who visited Pakistan at the invitation of the Karachi Cotton Association were impressed by the real efforts being made to maintain and improve quality standards of cotton cultivation.

This mission emphasised that an increased offtake of Pakistani cotton would depend very largely on whether this improvement could be maintained. As a result of the visit, the delegation was able to negotiate satisfactory payment and delivery conditions which should facilitate increased trade in raw cotton between the two countries, always provided that continuity of supply of the right types of material can be secured.

Commonwealth Cotton Supplies

A warning to cotton producing countries to give serious attention to maintaining their standards was given in Manchester by Lord Derby, President of the British Cotton Growing Association. "Today customers do not need to go in search of supplies, but can afford to wait for selling agencies to make attractive offers," he told the annual meeting of the Association. "Consequently, quality represented by regular grade and staple becomes once more a very important selling factor." Peasant producers, he added, could do much to help themselves by adopting improved cultivation methods, as yields in the rain-grown areas of Africa were relatively low.

Commenting on his recent visits to British cotton growing territories in Africa, Lord Derby congratulated the Nigerian farmers on producing the largest cotton crop ever handled in the area during 1958. This exceeded 240,000 bales, and he was hopeful that further progress would be made in growing cotton in this area.

Alarm about the future of cotton growing in Uganda was expressed by Lord Derby. He said: "The moment you educate an African his aim and ambition in life is to become a clerk. The thought of being an engineer is at the moment repugnant to them, as they consider it a menial occupation. The result is that there are virtually no African engineers in the ginneries in Uganda."—*All Rights Reserved.*

The questions relating to the revision of printing quota for cotton textile mills and the control of printing by independent machine processors, having due regard to the interests of hand-printing industry, were discussed by the Advisory Committee on Cotton Textile Industry at a meeting held in Bombay on the 18th inst. The Committee constituted a five-member sub-committee consisting of the representatives of the All-India Handicrafts Board and some members of the Committee representing mill interests and machine processors to consider the questions. It also appointed an *ad hoc* group to examine matters pertaining to rationalisation, modernisation and maintenance of machinery of the textile units. It further decided to associate some members with the technical officers of the Textile Commissioner's Office to go into the question of a comprehensive review and relaxation of textile controls.

MODERNISATION OF TEXTILE MILLS

MR. RAMNATH PODAR'S PLEA

AN earnest appeal for the adoption of policies that would enable the cotton textile industry to improve its competitive position in the domestic and foreign markets was made by Mr. Ramnath A. Podar, Chairman of the Bombay Millowners' Association, in his address to the annual general meeting of the Association held at Bombay on the 16th inst. The crisis in the textile industry, he said, called for bold and statesmanlike action. Since the real trouble was consumer resistance to prices, especially in regard to coarse and medium varieties, the recovery of the industry would be ensured if there was an increase in the purchasing power of the consumers. However welcome an increase in the buying power of people, it was unwise, Mr. Podar said, to allow the fate of the industry to be determined by such fortuitous factors. The industry must be allowed to acquire the ability to offer its products at prices consumers could afford. This was possible, according to him, provided proper resilience was promoted in the cost structure of the industry. Raw material, that is cotton, accounted for 48 to 52 per cent. of the cost element of the industry, wages 25 to 32 per cent., stores 9 to 11 per cent., power 3 to 5 per cent. and other expenses 3 to 6 per cent. Since the first two items constituted the major elements of cost it was imperative that they should not be allowed to cause a serious distortion of the cost structure.

In order to ensure stability of cotton prices, Mr. Podar pleaded for the revision of the present policy of announcing the full export quotas for cotton ahead of or at the commencement of the cotton season. Often, the earlier optimistic crop forecasts had to be drastically modified later as the season progressed, so that, due to prior export commitments, mills were threatened with short supply of domestic cotton. This involved a scramble for available lots and prices consequently rose sharply. Mr. Podar, therefore, contended that export quota should be announced only when the cotton crop was well advanced when a reliable appraisal of the crop position could be made. Such a procedure, he observed, would minimise sharp fluctuations in cotton prices.

Stability in Cotton Prices

Emphasising the need for maintaining the price of Indian cotton at a reasonable level, Mr. Podar pointed out that, in recent months, there had been a marked fall in the prices of foreign cottons, while those of Indian growth had risen to a level which had no relation whatsoever to world parity. In the interest of the domestic consumer of cloth and of export promotion such a development should not be encouraged. Indeed, he pointed out, the scales would be heavily weighted against textile exports as 96 per cent. of the cloth shipped from this country were made from Indian cotton. There must also be a steady and even flow of foreign cottons into the country, so that mills using them exclusively might not feel the shortage and thus be compelled to switch over to Indian cotton.

The approach to the question of wages, which constituted the second largest element of cost, Mr. Podar emphasised, should be based on realism. He quoted figures to show that textile labour had benefited a great deal since the war. The average monthly earnings of a Bombay cotton mill worker, for instance, had shot up to over Rs. 132 in 1958 in direct wage alone. His emoluments, including non-wage elements, now amounted to Rs. 160 per month. Mr. Podar admitted that the worker, like any other member of the community, was entitled to a higher standard of living, but any increase in his emoluments, he emphasised, could be countenanced only in the context of the ability of the industry to pay and the willingness of the worker to do a fair day's work.

Rationalisation and modernisation, which alone could improve the capacity of the industry to pay higher wages, were, therefore, of utmost importance. The Government of India had accepted the recommendations of the Textile Enquiry Committee for the installation of about 3,000 automatic looms in the mill sector for the purpose of promoting export of cloth. It had also agreed to the replacement of existing looms by automatic looms at the rate of 2,500 looms per annum over a period of three years. Although this was an important step towards a long delayed reform, Mr. Podar felt that, considering the large magnitude of the looms that needed replacement, it did not go far enough.

The Chairman underlined the importance of enlisting the co-operation of workers in pulling the industry out of the rut. For, the value of even the small concession provided by the Government could be reduced to naught if labour chose not to co-operate. He, however, felt that the terms and conditions laid down at the Fifteenth Labour Conference for the introduction of up-to-date machinery were too rigorous and required revision in the light of the conditions now obtaining, so that stipulations on modernisation should not become a millstone around the neck of the industry. The main object of modernisation was producing cloth at lower cost and the benefit of lower cost could not accrue to the industry if it were prevented from effecting economies in its wage cost.

The Chairman welcomed the realisation among those in authority of the urgent need for modernisation of equipments in factories. As far as the textile industry was concerned, he added, even for purposes of replacement and renovation, machineries of the conventional type should not be used. For instance, ordinary looms should not be replaced by ordinary looms but only by automatic looms, because it is only the latter that can help the industry to win markets.

Fear of Unemployment Unfounded

Refuting the contention that modernisation led to retrenchment of workers and the swelling of the ranks of the unemployed, Mr. Podar observed:

"Indeed, modernisation and automation represent a process of rejuvenation which alone can keep an industry stable and prosperous. The advantages of using modern and automatic machinery have been discussed by the British Working Party for Cotton which says that 'the change to automatic looms shows by far the largest and most consistent advantage of any change in equipment averaging about 20 per cent. of the operating cost and going up to 25 per cent. even with the very moderate number of looms per weaver allowed for in the calculations.' Rationalisation and modernisation thus hold the key to the problem of costs. I, therefore, plead that, in the interests of the industry, the worker and the consumer, every facility should be given for hastening the reform. After all, the maximum displacement of labour is likely to be about one per cent. per year distributed throughout the industry in the country. Considered in the wider context of new employment, I am sure this small displacement will not involve much hardship to the worker, especially when the advantages accruing from it are considerable and so many new avenues for alternative employment are fast increasing."

Mr. Podar urged for a judicious review of the patronage and the subventions given to the non-mill sector of the industry. He conceded that, as labour-intensive enterprises, handlooms and the cottage powerlooms had a place in the country's economy but the way to encourage them was certainly not by imposing heavy burdens and restrictions on the mill sector and by demanding similar sacrifices from the public. He wondered whether the large sums of money spent on the non-mill sectors were not in excess of requirements. The heavy weightage enjoyed by the handlooms and the cottage powerlooms had already made deep inroads into the mill sector. Such a process of blood transfusion from the mill sector to the other branches of the industry should not be carried to the extreme. Otherwise, Mr. Podar warned, the donor himself might become anæmic.

Restarting Closed Mills

The policy of restarting closed mills in the name of providing unemployment relief was severely criticised by Mr. Podar. This policy, he observed, was not in the best interest of the nation, because it ignored the fundamental fact that prevention was better than cure. He

U.P. SUGAR INDUSTRY IN DISTRESS

SOME SUGGESTIONS FOR IMPROVING CONDITIONS

THERE was not much in the speech of Dr. Sampurnanand, Chief Minister of Uttar Pradesh, at the annual meeting of the U.P. Branch of the Indian Sugar Mills Association held at Lucknow last week, that would infuse confidence into the State's sugar millowners. All that the Chief Minister said on the various points raised by the President, Mr. S. S. Kanoria—a brief reference to Mr. Kanoria's address was made in our last issue, *vide* page 631—was that the points would receive attention from the Government "at a suitable time and place." Instead of giving specific assurances at least regarding the most pressing problems confronting the industry, he merely stated that, unless the Government, the industrialists, the cane growers and the labourers pooled all their resources, the sugar industry in U.P. was sure to go under and that would spell ruin to large numbers of persons whose fortunes were closely linked with the factories as cane growers and workers. For too long have such general statements been made by men in authority, unaccompanied by any tangible actions later, that they seem to have lost their meaning.

It will be recalled that the percentage share of U.P. in the total production of sugar has gone down from 54.6 in 1939-40 to 47.7 in 1957-58 and is expected to decline further to 44.3 in the current season. This decline by itself is no cause for concern, because, from the point of view of India as a whole, it is but desirable that production of an article of daily consumption such as sugar should be fairly well dispersed if conditions for such dispersal are favourable. Fortunately, there are regions in India which are more suited than U.P. for growing sugarcane and converting it into sugar, as is evident from the fact that, in recent years, much of the growth in sugar industry has been in the Deccan and South India. This is a healthy development and should be encouraged by all possible means. But this is no reason why the long-established sugar factories in Uttar Pradesh should be allowed to languish or why steps should not be taken to make sugarcane growing in that State an economic proposition. How disquieting are the conditions in the U.P. sugar economy was vividly described by Mr. Kanoria as follows:

"These (that is, the handicaps from which the sugar factories in the State are suffering) are: unstable supply of raw material due to vagaries of nature but mainly owing to diversion to *gur* and unhealthy growth of *khandsari*; high cost of cane due to cane cess, co-operative societies' commission and extra charges on rail and road centre cane and lower recovery; low yield of cane owing to lack of irrigation and other facilities; lack of research and suitable varieties of cane; small holdings; uneconomic size of eastern U.P. factories and low duration due to overcrowding; need for rehabilitation of plant and machinery; loss of outside markets; high labour costs; lack of harmony between grower and producer; discriminatory control on sugar prices at uneconomic levels, and heavy burden of taxation."

Cane Cess

Although there is an all-India minimum price for sugarcane, the factories in U.P. are required to pay on every maund of cane a cane cess of 19 nP and co-operative societies' commission of 5 nP. The incidence of these levies on cost of sugar production comes to as much as Rs. 2.37 per maund. It may be noted here that the sugar mills in West Bengal, Kerala, Orissa, Madhya Pradesh, Rajasthan and Assam do not pay either the cane cess or the societies' commission. But these are not major producers of sugar and as such a comparison of U.P. with them is not on all fours. The mills in Madras, Bombay and Andhra, where the sugar industry is rapidly growing, pay a cess of just 3.7 nP, 18 nP and 18.4 nP per maund and no commission at all. The cess levied in Bihar and Punjab is 19 nP and 9 nP, respectively, the commission in both States being 5 nP. The cane cess in Mysore is 22 nP, but there is no co-operative societies' commission.

It will be seen from the aforesaid data that, in all the States that matter as a sizable producer of sugar, the cane cess is almost equal to that in U.P. In Madras, of course, it is substantially lower, but the sugar industry in that State is still relatively small and recovery is on the low side; in some cases, they are lower than even in U.P. Anyway, considering that the recovery per cent of sugar in U.P. is lower than in many other States, the U.P. Government would do well to concede Mr. Kanoria's plea for ensuring that the factories are not required to pay a higher price for sugarcane, including cess and co-operative societies' commission, than their confreres in other regions. Mr. Kanoria was not, however, justified in suggesting the fixation of an all-India uniform minimum price for cane, including these charges. This amounts to asking that the sugar units in other parts of India also should be subjected to the handicaps under which the units in U.P. are now working.

Cane Development

Mr. Kanoria laid special stress on the need for completely reorienting the cane development policy in the State. Evidently, he was prompted by the none too encouraging results of development work so far, as is borne out by the following statistics relating to cane yields in development zones in U.P., as compared with corresponding zones in Bombay, West Bengal, Mysore, Andhra and Madras:

States	Average yield of cane per acre—in tons				
	In 1948-49, that is, when the development scheme commenced	Progress achieved			
		1953-54	1954-55	1955-56	1956-57
Uttar Pradesh ..	12.7	16.0*	18.85	15.40	15.92
Bombay ..	31.0	42.1†	..	..	43.30†
West Bengal ..	16.1	19.8	21.0	22.0	20.47
Mysore	18.08	..	31.40	31.40	30
Andhra ..	25.0	30.3	30.46	31.81	32.49
Madras	25.0	35.3	37.9	37.43	39.44

* 17.27 tons per acre for plant and 13.7 tons per acre for ration cane, as against 19.3 tons and 12.3 tons, respectively, for 1952-53.
† Deccan Canal area.

In the considered opinion of Mr. Kanoria, the factory areas should be made the nucleus of cane development. The entire money spent on this development should be expanded only through one agency in which the factories should be allowed to play a leading part. In order to co-ordinate the activities of the factory areas, there should be a cane development board for the whole of Uttar Pradesh with an equal number of persons representing the Government, the cane growers and the sugar mills. The most immediate problems which this body would have to tackle will be to make available irrigation facilities at cheap rates by providing tube-wells, channels, masonry wells with persian wheels, etc., and to arrange better transport facilities.

In this connection, Mr. Kanoria put forward two valuable suggestions. First, the scheme for the consolidation of land holdings introduced by the State Government should be vigorously followed. It would be in the larger national interest if large cane farms are encouraged; these farms act as model farms, provide improved varieties of seed and popularise better techniques of cultivation in the neighbourhood, and thus contribute towards the benefit of the community. It is gratifying to be told by Mr. Kanoria that the U.P. Government has given the assurance that the farms which are mechanised and have higher production would not be brought within the purview of land ceilings as recommended by the Planning Commission. Secondly, adequate research on proper lines is necessary for the development of cane. A network of research stations and sub-stations with qualified personnel and necessary equipment and funds must be set up, especially in Eastern U.P., where the economics of sugar industry is very weak.

In fact, special reference was made by Mr. Kanoria to the difficulties of East U.P. factories. After pointing to the low average duration of crushing in the region, he urged the Government to embark on a practical scheme with suitable loans and subsidies for shifting some factories from the region to sites elsewhere in the State, so that the other factories may have an economic crush and opportunities to expand. On the question of rehabilitation of plant and machinery of sugar factories, he requested the Government to use its good offices to persuade the National Industrial Development Corporation to accord the same liberal facilities to the sugar industry as were being extended to jute and cotton textile industries.

Sugar Prices

Mr. Kanoria was critical of the control on the ex-mill price of sugar which, he said, had been imposed only on factories in North India, although prices in other parts were ruling higher, regardless of the prices at which the consumer got his sugar; it did not, therefore, appear that controls were imposed solely for the benefit of consumers. He pointed out that the sugar industry was most anxious to provide the consumer with sugar as cheaply as possible, after meeting its cost and a reasonable profit, but the following break-up of sugar prices during the seasons 1946-47 and 1957-58 as worked out by the Government of India would reveal that sugar prices had gone up largely due to increase in taxation:

	1946-47	1957-58
	Rs. per maund	Rs. per maund
Cane price, including transport charges ..	12.62	14.70
Government taxes—Central Excise duty, cane cess and co-operative commission	2.97	13.16
Manufacturing charges, including salary, wages and packing	3.75	5.55
Export loss	..	0.50
Overhead charges and profit subject to taxation	2.20	2.19
Total ..	21.54	36.10
Less for molasses	0.10	0.10
Ex-factory prices (per maund)	21.44	36.00

The continuance of the ex-factory price of Rs. 36 per maund for U.P. sugar mills during the current season is not justified. The production cost of these mills has gone up quite markedly as a result of lower recovery and smaller duration of crushing. If the Government is not prepared to decontrol sugar prices, it should at least raise, as Mr. Kanoria pleaded, the prices suitably, so that the mills may be able to make both ends meet and gradually rehabilitate their plant and machinery, which are getting old.

In the course of his speech, Mr. Kanoria indicated how the *per capita* consumption of sugar in U.P. continued to be more or less static, whereas that in several other States had gone up appreciably. Here are the relevant data:

(In lbs.)

States	1951-52	1952-53	1953-54	1954-55	1955-56	1956-57
Andhra ..	2.9	3.5	5.2	4.8	5.2	4.6
Assam ..	4.2	5.2	9.0	10.6	9.8	11.3
Bihar ..	4.0	5.9	5.6	5.0	6.6	7.0
Bombay ..	13.8	17.4	19.2	18.5	20.7	22.4
Madhya Pradesh ..	6.2	7.6	9.1	9.6	10.8	11.9
Madras ..	5.7	7.8	9.5	8.0	8.5	9.5
Mysore ..	7.8	9.6	10.4	11.8	12.4	9.1
Orissa ..	1.8	2.1	2.7	2.5	3.2	3.6
Punjab ..	12.30	19.4	19.8	15.4	20.8	19.1
Rajasthan ..	4.2	8.2	7.9	7.7	9.6	9.5
U.P. ..	5.9	9.8	8.5	6.3	8.9	6.6
West Bengal	13.2	20.9	18.6	18.6	19.5	17.2
All-India ..	7.3	10.3	11.0	10.5	11.7	11.7

A notable point which Mr. Kanoria stressed was that "sugar can be produced more economically by expanding the present factories rather than by putting up new ones." It must, however, be emphasised that the scope for achieving higher production of sugar at an economic cost through expansion of existing units in Uttar Pradesh is rather limited. For this State, since it lies in the sub-tropical region, is not so suitable for cane development as States lying in the tropical region of South India. The future expansion of sugar industry should, therefore, be confined mostly to the Deccan and South India. But, as already stated, if availability of sugarcane in the factory areas can be expanded through intensive cultivation and through curbs on production of *gur* and *khandsari*, there would be no harm in permitting the relevant sugar factories to raise their capacity, in order to crush the increased supply of sugarcane.

STOCKS OF JUTE GOODS DECLINE

OUTPUT OF HESSIAN EXCEEDS SACKING

THE heavy goods section of the Calcutta jute goods market has not derived much inspiration from the decline in output of sacking during the month of March and the substantial fall in stocks thereof at the end of the month. No doubt, there has been a slight improvement in prices during the last few days, but the undertone does not show any perceptible change for the better. This is presumably due to the fact that the decline in overall stocks of manufactured goods with mills, particularly that of sacking, during the last two months is due more to a drop in output than to any sizable improvement in the offtake by foreign consumers.

In the month of March, the production of member-mills of the I.J.M.A. aggregated 83,300 tons, which represent a fractional fall of only 300 tons from that in February. It has, however, helped the industry maintain the downward trend in production for the third month in succession, the cumulative fall in the last three months being of the order of 13,200 tons. The decline of only 300 tons in March, though it takes the monthly output to the lowest level since October last is, indeed, very negligible, particularly in view of the fact that 1½ per cent. of the looms of member-mills of the I.J.M.A. remained sealed with effect from 2nd March 1959. It may be noted here that the sealing of 1½ per cent. of the looms would by itself mean a cut in output of 1,500 tons per month. An explanation for production not having fallen to the extent expected is that the number of working hours in March was greater at 200.5, as against 192 in February. As compared with March 1958, the production during the month under review is 2,000 tons less, while the working period was three hours more.

A variety-wise breakdown of production figures shows that the overall decline would have been more but for the rise in the output of hessian and miscellaneous constructions. The former has gone up by 1,200 tons, thus reversing the downward trend noted in the previous two months and the latter by 800 tons to a new high of 8,000 tons. The production of sacking has fallen by 2,300 tons, bringing the aggregate reduction in the last three months to 12,000 tons. At 38,100 tons, the hessian output represents an increase of 7,700 tons over the year and constitutes 45.7 per cent. of the total, as against 35.6 per cent. in March 1958. The share of sacking in the total output of goods has declined from 58 per cent. to 44.6 per cent. It will be interesting to note here that, for the first time since April 1942, the production of hessian has exceeded sacking, thanks to the recent diversion of a part of the looms from sacking to hessian output, necessitated by the continued decline in the offtake of heavy goods and the accumulation of stocks thereof. Miscellaneous varieties show a rise of 2,600 tons over the year and form 9.6 per cent. of the total, as against 6.3 per cent. a year ago, as will be seen from the following table:

Production of Jute Goods

(In tons)

	March, 1959	February, 1959	January, 1959	March, 1958
Hessian ..	38,100	36,900	40,000	30,400
Sacking ..	37,200	39,500	45,200	49,500
Others ..	8,000	7,200	6,900	5,400
Total ..	83,300	83,600	92,100	85,300

Notwithstanding a slight fall of only 300 tons in production during the month under review, the stocks of goods with mills at the end of the month show a decrease of 4,000 tons. This is on top of a fall of 3,000 tons in the previous month. Over the year, however, they represent an increase of 12,500 tons, as the following comparative table of stocks shows:

Stocks of Jute Goods

(In tons)

	As on 31st March, 1959	As on 28th Feb., 1959	As on 31st Jan., 1959	As on 31st March, 1958
Hessian ..	17,000	15,500	16,800	24,500
Sacking ..	72,600	79,900	82,700	54,800
Others ..	17,200	15,400	14,300	15,000
Total ..	106,800	110,800	113,800	94,300

The fall in overall stocks is accounted for by sacking, the stocks of which have declined by 7,300 tons to 72,600 tons, the lowest level since May 1958. They also constitute 67.9 per cent. of the total stocks, as against 58.1 per cent. at the end of March 1958. Stocks of hessian have risen by 1,500 tons to 17,000 tons, thus more than making good the decline in the previous month. As compared with the position a year ago, the hessian stocks are lower by 7,500 tons and their share in the total has shrunk from 26 per cent. to 15.9 per cent. With the rising trend in production of miscellaneous varieties, their stocks are also accumulating, the rise during the month under review alone being 1,800 tons, thus maintaining the upward trend for the sixth month in succession. It will be of interest to note that the stocks of these varieties are at a record high and have even exceeded, for the first time, the hessian stocks. Though the excess of stocks of miscellaneous goods over those of hessian is small, the trend is clear. The mills, which have been concentrating their attention on these varieties, in order to make good the reduced offtake of heavy goods, have not found the experiment very favourable, as the stocks of these are accumulating at a rapid pace. In the last six months alone, they have gone up by 5,400 tons.

The decline in stocks with mills during March has been mainly due to a rise in shipments, hessian accounting for an increase of over 1,400 tons and sacking for nearly a like extent, as will be seen from the following table of gross shipments from Calcutta based on shipping bills presented:

(In tons)

	Bags	Cloth	Total
Hessian—			
March 1959	2,304	36,840	39,034
February 1959	4,093	33,526	37,619
March 1958	2,015	31,128	33,143
Sacking—			
March 1959	27,960	847	28,807
February 1959	26,314	1,141	27,455
March 1958	27,133	679	27,812

It will be noted that, over the year, while shipments of hessian have risen by nearly 6,000 tons, those of sacking are up by only 1,000 tons. This clearly indicates the extent to which foreign demand for heavy goods has been lagging behind. This is also substantiated by figures of production and stocks published above. Thus, while production of hessian has risen over the year, its stocks have gone down substantially. In the case of sacking, while the output stands reduced, the stocks thereof are very much higher.

PLANTING BRIEFS

The hopes of harvesting a crop of 50,000 tons of coffee during the season 1959-60 are receding due to the persistence of dry weather on the hills, according to the latest *Coffee News Letter*, released by the Coffee Board. The showers which coffee growers have been anxiously awaiting since early March have not so far materialised, except at a few scattered points.

Out of the export allocation of 14,494 tons from the 1958-59 crop, 4,685 tons have so far been sold. This includes 1,100 tons sold directly by the Coffee Board to the German Democratic Republic. The internal offtake during March 1959 amounted to 2,505 tons, as against 2,022 tons in the corresponding month of 1958. Thisbrings the total offtake in the first quarter of this year to 7,478 tons, which shows an increase of nearly 5 per cent. over that in the corresponding period of last year.

Under the quality control programme, 80 tons of coffee have been shipped to London to test market reactions.

Loans aggregating Rs. 10.55 lakhs have been sanctioned to 199 applicants under the Coffee Development Plan.

* * * *

During the year ended December 1958, India exported coffee of the value of Rs. 7.18 crores, as compared with Rs. 7.73 crores in 1957. The value of tea exported during the past year was Rs. 136.54 crores, the corresponding figure for 1957 being Rs. 123.40 crores. Imports of crude rubber, including synthetic and reclaimed, rose from Rs. 4.20 crores to Rs. 4.22 crores.

* * * *

Exports of coffee from Mexico declined in 1958, in terms of both quantity and value, as compared with those in the previous year. They were 78,748 tons of shelled coffee beans of the value of 1,006.2 million pesos (equivalent to Rs. 38.33 crores), as against 88,823 tons of the value of 1,360.4 million pesos (Rs. 51.82 crores).

THE PUNJAB NATIONAL BANK LIMITED

CHAIRMAN, MR. SHANTI PRASAD JAIN'S SPEECH

SCOPE FOR UTILISATION OF SURPLUS FUNDS WITH BANKS GREATER THAN MANY THINK

THE commercial banks in India can play a more effective role than they do now by broad-basing the credit for the industrial development of the country. This view was expressed by Mr. Shanti Prasad Jain, Chairman of the Punjab National Bank Ltd., in his address to the shareholders at the One Hundred and Twelfth Ordinary General Meeting of the Bank held at New Delhi on 14th April 1959. In this connection, he welcomed the suggestion that banks should provide medium-term credit to industries. Mr. Jain was also in favour of banks making available hire-purchase finance for consumer goods.

The following is the full text of Mr. Jain's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the one hundred and twelfth ordinary general meeting of the Bank.

"With the completion of the Bank building in Parliament Street, the head office shifted to the new premises in September 1958. This is the first meeting in our new premises. From this central location, your Bank is in a better position to serve its varied constituents. The building at Underhill Road is being used to house the Staff Training College and the office of the District Manager, Delhi Circle.

New Offices

"In accordance with your Bank's policy of setting up offices in developing centres, nine branches were opened during the year, taking the total number of offices in India to 362. I had mentioned last year about the reorganisation of the Foreign Exchange Department. The reorganisation has now been effected on a regional basis to serve better the foreign trade needs of our country. There has also been some reorganisation at the head office. The Western Circle has been strengthened by the appointment of an Assistant General Manager at Bombay.

Balance Sheet 1958

"The report of your Directors and audited statement of accounts are already with you. You will observe that the profits for the year 1958 stand at Rs. 110.74 lakhs after contributing Rs. 10.87 lakhs to employees' gratuity fund trust and providing for contingencies including Rs. 4.52 lakhs brought forward. The profits of the banking industry as a whole during the year 1958 were lower, as compared to the previous year, due to higher cost of money and higher establishment expenses coupled with low demand for funds from trade and industry. Provision for taxation has been made at Rs. 33.50 lakhs and Rs. 17 lakhs transferred to reserves. Provision for bonus to staff has been raised from Rs. 18 lakhs to Rs. 30.75 lakhs. A final dividend of Re. 1 per share (free of income-tax) has been recommended, making the total 20 per cent. per annum as in the last year.

Deposits

"The deposits of your Bank during 1958 increased by Rs. 5 crores, bringing the total to more than Rs. 129 crores. Most of the increase in the deposits of your Bank has been in time deposits whereas the demand deposits increased only slightly. The demand deposits in respect of all banks (excluding the State Bank) declined by about 6.4 per cent. during 1958, while time deposits increased by about 26.8 per cent. The competition for deposits continued and the interest rates were ruling high. Your Bank did not, however, bid for deposits at the prevailing high rates. It intends pursuing the same policy this year as well. I express the hope that the inter-bank agreement reached in September last will help not only in arresting the trend of higher deposit rates but actually scale them down to a level consistent with economic banking operations.

"The advance-deposit ratio of all banks in the country registered a fall from 62.7 per cent. to 55 per cent. during the year. This has been largely due to the Reserve Bank's restrictions on advances against foodgrains, etc., and also lack of demand for funds due to curtailment of imports. Your Bank's ratio of advances to deposits has been comparatively low. It has been the keen desire of your Bank to widen the scope of advances for better and profitable employment of its funds and at the same time assist national development. With this view, your Bank has been investigating and studying the commodities market and the needs of newly developing industries. Your Bank is already taking interest to the extent possible in the development of small-scale industries. It is in fact a paradox that, while banks with surplus funds have need to employ them more profitably, the industries needing finance for expansion and development are handicapped for want of finance. Admittedly, the needs of industry for development purposes are much greater than what the financial institutions in the country find it possible to meet. In this connection, the commercial banks in the country can play a more effective role as a credit institution than they are able to do at present. The present situation of increasing funds with banks and the needs of industry and trade not being adequately met by the financial institutions and the capital market has to be considered by the Reserve Bank and the Government of India with a view to giving banks new opportunities.

Investments

"With the availability of more funds and advances not rising, the banks have been able to pay off a substantial amount of borrowings from the Reserve Bank and enlarge their investment portfolio. Your Bank's investments in the year increased by nearly Rs. 24 crores to more than Rs. 62 crores. This investments of all Scheduled banks stood at an all-time high of Rs. 638 crores and in Government Securities at the end of 1958 they were as much as 40.50 per cent. of deposits compared with 31.69 per cent. at the end of 1957.

"This leads me to the general trends affecting our economy and its development. The last two years have been a difficult period for our country. Many hurdles appeared in the path of the Plan's progress. But for the kindly, timely and liberal measures of assistance in terms of food supplies, aids and loans from friendly foreign countries, the World Bank and other financial institutions, it would have been impossible to meet the crisis that faced the country. The World Bank under the stewardship of Mr. Eugene Black has been taking a lead in mobilising assistance for India's development. Mr. Erhard of West Germany and Mr. Samuel Waugh, President, Export-Import Bank, U.S.A. have been responsible for positive measures of help. It is the flow of goodwill from various directions through many channels that we experienced. This has been the silver lining.

Third Plan: Resources—Internal and External

"The need of our country is more production, larger development at a faster rate and larger savings for productive investment. In order to meet the needs of employment and higher living standards, there should be progressive acceleration in the rate of development of our economy. The tempo of development has to be kept high. Obviously, the ensuing Plan has to be larger. With the need for a big Plan, the pressure on resources, domestic and foreign, should obviously prove larger.

"During the last two years, so far as foreign resources were concerned, we were able to pull through only the core of the Plan with finance from abroad substantially through governmental agencies. Our capacity to borrow has been strained. Our requirements are bound to grow higher with a faster rate of economic development. Having regard to this, our ideas and policies would need some alteration. Some adjustment in the quantum of foreign exchange demand is possible through a discerning policy on imports. Imports are already greatly pruned, but further scrutiny is possible in certain directions. Essential developmental needs should be able to get precedence over production of less essential goods. There may be selective imports giving higher priority to developmental imports to meet the more basic needs of the economy. Even with these changes, the demand for foreign exchange would remain considerable and be beyond our capacity with our present technique of borrowing. The Government and the Planning Commission should study the industrial policy from the point of view of an appropriate reshaping. Apart from Government-to-Government borrowings from abroad, foreign capital both in the shape of private loans and equity participation should be induced to come into the country, work with the people shoulder to shoulder in the development of the country's economy and share the prosperity. Such private projects will be self-propelling.

Internal Resources

"So far as internal resources are concerned, many economists and experts have engaged themselves in analysing and working out the effects of increased national income and the channels of utilisation. They have also been assessing the percentage of national income to be saved for development and what and how it could be attracted to the exchequer. The invariable conclusion of the experts appears to have been that adequate resources are not saved by the society on account of increased consumption arising from higher national income. This has led the Government to the policy of cutting consumption through higher and higher excise duties and introducing compulsion on savings through higher and new taxes, provident fund, small savings and even proposing compulsory insurance. This policy tried during the past few years has not yielded and does not appear likely to yield sufficient resources to the Government for carrying on the development programme at the desired level. On the other hand, the policy has resulted in lower production even in the existing industries. Thus, in effect, the policy of creating compulsory savings by reducing consumption, so that the money may be utilised for development to create employment, has led to non-utilisation of available industrial capacity creating unemployment. This offshoot of the policy needs study and review by the Planning Commission and the Government.

Development and Private Enterprise

"In implementing the policy of compulsory mobilisation of domestic resources for development, it is the State which comes in for more prominent part. Incentives to efforts and initiative of individuals are relegated to a secondary place, though they are appreciated in principle. In this connection. the larger enterprises in the public sector are in themselves useful in the development of the country. Many of the big projects generate factors helpful to the economy. This is so especially with regard to the steel plants, electric grids, etc. But criticisms arise when public resources are utilised in fields in which individuals are anxious to carry on business and where they can operate more efficiently. Individual resources that could be available for development and which would have induced many others to save are siphoned off. Such criticisms as are made are obviously not against the public sector or public sector enterprises as such, but only against the policy of including such fields of activity possible under individual initiative into the public sector.

Bank Finance for Development

"In widening the base of industrial development, the commercial banks in the country can play a more effective role by extending necessary credit. The Reserve Bank of India under the leadership of its Governor, Shri H. V. R. Iengar, with his knowledge of industrial development in this country and outside has given a sort of blessing to banks extending medium credit to industries. This will enable the banks to acquire experience in a new class of business and, in due course, contribute further through the new channels to the development of the economy.

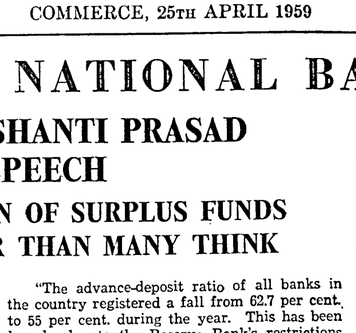
Housing and Hire Purchase

— "In recent years, the banks have learnt the technique of financing hire purchase of consumer goods. The system of hire purchase has in the past few years greatly helped the development of road transport in our country, reducing pressure on the railway system. There is great scope for extending the system leading to increased consumption of different consumer goods and expansion of industries. This technique of financing can be further extended to apply to small individual houses which will not cost more than either a car or a truck. Such small houses costing anything between Rs. 10,000 to Rs. 30,000 should be easily and readily marketable. In Western Europe, credit is being extended on such securities to housing societies. A great handicap in this respect in our country is that the land laws both in rural and urban areas are very rigorous. This needs careful study by the Central Ministry and State Governments.

Results Through Incentives and Initiative

"The purpose of our Plans is to create a better life for the people. In this effort, the approach makes for the difference between the communist and the democratic ways of life. What is sought to be achieved through an element of compulsion in the communist way of life is sought to be achieved in the democratic way of life through incentives and initiative. It is a truth under any circumstances that compulsion produces minimum results with maximum effort. Incentives and initiative produce maximum out of the individual with the least effort. The system of incentives has been recognised in the communist way of life, as is evident from the introduction of output awards, bonus, etc. The more efficient machinery of the democratic way of life is thus being used in the communist society while keeping the element of compulsion in the overall structure. India, that has chosen the democratic form of Government and democratic way of life, must use the means that count for results, sure and enduring."

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.



Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need — jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

THE INDIAN OVERSEAS BANK LIMITED, MADRAS

Branches at: AHMEDABAD . BOMBAY . CALCUTTA . CUTTACK HYDERABAD . MADRAS . NEW DELHI and throughout South India. *Overseas Branches*: BANGKOK . COLOMBO . HONGKONG . IPOH. KLANG . KUALA LUMPUR . MALACCA . PENANG . RANGOON. SINGAPORE.

How do your costs compare?

How does your performance rate?

Is there wasteful or avoidable expenditure on your plant?

Let us do the worrying for questions like these...and help you find the answers. It's not just enough, if you compare current costs and performance with what these have been in the past or with what are accepted as normal. *Do costs and performance compare with what these should really be?* That's the acid test ... and we conduct it.

acbi *diagnoses* and *prescribes*... you are not only told why wasteful expenditure occurs, but precisely what-remedial action you should take.

acbi is currently assisting industries in both public and private sectors. If you have problems relating to cost control, labour-management relations, job evaluation, work study, production control, quality control, material handling, office reorganisation etc., you'll do well to.

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur, Ltd., for the year ended 31st December, 1958.

After providing for all expenses the net profit of the Bank for the year amounted to Rs. 7,67,344.65 to which is to be added Rs. 20,475.73 brought forward from last year. The Directors have made the following appropriations of the available profit :—

	Rs. nP.
Provision for bad and doubtful debts	5,17,464.58
Provision for Staff Gratuity Fund and Bonus	1,25,000.00
Provision for Taxes	75,000.00
Reserve under Section 17 of the Banking Companies Act	35,000.00
Other Reserves	15,000.00

and the balance of Rs. 20,355.80 be carried forward to next year's account.

The Directors regret that during the year the Bank had to provide for certain bad debts as stated above and as such dividend to the Shareholders had to be passed over.

The Bank's investments appear in the Balance Sheet at below market value.

At the meeting of the shareholders held on 15th November, 1958, a proposal to constitute this Bank as a subsidiary to the State Bank of India was adopted. To give effect to this proposal a Bill called the State Bank of India Subsidiary Banks Bill, 1959, was introduced in the Lok Sabha on 4th March, 1959. The Bill provides for payment of compensation to the shareholders of this Bank on the basis of break up value of the share. As soon as the Bill is passed by the Lok Sabha the State Bank of India will proceed to determine the break up value of the share of this Bank according to the principles accepted by the shareholders at the aforesaid meeting.

During the year Shri Sunderlal Tholia, one of the founder Directors of the Bank, resigned on his attaining the age of 65 years. The Directors have pleasure in placing on record their appreciation of his services to the Bank.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for reappointment.

1. Shri G. D. Somani, M.P. 2. Shri Rajmal Surana.

The Directors wish to convey their thanks to the depositors for their valuable support and confidence and to the members of the Staff of the Bank for their devoted services.

Shareholders are requested to appoint Auditors for the current year and fix their remuneration.

For and on behalf of the Board,
G. D. SOMANI,
Chairman.

JAIPUR, 4th April, 1959.

IMPRESSIONS OF WORLD BANKING—III

RETAIL BANKING IN U.S.—DISCOUNT MARKET IN LONDON—MIRACLE OF GERMAN RECOVERY

By G. Lakshminarayanan

ASSISTANT GENERAL MANAGER, INDIAN OVERSEAS BANK, LTD.

THE First National City Bank of New York announces in its annual report that, of the 100 leading U.S. corporations, 98 are its customers, and this, with the same enthusiasm with which it announces the "challenge of champions," a special drive by its 7,400 staff members for new savings accounts. This is another version of "retail banking," and, indeed, leading banks in the world are making a determined bid to rely on innumerable small accounts than on a few big chunks alone. While loaning rate for prime corporations is 3½ per cent., U.S. banks pay 3 per cent. interest on savings accounts. In the U.K., deposit accounts are on a week's withdrawal notice with interest 2 per cent. below bank rate, for amounts big and small. Indian banks would do well to reach the small man, every small man who can give the barest minimum to the bank, instead of entering into rate war for big deposits. Our present interest rate of 2½ per cent. on savings can also stand an increase to at least 3 per cent.

Incidentally, U.S. banks do not accept term-deposits from domestic customers. Under anti-trust laws of the realm, any agreement between themselves in the matter of commission or other charges or interest rate, is not only void but is punishable, and the Department of Justice keeps a watch on any joint action which could be regarded as a joint imposition on customers.

Yet by several decisions of each bank, banks as a rule do not accept term deposits. When asked why, it was just this: if banks accept term deposits, corporations will transfer funds from current accounts to term deposits. And savings accounts are strictly for individuals with maximum balances of $25,000 to $50,000 with rigid rules on number of withdrawals. Again, interest rate on savings bank account is uniform by the several action of each, and, in fact, even telephonic discussion between banks is avoided in such matters.

Another extension of this common interest is the insistence of minimum balances in current accounts depending on the activity in each account. This is termed compensating balance. There is also a stipulation while granting loaning limits that "commensurate balances amounting to the specific ratio of the line of credit" are maintained. The percentage varies from 10 to 35 per cent. and, barring big accounts, the stipulation applies to most advances, and there have been cases of accounts being transferred for a lesser ratio to another bank, and also subsequent re-transfer.

The London Discount Market is a hallowed name in banking. It conjures up a host of thoughts of its yeoman service to trade and industry. One conceives of a perfect organisation to raise money against usance bills of a wide description. To me at least, it was a surprise that the three main partners in the London money market are:

Borrowers—Government through the Bank of England.

Intermediaries—Discount Houses.

Lenders—Clearing banks, Commonwealth banks, foreign banks, merchant bankers, and large investors like insurance companies.

The assets of the London Discount Market amount to £1,085 million, of which £350 million are against Government bonds, £635 million are against Government Treasury Bills and £100 million against prime banks bills. On the liabilities side, capital funds stand at £35 million, and the balance of £1,050 million is borrowing power from banks and other lenders. It may be more interesting to know that banks do not figure as borrowers in this celebrated money market, but only as lenders. The explanation for this position is the very system of British banking, under which banks regulate their position around cash balance of about 8 per cent.; at the same time, elasticity is needed to absorb cash fluctuations and this is met by money at call and short notice, another 6 to 8 per cent. This call money is not lent as between banks as in India, but to the Discount Houses, *not clean*, but against Government Treasury Bills and dated loans, mostly Treasury Bills. Where banks wish to call in money, they withdraw a portion of these call loans, and where they have surplus cash over 8 per cent., they re-lend. So, in fact, there is no borrowing between bank and bank through the money market, nor any bank borrowing at all. The benefit to banking is the avoidance of a higher cash ratio, the second line funds of 6 to 8 per cent. earning market rate of interest.

As far as Discount Houses are concerned, it is essentially a question of rate differential, the spread between the yield on their Treasury Bills and bond holdings and the rate at which they borrow from banks day to day. In view of the important role of Discount Houses, Banks have agreed not to tender for Treasury Bills. A syndicate of Discount Houses makes the tender, and banks' requirements are provided by the Discount Houses themselves.

From the Government's point, this is a source of ways and means funds. For example, on a particular day, the Bank of England rate was 6 per cent., rates of current Treasury Bills ranged from 6 to 7 per cent. (the Bank rate was 7 per cent. before) and the call rate ranged between 5-1/16 per cent. to 5½ per cent., privilege money rate was 4½ per cent. Privilege money is a limit that Discount Houses enjoy from the clearing banks to which they can resort without any prior arrangement, and this is a sort of privilege they have been accorded. Apart from availability, the interest rate is about 1 per cent. lower than day-to-day rate. The aggregate or the privilege money available to the various Discount Houses is about £8 million. Discount Houses equally cooperate with the eleven clearing banks, and, in fact, operate on each bank's account for a day by rotation.

The way the Bank of England regulates interest rate is equally interesting. When it wants the rate to be steady or downward, it offers to purchase Treasury Bills of selected maturity. It knows the holders of these series, gives them the offer, and, when this is done, the money is injected into the market and the rate is stabilised. This kind of money is called "made money." If, on the other hand, the Bank wants the rate to firm up, it stops purchases and rigs the market, forcing the discount market to borrow from the banks, which is not only at the higher bank rate, but carries minimum one week's interest. This operation is called "forced to bank." As I stated at the outset, all these operations are secured against mostly Treasury Bills and to a small extent terminable bonds. Bills and bonds are issued in special denominations, in bearer form, to facilitate market operations, and every operation carries with it a packet of these bonds and bills.

This delicate structure of the discount market with a fine rates difference and the means of "privilege money," "made money" and forcing to bank, has greatly tended to make London not only a leading financial centre but one of the most competitive centres in the world. The range of call rate fluctuation is just about a sixteenth, and on this fine balancing rests the whole discount market of a billion size. Even in the midst of this exacting operation, one can hear the typically cryptic British humour and an easy disposition.

Federal Funds and Clearing Funds

The Treasury Bill market is equally active in New York. But inter-bank call money operations are in what is known as the Federal funds—akin to cheque on Reserve Bank of India. Actually, in the U.S., clearing funds are available for drawing only on the following working day, and, where an inter-bank call loan is made, the borrowing bank gives its clearing funds cheque and obtains in exchange Federal funds cheque of the lending bank, and, automatically, the call loan is repaid on the next working day, and as such strictly overnight loans. These loans are unsecured just as in India.

The growth of the Treasury Bill market in the U.K. and the U.S.A. suggests the desirability of a similar system in India. The commercial

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of 'The Bank of Jaipur, Limited,' as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 10 branches audited by us, and the unaudited returns from 30 other branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in accordance with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

banks' holding of Government Treasury Bills in India is negligible and the integration of commercial bank funds with Government ways and means would integrate the Indian money market. The odium of the central banking institution entirely absorbing Treasury Bills would be avoided and, in the fullness of time, be an effective means of regulating interest rates in India. To promote this consummation, the Reserve Bank of India could consider special incentives, say, a concessionary interest rate for Reserve Bank's advances to Scheduled Banks against Treasury Bills, say ½ per cent. lower than Bank rate. Simultaneously, the Reserve Bank could reduce buying operations in dated loans to give a fillip for Treasury Bill holdings. Encouragement to short-term Treasury Bills investment will be particularly appropriate to the rapid growth of bank deposits in India.

"Mystery" of German Recovery

A country twice at major war in a lifetime with all its concomitants, devastation, economic wreckage, severe inflation, dismemberment of the country, refugee problem and a host of trials, and yet on its feet in almost a decade with vastly accelerated economic power. That is the story of German revival. Naturally, the first enquiry of a visiting student of money and banking is the marvel of this achievement. Germany today is a world creditor, with mounting clearing surplus and with foreign exchange holdings of DM 23 billion, thrice of 1953. Export trade in 1957 was DM 36 billion, double of 1953, industrial products accounting 97 per cent. 1957 steel production was 24 million tons, iron and steel industry employs 2.3 million people out of the total industrial employment of 5.75 million. Wage and salary income in 1957 amounted to DM 82 billion. Industrial production index last year was 203 (1950=100).

The Potsdam Conference laid down the 1946 German industrial production at 75 per cent. of 1936, raised to parity in 1947. Several industrial units that escaped the wreckage of war were forcibly dismantled, including a large shipbuilding yard in Hamburg. Banking organisations were made to disintegrate from country-wide ramifications, as concentration of financial power was considered the teeth of political vandalism. But then came about the Berlin blockade, and the most massive air lift of peace time, and Germany got the green signal to rebuild herself as a buffer for democracy.

Rise of Deutsche Bank

Germany is on its own now. Industry is flourishing and banking institutions have been reintegrated. The Deutsche Bank, successor to the Suddeutsche Bank, Deutsche Bank West and Norddeutsche Bank, has emerged as the largest on the Continent. The Norddeutsche Bank started with paid-up capital of 3.5 million D.Marks, the other two with 7 million each. Successive enlargement has brought the capital to 250 million D.Marks, with right issues at par (market price DM 260, paid up DM 100)—another measure of prosperity.

Despite war loss of seven million lives and a refugee population of 10 million—20 per cent. of total population—a visitor sees no sign of war-torn Germany. Shipbuilding, which had received a heavy blow, has risen again, more modern than ever before. The Howaldts Werft, which I visited employs 9,000 workers, builds annually 100,000 tons and is fully booked up to 1962. The 60,000-ton *Queen of Scotland* has been made over to this yard for complete remodelling. As with most rivers on the Continent, the Elbe has been exploited practically every square mile. Four large shipbuilding yards span the Elbe in its course across Hamburg, which is a free port, serving as international warehouse for considerable entrepot trade. Indeed, the prosperity of Hamburg and Elbe are considered inseparable. A report goes that, when sometime in the last century Hamburg went on flames, the Chieftain of Hamburg, with vast vested interests, was in his country home. Panic-stricken, people ran up and exclaimed to him in tribulation that all was lost. The Chieftain asked with composure if the Elbe was alone on fire. The innocent people said 'no,' and he remarked: "Then the situation is not as bad. So long as we have the river Elbe, we can always have Hamburg." Thanks to the Elbe, Hamburg is the leading commercial city of Deutscheland.

The Germans themselves are unexcited about their revival. The reasons for recovery are many and varied, political opportunity, Government policy, technical know-how, basic raw material, U.S. aid and, crowning all, perseverance of the people. There was co-ordination of high order. The Government policy was tuned to a highly realistic pitch. A country which was subject to the shackles of numerous controls since the 1930s, boldly ventured on free enterprise and abolished, in a brief period, every physical control, with the lone exception of coal price, a factor of some importance to railways. Tax concessions and special incentives for ploughing back profits were granted. Industries piled up profits at 20 to 50 per cent. Foreign capital investment was freely permitted, though, of late, capital of restricted convertibility is discouraged.

Currency Reform

But, while the machine age has revolutionised production, the human hand is irreplaceable and Germany discovered that two inflations in a lifetime and the mounting spiral of prices left no incentive to work. The workers' real income came to nothing, a pound of butter costing 40 Reichsmarks. The memorable currency reform of 21st June 1948, unique for the boldness of its concept and execution, was the answer. All currency holdings became valueless that morning, except to the extent of 60 Deutsche Marks per person in the ratio of one D.Mark for 10 Reichsmark. But currencies deposited in account with banks were reckoned at one-tenth value, and half of the balance so created was blocked, and, subsequently, 70 per cent. of blocked balance was cancelled. Of the rest, 20 per cent. was released later and 10 per cent. converted into medium and long-term balance. The reform had wide repercussions on financial institutions like banks and a special procedure was adopted for them. The excess of revalued liabilities over revalued assets of each bank was made good by way of "equalisation claims" on the Government. The paid-up capital of each bank was provided at 1½ per cent. of the deposit liabilities. These equalisation claims are in effect blocked claims but, in 1955, it was decided to convert a part into Treasury Bills and bonds for sale to the rest of the economy. Still the aggregate equalisation claims run to about DM 8 billion and these are redeemable, may be in some decades, out of surplus profit transfers of the Bundesbank to the Government.

Hard Work

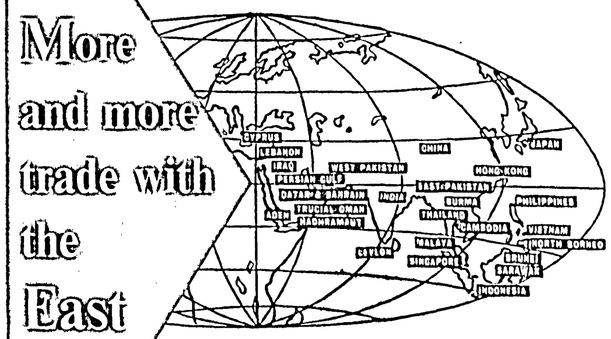
The currency reform had electric effect on the people who began working harder than ever before, some 12 hours a day in the beginning, in all sectors, industry, commerce, banking, public administration, etc. Each was prompted by the noble impulse of contributing his mite to the reconstruction of his homeland, his beloved Deutscheland, and that is the magic wand of German revival. Now the average industrial wage is 2 D.Marks per hour of 48 hours a week. The German is still one of the hardest working. So is the bank clerk and so the bank executive, who works nine hours a day. The German people have all comforts, their Mercedes car is among the best and their highways are second to none, they dress richly, they are voracious eaters. Even car drivers employed by banks have telephones at their residences.

East Berlin

The only question that has defied solution is the reunification of Germany. Refugees from East Germany are still flowing in and this is no wonder, seeing from the vast difference between the two sectors of Berlin itself. I had a peep into East Berlin, considered far better than East Germany proper. I was greatly moved by the difference between the two Berlins. I have no brief for the West, but East Berlin is deplorable, a pathetic sight. There is no cheer in the people, departmental stores are poor and unclean, cost of living is high, automobiles are so few and even the main thoroughfares look deserted. They have their homes in the Eastern sector, which means their property, family members and relatives, and for one who wishes to cross to the Western sector the problem is of many lives.

(Concluded)

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The three associated banks, The Chartered Bank, The Eastern Bank Ltd. and Allahabad Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.



Let your worry be our pleasure

THE EASTERN BANK LTD.
ALLAHABAD BANK LTD.

which together have over 80 branches in India and a complete branch service in The East extending from Cyprus to Japan.

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. JOHN LUCKHAM'S REVIEW

THE Thirty-third Annual General Meeting of the Dunlop Rubber Company (India) Ltd. was held in Calcutta on 23rd April 1959. Addressing the shareholders on the occasion, Mr. John Luckham, Managing Director, observed:

"GENTLEMEN,

"The Directors' report and accounts for the year 1958 have been in your hands for some time, and, with your permission, I will take them as read.

"You will have seen from the Directors' report that Mr. Reay Geddes resigned from your Board in March 1959. It was with very great regret that the Directors had to accept his resignation which he felt necessary to submit in view of his increased responsibilities as Managing Director of the Dunlop Rubber Company, Ltd. I am sure you will want to join me in expressing the Company's appreciation of all the advice and guidance which we have received from him.

"To fill the vacancy caused by the resignation of Mr. Reay Geddes, the Board appointed Mr. Cecil Stack who now retires by rotation and offers himself for re-election.

"Mr. Stack is now Overseas General Manager of the Dunlop Rubber Company, Ltd., which position he took up after his retirement from India two years ago. I am sure that his great experience will be of real value to the Company.

"It is also with regret that I have to report the resignations of Mr. A. W. Gillespie and Mr. F. G. W. Jackson.

"Mr. Gillespie came to India in 1935 as Secretary and Chief Accountant of the Company, and was appointed a Director in 1947. I should like to express appreciation of his services, and extend best wishes to him in his retirement.

"Mr. Jackson came to India in 1951 and has been Works Director since 1954. During his time at Sahaganj considerable expansions have taken place there and, of course, our new factory at Ambattur has been completed under Mr. Jackson's guidance. He is now taking up an appointment with the Dunlop Rubber Company, Ltd., and I should like to thank him for his valuable services and wish him success in his new appointment.

"In the places of Mr. Gillespie and Mr. Jackson, the Board are recommending the appointments of Mr. J. A. Moore and Mr. K. C. Ferguson respectively, who have each had long and varied experience in the Dunlop organisation and are fully qualified to take up these appointments.

"The Directors have the question of filling the remaining vacancies on the Board under very careful consideration.

The Year's Trading

"A further increase in production was achieved during the year under review in almost all lines, though this could not keep pace with the ever rising demand.

"The expansion of road transport, in particular long-distance goods traffic, referred to in my speech last year, resulted in a steady increase in the demand for truck tyres as the year progressed. In fact, even in the rainy season when, in the past years, a falling off in demand has always been felt, there was for the first time no respite and our order book remained full throughout the year.

"In the car tyre market, despite a fall off in demand from the car manufacturers who were affected by the general cut in import licences, our replacement sales continued to increase. During the year, plans were made for the introduction of a new and improved car tyre, the Gold Seal, and production of these tyres will commence shortly in all the popular sizes. I should mention here that the position of the car industry in 1959 has improved and the level of production is already increasing.

"Though the bicycle manufacturers were also affected by the import restrictions on components, they managed nevertheless to increase their production during the year, with a consequent rise in their offtake of tyres. The replacement demand was also the highest ever, and we were unable to meet this in full.

"Due to the rapid industrialisation of the country, the demand for our range of industrial [illegible] products rose to a level far above our present capacity. One of the most important items involved is conveyor belting and we have already put up to the Government our scheme for expansion.

"Our total sales of Dunlopillo increased during the year. There was a smaller demand from car manufacturers, but this was more than made up by increased sales of household items.

Raw Materials

"The raw material supply position was generally satisfactory, except for a temporary shortage of steel for the manufacture of bicycle rims. The Government's policy for the import of steel was altered during the second half of 1958, which resulted in some delay in securing supplies and we were unable to increase production of bicycle rims to our full capacity.

"Our consumption of rubber in 1958 increased to 15,926 tons, as against 14,424 tons in 1957. We had to import a considerable quantity of rubber in 1958, because production in India did not show any appreciable increase, being 24,327 tons, as against 23,767 tons in 1957. The total all-India consumption of rubber in 1958 touched a new record at 38,006 tons, as against 34,797 tons in 1957.

"The world price of raw rubber was considerably lower than the Indian controlled price throughout the year and, as a result, we paid to the Rubber Board Rs. 48,83,913 being the difference between the imported rubber price and the Indian controlled price.

"Prices of other principal raw materials remained steady throughout the year, but there was some increase in local transport charges.

Expansion Plans

"Last year, I expressed the hope to you that our new factory at Ambattur would be ready to start production at the beginning of this year.

"I am very happy to tell you that that hope has been fulfilled and, in fact, initial production of cycle tyres started there in December. I am sure that you would like me to express your appreciation to all those who contributed to the completion of this project on schedule.

"We now have the task of getting this new factory into full production on three shifts per day and the training of labour towards this end is proceeding well.

"During the year, our programme for increased production of giant and cycle tyres at Sahaganj was completed and the first phase of our cycle rim expansion was also ready for operation by the end of the year. However, we could not utilise the extra rim capacity immediately, as there was a raw material difficulty of which I have made mention elsewhere.

"You will recall that, as an initial step in providing the required additional finance for all this expansion, the sum of Rs. 203 lakhs was raised in 1957 by the issue of 14 lakhs of new ordinary shares of Rs. 10 each at a premium of Rs. 5 per share. This was followed by an offer to the public in September 1958, of Rs. 1 crore of 6½ per cent. debenture-stock 1968-73 at par, ranking pari passu with the balance of the original debenture-stock created in 1950. I am glad to be able to report that this issue was an unqualified success.

Profit and Loss Account

"The net profit for the year, after providing for depreciation, interest and taxation, was Rs. 82,42,813, as compared with Rs. 80,67,449 for 1957. As a result of the establishment of the Company's new factory at Ambattur, the development rebate allowable in respect of the accounting year 1958 is abnormally high, and under the Finance Act 1958 the Company is required to credit to a reserve account not less than 75 per cent. of the amount allowable. Accordingly, a sum of Rs. 30 lakhs has been transferred to development rebate reserve and the Directors do not, therefore, consider it necessary, for this year, to make a further appropriation to general reserve. After allowing for the transfer to general reserve of the expenses of the debenture-stock issue, the total reserves and surplus have been increased by approximately Rs. 25 lakhs and cover the ordinary share capital more than one and a half times. These reserves are, of course, fully employed in the business. The Directors are recommending the same rate of ordinary dividend as for 1957, that is, 16⅔ per cent. As, however, this dividend is payable for a full year on the new shares issued in the middle of 1957 the amount to be distributed is considerably higher than in the previous year, namely, Rs. 48,75,000, as against Rs. 38,25,000. The surplus carried forward will then be Rs. 22,46,000.

Balance-sheet

"The additions to fixed assets during the year amounted to Rs. 2,29,14,000, the bulk of which was in respect of buildings and plant for the new Ambattur factory. The amount of depreciation written off in 1958 was Rs. 31,47,000, as against Rs. 27,69,000 in 1957.

"Stock inventories, at Rs. 5,03,31,000, were Rs. 16,47,000 higher than at the close of the previous year, but finished goods stocks continue to be abnormally low arising from the constantly increasing demand for the Company's products. In spite of the greater sales turnover, sundry debtors remained at approximately the same level as at the end of 1957.

"Turning to the liabilities side of the balance-sheet, I have already mentioned that reserves and surplus are higher by Rs. 25 lakhs and debenture-stock by Rs. 1 crore. In addition, there has been an increase of Rs. 59 lakhs in bank borrowings. These figures reflect the large additional investment in fixed assets which has taken place during the year.

Employee Relations

"During the last year a greater strain was put upon our labour relations than at any time in the past. However, I am sure that mutual confidence has not been seriously impaired and that our management and our labour will continue to resolve their problems as in the past.

"It is essential for the country's welfare that productivity should be raised to the highest level and this is a necessary and principal step to increase the standard of living. Absenteeism is one of the factors which reduces productivity in our own and other industries, and the damaging effect of this on the country's economy is not generally realised.

"On the whole, staff and operatives have given us their loyal support and contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in thanking them."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

MARKET FOR PETROLEUM EQUIPMENT

BUYER HAS A FAIR CHOICE OF SUPPLIERS

IT seems improbable that any other enterprise can have so lengthy and varied a shopping list as the purchasing department of a major oil company. One such organisation, which over the last four years has spent an average of £50 million a year, regularly buys over 100,000 different items from as many as 3,500 U.K. suppliers. Its purchases, mostly for export, range from hypodermic needles to the largest line pipe, from tape recorders and television sets to helicopters and drilling barges.

Many of the things bought by an oil company for use at home and abroad are articles in general demand—food, cigarettes and medical supplies for the staff; pencils and paper for the drawing office; bulk chemicals, cement and paint; road vehicles, motor launches, and a wide range of engineering products. But its purchases will embrace many specialised items, such as oil country tubular goods—casing, tubing and drill pipe—drill collars, tooljoints, drilling bits and rigs. It is such specialised items as these which may properly be described as petroleum equipment in the narrower sense.

Before the war, many of the specialised items, drilling equipment in particular, could be bought only in the U.S.A. American manufacturers had a long start, not only because the United States was the cradle of the oil industry, but because the home market was so enormous. (The fact that over 49,000 wells were drilled in the U.S.A. last year, against less than 8,000 in the rest of the free world gives an inkling of the size of the U.S. market for drilling equipment.) For oil companies within the U.S.A., American manufacturers are virtually the exclusive suppliers. Since the war, however, the manufacture of petroleum equipment has made rapid progress in Europe, partly as the natural outgrowth of existing engineering industries, partly on account of the dollar shortage and the lower level of cost prevailing in European countries. In the early stages of development, American-designed equipment was made by European manufacturers under licence. This is still done; but, in recent years, there has been an increasing tendency (as there has been in the motor industry) for American manufacturers to set up subsidiary companies of their own in Europe.

Steel Producers

The European countries which have shared in this development are, inevitably, those possessing established steel and engineering industries. An idea of their relative importance as steel producers as compared with the U.S.A. is given in the accompanying table of steel production.

Steel Production

(Thousand long tons)

	1947	1957	1958*
U.S.A.	75,800	100,640	76,120
U.K.	13,700	21,700	19,670
W. Germany	9,100	24,120	22,420
France	5,640	13,880	14,370
Belgium	2,840	6,180	5,900
Italy	1,600	6,880	6,170
Luxembourg	1,690	3,440	3,350
Saar	700	3,300	3,350
Netherlands	190	1,160	1,380
Sweden	1,170	2,440	2,350
Austria	350	2,470	2,340
Japan	940	12,370	11,920
U.S.S.R.	14,270	60,290	64,020
Other countries	12,750	37,740	44,040
World total	133,800	286,500	267,300

* Provisional figures.

In the van of this new development during the immediate post-war years was the United Kingdom, the Continental countries not yet being in a position to enter this new field. In the U.K., the manufacture of petroleum equipment was stimulated by the pressure exerted on British oil companies, because of the acute shortage of dollars, to buy sterling goods for their overseas operations, and by the British Treasury's currency arrangements with U.S. oil companies operating in the sterling area. The industry has made great strides since the war and has contributed handsomely to the country's export drive; it has even begun to penetrate the difficult Canadian market in competition with U.S. suppliers. Some idea of the variety of the products in question may be gleaned from the accompanying table, which analyses the £122 million worth of orders placed with British manufacturers by oil company buyers during 1958. (Ten years earlier the value of orders was only half as much.)

Petroleum Equipment, etc., Ordered in U.K. in 1958

(Thousand £s)

Bulk chemicals	24,704
Tubulars, pipe-fittings and valves	14,907
Drilling and production equipment	10,384
Tools and machinery	9,156
Electrical equipment	8,566
Plates, sections and bars	8,053
Refinery equipment excluding pumps and valves	8,039
Automotive equipment	7,475
Drums, drum sheet and tinplate	6,401
Prime movers and compressors	4,092
Other items	20,289
Total 1958	122,066
1957	134,050
1956	153,730
1955	123,520
1954	80,390

Source: Oil Companies Materials Association, London.

The countries of the new European Economic Community—W. Germany, France, Italy, Belgium, Luxembourg and the Netherlands—are also suppliers of petroleum equipment, though, naturally, they do not all cover the entire field. International comparisons are difficult in view of the multiplicity of items involved and the fact that they are the product of so many different industries. However, it may be said that W. Germany is probably the biggest supplier after the U.K. The industry in the Federal Republic has been stimulated by the growth of exploration, producing and refining operations at home, and, for some items of equipment, W. German prices are more attractive than those quoted by U.K. manufacturers. The French equipment industry is also growing rapidly, with Government encouragement. It is supplying an increasing proportion of the equipment and materials required for prospecting and producing operations in the French Union, and also does a useful export trade. The Netherlands and Italy have recently become important suppliers for certain items. Other W. European countries also play their part: Austria and Sweden, for example, supply the oil companies with high-grade steel products, while Switzerland is a well-known supplier of gas turbines.

Outside Europe, the Japanese are becoming increasingly important suppliers of petroleum equipment, as they are of tankers. The Australians, too, are entering this field to a growing extent, and are now in a position to supply about four-fifths of the equipment and materials needed in the construction of an oil refinery. The Australian Government is doing all it can to encourage the petroleum equipment industry.

Thus, the near-monopoly of the supply of specialised equipment—particularly for the drilling and production sectors of the oil industry—possessed by American manufacturers before the war has been largely broken down. There are few items of equipment which are not now manufactured in Europe. And, if they are not made here, the reason is often commercial rather than technical: the demand may be insufficient to permit an economical scale of production. American influence remains strong, however: a great deal of petroleum equipment is made to A.P.I. or other American standard specifications, although European manufacturers are seeking increasingly to develop their own standards, even if, in many cases, these are based on American practice.

Choice of Supplies

For many of his requirements, therefore, the oil company buyer now has a fair choice of suppliers. How does he choose between them? As in almost all buying operations, the choice may, to some extent, be the result of purely personal preference, or even prejudice. One company, for instance, may be convinced that American-made drill pipe is the best in the world, whereas another may argue that W. Germany and Italy can turn out something equally good. Engineers accustomed to using one supplier's product may refuse, or only reluctantly accept, any substitute. Apart from factors such as these, there are four considerations which will influence the buyer's choice, though not necessarily in the order in which they are given here.

The first is quality. For high-duty drilling or refinery equipment, the purchasing department will generally buy the best: for the consequences of any breakdown may be most serious, in terms of time, money, or even human life. Where operating conditions are less exacting, however, there is no point in paying a higher price for a product with an excessive margin of safety. In this connection, there seems to be a danger that certain U.K. manufacturers (e.g., of electrical equipment) may price themselves out of the market by offering products with too high a safety factor, or too conservatively designed in other respects.

The next consideration is the delivery period. A long delivery period will necessitate the holding of large stocks of equipment—which may tie up an enormous amount of money. An oil company buyer is often in a hurry, because, if he does not get what he wants quickly, a projected plant may be delayed, an expensive piece of equipment may be left standing idle, or the company's operations programme may be held up. He is, therefore, under strong pressure to place his order with the supplier, who can offer the quickest delivery. This consideration was of paramount importance in the immediate post-war years when, e.g., the steel and engineering industries in the U.K. were heavily overloaded with orders. Not only were long delivery periods quoted; what was worse, delivery promises were not kept. Indeed, in those years some U.K. manufacturers were twelve months or more in arrears with their deliveries, to the great inconvenience of their customers. Much business which could have been placed with British industry, therefore, went to the U.S.A. The position is much better today. But it is still true that, for many items of equipment, U.S. delivery periods are about half those quoted by European producers. Hence, if the need is urgent, the oil company buyer may have little choice but to place his order in the U.S.A.

Currency considerations are now less important than they were. With steady progress towards convertibility in Europe, and the continuance of inflation in the U.S.A., the dollar is now much less "hard" than it was. Hence the former pressure on sterling area buyers to avoid hard currency sources is now easing.

If quality and delivery promises are satisfactory, and if there is no hard currency problem, the buyer's choice will be governed by price. Where items of equipment are manufactured in Europe under licence from U.S. principals, the selling price must generally be equivalent to that quoted in the U.S.A. Otherwise, European manufacturers are free to fix their own prices. While it is difficult to generalise about such a vast range of items, it may be said that the prices quoted by European suppliers are only infrequently above those of their American competitors.

Food

One other factor now influencing the oil company buyer is the possibility of procuring supplies locally in the country of operation. So far as food is concerned, there is, of course, a natural tendency to try to "live off the country"—though the process may be limited by dietary habits and by European, and especially American, preferences for national brands of food, drink, tobacco, etc. The existence of a large oil company demand naturally tends to stimulate the local production of essential supplies: cement is a good example. The international oil companies are always prepared to support such local suppliers, provided, of course, that the quality of their products is up to standard and their prices reasonably competitive.

The range of materials available locally is gradually being extended from relatively simple products like cement to more complex manufactures such as steel. All developing countries are anxious to have steel industries of their own, but, without some form of protection, steel production is unlikely to be economic, unless there are local supplies of iron ore and coal, together with a sizable local demand for steel products. At first, local steel industries, such as those which now exist in Mexico, Brazil, Argentina, Chile and Colombia, tend to concentrate on the simpler rolled products, e.g., heavy sections and rails, rather than on the tubes, plates and sheets in which the oil company buyer is mainly interested. However, Venezuela's first (State-owned) steelworks, which is under construction near Puerto Ordaz on the Orinoco River, will shortly be turning out tubes for oil company use, as well as a range of common rolled products. The development of an engineering industry capable of making pumps, electrical equipment, vehicles, etc., is, of course, associated with a much later stage of industrialisation.

Needless to say, oil industry equipment is also being manufactured in the communist countries, particularly the Soviet Union, Czechoslovakia, Poland and Rumania. The Soviet bloc is virtually self-sufficient in this field. There is, however, a growing tendency for petroleum equipment of various kinds to figure both as imports and exports in trade agreements between communist countries and the outside world. One reason is that, although the Russians are in many respects technically well advanced, there are certain items of equipment which they are anxious to obtain from the West; their recent efforts to procure petrochemical plant provide a good example. Another reason is that the Russians, and especially the Czechs and the Poles, are keen to sell equipment in order to obtain foreign exchange with which to buy needed imports. A third is that the offer of petroleum equipment is sometimes a useful way of appealing to Governments of underdeveloped countries.

Tubular goods, prospecting and drilling equipment are all displayed in the communists' shop window. Before the end of this year, the Syrians will be operating the Homs refinery built for them by the Czechs; they are also to receive prospecting and drilling equipment from communist sources. Similarly, India has received drilling rigs from Russia and Rumania, as well as turbo-drilling equipment. Turbodrills and other oil drilling equipment figure in the current trade agreement between the U.S.S.R. and France, while oil country tubular goods are among the items to be supplied to Austria this year under the long-term trade agreement with the U.S.S.R. Under last year's trade agreement, the Czechs were also to send tubular goods to Argentina, but they have apparently refused to supply the highest grades of tubes.

The size of orders for petroleum equipment is governed partly by the scale of existing producing and refining operations, partly by development programmes. The decline in orders for equipment placed in 1957 and 1958 was largely attributable to the big investment programmes of earlier years and to the subsequent slowing down of development work in face of somewhat less buoyant demand for petroleum products. Demand for oil is now beginning to move ahead more rapidly once again. But profits are lower, there is a good deal of spare producing and refining capacity in the world today, and the major development schemes in the Middle East and in the Sahara are already in hand. It seems likely, therefore, that new orders for petroleum equipment will, for the time being, tend to lag behind the growth of world demand for petroleum products.—*By special arrangement with Petroleum Press Service.*

ROURKELA STEEL PLANT

The Rourkela Steel Plant has moved a step forward in its progress towards full production with the firing of the first of four open-hearth furnaces on Thursday the 16th inst. by Pandit Pant, Union Home Minister. The first ingot of steel from the Rourkela Plant will be out by the time these lines are read in print. This step follows the commencement of pig iron production, formally inaugurated by President Rajendra Prasad on 3rd February, 1959.

Out of the million tons of steel ingot which the Rourkela Plant is designed to produce per annum, 750,000 tons are to be by L.D. process, under which steel is produced by blowing oxygen into molten pig iron after it is processed, and the remaining 250,000 tons are by open-hearth process. The three remaining open-hearth furnaces are at an advanced stage of construction and will go into production shortly. The steel produced in the open-hearth furnaces will be rolled into plates for shipbuilding and other similar purposes, while that under L.D. process will be converted into sheets.

Production of pig iron in Rourkela is already in full swing. According to Mr. M. Ganapathi, Resident Director and Chief Executive of the Rourkela Steel Plant, 50,000 tons of pig iron have been allocated to various foundries in the country and are waiting to be transported.

BRITISH NUCLEAR PLANTS

British nuclear power reactors could, in future, help raise living standards throughout the world. This forecast is made in a review of the prospects for the industry published in London by Political and Economic Planning, an organisation which concerns itself with studies of modern problems. The review says that it is clear there is, or will be, an overseas market for reactors. At the moment, the market will be for relatively large reactors developing over 100MW of electricity. But there is a potential market for small reactors similar to that for modestly powered gas-turbine and Diesel-powered generating sets.

"A small reactor," the review points out, "has the advantage that it can be sited where the power is needed, and its fuel requirements are small, thus doing away with transmission lines and high fuel transport costs. It cheap, it could transform areas which are now undeveloped or unexploited, and help to raise the standard of living of millions of people throughout the world who are now forced to do with little or no power and to rely on inefficient fuel burning, on human labour or on animals." To feed the reactor, the United Kingdom has adopted a fuel supply service. Fuel could be sent, for example, from Britain to Italy, and when it had been used, shipped back to the United Kingdom and reprocessed.

The review adds that, in industrial countries, particularly in Europe, atomic power is the best answer to the long-term problem that expansion is running ahead of fuel supplies, and that fuel will be more and more expensive as time goes on, so that nuclear power costs will be more and more competitive.

NEW PRODUCTS AND PROCESSES

Aircrash Recorder

AN aircraft crash recorder, which could, it is claimed, be of great value in analysing the causes of aircraft crashes, has been developed by the Aeronautical Research Laboratories of the Department of Supply, Government of Australia. Essentially, it is a very small recorder which is installed in the pilot's cockpit of an aircraft. It operates completely automatically and records and later erases essential flight data and the pilot's conversation. The instrument has an "in-built" memory, which enables it to keep on record the data over any desired period before it is erased. For example, if the "memory" is set at 10 minutes, then at all times the instrument will have on record the data of the preceding 10 minutes. In the event of a crash the instrument will have a comprehensive story of the critical 10 minutes preceding the crash. The recorder has been demonstrated to Civil Aviation authorities, aircraft manufacturers and airline operators in Australia, the United Kingdom, the United States and Canada. The instrument is claimed to have attracted considerable interest overseas and certain prominent organisations are now arranging for its manufacture and installation in important aircraft.

New Welded Steel Chains

Bennett Chain Company Pty. Ld. of Brisbane, Australia, now offer overseas markets a range of welded steel chains, used in mining, shipping, dredging and agricultural implements. In a 35,000 sq. ft. foundry, a battery of modern automatic and semi-automatic machinery turns out steel chain in sizes ranging from ¼th inch exact to 3-3/32nd inch. Main production lines are mild steel chain, nickel molybdenum chain, stainless steel, and alloy steel chain. Associated with chain production is the output of a full range of components such as grips and sling hooks, shackles, eye bolts, swivels, split links, and cold shuts. Each article is made to relevant British Standard Specifications and the laboratory is registered with the National Association of Testing Authorities. Chain is also supplied to Lloyd's specifications. Raw material for manufacture of Bennett Chains is Australian-made steel produced by the Broken Hill Pty. Ltd., in New South Wales. Huge coils of steel are fed into a battery of six modern "benders" and links are formed at the rate of from 15 to 60 a minute, according to size. The linked steel is then passed to a line-up of automatic and semi-automatic welding machines. Each chain is then resistance-welded on one side only, and the weld is swaged to the same curvature as the parent material. Welding units then weld and remove surplus material at rates varying from four to 50 links a minute. Each chain is subjected to a heat normalising process after it leaves the welding machine. Samples of each chain product undergo a series of tensile tests on a Denison Leeds hydraulic testing machine, which is capable of exerting pressures upto 30 tons. The company has been supplying steel chain to most States in Australia for many years, and to New Zealand.

Computer Controls Oil Refining Operation

The first electronic computer to control completely the operations of an oil refining unit has been installed in Port Arthur, Texas, U.S.A. According to Mr. James Foley, President of the Texas Company, up to now computers have done little more than analyse data and make calculations. The new machine, however, it is said, actually makes judgments and feeds them back into the refinery operation. With the new device, the company hopes to achieve substantial economies in operation and a marked increase in overall efficiency.

Self-cleaning Oil Filters

A new range of 30L2, 30M3 and 30L4 self-cleaning filters, which have been developed by Auto-Klean Strainers Ltd. of Middlesex, U.K., primarily to meet the need for defined mesh full-flow filteration down to 0.0015" in the lubricating oil systems of high and medium-powered turbine and diesel plant were shown at the Engineering, Marine Welding and Nuclear Energy Exhibition currently being held at Olympia, London. These filters are of all-metal plate-type construction and are cleaned in service by the normal Auto-Klean method of a turn of the handle, without interrupting the liquid flow. Flow rates of up to 11,200 gallons per hour and 5,400 gallons per hour are obtained, with defined meshes of 0.003" and 0.0015" respectively, in small compact units. In addition to the self-cleaning Auto-Klean elements, the filters incorporate a battery of magnetic elements to give added protection against ferrous particles. Also to be shown for the first time at Olympia are the Auto-Klean 05C, 10GA and 15JA all-metal plate-type filters, which also incorporate magnetic elements and operate on the principle of mesh-edge filtration. They are supplied with meshes from 0.001" upwards and can deal with flow rates up to 4,000 gallons per hour. They are designed for use with oils, distillates, paints and greases. Models are available for use with foodstuffs, beverages and other special liquids.

Packaging Material

A new polythene film for packaging a wide variety of consumer and industrial products will be introduced to the international market for the first time at the International Plastics Exhibition Olympia, 17th to 27th June). Involving an unusual processing technique and described as cast polythene film, it combines the sparkle and clarity of conventional films with superior toughness. It is ideally suitable for the packaging of everything from nuts and bolts to nylons. A special feature of the exhibit by the U.S. Industrial Chemicals Co. will show how cast polythene garment bags could be used by commercial dry cleaners to simplify customer examination of clothing and provide added protection for garments during their journey home.

SMALL-SCALE INDUSTRIES
PROGRAMME AND PROGRESS

SMALL-SCALE industries are an integral and continuing element both in the economic structure and the scheme of planning in India. In view of their vast potentialities for providing employment opportunities as well as for production, the Government of India has rightly emphasised, in its Industrial Policy Resolution, their economic importance and underlined their social significance. In the second Plan a sum of Rs. 61 crores has been provided for the small-scale industries and it is expected that these industries would provide additional employment for about 150,000 people during the Plan period. Development of small-scale industries is the primary responsibility of State Governments but the Union Government, realising the problems in different fields of this sector of industrial development and the limited resources at the disposal of State Governments, assumed certain responsibilities to assist them by way of evolving programmes and policies as also by providing financial assistance to carry out various schemes. A broad outline of the various programmes and schemes introduced for the development of small-scale industries and the progress made during the first three years of the second Plan is given in a booklet on small-scale industries published by the Union Ministry of Commerce and Industry.

Small-scale industries are defined as industries which are run with a limited number of persons, having a comparatively small capital outlay. For the purpose of providing governmental assistance, however, the official definition of small-scale industries covered, until recently, only those units that employed less than 50 workers using power or less than 100 workers without the use of power and having capital assets not exceeding Rs. 5 lakhs. This definition has been further revised and modified to include units employing less than 50 workers per shift when using power or less than hundred workers per shift when not using power with a capital investment of less than Rs. 5 lakhs, subject to certain conditions.

Help at Every Stage

A small *entrepreneur*, as is well known, has to face many handicaps such as lack of finance, inadequate knowledge of the methods and tools of production, scarcity of raw materials, non-availability of factory accommodation, lack of marketing information and marketing facilities. The Government, as a part of national policy, helps small industrial units at almost every stage, beginning with the planning of an establishment, followed by technical assistance in manufacturing processes, training of artisans, financial assistance for working capital and for buying machines and machine tools, provision of factory accommodation, etc. The nature of assistance available under these programmes and the organisations for rendering these (given within brackets) are: (1) technical know-how and industries information service (Organisation of the Development Commissioner, Small-scale industries, Small Industries Service Institutes and Extension Centres); (2) training, both technical and managerial (Small Industries Service Institutes, State Governments, Universities, Technical institutes); (3) finance (for cash loans: State Governments, State Bank of India, State Financial Corporations, Co-operative Banks, Scheduled banks and for machinery on hire purchase: National Small Industries Corporation); (4) marketing service (National Small Industries Corporation); and (5) factory accommodation (Development Commissioner, Small-scale Industries, State Governments, industrial estates, industrial colonies and co-operatives).

Since small units are normally not in a position to engage adequately qualified technicians or business consultants, the Government of India has set up a full-fledged Small Industries Service Institute in each State to render technical guidance and assistance to small industrialists in setting up units, planning production as well as solving the technical problems of existing units. There are now 15 such Small Industries Service Institutes, one in each State. These Institutes have under them what are known as Industrial Extension Centres to cater to the needs of a particular area and to render specialised operational assistance in certain specified industries. As many as 62 extension centres have been planned, of which 14 have already started functioning. The remainder are expected to start by the end of this year. Intending *entrepreneurs* are welcome to make use of the services of these Institutes and the Extension Centres for all technical problems, including planning of production, advice on selection of machinery and its lay-out and installation, advice on marketing problems, training of artisans in technical work and craftsmanship and business men in management, marketing and organisation.

Advice and Assistance

A small *entrepreneur* may have had no previous experience of manufacture in a particular line but may have the knowledge of the trade in that line. He might like to take up its manufacture. Similarly, a business man or a craftsman or small manufacturer might like to change his vocation for some reason or other and may need guidance about industries having reasonable scope of success. Information about all these matters is supplied by the Small Industries Service Institutes. About 11,500 persons had received such services throughout the country so far. While advice on specific points is given to individual units, model schemes for the manufacture of such items as writing inks, automobile dynamos, safety pins, leather footwear, glass phials, paints and varnishes and steel furniture are prepared by the Development Commissioners' Organisation. Nearly 340 different schemes were formulated during the past three years out of which 127 have been finalised. In addition, a number of technical bulletins for improving the methods and techniques of production have also been prepared.

The Institutes do not stop at merely furnishing information for the purpose of planning production. The service rendered is a continuous one and includes advice on removing manufacturing defects, effecting economy in fuel and raw materials, repairs to machinery, chemical testing and analysis etc. when the unit is in production. Technical assistance of this type has been rendered for a number of industries such as bicycles and parts manufacturing, diesel engine manufacturing, bolts and nuts manufacturing, mechanical-toy-making, soap-making, leather goods and footwear-making, fruit canning and a number of other consumer goods and spare parts manufacturing lines. About 43,000 enquiries for technical advice and guidance were attended to by the Institutes during the past three years. About 60,000 visits to small industrial units were made by the technical staff of the Institutes for rendering technical advice on the spot.

All the technical assistance and guidance for production and for running the units will have only a temporary value, unless there is a sufficient number of properly trained artisans and technicians capable of following up the technical know-how received from the Institutes and their extension centres. This is secured by a programme under which the workers engaged in small-scale units are given training through part-time courses organised at the Institutes and extension centres. Activities in this regard are supplemented by demonstration and training arranged through 47 mobile vans operating all over the country. Besides technological training, the Institutes have organised courses for training in various aspects of business management. Such training classes have been started at New Delhi, Bombay, Madras, Calcutta, Ludhiana, Rajkot, Hyderabad, Surat and Trivandrum.

Next to finalising production planning and engaging necessary trained personnel to run the unit, what is most needed by a small unit is a suitable factory shed to install the machinery and start production. Most of the industrial units do not have the necessary financial resources to construct and own a factory and even in those rare cases where they are in a position to provide the funds, they have to face long delays, expenses and troubles in acquiring a suitable site, in obtaining approval to plans, in securing permission and licences from the municipal authorities or departments, in securing building materials and constructing the factory building. With a view to giving help in this direction, the Government has started what are known as industrial estates in which properly designed and ready-built factory buildings of different sizes with all ancillary facilities including supply of power and water, godowns, railway siding, banking, communication and transport, etc., are made available.

In the second Plan, a sum of Rs. 10 crores was first allotted for building industrial estates. This was subsequently raised to Rs. 15 crores. So far, 110 such estates have been planned all over the country, out of which 96 would be completed by the end of this year, including nine in the pilot project areas and 20 in rural areas. Thirty-six estates have been already completed and 25 of them have been occupied. The total expenditure on these estates is estimated at Rs. 11 crores. When completed, these 96 estates will have about 3,600 factories with about 50,000 people employed. Of these, 20 industrial estates are in rural areas, and nine estates in pilot community project areas. In the 32 estates already constructed, 514 factories have been allotted and started working and 344 factories will be allotted shortly.

Another facility, as important as factory accommodation, urgently required by small industrial units, is supply of sufficient and easy credit. The number of industrialists who can arrange for the funds required for the industrial investment from their own resources is very small. Others have to depend on outside finances. The flow of funds from commercial and co-operative banks to small-scale industries has so far not been adequate because of various reasons. The State Governments and the Government of India are, therefore, extending financial assistance to these industries through the Department of Industries under the State Aid to Industries Act. During the past three years, loans aggregating Rs. 6 to Rs. 7 crores have been disbursed by State Governments to 12,545 small industrial units and 426 industrial co-operatives. It has been, however, felt that, while credit might be provided by the Government to fill the gap in this field during the promotional stage of the industry, the requirements of small *entrepreneurs* should legitimately be met progressively by institutional financing agencies like the State Financial Corporations, the State Bank of India, and commercial and co-operative banks. Following this realisation, it has been accepted in principle that Government loans may be routed through the State Financial Corporations. Negotiations for this purpose have been finalised in certain cases while they are in progress in some others. In addition to operating upon the State Funds, loans to the extent of Rs. 2.59 crores and Rs. 1.74 crore were sanctioned and advanced, respectively, to small-scale industries upto the end of September 1958 by State Financial Corporations from their own resources.

Early in 1956, the State Bank of India introduced, an experiment for advancing working capital loans to small industrial units in selected towns such as Bombay, Surat, Kolhapur, Madras, Coimbatore, Vijayawada Delhi, Ludhiana and Agra. Under this scheme, the State Bank has evolved a procedure whereby an applicant for credit, instead of having to approach a number of creditors, has only to go to one local agency, whether it be a branch of the State Bank or a co-operative credit institution. This local agency will receive and deal with the application in the first instance and either dispose it off itself and send it to its controlling authority or forward it to some other agency if the loan is of a type that can more appropriately be accommodated by one or more of the latter agencies, so that the various agencies can act as complementary to one another in their actual operation. The Bank has now extended this scheme to all its 490 branches, all of which offer credit facilities to small-scale industries against pledge of raw materials and/or finished or semi-finished goods either on-lock-and-key or factory basis. By the end of February 1959, the Bank had sanctioned loans upto Rs. 2.63 crores to 795 parties. The Bank has also decided to grant medium-term loans (up to seven years) for capital assets, machinery, and equipment to small-scale industries. The State Governments are also examining the possibilities of funds being provided to industrial co-operative societies by co-operative financing societies. Other scheduled banks have also been approached to extend these facilities to small industries through branches all over India.

Prototype Production Centres

Simultaneously with the introduction of various programmes for assisting development of small-scale industries in the country, the need for helping the small industries sector for taking up manufacture of imported machinery and equipment was also felt. For this purpose, it was decided to use Prototype production centres where prototypes of machines and machine tools at present being imported could be designed, developed and manufactured with licence, if necessary, from foreign manufacturers and the same could thus be passed on with the entire technical know-how to small-scale industries for manufacture on commercial lines. It was further felt that these centres could also be utilised for imparting training to skilled workers and higher executives in the small units. In collaboration with the T.C.M. of the U.S. and the Government of West Germany two prototype production-*cum*-training centres are being set up, one at Rajkot and the other at Okhla. It is the intention of the Government to establish one such centre in every State, if possible, during the second Plan period. The Government has also decided to set up a central institute for industrial design which will tackle problems of design in general and arrange to make prototypes of designs of various articles of common use produced or producible in the small-scale sector. With a view to facilitating marketing of the products of small units by linking their production with that of larger units, efforts are also being made to establish small units as feeders of components and parts to large units.

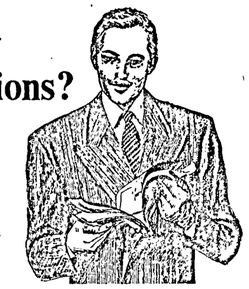
Hire-purchase Scheme

In order to ensure that small industrial units do not have to block their meagre financial resources in fixed assets, a scheme which enables them to acquire up-to-date machinery on easy instalment payment system has been evolved by the National Small Industries Corporation. Under this scheme, machinery is supplied on hire-purchase basis and the terms have been made liberal enough to enable large numbers of small units to avail themselves of this facility. The applicants need pay only 20 per cent. of the value of the machines as earnest money for general purpose machines and 33⅓ per cent. for special purpose machines. Instalments are payable half-yearly and are spread over a period not exceeding eight years. Since the introduction of the hire-purchase scheme in 1956 upto the end of March 1959, 2,234 machines, valued at Rs. 1.84 crore, were delivered.

One of the major problems of small industrial units is the marketing of finished products. A small industrialist, who has limited knowledge and resources, is handicapped in organising the sale of his products on scientific lines. When it is a buyers' market, the situation is all the more difficult. The initiative to produce the right type of goods at competitive price and to establish the product in the market should remain with the individual *entrepreneur*. But, in order to supplement his efforts, Government renders marketing assistance, as far as possible, through the agency of National Small Industries Corporation.

The Government being the largest single buyer in the country, attention was necessarily concentrated on exploring the possibility of evolving a procedure under which the small-scale industries could increasingly participate in the stores purchase programme of the Directorate General of Supplies and Disposals. To begin with, sixteen articles are reserved for purchases only from the small-scale units. These are: Brass padlocks, G.I. padlocks, brass dampers, boxes made of metal, signboards painted, buttons metals, postal seals, all badges, cloth embroidered and metal (not for Defence), belt leather (apparel), cash bags, dust shield leather, *chappals* and sandals, leather boxes (not army type), laces, leather, leather bags and boots and shoes of types required by civil indentors only. Besides, the Corporation assists in publicity as well as in the sale of their products to dealers and consumers through mobile vans, and opening wholesale depots. Moreover, seven items of small industries' products, namely, leather footwear and leather goods, cotton and woollen hosiery, sport goods, builders' hardware, locks and scissors, tinned fruits, chutneys and pickles, paints and varnishes, and glass beads have been selected by the Corporation for promoting their sale in overseas markets.

These services, obviously, are of a promotional nature. Although by no means easy, it is important to ascertain their impact. For this purpose, the Ministry of Commerce and Industry has set up an Evaluation Team which will assess how far the programme has assisted the small industrialists. The findings of the Team will, doubtless, be of invaluable help in formulating future policies.



Any questions?

"Yes, Mr. Chairman. Surely you agree that an investment in a Bank Deposit Account with Lombard Banking is one of today's finest opportunities for increasing income."

"Certainly. We should have used this method a long time ago. We will certainly invest our funds in Lombard Banking."

A capital proposal. For Lombard Banking offers the maximum return on Bank Deposit Accounts, plus Complete Security. Companies and individuals requiring a regular and secure income based on realistic rates of interest, paid without deduction of United Kingdom income tax, should write immediately for copies of Bank Deposit Account Booklet No. A091 to General Manager.

"Lost your shirt, Parameswar?"

"Don't remind me of shirts! One dozen shirts, made just 6 months ago, returned from the dhobi 'phut'!"

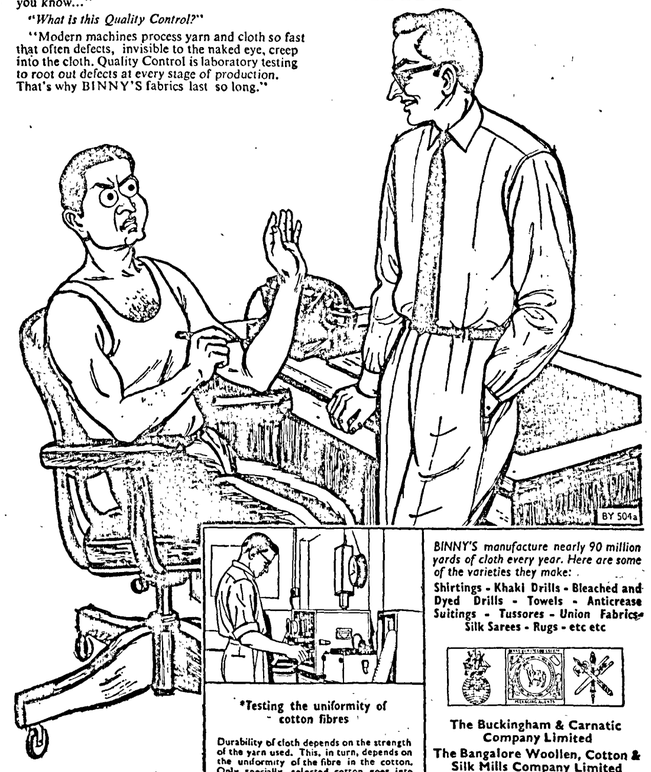
"Tut, tut! You must have been so busy hunting for fancy cloth that you haven't heard of BINNY'S! BINNY'S Quality Control* their production, you know..."

"What is this Quality Control?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics last so long."

"Your words give me courage, brother. Lead me to the nearest BINNY'S shop."

BINNY— a great name in textiles



*"Testing the uniformity of cotton fibres"

Durability of cloth depends on the strength of the yarn used. This, in turn, depends on the uniformity of the fibre in the cotton. Only specially selected cotton goes into BINNY'S fabrics. That's why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs - etc etc

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited

GROSS PROFIT OF NATIONAL CARBON CROSSES ONE-CRORE MARK

SALES EXPAND—DIVIDEND MAINTAINED

THE increased demand for battery products, the sale of flashlights manufactured at the new Lucknow factory of the Eveready flashlight division since June last and larger sales of the metals and ores division have mainly contributed to the substantial rise in the profit of the National Carbon Company (India) Ltd. (Chairman and Managing Director: Mr. J. R. Galloway, Calcutta) for the year ended 25th December 1958. The gross profit has crossed the Rs. 1-crore mark to Rs. 105.53 lakhs, representing a rise of Rs. 12.18 lakhs over that for the previous year. It also exceeds by Rs. 6 lakhs the previous best (since the Company was converted into a public limited concern) of Rs. 99.55 lakhs earned in 1955-56.

The net profit is, however, only a fraction higher at Rs. 41.98 lakhs, as compared with Rs. 40.63 lakhs for 1956-57, and is less than that earned in either of the two years 1955-56 and 1954-55. This is due to the larger provisions for depreciation and taxation. After adjusting Rs. 4.07 lakhs being the debenture issue expenses out of the surplus brought in from the previous year, the Directors have set aside Rs. 4.50 lakhs to the development rebate reserve. It is noteworthy that, though Section 10(2)(vi)(b) of the Indian Income-tax Act requires only 75 per cent. of the development rebate to be included in the profit and loss account, the Directors have considered it advisable to include 100 per cent. The dividend is unchanged at 14 per cent. per annum, to which level it had been reduced last year from 15 per cent. paid in respect of the year ended 25th December 1956 on the then increased capital of Rs. 2 crores.

It will be noted with interest that the Company has not added anything to the reserves during the last two years, though it has been retaining a large part of its earnings in business in the form of undistributed surplus. It is not clear why the Directors have been carrying forward a progressively rising amount year after year without allocating it to any of the reserves. Another feature of the results is the large contribution the Company makes to the revenues of the Government in the form of excise duty, income-tax and corporation tax. Thus, its tax burden for 1958, after providing for full development rebate and special depreciation allowable under the Income-tax Act, under the heads of income-tax, super-tax, dividend tax, wealth tax and excise duty, amounts to no less than Rs. 86.15 lakhs, as against Rs. 79.32 lakhs in 1957, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 25th December			
	1958	1957	1956	1955
Sale proceeds	6,05.07	5,35.35	5,18.94	4,51.77
Closing stocks of finished goods and work-in-process	1,04.24	81.84	62.37	43.10
Raw materials and stores consumed	2,36.17	2,34.28	2,22.24	1,81.87
Excise duty	40.78	38.63	40.60	29.14
Other expenses	2,45.56	1,92.38	1,77.97	1,58.31
Gross profit	1,05.53	93.35	99.55	94.51

Depreciation	18.18	12.03	9.12	7.69
Taxation	45.37	40.69	43.63	36.66
Net profit	41.98	40.63	46.80	50.16
Adjustment of income-tax and capital issue expenses	4.07	..	12.06	..
To reserves	4.50	5.40	..	..
Dividend	28.00 (14%)	28.00 (14%)	30.00 (15%)	40.25 (32½%)
Carry forward	33.83	28.42	21.20	16.46

The increased production during 1958 is reflected in the rise of Rs. 70 lakhs in sale proceeds and of Rs. 22 lakhs in stocks of finished goods and work-in-progress. Of the total sales of Rs. 6.05 crores, a sum of over Rs. 39 lakhs represents the value of zinc processed by the metals and ores division of the Company for internal use of other divisions. The production at the zinc mill was 20 per cent. higher than in the previous year. "Safety-glow" flashlights, the commercial trial production of which commenced towards the close of 1957, were released for sale on 1st June 1958. This new product is said to have met with excellent response from the trade and consumers alike. Sales of industrial products division continued to improve, but production was limited by restrictions on imports of the materials required.

The Company's financial position is quite sound. Its paid-up capital of Rs. 2 crores is supplemented by reserves and surplus (including share premium amounting to Rs. 38 lakhs) of the order of Rs. 1.22 crore. Secured loans from banks stand reduced from Rs. 74.13 lakhs to Rs. 61.09 lakhs, of which Rs. 50 lakhs represent the cash issue out of the Rs. 1 crore 6½ per cent. debentures made in March 1958. The balance of the debenture issue is pledged with the State Bank of India as security for advances. The proceeds of this issue are being used to finance partly the new undertakings, particularly the plastics and chemicals plant at Trombay. In addition to the debenture issue, under agreements concluded in 1957, the Company holds dollar and sterling credits equivalent to Rs. 1.25 crore against foreign exchange requirements of the plastics and chemicals plant, of which the outstanding amounts drawn from Union Carbide Corporation and Hanover Bank up to the end of the year under review amount to Rs. 80.63 lakhs. The current liabilities and provisions aggregate Rs. 83.10 lakhs. The gross block of the value of Rs. 2.83 crores stands written down to Rs. 2.04 crores. The additional capital expenditure made during the year under review is no less than Rs. 1.04 crore. The other assets aggregate Rs. 3.43 crores, including goodwill at cost of the value of Rs. 30 lakhs.

The following points from the Directors' report will indicate the growth prospects of the Company:

(1) The inexpensive flashlights manufactured in the Eveready Flashlight Company's (a division of the National Carbon) factory have a good consumer response. The factory has an annual production capacity of 6 million flashlights.

(2) The industrial products division continues to improve and this phase of the Company's division will benefit greatly when the plastics and chemicals plant being built at Trombay, Bombay, comes into operation.

(3) The plastics and chemicals plant now under construction is a major undertaking and will be completed in 1960. The necessary foreign exchange finance for this project has been secured, as stated earlier. Arrangements have also been made for the supply of alcohol, the major raw material for this venture.

(4) The Calcutta and Madras battery factories have attained good levels of output.

(5) An intensive programme for developing indigenous sources of raw materials used in the manufacture of the Company's products is being carried on and it has achieved some success in reducing the consumption of imported raw material.

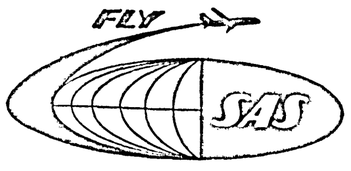
(6) Efforts to develop export markets for the Company's products are being continued through visits to foreign countries. During the year under review alone, export sales of the Company's products exceeded Rs. 18 lakhs.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 33.75 *cum-div.* On an *ex-div.* basis and at the rate of dividend for 1958, the shares provide a yield of 4.24 per cent. per annum, free of income-tax.

(Concluded from next column)

tions in the past two years, the assets have been well written down. The other assets, aggregating Rs. 41.42 lakhs, more than adequately cover the loans and other current liabilities. It will thus be seen that the Company's financial position is quite sound.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 135 *ex-div.*, at which rate they give a yield of 4.4 per cent. per annum, free of income-tax.



COIMBATORE COTTON'S PROFIT DECLINES

FIRST PHASE OF EXPANSION OVER

A FURTHER setback in profit is disclosed by the audited accounts of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Singanallur, Coimbatore) for the year ended 31st December 1958. The gross profit, which had come down from Rs. 16.10 lakhs to Rs. 12.11 lakhs in 1957, has shrunk further to Rs. 7.46 lakhs in the year under review. This is the lowest profit earned by the Company during the last six years. This was not unexpected, as the Directors themselves had indicated in their report for 1957 that the prospects for the year 1958 did not seem to be bright, though there had been, at the time of their report, a slight improvement in the yarn market. The net profit amounts to Rs. 2.46 lakhs, which represents a fall of more than 50 per cent. from that for either of the previous two years. This reflects the extent to which even this well-managed Company has had to suffer as the result of a man-made depression in the cotton textile industry.

While the provision for depreciation has been raised from Rs. 1.35 lakh to Rs. 4.50 lakhs, no amount has been provided for taxation, for which a sum of Rs. 4 lakhs had been set aside last year. Notwithstanding the low net profit, the Directors have transferred to the development rebate reserve a sum of Rs. 1.25 lakh, being 75 per cent. of the development rebate allowable in the income-tax assessment. If this had not been done, the Company's claim for the allowance for development rebate would have been lost. A sum of Rs. 50,000 has been added to the gratuity fund. The Directors have declared a dividend of 6 per cent., as against 9 per cent. paid for 1957, but this is on an increased capital of Rs. 35.97 lakhs, raised by a fresh issue of shares in 1957. The latest dividend represents a distribution at the rate of 17.75 per cent. on the old capital of Rs. 12 lakhs.

The progress of the Company during the last few years is indicated in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955

In pursuance of its expansion scheme, the Company had undertaken the construction of a separate unit, named Jubilee Mills, in commemoration of the Company's silver jubilee, to house 12,800 spindles to produce staple fibre yarn and 12,800 spindles to produce cotton yarn. Out of these, 2,000 spindles to produce staple fibre were erected by the end of 1957 and went into production. In 1958, the installation of the entire complement of 12,800 spindles was completed. In respect of the second 12,800 spindles to produce cotton yarn, all the imported blow room and preparatory machines have been erected. Fourteen indigenous cards out of 40 have been installed. The electrical transformer, switchgear, spinning frames and humidification plant are awaited and it is expected that all these machines will go into production before the end of this year. The Directors hope that there will be considerable improvement in the results for the current year.

The Company's paid-up capital of Rs. 35.97 lakhs is supplemented by reserves and surplus aggregating Rs. 24.16 lakhs. The liabilities include secured loans to the extent of Rs. 14.85 lakhs, unsecured loans Rs. 3.85 lakhs and current liabilities and provisions Rs. 15.34 lakhs. With the addition to the gross block during the year of Rs. 19.78 lakhs, the total capital expenditure during the last two years alone come to Rs. 47.74 lakhs. These bring the value of the gross block at the end of 1958 to Rs. 88.98 lakhs. As against this, depreciation provided so far is 36.22 per cent. Having regard to the large addi-

(Continued in previous column)

RESULTS OF BENGAL COAL STEADY

DIVIDEND UNCHANGED

THE first thing that strikes us on a perusal of the Directors' report and statement of accounts of the Bengal Coal Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) for the year ended 31st October 1958 is the time gained by the management in the publication of the report and in the holding of the meeting. Last year, the report was signed on 29th May and the meeting was held on 26th June. The latest report is dated 26th March and the meeting is scheduled for the 29th of this month. Thus, the presentation of the accounts, the timing of the meeting and the payment of dividend, all have been advanced by two months. This is good progress and we have no doubt that shareholders will appreciate it.

The second point that strikes us is the relatively small increase in raisings as compared with those in 1956-57, accompanied by an actual fall in despatches. This, however, is not surprising, because it is in consonance with the general trend of coal industry. Further, the explosion that took place on 19th February 1958 at Chinakuri colliery belonging to the Company must have had an adverse effect on the trend of production. It is said that the colliery has now resumed raisings of coal from the Dishergarh seam. An additional factor for the slight fall in despatches appears to be lower purchases of outside coal.

The following comparative table shows at a glance how the Company fared in 1957-58:

(In lakhs of rupees)

	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds	7,22.38	7,52.60	5,83.33	6,01.77
Other income	26.08	25.21	13.02	13.69
Stocks	15.83	17.79	39.88	46.17
Coal purchases	83.99	59.89	39.88	2,24.26
Freight, shipping charges, etc.	95.83	1,55.42	1,52.39	..
Mining, establishment and other expenses	5,11.07	4,66.04	3,52.84	3,09.30
Gross profit	1,06.21	1,06.39	80.59	95.33
Managing Agents' remuneration	6.44	6.42	3.92	4.79
Provision for—				
Depreciation	17.25	24.00	25.00	26.27
Taxation and cesses	68.61	52.10	21.37	31.45
Net profit	23.91	23.88	30.30	32.82
Transfer from reserves	2.00	3.27	..	..
To reserves	8.79	7.00	10.00	13.23
Dividends—				
4½ per cent. preference	0.62	0.62	0.66	0.66
Ordinary	17.50 (D. 17½%)	17.50 (D. 17½%)	17.50 (D. 17½%)	17.50 (D. 10% +B. 7½%)
Directors' commission	10.49	11.48	9.45	9.18
Carry forward	7.32	..	..	..
	Tons	Tons	Tons	Tons
Raisings	2,862,170	2,801,164	2,520,350	2,609,787
Despatches (including purchased coal)	3,070,631	3,101,282	2,559,083	2,809,167

Because of lower despatches, sale proceeds for 1957-58 are a shade less at Rs. 7.22 crores. There has been a considerable saving, of as much as Rs. 60 lakhs, in freight, but this has been more than offset by a sharp, all-round rise in expenses. Most of the increase in expenses has occurred under salaries and wages, and stores and spares consumed. Additionally, the explosion at Chinakuri has cost the Company Rs. 5.44 lakhs by way of charges alone. Consequently, the gross profit at Rs. 106.21 lakhs is a fraction lower than that for 1956-57 at Rs. 106.39 lakhs. There has been a drop of Rs. 6.75 lakhs in the provision for depreciation, but the taxes and cesses at Rs. 68.61 lakhs have taken up Rs. 6¼ lakhs more. So the net profit also is practically the same as that for 1956-57, that is, Rs. 23.91 lakhs, as against Rs. 23.88 lakhs. The net addition to reserves is a little better than last year and the Directors have proposed to maintain the dividend on ordinary shares at 17½ per cent. per annum (made up of an interim of 7½ per cent. and a final of 10 per cent.) for the fourth year in succession. It is noteworthy that the dividends, including the 4½ per cent. preference, are well covered by net profit, leaving a sizable amount of a little over Rs. 10 lakhs to be carried forward. In fine, the appropriation policy of the Company leaves nothing to be desired, with the needs of shareholders and of the Company having been catered to in a well balanced manner.

The Company's wealth tax liability for 1957-58 is placed at Rs. 2 lakhs.

As for the latest financial position, the Company's reserves and surplus amount to Rs. 170.64 lakhs, as against a paid-up capital of Rs. 130 lakhs, of which equity capital is Rs. 1 crore in units of Rs. 100 each. The gross and net values of fixed assets are Rs. 668.04 lakhs and Rs. 212.33 lakhs, respectively, the depreciation provided so far being Rs. 455.71 lakhs. The assets include a capital expenditure of Rs. 38.27 lakhs incurred during the year under review. Floating assets aggregate Rs. 358.28 lakhs and exceed loans, current liabilities and provisions amounting to Rs. 269.97 lakhs by a handsome margin of Rs. 88.31 lakhs. The principal items under floating assets are: stores and spares Rs. 130.98 lakhs, sundry debtors Rs. 167.48 lakhs, stocks of coal Rs. 15.83 lakhs, loans and advances Rs. 19.72 lakhs and cash and bank balances Rs. 10.71 lakhs.

The current market value of the Rs. 100 paid-up ordinary shares is Rs. 318, at which rate and on the basis of the proposed dividend, the yield works out to 5.5 per cent. per annum. A year ago, these shares fetched Rs. 224, the capital appreciation over the year being 42 per cent.

KOHINOOR MILLS' RESULTS DISAPPOINTING

The performance of the Kohinoor Mills Company, Ltd. (Managing Agents: Killick Industries Ltd., Bombay) during the year ended 31st December 1958 has turned out to be disappointing, in that the gross profit has suffered a sharp fall to Rs. 10.08 lakhs from Rs. 24.08 lakhs, to which level it had declined a year before from Rs. 59.98 lakhs for 1956. Thus, the Company's profit has not only shrunk by Rs. 49.90 lakhs within a short span of two years but has touched a level not seen in recent years. This is not surprising, because 1958 was one of the worst years for the cotton mill industry. After making a slightly lower provision of Rs. 5.68 lakhs for depreciation and reducing the provision for taxation from Rs. 9.50 lakhs to Rs. 2 lakhs, the net profit amounts to no more than Rs. 1.97 lakh, as against Rs. 6.65 lakhs for 1957. Out of this profit, a sum of Rs. 1.32 lakh has been set aside for development reserve, as against *nil* a year ago.

Following the setback in the results, the return to shareholders is to be pruned from 18 per cent. to 10 per cent., after having maintained it at the former level for four years from 1954 to 1957. Even for paying the lower dividend, which is the lowest to be paid on the present paid-up capital of Rs. 1 crore, since it was raised to this level in 1948, the Directors have to draw from the reserves a sum of Rs. 9.50 lakhs. In the previous year, they drew Rs. 10.25 lakhs for the purpose.

The main reasons for the disappointing results given by the Directors are: (1) difficulty of getting suitable varieties of cotton due to bad weather, (2) purchase of less suitable cotton at high prices, (3) restricted and haphazard issue of quotas for import cotton which made planning of production of better qualities of cloth very difficult, and (4) the accumulation of stocks of cloth and the consequent fall in prices realised for the Company's products.

The results of the Company for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	6,34.27	6,35.06	6,87.02	6,84.40
Stocks of finished goods and materials in process	1,34.23	1,36.87	91.09	80.42
Raw materials, stores, etc., consumed	3,72 09	4,00.94	3,91.40	3,97.33
Other expenses	2,52.04	2,58.66	2,49.97	2,42.08
Gross profit	10.08	24.08	59.98	41.74
Managing Agents' commission	0.44	1.80	5.98	4.19
Depreciation	5.68	6.13	11.21	6.33
Taxation	2.00	9.50	20.50	8.50
Net profit	1.97	6.65	22.29	22.72
Transfer from reserves	9.50	10.25	..	..
To reserves	1.32	..	3.00	4.50
Dividend	10 00 (10%)	18 00 (18%)	18.00 (18%)	18 00 (18%)
Carry forward	0.68	0 53	1.63	0.34

The Company's total capital expenditure during the year amounted to Rs. 7.85 lakhs, raising the gross block to Rs. 375.23 lakhs. The depreciation provided so far is Rs. 290.25 lakhs, so that the net block stands at Rs. 84.98 lakhs. The other assets, including stock-in-trade of the value of Rs. 178.59 lakhs, aggregate Rs. 246.08 lakhs, as against which there are bank loans, current liabilities and provisions of the order of Rs. 111.81 lakhs only. The Company's paid-up capital of Rs. 100 lakhs is supplemented by reserves and surplus amounting to Rs. 119.24 lakhs.

The Rs. 100 paid-up shares of the Company are being quoted at Rs. 259.50 *cum-div.* (final). On an *ex-div.* basis, the yield on the shares at the current rate of dividend is no more than 3.94 per cent. per annum.

CENTURY SPINNING AND MANUFACTURING COMPANY LTD.

As briefly stated in our issue dated 4th April 1959 (*vide* page 531), the results of the Century Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Bombay) for the year ended 31st December 1958 make impressive reading. Gross sale proceeds of cloth, yarn and waste have recorded a rise of Rs. 1.20 crore to Rs. 10.59 crores, thanks mainly to the improvement in exports of cotton cloth since the export promotion scheme came into operation in October 1958 and to the good performance of the rayon section, following the rayon plant coming into full production at the rate of 12 tons per day in July 1958.

The Company's gross profit has jumped up from Rs. 67.78 lakhs to Rs. 132.58 lakhs, thus more than making good the sizable setback suffered in 1957, when the profit dropped from Rs. 96.64 lakhs earned in 1956. This is the highest profit earned by the Company since 1944, when it aggregated Rs. 142.78 lakhs. It must, however, be noted that the latest profit includes the results of the rayon plant, which was erected only a few years back.

The appropriations of the profit have already been referred to in our issue dated 4th April 1959. It may be noted, in this connection, that the interim dividend of Rs. 8 per share on ordinary shares paid out of the general reserve was on the old capital of Rs. 109.43 lakhs, while the proposed final one of Rs. 14 per share is on the increased capital of Rs. 122.76 lakhs raised in September 1958 by a fresh issue of 13,679 equity shares of Rs. 100 each offered at par, of which 13,329 shares were applied for and allotted up to 31st December 1958. In addition, the Directors have recommended the payment of a dividend of 50 nP per share on the 125,000, 6 per cent. (tax-free) redeemable preference shares issued in October 1958 and allotted on 1st December last for a period of one month.

The progress of the Company in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	10,59.55	9,39.23	7,80.32	8,25.78

Transfer from reserves	25.56	24.07	24.07	..
To reserves	75.59	18.32	55.00	35.00
„ capital issue expenses	3.75	..	..	..
Dividends—				
6 per cent. preference	0 62	..	..	..
Ordinary	25.94 (22%)	24.07 (22%)	24 07 (22%)	24 07 (22%)
Carry forward	9.53	9.28	7.62	6.35

Even after the withdrawal of Rs. 26.56 lakhs from the general reserve for payment of dividends in respect of 1958—this is on top of a sum of Rs. 48.17 lakhs in the aggregate drawn in the previous two years—which was, however, more than made good by the addition of Rs. 146.91 lakhs to development reserve, the reserves and surplus of the Company as at the end of 1958 stand at the impressive level of Rs. 3.32 crores, as against a paid-up capital of Rs. 2.52 crores. The gross block, at Rs. 8.11 crores, which includes an addition of Rs. 7.91 lakhs to the cotton mill section and of Rs. 1.67 crore to the rayon plant, has been written down to Rs. 4.98 crores. The other assets amounting to Rs. 4.48 crores more than adequately cover the current liabilities and taxation aggregating Rs. 3.62 crores.

The Company proposes to rehabilitate its old machinery in the cotton textile section at a cost of Rs. 1.62 crore and is negotiating with the N.I.D.C. for a loan to finance the scheme. It will not be difficult for the Company to fulfil this scheme. Besides getting the resources it needs, the Company will also receive import licences up to a specified percentage of the value of its exports of cloth and yarn in terms of the export incentive scheme. The Directors have also decided, subject to the sanction of the Controller of Capital Issues, to raise additional capital by issuing new equity shares in the ratio of one share for every five shares held by the existing shareholders.

The Rs. 100 paid-up shares of the Company are being quoted currently at Rs. 496 *cum-div.* On an *ex-div.* basis and at the rate of dividend for 1958, the shares offer a yield of 4.56 per cent. per annum, free of income-tax.

PROFIT OF ORISSA MINERALS HIGHER

BRITISH INDIA ELECTRIC CONSTRUCTION REPEATS DIVIDEND

Orissa Minerals Development Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th June 1958.

Iron Ore.—Raisings increased from 4,11,993 tons to 5,02,970 tons compared to the previous year. Despatches also improved from 4,11,767 tons to 4,95,061 tons. The Steel Works maintained their order at 50,000 tons per month.

Manganese Ore.—Raisings increased from 34,477 tons to 49,410 tons. Sales also recorded an increase from 43,477 tons to 56,081 tons.

Manganese Dioxide.—1,408 tons of ore was raised during this year compared to *nil* raisings last year. Sales increased from 2,951 tons to 3,783 tons. Prospecting operations progressed satisfactorily during the year under review.

Market.—The market for manganese ore declined appreciably during 1958, but on the whole the prices at which the various grades could be sold during the period under review were satisfactory.

Transport.—The wagon position improved slightly during the year, but is still far from satisfactory.

Labour.—Labour relations remained satisfactory during the year. The directors are able to report that the issue concerning the strike and resultant lock-out in 1956, pending before the Industrial Tribunal has since been decided in favour of the Company. The labour strike being declared illegal and the resultant lock-out by the Company to be a lawful one.

Bolani Area.—The directors are pleased to report that Bolani Ores (Private) Ltd. has since commenced work on the project and the construction made satisfactory progress during the year under review.

The Eastern Shipping Syndicate.—During the year, the Company's share of profits from the Syndicate amounts to Rs. 5,084 and this has been included in the accounts.

The profit and loss account after providing for all charges and making provision of Rs. 18,30,000 (Rs. 10,90,000) for taxation and Rs. 2,17,100 (Rs. 1,85,100) for depreciation, shows a profit of Rs. 18,04,029 (Rs. 4,74,480) to which is added the balance brought forward from the previous year of Rs. 1,15,708 (Rs. 1,00,667) making a total of Rs. 19,19,737 (Rs. 5,75,147). And from this is deducted the amount transferred to general reserve of Rs. 2,50,620 (Rs. 315), to stores and stock reserve of Rs. 1,50,000 (*nil*), to mechanisation reserve of Rs. 5,50,000 (*nil*), to buildings reserve of Rs. 2,00,000 (*nil*), to development rebate reserve of Rs. 92,500 (Rs. 5,300) and staff and workmen's accident and compensation reserve Rs. 34,503 (Rs. 29,824) leaving a balance of Rs. 6,42,114 (Rs. 4,15,041 after transferring Rs. 24,000 to tax contingency reserve). The interim dividend declared on 29th August, 1958, on the ordinary shares at 10 (10) per cent. per annum without any deduction for income-tax payable by the Company absorbed Rs. 2,00,000 (Rs. 2,00,000) leaving a balance available of Rs. 4,42,114 (Rs. 3,15,708). The directors propose to dispose of this amount as follows:

By payment of a final dividend on the ordinary shares at 10 (10) per cent. per annum and a bonus at 5 (*nil*) per cent. for the year, without any deduction for income-tax payable by the Company absorbing Rs. 3,00,000 (Rs. 2,00,000) and by carrying forward Rs. 1,42,114 (Rs. 1,15,708).

Accounts in brief are as under:—

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 3,51,534 (Rs. 5,94,020) to which is added the balance brought forward from 1957 of Rs. 77,782 (debit of Rs. 2,16,238) making a total of Rs. 4,29,316 (Rs. 3,77,782). Out of this total, the Board paid an interim dividend of 5 (*nil*) per cent. on 20th February 1959, amounting to Rs. 25,000. (*nil*). The Board has transferred Rs. 8,706 (*nil*) to development rebate reserve and Rs. 2,52,421 (Rs. 2,00,000) to general reserve, leaving a balance of Rs. 1,43,189 (Rs. 1,77,782) available for distribution, which it is recommended be dealt with as follows:—To payment of a final dividend of 15 (20) per cent. absorbing Rs. 75,000 Rs. 1,00,000) leaving a balance to be carried forward of Rs. 68,189 (77,782).

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against the current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—Switchgear production and sales showed a marked improvement during the latter half of the year. The production of electric motors was satisfactory and sales continued to improve. Towards the end of the year, however, it was apparent that indigenous production of the smaller horse-power motors would soon satisfy the present demand. In 1958 Voltas Ltd. were appointed distributors for B.I.E.C.C.O. motors.

Standard Coal Co., Ltd.

The directors of the above Company [Secretaries: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st December 1958.

The profit and loss account after providing for all charges and making provisions of Rs. 1,51,326 (Rs. 80,901) for taxation and Rs. 1,000 (Rs. 1,000) for depreciation shows a profit of Rs. 2,50,006 (Rs. 47,379) to this is added the amount transferred from reserve for doubtful debts no longer required of Rs. 5,000 (Rs. 25,000 from general reserve) profit on sale of investments Rs. 38,632 (*nil*) and the balance brought forward from the previous year of Rs. 9,790 (Rs. 17,411) making a total of Rs. 3,03,428 (Rs. 89,790). From this amount the directors have transferred to general reserve Rs. 1,88,632 (*nil*) leaving a balance available of Rs. 1,14,796 (Rs. 89,790). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the ordinary shares at the rate of 12½ (10) per cent. per annum, without any deduction for income-tax payable by the Company absorbing Rs. 1,00,000 (Rs. 80,000) and by carrying forward Rs. 14,796 (Rs. 9,790).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,50,000 for which no quotation is available. The total of the market value of the investments as at 31st December 1958, for which quotations are available together with unquoted investments as valued by the directors amounts to Rs. 28,37,956 (Rs. 17,80,649).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Gross block	1,69,570

Chitavalsah Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July 1958.

The profit for the year, after providing for depreciation Rs. 3,53,215 (Rs. 3,10,684) and taxation Rs. 6,30,000 (Rs. 4,80,000), including wealth tax, amounts to Rs. 6,84,148 (Rs 5,15,114 for the 13 months ended 31st July 1957). To this must be added the credit balance brought forward from the previous period of Rs. 73,099 (Rs. 1,01,027) and dividends forfeited Rs. 2,058 (*nil*) making a total of Rs. 7,59,305 (Rs. 6 17,649 after adjustment). From this amount the directors have transferred to development rebate reserve Rs. 1,75,000 (Rs. 1,75,000) and to general reserve Rs. 1,00,000 (*nil*) leaving a balance of Rs. 4,84,305 (Rs. 4,42,649). The interim dividends for the year ended 31st July, 1958 on 5,000 preference shares at Rs. 3.50 per share absorbed Rs. 17,500 (Rs. 17,500) and on 3,01,500 ordinary shares at Re. 0.50 (Re. 0.60) per share absorbed Rs. 1,50,750 (Rs. 1,80,900) leaving an available balance of Rs. 3,16,055 (Rs. 2,44,249). This amount the directors recommend should be distributed as follows:—To payment of a final dividend on 5,000 preference shares at Rs. 3.50 (Rs. 4.08) per share for the year ended 31st July 1958 absorbing Rs. 17,500 (Rs. 20,400) and a final dividend on 3,01,500 ordinary shares at Re. 0.75 (Re. 0.50) per share for the year ended 31st July 1958 absorbing Rs. 2,26,125 (Rs. 1,50,750) leaving to be carried forward Rs. 72,430 (Rs. 73,099).

Jute stocks are shown at or under cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July 1958, have been valued at market rates.

The Mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association.

During the financial year under review trading conditions showed an improvement over the preceding period.

Due to delays in receipt of import licences, it is now anticipated that the modernisation of the *Sacking Weft Spinning Machinery* will be completed by August 1959, and modernisation of *Sacking Warp Spinning Machinery* should be completed by April 1960.

Accounts in brief are as under:—

Sassoon Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: M. G. Investment Corporation Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

The net profit for the year after providing an amount of Rs. 13,71,242 (Rs. 18,44,976) for depreciation, Rs. 50,000 (Rs. 2,33,499) for managing agents' commission, Rs. 82,000) (Rs. 9,97,000) for provision for taxation and Rs. 2,63,000 (Rs. 3,24,202) for statutory development rebate reserve amounts to Rs. 7,303 (Rs. 4,05,895) to which is added the balance profit of 1957 Rs. 12,182 (Rs. 1,66,307) making a total of Rs. 19,485 (Rs. 5,72,202). To this is added the amount transferred from dividend equalisation reserve of Rs. 5,00,000 (*nil*) and from general reserve of Rs. 2,40,000 (Rs. 3,25,000) making a total available balance of Rs. 7,59,485 (Rs. 8,97,202). Out of this balance the directors recommend, payment of 61st dividend of Rs. 2 (Rs. 2) per share (free of income-tax) amounting to Rs. 7,54,020 (Rs. 7,54,020) leaving a surplus to be carried to 1959 account of Rs. 5,465 (Rs. 12,182 after providing Rs. 1,31,000 for additional provision for taxation for previous year).

The directors regret that during the period under review working of the Company has resulted in a low profit owing to higher cost of production and lower prices realised of cloth and yarn particularly in export markets due to the prevailing depression generally. In order to diversify the manufactured products from grey to processed varieties and increase their saleability, the Company has purchased the entire block i.e. land, buildings, plant and machinery of the processing house at Foras Road, Bombay from Calico Processors Ltd. for purpose of processing the grey cloth. The processing house is working satisfactorily.

A provision of Rs. 50,000 for the payment of minimum remuneration to the managing agents of the Company made in the accounts is subject to the sanction of the Central Government which has been applied for.

The scheme of modernisation of the mills continues. An amount of Rs. 2,08,959 has been spent on buildings and Rs. 35,48,904 on installation of machinery. Machinery amounting to Rs. 2,46,162 is awaiting installation. The machinery installed has been working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Nellimarla Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July 1958.

The profit for the year, after providing for depreciation Rs. 1,55,964 (Rs. 1,20,586) and taxation Rs. 4,90,000 (Rs. 3,30,000), including wealth tax, amounts to Rs. 4,98,375 (Rs. 2,17,021 for the 13 months ended 31st July 1957). To this must be added the credit balance brought forward from the previous period of Rs. 43,512 (Rs. 1,29,411) and dividends forfeited Rs. 5,032 (Rs. 21,402 being over provision of liabilities written back) making a total of Rs. 5,46,919 (Rs. 3,67,834). From this must be deducted dividends previously forfeited now paid of Rs. 150 (*nil*), amount transferred to general reserve of Rs. 50,000 (*nil*) and amount transferred to development rebate reserve of Rs. 1,13,500 (Rs. 55,572) leaving an available balance of Rs. 3,83,269 (Rs. 3,12,262). This amount the directors recommend should be distributed as follows:—

To dividend on 5,000 preference shares at Rs. 6 (Rs. 3.50) per share for the year ended 31st July 1958 absorbing Rs. 30,000 (Rs. 17,500) and to dividend on 2,62,500 ordinary shares at Re. 1 (Re. 0.40) per share for the year ended 31st July 1958 absorbing Rs. 2,62,500 (Rs. 1,05,000) leaving to be carried forward Rs. 90,769 (Rs. 43,512).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July 1958, have been valued at market rates.

The mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. The Company purchased loom hours and worked 230 looms on double shift during the period.

During the financial year under review trading conditions showed an improvement over the preceding period.

The installation of modern machinery continued smoothly and more or less in accordance with the schedule during the period, and it is anticipated that modernisation, except for the Twist section, will be completed by July 1959.

Labour relations continued to be difficult with consequent adverse effects on the working efficiency of the Mills. Several minor stoppages took place and also one shift went on an illegal strike for 8 days in June 1958, with consequent loss in production. A further partial strike took place on 2nd December 1958, and there was a total closure of the Mills from 5th to 10th December 1958.

In July 1958, and Industrial Tribunal issued an Award in respect of bonus to the workers for the year 1955, and an appeal against this Award has been preferred in the Supreme Court as the Company's solicitors consider it inequitable.

Serious flooding took place at this Mill on 20th October 1958, resulting in considerable damage to stocks of raw jute, finished goods and machinery. Fortunately, no lives were lost due to prompt action by the management. This damage was mostly covered by the Mill's Flood Insurance Policy and the loss sustained was moderate. The Mills resumed full working on 10th November 1958.

Shorrock Spg. and Mfg. Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Mafatlal Chandulal & Co. (Ahmedabad) Ltd., Ahmedabad] submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show that the profits for the year after deducting managing agents' commission of Rs. 2,87,658 (Rs. 2,30,443), depreciation Rs. 4,70,315 (Rs. 8,25,343), development rebate Rs. 2,64,375 (Rs. 1,87,681) and taxation provision Rs. 14,00,000 (Rs. 13,80,000) comes to Rs. 9,99,091 (Rs. 3,66,970) to which is added the amount brought forward from last year of Rs. 18,346 (Rs. 1,11,376) making a total of Rs. 10,17,437 (Rs. 8,33,346 including an amount of Rs. 3,55,000 transferred from general reserve). Out of this amount the directors recommend payment of dividend at Rs. 20 (Rs. 20) plus Rs. 2 (*nil*) bonus per share, free of income-tax, on 29,250 ordinary shares absorbing Rs. 6,43,500 (Rs. 5,85,000), and a transfer to general reserve of Rs. 3,50,000 (*nil*) leaving a balance to be carried to next year's account Rs. 23,937 (Rs. 18,346 after transferring Rs. 2,30,000 to taxation provision being the amount of short provision for the year 1956).

It will be observed that a sum of Rs. 1,98,281 being the 75 per cent. of the toal development rebate to which the Company is entitled under the Income-tax Act, has been taken to the credit of the statutory development rebate reserve account in accordance with the statutory requirements of the Income-tax Act leaving a balance of Rs. 66,094 which has been kept to the credit of development rebate reserve in accordance with past practice.

Accounts in brief are as under:—

Adoni Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kothari and Sons, Madras) present the audited accounts of the Company for the year ended 31st December 1958.

The result of the Company's working for the period under review is a profit of Rs. 3,74,244 (Rs. 2,69,397) to which is added the amount brought forward from last year of Rs. 9,087 (Rs. 1,007) making a total of Rs. 3,83,311 (Rs. 2,70,404). From this is deducted appropriation to depreciation of Rs. 3,60,703 (Rs. 2,61,336) leaving a balance of Rs. 22,608 (Rs. 9,068) to be carried forward to next year. This profit has been arrived at after providing for interest and legal charges on debentures amounting to Rs. 52,000.

The Textile Industry had a disappointing period during the year due to the high prices that were ruling in the Indian cotton market, whereas the prices for cotton yarn were at a low level. As the Company's requirements of cotton for the period under review were purchased earlier at lower rates, the Company did not suffer much on account of the low prices of yarn and the gross profit stood at Rs. 6,02,855 against a gross profit of Rs. 3,91,615 of last year.

Expansion:—The installation of the balance 12,000 spindles has been completed and these are being progressively put into operation. The Mills have now an installed capacity of 24,000 spindles.

BRITISH PETROLEUM COMPANY

A company which has played an important role in the development of oil in West Asia, producing new resources of wealth for the region, is celebrating the fiftieth anniversary of its foundation. It is the British Petroleum (B.P.)—now the parent Company of a group which is one of the major international petroleum organisations.

It was in 1901 that the Persian Government granted oil concessions to an Englishman, Mr. William Knox Darcy, but it was not until seven years later that the first important "strike" was made.

Since those early days, development has been rapid, and expansions have benefited countries with oil resources and the Company which developed them. The B.P. group has brought into production large-scale refineries, including the famous Abadan refinery, whose capacity, originally 400,000 tons, has reached 32,000,000 tons of crude oil. The Company was originally the Anglo-Persian Oil Company, which became in 1935 the Anglo-Iranian Oil Company and in 1954 the British Petroleum Company.

Notices

THE TATA MILLS LIMITED

NOTICE

THE FORTY-SEVENTH ANNUAL GENERAL MEETING OF THE TATA MILLS LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Thursday, the 14th May, 1959, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the Audited Profit and Loss Account of the Company for the year ended 31st December 1958, and the audited Balance Sheet as at 31st December 1958.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. B. M. Ghia who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. T. V. Baddeley, C.B.E., who retires by rotation and is eligible for re-appointment, and to consider, and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Sections 190, 261, 280 and 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Sections 261, 280 and 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. T. V. Baddeley, C.B.E., a Director of the Company who is also a director, officer, member, and associate of Tata Industries Private Limited, the Mananging Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint Ex-officio and Special Directors to the Board) and who has attained the age of 70 years, and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him."

   The reasons which make this resolution necessary are more fully set out in paragraph 2 of the Explanatory Statements referred to in Note (*a*) below and which paragraph 2 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.
5. To consider and, if thought fit, to pass the following resolution in respect of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   "RESOLVED that pursuant to the provisions of Sections 280 and 281 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Mr. N. M. Amersey, who has attained the age of 65 years be and is hereby made and/or approved as required by the provisions of Section 281 and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

   The reasons which make this resolution necessary are more fully set out in paragraph 3 of the Explanatory Statements referred to in Note (*a*) below.
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and The Associated Building Company Private Ltd. (associates of the Managing Agents, Tata Industries Private Ltd.) for letting to the Company, on a monthly tenancy, office space and storage space in Bombay House, 24, Bruce Street, Fort, Bombay, owned by the Associated Building Company Private Ltd. and for facilities of air-conditioning, Board and Conference rooms and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of about Rs. 470 per month, plus a varying charge for air-conditioning facilities not exceeding Rs. 8,000 per annum, with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."
7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:

   "RESOLVED that subject to approval of the Central Government under the provisions of the Companies Act, 1956, the Company hereby re-appoints Tata Industries Private Limited as the Managing Agents of the Company as from the 16th day of August, 1960, for the period, at the remuneration and upon the terms, provisions and conditions set out in the draft agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Limited of the second part and Tata Sons Private Limited (as guarantors for the observance and performance of the terms and conditions of the said Agreement by Tata Industries Private Limited as Managing Agents) of the third part and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the said Act, to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."
8. To consider and, if thought fit, to pass the following resolution:—

   "RESOLVED that pursuant to the provisions of Section 294 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves and consents to the appointment of Nathuram Ramnarayan Private Ltd. and Patel Ghanshyamdas & Co. as the Company's sole selling agents for the Company's products for a period of three years commencing from the 1st day of January 1959 for the whole of India excepting the States of Mysore, Andhra Pradesh, Madras and Kerala at the remuneration and on the terms, provisions and conditions contained in the Agreement dated the 6th April 1959, made between the Company and the said sole selling agents, a copy whereof is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the said Act, to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."
9. To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 4, 5, 6, 7 and 8 set out above, are being posted to all members.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will remain closed from Wednesday, the 15th April, 1959 to Monday, the 11th May, 1959, both days inclusive.

(*d*) If dividend on shares, as recommended by the Directors, is passed at the meeting, payment will be made on and after Friday, the 15th May, 1959, to those members whose names are on the Register of the Company on the 11th May, 1959.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 16*th April*, 1959.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-THIRD ANNUAL GENERAL MEETING OF THE SVADESHI MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday, the 15th May, 1959, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1958, and the audited Balance Sheet as at 31st December 1958.
2. To declare Dividends.
3. To appoint a Director in place of Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for reappointment.
4. To appoint a Director in place of Mr. C. P. Wadia who retires by rotation but does not offer himself for re-appointment and to fill which vacancy a notice has been received by the Company from certain members under Section 257(1) of the Companies Act, 1956, proposing Mr. F. H. Kemple as a Director.
5. To consider and, if thought fit, to pass the following resolution:—

   "RESOLVED that pursuant to the provisions of Section 294 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves and consents to the appointment of Patel Ghanshyamdas & Co. and Nathuram Ramnarayan Private Limited as the Company's sole selling agents for the Company's products for a period of three years commencing from the 1st day of January, 1959, for the whole of India excepting the States of Mysore, Andhra Pradesh, Madras and Kerala at the remuneration and on the terms, provisions and conditions contained in the Agreement dated the 6th April 1959, made between the Company and the said sole selling agents, a copy whereof is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof."
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and The Associated Building Company Private Ltd. (associates of the Managing Agents, Tata Industries Private Ltd.) for letting to the Company, on a monthly tenancy, office space and storage space in Bombay House, 24, Bruce Street, Fort, Bombay, owned by the Associated Building Company Private Ltd., and for facilities of air-conditioning, Board and Conference rooms and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of about Rs. 470 per month, plus a varying charge for air-conditioning facilities not exceeding Rs. 8 000 per annum, with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."
7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that subject to approval of the Central Government under the provisions of the Companies Act, 1956, the Company hereby reappoints Tata Industries Private Limited as the Managing Agents of the Company as from the 16th day of August, 1960, for the period, at the remuneration and upon the terms, provisions and conditions set out in the draft Agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Limited of the second part and Tata Sons Private Limited (as guarantors for the observance and performance of the terms and conditions of the said Agreement by Tata Industries Private Limited as Managing Agents) of the third part and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the said Act, to vary or alter such of the terms provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."
8. To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 4, 5, 6 and 7 set out above, are being posted to all the shareholders.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will remain closed from Wednesday, the 15th April 1959, to Monday, the 11th May, 1959, both days inclusive.

(*d*) If dividends on shares, as recommended by the Directors, are passed at the meeting, payment will be made on and after Saturday, the 16th May, 1959, to those members whose names are on the Register of the Company on the 11th May, 1959.

By Order of the Board of Directors,

BOMBAY, 16*th April*, 1959.

MAHINDRA & MAHINDRA LIMITED

NOTICE

THE THIRTEENTH ANNUAL GENERAL Meeting of the Shareholders of Mahindra & Mahindra Limited will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay 1, on Monday, 18th May 1959, at 4 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report, and audited Balance Sheet and Profit and Loss Account for the year ended 31st October 1958.

(2) To declare Dividends on Preference and Ordinary Shares.

(3) To appoint a Director in place of Mr. A. K. Mitra who retires by rotation under Article 110 of the Articles of Association of the Company and who being eligible offers himself for re-election.

(4) To appoint a Director in place of Mr. K. C. Mahindra who retires under Article 110 of the Articles of Association of the Company and under the provisions of Section 280 of the Companies Act, 1956, and offers himself for re-appointment and to consider and if thought fit to pass, with or without modification. if any, as may be agreed upon at the Meeting, the following resolution of which special notice under Section 281 of the Companies Act, 1956, has been duly received by the Company and is hereby given:—

   "RESOLVED that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. K. C. Mahindra who is now 65 years of age and that Mr. K. C. Mahindra be and is hereby appointed a Director of the Company."

(5) To appoint auditors for the current year and to fix their remuneration.

