"The second event which calls for comment is not so promising for the Chartered Bank and its associates, which engage primarily in the financing of oversea trade. I refer, of course, to the impasse which has been reached in the negotiations for the setting up of a wider free trade area to supplement the newly established Common Market and it is by no means clear that the European Economic Community (E.E.C.) will not detrimentally affect the trade position of a number of Asian countries in which we operate. In theory, the increased scale of industrial operations possible in a unified market of some 170 million people should lead to an increase of trade with the outside world, but many of the Asian countries fear that the establishment of E.E.C. may mean the creation of a new system of tariff preferences within Europe which will have the opposite effect. In general, it is possible that these fears are exaggerated, for the agricultural exports of the South-East Asian countries differ generally from those of the French and Belgian African territories which receive preferential treatment, and for manufacturing countries like India and Hong Kong Commonwealth preference is still the most important factor in their trade. Nevertheless, it would be a very retrogressive step if South-East Asian countries had to resort to bilateral agreements with the Common Market, and it is to be hoped that for the sake of Asia as well as the United Kingdom a formula will be found to extend the present E.E.C. to the envisaged free trade area.

Cyprus

"Our newly acquired business in Cyprus was put to a severe test during the year and I am pleased to report that progress was made notwithstanding the effect of the terrorist activities of EOKA, a series of curfews and strikes, communal animosity and a boycott of British goods. This satisfactory outcome is in no small measure due to the efforts of our staff whose personal safety has from time to time been in some jeopardy, and they are to be commended for the efficient manner in which at all times they carried out their duties.

"It is surprising that, despite all the difficulties inherent in the emergency, there was no breakdown in the day-to-day economy of the island and no shortages of essential commodities occurred. An indirect result of the Government's inability to carry the continuing and increasing costs of the emergency has been an increase in taxes, which may fall heavily on the population and cause a rise in the cost of living. Fortunately now that a better understanding has been arrived at between the interested outside powers and the political parties on the island, we can look forward to a cessation of terrorism and happier relations between the Turkish and the Greek Cypriot communities.

Lebanon

"The tranquility which marked the end of 1957 was short-lived for in May grave disorders broke out and continued for several months and to add to the difficulties arising from the general insecurity, the frontier with Syria was closed, so that transit trade was halted. In these circumstances it is estimated that the total volume of oversea trade fell by as much as 30 per cent. over the year with the result that merchants had difficulty in disposing of stocks and the banks had to allow extended credit. By the end of the year local conditions had improved but while it would be wrong to underestimate the resilience of Beirut, the shock to the business community has been severe and some time will be needed for a full recovery.

Iraq

"The revolution which took place in July and established a republic in place of the monarchy has been fully reported in the Press. Iraq is still in a state of transition, and trade patterns may well change to conform to the foreign policy of the new Government.

"In the meantime the banks generally have so far experienced little interruption in their ordinary routine. Since the revolution all imports have been subject to licence, the object being to restrict 'luxury' expenditure; but as markets generally were overstocked during the first half of the year and licences were freely given for essential goods, current business was not greatly affected.

"Oil revenue was buoyant, rising to nearly I.D.84 million during 1958 with a further increase to I.D.100 million in prospect during 1959. The development plans of the former Government, which had made considerable progress, are being reviewed and it is clear that the new Government will not be short of funds for any reasonable programme.

"Wheat and barley crops were poor owing to short rainfall and damage by locusts, but there was fortunately an unsold surplus of barley carried forward from 1957 and exports were possible on a limited scale, while as far as can be judged at present the crop outlook for 1959 appears more promising. The date harvest was plentiful but below average in quality.

"By increasing exports and controlling imports the new Government hopes to improve the country's balance of trade. In accordance with the official policy of trading with a wider range of countries, a number of new trade agreements have been negotiated. The normal pattern appears to be that countries selling to Iraq are expected to buy Iraqi produce, a tendency towards bilateralism which has proved unsatisfactory when tried elsewhere and which may not result in any general expansion of trade.

Persian Gulf

"*Bahrain.*—Bahrain had another quiet and prosperous year. A 'free transit area' was opened in the port on 1st January and the flat two per cent. duty *ad valorem* on goods in transit has been abolished, storage charges being imposed instead.

"Work on the new deep water jetty at Jufair has progressed and the construction of new customs sheds at Manama has continued.

"Imports were maintained at about the 1957 level, but trade with Saudi Arabia was at a low level owing to exchange difficulties. The revolution in Iraq had no direct adverse effect on Bahrain's trade, but the Government found it necessary to prohibit the re-export, and to control the prices of certain foodstuffs as it was considered possible that shortages might occur.

"*Doha.*—There is little to report from Doha, except that development continues. The new power station was opened in May, the custom house building is nearing completion and road making and airfield extensions are in hand. New projects include the dredging of the port and the construction of a pipe-line for natural gas from Dukhan to Doha. Merchant business shows further improvement.

"*Sharjah.*—The year has been uneventful. After a slack period in the early months, there was some improvement in business but unfortunately this was not maintained.

Hadhramaut

"The Eastern Bank has had a branch at Mukalla since 1955.

"Although Hadhrami merchants have traded successfully for centuries throughout the East, their own country is deficient in natural resources and up to now no oil has been found there. A water-supply project is in progress at Mukalla and irrigation facilities are being developed in the hinterland, but these schemes are necessarily on a small-scale. Imports are restricted to simple necessities.

"Merchant business shows some improvement, while the volume of goods imported direct rather than through Aden is increasing and it is expected that during the coming year direct shipments from Europe will begin.

Aden

"The unsettled political conditions prevailing in the Middle East last year were reflected in Aden in intermittent fighting with insurgent tribesmen along the undemarcated boundary between the Western Protectorate and the Yemen. Matters reached a crisis in April with the deposition of the Sultan of Lahej and the following month, because of internal riots and unrest, the Government of Aden Colony found it necessary to declare a state of emergency. Although this is still in force, prompt and decisive action by the authorities soon restored law and order. Later, the situation was evidently considered sufficiently stable to make it possible to promulgate the new constitution and to hold, in January, the first elections under it. Although less than a third of the electorate voted, it is a matter for satisfaction that most of those elected have had previous legislative experience and are widely representative of the various sections of the electorate.

"Owing to shortage of foreign exchange in neighbouring territories and to the disturbed political situation in the hinterland Aden's entreport trade has been on a reduced scale. There has been difficulty in finding export markets for locally grown cotton and the output of refined oil has been lower. These factors have inevitably depressed local business activity, although fortunately more shipping has been using the port and its bunkering facilities.

India

"In previous years I have expressed anxiety that, taking into account India's available financial resources, the second Five-year Plan might well prove too ambitious. Nobody who has any knowledge of the living standards of the mass of the Indian population will question the need for strenuous efforts to improve them but, if the problem is to be tackled successfully, harsh economic realities make it necessary to distinguish between what is desirable and what is practicable. At one stage during the past year there seemed a grave danger that the import programme sanctioned soon after the inception of the Plan in April 1956 had not only outstripped India's ability to finance it, but also the extent of the foreign aid that was likely to be forthcoming. Fortunately, following the Finance Minister's foreign tour last September, he was able to secure sufficient credits to meet India's shortage of foreign exchange until next March, and possibly to March 1961. Moreover, it is generally understood that arrangements are in hand for the provision of enough foreign assistance to complete the essential features of the Plan, which suggests that the worst of the crisis may be over. The Reserve Bank of India figures, which show its recent purchases of sterling from the commercial banks to have exceeded its sales, serve to confirm these indications that the stringent import restrictions are now producing a favourable balance of trade in the private sector of the economy. It is difficult to gauge the fall in foreign exchange expenditure on Government account, where a rapid contraction is not easily effected, but it does appear that the heavy and continual loss of foreign exchange over recent years has been halted. Unfortunately the extent to which the Government has resorted to deferred payments to achieve this result has left a burden, to be shouldered in the years to come, which will leave little margin for additional foreign exchange expenditure during the third Five-year Plan, even allowing for possible savings on exchange which are likely to accrue when the new steel works and heavy industries, set up under the present Plan, commence operations.

"This factor and other difficulties that are bound to be encountered in effecting future balance of payments leave little hope for any early increase in the present low figure of foreign assets and, as little or no foreign exchange now exists to mitigate the effects of bad harvests or of temporary reductions in export earnings, it is important to pay some attention to what may be in view in the third Five-year Plan. It is planned to invest Rs. 10,000 crores in the period and one-third of the figure is expected to come from private investment. Progressively less reliance is to be placed on foreign assistance and a much larger figure is expected from domestic savings. This large figure of private investment is looked for after quite considerable extra taxation has been imposed and collected to take care of investment in the public sector. Domestic savings must surely depend on the ability to save and it is at least questionable whether the income *per capita* in relation to the cost of living will permit of savings on this scale. So far as private enterprise is concerned, the country's complicated system of heavy taxation, direct and indirect, which is apparently to bear extra burdens, has already reached a point where it is a serious deterrent not only to private enterprise in India, but also to foreign enterprise. Although progressively less reliance is to be placed on the latter the investment of foreign capital is still recognised as being of vital necessity and the Government has said that it wishes to encourage it. It is questionable under the circumstances whether this encouragement is in fact being given. Investment too, however made, should be concentrated on the agricultural sector, which would probably show quicker and better returns than industrialisation and would certainly do more generally to raise the standard of living.

"So far the vagaries of the monsoon, and the resultant food shortages in some districts, have been offset by substantial deliveries of wheat by the United States under P.L.480 agreements and equally generous supplies of cotton were given. These oversea gifts do not, however, solve the foreign exchange problem and it seems to me that India has to accomplish two things in order to safeguard its future; firstly, and this applies equally to Pakistan, it has to improve its relations with its neighbour to an extent that the proportion of military and other service expenditure in its budget is so drastically reduced that a lowering of taxation is possible. Secondly, that the gold in the hands of the people be made available to the Government. This is a psychological problem depending on confidence but it might be possible to introduce a form of bearer loans against gold, or even free imports, and allow an economic rate to be found and confidence restored in that way. Success in this could go a long way towards solving India's foreign exchange problem.

"Another factor which may prove of the utmost importance but which is not dependent upon Governmental action is an increase in oil production. On the other hand, I cannot but view with misgiving the increased tendency towards State trading. State Trading Corporations may perhaps be essential in dealing with countries behind the Iron Curtain but, generally speaking, they detract from a country's competitive trading ability and they certainly discourage private enterprise.

"The widespread publicity given to India's difficulties during the past year or more should not be allowed to obscure the extensive progress that has been achieved in carrying out the country's development programme. The task of improving the living standards of a population of some 400 million, which is increasing by about six million each year, is obviously immense and it is greatly to the credit of the Indian Government that it has chosen to implement its Five-year Plans by democratic means.

"In the purely banking field there was a tremendous change in the lending/deposit ratio of the banks, due no doubt to a striking increase in bank deposits. How much this is due indirectly to the large counterpart funds held in the country resulting from the sale of commodities imported under aid is not clear, and it would perhaps be more to the country's advantage if these counterpart funds could be spread amongst all the banks instead of being held by a single lender. Such a redistribution might, too, bring deposit and other rates to a level more in keeping with the cost of bank advances.

Pakistan

"A few years ago it seemed possible that Pakistan would emerge as a State strong economically and sound politically notwithstanding such initial disadvantages as the lack of a civil service, the influx of refugees and a territory divided geographically. Unfortunately since then overemphasis on industrial rather than

agricultural development on the one hand and a sad deterioration in the standards of public life on the other have seen these desirable goals recede. In fact, such was the cost to the country of governmental instability and lack of leadership that, when, last October, Major-General Iskander Mirza, who was then President, abrogated the constitution and, with the support of the army, imposed a direct presidential role under martial law, there was general relief and a feeling that this was the only hope of saving the country from what was considered a steady drift to disaster.

"Fortunately the new regime achieved power without bloodshed or disorder and under the new President, General Ayub Khan, it has acted with energy to effect an improvement in the country's circumstances. Although at first there was some confusion in business circles because of the many regulations fixing prices and limiting profits and dividends, the authorities have shown a commendable spirit of compromise and a general soundness of judgment in the introduction of new measures. Some of these measures, designed to bring to light illicit foreign exchange holdings and to eliminate corruption, hoarding and profiteering, were long overdue and can only have a wholly beneficial effect on the economy.

"It is pleasing to see that national effort is to be concentrated on the agricultural sector of the economy, on which the country's prosperity will depend for many years to come and when Pakistan can again feed its population and stop the large imports of foodgrains which have entailed such heavy outlay of foreign exchange in the last few years, then a great step forward will have been taken towards restoring equilibrium to the national economy. The higher interest rates already announced, if supplemented by a sound budgetary policy and the elimination of deficit financing, should curb the steady expansion of purchasing power within the country and indirectly help exports, but I view with some apprehension the recently announced export bonus scheme. The idea behind all such schemes is commendable but in practice, for administrative reasons, not one has so far worked successfully in any Eastern country. Nevertheless, it is fair to say that Pakistan enters 1959 in circumstances more hopeful than for some years past.

Ceylon

"The major and disquieting feature which has dominated trade and industry in Ceylon during the past year has been the widespread and increasing state of unrest which first manifested itself in November 1957 in serious labour disputes which, as I mentioned last year, brought to a standstill the normal working of the port of Colombo. The resurgence of tension between the Sinhalees and Tamil communities culminated in May last in an outbreak of rioting and disorder almost throughout the island. After some hesitation, it became necessary to declare a state of emergency and the Government then took steps to restore law and order. The authorities acted probably only just in time to prevent what might well have been an irremediable deterioration in the island's security; the fact that the state of emergency is still in force shows that although the general situation has been more normal for some months a renewed outbreak of violence is still considered a possibility.

"Such improvement as there has been in the general situation has not been reflected unfortunately in the working conditions in the port of Colombo, which handles the bulk of the country's oversea trade. Hopes that strikes and go-slow movements among the dock labour force would cease when nationalisation of the port took effect at the end of July proved ill-founded and although in November all work connected with the harbour was declared an essential service under the emergency regulations, there has still been persistent trouble with the labour force.

"To meet the situation it has been necessary to make increasing use of Ceylon's other ports, Trincomalee and Galle, which are now working to full capacity. Being in a position to ship through these ports has greatly assisted the tea industry but during the second half of the year tea prices at the Colombo auctions were lower and, had it not been for the introduction of the subsidy scheme last March, many of the marginal producers would have had to close down. Even so there is evidence of some of Ceylon's oversea customers turning to other suppliers.

"Fortunately, and because of the country's inherent agricultural wealth, the total volume of all exports was maintained at much the same level last year as in 1957. The volume of imports, on the other hand, decreased, partly because strikes in the port of Colombo made it difficult to land cargoes. Because of this the external balances, which had shown a marked fall in 1957, were well maintained at over Rs. 850 million. This is a tremendously important factor as it puts the Government, if it so desires, in a position to avoid the mistakes of other potentially rich young nations of imposing controls that stifle enterprise and in their application undermine the political and official life of the country. Unfortunately all pointers at the moment suggest that the Government, in order to attain the desire for more socialism, is committed to more nationalism, State trading and increased taxation, and in fact the latest budget proposals embrace a new range of taxes involving expenditure, capital gains and property. Heavy Government expenditure financed by a budgetary deficit is likely to generate further inflation, which in turn may endanger the precious exchange reserves.

"More industrial development to raise living standards has been suggested by the National Planning Council but there can be little doubt that Ceylon's first priority should be to intensify and improve the cultivation of the country's staple agricultural products—tea, coconuts and rubber—in order to build up export earnings to pay for essential imports. Improved irrigation and the extensive use of fertilisers and the improvement of crops could adequately offset Ceylon's lack of mineral wealth, for it is difficult to see how a country lacking minerals, and without an extremely plentiful and cheap labour force, can successfully embark on large-scale industrialisation. In any case one cannot look with any great optimism to the future until the Government comes to grips with the unlawful elements in the island and puts labour on a realistic basis satisfactory to the Government and private industry as employers and to the solid mass of decent, hard-working employees.

Burma

"The outstanding event in Burma last year was the appointment in October of General Ne Win as Prime Minister in succession to U Nu. It was a peaceful transition with no bloodshed or violence. The General assumed office at the invitation of the then Prime Minister and the new regime, which was approved by a parliamentary majority, pledged itself to hold general elections within six months of its accession to power. Such undertakings are often difficult to implement, as is shown by the recent resignation of General Ne Win and his statement at the time that free and fair elections in April are practically impossible under conditions at present obtaining in the country. As there is no doubt that the non-party caretaker Government under his leadership, which enjoyed a wide measure of popular support, had with vigour and efficiency set about its task of restoring law and order and normal living conditions, it is hopeful and gratifying that the General is seemingly prepared to resume office and continue the good work provided the constitution be amended to allow him, a non-parliamentarian, to hold office for longer than the period of six months allowed under existing provisions.

"Considering the good work being accomplished in many directions it is disappointing that the administration seems still strongly wedded to State trading and barter, notwithstanding the unfortunate experiences of the past years, and it would be a pity if the opportunity were not taken now to allow that freedom of private enterprise and trading which might make a vital difference to the balance of payments and hence the standard of living.

"Fortunately, next season's rice crop is expected to be substantially higher and it can therefore be hoped that exports in the coming year will show a considerable increase on the disappointing figures for 1958. In fact the exportable surplus may once again reach two million tons for a year. Only a very severe restriction on imports enabled the Union Bank of Burma to show an increase in foreign assets over the year. This restriction on imports, besides being internally inflationary, deprived the citizens of some of the luxuries they were accustomed to in their mode of life: a state of affairs accentuated by the Government-sponsored joint venture trading corporations' failure to live up to their declared purpose of reducing the prices of the consumer goods which were imported. This lends strength to my feeling that there is doubt whether the present system is consistent with the efficient marketing internationally of the country's staple exports or with obtaining the best possible value in terms of goods and commodities imported from abroad.

"Notwithstanding the foregoing remarks I think that the beneficial effects on the administration of a continuance of the recent stable government, together with the country's steadily increasing agricultural wealth, ensures that Burma enters the new year under more favourable auspices than for several years past.

Singapore

"The recession in international trade during the past year has been reflected in a reduction of Singapore's oversea trade turnover. Singapore and the Federation together showed a trade deficit almost throughout the year, but in November a reduction in imports effected and improvement. Additional difficulty has been caused by the insurrection in Indonesia and relations with the Indonesian Government have been somewhat strained, although the Government of Singapore has appeared only too anxious to remain on good terms with its neighbour. The disruption of trade with Indonesia, on which Singapore's prosperity depends in large measure, not only left a legacy in the shape of excess stocks of imported goods in Singapore but emphasised the difficulties inherent in operating successfully as an entrepot in South-East Asia at the present time.

"The need for providing employment for the increasing number of young people entering the labour market from school has encouraged responsible political leaders to advocate close co-operation with the Federation in order to open up wider fields for local labour and enterprise. At the same time the Government has made clear its interest in local industrial development by introducing various measures to this end. Although in this particular direction Singapore could profit from the example of Hong Kong in developing a wide range of manufacturing industry, the basis of its prosperity must rest for many years to come on its status as a free port and on its entrepot trade, a fact which, as the controversy over the Government's acceptance of a policy of selective protection showed, is well understood locally. Capital and enterprise from abroad can assist industrial development and it is to be hoped that the new immigration measures under consideration by the Governments of Singapore and the Federation will not create difficulties for companies employing expatriate personnel.

"The first elections under the new constitution, on which agreement with the British Government was reached last year, are now due to be held in May of this year. In recent months there has appeared a growing awareness of the serious responsibilities to be shouldered by those entrusted with the government of the territory as a result of the elections. Now and in the future there is no guarantee that the living standards of Singapore's population, which at present are relatively high for South-East Asia, can be maintained let alone improved if the goods and services available in Singapore are not fully competitive internationally. I stressed this point last year and it is a matter for cautious optimism that the paramount importance of the free port to the life of Singapore is gradually being accepted by all political parties. It is hoped that the City Council, and to a lesser extent certain Government departments, will take an equally realistic view.

Federation of Malaya

"The most important event in Malaya since my last review, and one which is of special significance to the Bank, has been the establishment of the Central Bank of Malaya (Bank Negara Tanah Melayu) which commenced business on 26th January 1959. I take this opportunity of welcoming the new institution and of wishing every success to its future operations. The new bank is in a position to exert considerable influence, not only on the banking system of the Federation but also on the territory's economy as a whole. It is in keeping with the practical attitude which has been shown by the authorities in the Federation in setting up their Central Bank that, although the relevant legislation includes provisions under which the new institution can take over from the Board of Commissioners of Currency, Malaya and British Borneo, the issue of the Federation's currency, for the time being it has been decided to allow the existing arrangements to continue. So far there are no arrangements between the two Governments concerned for any extension of the activities of the Central Bank of Malaya to Singapore. It must, therefore, be a matter for satisfaction that the continuance on the same parity basis, of the existing currency arrangements, to put it at the very least, postpones the fragmentation of the unified currency area comprising the Federation, Singapore and the British territories in Borneo, in which first the Straits dollar and subsequently the Malayan dollar have provided a stable and effective medium of exchange.

"To supplement the Central Bank legislation, a banking ordinance providing for the licensing and regulation of the business of banking was enacted and came into operation at the same time as the Central Bank commenced business. Most sections of the ordinance have been based on similar legislation in other Commonwealth countries and include the normal safeguards to protect depositors and others, conducting business with the commercial banks. There is one section, however, which has excited some controversy since it confers power on the authorities to refuse a licence to carry on business in the Federation to any bank which is in effect controlled by the Government of a foreign State. The Federation's aggregate trade turnover has been lower this year, exports falling more than imports. There are obvious reasons for this, including the general recession in international trade and, a factor which has particularly affected the Federation, the restriction of tin shipments by producing countries under arrangement with the International Tin Council. During the first six months of the year, coinciding approximately with the first export control period fixed by the International Tin Council, some 40 per cent of the Federation's tin mines closed down, causing substantial unemployment, especially in Perak. Not surprisingly Malaya's tin exports last year were the lowest for over a decade and represented a reduction of 35 per cent. on the 1957 level of shipments. This time last year producers in Malaya were hoping that the restrictions imposed would have the effect of restoring equilibrium between supply and demand in the international tin market by the end of the year. These hopes have been disappointed because of Russian selling of tin on the London market in the middle of the year, which was on such a scale that it proved impossible to maintain the floor price arranged under the Buffer Stock Agreement. Nevertheless, it is generally recognised that had it not been for the agreement the price of tin might have fallen substantially lower. In fact during recent months prices have improved and now that Soviet Russia has shown a readiness to restrict its tin exports by agreement with the International Tin Council, it is possible that the worst of the Malayan industry's ordeal may be over, although the full effects on the results of producing companies have yet to be seen.

"The rubber industry has enjoyed better fortune, heavy Russian buying at the end of the year being the major influence in raising prices in the Singapore market. Mainland China had been a substantial purchaser of Malayan rubber in the early part of the year but later ceased buying in accordance with its policy of discontinuing all trade with Malaya in view of what it considers discriminatory legislation in the Federation. The Malayan rubber industry is well aware of the necessity of maintaining its ability to compete with synthetic rubber and, in this connection, it is to be noted that record progress has been made during the past year in replanting with high yielding seed.

"Unemployment in the tin industry has served to emphasise the importance of encouraging economic development in other directions. By introducing legislation granting pioneer industries relief from income-tax for periods of two to five years and by displaying interest in sponsoring an international investment charter, the Government has shown readiness to create conditions favourable to foreign investment in Malaya. The Government continues also to implement its own five-year development plan, but with prudent regard to the financial resources available. Last September the World Bank made a loan to the Federation in connection with the Cameron Highlands hydro-electric scheme and I am pleased to say that this Bank participated therein.

"Elections are due to be held in August 1959 and meanwhile progress is being made towards ending the emergency, many parts of the country having now been declared 'white areas' owing to the efficiency and vigilance of the security forces.

North Borneo

"Proposals have been made for a closer association between North Borneo, Sarawak and Brunei. The North Borneo and Sarawak Governments have expressed their willingness to extend the co-operation which already exists between the three countries but the Brunei Government seems yet to be convinced that a closer integration will be economically and politically advantageous.

"In any case, the consistent rise in oversea trade turnover in recent years and the favourable trade balance achieved show that North Borneo is capable of standing on its own feet and it is clear too that the sums invested in developing the Colony's economic potentialities are producing encouraging results. Rubber is still the Colony's largest revenue earner but it is interesting that during 1958 timber led both rubber and copra in value of exports. Although the Government is endeavouring to extend the range of commodities shipped abroad, palm oil for example, it realises the importance to the economy of the country of improving the rubber industry's ability to compete in international markets. To this end the State has assisted replanting schemes with encouraging results and has also seen the acreage of rubber small-holdings increased by approximately one-half in the last four years. Communications have been improved and fortunately the situation I commented upon a year ago, of the paucity of the labour force, has improved to an extent that there is little shortage of agricultural labour at present and a useful importation of skilled labour from Hong Kong has taken place.

"Arrangements are proceeding to extend our branch system in North Borneo to Tawau, where we hope to open an office within the next few months.

Brunei

"I mentioned last year that we were planning to extend our branch organisation to Brunei and in May our two new branches at Brunei Town and Kuala Belait commenced business. His Highness the Sultan of Brunei honoured us by performing the opening ceremony at our office in Brunei Town. Our business in Brunei has expanded steadily during the year.

"Brunei is fortunate in possessing an oilfield the production from which is exceeded in the Commonwealth only by the Canadian output. The substantial oil revenues which accrue to the territory are not only financing a well-balanced development plan in Brunei itself but are also assisting economic development in Malaya through a further loan of M.$100 million generously made to the Government of the Federation.

Sarawak

"Lower commodity prices, in particular for rubber, in international markets during the past year have had their effect on Sarawak's oversea trade, the total value of which after disregarding the oil transit trade, shows a reduction in comparison with 1957. The tonnage shipped last year of rubber was not much lower than in 1956 and 1957, but the aggregate value thereof was considerably reduced.

"The importance of rubber to the Colony is fully realised by the Government which continues its policy of subsidising re-planting and of working for further efficiency to give the industry ability to compete effectively in the international market. The re-planting scheme has proved a success, but the financing of an enlarged scheme has made it necessary to impose a levy on rubber exports.

"The Government has also taken a number of steps to assist the pepper industry such as sponsoring research into disease and initiating studies to improve the quality of the product, its grading and marketing. The present trend is to ship direct to foreign markets rather than through Singapore.

"The restriction scheme for timber helped to maintain the price of ramin and export earnings are estimated to have attained much the same level as in 1957. There are high hopes of the forthcoming illipe nut crop and Government proposes to assist increased coconut cultivation. In the mineral field although the offshore search for oil has so far proved unsuccessful, the first shipment of bauxite from the territory was made in the middle of the year.

"The Government-sponsored credit institution, the Sarawak Development Finance Corporation, whose formation I mentioned last year, has now commenced business. Although lower revenue and a reduction in surplus balances are necessarily limiting the financial resources which the Government can allocate to development schemes, encouraging progress has been made during the past year in improving airfields and road communications and also the port facilities at Kuching.

"A disturbing note has been sounded in a statement made by the Governor a few weeks ago, to the effect that there was evidence of communist activities within the Colony; with recent experiences in Malaya in mind, no doubt, the authorities will be taking firm action to forestall any danger.

Indonesia

"The past year has been one of great difficulty for the Republic. In May it was officially announced that active resistance by the rebels had virtually been brought to an end; insurgent activity, however, particularly in Sumatra and the Celebes, continues to cause considerable interference with estate production and with the normal movement from the interior of agricultural products destined for shipment abroad. The rebellion and its aftermath have inevitably had the effect of reducing exports but somewhat surprisingly provisional figures for the first ten months of the year show that Indonesia not only had a trading surplus but that the surplus itself was substantially higher than for the same period of 1957. Although there is still much leeway to be made up some progress has been made in restoring the country's trade position.

"For the time being there remains a serious shortage of foreign exchange and because of this it is unlikely that the import of other than strictly essential goods will be permitted for some time to come. The shortage of foreign currency stems partly from excessive imports in the past and from loss of exchange through extensive barter trade and partly through the disruption in trade caused by the rebellion.

"The immediate situation will be relieved to some extent by various credits which Indonesia is receiving from abroad, notably from the United States and the U.S.S.R. Aid of this nature can however be but a temporary palliative: lasting economic recovery can only be assured by expanding production and export of the country's agricultural and mineral resources. The Government in an endeavour to improve the position has recently shown particular interest in the possibilities of further exploiting the potentialities of the oil industry. A law has also been passed to encourage investment from abroad but with the nationalisation of Dutch-owned enterprises and the difficulty in obtaining an adequate return in the form of profit or dividend remittances it seems hardly likely that the Republic can attract outside capital. There can be little doubt that many of the difficulties which Indonesia has had in the economic sphere can be attributed to inflation generated by persistent and excessive budgetary deficits. The excess purchasing power thus created had the effect ultimately of running down the exchange reserves to a dangerously low level and it became necessary in January last to limit to 60 per cent. the cover which the commercial banks were permitted to hold against their foreign exchange commitments under letters of credit. This measure, and the severe credit restrictions imposed by the authorities in an endeavour to curb inflation and to restrict imports, have borne heavily on the banks, a large part of whose resources have been immobilised in the form of statutory deposits with the central bank. Such measures, although they may be deemed necessary in the national interest, can have little hope of success unless a more satisfactory balance can be attained between Government revenue and expenditure. Controls and other expedients such as the complicated Bukti Ekspor system instituted with the object of righting economic ills have not been entirely successful and sooner or later it would seem inevitable that there must be an outright devaluation of the rupiah and a return to normal commercial procedure.

"In view of the restrictive policy being followed by the authorities in regard to profit remittances and with the difference between the internal and external value of the rupiah I see little prospect for the time being of any worthwhile reward being received for the extensive services which we offer and the business which we conduct in Indonesia.

Thailand

"It is probable that economic factors, no less than political, played their part in causing Field-Marshal Sarit, Supreme Commander of the Armed Forces, to effect an unexpected *coup d'état* last October and personally assume the post of Prime Minister. Reduced export earnings had caused a deterioration in Thailand's balance of trade and the resultant reduction in the country's holding of foreign exchange together with a sharp rise in the cost of living brought about a situation in which it was

evidently thought necessary to effect a change of government. The old constitution was abrogated last October and under interim arrangements a constituent assembly is to be nominated and to have the task of drafting a new constitution.

"To improve the economic position, in advisory committee has been formed to develop the country's resources, effect an immediate reduction in the cost of living and to plan the setting up of secondary industries at an early date. The committee will also be concerned with the formulation of a long-term development plan to be based on the report of the World Bank mission which visited the country during the course of the year. Early results of the committee's work are new regulations to encourage the establishment of industrial enterprises and to attract foreign capital for investment in the country. New enterprises are to be guaranteed freedom from nationalisation, facilities to import the necessary plant and machinery free of duty, exemption from income-tax for a period of from two to five years and, if necessary, a measure of protection by means of tariffs against competitive foreign products.

"Notwithstanding rice exports being substantially lower in 1957 compared with previous years and the prospect that good crops next season in adjacent countries may make exports difficult, the authorities have wisely set their face against imposing import restrictions, taking the view that no cause should be given for retaliatory action by other countries against Thailand's exports. Behind this reasoning doubtless there lies the assumption that although the country had a rather unsatisfactory trading year in 1958, the prospects for the export of rice, rubber and tin for the coming year are probably better. The worst of the difficulties arising from the International Tin Council's restriction scheme may well be over, and assuming that the new powers vested in the Government departments do not stifle enterprise, Thailand can rely on its traders to find markets abroad notwithstanding the more competitive conditions foreshadowed.

Vietnam

"During 1958 the government of President Ngo Dinh Diem remained firmly in power and, generally speaking, consolidated its position throughout the country although occasional attacks on estates showed that insurrection still exists. Politically the country still takes a very strong anti-communist line, which may be not entirely unconnected with its complete dependence on American aid, which finances more than three-quarters of its imports. Although direct aid is given in road construction, military equipment and technical assistance, imports consist largely of consumer goods which probably accounts for the air of prosperity in Saigon itself but effectively conceals the fact that the country is making very little progress towards self-support.

"The American aid authorities have tended to concentrate on the industrialisation of the country and although secondary industries, if successful, would assist the economy it is only through an increase in agricultural production and a greater diversification of crops that an increase in exports and final economic salvation can be achieved. The issue is not as simple as it seems for the diversion of aid to back the technical assistance to agriculture given under the Colombo Plan and by the American authorities would involve a reduction in the present living standards of the townsfolk, which would be quite unacceptable to them and might endanger the standing of the Government.

"The stock position in the bazaars is much healthier than it was a year ago and this, coupled with a general disinflationary tendency and a decline in purchasing power, suggests that the official exchange rate of the piastre may not be changed in the near future, notwithstanding persistent rumours to the contrary. A more friendly view is being taken towards foreign investment, particularly British, and in general although the future of the country cannot be said to hold a great deal of promise at the moment, it is clear that our Bank can still play an important and helpful role in the economy.

Cambodia

"Pursuing the difficult course of absolute neutrality whilst accepting aid from both the major international power groups has not improved relations with Cambodia's neighbours. Those with Vietnam still remain strained and those with Thailand deteriorated to an extent that in November there was a temporary closing of the border between the two countries and the severance of diplomatic relations.

"Internally Cambodia will finally benefit from the major development schemes that are being financed by foreign aid, but in spite of further aid which paid for substantial imports of consumer goods the country, in contrast to the previous year, had an unfavourable trading balance. No doubt this has influenced the Government in encouraging foreign investment for, with the possibility of the amount given in aid being considerably reduced in the next few years, a determined effort will have to be made to increase the ratio of exports to imports. Foreign exchange at the moment is earned almost entirely by the export of rice, rubber and a little timber and neither world prices nor markets in these commodities can be taken for granted. Nevertheless, the natural resources of the country and the conservative outlook of the authorities should achieve the equilibrium desired. It is fortunate that in a country that is manifestly loyal to the throne, Prince Sihanouk either as the central figure or as the power behind the throne, continues to dominate the political field.

The Philippines

"Good rice and grain crops in the Philippines and improved export earnings from coconut products, sugar and minerals should have helped the Republic to restore the extremely serious position created by the adverse trade balance of Pesos 400 million in 1957, but although it is estimated that the deficit in 1958 will be reduced to Pesos 100 million, a further fall in the external reserves to U.S.$125 million in a comparatively favourable trade year was most disappointing.

"This continuing decline in the reserves evoked much controversy within the country and it was unfortunately apparent that many of the schemes proposed to cope with the situation were intended to benefit the protagonists rather than ameliorate the country's economic condition. The President has recently again affirmed the Government's opposition to devaluation and its firm intention to maintain the present exchange value of the peso and has called for the support of all sections of the community to assist in stabilising the economic and fiscal situation. The controversial barter trade law which, since its introduction has been steadfastly opposed by Governor Miguel Cuaderno of the Central Bank as constituting a major drain on the country's reserves, is being repealed and, on the initiative of the Governor, a stabilisation programme consisting largely of disinflationary measures has been approved by the Monetary Board. The main necessity, however, is that of a balanced budget for there can be little doubt that the excessive resort to deficit financing has been the major inflationary factor and thus the prime cause of the continued deterioration in the Republic's economy.

"Responsible leaders of the community have frequently emphasised the necessity to encourage foreign investment in the country. Potential investors will, however, have derived scant encouragement from the strong opposition emanating from extreme nationalist sources which manifested itself to the projected Foreign Investments Bill and, however deserving of sympathy legitimate national aspirations may be, the recent Central Bank measures discriminating against the participation of foreign merchants in the country's import business cannot but produce an unfortunate impression. In the banking field it is difficult to find justification on economic grounds for the directive requiring immobilisation of substantial balances in special blocked fiduciary accounts, a measure which has particularly and adversely affected the business of the foreign banks operating in the Philippines.

"The Philippines are potentially rich in natural resources and the Republic's economic possibilities will be even more promising if the intensified search for oil, which is now proceeding, should prove successful. The substantial investment which has already been made in the development of secondary industry has had a disappointingly meagre effect so far on the balance of payments. It seems that many projects in the industrial field, because of their dependence on foreign sources of supply not only for their plant and machinery but also for their raw materials, tend rather to spend foreign exchange than to save it. It would appear more appropriate to concentrate on expanding agricultural production for export and to confine industrialisation to projects processing locally produced raw materials. A development policy on these lines in conjunction with sound and prudent administration of the Republic's finances and a resolute determination to eliminate corruption, would go a long way towards ensuring economic progress and improved living standards for the country at large in the years to come.

"Trade with the United States has continued to decline, but has increased substantially in other directions; tendencies which are likely to be given fresh impetus by the new moves towards convertibility on the part of sterling and the major European currencies and as, in accordance with the Laurel-Langley Pact, tariffs are progressively increased on goods imported into the Philippines from the United States.

Hong Kong

"Hong Kong's trade has been on a reduced scale during the past year mainly because of a sharp reduction in imports. In many respects this was a reflection of the world-wide recession in business which was a feature of 1958 and in the circumstances local industry has had a fairly satisfactory year. Many markets in South-East Asia which were formerly important outlets for Hong Kong goods are now subject to high tariffs and other trade barriers instituted in order to protect local industrial development and to conserve foreign exchange. Furthermore, competition from other Asian exporters, and notably mainland China, has become more intense. To meet the challenge Hong Kong industry has made vigorous and successful efforts to gain a footing in new markets all over the world and to expand sales in existing markets. Many sections of industry had already anticipated the advent of intensified competition by installing more modern plant and machinery, thereby lowering their production costs and improving and, particularly in the textile field, broadening the range of their products. The trend towards exporting finished goods in preference to semi-manufactured products gained considerable impetus during the year.

"Nevertheless some sectors of the Colony's economy have inevitably suffered a reduction in business which has had the effect of increasing unemployment. In some respects it must be recognised that future prospects in the field of industry and employment are unpromising, for the supply of refugee capital from neighbouring countries, which has been instrumental in effecting the remarkable industrial development that has transformed Hong Kong's economy in recent years, is diminishing. Moreover, the Colony is becoming increasingly dependent for its prosperity on imperial preference, assuring the entry of local manufactures into Commonwealth markets on preferential terms. The dangers of such dependence are illustrated by the case of the Hong Kong textile industry which has now under pressure given an undertaking to limit textile shipments to the United Kingdom. Since 1945 the Colony has had to cope with the problems of repairing the devastation which was the legacy of war and of restoring the entrepot trade on which its prosperity had always been based. Having successfully rehabilitated the local economy practically unaided, Hong Kong has subsequently been called upon to face the problem of housing and finding employment for a vast refugee population and also, as a result of the United Nations' embargo imposed during the Korean War on trade with China, has had to adjust its economy to the loss of a large part of its entrepot trade. It has been possible to make this adjustment successfully only by a rapid development of manufacturing industry. If they are to survive, the new industries need access to an expanding range of international markets. The limitation which has now to be imposed on the exports of one of the territory's principal industries is therefore a serious setback and one which has caused much anxiety locally.

"It is probable that textiles are only among the first of a steadily expanding range of Hong Kong products which can be expected to compete in the British and other international markets in the future. Already France and Switzerland have imposed restrictions on imports of Hong Kong goods and there are indications that the United States have the same thing in mind. There is now great concern that in the United Kingdom pressure will mount from other industries, such as enamelware, to limit competition in the British market from Hong Kong goods by means of undertakings similar to that which has been given in respect of cotton textiles.

"Whatever the prospective difficulties in the marketing field, local enterprise in the Colony is still seeking new land for industrial development. To meet the shortage of available factory sites, the Government has gone ahead with ambitious reclamation projects at Kun Tong and Tsun Wan and others are under consideration. Various measures are also being considered aimed at improving the territory's housing situation and accelerating the resettlement of the large squatter population. The new runways at the airport have been completed and were brought into operation during the course of the year. Our own new building is also nearing completion and it is hoped that it will be officially opened in August 1959.

China

"China's efforts to industrialise rapidly have received extensive publicity in recent months and substantial increases in industrial production have been made. Progress has been most notable in the steel industry, where it is claimed that production has all but been doubled during the past year. This particular achievement has been brought about by a mass campaign to establish small steel producing units throughout the country concurrently with the expansion of the extensive steel industry in Anshan. In the agricultural sector bumper harvests may lead to China's emergence as a major rice exporter while if, as is claimed, the size of the cotton crop is double that of the previous year, China may be becoming one of the world's leading cotton-growing countries. The transportation of steel and foodstuffs has, however, imposed a strain on the internal system of communications and in recent weeks this has evidenced itself in an unusual delay in fulfilling export contracts.

"Nevertheless, exhibitions and exports of Chinese manufactured goods indicate that considerable progress has been made. Following the suspension of trade with Japan last May China became a serious competitor in the markets of South-East Asia and the range of goods available for shipment to foreign markets seems to be steadily expanding. Since the prices of Chinese goods are in many cases fixed at levels which are well below production costs of similar goods manufactured elsewhere in the world, Chinese competition clearly is going to pose in future years serious problems for manufacturing countries throughout the world, and particularly for China's immediate neighbours, Hong Kong and Japan.

"It does not follow that China, as is often said, intends to use its increase in production for political ends in Far Eastern and other markets for, although the earning of foreign exchange is very important to the country, I feel that the authorities will endeavour primarily to use any increase for the improvement of the standard of living of their own people.

Japan

"During the past year the Japanese economy has successfully adjusted itself to what at the outset were generally expected to be extremely difficult conditions. At the beginning of the year the tight-money policy introduced by the authorities in 1957 had already had the effect of curbing imports to the extent that the country's balance of payments was once again in surplus. While this was encouraging it was anticipated that the recession in the United States and the slump in world commodity prices would have an adverse effect on the Japanese economy, causing an appreciable reduction in exports and a resultant rise in unemployment.

"In the event Japanese industry displayed far more flexibility and resiliency than had been expected and although over the whole of 1958 there was a reduction in the country's total exports, it was relatively small. Imports were considerably reduced in volume without adverse repercussions on industry by running down stocks of imported raw materials which had accumulated during 1957 when excessive imports had imposed a serious strain on the country's balance of payments. With imports lower in volume and cheaper in price and exports little reduced Japan, again aided by a bumper rice crop, achieved a substantial payments surplus for the year and greatly strengthened its foreign exchange reserves.

"The progressive improvement in the country's external position enabled the authorities to reduce interest rates to the level ruling before the introduction of the tight-money policy early in 1957. This reduction was timely, for certain industries, notably steel and textiles, were feeling the effects of a recession in business. Signs were not wanting, however, towards the end of the year that industrial production was once again on the increase, and while this has introduced a feeling of cautious optimism for 1959, Japan has still to face up to a further reduction in American spending and shrinking markets, particularly in South-East Asian countries where industrialisation and production seem identified with political independence. With oversea markets hard to find and the necessity of an expanding volume of trade for the country's continued well-being, it is unfortunate that Japan's relations with mainland China became so strained early last year that trade between the two countries was, and remains, suspended. One cannot fault the Japanese in their enterprise in seeking markets but there are indications that the country will have to rely more and more on its heavy as opposed to its light industry to produce the desired results. If these are to be successful much more co-operation in the country's internal politics is needed, for bitterness and enmity on many of the leading issues are an unsuitable background to increased trade overseas.

New York

"The American recession, although not as severe as was apprehended, inevitably had a depressing effect on world trade in general. It has also been a major factor in reducing the export earnings of a number of territories in which this Bank has branches, since the United States is a substantial importer of Asian goods and commodities. Consumer spending in the United States was surprisingly high throughout the recession and now that American industry is replenishing its stocks and again beginning to increase production, trans-Pacific trade should improve. The business of our New York agency is likely to benefit accordingly. Whilst there is no doubt regarding the inherent economic strength of the United States it is impossible to be completely optimistic about conditions in 1959 without more conviction that the authorities have the ability or the will to halt inflation.

Hamburg

"At the beginning of this review I have examined the general implications of the inauguration of the European Economic Community (E.E.C.). I need therefore say no more here than that provided it proves possible to arrive at some form of international arrangement over the question of Berlin, the Federal Republic of Germany, whose economy continues to grow in strength, will be a dominant partner in the Community with German industry finding greatly expanded scope in a common market of 170 million people. Germany is keenly interested in developing trade with Asia and our Hamburg agency is well situated to share in the expansion of banking business that is likely to accrue from an increased German demand for raw materials now that the E.E.C. is in being.

Manchester and Liverpool

"By acting as a link between our branch system in the East and commercial and industrial interests in Lancashire and Northern England our branches in Manchester and Liverpool continue to fulfil a useful function in our organisation.

West End, London

"The business of our office in the West End of London continues to expand and the branch will move into new and larger premises in Lower Regent Street during the course of the coming summer. It is hoped that this change will prove of especial benefit to our many friends from overseas who find it inconvenient to visit the City to transact their personal banking business.

Conclusion

"The oversea territories in which we operate are receiving increasing publicity and it is generally recognised that the developing of the natural resources of the South-East Asian countries and the raising of the standard of living there is of vital importance to future peace and progress in the world. This challenge is being accepted by the Western Powers in a most understanding and generous manner and the extent to which aid and credit is given to the newly independent nations of the area is staggering. Very few of the countries concerned would survive economically were it not for the tremendous infusion of assistance they receive and one can only hope that wise counsel and incorruptibility within these countries and a tolerant direction from the donors will help attain the objective of self-supporting economies with ever-increasing exports. This objective cannot be reconciled with a Western fear of Asian competition and attempts to avoid that competition and, in this connexion, perhaps too little significance has been given to the attitude of the United Kingdom Government in acquiescing in limitations on the textile shipments from Hong Kong to the United Kingdom.

"This particular issue raises a principle of major importance in matters of international trade. The *communiqué* issued last October at the conclusion of the Commonwealth Trade and Economic Conference at Montreal 'recognised how important it is that obstacles should not be placed in the way of the export of manufactured goods of the underdeveloped members of the Commonwealth and agreed that Commonwealth Governments will give full weight to this consideration whenever decisions are necessary concerning the terms of access of such goods to their markets.' The distinguished economists who compiled for G.A.T.T. the Haberler report on 'Trends in International Trade,' which was published the same month, consider that 'it may be a natural and economic development that relatively poor countries with high population densities, like India and Hong Kong, should export cheap labour-intensive manufactures.' They therefore suggest that 'it is of great importance that the highly developed countries should refrain from protecting their domestic industries from such imports."

"It seems regrettable, therefore, that many in this country who in theory are in favour of raising Asian living standards have not felt it inconsistent also to argue in favour of imposing such restrictions on the grounds that goods produced by what they term cheap labour compete unfairly with those manufactured at higher cost in the United Kingdom. This sort of reasoning strikes at the very root of international trade and if it were to gain wide acceptance, might well be invoked, to take an important example, to justify the virtual exclusion of British manufactures from the United States market. It cannot be too strongly emphasised that what is by standards in this country, relatively cheap labour, need not be exploited labour and that in the case of Hong Kong the Government has taken already active steps to improve working conditions.

"In this context it is perhaps ironical that in a recent announcement the United Kingdom Government pledged itself to support Hong Kong fully in resisting the attempts of American manufacturers to force Hong Kong into voluntarily restricting its textile exports to the United States."

Notices

SRI KRISHNARAJENDRA MILLS LIMITED, MYSORE

INTERIM DIVIDEND FOR THE YEAR ENDING 31st MARCH 1959

THE BOARD OF DIRECTORS OF THE above Mills have resolved to pay an interim dividend at the rate of rupees two (Rs. 2-0-0) per share, for the year ending 31st March 1959.

The Transfer Books of the Company will be closed from 10th April 1959 to 13th April 1959, both days inclusive.

The interim dividend warrants will be posted on and after 18th April 1959 to all the shareholders whose names stand on the Register of Members of the Company on 10th April 1959.

By Order of the Board,
L. KANDASWAMY,
General Manager.

MYSORE, *20th March* 1959.

THE STANDARD COAL COMPANY LIMITED

THE BOARD OF DIRECTORS OF THE COMpany has recommended Dividend on the Ordinary Shares at 12½ per cent per annum, in respect of the year ended 31st December 1958, without any deduction for Income-tax payable by the Company.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *20th March* 1959.

Balance Sheet of the State Bank of Hyderabad as at 31st December 1958

FIRST ANNUAL REPORT OF L.I.C.

NEW BUSINESS FIGURES AND INVESTMENT PATTERN

THE first statutory report of the Life Insurance Corporation of India covering the sixteen-month period from 1st September 1956 to 31st December 1957, which was placed on the table of the *Lok Sabha* on the 13th inst., has now been released to the Press. Despite the delay in its publication, the report, which contains a wealth of statistical and factual materials, throws a flood of light on certain aspects of the position and activities of the Corporation about which little reliable information was available so far. The delay, it is stated, was due to the fact that the Corporation was beset with various problems arising from the amalgamation of 245 separate accounts into an integrated whole. It is to be hoped that, in future, at least the annual report will be published soon after the close of the period to which it refers.

During the sixteen months from 1st September 1956 to 31st December 1957, the Corporation received 11,34,633 proposals for a total sum of Rs. 400.47 crores. The number of policies issued aggregated 9,41,654, being 82.99 per cent. of the proposals received, assuring a sum of Rs. 336.67 crores, which is about 84.07 per cent. of the amount proposed. The new business written by all the private insurers during the first eight months of 1956 was Rs. 145.51 crores under 4,20,288 policies. The new business written by the Corporation during the last four months of 1956 was Rs. 54.77 crores under 1,47,069 policies. The total business for the year 1956 thus amounted to Rs. 200.28 crores under 5,67,357 policies. The new business for the calendar year 1957 was Rs. 281.90 crores under 7,94,585 policies.

'Janata' Policy

These figures do not include new business written under the *Janata* policy scheme which was introduced in selected centres as a pilot project during the year 1957. Under this scheme, upto 31st December 1957, the Corporation received 22,967 proposals for a total sum proposed of Rs. 1.25 crore and issued 21,208 policies assuring a sum of Rs. 1.17 crore. Thus, the total new business in 1957, including Rs. 1.17 crore written under the *Janata* scheme, aggregated Rs. 283.07 crores. Of this, Rs. 277.67 crores were written in India under 8,10,738 policies and Rs. 5.40 crores were written outside India under 5,055 policies. This compares with the completed new business of Rs. 200.28 crores in 1956, Rs. 260.84 crores in 1955, Rs. 255.25 crores in 1954 and Rs. 170.92 crores in 1953. Thus, the volume of new business done in 1957 exceeded the earlier peak figure of Rs. 260.84 crores reached in 1955.