(6) To consider and if thought fit to pass, with or without modifications, if any, as may be agreed upon at the Meeting, the following ordinary resolution:—

   "RESOLVED that from 1st August 1959, i.e., after the expiry of their respective existing contracts, the remuneration of each of the three existing Executive Directors be increased from Rs. 3,000 per month to Rs. 5,000 per month, the commission payable to them be reduced from 5/3 per cent. to 1 per cent. of the net profits of the Company and that they be continued also to be paid and allowed all the other benefits, remunerations and emoluments as at present, that the appointment be not for any definite period and be terminable on 12 months' notice and the Board of Directors is hereby authorised to execute fresh contracts with each of these three Executive Directors in terms of the draft put before the meeting and initialled by the Chairman, with such modifications, if any, as may be prescribed by Central Government in according sanction under the provisions of the Companies Act, 1956."

(7) To consider and if thought fit to pass the following special resolution with or without modifications, if any, as may be agreed upon at the meeting:—

   "RESOLVED that in Article 98 of the Articles of Association of the Company the word 'nine' be substituted by the word 'twelve'."

Notes:—(*a*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 4, 6 and 7 set out above is annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will be closed from 4th May 1959 to 18th May 1959, both days inclusive.

(*d*) Dividends, if sanctioned at the Meeting, will be made payable to those shareholders whose names are on the Company's Register on the 18th of May 1959, and the dividend warrants will be despatched to them on and after the 26th of May 1959.

By Order of the Board,
MAHINDAR SINGH,
Secretary.

BOMBAY, 31*st March*, 1959.

ANNEXURE TO THE NOTICE

Explanatory Statements as Required by Section 173 of the Companies Act, 1956.

Item No. 4:

Mr. K. C. Mahindra, who has been a Director and Chairman of the Company since its incorporation in 1945, has attained the age of 65 years on 15th March 1959. The proposed resolution seeks to have Mr. K. C. Mahindra re-elected as a Director and your necessary declaration that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to him. Your Directors feel that it is in the interest of the Company that the Board should continue to receive the benefit of Mr. K. C. Mahindra's long experience and able guidance.

The Company has received Special Notices from two members notifying their intention to move the resolution set out in the Notice.

Item No. 6:

The Company has three Executive Directors, viz., Mr. Keshub Mahindra, Mr. Harish C. Mahindra (the son and nephew respectively of Mr. K. C. Mahindra), and Mr. Aloke K. Mitra. They have been Directors of your Company since 1948 and were last appointed Executive Directors under their respective contracts dated 25th August 1954.

These contracts being for a period of five years expire on 31st July 1959. Under these contracts the remuneration of each of these Directors is Rs. 3,000 per month plus commission of 5/3 per cent. of the net profits of the Company as certified by the auditors of the Company.

Under these existing contracts each of these Executive Directors also enjoys the following other benefits, remuneration and emoluments:—

(*a*) Medical, surgical, hospital and other such expenses.

(*b*) A lump-sum entertainment allowance of Rs. 500 per month representing the estimated normal disbursements made by the Executive Directors for entertainment on behalf of the Company.

(*c*) Suitable unfurnished residential accommodation.

(*d*) A motor car.

(*e*) First class return passage by sea or air for the Executive Director and his wife every two years for leave abroad of not less than four months, and during such leave abroad a travel allowance of £400 for each two months period of leave subject to sanction by the Reserve Bank of India. During such leave abroad the Executive Director is required to undertake such work for the Company as the Company may direct and generally to look after the interest of the Company abroad in the various countries that the Executive Director may visit.

Each of these Directors has been in charge of such sections of your Company's activities as have been assigned to him from time to time.

Since 1954 the work of the Executive Directors has appreciably increased in volume and in responsibility and in this period of five years your Company has become a full fledged manufacturing concern.

It is proposed that the salaries of each of these Executive Directors be increased from Rs. 3,000 to Rs. 5,000 per month, the existing commission being reduced from 5/3 per cent. to 1 per cent. of the net profits of the Company and the rest of the remuneration, benefits and emoluments as above remaining the same.

The draft contracts have been prepared for each of these Directors amending the existing contracts in confirmity with the above. Reference is also made to the Provident Fund benefits. The fixed duration of their employment limited to five years is also dispensed with and corresponding changes made in the existing terms making the contracts terminable on 12 months' notice. It is also expressly provided that the Executive Directors will be assigned such work and be in charge of such sections of the Company's activities as the Board of Directors may decide from time to time. The rest of the provisions of the existing contracts have been retailed in these drafts. These draft contracts and the existing contracts are open to inspection of the members between 11-00 a.m. to 1-00 p.m. on any working day excepting Saturdays.

Item No. 7:

The Articles of Association provide that the number of Directors shall not be less than 3 nor more than 9 until otherwise determined by the Company in General Meeting. Since 1955 the Company's operations have greatly expanded both in scope and content. It is therefore desirable to make provision for an increase in the number of Directors and hence the proposed Special resolution that Article 98 of the Articles of Association be so amended as to increase the strength of the Board from '9' to '12'. This resolution will be subject to the approval by Central Government and shall not have effect so far as the increase is disapproved by that Government as per Section 259 of the Companies Act, 1956.

By Order of the Board,
MAHINDAR SINGH,
Secretary.

BOMBAY, 31*st March*, 1959.

THE TRAVANCORE RUBBER AND TEA COMPANY, LTD.

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE 15th Annual General Meeting of the Company will be held on Monday, the 18th May, 1959, at the Registered Office of the Company at Alleppey at 11 a.m., to transact the following business:—

1. To receive and adopt the audited accounts and Balance-sheet for the year ended 31st December 1958 and the Report of the Directors and Auditors.

THE LAST DATE OF RECEIPT AND opening date of the above tender are extended as under:—

(i) **Roller Bearing Axleboxes**
Not later than 11 a.m. on 5th May 1959.
Offers received will be opened at 11 a.m. on 5th May, 1959.

(ii) **Wheelsets**
Not later than 11 a.m. on 6th May 1959.
Offers received will be opened at 11 a.m. on 6th May, 1959.

Offers should reach the Director, Railway Stores, Railway Board, State Entry Road, New Delhi, not later than the dates indicated above.

G. P. BHALLA,
Director, Railway Stores,
Railway Board,
State Entry Road,
New Delhi.

DATED *9th April*, 1959.

THE BOMBAY BURMAH TRADING CORPORATION LTD.

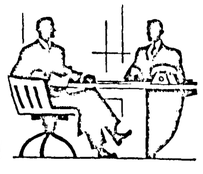
NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT IN pursuance of the powers granted to them by a resolution passed at the Extraordinary General Meeting held on 29th May 1958, the Directors have extended the final date fixed for the receipt of applications for consolidation of fractional certificates into whole shares of Rs. 125 each, from 31st May 1959 to 31st December 1959.

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

BOMBAY, 22*nd April* 1959.

BANKING IS OUR BUSINESS!



360 offices throughout the country and Foreign Exchange Department with regional offices under expert personnel at your service.

current accounts ● discounting of bills
savings fund deposits ● foreign exchange
fixed deposits ● safe deposit vaults
cash certificates ● advances

WORKING FUNDS EXCEED Rs. 164 CRORES.

S. P. Jain, Chairman — A. M. Walker, General Manager

(*Concluded from page 686*)

instanced the Bombay legislation which empowered the State Government to restart closed industrial undertakings, and envisaged a number of concessions aimed at reducing the cost of production. The Government was also empowered to revise the terms of the workers' employment and to make whatever changes it chose in the operation of the unit, irrespective of whether such changes were in accordance with the existing labour laws, awards and agreements applicable to an undertaking. If such concessions, Mr. Podar said, had been extended to the industry as a whole in good time there would have been fewer closures.

The question of promoting cloth exports has gained considerable importance and urgency in view of the imperative need for augmenting foreign exchange earnings. Although Mr. Podar welcomed the measures taken by the Government to help strengthen the position of the industry, he felt that Government should not be chary of further strengthening the competitive power of the industry considering the keen competition among exporting countries and the strong bid of new countries to establish themselves in international markets. Commenting on the situation, the Chairman observed:

"While on the one hand, the volume of cloth entering the world market has been steadily declining, on the other, the number of competitors for a share in the diminished trade is on the increase. Besides Japan and Hong Kong, countries like China and Pakistan are making strenuous efforts to maximise their exports of textiles. The first two exporters are able to offer their goods at prices 15 per cent. cheaper than those of Indian piecegoods. The cost structure of the Chinese textiles industry and the unconventional practices of its exporting agency render competition on any rational basis almost impossible. India has, therefore, to give far greater attention to quality and price if her cloth is to prevail in the world market and if she is to earn foreign exchange through this article on the scale envisaged by our planners of 1,000 million yards per year. Last year's poor export performance should serve as a warning against laxity and complacency. Modernisation of mill equipment, increased productivity on the part of labour, availability of cotton at reasonable prices and the grant of incentives to exporters on a scale commensurate with the concessions offered to our competitors by their Governments, will assuredly enhance the competitive power of Indian cloth. I realise that the outlook for exports is not bright. Even so, I take this opportunity of appealing to our manufacturers to make every effort to increase the volume of their sendings, so that more foreign exchange may be earned for the country."

There is thus no lack of desire on the part of the industry to export cloth. Accordingly, there is no point in the authorities holding out threats of compulsion to manufacturers. It is often stated that the industry must make sacrifices in order to build export markets. But how could this be done when a large number of mills are making little or no profit? The consumer resistance within the country is so strong that there is hardly any scope for the mills to recover their loss on exports from sales to the domestic market. It is only the Government that can help the manufacturers, because it is taking away from them large sums by way of taxes. It can utilise a part of these tax realisations to cover the mills' loss on exports, by reducing, if need be, the subsidy to handlooms and Ambar Charka.

The G.A.T.T. Secretariat has published as a leaflet the Recommendation on marks of origin adopted at the thirteenth session of the Contracting Parties. After an explanatory introduction, the leaflet sets out the text of the Recommendation. This is followed by the text of Article IX of the G.A.T.T. which deals with the marks of origin. The Recommendation is based on four main principles. First, the general aim is towards a considerable liberalisation of existing national rules and regulations on marks of origin; the Recommendation is, therefore, addressed not only to contracting parties but to all trading nations. Secondly, producers should have a reasonable assurance that a product marked in the recommended way would be accepted by all importing countries as being satisfactorily marked, so as to avoid the need for different markings to comply with the marking provisions of different countries. Thirdly, the recognition by importing countries of a uniform type of marking should in no way be understood to justify any attempt to limit or cancel more liberal marking provisions. The Recommendation should, in fact, be accepted as an elaboration of the liberal principles already laid down in the terms of the General Agreement. Fourthly, the right of countries to protect the accuracy of marks should be respected.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *22nd April*

After a lapse of two weeks, the Treasury Bill rate has hardened again this week from 2.780 per cent. to a high of 2.800 per cent. per annum, though the amount offered is no more than that (Rs. 2 crores) invited. This provides an indication that the seasonal stringency in the short-term money market has not begun to ease. Though the pace of increase in bank credit appears to have slowed down, the available funds in the market are not enough to meet the banks' requirements. Banks are, therefore, still borrowers in the market and interest rates are firmly held at last week's levels. Inter-bank call money is quoted at 3½ per cent., with occasional business at 3¾ per cent. as well, among the Exchange banks and large Indian banks. The corresponding rate among the smaller banks is 3¾ per cent. House money at seven days' notice is being bid at 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to three months.

Tenders for next week's Treasury Bill sales are unchanged at Rs. 2 crores. There has been no sale of Intermediate Bills for yet another week, but it has not been suspended either.

The Reserve Bank of India statement for the week ended 17th April 1959 shows no large variations in the Issue Department. While foreign securities are unchanged, there has been a decline of Rs. 3.07 crores in balances held abroad, so that the total foreign assets stand at Rs. 210.87 crores, as against Rs. 269.87 crores. Deposits of the Central Government show no variation, but those of other Governments are higher by Rs. 17.21 crores and deposits of banks have declined by Rs. 13.62 crores. Loans and advances to Governments have gone up by Rs. 2.18 crores, while other loans and advances show a drop of Rs. 9.60 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.68 crore. Investments show a substantial rise of Rs. 34.56 crores, while Government Treasury Bills purchased and discounted are lower by Rs. 6.86 crores.

The demand deposits of Scheduled banks have declined by Rs. 6.45 crores, according to their statement for the week ended 10th April 1959. This has been made good by a rise of Rs. 6.71 crores in their time deposits. While the total (net) deposits of all Scheduled banks are Rs. 26 lakhs higher, the deposits of the State Bank of India alone show a fall of Rs. 7.65 crores. In other words, the deposits of all other Scheduled banks must have actually risen by Rs. 7.91 crores. Inter-bank borrowings are higher by Rs. 3.86 crores, while borrowings from the Reserve Bank stand reduced by Rs. 8.36 crores. Advances (other than those against bills) show a rise of only Rs. 1.42 crore. Bills purchased and discounted are, however, lower by Rs. 2.19 crores. Investments have further declined by Rs. 3.76 crores, of which the State Bank of India alone accounts for Rs. 2.91 crores. Cash balances and balances with other banks have enlarged by Rs. 16.84 crores, thanks to the rise of Rs. 19.64 crores on State Bank's account. Money at call and short notice is higher by Rs. 4.54 crores.

The persistent stringency in the short-term money market continues to keep out institutional support from the Gilt-edged market and securities, as a result, are a little subdued. Though there is no heavy selling pressure, prices of select counters are ruling a shade lower over the week. Support from the Life Insurance Corporation is also conspicuous by its absence. 3 per cent. 1986 Conversion Loan is quiet at Rs. 74, with a drop of 5 nP over the week. 3 per cent. 1970-75 is placed at Rs. 91.15 *ex*-voucher, as against Rs. 91.20 *cum*-voucher a week ago, while 3 per cent. 1966-68 is unchanged at Rs. 93.70. 3 per cent. 1963-65 has lost 5 nP to Rs. 96.70. 3½ per cent. 1964 has been marked down by 5 nP to Rs. 99.75, while 3½ per cent. 1965 is unchanged at Rs. 99.55, 1967 at Rs. 99.05 and 1968 at Rs. 98.95. State loans, too, were neglected.

The continued rise in sterling in terms of the U.S. dollar has kept the rupee also steady against the dollar. Banks' selling rate for U.S. dollar is well maintained at Rs. 475 per $100 and their buying rate at Rs. 471.75 per $100. In New York, spot sterling improved from $2.81.11/16-2.81¼ to $2.81¼-2.81.13/16 and three months' forward from $2.81¼-2.81.3/16 to $2.81.3/16-2.81¼.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, *20th April*

Generally firm conditions prevailed in the linseed market throughout the past week, but, towards the close, there was a slight reaction, and a decline of about 50 nP was registered in the seeds price. With crushers still showing a keen interest, daily turnover continued to be fairly large. Although sellers were somewhat reserved, it was expected that new crop arrivals should reach their highest level early next month. The oilcake market remained firm at Rs. 14 with overseas prices relatively quiet and no immediate prospect of fresh business. The oil market showed very little change; but the undertone remained steady in sympathy with the firm trend in groundnut and mustard oils. Whilst shippers showed little interest, the local demand improved.

The latest available quotations are: Ready Rs. 23 and April-May Rs. 22.75 per maund.

GOLD TOUCHES ALL-TIME PEAK OF RS. 123-15 PER TOLA

(From Our Own Correspondent)

BOMBAY, *22nd April*

Never in the history of the bullion market had ready gold touched a high of Rs. 123-15 per tola as it did today. The quotation surpassed the previous all-time peak of Rs. 122 reached on 31st August 1948 and was higher by Rs. 2-10 as compared with the last week-end rate of Rs. 121-5. This steep climb-up is the result of persistent support by bulls. The market is thick with rumours that the Central Government will soon take some more effective measures to check arrivals of contraband metal such as demonetisation of rupee currency that are in circulation in West Asian countries. Stockists are extremely reserved, as they are hopeful of a still further rise in prices in the coming months. Apart from the aforesaid rumours, the factors that have engendered continued bullish fervour are: (*a*) the seasonal offtake has not yet reached the zenith; (*b*) the floating stocks are small and arrivals dwindling and (*c*) the inflationary psychology is receiving fresh momentum with every sharp increase in note circulation.

As a result of sharp rise in prices and in the carry forward charges, the bulls were called upon to pay heavy margins. But this had no restraining effect on the boom in gold.

Silver opened the week on an easy note, thanks to better prospects for silver coin imports from Tibet, but picked up strength on Monday in sympathy with the yellow metal and on account of good offtake from upcountry centres. The firmness of silver gathered further momentum today. The closing rates were higher than the low levels touched on the opening day.

April settlement in gold forged ahead from Rs. 120-15 to Rs. 122-3-6 on Monday. Since the closing rate was higher than the starting rate of Rs. 116-5-6 by Rs. 5, the bulls were required to pay a special margin of Rs. 7 per tola under Bye-law 33 C. The margin was, of course, not actually deposited, because the bulls were already paying a margin of Rs. 10 on the basis of the *budli* rate. Notwithstanding the margin, the settlement continued its onward march to touch Rs. 123-8 today before finishing at Rs. 123-5. May settlement spurted from Rs. 120-5-6 to Rs. 122-4, after being higher at Rs. 122-7. Consequently, the backwardation charge (that is, the *budli* payable by bears to bulls) widened considerably from As. 9-6 on Wednesday last to Re. 1-1 today, so that the bulls were required to deposit a higher margin of Rs. 25 per tola, as against the margin of Rs. 10 that was operating previously, on their outstanding business in April settlement. June settlement registered a rise of Re. 1-15 to Rs. 121-9-6. Margin at the rate of Rs. 10 per tola continued to be operative on bulls in May delivery also throughout the week.

Ready gold, as already stated, stood at the record level of Rs. 123-15 today. Towards the close, however, it receded a little to Rs. 123-12, owing to profit-taking. The premium commanded by it over the May settlement was as much as Re. 1-8, as against As. 15½ on Wednesday last week. The daily average arrivals and offtake of gold were 5,500 tolas and 6,000 tolas, respectively. The floating stocks of gold are estimated at 25,000 tolas.

In the silver section, April settlement opened the week distinctly easy at Rs. 200-9, as against Rs. 201-9 last week-end, and advanced to Rs. 201-13 today before closing at Rs. 201-5. May settlement, which had gone down from Rs. 200-12 on Wednesday last to Rs. 199-3 on the opening day, recovered subsequently to Rs. 200-3 today; towards the close, it was lower at Rs. 199-8. June settlement was quoted today at Rs. 198-8-6, as against Rs. 199-10-6. Yesterday, the bulls in April and May settlements were required to deposit a margin at the rate of Rs. 1,000 per bar, as the backwardation rates were higher than a rupee. The margin was in force today also but only in respect of April settlement, as the backwardation rate for May settlement had fallen to As. 15-6.

Ready silver met with good buying support and moved up from Rs. 200-10 early on the opening day to Rs. 202-11 today. It, however, finished lower at Rs. 202. The daily average arrivals of silver were 14 bars, while the offtake was 26 bars per day. The floating stocks of silver are reported to be around 600 bars.

Ready and forward silver in the London bullion market were unchanged throughout the week, the former at 79½d. per fine ounce and the latter at 78¾d. Ready gold, after receding from 249*s.* 0½*d.* per ounce to 249*s.*, recovered to 249*s.* 1½*d.* The latest available dollar price of gold is $35.09½-35.11½ per fine ounce. Silver in New York was 91.375 cents per ounce, same as last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	22-4-59	Highest	Lowest	15-4-59

COTTON FUTURES REACT TOWARDS CLOSE

(From Our Own Correspondent)

BOMBAY, *22nd April*

The cotton futures market had only four trading days during the week, as it was closed on the 17th and 21st inst. on account of *Ramanavami* and *Mahavir Jayanthi* respectively. The market depicted a fully steady trend during the first half of this short week although, towards the close, it turned easy. The initial steadiness was aided by good spot house support and investment buying. The growing tightening of the supply position in the wake of high rate of raw cotton consumption by mills, the scarcity of quality cotton in the ready section and the hardening of spot prices and the absence of any indication of a possible liberalisation of imports encouraged operators to extend support. However, a reaction set in late in the session on Monday following heavy profit-taking and large-scale upcountry selling prompted by the fear of large volume of tenders against the maturing May contract and rumours that Laxmi cotton will be tendered against it. Prices consequently declined. The declining trend continued today also. Although both the contracts opened higher they succumbed to heavy selling to close Re. 1.50 to Rs. 2.25 lower than the opening level. The closings were still higher than last week-end quotations.

I.C.C. Moglai Jarilla May 1959 opened the week at Rs. 678.75 and, after declining to Rs. 677, improved to Rs. 683 yesterday. Commencing at Rs. 682.75 today, the contract rose to Rs. 683, but receded to Rs. 678.25. The closing was, however, higher at Rs. 680.50.

I.C.C. Moglai Jarilla August commenced the week's trading at Rs. 690 and, after declining to Rs. 688 the same day, improved to Rs. 694 on Monday. Opening at Rs. 694 today, the contract reacted to Rs. 690.25 before closing at Rs. 692.50. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	22-4-59	*High*	*Low*	15-4-59
I.C.C. Moglai Jarilla May 1959 ...	680.50	683	677	678.75
I.C.C. Moglai Jarilla August 1959 ...	692.50	694	688	690

In the spot section, mill demand continued to be well maintained. Mills were ready buyers of quality lots. The sharp reduction in the crop estimate had given rise to the fear that cotton would become increasingly scarce in later months of the session. Spinners were, therefore, eager to cover their requirement. Nevertheless, turnover was less than the average in recent weeks, thanks to paucity of offerings. Some of the varieties which came in for business were Laxmi, Jayadhar, Vijay, Dgvijay, C02. Wagad cotton also was much sought after.

The export section continued to be subdued. Stray deals were reported in Bengal and Oomra *Deshi* with Japan and the Continent. Old crop Dholleras were also in demand.

In the foreign section, there was no important development to note. Interest in Egyptian cotton flagged as the recent allotment for that cotton was fully covered. Sudans and East Africans evoked very little inquiries. Ahmedabad mills were interested in the U.S. growths.

Importers believe that, since the previous allocations have been fully absorbed, the Government may announce an import allocation for cotton of staple length 1 1/16" and above and 1 3/16" and above soon after meeting of the Textile Consultative Board scheduled to take place at New Delhi on the 23rd inst. It is suggested in certain quarters that the classification of imports under the two staple length categories, namely, 1-1/16" and above and 1 3/16" and above, should be discontinued and, instead, imports be allowed hereafter under one staple category, namely, 1 1/16" and above. This, it is said, will enable mills to buy the cheapest foreign cotton available without bothering themselves about the staple length stipulations.

The latest available spot quotations—in rupees per candy of 784 lbs.—are the following:

Bengal *Deshi* 692; Berar Jarilla 780; Khandesh 850; Vijay 1,000; Jayadhar 900.

Fully steady conditions prevailed in the Karachi cotton futures market during the week under review. There were renewed inquiries from abroad. Mill buyers also extended support. N.T.R.G. May improved fractionally to Rs. 51.7. The July contract gained As. 2-6 to Rs 53-12. Exports from the commencement of the season till 26th March aggregated 458,334 bales, as against 399,614 bales in the same period last season.

Conditions in the Alexandria cotton futures market remained unchanged. Trading was fairly active on encouraging export advices and firm communication from the spot market. Future prices consequently improved. The following are the latest available quotations—in pence per lb.—from Alexandria:

Karnak: May 72.33; July 72.68. *Ashmouni*: April 61.98; June 62.45.

Liverpool cotton futures market ruled firm during the week under review. The firmness was aided by trade covering and mill buying against yarn sales. The firm trend of spot prices also aided sentiment. The latest available quotations—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: May-June 22.14; July-August 21.89; October-November 21.15; December-January 20.45. *American Cotton Mixed Growth Contract*: May-June 23.00; July-August 22.05; October-November 21.10; December-January 20.35. *Sudan*: May-June, July-August, September-October 23.50.

Cotton futures values scored handsome gain in New York during the week. New crop positions were particularly firm on good speculative

support prompted by the increasing tightening of the supply position and the improvement in the demand for cotton.

According to official estimates, the carryover on 1st August 1959 may be practically unchanged from the figure of 8.7 million bales at the beginning of this season on 1st August 1958. Domestic mill consumption is expected to aggregate 8.5 million bales this season and exports 3 million bales. Thus the total estimated disappearance is 11.5 million bales, which is about equal to the volume of the current crop. The total quantity sold under the current export programme C.11 upto the close of last month was 2,157,076 bales. At the same time registrations under the payment-in-kind programme aggregated 257,072 bales. Actual shipments during this season up to the 9th April made a depressing total of 2,163,095 bales, as compared with 3,957,686 bales shipped during the corresponding period last season.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	20-4-59	14-4-59	7-4-59
Spot	36.05	35.90	35.95
March	35.89	35.65	35.79
May	35.10	35.08	35.40
July	32.64	32.68	32.70
October	—	32.68	32.70

TAX RELIEF FOR ART SILK INDUSTRY

(From Our Own Correspondent)

BOMBAY, 22nd *April*

Both the art silk weavers and the yarn traders have welcomed the Union Finance Minister's announcement, made in the Lok Sabha on Monday this week, of the Government's decision to rationalise the exemption from the rates of compounded excise duty (in lieu of basic rates for powerlooms) and to limit the concession to the truly cottage type employing not more than four looms and working not more than one shift. The units employing not more than nine looms will, however, continue to enjoy the concession in respect of the first four looms, provided they do not work these four looms for more than one shift. This concession will not be extended to units employing over nine looms. In order to ensure that the medium size and bigger units may not have to bear a greater burden of duty on account of the proposed rationalisation and also by way of further relief, the compound rates payable by them are being suitably reduced and readjusted. Suitable changes are being made in the compounded rates in lieu of additional excise duty. These changes are expected to give the art silk industry a tax relief of Rs. 37 lakhs (Rs. 23 lakhs in basic excise duty and Rs. 14 lakhs in additional excise duty) during 1959-60 and Rs. 40 lakhs (Rs. 25 lakhs and Rs. 15 lakhs, respectively) in a full year.

The above announcement, it is felt, would lead to enlarged demand for art silk yarn from the genuine small units. Nevertheless, prices in the local market suffered a further sharp setback. For there was continuous nervous liquidation on fears that considerable quantities of yarn imported against licences granted under the export promotion scheme would be arriving in the market shortly. Cupressa Bamberg yarn (60 x 1) April delivery slumped by Rs. 32 to Rs. 1,472. June delivery moved down from Rs. 1,508 to Rs. 1,492. Spot yarn declined by 7 nP to Rs. 7.37. 120 Japan and 150 Japan shed 3 nP each to Rs. 4.81 and Rs. 4.75, respectively. 120 Italy was quiet at Rs. 4.87, while 150 Italy gained 3 nP to Rs. 4.78. National Rayons 150 bright cones first grade dropped 7 nP to Rs. 4.19. 120 bright cones first grade lost a naya paisa to Rs. 4.44.

Staple fibre yarns were also subjected to continued selling pressure. April delivery (40 x 2) receded from Rs. 597 to Rs. 592. June delivery was dull at Rs. 603. Spot Kohinoors eased by 3 nP to Rs. 3.25. Centurys were unchanged at Rs. 3.19. Among foreign yarns (80 x 2), Paramounts fell by 37 nP to Rs. 7.47, but Fujis rose by 3 nP to Rs. 8 81.

The cotton yarn section presented a dull trend in the absence of any encouraging development. Ten counts Moderns were quoted at Rs. 13.25 and Podars at Rs. 12.19. Forty counts Minaxis decreased by 6 nP to Rs. 25. Moderns were neglected at Rs. 26. Today's quotations for a few other counts of yarn were: Twenty counts Modern Rs. 16.25 and Seksaria Rs. 15.50; sixty counts Raghuvamshi Rs. 55.50 and Finlay Rs. 65; eighty counts Mahendra Rs. 71, Finlay Rs. 81 and City Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	22-4-59	15-4-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg		
April (per case of 200 lbs.)	1,472	1,504
June („)	1,492	1,508

10s Podar	12.19	12.19
40s Minaxi	25.00	25.06
60s Finlay	65.00	65.00
80s City	67.00	67.00

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 22nd *April*

Firm conditions continued in the oilseeds market during the week under review also. Although the buoyancy noted last week was absent, thanks to the tightening of margins on groundnut and the intervening holidays, the sentiment continued to be cheerful. In spite of the stringent margin, groundnut ruled firm due mainly to paucity of supplies and sustained demand. The news of heavy damage to the crop in Argentina on account of heavy floods and the closing of the ports in that country gave rise to hopes that foreign buyers such as Britain would turn to India for supplies of groundnut oil, especially because British West Africa has ceased to be seller of oil. The firmness of groundnut influenced castorseed also. Support from upcountry interests and speculative buying by shippers in anticipation of demand from the U.S. and East European countries imparted further strength to castorseed. Prices, however, were held in check by margin considerations and selling prompted by the proximity of settlement. Despite increased inflow of oil from Hyderabad, hopes of tenders from Australia continued to sustain linseed. Cottonseed, on the other hand, tended to recede on easier advices from the cotton market.

The Joint Chief Controller of Imports and Exports has notified that, exporters, who are able to secure business in excess of the balance in hand out of their original quota, and who file shipping bills for the same, will be allowed to effect shipment of the excess quantity also which will be debited against their repeat allotment to which they are entitled. This, however, will not exceed the repeat allotment. No quota slip for the repeat allotment will be issued in advance, unless the exporters have completed shipment of the original quotas.

Groundnut May firmed up, on sustained buying, from Rs. 191.25 last week-end to Rs. 192.50 today while the August contract rose from Rs. 196.26 to Rs. 197.75. Bold ready was quoted higher at Rs. 39.75, as against Rs. 39.12 last week-end. Groundnut oil (ex-mill) prices hardened further.

Castorseed May improved in sympathy with groundnut from Rs. 158.87 last week-end to Rs. 159.50 while the September contract put on one rupee to Rs. 164.37. Ready Madras was quoted higher at Rs. 31.50 and ready Kanpur at Rs. 30.25.

Linseed May crept up from Rs. 32.75 last week-end to Rs. 32.87 while Linseed September rose from Rs. 33.50 to Rs. 33.62.

Cottonseed May receded from Rs. 128.25 to Rs. 123.00 while September rose from Rs. 130.25 to Rs. 130.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	22-4-1959	15-4-1959	8-4-1959
	Rs.	Rs.	Rs.

Kardi seed	23.25	23.37	23.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

MEDIUM TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 16th *April*

Approximately 900,000 lbs. were offered in this sale, which was held on 13th April 1959. A useful selection of teas were offered in this sale, though the quality in general showed a slight seasonal decline. There was a good general demand, particularly for low medium and medium teas, which sold well and prices for these were irregularly 5 nP dearer. However, good medium and high grown brokens met with less demand and sold at easier rates. Similar fannings, though meeting with an improved enquiry, sold at lower rates than last. A small selection of C.T.Cs met with less demand and sold at easier rates. Well made whole leaf grades were strong and sold at dearer rates. The quotations were:—Low medium Re. 1.63 to Re. 1.75; medium Re. 1.80 to Rs. 2.25; good medium Rs. 2.25 to 2.85 and quality Rs. 2.60 to 5.12.

London Market: Sale of 13th April 1959.—Active demand at dearer rates several pence for quality teas.

Sale of 14th April 1959.—Strong demand. Advances often substantial.

Colombo Market.—Strong demand. High-grown irregular, following quality. Good mediums firm. Low mediums 10c. dearer. Low growns firm. Off grades strong and active demand. Generally dearer particularly useful liquoring sorts.

Calcutta Market: Export.—No sale this week.

Internal.—Good general demand for 21,700 packages dust. Orthodox types steady to 2 nP easier. C.T.C. irregular. Best easier. Strong demand all powdery types.

Export Quota 1959-60.—The market for 1959-60 quota has been rather quiet and no business has taken place, though there are sellers at 8 nP with probable buyers at 6 nP.

Special Licence 1958-59.—The market has been rather inactive last week and practically no business has taken place in special licence. At present, there are sellers at 1½ nP with buyers being scarce.

Forthcoming Auctions.—Sale No. 15 will be held on Tuesday, 21st April 1959 and Dust Sale 'H' will be held on Thursday, 23rd April 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 15:—1 million lbs. Good general demand. Low medium and medium 5 nP easier. Good medium fannings stronger and dearer. Best liquoring highgrowns easier, following quality with less demand for broken grades."

JUTE GOODS IMPROVE SLIGHTLY

(From Our Own Correspondent)

CALCUTTA, 21st *April*

Following more buying support, conditions in the jute markets recorded a small measure of improvement during the week under review. Prices for both the fibre and goods also improved. The better trend in fibre followed the invitation of tenders for about 50,000 bales of raw jute for export by the State Trading Corporation. On the other hand, the incentive for hessian prices to move up was provided in the announcement that, in March, burlap consumption in the United States recorded an impressive increase of 12.8 million yards to 82.7 million yards over the previous month. Following this, sacking prices also improved. In hessian, there was brisk activity in the futures market.

Referring to the S.T.C's call for tenders for raw jute for export, market circles were apprehensive about the competitive nature of prices at which the fibre would be exported. For the procedure followed by the Corporation is rather cumbersome. First, the fibre is bought by the Corporation, which permits balers to export the fibre on its behalf. The balers must purchase the jute for export from the Corporation at rates higher than the market prices and, in addition, balers are required to pay a commission to the S.T.C. Added to these, there is the export duty, which is Rs. 3 per maund. The trade here points out that raw jute output is increasing and that in the forthcoming season, it is estimated to be even higher than the last season's bumper crop. Further, the carryover from this season would be about 3 million bales. The availability in this season was 9.3 million bales, with output at 7.1 million bales and opening stock at 1.9 million bales and the balance being arrivals from Pakistan. Consumption by mills this year would amount to 6 million bales and other consumption and exports would form only an insignificant figure. As such, it was essential for the country to expand fibre exports, and abolish the present limitations in this regard. True, the purchase of fibre from the market by the Corporation at prices higher than those ruling acted as a support, but since most jute had left the cultivators before the export scheme was announced, the benefit, if any, of higher prices would not go to the cultivators. Under the circumstances, there was no point whatsoever for the S.T.C. to purchase for export in preference to the direct course, that is, asking the established exporters to export.

According to market circles, the need for pushing up exports is all the important in view of the keen competition in goods by Pakistani mills. In recent weeks, Pakistani mills were able to divert from India some orders for heavy goods. It was stated recently in Dacca that the thirteen mills in Pakistan were now operating the installed capacity of 7,750 looms in full and that goods output in the year to June 1959 would amount to 2½ lakh tons, as against 1½ lakh tons in the last year. That reports from Pakistan, especially when they related to India and/or competition against Indian industries always carried with them an amount of exaggeration was not in doubt here, but even after making allowance for this, it is stated that Pakistani mills were increasing production. For, after the establishment of the military regime, labour conditions have improved. Secondly, India is now not at all interested in Pakistani cuttings, for which there has been no great market excepting India, with the result, Pakistani mills have been forced to consume the great part of these cuttings and naturally the production also has increased. However, trade circles here think that all is not well in Pakistan with regard to raw jute.

On Tuesday last, ready B. twills improved to Rs. 93.05 from Rs. 92.75, while ready hessian 40" 10 oz. were steady at Rs. 39.85. The improvement followed a hardening in fibre prices. At this time, figures in regard to March output were released. Production amounted to 83,300 tons, as against 83,600 tons in February. With end of February stocks being 110,800 tons, the total quantity of goods available during the month was 194,100 tons. The March-end stocks were of the order of 106,800 tons, so that the demand during the month was 87,600 tons, which, it was noted, was more than production. Such an analysis, as also the good consumption report from the U.S.A. (on Wednesday the market was closed on account of Bengali New Year Day) hessian 40" 10 oz. spurted to Rs. 40.50. B. twills, at Rs. 93.95, was also noted for an improvement. However, genuine business was confined to small quantities, although purchasers in the bazar anticipated more enquiries from the United States and Argentina in the near future. On Friday, hessian 40" 10 oz. improved further to Rs. 40.55, but B. twills receded to Rs. 93.60 in the absence of support. Activity in hessian futures began to receive momentum, and over the week-end, the ready 40" 10 oz. rose to Rs. 40.80. On the other hand, ready B. twills sagged to Rs. 93.15. Stiffer competition from Pakistani mills in foreign markets was thought possible, as Pakistani mills were increasing sacking output by addition of 1,000 looms to produce heavy goods. The market was featureless yesterday, as overseas enquiries were lacking, and the rains on Monday and Tuesday nights imparted a lower trend in fibre market. Hessian 40" 10 oz. was quiet at Rs. 40.65 and B. twills at Rs. 92.60.

Although mills showed only limited interest in raw jute, prices improved, following the invitation of tenders by the State Trading Corporation. From Rs. 22.50, Daissee bottoms improved to Rs. 23, and Assam bottoms and Northern bottoms closed at Rs. 20.75 and Rs. 20.50, respectively, with a similar improvement. Later in the week, there were heavy showers in some of the jute districts in West Bengal, which would aid sowing as well as germination in places where sowing had already been completed. The latest quotations for April-May delivery for the different varieties are:

	Middles	*Bottoms*
Indian:	Rs.	Rs.
Northern	23.50	20.50
Upper Assam	23.75	20.75
Cuttack	25.25	22.25
Desal	*23.00*	*20.00*
Murshidabad ...	21.00	18.50
Jungli	20.75	18.25
Daissee selected ...	25.25	22.75
Uttar Pradesh ...	20.75	18.25
Bimli f.a.q. ...	Rs. 19.00	

Pucca bales 1st marks ... Rs. 160.00 per bale ready.

METALS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 21st *April*

A slightly downward trend was in evidence in the metal market during the week under review. Following the need to lessen inventories on account of year-end considerations, there were more offers than consumers could absorb. Tin opened at Rs. 583 and at one time was as low as Rs. 576 before closing quiet at Rs. 581. Demand from consumers having been met, offers from stockists were not responded. With huge stocks, there was some anxiety on the part of sellers for disposal, as there was apprehension that the price might fall further. This anxiety, it would appear, developed from a correct analysis of the situation. For not only the supply position here was easy but the trend in Singapore market prices was also downward.

With utensil scrap quoting at Rs. 220 per cwt. copper scrap was caught in the general dullness. Moreover, the price on the London Metal Exchange also gave way. This followed, it was stated, reports which pushed to the background any possibility of production in Chile being affected by labour troubles.

Lead closed lower at Rs. 66.50, as against the opening of Rs. 67.

Electrolytic zinc opened at Rs. 84.50 and soon gave way to Rs. 83.50. *Since*, however, the stock position was far from comfortable, unlike other metals, a recovery to Rs. 87.50 soon followed.

TEAS EASY

(From Our Own Correspondent)

CALCUTTA, 21st *April*

Tea prices during last week's internal sales eased, although there was good demand. Dusts on offer amounted to 21,652 chests. In C.T.Cs, the medium kinds declined by 8 nP. Stronger liquoring powdery lots, however, recorded a hardening tendency, as also brighter liquoring grainy teas. Best C.T.Cs declined by 10 to 15 nP below valuations. Orthodox teas eased by 2 nP. A similar decline was recorded by legg cut Dooars. On the other hand, powdery teas received good attention. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.65 to 3.00; medium Assam C.T.C. Rs. 2.00 to 2.15; medium Assam grainy Re. 1.74 to 1.80; and medium Dooars Re. 1.80 to 1.84.

Leaf amounting to 1,558 chests met with good demand at irregular rates.

Special export licence (transferable) was offered at 1¼ nP per lb., but no transactions could be put through in the absence of buyers.

Shipping licence (non-transferable) changed hands at ¾ nP.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 20th *April*

Quietly easy trend continued to prevail in the foodgrains market during the week. Although new crop arrivals were still not very heavy, reluctance of stockists to enter the market pending the announcement of the Government's procurement price of wheat was the main influencing factor. Wheat at Hapur registered a fractional fall during the week to be quoted on Monday at Rs. 16.25 per maund for *dara* quality and Rs. 17.25 to Rs. 17.75 for farm produce, while some inferior quality was quoted upto Rs. 15.50 per maund. Daily arrivals were small, the average being 150 to 200 maunds, as, following cloudy weather during the major part of the week, winnowing operations have been delayed. Reports from threshing floors indicate that crop as a whole will not be so heavy as earlier expected, as westerly winds in mid-March had harmed the standing crops.

Rice continued to rule steady and modest gains were recorded in the good quality rice prices with increasing seasonal demand and restricted supply position. The prevailing prices on Monday were:—*basmati sela* Rs. 34.50; *mainpuri* Rs. 22.50; *raimunia* Rs. 27; *gadda* Rs. 23 per maund.

After an early fall, peas and *arhar* recovered towards the week-end, due to good demand at lower levels. Arrivals of new grain during the week were also modest—peas at an average of 1,500 maunds and *arhar* 250 maunds daily. *Arhar* purchases were mostly from Agra operators. Other pulses ruled quietly steady to be quoted on Monday (in rupees per maund): peas *dara* 11.75; farm 12.25 to 13; peas *dal* 13.24; *arhar* 15; *arhar dal* 17 to 18; *urd* 19; *moong* 20.50 to 23; *massor* 14 to 15.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 20th *April*

Sugar prices continued to rule steady. Despite the ceiling fixed by the Central Government some months ago, prices of sugar in the open market are firm. It is alleged that sugar mills are selling their quotas in the black market or to fictitious parties, thereby making undue profits. Crushing season is gradually coming to a close and some more factories in West U.P. have terminated their season.

In the Muzaffarnagar market, *sugar* is quoted about Re. 1 to Re. 1.50 per maund higher than that fixed by the Government. Demand from consuming centres are reported to be fairly heavy. The latest prevailing prices are: Spot delivery new Shamli D29 Rs. 36.75; Mansurpur D29 Rs. 38.25; C29 Rs. 38.75; wholesale mill delivery controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36; market quotations: Rohana B29 Rs. 38.87; Lhaksar B29 Rs. 38.87; Mansurpur C29 Rs. 38.25; Deoband C29 Rs. 38.37; Khatauli D29 Rs. 37.44; Dhampur C29 Rs. 37.94; Meerut D29 Rs. 37.62; Amroha D29 Rs. 37.44; Bijnore D29 Rs. 37.25.

There was good outside demand in the Kanpur market during the week. Quotations were: Sugar spot per bag C29 Basti Rs. 106-4; Gola Rs. 105; D29 Gola Rs. 104-4; Hargaon, Burhwal and Waltergunj Rs. 104-8; Lakshimpur, Balrampur and Tulsipur (unstocked).

Khandsari continued to rule steady in line with crystal section. Production was on a restricted scale since the last levy proposed, but there were indications that the Government was likely to reduce the proposed duty and an early announcement was expected shortly. Current prices were: Superior Rs. 33 to Rs. 36; inferior Rs. 29 to Rs. 32 per maund.

Gur registered fractional gains during the week following fall in daily arrivals to an average of 500 maunds, mostly out of stocks retained by producers. Local stock was put at 95,000 maunds, as against 143,000 maunds on the corresponding date last year when *gur* was quoted at Rs. 15.75 per maund. Sowings of cane for the next season are also nearing completion and an increased cane acreage is predicted. Prevailing prices were:—*Gur pansera* Rs. 19.75 to Rs. 20; *balti* Rs. 20; *shakker* Rs. 21 per maund.

Gur arrivals also ran down in the Muzaffarnagar market to an average of 5,000 maunds daily and prices registered slight gains to be quoted in the week-end at:—*Gur chaku* Rs. 18.75 to Rs. 20; *pansera* Rs. 20 to Rs. 20.50; *ladu* Rs. 20 to Rs. 20.50; *shakker dara* Rs. 20 to Rs. 22; *masala* Rs. 23 to Rs. 25 per maund.

Forward trading in *gur* futures is soon to be allowed at Hapur under new regulations and restrictions imposed by the Government of India through the Forward Markets Commission.

MARKET GOSSIP

(*Concluded from page 675*)

Senate Sub-committee, which, in part, reads as under:

"There is an even more compelling reason, however, why it is essential for the United States to maintain a certain amount of textile capacity and a textile labour force. Textile mill products have a high military priority. The Department of Defence has ranked the textile industry second only to steel in terms of military essentiality. It would be the height of folly in a world where we must realistically recognise the necessity for military preparedness—however much we hope for and work toward the elimination of war—to allow the domestic textile industry to contract to the point where it could not satisfy our basic civilian and military needs in the event of an all-out emergency. It would not be wise national policy to allow conditions in the domestic textile industry to continue to deteriorate... there can be no disagreement that it is imperative to national security for this nation to maintain sufficient capacity to satisfy its military and civilian needs in the event of a national emergency."

Mr. Ewing also recalls that, in 1920, when the U.K. dyestuffs industry was catering to less than 20 per cent. of the domestic requirements, the Government gave protection to that industry, on grounds of national security, through regulation of imports and that this shelter enabled the establishment of a virile and progressive dyestuffs industry in the U.K.

The reaction of the British Government to the continued plea of Lancashire for protection against imports will be known in this country tomorrow, for Mr. Harold Macmillan, the U.K. Prime Minister, is expected to make a statement in London today.

Meanwhile, the Lancashire millowners are vigorously pursuing their efforts to improve their competitive capacity. The U.K. Cotton Board has already submitted to the Government a plan for reorganising and re-equipping the industry formulated by the Board's special Development Committee under the chairmanship of Lord Rochdale. The plan co-ordinates the various proposals for rationalising the industry which individual sections have produced, and it has generally been assumed that the outcome will be compensation for units taken out of action on the basis of an industry levy supplemented by direct Government aid. An official statement of the Government help for the cotton industry's reorganisation plan is also expected to be made in the House of Commons today—the day on which Mr. Macmillan starts his tour of Lancashire. In view of this impending statement, perhaps, Mr. Macmillan, Sir David Eccles (President of the Board of Trade) and Mr. Macleod (Minister of Labour) did not give any inkling of the Government's intentions when they received a deputation of nine Lancashire Mayors on Friday, the 17th inst. It is worth noting here how leaders of public opinion in Britain actively associate themselves with the spokesmen of industry whenever an industry is in trouble. Nothing of this sort is done in this country. If anything, they try to run down the manufacturers in the eyes of the public.

The Lancashire Mayors put forward a number of proposals for improving conditions in the Lancashire cotton industry. These covered, among others, the following:

(1) Legislation to provide that all goods sold in the U.K. should be marked with their country of origin; (2) introduction of restrictions on imports of cotton textiles; (3) abolition of purchase tax on all textiles manufactured in Britain; (4) special measures to bring new industries into those areas most hard hit by the plans for contracting the cotton industry.

If the aforesaid demands were granted, it would mean the erection of a strong protective wall against imports of cotton goods into Britain.

It is not the British cotton industry alone that is clamouring for restrictions on imports. Its confreres on the Continent and in the U.S., too, are seeking to broaden import controls to cover textiles from countries in the Far East. "This pressure," to quote a recent Press report from New York, "already reflected in a visit to Hong Kong by Mr. Henry Kearns, Assistant Secretary of Commerce, could take the form of an application for unilateral restrictions imposed by the U.S., if no further negotiated curbs can be obtained. The initially negative response of Hong Kong producers to Mr. Kearns' preliminary approach on quota negotiations increased this possibility... The domestic industry claims that the combination of modern machinery and low wages in the Asian countries makes it impossible for U.S. manufacturers to compete with their prices in the open market." It may be noted here that the U.S. textile industry already enjoys protection from Japanese imports under a voluntary quota system.

The European Common market countries are also thinking in terms of restricting imports of cotton goods from Asian countries. The need for uniform European regulation on imports of textiles from the Far East countries is being actively canvassed by West Germany. A delegation of the German textile industry led by Herr Carl Neumann, President of the Textile Association, met Dr. Erhard, the Economics Minister, recently and urged curbs on inflow of foreign cotton goods into Europe. The Minister is reported to have agreed on the need for such regulation. The difficulties confronting the German textile industry were highlighted by Herr Fritz Berg, President of the Industrial Federation, in the course of a speech made at Bonn on the 9th inst. He stated that one out of every ten textile plants had been compelled to shut down in recent years and that 60,000 working places were unoccupied, while many workers were on short time.

No one will underrate the disquieting conditions obtaining in the cotton textile economy of the Western countries. But what one would wish to ask is whether imposition of import quotas on textiles produced in the developing countries of the Asian region will solve all problems confronting the industry. If the Western nations really want to succeed in withstanding competition from Asian textile exports, they should concentrate all their energies on enhancing the efficiency of their equipment. As Mr. James Ewing rightly stressed, if Britain "is to recreate a compact and efficient industry working to full capacity, production of quality fabrics is a sound basis for a healthy industry." These words, though addressed to Lancashire, hold equally good for the cotton industry in all the industrially advanced countries of the West, not to mention India and other Asian countries.

* * * *

The International Cotton Advisory Committee will meet next month in Washington to discuss the cotton problems of the free world. This time the Committee is meeting when the whole atmosphere is surcharged with concern and anxiety over the adverse and unsettling influence of the U.S. cotton export policy. Cotton exporting countries of Latin America, Egypt and consuming countries like Britain are expected to voice their protest against the U.S. Policy. The U.S. payment-in-kind export subsidy, especially the provision that the subsidy rate is subject to change from time to time without notice, has already come under fire. Critics of the policy fear that it will have very harmful effects on the international trade in raw cotton. Already, as the International Federation of Cotton and Allied Textile Industries points out in a cable to the U.S. Secretary of Agriculture, it has undermined, and continues to undermine, forward buying confidence and cotton consumption remains adversely affected in relation to that of man-made fibres. Heavy price risks are involved in carrying stocks, which, because of this policy, cannot be effectively hedged. The Federation, therefore, has suggested that it would be advantageous for the U.S. and in the best interest of growers, shippers and manufacturers to enact, as soon as possible, legislation which will result in one-price system for American cotton.

Latin American countries, it appears, would not be satisfied with pleading for a readjustment of policy by the U.S. They seem determined to make an all-out bid to see that the policy is altered. They are currently thinking on the lines of creating a cotton bloc, consisting of exporting countries other than the U.S., to offset sharp swings in cotton prices which might possibly result from U.S. policies. It is reported that these countries would like to set up an inter-American cotton federation aiming chiefly at bringing about a change in U.S. policy. Mexico, as one directly interested in and affected by the U.S. policy, has taken the lead in the matter and appears to have succeeded in roping in countries like Columbia, Costa Rica, El Salvador, Panama, Brazil, Guatemala, etc. These countries believe that the U.S. policy spells the danger of total disappearance of cotton production as a source of work and income for their people. The U.S., according to them, has only to thank itself for the current dilemma of world cotton. It is stated that, to begin with, the Federation will have a tentative five-point programme. It will institute studies, in the first instance, aimed at a common solution of technical, agricultural and marketing problems of cotton. It will offer technical assistance to member countries, organise publicity campaign to win public opinion in cotton importing countries, and supply information on the different phases of cotton production, financing and marketing. It will also co-operate with other international organisations for the purpose of stabilising cotton prices.

RECENT TRENDS IN INDIAN BANKING

(*Concluded from page 683*)

Two factors have stood in the way of expansion of banking in the rural areas. One is the risk factor, the other is the absence of the banking habit among the people. Joint-stock banks, influenced mostly by commercial considerations, are not prepared to open branches in areas far removed from urban centres. It is for this reason that the State Bank has been entrusted with the responsibility of establishing not less than 400 additional branches within a period of five years from July 1955. Provision has been made to cover losses that may be incurred in the initial stages of this scheme by the creation of an integration and development fund. Upto the end of 1958, the State Bank had opened branches at 262 centres.

The General Pattern

Recent developments in the country's economy should have considerably reduced the force of the abovementioned deterrent factors. But, while it is obvious that, in the industrialised regions of the country, a rise in the tempo of economic activity and an increase in incomes directly and immediately help banking, the same thing cannot be said of the rural areas. Although the villages are being rapidly opened up to the influence of the towns and the unmonetised sector of our economy is steadily shrinking, it takes a long time for tradition and lethargy to give way to new ideas and habits. Nevertheless, in view of the recent rise in agricultural income and the progressive urbanisation of the rural areas, the question arises whether these improvements by themselves would not constitute sufficient attraction to the well-established banking institutions in the urban centres to expand to the villages.

The answer to this question consists in the fact that expansion of commercial banking, whether in rural or urban areas, like the expansion of industries in the private sector, depends directly on the scope of free enterprise. The condition of joint-stock banking in the last one year or so is illustrative of this point. The ratio of scheduled bank credit to their net liabilities was 58.7 per cent. in 1953, but rose to 69.9 per cent. in 1957. This ratio touched the peak level of 76.8 per cent. about the middle of May 1957. Since then, it steadily declined to about 62 per cent. at the close of the year and receded further in the next year to reach about 54 per cent. at the close of 1958. The trend since the middle of 1957 is significant. Between June 1957 and December 1958, the net liabilities of the scheduled banks in India increased steadily from Rs. 1,248.1 crores to Rs. 1,573.3 crores or by 26 per cent., while scheduled bank credit receded from Rs. 926.5 crores in June 1957 to the low of Rs. 847.9 crores in December 1957, moved up thence to Rs. 961.2 crores in April 1958 and again declined with the onset of the slack season to Rs. 837.47 crores in November 1958. Thus, in the 18 months from June 1957 to the end of 1958, while deposits rose rapidly, bank credit (of scheduled banks) varied roughly between Rs. 850 crores and Rs. 950 crores, with the result that the credit deposit ratio more or less steadily declined to 54 per cent. by the end of 1958. It is also worth noting that, in the one year from December 1957 to December 1958, as between time liabilities and demand liabilities, the latter (the bulk of which constitutes current account deposits and on which on the average an interest of a quarter per cent. is paid) declined from Rs. 714.0 crores to Rs. 687.5 crores, while time liabilities (on which the rate of interest varies between 4 per cent. and 4½ per cent.) increased from Rs. 647.3 crores to Rs. 885.8 crores. The inevitable result of this trend in deposit liabilities and advances was a decline in bank profits as seen in the results for 1958 published by most of the banks at the time of writing (February 1959). It is likely that higher rates of interest on time deposits should have brought about a shift from demand deposits to time deposits; and the placement by the U.S. authorities in India of funds received from the Government of India for foodgrains imported into the country accounts for the swelling of time deposits in the banks' portfolio to a substantial degree. But the rise in the payments on account of interest only partly explains the decline in profits. The real problem which the banks had to face in the last year was inadequate demand for bank accommodation against an embarrassingly large accumulation of liquid balances with them. The busy season of 1958-59 set in late and, though there has been a sharp increase in bank advances, it is feared that much of this has been required for speculative purposes. On the other hand, there has been further increase in bank deposits, while cash balances of the scheduled banks and their investment portfolio have not shown any significant change that may be expected in the busy season. At any rate, the recession in commercial banking in 1958 when the level of general economic activity in the country remained on the whole high, makes one feel that this is largely a reflection of the attitude of the private sector in industry. The tight import restrictions, mounting taxation, rising wages and other political and economic factors have considerably dampened business enthusiasm and unmistakably resulted in a slackening of activity.

If in the underdeveloped countries of today, financial and banking institutions are to develop along the lines they have developed in some of the advanced countries, it is necessary that more or less the same conditions should prevail in their economic system. But, if, in the special circumstances of the less developed countries, such conditions do not exist, it is not proper to judge the pattern of development of credit institutions against standards which are alien to them. Recent developments in banking in India—the nationalisation of the Imperial Bank, the establishment of special credit institutions and the forging of closer links of control between the central bank and the commercial banks—are in line with the scheme of economic development envisaged by the Government. Given the pattern of economic development, it is meaningless to expect the banking and financial institutions to shape in a different mould.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2510 BOMBAY, 2nd MAY 1959 PRICE: Rs. 2

OFFICIAL LANGUAGE

THE Committee of Parliament on Official Language has, as was perhaps only to be expected, given its verdict in favour of Hindi. The hope, entertained in certain quarters, that it might take into account the growing volume of opinion in favour of the maintenance of the *status quo* has been belied. The Committee is of the "definite" opinion that adherence to the Constitutional provision for official language—that is, the change-over to Hindi after 1965—is the only "safe and practical" course. Nevertheless, the Committee must be congratulated on its general sense of awareness of the importance of gradualness in effecting the change-over to Hindi and of making the transition as smooth as possible. But even this sense of caution may have to be thrown to the winds, if the ginger group of fanatical opponents to English are to prevail in Parliament. The debate in the Lok Sabha over Mr. Frank Anthony's motion for inclusion in the Constitution of English as one of the Indian languages showed how some elements are implacably opposed to the retention of English. The fact that the Committee's report contains minutes of dissent by five of its members favouring a speedier transition to Hindi shows which way the linguistic wind is blowing. It is a pity that only a few realise that it is an ill-wind that blows nobody any good; it succeeds only in fanning the irrational hatred for the North in the South.

The Committee is certainly not right in insisting that the Constitutional settlement prescribing 1965 as the date for change-over to Hindi was evolved after "careful consideration." It is well known that this decision was taken by a majority of one vote. The fact is that the Constituent Assembly was engaged in the discussion of many fundamental and momentous issues. It could not have brought into the discussion that awareness of practical difficulties in the change-over to Hindi which later years have served only to emphasise. To the men who wrote the Constitution, the year 1965 appeared too far away and it was then thought that, by 1965, many fundamental changes could be achieved. If later events have justified the postponement of the date or the modification of the decision, there is certainly no reason why such a change should not be effected. After all, in matters affecting relatively more fundamental issues, the Constitution has been amended with a want of seriousness of purpose which might have appeared incredible a few years ago. Again, it is difficult to agree with the Committee when it says that the replacement of English by Hindi and regional languages is a "practical necessity," on the mere grounds that the standard of attainment in English among students is less than it was formerly and that the State Governments are changing over to regional languages. It is true that the standard of English in schools and colleges is going down. But corrective measures could be promptly adopted for checking this deplorable trend. It is not yet too late to improve the standard of English in schools and colleges to the former level. It would be wrong to allow official decisions to be modified by deteriorating educational standards. If the State Governments are switching over to regional languages—even this trend is to be deplored because it is not calculated to further the cause of national cohesiveness—there is no reason why the official language should change at the Union level.

The redeeming feature of the Committee's report is its stress that, if it is conceded that the change-over to Hindi should be effected, then the transition should be as smooth as possible. Thus, it emphasises that the process of change-over should be so "developed and regulated" that it may be effected without causing dislocation and with the minimum of inconvenience. In determining the pace of change-over, consideration should be given to the progress of Hindi in non-Hindi areas and the linguistic capacity of existing Government servants. Further, the process of change-over, it is stated, should not have the effect of placing any linguistic group at a disadvantage in the matter of recruitment to the public services. In the first place, Hindi should be used in addition to English and preparatory measures taken for the next phase when the discontinuance of English is to be brought about progressively. The Committee also emphasises that the introduction of Hindi and other languages for official purposes does not mean severance of ties with English. Advanced students of science and technology have to be familiar with one or more foreign languages. English, it is conceded, has not only a rich literature which is intimately connected with the whole body of Western thought and culture but is at present the most important vehicle of scientific and technical information. The Committee says: "For us, amongst foreign languages, the choice of English is obvious, both because of its importance and utility and our present knowledge of it." Only, it is not clear to us why the Committee, which is fully aware of the importance of English and the historical role it has played in India, should, nevertheless, find it necessary to advocate its disappearance as the official language.

As regards recruitment to Central and all-India services, the Committee recognises that the officers will need to have adequate knowledge of English for a considerable time to come for performing their duties efficiently. The Committee is, therefore, of the opinion that there should be a compulsory English paper in competitive examinations for recruitment to Central services even after the change-over to Hindi has been effected. With regard to the language medium for these examinations, the Committee has recommended that English should continue to be the medium of examinations, Hindi being treated as an alternative medium; both Hindi and English, it says, should be available as alternative media for as long as necessary. The Committee recognises that the change-over to the language of the higher courts "will necessarily be a prolonged process and may reach completion after a general change-over has occurred in the language medium for other official purposes." Finally, it points out that, while there are general considerations in favour of adoption of common language in the Supreme Court and all High Courts, the subordinate judiciary will be functioning everywhere through the medium of regional languages.

The very sense of caution which the Committee has stressed in the matter of effecting the change-over to Hindi must serve to raise the fundamental issue as to whether the change-over is necessary at all. Perhaps, the Committee, despite its commendable emphasis on the need for circumspection and gradualness in the transitional stages, has underrated the magnitude of the problem. It is necessary to point out how many and how far-reaching are the linguistic changes that are being proposed in the country today. The Union language is sought to be changed from English to Hindi. A similar change from English to regional languages is being attempted at the State level. As if these changes were not enough, the universities, whether on their own or at the instance of the State Governments, are busy changing the medium of instruction. Clearly, the whole movement is bound to end in considerable confusion and deplorable fall in administrative and educational standards, besides inflicting irreparable damage to the sense of national unity. It is, therefore, difficult not to agree with Mr. Frank Anthony's closely reasoned minute of dissent appended to the Committee's report. The following quotation from his note bears reproduction:

"Hindi imposition spells, in my respectful view, the final hostage to India's disintegration. Mine was a lone voice in Parliament when I opposed the creation of Andhra. I warned the Government that it was initiating a process of linguistic disintegration which may lead to Balkanisation. Today, the Government condemns the movements for separate States in Maharashtra, Gujerat and the Punjab. Yet these demands are the inevitable logical consequences of the Government's policy in conceding Andhra.

"*Today, the Government, under increasing pressure from the politically dominant Hindi-speaking States, are rushing ahead with the madness of Hindi imposition.*

"The history of India has been the history of tribalisms. The reorganisation of the States on a linguistic basis was the first tragic major hostage to tribalism. The imposition of Hindi will be the final hostage to India's disintegration. *Already there is growing bitter revulsion against Hindi imposition. In reply to Hindi fanaticism, every step taken by the Hindi States is being matched in some of the non-Hindi-speaking States.* If the non-Hindi-speaking States persist in this policy, in order to forestall Hindi imposition, the inevitable result will be the splitting up of India into watertight, linguistic, cultural and, ultimately, so-called national enclaves. As the Hindi-speaking States change the medium in universities, so also will the non-Hindi-speaking States change to their respective regional languages. As the Hindi-speaking States change to Hindi in their High Courts, so will the non-Hindi-speaking States install, despite the pious hopes of the Committee, the regional languages in their respective High Courts. When the Hindi protagonists succeed in establishing Hindi as one of the media for the All-India Services, bitter irresistible movements will grow up in the non-Hindi-speaking areas which will compel the Central Government to accept the regional languages as the media for the All-India Services. The poison of linguistic disintegration, injected by the Government into the body politic through Andhra, will be mild as compared with the poison that the Government will be guilty of introducing if it insists on Hindi imposition." (Italics author's).

In view of the serious risks involved, Mr. Frank Anthony suggests that the "*status quo* should be allowed to continue at least until Parliament has had an opportunity to decide the next step or series of steps after careful, open consideration of this whole vital language

question." He warns that "every major consideration of national interest is against the introduction of Hindi." His may be the voice in the wilderness. But there is reason to think that it may well prove prophetic. It is not, therefore, surprising that many thoughtful people fully agree with him. Some of these, it is noteworthy, are the authors of our Constitution. A glance at the names of persons who have petitioned Parliament for the continuance of English as the official language of the Union and for abandoning all measures to replace it by Hindi will show that several renowned educationists, experienced administrators and public leaders of equal, if not greater, eminence as the members of the Parliament Committee on the language question are opposed to the change. They reflect the feelings and urges of a large section of people in Madras, Mysore, Andhra, Bengal, the Punjab, and Western India. There is not an iota of exaggeration in Mr. Frank Anthony's claim that almost all parents want their children to study English and be educated in English. This is evident from the tremendous rush for admission of children to schools where English is given a high place. The consenses of opinion among parents is that, during the last ten or twelve years, the Congress Governments in the States have made a mess of education by effecting all sorts of changes and by reducing the importance of English in the curriculum for primary, secondary and high school classes. There is good reason to feel that, on this language issue, the thinking section of the people is with the petitioners to Parliament. Both Parliament and the Government will, therefore, do well to let English remain as the official language of the Union Government and as the means of communication between the State Governments *inter se*. Such a decision need not in any way hurt the feelings of those whose mother tongue is Hindi, for, as a regional language, Hindi will have plenty of scope for growth and administrative usage.

LAND REFORMS AND PLANTATIONS

THE Kerala Agrarian Relations Bill, as it has emerged from the Select Committee, is harsher for the plantation industry than the original one. It would be unreal to overlook the fact that much water, some very muddy, has flowed through the Munnar tunnel since the original Bill was submitted to the Assembly by the Communist Government on 18th December 1957. The general debate on the Bill this week and the Revenue Minister's reply thereto indicate that there are no chances of the measure being improved in favour of the planters. Even the reasoned plea by some members of the State Legislature to modify the provisions that seek to restrict the growth of plantation industry has failed to evoke any response from the Government. Although Mrs. K. R. Gouri, Minister for Land Revenue, observed that it was not the intention of the Government to place any limitations on production of rubber and that there was a general provision in the Bill under which the Government could exempt any land from ceiling on the ground of public interest, this declaration is not adequate, nor is it calculated to inspire confidence among the planters, as it places them at the mercy of a Government which is by no means friendly to private enterprise, in general, and the planters, in particular, whom it has harassed to the maximum extent possible ever since it came to power. If the intention of the Government is not to place restrictions on the growth of plantation industry, why does it incorporate in the Bill specific provisions which run contrary to that intention?

In the original Bill, a "company" was not defined, but the Select Committee provides a definition which applies the ceiling on company holdings as rigidly as it does on personal holdings. The rigours of prospective restrictions are not reduced, but the total exemption provided for "oranges" and "budded mango" gardens make these two crops strangely privileged. While this attachment to oranges and mangoes is surprising as well as touching, it is not clear why the Select Committee chose these two insignificant crops for total exemption. There is hardly a mango grove above a few acres in the whole of Kerala and no orange grove as a single crop. In the Wynaad, where there is a concentration of over 10,000 acres under oranges, the crop is mixed with coffee and pepper and rarely ever cultivated as a monocrop. Neither orange nor mango cultivation is so advanced as to involve factory handling. Then why such absolute exemption for oranges and mangoes and why deny it to the State's most vital industry?

There is a general impression that plantations are exempted from the provisions relating to ceiling on holdings. But this is misleading. According to the relevant clause (57) as it stands, exemption is to cover only holdings as on 18th December 1957. By this provision, the planting industry in Kerala stands frozen as it was sixteen months ago. It is true that expansion upto 20 per cent. of the stand as it was on 18th December 1957 is now permitted by this clause, but it is an absolute limit, for those who do not have reserve lands will not be able to take advantage of it and those who have large reserves cannot go beyond the 20 per cent. The result would be far smaller expansion than the 20 per cent. calculated on the present acreage. This is an absurd fetter on the industry, especially as the State has plenty of scope for expansion of this industry and the country as a whole needs that expansion.

The Kerala State is chronically afflicted with food scarcity and has to import from the rest of India. Its textile industry is a small one, and to clothe its population, poor as it is, most of the textiles have to come from elsewhere. It is industrially one of the most backward States and what nature has done to Kerala the Communist Party has made worse by scaring away both capital and entrepreneurial skill. In Kerala, plantation is the only organised large-scale industry; in fact, it is so large and extensive that the State is known as the "plantation State" of India.

There are some 97,000 acres of tea, 85,000 acres of cardamom, 210,000 acres of pepper, 280,000 acres of rubber, 45,000 acres of coffee, nearly 200,000 acres of cashew, over 1,200,000 acres of coconuts and 85,000 acres of arecanut. Among these tea, coffee, rubber and cardamom are grown on plantation lines and constitute the organised section of the industry. It is this section of the industry that employs some 250,000 workers steadily round the year and provides them with a standard of wages and welfare unknown in agricultural employment. When it comes to the championing of these workers, the State Government considers plantations to be an industry, but, when it comes to land reforms, the same Government treats plantations as common agriculture and liable to restrictions. In this Janus-faced approach, it finds no contradiction.

The most amazing part of the Bill is under clause 56, sub-clause (3) read with clause 59, sub-clauses (2), (3) and (4). Sub-clause (3) of clause 56 reads:

"In calculating the extent of land owned or held by a family or an adult unmarried person, the shares of the members of the family or the adult unmarried person, as the case may be, in the lands owned or held by a company, co-operative society, firm, or other body of individuals or by an institution or by a joint Hindu family, Marumakkathayam Tarward, Aliyasanthana family or Namboodiri Illom, shall be taken into account.

Explanation: For the purposes of this sub-section, the share of a member of the family or the adult unmarried person in the lands owned or held by a company, co-operative society, firm, or other body of individuals or by an institution or by a joint Hindu family, Marumakkathayam Tarward, Aliyasanthana family or Namboodiri Illom shall be deemed to be the extent of land which would be allotted to such member or person had such lands been divided or partitioned, as the case may be, at the commencement of this Act."

Explanation II to sub-clause (2) and sub-clause (4) (c) of clause 59 reads:

"Where land to be surrendered is owned or held by two or more persons jointly, whether or not as members of a company, co-operative society, firm, or other body of individuals or of an institution or of a joint Hindu family, Marumakkathayam Tarward, Aliyasanthana family or Namboodiri Illom, the identity of the same shall be indicated with the concurrence of all the persons who own or hold such land....

"On receipt of the statement under sub-section (2) or sub-section (3), the Land Board shall... (c) determine the identity of the land to be surrendered."

Read together, these clauses mean that, where a shareholder of a planting company who also owns lands up to the maximum in his own right and chooses to retain such land, his shareholdings in the company will be taken as excess land held by him. The procedure laid down makes it clear that a mere liquidation of shares under highly adverse market conditions as can be easily foreseen, will not satisfy the framers of the Bill. The land equivalent to his shareholding in the company will have to be demarcated in the company's estate and surrendered to the Land Board. There will thus be dismemberment of holdings under corporate ownership and joint-stock enterprise in plantations is exposed to the risk of disintegration.

The Congress Party and, of course, the Socialist Groups in the Assembly are not in a position to counter the Communist strategy, because their national leadership has already compromised their position in regard to land reforms. In the course of the general debate on the Bill, Mr. P. T. Chacko, leader of the Congress Party in the State Legislature, put up a stout defence and impressively highlighted the importance of plantation industry to the economy of Kerala. But the Communist Party leaders had no great difficulty in disposing of his opposition simply by reading the published speeches of the Prime Minister and other top leaders of the Congress Party.

When the All-India Congress Committee adopted its historic land reforms resolution at Nagpur, it could hardly have understood the nature of agricultural holdings or practices on the West Coast. If the land is not under permanent tree crops, it is land from the backbays reclaimed with considerable capital outlay and permanent development. If 50 acres of coconut gardens or rubber are appropriated from a grower in the name of land reforms, the new owners need not do a thing to bring the acreage to production. Producing trees pass over to them intact for a mere pittance. If this was intended by the Congress as land reforms, it is not possible to think of a more iniquitous intention of a party.

The Planning Commission gave certain broad guidance for treating efficiently-managed farms, permanently developed lands and plantations on a separate footing and added, probably inadvertently, that each State should apply these according to local circumstances. This qualification has provided the Kerala Government with the loophole it needed for escaping from the other recommendations of the Planning Commission relating to these special lands. In fact, the contention that, as the plantation industry comes under the jurisdiction of the Centre, the State Government is impinging upon the rights of the Union Government by passing a legislation that seeks to restrict the growth of that industry, has been simply dismissed by the Communists as being untenable. In order to make a strong impression on the public and effectively silence the opposition, they took the extraordinary step of asking the Advocate-General to state their case before the Legislature on the constitutional validity of this and a few other controversial provisions of the Bill.

No amount of indulgence in constitutional and other legal niceties can offset the damage that is likely to be done to sound plantation practices. For instance, it is a normal practice for permanent crops such as tea, coffee, and rubber to expand cultivation as a method of replacing weak or poor stands on an existing holding. The reason is obvious. For a tree crop, which requires some 10 years to come into production, it will take a long period of investment and care before a particular area is regarded as unsuitable. No sensible grower would immediately cut down such stands. He replaces it elsewhere and brings a larger area to support the loss from the bad patches. This is an essential part of sound plantation practice, but it would come to an abrupt end with the prospective ceiling placed on plantations under clause 57 of the Bill.

Rubber cultivation in India is almost wholly confined to Kerala. Ninety-six per cent. of India's rubber production is concentrated in the State. According to manufacturers' estimates, 300,000 tons of raw rubber will be required by 1980 or twenty years from now. Even allowing for some synthetic rubber output, the rubber area will require to be expanded by about 400,000 acres. By barring almost all prospects of expansion by those most competent to do it according to the exacting standards of modern rubber cultivation, the Kerala Government is achieving precisely what a Government would most carefully avoid, if it is placing its faith in development. Thus, in the name of land reforms, a most retrograde step is being taken in Kerala and it will disintegrate the State's most valuable industrial asset, unless retraced. In their anxiety to be true to their creed, the Communists may not care for the consequences of putting the planters' nose out of joint, but, since it will affect the country's economy as a whole, the Centre has to prevent them from doing so.

MAJOR BID TO CHECK SMUGGLING

SOCIALISM OR COMMUNISM?—U.S. GOLD LOSS—OUTLOOK FOR DIAMONDS

7 MAY 1959 PUBLIC

THURSDAY, 5 P.M.

AN important event of the week is the major attack made by the Union Government against smuggling, especially of gold. Exactly a month ago (*vide* page 491 *Commerce* dated 28th March 1959), we stated in these columns that the authorities had not given up their search for new weapons to check illicit arrivals of gold. The weapon now chosen by them is to put an end to one of the chief means through which smugglers were able to finance their nefarious activities. As is well known, the smugglers bring gold into India surreptitiously, sell it in the markets, take the proceeds out of the country in the form of currency notes, mostly in denominations of Rs. 100, exchange these notes for foreign currency through the banks in foreign countries, which in turn present them to the Reserve Bank for payment in sterling. Despite the vigilance of the customs, the illegal traffic in gold has gone on merrily for years, ever since imports of gold were banned. The main spring-board for these traffickers is the Persian Gulf countries, because, in this area, Indian currency has been in circulation as a medium of exchange right from the time when both India and this area were under British rule. Even today, the authorities of almost all countries in the area treat Indian currency as legal tender. The step taken by the Government this week will make it extremely difficult for smugglers to convert the rupee proceeds of their trade with India into sterling or other foreign currency and thereby deter them from bringing gold into this country.

MARKET GOSSIP

Immediately after independence, India should have separated the currency in circulation in West Asia and withdrawn them. After all, these are foreign countries and, unlike the British, the Indian Government has no political control over them. Just as the currencies of Ceylon and Pakistan were separated, so also the rupees in the Persian Gulf area ought to have been promptly dealt with. It is not clear as to why this was not done. Some say considerations of political prestige stood in the way. It may be noted here that Pakistan had actually blocked all its rupees that were in circulation abroad long ago and thereby saved several crores worth of precious foreign exchange. There is really no economic reason for allowing Indian currency to circulate in a foreign territory as a medium of exchange and legal tender, especially when the foreign trade with that territory is conducted in the same way as that with any other foreign country.

The failure of the Indian Government to stop the use of its currency in the Persian Gulf area has cost this country quite a few hundreds of crores worth of foreign exchange which has been used for "importing" into the country the goods the authorities decided were unnecessary and, therefore, should not be allowed. The point to be noted, in this connection, is that, whereas Indian nationals could convert the rupees into sterling only at the discretion of, and to the extent allowed by, their Government, holders of our currency in the Persian Gulf area could exchange it for sterling for any amount and at any time they liked. This is, indeed, an extraordinary situation and it is surprising that this should have been allowed to continue for as many as eleven years. The authorities cannot say that they were not fully aware of it, for, according to our information, several experts in finance had advised them to end it promptly, when the foreign exchange position tended to deteriorate. Their inaction all these years was really inexcusable. Mr. Morarji Desai, therefore, deserves to be complimented for having taken a practical view of the position and deciding to plug this biggest hole in our foreign exchange bucket.

Now let us describe the step that has been taken. An emergency legislation has been passed by Parliament, amending the Reserve Bank of India Act. The relevant Bill was introduced on Tuesday. Despite the request of the Finance Minister for its immediate adoption, some members wanted time for considering it and, in deference to their wishes, the Speaker gave 24 hours for the House. On Wednesday 29th April, the House gave its consent to the Bill.

As a result, the Reserve Bank has now powers to issue special rupee notes of all denominations—including one-rupee notes which are the liability of the Government, a relic of the past—for circulation abroad. These notes, which will be distinguished from the existing notes by being printed in a different colour, will not be legal tender in India and can be exchanged for either local currency or sterling only at the Bombay Office of the Reserve Bank of India.

A time limit of six weeks has been given to holders of Indian currency in foreign countries to convert the existing notes into new notes. After this period, those foreigners who are still holding the current currency will have to remit them to the Reserve Bank of India and they will be given credit in local currency, which they can use for buying goods in this country.

The idea now is to issue a special type of notes for circulation in the Gulf area, limit the issue of these notes to the quantity now in actual circulation, make further issues, once the exchange is complete, only against payment in sterling and simultaneously stop the present facilities for the exchange of Indian currency tendered by banks in the Gulf area into sterling. While, under present arrangements, the liability to exchange returning currency for sterling is more or less unlimited, depending upon the currency smuggled out, in future, it will be limited only to the special notes replacing those now in circulation plus future issues against which sterling will be received.

The special notes will be a liability of the Issue Department of the Reserve Bank in the same way as the currency notes issued in India. Their issue will not involve any additional liability, because they will be exchanged for notes which are already in circulation and are, therefore, a liability already of the Issue Department. Future issue of notes against sterling will not involve any uncovered liability, because each rupee so issued will be covered by an equivalent receipt in sterling. In fine, the Reserve Bank of India will supply the notes required for circulation in the Persian Gulf area free of the cost of printing it.

So far as the present holders of Indian currency in the Persian Gulf are concerned, they will get new notes exchanged at par which will be their currency. The Reserve Bank will not issue existing notes in future for circulation in that area. Anyone who wants special notes will have to pay in sterling for them after the exchange is over.

The position in regard to the notes taken by Haj pilgrims is different. Indian notes do not circulate in Saudi Arabia as currency, because there is a Saudi Arabian currency which is the only legal tender there. Indian notes are only exchanged for local currency and those who collect them send the currency back to India for conversion into foreign exchange. Instead of allowing the pilgrims to take the normal currency for this purpose, it is proposed to issue special notes, so that, in future, India shall know how much of this currency has gone out. This will prevent ordinary notes smuggled out of the country getting transferred from the Persian Gulf to Saudi Arabia and returning to this country for exchange.

The Finance Minister disclosed in Parliament that the aforesaid step was taken only after consulting the rulers in the Persian Gulf area and the Bank of England. A period of six weeks' time for converting the existing notes into new notes was given, because the Government of India did not want to cause any inconvenience to those who were using the rupees as the medium of exchange. By agreeing to convert all the rupee currency notes that are held abroad either into sterling or into the new notes and by giving nearly a month and a half for this purpose, the Government of India has again demonstrated its determination to honour its external obligations to the full. As most of the rupee notes that are held abroad are mainly those that have been smuggled out of the country, the Government has a moral ground to refuse payment for them in sterling. The fact that it has not chosen to do so shows that it is anxious not to mar its reputation for financial integrity, even though the amount of foreign exchange it may have to lose in retiring these notes is expected to be anything between Rs. 30 crores and Rs. 50 crores, an amount which it can hardly afford now, with its foreign assets being only a little over Rs. 200 crores and with large import commitments which have already been made.

Some in this city are of the view that, in view of the acute shortage of foreign exchange, the Government of India should have blocked the currency notes in circulation abroad or exchanged them with the Governments of Persian Gulf countries for a 15- or 20-year long-dated loans carrying the current rate of interest for such loans, or allowed them to be used for payment against purchases of Indian goods over a period of three to five years. They feel that the Government of India has been unduly generous to the Persian Gulf countries which are undoubtedly richer than India and can surely afford to have such delayed payments. They do not think that these foreign holders of existing Indian currency will care very much for converting it into the special rupee notes; instead, they would elect to be paid in sterling. Accordingly, the demand for the new currency notes is not expected to be large. These notes, however, will be useful for another purpose, namely, for the small cash balance—at present it is Rs. 70 per person—which Indian residents going abroad are allowed to take in addition to their foreign exchange quota. Now that distinctly separate notes have been printed, there is surely no point in allowing the existing currency notes to be taken abroad.

Another comment that is heard is that the period of six weeks is too long and may encourage large-scale smuggling of rupee notes out of India to be returned in exchange for either sterling or the new notes. It is feared that smugglers will use this long interval to build up abroad a large pile of working capital which will be useful for keeping up their activities in India. The Government of India is aware of this possibility and has deliberately taken the risk for reasons mentioned above. The Finance Minister stated in Parliament that the Government would remain vigilant and try to prevent such smuggling. The fact that smugglers have always beaten the Government in this game does not inspire confidence in this statement.

Almost all are agreed that the step which the Government has taken will go a long way towards checking, though not completely stopping, the inflow of contraband gold. The military rule in Pakistan has so far led to a virtual cessation of the arrival of gold through West Pakistan. The shortage of currency in Goa and the strict police patrol on Goa's borders with India have also greatly reduced the scope for smuggling from that source. But these impediments may weaken, sooner or later, with prices of gold in this country being almost 100 per cent. above the world parity. A big difference of this nature offers an attractive margin of profit to smugglers. If, therefore, the Government had not taken the step to replace the existing currency notes abroad, it is quite possible that the quantity of gold brought into this country would have once again tended to increase.

In this context, the following data will give one an idea of the smuggling of gold that has taken place in recent years:

Between 1948 and 1956, Indian currency notes of the value of Rs. 117.5 crores were repatriated from the Persian Gulf area. In addition, the rupee balances of the banks in that area rose by Rs. 1.7 crore. In 1957, the net imports of Indian currency notes from this area amounted to Rs. 44.23 crores, of which Rs. 32.8 crores were exchanged into sterling. During the first three quarters of 1958, Rs. 33 crores in Indian currency were returned, of which Rs. 27.4 crores were exchanged into sterling. The bulk of the amount exchanged represents the value of gold and goods smuggled into the country with gold predominating.

It must be added here that smuggled gold is being paid for by other methods, too, such as unauthorised exports and foreign currency earned by underinvoicing of exports and overinvoicing of imports. These methods, though more difficult than taking currency notes out of the country and presenting them for payment in sterling through the banks in West Asia, are still available to smugglers and certain amount of contraband gold is, therefore, bound to find its way into India. Meanwhile, the price of spot gold in Bombay has broken all past records and is standing at Rs. 125.25 at the time of writing.

* * * *

The erstwhile President of the Congress Party, Mr. U. N. Dhebar, caused a flutter in the dovecots of the private sector in Bombay soon after we went to press last week, by discussing with some 20 economists a note on the implications of the socialist pattern of society. The discussions were held for two days, on Thursday and Saturday last. The note was fairly long, running into about 20 pages of foolscap size. It is not known who is the author of the note, but Mr. K. K. Shah, the President of the B.P.C.C., who arranged the meeting with the economists, described it in his invitation to them as that of Mr. Dhebar.

Although the note was supposed to be highly confidential, its contents came to be known to some of the leading industrialists and sharebrokers on Friday and caused considerable alarm among them, for its substance meant that, from the economic angle, the future pattern of the Congress Party's socialism would not materially differ from communism. Knowledgeable circles say that the note represents the quintessence of the discussions among the members of sub-committee of the Congress Party charged with the task of drafting the basic policy of the Third Plan. Mr. Dhebar is the Chairman of this Committee.

The main features of the aforesaid note are:

The scope for the private sector must be greatly reduced. Only a few lines of production should be left to it. Middlemen in all walks of life are to be eliminated. The ultimate objective is to have only three sectors, the public sector, the co-operative sector and the self-employed people. Employers will have no right either to recruit workers or to dismiss them; the State will take over that function. Banking is to be nationalised completely. As a counterpart to the ceiling on landholdings in rural areas, suitable measures shall be taken to limit the incomes in urban areas. The aim should be to see that everyone lives only by the sweat of his brow and not out of past savings.

Mr. Dhebar is said to have made it clear that the ideas contained in the note were meant only for discussion and did not constitute the final decision of the Congress Party. After the discussions on the second day, he took back the copies of the note from the invitees.

The most surprising thing about this development is that a top leader of the Congress Party should have presented a note for serious discussion containing such revolutionary ideas, which, if implemented, would mean the end of democracy in this country. It will be interesting to note that only three days before Mr. Dhebar's paper came up for discussion with the economists of Bombay, the Union Finance Minister, Mr. Morarji Desai, had rejected in the Lok Sabha the Communist Party's demand for nationalisation of banking as being unnecessary and unwarranted.

* * * *

Last week witnessed a fresh drain in the gold stocks of the U.S. of the value of $100 million. This is the sharpest fall in any week since September last and brings the total stocks down to $20,331 million, the lowest level in the last twelve years. The drain is attributed to the rise in gold prices in London which must have provided an incentive to foreign central banks to make their purchases in New York. The dollar price of gold in London has risen well above the U.S. selling price of $35·0875 per fine ounce. It is, therefore, cheaper for foreign central banks to convert the dollar or other fully convertible currencies into gold in New York. These purchases are presumed to have been financed partly through net sales of U.S. Treasury securities of the value of $60 million.

The loss of $100 million in the week ended 22nd April has come as a surprise after a period

BULLISH TONE BACK IN SHARES

TEXTILES IN FAVOUR

(From Our Own Correspondents)

BOMBAY, *30th April*

THE share market ruled steady during the week under review, with a general improvement in prices. The mild recovery which set in at the close of the previous week, following the Finance Minister's assurance in the Lok Sabha that he would look into the demand for reducing the rigour of the new system of corporate taxation, gathered some more momentum this week. In fact, some counters in the textile and sugar groups, shipping and miscellaneous sections were in the limelight and the rise in prices of these scrips was quite marked. Steel shares, however, were in the background, evidently due to fear of heavy delivery by a leading operator in the current settlement. The general undertone at the close was bright.

In the steel section, Tata Ordinaries shaded off early in the week from Rs. 180.50 to Rs. 178.75; later they moved up erratically to touch Rs. 182 today and closed at Rs. 181.75. The new shares were marked up over the week from Rs. 178.25 to Rs. 179.75. Indian Irons also moved irregularly between Rs. 24.50 and Rs. 24 before closing at Rs. 24.32, the rise over the week being no more than 12 nP.

Textile shares were conspicuous with smart rises in several counters on good support, following reports that stocks with mills had declined and that the offtake of cloth in the domestic market had improved. though the performance on the export front was not encouraging. Bombay Dyeings rose from Rs. 60.80 to Rs. 62.70 before closing at Rs. 62.50. The rise in Centurys was, however, less marked than in the previous week, having put on no more than Rs. 4 to Rs. 511.50, as against an increase of Rs. 19.25 in the previous week. Kohinoors provided an exception to the general trend with a drop of Rs. 2 to Rs. 258.50. Central Indias recorded an improvement of Rs. 9 to Rs. 104. Finlays jumped up from Rs. 271 to Rs. 283. Gokaks gained Rs. 16 to close at Rs. 159, following the Chairman's statement that the working of the mills in the first three months of the current year had shown better results than in the corresponding period of 1958. He also stated that the Company's rehabilitation plan carried out in recent years was beginning to yield benefit and that the outlook depended upon the supply of adequate power.

Bank shares were featureless again, despite reports that the Life Insurance Corporation had placed orders for buying some of them. Barodas gained a fraction to Rs. 106, while Central Banks were quiet with a drop of 60 nP to Rs. 56.60 and of 70 nP to Rs. 58.30 in their new shares. Bank of Indias were just steady at Rs. 136, while United Commercials shed 30 nP to Rs. 65.70.

On expectations of better price realisations for sugar in the current season, due to lower production and very good demand, sugar shares were keenly bid. Belapurs staged a sharp rise from Rs. 290 to Rs. 309, Phaltans from Rs. 154 to Rs. 167 and Walchandnagars from Rs. 297.50 to Rs. 322.50. Following the assurance by the Chairman (Mr. M. L. Dahanukar) that the shareholders' request for the issue of bonus shares would be considered after ascertaining the views of legal advisers and tax consultants, Maharashtra Sugars shot up by Rs. 26 to Rs. 226. The Company would shortly apply to the Stock Exchange for enlistment of its shares on the forward list.

Cement shares were dull and changes in prices were fractional. Associated Cements moved between Rs. 150 and Rs. 148.50 before closing at Rs. 149.75. Digvijays closed with a loss of Rs. 2.50 over the week at Rs. 144.50. Orissa Cements also lost a fraction to Rs. 14.20. Ashoka Cements changed hands 20 nP lower at Rs. 9.12 and Jaipur Udyogs 28 nP down at Rs. 10.88.

In the engineering and mining group. Alcocks were in favour and rose by Rs. 10 to Rs. 280. Narrow fluctuations marked trading in Tata Locomotives. After moving between Rs. 194.50 and Rs. 190, the shares closed at Rs. 192, with a fractional loss over the week. Premier Constructions were again conspicuous with a rise of Rs. 11.50 to Rs. 307, bringing the aggregate increase in the last two weeks to Rs. 42. At a meeting of the management of the Company and the shareholders' representatives, held on Monday this week, the latter are reported to have suggested the issue of bonus shares in the ratio of one share for every two ordinary shares held, while implementing the scheme of converting the promoters' shares into ordinary shares. They also made a suggestion to increase further the paid-up capital of the Company by a fresh issue of shares at par in the ratio of 1 : 6. The management is said to have agreed to place the proposals before the Board of Directors. Larsen and Toubros gathered 84 nP to Rs. 23.96, while Mahindra and Mahindras shed 24 nP to Rs. 24.76 and their new shares 16 nP to Rs. 21.32. Kirloskar Oil Engines were well maintained at Rs. 20, while Mysore Kirloskars shot up to Rs. 132.50 from Rs. 120, at which the last business was done. The decision of the Directors of Shivrajpur Syndicate to repeat the distribution for the year ended 30th November 1958 at Rs. 8, made up of a dividend of Rs. 5 and a cash bonus of Rs. 3 per share, did not result in a setback in Shivrajpurs. The shares were quietly steady at Rs. 103.50. Indian Coppers were unchanged at Rs. 4.28.

Shipping shares were in demand, following reports of a rising trend in tramp freight rates. Scindias staged a recovery from Rs. 17.68 to Rs. 18.32. The rise in Great Easterns was more marked, having gone up from Rs. 21.20 to Rs. 23.16. Their new shares gained by 80 nP to Rs. 16.32. Bharat Lines were steady at Rs. 12.92. In the automobile group, while Hindustan Motors were only a shade better at Rs. 9.06, Premier Automobiles advanced by Rs. 5.50 to Rs. 122.

In the miscellaneous section, Bombay Burmahs (old) rallied from Rs. 503 to Rs. 520.50 and their partly-paid shares by Rs. 2.50 to Rs. 177.50. National Rayons were conspicuously dull, moving between Rs. 291.25 and Rs. 286. The closing was done at Rs. 290.25. Gwalior Rayons were in demand and rose by Re. 1.04 to Rs. 18.16. Tata Chemicals gained 24 nP to Rs. 16.64, Dhrangadhra Chemicals Rs. 13 to Rs. 119 and Polychem Re. 1.50 to Rs. 85.50. Tata Oils shot up by Rs. 4.50 to Rs. 53 on expectations of higher dividend. Voltas were a feature with a rise of Rs. 8.25 to Rs. 167.50. Indian Dyestuffs advanced from Rs. 505 to Rs. 850 before closing at Rs. 775. Killick Industries were done Rs. 2 lower at Rs. 138, while W. H. Bradys changed hands Rs. 10 higher at Rs. 315. Wimcos were steady at Rs. 213.

Calcutta Stock Exchange

CALCUTTA, *28th April*

Earlier in the week under review on the Calcutta Stock Exchange, the lower levels, which had been touched in the last two weeks, invited sufficient buying interest, and, led by jute shares, fair gains were recorded in most sections. However, this support was not sustained, and in the profit-taking that followed the gains were reduced. In the result, there was a marked shrinkage in the volume of business suggesting paucity of buyers. The earlier support was mostly from speculators, who understandably enough attempted to prevent a major shake-up, in view of their large holdings acquired when the going was good and assuming that the bull phase would take prices further higher. There was no doubt that the genuine investor was hiding, as judging by corporate results and yield considerations, present levels on the Exchange are considered rather too high by him. The Prime Minister's call of more attention and importance to the public sector, which he said was more competent and economical than the much-maligned private sector, it was thought, would lengthen the holiday which the genuine investor has imposed upon himself. It was noted that Mr. Nehru's declaration that the progress of the Government sector could not be determined by the yardstick of output cost followed a somewhat contrary assertion by the Steel Minister, Sardar Swaran Singh, who thought that the operational cost per ton of Government steel would be lower than the private sector's. Added to these factors, the growing anxiety over the deteriorating Indo-Chinese and Indo-Pakistani relations acted as a chilling influence. Further, market men, noting the Finance Minister's statement in Parliament that corporate profits would be taxed at the rate of 45 per cent. from 1960-61 initially, thought that the tax burden might be heavier than at present. There is the fear in the market that equities are overvalued now even after taking growth prospects into consideration.

• • • •

Madras Stock Exchange

MADRAS, *28th April*

A distinctly firm trend was in evidence on the Madras Stock Exchange during the week under review and several scrips registered further handsome gains. The bullish sentiment was strengthened principally by the Union Finance Minister's assurance to consider the revised scheme of corporate taxation and provide relief where needed. In particular, his statement that he would consider the question of giving tax concession in respect of dividends declared out of past reserves, as also the matter of subsidiary companies or intermediary concerns, was noted with considerable satisfaction.

The textile section ruled active, on reports that domestic consumption was rising and offtake by overseas countries was better. Coffee shares elicited excellent support, thanks to expectations of better return from investment. The expectations followed Mr. Lal Bahadur Shastri's disclosure at Bhagalpur this week that, in order to simplify tax collection and to boost coffee exports, the Union Government was considering the question of replacing sales tax on the commodity by a Central excise duty. Traders are keenly awaiting the blossom estimates for the season; this is expected to be available shortly. Tea shares also attracted good attention induced by persistently firm trend of tea prices. Rubber shares, too, were well favoured. Quite a number of scrips in the sugar and miscellaneous sections edged forward on hopes of better working results.

There was good buying in textiles. Lakshmis rallied from Rs. 114 to Rs. 126, 'A' shares being done Rs. 5.50 higher at Rs. 61.50. Ramakrishnas jumped up by Rs. 10 to Rs. 175. Buckinghams spurted by Rs. 8 to Rs. 185 *cum-div.* (final). Coimbatore Spinnings hardened by a like amount to Rs. 63. Coimbatore Cottons and Rayalaseemas rose by Rs. 7 each to Rs. 142 and Rs. 121 *cum-div.*, respectively. Ranga Vilas put on Rs. 6 to Rs. 59 and Dhanalakshmis Rs. 5 to Rs. 190. Sivanandhas gathered Rs. 4 to Rs. 17 *cum-div.* The Directors of the Company have declared a dividend of 15 per cent. for the year 1958, same as in the previous year. Vijayakumars gained Rs. 3 to Rs. 102, Premiers Rs. 2 to Rs. 152, Bangalore Woollens Re. 1.50 to Rs. 170 *cum-div.* (final), and Rajalakshmis Re. 1 to Rs. 71. Anglo-Frenchs were done at Rs. 79 *cum-div.* The Directors have maintained the dividend for 1958 at the 1957 level of 6 per cent.

Values of planting scrips recorded an improvement. The following are today's closing rates for a few scrips, the figures in brackets showing the net gains over the week:

Coffee: Consolidated Coffee Rs. 22.35 (+Re. 1.10); Coffee Lands Rs. 23.70 (+33 nP); Kumargode Rs. 5.85 (+10 nP); Mysore Coffee Rs. 4 (+15 nP); Savamalai Rs. 4.08 (+18 nP); Panchura Rs. 4.62 (+32 nP).

Tea; United Nilgiri Rs. 19.75 (+20 nP); Stanes Amalgamated Rs. 15.50 (+40 nP); Peermade Rs. 20.25 cum-div. (+25 nP); Parkside Rs. 22.35 *cum-div.* (+25. nP); Nonsuch Rs. 27.30 *ex-div.* (+10 nP); Emerald Valley Rs. 8.25 (+13 nP).

Rubber; Vaikundam Rs. 26 *ex-div.* (+Rs. 2); T.R.T. and Co. Rs. 7.95 *cum-div.* (+60 nP); Inland Rs. 12.80 (+30 nP); Cochin Malabar Rs. 6.25 (+13 nP); Nilambur Rs. 15.85 (+10 nP). The Nilambur Rubber Company has sold and handed over the Munderi estate belonging to it to the Athimattam Rubber Company Ltd.

In the sugar and breweries group, United Breweries continued to provide the brightest spot, the quotation forging ahead from Rs. 350 to Rs. 400, to Rs. 92.50. E.I.Ds moved up by Re. 1.75 to Rs. 37.75. Deccans advanced by 55 nP to Rs. 11.75, Cauverys by 50 nP to Rs. 108 and Travancores by 20 nP to Rs. 11.95.

Among miscellaneous industrials, Textools strengthened by Rs. 4 to Rs. 185. A. V. Thomas recorded a rise of Re. 1.25 to Rs. 17. W.I. Plywoods picked up a rupee to Rs. 158. Standard Motors and Mysore Tobaccos both increased by 75 nP to Rs. 14. Mysore Chemicals and Fertilisers improved by 66 nP to Rs. 10.06, National Rubber Manufactures by 47 nP to Rs. 17.12, Aluminium Industries by 25 nP to Rs. 19.35 and India Cements by 20 nP to Rs. 5.95. Mettur Chemicals hardened by 15 nP to Rs. 13-10. The Company has obtained official sanction for raising the plant capacity from 20 tons to 40 tons of caustic soda per day and a corresponding rise in the production of chlorine to 35 at Rs. 80 lakhs which is proposed to be found by issuing second mortgage debentures for Rs. 50 lakhs and offering to existing shareholders equity shares for Rs. 39.5 lakhs out of the authorised capital of Rs. 1 crore, at a later date.

• • • •

The following are the views of Messrs. Maconochie & Co. on the state of share markets:

"Now that hopes of changes in direct taxes in the corporate sector have been set at naught by the Finance Minister himself, what will be the pattern of markets in the coming months? Many factors influence market movements and some of them are even extraneous. By and large, equity prices are determined by the yields obtainable on them and the prospects of capital appreciation. The post-Budget rise has almost fully blunted both these attractions and, if prices rise further, it can only be due to the inflation psychology that predominates. For the investor, however, safety of capital and a reasonable return are indispensable considerations. It would be dangerous for him to don the mantle of the speculator, however pleasing and profitable it might be in the short run. The recent structural changes in company taxation is such that, in a majority of cases, the total dividend income will be less than hitherto. During the Budget debate, in trying to justify the changes, the Finance Minister has admitted that a little more revenue might accrue to Government under the new proposals. This is only one aspect of the matter. The other aspect is the effect of the changes on the capacity of the companies to pay dividends and the total return to shareholders. It is now fairly clear that, apart from there being no reduction in the tax burden on companies, their ways and means position will become more stringent, by the compulsory payment of 50 per cent. tax at source on dividends and also by the gross-ing-up of tax-free preference dividends, these burdens being in addition to the 45 per cent. tax that they have to pay Government and that is now wholly retained by the Government.

"From the shareholders' point of view, as we have already stated, the tax-free character of all dividends has been taken away and, further, they will be receiving in their hands only 70 per cent. of the dividends declared by the companies, the balance 30 per cent. being deposited with Government and which can only be obtained by submitting a tax return. Unless the dividends are stepped up substantially, which is not within the means of many companies, the total return to shareholders will be lower. Therefore, at current levels, very few shares can be said to offer a reasonable return, coupled with safety of capital. The post-Budget boom has been due largely to psychological factors. Even the argument that equities are a hedge against inflation seems to be well-nigh overworked. In the last few days, there has been a perceptible cooling off of fervour. A good corrective reaction will give markets the necessary stability."

NEWS IN BRIEF

THE Lok Sabha passed on 24th April the Bill to repeal the Coal Grading Board Act of 1925 and to dissolve the Coal Grading Board.

The proposed World Agricultural Fair will be held at New Delhi from 11th December 1959 to 14th February 1960. The Fair is being organised by the *Bharat Krishik Samaj*.

The Madras Government has decided to carry out a survey of the different categories of land in the State with a view to serving as the basis for the proposed land reforms.

Central food officials have started requisitioning 40 per cent. of the stocks of rice held by millers in the coastal districts of Andhra Pradesh where controlled ceiling prices have been fixed.

The Union Ministry of Commerce and Industry has constituted a seven-man *ad hoc* committee, with headquarters at Ludhiana, to look into the problems faced by the export sector of the woollen hosiery industry and to recommend practical measures for boosting exports.

A phased programme to convert 16,000 credit and 30 co-operative societies into service co-operatives in the next three years is being drawn up by the Punjab Government. To begin with, 450 of the large-sized societies in the State will be converted into service co-operative in 1959-60.

Members of Parliament will meet the General Managers of the eight zonal railways in the country to discuss local problems at a series of meetings which will be held at New Delhi from the 4th inst. under the chairmanship of the Railway Minister.

In order to simplify tax collection and to boost exports, the Government of India is considering the question of replacing States' sales tax on coffee by a Central excise duty, according to Mr. Lal Bahadur Shastri. The other commodities for which sales tax is proposed to be replaced by a Central excise duty are vegetable oils, kerosene and iron and steel.

The total sales of Small Savings Securities during 1958-59 increased by Rs. 8 crores over those in the previous year, to a little over Rs. 78 crores, as against nearly Rs. 70 crores in 1957-58. Bombay State again leads with a total of more than Rs. 21.63 crores, West Bengal and Uttar Pradesh coming next with Rs. 8 crores and Rs. 7 crores, respectively.

Final negotiations are going on between the Governments of India and Russia on the establishment of the proposed oil refinery at Barauni in Bihar State, according to Mr. K. D. Malaviya. The terms offered by Russia appear to be more favourable to India than those offered by other countries with which preliminary negotiations were carried on.

The Government of India proposes to send under the T.C.M. Programme 150 teachers of engineering and technological institutions to the U.S. for post-graduate studies and research in American universities and research institutions. The period of training abroad will be about two years and the selected candidates will be required to leave this country so as to be in the U.S. in time for the September 1959 session.

The Union Government proposes to hold further talks with the Associated Chambers of Commerce and the Indian Tea Association to frame a programme for progressive Indianisation of foreign-controlled firms in the next three to five years. Revealing this in the Lok Sabha recently, Mr. Manubhai Shah said that the talks would be held during the current year when the agreement with foreign firms was to end.

The Central Government has agreed to take over the Model Textile Mill, Nagpur, and to entrust its management to the Government of Bombay. Meanwhile, the Centre has ordered an inquiry into the affairs of the Mill. The investigation body consists of Messrs. D. C. Kothari (Chairman), Navnitlal M. Choksi and R. G. Chandorkar (Member-Secretary).

Draft rules providing for rebate on export of customs and Central excise duties paid on imported and indigenously rolled sections of steel used in the manufacture of enamelware, fabricated steel structurals, steel ghameles, rat traps, watering can and tinplate washers have been published in the *Gazette of India*. The rate of rebate will be Rs. 60 per ton of tinplate content in respect of tinplate washers and Rs. 50 per ton of steel content in respect of other steel items.

In a written reply, Sardar Surjit Singh Majithia stated in the Lok Sabha last week that the assembly of trucks in ordnance factories with a proportion of indigenously manufactured components was scheduled to begin in May-June this year. The manufacture of certain components and parts and plants for progressive production began in January-February and it is expected that the indigenous content in these vehicles by the end of this year will not be less than 30 per cent.

A meeting of all those interested in tobacco, convened by the Union Minister for Civil Expenditure, will be held at New Delhi on the 8th inst. It is said that the meeting will consider, among other matters, the question of equitable distribution of export rights in respect of tobacco by the State Trading Corporation. It will also discuss the possibilities of setting up a new cigarette factory in Andhra Pradesh (State Government-controlled).

About 15,000 bales of raw jute have been shipped from Calcutta port till 21st April, according to the Jute Balers' Association, Calcutta. India resumed jute exports—after a lapse of 10 years—on 4th April when the first consignment of 1,000 bales was shipped out. Sales of raw jute for export purposes began in December last year and by the end of February aggregated 5,000 tons valued at about £400,000. Actual shipping out, however, began only on 4th April.

Higher basic wage and dearness allowance for the 11,000 workers employed in the 29 new mills in Coimbatore district with retrospective effect from the beginning of this year (1959) have been awarded by the Industrial Tribunal, Madras. Accordingly, an unskilled worker will get Rs. 26 as basic wage and 1½ anna per point of cost of living index as dearness allowance in the first working year of the mill. The basic wage and rate of dearness allowance in the next three years will be: second year Rs. 27 and As. 2; third year Rs. 29 and As. 2½; fourth year Rs. 30-1 and As. 3.

The Government of India is considering a proposal not to allow the opening of any more oil mills, but no curb will be placed on the working of the mills which are operating at present. This was disclosed by Mr. Lal Bahadur Shastri while inaugurating the All-India *Telghani* (village oil industry) Conference at Bhagalpur last week-end. Mr. Shastri agreed to the suggestion made at the conference for issuing import licences for copra from Ceylon and giving financial help to *telghani* co-operatives. He also endorsed the suggestion of the President for organising district and State federations of oilmen's co-operatives for arranging necessary finance.

The Ford Foundation Team on agricultural production has recommended a target of 110 million tons of foodgrains for the third Five-year Plan. The Team, it will be recalled, came to India in January at the invitation of the Government of India and conducted a ten-week study tour of the country. The Team has suggested, among others, a public works programme for increasing food production and village employment, fuller use of manures and fertilisers, intensification of irrigation and drainage programmes, and provision of immediate large-scale credit through co-operatives. According to the Team, India's population is expected to reach 480 million by the end of the Third Plan. If the increase in food production is not faster than the present rate, there will be a gap of 28 million tons between supplies and needs; this would be a shortfall of about 25 per cent. in terms of need.

In order to meet the increasing need for technical personnel, the Training Centre attached to the Hindustan Machine Tools Factory at Bangalore will admit 240 candidates every year for being trained as precision tool makers, highly skilled machine operators, etc. The Centre was set up and equipped to provide skilled labour and technical personnel required by the Factory for the production of precision lathes and other machine tools. As the Factory has now reached full production and its requirements of trained personnel have been met almost fully, the Government of India set up a Committee with Dr. Kalelkar, Senior Industrial Adviser (Engineering), Ministry of Commerce and Industry, as convener, to examine the ways in which the facilities available at the Centre could be utilised to meet the increasing need for trained personnel, especially in the engineering and machine tools industries in the private as well as public sectors. The Government has accepted the recommendations of the Committee and proposes to run the Centre as a separate unit with a Board of Control. The day-to-day management of the Centre will, however, be entrusted to the Hindustan Machine Tools.

The Inland Water Transport Committee has submitted to the Government of India an interim report in which it has expressed the view that the so-called master plan to connect the various rivers in India to facilitate inland navigation is at present beyond the range of practical politics; the plan was prepared by the Central Water and Power Commission. In support of its view, the Committee says: "Conditions have radically altered since the time when Sir Arthur Cotton envisaged these ideas in a. 1874. Withdrawals of water for irrigation have considerably affected the navigability of the main rivers during the last century. The demand for increased food production will inevitably further affect navigation. But, even otherwise, it would be impossible to find adequate water on the Central India plateau to fill up any canals whether from east to west or north to south, at least during six months every year. Moreover, the country has now been covered by a network of railways and roads, and it is improbable that any considerably long-distance traffic would be available by the slower navigation route when railways and road transport are available to cope more expeditiously with such traffic."

From Abroad

Denmark has agreed to a new Japanese plan for controlling textile exports to that country.

The Federal Legislative Assembly of Singapore has passed a Bill making it impossible for communists to subvert trade unions.

Arrangements are being made for the second International Wool Textile Research Conference to be held at Harrogate, U.K., in May 1960, according to the British Textile Institute.

Britain was building 22.49 per cent. of the world's gross tonnage of ships under construction in the first quarter of this year, states Lloyd's *Register of Shipping*. World tonnage under construction aggregated just over 10,000,000.

PERSONAL

MR. Ahmed Hassan Elfeky has been appointed Ambassador Extraordinary and Plenipotentiary of the United Arab Republic to India in place of Mr. Omar Abou-Richeh who has been recalled.

Mr. Arthur S. Lall, until recently India's Permanent Representative at the U.N. Headquarters, has been appointed Ambassador of India to Austria. He will take charge of the office in July.

Mr. Chinubhai Kilachand, Managing Director of Premier Automobiles Ltd., has been re-elected Chairman of the Indian Society of Advertisers. Mr. D. A. Orr, Vice-Chairman of Hindustan Lever Ltd., has been elected Vice-Chairman of the Society and Chairman of the Managing Committee.

Mr. J. A. Moore has been appointed Finance Director, the Dunlop Rubber Company (India) Ltd., *vice* Mr. A. W. Gillespie who has retired after 24 years' service with the Company in India. Mr. Gillespie joined the U.K. Dunlop organisation in 1929 and came to India in 1955 as Secretary and Chief Accountant of the Indian Company and became a director in 1957.

A Boeing 707 jet airliner recently made its first appearance in B.O.A.C.'s colours at the makers' factory in Renton, Washington, U.S. It is the first of a fleet of fifteen 707s, which, equipped with Rolls Royce Conway by-pass jet engines, will be delivered to B.O.A.C. from the end of 1959 onwards.

A seven-member Pakistan trade delegation left Karachi this week on a tour of eight South-East Asian countries (Burma, Thailand, Malaya, Singapore, Philippines, Hong Kong, Indonesia and Ceylon), with a view to exploring possibilities of expanding Pakistani exports to these countries. The delegation is headed by the Joint Secretary to the Ministry of Commerce.

The Royal Dutch Shell Oil group has secured a bid worth over £100 million for control of the Canadian Eagle Oil Company. As a result of the bid, the interests of the two companies will be completely amalgamated. The Shell group already refines much of the crude oil from Canadian Eagle's wells in Venezuela and Columbia and also distributes its petroleum products in the U.K.

In the first three months of 1959, B.O.A.C. carried 54 per cent. more passengers on North Atlantic services than in the same period of 1958. The average increase for all airlines is only 24 per cent. B.O.A.C. not only carried more trans-Atlantic passengers than any non-American airline, but recently overtook one of the leading U.S. airlines to become the second biggest trans-Atlantic carrier.

Every third member of the West German's working population is a woman. A recent poll revealed that every third working woman works in her own enterprise or in the family undertaking mainly in agriculture. Almost one third of all women work to pep up the family's monthly income, 19 in 100 work to buy furniture for their flat or for building a house for the family. Six in 100 want to help purchase a car or finance a TV set or a journey abroad.

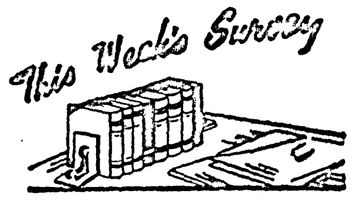
A recent Press report from New York says that work is already well advanced on research into problems which are to be faced in the construction of a supersonic airliner. The Lockhead Aviation Corporation has now spent over $1 million on design and wind tunnel tests of models of such an aircraft. The new aircraft is claimed to be capable of flying at a speed of nine 2,000 miles an hour at heights of 70,000 to 80,000 feet, twice the operational ceiling of the current subsonic jets in commercial production.

One of the world's fastest plastic bottle-blowing machines will make its European debut at the International Plastics Exhibition, Olympia, in June. In addition to an almost unlimited range of bottles and containers, it can produce a variety of hollow plastic articles, ranging from toys and electrical fittings to bowling balls and pins for the new American-style alleys soon to be opened in Britain. The machine made in Denmark can turn out these products in various types of plastic materials, including nylon, p.v.c., acetate and polythene.

Twenty big U.S. and Canadian oil companies have rushed to the Canadian Arctic with a view to exploring oil supplies from beneath the Polar Ice. Prospecting rights over 76 million acres have been sought, following indications that dozens of ice-covered islands 200 miles from the Pole may provide entry for boreholes into a huge untapped oilfield. The voyage of a U.S. submarine, *Nautilus*, under the Polar ice cap inspired the idea of giant submarine tankers, and the Canadian Government is now reported to be studying a British engineer's plan for 50,000-100,000-ton tankers. An under-ice pipeline is also mooted.

Britain is rapidly reaching self-sufficiency in the production of plastic materials. This was stated by the Chairman of the British Plastics Federation, Mr. N. B. Punfield, on 22nd April in

(Continued on page 745)



PUBLIC *VERSUS* PRIVATE SECTOR

THERE is a school of thought in this country which maintains that men in the private sector should not criticise the public sector. It is not suggested that there are no grounds for criticism. But it is held that such criticism keeps alive a controversy which is best avoided in the National interest. We have never subscribed to the view that the two sectors should either develop into a mutual admiration society or that each should adopt towards the other an attitude of cold indifference or sphinx-like silence. That way lies danger, for faults in either sector may fail to get exposed to the sunshine of public criticism and thereby develop into a festering sore in the body-economic. From this point of view, we welcome Mr. Nehru's assertion that the public sector, despite the errors it made, was "far superior to the private sector." Although this is a tall claim, we welcome it in the hope that, in future at least, the various undertakings in the public sector will work in such a way as to justify it. Presiding over the annual meeting of the Institute of Public Administration, held last week at New Delhi, Mr. Nehru said: "My firm opinion, gathered after some knowledge, is that the public sector today is infinitely superior to the private sector—superior in economy, efficiency and general outlook."

The statement is not very characteristic of Mr. Nehru, for he generally hedges his statements with certain reservations and qualifying clauses. But this time, he has entered the fray without any safeguard, having gone on record by asserting that the public sector was "far superior" to the private sector in "economy, efficiency and general outlook." Leaving aside the "general outlook" consideration, which cannot be defined, it is a moot point whether the public sector is invariably more efficient than the private sector. Clearly, the levels of efficiency in the two sectors are not strictly comparable, for the public sector generally operates under monopolistic conditions which leave no norms for comparisons, whereas the private sector, working under competitive conditions, has necessarily to strive hard in order to exist.

In any case, the innumerable verdicts given by the Public Accounts Committee, the Audit Officers, and the Estimates Committee do not generally bear out this unqualified claim made for the public sector by Mr. Nehru. The latest instance of a public project which has come in for serious criticism is that of the working of mints. The Estimates Committee, in its report on Mints, has made certain observations which deserve notice. Minting, as is well known, is an exclusive monopoly of the Government in all parts of the world, though, judging by the existence of counterfeit coins that cannot be easily detected, it will appear that there are elements capable of challenging the standard of Governmental efficiency in minting operations. Be that as it may, the Estimates Committee observes that there is no central coordinating and controlling authority in charge of the working of the mints, with the result that there is no uniformity among them even in matters like the system of maintaining accounts.

The Committee, in the course of its reference to the silver refinery project, which the Government wanted to establish in order to extract silver from quaternary alloy coins (with 50 per cent. silver content) and redeem wartime obligations to the U.S., remarks:

"The Committee observe that the purpose for which the Silver Refinery Project was conceived was not served by it, as the Government of India have already repaid the silver debt. The refinery which was planned to have been commissioned in 1951 has not gone into operation yet. There have been a series of unfortunate delays at every stage of the project. The consultants were appointed two years after the approval of the scheme. It took approximately another three years to call tenders and enter into a contract. Another 5½ years elapsed in the erection and commissioning of the plant. In all, a period of about 11 years has passed, since the scheme was originally approved. The trial commissioning of the plant was expected to commence in February 1959 and full production three months thereafter. However, on account of serious damage to one of the melting furnaces in a recent accident, the date of commissioning of the plant might be further affected."

The Committee says that it cannot help feeling that the planning, including location and execution of the entire scheme of the project, was not undertaken with the care it deserved. It wonders "whether, in view of the subsequent developments, the expenditure on the project was at all necessary."

Further, the Committee regrets—and this is very significant—that the design, etc., of the brass two-anna coins, which were counterfeited on a large scale, were such that it did not make counterfeiting difficult. The Committee suggests that proper investigations should be made into the nature of counterfeit coins as well as the methods employed by counterfeiters.

This is by no means a flattering verdict on what is universally conceded as the exclusive monopoly of the Government, namely, minting operations—a monopoly which the Government has exercised for so long that it might reasonably be expected to have attained high standards "in economy, efficiency and general outlook." While we have never been a party to unqualified criticism of the public sector, nor to uncritical admiration of the private sector, we are naturally unable to subscribe to the view that all is right with the public sector or that it is always more efficient than the private sector.

NOTIFICATION OF VACANCIES

Nothing is better calculated to discredit a law, a custom or an understanding in the eyes of the public than their open violation by the very sources which sponsor them. While the Union Ministry of Labour deserves credit for initiating measures and establishing precedents and practices which have exercised a healthy and restraining influence on the climate of industrial relations in India, certain of its actions and methods, it is sad to record, have cut at the root of the policy it seeks to further and the spirit it wishes to foster. To this class belongs the Bill introduced in the Lok Sabha on the 24th April for the compulsory notification of vacancies in both public and private undertakings in the country to the employment exchanges and for punishing employers for not doing so. It is not so much the objects and reasons of the Bill (which, incidentally, seems to have been kept as a closely guarded secret) that are reprehensible as the way in which the Ministry has gone about the business of framing the Bill. We learn that the Labour Ministry, which cries hoarse on the need for mutual consultation and negotiation for settling differences, has not even cared to consult the employers who are directly affected by the punitive provisions of the Bill. It passes one's comprehension as to what considerations proded the Government to seek to press the Bill through the current session of Parliament with a haste worthy of a more urgent cause. It may be noted that a tripartite conference is scheduled to be held some time in July and one cannot understand why the issue could not have awaited consideration till that time.

Be that as it may, under the Bill, employers will have to furnish returns regarding the vacancies that occur or are likely to occur from time to time to the exchanges concerned. It confers on the Government the right to inspect the relevant records or document in the possession of any employer at any time and place, take copies of them and elicit further information from the employers concerned. Failure on the part of employers to comply with the directions of the inspecting official will make them liable to a fine of Rs. 500 in the first instance and fines extending to Rs. 1,000 for every subsequent offence.

The Bill provides for the exemptions of certain types of employment. Vacancies concerning employment in agriculture other than employment as agricultural or farm machinery operatives, domestic service, unskilled office work and casual employment the duration of which does not exceed three months, are excluded from the scope of the Bill. It will also not apply, unless directed otherwise, to vacancies proposed to be filled through promotion or absorption of surplus staff of any branch or department of the same establishment or on the result of any examination conducted or interview held by or on the recommendation of any independent agency like the Union Public Service Commission. Vacancies for jobs carrying a remuneration of less than Rs. 60 per month are also excluded.

A redeeming feature of the Bill is that it does not impose on the employer the obligation to recruit any person through the employment exchange to fill any vacancy merely because that vacancy has been notified.

What is the purpose behind the Bill? Is it merely to assess the present and future employment potential? Or is it to ensure that no vacancy is filled up without the knowledge of the Government? If, however, employers are by no means bound to recruit any person through the employment exchanges, what is the purpose in compelling them to notify the vacancies? If the object is only to collect data to judge employment trends, can it not be achieved through the voluntary co-operation of employers? In the absence of the text of the Bill and its objects and reasons, we are unable to answer these posers.

TOURISM

Since the time when that venerable Venetian traveller, Marco Polo, journeyed to distant Cathay, the art of travelling has changed profoundly both in method and purpose. We now have not traveller but tourists 'doing' the entire globe in a few days in jet aircrafts and luxury liners, not mainly for learning the customs, language and ways of life of the people but just for the pleasure and fun of enjoying a change of climate and surroundings. There may be many who will regret, with Mr. Nehru, that travelling has lost much of its ancient romance. The modern tourist cannot in any way bear comparison with a Marco Polo, Hiuen Tsang or an Afanasi Nikitin in his powers of observation and analysis, but even unthinking and unperceptive travellers, as Mr. Nehru pointed out in his address to the eighth annual convention of the Travel Agents' Association of India held at Mussoorie on the 24th inst., help to bridge the gulf between nations and communities.

There is another aspect of travel which none of the ancient patriarchs of this tribe could ever have dreamt of. They would certainly not have imagined that such a pleasurable pastime could ever give rise to so lucrative a trade as modern tourism. Even to a country like India, where tourism has yet to develop into a full-fledged business, the foreign exchange earnings from this invisible export during last year amounted to nearly Rs. 20 crores. The tourist trade thus became one of the first ten foreign exchange earners. And, if properly cultivated and encouraged, it can contribute even bigger amounts in the years to come. Apart from its value as a unifier of nations and peoples, even from the point of view of immediate material benefits, tourist trade thus deserves top priority.

Although India still holds out many attractions to the tourist, the annual inflow of foreign visitors to this country is still a trickle, as compared with the performance of other countries in this business and what it ought to have been if adequate and conscious efforts were made to stimulate tourist traffic. Irksome customs formalities, lack of adequate transport facilities and suitable and sufficient hotel accommodation, restrictions on consumption of alcohol in hotels, restaurants and other places visited by the tourist, all have acted as impediments to tourist traffic.

There is, as already stated, much scope for developing tourism. According to Mr. K. G. Khanna, President of the Travel Agents' Association of India, this country could earn as much as Rs. 50 crores a year in another five years, provided necessary facilities are created. Among the Asian countries, Japan has done much in recent times to attract the tourist and the results of these efforts have already started materialising. Mr. Khanna, therefore, pleaded for greater Government encouragement to the travel agency business which, he said, could contribute much to the development of tourism in the country. Mr. Khanna listed three factors which had stunted the growth of the travel agency business. They are: (1) foreign exchange restrictions on travel and greatly reduced two-way traffic; (2) reduction by the railways of the agent's commission from 5 to 3¾ per cent.; and (3) prohibition of Government departments from dealing with travel agencies. Since a large percentage of travel was on Government account the travel agents' income was sharply reduced. Mr. Khanna hoped that the restrictions imposed on travel due to the acute foreign exchange shortage would be removed at the earliest. Such restrictions, he stated, encouraged irregularities and did not result in any real savings.

There seems to be considerable force in this argument, for, according to knowledgeable sources, despite the reduction in the quota of foreign exchange for travel abroad, there has been no significant fall in the number of persons going abroad. They somehow manage to find

the foreign exchange in foreign countries. It would be wise, therefore, to liberalise this restriction. As in the case of visible trade, invisible exports cannot be a one-way traffic. A certain amount of invisible imports in the form of Indian tourists to overseas countries will strengthen the Indian Airlines and other agencies that play a considerable role in attracting foreign tourists to this country.

Again, while it is true that, in recent months, there has been considerable relaxation in customs formalities at the airports, India still does not compare favourably with many other countries in this respect. There is considerable room for improvement in regard to courtesy and pleasant manners that should be extended to tourists by officials in the places of disembarkation. For instance, whenever passengers have to be kept waiting in the aircraft after it lands for health precautionary measures, a few persuasive words explaining the reasons for the delays will reduce the irksome feelings of passengers and the chances of their forming unfavourable first impressions about the country. What is stated here applies to the reception at seaports as well. Indeed, the customs formalities at seaports are more irritating than at airports. There are reasons for one to feel that adequate attention is not being paid to tourists arriving by ships.

While much can be done on a national level to attract tourist traffic, promotion of tourism is a question which could be tackled better on a regional basis. In fact, the South Asian Regional Conference, held last week in New Delhi, underlined the need for countries of the region taking steps to ensure uniformity in the rules and regulations applicable to tourists. It recommended that activities to promote tourism should be co-ordinated, as far as possible, among the South Asian countries. It specifically recommended that, on arrival and departure, all baggage declarations for tourists should be only oral and not written in all countries of the South Asian region. The Conference also felt that multi-entry visas should be helpful, because, in that case, tourists need not get their visas endorsed again and again whenever they re-entered a country after visiting a neighbouring country for a few days. It has been found from experience that the promotional activities of one country benefits its neighbours as well. The advantages of joint action by countries geographically close to one another such as India, Pakistan, Ceylon, Burma and Afghanistan are obvious.

ADVERTISING

Two impressive speeches on the vital role of advertising in a country's economy were made at the seventh anniversary dinner meeting of the Indian Society of Advertisers held in the city on Thursday, 23rd April. One was by Mr. Ellsworth Bunker, American Ambassador to India, who was the chief guest of the Society, and the other by Mr. Chinubhai Kilachand, the Society's Chairman. The observations of the two speakers acquire special weight considering that both of them are persons with wide and varied experiences in the business field of the two largest democracies in the world. Mr. Bunker spent more than 34 years of his life in the business world and he also worked with advertising managers and advertising agencies on many a promotional campaign. Mr. Kilachand is a leading industrialist and has been actively associated with the Society since its inception.

Both Mr. Bunker and Mr. Kilachand did well to stress that advertising had a leading role to play in economic development, inasmuch as it was an important means of building up a vast consumer market. The American Ambassador dilated at length on how his country had made tremendous progress in the field of advertising and on the benefits of advertising to the community. The data he furnished in this connection may be summed up as follows:

American business spends every year about $10,000 million, in order to bring its products before the public through the media of mass communications. The amount is twice as much money as was spent ten years ago and four times that spent before the Second World War.

By the end of the war, about $1,000 million worth of advertising space and broadcasting time, at commercial rates, had been contributed to the war effort, free of cost, by the advertising industry as a "public service." The campaign aimed at pushing the sale of war bonds, combating inflation, supporting rationing and helping war production. It proved that "that there is a way to get difficult things done with reasonable speed by masses of people in a large democracy and to get them done voluntarily."

The American Red Cross conducts annually a fund-raising campaign to support the multitude of activities, the goal being $100 million. One of the activities which the Advertising Council supported was the Red Cross.

The vigorous free Press of the U.S. owes its independence, size and diversity to advertising, as do the general circulation magazines. The 1,700 daily newspapers, 9,000 weeklies and 600 odd magazines in that country would have had sledding indeed without their advertising revenue. This is even more true of radio and television stations whose only source of income is advertising.

A sizable portion of U.S. expenditure charged to advertising now goes into the important field of market research—anticipating consumer likes and dislikes, improving packaging, testing of new products and the like. New products are constantly coming into the market and producing new industries. It was recently estimated by someone that, within two to three years, 10 per cent. of the market in the U.S. would be held by products not made today.

Closely allied to advertising is the complex and far-reaching field of public relations.

Thus, advertising is an integral part of the American economic scene. It contributes, as it does elsewhere, to the knowledge and entertainment of the people.

The foregoing account clearly points to the vast scope, as also need, that exists in India for promoting advertising, marketing and its associated sciences, and public relations as a fine art. This aspect was well brought out by Mr. Chinubhai Kilachand. "In a democracy," he rightly declared, "the consumer is the king. Nothing can be forced down his throat. He has to be persuaded to buy and the goods that we produce have to be brought to his notice. Here comes advertising and the science of marketing. And we have to develop this science and its practice, if we are to expand our markets." Describing the U.S. as the "House of Advertising," Mr. Kilachand observed: "The American business men realised long ago that it is demand that creates markets for the goods produced by them, that demand springs from desire and that desire is best engendered by sales promotion, of which advertising in all forms is an integral part."

Mr. Kilachand put forward a few valuable suggestions which, if implemented, will go a long way towards the development and improvement of advertising methods in India. The suggestions fall under two heads: one, what the U.S. Government could do to help advertisers in India and the other what should be done in India itself. Under the former are the suggestions that a study tour of the U.S. by a team of appropriate personnel from the field of advertising should be arranged with the help of the T.C.M., that facilities for specialised study and training on advertisement marketing and sales promotion in any universities of the U.S. could be provided, as there are none in India, and that U.S. professors on advertising and allied arts should visit India under the programme for visiting professors when suitable arrangements are made in Indian universities to teach this subject. As to what has to be done in India, Mr. Kilachand pointed out that a large number of young men must be taught and trained in this branch of science; he wanted the members of the Indian Society of Advertisers to investigate the problem further. This is an important thought and the Society, the members of which account for 75 per cent. of the estimated national advertisement coverage, should take up the lead in inducing some of the leading universities—preferably Bombay, Calcutta, Madras and Delhi Universities—to introduce the necessary courses, by offering financial assistance and practical guidance.

Availing himself of the opportunity, Mr. Bunker sought to explain at some length what he called the revolutionary change in the U.S. during the last 25 years in the whole philosophy of business and in the relation of business to society. The business man, according to the Ambassador, has learned that it is not only good business to think of the public and what his policies and production mean to the public but also that he has social obligations and responsibilities as well—to the employees, the shareholders, the customers, the community in which his business is situated and the nation. Elucidating this point, he said:

"Modern American business has become a part of the community in which it operates. It knows that it has a stake in the community and, therefore, a responsibility to it—to improve and support it and to do all it can to make it a better place for all the people. Responsibility to the community is evidenced in many ways. The business firm supports community activities by contributions and encouragement. It urges its executives to take part in local affairs. In some cities, there are business executives who spend up to a third of their time in voluntary work, fund-raising for social welfare organisations, helping school groups, serving on the boards of public organisations and the like. These activities are not restricted to the local level either; they spread through States and even the nation as a whole. Hundreds of top-ranking business men serve national organisations supporting scores of activities ranging from international affairs to the boy scouts.

"The trend toward more enlightened employment policies has been one of the most significant developments of the modern American economy. Today, a job is more than a thing which produces a pay envelope every Friday. There have been added pensions, savings plans, hospitalisation and medical insurance, severance pay and other benefits. Some companies have adopted a guaranteed annual wage for their employees. In others, there are profit-sharing plans which, in a few cases, have annual bonuses of as much as 100 per cent. of base wages."

A very pertinent general point which Mr. Bunker emphasised was that material benefits are not always enough to produce satisfied workers. In his opinion, a worker in the complex and dispersed production units of today has difficulty in seeing just where he fits into the pattern and just what his importance to the company is. Also, he wants to have satisfaction in his job and the feeling of doing it well plus the knowledge that his contribution is recognised by the people who know what a good job is. The worker wants, too, a sense of participation in the company's affairs.

The aforesaid problems are in evidence as much in India as in the U.S. and other countries. They cannot be solved, as Mr. Bunker stated, just by recognising that they are there and that something should be done about them. What is wanted is energetic action. Here is a field where there is much that Indian employers can learn from the U.S., where, we are told, many techniques have been tried in personnel and industrial relations with a view to bringing the employee closer to the objective of the company and keep him informed. These include setting up of union-management committees, publication of "house organs," establishment of company associations to bring the workers together off-the-job, and appointment of vice-presidents in charge of human relations, whose sole job should be to see that the human side of business is properly looked after.

ANGLO-SOVIET TRADE

What will be the future course of Anglo-Soviet trade? This question is now being hotly discussed in Britain and, perhaps, in Russia too. The interest in the question has been aroused by the forthcoming visit of the British trade mission to Moscow in the middle of the current month. The mission, we are told, will be headed by Sir David Eccles, President of the Board of Trade, and consist of two or three business men of standing who will act as advisers, particularly on Russian exports to the U.K. The aim of the mission will be "to establish the conditions in which trade can be increased" between the two countries. Meanwhile, the Tube Investments of Britain have secured from the Promsyrioimport of Russia a £2-million contract for the export of stainless and alloy steel tubes.

It is, however, not the forthcoming visit of the British trade mission to Russia but the manner in which Britain proposes to conduct its trade with Russia that is of some significance to India. The authorities in Britain, for instance, have made it clear to the Russians, in the course of preliminary discussions, that "there can be no question of disturbing British methods of trading by setting up any special State trading organisation for buying or selling to the Soviet." This is in striking contrast to the manner in which India is conducting its trade with Communist countries through the State Trading Corporation. Indeed, as readers are aware, the S.T.C. was brought into being by the Government of India on the ground that that was the right way of dealing with the Communist countries. This difference in approach between the U.K. and Indian Governments reflects the difference in their basic economic philosophies.

Credit is another subject on which fundamental conditions have been clearly established by Britain. The Russians have not so far asked for long-term credit; nor is Britain offering it. The aim is rather to deal with the problem of ensuring that ordinary commercial credit is available adequately. It is stated that the normal working of the Export Credit Guarantees Department will be examined with this object in mind. Two other conditions have been established. First, there can be no question of disturbing the existing sources of oil supplies to Britain, in order to make room for oil imports from Russia. Secondly, the trade mission will not discuss the list of embargoes drawn on

(Continued on page 755)

LATEST NATIONAL INCOME ESTIMATES

TERMS OF TRADE FOR AGRICULTURE HAVE NOT WORSENED

From Our Special Correspondent

NEW DELHI, *28th April*

THE Central Statistical Organisation has just issued the revised estimate of national income for 1956-57 and the preliminary estimate for 1957-58, the former being Rs. 11,000 crores and the latter Rs. 10,830 crores, both at 1948-49 prices. In *per capita* terms, the figures for the respective years are Rs. 283.5 and Rs. 275.6. At constant prices and as compared with 1950-51 (the pre-first Plan year), the 1957-58 national income represents an increase of 22.4 per cent. In the case of *per capita* income, the increase is only 11.9 per cent.

DELHI LETTER

At current prices, the national income for the first year of the Second Plan is estimated at Rs. 11,310 crores and that for 1957-58 at Rs. 11,360 crores. In *per capita* terms, the figures for the respective years are Rs. 291.5 and Rs. 289.1. At current prices, the 1957-58 national income represents an increase of 19.2 per cent. over that in 1950-51 and the *per capita* income in the former year an increase of 9.0 per cent. over the latter.

The details of national income estimates for the two years are given in the following tables:

(At 1948-49 prices)

	1950-51		1956-57		1957-58	
	In Rs. 100 crores	Per cent.	In Rs. 100 crores	Per cent.	In Rs. 100 crores	Per cent.
Agriculture, animal husbandry, etc. ..	43.4	49.0	52.5	47.7	49.3	45.5
Mining, manufacturing, small enterprises ..	14.8	16.7	18.4	16.7	18.8	17.4
Commerce, transport and communications ..	16.6	18.8	20.8	18.9	21.0	19.4
Other services	13.9	15.7	18.2	16.6	19.2	17.7
Net domestic product at factor cost	88.7	100.2	109.9	99.9	108.3	100.0
Net earned income from abroad	—0.2	—0.2	0.1	0.1	0.0	0.0
Net national output at factor cost=national income	88.5	100 0	110.0	100.0	108.3	100.0

(At current prices)

	1950-51		1956-57		1957-58	
	In Rs. 100 crores	Per cent.	In Rs. 100 crores	Per cent.	In Rs. 100 crores	Per cent.
Agriculture, animal husbandry, etc.	48.9	51.3	55.2	48.8	53.3	46.9
Mining, manufacturing and small enterprises ..	15.3	16.1	20.0	17.7	20.9	18.4
Commerce, transport and communications ..	16.9	17.7	19.6	17.3	20.2	17.8
Other services	14.4	15.1	18.2	16.1	19.2	16.9
Net domestic product at factor cost	95.5	100.2	113.0	99.9	113.6	100.0
Net earned income from abroad	—0.2	—0.2	0.1	0.1	0.0	0.0
Net national output at factor cost=national income	95.3	100.0	113.1	100.0	113.6	100.0

The C.S.O. has revealed that the preliminary estimates for 1957-58 are obtained by a short-cut method and has also described the new features, both in respect of data and methodology used.

The relationship between national income and some other main aggregates of income and product is brought out in the following table:

(At current prices in Rs. 100 crores)

	1950-51	1956-57
Net domestic product at factor cost	95.5	113.0
Earned income from abroad	—0.2	0.1
Net national product at factor cost=national income	95.3	113.1
Indirect taxes including miscellaneous fees ..	5 4	8 0
Less—Subsidies	—0 4	—0 3
Net national product at market price	100.3	120 8
Net domestic product at factor cost	95.5	113.0
Less—Income from domestic product accruing to government	—0.7	—0.9
Income from domestic product accruing to private sector	94 8	112.1
National debt interest	0 4	0 6
Earned income from abroad	—0 2	0.1
Transfer payments	0.6	1.4
Net private donations from abroad	0 4	0 5
Private income	96.0	114.6

Parity Between Agriculture and Industry

In the course of the Lok Sabha debate on demands for grants, a reply has been given on behalf of the Commerce and Industry Ministry regarding the need, expressed by a member from West Bengal, to achieve sectoral harmony by adjustment between prices of industrial raw materials and those of manufactured commodities. Prices of industrial raw materials and manufactured articles, according to the Ministry, are in line with each other, and there is no imbalance between the two sets of prices. The following table is given in this context:

Index number of wholesale prices

(Base: 1952-53=100)

	Industrial raw materials	Manufactured articles	
		Semi-finished	Finished goods
1956	113.2	110.0	104.1
1957	118.1	108 5	107.9
1958	114.8	109.4	108.0
1959—			
January	114.1	110.5	108.1
February	115.5	110.6	108.0
March	116.4	109.4	107.9

As will be seen from the above, prices of industrial raw materials are broadly in line with prices of manufactured goods, the parity between prices of finished goods and those of industrial raw materials being maintained over the past three years or so.

As far as imported raw materials and components are concerned, these have been allowed to be imported by actual users on as liberal a basis as possible, with available foreign exchange resources. Imported raw materials have, therefore, been available at reasonable prices to manufacturers, and this has enabled prices of manufactured goods to be kept generally stable.

Manufactured Articles

On the side of manufactured articles, prices have been kept in check, first, through the Essential Commodities Act, 1955, under which some of the commodities covered are cotton and woollen textiles, drugs, coal, component parts of automobiles, iron and steel, paper and newsprint, petroleum and petroleum products, etc., and, secondly, through fair selling prices as indicated by the Tariff Commission, on an examination of the structure of industrial costs. Some of the industries, the prices of which are thus regulated are steel, aluminium, automobiles and various ancillaries, bicycles, sewing machines, diesel engines, electric motors, conductors, cement, caustic soda, soda ash, bleaching powder, dyestuffs, sheet glass, etc.

The recent decline in prices of raw jute is considered next. It is noted that, in recent months, there has been a fall in the demand for sacking, and this, coupled with a plentiful supply of jute, has resulted in a significent decline in the prices of raw material. It might, however, be noted, in this connection, that, though prices of raw jute have gone down there has also been an increase in the yield of jute per acre, so that the fall in prices does not reflect a corresponding fall in agricultural incomes. The Ministry continues that Government have been aware of the recent decline in raw jute prices and have taken various measures to arrest the decline. The State Trading Corporation has been authorised to procure raw jute from the upcountry markets and to organise exports upto 50,000 bales. The procurement operation of the S.T.C. has been arranged through co-operative marketing organisations in the States of West Bengal, Bihar, Orissa, Assam and U.P. About 25,000 bales of raw jute have already been procured by these societies, and export orders so far booked aggregate 23,000 bales. As a result of these measures, prices of raw jute, the Ministry claims, have been stopped from declining further. The price for Assam bottoms in January was between Rs. 19 and Rs. 20 per maund. In the first week of April the price ruled around Rs. 21 per maund, thereby showing a slight improvement.