During the sixteen-month period, the Corporation issued 452 deferred annuities, with a total annual payment of Rs. 6.73 lakhs and 123 immediate annuities with a total annual payment of Rs. 3.22 lakhs.

Breakdown figures of new business written in India during the sixteen-month period indicate that Rs. 245.24 crores (74.75 per cent.) were endowment assurance, Rs. 30.68 crores (9.35 per cent.) were whole life assurances, Rs. 22.93 crores (6.99 per cent.) miscellaneous assurances, Rs. 16.21 crores (4.94 per cent.) joint life assurances and Rs. 13.02 crores (3.97 per cent.) children's assurances. The average sum assured per policy issued by the Corporation during the sixteen-month period was higher at Rs. 3,575, as compared with Rs. 3,208 in 1955 and Rs. 3,355 in 1954.

Total Business in Force

Total business in force as on 31st December 1957 was Rs. 1,474 crores, under 56,86,000 policies, out of which Rs. 1,375 crores, under 54,17,000 policies, constituted the business in India and Rs. 99 crores, under 269,000 policies, formed the business outside India. The following table gives figures of the business in force as on 31st December for the years 1952-57:

Total Business in Force on 31-12-'57

	In India		Outside India		Total	
	No. of policies (in lakhs)	Sum assured and bonuses (in crores of Rs.)	No. of policies (in lakhs)	Sum assured and bonuses (in crores of Rs.)	No. of policies (in lakhs)	Sum assured (in crores of Rs.)
1952 ..	40.17	925	2.66	70	42.83	995
1953 ..	41.67	970	2.72	77	44.39	1,047
1954 ..	45.05	1,091	2.77	86	47.82	1,177
1955 ..	45.16	1,128	2.76	92	47.92	1,220
1956 ..	—	—	—	—	—	—
1957 ..	54.17	1,375	2.69	99	56.86	1,474

Note: 1956 figures are not available as they have not been compiled by the Corporation.

The funds appertaining to the controlled business of insurers vested in the Corporation on the Appointed Day, that is, 1st September 1956, were Rs. 380.61 crores. The premium income for the sixteen-month period ended 31st December 1957 amounted to Rs. 88.12 crores, as against Rs. 58.55 crores for the year 1955 and Rs. 37.56 crores for the eight months ended 31st August 1956. The rate of interest realised on the mean life assurance fund during the period covered by the report, after deduction of income-tax at source, was 3.74 per cent. per annum. As compared with this, the average net rate realised by all insurers during the year 1955 was 3.51 per cent. The claims for this period, inclusive of bonus additions, amounted to Rs. 28.70 crores. Of this, Rs. 7.89 crores were claims by death and Rs. 20.81 crores claims by maturity.

The overall expense ratio, that is, the ratio of expenses to premium income for the period of account, was 27.3 per cent. The corresponding figure for all the insurers combined for the year 1955 was 31.8 per cent. and that for the eight months ended 31st August 1956 was 33.7 per cent. The renewal expense ratio for the period was 15.89 per cent. As compared with this, the renewal expense ratio of all the Indian insurers combined for the year 1955 was 17.3 per cent. and for the eight months ended 31st August 1956 was 20.9 per cent. The renewal expense ratio, although lower than that of the private insurers, must be still considered high. With the introduction of rationalisation and improved administrative procedures, coupled with the expansion of business, a reduction in the expense ratio could be expected in future. The progress in this direction may, it is pointed out, be retarded to some extent, by the expenses involved in plans of development, particularly in rural areas where the Corporation is intensifying its efforts to spread insurance. Costs in rural areas are high, as, apart from expenses inevitable in breaking new ground, the sum assured per policy in these areas will be significantly smaller than in urban areas.

Investments

By far the most exhaustive statistical information contained in the report relates to the investments of the Corporation. The total investments of the Corporation as on 31st December 1957 amounted to Rs. 381.90 crores. This consisted of Rs. 260.61 crores in Indian and State Governments and other approved securities, Rs. 69.14 crores in debentures and shares of joint-stock companies in India, Rs. 13.86 crores in mortgage of properties, Rs. 21.38 crores in house property and Rs. 16.91 crores in other investments.

The total book value of the Corporation's investment as on 31st December 1957 in stock exchange securities was Rs. 338.59 crores. Of this, Rs. 329.75 crores were in India and 8.84 crores outside India. Out of the investments in India, those in the public sector, comprising Central and State Government loans and the major portion of the approved securities amounted to Rs. 255.13 crores or 77.37 per cent. of the total, while investments in the private sector, consisting of debentures and shares in joint-stock companies and also some of the approved securities, amounted to Rs. 74.62 crores or 22.63 per cent. of the total. Of the Rs. 255.13 crores invested in the public sector, Central Government securities accounted for Rs. 185.55 crores, State Government securities for Rs. 42.53 crores, and approved securities for Rs. 27.05 crores,

REPORT OF THE AUDITORS

TO THE RESERVE BANK OF INDIA.

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 30 (1) of the State Bank of Hyderabad Act, 1956, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1958.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December, 1958, and the Profit and Loss Account for the year ended upon that date with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report:

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iii) that, the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) that, the Profit and Loss Account shows a true balance of profit for the year covered by such Account;

(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law, and

(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

DEVELOPMENT OF CALCUTTA PORT

CONCERN OVER THE SILTING UP IN THE HOOGHLY

SOME understandable concern has been expressed over the deterioration of the Calcutta port, arising particularly from the silting up of the Hooghly. This is not surprising, considering that it is of the utmost national importance that the Calcutta port should be so developed as to be able to handle the increased traffic which will flow through it in the coming years. The significance of the port to the national economy cannot be stressed too strongly, in view of the fact it serves as a port for imports into, and exports from, large areas, including Upper India, Assam and even parts of Central India. The chief imports it handles are salt, foodgrains, machinery and petroleum, while its exports include coal, tea, jute, shellac, linseed and mineral ores. It is the largest port in the country, accounting as it does for over 8 million tons of export and import traffic.

It is the peculiar physical features of the Calcutta port which compel continuous attention being given to its problems. The port is located on the left bank of the Hooghly, about 80 miles downstream from the confluence of the two spill channels of the parent river, the Ganga. The seaward approach to the port is at Sandheads, about 126 miles from Calcutta. The depths of water in the navigable channel leading to the port from Sandheads vary continuously, thereby necessitating maintenance of dredging operations throughout the year on an extensive scale. These ineluctable facts of the geography of the region, together with the situation created by a tidal river like the Hooghly, not only make pilotage necessary but impose restrictions on day-to-day drafts, upto which the ships at the port are permitted to load.

In recent years, congestion at the Calcutta port has posed some difficult problems for the authorities. It is true that periodical congestions cannot be entirely avoided. After all, there are physical limitations on the immediate extension of port facilities, whereas there can be none for the expansion of a country's foreign trade. No wonder, congestion in ports has been a world problem, for not all the world's ports have grown as fast as world trade. The Calcutta port authorities, recognising the need for rapid development, took in hand, during the period of the first Five-year Plan, a programme for the extension of port facilities. The main objective of the first Plan was the replacement of the facilities which had deteriorated through wear and tear and installation of new facilities. The programme, however, could not be implemented in full, because the execution of the project was taken up only two years after the commencement of the Plan. Actual expenditure under the Plan aggregated only Rs. 3.48 crores, as against a total allotment of Rs. 12.17 crores. The Rs. 13.2-crore second Plan—this is besides the provision of Rs. 6 crores for projects carried over from the first Plan—envisages strengthening of quay walls, construction of new sale tea warehouses and new harbour craft, improvement of dry dock facilities for ship repairs, installation of mechanical handling appliances and improvement of fire protection service. To finance the foreign exchange component of the programme for improvement of the port, the World Bank, as is well known, has granted a $29-million loan, carrying interest at 5½ per cent. and repayable in 20 years.

By far the most important aspect of the Calcutta port project is the dredging of the Hooghly. The Estimates Committee, in its report on major ports, expressed the hope that the question of providing adequate dredging facilities will be constantly kept in view. The amount of dredging required to keep the navigable channels clear and to maintain proper depths, it is stated, is heavy and varies from year to year. The quantity of silt dredged every year is about 10 to 12 million tons. This poses several highly technical problems. The situation in the river Hooghly is attributed to cyclical changes in the estuary below Diamond Harbour and seasonal changes in the upper reaches above it.

It would appear that the Hooghly presents an increasingly difficult problem. A reference to this was made by Mr. J. D. K. Brown, President of the Bengal Chamber of Commerce, in his speech at the annual meeting of the Chamber, held recently at Calcutta. Mr. Brown pointed out that, "due to operations far above Calcutta, the flow of fresh water has been inadequate to prevent the silting up which has been going on in the channel." He added: "I am told that the increased salinity of the river in its upper reaches is symptomatic of the damage which has resulted from the failure of fresh water supplies during the long dry season, with the consequent destruction of the preponderance of the ebb over the flood flow." The whole situation, difficult as it is, is believed to have been aggravated by the construction of large dams in the Damodar Valley area and the deforestation which has taken place, coupled with the increasing demands for fresh water for the growing population as well as for irrigation and industry.

The authorities, it is stated, have accelerated the dredging operations at the Belari Bar. But this, according to Mr. Brown, cannot by itself repair the damage. He felt that the construction of an ancillary port at Haldia would not also be a permanent solution of the problem. He added: "I believe that the decision of the Central Government to implement the Plan for the Ferakka Barrage has been taken, although there is no indication as to when the work will start, but, in any case, the building of the barrage cannot have any very early effect on the state of the river." Nevertheless, he urged the authorities to give the scheme a "very high priority."

Clearly, the problem of the Hooghly brooks no delay. It demands expert examination. In this connection, we commend to the attention of the authorities Mr. Brown's suggestion, namely, the appointment of a commission, representative of all interests and including a number of international experts, at least some of whom should have a knowledge of the river and its past history. Such a commission should also be required to submit its report early, which, in its turn, should be implemented expeditiously by the authorities. In the absence of constructive measures for the improvement of the Calcutta port and the prevention of the deterioration of the Hooghly, there is no doubt that the Calcutta port, which serves the region of all the steel plants and increasingly numerous engineering and electrical industries and is the chief port of export for a variety of Indian produce and manufactured goods, will be unable to cope with the growing volume of traffic.

"INDIAN SHIPPING"

The January 1959 issue of *Indian Shipping* (Editor: Mr. S. K. Iyer, Bombay), the journal of the Indian National Steamshipowners Association which celebrated its silver jubilee this year, reviews the recent problems relating to shipping. While it feels that the members may look back upon the past with satisfaction, there is still a long way to go to reach the minimum target for shipping. It expresses the hope that "through properly co-ordinated efforts of the shipowners, the Government and the Planning Commission, all obstacles impeding the progress of the industry will be overcome" and the 1½-million ton target reached. A notable contribution to the literature on Indian shipping is the article, "Two Centuries of Indian Shipping Events—1736 to 1958." Beginning with the establishment in 1736 of the dockyard in Bombay by the East India Company with Lowjee Nusserwanjee Wadia as "master builder," the article traces the history of Indian shipping, setting down such chief events as the first voyage by any steam vessel from Europe to India via the Cape of Good Hope in 1825, the Indian Registration of Ships Act, 1841, the opening of the Suez Canal for traffic (shortening the distance from Europe to Bombay by 4,000 miles) in 1869, the passage of the Bombay Port Trust Act in 1879 and the establishment of the Bombay Steam Navigation Company in 1905 and the Indian Shipping Company by V.O. Chidambaram in 1906, both of which went into liquidation later.

(Concluded from next column)

rules and procedure of the Department. These changes are expected to be introduced with effect from 1st April 1959. A significant step taken by the U.P.C. was the creation of a technical body known as the Consultative Commission of Postal Studies which has been entrusted with the study of technical and operational questions relating to postal service. India has participated in certain studies conducted by the Commission; these are: the organisation of non-mechanised sorting centres, treatment of air-mail articles, basis for fixation of rates for various categories of articles of correspondence. The results of these studies are bound to be of much use to India in reorganising its own postal services.

EXPANSION OF POSTAL FACILITIES

TELEGRAPH SERVICES EXTENDED

THE progress in India's national economy and the growth of its population are reflected in the increasing demand on the services of the Post and Telegraphs Department. In 1958-59, to which the latest report of the Department refers, there was an all-round improvement in postal traffic. The number of postal articles handled aggregated, according to the latest estimate, 3,500 million, as against 3,356 million in 1957-58 and 1,241 million in 1938-39, the respective figures for value of money orders issued being Rs. 275 crores, Rs. 263 crores and Rs. 74.3 crores respectively. The number of telegrams, which was no more than 16.4 million in 1938-39, moved up to 33.2 million in 1957-58 and 34 million in 1958-59. The number of telephone connections, as on 31st March 1959, was 360,000, as compared with 334,733 and 83,378 as on 31st March 1958 and 1939 respectively.

The Postal Department, as is well known, plays an important part in providing facilities for small savers. The number of transactions in Postal Savings Bank increased from 20.2 million in 1957-58 to 21 million in 1958-59. A major innovation during the year was the introduction of the 'cheque' system for withdrawal of amounts. A new scheme called "cumulative time deposits" has been introduced with effect from January last, under which monthly deposits can be made of Rs. 5, Rs. 10, Rs. 20, Rs. 50, Rs. 100 or Rs. 200 for a period of either five or 10 years, at the end of which the amount together with interest will be returned to the depositor.

The policy of extending the postal services to rural areas is being pursued. Under this policy, post offices will be opened in groups of villages with a minimum population of 2,000 within a radius of two miles, but no post office will be opened within a radius of three miles of an existing post office, unless it is self-supporting. However, no new post office will be opened if the loss in working it exceeds Rs. 750 per year; in backward areas, the permissible loss limit is Rs. 1,000. During the period of nine months ended 31st December 1958, the number of new post offices opened was 1,492, and the number of new telegraph offices 163, as against 2,901 and 274 respectively in 1957-58. The total number of letter boxes increased from 133,973 as on 31st March 1957 to 142,110 as on 31st March 1958. A large staff is employed for performing the services rendered by the Postal Department. As on 31st March 1958, the Department employed 316,617 men (permanent 164,017, temporary 51,025 and extra departmental 101,575), including 1,472 gazetted officers.

Considerable progress has been made in the extension of telecommunications. The number of telegraph offices increased by 163 to 5,895 during the nine-month period ended December 1958; only three district towns (in remote North-east Frontier Agency) out of 325 in India, 10 out of 482 sub-divisions and 168 out of 1,382 *tehsils* remained without telegraph facility. The telegraph offices are being modernised through the introduction of tape relay service which is functioning in respect of 23 circuits. Printergram service in Bombay has proved popular. The Telex system, which operates between Bombay and Ahmedabad, is working to full capacity.

The Department provides its own training facilities for the staff. The P. and T. residential training centre at Saharanpur has been running satisfactorily. The Department has also started 10 postal and 15 R.M.S. non-residential training classes in different centres. The training facilities at the Telecommunications Training Centre, Jabalpur, have been increased. On an average, about 400 students are being trained at a time in this centre. There are three regional training centres at Ambala, Calcutta and Madras for telephone mechanics, wiremen and cable jointers.

India continues to play an important role in international postal relations. The Department is engaged in finalising the arrangements to give effect to the changes introduced by the Universal Postal Congress (U.P.C.) which met at Ottawa in 1957. The changes relate to certain basic tariffs and the prescription of a minimum rate of postage for samples and to technical matters, involving alterations in the

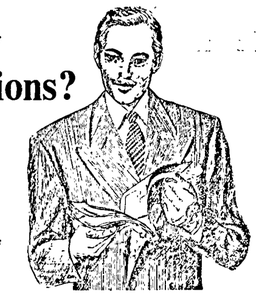
BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED
N. D. JOSHI, *Manager.*

Any questions?



"Yes, Mr. Chairman. Surely you agree that an investment in a Bank Deposit Account with Lombard Banking is one of today's finest opportunities for increasing income."

"Certainly. We should have used this method a long time ago. We will certainly invest our funds in Lombard Banking."

A capital proposal. For Lombard Banking offers the maximum return on Bank Deposit Accounts, plus Complete Security. Companies and individuals requiring a regular and secure income based on realistic rates of interest, paid without deduction of United Kingdom income tax, should write immediately for copies of Bank Deposit Account Booklet No. A091 to General Manager.

STEEL AND YOU

Day and night you are using steel. Steel builds your houses, roads and bridges, spins your thread and weaves your garments. Steel tames the raging rivers to bring water to your fields, power to industry and light to your homes. Steel carries you and even your words across vast distances.
But India needs more of these modern amenities—her per capita consumption of steel is amongst the lowest in the world.

Night and day The Indian Iron & Steel Company Limited is working to help India fulfil her target for steel—your target for a prosperous tomorrow.

STEEL
IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

DESIGN CENTRE IN U.K.

SOMETHING THAT INDIA CAN EMULATE WITH PROFIT

A STAR attraction for domestic consumers and business men from abroad in the U.K. is the Design Centre, a permanent exhibition organised by the British Council of Industrial Designs in Haymarket, London. The Centre is a virtual replica of a vital industrial sector in the U.K., in that it seeks to bring within its fold a systematic representation of a bewildering variety of best designed durable consumer goods in the country. There is no exaggeration in saying that the centre is proving a "time-saver to buyers" in general by providing a snap-shot of a wide range of domestic goods in current production amounting to no less than 10,000 of assured quality. Actually displayed in the hall are just over 1,000 products, the rest being shown in photographs and a catalogue called Design Index. Each item is illustrated either by photograph or by a sample and supported by details concerning the manufacturer, the retail price, dimensions, materials and all other detailed information. The Design Index is reserved in a special "buyers room." We are told that an increasing number of trade buyers and professional inquirers are making use of these facilities for discovering new designs and sources of supply. Thus the Design Centre has become a live-wire organisation, promoting the cause of domestic industry and trade.

Although no orders can be placed through the Centre, the Centre provides telephone facilities, so that interested buyers may make contacts with the manufacturers and get information regarding wholesale prices, availability and delivery. The Design Centre staff gives the visitors necessary information regarding the exhibits. The products covered in the display include, among others, furniture, furnishing accessories, furnishing fabrics and household textiles, cutlery and flatware, floor coverings, glassware, heating and ventilating appliances, kitchen equipments and appliances. lighting fittings, office equipment, plastics, pottery, radio and television sets, sewing and knitting machines, silver, metalware, household and garden tools, light transport, travel goods, wall papers, and wall treatments, wooden and other tableware, street furniture, building fittings, clocks and watches, cleaning equipment and appliances, brushes, photographic equipment and optical instruments. It may be noted here that the Council of Industrial Designs brings out a magazine entitled *Design*, giving a detailed account of its activities both in England and abroad

Improvement of Designs

The fact that the various products exhibited at the Centre carry the approval of the Council of Industrial Design in respect of their quality and standard, makes them all the more popular with the consumers—who have a fascination for best designs and quality. It may be noted that the Council of Industrial Design was constituted by the British Board of Trade about 15 years ago—1944 to be precise. This is a grant-aided body, designed to promote improvement of designs in the domestic industry. A majority of the 24 members who constitute this body are leading industrialists in Britain. There is, in addition, a separate Scottish Committee. Also associated with this institution are the Royal Society of Industrial Artists, which is the representative professional body in the U.K. of designers engaged in industry and commerce, and the Design and Industries Association (D.I.A.), a voluntary body consisting of many industrial companies, designers, etc. Their co-operative efforts are helpful to consumers and producers alike. The consumers have the satisfaction that they can rely on the Council for the quality and reasonableness of price of the products displayed in the Centre. The producers find in the Centre a model technique for publicising their products having good designs.

A permanent exhibition of this nature in an international tourist and trade centre such as London has a special significance to export promotion also. This experiment is, therefore, worth emulating by India, too, in cities like Bombay, Calcutta, New Delhi and Madras. It is to be hoped that industrialists and the Government of India will pay some thought to this suggestion. Apart from helping the domestic and export trade to expand, a design centre will give considerable fillip to the art of industrial designing and attract a lot of young people to this much neglected but very valuable profession in this country. It would amount to stressing an obvious point to say that if India is to succeed in becoming a full-fledged industrial nation, it must have a large force of industrial designers. No nation can achieve industrial greatness by copying or imitating foreign designs.

PAINT INDUSTRY

The progress of the paint industry is not as spectacular as the wide range of bright and dazzling colours of paints and varnishes produced in this country might seem to suggest. The industry's path is by no means smooth, as it is faced with several problems in regard to raw materials and packaging materials. The production of paints in 1958 rose to 50,000 tons from 42,271 tons in 1957 and 33,492 tons in 1951. While production has thus steadily increased, there is still a substantial under-utilisation of capacity to the tune of about 21 per cent. The total annual installed capacity of the industry is about 65,000 tons, calculated on the basis of two shifts and 300 working days. If this surplus capacity is to be utilised, the industry must have sufficient supply of raw materials. And it is a simple law of economics that, unless the capacity is fully utilised, costs cannot be brought down and that, unless the product is competitive, it has no chance of winning markets. It is, therefore, no wonder that on the export front the paint industry has not fared well. The aggregate value of exports of paints and varnishes during 1958 was no more than Rs. 10.57 lakhs, as against Rs. 11.86 lakhs during the whole of 1957.

In this context, it would be worthwhile to examine the difficulties that inhibit the paint industry's expansion in production and exports. It would appear from the speech of Mr. R. S. Cooke, Chairman of the Paint Federation, that the import licensing policy leaves much to be desired. This drawback accounted, to a great extent, for the inability of the industry to meet many demands and delays in making deliveries. He, however, appreciated the system of blanket import licences, introduced by the Government at the end of last year. By this he did not mean to suggest that there had been general satisfaction with the value of licences granted for most of the manufacturers needed a substantially more generous allocation. The chief merit of the new system was its flexibility and he hoped that this policy would be continued.

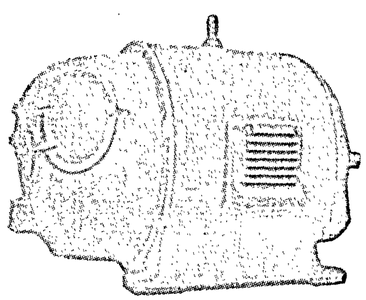
In addition to the raw materials, which the producers of paint themselves import directly as actual users, the industry is also handicapped by the shortage of lead and zinc pigments, vital for its development. Lead and zinc pigments are of paramount importance for ensuring the anti-corrosion quality of paints. That is why a large number of I.S.I. specifications for the paint industry require the use of such pigments. The difficulty has arisen because the manufacturers of these pigments have not been permitted to import adequate quantity of lead and zinc metals.

Scarcity of tung oil is another problem of the paint industry. India produces only a small quantity of this oil but the prices are so high that the Paint Federation has found it necessary to bring it to the notice of the Bengal Government. Mr. Cooke disclosed that the latter was now seized of the problem and that it had ordered an increase in the acreage for the seed-bearing tree, namely, *aleurites*. He expressed the hope that it would not be long before the millers of Indian tung oil would eventually place their product on the market at a price which would be more or less equivalent to that of imported oil.

Another problem confronting the paint industry to which Mr. Cooke referred, pertains to securing continuous supply of tinplate and steel sheet for the packages in which paint has to be sold. He urged that the paint industry should be given high priority in the allocation of tinplate and steel sheets for packages.

The importance of stepping up exports, at a time when the country is passing through foreign exchange difficulties, cannot be overemphasised. Many attempts are being made to develop export trade in paints. It may be recalled that the Chemicals and Allied Products Export Promotion Council was constituted in July 1958, a Panel was also formed within its framework to deal with specific problems relating to the export of paints. Apparently, this measure has not led to any immediate benefit. Mr. Cooke felt that no improvement in the export of Indian paints would be possible, until its producers were able to place their products in foreign markets competitively. He, therefore, made a fervent plea to devise a system of drawbacks of import duty on raw materials. That was for promoting export of paints direct. Besides this, paint figures prominently in the export of several other items, in which it is used for protective and/or decorative purposes. Mr. Cooke, therefore, stressed that manufacturers of paint should give maximum co-operation and high priority to those of their customers who were buying paints for the finishing of goods destined for export.

The demand for paints within the country itself is bound to go up in view of the large development programmes in hand. Paint is needed everywhere in some shape or form; railways, motor cars, bicycles, electrical industries, houses and almost all construction industries—all of them require paint. It is, therefore, a vital industry and must be helped to grow and become self-sufficient as early as possible. It is gratifying to hear that the need for research in paints has been recognised. Mr. Cooke disclosed that considerable headway had been made, in co-operation with the Council of Scientific and Industrial Research and other interests in paints industry, towards the establishment of the Indian Paint Research Association. The Association is expected to set up a research institute in the course of this year.



ELECTRIC MOTORS, GENERATING SETS, ETC.

TROPICAL ENGINEERING CO.

21 Forbes Street, BOMBAY

EXPORTS OF CASTOR OIL TO THE U.S.

A feature of India's export trade in 1958 was the total absence of business in castor oil with the U.S., which in 1957 was the leading buyer of this commodity, accounting as it did for an offtake of about 16,770 tons, valued at about Rs. 2.8 crores. Mr. Walter L. Willner, President of the Walter Willner Company, Incorp., New York, who was in Bombay recently, attributed this shift in trade to hectic fluctuations in the price of castorseed in this country, which made Indian castor less attractive to U.S. consumers who wished not only reasonable prices but also a certain measure of stability. He held the view that the U.S. naturally turned its attention to other sources of supply such as Brazil, Portuguese West Africa, and Peru. Another outcome of lack of price stability and high prices for Indian castor was the preference of U.S. consumers for synthetic substitute, which could be had at steady prices. In these circumstances, India could not, according to Mr. Willner, hope to develop its castor oil exports to the U.S., unless its prices were allowed to stabilise at lower levels.

High level of prices in India was also acting, Mr. Willner pertinently pointed out, as a protective umbrella to Brazilian castor oil. It is even encouraging the U.S. to step up its domestic production. Indeed, the U.S. is already growing about 28,000 tons of castor seed, just sufficient to meet two months of its consumption. That this is not an empty threat will be evident from the fact that, whereas, not long ago, the U.S. was a net importer of soya beans, today, it is a net exporter of this item. With its high level of efficiency in farming and with sufficient land available in areas where climate is suitable for growing castor seed, it should not be difficult for the U.S. to achieve self-sufficiency or near self-sufficiency in castor seed and castor oil. It is, therefore, inadvisable for Indian exporters to try to squeeze the last cent out of the U.S. consumer. On the contrary, they should endeavour to ensure a steady level of prices and a high standard of quality. The warning sounded by Mr. Willner deserves to be heeded by the Government of India and the traders in this country. Otherwise, India will soon lose another valuable source of earning foreign exchange.

The first step for achieving price stability is to control speculation. It is the duty of the authorities in charge of forward markets ruthlessly to eliminate unhealthy speculation. This should not be difficult if the Governing Boards of these markets were to take the initiative for exposing the black sheep in their fold and for preventing the use of forward contracts as instruments for making quick profits. If they fail to do self-policing, the Government will be justified in acting firmly against speculators, including the abolition of futures trading.

INDO-BRITISH TRADE—JANUARY 1959

The aggregate value of India's exports to the U.K. in January 1959 amounted to £15.82 million, which compares favourably with £11.29 million in January 1958. There was a perceptible improvement in the export of tea which accounted for as much as £9.76 million, as against £5.98 million. The export of miscellaneous textile manufactures also rose from £886,000 to £1.30 million and that of oilseed cake and meal from £625,000 to £971,000. The earnings from leather manufactures and dressed furs, however, were slightly lower at £1.08 million, as compared with £1.09 million in the first month of 1958.

In contrast to exports, India's imports from Britain suffered a slight setback, their total value having fallen from £14.26 million in January 1958 to £11.80 million in January 1959.

K.C.P.'S GROSS PROFIT LOWER

CEMENT FACTORY GOES INTO PRODUCTION

DESPITE a sharp rise in the turnover of sugar, spirits and confectionery and a sizable improvement in the realisation from the sale of manures and molasses, the results of the K.C.P. Ltd. (Managing Agents: Messrs. V. Ramakrishna Sons Private Ltd., Madras) for the year ended 30th June 1958 are not favourable as compared with those for the previous year. The quantity of cane crushed and the output of sugar also suffered a setback and this, together with the rise in manufacturing and other expenses, has obviously contributed to the fall in earnings. The gross profit for the year under review at Rs. 32.74 lakhs is Rs. 2.96 lakhs lower than the Rs. 35.70 lakhs earned in the previous year. It is, however, a shade higher than Rs. 32.41 lakhs for 1955-56 and twice as much as that (Rs. 16.27 lakhs) for 1954-55.

The provision for depreciation has received Rs. 9.97 lakhs, as against Rs. 7.50 lakhs last year. No amount has been provided for taxation which had been credited with Rs. 12.50 lakhs in the past year. Consequently, the net profit stands substantially higher at Rs. 20.77 lakhs, as compared with Rs. 12.98 lakhs for 1956-57 and Rs. 15.22 lakhs for 1955-56. The Directors have written back Rs. 2.44 lakhs, representing excess dividend provision made on deferred shares for the year 1956-57 and Rs. 28,044, being interest not relating to the year of account. The amount thus written back has, however, been utilised to strengthen the Company's reserves further. Thus, as against only Rs. 8.50 lakhs conserved a year ago, as much as Rs. 21.50 lakhs have been ploughed back now. Of this amount, Rs. 12.50 lakhs have been transferred to development rebate reserve and Rs. 9 lakhs to general reserve.

The dividend on ordinary shares shows no change at 7½ per cent., since the shares are entitled to a fixed dividend at that rate and do not carry any rights to cumulative dividend. The dividend on deferred shares, on the other hand, which had been consistently maintained at 100 per cent. for the past seven years in succession, has been reduced to 15 per cent. Even this dividend is subject to the sanction of the Industrial Finance Corporation of India, but there should be no difficulty in getting it.

The following comparative table discloses the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale of sugar, spirits and confectionery	272.15	181.99	178.34	N.A.

Sugar produced (in tons)	9.14	8.25	9.39	9.94
Recovery (%)				

N.A.—Not available.

* Includes excise duty on sugar amounting to Rs. 66.17 lakhs, the corresponding figures for 1956-57 and 1955-56 being Rs. 29.14 lakhs and Rs. 22.78 lakhs, respectively.

† Administrative and other expenses only.

The Company's sugar factory commenced crushing on 11th December 1957 and closed on 18th May 1958. During this period, it crushed 273,273 tons of sugarcane and produced 24,960.3 tons of sugar. The recovery of sugar for the season was higher at 9.14 per cent., as against 8.25 per cent. in the previous season.

The Directors state that the cement factory at Macherla went into production with effect from 1st March 1958 and produced 11,696 tons of cement. The Company's workshops at Tiruvottiyur near Madras worked satisfactorily during the year. The Directors' report states that it is proposed to sell the workshops to the Ramakrishna Basic Industries Corporation Ltd.

The Company's paid-up capital as at 30th June 1958 remains unchanged at Rs. 16.68 lakhs. This is composed of Rs. 3.29 lakhs in 5 per cent. tax-free redeemable cumulative preference shares of Rs. 100 each, Rs. 10.52 lakhs in 7½ per cent. tax-free ordinary shares of Rs. 100 each and the balance of Rs. 2.87 lakhs in deferred shares of Rs. 10 each. The reserves and surplus aggregate Rs. 110.33 lakhs. The current liabilities, including provision for taxation, amount to Rs. 379.76 lakhs, of which secured loans from banks account for Rs. 261.52 lakhs including Rs. 87 lakhs from the I.F.C. The gross block amounting to Rs. 337.42 lakhs has been written down to a book value of Rs. 285.72 lakhs. Additions to the gross block during the year accounted for Rs. 92.55 lakhs. The current assets aggregate Rs. 221.05 lakhs and fall short of the current liabilities and the provision for taxation by a margin of Rs. 158.71 lakhs.

The Rs. 100 7½ per cent. tax-free ordinary shares are being currently quoted at Rs. 140 *cum-div.* On an *ex-div.* basis, they provide a yield of 5.66 per cent. per annum, free of tax.

INDUSTRIAL INVESTMENT TRUST RAISES DIVIDEND

The Industrial Investment Trust Ltd. (Secretaries and Treasurers: Messrs. Premchand Roychand and Sons, Bombay) has earned a higher profit of Rs. 6.39 lakhs for the year ended 31st December 1958, as against Rs. 5.93 lakhs for the previous year, after setting aside Rs. 52,205 for Secretaries and Treasurers' remuneration, as against Rs. 50,423. After adding to this the amount brought forward from the previous year of Rs. 1.75 lakh, the total amount available for appropriation is Rs. 8.14 lakhs. Out of this, Rs. 9,128 has been set apart for additional income-tax assessed for the assessment years 1953-54 to 1956-57 and another Rs. 3.826 for wealth tax for 1958-59, as against Rs. 2.30 lakhs for assessment years 1954-55 to 1957-58 and Rs. 5.916 for wealth tax transferred in the previous year. The Directors have transferred to capital reserve a sum of Rs. 8,647 representing the net profit on sale or redemption of investments. They have proposed a dividend of Rs. 6 per share of Rs. 100 each, free of income-tax, for 1958, as against Rs. 5.50 for 1957. The dividend absorbs Rs. 6 lakhs, leaving a balance to be carried forward of Rs. 1.92 lakh, subject to taxation for the years 1957 and 1958, as against Rs. 1.75 lakh brought in.

The Company's income by way of dividends on shares and interest on debentures and securities amounted to Rs. 7.39 lakhs, as against Rs. 7.16 lakhs in 1957. Income from other sources also increased slightly from Rs. 13,067 to Rs. 17,941.

The Directors state that the approximate valuation of the Company's investments at market quotations as on 31st December 1958 or in the case of unquoted investments at the book value, was higher than the total book value by 6.62 per cent.

The Trust has a paid-up capital of Rs. 99.99 lakhs, all in ordinary shares of Rs. 100 each. As against this, it has reserves and surplus aggregating Rs. 22.14 lakhs. The current liabilities amount to Rs. 8.05 lakhs. Fixed assets consisting of furniture and fittings of the value of Rs. 19,684 stand written down at Rs. 3,157. The current assets aggregate Rs. 130.15 lakhs, of which investments (at or under cost) account for Rs. 126.86 lakhs. Of the investments, quoted investments of a value of Rs. 114.66 lakhs have a market value of Rs. 123.06 lakhs on 31st December 1958, such having increased from Rs. 104.36 lakhs quoted a year earlier.

The Rs. 100 fully paid-up shares are currently quoted at Rs. 90 *cum-div.* On an *ex-div.* basis, the yield is 7.14 per cent. per annum free of income-tax.

(*Concluded from next column*)

year. The Directors are also examining some new schemes which will further enlarge and diversify the activities of the Company.

It is stated that the current year's working is expected to show satisfactory results, provided the import policy of the Government does not undergo any further change.

The Company's paid-up capital of Rs. 50.08 lakhs is made up of ordinary shares of Rs. 10 each. As against this, its reserves and surplus are equal to only Rs. 8.48 lakhs. It has two sets of debenture liabilities, one of Rs. 13.71 lakhs carrying interest at 5¼ per cent. and another of Rs. 68,000 at 7 per cent. The former, we are told, have been redeemed since the close of the accounting year. The gross block is valued at Rs. 81.32 lakhs and the net block at Rs. 51 lakhs. The current liabilities stand at Rs. 32.65 lakhs. As against this, the current assets aggregate Rs. 54.61 lakhs.

The Rs. 10 paid-up shares are currently quoted at Rs. 9.37 *ex-div.*, at which rate and on the basis of the dividend for the year, the yield is 6.9 per cent. per annum.

JAY SHREE TEXTILES

DIVIDEND HIGHER

IN these days of slump for cotton textile industry, it is gratifying to know that Jay Shree Textiles Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) has added one more year of steady progress. The year under reference is the last calendar year, 1958. The Company's profit for that year shows a sharp rise over that for the preceding two years. Considering the fact that the Company wiped out the arrears of its debit balances only as recently as in 1956, the results for the year under review justify the hope that the Company has definitely turned the corner and that its future is well assured. It is true that there are still large arrears of depreciation, but, if the present rate of progress were maintained, it would not be difficult for the Company to fill this gap. In this context, the gesture of the Managing Agents by giving up their commission in the larger interests of the Company deserves to be mentioned.

The gross profit at Rs. 19.07 lakhs has shot up by Rs. 7.40 lakhs from Rs. 11.67 lakhs for the previous year, to which level it had increased from Rs. 10.59 lakhs earned in 1956. The net profit at Rs. 10.44 lakhs also stands appreciably higher, as compared with Rs. 4.23 lakhs for 1957 and Rs. 4.92 lakhs for 1956. This is after raising the provision for depreciation from Rs. 6.94 lakhs to Rs. 8.35 lakhs. A sum of Rs. 28,500 has been provided for wealth tax, as against Rs. 45,000 set aside in the previous year for the years 1956 and 1957.

The higher profit has enabled the allocation of Rs. 6 lakhs to renovation and renewals reserve and another Rs. 28,860 to development rebate reserve. The amounts set aside in the previous year, it may be noted, were Rs. 85,968 to development rebate reserve and Rs. 7,423 to provision for doubtful debts. The Directors state that, on the basis of the Company's calculations in accordance with the Income-tax Act, the amount of unprovided depreciation as on 31st December 1958 comes to about Rs. 31 lakhs.

The dividend to shareholders has been raised to 6¼ per cent. from 5 per cent. for 1957, to which level it had been stepped up from 3¾ per cent. for 1956.

The following comparative table sets out the Company's profits during the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1958	1957	1956
Sale proceeds of finished goods	81.75	83.66	58.08
Closing stocks of finished goods and stock-in-process	22.49	16.48	13.51
Raw materials consumed	39.43	47.76	34.20
Expenses	34.28	31.36	23.29
Gross profit	19.07	11.67	10.59
Depreciation	8.35	6.94	5.67
Provision for wealth tax	0.28	0.45	—
Net profit	10.44	4.28	4.92
Items pertaining to previous years written back	0.13	0.04	0.18
Expenses written off	0.54	0.14	2.92
Provision for tax on excess dividend	0.02	—	—
Transfer to reserves	6.29	0.93	0.32
Dividend	3.20	2.46	1.84
	(6¼%)	(5%)	(3¾%)
Carry forward	1.33	0.82	0.03

The Directors observe in their latest report that the Company's products, especially fire-fighting hose-pipes, linen threads and twines, flax canvas and paulins, hair belting yarn, etc., are becoming more and more popular. Considerable progress has also been achieved in the manufacture of industrial cloths like filter cloth, cotton canvas, lapping cloth, clearer cloth, sizing flannel, etc. It will thus be seen that the Company's manufacturing activities have been diversified to a considerable extent.

Alluding to the Company's working during the year under review, the Directors aver that the results of the Company would have been better but for the inadequate import licences for some of the essential raw materials and increase in various heads of expenditure, chiefly under wages, stores, coal and electricity. As a result of the award of the Cotton Textile Tribunal, the annual wage bill of the Company has increased by about Rs. 2 lakhs.

The technical collaboration with Messrs. George Angus & Co., Ltd., London, to manufacture rubberlined fire-fighting hoses (equivalent to their "Pressure Flex Hose") in India has been concluded and has received the sanction of the Government. The new plant is scheduled to start production during the current

(*Continued in previous column*)

SIRPUR PAPER EARNS HIGHER PROFIT

RESULTS OF BRAITHWAITE AND COMPANY SATISFACTORY

Sirpur Paper Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The profit and loss account after providing Rs. 35,00,000 (Rs. 17,63,251) for depreciation, Rs. 4,00,000 (Rs. 82,000) for taxation (including wealth tax) and Rs. 1,00,000 (*nil*) for development rebate, shows a profit on the year's working of Rs. 18,53,930 (Rs. 14,32,619) to which is added the balance brought forward from the previous year of Rs. 5,497 (Rs. 17,813) making a total of Rs. 18,59,427 (Rs. 14,50,432). From this there has been provided for reserve for contingencies Rs. 1,75,000 (*nil*) and forfeited dividends paid Rs. 100 (Rs. 857) leaving a balance available of Rs. 16,84,327 (Rs. 14,49.575) for disposal which, it is recommended be disposed off as under:

To payment of dividend on 40,480 cumulative redeemable preference shares of Rs. 100 each fully paid up at 6 per cent. per annum without any deduction of income-tax absorbing Rs. 2,42,880 (Rs. 2,25,126), to dividend on 21,85,524 ordinary shares of Rs. 10 each fully paid up at 65 (50) nP per share without any deduction of income-tax, absorbing Rs. 14,20,591 (Rs. 10.92,762) and to transfer to general reserve Rs. 2,062 (*nil*), leaving a balance to be carried forward of Rs. 18,794 (Rs. 5,497 after writing off Rs. 1,16,029 being expenses on training of employees sent abroad and writing Rs. 10,161 being brokerage and commission on issue of shares).

During the year under report, the production amounted to about 20,400 tons of paper as against 17,400 tons in the previous year and 14,200 tons in the year prior to that. There has been considerable improvement in the quality of paper in the year.

The working results of the year under review are considered satisfactory although the cost of raw materials, chemicals, railway freight and salaries and wages recorded further rise.

With a view to determine the fair selling prices for paper and board, the matter has been referred by the Government of India to the Tariff Commission.

The expansion programme has almost been completed. The new 'paper machine' was commissioned about the end of 1958 with the help of imported pulp. Erection of machinery in the soda recovery, pulp and bleaching sections, etc., is in final stage of progress. These plants are expected to be commissioned shortly.

The closing stock of paper has been valued 'at or below market rates' instead of 'at market rates' due to supplies to Government being made at lower rates, as per the rates specified in the rate contract with the Government. This change would not result in affecting profits for the current year.

The Company has not made any provision for gratuity as, at present, there is no liability for same. The liability, if any, for gratuity, accrues at the time of retirement and providing for future liability is not obligatory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,59,52,530	Gross block	3,93,85,536

Braithwaite & Co. (India) Ltd.

The directors of the above Company (Chairman: J. D. K. Brown, Esq., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The trading profit for the year after making provision for depreciation and all other working charges and after providing a sum of Rs. 1,18,706 (Rs. 87,024) in respect of development rebate, amounted to Rs. 38.21.354 (Rs. 38,69,928) to which has to be added the balance brought forward from the previous year, viz. Rs. 1.82.669 (Rs. 1 99.299) making a total of Rs. 40 03,623 (Rs. 40,69,227). Out of this sum there has been provided for taxation in respect of 1958 Rs. 23,25,000 (Rs. 21,25,000) and transferred to general reserve Rs. 7,95.979 (Rs. 2.00.000) leaving a balance available for disposal of Rs. 8,82,644 (Rs. 17,44,227). The directors recommend payment of a dividend at the rate of Re. 1.25 (Rs. 2.00) per share without any deduction for income-tax payable by the Company absorbing Rs. 7,07,474 (Rs. 11,31,958) leaving a balance at the credit of profit and loss account of Rs. 1,75,170 (Rs. 1,82,269 after providing Rs. 4,30,000 for additional taxation in respect of 1956 including super tax on issue of bonus of shares) to be carried forward to the next account.

The result of the year's trading is a profit which is only marginally less than that of the preceding year but in view of the need to conserve the resources of the Company to provide for an expansion of its activities the directors consider it prudent to recommend payment of a dividend of only Re. 1.25 per share as compared with Rs. 2 per share which was distributed in respect of 1957. It will be recalled that at an Extraordinary General Meeting held on 16th July last additional dividends totalling Re. 1 per share were declared in respect of the years 1954 and 1955 in order to avoid the penal effects of Section 23A of the Indian Income-tax Act and in the explanatory circular letter to shareholders which accompanied the notice convening that meeting, it was stated that. having regard to the need to conserve the Company's resources, the distributions then proposed would require to be taken into account by the directors when considering their recommendation regarding a dividend for 1958. It is in these circumstances that a dividend of Re. 1.25 per share is now recommended but it may be observed that despite the slightly reduced profit the necessary provision for taxation has been increased by the necessity to provide, *inter alia*, for additional taxation on "excess" dividends resulting from the declaration of the dividend for 1957 and the additional dividends for 1954 and 1955, all within the same accounting year. Payment of these additional dividends absorbed Rs. 5.65,979, which was met out of the Company's general reserve account and this amount has now been restored to that account by transfer out of the profits of 1958, being included in the total amount shown above, viz: Rs. 7,95,979.

Output from the Structural Shop was successfully maintained throughout the year, even surpassing the previous record of 1957, but the Wagon Shops were affected during the second half of the year by the shortage of raw materials foreshadowed in the last report. Aggravated by the disastrous strike at the Tata Steelworks at Jamshedpur in May, wagon outturn was on many occasions halted by inadequate and irregular supplies of materials and the results achieved reflect great credit on the energy and initiative of the Company's production staff under most difficult conditions.

Comparative output has been:—

	1957		1958	
	Numbers	Tons	Numbers	Tons
Structural steel work	...	10,940	...	11,139
Railway wagons	2416	12,685	2030	10,572
Total for the year		23,025		21,711

Shortage of raw materials will continue for some months and, despite a satisfactory order book, some fall in production must be expected. The Company, however, is no worse placed than others engaged in the heavy engineering industry and the directors are confident that the present temporary difficulties will pass. It is expected that the benefit of the expansion schemes of the Tata Iron & Steel Co. Ltd. and the Indian Iron & Steel Co. Ltd. will begin to show towards the end of the current year, when the Company can look forward again to a period of full activity.

Accounts in brief are as under:—

Coimbatore Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. R. Bheema Naidu & Co., Singanallur, Coimbatore) submit the audited accounts of the Company for the year ended 31st December 1958.

After deducting all working expenses and interest and providing Rs. 4,49,758 (Rs. 1,35,499) for depreciation, the year's working has resulted in a net profit of Rs. 2,46,291 (Rs. 9,77,485). Out of this amount Rs. 18.376 (Rs. 3,327) were paid as donations and Rs. 44.928 (*nil*) as balance of bonus for 1955 leaving a balance of Rs. 1,82,987 (Rs. 9,74,158). With Rs. 698 (Rs. 10,889), the balance of profit brought forward from last year, and Rs. 1,85,000 (*nil*) transferred from dividend equalisation reserve, there is a sum of Rs. 3.68.685 (Rs. 9.85,047) available for appropriation. The directors recommend the following appropriations:—

To development rebate reserve Rs. 1,25,000 (*nil*), to employee's gratuity reserve Rs. 30,000 (Rs. 27,500), to proposed dividend at 6 (9) per cent. tax-free Rs. 2,13,089 (Rs. 1,98,138) and leaving a balance to be carried forward of Rs. 596 (Rs. 698 after placing Rs. 3,08,711 to machinery replacement reserve; Rs. 50,000 to G. K. Naidu Charity Trust and Rs. 4.00.000 for provision for taxes).

Unless an amount not less than 75 per cent. of the development rebate allowable in the income-tax assessment is appropriated for development rebate reserve, the claim for the allowance for development rebate will be lost.

With a view to minimise the burden of payment of gratuity on the profits of any future year in which any employee or employees may leave the service in the Company, a gratuity reserve is being built up by appropriating sufficient sums from the profits of every year.

The installation of the first 12.800 spindles to spin staple fibre yarn is complete in the Jubilee mills and out of the second 12,800 spindles to spin cotton yarn, all the imported blow room and preparatory machines have arrived and have been erected. 14 indigenous cards out of 40 have been installed. The electrical transformer, switch gear, spinning frames and humidification plant are awaited and it is expected that all these machines will go into production before the end of this year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,97,200	Gross block	88,98,386

Calcutta Steam Navigation Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Hoare Miller & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The accounts show a net profit of Rs. 2,82,797 (Rs. 3,92,805). On bringing forward from the last profit and loss account the balance of Rs. 73,358 (Rs. 91,810) and including the profit on sale of a motor car of Rs. 578 (*nil*), the credit on profit and loss account amounts to Rs. 3,56,733 (Rs. 4,85,037 including Rs. 422 being unclaimed dividends written off), which the directors recommend be dealt with as follows:

To provision for taxation Rs. 1,00,000 (Rs. 2,47.879), to transfer to fleet reserve Rs. 578 (*nil*), to transfer to development reserve Rs. 25,000 (*nil*) and to pay a dividend at Re. 1.00 (Re. 1.30) per share or 10 (13) per cent. (free of tax) absorbing Rs. 1.26,000 (Rs. 1,63,800) leaving to be carried forward Rs. 1,05,155 (Rs. 73,358).

Accounts in brief are as under:—

Rs.	43.77,864	Rs.	43,77,864

British Burmah Petroleum Co., Ltd.

The directors of the above Company (Chairman: Tricumdas Dwarkadas, Bombay) submit the audited accounts of the Company for the year ended 31st March 1958.

The net profit earned by the Company for the year under review amounted to £30.805 as compared to £45.195 for the previous year. After providing £19,619 (£7,369) for taxation, there remains a balance of £13,025. The directors recommend payment of a dividend at 2 (*nil*) per cent. which, if accepted, will absorb £11,250 (*nil*) leaving a balance of £1,775 (£1,839) to be carried forward.

No progress has been made during the year in the claim against the Union Government of Burma for compensation for the destruction of the Company's assets as a war measure.

Accounts in brief are as under:—

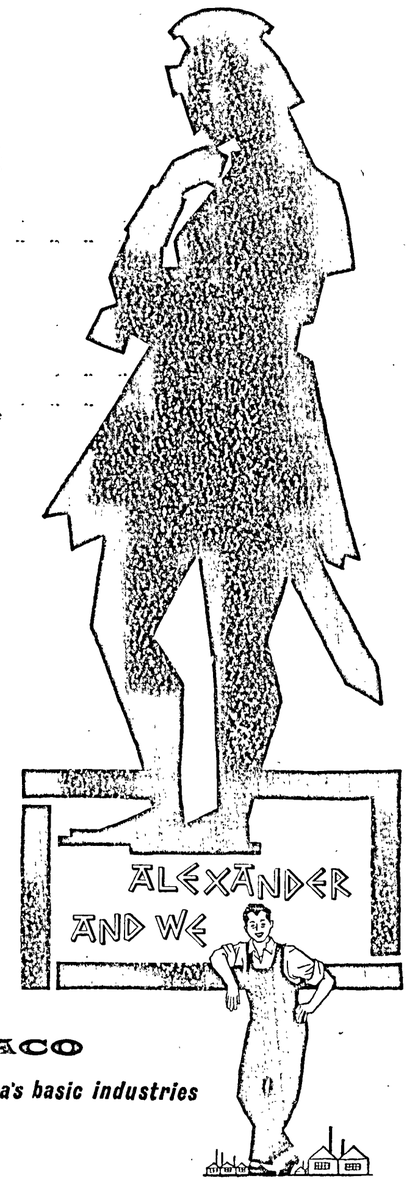
Aristotle had once described his pupil, Alexander the Great, as many in one : man of action, man of logic, romantic dreamer, believer in magic and so on. Like Alexander, we too have become many in one. At birth, we were christened Textile Machinery Corporation Limited, or makers of textile machinery, and over the years we have made many such machines. But we did not stop here. The 4,500 strong Texmaco, today manufactures a wide range of engineering products—cotton and jute textile machinery, industrial and locomotive boilers, pressure vessels, steel structurals, railway rolling stock, sugar mill machinery steel castings and so on. With the implementation of our new projects; now under way, we would become yet many more in one. Whatever Alexander did, he was inspired by the thought of adding fresh glory to the name of Macedon. Whatever we might do, there is a single aim that directs our activities—the proper utilisation of all our resources, to manufacture quality machinery—machinery to help India industrialise and bring prosperity to her teeming millions.



TEXMACO

serves India's basic industries

THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

(AFFILIATED TO THE CHARTERED BANK)

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited, showing the position of the Bank's affairs as on the 31st day of December, 1958, together with their report.

	Rs.	nP.
The result of the working for the twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of ..	17,24,958	03
Out of this there has been paid Dividend and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 18 and 6 per cent. per annum, respectively, for the six months ending 30th June, 1958, absorbing	3,19,500	00
Leaving an available balance of	14,05,458	03
which your Directors recommend should be disposed of as follows:	Rs.	nP.
In payment of a Dividend (free of Income-tax) on the Preference Shares for the six months ending 31st December, 1958, at the rate of 6 per cent. per annum	45,000	00
In payment of a Dividend (free of Income-tax) on the Ordinary Shares for the six months ending 31st December, 1958, at the rate of 12 per cent. per annum	1,83,000	00
In payment of a Bonus (free of Income-tax) on the Ordinary Shares at the rate of 6 per cent. per annum for the six months ending 31st December, 1958	91,500	00
Provision for bonus to staff	7,32,000	00
	10,51,500	00
Carry forward to next Account	3,53,958	03

Although no new office was opened during the year, the prospects of profitable representation at several centres are under investigation. Deposits continue to show an upward trend mainly in the higher interest group, and the Bank's business generally continues to expand. The high cost of deposits and increasing establishment expenses have again narrowed the margin of profit on investments and advances. As hitherto, investments have been shown in the Balance Sheet at less than market value.

It was with deep regret that the Directors recorded the death of Mr. Alexander Izat on the 5th April, 1958, three days prior to his departure from India on furlough preparatory to retirement after 32 years' service with the Bank. The late Mr. Alexander Izat held the post of General Manager of the Bank from June, 1955, prior to which he had been associated closely with the management of the Bank for many years.

Under Article 115, two of the Directors, Maharajadhiraja Bahadur Sir Uday Chand Mahtab, K.C.I.E., B.A., of Burdwan, and Sir Iqbal Ahmad, retire from office by rotation, but are eligible for re-election.

Mr. M. J. Maclaren was appointed to fill the vacancy caused by the death of Mr. Alexander Izat and under Article 104 retires, but offers himself for re-election.

Mr. W. F. MacDonald was appointed to fill the vacancy caused by the resignation of Mr. P. R. Wait, M.C., and under Article 104 retires, but offers himself for re-election.

Auditors will have to be appointed for the year ending 31st December, 1959.

Mr. M. R. Das being absent from India has not signed the accounts.

By Order of the Board,
W. F. MACDONALD,
Chairman.
M. J. MACLAREN,
General Manager.

CALCUTTA, the 27th February, 1959.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the audited returns of Calcutta and Bombay Branches and the unaudited returns of all other branches which have not been visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

ALLAHABAD BANK NOMINEES PRIVATE LIMITED

DIRECTORS' REPORT

The Directors of the Allahabad Bank Nominees Private Limited submit the audited Balance Sheet for the year ended 31st December, 1958, together with their report.

A Profit and Loss Account is not submitted as no profit was made nor loss sustained. The Company is a wholly owned subsidiary of the Allahabad Bank Limited by whom the entire expenses of the Company have been paid.

M. J. MACLAREN,
W. SMITH,
JAGAT NARAIN. } Directors.

CALCUTTA:
The 27th February, 1959.

We have audited the foregoing Balance Sheet as at 31st December, 1958, of the Allahabad Bank Nominees Private Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as on 31st December, 1958.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

A. F. FERGUSON & CO.,

Notice

THE GANESH FLOUR MILLS CO., LTD.

DELHI

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 67th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Company, Ltd., Delhi, will be held at the Registered Office of the Company at Subzimandi, Delhi, on Tuesday the 21st April, 1959, at 10 a.m., to transact the following business:—

1. To receive, consider and adopt the Directors' report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September, 1958.
2. To declare Dividends.
3. (a) To elect a Director in place of Shri Balraj who retires by rotation and being eligible offers himself for re-election.

   (b) To elect a Director in place of Shri S. Vaidyanath Aiyar who died on 5th February, 1959, and was also due to retire by rotation in this Annual General Meeting.

   N.B.—Under Section 257(1) read with Section 281 of the Companies Act, 1956, a shareholder of the Company has given special notice of his intention to propose the name of Shri Brij Lal, Advocate, Chandni Chowk, Delhi, who will be 67 years of age next birthday, as a candidate for the appointment of Director of the Company in the vacancy created by the death of Shri S. Vaidyanath Aiyar, which occurred on 5th February 1959, in the next General Meeting and to consider and if thought fit to pass the following resolution of which, as mentioned above, special notice under Section 281 of the Companies Act 1956, has been received:—

   "Resolved that Shri Brij Lal, Advocate, Chandni Chowk, Delhi, who will be 67 years of age next birthday, be and is hereby elected a Director of the Company and it is hereby specifically declared that the age limit for a Director as prescribed under Section 280 of the Companies Act, shall not apply to him."

4. To appoint Auditors for the year 1958-59 and fix their remuneration.
5. To consider and if thought fit to pass the following as special resolution:—

   "Resolved that in Article 67 the words 'six months' appearing in the fifth line of the Articles of Association of the Company be substituted by the words 'eight months.'"

By Order of the Board of Directors,
For THE GANESH FLOUR MILLS CO., LTD., DELHI,
(Sd.) KIRPA NARAIN,
Secretary and General Manager.

DELHI, 12th *March*, 1959.

N.B.—(a) The Share Transfer Books of the Company will remain closed from 7th April, 1959, to 21st April 1959 (both days inclusive).

(b) Members unable to attend are requested to send their Proxy Forms duly stamped, signed and completed in favour of a person attending the meeting. Forms not properly signed, stamped and completed or received less than 48 hours before the meeting will be treated as invalid.

(c) A member entitled to vote is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company.

EXPLANATORY STATEMENT

In regard to the Special Business Under Items No. 3(b) and 5 of the Agenda set out above as required under Section 173(2) of the Companies Act, 1956.

Item No. 3(b).—A Shareholder of the Company has by a special notice proposed the name of Shri Brij Lal, Advocate, Chandni Chowk, Delhi, for being elected a Director of the Company in the vacancy caused by the death of Shri S. Vaidyanath Aiyar, which occurred on 5th February 1959, (who was also to retire by rotation in this meeting). As Shri Brij Lal is more than 65 years of age he is not capable of being appointed a Director unless the Company in General Meeting specifically approves that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.

Shri Brij Lal is a leading lawyer of Delhi having practised at the bar for more than 40 years. He has a sound knowledge and vast experience of Mercantile and Company matters and has been rendering valuable legal advice to the Company. His inclusion in the Board of Directors of the Company will be highly beneficial to the Company.

Item No. 5.—The existing Article 67 of the Articles of Association of the Company provides that the Annual General Meeting of the Company should be held within six months of the close of the financial year, i.e., by 31st March in each year.

As the Government of India Budget is presented to the Parliament on the 28th of February every year it would not be possible to take into account the impact of budget proposals in the Accounts of the Company if the Annual General Meeting is held within the limit now prescribed by existing Article 67 of the Articles of Association of the Company. Moreover, if the existing Article 67 is not amended it would result in payment of two dividends to the shareholders in one year.

Section 166(1)(c) of the Companies Act, 1956, prescribes the limit for holding Annual General Meeting within nine months.

It is, therefore, desirable that the existing Article 67 be amended and the words "six months" appearing therein be substituted by the words "eight months."

INSURANCE

(*Concluded from page* 515)

crores. Of the 74.62 crores invested in the private sector, Rs. 5.48 crores were in approved securities and the balance of 69.14 crores in debentures, preference and ordinary shares of joint-stock companies.

Industry-wise Distribution

The industry-wise distribution of this latter figure (Rs. in lakhs) is: banks 263.12; cements 365.96; chemicals and pharmaceuticals 119.94; coal 191.93; cotton 690.85; electricity 829.21; engineering 714.21; insurance 135.62; investment trust 50.42; iron and steel 548.40; jute 414.63; managing agents 168.44; mining 33.65; paper and pulp 309.00; plantations 135.52; railway 70.58; shipping and other transport 121.39; sugar and breweries 142.55; textiles (other than cotton) 89.34; vegetable oils 33.22; miscellaneous 1,456.18; co-operative housing societies 21.61.

It will be seen from the aforesaid data that electricity companies accounted for the largest share in the Corporation's investments in joint-stock companies, with as much as Rs. 8.30 crores in their shares. Engineering ranked second with Rs. 7.14 crores, cotton mills third with Rs. 6.90 crores, iron and steel fourth with Rs. 5.48 crores, jute fifth with Rs. 4.14 crores and paper and pulp sixth with Rs. 3.09 crores. Investment trusts, mining, vegetable oils and co-operative housing societies ranked low, investments in them being of the order of Rs. 50.42 lakhs. Rs. 33.65 lakhs, Rs. 33.22 lakhs and Rs. 29.61 lakhs, respectively. Investments in miscellaneous industries amounted to Rs. 14.56 crores.

The figures relating to State-wise distribution of investments given in the report show that, of the Rs. 69.14 crores invested in shares of joint-stock companies (ordinary and preference shares and debentures), Rs. 25.87 crores were in shares of companies the principal factories of which are located in Bombay and Rs. 23.17 crores in shares of companies in West Bengal. The shares of other States were: Andhra Rs. 1.52 crore, Assam Rs. 0.9 crore, Bihar Rs. 7.02 crores, Delhi 0.92 crore, Kerala Rs. 0.99 crore, Madhya Pradesh Rs. 0.73 crore, Madras Rs. 2.44 crores, Mysore Rs. 0.99 crore, Orissa Rs. 0.74 crore, Punjab Rs. 0.53 crore, Rajasthan Rs. 0.07 crore, Uttar Pradesh Rs. 2.85 crores.

Of the total investment of Rs. 8.29 crores in electricity companies, as much as Rs. 5.57 crores were in companies located in Bombay and Rs. 1.62 crore in companies located in West Bengal. Of the Rs. 7.14 crores invested in engineering companies, Rs. 4.65 crores were in shares of companies situated in West Bengal and Rs. 1.20 crore in those in Bombay. Bombay occupied the pride of place in the total investment of Rs. 6.90 crores in cotton mill industry, accounting for an investment of Rs. 2.90 crores, while Madras ranked second, accounting for Rs. 1.18 crore. The total investment of Rs. 5.48 crores in iron and steel was shared between two States, Bihar (Rs. 3.42 crores) and West Bengal (Rs. 2.06 crores), exclusively. Out of a total investment of Rs. 4.15 crores in jute, Rs. 4.08 crores were in shares of companies in West Bengal.

Valuation of Assets

The first valuation of the assets and liabilities of the Corporation as at 31st December 1957 is in progress. Several factors are said to have contributed to the delay in completion of the valuation. This is the first time that valuation of the entire life insurance business in India is being undertaken as on one date. So far the different insurers had different valuation dates spread over a period of three years and the total amount of work to be done in any one year in connection with the valuation was limited. The Punch Card machinery, at present available with the Corporation, has proved quite inadequate to handle this voluminous work and this has acted as a serious brake on the speed with which the valuation data could be processed for tabulation. Another major difficulty, which has added considerably to the work in connection with the valuation, has been the large number of different plans of insurance with which the Corporation has to deal. It has always been the tendency among insurers to vary the ancillary benefits offered in connection with what may be called non-standard plans of assurance, with the object of presenting to the insuring public special plans which could be claimed to be unique. The result is that the Corporation is confronted with what may be called a medley of plans under which policies were issued by insurers in the past. The detailed benefits granted under such plans could be ascertained only by reference to the prospectuses and tables of rates of the insurers. The Corporation was, accordingly, required to make a detailed study of the prospectuses and tables of rates of each and every one of the 245 insurers whose business it took over. Each insurer had several such plans and the volume of work involved in the study, analysis and codification thereof for the purpose of valuation was huge.

Another major problem which involved voluminous work was the investigation into the question of differential bonuses. Section 49(2)(k) of the Life Insurance Corporation Act confers on the Corporation the power to make, with the previous approval of the Central Government, regulations providing for the classification of policies, whether issued by the Corporation or by any insurer whose controlled business has been transferred to and vested in the Corporation, for the purpose of declaring differential bonuses, wherever necessary. The examination of the question is nearing completion and a decision thereon will be taken shortly.

New Developments

The report enumerates the measures taken by the Corporation to liberalise the terms on which life insurance is offered to the public, to widen its fields of operations and to offer insurance protection on reasonable terms to larger sections of people. It has a comprehensive range of plans of life insurance, which enables persons wishing to take out life policies to select the precise type of policy suited to their particular needs. The premium rates are low, as compared with the rates offered earlier by all leading private insurers. Certain categories of Defence personnel are no longer required to pay an extra premium for covering war risks. Proposals for assurance from women are now accepted without the extra premium that used to be charged previously. Illiterate persons too are now eligible for insurance in the same manner as others.

BUILDERS' RISKS INSURANCE

The American Institute of Marine Underwriters has recently circulated to its members and recommended for use a new form for the insurance of Builders' Risks on commercial hull construction. This new form is the first Builders' Risks form that has been adopted by the Institute. It is more comprehensive in coverage than any previously used in this market. The insurance requirements of the American shipbuilding industry, it is stated, will be covered more adequately by this form than heretofore. The form covers the shipbuilder or shipowner, or both, to the extent of their respective insurable interest, from time of keel-laying until final delivery, whether at the yard or elsewhere, against all risks of physical loss or damage to the vessel under construction and for all third party liabilities, including loss of life and personal injury, with a few exceptions, which are usually written under separate covers such as strikes, riots and civil commotions, war risks, delay, and liability to employees.

TREND OF MARKETS

(From Our Own Correspondents)

MONEY

BOMBAY, 24*th March*

The short-term money market has passed another week of stringency. The trend of bank advances shows that the seasonal demand for credit continues unabated. It may be noted here that, since the beginning of this calendar year (up to 13th March), Scheduled banks' advances have risen by Rs. 95.88 crores, as against Rs. 59.48 crores in the corresponding period of 1958. During the same period, the banks' deposits (net) have gone up by only Rs. 43.17 crores, as compared with Rs. 68.26 crores last year. These trends indicate that the seasonal pressure of demand for funds is more than this time last year. Consequently, the interest rates rule firm; inter-bank call money rate among the Exchange banks and big Indian banks is unchanged at 3½ per cent. per annum and at 3¾ per cent. among the smaller banks, the corresponding rates a year ago being 3 and 3¼ per cent., respectively. House money at seven days' notice is being bid at 3¾ per cent. and short-term deposits at 3¾ to 3⅞ per cent. up to three months and 4 per cent. for over three months. These rates are lower than those this time last year, thanks to the inter-bank agreement signed a few months ago.

The average discount rate on Treasury Bills has hardened further, from 2.720 per cent. to 2.760 per cent. per annum this week. This is the highest rate touched since the commencement of the sale of these Bills in August last, the previous highest being 2.726 per cent. in the first sale. The amount offered, at Rs. 2 crores, was no more than that invited. There were no sales of Intermediate Bills this week. The tenders for the next week remain unchanged at Rs. 2 crores. Similarly, the sale of Intermediate Bills also is being continued.

The Gilt-edged market rules dull, with very little business passing in either Central loans or State Government issues. The demand for State loans would appear to have been satisfied. The Life Insurance Corporation is meeting on the 26th inst., at Madras to consider further investment. Prices over the week do not show any variations, except in a few counters. 3 per cent. 1986 Conversion Loan has gained 5 nP to Rs. 74, after it became *ex*-voucher. 3 per cent. 1970-75 has also risen by 5 nP to Rs. 91.15, while 3 per cent. 1966-68 is unchanged at Rs. 93.85, 1964 at Rs. 97 and 1963-65 at Rs. 96.75. 3½ per cent. National Plan issues are all on offer at quoted rates. 3½ per cent. 1967, 1968 and 1974 are being maintained at Rs. 100.80, Rs. 100.60 and Rs. 98.85, respectively. 4 per cent. 1972 has gathered 5 nP to Rs. 101.65. 4½ per cent. 1970 which has spurted by 15 nP to Rs. 101.75.

BULLION

BOMBAY, 24*th March*

Ready silver in the bullion market touched today Rs. 202 per 100 tolas, the highest level since 14th April 1958, when it stood at Rs. 202-8, and compares with the all-time peak of Rs. 207-12 touched on 20th June 1951. The rise followed hectic buying by bulls who tried their best to exploit the situation arising from scarcity of floating stocks in the wake of impending festival demand. The bulls felt that the scarcity of silver would become more acute in view of the virtual stoppage of arrivals of silver coins from Tibet, the main source of supply, thanks to grave political developments there. It was reported that a few Calcutta and Kasganj operators had increased their purchases quite markedly.

In sympathy with the white metal and on account of negligible arrivals of contraband metal, gold also staged a smart rally. On Thursday, the backwardation charge (that is, the *badli* payable by bears) widened to a rupee and the bulls were required to deposit an enhanced margin of Rs. 25 per tola, as against the margin of Rs. 10 operative previously. Subsequently, however, the *badli* narrowed down and touched As. 14 on Saturday, when the margin was brought back to Rs. 10.

March settlement in silver went off the board today, the closing rate being Rs. 202-4, as against Rs. 199-2 on Wednesday last week. April settlement climbed up from Rs. 198-5 to Rs. 201-8, a rise of Rs. 3-3 over the past six days. Business in May settlement commenced at Rs. 118-2-6 on Friday. The settlement moved up steadily to touch Rs. 200-14 today.

Ready silver, as stated at the outset, reached the post-July 1951 highest level of Rs. 202 today. Last week's closing rate was Rs. 119-5. The daily average arrivals of silver were 17 bars, while the offtake was 10 bars per day. The floating stocks of silver are reported to be about 3,500 bars.

In the gold section, March settlement advanced from Rs. 118-14 to Rs. 119-13 yesterday. At higher levels, profit-taking set in and the settlement receded to Rs. 119-10 before recovering to Rs. 119-12 at which rate it was closed out. April settlement opened the week firm at Rs. 118-6, as against Rs. 118-4, and spurted to Rs. 119-1 today. May settlement registered a gain of As. 13-6 over the week, today's closing rate being Rs. 118-10.

Ready gold met with good buying support and rallied from Rs. 119 to Rs. 119-15 today. This was short of the all-time peak of Rs. 120-1 touched on 6th May 1950 by just As. 2. The daily average arrivals and offtake of gold were 4,000 and 4,500 tolas, respectively. The floating stocks of gold are estimated at about 25,000 tolas.

A development of import to the London Bullion Exchange this week was the Bank of England's decision, announced on the 20th inst., to give the Exchange "blanket permission to undertake forward transactions in gold, although, seemingly, on the understanding that, for the time being, this will not be used for establishing a forward trading market in the metal." Immediately after the announcement, ready gold declined from 249s. 3d. to 249s. 2d. Ready and forward silver, however, were unchanged throughout the week, the former at 79⅛d. and the latter at 79¼d. Silver in New York also stood unchanged at 91.375 cents per fine ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	24-3-59	Highest	Lowest	18-3-59

* 23rd April settlement. † 24th April settlement.

COTTON

BOMBAY, 24*th March*

The most notable feature of trading in the cotton futures market during the week under review was the strident advance made by the March contract prior to expiry today. The contract, which commenced the week at Rs. 675.50, spurted on frantic short covering, piercing the Rs. 700 level to quote at Rs. 701 yesterday. This was mainly attributed to the small volume of tenders (200 bales) issued yesterday, the seventh notice day.

The firmness of March imparted strength to the May contract which too rallied. The upswing was also aided by strong spot advices and reports that the crop estimate was further revised downward to 4.7 million bales. Today, however, there was a mild reaction in prices due to overnight selling. The March contract declined to Rs. 690 before going off the Board at Rs. 695. Tenders issued against the contract today aggregated 2,500 bales bringing the total issued against the contract to 3,650 bales. The unexpectedly large tenders induced weakness in the May contract which shed Rs. 6.25 from yesterday's high of Rs. 683 to close at Rs. 676.75.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	24-3-59	*High*	*Low*	17-3-59
I.C.C. Moglai Jarilla March 1959 ...	695	701	675.50	677
I.C.C. Moglai Jarilla May 1959 ...	676.75	683	669	674.25

The spot section was active. Mills were keen buyers of staple styles like Vijay, Kalyan, Surti, 197/3. Prices of these varieties consequently hardened.

Barring stray demand for Bengals, the export front was quiet while, in the foreign section, brisk mill buying of East African and Sudan cotton was reported. B.P. 52 was done at Rs. 1,100, and Busoga at Rs. 1,070. Sudanese varieties, G2L and G3S came in for business at prices ranging from Rs. 1,165 to Rs. 1,237. Egyptian styles, however, were neglected. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 690; Berar Jarilla 760; Khandesh 835; Vijay 965.

The Karachi cotton futures market depicted an easy trend during the week under review. The slackness of demand in the wake of large arrival of new crop led to a fall in prices. Export inquiries were few and far between. N.T.R.G. March contract dropped, over the week, Rs. 3-6 to Rs. 50-12. The May contract declined from Rs. 56-2 last week-end to Rs. 54-12.

Quietly steady conditions prevailed in Alexandria cotton futures market. In the absence of any new development, trading interest was low. Price fluctuations were narrow. The Karnak contracts ruled around 71 tallaris and the Ashmouni contracts round 61 tallaris.

Cotton futures values in Liverpool showed a sagging tendency. There were rumours of large-scale barter transactions for U.S. cotton which made operators cautious in their dealings. Support was generally lacking. Inter-month switching was the main feature of trading.

The New York cotton futures market put on a better appearance during the week. Values improved on short covering and Good Spot House support. Mill buying was also evident to a limited extent.

YARN

BOMBAY, 24*th March*

Easy conditions continued to prevail in the yarn market during the week under review also, barring forward Cupressa Bamberg art silk yarn which evoked excellent support. Spot rayon yarns suffered a setback, thanks to expectations of enlarged arrivals of imported yarn against old export promotion licences. The stockists were inclined to dispose of their holdings before prices receded further. Staple fibre yarns came in for selling, as offtake from Surat and other consuming centres was very poor. Cotton yarns were dull due to continued slackness in demand from up-country centres as well as overseas markets.

In the art silk yarn section, spot 150 Italy declined by 19 nP to Rs. 5. 150 Japan lost a naya paisa to Rs. 4.90. 120 Italy was neglected at Rs. 5. 120 Japan, however, gathered 3 nP to Rs. 4.87. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 4 nP to Rs. 4.24. 120 bright cones first grade were dull at Rs. 4.41. Spot Cupressa (60 x 1) Bamberg art silk yarns shed 6 nP to Rs. 7.69. Cupressa Bamberg art silk yarn (60 x 1) June delivery was well supported and advanced by Rs. 9 to Rs. 1,552. April delivery gathered Rs. 2 to Rs. 1,550.

Staple fibre yarn (40 x 2) April delivery encountered selling and receded by Rs. 3 to Rs. 628. June delivery fell by a like amount to Rs. 634. Spot 40 x 2 Citys were quoted a naya paisa lower at Rs. 3.19. Centurys were stagnant at Rs. 3.25. Foreign yarns, however, fared better. Paramounts advancing by 13 nP to Rs. 7.75 and Fujis by 6 nP to Rs. 8.31.

Among cotton yarns, ten counts Moderns were unchanged at Rs. 13.37, as also Podars at Rs. 12.19. Twenty counts Hinds eased by 13 nP to Rs. 15.87. Moderns were unchanged at Rs. 16.25, and Seksarias at Rs. 15.50. Among forty counts, Minaxis declined by 28 nP to Rs. 25 and Moderns by 25 nP to Rs. 25.75. Sixty counts Finlays changed hands at Rs. 65, same as last week. Among 80s, Citys softened by 50 nP to Rs. 67. Finlays were quiet at Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	24-3-59	18-3-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg April / June	1,550 / 1,552	1,548 / 1,543
" " (per case of 200 lbs.)		
60/1 Cupressa Bamberg spot (per lb.)	7.69	7.75
120 Japan (per lb.)	4.87	4.84

80s City	67.00	67.50

LINSEED

(Messrs. A. Bradley and Co.)

CALCUTTA, 23*rd March*

A very sharp decline in the price of ready goods, almost Rs. 2 per maund, has not resulted in a greatly increased turnover; forward prices have not fallen so steeply, and the margin between the two has narrowed down. There has been a steady demand from crushers, but mainly for early delivery with a further decline anticipated for April-May positions. Oilcake prices have gradually weakened with a slackening of demand. The oil market has continued dull. Despite a reduction in all positions to the extent of Re. 1 to Re. 1-8 per maund, buyers have shown little interest and turnover has been negligible. The latest quotations are as follows: Ready Rs. 23.75; March Rs. 23.50; April Rs. 23.00 and May Rs. 22.50 per maund.

OILSEEDS

BOMBAY, 24*th March*

The oilseeds market witnessed easy conditions during the week under review, reversing the distinctly buoyant trends in the last week. Prices of all oilseeds and oils, barring cottonseed, drifted to lower levels. The setback in groundnuts was particularly pronounced, thanks to heavy bull liquidation and profit-realising at bulges.

The statistical position in groundnuts remained as tight as it was a week ago. There was hardly any improvement in the volume of arrivals as well. Nonetheless, the bulls were unnerved at the prospect of the likely intervention by the Forward Markets Commission and probable refusal of permission to commence the new August 1959 contract in groundnuts. Moreover, higher levels set off some selling. The May contract, which closed last Wednesday on a distinctly firm note at Rs. 190.25, lost considerable ground in the course of this week to touch Rs. 186.62 today. Bold ready, after fluctuating between Rs 38.12 and Rs. 38.50, wound up today at Rs. 38.25. Similarly, oil ex-mill sagged to Rs. 20.00 today, as against Rs. 20.19 last week-end.

The castorseed section remained featureless with no sizable business having been done in oil with foreign countries. There, however, still remain hopes that the communist countries will soon enter the Indian market for castor oil. The sizable arrivals from terminal centres and the reaction in the groundnut section brought down values in castorseed and oil. Castorseed May 1959 declined from Rs. 158.75 to Rs. 156.25 over the week. Ready Madras and Oil B.S.S. moved down from Rs. 30.87 and Rs. 16.81 to Rs. 30.50 and Rs. 16.50, respectively.

Linseed too was bearish in sympathy with other seeds. This was further aided by larger volume of arrivals and lack of good support. Export enquiries for oil were not encouraging. The May contract which stood at Rs. 33.37 last week-end, gave way to close today at Rs. 32.62. Bold ready which closed last week at Rs. 33.00, after fluctuating within a narrow range, finished today at Rs. 32.62 on an easy note. Oil was down by 56 nP and wound up today at Rs. 16.25.

In contrast, cottonseed futures made notable gains during the week under review. Although a slight reaction set in in the cottonseed market in the initial sessions, it later staged a smart recovery, thanks to firm advices from the cotton market. May 1959 contract fell from Rs. 130.50 to Rs. 129.25 on Friday. It improved to Rs. 132.50 yesterday; it, however, closed today at Rs. 131.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	24-3-1959	18-3-1959	11-3-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	186.62	190.25	184.25
Bold ready	38.25	38.50	37.50
Coromandel ready	38.50	39.00	37.75
Khandesh quality	38.50	39.00	37.75
Oil ex-mill ready*	20.00	20.19	19.62
Railway receipts*	19.69	19.94	19.25
Castorseed			
May 1959	156.25	158.75	155.87
Ready Madras	30.50	30.87	30.75
Ready Kanpur	29.25	29.44	29.75
Oil B.S.S.†	16.50	16.81	16.62
Oil commercial†	15.31	15.56	15.56
Linseed			
May 1959	32.62	33.37	32.81

Oil ready†	16.25	16.81	16.37
Cotton seed May 1959	131.25	130.50	128.25
Niger seed	29.12	29.50	28.75
Kardi seed	24.25	24.37	23.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR

HAPUR, 23*rd March*

Sugar prices ruled quietly steady during the week. Demand from the consuming areas was fair, but there was pressure of sales from factories, as they have to clear their released stocks before 7th April. Pre-*Holi* and *Idd* demand was reported fairly heavy. The crushing season has closed in many factories in east U.P., and in west U.P. factories are faced with shortage of cane supplies. While a few have closed their season, some of the factories are to go out of production by the end of the current month. Prevailing prices in almost all sections were higher than fixed by the Government and the premium was being negotiated in private. The prevailing prices in the Muzaffarnagar market are: Crystal spot delivery new Shamli D29 Rs. 36.75, Mansurpur D29 Rs. 38.50; wholesale mill delivery controlled B29 Rs. 37.12, C29 Rs. 36.37, D29 Rs. 36; market quotations for mill stations Lhaksar C29 Rs. 38.19, Mansurpur C29 Rs. 38, D29 Rs. 37.62, Seohara C29 Rs. 37.56, Hargaon C29 Rs. 37, Iqbalpur A29 Rs. 39.25, Khatauli B29 Rs. 38.50, Bijnore D29 Rs. 37.19, Pilibhit D29 Rs. 37.25.

The sugar market was active at Kanpur due to good demand and prevailing prices in the weekend were: ex-mill controlled Rs. 36 a maund; spot per bag C29 Basti Rs. 106, Gola Rs. 104-4; D29 Gola Rs. 103-8; Waltergunj and Burhwal Rs. 103-4, Hargaon, Lakhimpur, Tulsipur and Balrampur Rs. 103.

Khandsari prices ruled quietly steady and most of the concerns have suspended manufacture, pending final decision regarding proposed excise levy by the Union Government. Prevailing prices are: Superior Rs. 33 to Rs. 36, inferior moist Rs. 29 to Rs. 33 per maund.

Ready *gur* prices recorded sharp gains during the week, due to brisk demand from consuming areas coupled with stockists' support. Balti quality was much in request from Gujerat side. Daily arrivals still averaged 3,000 to 4,000 maunds and local stock is now put at 82,000 maunds. Total arrivals from the beginning of the season were about 6 lakh maunds, as compared with about 4 lakh maunds in the full last season and this heavy increase in production is due to lucrative price of *gur* from the very beginning of the season. Prevailing prices are: *Pansera* Rs. 19.25 to Rs. 19.50, *balti* Rs. 20.25, *shakker* Rs. 20.25 per maund.

Gur prices also improved in the Muzaffarnagar market, where arrivals averaged 10,000 to 12,000 maunds and the latest prevailing prices are: *chaku* Rs. 19.50 to Rs. 21.25, *ladu* Rs. 20.25 to Rs. 21, *pansera* Rs. 20, *Shakker dara* Rs. 22 to Rs. 23, *masala* Rs. 24 to Rs. 25.25 per maund.

Futures trading in *gur* is still under suspension on the Government of India's orders, but standing transactions have all been squared up by mutual agreements by the traders. The Forward Markets Commission has assured that forward trading will soon be allowed at Hapur under new regulations.

FOODGRAINS

HAPUR, 23*rd March*

Quiet to easy conditions were witnessed in the foodgrain market during the past week, thanks to the commencement of arrivals of new crop grains in the markets. Coarse grain harvesting is in full swing and daily arrivals in the markets are gradually increasing. Harvesting of wheat will, however, take another month. According to the Government's estimate, the supply position and price trend of foodgrains in the country is expected to remain satisfactory in 1959. The year started with a stock of 914,000 tons of foodgrains and due to bumper rice crop which has beten all previous records, at 29.7 million tons in 1958-59, the Government rice purchases are expected to be larger than in the previous year and the *rabi* crops are also reported to be promising.

Wheat prices at Hapur ruled quietly steady during the week due to tight supply position at the fag end of the season and wheat *dara* was now quoted at Rs. 22.75 and farm quality between Rs. 24 and Rs. 25 per maund. Some inferior pest-infected quality was being sold at Rs. 21.50 per maund. The sales through fair-price shops is being continued, but the quality of imported wheat offered is very poor. The condition of the standing wheat crop is reported quite satisfactory.

Rice prices also ruled quiet during the week and Government procurement operations were reported to be working satisfactorily in various States. The prevailing prices of rice are: *basmati sela* Rs. 32.50, *mainpuri* Rs. 22.25, *raimunia* Rs. 27, *gadda* Rs. 22.75 per maund.

Gram prices lost about Re. 1.50 per maund during the week and, although local arrivals have not yet begun, arrivals are increasing in east U.P. and other producing areas and large quantities are also, reaching here by road. Barley and *bejhar* prices were steady, as consumers' demand is increasing and new crop arrivals were still meagre. Maize prices were steady, due to dwindling stock position, while *bajra* and other coarse-grain prices sought lower levels. Week-end prices (in rupees per maund) were: gram new 20, barley 15, *bejhar* 15.12, maize 15.75 to 16 12, *bajra* 13 to 14.50, *jowar* 12.75 to 14.50 and *guwar* white 14.75.

New peas arrivals were mounting and were about 2,000 maunds daily. Arrivals were also reported substantially heavy in other markets and prices eased fractionally under pressure of arrivals. *Arhar* stocks were almost *nil* and new crop grain will be available after about a month. Prices of other pulses were quiet.

HIDES AND SKINS

MADRAS, 23*rd March*

Trading in kips continued difficult. E.I. tanners were reserved and did not make offers freely for shipment, because of the likelihood of smaller raw stock forward position. U.K. buyers were not interested in paying higher prices, but evinced interest only if at last prices. In the local market, arrivals of tanned stocks were small and were taken up readily by shippers at firm prices. The U.S. booked several parcels of tanned buff calf skins.

In the tanned skins section, middle class sheep skins ruled active and higher prices were paid. Tanned goat market also was a shade firmer than last week, following large enquiries from the Continent. Raw markets rule firm in all centres.

* * * *

KANPUR, 23*rd March*

During the week under review, the condition of the local hides and skins market was stable The new arrivals were considerable. Nevertheless, in the upper grade buff sector, there was some scarcity. The country tanners were active in the lower grade cow sector. The main purchasers were the local tanners headed by Cooper Allens. The Madras dealers were lukewarm during the week. The latest quotations are as follows:

Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 350 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 2 lb. 1 oz. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces; sheep Rs. 360 per 100 pieces.

COAL FOR STEEL

Tata Steel are the largest users of coal in India, next to the Indian Railways.

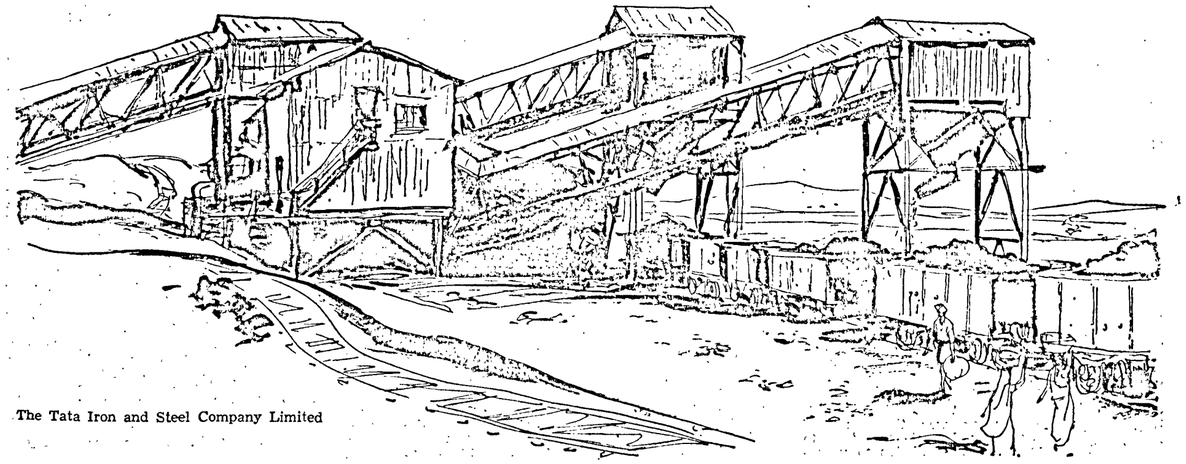
Nearly 3 million tons of coal will shortly be needed to operate the blast furnaces and boilers at Jamshedpur. Of this quantity, 1.5 million tons will be obtained from the Company's own collieries, and the rest will be purchased from the market.

Tata Steel's interest in the coal industry dates back to 1903 when Tata geologists carried out a long survey of the Jharia fields to find coking coal suitable for steel making. The first collieries were acquired in 1910.

At a very early stage, work was initiated on the beneficiation of low-grade coals, leading to the setting up of the Coal Blending and Coking Research Centre at Jamshedpur.

By 1952, the Company had set up two washeries at Jamadoba and Bokaro, pioneering in the washing of coals at a time when the process was considered impractical in India.

TATA STEEL



The Tata Iron and Steel Company Limited

MARKET GOSSIP

(*Concluded from page 491*)

Oriental, for example, was 25.4 per cent. in 1954 and 23.4 per cent. in 1953. The same can be said of the comparison of the renewal expense ratio of the Corporation with that of private insurers. It is stated that, as against the L.I.C.'s renewal expense ratio of 15.89 per cent., the renewal expense ratio of the Indian insurers combined for the year 1955 was 17.3 per cent. Here, too, the bigger companies had a much lower ratio. For instance, the renewal expense ratio of the Oriental for business written in India was 12 per cent. in 1955, although the combined ratio for both Indian and foreign business together was higher at 13 per cent. The business of the New India was 11.7 per cent. and for business outside India 9.2 per cent. in the same year. The total ratio for both Indian and foreign business of this Company was only 11.5 per cent.

Even this comparison is not very appropriate. For there is no reason to think that these companies could not have reduced their ratios still further. If the authorities want to prove that the L.I.C. is doing better than private insurers, the best way to do so is to allow the private insurers also to do life insurance business and then compare the results. The injection of an element of competition in life insurance will certainly help its expansion, which is one of the avowed objectives of nationalisation.

* * * *

Last October, the Communists staged a major strike in the plantations of Kerala, a State which is ruled by the Communist Party. The strike lasted for 27 days and affected production to the tune of at least 2½ million lbs. of tea, and involved the workers in a loss of some 400,000 work-days. There were two deaths as a result of police firing and many were injured and the whole episode ended with loss to all and gain to none. As usual, the police were accused by the Communist Party and union leaders of excesses and misbehaviour. The management, on the other hand, quoted instances when police showed extreme reluctance to act to prevent a situation from worsening.

The Government of Kerala, after having publicly justified the strike at the time and declared that they will be on the side of labour and after having made statements calculated to show that they believed police had apparently misbehaved, appointed Mr. Govindha Menon, a member of the Board of Revenue of the State Government, to enquire into the allegations. There was, however, some criticism regarding the appointment of Mr. Menon and, at one stage, it appeared that he was reluctant to conduct the enquiry. The enquiry was, however, conducted and his report vindicates the police.

The full text of the report has not yet been received, but the extracts which have appeared in the Press would show that it promises to be a controversial one. The enquiring officer has referred to the failure of those responsible for the maintenance of law and order to make effective utilisation of the preventive sections of the Criminal Procedure Code and the Police Act even after the first firing. It will be recalled that the Chief Minister of Kerala, in his now famous statement of 23rd July 1957 on the role of police in his State, was then criticised widely for practically rendering the preventive provisions of the Criminal Procedure Code innocuous. Mr. Menon's report would seem to justify the criticism.

What Mr. Menon says regarding the attitude of managements certainly contains more dynamite. He says that the management showed an anxiety to interest itself in local politics. He considered the General Manager of the Kanan Devans Company more a politician than the manager of the company. It is not quite clear whether Mr. Menon relied on any indication of the General Manager's political interest at the time of the strike and the various instances connected therewith or it was a *post facto* impression obtained at the time of conducting the enquiry. If this impression was obtained at the time of conducting the enquiry, the public has a right to know on precisely what evidence Mr. Menon has relied in order to arrive at his conclusion. It would be extremely difficult for the General Manager of the Company to overcome the unfortunate effect of Menon's report merely by a flat denial of intention. Mr. Menon has placed the General Manager in a most awkward position; it would be an unjust one, if he had only gone by his impressions at the time of enquiry.

It cannot be denied that the management was confronted early in October with the various demands made by two unions, one rivalling the other, and both supported by political parties in the State. The management agreed to refer the issues under dispute to adjudication, a procedure open to both management and labour and provided by the law. One union chose to accept this course and the other, the Communist Union, did not. The subsequent action by the unions, one aggressive and striking, and the other party to the agreement for the reference of the dispute to adjudication, followed what was to be expected under the conditions prevailing in the State. Within a few days, the State Government was openly declaring itself to be on the side of the striking Communist union and refused to refer the dispute to adjudication under the Industrial Disputes Act. When unions are acting under political motivations, any reaction by a management can easily be construed as political, even if all that they wanted to do was to prevent a strike by referring the whole matter to adjudication. It would, therefore, appear that Mr. Menon, who has not spared the Government or the striking union, had felt some internal compulsion, not untouched by political consideration, to assume certain intentions in the management. If we are not to draw this conclusion, we should find in the report sufficiently detailed evidence that the management was in fact motivated by political considerations.

PROBLEMS OF COMMERCIAL BANKS

(*Concluded from page 496*)

customers. Unfortunately, the great advantage of maintaining this very basic foundation is being undermined for the sake of getting some temporary advantages. Particularly in the underdeveloped countries, this shortsightedness should be abandoned for the sake of preserving this basic pillar of relations between a banker and his customers. In some highly developed economies of the world, banking secrecy has been accepted for many years, as a result of sound ethical practices of banks, which only during the last quarter of a century or so have been supported by laws. A fair evaluation of such ethical practices, as well as subsequent laws, has proved their great benefit to the national economy and it is felt that it would be unfortunate if this were compromised for the sake of seeming advantages which are often praised demagogically.

"Proper and efficient banking service is an absolute necessity to India. While significant efforts in this direction are being made by all in the banking field, particularly by those who belong to the category of officers, it is obvious that the number of trustworthy and properly trained officers in this important line of economic activity is very inadequate. Like many other technicians needed by India in her efforts at regeneration, specially trained officers are also needed and will continue to be needed in an increasing number by Indian banking. The various banks are making the best possible efforts to train their junior officers for the efficient discharge of their responsibilities. Along with that the Reserve Bank of India has also provided some essential training through its Bankers' Training College. While such efforts have their great value, it is essential for the banks to establish among themselves cerain high traditions and conventions in the matter of taking over of trained personnel by one institution from another and thereby avoiding unwarranted jealousies and suspicion among the banks themselves. State institutions functioning in the field of banking should also not exploit their advantageous position and plough their lonely furrows by making offers of special terms which may not be in tune with the terms and conditions of service prevalent in the banking system generally.

"As is known to all concerned with the banking organisation of this country, the Industrial Disputes (Banking Companies) Decision Act, 1955, will complete its tenure at the end of the current month. One feels disappointed to find that, despite the most fair and even liberal considerations embodied in this Act, the desired results have not ensued and the pious hopes have not fructified. Instead of better efficiency and more concentrated attention to work and results for the institutions, on several occasions the flimsiest excuse engendered a spirit of revolt, disobedience to authority and utter disregard for obligations and responsibilities. I am, indeed, sorry to be forced to state that, by and large, the general tone of discipline among bank employees leaves much to be desired. Quite often, too, liberality has been construed as weakness and official attitude has been misunderstood for partisanship and justification for an obviously mistaken line of action. In an industry depending entirely on the confidence of, and service to, the public, the most undesirable go-slow tactics, pen-down strikes, shouting of slogans, both within and outside bank premises, illegal and lightning strikes unconnected with any disputes between banks and their employees, deliberately lengthening the hours of work to ensure the maximum overtime allowance benefits and holding undignified demonstrations are being indulged in with impunity and utter disregard to the larger interests of society and of this very pivotal industry. One thing that has been amply brought out through the experience of the operation of this liberal award has been that it is a grave mistake to consider the employees of the banking industry as being on a par with the employees in any other industry. An essential economic activity as that of banking really can be governed by rules, regulations and conditions of service such as those prevailing in Government Departments. There is no doubt that some measures are urgently called for, to inculcate a sense of responsibility amidst these white-collared bank empolyees of our country. The essential dignity of this important branch of service must be recognised and inculcated among all connected with it. Foisting compulsory adjudication or legislation for this purpose upon this section of society cannot bring about the desired efficiency, discipline, and above all, appreciation of the efforts of bank managements. The basic malady, as diagnosed by some, is that trade unionism among bank employees is influenced by outside or political considerations. The long-term interests of bank employees in this country would be better served and safeguarded, if their organisations eschewed all political ideologies, trod on the straight path of genuine service to the cause and had their leadership from among the ranks of those with actual experience of banking.

"Undoubtedly, the Bank Award has ensured conditions, which are regulated on proper lines. It is meant to facilitate smoother working and to eliminate the all too frequent pinpricks in daily work as well as the highly objectionable agitational activities and attitudes. But, with all that, as often expressed in the past, it has not brought in either improved productivity or genuine and sincere change of outlook towards work, obedience to authority, and above all, the observance of ordinary courtesies and decencies of life. Besides, from data collected by our Association from various banking institutions of the country, a sad picture that emerges is that of the vast majority of bank employees taking the maximum amount of benefits in the shape of overtime allowance, medical expenses and leave provided by the Bank Award and thereby clearly exhibiting how liberal concessions and advantages, provided by such agreements or arrangements, are abused, with all their unfavourable repercussions on the economy of the nation.

"Perhaps it would be useful to quote here the warning given by an important Trade Union Leader in the United Kingdom to his fellow workers at a conference of National Union of Railwaymen:

"'You cannot slack your way to prosperity. You must work your way there. The success of the boss means our success. If we want higher wages, more holidays, better security, and a reduction in hours, we must be prepared to pull our weight. We should look upon modernisation as inevitable, but we must also ask ourselves if the workers possess a modern outlook. A 40-hour week would certainly be a step forward if we can afford it. But, from past experience, can we honestly say that our hours would be lessened, or would we welcome an extra four hours a week overtime? I was not against the principle of it, but I wanted the delegates to realise its implications.'"

Notice

INDIAN ALUMINIUM COMPANY LIMITED

31, CHOWRINGHEE ROAD, CALCUTTA

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Annual General Meeting of Indian Aluminium Company, Limited will be held at the Registered Office, 31, Chowringhee Road, Calcutta 16, on Monday, 27th April 1959, at 11 a.m., for the following purposes:

1. To receive and adopt the Balance-sheet as at 31st December 1958, and Profit and Loss Account for the year ended on that date, together with the reports of the Auditors and Directors.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolution of which Special Notice has been received:

> "That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. K. C. Mahindra and that this meeting hereby approves any appointment of Mr. Mahindra as a Director of the Company which may hereafter, whilst this resolution remains in force, be made pursuant to the Company's Articles of Association."

The share transfer register of the Company will be closed from 6th to 27th April 1959, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on 27th April 1959, or to their mandatees. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company who is entitled to attend and vote at the Meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,

R. J. MOYSE,
Secretary.

6th March 1959.

Explanatory Statement as Required by Section 173 of the Companies Act 1956

Item No. 5

Mr. K. C. Mahindra who has been a Director of the Company since 1948 will attain the age of 65 years on 15th March 1959. The proposed resolution seeks to obtain your approval of Mr. Mahindra's appointment and your declaration that the age limit specified in Section 280 of the Companies Act 1956, shall not apply to him. Your Directors feel that it is in the interest of the Company that the Board should continue to receive the benefit of Mr. Mahindra's long experience and able guidance.

The Company has received Special Notices from two members notifying their intention to move the resolution set out in Item No. 5 above.

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2506 BOMBAY, 4th APRIL 1959 PRICE: Rs. 2

DO JUSTICE TO COAL INDUSTRY

THE coal industry will be forgiven if it has not always felt jubilant over its inclusion in the hard core of the second Five-year Plan. Many industries have clamoured in vain for this status. Perhaps, their exclusion has not meant more disabilities for them than what has fallen to the lot of coal industry. Being an industry which is controlled in the strictest possible manner, the coal industry has had to bear a disproportionately large burden of official apathy. The prices of its products are pegged at an uneconomic level. The financial assistance which it has a right to expect is not always forthcoming in as generous a measure as it deserves. It is denied the essential imports it needs. Above all, its demand for transport facilities, so vital to its progress, has not been met in full. The result is that, in recent months, the pace of expansion of coal output has been less than what the industry could achieve under a more favourable set of circumstances, while its immediate prospect is clouded by many uncertainties, not of its choice, nor of its making.

It is true that, last year, coal output improved by 1.8 million tons to 45.3 million tons. But the point is that the rate of increase was less than half of what it was in 1957, when it had increased by 4 million tons to 43.5 million tons. The private sector has, however, acquitted itself creditably. Its share in domestic coal production was 39.5 million tons or 1.3 million tons more than in 1957; the public sector increased its production by 0.3 million tons to 5.6 million tons in 1958. While the overall increase in output is satisfactory in itself, and may even be regarded as a remarkable achievement in the light of the several handicaps which the industry has had to face, the fact remains that it falls far short of what the industry is capable of producing if it is given the facilities it needs. By its performance under very difficult circumstances, the private sector has fully justified its claim that it could itself produce the entire target of additional production in the second Plan, namely, 22 million tons. But the Government, which has taken a purely ideological view of the coal industry's future, has condemned the private sector to a slower rate of development. Be that as it may, the important question is how best the country can reach its target of 60 million tons in the second Plan and what should be done to prepare the industry for meeting the still bigger challenge in the third Plan. It is estimated that, as the current year progresses, the demand for coal will increase at a steep rate and, in the next few years, the demand may grow sharply, thereby necessitating increased effort in the cause of additional production.