BRITAIN'S OVERSEAS LENDING IN 1958

From Our Own Correspondent

LONDON, *24th April*

IN 1958, the U.K. invested some £170 million overseas, repaid over £65 million on her North American loans, and built up her gold and dollar reserves by £284 million. This strength in capital transactions was made possible, partly by a high level of earnings on invisible account (mainly shipping and oil) and partly by the world fall in commodity prices which reduced Britain's import bill by some £250 million!

LONDON LETTER

The total level of net private investment in the Commonwealth countries (excluding Canada) averaged about £50 million more than in the preceding three years; but the Government has recognised that private investment, necessarily flowing to the most potentially profitable borrowers, is insufficient for the "development of the under-developed"—hence the decision to make Government-to-Government loans ("Commonwealth Assistance Loans") under which India and Pakistan are already benefiting by some £50 million. But such investment —whether private or Government—is only practicable if the resources are available and in assessing how far Britain's experience in 1958 serves as a guide to her potential lending in the future, regard must be had to the special circumstances of last year.

Balance of Payments

Between April 1957 and March a year ago, Britain's import prices fell by 12 per cent. and then struck a stable level. As a result, import prices in 1958 were some 8 per cent. lower than in the previous year while export prices were only 1 per cent. lower. The terms of trade were, therefore, 7 per cent. more favourable. The effect of this on the balance of payments is shown in the following table:—

(In million £s)

	1957	1958 (*actual*)	1958 (*at 1957 prices*)
Imports	3,573	3,309	3,597
Exports	3,515	3,429	3,463
Visible balance ..	—58	+120	—134

Thus, in 1958, the U.K. enjoyed the phenomenon of a *favourable* visible balance of payments—but entirely as a result of a far-reaching improvement in the terms of trade which it is already known has come to an end, if it is not actually being reversed. The balance of payments, therefore, worked out as follows:

(In million £s)

	1957	1958 (*actual*)
Visible balance	—58	+120
Government expenditure	—143	—216
Invisible income	+464	+551
Net favourable balance ..	+263	+455

But had the visible balance not been so tremendously boosted by the fall in import prices, the net favourable balance would have been only £200 million and, of this, half would have been due to a rise in net invisible income, in turn partly due to a cheapening of freights on Britain's imports. Herein, of course, lies the danger of reflation—that, as imports rise, the visible balance will become adverse to an extent to swallow up the net invisible income. The second half of 1958 already showed a deficit on visible trade account.

Remaining Transactions

What of the remaining transactions on capital account? The strength of sterling caused a substantial increase in sterling balances held by *non-sterling* countries—no less than £158 million. On the other hand, the *sterling* countries—hit by the fall in commodity prices which had so benefited the U.K.—drew down their sterling balances by £82 million. Britain, however, received a short-term capital inflow of £76 million to add to her current earnings of £455 million and minor capital transactions merely reduced the gain by £11 million. The net effect of these movements was to make the U.K. a creditor country to the tune of £520 million.

That is, by dint of benefiting by falling commodity prices, better invisible earnings and by borrowing short, the U.K. puts herself in the position of being able to repay the service

AMERICAN LETTER

ST. LAWRENCE SEAWAY—DREAM OF CENTURIES COMES TRUE

INTER-AMERICAN BANK TO BE FORMED

From Our Special Correspondent

NEW YORK, *23rd April*

A DREAM of centuries will come true this month. As soon as ice conditions permit, the great St. Lawrence Seaway will be opened for ocean-going vessels.* At this writing, about 60 ships are waiting at Montreal harbour for passage to the Middle West of the United States.

In 1534, it may be recalled, Jacques Cartier was sailing up the St. Lawrence in quest for a route to India through the Great Lakes. He was barred by the Lachine Rapids. The new Seaway by-passes these.

The entire project is 600 miles long and connects the St. Lawrence River at Montreal with Lake Erie. It cost about $450 million. The share of the United States is $145 million, mostly for construction of two giant locks and the channels leading to them. The bulk of the cost was borne by Canada.

In conjunction with the Seaway, a $600-million power project has been developed under the joint sponsorship of Canada and New York State. Generating plants there will produce more than 2.2 million horse-power of electricity a day.

Both the Seaway and the power project were not without controversy. The Seaway was fought by the railways serving the area and the power plant idea was attacked by the public utilities in operation there.

The opening of the Seaway this month will be informal. Formal dedication is scheduled for 26th June, 1959 in the presence of Queen Elizabeth II and President Eisenhower at Montreal.

Two U.S. ships will be in the first wave of vessels to navigate the Seaway. They are American Export Lines' *Extavia* and the Grace Lines' *Santa Regina*. The former is bringing cargo from Mediterranean ports to the Middle West. The latter carries cargo from Caribbean ports.

The Seaway actually begins in the Gulf of St. Lawrence. Ships sail 1,000 miles from the Atlantic until they reach Montreal. From there, a 27-foot channel has been constructed through all the old and new canals. Previously, the draft clearance was only 14 feet. The system of locks is equipped to handle ocean-going vessels at the rate of about 20 to 25 minutes for each lock.

Communications have always played a vital role in the attitude of peoples. The presence of foreign flag ships and airplanes tends to stifle remnants of isolationism and narrow nationalism. Thus, the Seaway may be regarded as another harbinger of better international understanding.

Economic Trends in the U.S.

The improvement in overall economic activity in the U.S. is much better than was expected a few months ago. The gross national product in the first quarter was close to $465,000 million annually, against $453,000 million in the final quarter of 1958 and against a pre-recession high of about $466,000 million.

Personal income also advanced. The latest tabulation for March places it at $368,600 million, as compared with $365,400 million in the preceding month and $348,700 million a year previously in March 1958.

There was a greater than seasonal decline in unemployment as well. Conversely, employment jumped up to the pre-recession level by mid-March.

The employment picture was bolstered by an early Easter. It accounted for employment of thousands of additional retail clerks. There was also stepped-up output in steel and expanded automobile production. Durable goods' industries also recalled workers.

A new $1,000 million inter-American bank has been organised on paper. The fund is designed to provide new capital investments in Latin America. The U.S. participation in this venture would be $450 million. Between now and 31st December, 1959, the project must be ratified by the U.S. Congress and by legislatures in other countries which would put up at least 85 per cent. of the total contributions.

The plan calls for $150 million of the $1,000 million aggregate to be placed in a special "soft" loan fund. Borrowers from this fund in dollars would repay in their own local currencies. The other $850 million would be used for regular loans to be repaid in the currency originally borrowed.

Rising stock market prices to new highs, in terms of averages, have aroused concern for some time. In a rare public statement, the Securities and Exchange Commission has taken cognizance of the situation. It warned of "indications of increased manipulative activity."

Investors, it said, should exercise extreme caution and self-restraint, for their own protection when considering the purchase of securities upon the basis of tips and rumours. The statement expressed concern about the "extent to which the prices of certain securities seem to fluctuate unduly without apparent economic reason." The same sentiment was echoed by the Presidents of the New York and American Stock Exchanges.

New Secretary

Trading was hardly affected by the resignation of John Foster Dulles as Secretary of State, even though he was in many respects more powerful in foreign affairs than the President of the United States. Insiders contend there is not much hope that Mr. Dulles can fight off his latest cancer attack.

Christian Herter who succeeds Mr. Dulles is regarded in the financial and business community as the logical successor. He has worked closely with his predecessor for the past two years and has seen eye to eye with him. Hence, a change of foreign policy is most unlikely.

While Mr. Dulles suffers from cancer, Mr. Herter is a victim of arthritis in his hips. Medical reports about Mr. Herter seem to be favourable, but the chances are that Vice-President Richard Nixon rather than Mr. Herter will emerge as international spokesman for the U.S. He has acquitted himself honourably in this role overseas on previous occasions.

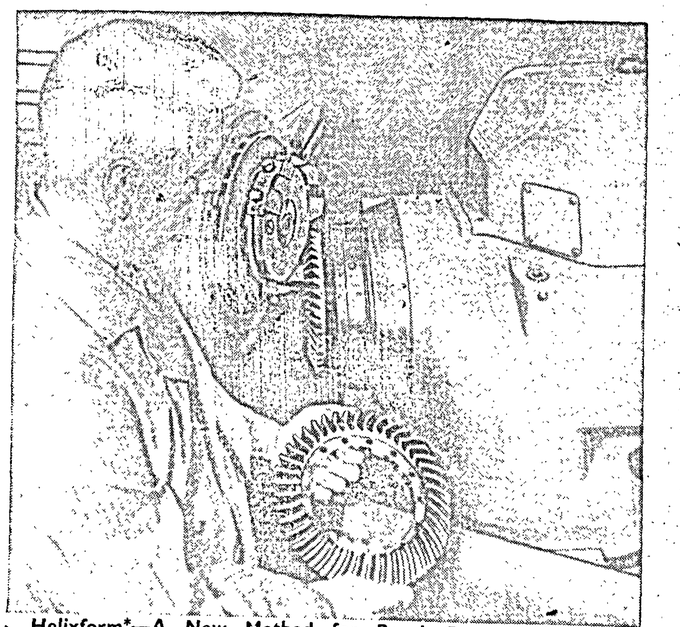
President Asserts

President Eisenhower, much to the astonishment and delight of Wall Street, is more powerful than the Democratic majority in Congress. He has made it plain that he would veto any measures which he considers unsound economically. There has been much talk but little action by the Congressional majority, as a result. There are hearings about unemployment and distressed areas. Testimony will be compiled. It will take weeks before findings are formalised. By that time, Senators and Congressmen probably will want to go home to escape the summer heat in Washington.

Thus, very little favourable or unfavourable legislation is expected to be enacted this year which is one of the reasons for the cheerfulness of sentiment among bankers and businessmen at this time.—*All Rights Reserved.*

*The Seaway was actually opened for shipping on Saturday, 25th April, 1959. An international flotilla of 55 ships made the historic initial inland voyage.

The U.S. wool tariff quota for 1959 has been reduced by President Eisenhower from 14.2 million lbs. to 13.5 million lbs. The fabrics imported within the quota are subjected to an *ad valorem* duty of 20 to 25 per cent. depending on quality, while imports in excess of the quota carry a duty of 45 per cent. In the case of high quality fabrics, which are now to receive partial exemption, the *ad valorem* duty on excess exports up to the 350,000-pound limit will be 30 per cent. The operation of the tariff quota system will remain substantially unaltered, despite strong U.K. representation against its discriminatory effect.



Helixform*—A New Method for Bevel Gear Production!

The new No. 112 Hypoid Helixform Gear Finisher assures improved quality and increased production on spiral bevel and hypoid non-generated ring gears up to ½" in diameter, and 2½ DP. such as employed in passenger car axles.

*Trade-Mark

DEVELOPMENT SAVINGS BANK

PROPOSALS OF A CEYLON BANKER

ONE of the remarkable features of the current trend in world economic thinking is the increasing attention devoted to underdeveloped countries. This is not only the result of the importance these countries have come to occupy in the political affairs of the world but also of the realisation that poverty anywhere is a threat to prosperity everywhere. More and more economists of international standing are addressing themselves to the development problems of underdeveloped countries. In the latter countries also, there is a growing awareness that, in view of the special circumstances obtaining in them, the traditional techniques and institutional devices, howsoever useful they might have been in promoting the development of the now-industrialised countries of the West, have only limited application in the present-day context of backward nations. Economists in these countries are consequently beginning to realise the need for breaking new ground in the realms of both theory and practice.

The plan for an institutional device for promoting economic development and ensuring social justice in the underdeveloped countries of Asia within the framework of democracy presented by the Ceylonese National Council of the International Chamber of Commerce (I.C.C.) to the seventeenth congress of the I.C.C. now being held in Washington is an instance of this awakened awareness. The author of the plan is Mr. C. Loganathan, Chairman of the Council, and the Chief Executive and Chairman of the Bank of Ceylon. The Loganathan plan seeks to meet the challenge of economic development facing business men the world over and which forms the theme of the Washington conference. We feature in these columns the salient features of his plan because we feel that any attempt at original thinking on the problems of the underdeveloped countries deserves to be encouraged and given publicity, so that it may stimulate discussion of the idea and yield concrete results that will further the economic progress of the underdeveloped countries along democratic lines. This proposal was first outlined by Mr. Loganathan at the seventh session of the Commission for Asian and Far Eastern Affairs (C.A.F.E.A.) and the regional businessmen's conference of the International Chamber of Commerce held in Manila last year and later developed into a detailed plan. Mr. Loganathan has even included a draft Bill, so that the countries to which his plan appeals may know how to establish the Development Savings Bank. The thoroughness with which he has gone about the task and the persistence shown by him in expounding his idea are proofs of his dedicated approach to the problems confronting the underdeveloped countries.

Basic Economic Realities

The plan proposes the formation of what is called a Development Savings Banks for mobilising resources and channelling them into capital projects in keeping with the development policy of the Government concerned. It takes cognisance of two basic economic realities of the underdeveloped countries, namely, the urgent need for rapid economic development and, consequently, for accelerated domestic investment and the important role which foreign capital has to play in the developmental efforts of these countries. The institutional device proposed in the plan is meant primarily for the consideration of the Governments and political parties of the free countries of Asia which believe in democratic socialism and are striving to achieve it. The broad features of the plan are:

A Development Savings Bank is to be set up in each country by an Act of Parliament. The Government shall provide the initial capital necessary for the formation of the bank, either as a grant or as a loan repayable in instalments. The funds of the bank shall come from the following sources:

(1) Compulsory and/or voluntary contributions from every individual, who is on the pay-sheet of every employer within the Government and private sectors for the credit of the respective employees.

(2) Compulsory and/or voluntary contributions from employers in both the public and private sectors for the credit of their employees.

(3) Tax rebates from the Government to the contributors in respect of the aforesaid deposits.

(4) Voluntary contributions from income-tax payers for the credit of their accounts which will be deductible as an expense in their income-tax returns.

(5) Voluntary contributions from non-income-tax payers for the credit of their accounts, under certain inducements.

(6) Such part of the foreign aid granted by foreign Governments or institutions in the form of gifts as may be determined by the Government.

(7) Domestic and/or foreign loans.

From these contributions eight funds will be created. These are: employees' compulsory savings fund, employees' voluntary savings fund, employers' contributions fund, provident fund contributions fund, tax rebates fund, public (taxpayers) voluntary savings fund, public (non-tax payers) voluntary savings fund and foreign gifts capital fund.

The funds will generally be invested in the private sector and the contributors will be given shares in the different enterprises in the private sector. The constitution of the bank will be on the basis of a joint-stock company. It will provide for certain safeguards to the members and for the functioning of the bank on democratic lines.

Bank With A Difference

At the outset, the author makes it clear that the Development Savings Bank is not the usual type of savings bank or development bank. An ordinary savings bank collects deposits and lends them or invests them in Government securities. A development bank invests or lends shareholders' capital or borrowed capital. The Development Savings Bank, on the other hand, will collect savings and invest them generally in the form of risk capital and not lend them. It is also different from the normal type of savings bank or development banks or investment trusts or such similar institutions for the reason that investment of these institutions are held in their own names and not in the names of those who have contributed towards their fund. The investments of the Development Savings Bank will, except under special circumstances, be in the names of members themselves.

The management of the Development Savings Bank will vest in an independent Board of Directors. In order to prevent undue political or Government interference in the day-to-day functioning of the bank, it is provided that neither a member of Parliament nor a full-time public or judicial officer can become Director. The Government, however, can nominate the Secretary to the Treasury and the Secretary to the National Planning Board, or any similar body, as Government Directors, but without the right to vote. The Board of Directors, in discharging its functions, shall act in accordance with recognised business principles and practice, with due regard to the interest of the members of the bank and the country, but subject to certain regulations.

Underlying Philosophy

The economic philosophy behind the proposal is that a wide diffusion of economic power is an essential pre-requisite of democracy. It therefore follows logically that one ingredient of a democratic political structure is a broadbased private sector representative of the mass of the people, in fact what is called "a people's sector." The development of the "people's sector" is not a problem capable of easy solution. Economic resources are limited in relation to population and cannot be divided and distributed physically among the population in proportions that will be substantial or sufficiently integrated to be efficient units for economic development. The modern joint-stock device, with proper safeguards to protect the interests of the small shareholders, will, according to the author, enable a more even distribution of wealth, though not physically and in equal proportions, and will, at the same time, provide for the grouping of the resources in efficient economic units. If the joint-stock device, with the necessary safeguards for the small holders, is used to create a series of corporations for different economic activities, without giving scope for any monopolistic controls, and if the shareholders constitute a cross-section of the masses of the people and enjoy adequate voting power, then it can be said that a diffusion of economic power has been achieved, although there may not be complete equality of ownership.

The author recognises that the diffusion of economic power can be achieved through the co-operative system also. There should, obviously, be no opposition to any genuine expansion of co-operative societies based on voluntary joint action of persons with common interest. What is, however, objectionable is the attempt of Governments to force people into co-operatives to serve as adjuncts of the State for the purpose of achieving the objects of state policy. The environment in Asian countries is such that it will, in the opinion of Mr. Loganathan, be difficult for the co-operative system to avoid direct or indirect control and, therefore, to conform to the needs of democracy. Further, the shareholding system in the co-operative movement, with restrictions placed on the transfer of shares and distribution of profits, does not provide the same incentive for greater productivity as is provided by joint-stock companies.

Best of Both Capitalism and Socialism

The institutional device Mr. Loganathan has in view will, he believes, preserve the best of both capitalism and socialism. It will provide, among other things, for the transfer of a part of the current purchasing power in the hands of the low income groups into investment through a certain amount of moral suasion and financial inducement which, at first sight, though not in reality, may appear to be coercion by the State. Explaining the advantages of the device, the author says:

"The advantage in a capitalist form of society (where there is scope for competition) is that it provides a market mechanism for the most economic use of scarce resources. The disadvantage is that the productive machinery is motivated by profit and not by the needs of the society. The advantage in a socialist society in which the means of production are owned or controlled by the State is that it provides, at least in theory, goods (which may be called "wage goods") and services needed by large sections of the people and is not motivated by profit. The disadvantage is that, because the owner or controller of the means of production is the same as the user of the means of production, the market mechanism does not operate and therefore most economic use is not made of scarce resources. If production has been efficient in fully State-owned or State-controlled economies as in Russia, it has been largely due to regimentation and compulsion.

"The type of socialist democracy contemplated is one in which cross-sections of the masses of the population, with interests identical with those of the masses, and with adequate political and economic power, will compete with one another, without any central direction, for the means of production, thereby obtaining the advantage of a market mechanism, and at the same time, utilise the means of production in the larger interests of society."

More Foreign Aid

Another advantage of the plan, according to its author, is that Western democracies will grant more foreign aid if a substantial part of such aid is diverted to the people's sector. Any such aid should, in the first instance, be received by the Government of the recipient country and then channelled to the people's sector. As an inducement to the common man to accept any scheme that requires the syphoning off of a part of his current purchasing power into savings and investment, it is suggested that the benefits of foreign aid meant for the people's sector may be distributed, on some equitable basis, among the low income groups who are prepared to subscribe to such a scheme.

Presenting his plan to the Washington Conference, Mr. Loganathan admirably summed up the dilemma facing the Governments of the underdeveloped countries. These Governments, in their anxiety not to displease the people who had elected them to power and who could, if they wished, remove them from power, were tending to preoccupy themselves with the distribution problem to the relative neglect of the problem of increasing national output and the paramount objective of preserving a democratic political structure. They appeared to fail to realise that their preoccupation with the problem of distribution would result in the socialisation of poverty and not of wealth. This attitude, as he averred, is forced on them by the common man who thinks more in terms of distribution rather than production, little realising that equal distribution before the national wealth is raised, will result in equal slices of a smaller and smaller pie.

One unique advantage of the Loganathan plan is that it seeks to create for the workers and the low-income groups a stake in the bank. This will help to foster in them a sense of participation and belonging which is a very healthy psychological force contributing to the stability of a democratic society. It is, however, idle to think that, in the political climate obtaining at present in underdeveloped countries, a government, which by an Act of Parliament has to force its citizens to make contributions to the funds of the Development Savings Bank, will not demand, or that the Parliament will not insist on it demanding, powers other than nominating two Directors without voting power. Since large amounts of public money are to be put into the bank at the instance of the Government, the most natural thing to expect is that the Government will demand for itself powers of control and direction of the affairs of the bank. It will thus cease to be an independent body, or, at best be a semi-autonomous corporation ever conscious of an omnipotent Government and a Parliament jealous of its rights. The Plan sounds admirable in theory but, from the practical point of view, its workability is highly doubtful. It certainly will not appeal to the powers-that-be in India, the largest underdeveloped democratic country in the world. We think we are correct in saying that it is unlikely to get the support of the Governments of our neighbouring countries also, including Ceylon, to which the author belongs.

WORLD BANK LOAN TO ITALY

The World Bank and the European Investment Bank have lent $20 million each to the Southern Italy Development Fund. In addition to these two loans, the Fund has borrowed $30 million through a bond-issue from the New York investment market. The bonds and the loans are guaranteed as to the payment of principal and interest by the Republic of Italy. This bond-issue marks the first borrowing by the Southern Italy Development Fund in the New York capital market.

The bonds raised in the capital market are made up of 15-year 5¼ per cent. bonds for $20 million issued at 97½ per cent. and due for repayment on 1st May 1974, 4-year 4¾ per cent. bonds for $5 million and 5-year 4¾ per cent. bonds for $5 million both at par. The latter two classes of bonds have been placed with institutional investors, including commercial banks. The fifteen-year bonds are redeemable not earlier than 1st May 1969, through the operation of a sinking fund, which will begin on 1st November 1964 and is designed to retire the entire issue by maturity.

The Southern Italy Development Fund (*Cassa per il Mezzogiorno*) was created by the Republic of Italy in 1950 to carry out a large programme of public works in southern Italy in the fields of agriculture, transport and public health. The *Cassa* also extends credit and provides other assistance to promote the development of agriculture and industry in the South. The lire equivalent of the net proceeds from the sale of $30 million bonds will be applied to the general programme of the *Cassa*.

The loans equivalent to $40 million from the European Investment Bank (E.I.B.) and from the World Bank will help to finance the Mercure thermal electric power project south of Naples and two industrial projects in Sicily, the *Sincat* and *Celene* petrochemical plants, both near Augusta. The *Cassa* will re-lend $18 million to the Company carrying out the Mercure power project, and $22 million to a regional agency for re-lending to the industrial concerns. The E.I.B. loan bears interest of 5¾ per cent. per annum. The World Bank loan bears interest of 5¾ per cent., including the 1 per cent. commission which is allocated to the Bank's special reserve. Both loans to the *Cassa* are for a total term of 20 years with amortisation beginning in 1963. Repayment of the industrial loans will be completed in 1971 and repayment of the power loan will be completed in 1979.

The loan by the European Investment Bank, which was established in 1958, marks the beginning of its credit activity. This is the *Cassa*'s sixth loan from the World Bank, bringing total World Bank lending for the *Cassa* programme to nearly $260 million.

A NEW BANK IN IRAN

A new bank under the name of the Bank of Iran and the Middle East, an associate of the British Bank of the Middle East, will open for business at Teheran on 1st May 1959. The opening of the new bank in Iran marks the return of British Banking to that country. Those having dealings with the Middle East will recall that the old Imperial Bank of Iran which, under the style of the British Bank of Iran and the Middle East, was obliged to close down in Iran in 1951. It has, however, been expanding its sphere of activity in other areas, so that since that time ten new offices and sub-offices have been opened, including an office at Bombay, which was opened in 1954 under the management of Mr. T. M. Tagg who has now been appointed Managing Director of the new Bank of Iran and the Middle East.

The issue of shares in the new bank, of which 49 per cent. are held by the British Bank of the Middle East, was well subscribed.

EGYPTIAN CURRENCY DEMONETISED

The United Arab Republican Government has, in a surprise move, demonetised Egyptian bank notes of the face value of £100 and £50, with effect from midnight of 24th April 1959. This step is said to have been taken with the twin object of raising the depreciated value of Egyptian currency in the free markets abroad and of punishing "Zionist imperialist" agents who had smuggled their "ill-gotton gains" out of the country after the Suez crisis.

It is stated that the demonetisation measure was taken against the advice of the experts of the U.A.R. Finance Ministry and the National Bank of Egypt, who opposed the step on the ground that it would shake confidence in Egyptian currency. It is expected that the measure will have no significant effect on enhancing the value of the Egyptian pound abroad. For it is reported that, by midnight of 24th April, 100-pound and 50-pound notes of the value of £43 million, out of a total issue of about £48 million, had been exchanged for smaller-denomination notes. Thus, the alleged smugglers will lose no more than £5 million.

NETHERLANDS TRADING SOCIETY

The Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society) has, together with a group of Iranian interests, formed at Teheran a bank called the Mercantile Bank of Iran and Holland. The new bank opened for business on 11th April 1959. Its authorised capital amounts to Rls. 100,000,000 of which Rls. 50,000,000 have been paid up, for the time being. The daily management of the Bank has been entrusted to the Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society); the first Manager being Mr. A. A. den Hartog, formerly in charge of the Department Banking Operations at N.T.S's Central Agency at Djakarta.

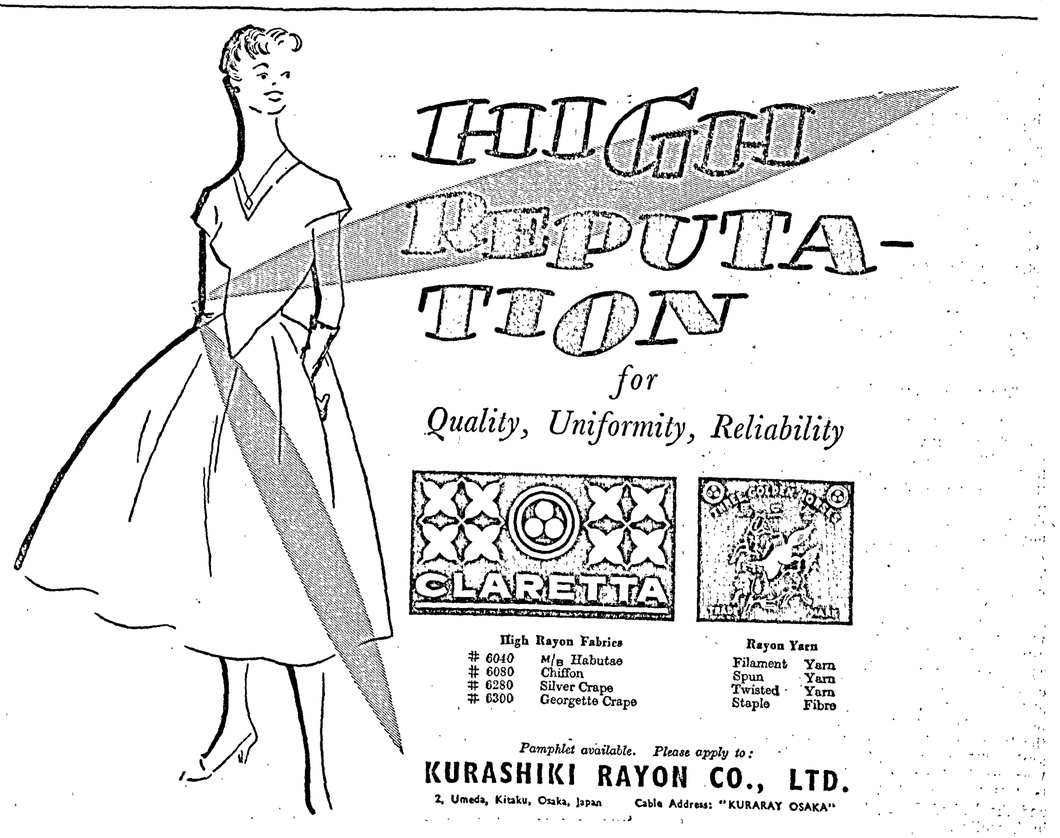
The Board of Directors of the Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society) has recommended a dividend of 10 per cent. for the year 1958, the same as that paid for 1957.

FRENCH BANK RATE CUT AGAIN

For the third time within a short span of six months, France has reduced its bank rate. The latest cut is by ½ per cent. to 4 per cent. and has been effective from 23rd April 1959. In October 1958, the rate was brought down from 5 per cent. to 4½ per cent. and in February this year, it was further cut to 4¼ per cent.

The latest reduction has not come as a surprise to the French people. For, even in February last, it had been widely expected that a reduction of ½ per cent. would be made, but the authorities restricted it to ¼ per cent., with a view to keeping a margin over the British rate and attracting "hot money" into the country. Now this margin has been removed, presumably because the extent of fresh foreign capital coming to France is not up to expectations.

The World Bank has granted a loan equivalent to $25 million to India for the Koyna Hydro-electric power project in the State of Bombay. The project will have an initial capacity of 240,000 kilowatts and most of the power from the new plant will be fed into the power system which supplies the Bombay-Poona area, where industrial growth has created a continuing need for more power. The loan is for a period of 25 years and bears interest of 5¾ per cent., including the commission of 1 per cent. which is allocated to the Bank's special reserve. Amortisation will begin in May 1965. This brings the total amount lent to India by the World Bank to $532 million, the number of loans being 21.



TRENDS IN WORLD WOOL ECONOMY

PRICES RECOVER FROM 1958 LOW LEVELS

WOOL growers the world over, especially in Australia, must have heaved a sigh of relief at the notable recovery in prices that has continued since the commencement of the current calendar year. The latest available quotation for wooltops (64s) in the London market is 114*d.* per lb., which compares favourably with 93*d.* at the end of 1958 and 112*d.* prevailing a year ago (21st April 1958). It is, however, still much below the high level of 153*d.* touched in April 1957. Now that wool prices have recovered substantially, it would be interesting to know whether the representatives of the wool growers associations in Australia continue to think in terms of instituting some sort of a reserve price scheme for wool. Commenting on the scheme, *The Times Review of Industry*, London, makes the following observations:

"It might be wise, however, before taking action to enforce such a scheme to reflect on the trend of raw wool consumption. It is true that, until two years ago, consumption was growing somewhat faster than production, but, more recently, this situation has been reversed. Over the longer period, too, it is clear that, like cotton, wool is meeting increasing competition from man-made fibres; so attempts to limit the fall in growers' income by price-fixing may make competition more difficult and ultimately lead to a lower level of consumption."

Whatever may be the long-term outlook for wool, there would appear to be no immediate possibility of a further appreciable rise in prices. For the supply position is very comfortable. The aggregate world supply of wool in the current season, that is, July 1958-June 1959, is estimated at 3,135 million lbs. (clean or scoured wool), as against 2,949 million lbs. (estimate only) in the previous season (1957-58). The marked improvement in supplies is due to the heavy carryover stock of 270 million lbs. brought in from the last season and rise in the total world output which amounted to 2,865 million lbs., as against 2,842 million lbs. in 1957-58. The heavy carryover is attributed mainly to the large unsold stocks of 145 million lbs. in South America. A new element in the stock situation is the wool—estimated at 18 million lbs.—bought early in 1958 by the New Zealand and South African Wool Commissions in the course of their price support operations.

World Output Rises

The current wool season 1958-59 now drawing to a close—it will actually end on 30th June 1959—has witnessed a rise of 19 million lbs. in the world production of wool to 4,917 million lbs. (greasy basis), according to the preliminary estimate of the U.S. Department of Agriculture. The rise is in distinct contrast to the marked fall experienced in the previous season (1957-58) when the output was lower by 85 million lbs. at 4,900 million lbs. The current season's output is just 1 per cent. below the all-time record clip of 4,985 million lbs. touched in 1956-57. Converted into cleaned or scoured basis, the total quantity of wool produced in the season comes to 2,865 million lbs., representing about 58 per cent. of the greasy equivalent. The bulk of the world wool output, amounting to as much as four-fifths, is accounted for by apparel types, the balance being the share of coarser, carpet type wools.

The upward trend in the world wool clip during 1958-59 has occurred despite the marked setback to production in Australia, the world's largest producer, accounting, as it does, for nearly 30 per cent. of the total. The actual setback is expected to be of the order of 42 million lbs. or 3 per cent.; the estimate of output is placed at 1,428 million lbs., as against 1,386 million lbs. in 1957-58. The fall in output is attributed partly to the severe drought in eastern Australia and partly to increase in rabbit pest. The annual livestock census shows that the number of sheep in Australia in March 1958 was 149.3 million, less than 1 per cent. lower as compared with the corresponding month of 1957. It is said that this is the first time that a fall in sheep number has occurred since 1947. The substantial decline in the Australian wool output has largely been offset by an appreciable expansion of 31 million lbs. or 6 per cent. in output in Soviet Russia; the total output of the latter is estimated at 550 million lbs., as against 519 million lbs. in the preceding season. Wool production was also higher in New Zealand, Union of South Africa, Uruguay, the U.K. and the United States, but was slightly lower in Argentina.

The following table indicates the trend of wool output in the world and in individual countries during 1958-59 as compared with the production in two preceding seasons and the average output for the period 1935-39:

(In million lbs.—greasy basis)

	1958-59*	1957-58	1956-57	1935-39 (average)
Australia	1,386	1,428	1,565	1,018
New Zealand	505	497	491	808
South Africa	315	310	321	246
Argentina	408	409	392	389
Uruguay	210	209	189	121
U.K.	115	112	105	108
U.S.A.	272	289	279	424
Other countries ..	1,706	1,666	1,643	1,190
World total ..	4,917	4,900	4,985	3,804

Source: United States Department of Agriculture.
* Preliminary.

The countries mentioned above are the seven large producers which together account for as much as 65 per cent. of the estimated world production in 1958-59. Among "others," those producing more than 50 million lbs. of wool, with the percentage change on the 1957-58 clip shown in brackets, are: Turkey: 79 million lbs. (−5 per cent.); Spain: 77 million lbs. (+3 per cent.); India: 74 million lbs. (no change); Brazil : 66 million lbs. (+3 per cent.); France: 63 million lbs. (+3 per cent.).

Wool Exports

The latest statistical data relating to world trade in wool are not available. Indications are that there has been a downward trend. Wool exports from Australia during the first four months ended October 1958 were 9 per cent. or 327 million lbs. (greasy basis) lower than in the corresponding period in 1957-58; recent reports show that wool earnings during the whole of the first half of the season (July-December 1958) were less by £A60 million. Shipments from New Zealand, however, were higher by 85 million lbs. or 25 per cent. during July-October 1958 as compared with the same period a year before.

The main raw wool exporting countries of the world are Australia, Argentine. Union of South Africa, Uruguay and New Zealand. The countries together exported during the season 1957-58 about 2,246 million lbs. of wool, a reduction of 9 per cent. as compared with 1956-57. This quantity represented almost 60 per cent. of the total production of 2,843 million lbs. The U.K. was the largest market for the Commonwealth wool producers (Australia, New Zealand and South Africa) and took 27 per cent. of their total exports. The second largest user was France, taking 16 per cent. of total exports, followed by Japan, taking 11 per cent.

During the first half of 1958, world consumption of raw wool was running some 16 per cent. lower than a year previously, but there were signs of recovery later in the year. By the third quarter, wool consumption was only 9 per cent. lower than in the previous year, mainly because of increased activity in the U.S. and West Germany. The wool industry in the U.K. began to recover somewhat later. By December 1958, the rate of consumption was 15 per cent. higher than in the same month of 1957.

CLOTH AND YARN PRODUCTION

Production of cotton piecegoods in the mill sector during the month of March 1959 is provisionally estimated at 407 million yards, as against 406 million yards in the corresponding month of 1958. The total production for the first quarter of 1959 was 1,229 million yards, that in the same quarter last year being 1,235 million yards. The quantity of yarn spun in March 1959 was 141 million lbs., bringing the total output for the quarter to 429 million lbs. The table below gives the month-by-month trend of yarn and cloth production during the first quarter of 1958 and 1959:

(Cloth in million yards; yarn in million lbs.)

	Cloth		Yarn	
	1959	1958	1959	1958
January	430	437	151	149
February	392	392	137	133
March	407	406	141	138
Total ...	1,229	1,235	429	420

OFFICIAL STATEMENT OF POLICY FOR COTTON INDUSTRY AWAITED

WORKERS AND MERCHANTS ON REDUNDANCY SCHEME

From A Special Correspondent

MANCHESTER, 21*st April*

AN air of expectancy pervades the market in advance of what many hope may be an historical statement of policy for the industry, to be made on behalf of the Government before the end of this week. Hopes, however, have been raised in the past and have not always been fulfilled, so that the suppositions so widely quoted about the amount of aid which is to be offered to Lancashire may yet prove to have "strings" attached.

MANCHESTER LETTER

The sudden renewal of interest in the trade's affairs, prompted by "inspired" statements in the national Press, appears encouraging on the surface. A number of seemingly authoritative forecasts have been made as to what the Government is prepared to do on behalf of the industry, although a significant omission has been any detail. The publicity attached to this matter has even sent some members of the basic committees involved searching for the appropriate officials to find out what exactly is going on.

At the same time, it can be recorded that some sections of the industry have already put forward draft redundancy plans to the Board of Trade for their comments. It should, therefore, not be long before the individual firms, who are so directly concerned, learn how their future is to be affected. The whole situation presents innumerable difficulties which can only be resolved by concerted action, but those who are dealing at first hand with the projects are devoting much time and skill in producing schemes which should be effective. Headlines indicating extensive mill closures have so far tended to underestimate the seriousness of the position. Suggestions of a 10 per cent. cut in present capacity would merely touch the fringe of the problem—at least a 25 per cent. reduction is required.

Not So Gloomy

Once more, the trade can be indebted to Mr. James Ewing, Chairman of the Bradford Dyers' Association, for a clear-sighted review of conditions and prospects. His annual report is, in addition, a change from many of the gloomy forecasts which have received widespread attention over the past year or more.

"I believe that the United Kingdom textile industries have reached bottom and that, if those engaged in the industries and the Government will play their parts in re-creating an industry of the size required to produce efficiently the reduced volume, the future is not so gloomy as one would be led to believe from recent comments in the Press and elsewhere," is Mr. Ewing's summing up. "There may have to be fundamental changes in the present horizontal structure, the way for which can be cleared in the first instance by cutting out excess capacity in each of the horizontal sections and operating the fewer units on a full capacity scale," he adds. "Once that has been done efforts should be made to bring closer together the manufacturers and distributors."

Pointing out that the American Department of Defence has ranked the United States textile industry second only to steel in terms of military essentiality, Mr. Ewing urges the British Government to weigh this pertinent factor very carefully. An American Senate Committee has said: "It would be the height of folly in a world where we must realistically recognise the necessity for military preparedness to allow the domestic textile industry to contract to the point where it could not satisfy our basic civilian and military needs in the event of an all-out emergency."

Workers' View

Union leaders of Lancashire's 200,000 cotton spinning and weaving workers are not prepared to be a party in saying which mills should close down under an organised scheme of redundancy. Declaring this in its annual report, the United Textile Factory Workers' Association said: "But we have insisted that operatives compelled to leave their jobs through mill closures shall be adequately compensated."

Referring to the discussions which have been taking place within the industry on the question of its future size, the report said: "Final conclusions have not been arrived at, but it is essential that the industry should be as compact as possible and highly efficient with mills running at 100 per cent. capacity. This is the only way to maintain and improve the living standards of those whom we represent." It had been evident for some time that the machine capacity of the industry was in excess of any likely demand for yarn and cloth; a report had, therefore, been submitted of the expected demand and many assumptions had been made, including the development of shift working and the introduction of more automatic plant. The report added: "This would mean, of course, old machinery being scrapped and inevitable mill closures."

Merchants' Warning

The urgent need for completion of the cotton industry's schemes for contraction and for clarification of the Government's promises of assistance was stressed in the annual report of the yarn section of the Cotton and Rayon Merchants' Association. "If some units are led to believe that by continuing in existence at any cost they may obtain a share of some Government or other largesse, prices could take a most erratic course. It is most essential that the period of uncertainty should be brief," continued the report.

Commenting on the abandonment of the price agreements in the cotton spinning and doubling industries and the withdrawal of minimum prices for spun rayon yarns, the Association declared that it had always been in favour of greater flexibility in prices and felt that export trade in yarns would benefit from the new freedom. "As long as the industry is larger than is justified by the total volume of trade available there is a danger that the market may become so unstable that nobody will benefit," the report warned.

The report regretted the reduction in quotas imposed by the Indian Government on imports of yarn and commented: "Lancashire exports of cotton yarns to a traditional market have already been reduced to a fraction of their former volume and statistics show that the new restrictions will reduce India to a market little larger than some of the small West European countries."

Textile Plant For U.S.S.R.

Machinery for use in a new man-made fibre plant now being built in the Soviet Union has been ordered from Ernest Scragg and Sons Ltd., Macclesfield, Cheshire, textile machinery makers. A contract worth more than £300,000 has been placed with the firm, it was announced last week. The machinery was said to be of the most modern type and will be operating at higher speeds than any other similar plant now in use in Russia, as far as is known.

During the past twelve months the Scragg Group has secured orders with Russia for machinery to be used for the processing of man-made fibres worth more than £1,000,000, including some contracts obtained in conjuction with Courtaulds Ltd.

Trade With Germany

Expanding export opportunities for British firms in Western Germany were outlined in Manchester last week by Mr. J. A. M. Marjoribanks, H. M. Minister Economic at Bonn who visited the Manchester Chamber of Commerce for talks with exporters. In the last six years, he said, the value of U.K. shipments to West Germany had increased from £55,000,000 to £116,000,000 a year and, in the latter part of last year, exports were running at an annual rate of £130,000,000. "These figures show that Western Germany is the most expanding market we have in Europe; our exports to every other Continental country with the exception of Austria have decreased over the past year."

Mr. Marjoribanks said that British firms who took the initiative and visited Germany to explore the market were doing very good business and there was scope for more. There were openings for all kinds of machinery—textile, agricultural and electrical—woollen textiles and chemicals and the higher quality cotton textiles.—*All Rights Reserved.*

CLIMATE FOR FOREIGN INVESTMENT

RESULTS OF U.S. STUDY

IT has now become quite clear that, if India's economic development is to be rapid and smooth, utmost importance must be attached to the need for encouraging inflow of private foreign capital and that less reliance should be placed on aid from foreign Governments. Already, several Indian business houses have approached overseas interests, particularly in the U.S., with schemes for collaboration. Many U.S. companies are reported to be evincing much interest in these schemes. In view of this upsurge in interest, the Far Eastern Division of the U.S. Bureau of Foreign Commerce has prepared a document entitled *Investment Factors in India* which contains answers to several questions, as many as 50, that must be uppermost in the minds of prospective foreign investors. This document was placed before the Terminal Conference of the U.S. Trade Mission to India held at Chicago in March last. A portion of the document, that pertaining to the more important questions and answers, is reproduced below, as we are sure that most of the business men in India—both nationals and foreigners—will be interested in knowing the findings of the U.S. Commerce Department:

What is the extent of present U.S. investment?

Current value of total U.S. private investment in India was unofficially estimated at $150 million in late 1958, and additional projects were being negotiated involving approximately $15 million. The last official U.S. estimate of the book value of U.S. investment in India was $110 million at the end of 1957. More than half this investment was in petroleum exploration, refining and distributing operations. Additionally, American branches or subsidiaries are engaged in the manufacture in India of such products as rubber tyres, jute products, abrasives, flashlight batteries, a wide range of chemicals and pharmaceutical, and elevators and escalators.

Is there other foreign investment?

The latest official tabulation by the Indian *Government* (end of 1955) placed the book value of all foreign private investment at approximately $1.1 billion. Of this amount, U.K. investors owned about $844.2 million and U.S. investors $95 million.

What is the rate of new investment in India?

During the period 1948-53, there was an average net annual private capital inflow of about $51 million. This declined to about $38 million annually during 1953-55. Although more recent estimates are unavailable, new investment in the past two years is thought to be considerably in excess of previous rates.

What is India's private foreign investment goal?

In 1956, the Indian Government set a goal of $210 million in private foreign investment for the second Five-year Plan period (1956-61). The Government is now relying on an even greater flow to help meet the gap between planned expenditures and India's own foreign exchange resources.

Is investment in India profitable for U.S. firms?

A recent study by the Reserve Bank of India reveals that the average rate of return on investment in India by U.S. companies, after Indian income taxes, amounted to 13.5 per cent. and 12.8 per cent., respectively, in the years 1953 and 1955, as compared with the average earnings of 10-12 ,per cent. by large corporations in the United States.

What is the scope for licensing agreements with Indian companies?

The wide range of new industries being established and the emphasis on increasing the productivity of existing plants offers greatly expanded scope for the licensing of patents and the extension of technical assistance by U.S. companies. The Indian Government has authorised the conclusion of more than 300 licensing and technical assistance agreements since independence. Many U.S. companies have licensing arrangements with Indian firms covering textile finishing processes, food processing machinery, production of jeeps and automobile parts and accessories, etc.

Is there an investment guaranty agreement?

An agreement was concluded on 19th September 1957 which provides convertibility guaranties for the conversion of earnings and original capital into dollars. It does not cover nationalisation or war risk.

What policy statements govern U.S.-Indian commercial relations?

High officials of the Indian and U.S. Governments issued a joint statement in February 1958 expressing agreement on ways to foster closer trade and investment relations (see Kearns-Lall statement W.T.I.S. 58-60, p. 4). References to W.T.I.S. 58-60 relate to the publication *Establishing a Business in India*, World Trade Information Service, Part 1, No. 58-60. Available from U.S. Department of Commerce Field Offices or the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D. C., for 10 cents.

Is there a double taxation treaty?

In December 1958, Indian and U.S. officials met to discuss the terms of such a treaty and tentatively agreed on the matters to be covered. These discussions will be resumed in India soon.*

India's Policy Towards Foreign Investment

There is no general law in India governing foreign investment. The Indian Government has generally followed the four major principles announced by Prime Minister Nehru on 6th April 1949. These are: The Government of India does not intend to place any restrictions or impose any conditions on foreign private investment which are not applicable to similar Indian enterprises; foreign interests will be permitted to earn profits subject only to regulations common to all companies, and no difficulty is foreseen in continuing the existing facilities for the remittance of profits; if and when foreign enterprises are nationalised, compensation will be paid on a fair and equitable basis; and as a rule, the major interest in ownership and effective control of an undertaking should be in Indian hands.

In what industries would a foreign investor be expected to enter into joint ventures with the Indian Government?

India's Industrial Policy statement of 1956 required that 17 basic industries, including defence equipment, atomic energy, iron and steel, etc., be developed exclusively in the public sector. However, existing private enterprises in those industries are permitted to continue and may be allowed to expand if this is in the national interest. As a general rule, foreign investors would be required to enter into joint ventures with the Indian Government in those industries.

What other fields are reserved largely to the Government?

Twelve other industries, including antibiotics, essential drugs, fertilisers, machine tools, synthetic rubber, etc., are to be progressively State-owned. The State will generally take the initiative in establishing new undertakings in those fields. Private enterprise, however, will also be expected to supplement the effort of Government. In the past two years, the Indian Government has permitted an enlarged role to private industry in those 12 industries.

To what extent are foreign private companies entering into joint ventures with the Indian Government?

There have been relatively few instances to date in which private foreign companies have entered into joint ventures with the Indian Government. Nevertheless, there has been a growing trend toward private foreign equity participation with the Indian public sector in new enterprises. Recent examples include private British equity participation in an explosives plant, in an oil exploration and refining project and in a large telephone manufacturing enterprise. In 1958, an American pharmaceutical company agreed to provide technical services to a Government antibiotic plant on a royalty basis.

To what extent are private foreign companies entering into joint ventures with Indian private industrialists?

A substantial number of foreign private companies, predominantly European, are entering into joint undertakings with Indian businessmen. While American companies have been less inclined so far to participate in such joint ventures, a number of such agreements have been negotiated in the past two years.

What proportion of new industrial growth is taking place in the private sector?

In 1956, at the beginning of the second Five-year Plan about 80 per cent. of Indian industry was in the private sector. Since the Plan calls for greatly increased public sector expenditure (approximately double the capital investment allocated to the private sector), it is estimated that, by 1961, the Government sector will control about 40 per cent. of all industrial investment. It should be noted, however, that most of this investment is taking place in large-scale basic industries. The Indian Government expects that the development of these basic industrial facilities will permit greatly expanded opportunities for private sector activity in secondary and consumer goods industries.

What corporate forms may foreign investment take?

Although India has generally insisted on majority control of new enterprises by Indians, this requirement is now being interpreted more flexibly. On 15th August 1958, the Indian Government explained that, in principle, the cost of imported capital equipment is allowed either as minimum equity participation or on a part equity and a part loan basis. While majority Indian participation is generally favoured over and above the minimum cited above, the Government stated that, in suitable cases, it will allow foreign investment as the bulk of the capital structure of a new enterprise provided Indian participants can exercise effective influence on the company to develop Indian "know-how."

What corporate forms may foreign investment take?

Foreign investors may organise an Indian company or participate in an existing Indian company on the same terms as Indian investors. Special provisions have been set forth in the Companies Act, 1956, for companies incorporated in foreign countries having a place of business in India (see W.T.I.S. 58-60, p. 7-8). Some changes may be introduced soon into the Company Law definitions of a "private" and a "public" company as a result of the recommendations contained in the 1957 Report of the Company Law Amendment Committee. Loan copies of this report are available from Commerce Field Offices.

What criteria are used in screening investment proposals?

The four fundamental tests employed by the Indian Government require generally that the proposal involves manufacture; it should increase productivity in an important economic field; it should save or earn foreign exchange; and the enterprise to be established should impart technical skills and create employment.

How is approval obtained?

All proposals must be approved by the Indian Government. The approval usually takes the form of a licence to manufacture issued by the Ministry of Commerce and Industry.

Is the screening process time-consuming?

In most cases, American investors have complained about the delay in getting approval for a project. It is not unusual for decisions to take a year or more. The Indian Government is now considering the opening of investment centres abroad to facilitate negotiation of investment proposals. It recently simplified regulations governing the expansion of existing enterprises in India, a step which may indirectly expedite consideration of new investment proposals.

What assurances should U.S. investors try to obtain at the time of entry?

In most instances, foreign companies request assurances with regard to the import of essential raw materials for the proposed enterprise, and the right to obtain suitable land and other facilities for the plant. In some cases, companies seek to determine whether their undertaking would be eligible for tariff protection. Agreement is ordinarily reached also on the capital valuation assigned to the foreign equity contribution.

What assurances does India generally require?

Among the typical conditions advanced by the Indian Government are: The submission

(Continued on page 745)

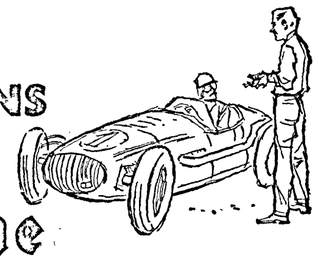
WORLD CHAMPIONS CHOOSE Firestone



..SO SHOULD YOU

because—in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

Glen Roberts, winner of the Ninth Annual '500' race at Darlington, South Carolina, said that his wonderful performance was mainly due to his Firestone tyres, which had to withstand a track temperature of 121 degrees.

"KHANDSARI" SUGAR GETS RELIEF

MR. MORARJI DESAI YIELDS TO PRESSURE

AT least a section of *khandsari* sugar manufacturers has reason to feel gratified at the relief in excise duty announced by Mr. Morarji Desai, Union Finance Minister, while moving for consideration the Finance Bill 1959-60 in the Lok Sabha on 20th April last. The Finance Bill originally introduced, it will be recalled, envisaged the imposition of a basic excise duty of Rs. 5.60 per cwt. with an additional duty of 70 nP in lieu of sales tax on *khandsari* sugar. The levy was severely criticised by the industry as well as by a section of politicians, and scores of telegrams were addressed to the Government of India urging it to drop the levy. During the general discussion on the budget in both the Houses of Parliament, several members not excluding many a Congress man, opposed the imposition on the ground that the *khandsari* industry in general was not in a position to bear the burden. The Finance Minister had the matter thoroughly investigated and has since announced some concessions for the industry, although in his reply to the general debate, he had strongly defended his action. Apparently, he must have thought that it would be better, politically, to make a reduction in the tax levied by him.

According to the Finance Minister, it is proposed to make a distinction between *khandsari* sugar produced with the aid of sulphitation plant and that produced without such aid. The basic rate of duty on the former is to be reduced from Rs. 5.60 to Rs. 5.04 per cwt. and on the latter to Rs. 3.92 per cwt. Similarly, the additional excise duty has also been lowered from 70 nP to 63 nP and 49 nP, respectively. The concessions are expected to cost the exchequer Rs. 61 lakhs during the current financial year (1959-60) and Rs. 81 lakhs in a full year. The new proposals would be given effect to by executive notifications.

Further, it has been decided that *khandsari* sugar should be deemed to be assessable only when power-driven centrifugals are used in its manufacture. In other words, it is of no consequence if *rab* is made from out of juice extracted with the aid of power driven crushers; *khandsari* sugar produced from such *rab* with the aid of either hand-driven centrifugals or any other non-power contrivance will not be assessable. By way of simplification of procedure, Mr. Desai has in mind, we are told, prescription of compounded rates of duty in respect of the smaller units in lieu of standard rates. The details are being worked out and an announcement will be made in the near future. Mr. Desai hopes that the *khandsari* industry will have no further cause for complaints.

It is unfortunate that the Union Finance Minister has bowed to the pressure tactics of politicians. Even the original excise duty of Rs. 6.30 per cwt. (including additional excise duty) is very inadequate, as it still leaves a gap of about Rs. 8.26 per cwt. between *khandsari* sugar and white sugar, apart from the incidence of co-operative societies' commission on sugar factories which works out Rs. 3.22 per cwt. What is worse, by making a distinction between *khandsari* sugar produced with the help of sulphitation plant and that produced without such aid and by imposing a lower rate of duty on the latter, the Minister has only placed a premium on wasteful production of *khandsari* sugar. It is common knowledge that the recovery of sugar in the traditional indigenous process of *khandsari* manufacture is very much lower than the production by the sulphitation plant; the recovery under the old process is just 5 to 5.5 per cent., as against 7.5 to 8 per cent. under the improved sulphitation method.

No one would grudge tax relief and even active financial assistance to a cottage industry, but, when such relief and assistance are extended to wasteful means of production, they serve no purpose. Is it worthwhile to encourage production of *khandsari* sugar under traditional indigenous process, that is, without the help of sulphitation plant? Every 100 tons of sugarcane crushed under this process will result in a total loss of 4.5 tons of sugar which could be had by utilising the same quantity in a sugar factory to produce white sugar. The revenue lost as a consequence of not producing these 4.5 tons of white sugar is nearly Rs. 1,830, made up of Rs. 1,310.40 by way of excise duty, Rs. 229.05 as cane cess and Rs. 290.30 as co-operative societies' commission. This is the minimum loss, in that it is exclusive of the income-tax and super-tax which the Government can collect from the sugar mills on the profit made by them on the 4.5 tons of sugar.

The Union Finance Minister would have certainly served the cause of the *khandsari* industry better if he had maintained the previous excise duty of Rs. 6.30 per cwt. and given a tax preference to the more efficient production of *khandsari* sugar with the aid of sulphitation plant. It is the adoption of this plant which removes the several defects in the traditional indigenous process such as poor extraction of juice, processing of juice without neutralisation, inefficient juice boiling resulting in the inversions and caramelisation of sugar, and crystallisation of *rab* under uncontrolled conditions as a result of which formation of grain is excessive and the size of grain so small as to pass out in molasses during "centrifugal." But it must be emphasised that even the improved type of *khandsari* manufacture is wasteful as compared with white sugar manufacture. Accordingly, the proper thing to do would be to discourage production of *khandsari* sugar and to divert the cane used for this purpose to the factories producing white sugar.

SUGAR IN RUSSIA

Sugar production in the Soviet Union is expected to touch 10.0 million metric tons (raw value) in 1965, as against the estimated output of 6.2 million tons in 1958-59. The rise of 3.8 million tons is being achieved partly through the setting up of 45 new sugar refineries and partly through the reconstruction of 44 old units. The new refineries will have a capacity to process 30,000 to 50,000 centners of sugar-beet per day. A large part of the production processes at the refineries now being erected is said to be fully automatised. With the successful implementation of this programme, the *per capita* output of sugar in Russia will increase from 26 kilogrammes (about 57 lbs.) at present to 41-44 kilogrammes (92-97 lbs.) in 1965.

It may be noted here that Russia is one of the members of the International Sugar Agreement. Its basic export quota for 1958 was 200,000 metric tons, out of the total tonnage of 6.39 million tons for all countries. The domestic consumption of sugar in 1957 aggregated 4.7 million tons, as against 4.2 million tons in 1956 and 3.95 million tons in 1955.

"INDIAN SUGAR"—ANNUAL NUMBER

The latest annual number of *Indian Sugar*, published by the Indian Sugar Mills Association, India Exchange, Calcutta (Editor: Mr. J. S. Mehta. Price: Rs. 3), gives, like its predecessors, an interesting resume of the recent developments in the sugar industry, Indian and international. There are several general and technical articles on the various aspects of sugar industry—sugar production, sugarcane cultivation, confectionery, subsidiary industries and labour. There is also a brief review covering world sugar output, world export quotas, and sugar industry in Pakistan, Vietnam and Cuba. The Annual contains, besides, a note on the proceedings of the Association's annual meeting held early in March 1959, including the speech of the retiring Chairman, Mr. P. Haddfield. There is also a statistical section giving up-to-date information regarding sugar and cane production, *per capita* consumption of sugar, sugar recovery, etc., in India as well as in the important sugar producing countries in the world.

Sugar production during the month of March 1959 was 366,000 tons bringing the total production to 1,697,000 tons upto 31st March 1959, as against 378,000 tons in March 1958 and 1,714,000 tons upto 31st March 1958.

The offtake of sugar from factories during the month of March 1959 was 171,000 tons, as against 172,000 tons in the corresponding month in 1958. The total despatches from factories during the first five months of the season were 862,000 tons, as against 808,000 tons during the corresponding period last season.

The total closing stocks of sugar with factories as on 31st March 1959 was 1,168,000 tons, as against 1,334,000 tons on the same date last season.

The South Indian Sugar Mills Association has arranged for free sale of sugar at ex-factory prices which, after allowing for reasonable profit to the wholesaler and retailer, should enable the consumer to obtain sugar at no more than 52 nP per lb. or Re. 1.63 per *viss* of 3½ lbs. Announcing this, the Association observes that it "has noted with concern the high retail price of sugar ruling over the last two months in South India; production in South India comprising the States of Madras, Andhra, Kerala and Mysore together will be even a little more than last year."

The Punjab Government has decided to institute a comprehensive enquiry into the working of three co-operative sugar factories in the State. The three factories, it is said, have been running at a loss during the last three years of their existence, despite a total investment of over Rs. 4 crores. The enquiry will begin on the 21st inst., with the Rohtak Karyana Co-operative Mills. The affairs of the other two units at Panipet and Bhogpur (Jullundur) will be taken up later.

Sudan is obtaining 25,000 tons of refined sugar from Formosa. The purchase has been made possible by U.S. assistance funds granted to Sudan, with a view to overcoming the present shortage of foreign exchange. The International Co-operative Administration in Washington has issued a $2.8-million procurement authorisation to cover Sudanese sugar purchase. Meanwhile, Sudan has plans to extend sugarcane planting in the fertile Zondi district of Southern Sudan and to develop sugar-refining industry.

The Central Government has turned down the plea of the Kerala Government for permitting the establishment of a co-operative sugar factory in Palghat district on the ground that the entire targeted capacity for sugar industry under the second Five-year Plan has already been licensed. This was disclosed by the Union Deputy Minister for Community Development and Co-operation in the Lok Sabha recently.

Men and Oil . . . 7

The Welfare Officer

Most of the world's great oilfields lie under deserts, swamps and jungles, far away from established centres of civilisation. Near the wells and refineries live the geologists, drillers and technicians, and as operations expand so the oil camps grow into permanent settlements. In time, new towns are established, whose citizens are the thousands of people employed in the industry.

Oil companies are very much aware of their responsibility for the welfare of these new communities, and most oil towns are, for that reason, models of thoughtful planning and administration.

So it is in Digboi. Once just a clearing in the dense jungle, Digboi is now one of India's most modern industrial towns. The Assam Oil Company devotes great attention to the provision of health services, good housing and sanitation, schools and other amenities for its employees.

And this is where the Welfare Officer comes in. He is the link between the Company and the community; the man who administers projects that make a fuller, happier life for everybody. Just as the Assam Oil Company recognises that it has a duty to serve the people of India, so, through its Welfare Officers, does it promote the happiness and benefit the lives of the men who make their living by oil.

FISCAL LEVIES ON TEA INDUSTRY

MINISTER RULES OUT PROSPECT OF FURTHER REDUCTION

TEA planters who had gathered at Jalpaiguri last week-end for the annual meeting of the Indian Tea Planters' Association, might have been somewhat disappointed with the statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, when he addressed them on the occasion, that it would not be advisable on their part to expect any further concession at the present moment, in so far as the excise and export duties on tea were concerned. Mr. Shastri, who was replying to the plea of Mr. L. D. Betts and Mr. K. K. Rahut for a radical change in the Government's taxation policy, did not, however, rule out the possibility of the Government acting swiftly, if any special situation arose, and rendering necessary assistance to the industry.

Mr. Betts pointed out that the tea industry, despite its importance as the largest foreign exchange earner, was the most heavily taxed. It was also burdened, he said, with various levies on production, which besides being vexatious, were also a great handicap to the industry. It was in the ridiculous position of having to pay all surplus to labour, leaving nothing for carrying out improvements and fulfilling statutory obligations. Mr. Rahut explained that a large slice of the cost of production (which had increased considerably in the post-war years) consisted of taxes which either the producer or the buyer had to pay. Even where the buyer had to bear it, it ultimately recoiled on the producer and virtually became a part of the cost production. He added that, out of the cost of production of Re. 1.75 per lb. in 1958, taxes alone accounted for 55 nP and of the latter, the share of export duty was no less than 38 nP per lb. Further, in 1958, while production went up by 4.4 per cent., as compared with that in the previous year, exports rose by about 15 per cent. Foreign exchange earnings, however, were higher by only about 11 per cent., as the average export price declined by 3 per cent. With higher production and export, Mr. Rahut said, the Central Government obtained larger revenues but, with lower prices, the producers suffered a loss. He pointed out that the revision of excise and export duties had not fetched a better price for common teas. The differential excise on zonal basis, according to Mr. Rahut, failed as an incentive to a larger offtake of common teas.

Average Prices Realised

Refuting the claim of planters that the average prices fetched by Indian teas, as a whole, and Dooars teas, in particular, had been lower than in 1957, Mr. Shastri said that the position was not exactly like that. Thus, he said:

"In the Calcutta auctions, the average price was Rs. 2.18 per lb. in 1958-59, as compared with Rs. 2.10 in 1957-58. In the London auctions, the average price moved up from 55*d.* to 55.90*d.* The price of Dooars tea came down by about 1*d.* per lb. in the London auctions, but, in the Calcutta export auctions it moved up from Re. 1.82 in 1957 to Re. 1.88 in 1958. Dooars dust tea rose from Re. 1.64 to Re. 1.80 and leaf from Re. 1.24 in 1957 to Re. 1.51. On these calculations, it seemed that while the relief obtained was 12 nP to 14 nP in tax burdens, the industry gained 6 nP to 10 nP in prices in exports and internal auctions."

Replying to the planters' plea for the Central Government's assistance in seeking a relief from the West Bengal and Assam Governments in respect of entry and road taxes, Mr. Shastri said that he had discussions with the Ministers of the two State Governments on the subject and that both the Governments were giving active thought to this problem. While sympathising with the planters, the Minister did not hold out any promise of relief. For he said that they should fully realise the great need for funds for developmental activities of the States. It was, therefore, not an easy matter for both the Governments to forgo the big revenue they got out of these taxes at present.

Mr. Rahut drew the attention of the Minister to the growing production of tea by the major tea-producing countries during the last three years. Their aggregate output had risen from 1,218.8 million lbs. in 1956 to 1,312.8 million lbs. in 1958. The surplus brought forward from 1957 amounted to 89 million lbs. It was very likely that, even after making a reasonable allowance for a higher consumption in 1958, Mr. Rahut said, with an increased world production of more than 60 million lbs., the carryover of surplus stocks to 1959 would be about 100 million lbs. Such a large surplus and increasing competition from other tea-producing countries have naturally caused some anxiety among Indian planters over the prospect of raising the exports of their produce.

Exports

While fully realising the anxiety of the growers in respect of tea exports in an overstocked world, Mr. Shastri said that they need not be unduly nervous about it. On the contrary, he was very hopeful of increasing our exports. Thus, he said:

"The future of our common tea producing areas in a highly collective world market lies in the success of our effort to convert the greater part of our common tea production into quality tea production.... We have to adapt ourselves to changed conditions and do our best. We will continue to maintain our exports to our main buyer country, the U.K. I hope there will be some improvement in the U.S.A. also.

"We have recently developed some new markets, like Egypt and Sudan, the U.S.S.R. and the countries of Eastern Europe. Recently, our trade agreement with Iraq has regained for Indian tea a foothold in the Iraqi market which India had completely lost. But it is only a foothold that you must consolidate and extend. I have the impression that enough is not being done by Indian exporters to exploit this development.

"Iran is another market to which we are not paying sufficient attention. According to a recent law of the Iranian Government, all imported tea has to be blended with the local product before it is sold to the consumers. I wonder how many of our exporters have tried out blends of various grades of Indian tea and Iranian tea to find out what blend would be competitive in price and agreeable to the Iranian taste.

"I am pointing out these instances only to show that, even in an overstocked market, ingenuity, resource, drive and enterprise are not ruled out and our export outlook need not be too pessimistic."

It is true that there is vast scope for enlarging India's exports, but the whole trouble is that the bulk of this country's output is made up of common teas and the prices fetched by them are not competitive, on account of the high cost of production.

International Tea Agreement

Speaking on the representation made to the Government of India for taking steps to revive the International Tea Agreement, even if it be confined to a limited circle of producers, the Union Minister remarked:

"This question has two sides which have to be carefully considered. May I give an instance of the contradictions in what you have said about the advantages of an international trade agreement. With an excess of 89 million lbs. in world supply over world consumption, why is it that, in 1958, we exported 65 million lbs. more than the preceding year? Why is it that prices in Calcutta, Cochin and London auctions were better than last year? You have rightly pointed out that our present export performance is by no means unprecedented. We nearly touched that figure in 1953. But for the 500 million lbs. we exported that year, we earned only Rs. 163 crores, as against Rs. 136 crores for the 507 million lbs. we exported last year. Considering that world production in 1953 was not of the same volume as in 1958. I find it difficult to explain this. Again why is it that the slump of 1952 occurred despite the fact that the International Tea Agreement was in force then?

"It is far from my intention to rule out the necessity of an international tea agreement. I merely wish to point out that there are so many imponderables in this situation that the most concentrated thought and analysis of all aspects of this situation is necessary before we take a decisive step. Any policy based on easy generalisations would not be correct.

"Of late, the plea for a limited agreement between a few producing countries confined only to the limitation of exports has been made by some quarters. Their argument is that these producing countries accounting for the bulk of world exports of tea can by a restrictionist agreement among themselves push up prices to a remunerative level I would not like to dilate upon this any more and merely say that the Commerce and Industry

NEW BRIDGE ACROSS THE GANGA

ITS SIGNIFICANCE TO NORTH BIHAR'S ECONOMY

THE completion of the Rs. 15-crore railway bridge across the Ganga at Mokameh (Bihar), which was formally opened for traffic this week by Prime Minister Mr. Jawaharlal Nehru, is a new milestone in India's industrial march. By connecting the broad-gauge system of the Eastern Railway on the south of the river with the metre-gauge system of the North-Eastern Railway on the other side, the bridge is a link not only between north and south Bihar but also between the entire region south of the Ganga with Assam, Bengal, Nepal and east U.P. It thus paves the way for the industrialisation of several regions, including, of course, north Bihar, the economic progress of which has for long been hampered by absence of a speedy and efficient system of communications across the Ganga in Bihar.

North and South Bihar

The terms 'north' and 'south' Bihar have become so common through long usage that few have perhaps cared to reflect why similar classification is not made in respect of, say, U.P. or Bengal. The ineluctable fact of Bihar's geography, namely, the east-west flowing Ganga, across which there is no bridge in the State, has made regional dichotomy an inescapable part of life in Bihar. Although the Ganga has been bridged over at as many as eight points in its upper reaches, the last bridge being at Varanasi, six miles to the west of Moghalsarai, there was no bridge for moving goods and passengers between north and south Bihar. Again, whereas in U.P. alone, there are six bridges across the Ganga over a distance of 400 miles, there is no bridge whatever in Bihar over a length of nearly 300 miles. The result was that transport had to be confined to the costly, slow and hazardous system of ferries. The most important ferry point was the Mokameh ghat—the site of the present bridge—though there were three other minor ferry points worked by the railways at Patna, Bhagalpur and Sahibganj. Ferrying has presented some serious problems not the least of which was the instability of the north bank of the river. This meant that the ferry points had to be frequently shifted which, in turn, implied temporary stoppage of transport until arrangements could be made at the new ferry points. For instance, in 1955–56, the Manihan ghat near Sahibganj had to be shifted no less than 14 times; each time, the whole apparatus, including railway yards and offices, had to be moved. Transport across the Ganga was a regular nightmare. No wonder, north Bihar has held no attraction even for the most enterprising of Indian industrialists.

It may well be asked why a bridge was not built earlier, considering that the railways have had to encounter many difficulties in transport of goods and passengers which implied heavy costs and innumerable uncertainties. For a long time, the engineering knowledge, which has now made possible the Mokameh bridge, was lacking. It must be remembered that the lower reaches of the Ganga, which is enriched by many tributaries, each of which is a large river in itself, are very broad, carrying with them enormous volume of water. The Ganga, after passing Patna, carries 1,020 million gallons of water per minute—a quantity which is sufficient to meet the daily water-supply requirements of all the important cities in India. To bridle so imperious a river as the Ganga, spreading out over a width of five to seven miles, is no mean engineering feet. What has made this achievement possible is the knowledge of river training which has been acquired only from the beginning of the present century. The first bridge in the lower reaches of the Ganga was attempted early in this century at Sara and completed in 1911; it is now in Pakistan.

Expert Opinion

At Mokameh, the 2½-mile wide river has been narrowed down to a width of nine furlongs; in the absence of this constriction, the bridge would have been three times as costly as it is now. Mokameh was adjudged by experts as the most convenient spot for erecting the bridge. , The Bihar State Government itself felt that the bridge should be constructed at Patna. In 1952, the nonagenarian engineer-statesman, Mr. M. Visvesvarayya, was called in to give his verdict in favour of an appropriate site for the bridge, the eligible sites being Patna, Mokameh, Sakrigali and Rajmahal. In giving his verdict in favour of Mokameh, Mr. Visvesvarayya took into consideration such factors as (1) the traffic flow and operating requirements, (2) the initial and maintenance cost of the bridge, including training works, (3) the special engineering features and the regime of the river, (4) the relation of the project to other schemes and (5) administrative considerations. The controversy over the site of the bridge delayed its construction. For, as early as in January 1948, the Cabinet approved that the Railway Board should go ahead with the construction of the bridge at Mokameh. Financial difficulties held up the work for some period of time, while the controversy over the location of the bridge further delayed it. Orders for restarting the work on the bridge were, however, issued in September 1953.

Discussing the development of the project, the Chairman of the Railway Board, Mr. P. C. Mukerjee, observes that though the original idea was to provide a metre-gauge bridge with the transhipment yard and sheds on the south side of the river, it was decided ultimately to provide a broad-gauge bridge and the transhipment yard and sheds on the north of the river in view of certain advantages, namely, (*a*) goods consigned to places in north Bihar, which are within road transport distance from the new transhipment points, can reach there direct by broad-gauge without being transhipped into metre-gauge wagons;

(*b*) the capacity of the line across the bridge will be greater in tons carried per train;

(*c*) the railways will have virgin ground on which to lay out a modern and mechanised transhipment yard with room for expansion.

Features

The project consists of linking the broad-gauge railhead on the south bank with the metre-gauge railhead on the north bank. According to Mr. Mukerjee, the main items of the work involved are:

"(i) The construction of the bridge proper about 6,000 feet long on deep well foundations, sunk to about 165 feet to 175 feet below low water level with an armoured guide bund about 8,194 feet long. The cost of the bridge is chargeable partly to the Railways and partly to the Ministry of Transport (Roads Wing). The bridge will carry the broad-gauge railway single line on the lower deck and a roadway 24 feet wide with two footpaths each 6 feet wide on the upper deck. It will consist of 14 simply supported main spans each 397 feet resting on 15 main piers and 4 shore spans each 104'-9" supported on land piers. The bridge has been designed to pass a peak estimated discharge of 27½ lakh cusecs. (ii) A new broad-gauge line from Dumra to Barauni, a distance of 10.3 miles, with a modern mechanised broad-gauge/metre-gauge transhipment yard on the north bank and an independent access to the bridge from the Mokameh side. (iii) A metre-gauge direct line of access from the transhipment yard to Tilrath. (iv) Suitable junction arrangements at Mokameh (Tal) Dumra and Barauni and connection from transhipment yard to centre of Tilrath (metre-gauge)."

With the completion of the bridge across the Ganga at Mokameh, there opens up new vistas of industrialisation for north Bihar. Through booking of goods from north Bihar to all destinations in India and *vice versa* has now been rendered possible. The bridge will benefit, as stated at the outset, not only north Bihar but also north Bengal, Assam, east U.P. and Nepal, all of which have till now been dependent upon the precarious ferry services run by the railways. As. Dr. S. K. Sinha, Chief Minister of Bihar points out, the "completion of this project makes a radical change in the whole situation and makes possible for this entire area a pace of development which may rapidly change this somewhat poor and backward part of the country into one of its most prosperous areas." The bridge will facilitate the flow of coal, stone and steel from south Bihar to north Bihar. The State Government is now engaged in issuing several licences for new industrial enterprises in north Bihar. It is believed that the sugar mills can release bagasse for the establishment of paper mills. Industries based on alcohol such as plastics and chemicals could be developed. The capacity of the existing sugar factories and power alcohol plants could be expanded.

A major handicap in the development of thermal power facilities in north Bihar has been the obvious difficulty in reaching sufficient quantities of coal available in south Bihar. This can now be moved by the Mokameh bridge. Nearly all the electricity so far generated in north Bihar has been from diesel stations which are expensive to run and have limited capacity and life. The generation of power in north Bihar will soon be augmented by the State-owned thermal power station at Barauni which will generate some 30,000 kw. at the first instance, and 120,000 kw. in its later stages. In fact, the oil refinery project at Barauni and its allied industries, like the manufacture of petroleum products and plastics are all directly linked with the Mokameh bridge. Re-rolling mills and steel processing industries of various kinds are expected to be established in north Bihar, and, for some of them, licences have already been given. The establishment of these enterprises is obviously only the beginning of what is bound to prove to be a great movement towards the industrialisation of north Bihar and its adjoining regions.

ATOMIC STATION FOR JAPAN

The General Electric Company/Simon-Carves atomic energy group, on confirmation from its Tokyo representative on 3rd April that a letter of intent had been received, authorised work to begin immediately in England on the detailed aspects of the design of a 150-MW atomic-power station for Japan. The letter of intent was issued by the Japan Atomic Power Company for the construction of Japan's first atomic-power station at Tokai-Mura, about 70 miles north-east of Tokyo. A General Electric Company (G.E.C.) spokesman said in London that the order would be worth about £20 million and the station was due to be completed by the end of 1963. He stated that Japan's first atomic station would be of a type similar to the station now being built at Hunterston, Scotland, by G.E.C., but that it would be modified to meet earthquake conditions. When the British group was selected to negotiate the contract, it was stated that G.E.C. as the main contractor would be responsible for the design of the entire project, but that certain items would be manufactured by Japanese firms. In this connection, G.E.C. had concluded, subject to Japanese Government approval, a long-term licensing agreement with a consortium of 14 leading Japanese companies known as the First Atomic Power Industrial Group. Members of this group would undertake site construction work. The station, it is stated, would be powered by a single gas-cooled, graphite-moderated reactor of the same basic type as those at Hunterston.

LOW-COST NUCLEAR SHIP

Nuclear-powered ships with operating costs not more than 5 per cent. higher than those of conventional vessels will be in service by 1961. This was predicted recently by an official of the United Kingdom Atomic Energy Authority, Mr. H. W. Bowker, who is head of the marine propulsion group at the Harwell research establishment. He was speaking at Utrecht, Netherlands, at a special international meeting on marine nuclear propulsion organised as part of Utrecht's technical trade fair. Mr. Bowker pointed out that it had still to be determined "whether there is, or is likely to be, a reactor system that can produce power at a price comparable to that of conventional fuel when built in sizes that are required for (commercial) ships and when operated under marine conditions." Nevertheless, if the progress made recently could be maintained, it was likely that nuclear-powered ships could be operating at competitive costs within five to 10 years. Mr. Bowker said the results of a study made by British engineering firms of the comparative qualities of various kinds of reactor which might be suitable for marine propulsion were being reported to the Admiralty and their findings would be awaited with great interest. He said Britain's General Electric Company had evolved a reactor incorporating a "radically new approach to fuel element design," while a marine propulsion reactor was at an "advanced stage of design." The research group of the Nuclear Power Plant Company and Swan, Hunter and Wigham Richardson was studying a nuclear power plant suitable for a tanker requiring 22,000 h.p.

B.O.A.C. SUMMER PROGRAMME

During the summer, Comet services will be stepped up from four to ten a week on B.O.A.C. routes through India to the Far East. Of this total, eight weekly flights will serve Hong Kong, five will terminate at Tokyo and four Comet flights will serve Singapore. Britannias will continue to serve Singapore four times a week during the summer on the U.K.-Australia route.

An outstanding feature of the new Comet services will be the introduction of express flights serving Hong Kong and Tokyo. Tokyo will be reached in 27½ hours from London and Hong Kong in 20½ hours. On the return flight, it will be possible to leave Hong Kong at breakfast and reach London the same day after a flight of 22 hours 50 minutes.

On the U.K.-Australia route, B.O.A.C.'s partners, Qantas, will operate Boeing 707s this summer. Lated in the year, B.O.A.C. will introduce Comet 4s on the same route.

Across the North Atlantic B.O.A.C. will operate a total of 58 flights, offering more than 4,000 seats each week. These include 31 services from London to New York, 13 to Montreal, 7 to Chicago, 2 to San Francisco, 2 to Caracas and 3 to Kingston.

A further ten services a week by fast DC-7C airliners will provide swift connections between New York and Nassau.

In conjunction with its associated companies, B.O.A.C. will offer five weekly services to Accra, eight weekly services to Lagos and 17 weekly flights to East, Central and South Africa.

PRICE SUPPORT FOR FARM PRODUCTS

IS IT NECESSARY AND FEASIBLE?

By M. S. Parthasarathi

Once again, the question whether India's farmers should be guaranteed certain minimum prices for their products, especially foodgrains, has come to the fore. The issue first arose in 1955, following the steady and rather steep down-trend in food prices, as a result of two good harvests in 1953-54 and 1954-55. On that occasion, after much hesitation, the Government announced a limited scheme of price support for some cereals. But the support prices offered were not much higher than the then prevailing market prices, and the mere announcement of the scheme helped to avert any further serious price decline in spite of foodgrain production in 1955-56 maintaining the previous year's level. Also, the acceleration of development expenditure in the last year of the first Five-year Plan helped in the process. It is worth noting that, unlike the bumper crop of 1953-54, that of 1956-57 did not cause any alarming fall in prices, nor has the anticipated record crop of 1958-59. The principal reasons for this are, first, the natural increase in population and the consequent rise in the demand for food and, secondly, the fact that the latter two bumper harvests are isolated instances not followed or preceded by another good harvest.

Considering the population factor alone, it is somewhat incongruous that a price support programme should now be thought of at all. The anticipated increase in food production, calculated by suitable statistical methods, is around 2.6 per cent. a year. This will just about meet the food requirements of an estimated 2.0 per cent. annual rise in population, allowing only a marginal increase in the already low per capita levels of food consumption. With even a very moderate increase in per capita incomes—1.5 to 2.0 per cent. a year is what now seems likely—there is no legitimate reason to fear a steep decline in food prices in the near future such as the one which occurred in 1955. These considerations only emphasise the need to be clear on what objectives are proposed to be achieved by a programme of price support and whether they can be accomplished.

Objectives

Now, a programme of price support can have two objectives: (1) to ensure that the farmers get a guaranteed minimum price for their produce, so that they can rely on a minimum return for their efforts, and (2) to encourage further production by promising an assured reward. The first objective will have validity and relevance in a period of falling prices. In fact, in those circumstances, a price support scheme may really aim at nothing more than ironing out violent fluctuations in farm prices and, consequently, in farmers' incomes, resulting from fluctuations in output. It may attempt to improve the returns to the farmers by eliminating the windfall profits traders usually make when there are violent price movements. Such a price stabilisation programme is certainly to be welcomed. But the present time is not a period of falling prices, and the objective of a price support programme now under contemplation can only be to encourage production. How far, therefore, a price support programme can act as an incentive to greater efforts by farmers will be examined first in the course of this article.

It is obvious that the idea that price supports can act as inducements to raise production has its origin in a misreading of U.S. experience with price supports. The existence of bumper harvests in the U.S. alongside of guaranteed minimum prices appears to have created the impression that price support was the cause of agricultural growth. It must be pointed out here that, when the price support scheme was originally introduced, the primary objective of the U.S. Government was to ensure that the farmers, who were suffering from unfavourable movement in their terms of trade with the rest of the economy, following the Great Depression, obtained a reasonable reward for their efforts. It is true that American farmers, taking advantage of the price support programme, expanded production to such an extent that the Government had to introduce restrictions on the area sown. But acreage restrictions did not prevent them from increasing output by adopting better cultural practices and greater use of fertilisers. Herein lies the true explanation for the phenomenal progress of American agriculture. American farmers were so advanced technically that they could circumvent acreage restrictions. Their efforts, moreover, paid, because they are less dependent on the vagaries of the monsoon than are Indian farmers.

The Principal Problem

On the other hand, the principal problem of Indian agriculture is not the absence of remunerative prices for its products. In fact, it is to be questioned whether our farmers will know how to take advantage of price supports if they are introduced, since not only their knowledge of better methods of cultivation but also their resources and ability to adopt them are extremely limited. Even if these hurdles are overcome, there is still the unpredictable monsoon to contend with. Tables 1 and 2 show the area sown, the output indices and the price indices of the principal food and commercial crops, respectively. The data do not warrant the belief that our farmers have been, to any extent, influenced by the price level in planning their operations. Even in the case of a crop like jute, where land can easily be diverted to rice, it is difficult to make any assertion. In particular, it is difficult to divine any design in the movements in food output. Until our farmers can plan their work with greater confidence, without having to be constantly gazing at the sky, a price support scheme is highly unlikely to give a fillip to production in concrete terms, and, when that good time comes, the incentive of price support will very probably be superfluous.

Even if price support is successful in inducing a higher level of production, it need not be entirely beneficial in its overall effects. For instance, the production of a crop, which has a minimum guaranteed price, may increase through the diversion of land from some other crop. This has happened even in the U.S., where new areas were waiting to be brought under cultivation. This is all the more likely to happen in India, since the scope for bringing new land under the plough are strictly limited. Further, such new areas as may be available are not likely to be fit for the crops whose production the Government presumably would like to encourage. To guard against such unwise diversion of land, the Government will find itself forced to consider a complete scheme of price support for almost all agricultural products. This will not only involve a higher outlay in terms of money, but also a far more difficult task in working out a balanced price support programme, which will satisfy not only all farming interests but also the interests of the nation as a whole.

It is now necessary to examine whether there is any validity in the other possible argument in favour of price support, namely, that farmers should be guaranteed a minimum fair return for their produce, so that cultivation does not cease to be profitable. As already pointed out, it is on this ground the U.S. Government has over the years been operating a price support programme. This is understandable, since, in the U.S., farming is as much a business as any other, and uneconomic prices may result in some farmers quitting farming to take up some other occupation, adversely affecting production thereby. In India, on the other hand, farming is a way of life, and most farmers are subsistence farmers who cannot enter other vocations. This is not to justify denying our farmers a fair return, but only to highlight that differing ideas of a fair return are possible and practicable.

Question Does Not Arise

In any case, the question of ensuring a fair return to our farmers arises only if they are now being denied fair prices for their products, in comparison with the prices of manufactured commodities. All available statistical evidence, on the other hand, only proves that prices have generally been moving in favour of farmers in the last two decades. True, a case can be made out for price support for agricultural products, and for foodgrains in particular, especially in the years 1954-55 and 1955-56, if we look at the index number of wholesale prices with 1952-53 as the base. Tables 3 and 4 show that, since 1952-53, the prices farmers have been receiving for their principal food crops in relation to the prices of manufactures, which roughly represent the prices of goods they have to buy from the rest of the economy, has largely been unfavourable to them. But cultivators of commercial crops have altogether been enjoying favourable price relations.

This, however, cannot by any means be interpreted as justifying price support for foodgrains. The year 1952-53, which has been chosen as the base for the new series of index numbers of wholesale prices, cannot be called a normal year as far as price relations among the various commodities are concerned. The price rises registered by the important commodities between the base year of the preceding wholesale price index, that is, the year ending August 1939, and 1952-53 were quite unequal, as can be seen in Table 5. This table also shows the relation between the rise in the prices of manufactures, representing the prices farmers have to pay for their purchases, and the increase in the prices of farm products. Table 6 portrays the movement in price relations since 1952-53 after the elimination of the distortion introduced by the new series adopted in that year. It can be seen from this table that almost all agricultural commodities have been enjoying favourable price shifts in comparison with the prices of manufactures. The exceptions are the coarse grains, *jowar* and *bajra*, which are the staple foods of the poorest sections of the rural people who cannot afford to pay any higher prices.

It needs to be emphasised that it is not contended that the price relations between agricultural goods and manufactures as they were in 1938-39 were reasonable and just. But, since 1938-39 was the last normal year without any of the distortions and dislocations caused by the war and post-war years, it does seem logical to assume that the price relations of that year are a better guide to normal relations than those of 1952-53. On this basis, the conclusion is inevitable that, far from suffering from unfavourable price movements, Indian farmers have generally been reaping the benefits of favourable price changes. A price support scheme will, therefore, be calculated to benefit them further and cannot be described as designed to compensate them for adverse price movements.

It is now appropriate to examine whether the additional burden involved in a price support scheme can justifiably be imposed on the non-agricultural population of India. In whatever form a price support programme is introduced, so long as it is a case of one section subsidising another, this is a problem deserving consideration. In the U.S., the subsidy to farmers is not really as serious a problem as one may be led to believe from all the talk about accumulated surpluses and the problem of their disposal. Farmers in the U.S. form only 13 per cent. of the population and account for only 5 per cent. of the national income, so that the burden of price support is spread over 87 per cent. of the people and over 95 per cent. of the national income. In India, on the other hand, almost 70 per cent. of the people depend on agriculture for their livelihood, producing about half the national income. While it is theoretically possible to make the farmers also share in the burden of a price support programme, this may in practice prove difficult, as farmers may demand a still higher guaranteed price to offset the burden. In the result, the 30 per cent. non-farm population will have to bear the entire burden of price support.

It is precisely this 30 per cent. of the total population engaged in non-agricultural pursuits, especially the middle class, which has had to bear most of the additional tax burden that has been imposed since 1938-39. Not only have prices been moving in favour of farmers, but the incidence of the tax burden has also been shifting in their favour. In 1938-39, receipts from land tax amounted to Rs. 25 crores, that is, 14.7 per cent. of Central and Provincial Government income. In 1958-59, on the other hand, revenue from land, including agricultural income-tax, is expected to be only Rs. 104 crores, which is a mere 7.2 per cent. of all Governmental revenues. Thus, the agricultural class, as the agricultural class, contributes at present less than half as much as it did before the war, in terms of its share in the total, to the running of the Government. At the same time, the extension of many facilities to rural areas, particularly after independence, has considerably improved their share in the total social welfare activities of the State.

Let us now take a look at the relative economic positions of those who are likely to benefit from price support and those who will ultimately have to foot the bill. Obviously only those who buy their food from the market will have to subsidise the farmers since support prices will be higher than the normal price. The principal buyers of food are the industrial workers and the urban middle class. It is well known that industrial workers are quite capable of securing wage rises to compensate them for any increase in the cost of living; in fact, many wage agreements provide for automatic adjustments to reflect price movements. Consequently, it is the salaried urban middle class which has in the past suffered most from the steady rise in prices. It is, therefore, almost certain that the burden of guaranteed prices to farmers will also impinge most harshly, if not exclusively, on this section of society. On the other side, the beneficiaries of this subsidy will be the better-off farmers, since it is they who will have sizable surpluses to sell. Thus, the bigger farmers, who have been let off rather lightly, in comparison with even the average farmer, by the regressive and static land taxation system, will be precisely the ones to receive subsidies from the already lean purse of the urban middle class, who have had to bear a major part of the additional tax burden levied in recent years. This is likely to be the final outcome, even if a price support scheme is initially proposed to be financed out of the general revenues of the Government, as the extra taxation felt necessary will again fall on the salaried middle class.

It now remains to point out one or two other problems which a price support scheme is likely to throw up. If it is attempted to reward one section of society by taxing another section, directly or indirectly, the result will be to restrain consumption, either because prices go up or because the affected people have less income to dispose of. Whatever the trend in output, this by itself is likely to present a problem of storing the surplus gathered by holding consumption down. The question for consideration is whether the Government has adequate storage capacity at its disposal to do this. The problem will become particularly acute, if an all-round price support programme has to be adopted. At the same time, it is a matter for serious debate whether, with consumption levels as low as they are at present, specially among the poorest sections, the Government can at all be commended on holding consumption down while surpluses accumulate, surpluses which cannot be sold at home without upsetting price support and which obviously India cannot sell abroad at a loss.

Finally, if the aim of price support is to secure better returns to farmers, which may perhaps act as inducements to greater effort, this can be accomplished through the scheme of State trading in foodgrains by cutting down the share of the final price going to middlemen. In addition, every assistance needed by farmers by way of credit, fertilisers, improved seeds, etc., can be provided through co-operatives to encourage production.—*All Rights Reserved.*

NEW PRODUCTS AND PROCESSES

New Type of Hardboard

A NEW type of hardboard known as "Esca-Board" has recently been introduced in the market by the Swedish Cellulose Company. The outcome of several years of research and test production, the new board is claimed to have greatly improved painting qualities. The manufacturing process differs from the usual in so far as two separate layers, impregnated with a special linseed-oil compound, are "baked" together in the wet process on the uptaking machine. During the following hot-pressing and tempering processes the impregnation compound causes certain chemical reactions, giving the board its special character and qualities, including a very smooth and dense surface which permits of an easier and cheaper painting or coating. A very good finish is said to have been obtained from only one single spray-painting without any rubbing or grinding. When brush painting is used, there is no need for priming nor for any other puttying than filling, nailing holes, etc. Only two coatings are needed, and the board takes the paint firmly without soaking up more than necessary.

New Paint-making Process

A new technique, which is said to produce polyurethane paints that are easy to apply, long lasting, and superior in resistance to chemicals, has been developed. Although coatings incorporating polyurethane have been known to have desirable properties, heretofore the addition of pigment has introduced difficult problems. A reaction, attributed to moisture and possibly certain impurities in the pigment, causes the paint to gel before it can be used. Even if the gelling can be avoided, puffiness, bubbling and paint films exhibiting extremely low gloss and numerous pinholes tend to be the rule. The new technique employs compounds known as isocyanates, mixed with the pigments in advance, to make the unwanted reaction occur before the paint mixing step takes place so that properties of the finished paint are not affected. Before the new process was discovered, the pigment had to be combined with other components and then blended with the polyurethane material just before application, limiting its use to skilled industrial applicators. The paints made by the new method (which avoids the conditions calling for skilled applicators) are said to have demonstrated several months of stability in the can, good application properties, lack of gelling and excellent film characteristics.

Electronic Cheque Sorter

An electronic device that reads characters printed with magnetic ink on bank cheques and other documents and sorts them at the rate of more than 1,500 per minute had its first public showing. The new machine, sorting cheques, deposit slips and other documents ten times as fast as a single person in the manual operation, is designed to free employees from tedious, time-consuming tasks for more important banking operations. Also displayed publicly for the first time; a Magnetic Imprinter and a Magnetic Amount and Account Number Printer. Both are designed to print numbers and symbols in magnetic ink on cheques and other items, providing the "trigger" for automatic devices in the bank's system. The new machines were developed to conform with the common language adopted in principle by the American Bankers Association in 1956. A type font designated E-13-B was approved late in 1957 and final specifications are expected to be released soon. The new devices are compatible with the E-13-B type font.

Altimeter for Aircraft

A new type of altimeter designed for swifter and safer reading in flight and said to provide greatly increased accuracy has been demonstrated. It is of particular interest, coming as it does on the heels of a controversy over altimeters during the investigation into the fatal crash of a Lockheed Electra into the East River in New York recently.

(*Continued from next column*)

The new device indicates altitude on a single-strip tape which replaces the traditional dial face and pointers on altimeters. The 40-foot tape is electronically driven past a window on the instrument panel and presents a single reading of figures. Tests are said to indicate that the reading time on the new instrument is 3.4 seconds instead of the usual 7.3 seconds and that it deviates only 20 feet, plus or minus, at an altitude of 12,000 feet in contrast to a possible 200-foot deviation for conventional types.

New Hardeners for Plastics

A series of new hardeners for epoxide resins have been developed by Bakelite, Grosvenor Gardens, London. They are said to be cheaper to use than previous hardeners of this type—a fact of some importance in that epoxy resins are expensive materials whose cost up to now has tended to restrict their use. Considerable reductions in cost combined with very good final quality are said to be obtained in the production of epoxy resins with the aid of these hardeners. One of the reasons for the lower expense is that relatively high proportions of the low cost hardeners are used with the epoxide resin, resin to hardener ratios of between 100 to 50 and 100 to 70 being acceptable. The components are said to cure thoroughly at room temperature to a tough flexible composition with good adhesion to many surfaces. Moreover, it is claimed, a composition, which is easily trowelled and smoothed into position, can be produced with the aid of one of the hardeners, DQ 19116, and a resin made by the same company. This is unusual in the case of some epoxide resin formulations.

(*Continued in previous column*)

U.K. PLAN TO MODERNISE COTTON INDUSTRY

GOVERNMENT OFFERS LIBERAL AID

A PLAN for re-shaping and re-equipping the British cotton industry in order to make it more compact, up to date and efficient, and to enable it to compete in expanding world markets was announced by the United Kingdom Government on 23rd April 1959. The President of the Board of Trade, Sir David Eccles, said in the House of Commons that the plan, which might well cost the Government £30,000,000 over the next five years, contained two main features:

1. The Government is ready to pay two-thirds of the cost of removing the industry's surplus capacity. Firms which scrap machinery after 23rd April can get assistance.

2. When surplus capacity has been eliminated. the Government will pay one-quarter of the cost of modernising existing machinery and of providing new machinery.

The future of the industry, said Sir David, was bright. "Growing purchasing power in industrialised economies opens up excellent prospects for better fabrics and made-up goods." In his statement to the House, Sir David observed:

"In recent years, the cotton industry has been exposed to formidable and increasing competition from textile industries established inside its traditional export markets.

"Moreover, Commonwealth countries have emerged as large exporters to the United Kingdom itself, where they meet no tariff barrier. These changes have brought distress and anxiety to Lancashire.

"The result is a situation complicated and worsened by the existence of a large volume of surplus and obsolete equipment.

Excellent Prospects

"The outlook. however, is by no means all bleak. Growing purchasing power in industrialised economies opens up excellent prospects for better fabrics and made-up goods. Special measures are, therefore, called for, in order to make the industry compact, up-to-date and efficient.

"Following the Hong Kong undertaking to limit exports, the industry has been working out plans to adapt itself to changed conditions and to reorganise and re-equip its capacity.

"Leaders of different sections have been discussing with me a contribution from the Government which they feel to be essential to the success of their plans.

"The Government has no doubt that the circumstances of the cotton industry justify the exceptional course of direct financial assistance from public funds.

"Accordingly, we shall seek powers from Parliament to meet the industry's request for help. The first step must be to remove surplus capacity.

"The Government is ready to contribute, from public funds, two-thirds of the cost of bringing this about under schemes to be approved by the Board of Trade.

"The balance will be met by the industry by a statutory levy.

"A severe time limit will be set for qualifying for assistance, and, in order to start without delay, arrangements will be made whereby, subject to the fulfilment of the necessary conditions, a firm which scraps machinery after 23rd April can qualify for assistance.

"The Government has agreed to bear a high proportion of the cost of eliminating surplus capacity, on the clearly understood condition that the industry itself will compensate operatives faced with loss of employment as a result of the schemes.

"This is a matter for employers to settle directly with the trade unions concerned. The Government will, of course, do everything in its power to assist those displaced by reorganisation schemes to find alternative work.

Encouraging Re-equipment

"After the elimination of surplus capacity, the next step is to encourage re-equipment, provided the Board of Trade is satisfied that enough surplus capacity in the industry will be eliminated. The Government will be prepared to pay a grant of one-quarter of the cost of modernising existing machinery and providing new machinery.

"Orders for machinery placed after today will be eligible for this grant, subject to the fulfilment of the condition to which I have referred, and to the granting of powers by Parliament. Re-equipment and modernisation completed during the next five years will rank for this assistance.

"It is not possible to estimate, at the present moment, how much the total charge on public funds will be. This depends on the extent to which the industry takes advantage of the assistance now offered, and on such factors as the terms which are settled for eliminating surplus capacity.

"I can only say that, given a favourable response from the industry, the cost to the Exchequer might well be of the order of £30,000,000 over five years.

Special Agency

"These arrangements will require detailed administration. For this purpose, the Bill which we propose to introduce will contain provisions for setting up a special agency, under the Cotton Board, to carry out schemes in accordance with directions from the Board of Trade.

"This set of proposals forms a comprehensive whole. We shall meet with problems that we cannot see in advance, but, with goodwill from both sides of the industry, they can be solved.

"I know that employers will bring trade unions into the fullest possible consultation at all stages. The Government will follow closely the reorganisation schemes, and will do all it can to maintain the impetus to carry them through speedily and effectively.

"These joint endeavours will re-shape our cotton industry and equip it to compete in the expanding markets of the world with the types of cloth that are wanted wherever living standards are high."

In reply to a question, Sir David Eccles said the scheme would be "voluntary from start to finish."

Mr. Macmillan's Speech

Speaking at Preston, Lancashire, on 23rd April, the Prime Minister, Mr. Harold Macmillan, commended the Government's plans for the reorganisation of the cotton industry. Mr. Macmillan said the Lancashire cotton industry could not expect to maintain for ever the advantage of having been the first in the field. There was nothing that his or any other Government could do to stop, or even delay, developments overseas which had led to a reduction of Lancashire's cotton exports.

The real problem arose with imports coming from other Commonwealth countries such as India, Pakistan and Hong Kong, Mr. Macmillan said. The Ottawa agreements and the system of Imperial Preference were of immense economic advantage to Britain. "If we were to break our side of the bargain by restricting Commonwealth cotton exports, he declared, we could not expect the Commonwealth to continue unchanged the present system of preference for our exports to every Commonwealth country. The whole system would break down."

Referring to the negotiations of the Lancashire cotton industry with the cotton industries of India, Pakistan and Hong Kong for a voluntary limitation of their exports to Britain, Mr. Macmillan stated: "The three-year limitation with Hong Kong came into force in February; it has been an enormous help to the position here. The others will, I hope, soon be made.

Paying a tribute to Lancashire cotton industry, the British Premier said:

"The men and women of Lancashire may not be able to triumph again in markets where they prevailed 50 years ago. but they have not been slow to find new industries in which the same qualities of vigour and enterprise can be as usefully and profitably deployed.

"New methods, new techniques, new inventions, new designs will all help to give the cotton industry a sound future, if it will face the challenge of the future with confidence. The Government will certainly give all the encouragement and assistance it can, but the main initiative can only come from the industry itself."

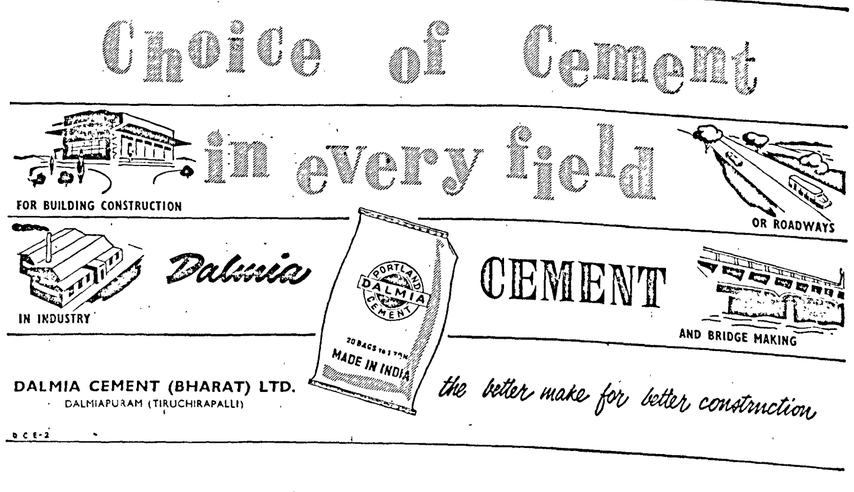
Alluding to the heavy cost of the plan announced by the President of the Board of Trade in the Commons, Mr. Macmillan remarked: "I believe the country will not begrudge it if it will help the textile industry, as it will. The Government's readiness to put these large amounts of money into the industry is a demonstration of our confidence that this co-operative effort will be forthcoming and that a compact, modern and efficient cotton industry can be built, able to compete successfully in the expanding markets of the world and to play again a significant part in the economic life of Lancashire and the country as a whole."

Welcoming what it calls the Government's "ambitious plan to deal with the troubles of the cotton industry," the London *Times* comments:

"The broad aim of Government policy is to help in the establishment of a smaller but more efficient and competitive industry. The new scheme is designed to assist in this transformation, to help in making the industry capable of meeting the competition within the Commonwealth when voluntary restraints on imports from low-wage countries are lifted. The broad aim is to get the industry down to size first and then modernise it.... The plan is workable and capable of achieving its admirable objectives."

The *Manchester Guardian*, though critical of some present details and of others not yet formulated, says:

"The broad outlines of the Government's proposals are reasonable enough. There are still, as Sir David Eccles said, excellent prospects in world markets for an up-to-date and efficient industry. But Lancashire's chief need now is to shed surplus capacity which is hampering development. The elimination of redundant plant will be a painfully protracted business if it is left to normal market forces: hence an organised redundancy scheme with Government assistance is justified if it opens the way to a swifter reorganisation of the industry.... The industry can no longer say it has not been given a chance to work out its salvation."



PROMOTION OF EXPORTS THROUGH MARGINAL COSTS

By Minoo R. Shroff

IT is unnecessary to lay too much stress in this article on the vital importance of exports to Indian economy, as quite a lot has been said and written on the subject. It is recognised by both the Government and the business community that no sacrifice is too much for winning export markets. One may, therefore, straightaway proceed with the discussion of the problem.

There is general agreement on the need for diversifying India's export trade. It is common knowledge that efforts are already being made to develop exports of engineering goods, plastics, etc., which have hitherto been the preserve of the highly industrialised nations. The initial results, though only modest, are encouraging. A wide range of engineering goods such as sewing machines, diesel engines, pumps, electric motors, fans, steel furniture, etc., has found a foothold not only in our traditional markets in Asia and Africa but even in the highly developed countries like West Germany and the U.S.A.

In the case of very many items of manufactured goods, however, we find ourselves hopelessly outclassed on the price front, let alone the questions of better quality and service offered by our competitors. A recent survey made by the Export Promotion Council has shown that the price of British, German and American engineering goods are 10 to 20 per cent. cheaper than ours, while Japanese goods were almost 70 per cent. cheaper.

The Minister for Commerce and Industry himself has made a suggestion that the domestic price of some of our exportable products may be raised, so that the additional profits earned thereby may be used for subsidising and covering the loss on exports. This view has also been endorsed recently by the Standing Committee of the Export Promotion Council, though it has advocated that this suggestion be left to be implemented voluntarily by the industries and the associations concerned and not made compulsory as in the case of sugar.

The Technique

This brings to the fore the technique of marginal costing which has been very efficaciously used by many leading exporters of the world. The highly competitive price at which Japan dumped her goods in world markets before the war and the recent resort to this practice by China are strong pointers in this direction. The considerable sacrifice at which these and other countries have exported their goods was not any act of benevolence on their part towards consumers elsewhere but a drastic attempt towards a solution of their own economic problems.

Now what is marginal costing? It is simply a technique for ascertainment of marginal costs. by differentiating between fixed and variable costs, and of the effect on profit of changes in volume or type of output. The total cost of manufacture of a product as computed by the conventional cost accounting method comprises two distinct and incompatible elements, namely, marginal cost and fixed cost. Marginal cost would thus comprise direct material, direct labour and variable overheads, i.e., that portion of the indirect or overhead expenses which varies more or less directly with production. It is that constituent of total cost which is directly traceable on a product and would not, therefore, be incurred if the product were not to be made. This is in contrast to the fixed overhead complement which is more or less rigid, irrespective of volume of output, albeit within certain limits.

Under this technique, the most crucial factor is the computation of the contribution which each product makes to the fixed overheads and profits of a business, the contribution being the difference between the selling price and the marginal cost.

It must be the objective of any firm which adopts this technique to aim at the highest possible contribution per unit of output to maximise profits. However, if any of the factors of production like material, labour, plant and machinery or finance is in short supply, then the highest contribution per key factor of production must be aimed at. For instance, in the steel processing and fabricating, as well as engineering, industry in general, supply of iron and steel is one of the most limiting factors today. The optimum use of resources and maximising of profits could be realised by those firms which can concentrate on the manufacture of such items as would secure the largest contribution per ton of steel used and not merely per unit produced, for, owing to the restricted supply of steel available, only a limited output can be produced irrespective of availability of labour and processing capacity.

This analogy can be projected on the national horizon as well and it is a truism to say that India should concentrate as much as possible on export of items which have a low material content and high labour and processing element, especially as while her human resources are ample raw materials and manufacturing capacity is comparatively scarce. This would also result in obtaining the maximum possible contribution per key national factor of production. For example, cotton textiles is India's third largest item of exports, but the bulk of it is of a grey variety which is processed abroad and re-exported. If India were to concentrate on the export of a wide range of finely finished cotton textiles, in which she has gained considerable proficiency, not only would she earn far more foreign exchange for the same yardage of cloth exported but would also benefit indirectly in eliminating competition in third markets from her own grey goods being re-exported after processing.

Encourage Engineering Industry

Under the Second Plan, steel output is expected to rise to 6 million ingot tons. It has also been repeatedly mentioned in official quarters that we intend exporting the steel surplus to our requirements once the new plants get into full production. Steel plants require probably the largest rupee and foreign exchange outlay per rupee of output. It cannot be overemphasised, therefore, that, at a time when we are scraping the bucket for every available rupee, pound and dollar in order to see our Plan through, our objective should be to obtain the maximum possible contribution to the national pool per ton of steel exported. This can only be done by exporting products fabricated from steel, e.g., locomotives, automobiles and trucks. machine tools, etc., rather than steel itself. Our engineering industry today has a total annual output of around Rs. 250 crores in value and, given positive inducement and encouragement, there is no reason why it should not rise to the occasion, especially in view of the commendable progress it has shown in the last few years. As a matter of fact, it is the healthiest industrial body the nation has produced since independence.

Export trade for any nation may be sought to utilise spare capacity, for prestige reasons; for testing foreign markets, to gain experience, to reduce unit cost of production or for patriotic reasons for earning more foreign exchange for the country or a combination of one or more of these factors. Needless to say earning additional foreign exchange through increased exports is today our prime objective. With the rising tempo of economic development, the hunger for increased imports of capital equipment and raw materials will grow and, unless solid foundations are laid for ensuring the wherewithal of that growth by vigorous stimulation of exports, our economic growth will remain stunted.

Importance of Home Market

The ability to compete in the export field is largely dictated by the volume attained in the home market. In many cases, export business must be considered as marginal and it is essential to appreciate that an assured and potentially developable market at home is the first requisite for a competitive price abroad. It is a paradox that, in a country like India, where industrial wages are much lower than in the industrialised nations of the West, the prices of finished products should be higher than those prevailing in those countries. Several factors may be considered responsible for this, namely, the far superior techniques of manufacture adopted by the developed countries, economies arising to them out of mass production, higher productivity of labour and a much lower incidence of direct and indirect taxation.

As against these obvious advantages enjoyed by our competitors, Indian industries have to contend themselves with a comparatively much smaller home market, owing to low purchasing power of the people, low productivity arising from rigid and inflexible labour laws and a crippling burden of direct and indirect taxation. Considering the incidence of taxation alone, a recent study in Calcutta, entitled *Impact of Taxation on Industrial Economy*, has disclosed that, while the total national income arising from the industrial sector in 1958 is expected to be Rs. 2,100 crores, the impact of direct and indirect taxation levied by the Central and State Governments would be around Rs. 837 crores or almost 40 per cent. While this is the average degree of incidence, its impact on certain industries, such as sugar and cement, is much higher. While the domestic consumer may bear this heavy burden, perhaps not very cheerfully, in the hope of a better tomorrow, we cannot expect the foreign consumer to underwrite our development. The present state of Central and State revenues being what they are and in view of the recent ministerial pronouncements, we should consider ourselves lucky if we are spared from additional taxation next year, leaving aside the question of receiving the very badly needed relief.

All Must Sacrifice

Although, therefore, the Government can play a substantial role through rationalisation and lightening of the tax burden, managements of our industries and the consumers will also have a vital role to play. We buy in the cheapest markets and we cannot deny the right to others. We must produce at the right price or lower our existing meagre standard of living. Sacrifice from all sections is, therefore, necessary and should be willingly forthcoming for the realisation of our national objective of providing a better and more secure future for our people.

The obvious method of doing this is to follow the discriminatory pricing policy, that is, having different prices for different markets, depending on the demand and supply of the particular goods in the market concerned, the price charged by competitors for comparable products, etc. As a matter of fact, to start with, we will have to sell at least five to ten per cent. cheaper than the prices charged by our competitors for goods of the same quality, as this is the minimum price differential necessary to overcome the resistance of the foreign consumer and induce him to try products which are new to him. Besides, owing to great disparity of prices in the home and foreign markets in some cases, the home consumer, the industry and the Government will have to share the loss.

An Example

In the ultimate analysis, no industry can sell at or a little above marginal cost for very long, as that would be tantamount to burdening the home consumer permanently with a heavy burden, assuming that the entire price differential is passed on to him. But, initially, for India to make substantial inroads into foreign markets, there is no other alternative but to do so and, if this policy is used discriminately and rationally, it would result in a lowering of the overall cost of production as a result of economies arising out of a larger output whereby the home consumer would benefit ultimately. This is best illustrated by the following example:

A small engineering firm is working at 60 per cent. of its normal capacity for manufacturing centrifugal pumps. Assuming that only one type of pump is being made and the production is 1,000 units per month at this capacity:

	Rs.
Total cost of each pump (at 60 per cent. normal capacity) is	250
Marginal cost of each pump is	175
Fixed overheads per pump (Rs. 75,000 month)	75
Total selling price of each pump in home market is	275

The firm receives an enquiry for export of these pumps at the rate of 500 a month, provided the export price is Rs. 190 or 31 per cent. lower than the price realised in the home market. Should it accept the export order or not?

The marginal cost analysis discloses that, if the plant were to work at 90 per cent. of normal capacity, for fulfilling the export order, the total cost will be reduced from Rs. 250 to Rs. 225, as the fixed overheads which will re-

(*Continued on page 742*)

GROSS PROFIT OF MAHINDRA AND MAHINDRA UP BY MORE THAN 50 P.C.

EXPANSION PLANS UNDERTAKEN

NOTWITHSTANDING a setback in manufacturing activities due to restrictions on imports and a rise in the cost of manufacture, the financial results of Messrs. Mahindra and Mahindra Ltd. (Chairman: Mr. K. C. Mahindra, Bombay) for the year ended 31st October 1958 are very encouraging. The gross profit has gone up by over 54 per cent., that is, from Rs. 45.05 lakhs to Rs. 69.39 lakhs. This is on top of a small rise of Rs. 4 lakhs in 1956-57 and of Rs. 19.83 lakhs in 1955-56. Thus, in the last three years since the Company was converted into a public limited one, its gross profit has more than trebled itself, from Rs. 21.22 lakhs to Rs. 69.39 lakhs. A substantial part of the profit has, however, been derived from the trading operations of the Company, particularly in steel.

The net profit for the year under review does not show any worthwhile increase. It is only Rs. 23.13 lakhs, as against Rs. 22.16 lakhs in 1956-57. This is due to the larger allocation to depreciation and taxation, the former having gone up from Rs. 5.42 lakhs to Rs. 12.05 lakhs and the latter from Rs. 15.50 lakhs to Rs. 31.25 lakhs. After bringing in a sum of Rs. 1.38 lakh, being the excess provision for taxation no longer required, the Directors have conserved to the various reserves Rs. 9.51 lakhs, as compared with Rs. 12 lakhs in the previous year. They have also recommended an increase in dividend on ordinary shares from 17½ per cent. to 22 per cent., thus successively raising it from 10 per cent, for 1954-55, the year in which the Company was converted into a public limited one. They have also recommended a *pro rata* dividend at the same rate for a period of one month on the new ordinary shares issued in August last and a *pro rata* dividend at 6½ per cent. per annum on the new preference shares issued at the same time. The Company has been advised that the provisions of Section 23A of the Indian Income-tax Act apply to the Company for the year under review.

A broad idea of the Company's progress since 1954-55 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds	17,68.87	24,41.27	14,03.21	5,74.52
Other income	50.52	31.73	23.31	8.56
Closing stocks and work-in-progress	3,70.85	5,26.22	6,16.83	1,95.03
Expenses	17,50.00	24,27.95	13,85.66	5,61.86
Gross profit	69.39	45.05	41.05	21.22
Directors' commission	2.96	1.97	1.75	0.99
Provision for—				
Depreciation	12.05	5.42	2.15	1.51
Taxation	31.25	15.50	16.00	9.50
Net profit	23.13	22.16	21.15	9.22
Excess provision written back ..	1.38	..	..	..
To reserves and other funds ..	9.51	12.00	11.52	6.00
Dividends—				
Preference	1.66	1.50	1.50	0.31
Ordinary	13.51	9 62	6 87	2.74
	(22%)	(17½%)	(12½%)	(10%)
Carry forward	0.99	1.16	2.12	0.87

Note.—The dividends for 1957-58 include *pro-rata* distribution on the new 6½ per cent. (tax-free) preference shares and on the new ordinary shares for one month.

The decline in turnover during the year under review (as will be seen from the table) is mainly due to the cut in imports of vehicles and tractors. Further, a substantial portion of the steel imports does not appear in the computation of turnover, as these are financed directly by the Government and the Company's operations were limited to competitive tendering and earning commission on successful bids.

During the last three years, imports of steel had contributed substantially in increasing the Company's turnover. With the establishment of additional producing capacity within the country, imports of steel will gradually decline in the years to come. In order that the Company's trading position might not be affected, the Directors have decided to enlarge its operations as controlled stockists, as it is expected that steel will continue to be distributed through established stockists and that the Company will have its own share in this business.

The Company is also concentrating its attention on enlarging its manufacturing activities. While the Company will be in a position to manufacture the bulk of the components for jeep production during the current year, it has also programmed to increase the volume of jeep manufacture from 2,500 units to 5,500 units per annum and the programme has received the Government of India's approval. In fact, the first two phases of this expansion programme are reported to have been crossed. Under the new policy regarding import of raw materials for automobile manufacture, the Company can import them in advance and pre-plan and schedule production more rationally.

The Company has submitted proposals to the Government of India for the manufacture of Willys one-ton 4-wheel drive truck. A notable feature of this programme is that the functional components like the engine, transmission, transfer case and front axle are inter-changeable with the jeep. "The policy of your Directors," the latest annual report says, "has been to expand development round the many varied and allied types of utility vehicles. This is necessary, in order to increase the turnover and reach an economic volume of manufacture, by which method alone reduction in prices to the ultimate consumer can be achieved."

The Government has approved, in a modified form, the Company's proposals to manufacture David Brown tractors and negotiations are in progress with the British associates to secure the larger capital now required for the import of plant, equipment and tooling. The Directors expect that these negotiations will fructify in the formation of a new company to undertake manufacture of tractors.

The trailer division of the Company has been segregated into a separate company from 1st November 1958. This new company, Mahindra-Owen Private Ltd., has been formed in association with Rubery Owen & Co., U.K., in which Mahindra and Mahindra will hold 51 per cent. and the British associates 49 per cent. of the ultimate capital. The Company has been registered and is now in operation. The Directors hope that, with progressive manufacture of cardinal components, the volume of business in industrial and agricultural trailers will increase.

The following synopsis of the Company's latest balance-sheet show its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Paid-up capital ..	1,87,00,000	Gross block ..	1,33,44,215
Reserves and surplus..	36,49,863	*Less*—Depreciation	23,12,332
Loans ..	5,12,81,916		
Current liabilities and provisions ..	2,34,34,137	Net block ..	1,10,31,883
		Investments ..	24,28,704
		Loans and advances ..	2,24,51,683
		Current assets ..	5,92,67,918
		Cash ..	18,85,728
Rs.	9,70,65,916	Rs.	9,70,65,916

It will be seen that pressure on the Company's finances caused by its development programme continues to be heavy. Consequent on the import restrictions, the Company has had to carry much heavier inventories of raw materials than under normal conditions. This is necessary in order to stabilise production and to decrease the cyclical fluctuations in the monthly output of vehicles to the minimum.

The Rs. 10 paid-up ordinary shares of the Company are being quoted at Rs. 25 *cum-div.* At the current rate of dividend and on an *ex-div.* basis, the yield on the shares works out to 9.65 per cent. per annum, free of income-tax.

FOREIGN INVESTMENT IN COAL INDUSTRY

Foreign investments in coal industry in India at the end of 1956 amounted to Rs. 3.49 crores, according to a written reply given by Sardar Swaran Singh, Minister for Steel, Fuel and Mines to a question in the Lok Sabha on the 24th inst. The information was based on a publication brought out by the Reserve Bank of India in September 1958. Complete information showing separately the foreign and Indian investment in the coal industry in India was not available, the Minister stated, as the Companies Act 1956, under which annual returns of share capital were furnished, did not provide for disclosure of the nationality of the shareholders of the joint-stock companies. Figures compiled by the Department of Company Law Administration placed the overall investment in joint-stock companies in coal during the same period at Rs. 22 80 crores.

The Minister further stated that under the Industrial Policy Resolution, 1956, all new development of coal mines would be in the public sector, which meant that the major investment henceforth in the industry would be Indian. Further, under the Mines and Minerals (Regulation and Development) Act, 1956, concessions for coal to persons other than Indian nationals could not be given without the permission of the Government of India which was another restricting factor against foreign investment.

INDIA SUGARS' RESULTS ENCOURAGING

OUTPUT RISES SHARPLY

A SUBSTANTIAL increase in output of sugar has enabled the India Sugars and Refineries Ltd. (Managing Agents: The India Sugar Agencies Private Ltd., Madras) to earn a sizable profit during the year ended 30th September 1958, despite the burden of an additional excise duty imposed in lieu of sales tax in December 1957 and a loss on export sale of sugar. This is in refreshing contrast to a loss suffered in the previous year. Thus, the gross profit for the year under review amounts to Rs. 10.82 lakhs, as compared with the loss of Rs. 3.58 lakhs in 1956-57. It is, however, less than that earned in each of the three years preceding 1956-57. This is obviously due to the heavier excise duty on sugar and the loss on export of sugar, referred to at the outset.

After providing Rs. 4.94 lakhs for depreciation and Rs. 35,000 for wealth tax (no provision has been made for income-tax), the net profit amounts to Rs. 4.95 lakhs, as against a net loss of Rs. 3.88 lakhs in respect of the previous year. The entire net profit has been transferred to the reserves—Rs. 8,000 to the development rebate reserve and Rs. 4.87 lakhs to the depreciation and rehabilitation reserve. As it was not possible to provide anything for depreciation in the 1957-58 accounts, the Directors have considered it prudent to set aside to the depreciation and rehabilitation reserve the aforesaid sum of Rs. 4.87 lakhs.

With the net profit thus fully utilised, the Directors have drawn a sum of Rs. 6.75 lakhs from the general reserve to pay the dividends on the preference and ordinary share capitals. This withdrawal is on top of a sum of Rs. 3.88 lakhs drawn last year to wipe out the loss in respect of 1956-57. The dividend on ordinary shares is unchanged at 10 per cent. per annum, but it is on a higher capital raised by the payment of calls in arrears on the new capital issued in 1956-57. The 7½ per cent. preference dividend is also on a higher capital. It may be noted here that the dividends in respect of 1956-57 had been paid out of the preceding year's undistributed surplus.

The salient features of the Company's profit and loss accounts for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	1,33.33	82.23	97.72	99.37
Other income ..	4.53	3.78	3.06	2.81
Closing stock of finished goods..	22.55	25.62	28.21	18.17
Expenses ..	1,23.97	87.00	97.53	1,07.14
Gross profit (+) or loss (—) ..	+10.82	—3.58	+13.30	+13.21
Managing Agents' remuneration	0.58	0.30	1.30	1.36
Provision for—				
Depreciation	4.94	..	0.67	0.46
Taxation	0.35	..	5.35	6.00
Net profit (+) or loss (—) ..	+4.95	—3.88	+5.98	+5.39
Transfer from general reserve ..	6.75	3.88	..	..
To reserves	4.95	..	..	..
Dividends—				
7½ per cent. preference ..	0 56	0 31	0.33	0.09
Ordinary	6 40	6.00	4 04	4.41
	(10%)	(10%)	(11½%)	(14%)
Carry forward	0.25	0.46	6.77	5.22
Cane crushed (In tons) ..	136,817	120,684	133,142	127,609
Sugar produced (In tons) ..	13,262	7,959	13,565	13,067

The quantity of cane crushed during the year under review, at 136,817 tons, is, perhaps, a record, but not so the quantity of sugar produced at 13,262.30 tons. Although the latter represents an increase of 5,303 tons over that in 1956-57, it is less than that produced in 1955-56. Consequent on the prolonged working of the 1956-57 season, the Company had to deal with a portion of unripe and immature cane during the season 1957-58. This was to help the growers, as the Directors point out, irrespective of any gain to the Company. The larger crushing and production is reflected in the rise in expenses. Of the latter, excise duty and gallonage fees account for an increase of Rs. 22.06 lakhs to Rs. 36.59 lakhs, largely due to the increase in output of sugar, the additional excise duty imposed in December 1957 and the manufacture of Indian and foreign type of liquors which was commenced in 1956-57. The Company's quota of sugar for export, under the Sugar Export Ordinance, was 3.366 bags, on which it incurred a loss of over Rs. 1.47 lakh.

The Directors report that, while the production of liquors is progressing satisfactorily, the offtake is very poor. "The quota allotted to us" they add, "is nowhere near our capacity. The offtake is limited by restrictions of the area calling for our supplies. We propose to approach the Government to reconsider this question, so that both the Company and the Government may derive the advantage."

The Company's reserves and surplus, amounting to Rs. 9.34 lakhs, supplement a paid-up capital of Rs. 74.98 lakhs. Borrowings have gone up from Rs. 27.07 lakhs to Rs. 38.49 lakhs, while other current liabilities and provisions stand reduced from Rs. 73.21 lakhs to Rs. 59.80 lakhs. The gross block of the value of Rs. 78.59 lakhs has been written down to a net value of Rs. 54.83 lakhs. Investments aggregate Rs. 31.38 lakhs and current assets Rs. 97.03 lakhs.

The Directors report that the Company's working so far during the 1958-59 season is satisfactory and expect better results.

The Rs. 10 paid-up shares are being currently quoted at Rs. 13.10 *cum-div.* On an *ex-div.* basis, the shares give a yield of 8.3 per cent. per annum, free of income-tax.

MAHARASHTRA SUGAR BARNS RECORD PROFIT

The year ended 30th September 1958 proved to be a most prosperous one for the Maharashtra Sugar Mills Ltd. (Managing Agents: Messrs. M. L. Dahanukar & Co. Private Ltd., Bombay), in that the production and profit were at the highest on record in the history of the Company. The Directors' report does not give either the quantity of cane crushed or the quantum of sugar production, but the gross profit has gone up to Rs. 61.69 lakhs from Rs. 59.37 lakhs, to which level it had risen from Rs. 48.62 lakhs earned in 1955-56.

The net profit, at Rs. 31.07 lakhs, shows a much larger rise (than that in gross profit) of Rs. 9.10 lakhs, on account of the reduction in the provision for taxation from Rs. 28 lakhs to Rs. 21 lakhs. The provision for depreciation has also been slightly reduced from Rs. 3.85 lakhs to Rs. 3.52 lakhs, while the managing agency commission absorbs Rs. 5.79 lakhs, as against Rs. 5.55 lakhs. After increasing the allocation to the reserve fund from Rs. 4 lakhs to Rs. 5 lakhs and providing Rs. 30,629 for development rebate (as against *nil*), the Directors have recommended a dividend of 30 per cent. and a special cash bonus of 4 per cent. to commemorate the Company's Silver Jubilee. This is on a higher capital of Rs. 67.50 lakhs raised by the capitalisation of Rs. 22.50 lakhs from the general reserve in the previous year, while last year a distribution of 40 per cent. (made up of a dividend of 30 per cent. and a bonus of 10 per cent.) had been made on a capital of Rs. 45 lakhs. The Directors have also recommended a Silver Jubilee bonus of 3 per cent. on the 7 per cent. cumulative preference shares, in addition to the usual distribution. These distributions take up Rs. 23.45 lakhs, as against Rs. 18.35 lakhs a year ago, leaving to be carried forward Rs. 2.99 lakhs.

Though the Company's gross profit, as stated above, has recorded a rise of Rs. 2.32 lakhs, it does not seem to be commensurate with the rise in production, which is indicated by the increase in gross sales from Rs. 1.97 crore to over Rs. 2.72 crores. This is mainly due to the rise in excise duty and sugarcane cess from Rs. 50.73 lakhs to Rs. 80.45 lakhs.

The Company's quota in the sale of sugar for export purposes was 611.94 tons, on which it suffered a loss and this had to be borne by the Company.

After the capitalisation of Rs. 22.50 lakhs in 1956-57 and of Rs. 40 lakhs in 1955-56 from the general reserve, the Company's reserves and surplus stand, as on 30th September 1958, at Rs. 46.51 lakhs, as against a paid-up capital of Rs. 72.50 lakhs, made up of 135,000 ordinary shares of Rs. 50 each and 2,000 7 per cent. tax-free cumulative preference shares of Rs. 250 each. The gross block of the value of Rs. 132.16 lakhs has been written down to a book value of Rs. 69.77 lakhs. The other assets, aggregating Rs. 167.20 lakhs exceed the current liabilities and provisions, at Rs. 117.96 lakhs, by a large margin.

The Rs. 50 paid-up shares of the Company are listed in the cash section on the Bombay Stock Exchange and their current market value is Rs. 202 *cum-div.* On an *ex-div.* basis, they provide a yield of 9.2 per cent. per annum, free of income-tax.

Notice

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend of 3 per cent. for the year ended 31st March, 1959, has been declared payable on 29th May, 1959. Dividend Warrants will be issued to the registered shareholders whose names appear in the Register on the latter date or to their mandatees.

The Share Register of the Company will be closed from 13th to 29th May, 1959, both days inclusive.

By Order of the Board,
JAMES FINLAY & CO., LIMITED.
Managing Agents.

W. GERMANY MOVES TOWARDS PEOPLE'S CAPITALISM

SUCCESS OF "PREUSSAG" DENATIONALISATION

(By A German Correspondent)

THE first practical step towards "People's Capitalism" has successfully been made by the Bonn Government by offering 300,000 "Preussag" shares to low and middle-income families earning up to 16,000 DM (about £1,400) a year. Preussag is a wholly State-owned corporation mainly engaged in coal and metal mining and processing. The offering consisted of new shares of a face value of 30 million DM to raise total Preussag nominal capital to 105 million. The issue was heavily over-subscribed (by about three times), encouraging the Government to offer a further block of 53 million DM, this time out of its own holdings, thus reducing the Government's share in the Preussag capital to some 20 per cent.

More than 200,000 subscribers will soon receive Preussag shares. Contrary to original plans, the Government will not even retain 26 per cent. of the stock, a percentage which, under German law, is a so-called controlling minority giving special—even veto—rights to its holder. Ownership of the concern will be widely dispersed. This is exactly what this and all future denationalisation moves, like the rapidly maturing plan to sell the Volkswagen works, are meant for. Corporations either wholly or partially owned and controlled by the Federal Government alone have a total value of about 7,600 million DM. Furthermore, there are rather substantial holdings of the various W. German States (Länder) and of communities and other local or regional authorities and bodies, worth some additional 1,400 million DM.

The success of the Preussag offer may partly be due to its favourable conditions. The shares of a face value of 100 DM each were offered at 145 DM. But, prior to the issue, word had got around that the quotations would rise to some 170 to 175 DM a piece once the shares have been introduced on German stock exchange. In spite of the lure of an "easy gain" in this case, an eager and rather widespread desire for buying corporate equities seems to exist.

The Preussag success was heralded by Professor Erhard and by large parts of public opinion as a new era of social understanding and co-operation and as an era leading beyond former class struggles. The Government intends, therefore, to continue to denationalise State-owned corporations systematically.

The political and social implications of the W. German denationalisation efforts should clearly be seen. Much to the surprise of critics who prior to the Preussag issue had held that the average W. German wage and salary earner would neither be willing to nor capable of acquiring industrial stock, the answer of the buying public, a large percentage of which never had owned shares before, has been highly gratifying. People's Capitalism as practised in the Federal Republic is a constructive alternative to collective or state ownership. People's Capitalism wisely supplements, and extends, private capitalism, making free enterprise a social system open to all.

Notice

THE SOUTH KARANPURA COAL COMPANY, LIMITED

THE BOARD OF DIRECTORS HAVE recommended payment of the following final dividends for the year ended 31st August, 1958:—

On Ordinary Shares—At 3.8 per cent. making a total of 7½ per cent. per annum without any deduction for Income-tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, *22nd April, 1959.*

COMPANY MEETINGS AND DIVIDENDS

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Annual General Meeting, Calcutta, 4th May 1959. Dividend: Rs. 2.00 per share (includes interim dividend of Re. 0.50 per share). Transfer books remain closed from 20th April to 4th May 1959, both days inclusive.

DURBHANGA SUGAR CO., LTD. Annual General Meeting, Lohat, District Darbhanga, 5th May 1959. Transfer books remain closed from 19th April to 5th May 1959, both days inclusive.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 6th May 1959. Dividend: Re. 1.50 per share. Transfer books remain closed from 20th April to 6th May 1959, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 7th May 1959. Dividend: Re. 1.00 per share. Transfer books remain closed from 23rd April to 7th May 1959, both days inclusive.

KOHINOOR MILLS CO., LTD. Annual General Meeting, Bombay, 7th May 1959. Dividend: Rs. 10.00 per share (includes interim dividend of Rs. 4.00 per share). Final dividend of Rs. 6.00 per share is payable on and after 14th May 1959. Transfer books remain closed from 20th April to 7th May 1959, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 8th May 1959. Dividend: Rs. 22.00 per share (includes interim dividend of Rs. 8.00 per share). Final dividend is payable on or after 13th May 1959. Transfer books remain closed from 7th to 29th April 1959, both days inclusive.

AUTOMOBILE PRODUCTS OF INDIA LTD. Annual General Meeting, Bombay, 12th May 1959. Dividend: *Nil*. Transfer books remain closed from 23rd April to 12th May 1959, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Alleppey, 12th May 1959. Dividend: 16½ per cent. or Re. 1.62½ per share (includes interim dividend of 6½ per cent. or Re. 0.62½ per share). Transfer books remain closed from 29th April to 15th May 1959, both days inclusive.

TATA MILLS LTD. Annual General Meeting, Bombay, 14th May 1959. Dividend: Re. 1.50 per share, payable on and after 15th May 1959. Transfer books remain closed from 15th April to 11th May 1959, both days inclusive.

SVADESHI MILLS CO., LTD. Annual General Meeting, Bombay, 15th May 1959. Dividend: Rs. 10.00 per share, payable on and after 16th May 1959. Transfer books remain closed from 15th April to 11th May 1959, both days inclusive.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 15th May 1959. Dividend: 14 per cent. or Re. 1.40 per share (includes interim dividend of 6½ per cent. or Re. 0.65 per share). Transfer books will remain closed from 1st to 15th May 1959, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 18th May 1959. Dividend: 22 per cent. or Rs. 2.20 per share. Transfer books will remain closed from 4th to 18th May 1959, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, 18th May 1959. Dividend: 5 per cent. or Re. 0.50 per share. Transfer books will remain closed from 2nd to 19th May 1959, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 20th May 1959. Dividend: Re. 1.25 per share (includes bonus of Re. 0.25 per share). Transfer books will remain closed from 7th to 22nd May 1959, both days inclusive.

VASANTA MILLS LTD. Annual General Meeting, Singanallur, Coimbatore District, 27th May 1959. Dividend: 12 per cent. or Rs. 12.00 per share. Transfer books will remain closed from 13th to 27th May 1959, both days inclusive.

RAYALASEMA MILLS LTD. Annual General Meeting, Rayanagar, Adoni-Thungabhadra Road, Adoni, 3rd June 1959. Dividend: 10 per cent. or Rs. 10.00 per share. Transfer books will remain closed from 25th May to 10th June 1959, both days inclusive.

SRI KANNAPIRAN MILLS LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 31st December 1958. Transfer books will remain closed from 13th to 27th May 1959, both days inclusive.

ASPINWALL & CO., LTD. Dividend of 6 per cent. or Re. 0.60 per share for the year ended 31st December 1958. Transfer books will remain closed from 12th to 26th May 1959, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Dividend of Rs. 14.00 per share, for the year ended 31st December 1958, payable on 26th June 1959. Transfer books will remain closed from 11th May to 9th June 1959, both days inclusive.

LUCKY VALLEY (NILGIRI HILLS) TEA ESTATES LTD. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 16th to 30th May 1959, both days inclusive.

GUEST, KEEN, WILLIAMS, LTD. Final dividend of Re. 1.20 per share, for the 53 weeks ended 3rd January 1959.

SYNOPSES OF COMPANY REPORTS

Tata Mills Ltd.

THE directors of the above Company (Managing Agents: Tata Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year, before providing for bonus, *managing agents' remuneration*, depreciation and taxation amounted to Rs. 4,20,449 (Rs. 15,95,542). From this is deducted bonus provision for the year amounting to Rs. 2,00,000 *(Rs. 3,00,000)*, *managing agents'* commission of Rs. *nil* (Rs. 50,000), provision for depreciation of Rs. 1,50,000 (Rs. 10,25,000) and provision for taxation of Rs. 50,000 (Rs. 50,000) leaving a balance of Rs. 20,449 (Rs. 1,70,542) to which is added the balance brought forward from previous year of Rs. 17,925 (Rs. 17,925) making a total of Rs. 38,374 (Rs. 1,88,467). The directors have transferred to gratuity reserve Rs. 20,000 (Rs. *nil*) and to general reserve No. 2 Rs. 449 (Rs. 1,70,542) leaving a balance of Rs. 17,925 (Rs. 17,925). To this is added the amount transferred from general reserve No. 1 for payment of proposed dividend Rs. 3,93,473 (Rs. 5,24,630) making a total amount available for disposal of Rs. 4,11,398 (Rs. 5,42,555). The directors recommend a dividend on ordinary shares at Re. 1.50 (Rs. 2.00) per share, without deduction of income-tax, for the year ended 31st December 1958 absorbing Rs. 3,93,473 (Rs. 5,24,630) leaving a balance to be carried forward to next year of Rs. 17,925 (Rs. 17,925).

The directors regret that the result for the year has been a disappointing one as the year under review was, for the industry as a whole, one of very adverse trading conditions—poor offtake of cloth, unremunerative prices and higher cost of production. Due to high prices of foodgrains, the purchasing power of the people in other directions declined substantially. During the year, the cost of living index fluctuated between 380 and 407, and this resulted in the payment of increased dearness allowance thereby further increasing the cost of production. Due to lack of demand from consuming centres, the industry had to carry the burden of heavy stocks and, as a result, in some cases, some mills had either to close down completely or reduce the number of shifts.

Conditions on the export front continued to be extremely dull throughout the year. With a view to giving much needed assistance to exports, the Government of India announced an Export Incentive Scheme under which the export performance of individual mill companies would be taken into consideration for determining the extent to which they would be entitled to imports of foreign cotton, machinery, dyes and chemicals.

All Indian cottons were freely available but prices were higher and quality poorer than in the previous year. Owing to the acute shortage of foreign exchange, cotton imports were severely limited, resulting in scarcity of all foreign varieties.

The Mills' re-organisation and modernisation programme was carried a stage further during the year, involving a capital expenditure of about Rs. 23,00,000 on buildings and machinery. Machinery of the value of about Rs. 20,00,000 was installed during 1958. At the end of the year, works under construction and machinery awaiting installation amounted to about Rs. 3,72.000. The directors have placed additional orders for a singeing and a mercerising machine, together with two replacement drying ranges, at an approximate cost of Rs. 10.5 lakhs.

Under the Export-Import Bank credit scheme and the U.K. credit scheme the Company has submitted applications to import a combing set and a hot flue.

Of the permitted installed capacity of 70,840 spindles, so far, 60,500 spindles have been replaced. The directors have placed further orders for about 10,200 spindles valued approximately at Rs. 12 lakhs, thereby completing the programme of replacement of all the old ring frames. The present installed capacity of the mills is 70,968 spindles and 1,788 looms.

Accounts in brief are as under:—

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Mooljee Ramjee and Sons, Ramjeenagar, Tiruchirapalli) submitted the audited accounts of the Company for the year ended 31st December 1958.

The year 1958 turned out to be a trying period for the textile industry as a whole. It is gratifying to note that during such a critical period, the Company has escaped incurring loss. Judging from the present trend, the directors hope that this year may witness comparatively better results.

The net profit after deducting all expenses including Rs. 22,361 (Rs. 75,551) being bonus to workers for the year 1957 and writing off Rs. 79,212 (Rs. 117,966) as depreciation on fixed assets is Rs. 1,25,677 (Rs. 1,81,435). Donations amounting to Rs. 2,435 (Rs. 1,652) have been paid therefrom. Along with Rs. 794 (Rs. 62,837) brought forward from last year, there is a sum of Rs. 1,26,471 (Rs. 2,42,620) to the credit of profit and loss account.

The directors recommend that the development rebate of Rs. 50,940 (Rs. *nil*) be transferred to profit and loss account and a sum of Rs. 20,000 (Rs. 55,000) be drawn from dividend equalisation fund and propose the amount thus available, viz., Rs. 1,97,411 (Rs. 2,99,272) be disposed off as follows:—

To donations Rs. 2,435 (Rs. 1,652), to provision for taxation Rs. 90,000 (Rs. 1,20,000) and to pay a tax free dividend of 7½ (9) per cent. absorbing Rs. 1,04,905 (Rs. 1,25,886) leaving to be carried forward to next year Rs. 71 (Rs. 794).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

		Stores, spare parts, etc.	2,81,580
		Debts, deposits and advances ...	5,98,037
		Investments	12,450
		Cash ...	4,04,316
Rs.	26,76,101	Rs.	26,76,101

Empire Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July 1958.

The profit for the year after providing for depreciation Rs. 2,92,187 (Rs. 2,21,805) and taxation Rs. 2,60,000 (Rs. 1,55,000) including wealth tax, amounts to Rs. 3,74,964 (Rs. 2,21,705 for the thirteen months ended 31st July 1957). To this must be added the credit balance brought forward from the previous period of Rs. 4,192 (Rs. 76,491), dividends forfeited Rs. 2,499 (nil) and provision for doubtful debts Rs. 1,730 (*nil*) making a total of Rs. 3,83,385 (Rs. 2,99,567 including Rs. 1,371 being overprovision for liability written back). From this must be deducted dividends previously forfeited now paid of Rs. 12 (Rs. 375) and the amount transferred to development rebate reserve of Rs. 1,37,250 (Rs. 1,06,600) leaving a balance of Rs. 2,46,123 (Rs. 1,92,592). The interim dividends for the year ended 31st July 1958, on 10,000 preference shares at Rs. 3.50 per share absorbed Rs. 35,000 (Rs. 35,000) and on 1,50,000 ordinary shares at Re. 0.30 (Re. 0.40) per share absorbed Rs. 45,000 (Rs. 60,000) leaving an available balance of Rs. 1,66,123 (Rs. 97,592). This amount the directors recommend should be distributed as follows:—

To final dividend on 10,000 preference shares at Rs. 3.50 (Rs. 4.09) per share for the year ended 31st July 1958, absorbing Rs. 35,000 (Rs. 40,900) and to final dividend on 1,50,000 ordinary shares at Re. 0.70 (Re. 0.35) per share for the year ended 31st July 1958, absorbing Rs. 1,05,000 (Rs. 52,500) leaving to be carried forward Rs. 26,123 (Rs. 4,192).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st July 1958, have been valued at market rates.

In accordance with the working time agreement of the Indian Jute Mills Association, working hours were 48 hours per week with 12½ per cent. of the total looms sealed. The Company purchased loom hours during the period and worked 275 looms on a double shift basis.

The installation of modern spinning plant continued during the year and the installation of machinery catering for sacking weft was completed. It is anticipated that the installation of the balance of the sacking warp machinery will be completed during 1959.

During the financial year under review trading conditions were fair although raw material prices tended to be on the high side in comparison with prices for manufactured goods. While the hessian stock position was sound, sacking stocks increased considerably towards the end of the period, and prices were forced down to uneconomic levels by speculators. However, the introduction of minimum prices from 26th February 1958 by the Indian Jute Mills Association arrested the decline.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Gross block	1,01,87,736
Debentures ...	8,86,000	*Less*—Depreciation ...	65,99,232

Presidency Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July 1958.

The profit for the year, after providing for depreciation Rs. 2,15,522 (Rs. 2,04,705) and taxation Rs. 2,40,000 (Rs. 1,82,000) including wealth tax, amounts to Rs. 3,21,105 (Rs. 2,05,210 for 13 months ended 31st July 1957) to which must be added—dividend forfeited of Rs. 1,826 (*nil*) and credit balance brought forward from the previous period of Rs. 7,049 (Rs. 45,825) making a total of Rs. 3,29,980 (Rs. 2,53,693 including Rs. 2,658 being overprovision of liability in respect of previous period written back). From this must be deducted the dividend previously forfeited now paid of Rs. 141 (Rs. 300) and amount transferred to development rebate reserve of Rs. 1,30.000 (Rs. 96,344) leaving a balance of Rs. 1,99,839 (Rs. 1,57,049). The interim dividend for the year ended 31st July 1958, on 5,00,000 ordinary shares at Re. 0.15 (*nil*) per share absorbs Rs. 75,000 (*nil*) leaving an available balance of Rs. 1,24.839 (Rs. 1,57,049). This amount the directors recommend should be distributed as follows:—To payment of a final dividend on 5,00,000 ordinary shares at Re. 0.22½ (Re. 0.30) per share for the year ended 31st July 1958, absorbing Rs. 1,12,500 (Rs. 1,50,000) leaving to be carried forward Rs. 12,339 (Rs. 7,049).

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale rates and goods unsold on 31st July 1958, have been valued at market rates.

In accordance with the working time agreement of the Indian Jute Mills Association, working hours were 48 hours per week with 12½ per cent. of the total looms sealed. The Company purchased loom hours during the period and worked 265 looms on a double shift basis.

The installation of modern preparing and spinning machinery continued during the period under review, and the installation of machinery catering for the sacking warp is partially completed. A loan of Rs. 8,00,000 has been received from the National Industrial Development Corporation Private Ltd. to finance the cost of this new machinery.

During the financial year under review trading conditions were fair although raw material prices tended to be on the high side in comparison with prices for manufactured goods. While the hessian stock position was sound, sacking stocks increased considerably towards the end of the period, and prices were forced down to uneconomic levels by speculators. However, the introduction of minimum prices from 26th February 1958, by the Indian Jute Mills Association arrested the decline.

Soorah Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working shows a surplus of Rs. 10,62,600 (Rs. 10.05.237) out of this, provision has been made for depreciation of Rs. 2,71,222 (Rs. 3,93,445), for reserve for doubtful debts Rs. 23 508 (*nil*), for reserve for development rebate Rs. 28.905 (*nil*) and for taxation (including provision for wealth tax) Rs. 4,30,000 (Rs 3 15,000) leaving a sum of Rs. 3.08.965 (Rs. 2,96,792) to which is added the balance brought forward from the last year of Rs. 40,154 (Rs. 23,362) making a total of Rs. 3.49,119 (Rs. 3.20 154). The directors recommend payment of dividend on 10,000 cumulative preference shares at 7 per cent. per annum free of income-tax for the year absorbing Rs. 70.000 (Rs. 70.000) and on 1,40,000 ordinary shares at Re. 1.50 (Re. 1.50) per share [15 (15) per cent. per annum] free of income-tax for the year absorbing Rs. 2,10,000 (Rs. 2,10.000) leaving a balance to be carried forward to the next account of Rs. 69.119 (Rs. 40.154).

In accordance with the working time agreement of the Indian Jute Mills Association, the Mills worked 351 looms (12½ per cent. of looms remaining sealed) on the basis of 48 hours a week throughout the period under review. However, on account of the large accumulation of stocks of heavy goods, prices of bags were depressed and, therefore, to restore stability in the market, the Association decided that a further 1½ per cent. of the looms should be sealed with effect from the 2nd March 1959. Therefore, from that date, the mills have been working only 345 looms on the basis of 48 hours a week, with a total of 14 per cent. of the looms remaining sealed.

For the first time after 1947, sufficient jute has been produced this year in the Indian Union, which will be sufficient to meet the full requirements of the industry. The import of jute from Pakistan has, therefore, been stopped and as a measure of support to raw jute prices, the Government have also decided to allow export of a small quantity of jute from India. Trading conditions on the whole remained satisfactory during the year and relations with the labour continued to be cordial.

Peermade Tea Co., Ltd.

The directors of the above Company [Secretaries: Messrs. Aspinwall and Co. (Travancore) Ltd., Alleppey] submit the audited accounts of the Company for the year ended 31st December 1958.

The net profit for the year amounted to Rs. 1,10,575 as compared with Rs. 2,05,727 in 1957. The decline in profit for 1958 was mainly due to lower crop and increased expenditure. One of the main items which affected the profit is the Kerala sales tax which is now charged at 5 per cent. with a surcharge of 2½ per cent. It will be seen that as against Rs. 67,461 in 1957, this has amounted to Rs. 1,34,256 during the year under review. The usual provision for depreciation on buildings and machinery has been made. Provision for taxation includes cover for taxation on dividends in excess of 6 per cent. in respect of dividend payments during the year under review.

Crop.—Crop harvested during the year was 20.92,988 (22,54,940) lbs. which is 1,92,988 lbs. above estimate, but, 1,61,952 lbs. less than the 1957 crop. Upto September 1958 the crop was 1,29,215 lbs. over the same nine-month period in 1957, but from October onwards there was a steep drop. 1958 would have established a fresh record in crop but for the general strike in October. This strike resulted in a loss of approximately 1 lakh lbs. during October, and adversely affected the crop during the succeeding two months. During the latter part of the year climatic conditions also were not as favourable as in 1957.

The results of the last 3 years compare as under:—

Year	Crop	Estate Expenditure cts. per lb.	Average Sale Price cts. per lb.
1956 ...	18,87,956	137.41	202.28
1957 ...	22,54,940	128.40	165.16
1958 ...	20,92,988	130.86	163.09

For 1959 the Manager has estimated a crop of 20 lakhs lbs. at an estate expenditure of 132.87 cents per lb.

The crop secured for the year at 20,92,988 lbs. represents an overall yield of 1,344 (1 448) lbs. per acre. Electric power is still not available but is now expected some time during 1959. The installation of electrical equipment in the Pirmed Factory is nearing completion.

The total amount available for distribution is Rs. 2,73,906 (Rs. 4,51,542) from which after transferring a sum of Rs. 306 (*nil*) to development rebate reserve, is to be deducted Rs. 9,000 (Rs. 9,000) and Rs. 1,06,250 (Rs. 1,27,500) representing respectively 6 per cent. dividend paid on the preference shares and 6½ (7½) per cent. interim dividend on the ordinary shares. In view of the substantial fall in the profit for the Company during 1958, and having regard to the dividend equalisation reserve built up in the years of prosperity, the directors recommend a final dividend of 10 (17½) per cent. on the ordinary shares utilising Rs. 75.000 (Rs. 85,000) out of the said reserve. This dividend absorbs Rs. 1,70,000 (Rs. 2,97,500) leaving a sum of Rs. 63,350 (Rs. 1,02,542) to be carried forward.

Accounts in brief are as under:—

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th September 1958.

After providing Rs. 68,489 (Rs. 84,228) for depreciation the accounts reveal a profit of Rs 7,13,756 (Rs. 7.61,328). Out of this sum, provision for taxation absorbs Rs. 4,12,000 (Rs. 4.50,000) leaving a balance of Rs. 3,01,756 (Rs. 3,11.328). To this has been added the amount brought forward from the previous year of Rs. 74,946 (Rs. 73,488) making a total of Rs. 3,76.702 (Rs. 3.84,816) at the credit of profit and loss account. This amount the directors to recommend should be appropriated as under:—

To transfer to general reserve Rs. 50,000 (nil), to pay a dividend at Re. 1 (Re. 1) per share for the year ended 30th September 1958, free of income-tax, absorbing Rs. 2,59,870 (Rs. 2,59,870) and to carry forward to next year Rs. 66,832 (Rs. 74,946) after providing Rs. 50,000 to contingencies).

The factory commenced crushing on the 19th November 1957, and concluded on the 28th March 1958, with a total crush of 24,91,495 maunds of cane as compared to 34,11,524 maunds in the previous year.

The quality of cane available was normal and the recovery was 10.47 per cent. as compared to 9.72 per cent. in the previous year. The minimum cane price was Re. 1-7-0 per maund at the factory and Re. 1-5-0 per maund at outstations. Cane cess was levied at annas three and Cane Co-operative Societies Commission was 9 pies per maund of cane.

Season 1958-59.—The first phase of extension of the factory has been completed thereby extending the crushing capacity to 1,000 tons per day from 850 tons per day. The second phase of extension which would increase the crushing capacity to 1,200 tons is expected to be completed by the end of 1960. The crushing for the current season is expected to be higher at about 23 lakh maunds.

Hindustan Wire Products Private Ltd., the subsidiary Company, has gone into production from December 1958 and the quality of its products has been appreciated in the market and is according to B.S.S.

Assam Match Co., Ltd.

The directors of the above Company (Chairman: Mr. Dinshaw D. Romer, Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

The trading result of the year has been satisfactory, both production and sales being good.

The factory and other property of the Company have been adequately maintained. Rs. 1,56,949 (Rs. 1,50,067) has been provided for depreciation on buildings and machinery on the same basis as the previous year. A sum of Rs. 10,506 (Rs. 41,736) has been set aside as statutory development rebate reserve. For 1958 a provision of Rs. 5,73,500 (Rs. 5,70,000) has been made for taxation, which includes Rs. 27,000 (Rs. 25,000) on account of wealth tax.

The net profit for the year, after providing for depreciation, statutory development rebate reserve and taxes for 1958 as aforesaid, is Rs. 4,38,589 (Rs. 4,63,071) to which should be added the sum of Rs. 1,83,944 (Rs. 1,72.873) being the balance brought forward from the last year, making a total of Rs. 6,22,533 (Rs. 6,35,944). The directors recommend that this amount may be dealt with as follows:

To pay a dividend for the year ended 31st December 1958 at the rate of 10 (10) per cent. per annum [i.e., Re. 1 (Re. 1.00) per share] free of income-tax absorbing Rs. 3,00.000 (Rs. 3,00,000), to pay a bonus for the year ended 31st December 1958 at the rate of 2½ (2½) per cent. per annum [i.e., 25 (25) naye paise per share] free of income-tax absorbing Rs. 75.000 (Rs. 75,000) to set aside for general reserve Rs. 50,000 (Rs. 50,000) and to carry forward to next year's account Rs. 1,97,533 (Rs. 1,83,944 after providing Rs. 27,000 for additional taxes for 1956).

Jawahar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Umaiyambika & Co., Salem) submit the audited accounts of the Company for the year ended 31st December 1958.

After deducting all working expenses and interest and providing Rs. 3 83.581 (Rs. 3,00,800) for depreciation, the year's working has resulted in a net profit of Rs. 3.60.497 (Rs. 4,28 797. Out of this amount, the directors have spent Rs. 2,114 (Rs. 1,357) on charity and presents, paid Rs. 85,597 (*nil*) as balance of bonus for 1956 over and above the provision of Rs. 35,757 (*nil*), and set aside Rs. 72,656 (*nil*) towards development rebate reserve. The balance available after the above adjustment is Rs. 2,00,130 which the directors recommend to dispose of as follows:

For gratuity reserve Rs. 50,000 (*nil*), for the payment of a tax-free dividend of 15 (15) per cent. absorbing Rs. 1,41,000 (Rs. 1,41,000) and to carry forward to next year Rs. 9,130.

As indicated in the directors' last report the slump in the textile trade has been continuing even after 1958. In spite of such adverse conditions, the directors are glad to report that it has been not only possible for them to provide full depreciation and development rebate but also to maintain the same rate of dividend as last year. As it is expected that no tax will be payable by the Company, no provision has been made from the year's profits. The debit balance in the profit and loss account as per last balance-sheet has been adjusted against the general reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,40,000	Gross block ...	77,56,093
Reserves ...	19,05,847	*Less*—Depreciation ...	37,49,777
Provision for taxation ...	21,981		
Liabilities ...	48,83,204	Net block ...	40,06,316
Profit and loss account ...	9,130	Stock-in-trade	20,91,577
		Stores, etc. ...	4,06,702
		Debts, deposits and advances ...	11,44,114
		Investments	37,000
		Cash & stamps in hand ...	74,453
Rs.	77,60,162	Rs.	77,60,162

Parry and Co., Ltd.

The directors of the above Company (Chairman: Mr. G. N. Noel-Tod, Madras) present the audited accounts of the Company for the year ended 30th September 1958.

The net profit for the year before providing for taxation was Rs. 15,01,757 (Rs. 21,02,603) upon which taxation, including the sum of Rs. 53,378 (Rs. 2,54,185) in respect of adjustments relating to previous years, amounts to Rs. 10,20,638 (Rs. 15,50,847) leaving a net profit, after taxation, of Rs. 4,81,119 (Rs. 5,51,756). To this should be added the surplus brought forward from 1957, amounting to Rs. 1,94,184 (Rs. 1,92,428) making the profit available for appropriation of Rs. 6,75,303 (Rs. 7,44,184). Out of this the following appropriations have been made or are recommended by the directors: Transfers to general reserve of Rs. 3,00,000 (Rs. 4,00.000), to capital reserve of Rs. 6,000 (nil) and to payment of dividends, free of income-tax, on the 5 per cent. preference share capital for the year amounting to Rs. 1,50,000 (Rs. 1,50,000) leaving a surplus to be carried forward to next year of Rs. 2,19,303 (Rs. 1,94,184).

At 30th September 1958 the capital and revenue reserves of the Company aggregated Rs. 63,98,433 as against Rs. 60,67,314 last year. Trade investments were increased during the year by Rs. 9.83 lakhs and this resulted in a decline in the excess of current assets over current liabilities to Rs. 89.48 lakhs at 30th September 1958 compared with Rs. 95.47 lakhs last year.

Dividends.—The preference dividend for the year has been paid on the usual half-yearly dates. The directors, in consultation with the Board of the Holding Company, have again decided not to recommend payment of any dividend on the ordinary share capital for the year under review and to utilise the whole of the profit available for strengthening the Company's resources.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Gross block ...	49,36,397
Debentures ...	2,67,941	*Less*—Depreciation ...	25,97,162
Reserves ...	61,79,130		
Provision for taxation ...	23,86,838	Net block ...	23,39,235
Liabilities ...	2,63,78,659	Stock & work-in-progress	1,49,53,693
Profit and loss account ...	2,19,303	Debts, deposits and advances ...	2,06,05,001
		Investments	25,46,446
		Cash ...	19,87,496
Rs.	4,24,31,871	Rs.	4,24,31,871

N.B.—Figures within brackets relate to the corresponding period of the previous year.

U. S. chemists have developed new heat and radiation resistant materials that function as lubricants at temperatures up to 1,000 degrees Fahrenheit—400 degrees above the upper limits of conventional lubricants. These new materials, a family of chemicals known as metapolyphenyl ethers, can also withstand five times as much radiation as would destroy present conventional lubricants. It is believed that the durability of these synthetic oils would be useful in space craft of the future.

A turbine research and model-testing laboratory, which is claimed to be one of the best-equipped in the world, has just been taken into use by Karlstads Mekaniska Werkstad (K.M.W.) at their Kristinehamn works, Central Sweden. The laboratory has been designed for all kinds of model tests with hydraulic turbines, pump turbines and pumps, and it includes equipment for precision measurements by means of electronic devices to ensure full objectivity and reliability of the tests.

PLANTING

(*Concluded from page 730*)

Ministry is giving careful thought to these ideas, and I wish to call for some more expert opinion on this matter."

An important factor which hampers the improvement of the quality of Indian tea is the slow progress of replantation of estates, which, in turn, has been due to paucity of finance. According to the Plantation Enquiry Commission, the industry will have to make good the arrears of replanting to the tune of 200,000 acres, which will cost about Rs. 60 crores. If the work is phased over ten years, the annual cost will come to Rs. 6 crores or Rs. 30 crores for each of the Third and Fourth Plan periods. Mr. Rahut said that it would be impossible for most gardens to carry out a programme of this magnitude with their own resources. He suggested that the Government should set apart in the Third Plan Rs. 30 crores for granting long-term loans to tea planters for uprooting and replanting or replacing bushes planted before 1900.

Replanting of Gardens

Speaking on this problem, Mr. Lal Bahadur Shastri observed:

"To my mind the most important point which has to be considered is in regard to the vital need for a programme of replantation. This has been neglected in the past. If the backload in replantation is not made up, it will threaten our pre-eminent position in tea production in the world. In the tea plantation industry of the world, the new producing countries have the same advantage as Germany in industrial production. Germany with her plants reduced to nil by bombing or dismantled by the Allies, restarted with brand new plants and in a few years has come to the top economically. The young plantations of Africa will have the same advantage over us in the long run, if we do not renew our plantations by replanting.

"Replanting in the plantation industry is like renewal of a machinery in the purely manufacturing industries. As such, the cost of replanting should come out of the depreciation reserves of the industry. I regret to say that the maintenance of a replantation or a depreciation reserve has been neglected by some producers.

"We have been fully aware of the tea industry's need for block finance and the difficulties which stand in the way of obtaining this finance. The Tea Board and the Ministry have tried their best to obtain from the banks a relaxation of their banking practices so that a single agency could look after a garden's need for both block and working capital. In this they did not have much success. They are now working out the details of a guarantee fund which would guarantee the residual liability of the gardens in respect of the working capital they raise from banks and their title deeds are set free for raising block loans. This scheme has been prepared with the assistance of the Reserve Bank and I have no doubt the representatives of planting interests will be consulted by the Tea Board before its finalisation."

The Minister's replies on the problems of the tea industry indicates that the Government's attitude towards the industry is not wholly unsympathetic. The Government is anxious to provide finance for replanting and is trying its best to revive the International Tea Agreement, thought it is not willing to reduce further the export and excise duties for the present.

COMMERCE AND INDUSTRY

(*Concluded from page 737*)

main more or less constant at Rs. 75,000 will now be spread over 1,500 pumps. Hence the net margin in the two cases will be as follows:

If the firm were *not* to accept the export order:

	Rs.
Total selling value (per month) 1,000 x 275	2,75,000
Less: Total cost of production (per month) 1,000 x 250	2,50,000
Net margin or profit	25,000

If the firm were to accept the export order:

Total selling value (per month) 1,000 x 275 plus 500 x 190	3,70,000
Less: Total cost of production (per month) 1,500 x 225	3,37,500
Net margin or profit	32,500

Hence the overall profit is increased by 33⅓ per cent., though the price is reduced by 31 per cent. for exports.

The total outlay under the Third Plan is going to be around Rs. 9,900 crores, according to certain tentative estimates announced recently. This would involve a correspondingly larger outlay of foreign exchange. If, with a much more modest outlay of the Second Plan, we have had to face such acute foreign exchange crisis, one can easily imagine what would be the position in the Third Plan period, unless an all-out effort were made for augmenting our foreign exchange earnings through increased exports right from now.

COMMONWEALTH TRADE, 1950 TO 1957

In a memorandum issued by the Commonwealth Economic Committee, which reviews Commonwealth trade in the years 1950 to 1957, it is pointed out that, though the United Kingdom is the main market for the exports of most Commonwealth countries except Canada, there are indications that the export trade in several cases is now more broadly based than formerly: markets have been developed in Commonwealth countries other than the United Kingdom as well as in Europe and the United States. The record reveals no large changes in the United Kingdom share in the import trade of other Commonwealth countries.

The memorandum points out that Commonwealth countries, taken together, account for about one-third of the external trade of the United States, Canada alone being responsible for nearly 25 per cent. of United States' exports and imports. An upward trend has been apparent in the figures for the United Kingdom share of the United States market, but this has not been paralleled for the rest of the sterling Commonwealth taken together.

Western Europe, however, has proved to be an expanding market for Commonwealth countries; this trade comprises manufactured goods, foodstuffs and raw materials. In several cases, including the United Kingdom, Australia, South Africa and Pakistan, 25 per cent. or more of total exports are destined for the European market.

The memorandum (priced at 3s. 10*d.* post free), which was prepared originally for the Commonwealth Trade and Economic Conference held in Montreal last September, reviews also the main features of the trade of individual Commonwealth countries. A statistical appendix summarises the trends in the trade of the Commonwealth with its chief markets and sources of supply.

DOUBLING U.K. LIVING STANDARDS IN 25 YEARS

Progress towards "doubling living standards" in the United Kingdom in 25 years was described in the House of Commons last week as having been made at a satisfactory rate.

The Chancellor of the Exchequer, Mr. Derek Heathcoat Amory, told a questioner that, since 1954, the standard of living had risen by an average of 2.7 per cent. each year—0.1 per cent. below the progress rate needed to produce doubling by 1979.

Replying to further questions, the Chancellor said that, in the past four years, the United Kingdom production per head had risen by an average of 1.1 per cent. yearly.

"The average annual increase in consumption per head over a four-year period has been 1.8 per cent. Probably, the best statistical definition of standard of living is the level of real personal disposable income per head. Between 1954 and 1958, this has risen by 2.7 per cent. per annum—very nearly at the level of 2.8 per cent. per annum which would be required as an average to produce doubling in 25 years."

The difference between the figures for consumption level and disposable income was due to the very large increase in personal savings over the period.

The Chancellor added: "Over this short period, on these facts, I would regard progress to date as reasonably satisfactory, particularly as national investment has been running at very high levels."

Notices

THE MODERN MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday the 9th June 1959, at 3-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1958.
2. To declare a Dividend.
3. To appoint Directors in place of those who retire but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 12th May 1959 to 3rd June 1959, both days inclusive.

Any member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & COMPANY PRIVATE LIMITED,
Managing Agents.
N. D. SIRUR.
Managing Director.

BOMBAY, 20*th April* 1959.

N.B.—The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 22nd June 1959 to those Shareholders whose names stand on the Register of Members on the 12th May 1959. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

THE SOUTH KARANPURA COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE SOUTH KARANPURA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 29th May, 1959, at 11 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st August, 1958 and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 14th May to the 29th May, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 22*nd April*, 1959.

Note:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 5th June, 1959 to those members so entitled whose names appear in the Company's books on 29th May, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Monday 18th May, 1959, at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1958 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 9th to 18th May, 1959, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, 23*rd April*, 1959.

Note:—A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

TREASURY BILL RATE UNCHANGED

(From Our Own Correspondent)

BOMBAY, 29*th April*

The end of April usually marks the beginning of the end of the busy season, but this year it seems to be still far away. Though the demand for bank credit is not on the same scale as a few weeks ago, the return of funds to banks has not started on a scale to relieve the stringency in the short-term money market. Banks continue to be borrowers in the market and interest rates continue to hold their ground. Inter-bank call money is being bid at 3½ per cent. among the Exchange banks and large Indian banks; occasionally they pay even at 3¾ per cent. The corresponding rate among the smaller Indian banks is also unchanged at 3¾ per cent. House money at seven days' notice is being maintained at 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to three months.

The 91-day Treasury Bill rate, which had gone up from 2.760 per cent. to 2.800 per cent. per annum last week, has remained at the latter level this week also. The amount offered (against the usual invitation for Rs. 2 crores) is slightly higher at Rs. 2.05 crores. The tenders for next week are unchanged at Rs. 2 crores. There has been no sale of Intermediate Treasury Bills this week also, but it has not been suspended either.

The Reserve Bank of India's statement for the week ended 24th April 1959 discloses a contraction of Rs. 13.72 crores in notes in circulation and a rise of Rs. 14.61 crores in total notes issued. There is no change in foreign securities, but balances held abroad have recorded a further decline of Rs. 2.18 crores, so that the total foreign assets stand lower at Rs. 208.69 crores. Central Government's deposits have risen by Rs. 4.01 crores and other Governments' deposits by Rs. 8.25 crores, as also bank deposits by Rs. 13.69 crores. While loans and advances to Governments have gone up by Rs. 5.78 crores, other loans and advances have declined by Rs. 6.01 crores. There has been a further large addition of Rs. 29.44 crores to investments. This is on top of an increase of Rs. 34.56 crores in the previous week.

The Scheduled banks' statement for the week ended 17th April 1959 shows that the total (net) deposits of banks have gone up by Rs. 16.30 crores. Almost the entire rise is accounted for by banks other than the State Bank of India, for the deposits of the latter at the end of the week under review are fractionally lower. Demand deposits of all banks account for an increase of Rs. 10.55 crores and time deposits for Rs. 5.75 crores. Inter-bank borrowings have gone up by Rs. 1.05 crore, while borrowings from the Reserve Bank show a decline of Rs. 7.23 crores. Loans, cash credits and overdrafts have recorded a rise of Rs. 2.14 crores and bills purchased and discounted Rs. 95 lakhs, while the State Bank's total advances stand reduced by Rs. 68 lakhs. Investments are higher by Rs. 6.37 crores, mainly due to a rise of Rs. 7.05 crores in the State Bank of India's portfolio. Cash balances have shrunk by Rs. 14.97 crores, following a drop of Rs. 16.19 crores on State Bank's account.

Barring scattered enquiries for a few long-dated issues, the conditions in the Gilt-edged market continue to be dull and drab. Most of the counters attracted sellers and some of the State loans have started looking down. The volume of business is small. 3 per cent. 1986 Conversion Loan is featureless at Rs. 74, while 3 per cent. 1970-75 has attracted small enquiries and has risen by 5 nP to Rs. 91.20. 3 per cent. 1966-68 is unchanged at Rs. 93.70, 3 per cent. 1964 at Rs. 97 and 3 per cent. 1963-65 at Rs. 96.70. 3½ per cent. loans are also holding their ground at last week's rates. 4 per cent. 1972 has hardened by 5 nP to Rs. 101.70 and 4 per cent. 1973 by a similar extent to Rs. 101.65. In the State loans section, West Bengal 4 per cent. 1967 and 1968 have shed 5 nP each to Rs. 100, as also Madras and U.P. 4 per cent. 1967.

There has been a slight weakening of the sterling in terms of the U.S. dollar this week. Spot sterling fell in New York from $2.81¼-2.81.13/16 to $2.81¼-2.81.9/16, before closing at $2.81.21/32-2.81.23/32. Three months' forward too declined from $2.81.3/16-2.81¼ to $2.81-2.81.1/16, but it recovered partially to $2.81.5/32-2.81.7/32 yesterday. In consonance with this trend, rupee also has lost some ground in terms of the U.S. dollar. Banks' selling rate for ready, after rising from Rs. 475 to Rs. 475.75, declined to Rs. 475.25. Their buying rate is, however, unchanged at Rs. 471.75.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 27*th April*

There was practically no change in the linseed market this week. Firm prices prevailed in sympathy with other oilseeds markets and activity was fair. Daily arrivals from upcountry averaged around 2,300 tons, a slight falling off, owing to booking restrictions at certain centres. These quantities were easily absorbed by local mills who were fairly keen buyers. Ready goods fetched a slight premium, whilst sellers for any positions beyond May were reserved, despite higher prices quoted. The oilcake market remained inactive; firm prices were held, although no fresh business was reported.

The oil section remained steady. Despite a slight improvement in overseas prices, Indian oil was still out-priced. Local demand was rather poor, with buyers pausing.

The latest available quotations are: Ready-April Rs. 23; May Rs. 22.75 per maund.

CHECKING GOLD SMUGGLING

(From Our Own Correspondent)

BOMBAY, 29*th April*

The rumours regarding official measures to check arrivals of contraband gold that persisted in the bullion market for some time past have now turned out to be correct. On Tuesday (28th April 1959), the Union Finance Minister introduced a Bill in the Lok Sabha for amending the Reserve Bank of India Act, with a view to preventing "the smuggling out of Indian currency." The measure authorises the Reserve Bank to issue special bank notes for circulation abroad; the notes will be exchangeable into sterling or Indian currency only at the Bombay office of the Reserve Bank. Although the exact implications of the move are being studied carefully by the traders, the general consensus of opinion among them seems to be that the scope for smuggling gold into India would be considerably restricted.

As the price of gold had gone up during the past few days, in expectation of this development, there was no spurt in it after the Bill was introduced in Parliament. Actually, there was a slight fall in price today, on account of profit-taking. The overall trend, however, is still said to be bullish, as arrivals are expected to shrink, while demand is anticipated to broaden.

In sympathy with gold and on the news that there might not be any more imports of Tibetan coins, silver has staged a rally. The net gain over the week would have been more marked but for intermittent profit-taking at higher levels. Actually, the closing rate for ready silver also was slightly lower than the rate last week-end.

April settlement in gold went off the board at Rs. 123-13 on the 23rd inst., as against Rs. 123-5 on Wednesday last week. May settlement moved up from Rs. 122-4 to Rs. 123-3 on Monday, but declined subsequently, to touch Rs. 122-2 today before finishing at Rs. 122-8-6. June settlement advanced from Rs. 121-9-6 to Rs. 122-9 on Monday. Thereafter, it tended to decline and closed today at Rs. 121-8. The backwardation charge (that is, the *budli* payable by bears to bulls) widened from As. 10-6 last week to Re. 1-0-6 today, so that the bulls were required to deposit a higher margin of Rs. 25 per tola, as against the margin of Rs. 10 that was operating previously, on their outstanding business in May settlement.

Ready gold opened the week firm at Rs. 124-1, as against Rs. 123-12 and, after spurting to Rs. 124-9 on the 27th inst., eased to Rs. 123-8 before finishing higher at Rs. 123-14-6. The highest level touched during the week marks a new peak for the yellow metal so far. The daily average arrivals of gold were 4,000 tolas, while the offtake was 4,500 tolas per day. The floating stocks of gold are reported to be around 20,000 tolas.

Business in silver April settlement terminated at Rs. 202-11 on the 24th inst. At this rate, it was higher by Re. 1-6 as compared with the last week's closing rate of Rs. 201-5. May settlement moved up from Rs. 199-8 to Rs. 200-10 on Monday. Subsequently, it receded to touch a low of Rs. 199-2 today, before recovering to Rs. 199-5 at the close. June settlement, after rising from Rs. 198-8-6 to Rs. 199, declined to finish at Rs. 197-6-6.

On the opening day of the week, that is, Tuesday, the 23rd inst., the backwardation rate for April settlement widened from Re. 1-13 to Rs. 2-6. Automatically, the operation of By-law 33 (d) (i) came into force, under which the bulls in April settlement had to deposit a higher margin of Rs. 2,500 per bar. On Friday, the bulls squeezed the bears by exacting a markedly enhanced backwardation charge of Rs. 5 per bar for transfer of business to May settlement. The backwardation rate for May settlement, which had fallen to As. 15-6 on Wednesday last week, exceeded a rupee during the week—it actually stood at Re. 1-14-6 today—so that the bulls were required to deposit a margin at the rate of Rs. 1,000 per bar.

Ready silver met with good buying support and hardened from Rs. 202 to Rs. 203-6 on the 27th inst. Thereafter, profit-taking set in and the rate declined to Rs. 201-6 today. Towards the close, it was better at Rs. 201-9. The daily average arrivals and offtake of silver were 14 bars and 15 bars, respectively. The floating stocks of silver are estimated at 500-600 bars.

Ready gold in the London bullion market moved down from 249s. 11½*d.* to 249s. 0½*d.* per fine ounce early in the week, due to firmer tendency for sterling against the dollar and fall in the dollar price from $35.09¼-35.11¼ to $35.08-35.10. Subsequently, however, there was a recovery, yesterday's quotation being 249s. 2*d.* Ready and forward silver were unchanged this week too, at 79¼*d.* and 78¾*d.* per fine ounce, respectively. There was no Continental enquiry for the metal, but some demand from "essential" industry was noted. No change was recorded by silver in New York which stood at 91.375 cents per ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	29-4-59	Highest	Lowest	22-4-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, 29*th April*

The cotton futures market, which remained subdued on the opening day of the week, thanks to the uncertainty about the tendering differences, picked up strength in the later sessions. In fact, virtual buoyancy prevailed in the market in the next three sessions. The buoyancy was mainly attributed to the bullish interpretation of tendering differences in respect of the Jarilla May contract fixed on Thursday. The steady improvement in the textile situation and the rapid decline in cloth stocks gave rise to the feeling that the prospects are for a further rise in cotton prices. Large-scale short covering and investment buying prompted by these considerations led to a spurt in values. The Jarilla August contract firmed up to touch a new peak of Rs. 698.50 on Monday. The strength of the spot market also fanned the bullish fervour. Yesterday, however, a mild reaction set in, following reports that a large number of appeals against the tendering differences were likely. But only two appeals were actually lodged calling for a reduction of Rs. 10 in the "basis" and a similar reduction in the 'off' allowance. Yesterday's reaction proved a short-lived affair. For, the market again firmed up today on renewed short covering, with the Jarilla August contract piercing the Rs. 700 mark to quote at Rs. 700.75 and the May contract knocking against that level.

I.C.C. Moglai Jarilla May opened the week at Rs. 677.75 and hardened to Rs. 693.25 on Monday. The contract succumbed to selling pressure and declined to Rs. 688 yesterday. It again rose to Rs. 693.75 today and finished at that rate.

I.C.C. Moglai Jarilla August 1959 commenced the week at Rs. 689.50, spurted to Rs. 698.50 on Monday, receded to Rs. 695.50 yesterday but again firmed up to Rs. 700.75 today and closed at that level.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	29-4-59	*High*	*Low*	22-4-59
I.C.C. Moglai Jarilla				
May 1959 ...	695.75	695.75	678	680.50
August 1959 ...	700.75	700.75	688.50	692.50

In the spot section, all-round mill buying was witnessed early in the week. Towards the close, mills were hesitant to make large purchases as they thought that the prices were too high. Stockholders continued to hold on, in the expectation that the deterioration in the quality of current crop will force the mills to make renewed purchases of available quality lots. Price, therefore, continued to rule firm. All the popular varieties received attention. Jaydhar, Kalyan, Vijay, Digvijay, etc., were in keen demand. Southern mills were especially interested in Kalyan and a fairly large quantity of this cotton was sold to some of them.

Business for exports was fairly active. Shippers covered moderate quantities of Bengals against previous export commitments. Fresh business reported was, however, very small. Rates quoted by foreign customers continued to be below Indian offers.

The import section was subdued. Stray inquiries were noted for Egyptian and Sudan cottons but no substantial business was reported. Importers were confidently expecting an allocation of 100,000 bales of cotton of staple length 1.1/16" and above. Reports are that the Cotton Advisory Committee, which met in New Delhi on the 23rd inst., had recommended to the Government that such a quota should be released.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are as follows: Bengal *Deshi* 695; Berar Jarilla 785; Khandesh 860; Vijay 1,010. Hubli Laxmi 1,060.

Further gains were recorded by cotton futures in the Karachi market during the week under review. Better export inquiries and renewed buying of domestic spinners imparted strength to the market. Investors also extended support. N.T.R.G. May improved from Rs. 51-7 to Rs. 52-6. The July contract was quoted higher at Rs. 54-8 as against the last week-end quotation of Rs. 53-12. The market remained closed for three days due to the non-settlement of accounts.

Firm conditions prevailed in the Alexandria cotton futures market during the week under review. There were good trade buying and speculative support prompted by the official announcement that sales in hard currency would be given a discount of 35 per cent. The continued firmness of the spot market also imparted strength to futures. Futures values, consequently, improved. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 72.85; July 72.80. *Ashmouni*: June 64.50; August 64.37.

Barring the near delivery months, which met with selling, the Liverpool cotton futures market ruled fairly firm during the week. Distant month attracted trade support and commission house buying, touched off by the U.S. announcement of carrying charges on cotton sold under choice 'A' plan. Sudan contracts appreciated on firm Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 22.05; July-August 22.35; October-November 21.95; December-January 21.40.

American cotton mixed growth contract: May-June 22.90; July-August 22.60; October-November 22.05; December-January 21.40.

Sudan: May-June, July-August, September-October 24.25.

Fully steady conditions prevailed in the New York cotton futures market during the week under

review. The steadiness was influenced by the announcement of the Department of Agriculture that the carrying charges on cotton under the choice 'A' plan would be 10 points in October, increasing by 15 points a month until July 1960 when the carrying charges will be 145 points.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	28-4-59	20-4-59	14-4-59
Spot	36.10	36.05	35.90
March	35.88	35.89	35.65
May	34.94	35.10	35.08
July	32.68	32.64	32.68
October	—	—	32.68

YARNS DECLINE SHARPLY

(From Our Own Correspondent)

BOMBAY, 29*th April*

Distinctly easy conditions prevailed in the yarn market during the week under review. Both art silk yarns and staple fibre yarns were subjected to heavy selling pressure which resulted in a marked setback to values. It was feared that arrivals of imported art silk yarns would be very considerable in the coming weeks. These heavy arrivals in the wake of continued slack buying inquiries from consuming centres were expected to lead to large accumulations of stocks with dealers. A further sharp fall in nylon yarn prices also imparted weakness. Cotton yarns continued to rule dull. The handloom weavers and powerlooms were reported to be making only hand-to-mouth purchases. Demand from overseas countries was also not encouraging.

Cupressa Bamberg yarn (60 x 1) April delivery were hammered down from Rs. 1,472 to Rs. 1,439. June delivery fell by Rs. 31 to Rs. 1,461. Spot yarn dropped 25 nP to Rs. 7.12. 120 Japan climbed down by 9 nP to Rs. 4.72. 150 Italy declined by 10 nP to Rs. 4.68. 150 Japan and 120 Italy shed 3 nP each to Rs. 4.72 and Rs. 4.84, respectively. National Rayons 150 bright cones first grade retreated from Rs. 4.19 to Rs. 4.10.

In the staple fibre yarn section, April delivery 40 x 2 encountered heavy selling and receded from Rs. 592 to Rs. 574. June delivery suffered a loss of Rs. 14, today's closing rate being Rs. 589. Spot Centurys decreased from Rs. 3.19 to Rs. 3.15. Citys and Kohinoors lost 3 nP each, the former to Rs. 3.06 and the latter to Rs. 3.22. Among foreign yarns (80 x 2), Fujis slumped by 31 nP to Rs. 8.50. Paramounts dropped 6 nP to Rs. 7.41.

Among cotton yarns, ten counts Moderns were quiet at Rs. 13.25, as also Podars at Rs. 12.19. Twenty counts Moderns were done at Rs. 16.25 same as last week. Forty counts Moderns were unchanged at Rs. 26, while Minaxis gained 6 nP to Rs. 25.06. Sixty counts Raghuvamshis were unaltered at Rs. 65. There was no change in the quotations for eighty counts. Mahendras were done at Rs. 71. Finlays at Rs. 81 and City at Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	29-4-59	22-4-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg		
April (per case of 200 lbs.)	1,439	1,472
June („)	1,461	1,492
60/1 Cupressa Bamberg spot (per lb.)	7.12	7.37
120 Japan (per lb.)	4.72	4.87
150 Japan („)	4.72	4.75
120 Italy („)	4.84	4.87
150 Italy („)	4.68	4.78
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.)	574.00	592.00
40 x 2 June („)	589.00	603.00
40 x 2 Century (per lb.)	3.15	3.19

10s Podar	12.19	12.19
40s Minaxi	25.06	25.00
60s Finlay	65.00	65.00
80s City	67.00	67.00

HIGHER MARGIN ON COTTONSEED

(From Our Own Correspondent)

BOMBAY, 29*th April*

Barring castorseed and linseed, which staged a retreat, the oilseeds market depicted a bullish trend during the week under review. Groundnut scored further gains on heavy short covering and speculative buying. Firm advices from the spot market also helped sentiment. A prominent *vanaspati* manufacturer was reported to have re-entered the market and bought sizable quantities of groundnut oil and seeds. This led to a further hardening of spot prices which, in turn, influenced futures also. The news that sizable business in groundnut oil was done with Burma imparted additional strength to the market. Even the uncouraging export advices from the U.K. failed to have any perceptible bearish effect on prices.

Under directions from the Forward Markets Commission, the Oilseeds and Oil Exchange raised on Friday the rate of margin on cottonseed hedge contract from Rs. 30 to Rs. 35 per candy if the price rose above Rs. 140. The rate of margin above the first marginal line of Rs. 130 was, however, kept unaltered at Rs. 15 per candy. In spite of the higher margin, cottonseed futures firmed up, in sympathy with raw cotton. Nigerseed and kardiseed also met with firm support and rates hardened.

Castorseed and linseed, as noted earlier, eased despite the bright prospects for export of castor oil to the U.S. and news of Australian tenders for linseed oil. Fears of large tender against the May contract and heavier arrival of new crop in Gujerat prompted selling in castorseed futures, while lower spot advices depressed linseed.

A Press note issued by the Joint Chief Controller of Exports on Thursday says: "In order to promote export of H.P.S. groundnuts and to enable co-operative societies to participate in the export trade on a wider scale, it has been decided to entertain all the applications received even after 10th January 1959, but not later than 11th February 1959. Quotas of H.P.S. groundnuts will be granted to the co-operative societies for export up to the end of June 1959, admissible to them in terms of the announcement dated 17th December 1958."

It has also been decided to give repeat allotment to co-operative societies equal to the quantity allotted to them for export up to the end of June 1959, after they have completed shipment against the quotas granted previously.

It has been decided to continue free licensing of the export of *Vanaspati* (vegetable product) to all permissible destinations excluding the Portuguese possessions in India up to the end of March 1960. Exports will be allowed by all shippers as hitherto on shipping bills supported by evidence of valid firm sale contract. It has been decided to decontrol celery seeds, cover crop seeds other than green manure seeds, forest seeds including tree seeds and hedge seeds but excluding tarwar seeds and vegetable seeds.

Groundnut May advanced, on firm buying support, to Rs. 194.00. While the September contract rose from Rs. 197.75 last week-end to Rs. 199.00. Khandesh quality and coromandel were quoted higher at Rs. 40.00, while bold ready was unchanged at Rs. 39.75.

Castorseed May eased from Rs. 159.50 last week-end to Rs. 158.62. The September contract was quoted lower at Rs. 164.00. Ready Madras and ready Kanpur declined over the week by 25 nP each to Rs. 31.25 and Rs. 30.00.

Linseed contract met with profit-taking. Linseed May receded to Rs. 32.69 and the September contract to Rs. 33.37. Linseed oil too was priced down at Rs. 15.75.

Cottonseed May made a strident advance to Rs. 133.25 and September to Rs. 133.75 from Rs. 128.00 and Rs. 130.75 respectively last week-end.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	20-4-1959	22-4-1959	15-4-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	194 00	192.50	191.25
August 1959	199.00	197.75	196.25

September 1959	133.75	130.75	130.25
Niger seed	30.50	29.75	29.50
Kardi seed ?..	23.87	23.25	23.37

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 29*th April*

The sugar market ruled distinctly firm during the forthnight under review and there was a sharp rally in prices. Buying support was excellent, thanks to reports of a marked fall in production during the current season. Traders felt that the closing stocks of sugar with the mills at the end of the season would be very slim. Arrivals of sugar by rail into the market during the week were small, being no more than 8,400 bags.

Over the fortnight, large grain sugar registered a rise of Rs. 2 to Rs. 116-Rs. 119 per bag. Small grain advanced by a like amount to Rs. 115. Medium grain rose from Rs. 113-Rs. 114 to Rs. 115.

* * * *

HAPUR, 27*th April*

Sugar prices ruled steady during the week. Production in the current season was expected to be less than 1.9 million tons, while demand for consumption had gone up. Prices in almost all cases were quoted higher than those fixed by the Government. There were indications that prices would improve further after some months when demand increased and stocks ran short. Crushing season was said to be nearing its end.

Sugar improved fractionally in the Muzaffarnagar market, thanks to revival of demand from Delhi and other consuming areas. Some varieties were quoted at a premium of Re. 1.31 to Rs. 2 per maund over the controlled price. The latest prevailing prices were:—crystal spot delivery New Shamli D29 Rs. 36.75; Mansurpur D29 Rs. 38.25; wholesale controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36;-market quotations mill delivery Meerut D29 Rs. 38; Bijnore D29 Rs. 37.31; Lhaksar B29 Rs. 38.75; Dhampur C29 Rs. 38.12; Deoband C29 Rs. 38.25; Khatauli D29 Rs. 37.37.

Spurred by prevailing scarcity of supplies in the face of brisk seasonal demand, sugar at Kanpur spurted by about Rs. 3 per bag during the week. The spot offtake of 1,000 bags per month was now twice as large as arrivals which lagged behind because mills had exhausted their allocations against last quota. There were, however, hopes of an early release of the monthly quota. Most of the units have stopped their crushing season and the rest are expected to stop in the next two weeks.

Khandsari failed to respond to the concession, announced by the Government, in the proposed excise levy, and prices continued steady. Production was being continued on a restricted scale and prevailing prices were:—*khandsari* superior Rs. 33 to Rs. 36; inferior moist Rs. 29 to Rs. 32 a maund.

Ready *gur* was quietly steady during the week. Arrivals out of stocks retained by producers averaged 400 to 500 maunds daily. Demand for *Kotha* quality was slack and local stock was put at 94,000 maunds, as against 150,000 maunds on the corresponding date last year when average *gur* was quoted at Rs. 15 per maund. Sowings of cane for next season are also completed and prevailing prices of *gur* were:—*pansera* Rs. 19.62 to Rs. 20, *shakker* Rs. 21 a maund.

Gur arrivals in the Muzaffarnagar market were still at an average of 5,000 maunds daily and stocks were put at 400,000 maunds. Prices were steady to be quoted at:—*gur chaku* Rs. 19.50 to Rs. 20.50; *pansera* Rs. 19.25 to Rs. 19.50, *shakker dara* Rs. 20 to Rs. 21.50; *masala* Rs. 23 to Rs. 25 a maund.

Trading in *gur* futures continues to remain suspended. There are indications that it will soon be allowed at Hapur, as necessary recommendation has been sent by the Forward Markets Commission to the Union Government.

BLACK PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 29*th April*

Malabar black pepper continued to fluctuate narrowly with steady undertone for want of selling pressure by the growers during the fortnight under review. Basically, the market appears to be healthy, but prices fail to move upward, owing to paucity of overseas demand and under-pressure of liquidation by tired bulls. Any development in foreign demand is likely to push up prices. Arrivals at all the terminal centres are restricted and growers are resisting lower prices. The market analysts are interpreting smaller arrivals in the current month as an indication of smaller crop this year, as, otherwise, growers may have bought down greater quantity at the ports before the monsoon.

Ungarbled at Alleppey, after going down to Rs. 643, improved to Rs. 668½. May delivery for garbled at Cochin, after slipping back to Rs. 114, rallied to Rs. 118.

Singapore moved narrowly. Fluctuations in both Lampong and Sarawak black were small. White Sarawak and Muntok registered comparatively bigger fall, owing to heavy arrivals of Muntok and under the shadow of coming crop from Sarawak. In spite of heavy arrivals of Lampong, New York stood comparatively steady, the lowest being $0.24¾. New business with New York either from Singapore or from India was conspicuous by its absence, as dealers there were bidding below the replacing parity. Recent inquiries from the East European countries proved a supporting factor and a few hundred tons were reported already done.

Stock with growers being smaller than those estimated earlier, any inland or overseas demand, however small, is likely to push up prices. Re-entry of New York in the Indian market during the coming months, which is very likely, will tighten the already tight statistical position of Malabar pepper.

Ready in Bombay is quoted at Rs. 94-Rs. 100 per Bengal maund according to quality.

TEA PRICES SAG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 24*th April*

Just over a million pounds were offered in sale No. 15, which was held on 21st April 1959. The quality of teas offered was well maintained, with the exception of high grown teas which showed a slight seasonal decline. There was good general demand, particularly for good medium fannings which were strong and sold at dearer rates. Corresponding brokens met with useful enquiry and were slightly easier. Though low medium and medium descriptions were well supported, these were sold at slightly easier rates than last. Buyers were selective in their purchases of best liquoring high growns and these were easier following quality. Whole leaf grades offered sold well at last week's rate. The quotations (with the corresponding rates for the previous week in brackets) are: Low medium Re. 1.65 to 1.75 (Re. 1.65 to 1.75); medium Re. 1.80 to 2.15 (Re. 1.85 to 2.25); good medium Rs. 2.35 to 2.80 (Rs. 2.30 to 2.80) and quality Rs. 2.50 to 4.62 (Rs. 2.55 to 4.97).

Dust Sale 'H':—575,000 lbs. were offered in this sale which was held on 23rd April 1959. A quite useful selection of dusts was on offer. There was a good demand for all types. Prices for low medium and medium dusts were irregular and easier by 5 to 10 nP. However, any medium dusts with useful colour met with keen competition from the buyers and sold at firm to dearer rates. Milled dusts were firm and occasionally dearer. There was less enquiry for high grown dusts and these sold at easier rates. C.T.C. Dusts met with better enquiry and were firm at last week's rate.

London Market: Sale of 20th April 1959.—Slightly dearer all round.

Sale of 21st April 1959.—Generally dearer. Good demand.

Colombo Market: Sale of 20th April 1959.—Quality declined. Quieter demand. Dimbula dickoya brokens substantially lower following quality. Uvas and mediums down 20 cents. Lowgrowns 5 cents lower.

Sale of 21st April 1959.—All off grade about 15 cents lower, but good demand at the drop.

Calcutta Market: Export.—28,184 chests export. Mostly end of season types. Strong general demand, strongest being teas for price which were 2 to 6 nP dearer. Any clean leaf and or bright liquoring types sold well. Plain and medium B.P. 2 to 6 nP dearer. Similar fannings generally easier. C.T.C. irregular with better liquoring easier. Whole leaf well supported.

Internal.—21,100 packages dust. Good general demand. Orthodox types generally 6 nP easier, except powdery kinds which met better support. Best C.T.C. met better enquiry and were generally dearer, particularly grainy types, but plainer varieties were irregularly 10 to 15 nP easier.

Export Quota 1959-60.—No business has been transacted in current quota, but there is a nominal quotation of 8 nP sellers and 6 nP buyers.

Special Licence 1958-59.—The market has remained quiet and small business has taken place at 1 nP and at the time of writing there are sellers at 1 nP with no buyers.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale 16.* 650,000 lbs. Strong general demand. Low medium and medium brokens about steady. Similar fannings fully firm. Good mediums good demand at firm rates. Best liquoring easier following quality."

KIPS SUFFER SETBACK

(From Our Own Correspondent)

MADRAS, 27*th April*

Kip prices suffered a setback during the week, because the U.S. inquiries failed to result in actual business and U.K. importers did not operate in the local market at U.S. levels. If overseas inquiries are less this week, prices are likely to decline by 5 per cent. in the cow hides section only, while calf skins as well as goat and sheep-skins are not likely to rule week, in view of the oversold position of the E.I. tanners and shortage in arrivals.

The next London tanned skins public auction will take place on 4th May, when 60,000 goatskins and 210,000 sheep will be offered for sale. In view of the very low stocks of goatskins, prices will increase sharply; the increase has already been discounted in the shipment business.

COARSE GRAINS EASY

(From Our Own Correspondent)

HAPUR, 27*th April*

Quietly steady conditions were witnessed in the wheat section during the week, but coarse grains, including gram, registered an easy trend. The Government of India has fixed the procurement price of wheat at Rs. 14 per maund for common variety of white wheat. Inferior quality will be quoted lower by a rupee, per maund while superior quality may fetch Re. 1 to Rs. 2 per maund higher. These prices will operate in the States of Punjab, U.P., Rajasthan and Madhya Pradesh. Arrangements are being made by the States for the procurement of wheat.

Wheat at Hapur registered a modest advance. *Dara* quality was quoted on Monday at Rs. 17 per maund, farm product at Rs. 17.50 to Rs. 18.50, and while inferior quality at Rs. 16 per maund. Arrivals during the week continued to be small, the average being 400 to 500 maunds. Although winnowing operations are in full swing and weather is favourable for husking, cultivators are reported to be reluctant to bring produce into the markets and they are storing it in their houses.

Rice ruled steady and modest gains were recorded in fine quality prices, due to good consumer seasonal demand and restricted supplies from surplus areas. Prevailing prices on Monday were:—*basmati sela* Rs. 33 to Rs. 36; *mainpuri* Rs. 22.25; *raimunia* Rs. 26.75; *gadda* Rs. 22.50 per maund.

Gram registered a slight improvement early in the week on good demand at lower levels but tended to ease later, following removal of restrictions on exports from the surplus areas of Rajasthan. Barley and *bejhar* ruled quiet with good consumer demand in a market which was as yet short of supplies. Maize and *bajra* were out of the market, due to off-season, while *jowar* and *guwar* were steady owing to demand for seed purposes. The week-end prevailing prices (in rupees per maund) were:—gram 12.75; barley 11.50; *bejhar* 11.50; *jowar* 12 to 15; *guwar* 15.

Pulse ruled steady during the week on account of good demand at lower levels. Peas arrivals were at an average of 2,000 maunds and local stock swelled to 14 *khatties*. Total arrivals during the season upto date were estimated at 60,000 maunds, the corresponding figure last year being 75,000 maunds. *Arhar* arrivals were at an average of 500 maunds daily. The week-end prevailing prices (in rupees per maund) were:—peas *dara* 11.62; farm 12 to 12.50; peas *dal* 13; *arhar* 14.75 *arhar dal* 18 to 18.50; *urd* 19; *moong* 20 to 23; *massor* 14 to 18.

SURVEY

(Concluded from page 719)

strategic considerations. This decision should be welcome to the U.S. and other members of the N.A.T.O. The Russian goods in which Britain is interested include, among others, traditional items such as timber, grain and certain types of machinery. On its part, Russia has said that it is not greatly interested in buying consumer goods from Britain, but only in complete plants.

Soviet Russia would appear to feel that the total value of its trade with Britain, which can rise to £250 million in the ordinary way within five years, can be doubled by "ordinary means" (interpreted as encouragement by better credit facilities and removal of Government restrictions) and trebled by "extraordinary means." While an expansion in the volume of Anglo-Soviet trade is considered in Britain to be highly desirable for both political and economic reasons, it is emphasised that expectations should not be pitched too high at this stage. By way of conclusion, it must be pointed out that Russia may be given an opportunity to augment its earnings from exports to the democratic countries so long as it agrees to trade on the basis of free and fair competition *vis-a-vis* other countries.

CLIMATE FOR FOREIGN INVESTMENT

(Concluded from page 726)

of a phased manufacturing programme to assure that, eventually, most, if not all, components will be manufactured in India; the training of Indian executives and Indian labour, and the export of the resultant products to some foreign markets. The terms of admission are generally uniform for all foreign investors; however, much seems to depend upon the negotiating skill of the foreign investor.

Is there any ceiling on payments for technical collaboration?

The Indian Government usually distinguishes between technical services and royalty payments. It has stated that "Government approval is given to payments by Indian companies to foreign collaborants towards research fees, technical services, etc. In giving such approval, the amounts to be paid, once mutually settled by the parties themselves, are generally not interfered with." In practice, however, the Indian Government generally scrutinises closely any arrangements for technical assistance and royalty fees between foreign parent concerns and Indian subsidiaries or branches, often taking the view that the profit arragements between the two companies should afford adequate compensation and that additional fees are not merited. Regarding royalty payments, the Indian Government, while not committed to any specific rate, generally regards 5 per cent. as the maximum rate. Higher royalty rates are granted only where there appears to be adequate justification.

NEWS IN BRIEF

(Concluded from page 717)

London. Production of plastics materials during 1958 aggregated 410,000 tons—about 60 times the figure for 1937. Exports of U.K. plastics materials last year amounted to 122,650 tons (worth over £32 million), as compared with 4,300 tons in 1938. The next ten years are expected to witness continued rapid growth. This year, two new polythene plants will come into operation, each producing 11,000 tons a year.

Senior economic officials representing the Commonwealth Governments are to meet in London next week to exchange views on general trade and economic subjects as part of the continuing process of Commonwealth liaison. The meetings will begin on the 5th inst. and are expected to last three or four days. The meetings will be similar in character to those that have taken place among Commonwealth economic officials in recent years. All Commonwealth countries are sending representatives, and, as at the meeting last June, a number of colonial territories will be represented in an advisory capacity in the U.K. delegation.

With a view to providing U.S. investors with means of diversified investment in Europe, Britain and the Commonwealth, Messrs. Kleisworth Sons & Co. have sponsored a new investment trust, called the Transatlantic Fund, in Canada. About half the amount of the Trust will be invested in Common Market countries and the other half in Britain and the Commonwealth. Over $5 million of the Trust's shares are initially being placed privately, a few with English and European investors, but the greater part with U.S. investors by Goldman Sachs & Co. A market may be established later to widen the ownership of shares.

The five-day work-week with 8-hour days for West Germany's hard coal miners has been provisionally agreed upon. So far, the regular work-week for face workers was 43 hours. Thus, the coal miners will be the first major group of industrial workers to win the 40-hour week. However, they will not immediately receive full pay, in view of the high labour costs in mining and the coal sales crisis. Full pay for the shorter week will only come progressively within the next two years. The new collective agreement will entail a substantial cut in hard coal output expected to reach some 4 to 6 million tons a year.

The three biggest West German banks have begun a personal loan scheme similar to that operating in Britain with effect from the 2nd inst. The loans will be granted by the Deutsche, Dresdner and Commerz banks to persons in secure employment regardless of whether they have banking accounts. Loans will be from DM100 (£26) to DM2,000 (£170) for periods of from six months to two years. Interest at the rate of 0.4 per cent. per month will be charged on the whole loan. The only checks on a borrower's creditworthiness will be proof of employment and income. The size of the loan will, however, be related to the borrower's earnings.

The Commonwealth produces well over four-fifths of the world's jute, most of its wool, and nearly one-third of its hard hemp, according to a study on industrial fibres published in London by the Commonwealth Economic Committee. About one-sixth of the world's cotton and rather over one tenth of all man-made fibres are also accounted for by Commonwealth production. As compared with the position before the war, there has been a marked rise in Commonwealth production of most industrial fibres. Taking 1957-58 output in relation to the 1934-38 average, wool production has risen by 39 per cent., cotton by 10 per cent. and jute by 20 per cent. Over the same period, output of arid hemp (that is sisal) has nearly doubled and that of man-made fibres increased four and a half times.

The tax burden of West Germany of some 50,000 million DM for the fiscal year 1957-58 is 2.5 times heavier than in 1950-51. A comparison with 1932 shows that the present Federal tax bill is 4.7 times the bill of the former Reich, which, in terms of territory and population, was larger than the Federal Republic. Thus, the nominal tax bill per inhabitant is now 5.8 times the amount of 1932. Even if allowance is made for the increase in the cost of living, *per capita* taxes are about 3 times higher than in the early thirties. The four taxes supplying the bulk of the revenue are the taxes on sales and on income, a supplementary trade tax on business property and profits collected by local authorities and the corporation tax. Altogether, they now yield some 70 per cent. of total tax receipts, while, in 1922-23, this share was only 34 per cent.

United Kingdom exports and imports both rose in March from the seasonally low level of February, and trends in oversea trade were largely unchanged in the first quarter of this year. Exports rose by nearly £20 million to £270 million and re-exports by £2 million to £12 million. Imports increased by nearly £31 million to £322 million. Exports were very close to the January level and that of the fourth quarter of last year, while imports were just below these levels. The visible trade deficit, at £39 million, was £8.5 million more than in February, but close to the average rate for the past nine months. The export price index remained unchanged in March at 109 (1954=100) and, at 97, the import price index was one point lower than in February. In consequence, the terms of trade (the import price index as a percentage of the export price index) moved down to 89. This is its lowest point since July 1958 and compares with an average of 90 for 1958, 96 for 1957, and 99 for 1956.

The Soviet Union has submitted to the Economic Commission for Europe, which is now holding its annual conference at Geneva, two draft schemes, one concerning the establishment, within the E.C.E., of an all-European regional trade organisation and the other pertaining to the convening of a conference of Ministers on questions of the development of Intra-European trade. Russia proposes that a conference of Ministers which should be held at the end of this year or early in 1960 should study the serious unsolved problems relating to the development of Intra-European trade, especially East-West trade which is now below pre-war level. It further considers that the development of economic collaboration on an all-European basis could be most effectively promoted if measures and basic principles relating to such a development were concerted within the proposed new trade organisation. Lord Gosford, head of the U.K. delegation to the E.C.E. session, told the conference recently that the U.K. would examine the Soviet proposals carefully. He did not, however, deal with the subject at this stage.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 24th April, 1959

BANKING DEPARTMENT

Liabilities	Rs.
Capital paid-up	5,00,00,000

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co Ltd

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free

R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

FINANCE BILL 1959-60 ADOPTED

DETAILS OF MODIFICATIONS

THE Finance Bill 1959-60, which seeks to give effect to the taxation proposals announced by Mr. Morarji Desai on 28th February 1959, has been adopted by both the Houses of Parliament. The Bill contains certain modifications of the original proposals with regard to indirect taxaton, while the position in respect of direct taxation remains unchanged. The modifications in indirect taxes relate to excise duties on *khandsari* sugar, vegetable non-essential oils and art silk fabrics.

"Khandsari" Sugar

Khandsari sugar was originally subjected to a basic excise duty of Rs. 5.60 per cwt. and an additional duty of 70 nP in lieu of sales tax. Now, a distinction has been made between *khandsari* sugar produced with the aid of sulphitation plant and that produced without such aid. The basic excise duty on the two has been reduced to Rs. 5.04 and Rs. 3.92, respectively, and the additional duty to 63 nP and 49 nP, respectively.

The concessions are expected to cost the Exchequer Rs. 61 lakhs during the current year (1959-60) and Rs. 81 lakhs in a full year.

Khandsari sugar will be deemed to be assessable only when power-driven centrifugals are used in manufacture. In other words, it is of no consequence if *rab* is made from out of juice extracted with the aid of power-driven crushers ; *khandsari* sugar produced from such *rab* with the aid of hand-driven centrifugals or any other non-power contrivance will not be assessable. By way of simplification of procedure, compounded rates of duty in respect of smaller units in lieu of standard rates are contemplated. The details are being worked out and an announcement will be made in the near future.

Vegetable Non-essential Oils

Orders have been issued simplifying considerably the standard procedure and dispensing with certain registers and returns. In the matter of clearance, too, formalities have been reduced to the barest minimum. Under the new procedure, clearances, in fact, are permitted under gate passes signed by the manufacturers themselves, without waiting for an excise officer. By way of further simplification, orders are now under issue prescribing compounded rates of duty for units producing, without the aid of expellers, not more than 75 tons per year.

This simplification will cost the Exchequer Rs. 11 lakhs during 1959-60 and Rs. 12 lakhs in a full year.

Art Silk Fabrics

Consequent on the increase in the basic excise duty from 3 nP to 6 nP per square yard, the rates of compounded duty in lieu of basic rates for powerlooms has also been increased to Rs. 50 for first shift, Rs. 35 for second shift and Rs. 20 for third shift, the first four looms being exempt from duty. This exemption was really intended to benefit the owner-weavers (the truly cottage type) who normally work only one shift in their own cottages. But, in extending this concession to bigger units, such units, it is found, derive an unintended benefit by working the first four looms also for more than one shift. The concession has, therefore, now been restricted to the truly cottage type employing not more than four looms and working not more than one shift. The units employing not more than nine looms will, however, continue to enjoy the concession in respect of the first four looms, provided they do not work the first four looms for more than one shift. The concession will not be extended to units employing more than nine looms. In order to ensure that the medum size and bigger units may not have to bear a greater burden of duty on account of this rationalisation, and also by way of further relief, the compounded rates payable by them are being suitably reduced and readjusted. Suitable changes are also being made in the compounded rates in lieu of additional excise duty.

These changes which are now being given effect to by executive notifications will cost the Exchequer in basic excise duty Rs. 23 lakhs during 1959-60 and Rs. 25 lakhs in a full year and in additional excise duty Rs. 14 lakhs during 1959-60 and Rs. 15 lakhs in a full year.

Diesel Oil

The excise duty on diesel oil remains unchanged at 80 nP per Imperial gallon on refined diesel oils and vaporising oil and at Rs. 50 per ton on diesel oil not otherwise specified. Refusing to concede the plea for reduction in duty in the course of his reply to the debate on the Bill, Mr. Morarji Desai said: "The levy is not imposed for the benefit of the railways. It was only a coincidence that, in the Railway Budget, it was mentioned that there was competition with road transport, but, before that, it had been decided to impose this levy, because of the unfair competition between petrol and diesel."

Company Tax Scheme

No changes in the company tax scheme are proposed. Mr. Desai declined to consider a further revision of direct taxes on the corporate sector on the following grounds:

At this important juncture of the economic development of the country, we cannot afford to reduce the present level of revenue from the corporate sector, which is the most important single taxpaying unit. The proposed rates of tax have been devised to ensure this. The overall rate of 45 per cent. may prove to be somewhat high in cases where the incidence of excess dividend tax or wealth tax has been low or in cases where companies enjoy exemption from wealth tax or where the dividend distributions exhaust the bulk of the available profits, but it will prove to be low in cases of companies where the incidence of excess dividend tax and wealth tax is high. Companies which have been distributing moderate dividends will be in a position to ensure the full gross return to the shareholders as before, without being put to the necessity of reducing the amount retained as reserves. The rates prescribed are merely for purposes of advance payment of tax and do not represent the final rate for the assessment year 1960-61. As the scheme comes into operation, the Government should be able to notice its defects and steps will be taken to correct them.

The double depreciation allowance was allowed soon after the war to see that the machinery worn out during the war was rehabilitated. The development rebate now allowed is itself substantial and is benefiting various industries. There is, therefore, no case for double depreciation.

Expenditure Tax

As regards expenditure tax, the changes made in the original Bill remain unaltered. Justifying the changes, Mr. Desai said:

"If a husband and his wife should be treated separately for the purposes of expenditure tax, I cannot understand why the tax should be imposed at all. The prime consideration in revising the structure is the savings that will result rather than the revenue that will accrue to the Government. Given under the revised scheme, only expenditure exceding Rs. 26,000 will be taxable. It is difficult for me to understand how a family can spend more than that in a country where there is so much poverty. If people keep their expenditure within the exempted limit, they can save the rest and invest it. But if they choose to spend more, there is no reason why they should grudge paying a tax to the State."

The levy on bullion and jewellery, according to Mr. Desai, is justified. There is no reason for encouraging this kind of investment in a country where no bullion is produced. These investments are profitable neither to the person concerned nor to the State.

MARKET GOSSIP

(*Concluded from page* 715)

of "calm", in which the pace of decline was much slower than that in 1958. During the past year, the U.S. Treasury had lost gold worth about $2,300 million, the largest decline in any single year in the history of the U.S. It represented over 10 per cent. of the Treasury's total stocks of gold. If this pace of drain were to continue for another three or four years, it would have threatened the 25 per cent. legal gold backing of the U.S. domestic currency. Happily, the pace of outflow considerably slowed down during the current year. In the first quarter of 1959, the gold loss amounted to about $92 million, a rate which is less than a sixth of the quarterly average for 1958.

The slower pace of decline in U.S. gold stocks during the current year mainly reflected the fact that, while foreign countries enjoying a favourable balance of payments with the U.S. in the early part of 1958 were inclined to convert the majority of their gains into gold, they allowed a larger proportion of their gains to remain in dollars in the first three months of 1959. It is too early to say that last week's big fall, which was larger than that in the first quarter as a whole, means that foreign countries are no longer willing to let their favourable balance of payments remain in dollars and that the drain will continue on the same scale as last year.

Another reason for the slow-down in conversion of dollars into gold during the first quarter of the current year was that the large repayments to the U.S. and the I.M.F., which were made in dollars by the U.K. and other West European countries at the end of 1958 and in the earlier months of 1959, are now over. The third reason was the hardening of short-term interest rates in the U.S., in contrast to the fall in money rates on this side of the Atlantic. As a result of this, foreign holders of U.S. Treasury bills were able to earn a better yield and this proved to be a discentive to converting them into gold. This factor still holds good and it will gain strength if the rumours about a possible increase in Federal Reserve discount rate materialise. The fourth reason was the improvement in the economy of the U.S., which strengthened the confidence in the dollar as a currency which can be safely held. This factor, too, still holds good.

The above rationale, however, does not mean that further heavy drain on gold is not a possibility. There is the question of subscription to the I.M.F. towards the increased quota, a quarter of which has to be paid in the form of gold. This may result in member-countries of the I.M.F. selling dollars or sterling for gold. Nevertheless, it is too early to say anything definite on the future trend of gold flow from the U.S., but there is no doubt that the question must be a source of some concern to the U.S. Government and the Federal Reserve Bank.

* * * *

Producers of diamonds in Africa are not worried by the Russian claims about the opening of new diamond mines in Siberia and the threat of their production being dumped in the markets of Western countries. This was stated by Mr. Philip Oppenheimer, Managing Director of the De Beers group of diamond companies, in the course of an interview to the *News Chronicle*, London. Mr. Oppenheimer was of the view that the Russian diamonds were mostly small stones. In any case, he said, they needed all the industrial diamonds they could get for cutting tools and grinding wheels. He also dismissed the threat from synthetic diamonds, such as is being made by the General Electric Company of America. "At present, they are only producing boart, that is, pin-head diamond dust, with limited applications in industry. Even if they succeeded in synthesising larger diamonds and selling 2 million carats, it would not worry us," he added. The demand for industrial diamonds, according to Mr. Oppenheimer, is rising and, as wage costs rise, so will the use of these stones for cutting tools of all descriptions extend. The British industry could use many more to do jobs in a fraction of the time now taken. Too many workmen are said to be still using the time-consuming old methods of cutting hard materials.

* * * *

The U.S. Administration seems to be caught on the horns of a minor dilemma in respect of its cotton import policy for the fiscal year beginning 1st August 1959. While the Department of Agriculture, presumably under pressure from cotton producers inside the country, is strongly pressing for a substantial reduction in the existing quota for imports of long-staple cotton of 1⅛" and above, the State Department is opposed to such a reduction. The question whether any modification in the current import quota is necessary is presently being considered by the U.S. Tariff Commission under section 227 of the Agricultural Adjustment Act.

It may be noted here that an annual quota of 45,656,420 lbs. of long-staple cotton was established in 1939 under section 22 of the Agricultural Adjustment Act, as amended. Last July, the President, acting on the recommendation of the Tariff Commission, split up the quota on the basis of staple length for future quota years commencing from 1st August 1958. The apportionment was 39,590,778 lbs. for extra-long staple cotton (staple length 1⅜" and above in length) and 6,065,642 lbs. for ordinary long-staple cotton (staple length 1⅛" and above but less than 1⅜" in length). Of the latter, 1,500,000 lbs. were set aside for the so-called 'Tanguis' cotton. The quota system in respect of imports of short harsh cotton was abolished as recommended by the Tariff Commission.

The Department of Agriculture has already presented its case for a reduction in quota in hearings before the Tariff Commission which commenced on 28th April. The Department, it is said, is concerned only with the technical aspect of the question. It has nothing to do with the wider and deeper political implication of the question which is the concern of the State Department. The State Department apparently does not think that such a step is advisable at present, because it fears that it will not be favoured by Egypt, Sudan, Peru and such other countries that export long-staple cotton to the United States. These countries, it is understood, have already represented to the State Department against any reduction in import quota.

After the Tariff Commission has taken testimony, it will make its recommendations to the President, who, under the law, can either reject or accept them. It is reported that the State Department is not planning to participate in the hearings. Its intention is to concern itself with the question when it reaches the White House.

LONDON LETTER

(*Concluded from page* 720)

on her North American loans, to invest abroad and still to build up her reserves. The account can be shown as follows:

(In million £s)

Visible income	120	Gold and dollar inflow ..	284
Net invisible income ..	335	Long-term investment (including loan repayment).	236
Net increase in sterling balances, etc.	65		
	520		520

Nevertheless, though so many non-recurring factors contributed to the above picture, it does not follow that long-term investment will shrivel up as net income diminishes. After all, the increase in the reserves represents a substantial cushion and, if the favourable balance of payment falls to the level of £263 million of 1957, this would still leave about £200 million (after service of the North American loans) for overseas investment and some further drawing down of the sterling balances. But, of course, the outcome in 1959 could be a good deal worse than that and, since (*a*) the gold and dollar reserves are hardly large enough to be expended in loans, (*b*) a further drawing down of sterling reserves by sterling countries must be looked for and (*c*) a similar drawing down by non-sterling countries would follow a weakening of the pound for whatever reason, it is clear that the margin for true long-term investment is very tenuous.—*All Rights Reserved.*

Five Indian colliery officials have completed a vacation course in Wales arranged by the British Council. During their stay in Wales, they visited 15 collieries, among them some of the most modern in Britain. The officials are reported to have been greatly impressed by the amount of mechanisation in Welsh collieries and also by the welfare facilities which make life easier for the miner.

CONSORTIUM OF UNDERWRITERS

OF late, considerable thought is being devoted to the role commercial banks can play in the provision of industrial finance in the form of term loans and through participation in capital issues. A few weeks ago, Mr. G. D. Birla recommended the establishment of a consortium of banks and other financial institutions on the lines suggested by the Shroff Committee in April 1954. In the last week of March 1959, Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, cautiously proposed, in his capacity as the Chairman of the Refinance Corporation for Industry, that the bigger banks should take greater interest in providing term loans to industry. Mr. G. D. Somani, a leading industrialist and Congress Member of Parliament, tried the other day to elicit from the Government its views on some aspects of industrial finance. The results of his efforts are covered in our Delhi letter this week, *vide* page 764. It will be seen therefrom that the Government has rejected the idea of a consortium, on the ground that the facilities already available are adequate for the purpose and that it is unnecessary to add to them further. It seems to us that, in coming to this conclusion, the Government has not considered the proposal from all angles, and has mistaken the trees for the wood.

The first reaction to the suggestion for a consortium of underwriters is, of course, something very similar to the Government's decision. It is so, because there are quite a few institutions to take care of the medium- and long-term financial needs of industries in the private sector. Instinctively one is tempted to raise the brows and ask: "Why one more institution or arrangement?" The very mention of Shroff Committee immediately brings forth another explanation, namely, that, since the recommendations of the Shroff Committee five years ago, much water has flowed under the bridge. All this is true, but, notwithstanding all that has been done during the last five years, the need for a consortium of financial institutions of adequate strength and large resources has not been met. On the contrary, as we shall presently show, the need for it is greater than before and the conditions are more propitious for fulfilling it.

A consortium is required for underwriting new issues of capital—ordinary and preference shares and debentures—of a sizable nature, involving quite a few crores of rupees required either for establishing a new industrial unit or for expanding an existing one in the private sector. Some in this sector have already plans for starting heavy industries, as, for instance, aluminium, dyes and chemicals, pharmaceuticals, synthetic rubber, pulp for paper and fibres, mining and processing of minerals, a variety of engineering units and shipping. This list is by no means exhaustive, but sufficient to give an idea of the vast amount of fresh capital that will be required for their establishment in the coming years. The synthetic rubber plant now contemplated will alone require more than Rs. 10 crores. A more or less similar amount will be required for the aluminium project and an equal amount for the pulp scheme. In addition, there will be several industrial projects of more modest proportion and medium type, the aggregate capital requirements of which will run into several crores of rupees. It will be extremely difficult to find all this capital through the share markets, without adequate arrangements for underwriting them. No single existing institution will be in a position to handle them all and nurse the new issues till individual savings grow and are able to absorb them. It will require the collective effort of the big banks, the Life Insurance Corporation (L.I.C.), the Industrial Credit and Investment Corporation (I.C.I.C.), the Central and State Finance Corporations and their confreres in foreign countries such as the Commonwealth Development Finance Company and the International Finance Corporation. The need for a consortium of these institutions is thus obvious.

The nationalisation of life insurance and the Imperial Bank of India, the establishment of the I.C.I.C., and the formation of Development Banks in the capital exporting countries in the West—all these developments since the Shroff Committee reported do not by themselves render an underwriting consortium or syndicate superfluous. Instead, they have increased the feasibility of forming and successfully working a consortium. In the matter of strength, the resources and the capacity to take risks, the State Bank of India is superior to the Imperial Bank which it has replaced. The abolition of the private sector in life insurance and the assumption of State monopoly in this field have created a situation in which it is unnecessary to consult, and get the co-operation of, a number of insurance companies competing with one another when an issue has to be underwritten. As a unitary body, the L.I.C. is in a better position to join and operate a consortium than a group of individual insurance companies. Further, the resources which the L.I.C. could place at the disposal of the consortium would be larger than would be the case if only the bigger insurance companies were there to join it. Again, the coming into existence of the I.C.I.C. augurs well for the success of the consortium, as it has valuable contacts with foreign investors. The marked increase in the deposits of banks during the past three years has also improved the prospects for the proposed consortium. If the Shroff Committee's recommendation that the banks could safely invest an amount equal to 5 per cent. of their deposits in shares and debentures were to be accepted and assuming that only the major Scheduled banks would participate, the resources available for this purpose would easily be Rs. 70—75 crores.

There is not much substance in the argument that the formation of the Refinance Corporation obviates the need for a special arrangement to underwrite big capital issues. The Refinance Corporation is not meant for underwriting new issues at all, irrespective of whether they are big or small. The Corporation is intended to provide re-lending facilities to banks against loans given by them to industrial concerns for the purpose of increased production primarily in industries included in the Second Plan and the Plans that follow. Other conditions for eligibility of this rediscounting facility are: the loans must be for periods between three and seven years; they must be of a medium-sized amount, subject to a maximum limit of Rs. 50 lakhs; and they must pertain to companies of medium size, that is, only to industrial companies the paid-up capital and reserves (excluding reserves for taxes and normal depreciation) of which do not exceed Rs. 2.5 crores. It may be that these conditions will be relaxed from time to time, but, even then, the Corporation will not be doing any underwriting functions. It is, therefore, not understandable how the coming into existence of the Refinance Corporation has made the proposed consortium unnecessary.

The most important point to be decided is whether it will be prudent for banks to invest a part of their resources in industrial equities and fixed-yielding obligations. There has been considerable discussion on this subject. And the latest trend of thought (*vide* pages 768 and 769 of this issue) is that there is no harm in banks doing so, to some extent, provided their resources are sufficiently large and the industrial projects concerned are good, their

management competent, and the economic policy, as well as the ideology, of the Government, is conducive to their growth. The Shroff Committee itself was of this view and, since then, there has virtually been a revolution in the concept of commercial banks' responsibility to the economic advancement of countries where they operate, as witness the transformation that has taken place even in the conservative traditions of British banking on which Indian banking is modelled. It is now generally felt that, for Indian needs, the American banking system offers more useful lessons to be learnt and applied in practice than the British system. It is not suggested here that Indian banks should go headlong into the underwriting business. In the interests of depositors, there should undoubtedly be well-thought-out regulations and restrictions on the method and extent of underwriting.

In a cautious advocacy of term-lending by commercial banks the other day, Mr. H. V. R. Iengar observed as follows:

"It is hoped that the facilities made available by the (Refinance) Corporation will enable some needed alteration of the methods of lending by Indian banks, so as to provide, on a larger scale, formal term loans to industry. To start with, the funds required to this end could be provided entirely by the Corporation. But, as this mode of lending gains in popularity, and the banks gain experience of its operation, they could well contribute some of their own resources for lending in a similar way. Indeed, the facilities of an institution such as this are intended to supplement the banks' own resources for the new type of lending and, therefore, to stimulate and encourage the banks' operations in that direction. Such encouragement has, however, to be confined, in the first instance, at any rate, to the larger banks, and should be limited to a modest proportion of their resources, particularly owned resources, and time liabilities. It would seem to be advisable for the present that the smaller banks confine themselves to the known hazards of commercial lending, till some experience has been gained by the bigger banks of the problems of industrial lending."

Similar qualifications have to be made to the suggestion that banks could participate in a consortium for underwriting capital issues. In order to enable banks to play an increasing role in the rapid industrialisation of the country without in any way upsetting the confidence of depositors, it is necessary to do four things. In the first place, the owned resources of banks should be increased. This can be done in two ways, by raising their paid-up capital through issue of additional shares and by increasing their reserves. In this context, a reduction in the burden of taxation on banks is an urgent requirement. Secondly, the banks themselves should try to widen their profit-margin by increasing the cost of their services and advances. Thirdly, the banks should consider the advisability of raising medium-term deposits, say, for three to five years, by offering competitive rates of interest. And, fourthly, insurance of deposits as in the U.S. and insurance of loans and advances as in Japan should be organised.

The Government itself is very keen to avoid concentration of economic power in a few hands through an increase in the growth of *entrepreneurs* and dispersal of ownership of industries. This is undoubtedly a right policy. But it is not enough merely to go on reiterating this objective, without creating appropriate conditions for its attainment at an early date. Imposition of punitive or other like measures is no good, for it only makes matters worse, as experience during the last eight or ten years has proved beyond doubt. It is, therefore, necessary to try positive measures and the establishment of a consortium of major banks, the L.I.C., the State Bank, the I.C.I.C. and other finance corporations for underwriting new capital issues is one of them. Accordingly, the Government and the Reserve Bank of India would be well advised to reverse their decision and take appropriate steps for the fructification of the consortium idea at an early date.

ROAD-RAIL CO-ORDINATION

THE co-ordination of road and rail services continues to present some intractable issues. The Rail authorities are perturbed over some diversion to road transport of traffic, which the Railways believe they are in a better position to carry. The net result of this new development is that, in all discussions about road-rail co-ordination, it is the competition between road and rail transport that wins larger attention and notice. There has been some controversy over the alleged deviation of the Road Transport Reorganisation Committee from its terms of reference. The Railway Ministry, it is stated, is indignant that the Committee has been led astray into a discussion of road-rail co-ordination which was outside its purview. This allegation does not appear to be correct, considering that the Committee could not possibly have discussed the road transport problems without importing into the discussion the issue of road-rail co-ordination which has an important bearing on the development of road transport. There is, as the Chairman of the Committee, Mr. M. R. Masani, points out, "no basis whatsoever for the suggestion made by the Railway Ministry that the Committee went out of its way to stress the problem of road-rail co-ordination."

Be that as it may, the point is that, if the Railway Ministry feels that a fuller review of the whole issue deserves to be made, it is perfectly entitled to call for such a review and it could do so without questioning the competence of the Committee to discuss road-rail co-ordination. Some such review is bound to form a part of the report of the high-level expert committee on transport which the Ministry of Transport and Communications has decided to set up. The committee, it is stated, will consist of experts and economists and will advise the Government on the principles on which a national transport policy may be formulated. While the Government's decision to appoint the committee will be welcomed, it is to be hoped that the present commendable trend of modest appreciation of the importance of road transport will not be allowed to suffer any setback, on the ground that the whole issue of transport has been remitted to the care of an expert committee. It is certainly deplorable that, even after more than a decade of independence, this country should be left without a national transportation policy. In his brilliant, though understandably parochial, minute of dissent appended to the Masani Committee, the representative of the Railway Ministry, Mr. S. R. Kalyanaraman, admits, in the course of his exposition of the case for the Railways, that "our national transport policy has not yet been enunciated."

Clearly, the task ahead of the expert committee is by no means easy. It cannot overlook the subject of road-rail co-ordination which has a close bearing on the evolution of a national transport policy. At one time, it looked as though the problem could be safely relegated to the background, since it was thought that both rail and road transport could prosper simultaneously. But recent developments have, once again, shown the existence of a certain clash of interests between the two modes of transport. This point should be recognised and some solution found for the orderly development of both road and rail transport services. The case for Railway transport rests chiefly, if not wholly, on the ground that, if some of its lucrative lines of traffic are diverted to road transport, it cannot continue to carry several essential commodities such as coal, cement and mineral ores at the low rates at which they are now being transported by rail. It would appear that, in a memorandum on road-rail co-ordination, prepared by the Central Government in 1945, it was pointed out that, "if road traffic is allowed to take away the cream of traffic, then the inevitable result will be pushing up of rates for the above commodities to the detriment of everyone and to the detriment of the industrial development of the country."

While the general case for improving the rail traffic capacity as well as the actual rail traffic cannot be too strongly stressed, it is clearly unnecessary to buttress the case by a reliance on considerations which are either weak or irrelevant to the main issue. For instance, it would be wrong to contend that, since rail transport is a vast national enterprise, it would be a grievous national loss, if a part of rail traffic were to be diverted to private road transport. As we pointed out two weeks ago, the investment in roads is not inconsiderable—and this too is national investment. The investment in road transport is placed at Rs. 1,400 crores, as against an investment of Rs. 975 crores in the Railways. Nor can the point be ignored that the cost of laying a rail track is greater than the construction of roads and that, while the former has a single use, the latter can be put to multiple uses; it has been computed that the cost of constructing a modern new national or State highway varies from about Rs. 1.57 to Rs. 1.98 lakh per mile, while that of a rail line (single track) is about Rs. 7 lakhs.

Again, it would be wrong to overlook the fact that, on economic and other grounds, the automobile industry deserves to be encouraged. It cannot possibly get such an encouragement if restrictions are placed on road transport. India has only 89 vehicles per 100,000 of population, as compared with 37,998 in the U.S., 25,236 in Canada, 22,939 in the U.K., and 9,097 in Malaya. Further, the employment potential in road transport is very high. Road transport now employs about 2.68 million men, as compared with 1.05 million in the Railways. In any case, it is now generally recognised that rail transport will be unable to carry all the traffic that will develop in future, so that road transport will continue to remain an economic necessity. There is some difference of opinion over the quantum of deficiency in rail traffic capacity by 1960-61—this is placed at 15 to 20 million tons by some observers, while others are inclined to place the deficiency at a lower level—but it is known that a certain marked deficiency would exist and a well developed system of road transport alone could meet it. No wonder, even the partisan of rail transport, Mr. Kalyanaraman, has stressed that he does not seek in any way to contend that there is no need to develop road transportation and that "road transport must not only be developed but developed substantially." Only, he insists that the "action we take should be such as to achieve the basic objective of maximisation of the total transportation capacity of the country by all methods of transportation that can be made available and that at the least expense to the country as a whole in terms of real costs."

Closely allied to the question of road-rail co-ordination is the principle of the freedom of the consumer's choice. The spokesman for the Railways has been at some pains to point out that an unrestricted freedom of choice does not obtain in any country. But this does not answer the question whether the principle should be respected or not. So far as India is concerned, experience suggests that, if the choice is given to the consumer, he prefers, in respect of many commodities, road to rail transport. He does so for the reason that road transport is quicker, gives door-to-door service and is free from pilferage. Surely, the Railway authorities can profitably divert a part of their attention to finding out the means by which their services can become more acceptable to consumers. When they have done that, they may have a better case for insisting on a larger share of the total traffic. As it now happens, their complaint of unfair competition of road transport tantamounts to a request for compelling the consumer to accept their less efficient service.

Even if it is conceded that the consumer's freedom of choice may have to be circumscribed by considerations of wider national interests, it must be recognised that it will be a grave injustice to the consumer to give a monopoly for all long-distance traffic to the Railways. Besides, it would imply artificial restrictions on road transport, of a kind which would imperil its natural growth. Experience in other countries, as the Masani Committee points out, shows how road transport has rapidly gained ground and rail transport has lost it. Thus, in Italy, during the period 1938 to 1954, the percentage of traffic handled by the railways declined from 68.8 to 31.0, while that handled by road transport increased from 31.2 to 69. In Australia, the ton-mile share of roads and railways is 52 per cent. and 48 per cent. respectively, while in the U.K. it is 46 per cent. and 54 per cent. During the period 1939 to 1953, the total goods and passenger traffic in the U.S. increased by 118 per cent. and 95 per cent., respectively, but the corresponding increase in road traffic was 289 per cent. in goods and 118 per cent. in passengers, while the corresponding increase in rail traffic was only 83 per cent. and 35 per cent., respectively. Long-distance road transport in the U.S., it is stated operates on coast-to-coast hauls of up to 2,500 miles. It should thus be clear that automobiles are setting the pace for a new revolution in transport. The Masani Committee rightly observes that "it will be generally agreed that any attempt to turn back the wheels of progress and to cling to a mode of transport that is no longer the most efficient or speedy would be to do grave injury to the basic interests of the country." It adds: "In such a context, the task of the planner in a democratic society is to balance the free choice of the consumer with the needs of maximum utilisation of resources invested in the various forms of transport." In striking such a balance, it would be a disservice to the nation if road tranpsort were made to suffer a setback in order to give an artificially wide and free field for rail transport.

BULL MARKET REASSERTS ITSELF

CONFERENCE ON FUTURES TRADING—COST OF BANKING SERVICES—TAX ARREARS

THURSDAY, 5 P.M.

MARKET GOSSIP

AFTER remaining hesitant and moving in an irregular fashion, the bull market in equities has reasserted itself again. Unlike in the previous week, the scrips that have staged handsome gains are the speculative leaders and not the so-called cash counters. Thus, over the week, Tata Steels have gone up by Rs. 7.25, A.C.Cs by Rs. 7, Bombay-Burmahs by Rs. 25, Bombay Dyeings by Rs. 2.05, Centurys by Rs. 19.50, Kohinoors by Rs. 13.75, National Rayons by Rs. 13.75 and Telcos by Rs. 5.50. It may be noted here that the closing rates of all these scrips are a shade below the best levels touched a little earlier. The bull in the market has thus become a roaring animal and it looks as though he will become noisier still. He seems to have cast off the fear caused by Pakistan, Tibet, and the socialism of the Congress Party. He is no longer subdued by either the heavy carryover charges or the prospect of large deliveries in the coming settlements. Apparently, the possibility of money becoming easier after a fortnight or so, if not earlier, has induced him to ignore this handicap.

It is true that, during the last few weeks, some big investors lightened their portfolios either for paying their taxes or for keeping sufficient cash to take up rights issues or for investing in their own new projects. It is very likely that not all their sales have been finalised, in the sense that they have parted with their holdings and taken the cheques. With *bullish* in their favour, they need not be in a hurry to do so. But when this attraction is reduced, they may complete their sales.

Although some investors must have been wise enough to realise their profits, the vast majority of them are not doing so. They seem to be content with counting the profit in their books, unmindful of the fact that profit is made only when it is taken. That, of course, is the general characteristic feature of investors all over the world and hence the universal stock exchange maxim that tops and bottoms are for fools. The taxation laws are such that they are a great disincentive to liquidate one's investments at a good profit. The necessity to pay a sizable part of the capital gains to the Government induces many an investor to sit tight on his portfolios.

As the single largest investor, the L.I.C. has only been a buyer all along and not a seller. Even last week, it was reported to have taken over a large block of Indian Irons from a Clive Street investment company. This policy of L.I.C. is accentuating the scarcity of scrips and turning the market into a virtual one-way street. If life insurance had not been nationalised, some of the companies might have, perhaps, realised at least a part of the capital profit.

That speculative mania is increasing is evident from the tremendous rush for the shares of Colour-Chem. The issue offered to the public by this Company was for Rs. 35 lakhs in 35,000 shares of Rs. 100 each. The total amount applied for was Rs. 5.90 crores, as many as 17 times the amount invited. It is said that the number of applications was 75,000, that is, more than twice as much as the number of shares, so that, even if each applicant were to be given something, irrespective of the number of shares for which he has applied, he would get less than half a scrip. This is undoubtedly something unprecedented in company flotation in this country.

One of the chief factors responsible for this mad rush for Colour-Chem shares was the advance information to the effect that the promoters would present for encashment only the cheques of those applications that got picked up in the draw. This news induced people to send in as many applications as possible, even though they might not be having sufficient balance in their bank accounts. Another factor was the general notion that manufacture of dyes and colours and other chemicals would turn out to be a gold mine, as witness the big jump in the value of India Dyestuffs and Atul Products Ltd. also. A third factor was the tie-up arrangement with reputable foreign chemical companies such as Bayers, Montecatni and I.C.I. Indeed, as the premium on Colour-Chem shares rose by stages from Rs. 50 to Rs. 120, the value of Dyestuffs and Atul Products also automatically jumped up. Operators began to argue that, if Colour-Chem were to stand at Rs. 200 or Rs. 220, the Dyestuffs, which has a right issue of nine scrips for one at par and which came into the field earlier, ought to be much higher and that, if both these new comers were to command such astoundingly high premia, why not Atul, which has already been in the field for quite a few years now and has been paying a decent dividend, the latest dividend being Rs. 10 per share (of Rs. 100 each). The fact that it takes a fairly long time for chemical companies, in general, to get established and pay good dividends has been ignored. This type of get-rich-quick mentality is surely unhealthy, especially when it is displayed in such a conspicuous manner as was done last week. What has happened in Colour-Chem is a striking example of excessive "stagging." It is to be hoped that neither genuine investors nor the policy-makers in this country will be misled by the response which this new issue has had.

A unique conference was held in this city last week-end. The Presidents of 19 recognised associations operating 33 forward markets in 12 commodities met for two days and discussed various matters of common interest relating to organisational, trading and regulatory matters. Mr. W. R. Natu, the energetic Chairman of the Forward Markets Commission, deserves to be congratulated on hitting this excellent idea and giving effect to it. A conference of this type for dealing with problems of futures trading, which has remained unorganised for a long time in most parts of the country, is bound to be highly useful. It is one way of establishing closer relations and real understanding between the controller and the controlled.

In his welcome speech, Mr. Natu gave a comprehensive account of the work done by the Commission ever since its inception 5½ years ago and the problems facing it. Despite several handicaps, such as inadequacy of staff and funds, lack of expert personnel knowing the intricacies of futures trading and absence of ideal conditions for healthy and smooth functioning of futures markets, the Commission has done an excellent job. It must be said to the credit of Mr. Natu and the small band of devoted workers with him that they have managed to carry on their task of regulation, without provoking a serious clash with the authorities in charge of the administration of the markets. It is easy for the Commission, which has ample powers and authority at its command, to declare a state of emergency and supersede the Boards of Forward Markets, especially in times such as these when the supply of commodities—with the possible exception of jute and jute goods—is not plentiful and conditions are favourable for bull squeezes. But the fear for the controller will go and the whole game will become colourless, once he shoots his way into the markets and himself assumes full responsibility for their working.

This is not to say that the Commission did not firmly deal with evasions of control regulations or malpractices. One has only to listen to the grouses of the Boards of the recognised associations to realise the extent to which the Commission has been trying to keep speculation under control. Their complaint, in effect, is that the Commission is interfering too much. The firmness with which the Commission has been handling the forward markets is also evident from the large number of raids it has made on the offices of several firms dealing in illegal contracts and on the prosecutions launched in the courts. If the outcome of its efforts is not very impressive, it is because of the enormous difficulties involved in tracking down the guilty persons and the basically tight statistical position of the commodities in which forward trading is permitted. Indeed, it will be no exaggeration to say that, but for the Forward Markets Commission, the speculators would have by now overreached themselves, as they did in *gur* (which, incidentally, had not been brought under the purview of the Commission), and futures trading in several of the commodities would have come to a close. Futures markets are one of those basic institutions of the private sector which have to be skilfully regulated by the State, if they are not to find themselves in a state of crisis at frequent intervals. So strong is the desire in some operators to make money that they will not be able to realise the harm they do to the very institutions which enable them to exist. The instinct of self-preservation simply ceases to act in their case.

Apparently, Mr. Lal Bahadur Shastri, the Union Minister for Commerce and Industry, was not fully alive to this characteristic feature of speculation when he lamented, in his inaugural speech, that some people continued to indulge in illegal forward trading and options, even though they knew that a ban on such business existed. Nevertheless, it must be said that both the Minister and the Chairman of the Commission were right in stressing that it is the duty of Boards of Directors of the Associations to regulate their markets in accordance with their own articles of association and by-laws. We would, therefore, endorse the following quotation from Mr. Natu's speech:

"While punitive steps are being taken now and again against unscrupulous parties who flout the law, the Commission continues to hope that lasting results may yet be obtained through the voluntary compliance by the members of associations with their own by-laws. The Commission has, therefore, requested the Boards of Directors of the Associations to set up their own Vigilance Committees for keeping a watch on any breaches of the law and themselves take appropriate disciplinary action against the offenders in accordance with their own by-laws."

In the prevailing political climate in the country, the authorities in charge of futures markets can ignore this appeal only at their peril.

A Press note issued on the proceedings of the Conference says: "The Conference discussed at length the working of the special margins and their effectiveness in controlling prices. While conceding that the imposition of special margins was useful for putting a temporary brake to the rising trend of prices, it was generally agreed that the level of prices in the forward markets had ultimately to be determined by the prices in the ready markets which were governed by the laws of supply and demand. The difficulties experienced by the trade and the punitive nature of special margins were also stressed. It was emphasised that the imposition of special margins resulted in a considerable reduction in the volume of trading, the elimination of the small traders and the concentration of business in the hands of a few financially powerful operators. To mitigate these difficulties, suggestions offered, *inter alia*, included the provision of a free limit over which alone special margins will apply, the exemption of the hedge business done by genuine exporters from the payment of margins, and the fixation of maximum and minimum prices on all-India and statutory basis. In order to minimise kerb trading, the Conference proposed the fixation of uniform trading hours for each commodity all over the country. The Presidents also stressed the utility of options and the need to legalise and regulate such business."

There is some force in the contention of Presidents regarding options. The efforts to stop options have not been successful. When a thing cannot be ended, it should be mended. It is on this principle that options in some of the foreign countries are recognised and regulated. The question, therefore, deserves to be re-examined from a practical angle.

In his speech at the annual meeting of the United Bank of India Ltd., held at Calcutta, the Bank's Chairman, Dr. N. N. Law, raised and discussed quite a few important issues relating to Indian banking. A vexed issue has been the increase in costs of banking operations, brought about, largely, though not wholly, by the increase in establishment charges. In his reference to this issue, Dr. Law pointed out how, during the period 1950-57, establishment expenses of Indian Scheduled banks rose by about 74 per cent. This rate of increase could not have been lower in 1958, for which figures are not yet available. Dr. Law rightly urged that, since banking was basic to development, there should be a wider appreciation of the need for "an equitable correlation between the increase in cost, improvement in productivity or enhancement of earning potential."

Dr. Law welcomed the agreement on the part of the banks in respect of rates of interest on various types of deposits. In this connection, he reiterated the suggestion he made last year that the rate of interest on time deposits should not exceed two-thirds of the Bank rate in force. We wonder whether a control on rates of interest on deposits, in whatever form it may be implemented and irrespective of whether it commends the agreement of all banks or only a few of them, is calculated to ensure the preservation of the competitive urge for efficiency and service which lies at the root of all free banking.

Dr. Law, however, made an important suggestion when he said that India should adopt the system of levying charges on the unutilised portion of the credit sanctioned to customers. There is a certain element of economic justice in levying such a charge, considering that the banks have a right to be reimbursed against the immobilisation of funds which the grant of a credit line to a customer involves. From the point of view of the customer, the adoption of the system will help promote more careful financial administration, through realistic budgetting. Yet another suggestion Dr. Law made relates to the institution of a system of organised credit investigation agency. He said: "Of course, banks have their own credit investigation departments, but that by itself cannot bring out all the relevant information which would be more helpful in consideration of extension of bank credit. It is, therefore, necessary that credit investigation agencies should be organised in this country on the lines of such institutions in other advanced countries of the world." This suggestion too deserves the consideration of Indian bankers. In this, as in many other aspects of banking, India will do well to adopt the features and practices of American banking. Elsewhere in this issue, we have drawn the attention of our readers to what some Indian observers have to say on the relevance of U.S. banking practices to Indian conditions. Indian banking has now reached a stage where it should strive to imbibe new ideas and be prepared to adopt new practices, so that it may play an increasingly important role in India's economic development.

• • • •

One of the departments of the Central Government which comes in for criticism off and on in Parliament is the Income-tax Department. The criticism is two-sided—some protest against harsh treatment accorded to the assessees and others attack it for being too lenient towards assessees. It is the latter section which seems to predominate at present. Several members in both the Lok Sabha and the Rajya Sabha pointed out, during the debate on the Finance Bill for 1959-60, that the Income-tax Department was not only very slow in collecting the arrears but also liberal in giving time for payment of the assessed taxes. The amount of arrears was placed (by the Department) at as high as Rs. 280 crores, as against a year's gross income from income-tax, corporation tax, estate duty and wealth tax of about Rs. 230 crores for 1957-58. On an earlier occasion, that is, when the Lok Sabha was debating the budget demands of the Finance Ministry, a Communist member from West Bengal, Mr. Prabhat Kar, described the tax-collecting machinery as a "slur" on the Finance Ministry. Here is what Mr. Kar said:

"I wonder if there has been a single prosecution for tax evasion. The Finance Minister cannot deny that huge amounts of tax remain to be collected. I know hundreds of instances where proceedings for tax evasion against prominent persons have been given up under pressure and influence. The Ministry should take the co-operation of the lower class of employees in the Income-tax Department for checking evasion. Higher officers stay in the house of assessees and, quite naturally, the

EQUITIES FLARE UP

TEXTILES WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *7th May*

BOOM conditions prevailed on the Stock Exchange during the week under review. The bullish tone noted in the previous week gathered fresh momentum this week, particularly in the new account which opened on Monday last. Steel shares, except Indian Irons, textiles, rayons, engineerings and several miscellaneous counters came in for considerable support and gains were very marked, lifting them to new high levels for the year. There were no fresh developments during the week to inspire the market, but operators would appear to have placed their faith in the long-term outlook of the country's economy. Reports of continued improvement in the offtake of cloth, the consequent reduction in stocks with mills and traders, the good performance of rayon mills, the growth prospects of several industrial units infused fresh enthusiasm in operators. The setback in output of the T.I.S.Co. and I.I.S.Co. in the month of April did not have any effect on the market. The production of saleable steel by the T.I.S.Co. amounted to 93,300 tons, as against 100,700 tons in March. The fall in output of saleable steel by the I.I.S.Co. was much sharper, having dropped from 59,707 tons in March to 40,151 tons. No doubt, Indian Irons experienced heavy selling from Calcutta and in the past two days Bombay is reported to have absorbed all the offerings, but it could not do so today. There was, therefore, a slight setback in this counter today.

The market is keenly awaiting the terms of the proposed issue of new capital by the T.I.S.Co. The Committee of the Shareholders' Association has decided to request the management that the new capital issue should consist of ordinary, as well as preference shares and that 50 per cent. of the new capital should be in ordinary shares and the balance in preference.

Tata Ordinaries jumped from Rs. 181.75 to Rs. 189.75 today. After a dip to Rs. 188.50 the shares closed at Rs. 189. Indian Irons were less active on conflicting reports about the offer of a large block of the shares to the L.I.C. by some prominent brokers in Calcutta. However, they crept up from Rs. 24.32 to Rs. 24.84, before closing at Rs. 24.68.

Textiles provided the lead to the market this week and gains were large and widespread. Bombay Dyeings advanced from Rs. 62.50 *cum-div.* to Rs. 63.40 *ex-div.*, but finished at Rs. 62.80 *ex-div.* on profit-taking. On a *cum-div.* basis, this represented a gain of Rs. 2.05 over the week. Centurys were in the limelight with a sharp rally from Rs. 511.50 to Rs. 534.25. Today, however, they met with profit-taking and closed at Rs. 531. Kohinoors scored a gain of Rs. 13.75 to Rs. 272.25 and Central Indias Re. 1 to Rs. 105. Finlays were placed at Rs. 275 *ex-div.* (dividend: Rs. 16), as against Rs. 283 *cum-div.* Gokaks closed at Rs. 150 *ex-div.*, which on a *cum-div.* bas's showed a loss of Re. 1. Morarji Mills rose by Rs. 16.25 to Rs. 225, and Shree Niwas Cottons by Rs. 13 to Rs. 176. Khataus provided an exception with a loss of Rs. 10 over the week at Rs. 225. Simplex put on Rs. 6 to Rs. 186, Standards Rs. 12.50 to Rs. 520 and Svadeshis Rs. 3 to Rs. 229.50. At the *ex-div.* rate of Rs. 415, Swans recorded a gain of Rs. 40. Ahmedabad Advances moved up by Rs. 3 to Rs. 140.

After a long break, cement shares came to the forefront, A.C.C. providing the lead, with a sharp rise of Rs. 6.75 to Rs. 156.50. Digvijays also shaped well with a gain of Rs. 6.50 at Rs. 151. Orissa Cements put on 36 nP to Rs. 14.56 and Jaipur Udyogs 24 nP to Rs. 11.12. Sugar shares moved in consonance with the general trend, but met with heavy profit-taking at higher levels. Belapurs, for instance, picked up from Rs. 309 to Rs. 317 before giving way to Rs. 314. Phaltans put on Re. 1.50 to Rs. 168.50, Changdeos Re. 1 to Rs. 30 and Bhopals 44 nP to Rs. 24.32. Walchandnagars were done at Rs. 302.50 *ex-div.*, as against Rs. 322.50 *cum-div.* (dividend: Rs. 21). Maharashtra Sugars continued to be in favour and rose by Rs. 5 to Rs. 231. Ravalgaons were picked up Rs. 6.50 higher at Rs. 130.50.

In the engineering and mining group, Alcocks provided a bright feature with a rise of Rs. 18 to Rs. 298. Tata Locomotives crossed on Tuesday last the Rs. 200-mark and touched Rs. 200.50. Profit-taking at this level, however, brought them down to Rs. 197.50 at the close today. Larsen and Toubros were in keen demand and improved by 72 nP to Rs. 24.68, while Mahindras moved down by Re. 1.04 to Rs. 23.72. Brady Engineerings were marked up by Rs. 4 to Rs. 60. Kirloskar Oils, however, lost 52 nP to Rs. 19.48. Shivrajpurs gave way from Rs. 103.50 to Rs. 100, while Indian Coppers gained 6 nP to Rs. 4.34.

Shipping shares were dull. Scindias moved between Rs. 18.64 and Rs. 17.96 before closing at Rs. 18.28. Great Easterns were a shade quiet at Rs. 23.12. In the automobile group, while Hindustan Motors picked up 12 nP to Rs. 9.20, Premier Automobiles lost Rs. 3 to Rs. 115 *ex-div.* (dividend: Rs. 4).

In the miscellaneous section, Bombay Burmahs (old) were a bright feature with a rise from Rs. 520.50 to Rs. 551.50. Towards the close, however, they reacted to Rs. 545.50. The partly-paids gained Rs. 7 over the week to Rs. 139. National Rayons shot up from Rs. 290.25 to Rs. 309, before reacting to Rs. 304 at the close. Gwalior Rayons rose by 80 nP to Rs. 18.96. Tata Chemicals were just steady at Rs. 16.72, while Tata Oils were a shade quiet at Rs. 52.30. Amar Dyes rallied from Rs. 150 to Rs. 172 and Dhrangadhras from Rs. 119 to Rs. 122. Poly Chems gathered Rs. 4.50 to Rs. 90. Greaves Cottons had business Rs. 6.50 higher at Rs. 128. Indian Dyestuffs suffered a reaction from Rs. 775 to Rs. 720. West Coast Papers advanced by Rs. 7 to Rs. 137, Wimcos by Rs. 4.50 to Rs. 217.50 and Ceat Tyres by Rs. 17 to Rs. 140.

* * * *

Calcutta Stock Exchange

CALCUTTA, *5th May*

Buoyant conditions prevailed on the Calcutta Stock Exchange during the week under review due to speculative manipulations encouraged by anticipations of the L.I.C's imminent entry into the market. Investment interest was, however, limited. The volume of business was low compared to the rise in prices. There were conflicting rumours about the intentions of the L.I.C. Investment Committee; at one stage, it was believed that the L.I.C. would soon purchase about Rs. 5 crores worth of shares. The report that the Corporation would not now enter the share market, in view of its need to mobilise resources for Government loans, which would soon be floated, followed the Investment Committee's meeting last week in Bombay. These reports apart, it is common knowledge that the Corporation's interest in Calcutta's engineering concerns is lively. During the week under review speculative Indian Irons were subjected to wide fluctuations. A huge parcel of Indian Irons was offered to the L.I.C., but a Bombay report indicated acceptance of the offer only in part yesterday, following which a fractional recovery in Indian Irons was recorded. Also, it was known now that April output in I.I.S.Co. was lower. Those who had bought other popular scrips at hardening rates earlier in the week for offering to the L.I.C. were disappointed. A cause for the paucity of genuine buying interest was tightness in the money market, and expectations of a series of imminent rights issue for which funds were being kept apart.

Sectionwise, coals were in the limelight, following the possibility of India securing a large order for metallurgical coal from Japan. More transactions took place in textiles following the Union Commerce Minister's view that the cloth crisis in the country was over. Cloth export was improving, as also offtake for internal consumption. Jutes provided some good features on interested buying and sugars came to the forefront on account of expected benefit from alcohol plan. Following more releases of satisfactory corporate results, miscellaneous industrials attracted considerable attention.

* * * *

Madras Stock Exchange

MADRAS, *5th May*

Buying enquiry in the share market was of a selective nature during the week under review. This was so because there was no fresh encouraging development to enthuse much interest among operators. Besides, there was a growing realisation that current level of prices for equities was high and that it would be risky to make fresh investments at these levels. Turnover, as a consequence, was less as compared with the preceding week and values moved narrowly, the general tendency being upward. The undertone of the market was steady.

A feature of trading in the planting section was the fairly sizable absorption of low-priced shares. Investors noted that the present prices of tea were higher by about 25 nP per lb. as compared with those obtaining at this time last year. Sugar shares attracted good support induced by expectations of better price realisations for sugar in the current season due to lower production and enlarged demand. Barring a few scrips which forged ahead on excellent investment buying, textiles were hesitant at higher levels due to profit-taking and lack of follow-up support.

Among tea shares, Devasholas were keenly bid, the quotation spurting by Re. 1.25 to Rs. 28.25. United Nilgiris picked up 37 nP to Rs. 20.12. Kil Kotagiris hardened by 10 nP to Rs. 8.45 *ex-div.*, Chenbras by 8 nP to Rs. 4.36, Periakaramalais by 4 nP to Rs. 4.33. Chandramalias and Kalasas gathered 3 nP each to Rs. 3.17 and Rs. 4.05, respectively. Arthalas were dull at Rs. 4. The Company is offering 20,000 6 per cent. tax-free cumulative preference shares of Rs. 10 each and 60,000 ordinary shares of Rs. 5 each to the shareholders as on 31st March 1959 in equal proportion to their existing holdings. Coffee shares changed hands at higher prices, Amalgamateds advancing by Re. 1.25 to Rs. 15, Rajendras by 50 nP to Rs. 14.50, Coffee Lands by 30 nP to Rs. 24, Kumergodes by 25 nP to Rs. 6.10 and Cowcoodys by 5 nP to Rs. 7.20. Savamalais, however, dropped 8 nP to Rs. 4 *cum-div.* The Directors of the Company have maintained the dividend for the year ended November 1958 at the previous year's level of 12½ per cent. In the rubber group, Malabar Industrials strengthened by 56 nP to Rs. 16.06 and Peninsulars by 50 nP to Rs. 22. Thirumbadis rose by 13 nP to Rs. 2.02, Kailas by 10 nP to Rs. 5.20, and Highlands by 8 nP to Rs. 12. Nenmenys were unchanged at Rs. 16 *cum-div.*, despite the announcement of higher dividend (15 per cent.) for the year 1958, as against 7½ per cent. for 1957. Udayagiris were also unchanged at Rs. 11.15 *cum-div.* The decision of the Directors to pay a higher dividend of 7½ per cent. for 1958, as against 6 per cent. for 1957, had no effect.

A few select textile shares were very well favoured and handsome gains were recorded. The following are today's closing rates for these, the figures in brackets showing the net gains over the week:

Coimbatore Pioneer Rs. 285 *cum-div.* (+Rs. 15); Anglo-French Rs. 90 *cum-div.* (+Rs. 11); Dhanalakshmi Rs. 196 (+Rs. 6); Balarama Varma Rs. 95 *cum-div.* (+Rs. 6); Virudhunagar Rs. 39 (+Rs. 2.50); Balasubramania Rs. 54.75 (+Rs. 2.25); Radhakrishna Rs. 132 (+Re. 1); Loyal Rs. 32.25 (+25 nP).

Bangalore Woollens were done at Rs. 174 *ex-div.*, as against Rs. 179 *cum-div.*, and Buckinghams at Rs. 181 *ex-div.*, as against Rs. 185 *cum-div.* Metturs encountered selling pressure and fell by Rs. 7 to Rs. 396. Lakshmis dropped Rs. 3.50 to Rs. 122.50, Ranga Vilas Rs. 2.50 to Rs. 56.50 and Rajapalayams Rs. 2 to Rs. 123.

Sugar shares, as already stated, attracted good support. Kirlampudis improved by 50 nP to Rs. 52.50. E.I.D's hardened by a like amount to Rs. 38.25. Deccans put on 20 nP to Rs. 11.95. Travancores gathered 15 nP to Rs. 12.10 and Indias 10 nP to Rs. 13.10 *cum-div.* Andhras were done at Rs. 21 *ex-div.*, as against Rs. 22.50 *cum-div.*

In the miscellaneous section, Mysore Electrical Industries provided the highest spot, the quotation rallying from Rs. 118 to Rs. 125. Textools climbed up by Rs. 4 to Rs. 189. W. I. Plywoods advanced by a rupee to Rs. 159. Andhra Scientifics and Orissa Cements improved by 25 nP each, the former to Rs. 6.25 and the latter to Rs. 14.40.

The Dunlop Rubber Co., Ltd., London, has earned a net profit (after taxation) of £3,567,000 for the year 1958. This represents an increase of £550,000 over that for the previous year. The Directors have raised the allocation to the general reserve from £1 million to £1.1 million. After paying preference dividends amounting to £456,000 (as against £451,000), the distribution on ordinary shares is being raised from 14 per cent. to 16¼ per cent., leaving to be carried forward a sum of £1,525,000, including £1,509,000 brought in.

FOR EXPORTERS ONLY

APPLICATIONS from exporters are invited for the appointment of "Sole Export Agents", to export our famous, perfumed, "LATA AGARBATTI" to different ports of East and West. Appointments are to be made immediately, as our improved quality goods have earned a good name in most of the foreign countries and are in great demand.

THE ADARSHA CHEMICAL WORKS

13, Ash Lane, Dadar, BOMBAY 28.

NEWS IN BRIEF

AN official resolution seeking to extend the existing convention about the railways' contribution to the general revenue up to the end of March 1961 has been adopted by the Lok Sabha.

The Union Minister for Industry, Mr. Manubhai Shah, stated in the Lok Sabha the other day that the proposed aluminium factory in Uttar Pradesh was likely to go into production by the second year of the third Plan.

In its sixtieth report, the Estimates Committee of the Lok Sabha has recommended reconsideration of its earlier proposal to commence the Government's fiscal year from 1st October, instead of from 1st April as at present.

The Union Minister for Food and Agriculture disclosed in the Lok Sabha the other day that it was proposed to experiment with the Chinese method of paddy cultivation at 31 centres all over the country in the forthcoming *kharif* season.

That there is good scope for setting up bamboo paper mills in the States of Assam, Mysore, Madras, Bombay and Kerala is the view of the Raw Materials Committee of the panel for the pulp and paper industry, expressed in its report to the Lok Sabha this year.

The Government of Uttar Pradesh has decided to impose a ceiling of 40 acres on the present holdings of land of average quality for a family of upto five persons. Additional land will, however, be allowed up to 80 acres for bigger families with eight or more members.

Established importers of sheet and plate glass will be granted import licences up to a quota of 5 per cent. during the current half-year April-September 1959. The quota licences will be valid only for import of wired glass, figured glass, welding glass, opaque glass and all other types of plate glass (other than laminated type safety glass).

The U.N. Special Fund has decided to establish a vocational training institute in India to turn out 800 craftsmen a year. The Fund will arrange to send experts to India to train instructors and provide necessary equipment. The aid from the Fund will amount to Rs. 42.5 lakhs. The Government of India will contribute about Rs. 1 crore towards the cost of the project.

The Forest Enquiry Committee, constituted by the Government of Orissa, has recommended that the State should take over the management of all private forests. It has also suggested immediate extension of the Indian Forest Act 1927 to the ex-*zamindari* forests and avoidance of dual control over the management of forests by entrusting management only to the Forest Department.

The Andhra Pradesh Government has approached the Centre to issue an order prohibiting the export of paddy from the State to help stabilise prices. Meanwhile, the Government has decided to purchase a sizable quantity of rice from licensed dealers in the State to keep it as a buffer stock for distribution through fair price shops during the lean months of the year.

The work on the establishment of a teleprinter factory in the public sector is expected to be commenced according to Mr. S. K. Patil, probably within a year. The proposed factory will have an annual capacity of 1,000 units. Actual production in the initial stages will be 500 teleprinters annually. There are five prospective collaborating firms, one each from W. Germany, the U.K., Italy, Japan and the U.S.

The Hindustan Aircraft Limited, Bangalore, made a profit of Rs. 34.16 lakhs in 1957-58. Its sales turnover, including supplementary claims, during the year amounted to *Rs. 608.24 lakhs, as against* Rs. 504.98 lakhs in the previous year. The Company's rail coach section has now switched over to the manufacture of integral type coaches similar to those manufactured in the Integral Coach Factory at Perambur.

An agreement has been signed between the Neyveli Lignite Corporation and the Technoexport of the U.S.S.R. for the supply of machinery, equipment and technical services to the construction of the Neyveli Thermal Power Station based on lignite. The total cost of machinery and equipment to be supplied under the agreement will be met out of the 500-million rouble credit granted by the U.S.S.R. under the Indo-Soviet agreement of November 1957.

It has been proposed by the West Bengal Government to set up a plant to manufacture lightweight-aggregate, a building material. This material is expected to replace stone-aggregate or gravel, which is now being transported to Calcutta from a distance of over 100 miles. It can be produced from the silt accumulated at the Palta waterworks. The use of this new material, it is said, will reduce the expenses of building construction and give greater thermal and acoustic comfort to houses.

There are 1,001 Soviet experts employed in the Bhilai steel plant. The monthly salaries of these experts are: one Chief Engineer Rs. 4,500; 35 leading specialists Rs. 2,850 each; 123 specialists Rs. 2,400; 214 technicians and leading foremen Rs. 2,200; 53 interpreters Rs. 1,950; 107 foremen and adjusters Rs. 1,800; 468 other technicians Rs. 1,500. Besides these experts, there are 66 Soviet experts acting as Consulting Engineers and they are paid by the U.S.S.R. Government. The duration of stay of these various experts ranges from 6 to 36 months.

A scheme for integrated storage development is being worked out by the Central Warehousing Corporation. The scheme envisages co-ordinated expansion of storage facilities all over the country. Under the existing arrangement, the storage accommodation created by the Corporation is being utilised by agricultural products other than foodgrains, while the Food Department has constructed its own godowns for storing grains. The Corporation which has been transferred from the Agriculture to the Food Ministry, has also plans to establish eight Central godowns in the various States during the current year (1959-60).

The desirability of establishing a super-island port in the south of Calcutta at a cost of about Rs. 100 crores has been suggested by Mr. F. Posthuma, Deputy Director of the Rotterdam port, in his report submitted to the Central Government. Another suggestion put forward by him relates to deep dredging of the Hooghly, despite its high cost, with a view to saving the Calcutta port from silting. The Ganga barrage, according to Mr. Posthuma, is of doubtful value in realising this object. On the establishment of an auxiliary port near Calcutta, he is said to have approved of the original site, with a proviso that, prior to the development of the port, the sandbar between Calcutta and the site should be dredged. He has not favoured dredging operations at Bombay port, because of their high cost. Nor has he agreed to developing Bombay as a naval base. He has not considered Paradeep for possible development as a major port.

* * * *

From Abroad

The U.S. has assured Australia that it does not propose at present to expand its surplus food and fibre disposals programme.

The index of industrial production in the U.K. (base: 1954=100) during March was 107-108, as against 110 in February and 108 in January.

A $60-million project to make Toronto the largest inland seaport in Canada is under way. The completion of the whole project is expected to take 25 years.

In an endeavour to improve the standard of sheep farming in Kenya, the Farmers' Association there has imported more than 1,300 sheep, costing almost £70,000, from New Zealand.

More than 7.3 million gross tons of ships—7.3 per cent. of the world's merchant fleet—were laid up at the end of 1958, as against just over 1.5 million tons a year before, according to the Netherlands Shipowners' Association.

The next meeting of the G.A.T.T. organisation will be opening at Geneva on the 11th inst. One of the issues to be considered at the meeting relates to the application for membership filed by Israel.

Vickers-Armstrongs (Engineers) Ltd. of the U.K. have signed a £2.2-million contract with the U.S.S.R. for the supply of a chemical plant. The construction of the plant is expected to be completed by the end of next year.

The Pakistan Government has decided to implement family planning vigorously, on a nation-wide scale. The scheme will be enforced through the agency of 'Village Aid,' an organisation similar to the community projects in India.

Switzerland exported during the first quarter of 1959 about 7.3 million watches worth Sw. Fr. 212 million (£17.4 million), as against 7.9 million watches worth Sw. Fr. 247.9 million (£20.3 million) in the corresponding quarter of 1958.

The U.S. National Geographic Society has estimated that more than 200,000 chemical by-products are made from bituminous coal; some of these are used in aspirin, vanilla ice cream, explosives, moth balls and fingernail polish

Poland claims to possess the world's second richest sulphur ore deposits. In order to exploit these deposits, the country is developing its extracting and processing technology as swiftly as possible. The production of sulphur in the Paiseczno mines is expected to be 100,000 tons in 1959 and 2 million tons by 1965.

A new world development corporation which would sell some $15,000 million worth of stock to the American public for investment overseas has been proposed at Washington by two noted economists, Benjamin Javits and Leon H. Keyserling. The authors of the plan propose to ask the U.S. Treasury to contribute $2,000 million to get the organisation launched.

India was the biggest customer for British aircraft and aircraft parts during the first quarter of 1959, with orders valued at about £3.8 million. Argentina stood second (£2.9 million) followed by W. Germany (£2.5 million) and the U.S. (£1.6 million). The total U.K. exports of aircrafts at £41 million was a record for any quarter and represented an annual rate of £164 million, as against last year's record of £154 million.

The index of business turnover in the U.K. (base 1950=100) for the first quarter of this year was higher at 169, as compared with 160 for the previous quarter and 161 for the corresponding quarter of 1958. The index had shown a gradual fall throughout 1958, the actual decline being from 161 in the first quarter to 151 in the third quarter. Although it recovered to 160 in the fourth quarter, the average for the year as a whole was only 158.

The U.K. Export Credits Guarantee Department has decided to provide new facilities. One such facility relates to the offer of a 5 per cent. rebate on premiums to existing policyholders who cover their exports of commodities, consumer goods or production like engineering goods on a three-year basis, as against the present 12 months' scheme. The rebate will, however, be lower at 2½ per cent. for new policyholders and those with less than three years' continuous E.C.G.D. cover.

The view that West Germany has not set a good example by imposing a consumer tax on tea and coffee to compensate for the loss of revenue due to the lowering of tariffs in the Common Market has been expressed by the Chambers of Commerce Federation, Bonn. The Federation has urged that a watchful eye will have to be kept to see that an effective Common Market is not prevented by the erection of internal tariff walls behind the external tariff walls now being broken down.

The number of cartels in W. Germany now is 41, as compared with 1,600 and 2,800 in the Netherlands and in the U.K., respectively, according to the 1958 report of the Federal Cartel Office. Of the total of 41, 27 cartels existed already previous to the enactment of the 1957 Federal Law Against Restraints of Competition (Cartel Law), which generally outlaws cartels with only few exceptions such as *rationalisation cartels* and cartels on general business conditions. Eighty-five cartel cases applied for were still pending at the end of 1958.

A group of British scientists is reported to have discovered a new source of cheap power for road and rail vehicles—a power plant (or fuel cell) which produces electricity directly from bottled hydrogen and oxygen. Electricity will be used at off-peak periods to generate hydrogen and oxygen by the electrolysis of water. The gases will then be bottled and fed later into fuel cells in rail cars and heavy vehicles which will convert the gases into electrical power. It may be possible for the vehicle to carry only a bottle of hydrogen, extracting its oxygen from the air.

The population of the U.S. will go up to about 260 million by 1980 and to 350 million by the year 2000, if the present rate of growth continues, according to a forecast by the U.S. Population Reference Bureau. The U.S. birth rate of 24.5 per 1,000 population in 1958 was 30 per cent. above the 1935-39 average. The survey reveals that improved health standards, which have decreased infant mortality by about 73 per cent. between 1915 and 1958, and raised average life expectancy for men and women from 47.3 years in 1900 to 69.5 years in 1955, have had a marked effect on population growth.

World production of rice (excluding China) in the current year is now estimated at a record 130 million tons (terms of paddy), as against 121.5 million tons for 1957-58, according to the Commonwealth Economic Committee. The final official estimate of rice crop in India for 1958-59 places the output at a record of 43.7 million tons (paddy), as compared with 36.5 million tons for 1957-58. The previous record total was 41.6 million tons touched in 1956-57. The area harvested in 1958-59 is estimated at 81.6 million acres, as compared with 79.0 million acres in the previous season. The crop in Pakistan, on the other hand, is reported to be substantially below that of 1957-58, the third official estimate being 11 million tons from 21.6 million acres. The output in Burma is now unofficially estimated at 6.5 million tons, as against 5.1 million tons in 1957-58. The planted area increased from 10.2 million acres to 10.9 million acres, and favourable climatic conditions resulted in a high yield per acre. In Malaya, unofficial reports indicate that 915,000 acres had been planted with rice by the end of 1958, the total planted acreage being estimated for 1958-59 at 936,000, as compared with the previous year's 901,000 acres.

PERSONAL

MR. H. C. Dasappa, M.P., has been appointed Chairman of the Estimates Committee of the Lok Sabha for the period 1959-60.

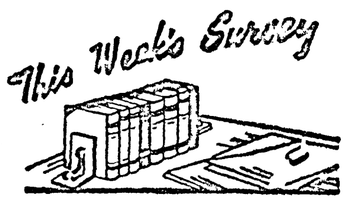
Mr. G. D. Birla left Bombay on 1st May 1959 on a two-month tour of Europe, the U.K. and the U.S.

Dr. Omar Hayat Malik has been appointed High Commissioner for Pakistan in India *vice* Mian Ziaud Din who has been recalled.

Mr. Kewal Kishan Aggarwal, Managing Director of *Messrs. Devidayal Cable Industries Private* Ltd., has left on a business tour of the U.K. and the U.S.

Mr. Manilal H. Patel, Vice-President of the East India Cotton Association Ltd., Bombay, left for the U.S.A. on the 2nd inst., to represent the Government of India at the eighteenth plenary meeting of the International Cotton Advisory Committee to be held at Washington from the 13th to 23rd inst.

Prof. J H. Richardson, British expert on Industrial Relations, whose services had been made available to India for six months under the Technical Assistance Programme of the *International Labour Organisation*, left New Delhi for Geneva on Wednesday this week. Prof. Richardson visited almost all industrial regions in the country and made a comprehensive survey of industrial relations and related problems in India. He has submitted a report to the Central Government.



ALCOHOL INDUSTRY

A DEPLORABLE feature of Governmental machinery is egregious delay in arriving at decisions on the findings of expert bodies. A typical instance of such delay is provided by the way in which the Union Government has acted upon the recommendations of the Committee on Power Alcohol (Chairman: Dr. A. Nagaraja Rao), set up in October 1955. Although this Committee submitted its report as early as in December 1956, it was not until March last year that the Government released for publication the recommendations of the Committee and the official decision on some of them. It, however, witheld its decisions on the more important subjects such as those relating to price, distribution, taxation, freight rates and rail transport facilities. It was only this week that it announced the decisions on these issues, that is, two years and four months after the Committee submitted its report!

The Government of India has accepted the Committee's suggestion to impose a ceiling on the basic ex-distillery price of alcohol—at 80 nP per gallon for alcohol of 99.5 per cent. strength and at 78 nP per gallon for alcohol of 96 per cent., besides an additional charge of 37 nP per gallon in both cases on account of average actual transport charges incurred on molasses. Even if the argument that a ceiling on alcohol price is required in order to encourage the use of alcohol as raw material is accepted, one wonders whether the rates of ceiling now accepted can be considered to be reasonable, in view of the all-round increase in the cost of production of almost everything consequent on the growth of inflationary pressure during the long interval that has lapsed. The Government has, therefore, done well to concede that the price range to be specified for alcohol of different strengths may be re-examined to see whether any revision or adjustments are necessary due to lapse of time and also on regional considerations.

The Government is, however, not justified in accepting the suggestion of the Committee that the reasonable ex-factory price per maund of molasses (the principal raw material for alcohol production) containing not less than 50 per cent. total sugar is As. 4, correspondingly lower prices being charged for molasses of lower sugar-content. This is certainly a very low price, considering the rigid cost structure from which the sugar industry is suffering at present, thanks to the heavy impact of taxes and high price of sugarcane. It will be necessary to fix a higher price for molasses, if the sugar mills are to reduce the price of sugar to some extent, as well as to ensure adequate and regular supplies of molasses to the alcohol distilleries.

The Government is also not justified in deciding to leave undisturbed the mechanism of control on molasses distribution already existing in some States. While few would dispute the need for some controls, the point is that, in a few States, especially in Bombay, the controls have been so vexatious and harsh as to put the sugar mills into utmost hardship and inconvenience. The storage of molasses accumulated with mills year after year has been a standing problem to the mills ever since the Prohibition Act came into force. The Government of India should have accepted the Committee's recommendation for Central control over molasses distribution, the assumption here being that the Centre would be more realistic than the States in evolving the control. An additional advantage of Central control is uniformity in the scheme of distribution throughout the country.

Similarly, the Government should have accepted the Commitee's recommendation to exercise Central control over the distribution of alcohol. By doing so, it would have ensured the availability of adequate quantities of alcohol for industries deserving encouragement. The Government has not given any reason as to why it feels that the power to regulate industrial alcohol distribution should rest with the State Governments and that the tax on alcohol need not be taken as a Central item for the present. The system of taxation, including the provision for supply of tax-free alcohol for the specified categories of industries, it is said, has been left to be implemented by the State Governments under the State Excise Acts.

Three notable suggestions of the Committee have been accepted by the Government of India. First, the minimum annual capacity for a distillery (power alcohol or industrial alcohol) should be one million gallons, although units of smaller capacities can be permitted in certain circumstances. Secondly, an adequate number of tank wagons for transport of both alcohol and molasses must be made available. Thirdly, a standing advisory committee on denaturants should be constituted and entrusted with the task of enlarging or altering the list of special denaturants for alcohol intended for different industrial uses. On the question of freight rates on alcohol, the Government has agreed to extend uniformly reduced freight only to ethyl alcohol meant for large-scale industrial uses. In its opinion, such a concession need not be given to pure forms of ethyl alcohol meant primarily for potable purposes. This decision is, of course, in keeping with the inflexible policy of Prohibition which has been accepted even by the Communist party.

POLYTHENE PLANT

The latest in a series of Indo-British collaboration in the industrial field launched by Imperial Chemical Industries is the establishment of a new polythene plant at Rishra, West Bengal. It was only six months ago that President Dr. Rajendra Prasad opened a factory at Gomia, in Bihar, for the manufacture of commercial blasting explosives, which was a joint venture of I.C.I. and the Government of India. Completion of another project was announced last month when Atic Industries Ltd., a joint company of Atul Products Ltd., and I.C.I., opened a major extension to their dyestuffs factory at Bulsar.

INDUSTRIALIST WITH A SECRET. For him the wider vision, the weighty decisions. And still, despite the tension and pace, he's always alert and active—with a secret store of vitality.

For the Secret of the successful Industrialist

Please see announcement opposite

The Rishra plant, which was formally declared open by Mr. Morarji Desai, Union Minister for Finance, on the 2nd inst., is India's first polythene plant. Built by the Alkali and Chemical Corporation of India Ltd., a subsidiary of I.C.I., at a cost of Rs. 4 crores, the plant has an annual licensed capacity of 3,500 tons of Alkathene, the I.C.I. brand of polythene, and will result in a saving of foreign exchange to the tune of Rs. 1.5 crore to begin with.

Polythene is a versatile plastic, having a unique combination of various qualities. It is tough, flexible even at low temperatures, does not corrode, is not affected by most chemicals and has excellent electrical insulating qualities. Polythene is put to many uses in industry, agriculture and the home, the largest single use being for film. Polythene film is cheap, flexible, transparent and moisture-proof and is used for packing many types of goods from food to fertilisers. The long and steadily growing list of other articles made of polythene ranges from cable insulation and unbreakable industrial carboys to water bottles, buckets, bowls and toys.

The main raw material for the polythene plant is ethyl alcohol produced from molasses by distilleries in Bihar and Uttar Pradesh. The alcohol is dehydrated in a converter to produce ethylene and this gas is purified before being compressed and polymerised. The polythene is then separated and cut into granules, which are tested and blended before being packed and despatched.

The manufacture of polythene granules is a large-scale process, but the conversion of granules into industrial and commercial goods is a small-scale industry. More than 200 concerns are directly engaged in making polythene products and about one-third of these concerns are of cottage industry type. A large percentage of the 15,000 people employed in the plastic conversion industry, as a whole, are handling polythene and the availability of indigenous raw materials will give increased opportunities for employment in small-scale and cottage industries.

There seems to be an assured future for polythene manufacture in India. Since polythene is finding a variety of industrial and consumer uses, the demand is increasing rapidly. In 1952, total Indian consumption of polythene amounted to a mere 100 tons. In 1958, it had increased to 2,100 tons—a twentyfold increase in about six years. Demand for polythene is still growing at a rapid pace.

TOO MANY HOLIDAYS

The non-official resolution introduced in the Rajya Sabha by Dr. P. J. Thomas on the 1st inst. has served to focus attention on the need for introducing an element of planning and sound rationalism into the scheme of work and leisure in the country. It is a well-known fact that, of all the modern countries in the world, India has perhaps the largest number of holidays. In addition to Sundays, there are numerous national and religious holidays and casual holidays declared occasionally, all of which add up to an impressive total. Dr. Thomas pointed out that Central Government employees in India were entitled to take off for 35 per cent. of the days in a year, while, in the Punjab, Government servants worked only for 41 per cent. of the days in a year, assuming that they took all the leave they were entitled to. Banks, which were the very life-blood of economic activity, had on an average, 23 holidays in India, as compared with seven or eight in most countries of the world. This is, of course, in addition to privilege leave, casual leave and sick leave.

Holidays in other parts of the world, as already stated, are far less in number. For instance, an analysis of the provisions in respect of paid vacations and holidays applying in six broad industrial sectors in 17 labour markets areas made by the Bureau of Labour Statistics of the U.S. Department of Labour revealed that, in the four north-east areas, where the most liberal holiday provisions were in force, the majority of office workers received 11 days and the majority of the plant workers in three of the areas received eight paid holidays. More than half of the office workers in three other areas received an equivalent of eight holidays and an equivalent of seven holidays was given in still nine other areas. A majority of plant workers received seven holidays in all but six areas. In the U.K., the number of paid holidays was eight and the majority of workers in Canada enjoyed the same numbers of holidays.

The number of paid holidays for factory workers in India is by no means large; it is no more than ten or eleven, depending upon the practice of State Governments. Only, they occur in such a way that they cause considerable inconvenience to certain types of industries. The privilege of enjoying an unduly large number of holidays is confined to the employees of Governments, banks and commercial establishments. It is strange that there should be such gross discrimination against factory workers in a country governed by socialists. The solution to this discrimination does not lie in giving the same number of paid holidays to industrial workers as in the case of non-factory workers, but in whittling down the privilege of the latter. It may be noted that there is hardly any such discrimination in the so-called capitalist countries of the West.