Tentative targets now being contemplated for the third Five-year Plan envisage a coal output of the order of 100 million tons. Clearly, the achievement of this target will call for tremendous effort which will necessarily imply the removal of all the obstacles which have impeded a rapid growth of production in the second Plan. As Mr. D. Hogg, Chairman of the Indian Mining Association, pointed out in his speech at the annual meeting of the Association held last week, the high targets, now contemplated, "cannot be attained unless effective steps are taken now to give remedial treatment where help to the industry is required." He added: "Also, planning must be more detailed than we have seen in the past, so that collieries may know by whom their increased production is to be consumed and when it will be required." It would appear that some collieries have had the unfortunate experience of abrupt reduction in the demand from steel works which had previously placed large orders with the coal mines. Of immediate concern to the coal industry is the provision of adequate assistance which will enable it to undertake stowing operations involving heavy expenditure. Further, the deep and gassy mines, according to Mr. Hogg, do not possess sufficient resources to increase production. Such mines are said to be working at a loss in the hope that their case for assistance will receive the consideration it deserves. It is to be hoped that the solution to these urgent and specific problems will not be long delayed, for on it depends the course of coal output in the next few months.

No less important to the future of the industry than the provision of adequate financial assistance is the assurance that import and transport facilities will be freely available. Mr. Hogg has clearly explained how the import control policy has been a major handicap preventing many collieries from increasing their production. There is a continual demand for imported spares and items of plant and machinery. In this connection, it may be noted that, since the Indian mining equipment, now in use, has been standardised largely on equipment from the sterling area, the coal industry has not been able to utilise the credits offered by the U.S. Export-Import Bank. It should be possible for the Government to meet the industry's demand for equipment from the sterling area, if it diverts a part of the assistance now promised by the U.K. to the purchase of essential machinery and equipment by the industry.

Equally essential is the provision of transport facilities. It is acknowledged that the railways have made a genuine effort to meet the industry's demand for their services. But transport availability still falls far short of the demand by the industry. Further, it is not always available promptly enough. As Lala Inder Mohan Thapar, Chairman of the Indian Mining Federation, pointed out, the result of the inadequacy of transport has been that production has had to adjust itself to transport. Surely, this is not a situation about which the industry could be happy and the transport authorities proud. Mr. Thapar rightly stressed that, "if production has to adjust itself to availability of transport, then the targets of production, as fixed for the various Plan periods, become unreal, because they have meaning only in terms of the level of transport available at any period of time." A deplorable feature of the transport situation is that the private sector continues to feel that it is being neglected in favour of the collieries in the public sector. Mr. Thapar said that "it is being observed that, whenever there is a shortage of wagons, the collieries belonging to the public sector get their allotments in full, whereas the private collieries suffer cuts." We know that similar allegations, made in the past, have been denied by the authorities. But the fact that they are continuously made shows that the Government owes it to the country to allay the apprehension that it is prepared to sacrifice the larger interests of the industry, in order to ensure that the State-owned collieries are able to show some progress.

Two issues which have recently attracted considerable attention are the productivity of the coal mines and enforcement of safety measures. It is regrettable that, despite a sizable increase in the wages of coal miners, their productivity remains at a relatively low level. In Jharia coalfields, for instance, the weekly earnings of a coal miner are today Rs. 28.09, as compared with Rs. 20.46 in 1957, Rs. 17.37 in 1956 and Rs. 14.20 in 1955. And yet, the output per man-shift is as low as 0.37 ton, as against 6.6 tons in the U.S., 1.28 ton in the U.K. and 1.11 ton in Germany. Trade unions will do well to realise that an increase in wages which is not reflected in improvement in productivity is a national disservice, as it aggravates inflation. As regards safety measures, everybody must welcome the zeal with which the Government is enforcing them, for it is a pre-eminently human problem. Only, it is necessary to observe that the Government should ensure that the industry acquires all essential safety equipment and the trade unions must see that safety consciousness permeates all ranks of workers. At the same time, it would be folly not to recognise the fact that, since, with the best will in the world, it may not be possible to prevent all accidents in an essentially hazardous occupation like coal mining, any excessive preoccupation with safety measures may conceivably interfere with legitimate mining operations.

The major problem of the industry is, however, the issue of an adequate price for its product. The Coal Prices Revision Committee, which was appointed in November 1957, has submitted its report to the Government. Neither the report nor the Government's decision thereon has been published. Mr. Hogg deplored the inordinate delay which had taken place over this

issue, but expressed the hope that the time had been well utilised and it would result in a "clear-sighted and wise" decision. Some facts about the coal prices issue deserve to be faced squarely. In the first place, since coal is a wasting asset, its prices should be adequate to give a remunerative return on investment and cover the recovery of capital costs over a period. Secondly, the argument that coal is an important industrial fuel the prices of which must be kept down could be easily overemphasised, considering that, in most industries, coal accounts for only 1 to 5 per cent. of the manufacturing costs. Thirdly, as Mr. Thapar pointed out, since 1947, coal prices have increased by only 31 per cent., as against the rise of 120 per cent. in iron and steel and 90 per cent. in cement. In the coal industry, wages which constitute some 70 per cent. of the total costs have risen by over 200 per cent., as compared with 1947. Finally, the return to the industry is now deplorably low. Mr. Hogg quoted statistics to show that, in the case of 19 coal companies, which together raise about one-third of the total production in the country, the return on paid-up capital is only 6.3 per cent., and the return on capital employed is no more than 3.4 per cent. In other industries, the selling prices of which are controlled, the Tariff Commission has allowed for a much higher return. In the face of these facts, to deny the coal industry an adequate increase in its prices is to flout all canons of economic justice.

CO-OPERATIVE FARMING—I

THE Lok Sabha has given its approval to the Nagpur resolution of the Congress Party on co-operative farming. There is, of course, nothing surprising about it, for it was a foregone conclusion. But the resolution that was adopted on Saturday last was moved in an odd way. It was an Independent member, Mr. U. C. Patnaik, that first moved a resolution urging "top priority" to the introduction of co-operative farming in the programme of land reforms. A substitute to this resolution was then moved by a Congress member, Dr. Ram Subhag Singh, recommending to the Government that, "during the next three years, every possible effort should be made to organise service co-operatives all over the country and to develop the spirit of co-operation, in general, so that co-operative farms may be set up voluntarily by the people concerned, wherever conditions are mature." Mr. Patnaik then withdrew his resolution in favour of this substitute which secured the approval of the House, after a brief debate. This might have been necessitated by some procedural difficulty, but it has brought out a significant point. Although the House had an opportunity to go farther than the Nagpur resolution on co-operative farming, it preferred not to do so. Instead, it decided that, in the next three years, the country should concentrate on service co-operatives, as the first step towards co-operative farming. Thus, a directive principle has been adopted by the sovereign body and the party in power is bound to implement it.

In the discussion on the resolution, very little was said on service co-operatives. Members, including the Prime Minister, spoke as though the main issue was co-operative farming. This was natural, because co-operative farming and not service co-operatives has been the most controversial subject, about which strong views on both pros and cons are held in the country. Nevertheless, it is a pity that the House did not pay any attention to the principal subject of service co-operatives. What are service co-operatives? Who is going to form them, where and how? How many societies are to be formed within three years? Even the Prime Minister did not throw much light on these questions. These are no doubt questions of details, but they do require to be elucidated, so that people may know how exactly this rural reform is going to be carried out.

Beyond the number of service co-operatives to be established, very little information has been given by the Congress leaders. A target of 3,000 societies to be established in three years from 1959, or 1,000 societies per annum, has been mentioned by some. This means that three service co-operatives are to be formed per day. Apart from the fact that three months of 1959 are already gone, it is doubtful whether this is a feasible proposition, especially as even service co-operatives are supposed to be voluntary. It is generally understood that by service co-operative is meant an association of farmers which will procure and supply their needs, particularly good seeds, fertilisers, agricultural implements and valuable advice on the techniques of scientific farming. But where are the personnel to man these societies and self-less leaders to supervise them? Again, will a sufficient supply of seeds, fertilisers and equipment be available to be stocked in the societies, without making inroads into the supplies of the existing channels of distribution? Some suggest that the rural extension services may be converted into service societies, but that means that the societies will mainly become official channels and that the State will be doing the business of village shopkeepers. This journal is not opposed to service co-operatives; there is need and scope for them. There is no harm in the State taking a major lead in reorganising rural life, in order to make it more active, productive and meaningful. But there should be careful planning of details and, if the experiment is to succeed, the people who are sought to be served must be actively associated with it. All this, however, will take time and cannot be rushed as fast as the Congress Party is now impatiently trying to do.

Co-operative farming, or joint-farming as some prefer to call it, is, however, a different proposition. As is planned by the Congress Party, it goes far beyond the accepted definition and practice. There can be no objection to the application of the principles of Co-operative Movement to supplying the needs of farmers and the marketing of their produce, with the object of enabling them to get a fair return on their hard labour and to prevent their exploitation by middlemen. In this respect, the Congress Party has failed to do all that it could have done during the last twelve years. Here was a vast field for systematic constructive work by the Congress. Unfortunately, this was neglected and the Party's energies were wasted on several other pursuits, some unimportant and some that were not urgent. But now it wants to bring practically the whole sphere of agriculture under joint-cultivation. The proposal is to pool the land belonging to farmers and to cultivate it under the auspices of the co-operatives. The individual ownership of land, we are told, will be recognised and ensured in the form of share certificates. The pooled land will be cultivated by the society on scientific lines and the owners will get a share in the produce on the basis of the quantum of land contributed by them, as well as wages for the labour they put in.

All this sounds simple on paper, but will prove extremely difficult in actual practice. The optimism of Congress leaders that they can persuade land-owners to accept this system of co-operation is misplaced. The people of this country are highly individualistic and will not be easily amenable to the discipline of mind and action that will be necessary for the smooth functioning of co-operative societies. There will be innumerable quarrels among the villagers and the co-operative farms will become a new source of faction. The leadership in rural areas may pass into the hands of irresponsible persons. Since the people are unlikely to put up with such leadership for long, there may be serious disturbance to peace which in turn will be exploited by anti-democratic forces to their best advantage. If these possibilities are to be averted and if the co-operative farms are to work smoothly and efficiently, a large degree of regimentation and bureaucratic control will be necessary right from the beginning. Co-operative farming on an extensive scale thus poses a grave danger to democracy in India.

In his speeches both in Parliament and outside, Mr. M. R. Masani has very clearly brought out the defects inherent in co-operative farming and highlighted the possible consequences. Many other eminent leaders, such as Rajaji and Mr. K. M. Munshi, whose sincerity of purpose is unquestionable, have also pointed out the dangers involved in the proposed land reform. It is sad to see that the top Congress leaders who are in power today are unable to appreciate the warnings sounded by all these people. On the contrary, they passionately argue that co-operative farming is essential for the preservation of democracy and is the only way to keep the Communists out. But the best answer to this argument is provided by the fact that, outside the Congress, the Communists alone have offered their enthusiastic co-operation to the Congress for implementing its Nagpur resolution. A large number of Congress men themselves are very critical of the political implications of co-operative farming. While some of them, as, for instance, Prof. N. G. Ranga and Mr. Charan Singh, have resigned from the Congress and strongly expressed themselves against co-operative farming, a very large number of them have accepted their Party's decision with mental reservations. The spirit of intolerance, which is inimical to the principle of co-operation, is already evident from the statements of some leading Congress men to the effect that those who are opposed to co-operative farming are reactionaries and have no place in the Congress Party.

A perusal of the numerous speeches made by the Prime Minister during the past three months reveals a medley of objectives of co-operative farming. Briefly stated, they are as follows:

1. Co-operative farming will lead to increased production.
2. It will help eradicate poverty among the rural people.
3. It is necessary for infusing new life in rural areas and a sense of co-operation among the villagers.
4. It is one of the means of achieving a classless society.
5. It is an essential part of the scheme for introducing State trading in foodgrains.
6. Without it, it will not be easy to introduce the reform of ceiling on land.
7. It will put an end to the evil of fragmentation of land and speed up consolidation of small holdings.

Not one of the several arguments that have been put forward by the critics of co-operative farming has convinced the Prime Minister. He has dismissed as baseless the contention that co-operative farming where tried has been a failure, because, in his opinion, co-operative farming has not so far been tried in India on right lines and with proper incentives. Even the admission of failure of co-operative farming, tried in Kerala under the Communist regime, by the Kerala Finance Minister himself has not carried conviction to him. It is irrelevant, according to him, to judge the co-operative farming in the light of the shortcomings of collective farming or communes in the Communist countries, because the two systems, based as they are on different principles, are not comparable. The fear that co-operative farming may soon end up in collective farming is, he avers, unwarranted. The argument that, at some later stage, the right of individual ownership to the land pooled into the co-operatives might be abrogated by a future Government is strange to him. He cannot be expected to answer such hypothetical questions. There is, of course, some force in these replies of Mr. Nehru to the critics of co-operative farming, but they are not sufficiently convincing to dispel the misgivings voiced earlier. At best, they are only theoretical assumptions. Nor is his contention that there could be no increase in agricultural production without co-operative farming tenable. It could be valid only if all the measures for raising agricultural production have been tried under the existing system and found wanting. The fact is that they have not been tried in full or effectively. Further, it cannot be said that there has been no increase at all in agricultural production. The Union Finance Minister, Mr. Morarji Desai, himself, refused to admit such a contention in his reply to the general debate on the Budget.

There are also some contradictions in Mr. Nehru's replies. Opposing the criticism that a ceiling on landholdings was tantamount to placing a ceiling on the farmer's income, Mr. Nehru said that it was not so,-because a farmer could raise his income by putting land to intensive use. But how could this happen, if all the land is pooled into the co-operatives and the share of each land-owner in the produce is determined on the basis of his quota of land? The claim that co-operative farming will lead to abolition of class system is an exaggeration and is in conflict with the concession that members of farming societies will be allowed to retain ownership of land, that the quantity of land that one can thus own need not be the same for all and that landless workers also can become members of societies. Finally, the protagonists of joint-farming are yet to prove that collective ownership will provide better incentive to increased effort and larger production than individual ownership. Experiences of other countries and experiments tried in this country itself offer sufficient evidence to discredit their notions. Their claim that the co-operative farming which they have decided to try is something unique and without parallel anywhere in the world is a tall one.

NEW ISSUE OF TATA IRON AND STEEL

CENTURY LEAPS FORWARD—MUSCLE POWER COSTLIER THAN EVEN NUCLEAR POWER

THURSDAY, 5 P.M.

MARKET GOSSIP

THERE is considerable speculation in share markets about the proposed new issue of the Tata Iron and Steel Company, Ltd. That the Company has to raise additional capital to repay a part of its heavy borrowings is not disputed. As against a total of about Rs. 135 crores of invested funds, the share capital is only Rs. 30 crores. Mr. J. R. D. Tata, Chairman of the Company, described the disparity between the two figures as "unduly wide" and pointed out that it would widen again this year when expansion projects were completed. He, therefore, suggested that the share capital should not lag too far behind the figure of net block. At the last annual general meeting of the Company, several shareholders agreed with this view and appreciated the Chairman's assurance that additional capital would be so raised as not to cause any serious hardship to them. The discussions at this meeting brought out two points (*vide* page 463, *Commerce*, 20th September 1958). One, no call for additional capital would be made before the end of March 1959. Two, new capital would be issued only at par and all the Directors were unanimously of the view that no premium should be collected. Some of the shareholders also suggested that the new issue should be made when the Stock Exchanges were in a mood of buoyancy.

The month of March 1959 is over. The share markets continue to be buoyant. The time is fast approaching when the Directors of the Company have to take the shareholders into confidence. It is learned that the issue is now under the active consideration of the Board and that a decision will be taken in the near future. Although the shareholders may know about it in a few weeks or a few days, the time for subscription is a long way off. The Company will have to get the permission of the Government. And it is unlikely that the Government will permit the new issue to go through before completing its borrowing programme and that of the State Governments. So, it seems to us that the issue will not actually materialise before August or September next.

Nevertheless, three questions are uppermost in the minds of investors even now:

1. What is the size of additional capital and in what proportion will it be issued?
2. Will the entire additional capital be in ordinary shares or in preference shares or in both?
3. Will the Government permit the issue of new shares at par or insist on a premium?

We do not claim the privilege of knowing the answers in advance. However, according to reports current in the market, the possibilities seem to be as follows:

Although some have suggested that the Company should raise additional capital in the form of preference shares, the management does not appear to be favourably inclined towards it. The new issue is, therefore, *likely* to be in the form of ordinary shares. On the proportion of the new issue, market expectations vary from one share for two shares to one share for three shares. Some say that it may be two shares for every five shares. It looks as though one for three will be nearer the mark, as the management is credited with the idea of raising no more than Rs. 7 crores to Rs. 8 crores.

As for the question whether the new issue would be at par or at a premium, the management has already made the position quite clear. Since the last new issue was made, the Government has changed its policy. In recent times, it has not insisted on new issues by existing companies being at a premium. And yet, if a doubt on this issue exists in some minds, it must be because of the Government's decision to tax capitalisation of share premia in the same way as capitalisation of reserves. They think that this denotes a change in the Government's policy again. What is the point, so they argue, in Government proposing this tax, unless it is prepared to make sure that existing companies do collect a premium on their new issues? This may be an intelligent guess, but it remains to be seen what the Government will do. The general assumption, however, is that Mr. Morarji Desai, Union Finance Minister, will not interfere with the freedom of companies to decide the terms of their new issues.

Moreover, it is utterly unfair to compel a company to collect a premium on its new issue and then subject the premium to a tax of as much as 30 per cent. when it is transferred to the capital account. If the Government wants the existing well-established companies to return to the accepted practice of charging a premium on their new issues, it must in fairness to them abolish not only the proposed tax on share premia but also the existing tax on capitalisation of reserves which have already borne taxation. There is no justification whatever for taxing bonus shares and that at the penal rate of 30 per cent. It is one of the worst forms of double taxation and was opposed by the Taxation Enquiry Commission. Even Prof. Kaldor pleaded for its abolition.

The practice of taking a premium on new issues by existing companies has some merits to its credit and is being followed even now in several countries, notably in the U.K. and the U.S. It has a restraining effect on equities, when they tend to go too high. Secondly, it is only but fair that, when new capital is admitted into a going concern, it must pay a price for sharing in the goodwill and reserves that have already been created. And, thirdly, it will facilitate new company flotations and growth of *entrepreneurs*, and thereby dispersal of economic power. If company managements in India have abandoned this practice, the Government is chiefly responsible for it, by following an unhealthy fiscal policy. The Government should, therefore, amend its tax policy suitably, so that companies may follow sound principles for strengthening their capital structure from time to time. It is true that some company managements used to abuse this practice and collect excessive premia from shareholders by manipulating the market value of their shares. But such abuses can be corrected by the Controller of Capital Issues, when he receives applications for permission to issue new capital.

To return to the forthcoming new issue of the T.I.S.Co. Some students of investment market are of the view that the Company would do well to raise the additional capital it requires in the form of preference shares rather than ordinary shares, because of the necessity to conserve its resources to the maximum extent possible, in view of the large loans that have to be liquidated in the coming years. The Company has, as readers are aware, first and second cumulative preference shares of the tune of Rs. 75 lakhs and Rs. 7 crores, respectively. The first preference shares are entitled to a dividend of 6 per cent. and the second to 7½ per cent., both taxable. The suggestion is that the Company could, with the consent of existing preference shareholders, offer a third issue carrying a fixed dividend of 7½ per cent., taxable, which would mean a net return of a little over 5 per cent. This, it is argued, will be a cheaper method of raising additional finance than issuing equity capital on which a gross dividend of at least Rs. 10 to 11 per share will have to be paid. It is further argued that, in the long run, this will work out favourably to the existing ordinary shareholders also and that, in the case of a growing concern like the T.I.S.Co., there would be plenty of opportunities for issuing further equity capital. Apparently, this school of thought is of the opinion that, after some time, the Company could go in for further expansion of its capacity.

It is reported that, during the last few days, there has been a sizable liquidation of T.I.S.Co. ordinary shares by some big investors. This is probably due to a desire on their part to make room for the forthcoming new issue. Knowledgeable circles are of the opinion that this tendency may come to prevail from time to time and that there may be a perceptible increase in the delivery of this scrip during some settlements.

• • • •

The sharp rise in the value of Century Mill shares during the last few days was due to expectations that the Company will be able to maintain comfortably the dividend for the year 1958 at Rs. 22 per share, a rate which it has been paying consistently from 1953 onwards, thanks to the excellent working of the mills, particularly the rayon section, and that the Company may also announce issue of additional share capital. These expectations have not been belied. The Directors have decided today to maintain the aforesaid distribution by declaring a final dividend of Rs. 14 per share; an interim payment of Rs. 8 has already been made. They have also decided to apply to the Controller of Capital Issues for permission to issue new equity shares to the existing shareholders at par in the ratio of one share for every five equity shares held by them. This will mean an issue of fresh capital to the tune of Rs. 21.88 lakhs.

The Directors have further decided to pay the entire dividend for the year from the taxed profits of the previous years taken to the general reserve and not out of the current profit, in order to give the benefit of tax refund to the shareholders, as they did last year to pay a part of the interim dividend for 1958 and the whole of the final dividend for 1957.

The Company's performance in 1958 has been excellent, its gross sales having gone up from Rs. 9.39 crores to Rs. 10.61 crores and its gross profit having nearly doubled itself from Rs. 67.78 lakhs to Rs. 133.80 lakhs. After bringing in the previous year's surplus of Rs. 9.28 lakhs, the Directors have utilised a sum of Rs. 3.75 lakhs to write off capital issue expenses. They have provided Rs. 43 lakhs for normal depreciation (as against Rs. 37.76 lakhs set aside last year), Rs. 31.59 lakhs for development rebate (Rs. 18.32 lakhs) and a further Rs. 42 lakhs (*nil*) for development reserve. The managing agency commission takes up Rs. 8.91 lakhs (Rs. 2.92 lakhs) and provision for taxation Rs. 3.06 lakhs (Rs. 7.12 lakhs). A sum of Rs. 1.22 lakh has been donated to the Bombay Textile Research Association. These appropriations leave a balance of Rs. 9.53 lakhs to be carried forward. The dividend, to be paid out of the general reserve, will absorb Rs. 24.07 lakhs. But this withdrawal is more than made good by the large additions to the other reserves as mentioned above.

More and more men, who have rendered several decades of service in the cause of India's industrialisation, are giving expression to their thoughts on the third Five-year Plan. Since official spokesmen have gone on record by stating that they welcome suggestions from all quarters, it is to be hoped that they will not rush the country into hasty decisions which will create more problems than any five-year plan can solve. Speaking in his capacity as the Chairman of the Central Bank of India Ltd., Mr. H. P. Mody, who was critical of any bigger and more spectacular plan, insisted that what the country needed was scientific, and not political, planning. He rightly added: "Incentives to earn, save and invest must find their proper place in any such plans for national reconstruction. A process which virtually amounts to pauperising the rich and making life harder for the vast number of lower middle-class income groups cannot possibly usher in the millennium, nor conform to any canons of fairness in the rendering of social justice."

Although Mr. G. D. Birla, who addressed the annual meeting of the United Commercial Bank as its Chairman, welcomed the news that the third Plan would involve an investment of Rs. 10,000 crores, he emphasised that what really mattered was not the magnitude of investment or expenditure on the Plan but "how much additional income could be earned per unit of investment." Since large foreign loans would add to the burden of repayment, Mr. Birla stressed that India must "plan for less of foreign loans and more of foreign investment." As regards domestic resources, he agreed that there were ways of raising them. But he raised a fundamental issue when he asked: Why should anyone venture to invest if the investment be unattractive? He added: "We must create favourable conditions for attracting such investment." This, as Mr. Birla recognised, is true as much of foreign as of domestic investment.

An important point which Mr. Birla made was that "those who dream of solving unemployment problem through intensive employment of manpower rather than through intensive production per unit of capital are unrealistic in their outlook." This is a theme on which Mr. Birla has expressed himself very clearly in the past. His point has always been that, if the country must grow rich, it must let the devil do the work for man, the devil being machine power. Mr. Birla declared in his speech at the United Commercial Bank meeting that "muscle power is the costliest power in the world."

This reminds one of the telling advertisement slogan of the British engineering company, Mitchell Engineering Ltd. Under the striking heading "Muscle is the most costly power on earth," and quoting Ritchie Calder, a noted science writer, the advertisement describes a tropical scene of a bullock-team raising water from well. It says: "Bullocks have to be bought, tended and fed, yet even with the meagre food and pitiful earnings of the men who drive them, the energy equivalent which they produce costs twenty times as much per unit as the energy output at Calder Hall atomic energy station." And it must be remembered here that nuclear power itself today costs much more than electricity, oil and coal. The advertisement goes on to point out how " a great many people in the world are poor because of necessity" and how "they use calories in their most expensive form and energy in the most uneconomical way." It adds: "The paradox of power is that those who are power-deficient are power-extravagant. When we go around the house switching off lights to keep the electricity bill down, we might think of the Indian villager burning cow-dung to cook his food for his muscle power. Because he burns that dung, instead of using it as manure, his soil is undernourished, his crops are undernourished, and he is undernourished. This is the Misery-Go-Round of poverty; because the peasant is poor he is undernourished; because he is undernourished he under-produces; because he under-produces he is poor; and because, in 'muscle power' countries, poverty prevails, their natural resources are underdeveloped. Such countries see in nuclear energy a break-through to industrial prosperity."

Here is a closely-reasoned case for the abandonment of an economy based on muscle power in favour of a more dynamic economy which seeks to utilise all the constructive advances of science, man's noblest achievement.

The overall trend of world commodity markets since the commencement of 1959, as judged by the indices of commodity prices for the first quarter of this year, has generally been upward. Thus, the *Financial Times*, London, index of commodity prices (Base: 1st July 1952=100) has risen from 79.17 on 30th December 1958 to 82.03 on 30th March 1959, as compared with 80.26 a month ago and 80.74 a year ago. The Dow Jones index of commodity prices futures (Base: 1924-25-26=100) has moved up from 147.94 to 149.39 during the same period. A few of the major commodities such as cotton and sugar, however, have proved an exception to this general trend, as the prospects of higher production and lower consumption loomed large over them. Among metals, almost all the non-ferrous metals have improved. Among agricultural commodities, rubber, groundnut, linseed, tea and pepper have gained some ground, while jute has managed to remain more or less steady.

The principal commodity markets in India would appear to have conformed to the world pattern. Raw cotton, however, has been an exception, in that it moved differently. Unlike elsewhere in the world, raw cotton in this country has been ruling exceptionally strong during the first three months of 1959. The successive reduction in crop estimates, damage to quality, and higher consumption were responsible for the strength of cotton. The Jarilla March contract, which was quoted at Rs. 641.4 at the beginning of the year, rose to Rs. 701 on 23rd March prior to its expiry on 24th at Rs. 695. The trend of Jarilla May contract was more or less in line with that of the March contract. From Rs. 656.75 at the beginning of March, the contract advanced to Rs. 680.50 at the close of the month and has since been ruling firmly steady. The August contract, which started its

EQUITIES BUOYANT

SHARP RISE IN VALUES

(From Our Own Correspondents)

BOMBAY, *2nd April*

THE mild reactionary trend in equity prices noted last week was reversed and buoyant conditions came to prevail during the week under review, on keen speculative buying. Scarcity of stocks, absence of sellers and the publication of encouraging results by some leading companies in the miscellaneous section fanned the bullish enthusiasm. Many investment scrips of companies with excellent growth prospects were absorbed at rising levels in the hope that these companies would be able to pay higher dividends to make good, at least to a large extent, the loss to shareholders on account of the change in the mode of taxation introduced by the recent budget. Hopes of a change in the provision relating to deduction of tax on dividends in the Select Committee stage also aided sentiment. In short, the bullish reaction to the Budget proposals, particularly the abolition of wealth tax on companies and dividend tax, has received a fresh lease, though operators appear to be cautious at higher levels for two reasons, namely, the lowering of yield pattern and fears of fresh credit curb aimed at checking undue speculation. Nevertheless, the undertone is still buoyant.

Steel shares did not provide the lead to the market. They were rather docile in view of the heavy selling by a prominent operator. Tata Steel Ordinaries, which had advanced from Rs. 181.25 to Rs. 186.50 on the opening day of the new account, suffered a reaction in the last two days to Rs. 181 before closing at Rs. 181.75. The new shares rose from Rs. 178.25 to Rs. 183, but declined to close at Rs. 179. Indian Irons improved from Rs. 23.96 to Rs. 24.48, but fell back to Rs. 24.08, despite the news of higher production and despatches in March. The output of steel ingots rose from 61,987 tons in February to 70,887 tons and of saleable steel from 50,202 tons to 59,707 tons. Despatches of saleable steel recorded a sharp rise from 45,090 tons to 75,972 tons.

Textile shares shaped well on reports of improving offtake of cloth and encouraging results of the Mafatlal group of mills for the year 1958. Centurys were conspicuous with a sharp rise from Rs. 477.50 to Rs. 487 on expectations that the dividend would be maintained and a right issue would be made in the ratio of 1:5. Towards the close, however, the shares dipped to Rs. 483.50. The market's expectations have since materialised when the Directors announced a final dividend of Rs. 14 per share (making Rs. 22 for the year) and to issue new ordinary shares in the above ratio. Bombay Dyeings were lifted up from Rs. 59.80 to Rs. 60.70 before being marked down to Rs. 60. Kohinoors jumped from Rs. 254 to Rs. 261, but the disappointment over the cut in the final dividend for the year 1958 from Rs. 12 to Rs. 6, making the total distribution for the year Rs. 10, as against Rs. 18 for 1957, caused a sharp setback to Rs. 250. The Tata group provided good features, Central Indias rising by Rs. 4.50 to Rs. 93.50 and Svadeshis by Rs. 6.50 to Rs. 216, due to proximity of dividend. Finlays were unchanged at Rs. 271, but Gokaks improved by Rs. 3 to Rs. 142. Khataus recorded a rise of Rs. 15 to Rs. 182.50. Standards provided the highlight with a jump of Rs. 33 to Rs. 481. The Company has earned a gross profit of Rs. 93.82 lakhs for 1958, as against Rs. 89.15 lakhs for the previous year. Morarjee Mills, Models, New Greats, Osmanshahis, Podars and Shrinivas Mills were all marked up sizably. Simplex provided an exception with a drop of Rs. 3 to Rs. 165.

Electricity shares were subdued. While Ahmedabad Electrics were unchanged on balance, at Rs. 96.80, Bombay Suburbans were a fraction down at Rs. 107. Tata Hydros were maintained at Rs. 120, while Andhra Valleys dropped Rs. 2.50 to Rs. 1,163.75 and Tata Powers Rs. 15 to Rs. 1,175.

Activity in bank shares was widespread, though changes in prices were small. Barodas were done at Rs. 115.50 *ex-div.*, as against Rs. 118.50 *cum-div.* a week ago. Centrals were placed at Rs. 56.80 *ex-div.*, as against Rs. 58.80 *cum-div.* and their new shares at Rs. 59 *ex-div.*, as against Rs. 60.70 *cum-div.* Bank of Indias hardened by 50 nP to Rs. 136. Punjab Nationals were a shade lower at Rs. 24.52 and United Commercials at Rs. 69.50. State Bank of Indias had business at Rs. 387.50.

Sugar shares were in good demand and there was a marked rise in prices. Belapurs appreciated from Rs. 287 to Rs. 293. Phaltans gained Re. 1 to Rs. 156.50 and Walchandnagars Rs. 3.75 to Rs. 292.50. Maharashtra Sugars moved up by Rs. 2 to Rs. 197. Cauvery Sugars changed hands at Rs. 107.50, as against the previous nominal quotation of Rs. 87. Cement shares showed a mixed performance. While Associated Cements were featureless at Rs. 146.50, Digvijays were marked up by Rs. 3.25 to Rs. 146.50 and Orissas by 40 nP to Rs. 14.50. Dalmia Cements rose by Re. 1.20 to Rs. 11.40 and Jaipur Udyogs by 16 nP to Rs. 11.44. In the engineering and mining group, Tata Locomotives presented a firm front and rose from Rs. 182.25 to Rs. 185.25. Alcock Ashdowns were well maintained at Rs. 272. Larsen and Toubros were in demand and rose by 96 nP to Rs. 21.68 on reports of encouraging results of working and prospect of a rights issue. Mahindras jumped by Rs. 4.50 to Rs. 25.10 and their new shares by Rs. 4.20 to Rs. 22, encouraged by the good financial results for the year 1957-58. Premier Constructions advanced by Rs. 7 to Rs. 265. Shivrajpurs were dull at Rs. 97, while Indian Coppers were in keen demand, on expectations of the price of copper remaining steady, and rose by 34 nP to Rs. 4.32.

In the shipping group, while Scindias improved from Rs. 18.16 to Rs. 18.72 before closing at Rs. 18.56, Great Easterns lost over the week 20 nP to Rs. 21.68 and Bharat Lines shed 32 nP to Rs. 13.24. Automobile shares were taken up at higher levels, Premier Automobiles scoring a gain of Rs. 5.75 to Rs. 115.50. Hindustan Motors were done 8 nP higher at Rs. 9.04.

The miscellaneous section provided many bright spots. National Rayons were prominent with a rise of Rs. 16.75 to Rs. 293.25. Gwalior Rayons were marked up by 36 nP to Rs. 16.04. Bombay Burmahs (old) rallied from Rs. 504.50 to Rs. 517 before declining to Rs. 509. Wimcos shot up from Rs. 193.50 to Rs. 210. Indian Dyestuffs, which had been keenly sought after for sometime now, scored a rise of Rs. 157.50 over the week to Rs. 482.50. Hindustan Levers were picked up Re. 1.10 higher at Rs. 31.65. Tata Oils gained 75 nP to Rs. 50 and Tata Chemicals put on 8 nP to Rs. 16.52 and their new shares 16 nP to Rs. 15.40. Alembic Chemicals rose by Rs. 5 to Rs. 176 and their new shares by Rs. 4 to Rs. 167.

Calcutta Stock Exchange

CALCUTTA, *1st April*

Equities registered further handsome gains under the lead of jutes during the week under review. Investment support was quite pronounced, thanks to renewed expectations of enlarged flow of funds into the share market as a cushion against inflationary forces generated by heavier dose of deficit financing. Jute shares were keenly bid on hopes of better working results in the current year. The hopes were based on comfortable raw jute supply position, progress in the implementation of rationalisation schemes in many units, improvement in labour relations and likelihood of better offtake of jute goods. Coal shares also elicited good buying inquiries induced by reports that the Central Government would soon announce increases in coal prices in the light of the Coal Prices Revision Enquiry Committee's findings. Tea shares, too, were well favoured, owing to encouraging advices from tea markets which indicated upward trend in exports and a hardening tendency in prices. In tune with the general trend and on anticipations of a rise in output as a result of the liberalisation of import policy governing raw materials, engineerings and miscellaneous industrials came in for enquiries at higher prices. The undertone of the market was distinctly firm.

Belvedere Jutes forged ahead from Rs. 181 to Rs. 185. Aucklands and Deltas both spurted by Rs. 4 to Rs. 181. Nellimarlas picked up 90 nP to Rs. 14.06, Howrahs 50 nP to Rs. 24.19, Agarparas 44 nP to Rs. 12.50 and New Centrals 25 nP to Rs. 15.06.

Among coals, Bengals strengthened by Rs. 4 to Rs. 304. South Karanpuras put on a rupee to Rs. 13.87. Burrakurs were bid 93 nP higher at Rs. 18.87. Pench Valleys rose by 25 nP to Rs. 26.75, Western Bengals by 16 nP to Rs. 6.41 and Central Indias by 15 nP to Rs. 8.34.

In the engineering section, Britannias firmed up by 35 nP to Rs. 13.25. Indian Irons hardened from Rs. 24.06 to Rs. 24.11. Texmacos were fully maintained at Rs. 23.45, as were Indian Standard Wagons at Rs. 95. Marshalls changed hands at Rs. 6.72 and Kumardhubhis at Rs. 10.25.

Several miscellaneous industrials were well fancied. Jardine Hendersons rallied from Rs. 79 to Rs. 81.50. Dunlop Rubbers were marked up by Re. 1.69 to Rs. 33.31. The Directors of the Company have maintained the dividend at 16½ per cent. for the year 1958. Karanpura Developments gathered Re. 1.56 to Rs. 14.31. Indian Aluminiums added Re. 1.25 to Rs. 20.75. Rallis Indias gained a rupee to Rs. 66. Indian Cables rose by 62 nP to Rs. 32.12, Rohtas by 56 nP to Rs. 23.31, Aluminium Corporations by 50 nP to Rs. 13.44, Indian Paper Pulps by 44 nP to Rs. 24.44, and Indian Coppers by 26 nP to Rs. 4.27. Metals Boxes were fully maintained at Rs. 34.62, as also Hindustan Motors at Rs. 8.94.

Madras Stock Exchange

MADRAS, *31st March*

The Madras Stock Exchange displayed a fully steady trend during the week under review. There was good absorption of several counters and values tended to move up. The sentiment of operators was influenced favourably by two important factors. First, it was reported that, at its meeting held in the City on Saturday, the L.I.C. Investment Committee decided to buy the shares of certain companies dealt on the Exchange. Secondly, there was a feeling that the new scheme of company taxation might be suitably modified at the Select Committee stage.

A special feature of trading this week was the sizable business put through in sugar shares. In particular, Kirlampudis were keenly sought after, the quotation climbing up by Rs. 4 to Rs. 55. Andhras and Mysores recorded a rise of 50 nP each to Rs. 22.50 *cum-div.* and Rs. 54.50 *cum-div.*, respectively. Indias hardened by 40 nP to Rs. 13.40. Travancores gained a like amount to Rs. 11.80. Deccans rose by 29 nP to Rs. 11.29 and E.I.D.s by 25 nP to Rs. 36.50 *cum-div.* (second interim).

In the textile group, Metturs attracted much attention and rallied from Rs. 380 to Rs. 390. Premiers and Vasantas spurted by Rs. 5 each, the former to Rs. 135 and the latter to Rs. 215. Lakshmis rose by Rs. 3 to Rs. 110.50, Coimbatore Spinnings by Rs. 2 to Rs. 49.50 and Krishnarajendras by Re. 1 to Rs. 62 *cum-div.* (interim).

Certain select tea and rubber shares met with good buying support. Among the former, Mlamalays advanced by Rs. 4 to Rs. 40.25, Peermades by Re. 1.50 to Rs. 20.25 *cum-div.* (final) and Balanoors by 70 nP to Rs. 21. Among the latter, Vaikundams picked up 50 nP Rs. 25.50 *cum-div.* (final), Velimalais 25 nP to Rs. 6.25 and Teekoys 15 nP to Rs. 7.95. Coffee shares, however, were somewhat subdued, Coffee Lands dropping 65 nP to Rs. 23.35, Consolidated Coffees 15 nP to Rs. 23.35 and Sheveroys 3 nP to Re. 1.94.

Textools provided the brightest spot in the miscellaneous section, the quotation moving up from Rs. 175 to Rs. 178.50. Rallis hardened by Re. 1.50 to Rs. 66 and Dalmia Cements by Re. 1.22 to Rs. 11.62. Andhra Scientifics were higher by 80 nP at Rs. 6. Hindustan Levers, Mysore Papers and Sen-Raleighs strengthened by 75 nP each to close at Rs. 29.75 *cum-div.*, Rs. 19 and Rs. 17, respectively. Mettur Chemicals gained 60 nP to Rs. 12.75, Aluminium Industries 40 nP to Rs. 10.75 *cum-div.* (interim) and F.A.C.Ts 32 nP to Rs. 8.35.

MAHINDRA AND MAHINDRA

Notwithstanding a decline in sale proceeds from Rs. 24.41 crores to Rs. 17.69 crores, the gross profit of Messrs. Mahindra and Mahindra Ltd. for the year ended 31st October 1958 has gone up by nearly 50 per cent., that is, from Rs. 45.05 lakhs earned in 1956-57 to Rs. 65.37 lakhs and that too after raising the distribution of bonus to employees from Rs. 11.50 lakhs to Rs. 13.97 lakhs. Consequently, the provision for taxation has been stepped up from Rs. 15.50 lakhs to Rs. 31.25 lakhs. The provision for depreciation also is higher at Rs. 12.04 lakhs, having been raised from Rs. 5.42 lakhs. The Directors' commission has risen from Rs. 1.97 lakh to Rs. 2.96 lakhs. A sum of Rs. 4.01 lakhs has been set aside for development rebate reserve, for which purpose no allocation had been made last year. The transfer to the general reserve has been reduced from Rs. 10 lakhs to Rs. 5 lakhs. A sum of Rs. 1 lakh each had been set aside to reserve for additional taxation and contingencies and reserve for doubtful debts out of the profit for 1956-57, but no allocations have been made from the profit for the year under review. However, the Directors have transferred Rs. 50,000 to the research and development fund, as against *nil* in the previous year.

The dividend on ordinary shares have been stepped up from 17.5 per cent. to 22 per cent per annum, free of tax, after paying 6 per cent. tax-free to preference shareholders. A *pro-rata* dividend on the new 6½ per cent. (tax-free) preference shares for one month and on the new ordinary shares for one month at 22 per cent. per annum has also been proposed.

The Company has been advised that the provisions of Section 23A of the Indian Income-tax Act apply to it for this financial year.

NEWS IN BRIEF

THE Government of Madhya Pradesh has withdrawn the system of issuing licences for trade in cotton cloth and yarn.

India was the second largest buyer of Sudan cotton in 1958, the quantity actually purchased being 72,600 bales out of the total Sudan exports of 417,900 bales.

The Central Government has received two applications for the manufacture of small-scale paper machinery plants, one in collaboration with the U.K. and the other with a Japanese firm.

An official trade delegation from Pakistan is expected to arrive in India in July next to review the working of the existing three-year trade agreement between the two countries signed on 1st January 1957.

A two-man Iranian tea delegation, headed by Mr. Mansouri, Director-General of the Iranian Tea Board, has arrived in Calcutta from Bangkok on a fortnight's tour of India. The delegation will visit tea plantations in Darjeeling, Assam and Nilgiris.

The total production of steel furniture in India in 1958 is estimated at 20,400 tons, as compared with 21,308 tons in 1957. There are at present 20 units engaged in the manufacture of steel furniture, with an aggregate annual capacity of 31,020 tons.

The Mysore Government has set up a State Financial Corporation, with Mr. G. Mathias, Finance Secretary, as Chairman and Mr. M. Vasudeva Rao as Managing Director. The authorised capital of the Corporation will be Rs. 2 crores, of which Rs. 1 crore will be issued in the first instance.

About 900,000 spindles and 18,000 looms are remaining idle in the country owing to the partial or complete closure of textile mills, according to the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri. The total number of spindles and looms in place in the country is 13 million and 200,000, respectively.

The Government of Orissa has published a Bill seeking to fix ceiling on existing and future holdings of land at 33 standard acres of land. The Bill is likely to be introduced in the legislature during the current session itself. For the implementation of land reforms, the Government will constitute a Land Commission, consisting of three officials and four non-officials.

The Government of India proposes to set up probably in the Guindy industrial estate, Madras, a proto-type-*cum*-training factory for the development of high and super precision instruments. The implementation of the project will be in collaboration with the French Government. The precision instruments tentatively selected for development will include measuring and testing equipment, clocks and watches and pneumatic hand tools.

The Government of India has constituted six standing committees, attached to the Ministry of Commerce and Industry, to consider and report within four months from now, measures to develop the manufacture of machinery for various industries. The groups of industries covered include engineering, ferrous and non-ferrous metals and metallurgical, chemicals, fertilisers and plastics, machine tools and transport and communications, textile (including cotton, wool, silk and jute) and synthetic fibre and consumers' goods.

India and the U.S. have reached an agreement at technical level on the draft of a convenion for the avoidance of double taxation of income between the two countries. The agreement followed the negotiations held at New Delhi last month between the U.S. delegation, led by Prof. Dan Throp Smith, Special Adviser to the Secretary of the U.S. Treasury, and the Indian delegation, headed by Mr. V. V. Chari, Member, Central Board of Revenue. The draft convention now requires to be ratified by the respective Governments.

The total production of foodgrains is expected to touch an all-time record of 70 million tons during the year 1958-59, as against the previous record of 68 million tons in 1956-57. The increase in output is attributed to good *kharif* crops and successful *rabi* campaign now coming to a close. Harvest reports from most States in which the drive for increased production of *rabi* foodgrains was launched in September last indicate an increase of at least 20 per cent., as compared with the previous year.

The Central Board of Trustees of the Employees' Provident Fund Organisation has decided to recommend to the Government of India that the rate of interest to be paid to members of the Fund on their accumulations for 1959-60 should be 3¼ per cent. The Board of Trustees met here on 30th March under the chairmanship of Mr. K. N. Subramanian, Joint Secretary, Ministry of Labour and Employment. The Employees' Provident Funds Act, which came into force in 1952, now applies to 38 industries. About 2.48 million employees in 6,847 establishments get the benefit of provident fund in these industries. The provident fund accumulations up to the end of January 1959 amounted to Rs. 131.4 crores.

The demand for superphosphate from the northern zone comprising States of Punjab, Uttar Pradesh, Rajasthan, part of Madhya Pradesh and the Union Territories of Delhi and Himachal Pradesh for 1959-60 is estimated at 62,000 tons. The assessment was made at a meeting of representatives of the Union Ministries of Food and Agriculture, Commerce and Industry, State Governments and the Fertiliser Association of India held at New Delhi this week. This was the last in the series of meetings held by the Union Ministry of Food and Agriculture on zonal basis to assess the demand for superphosphate of various States during 1959-60. The entire demand of the northern zone is expected to be met from the expanded production of D.C.M. Chemical Works, Delhi.

A model workshop has been set up in Bombay for the development of surgical instruments and appliances manufacture in the country. It is attached to the Small Industries Service Institute. A foreign consultant is working in the Institute on the preparation of drawings, designs, moulds and prototypes of surgical instruments to be taken up for manufacture by Indian *entrepreneurs*. Arrangements have also been made for training personnel in the correct methods and techniques to be adopted in producing surgical instruments. This workshop will provide designs and manufacturing methods. In the large-scale sector, a proposal to set up a full-fledged unit, in collaboration with the U.S.S.R., for the manufacture of medical appliances and surgical instruments, has already been approved. This factory is expected to meet the requirements of these instruments in the country.

From Abroad

The number of foreign trainees now receiving technical training in West Germany is put at 6,000, of whom as many as 2,000 are Indians.

Switzerland has granted "a five-year industrial credit" of S.frs. 25 million to the United Arab Republic for the purchase of textile machinery.

The next report of the British Cohen Council on Prices, Productivity and Incomes is expected to be completed by the end of July next.

The British House of Commons has passed a Bill which seeks to raise the provision for colonial development and welfare scheme by £95 million to £315 million.

The French Government has removed restrictions on exports of a large number of products, particularly engineering goods. Licences are no longer required for the exports of these goods.

Unemployment in the U.S. will decline to around 3 million by the final quarter of 1959 from the current level of 4.7 million, according to the forecast made by the U.S. Secretary of Labour, Mr. James Mitchell.

Investment of foreign capital in Australia is now said to be at an annual rate of £A100 million, American investors alone contributing a third of the amount. A feature of American investment is said to be the large "plough-back" of undistributed profits into local industry.

American bids are being invited by the Government of Iraq for construction of the Baghdad-Kirkuk road. The construction, including asphalt pavement, culverts and bridges, will be under two contracts of approximately 43.5 miles each.

Sixty-three Indian firms are among the 606 business concerns struck off the Burmese Government register. Action against them has been taken following a scrutiny jointly undertaken by the Bureau of Special Investigation, the Army and the Police. The number of "disregistered" Burmese firms is 523, Chinese 92, European 3 and limited companies 8.

The Ghana Government and Aluminium Limited of Canada have floated a new joint company, known as the Ghana Aluminium Products, to build a factory at Tema, near Accra, for the manufacture of corrugated aluminium sheets by August this year. The Ghana Government is to subscribe about 40 per cent. of the equity capital and the rest by Aluminium Limited of Canada.

The U.S. Atomic Energy Commission is planning to establish a $3.5 million plant at Oak Ridge, Tennessee, to recover fissionable materials chemically, as part of its programme to develop economically competitive nuclear power plants. The plant will enable the Oak Ridge National Laboratory to re-process unused nuclear fuels from most of the power reactors currently operating or proposed for construction in the next few years.

A West German oil company, Gewerkschaft Elwerath (in which Esso, Shell and German Wintershall concern have sizable interests), has signed a prospecting contract with the Government of Ethiopia. The agreement is valid for 50 years and enables the Company to prospect at its own cost and later drill for oil in the Ogaden Province. If oil is struck, the Government of Ethiopia and the Company will enter into an agreement stipulating equal sharing of profits.

The consumption of coffee in W. Germany during 1958 reached a new peak for the post-war period and is expected to go up further this year. W. Germany imported 154,454 tons of coffee beans last year, as against 148,041 tons in 1957. Latin American countries were the biggest suppliers, Brazil accounting for 19.06 per cent., Columbia for 14.18 per cent., and Nicaragua, Salvador, Venezuela, Gautemala, Mexico and Costa Rica for a combined total of 48.43 per cent.

The less developed countries of the world will require a net capital inflow of about $70,000 million over the next ten years, if they are to achieve reasonable rates of economic growth. Expressing this view, Mr. Paul Hoffman, Managing Director of the U.N. Special Fund, says that half of this sum will be forthcoming on present estimates and new sources will have to be tapped for raising the balance. According to him, what is wanted was not dollars but goods and services, a lot of which can be provided out of capacity at present unused in the highly industrialised countries.

The Japanese Cabinet has approved of a new foreign exchange and trade programme designed to cope with the intensified competition in world markets following the return to convertibility of West European currencies. The programme envisages immediate adoption of measures such as removal of currency discrimination in the import of automatic approval goods and transfer of items now requiring prior allocation of foreign exchange to the automatic approval list. It also envisages an increase in the number of authorised currencies used for normal trade settlement, as well as relaxation of the terms of short-term credits supplied by foreign exchange banks to finance imports.