The large number of public holidays at present enjoyed by non-factory workers in India, according to Dr. Thomas, is a hangover of the past. India, which desires rapid economic development, cannot afford to have many holidays. The case for a reduction in the number of holidays is not one based on economic grounds alone. It is sometimes argued that the conditions in India are so different from those in the West that it is not quite appropriate to compare the practice in other countries with that in India. It is pointed out that conditions of work and living, as also of climate, in Europe or America, are so different that a working man in these countries can manage, without injury to his health, with a relatively small number of holidays. While there is an element of truth in this argument, none will seriously contend that the large number of holidays for non-factory workers admits of no reduction at all. These holidays are so spread over the whole year that it is doubtful whether, from the health point of view, they do any substantial good to those enjoying the holidays. On the other hand, their scattered nature results in frequent and irritating interruption of work. There is no doubt that a holiday for, say, seven days given at a stretch has more to commend itself from the point of view of health and recreation than holidays three times that number spread over a whole year. In the former case, the employee has the opportunity to forget about his work entirely, get away from the place of work, spend the days as he likes and return refreshed, with a feeling of having really enjoyed a sojourn. If this is not feasible, apart from Sundays and some of the most important national holidays like Republic Day and Independence Day, a limit should be placed at least to the number of religious holidays that could be availed of by any one person in a year. The choice of these holidays could be left to the individual employee.

The credit for drawing up a new, comprehensive scheme which seeks to rationalise the structure of allotment of work and leisure to Government employees—we presume that this applies to employees of all commercial establishments too—goes to the Punjab Government. The scheme has been evolved in accordance with the recommendations of the Resources and Retrenchment Committee appointed in 1957. It makes drastic changes in the number and incidence of public holidays, the rules for the entitlement of leave and the spreadover of daily working hours. The State Government employees at present enjoy 97 paid holidays, inclusive of Sundays. In addition, they are entitled to casual leave for 20 days and earned leave for 33 days per annum. The average total number of days without work thus add up to 150 in the case of an employee who takes full advantage of the benefits. Under the new scheme, which will come into force on 1st July 1959, the State Government offices will observe only three national holidays in a year, namely, Republic Day, Independence Day and Mahatma Gandhi's birthday, and will remain closed on all Sundays throughout the year and on Saturdays too during the eight months from September to April. In addition, all employees will be entitled to six full holidays or 12 half holidays of their individual choice. The schedule and the number of working hours have also been changed. While from September to April (winter months) the offices will work from 9 a.m. to 5-30 p.m., with a ½-hour break, from May to August (summer), the working hours will be 7 a.m. to 1-30 p.m., with a ½-hour break. The overall increase in working hours a year as a result of these changes will be from 1,348 to 1,710, an increase of approximately 25 per cent.

The scheme would appear to have been well received on the whole. The novel experiment will surely be watched with interest by the Centre and other States. In fact, the Union Government spokesman has already stated that, after seeing the results of the Punjab's new scheme, the Government of India itself would take the initiative in this matter. It was on this ground that he requested Dr. P. J. Thomas not to press his resolution.

EXPORT PROMOTION

India's export performance continues to be disquieting, notwithstanding the vigorous export drive and the boost given by the Government in the form of so-called incentives. The value of goods and commodities actually shipped during the first two months of the current calendar year—usually good export months—aggregated no more than Rs. 88 crores, which compares unfavourably with Rs. 96.70 crores and Rs. 109.71 crores in the corresponding periods of 1958 and 1957, respectively. During the first quarter of 1958, it may be noted, the economic recession in the U.S. was at its height and Western Europe also was passing through a downward phase. But, in the first quarter of this year, economic conditions in these parts of the world have been much better. And yet India's exports have failed to maintain even the levels achieved in the initial months of last year.

It is true that the Communist countries have emerged as formidable competitors in world markets and that Pakistan is offering stiff competition in both jute and cotton textiles. But, at the same time, it is also true that Indian economy is becoming a high-cost one, with the result that its commodities and manufactures are finding it more and more difficult to compete effectively in international markets. To take cotton textiles, sugar and cement. The cost of production of these items is increasingly out of line with costs abroad. This aspect was impressively brought out by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, in his inaugural speech at the sixth annual general meeting of the Indian Council of Foreign Trade in Bombay last week. Mr. Mehta certainly struck a note of realism when he declared that "the basic problem is to make our products competitive so as to ensure exports without continuous spoon-feeding." And he put forward the following few suggestions:

1. Various issues relating to taxation, productivity, managements and labour efficiency should be examined afresh in order to see how the country can undermine industrial plants and improve their working.

2. Export trade must be diversified further. There are possibilities of exporting iron ore, pig iron and cement in the near future.

3. In considering non-traditional items of exports, the country should also take into account such invisible exports as banking, shipping and insurance.

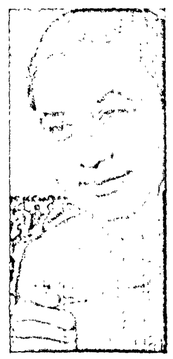
4. The possibilities of developing a common regional market in South Asia must be explored.

While the first three suggestions are quite pertinent and constructive, the fourth one is very woolly. Even if such a move is desirable, its feasibility is not apparent. India's neighbours are undoubtedly the natural markets for a variety of goods which it is manufacturing and proposes to manufacture in the coming months. There is also scope for obtaining a large number of raw materials required by it. But there is the big question mark whether, as a result of the several basic differences in the political and economic ideologies among the countries of Asia, adequate and proper co-operation will be forthcoming from these countries. There is, however, nothing to be lost by examining the proposition.

Mr. Mehta was quite right when he urged concentration of efforts on developing trade rather than depend increasingly on aid. The best ingredient of the economic development of India is, as Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, stated, while inaugurating the All-India Exporters' Chamber at Bombay on Sunday this week, the export earning. Frankly admitting that the results of the several incentives given and other steps taken by the Government to boost exports had not been as satisfactory as the Government had expected, Mr. Shastri emphasised that the wherewithals were to be found in four important measures: (1) Increase in production of primary and processed commodities with a view to augmenting their export potential; (2) commensurate reduction of home consumption of exportable commodities to a reasonable extent; (3) export of new types of commodities; and (4) improvement of the value of exportable goods through such known media as standardisation, sorting, blending and packing.

Mr. Shastri commended the merger of the All-India Exporters Association and the Africa and Overseas Exporters Chamber into one single organisation under the name of All-India Exporters' Chamber and welcomed the Chamber's proposal to set up an Export Corporation with a capital of Rs. 50 lakhs. It may be noted here that this Corporation will handle principally non-traditional items which have not so far figured prominently in the export trade or been handled by the traditional exporters and also to conduct the export trade generally with the Communist countries. Mr. Shastri agreed with the President of the Chamber, Mr. Naranji L. Kara, that the Government should render assistance to the Corporation so as to enable it to sell some products at bare cost price and added: "In this desire to sell goods abroad even at a sacrifice of profits, you are almost echoing my own sentiments. If your efforts for increasing exports would be on these lines—that is, export even without profit—it would be a bold and courageous venture, and I am sure you will deserve the assistance of all concerned."

The desire to sell abroad even at a sacrifice is certainly laudable, but one would ask: How long can this be done and who will foot the bill ultimately? Surely, one cannot go on exporting at a loss, for, if one were to do so indefinitely, one would become bankrupt very soon. At any rate, this is not the effective way in which the country can successfully weather the growing competition in world trade. What is urgently wanted is energetic action for raising the output of exportable goods, improving their quality and keeping down the cost of production. On its part, the newly formed Chamber should, as the Commerce and Industry Ministry aptly urged, pay attention to the export of quality goods by encouraging pre-inspection of goods before they are shipped and take advantage of the Government's export insurance scheme. It is gratifying to hear the Minister say that, if there is any deficiency in the scheme or the working of the Export Risks Insurance Corporation, he would be glad to know of it.



INDUSTRIALIST WITH A SECRET

Mr. X can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound restful *sleep*—in the soothing coolness of his 'Crystal' conditioned bedroom.

Keep Cool with a

Crystal trimline

ROOM AIR CONDITIONER

Only the 'Crystal' gives you all these advantages:
- Over one ton cooling capacity
- Protrusion of less than three inches into the room

FINANCE FOR INDUSTRIES

OFFICIAL REPLY TO MR. G. D. SOMANI'S QUERIES

From Our Special Correspondent

NEW DELHI, *5th May*

DELHI LETTER

TO three questions regarding finance for industry raised by Mr. G. D. Somani in Parliament's Informal Consultative Committee on Finance, the Ministry concerned has given detailed replies. The first question is whether the terms and conditions under which the Refinance Corporation for Industry (Private) Ltd. is working could not be relaxed and liberalised so as to ensure quicker utilisation of its resources for increasing industrial production. After listing the existing terms and conditions governing the Corporation's lending operations, the Finance Ministry's note says that it is too early to assess the work of the Corporation or make modifications in the pattern of its lending.

In his second question, Mr. Somani has asked for information as to whether margins for advances to the textile industry have been reduced by the commercial banks. He has also suggested that, if margins have not been reduced, banks should be asked to reduce them now and lend them more liberally to the industry. In its note clarifying the position, the Finance Ministry has given a statement, summarising the trends in bank advances to the textile industry and the trade, the indices of production, and stocks of yarn and cotton with the industry. It is seen from this statement that (i) the level of production in the industry has been somewhat low; (ii) the stocks of yarn and cloth with the industry have declined appreciably; and (iii) in spite of the trends indicated at (i) and (ii) above, advances to the mills have been more or less stationary, the decline, if any, being marginal, while advances to the trade have increased appreciably.

The facts disclosed in the statement, according to the Finance Ministry, indicate that the demand for assistance from banks to the textile mills may have declined in recent months. This conclusion is also supported by the fact that the advances actually drawn from the State Bank of India, by all the textile industries (including woollen textiles), in the country as a whole, as well as in Kanpur which was seriously affected by the slump, have been appreciably lower than the advances which were sanctioned by the State Bank. The following figures are given in this connection:

(In crores of rupees)

	To mills	*To the trade*
Total limits sanctioned by the State Bank of India at all its branches (as on 31st December 1958)	49.22	3.11
Total outstandings at all the branches (as on 31st December 1958) ...	26 26	1.57
Total limits sanctioned in the Kanpur area (as on 31st December 1958) ...	4.73	*Nil*
Total outstandings in the Kanpur area (as on 31st December 1958) ...	3.32	*Nil*

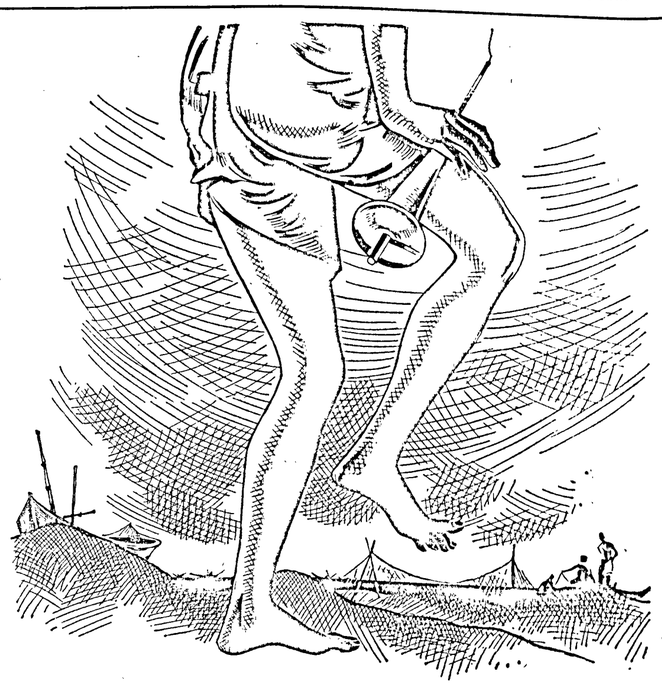
The note adds that, when a reduction in the margin for advances against textiles was brought into force by the State Bank in May 1958, and when the question was considered subsequently at a conference of the representatives of the leading scheduled banks in June 1958 with the Reserve Bank, it was contemplated that individual cases of hardship, if any, might be brought to the notice of the Reserve Bank or the Government of India for investigation, if necessary. No such case has, however, been reported to the Finance Ministry in the last few months.

The third question raised by Mr. Somani concerns the proposal for the establishment of a consortium of banks for financing medium-scale industries. In coming to the conclusion that there does not appear to be any need at the present stage for a consortium of banks, the Finance Ministry has clarified the position by a reference to the history of the proposal. The Shroff Committee on Finance for the Private Sector, the Ministry's note recalls, recommended in April 1954 the formation of such a consortium for the purpose of underwriting or investing in new issues of shares and debentures. It was contemplated that (i) the provisions of the Imperial Bank of India Act should be amended so as to permit that bank to invest in such shares and debentures of joint-stock companies; (ii) a consortium of banks and insurance companies should thereafter be formed under the leadership of the Imperial Bank, and (iii) banks should be encouraged to invest about 5 per cent. of their deposits in such shares and debentures.

These suggestions were examined further by a technical committee under the chairmanship of Mr. Handoo, the then Managing Director of the Imperial Bank. This Committee reported in October 1954. It envisaged, in addition to the amendment of the Imperial Bank of India Act referred to above, the formation of a consortium consisting of eight to ten members, restricted to leading banks and insurers under the leadership of the Imperial Bank, which would work as a voluntary organisation with no obligations on the part of any member. It was contemplated that the proposed consortium would consider, in the first instance, the question of underwriting or investing in the debentures of joint-stock companies.

Certain developments, continues the Finance Ministry's note, which were not contemplated either by the Shroff or the Handoo Committee, have taken place since October 1954 and have now to be taken into account. Life insurance has, for example, been nationalised, and the Life Insurance Corporation is in a position to underwrite or invest in the debentures and shares of companies within the limits laid down in the statutory rules which were issued in August 1958. The Industrial Credit and Investment Corporation of India is also now functioning, as also the Industrial Finance Corporation and the State Financial Corporations.

The matter has been recently re-examined by the Finance Ministry. So far as loans are concerned, in the opinion of the Ministry, the facilities now available to industry through the various agencies mentioned above, to which the Refinance Corporation has also been added, seem, by and large, to be adequate. As regards investment in shares, the Reserve Bank's general advice is that it is neither necessary nor desirable, in the existing circumstances, to induce or encourage banks to invest to a considerably larger extent in the debentures and shares of joint-stock companies. The nature and the extent of any such investment should primarily be for the banking companies themselves to consider, within the scope of the provisions applicable to them under the law.



a timeless craft

A common sight on many a sandy beach and village is this rustic man spinning yarn from a ball of cotton. He uses a simple implement, the 'thakli'. A flick of the fingers and round spins the 'thakli' while a practised hand gently draws out the fine thread. Flourishing together with this fine but primitive cottage craft, in India, is the giant modern textile industry. Today, there are more than 420 textile mills, in our country, with about 12 million running spindles. Texmaco, the manufacturer of the first ring spinning frame in India, accounts for nearly two million of these spindles. Aided by the world's best technical know-how, Texmaco is today equipped to manufacture and supply the entire range of spinning machinery for cotton and staple fibre.

Hirakud Power Station is protected with Shalimar Tarfelt

Project proofing with Shalimar TARFELT

Waterproofing is our business and has been so for several decades now. As a result, in every corner of India, you will find scores of buildings from thermal power stations to the shell arch roofed working bays of new and expanding industries, from public buildings, old and new, to vast labour colonies, all waterproofed by Shalimar Tarfelt—manufactured, applied and guaranteed by Shalimar Tar Products.

Over 12,000,000 sq. ft. of Shalimar water-proofing Tarfelt were supplied in one year to protect the roofs of India.

STATE BANK SUBSIDIARIES BILL GOES TO SELECT COMMITTEE

GOVERNMENT NOT IN FAVOUR OF MERGER

THE State Bank of India (Subsidiary Banks) Bill 1959, which was introduced in the Lok Sabha on 4th March last, came up for a brief discussion on 29th April, and was then referred to a joint select committee of both the Houses of Parliament. The Committee was requested to submit its report by the first day of the next session. The Bill, as was stated in our issue dated 25th April, provides for the formation of certain Government or Government-associated banks as subsidiaries of the State Bank of India and for the constitution, management and control of the subsidiary banks so formed and for matters connected therewith.

Moving the Bill for reference to the Select Committee, Dr. B. Gopala Reddi, Minister for Revenue and Civil Expenditure, traced the history of the measure and said that it followed the acceptance in principle by the Government of the recommendation of the Committee of Direction of the All-India Rural Credit Survey for the creation of "one strong, integrated, State-sponsored, State-partnered commercial banking institution, with an effective machinery of branches spread over the whole country (which was intended) to take over cash work from the non-banking treasuries and sub-treasuries, to provide vastly extended remittance facilities for co-operative and other banks and generally to follow a policy which would be in effective consonance with the objectives laid down by the Central Government and the Reserve Bank."

The Government's acceptance of the principle was announced by the Finance Minister in the course of a speech on economic policy generally on 20th December 1954. As a first step in implementation of this accepted principle, the Imperial Bank of India was nationalised and the State Bank of India was constituted on 1st July 1955. Subsequently, on 10th February 1958, the President announced, in the course of his address to the Houses of Parliament, that certain State-associated banks of intermediate size would be taken over and managed as subsidiaries of the State Bank. The present Bill seeks to give effect to this decision.

Anomalies and Difficulties

The banks, Dr. Reddi went on to say, could not, however, be taken over as subsidiaries without reconstituting them. The reconstitution could not, in turn, be done without removing certain anomalies and difficulties, except through legislation on the lines proposed. Explaining these anomalies and difficulties, Dr. Gopala Reddi said:

"The banks which are covered in the present Bill came into being on various dates between the years 1913 and 1950. They were, and to some extent continue to be, directly or indirectly helped by the State. The extent of State-association has, of course, varied from bank to bank, but it has in no case been so remote or negligible as to justify our leaving these banks to their own resources, without any attempt being made, on our part, to settle their future satisfactorily and in a reasonable manner."

"Only two of the eight banks which are proposed to be reconstituted, namely, the State Bank of Hyderabad and the Bank of Mysore, perform agency functions at certain treasuries as the regularly appointed agents of the Reserve Bank of India. At all other places in the area covered by respective banks, the treasury business of the Central and State Governments is either carried on departmentally, or has been temporarily entrusted to them and to some other institutions as a purely transitional arrangement.

"These temporary arrangements are obviously unsatisfactory. They have led, in effect, to a policy of inactivity in the former Part B State areas in the country. In these areas we have been unable, in consequence, to establish an adequate number of banking treasuries, small coin depots or currency chests, or to provide cheap remittance facilities, or even to open an adequate number of ordinary banking offices. The problem has become even more complicated and difficult, since the establishment of the State Bank, as the State Bank of India has been unable to expand in these areas, pending the taking over and reconstitution of the banks, while the banks themselves, in the existing conditions and pending such reconstitution, have not had the incentives, or the financial assistance and backing, which may be necessary for discharging effectively their role as regularly constituted State banks."

One of the important questions that had to be settled before undertaking the present legislation for reorganisation of the banks was whether the Government should exercise compulsion in this regard or leave the question to the considered decision of the institutions themselves. According to Dr. Reddi, the Government devoted a good deal of thought to this question and came to the conclusion that, "in a matter like this, compulsion is inappropriate and has to be ruled out." While unwilling to impose any decision on the banks, the Government considered it desirable to acquaint them with the various aspects of the problem and the several complicated issues which had risen or might arise out of this reorganisation. Accordingly, the Chairman of the State Bank of India was authorised to indicate, for the information of the banks concerned, the salient features of the proposed legislation and also to elucidate the points, if any, in respect of which information was desired.

Dr. Reddi claimed that the Government had made, on the whole, a fair and reasonable approach to what had become, over a period of some years, a rather complicated problem and that this approach had been justified by the results. Barring one bank, namely, the Bank of Rajasthan, all the other eight banks have expressed themselves as being in favour of the scheme of reconstitution. The Bank of Rajasthan has, according to the Minister, "found itself unable or unwilling to accept the terms and conditions which were envisaged by the Government for the reconstitution of these institutions." The Minister, it may be noted here, did not make any reference to the Bank of Baroda, which was also reported to have decided to opt out of the scheme. While the Government had not found it necessary to compel the Rajasthan Bank to fall in line with the others, Dr. Reddi announced that the extent to which the State was now associated with this bank would be reviewed in due course and it could not obviously be permitted to do the treasury functions.

Reconstitution

Of the eight banks to be taken over, five, which are incorporated under the Companies Act, and one, namely, the Bank of Patiala, which is at present functioning as a department of the State Government, will be re-established as statutory corporations under the present Bill and, in that capacity, they will replace and take over the business of the existing institutions. The remaining two banks, namely, the State Bank of Hyderabad and the State Bank of Saurashtra, are already incorporated under special laws. In the case of these two banks, appropriate changes are being made in the relevant Acts governing them, in order to ensure that the pattern of organisation and management in these two cases will, in future, be the same as in the case of the other six banks.

The business of the reconstituted banks as subsidiaries will be substantially the same as in the case of the other banks. In addition, they will have to perform other functions too. Referring to this important aspect of the reconstituted banks' business, Dr. Gopala Reddi observed:

"The work or progress of the reconstituted banks will not be judged in future with reference to the profits which they may be making, or the dividends which they may declare, but with reference to their ability to provide the basic services and facilities, which it is the function of a State Bank to provide, and which may not always be remunerative from a narrowly commercial point of view.

"It may be useful if I indicate very briefly the additional work which we expect the reconstituted banks to undertake from this point of view. Clause 36 of the Bill provides that all the reconstituted subsidiaries can be appointed as the agents of the State Bank of India for carrying on the work which may be entrusted to the State Bank by the Reserve Bank of India. The intention is that the necessary arrangements in this connection should be made, as soon as the subsidiary banks have been strengthened and reinforced. The banks will then draw up, and try to implement without avoidable delay, a vigorous branch expansion programme. We contemplate that at all their branches, the reconstituted institutions will undertake a variety of new services, such as the provision of strong-room and other safe deposit facilities, the collection and remittance of funds both under the Reserve Bank's scheme for remittance facilities and on their own initiative, the granting of loans to the co-operative movement and to small-scale industrial units, and the performance of such other functions, including agency functions for other institutions, as may be necessary in the public interest."

This developmental work will naturally cast an additional burden on these banks and may prove unremunerative for them. The necessary provision has been made in the Bill itself to compensate them for this loss.

Thus, as Dr. Reddi pointed out:

"Clause 48 of the Bill contemplates that subsidies will be paid by the State Bank of India to the new units after reconstitution, in order to facilitate the smooth and unhampered implementation of this development programme. The State Bank of India is also able to draw upon its Integration and Development Fund, which is intended specifically to finance additional and unremunerative expenditure of this kind. These resources of the State Bank, and the profits which it makes on its own shareholding in the subsidiary banks, will be available for the purpose of financing the subsidiaries, if necessary."

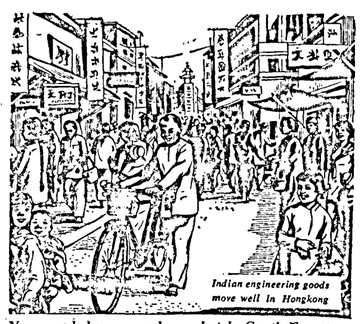
Merger Not Favoured

While a section of the public is opposed to this measure and wants the status quo to be maintained, a few others are in favour of merging the banks completely into the State Bank, instead of merely reconstituting them as the latter's subsidiaries. In fact, a demand was made in the House by a few members when the Bill was briefly discussed, that these banks should be integrated with the State Bank. Dr. Reddi himself disclosed that the associations and unions of the concerned employees had demanded that the scheme should be modified, so that the banks could be merged completely into the State Bank. In answer to these demands, Dr. Gopala Reddi quoted the objectives of the scheme and observed:

"Our scheme of reorganisation is based on the idea that nothing that is useful should be destroyed; and it is a necessary implication of this that no changes beyond those which are really needed should be made. By continuing the separate character of these eight institutions, we are helping them to maintain their existing contacts and traditions, preventing or moderating the impact of sudden changes in their working methods and policies, and are offering at the same time, adequate incentives for the banks themselves to concentrate intensively on the development of their own areas. We are also making it possible, by continuing the separate character of these institutions, for some prominent local persons to be associated with and to be interested in their development.

"It is not clear to me why we should be asked to discard a solution which has all these advantages, and adopt instead, the alternative of an irrevocable merger, which offers none of these advantages, and may add substantially to the cost of maintaining even existing banking facilities in the areas concerned; the merger of these institutions in the State Bank, instead of solving any of our problems, may only increase them, by adding a fresh and uncertain burden to those which the State Bank of India has already been called upon to bear."

In conclusion, Dr. Reddi said that the Government had taken this step only after very careful consideration and after being fully convinced that it offered the best solution in all circumstances.



Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need — jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

ANOTHER YEAR OF GROWTH FOR LLOYDS BANK

BUSINESS IN INDIA, HOWEVER, SHRINKS

THE past year proved to be a difficult one for the foreign banks operating in India. The contraction in India's foreign trade, a good part of which is financed by these banks, on account of the drastic restrictions on imports and the recession in the fortunes of export industries, such as tea, jute, cotton textiles, etc., the entry of State Trading Corporation in foreign trade and the increasing competition from domestic banks were the main factors that adversely affected the business of foreign banks. This trend is borne out by the drop in their credit portfolio from Rs. 197.74 crores to Rs. 164.06 crores, as well as in their deposits from Rs. 206.96 crores to Rs. 197.16 crores.

A typical instance of this experience of foreign banks is provided by the results of working of the Indian branches of Lloyds Bank Ltd. Their deposits, as at the close of 1958, show a fall of over Rs. 3 crores and their advances a decline of more than Rs. 4 crores. The profit and loss account, which is usually drawn for the twelve months ended October, discloses a shrinkage in profit from Rs. 43.06 lakhs to Rs. 28.56 lakhs, thus reversing the upward trend noted in the previous three years. It is even a fraction lower than that (Rs. 28.64 lakhs) earned in the year ended October 1956.

The income from interest and discount is more or less unchanged at Rs. 184.06 lakhs (the corresponding figure for the previous year being Rs. 183.73 lakhs), while that from commission, exchange and brokerage has fallen from Rs. 50.71 lakhs to Rs. 48.28 lakhs. The decline in income from the latter source has been made good by a profit of Rs. 2.84 lakhs earned on sale of investments, bullion, etc. Interest paid on deposits and borrowings is more or less maintained at Rs. 76.54 lakhs (as against Rs. 76.72 lakhs in 1956-57). Administrative expenses have, on the contrary, risen by Rs. 13.39 lakhs to Rs. 125.15 lakhs, of which salaries, allowances and provident fund alone account for an increase of Rs. 7.36 lakhs, at Rs. 93.43 lakhs.

The balance-sheet total at the end of December 1958 has declined by Rs. 6.45 crores to Rs. 49.16 crores. This is on top of a drop of Rs. 3.09 crores in 1957. The decline of Rs. 3.17 crores in deposits is in contrast to the rise of Rs. 3.96 crores recorded in the previous year, and has occurred mainly under short-term deposits and deposits at call from Rs. 5.83 crores to Rs. 3.19 crores and under current and other accounts from Rs. 22.01 crores to Rs. 19.81 crores. Fixed deposits, however, have gone up from Rs. 5.14 crores to Rs. 5.22 crores and savings bank deposits from Rs. 10.91 crores to Rs. 12.50 crores. Advances, which had dropped by Rs. 1.83 crores in 1957 to Rs. 29.01 crores, have further moved down to Rs. 24.78 crores, the lowest level since 1955. Of these, loans, cash credits and overdrafts show a fall from Rs. 26.91 crores to Rs. 22.40 crores, while bills purchased and discounted have recorded a slight increase from Rs. 2.10 crores to Rs. 2.39 crores. At Rs. 24.78 crores, the total advances of the Bank bear a ratio of 60.8 per cent., as against 66.1 per cent. a year before and the average of 83 per cent. for all foreign banks. Investments (at market value) have grown by Rs. 3.08 crores to Rs. 14.69 crores, while cash balances have shrunk by Rs. 2.05 crores to Rs. 2.70 crores. These liquid assets provide a cover of 36 per cent. and 6.6 per cent., respectively, to the deposits, as against the general ratio of 23 per cent. and 14.5 per cent. in the case of all foreign banks. The setback in business is also reflected in the reduction of borrowings from other banks, and the fall in bills for collection and acceptances and endorsements, as will be seen from the comparative table at the foot of the previous column:

(In lakhs of rupees)

	For the year ended 31st October			
	1958	1957	1956	1955
Interest and discount	184.06	183.73	157.06	140.81
Commission and exchange	48.28	50.71	48.05	38.70
Interest paid	76.54	76.72	57.65	49.13
Expenses	124.15	110.76	103.15	98.77
Depreciation	6.00	4.06	6.27	6.34
Profit	28.56	43.06	28.64	21.42

	As on 31st December			
	1958	1957	1956	1955
Deposits	40,72.29	43,89.20	39,93.46	41,69.57
Borrowings from other banks	35.00	1,35.30	6,36.06	89.85
Bills for collection	2,74.32	3,88.82	4,47.84	3,47.79
Acceptances, endorsements, etc.	4,02.31	5,09.37	6,77.35	4,18.11
Advances	24,78.49	29,01.27	30,84.69	29,04.14
Investments	14,69.27	11,60.87	12,67.95	19,75.56
Cash	2,70.23	4,75.32	3,69.38	5,02.66
Balance-sheet total	49,16.13	55,61.57	58,70.11	52,75.92

	(In thousands of £'s sterling)			
Capital	27,848	18,565	18,565	19,403
Reserve fund	18,000	18,000	17,500	15,000
Deposits	1,297,752	1,257,523	1,197,144	1,190,146
Acceptances, endorsements, etc.	184,785	180,088	157,811	124,171
Cash, money at call and balances with other banks	273,407	275,226	247,156	245,666
Investments—				
Gilt-edged	344,729	367,840	369,578	387,542
Trade	24,715	10,215	10,049	10,046
Loans and advances	392,319	327,252	336,878	308,107
Balance-sheet total	1,531,899	1,477,935	1,394,200	1,350,899

While the Bank's performance in India has been somewhat disappointing, for reasons beyond the control of the management, the business of the Bank as a whole, that is, in the U.K. and elsewhere, has made further growth. Its balance-sheet total, as shown in the above table, has gone up from £1,477.93 million to £1,531.90 million. The number of customers is said to have grown further, an indication of the spread of the banking habit to a wider section of the population. In order to provide for this expansion, the Bank opened 29 additional offices during 1958. The profit has recorded a rise from £2,502,391 to £2,727,535 (in refreshing contrast to the slight decline noted in 1957), despite the rise in operating costs, especially in salaries, as a result of the higher scales of remuneration to staff introduced a year before.

The addition to the general reserve has been raised from £500,000 to £1,250,000, while the allocation to the contingency reserve of £500,000 made last year has been held over. The interim dividend of 6¼ per cent. paid in August last was the same as that paid in respect of 1957, on a capital of £18.56 million, while the final distribution of 5¾ per cent. (as against 6¼ per cent.) is on the increased capital, of £27.85 million raised by a scrip bonus issue (in the ratio of 1:2) made in November last.

The Bank's deposits have gone up by over £40 million to a record level of £1,297.75 million. The increase in loans and advances is much more than that in deposits, having risen by £65 million to £392.32 million. Investments, in gilt-edged securities, however, stand reduced by £23 million, while other trade investments are higher by £14.50 million, reflecting largely the Bank's entry into the hire purchase field. The Bank's investments in hire purchase finance companies aggregate £13.33 million.

HINDUSTAN MERCANTILE BANK

A shrinkage of deposits and a fall in advances have been responsible for the slight setback in the profit of the Hindustan Mercantile Bank Ltd. (General Manager: Mr. P. H. Kothari, Calcutta) from Rs. 2.57 lakhs to Rs. 2.06 lakhs for the year ended 31st December 1958. This is in contrast to the improvement noted in 1957 when the profit had risen (to Rs. 2.57 lakhs) from Rs. 1.40 lakh earned in 1956. Out of the profit for 1956, it will be recalled, the Bank had to write off bad debts to the tune of Rs. 1.36 lakh and in 1957 these amounted to Rs. 76,033. In addition, the Bank incurred during 1957 a loss of Rs. 1.77 lakh on sale of investments. These left a meagre sum of only Rs. 3,083 for appropriation, as against Rs. 4,630 in 1956. It is gratifying to note that in the year under review, that is 1958, not only has there been no loss on sale of investments but the bad debts written off have been lower at Rs. 68,576.

After writing off the aforesaid bad debts, the Directors have set aside Rs. 1.02 lakh towards arrears of income-tax till 1957 and have added Rs. 28,000 to the reserve fund, which had received only Rs. 2,500 in the previous year. The Bank had not been able to pay any dividend since its inception in 1944.

The Bank's income from interest and discount has gone up from Rs. 10.31 lakhs to Rs. 10.80 lakhs, while that from commission and exchange has declined from Rs. 1.71 lakh to Rs. 1.58 lakh. The outgo, by way of interest paid has risen from Rs. 4.19 lakhs to Rs. 4.58 lakhs and expenses are up from Rs. 5.91 lakhs to Rs. 6.48 lakhs.

The Bank's reserves are meagre at Rs. 2.08 lakhs, as against a paid-up capital of Rs. 50 lakhs. In distinct contrast to the experience of banks in general, the Hindustan Mercantile's deposits have declined from Rs. 2.25 crores to Rs. 1.85 crore. Advances, too, have fallen from Rs. 1.48 crore to Rs. 1.11 crore, at which level, they bear a ratio of 60 per cent. to deposits, as against 66 per cent. at the end of 1957. Investments (at cost) are almost unchanged at Rs. 69.41 lakhs. Their market value as at the close of the year is Rs. 67.65 lakhs. Cash balances have shrunk from Rs. 62.34 lakhs to Rs. 57.03 lakhs, but the ratio of the total liquid assets to deposits has risen from 60 per cent. to 70 per cent.

BANK OF RAJASTHAN REPEATS DIVIDEND

PROFIT, HOWEVER, SHADE LOWER

IN consonance with the general trend of bank earnings, the profit of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta, Udaipur) has suffered a reversal from the peak of Rs. 2.75 lakhs for 1957 to Rs. 2.33 lakhs for the year ended 31st December 1958. The decline, being of the order of about Rs. 42,000 or 15 per cent., is relatively small as compared with that suffered by many other units. It is also gratifying to note that the profit for 1958 is still Rs. 1.10 lakh above that for 1956 and represents the second highest in the history of the Bank. The setback in profit, as compared with 1957, is due to the lower level of advances, dearer rates of interest on deposits and higher administrative expenses.

The provision for taxation has been reduced from Rs. 1.04 lakh to Rs. 90,000 and the allocations to the reserve and other funds from about Rs. 88,000 to Rs. 54,000. Thus, the transfer to the reserve fund has been pruned from Rs. 55,212 to Rs. 43,734 and that to the gratuity fund from Rs. 7,500 to Rs. 5,000. The investment reserve fund, which had received Rs. 25,000 out of the profit for 1957, has not been strengthened further this year. While the bonus distribution to staff has been raised from Rs. 28,000 to Rs. 34,050, the dividend to shareholders is unchanged at 6 per cent., to which level it had been successively stepped up from 3½ per cent. paid for each of the years 1952 to 1955.

The following comparative table shows the progress of the Bank in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	17.35	14.27	10.95	7.99
Commission and exchange	5.49	5.32	3.62	2.81
Interest paid	10.86	8.29	6.73	4.72
Expenses	9.79	8.79	6.89	5.43
Depreciation	0.68	0.36	0.29	0.12
Profit	2.33	2.75	1.23	1.00
Provision for taxation	0.90	1.04	0.40	0.43
To reserve and other funds	0.54	0.88	0.42	0.25
Bonus to staff	0.34	0.28	..	..
Dividend	0.55 (6%)	0.55 (6%)	0.41 (4½%)	0.32 (3½%)
Carry forward	0.01	0.01	0.01	0.01

	As on 31st December			
	1958	1957	1956	1955
Paid-up capital	9.23	9.23	9.23	9.23
Reserves	6.82	6.27	5.36	5.28
Deposits	4,53.74	3,81.14	3,59.99	2,69.82
Advances	1,45.79	1,81.49	1,22.77	1,09.54
Investments	1,37.43	1,02.62	1,06.61	1,05.89
Cash	2,11.03	1,35.28	1,42.45	1,13.06
Balance-sheet total	5,35.93	4,57.32	4,04.56	3,20.76
Ratio to deposits of—	%	%	%	%
Advances	32.1	47.6	36.1	40.6
Investments	30.2	26.9	31.3	39.2
Cash	46.5	35.5	41.9	41.9

Interest and discount earned during 1958 show a rise of Rs. 3.08 lakhs and commission and exchange, too, have recorded a small increase. This is offset by a rise of Rs. 2.57 lakhs in interest paid and of Rs. 1.03 lakh in expenses.

The total working funds of the Bank as at the close of 1958 stand at the record level of Rs. 5.36 crores and exceed the previous year's total by Rs. 78.61 lakhs. Of this increase, deposits alone account for Rs. 72.60 lakhs. At Rs. 4.54 crores, the deposits constitute a new peak. There has been an increase in the number of depositors from 22,068 to 25,632 and all classes of deposits have participated in the rise in total deposits. Fixed deposits, for instance, have gone up from Rs. 1.88 crore to Rs. 2.38 crores, current and other accounts from Rs. 1.14 crore to Rs. 1.27 crore, savings bank deposits from Rs. 79 lakhs to over Rs. 88 lakhs, staff security deposits from Rs. 88,500 to Rs. 1.11 lakh.

The expansion in deposits is not reflected in advances. On the contrary, they show a fall of Rs. 36 lakhs consequent on the restrictions on advances against foodgrains by the Reserve Bank of India and the delay in the arrival of cotton crop in the Rajasthan area by two months. The ratio of bank credit to deposits at the end of the year shows a decline from 47.6 per cent. to a low of 32.1 per cent., the lowest level since 1954. The average credit ratio for the year remained lower at 44.32 per cent. as against 55.68 per cent. in 1957.

The surplus resources have been well utilised to strengthen the liquid assets, investments showing an increase of Rs. 35 lakhs and cash balances of Rs. 76 lakhs and their aggregate ratio to deposits recording a rise from 62.4 per cent. to 76.7 per cent. The bulk of the Bank's investments (96.5 per cent.) represents Government and trustee securities. The Bank holds no undated Government securities and 95.2 per cent. of its gilt-edged holdings mature within 10 years. In fact, 56 per cent. of the total investments mature within five years.

With a view to providing banking facilities in suburban and rural areas, the Bank proposes to introduce mobile branches during the current year.

U.S. BANKING AND INVESTMENT OPERATIONS—I

TERM LOANS—EXCHANGE OF CREDIT INFORMATION

WHAT part can banks play in the developing economy of India and the U.S.? This question underlined the deliberations of 16 Indian bankers who participated in a two-day seminar on U.S. banking and investment operations held at New Delhi on 20th and 21st April 1959. Organised by the U.S. Technical Co-operation Mission, the seminar was inaugurated by Mr. Ellsworth Bunker, the U.S. Ambassador to India. The participants, belonging to ten leading Indian banks, had toured the U.S. as a team for three months last year, under the auspices of the T.C.M. They read out brief papers on U.S. banking practices and their possible adaptation by Indian banks. The subjects discussed were confined to U.S. banking policy on medium-term loans to industrialists, their procedures for screening and following up of loan requests, inter-bank exchange of credit information, role of publicity in banking and consumer and personal loans. It is now admitted by many, including Mr. Morarji Desai, the Union Finance Minister, and Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, that there is need and scope for an effective change in the Indian banking system. It is also realised that banks will be called upon to play an increasingly larger role in India's development programme. In view of this, it is worthwhile publishing the papers read at the seminar. This we propose to do in two or three instalments. The following is the first instalment covering five papers dealing with medium-term loans and inter-bank exchange of credit information.

INDUSTRIAL DEVELOPMENT BANKING

By Mr. K. N. R. Ramanujam

Director of Banking Research, Reserve Bank of India.

Today, the commercial banking system plays a dominant role in the U.S. economy. It finances all types of economic activity—agriculture, commerce, industry, public utilities and transportation. It also assists at all stages the movement of goods from producers to consumers. It extends credit mostly for short-term, namely, for six months, and partly for longer periods, from one year to three years and in exceptional cases upto five years. Its portfolio of investments includes bonds and shares of successful corporate concerns, involving an extension of long-term credit to them. Thus, the evolution of the U.S. banking system on these lines is largely the result of its adaptation to meet, not merely the large credit requirements of a rapidly growing economy but also the varying special needs of different types of borrowers.

How is this mixed portfolio of bank assets justified by the traditional concept of bank liquidity? The ninety days' paper representing the short-term financing of the production and movement of goods and generally repaid with their sale proceeds is no doubt self-liquidating in nature and conforms to the traditional canon of liquidity. The bonds of corporate concerns, however, obtain liquidity, not through repayment but through their sale or shift to other holders in the market and, in an emergency, to the Federal Reserve Banks by virtue of the Banking Act of 1935; this Act empowers the Federal Reserve Banks to lend to member banks against "any acceptable assets." This theory of shiftability of bank assets is the second major theory of bank liquidity.

The formal term loans, increasingly extended by the U.S. banks since the 'thirties, are also justified by a further extension of the theory of liquidity, namely, the anticipated income theory. The significant difference between short-term loans and the term loans lies in this; the former are liquidated by the sale of assets, while the periodical repayments of the latter depend upon the earnings generated by the assets created by them. As the term loan covenants provide for periodical amortisation, they are, in many instances, no less liquid than short-term loans, regularly renewed. The term loans are also provided with Central Bank liquidity by the Banking Act of 1935, according to which member banks could obtain advances from the Federal Reserve banks on the basis of the soundness of their assets, irrespective of their form or of the nature of the collateral. Bank supervisors also assisted this process by approving generally sound term loans. Thus, the earning assets of the U.S. banks comprise reasonable amounts of loans and investments, which are expected to be liquidated in accordance with any one of the three theories of bank liquidity or a combination of two or more of them.

Although monetary and banking systems in India provide a strong contrast with those in the U.S.A., still the U.S. experience of extension of commercial banking to industrial development will have some relevance to us. Bank deposits in India are hardly one-third of money supply as against three-fourths in the U.S.; hence there is paramount need at the outset for more intensive banking development, if there is to be an effective and permanent base for deposit expansion. The role of credit, restricted as it is at present because of the predominance of cash transactions, can expand only with the greater addition to deposit resources and also the adoption of newer types of collateral obtainable in the U.S.A.

Some bank loans in India too represent departures from traditional canons of short-term liquidity. However, apart from Government and trustee securities and certain usance bills, banks in India do not possess assets of a kind, which can be shifted to the market or to the Reserve Bank. The major banks can now make a beginning in the purchase of bonds of first class concerns and also their shares upto a specified portion of their capital reserves and time liabilities. Similarly, subject to the same ceiling, they can also make a beginning in the extension of formal terms loans, based on a proper appraisal of the relevant aspects, including the income prospects of the projects to be financed.

The primary requisite both in the purchase of bonds and the extension of term loans should indeed be their quality. The Reserve Bank, in its turn, should be willing to provide liquidity to the banks by enlarging the portfolio of securities eligible as collateral for its lending, irrespective of the maturity, but based on the soundness of assets; the Bank can also adopt a more liberal attitude in its inspections to the new term lending techniques of banks. The practices and techniques of both the scheduled banks and the Reserve Bank should change gradually so as to adopt the philosophy behind the theory of shiftability of assets and the anticipated income theory of liquidity. The stimulus for expansion imparted by our Development Plans should indeed provide the necessary scope for this transformation.

GOVERNMENT FINANCING AGENCIES

By Mr. T. K. Ramasubramaniam

Chief Officer, Industrial Finance Department, Reserve Bank of India.

In the United States, comprehensive financial arrangements exist for assisting different sectors of the U.S. economy. On their part, the U.S. Government have taken steps to ensure that there are no gaps in the financial arrangements. Commercial banks which play a dynamic role in the U.S. economy may not be able to entertain applications for accommodation in cases where their normal credit criteria are not satisfied. Again, there are many underdeveloped nations in the free world which look to the U.S. for assistance for importing the equipment they require for essential projects such as irrigation, railways or generation of electric power. The U.S. Government have established specific financial institutions, the funds for which are authorised by the Congress so as to fill these gaps. The main financing agencies thus set up are: (i) the Small Business Administration, (ii) the Export-Import Bank and (iii) the Development Loan Fund. I shall now endeavour to put before you very briefly an outline of the functions of these institutions and the distinctive features of their operational methods.

The S.B.A. was established in 1953, as a Government agency to provide financial assistance to small business enterprises, increase the participation of small business in Government purchase operations and provide management and technical assistance. This institution grants two types of loans, namely, (i) business loans, and (ii) disaster loans, when credit is not otherwise available to them on reasonable terms. Business loans are made to finance business construction or expansion, or the purchase of equipment, facilities or material; to supply working capital or as may be necessary to ensure a well balanced national economy. Such loans are either given direct or in participation (immediate or deferred) with private lending agencies such as banks. The policy of the S.B.A. is to encourage participation loans, its participation being limited to a maximum of 90 per cent. The extent of participation with banks and other private agencies will be evident from the fact that nearly 70 per cent. of the S.B.A's loans are covered by participation arrangements. We were given to understand that, in many cases, the S.B.A. was not called upon to actually take up the portion representing its interest in the loans. The S.B.A. has also the authority to make "disaster" loans for rehabilitation of businesses or homes damaged or destroyed by storms, floods and similar catastrophes. Apart from giving direct or participation loans, the S.B.A. helps small firms in a number of ways in overcoming management or technical problems. Perhaps this constitutes the most important function of the S.B.A., as in many cases the problem of small units is not so much lack of finance as it is of securing managerial and technical guidance in their operations.

This Bank is the principal agency of the U.S. Government engaged in international finance. The Bank is intended to supplement and encourage the utilization of private capital in the export and import trade of the United States and in overseas investment generally; it does not compete with private capital. The Bank provides direct financing and extends guarantees. It is prepared to consider proposals for the purchase of portions of its portfolio by commercial banks or other private investors. Thus, it works also in co-operation with private banks.

This is a new source of finance for economic development provided in the Mutual Security Act of 1957. Its purpose is to provide financial assistance preferably in respect of projects in the less developed areas which have a great need for capital. The Fund is required to be operated, as a source of last resort, so as not to compete with private investment capital, the Export-Import Bank or the I.B.R.D. and other financing sources. Guarantee of repayment (by Governments of the nations in which investments are made) will not necessarily be required. The Fund has proved to be a very valuable source of finance. So far, $800 million appear to have been voted for it since its inception. It is understood that the Fund has agreed to provide $175 million for India. The unique feature of the Fund is that, in certain cases, e.g., India, it is prepared to accept repayment in the local currency.

I may be permitted to say in conclusion that the institutions about which I have spoken are illustrative and not exhaustive of what Government has done in this field in the U.S., as there are other institutions such as the Federal Housing Administration and Farm Credit Administration.

JOINT LOANS

By Mr. V. C. Patel

Chief Accountant, Central Bank of India

One of the noteworthy features of American banking practices is granting of loans jointly by more than one credit institution. American ideas of credit functions of commercial banks have been evolved from the attempts to meet the growing financial requirements of an expanding economy intent upon development of all resources.

Participation loans have been an outcome of this evolving process necessitated in the initial stages by the peculiar banking structure in the U.S.A. Whereas in countries like the U.K. there are numerically only a few banks having branches all over the country, there are about 14,000 banks in the U.S.A. all governed by their respective State laws which vary from State to State. Owing to deep-rooted dislike of any mode of concentration of power in any one organisation, the U.S.A. banking system has grown into a "dual" system with powers vested in the States as well as in the National Authority. Since each State was keen on maintenance of its autonomy and full regional development, it formulated its own banking regulations involving certain restrictions on opening of branches by banks. Certain States permit banks to open branches in one city only, certain in a particular county and certain allow branches within the State. There are about 12,000 banks, which are unit banks, having no branch at all.

This geographical restriction on the expansion of the branch activities in the U.S. has led to an extensive correspondent relationship between banks in different States which in turn has resulted into participation loans where the financial requirements of a large borrower could not be effectively handled by a particular bank. The "dual" system of banking and State restrictions on branches, instead of retarding the economic growth, as would have been normally expected, led to exploration of other avenues for meeting the financial needs of the community and has thus provided a flexible system of banking, contributing to the maximum regional development by meeting special regional needs. Another legal restriction imposed on all banks, namely, the prohibition of an advance to a single borrower exceeding one-tenth of the capital and reserves of a bank, has also helped in the growth of participation loans between different banks.

A prospective borrower may have checking accounts with different banks and may desire to give each bank a part of the credit, in order to strengthen his relationship with all the banks. Sometimes a large company is located in a small city whose banks are not sufficiently large to cater for all its borrowing requirements. Sometimes a bank may invite another bank to participate in a loan in the hope of developing stronger relationship between banks and opening opportunity for mutual help.

Participation is also resorted to by a bank which desires an opportunity to convert its assets into a more liquid form, having regard to its deposits structure and the nature of commitments already made. The opportunity available to banks for borrowing from the Federal Reserve banks resulting in improved liquidity and the protection afforded by the Federal Deposit Insurance have enabled the banks to grant long-term loans to an increasing extent by inviting, if necessary, participation from other credit institutions. The changing nature of demand for bank credit has also encouraged participation loans. Industry has been operating with higher and higher costs and resulting lower profit margins. This has necessitated larger inventories and more accounts receivable, involving increase in the size of bank credit. Acquisition of fixed assets has been an important factor in demand for long-term loans. Higher taxation has also brought about an indirect increase in bank credit. Since long-term lending has got to be regulated by a bank with reference to its capital, surplus, deposit structure, etc., participation has to be arranged with the growing demand for term loans.

Participation may be between banks, a bank and an insurance company and/or a bank and Government agency like the Small Business Administration.

Where long-term finance is needed, banks make participation arrangement with insurance companies. Because of the nature of their liabilities, the latter are much better equipped to accommodate the very long-term borrowing needs of industry. If a borrower requires a loan for 15 or 20 years, the need is obviously one which a bank cannot handle. However, in such cases, it is possible for the bank of account to handle three to five years' maturities, leaving the later maturities to the insurance company. Usually, such arrangements are handled on a split rate basis, i.e., the bank charging a lower rate than the insurance company. Participation also helps the banks to avoid a large concentration of risk in any one borrower.

Participation with banks has been an important feature of the lending programme of the Small Business Administration. The bank generally processes the loan, makes the advance and the S.B.A. guarantees it. Participation may be immediate or deferred. In certain cases, the S.B.A. makes the initial loan and the banks take it over after a few years. About 60-70 per cent. of all loans granted by the S.B.A. are on participation basis.

Agreements between the principal bank, the participating banks and the borrower are drawn up after negotiations. These agreements are rather elaborate complicated documents, setting forth not only the detailed terms of the loan but also rights of the participating banks with regard to the securities and providing for all contingencies. Provisions are included in the agreement to the effect that all securities, rights, benefits, liens, set-offs, payments, etc. are for the benefit of all the banks in proportion to the credit provided. The principal bank receives repayments from the borrower and distributes them *pro rata* amongst the participants and, for this purpose, it is deemed to be an agent of all the interested banks. Sometimes, only a certificate is issued by the principal bank to the participating banks, denoting their respective shares in the credit.

Considering the large outlay of funds that would be continually required by manufacturing concerns to keep abreast with the technological improvements, automatic processes and equipment, it appears that participation finance will play a dominant part in meeting the credit needs of industry in the U.S.

CREDIT INVESTIGATION

By Mr. M. G. Parikh

Manager, Bank of Baroda Ltd.

The objectives of a Credit Investigation Department of a bank in the U.S., or Credit Department, as it is called, are (a) "to serve customers by acquisition and dissemination of credit information and other data in connection with their specific problems, and by properly giving suppliers or others whom they refer to banks sufficient data regarding Bank's account relationship to substantiate the credit involved"; and (b) "loaning and other divisions of the bank by establishing and maintaining credit files and by assembling credit information from time to time as may be required by these divisions."

The two main functions of this department are:

1. *Investigation* which has several sections collecting information from all sources. This information is collected not only with a view to determining the worth of the party but also to establish if it is creditworthy.

2. *Analysis:* In the U.S., all advances are by way of loans and not by way of cash credits or overdrafts, as we have in this country. This department is, therefore, very important as all loans—short or term—are granted on the basis of the ability of the party to repay from net earnings over a period. The method of analysing balance-sheets and statements is standardised throughout the country and it can be generalised that, if the party cannot repay a loan from its earnings, it will not get the loan.

This is a very important feature of American banking and has a great impact on the economy of the country, as these repayments of loans result in compulsory savings both for the individual and the business and add to the resources of banks every year, thereby increasing the available capital in the country.

As a rule, the Credit Department men do not call directly upon any individual or company and are prohibited from contacting any of their office or branch representatives or customers on whose behalf the bank is conducting the inquiry, with the result that the borrowers have no contact whatsoever with the Credit Department which practice is completely at variance with what prevails here.

It will be agreed that the Credit Department is a foundation on which all advances are granted and it is necessary that our records should be complete with all details.

In the States, the business structure is mostly that of an incorporated company whose audit by a public accountant is compulsory. I feel a great leeway has to be made up in our country where we have no specialised agencies for giving information and where the business structure is mostly proprietory or partnership whose accounts are not audited by any registered accountant. Besides, the average customer in this country is most reluctant to give details of his business and assets, with the result that the banks have very little information on them.

In our country, the law recognises only registered partnerships and I would suggest that all such partnerships should be compelled by law to have their accounts audited by registered accountants, so that authentic statement of affairs are available to those who have to extend credit. This legislation is necessary, if the banks in India are to play a proper role in the developing economy.

EXCHANGE OF INFORMATION

The immensity of information which the banks in the U.S.A. exchange between themselves was revealing to us. This practice is in complete contrast to what prevails in this country and has been there for several decades. The banks in U.S.A. follow a code of ethics for the exchange of information.

To illustrate, the banks would give full information stating the history of the account, the loans given, their opinion on the strength of the endorser, on the guarantor, and their own judgment on the borrower, giving full details on the borrowings. The most amazing thing is that they also give their own recommendations on the transactions involved.

In exchanging information, the most important rule which the banks have to observe is that, if you obtain information from a bank about one of its accounts, you must not solicit the account until six months have passed. Moreover, if you tell the other bank that you are actively soliciting the account—before you receive the information—the rule does not apply.

We were told by the banks in the U.S.A. that they have not lost any business as a result of the exchange of information. On the contrary, they take pride in stating that the progress of the banks is largely due to the fact that they are able to exchange complete information about customers who dare not hide anything from their bankers. This is also well known to the business community in that country, with the result that they give the fullest information. It is, therefore, not surprising that the losses of the banks are few and there have been very few failures during the last 25 years.

As a contrast, the information which the banks in this country give is most scanty and sometimes misleading. The information records of the banks in this country are not as detailed or as comprehensive as they should be. There is, therefore, great scope for the development of proper Credit Departments in a very thorough manner.

As stated before, we have no special private agencies like "Dun & Bradstreet" in the U.S. or "Seyds" in the U.K. which will give ready information, but I would emphasise that the banks abroad do not merely rely on special agency reports, as they have their own departments for investigation.

I would, however, state that the greatest need of the hour in our country is more exchange of information between the banks. When I was in the States and even after my return, I have discussed the need for this with some of my colleagues in other banks. While they realise its importance, they fear that their bank may lose business, if they gave full information to a competitor. I would, however, suggest that the banks here should evolve a code of ethics which would not only prevent any loss of business but in fact make it more sound. In a developing country like that of ours where banking business is still in its infancy there would be plenty of business and borrowers in the years to come.

I would request my fellow bank managers to discuss with their respective banks and convince them of its importance and, if necessary, we can meet again to evolve a code of ethics.

If the banks cannot agree to any code of ethics for exchange of information, then I would suggest that the banks organise a separate credit agency which can collect information from all banks and other sources and pass on the same to the enquiring banks. It has been suggested that the Reserve Bank should undertake this work, but, to the best of my information, no central bank of any country does this. In any case, if they did it, the information will be merely statistical and will not be of the type required.

CREDIT INVESTIGATION AGENCIES

By Mr. K. S. Chaturvedi

Senior Assistant, Bank of India Ltd.

The Credit Investigation Agencies, also called the Mercantile Agencies, play a vital part in the structure of credit in the U.S.A.

The function of these agencies, in short, is to collect and furnish information for the use of banks, loaning companies, insurance companies, wholesale and retail traders, industrial concerns, employers and others. Information so gathered concerns individuals, firms, corporations and associations, and covers a wide field, including such matters as previous background, character, habits, resourcefulness and personality of the individual or partners or officers, past experience in business or profession, present business and its future prospects, capital, financial standing, bank account, promptness or otherwise in settling creditors' accounts, litigation, suits, judgments, business surveys and appraisals, etc.

The agencies may broadly be divided into two categories—general and special. The for-

REOPENING OF CLOSED COTTON MILLS

MR. LAL BAHADUR SHASTRI ON GOVERNMENT'S POLICY

THE Government of India's policy with regard to cotton mills remaining closed was outlined briefly by Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, when he addressed the annual general meeting of the Piecegoods Merchants Mahajan in Bombay last week-end. The policy of the Government, Mr. Shastri declared, was to reopen and run all those mills which could be run as economic units, but made it clear that it was not possible to run all the closed mills, as some of them had very old machinery, the running of which would require the sinking of crores of rupees. In this connection, he said:

"The State Governments have jurisdiction over the closed mills and would reopen and run all these mills. The Union Government will do its best to help the State authorities financially. Following this policy, it has been decided to reopen and run the Model Mills at Nagpur. The Bombay Government has agreed to run it under its control and the Government of India is now considering the financial implications of this step. At least three more mills are not working at present in the Vidarbha region, but, generally speaking, these cases are slightly different from the case of the Model Mills. The authorities are, however, examining the case of each mill separately."

The decision of the Central Government to reopen and run the units remaining closed is to be appreciated only in so far as it reflects the anxiety to relieve unemployment among quite a few thousands of workers. But the question is whether the taking over of these mills by the Government will solve their problem and place them on a permanent sound footing. Any impartial observer of trends in India's textile economy will admit that the chief factor responsible for the continued closure of several units has been the unhelpful official policy. The cotton mill industry consists of units of varying size and strength. Some have locational advantages and others locational disadvantages. There are differences in regard to quality and variety of goods produced. Unfortunately, the fiscal policy and controls pursued by the Government since 1956 are such that several units, which were on the marginal line or very near it, have become automatically downgraded and their working has become uneconomic. Since this is the basic cause, the Government has to tackle it first. Instead of thinking along lines of itself taking over the closed mills, the Union Government will do well to examine the conditions under which either their existing managements or someone else in the private sector will come forward to revive them. If these conditions are not very costly, it should do its best to create them. If they appear to be too costly, it is better to allow the mills to be liquidated and wound-up, so that they may not remain as a drag on the community.

Even the Congress Party has stated in its Nagpur resolution that all investments should result in a profit. It is from this angle that the Government has to look at the problem of reopening closed mills. The first question which it has to consider is whether, by reopening, the closed mills will make profit. If they cannot, what is the point in throwing away taxpayers' money on them?

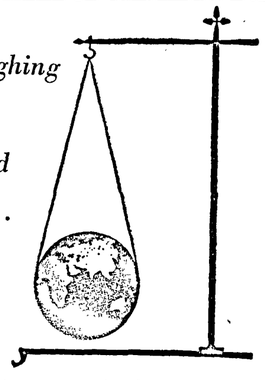
Another point which the Government must bear in mind is that it is not unnatural for industrial units to change hands when they are badly managed. Why is it that no other *entrepreneur* is willing to take over the closed units and revive them? The Government knows the answer, namely, it is the cumulative result of its own rigid labour, fiscal and production policies. Would it not be prudent for the Government to modify these policies in such a way as to allow the operation of normal economic laws within reasonable limits, rather than ease their rigidity only in the case of mills which have been closed down? Surely, prevention is better than cure. The taking over of a mill or mills, as Mr. Shantilal Shah, Bombay's Labour Minister, very rightly stated a few weeks ago, presents a peculiar problem to the Government, apart from several other difficulties. "Such a step," to quote him, "means the creation of the public sector, even if it be temporarily, while it is surrounded by the private sector."

To revert to Mr. Shastri's speech. He disclosed that the Government of India was contemplating an investigation into the working of cotton mills which were not running efficiently at present. The survey, he added, would be conducted by the Textile Commissioner; it would find out if the working of a particular unit could be improved by Government help. He pointed out that the Government was actively helping the textile industry to ensure its renovation and modernisation, in view of its unique position in respect of investment, production, capacity to earn foreign exchange and importance in the life of the people.

Mr. Shastri's appreciation of the vital role played by the cotton mill industry in the economy of the country thus is encouraging. It is true that, as a result of some measures taken by the Government after Mr. Shastri took over the portfolio of Commerce and Industry a year ago, the stocks of cloth lying with mills have been steadily declining. The stocks of cloth lying unsold with the mills (estimated at about 345 million yards at the end of March 1959, as against 373 million yards in January 1959 and 559 million yards in January 1958) are equal to only four weeks' production. But a large part of the decline in stocks has been brought about by distress sales by several mills, necessitated by the heavy financial burden involved in carrying stocks. There has been, it is said, no worthwhile improvement in the profits of mills. While prices of Indian cotton have shot up in recent months, there has been little or no rise in the price of cloth. Notwithstanding the reduction in stocks, the position of mills, therefore, continues to be none too encouraging. The number of units that remain completely closed is believed to be 42, as against 28 early last year.

It may be noted here that four mills are now being run by State Governments—the Narsinggirjee Mills, Sholapur, and the Seksaria Cotton Mills, Bombay, by the Government of Bombay; Sitaram Mills, Trichur, and Cochin Mahalaxmi Cotton Mills, Mulakunnathukavu, by the Government of Kerala. It would be interesting to know as to how these mills are faring now and how the wages and emoluments received by the workers in these mills compare with those in other mills which have managed to stay alive.

Following the continued closure of a large number of mills, the production of cloth has been at a low level. The average monthly output during the first quarter of 1959 was no more than 409.7 million yards, as against 411.7 million yards and 457.4 million yards in the corresponding quarters of 1958 and 1957, respectively. Exports of mill cloth also continue to be low, such from Bombay during January and February having been no more than 87 million yards, or at an annual rate of just 525 million yards, which compares unfavourably with 541 million yards and 795 million yards shipped in 1958 and 1957, respectively.



....even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

COTTON INDUSTRY IN EUROPEAN COMMON MARKET

It is reported that the Cotton Manufacturers Federation for the European Common Market (E.C.M.) has submitted to the E.C.M. Commission a memorandum urging protection for the cotton industry through a drastic limitation on imports from three sources: (1) "cheap labour" manufacturers, particularly in the Far East and the Indian sub-continent; (2) countries which operate State trading, that is, the Communist block; and (3) nations which go in for double-pricing and dumping. The Federation has pleaded for limiting imports of cotton goods from these sources to a very small percentage of each member-State's own production. Imports on top of such quotas, it is argued, would be allowed, either without any control or subject only to large quotas, for making up and re-export outside the E.C.M., but they would not benefit from the E.C.M. rules.

The Federation does not want the scheme to be confined to the E.C.M. alone, for it considers that there is a good prospect of some other West European countries participating in it. It would be delighted to bring in the U.K. cotton manufacturers as well, but here, it is "up against the declared opposition of the U.K. Government to the imposition of quotas on Commonwealth produce."

The Federation is full of hope that the E.C.M. Governments and the High Authority will approve its memorandum and impose the quota restrictions it demands. If, however, these hopes are disappointed, the Federation points out, it will try and run a restrictive scheme itself by co-operation among the national textile trades, although it admits that the chances of such an independent scheme being effective are not good.

The persistent plea of the Western countries' cotton textile millowners for restrictions on imports from the countries in the Far East has been commented upon by this journal on more than one occasion in the past, so that it is unnecessary to go into the question again. Suffice it to say that the solution to the difficulties confronting the cotton industry in the West lies not in import limitations but in practising the principle of international division of labour at least to some extent. It is the duty of the Governments of these countries to tell their textile manufacturers that the pattern of world trade is changing and that they should readjust their investments, if they cannot withstand even modest competition from the underdeveloped countries.

INTERNATIONAL YEARBOOK OF COTTON

The Legislative Number and International Yearbook 1958-59 of *The Cotton Trade Journal* (pages: 272. Price: $3 or Rs. 14.37. Available in India from Messrs. W. R. Stoessel and Co., 63, New Marine Lines, Bombay-1), the well-known international weekly newspaper published from Memphis, U.S.A., offers a rare and deep insight into the problems and prospects of cotton culture, trade, and industry in the United States, and other major cotton producing and manufacturing countries of the world. In range and comprehensiveness and the qualities of its contributors, it is a publication which has few equals in the field.

The Yearbook contains a good number of articles on cotton and several others on topics, of general economic interest. Commenting editorially, the *Journal* points out that the world cotton problem is not one of surplus but of poor distribution, lack of research and widespread deficiency of world purchasing powers. In a special article entitled, "A Long Stride Towards Freedom," Mr. Ezra Taft Benson, U.S. Secretary of Agriculture, details the provisions of the Agricultural Act, 1958, which gives greater freedom for cotton farmers in the U.S.A. In the succeeding pages, Mr. M. K. Horne, Jr., Chief Economist of the National Cotton Council, discusses whether the cotton textile depression is a temporary phase, Mr. Adolph Well, Jr., President of the American Cotton Spinners' Association, studies cotton's rapidly changing economy, while Mr. Hal-bert Jones, President of the American Cotton Manufacturers' Institute, urges breaking the shackles thrown round the U.S. cotton industry.

Of particular interest to readers in this country is the section on India wherein Mr. E. D. Sheppard points out that controls sap Indian textile strength, while Mr. Kasturbhai Lalbhai describes how Indian textile industry adapts itself to changing times.

An interesting section is the one on agricultural practice, containing the story of modern, successful cotton farming operations in each of the major cotton producing areas in the United States. Also included in the section are articles on the record developments in irrigation, machinery care, hybrid cotton seed and insect control by specialists in the field.

The Lancashire cotton employees have offered to set up the first industry-wise compensation scheme for workers who lose their jobs as a result of the closure of mills under the reorganisation scheme on which the cotton industry is to embark with Government support. The basis of the scheme is a worker's length of service in a particular mill plus his age factor.

INDIAN ALUMINIUM COMPANY LTD.

MR. K. C. MAHINDRA, CHAIRMAN, REVIEWS A YEAR OF RECORD ACHIEVEMENT

COMPANY ENTERING SECOND STAGE OF EXPANSION

ADDRESSING the shareholders of the Indian Aluminium Company, Ltd., at their Annual General Meeting held at Calcutta on 27th April 1959, Mr. K. C. Mahindra, Chairman, claimed with justifiable pride that the output of aluminium at the Hirakud smelter, which started operations early in January this year, reached its rated capacity of 10,000 tons within two months without any interruption. With the completion of this smelter, the Company was entering the second stage of expansion, under which the capacity at Hirakud would be doubled, the production at Muri alumina plant would be raised to meet the requirements of Hirakud and Alupuram smelters and additional fabrication facilities would be provided. The ability of the Company to obtain the necessary funds to implement these plans, he added, depended on the policies of the Government.

The following is an abbreviated version of Mr. Mahindra's speech:.

"The Directors' report submitted to you along with the audited accounts for the year 1958 gives you the factual background of record activity in the operations of the Company. Production of bauxite ore and alumina, of primary ingots and rolled products reached new high levels, as also sales of own and agency products.

"Since our last meeting the Company has passed an important milestone in its history. Our Hirakud smelter started operations on the 6th of January this year and it is a measure of the eminently successful start-up that in February aluminium production at the plant attained its rated capacity of 10,000 tons per annum. There is reason for additional pride and satisfaction, in that this smelter, costing nearly Rs. 5 crores, was built largely by the Company's Indian technicians. We took care in providing for highly skilled supervision from Canada for a short period during the concluding phase. That all the smelter pots have functioned without interruption, since the start-up, and functioned efficiently, speaks well of the technical proficiency and care and skill devoted during the construction and initial operating stages. And our Canadian friends tell us that to have operated without break during the initial period and to have reached the capacity output within two months is a record achievement.

Annual Output of Aluminium

"The Company is now a significant producer of the metal with an annual production rate of nearly 16,000 tons of aluminium. The members of this Company can justly take pride in this achievement and the contribution it makes to strengthening the foundations of the country's economy.

"Turning to the financial accounts for 1958, you will notice that a sum of Rs. 11.1 lakhs has been transferred to the development rebate reserve, a statutory requirement, if the Company wishes to avail of certain tax concessions in respect of new plant and machinery. The allocation for 1958 related principally to the additional plant at Muri where production facilities have been increased to 18,000 tons of alumina per year. For 1959, the development rebate reserve will be correspondingly high, because of the new installation at Hirakud. A further amount of Rs. 60 lakhs has been provided for current taxes. While gross profits show a healthy corresponding increase, corporate taxation absorbs over 55 per cent. more than it did last year. Because of these heavy deductions, the net profit was reduced to Rs. 36.6 lakhs in 1958, which still is an improvement on the previous year.

"The higher rate of production and the resulting increase in total profits enables and justifies a slightly higher dividend on ordinary shares than that declared for 1957. At the present time, however, when the Company is engaged in an expansion programme of considerable magnitude and the effect of annual changes in tax measures on our finances cannot be accurately foreseen, your Directors feel that it would be prudent to conserve cash resources somewhat and yet meet the legitimate expectation of a higher dividend. We have, therefore, recommended a dividend of 7 per cent. on the ordinary share capital and I trust this will meet with your approval.

Second Stage of Expansion

"For private enterprises, such as ours, it is the profits we make and the cash the shareholders receive in dividends which determine whether or not the Company will continue to attract the capital needed for expansion of the industry. With the completion of the Hirakud smelter we are entering the second stage of expansion—the Hirakud smelter to 20,000 tons, the Muri alumina plant sufficient to meet the requirements of both the Hirakud and Alupuram smelters and the provision of requisite additional fabrication facilities. The implementation of these plans will require considerable funds from internal, as well as external, sources and our ability to obtain them will be influenced greatly by the policies of the Government.

"As shareholders will probably have read, the Chief Minister of Orissa announced at the formal opening of our Hirakud smelter on 12th February 1959 that the electric power required to expand the smelter to 20,000 tons capacity will be made available to us in two years' time. In the light of this announcement, we have been actively pursuing our negotiations with the Orissa Government and hope that a satisfactory power contract will soon be concluded permitting us to proceed with the expansion.

"Keeping in view the needs of our expanding business and its complexity, we have during the past year sent a number of our employees for technical and administrative training in North America and Europe. This training has been provided by the subsidiary companies of our Canadian shareholder, Aluminium Limited. We have also continued to receive their assistance by the loan of some of their specialists for various assignments in our Company. These facilities, as you will appreciate, represent a valuable asset to the Company and enable it to maintain its technological leadership in the Indian aluminium industry.

Investment in Soil

"It has been customary with me to utilise this occasion to offer a few personal comments on the economic questions raised during the past twelve months, to take stock of the prevailing moods and submit for critical appraisal a suggestion or two. Thus, I made an unusual suggestion last year, namely, that a taxpayer may be permitted to 'invest' 10 per cent. of the tax amounts due from him in soil improvements and soil productivity in the locality of his choice and in the manner he considered most effective. This suggestion was novel and met with no response. Yet, if I repeat it with some variation, it is in the belief that it is paramount for the non-farming citizen not merely to know the complex agricultural problems facing our country but to learn to know how to help in reaching practical solutions. The variation is in the line that joint-stock manufacturing units may be permitted to 'adopt' a village or cluster of villages and in co-operation and consultation with the local authorities, as well as the community development officers, make itself responsible for the economy and health of the village or group of villages so adopted. Expenditure of the corporation on this account, duly checked and certified, may be treated as a business expense for taxation purposes. I regard it as of growing importance that the people engaged in the development of industries should get mixed up somehow and in some manner actively with village economies.

"Joint co-operative farming proposals as enunciated by the Congress Party and now supported in a generalised manner by the Lok Sabha have evoked contrary and highly surcharged emotions. Criticisms, appraisals, appreciations of fundamental problems are within the rights of democratic people, but the controversies which have raged round the joint farming proposals have reached the nadir or bickering and bathos and reveal the alleged essentially Indian capacity for sustained confusion. The political and intellectual opponents of the proposals see in them the fatal approaches to a totalitarian system, for to them coercion is implicit and extinction of individual identity and proprietorship inevitable. Yet they seem to ignore the urges behind land reforms which aim to correct a situation which has made the agriculturist a veritable serf and a situation disturbing and explosive enough to demand immediate attention. The advocates, on the other hand, refuse to be daunted by economic equations composed entirely of variables and acclaim the support of many economists and operators in statistics.

"It is confusing for a lay citizen to read, on the one hand, a distinguished economist (who perhaps has never been near a farm) to affirm that co-operative farming would enable Government to provide employment to the unemployed and the underemployed in the villages, and, on the other, to listen to a practical agricultural landowner who states categorically that joint farming means surplus hands, that if pooling takes place some people will be thrown out of work—they will become absentee landowners. Joint farming is proposed for increasing production—yet the same enthusiastic economist proclaims that the smaller the holding, the larger the production per acre. Amidst such confusion of advice one can only paraphrase the old English adage: 'If you consult a doctor, nothing is wholesome; if you consult the soliders, nothing is safe'—and say in modern parlance that if you consult the economists, nothing would remain *economic*!

"I am conscious of the fact that what would make economic sense often makes political nonsense and that, while continuation of large one-unit farms owned by a single individual or family would make for increased production rapidly, given the necessary assistance by way of better seeds, fertilisers, irrigation water and mechanised power, there may be gained larger social satisfaction if the ownership was broken up and land distributed to tillers.

Basic Problem

"The basic problem, however, remains—the problem of how to release and guide the energies of the millions now locked up in the rural subsistence economy. The joint farming co-operatives aim to meet this challenge. We should recognise the psychological as well as the emotional implications of the proposals, but for practical ends one does not see in the villages either the democratic interplay of cohesive forces or the emotional appeals of sustaining faiths and credo. It is, therefore, going to be a long, long process and a most expensive one if the country is to be covered with joint co-operatives at all levels of ownership, tilling, production, marketing and credit within a short period. It is questionable if the individual owner of a small plot of land would voluntarily agree to join the pool, when he knows he may have no work to do and would hereafter depend upon the toils of others. A Japanese proverb is apt: 'Nobody is more stupid than the man who allows his pot to be stolen on a moonlit night.'

"In statecraft one pursues not what is most desirable, but what is best attainable in the shortest time. Discussions on the platform, in Parliament and in the Press have been free and uncurbed; it is good to see our Prime Minister lashing at the critics of the joint co-operative farming proposals and inviting a better alternative course. Without being critical of the ultimates of the socialist ideal of a co-operative commonwealth, I can visualise the immense difficulties in formulating the details of a practical programme and then in executing and administering the same with speed and determination.

Declare Agriculture As An Industry

"I venture to suggest an alternative which will not disrupt the course of social reform and does not conflict with any ideological acceptances. The aim is to increase agricultural productivity per acre and per man in as short a period as possible. I suggest that agriculture be declared an 'industry' under the Industries (Development and Regulation) Act of 1951 and henceforth be treated as such in Government thinking. That India imported about Rs. 1,200 crores worth of foodgrains during the last ten years is a most harrowing fact. The record of handling of our food problem both at the Centre and at the States level has not hitherto been bright; on the contrary, the various survey reports confirm that there has been a considerable amount of confusion and muddle over this problem. Throw open the land for massive and intensive development with the one and sole

THE BANK OF RAJASTHAN LIMITED

Head Office:—Udaipur *Central Office*:—Jaipur

THE SHAREHOLDERS, THE BANK OF RAJASTHAN LTD.

GENTLEMEN,

The Directors have pleasure in submitting the Sixteenth Balance Sheet and Profit and Loss Account as at 31st December, 1958. The Auditors' report is also annexed.

Branches: During the year 1958 three new offices at Pali, Nathdwara and Jhalrapatan were opened raising the total number of branches to 31.

The facility of Safe Deposit lockers has been introduced at four more centres and now the number of offices of the Bank equipped with modern Safe Deposit Vaults has gone upto nine.

Working Funds: The working funds have risen to a record figure of Rs. 5,35,92,799 and exceed last year's total by Rs. 78,60,549.

Deposits: Our deposits have increased by over Rs. 72 lakhs to a new peak figure of Rs. 4,53,74,037. There has been all round increase in the various types of deposits during the year. The number of depositors has also increased from 22,068 to 25,632. The enlargement of our deposit liabilities reflects the growth of our business.

Liquidity: The increased deposits have been well utilised in strengthening the liquid resources. Our total liquid resources (Cash, Balances with Banks, Investment and Demand Bills) at the year end were Rs. 3,79,70,096 (in 1957 they were Rs. 2,75,65,698) and the ratio of these resources to our deposits is 83.7 per cent. (in 1957 it was 72.3 per cent.). Again the percentage of the liquid resources to demand liability comes to 197.6 per cent. which compares favourably with the previous year's figure of 162.9 per cent.

Investments: Our investments at Rs. 1,36,67,570 consist mainly of Government and other Trustee Securities (96.52 per cent. in Government and Trustee Securities and 3.48 per cent. in first class shares and debentures). We hold no undated government security and 95.24 per cent. of our holdings mature within 10 years. Maturity distribution, using final maturity dates, is as follows:—

Maturity	*Face Value*	*Percentage of total investment*
Maturing within 5 years	82,06,580	56.04
" 5 to 7 years	29,04,352	19.83
" 7 to 10 years	28,35,221	19.37
" 10 to 15 years	6,53,500	4.46
Shares	45,000	.30
	1,46,44,653	100.00

A new feature has been added to our Investment Portfolio with the addition of Rajasthan Jagirdari Bonds. Our investment in these bonds has enabled the Jagirdars of Rajasthan State to obtain a fair price for their Bonds.

The investments appear in the Balance Sheet at a figure which is below their market value.

Advances: Our advances inclusive of bills stand at Rs. 1,45,78,805 which represents 32.13 per cent. of our deposits. The corresponding figures at 31st December 1957 were Rs. 1,81,48,774 and 47.61 per cent. The decrease in the volume of our loans is due to the restrictions on foodgrains advances by the Reserve Bank of India and late arrival of cotton crop in our area by two months.

Net Profit: The net earnings for 1958 were Rs. 2,33,068.86 nP. as against Rs. 2,75,040.91 in 1957, the reason for decrease being that our average of advances to deposits remained lower throughout the year by 11.36 per cent. (the average for the year 1958 and the previous year was 44.32 per cent. and 55.68 per cent. respectively). However, our gross income increased by Rs. 3,39,573.00 to Rs. 23,56,478.00 but this was offset by increase in operating expenses which rose by Rs. 3,81,560.00 during the year.

Appropriation of Profits: The net profit amounts to Rs. 2,33,068.86 nP. to which a sum of Rs. 1,032.69 nP. brought forward from the previous year has to be added, making a total of Rs. 2,34,101.55 which has been appropriated as follows:—

	Rs.
To Reserve Fund	48,733.82
To Provision for Income-tax	90,000.00
To Bonus to Staff	34,050.00
To Gratuity Reserve Fund	5,000.00
The Directors recommend:	
To pay a dividend of 6 per cent. free of income-tax	55,299.00
To carry forward to the next account	1,018.73
Total	Rs. 2,34,101.55

Election of Directors: Under the provisions of Section 256 of the Companies Act, 1956, two Directors, namely, Shri Seth Pusalalji Mansinghka and Shri Rajadhiraj Amar Singhji of Banera retire by rotation but are eligible and offer themselves for re-election.

Appointment of Auditors: You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Mobile Branches: In the current year it is proposed to introduce mobile branches with a view to provide banking facilities to sub-urban and rural areas.

Thanks: The Directors express their thanks to the Shareholders and customers of the Bank, particularly to the Government of Rajasthan for their kind patronage and also appreciate the loyal services rendered by the members of the staff.

By Order of the Board,
G. S. PUROHIT,
Acting Chairman.

JAIPUR, *16th March*, 1959.

BALANCE SHEET AS AT 31st DECEMBER, 1958

1957 Rs.	CAPITAL AND LIABILITIES	Rs. nP	Rs. nP

JUTE INDUSTRY IN PAKISTAN

COMMISSION OF ENQUIRY TO STUDY PROBLEMS

THE Pakistan Government has set up a commission to enquire into the production, prices, marketing and export of raw jute goods. The Commission, which will be headed by Mr. Zakir Hussain, Governor of East Pakistan, will consist of eleven other members representing the jute growers and industry. The terms of reference to the Commission include, among others, recommendations on the appropriate size of jute crop to be grown in the next five years, having regard to both internal and external requirements, price levels, and world trends in the use of jute, competing fibres and substitutes. The Commission has also been asked to make recommendations on how to maximise yields of superior varieties of jute and lower cost of production through use of improved seeds and farming methods.

The setting up of a Commission of Enquiry on an infant industry which has had from its birth a decided advantage over its confrere in India with an adequate supply of good quality raw material, implies that all is not well with it. Its position does not appear to be so rosy as it was made out to be a few years ago. The Government's policy in respect of raw jute is threatening the country's monopolistic position. Though Pakistan is still the biggest supplier of raw jute in the world, many countries have taken up production of jute seriously, so that they now constitute a serious threat to Pakistan's trade in raw jute. India has attained self-sufficiency in its requirements of the fibre, except for the superior quality of raw jute it requires. It has even emerged as an exporter in this commodity. Brazil and China have made tremendous progress in the production of the golden fibre. Burma also has made a beginning in growing jute. Whereas at the time of partition Pakistan produced about 8.5 million bales of raw jute, as against Indian output of 1.5 million bales, it is now producing 6.8 million bales, on account of forced curtailment of production to push up prices artificially. (In 1956-57 it was still lower at 5.5 million bales.) At the same time, there is an abundance of lower grade material and not sufficient of the better marks to meet the requirements of consumers in the U.K. and on the Continent. India has, in the meantime, raised its output to about 6.5 million bales (including mesta).

The unrealistic jute policy of the Pakistan Government, coupled with absence of disciplined labour, managerial skill and efficient marketing facilities, has hit the manufacturing industry itself. As was pointed out by Mr. A. Jalil at the annual general meeting of the Pakistan Jute Mills Association held a few days ago, 1956 and 1957 were probably bad years for jute mills throughout the world and they were particularly so for mills in Pakistan, which suffered a loss of Rs. 2.1 crores, as against a total capital investment of Rs. 26.61 crores.

The policy of the Government of Pakistan in recent years in rapidly switching over from agricultural production to industrialisation, came in for criticism at the hands of Mr. T. D. Bruce, the outgoing Chairman of the British Jute Trade Federal Council, at its annual meeting held recently. He said:

"For some years now, we have been dependent for our raw material on a country which has been in a chronic state of political instability and which was on the verge of economic collapse last autumn. It has been the belief of Pakistan, prevalent in more than one primarily agricultural country, that prosperity can be achieved only through a rapid flight from agriculture to industry. To industrialise may be sound policy, but side by side with it has been the neglect of agricultural production, the main source of foreign exchange for Pakistan. Thus, the illogical situation of Pakistan reducing acreage in areas ideally suited to grow fine quality jute, at a time when it was vital to maintain exports of jute at the highest possible level.

"The effect of all this has been to create trouble for Pakistan, and trouble for the jute-consuming countries in these past years. It has damaged the world jute position, created scarcities and uncertainties, and has led to undue price fluctuations, which add greatly to the commercial hazards of industrial planning by jute firms and users of jute goods. It has also encouraged other countries to grow their own jute or other long-fibred plants having the essential properties of jute, a development of which the Pakistan monopoly must take heed."

A note of warning about the fallacy of Pakistan's raw jute policy was given by Mr. W. G. N. Walker, Chairman of Jute Industries Ltd., at the recent annual meeting of the Company, in the following words:

"With the distinct possibility of Pakistan losing ground, the new Government composed of military and official personnel must give very careful consideration to its actions, lest unwittingly it loses its traditional markets for quality fibre in the Western countries of the world.

"In recent years, small carryovers of crop from one season to another have tended to increase fluctuations in price and, in addition, have meant much too high prices at times. This state of affairs has done much damage to the industry and Pakistan's artificial restriction of crops has largely been the cause."

Fortunately, the position has improved in recent months under the new military regime. Thanks to the end of labour indiscipline, the production of mills has been rising gradually, touching a peak of over 20,000 tons in January this year, as against a monthly average of a little over 13,000 tons under the previous regime. It is stated that, in the first four months of the martial law regime, production of gunnies in Pakistan rose by 20 per cent., but even the current rate of production is said to be appreciably

AUDITORS' REPORT TO SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of Rajasthan Limited, Head Office, Udaipur as at 31st December, 1958 and also the annexed Profit and Loss Account of the Bank for the year ended on that date. In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

1. We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory.
2. The transactions of the Bank which have come to our notice, have been within the powers of the Bank.
3. In our opinion, proper books of accounts required by law have been kept by the bank so far as appears from our examination of those books.
4. The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account.
5. In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1958 and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.
6. The returns received from Branches for the year ended 31st December, 1958 were duly audited by Chartered Accountants.

BEAWAR, 15th March, 1959.

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

MR. C. R. SRINIVASAN'S REVIEW

PLEA FOR TAX RELIEF TO RETRIEVE THE COUNTRY'S ECONOMY

SPEAKING at the Sixty-first Annual Meeting of the East India Distilleries and Sugar Factories Ltd., held in Madras on 29th April 1959, Mr. C. R. Srinivasan, Chairman of the Company, uttered a note of caution that the potentials of taxation had already been reached and signs of regression lay to the surface. The position could be retrieved only if the industrial sector regained buoyancy and played its vital role in national economy. On a long-term point of view, he added, it would be wise to give it the much-needed tax relief even to the point of sacrificing current revenue.

The following is the full text of Mr. Srinivasan's speech:

"GENTLEMEN,

"Copies of the balance-sheet, profit and loss account and Directors' report for the year ended 30th September 1958 have been in your hands for the statutory period and I have no doubt you have read them with interest and profit. It has been the policy of the Company to provide as full information as possible to enable shareholders to take an intelligent interest in the affairs of the Company and if there is anything more I can usefully add to enlighten you, I am at your disposal.

"The results of the year's working, within the limits of our opportunity, have been in keeping with the rising tempo of progress that we should naturally and normally expect in the expanding economy of the country. My only regret is that we have not done still better, possessing in exceptional measure, as we do, talent, experience and organisational set-up. What sets the limit is the resources at our disposal. The capital and reserves of the Company are now of the order of two million pounds. There is an imbalance between capital and reserves which must be corrected in the interests of the shareholders, if further and fuller progress is to be achieved. The capital of the Company stands in round figures at £750,000, while the reserves have been steadily increasing and are now over a million and a quarter pounds. The need for broadening the capital structure of the Company has been receiving the anxious consideration of the Board during the past two years, but unexpected difficulties have blocked the fruition of our endeavours. At one time we had almost completed arrangements for making a fresh issue of capital coupled with a bonus issue; but at the last lap we had to call a halt when Government levied a 30 per cent. tax on bonus issues. The tax was unconscionable as the issue was to be made from reserves which had already paid prevailing rates of company tax. May be, the needs of the Government are great to finance their planned economy, but this is not the way to cover their needs and after all, the strengthening of the private sector has a necessary part and place in the national economy. However, there it was and we drew our horns in at the time and awaited better understanding of the issues posed, in this context, by the Government.

Rights Issue

"Meanwhile, failing the bonus issue which was the centrepiece of our proposal to attract fresh capital, we proceeded to consider alternative ways and means. In this context we canvassed the possibilities of a rights issue and satisfied ourselves that the outlook was promising. Again, however, quite unexpectedly a new obstacle cropped up. You are aware that our Company is a sterling company maintaining two registers, one in Madras and another in London, for the convenience of shareholders living in India and England. There was free transferability of shares between India and England that helped to maintain parity of prices for the shares in both countries, Thirty-five to 40 per cent. of the shares were held in England and they were all held under investment account as the Company's activities were concentrated in India and management and control were also in India. One fine morning it was decided there should no longer be free transfer of shares from England to India, with the result that share values in England rule substantially lower than those obtaining in India today, with no justification on merits. We can understand the anxiety of the Indian Government to save foreign exchange at a time of strain and stress; but in the present context of needs and requirements in this regard, it seems to me, that this is a penny-wise and pound-foolish policy. We want foreign capital to come into this country in progressively increasing measure. If our planning programmes are to succeed, surely any step calculated to impair confidence in investments in this country must be avoided at all costs. In the case of our own Company the amount of foreign exchange involved on a factual assessment of the value of flow of shares from England to India is not of such dimensions as to cause any headache to the powers-that-be.

Promising Ventures

"We have been making representations to the Government for a relaxation, if not a complete revision of the policy, and we hope our prayers will not go in vain. Once the way is cleared and we are in a position to reassure a substantial body of foreign shareholders that their interests are safe, I have no doubt, we shall be able to attract adequate capital on the basis of our past record and future promise both from this country and from England. We feel hurt and helpless when there is so much to do and we are unable, for no fault of our own, to give our best in the service of the country. In pottery, for example, we have developed a promising line of sanitaryware which is waiting for expansion. In fertilisers, for another, we occupy an outstanding position in the country and we have been busy in tapping out new enterprises in this direction. Whoever has bestowed thought on the basic structure of the Indian economy cannot but recognise the primary importance of fertiliser projects. There may be giant projects which call for investment beyond the resources of private enterprise. There are quite a few, however, which can be worked to advantage in the private sector and at the moment, we may say, we are ourselves engaged in the study of one such project. There are again other directions of promising industrial adventure which we can seriously examine, if, as I said, the way is clear and I hope the way will be cleared.

Implications of Finance Bill

"The next point that I would like to canvass on this occasion is the Finance Bill now before Parliament. Its exact scope and purpose is still a matter of discussion and debate in knowledgeable circles. It looks, on the face of it, as if substantial concessions have been extended to joint-stock enterprise. Wealth tax on companies has been removed; tax on excess dividends has been eliminated; income and super-tax on companies have been reduced. Psychologically a climate of confidence has been sought to be created, but, I am afraid, a little closer study will not bear out the optimism that has been induced. Nowhere has it been suggested that the Government has forgone any part of the revenue it was collecting from the taxation measures that are now being repealed. All that it has said is it has simplified the procedure relating to company taxation. From the companies' point of view, far from its being simplified, it has only added complications. The Government has drawn a fine distinction between taxes on companies' profits and taxes on distributed profits. It has reduced the tax on companies' profits to 45 per cent., but has thrown the onus of paying tax at standard rates on shareholders' dividends on the companies also. What the actual effect of this impost will be is not easy to assess; but in the result the total levy made on the Company by these bipartite taxes will not be less and may probably be more than what the companies are paying today under income-tax, corporation tax, excess dividends tax and wealth tax.

"Apart from its direct results, the new procedure may provoke reactions also on the labour front where the lower level of company tax may lead to a wrong understanding of residual profits. The final form in which the Bill will emerge and the enduring reactions it will provoke will have to wait on time. But a note of caution will not be out of place while there is yet time. There is no denial that the Government has set its hands to a tremendous task and the second Five-year Plan is passing through a crisis owing to shortage of resources, notably in the foreign exchange sector. It is understandable that the Government is determined to raise funds wherever it can and will not easily let go any source of revenue. This earnestness has undoubtedly impressed prosperous nations to extend a helping hand to tide over current needs and it is common knowledge that a consortium of these nations has willingly come forward to underwrite, in effect, what is needed to save the core of the second Five-year Plan in regard to foreign exchange. The second Five-year Plan is not the end of it. A third Five-year Plan is already incubating on an even more ambitious scale and progress on these lines is only possible to the extent to which internal resources are forthcoming. The potentials of taxation have already been reached and signs of regression lie to the surface. Further deficit financing on any considerable scale may provoke reactions difficult to control. Cost of living has been steadily rising and middle class economy is seriously impaired. The position can be retrieved only if the industrial sector recovers buoyancy and plays its vital role in the service of national economy; and on a long view it would be wise to give it the much needed taxation relief even to the point of sacrificing current revenue.

Review of Activities

"And let me now briefly review the major activities that we are directly concerned with during the year under report. First taking sugar into consideration, the relevant data about total crush, sugar manufacture and percentage of recovery are all mentioned in the directors' report; in this aspect the report is not particularly heartening, but incidental to whatever stems basically from an agricultural economy.

"You will be glad to hear that last year Nellikuppam had a shipment of 9,300 tons of sugar exported to Sudan and seems to have given satisfaction as London brokers asked for Nellikuppam sugar again for a Sudan tender early this year. There has, however, been a halt in shipment in exports as the hands of the Indian Sugar Manufacturers' Association, which has been handling exports, have been tied up by a stay order granted by the Supreme Court. Even if export is resumed, I am afraid, stocks in the country will not permit any large-scale despatches, though it would be necessary and desirable to maintain token exports to save contacts we have established in the Near East.

"The all-India crop for 1958-59 is estimated to yield 18.90 lakh tons of sugar making 21.19 lakh tons available with last year's carry-over. Consumption last year was 20.44 lakh tons and consumption this year to date is 7½ per cent. higher than during the corresponding period of last year. If this trend continues, consumption for this year will be about 22 lakh tons. Much of the new capacity licensed in recent years has not yet come into production and when it does, production is likely materially to exceed consumption. For this reason it is important that we should maintain contacts with our customers in neighbouring countries.

"In addition to the doubling of the excise duty on sugar last year, State Governments have been busy adding their quota to the burden of taxation on sugar. Madras State Government has doubled the cess on sugarcane and, though the cess has in effect been treated as a source of revenue, the Government has sought to raise a further quantum of revenue from sugarcane by making it subject to sales tax at the rate of 3 per cent. *ad valorem* at the last point, thereby expecting the sugar factories to work as their collecting agents. The incidence of the increased cess at a recovery of 9 per cent. is Rs. 11.11 per ton of sugar and that of the sales tax Rs. 13.05.

Price Linking Formula

"I referred last year to the price-linking formula the Government was contemplating, so as to provide a further fillip to cane growers. The formula has since become law. It is not possible to work out in advance the incidence of this additional impost as the percentage share of sugar price to growers is to be fixed by the Government every year after the close of the season. The average price realised for sugar can only be worked out after all the sugar is sold and since production is released over a period of twelve months, the additional price payable will not be known until about 14 months after the start of the season. This question is also linked with the findings of the Tariff Commission which is presently engaged in investigating the cost structure of sugar.

"You may remember my comments about the growing menace to the sugar industry from *khandsari* sugar. It was some consolation to us that the protest has registered and in the Finance Bill this year an excise duty of Rs. 126 per ton was proposed to be levied on *khandsari* sugar manufacture by the use of power.

"This consolation has, I am sorry to say, proved short-lived, because the powers-that-be have yielded to pressure and the excise duty is now to be Rs. 113.4 per ton on *khandsari* sugar made under sulphitation process and only Rs. 88.2 per ton where that process is not used. However, I suppose we are still grateful for small mercies.

"In addition to the sugar manufactured at Nellikuppam, amounting to about 30,000 tons per year, the factories at Samalkot, Pugalur, Pamba and Pettavaytalai under our management produce about 55,000 tons per year and taking all these productions together we already have a substantial stake in the sugar needs of the southern States and I am of the view, it would not be wise to take on further risks in this line of industry.

Fertilisers

"Last year, I referred to the satisfactory progress in manufacture and sales of fertiliser products. I am glad to be able to inform you that in the year under review, there has been further progress. Sales of fertilisers having moved up from 2.2 million pounds to about 2.6 million pounds; and for the first time we reached sales figure of 100,000 tons. The agriculturists continue to show keen interest in increasing production by the use of fertilisers and I feel confident that further improvement awaits us in this line of our business.

"The new fertiliser mixing plant at Bezwada has gone into production and worked satisfactorily during the year under review. We have now received from the Government of India the necessary licence to import plant and machinery required for the production of 50,000 tons of superphosphate per annum at Bezwada and I hope the Andhra Fertilisers Private Limited which is now a fully-owned subsidiary of this Company will now proceed smoothly to integrate this factory and go into production next year.

"Along with our fertiliser business we have been developing the sale of insecticides and fungicides and their sales progress now indicates a satisfactory future for this business also.

Pottery

"In regard to pottery, turnover has risen by Rs. 8 lakhs and trading profit by nearly Rs. 3 lakhs, principally due to very satisfactory sales of sanitaryware. With imports banned and increasing housing schemes being undertaken by the Government and industrial employers, a sellers' market virtually prevails and we are seriously contemplating doubling our capacity for this type of ware. I have already referred to the need for additional capital to develop this line and I hope favourable conditions will supervene ere long.

"I am glad to state that our relations with staff and labour at both our factories remain cordial. During the year under review, we entered into agreements with the labour unions at Nellikuppam and Ranipet covering dearness allowance, leave privileges, gratuity and bonus for a period of three years and, accordingly, we hope we shall have comparative industrial peace for this period. You are probably aware that the Government of India has constituted a Wage Board for the sugar industry which has made an interim award regarding increasing wages, the increase being based on wages obtaining in 1954. As the increases voluntarily granted by your Company from that date far exceed the increase recommended by the Wage Board, no action on our part has been necessary. The final report is expected to be published in the course of this year and it is hoped that labour leaders will recognise that any further increase must be linked with increase in production. Otherwise a further handicap will develop, because of labour cost, in our endeavour to enter and hold our export market.

"I referred last year to our trading activities and how, by reason of the restrictions of imports, there has been a change in the pattern of the business we are handling. Negotiations for enlarging the range of our selling agencies of products of Indian manufacture have yielded results and we are geared up organisationally to handle additional turnover running into crores of rupees.

"Before I close, I would like to refer to the impending retirement of two of our Directors from the Parry Board. Mr. Allerton has been with the Company for 31 and odd years and has richly earned his rest. I can say from my own association with him during the past few years, there is none I hold in greater respect for his knowledge, experience and judgment. As he has decided to settle down in India, I hope, we shall have opportunities to indent on his services as and when need arises. Mr. Parkes is an acknowledged authority in the technical problems of the sugar industry and, though he retires from service in July, his services will continue to be available to the Parry Group of companies by special arrangement. He has agreed to be in working touch with our factories. Though away in England, he will be visiting us every year to check up the condition of the factories and to advise us on all matters relating to their work.

"I cannot miss this opportunity of expressing, on behalf of myself, and my colleagues, our appreciation of the hard work and loyal support during the year under review of the staff of this Company and its subsidiaries which are reflected in the satisfactory results we have been considering."

The Directors' report and the accounts for the year ended 30th September 1958 were unanimously adopted. Mr. V. Ramakrishna was re-elected to the Board, and the auditors, Messrs. Lovelock and Lewes, were reappointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

RECORD WORLD SUGAR OUTPUT

World production of sugar in 1958-59 is placed at the record high level of 50.37 million metric tons, as compared with 45.24 million tons in the previous season and 41.66 million tons in 1956-57, according to second estimates. Thus, the increase in sugar production during the current season will be 5.13 million metric tons as compared with 1957-58 and 8.7 million tons as compared with 1956-57. Though the increase in production is shared by both cane sugar and beet sugar, the share of the latter in the total production is phenomenal.

Output of beet sugar during the current season is placed at 21.39 million tons, as against 18.7 million tons in 1957-58 and 18.5 million tons in 1956-57. Thus, in two years, production of beet sugar has recorded a rise of almost 30 per cent. Output of cane sugar, on the other hand, rose from 25.26 million tons in 1956-57 to 26.53 million tons in 1957-58 and 28.98 million tons in the current season.

THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

GOVERNMENT'S AID PROGRAMME FOR COTTON INDUSTRY

SHARP CONTRACTION IN SIZE EXPECTED

From A Special Correspondent

MANCHESTER, *28th April*

THE proposals put forward this week by the British Government to give financial aid to the Lancashire cotton industry mark another stage in the post-war history of an industry which has declined from being a major world exporter of cotton textile fabrics. The plan aims at providing financial aid to eliminate surplus machinery and re-equip the mills of those firms which elect voluntarily to remain in existence. A figure of £30 million in five years has been suggested as the sum which the Government is prepared to offer by way of subsidy.

MANCHESTER LETTER

History records that the peak of the Lancashire cotton trade came immediately prior to World War I, when exports alone amounted to 7,000 million yards of cloth. The inter-war years saw trade dwindle with increasing competition from Far Eastern producers, led by Japan. At the outbreak of hostilities in 1939, Lancashire was still exporting cotton goods at a rate of about 1,500 million yards and provided employment for some 375,000 spinning and weaving operatives. Imports from foreign sources were negligible and the mills were fully capable of meeting all the demands made on them by the home market.

The present position is that only about 200,000 workers are available for employment in spinning and weaving and, in the past three and a quarter years, some 350 mills have closed permanently. Substantial quantities of machinery are standing idle and demand from all sources has been sharply curtailed. For the first time for more than 200 years, imports of foreign cloth exceeded comparable shipments abroad during 1958, when exports were 384 million square yards. In the first quarter of the current year, the position has further deteriorated and imports of 122 million square yards compare with exports of only 82 million square yards. In addition, the arrivals of foreign cotton yarn have for the first time exceeded exports.

Subsidy For Re-equipment

The different sections of the industry are presenting their redundancy proposals to the Board of Trade for approval. The general idea is to dispose of surplus plant by means of reorganisation schemes to which the Government is prepared to pay two-thirds of the cost. At the same time, provided certain conditions are fulfilled, individual firms will be able to obtain a subsidy of 25 per cent. towards the cost of re-equipment of machinery.

The whole plan is on a voluntary basis so that it is difficult to estimate at this stage what the response will be, but it is believed that the terms are generous enough to encourage many companies which have been wavering to go out of business. An important point which remains to be settled is the provision of compensation for displaced workers which the Government has passed back to the industry.

The aim is a more compact and efficient trade, working modernised plant probably on a shift basis. Such schemes have been frequently suggested in the past and have not been realised, but the decline in the general condition of the trade over the past few years has been so persistent that many observers feel that the terms of the present offer will turn the scales and result in a sharp contraction in the present size of the industry. The major combines will undoubtedly remain in existence and will be able to trim their excess plant accordingly. Many of the smaller units will decide to close their doors finally.

Activity Ahead

As a result of the Government's willingness to collaborate in the cotton industry's redundancy and re-equipment scheme, the next few months will be full of incident, with a changing structure constantly in view. The decision, once taken, is a far-reaching one that cannot fail to touch almost every individual concerned with the trade. It should be said at once that the assistance promised is generous, consisting of a sum of up to £30 million for subsidising the elimination of surplus machinery and the re-equipment of the remainder after the scrapping has been accomplished. As had always been forecast, the arrangement is purely voluntary, so that the amount of the compensation payable by the Government will vary according to the support received from the industry.

The announcement itself created some confusion, as there were many questions left unanswered in the Parliamentary statement. The Government merely gave the basic principles, that two-thirds of the cost of redundancy would be paid from public funds and one-third of re-equipment charges, on condition the industry provided the rest of the redundancy cost by a levy and that the employers were responsible for offering compensation to displaced workers.

Legislation embodying the proposals will be introduced before the summer recess and, in the meantime, negotiators within the trade will be hard at it drawing up the detailed terms of the scheme. These will be formulated sectionally and will be administered by a special agency set up for the purpose.

Time Limit for Scrapping

Although the ideas of each branch may differ a little in detail, the general outline of the plan will be on similar lines. The intention is that a date shall be fixed (31st December?) as the latest time for registering the amount of plant which each individual firm or group aims at scrapping. The machinery will definitely be destroyed, except in special cases where really new plant is involved and it would be a shame to put it under the hammer.

Coinciding with the fixing of a time limit on the redundancy plan, all firms concered will be notified of the agreed value set on each machine, which will normally be paid as compensation, irrespective of the age of the plant. Once this information is known, the way will be clear for individual managements to study their position and make their own decisions as to the extent to which they intend to scrap or get out. They will have to bear in mind that a levy will be paid on all remaining machinery as part of the compensation programme. Already, suggestions have been made that as much as £80 a loom and 15s. a spindle may be paid out for surplus plant, but no final figures have yet been decided.

Within the combines, it may be possible to continue the policy of reconstruction by shifting

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1958 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1958 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Section 211 (1), (2) and (3) and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the nine Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1958 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October 1958.

THE UNITED BANK OF INDIA LIMITED

ANOTHER YEAR OF SATISFACTORY PROGRESS

DR. N. N. LAW ADVOCATES PLANNED EFFORTS TO DEVELOP BANKING SERVICES

THE need for planned effort to develop and spread the banking services in the country if only at least to maintain the value of the rupee was emphasised by Dr. N. N. Law, Chairman of the United Bank of India Ltd., in the course of his speech at the Annual General Meeting of the Bank held at Calcutta on Monday, 4th May 1959. Dr. Law pointed out that, in a fast changing economy, the banking system must reorganise and equip itself in such a manner that it might cater to the new requirements and conform to the changed pattern of the economy. Stating that efforts in this direction had been inadequate, he reiterated the suggestion for a convention of all banks under the auspices of the Indian Banks' Association, with a view to sponsoring the idea of forming a "Banking Expansion Scheme" and to appointing a "Standing Plan Committee of the Convention."

The following are excerpts from the speech of Dr. Law at the annual meeting:

"The working results during 1958 depict another year of progress. The deposits of the Bank at Rs. 43.54 crores were higher by Rs. 5.18 crores, that is, roughly 13.50 per cent. over the previous year's figure. Advances at Rs. 27.64 crores were higher by Rs. 4.09 crores, being about 17.3 per cent. over the previous year. The gross earnings of the Bank at Rs. 2.19 crores show a rise of about Rs. 29.00 lakhs or 15.2 per cent. over the previous year. The progress achieved in these directions may be deemed to be satisfactory, in comparison with the performance of other major banks in 1958. Despite this increase in the volume of business and gross earnings, however, the profit of the Bank continues to be low. Progressive rise in operating costs, which has been the common experience of all the major banks in the country, materially contributed to this result.

Establishment Cost

"The two major items of expenses, namely, establishment expenses and interest on deposits, still continue to mount in such a manner that they remain a matter of serious concern for the banking system. During the period 1950-57, the establishment expenses of Indian Scheduled banks rose by about 74 per cent. Figures for 1958 are not yet available, but the rate of increase during the year cannot be expected to be any lower. In your Bank, the rise in establishment costs during 1958 was over Rs. 21 lakhs. It is no exaggeration to suggest that the rise in establishment expenses has been abnormal. The banks are trying their best to step up the quantum of earnings, but, in view of the faster growth of the operating expenses, such efforts cannot be expected to neutralise the imbalance. I, therefore, submit for consideration of the bank workers that there should be a realisation of the fact that it is as much in their own interest as in the interest of the national economy that there should be an equitable correlation between the increase in cost, and improvement in productivity or enhancement of earning potential. After all, banking is basic to development and it is also the linchpin of the monetary system which finances economic activities and promotes a higher standard of living. We, therefore, feel that, in the larger interest of the country, a change in outlook is called for, and there should be common appreciation of the fact that the various branches of economic activity are interlinked and interdependent.

Interest on Deposits

"I am glad to mention that, during the latter part of the last year, the Indian Banks Association succeeded in their efforts to bring about an inter-bank agreement on rates of interest to be allowed on various types of deposits. This is a good augury, and it is hoped that it will prove to be a beginning of more and more co-operation and co-ordination as between different banks. I would, however, point out here that the maximum rate of interest on deposits, as postulated in the inter-bank agreement, is still rather high and eats into the level of profit. In the ultimate analysis, the rate of interest on deposits, as we have on many occasions pointed out, should be adjusted to what is in the interest of the community., Unfortunately, if the rates payable on deposits are themselves high, and if, at the same time, a higher rate of charges for advances is either impracticable or undesirable, banks have inevitably to lend more, and the consequence is that the ratio of their advances to deposits rises. This, in turn, compels banks further to seek new deposits at higher rates. This vicious circle can be broken if, instead, efforts are made to control the interest rates on deposits. Also, if the banking industry is to function properly and adapt itself to India's progressive economy, the margin between the rate of interest on deposits and the rate of interest on advances should be wider than what it is today. Last year, we had suggested that the maximum rate of interest allowed on time deposits should not exceed two-thirds of the Bank rate in force for the time being. I think this point deserves immediate consideration by all concerned.

Competition from Public Sector

"While on this subject, I would like to refer to another matter having a direct bearing on interest on bank deposits. I refer here to the rate of interest on deposits allowed by the public sector in the small savings schemes. The public sector has to, and needs to, collect resources through mobilisation of small savings. But their efforts towards diverting bank deposits to small savings schemes of the public sector have been very much marked. It is our view that, if efforts were made towards collecting such resources from non-banked areas (high cost notwithstanding), it would have been an invaluable service to the country's economy. The commercial banks thus have to face not only competition amongst themselves but also the competition from the public sector. This has resulted in a scramble for deposits on all sides. The commercial banks have now demonstrated, by entering into an agreement amongst themselves, that they are alive to the fact that such blind competition is not only unhealthy but also harmful to the country's economy. It is to be hoped that the public sector will also co-operate in this effort to put a stop to the wasting race for pushing up the rate of interest on deposits.

Unutilised Credit Limits

"Statistics are not available about the quantum of the unutilised portion of credit limits granted by banks. While it is true that different banks try to keep a control in this regard, if a proper survey is made, it may be found that the aggregate of such unutilised credit limits is proportionately higher in relation to bank deposits. In some countries in Europe as well as in the U.S.A., there is a system of levying a charge on the unutilised portion of the sanctioned limits. I think some system of commitment charges may also be adopted in this country. It may then encourage making correct estimation of requirements, and effectively control the tendency to arrange for limits much higher than what can be utilised. Such an imposition is suggested more as a deterrent than as a source of revenue for banks.

Banking and National Plans

"Available information indicates that the third Plan is going to be much larger than the second Plan. Since results of the projects undertaken in the first and the second Plans are expected to be utilised in a larger measure during the third Plan period, it can be visualised that the tempo of economic activity will be very much higher than heretofore. This again highlights the necessity for planned efforts for development and spread of the banking services in the country, if only, at least to maintain the value of the rupee. In a fast changing economy, the banking system must reorganise and equip itself in such a manner that it may cater to the new requirements and conform to the changed pattern of the economy. But efforts in this direction have been inadequate. I repeat the suggestion made by me in my speech in 1957 that a convention of all the banks should be organised under the auspices of the Indian Banks' Association with a view to sponsoring the idea of forming a 'Banking Expansion Commission' and to appointing a 'Standing Plan Committee of the Convention' to maintain liaison with the proposed 'Banking Expansion Commission.'

Credit Investigation

"Banks in this country suffer from the disadvantage in not having any organised credit investigation agency through which they can obtain adequate information about the prospective borrowers and other customers. Of course, banks have their own credit investigation departments, but that by itself cannot bring out all the relevant information which would be more helpful in consideration of extension of bank credit. It is, therefore, necessary that credit investigation agencies should be organised in this country on the lines of such institutions in other advanced countries of the world. Furthermore, there should be more free and frank exchange of information amongst the banks. This will, apart from encouraging the growth of a healthy credit investigation system, also act as an effective check on excessive or undesirable utilisation of bank credit. In this regard, I feel that the Indian Banks' Association may make useful contribution towards organising such an agency and establishing the practice of free and frank exchange of information as amongst banks, and I have no doubt that, if such a lead be given by the said Association, it will receive the wholehearted support from the commercial banks."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

COMPANY LAW SUPPLEMENT

(*Monthly Journal*)

Main object, to keep the readers informed on all aspects of company law, contains among other matters Queries on problems relating to company law and their answers, amendments of company law, notifications, articles of general importance, digest of cases, etc.

Edited by **Messrs. JOHN & ROW**, *Advocates, Madras*, authors of **Ready Referencer on the Indian Companies Act, 1956**, and other publications on company law.

Annual subscription: **Rs. 24.**

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

SEVENTY-SIXTH ANNUAL MEETING

MR. E. F. G. HUNTER PLEADS FOR LARGER IMPORTS OF FINE QUALITY WOOL

THE Seventy-sixth Annual General Meeting of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., was held at Bangalore on 29th April 1959. Addressing the shareholders on the occasion, Mr. E. F. G. Hunter, Chairman, said that the consumer demand for better quality of woollen goods had come at a time when restrictions had been imposed on import of finer qualities of wool. He, however, hoped that sufficient licences would be issued to enable the Company's fine woollen section to work to full capacity during the current year.

The following is the full text of Mr. Hunter's speech:

"GENTLEMEN,

"The Directors' report and the audited accounts for the year ended 31st December 1958 having been in your hands for the prescribed period, I propose, with your permission, to adopt the usual procedure and to take them as read.

"1958 was yet another difficult year for the industry, and more mills closed, while shift working had to be reduced in others. The industry's total production fell by nearly 400 million yards, being partly offset by the lower quantity exported, so that the reduction in stocks at the end of December was not as great as it would have been, if exports had been maintained at the 1957 level.

"During the year under review, world trade in textiles continued to shrink, and as many countries, especially cotton producing countries, have in recent years installed weaving and spinning equipment, competition in export markets became more severe. However, your Company was able to ship overseas goods to the value of nearly Rs. 20 lakhs. In recent months, restrictions on the import of foreign cotton has resulted in an increased demand for indigenous cotton. This has forced prices of Indian cotton upwards and has had the unfortunate effect of enhancing the cost of the qualities that India traditionally exports.

Domestic Market

"Although the domestic market conditions continued to be difficult, your Company was able to increase its sales of cloth and to avoid any material increase in closing stocks. There is no doubt that the reduction in excise duties in 1957 and in March and July 1958, assisted mills to reduce their stocks and to market their products at more attractive prices. While these reductions were welcome, the cost of raw materials, stores, machinery parts and dearness allowance continued to rise. The satisfactory results achieved, despite these adverse factors, reflect the value of your Company's distribution organisation.

"Turning to the woollen section, lower prices ruled for imported wool, in consequence of reduced activity in overseas manufacturing centres. This unexpected benefit enabled that part of the woollen section using imported wool, to show improved results compared with the previous year. However, it became apparent that it was no longer economic to continue to manufacture coarse qualities and towards the end of the year, production in this section was curtailed. This development, although discouraging to your Company, reflects the rising standards of living throughout the country in that those who used to be content with coarse woollen products, now demand something better. It is unfortunate that this natural desire by consumers for better articles comes at a time when foreign exchange is limited, because raw wool for the finer qualities has to be imported.

"It is your Company's policy to continue to produce a range of woollen goods that meets the public's exacting demands, consonant with the quantity of wool that can be purchased with the import licences at their disposal. In this context, I am pleased to inform you that there is some hope that the Government of India will issue wool licences for a twelve-month period instead of for six months; this will give mills greater latitude and more time in which to effect purchases. It is hoped that sufficient licences will be issued to enable the fine woollen section to work at full capacity during the current year.

"In the spun silk section, production has once more declined, due to lack of import licences for spun silk. It is also disheartening that the only supplier of indigenous spun silk has recently ceased operations. Unless, therefore, supplies are resumed, this section may have to close down on the exhaustion of present stocks. With regard to the filature silk section, however, I am glad to report that the Government is aware of the need to improve the quality of indigenous filature silk, but only insistence by the public on higher standards will really provide the incentive. Although I am sure there will always be a market for high quality filature silk goods, there is no doubt that materials manufactured from man-made fibres are making considerable headway.

"Cotswol, our popular union cloth, continued to find a ready sale and there is no doubt that it has now established for itself a market of its own amongst discriminating consumers throughout the country. The sale of the heavier cloth—Angola—is making progress and I am pleased to inform you that your Company continues to supply Angola in considerable quantities to the armed forces.

"The water-supply position at the mill is still serious. In my opinion, the needs of your Company, which is one of the oldest and largest consumers in Bangalore, should receive more sympathetic and generous treatment from the Corporation, particularly as your Company employs directly and indirectly a large number of Bangalore citizens. Your Company has done its best to assist itself by sinking bore wells, but this water is not entirely suitable for processing purposes. With the object of improving this source of supply, plans have been made to treat the bore well water, but we shall always require large quantities from the Corporation.

"Your Company's programme for rehabilitation and replacement of machinery continues to be retarded by the difficulty in obtaining import licences for plant and spare parts not yet manufactured in the country, although, in view of the shortage of foreign exchange and the demands of other mills, I cannot say that we have been treated ungenerously.

Agreement with Labour

"Last year, Mr. E. J. M. Leigh referred to long discussions and negotiations with the Labour Association and I am pleased to record that there has been a considerable improvement in relationship between the Labour Association and the management. Whilst the compromise agreement which we have been negotiating with them for many months is not yet signed, I am happy to say that discussions have been carried on in a very cordial atmosphere with the spirit of give and take ever present. Provided the same reasonable attitude is continued by both parties, final agreement should not long be delayed.

"Shareholders will be interested to know that during the year an agreement was reached between the Company and the Staff Association, covering wages, terms and conditions of service, etc., of the monthly paid staff.

"Besides direct payments by way of wages, bonus, dearness and other allowances, employees benefit from substantial expenditure on welfare activities, and during the year another 72 workpeople's houses were completed and occupied.

"Turning to the accounts, I would like to draw your attention to the figure of sales given in the profit and loss account which, at Rs. 5,54,18,535, represents a record for your Company.

Allocations

"The withdrawal of the allowance for extra normal depreciation which is one reason for the higher provision for taxation, is not of importance to your Company, as the effect of the allowance was only to defer taxation. An appropriate provision has been made by your Company in previous years to meet the liability in respect of this allowance. The improved profits made it possible for your Directors to allocate Rs. 6 lakhs to the general reserve, which allocation will assist in financing our capital expenditure programme. Your Directors were also able to provide Rs. 2,50,000 for workpeople's housing.

"The liability of the workpeople's and employees' provident funds as at 31st December 1958 amounted to Rs. 85,63,207 and Rs. 4,40,343, respectively; corresponding amounts have been invested in trustee securities and these are held by the trustees of the funds.

"It gives me great pleasure to record our thanks for the valuable services which have been rendered to your Company by the Managing Agents. No commentary on your Company's activities during 1958 would be complete, unless I were also to record our appreciation of the continued loyal and devoted services to the Company by the Mill Manager and his staff. Our thanks are also due to the employees for their contribution to the successful results for the Company during the year under review."

Note.—This document does not purport to be a report of the proceedings of the general meeting.

INDIAN ALUMINIUM COMPANY LTD.

(*Concluded from page 771*)

end-purpose of increased production and increased productivity per acre. Scientific aggregation of culturable areas, mechanisation, technology, experience and co-ordination should override, at any rate for the next 20 years, demands for fractionising of land.

"The inclusion of agriculture under the 1951 Act would mean that invitation is given to farmers and others to apply for a licence to set up agronomical estates for economic production. The size, the location, the crop selected, the financial structure, employment factor—these would receive the scrutiny of the agricultural Development Wing before a licence is granted. It may be in accord with the accepted social principles that only leasehold rights be granted to the applicants and for a period of, say, 40-50 years only: it will be in accord with the country's needs that the programme of cultivation be got under way as soon as possible. The 1951 Act contains sufficient powers for the Government to control production and prices and direct distribution channels, and take over in the event of mismanagement. At the start, the experiment may be confined to regions where 'new' water goes, to *gramdan* villages and newly reclaimed colonies where betterment levies can be openly accepted. A success will serve as a signal example to others who are shy of paying today for something which they are not sure will yield better fortune. As the estates will remain leasehold and safeguarding provisions can be evolved for the benefit of the workers employed, there can arise no conflict with the concept of joint co-operative farming; in fact, if a joint-stock company promotes the estates, the gradual development of shares of the company to the workers on the estate is possible and may be considered desirable, thereby ultimately leading to the estate being substantially owned by the workers in joint title. Government may then consider converting the leasehold into a freehold co-operatively held by the workers of the soil.

"Since our last meeting, Mr. W. A. Russell resigned from the Board on his departure from India. Mr. Russell served as a Director for five years and I would like to express, on your behalf and mine, our appreciation of the services he rendered to the Company. I am sure all of you would also like to join me in the praise which is due to the management and employees of the Company for the notable achievements to which I referred earlier. Their sustained effort has largely been responsible for the progress and on them we depend to further enhance the stature of the Company in the years ahead."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

Perfected methods of welding aluminium have been developed by the Skultuna division of Svenska Metallverken, Sweden's leading producers of non-ferrous metals. The methods are being used for welding work on the Swedish Atomic Energy Company's R2 materials-testing reactor at the Studsvik atomic research station and are reported also to be applied in Holland. Special welding equipment has been designed by Skultuna for their methods, which are based on the use of argon tungsten and argon metal arc welding. The high demands for quality placed on welds in reactor components also require rigorous pressure, X-ray, colour indication and vacuum tests.

HINDUSTHAN MERCANTILE BANK LIMITED

DIRECTORS' REPORT

TO THE SHAREHOLDERS HINDUSTHAN MERCANTILE BANK LTD.

The Directors have pleasure in submitting to you the Audited Accounts of the Bank for the year ended 31st December, 1958, together with the Auditors' Report thereon.

The gross earning of the Bank during the period under review after writing off the irrecoverable debts aggregating Rs. 68,576.07 nP. amounted to Rs. 12,59,529.70 nP. and after providing for expenses, the net profit for the year comes to .. .. Rs. 1,38,096.77 nP.

to this has to be added the amount brought forward from the previous Balance Sheet .. .. Rs. 4,232.61 nP.

Total .. Rs. 1,42,329.38 nP.

which the Directors have disposed of as follows :—

(1)	Transferred to Reserve Fund	Rs. 28,000.00 nP.
(2)	Towards Income-tax, till 1957	Rs. 1,01,793.51 nP.
(3)	Balance carried forward	Rs. 12,535.87 nP.
	Total ..	Rs. 1,42,329.38 nP.

The business of the Bank during the year 1958 and the results achieved are considered to be satisfactory.

The Directors are pleased to inform that during the year the Bank's Directorate was strengthened with the addition of Sri Hariram Bubna, a prominent businessman of Bombay.

In terms of the provisions of Clauses 90 and 91 of the Articles of Association (1) Srl M. R. Jaipuria and (2) Srl Manmull Bhuwalka, the Directors of the Bank retire by rotation and Sri Hariram Bubna, a Director of the Bank, retires under Section 260 of the Companies Act, 1956, but being eligible offer themselves for re-election.

The Directors express their gratitude to the Bank's constituents, Shareholders and members of the Local Advisory Committees for their continued support, co-operation, able help and guidance towards the Bank's development.

The Directors also place on record their appreciation of the services rendered by the Officers and other members of the staff at Head Office and Branches.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,
M. L. JALAN,
Chairman.

CALCUTTA, 23rd *March*, 1959.

UNITED STATES GETS A FOURTH SEACOAST

SIGNIFICANCE OF ST. LAWRENCE SEAWAY

UNTIL last month, fully loaded deepwater ocean vessels could proceed only 800 miles up the St. Lawrence River from the Atlantic Ocean. At Montreal, the 35-foot-deep channel ended and their cargoes bound for the Great Lakes had to be transferred to smaller, shallow-draft vessels. But, with the opening of the new Canada-U.S. St. Lawrence Seaway, up to 80 per cent. of the world's ships can sail fully loaded up the St. Lawrence River and through Lake Ontario to the port of Toledo on the western shore of Lake Erie. The new Seaway thus allows these large vessels to make a 600-mile deeper penetration with full cargoes into the rich heartland of Canada and the United States. Downbound traffic to foreign ports reaps similar advantages.

Thus, the centuries-old dream in Canada and the United States of an "Eighth Sea" has finally become a reality. This "Eighth Sea" provides the United States with a "Fourth Seacoast." U.S. officials believe that the opening of the Great Lakes to world shipping will prove a powerful stimulus to world trade.

Joint construction of the new Seaway by the Canadian and U.S. Governments began five years ago in company with the joint construction by the Canadian Province of Ontario and the State of New York of the $600 million Moses-Saunders hydro-electric power plant at the lower end of the International Rapids section of the upper St. Lawrence River. The dams of the power project were made part of the engineering plan of the U.S. portion of the Seaway locks and canal system.

Two adjoining powerhouses were built, one on each side of the International Boundary, integral with the main dam structure. When completed by the end of this year, each will have 16 generators with a combined capacity of 940,000 kilowatts. The total generating capacity of the 32 generators will be 1,880,000 kilowatts, making the Moses-Saunders plant the second largest power-producing plant in North America. Commercial production by the initially installed generators began last September.

The Seaway navigation project cost $471 million, bringing the total cost of the Seaway and power projects to more than $1,000 million.

Shipping tolls will be levied on vessels passing through the upper St. Lawrence River section of the Seaway and also through the Welland Canal.

The Welland Canal toll fees will go wholly to Canada, which has spent $29 million on its deepening. However, the United States and Canada will share the toll fees levied on vessels passing through the upper St. Lawrence River section of the Seaway. They will divide the toll receipts in proportion to their annual revenue requirements for operations and debt services, which are estimated to be 71 per cent. for Canada and 29 per cent. for the United States.

U.S. officials say that the shipping toll charges will represent a very small part of shipping costs on trips through the Seaway and will not add materially to the cost of water transportation of freight. They explain the tolls are designed, in accordance with statutory requirements, to enable the Seaway to be self-sustaining and self-liquidating, so that the borrowings from the two Governments for its construction can be retired in 50 years.

In addition to its expenditures on the Seaway of approximately $128 million, the U.S. Government also plans to spend $146 million on the project to deepen the Great Lakes connecting canals between Lake Erie and the three upper lakes to the Seaway's optimum depth of 27 feet.

Briefly stated, the combined Seaway-power project included deepening the Welland Canal between Lake Ontario and Lake Erie and its approaches; the removal of rock shoals in the Thousand Island section; the construction of three dams in the International Rapids section; the construction of seven new navigation locks and four lateral canals to replace the 22 outmoded locks and six lateral canals in the old canal system in the river above Montreal. (Below Montreal, the St. Lawrence River has a deepwater 35-foot channel to a point 30 miles below Quebec where it is open waters from there to the sea).

In assessing the long-range potentialities of the new Seaway, officials point out that it provides economical ocean-going water transportation, the cheapest form of transportation that is available, to a vast inland region which formerly could not be reached by large ocean-going vessels.

This inland region is made up of the Provinces of Ontario and Quebec on the Canadian side and 17 states on the American side and constitutes the greatest concentration of industrial and agricultural development in the world today. Within this area live one-third of the people of both the United States and Canada—an estimated population of 58 million on the U.S. side alone. The U.S. area produces 84 per cent. of the nation's automobiles, 61 per cent. of its miscellaneous machinery, 61 per cent. of its wheat, and 75 per cent. of its steel.

The Great Lakes, together with the St. Lawrence River, comprise a drainage area of 300,000 square miles. The water surface has an area of 95,000 square miles and constitutes the greatest body of fresh water on earth.

All told, the shoreline of this "Eighth Sea" totals 8,300 miles, a stretch longer than the whole U.S. Atlantic Ocean seaboard. The Great Lakes port most distant from the Atlantic Ocean—Duluth, Minnesota,—is 2,342 miles away by direct route.

Although traffic is expected to double on the Seaway this year, U.S. officials do not believe the mere availability of the new Seaway will automatically result in full use of its potentialities. But the future of the Seaway looks bright to Administrator Castle. He points out that all water routes of prominence have experienced continuous gains in volume of tonnage over the years.

Although the benefits of the new Seaway will, of course, be mainly reaped by Canadian and U.S. producers and consumers, it will enable foreign producers to ship their products into the Great Lakes—St. Lawrence Basin at lower costs and also make it possible for foreign businessmen and Governments to import products from the area at lower transportation costs. Thus, it will benefit to a considerable extent producers and consumers and shipping lines in all parts of the world. In the words of U.S. Secretary of Commerce, Mr. Lewis L. Strauss, the opening of the new Seaway to the world's ships "presages the dawn of a new era in world commerce."

CONTROL ON SALE AND RE-SALE OF MOTOR CARS

In June 1958, the Government of India issued certain instructions to manufacturers and dealers of motor cars in regard to the equitable distribution and sale of motor cars. These instructions were furher amplified in April 1959. The Government now feels, however, that, in respect of medium and small passenger cars, it is necessary to give legal backing to the instructions already issued and also to regulate re-sale, so as to eliminate profiteering. It has accordingly issued a statutory, order, called the Motor Cars (Distribution and Sale) Control Order, under the Industries (Development and Regulation) Act, 1951. The scope of this order is confined to three makes of cars, namely, Hindustan Landmaster/Ambassador, Fiat 1100 and Standard 10. The order came into force with effect from 1st May, 1959.

Apart from making provision for the sale of motor cars in the order of registration, on the lines of the instructions already issued, the Order stipulates that any person who had purchased any of the three above-mentioned makes of cars cannot re-sell the same for a period of two years from the date of its first purchase as a new motor car, without a written permit from the Controller of Motor Cars or an officer appointed for the purpose by the State Governments. Thus, the re-sale of motor cars purchased on or before 1st May, 1957, does not require any permit.

Permission for the re-sale of the above-mentioned three types of cars purchased after 1st May, 1957, and registered for the first time prior to 1st June, 1958, when the scarcity in motor cars may be said to have developed, will normally be freely granted. Permission for re-sale of such cars registered for the first time on or after 1st June, 1958 will be granted only for valid reasons. Owners affected by this provision will have to obtain the permission referred to above before the transfer is given effect to by the registration authorities under the Motor Vehicles Act.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of Hindusthan Mercantile Bank Limited as at 31st December, 1958, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of one branch audited by us and the unaudited returns from six other branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (3) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts, are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that subject to the income-tax provision for the accounting year 1958 :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended on that date.

THE BENGAL COAL COMPANY, LIMITED

SPEECH OF CHAIRMAN, MR. N. STENHOUSE

WORKING CONDITIONS IN PRIVATE SECTOR COLLIERIES ARE BY NO MEANS EASY

THERE are only three collieries in India which have shafts sunk to a depth of over 1,400 feet. They have the hazard of gas to contend with and their operating costs are high. All these three collieries are owned and operated by the Bengal Coal Company, Ltd. This statement was made by Mr. N. Stenhouse, Chairman of the Company, in the course of his speech at the Annual General Meeting of the shareholders held in Calcutta on 29th April 1959, in refutation of the claim by a section of the public that the State collieries work deep and difficult seams and thus incur losses, whereas the private sector operated only those mines where the working conditions were easy.

The following is the full text of Mr. Stenhouse's speech:

"GENTLEMEN,

"You will have seen from the Directors' report for the year ended 31st October 1958 that there was an increase in the total raisings from 2,801,164 tons to 2,862,170 tons and an increase of some Rs. 5 lakhs in the gross profit. Your Directors have recommended a final dividend which will maintain the annual distribution on the ordinary capital of the Company at Rs. 17.50 per share; this, however, represents only 5.82 per cent. on the capital employed in the undertaking. Provision for wealth and other taxes totals Rs. 51 lakhs—a heavy burden and over 68 per cent. of the Company's profit for the year, and nearly three times the aggregate of the dividends paid or recommended on the preference and ordinary shares. In the case of a major unit in an expanding industry such as coal, the constant strain on the Company's finances occasioned by capital expenditure required for development and, what is equally important, to increase the safety and efficiency of your collieries, as also amenities to labour, is indeed a serious matter. You will observe that, although the net balance on the Company's block account has increased by nearly Rs. 16 lakhs, the Company has been able to provide by transfers to reserve a net amount of Rs. 7 lakhs only.

Chinakuri Accident

"The year under review was clouded by the very serious accident on 19th February 1958 at Chinakuri 1 and 2 pits colliery. The Court of Inquiry appointed by Government concluded its work after detailed investigations which extended over a period of five months and, as a summary of the Court's findings, I would like to repeat what the Board stated in their annual report to shareholders:

> 'The conclusions arrived at by the Court were to the effect that shortly before the actual explosion there was an outburst of methane gas from a splinter seam below the main Disergarh seam. An outburst of this magnitude had not previously occurred in India, but was known to have taken place in other countries. The Court was not, however, able to establish definitely the cause of the ignition which resulted in the explosion. What did appear certain, however, was that the vast majority of the miners who lost their lives so tragically were asphyxiated by the original outburst of gas before the explosion took place.'

These then were the basic findings of the Court on this most unfortunate disaster which caused the death of 176 fine men under such tragic circumstances.

"The report of the Court of Inquiry has received considerable publicity in the Press and has been the subject of much discussion in Parliament. Whilst welcoming constructive suggestions arising out of the recommendations in the report, I am sure that I am voicing the thoughts of you all when I decry the biassed and, indeed, vicious criticism which has emanated so freely from certain quarters as a result of the published report. For instance, the accusation that the Company should have concealed the number of the unfortunate victims of the accident is completely abhorrent to us. It has been our policy throughout to place before the Court of Inquiry and the officials all the facts and information available to us, all members of our staff were instructed to co-operate in every way in the investigation, and the assistance rendered by the Company was duly acknowledged in the report. Is it too much to hope that these fantastic allegations will now cease? Their continuance can only have the effect of lowering the morale of all those in the coalfields who bear heavy responsibilities connected with the industry, whether they be in the public or the private sector. Such persons should be encouraged in their endeavours to produce, with due regard to safety, the coal so vitally required by the country, and they should not be subjected to such a persistent campaign of destructive criticism.

"We welcome any detailed study of the recommendations put forward by the Court which can assist the industry in overcoming the many problems connected with deep and gassy mines, and, in fact, these recommendations were considered at the second of a series of Official Safety Conferences held early this year. It must be remembered that much of the high grade coal required in the Third and subsequent Plans will have to be mined from deep and gassy seams, and all investigations directed towards the reduction of the inherent hazards must receive the support and encouragement of the whole country. We also look forward to the completion of the mining research station, whose primary responsibility it will be to investigate these matters.

A Fact Not So Well Known

"It may not generally be known that there are only three collieries in India which have shafts sunk to a depth of over 1,400 feet; these three large collieries are owned and operated by your Company. This will come as a surprise to those who may have recently read about a reference in the Lok Sabha to the enormous losses being incurred by certain of the State collieries, and to the statement that this was due to the fact that these State collieries continue to work deep and difficult seams, whereas the private sector operate 'only those mines where the working conditions are easy.' The three collieries to which I have referred are certainly not easy to work: they have deep shafts; they have the hazard of gas to contend with; and their operating costs are high.

"It may not be out of place to mention that there appears to be considerable misunderstanding in certain quarters regarding ownership of some of the large Indian coal companies. In the case of Bengal Coal Company, Ltd., just over 93 per cent. of the issued share capital is held by shareholders resident in India, and of the total number of 1,573 shareholders, as many as 1,320 hold not more than 50 shares each. It will, therefore, be seen that your Company has its roots in India and that its shareholding is indeed widely spread.

Labour

"Last year, my predecessor referred to the problem of inter-union rivalry. Although during the year under review there have been no major disputes or stoppages at any of your collieries, the uneasy truce continues. There is still much room for the expansion of enlightened union leadership directed towards the best interests of the miners. It is only by the effective working of genuine and constructive unions in the coalfields area, which has aptly been called the Ruhr of India, that the coal and other major industries there will be able to make their full contribution to the national interests, and it is to be hoped that responsible leaders in the labour field will soon appreciate this fact.

"Considerable progress has been made in the construction of workers' quarters at your collieries under the auspices of the excellent scheme of the Coal Mines Housing Board, and this work is receiving top priority. We are completing 908 houses during the first year of the scheme, and it is our intention to construct 850 more quarters during the coming year. Much has been heard of the central schemes for the supply of water in the Raniganj coalfields but, while these schemes may be admirable when completed, they are still in the discussion stage. Shortage of good water is one of the main problems experienced at the majority of collieries, and we are, therefore, undertaking extensive projects for the purification and supply of water at all your large collieries. The first of such major projects, costing Rs. 2 lakhs, at Seetalpur colliery has already proved a great success, and others are now being completed. These are, we feel, very real and practical ways of improving the living conditions of the miners. Also, as an indication of the improvement in the earnings of the Company's workers, it may interest you to know that, since 1956, the total amount paid to them has increased by Rs. 108 lakhs—55 per cent.—while the number of employees remains virtually the same.

Price Revision

"The Chairman of the three Associations of coal producers, in their annual speeches delivered during recent weeks, have referred in no uncertain terms to the necessity for an immediate and adequate price increase, and I fully endorse all that has been said on this subject by these prominent spokesmen of the industry. Although the Bengal Coal Company, Ltd., is still operating on a profitable basis, the main reason for this is the increase in raisings—mainly at the mechanised collieries. It is, however, impossible to overlook the fact that costs are continuing to increase, not only due to higher prices for stores and equipment but also because of the more advanced safety measures which are being introduced. Your Company is a large company and, therefore, can to a certain extent carry the burden of the losses which some of its collieries incur. Indeed, 14 of these collieries which produced over 1½ million tons during the year made either actual losses or only small profits.

Sandstowing

"You may have noticed from the accounts that the Company has had to bear a difference of over Rs. 9 lakhs between the cost of sandstowing at your collieries and the quantum of assistance received from the Coal Board. Three additional collieries will be stowing during the current year and the overall cost to the Company will thus, I fear, be very much greater in future. This is a very real contribution not only towards safety in our gassy mines but also to ensure maximum extraction from the high quality seams. We, therefore, welcome the recent announcement that the quantum of assistance towards stowing by the Coal Board is being increased, albeit by the inadequate amount of As. 3 per ton of sand stowed hydraulically.

Railways

"No speech from this chair or at any similar meeting connected with the coal industry can be complete without a reference to rail transport. As always, we continue to have difficulty in getting sufficient wagons to keep stocks at collieries down to reasonable levels, and this subject has already been amply dealt with in recent speeches connected with the industry. I must, however, in all fairness thank the Eastern Railway for their efforts in assisting the large portion of the industry which they serve. Wagon offerings on the Eastern Railway during the year have shown a gratifying increase over the previous year's figures, and this railway has also appreciated what, in the eyes of the coal industry, should be one of the main functions of the railways: the provision of sufficient siding and pilot capacity at those collieries which are actually producing increasing quantities of coal.

Exports

"I am glad to be able to say that more encouragement has been given during the past year to the export of coal but, as your Chairman said last year, it will take some time to repair the damage occasioned by official apathy in the past. We are vigorously pursuing all possible outlets and potential markets, and I would like to mention particularly the fact that we have regained the 1959 contract for the entire requirements of the Ceylon Government Railways, which contract was shared equally with China during the previous year.

"The Company has always owed a great deal to its senior staff working in the coalfields,

(Continued in next page)

BUCKINGHAM & CARNATIC COMPANY LIMITED

THIRTY-EIGHTH ANNUAL MEETING

EXPORT INCENTIVES ARE ONLY SHORT-TERM PALLIATIVES, SAYS THE CHAIRMAN

INCENTIVES granted by the Government of India to exporters of textile goods will at best serve only as short-term palliatives and success in the long run must depend on the removal of the several basic disadvantages from which the industry suffers. This view was expressed by Mr. E. F. G. Hunter, Chairman of the Buckingham and Carnatic Company, Ltd., at the Thirty-eighth Annual General Meeting of the Company held at Madras on 30th April 1959. He further added that, unless prices of Indian cotton were brought down to, or if possible below, international parity, it would have the most serious effect on India's export performance.