Officials from a dozen Asian countries, including India, are currently attending a course at the Training Centre in Trade Promotion at Tokyo. The training which commenced on 30th March will last upto 24th May 1959. The programme is jointly sponsored by the E.C.A.F.E. and the U.N. Bureau of Technical Assistance Operations in co-operation with the Government of Japan. Lectures at the centre are being provided by the Governments of Japan, the U.S.S.R., the U.K. and the U.S. The subjects covered include functions of commercial attaches in diplomatic and consular missions, international trade fairs and exhibitions, marine insurance and shipping and inspection and control of quality in commodities.

The U.S. Atomic Energy Commission reports that its installation at Los Alamos. (New Mexico) is testing a unique homogeneous nuclear power reactor designed to produce high pressure superheated steam for modern electrical turbines in one simple operation. Tests of the reactor, which is expected to generate 1,000 kilowatts of heat, will determine the feasibility of using a solution of enriched uranium phosphate, phosphoric acid and water as a fuel, relying on the natural circulation of the solution to carry the heat to the heat exchanger where the steam is produced. The process eliminates the use of a circulating pump which in the past has resulted in excessive corrosion in the heat exchanger

MR. Vithaldas H. Shah, J.P., has been re-elected President of the All-India Non-ferrous Metalware Manufacturers' Association for the year 1959.

Mr. K. Srinivasan, Director, South Indian Textile Research Association, Coimbatore, has been elected President of the Textile Association of India for the year 1959-60.

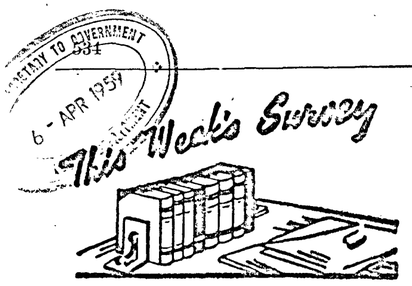
Mr. Badriprasad Poddar has been elected President of the Bharat Chamber of Commerce, Calcutta, for the current year. Mr. M. G. Rungta and Mr. H. S. Singhania have been elected Vice-Presidents.

Mr. H. Chiswell Jones, Chairman of the Metal Box Company of India Ltd. for 17 years, has left for the U.K. on retirement. He is expected to take up an appointment on the Board of Metal Box Overseas Ltd., London.

Mr. Murarji J. Vaidya has been elected President of the Indian Council of Foreign Trade for the current year. Messrs. P. B. Advani, Vallabhadas, V. Marivala, and B. N. Banerjee have been elected Vice-Presidents and Mr. R. V. Vora, Honorary General Secretary.

Mr. A. Keown has been appointed to the Board of Imperial Chemical Industries (India) Private Ltd., as Personnel Director, with effect from 1st April 1959. Mr. Keown joined the Metals Division of I.C.I. Ltd. in the U.K. in 1939. On demobilisation after the war, he joined the I.C.I. Bombay Regional Office and, in 1951, he was transferred to Calcutta and made Manager of the Regional Sales Office in 1952.

SECRETARY TO GOVERNMENT 6 - APR 1959



INDIAN AIRLINES

THE losses incurred by the Indian Airlines Corporation year after year have been a source of not inconsiderable concern to the country. The Corporation incurred a loss of Rs. 103 lakhs in 1957-58, as against Rs. 109 lakhs in 1956-57 and Rs. 119 lakhs in 1955-56. The loss for the year 1958-59 was recently estimated at Rs. 105 lakhs. It is true that there are some valid reasons why the Corporation has not been able to wipe out the deficits entirely. The problem of integration of no less than eight different air services with their divergent administrative and financial structures and physical assets, the increase in wage bill, the performance of services on non-commercial routes, the increase in expenditure arising out of heavier duties and taxes, on the one hand, and the heavier depreciation on new aircraft, on the other, have been largely responsible for the Corporation's losses. It is also true that the deficit in the results of working of airlines is a world-wide problem. Even after making allowances for these factors, there is a growing feeling, both in Parliament and outside, that the control over expenditure has been insufficiently exercised by the Corporation. This view has now been virtually confirmed by the Expert Committee on cost structure of the Indian Airlines Corporation, the report of which was released last week. The Committee, which was presided over by a British aviation expert, Mr. Stephen Wheatcroft, has declared that there is a general lack of appreciation of budgetary control in the Corporation. It has, however, paid a tribute to the "very good" general standards of the Corporation's operation and the quality of the transport offered by it to the public. It, therefore, warns against any tendency to take its criticisms out of their context and use them to "belabour the Corporation's management."

While no one will want to use the Committee's report as a convenient stick to beat the Corporation with, it is undeniable that there is urgent need for economy in the management of India's nationalised air services. In this sense, the Committee's verdict will not occasion any surprise. In a recent session of Parliament, the members voiced their dissatisfaction over the continuing high level of the Corporation's break-even load factor. Two years ago, the Estimates Committee, after insisting that the importance of placing the Corporation on a proper economic footing could not be overemphasised, pointed out how "huge losses depress the morale of those who work for it, lower the efficiency and lead to further losses." The report of the Wheatcroft Committee on cost structure has served only to reinforce these observations. The Committee has directed its criticism at the "general lack of appreciation" of the value of budgetary control in the I.A.C. and the failure to make cost control an integrated part of the system of management. It says: "We found that at various levels of management there were officials who, though responsible for a substantial segment of I.A.C. expenditure, did not seem to be aware of their responsibility to control that expenditure." It finds that insufficient effort has been made to ensure that departments keep within the limits set by their budgets. The result is that "the whole system of budgetary control commands little respect from junior levels of management." The general level of the morale of the staff at the junior level, it is stated, is rather low. This is attributed partly to a feeling of helplessness in the field of labour management. The Committee says: "But it is also due to the lack of a driving sense of purpose throughout the Corporation. The most immediate task of I.A.C. management should be to establish an all-pervading feeling that the Corporation exists primarily as a commercial undertaking, that its purpose is not only to provide good and efficient air services but also to operate these services at a profit." Incidentally, it has expressed itself against any proposal to merge the I.A.C. with the Air-India International.

Clearly, the authorities should bend their energies to the task of placing the Corporation on a firmer financial footing. They will do well to implement the Committee's recommendation that all new recruitment should be prohibited, until the surplus staff has been absorbed in the future growth of traffic and workload. The Government, on its part, should make an objective assessment of the loss arising out of the Corporation's non-commercial services, in order to see how best the Corporation could be helped through a special subvention. Before this is done, the Corporation must make a genuine effort to put its own financial house in order. Since it has already increased its schedule of fares, with effect from June last, it cannot possibly think in terms of a further increase in fares. The argument that Indian air fares are the lowest in the world could be easily overstressed by ignoring, on the one hand, the general economic level of the people and the Corporation's failure to adopt appropriate economy measures, on the other. There is no getting away from the fact that, consistent with its obligations to ensure safe and efficient services, the Corporation should relentlessly pursue economy in expenditure. But the prospects for the future, according to the Expert Committee, are bright for the Corporation. A substantial and increasing surplus, it is stated, can be forecast for Viscounts on the trunk routes and the night airmail services. If the Committee's standard costs for Dakota operation were implemented, it has computed that the losses on these routes could be reduced by 40 per cent. These and other suggestions made by the expert body deserve urgent implementation in the interests of stemming the continuing tide of the Corporation's losses.

EXCISE ON TOBACCO

The administration of excise duties is an admittedly complicated task. This is particularly true of this levy on unmanufactured articles, such as tobacco and coffee. Those who pay the duty have for long complained that they have been denied facilities of appeal to an impartial and independent tribunal. The All-India Tobacco convention, held this week at New Delhi, reiterated the demand for an independent appellate tribunal to hear excise duty appeals. This suggestion was rejected by the Union Minister for Revenue and Civil Expenditure, Mr. B. Gopala Reddi, who inaugurated the Convention. It may be recalled that the Taxation Enquiry Commission, which examined this question, reached the conclusion that, since the essence of the administration of customs and excise duties was prompt disposal of cases, it was not advisable to set up an elaborate machinery on the lines of what existed in respect of income-tax matters. The Commission, however, suggested that revision petitions against the orders of the Central Board of Revenue or the Collectors should be disposed of by a tribunal which, in addition to being independent of the Ministry of Finance, should consist of at least one judicial member who should be either a serving or a retired High Court judge and one member who has had administrative experience. It would appear that the Government, though it has not accepted the Commission's suggestion in its entirety, has evolved a procedure which is an improvement on the old. Since March 1957, two officers—the Chairman of the Central Board of Revenue and a Joint Secretary of the Law Ministry—are dealing with revision petitions against the decisions of the Central Board of Revenue. It is to be hoped that the two officials will bring to bear upon their task a sense of impartial judgment of the kind that one would expect from a judicial tribunal. It is gratifying to note that the new arrangement is working satisfactorily.

Two other issues which were raised at the Convention were the relative position of the biri and cigarette industries and the abolition of the time limit on the storage of tobacco in bonded warehouses. At the Convention, it was suggested that the duty on *biri* tobacco should be reduced, so as to narrow the gap between the higher-rated *biri* tobacco and the lower-rated varieties and the resulting loss of revenue should be made up by increasing the rate on cheap cigarettes. The Minister rightly argued that, in assessing the comparative burden of excise duty as between *biri* tobacco and other varieties of tobacco, the additional excise duty levied since May 1957 should not be taken into account since that duty was imposed in lieu of sales tax legally payable by *biri* tobacco. As regards the competitive capacity of the *biri* industry *vis-a-vis* cheap cigarettes, he cited statistics to discount the suggestion that the cigarette industry was stealing a march over the *biri* industry. In any case, in the last budget, certain adjustments were made in the duty on various kinds of cigarettes, involving an increase of 16 per cent. in the level of duties for cigarettes taken as a whole. These adjustments, together with the other advantages which the *biri* industry possesses by reason of its being in the decentralised sector of the economy gives it a sufficiently favourable economic status. It is true that certain other adjustments made in respect of unmanufactured tobacco in the last budget impose some additional burden on the industry. But they were made with a view to arresting the tendency on the part of the *biri* industry to utilise a lower-rated tobacco which was previously used for *hookah*. As regards the demand for the removal of the time limit for keeping tobacco in bonded warehouses, the Minister rightly rejected it on the ground that warehousing itself was an important facility and the permitted period of storage, namely, five-years, was a reasonably long one.

ECONOMIC POLICIES

The thought-provoking speech delivered by Mr. E. J. M. Leigh, President of the Madras Chamber of Commerce, at the 123rd annual general meeting of the Chamber, deserves to be read by a wider section of the public. It may well spark some serious rethinking of policies, inasmuch as Mr. Leigh approached his subject with an objectivity and clarity rarely to be met with in most of the current policy discussions. He singled out some of the questions that deserved the most urgent attention of the Government and made suggestions as to how to deal with them.

It is common knowledge that, even if import of foodgrains is avoided, India, committed as it is to rapid and full industrialisation, will still require large amounts of foreign exchange for capital equipment, industrial stores, spares, etc., for many years to come. There are only two ways of getting the necessary capital equipment in sufficient quantities: (1) inducing foreigners to invest in India, (2) acquiring capital goods by utilising enhanced export earnings. There was, therefore, a most urgent need, according to Mr. Leigh, for developing a more favourable investment climate for both domestic and foreign investment. This would not only facilitate negotiations for foreign investment, but would also encourage the inflow of private foreign capital with the attendant know-how so badly needed in this country. It was unfortunate, he observed, that foreign private capital was still regarded in high places with so much suspicion and as adding a heavy burden in the shape of annual profit remittances and ultimate capital redemption. There was no factual basis for the suspicion, because available statistics indicated that a substantial part of the profits earned was ploughed back into industry for subsequent expansion.

Private domestic capital in the country, Mr. Leigh said, had been traditionally shy and many *entrepreneurs* were suffering from a sense of frustration and uncertainty which was not a little due to the confusing and often contradictory statement of those in authority. The position was aggravated by the growing indiscipline of labour, in general, throughout the country and the unrealistic labour policies adopted by the Government.

While fully recognising the need for higher exports, Mr. Leigh warned against shortsighted policies for stepping up exports quickly. Threats of using compulsion for promoting exports, according to him, could not but be viewed with alarm. Compulsion might lead to some immediate gains but, in the long run, it might turn out to be harmful. For many years to come the country, he pointed out, had to depend for foreign exchange earnings on

established industries such as jute, tea and textile. Most of the new industries were established under protective tariffs and with the intention of replacing imports. Manufacturing costs of these industries were relatively high and their products in some cases were not up to the internationally accepted quality standards. If these industries were forced to step up the pace of exports in the early stages, and especially if, as a result of compulsion, inferior goods were to be shipped, it might result in the loss of potential exports.

He, therefore, maintained that incentives were preferable to compulsion for promoting exports. But incentives should not be self-defeating; nor should they result in putting up the cost of manufacture. The most effective incentives, apart from fiscal concessions which had found no favour with the Government so far, he rightly pointed out, were those which enabled an industry to replace worn out machinery, install up-to-date plant and introduce new processes which would improve its export earning capacity. These, he admitted, were no doubt long-term in their effect. Hence, as a short-term measure, which permitted immediate reduction in export prices, he suggested that raw materials and stores, which were surplus to the qualifying exporters, should be made available at reasonable prices to other needy industrial units, without their having to pay high margins to the middlemen. The full value of the incentive should be ensured to the industry which already had to fight a hard battle against rising costs of production.

INDIAN STANDARDS INSTITUTION

The Indian Standards Institution is making steady progress. The I.S.I., which was set up for the purpose of preparing and promoting standards for Indian industry, has now completed twelve years. During this period, the membership and revenue of the I.S.I. have gone up and the sale of standards is also said to be encouraging. In 1958, the I.S.I. sold Indian standards of the value of Rs. 2 lakhs and overseas standards of the value of Rs. 1 lakh. By intensive effort and through large-scale cooperation from all the interests concerned with standardisation, the I.S.I. has been able to reach the second Plan target of an annual production of 200 standards a year, a head of schedule. Even with this rate of progress, the I.S.I. will not be able to meet the country's demand for standards, which, at the end of the second Plan period, is estimated at 3,000, while the I.S.I. will be able to produce only 1,500 standards. Only 50 per cent. of the demand could thus be met.

The main obstacles which inhibit progress of work in the field were highlighted by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, when he addressed the fourteenth meeting of the General Council of the I.S.I. held at New Delhi on 30th March. Mr. Shastri said that the main problem was shortage of adequate personnel. The I.S.I. had itself undertaken the training of young men. Last year, 30 young men were recruited for training and the same number would be taken this year also. Considering the demand for trained personnel, this was quite inadequate and he, therefore, urged a more ambitious training programme.

A point which Mr. Shastri particularly emphasised was popularisation of the standards produced by the Institution. There still existed many pockets of resistance. The standards had not been adopted by many Government Departments concerned nor in all industries in the private sector. Hence there was need for devoting special attention to the creation of interest in the adoption of standards. He suggested that, for this purpose, there should be frequent discussions between the various parties concerned, so that their doubts were cleared and the utility of the standards produced could be firmly established.

Referring to the certification of exports, Mr. Shastri pointed out that Japan had gone ahead of many countries in this respect. Japanese industrialists readily agreed to pre-shipment inspection and certification of exports. This had led to the creation of confidence in the buyers that the goods were of standard quality. This system was yet to become popular in India. At present, even the Government of India's purchasing authorities were not generally inclined to accept certified products of the I.S.I. without further inspection. This meant duplication of work and almost nullified the work already done by the I.S.I. He felt that the Government would have to take the initiative in accepting the I.S.I. standards and certification marks for its purchases. If the Government and also private industry made special efforts to conform to the standards evolved by the I.S.I., it would certainly lead to a general improvement in the quality of goods.

BRITISH BANKERS' ADVICE

Most bankers in the West, while they are greatly appreciative of India's efforts at raising the living standards of the masses, are much sceptical about certain economic policies; some are even very critical of them. But their criticisms are of a mild nature and offered with a studied caution. This is the impression that one gets after reading the latest annual statements of the Chairmen of the Mercantile Bank, the Chartered Bank, the National and Grindlays Bank, and the Hongkong and Shanghai Banking Corporation—Sir Kenneth W. Mealing, Mr. V. A. Grantham, Mr. J. K. Michie and Mr. Michael W. Turner, respectively. All the statements contain not merely an impressive, dispassionate review of the recent economic trends in India but also valuable words of advice designed to ensure an orderly and smooth economic development. Considering that the advice is from persons who are well-wishers of India, it deserves utmost consideration at the hands of planners and the powers-that-be.

The most outspoken among the aforesaid Chairmen is Mr. Grantham. Alluding to the talks of fixing the aggregate outlay of the third Five-year Plan at Rs. 10,000 crores, one-third of which is said to be the share of private investment, with emphasis on progressively less reliance on foreign assistance and more dependence on domestic savings, Mr. Grantham reminds us pertinently that domestic savings must depend on the ability to save and questions whether the *per capita* income in relation to cost of living will permit of savings on the scale commensurate with the figure of private investment. Here are Mr. Grantham's own words:

"So far as private enterprise is concerned, the country's complicated system of heavy taxation, direct and indirect, which is apparently to bear extra burdens, has already reached a point where it is a serious deterrent not only to private enterprise in India but also to foreign enterprise. Although progressively less reliance is to be placed on the latter, the investment of foreign capital is still recognised as being of vital necessity and the Government has said that it wishes to encourage it. It is questionable under the circumstances whether this encouragement is, in fact, being given. Investment too, however made, should be concentrated on the agricultural sector, which would probably show quicker and better returns than industrialisation and would certainly do more generally to raise the standard of living."

This is certainly a correct assessment of the whole issue. In the considered opinion of Mr. Grantham, India has to accomplish two things, in order to solve its problem of resources. One, it has to improve its relations with its neighbour, Pakistan, so that the proportion of military and other service expenditure in its budget could be reduced and some relief in taxation could be given. He has, of course, given this advice to Pakistan also. Two, India should try to mobilise its gold hoard, by introducing a form of bearer loans against gold, or even free imports, and allow an economic rate to be found and confidence restored in that way. While these suggestions are quite important, the point is how far they are practicable. So far as the first question is concerned, much depends on the attitude of Pakistan which continues to be hostile. As regards the second, Mr. Grantham would have done better if he had suggested a concrete scheme for mobilising the gold resources of the people. Last year, much thought was bestowed in this country on this subject, but nothing has emerged from it. Nevertheless, the idea does not seem to have been abandoned.

Sir Kenneth Mealing is critical, and very rightly of course, of the "extremely severe" taxation in India and also of the periodical statement of Ministers promising more socialism, an action which, as he says, is hardly calculated to stimulate investment or initiative in private enterprise. He feels that deficit financing, high taxation and shortage of consumer goods as a result of import restrictions, coupled with food shortage due to crop failures, have led to continued inflation; this, in turn, has resulted in growing discontent, particularly in Bengal, among the younger, middle and labour classes, and growing infiltration of Communism among both industrial and plantation labour. To him, the pressure of population and the need to import and pay for food imports present a "sombre picture." Nevertheless, Sir Kenneth is not pessimistic of the future. He observes: "The reclamation and irrigation of large areas of land as the new projects come to fruition, the greater emphasis on food production now being undertaken by the Government, and a fruitful harvest may brighten the picture during the coming year."

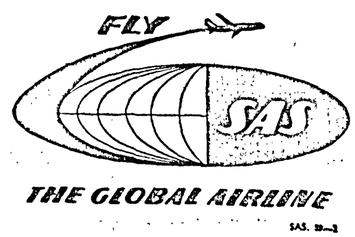
Both Mr. Michie and Mr. Michael Turner attach considerable importance to the need for stepping up agricultural production, specially foodgrains. Mr. Michie points out that food production must continue to be the fundamental problem of countries like India which have both a low average standard of living and a rapidly growing population, and that one cannot help being a little doubtful whether agriculture gets its fair share of attention *vis-a-vis* industrialisation. On the same subject, Mr. Michael Turner makes the following interesting remarks:

"Consideration is already being given to the third Five-year Plan and there are indications that many favour a more ambitious edition of the second, with concentration on the construction of further large-scale industrial enterprises. This would be a further step along the path at which India wishes to tread, but I wonder whether the inflationary pressure will not prove to be too great, unless self-sufficiency in foodgrains has been achieved. It is true that the present harvest is a good one, but planning cannot depend on the vagaries of the monsoon, nor can the country continue indefinitely on the present austerity level of imports. Would it not be better, as a first step, to concentrate on a well planned programme of agricultural development in conjunction with an active campaign to improve existing farm methods? This would give the necessary base, without which rapid industrialisation can hardly hope to succeed, namely, steadily rising agricultural production."

A large section of the thinking public in this country itself shares the misgivings of Mr. Michael Turner. Similarly, there are many here who will endorse his remark that "the resolutions of the Nagpur Session of the Congress are not encouraging."

One of the major hurdles in the way of the rapid economic development of India as well as other countries where the standard of living is low is shortage of capital. Mr. Michael Turner puts the finger on the right spot when he states that the first necessity for the less developed countries is to attract foreign private investment. It is a well-known fact that a large part of the capital received by these countries since the war has come from Governmental sources and international agencies which have, to a large extent, taken the place of the private investor. He does not, of course, "quarrel" with this development, as he admits that, in many cases, the large amounts required could not have come from any other source. But he feels that there still remains a role for private capital to play, particularly in the supporting industries "without which any broad basis of industrialisation is impossible. Not only that, but private has one advantage over institutional capital, in that there is less likelihood of the repatriation of the original investment and, provided the venture is successful, a portion of the profits will be ploughed back each year for future development." Viewed thus, it is, indeed, in the interest of the underdeveloped countries themselves to make every effort to see that a suitable climate exists for encouraging foreign private investment.

The second necessity for the underdeveloped countries to which Mr. Michael Turner alludes relates to the ability to find markets for the goods manufactured by the newly set up industries. Since these markets lie largely in countries where the purchasing power is high and competition from home industries exist, Mr. Turner has done well to call upon the Western nations to go a step further and open up their markets to some of the products of underdeveloped countries. These Western nations have been giving aid on a more generous scale, and "it remains to be seen," to quote the Hongkong Bank chief, "whether the same enlightened attitude will be adopted over the more difficult problem of trade."



INDUSTRIAL POLICY RESOLUTION

MR. MANUBHAI SHAH'S RE-EXAMINATION

From Our Special Correspondent

NEW DELHI, 31*st March*

DELHI LETTER

MR. Manubhai Shah, Union Minister for Industry, has just tried, through the columns of the economic organ of the All-India Congress Committee, to set at rest the controversy periodically arising on the Government's policy regarding nationalisation of industries. As the question has recently cropped up in Parliament, the Union Minister has done what may be called an official re-examination of the Government's industrial policy. After referring to the twin basic objectives of that policy, namely, that "the State will progressively assume a predominant and direct responsibility for setting up new industrial undertakings and for developing transport facilities" and that "it will also undertake State trading on an increasing scale," Mr. Shah proceeds to answer the question "whether the policy-making and thinking are being still continued and whether there is any machinery in the country today for framing this policy."

The three basic points in the industrial policy, continues Mr. Shah, are the basic policy, the machinery for policy-making and thinking and the programme of implementation of this policy. They are, he says, "always" subjected to continuous re-thinking and modification to suit the needs of the country from time to time. As regards the basic policy of the Government, the ruling party in the country was mainly responsible for its formulation. As regards the machinery for policy making and thinking, it is done at two levels—the political and the executive. At the political level, Mr. Shah is sure, "the Congress takes into consideration, while framing the policy, the developments taking place all over the country and elsewhere" and "the viewpoints of rival political organisations on the question of national development are also kept in mind." At the executive level, the thinking part is done by the Planning Commission.

Programme of Implementation

Adverting to the third point, namely, the programme of implementation of this policy, Mr. Manubhai Shah refers to the nationalisation of certain industries as "an important instrument that is used wherever found necessary or desirable in the public interest" in pursuance of the objectives "which the people themselves have accepted." He, therefore, wants the programme of implementation to be judged in its proper perspective, and continues:

"We have considered in this Industrial Policy Resolution that the public sector is a very important instrument of industrial development. The 'Schedule A' industries have been clearly defined; the 'Schedule B' industries in which both the private and the public sectors can participate have also been clearly laid down; and the rest of industries have been left to the private *entrepreneurs* to undertake. Wherever a particular scheme —small or medium size—comes before the Government and where the basic issues are not being altered or the basic trends of policy are not being deflected, there is no reason to shut one's eyes to all the new currents of development. Therefore, a few exceptions here and there made even under 'Schedule A' should not be construed as a proof of our having deflected from the chosen path—the path which we have voluntarily accepted for ourselves."

Thus far Mr. Manubhai Shah has done the re-examination in a general way with a view, obviously, to silencing those critics who 'accuse' the Government of going back or going too slow on its chosen policy of expansion of the public sector and nationalisation of industries. There is no answer, even in this general examination, to those critics who say that the Government has gone or is going too far in the direction of expansion of the public sector. Only a detailed examination of the new industrial projects that have come into being since 1956 or are under active consideration now in both the sectors would be useful for the specific purpose of judging whether they are in accordance with the spirit of the Industrial Policy Resolution. It is not as if the 'spirit' of this resolution does not permit of two different interpretations. For, is it not laid down in the same resolution, overriding the threefold categorisation of industries therein, "that it is always open to the State to undertake any type of industrial production"? Does this not open the door wide for an indefinite expansion of the public sector? Can it be validly assumed, in the circumstances, that the 'spirit' of the Industrial Policy Resolution is to be found only in the directions pertaining to the three categories of industries? After all, these directions themselves are referred to only as 'general'.

Progress of Some Industrial Projects

The progress of some new industrial projects—reference to them in this letter is by no means exhaustive—in the year ended March 1959 has just been reviewed by the Ministry of Commerce and Industry in its comprehensive and valuable Annual Report. Here are some relevant extracts:

"In the public sector, the most significant new development has been the formation of the Heavy Engineering Corporation, which will be responsible for the setting up of a heavy foundry and a forge, a heavy machine building shop and a mining machinery works with the help of the U.S.S.R. and Czechoslovakia. The heavy electrical plant which is being set up at Bhopal with British collaboration is under active construction and the training school has started functioning. Other schemes of development in the public sector include an expansion of antibiotics production at Pimpri in technical collaboration with an American manufacturer and the expansion of Sindri and the setting up of a new plant at Nangal to augment the supplies of fertiliser. Sindri Fertilisers were also able to secure a part of the contract for the new fertiliser plant at Rourkela which is being set up by the Hindustan Steel.

"For the first time, the manufacture of compounded electroplating salts, activated carbon, sodium perborate and heat treatment salts have commenced in this country. In the public sector, the second D.D.T. Factory at Alwaye went into production during the year, and the trial production of urea and double salt was started at Sindri.

"In the field of drugs, a U.S.S.R. team visited India and has made out a report in regard to the setting up of five new projects with Russian Loan Assistance. The report is under the active consideration of the Government. These projects along with the project for intermediates and basic organic chemicals are expected to be taken up in 1959 and will make an important advance in the development of the chemical and pharmaceutical industry in the country. A proposal for the manufacture of Vitamin A. Cortisone and its derivatives, Vitamin B_2 and B_{12}, etc., with foreign collaboration has also been licensed by Government for establishment in the private sector.

"In addition to these major public sector schemes, proposals for the expansion of Benzene Hexachloride production for the manufacture of rubber chemicals, argon gas and of foundry fluxes have been approved in the private sector. Licences have also been granted to various firms for the production of Phosphorus Trichloride, Mono Chloro Acetic Acid, Acetyl Chloride, Tetra Chloro Ethane, Mercury Salts and Water Treatment Chemicals.

"The Indian Explosives Ltd., in which the Government of India has shares to the extent of 20 per cent. with its factory at Gomia, was declared open by the President in November 1958. A scheme for its substantial expansion for the production of safety fuses and gunpowder has also been licensed during the year.

"With the completion during the year of the expansion scheme at one of the chemical works, the total installed capacity of soda ash has risen from 108,000 tons to 111,000 tons per year. Considerable progress has been made in the erection of the two new factories for the production of soda ash at Porbandar and Varnasi. Both these factories are expected to take trial runs shortly. With the completion of two expansion schemes, the total installed capacity for caustic soda has also increased from 45,350 tons in 1957 to 68,965 tons per year in 1958, as against the second Plan target of 150,000 tons per year.

"A scheme for the manufacture of rubber chemicals in the private sector has been approved. The country's current requirements of these products are estimated at Rs. 80 lakhs per annum.

"Various schemes for the utilisation of alcohol for industrial purposes namely, manufacture of Polyethylene and chemicals like acetic acid based on alcohol have already been licensed to provide a ready demand for increasing production of alcohol.

"The capacity and production of oxygen and dissolved acetylene gases has substantially increased in 1958 as a result of implementation of some of the expansion programmes and also due to rapid rise in the demand for these gases in the various engineering industries and structural engineering works. One of the principal oxygen producing firms is now going to undertake productions of Argon gas and this is expected to commence next year.

"In India, so far only the simple fluxes for soldering tins were being manufactured, while all other fluxes were being imported. From this year, the principal gas producing firms have started manufacture of welding fluxes suitable for welding

U.K. IN A DILEMMA

From Our Own Correspondent

LONDON, 27*th March*

LONDON LETTER

BRITAIN'S dilemma in the financial year which is about to open will be to reconcile essential measures to expand output with the need to preserve a healthy balance of payments. That is the conclusion of the National Institute of Economic and Social Research in its latest quarterly *Review*. The *Review* finds that there are no definite signs of an upswing in the economy: the total of persons unemployed over six months has grown by 100,000 and, perhaps even more significant, that the total published figure of 550,000 unemployed conceals about as many again who are not at work either because they have retired sooner than they would normally have done, or who prefer to live on their savings and look around for a congenial job instead of registering as unemployed. If this assessment is correct, it would mean that the army of unemployed is likely to grow very rapidly in the autumn.

The maintenance of output in recent months is due to the continued high level of consumer spending, supported by easier hire-purchase and eager bank advances. Neither of these factors can do more and, obviously, the limits of drawing on future income will soon be reached. Moreover, investment in manufacturing industry continues to decline—a result of current underemployment of resources—although total investment in fixed capital this year may rise over last, as a result of increased Government expenditure on roads and other public work.

A fillip to consumer spending and to investment may be given in the coming Budget (the *Review* guesses at tax reliefs of perhaps £200 million which it says will be insufficient to arouse any serious industrial revival), but the Government's dilemma in taking those positive measures which are open to it is that a reflationary dose into the economy could upset the balance of payments. This would be the result of pushing up imports *more* than in proportion to any increase of output, while exports would be unlikely to improve anyway. As evidence of its contention that the import growth would be relatively excessive, the *Review* instances the growth of imports since 1954. In that year they totalled £3,374 million, while, by 1958, they had grown to (*at 1954 prices*) £3,862 million. *But*, if they had only increased *pro-rata* to the growth in national output, they should only have reached £3,553 million. In other words, there was an excess of over £300 million.

No Sign of Improvement

One must not strain this argument too far, since, if exports rise to keep pace, it simply means that the economy is becoming more dependent on international trade. But the excess has been due mainly to higher food imports (as living standards have improved), to more oil imports against less home produced coal, and to a significant rise in finished manufactures. If such imports increase productive efficiency and thereby exert an impetus on exports, there will be no harm done. But there the U.K. is, to a large extent, in the hands of world trends and the *Review* notes sadly that the American recovery is slackening and there is no sign of improvement in Europe.

However, to see the problems is no substitute for policy. The London and Cambridge Economic service has made its own comment that there are *no* factors at work which could raise output to the limit of capacity and that there is unlikely to be any improvement without some "new initiative by the Government and monetary authorities"—at which point the dilemma arises. The Government will have to find a policy and they will not wish to use those weapons of physical control on which their political opponents would rely. It remains to be seen what they can do to stimulate expenditure on investment and research immediately, while avoiding an excessive impact on imports.—*All Rights Reserved.*

The maximum amount of sterling bank notes which the U.K. travellers are allowed to take out has been doubled from £10 to £20. The measure is in compliance with an O.E.E.C. recommendation that the member-countries should permit the export of about £18 in domestic bank notes per head. The resident travellers, however, are still not allowed to sell abroad notes in exchange for foreign currency; they can use the money on British ships and aircraft and for expenses in the U.K.

AMERICAN LETTER

WALL STREET SHOWS SIGNS OF FALTERING

FOREIGN TRADE COMMUNITY IN DILEMMA

From Our Special Correspondent

NEW YORK, 25*th March*

BUSINESS activity in the United States continues upward but in a very selective fashion. In recent days, the stock market has been faltering. Bond yields are near their post-war highs, while certain stock yields have been falling, some to rather ridiculously low levels.

The last time this happened, the markets reversed themselves. It could happen again. From the overall viewpoint, the trading and investment markets will be subject to many influences.

Refinancing requirements of the U.S. Treasury short-term debt, as usual, will be enormous. In addition, there will be new financing needs for the looming Federal deficit.

With bond yields far above stock yields, there is great temptation among investment managers to switch from stocks to bonds. The market for home mortgages is good, indeed. Housing starts in February were at an annual rate of 1,320,000.

This means there will be considerable demand for mortgage money, too. On top of this, State and Municipal Governments will be in the market for obligations of various descriptions. As mentioned in previous despatches, indications still are that, in 1959, there will be a deficiency of savings, measured against the potential demand from the abovementioned quarters *plus* that from the corporations which will be in the market for machinery and equipment.

The overall business upturn is best illustrated by the Federal Reserve index of industrial production. It reached 144 per cent. of the 1947-49 average. The recovery brought it within two points of the previous high of February 1957.

Business capital investment is expected to expand by 4 per cent. over 1958, to $31,800 million. But this is still well below the 1957 record level of $37,000 million.

Steel production is still gaining and has now reached the level of about 92 per cent. of capacity, as compared with a recession low of 50 per cent. Besides, that 92 per cent. is related to a new 100 per cent. of expanded capacity.

Automobiles

Output of automobiles is also rising and is well above last year's level. Yet, unemployment in these industrial areas shows no signs of diminishing. There are also no indications that improved retail buying of cars will keep up through the spring and summer. This is, particularly true, it seems to me, now that the big three motor car manufacturers, Chrysler, Ford and General Motors, have decided to introduce small economy cars this year.

It is just barely possible these announcements will keep people from buying present expensive models. The latter are monstrosities in every respect but that of the mechanical power plant. Their fuel consumption is wasteful. They are impossible to get into or out of after the age of 35 and their sizes are one of the contributing factors to the congestion and parking problems in populated areas.

It may also be noted that much of the steel buying represents hoarding against the possibility of a prolonged steel strike beginning 1st July. If, by any chance, there should be no walk-out, the prospect is that production would fall off again until inventories are consumed. My impression after a meeting with a high official of U.S. Steel is, however, that management has no intention of giving in to such demands as a 36-hour week and three months' paid vacations every three years which have been tossed out as trial balloons.

Two really cheerful areas of the U.S. economy are retail trade and construction. Including home building, overall construction activity is almost 10 per cent. above last year's levels and, reflecting consumer confidence, expanding sales in department stores from coast to coast are 9 per cent. higher than in 1958.

To get a true picture, inflationary price increases in both fields must be taken into consideration. For construction, that figure is probably not higher than 3 per cent. In retail trade, I would venture 1½ per cent. would be the right amount to deduct. Thus, the gains are still substantial in constant dollars.

Higher retail trade is probably explained by the continually rising personal income figures. Those were at an annual rate of $364,500 million in February, as compared with $347,500 million in February 1958. This includes all income from payrolls, rents, investments and—the "built-in-stabilisers," such as unemployment insurance.

The unemployed last month were still at the uncomfortably high figure of 4,749,000 in relation to the labour force of 62,722,000. The corresponding figures last year were 5,173,000 and 61,988,000. It is an improvement to be certain, but it does not correspond to the recovery in industrial production.

Import Curbs

The U.S. foreign trade community is in a distinct dilemma. Higher wages and costs have priced more and more American goods out of the world markets. This does not apply so much to highly complicated electronic computers which few countries produce, but to such simple things as nails and simple tools which other countries can provide at lower prices. The result is that the protectionists have been heard again loudly. Thus, import curbs have been established, for example, on lead, zinc and petroleum.

Mandatory limits on oil imports, superimposed on the previously existing State conservation laws, which control output by the flow of supply and demand, have created a widely attacked air-tight system of Government regulation which, the industry fears, will probably lead to higher prices for consumers.

The rising flood of imports has been particularly spectacular in textiles, automobiles, steel, metal fabricating and construction materials. The textile industry is a classical example. The U.S. Department of Agriculture sells from its own surplus stocks vast amounts of cotton at below world market prices to overseas buyers. U.S. foreign aid has provided funds for up-to-date plants abroad which process this cotton and then import the goods at much lower prices than the U.S. manufacturer can produce them.

This is, of course, a normal economic process which has been going on for decades, but those who are affected try their utmost to invoke new provisions of the recently renewed Reciprocal Trade Act. Erection of import barriers is justified therein if the U.S. Office of Civil and Defence Mobilisation should find that imports may be an actual or potential threat to national security. That is a question of semantics. The textile industry claims, for example, it is essential to national security because it has been making uniforms for the armed forces.

Meanwhile, national security questions have been aired thoroughly as a result of the discussions between British Prime Minister Macmillan and President Eisenhower. The media of communication have placed real emphasis on the possibility of war over Berlin. Nobody can tell what will happen of the consistent behaviour of strength by the West clashes with the inconsistent behaviour of the East. There has never been logic in the events leading up to outbreak of any major hostilities, except assumed expediency, at the time, on part of the aggressor.—*All Rights Reserved.*

PERSONAL INCOME IN U.S.

"The most notable feature of the recent recession, and the two earlier post-war declines, was that personal income decreased far less than output. Salaries and wages fell off only moderately, and a portion of this decrease was offset by unemployment compensation. The moderate character of the drop in labour income occurred at the expense of corporate profits, which thus acted as a strong cushion in preserving consumer spending power. The reduction in profits was, of course, shared by the Federal Government through the operation of the corporate income-tax. The greater stability of personal income than output today is one of the most important changes that have occurred in the economy of the United States over the years. It is among the main reasons for believing that the recessions of the future will also be only temporary interruptions in our economic growth." —*Irving Trust Company, New York.*

CHEMICALS
THAT HELP INDUSTRY TO BRING
A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

CHEMICALS FOR EVERY INDUSTRY

INSTALMENT CREDIT SYSTEM

A SERVICE OF IMMENSE BENEFIT TO ALL

By S. N. K. Sundaram
MANAGING DIRECTOR, PANDYAN BANK LTD.

AMONG the various banking services available in Western countries, instalment loan is the most popular one. It is called by several names in American countries where it is perfected. Some of the names by which they are widely advertised are—instalment loans, consumer credit, hire-purchase, time credit, time plan, personal loans, etc. A simple definition of instalment loan would amount to a credit extended to individuals, repayable in monthly instalments generally amounting to no more than 20 per cent. of the monthly income of the customer. This facility is normally made available to individuals for acquiring consumer goods and durable goods. It is also extended in American countries for home repair, doctors' bills, travels, insurance premia, etc. Instalment credit or hire-purchase is also made available for purchase of machinery, etc., for manufacture and improving industrial production.

There are two categories of loans in this line, namely, direct loan to the actual consumer and dealers' loan. In the former case, a loan is disbursed directly to the borrower and, in the latter case, a dealer of goods makes the sale to his customer on instalment basis and the Bank purchases this credit from the dealer with the dealer's guarantee. In a country like the United States, where branch banking is very much restricted in most of the States and the population is so much spread out, dealers' credit has become inevitable.

Simple Procedure

The procedure adopted for availing a credit is very simple. The moment a person decides on purchasing an article like radio, he goes to the dealer and chooses the model he desires and obtains an invoice. He then meets his banker with the invoice and finalises the down payment and the instalments for the balance. After the initial payment is made either to the dealer or to the bank, the balance is paid to the dealer by the bank on behalf of the borrower and the receipt obtained from the dealer for the value of the goods sold to the customer which forms part of the document and evidence of the loan.

The advantages to the borrower for purchasing goods on instalment basis are many. He can purchase the goods the moment he desires or decides to have. He can purchase a quality article. He can claim concession in the price of the article as it will be a cash purchase. He can pay for it in easy instalments to the bank and can also enjoy the full use of the article as he pays for it. He improves his standard of life automatically and takes away the drudgery of time at home, with increasing amenities and consequent enlightenment.

It is a means of forced savings, because the useful life of most durable goods purchased is much longer than the period of repayment. The borrower will not have to pay any usurious rate of interest for his needs.

Benefits Banks

Advantages to the banks are equally many. It is essentially a service to the middle class, which is the most neglected class today. It makes life worth living for such families. The bank stands to gain the loyalty of both deposit and borrowing customers, apart from continuous expansion of the clientele of the bank. It is such a widely distributed risk that a bank may not get upset on any delinquent accounts. Because of easy payments, it helps develop integrity of customers and above all, in a country like ours, the banking habit develops considerably along with improvement of standard of life.

But the maximum advantage is to the country. Especially with a vast population like ours, internal consumer potential must be developed and kept increasing continuously. There is almost a wild cry for production without any kind of marketing technique. The 'selling' aspect of production is not thought of. But, in a country like the United States, there is always an emphasis on 'selling.' By increased sales, production also increases and that increased production brings down cost of production is a natural corollary. Technological discoveries and developments take place side by side. These would provide incentive for greater capital formation and thereby help larger development of industries.

As productivity increases, it can be shared with the public in the form of lower prices or better quality or both. Along with this, employment would increase with more pay and more leisure for the worker. This would in turn lift real income above subsistence level. But there would be no purpose in putting more money in the hands of the worker without the discretion and choice to use it and the free time in which he could spend it. He must be able to spend conveniently on shelter, transport, household services and recreation which in turn help improve living conditions. The concept of mass consumption through more real income to workers as an active and motivating force can be developed only by instalment credit.

In the light of this, it would be unreasonable to declare that instalment credit would lead to inflation. On the other hand, the fountain source of inflation is Government deficit financing and Government spending on various projects and housing. The special factor in our country is the undue encouragement to labour by legislative measures without reference to productivity. But even the worker on whose laps more money is thrown has not enough choice of articles to buy. Inflation sets in when too many bid for the same article or when too much money chases too few articles. In the name of currency stabilisation, imports are curtailed with stricter direct controls and high tariff walls creating scramble for consumer goods—which again lead to inflation in imported goods. These protective measures naturally take away the anxiety for quality and lead to inflationary tendencies.

Valuable Experience

The Pandyan Bank introduced instalment credit in the year 1953 in South India and has developed it very effectively and successfully so far. It began with hire-purchase of machinery for printing, transport vehicles and consumer goods, and in a very small way home improvement. It can proudly claim to have created certain outstanding records of service through its instalment lending. For example, a lithographer who set up his press with a nucleus of one old litho press proudly possesses today 13 machines in four years, some of them most modern and directly imported ones. Similarly, transport people, who were carrying on with one or two trucks, have become large fleet owners and goods are being carried from any South Indian town to distant Bombay and other areas. Many people can claim to have been able to possess consumer articles like radios, bicycles, etc., by the Pandyan Bank's instalment plan which helped increased sales to dealers. In short, there is great appreciation for this service.

The procedure adopted is simple and the experience is most favourable. Considering the very large number of borrowers in these five years in this system of advance, defaulters are hardly a few. The amount of default involved is too small to mention. But, so far, there has not been any loss or bad debt whatever under this portfolio. The reason may be obvious. Excepting a few credit corporations who are very expensive, there is no competition in this line of lending. The Pandyan Bank's terms and conditions are most favourable. Naturally, the quality of clientele that makes the approach is of a high order.

But experience has proved beyond doubt that this system of lending has developed respect for due dates even among people in the underdeveloped interior villages of the country.

Incidentally, even in a country like the United States, the total instalment credit is only 12.6 per cent. of the total advance of all banks. The U.S.A. claims instalment credit as one of the most important single factors in the tremendous growth of its economy which has revolutionised its people's way of life. Therefore, even if a number of banks of our country launches on this programme of instalment credit, it may not substantially affect the ratio of loans and advances portfolios. But instalment credit is a 'must' for prosperity and useful living of our people and growth of the country.

PUNJAB NATIONAL'S PROFIT SHADE LOWER

PACE OF RISE IN DEPOSITS SLOWS DOWN

NOTWITHSTANDING the credit restraint and the high operating expenses, without any corresponding increase in the rate of interest on advances, the performance of the Punjab National Bank Ltd. during the year ended 31st December 1958 seems to have been quite satisfactory. No doubt, the Bank's profit has suffered a setback from the peak level of Rs. 1.11 crore earned in 1957 to a little over Rs. 1.06 crore, but this decline is negligible as compared with that in the case of many other banks. The fact that the profit has been maintained at well over Rs. 1 crore, which is higher than that earned in any of the years preceding 1957, is itself creditable. The Bank has been able to do this by maximising its investments in Government securities. A larger decline in profit has also been averted by the substantial profit earned on sale of investments, bullion, etc.

While the profit has declined by less than Rs. 5 lakhs, the provision for taxation has been reduced from Rs. 50 lakhs to Rs. 33.50 lakhs and the allocation to the reserve fund from Rs. 22.50 lakhs to Rs. 17 lakhs. The provision for bonus to staff has, however, been raised substantially from Rs. 18 lakhs to Rs. 30.75 lakhs. The dividend has been maintained at 20 per cent. on the increased capital of Rs. 1.25 crore following the capitalisation of share premium of Rs. 37.50 lakhs during 1957. It must, however, be noted that, while the final dividend of 10 per cent. in respect of 1957 alone was on the increased capital, both the interim and the final distributions for 1958 are on the higher capital, requiring an additional sum of Rs. 3.75 lakhs, as will be seen from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955

Cash	10.1	19.6	11.0	10.3

* Ratio arrived at after taking into account investments earmarked against borrowings from other banks. The comparative ratios for 1956 and 1955 are not available because of the clubbing of investments and usance bills against which the borrowings were made.

The fall in reserves, consequent on the capitalisation of the share premium account, has been more than made good by the addition of Rs. 22.50 lakhs from the profit for 1957 and of Rs. 17 lakhs out of the profit for 1958. The pace of increase in the Bank's deposits slowed down considerably during the year under review, the rise in deposits in 1958 being no more than Rs. 4.58 crores, as against Rs 18.22 crores in 1957 and Rs. 16.26 crores in 1956. Even this small expansion has been mainly due to the increase of Rs. 4.02 crores (to Rs. 64.08 crores) in fixed deposits and of Rs. 2.44 crores (to Rs. 33.31 crores) in savings bank deposits. Current and other accounts have declined by Rs. 1.92 crore to Rs. 31.36 crores. The expansion in deposits is supplemented by borrowings to the tune of Rs. 6 crores, secured by part of the Bank's holdings of Government securities. Loans, cash credits and overdrafts have declined from Rs. 59.71 crores to Rs. 57.80 crores, while bills purchased and discounted have risen from Rs. 8.25 crores to Rs. 8.96 crores. Cash balances have shrunk by Rs. 11.46 crores, but there has been an addition of Rs. 23.71 crores in investments, so that the total liquidity ratio stands higher at 53.8 per cent., as against 50.6 per cent. a year before. The investments are shown at or below cost; their market value at the end of the year was Rs. 72 lakhs higher than the book value.

TRAVANCORE BANK

PROFIT MARKED DOWN

AFTER maintaining an upward trend for three years in succession, that is, from Rs. 7.36 lakhs in 1954 to a record level of Rs. 14.82 lakhs in 1957, the profit of the Travancore Bank Ltd. suffered a reversal during the year ended 31st December 1958 to Rs. 10.24 lakhs. The drop of Rs. 4.58 lakhs in the year under review has taken the Bank's profit to the lowest level since 1955. The profit has been found inadequate to make the usual and necessary appropriations and to maintain the dividend at 5 per cent. The Directors have, therefore, drawn a sum of Rs. 3.50 lakhs from the contingency reserve to meet a part of the tax liability of Rs. 6.50 lakhs.

The transfer to the reserve fund has been pruned from Rs. 2.97 lakhs to Rs. 2.05 lakhs. No provision has been made for depreciation on investments, for which purpose a sum of Rs. 20,000 had been set aside in each of the previous two years. The Directors do not consider it necessary to make such a provision, as any losses on redemption are being written off from current profits as and when securities mature. After repeating the allocation to the gratuity fund at Rs. 5,000, the Directors have maintained the distribution to the shareholders at 5 per cent. per annum.

The following comparative table gives an idea of the Bank's progress in recent years.

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned ..	35.98	32.06	25.79	23.81
Commission and exchange ..	4.78	7.00	5.15	4.64
Interest paid	18.89	13.51	9.80	8.82
Expenses	11.45	10.53	8.06	9.22
Depreciation	0.19	0.21	0.29	0.35

Transfer from contingency reserve	3.50	..	..	..
To provision for taxation ..	6.50	7.00	4.00	4.00
,, reserves	2.05	2.97	2.40	2.05
,, depreciation on investments.	..	0.20	0.20	0.25
,, bonus to staff and gratuity.	0.05*	0.05*	0.40	0.40
Dividend	5.00	5.00	4.00	4.00
	(5%)	(5%)	(4%)	(4%)
Carry forward	0.19	0.08	0.45	0.44

	As on 31st December			
	1958	1957	1956	1955
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	27.72	29.17	26.20	23.80
Deposits	6,60.30	6,05.48	4,65.54	4,76.70
Borrowings from other banks ..	..	..	10.00	..
Advances	3,20.05	3,33.60	2,63.81	2,51.57
Investments (less depreciation).	3,02.06	2,44.12	2,60.32	2,55.69
Cash	1,78.83	1,75.28	97.25	1,10.44
Balance-sheet total	9,18.92	9,05.12	8,01.66	7,40.81
Ratio to deposits of—	%	%	%	%
Advances	48.6	55.1	56.7	52.8
Investments	45.8	40.3	53.8	53.6
Cash	27.1	28.9	20.9	23.2

* Gratuity only.

The upward trend in the Bank's income from interest and discount has been maintained with a rise of Rs. 3.92 lakhs, though this increase is only a little more than half of that recorded in 1957. The bulk of the rise in income from this source has, however, been offset by the fall of Rs. 2.22 lakhs in commission and exchange earned and by the substantially larger outgo in the form of interest paid, which has gone up by Rs. 5.38 lakhs.

The addition of Rs. 2.05 lakhs from the year's profit has strengthened the Bank's reserve fund to Rs. 24.97 lakhs, while the contingency reserve stands reduced to Rs. 2.75 lakhs following the transfer of Rs. 3.50 lakhs to provision for taxation. The total reserves thus amount to no more than Rs. 27.72 lakhs. The rise of Rs. 55 lakhs in deposits is mainly accounted for by fixed deposits, thrift deposits and cash certificates, and savings bank deposits, which have gone up by Rs. 1.56 crore to Rs. 3.94 crores and by Rs. 2.43 lakhs to Rs. 45.86 lakhs, respectively. Current and other accounts have, however, declined by Rs. 1.04 crore to Rs. 2.20 crores.

On the assets side, the Bank's total advances, at Rs. 3.21 crores, show a decline of Rs. 13 lakhs over the year, thanks to the fall of Rs. 20.83 lakhs to Rs. 26.03 lakhs in bills purchased and discounted. Loans, cash credits and overdrafts show a slight rise from Rs. 2.87 crores to Rs. 2.95 crores. Investments (shown at or below cost) have been strengthened from Rs. 2.51 crores to Rs. 3.09 crores. The gap between the book value and the market value of the securities held by the Bank has narrowed down from Rs. 15.62 lakhs as on 31st December 1957 to Rs. 9.15 lakhs, as against which there is a depreciation reserve of Rs. 6.65 lakhs. This, together with the balance of Rs. 2.75 lakhs in the contingency reserve, is more than adequate to cover the gap.

DEPOSITS OF UCO. BANK RISE SHARPLY

MARKED FALL IN PROFIT

THE Directors' report and accounts of the United Commercial Bank Ltd. for the year ended 31st December 1958 disclose a sizable expansion not only in its branch banking but also in the volume of business. During the year, the Bank opened no less than fifteen branches in various parts of India. Its deposits expanded by as much as Rs. 17.20 crores, accompanied by a rise of Rs. 7.47 crores in advances and of Rs. 15.69 crores in investments. Unlike in the case of many other leading banks, the pace of expansion in deposits of the United Commercial Bank was much more than that in the previous years. The rise in advances, too, is in refreshing contrast to the general trend. Nevertheless, the Bank's profit has suffered a marked decline from Rs. 59.70 lakhs to Rs. 45.38 lakhs, thus reversing the upward trend noted since 1953 when the profit aggregated no more than Rs. 23.01 lakhs.

The decline in profit has resulted in a reduction in the tax liability from Rs. 18.50 lakhs to Rs. 9 lakhs and a cut in the allocation to the reserve fund from Rs. 19 lakhs to Rs. 14 lakhs. This is the second year in succession in which the addition to the reserve fund has been reduced. An increase of Rs. 25,000 has been made in the provision for bonus to staff. The dividend is unchanged at 7½ per cent., to which level it had been stepped up (last year) successively from 4 per cent. paid for 1953.

The Bank's earnings from interest and discount have increased by Rs. 52 lakhs during the year under review, as against Rs. 75 lakhs in the previous year. The income from commission and exchange has further declined, but the decline (Rs. 1.12 lakh) is negligible as compared with that (Rs. 12.47 lakhs) in 1957. There has been a rise of Rs. 54 lakhs in "interest paid" and of Rs. 16 lakhs in establishment expenses. It will be of interest to note that the outgo by way of interest paid has risen by Rs. 1.31 crore in the course of the last three years, that is by more than 150 per cent. This is quite out of proportion to the rise of only 64 per cent. in deposits themselves. Another interesting feature is that "interest paid," which had crossed over other expenses for the first time in 1957 and stood Rs. 26 lakhs higher, exceeded the latter by no less than Rs. 64 lakhs in the year under review (the United Commercial is not the only Bank which has had such an experience), as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned ..	3,08.80	2,57.24	1,81.98	1,63.90
Commission and exchange ..	1,06.65	1,07.67	1,20.14	78.53
Interest paid	2,17.21	1,83.12	1,17.81	86.29
Expenses	1,53.21	1,36.72	1,22.27	1,19.85
Depreciation and repairs ..	7.91	6.65	6.76	7.07
Profit	45.38	59.70	56.52	36.69
Provision for taxation ..	9.00	18.50	16.00	14.00
To reserve fund	14.00	19.00	20.00	8.50
,, bonus to staff	7.25	7.00	6.50	4.00
Dividend	11.00	15.00	14.00	11.00
	(7½%)	(7½%)	(7%)	(5½%)
Carry forward	0.62	0.40	0.29	0.28

	As on 31st December			
	1958	1957	1956	1955
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserve fund	1,48.00	1,34.00	1,15.00	95.00
Deposits	78,37.97	61,07.45	52,14.76	47,69.24
Borrowings from other banks ..	5,76.21	34.05	8,50.12	4,25.56
Advances	45,15.94	37,69.00	38,45.32	27,59.19
Investments	35,62.87	19,94.21	19,43.17	22,16.73
Cash	8,33.86	8,28.40	7,50.88	6,21.16
Balance-sheet total	114,15.01	90,22.61	91,51.42	81,68.74
Ratio to deposits of—	%	%	%	%
Advances	57.7	61.7	73.7	57.8
Investments*	38.3	32.1	27.8	37.6
Cash	10.7	13.5	14.4	13.0

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

The substantial rise in interest paid, during the year under review is due to the sharp rise of Rs. 17.07 crores (to Rs. 46.55 crores) in fixed deposits and of Rs. 75 lakhs (to Rs. 6.56 crores) in savings bank deposits. Current and other accounts have dropped by Rs. 62 lakhs to Rs. 25.16 crores. The rise in deposits has been supplemented by larger borrowings from other banks, which have gone up from Rs. 34 lakhs to Rs. 5.76 crores. The increase in advances is shared by loans, cash credits and overdrafts, which have risen by Rs. 5.20 crores to Rs. 29.89 crores, and bills purchased and discounted which are up by Rs. 2.26 crores at Rs. 15.26 crores. The Bank's investments, which, as usual, are shown at below market value, have been strengthened by Rs. 15.69 crores, but this has not affected the cash balances.

THE CHARTERED BANK

JOINT VENTURE IN IRAN FLOATED

THE continued upward trend of working costs, particularly salaries and wages, coupled with a fall in interest earned, has resulted in a decline in the consolidated profit of The Chartered Bank and its subsidiaries for the year ended 31st December 1958. The group profit, which had risen from £804,641 to £1,000,890 in 1957, has dropped to £993,590 in the year under review. This decline, it may be noted, has occurred, despite a further expansion in the Bank's business, as indicated by the rise in its balance-sheet total to £243.12 million from £231.62 million, which was itself a record.

The setback in profit has been made good to a large extent by the larger surplus of £438,458, of which that relating to the Chartered Bank alone is £412,542 (as compared with £432,068) brought in from the previous year, so that the sum available for appropriation, at £1,432,048, is only a shade lower than the corresponding sum of £1,432,958.

The Directors have maintained the depreciation on Bank premises at £250,000, as also the appropriations to the officers' pension fund and widows' and orphans' fund at £125,000 and £20,000, respectively. The transfer to the contingency reserve has, however, been reduced from £220,000 to £150,000. The distribution to shareholders has been repeated at 15 per cent., but the final dividend of 7½ per cent. is on the increased capital of £5 million, the interim one being on the old capital of £4.4 million. The dividends absorb £405,375, as against £379,500 a year before, leaving a larger surplus of £481,673, of which £455,019 relate to the Chartered Bank.

The salient features of the Bank's balance-sheet as at the close of the last four years are compared in the following table:

(In thousands of £s sterling)

	As on 31st December			
	1958	1957	1956	1955
LIABILITIES (Main)				
Capital	5,000	4,400	3,500	3,500
Reserve fund	5,500	5,700	5,000	5,000
Undistributed surplus	455	412	409	405
Current and other accounts ..	176,296	178,329	175,370	172,434
Fixed deposits	42,838	26,843	22,344	30,658
Notes in circulation	3,806	3,731	3,267	2,906
Bills payable	1,557	1,810	1,817	1,705
Acceptances (contra item) ..	7,365	10,143	10,983	7,109
ASSETS (Main)				
Cash	48,783	47,458	36,956	40,207
Investments—				
Government and other securities	57,857	47,454	48,590	58,411
Securities lodged against note issue	3,882	3,876	3,428	2,684
Advances	93,809	97,784	103,950	91,871
Bills of exchange	24,130	18,282	13,785	17,026
Bank premises	2,887	2,621	2,303	2,180
Holdings in subsidiaries ..	2,885	2,883	1,278	1,269
Trade investments	197	8	10	13
Balance-sheet total	243,118	231,623	222,989	223,069

The Bank's paid-up capital was raised during the year under review from £4.4 million to £5 million by the capitalisation of £600,000 out of the reserve fund. The withdrawal from the reserve has been restored partially by transferring £400,000 from the inner reserve, so that the reserve fund as at the end of the year stands at £5.5 million. The total deposits of the Bank have increased by £13.96 million to £219.13 million, thanks wholly to the rise of £16-million in fixed deposits to £42.84 million. Current and other accounts, have however, shrunk by £2.03 million to £176.30 million. Acceptances also have declined by £2.78 million to £7.36 million.

On the assets side, the Bank's advances have fallen from £97.78 million to £93.81 million. This is the second year in succession to witness a drop in advances; in 1957, they fell from £103.95 million to £97.78 million. It is, however, comforting to note that the pace of decline in advances was slower during 1958 than in the previous year. Bills of exchange, at £24.13 million, are higher by £5.85 million, investments stand strengthened by £10.40 million, at £57.85 million, and cash balances by £1.33 million, at £48.78 million, so that liquidity was at a high level. The ratio of cash balances (including money at call) to the Bank's demand and time liabilities, excluding the notes in circulation against which security has been lodged, is, however, a shade lower at 22.1 per cent., as against 22.9 per cent. at the close of 1957. The increase in bank premises is due to the Bank's continued expansion and the modernisation of its properties in the East. Of the trade investments amounting to £196,664, shareholding (at cost) in the Irano-British Bank accounts for no less than £190,476.

The Irano-British Bank is a joint venture of the Chartered Bank and some influential

(Continued on page 579)

WOOLLEN TEXTILES OUTPUT EXPANDS

MORE UNITS IN OPERATION

THE continued efforts on the part of woollen manufacturers (organised sector) to maintain a high level of output are commendable. The actual production of woollen and worsted fabrics during the calendar year 1958 amounted to over 19.36 million yards, as against 16.14 million yards in the previous year, representing a rise of as much as 20 per cent. The improvement in fabrics production followed an increase in the quantity of yarn spun which aggregated 29.14 million lbs., as against 27.84 million lbs. The whole of this increase was accounted for by worsted yarn, the quantity of this yarn that actually came off the spindles being higher by 2.82 million lbs. at 17.55 million lbs. The production of woollen yarn, however, suffered a distinct setback, from 13.11 million lbs. in 1957 to 11.59 million lbs. in 1958.

The upward trend in the output of woollen textiles during 1958 was rendered possible by a further expansion in the installed capacity of the industry. The number of woollen and worsted spindles in existence increased by 2,002 and 1,662 to 62,981 and 119,201, respectively. This increase was brought about partly by the establishment of new units and partly by the expansion of the existing units. The number of purely spinning mills in December 1958 was 33, as against 15 in the corresponding month of 1957. The number of purely weaving mills rose from 78 in December 1957 to 104 in December 1958. No information is available about the number of looms installed, but it is unofficially estimated at about 5,400, as against 4,042 in 1957. There was, however, no change in the number of composite mills which stood at 26.

The woollen textile industry has at present a total rated capacity of 20.20 million lbs. of yarn and 24.00 million yards of fabrics, on the basis of single shift of eight hours and taking the number of days worked as 300 per annum.

Out of the 19.37 million yards of woollen-worsted fabrics woven in 1958, nearly half—more than 9.59 million yards, to be precise—was accounted for by "mixings." The share of "woollen" and "worsted" goods was 3.04 million yards and 6.73 million yards, respectively. The following table indicates the production pattern of the industry during 1958:

Items		Production (in yards)
Woollen—		
Suitings		1,729,826
Uniform cloth		1,200,963
Lohie		110,768
	Total	3,041,557
Worsted—		
Suitings		5,518,825
Uniform cloth		348,703
Lohis		861,750
	Total	6,729,278
Mixing—		
Suitings		487,344
Uniform cloth		168,547
Lohis		339,208
Blankets and rugs		4,117,647
Hosiery goods		999,134
Other items		3,296,108
Shody		189,846
	Total	9,594,834
	Grand Total	19,365,669

The overall rise in the combined woollen-worsted yarn production noted in 1958 was accounted for entirely by the States of Bombay, Uttar Pradesh, West Bengal, and Jammu and Kashmir. The rise was particularly marked in Bombay. The quantity of yarn actually spun last year was 9.39 million lbs., as against 8.39 million lbs. in 1957. Yarn production was higher by 344,000 lbs. at 3.81 million lbs. in U.P., by 95,000 lbs. at 3.15 million lbs. in West Bengal, and by 23,000 lbs. at 412,000 lbs. in Jammu and Kashmir. The production of yarn was, however, lower in the Punjab and Mysore States, their shares being 9.44 million lbs. and 2.71 million lbs., as against 9.79 million lbs. and 2.75 million lbs., respectively in 1957.

An idea of the distribution of units engaged in the production of woollen goods in the different States as at the close of 1958 can be had from the table given below, the figures in brackets relating to those a year before.

	Purely spinning	Purely weaving	Composite units	Total
Punjab	20 (9)	100 (77)	10 (10)	130 (96)
Bombay	6 (5)	3 (..)	8 (8)	17 (13)
Uttar Pradesh	2 (1)	(..)	3 (3)	5 (4)
West Bengal	2 (2)	1 (1)	1 (1)	4 (4)
Mysore	1 (1)	(..)	2 (2)	3 (3)
Madhya Pradesh	1 (..)	(..)	1 (1)	2 (1)
Delhi	1 (..)	(..)	(..)	1 (..)
Jammu and Kashmir	(..)	(..)	1 (1)	1 (1)
Total	33 (18)	104 (78)	26 (26)	163 (122)

The foregoing table shows that the Punjab State is the major centre of the wool textile industry. It accounts for 100 weaving mills, 20 spinning mills and 10 composite mills out of a total of 104 units, 33 units and 26 units, respectively.

The export of woollen fabrics is being encouraged and export promotion measures are being taken by the Development Council for Woollen Industry. During the first eleven months of 1958, India exported 316,706 yards of woollen-worsted fabrics worth Rs. 46.31 lakhs.

As the second Five-year Plan targets for the woollen-worsted spinning and weaving mill sectors have been reached, no expansion in these sectors is considered desirable. The targets fixed for 1960-61 are 62,768 woollen spindles, 123.416 worsted spindles and 4,051 powerlooms. The annual rated capacity on double-shift working is 17.5 million lbs. of woollen yarn, 28.0 million lbs. of worsted yarn and 50.0 million yards of fabrics. The targets of actual production fixed are 12 million lbs. woollen yarn, 15 million lbs. worsted yarn and 20 million yards fabrics. The output target for wool tops is 9 million lbs.

MR. B. K. BIRLA ON TEXTILE SITUATION

There is no exaggeration whatever in the statement of Mr. B. K. Birla, President of the Bengal Millowners' Association, made at the annual meeting of this body, held at Calcutta last week, that, never before since the outbreak of the last war, was the cotton mill industry in greater distress than it is today. The distress is the cumulative effect of a number of factors which Mr. Birla summarised as follows:

1. Sharp increase in excise duty in September 1956.
2. Reservation of fields of production for the decenralised sector of the cotton industry.
3. Old and obsolete equipment employed by many mills.
4. Fall in the purchasing power of the people and the consequent inability of the consumer to buy his normal cloth requirements.
5. Wide disparity between the prices of mill cloth and handloom cloth, due to the increased level of excise and the conversion of sales tax into additional excise in December 1957, the handloom cloth being entirely free from excise duty and sales tax.
6. Rise in labour cost on account of wage increases unrelated to productivity and workload.
7. Fall in exports.

All these disquieting handicaps have resulted in the complete closure of many mills and drastic curtailment of operations in several others. It is no wonder, therefore, that the trend of mill cloth output continues to be downward. The quantity of cloth actually produced in the first two months of the current calendar year was 818 million yards (provisional estimate only), as against 828 million yards in the corresponding months of 1958. The fall in cloth output has occurred despite a slight improvement in the production of yarn which aggregated 286 million lbs., as compared with 282 million lbs. Apart from loss in output, there is the enforced idleness of thousands of workers.

It is true that the Government of India has reduced excise duty on cloth, but the reduction is not, as Mr. Birla stated, adequate; the annual revenue expected from the excise duty is still no less than Rs. 48 crores (excluding the additional realisation of Rs. 4.00 crores from the conversion of States' sales tax into excise duty) which is Rs. 20 crores more than the actual realisation in 1955-56. Mr. Birla urged that the excise duty should be lowered to the pre-September 1956 level. He also emphasised that wage levels should necessarily bear some relation to productivity. Regretting that all recent increases in rates of wages awarded by tribunals had been made on an *ad hoc* basis without any consideration for productivity, he observed: "It is strongly felt that the danger level has already been reached and any increase in the wage level unmatched by a corresponding increase in productivity would be disastrous not only for the industry but also for labour."

Mr. Birla referred to the special difficulties confronting the cotton mills in West Bengal. One such difficulty, we are told, is the lack of dyeing, bleaching, printing and finishing facilities which prevents the mills from producing cloth in accordance with the changing tastes and requirements of the consumer. Further, being situated at a long distance from cotton producing areas, the mills have to bear additional expenses by way of railway freight, insurance, storing charges, etc., in respect of raw cotton and stores. The other drawbacks are low workload and productivity of workers, inadequate allocation of imported cotton to mills, and uneconomic sizes of individual units. Mr. Birla was right when he declared that the only means by which the cotton mills of West Bengal could bring down production cost and keep their heads above water was replacement of old and antiquated machinery by modern and up-to-date equipment. And his plea for allotment of reasonable quotas of foreign cotton, chemicals, dyes, etc., to all mills (in West Bengal), exporting or non-exporting, deserves to be sympathetically considered by the Central Government.

Despite the present difficulties, Mr. Birla said, the future for the cotton industry was by no means gloomy. He was definite that the effective demand for cloth, both domestic and overseas, would go up in the coming years. He, however, hastened to emphasise the need for keying up the industry to the maximum pitch of efficiency and rightly called on producers and distributors "to study consumer preferences and take suitable steps to adjust production and supply accordingly."

MODERNISING THE COTTON INDUSTRY

"NO FIRM WOULD BE FORCED TO GO OUT OF BUSINESS"

From a Special Correspondent

MANCHESTER, 24*th March*

FINAL plans for redundancy and modernisation proposals in the spinning section of the Lancashire cotton industry are now awaiting replies from the Government on certain vital points. Mr. Ernest Hirst, President of the Master Cotton Spinners' Federation, said this at the annual meeting in Manchester, commenting that the principle was being strictly observed that no firm would be forced to go out of business. The form and extent of any modernisation to be undertaken was to be left entirely to the decision of individual companies, he added.

MANCHESTER LETTER

On the future of the cotton industry, Mr. Hirst said that it was all a question of confidence. "Not only we ourselves but the Government also and the public must have confidence," he continued. Lord Woolton, in his recently published memoirs had said that he became convinced in the difficult period between 1928 and 1938 that low price imports leading to unemployment in this country should be restricted. He agreed with Lord Woolton that, together with some degree of protection, a reduction in the price of goods made in this country could and should take place.

Protection from Unfair Competition

"We do not ask for any form of featherbedding and we are prepared to compete on level terms with Western Europe, but we ask to be protected against unfair competition," Mr. Hirst continued. The public, he said, would still buy Lancashire goods when the highest quality and reliability of texture and colouring were required. "We have failed to give the necessary assurance to buyers that the goods they purchase have been spun, woven, finished, and made-up in the United Kingdom. Many men and women, not only in Lancashire, would buy no other for general purposes, if the goods were plainly marked with a Union Jack."

There had been shortsighted and individualistic interests opposing this idea, but added Mr. Hirst: "We must brush them aside for the good of all and see to it that the public knows what it's getting and gets what it knows." The industry, he continued, had the know-how and the determination to install the most modern machinery and equipment, if there were reasonable prospects of running it economically. The best mills in Lancashire could compete with any in the world and had made a point of keeping up-to-date by means of special trade missions and individual visits to other industries throughout the world.

Investigation of cotton futures trading in Liverpool is a subject which many historians and economists have found singularly attractive. As a pioneer in the development of such activities, the progress and recent problems of the market have produced a lengthy list of literature. The latest in this long line comes in the current issue of the *Three Banks Review*, the contributor being Mr. B. S. Yamey. Apart from being a worthy addition to its predecessors by bringing the events of the past five years up to date and into perspective, this survey provides an objective approach to the issue at a time when Liverpool's future hangs in the balance. Mr. Yamey says:

"It would be a mistake to explain the reduction in market business mainly in terms of the reduction in size of the British cotton industry or the increase in the degree of concentration in that industry. The main reason is the post-war multiplication of Government intervention in most of the cotton producing countries, including the principal ones, the United States, Egypt and the Sudan. The control of cotton sales and selling prices has necessarily led to a contraction of futures trading which flourishes in conditions in which neither public nor private market controls are operative."

Since the reopening of the futures market, the Liverpool Cotton Association has tried to ward off the worst results of American farm policy by introducing changes in its practice, but, as Mr. Yamey points out, little has been, or could have been, achieved in the circumstances. A State-trading authority, he adds, would also have been operating in a most unfavourable setting, and the winding-up of the Raw Cotton Commission in 1954 spared it from the ordeal of having to cope with a series of most difficult situations affecting its stockholding and pricing policies. "Had it continued in operation as a monopolist State-trading body, the volume of criticism of its decisions and policies would have become greatly amplified."

Whether the ending of the yarn price agreement will prove to be the salvation of futures trading is a moot point. Mr. Yamey believes that it should bring some additional business to Liverpool, mainly due to more hedging transactions. On the other hand the growth of the large combines with their ability to carry market risks without hedging may adversely affect the turnover in futures. But the larger firms may become more anxious to shed some of their raw material risks in the new conditions of a more competitive yarn market and the heads of such firms, he points out, have often expressed the need for hedging purposes of an effective long-staple cotton contract.

No Export Relief

Disturbing trends in overseas trade in cotton goods are already apparent in the first two months of the current year. Contrary to hopes that the abandonment of the Yarn Spinners' pact would lead to a wider offtake for export purposes, there has been as yet no relief for shippers. Latest Board of Trade returns to the end of February provide further discouraging news. Already in the first two months of 1959, the value of all cotton yarns and manufactured goods sent abroad has declined from £13,824,056 to £10,363,776. Shipments of cotton yarns have dropped from 5,264,116 lbs. to 3,907,503 lbs. and cloth exports have fallen from 75,888,000 square yards to 55,239,000 square yards.

No comparable reduction has taken place in the volume of imports arriving from foreign sources. By the end of February, overseas suppliers had already sent 83,266,000 square yards of cotton cloth, as against 66,437,000 square yards a year previously; yarn imports had risen from 2,952,513 lbs. to 3,858,548 lbs. In each of the first two months, arrivals of foreign cloth exceeded comparable exports by substantial margins.

Far Eastern Menace

Recent warnings from the Lancashire trade mission to Australasia about the impact of Japanese competition are borne out by the latest figures. British exports of cotton cloth to Australia so far in 1959 have slumped from 13,244,000 square yards to 8,694,000 square yards, while New Zealand has taken 3,824,000 square yards, as against 5,715,000 square yards. Another major importer of Lancashire fabric, South Africa, has only absorbed 6,226,000 square yards, as against 11,893,000 square yards and smaller quantities have been taken by Rhodesia and Nyasaland, Ceylon, the Belgian Congo and French West Africa.

Yarn shipments have also fallen in the case of Australia, India and Nigeria, although, oddly enough, exports of Lancashire cotton yarn to Hong Kong have practically doubled at 100,000 lbs.

India remains the chief supplier of cotton grey cloth to Britain, shipments for the two months being 28,435,000 square yards, as against 23,796,000 square yards, but Hong Hong's share has risen sharply from 15,038,000 square yards to 25,360,000 square yards.

The decline in the labour force in the Lancashire cotton industry continues unchecked. The Cotton Board reported that the spinning and weaving mills lost more than 1,000 operatives in January, reducing the industry's labour force to 206,940. This is almost 34,000 workers fewer than at this time last year.

Comparative figures of cloth and yarn output reflect the reduced level of activity in the industry and the spate of mill closures. Production of cotton and mixture cloth in the four-week period ended 31st January averaged 36,890,000 yards weekly, a weekly decline of 7,180,000 yards on output in the same month of 1958. The average weekly production of cotton and mixture yarns at 14,380,000 lbs. was 2,850,000 lbs. down on the corresponding figure.

New Mill Deal

Combined English Mills (Spinners) Ltd., the Atherton mill group, has acquired the £19,900 share capital of the Chain Bar Mill Company Limited, a private concern established in 1865, manufacturing sponge cloths, scouring cloths, dish cloths, oven cloths, dusters and specialised industrial towels at its factory at Moston, Manchester.

In a statement, the directors of Combined English Mills said that this widening of the Company's interests was a continuance of a policy started some years ago. The services of Mr. Cyril Birtles, Managing Director of Chain Bar Mill, were being retained, while Sir Cuthbert Clegg, Mr. Ernest Hirst, Mr. John Mills and Mr. Fred Carter had joined the board, with Mr. W. Mallinson as Secretary.—*All Rights Reserved.*

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY 1943)

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their sixteenth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1958.

The net profit for the year, after providing for all known and anticipated charges, and including Rs. 49,432.18 brought forward from the previous account, amounts to .. Rs. 45,87,097.56

The Directors have transferred Rs. 14,00,000 to the Reserve Fund and provided Rs. 9,00,000 for Taxes and Rs. 7,25,000 for Bonus to Staff. They now recommend the payment of a Dividend at Rs. 3.75 per share, free of income-tax, which will absorb Rs. 15,00,000, leaving an unappropriated balance of Rs. 62,097.56 to be carried forward.

The Bank's business expanded during the year and the deposits rose from Rs. 61.07 crores to Rs. 78.23 crores but due to rise in the cost of money and the difficulty of utilising funds advantageously, the profits of the bank showed a decrease as compared to the previous year.

The Bank's investments appear in the balance sheet at below market value.

During the year branches of the Bank were opened at Deesa, Barakar, Cochin, Sri Ganganagar, Pudukottai, Hyderabad, Tiruchirapalli, Kumbakonam, Bikaner, Visakhapatnam, Muzaffarpur and in New Delhi at Karol Bagh, Ajmeri Gate Extension, Patel Nagar and Parliament Street.

The Directors are thankful to the shareholders and the clients of the bank for their continued support. They also express their gratitude to the bank's Advisors and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. T. S. Rajam, Mr. M. L. Dahanukar, Mr. P. D. Himatsingka and Mr. G. L. Bangur who offer themselves for re-appointment. Both Mr. M. L. Dahanukar and Mr. P. D. Himatsingka have attained the age of 60 years and special notices of Resolutions for their re-appointment have been given in terms of Sections 190 and 281 of the Companies Act, 1956.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

On behalf of the Board,

G. D. BIRLA,
Chairman.

CALCUTTA, 25th February, 1959.

BALANCE SHEET AS AT 31st DECEMBER 1958

		(vi) Bonus claims by employees for 1950, 1951 and 1952 not acknowledged as debts and disputed by the Bank before the respective Tribunals.				
		(vii) There is a liability for outstanding bills, not certified by the architects, in respect of the Bank's buildings.				
		(viii) Demand of Rs. 25,75,850.29 and Rs. 2,61,316.77 was made for assessment years 1952-53 and 1953-54 respectively by the Income-tax Officer assessing the Bank in India by adopting a totally new method. The Bank appealed against the assessments disputing the very basis of assessment and contending that there is no liability whatsoever. The appeal for 1952-53 assessment has been decided in favour of the Bank; but the Department has appealed to the Tribunal. No provision has been made for the relative demands. Accordingly, provision for later years has been made on the basis adopted all along in the past and accepted by the Department.

THIRD PLAN TARGET FOR COTTON TO BE REVISED?

VIEWS OF COTTON COMMITTEE

AGRICULTURAL production in India in general and cotton production in particular depend so much on the proverbial vagaries of the monsoon that it is rarely, if ever, that actual of production in any year approximates the target. Early in the season every year hopes of bumper crops are entertained which almost invariably get belied. The weather will take an unexpected turn for the worse at an unexpected moment, upsetting all yield and output calculations. For instance, cotton production during last season fell short of the target of 5.4 million bales by 200,000 bales, thanks to prolonged drought in Gujarat and heavy jassid and pink bollworm attack in the Punjab. Dr. M. S. Randhawa, President of the Indian Central Cotton Committee, had to tell the same story of non-realisation of the target in the current, that is, 1958-59, season when he addressed the seventy-ninth meeting of the Committee held in Bombay on 20th March. He reported that unprecedented rains experienced in September and early October 1958 caused very heavy losses in the Punjab, Rajasthan and Bombay so that, as against the target for the year of 5.73 million bales, actual production was estimated at only 5.1 million bales. Subsequent developments, it may be noted, have necessitated further downward revision of crop estimate. The latest estimate puts the crop at no more than 4.8 million bales.

While adverse weather was mainly responsible for the fall in production, the failure of distribution of seed and fertilisers to reach the target also seemed to have contributed to the drop in production. In Marathwada region of Bombay State, to cite one instance, as against the target of 290,000 maunds, only 60,578 maunds of improved seeds were distributed. Similarly, in Vidharbha, while the target was 167,320 maunds, only 37,018 maunds were distributed.

Although the country is in the third year of the second Plan, there is still a long way to go to achieve the Plan target of 6.5 million bales. It remains to be seen whether this target could at all be hit in the next two years. It is, therefore, difficult to understand what considerations prompted the Planning Commission to suggest a revision of the target for the third Plan from 7.2 million bales, as originally proposed, to 8 million bales. The progress made so far in cotton extension schemes and in the distribution of improved seeds and fertilisers does not seem to warrant such a revision. The Central Cotton Committee has, therefore, done well to plead that the target should not be raised. It has rightly pointed out that the yardstick used for framing the targets should be more realistic and, as far as possible, based on actual results obtained in selected areas.

Be that as it may, in view of the weather hazards inherent in cotton growing, Dr. Randhawa suggested mixed cropping of cotton and groundnut. The practice of growing long-staple cotton six feet apart with a row of groundnut in between had been introduced with some success in Saurashtra. When the rainfall was heavy groundnut would benefit and would compensate the farmers for any loss they might have to incur on cotton. This, according to him, would provide a good system of insurance against weather factor and he felt that it should be widely popularised.

Dr. Randhawa laid particular emphasis on cultivation of cotton in new areas brought under irrigation. These new areas possessed high potentials for cotton production. In view of the assured water-supply, there was scope for adoption of all the improved methods of cultivation in these areas. If suitable quality cottons were developed for these regions, it was quite likely, Dr. Randhawa added, that the present deficit in production could be offset within a few years by concentrating on these areas. The development of these areas on a planned basis was of utmost importance. As many of these projects would be bringing under irrigation new areas which had, for centuries, been rain-fed, the need for educating the cultivator in the methods of growing cotton under irrigation was imperative. Before irrigation water was made available to the cultivator, it would be necessary not only to evolve high quality strains of crops, including cotton, but also to conduct agronomic experiments for purposes of fixing schedules of cultivation and manuring for adoption by the farmer. The possibilities of concentrating upon the crops which the cultivator was accustomed to grow should also be explored. Dr. Randhawa, therefore, suggested that a special sub-committee should be constituted to examine the technological requirements of the new project areas. It should chalk out comprehensive programmes for each of the project areas.

The President also stressed the need for closer co-ordination between the cotton extension schemes of the Ministry of Agriculture and

REPORT OF THE AUDITORS TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED

We have audited the attached Balance Sheet of The United Commercial Bank, Limited, as at 31st December, 1958, and the annexed Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be, and are not, drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance Sheet gives a true and fair view of the state of the affairs of the bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

SUGAR AND CANE IN THE THIRD PLAN

CENTRAL COMMITTEE RECOMMENDS PRODUCTION TARGETS

A TARGET of 3.0 million tons of white sugar and 5.0 million tons of *gur* and *khandsari*, to be reached by the end of the third Five-year Plan, that is, 1965-66, has been recommended by the Indian Central Sugarcane Committee at the end of a two-day session at New Delhi on 21st March. The target of 3.0 million tons of white sugar is based on the assumption that the units sanctioned during the first and the second Plans, as also those sanctioned in the river valley project areas, will be in operation by 1960-61. The target represents an increase of 750,000 tons as compared with the production target of 2.25 million tons fixed under the second Plan.

The basis on which the Committee has chosen the targets for sugar, *gur* and *khandsari* is not known. And it is difficult to say whether the targets are realistic in the absence of details regarding the size of population, the level of taxation, national and *per capita* incomes, and export requirements. All that the Committee says on this point is this: "The present *per capita* consumption per annum of white sugar and *gur* is 11.4 pounds and 16 pounds, respectively, which is barely half what it should be from the nutritional point of view. But, as the consumption is related to the national and *per capita* incomes, the Committee has recommended fixation of "realistic" targets.

The aggregate quantity of sugarcane required to achieve the aforesaid targets is put at 90 million tons. To this figure has to be added 10 million tons required for seed, chewing and other purposes. The production target for cane thus works out to 100 million tons, as against the second Plan target of 78 million tons. The entire targeted output is to be achieved, according to the Committee, from an area of 5.0 million acres now under this crop. In other words, for the third Plan, there is a ceiling on the acreage under cane. The Committee notes that the new river valley projects on completion will add to the area under cane, but emphasises that any such increase in one State should be offset by a corresponding reduction elsewhere.

Per-acre Yield

The net addition during the third Plan period of 22 million tons of cane from the existing area of 5.0 million acres implies a substantial improvement in the per-acre yield, from just 12.73 tons in 1957-58 to as much as 20.00 tons in 1965-66. Will such an improvement actually be fulfilled? This question has been specially posed, because the progress made in the implementation of the cane development programmes has so far been none too encouraging. Barring the improvement in certain selected factory areas, the average yield of cane per acre has not only not gone up but actually declined. The all-India average for 1957-58 was no more than 12.73 tons, as against 13.33 tons in 1950-51 (base year for the first Plan). Similarly, the percentage recovery of sugar in cane was lower at 10.01, as against 10.03.

Viewed thus, it is clear that, if the proposed target for sugarcane production, namely, 100 million tons, is to be hit without any enlargement in the area sown, a more dynamic approach to the cane development work is imperative. The Committee has, therefore, done well to emphasise the adoption of measures such as strengthening of research and development organisations with technically trained personnel, research in improved varieties, rapid multiplication of seed material, greater use of reinforced vigorous seed, rational manuring, irrigation, timely and adequate plant protection measures, and better utilisation of the crop. It is envisaged that irrigation, manurial and fertiliser resources would need to be considerably augmented to meet the entire requirements of the development zones, and full protection would be given to the crop against floods, waterlogging and poor drainage.

The Central Sugarcane Committee has put forward three valuable suggestions designed to improve conditions in the cane economy. First, "key villages" should be set up where the cumulative effect of various improvements and their impact on the agricultural economy of these villages can be immediately demonstrated to the entire neighbourhood. Each acre planted under cane in these key villages will receive the benefit of pooled research findings and improvements in the cultivation schedule, so that it will be possible to raise the per-acre yield and quality of cane for the village as a whole. Secondly, the sugar mills themselves must prepare a suitable plan of development for the supply zones to achieve the production targets. The factory managements, the cane co-operatives and the growers must all become partners in the joint endeavour to raise the output level in factory areas, the factory managements providing the necessary wherewithal and the cultivators producing the required raw material of high quality. Thirdly, sugarcane research should be so reoriented on a regional basis as to enable entire zones, not individual States alone, to benefit from the advances in research work already made in some of the important research stations.

Fundamental Importance

Inaugurating the meeting of the Sugarcane Committee, Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, struck a note of realism when he declared that improvement in the per-acre yield of cane "is of fundamental importance to provide basic stability to sugar, *gur* and *khandsari* industries." As he rightly observed, great potentialities exist in the country for harvesting from the same area a larger sugarcane crop. Within the same State in the developed areas, a yield of 32 tons per acre has been obtained, as against the average yield of 25 tons. Still more marked results have been obtained under the All-India Sugarcane Crop Competitions—as high as 110 tons in the Southern States and 67 tons in the Northern region. Mr. Krishnappa drew particular attention to the issues relating to manures and fertilisers and research work. He observed:

"The results obtained by research stations or in the demonstration plots of cultivators have indicated that improvement in yield can be effected by maximum application of manures and fertilisers. However, their availability is a serious problem and attention should be concentrated on augmenting supplies of green manures and composts which can be usefully substituted. Irrigation is another important item which contributes substantially to the improvement in acre yield and minor irrigation projects should be fully explored and utilised.

"A chain of sugarcane research stations and sub-stations is functioning in the country and carrying out detailed trials for selecting sugarcane varieties suited to different soil and climatic environments. The Central Breeding Institute at Coimbatore has done "immensely useful" work in evolving new varieties and the Indian Institute of Sugarcane Research at Lucknow is engaged in fundamental research. I hope that the objective shall always be how best to achieve the targets and thus fall in line with the progress made in other countries."

There is considerable force in these observations of Mr. Krishnappa, as also in his statement that it is necessary to maintain a healthy balance among the sugar, *gur* and *khandsari* industries. As readers are aware, the production of white sugar declined from 2.09 million tons in 1956-57 to 2.04 million tons in 1957-58, whereas that of *khandsari* rose appreciably from 100 000 tons to over 300,000 tons. The Minister rightly said that the upward trend might fulfil the needs of any particular area, but, if it came into conflict with sugar production, a proper balance would have to be restored between the two sectors

Committee's Work

The Central Sugarcane Committee has been doing good work. A review of the activities of the Committee was made by its President, Mr. M. Lal, I.C.S. According to the review, useful research in varietal, manurial and irrigational aspects and control of pests and diseases is being conducted in the various research stations. The Committee attaches great importance to this work and its share of subsidy in various schemes has been increased from Rs. 3 lakhs in 1946-47 to Rs. 9 lakhs in 1957-58. The expenditure incurred on cane development was Rs. 2.04 crores (including the Central Government's share of Rs. 70 lakhs) in the first two years of the second Plan and Rs. 1.76 crores in 1958-59. The total expenditure to be incurred in 1959-60 is put at Rs. 1.95 crore.

With this increase in expenditure from year to year, the tempo of sugarcane research and development work no doubt will, as Mr. Lal said, go up considerably. But it must be stressed that a mere increase in the tempo of research work will not be of any avail, unless the results of such work are actually carried from laboratories to the fields speedily and effectively. The Sugarcane Committee should make suitable arrangements for a proper dissemination of the results of research among the cultivators. In addition, the adoption of a scheme for relating the cane price to quality is also necessary for creating enthusiasm among agriculturists for securing a larger yield of cane per acre with richer sucrose content.

THE BANK OF INDIA LTD.

ESTABLISHED 7th SEPTEMBER, 1906

CAPITAL—AUTHORISED, ISSUED AND SUBSCRIBED .. Rs. 5,50,00,000
CAPITAL PAID-UP .. Rs. 3,00,00,000

Current Deposit Accounts.—Except at certain places interest is allowed on daily balances of Rs. 500 and above at ½ per cent. per annum. No credit will be given for interest amounting to less than Rs. 5 per half-year.

Fixed, Short and Savings Bank Deposits received on favourable terms. Rates on application.

Foreign Exchange Business Transacted and Letters of Credit opened for approved customers.

The Bank acts as Executor and Trustee under Wills and Settlements and undertakes Trustee business generally.

Every Description of Banking Business Undertaken.

T. R. LALWANI, *General Manager.*

BONUS FOR BIHAR SUGAR LABOUR

An aggregate sum of Rs. 10 lakhs is expected to be distributed as bonus by the 14 sugar mills in Bihar to their workers numbering about 14,000, in accordance with the agreement signed between the Bihar Branch of the Indian Sugar Mills Association and the Indian National Sugar Mills Workers' Federation at Calcutta last week. The terms of the agreement are as follows:

The bonus should be paid before the end of this month or prior to the close of the crushing season, whichever is earlier.

If any factory seeks exemption from bonus payment owing to losses, meagre profits or uneconomic working, it will have to apply by the 10th inst., to a committee comprising a representative each of the Association and the Federation; the decision of the Committee will be binding on both the parties.

SUGAR PRODUCTION AND STOCKS

The total production of sugar during the first four months of the current season (November 1958—February 1959) amounted to 1,331,000 tons, as against 1,336,000 tons in the corresponding period of 1957-58. The production during February 1959 was 410 000 tons, that in February 1958 having been 414,000 tons.

The offtake of sugar from factories in the aforesaid period aggregated 691,000 tons (116,000 tons in February 1959), as against 636,000 tons a year before (195.000 tons in February 1958).

The total closing stocks with factories as on 28th February 1959 were 972,000 tons, as compared with 1,128,000 tons a year before.

SUGAR RELEASE

The Government of India announced on the 26th ultimo, the release of a further quantity of 150.000 tons of sugar for sale in the market. In addition to it, the system of allotment against tenders is also being continued with a view to augmenting supplies to consumers. In the case of factories situated in U.P., North Bihar and the Punjab, the sales are to be effected at prices stipulated in the Government of India notification dated 22nd December 1958. The latest release of 150.000 tons is less than the previous release by 15.000 tons. The reduction, it is understood, has been made in order to augment allotment of sugar to applicants who apply for such allotments at prices fixed by the Government. Thus, the total availability of sugar for the market is said to be in no way smaller than in the past.

COFFEE IN SWITZERLAND

DEMAND EXPECTED TO INCREASE

THE growing surplus of coffee in India has once again focussed attention on the marketing policy of the Government of India. The problem has been rendered more difficult by the mounting stocks of coffee in all other leading producing and exporting countries of the world and the consequent depression in prices. This does not mean that there is no scope for increasing sales of Indian coffee abroad. *The Market Survey on Coffee in Switzerland*, one of the latest in the *Market Survey Series*, published by the Union Ministry of Commerce and Industry, for instance, reveals that there is still scope for improving sales of coffee abroad, as the mild quality of the Indian beverage can be usefully utilised for blending purposes. It also points out that the trend of future demand for coffee in Switzerland may be regarded optimistically. "On the whole," it says, "the standard of Swiss life is rising steadily and coffee is purchased regularly even by such classes whose purchasing power is below the average." Some of the statistics on which this study is based are not, however, up-to-date, but the publication contains very useful facts about coffee trade in Switzerland and suggestions for promoting sales of Indian coffee in that country.

Switzerland is not a grower of coffee, but it has been one of the leading coffee consuming countries of Europe, particularly from the point of *per capita* consumption. During the years 1934 to 1938, the imports of coffee into Switzerland amounted to an average of 261,000 bags (of 132.276 lbs. each), which worked out to a *per capita* consumption of over 9 lbs. In the war years, they were curtailed slightly, averaging about 199,600 bags per annum in 1939-45. The post-war years witnessed a revival of imports to more than the pre-war levels, averaging, as they did, about 335,850 bags per annum in 1949-53. Imports in 1952 amounted to 303,650 bags and in 1953 to 318,728 bags. Central America was the largest supplier in 1953, accounting, as it did, for 31.3 per cent. of the total followed by Brazil with 30.5 per cent., Colombia 9.6 per cent., West Africa 9.5 per cent. and East Africa 7.8 per cent. The import figures for the subsequent years are not available. In the first half of 1958, according to the *Survey*, Switzerland imported 11.36 million kilograms of coffee, valued at Sw. Frcs. 55.70 million, of which India supplied 539.565 kilograms of the value of Sw. Frcs. 2.64 million.

In normal times, coffee is regarded as a necessity in Switzerland. Even during the Second World War, the *Survey* points out, coffee was always available at reasonable prices, in good quality and adequate quantity. It cannot, therefore, be considered as an item of luxury. Of the consumption of tea and coffee in Switzerland, the latter beverage accounts for 80 per cent. and tea for the balance. There are no restrictions on imports of coffee, excepting licence for the importation of green coffee and caffeine-free coffee and this can be obtained without difficulty. The trade is, therefore, able to meet the entire internal requirements.

Switzerland buys less than one per cent. of the total world output of coffee and the trend of world markets naturally has its influence on the Swiss market. Thus, thanks to the increasing pressure of supplies, there is keen competition among producers to sell their coffee in Switzerland, as in other countries, and the wholesale prices show a marked tendency to sink. Many importing firms have been forced to sell at prices well below those of their own purchases. Such a trend, however, has not so far resulted in catastrophies in the trade.

Though imports of coffee are allowed freely, importers in Switzerland are required, under the import regulations, to maintain a compulsory stock of 35 per cent. of their imports and only first class qualities are allowed to be kept in stock. In order to safeguard the importing firms against possible losses, the Swiss Government has undertaken to pay the difference between the import price and the price, of the same quality, at which it is sold to the roasters. The necessary funds for this purpose are met out of the import duty levied on coffee, which is as follows:

(Per 100 Kg. gross wt.)

Green coffee	Sw. Fr.	54.00
Caffeine-free coffee not roasted	„ „	85.00
Other kinds. like roasted instant coffee, etc.	„ „	100.00

Coffee is imported directly by private roasters and wholesalers who purchase either direct from shippers in producing countries or through shippers' agents in European ports or in Switzerland. Imports through brokers are an exception. Roasters, packers and wholesalers distribute the coffee through retailers, restaurants and chain stores. The other large channels of green coffee imports and roasted coffee distribution are the purchasing associations for the independent retailers and the co-operative societies. The most important purchasing association for the retailers is the Union Swiss Purchasing Association in Olten which purchasss coffee and tea and then processes it for the independent retailers. The Swiss Co-operative Union of Consumer Societies in Basle and the Migros Co-operative Federation in Zurich purchase and process coffee for co-operative stores.

Imported green coffee is expected to be delivered in jute bags of 60 kilograms each. The bags should be marked with the number of the lot and the market name of the contents. From seaport, it will be transported to Switzerland by railway, usually at a special freight rate which is equal to that charged for transport *via* the river Rhine. Within Switzerland, coffee is packed in 250 and 500 gram paper bags. Vacuum packing has not yet found favour. The use of chicory is widespread, the extent of chicory used in blending being 30 per cent. Soluble coffee is said to be gaining popularity rapidly. The Swiss consumer has also a preference for caffein-free coffee. Heavy bodied blends find the most favour.

It is interesting to hear that Indian coffee—particularly Malabar Yellow and Mysore monsooned—is highly esteemed in Switzerland and usually commands a price 20 per cent. above that of standard Santos. Yet, it is, at present, quite impossible, the *Survey* points out, to sell these Indian coffees to the Swiss consumer, as, in their pure form, they do not conform to the taste and flavour generally preferred. It is so, because Indian coffees appear too acid for the Swiss. In Switzerland, a rather mild blend is preferred by the majority and about 10 to 15 per cent. of Indian coffee is added to such blends to enrich the flavour of other kinds. So long, therefore, as the idea that Indian coffees taste too acid prevails, the market for them in Switzerland will be limited. In this connection, the *Survey* makes a few suggestions to improve the marketing of Indian coffee in Switzerland. It says:

"Indian parties should concentrate their publicity on the wholesale and not the consumers' market. The consumer is almost ignorant of the existence of Indian coffee and it is unlikely that it can be introduced in the Swiss market, unless its taste can be adjusted to the one prevailing in Switzerland. Yet Indian coffee can be of considerable importance in improving the taste of coffee of other origins and it seems that excellent results are known for such mixtures (e.g., with Costa Rica, Gautemala). If representatives of Indian firms are appointed in Switzerland, it will be necessary that these representatives possess a small roasting equipment for sample purposes. This is particularly important when new qualities are to be introduced. If only samples of green coffee are offered to Swiss firms, chances are that the offer will be forgotten and the sample lost, as people seldom find time to roast the sample themselves. It is, therefore, much safer to add a sample of roasted coffee to the sample of green coffee, the prospective buyer then being less inclined to give preference to competitors whose qualities he may be well acquainted with. Generally, it is suggested that coffee should be propagated the same way as tea is through the Hamburg 'Tea Office.'"

It is also suggested that a booklet on the model of the *Calendar* published by the Instituto de Cafe, Sao Paulo. giving facts about Brazilian coffee in text and in colour photographs, may be published and distributed by India too. It is stated that propaganda of this kind may be very effective in promoting sale of Indian coffee.

EXPORT OF GUNNIES

SHIPPERS' ASSOCIATION CHAIRMAN EXPRESSES CONCERN

THE jute industry has had yet another disappointing year during 1958 in respect of exports of its manufactures. The aggregate exports of gunnies from India, which had declined from 877,000 tons in 1955 to 863,000 tons in 1956 and to 859,600 tons in 1957, fell again to 809,000 tons in 1958, on the basis of the data for the first eleven months of 1958 when they amounted to 746,900 tons (the figure for the corresponding period of 1957 being 796,600 tons). Of even greater significance was the drop in value. While exports of hessian (during the first eleven months) rose from 369,400 tons to 379,800 tons, as also of "other varieties" from 36,200 tons to 40,700 tons, those of sacking dropped from 391,000 tons to 326,400 tons.

The following table shows the trend of hessian and sacking exports to some of the principal consuming countries during the first eleven months of 1958 and 1957.

(In tons)

Countries	Hessian Jan.-Nov.		Sacking Jan.-Nov.	
	1958	1957	1958	1957
U.K.	35,300	21,000	12,000	9,000
Rest of Europe	34,200	15,500	11,700	6,900
Far East	7,800	8,000	50,700	82,300
Africa	13,000	21,000	80,600	99,300
U.S.	163,800	165,200	5,300	9,400
Canada	34,500	29,800	..	200
Argentine	57,200	63,300	2,000	2,300
Rest of America	11,200	14,800	63,000	75,900
Australia	13,600	15,000	65,700	77,100
New Zealand	5,300	6,800	12,500	10,500
Other countries	3,900	8,600	22,000	17,200
Total ..	379,800	369,400	326,400	391,000

It will be noted that the perceptible drop in exports of hessian to the U.K. suffered in 1957 was made good to a substantial extent in 1958. Exports to the rest of Europe, which had recorded an impressive rise in the previous year, gained fresh ground in the year under review, having more than doubled themselves. The offtake by Canada, too, staged a recovery. The most sizable setback is noted in exports of hessian to Africa, followed by Argentine and the rest of America. Exports of sacking to the U.K. and the rest of Europe recovered substantially and those to New Zealand improved further. The offtake of the heavy goods from Africa, the largest customer for Indian sacking, suffered seriously, as also from the Far East, Australia and the "rest of America."