The following is the full text of Mr. Hunter's speech:

"GENTLEMEN,

"The report of the Directors and the audited accounts for the year ended 31st December 1958 having been in your hands for the prescribed period, I propose, with your permission, to adopt the usual procedure and to take them as read.

"The year under review, which was another critical one for the textile industry, witnessed the closure of more mills and the reduction of shift working in many others. Yardage production fell by nearly 400 million yards to approximately 4,930 million and had exports not also fallen by 291 million yards to 587 million, the lowest figure since 1949, the reduction in stocks would have been more substantial.

"Following reductions in excise duties in December 1957 and again in March 1958, there was some improvement in offtake, but this was short-lived and as stocks again mounted, certain further reliefs were announced in July in respect of coarse and medium varieties.

"During the closing months of 1958, there was a welcome improvement in exports, assisted by incentive schemes and closing unsold stocks with mills fell to approximately 181 million yards.

"When he addressed you last year, Mr. E. J. M. Leigh pointed out that clearances from mills in 1957 for home consumption fell by some 550 million yards when compared with the previous year. According to our calculations, clearances from mills for home market sales were approximately:

> 4,550 million yards in 1956,
> 4,000 million yards in 1957,
> and 4,050 million yards in 1958.

"It will be appreciated, however, that these figures do not necessarily relate to consumer purchases at the retail point. 1956 was a year of rising prices and at such times clearances from mills are high and the distribution pipeline is comparatively full. A period of falling prices followed, resulting in lack of confidence, and dealers tended to reduce their stocks and to adopt a hand-to-mouth policy. Due to recurring crises in 1958 confidence failed to return to the market during that year; until confidence revives, there will be only a minimum flow in the pipeline and the trade will leave the mills to carry stocks. In short, I contend that there has been little, if any, fall in actual consumer offtake and that, in fact, it may well have been rising all the time, though not spectacularly. Indeed, there are shortages in some of the better types of cloth and quite a considerable portion of the surplus stocks with mills are definite surpluses, in quality and type, to consumer requirements.

Satisfactory Trading

"Thanks to the constant attention that has always been given to quality control, market research and the development of a scientific sales policy, your Company has had a satisfactory year's trading. Due to its conservative dividend policy and to the care given to the maintenance of its machinery and plant, your Company is in a relatively strong position to face the future, when the biggest challenge will be in the export field.

"India's exports in 1958 fell by approximately 30 per cent. by comparison with those for the previous year, as against an average fall of 13 per cent. in the case of all non-communist countries put together. The position is serious when the country is so short of foreign exchange and one does not have to look very far to find the reasons for this disparity. Export incentives, though welcome, will at best serve only as short-term palliatives and success in the long run must depend on the removal of several basic disadvantages.

"Costs of manufacture are far too high and must be reduced substantially with the proper relation of wages to productivity.

"Quality must be improved; the industry must be allowed to modernise and rationalise its plant and expand substantially its capacity to dye, print and finish fabrics to satisfy overseas customers' requirements. The demand for cheap loom state cloth has shrunk severely and will continue to do so with the development of new textile units in many countries, several of which are themselves growers of cotton.

"Indian cotton prices must be brought down to, or if possible below, international parity, as they were until recently. The high prices ruling at present, resulting from restrictions on the import of cheap foreign cotton and a partial failure of the local crop, cannot but have the most serious effect on India's export performance.

An Unchallengeable Competitor

"Another grave threat to India's textile exports is the entry of China as an apparently unchallengeable competitor offering good and well finished cloths at whatever prices are necessary to obtain bulk business. The development of this Government directed and assisted drive will be watched with anxiety by many textile exporting countries.

"In the face of adverse circumstances, your Company achieved export earnings to the extent of Rs. 1.85 crores. Though down on last year's record figure, it represents a very creditable achievement and your Company will derive substantial benefits this year under the export incentive schemes.

"When he addressed you last year, Mr. E. J. M. Leigh reported that progress had been made with the construction of the second new weaving shed. The northern half of that shed was completed during the year and, with the transfer of some rehabilitated looms from older sheds, production has already commenced in this section on a substantial scale. Work on part of the southern half of the shed was started during the latter half of 1958 and contracts have recently been placed for the completion of the flooring and associated works.

"I am pleased to tell you that, despite the difficult import licensing position, a few much needed machines were imported during the year including three modern sizing machines which have gone into production. The rehabilitation of looms continued steadily throughout the year, and it is expected that this work will be completed before the end of 1959.

"As you will have seen from the Directors' report, the workers embarked on an illegal strike in June and in its settlement secured considerable benefits in the shape of bonus payments for past years and a more favourable formula for computing bonus in the future. The question of higher bonus has been, as you are aware, a subject of agitation over a number of years and your Directors are hopeful that its settlement will lead to a happier relationship.

"Undoubtedly, before further benefits are given to workers in the shape of enhanced wages, allowances or bonuses, more satisfactory workloads must be established. I realise that when considering workloads, the bogey of retrenchment is ever present in the minds of workers, but your Company has assured its employees and their leaders that there will be no retrenchment as a result of modernisation and rationalisation and that no employee will in consequence suffer a reduction in wages. Despite these assurances, labour has resisted changes at every turn and has indicated its displeasure by frequent short lightning illegal stoppages. This attitude is incomprehensible and must in the long run operate against the interests of labour. However, the management has recently discerned a better understanding of this matter by the labour leaders and it is hoped that as a result, our labour will work peacefully and without interruption and co-operate in bringing about the further improvements in methods of production which are so necessary if we are to retain our position, particularly in the export field.

"Turning now to the accounts, the substantial reduction in stocks which, as mentioned in the report, is mainly responsible for the lower overdraft at the close of the year, is a healthy sign and reflects the virility of your Company's sales organisation.

"The amount charged in the profit and loss account for bonus to employees—Rs. 27,09,613—represents a record bonus payment and was made in pursuance of the settlement reached with labour to which I have already referred.

"The provision for taxation, at Rs. 20,50,000, would have been substantially higher, had it not been for the increased bonus for 1958 and the additional bonus payments for previous years. The increased liability for taxation, despite a slightly lower profit than that made in 1957, is the result of the withdrawal of the allowance for extra normal depreciation. While this allowance is no doubt very welcome to, and possibly desirable for, a new developing industry, the consequent deferment of tax payments which this allowance entails, can lead to misunderstanding and to difficulties when the tax has to be paid, unless adequate provision is made. An appropriate provision has been made by your Company in previous years and appears in the schedule of reserves under the heading 'deferred taxation'.

"Other matters of special interest in the accounts have, I think, been covered adequately in the Directors' report.

Cautious Optimism

"Having read the report and heard my remarks, you will, I believe, have some understanding and appreciation of the difficulties which your Company has had to face and overcome during the year under review and, while I do not expect that our anxieties will be any the less in the future, I do believe that with the Government's new recognition of the industries' difficulties, and given the co-operation and goodwill of labour and above all freedom from interference, we can look forward to the future with some measure of optimism.

"I am sure you would not wish me to conclude without recording your appreciation of the valuable services which have again been rendered to your Company by the Managing Agents. I also wish to record our thanks to the Mill Manager and his staff for their continued loyal and devoted service to the Company, and to the employees for their contribution to the result for the year under review, which I consider may be regarded as satisfactory."

Note.—This document does not purport to be a report of the proceedings of the general meeting.

(Concluded from previous page)

but there can seldom have been a more trying year than 1958. Your Chief Mining Engineer, Mr. Rosser, and his staff have had to face the considerable additional strain occasioned by the aftermath of the Chinakuri explosion and the inquiry, and it is to their credit that they have not only coped with this and brought Chinakuri back into production, but have also been able to proceed with the development plans at your other collieries. Mr. Rosser is with us this morning and I know that it will be your wish that I should express to him, and through him to all members of the coalfields staff, our very great appreciation of their excellent work.

"I do not suppose that there is any one here today who will remember the time when, in October 1908, Andrew Yule and Company were first appointed Managing Agents of your Company. It has been my great privilege to address you today on the completion of the fiftieth year of this association."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

MAY 1959 FACILITY DEPARTMENT

FORTHCOMING INDIAN LABOUR CONFERENCE

SEVERAL PRESSING PROBLEMS TO BE DISCUSSED

THE seventeenth session of the Indian Labour Conference, scheduled to be held in July, will be one of the most remarkable of recent sessions of the Conference. Important issues relating to industrial relations are expected to come up for consideration. Several changes have taken place since the last session of the Conference, changes which have a direct bearing on the climate of industrial relations. Among the most notable of these are, first, the unreserved acceptance of the code for discipline in industry by the employers and workers. This had a perceptible influence on the trend of industrial relations as reflected in the statistics of industrial disputes for 1958. Thus, although there was a minor increase in the number of disputes during the second half of the year, as compared with the first half, from 781 to 783, the number of workers involved and the number of man-days lost recorded an appreciable decline from 511,237 to 431,183 and from 4,519,087 to 3,073,516 respectively. Secondly, the evaluation and implementation machinery at the Centre and in the States has been, generally speaking, functioning effectively, thus leading to the elimination of a number of misunderstandings between employers and workers and also to a better appreciation of the difficulties of one party by the other. Thirdly, acceptance of the inter-union code of conduct by the four all-India organisations of workers had contributed to the creation of a better atmosphere in which the employers would find it easier to carry on negotiations.

Encouraging as these trends are, there is no denying that there are still many loopholes to be plugged before it can be affirmed that the foundations of a rational system of labour-management relations have been securely laid. There cannot, however, be any finality in a field which is subject to the influences of continuous and swift changes in the economy of the country. Problems will have to be tackled and solutions found as and when they arise.

Various Suggestions

A number of proposals for the amendment of the Industrial Disputes Act were placed before the seventeenth session of the Standing Labour Committee held in Bombay in October 1958. Various suggestions for changes or modifications in the existing law and procedure governing the settlement of industrial disputes, recognition of trade unions and allied matters have also been received by the Labour Ministry not only from employers' and workers' organisations but also from the State Governments and the employing Ministries at the Centre. The Union Labour Ministry, taking into consideration all these proposals and suggestions, has drawn up a memorandum on industrial relations which is entered as item 2 on the agenda of the Conference. The memorandum, which deals, under two broad headings, with the machinery for collective bargaining and the settlement of industrial disputes and the problems relating to trade union organisation, has been circulated to employers' and workers' organisations and State Governments. Under the first heading, the following questions have been included as deserving the attention of the forthcoming Conference: (1) Merits of the procedure proposed in the Kerala Industrial Relations Bill for the certification of negotiating agents and the need for and the desirability of making consequential modifications in the criteria for recognition of unions as adopted at the last Conference. (2) The appointment of a small tripartite committee for drawing up "guidance principles" relating to the composition and functioning, etc., of works committee. (3) Validity of agreements reached through direct negotiations between the parties. (4) Removal of the difficulties standing in the way of reference of disputes to voluntary arbitration. (5) Replacement of labour courts and industrial tribunals by arbitration boards as suggested by the Madhya Pradesh Government. (6) Model principles for reference of disputes to adjudication. (7) Revival of Labour Appellate Tribunal. (8) Creation of separate machinery for dealing with disputes relating to individual dismissals. (9) Jurisdiction of a tribunal appointed by one State Government in respect of a dispute concerning workmen employed in a different State.

To take some of the more important questions. First, the question of replacement of labour courts and industrial tribunals by arbitration boards.

The Industrial Disputes Act provides for a three-tier system of tribunals, manned mainly by persons who are holding or have held judicial posts. The Government of Madhya Pradesh feels that, consequently, these tribunals are swayed more by the niceties of civil law than by considerations of equity and social justice. The State Government has, therefore, suggested that consideration should be given to the question of replacing labour courts and industrial tribunals by arbitration boards consisting of representatives of employers and workers selected out of panels maintained by Government, the chairmen being independent persons with a judicial background. The suggestion of the Madhya Pradesh Government amount, in effect, to the substitution of adjudication by compulsory arbitration. The system of labour courts and industrial tribunals, says the memorandum, was introduced only in 1956 and perhaps needs to be given a fair trial before a change-over is thought of. The Conference may, however, according to it, discuss the implications of the suggestion made by the Madhya Pradesh Government.

Model Principles

As regards item number (6), a draft model of principles for reference of disputes to adjudication has been worked out. The following are its salient features:

Individual disputes: Industrial disputes raised in regard to individual cases, i.e., cases of dismissal, discharge or any action of management on disciplinary grounds, may be referred for adjudication if there is a *prima facie* case of (1) victimisation or unfair labour practice, (2) that the standing orders in force have not been properly followed or that the principles of natural justice have not been followed, and (3) the conciliation machinery reports that injustice has been done to the workmen.

In all the aforesaid cases, however, if there is *prima facie* evidence to show that the workmen concerned have resorted to violence or otherwise committed a serious breach of the Code of Discipline, then adjudication may ordinarily be refused.

Collective disputes: No dispute may, ordinarily, be referred for adjudication—(1) Unless efforts at conciliation have failed and there is no further scope for conciliation and the parties are not agreeable for arbitration. (2) If there is an illegal strike or lockout or a strike or lockout resorted to without seeking settlement by constitutional means and without proper notice, unless such strike (or direct action) or lockout, as the case may be, is called off. (3) If the demand relates to a claim for wages for the period of a strike, or the demand is such, which following judicial decisions the tribunals have consistently refused to concede, e.g., the demand about recognition of union. (4) If in respect of demands other legal remedies are available, i.e., matters covered by the Factories Act, Workmen's Compensation Act, Minimum Wages Act, etc. (5) If the matters in dispute are pending before a committee appointed by Government.

In ordering adjudication, the following factors will be taken into account: (1) The reasonableness of demands and their justiciability. (2) The repercussion on the other units of the same industry or allied industry. (3) The capacity of the industry to pay or accede to demands like increased wages, etc. (4) The standing of the union raising the dispute and the strength behind the demands. It will be useful, observes the memorandum, if "norms" are laid down with regard to various conditions of service, welfare provisions, etc., in industries. They will be of help in deciding whether a particular dispute should or should not be referred to adjudication.

Prof. Richardson's Proposals

These draft model principles, according to Prof. Richardson, an I.L.O. expert on industrial relations at present working with the Ministry of Labour, are generally adequate and applicable. He, however, made the following suggestions:

(i) A useful distinction may be drawn between (*a*) disputes arising out of the implementation of existing legislation, awards, etc. (implementation disputes) and, (b) disputes arising from demands for new conditions.

(ii) "Implementation disputes," which usually affect only individual or small groups of workers should rarely be sent up for adjudication. The Labour Commissioners may be empowered to give binding decisions in such cases.

(iii) In the case of the second category of disputes, often involving large numbers of workers, wider use may be made of courts of enquiry, provided for in Section 6 of the Industrial Disputes Act, to investigate the facts and make impartial recommendations which would provide an authoritative basis for settlement by agreement and further conciliation.

(iv) Disputes which could not initially be settled through conciliation should, instead of straightaway being referred for adjudication, be sent back for further conciliation, even if this process involved the risk of a strike or lockout.

The abolition of the Appellate Tribunal has resulted in a large increase in the number of cases going up in appeal to the Supreme Court. For instance, the number of petitions for special leave to appeal registered was 59 and those which were granted leave were 23 in 1953. They were 51 and 21 respectively in 1954, 57 and 37 in 1955 and have increased to 291 and 257 in 1956 and 189 and 148 as on 31st October 1957. About 209 cases were pending with the Supreme Court as on 30th November 1958. Commenting on this situation, the Law Commission observed: "The situation created by the large number of appeals causes concern in two respects. It has the national effect of clogging the work of the Supreme Court. The graver aspect, however, of the matter is that labour matters are being thrust upon a Court which has not the means or materials for adequately informing itself about the different aspects of the questions which arise in these appeals and therefore finds it difficult to do adequate justice. Equally grave are the delays caused by these appeals in the disposal of industrial matters which essentially need speedy disposal."

Appeals To High Courts

As far as appeals to the High Courts are concerned, the Law Commission has pointed out that a party aggrieved by the decision of the tribunal approaches the Supreme Court, because the jurisdiction of High Courts under Article 226 of the Constitution is too narrow to afford relief. A High Court can only quash an order of a tribunal but cannot make its own decision and substitute it for that of the tribunal. The remedy, according to the Law Commission, lies in providing for an adequate right of appeal in industrial matters. Such a right of appeal could be provided either by constituting tribunals of appeal under the labour legislation itself or by conferring a right of appeal to the High Court in suitable cases.

The views of the Law Commission deserve close attention. The observance of the code for discipline may lead to a reduction in the number of cases going up to the High Courts and the Supreme Court. Even so, the Conference may discuss the desirability of revising the Labour Appellate Tribunal or some suitable means of filling the gap caused by its abolition.

As regards the problems relating to trade union organisation, the memorandum points out that workers' organisations have a dual role to play. One is to negotiate with the employers and to enter into collective bargaining or, as a last resort, have recourse to direct action for securing satisfactory conditions of work and fulfilling the reasonable aspirations of worker. These problems raise the issue of recognition of trade unions either voluntarily by the employers or through certification by Governmental agencies, if necessary. The other important, perhaps, much less ostentatious function of trade unions is to look after the day-to-day welfare of their members and, where practicable, of their families.

The desirability of making substantial changes in the Trade Unions Act of 1926 has been stressed on several occasions. The memorandum lists seven suggestions as deserving consideration. They are:

(1) Alteration of the present statutory limit of 50 per cent. on the number of outsiders as executives of trade unions.

(2) Inclusion of provision in the Trade Union Act regarding membership fee.

(3) Decentralisation of work of Registrars of Trade Unions.

(4) Empowering Registrars to look into the records of trade unions.

(5) Cancellation of registration for failure to observe the rules of the union, and submit annual returns.

(6) Restricting the number of unions that may be registered.

Several other amendments of a minor nature to the Trade Unions Act have also been received by the Ministry. It feels that these can be taken care of if the fundamental issues are settled and broad principles are laid down by the Conference.

PLANNING AND FOREIGN TRADE

NEED FOR REGAINING LOST GROUND IN TRADITIONAL EXPORT ITEMS

(Contributed)

PLANNING has, or should have, two most important objectives; (a) to raise the standard of living and (b) to bring about a stabler and more diversified economy. Let us see the latter effect, which is generally reflected in the foreign trade.

Between 1951-52 and 1958, over a period of eight years of planning, our total foreign trade has dwindled by Rs. 195 crores from Rs. 1,653 crores to Rs. 1,458 crores; exports by Rs. 127 crores from Rs. 703 crores to Rs. 576 crores; re-exports by Rs. 5 crores from Rs. 14 crores to Rs. 9 crores; imports by Rs. 63 crores from Rs. 936 crores to Rs. 873 crores; and the trade deficit rose by Rs. 69 crores from Rs. 219 crores to Rs. 288 crores. There was thus a fall (in value) of 12 per cent. in the total trade, 18 per cent. in exports, 39 per cent. in re-exports, 7 per cent. in imports, and a rise of 31 per cent. in the trade deficit between the two years. Considering the rise in the general price level during the period, and the fact that the figures of imports of Government stores are usually deficient, the position, by and large, should be regarded as even more unsatisfactory than the figures seem to indicate.

How has this position come about? What are the gains and losses reflected in the direction and composition of our foreign trade?

India has had substantial trade with a few countries such as the U.K., the U.S.A., Australia, Canada, Argentina, Burma, Pakistan, Ceylon, Japan and Singapore. Our exports to these countries, however, have fallen substantially between 1951-52 and 1958. Exports to the U.K. have fallen by Rs. 23 crores from Rs. 188 crores to Rs. 165 crores; to U.S.A. by Rs. 38 crores from Rs. 130 crores to Rs. 92 crores; to Australia by Rs. 25 crores from Rs. 46 crores to Rs. 21 crores; to Burma by Rs. 12 crores from Rs. 19 crores to Rs. 7 crores; to Pakistan by Rs. 12 crores from Rs. 19 crores to Rs. 7 crores; and to Argentina by Rs. 8 crores from Rs. 17 crores to Rs. 9 crores. Thus, the fall in our export trade with these six countries alone amounted to Rs. 118 crores out of the total shortfall of Rs. 127 crores. No doubt there have been some considerable gains in other directions. Our exports to U.S.S.R. rose by Rs. 16 crores from Rs. 7 crores to Rs. 23 crores; to Japan by Rs. 12 crores from Rs. 14 crores to Rs. 26 crores; and to West Germany by Rs. 6 crores from Rs. 9 crores to Rs. 15 crores. But such gains have not been sufficient to offset the losses. The result has been a substantial decline in our export trade.

Imports

Similarly, our import trade has also registered a decline, but not to the extent that the export trade has done. The imports from U.S.A. have fallen sharply by Rs. 134 crores from Rs. 295 crores in 1951-52 to Rs. 161 crores in 1958; from Egypt by Rs. 34 crores from Rs. 40 crores to Rs. 6 crores; from China by Rs. 11 crores from Rs. 16 crores to Rs. 5 crores; from Singapore by Rs. 9 crores from Rs. 18 crores to Rs. 9 crores; from Kenya by Rs. 7 crores from Rs. 19 crores to Rs. 12 crores; from Pakistan by Rs. 4 crores from Rs. 10 crores to Rs. 6 crores; and from U.K. by Rs. 2 crores from Rs. 171 crores to Rs. 169 crores. The fall from these seven countries amounted to Rs. 201 crores. On the other hand, the imports substantially increased from other directions: from West Germany by Rs. 65 crores from Rs. 29 crores to Rs. 94 crores; from Burma by Rs. 22 crores from Rs. 23 crores to Rs. 45 crores; from U.S.S.R. by Rs. 21 crores from Rs. 1 crore to Rs. 22 crores; from Canada by Rs. 15 crores from Rs. 19 crores to Rs. 34 crores; from Japan by Rs. 14 crores from Rs. 25 crores to Rs. 39 crores; and from Italy by Rs. 7 crores from Rs. 18 crores to Rs. 25 crores. The increase in the imports from these six countries was to the extent of Rs. 144 crores. The net fall in the import trade accounted for by the above figures was Rs. 57 crores out of a total fall of Rs. 63 crores in the imports.

An analysis of the composition of the trade would at once bring out the fact that the largest erosion in our export trade has taken place in the textile yarn and manufactures group, which has registered a heavy fall of Rs. 155 crores from Rs. 338 crores in 1951-52 to Rs. 183 crores in 1958. Other significant fall has occurred in the exports of leather and leather manufactures, by Rs. 9 crores from Rs. 34 crores to Rs. 25 crores. As our most important exports in the textiles group are cotton and jute manufactures, it is essential to concentrate all attention on these items.

In the import trade, the general pattern is naturally determined by our economic and industrial planning. The major items of imports are cereals and cereal preparations; textile fibres, unmanufactured and waste; metals and their manufactures, machinery and transport equipment; and oils vegetable, mineral and animal. The imports of foodstuffs are still high at Rs. 149 crores in 1958, though they have fallen by Rs. 80 crores from Rs. 229 crores in 1951-52. Half of our trade deficit in 1958 is accounted for by the imports of foodgrains, a sad irony for a predominantly agricultural country. There has been a heavy fall of Rs. 108 crores in imports of raw textile fibres from Rs. 154 crores to Rs. 46 crores. Imports of textile yarn and manufactures also considerably declined by Rs. 18 crores from Rs. 35 crores to Rs. 17 crores. On the other hand, there have been substantial increases in other cases. Imports of metals and their manufactures increased by Rs. 87 crores from Rs. 44 crores to Rs. 131 crores; machinery by Rs. 72 crores from Rs. 117 crores to Rs. 189 crores; chemicals, drugs and medicines by Rs. 29 crores from Rs. 36 crores to Rs. 65 crores; and transport equipment by Rs. 22 crores from Rs. 37 crores to Rs. 59 crores. It is noteworthy that the increase in the imports of these four groups of items amounted to Rs. 210 crores. The net result of these recent trends in our foreign trade is the yawning gulf between our exports and imports and mounting trade deficit.

Diversification of Exports

There was a time when India was exporting foodstuffs and raw materials and importing manufactured articles. It was recognised to be an unhealthy position, a sign of economic underdevelopment and backwardness. Today, her exports have drastically fallen. Although there is some evidence of diversification of production, there is no appreciable sign yet of diversification of exports. In 1951-52, about 48 per cent. of our exports consisted of textile yarn and manufactures, and spices, tea and coffee accounted for 16 per cent. The trade in the former group was considerably lost by 1958 when the exports accounted for only 32 per cent. of the total exports, while trade in the latter group substantially improved to 26 per cent. of the total exports. There has been no great change in the position of the other groups of items in the export trade. India is now importing almost everything, food, industrial raw materials, manufactured articles, machinery and equipment. In 1951-52, the imports of foodgrains comprised about 24 per cent. of the total imports, textile fibres, raw and waste accounted for 16 per cent., machinery for 12 per cent., metals and manufactures for 5 per cent., and chemicals, drugs and medicines for 4 per cent. In 1958, the share of the foodgrains in the total import trade fell to 17 per cent., and that of textile fibres to 5 per cent., while the share of machinery rose to 21 per cent., of metals and manufactures to 15 per cent., and of chemicals, drugs and medicines to 7 per cent.

The conspicuous fall in our exports calls for a reasonable explanation. Available statistics show that India has been making considerable progress in agricultural and industrial production. The index number of agricultural production (base 1949-50=100) has increased from 97.5 in 1951-52 to 113.4 in 1957-58. The index number of industrial production (base 1951=100) has risen to 139.4 in 1958. The *per capita* income (at 1948-49 prices) has advanced from Rs. 251.7 in 1951-52 to Rs. 284.0 in 1956-57, i.e., by nearly 13 per cent. Yet, a very difficult foreign trade position stares us in the face.

There may be several reasons for our fast dwindling exports. The prices of our exportable goods are high, their quality poor, our business ethics are not as good as they should be, and there are probably not enough surpluses. In a poor underdeveloped country with teeming millions far below the comfortable margin of existence, a small rise in the *per capita* income is sufficient to create a sea of demand for all consumable goods that consumption, temporarily at least, tends to outstrip production leaving no exportable surpluses. Further, in an economic society, where there are no perceptible incentives for producing more or penalties for producing less, but there is a strong and genuine desire to raise the standard of welfare, it is rather doubtful whether production will ever catch up with consumption. Trade deficits are, therefore, likely to persist for a considerable time to come. All our export promotion measures will naturally not avail much in the face of such basic facts of our economy, unless vigorous and, if necessary, stringent measures are taken to regulate production and distribution, and rationalise our import and export trade.

The Real Solution

The real solution would be greater and greater production, first, of foodgrains, with a view to obtaining self-sufficiency as soon as possible, and then, of the wide variety of consumable goods by industrialisation. But industrialisation in a vast underdeveloped country like India cannot be on a large scale; it has rather to be on a small scale, using less of capital and more of human labour. Bigger and better results would seem to follow from decentralised smaller industries suited to our basic economic conditions rather than by an industrial revolution of the traditional type. Austerity in consumption and the utmost economy in the use of our scarce resources both in the private and public sectors would also enable us to go forward in our economic development. It is also not enough if the production increases in the aggregate; it should bring increasing returns for each unit of labour and capital employed or, in other words, raise productivity and not merely production. A fairly well balanced foreign trade position can be obtained only when (*a*) we become self-sufficient in food, (*b*) recapture our lost markets in cotton and jute textiles, and (*c*) expand, in particular, the production of leather, leather goods, chemicals, drugs and medicines, and engineering goods. We should see why we have lost our traditional market in the countries like the U.K., U.S.A., Australia, Canada, Burma, Pakistan, Argentine, etc. We can ill afford to lose sight of our traditional exports in the hope of building up petty new items which at present cannot even meet the domestic market. We should explore new markets for our traditional as well as new items. We should use our trade representatives abroad more effectively for the purpose, and also enter into as many mutually profitable bilateral trade agreements as possible. If our resources are admittedly meagre, let us not attempt all at once. There is no short cut to prosperity. It is inevitable that democratic planning should be somewhat slow; but, if it is sound and steady, the race of economic reconstruction will be won.

DEVELOPMENT COUNCILS

A call for an all out effort to promote exports was made by Mr. Manubhai Shah, Minister for Industry, at a meeting of the Chairmen of Development Councils held at New Delhi on 30th April, 1959. The Minister said that the Development Councils would have to play an increasingly important role, in view of the additional functions now assigned to them. He wanted the Development Councils to assist in the distribution of controlled materials and promote arrangements for obtaining materials for the industries concerned. These Councils would also have to investigate possibilities of decentralisation of stages and processes of production, with a view to encouraging the growth of small-scale industries and ancillary industries. He stressed the need to foster co-operative research by industries themselves.

The meeting discussed the possibilities of export promotion in various industries covered by the Development Councils. In the course of the general discussions of the scope and functions of Development Councils, suggestions were made for further increasing the working efficiency of these Councils.

So far 16 Development Councils have been set up by the Government of India to advise them on matters pertaining to the development of industries.

WIMCO'S PROFIT UP BY A FIFTH

RETURN TO SHAREHOLDERS, HOWEVER, THE SAME

A COMMON theory of investment in equities is that, in times of inflation, it offers protection to the purchasing power of savings, as the equities appreciate in value. But this rationale needs to be qualified, for, in an economy closely controlled by the Government, not all the equities act as an effective hedge against inflation. In the case of some industries, the Government's policy may be such that their profits may either cease to grow or grow at only a disproportionately slow pace or actually decline. Equity investments in these industries, it is obvious, will not serve the purpose of a hedge against inflation. On the contrary, they may fall in value, as the profit of that industry may be inadequate to build up sufficient reserves for replacing the assets.

Let us take, for example, the match industry. Matches constitute an essential article of consumption. In an economy of rising population and growing incomes, the demand for matches is bound to keep on rising. And the profit of the industry should expand, not necessarily as a result of higher margin of profit per match box but purely as a result of expanding turnover. But this has not been the experience of the Western India Match Company, Ltd., the largest producer of matches on modern lines. The chief reasons for it are to be found in the Government's policy of strict control on the prices of the Company's manufactures and of encouraging the growth of cottage units by heavily subsidising them. So strong has been the competition from these units in certain parts of India, especially in the south, that its matches have been pushed out of the market. There has nevertheless been some increase in the turnover of the Company, but that is nothing as compared with what it could have been, had the terms of competition from the cottage units been fair. Consequently, the equities of the Company (its entire capital is in the form of ordinary shares only) have remained either stagnant and quiet, when others have been going up, or have moved up only to a modest extent, showing a small gain. Again, its dividend has remained unchanged for a decade now.

The Company's results for the year ended 31st December 1958 were published a few days ago and the Directors' report and statement of account for that year are due to be adopted at its annual general meeting next week. The return to shareholders for 1958 is just 11 per cent., made up of a dividend of 10 per cent. and a bonus of 1 per cent. This is the tenth year in succession for which the same return is being given by the Company. The inability of the Company to offer a better return to shareholders is chiefly the result of the Government's unrealistic policy towards the match industry.

The following table shows at a glance the main particulars of the results for 1958, against the background of those for the three preceding years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross sale proceeds	15,65.09	12,84.96	10,24.03	10,16.87
Other income	12 03	12.52	12.54	12.39
Closing stocks	30 47	22.88	29.44	22.84

* Includes reserve for deferred taxation, separate figures for which are not available.

It will be observed from the foregoing table that gross sale proceeds have gone up from Rs. 12.85 crores to Rs. 15.65 crores. As against this, excise duty paid by the Company has advanced from Rs. 7.06 crores to Rs. 9.39 crores. So, more than 80 per cent. of the increase in sales reflects the full incidence of higher excise duty on matches. Cost of raw materials consumed has also risen by about Rs. 27 lakhs to Rs. 227 lakhs and other expenses by Rs. 19 lakhs to Rs. 315.02 lakhs. Consequently, the gross profit at Rs. 104.54 lakhs is better by only Rs. 17 lakhs. Although this rise appears to be small as compared with that in sale proceeds, it is nearly 20 per cent. when compared with the gross profit for 1957. It may be noted here that the gross profit for the year under review is the highest to be seen since 1952.

The provisions for depreciation and taxation alike are higher by Rs. 2.69 lakhs and Rs. 4.50 lakhs, respectively. Of the provision for taxation, Rs. 3 lakhs are for wealth tax. After these essential allocations, the net profit shows a modest advance from Rs. 35.87 lakhs to Rs. 44.19 lakhs. Of this, about 30 per cent.—Rs. 13.20 lakhs to be precise—has been conserved by a transfer to the development rebate reserve. The dividend absorbs Rs. 30.25 lakhs, leaving Rs. 1.63 lakh to be carried forward.

In view of the limitations on manufacture of matches, the Company has apparently decided to diversify its manufacturing activity. Thus, it has established a paper mill in Bengal and a chlorate potash factory at Ambernath near Bombay City. The construction of the paper mill was completed in December 1958 and the machinery first started on the 13th of that month. The factory was formally declared open on 3rd February 1959. The Directors say that the mill is working satisfactorily and is at present providing paper for the Company's own requirements. The chlorate of potash factory was also completed last year and is functioning smoothly.

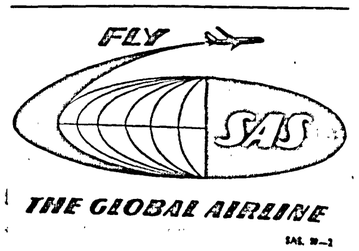
Additions to gross block during the year were of the order of Rs. 102.97 lakhs, including the cost of the paper mill. The total value of gross block is Rs. 442.24 lakhs, as against which a depreciation of Rs. 176.37 lakhs has been provided, so that the value of net block is Rs. 265.86 lakhs. The Company's paid-up capital is Rs. 275 lakhs, as against which there are reserves and surplus amounting to Rs. 158.90 lakhs. The current assets, aggregating Rs. 384.47 lakhs, exceed current liabilities (Rs. 217.01 lakhs) by a handsome margin of Rs. 167.46 lakhs. Despite the large capital expenditure incurred during the year, the cash balances alone stand at Rs. 73.81 lakhs. Thus, the financial position of the Company is sound.

The Rs. 100 paid-up ordinary shares of the Company are currently standing in the market at Rs. 214.50 *cum-div.*, as against Rs. 185.50 four months ago and Rs. 172.50 a year ago. The gain in their value in recent months mainly reflects the investors' hope that the Company's entry into the sphere of paper manufacture will enable it to pay better dividends in the coming years. At the ex-dividend rate of current market value, the yield is 5.4 per cent. per annum.

(*Concluded from next column*)

within a period of three years and has accordingly made an application for the installation of 240 automatic looms to replace very old looms which have outlived their useful life. If the full quota asked for is granted, the Company will require Rs. 18 lakhs towards the cost of looms and Rs. 5 lakhs for renovation of buildings and equipment. Under the Export-Import Bank Credit scheme, the Company has applied for import of a sanforising machine, combers and drawing frames, mixing and blow room machinery and a curing machine. Licences for some of these have already been received and orders have been placed with American manufacturers.

The ordinary shares of the Company of 1 paid-up value of Rs. 100 each are being currently quoted at Rs. 227 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 4.6 per cent. per annum, free of income-tax.



SAS. 59—2

SVADESHI MILL RAISES DIVIDEND LEVEL

MODEST INCREASE IN PROFIT

THE recommendation of the Directors of the Svadeshi Mills Company, Ltd., to enhance the dividend for the year ended 31st December 1958 to 10 per cent. from 9 per cent. paid in respect of 1957 is in consonance with the improved earnings of the Company for the year under review. The gross profit for 1958 has gone up by nearly Rs. 5 lakhs to Rs. 28.83 lakhs. Though this increase makes good only partially the sharp setback in the previous year, when the profit fell from Rs. 49.67 lakhs to Rs. 23.87 lakhs, it should be considered somewhat heartening, in view of the adverse trading conditions experienced by the industry, namely, poor offtake of cloth, unremunerative prices and high cost of production. The Company was, however, fortunate in avoiding heavy accumulation of cloth during most part of the year.

The net profit, too, shows a rise of Rs. 4.69 lakhs to Rs. 11.48 lakhs, in refreshing contrast to the drop of Rs. 24.97 lakhs (that is, from Rs. 31.76 lakhs to Rs. 6.79 lakhs) in 1957. This improvement is after raising the provision for depreciation from Rs. 13.69 lakhs to Rs. 14.95 lakhs and reducing the provision for wealth tax from Rs. 2.50 lakhs to Rs. 1.25 lakh. No amount has been set aside for income-tax, as "there is an adequate surplus in the provision for taxation account." As in the previous year, the entire net profit of Rs. 11.48 lakhs has been transferred to the reserves—Rs. 4.75 lakhs to the development rebate reserve (as against *nil* in the previous year) and Rs. 6.73 lakhs to the general reserve No. 2, to which a sum of Rs. 6.79 lakhs had been added out of the 1957 profit. The entire dividend distribution on the 5 per cent. preference shares and on the ordinary shares, amounting to Rs. 10.75 lakhs, is being paid out of the general reserve No. 1, from which Rs. 9.75 lakhs had been drawn a year ago for a similar purpose.

The salient features of the Company's working results are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	3,08.38	3,76.82	3,56.17	3,73.63

Carry forward	0.29	0.29	0.29	0.68

Sale proceeds have risen by Rs. 21.56 lakhs, while the cost of raw materials and stores consumed is unchanged. Manufacturing and other expenses have recorded a rise of Rs. 20.17 lakhs, of which salaries, wages and bonus alone account for Rs. 19.09 lakhs. A part of this increase —Rs. 5.50 lakhs to be precise—represents the additional bonus paid to workers in respect of the years 1953 to 1956, in terms of the award of the arbitrator.

The paid-up capital of Rs. 1.15 crore is supplemented by reserves and surplus amounting to Rs. 96.23 lakhs. Loans stand reduced from Rs. 59.26 lakhs to Rs. 50.45 lakhs, while current liabilities and provisions have risen from Rs. 54.39 lakhs to Rs. 62.52 lakhs. There has been an addition of Rs. 26.63 lakhs to the gross block, reflecting the progress of reorganisation and renovation of the mills. Of this capital expenditure, new machinery installed during the year accounts for Rs. 23.95 lakhs. This addition to the block account brings the total value of fixed assets at the end of the year to Rs. 302.49 lakhs; this has been written down to Rs. 142.95 lakhs. Works under construction and machinery awaiting installation amount to Rs. 8.84 lakhs. The other assets aggregate Rs. 176.24 lakhs.

The Company's mills are now equipped with 560 automatic looms. It proposes to take advantage of the Government's recent decision to permit the textile industry in the country to install 7,500 automatic looms as replacements

(*Continued in previous column*)

S.T.C. DOES WELL

GROSS PROFIT FAR EXCEEDS RS. 2 CRORES

THE second year of working of the State Trading Corporation of India Ltd., namely, the one ended 30th June 1958, proved to be a very prosperous one, notwithstanding the heavy odds which it had to face and the world-wide decline in economic activity, resulting in a visible shrinkage, for the first time in many years, of international trade. There was a setback in industrial activity, too, which, coupled with the decline in purchasing power and the deterioration in the terms of trade, placed serious impediments in the way of the country's effort to augment export earnings.

Nevertheless, the Corporation's sales turnover in commodities directly traded in by it expanded threefold from Rs. 9.19 crores to Rs. 28.58 crores. The trading profit on this account increased more than six times from Rs. 35.42 lakhs to Rs. 213.09 lakhs. The gross income for the year, including the profit on direct trading activities, agency fees, service charges and interest on deposits, etc., aggregated Rs. 2.86 crores, as compared with Rs. 1.10 crores in the first year of its operation. After meeting the expenses on establishment, administration, contingencies, depreciation, etc., the Corporation earned a profit of Rs. 2.33 crores, the corresponding figure for the previous year being Rs. 83.63 lakhs. The provision for taxation has been stepped up from Rs. 51 lakhs to Rs. 1.21 crore, leaving a net profit of Rs. 1.05 crore, as compared with Rs. 32.63 lakhs a year ago.

The Directors have made certain appropriations, so as to make it easier for the Corporation to build up its business in the succeeding years. Accordingly, they have added Rs. 20 lakhs to the office building fund created last year with a similar allocation. In view of the difficulties which the employees of the Corporation have been experiencing in securing residential accommodation, a beginning has been made with a sum of Rs. 10 lakhs for the construction of residential quarters. Last year, the Directors started an insurance fund with Rs. 2 lakhs to finance a scheme for self-insurance. This fund has now been strengthened with an allocation of Rs. 10 lakhs. As a result of the experience gained in the working of the Corporation, the Directors feel that adequate reserves should be built up to provide against seasonal fluctuations in prices and have, accordingly, created a price fluctuation fund with Rs. 30 lakhs. They have also set up a trade development fund with Rs. 15 lakhs, on an experimental basis. They are of the view that, for enlarging the export of bulk commodities and for promoting overseas sales of industrial products, the Corporation should be in a position to finance developmental and promotional activities. For instance, they point out, the provision of essential facilities in mining areas, the improvement of means of communications in inaccessible regions and the supply of handling equipment at the jetties may help to maximise availabilities and eventually cheapen costs. Promotional expenses in exploring new markets or developing preference for Indian industrial products are known to be unusually heavy and the business associates of the Corporation are unable to meet these costs individually. The Directors have also put aside Rs. 3.06 lakhs in the fertilisers canalisation suspense and have raised the transfer to the general reserve from Rs. 4 lakhs to Rs. 5 lakhs. After these allocations, which take up Rs. 98.06 lakhs, as against Rs. 26 lakhs, the Directors have stepped up the dividend from the maiden distribution of 6 per cent. to 7 per cent.

The Corporation holds the agency for distribution of imported, as well as indigenous, cement. Sales of imported cement rose from Rs. 2.31 crores to Rs. 2.87 crores. Despite the expansion in sales, the total amount of remuneration earned by the Corporation thereon shows a decline from Rs. 2.89 lakhs to Rs. 2.15 lakhs, consequent on the cut in the rate of remuneration from 1¼ per cent. to ¾ per cent. of the gross turnover. Sales of indigenous cement rose from 5.05 million tons of the value of Rs. 52.13 crores to 6.30 million tons valued at Rs. 71.22 crores, while proceeds from exports declined from Rs. 22.17 lakhs to Rs. 18.56 lakhs. The gross surplus earned on distribution of indigenous cement amounted to Rs. 4.55 crores, having declined from Rs. 5.48 crores in 1956-57. After deducting the subsidy amounting to Rs. 59.09 lakhs (Rs. 47.53 lakhs in respect of 1956-57) received on imported cement and adding the interest on investments Rs. 13.90 lakhs (Rs. 1.22 lakh), the net surplus on cement agency comes to Rs. 4.10 crores, as compared with Rs. 5.02 crores in the previous year.

The financial results of the Corporation would have been better still but for the loss of Rs. 6.96 lakhs on soda ash trade and of Rs. 1.39 lakh on tobacco. The loss on soda ash was sustained as a result of the Corporation's effort to maintain the price of the commodity at a steady level, despite the fluctuations in procurement prices. The loss on tobacco was promotional in character and has, since the close of the year, been more than made good in subsequent sale contracts in the current year. The Corporation has had to carry over into the current year purchase commitments of the order of 100,000 tons of manganese ore entered into at a time when prices were ruling at a comparatively high level. This quantity is proposed to be marketed as and when price and demand improve.

The total assets of the Corporation as at the close of June 1958, aggregate Rs. 8 93 crores, of which stock-in-trade accounts for Rs. 1.34 crore, sundry debtors (after making provision for doubtful debts), for Rs. 1.55 crore, loans and advances for Rs. 4.50 crores, cash and balances with banks for Rs. 10 lakhs. As against these, loans from banks and the Government of India aggregate Rs. 2.47 crores and current liabilities and provisions Rs. 4.16 crores, so that the net assets amount to Rs. 2.30 crores. These are represented by a paid-up capital of Rs. 1 crore and reserves and surplus amounting to Rs. 1.30 crores.

MANCHESTER LETTER

(*Concluded from page 777*)

modern machines from one mill to another, so adding to the process of concentration. Single-unit mills, however, may well decide to go out of business altogether. Shareholders themselves, in firms where the assets are known to be substantial, may urge that the directors take the compensation for redundant machinery and go into liquidation.

Compensation and Tax

One aspect of the proposals, still unsolved, concerns the question of how current taxation affects the sums to be paid out under the redundancy programme. Treasury officials will collaborate in further discussions on this vexed topic.

The other really controversial subject, on which divergent views have already been expressed, concerns the compensation to be paid to displaced operatives. A claim for suitable remuneration has twice been rejected by the employers' organisations, but the Government has decreed that the principle should be settled by joint negotiations between representatives of the millowners and the unions.

Rising Yarn Imports

Only three months ago, considerable agitation was caused in the industry and elsewhere by the fact that imports of cotton cloth during 1958 had, by a slight margin, exceeded comparable shipments abroad. As was pointed out at the time, the month of December turned the scales, making Lancashire a net importer of cloth for the first time since the Industrial Revolution.

Subsequently, the situation has decidedly deteriorated. In the first three months of the current year, the quantity of cloth arriving from abroad has so far exceeded exports that, for every two yards shipped, three have been received in this country. Over the quarter, exports aggregated 82 163,000 square yards and imports 121,911,000 square yards.

Of perhaps greatest significance is the change in the position of overseas trade in cotton yarn. Shipments have been declining for some years on a similar scale to the way in which cloth exports have fallen. Meanwhile, imports of yarn have risen and, over the first quarter this year, they have, for the first time ever, exceeded yarn exports.

Arrivals of foreign yarn in the past three months have been half as much again as in the same period last year, lending weight to the warnings issued by Lancashire spinners when the agreement with Hong Kong was negotiated that safeguards should have been introduced to cover business in yarns.

The Board of Trade returns do not specify the countries of origin of such goods, but, if this trend develops, there will be renewed pressure for some form of limitation to be imposed on this fresh menace to the spinning trade.—*All Rights Reserved.*

COMPANY MEETINGS AND DIVIDENDS

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, 18th May 1959. Dividend: 5 per cent. or Re. 0.50 per share. Transfer books remain closed from 2nd to 19th May 1959, both days inclusive.

JENSON AND NICHOLSON (INDIA) LTD. Annual General Meeting, Calcutta, 18th May 1959. Transfer books remain closed from 9th to 18th May 1959, both days inclusive.

ASSAM MATCH CO., LTD. Annual General Meeting, Bombay, 20th May 1959. Dividend: Re. 1.25 per share (includes bonus of Re. 0.25 per share). *Transfer books remain closed from 7th to 22nd May 1959, both days inclusive.*

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 21st May 1959. Dividend: *Nil.* Transfer books remain closed from 7th to 21st May 1959, both days inclusive.

BUDGE-BUDGE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 22nd May 1959. Dividend: Rs. 5.00 per share. Transfer books remain closed from 8th to 22nd May 1959, both days inclusive.

ORIENT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 22nd May 1959. Dividend: Rs. 2.50 per share. Transfer books remain closed from 8th to 22nd May 1959, both days inclusive.

LUCKY VALLEY (NILGIRI HILLS) TEA ESTATES LTD. Annual General Meeting, Belmont, Coonoor, Nilgiris, 23rd May 1959. Dividend: Re. 1.00 per share. Transfer books will remain closed from 16th to 30th May 1959, both days inclusive.

SHIVRAJPUR SYNDICATE LTD. Annual General Meeting, Bombay, 27th May 1959. Dividend: Rs. 8.00 per share (includes bonus also), payable on and after 29th May 1959. Transfer books will remain closed from 11th to 27th May 1959, both days inclusive.

VASANTA MILLS LTD. Annual General Meeting, Singanallur, Coimbatore District, 27th May 1959. Dividend: 12 per cent. or Rs. 12.00 per share. Transfer books will remain closed from 13th to 27th May 1959, both days inclusive.

VICTORIA MILLS LTD. Annual General Meeting, Bombay, 28th May 1959. Dividend: Rs. 20.00 per share (includes bonus also), payable on and from 15th June 1959. Transfer books will remain closed from 15th to 28th May 1959, both days inclusive.

SOUTH KARANPURA COAL CO., LTD. Annual General Meeting, Calcutta, 29th May 1959. Dividend: Final dividend of 3.8 per cent. making a total of 7½ per cent. per annum or Re. 0.75 per share, for the year ended 31st August 1958. The final dividend is payable on or after 5th June 1959. Transfer books will remain closed from 14th to 29th May 1959, both days inclusive.

GODFREY PHILLIPS INDIA LTD. Annual General Meeting, Andheri, Bombay, 29th May 1959. Transfer books will remain closed from 23rd to 29th May 1959, both days inclusive.

RAYALASEMA MILLS LTD. Annual General Meeting, Rayanagar, Adoni-Thungabhadra Road, Adoni, 3rd June 1959. Dividend: 10 per cent. or Rs. 10.00 per share. Transfer books will remain closed from 25th May to 10th June 1959, both days inclusive.

MODERN MILLS LTD. Annual General Meeting, Bombay, 9th June 1959. Dividend: Rs. 3.00 per share, payable on and after 22nd June 1959. Transfer books will remain closed from 12th May to 3rd June 1959, both days inclusive.

CHAMPDANY JUTE CO., LTD. Interim dividend of 3 per cent. or Rs. 3.00 per share, for the year ended 31st March 1959. Transfer books will remain closed from 13th to 29th May 1959, both days inclusive.

ASHOK LEYLAND LTD. Dividend of 6 per cent. or Re. 0.30 per share, for the year ended 31st December 1958. Transfer books remain closed from 8th to 22nd May 1959, both days inclusive.

SIVANANDHA MILLS LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1958. Transfer books will remain closed from 27th May to 10th June 1959, both inclusive.

ANGLO FRENCH TEXTILES LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 18th May to 8th June 1959, both days inclusive.

CELLULOSE PRODUCTS OF INDIA LTD. Business: Manufacturers and dealers in chemical cottons, methy cellulose etc. Authorised capital: Rs. 50,00,000. Public company. Address: 1687, Kadwa Pole, Darapur, Ahmedabad.

PHOTOMATERIALS (INDIA) PRIVATE LTD. (First Director: Mr. Bidesh Tukaram). Business: Manufacturers, sellers and exporters of photographic goods. Authorised capital: Rs. 5,00,000. Private company. Address: 2nd Floor, Dongre Building, Lamington Road, Bombay 7.

SYNOPSES OF COMPANY REPORTS

Budge-Budge Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1958.

The accounts, after charging all expenses and writing back provision against sales tax in respect of previous years, show a profit of Rs. 2,86,438 (loss of Rs. 81,355) of which short provision for taxation in the previous years requires Rs. 12,200 *(nil)* leaving a net profit of Rs. 2,74,238 (debit of Rs. 81,355). From this amount the directors have transferred to development rebate reserve Rs. 924 *(nil)* leaving a balance of Rs. 2,73,314 (debit of Rs. 81,355). To this is added the balance brought forward from last year of Rs. 2,799 (Rs. 4,154) making a total available for distribution of Rs. 2,76,113 (Rs. 65,799 after transferring Rs. 63,000 from dividend equalisation reserve and Rs. 80,000 from general reserve). The directors recommend dividends on preference shares at Rs. 7.00 (Rs. 7.00) per share absorbing Rs. 63,000 (Rs. 63,000) and on ordinary shares at Rs. 5.00 *(nil)* per share absorbing Rs. 1,80,000 *(nil)* leaving a balance to be carried forward of Rs. 33,113 (Rs. 2,799).

Wealth tax for the year is estimated to amount to Rs. 32,000 and the provision made in the previous year not having been required, only the balance of Rs. 2,000 has been provided for by a transfer from investment realisation surplus.

In accordance with the working time agreement of the Indian Jute Mills Association the Company's mill worked 48 hours per week on single shift with 12½ per cent. of the looms sealed up to the 17th May, 1958. From the 18th May, 1958, No. 1 mill was closed down and the Company's allotment of loom hours was worked in No. 2 mill by the equivalent quantity of machinery working double shift. This change to shift working was at first opposed by the labour and for some months a considerable fall in working efficiency was experienced. Latterly the situation greatly improved and the subsequent more economic working of the mill has fully justified the move. Unfortunately this improvement came too late to be reflected in these accounts. From the 2nd March, 1959, manufacture has been further curtailed under the working time agreement by the additional sealing of looms equivalent to 1½ per cent. of the complement on a single shift basis.

As shareholders were advised in February, 1959, the directors of the Company, in conjunction with the directors of other Jute Mill Companies under the managing agency of Andrew Yule & Co., Ltd., are examining proposals for closer integration of their operations. This matter is still under consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Gross block	1,17,96,462
Reserves ...	19,35,850	*Less*—Depreciation ...	70,59,451
Provision for taxation ...	9,875	Net block ...	47,37,011
Provision for wealth tax	32,000		47,37,011
Liabilities ...	23,97,628	Stock-in-trade	27,99,544
Profit and loss account ...	33,113	Stores, spare parts and loose tools	6,45,928
		Work-in-progress ...	1,91,708
		Debts, deposits and advances ...	4,37,309
		Investments	94,797
		Cash ...	2,169
Rs.	89,03,466	Rs.	89,08,466

Orient Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co.. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1958.

The accounts, after charging all expenses and writing back provision against sales tax in respect of previous years, show a profit of Rs. 90,476 (loss of Rs. 55,117) of which short provision for taxation in the previous years requires Rs. 11,600 *(nil)* leaving a net profit of Rs. 78,876 (debit of Rs. 55,117). From this the directors have transferred to development rebate reserve of Rs. 2,325 *(nil)* leaving a balance of Rs. 76,551 (debit of Rs. 55,117). With the balance brought forward from last year of Rs. 5,981 (Rs. 11,098) there is a total amount available for distribution of Rs. 82,532 (Rs. 5,931 after transferring Rs. 50,000 from general reserve). The directors recommend that a dividend on ordinary shares at Rs. 2.50 *(nil)* per share be paid absorbing Rs. 62,275 *(nil)*, leaving a balance to be carried forward of Rs. 20,257 (Rs. 5,981).

Wealth tax, including Rs. 158 short provided in the previous year, is estimated to amount to Rs 22,150 and this has been provided for by transfer of this sum from general reserve.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed during the period to which the accounts pertain. From the 2nd March, 1959 a further 1½ per cent. of the looms have been sealed.

As shareholders were advised in February, 1959, the Directors of the Company, in conjunction with the directors of other Jute Mill Companies under the managing agency of Andrew Yule & Co., Ltd., are examining proposals for closer integration of their operations. This matter is still under consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,91,000	Gross block	76,67,180
Reserves ...	22,84,224	*Less*—Depreciation ...	53,39,989
Provision for taxation ...	11,762	Net block	23,27,191
Provision for wealth tax	21,992	Stock-in-trade	17,89,015
Liabilities ...	7,01,152	Stores and loose tools	8,20,758
Profit and loss account ...	20,257	Work-in-progress ...	2,19,233
		Debts, deposits and advances ...	2,66,492
		Investments	71,902
		Cash ...	35,796
Rs.	55,30,387	Rs.	55,30,387

North Bihar Sugar Mills Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 30th September 1958.

The profit and loss account shows a net profit of Rs. 9,824 after providing for depreciation and development rebate. The debit balance of Rs. 13,61,300 was brought forward in the previous year's profit and loss account and including payment of Rs. 403 in respect of the previous year, the total debit balance amounts to Rs. 13,61,703. After adjusting profit of the year against this amount, the net debit balance in the profit and loss account is Rs. 13,51,879. The directors propose to carry-over this balance to the next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Gross block	34,61,705
Reserves ...	15,000	*Less*—Depreciation ...	16,05,508

		Loss ...	13,51,879
Rs.	71,19,331	Rs.	71,19,331

Travancore Rubber and Tea Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Aspinwall & Co. (Travancore) Ltd., Alleppey] submit the audited accounts of the Company for the year ended 31st December 1958.

It will be seen that, as against a net loss of Rs. 57,573 during 1957, the working of the year 1958 resulted in a net profit of Rs. 3,19,987 after making necessary provision for depreciation on buildings and machinery, and a provision (of Rs. 72,186) for rubber rehabilitation, and also taxes, namely income-tax, agricultural income-tax and wealth tax. The above profit figure includes a net profit on sale of capital assets of Rs. 1,41,680, which, as seen later in this report, the directors are recommending be transferred to capital reserve account.

Rubber.—From 1st October 1958, the metric system of weights was introduced for rubber. For comparison purposes, the total 1958 crop converted into pounds amounted to 10,58,446 (9,37,218) lbs., as against an estimate of 10,10,000 lbs; this was 1,21,228 lbs. more than the crop harvested during 1957. As in 1957, a portion of the rubber crop was sold on the estates as liquid latex.

Expenditure and average sale prices are compared below:—

	Crop	Estate Expenditure	Average Sale price
		cts. per lb	cts. per lb.
1955 ...	10,35,280	70.88	144.64
1956 ...	10,32,428	77.78	145.72
1957 ...	9,37,218	97.72	145.90
1958 ...	10,58,446	85.96	146.16

It is conservatively estimated that a crop of 10,40,000 lbs of rubber will be collected during 1959 at an estate expenditure of 85.20 cts. per lb.

Tea.—The crop harvested during 1958 was 11,79,667 lbs. as against 10,02,302 lbs. during 1957. This crop was 1,77,365 lbs. over last year's crop and 1,29,667 lbs. above estimate.

Comparative figures of tea crops, and sale prices for the year under review and three previous years are given below:

	Crop	Estate Expenditure	Average Sale price
1955 ...	11,65,729	134.87	204.06
1956 ...	8,89,643	183.13	210.90
1957 ...	10,02,302	168.71	158.79
1958 ...	11,79,637	142.86	160.67

In 1959 it is estimated that the tea crop will be 12,00,000 lbs. to be secured at an estate expenditure of 133.21 cts. per lb.

It will be seen that the total area is reduced by 78.35 acres compared with the acreage a year ago. During the year the directors authorised the sale of an area measuring 76.81 acres known as the Mycologist's Field, which land was isolated and remote from other of the Company's holdings and consequently difficult to administer effectively. A further small plot measuring 1.54 acres, unsuitable for cultivation, was sold, making the total land disposed of 78.35 acres.

During the year, steps have been taken to replant 30.90 acres rubber under the Rubber Board's Replanting subsidy scheme, and the work is now progressing well.

General.—The Company's properties did not escape the October Strike, the actual days of complete cessation of work being from 12th to 25th October. The crop estimated to have been lost during that period is 75 000 lbs. rubber and 60,000 lbs. tea. There was consequential loss too: the rubber trees did not come back into full flow of latex for a week or more after resumption of work; and while in regard to tea the stoppage was not long enough to preclude immediate resumption of plucking in most areas as soon as work recommenced, most of the leaf was coarse for some time, and prices well below average were the result. The controlled price of rubber remained unchanged throughout the year under review.

The total available for distribution is Rs. 4,66,621 (Rs. 4,24,227). During the year under review, the directors have distributed Rs. 96,000 (Rs. 96,000) being dividend at the rate of 6 (6) per cent. free of income-tax on preference shares, and after deducting this amount the balance available is Rs. 3,70,621 (Rs. 3,28,227) which the Board recommend be disposed of as under:—

To transfer to capital reserve a sum of Rs. 1,41,680 *(nil)*, to pay of a first and final dividend on the ordinary share capital at 5 (4) per cent. absorbing Rs. 2,05,000 (Rs. 1,64,000) and to carry forward Rs. 23,941 (Rs. 1,06,654 after writing off the previous year's loss brought forward of Rs. 57,573).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,00,000	Gross block	85,55,546
Reserves ...	14,20,901	*Less*—Depreciation ...	16,43,709
Provision for taxation ...	3,12,433	Net block ...	69,11,837
Liabilities ...	7,84,375	Stock-in-trade	3,79,745
Profit and loss account ...	23,941	Stores, spare parts etc.	2,09,965
		Debts, deposits and advances ...	2,62,883
		Investments	2,02,876
		Cash ...	2,74,344
Rs.	82,41,650	Rs.	82,41,650

Rayalaseema Mills Ltd.

The directors of the above Company (Managing Agents: The Rayalaseema Development Co., Adoni) present the audited accounts of the Company for the year ended 31st December 1958.

Depreciation of Rs. 2,71,775 (Rs. 1,95,208) has been written off on buildings, plant and machinery. In the profit and loss appropriation account, a sum of Rs. 29 000 *(nil)* has been set apart towards development rebate reserve being 75 per cent. of the development rebate claimed by the Company in respect of additions to plant and machinery made during the year as it is obligatory to provide this reserve under the Income-tax Act, wherever development rebate is claimed. A sum of Rs. 26,316 has been provided towards Wealth-tax for the years 1957 and 1958 and also the arrears for the year 1956 and a sum of Rs. 1,31,000 (Rs. 51,140) towards income-tax on the year's profits.

The above provisions leave an available balance of Rs. 1,69,333 (Rs. 1,38,666) for disposal. The directors have found it necessary again this year to transfer a sum of Rs. 60,000 (Rs. 90,000) out of the amount standing to the credit of dividend equalisation reserve to pay a dividend of 10 (10) per cent. to the shareholders. With the above provisions made in the profit and loss appropriation account, a sum of Rs. 5,956 (Rs. 5,286) is being carried over to next year.

The cotton prices during the year were favourable and the yarn market was steady from about July 1958. This has helped the Company to gain reasonable profit. There was a small export business done during the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,32,300	Gross block	56,65,412
Reserves ...	11,19,000	*Less*—Depreciation ...	25,87,531
Provision for income-tax	4,51,000	Net block ...	30,77,881
Provision for wealth tax	24,854	Stock-in-trade	4,21,106
Liabilities ...	14,50,658	Stock of raw materials	6,06,865
Profit and loss account ...	5,956	Stores and spare parts	2,33,106
		Debts, deposits and advances ...	8,07,241
		Investments	1,19,432
		Stamps on hand ...	545
		Cash ...	17,612
Rs.	52,83,768	Rs.	52,83,768

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

THE TWENTY-NINTH ANNUAL GENERAL Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4 Clive Row, Calcutta, on Friday, the 29th day of May 1959, at 12 noon, to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 53 weeks ended 3rd January, 1959.
2. To declare a Dividend.
3. To elect Directors in the place of those retiring. In this connection, notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956 has been received by the Company under Section 281 of that Act to move the following Resolution at the Meeting:—

   "That Mr. Reginald Catlow, who is the Chairman of the Company and retires at this Meeting, having attained the age of sixty-five years, be and he is hereby reappointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to him."

4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass with or without modification, the following resolutions:—

5. *As a Special Resolution*

   That, in view of the proposal contained in the next succeeding resolution that Mr. Thomas Kay Walshaw be appointed a Director of the Company, consent be and is hereby accorded to Mr. Thomas Kay Walshaw holding and continuing to hold an office or place of profit under the Company as General Works Manager at the Company's Calcutta Works or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Government's approval and, in the meantime, on the terms presently applicable to him.

6. *As an Ordinary Resolution*

   That due notice in writing signifying the intention of a member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, Mr. Thomas Kay Walshaw be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company.

The Register of Members of the Company will be closed from the 15th May 1959 to the 29th May 1959, both days inclusive.

By Order of the Board,
W. MORRICE,
Director and Secretary.

41, CHOWRINGHEE ROAD,
CALCUTTA, *14th April*, 1959.

Note:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

Note:—2. No application for Warrants will be necessary and payment of any Dividend declared will be made only to those Members whose names are registered in the books of the Company on the 29th May 1959, or to their Mandatees. Claims on behalf of holders of shares held on blank transfer will not be entertained.

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4 Clive Row, Calcutta, on Friday, the 29th day of May 1959, at 12-10 p.m., or as soon thereafter as the Annual General Meeting of the Company convened for 12 noon on this same date and at the same place shall have been concluded or been adjourned, for the purposes of considering and, if thought fit, passing, with or without modification, the following Resolutions, namely:—

1. *As an Ordinary Resolution*

   That the Directors be and they are hereby authorised to allot and issue 4,76,850 Equity (Ordinary) Shares of Rs. 10 each, credited as fully paid up, by way of exchange for the issued shares in the capital of Sankey Electrical Stampings Private Limited, without such new Equity (Ordinary) Shares being first offered to the Members in proportion to the existing shares held by them.

2. *As an Ordinary Resolution*

   That the foregoing Resolution is and shall be subject to the consent of the Controller of Capital Issues being granted to the issue of 4,76,850 Equity (Ordinary) Shares of Rs. 10 each, credited as fully paid up, and also to such other consents required under statutory or other regulations.

3. *As an Ordinary Resolution*

   That in accordance with the authority given under Article 62 of the Articles of Association of the Company, the authorised Capital of the Company be increased from *Rs. 3,00,00,000* to *Rs. 6,00,00,000* divided into 60,00,000 Equity (Ordinary) Shares of Rs. 10 each.

4. *As a Special Resolution*

   That, subject, as regards the alterations set out in paragraphs (b) and (c) below, to the approval of the Central Government, the Articles of Association of the Company be altered as follows:—

   (a) By deleting Clause 4 and substituting in place thereof the following Clause:—

   "The Authorised Capital of the Company is *Rs. 6,00,00,000* divided into 60,00,000 Equity (Ordinary) Shares of Rs. 10 each."

   (b) In Clause 104 by deleting the word "nine" and substituting in place thereof the word "twelve."

   (c) In Clause 106 by deleting the figure "200" and substituting in place thereof the figure "500."

The Register of Members of the Company will be closed from the 15th May 1959 to the 29th May 1959, both days inclusive.

By Order of the Board,
W. MORRICE,
Director and Secretary.

41, CHOWRINGHEE ROAD,
CALCUTTA, *1st May*, 1959.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

THE RAYALASEEMA MILLS LTD.
ADONI, KURNOOL DISTRICT

NOTICE

NOTICE IS HEREBY GIVEN, THAT IN pursuance of the requisition received in writing, under Section 188 of the Companies Act 1956, by members holding more than 1/20th of the total voting power of all members having at the date of requisition a right to vote at the Annual General Meeting and on the resolutions and business to which the said requisition relates to, the supplementary resolutions and the explanatory note as given in the said requisition, details of which are contained in the supplementary notice, posted to the members of the Company, will be placed at the 13th Annual General Meeting of the Shareholders on Wednesday the 3rd June, 1959, at 2-00 p.m. at the Registered Office of the Company, Rayanagar, Adoni-Thungabhadra Road, Adoni P.O.

FOR THE RAYALASEEMA MILLS LTD.,
THE RAYALASEEMA DEVELOPMENT COMPANY,
M. SOMAPPA,
Senior Partner,
Managing Agents.

27th April, 1959.

THE ELLORE ELECTRIC SUPPLY CORPORATION, LIMITED

Registered Office:
20, 2nd LINE BEACH, MADRAS-1.

INTERIM DIVIDEND ANNOUNCEMENT

NOTICE IS HEREBY GIVEN THAT THE Directors at their Meeting held today at the Registered Office have RESOLVED to declare an INTERIM DIVIDEND for the year 1958-59 at 4 per cent. free of income-tax.

The Share Transfer Books will remain closed from 20th May, 1959 to 24th May, 1959, both days inclusive.

The Dividend Warrants will be posted to those members whose names stand on the Register of Members on 19th May, 1959, on or after 25th May, 1959.

By Order of the Board,
For CHANDRIE & CO. PRIVATE, LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

27th April, 1959.

U.K. CLOTH TRADE

Britain's imports of cloth during the first quarter of 1959 were only slightly more than those in the same period last year and the fall in exports is the reason for the sharp disparity in the totals. Both India and Hong Kong have raised their shipments of grey cloth to Britain as compared with 1958, the figures being 41,307,000 square yards, as against 36,772,000 square yards from India and 36,565,000 square yards, as against 23,672,000 square yards from Hong Kong. Other Commonwealth countries have stepped up their sales from only 245,000 square yards to 4,238,000 square yards. Chinese cloth arrivals during the quarter have shown a marked decline, from 28,321,000 square yards to 8,712,000 square yards. Japan has sent 8,448,000 square yards, as against 10,068,000 square yards.

Chiefly responsible for the fall in exports of cotton cloth are distinctly lower shipments to several of the larger Commonwealth markets. So far trade with South Africa has been halved as compared with 1958 at 9,525,000 square yards; while there has been a sharp drop of nearly 6 million square yards in shipments to Australia at 12,859,000 square yards. West African trade has also declined, smaller quantities being sent to Nigeria, the Belgian Congo and French territories in the area.

ARAB OIL CONGRESS REVIEWED

ITS PRACTICAL EFFECTS WILL TAKE TIME TO APPEAR

[This article conveys a firsthand account and impression of last month's Arab Oil Congress in Cairo where many crucial questions affecting the oil industry in the Middle East were discussed, among some 500 participants from many parts of the world. The subject of nationalisation was not raised. The wide-ranging frank talk and the fresh understandings and goodwill created suffice to rate the meeting a success.]

LAST month's Oil Congress in Cairo was surprised at its own size. Over 500 people, members of the Congress and observers from many parts of the world, came together at the invitation of the Oil Committee of the Arab League, to talk about oil matters which were not clearly specified in advance. The air of mystery was not clarified by the announcement that the conference was essentially technical and cultural—terms which, today, are so delightfully vague as to embrace anything, especially in an atmosphere where Arab nationalism may take various forms, and where claims for more oil revenues, and desire to display originality of thought, are bound to appear and to evoke argument and counter-argument. And so it proved. There were a number of strictly technical papers which passed uneventfully and raised no one's heart-beats. But there were a very few papers of a general character which will continue to be discussed long after the end of the Congress.

One of these, on the first working day of the Congress, provided a mild shock to the gathering—a paper by an American lawyer, Mr. F. Hyndrex, of the Saudi Arabian Directorate General of Petroleum and Mineral Affairs, entitled "A Sovereign Nation's Legal Ability to Make and Abide by a Petroleum Concession Contract." This sought to show that there could be circumstances in which a Government could unilaterally break or amend a contract it had entered into. It struck a jarring note just when everybody wanted a spirit of goodwill and bonhomie to prevail. In fact, the paper fell rather flat, and caused much less of a stir than it has done in the Press abroad. Points in the paper were challenged, but few cared, or were qualified, to embark on a contentious legal argument. The general impression seemed to be that whatever the ultimate legal rights no business man, building or other contractor, or concessionaire, whether Arab or foreigner, would be happy to deal with Governments given to insistence on such a right. No Arab Government representatives offered any support to this paper, though quite a few of them would like to see existing arrangements with the oil companies modified. Mohamed Salman, Chief of the Arab League's oil department which had convened the Congress, in his earlier welcoming speech had referred to changing conditions which call for the companies to amend their contracts, so that Arabs should not feel that their share of profits was unjust. But he reiterated that the Arab world felt no enmity towards foreign petroleum companies, nor wished to eliminate them. The impression given was that this was all a matter for negotiation and, indeed, that the experience of the Congress would help everybody to see the necessity and wisdom of making such a revision. One or two delegates from other Arab countries, speaking later than Mr. Hyndrex, took the opportunity to assert their country's belief in the sanctity of contracts.

Oil Pipeline Plan

The incongruity of Mr. Hyndrex's contribution was evident when subsequently the head of the Saudi delegation, Shaikh Abdullah Tariki, put forward his plan for a big entirely Arab-Government-owned crude oil pipeline from the Persian Gulf to the Mediterranean (which might cost the equivalent of some $600 million or more) which he thought might be financed by banks in the oil-consuming countries. The conservatism of bankers, their sensitiveness to the slightest suggestion of departure, for whatever reason, from a contractual commitment, and the high degree of risk which banks in Europe or the U.S.A. consider attaches to any investment in the Middle East, are obviously matters which will have to be faced. But Shaikh Abdullah thought also that the project might be financed by Arab funds and so provide, as he put it, an outlet for investment of hoarded money in Arab countries.

Explaining this proposal, he foresaw that in 1967 Middle East production would be 11.5 million barrels a day (an estimate regarded by some forecasters as far too high) of which he calculated 1.25 million barrels a day would have to go round the Cape if another pipeline were not built. His project is for a 1,250-mile line, with a total capacity of at least 800,000 barrels daily, subject to increase by adding pumping stations. It would, he claimed, make Arab oil more and more competitive all over the world.

The idea was that the pipeline system would begin with a 14-inch section from Qatar to Dammam, a 20-inch section from Dammam to a junction with a line from Kuwait, and thence with increasing diameter taking in, by stages, oil from southern Iraq, Kirkuk, and possibly some Persian production too, also oil from the new Karatchok field in Syria; the location of the terminal on the eastern Mediterranean was not specified. Incidentally, pumping stations would as far as possible be remotely controlled, which, he said, would provide a big economy of fixed and variable costs compared with costs of existing pipelines in the region.

Profit Distribution

Detailed proposals for participation in the profit distribution have not been agreed upon, and ready agreement between Arab States on this was not foreshadowed by anything at the conference. Rather the reverse since, in this context, Shaikh Abdullah referred to his country as a "have-not" whereas this is a category in which the transit States without oil production would emphatically not include the admittedly underdeveloped Saudi Arabia. The importance attached to the Arab pipeline scheme was emphasised by the final statement of the Congress, but it remains to be seen what practical steps can be taken by the Arabs to put it into effect.

A great deal of the social and political tension in the Middle East, and in the oil-producing countries there, arises from the maldistribution of oil wealth among the several territories, also within those territories. A contribution from Mr. Emile Bustani, a big business man from the Lebanon, sought to grapple, in part, with the first of these problems. His scheme, now officially supported by the Lebanese Government, and in which the Ruler of Kuwait has promised to co-operate if others will do the same, is for an Arab Development Bank, to which Governments and oil companies in Arab producing countries should each contribute, as capital, 5 per cent. of their oil revenues or profits. The Bank would lend its funds, at 2½ per cent., for development projects, initially in the transit countries, Jordan, Lebanon and the U.A.R. This would give them a real stake in continuance of the flow of oil to the west. About £35 million a year would be available in the early years, but this would gradually rise. A National Development Corporation, to whom the Development Bank would lend its funds, would be formed in each Arab State. Fifty per cent. of the shares would be held by the Government and the rest offered to the public in the State. Private concerns needing funds for industrial projects guaranteed by the National Development Corporations could also borrow from the Bank, and the Corporations' schemes could themselves be later sold to private enterprises if desired. As a corollary, Mr. Bustani would have the transit countries thus benefiting—on a loan, not a gift basis—enter into internationally recognised treaties with the oil-producing States to guarantee the use of the pipelines crossing their territories. Thus stability and security would be furthered as well as economic development.

Economic co-operation of this kind clearly postulates a high degree of Arab unity yet to be achieved. The Congress took note of the scheme at its final session and recognised the advisability of referring it to the Arab League, which has itself already set up an Arab Development Bank. Mr. Bustani is a practical man of tremendous drive and more will surely be heard of his proposal.

In the working sessions group of the Congress devoted to "Petroleum Economics, General and Miscellaneous," there were besides those noted above which particularly caught the imagination of the Congress, several able papers of more specialised interest. A member of the Libyan delegation, Mr. Anis el Kassem (who made an admirable chairman of the group), in a paper, "Petroleum Legislation in Libya," outlined the principles underlying oil legislation and their adaptation to the circumstances of each country. The terms in which they were embodied in Libya's Petroleum Law have attracted a number of companies to energetic exploration in an area which at the outset was not very attractive. Another paper which attracted serious concentrated interest early in the Conference was a discussion by Mr. Farouk el Bakkary of the U.A.R. Chamber of Mines and Quarries, of the legal, economic and political effects of the principle of State ownership of mineral wealth.

Another U.A.R. delegate, Dr. Mohamed Selim, described the birth and progress of Egypt's General Petroleum Company, the first

(*Continued on page 796*)

PALAI CENTRAL BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE 31st Annual General Meeting of the above Company will be held at the Registered Office of the Company at Palai on Saturday the 30th May 1959, at 3.30 p.m., to transact the following business:—

1. To consider the audited Balance Sheet as at and Profit and Loss Account for the year ended 31st December 1958 and the reports of the Directors and Auditors.
2. To elect Directors in place of retiring Directors.
3. To appoint an Auditor or Auditors and to fix his or their remuneration. The retiring Auditors, Messrs. Srinivasan & Co., Chartered Accountants, are eligible for reappointment. Special notice has been received from a member that he proposes to move the following resolution, viz., "that the retiring Auditors of the Company, Messrs. Srinivasan & Co., Chartered Accountants, Kottayam, shall not be reappointed."
4. To consider and if thought fit to pass the following special resolution which would be moved as a special resolution:—

   "Resolved that sub-clause (2) of Article 65 of the Articles of Association of the Company be deleted and that sub-clause (1) be numbered as Article 65 and further that the last sentence in sub-clause (1) of Article 79 be also deleted."
5. To transact any other business that can be transacted at the meeting.

The Explanatory Statement under Section 173 of the Companies Act is annexed hereto.

A Member who is unable to attend in person is entitled to appoint another (whether a Member or not) as his proxy to attend and vote instead of himself subject to Section 176 of the Act. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

The Register of Shareholders and the Transfer Books of the Company will be closed from 9th May 1959 to 29th May 1959, both days inclusive.

By Order of the Board,

K. JOSEPH AUGUSTI,
Managing Director.

PALAI, *29th April*, 1959.

STRINGENCY IN MONEY CONTINUES

(From Our Own Correspondent)

BOMBAY, *6th May*

There are some signs of a slackening of demand for bank credit, but it is too early to say that the busy season has come to an end. For the overall requirements of banks far exceed the available supplies in the short-term money market, with the result that banks are still heavy borrowers and interest rates are firmly held at the previous week's levels. Inter-bank call money is being offered 3½ per cent. by Exchange banks and big Indian banks. Stray transactions are being done even at 3¾ per cent. The representative rate among the smaller Indian banks for call money is 3¾ per cent. House money at seven days' notice is unchanged at 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to three months.

There was a slight improvement in the response to the Government of India 91-day Treasury Bill sales this week, the total amount offered being Rs. 2.25 crores, as against Rs. 2.05 crores last week; the amount invited was the same at Rs. 2 crores. The average discount rate was, however, unchanged at 2.800 per cent. for the third week in succession. Tenders for Rs. 2 crores have been invited for next week also. There has been no sale of Intermediate Bills in the week ended 2nd May. These Bills will, however, be offered this week at Rs. 99.316 per cent.

The Reserve Bank of India statement for the week ended 1st May 1959 shows no worthwhile variations in the Issue Department. There has been no change in foreign securities, but balances held abroad (in the Banking Department) have recorded a further drop of Rs. 5.47 crores, so that the total foreign assets stand at a low of Rs. 203.22 crores. Central Government deposits show a fractional decline of Rs. 35 lakhs. Deposits of other Governments are lower by Rs. 10.53 crores and those of banks by Rs. 7.89 crores. Loans and advances to Governments have declined by Rs. 4.55 crores, while other loans and advances are higher by Rs. 2.52 crores. Investments show a fall of Rs. 10.53 crores and so also Government Treasury Bills purchased and discounted by Rs. 1.95 crore.

The Scheduled banks' statement for the week ended 24th April 1959 shows, for the first time in many weeks, a drop of Rs. 3.43 crores in advances. Bills purchased and discounted are, however, slightly higher by Rs. 56 lakhs. Banks' deposits have gone up by Rs. 9.30 crores, the rise being mainly accounted for by time deposits which have risen by Rs. 8.37 crores. Inter-bank borrowings show an increase of Rs. 3.62 crores, while borrowings from the Reserve Bank and the State Bank of India stand reduced by Rs. 5.89 crores and Rs. 3.40 crores, respectively. Investments have been enlarged by Rs. 1.50 crore and cash balances and balances with other banks by Rs. 14.62 crores.

The Gilt-edged market continues to be listless. Transactions are few and far between and hardly any variations are noted in prices. Institutional interest is still at a low ebb on account of the persistent stringency in the money market. There are, on the contrary, sellers in a few counters and this is keeping the sentiment subdued. State loans are also friendless.

In the foreign exchange section, the rupee is ruling steady in terms of the U.S. dollar; banks' selling rate is being maintained at Rs. 475.25 and their buying rate at Rs. 471.75 per $100. This is in consonance with the trend of sterling abroad. In New York, spot sterling, after an initial setback from $2.81.21/32-2.81.23/32 to $2.81¼-2.81.9/16 has regained to $2.81⅝-2.81.11/16. Three months' forward has gone up over the week from $2.81.5/32-2.81.7/32 to $2.81.3/16-2.81¼.

BASE METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *5th May*

Base metals moved up during the week under review, following higher advices from abroad and increased local demand. From Rs. 93, electrolytic zinc spurted to Rs. 96.50 and moved up gradually thereafter to close fully steady at Rs. 93.50. Demand from consumers being insignificant, the rise followed covering demand. Consumers thought that the rise would prove temporary and that a reaction would start when fresh arrivals would be received. The rise on the London Metal Exchange was attributed to increased consumer demand as also to the hardening trend in New York.

Virgin lead at Rs. 70 was higher by Re. 1.50 as compared with the opening quotation. The gain was mainly due to the steady trend in London.

Tin, after being higher at Rs. 581, as against the opening of Rs. 580, closed at Rs. 579. The rise was not followed by buyers.

KIPS EASY

(From Our Own Correspondent)

MADRAS, *4th May*

World leather prices, which were moving on the higher levels, seem to have received a setback, as the U.S. has reported a decline of 10 per cent. recently. The U.K. importers are unable to obtain Madras equivalents for their leather. They, therefore, continue to keep out of the market.

Kip prices have eased after touching peak levels, while tanned skins may be said to be nearing top.

Arrivals of tanned cow hides are meeting with good clearance at 15 to 20 nP less, while buff calf and cow calf continue to be in short supply. As regards buff hides, sellers are quoting unworkable prices.

Tanned goat is firm and sheep steady.

BULLION IRREGULAR AT HIGHER LEVELS

(From Our Own Correspondent)

BOMBAY, *6th May*

The bullion market ruled bullish during the major part of the week under review, but turned easy yesterday. A steady trend was in evidence today. The bullish fervour earlier in the week was engendered by the Central Government's announcement in Parliament that it would continue to acquire the entire production of Mysore gold at the official rate (Rs. 62.50 per tola, as against the market rate of about Rs. 125). This decision, together with the considerably restricted scope for arrivals of contraband gold as a result of the check on smuggling out of Indian currency and expectations of enlarged demand for the metal as hedge against inflation, led to fears of acute scarcity in supplies in the coming months. There was, therefore, hectic buying by bulls, with the result that prices moved forward further. In sympathy, silver also appreciated in value. After the option settlement (unofficial, of course) on Tuesday, however, both the metals were subjected to long liquidation. Following deterrent margin requirements, the bull operators who had applied call options turned out to be keen sellers. A leading bull operator was also reported to have supplied contracts freely. Selling was more pronounced in silver, following the Union Finance Minister's statement in the Rajya Sabha confirming the earlier report that the Chinese Government had lifted the ban on the export of Chinese dollars to India from Tibet with effect from 17th April 1959.

In the gold section, May settlement met with good buying support and rallied from Rs. 122-8-6 to Rs. 124-15 on the 3rd inst. After receding to Rs. 123-4 yesterday, it recovered to Rs. 124-1 today before closing at Rs. 123-8. The net rise over the week was As. 15-6. June settlement moved up from Rs. 121-8 to Rs. 122-15 in the course of the week and finished at Rs. 121-7 today. Business in July settlement commenced at Rs. 121-1 today. It was quoted at Rs. 120-13 towards the close.

The backwardation rate for May settlement widened considerably from Re. 1-0-6 on Wednesday (29th April) to Re. 1-13 on Monday. Thereafter, it narrowed down and stood at Re. 1-1 today. As the backwardation rate was more than a rupee throughout the week, the bulls were required to deposit a margin of Rs. 25 per tola. Since the closing rate for June settlement on Monday was higher than the starting rate by Rs. 5, the bulls were required to pay a special margin of Rs. 7 per tola under By-law 33C.

Ready gold forged ahead from Rs. 123-14-6 to Rs. 125-11 on Monday and, after declining to Rs. 124-5 yesterday, recovered to Rs. 124-15 today before closing at Rs. 124-7. The highest level touched during the week marks a new peak for the yellow metal so far. The daily average arrivals and offtake of gold were 3.500 tolas and 4,000 tolas, respectively. The floating stocks of gold are estimated at 20,000 tolas.

May settlement in silver opened the week firm at Rs. 199-10, as against Rs. 199-2, and spurted on enlarged enquiries to touch a high of Rs. 200-14 on the 3rd inst. After easing subsequently to Rs. 198-2 yesterday, it recovered to Rs. 199-2 today before finishing at Rs. 198-7. June settlement hardened from Rs. 197-6-6 to Rs. 197-15 early in the week, but came in for selling in the following sessions and moved down gradually to Rs. 194-10 today. Towards the close, it was As. 3 higher. The backwardation rate for May settlement, which stood at Re. 1-14-6 on Wednesday, exceeded Rs. 2 during the week and actually touched as high as Rs. 3-10 today. This rise brought into force the margin of Rs. 2,500 per bar on open bull position in May settlement. July settlement was quoted today at Rs. 193-14, as against Rs. 197 at which business in it commenced on Monday.

Ready silver evoked good buying orders early in the week, the quotation advancing from Rs. 201-9 to Rs. 203-11 on the 3rd inst. Thereafter, selling ensued and the rate declined, today's closing rate being Rs. 201-3. The daily average arrivals of silver were 17 bars, while the offtake was 18 bars per day. The floating stocks of silver are reported to be around 400-500 bars.

Trading in the London bullion market during the week under review was characterised by large turnover in ready gold, induced by Continental buying and weakness of pound sterling *vis-a-vis* the dollar. Yesterday's quotation stood at 249s. 3¾*d.* per fine ounce, as against 249s. 2*d.* a week before. The dollar price of gold in London was firm, the latest available rate being $35 08¾-$35.10¾. Ready and forward silver, however, were unchanged this week, too, at 79½*d.* and 78¾*d.* per ounce, respectively, despite some demand from "essential" industry. Silver in New York also was unaltered at the last week's rate of 91.375 cents per ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	6-5-59	Highest	Lowest	29-4-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	124 7	125 11	124 3	123 14½

COTTON FUTURES DECLINE AFTER EARLY FIRMNESS

(From Our Own Correspondent)

BOMBAY, *6th May*

Barring a temporary setback on Saturday, the cotton futures market continued to rule buoyant till Monday, although it declined towards the close. The early buoyancy would appear to have been influenced by the statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that the Government's policy was to reopen all those textile mills in the country which had closed and which could be run economically. Operators also noted the Minister's observation that the Union Government would do its best for helping the State Governments financially to run the mills. Encouraging reports from the piece-goods market where stocks were said to have declined to normal levels, the small volume of tenders against the maturing Jarilla May contract and the news that mill consumption of raw cotton in March showed a further rise over the February figure imparted further strength to the market. Saturday's setback was due to Mr. Shastri's warning against excessive speculation. But it proved short-lived and the market again firmed up on Monday, thanks to keen mill buying and investment support. The Jarilla August contract spurted to touch a record high of Rs. 706.25. The market staged a decline yesterday as bulls started liquidation. The downward trend continued till the close today.

I.C.C. Moglai Jarilla May opened the week firm at Rs. 697, as against the previous day's close of Rs. 695.75 and, after improving to Rs. 698, declined to Rs. 692 on Saturday. The contract again rallied to Rs. 696.50 on Monday before receding to Rs. 691.50 yesterday. Opening at Rs. 692 today, it gathered three rupees before closing lower at Rs. 690.75. Tenders issued against the contract on 1st May, the first notice day, aggregated 550 bales and on the second day, that is, 4th inst., 400 bales, making a total to date of 950 bales. With the May contract fast running out, the August contract was in the limelight. Commencing the week at Rs. 703, the contract improved to Rs. 704 the next day, declined to Rs. 699 on Saturday and again rose to a peak of Rs. 706.25 on Monday. It met with bull liquidation yesterday, declining to Rs. 701. Opening at Rs. 702.25 today, the contract improved to Rs. 705 before finishing lower at Rs. 701.75.

The following table indicates the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	6-5-59	*High*	*Low*	30-4-59
I.C.C. Moglai Jarilla May 1959 ...	690.75	698	690.50	695.75
I.C.C. Moglai Jarilla August 1959 ...	701.75	706.25	699	700.25

In the spot section, mill activity was fairly well maintained early in the week but towards the close it flagged. Spot values, however, continued to rule firm. Ahmedabad mills purchased sizable quantities of Kalyan, while Bombay mills were especially interested in Vijay and Digvijay. Some of the other varieties which came in for business were Jaydhar, Laxmi, Morvi, Kala, Manavdar, Wagad.

Business for export was negligible. Foreign demand continued to be very slack. Even stray inquiries, occasionally forthcoming, did not result in any substantial business as foreign price ideas were below Indian offers. The low level of foreign demand is reflected in the progress of sales for export. Thus, sales registered against the remaining unutilised export quota of 250,000 bales up to 25th of last month aggregated only 54,136 bales and the quantity passed for shipment a mere 13,332 bales.

In the foreign section, there was no special development to note. Importers were eagerly awaiting permission for import of 100,000 bales of cotton stapling 1-1/16" and above. Present indications are that the announcement might be delayed as the Government is reported to be considering the proposals submitted by the Indian Cotton Mills Federation for amending the existing export incentive scheme for textiles.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 690; Berar Jarilla 780; Khandesh 865; Vijay 1,005; Hubli Laxmi 1,065.

Quiet conditions prevailed in the Karachi cotton futures market during the week under review. In the absence of any new development, trading interest was low. Turnover was limited and prices moved in a narrow range showing practically little change over the week. N.T.R.G. May improved fractionally to Rs. 53 while the July contract was unchanged at Rs. 54-8. The spot section was also inactive. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 75; Punjab *Deshi* 63-8; 4 F Punjab Roller 62-8; S.G. 66; L.S.S. Punjab Roller 63-8; S.G. 66-8; N.T. Roller 63-8; S.G. 69. 289 F Punjab Roller 66-8; S.G. 73.

Cotton futures values in Alexandria made small gains during the week, thanks to support influenced by export demand from East European countries and firm spot advices.

The Ministry of Agriculture in its fourth and final crop estimate put production at round

1,327,324 bales (of 720 lbs.), excluding Scarto. This compares with the third estimate of 1,323,766 bales and the second and first estimates of 1,330,284 and 1,328,493 bales, respectively.

Bids at the recent auctions for all Sudan styles were above minima. G6S and lower S grades and G5L and lower L grades have been fetching appreciably higher prices. The new crop is considered a high grade crop and there are apprehensions that the proportion of the lower grades produced as against higher grades might be less than normal. However, the higher price trend did not affect buying enthusiasm and the turnover at the auctions continued to be very encouraging. Among the prominent purchasers were U.K., Italy, Germany and France. Sales of Private Estates cotton were reported to have been small because growers were inclined to keep their holdings in the hope of much better prices. Of an expected Private Estates crop of 210,000 bales, about 140,000 bales are estimated to have been already marketed.

The Liverpool cotton futures market ruled easy during the week. Values receded on hedge pressure by mills and Commission House liquidation. American interest in Liverpool were also mentioned as sellers. The selling would appear to have been influenced by higher export subsidy rate for U.S. cotton announced by the Department of Agriculture on the 1st inst. It was expected that this will make U.S. cotton more cheaply available in Liverpool in the future. Sudan contracts came in for active trading. The quotations improved on sustained firm advices from Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 21.90; July-August 22.23; October-November 21.65; December-January 21.25. *American cotton Mixed growth contract*: May-June 22.60; July-August 22.60; October-November 21.85; December-January 21.30. *Sudan*: May-June, July-August, September-October 25.75.

The U.S. Department of Agriculture announced on the 1st inst., the operating provisions of its payment-in-kind export programme for upland cotton for the 1959-60 marketing year. The programme, the Department said, will, in general, be a continuation of the one in effect in the present marketing year. The subsidy to be paid to exporters will, however, be raised next year to 8 cents per lb. from the present rate of 6.5 cents per lb. It has been already announced that the Department will end cash sales of surplus Government-owned cotton at the beginning of the next marketing year commencing on 1st August.

The announcement of the higher export subsidy rates touched off a wave of speculative buying on the New York Cotton Exchange. Cotton futures, consequently, rallied. Report of wet cold weather in Lousiana, Georgia and Caroline, which necessitated considerable replanting, also imparted strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	5-5-59	28-4-59	20-4-59
Spot	36.25	36.10	36.05
March	35.89	35.88	35.89
May	34.96	34.94	35.10
July	32.77	32.68	32.64
October	—	—	—

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 6th *May*

The yarn market put on a dull appearance during the week under review, thanks to absence of any fresh encouraging development. Operators were not inclined to extend their commitments either way, in view of the continued uncertainty regarding the Government's decision on the Export Promotion Scheme for rayon textiles. It was reported that stocks of rayon yarn with importers and dealers had increased quite markedly in recent weeks, as a result of large arrivals of imported yarns. Staple fibre yarns lacked support on reports that the supply of raw staple fibre had improved considerably and many mills were spinning staple fibre yarns in large quantities. Advices from consuming centres were also not helpful. Business put through in cotton yarns continued to be restricted, with values moving narrowly.

Cupressa Bamberg yarn (60×1) June delivery dropped Rs. 7 to Rs. 1,454. Spot yarn was, however, firm at Rs. 7.22, as against Rs. 7.12. 120 Japan and 150 Japan were quiet at Rs. 4.72, as also 150 Italy at Rs. 4.68. 120 Italy, however, met with good support and spurted by 16 nP to Rs. 5. Indigenous yarns were well favoured, National Rayons 150 bright cones first grade rising by 2 nP to Rs. 4.12 and 120 bright cones first grade by 6 nP to Rs. 4.56.

Staple fibre yarn 40×2 June delivery, after remaining depressed at Rs. 588 in the early part of the week, improved to Rs. 592 today. Spot Centurys eased by 3 nP to Rs. 3.12. Kohinoors lost a naya paisa to Rs. 3.21. Citys, however, were higher by 2 nP at Rs. 3.08. Among imported yarns (80×2) Paramounts climbed down from Rs. 7.41 to Rs. 7.31.

In the cotton yarn section, ten counts Moderns were dull at Rs. 13.25 and Podars at Rs. 12.19. Twenty counts Moderns were unchanged at Rs. 16.25. Forty counts Minaxis and Moderns were quoted at Rs. 25.06 and Rs. 26, respectively, same as last week. Sixty counts Raghuvamshis were dull at Rs. 65. Eighty counts Mahendras and Finlays were unaltered at Rs. 71 and Rs. 81, respectively, while Citys attracted special support and advanced 75 nP to Rs. 67.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	6-5-59	29-4-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg		
June (per case of 200 lbs.)	1,454	1,461
60/1 Cupressa Bamberg spot (per lb.)	7.22	7.12
120 Japan (per lb.)	4.72	4.72
150 Japan („)	4.72	4.72
120 Italy („)	5.00	4.84
150 Italy („)	4.68	4.68
Staple fibre yarn—		
40×2 June (per case of 200 lbs.)	592.00	589.00
40×2 Century (per lb.)	3.12	3.15
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
40s Minaxi	25.06	25.06
60s Finlay	65.00	65.00
80s City	67.75	67.00

GROUNDNUT AND CASTOR BOUYANT

(From Our Own Correspondent)

BOMBAY, 6th *May*

Virtual boom conditions prevailed in the oilseeds market during the week under review. Groundnut and castorseed futures prices set up new records today. This imparted strength to the other sections as well. Encouraging advices from abroad and shortage of supply were the two outstanding causes behind this upward trend in prices.

Against the background of tight supply position, the persistent demand from *vanaspathi* manufacturers and crushers for oil and seeds even at higher levels pushed up the prices further in the groundnut section. Besides, there was a belief among operators that there were bright prospects for exports of oil and seeds, particularly to the U.K. Thus values touched new high levels on heavy short-covering and speculative buying. Groundnut May 1959 contract, which closed last week on a firm note, advanced to Rs. 198.25 on Monday, only to rise further to Rs. 201.00 today. August contract gained Rs. 5.50 over the week to finish today at Rs. 204.50. Bold ready improved from Rs. 39.75 to Rs. 41.00 today. Oil ex-mill, after experiencing minor fluctuations, rose today to Rs. 22.00, as against Rs. 21.00 last week-end.

The rally in prices in the castorseed section was more spectacular, particularly on account of reports of export business in castor oil with U.S.A. at 13¼ cents. It is rumoured today that the Forward Markets Commission is considering the possibility of removing margin on castors futures, while the earlier reports that the F.M.C. might impose double margin stand unconfirmed. The September contract exceeded the margin limit on Monday and there is yet no sign of abatement of this buoyancy. The September contract hardened from Rs. 164.00 on Wednesday to Rs. 166.37 on Monday and again to Rs. 171.25 today. May contract was higher by Rs. 7.38 when it wound up the week today at Rs. 166. Ready Madras closed higher by Rs. 1.38 at Rs. 32.62 today. Likewise, Oil B.S.S. moved up from Rs. 16.75 to Rs. 17.62.

Linseed followed the price pattern in other sections. By and large, it remained featureless, May and September contracts, which wound up last week at Rs. 32.69 and Rs. 33.37, rallied to Rs. 33.31 and Rs. 34.31, respectively. Bold ready after moving within a narrow range, closed today higher at Rs. 33.12, as compared with Rs. 32.44 last Wednesday. Similarly, linseed oil improved from Rs. 15.75 to Rs. 16.25. Cottonseed also moved in sympathy with other seeds. May and September contracts went up from Rs. 133.25 and Rs. 133.75 to Rs. 135.50 and Rs. 137.75, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	6-5-1959	29-4-1959	22-4-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	201.00	194.00	192.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

GOOD MEDIUM TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 30th *April*

A smaller quantity of 650,000 lbs. were offered in Sale No. 16, which was held on 28th April 1959. Quality from all districts showed a further seasonal decline. The offerings met with a strong general demand. Low medium and medium brokens sold well at steady rates, but similar fannings were fully firm to dearer. The demand for good medium teas was good and these sold at firm rates and were occasionally dearer. However, best liquoring high growns sold at easier rates following the drop in quality. A few lines of C.T.C. teas on offer were well supported and sold at higher rates than last. Whole leaf grades met with fair enquiry at about last rates. The quotations are: low medium Re. 1.70 to 1.80; medium Re. 1.80 to Rs. 2.10; good medium Rs. 2.35 to 2.90 and quality Rs. 2.45 to 4.02.

London Market: *Sale of 27th April* 1959.—Prices still advancing, except thin sorts.

Sale of 28th April 1959.—Good demand. Generally dearer.

Colombo Market: *Sale of 27th April* 1959.—Strong demand. Best liquoring dimbula dickoya brokens firm to dearer. Poorer sorts irregularly lower, following quality, except fannings medium B.O.Ps down 15 to 20 cents. Fannings dearer. Low-growns down 5 cents.

Sale of 28th April 1959.—Offgrades strong. Demand generally slightly dearer, except stalky broken mixed.

Calcutta Market: *Export.*—No sale.

Internal.—20,000 packages dust. Met good general demand. Grainy orthodox types up to 4 nP easier. Powdery sorts was fair to dearer. Plain C.T.C. easier. Medium and good quality dearer.

Export Quota.—The market continues to remain quiet this week and no business has taken place either in special licence or in current quota. Nominal quotations at present are:

Special licence 1958-59—Seller 1 nP with no buyer.

Current quota 1959-60.—Sellers at 8 nP with probable buyers at 6 nP.

As we to go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 17.—800,000 lbs. Good, but irregular, demand. Low medium and mediums irregularly 5 nP dearer. Good medium fannings fully firm. Similar brokens and highgrowns much less demand with some withdrawals. Whole leaf very strong."

GOOD DEMAND FOR TEA DUSTS

(From Our Own Correspondent)

CALCUTTA, 5th *May*

Dusts amounting to 21,934 chests on offer during last week's internal auctions met with a good and general demand. However, prices were irregular. There was good demand for the best liquoring C.T.Cs, which realised prices above valuations. Good medium C.T.Cs were steady, while the plain and poorer medium C.T.Cs eased. Competition was keen for grainy orthodox teas with better quality or in small and powdery lots, leading to firm prices. Other lots of this category gave way by 4 nP. Darjeelings rose above valuations in accordance with quality, but legg cut Dooars were irregular. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.70 to Rs. 3.10, medium Assam C.T.C. Rs. 2.10 to Rs. 2.30, medium Assam grainy dust Re. 1.70 to Re. 1.74, and medium Dooars Re. 1.74 to Re. 1.78.

Leaf on offer amounting to 605 chests were irregular, but often dearer.

The Pakistan Government's decision to raise the excise duty on tea by As. 2 to As. 6 per lb. caused surprise in market circles here. Announcing this the Commerce Minister, Mr. Z. A. Bhutto, said that in 1959-60 the minimum export quota would be 20 million lbs., as against the actual exports of 11.4 million lbs. in 1958-59. How the increased target, which was higher by almost 100 per cent., would be reached was difficult to see, in view of the raising of export duty. In 1957-58, exports were even lower at 7.2 million lbs. Tea was facing keen competition in world markets following increased supplies, and the trade thought Pakistan was taking a contrary step in raising the excise duty. Pakistan's action would no doubt lend more competitive power to teas of other countries including India.

Stronger demand and dearer prices in tea auctions for export in Cochin held in the last two weeks were, it was thought here, due to the buying interests having to concentrate in the South Indian trading centre only, as Calcutta's export auctions for this season have been closed already. It was significant that the U.K. tea stocks in London and provincial warehouses for the week ended 24th April were only 154 million lbs., as against 157 million lbs. in the previous week. It was also significant that in the last auctions held in Mincing Lane higher demand continued and prices were still rising. Good liquorings added 3d. to 6d. per lb.

JUTE GOODS SUBDUED

(From Our Own Correspondent)

CALCUTTA, 5th *May*

In the absence of buying support, prices of jute goods and raw jute moved narrowly and recorded fractional decline on balance during the week under review. There was fair activity in the futures market, following bear-covering, particularly in hessian. Overseas interest was insignificant generally, but for a time there was keen interest shown in cornsacks. Shipping instructions being poor, an increase in stocks was anticipated and quotations were discounted on this account. However, mills declined to sell for forward positions; had it not been for this feature the fall in prices would have been more pronounced. The lock-out in Howrah Mills which followed a strike beginning from 22nd April did not cause any anxiety to the market, as it was felt that, stocks of goods with mills being high, a decline in production might push up overseas demand.

An outstanding news of the week under review was the announcement that, as from 1st June, the East India Jute and Hessian Exchange would regulate trading in transferable specific delivery contracts in raw jute and jute goods, the by-laws and contracts governing trading in these contracts, as well as by-laws for licensing of brokers engaged in business in such contracts, having been finalised. All such contracts would be legally valid only, if they were put through between members of the Exchange, or through, or with any such member, or where the services of a broker who was not a member of that Association were employed by a member, except through a licensed broker.

Another news item was the announcement from Karachi that a commission headed by the East Pakistan Governor and consisting of representatives of jute interests had been appointed to inquire and report on the various problems facing the jute industry, beginning from growing of the fibre, production in mills, and marketing of the raw material and the finished product, including export of both. The commission, *inter alia*, would study the size of the crop required in the next few years, and methods for reducing costs of production. It was believed here that the appointment of the commission was a sequel to recent success which Pakistan mills had been able to achieve in export of jute goods. In recent months, Pakistan mills were able to secure orders for heavy goods from Australia and Burma, and in hessian from the United States. It was noted here that Pakistan was paying attention first to the development of the markets in Australia and the U.S., which regularly consumed jute goods. Market circles regretted that this development was passing unnoticed by the Indian industry. They felt that the need for improving quality of heavy goods was urgent, and, if the indifference to quality and complaints continued, exports from India would suffer. If unfortunately such an event occurred, the self-sufficiency in raw jute, over which pardonable pride had been natural, would prove to be of no importance. Also pushing up exports of fibre of inferior variety, when consumers in foreign countries could get most of their requirements from Pakistan, would prove palpably difficult and arduous.

Pakistan's success at increasing exports of jute goods was attributed to the incentive export bonus scheme, according to which the exporter of a certain minimum quantity could import the things of his choice for his fluctuations, provided such imports did not cost more than a certain percentage of the value of his exports. Thus, Pakistan mills are now in a position to import machinery, the introduction of which would reduce cost of production. Even in spite of cheaper labour, there was the feeling here that cost of production might be higher as compared to Indian mills.

On Tuesday last, there was considerable interest shown in cornsacks by export buyers. Excepting for this, the market was featureless, and the fall in ready B. twills to Rs. 40.20 from Rs. 40.40 did not cause surprise. Ready hessian 40″ 10 oz., however, rose to Rs. 40.20 from Rs. 39.90 on bear covering in the futures market. Business passing for export was only fair, but not adequate enough to maintain prices, and on Wednesday hessian 40″ 10 oz. was quiet at Rs. 40.15, and B. twills fell to as low as Rs. 92.05. At lower levels, speculative interest was revived, and on Thursday B. twills recovered to rise to Rs. 92.90. Hessian 40″ 10 oz. was quiet at Rs. 40.10. Follow-up interest was insignificant, and this caused a setback in hessian 40″ 10 oz. to Rs. 39.85 and B. twills to Rs. 92.55. The week-end witnessed a steady trend in hessian 40″ 10 oz. at Rs. 39.90 following activity in futures, while B. twills sagged further to Rs. 92.45. Yesterday, however, B. twills spurted to Rs. 93.55. This followed the receipt of a Government tender for 31,000 bales of B. twills against May-June delivery. Hessian 40″ 10 oz. was, however, unchanged at Rs. 39.90.

Following a decline in interest shown by mills, fibre prices gave way. Reports of satisfactory condition of the crop were so strong as to cause anxiety on the part of stockists. Northern bottoms at Rs. 20 were lower by 50 nP. Daissee bottoms declined to Rs. 23 from Rs. 23.25. The season having come to an end practically and with the possibility of an earlier crop, sellers exhibited an anxiety to dispose of the remaining stocks, most of which were inferior varieties. There were even instances where mills reported arrivals in excess of the quantity on order on the basis of price to be fixed. The increasing number of godown fires—so far during 1959 such outbreaks have numbered 20, as against 44 only for the whole of last year—is causing great concern to the industry and insurance companies alike. It is understood that the matter will soon be gone into by a special sub-committee. It is believed that the need for mills to carry greater stocks, in view of higher output, has made the position vulnerable. Fire causes great inconvenience to production and trading including export programmes. The latest quotations for the balance of 1958-59 crop, May-June delivery, are:

	Middles Rs.	Bottoms Rs.
Indian:		
Northern	23.00	20.00
Assam Upper ...	23.50	20.50
Cuttack	25.00	22.00
Desal	22.50	19.50
Murshidabad	20.75	18.25
Jungli	20.50	18.00
Daissee selected ...	25.00	22.50
Uttar Pradesh ...	20.50	18.50
Daissee mesta ...	21.00	18.50
Bimli f.a.q.	Rs. 18.75	

Pucca bales 1st marks Rs. 160.00 per bale ready.

LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 4th *May*

A slightly easier tone prevailed, but towards the close prices recovered slightly from the lowest levels reached earlier in the week, and the tendency at present seems better. Arrivals have still been somewhat below the levels expected at this season; crushers have been showing a keen interest for ready goods and forward delivery. Oilcake prices are slightly lower with little buying interest. The oil market is fairly active; shippers, after purchasing some ready at Rs. 49 are still interested without response from sellers. Owing to steadiness in groundnut oil, there has been a keen local demand for forward delivery at a premium of 0.50 to 0.75 nP with sellers reserved. A parcel of 480 tons has been sold to Australia by Bombay shippers at £111. The latest quotations are: Ready Rs. 22.75 and May-June Rs. 22.50 per maund.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 4th *May*

Quietly steady conditions were witnessed in the foodgrains markets during the week. Contrary to all expectations, new crop arrivals in the markets were poor. Weather continued to be favourable for winnowing operations which were in full swing, but cultivators were reported to be retaining their produce, expecting better prices later. Wheat registered fractional gains. The coarse grain also sought higher levels. Pulses stayed steady.

Wheat at Hapur registered gains to be quoted on Monday at Rs. 16.50 per maund for average quality and Rs. 17 to Rs. 17.75 for farm produce, while some inferior quality was quoted at Rs. 16.25 per maund. Average wheat was quoted at Rs. 14.50 per maund on the corresponding date last year when crop was very poor and at Rs. 14.75 per maund in 1957. Latest reports from threshing floors indicated that, on the whole, production of *rabi* grains is not so good as earlier predicted, as strong westerly winds in mid-March has harmed the standing crops.

Thanks to slightly better supply position, rice ruled depressed during the week. Large imports of rice from the surplus areas of the State have been banned and the State Government is procuring rice there for building up reserve. The latest prevailing price were:—*sela basmati* Rs. 33 to Rs. 35; *mainpuri* Rs. 22; *gadda* Rs. 22.50; *raimunia* Rs. 26.50.

Gram ruled steady during the week on encouraging advices from Punjab, but, as crop this year has been excellent in the Punjab, gram continued to reach all consuming centres from there. Barley and *bejhar* improved in sympathy and on good consumer demand. *Jowar* and *guwar* were also steady. Prevailing prices on Monday (in rupees per maund) were:—gram 12.75; barley 11.50; *bejhar* 11.50; *jowar* 13 to 15; *guwar* 15.

Pulses recorded a firm trend towards the week-end, as arrivals were modest and stockists were main supporters. Peas arrivals were about 2,000 maunds daily and local stock swelled to 23 *khatties*. Prices improved fractionally. *Arhar* arrivals, too, were small at about 500 maunds daily and local stock was put at 2 *khatties*. Other pulses stayed steady and were now quoted at (in rupees per maund): peas *dara* 12; farm 12.50 to 13.25; peas *dal* 13.25; *arhar* 15 to 15.25; *arhar dal* 17.50 to 18.50; *urd* 19, *moong* 22 to 23; *massor* 14 to 18.

SUGAR ADVANCES

(From Our Own Correspondent)

HAPUR, 4th *May*

Despite the release of a further quantity of 140,000 tons for free sale by factories and the assurance that the system of allotment against tenders is being further strengthened, sugar prices have registered further gains during the week. Demand from consuming centres is brisk and the quantity released is considered to be fully insufficient to meet the requirements. Crushing season is coming to an end and it is gathered that sugar output this year will be less than 1.9 million tons.

Steady to firm conditions prevail in the sugar market at Muzaffarnager, as, out of the releases made by Government for free sale, the quantity allowed for factories in Moradabad and Delhi divisions is much less. Prices have gone up further by about 50 nP per maund. The latest prices in the market are at a premium of about Rs. 2 to Rs. 2.75 per maund over the controlled price fixed by the Government. The following are the latest quotations prevailing in the market:

Rohana B29 Rs. 39.81; Meerut D29 Rs. 39; Khatauli B29 Rs. 40; Amroha D29 Rs. 38.59, Modinagar C29 Rs. 39.25; Daurala C29 Rs. 39.25; Mawana C29 Rs. 39.25; Simbhauli E29 Rs. 38.37; Bijnore D29 Rs. 38.25; wholesale mill delivery controlled A29 Rs. 37.75; B29 Rs. 37.12; C29 36.37.

Sugar has firmed up in the Kanpur market, due to good demand in the face of short supplies. The prevailing prices are Kanpur delivery Rs. 110 to Rs. 112; mill delivery Rs. 37.50 to Rs. 39 per maund.

Ready *gur* are ruling steady, due to good outside demand for dry quality, while *kotha* quality is attracting modest support. *Gur* manufacturing is almost over and arrivals out of stocks retained by producers average 300 to 400 maunds daily which are being lifted for outside despatch. The local stock have run down slightly to 91,000 maunds. Total arrivals during the season are put at 640,000 maunds, as against 397,000 maunds in the corresponding period of last year. Prevailing prices are:—*pansera* Rs. 19.75 to Rs. 20, *shakker* Rs. 21 a maund. Last year's corresponding prices were Rs. 15.25 and Rs. 16 a maund, respectively.

Gur in the Muzaffarnager market also rules steady. Arrivals have dwindled to an average of 500 to 750 maunds. The latest prevailing prices are:—*gur chaku* Rs. 20 to Rs. 20.75, *khurpa ruskat* Rs. 12.50 to Rs. 13.50; *shakker dara* Rs. 20.25 to Rs. 21.50; *masala* Rs. 23.50 to Rs. 25.

Latest advices from official sources indicate that the Government was very soon going to allow forward trading at Hapur and Agra.

Khandsari has improved further in line with crystal sugar. Production is being continued in some centres in rural areas from *rab* already stocked with producers. Prevailing prices are:—superior Rs. 33 to Rs. 36, inferior moist Rs. 30 to Rs. 32 per maund.

MARKET GOSSIP

(*Concluded from page 759*)

suspicion will arise that such officers cannot do justice to the cases before them."

While there may be a few cases where the Income-tax Department has shown undue leniency in regard to both the amount of taxation and the period of payment, to charge the whole Department as being highly incompetent and corrupt is to indulge in irresponsible criticism. Arrears of taxes are mainly the result of excessive assessment and the grievance caused thereby among the assessees. In a democracy, an aggrieved person has a right to seek the protection of the Court. Nearly 600 appeals, involving huge amounts, according to Mr. B. Gopala Reddy, Minister for Revenue and Civil Expenditure, are pending in High Courts. The "effective arrears" of income-tax, it is said, aggregate Rs. 173 crores and not Rs. 280 crores, as shown by the Department. Even out of the balance of Rs. 107 crores which the Minister said would "have to be abated," the amount of double income-tax relief, amounts due from persons who have left India and have no assets, and those which are covered by appeals account for Rs. 60 crores. The actual arrears that will have to be written off are thus Rs. 47 crores.

It may be interesting to note here that the net outstandings of Rs. 173 crores as unpaid income-tax and due to be recovered are almost equal to 75 per cent. of the annual income from the four direct taxes mentioned above. India, of course, is not the only country where the arrears are very large; this is a common feature in other countries too. But the proportion of arrears to the total annual collections in other countries is not so high as in this country. In the U.K., for example, the arrears of unpaid income taxes at the end of 1957-58 amounted to £422.90 million which represented a little over 15 per cent. of the total tax revenue of £2,791 million in that year.

Considering the urgent need for raising funds to finance economic development, the Government should, of course, take prompt measures to expedite collection of arrears taxes from the assessees. The assessment should be prompt and, while undue harassment of assessees should be avoided, sufficient time and opportunity should be given to assessees to appeal in case of overassessment of their incomes by income-tax officers. In order, however, to discourage the tendency among the assessees to dodge payment, they should be asked to deposit with the Government the amount of tax assessed, pending final settlement. At the same time, failure to disclose all taxable incomes should be treated as a penal offence, as in the U.S., and subjected to severe punishment. It is unnecessary for the Government to show any mercy to those who deliberately evade the taxes due to it. If the tax laws are properly enforced and evasions successfully detected, it should be possible for the Government to reduce the burden of taxation, which itself will be an inducement to the assessees to be honest and prompt in paying the taxes. It is a well-known fact that excessive taxation itself is a cause for evasion as distinct from avoidance.

SEMINAR ON BANKING

(*Concluded from page 769*)

mer comprises one agency—Dun & Bradstreet Inc.,—that covers reports on any company or individual in the U.S.A. and Canada. The category of special agencies comprises many and varied bodies that specialise either in certain lines of business or in certain geographical areas.

Dun and Bradstreet, Inc. Established in 1841 and best known, it has about 200 offices in the U.S.A., with offices or correspondents in important business centres of the world. The facilities it offers may be summarised as under:

1. Publication, every other month, of a "Reference Book" which contains over three million reports on business concerns in the U.S.A. and Canada, classified by line and function, and rated as to financial and credit standing.

2. Reports on business concerns in the rest of the free world.

3. Business research, studies and surveys.

4. Special Investigations.

5. Surveys on states, counties and other Governmental units to help investors.

6. Collection of past due accounts by specialised methods.

7. Publications of various sorts for general and special lines; statistics, business ratios, charts, analyses, etc.

8. Counselling business men, including the preparation of pattern statements relating to balance-sheets, etc.

9. Documentary films on business subjects for free exhibition and provision of a library.

Special Credit Agencies: These are too many and varied to admit of full description, but the chief ones may be mentioned. National Credit Office Inc., (the largest in this class), Proudfoot Commercial Agency Inc., Hooper-Holmes Bureau Inc., the Retail Credit Company and local credit bureaus knit together under the Associated Credit Bureaus of America may be noted. All of these specialise in certain branches of information and/or certain geographical areas. Information supplied by them follows the lines mentioned above in respect of Dun and Bradstreet Inc.

The sources from which credit agencies obtain information are mainly the subjects themselves, public records of suits, mortgages, deeds, etc., newspapers, suppliers to the subject, correspondents and banks.

It may be wondered why people in the U.S.A. readily give information on themselves or their business to credit agencies. The reason is that nearly everyone in that country realises that it is is in his own interest that information on him or his business should be recorded and the credit and financial standing rated. The average person—business man, professional man or otherwise—understands that he will some day need to borrow from his bank for business, consumer goods or personal purposes, or he will want to buy merchandise on credit from a store or he will need some kind of insurance, or he will enter into some other relationship where information on him would be called for. He, therefore, welcomes the enquiry from a credit agency, and fully co-operates with it by placing full and correct information at its disposal. The dependence on credit not only makes for ready availability of information, it also ensures the accuracy thereof. No one would want to have his credit ruined by giving false information; when found out, he would find further credit denied to him.

In India, there is no credit investigation agency, and it is high time that a start was made. Such agency or agencies as may be started can utilise all the sources used by the agencies in the U.S.A., mentioned above. It is true that, in our country, there is not, at the present time, the same willingness on the part of people to give financial information about themselves as in the U.S.A., but one can expect that, gradually, such willingness will increase. More reliance on credit can be expected from expansion of production and rise in the standard of living; this will make for greater co-operation with credit investigation agencies on the part of subjects. In the beginning, however, it may be advisable for the first agencies that may be started in India to devote their work mainly to business men.

JUTE

(*Concluded from page 773*)

below the optimum. The total production of jute goods in the seven months ended January 1959 amounted to 114,073 tons, as compared with 90,693 tons in the corresponding period of 1957-58. The production during the whole of 1957-58 aggregated 158,000 tons. It is, however, reported that the East Bengal mills hope to increase their output soon to an annual rate of 240,000 tons, because of the peaceful conditions which prevail on the labour front and the commissioning of about 1,500 new looms.

The Pakistan Government has also introduced an export bonus scheme under which industries, including the jute industry, are allowed to retain a specified percentage of their export earnings for their own use. According to the President of the Pakistan Jute Mills Association, the scheme has enabled the mills to dispose of their rising stocks and a fair proportion of future months' production, in spite of the very poor demand from overseas and the very large stocks accumulating in India. Mr. Jalil hopes that the export bonus scheme will enable the industry to rehabilitate itself of past losses and finance further development.

Along with the rising trend of gunny production in recent months, the despatches from Pakistani mills have also recorded an improvement. In the first seven months of 1958-59, despatches aggregated 99,640 tons, as compared with 88,438 tons in the corresponding period of 1957-58. This increase was mainly due to the rise in despatches for export from 57,407 tons to 68,010 tons. Internal offtake too rose from 31,031 tons to 31,630 tons, but the increase was very small.

The recent improvement in the position of the jute industry in Pakistan shows that the new regime was already seized of the problem and had taken steps to restore stability and get the economy into balance. The appointment of a Commission of Enquiry bears further testimony to this awareness. The core of Pakistan's problem is a sound long-term policy for jute, the main source of foreign exchange, to repair the neglect of past years.

These developments in Pakistan cannot but be of interest to India and will be watched keenly, as the success of the policy to be enunciated by the Jute Commission will weaken the competitive position of India. The latter's efforts to attain self-sufficiency in raw jute will go in vain unless the quality of the fibre is improved and the competitive capacity of the mills enhanced.

ARAB OIL CONGRESS REVIEWED

(*Concluded from page 790*)

Arab company for the exploration of oil, which has found two fields in the vicinity of Ras Gharib. A Lebanese delegate drew the speaker's attention to the fact that there had been already a local company in the Lebanon but the Egyptian company was certainly the first Arab company to find oil! The formation of national petroleum companies, not to displace but to operate contemporaneously with existing companies, was advocated in the final resolution of the Conference.

A paper by Mr. Farouk el Husseini of the Saudi Arabian delegation, on the economics of Middle East oil, treated the broad facts of production and other operations in the Middle East, and then the question of prices and revenues, leading to the conclusion that the present arrangements for the 50:50 division of profits on crude oil production has worked in favour of the oil companies. A great deal of work had been put into this paper which, in regard to matters of pricing, provoked a discussion but on several different levels. Some speakers fully realised that a difference between prices at Sidon and Ras Tanura is not a sinister phenomenon, and others seemingly believed that pricing was one vast machination to do the Arabs down. Surprisingly, the sharing of profits from refining and marketing was not treated as a subject, but it arose several times in the course of the discussions.

Naturally enough, it was expected that the Congress would be used as a means of voicing Arab nationalism, although its purpose was economic, not political. In fact, the only paper without economic content was that delivered by a delegate of the Algerian National Liberation Front bidding the oil companies beware, as concessions accorded by the French in the Sahara would certainly not be recognised by the coming Government of Algerian patriots. The subject of nationalisation was never raised, and was not revealed as a subject at all pre-occupying Arab countries. Many aspects of the relations with the oil companies were, however, discussed on, and off, the Congress floor.

Iraq was not in any way represented at the Congress, because of the present strained relations between its Government and that of the U.A.R. Persia had two observers present, and Venezuela was represented by a group, also as observers, led by the Minister of Mines and Hydrocarbons, Dr. Perez Alfonso. Outside the Congress walls, the Venezuelan delegates had many discussions with Arab oilmen, and they put abroad the idea that there should be co-operation between the Venezuelans and Arabs in regard to possible regulation of output (and so keep up prices), a subject for which a study Commission has recently been set up in Venezuela.

At the final meeting of the members of the Congress, presided over by its Chairman, Mr. Ahmed Nessim, of the U.A.R., a statement was presented which, in an atmosphere of general goodwill, rounded off the proceedings. It referred, *inter alia*, to the need for improved participation by producing countries in all phases of the oil industry, for consultation between Governments and oil companies on pricing, and for co-ordinating conservation, production and export of the various countries.

The practical effects of the Congress will take time to appear. But the meeting has been well worth while. It has given rise to many interchanges of opinion, many friendships have been made, and fresh understanding created. Ideas and notions which, unexpressed, might have lingered to give rise to frustration and misunderstanding, have been brought into the open. No doubt, many misapprehensions remain uncorrected and Arab hospitality and courtesy softened the differences in viewpoint between Arab and Arab, and between Arab country and foreign company. But the air is a little clearer. A major aim of the Congress was to make the oil business better understood. In this it has succeeded, helped by the conjoined public Oil Exhibition. Here were exhibits suited to all stages of comprehension, from contour maps and new machinery only to be appreciated by oilmen, to dioramas and models and lighted flow diagrams designed at once to simplify processes for the understanding of the layman and to remind him of their complexity. Crowning all was a floodlit full-size rig at work. The local press noted with satisfaction that £3 million of material was being shown at the Exhibition.

All in all, the getting together at the Congress has been good for everybody.—*By special arrangement with Petroleum Press Service.*

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2512 BOMBAY, 16th MAY 1959 PRICE: Rs. 2

WASHINGTON CONFERENCE

OVER a year ago, a profound change for the better took place in the attitude of the U.S., in particular, and the Western countries, generally, on the question of assisting India to implement its plans for economic development. Till then, their response was lukewarm, both for political and economic reasons. The world situation was such that India's policy of non-alignment led to considerable misunderstanding and cynicism. The backwash of the Suez and Hungarian episodes lasted for a long time, clouding the vision of many persons in high places and thereby impeding adequate appreciation of India's efforts to raise the living standards of its poverty-stricken masses. But, as the cold war took an economic turn, with Russia turning its attention to capturing the hearts and minds of the peoples of underdeveloped countries, and as China's enormous strides in the strengthening of its economy began to receive notice all over the world, politicians, economists and commentators in the West suddenly woke up to realise the advantages of helping India. The idea that India was the bastion of democracy in Asia and that, if it failed in its efforts to raise the living standards of its people, the cause of democracy, in general, would suffer a serious setback, began to permeate the minds of an increasing number of leaders in the Western world. It is true that, even before this development, there were quite a few leaders in the U.S. and the U.K. who had realised the beneficial implications to the democratic world of India's plans for economic development and were not found wanting in championing this country's cause. But they were in a minority. Apart from political considerations, the economic recession of 1957-58 also opened the eyes of the majority of administrators and politicians to the importance of underdeveloped countries both as sources of raw materials and markets for the manufactures of the Western world. As India is relatively more advanced than the rest in this part of the world and had taken steps to implement a large number of sound development projects, its needs received prominence.

Evidence of a change in the attitude of the West towards India in 1958 was provided by (*a*) U.S. credit of $225 million through the Export-Import Bank and the Development Loan Fund, (*b*) the stepping up of the World Bank's interest in this country, (*c*) the concerted attempts of six countries to come to India's rescue in its serious foreign exchange crisis, (*d*) a fresh offer of help by the U.S. under P.L.480, and (*e*) the appreciative terms in which India's developmental efforts were commented upon at the annual meetings of the I.M.F. and the World Bank at New Delhi in October last. The proposals to increase the capital of the I.M.F. and the World Bank and to establish an International Development Association, as suggested by President Eisenhower, were also general evidence of the aforesaid change. The cumulative results of all these developments are the assurance that the core of India's second Plan will be implemented more or less according to schedule and the restoration of confidence among the planners in this country that they can prepare a third Plan without unduly deflating their ambitions.

It is heartening to find that, since the Fund-Bank meetings at New Delhi, there has been an even greater understanding of India's problems and aspirations. The two-day Conference in Washington last week, entitled "India and the United States—1959," sponsored by the Committee for International Economic Growth, a private organisation headed by Mr. Eric Johnston, is a striking testimony to the growing interest thoughtful Americans take in India. As many as 500 American leaders in Government, labour, industry and education participated in the Conference, which was attended by six prominent Indians and a leading British economist. The objects of the Conference, according to Mr. Johnston, were:

(1) to contribute to mutual understanding between the peoples of two countries;

(2) to examine India's problems of economic growth—not in the abstract, but in terms of America's ability to help;

(3) to look carefully at the processes of U.S. economic assistance and to discover how the resources of the U.S. can more effectively be used in its economic assistance programme generally.

From the reports that have appeared in the daily Press, it is clear that the first two aims were fully realised, but not much is known about what happened regarding the third aim. The general feeling among international observers on this last point is that there is considerable wastage and room for improvement. There are several agencies in the U.S.—their number is said to be as many as nine—through which foreign aid is rendered and the objectives are a mixture of military, political and economic purposes. Mr. Eugene Black, President of the World Bank, remarked, in an interview at London last week, that aid given for political or military reasons was likely to be inefficient, even positively harmful, from the economic point of view. The use of finance as an instrument of diplomacy was strongly criticised by him. He said that he did not believe that people could be bought with aid. He was somewhat sceptical of the view that the Russians were getting a large political return for a small expenditure of money. "If Soviet aid really helps to develop a country," he observed, "this is all to the good. If it is merely a political weapon, it will not eventually give the Russians much credit in the countries concerned." He advised the Western countries to answer the "Soviet economic offensive" by getting on with the job of sound economic development.

It is for the authorities and leaders in the U.S. to reflect and decide whether or not the objectives of their foreign aid programmes require to be revised. What is economically logical need not necessarily be so from the political and military points of view. But the time has come when the U.S. and other developed countries in the West have to do something more than they have done so far and that quickly to close the gap between the haves and the have-nots in this world. It is gratifying to find that even the *Financial Times*, London, has effectively stressed this point in its issue of the 7th inst. After gracefully conceding that it is in their self-interest for the Western countries to help underdeveloped areas, our contemporary says: "The question, from this point of view, is not whether the providers of aid have got value for their money, but whether the recipients have.... It is certain that a great deal of the so-called aid has been wasted, either frittered away or squandered on investments designed to serve political rather than economic ends." It then goes on to suggest that the primary purpose of aid should be "to raise living standards rather than to win friends and influence people." This quotation from the *Financial Times* points to a welcome change in the thoughts of British people also.

Since Independence, the U.S. has rendered economic assistance to India to the tune of Rs. 800 crores. There has, of course, been no political motive behind this aid. Nevertheless, it has acquired a political flavour, because Congressmen, officials and newspaper commentators in the U.S. have sought to support aid to India on the grounds that, if no such aid were given, India would become an easy prey to communism and that, in the race for economic progress in the underdeveloped, overpopulated regions in the world, India must be enabled to prove that such progress is quite possible on democratic lines, so that China's experiment, based on dictatorship and communist regimentation, may not draw many adherents. There is nothing wrong with these reasons; they are perfectly legitimate. Although India has not taken to planned economic progress in any spirit of race against China, it cannot be denied that, if a reasonably rapid pace of economic development is not achieved, India will become a fertile ground for the growth of reactionary forces as represented by communism or fascism. But there are some in this country, including the leading lights in the Congress Party, who think that it is not in good taste to seek aid from foreign countries on such grounds. This is understandable, for two reasons: (*a*) India has been taking aid from Russia and a few of the East European countries also; and (*b*) it has entered into an understanding with Russia and China not to interfere in their internal affairs. To run down their way of life openly would be in conflict with the spirit of this understanding. To those who feel this way, the following statement of Mr. Richard M. Nixon, Vice-President of the U.S., whose participation was the most significant feature of the Washington Conference, will be welcome:

"I noted that, in your conference agenda, you have pointed out that you would consider the importance of India in relation to the security and freedom of the free world. Speaking now as an official of the American Government and as an American citizen, I would not like this great Conference to begin believing that this was our sole interest as far as a Government and a people were concerned, when we did provide governmental assistance or other assistance to our friends in India. If there were no communism in the world, if there were no threat from communism to the United States and other free nations like India, there would still be poverty and misery and disease and then the people of the United States and our Government would be concerned about that poverty and misery and disease. I would not like the case for Government assistance, the case for the interest of the American people in our friends in India, to be rested at the outset of this conference simply on the negative, defensive issue of helping India, in order to save the United States from communism. I think the case can better be presented in terms of not the defeat of communism, in which, of course, we are interested, because we realise that freedom can live only where dictators are defeated—but our primary interest must be the victory of plenty over want, of health over disease, of freedom over tyranny of any type, wherever it exists in the world, and, as far as our

friends in India are concerned, we can assure you, those who are here today, and those in that great land so far away, in which we have always had such a warm and friendly interest, that we welcome the opportunity to work with you in developing the economic progress which is your aim, so that you can prove to all the world that it is possible to have progress with freedom."

Coming, as it does, from a top official of the U.S. Government and one who is likely to be the next President of the U.S., the foregoing observation is of great value and gives rise to the hope that the U.S. Administration itself will take the lead in giving a high priority to economic aid to this country. His further statement that what happens to India in the next few years is more important to the free world than what happens in the current Berlin crisis and that "the free world has a tremendous stake in the economic problems of India" lends additional strength to this hope.

Shortly after Mr. Nixon's statement, President Eisenhower told a Press conference that the U.S. could not take the sole responsibility for assisting India in implementing its plans for economic progress. To several questions that were put to him on this subject, he gave non-committal replies. This, together with the fact that the U.S. Congress has not yet sanctioned the President's urgent request for $225 million to replenish the resources of the Development Loan Fund, has created a certain amount of scepticism in this country about the sympathetic and reassuring observations made at the Washington Conference not only by Mr. Nixon but also by the other leaders in the U.S. While such a reaction is natural, it should not be allowed to minimise the value of the Conference. It would be unfair to expect the U.S. President to make any definite commitments in a Press conference. Further, none in this country expects the U.S. to be solely responsible for the foreign aid required for implementing India's development plans. What is expected of the U.S. is a lead in this direction and, as the richest creditor country in the free world, readiness to provide the major part of the aid. The failure of the U.S. Congress to give prompt approval to the President's request regarding the D.L.F. is not surprising, in the light of past experience. And it is possible that, ultimately, the Congress may agree to vote about $150 million or $200 million. One should not, therefore, be unduly depressed by this event.

The value of the Washington Conference lies particularly from the point of view of mobilising U.S. public opinion in favour of support for the third Plan of India. The experience of the second Plan shows that no development plan worth the name can be framed and implemented, without a proper assessment of the foreign aid required and ensuring the sources of such aid. A plan of this nature cannot depend upon the varying moods of Parliaments of foreign countries and be worked on the basis of their annual budgets of foreign aid. They have to evolve a long-term plan and "give," to quote Senator John Sherman Cooper, "a convincing demonstration that they have not a propaganda or crisis interest, but enduring long-term interest in the productive economic growth of the less-developed nations." Fortunately for this country, a growing number of American leaders are realising this point. Senators Cooper and Kennedy. Representative Chester Bowles, and several others in the Congress, supported by the leading economists belonging to the Massachusetts Institute of Technology, are trying their best to convince the American public about the need for assuring economic aid to India on a long-term basis. It is the duty of the leaders of this country, especially of the party in power, not to say or do anything that will weaken the hands of these U.S. leaders. From this point of view, some of the economic policies that are now advocated for adoption in the third Plan—these seek to place further restrictions on the scope for the private sector and to penalise individual savings—are definitely ill-advised and should be dropped. At the Conference under reference, Senator Kennedy drew attention to a proposal, which he had made jointly with Senator Cooper, for the creation of an international joint mission to India to work out with the Indians an accurate appraisal of their needs for the forthcoming third Plan. There is no reason why the Indian authorities should not accept this suggestion. As was pointed out by us on an earlier occasion, the Government of India should invite an authoritative mission from abroad for a discussion on this subject as soon as the third *draft* Plan is drawn up.

CO-OPERATIVE FARMING

THE stage is being set for the introduction of co-operative farming. The All-India Congress Committee (A.-I.C.C.), which met at New Delhi last week-end, was chiefly concerned with drawing up the details of the scheme. Although it is four months since the Nagpur session of the Congress decided to adopt co-operative farming as the main feature of the Party's agrarian policy, no serious attempt has been made to take the concrete steps necessary for its introduction. This was, in fact, held as a serious weakness and the delegates to the New Delhi session were somewhat insistent that more rapid progress was necessary and desirable. Be that as it may, it is now clear that co-operative farming is an article of the Congress Party's economic faith which it would be a sacrilege for the members to question, though other impartial observers will continue to entertain doubts about the practicability of the programme.

By and large, the note on co-operative farming, which was circulated at the A.-I.C.C. session, was a realistic document. It reiterated—this has been emphasised by several Party leaders—that joint co-operative farming will be introduced in several areas to begin with. In other words, the idea of pilot projects has obviously commended itself to the authorities. Even so, it might have been more realistic to introduce service co-operatives in the first instance and to make joint co-operative farming depend upon the former's success. Obviously, this is not what the Congress has in mind. The note is anxious to stress that it is not the intention of the Party to shelve co-operative farming and that its programme envisages the introduction of both service co-operatives and co-operative farming, though the latter will be treated as a limited objective in the initial stages. It observes that the 20-million target, set for the membership of service co-operatives, to be achieved by the end of the second Plan, cannot be achieved without larger financial accommodation to village societies and non-official effort on a mass scale throughout the country. It adds that care must, however, be taken to see that expansion is on sound lines and does not merely take place on paper.

Much emphasis is placed on primary rural co-operatives. The chief functions of these co-operatives, it is stated, will be "the provision of short and medium-term credit, supply of agricultural and other production requirements, the marketing of agricultural produce and the formulation and implementation of a plan of agricultural production for the village." Co-operatives, it is further stated, should be organised on the basis of the village community as the primary unit, but, where villages are small, they could be grouped together and a society formed for a population of about 1,000. The liability of village societies may be either limited or unlimited according to the wishes of the people. Although the Government will render necessary assistance to the co-operatives, they will try to develop local resources, in order to create a spirit of self-help in the community. More intensive development of co-operative marketing and processing, it is stated, is necessary, particularly in view of the vital role co-operative marketing societies have to play in the scheme of State Trading in foodgrains. Village societies, the note adds, should function as members of the marketing societies and act as their agents for the purchase of surplus produce.

As a general outline of the theory of co-operativisation of agriculture, the note is perhaps unexceptionable. Whether the scheme will work as well as its sponsors expect, or even whether it is a sufficiently effective prelude to co-operative marketing are questions which call for answers. But the Congress leaders have been at some pains to give a few welcome assurances which will soften the opposition to the scheme. In the first place, they have reiterated the point that no loss of property rights is involved in co-operative farming. Apparently, this assurance applies only to lands that fall within the proposed ceiling on land holdings. A studied silence is, however, being maintained in regard to compensation payable in respect of land that is in excess of the ceiling and is proposed to be taken over by the State. If the proposals contained in the pending Bills in some of the States are any indication, there will be a virtual expropriation of these lands. Secondly, they have made it clear that no compulsion is contemplated in the working of the scheme of co-operative farming. Mr. Nehru declared that a "compulsory co-operative" was an absurdity. It, however, remains to be seen how far this assurance will be implemented, in letter as well as in spirit, for it is easy to implement it in letter and violate its spirit by making it so difficult to undertake individual farming that the farmer is virtually compelled to join a co-operative. Thirdly, the party spokesmen have agreed to keep an open mind on the question of permitting a farmer to withdraw from a co-operative in the event of his wanting to resume individual cultivation. Mr. Nehru said that, while they cannot permit entry into, and exit from, a co-operative to be decided by the whims of the farmer—once a farmer joins a co-operative, he will have to serve some minimum period—they would not like to impose rigid solutions. Here, again, things may turn out to be different in actual practice. Since the majority in villages are have-nots, they can make the life of a farmer, who wants to resume individual farming, so miserable that he dare not attempt it. Thus, those who have given these assurances have no idea of what life is in our villages.

The essence of the whole approach of the Congress Party to the agrarian problem is an almost pathetic faith in co-operation. It would be a different matter if co-operation were held up as an ideal. But the Party is convinced that co-operation is the only practicable way to prosperity. It is true that co-operation can achieve a great deal of concrete results in the rural sphere. But is it right to lay almost exclusive emphasis on it? As the Agricultural Team, sponsored by the Ford Foundation, in its report on *India's Food Crisis and Steps to Meet It* points out, "there is no magic in the co-operative farm of organisation which ensures its success." It rightly adds: "Co-operatives will succeed, only if they perform economic functions better than they are now being performed." Among the several notable suggestions it makes for the achievement of more rapid results on the agricultural front, mention deserves to be made of three recommendations. In the first place, it insists that co-operative organisation must be built on sound business principles. Secondly, it emphasises that "there should be close working relationship between agricultural technicians and the officials of both the primary credit societies and the co-operative banks, in order that technical agricultural knowledge be used to strengthen repayment capacity and enhance local recovery probabilities." Thirdly, it stresses the importance of non-official leadership.

These observations have been made in the context of the examination of the role of co-operation in raising agricultural production. That co-operation has an important role to play in rural life has been generally recognised. But co-operative farming raises many difficult issues for which agriculture in the free world can possibly provide no *comparable* precedent. Among the free countries, India alone is attempting this experiment. And let it not be forgotten that India is a vast country with 366.6 million acres under cultivation by people, the great majority of whom can neither read nor write. The Congress Party is attempting it with the full knowledge that the co-operative movement has made no significant headway so far and that the number of co-operatives, with specialised training in applying the principles of co-operation to agriculture is by no means sufficiently large to justify the faith now reposed in co-operative farming.

Apart from the fact that no adequate preparation is being made for a change which is clearly a revolution in agricultural organisation, there is the far more important danger arising out of the possibility of extremist political elements exploiting the co-operative movement. There is a grave danger of the co-operatives being formed on party lines—Congress, Socialist and Communist co-operatives—in the same way as in trade unions. And, when this happens, it may lead to serious disturbance to peace and even endanger the unity of the country, for the membership of these co-operatives will be many times larger than that of trade unions. The Congress delegate from Kerala to the A.-I.C.C. meeting pointed out how, in his State, not only communist members get priority in the organisation of co-operative societies but the societies formed by non-communists, are being superseded. The communists, it is stated, are making the co-operative movement a wing of their Party; loans are freely given by the Government to their societies and the money goes to the Party. These charges deserve to be investigated, if only for the reason, that the artificial stimulus now being given by the Government in good faith to co-operation may itself prove a mighty fillip to the growth of extremist political parties in the country.

CO-OPERATION IN INDUSTRY—WHAT IMPLICATIONS?

T.I.S.Co. NEW CAPITAL—CAPTAINS OF INDUSTRY

THURSDAY, 5 P.M.

A BRIEF reference was made in these columns a fortnight ago to a note on the implications of the socialist pattern of society brought to Bombay by Mr. U. N. Dhebar for a discussion with a selected number of economists. This note seems to have been rehashed and presented to the A.-I.C.C. members for discussion as the note from the Planning Sub-Committee of the Congress Party.

MARKET GOSSIP

Unfortunately, as the A.-I.C.C. gave precedence to co-operative farming, Mr. Dhebar's note on economic policy could not be considered and has been deferred to the next A.-I.C.C. meeting due in September. Meanwhile, the A.-I.C.C. has adopted a resolution that, as far as possible, the principles envisaged in the Nagpur resolution on co-operative farming should be extended to industries, too, whether big or small. The qualification "as far as possible" was incorporated at the instance of Mr. Nehru. It is not known what exactly is meant when it is said that industries should be run on co-operative basis. Does it mean that the system of joint-stock enterprise is to be given the go-by? Is the industrial policy of the Government going to be spelled out again in the light of this resolution? From the reactions of Mr. Nehru to this resolution, it appears that this is not an immediate objective of the Congress Party, but we will not be surprised if it looms large at the time of the next elections or shortly thereafter. Nevertheless, this is only the thin end of the wedge. One day, when attempts are made to implement this ideal, as is now being done in the agricultural sector, investors in industries, especially large-scale investors, may be treated in the same manner as those who hold land in excess of the proposed ceilings are now treated. It is not our intention to raise a scare among investors by drawing attention to the implications of the adoption of this resolution by the A.-I.C.C. without even a proper debate on it. But, at the same time, we would be failing in our duty if we did not focus the attention of the public on this development, as it creates one more uncertain factor about the future of private enterprise.

Even more disturbing is the note of the Planning Sub-Committee, referred to at the outset. The ideas contained in it may seem innocuous, but, if they are carefully analysed, it will be seen that they imply further restrictions and burdens on private enterprise. There is, of course, no mention of nationalisation of banking, but stringent controls on the activities of banks are advocated. Unearned incomes are to be taxed heavily. The note talks about ours being a mixed economy, but it is obvious, from its description of the functions of the State, that the mixture will be heavily weighted in favour of the public sector. The share markets, however, have practically ignored Mr. Dhebar's note, after registering a short-lived fall in equity values. It does not, of course, suit the bulls to talk of bearish points. And some powerful bulls are said to have entered the ring for a fresh bout of the game.

* * * *

The proposal to raise additional capital by the Tata Iron and Steel Company, Ltd., is still the subject of lively discussion in market circles. Some of the leading shareholders and representatives of the Bombay Shareholders' Association had discussions with the Company's management on the 7th inst. It would appear that the Company wants to raise about Rs. 8 crores and the suggestion made by these representatives was that at least half of the new issue should be in preference shares, the other half being in ordinary shares in the ratio of one for five at par. There are reports that some shareholders were in favour of the whole issue being in ordinary shares. Neither the management nor the Board of Directors has yet made up its mind on this issue. Even if they decide, the ultimate decision rests with the Government which has a large say in these matters. In the meantime, the general impression is that the Company will be raising capital as suggested by the Shareholders' Association. It is this impression that has led to a sharp rise in the value of Tata Steel Ordinaries during the last few days.

But there are some who strongly hold the view that the whole issue should be in equities and no preference shares should be issued. The following arguments have been advanced in support of this view:

(1) It is necessary to balance the enormous growth in the net assets of the Company with an adequate capital base, thereby restoring a proper proportion between paid-up capital, reserves and borrowings.

(2) A definite balance between the fixed interest capital and ordinary capital should be maintained. A comparative study of the ratio of preference shares with ordinary shares in the case of other really big Indian companies will support the view that the T.I.S.Co's present ratio of one preference to three ordinaries should not be exceeded.

(3) If the Company were to decide to issue only equity capital now, it would be doing so under more favourable circumstances than those that prevailed at the time of the issue in 1956. Production and profits are already increasing and the share markets are starved of first class equities, as can be seen from the great response received by Colour-Chem. The current market value of Tata Ordinaries are the highest ever touched, after taking into account the conversion of Deferreds and the issue of bonus and right shares.

(4) When the purchasing power of money is decreasing due to inflationary pressure, the new equity capital will constitute a hedge against inflation.

(5) The element of "interest on capital" will no longer be present and an undertaking of 5 per cent. or 5½ per cent. return will mean much more on the new capital.

(6) The T.I.S.Co. is very much under-capitalised and its future need of capital requires that full advantage should be taken of the present bull market for raising equity capital that can be adequately serviced.

(7) The necessity to raise additional capital will again arise in two years' time, which synchronises with the election year, when steel may be in surplus, as Government plants will be in commission. The present Government is wedded to a socialist pattern of society and the slogan at the elections will accelerate the pace for achieving that end. The markets then are likely to remain depressed. That will be the time to issue preference shares. By that time, the equity-preference ratio also will be better and the indebtedness will have been reduced.

There is reason to believe that, at their meeting last week, some shareholders suggested that exclusive equity issue will be a failure, as the shareholders, who have no savings in cash, will have to sell their other shares to finance the new issue and thereby pay capital gains tax. This argument, it is said, is not convincing, for capital gains tax is unlikely to be removed in the foreseeable future and will, therefore, have to be paid when capital profit is booked even at a future date. In any case, if this argument is relevant, there can be no new capital issue at all, whether equity or preference.

The issue of ordinary shares at the rate of two for five at par will bring a profit of about Rs. 100 in case the shareholders have no savings to take up the new shares, while the gain under the other scheme will be about Rs. 50 only. Why should the equity shareholders then oppose the scheme which is going to bring an immediate gain?

The present boom in share markets is like a red rag to the socialist bull in Delhi. Issue of equity capital alone will tend to check the element of speculation in the Company's shares and bring about a better balance between the capital base and net block. Incidentally, this may also assist the shareholders in the event of Government nationalising the industry.

A small issue of equity capital and the high price of existing shares in the market, it is pointed out, will also encourage the labour to ask for more and thereby make inroads into the return that would otherwise be available to investors.

Issue of equity capital only may bring about a temporary decline in prices, but the ultimate gain, we are told, will be substantially large.

Since writing the above account and just a few minutes before going to press comes the Directors' announcement that they have decided to issue additional capital to the tune of Rs. 8.32 crores, made up of Rs. 4.60 crores in 613,953 (A) ordinary shares of Rs. 75 each and Rs. 3.72 crores in 371,909 (A) 7½ per cent., taxable, cumulative preference shares of Rs. 100 each. The ordinary shares will be issued in the ratio of one for every five shares and the preference in the ratio of one for every two first and/or second preference shares. Both the shares are offered at par and the full amount will be payable on application.

* * * *

It is greatly to be feared that Mr. Nehru's diatribe against captains of Indian industry, by whom he said he had not been "terribly impressed," is likely to be echoed by lesser men. Since, in this country, an idea may gain adherents through its sheer repetition, it is just as well that one stops to consider whether Mr. Nehru's estimate of Indian industrial leaders is fair and just. It is not clear what precisely Mr. Nehru meant when he said he had not been "terribly impressed." If he meant that he was not impressed by industrialists in the way he would be impressed by a great scholar, statesman, poet or painter, he is perhaps looking in the wrong place. That this is not what he had in mind is clear from the two specific criticisms he made against Indian industrialists—their poverty and inability to stand on their feet. His point was they wanted loans from the Government and protection for their industries.

These two "wants" from which Indian industrialists are alleged to suffer are apparently the cause of Mr. Nehru's indignation against anybody wanting to pay too high a tribute to their services. Is Mr. Nehru right in pointing to these "wants" as a most reprehensible part of the activities of Indian industrialists? To take the first allegation. Surely, the dependence of industries on Government loans is not a peculiarly Indian feature. In any case, the industrialists would have been happier to get the necessary resources from the market, if only the Government had cared to leave a little more money in people's pockets. Actually, the Government takes a lion's share of individual and corporate income. And it is strange that Mr. Nehru should suggest that the diversion of a very small part of the Government's revenue to industrial borrowers is a serious reflection on the industrialists' efficiency.

If it is Mr. Nehru's contention that there are many countries in the world where industrialists do not insist on Governmental aid, it is necessary to point out that the comparison is not correct. Now, if the U.K. or the U.S. or Germany had as high a level of taxation in the last century as India has at present, these countries too would have had to depend upon the assistance of their respective Governments. Further, before this myth of Governmental assistance gains greater currency, it is just as well that someone should collect and publish the total capital and resources in Indian industry and the total of the loans given by the various Government and quasi-Government organisations. These figures will confirm what is generally well known, that Governmental assistance forms only a fraction of total industrial investments in India.

In any case, the Government has given the industries in the private sector only loans and not gifts. They are to be repaid with interest in the vast majority of cases. Again, it is not uncommon even in highly developed countries for Government to give loans to industries in the private sector. Even today, vast loans have been given by the British Government to some of the steel companies and aircraft manufacturers for financing their expansion programmes. The Governments of West Germany and Japan gave enormous loans to their industrialists for rebuilding the war-devastated industries. And, for that matter, why does Mr. Nehru forget that the Government of India itself has borrowed large sums from the Governments and private investors in other countries?

It is true that Indian industries have claimed and obtained protection. But, since public memory is short, it may not be out of place to recall here that the formula of "discriminating protection," adopted in the pre-independence years, was not much of a strong assistance to Indian industries. Indeed, many of them had to be set up in the teeth of international competition. And it is to these industries and their sponsors that the country owes all the modest industrial progress it has made. Whether in the older industries, like steel and textiles, or in the new industries, like chemicals, synthetics, aircraft and automobiles, the country owes its achievements to the pioneering efforts of private industrialists. Nor is the charge correct that, unlike their confreres in Japan and Germany, they were not farsighted enough to develop machine-building capacity. For one thing, the industrial units which could consume the machines were not sufficiently large to justify their manufacture. Secondly, the industrialists had to function under an alien Government—a situation which did not confront their counterparts in other developed parts of the world.

Surely, giving protection to national industries is the primary function of a Government, for thereby a Government is protecting not merely a handful "captains of industry" but employment and living standards of its people and the utilisation of its raw materials. Protection is a common feature of countries all over the world. The industries in the U.S. grew with the help of a big tariff wall and many of them are still heavily protected. Industries in Russia and China, so much admired by Mr. Nehru, are totally protected through State Trading and State control. This is true of industries in India's public sector also. Are they not protected through import controls and subsidies from general revenue? Can the ships, locomotives, machine tools, wagons, coaches, drugs and fertilisers made by Mr. Nehru's public sector stand in competition from foreign countries?

Mr. Nehru's frequent criticism of the private sector is unfortunate to a degree. Perhaps, in no country which is at a stage of economic development comparable to India, will it ever occur to a prime minister to disown publicly its captains of industry. What Mr. Nehru hopes to gain by starting a controversy of this kind he alone can tell. How can Indian industrialists explain their Prime Minister's prejudice against them to foreign industrialists with whom they may seek technical or financial collaboration? How can they enforce discipline among their employees or command their respect and loyalty?

Mr. Nehru's criticism could not have been more badly timed, considering that, just at present, there is a lively realisation on the part of the Western industrialised countries of the necessity for rendering economic assistance to India. These countries have great faith in private enterprise and their spokesmen have been saying that countries like India with plenty of *entrepreneurial* skill should encourage private enterprise, with a view to ensuing optimum rate of development. At such a time like this, Mr. Nehru's attack on the private sector and its leaders may produce unfavourable reactions in these countries and make the task of getting assistance from them difficult. This is exactly what the communists in India and the communist countries in the world want to happen. Thus, unwittingly, Mr. Nehru himself is helping the communists, while his party is keen on unseating them from power in Kerala.

There is a great deal to be said in favour of flow of private foreign investment into this country. This is how the U.S. Vice-President, Mr Richard M. Nixon, viewed the problem in the

EQUITIES MAINTAIN BULLISH TONE

FURTHER SPURT IN VALUES

(From Our Own Correspondents)

BOMBAY, 14*th May*

AFTER last week's hectic rise, equities moved a little erratically this week, on profit-taking at higher levels and revival of buying at lower rates. The basic trend was, however, upward and over the week, prices recorded smart gains on a wide front, thus indicating that the bull grip over the market has not been lightened. If anything, the bulls are still confident and offerings at higher levels are being absorbed. The main inspiration for the market came from reports that the Directors of the Tata Iron and Steel Company, Ltd., would soon finalise the terms of the new capital issue—it is reported that a meeting is to be held this evening to consider the question. No definite indication is available of the outcome of last week's discussions between the management and the shareholders' representatives. An important outcome of the meeting, however, is the Directors' assurance to cancel the notice of closure of transfer books from 8th June to 4th July and to close the books simultaneously for purposes of dividend and the proposed rights issue.

Tata Steel Ordinaries moved ahead from Rs. 189 to Rs. 191.25, at which level they suffered a setback on heavy profit-taking to Rs. 187.50 on Tuesday this week. They, however, soon rallied to Rs. 193.50 today, before closing at Rs. 192.75. The new shares gained over the week Rs. 2.75 to Rs. 190.50. Indian Irons were also erratic. After a decline from Rs. 24.68 to Rs. 24.20, the shares gained ground to Rs. 24.75. The closing was lower at Rs. 24.60.

Textile shares were again in the forefront. Bombay Dyeings appreciated from Rs. 62.80 to Rs. 64.40 and closed at Rs. 64.30. Centurys staged a big rise this week, shooting up from Rs. 531 to Rs. 552.50 and finishing at Rs. 549. Kohinoors were concerned in some hectic movements. Moving up from Rs. 272.25 to Rs. 284, the shares gave way to Rs. 276. They again rallied to touch a high of Rs. 287.50, but the closing was lower at Rs. 282. Central Indias gained Re. 1.50 to Rs. 107. Khataus moved up by Rs. 5 to Rs. 230, Morarjee Mills by Rs. 5.75 to Rs. 257, Podars by Rs. 14 to Rs. 167 and Shree Niwas Cottons by Rs. 4 to Rs. 180. Standards scored a gain of Rs. 7 to Rs. 527 and Svadeshis shot up by Rs. 8.50 to Rs. 238. Tata Mills advanced by Rs. 2 to Rs. 39. A feature of this section was the sudden spurt of Rs. 9.50 to Rs. 104 in New City Mills.

Sugar shares lagged behind, Belapurs losing over the week Re. 1 to Rs. 313. Phaltans shed Rs. 3 to Rs. 165.50. Walchandnagars, however, gathered Re. 1.25 to Rs. 303.75. Cement shares were less active than in the previous week. Associated Cements recorded a gain of no more than Re. 1.25 to Rs. 157.75. Digvijays rose by Rs. 2 to Rs. 153, while Orissa Cements were a shade quiet at Rs. 14.48. Ashokas at Rs. 9 and Jaipur Udyogs at Rs. 11.12.

In distinct contrast to the general trend, Alcock Ashdowns, in the engineering and mining group, suffered a setback, losing over the week Rs. 8 to Rs. 290. The highlight of the section was provided by Premier Constructions which staged a hectic rise of Rs. 21 to Rs. 341. Tata Locomotives moved ahead from Rs. 197.50 to Rs. 204.75, but gave way to close at Rs. 201.50. Larsen and Toubros were quiet at Rs. 24.40 and Mahindras at Rs. 23.40.

Miscellaneous industrials provided several features. Bombay Burmahs (old) advanced by Rs. 13.50 to Rs. 559 and their new shares by Rs. 7.50 to Rs. 192.50. National Rayons were erratic, moving between Rs. 309 and Rs. 297.25 The closing was done at Rs. 303.50. Gwalior Rayons lost 36 nP to Rs. 18.60. Tata Chemicals rose by Re. 1 to Rs. 17.72 and Alembic Chemicals by Rs. 9 to Rs. 209, while Dhrangadhra Chemicals declined by Rs. 2 to Rs. 120. Tata Oils added Rs. 2.70 to Rs. 55 and Indian Dyestuffs Rs. 41.25 to Rs. 761.25. Wimcos spurted by Rs. 15.50 to Rs. 233, following the Chairman's statement that the working of the Company's paper mill had been encouraging. Ceats scored a gain of Rs. 27 to Rs. 167. Greaves Cottons were picked up Rs. 8 higher at Rs. 136.

• • • •

Calcutta Stock Exchange

CALCUTTA, 12*th May*

Cheerful conditions prevailed on the Calcutta Stock Exchange during the week under review. Tea shares were the cynosure of all eyes for some time, and absorbed a good portion of this week's speculative fervour. Continued interest in good dividend-bearing tea scrips was attributed to the improved prospects for the new season's crop. Investment buying was generally restricted, and Monday's reaction was attributed to the rather fast upward movement of prices on speculative support alone earlier in the week.

Sectionwise, miscellaneous industrials continued to be in the forefront following further releases of good corporate results. Coals, after being fully steady on expectations of a price increase, turned quiet following the Government's proposal to fix ceiling prices for the fuel instead of minimum selling prices. This would mean competition among sellers of the fuel, and the industry as a whole would not derive as much benefit as from a straightforward increase in minimum prices. Assam gardens were particularly favoured in teas, in view of the proximity of dividends. Jutes received less attention, in view of the increase in hessian stocks; but it was thought that this section should be more active judging from the good reports from the goods market. Engineerings and minings were active on good reports, while paper shares, after being higher, reacted, since it was thought that the increase in paper prices would not be sustained.

Among coals, Pench Valleys advanced to Rs. 26.37 from Rs. 26, and Amalgamated to Rs. 25.87 from Rs. 25.31, while South Karanpuras dipped to Rs. 13.22 from Rs. 13.56. Khatras Jherriahs, after reacting to Rs. 74.50, recovered to Rs. 75.25. Equitables were fractionally higher at Rs. 31.75, but Bengals, after firming up to Rs. 313, sagged to Rs. 312.

Jutes were subdued, though here and there selected features were not wanting. Anglo-Indias, after losing to Rs. 225, recovered to Rs. 236. New Centrals closed slightly higher on balance at Rs. 15.37. Howrahs were earlier done at Rs. 24.25, but soon sagged to Rs. 24.

Teas attracted considerable interest, but were subsequently subjected to profit-taking. At Rs. 22, Teesta Valleys added a fractional gain. Ranicherras, after being higher at Rs. 20.62, moved down to Rs. 20.06. Brooke Bonds touched Rs. 20 before closing at Rs. 19.19. Sungmas, after realising Rs. 21.50 as against Rs. 20.12 previously, were lower at Rs. 19.25.

Among engineerings, Guest, Keen, Williams rose to Rs. 41.12 from Rs. 38.62, following news of diversification of activity to new lines with foreign technical collaboration. Indian Irons opened at Rs. 24.57 and rose to as high as Rs. 24.74 to close at Rs. 24.30. Texmacos moved up to Rs. 26.10, but closed at Rs. 25.60.

• • • •

Madras Stock Exchange

MADRAS, 12*th May*

Barring a few miscellaneous industrials which encountered selling and suffered losses, the Madras Stock Exchange depicted a fully steady trend during the week under review. Turnover was, of course, restricted, but this was due not to paucity of buyers but to scarcity of floating stocks, especially of popular scrips, following persistent purchases in the past few weeks. In particular, sugar shares ruled buoyant, thanks to buying support induced by renewed expectations of better price realisations for sugar. The shares of tea companies producing high-grown teas evoked good buying by local and upcountry interests. In sympathy, rubbers and coffees tended to move up. Textile shares were firm, although buying was selective in character. There would have been a marked rise in values but for the tendency of operators to await emergence of a clear picture regarding offtake of cloth and yarn—domestic and overseas—as well as confirmation of rumours that the Government was considering a new scheme to step up exports.

In the sugar group, Andhras attracted excellent attention and climbed up by Re. 1.25 to Rs. 22.25. Mysores and E.I.Ds registered a rise of 75 nP each to Rs. 52.25 and Rs. 38.75, respectively. Jeypores spurted by 50 nP to Rs. 15.50. Travancores hardened by 35 nP to Rs. 12.45. Deccans strengthened by 20 nP to Rs. 12.15.

Several planting shares recorded an improvement. The following are today's closing rates for some of them, the figures in brackets showing the net gains over the week:

Tea: Balanoor Rs. 21.25 (+25 nP); Coonoor Rs. 26.25 *ex-div.* (+25 nP); Haileyburia Rs. 19.20 (+20 nP); Coorg Rs. 5.25 (+10 nP); Kil Kotagiri Rs. 8.55 (+10 nP); United Nilgiri Rs. 20.20 (+8 nP); Lucky Valley Rs. 12.95 *cum-div.* (+5 nP).

Rubber: Nenmeny Rs. 16.50 *cum-div.* (50 nP); Peermade Rs. 20.40 *cum-div.* (+40 nP); Tropical Rs. 24.50 *cum-div.* (+25 nP); Karikode Rs. 10.50 (+25 nP); Pullangode Rs. 1.88 (6 nP); Mercara Rs. 8.95 (+5 nP).

Coffee: Kumergode Rs. 6.60 (+50 nP); Rajendra Rs. 14.75 (+25 nP); Anaparai Rs. 4.70 (+5 nP); Consolidated Coffee Rs. 22.15 (+5 nP); Cowcoody Rs. 7.25 (+5 nP).

Among textiles, Palani Andavar A's were well fancied and advanced by Rs. 5 to Rs. 134. Buckinghams, Balarama Varmas and Dhanalakshmis rose by Rs. 2 each to Rs. 183, Rs. 97 *cum-div.* and Rs. 198, respectively. Metturs gathered a rupee to Rs. 397. Bangalore Woollens put on a like amount to Rs 175. Virudhunagars gained 50 nP to Rs. 39.50 and Balasubramanias 25 nP to Rs. 55.

In the miscellaneous section, Ashok Leylands provided a bright spot, the quotation moving up by a rupee to Rs. 8.95 *cum-div.* The Company has announced issue of 25,00,000 equity shares of Rs. 5 each at par to holders as on 22nd May 1959 in the ratio of five for eight shares held. The last date for submitting applications for right shares and renunciation of letters is 15th June next. F.A.C.Ts were done at Rs. 9.45 *cum-div.*, as against Rs. 8.75 last week. The Directors of the Company have declared a dividend of 4 per cent. for 1958, for the first time after 1951. W.I. Plywoods were marked up by Rs. 3 to Rs. 162. Travancore Rayons hardened by 43 nP to Rs. 20.35 *cum-div.* Mysore Papers improved by 18 nP to Rs. 19.50, Aluminium Industries by 8 nP to Rs. 19.55 and Andhra Scientifics by 25 nP to Rs. 6.50. Travancore Cements were quoted at Rs. 9.85 *cum-div.* A dividend of 6 per cent. has been proposed by the Company's Directors for the year 1958, which is the same as that given in the two previous years. Rallis, however, were subjected to selling and dropped Rs. 2.25 to Rs. 67. Binnys fell by Rs. 2 to Rs. 166 *ex-div.* National Rubber Manufactures declined by Re. 1.87 to Rs. 15 *cum-div.* India Steel Rollings shed 37 nP to Rs. 15.50.

INDIAN RAYON CORPORATION

The Indian Rayon Corporation has come out with the announcement of its capital issue. As will be seen from the detailed announcement on pages 822-823, the issued capital is of the order of Rs. 2 crores, made up of 60,000 7 per cent. tax-free cumulative redeemable preference shares of Rs. 100 each and 140,000 ordinary shares of Rs. 100 each. Of this, the Directors and their friends, selling agents and foreign investors have taken up Rs. 1 crore, consisting of 7,000 preference shares and 93,000 ordinary shares. Of the balance, we understand that several institutional investors have already expressed their willingness to subscribe Rs. 35 lakhs. Consequently, the amount available to the public is Rs. 65 lakhs. This factor itself is conducive to the success of the issue.

The total issued capital of Rs. 2 crores represents the major portion of the estimated cost of Rs. 3.32 crores for putting up the rayon yarn manufacturing plant at Veraval, about 200 miles west of Bombay. The balance of Rs. 1.32 crore is being met from five-year deferred credits by foreign machinery suppliers, namely, Messrs. Von Kohorn group of companies. The Company has entered into agreements with Messrs. Von Kohorn International Corporation (who, jointly, with the Financial and Development Fund, Inc., of the U.S., have agreed to invest $825,000 or Rs. 40 lakhs in equity capital), Messrs. Von Kohorn International (London) Limited and Messrs. Von Kohorn Eastern Corporation Limited, under which the entire plant and machinery for the Company's factory will be designed and supplied from the U.S. and the U.K.

The foundation-stone of the factory will be laid by one of the Central Ministers on 20th June next. The machinery and equipment will start arriving in September. The factory is expected to commence trial production in September 1960 and go into full production by the end of 1960. The initial capacity of the factory will be 5 tons of rayon yarn per day which will be expanded gradually to 10 tons. The bulk of the production, it is said, will consist of finer counts of yarns—100 deniers and below—which are not being manufactured in India at present and which are largely imported. The manufacture of staple fibre and other viscose and synthetic fibre products may also be undertaken at a later stage. The factory will employ directly about 1,000 persons and produce goods worth approximately Rs. 3 crores annually.

The rayon yarn to be produced by the new factory will undoubtedly meet with very good demand from consuming interests, especially in the Saurashtra and Punjab regions which are at present depending largely on Bombay for their supplies. It may be noted here that there is a wide gap between domestic production and actual requirement and the gap may widen further in the coming years. The target for rayon yarn output (fixed for 1960-61) is no more than 60 million lbs., as against the estimated annual requirements of 80 million lbs.

KHANDELWAL FERRO ALLOYS LTD.

The long-awaited terms of the proposed capital issue of Khandelwal Ferro Alloys Ltd. have been announced. The authorised capital of the Company is Rs. 2.50 crores, made up of 150,000 equity shares of Rs. 100 each and 100,000 7½ per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. Of these, 100,000 equity shares of Rs. 100 each and 50,000 preference shares of Rs. 100 each will be issued, out of which the promoters, the Directors and their friends have already taken up 65,063 equity shares. The balance of 34,937 equity shares and the entire preference shares are being offered for public subscription at par. The subscription list will open on 30th May and will close on 6th June or later at the discretion of the Directors.

The entire preference share issue has been jointly underwritten by the Industrial Finance Corporation of India and two Bombay firms of share brokers. The share of the I.F.C. is to the extent of Rs. 37.50 lakhs. A sum of Rs. 25 per share on each of the preference and equity shares is payable on application and another Rs. 25 each on allotment. The balance of Rs. 50 per share will be payable in calls not exceeding Rs. 25 per share. The Directors do not, however, propose to call the balance of Rs. 50 per share on the equity shares at least for a period of two years. The preference shares are redeemable after five years and will be redeemed within a period of ten years from the date of issue.

The object of the issue is to provide the capital and working costs for a plant to produce standard grade high carbon ferro-manganese and other ferro-alloys complementary to ferro-manganese production and such other products as could be manufactured in the plant. The present scheme is to install plant for the manufacture of ferro-manganese with an installed capacity of 30,000 tons per annum.

The Company has an assured market for its product for a fairly long period and is guaranteed minimum price for a period of 4½ years in the first instance. Even at the highest level of cost of production, and on a conservative basis, the Company is expected to earn a profit of Rs. 50 lakhs per annum on a production of 30,000 tons.

NEWS IN BRIEF

A Rs. 30-lakh scheme to develop tourist traffic in Jammu and Kashmir is now being implemented by the State Government.

The Madras Government is considering the proposal of a Calcutta firm to set up a strawboard factory at the foot of the Nilgiris.

The plant for the manufacture of large-size power generating units now under construction at Bhopal is expected to commence full production by 1961.

The various State Governments have supported the move for constituting a Central Prohibition Committee, according to Mr. B. N. Datar, Union Minister for Home Affairs.

The Commission enquiring into the affairs of the Dalmia concerns has not yet submitted its report, according to the Union Minister for Commerce, Mr. N. Kanungo.

The pilot scheme for intensifying paddy cultivation under Japanese method, which is currently being implemented in nine blocks of Bombay State, has been extended to 17 new blocks in the State, thus covering a total area of 450,000 acres.

A two-man official mission is expected to leave India shortly for Australia at the invitation of the Government of that country to examine the possibilities of getting certain requisites for the development of Indian railways.

A co-operative milk supply union is being set up at Chandigarh by the Punjab Government. It will be entrusted with the task of collecting milk from rural areas within a radius of 20 miles and distributing the same after pasteurisation. The quantity actually to be distributed every day is expected to be 150 maunds.

The Union Minister for Industry, Mr. Manubhai Shah, disclosed in the Lok Sabha on the 8th inst., that the newsprint factory at Nepa made some profit during 1958-59 after meeting a part of the depreciation charges and writing off a portion of the outstanding loans.

No proposal to postpone the next general elections till the end of the Third Plan is under the consideration of the Government of India. This was stated in the Lok Sabha the other day by Mrs. Lakshmi N. Menon, Deputy Minister for External Affairs.

The value of contracts secured by small-scale industries from the Director-General of Supply in 1958-59 was Rs. 2.56 crores, as compared with Rs. 62 lakhs in the previous year and Rs. 5 lakhs in 1955-56. The bulk of these contracts was executed by factories located in the States of U.P., W. Bengal, Delhi, the Punjab and Bombay.

A group of seven airlines traffic control specialists, headed by Mr. E. S. Willey of B.O.A.C., who are now conducting a field mission to the Middle East and Far East in connection with the extension of jet operations, are expected to arrive in Bombay towards the end of this month. The mission's visit is organised by the International Air Transport Association.

The Government of India has decided not to issue fresh licences for additional capacity in the cement industry for the next 18 months. There has recently been a slackness in the demand for cement (in relation to current production) presumably as a result of the shortage of steel and lack of new construction projects. The capacity for plant and machinery already covered by import licences will raise the present production capacity in the next two years from 7.74 million tons to 10 million tons.

A system of revolving credits from the Centre to the States has been recommended by the Public Accounts Committee, with the object of ensuring effective utilisation of funds placed at the disposal of States for development projects. It has been suggested that, in future, the States may be given up to 20 per cent. of their total requirement of funds as revolving credit. The States would submit accounts and progress report to the Centre and ask for recoupment of funds. This system is expected to facilitate more expeditious execution of development projects.

The West Bengal Government has finally decided to take over the Oriental Gas Company under Article 31A of the Constitution. A Bill has already been drafted for this purpose. The Company will be run as a joint-stock concern. It will undertake the distribution of gas for industrial and domestic consumption in Calcutta and suburbs. This, however, is possible only after gas from Durgapur coke oven plant is brought to Calcutta. The Government has already finalised the contract with Yugoslavia for the supply of pipes for the gas grid system from Durgapur to Calcutta.

Attention has been drawn by the Public Accounts Committee in its latest report to certain lapses in the working of the Coal Board. According to the Committee, the steps taken by the Board for conservation of good quality coal are unsatisfactory. Even in 1957, more than 50 per cent. of the production of selected grades A and B coals and more than 80 per cent. of grades I and II coals were used by non-essential consumers. Again, although the stowing cess was instituted 20 years ago, voluntary stowing was carried out only in 81 collieries out of the 830 collieries in existence. In the Jharia coalfields, less than one-tenth of the quantity of coking coal produced was derived by stowing.

The National Council of Applied Economic Research, New Delhi, which conducted an intensive techno-economic survey of Bihar State, has recommended the setting up of a Rs. 10-crore alloy steel plant at Jamshedpur capable of employing 2,000 persons. Since the foreign exchange component of the plant is estimated at as high as Rs. 7.5 crores, it has been suggested that the plant should be set up with participation of foreign capital and technical know-how. The proposed plant, it is said, will manufacture plain carbon tool steel and high speed steel and die steel in the first phase. It will switch over to the production of die blocks and stainless steel sheets in the second stage, and manufacture of steel rolls and forged heavy alloy steel shaftings and rings in the third stage.

The Board of Trustees of the Indian Airlines Employees' Provident Fund has declared 4½ per cent. rate of interest to be credited to members' balances, amounting to Rs. 1,51,02,524, for the year 1957-58. The Fund, with 8,228 members, earned an income of Rs. 6,85,817. Out of this, a sum of Rs. 6,79,612 has been credited to members' accounts, leaving a surplus of Rs. 6,205. In addition, a sum of Rs. 1,06,703 has already been earmarked for interest equalisation. Fund investments are made exclusively in Government securities and exceed Rs. 2 crores as on 31st March 1959. The Board has also sanctioned an annual recurring expenditure of over Rs. 20,000 for the running of holiday homes for employees at popular hill-stations like Mussoorie, Shillong and Matheran, and for *ex-gratia* payments to employees and their families in distress. Payments for these welfare activities are met out of provident fund reserves.

• • • •

From Abroad

Yugoslavia has agreed to grant 5.5 million sterling credit to Ceylon for the purchase of ships and industrial equipment.

Japanese steel industry will import over 3,100,000 tons of Australian coking coal over the next five years, under a new contract with Australia.

The Lebanese Government is expected to start negotiations shortly with the Iraq Petroleum Company and the Tapline for increasing oil transit royalties.

The Government of Malaya has decided to reconstruct the historic port of Malacca, one of the world's major harbours four centuries ago, into a first class lighterage port.

The U.S.S.R. has a population of 208.83 million composed of 94 million men and 114.80 million women, according to the first complete Soviet Census during the post-war period.

The West German Minister of Economics, who visited Persia last week, has promised German help to erect a steel plant at Azana. The steel works will be built by a Demag-Krupp consortium.

A Swedish company, *AB Gustaf Kahr*, manufacturers of laminated flush doors and flooring, has secured orders from the U.S.S.R. worth about several million Kroners for machinery and equipment for setting up two door and flooring factories.

Both Shell International and B.P. Trading have reduced the spot bunker prices of marine diesel fuel and gas oil by 6s. per long ton in ports in India, East and South Africa, the Persian Gulf, the Red Sea, Pakistan, Burma and Australasia.

President Eisenhower has asked the Congress to approve of the U.S. membership in the proposed $1,000 million inter-American Development Bank. The U.S. will contribute $450 million towards this fund, the balance being subscribed by the Latin American countries.

The sixth annual conference of the American Bankers' Association, held for the first time outside the U.S., came to a close in London on the 8th inst. The discussions at the conference covered broad financial and economic matters, rather than details of banking practices.

France has relaxed quantitative restrictions on imports of many goods from the O.E.E.C. countries. These include synthetic fibres, cotton tissues and woollen clothing, some steel alloys, certain glasswares, dyestuffs and assorted imports ranging from coffee grinders to wax candles.

A probe into the official activities of former Ministers, Parliamentary Secretaries and members of the Assembly has been ordered by the Government of Pakistan. Action against those found guilty will be taken under the recently proclaimed Public Offices Disqualification Ordinance.

The U.S.S.R. has now started exporting cameras to the U.K., for the first time, in commercial quantities. The first consignment is expected to reach the U.K. next week and will consist of twin-lens reflex camera, named Lubitel 2. It will be retailed at £7 15s. 5d., including tax.

Production of automobiles in the U.S. last week was 136,741 units, the peak level touched since the beginning of 1959. This is nearly 16 per cent. higher than in the preceding week's total of 118,059 units and 74 per cent. more as compared with 78,406 units produced in the corresponding week a year before.

PERSONAL

MR. B. K. Nehru, India's Commissioner-General for Economic Affairs in the U.S., arrived in this country from London on Sunday last on a short visit.

Mr. J. J. Ashar, a Director of the Century Spinning and Manufacturing Company, Ltd., has been appointed a member of the Committee of the Millowners' Association, Bombay, in place of the late Mr. Vithal N. Chandavarkar.

Mr. Eugene Black and Mr. W. A. B. Iliff, President and Vice-President, respectively, of the World Bank, arrived in New Delhi on Tuesday this week, to assist in the solution of the Canal Waters dispute between India and Pakistan.

Mr. W. Rangavendra Rao, Senior Liaison Officer in the Research Department of the Coffee Board, has been deputed, at the instance of the Government of Orissa, on a survey tour to assess the prospects for coffee cultivation in the State.

Mr. C. B. Madhava Rao, an officer of the Propaganda Department of the Coffee Board, is leaving for the U.S.A. to undergo training in modern methods of publicity and public relations under Messrs. Benton and Bowles and Messrs. Walter Thompsons.

Mr. Ram D. Malani, Managing Director of the Air Conditioning and Refrigeration Division of Blue Star Engineering Company (Bombay) Private Ltd., is attending the International Air Conditioning and Refrigeration Conference, now being held at San Juan, Puerto Rico, under the auspices of the Worthington Corporation of the U.S.

Mr. John Exter, Vice-President of the Federal Reserve Bank of New York, has joined the First National City Bank of New York, as a Vice-President, with effect from the 1st inst. He will be associated with the Overseas Division as a member of the senior administrative group of the Division. He has been a member of a number of special missions and conferences on central banking and international finance and has served as central banking adviser to the Philippine and Ceylon Governments.

The *Institut Francais des Petroles*, the French Government's training and research institution for the oil industry, has signed a co-operation agreement with the National Iranian Oil Company, under which it will train Persian technicians and also carry out specific research projects for the Persian Oil Company in north-west Iran.

A plea for the introduction of a "tourist dollar" by the U.S. to enable European tourists to visit America has been made by Mr. Aler, K. L. M. Director. This measure, combined with the specially low passenger rates by air or sea, will enable the transport companies to offer inclusive tours which will bring the U.S. within reach of a larger number of Europeans.

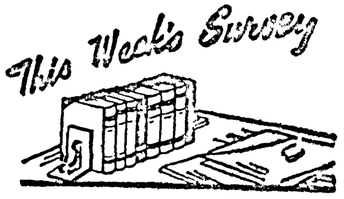
A new aid to navigation in harbours and narrow waterways in fog and darkness has been designed in Sweden. The device, which is meant to be a supplement to existing navigation instruments, consists of an oscilloscope actuated by an electric cable laid in water. The method was demonstrated in the harbour of Limhamn, South Sweden, two weeks ago.

It is reported that the West German offer to Egypt to guarantee credits of DM 200 million for the construction of the Aswan Dam is still valid, irrespective of the assistance offered by the U.S.S.R. for the construction of the first stage of the project. The W. German credit, however, can be utilised only for the second stage—a condition which had not been mentioned before.

The fourteenth session of the General Agreement on Tariffs and Trade will be held in September 1960 for a fresh round of tariff negotiations. The first phase of the talks will be devoted to tariff negotiations among the six nations of the European Common Market acting as a united body and other members of the G.A.T.T. General negotiations will be held during the second phase commencing in January 1961.

Pakistan has resumed export of rice for the first time since 1955. The country has earned Rs. 3.3 crores of foreign exchange during the last four or five months from the export of rice. In spite of good crops in the other rice producing countries, Pakistan is capable of securing good market abroad, thanks to its superior variety rice, *basumati*, which is popular in many countries. Already 1,000 tons of this variety have been exported. The proceeds from these sales are used for importing cheaper rice for domestic mass consumption. Pakistan has also exported large quantities of inferior rice to Goa and Ceylon.

The value of foreign investments bought by West German private investors during the first quarter of 1959 was about £31 million. This amount is more or less equal to the cumulative total of such securities purchased by them during the last two years since 1956, when investors were permitted to buy securities floated on foreign bourses. Among the purchases made in the first quarter of this year, equities account for £23 million, largely of companies in the other Common Market countries. An Austrian bond issue was the biggest item in the fixed interest securities. Besides these security purchases, private German investments placed abroad on a long-term basis amounted to £14 million.



COMPANY LAW

THE debate in the Lok Sabha on the Bill to amend the Companies Act 1956 provided an opportunity for the members to express their views on such aspects of corporate activity as the managing agency system, the contributions of political parties and the administration of the Act. From the trend of discussion in the House, it is clear that the managing agency system continues to evoke opposition. However, an interesting point was made when a member suggested that a minimum limit for investment by managing agents should be prescribed which would compel them, at least out of a sense of self-interest, to look after their managed companies properly. Be that as it may, the Bill, on its part, lays down that by 15th August 1960, managing agencies will cease to exist, unless their renewal in each individual case is sanctioned by the shareholders and permitted by the Government which will act in consultation with the Company Law Advisory Commission. It is, of course, open to the Government to abolish the system itself in respect of any industry or group of industries.

In the course of the discussion on the managing agency system and related issues, many members referred to the evil of concentration of economic power. Speaking on the Bill, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, pointed out that the main idea behind the Bill was precisely to prevent such concentration. There is no doubt that the diffusion of economic power is a desirable objective. Only, it is not clear how far, or how effectively, company legislation, by itself, can serve the cause. For one thing, the Government, out of a sense perhaps of a realistic appraisal of the situation, made concentration of economic power possible through the institution of "secretaries and treasurers" which is no different from the system of managing agents. In any case, so long as the economic climate is not favourable to the formation of capital in all ranks of the population and the availability of credit for industrial ventures is limited, there is no escape from permitting concentration of economic power, the only alternatives to such a trend being State initiative or economic stagnation. Since the State cannot enter every conceivable field, it becomes necessary, nay desirable, to permit some further concentration of economic power in the interests of economic expansion and provision of employment opportunities.

The situation can be corrected, only if the fiscal policies are changed and credit facilities augmented in a way that will induce a steady flow of new entrants into the industrial field. In the absence of these conditions, those who cry hoarse against concentration of economic power—they, of course, ignore that such concentration in the hands of the State is not an unmixed blessing—are only asking for the clock of economic progress to be put back. Further, it must be remembered that no convincing statistical evidence has yet been adduced to show that economic power is too heavily concentrated in a few hands—or more heavily concentrated than in many other free countries—or that such power has led to fall in standards of welfare for the workers or to neglect of the interests of consumers. Whatever may be the truth of the allegation we would urge company managements in this country to adopt a policy, aimed at as wide a diffusion of shareholdings as possible.

To turn to the provisions of the Bill. Based as it is on the recommendations of the Sastri Committee which, in its report submitted in November 1957, held that it was too early to introduce major amendments to the Companies Act, the Bill to amend the Act, now referred to a Joint Select Committee of both the Houses, does not claim to make any radical changes in the Act. Nevertheless, the Bill, with its 212 clauses, seeks to overcome several practical difficulties, remove uncertainties or ambiguities in the Act and plug certain loopholes in the Company law. Explaining the scope of the Bill, the Union Minister for Commerce, Mr. Nityanand Kanungo, observed: "The present Bill is largely based on the recommendations of the Committee which have been very carefully considered by the Government, though, in some particulars, modifications have been made partly in the light of the experience of the working of the Act gained in the past three years and partly also of the views expressed by chambers of commerce and other interested persons." To the category of amendments designed to overcome practical difficulties belong the clauses in the Bill which seek to exempt chambers of commerce, clubs, charitable institutions, *nidhis* and benefit societies from the rigid requirements of the Act in regard to the holding of annual meetings, election of directors and age of directors. Again, since it may be inconvenient or even impracticable for a director of a company, say, Company A, to ascertain whether a "relative," as defined in the Act, is a partner or managing agent or director in any firm or company with which Company A has a genuine transaction, the Bill provides a revised definition of the term "relative"; a new schedule of such relationships is proposed. Practical difficulties prevent registrars of joint-stock companies from being present personally in courts of law where prosecutions under the Companies Act are heard. The Bill provides that the personal attendance of a registrar before the court would not be necessary, unless the court, for reasons to be recorded in writing, requires such attendance.

By another proposed amendment to the Act, the Bill seeks to lay down that, in future, any conversion of a public company into a private company would require the prior approval of the Government. Explaining the objective of this provision, Mr. Kanungo said: "It is considered desirable to subject any proposal for such conversion to Government's scrutiny, so as to ensure that the conversion is not resorted to merely with the object of evading the restrictions placed on the management of public companies." It may be mentioned, in this connection, that, during 1957-58, 54 public companies were converted into private companies, as against 227 such conversions in 1956-57. The Bill seeks to restrict the privileges and immunities of private companies which are private only in form but are really owned by the public. It provides that where not less than 25 per cent. of the paid-up share capital of a private company is held by one or more bodies corporate, such private company shall in future be treated as a public company for purposes of the Act. It also indicates the steps that should be taken by such a company in regard to the changing of its name and altering of its articles. It is proposed to exempt a private company which is either a wholly owned subsidiary of another Indian private company or is wholly owned by one or more foreign companies from the operation of this new provision. These exemptions, it is stated, are necessary in order to avoid the anomaly that, but for the first exemption, it may possibly give rise to a case where the holding company would be a private company, whereas its wholly owned private subsidiary will be treated as a public company. The second exemption is deemed necessary in order to avoid discouragement of foreign participation in industrial undertakings in India.

Powers of inspections under the Act are sought to be enlarged by the Bill. Thus, an inspector will have powers to examine the employees of the companies concerned and compel such companies to produce books and papers to him through the court. With the permission of a first class magistrate, the inspector may enter the premises of a company under his investigation and seize books and papers whenever it becomes necessary to do so.

An important clause in the Bill is that which relates to the cornering of shares. Mr. Kanungo explained that the relevant clause in the Bill was intended to make it "more difficult for unscrupulous persons to reap the benefits of cornering." The clause provides that, when any transfer of shares, considered to be undesirable in the public interest, is about to take place, the Central Government can prohibit such transfer and, where such transfer has already taken place, it can direct that the voting power in respect of the shares should not be exercised for a period not exceeding three years. Yet another amendment which may conceivably prevent undesirable cornering of shares is that in relation to Section 372 of the Act which deals with the purchase by one company of shares of other companies in the same group. The meaning of this section is sought to be made clearer, while the principle involved in the section is sought to be extended to all inter-company investments.

A trend in corporate management which has been noticed in recent years is that some managing agents have allowed themselves to be appointed as managing directors in order to escape some of the provisions of the Act which has not only fixed a ceiling on the managing agents' remuneration but also placed restrictions on their functioning as buying or selling agents. The amendments now proposed are designed to regulate the appointment of former managing agents or their associates as sole selling agents for the same companies. It is also proposed to lay down that no sole selling agents should be appointed in future in such industries as may be notified by the Government except with the latter's approval. Another clause provides that no company shall appoint or employ as its managing agent another body corporate which is itself a subsidiary of another body corporate. So far as the existing managing agents, which are subsidiaries of other companies, are concerned, it is proposed to take power to regulate any changes in the constitution of the body corporate which is the holding company of the managing agency.

Finally, the much-debated issue of contributions to political parties figures in the Bill. The issue, it may be recalled, was considered by the Companies Act Amendment Committee which recommended that every company should disclose all donations to any political party, made by its directors in the year of account. The Bill implements the Committee's recommendations with the amplification that all donations should be disclosed, whether they are made to an institution or a party or an individual. This provision should meet the ends of political justice in a manner that will satisfy shareholders' interests as well as the requirements of a democratic society.

PARTITION DEBT

One of the major financial disputes between India and Pakistan that have continued to remain unsolved even after nearly twelve years relates to Pakistan's debt to India. The Government of India has been making attempts time and again to settle this issue with its counterpart in Pakistan, but these attempts have not at all proved successful, thanks to the intransigent attitude of the Pakistani authorities. What is worse, a spokesman of the Pakistan Finance Ministry came out recently with a statement that India had been withholding for no valid reason payment of Rs. 180 crores "which is immediately due to Pakistan from India on various accounts." A call attention notice on the claim was given in the Lok Sabha on the 7th inst. by Mrs. Ila Pal Choudhuri, a Congress member. Replying to this, Mr. Morarji Desai, Union Finance Minister, gave a correct account of the position in respect of partition debt which not only refutes Pakistan's claim but also shows the renewed earnestness of our Government to settle all financial disputes with Pakistan.

Mr. Morarji Desai's analysis reveals that the sum of Rs. 180 crores claimed by Pakistan is a highly inflated one, without any basis whatever. The highest figure so far mentioned has been about Rs. 100 crores, including Rs. 49 crores on account of currency assets to be transferred from the Issue Department of the Reserve Bank of India. This was the amount mentioned both by the late Mr. Ghulam Mohamad in a communication addressed to the Indian Finance Minister in 1950 and by the Pakistan Finance Minister in the Pakistan National Assembly on 28th August 1957. Within two years from that latter date, the figure has been changed to Rs. 180 crores!

Whatever may be the actual debt which India owes Pakistan, India can certainly not be expected to start payments of the debt even on a provisional basis until Pakistan pays the seven annual instalments aggregating Rs. 66 crores overdue up to August 1958. It is regrettable that Pakistan has not only not paid this amount but has pointed out that the figure of Rs. 300 crores mentioned by Mr. Morarji Desai as the partition debt owed by Pakistan to India has no basis at all.

The estimate of Rs. 300 crores has not suddenly sprung up, since it was made as early as in 1948 and has since been repeated many times in the budget papers of the Government of India. On its part, Pakistan, too, had not questioned the amount so far. Readers will recall that Pakistan had agreed to repay the partition debt in 50 equated annual instalments, the first one which fell due on 15th August 1952. In the Central Government budget for 1952-53, Mr. C. D. Deshmukh, the then Finance Minister, had taken credit for a recovery of Rs. 9 crores from Pakistan as the first instalment. As, however, it was not possible to reach an agreement on the provisional amount of the debt, this payment was carried forward to the year 1953-54. Since the two years' instalments amounting to Rs. 18 crores for 1952-53 and 1953-54 failed to materialise due to lack of settlement with Pakistan, Mr. Deshmukh did not take any further credit for repayment of partition debt by Pakistan in his subsequent budget. The position remains unaltered since then.

Replying to a question in the Lok Sabha on 5th September 1957, Mr. T. T. Krishnamachari had clearly stated that even the figure of Rs. 300 crores "gives only the order of the sum involved," considering that, if the debt arising from the partition of the Provinces was also taken into account, the figure might be higher. Reiterating this view, Mr. Morarji Desai has now said that, in the opinion of the Government, the sum may be actually somewhat higher. As far back as 1952, broad details of a balance-sheet, which gave a higher figure of the debt, were supplied to the officers of the Pakistan Government by Indian Government officers. There was some correspondence about some of the figures furnished by India, but, eventually, this correspondence, like that on many other matters, petered out. In view of this, it is, as Mr. Desai says, hardly correct to say that there is no basis for the figure. Proceeding, Mr. Desai observed:

"On this pretext, no payment need ever be made simply by refusing to accept any figure as the correct figure of the debt. While the final figure would take some time to work out, the broad dimension of the sum involved is, in our view, quite clear and could easily be settled. We have already seven annual instalments overdue under the partition arrangements and the eighth instalment will fall due next August. When claims are made for other payments as due here and now, the fact that India has already overdue to her a large sum on account of the partition debt cannot be brushed aside on the specious ground that the debt has not been worked out."

Assuming for argument's sake, that the "actual" debts which India and Pakistan owe to each other are still to be worked out, it must be emphasised that an overall settlement should be arrived at through discussions in a frank and friendly way. It will certainly do no good to either country if Pakistan goes on saying "anything or taking up any position in regard to an individual matter, whatever the temptation or the provocation for it which may adversely affect discussions" on the financial issues. If Pakistan is really earnest about entering into a settlement fair both to itself and India, the Finance Minister of Pakistan, Mr. Mohammad Shoaib, should accept Mr. Morarji Desai's invitation for discussions on all the outstanding items and claims regarding Pakistan's partition debt to India. It is, indeed, encouraging to learn from Karachi Press reports that Pakistan Finance Minister is likely to accept Mr. Desai's invitation and that he is keen on settling as early as possible the several financial disputes, including partition debt, canal water dues evacuee property issue, and question of money orders and insured parcels held up in the two countries since the Partition.

AGRICULTURAL MARKETING

The first regional technical meeting on marketing for Asia and the Far East, jointly sponsored by the Food and Agricultural Organisation (F.A.O.) and the Economic Commission for Asia and the Far East (E.C.A.F.E.), ended its 10-day session at New Delhi on the 6th inst. The meeting has been of special significance to India since it has been organised on the eve of the introduction of a major change in the system of trading in the chief agricultural produce, foodgrains, namely, State Trading. Moreover, the meeting coincides with the silver jubilee year of the Directorate of Marketing and Inspection attached to the Union Ministry of Food and Agriculture. A souvenir, entitled *Twenty-five Years of Agricultural Marketing in India*, brought out by the Directorate on this occasion, provided a fitting supplement to the exchange of views held at the session by the various delegates—numbering about 40—from Cambodia, Ceylon, China (Taiwan), Indonesia, Laos, Malaya and Pakistan. The primary object of the meeting has been to explore the possibilities of enabling the various countries of this region to pool and exchange their experience.

The importance of devising efficient and organised marketing techniques for primary products in these countries cannot be overemphasised. Predominantly agricultural, these countries share more or less the same kind of problems. In the first place, the farmers' share of the ultimate price paid for their products by the consumer is low; in some cases it is as low as 50 per cent. This is due obviously to the prevalence of a long chain of marketing functionaries and middlemen. Besides, producers are often compelled to part with their produce at low prices at the time of harvest. Not only the time but the place, where the farmer disposes of his products, affects his income adversely; for a major part of the marketable surplus is sold in the village itself. It is computed that in India, for instance, about 65 per cent. of the total sales of crops are effected in the village. This is attributed to prior indebtedness to the moneylender, need for paying land revenue, shortage of holding capacity, lack of adequate facilities for storage, transport and communications. Secondly, the consumers, mostly the urban population, are hard put to it to adjust themselves to the frequent fluctuations in agricultural prices. Thirdly, the rural economy has an isolated existence, having been traditionally given to subsistence farming and payments in kind, rather than in money. The lack of monetisation of several areas makes the economy impervious to the fiscal and monetary mechanisms. What is necessary is to procure as large a marketable surplus as possible and to so distribute it as to ensure fair prices for both the producer and the consumer. As the New Delhi meeting emphasised, "while efficient marketing is directed initially towards helping the producer and the consumer, it is also a vital component and instrument of the economic and social development of a country."

The Union Minister for Food and Agriculture, Mr. A. P. Jain, who inaugurated the meeting, gave a brief account of the various problems confronting this country with regard to agricultural marketing. He referred to the rapid rise in price of foodgrains in the second half of last year, following a shortfall in production in 1957-58, the index having risen to 115 in September from 95 in February. He observed that grain was bought at relatively low prices by the trade soon after the harvest. "The producer, therefore, did not benefit, but it was the

HINDUSTAN ANTIBIOTICS' AGREEMENT WITH MERCKS

UNDER SECRETARY TO GOVT.
18 MAY 1959
PUBLIC DEPARTMENT

ADVANTAGES TO INDIA MANY

From Our Special Correspondent

NEW DELHI, 12*th May*

THE agreement between the Hindustan Antibiotics Limited and Messrs. Merck Sharp and Dohme (U.S.A.) for the manufacture of 40,000-45,000 kgs. of streptomycin per annum, it may be recalled, has been the subject of a keen controversy in recent months. How unfair Communist criticism has been is easily seen from the authoritative details available of the agreement which was signed on the 16th April 1958. According to its terms, Mercks will make available all the up-to-date technical know-how and their comprehensive range of patents covering the manufacture of streptomycin and dihydrostreptomycin, and will assist in drawing up plans, specifications and other details for setting up the plant. Only actual costs of preparations of drawings, etc., within a ceiling of $25,000 (payable in rupees) will be paid. On payment of reasonable and necessary expenses and as desired by the Hindustan Antibiotics Limited, Mercks will arrange, if required, to send competent personnel to India to advise on the construction, installation and operation of the plant. The salaries of these personnel will be borne by Mercks. They will also train technical personnel from the Hindustan Antibiotics both in designing and in operating the plant.

DELHI LETTER

The latest types of sub-cultures of a high-yielding streptomycin producing strain of *S. Greseus* will be provided by Mercks. They will continue to provide, during the 10-year period of the agreement, the benefits of the results of future research work and new patents on streptomycin and dihydrostreptomycin manufacture worked out at their end and there will be a continuous exchange of information on such points between the two parties. In return for these services, Mercks will be paid technical fees to cover contribution towards research at 2½ per cent. of the net proceeds in India of sales of Hindustan Antibiotics calculated in bulk streptomycin or dihydrostreptomycin and 5 per cent. on such sales in other countries. These payments will be made in U.S. dollars.

Foreign Exchange Saving

The foreign exchange required for import of 45,000 kgs. of streptomycin at the current price of Rs. 160 per kg. would be Rs. 72 lakhs. The cost of production of streptomycin at the proposed plant at Pimpri is estimated to be about Rs. 267 per kg. In other words, the value of bulk streptomycin produced at Pimpri would be Rs. 1.20 crore per year. As the production envisaged would be about the equivalent of the increasing demand of the country by that time, it may be safely assumed that very little will be available for export. On this basis, a technical fee of Rs. 3 lakhs per annum will have to be paid to Mercks at full production of 45,000 kg. There will thus be a clear saving of Rs. 69 lakhs per annum of foreign exchange. As the arrangement at present contemplated would be valid for a period of 10 years, the total amount that may be available by way of technical fees to Mercks on a production of 45,000 kgs. per annum would be only Rs. 30 lakhs in 10 years.

One of the terms of the agreement was that, pending the manufacture of streptomycin in India, the Hindustan Antibiotics would purchase from Mercks not less than 80 per cent. of India's requirements of streptomycin salts, and would pay 5 per cent. lower than the lowest of the quotations. In fixing this price such lower quotations as are the result of any form of unfair competition such as dumping are not to be taken into consideration. While implementing this part of the agreement for the first time during the licensing period April-September 1958, several difficulties were encountered in determining the price payable to Mercks. To avoid such difficulties in future, it has now been mutually agreed that the supply agreement should be deemed to have been modified to provide for the Hindustan Antibiotics being obliged to purchase not less than only 50 per cent. of the requirements from Mercks. The modified agreement also provides for Mercks being relieved of the obligation to supply even 50 per cent. of the requirements in certain circumstances.

The arrangements with Mercks were designed to give this country a number of advantages, in that they help to establish competition between different traditional suppliers of streptomycin in the world. It has been possible to derive the benefits of the lowest prices possible and Mercks have to supply India's requirements at 5 per cent. below the lowest price. One of the immediate results of the agreement is that there has been a substantial reduction in the cost of streptomycin in this country. Before this agreement came into force, streptomycin used to be imported into the country at an average price of Rs. 400 per kg. As against this, during the first licensing period immediately following the signing of the agreement, the Hindustan Antibiotics imported 16,000 kg. of streptomycin at an average cost of less than Rs. 250 per kg. This has resulted in foreign exchange saving to the country of about Rs. 25 lakhs. During the next licensing period, October 1958-March 1959, arrangements were made to import 30,000 kg. of streptomycin, which resulted in a saving of about Rs. 72 lakhs in foreign exchange. The arrangement has actually resulted in the availability of streptomycin to the public at a considerably cheaper cost.

Joint Plan of Operations

The Joint Plan of Operations between the Government of India, on the one hand, and the U.N.I.C.E.F. and W.H.O. on the other, covers technical and financial assistance to produce antibiotics which include penicillin and streptomycin as well. The funds allotted for the project were, however, limited and it was subsequently found that they could suffice only for the supply of the equipment required for penicillin manufacture. The Government of India had subsequently approached the U.N.I.C.E.F. for funds and the U.N.T.A.A. (who had taken over the functions of the W.H.O. in regard to technical assistance) for technical assistance for the setting up of streptomycin manufacture at Pimpri as envisaged in the Joint Plan of Operations. The U.N.I.C.E.F. replied that no funds could be provided for the streptomycin project and the U.N.T.A.A. advised that Government should secure technical know-how for streptomycin manufacture by payment of royalties to a commercial company. It was only after these replies were received that the Government pursued the negotiations with foreign commercial firms which ultimately led to the agreement with Mercks.

The agreement with the American firm, it is authoritatively stated, does not hinder India independently setting up an integrated drug industry in the public sector with Soviet aid. Recently, the scope and size of the following five drugs projects were discussed with a team of Soviet experts:

Synthetic Drugs Plant; New Antibiotics Plant; Endocrine and Glandular Products; Laboratory and factory for plant products; Medicial Instruments and Appliances.

Russian Assistance

It is proposed to develop these projects with the technical and loan assistance to the extent of 80 million roubles from the Soviet Union. Depending on the availability of internal finances and on the extent of assistance, both financial and technical, to be allocated to the different projects from the overall external assistance, suitable priorities are to be assigned to the different projects. In fact, it is contemplated to secure maximum benefit from the Russian assistance in these directions. Negotiations for an integrated drug industry in the public sector with Soviet assistance have been thus going on independently of the agreement with Mercks.

From the data now available it is estimated that the probable cost of producing streptomycin and dihydrostreptomycin at Pimpri would be Rs. 267 per kg. if the target of 45,000 kg. of streptomycin per annum can be achieved. If the annual production is 40,000 kg., the cost would be about Rs. 300 per kg. These figures include a return of 4½ per cent. on capital. According to the tentative calculations made by the first team of Soviet Experts in 1956, the cost of production of 45,000 kg. of streptomycin would be Rs. 450 per kg. without any profit. If the usual 10 per cent. profit element is added the estimated cost would come to Rs. 495 per kg. The cost of production under the arrangement with Mercks is not expected to be unfavourable in comparison with that under Soviet aid.

It is, therefore, strange that one of the appendices to the report submitted in October 1958 by the second Team of U.S.S.R. Experts gives an estimate of the savings in foreign exchange that will result when a streptomycin factory is established with Soviet assistance. In that statement, the price of imported streptomycin is taken at Rs. 325 per kilogram and the anticipated wholesale price of the product to be produced in the proposed factory at Rs. 157 per kilogram. No details, however, are given as to how the sale price of Rs. 157 has been arrived at. Nor does the report give any data or calculation for the cost of production in the proposed plant. It has merely been mentioned that, in accordance with preliminary calculations, the ex-factory price should not be higher than Rs. 157 per kg. The only basis for the figure of Rs. 157 appears to be the knowledge (which the Soviet Experts had informally gathered) that the cost of production of streptomycin at Pimpri in the plant to be established with Mercks' collaboration was estimated at Rs. 267 per kilogram. The reader can easily see how the grist has been provided to the Communist mill.

A USEFUL COMPENDIUM

Among the annual economic reviews published year after year, the one brought out by Messrs. Premchand Roychand and Sons of Bombay enjoys a reputation of its own. Styled as the *Annual Market Review*, the publication is a useful compendium, giving an interesting, objective account of India's economic trends judged against international background. The latest edition of the *Review* covers the year 1958.

The 1958 *Review* starts with an introductory chapter which impressively sums up in one para the world political and economic changes during the year, followed by a survey of the position of the U.K. and the sterling area, the U.S. and dollar area, Canada, Western Europe, West Germany and the E.C.A.F.E. region. The rest of the *Review* is devoted entirely to the study of Indian economy. The study is quite comprehensive, in that it not merely contains an analysis of wholesale prices, cost of living, trade, balance of payments and reappraisal of the second Five-year Plan but gives a bird's-eye view of trends in industrial production, with particular reference to the major industries—cotton textiles, jute, iron and steel, sugar, tea, cement, coal, engineering, chemicals, and metals and minerals. The *Review* also includes (1) survey of money, foreign exchange, gilt-edged, bullion and share markets; (2) summaries of railway, Union Government and Bombay Government budgets; and (3) statistical tables relating to sterling exchange and trade of India, Scheduled banks, prices of gold and silver, cotton mills, jute mills, rupee loans outstanding and prices of rupee loans.

The value of the *Review* lies as much in the aforesaid features as in the way in which the economic outlook in India for the current year has been assessed. While expressing confidence that the country is assured of both internal and external political stability, the *Review* feels that there is an undercurrent of disappointment at the progress achieved on the economic front. "Various conflicting trends," it says, "have clouded the economic horizon and a feeling of frustration appears to be growing, particularly among the educated unemployed. An ever-increasing population and unemployment are by far the most vexed questions of today and, unless a successful answer can be found for these, the socialistic pattern of society must continue to remain a mirage." Any impartial observer of economic trends will fully agree with the *Review* when it urges a close scrutiny of India's cost structure and such reorientation of price and taxation policies as will promote exports, stability of internal prices and adequate attention to actual available resources and real rate of domestic savings while drawing up the Third Plan.

AMERICAN LETTER

TALK OF A BOOM IS FAR-FETCHED

ANTIQUATED TAX LAWS SQUEEZING OUT PROFITS

From Our Special Correspondent

NEW YORK, 6*th May*

INDIA made prominent news twice in recent days. The Indian Ambassador to the United States, Mr. M. C. Chagla, was guest of honour at the Overseas Press Club at New York. He came from Washington with his son and daughter. Also attending as guests of honour were the Consul General of India, Mr. M. Gopala Menon, and Consul Mr. A. P. Venkateswaran.

The second event was a discussion of India's Government-administered railway system at the United Nations, following a speech by Eugene R. Black, President of the International Bank for Reconstruction and Development, before the Economic and Social Council.

Mr. Black commended to the Council the "sound financial management" of India's Railway Board. He said that realistic policies have kept adequately high the fees charged for the services rendered. Such policies, he added, were worthy of emulation by other countries, having yielded "more by a good deal than had been expected."

Out of these funds, he suggested, India has been able to build roads, schools, hospitals and city sewer systems which would have remained on the planning board without this source of revenue. It was also brought out that the largest profit in the income statement of the Indian railways was derived from third class passenger traffic.

This is quite contrary to the experience in the U.S. where passenger traffic, notably commuters, are a drain on railway treasuries, while freight is the real income producing element. A second World Bank loan for the expansion of India's railways was made last October, amounting to $85 million. It supplemented an earlier $90-million loan of 1957.

The Overseas Press Club dinner was a significant event. It presented India subtly to many foreign correspondents and their guests. Also present were Director S. N. Khanna, Assistant Director Hira Nirodi and Press Officer Saeed Jaffrey of the Government of India Tourist Office. They provided customed entertainers, Shirish Gor who sang and played the *sarod* and Arya Kumar Bal who played the *tabla*. Affairs like that often leave more of a lasting impression than an official speech.

The U.S. Economy

The business recession has receded into memory and statistics. There is now talk of a boom in the making, but it seems somewhat far-fetched to me. The stock market seems to have been quite hesitant in recent days and weeks. Buyers and traders would appear to have their doubts as well.

Yet, spending by the public has been increasing in all areas. The latest count on the gross national product is an annual rate of $465,000 million. This compares with a recession low of $427,100 million and a 1955-57 high of $445,600 million. The growth to the present level is, of course, partly accounted for by inflation. Nevertheless, there has been an increase over and above that.

Personal incomes had a similar boost. That figure now stands at an annual rate of $365,700 million, as compared with a 1955-57 high of $351 800 million and a recession low of $348,300 million. These figures include pension and unemployment payments, as well as higher Government salaries. Dividend payments have gone up, too, and they are also a part of personal incomes.

Other higher records can be cited, such as industrial production, the construction of new homes, of refrigerators and television sets as well as of automobiles. There has also been a considerable pick-up in auto sales and retail sales, generally.

Much of the higher industrial buying is based on the threats of strikes in major industries later this year, including steel, railways and aluminium. If the walk-outs do occur, the over-buying would be salutary.

If there were to be no strikes, a tapering off in demand might follow. This will be true anyway in July and August when many plants shut down for the now contractual vacation periods.

Industrial managements threatened with major strikes have made no bones about the prospect that increases in wages or in fringe benefits must, of necessity, mean higher prices to the consumer. One U.S. Cabinet member suggested recently in a speech that members of labour unions, before asking for higher wages, should consider their positions as consumers.

There has been no response to this suggestion so far, but it is quite obvious that the rank and file of trade union members has never given a thought to the possibility that an increase in wages might actually and eventually shrink their pocket books as consumers because of higher prices and the inflationary spiral, generally.

Cost of Production

Beyond that, there are now serious discussions going on over the fact that the U.S. is gradually pricing itself out of world markets. One of the reasons for this is the famed American standard of living, propped up by high wages. Another is the antiquated tax laws which are squeezing corporate profits to the point where they hardly keep up with necessary modernisation of machinery and equipment.

What has happened is this. A machine which cost $10,000, or $100,000 in 1940, would cost $30 000, or $300,000 today in its modernised version. Depreciation allowances, however, only cover the original purchase price.

The remaining two-thirds of the purchase price of new tools of production must come out of profits, after taxes. With Federal tax rates up to 52 per cent., this is rather difficult. The net result is that, according to a McGraw Hill survey, about $100,000 million out of a total of $300,000 million of depreciable income producing property in the U.S. is now economically obsolete.

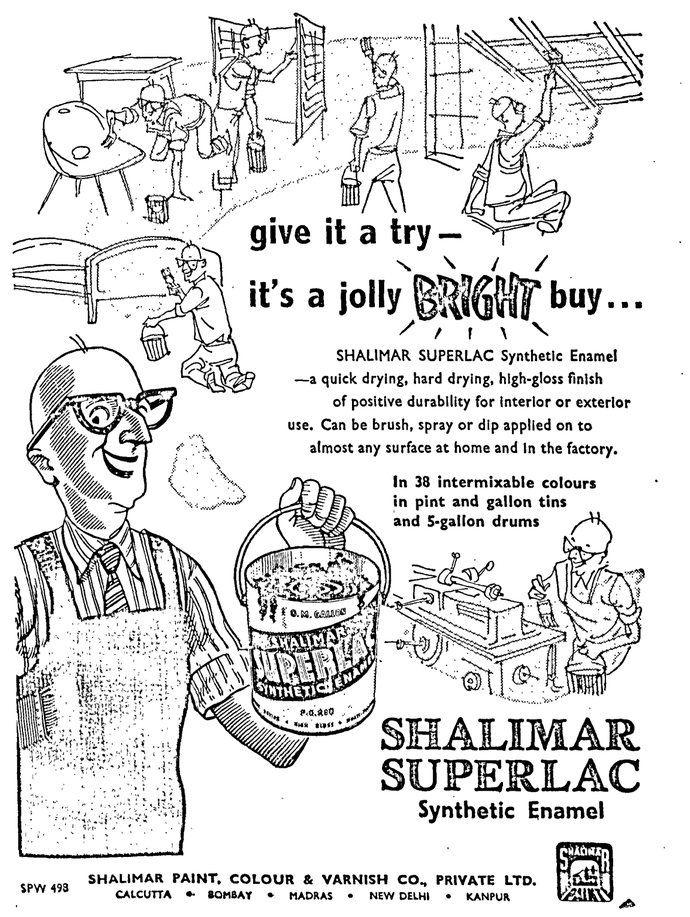
Short-sightedness All Round

This is another big factor for the loss of a portion of world markets by the U.S. There is short-sightedness among legislators, managements and labour. It is always much easier to do nothing and preserve the *status quo* than to embark upon a reform and, possibly, make a mistake. Most labour leaders still do not see that a more efficient machine may eliminate some jobs, but will, in the end, create many more jobs.

The U.S. farm picture is one of abundance, both so far as livestock and as crops are concerned. Dairy production will be near a record. Farm exports are expected to gain slightly in the latter part of this year.

Cotton is expected to be in ample supply and exports are likely to rise. The oversupply in many farm items will naturally tend to reduce prices. The net result of that is, inevitably, a burden on Washington under the present price support programme. Farmers' incomes are likely to be the same this year as in 1958.—*All Rights Reserved.*

Plans for a vehicle which can travel at will across open terrain or bodies of water have been announced by the Curtis-Wright Corporation. The new type of vehicle will be suspended as well as propelled by low-pressure, low-velocity air. Without conventional wheels, axles, brakes, clutches, transmission or frame, the vehicle would use a piston-type engine, from 50 to 200 horsepower, to lift it six to 12 inches off the ground.



UNITED BANK'S BUSINESS GROWS

PROFIT MARGIN, HOWEVER, SHRINKS MARKEDLY

THE audited accounts of the United Bank of India Ltd. (Managing Director: Mr. B. K. Datta, Calcutta) for the year ended 31st December 1958 indicate that, though the past year was one of progress in terms of turnover, it proved to be less remunerative, as was the case with other banks. The bank's balance-sheet total as at the end of the year discloses, as compared with that a year before, an increase of Rs. 7.73 crores, of which the expansion in deposits alone accounts for Rs. 5.17 crores. On the assets side, advances have gone up by Rs. 4.08 crores or 17.3 per cent. The gross income shows a rise of Rs. 29.50 lakhs or 15.2 per cent. over the year. The improvements in the volume of business and the gross earnings are not, however, reflected in the profit for the year, which has, on the contrary, declined from Rs. 16.21 lakhs to Rs. 14.15 lakhs.

While comparing the profit for the year under review with that for any of the preceding years, it must be noted that the profit for 1958 has been arrived at after making provision for taxation, the extent of which is not indicated in the balance-sheet or the profit and loss account, while that relating to previous years was before providing for taxation. If, however, the tax provision made last year, namely, Rs. 4.92 lakhs, were to be deducted from the profit for 1957, the comparable profit for that year would be Rs. 11.29 lakhs, in which case the profit for 1958 would show a rise of Rs. 2.86 lakhs.

The transfer to the statutory reserve has been raised from Rs. 3.25 lakhs to Rs. 3.45 lakhs. A sum of Rs. 2.83 lakhs has been provided for payment of bonus to staff, while no such allocation was made in the previous year. The dividend is kept unchanged at the very modest level of 3 per cent., as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	1,70 56	1,45.22	1,19.46	1,02.44

Other income	15.03	12.83	12.26	11.70
Interest paid	62.10	52.05	41.35	33.13
Expenses	1,36.06	1,15 69	1,02 81	91.14
Depreciation	7.01	5.86	4.49	4.55
Profit	14.15	16.21	15.58	14.61
Provision for taxation	..	4 92	4.40	3.50
To reserves	3.45	3.25	3.15	2.95
,, bonus to staff	2 83	..	..	..
Dividend	7 83 (3%)	8 00 (3%)	8 00 (3%)	7 90 (3%)
Carry forward	1.81	1.77	1.73	1.70
	As on 31st December			
	1958	1957	1956	1955
Capital	2,63.04	2,66.57	2,66 56	2,66.56
Reserves	80.80	77.35	74.10	70.95
Deposits	43,53.98	38,36.45	33,91.00	31,26.71
Borrowings from other banks	1,41.50	0 85	1,02.52	1,90 84
Advances	27,63.78	23,55.74	20,17.85	18,13.42
Investments	15,48.09	12,24.72	13,91.20	14 41.46
Cash	5,06.40	5,87.01	4,25.99	4,02.74
Balance-sheet total	56,33.93	48,60.63	45,18.00	43,40.19
Ratio to deposits of—	%	%	%	%
Advances	63.5	61.4	59.5	58 0
Investments	32.3*	31.9	38.0*	40.0*
Cash	11.6	15.3	12.6	12.9

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

It will be noted from the above table that, while the total income of the Bank has gone up by Rs. 75.88 lakhs in the last three years, the operating expenses have risen by Rs. 73.89 lakhs and depreciation on property by Rs. 2.46 lakhs. Of the rise in operating costs, interest paid accounts for Rs. 28.97 lakhs and establishment expenses for Rs. 44.92 lakhs. Such an increase in costs has markedly affected the profit margin, the ratio of profit to gross income having declined from 10.2 per cent. in 1955 to 6.4 per cent. in 1958.

The Bank's reserves form only 30 per cent. of the paid-up capital. This is not surprising in view of the low profit-margin which does not allow the Bank to build up its reserves. It will be seen from the table that the reserves have gone up by hardly Rs. 10 lakhs in the last three years. The bulk of the increase of Rs. 5.17 crores in deposits is of the fixed variety and cash certificates, the exact rise being Rs. 5.05 crores. Loans, cash credits and overdrafts, at Rs. 24.50 crores, show a rise of Rs. 5.21 crores, while bills purchased and discounted (at Rs. 3.13 crores) are lower by Rs. 1.13 crore. The rise in the Bank's credit portfolio must have been due to the large seasonal demand witnessed at the end of the year. The Bank's investments are higher by Rs. 3.24 crores and, at the same time, its borrowings from other banks also are up by Rs. 1.40 crore. The borrowings are secured by part of the Bank's investments. The unencumbered investments, together with the cash balances, provides a coverage of 43.9 per cent. to deposits, as against 47.2 per cent. at the end of 1957.

During the year under review, the Bank opened three branches in West Bengal, one in Orissa and one in Manipur State. These bring the total number of offices at the end of the year to 106, including 15 in East Pakistan.

BANKS IN INDIA MAP

After a lapse of 16 years, the Bureau of Commercial Intelligence and Statistics, Central Bank Building, Bombay, a market research organisation, has brought out a new edition of the *Banks in India Map*. The design of the latest (1958) edition is exactly the same as the previous one published in 1942. The map is based on the *Statistical Tables Relating to Banks in India* for the year 1956 published by the Reserve Bank of India and shows at a glance the places where banking facilities are available in India.

All the Scheduled banks, non-scheduled banks with a paid-up capital and reserves of Rs. 1 lakh and over, foreign banks and co-operative banks with a paid-up capital and reserves of Rs. 10 lakhs and over have been listed on the map, distinguishing them by categories and paid-up capital. Along the sides of the map, all towns where these banks have branches are given in alphabetic order. A number is given to each bank, and these numbers are indicated against the name of each town. This will enable one to find all the banks in these towns. On the body of the map, the towns are shown in various coloured dots indicating towns which have more than 10 banks, those having 5 to 10 banks, between 2 and 5 banks and only one bank, thus providing a clear visual picture of the concentration and distribution of banks in various towns.

The size of the map is 40" x 52" and is printed on thick white paper with cloth lining at the back. It is priced at Rs. 21 each and for an order of 10 or more copies the price will be Rs. 15 each, packing and postage being extra.

The Sterling Area's gold and convertible currency reserves rose by £40 million in April and stood at £1,161 million on 30th April. The substantial gain in the gold and convertible currency reserves reflects the favourable seasonal trend and the continued strength of sterling. Apart from falls in March (when there was a repayment of £71.5 million of stand-by credits to the International Monetary Fund) and December 1958 (when payments were made on the North American loans), the reserves have risen every month since September 1957.

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

ANDHRA BANK LTD.

DIVIDEND UNCHANGED

IN conformity with the experience of banks in general, the higher interest rates paid on deposits and the increase in establishment expenses have had their adverse effect on the profit of the Andhra Bank Ltd. (Managing Director: Mr. Tadepally Sreeramulu, Masulipatam) for the year ended 31st December 1958, such having dropped from Rs. 7.05 lakhs to Rs. 6.48 lakhs. Though this is the second year in succession for which the profit has suffered a setback, it is gratifying to note that the decline in 1958 was very much less than that suffered by many other banks. It is also less marked than that noted in 1957 in the case of the Bank itself, when the profit fell from the peak of Rs. 8.46 lakhs to Rs. 7.05 lakhs.

The profit for 1958 is supplemented by a sum of Rs. 1.78 lakh drawn from the investment reserve account, as this provision is no longer required, in view of the fact that the present market value of the Bank's investments in securities is much in excess of the book value. The provision for taxation has been raised from Rs. 3.60 lakhs to Rs. 4.01 lakhs and this includes Rs. 0.99 lakh being the short provision for taxes made in previous years. The transfer to the statutory reserve has been increased from Rs. 1.41 lakh to Rs. 1.51 lakh, while that to the gratuity fund is unchanged at Rs. 5,000. The dividend has been maintained at 6 per cent. per annum, to which level it had been cut last year from 8 per cent. paid for 1956.

The salient features of the Bank's results for the last four four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount	59.66	51.12	44.45	32.73
Commission and exchange	9.50	8.85	8.35	6.78
Interest paid	32.56	27 20	23.41	18.68
Expenses	30.35	26 04	21.25	17.25
Depreciation	0.77	0 67	0 62	0.39
Profit	6.48	7.05	8.46	4.28
Transfer from reserve	1.78	0 20	..	..
Provision for taxation	4.01	3.60	3.45	1.40
To reserves and other funds	1.56	1.46	2.26	0.86
Dividend	2.47 (6%)	2 29 (6%)	2.75 (8%)	2 06 (6¼%)
Carry forward	0.24	0.02	0.12	0.12
	As on 31st December			
	1958	1957	1956	1955
Capital	41.25	40 77	34.41	33.47
Reserves	17.57	18 04	16.63	14.37
Deposits	11,41.71	9,68 20	9,26.18	8,31.95
Borrowings from other banks	50 28	79.57	60 45	..
Advances	6,57.19	6,19.18	6,13.13	4,42.30
Investments	4,67.18	3,45.60	3,17.79	2,83.80
Cash	1,50.41	1,54.63	1,30 29	1,64.24
Balance-sheet total	14,03.27	12,61.23	11,84.13	10,03.72
Ratio to deposits of—	%	%	%	%
Advances	57.5	63.9	66 2	53.2
Investments	38.5	28.0	27.8	34.1
Cash	13.1	16.0	14.1	19.7

The Bank's income from interest and discount has increased over the year by Rs. 8.54 lakhs to Rs. 59.66 lakhs, the highest level seen in the history of the Bank. This is accompanied by a slight increase in income from commission and exchange. On the expenditure side, a rise of Rs. 5.36 lakhs is noted in interest paid and of Rs. 4.31 lakhs in expenses.

The Bank's capital stands raised from Rs. 40.77 lakhs to Rs. 41.25 lakhs, on account of payment of calls unpaid. The reserves at the end of the year are slightly lower. These reserves include share premium amounting to Rs. 6.48 lakhs. The deposits, at Rs. 11.42 crores, are at their highest level, the rise over the year being Rs. 1.73 crore. Fixed deposits, which form the bulk of the Bank's deposits, have risen from Rs. 4.93 crores to Rs. 6.09 crores, savings bank deposits from Rs. 2.57 crores to Rs. 2.72 crores and current and other accounts from Rs. 2.17 crores to Rs. 2.60 crores. Consequent on this increase in deposits, without any corresponding rise in advances, the Bank's borrowings have been reduced from Rs. 79 lakhs to Rs. 50 lakhs. Advances are higher by no more than Rs. 38 lakhs, of which loans, cash credits and overdrafts (at Rs. 5.61 crores) account for a rise of Rs. 22 lakhs and bills purchased and discounted (at Rs. 96.51 lakhs) for Rs. 16.41 lakhs. As a result of the slower pace of increase in advances, the credit ratio has gone down to 57.5 per cent. from 63.9 per cent. at the end of 1957 and 66.2 per cent. at the close of 1956. Investments stand strengthened by Rs. 1.21 crore, while cash balances are a shade lower. The total liquid assets, however, provide a higher coverage to deposits; their ratio to deposits has gone up from 44 per cent. to 49.6 per cent.

REHABILITATION COST OF COTTON MILLS IN BOMBAY

INQUIRY COMMISSION'S FINDINGS

THE disagreement between cotton millowners and workers in Greater Bombay on the determination of the rehabilitation cost of mills for purposes of calculating the bonus due to workers is now as good as settled. For the Bombay Cotton Textile Industry (Rehabilitation) Inquiry Commission, which was asked to go into this problem, has just submitted its report to the Government of Bombay. The Commission has assessed the requirement of rehabilitation, replacement and modernisation of machinery for the mills individually, as well as for the whole industry. The assessment has been made in the same manner as was done by the Technical Sub-Committee of the Working Party for the Cotton Textile Industry in its report dated 22nd April 1952, excepting item 10 whereunder the Sub-Committee had recommended that "warp stop motion and auto-pirn change device should be equipped on looms in sound mechanical conditions." Taking the average price of machinery ruling during the calendar years 1952 to 1956 (both inclusive), the Commission has worked out:

an estimate of the cost of rehabilitation of machinery for 15 years from the beginning of the bonus year 1956 and, in the case of buildings, for a period of the average estimated life thereof; and

the cost of requirement of machinery rehabilitation on the basis of the rehabilitation requirement upto the end of the bonus year 1961.

The Commission's recommendations are binding on both millowners and workers. They are, however, relevant to the calculation of bonus for 1957 only, as the bonus for the first four years of the five-year bonus agreement 1953-57, that is. 1953, 1954, 1955 and 1956, has already been calculated and paid on the basis of the old quota figures relating to the rehabilitation cost of individual mills as a result of mutual agreement between the two parties. In other words, the question of determining the rehabilitation cost of mills for calculating bonus due to workers for 1958, 1959 and the coming years remains to be settled. Again, although the rehabilitation requirements of individual mills have been made available by the Commission, it still leaves open the question as to how the annual quota of each mill is to be calculated. Naturally, this will involve questions of the amounts deemed to be available with each mill for purposes of rehabilitation as at the beginning of 1956 and the balances which it is required to make up in the remaining period.

The Commission was appointed by the Government of Bombay as early as 3rd January 1957. Although the Commission had been asked to submit its report within six months, the period that has actually elapsed is more than two years and three months; to be precise, the report was signed on 17th April 1959. For this prolonged delay, the Commission is, perhaps, not wholly to be blamed, because there were two special factors which did not enable the Commission to complete its findings earlier. One, the personnel of the Commission changed thrice, once in the case of Chairman and twice in that of members. Thus, Mr. Justice S. T. Desai tendered his resignation as Chairman and Mr. Justice K. T. Desai was appointed in his place. Two new members (Messrs. Radhakrishna R. Ruia and V. R. Hoshing) were appointed to replace Messrs. T. P. Barat and G. D. Ambekar, respectively. The other members of the Commission, however, continued. They were Messrs. Pratap Bogilal, A. S. Parasuram and K. R. Gadgil (Secretary). Two, the Commission was handicapped in its deliberations by paucity of data. The handicap was all the greater because the Commission had to consider machinery of various types and makes manufactured in different countries, as also of the average life of each machine installed in the mills. The Commission. therefore, took time to investigate the matter and consider the same.

The *raison d'etre* of the Commission's appointment is the award on bonus for mill workers given by the Industrial Court in Bombay on 31st May 1947. In that award, the Court had estimated the cost of rehabilitation of the Bombay cotton mills at Rs. 72 crores. This sum was disputed as being too much by workers and as an underestimate by millowners. The dispute was referred to the Labour Appellate Tribunal which confirmed the lower Court's estimate of Rs. 72 crores as quite reasonable and turned down the plea of the workers for a fuller investigation of each mill.

Subsequently, negotiations were held between the representatives of millowners and workers over the question of bonus and a five-year bonus agreement (1952-57) was agreed on. During the negotiations, the workers reiterated their plea for the assessment, by a special body, of the cost of rehabilitating the cotton mills. On 13th March 1956, the Industrial Court gave its award in the matter of bonus for the years 1954-57 in terms of the above agreement. The Court conceded the workers' demand for the setting up of a Rehabilitation Inquiry Commission. Discussions were held between the Millowners' Association and the *Rastriya* Mill *Mazdoor Sangh* regarding the composition of the Commission. The discussions, however, did not lead to an agreement. Thereafter, the *Sangh* submitted an application to the Government of Bombay urging it to take the initiative and constitute the Commission in accordance with the provisions of clause 5 (C) of the bonus agreement. It was in pursuance of this application that the Government appointed the Inquiry Commission under reference.

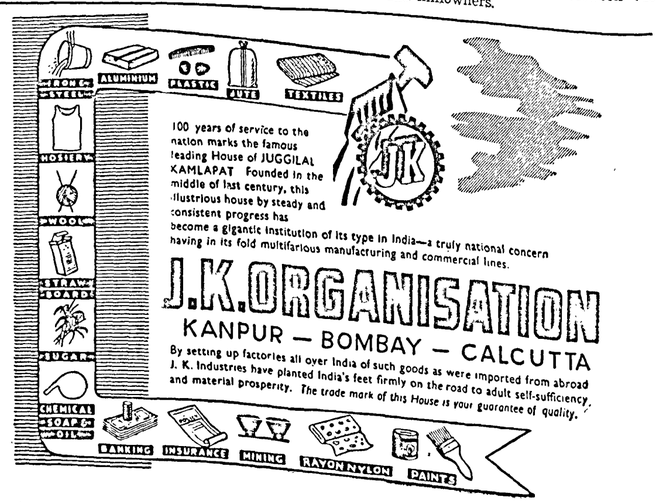
In its report, the Commission has estimated the total rehabilitation requirement of the whole cotton mill industry in Greater Bombay (excluding three units, namely, the Prakash Cotton Mills, New Prahlad Mills and Raghuvamshi Mills) at Rs. 66.34 crores in respect of machinery for 15 years from the beginning of the bonus year 1956 and at Rs. 42.55 crores up to the end of 1961. The sums represent the aggregate cost of rehabilitation, replacement and modernisation of all machinery and plant installed in the 51 mills prior to 1st January 1947 only and which continued to be in existence on 1st January 1956. The total rehabilitation requirement in respect of buildings of mills (excluding the three aforesaid units) is put at Rs. 38.99 crores. The estimate is based on the average residual anticipated future life of the buildings being taken as 35 years from 1st January 1956.

The Prakash Cotton Mills was excluded from the terms of reference, while the New Prahlad Mills did not supply any data. With regard to the Raghuvamshi Mills, although this Mill was not covered on a strict interpretation of the terms of reference, its management and the Millowners' Association desired the Commission to make a report also in connection with the rehabilitation requirement on the same basis on which the Commission had estimated the requirements of other mills covered by the reference. As this Mill and its employees are bound by the bonus agreement, the Commission has estimated the rehabilitation cost at Rs. 23.48 lakhs for 15 years beginning 1956 and at Rs. 18.86 lakhs up to the end of 1961. The cost of rehabilitation of its buildings is put at Rs. 34.76 lakhs.

The aforesaid estimates of the Commission are generally considered to be reasonable. Some, however, feel that the total rehabilitation cost of machinery and plant installed prior to 1st January 1947 (Rs. 66.34 crores for 15 years from 1956 and Rs. 42.55 crores up to end of 1961) would be higher if account is taken of the marked rise in the prices of machinery in the past two or three years. The currently ruling prices of cotton mill plant and machinery, it is said, are, on an average, higher by nearly 20 per cent. as compared with the average prices ruling during 1952-56 which the Commission has adopted as the basis. Moreover, the Commission's report does not contain estimates of rehabilitation cost of machinery worth about Rs. 32-35 crores installed after 1st January 1947. For the purpose of calculating the bonus for mill workers, it is necessary to provide for an adequate allowance for the replacement of this machinery also. To the extent the Commission has not provided for this need, its report is deficient.

It is true that the terms of reference given by the Government of Bombay precluded the Commission from including, in its examination, machinery and equipment installed after 1st January 1947. But the Commission could have at least pointed out this lacuna to the Government. In fact, the Millowners' Association prayed that the Commission should include these machinery and equipment also. The Commission, however, was of the view that it was not open to it to sit in judgment over the terms of reference, and the Millowners' Association agreed not to press its contention. The Union representing the workers was also opposed to the millowners' suggestion.

It was, however, the duty of the Bombay Government to have broadened the terms of reference so as to include machinery installed subsequent to 1st January 1947, so that taxpayers' money need not be spent on another enquiry and conciliation attempt. The value of new machinery added during the eleven years ended 1957 is, as already said, estimated at about Rs. 32-35 crores. This amount, together with the Commission's estimate of Rs. 44.02 crores, brings the total rehabilitation requirements of all machinery and equipment of cotton mills installed up to 1st January 1958 to Rs. 76-79 crores. Deducting from this amount the sum of Rs. 19-20 crores (excluding amount earmarked for rehabilitation of buildings) believed to have been with mills at the end of 1955, the money still required by mills for rehabilitation up to the end of 1961 comes to Rs. 56-59 crores, in addition to Rs. 41 crores needed for rehabilitating buildings, taking their life to be 35 years. On this basis, the total average annual requirement of mills during the period 1956 to 1961 (both years inclusive) comes to Rs. 10.8-11.1 crores, which is considered to be more than the total average gross profit earned by mills annually. If the Commission had been asked to assess the rehabilitation cost of machinery installed after January 1947, the need for appointing another Commission would have been obviated and the negotiations on bonus question between millowners and workers rendered smooth. Nevertheless, the Commission's conclusions are valuable to the extent that they have solved at least part of one issue of contention between the workers and millowners.



TRADE UNIONS OPPOSE AID PROGRAMME

COMPENSATION SCHEME OF MILLOWNERS

From A Special Correspondent

MANCHESTER, *5th May*

PROPOSALS as far-reaching as those put forward for the consolidation of the Lancashire cotton trade into a more efficient structure could scarcely avoid being discussed at length by the industry at large. Most traders are withholding their respective judgments of the plan until details are released, but official comment has in general been favourable. Much can happen between the formulation of a scheme and its implementation and, in this case, the response from those involved is the vital factor.

MANCHESTER LETTER

Any reorganisation of this kind is dependent on the effectiveness of the redundancy programme. If this fails to dispose of the surplus plant, no amount of modernisation of machinery at a later date will keep the industry operating at its most efficient level. In such circumstances, it is essential that the entire plant which is surplus to existing capacity, and even some machinery now being used, should be scrapped.

Trade leaders on the employers' side have given a qualified welcome to the outline of the scheme and await the exact details before making up their minds as to how large the contraction of the trade will be. The annual report of the Merchants' Association has put the aim of the project in a nutshell, saying:—"With redundant machinery scrapped and units working to greater capacity, the industry will obviously be more competitive, with better prospects of maintaining export trade and even regaining some of that which has been lost."

Not Fast Enough

Opposition to the programme has come mainly from the trade union side. Suggestions that a central authority should be set up to direct which mills should close are in complete contrast to the voluntary system capable of dealing with an industry in the throes of contraction. It is recognised that the force of economic circumstances, fast as it has been in recent years in closing mills, will not be sufficiently speedy to bring about the required elimination of surplus capacity.

War-time concentration by direction was accepted as a necessity in the national emergency, but any attempt at dictatorship, however well-meaning, in the present circumstances would be doomed to failure. Speakers both inside and outside the House of Commons have already put forward a multitude of conflicting ideas on the proposals.

Employers' Offer

Meanwhile, employers in the cotton industry have offered payment of compensation to workers who lose their jobs under the reorganisation programme. At a joint meeting with leaders of eight spinning and weaving unions, they suggested that the calculation of compensation should be based on a worker's length of service at a particular mill plus his age factor. The question of availability of work elsewhere would also enter into it.

This differs from the original scheme put forward by the trade unions, which suggested payment of one week's pay for every year of service up to a maximum of 50 weeks' pay. On this basis, some higher-paid workers with long service would qualify for compensation of more than £400 before tax. It is understood that the most a worker could expect to receive under the employers' scheme would be in the neighbourhood of £200.

After the first 90-minute meeting, Sir Alfred Roberts, acting as the cotton unions' spokesman, said that the unions wanted time to consider the employers' suggestions and might have counter-suggestions to make when talks were resumed in a week's time.

Unions Confer

Disclosure of the outline of the reorganisation scheme only a week before the opening of the annual conference of the United Textile Factory Workers' Association gave the delegates a good chance to let off steam. The operatives are chiefly aggravated by the fact that their leaders have not been directly involved in the drawing up of the redundancy plans. An emergency motion prepared by its Legislative Council on the Government's plan was accepted by the conference. Moving its adoption, Sir Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, said that, unless the employers agreed with the unions on fair terms for the compensation of workers made redundant under the Government's plan, the unions were prepared to risk destroying the whole scheme. Referring to the offer of compensation made earlier by the employers, Sir Alfred said:

"We regard what the employers have offered us as completely inadequate. It is true that they have not said their last word and we will have to see how far we can take them in the way they want to go before we find whether we have to break down. Our strongest weapon is that the Government has made it a condition of this grant that there shall be fair compensation to the workpeople affected. I can say, with a due sense of responsibility—and I believe I speak for all of my colleagues—that unless we can arrive at an agreement on what we regard as reasonable and adequate, we are prepared to take the risk of wrecking this scheme entirely."

Sir Alfred condemned the Government for ignoring every plea made by the industry during the past five years and complained that the unions had had no part in the Government's plan. They had received information after the plan was prepared, he said, but they demanded consultation. He could think of no better way of bringing financiers and speculators into the business than the way in which the Government had announced its intentions.

If a conservative figure of the planned contraction of the industry was the elimination of some 50.000 looms and 8,000,000 spindles, this would mean that about £10 million would be paid to firms to close, of which approximately £7 million would come from the Government. Mr. James Milhench, the Association's Secretary, said in seconding the motion, that there were about 10.2 million mule spindles in use, and it was anticipated that this number would be reduced to one million.

Yarn Imports Warning

Quite apart from what must now be expected to the inevitable references by any speaker on textiles to the latest scheme for rehabilitating the industry, the address given by Mr. Fred Bottomley, Chairman of the Cotton Yarn Doublers' Association, at the annual meeting, contained comments on a number of topics which are of distinct relevance to current trade affairs. It so happened that attention had been drawn to the gravity of the imported yarn situation a day or two before his remarks were made public and the excess of arrivals over exports during the first quarter of the year added emphasis to his words. "The position is no better and could be a lot worse than it was before the Hong Kong undertaking was given," he declared. An increase in yarn imports would, he forecast, cause ill-feeling between the textile industries of the two countries. Spinners and doublers in Lancashire could not accept a further threat to their livelihood "without doing something about it."

It remains to be seen whether swift action will be taken by the yarn producers in the country. Mr. Bottomley added: "We cannot continue indefinitely to make sacrifices and, if yarn imports increase, we should insjst on the question of a ceiling for yarns being reopened. It would in any case be quite ridiculous to embark on any scheme of reorganisation with the object of bringing the doubling section of the industry to a compact and efficient size if the ground was being consistently cut from under our feet."

The spinners and doublers assert that they have acted very considerately in this matter for the benefit of other sections, but they are anxious about their reaction should this controversial issue be raised once more. It is a little significant that no further news has yet come to hand about any voluntary arrangement to curtail imports from India and Pakistan.

No Retail Saving

Belated references to the effect of the adverse verdict on the Yarn Spinners' Agreement and other trade arrangements by the Restrictive Practices Court are still being made. Mr. Bottomley repeated the widely-held view that the abandonment of the spinning and doubling price schemes would fail to have any tangible effect on retail prices of consumer goods. "It is one of the weaknesses of this Act, that the Court, having made its decision, has no power to follow up the results of this decision to ensure that any reductions in price are, in fact, passed on to the consumer," he declared.

Reports of weak selling following the withdrawal of the price maintenance schemes have not been exaggerated. The Government's hint of financial aid in reconstruction coincided with the freeing of prices, so that firms which might otherwise have abandoned the struggle were tempted to remain in business and accept low offers in order to be eligible to participate in any compensation. The margins available under the minimum price scheme were very modest, claimed Mr. Bottomley.—*All Rights Reserved.*

DEVELOPMENT OF BACKWARD NATIONS

MR. HOFFMAN ON ROLE OF FOREIGN AID

LONG before the modern concept of foreign aid, with all its complex political and economic implications emerged, nations and peoples thought it obligatory to help others less fortunate than themselves. History tells of many instances of one country extending a helping hand to its neighbour in times of distress. But is is one of the significant developments of the present century that to this traditional moral compulsion has been added certain economic and political imperatives. Two developments can be said to be mainly responsible for this. First, the "shrinking" of the world into a smaller and more interdependent area as a consequence of the spectacular developments in science and technology. The second, and more pervasive, happening is that hundreds of millions of people whose forefathers accepted poverty, sickness, and illiteracy as their normal life, as something to be borne patiently because no other life could be imagined, are in active revolt against a continued acceptance of these conditions. They are demanding an opportunity for a better life and living and they want it in their own lifetime. Does this situation point to good or evil? None will disagree with the view of Mr. Paul G. Hoffman, Managing Director of the U.N. Special Fund, that, in it, there is both promise and menace. Out of these yearnings can come a new, better world or the destruction of any kind of world.

Addressing the annual conference of the World Affairs Council of Northern California on the 3rd inst., Mr. Hoffman observed that the need for increased investment to help the peoples of underdeveloped countries to realise their dream becomes quite clear once the dimension of this problem of development of backward nations is understood. It is, according to him, "staggering"—for two reasons. First, because of its huge size and, second, because of the present distressingly slow rate of improvement in living standards of the people.

Low "Per capita" Income

No less than sixty of the eighty-two nations of the U.N.O., in addition to some forty territories are, according to Mr. Hoffman, underdeveloped. More than a thousand million people live in these countries and their total income in 1957 was approximately $120 billion or $120 per person. These people are living at a sub-subsistence level; they are undernourished; most of them are without the barest of health and educational facilities. In the more advanced countries, on the other hand, the average *per capita* annual income is $800; in the U.S. alone it is as high as $2,000, as against a mere $68 in India.

Clearly, the rate of growth in *per capita* income should be stepped up—at least doubled. Can this be done? Mr. Hoffman answered this poser in the affirmative, provided, in the next decade, the countries themselves devoted every dollar possible to increasing their own investment and provided also the advanced countries doubled theirs. According to figures quoted by Mr. Hoffman, in 1957, the underdeveloped countries themselves devoted $6 billion (a billion= 1,000 million) of their meagre income of $120 billion to capital formation and from all outside sources, public and private, approximately $3 billion was made available. If the present rate of investment were to continue in the next ten years, Mr. Hoffman said, the investment of the countries themselves would be $60 billion, of the advanced countries $30 billion, making a total of $90 billion. The countries themselves, it is suggested, can increase their investment to $75 billion and the advanced countries should increase theirs to $60 billion. These figures do not include technical assistance or similar services.

Power to Absorb Aid Limited

Commenting on these data, Mr. Hoffman observed:

"This total of $135 billion represents not only what these 100 countries and territories need but, in all probability, all they could effectively use. An underdeveloped country's power of absorption is limited and, paradoxically, the countries that need development most, the least developed, where people are the poorest, are capable of the least absorption. Why is that? Well, in the first place, they do not know and we do not know, what the resources of the country are and surveys have to be made to find out. They are also the countries with the fewest trained people—the fewest engineers, doctors, agriculturists, craftsmen—the very people who are needed to carry out a programme. They have to be trained. And they are also the countries with the fewest facilities—power, transportation, communication, roads—all needed for development. There is a limit, therefore, to the amount of goods and services that can be absorbed in the early stages of development. The probabilities are that, of the 30 billion dollars of additional investment needed from the advanced countries, not more than one half billion could be used in 1960. Of course, as a country advances it can absorb more and then a point is reached, and this is the objective of all development programmes, where the aid tapers off and the country is doing its own development by the effective exploitation of its own resources. An increase of one to two per cent. in *per capita* income over a ten-year period may seem to be a very limited goal. It would mean, in dollars, an increase of average income from $120 to $150. That $30 may not seem significant but it would mean clean water, better medical facilities, protection against epidemic and endemic diseases, more schools, a chance to learn to read and write and acquire knowledge for hundreds of millions of people."

"The rate of increase will vary greatly, of course, among the countries. Some will not make much progress and others, where the increase in income will not match the increase in population, may even retrogress. On the other hand, in the more vigorous countries or in countries which have rich, untapped resources the next decade can bring a breakthrough from poverty to decent living conditions. Such a breakthrough, the first lurch off dead centre for these countries, inspiring as it would be to all underdeveloped people, could for the entire community of nations be one of the most spectacular events of the century."

Is Large Foreign Aid Justified?

An additional $30 billion expenditure for foreign aid, even spread over ten years, is a big amount and the advanced countries, Mr. Hoffman rightly pointed out, have every right to ask themselves whether it is wise to take on this burden. The first answer to this question, according to Mr. Hoffman, is a moral one, that of one's own conscience. He wanted the developed countries to remember that, in this shrinking world, it would be very uncomfortable for them to continue to grow richer while the poor nations remained distressingly poor. The second answer is a very practical one and has to do with the changing nature of the world. In his own words:

"We know that we are living in an unsafe world. And our greatest problem is to prevent it blowing up. It is a problem which is facing every nation, every people in the world. It is the main reason for the United Nations, for meetings of foreign ministers, for summit conferences. And, until the safe foundations of peace are laid, it is the reason for our defence spending. The advanced nations are spending on defence about 100 billion dollars (more) a year. In the next decade, if we are to go on at the present rate we will spend 1,000 billion dollars. And we are not asking: 'Can we afford it?'

"There is not only unrest in the 'have not' countries: there is explosive unrest. Expenditures for economic aid are an investment in peace. Economic advance is by no means a complete answer but economic advance is an advance towards peace. It is an advance towards peace because it lessens the social and political instability that springs from discontent and resentment. And positively it lays a more stable basis for sound economic relations among nations, which is a basis for peace. If an additional 30 billion dollars in aid does help move us towards peace it is worthwhile in itself and it is likely to save us many times 30 billion dollars in defence expenditures."

The third answer given by Mr. Hoffman is that an investment in aid will help insure the stability of those countries to which advanced countries must look for their raw materials. Most of the important raw materials needed by the industrialised nations come from the Middle East, Asia, South America and Africa—

SUGAR EXPORT PROMOTION ACT VALID

SUPREME COURT'S JUDGMENT

THE Sugar Export Promotion Act 1958 is constitutional and valid, and it does not impose an unreasonable restriction on the sugar factories' right to carry on their trade. This was the judgment given by the Supreme Court last week while dismissing the petitions of the Lord Krishna Sugar Mills Ltd., the Shiva Prasad Banarsidas Sugar Mills and two others of Saharanpur, filed under Article 32 of the Constitution, challenging the constitutional validity of the Act and the propriety of the action taken under it. The judgment represented the majority opinion of five out of six judges, Mr. Justice Sarkar alone dissenting. In the opinion of Mr. Justice Sarkar, the Act is invalid. This view is based on the ground that the Act, which makes the petitioners suffer a loss on the sale of a part of their produce, imposes a restriction on their right to carry on their business and that the restriction cannot be said to be reasonable.

The Sugar Export Promotion Act, it will be recalled, was passed by Parliament on 16th September 1958 and was intended to provide for the export of sugar "in the public interest." The Act was in replacement of the notification, issued by the Central Government on 27th June 1958, fixing the total quantity of sugar for export at 50,000 tons during the period ended 31st October 1958. Export quotas were fixed for all sugar factories, including those of the petitioners. The Indian Sugar Mills' Association was nominated as the export agency. This agency asked the petitioners to deliver the sugar, but the petitioners failed to sell or deliver the requisite quantities. Thereupon, the export agency pointed out to the petitioners that they were, by their conduct, exposing themselves to the risk of having to pay an additional excise duty under section (7). The petitioners then filed applications for writs restraining the Union Government and the export agency from taking steps under the Act on the ground that the Act was invalid, as it unreasonably restricted the petitioners' right to carry on their trade.

Restriction Not Unreasonable

The majority judgment of the Supreme Court, delivered by Mr. Justice Hidayatullah, is that the object of the Act does not infringe the fundamental rights of the petitioners. In order to prevent any loss to the petitioners, it was contended, countervailing additional prices are allowed on sales of sugar for internal consumption. The petitioners do not stand to lose ultimately. The quota is fixed at 2½ per cent. of their total production and "it is inconceivable that they are unable to sell sugar in the open market. It is obvious that the plea that the mills are unable to sell sugar at the controlled rate is a mere sham." In these circumstances, the Court felt, there is no ground for holding that there has been an infringement of the fundamental rights of the petitioners. The restriction is not unreasonable, because arrangement has been made to save the owners of factories from loss, and the loss entailed by the export of sugar is to be borne out by the consumers in India and not by the producers. Elucidating this view, the Court said:

"The Court, in judging the reasonableness of a law, will necessarily see, not only the surrounding circumstances but all contemporaneous legislation passed as part of a single scheme.... The reasonableness of the restriction is to be judged today, and in the context of the circumstances now existing. It is a well-known proposition that, when commodities are controlled by fixation of price, the commodities sell only at the controlled price and not less. Economists have complained that the worst fault of price control is that the price does not fall below the controlled rate. There is nothing in the record of the case to show that the mills were not able to sell their sugar at the controlled price.

"The restriction was not unreasonable, because arrangement was made to save the owners of the factories from loss, and the loss entailed by the export of sugar was to be borne by the consumers in India, and not by the producers. The foreign export served the national interest by stabilising the sugar market, so that the production of sugarcane may be maintained at a reasonable level... If the objects and purpose of the Act are valid, none of the sections even viewed separately is *ultra vires*. The result is that both the petitions

It may be noted here that the scheme for export of sugar was hammered out after prolonged discussions with the representatives of the industry. In enacting the Sugar Export Promotion Act, the Government thus had the support of the industry as a whole. Even when the legislation was framed, there were doubts in certain quarters about its constitutional validity. But the spokesmen of the industry assured the Government that the industry would not challenge the measure in a court of law. It is a well-known fact that the industry has been as anxious as the Government to develop an export trade in sugar, though its reasons for doing so are not identical with those of the Government. Accordingly, the two U.P. mills that petitioned the Supreme Court did not respect the understanding between the Government and the Indian Sugar Mills' Association. Whatever the merits of the majority verdict of the Supreme Court, the fact remains that it is in consonance with the desire of the vast majority of sugar mills in this country.

The Supreme Court has held by a majority that the sugar mills have been allowed to pass on the loss on export of sugar to the consumer. This conclusion seems to be based on a tenuous ground, in that the Government soon came out last year with an order fixing a ceiling on the ex-mill prices of sugar in North India. There are serious differences of opinion between the Government and the industry on the question whether these ex-factory prices are adequate. The controversy is now sought to be resolved with the help of the Tariff Commission. Since the Commission's verdict is unlikely to be given retrospective effect, those mills which could not cover the loss on their export quota would have suffered an irrecoverable loss.

The Government spokesmen have been saying, from time to time, that it would have to resort to compulsion on manufacturers in order to push up exports. The aforesaid judgment of the Supreme Court may embolden them to implement this unwise idea, for it has removed the bugbear of constitutional incompatibility.

With the Supreme Court upholding the validity of the Sugar Export Promotion Act, the Indian Sugar Mills' Association has been enabled to enter into fresh commitments with foreign buyers. But it is highly doubtful whether export sale of sizable quantities of sugar will, in fact, be put through. For the world sugar markets continue to rule depressed, notwithstanding the recovery in prices noted in the past two weeks. Spot Cuban raw sugar in the New York market is currently quoted at 2.98 cents per lb. (f.o.b. Cuba) which, though it is about 18 points (0.18 cent.) above the lowest level reached during the recent decline, is still 17 points below the lowest limit under the International Sugar Agreement's price range. The latest available spot quotation for sugar in London is £27¼ (Rs. 363) per ton, as against £26⅛ (Rs. 349) a month ago and £32 (Rs. 427) in the beginning of the year.

Heavy Loss

The advantage of the upward trend in world sugar prices of late has more than been counteracted by the sharp rally in internal sugar prices in India. The average wholesale price of sugar in Bombay now stands at about Rs. 1,240 per ton, as against Rs. 1,186 a week before and Rs. 1,152 a month before. After allowing for the full remission of excise duty (Rs. 291.20) and cane cess (Rs. 50.90), the average f.o.b. cost of Indian sugar comes to nearly Rs. 893 per ton, as compared with the London price of Rs. 363. On this basis, the loss on every ton of sugar exported works out to as much as Rs. 535, in addition to the loss of Rs. 342.10 in revenues to the Governments. Naturally, the question arises as to whether it would be worthwhile earning a foreign exchange of Rs. 363 from exporting one ton of sugar which entails a total loss of Rs. 877.

Men and Oil . . . 8

The Fire Officer

Tremendous fires blaze all day long in the oil industry—under steam boilers, inside heaters and in refinery units. All these fires are kept under control by trained operators. It is for the other kind of fire that the industry's fire brigades are on the watch day and night; the accidental blaze that flares up quickly, silently, and without warning. For a spark in an oilfield can cause an outbreak of fire disastrous to life and property. A chance error in a refinery could put the whole plant out of action. Oil fires, because they spread so quickly, must be fought with special apparatus, and the industry's firemen, under their Fire Officers, are specially trained for the job. In the Assam oil industry, fire brigades are on constant duty at all important centres, ready at a moment's notice to tackle this most treacherous enemy. Indian run, the brigades perform a vital service to an important Indian industry.

ASSOCIATED STONE INDUSTRIES (KOTAH) LTD.

CHAIRMAN, SARDAR DALJIT SINGH REVIEWS COMPANY'S GROWTH

THE Thirteenth Annual General Meeting of the Associated Stone Industries (Kotah) Ltd. was held at Ramganjmandi on 25th April 1959. Addressing the shareholders on the occasion, Sardar Daljit Singh, Chairman of the Company, said that the fourteen-year lease period of the Company expires on 30th September 1959. He, however, added that the shareholders need not have any apprehension about the future of the Company as he was confident that the Company's application for renewal of the lease would meet with a favourable response from the authorities.

The following is the text of Sardar Daljit Singh's speech:

"It is my proud privilege to welcome you all this afternoon and to present to you the report of your Directors, and the statement of accounts of your Company, along with the auditor's report for the year ended 30th September 1958.

"The special feature of this assembly is that we are meeting in the last working year of the lease period which would expire on 30th September 1959 and, therefore, I would venture to submit to you in brief the achievements of our Company during these fourteen years which have been characterised equally by our friends and foes as remarkable.

"In 1944, when lime stone mines, now owned by the Company, were being worked by fourteen different contractors, the industry was in a pitiable condition and the internecine trouble was a prime cause for the economic setback in the industry. The resources of the then contractors were very limited and it was unfortunate that those limited resources too were mainly utilised in an unhealthy cut-throat competition between themselves. The product of the mines was facing a serious challenge in the market to stand in competition with other flooring materials available at cheaper rates.

Pooling of Resources

"It was under these conditions that His Highness' Government realised the need of pooling all the resources to so manage the industry as to rationalise the process of extracting the lime stone slabs from the mines in scientific manner which may result in reducing the cost of production and minimise its wastage. In order to achieve due place for the product of these mines situated in the tehsils of Chechat and Ramganjmandi on the industrial map of India, it was thought expedient by the then administrators, that this industry must be placed under one management, and it was in that background that the Kotah State Government changed its policy of leasing out small pits of the mines to different contractors.

"To give the concrete shape to the changed policy of the Kotah Government, your Company took its birth in 1945 and His Highness the Maharao Saheb Bahadur of Kotha was pleased to ordain the grant of lease to the Company for a period of 15 years commencing from 1st October 1944.

"Long-term planning is an essential requisite for making an industrial concern a success. It was only from that point of view that His Highness' Government, at the first instance, granted the lease to the Company for fifteen years with a stipulation that further renewal of the lease shall be made in favour of the Company if it so prefers to continue in the field. It is in the last year of the lease period that we are meeting today to review our achievements, but it should not in any way, give you any apprehension about the future of the Company. I may here state that the Company has made an application to the appropriate authorities for the renewal of the lease. I am confident that the application will be met with due justice and our lease will be renewed.

"We had also big plan to mechanise the system of extraction of the lime stone slabs from the mines, but the exchange problem and the non-availability of the machinery from outside India came in the way of the Company to implement the same and to achieve the desired goal.

"The Company had prepared a scheme as far back as in 1946 to lay out railway line for the transport of its product from the mines to the railway yard, but post-war conditions did not permit us to implement this plan in our working. When we were seriously trying to implement our various schemes for mechanisation, the State Government in 1952 unilaterally revoked the lease of the Company, which was responsible in creating uncertain conditions in our working and we were compelled to give up the implementation of those schemes. This greatly handicapped our progress in various fields of our activities, but we could not help it. It was under the interim stay order given by the Court that we worked during these last seven years.

"I am glad to inform you that, with a view to enabling the employees of the Company to purchase grains and other daily necessities at cheap rates, a co-operative society was started at Ramganjmandi at the instance of the Company. The Company has agreed to give financial assistance to this society and it is hoped that with the efforts of the Company's staff and other workers, this society will give very useful service to the residents of Ramganjmandi in general and employees of the Company in particular.

"It will not be out of place to mention that the ambitious schemes formulated by the Company which are well in consonance with the development of the nation in evolving a socialistic pattern of society, will soon find their implementation after the renewal of our lease becomes a *fait accompli*. The Second Five-year Plan and the recent labour legislations have cast further duty on the Company to accelerate its speed to achieve success in translating its scheme into action.

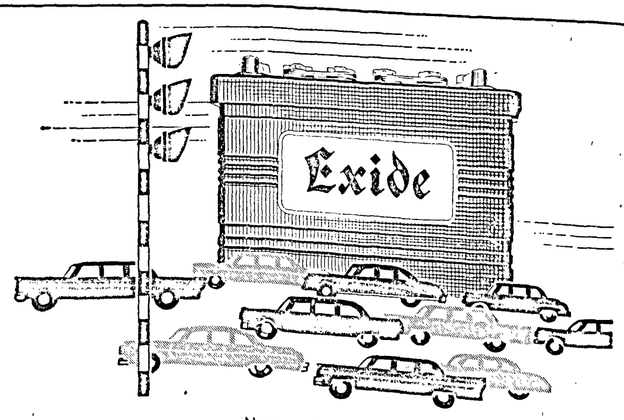
"The Company has planned to construct a township at a cost of Rs. 30 lakhs which shall be named as Asinagar, after the name of the Company. We also propose to shift our office, polish factory, etc., to the site of the proposed new township. The broad-gauge siding lines from Ramganjmandi station to the site of the new township shall also be laid by the Company at the estimated cost of Rs. 5 lakhs. This new township will provide about 600 tenements for the labour employed by the Company and they will be so planned that it may become a model of modern labour colony.

"In the words of our beloved Prime Minister, 'housing is one of the elementary needs of a civilised society. Not only the houses should be built for our people of all classes but they should be built tastefully and beautifully that living in such houses becomes a pleasure....' We are confident that the growth of our industry under the management of the Company would certainly help to meet the aforesaid ideal of our Prime Minister.

"Our Company is one of the few enterprises in the industrially backward State of Rajasthan which has worked with remarkable success so far and has also contributed considerably to augment the revenues of the State. We hope that the Rajasthan Government and its officers will patronise the industry with more sympathetic attitude to help the future growth of the Company.

"Again I wish to place on record, our heartfelt thanks to the Director-in-charge, Shri Hiralal M. Parikh, who has all through guided the destinies of the Company with remarkable skill and untiring efforts. Credit for successfully bringing the present level of the Company largely goes to him. Our thanks are also due to our officers, the members of the staff, labourers and our customers for their active and sincere co-operation to the working of the Company. I also thank the auditors and legal advisers for their valuable and timely advice and guidance."

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting, but is only a part of the said proceedings.



ALWAYS "OFF" TO A QUICK START

No matter how frequently you use the self-starter, your Silver Exide will always bear the load. Special long-lived Porvic Separators of microporous plastic, offer sustained insulation to the battery plates. And the Exide plates of hard-wearing CB 95 alloy, being fully protected, have a really long and useful service life.

Remember, only Silver Exide offers you all these features plus a Hard Rubber Container that is TOUGH, SHOCK RESISTANT and LEAK-PROOF.

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for 'SANFORIZED' REGD TO MK on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

ESTIMATES COMMITTEE ON STATE SHIPPING CORPORATIONS

SUGGESTIONS MADE FOR EXPANSION OF TONNAGE

THE importance of shipping to India's national economy has again been stressed by the Estimates Committee, in its report on the State-owned Eastern Shipping Corporation Ltd. and Western Shipping Corporation (Private) Ltd. Besides emphasising the need for augmenting the tonnage owned by the Corporations, the Committee has made a number of suggestions for increasing the volume of goods carried by them and for improving their organisational structure. More specifically, it has, in effect, advocated the need for giving the authorities in charge of the Corporations a better voice in determining the rates along which they should operate. Among its general recommendations is a suggestion for setting up a separate organisation to evaluate the working of State undertakings.

The Committee prefaces the Report with the observation that the importance of shipping in the development of national economy needs no emphasis, in view of the fact that a national mercantile marine of an adequate size can maintain and safeguard the flow of vital supplies. It adds: "Overseas trade and commerce can thrive only on the foundations of an adequate merchant navy which can assist in the exploration of new markets and expansion of overseas trade." It deplores that, out of India's total overseas trade, valued at Rs. 1,500 crores about 91 per cent. is in the hands of foreign shipping companies and that the annual amount paid by India on the transport of its exports and imports is about Rs. 150 crores. This, the Committee says, is a "serious drain on the foreign exchange resources of the country and it underlines the need for a quick expansion of the national merchant fleet." It notes that the objectives laid down in 1947 by the Sub-Committee of the Reconstruction Policy Committee for achievement within five to seven years, are far from being achieved yet; these included a target of two million tons for Indian shipping for carrying 100 per cent. of coastal trade, 75 per cent. of India's trade with adjacent countries and 50 per cent. of India's distant trades. It is computed that these objectives would need a target of 2.5 million tons (not two million tons, estimated formerly) in view of the fact that the quantum of India's trade has increased.

Target

The Committee has, therefore, suggested that "requirements of shipping may be reviewed in the light of the present trends and the objectives of the shipping policy restated on a realistic basis." If the small target of 900,000 g.r.t., set in the second Plan is achieved, Indian ships may be able to carry about 12 to 15 per cent. of the country's overseas trade and 40 per cent. of its trade with adjacent countries. Commenting on this progress, the Committee observes: "At the rate of progress achieved in the first Five-year Plan and planned for in the second Five-year Plan, it will take more than twenty years to attain even the conservative objectives of acquiring two million tons of shipping for the nation, within which time the rise in the demand for shipping might itself far outstrip the volume of tonnage that might be acquired." The Committee, therefore, hopes that the planners of the third Five-year Plan will, considering the importance of shipping to national economy, and its present inadequacy, give the development of shipping "higher priority than hitherto and greater allocation of resources in order that the objectives of the shipping policy might be attained within a reasonable time."

Having been included in Schedule B of the Industrial Policy Resolution 1956, shipping belongs to the category of industries which will be progressively State-owned and in which the State will generally take the initiative in establishing new undertakings but in which private enterprise will also have the opportunity to develop in the field either on its own or with State participation. The two shipping enterprises in the State sphere are the Eastern Shipping Corporation, set up in 1950, and the Western Shipping Corporation, set up in 1956. The two Corporations together own a fleet of about 60,000 g.r.t. and, by the end of the second Plan, they will have about 112,000 g.r.t. The Committee is not convinced of the desirability or advisability of having two separate Corporations for operating the small fleet they own at present. It recommends that "the feasibility of amalgamating the two Corporations should be considered" and expresses the hope that the "assurance that no additional expenditure would be incurred on maintaining the Corporations separate would be adhered to."

Organisation

On a study of the organisational character of the Corporation, the Committee has taken exception to the practice of appointing Government officials on the Boards of Directors while they continue to be attached to the departments to which they belong. Nor is the Committee convinced that the argument that non-officials would not have any stake in the Corporations if they were appointed to the Board is correct. It feels that, for that matter, it could well be argued that the officials who are appointed on the Boards also do not have any stake in the concerns they are required to administer. The Committee feels that prominent non-officials, drawn from public or business life, would be as much conscious of their reputation as the officials might be, in case anything went wrong when they were at the helm of affairs. The Committee, therefore, feels that what is required is to secure the best talent and experience for the management of public enterprise in the interest of the nation as a whole. The Committee does not, however, suggest that the appointment of Government officials on the Boards should be dispensed with altogether. It feels that while officials known for their administrative ability and qualities of leadership would definitely be of use to the Government undertakings, the present practice of making appointment of officers, who are also entrusted with other departmental duties and are fully occupied with them, with a view to giving representation to certain concerned ministries or departments concerned, is not sound. In its opinion, frequent changes in the composition of the Boards, which such representation often gives rise to, is also not conducive to efficient management of the undertakings and, therefore, efforts should be made to reduce them to the minimum. The Directors should have a fairly long and fixed tenure of office so that there might be continuity and stability on the Boards of the undertakings. The Committee, therefore, recommends that the question be reviewed in a comprehensive manner and a suitable pattern of organisation devised for the management of Government commercial undertakings.

Discussing the routes along which the State-owned Corporations should operate, the Committee emphasises that the responsibility of the Government in this sphere should be limited to laying down a broad policy within which the Corporations should have discretion to select the best and the most profitable routes in accordance with commercial methods. The Western Shipping Corporation owns at present only a tanker, though it is the intention of the Government that it should operate India-Poland and certain other services. The Eastern Shipping Corporation operates East India-Australia, Calcutta-Far East, Bombay-East Africa, Madras-Singapore and India-Andaman routes. The Committee recommends that, if the Corporations have to operate routes for reasons other than economical, then they should be suitably subsidised. These Corporations are not entitled to operate along coastal routes. Since foreign ships also operate along these routes at present, the Committee suggests that the policy under which the public sector does not participate in coastal trade should be re-examined so as to enable the Eastern Shipping Corporation to enter coastal routes. As regards foreign routes, the Committee feels that the mutual exclusion of private companies and Government Corporations in this sphere is not desirable and that any surplus cargo on any of these routes should be lifted by Indian ships, whether they belong to the private or public sector. In other words, it advocates "better co-ordination and co-operation among all the Indian shipping companies belonging to both the sectors."

Tonnage

Emphasising the need for augmenting the tonnage of the State-owned corporations, the Committee deplores that opportunities for acquisition of such tonnage should have been lost for one reason or another. The Committee feels that progress made in the acquisition of tankers by the Western Shipping Corporation is very slow; it now has only one tanker (7,352 g.r.t.), and has placed an order for a new tanker with a Japanese firm. The Eastern Shipping Corporation has eight ships of 52,892 g.r.t. When the ships for which orders have been placed are delivered, the Eastern and Western Shipping Corporations will have a total tonnage of 65,891 and 47,000 respectively. The Committee regrets that, though eight years have passed by since the Eastern Shipping Corporation was set up, its tonnage is still far below the target of 100,000, fixed originally. The Committee was informed that it had not been possible to avail of the attractive opportunity to acquire more ships because, first, the entire financial provision made in the second Five-year Plan for expansion of shipping had been fully committed even before the first year of the second Plan was out and, secondly, the foreign exchange position of the country had also deteriorated. The Committee considers it unfortunate that the country should be losing such a valuable opportunity and, therefore, recommends that the Government might consider the possibility of making some readjustment in the allocation of funds under the second Plan and allot additional funds for acquisition of ships. It was suggested to the Committee that, in building the fleet, the Corporations should aim at maintaining a balance among various kinds of vessels. It was stated that the percentage composition of the fleet would depend to a large extent on the routes and the trades selected and it was suggested that, in arriving at a decision in this regard, the modern trend towards specialist service, in particular, bulk carrier vessels, like tankers, grain carriers, or coal carriers and heavy lift vessels should not be lost sight of. The Committee commends the suggestions for consideration of the Government and the Corporations.

Some aspects of the working of shipping industry in the public sector have come in for criticism at the hands of the Committee. The Eastern Shipping Corporation purchased two ships, the *State of Bombay* and the *State of Madras*, from the Scindia Steam Navigation Company, Ltd. It would now appear that the *State of Bombay* needs to be replaced. The Committee is surprised that it should have become necessary to replace the ship only after

(Continued on page 847)

THE ANDHRA BANK, LIMITED

(ESTABLISHED : 1923)

Annual Report of the Directors for the year ended 31st December, 1958.

Presented to the Shareholders at the 35th Annual General Meeting held at the Registered Office of the Bank, Cantonment Road, Masulipatam, on Monday the 11th May, 1959, at 4-00 p.m.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet of the Bank as at and Profit and Loss Account for the year ended 31st December, 1958. The Auditors' Report also is annexed.

The net profit of the Bank for the year 1958 amounted to Rs. 8,26,276 after providing for contingencies and after transferring Rs. 1,78,030 from the Investment Reserve Account, as this provision is no longer required, the present market value of the securities being much in excess of the book value. To the profit of Rs. 8,26,276 is to be added the balance of Rs. 1,909 remaining in the Profit and Loss Account after the appropriations have been made from the Profits of 1957. The amount thus available for appropriations is Rs. 8,28,185. Your Directors have already made certain appropriations out of this amount and propose making further appropriations, as per details below :

	Rs.
Balance of Profits available, as above	8,28,185
Deduct short provision for taxes of back years	98,680
	7,29,505
Deduct :	
1. Interim Dividend for the half-year ended 30th June, 1958, at the rate of 6 per cent. per annum free of Income-tax	1,02,800
2. Transfer to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	1,51,000
3. Provision for taxes	3,02,000
4. Transfer to Gratuity Fund	5,000
	5,60,800
	1,68,705
Appropriations now proposed :	
To pay a final dividend for the half-year ended 31st December, 1958, at 7 per cent. per annum free of Income-tax, making a total of 6 per cent. per annum fee of Income-tax for the whole year, which will absorb	1,44,500
To carry forward to next account	24,205

The Bank's business continued to be satisfactory during the year under review.

The Official Rate of the Reserve Bank of India remained at 4 per cent. per annum during the year.

New Offices of the Bank were opened at Nizamabad, Repalle, Ramachandrapuram, Proddatur (Cuddapah Dt.) and Tiruppur (Coimbatore Dt.). Two sub-offices at Bhattiprolu and Anaparti were closed during the year since they were found uneconomic.

Under Section 256 of the Companies Act, 1956, read with Article 94 of the Bank's Articles of Association, Messrs. S. Ramachar, D. Bhaskararao, M. Ranganatha Sai, Directors longest in Office, retire by rotation and from the next longest in Office Sri K. S. Dutt has volunteered to retire. The retiring Directors are eligible for reappointment.

You are requested to appoint Auditors to hold Office till the conclusion of the next Annual General Meeting. Messrs. Brahmayya & Co., Ch. V. Lakshmaiah Co., and Bapanaiah & Co., the retiring Auditors are eligible for reappointment.

By Order of the Board,
S. R. Y. SIVARAMA PRASAD BAHADUR,
Chairman.

HYDERABAD, 28th March, 1959.

NEW PRODUCTS AND PROCESSES

New Method for Operating Gastric Ulcer

A NOVEL method for operating on patients suffering from gastric ulcer has been perfected by a Swedish doctor, Dr. Sture Hedenstedt, Lulea. Instead of reducing the volume of the stomach by half or more in the course of a gastric operation, which causes lasting inconvenience to about 50 per cent. of all gastric patients, the Swedish doctor has used a length of some 10-15 cm. (4-6 in.) from the small intestine to replace the removed tissue and retain the stomach volume. Some 100 operations have been performed according to this method since Dr. Hedenstedt first tried it early in 1957 after having learnt about it from a paper by a British surgeon, Dr. Henley. He has modified his British colleague's method, known as "replacement according to Henley," in order to make it suitable for all patients suffering from gastric ulcer. About one-third of his operations are now some two years old and have proved very successful. Another advantage of the method is that it seems to offset the post-operative effect of reduced formation of blood corpuscles formerly a frequent result of gastric operations. The 3-4 per cent. of the patients who suffered from invalidating troubles after the first operation have been reoperated on by Dr. Hedenstedt and have proved to show a surprisingly early recovery.

Novel Metal Polish

A compound which can be used to polish metals which can be applied, it is claimed, without interrupting production has been developed in the U.K. The material, it is said, can be spread on to a bob, or mop. It does not, it is claimed, require any coating of glue and dries very rapidly. Mops treated with the compound are said, for example, to dry in between 30 minutes and 40 minutes. The compound is made in the form of an emulsion. Tests which have been carried out with the compound are said to have shown that it is particularly effective when it is used for polishing titanium, or titanium alloys. It can also be used, however, for polishing a wide variety of different metals.

Dimerised Fatty Acids

A new process for dimerisation of fatty acids from drying and semi-drying oils like linseed, safflower, tobacco has been developed at the Shri Ram Institute for Industrial Research, Delhi. The polymerisation is effected with the help of certain catalysts at temperatures much lower than what are usually necessary. In addition to reducing the reaction time, the improved technique is claimed to completely suppress thermal degradation of fatty acids. Saturated fatty acids which do not take part in polymerisation are later separated by distillation. The process has been studied on a pilot plant scale where batches of 6-8 lbs. of fatty acids have been processed, and sufficient data collected to scale up the unit to commercial size. This product compares favourably with dimerised fatty acids, being marketed by a prominent foreign concern. Conditions for preparing alkyds and polyesters using these finished fatty acids have been standardised and work on preparation of polyamides and similar other products is in progress.

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE ANDHRA BANK LIMITED.

We have audited the foregoing Balance Sheet of the Andhra Bank, Limited as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, with the books of account of the Head Office and Branches, and

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956 ; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

U.S. BANKING AND INVESTMENT OPERATIONS—II

LOAN PROCEDURES—CONSUMER CREDIT

[In our last issue, *vide* pages 768 and 769, we published five papers on U.S. banking practices and their possible adaptation to Indian conditions read at a banking seminar at New Delhi organised by the U.S. Technical Co-operation Mission. We now publish another set of five papers, as the final instalment of the series. These are on the procedures followed by the American banks before and after sanctioning loans and on consumer and personal loans.—ED.]

LOAN NEGOTIATIONS

By B. N. Mehta

Legal Division, Reserve Bank of India

THE position regarding loan negotiations, protective covenants and qualifications of types of collaterals in the U.S. may be summarised as follows:

American banking practices have been fashioned to suit the growth of a developing economy and have subsequently been adjusted to play a vital role in a fully organised economic system. Of these practices, loan negotiations constitute a special feature. What was once the act of loan negotiations has now become a developed science based upon specialisation and technical knowledge. One basic principle underlying negotiations in term lending is that the loans do not serve merely personal purposes but take into account environmental circumstances such as the general economy and the interests of an industry as a whole. This background has served to emphasise certain principles to be followed in loan negotiations, which, stated briefly, are character, capacity, capital, collateral and conditions. Thus the distinctive features are (1) that the transactions are not merely related to narrower interests of the lender but to the broader interests of economy and industry; (2) that the main qualifications for eligibility for loans are the integrity of the borrower and his ability to repay out of profits, and (3) that absence of security is no bar to a loan.

According to American practices, the fundamental attributes of a good credit are good management and earning potential. In India, on the other hand, the major emphasis is on security. The lender always looks to the security, its adequacy, its protection and its perfection. This results in hampering the legitimate activities of the borrower and in a lack of incentive to the lender to follow a loan to its proper application to the intended use and to obtain the desired results.

An allied subject is the system of participation loans where a number of financial institutions join in the grant of loans to one borrower. Such participation loans facilitate loan negotiations in a number of ways, since these loans enable the obtaining of large loans, sharing of risk, participation by units which may not otherwise be in a position to lend, wider control over the borrower's management and avoidance of unnecessary documentation and expenditure.

A further aspect is specialisation in credit techniques which has led to the employment of well trained executives having the necessary background of law, accounting, economics, etc. Such specialisation enables the appraisal of an industrial loan in the perspective of the future.

In America, considerable facilities are available for training in this regard. The difference between Indian and American practices in regard to the above focuses the difference in the basic approach. In the present context of the industrial development of India, a new look can be brought to bear on the subject with the adoption of American practices by introducing (1) provisions for such unsecured finance, laying stress upon the needs of industry, the borrower's ability to serve that industry and his capacity to earn sufficient profits to repay the loan, (2) the system of joint or participation loans, and (3) the necessary facilities for an organised credit investigation system.

So far as protective covenants are concerned, the most frequently used relate to (*a*) maintenance of a net working capital, (*b*) collaterals, if any, or the negative pledge clause, and (*c*) a limitation on the borrower's total debt. Supplementary restrictions are included so as to ensure that the borrower's resources will not be dissipated, that profits will be employed for reduction of the debt and that there will be a continuing accretion to net working capital. Sometimes, the lender will have to place emphasis on the management aspect of the borrower and covenants are included to restrict changes in management or stock-holding and enhancement of salaries and bonuses. To curb the tendency to over-extend plant facilities, a limitation on capital expenditure is imposed. Similarly, in order to assure retention of earnings, limitations are imposed on declaration of dividends and acquisition of capital stock. It is also usual to provide against merger or amalgamation of the borrower with other companies or the sale, transfer or lease of the borrower's undertaking or assets. These covenants are somewhat influenced by the special features of the credit policy followed by American banks. A similar policy can be fruitfully adopted in India, with suitable modifications.

As regards qualification of types of collateral, there is not much difference between the ordinary types of collateral taken in America and in India. What may, however, be followed in India with advantage is the practice of having insurance companies as participants in special loan agreements, which afford certain types of collaterals. Besides, the Uniform Trust Receipts Act in America has enabled bankers to utilise trust receipts as collaterals. The present state of the law in India does not afford any such facility and it would be to the advantage of financial institutions if similar legislation were enacted in India.

In the light of the foregoing observations and having regard to the developing economy of India, the following U.S. practices can be fruitfully followed or adopted:

1. Development of loan negotiations based on the integrity of the borrower and his ability to repay out of profits. Suitable provisions may be made and steps taken to enable the lender to ensure the application of the loans for the proper and intended purpose.

2. Development of organised methods of credit investigation and analysis based upon specialisation and technical analysis of financial statements. This will enable the adoption of techniques viewed in the perspective of the future. For this purpose adequate educational and training facilities may be provided.

3. Encouragement and adoption of participation loans by number of institutions. This would, to a great extent, protect against stringency of credit, provide for easier negotiations and avoid needless documents and expenditure.

4. Enactment of legislation on the lines of the Uniform Trust Receipts Act may be worthwhile.

INVESTIGATION OF LOAN APPLICATIONS

By S. V. Chandavarkar

State Bank of India

The two main objectives of credit policies of banks in the United States of America have been to provide adequate volume of credit to the ever-increasing needs of an expanding economy and to seek to preserve what is considered to be the essence of the American economic system, namely, free competition. They endeavour to encourage and assist in every possible way a competent business man of good character, producer or distributor, provided the loan conforms to their policies, is justifiable in the light of the economic condition of the area and there is no doubt about its recovery. In their effort to achieve the objectives, they have adopted several new innovations, the two outstanding in recent years being Term Loans and Consumer Loans. Credit is provided on a substantial scale to consumers.