Reasons for Decline

Explaining the reasons for the setback in the export of heavy goods and the prospects, the Chairman of the I.J.M.A. observed, at the recent annual meeting of the Association as follows:

"Our exports of heavy goods in 1958 were disappointing and, if the fall represented a continuing trend, it would be a serious matter for the industry. But there were a number of special factors involved last year and when these are taken into account, I do not think that we need feel unduly depressed about our sacking exports. The markets which principally contributed to the decline were Australia, Cuba, Egypt and various countries in South-East Asia. Except in the case of Cuba, where the demand for bags was affected by the general trend towards bulk shipment of sugar, it is probable that this decline in offtake was only temporary. In Australia, for example, the demand for cornsacks was limited by an excess carry-over of stocks after the poor wheat harvest of 1957-58, while the wool farmers, who had been badly hit by the fall in wool prices, drew heavily on their existing stocks of woolpacks. This year, there has been a bumper wheat crop in Australia, and, with woolpack stocks now lower than they have been for many years, there is every prospect of an appreciable rise in the Australian offtake of both cornsacks and woolpacks in 1959. Egypt last year took less than a third of her 1957 imports of jute bags. While there is, admittedly, an expanding jute industry in that country, this would not account for the fall in imports which was largely due to financial difficulties. Now that Egypt has come to a financial settlement with the U.K., we may hope that these difficulties will diminish, so that Egypt will be in a position to increase her imports of jute goods from India.

"All our markets in South-East Asia cut down their imports in 1958. In some cases—and especially in Indonesia and Vietnam—the decrease was to some extent due to a fall in agricultural production resulting from political changes within the country. As conditions become more stable, the production of rice, sugar, and other agricultural commodities should increase, and this will inevitably mean larger imports of jute bags, because there are no bulk handling facilities in this part of the world and, during our recent tour, we saw no signs of any major expansion of the local jute manufacturing industries, except to a limited extent in Vietnam. We were, however, struck by the determined efforts which all these countries are making to increase their agricultural production in order to improve their financial position. In the

FIXATION OF WATER RATES IN IRRIGATION PROJECTS

RESEARCH BODY'S SUGGESTIONS

THE existence of a sizable gap between the irrigation potential created and the actual utilisation of the irrigation water has been a source of great concern to all those interested in India's economic progress. An investigation at the end of the first Plan revealed that, though irrigation potential to the tune of 6 million acres had been created, actual utilisation was confined only to 4 million acres. Although the magnitude of the problem at present is not known, it is believed that the irrigation potential in several projects far exceeds its utilisation. To the extent the problem, in whatever degree, persists, it must be admitted that it represents a national waste, for it is of the utmost importance to the country's economy that the irrigation projects, which involve large capital outlays, should be promptly and fully utilised. There are, of course, certain physical factors, the neglect of which could easily lead to failure of full utilisation of irrigation water, such as the absence of field channels. But, even when the necessary facilities have been created there could be delay in the utilisation of irrigation water, if the farmers do not find that it pays them to bear the additional levy and use the water potential created for their benefit. The continuing agitation in the Punjab is an instance in point. In other words, the schedule of rates for the utilisation of irrigation water should be so drawn up as to induce farmers to utilise irrigation water and also to bring a certain return to the Exchequer from which it has been created. The considerations which must be borne in mind in choice of irrigation projects and in fixation of rates for irrigation water are discussed by the National Council of Applied Economic Research (Director-General: Dr. P. S. Lokanathan) in an illuminating report entitled *Criteria for Fixation of Water Rates and Selection of Irrigation Projects.**

Rate of Return

Tracing the course of the development of criteria for investment in irrigation projects, the report points out how, prior to 1854, there was no separate account for revenue and expenditure in respect of irrigation. The Select Committee of the House of Commons, which examined the question in 1879, recommended that the financial results of works of irrigation were the "best test of their utility." By and large, this test has held the ground till today. The rate of return required before a project could be considered financially productive has varied from time to time. It was fixed at 4 per cent. till 1st of April 1919, at 5 per cent. till 1st of August 1921 and 6 per cent. for all works sanctioned after that date. From 1st of April 1949, it was fixed at 3.75 per cent. but it was raised to 4.5 per cent. from 1st of August 1954. The criteria for sanctioning irrigation projects caused some dissatisfaction at the end of the nineteenth century. The Royal Commission on Irrigation in 1921, however, favoured the financial productivity test till then being applied. Thus, in practice, this test has been adhered to, though some flexibility has been permitted from time to time.

What considerations should govern the choice of an irrigation project? The report, in seeking to find an answer to this question, has examined at some length the selection and execution of the Rs. 9.50-crore Sarada Canal in U.P. which was commenced in 1922 and completed in 1928-29. The report points out how an economic appraisal was not made before the project was undertaken, and how the project has not added to the area under cultivation and the area under double cropping in the districts served by the Canal has already gone down. The Sarada Canal, which has been singled out for special study, shows how the authorities may go wrong in the choice of projects. However, Dr. Lokanathan, in his preface, observes: "But it was obvious that the Sarada Canal, with its long and chequered history, cannot be regarded as a typical case and that the findings and conclusions emerging out of the study should be regarded as illustrative, rather than of general validity.... It is always easy to be wise after the event and to say that things might have been done in a different way." From its study of the Sarada Canal, the report reaches the conclusion that the absence of an economic appraisal in the case of a project may lead to two unfavourable effects: (1) exaggerated estimates and (2) bringing political influence to bear in a concealed manner.

Choice of Projects

The importance of broadbased criteria for the choice of irrigation projects has been emphasised by the report. Investment in irrigation has direct and indirect effects over the whole economy and results in considerable external economies. The appropriate criteria for investment, it is argued, must be sufficiently broadbased to take into account the direct and indirect effects of irrigation. The two chief advantages of irrigation projects are: (1) investment in control over water resources imparts stability to an inherently unstable industry, namely, agriculture; (2) such investment may increase the rate of growth of the economy, bringing benefit both to agriculture and industry. In agriculture, uncertainty is removed, risk is reduced, wastes eliminated and yield increased. This leads to more purchasing power in the hands of agriculturists which, in its turn, leads to an increase in effective demand for industrial products.

Turning to the principles for determining water rates, the report notes that, in India, such rates have not been fixed on any scientific basis and there is a wide variety of systems for the calculation of actual charges. The factors which point to the need for a detailed examination of the question of water rates are:

(*a*) the Central and State Governments have spent a considerable portion of their total outlay on irrigation and propose to spend a still larger amount in the second Five-year Plan. It is, therefore, high time that the structure of rates be put on a proper basis; (*b*) in view of the fact that there is a great need for mobilising as many resources as possible for financing the second Five-year Plan, it is worthwhile examining how far the benefits accruing from irrigation can be mobilised in the form of State revenue; (*c*) it is necessary to see that the existing facilities are fully utilised before more investment is made in this line of production; (*d*) unless the water rates are fixed on an objective basis, their burden might fall inequitably on the different users of irrigation waters.

There are, fundamentally, two main considerations in fixing water rates: (*a*) cost, and (*b*) benefits. On the side of cost, the necessity of recovering total cost, both fixed and variable, or the recovery of variable cost alone, have been suggested as possible determinants of levels of rates. On the side of benefit, the water rates, at the maximum, could take away the entire benefit available to the users of the water. There is also an extreme view that, since water is a fundamental necessity, the principle of free access to water should be adopted.

The authors of the report feel that the practice of selecting projects on the basis of recovery of cost is not a sound one. However, if this practice is accepted, the recovery of the cost through water charges alone cannot be considered reasonable. This is because irrigation confers benefit on the region as a whole and a part of these benefits flows back to the State in various forms. The share of land revenue increases if irrigation brings additional areas under the plough. Land revenue is stabilised. Savings are effected in famine relief expenditure. Lands served by the canal as well as in adjacent areas appreciate in value, which appreciation might be tapped in the form of betterment levy by the State. Besides, there may be net indirect receipts realised by the various departments of the State such as railways, posts and telegraphs, excise and income-tax. Therefore, if the recovery of cost is to be insisted upon, the calculation should include not only the water charges and the share of land revenue, but also take into consideration all such sources of State income which can be legitimately ascribed to irrigation.

The only sound and justifiable basis for the irrigation rate, it is stated, should be the additional net benefit available to the cultivators from the use of the water supplied. It is recognised that it is difficult to measure this additional benefit in a precise manner. The report, however, suggests a simple formula for the measurement of additional net benefit which is equivalent to $(R_1-R_0)-(C_1-C_0)$ where R_1= value of crop before irrigation is introduced, C_1= cost before irrigation, R_1= value of crop after irrigation and C_1= cost after irrigation before paying water rate. The report also recognises the point in the argument that the entire increase in agricultural yields cannot be ascribed to irrigation alone, since the use of irrigation facilities is invariably accompanied by the use of fertilisers, employment of additional labour and other supplementary investment. It observes:

"However, it is also a fact that, in agriculture, water is a most important element, next only to land in importance. As a matter of fact, the introduction of irrigation facilities leads to an improved cropping pattern and to the adoption of better farming methods, resulting in a handsome increment in the net returns of the cultivator. However, this problem can be solved by computing the cost of all the other factors making up the supplementary investments which are substitutable in the market economy and then deducting this cost from the value of the increased yield. The balance is the net additional benefit which can be said to arise from irrigation."

State Policy

Discussing the considerations which must be borne in mind in fixing water rates, the report emphasises that the rates should be conducive to the most efficient utilisation of water. If the rates are too low, the cultivators might waste water. The rates should offer sufficient inducement to the cultivator for the use of water. They should be such as to encourage the implementation of national objectives of State policy. Thus, if a project is set up to increase food production, the rates should be biased in favour of food crops as against commercial crops. As regards the question as to what proportion of the additional net benefit to the cultivator must form the basis of water rates, the report says that the full 100 per cent. should not be charged. This is because there are different types of cultivators, so that the net profit available to each farmer for one acre of land will not be the same. Accurate measurement of additional net benefit is not also easy. Since output and prices in agriculture fluctuate considerably, it is advisable to keep a safe margin. It is, therefore, suggested that actual rates should in no case exceed, say, 50 per cent. of the extra net benefit available to the cultivators; the actual charge could vary between 20 per cent. and 50 per cent. Although the system of charging for water according to volume of water supplied is more scientific than any other, it is not recommended for the reason that it will involve a large initial investment in meters and supervising staff and risk of damage to meters by people who may tamper with them.

Water Rate Boards

In order to attain the threefold objectives of water rates, namely, the furtherance of the social and economic policy of the State, maximisation of net profits on the newly added farm product and realisation of reasonable revenues for the State, the actual application of the benefit criterion would demand the consideration of several factors which affect the net benefit from irrigation water. Since conditions differ from canal to canal and region to region, there cannot be a uniform level of water rate for the whole country. In each region, the factors which should be taken into account are: nature of soil, type of crop and season in which cultivation takes place, volume of water required for each crop, transport and marketing conditions and net profits of cultivation. The water rate should be divided into two parts—the compulsory rate and voluntary rate. The compulsory rate should be introduced for those canals where cultivators resort to alternative sources of irrigation and the demand for irrigation water depends on vagaries of rainfall. This rate should be low and related to the benefits conferred upon the area by way of insurance against failure of rainfall. Land irrigated by wells should also pay this compulsory rate, because, whenever such land needs additional water, it can resort to canal irrigation, and also because well irrigation becomes easier owing to rise in the sub-soil water in the region served by a canal. For the actual fixation of fair water rates, it is desirable to evolve a machinery on the lines of wage boards for the fixation of fair wages. Water rate boards could be appointed for each main canal or for each State.

Criteria for Fixation of Water Rates and Selection of Irrigation Projects. Published by Asia Publishing House, Bombay. Pp. 156. Rs. 13.75.

AUTOMOBILE INDUSTRY IN WEST GERMANY

West Germany's automobile industry recorded an increase in both production and export during 1958 over the figures for the preceding year. It also retained its lead in output among the main automobile-producing countries of Europe. Nevertheless, a survey of the production and trade position in the industry showed that Germany was faced with growing competition from certain other countries. The consumer, however, stands to benefit from the stiff competition which has led to the introduction of technical improvements by manufacturers and to improvements in styling and passenger comfort. The survey has brought out the following points:

The number of motor vehicles manufactured in 1958 was about 1,500,000 units, representing an increase of 23.5 per cent. over the figures for 1957. While about 770,000 vehicles were sold on the domestic market, exports rose by 25 per cent. and totalled 730,000 units. Although nearly 250,000 cars were taken out of use during the year, the total number of vehicles on the roads rose by more than 500,000. The *per capita* number of cars increased to 17 for every 1,000 persons. Manufacturers took particular note of the fact that the number of cars owned by workers soared from 310,000 in 1957 to more than 580,000 in 1958—an indication that the domestic market is still capable of expansion in the future, if there is no economic recession. In spite of the boom year which the industry has had, large German industrial concerns are thoughtful about future developments.

Analysed with reference to the categories of vehicles—passenger cars, station wagons and lorries—the 1958 production figures show that the increase in production was the highest in regard to passenger cars. The rate of increase varied according to the size of the cars; it was relatively high in the category of cars with a cylinder capacity of between 1,000 and 2,000 c.c. in which range production rose by 175,000 units or 25 per cent. over the figure for 1957. The largest increase—78 per cent. was registered in the 500 to 1,000 c.c. class. It is to be noted that many cars of this class, for instance, the Auto-Union's DKW models, are really "medium-sized" vehicles ranging from 890 to 1,000 c.c. and capable of speed performance upto 90 miles per hour. The purchase prices of these cars are not lower than those for the 1,500 c.c. models and it was found that the buying public considers the medium-sized cars a better bargain than the "baby cars," because of their longer life and higher re-sale value.

A comparison of the production figures of the main European automobile-producing countries shows that, in 1958, West Germany again led the field, with a total output of 1.5 million vehicles, Britain following closely behind with 1.4 million, France with 1.1 million vehicles and Italy with 0.4 million cars. These four European countries produced about 4.4 million vehicles as compared with the United States' production of 5 million vehicles during the year.

ST. LAWRENCE AUTHORITY

The tolls tariff to be levied by the St. Lawrence Seaway Authority was announced by Mr. George Hees, the Canadian Minister of Transport, in the House of Commons on 12th March last. The St. Lawrence Seaway is a project in which, as our readers are aware, both the U.S. and Canada are interested. The total cost of the project (*vide Commerce* dated 11th October 1958, page 604) is $471 million, the Canadian share being $340 million and the U.S. share $131 million. The tariff of tolls now being introduced is the same as the one which was recommended by the Tolls Committee which submitted its report in June last. For each passage from Montreal to Lake Erie a vessel will be assessed at 6 cents per g.r.t. and, in addition, 42 cents per ton of bulk cargo and 95 cents per ton of general cargo carried. From Montreal to or from Lake Ontario, a vessel will be charged 4 cents g.r.t. and, in addition, 40 cents per ton of bulk cargo and 90 cents per ton of general cargo. For each passage through the Welland Canal, a vessel will be assessed at 2 cents per g.r.t. and, in addition, 2 cents per bulk cargo and 5 cents per ton of general cargo. The charge for a complete transit of the Seaway will be $7.50 per passenger. Pleasure craft will be subject to the same rates as other vessels with a minimum charge of $2.00 per lock transited; the minimum charge for other vessels will be $4.00 per lock transited. A four-member Joint Tolls Advisory Board, equally representative of the Canadian St. Lawrence Seaway Authority and the U.S. St. Lawrence Seaway Development Corporation, will hear complaints relating to the interpretation of the tariff or alleged unjust discrimination arising out of the operation of the tariff. The two seaway entities will report to their respective Governments not later than 1st July 1964 as to the sufficiency of the authorised tolls and to cause the tariff to be reviewed accordingly.

JUTE

(*Concluded from page* 546)

meantime, there is no doubt that lack of finance is a major factor in restricting imports of jute goods. All these South-East Asian countries are suffering from an acute shortage of foreign exchange and all of them have an adverse trade balance with India. They are, therefore, most anxious that India should buy goods from them in return for her exports of jute bags, and if this could be arranged I am sure that it would do much to facilitate an expansion of our markets."

While the general position of the jute industry and the outlook for jute goods are viewed with subdued optimism by the producers, the shippers would appear to be rather concerned over the trend of exports. Expressing this concern at the annual meeting of the Calcutta Jute Fabrics Shippers Association held last week, Mr. D. Duncan-Smith, Chairman of the Association, said that, although quite a number of countries were enjoying an expanding economy which should result in greater use of jute goods, India was not able to share in this expansion. The position was serious, he added, "not because of any decline in consumption, but because of increased production in other countries which are endeavouring to become independent and self-sufficient and reduce their requirements of foreign exchange."

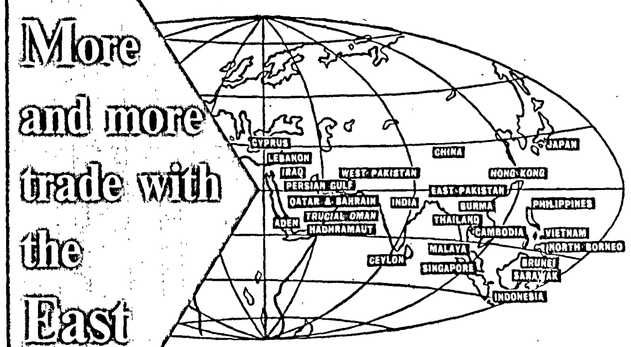
A serious competitor to India in world markets is Pakistan, which, according to Mr. Duncan-Smith, is in a position to export between 10,000 and 12,000 tons of jute goods per month and is making serious inroads into India's markets. Among the countries which have established in recent years their own jute mills and have reduced their offtake of jute goods from other countries are South Africa, Burma, Philippines, Viet Nam, Thailand and Egypt. These countries are said to obtain their requirements of raw material partly from East Pakistan and partly from local fibre, in the form of kenaf or ramie, which is mixed with jute. There are also other factors which have affected India's export trade in gunnies. Enumerating the more important ones, Mr. Duncan-Smith said:

"First, a shortage of foreign exchange in the importing country has forced users of bags to use these many times over, because they were unable to replace them with new ones. Secondly, bulk-handling, particularly of sugar, primarily in such places as Australia and Cuba. Thirdly, the use of substitutes, such as paper and polythene, which can be produced locally at prices which do not fluctuate to the same extent as the market in Calcutta and the manufacture of which, at the same time, supports a local industry. Lastly, and possibly one of the most important reasons, is the lack of reciprocal trade between India and the countries to which we are endeavouring to export jute goods, owing to India's curtailed import policy."

Mr. Duncan-Smith considered these factors as depressing and advised the Government and the industry to take suitable measures to increase the exports. In this connection, he suggested that every endeavour should be made to improve the quality of the raw jute grown in India, so that the gunnies produced therefrom might compete well with those of Pakistan. The other suggestions made by Mr. Duncan-Smith are: (1) the goodwill amongst overseas buyers should be enhanced by dealing promptly with complaints, and (2) the Government should assure the industry that the export trade would not be jeopardised by the introduction of any forms of export control, such as price fixation, as it is not in a position now to bear such controls.

It may be mentioned, in this connection, that Mr. Duncan-Smith accompanied the I.J.M.A. delegation to Australia, New Zealand and other Far Eastern countries in October as a representative of the shippers and as such has an intimate knowledge of these markets. His views on the export trade of jute goods, therefore, deserve to be taken note of by the industry, as well as by the Government.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The three associated banks, The Chartered Bank, The Eastern Bank Ltd. and Allahabad Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.



Let your worry be our pleasure

PUBLIC DEPARTMENT

COAL OUTPUT AND TARGET—HIGH COST OF STOWING

POSSIBLE EFFECT OF OPENING NEW COLLIERIES

MR. D. HOGG URGES HIGH-POWERED BODY TO CO-ORDINATE PROBLEMS

SOME of the important and urgent problems pertaining to the coal industry were lucidly explained by Mr. D. Hogg, Chairman of the Indian Mining Association, at the Annual General Meeting of the Association held at Calcutta on Thursday, 26th March, 1959, in the premises of the Bengal Chamber of Commerce and Industry. The following is the full text of Mr. Hogg's speech:

"GENTLEMEN,

"On the occasion of the last annual general meeting held just over a year ago, I had the pleasure of saying that coal production had increased during 1957 by just over 4 million tons, of which 3.1 million tons was produced by the private sector. At that time, I ventured to say that a progressive expansion of output from the private sector could be expected for the Second Five-year Plan period, provided that we were given sufficient inducement and incentive and many of our handicaps were removed.

"A year has passed and, from a study of the activities of this Association given in the Annual Report, you will be aware of the energetic efforts made by this Association to bring our difficulties to the notice of Government. It is tedious to recount them, as they are so well known to you, but it is disappointing, to say the least of it, that so few of our obstacles have been removed in spite of repeated representations.

Production

"The all-India total of coal production increased in 1958 to 45.3 million tons, as against a target of 60 million tons which has been set for the industry for attainment by the end of the Second Five-year Plan period. The increase was only 1.8 million tons in 1958 or 4 per cent. compared with 10 per cent. increase achieved in 1957. Nevertheless, 75 per cent. of the 1958 increase in production was achieved by the private sector. To those outside the coal industry the increase of 1.8 million tons may appear to be insignificant. However, I feel that those of you within the coal industry will agree with me that it was a remarkable achievement in view of the many handicaps which stood in our way. As to whether our increase in production was adequate for the country's needs, it is sufficient here for me to pose a simple question on behalf of those of us who have to carry the financial burden of pithead stocks and ever-increasing costs and ask what would have happened if an extra one million or an additional two million or a further three million tons had been raised in 1958. The fact which must be faced is that pithead stocks were higher during nine months in 1958 than they were during the corresponding months of 1957. During the past year, the railways in general, with certain exceptions to which I will refer later, have achieved remarkable results. It has been stated on innumerable occasions in the past that coal production can only keep pace with transport availability. However, with the expansion which has taken place on the railways, it appears that, on some occasions during their 'slack' season, there was, in certain directions, an availability of wagons for the movement of coal in excess of the demand which existed for coal on those routes. During the past year, the coal industry has felt that their production capacity has kept pace with industrial demand. It has been reported recently that the general index of industrial production registered an increase in 1958 but the rate of increase was lower than in 1957. This temporary slowing down in the tempo of industrial development in 1958 has been very noticeable not only to the coal industry whose duty it is to feed almost every industry but also to the railways. But, with the gigantic plans which have yet to materialise before the end of the Second Five-year Plan period, the industrial tempo can rapidly increase again. Will the coal industry be able to regain its momentum and meet all demands, not only for the Second Five-year Plan but also for the Third?

"I do not question whether 60 million tons of coal is required under the Second Five-year Plan or whether 100 million of 110 million tons of coal should not be the target for the Third Five-year Plan—there is no doubt about these targets—such quantities must be planned for in order to achieve our Government's objectives but such targets cannot be attained, unless effective steps are taken now to give remedial treatment where help to the industry is required. Also, planning must be more detailed than we have seen in the past, so that collieries may know by whom their increased production is to be consumed and when it will be required. So far, the industry has been unable to obtain any indication of the targets which may be required to be achieved in the various coalfields and States in the Third Five-year Plan. Certain collieries mining coking coal have recently had the unfortunate experience of having almost their entire production diverted to the Steel Works, only to find that, shortly after their other orders had been transferred to non-coking coal collieries, the demand from the steel works was reduced and a large percentage of their production has had to be put into stock. There is not only a limit to which collieries can afford to finance the holding of stocks but there is also a physical limitation to which a colliery can stock coal when production exceeds demand. For most of last year, pithead stocks averaged about 3.2 million tons, of which the private sector held about 95 per cent.

"Before proceeding further, it is necessary to review the trend of coal production noticeable during the last year. It is apparent that the output of selected 'A' and 'B' grades of both coking and non-coking coal showed little or no increase. Many of the collieries mining these grades are burdened with heavy stowing expenditure for which inadequate assistance is paid to them by the Coal Board. In addition, many stowing collieries incur additional expenditure on account of the fact that they are gassy mines.

Assistance for Stowing

"Consideration of representations for increases in stowing assistance and the revision of coal prices, to which I will refer later, has been protracted. I would be failing in my duty if I did not ask Government to bear in mind that coal companies must balance income and expenditure and they cannot embark on an indefinite policy of deficit financing.

"Collieries mining grade I coking coal will be unable to increase their production substantially until the central washeries, which have been under discussion for so many years, are put into operation. The delays which have occurred over the setting up of these central washeries are regrettable and it is now apparent that the three central washeries which were to be installed during the Second Five-year Plan will not materialise for some years yet. The tender for the first washery has been decided only recently.

"The latest Annual Report of the Coal Board for the year ended March 1958 reveals some interesting information. Assistance towards voluntary stowing was sanctioned in 1957-58 for 110 collieries, of which only 81 collieries carried out stowing. The other 29 collieries had not completed their arrangements for stowing. There are many valid reasons why these collieries had not commenced stowing; in many cases they are waiting for the Coal Board's Central Sandstowing Schemes to materialise. Others were waiting for the necessary import licences or for the arrival of plant and machinery from abroad. Despite this, a larger quantity of material was stowed underground, and 6.3 million tons of sand and other materials were stowed to produce 3.7 million tons of additional coal from the stowing areas. In fact, almost one colliery in ten undertook stowing and as a result of their efforts about 10 per cent. of the country's production was raised, which without stowing would otherwise have been lost. In the year 1958-59 the number of collieries carrying out voluntary sandstowing increased from 81 in the previous year to 95.

"I apologise for enumerating so many statistics over stowing, but I feel that the efforts made by the industry to attain safety in their mines and to conserve our mineral wealth are not sufficiently well publicised. There has been so much ill-informed criticism of the industry in the past over these matters and, unfortunately, this tendency of the general public and certain quarters to make little effort to understand our problems still persists. Only recently, I have noticed a statement made in the Lok Sabha by the Minister of Steel, Mines and Fuel, Sardar Swaran Singh, who, while defending the high costs of a certain colliery in the N.C.D.C., stated that the Corporation is unable to adopt the private owners' attitude of exploiting only those mines where the working conditions are easy. I would ask if such a remark is not unjustified when 90 collieries in the private sector, i.e. more than 10 per cent., are undertaking stowing, inadequately compensated, and many of them at uneconomic costs and many other collieries in the private sector are running at a loss, in the same way as the Giridih Colliery, due to their difficult working conditions. It is easy to criticise but we would prefer that criticism should be accompanied by constructive suggestions and help.

Funds Adequate

"I appreciate the problems of the Coal Board and my criticisms of their efforts are made with the best of intentions and in an effort to underline their problems. It is now over a year since this Association placed a case before the Coal Board for increased assistance for sandstowing and, while they appeared to appreciate the need for revision in view of substantial increases in labour costs as a result of the Award of the All India Industrial Tribunal (Colliery Disputes) and the decision of the Labour Appellate Tribunal and other increases in costs, the change in the rate of assistance is still awaited. The industry continues to bear the burden of these heavy imposts on stowing collieries and suffers delays in payment. A further reference to the last report of the Coal Board will show the delays which occur. Out of Rs. 81 lakhs paid in the year to stowing collieries, less than a quarter of this amount was on account of stowing charges incurred during the year and over Rs. 60 lakhs covered assistance for stowing carried out in the previous three years. The Coal Board is, fortunately, well endowed financially and its income has always exceeded its expenditure. The total funds available now amount to nearly 4 crores of rupees. Any reluctance to increase the rate of assistance to stowing collieries is probably the Coal Board's fear that large sums will require to be expended for the two proposed Central Stowing Schemes in the Ranigange and Jharia coalfields. Adequate funds are available to meet the industry's claim for increased assistance, but, if there is any reluctance on the part of the Coal Board to face criticism in requesting for an increase in the stowing cess now being levied on consumers, I would humbly submit that the statistics which I have inflicted upon you earlier, amply bear out the industry's sincerity of purpose in carrying out voluntary stowing for safety and conservation of our mineral wealth. Such stowing has resulted in additional production for which the industry can rightly expect the nation to bear an increased share of the cost, as and when the occasion arises, particularly as this form of mining is being carried out more and more extensively.

"Apart from stowing collieries, there is also the question of deep and gassy mines and the problem that the present price structures do not provide them with sufficient resources to enable them to increase production. By their very nature and working conditions, they are placed at a great disadvantage over shallow mines, inclines, open cast quarries and non-gassy mines which are not required to install the expensive flame-proof equipment and employ the additional staff required under the Mines Regulations. Unfortunately, some of these mines, such as those working the Dishergarh seam, whose coal will be required in larger quantities in the future, have not only to bear these increased costs, because they are deep and gassy, but have to bear heavy sandstowing costs also. Such mines have not been abandoned, as might be imagined from the recent statement in the Lok Sabha, and some of them continue to work at a loss, obviously in the hope that their case will receive active consideration eventually. It is hoped that the Coal Prices Revision Committee will find a solution to the problem of collieries, whose mining conditions of necessity entail high costs.

"Last year, I stated that the fate of the coal industry then rested with the Coal Prices Revision Committee and, although they submitted their report to Government in December 1958, their findings are not yet known to the industry but they can only be more out of date now than they were a year ago when I mentioned this point. As you are aware, this Committee was constituted in 1957 with instructions to submit their report within two months. The complexity of the problem before them was known to us, and it is understandable that they could not complete their investigation in so short a time but the industry awaits with keen interest the report of this Committee and to hear what action Government intends to take on their report. It is difficult to appreciate the inordinate delays which have taken place over this matter, but let us hope that the time has been well utilised and that such detailed consideration has been given to this matter that it will result in a clear-sighted and wise decision being taken by Government which will enable the industry to expand to meet its commitments in the future.

Import Control

"A major handicap which has prevented many collieries from increasing their production has been the import control policy and the delays which have occurred over the granting of licences. While the grave shortage of foreign exchange is appreciated, it is felt that sufficient priority over the granting of import licences has not been given to the coal industry during the year. There is a continual demand for imported spares and items of plant and machinery used in the mining industry for which foreign exchange will continue to be required until the Government factory, to be located in Durgapur, is in production and other indigenous manufacture increases. Unfortunately, the coal industry has been unable to utilise the credits offered by the Export-Import Bank of the United States of America. As our mines have standardised largely on equipment from the sterling area, it would not be practical, at this stage, in view of the advent of increased indigenous manufacture, to change to American equipment as a wastage of foreign exchange would only result. Machinery already purchased must be provided with the necessary foreign exchange to keep it supplied with the spare parts required and less wastage occurs if the present standardisation of types of machinery is allowed to continue and is intensified rather than if new manufactures and types are introduced. It must be remembered also that the coal industry is working on the basis of controlled selling prices and cannot afford to purchase machinery which is more expensive than that available from the sterling area.

"While great credit is due to the Eastern Railway for the increased coal loading achieved during 1958, loading on the South Eastern Railway showed a reduction in 1958, when compared with the previous year. In view of this I would ask how collieries served by the South Eastern Railway could be expected to increase their production in 1958. Unfortunately, despite the strongest representations made, the Railway Board appear to be able to offer little hope for improvement during the Second Five-year Plan period and the collieries served by the South Eastern Railway in Bengal and Bihar have had no alternative but to defer their schemes for increased production. The South Eastern Railway have been engaged in major construction work in connection with the movement of ore and increased capacity for the steel works. In the meantime, there has been little or no progress by the South Eastern Railway over comparatively minor alterations to railway yards which require to be expanded to meet the increased demand for coal from the steel works.

"While the railways are to be congratulated upon their improved operational efficiency, I feel that some of the credit for their achievement should be passed on to the coal industry. Greater operational efficiency has been achieved as a result of the introduction of certain schemes, to which collieries have given their wholehearted support, in most cases at the expense of their personal interests and with considerable sacrifice to themselves. The coal industry offered their co-operation in the hope that the result might be a greater wagon availability for the movement of coal. To cite a few examples, these are five-hour loading, block rake loading and rationalisation of movement. In some respects, as far as the collieries have been concerned, I feel that these schemes have proved to be double-edged and while improving wagon availability have acted to the detriment of the coal industry. These innovations have resulted in a financial strain being placed on coal companies. In addition, the coal industry has been burdened further financially over the provision of colliery sidings and weighbridges. Whereas it was possible previously for collieries to be provided with assisted sidings, in recent years they have been compelled to construct sidings on private siding terms at their own expense. They have even had no alternative but to make additions and alterations at their own expense to their old 'railway-assisted' sidings.

Rationalisation of Movement

"I can only record grave concern over certain aspects of the rationalisation in the movement of coal and the further limitations which are likely to arise as production increases in the outlying coalfields and coal mining commences in new coalfields. As I see it, there is a danger that, in time, the outlet for the coal production of the States of Bihar and West Bengal may be confined to consumption within Eastern India and probably these States only. Already, we are bound by such rules that certain grades of coal can only be transported in this or that direction and such rules appear to be a pointer to the fact that, if such planning continues, coal from the States of Bihar and West Bengal will be eventually given little opportunity to move to other States where consumption will increase due to industrialisation. As I have said before, the coal industry has no idea yet of the detailed plans which are being considered for the Third Five-year Plan, but I feel that the future of collieries in Bihar and West Bengal should be considered carefully before plans are made for opening up further new coalfields. The economics of such proposals should also receive detailed consideration. The capital requirements of new coalfields exploited by the N.C.D.C. appear to be Rs. 60 for each ton of coal and I would ask whether it would not be better to give more opportunity to existing collieries in Bihar and West Bengal to mine their other seams and nearby areas during the Third Five-year Plan, resulting in less capital expenditure, rather than launching out into expensive schemes involving vast expenditure of foreign exchange to produce low grade coal in new coalfields. I appreciate the arguments which have been put forward in the past over dearer railway freight for long-distance hauls but I feel, however, that as the railways are now removing their old bottlenecks such as Waltair, Moghalsarai, the Ganga Bridge, etc., they will soon be able to transport Bihar and West Bengal coal at cheaper cost to the consumer than if industries are compelled to accept inferior coal from a shorter distance. In addition, the latter coal can only become high-priced eventually in view of the capital cost incurred and when deeper mining becomes necessary. I trust that this will be examined in great detail when finalising the Third Five-year Plan, as well as the economic distress which may result if existing collieries are not allowed to expand or replace their output from available coal reserves. Increased production from new coalfields should not be allowed at the expense of existing units and their potential, otherwise economic distress and unemployment will only result. It is usually cheaper to expand existing units than to start new ones. The private sector of the coal industry have expressed willingness in the past to enter into joint mining ventures with Government and I sincerely hope that this suggestion will be considered while formulating the policy for the Third Five-year Plan.

Fair Return

"On the occasion of this meeting last year, I took the opportunity to give particulars taken from an analysis of the financial accounts of 19 coal companies of this Association to show the serious depletion of their resources which was taking place on account of capital expenditure incurred by them. These detailed particulars have been supplied to the Coal Prices Revision Committee. In support of our case, I would draw attention to the latest *Reserve Bank of India Bulletin* dated February 1959 which shows some interesting information regarding the sources and uses of funds of selected industries during 1957. These statistics show that the paid-up capital of 39 coal companies increased by only 1.9 per cent. compared with the previous year, whereas, in the case of cement and iron and steel, increases of 21.5 per cent. and 27.3 per cent., respectively, were recorded. New capital for coal mining is naturally shy, in view of the treatment which the industry receives, and our sources of funds for increasing output are, therefore, limited to current profits, where attainable.

"In addition, these statistics show that the increases in free reserves and surplus were 0.8 per cent. for coal and 14.9 per cent. and 29.9 per cent., respectively, for the other two industries, which are part of the core of the Second Five-year Plan and are further proof that the current controlled selling prices for coal are inadequate.

"Again, to quote from another *Reserve Bank Bulletin* dated September, 1957, the average rate of dividend for the coal industry was shown as 7.1 per cent. on paid-up capital and to be lower than most other industries. More recent figures supplied to the Coal Prices Revision Committee showed the dividends paid to the shareholders of our 19 coal companies, which together raise about one-third of the total production of the country, to be 6.3 per cent. on the paid-up capital involved but, on the capital employed, the average dividend represented 3.4 per cent. only. In view of the increase in costs which have occurred subsequently on account of the Coal Mines Regulations and other items, the return on capital employed is now even lower.

"I would ask if this is a fair return to the shareholders who have invested in companies mining coal which is a wasting asset. In order to attract money to the mining industry and keep it in a healthy state, there must be a more than average return on the sum invested. It is to be hoped that the Coal Prices Revision Committee have taken these points into account and that they have not based their findings entirely on past statistics but have looked ahead to the future requirements of the industry.

Labour

"Apart from the question of inadequate earnings, another factor which is impeding progress in the coal industry is low productivity. Although the wages and emoluments of our workers have increased by about 75 per cent. during the last six years, output per man has risen only slightly, which in part is attributable to increased mechanisation, and absenteeism has increased. Unfortunately, the standard of living of miners remains static and as long as their known wants are met, they do not appear to show any desire to work harder to earn more.

"Here, the problem appears to be one of changing the habits, outlook and attitude of the workers, so that they may appreciate the value of a higher standard of living. Our industry is fortunate in having the Coal Mines Welfare Organisation to help in this direction as one of their many functions. It is disappointing that some of the facilities offered by this Organisation are not being fully utilised but the activities of the Organisation are increasing. A new housing scheme was sanctioned last year to construct 30,000 houses during the next five years and this scheme is now well under way and over 7,000 houses are expected to be completed this year.

"Earlier this year our Coal Controller and the Chairman of the Coal Board, Mr. P. M. Nayak, was transferred for service to his State Government and on your behalf, gentlemen, I wish Mr. Nayak every good wish for his future career. I have always felt that the Coal Board's Annual Reports read little differently from the reports of the old Coal Mines Stowing Board but I feel Mr. Nayak is to be congratulated over the increased activities of the Coal Board while under his care. You will note from their last report, the activities which the Coal Board have undertaken and the various sub-committees which were formed, supported by technical experts from the private sector, in addition to its normal advisory bodies. These include one to make detailed surveys and investigation regarding the winning, transportation and distribution of sand from the Damodar Valley Corporation river deltas and another

UNITED COMMERCIAL BANK LIMITED

CONSIDERABLE EXPANSION IN BUSINESS

MR. G. D. BIRLA OFFERS SOME VALUABLE SUGGESTIONS ON THIRD PLAN

THE Sixteenth Ordinary General Meeting of the United Commercial Bank Limited was held at Calcutta on Thursday, 2nd April 1959. In his statement to the shareholders on that occasion, Mr. G. D. Birla, Chairman of the Bank, dwelt on the problem of economic development, after briefly tracing the main features of the Bank's progress during 1958. He gave some valuable suggestions on the Third Plan now on the anvil. He stressed that the planners should lay emphasis on incentives and not on compulsion, that the Plan should be thought of in terms of additional national income and not in terms of size, that the foreign exchange part of it should largely be in the form of private capital rather than loans, that appropriate climate should be created for attracting both domestic and foreign capital, and that unemployment could be effectively tackled only through intensive production per unit of capital. "Muscle power," he averred, "is the costliest power in the world and we have heard of no country which has solved the problem of poverty of the people through this power."

The following is the full text of Mr. Birla's statement:

"GENTLEMEN,

"You would have noticed from the balance-sheet and profit and loss account, which have been in your hands for some time and which, I have the pleasure to present to you for your adoption, that the Bank's business has shown considerable expansion during the year.

Deposits

"The deposits at the end of 1958 showed an increase of Rs. 17.21 crores and stood at Rs. 78.28 crores. This increase of 28.1 per cent. is higher than the increase of 17.1 per cent. recorded in the year 1957. The deposits of Scheduled banks other than the State Bank of India registered an increase of 9.9 per cent. during the same period.

Cash

"Cash on hand and with banks and money at call and short notice was Rs. 8.39 crores and represented 10.7 per cent. of the deposit liabilities.

Investments

"As the bulk of the additional resources which accrued to the Bank during the year could not be more profitably employed in advances and bills, we had to invest a large part of it in Government and other securities. This portfolio, therefore, showed an increase of Rs. 15.69 crores and its total stood at Rs. 35.63 crores. The cash balances and unencumbered investments together amounting to Rs. 38.34 crores give a ratio of 48.9 per cent. to total deposits.

Advances and Bills

"Our advances at Rs. 29.89 crores were higher by Rs. 5.20 crores and were only 38.1 per cent. of our deposits. Bills discounted and purchased at the end of 1958 showed an increase of Rs. 2.27 crores and stood at Rs. 15.27 crores. This self-liquidating asset forms nearly 19.5 per cent. of the deposits.

Liquidity Ratio

"The total of our liquid assets, cash on hand and with banks, money at call and short notice, unencumbered investments and bills amounted to Rs. 53.61 crores, and represented 68.4 per cent. of our deposit liability, which, I trust, you will consider is a highly satisfactory position.

Profit and Loss Account

"The slowing down of industrial and commercial activity during the year created a tendency amongst the depositors to place their idle funds with banks in call and time deposit accounts rather than leave them in their current accounts. This shift in the pattern of deposits would, by itself, have resulted in a largely increased payment of interest but added to this was the severe competition amongst the banks to secure deposits by paying high rates of interest. In our own case, we had to pay as much as Rs. 2.17 crores by way of interest on deposits and borrowings, as compared to Rs. 1.63 crores paid in the previous year. As mentioned before, the bulk of the additional resources had to be invested in Government and other securities with low yields and, notwithstanding this large investment, we had, for the greater part of the second half-year, considerable surplus funds earning an unremunerative rate of interest. The rise in our earnings, therefore, under the head 'interest and discount' was the modest sum of Rs. 51.55 lakhs which just sufficed to pay the additional interest on deposits. Working expenses under the head of salary and allowances rose by nearly Rs. 13 lakhs. By reason of these influences, which affected the entire banking system, the profits of the Bank have come down from Rs. 59.70 lakhs to Rs. 45.38 lakhs. By pruning the allocation to reserve fund from Rs. 19 lakhs to Rs. 14 lakhs, we have been able to recommend to you payment of the same dividend as last year and also to pay bonus to the staff on the same scale.

"I take this opportunity of offering the thanks of myself and of the Board of Directors to Mr. S. T. Sadasivan and his able assistants for the continued expansion of the Bank's business. I also wish to record our thanks to the other members of the staff for their contribution and look forward to greater co-operation amongst them in the years to come.

Money Market

"The year 1958 was characterised by the almost complete absence of seasonal tightness of money. The expansion of bank credit during the first five months of the year which is usually the busy season was very much smaller than in 1957, when we had the crippling tightness of money which caused severe strain on the resources of the commercial banks. In 1958, by contrast, the banks were able to meet the modest seasonal demand with the greatest ease, without resorting to any large-scale borrowing from the Reserve Bank against securities or under the Bill Market Scheme.

"In spite, however, of the reduced demand for money, the competition amongst banks for securing deposits was very great and the rate of interest offered on call and time deposit accounts was as high as 4½ per cent. per annum. Fortunately, all the leading banks got together in the second half of last year and succeeded in evolving an agreement, to limit, on an all-India basis, the maximum rates of interest payable on various types of deposits. I am glad to say that all the major banks in the country are parties to this agreement. The rates of interest on advances came down slightly, as a result of the easier tendency in the money market, and it remains to be seen whether the benefit of the Inter-bank Agreement would be felt during the current year.

"Towards the close of the year, the busy season set in with the customary demand for bank finance and the expansion of bank credit, so far, has been on a much larger scale than in 1958. Money conditions are tighter than a year ago, but this is largely due to the banks' over-investment in Government and other securities during the last year. The Reserve Bank of India has called for restraint on the expansion of advances, in order that the price line might be held and it is, therefore, expected that the advances-deposits ratio of the banking system this year will not go beyond the normally accepted standards.

Industrial Production

"Having reviewed the affairs of the Bank, I now turn my attention to the general economic situation and, in doing so, I have inevitably to bring under review the progress achieved under the second Five-year Plan and visualise what has to be done during the third Plan period. The targets assigned to the private sector have been fulfilled, but the momentum which enabled this to be achieved has been somewhat lost during the course of last year and there is a noticeable decrease in the rate of growth. The index of industrial production which maintained a steady upward trend from 1951 onwards began to show a downward trend thereafter. The average index for the nine months January-September 1958 was 142.7, as compared with 149.3 for the corresponding period of 1957. The index of agricultural production also declined from 123.8 in 1956-57 to 113.4 in 1957-58, the production of foodgrains in particular having gone down from 68.7 million tons to 62 million tons. These figures are a little disquieting and it would appear that economic progress cannot any longer be as satisfactory as in the past, unless we pay particular attention to the treatment of the maladies that have caused this setback.

"While the growth in the national income has been small by reason of the disappointing performance mainly of the agricultural sector, the growth of employment has also not been as large as anticipated in the Plan and such increase as has been achieved has not been enough to offset the addition to the labour population brought about by the rapidly rising population. The second Plan has, therefore, fallen short of its target both with regard to the national income and employment and, if we are unwise enough not to recognise this fact, we might do irreparable harm to the third Plan.

"The reason for the setback in the rate of growth of industrial production is to be found in the low national income of 1957-58 coupled with the effects of the fiscal measures adopted during the last three years. When the purchasing power of the public declined heavily at the end of 1957, timely action should have been taken and the gap between savings and investment should have been filled up by expansion of credit. Unfortunately, imposition of curbs on credit tended only to worsen the position. With the reduced purchasing power of the people, a few industries seem to have already reached the saturation point and are experiencing difficulty in selling their products. Unless the purchasing power of the people substantially improves, there cannot be any hope of a noticeable rise in the industrial production. Obviously, production cannot increase, unless sales are made possible.

Fear of Inflation

"Fiscal and monetary measures must be suited to the particular conditions in the country. Often we adopt measures which are suitable to industrially advanced countries where over-investment and over-employment threaten to undermine the stability of their economy. Such countries adopt disinflationary measures to curb investments and discourage excess demand for goods caused by over-employment. Are such conditions obtaining in India? Do we desire to bring about a fall in investments and a reduction in consumer demand? Our problem is not one of over-employment but of under-employment and unemployment. We are suffering from under-investment and not from the consequences of over-investment. Our malady being poverty and a chronic state of unemployment, we should encourage investment and aim at increased production and employment. Our objective should be larger and larger production. The fiscal measures taken by our Government have resulted in a setback to our economy and the first impact has been felt by the textile industry, followed by cement and engineering industries, and it is probable that other industries will ultimately come to the same pass. On the monetary front, we are obsessed by fear of inflation and of rising prices. How easily the bogey of inflation can give way to the reality of recession was witnessed in the latter half of 1957 and the first half of 1958. In an under-developed country, with plenty of idle labour and undeveloped resources, there can be no such thing as over-investment or inflation arising therefrom so long as investments are directed towards productive purposes. There may be a rise in price due to shortage of goods as has happened in respect of foodgrains, but, such 'scarcity inflation' can be met only by greater production. There is no other fiscal or monetary remedy for it.

Savings Through Increased Production

"To increase investment, we need greater savings but savings cannot be increased by under-consumption and austerity. Austerity will bring down living standards and reduced consumption will slow down industrial production. Austerity is, therefore, the surest way to curb employment and production. In an under-developed country, where savings are not adequate, credit should be expanded to bridge the gap between available savings and required investments. Savings can be generated upto a point by fiscal measures such as reduction of heavy burden of taxation and the pruning of unproductive expenditure. But, basically, savings can follow only increased production and, so long as savings are inadequate, they must be supplemented by bank credit, so that the upward trend of production could be kept up to generate more employment, more earning and ultimately more savings. The notion that savings could be brought about through compulsion requires to be dispelled. Investments can be made attractive only through the assurance of reward whether the investor is Indian or foreign. It is only the incentive and not compulsion that, in the ultimate analysis, will produce results.

"Larger investment is, therefore, the goal we should aim at through savings supplemented by organised credit. I, therefore, fully support a bigger plan for investment—of course in productive projects—on the condition that the flow of foreign and internal resources into investment channels is assured. We shall thereby increase the national income and create new employment.

Third Five-year Plan

"By the same token, I welcome the news that the third Five-year Plan envisages an investment of Rs. 10,000 crores. But, in saying this, I would emphasise that we should not forget that the main object of the Plan should be not how much is to be invested or spent but how much additional income could be earned per unit of investment. From this point of view, it is better to talk not in terms of the size of the Third Plan but in terms of additional national income aimed at in the Plan. I would, therefore, pose the question whether we can earn as much as an additional Rs. 3,000 crores per annum through investment of Rs. 10,000 crores. I believe we can, if the investments are made judiciously. The choice of investments is very important. Those who dream of solving unemployment problem through intensive employment of manpower rather than through intensive production per unit of capital are unrealistic in their outlook. If uneconomic production were the remedy, then the bullock cart and not the railways is the metaphorical answer to our problem. It would be better if we think in terms of medium-scale and even small-scale industry run by power rather than cottage industries worked by hand. Muscle power is the costliest power in the world and we have heard of no country which has solved the problem of poverty of the people through this power.

"I doubt whether even a Plan involving Rs. 10,000 crores, invested carefully, will make any improvement in the *per capita* income of the people. Even if it succeeds in increasing our income by another Rs. 3,000 crores per annum, it would bring about only a modest and not a significant increase in the *per capita* income in 1966, the end of the third Plan. No plan can, therefore, be criticised as being too ambitious. There is a case for a big plan rightly conceived and implemented. The making of the plan is not so important as its implementation. The success of a bigger plan largely depends on one or two important factors. The securing of foreign capital to pay for purchases abroad is one of them. Ability to raise internal capital is another. If we succeed in both these, it would be unjust to criticise the Plan as an ambitious one. If, on the other hand, the external and internal capital could not be procured, then, whatever the size of the Plan, it would remain a Plan on paper only.

More Foreign Investments—Less Foreign Loans

"I shall take the question of foreign exchange first. I consider that, on a plan of of Rs. 10,000 crores, we require an assured inflow of Rs. 3,000 crores in foreign currency. For this, we should not depend too much on aids and loans. External loans have to be repaid in foreign currency some day and our liability for servicing and repaying the debt already incurred is great. If we continue to borrow more, the annual charges for repayment of principal and interest might conceivably increase beyond our capacity to pay in foreign currency. We must, therefore, plan for less of foreign loans and more of foreign investments. For attracting foreign investment, we must create a proper climate.