However, as trustees of the depositors' funds, banks are not in a position to take more than a reasonably calculated and intelligent risk. All applications for loans are, therefore, thoroughly investigated before decisions are taken.

Character is the foundation of trust. The banker, therefore, at the outset, satisfies himself in regard to the character and integrity of the individual or individuals connected with the management of the business. If he has any doubt whatever, he does not give any further consideration to the application. There is no degree of honesty to a banker.

Experience had shown that business failures were mainly due to management inefficiency. The largest number of failures was due to a junior employee experienced in certain management functions undertaking the control of an entire business. According to Dun and Bradstreet, 90 per cent. of the business failures were due to the lack of management and business ability. It is, therefore, but natural that the banker should attach considerable importance to this credit factor. He ensures that the management has experience in the line of business, the ability to plan and to execute the plan and the capacity to cope with almost any adversity. In the case of a term loan, he further ensures that there will be continuity of good management during the period of the advance and that there is a secondary group of men capable of taking control of the business at any time and conducting it efficiently.

The applicant is required to submit financial statements. They reveal the financial position of the business and indicate how the business is conducted. From the latest balance-sheet, the banker ascertains, *inter alia*, the capital, the net worth (total assets *minus* total debts), the working capital (current assets *minus* current liabilities), the current assets/current liabilities ratio known as the current ratio, the relationship of the applicant's investment (net worth) to the funds contributed by creditors, the sales/receivables ratio, the cost of goods sold/inventory ratio and the relationship of net profits to sales. Balance-sheets of three to five preceding years are also obtained and a comparative study made to see whether the applicant's record of progress has been satisfactory. A banker usually maintains analysis of balance-sheets of other parties in the same line of business. This enables him to arrive at a more precise assessment of the applicant's position.

No loan is granted without an appraisal of the applicant's ability to repay it and an examination of the sources from which it will be repaid. Term loans can only be repaid from earnings. The applicant is, therefore, required to submit an estimate of the future of his business with a record of the past earnings and a projection of his future earnings. The projection is checked by appropriate tests and the banker sees that there is a reasonable relationship between the past and projected sources of funds. He also examines the applicant's contemplated future uses of funds and other sources of funds, if any, and ensures that the applicant will be able to repay the loan without impairing his net working capital. Even though a loan may be secured by collateral or guarantee, no banker looks to it for repayment.

Except in the case of first-class parties and, at times, in the case of smaller parties where the banker has no reservations about the applicants' character, integrity and ability, the banker usually insists on a loan being adequately secured. While investigating the loan application, he verifies that the applicant has a suitable collateral to offer. If a business is owned by a family or a few stock-holders, the guarantee of the principal members of the family or stock-holders in their personal capacities is sought.

The banker also examines the nature of the applicant's business and the purpose of the loan. The product or service supplied by the business financed must meet a public need and there must be ample supply of the required raw materials or of processed or finished goods. In the case of a term loan, the banker makes sure that the position in regard to these factors will continue to be satisfactory during the period of the loan. The banker does not consider a loan justifiable, unless its purpose is to assist the applicant to maintain or improve his competitive position.

The key to successful lending is said to be an effective system of follow up. The banker is vitally concerned with the use to which the borrowed funds are put. Therefore, while considering the other credit factors, he satisfies himself that the applicant keeps his accounts and other records in a systematic manner and that they will be available for inspection whenever required.

It will be observed from the foregoing remarks that a banker is not only expected to acquire proficiency in assessing an individual's character and ability and to be capable of interpreting his financial position from the various statements but also to possess adequate knowledge of the position of the many lines of business or industries and be familiar with the latest business trends and practices. A prominent American banker defined a successful banker as follows:

"A successful banker is composed of about one-fifth accountant, two-fifths lawyer, three-fifths political economist and four-fifths gentleman and scholar—total ten-fifths—double side. Any smaller person may be a pawnbroker or a promotor, not a banker."

FOLLOW-UP BY LENDING BANKS

By R. V. Pandit

State Bank of India

After sanctioning a loan and obtaining the necessary supporting documents, the next step the bank takes is to make sure that the loan is utilised for the purpose for which it was granted. A shrewd banker usually does this by closely watching the account of the borrower and scrutinising all large cheques drawn on it. If any cheques are issued in favour of other financing institutions or stock-brokers or the borrower's own subsidiaries, he at once makes further enquiries with the borrower regarding the nature of these payments.

Short-term loans do not offer much of a problem to a banker so far as follow-up is concerned, as they are more or less of a self-liquidating nature and are generally extended to supplement the borrower's working capital during the season.

Term loans (i.e., loans with a maturity exceeding one year), which are invariably granted for financing fixed assets, on the other hand, call for greater vigilance on the part of the banker, repaid as they are over a longer period and out of earnings after taxes.

In the U.S.A., the follow-up in the case of term loans granted for business purposes, takes the form of maintaining a close watch over the activities of the borrower particularly in regard to (*a*) the due observance of all the affirmative and negative covenants detailed in the loan agreement, and (*b*) calling for and scrutinising periodical reports from the borrower. The reports usually called for are:

(1) Annual financial statement (i.e., balance-sheet), audited by an approved certified public accountant.

(2) Quarterly statements by book-keeper, and

(3) Monthly statements giving information on aging of the receivables, aging of the payables, inventory, cash in hand and with bank, notes payable, and monthly sales.

These statements enable the bank to keep track of the borrower's position and to offer guidance to him if necessity arises.

Other points which receive the attention of the bank manager are:

(1) Is the account actively conducted?

(2) Is the borrower over-trading?

(3) Is the business showing signs of over-expansion?

(4) Is the borrower withdrawing capital for outside interests?

(5) Is he extending credit liberally to customers?

(6) Are obsolete inventories included in current inventory?

(7) Do sales include large "sale returns"? Do the figures represent gross or net sales?

(8) Are interest costs high? (These will indicate other borrowings.)

(9) Are legal charges high? (These may indicate unbusinesslike practices.)

(10) Are taxes being regularly paid?

In addition to analysing monthly statements, the bank manager compares them with Robert Morris Statement Studies of the industry concerned and discusses with the borrower any large variations found in his statements.

Credit reports are periodically obtained from Dun and Bradstreet and/or Credit Bureaus and, if necessary, from other banks too. It is also usual to send round a representative of the Loan Division to the borrower's place of business for obtaining first-hand information on the business or industry and for checking on the trade.

If at any time a weak spot or danger signal is discovered in the affairs of the borrower, the bank takes immediate steps thoroughly to discuss the matter with the borrower, with a view to evolving remedial measures before the problem assumes greater proportions.

Where projections submitted by the borrowers prove incorrect due to changed circumstances, fresh projections are obtained and the repayment programme is suitably revised by mutual consent.

In the case of loans against receivables, the borrower's statements are verified with the books at frequent intervals.

If an instalment due on an instalment loan, personal loan or other type of loan falls in arrears, the bank endeavours to "educate" the borrower concerned in the first place and, only when all attempts fail does the loaning officer pass on the delinquent loan to the "collection department" which then goes after the borrower to recover the outstanding.

TECHNICAL AND OTHER SERVICES

By K. D. Shandilya

State Bank of India

It is a recognised fact that a bank cannot grow and prosper, unless the community which it serves also grows and prospers. With a view to ensuring their own progress, banks in the United States of America adopt dynamic and progressive practices and encourage industry and agricultural diversification through constructive and intelligent granting of credit. Investigation of a loan application and the follow up of the loan after it has been granted, enable the loaning officer to know exactly when and where the shoe pinches and he immediately proceeds with the diagnosis of the trouble. A study of the financial statements of the borrower for the past several years before granting a loan reveals to the loaning officer the past story of the borrower's performance. Will the borrower be able to repay the bank's loan? Has his performance been satisfactory as regards sales and profits earned? Is the industrial concern able to meet competition from other similar concerns? These are some of the questions, which are studied in detail. In this process, the loaning officer is able to find out whether the capital structure of the industrial concern is sound, its sales sufficient in volume, its operations economic and its management efficient; also whether receivables are being promptly collected and creditors regularly paid by the concern. If not, the loaning officer, who is a man of considerable experience and is fully acquainted with the local conditions, discusses with the borrower the particular problems in detail and suggests to the borrower what means he should adopt to set the position right.

Larger industrial concerns have persons of wide and varied experience on their management; they also have the necessary research and statistical departments and are therefore able to look after their affairs themselves. It is mostly to small closely-held corporations in the hands of unseasoned businessmen that the financing banks render valuable technical and other assistance. A few examples will illustrate how this is done.

(*a*) A concern manufacturing glue was doing very well. Later its sales and profits began to decline. The usual follow up of the advance by the financing bank revealed to them that there was something wrong with the concern and the bank during the course of its investigation of the reasons had the product chemically analysed, but nothing wrong was found. The sales manager was, however, found to be very old and rather inefficient. The bank advised the concern to appoint a young and energetic sales manager and to consult an advertising agency. The advertising agency's investigation disclosed that the cartons in which the product was sold were not attractive. This was remedied and the concern is doing very well again and is able effectively to meet competition from similar other concerns in the area.

(*b*) An engineering company has specialised in the manufacture of precision instruments. Despite the fact that the proprietors knew the technical know-how very well and were doing their best to promote sales, the company could not achieve profits usually earned by a concern of its size. In the follow up of the advance, the bank diagnosed their trouble and advised them to engage a competent accountant to look after their operational expenses. In fact, they even recommended a good accountant for the purpose. With the control of the operational expenses by the accountant, the concern is now doing very well. During my interview with the proprietor, he profusely expressed his gratitude to the bank for the assistance extended to him, which was not purely financial.

(*c*) In the case of a radio tube manufacturing company, the financing bank, realising that tube radios were being gradually replaced by transistor radios, advised the company to introduce the manufacture of parts of transistor radios and this proved very profitable to the concern.

An instance of negative assistance will also be useful in illustrating the part played by banks. A customer with the technical know-how and with ample resources to start a business approached a bank for an advance for working capital. The bank after analysing the proposal turned down the loan saying that the articles which the borrower intended to manufacture were out of date. The borrower had not till then realised this fact and felt extremely grateful to the bank for enlightening him on the point.

For rendering the types of assistance, described above, banks have naturally to keep themselves in close touch with production and marketing problems and quite a number of them have even started their own research departments to advise borrowers on labour, statistical and marketing problems. Some of the larger banks have technicians such as engineers and persons conversant with oil industry techniques on their staff and such staff is consulted on the borrowers' problems. Where, however, the banks find that a problem requires consultation with a specialist, the borrowers are suitably guided in this regard.

Another way in which banks have assisted industry considerably is by stimulating sales by granting consumer credit without which sales could not have achieved the present level.

Banks in India can considerably increase their contribution to the rapid development of the country's economy by maintaining closer contacts with their present and prospective borrowers and trying to study and solve their problems not only in the field of finance but, as in the case of the American banks, in other directions also.

CONSUMER AND PERSONAL LOANS

By P. V. Gandhi

Managing Director, Devkaran Nanjee Banking Co., Ltd.

The subject assigned to me is "Consumer and Personal Loans," a most important subject for a banker and particularly for bankers in India, in the critical stage of development in the economy and in the credit and banking system. Yet, the subject is not so easy for popular presentation, but I shall do my best in focussing thought on the broad aspects and significant role of consumer credit in an underdeveloped economy like India. I necessarily draw on the experiences which I have had as a practical banker—not as a theorist—on the role of credit and the functioning of the banking system in India. The observations and study of banking operations in the U.S. which I made as a member of the Banking and Investment Team have thoroughly refreshed my thoughts on the subject and enlightened my views. So, I believe, I speak on the basis of authoritative data and the practical results of the working of the

(*Continued on page 834*)

This is only an announcement for information and not a prospectus and applications are invited on the basis of the prospectus copies whereof are available from the Company's Bankers and Brokers mentioned herein.

Consent of the Centrat Government has been obtained to this Issue by an Order, of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking, of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, Bombay.

An application is being made to the Stock Exchanges of Bombay and Calcutta for permission to deal in the shares now being offered and in due course for an official quotation.

THE INDIAN RAYON CORPORATION LTD.

(INCORPORATED ON 26TH SEPTEMBER 1956 UNDER THE COMPANIES ACT, 1956.)

AUTHORISED CAPITAL .. .. .. Rs. 10,00,00,000

Divided into 4,00,000—7% TAX-FREE Cumulative Redeemable Preference Shares of Rs. 100 each, 4,00,000—Equity Shares of Rs. 100 each and 2,00,000 —Unclassified Shares of Rs. 100 each.

ISSUED CAPITAL .. .. Rs. 2,00,00,000

Divided into 55,000—7% TAX-FREE Cumulative Redeemable Preference Shares of Rs. 100 each and 1,45,000—Equity Shares of Rs. 100 each.

ALREADY ISSUED AND SUBSCRIBED .. Rs. 6,24,100

comprising of 2,070—7% TAX-FREE Cumulative Redeemable Preference Shares of Rs. 100 each and 4,171—Equity Shares of Rs. 100 each (on both of which Rs. 25 per share has been paid).

CAPITAL AGREED TO BE TAKEN UP:

By the Financial and Development Fund Inc., and Messrs. Von Kohorn International Corporation of U.S.A. (suppliers of machinery):		
39,187—Equity Shares of Rs. 100 each	Rs.	39,18,700
By the Promoters, Managing Agents, Directors, Selling Agents and their friends:		
4,930—7% TAX-FREE Cumulative Redeemable Preference Shares of Rs. 100 each ..	Rs.	4,93,000
49,642—Equity Shares of Rs. 100 each	Rs.	49,64,200
	Rs.	93,75,900

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

48,000—7% TAX-FREE Cumulative Redeemable Preference Shares of Rs. 100 each ..	Rs.	48,00,000
52,000—Equity Shares of Rs. 100 each	Rs.	52,00,000
	Rs.	1,00,00,000

AMOUNT PAYABLE IN RESPECT OF SHARES:

The amount payable in respect of both the classes of shares, namely, Preference and Equity, is as follows:

Rs. 12.50 per share on application.

Rs. 12.50 per share on allotment,

and the balance in six equal instalments provided that there shall be an interval of not less than three months each between calls and between the allotment and the first call.

APPLICATION FOR SHARES:

Each application must be for a minimum of 5 shares, either Equity or Preference, or in multiples thereof.

Complete application forms along with payment must be delivered before the closing date of the subscription list to the Bankers of the Company or to the Managing Brokers or Brokers to this Issue or at the Registered Office of the Company. Upcountry drafts or cheques should include appropriate Bank Charges.

Where no allotment is made, the deposit will be returned in full and where a partial allotment is made, the unutilised balance will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted, when due, will render previous payments and shares liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company, during office hours.

The Share certificates will be issued within six months of the date of allotment.

DIRECTORS:

SOLICITORS:

Messrs. AMARCHAND & MANGALDAS, Bombay.

REGISTERED OFFICE:

ALLAHABAD BANK BUILDING, APOLLO STREET, FORT, BOMBAY-1.

OBJECTS OF THE COMPANY

The Company was incorporated on the 26th day of September 1956 with the objects mentioned in the Memorandum of Association and in particular to undertake the manufacture of Viscose Rayon Yarns, other Synthetic Fibres, Yarns and Fabrics and ancillary Chemicals and Products.

MACHINERY AND TECHNICAL SERVICES

The Company has entered into agreements on 2nd October 1958, with (1) Messrs. Von Kohorn International Corporation (who jointly with The Financial and Development Fund Inc., of U.S.A., have agreed to invest in the equity capital of our Company, a sum of U.S. Dollars 825,000 which is equivalent to about Rs. 40 lakhs), (2) Messrs. Von Kohorn International (London) Limited, and (3) Messrs. Von Kohorn Eastern Corporation Limited, under which the entire plant and machinery for the Company's rayon factory at Veraval will be designed and supplied by them from the U.S.A., and U.K.

The Von Kohorn Group of Companies has long experience of building rayon factories all over the world numbering about 40 upto now including Century Rayon at Kalyan, near Bombay.

THE SCOPE AND PROSPECTS

The growing demand for rayon yarn in the country is much larger than the indigenous production capacity. Total consumption of rayon yarn in 1958 was 6,72,78,000 lbs. out of which 3,36,80,000 lbs. were imported. In 1956 consumption had reached a figure of nearly 8,00,00,000 lbs., out of which about 6,00,00,000 lbs. were imported. The restrictions on imports by Government have naturally resulted in a ready demand for Indian Rayon Yarn.

The Planning Commission have estimated the consumption of Viscose Rayon Yarn in the country by 1960/1961 at 80 million lbs. and have fixed the target of production at 60 million lbs. during the same period.

Considering the great scope for expansion of indigenous production, the Government of India has licensed the establishment of a few new units of rayon production in the country in accordance with the recommendations of the Planning Commission. It may be added that even if all the new licensed units go into production by 1960/1961, there will still be a considerable gap between the consumption and production of rayon yarn in India. There will be further scope also for expansion of existing units and of new units being established.

The Rayon Industry, while enjoying a unique scope for expansion, has been receiving protection from Government by the regulation of imports in relation to the capacity of the indigenous units and also by the imposition of protective duties on foreign yarns which ensure profitable returns to the investors in indigenous units. The recent drastic cuts in rayon yarn imports have further widened the scope of the indigenous units.

PLANT CAPACITY

The Company's factory, proposed to be established at Verava, in Saurashtra, is one of such newly licensed units. The licensed capacity of the factory is 10 tons of rayon filament yarn per day.

The first phase of production in the factory is expected to yield about 5 tons of rayon yarn per day. The remaining licensed capacity is proposed to be attained in subsequent phases. Manufacture of Staple Fibre and other Viscose and Synthetic Fibre products may also be undertaken at a later stage.

SELLING ARRANGEMENTS

The Company will have the benefit of the association as Selling Agents of **FORBES FORBES CAMPBELL & CO. PRIVATE LTD.**, a well-known business house of Bombay who have long and wide experience in India as distributors of world-famous foreign rayon and other synthetic yarns. The Company is entering into the necessary agreement with them, appointing them as the Sole Selling Agents of the Company.

INCENTIVE TO RAYON WEAVERS

It is proposed, as an incentive to rayon weavers who subscribe to shares in the present Issue of the Company, that preferential treatment by way of priority in the allocation of rayon yarn to the extent of annual sale value equivalent to their share subscription be given to them.

LOCATION OF THE FACTORY

After a thorough investigation by Experts, a very favourable site at Veraval, in Saurashtra, has been selected for the factory, as it offers important facilities for production of rayon yarn.

WATER SUPPLY

Guaranteed water supply at a reasonable rate, to the extent of 6 to 7 million gallons per day, has been assured by the then State Government by constructing the requisite water works, dam, etc., on the river Hiran in the Gir Forest. The construction of these works is scheduled to be completed before the Company's factory goes into production.

ELECTRIC POWER

Electric Power will be available at the site of the factory from the Shapur Power House which has already commenced generation. The Corporation proposes to further generate its own power to the extent necessary and is rendered economical by the generation of steam for the processing work.

LAND

Land to the extent of about 171 acres has been acquired at Veraval through the State Government and is being developed by the Company. The Company proposes to give five acres of land to the Bombay State Electricity Board, for Veraval Sub-Station, at cost price.

TRANSPORT FACILITIES

Veraval is a sea port adequately equipped for handling heavy cargo. A metre-gauge line of the Western Railway links the docks with the rest of the country and an all-weather road connects it to the other parts of Saurashtra and the rest of India, via Junagadh, Rajkot and Ahmedabad. Veraval is served by the Keshod Airport (through the air services running between Bombay-Saurashtra and Kutch) which is a regular point of call and is about 25 miles from Veraval and is connected by an asphalt road and a concrete highway.

IMPORT LICENCE

The Company has already obtained the Import Licence No. 001190/HQ.C.C.I.C.G.,/A.U. dated 6th May 1957 from the Government of India for the import of plant, machinery and equipment upto a value of Rs. 2,13,00,000 on deferred payment terms.

GOVERNMENT ASSISTANCE

It will be observed from what has been stated above that the Central and State Governments have been extremely helpful and have offered every possible assistance and facility.

CAPITAL OUTLAY

The total cost of the project will be about Rs. 3,32,00,000 estimated as under:

	Rs.
(1) F.O.B. Value of Plant and Machinery	1,76,00,000
(2) Freight, Import Duty, Transport to site, etc.	27,00,000
(3) Technical Assistance	12,00,000
(4) Erection and Implementation Expenses	10,00,000
(5) Lands and Buildings, etc.	45,00,000
(6) Financing Charges	8,71,578
(7) Local Purchase and Fabrication	8,00,000
(8) Working Capital and Reserve for Contingencies	40,78,422
(9) Preliminary Expenses including Brokerage and other share issue expenses	4,50,000
Rs.	3,32,00,000

The Directors are convinced that the Capital Outlay for this project compares favourably with the capital cost of other rayon projects undertaken in our country.

FINANCIAL RESOURCES

	Rs.
(1) Capital subscriptions from Promoters, Directors, Selling Agents, The Financial and Development Fund, Inc. of New York, Von Kohorn International Corporation and friends	1,00,00,000
(2) Capital Subscriptions to be offered to the public	1,00,00,000
(3) Long-term Credits provided by Von Kohorn International (London) Limited, for purchase of Plant and Machinery, excluding 15% payment to be made in October, 1960	1,32,00,000
Rs.	3,32,00,000

MINIMUM SUBSCRIPTION

The Directors will proceed to allotment on the subscription to shares amounting to Rs. 1,35,00,000 inclusive of the shares agreed to be taken up by the promoters, Directors and their friends and the foreign parties as mentioned above.

ESTIMATE OF PROFITS

The existing rayon factories in our country have been making substantial profits and the shareholders of these companies have not only been receiving attractive dividends but have also benefited in the form of capital appreciation.

After a thorough investigation into manufacturing costs, it is estimated on conservative basis that under existing conditions within a short period of the working of the Company's factory, the profits will be sufficient after payment of dividends on Preference Shares, to provide an attractive return to the Equity Shareholders.

SPECIAL BENEFITS

The Company will be entitled to the Special Benefits under the Indian Income-Tax Act with respect to development rebate. It will also enjoy the benefit of Section 15C of the Indian Income-Tax Act whereby profits upto 6% on the employed capital will be exempted from tax for the first five years of operation. It is, therefore, very unlikely that the Company will be liable for Income-tax for the first few years of its operation.

Preliminary Expenses:—The estimated amount of the preliminary expenses including brokerage on share subscriptions is Rs. 4,50,000 out of which a sum of Rs. 84,938 has already been incurred upto 15th day of February 1959.

BROKERAGE

Brokerage at the rate of 1% on the nominal value of each Ordinary and/or Preference Share will be paid to recognised Brokers or Banks on allotment being made in respect of applications bearing the stamp of such Brokers or Banks.

Messrs. Merwanjee Bomanjee Dalal, Bombay, are the Managing Brokers to this Issue and will be in addition entitled to a Brokerage of ½% per Ordinary and/or Preference Shares subscribed by the public.

AUDITORS' REPORT

After the date of Certificate of Commencement of business dated 13th February 1958 the Company has not carried on any business but has incurred certain expenses out of the moneys received in respect of the shares allotted prior to the date of the issue of this Prospectus. The Auditors, Messrs. G. P. Kapadia & Co. and Messrs. Khimji Kunverji & Co., have made a report in that behalf.

SUBSCRIPTION LIST WILL OPEN AT 10 A.M. ON MONDAY, 25th MAY 1959, AND WILL CLOSE AT 1 P.M. ON SATURDAY, 30th MAY 1959

NEW PUBLICATIONS

Nuclear Explosions and Their Effects. By Dr. D. S. Kothari. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, Delhi. Pages : 355. Price: Rs. 7.50

IN the history of scientific progress, no invention has aroused keener controversy and more widespread public concern than the atomic bomb. In post-war years, the nuclear explosions have been the subject of political and scientific discussion. They have always evoked a sense of horror both among the scientific experts and the lay public. True to its pacific traditions, India has always described the military uses of atomic energy, whereas, among the underdeveloped countries, its record in the development of peaceful uses of nuclear power is not inconsiderable. The book under review tries to tell, in as simple a language as a highly technical subject like nuclear science will permit it, the effects of nuclear explosions. The author, Dr. D. S. Kothari of India's Defence Science Organisation, deserves to be congratulated on presenting the subject with minimum technical details, although it should be obvious that, in a book of this kind, such details cannot be kept out. Even so, as Mr. Nehru points out, in his foreword, "the book will give some idea of the world we live in and, even more so, of what the fate of the world is likely to be, if we start playing about with nuclear warfare." He adds:

"I suppose that no one, not even the great experts in this new science, knows definitely what the full results of hydrogen bomb explosions will be. Enough is known, however, to give us some kind of a picture of a war in which these weapons are used. War is associated with death. We have now to face death on a colossal scale and, what is much worse, the genetic effects of these explosions on the present and future generations. Before this prospect, the other problems that face us in this world become relatively unimportant."

In his introductory chapter, the author surveys the effect of the Hiroshima and Nagasaki bombs which is followed by a discussion of fission and fusion explosions and radio activity of fission products. The effects of atomic bomb and high-yield explosions form subjects of two separate chapters. The last two chapters deal with radiological hazards and genetic effects of nuclear explosions.

Neatly got up, the book carries several charts and no less than 12 appendices which deal with some of the more technical aspects of nuclear explosions. This bald summary of the contents of the book can, of course, provide only a very inadequate guidance of the great labour that has gone into the preparation of this work, the study of which must prove rewarding to the men who have in them the power to shape the world's future. The wide international notice which the book now in its second edition, has attracted will be evident from the fact that its first edition was translated in German in 1957 and a Japanese translation is soon to be published by Hosai University, Tokyo. Having been carefully revised and rewritten, the second edition is virtually a new book on the subject. The author succeeds in driving home the point, namely, the colossal destructive potentiality of a nuclear bomb. Here is a vivid description of the devastating effects of the use of nuclear weapons:

"What stands out clearly above everything else is that the range of destruction of high-yield nuclear weapons is truly colossal. The multiplication factor, in comparison to the devastation caused by conventional weapons, is so big that it becomes extremely difficult to appreciate and assess the seriousness and peril of the new situation. Think of a 20-megaton bomb. It releases energy which is of the same order as that of a large earthquake or a hurricane: its energy is equal to that of 3 million tons of coal, and is about 2 per cent. of the total annual output of electrical energy in the world. If this bomb were to be made from conventional explosives, the mere cost of the explosives would be no less than £1,000 million. In terms of destructive power, a nuclear weapon is the cheapest thing the world has yet seen—cheaper than conventional weapons by a factor of hundreds, if not thousands. The target that matches this weapon is a huge city: one single weapon would suffice by its blast effect alone to obliterate any metropolis. By sheer logic of the situation, megaton bombs and cities cannot co-exist for a long time. The very presence of these hideous weapons of colossal mass destruction hanging over mankind creates a state which is too precarious and too unstable to exclude the possibility—in fact, much more than mere possibility—of the occurrence of some unpredictable 'spontaneous event' or accidental happening—a sort of *political Brownian motion*, to use an analogy from molecular physics—culminating in a full-scale nuclear war."

The stark reality of the vast destructive power of the nuclear bomb must make man pause and consider whether he would allow human civilisation to survive the invention or turn himself into a Frankenstein, the victim of the monster he has created.

Forward Markets Bulletin. Edited by P. A. Bhaskar Rao. Issued by the Forward Markets Commission, Government of India, "Everest," 100, Marine Drive, Bombay-2. Pages : 116. Price: Rs. 2.00

This monthly bulletin is a welcome addition to the technical literature on market trends in India. It aims at presenting in an integrated form all factual data relating to forward markets in different commodities in the country and focussing attention on the problems relating to their regulation.

The maiden issue contains an interesting article on regulation of forward markets by Mr. W. R. Natu, Chairman of the Forward Markets Commission, wherein he points out the principal benefits of forward markets and underlines the responsibilities of the various trade associations and the Commission in regulating them. Also included in this issue are a general review of the trend of forward markets during the first quarter of the year, a note on the working of some of the principal commodity exchanges and a brief resume of the action taken by the Commission under the Forward (Contracts) Regulation Act, 1952.

The most useful section of the *Bulletin* is the one on current statistics giving detailed and exhaustive information regarding production, price, imports and exports of the main commodities. One, however, wonders whether, in a publication dated March 1959, statistics relating to a later period than end-January could not have been given, though it must be said that it contains more up-to-date data than most other official publications. The *Bulletin* will be useful to all persons interested in forward trading including research workers in this field.

Industrial India Annual 1958-59. Edited by S. T. Chary, United India Building, Sir P. M. Road, Bombay-1. Pages: 246. Price: Rs. 3.50

This publication serves a very sumptuous fare of interesting articles. The long list of contributors includes such well-known personalities as Dr. Erhard, Vice-Chairman, Federal Republic of Germany, Messrs. C. V. Narasimhan, erstwhile Executive Secretary, E.C.A.F.E., Eric Wyndham White, Executive Secretary, G.A.T.T., B. R. Sen, Director General, F.A.O., S. K. Patil, Jagjivan Ram, Murarji J. Vaidya, Ramnath A. Podar, Lakshmipat Singhania, Lala Charat Ram, V. K. R. Menon, P. R. Brahmananda, to mention only a few.

The articles fall under three broad headings. The general section carries contributions on topics of general economic interest, while in the technical and review sections are included articles on and surveys of important industries. A separate section deals with economic and industrial trends in Japan.

Leading the 74 articles contained in the *Annual* is the editorial which analyses the basic inter-relation between nationalism, economic development and political democracy. The view it expounds is that the aspirations of the peoples of underdeveloped countries for a better life could be realised only if the foundations of a prosperous society are laid through planned economic development. The journal feels that, in India, if the masses, with all their limitations, could be organised for a sustained political struggle against their alien masters, there is no reason why they could not be rallied for an economic struggle for their own betterment.

EXPORT RISKS INSURANCE

PROGRESS AND PROBLEMS

THE Export Risks Insurance Corporation of India, which was established on 4th October 1957 and commenced business 10 days later, has now completed over a year and a half. This is, indeed, too short a period for a pioneer institution like the Corporation, the first to underwrite commercial and political risks of export in the country, to make any considerable headway, especially as its functioning depends as much on the exporters' appreciation of its role and usefulness to themselves as its capacity to make its services attractive to them. It is a common experience of an institution of this kind that, while traders' understanding of its role is not forthcoming in sufficient measure, due probably to inadequate appreciation of its advantages or to reluctance to avail themselves of a service whose benefits they have not experienced, the institution is not prepared to adopt practices to attract traders which might endanger its financial position. If the working results of the Corporation during the first year and a half is not as good as one would wish it to be, the reason is that the Corporation has had to face the very same dilemma. Nevertheless, the trend of business and the increasing popularity of the Corporation with the trade surely indicates that the initial difficulties are being gradually got over.

Business Done

During the six-month period ended 31st March 1959, the Corporation issued 108 policies, covering risks of shipments and contracts valued at Rs. 2.05 crores, as compared with 146 policies issued during the whole of the first year, covering risks of shipments and contracts valued at Rs. 1.30 crore. Of these, 54 policies originated from Bombay and 29 from Calcutta. The balance was shared by other important exporting centres in the country. The large share of Bombay would appear to be probably due to the fact that, since the Corporation is located in Bombay, exporters here are in a better position to avail themselves of its services. In order to enable it to reach out more easily to exporters in other centres, the Corporation recently opened offices in Madras and Calcutta.

The premium income has also registered a rise commensurate with the increase in the volume of business. During the six months ended 31st March 1959, premium income aggregated Rs. 73,500, as against 43,000 during the first year, representing an increase of over 70 per cent.

Although the premium income and the number of policies issued have shown a substantial rise, in absolute terms, they are surely very small, when considered in relation to the total value of India's export trade. There are several factors which have prevented a rapid increase in the business of the Corporation. In the first place, the trade insists on selective coverage of risks. Exporters, who ship goods to various countries, want to insure consignments to certain destinations only and not to others. For instance, they might want coverage for risks on exports to the politically unstable countries of West Asia, while shipments to countries like the U.S., U.K. and West Germany, which are considered safe, are sought to be exempted. This, obviously, is a proposition which the Corporation, depending, as it has to, on the law of averages in the matter of coverage of risks, cannot accept. Experience has also not proved that shipments to the so-called "safe" countries are not attended by such risks as the consignee's failure to take delivery, changes in import policies and foreign exchange regulations. But the Corporation has tried to be as accommodating as possible, consistent with considerations of financial prudence. It has, for instance, agreed to exempt exports to one or two countries on individual merit out of a total of 10 or 15 countries to which the articles may have been consigned.

Premium Rates

Secondly, there is the problem of premium rates. Exporters plead that the premium rates charged by the Corporation should be reduced, especially since the profit margin on exports is small. The Corporation, in quoting the premium, does not take into account the profit margin. It is concerned only with the risks involved and the premiums may be high or low according as the risks are large or small. Since no reasonably scientific determination of risks is possible, the sufficiency or otherwise of premiums can be ascertained only on the basis of actual working results. There is also no precedent to go by in the fixation of premium rates.

The rates of premium charged by export risks insurers in other countries are not only not published but they are treated as strictly confidential. Even the policyholder is required to give an undertaking that the fact of his having insured and the premium paid by him would be kept confidential. He may, however, in confidence, inform his own banker of the fact of insurance to enable him to obtain finances. Premium rates have been worked out by the Corporation after taking into consideration the type of risks and their causes, the markets to which the goods are exported, the type of goods, the period for which the exports are covered, past experience, of the exporter and the spread of risks offered by him for insurance and the expenses of management. Only after they have been in force for some time, one could say whether the rates have been high or low. Its sufficiency or otherwise cannot be judged on the basis of its working during a year or two. The Corporation, therefore, maintains that a reduction in premium rates at present is not advisable, considering the need for putting it on firm financial foundations.

Another demand made by the trade, which the Corporation finds it difficult to comply with, is that risks of rejection of consignments on grounds of quality should also be covered. The Corporation feels that this would not be possible, unless a system of pre-shipment inspection satisfactory to the Corporation is established. Pre-shipment inspection now made by some chambers of commerce and other associations has been found to be not entirely foolproof. The trade also insists that the Corporation pay the claim on the rejection of a consignment by a buyer without the exporter having to establish the extent of the loss. This is not acceptable to the Corporation, although it is willing, and indeed does, help exporters in finding other parties for buying the rejected consignments.

BONUS FOR L.I.C. STAFF

The Life Insurance Corporation of India and the All-India Insurance Employees' Association have concluded a provisional agreement under which the Corporation employees in the supervisory, clerical and subordinate grades will be paid a yearly cash bonus at the rate of one and a half times the basic salary. The agreement covers five years from 1957. The free insurance scheme now in force will be withdrawn and the employees who have availed of it and who desire its continuance will be issued an individual policy under the Corporation's staff insurance scheme for an identical amount and term. The agreement also provides for "a term assurance scheme" for employees in the supervisory, clerical and subordinate grades Under the scheme, the insurance amount will be payable only in case of death of the employees while in service.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1958 and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and to sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

RAY & RAY,

PROGRESS OF GLASS INDUSTRY

NEED FOR UTILISING THE LARGE SURPLUS CAPACITY

MODERN glass industry in India can be regarded as of comparatively recent origin. The turn of the century witnessed the establishment of a number of large-scale units on modern lines, particularly in U.P., Bengal and Bombay. During the past fifty years, the industry underwent many ups and downs, booming in periods of war-time scarcity and languishing in peace-time, thanks to foreign competition. Of late, however, the industry appears to have come into its own through expansion and diversification of production and improvement in quality. Production of glass and glasswares rose from about 87,000 tons in 1950 to about 158,000 tons in 1957 and about 180,000 tons in 1958. This increase was shared by almost all the items; it was remarkable in the case of sheet glass, table and pressed ware, thermos flasks and safety glass. Besides, the industry has sought to reorganise its structure and methods of production by replacing mouth-blowing process by semi-automatic, and progressively to fully automatic, machines.

This expansion and technological progress in the industry, as Mr. P. N. Talukdar pointed out in his presidential address at the fourteenth annual general meeting of the Bengal Manufacturers' Association, held at Calcutta a fortnight ago, was made possible by the rapidly growing demand for glass goods, the greater emphasis given by the producers on precision with a view to meeting the requirements of both industrial and domestic consumers, and the economies of large-scale production and quality-consciousness amongst consumers. The restrictions on imports of glass products have also greatly helped the industry. In view of the developmental efforts in the country, the demand for the products of glass manufactures from industries such as automobiles, railways, housing, chemicals, pharmaceuticals and cosmetics is bound to grow in the years to come. Given greater attention to quality and adaptability to changing requirements of the day, the industry should be in a position to compete effectively even in foreign markets which are within easy reach of this country.

Installed Capacity

Although the trend of production and progress of modernisation have been satisfactory, all is not well with the industry. As the installed capacity has increased *pari passu* with production—at present it is well above 3.50 lakh tons—the industry is confronted with the problem of surplus capacity. According to Mr. Talukdar, the unutilised capacity in the industry in 1958, despite phenomenal increase in production, was as high as 50 per cent., as against 44.7 per cent. in 1947. Accumulation of such heavy unused capacity, Mr. Talukdar observed, invariably inflated the overhead cost and, thereby weakened the competitive strength of the industry. He added that this was particularly ominous for an industry which depended for the disposal of the bulk of its products on other industries, to which "cheapness, consistently with quality, is of utmost importance." Another weakness of the glass industry, to which Mr. Talukdar drew attention, is undue concentration of capacity in such traditional items as bottles and phials, tableware and pressedware as well as lampware, while the capacity in respect of such items as laboratory glassware has not come up even to the original estimate. He, therefore, urged the licensing authorities to so scrutinise and make suitable adjustments in the Plan as to promote the production of scientific and laboratory glassware and apparatus to meet the enhanced requirements in these fields. This is a very pertinent suggestion, which the authorities would do well to note and implement.

Mr. Talukdar made particular reference to some of special problems affecting the industry. He strongly pleaded for a proper appreciation by the authorities of the fact that the glass industry was one of the continuous process industries where furnaces had to be regularly fed with fuel to maintain a constant temperature at a high level to avert any breakdown. Secondly, the industry consumes raw materials, fuels and chemicals in great bulk. These have to be brought from long distances to the factories in West Bengal. Again, the finished products have to be sent all over the country. Consequently, both in bringing the raw materials, stores, etc., and distributing the manufactured goods, long haulages are involved. Then, there is the susceptibility to heavy breakages. All this makes the cost of production high and inflexible.

Some of the important foreign chemicals consumed by the industry are dense soda ash, borax and solenium. The restriction on imports of these chemicals and the consequential shortage in their supply have inevitably led to sharp increase in prices and have affected the cost structure of the industry. The use of inferior substitutes, such as light soda ash and cullets leads to a deterioration in quality. Mr. Talukdar, therefore, called upon the Government not only to liberalise imports of essential raw materials but also allow actual users licences for their full requirements.

Referring to indigenous raw materials, such as sand, lime, dolomite, felspar, Mr. Talukdar pointed out that supplies had been highly irregular owing principally to operational limitations of the railways. He also drew attention to the fact that, though it had been demonstrated by test loading at the time of investigation by the Railway Freight Structure Enquiry Committee that the minimum weight condition varied from 120 to 160 maunds, for registration of indents for wagons it had been fixed, with effect from October last, at 300 maunds for glassware under Division 'C' in the name of greater utilisation of wagon space. As a result, he said, the industry has either to forgo movement of some bulky items like chimneys and jars or pay additional freight on the basis of "smalls." Further, the enhancement of freight surcharge on "smalls" from 6¼ per cent. to 10 per cent. and the reduction of the minimum weight for "smalls" from 20 maunds to 10 maunds had discouraged the transport of small consignments.

Fuels

Alluding to the difficulties experienced by the industry with regard to fuels, Mr. Talukdar said that the recent revision of prices of coal naturally affected the industry adversely. The only remedy for recurring coal shortage, was to open "coal dumps" in convenient centres under the auspices of the Association. He disclosed that the Ministry of Railways had agreed to consider such facilities as waiver of immediate collection of freight on coal transported to the dumps. He touched upon the possibility of using furnace oil as fuel instead of coal and the proposed pool price system for furnace oil. In this connection, he observed:

"Increased use of furnace oil as a substitute for coal has been suggested to conserve coal and also minimise the strain on transport system for movement of coal. The Petroleum Consumers' Advisory Council has already mooted the idea of having pool price for furnace oil in the country, the total production of which at the refineries is reported to exceed the current internal demand. In so far as the glass industry is concerned, this suggestion does not have much relevance in view of the concentration of the glass industry in the port towns of Calcutta and Bombay. Only a few glass factories of importance are located away from the ports. Already, the glass factories in West Bengal are paying a disproportionately high price for furnace oil, and the fixation of a pool price, which is bound to be higher than the prevailing prices at the port towns, will adversely affect the factories in Calcutta and Bombay, while at the same time additional consumption in areas far off from ports will not be anything significant. The best way of promoting consumption of furnace oil is to bring down the supply price. With the establishment of refineries, the industry can quite legitimately expect this privilege."

Probably some of these problems highlighted by Mr. Talukdar account, to a large extent, for the declining volume of exports of glass and glasswares. In the second Plan, the annual average exports of these goods was estimated at about Rs. 50 lakhs. Far from this target being attained, there has been a drastic decline in exports from about Rs. 41.53 lakhs in 1951-52 to about Rs. 21.98 lakhs in 1957 and Rs. 19.71 lakhs last year. In order to improve this state of affairs, Mr. Talukdar suggested that the amount of drawback of import duties now available on glass goods should be enhanced from Rs. 21.25 to at least Rs. 25.00. No doubt, there is, as he pointed out, very good scope for export of such items as sheet glass, bottles and phials, glass mirrors and fancy wares to adjacent countries like Pakistan, Burma, Ceylon, the Far East and the Middle East. Indian-made glass goods, however, will find it difficult to enter these markets unless efforts are made to bring down the cost of production and offer them at competitive prices. Needless to say that sustained attention should be devoted to improving quality as also to organising integrated publicity measures abroad. These steps will, in the long run, pay rich dividends but some adjustments, if not sacrifices, on the part of both the manufacturers and the Government are inevitable in the initial stages.

HYDROQUINONE INDUSTRY

The Tariff Commission has taken up for consideration the question of continuance of protection to the hydroquinone industry beyond 31st December 1959. Opening the public enquiry on the 5th inst., at Bombay, Mr. C. Ramasubban, Chairman of the Commission, gave a brief account of the present position and problems of the industry. Hydroquinone, utilised by the film processing laboratories, is still a nascent industry in the country. The manufacturers have asked for protection mainly on the ground that, as compared with their foreign confreres, the indigenous industry is very small. The domestic producers have held that the future growth of the industry cannot be ensured, unless it is afforded substantial and prolonged tariff protection.

The hydroquinone industry, it may be recalled, has been enjoying protection for the past eight years. From July 1951 to July 1953, protection for the industry was at the rate of 27.3 per cent. *ad valorem* preferential and 37.8 per cent. *ad valorem* standard. These rates were raised to 50 per cent. and 60 per cent., respectively, in August 1953 and retained in the third tariff enquiry to last up to the end of December 1959.

Under the protective shade, the industry, which is made up of two units, has made substantial progress. The Satyadev Chemicals Ltd., Baroda, one of the two units, has stepped up its annual installed capacity to 42,000 lbs. by 1957. Its production also has risen from a mere 771 lbs. in 1951 to 37,361 lbs. in 1958. The Kesar Sugar Works Ltd., Bombay, which had a rated capacity of 72,600 lbs. during 1953-54, suspended production for some time but resumed it in 1955, maintaining a steady rate of output since then. In its last report in 1955, the Commission estimated the domestic demand at 40,000 lbs. per annum. This was expected to go up in the following years. Its expectation has materialised, the consumption in 1958 having been no less than 50,000 lbs., the bulk of which was supplied by the domestic industry. We are told that consumers are generally satisfied with the quality of the indigenous product. Tests have shown that it is as good as the imported material.

The principal raw materials used in the manufacture of hydroquinone are aniline, sulphuric acid, manganese dioxide and iron powder. Of these, aniline alone has to be imported. It is, however, understood that the Kesar Sugar Works is importing iron powder. The Tariff Commission will examine to see presently whether the Company cannot use the indigenously available iron powder, without impairing the quality of its product.

The domestic industry, it must be admitted, stands to gain much from the restricted import policy being pursued by the Government. In fact, the import of hydroquinone has been completely banned since October 1957. It is for the industry fully to utilise this opportunity to expand production, improve quality and thus strengthen and stabilise its foundation. Mr. C. Ramasubban, Chairman of the Commission, did well to draw the attention of the indigenous producers to the need for striving to reduce costs and find outlets in the export market. This is all the more essential as the demand for hydroquinone is substantially lower than the industry's rated capacity, making it difficult to function economically.

WHEAT UTILISATION

The five major wheat exporting nations of the world have agreed to establish immediately a Wheat Utilisation Committee which will try to find means of improving and adding to the programme for the distribution of wheat from reserve supplies to meet the urgent need of food-short nations. The U.S. Secretary of Agriculture, Mr. Benson, announced the formation of this committee following a two-day "food-for-peace" conference at Washington of ministers of Australia, Argentina, Canada, France and the U.S. Also present at the conference was Mr. B. R. Sen, Director-General of the Food and Agriculture Organisation (F.A.O.) of the United Nations. Mr. Benson said the committee probably will hold its first meeting in June, in the United States or Canada.

The first annual report of the Bombay Productivity Council for 1958-59 enumerates the various activities and work done by Bombay Productivity Council in the first year of its inception. The Council has conducted an advanced course on work study for senior technical personnel selected from a number of industrial concerns in Bombay, organised a course on statistical methods in engineering and conducted a field investigation on job evalution in six different engineering factories covering about 350 jobs. It also conducted two seminars on workers and productivity on labour participation in management and job evaluation as a wage administrative technique in which experts and specialists in the line took part.

ALIND
KER-AL-LITE

For all house and factory wiring applications, use ALIND KER-AL-LITE ... the new polythene-insulated, polyvinyl chloride (PVC) sheathed building wire.

ALIND KER-AL-LITE is manufactured to BS 2791: 1956 for aluminium conductors and BS 1557: 1954 for polythene insulation and PVC sheathing.

Approved by the Directorate General of Supplies and Disposals, also by Kerala, Madras, Andhra and Orissa States and project authorities and electricity undertakings in various States.

GUEST, KEEN, WILLIAMS TO EXPAND ITS FIELD OF ACTIVITY

SANKEY ELECTRICALS TO BE ACQUIRED

THE shares of Guest, Keen, Williams, Ltd. have had a meteoric rise in their market value during the past two years, having advanced to a peak of Rs. 41.50 (face value Rs. 10) last week-end, as compared with their issue price of Rs. 20 in November 1956. Thus, the capital gained has been more than 100 per cent. It may be noted here that a week ago they were standing at Rs. 39.50 and at Rs. 37.75 at the end of March. They were hovering around the last mentioned rate for some months after having been lifted from Rs. 30.50 a year ago and Rs. 28.62 at the beginning of 1958. Investors all over India seem to have a fancy for this scrip, having regard to the growth prospect for this Company, following reports for some time now that the Company proposes to expand its field of activity. These reports have now been confirmed by the Directors who have announced that the Company has decided to acquire the entire share capital of Sankey Electrical Stampings Private Ltd., Calcutta, the leading manufacturers in India of electrical stampings and laminations. The latter Company also specialises in precision pressings for industries other than electrical.

Subject to the consent of the Controller of Capital Issues, Guest, Keen, Williams, Ltd. has offered to acquire the whole of the share capital of Sankey Electrical Stampings, consisting of 177,334 ordinary shares of Rs. 100 each, in exchange for 476,850 ordinary shares of Rs. 10 each of G.K.W. The basis of this exchange is an independent valuation of the shares of Sankeys by Messrs. Price, Waterhouse, Peat & Co., chartered accountants, and the market price, as on 13th April 1959, of G.K.W., as certified by Messrs. Place, Siddons and Gough, share and stock-brokers, Calcutta. The market price on that day (13th April) of G.K.W. shares was Rs. 40.75 per share, on the basis of which the total cost of this acquisition works out to over Rs. 1.94 crore. At present, the shares of Sankey Electricals are held between Messrs. Joseph Sankey and Sons Ltd., of England, and the Tata Iron and Steel Company, Ltd., Bombay. The majority of the shares is held by the former firm, which is itself a wholly-owned subsidiary of Guest, Keen and Nettlefolds Ltd., England, the majority shareholder of G.K.W.

Sankey Electrical Stampings Private Ltd. started its manufacturing activity in Bombay in 1943 and built up its own modern works in Bhandup. In 1949, it started another works in Calcutta, which, together with the Bhandup works in Bombay, has been expanded considerably during the last few years. The latest addition to its manufacturing capacity is a works at Bangalore, which will come into production this year. The business of Sankey Electricals has thus been developed and expanded carefully during the last 15 years. Its financial results during the last five years have been encouraging, the net profit (after providing for depreciation and taxation) having risen from Rs. 5.03 lakhs in 1954 to Rs. 19.74 lakhs. The Directors of G.K.W. consider that the business of Sankey Electricals can be conveniently combined with that of G.K.W., which will thus obtain entry into the electrical engineering industry, "a field promising of substantial development and of good profit-earning possibilities.

Guest, Keen, Williams, Ltd. is already having a wide range of manufacturing activity in the engineering field and its production and sales have grown considerably during the last few years. In 1958, for instance, the Company's sales rose by Rs. 1.18 crore to Rs. 10.25 crores; they have gone up more than threefold in the past four years. The expansion in turnover is not, however, reflected in the earnings. The gross profit, which had shrunk from Rs. 1.71 crore (in 1956) to Rs. 1.61 crore in 1957, has further declined to Rs. 1.55 crore in 1958, on account of the persistent rise in operating costs. During the year under review alone, these costs have gone up by Rs. 1.16 crore to Rs. 8.71 crores. After raising the provision for depreciation from Rs. 17.91 lakhs to Rs. 22.68 lakhs and that for current taxation from Rs. 72 lakhs to Rs. 74.20 lakhs (a part of which—Rs. 1.71 lakh to be precise, as against Rs. 5.76 lakhs—is drawn from the taxation equalisation reserve), the net profit stands lower at Rs. 60.30 lakhs, as against Rs. 65.82 lakhs. Out of this, a sum of Rs. 2.59 lakhs has been transferred to the additional depreciation reserve (the corresponding sum in respect of 1957 being Rs. 2.45 lakhs), Rs. 8.42 lakhs to the development rebate reserve (as against *nil*) and only Rs. 1.36 lakh (Rs. 25.91 lakhs) to the general reserve. The debenture issue expenses written off from the profit amount to Rs. 7.14 lakhs. The dividend is unchanged at Rs. 2 per share (or 20 per cent.), of which the interim distribution was 80 nP per share, absorbing Rs. 40 lakhs.

The Company's paid-up capital is unchanged at Rs. 2 crores, all in ordinary shares of Rs. 10 each. The reserves (including share premium amounting to Rs. 58.94 lakhs collected at the time of the public issue of shares in November 1956) stand at Rs. 2.13 crores. The growth in the Company's activity is reflected in the rise in bank overdraft (secured by the hypothecation of stocks) from Rs. 92.70 lakhs to Rs. 1.16 crore. In addition to the larger working capital provided by bank facilities, the Company has a debenture loan to the tune of Rs. 1.50 crore. This was raised in September last to finance its various development projects. The current liabilities and provisions, excluding the aforesaid bank overdraft, aggregate Rs. 3.33 crores, which, however, are lower as compared with those (Rs. 4.59 crores) a year before. There has been an addition of Rs. 57.70 lakhs to the gross block, bringing the total value at the end of the year to Rs. 4.45 crores, the depreciation provided on this being Rs. 1.89 crore. Projects in course of completion and development schemes aggregate Rs. 2.51 crores. Trade investments account for Rs. 6.05 lakhs. Current assets are Rs. 4.99 crores, as against Rs. 6.12 crores a year before.

Even at the current high market value of Rs. 41 *cum-div.* (final) the Company's shares provide a yield of 5.0 per cent. per annum, which is not low, having regard to the growth potentialities of the Company and current ideas on equity yields.

METAL CORPORATION OF INDIA

The shares of the Metal Corporation of India Ltd. provided a firm feature in the Calcutta market recently with a sharp rise from Rs. 10.37 at the end of March to a high of Rs. 15.12 early this month. They are being currently placed at Rs. 13.37 on heavy profit-taking. A year ago, the shares were neglected even at a discount of Rs. 3.

The firm trend was a sequel to reports about the Company's expansion programme. It proposes to establish a zinc smelter and to expand the working of its lead-zinc deposits at Zawar in Rajasthan in collaboration with the Dio Tinto Company, Ltd., an international metal company, with its registered office in London. An agreement has been reached between the two firms for providing technical and commercial services to the Indian Company. The agreement is to be ratified by the shareholders of the Metal Corporation at their meeting to be held on the 27th inst.

The Metal Corporation also proposes to issue 1,300,000 new ordinary shares of Rs. 10 each and 100,000 six per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. Both these issues will be made at par. The Rio Tinto has agreed to take up 600,000 ordinary shares and the Indian Steel and Wire Products Ltd., Calcutta, will subscribe to a similar extent. The balance of the 100,000 ordinary shares and the entire preference shares will be offered to the existing shareholders of the Company or to the public at the discretion of the Directors. The Rio Tinto will also make available loans to the Indian firm in accordance with arrangements made with the Government of India.

The Metal Corporation of India was formed particularly for the purpose of acquiring the assets of the Eastern Smelting and Refining Company, Ltd., Calcutta, to carry on the business of lead ore mining and smelting and other non-ferrous mining and metallurgical operations. The smelting works is situated at Tundoo near Katrasgarh, Eastern Railway. The factory is fully equipped for a regular production of nearly 6,000 tons of lead per annum.

The Company is developing the extensive lead, zinc and silver deposits at Zawar in Udaipur, partially developed by the Central Government. Its paid-up capital, as on 31st March 1958, is Rs. 57 lakhs, made up of 500,000 ordinary shares of Rs. 10 each and 7,000 5 per cent. tax-free cumulative preference shares of Rs. 100 each. It has paid dividend on its ordinary shares only once (for 1952) during the last fifteen years of its history.

The Rio Tinto has investments in holding subsidiaries in Canada, Africa and Australia and exploration services in Britain, Canada, U.S., Africa, and Australia. It has also interests in copper mining companies in Northern Rhodesia.

PROFIT OF SHIVRAJPUR SLIGHTLY LOWER

SHORT-TERM OUTLOOK NOT ENCOURAGING

IT is common knowledge that the manganese industry has had a depressing period during the past year, on account of the setback suffered by the steel industry in the U.S. and elsewhere. As an important exporter of manganese ore, India was naturally affected by this development. The situation was aggravated by keen competition from other countries and by the heavy burden of export duty and railway freight. As a result of repeated representations made by the export trade, the export duty was reduced in February 1958. But conditions did not improve and the Government abolished, late in November, this impost on all grades of ore, but enough damage had already been done to the industry. The little benefit which the industry could have gained was affected by the enhancement of the railway freight with effect from 1st October 1958. Strong representations made by the trade have not so far brought any favourable response from the Railway Board.

Viewed against this background, the financial results of the Shivrajpur Syndicate Ltd. for the year ended 30th November 1958 can be considered satisfactory and justify the Directors' recommendation to maintain the distribution to the shareholders. The gross profit for the year, at Rs. 33.26 lakhs, shows a drop of only Rs. 3.87 lakhs and is relatively small as compared with the decline of Rs. 13.08 lakhs suffered in the previous year. The results would have been worse but for the curtailment of the Company's mining operations in the latter half of the year and the forward sales contracted in earlier years. The net profit, which had shrunk from Rs. 18.47 lakhs to Rs. 12.12 lakhs in 1956-57, has fallen further to Rs. 11.57 lakhs in the year under review.

Out of the net profit, the Directors have transferred Rs. 2.75 lakhs to the development rebate reserve, as against *nil* in the previous year and have also raised the allocation to the dividend equalisation reserve from Rs. 2 lakhs to Rs. 3 lakhs. No amount has been added to the mine development and prospecting reserve, which had received Rs. 3.30 lakhs out of the profit for 1956-57. On the contrary, a sum of Rs. 2.73 lakhs has been drawn from this reserve to write off development expenditure. The distribution to the shareholders is unchanged at 80 per cent., made up of a dividend of 50 per cent. and a bonus of 30 per cent., a rate which the Company has been paying from 1952-53 onwards. The high rate of dividend reflects undercapitalisation. For long, the management did not take steps to capitalise reserves. By the time it decided to rectify this anomaly, the penal tax of 30 per cent. on bonus shares had come into existence and the idea had to be abandoned. The dividend would appear modest when related to actual capital employed. It is a pity that the management has not given this figure in the Directors' report. Here is an example of poor public relation work, a characteristic feature of the private sector, in general, in this country.

The following comparative table shows the progress of the Company in recent years:

(In lakhs of rupees)

	For the year ended 30th November			
	1958	1957	1956	1955
Sale proceeds of ore	1,44.60	1,73.99	1,63.08	1,15.23
Closing stocks	23.19	24.24	34.46	37.91
Export duty on ore	10.25	20.35	5.31	..
Expenses	1,01.35	1,08.22	1,05.19	87.64
Gross profit	33.26	37.13	50.21	36.70
Managing Agents' commission..	2.92	3.37	5.74	3.03
Provision for—				
Depreciation	4.27	5.89	4.50	3.60
Taxation	14.50	15.75	21.50	12.25
Net profit	11.57	12.12	18.47	16.92
To reserves and other funds ..	5.87	6.09	13.04	11.23

Dividend	2.77	..	5.60	5.60
	5.60 (D. 50% +B. 30%)	5.60 (D. 50% +B. 30%)	5.60 (D. 50% +B. 30%)	5.60 (D. 50% +B. 30%)
Carry forward	0.53	0.52	0.09	0.22

The Company's output amounted to 91,626 tons, as against 92,748 tons in the previous year. Production would have been higher but for the curtailment of mining operations in the latter half of the year, for reasons already mentioned. Even so, it is very much more than that (of 83,238 tons) in 1955-56, as a result of progress made in implementing development schemes and expansion programmes. Shipments and sales aggregated 91,452 tons, having declined from 114,337 tons in 1956-57 and 117,482 tons in 1955-56. These would have been lower still, had it not been for the forward sales contracted in earlier years. The Company had been granted a quota of 59,130 tons for movement and export of manganese ore, in respect of the year from 1st July 1958 to 30th June 1959. This quota was the same as that given for the year 1957-58. Out of this, the Company was able to ship only 8,914 tons up to the end of November 1958, as against 30,411 tons in the corresponding period of 1957. The Company has, however, entered into contracts with foreign buyers for 43,500 tons for delivery during 1959.

In view of the need for funds for development projects at the mines, the Company issued, since the close of the year under review, 35,000 ordinary shares of Rs. 10 each to the existing shareholders in the ratio of one new share for every two shares held by them. The issue was oversubscribed. The paid-up capital, as at the close of the year under review, at Rs. 7 lakhs is supplemented by reserves and surplus amounting to Rs. 65.40 lakhs. There has been an addition of Rs. 17.44 lakhs to the gross block during the year (this is on top of Rs. 19.14 lakhs spent in 1956-57), bringing the total value at the end of the year to Rs. 92.16 lakhs. The depreciation provided so far on this gross block is Rs. 33.75 lakhs, so that the written down value of the block account is Rs. 58.41 lakhs. The capital works-in-progress account for Rs. 1.07 lakh. Investments and current assets amount to Rs. 82.76 lakhs, which more than adequately cover the current liabilities and provisions at Rs. 69.84 lakhs.

The Directors are not very hopeful of the short-term outlook for the Company, "as there seems to be little hope of any appreciable improvement in the near future." The management is, however, taking all necessary steps to ensure maximum economies in the working of the Company's mines.

Presumably, in view of this none too encouraging short-term outlook, the shares of the Company have dipped to a low of Rs. 99 as on Friday last from Rs. 105 touched in the previous week, in distinct contrast to the general buoyancy in the share market. They are, however, being currently quoted at Rs. 100 *cum-div.* On an *ex-div.* basis, the yield on them works out to 8.7 per cent. per annum, free of income-tax.

KOHINOOR MILLS

The Chairman of the Kohinoor Mills Company, Ltd., Mr. A. N. Haksar, had good news for the shareholders of the Company at their annual meeting held on the 7th inst. Addressing them on the occasion he struck a note of confidence that the steps that had been taken by the management to improve the working of the mills would enable the Company "to regain the eminent position" it once held. The various steps taken by the management are:

(1) A scheme of modernisation and rehabilitation has been drawn up. The first part of the programme has been set in motion, costing so far Rs. 60 lakhs. It is expected to be completed in a year or two. The main aim so far has been to alter the spinning machinery in order to achieve more efficient spinning of short-staple cotton which the mills are now forced to use. Out of the Rs. 60 lakhs, about Rs. 42 lakhs will be spent on installing new ring frames and modernising some of the existing ones. In order to improve the quality, the Company has obtained a licence to import combers which will improve the combing capacity by 25 per cent. The balance of the programme will be devoted to purchasing more finishing machinery and to the rehabilitation of a number of looms.

(2) Rationalisation of the Mill's labour force has been undertaken. Thanks to the award of the Industrial Court, the Company's labour force has been reduced by 400 men. This does not involve payment of any compensation, as these workers were only temporary employees. The benefit of rationalisation will begin to accrue from the current month.

(3) A concerted drive has been launched to reduce miscellaneous expenses.

(4) Attempts are being made to increase the volume of the Company's exports. A certain measure of success has already been achieved in this direction. With the better quality products to be obtained as a result of modernisation, export sales will be increased in the second half of the year.

On the prospects for exports, Mr. Haksar uttered a note of warning to the effect that competition from other countries had become stronger and would undoubtedly become even more formidable when the effect of the current low prices of foreign cotton was felt in the export markets of the world. He went on to add: "With more efficient machinery and a more rational employment of labour, mills in the main exporting countries are at present purchasing their cotton in some instances at prices considerably lower than those we have to pay for Indian cotton. I am sure that, unless urgent measures are taken to bring the price of Indian cotton down, India may find that she will suffer an even greater recession in export sales."

In this connection, the Chairman of the Kohinoor Mills suggested that exports of cotton should be freed completely, as long as the price of foreign cotton remained at the current low levels. Analysing the effect of this step, Mr. Haksar observed: "As I see it, the effect of this would be to reduce the price of all Indian cottons from the best to the cheapest. If this were to happen, exports of fabrics made from Indian cotton could be sold cheaper as likewise the exportable varieties of raw cotton. In my opinion, the volume of export trade that would be generated would go a long way to paying for the raw cotton that would be imported as a result of free licensing. I say this, although I am well aware of the difficulties which face the Government in their search for foreign cotton."

Mr. Haksar referred to the shareholders' criticisms at last year's annual meeting and the appointment of a Directors' sub-committee to go into these criticisms. He said that the three-man sub-committee made a thorough investigation and its recommendations had been implemented. In conclusion, he counselled the shareholders to be patient, as he was sure that, within a reasonable time, the Mills' working would show a definite improvement.

Replying to shareholders' questions, the Chairman said that the real benefits of the Company's renovation programme would be reflected in its working during 1961. He expressed his inability to comment on the possibility of further retrenchment of workers, but he promised to go into the proposal for closing the third shift on the spinning plant, if that could help matters.

The Company has dropped the plan for establishing a nylon plant in collaboration with a Dutch company.

Out of the Company's total production in 1958, superfine goods accounted for about 5 per cent., fine goods for 7 per cent., medium for 78 per cent. and coarse for 10 per cent.

CENTURY SPINNING AND MANUFACTURING COMPANY, LIMITED

The annual meeting of the Century Spinning and Manufacturing Company, Ltd., held on Friday last, evoked keen interest among the shareholders who elicited some vauable information from the Chairman on the working of the Company during the past year, which is of interest to investors. Answering the shareholders' questions, Mr. R. D. Birla, Chairman, said that the Company's production of cloth consisted mainly of coarse and medium varieties, accounting as they did for 89 per cent. The share of fine and superfine cloth was only 11 per cent. The output of rayon yarn during 1958 amounted to 9.235 million lbs. Out of the total sale proceeds of Rs. 10.60 crores, as much as Rs. 6.95 crores came from cotton textiles, Rs. 3.04 crores from rayon yarn, Rs. 55 lakhs from cotton and staple fibre yarn, but mostly the latter, and Rs. 7 lakhs from cotton waste. Most of the cloth produced by the Company was sold in the domestic market, while exports constituted no more than 16 per cent. of the total sales, fetching Rs. 1.14 crore.

It was generally known that the bulk of the Company's bumper profit in 1958 came from the rayon section. Confirming this, Mr. Birla disclosed that, out of the gross profit of Rs. 1.29 crore (after writing off capital issue expenses), no less than Rs. 1 crore was from rayon and the balance from cotton textiles. It will thus be noted that, on a sale of Rs. 6.95 crores of cotton textiles, the gross profit amounted to a mere Rs. 29 lakhs or 4.2 per cent., while the profit margin on rayon was about 30 per cent. This gives an idea of the extent to which the Government's fiscal policy has hit the cotton textile industry and has driven many of its units to diversify their production by taking to synthetic fabrics and fibres.

The Chairman, however, disclosed that the additional amount of Rs. 1.72 crore proposed to be spent on the rayon plant was not for expanding the capacity of the plant from the existing rate of 12 tons per day, but for diversifying production to cover finer deniers. He added that the recent strike at the rayon factory brought about a loss of production of 350,000 lbs. of rayon yarn.

The tax liability of the Company had been settled up to 1955 and adequate provisions had been made for liability thereafter. The L.I.C. holds 10,520 ordinary shares and 25,000 preference shares of the Company. These represent 8.6 per cent. and 20 per cent., respectively, of the total number of shares issued by the Company.

STATISTICAL POSITION OF COFFEE

Almost all coffee growing districts received blossom showers in April 1959. Although late, these showers were sufficient and widespread in all districts except in certain parts of Hassan and North Coorg districts, where they were insufficient. The present expectations are that the 1959-60 crop, though not as big as originally anticipated, will be about the same as the crop that has been just harvested. The latest estimate of 1958-59 season's crop as revised by the Marketing Committee on 1st May 1959 stands at 45,430 tonnes, comprising of 19,050 tonnes Plantation, 7,020 tonnes Arabica Cherry and 19,360 tonnes Robusta. This is by far the biggest Robusta crop picked so far, the previous best being 14,710 tonnes picked in 1957-58.

The internal offtake of coffee in April 1959 amounted to 2,501 tonnes, bringing the total for the first four months in 1959 to 10,000 tonnes, which compares with the offtake of 8,340 tonnes for the same period last year. During the period January-April 1959, the quantity sold for export amounted to 6,903 tonnes, comprising of 6,526 tonnes Plantation and 377 tonnes Arabica Cherry. This includes 1,600 tonnes sold to German Democratic Republic and 80 tonnes sent to London under the Quality Control Programme. Against 300 tonnes earmarked for sale on consignment basis, 228 tonnes have been shipped to London.

COMPANY MEETINGS AND DIVIDENDS

CALEDONIAN JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 27th May 1959. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 3.00 per share). Transfer books remain closed from 13th to 27th May 1959, both days inclusive.

CHEVIOT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 27th May 1959. Dividend: Rs. 5.00 per share. Transfer books remain closed from 13th to 27th May 1959, both days inclusive.

KYANG TEA SEED CO., LTD. Annual General Meeting, Calcutta, 28th May 1959. Dividend: 5 per cent. or Re. 0.50 per share. Transfer books will remain closed from 20th to 28th May 1959, both days inclusive.

SHOLAPUR SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 28th May 1959. Dividend: *Nil.* Transfer books remain closed from 14th to 28th May 1959, both days inclusive.

GUEST, KEEN, WILLIAMS, LTD. Annual General Meeting, Calcutta, 29th May 1959. Dividend: Re. 1.20 per share (final), for the 53 weeks ended 3rd January 1959. Transfer books remain closed from 15th to 29th May 1959, both days inclusive.

CEAT TYRES OF INDIA LTD. Annual General Meeting, Bombay, 29th May 1959. Transfer books remain closed from 11th to 29th May 1959, both days inclusive.

GODFREY PHILLIPS INDIA LTD. Annual General Meeting, Andheri, Bombay, 29th May 1959. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 23rd to 29th May 1959, both days inclusive.

KIRLAMPUDI SUGAR MILLS LTD. Annual General Meeting, Pithapuram (East Godavari District), 30th May 1959. Dividend: *Nil.*

TIDE WATER OIL CO. (INDIA) LTD. Annual General Meeting, Calcutta, 2nd June 1959. Dividend: Re. 1.50 per share (includes interim dividend of Re. 0.50 per share). Transfer books will remain closed from 19th May to 2nd June 1959, both days inclusive.

CAWNPORE SUGAR WORKS LTD. Annual General Meeting, Kanpur, U.P., 2nd June 1959. Dividend: *Nil.*

MODERN MILLS LTD. Annual General Meeting, Bombay, 9th June 1959. Dividend: Rs. 3.00 per share, payable on and after 22nd June 1959. Transfer books remain closed from 12th May to 3rd June 1959, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Alwaye, Kerala State, 12th June 1959. Dividend: 4 per cent. or Re. 0.40 per share, payable on and after 13th July 1959. Transfer books will remain closed from 1st to 12th June 1959, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Dividend of Rs. 10.0 per ordinary share, free of tax, for the year ended 31st December 1958. Transfer books will remain closed from 2nd to 22nd June 1959, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Final dividend of Re. 1.00 per share, free of income-tax, for the year ended 31st December 1958.

KAMANI ENGINEERING CORPORATION LTD. Dividend of Re. 0.50 per share, for the year ended 30th September 1958, payable on 22nd June 1959. Transfer books will remain closed from 21st May to 11th June 1959, both days inclusive.

NENMENY RUBBER AND PRODUCE CO., LTD. Dividend of 15 per cent. or Re. 1.50 per ordinary share, for the year ended 31st December 1958. Transfer books will remain closed from 23rd to 29th June 1959, both days inclusive.

UDAYAGIRI RUBBER CO., LTD. Dividend of 7½ per cent. or Re. 0.75 per ordinary share, for the year ended 31st December 1958. Transfer books will remain closed from 23rd to 29th June 1959, both days inclusive.

NATIONAL RUBBER MANUFACTURERS LTD. Dividend of 6 per cent. or Re. 0.60 per ordinary share, for the year ended 31st December 1958.

SAVAMALAI ESTATES LTD. Dividend of 12½ per cent. or Re. 0.25 per share, for the year ended 30th November 1958.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Interim dividend of 7½ per cent. or Re. 0.75 per share, for the year ending 30th June 1959. Transfer books will remain closed from 22nd to 31st May 1959, both days inclusive.

KRISHNA INDUSTRIAL CORPORATION LTD. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 30th September 1958. Transfer books will remain closed from 1st to 8th June 1959, both days inclusive.

RAJALAKSHMI MILLS LTD. Dividend of 6 per cent. or Rs. 3.00 per ordinary share, for the year ended 31st December 1958.

COMPANY REGISTRATIONS

PRESS SYNDICATE LTD. Business: To print, publish, circulate newspapers, etc. Authorised capital: Rs. 25,00,000. Public company. Address: Army and Navy Building, 148, Mahatma Gandhi Road, Bombay.

STEEL PLANT PRIVATE LTD. (First Director: Mr. Moti Rijhumal Tadhani.) Business: Civil, mechanical and electrical engineers. Authorised capital: Rs. 5,00,000. Private company. Registered office of the company will be situated in the State of Bombay.

SYNOPSES OF COMPANY REPORTS

Polson Ltd.

THE directors of the above Company (Managing Agents: Messrs. Polson Agencies Private Ltd.) present the audited accounts of the Company for the year ended 31st December 1958.

The net profits after providing for managing agents' commission, depreciation and provision for taxation, amount to Rs. 4,31,884 (Rs. 6,77,898) which with the sum brought forward from the preceding year's accounts of Rs. 64,830 (Rs. 45,762) make a total of Rs. 4,96,714 (Rs. 7,23,660). From this amount the directors have transferred to development reserve Rs. 58,802 (Rs. 73,137) leaving a balance available for distribution of Rs. 4,37,912 (Rs. 4,00,830 after transferring Rs. 1,99,693 to rehabilitation reserve and Rs. 50,000 to reserve fund.) From this amount, the directors recommend payment of a dividend of Rs. 6.00 (subject to deduction of income-tax) per share on the preference shares absorbing Rs. 1,20,000 (Rs. 1,20,000) and a dividend of Rs. 10.00 (Rs. 10.00) per share, free of income-tax, on 26,978 (21,600) ordinary shares absorbing Rs. 2,69,780 (Rs. 2,16,000) leaving a balance of Rs. 48,132 (Rs. 64,830) to be carried forward.

Although the sales of the Company's products raised from Rs. 1.01 crores in 1957 to Rs. 1.08 crores during the year under review, the net profits were lower by Rs. 1.36 lakhs. The rise in the price of milk has contributed to an increase in the cost of production and a reduction in the margin of profit.

The production at the Patna Dairy was not satisfactory owing to irregular supply of cream and labour troubles. Continuous efforts are being made to regularise the supply of cream and to improve relations with workmen.

The additional depreciation allowable upto the assessment year 1958-59 has not been provided for during the year under review, since the relevant provision has not been renewed under the Finance Bill 1959. Therefore the normal depreciation and development rebate have been taken into account.

The Company's export of coffee during the year has increased by rupees one lakh to Rs. 9,92,322.

Out of the 5,400 bonus shares issued to the members of the Company, 88 fractional certificates representing 22 shares are still outstanding. The last date for redemption of the fractional certificates is, therefore, extended till the 30th June 1959.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,94,500	Gross block	65,52,811
Reserves ...	24,05,554	Less—Depreciation ...	16,34,991
Provision for taxation ...	1,62,481	Net block ...	49,17,820
Liabilities ...	12,14,835	Raw materials ...	10,39,781
Profit ...	48,132	Finished goods	7,11,323
		Stores, spare parts, etc.	6,05,236
		Debts, deposits and advances ...	6,28,202
		Investments	3,235
		Cash ...	6,19,905
Rs.	85,25,502	Rs.	85,25,502

Godfrey Phillips, India, Ltd.

The directors of the above Company (Chairman: Mr. D. S. Barron, Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The Company made a net profit after provision for taxation, depreciation and all other charges, of Rs. 9,89,772 (Rs. 7,51,831). To this amount is added the balance brought forward from last year of Rs. 10,90,318 (Rs. 13,04,518) and excess provisions less short provisions for previous years Rs. 30,509 (*nil*) making a total of Rs. 21,10,599 (Rs. 20,56,349). Of this sum the directors have decided to transfer to development rebate reserve Rs. 40,000 (nil) and to gratuity reserve Rs. 1,23,000 (Rs. 57,000) leaving a balance of Rs. 19,47,599 (Rs. 18,03,343 after providing Rs. 1,96,006 towards short provisions *less* excess provisions for previous years). Out of this amount the directors recommend payment of a dividend on the preference shares at 5½ per cent. per annum subject to tax, absorbing Rs. 1,13,025 (Rs. 1,13,025) and a dividend on the ordinary shares at 20 (15) per cent. per annum absorbing Rs. 8,00,000 (Rs. 6,00,000) leaving a balance to be carried forward to next year of Rs. 10,34,574 (Rs. 10,90,318).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Gross block	68,41,943
Reserves ...	4,40,000	*Less*—Depreciation ...	36,78,212

South Karanpura Coal Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st August 1958.

Raisings and Despatches.—193,010 tons of coal were raised and 182,200 tons were despatched during this period compared with 187,703 tons raised and 186,382 tons despatched during the previous year.

The policy of gradual restriction of the output from opencast mining at Sirka Proper by reducing and diverting the labour force to underground mining at West Sirka continued successfully throughout the period. At West Sirka the two crosscut inclines went into full production during the year but due mainly to difficult natural and geological conditions in the East Crosscut it was not possible to achieve the target output of 15,000 tons per month set for these two inclines.

Wagon supplies were erratic from time to time but on the whole were more satisfactory than in some previous years.

The Tripartite Implementation Committee constituted by Government to interpret correctly certain portions of the Labour Appellate Tribunal Award finished its deliberations in February 1958. Agreement was reached on a number of points and the Award has been fully implemented in practically all respects. The relations with Labour were on the whole satisfactory during the year under review.

The profit and loss account after providing for all charges and making provision of Rs. 1,70,204 (Rs. 1,11,561) for taxation, Rs. 16,000 (Rs. 25,000) for wealth tax and Rs. 1,20,103 (Rs. 1,00,835) for depreciation shows a profit of Rs. 2,00,807 (Rs. 2,10,133). To this is added the balance brought forward from the previous year of Rs. 8,739 (Rs. 9,794 after deducting directors' commission of Rs. 613) making a total of Rs. 2,09,546 (Rs. 2,89,927 after transferring Rs. 70,000 from general reserve). From this amount there has been transferred to development reserve Rs. 25,000 (*nil*) to development rebate reserve Rs. 5,500 (Rs. 3,200) and to statutory development rebate reserve Rs. 33,700 (*nil*) leaving a balance of Rs. 1,45,346 (Rs. 1,39,989 after transferring Rs. 15,300 to tax contingency reserve and Rs. 1,31,438 for provision for payments under Appellate Award). The interim dividend declared on 18th December 1958, on ordinary shares without any deduction for income-tax payable by the Company absorbed Rs. 64,750 (*nil*) leaving a balance available of Rs. 80,596 (Rs. 1,39,989). The directors propose to dispose of this amount as follows:—

By payment of a final dividend at 3.8 (7½) per cent. making a total of 7½ (7½) per cent. per annum on 1,75,000 ordinary shares without any deduction for income-tax payable by the Company absorbing Rs. 66,500 (Rs. 1,31,250) and by carrying forward Rs. 14,096 (Rs. 8,739).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Gross block	43,52,233

Cawnpore Sugar Works, Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland and Co. (Private) Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st October 1958.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a loss of Rs. 13,63,218 (Rs. 9,27,781). To this has to be added provision for development rebate reserve of Rs. 25,000 (nil) and loss carried forward from the previous year Rs. 8,35,790 (credit of Rs. 91,991) leaving at debit of profit and loss account Rs. 22,24,008 (Rs. 8,35,790).

The adverse trading results during the year have again been primarily due to the heavy losses incurred at Padrauna and Kathkuiyan Factories. The reasons for the heavy losses at these two Units are due to the relatively poorer yields of sugar from the cane coupled with considerable mechanical difficulties in operating the factories by virtue of the High Court order restraining the Company from undertaking any overhaul or replacing worn out machinery. The court restrictions have now been raised and the future prospects for these two Units appear to be brighter.

The relative figures for the cane crushed and the sugar made in the season 1957-58 are as follows:—

	Cane crushed Mds.	Yield Per cent.
Marhowrah Factory ..	31,25,104 (29,17,602)	9 70 (9 10)
Gauri Factory	21,77,710 (22,10,770)	10 33 (10 23)
Kathkuiyan Factory ..	20,04,414 (17,66,162)	9 65 (9 20)
Padrauna Factory ..	27,80,365 (24,66,331)	9 05 (8 73)

The poor yield of sugar from cane at Marhowrah Factory contributed also to the poor trading results over the year. The poor quality of sugarcane continues to have the attention not only of the directors but of the Industry and the Government.

The title of the Company to Kathkuiyan Factory is now absolute and considerable rearrangement and overhaul was carried out in the off-season 1958 which has proved of immediate value in the operation of Kathkuiyan Factory in the current season. While the Padrauna Factory case is not yet clear, there is now no restriction on the Company improving the efficiency of this Factory to stop the losses and in due course to render it a paying concern.

The cane price remained at the previous rate of Re. 1-7-0 per maund at the Factory gate and Re. 1-5-0 per maund at out-stations. The sugar prices were arbitrarily fixed by the Government of India and as from the 30th of July 1958 no sugar produced by the Company's Factories was sold above the statutory price of Rs. 36.00 for D/29 quality. The Industry has vigorously protested against the imposition of a low fixed price of sugar and the Government of India have now decided to refer the matter of sugar prices to the Tariff Commission. Sugar prices remained firm throughout the year and with the exception of Kathkuiyan Factory all sugars were sold at controlled rates.

The values of sugar in stock as at the 31st of October 1958 have been valued at the Government controlled prices.

While a good deal of overhaul and a certain amount of reconstruction was undertaken prior to the current season in Padrauna and Kathkuiyan, this had to be done from the Company's own resources as all efforts to obtain finance for reconstruction have so far failed. The directors, however, continue to pursue the matter of additional finance for rehabilitation to make Padrauna and Kathkuiyan profit making Units. The efficiency of Marhowrah and Gauri Factories was maintained at a high level.

The Marhowrah Distillery worked continuously throughout the year and the market for spirit continuous to improve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	1,64,83,531
Reserves ...	63,02,047	Less—Depreciation ...	98 80,069
Liabilities ...	89,60,739	Net block ...	66.03,462
		Machinery in course of installation	4,26,826
		Stock-in-trade	33,73,264
		Stores, spare parts and loose tools	36,29,560
		Goods-in-transit ...	2,276
		Debts, deposits and advances ...	24,55.974
		Investments	2.63.963
		Cash ...	2,83,453
		Profit and loss account ...	22.24,008
Rs.	1,92,62,786	Rs.	1,92,62,786

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NEW LIFE INSURANCE BUSINESS

New life insurance business figures for the first four months, 1st January 1959 to 30th April 1959, show that there has been an all-round increase in the proposed business in all the five zones while completed business showed a rise in all but one zone. Business proposed in all the zones taken together amounted to Rs. 86.34 crores, as against Rs. 66.22 crores in the same period last year. Completed business during the period in all the zones aggregated Rs. 48.78 crores, representing a rise of Rs. 5.55 crores over the corresponding figure for the same period last year.

The following table gives the zone-wise breakdown of the new business proposed and completed:

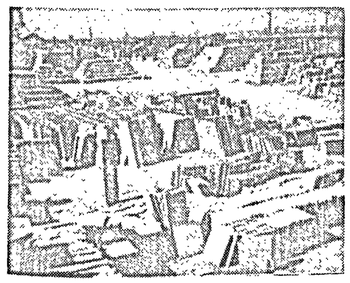
	Business proposed		Business completed	
	1959	1958	1959	1958
Northern ..	11.86	10 00	6.40	6.49
Central ..	12 62	8.49	6.53	4.47
Eastern ..	18.71	13 81	9.92	9.13
Southern ..	21.43	17.70	13 02	12.00
Western ..	21.72	16.22	12.91	10.54
Total ..	86.34	66.22	48.78	43.23

The Western zone, as can be seen from the table, leads with business proposed amounting to Rs. 21.72 crores whereas the Southern zone tops the list in respect of completed business.

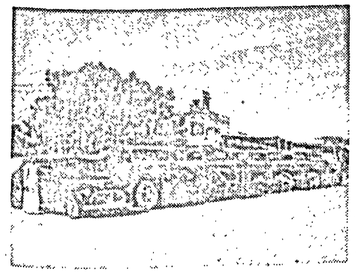
The number of new policies issued during the period also shows a considerable increase over the figure for the corresponding period of 1958. Thus new policies issued aggregated 147,519, as against 132,406 in the same period last year.

New foreign business has also recorded a sharp rise, thanks to the intensive efforts made by the Corporation to canvass business abroad and the visit of the Corporation's Chairman, Mr. P. A. Gopalakrishna, to East Africa and more recently to Malaya and Singapore. New foreign business written by the Corporation during the first four months of this year amounted to Rs. 1.23 crore, as compared with a mere Rs. 50 lakhs during the same period last year.

Shri Mohanlal Sukhadia, Chief Minister of Rajasthan, being welcomed by Seth Hiralal M. Parikh, Director of the Company, to the workshop.



Flooring Stones stacked after excavation from the quarry.



Company's trucks line up for transporting flooring stone from quarry to the railway station.

Workers loading flooring stones in wagons for despatch to different centres.

STORY OF 'KOTAH' STONE

From the Quarries to the Finished Stage

The little wayside station of Ramganjmandi on the Western Railway is buzzing with activity these days. There is huge stock-pile of flooring stone in the yard and hundreds of workmen are loading the railway wagons with the beautiful polished "Kotah" Stone to be despatched to distant places in India.

Ramganjmandi is the headquarters of The Associated Stone Industries (Kotah) Ltd., the Company which takes pride in marketing polished flooring stone in India. Here the Company has its own workshop, where the rough stone is polished by mechanical devices. Even the machinery for polishing stone is fabricated in its own Workshop. The Associated Stone Industries have their own generating sets for electricity and the power for lighting the Ramganjmandi Railway Station is supplied by the Company.

Though apparently a barren tract, this area of Rajasthan contains large deposits of limestones. The quarries run continuously from north to south, and are opened out along the direction of strike and worked forward in the direction of the dip of the limestone strata towards the west. The thickness of different useful beds varies from a few inches to as much as two feet, the planes of cleavage further dividing the bed into sheets of marketable thickness of ¼ inch to 2 inches. These beds are reached after an overburden of some six feet of earth and rock at the top. The quarries are usually worked to a depth of about 50 feet. Most of the sheets are obtained in grey colour with a small proportion of green and yellow.

Water is met with at a certain depth, varying with seasons, below ground and the Company has a large number of pumping sets to pump the water out of the quarries.

Hundreds of manual workers and stone chiselers are employed by the Company for quarrying operations.

After the slabs are brought to the surface, a large fleet of Company's trucks carry the marketable produce to the railway station.

Before The Associated Stone Industries started their operations, there were fourteen contractors engaged in quarrying operations in this area. The resources of these contractors were limited and the industry was in a pitiable condition. The contractors were engaged in cut-throat competition among themselves.

Realising the sorry plight of this industry, His Highness the Maharao Bahadur of Kotah took steps to rationalise the industry by having the quarries exploited in a scientific manner, thus eliminating wastage and reducing the cost of production. These mines are situated in the Tehsils of Chechat and Ramganjmandi, and the then Government of Kotah thought that it would be better to place the industry under one management. The Kotah State rescinded its policy of leasing out small pits to different contractors. It was in these circumstances that The Associated Stone Industries (Kotah) Ltd. was formed in 1945 to give a concrete shape to the new policy of the Kotah State. His Highness the Maharao Saheb Bahadur of Kotah granted a lease of 15 years to the Company to exploit the quarries.

The Company started its life from 1945 with a subscribed capital of Rs. 12,50,000. In the beginning it had some initial difficulties in setting up its huge structure, but it is gratifying to note that under the able guidance of the Director-in-charge, Shri Hiralal M. Parikh, the Company not only could establish itself efficiently within the shortest possible period but it started giving dividends to its shareholders from the very first year of its working.

The production and sale of the limestone extracted by the Company from the quarries has increased considerably from year to year.

The production of stone which was 33,18,000 sq. ft. in 1944-45 has now reached a record figure of 1,31,61,000 sq. ft. in 1957-58. Similarly, sales in 1944-45 were 27,42,000 sq. ft. which stand at 1,43,91,000 in 1957-58. It will thus be seen that the figures of production and sales are more than four times that of the first year of the Company's working.

During this period the Company had to face, on several occasions, acute shortage of wagons and at times serious labour crisis also, but these temporary tides were overcome by the dextrous handling of the situation by the management and such eventualities were not permitted to scale down the production and sale of the Company.

The market, worth the name, where "Kotah" stone could find a due place were the Gujarat and Saurashtra markets alone. Northern, eastern and southern parts of the country were unknown to it. It is on account of the Herculean efforts of the Company alone that today "KOTAH STONE" is not only hailed as a symbol of modernised flooring, but the growing demands for the stone even from the farthest cities like Bombay, Calcutta, Madras, Kanpur, Chandigarh and Tiruchirapalli, etc., is a clear indication of the fact that "Kotah" Stone has also been hailed as a substitute for the foreign marble, the import of which is banned on account of the stringent foreign exchange position.

"Kotah Stone," it can be rightly claimed, has not only served the fine taste of the owners of the buildings by providing them with a material for ornamental pavements, but has also indirectly helped the Government to ease the exchange position by supplying a substitute for the foreign marble.

It is a matter of pride for the Company to see the President of India walking every morning on KOTAH STONE which is fixed in the RASHTRAPATI BHAVAN.

Important buildings of the country like the following are adorned with "Kotah Stone."

1. Rashtrapati Bhavan, New Delhi. 2. New Railway Station Buildings—Churchgate (W. Rly.), Bombay—New Delhi (N. Rly.), New Delhi, —Jaipur (W. Rly.), Jaipur—Allahabad (N. Rly.), Allahabad. 3. New Secretariat Buildings, Bombay,—Jaipur,—Chandigarh. 4. Hindustan Lever Ltd.,—Tiruchirapali,—Calcutta. 5. Heavy Electricals Private Ltd.,—Bhopal. 6. Birla Education Trust Bldg.,—Pilani. 7. Medical College of Technology, Hubli. 8. P. S. G. College of Technology, Coimbatore. 9. Central Board of Revenue Bldg., New Delhi. 10. Tata Institute of Fundamental Research, Colaba, Bombay. 11. Banaras Hindu University Bldg., Banaras, 12. New Reserve Bank of India Building, Madras. 13. Hindustan Sugar Mills Ltd., Golagokarnnath. 14. Almost all University Buildings and College Buildings of Bombay State.

When the Company started working it had a small Polishing Factory, but with the lapse of time and with the increasing popularity of its product the factory also grew in size in such a proportion that today they are not only the pioneers in this branch but the Polishing Factory can be claimed to be the biggest Polishing Factory in India, which also manufactures the machinery that is used for stone cutting, polishing, etc. The Company has also started, along with the polishing of the slabs, edge cutting and repolishing of the stone to bring its product to the level of the imported marble.

The Company can claim to its credit a fair deal to its workers. With the expansion of the business of the Company, more and more funds were made available for labour welfare, i.e., for the scholarship of children, maternity benefit, playgrounds, games, and entertainment by means of cinema shows, etc., which have now become a regular feature of the welfare work. A club with beautiful swimming pool and well-laid-out gardens has been started for the recreation of the employees of the Company.

In spite of the seasonal labour, the Company has been very considerate in fixing the wages of the labourers which compare very favourably with the wages given by such concerns in India. It will not be an exaggeration to say that no better wages are paid to the labourers by any other similar industry anywhere in India as is paid by this Company. Seasonal nature of the labour was not permitted to come in the way to introduce the Bonus scheme also and for the last 10 years Bonus is being paid to all the permanent employees as well as to labourers who put in at least 100 days' work in a year. The figures of Bonus given to the labourers and the employees of the Company as given herein would show that the workmen get an additional advantage as compared to other industrial concerns, of getting more contribution by the Company to the Provident Fund than what is usually contributed by the employers.

Year	*Bonus paid*	*Contribution to Provident Fund*
	Rs.	Rs.
1948-49	6,686	—
1949-50	23,568	—
1950-51	85,835	—
1951-52	40,584	9,009
1952-53	43,256	10,684
1953-54	53,661	12,278
1954-55	45,404	13,063
1955-56	60,633	12,787
1956-57	75,996	14,767
1957-58	70,090	15,547

The birth of the Company has not only ameliorated the condition of its employees and labourers alone, but it has also benefited the community in general in various ways. The existence of the Company has cast a spell of prosperity in the vicinity of its field of action, where generally income from agricultural enterprise is bare minimum and their economy is not supplemented from any other trade or industry. The working of the Company has made open new avenues for the agriculturists of this region to increase the sources of income and the existence of the Company is a boon to poor tenantry which has been considerably helped to improve their bare economy. The philanthropic aptitude of the Company has injected life and prosperity in various organisations working for the welfare of the people in their own way in this region. The Company has made considerable contribution in this direction in these years of its working.

THE ASSOCIATED STONE INDUSTRIES (KOTAH) LTD.

Notices

THE FERTILISERS AND CHEMICALS, TRAVANCORE, LIMITED

(Incorporated in Kerala State Liability of Members Limited)

ALWAYE

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Annual General Meeting of the Company will be held at the Registered Office of the Company at Eloor, Alwaye, on Wednesday the 15th of July 1959, at 4 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December 1958.
2. To declare a Dividend.
3. To appoint a Director in place of Seth Mulraj Kersondas who retires by rotation under Article 88 but who is eligible for reappointment.
4. To appoint a Director in place of Sri K. Srinivasa Karayalar who retires by rotation under Article 88 but who is eligible for reappointment.
5. To consider the question of filling up the place of a Director which was kept vacant by resolution of the Company at the last Annual General Meeting and if thought fit to appoint a Director to fill up the vacancy.

The Share Transfer Books of the Company will be closed from 6th July 1959 to 15th July 1959, both days inclusive.

All shareholders are requested to be present in person or by proxy. A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
SESHASAYEE BROTHERS (TRAVANCORE) PRIVATE LTD.,
Managing Agents.

ELOOR, ALWAYE, *8th May* 1959.

Note:—The dividend, if sanctioned, will be made payable on or after the 15th of August 1959 to those shareholders whose names stand on the register as on the 15th of July 1959.

THE NAIHATI JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the abovenamed Company will be held at the Registered Office, No. 33, Netaji Subhas Road, Calcutta-1, on Thursday, the 11th June, 1959, at 3 p.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1958 and to receive the Directors' and Auditors' Reports thereon.
2. To appoint Auditors and fix their remuneration.
3. To place the notice of the resignation of the Managing Agents together with the Statement of Affairs, Balance Sheet, Profit and Loss Account and Auditors' report thereon as required under Section 342 of the Companies Act, 1956.
4. To appoint Directors in place of those retiring. And, in this connection Special Notice as required by Sections 280 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

"That Mr. G. D. Bhagat who has attained the age of 71 years, be and is hereby re-appointed a Director of the Company and the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

The Share Transfer Registers of the Company will be closed from 29th May, 1959 to 11th June, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
G. D. BHAGAT,
Chairman.

33, NETAJI SUBHAS ROAD,
CALCUTTA-1, *11th May*, 1959.

EXPLANATORY STATEMENT

In connection with item No. 4 of the above notice it will be necessary in accordance with Section 281 of the Companies Act, 1956, for the resolution re-appointing Mr. G. D. Bhagat as a Director to declare that the age limit provided under Section 280 shall not apply to him. Mr. G. D. Bhagat has long-standing association with the jute industry and he is a reputed merchant and mill owner. Therefore, his services are considered extremely necessary. Special Notice of the intention to move this resolution, as required by both Sections 280 and 281 of the Act, has been received by the Company.

The Directors, including Mr. K. C. Bhagat who is also a Director and Shareholder of the Company, have no interest in the resolution to be proposed.

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE SENDRA COAL COMPANY LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 12th June, 1959, at 10.50 a.m., for the following purposes:—

2. To appoint a Director in place of a retiring Director.
3. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 29th May to the 12th June, 1959, both days inclusive.

By Order of the Board,
D. L. V. ROWE,
Chairman.

CALCUTTA, *7th May*, 1959.

Note:—A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Management have sanctioned payment of an interim dividend on 5 per cent. Cumulative Preference Shares of the Company of the half-year ended 30th April 1959.

Preference Share Transfer Register will be closed from 27th May to 30th May 1959, both days inclusive.

Dividends will be paid only to the registered Shareholders or their Mandatees.

By Order of the Board,
D. D. MARKAN,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *9th May*, 1959.

SEMINAR ON BANKING

(Concluded from page 821)

system of consumer and personal loans in the U.S. where this unique system is prevalent on a very large scale and worked out successfully.

The U.S. economy is today the most highly developed and, correspondingly, the U.S. has grown as a powerful nation. With 6 per cent. of the world's population, she contributes 40 per cent. to the world's production of goods. What is more significant is the high level of material prosperity attained and maintained by the American Society. More than 80 per cent. of the people earn above $2,000 (Rs. 9,000) and command all comforts of material life. The American economists have recognised and my study has confirmed that this material prosperity of the people is greatly dependent on consumer credit provided by the banking system in U.S. even as the high level of production is sustained by various types of production credit for big and small businesses. This dual and purposive role of bank credit in U.S. economy has progressively and steadily contributed to the raising of the economic status of the nation and the people.

What is consumer credit? What are the implications of developing this type of credit? Consumer credit in the U.S. is simply the extension of credit to the public for consumption purposes. The consumer credit was particularly developed to assist the middle-income group people. These loans are given for manifold purposes, extending to every conceivable consumption need of the individual, such as the purchase of household equipment, electrical appliances, automobiles, television or radio sets, purchase or repairing of houses, paying doctor's bills, insurance premia or for higher education of children, etc. From the banker's point of view, the essential principle of self-liquidity of the loan is safeguarded through a proper evaluation of the employment, income and repaying capacity of the borrowers. The loans are all unsecured and are liquidated out of the anticipated income of the borrower. They are advanced to individuals against a down payment of the cost of goods from 10 to 40 per cent. The loans are covered by insurance which extinguishes the liability of the borrower in the unfortunate event of his death. Thus, the standard of living of the successors of the borrower is not impaired. The discount rate covers the cost of this insurance.

Consumer credit in the U.S. was an offshoot of the great depression. The banks were then compelled to find outlets for excess funds and supplement the falling incomes. Subsequent experience, since 1932, has shown that consumer credit is a vital link in planning for prosperity. Consumer and personal loans have become so popular that the growth in outstandings of this type of credit has been phenomenal, from $500 million in 1938 to $11,000 million in 1947 and to over $42,000 million in recent years. They represent a significant percentage of the loans advanced by banks in America.

The questions often asked are how does consumer credit help the growth of the economy? Is it not contributing to the current indebtedness of the individuals and thus creating an excess purchasing power in their hands? Will this not aggravate the inflationary tendencies in the economy? These questions have been answered emphatically by the functioning of the system in the U.S. In the U.S., we were informed, the consumers are increasing their current indebtedness only by a little over one per cent. of their spending. In fact, this has meant a self-enforced saving by the people to improve their standard of living now instead of waiting for it for 20 years or in the long run, when, in the words of Keynes, "we are all dead." What is important is that they raise their standard of living within the limits of their earning and paying capacity, projected over a fixed period. It brings into effective play the economic law of substitution of wants, binds the people to productive spending and prevents wasteful expenditure. All the impact that it has on the economy is only to make possible the manufacture and movement of goods in demand by the people and enable the mass market to buy and pay for them. As for the fear of inflation, no thinking person, least of all a banker, would minimise its evils. But consumer credit is not the primary creator of inflation. The cause and cure of inflation have many facets and consumer credit may be one under certain conditions of growth like full employment and maximum national income.

I firmly believe that Indian economy is in the process of rapid growth. Under the conceptions of socialistic pattern of society and a Welfare State, there is the shift in income groupings and we have already a sizable middle-class population who are and will be the backbone of Indian society. All our planning techniques are aimed at increasing employment, incomes and improving the standard of living of the population. There is bound to be secular inflation. We should not be deterred by this fear. And the Banking system cannot stand by. It has to reorientate its credit policy to the needs of dynamic growth and one vital phase of reform is the introduction of consumer credit. The contribution of consumer credit to the U.S. economy has been tremendous. It will be so under Indian conditions. It is helpful, safe and profitable and it must be allowed to grow and expand in its proper relation to our national economy.

STRINGENCY IN MONEY CONTINUES

(From Our Own Correspondent)

BOMBAY, *13th May*

The state of the short-term money market has shown no change in the last one week. The stringency continues, with banks appearing as good borrowers. The signs of return of funds seen at times do not seem to have taken a definite trend and the flow of funds is also in trickles. The latest bank returns indicate that the pressure of demand for bank credit continues, banks' borrowings from the Reserve Bank are still rising and their balances with the latter are dwindling. Interest rates are unchanged. Inter-bank call money rate among the Exchange banks and big Indian banks is well maintained at 3½ to 3¾ per cent., the former being the most representative rate. The rate among the smaller Indian banks is 3¾ per cent. House money at seven days' notice has shown no change at 3¾ per cent. Short-term deposits continue to fetch 3¾ to 4 per cent.

There has been no variation in the Treasury Bill rate at 2.800 per cent. per annum this week also. The amount offered at this week's sales hardly exceeded the amount invited, namely, Rs. 2 crores. Tenders for a similar amount have been invited for next week also. There were no sales of Intermediate Bills last week but they will be held this week.

An expansion of Rs. 23.62 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 8th May 1959. Notes held in the Banking Department are lower by Rs. 16.02 crores, so that the total notes issued show a rise of Rs. 7.60 crores. This is covered by an increase of Rs. 9.97 crores in rupee securities and a fall of Rs. 2.37 crores in rupee coin. Foreign securities are unchanged, but balances held abroad have gone up by Rs. 51 lakhs, thus reversing the downward trend noted in the previous three weeks. Deposits of the Central Government have declined by Rs. 1.52 crore, other Governments' deposits by Rs. 6 crores, and deposits of banks by Rs. 15.04 crores. Loans and advances to Governments show a rise of Rs. 1.99 crore and other loans and advances Rs. 11.71 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.78 crore. Investments stand reduced by Rs. 20.16 crores.

The Scheduled banks' statement for the week ended 1st May 1959 shows that demand deposits of banks have gone down by as much as Rs. 35.75 crores, the bulk of which—Rs. 31.22 crores to be precise—has been transferred to time deposits, raising them to a level which is only Rs. 31 crores less than Rs. 1,000 crores. Advances and bills together account for an increase of Rs. 2.13 crores. Investments, too, have gone up by Rs. 8.05 crores, while cash balances and balances with the Reserve Bank have shrunk by Rs. 9.19 crores and money at call and short notice by Rs. 5.95 crores.

The Gilt-edged market continues to be listless, in the absence of institutional interest on account of persistent stringency in the money market. With only a few weeks to go for the terms of the Central Government's borrowing to be announced, there is also a general disposition to wait and watch. Most of the medium-dated loans are on offer.

3 per cent. 1986 Conversion Loan has declined sharply by 35 nP to Rs. 73.50. 3 per cent. 1970-75 is dull at Rs. 91.20 and 3 per cent. 1966-68 at Rs. 93.70. Following the announcement that the whole of the 3 per cent. second Victory Loan 1959-61 will be repaid at par on 15th August 1959, 3 per cent. 1959-61 has attracted some attraction and had buyers 5 nP higher at Rs. 99.75. The outstanding amount of this loan is Rs. 113.66 crores. 3½ per cent. 1963 is placed at Rs. 99 90 *ex*-voucher, as against Rs. 99.95 *cum*-voucher a week ago. 3½ per cent. 1965 is on offer and has shed 5 nP to Rs. 99.50. 3½ per cent. 1967 has, however, gained 5 nP to Rs. 99.10. State loans are lethargic with hardly any enquiry.

The rupee is ruling quietly steady in terms of U.S. dollars, in sympathy with the quiet tone of sterling abroad. While banks' selling rate of ready dollars is unchanged at Rs. 475.25 per $100, their buying rate has gone up from Rs. 471.75 to Rs. 472 per $100. In New York, spot sterling has declined from $2.81⅝-2.81.11/16 to $2.81.9/16-2.81⅝ and three months' forward from $2.81.3/16-2.81¼ to $2.81.7/32-$2.81.9/32.

KIPS MOVE UP

(From Our Own Correspondent)

MADRAS, *11th May*

Kip prices moved up during the week under review, due to purchases by shippers to the Continent at prices higher than those ruling at the end of April. Though the quantities sold amounted to only 300-400 bales, this enlivened the market, and the sellers were trying to hold on to these levels.

Arrivals in the local market were small and clearance patchy. Buyers were not keen to pay the top prices established recently, as they expected prices to decline to some extent.

There were several enquiries for tanned sheep and goat skins at full prices, and it looked as though prices would hold in this section for some time.

Shipments during April 1959 were: To the U.K.: 3,024 bales tanned cow hides, 319 cow calf, 8 buffs, 499 buff calf, 714 goat and 487 sheep skins. To the Continent: 11 bales tanned cow hides, 35 cow calf, 151 buff calf, 528 goat and 260 sheep skins. To the U.S.A.: 45 bales tanned cow hides, 6 cow calf, 131 buff, 369 buff calf and 173 goat skins. To Japan: 86 bales tanned sheep skins.

LANDSLIDE IN BULLION

(From Our Own Correspondent)

BOMBAY, *13th May*

There was a landslide in bullion prices during the week under review, thanks to nervous long liquidation and heavy bear selling. Both ready gold and silver suffered a loss of nearly Rs. 6 and Rs. 7-3 over the week. The heavy *budlis* which bulls were extracting considerably narrowed down. In fact, in one of the settlements in silver, the drop in price was so large that the bears had to pay a margin, instead of the bulls as in the previous weeks. Arrivals of contraband gold were said to have been considerable. This sudden spurt in the flow of gold is attributed to liquidation of stocks of smuggled gold stored in the country in view of the proximity of the date for getting rupee notes in circulation abroad exchanged for special bank notes issued by the Reserve Bank. It may be noted here that the period allowed for such exchange under the Reserve Bank of India (Amendment) Act passed by Parliament on 29th April is six weeks. Further, the Kasganj operator, who was believed to have incurred heavy losses in commodity markets, especially in castorseeds, turned out to be an aggressive seller in both gold and silver, the total sales during the week being estimated at as much as 40,000 tolas and 2,000 bars, respectively. The report in a section of the Press that the Central Government was considering the question of bringing futures trading in gold and silver under its control also imparted weakness to the market.

Replying to a question in the Lok Sabha on imports of silver from Tibet, Mr. Sadath Ali Khan, Parliamentary Secretary to the Minister for External Affairs, observed: "The position, as far as the Government of India is aware, is that the official rate of exchange of Chinese silver dollar is Rs. 3. The Chinese charge 2 per cent. commission on dollars converted into rupee drafts payable at Calcutta. The official rates are thus reduced to Rs. 2.95. The Indian traders, on the other hand, accumulate dollars from sale proceeds of their goods converted at the rates of Rs. 3.31 to Rs. 3.37, which is the market rate. The traders thus suffer loss when they reconvert accumulated dollars at the official rate by purchasing rupee drafts." The loss thus suffered by traders is made good by selling the silver coins in India at the market rate after paying the duty.

The aforesaid observations did not, however, have any effect on the bullion market.

May settlement in gold opened the week easy at Rs. 123-4, as against Rs. 123-8 on Wednesday last, and moved down in the course of the week owing to continued selling pressure and touched a low of Rs. 118-4 today before finishing at Rs. 118-9. The net loss over the week was Rs. 5-14. June and July settlements slumped by Rs. 4-7 each to Rs. 117 and Rs. 116-6, respectively.

The backwardation rate (*budli* in favour of the bulls) for May settlement narrowed down from Rs. 2-1 at the close of last week to Re. 1-9 today, indicating weaker hold of the bulls in this settlement which will be maturing on the 23rd inst. Nevertheless, the bulls had to continue depositing a margin of Rs. 25 per tola throughout the week, since the backwardation rate was over a rupee. The backwardation rate for June settlement stood unchanged at As. 10.

Ready gold encountered heavy selling and fell from Rs. 124-7 to Rs. 118-9. This rate was on a par with that for the May settlement. Last week, ready gold was at a premium of As. 15 over the settlement. The daily average arrivals of gold were 4,500 tolas, while the offtake was 3,500 tolas per day. The floating stocks of gold are reported to be around 15,000 tolas.

In the silver section, May settlement was hammered down in the course of the week from Rs. 198-7 to Rs. 191-10 yesterday. After recovering to Rs. 193-12 today following support at lower levels, it eased again to Rs. 193-7. The net loss over the week was Rs. 5. June settlement declined from Rs. 194-13 to Rs. 189-14 yesterday, but recovered to Rs. 190-15 today. July settlement retreated from Rs. 193-14 to Rs. 190-3.

The backwardation charge for May settlement narrowed down gradually from Rs. 3-10 on Wednesday last week to Rs. 2-8 today. The margin of Rs. 2,500 per bar on open bull position in the settlement was in force throughout the week. With regard to June settlement, since the closing rate of Rs. 191-5 on Monday was lower by Rs. 7 as compared with the starting rate, a margin of Rs. 500 per bar became operative on bears under by-law 33 c (1) (b).

Ready silver climbed down from Rs. 201-3 to Rs. 194 today, after being lower still at Rs. 193-4 yesterday. The daily average arrivals and offtake of silver were 14 bars and 15 bars, respectively. The floating stocks of silver are estimated at 400 bars.

Ready and forward silver in the London bullion market continued to remain unchanged at the last week's level of 79¼d. and 78⅞d. per ounce, respectively. Silver in New York also was unaltered at 91.375 cents per ounce. Ready gold in London firmed up from 249s. 3¼d. to 249s. 6¼d. induced by weakness of the pound sterling *vis-a-vis* the dollar. The dollar price of gold in London was firm, the latest available rate being $35.11-$35.13.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *13th May*

The cotton futures market, which was easy during the first half of the week under review, gathered strength on Monday and ruled distinctly firm. The firmness gained further momentum in subsequent sessions. The earlier easiness was induced by rumours that the Reserve Bank would curb advances against cotton and that the Forward Markets Commission might intervene to impose margin if the hedge contract price rose to or above Rs. 700. These rumours prompted nervous liquidation. The market firmed up on Monday. Cotton futures spurted on fresh buying and large-scale short covering. The small volume of tenders against the May contract on Monday, which aggregated only 400 bales, strong spot advices and encouraging news from the piecegoods market imparted further strength to the market. Rumours about F.M.C's intervention were wholly discounted. The firmness persisted today also.

I.C.C. Moglai Jarilla May 1959 opened the week at Rs. 693 and declined to Rs. 686.25 on Friday. The market was closed on Saturday on account of *Shivaji Jayanthi*. The contract hardened, under heavy buying pressure, to Rs. 698 yesterday. Opening at Rs. 698 today, it improved to Rs. 701 but dropped towards the close to finish at Rs. 695.25. Tenders against the contract to date aggregate 1,900 bales.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 703 and, after declining to Rs. 693.75 on Friday, spurted to Rs. 704 on Monday and still higher to Rs. 709.75 yesterday. Commencing today at Rs. 709.50, the contract hardened to Rs. 711.50 before closing lower at Rs. 708.

The following table indicates the trend of prices of the contract during the week:

	13-5-59	*High*	*Low*	6-5-59
I.C.C. Moglai Jarilla May 1959 ...	695.25	701	686.25	690.75
I.C.C. Moglai Jarilla August 1959 ...	708	711.50	693.75	701.75

Mill demand for spot cotton was fairly keen, but owing to the high price, they were inclined to put off buying. Nevertheless, demand was noted for ready lots of Kalyan, Jarilla, CO2, Laxmi, etc., even at advancing prices. A prominent Delhi mill was particularly interested in Vijay, Digvijay and Khandesh cotton. Fairly large business was reported in these varieties during the last few days.

Export demand for Bengal *Deshi* showed signs of revival. Inquiries were received by both old and current crop Bengals. Other exportable styles were comparatively neglected.

Activity in foreign cotton was subdued. The much-awaited import quota for 100,000 bales of cotton of staple length 1 1/16" and above has still to materialise. It is reported that the discount rate on sale of Egyptian cotton to India has been raised from 27.75 per cent. to 32.50 per cent. with immediate effect provided payments are made in transferable currencies.

The Alexandria Cotton Exporters Association is reported to have decided that henceforth all samples for arbitration and appeal should be drawn at the port of shipment prior to shipment and not at port of destination as hitherto. This would mean that the buyers will have to nominate their controllers in Egypt so that they may supervise the withdrawal of samples before the departure of the ship. This decision is considered unfair by the trade in India. The Secretary of the Cotton Buyers' Association, in the course of a communication addressed to the President of the Alexandria Cotton Exporters' Association, observes: "According to the previous practice, samples for arbitration and appeal were drawn at the port of destination in the presence of international cotton controllers appointed by the shippers. As the position stands now, the buyers would have to incur controlling charges to supervise the drawing of the samples at your end. Apart from this, it is unreasonable to presume that the buyers would, in each and every case, decide to go to arbitration without seeing the actual quality of the shipment. My Association is afraid that this might lead to unnecessary disputes between the importers and the mill consumers at this end in the absence of the full implications of your decision not being realised by the latter. It is indeed unfortunate that such a decision should have at all been taken at a time when the Government of India is doing all it can to allow more imports of Egyptian cotton regardless of exchange difficulties."

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 695; Berar Jarilla 690; Khandesh 870; Laxmi 1,050.

The 18-day old dispute between the Karachi Cotton Association and brokers ended on the 10th inst. following the abolition by the Association, in consultation with the Government, of the ceiling and floor prices for cotton. The dispute, it may be recalled, turned on the basic issue of clearing and commitment of contracts. It arose when private deals involving 20,000 bales of cotton resulted in a loss of about Rs. 8,00,000 which the brokers wanted to be squared up by the members of the Association. The Association contended that it was not concerned with the loss as it arose out of private deals. The deadlock has been solved by permitting free trading without any floor or ceiling restrictions. The Association also banned fresh futures trading in May and July contracts.

In view of uncertainties about the dispute, the Karachi cotton futures market ruled subdued. Trading interest was low and only nominal transactions were reported. Prices ruled virtually unchanged. N.T.R.G. May and July were quoted at Rs. 53 and Rs. 54-8 on 9th May. Fresh trading, as

noted earlier, in May and July was banned. The developments in the futures section affected the spot market which too was subdued.

The Alexandria cotton futures market ruled fairly firm during the week. The firmness was due to speculative buying based on the expectation that foreign demand would improve following the raising of the discount rate on Egyptian cotton from 27.75 to 32.50 per cent. The enhancement of the discount rate is said to have been made to strengthen the competitive position of Egyptian cotton *vis-a-vis* Sudan cotton.

As a measure of official assistance, cotton exporters have been permitted to buy from Government stocks of qualities which are in short supply in the spot market. Such purchases aggregated 35,000 bales (of 720 lbs.) till the middle of April. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: May 72.50; July 72.55; *Ashmouni*: June 65.80; August 64.85.

Firm conditions prevailed in the Liverpool cotton futures market during the week. Values advanced on mill fixation and trade covering said to be against yarn sales. Advices from the spot market were encouraging and export inquiries better. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end rates.

American cotton one inch staple contract: May-June 22.65 (21.90); July-August 22.65 (22.23); October-November 21.85 (21.65); December-January 21.60 (21.25).

American cotton mixed growth contract: May-June 23.00 (22.60); July-August 23.12 (22.60); October-November 22.25 (21.85); December-January 21.60 (21.30).

Sudan: May-June, July-August, September-October 26.75 (25.75).

Further gains were recorded by the New York cotton futures market during the week. Most of the current and new crop positions met with support. The buying was attributed to encouraging news from the textile markets, the gradual recovery in cotton consumption and the prospect for larger export abroad as a consequence of the enhancement of export subsidy rate

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	12-5-59	5-5-59	28-4-59
Spot	36.25	36.25	36.10
March	35.91	35.89	35.88
May	35.09	34.96	34.94
July	32.87	32.77	32.68
October	—	—	—

SUGAR SHOOTS UP

(From Our Own Correspondents)

BOMBAY, 13*th May*

At no time in the recent history of the sugar market had prices been ruling so high as now. Large grain is currently quoted at Rs. 125-129 per bag, as against Rs. 116-119 two weeks ago. Over the same period, medium grain has spurted by Rs. 9 to Rs. 123-124 and small grain by Rs. 7 to Rs. 122.

This steep scaling-up is attributed largely to speculative activity indulged in by a section of traders which, it is said, is trying to exploit the situation caused by the fall in sugar output in the current season—the actual production is expected to be not more than 1.90 million tons, as against 1.98 million tons in 1957-58—when demand continues to rise. These traders fear that the closing stocks of sugar with mills at the end of the season would be less than 100,000 tons and that prices would register a further appreciable increase in the coming months, if no corrective steps are taken. Some would appear to feel that the stocks would be substantially lower still. This view is based on rumours that the Government would allow 100,000 tons of sugar to be exported, as was contemplated before, now that the Supreme Court has upheld the validity of the Sugar Export Promotion Act.

Much concern over the sudden rise in sugar price was expressed by several members of Parliament. Replying to a "calling attention" notice in the Lok Sabha on Saturday the 9th inst., Mr. A. M. Thomas, Union Deputy Food and Agriculture Minister, announced that the Centre had advised the State Governments to licence wholesale dealers in sugar, in order to check the recent unwarranted rise in the price of the commodity, especially in Uttar Pradesh. Neither this announcement nor his assurance to make available adequate quantities of sugar to meet the rising trend of consumption had any effect on prices in the sugar market. In fact, much of the aforesaid rise in prices took place after the Minister's statement.

The more responsible section in sugar trade is inclined to feel that there is no justification for the steep rise in prices. There are reports that the Centre will be making available normal quantities of sugar for sale in the free market during the current month through normal releases and distribution of about 30,000 tons among tenderers at controlled prices which are being rushed to scarcity areas. It is further learned that the Government is seriously reconsidering the export policy and that only a token quantity of about 10,000 tons in all will, in fact, be exported in the current year.

Arrivals of sugar by rail into the city during the week aggregated 13,030 bags.

* * * *

HAPUR, 11*th May*

Sugar prices firmed up during the week, due to shortage of supplies. Ex-mill deliveries were quoted at a premium of Rs. 4.25 to Rs. 4.50 over the controlled prices. Sugar improved from Rs. 106 per bag last week-end to Rs. 109 to Rs. 110.

The U.P. Government has decided to enter the market as a seller and the Centre is rushing additional supplies to stem the rise in prices and meet the shortage. The intention to introduce a system of licensing of wholesale sugar trade has also been announced by the Union Food Minister to check the spurt in sugar prices in U.P.

Perfectly firm trend was witnessed in the Muzaffarnagar sugar market. Buying from consuming areas was brisk, while stocks with mills were small. Prices spurted by about Rs. 2 per maund. The last quota release was reported to have been sold out with most of the factories. The latest prevailing prices were: wholesale mill delivery controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36; prevailing market prices Meerut D29 Rs. 40; Amroha D29 Rs. 39.50; Sakoti D29 Rs. 39.87; Bijnore D29 Rs. 39.37; Saharanpur D29 Rs. 39.62; Rohana C29 Rs. 40.

Under the impact of artificial scarcity reports, sugar moved up to touch new heights since control in the Kanpur market where the rate for a bag stood at Rs. 121, and would have gone up more appreciably but for better supplies in the market. Brisk demand was reported from the non-controlled areas in the South. At the peak season of demand due to summer season and marriage requirements, the release of a lower quota added further strength to the sugar market.

Khandsari also recorded gains, in line with crystal sugar and with good demand. Better quality was quoted at Rs. 34 to Rs. 39, inferior at Rs. 30 to Rs. 34.

Gur recorded further gains, due to demand of dry quality which averaged about 300 to 400 maunds out of stocks retained by producers. *Kotha* stocks were running down and were put at 89,000 maunds, as against 92,000 maunds last week-end. Prevailing prices were: *pansera* Rs. 20 to Rs. 20.50; *shakker* Rs. 21.50 per maund.

Gur also improved in the Muzaffarnagar market, due to good demand from Gujerat and Madhya Pradesh. Arrivals were at an average of 4,000 maunds and the latest prevailing prices were: ready *Chaku* Rs. 21.75 to Rs. 23; ladu Rs. 21 to Rs. 21.25; *Shakker dara* Rs. 20.50 to Rs. 22; *masala* Rs. 23 to Rs. 26 per maund.

YARNS STEADY

(From Our Own Correspondent)

BOMBAY, 13*th May*

The yarn market put on a distinctly steady appearance during the week under review and values tended to look up. Art silk yarns met with good buying support induced by expectations of enlarged demand from consuming centres in the coming months. The expectations were based on a recent announcement in the Lok Sabha by the Union Finance Minister that he would further examine the question of reducing excise duty on small art silk weaving mills. The two other favourable factors were upward revision in premium commanded by rayon yarn import licences (from 40 to 50 per cent.) and firmness of nylon yarn. Staple fibre yarns also evoked good support, despite reports regarding large stocks lying unsold in the Punjab markets and some sales by South Indian mills. Cotton yarns, however, continued to rule dull.

Cupressa Bamberg yarn (60×1) June delivery spurted from Rs. 1,454 to Rs. 1,471. Spot yarn was fully maintained at Rs. 7.22. 120 Japan and 150 Japan both hardened by 3 nP to Rs. 4.75. 120 Italy was firm at Rs. 5, as also 150 Italy at Rs. 4.68. National Rayons 150 Bright cones 1st grade advanced by 14 nP to Rs. 4.28. 120 Bright cones 1st grade registered a rise of 6 nP to Rs. 4.62.

Staple fibre yarn (40×2) June delivery rallied from Rs. 592 to Rs. 608. Spot Kohinoors strengthened by 7 nP to Rs. 3.28. Citys gathered 4 nP to Rs. 3.12. Centurys put on a naya paisa to Rs. 3.13. Among imported yarns (80×2), Paramounts encountered selling and dropped 12 nP to Rs. 7.19.

In the cotton yarn section, ten counts Moderns and Podars were quiet at Rs. 13.25 and Rs. 12.19, respectively. Twenty counts Moderns were done at Rs. 16.25, same as last week. Forty counts Minaxis picked up 19 nP to Rs. 25.25. Moderns were dull at Rs. 26. Among 60s, Raghuvamshis were unaltered at Rs. 56.50, as also Finlays at Rs. 65. Eighty counts Citys dropped 75 nP to Rs. 66.50, while Finlays stood at the last week's level of Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	13-5-59	6-5-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg		
June (per case of 200 lbs.)	1,471	1,454
60/1 Cupressa Bamberg spot (per lb.)	7.22	7.22
120 Japan (per lb.)	4.75	4.72
150 Japan („)	4.75	4.72
120 Italy („)	5.00	5.00
150 Italy („)	4.68	4.68
Staple fibre yarn—		
40×2 June (per case of 200 lbs.)	608.00	592.00
40×2 Century (per lb.)	3.13	3.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
40s Minaxi	25.25	25.06
60s Finlay	65.00	65.00
80s City	66.50	67.75

FURTHER RISE IN CASTORSEED

(From Our Own Correspondent)

BOMBAY, 13*th May*

The oilseeds market continued to rule buoyant during the week under review. Castorseed was exceptionally strong. Groundnut too made considerable gains. Other seeds and oils witnessed sympathetic rise in values on short covering and speculative support. The outlook on the export front was considered bright, despite reports that the Conference Lines had decided to raise freight rates for oil and oilcakes to the U.K. and Continental ports, with effect from 1st July.

The strength in the groundnut section was induced by the restricted arrivals not only in the local market but in upcountry centres. *Vanaspati* manufacturers and crushers continued to lend good support, despite higher prices. Although there was a slight technical reaction in the initial sessions of the week, both the May and August contracts rallied to touch Rs. 204.25 and Rs. 206.25 today, as against Rs. 201.00 and Rs. 204.50 last week-end, respectively. Bold ready which was quoted at Rs. 41.00 last Wednesday, after moving both ways within a narrow range, advanced to Rs. 42.12. Oil ex-mill too was firm, its prices having gone up from Rs. 22.00 to Rs. 22.25.

The castorseed section, as already pointed out, witnessed spectacular rally in prices. The revival of U.S. interest in Indian castor oil is the major influence in the section. It is, however, feared that Brazil will recover its position by September and offer strong competition in the American market. The present acute shortage of castor oil in Brazil, however, is likely to continue for some time more. Castor May and September contracts steadily advanced from Rs. 156.00 and Rs. 171.25 to Rs. 172.87 and Rs. 176.62 yesterday, but declined slightly, owing to technical factors, to Rs. 172.75 and Rs. 176.00 today, respectively. Ready Madras improved from Rs. 32.62 to Rs. 34.12. Oil B.S.S. was higher at Rs. 18.31, as compared with Rs. 17.62 last week.

Linseed and cottonseed followed the pattern set by the other seeds. The reports that Australia would enter the market for linseed oil induced further strength in this section. September contract, which stood at Rs. 34.31 last week-end, after fluctuating between Rs. 34.06 and Rs. 35.06, closed today on a firm note at Rs. 35.50. Bold ready hardened from Rs. 33.12 to Rs. 34.25 and oil from Rs. 16.25 to Rs. 16.87. Cottonseed May and September contracts, which finished last week at Rs. 135.50 and Rs. 137.75, after witnessing minor fluctuations, rose to Rs. 138.25 and Rs. 139.25 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	13-5-1959	6-5-1959	29-4-1959
Groundnut	Rs.	Rs.	Rs.
May 1959	204.25	201.00	194.00
August 1959	206.25	204.50	199.00
Bold ready	42.12	41.00	39.75
Coromandel ready	42.62	41.25	40.00
Khandesh quality	42.62	41.25	40.00
Oil ex-mill ready*	22.25	22.00	21.00
Railway receipts*	22.00	21.75	21.00
Castorseed			
May 1959	172.75	156.00	158.62
September 1959	176.00	171.25	164.00
Ready Madras	34.12	32.62	31.25
Ready Kanpur	33.12	31.37	30.00
Oil B.S.S.†	18.31	17.62	16.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

MEDIUM TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 8*th May*

A slightly larger quantity of 800,000 lbs. was on offer in this sale which was held on 5th May 1959. The offerings from all districts showed a further decline in quality and in particular high grown teas had less flavour. The market opened to a good, but irregular, demand. There was useful enquiry for low medium and medium teas which sold well and were irregularly 5 nP dearer. In particular, fannings grades were in good demand. There was less enquiry for good medium brokens and these sold at easier rates and were sometimes difficult to sell. There were a number of withdrawals under this category. However, similar fannings met with keen competition and sold well. Best liquoring high growns continued easier, following quality with broken grades in less demand than last. There was strong demand for whole leaf grades at dearer rates. The quotations are: low medium Re. 1.75 to 1.85; medium Re. 1.85 to Rs. 2.15; good medium Rs. 2.40 to 2.75 and quality Rs. 2.45 to 4.22.

Dust Sale 'I':—A total quantity of 390,000 lbs. were on offer in this sale which was held on 7th May 1959. The offerings consisted of a useful selection and quality in general was well maintained. There was a good general demand for all types of dusts which sold at irregularly dearer rates. Black grainy dusts met with keen enquiry and sold at higher rates. There was strong demand for a selection of C.T.C. dusts and these were considerably dearer.

London Market: *Sale of 4th May 1959*.—Best firm plainer barely steady.

Sale of 5th May 1959.—About steady.

Colombo Market.—Quality declined. Active demand highgrown mediums generally 15 to 20c. dearer. Lowgrowns slightly dearer. Offgrades strong demand firm to dearer, except stalky kinds.

Export Quota.—The market continues to remain quiet with no change in our last week's quotation.

Special Licence 1958-59.—Seller 1 nP with probable buyers at 1 nP.

Current Quota 1959-60.—Seller 8 nP with probable buyers at 5 nP.

Forthcoming Auctions. Sale No. 18 will be held on Tuesday, 12th May 1959 and dust sale 'J' on Thursday, 14th May 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire.

"*Sale* 18.—700,000 lbs. Good demand, particularly for low medium and medium teas, which are fully firm. Good mediums and highgrowns irregularly 10 to 20 nP easier. Whole leaf strong."

DUST TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Mixed conditions were in evidence in the internal sales held last week, when dusts amounting to 22,106 chests met with a good and general demand. In C.T.Cs, the mediums eased in an irregular trend, but the poorest descriptions of the same category hardened. Good mediums and the best liquoring C.T.Cs eased by 10 nP. Black leaf orthodox teas gave way, but keen competition was in evidence in the smaller kinds. Darjeelings were higher, but the legg-cut teas in an irregular trend eased. The quotations were: best Assam C.T.C. Rs. 2.65 to Rs. 3.05 (nom.), medium Assam C.T.C. Rs. 2.05 to Rs. 2.25, medium Assam grainy Re. 1.70 to Re. 1.74, and medium Dooars Re. 1.74 to Re. 1.78.

Leaf offerings totalled 419 chests, prices of which hardened on good general demand.

Transferable shipping licence was wanted at ¾ nP., while sellers demanded 1¼ nP. Business was done in non-transferable shipping licence at 1 nP, but the price soon eased to ½ nP.

Note was taken here of the fall in demand in last week's sales in London of both North Indian and Ceylonese teas. Buying was more selective than in recent weeks, and prices of the inferior types gave way. The fall in demand in London would indeed seem surprising against the background of the noticeable fall in U.K. tea stocks from 154 million lbs. to 150 million lbs. in the week ended 1st May. However, no such surprise was caused in trade circles here since the fall in demand was attributed to the paucity of quality teas on offer. Bidders in London would naturally wait for the new season's teas.

JUTE GOODS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Following increased support and Government buying, prices of jute goods made a modest recovery, while, due to reports of timely rains for the new crop, fibre prices were quiet and unchanged during the week under review. There was fair buying for export in goods, and speculators increased their holdings in anticipation of more buying orders. Mills availed of this opportunity to unload as much as they could for forward positions, the near positions in their order books having been completed. The news of a decrease in stocks of goods with mills as on the last day of April was in accordance with market expectations, but when the details were known they were more pleasing than the earlier anticipations. This gave a push to the prevailing uptrend. There was an overall decrease of 1,800 tons. Considered construction-wise, heavy goods recorded the welcome decline of 4,800 tons. The increase of 2,600 tons in hessian was considered of no consequence. For stocks were already too low and there had been ample indications of forthcoming buying support. The increase in hessian was due to the continuation of the process of transferring more sacking looms to hessian manufacture in an attempt to balancing production. Miscellaneous goods increased by 400 tons.

Sentiment in heavy goods was also boosted by the Government order for about 31,000 bales of B. twills for near delivery. Tenders had earlier been invited. This was a good compensation for earlier chillness following reports of Pakistani mills getting orders for cornsacks from overseas. There was also the rumour that Pakistani mills would shortly be increasing working hours in order to cope with the increased demand. Shrewder elements in the market were not prepared to give any credence to these rumours, which, even if partly true, were believed to be exaggerated considerably. Indeed, business was reported here for cornsacks from Australia. It was apparent that even if Pakistan had received orders for cornsacks from Australia, she was unable to meet the demand in full. At this stage, Argentine interest for hessian was reported. There were also enquiries for export to the U.S.S.R. which partly substantiated the earlier report in the market that the Russians had placed an order for a considerable quantity of hessian.

On Tuesday last, mills exhibited an anxiety to sell as much as they could following reports of a Government call for tender for 31,000 bales of B. twills on the previous day. However, offerings increased, and could not be absorbed instantaneously. This caused ready B. twills to give way to Rs. 93.45 from Rs. 93.55. In sympathy, ready hessian 40" 10 oz. also receded to Rs. 39.75 from Rs. 39.90 the earlier day. Buying interest was on the decline. On Wednesday, there was some business done in cornsacks with Australia, and this set in a recovery. Also, the trend in the futures market was steadier. The result was a narrow gain in prices, B. twills being quoted at Rs. 93.60 and hessian 40" 10 oz. at Rs. 39.70. This was followed on the next day by the highly satisfactory announcement of April-end stocks with mills. This caused B. twills to spurt to Rs. 94.30. Hessian 40" 10 oz. at Rs. 40.25 recorded an impressive rise. This was followed by the Government order for B. twills. Although rates fell fractionally on account of profit-taking, the undertone was steadier. B. twills were placed at Rs. 94.25 and hessian 40" 10 oz. at Rs. 40.15. At this stage, business was done in hessian with buyers for Argentine, and some amount of buying was done in the bazar on expectations of Russian interest. Over the week-end B. twills hardened to Rs. 94.35 and hessian 40" 10 oz. to Rs. 40.25. There was covering demand in hessian yesterday, and transactions in the futures market also attracted attention. As a result, hessian 40" 10 oz. at Rs. 40.65 made a further recovery. B. twills continued to advance and touched Rs. 94.50.

Interest in raw jute was slack. For mills had plenty of fibre in stock, adequate enough to see them through for most of this season. Further, reports of good condition of the new crop acted as a disincentive for increasing stocks further. What remained to be marketed was mostly the low quality jute and it seemed improbable that most of it would find its way to mills. Latest quotations for the outstanding 1958-59 crop, May-June delivery, are:

BASE METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Base metals were maintained at steady levels during the week under review. The stock position of principal metals was far from satisfactory and the position was expected to continue for some time. Imports were on the high seas or awaiting shipment in foreign ports, but any arrivals in the near future were not scheduled.

The week's star feature was the rise in virgin lead from Rs. 76.75 to Rs. 78. Demand considerably exceeded availability. On the London Metal Exchange, spot lead was fully firm at £70½ and August £71½.

Tin at Rs. 579 held firm ground and, in London, the price was unchanged at £783. International firmness in this metal was attributed to the increased requirements in the United States. Also, consumption in other countries was increasing. It was reported that the producing countries demanded a revision of the export quota of 40 per cent. of production in each country. If this request was allowed, the producing countries, which are members of the International Tin Council will step up exports by about 3,000 tons per year. Recently, about 5,000 tons were disposed of from the buffer stocks in London.

Electrolytic zinc opened at Rs. 106.50 and, after spurting to Rs. 108.75, closed at Rs. 104.50. There was good demand.

Copper scrap continued to be in short supply.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, 11*th May*

In sympathy with the generally bullish trend in other oilseeds, notably groundnut, castor and mustard, linseed advanced and the tone of the market was distinctly steady. There was keen demand from crushers for both near and forward positions, but, with availability still somewhat scarce, the actual turnover was disappointing. Oilcake sagged further to Rs. 13 with few enquiries. The oil market was steady and there was fairly keen activity, with shippers and stockholders showing interest. Despite premiums asked for June and July, these positions were much in demand. With an improvement in overseas prices, the disparity in Indian quotations had diminished.

The latest available quotations are: Ready-May Rs. 23 and June-July Rs. 23.25 per maund.

WHEAT LEVY SCHEME

(From Our Own Correspondent)

HAPUR, 11*th May*

Steady to firm conditions prevailed in the foodgrains market during past week. Contrary to all expectations, arrivals of new grains in the markets dropped further and, following the imposition of wheat levy scheme by the State Government, wheat arrivals dwindled to almost *nil*. The Government of India has fixed the price for the purchase of different varieties of wheat in the wheat producing States of Punjab, Rajasthan, U.P. and Madhya Pradesh; the prices vary from Rs. 13 to Rs. 15 per maund according to variety. The wheat levy scheme has been put into operation in the States and, in the U.P., wheat stocks have been registered with the traders, out of which 50 per cent. will have to be delivered to the Government at controlled price. Following this, wheat arrivals here and in other centres have gone down considerably and cultivators are not bringing their produce in the market to be sold at prices fixed by the Government, with the result that consumers are finding it difficult to meet their needs at this time when supplies ought to have been plentiful.

Wheat at Hapur recorded a sharp advance during the week. While controlled price was Rs. 13 to Rs. 15 per maund, wheat was not easily available in the open market even at Rs. 19. Daily arrivals, which were gradually increasing before the scheme and were upto 500 to 600 maunds daily, are almost *nil* now. Spurt in prices and non-availability of wheat in the market are reported from various parts of the State.

Rice, however, ruled quiet during the week in the absence of new urges and supply position was reported fair. The latest prevailing prices were: *basmati sela* Rs. 33 to Rs. 35; *mainpuri* Rs. 21.50; *raimunia* Rs. 26.50; *gadda* Rs. 22.50 per maund.

Gram also registered a rise of a rupee per maund on firm Punjab advices and in sympathy with wheat. Barley and *bejhar* continued to record a hardening trend, as arrivals in the market were small. The U.P. Government has to purchase these coarse grains also at Rs. 11.75 for gram and at Rs. 10 for barley and *bejhar*. *Jowar* and *guwar* stayed steady. The week-end prices on Monday were: gram Rs. 13.75; barley Rs. 12.37; *bejhar* Rs. 12.25; *jowar* Rs. 13 to Rs. 15; *guwar* Rs. 15 per maund.

SUGAR

(*Concluded from page* 812)

Some in the sugar trade are inclined to feel that the world prices would move up in the coming months and chances of export business would be brighter. In support of their view, they point to the International Sugar Council's statement that the recent low prices for sugar cannot be justified on normal supply-demand considerations alone and its hope that, once the uncertainty about the Cuban position has been reduced, "prices would start to react to the export cuts" the Council imposed in February 1959. There is, however, another section which is of the opinion that world sugar prices may not go back to 3.15 cents per lb., "unless it is," as the *Financial Times*, London, says, "the result of political factors and the Sugar Council may feel forced to act again, if there has not been any improvement in the market by mid-June." At the moment, the majority of world sugar interests, we are told, is firmly of the view that there will be a sizable surplus this year.

FUTURES TRADING IN "GUR"

A special reference to the futures trading in *gur* was made by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, while inaugurating the Conference of Presidents of recognised forward markets held in Bombay a fortnight ago. Mr. Shastri disclosed that the possibility of granting recognition to the centres for *gur* futures trading was under Government's examination and an official decision would be taken on the issue soon. The Forward Markets Commission has urged immediate grant of recognition to the Chamber of Commerce at Hapur and the Agra Merchants Chamber at Agra and stated that it would be shortly sending its recommendations in respect of other centres. Mr. Shastri complimented the Commission by saying that it had a clear mind on the subject, but stressed that the matter had to be pursued further with the Ministry of Food. Proceeding, he said:

"A reference has already been made to them (the Food Ministry). The Forward Markets Commission naturally fears that, sometimes, a complete ban would lead to widespread illegal trading. However, this matter will be pursued and some decision arrived at. I might also say that I have received representations from different associations for giving recognition to them for futures trading in *gur*. I was impressed with the case of Amritsar when I went there last."

Futures trading in *gur*, as readers are aware, was suspended in all centres by the Government with effect from 12th February 1959. It was done so on the ground that futures trading led to heavy speculation and sharp rise in prices. Its abolition has, however, not served the purpose, as witness the appreciable rise in prices since then. The latest available quotation of Rs. 20.25 per maund for *gur pansara* quality at Hapur is actually higher than the high level of Rs. 18.37 prevailing before futures trading was suspended. The Forward Markets Commission is of the view that a complete ban on futures trading will lead to widespread illegal trading, although the marked rise in *gur* prices has been brought about, to some extent, by firmness of sugar, *gur's* competitor. The imposition of a complete ban on futures trading in *gur* could have been avoided, if the Government had given effect to the Commission's suggestion, made two years ago after a full examination of the position, for applying the Forward Contracts (Regulation) Act to *gur* and for granting recognition to appropriate bodies at Hapur, Meerut, Agra, Muzaffarnagar and Delhi. Mr. Shastri seems to concur with this view, for he said that futures trading in *gur* should be regulated and that, in accordance with the earlier recommendations of the Commission, a limited number of trading bodies must be recognised for the purpose. He emphasised that, "for the recognition of such trading bodies, it is necessary that the Commission should be satisfied about their representative capacity, their proper composition, their financial standing, and the drawing up of suitable rules and by-laws for conducting futures trading."