"I appreciate the uneasiness expressed by some of our creditors abroad about the size of the third Plan. But I am sure they are capable of taking a wider view and realising that the Indian Plan is not just a concern of India alone but of all the free democracies. India is a citadel of democracy and freedom and, therefore, the democracies can ill-afford to allow India to default and leave the field free for undemocratic forces to gather strength. Ultimately, the success of democracy in India or any other Asian country is tied up with economic progress. A big plan with assured supply of foreign exchange is, therefore, vital to India and democracy. The free world must, therefore, help.

Internal Resources

"We too have a part to play in attracting investment. Can we manage to secure Rs. 7,000 crores in internal resources is the main problem and to me the fiscal policy we pursue would be the key to this problem. There is some capital within the country which is not coming out for investment. There is also money in some parts of rural areas where small capital formation has taken place due to high prices of cash crops which could be tapped. Perhaps, some money in the hands of labourers too could be attracted for fruitful investment. But why should anyone venture to invest if the investment be unattractive? No amount of slogans or appeal for austerity would attract capital. We must create favourable conditions for attracting such investments.

World Bank—I.M.F. Meetings

"It is a matter of great satisfaction that the annual general meetings of the World Bank, the International Bank for Reconstruction and Development and the International Financial Corporation were held in New Delhi last October. We had, in our midst, the British Chancellor of Exchequer, the American Secretary of the Treasury, the Finance Ministers of various countries, Governors of Central Banks and other leading bankers and financiers of the world who got an opportunity of getting acquainted, at first hand, with the economic progress made in the country since independence and also became aware of the problems of development which we have to face in common with other countries trying to improve their economic conditions. Many of the speakers at the meeting showed awareness of the necessity of improving the standard of living in the areas which are less developed than the advanced countries of the world and, as a result of the deliberations, it was agreed, and the decisions have since been given effect to, that the capital of the Bank and the resources of the Fund should be increased so as to enable the Bank to raise further funds in the capital markets of the world to meet the ever-growing demands for development loans and to enable the Fund to meet the situations arising from temporary imbalance of payments. The proposal to start an independent International Development Association was also a welcome move and I hope that concrete steps would be taken to bring soon this new Association into being. All these are helpful auguries for our future development. India owes a great deal to the assistance so ungrudgingly extended to her by various international financial agencies and foreign governments and I hope the same measure of generous assistance would be forthcoming for the execution of our future plans.

Public and Private Sectors

"Lastly, I turn to the question between the public and the private sectors in which connection an unnecessary controversy has recently arisen. Those circles which believe that the public sector is treading on the toes of the private sector are taking a short-sighted view. The position is that the public sector is, even now, helping to give a tremendous push to the private sector. A number of ancillary industries have already been set up in the private sector to cater for the requirements during the period of erection of the industries set up in the public sector. When the steel plants would go into full production, many more small *entrepreneurs* will come into existence in the private sector to fabricate steel and steel goods. This applies equally well to several other public sector undertakings. The public sector is thus going to act as a generator of the private enterprises.

"The main concern is not the controversy as to who does it—the public or the private sector—but the task of obtaining of the resources, both external and internal. We need Rs. 3,000 crores from abroad and Rs. 7,000 crores internally and a policy to get it.

"Shall we succeed in raising Rs. 3,000 crores from abroad and Rs. 7,000 crores internally? Shall we invest them judiciously so as to create the highest return per unit of capital? Shall we succeed in checking the rapid growth of population?

"These are vital questions, the significance of which must be realised and answers found by all those who are eager to seek rapid progress and the maintenance of a free and abundant way of life."

THE INDIAN MINING ASSOCIATION

(*Concluded from page 553*)

two committees to work out Central Schemes for the supply of sand to collieries in the Jharia and Ranigunge coalfields and so on. The widening activities of the Coal Board are apparent from their latest report. In welcoming on your behalf, gentlemen, the new Coal Controller and Chairman of the Coal Board, Mr. A. Zaman, I am sure you will join with me in extending to him our offer of continued help and assistance and that you will wish me to assure Mr. Zaman of our desire for even greater co-operation in the future.

"I have just mentioned certain sub-committees on which our representatives have joined in the deliberations. Their reports have been submitted and have been accepted but it is my painful duty to point out that action, which is long overdue, must now be taken on these reports. It appears to me that there is an urgent need for the Coal Board to be reconstituted, so that greater attention can be paid to its activities which have widened and become more extensive since it was first formed. I would ask if the time is not now opportune for the Coal Council and the Coal Board to be merged and for a larger executive committee to function under them than exists in the present Coal Board. There are so many problems to be tackled in order to achieve future coal production targets and I feel that success cannot be achieved unless one unified high-powered body consisting of both the private sector and Government is formed to co-ordinate all matters concerned with the coal industry.

Technical Manpower

"The Committee on Production and Preparation of the Coal Council have assessed the technical personnel required for the Third Five-year Plan. They have estimated that, by 1965-66, an additional 3,750 mine managers, 2,000 electrical engineers, 2,000 mechanical engineers, 950 surveyors, 7,000 overmen, 30,000 sirdars and shotfirers will be required for the mining industry. They have also predicted that, in view of the limited training facilities existing, this number of personnel may not be trained in time and, even in the lower technical categories, have estimated the shortfall to be 5,150 overmen, 300 surveyors and 27,900 sirdars and shotfirers. Yet the latest Mines Regulations have laid down that a greater number of technical personnel must be employed in mines—they must be employed according to statute and mine owners are faced with prosecution or the closing down of their mines, unless the required number of technical personnel are provided. I would humbly submit that the time has now arrived when one high-powered body should be formed to co-ordinate requirements and look into the problems of the coal industry and that a strong executive committee should work under them to see that their policy is carried out. The Executive Committee should also be sufficiently strong in numbers to ensure that quick and effective action can be taken on the accepted recommendations of sub-committees and their reports should not be allowed to remain mere blue-prints for the future. This has been the tendency so far and it can only remain so until the Coal Board is reconstituted."

Two new coal bearing regions have been located recently in West Bengal. The first one is located in Bankura over an area of 13 sq. miles with proved reserves of 11 million tons. Four seams of coal have been so far established in this area. The coal, however, is reported to be inferior. A new deposit has also been found near Ondal. This is said to be the extension of some of the known seams of the Raniganj coalfield. With the exception of Narsamuda and Upper Kanjora Bottom seams, coal in this area is classified as first grade. The proved reserves in this area are 5.26 million tons with a much larger quantity of probable reserves.

THE PUNJAB NATIONAL BANK LIMITED

HEAD OFFICE: "P. N. B. BUILDING", PARLIAMENT STREET, NEW DELHI

(Established in 1895)

DIRECTORS' 112th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1958

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

The transactions for the year under report have resulted in a profit of Rs. 1,10,73,689.70 (including Rs. 4,51,903.52 brought forward from the previous year's account) after contribution of Rs. 10,86,760.00 to Employees' Gratuity Fund Trust. The following amounts have been appropriated for the under-mentioned purposes:—

	Rs.
1. Transferred to Provision for Taxation	33,50,000.00
2. Transferred to Reserve Fund	17,00,000.00
3. Transferred to Bonus to Staff Account	30,75,000.00
4. Ad-interim Dividend at Rs. 2.50 per share (Rs. 25 Fully Paid) free of Income-tax paid	12,50,000.00
Total .. Rs.	93,75,000.00

The Directors recommend that the balance of Rs. 16,98,689.70 be disposed of as follows:—

	Rs.
(a) Final dividend at Rs. 1.00 per share of Rs. 10 each free of income-tax making the total at 20 per cent. per annum	12,50,000.00
(b) Carry forward to the next year's account	4,48,689.70

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

S. P. JAIN,
Chairman.

9th March, 1959.

BALANCE SHEET AS AT 31st DECEMBER, 1958

1957 Rs.	CAPITAL AND LIABILITIES	Amount Rs.	Total Rs.
	1. Capital—		
2,00,00,000	AUTHORISED CAPITAL—20,00,000 Shares of Rs. 10 each		2,00,00,000.00
1,25,00,000	ISSUED, SUBSCRIBED AND PAID-UP CAPITAL—12,50,000 Shares of Rs. 10 each		1,25,00,000.00
	Of the above shares 3,75,000 shares are issued as fully paid-up by way of bonus shares.		
	2. Reserve Fund and Other Reserves—		
87,50,000	Reserve Fund as on 1st January, 1958	1,10,00,000.00	
22,50,000	ADD—Amount transferred from Profit and Loss Account	17,00,000.00	
1,10,00,000			1,27,00,000.00
	3. Deposits and Other Accounts—		
60,05,79,658	Fixed Deposits	64,07,66,629 03	
30,86,75,297	Savings Bank Deposits	33,31,01,636 95	
33,28,02,018	Current Accounts, Contingency Accounts, etc.	31,36,32,499.07	
40,41 485	Employees' Security Deposits (held by the Bank itself)	44,52,444.55	
1,24,60,98,458			1,29,19,53,209.65
	4. Borrowings from Other Banking Companies, Agents, etc.—		
16,21,553	(i) In India	6,00,18,226.09	
Nil	(ii) Outside India	188.02	
16,21,553			6,00,18,414.11
	PARTICULARS—		
	(i) Secured by part of Government Securities lodged	6,00,18,226.09	
16,21,553	(ii) Unsecured	188.02	
Nil			
7,35,67,900	5. Bills Payable		7,57,47,278.04
	6. Bills for Collection being Bills Receivable as per contra—		
9,20,83,290	(i) Payable in India	9,55,11,781.02	
51,88,418	(ii) Payable outside India	50,73,956.57	
9,72,71,708			10,05,85,737.59
	7. Other Liabilities—		
1,06,059	Dividend and Interest on Advance Calls unclaimed	1,21,583.29	
8,381	Rebate on Bills Discounted	27,085.80	
1,14,440			1,48,674.09
7,59,65,663	8. Acceptances, Endorsements and Other Obligations as per contra		8,61,65,985.96
	9. Profit and Loss Account—		
13,20,272	Profit as per last Balance Sheet	17,01,903.52	
7,00,000	LESS—Final Dividend at Rs. 2.50 per share (Rs. 25 Fully Paid) free of income-tax on the increased capital as on 31st December 1957	12,50,000.00	
6,20,272		4,51,903.52	
1,11,06 631	ADD—Profit for the year brought from the Profit and Loss Account	1,06,21,786.18	
1,17,26,903		1,10,73,689.70	
	LESS— Rs.		
8,75,000	Ad-interim Dividend at Rs. 2 50 per share (Rs. 25/- Fully Paid) free of income-tax paid 12,50,000.00		
50,00,000	Transferred to Provision for Taxation 33,50,000.00		
18,00,000	Transferred to Bonus to Staff Account 30,75,000.00		
1,00,000	Transferred to Charity Account Nil		
22,50,000	Transferred to Reserve Fund 17,00,000.00		
1,00,25,000		93,75,000.00	
17,01,903			16,98,689.70
	10. Contingent Liabilities—		
30,80,273	(i) Claims against the Bank not acknowledged as debts	23,19,340.87	
Nil	(ii) Guarantees given on behalf of Directors or Officers	Nil	
1,81,99,023	(iii) Guarantees given on behalf of others	2,06,07,332.67	
2,34,692	(iv) Bills of Exchange re-discounted	12,041.23	
3,98,305	(v) Outstanding Forward Exchange Contracts	3,14,36,518.03	
6,00,000	(vi) Liability for calls on partly paid Shares of Rehabilitation Housing Corporation Ltd., Central Warehousing Corporation and Refinance Corporation for Industry Private Ltd.	25,75,000.00	
	(vii) In respect of buildings constructed by the Bank, adjustment has been made to the extent of the amount certified by the Architects. Further liability in this respect will be adjusted in the current year when the final bills are verified by the Architects.		
	NOTE:—Contingent liability exists in respect of agreement to purchase a building for Bank's use.		
1,51,98,41,685	Total .. Rs.		1,64,15,17,989.14

(Continued on next page)

CONSERVATION OF COKING COALS

PROGRESS IN 1957-58 REVIEWED

THE demand for coking coal in this country is progressively rising, while the reserves thereof are not inexhaustible. The demand is expected to expand substantially in the next few years when production of steel under the expansion programmes of the existing plants in the private sector and that of the new plants in the public sector gathers momentum. Several measures are being taken to conserve the available resources of this high grade coal, the more important of which are: (1) pegging the output of coking coal, (2) stowing, (3) coal washing, and (4) restriction on opening and re-opening of mines and seams.

The pegging of output of coking coal is being done by fixing ceilings for the three main grades (selected A and B, grade I and grade II) every year. In 1956, to take a recent year, the overall ceiling for these three grades was fixed at 15.4 million tons. This was raised to 16.7 million tons for 1957 and further to 18.2 million tons for 1958.

The grade-wise ceilings and actual output of coking coal for the last three years are as follows:

(In million tons)

	Selected A and B grades	Grade I	Grade II
1956—			
Ceiling	7.88	4.43	3.10
Actual output	7.22	4.12	2.46
1957—			
Ceiling	8 00	5.00	3.70
Actual output	7.59	4.63	2.86
1958—			
Ceiling	9.00	5.50	3.70
Actual output	3.74*	2.32*	1.56*

* For the first six months only.

Explaining the reasons for raising the ceiling for 1958, the Annual Report of the Coal Board for 1957-58 says:

"It had been expected, according to the plans for washing considered at the beginning of the second Five-year Plan period, that, by the end of 1961, all coking coals would be washed. This would have provided sufficient washed coking coal to meet the requirements of the steel plants. The expansion of two existing steel plants was nearing completion in March 1958. The Bhilai and Rourkela steel plants were expected to go into production in 1958. But all the plants for washing coking coals are not likely to materialise in the next two years. In the meantime, the demand for coking coal, which will increase in 1958 and which, by the end of 1959, may reach a level of 10 million tons, has to be met. It will have to be met from the washed coal from the existing washeries, from the output of selected grades of coal, and some amount of grade I coal (both unwashed). It was, therefore, considered necessary to create conditions for an increase in the output, particularly of the selected grade and grade I coking coal and the ceilings of production were accordingly increased."

In fixing ceilings for selected A and B coal for individual collieries in 1958, an increase of 12½ per cent. was given in all cases where production in 1957 was not far below the ceiling and for grade I an increase of 10 per cent. was granted, except in cases where the output during 1957 was less than 80 per cent. of the ceiling fixed.

There was a marked increase in the number of collieries carrying out stowing and in the quantities of material stowed during 1957-58. There was also a corresponding increase in the amount of assistance paid for stowing. The Coal Board had sanctioned assistance for voluntary stowing to 110 collieries (out of a total of 830 collieries in India), of which only 81 actually carried out stowing, consuming 6.40 million tons of stowing materials. Forty-three of these collieries producing coking coal stowed 3.17 million tons and 38 producing non-coking coal stowed 3.22 million tons. A total quantity of 3.73 million tons of coal was raised during the year under review with stowing. The comparative figures of coal output from stowing areas for the last five years are as follows:

(In million tons)

Year	Coking coal		Non-coking coal	
	Quantity stowed	Output	Quantity stowed	Output
1953-54	2.24	1.28	2.73	1.75
1954-55	2 16	1.35	2.97	1.89
1955-56	2 43	1.15	2.78	1.74
1956-57	2 54	1.34	2 68	1.70
1957-58	3.17	1.72	3.22	2.01

It will thus be noted that, in 1957-58, the quantity stowed and coal recovered with stowing in both coking and non-coking collieries were more than in 1956-57.

The total amount paid as assistance for stowing during 1957-58 was Rs. 81.68 lakhs, as against Rs. 71.87 lakhs in 1956-57 and Rs. 61.41 lakhs in 1955-56.

Next to stowing, washing is an important measure of conserving the better quality of coking coals. Grade I and grade II coking coals can be used economically for metallurgical purposes only if they are beneficiated. If they are not washed, larger quantities of selected grade coking coals would have to be produced, thus rapidly exhausting the limited resources of these coals. In view of the urgency of washing in the context of the expansion of steel industry, the Government of India had decided to establish central washeries in the Jharia coalfield. It is expected that if the three new washeries scheduled to be established and the existing washeries were to work to full capacity, about 13 million tons of coking coal would be washed to produce about 9 million tons of clean coal. Considering the progress so far made, the Coal Board is, however, doubtful whether some of these washeries would be completed before 1961.

SINGARENI COLLIERIES

The long-drawn-out dispute between the Union Government on the terms and conditions of the Central Government's assistance for the expansion programme of the Singareni Collieries, Hyderabad, during the current Plan period has ended with the conclusion of an agreement between the two Governments. A memorandum explaining the broad features of the agreement was placed on the table of the Andhra State Legislative Council on the 26th March.

The Central Government, it may be noted, had all along been insisting on its being allowed to hold two-thirds of the equity capital of the Company, as a condition precedent to its providing any assistance. In August last, however, it revised its stand and agreed to provide loan assistance, without a majority holding of the shares and controlling interest in it. A sequel to this is the present agreement.

Under the agreement, the authorised capital of the Company will be Rs. 4 crores. The question whether this should be increased or not is to be determined at the beginning of the third Five-year Plan, when the position will be reviewed. The equity capital of the Company will be fixed at Rs. 3 crores, of which the Centre will hold 40 per cent., or Rs. 1.20 crore. The Andhra Government will purchase the bulk of the shares held by the public, after which the Company will be virtually under the control of the State Government.

The agreement estimates the total assistance required from the Central Government by the Company up to the end of the current Plan period at Rs. 4.15 crores. This assistance will be partly in the form of equity capital and partly as loan. On the basis of the participation in the equity capital, as stated above, the loan assistance by the Union Government to the Company will not exceed Rs. 2.85 crores, excluding the sum of Rs. 10 lakhs advanced in 1956.

THE PUNJAB NATIONAL BANK LIMITED, DELHI—*Contd.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1958

1957 Rs.	EXPENDITURE	Amount Rs. nP.	1957 Rs.	INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Amount Rs. nP.

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK, LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank, Limited, as at 31st December, 1958, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE UNITED COFFEE SUPPLY CO., LTD. AND STANES MOTORS (SOUTH INDIA) LTD.

HIGH TAXATION IMPEDES PROGRESS, SAYS MR. E. H. STANES

THE Forty-eighth Annual General Meeting of Messrs. T. Stanes and Company, Ltd., was held in Coimbatore on 25th March 1959. Addressing the shareholders on the occasion, Mr. E. H. Stanes, Chairman of the Company, referred to the increased labour costs of the Group, which could be covered only by increasing production and sales. This was, however, difficult to achieve, he added, when taxes were so high and left very little money for further development.

The following is the full text of Mr. Stanes' speech:

"Last year, at the annual general meeting, I handed you a condensed statement showing the summary of the Company's combined balance-sheet and profit and loss account and a copy of that was also published in some of the financial papers. With a company such as ours is, only recently made a public company, it seems to me necessary to advertise ourselves to the public, and as the balance-sheet of T. Stanes & Co., Ltd., by itself does not give a full picture, I again give below a condensed statement of the combined balance-sheet and consolidated profit and loss account of the group as on 30th September 1958, and with the previous year's figures for comparison:

(In lakhs of rupees)

Capital, Liabilities and Reserves	As on 30th September 1957	1958	Assets	As on 30th September 1957	1958
Capital:			Fixed capital expenditure	33.06	34.76
Preference	1.50	1.50	*Less*—Depreciation to-date	17.20	19.21
Ordinary	11.56	11.56		15.86	15.55
Capital reserves	4.70	4.70	Investments	7.98	8.25
Revenue reserves, including surplus in profit and loss account	33.70	35.10	Current assets	63.94	56.46
	51.46	52.86	Cash and bank balances	5.72	10.32
Minority interest	0 28	0.25			
Liabilities	40 89	36.11			
Difference in consolidation	0 87	1.36			
Total	93.50	90.58	Total	93.50	90.58

Profit and Loss Account	For the year ended 30th September 1957	1958	Profit and Loss Account—*Contd.*	For the year ended 30th September 1957	1958
By Sales	202.79	201.04	Group profit for the year brought down	12.00	8.65
" Miscellaneous income	10 60	8.87	*Less*—Difference in consolidation due to variation in dates of subsidiaries	0.09	0.03
" Closing stock	35.60	28.46		11.91	8.62
	248.99	239.27	Balance brought forward from last year	0.76	0 82
To Opening stock	32.53	35.60	Provisions withdrawn	1.44	2.00
" Purchases	161.27	148.69		14.11	11.44
" Administrative charges, Directors' fee, working expenses and provisions	40.84	43.90	*Less:*		
" Depreciation	2.35	2.43	Provision for taxation	6.35	6.14
" Group profit for the year carried down	12.00	8.65	Other provisions	0.29	0.02
			Transfer to reserves	4.24	2.35
			Dividends	2.41	2.42
			Carried forward	0.82	0.51
	248.99	239.27			

"You will note the strong financial position shown in this statement. As commented in the Directors' report, the total balance-sheet assets per Rs. 10 ordinary share now stand at Rs. 44.42, whilst the price at which transactions have taken place recently on the Madras Stock Exchange is some Rs. 20 per share below the assets value. With a dividend of 20 per cent. for the year, the yield on the shares at current market price is 8.25 per cent.

Group Sales

"The group sales turnover is approximately the same as last year at over Rs. 200 lakhs; net group profit is Rs. 8,64,683 (Rs. 11,99,742), depreciation Rs. 2,43,209 (Rs. 2,35,593), taxation Rs. 6,13,522 (Rs. 6,35,000), transfers to reserves Rs. 2,35,052 (Rs. 4,24,338).

"As regards individual companies, the Directors' reports attached to these companies' accounts, give a picture of their individual trading conditions during the year. The motor department suffered from a shortage of new vehicles for sale, and this position continues owing to restricted imports. The TyresoleS and Vaculug business continues to expand and flourish.

"The United Coffee Supply Company, Ltd., had difficult trading conditions in the second half of 1957, increased costs and lower turnover cut their profits. But I am glad to say that through the whole of 1958 and to-date the position has much improved and I look to near-record results from that Company this year, and particularly in their sales of Instant coffee.

"Our two plantation companies which we manage had much reduced profits, and hence we received a lower commission, due mainly to the fall in tea prices and higher costs of production. Here again, prices over the second half of 1958 have improved and, in fact, the recession starting in 1957 in U.S.A. and Europe seems to have eased, with the result that I can see a very definite improvement all-round in our business from the second half of 1958.

High Level of Taxation

"All our companies, however, have much increased costs of labour and staff to cover, necessitating a struggle for increased production and turnover, all of which is difficult of attainment when taxes are so high, and leave us so little money for further development. Direct taxation only over the past three years, at Rs. 18.36 lakhs, is over 2½ times the amount of dividend to shareholders. I like the phrase, I read recently, where someone mentioned very aptly, 'the cold war against the private sector.' The Government, with its taxation receipts, both direct, indirect, and from all our employees, is the biggest capitalist in the private sector and receives the bulk of the profits without having to put up the capital, or the work and brains to run it. In fact, controls and restrictions continue to make our work more difficult. There are extremists who still say the private sector is an excrescence which ought to be abolished and who seem quite incapable of a fair outlook, and are unable to see that the private sector is, in fact, the backbone of the whole country's economy and well-being. In this matter I should like to feel hopefully confident that wiser counsels will prevail and that in the long run, private enterprise will be given more scope and more incentive, and that as a result, the welfare of the people will be more swiftly established than can be expected of untried ideological theories. A moment's reflection will make it abundantly clear to us in which democratic countries the standard of living is highest, and how that standard has been established.

"I feel sure you must be gratified with the financial results of your Company for the year. It will be agreed that further progress has been made since I addressed you last year, even though the profits of the group are somewhat lower.

"The reduction in this Company's profits is largely due to reduced managing agency commission, reduced income from TyesoleS (India) Calcutta, and losses incurred in the curing of coffee. This loss is caused by enhanced wages, and no increase from the Coffee Board in allowable charges for curing coffee.

Funds Locked Up

"If anything, I would venture to say that we are probably expanding too fast commensurate with the finances at our disposal, and there is very little money left for ploughing back into the business not only for current financing but also for modernisation of plant and machinery. I feel I must give you an example of financial situations which are much too prevalent. As you know, we conduct considerable business in fertilisers, the chief ingredients of which are under the control of the Union and State Governments. Such fertilisers are allotted to us from time to time based on an estimated offtake. These allotments, however, are usually made in large quantities at long intervals and it is not infrequent that we are called upon to make advances of Rs. 2 lakhs to Rs. 3 lakhs, and more at short notice and then wait a long time for the arrival of the goods, which, when received, are often out of season for manuring crops. Money tied up in this way restricts business in other departments, such as, for example, the hypothecation of coffee crops.

"If I may be permitted to take a view of the immediate future, which of course is based on current business in our combined trading activities, I would say that the horizon is by no means clouded over. You may look forward, I feel sure, to another year of satisfactory progress.

"In closing, I wish to thank our staff and workers for the hard and careful work they have put in during the year and their generally loyal service to our Company. Two of our staff who retired on pension from head office last year had 43 and 47 years of service to the Company behind them. It is examples such as this, of staff who have spent their whole working life with us, which make me feel that we are not an impersonal and inanimate business, but a living organisation, and the team spirit behind the results of our annual balance-sheet is what really counts."

Notice

THE MAHARASHTRA SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FIFTH ANNUAL GENERAL MEETING of THE MAHARASHTRA SUGAR MILLS LIMITED will be held on WEDNESDAY the 29th day of APRIL 1959, at 11-30 a.m., at the Registered Office of the Company, Industrial Assurance Building, Opposite Churchgate Railway Station, Bombay, to transact the business mentioned in the Notice already sent to the shareholders along with the Explanatory Statement, Balance Sheet and Profit and Loss Account, Report of the Board of Directors and the Auditors' Report for the year ended 30th September 1958.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Share Transfer Books of the Company will be closed from 16th day of April 1959 to 6th day of May 1959, both days inclusive.

By Order of the Board,

For THE MAHARASHTRA SUGAR MILLS LIMITED,

M. L. DAHANUKAR & Co., PRIVATE LTD.,

D. M. DAHANUKAR,
Director,
Managing Agents.

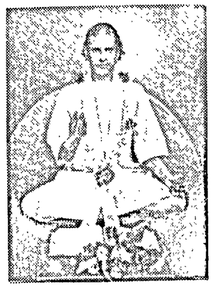
Lectures

On every Saturday in the evening and Sunday in the morning, Lectures by Shri Yogiraj Umeshchandraji and other learned dignitaries are delivered on various subjects like Yoga, Vedanta, Devotion, Spiritual Strength, etc., at Shri Ramtirth Yogashram.

UMESH YOGA DARSHAN (First Part)



SHRI YOGIRAJ UMESHCHANDRAJI

In Four Languages: English, Hindi, Gujarati and Marathi.
(Author: SHRI YOGIRAJ UMESHCHANDRAJI).

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji, is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 100 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho-Therapy and many other Therapies. The book is the best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

PRICE: Rs. 15/- Plus Postage Rs. 2/- extra.
No V.P.P. sent.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available from here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2·50 including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers are available for Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and lets sleep sound. Most ideal for body massage. It is useful to every one in all seasons. Prices: Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

THE CENTRAL BANK OF INDIA LIMITED

INCREASED COST AFFECTS PROFIT MARGIN

MR. HOMI MODY DOUBTFUL OF BANK EARNINGS KEEPING PACE WITH GROWING EXPENSES

SPEAKING at the Forty-eighth Annual General Meeting of the Central Bank of India Ltd. held in Bombay on 30th March 1959, Mr. Homi Mody, Chairman of the Bank, was doubtful whether banks' earnings would be able to keep pace with the ever-growing establishment charges, unless either rates of interest allowed 'on deposits were reduced or those charged on advances increased. He was, however, of the view that, in view of growing resistance from borrowers to any rise in interest rates, the present ceiling on deposit rates might have to be reviewed.

The following is the full text of Mr. Homi Mody's speech:

"LADIES AND GENTLEMEN,

"I have pleasure in welcoming you to our annual general meeting. Before I deal with the affairs of the Bank, I would like to offer a few observations on the economic situation in India and abroad.

"The year under review saw the peak of the recession in the United States and its gradual tapering off until industrial production in December nearly reached the level from which it had started falling. A perplexing feature of the setback in the economy was the behaviour of prices, which kept firm throughout, particularly in consumer goods, and did not move up or down with the fluctuations in production. Wages also failed to decline, leaving industry no option but to cut down production costs by keeping the labour force to the minimum. Another effect of the recession was the drastic reduction of the trade surplus of the U.S.A., due to the fact that export prices failed to fall markedly, in sympathy with internal domestic prices, thereby reducing world demand for American goods.

"The underdeveloped countries of the world did not fare too well during this period. They were hit by the large inventory liquidations of raw materials effected in the United States. Nevertheless, the early upward turn in industrial production in the States in the latter half of 1958 prevented the situation from turning too difficult.

British Economy

"In the United Kingdom, the pound strengthened and there was a sharp rise in gold and dollar reserves. This was due, apart from an improvement in the terms of trade, to the 7 per cent. Bank rate, economy in Government expenditure and continuance of restrictions on bank advances. These measures had their effect, and in the latter half of 1958, the Treasury found it possible to introduce a policy of 'cautious reflation.' The Bank rate, which was gradually being reduced, came down to 4 per cent. in November. Restrictions on bank advances were removed and qualitative controls were virtually suspended. In the result, bank policies underwent a marked change. Personal loan services were introduced and banks entered the hire-purchase field by large-scale investment in existing hire-purchase companies. To offset the possibility of an uncontrolled inflation, arising from these and other measures, the Bank of England acquired powers to call for special deposits from banks.

"Turning to the situation in India, 1958 witnessed some disquieting trends. Production was not maintained at the pace which might be expected in an expanding economy. Cotton textiles actually recorded a fall, as compared with the previous year, as also industries like automobiles, power transformers, finished steel, *vanaspati* and sugar. In some cases, the decline in output reflected a slackening of demand. There was expansion, on the other hand, in industries, such as coal, electricity, machine tools and chemicals, but the overall picture could not be called satisfactory and the number of unemployed rose substantially. The decline in production, particularly of agricultural commodities, was reflected in the level of prices and the wholesale price index rose by a few points. In spite of the restrictions on imports, the balance of payments position was none too healthy, and the drain on our foreign exchange resources continued.

Heavy Weather

"The second Five-year Plan encountered heavy weather during the year. In spite of stringent controls on imports which bore heavily on a number of existing industries and also affected the 'small man' in a number of ways—a gap of something like Rs. 280 crores was anticipated between the requirements of even the hard core of the Plan and the resources available for its implementation. Had it not been for the generous and timely assistance proffered to us by some of the industrially advanced nations, particularly the U.S.A. and the U.K., we would have found ourselves in serious difficulties. Even so, we cannot say with confidence that the modified targets, which we have now set before ourselves, will be achieved at the end of the period.

A Disastrous Approach

"Cheerfully forgetting the lessons taught by the events of the last few years, our planners are now said to be busy framing a bigger and more spectacular Plan, such as would constitute a significant socialistic advance. That would be a disastrous approach. What the country needs is not a bigger, but a better Plan, such as would promote a harmonious development of agriculture and industry, make for larger and more gainful employment and succeed in holding the price line. Scientific, and not political, planning is required or such a balanced development of the country's resources. Incentives to earn, save and invest must find their proper place in any such plans for national reconstruction. A process which virtually amounts to pauperising the rich and making life harder for the vast number of lower middle-class income groups cannot possibly usher in the millennium, nor conform to any canons of fairness in the rendering of social justice.

"The Budget proposals presented to Parliament by the Finance Minister must be regarded as a reflection of the position in which haphazard and unrealistic planning has landed us. While there are some welcome features, such as the abolition of the wealth tax on companies, the system of compulsory deposits and the excess dividends tax, not only has no tax relief been given but a substantial addition to the revenues has been provided for. On the ground of rationalising the tax structure in relation to companies and shareholders, changes have been introduced involving a heavier burden, which will operate particularly unfairly in the case of corporations which have pursued a prudent policy and built up substantial reserves. Even more unfair are the new provisions with regard to the expenditure tax and excises on certain commodities. As I pointed out in my speech last year, so far as the range and incidence of taxation are concerned, there is no country in the world where so much is sought to be taken from so few, and where also the 'common man' is being penalised in so many ways. All this in a country which is amongst the poorest in the world. That a large part of the burdens, which have been imposed in the last few years, should go to the financing of unproductive expenditure makes the position still more indefensible.

Working of Indian Banks

"Turning to the working of Indian banks during the year, time deposits of Scheduled banks again moved up sharply, while demand deposits showed no change at all. The rise of Rs. 222 crores in time deposits was largely accounted for by the counterpart funds under P.L. 480 placed by Government with the State Bank of India. In a sense, it may be argued that funds are moving from the private to the public sector. The counterpart funds are built up out of the sale proceeds of foodgrains from the United States, and to the extent they have been utilised by the State Bank for investment in Government securities, they can be said to have helped the public sector. It has often been urged that the benefit of these funds be distributed evenly among the Scheduled banks, and it is time the justice of that demand was conceded.

"The rise in deposits was not matched by any significant advance in the financing of trade and industry by banks. There was an increase of only Rs. 8 crores in the figure of advances and bills. The demand for funds slackened during the second half of the year, owing largely to the restrictions on imports and a slowing down of activity in the industrial sector. The Reserve Bank's restrictions on advances against foodgrains aggravated the stagnant conditions which prevailed. Bank profits were accordingly affected and recorded a substantial decline, as compared with the results of the previous year.

"Before dealing with the business of the meeting, I have to refer to the death, which took place in October last, of one of our colleagues. Mr. Manmohandas Amersey, who was a member of the Board for a number of years. The Board deeply regretted his passing and have placed on record their appreciation of the very valuable services he rendered to the Bank.

Balance-sheet and Accounts

"I now pass on to the balance-sheet and the statement of accounts presented to you. As will be seen from the comparative figures given in the balance-sheet, our figures of working funds, general turnover of business and gross earnings progressively increased during the year. Operating conditions, however, were not too favourable. While the employment of funds continued at a fairly high level during the first half of the year, the demand for money during the second half slackened off and the expanding resources of the Bank could not be utilised to the same advantage. Despite this feature, the scramble for deposits continued, and until the inter-bank agreement on ceiling rates for deposits could be brought into force, rates as high as ½ per cent. above Bank rate had to be paid for short-term moneys. This increased cost of working funds, without any compensating rise in the rates of interest charged on advances, coupled with the abnormal rise in establishment charges, more than absorbed the increase in our earnings, thus reducing the actual working profit to a figure below that of the previous year. The setback in net profit was of the order of Rs. 7.32 lakhs, against which is to be set off the amount of Rs. 4.23 lakhs which was paid last year on account of gratuity to staff out of profits, instead of out of the fund provided for the purpose.

"In view of the increased working funds and their higher cost, outgoings under interest increased by over Rs. 43 lakhs, but the income under the same heading, after making the necessary provisions, increased by over Rs. 64 lakhs. This, together with the profit realised on the sale of investments and a small increase in earnings under other heads, accounted for an increase in the net income of nearly Rs. 28 lakhs over that of the previous year. However, with establishment charges recording a further rise of Rs. 30 lakhs, the increase in the income was more than wiped out.

"This heavy rise in establishment charges was due to increases in dearness allowance, salaries and overtime, apart from an increase in staff, consequent on the expansion of business and the opening of 16 new offices during the year. I may add that, since the commencement of the current year, there has had to be allowed a further addition to the dearness allowance due to a stepping up of the cost of living index.

Ceiling On Interest Rates

"Over and above these adverse factors, there is a growing resistance from borrowers to any increase in interest rates, and even to existing rates of interest. Moreover, the credit restrictions imposed by the Reserve Bank are being further extended. It appears doubtful, therefore, that banks will be able to keep pace in the matter of their earnings with the ever-growing establishment charges, unless either rates of interest allowed on deposits can be reduced, or those charged on advances increased. The Indian Banks' Association, of which our Vice-Chairman, Mr. Bhabha, is President, has succeeded in bringing about from October last an inter-bank agreement on rates of interest on deposits; but I feel the ceilings so fixed may soon need to be reviewed in the light of prevailing trends in banking profits.

"It will be noticed that, in addition to payments for gratuity made out of our profits for the year, we have—and this was at the instance of our auditors—appropriated Rs. 10 lakhs for staff gratuity fund, as the provision held in this account was considered inadequate in relation to our liability for gratuities. The provision in this account may now be considered to be fair, but it will require to be increased, from time to time, as and when profits permit. In view of all the loose talk on the subject of remuneration to the staff, it is important to note that the total amount accounted for by payment to the staff amounts to the very substantial figure of nearly Rs. 3.43 crores, which works out to as much as 70 per cent. of our net income, as against a little over 9 per cent. paid to shareholders.

"I gave expression last year to my disappointment that the heavy burden of establishment charges had not been compensated for by happier relations with the staff and by more efficient working. I wish I could say the situation had since changed to any material extent. Slackness and indiscipline continued amongst sections of the staff at certain centres, and there is now a clamour for larger concessions. All I shall say with regard to that at the moment is that, if more has to be drawn out of the till, more has to be put in; there cannot be a one-way traffic in this matter. Increased salaries and other emoluments can only come out of better work-loads, greater discipline and happier understanding between management and staff. I would say to all engaged in the service of our Bank, let us work together for the common good and make the institution to which we have the privilege to belong more stable, more prosperous and better able to serve the trade and industry of the country.

Trend of Deposits

"There was a progressive increase in our deposits which, at Rs. 162 crores, record a rise of Rs. 7 crores over the previous year. In accordance with the prevailing trend in bank deposits, time deposits increased and demand deposits declined, thus increasing the cost of working funds. The fall in demand deposits was largely due to our discouraging call deposits at the prevailing high rates. It is a matter of satisfaction that our savings deposits, which had become somewhat stagnant over the previous two years, have again been moving forward, and our figure under this heading has, for the first time, crossed the Rs. 30-crore mark.

"The rise in deposits, without a corresponding increase in advances, necessitated our increasing the portfolio of investments. Our figures under this heading accordingly record an increase of Rs. 3.46 crores. A particularly happy feature of our portfolio is that, owing to an appreciation in the values of Government and other securities, the wide gap of Rs. 254 lakhs between the book and the market values, which appeared in our balance-sheet for 1957, has narrowed down to about Rs. 78 lakhs, as at the close of 1958. It is for the first time in many years we can record such a substantial improvement in our position, and I am sure you will share my hope that the trend may be maintained. On account of this change in the situation, no appropriation has been made out of profits for the year for transfer to investments.

Advances

"Our advances, in general, throughout the year were actually higher than during the previous year, but not to an extent as would enable us to utilise our increased resources fully and remuneratively throughout. Seasonal requirements of finance accounted for a fairly good demand for advances during the first half of the year, and our figures, at one time, touched the high level of Rs. 120 crores; but during the second half, conditions ruled extremely easy and adequate utilisation of our resources became difficult. The curb on imports, the Reserve Bank's restrictions in the matter of advances against foodgrains and the stagnation in the piecegoods trade seriously affected our turnover in bills, and figures at the close record a drop of nearly Rs. 2.43 crores under this heading. Due to this drop, the total figure of advances at Rs. 99.87 crores, as appearing in the balance-sheet, shows a decline of Rs. 1.62 crores over that of the previous year.

"We have been continuing our policy of weeding out non-paying offices, and three more of our upcountry pay offices, two in India and one in Pakistan, which had been continuously working at a loss over the past few years, were closed down and 16 new offices were opened at centres reported upon favourably. It may be stated in this connection that, since January 1955 we have closed down altogether 37 offices; as against that we have opened 35 new offices at different centres. Some of the new offices opened during the past three years have already built up a fair amount of deposits and advances. The total number of offices, including the head office and local branches, was at the close of the year 299.

"I shall end by thanking our Vice-Chairman, Mr. C. H. Bhabha, for the keenness and devotion with which he has been serving the interests of the Bank. The knowledge and experience he has brought to bear upon our working are of inestimable value to the Bank. Our thanks are also due to our General Manager, Mr. N. K. Karanjia, for the single-minded devotion with which he has been discharging his responsibilities and which have earned for him the regard and esteem of all who have to deal with him. We have likewise to acknowledge our appreciation of the services rendered by Mr. F. C. Cooper, the Deputy Manager, the members of the staff at the head office and branches and the Local Advisory Committees at the various centres. Let us hope the work done by one and all in the service of the Bank may yield richer and richer fruits as the years go by."

LABOUR SITUATION IN AFRICA

HIGHLIGHTS OF AN I.L.O. SURVEY

A FLOOD of light is thrown on the labour situation in the "dark" continent by the publication entitled *African Labour Survey*, (price: 30 shillings) issued by the International Labour Office, Geneva. The publication, which is a comprehensive survey of labour and social policy in Africa, has been prepared in pursuance of the decision of the Governing Body of the I.L.O. at its 131st session held at Geneva in 1956. It covers only countries and territories lying south of the Sahara and does not, therefore, include Egypt, Libya, Tunisia, Algeria and Morocco. These countries will be covered by another survey, currently under preparation, which will be similar to the present one. The bulk of the information contained in the survey is based on documents and reports on particular subjects submitted to the Committee of Experts of the I.L.O., supplemented by other information available to the I.L.O. from Governments and from the Inter-African Labour Institute. This has been further supplemented by on-the-spot findings of I.L.O. officials who visited 34 countries and territories of the Continent.

It should not be thought that only now the I.L.O. is beginning to get interested in Africa as a venue for its activities. Its interest in Africa, in fact, dates as far back as 1920. I.L.O.'s work in Africa falls conveniently into three periods. The first, from the 1920s until just before the Second World War, was largely occupied with the adoption of international labour instruments, conventions and recommendations on such matters as forced labour, recruitment, contract labour and penal sanctions. During and immediately following the war, that is, the second period of I.L.O. activity in Africa, the I.L.O. set down, in a group of conventions adopted in 1947, the social purposes of economic development and a series of basic principles to which all policies should conform and prescribed standards of living, remuneration of workers and related questions. In the third period, that is, after 1947, the work of the I.L.O. in relation to Africa was mainly aimed at securing the formulation of a number of broad general considerations of policy for the guidance of the Governments and to suggest to them practical means of applying existing international standards. The I.L.O. recently set up an African unit at its headquarters in Geneva and an African Field Office at Legos, Nigeria. A special African Advisory Committee, on the model of the Asian Advisory Committee, has also been formed.

The *Survey*, which is by far the most comprehensive and authoritative document so far published on the subject, will form the basis of the future work of the I.L.O. in Africa. It runs into a total of 712 pages, comprising 534 pages of text and the rest of appendices. The first three introductory chapters deal respectively with economic and social conditions, land and labour and community development. These are followed by thirteen chapters dealing with every aspect of the labour situation in Africa such as manpower and employment, productivity, technical and vocational training, industrial relations, wages and wage policy, recruitment, contracts of employment and conditions of work, health and safety, social security, workers' housing, co-operative movement, labour administration and inspection and the application of international labour standards.

The picture of the labour situation in Africa that emerges from the *Survey*, is similar, in many respects, to that in other underdeveloped countries of Asia.

The labour market in Africa, as in most of Asia, is still marked by a certain rigidity since workers respond only imperfectly to normal economic stimuli, and, moreover, are frequently restricted in their freedom of movement, either by inadequate means of communication or by restrictions imposed by law or custom. Besides, there are wide differences between one territory and another as regards availability of labour. The relation between the amount of labour actually employed at the present time and available manpower sources in given conditions is, in general, virtually unknown. In many territories, installation of up-to-date employment services has hardly begun and, in any case, these services have very little influence on the labour market in Africa.

Industrial Relations

There is a great diversity of patterns of industrial relations in Africa. The problems encountered are common to other underdeveloped areas, but, owing to the varying stages of social evolution, there is divergence in the policies and legal provisions for various racial groups. At present, collective negotiation and collective bargaining are becoming, to a continually increasing extent, the means by which wages, bonus and certain aspects of conditions of work are being determined. In the non-self-governing territories, the metropolitan governments concerned have, in general, accepted the thesis that collective bargaining should be promoted even if in some cases the communities concerned are, in their view, not sufficiently advanced to utilise collective bargaining machinery. In the independent countries, collective bargaining procedures are recognised as being appropriate for application generally or at least for some racial elements in the community.

Statutory provisions requiring the registration of trade unions exist in many parts. Separate trade unions for different racial groups exist in the area, in some cases even where the same trade union legislation is applicable to all groups. This arrangement is generally found where widely different ways of life and standards of living separate the groups concerned. The development of workers' organisations, however, in the area is in general completely inadequate for the extensive development of collective bargaining practices, particularly with regard to organisational and financial questions. The membership often fluctuates wildly, and the number of members who pay dues is often insignificant. The legislation of a few territories contains safeguards against victimisation and other unfair labour practices. The multiplicity of unions in some parts of the area is a factor impeding the development of collective bargaining. A number of limitations on strikes and lockouts exist in the territories, sometimes providing for the prohibition during the process of consultation and arbitration, sometimes categorically prohibiting them in essential services and among certain categories of workers.

The number of employers' organisations are, however, either inadequate or are not there to provide counterparts to workers' organisations for collective bargaining. In recent years, employers and workers are becoming increasingly familiar with modern industrial relations patterns and are recognising the importance of satisfactory human relations in industry. Conciliation and arbitration machinery exists in most of the countries and territories covered by the *Survey*.

Wages

The typical African worker comes from the rural *milieu*, and his wage in the new environment is in a way determined by the general wage level in agriculture, including both subsistence and cash crop farming. His needs and desires, which influence this wage, are in the main of such a nature as to exercise a generally depressing effect on wage levels. No adequate data is available to draw a picture of the general

(*Continued on page 563*)

ACTIVITIES OF STATE TRADING CORPORATION

MANY GAINS TO THE COUNTRY CLAIMED

THE export and import contracts of the State Trading Corporation in the year 1957-58 show that its activities have covered a number of new lines. This may be seen from the two tables at the end of this article, giving figures of commodity-wise export and import contracts in the first two years since the formation of the Corporation. The countries which figured in the Corporation's export activities in 1956-57 were: Indonesia, U.S.S.R., Poland, East Germany, Pakistan, Ceylon, Yugoslavia, North Niet Nam, Hungary, Czechoslovakia, U.K., U.S.A., Belgium, Italy, Japan, Holland, France and Norway; the countries covered in 1957-58, besides those mentioned, are China, Egypt, Bulgaria, West Germany, Switzerland, Canada, Sweden and Rumania. The countries which figured in the Corporation's import activities in 1956-57 were: Pakistan, East Germany, U.S.A., U.S.S.R., Chile, U.K., North Viet Nam, China, Yugoslavia, Poland, Rumania, Japan and Egypt; the countries covered in 1957-58, besides the said ones, barring Pakistan and Chile, are West Germany, Bulgaria, Hungary and Czechoslovakia.

It would be interesting to know what substantial contracts the S.T.C. negotiated successfully with some of these countries in the two years of its operations. On the export side, the following contracts were of a substantial kind:

(Value : In lakhs of rupees)

Serial No.	Country and commodity	1956-57	1957-58
1	U.S.S.R. (woollen fabrics)	64.5	70.8
2	U.S.S.R. (shoes)	166.9	33.8
3	U.S.S.R. (coffee)	61.0	46.3
4	Poland (iron ore)	..	254.9
5	East Germany (coffee)	14.0	111.1
6	East Germany (mica)	1.0	42.0
7	Pakistan (cement)	30.6	9.1
8	China (tobacco)	..	53 2
9	Egypt (jute bags)	..	159.9
10	Egypt (tea)	..	377.6
11	Yugoslavia (iron ore)	42.3	..
12	North Viet Nam (jute bags)	9.5	45.7
13	Hungary (cotton waste)	..	37.5
14	Czechoslovakia (manganese ore)	..	47.0
15	Czechoslovakia (iron ore)	392.5	60 8
16	U.K. (manganese ore)	153.5	218.3
17	U.S.A. (manganese ore)	101.4	452.6
18	Italy (manganese ore)	57.8	..
19	Italy (iron ore)	160.1	51.8
20	Japan (iron ore)	826.1	92.2
21	Japan (manganese ore)	126.4	9.7
22	Holland (manganese ore)	110.7	57.4
23	France (manganese ore)	45.6	40.4
24	Rumania (cottonseed oil)	..	54.7

On the import side, the following contracts were of a substantial kind:

(Value : In lakhs of rupees)

Serial No.	Country and commodity	1956-57	1957-58
1	Pakistan (cement)	144.2	..
2	East Germany (ammonium sulphate)	70.0	141.4
3	East Germany (muriate of potash)	..	60.0
4	U.S.A. (ammonium sulphate)	131.3	..
5	U.S.A. (milk powder)	50.1	73.4
6	U.S.S.R. (rice—Burmese)	..	169.4
7	U.S.S.R. (machinery)	27.6	100.2
8	U.S.S.R. (non-ferrous metals)	..	90.3
9	Chile (nitrate)	174.7	..
10	West Germany (ammonium sulphate nitrate)	..	180.5
11	U.K. (caustic soda)	146.8	57.5
12	U.K. (soda ash)	83 0	10.4
13	North Viet Nam (rice)	31.7	31.7
14	China (caustic soda)	..	143.8
15	China (soda ash)	33.5	20.7
16	Yugoslavia (cargo ships and launches)	158.4	..
17	Yugoslavia (cement)	118.5	..
18	Yugoslavia (machinery)	..	35.8
19	Poland (machinery)	..	104.4
20	Rumania (cement)	80.7	..
21	Rumania (machinery)	..	71.4
22	Hungary (machinery)	..	104.2
23	Japan (cement)	60.8	..
24	Japan (machinery)	..	90.0
25	Japan (raw silk)	34.8	37.2
26	Czechoslovakia (machinery)	..	206.7
27	Egypt (raw cotton)	166.1	443.0

Established in May 1956, the Corporation, it is stated, has been endeavouring to diversify and supplement the country's foreign trade. It seeks opportunities to make its contribution to the building up of the country's commerce with new markets and new sources of supply, provide facilities to augment exports, secure, wherever possible, improvement in terms of trade and economies in imports and arrange, to the extent practicable, for import and distribution of certain essential raw materials at stable prices. The nature of the Corporation's contribution and the extent and magnitude of its participation are largely conditioned by the needs and requirements of each trade or transaction. Consequently, the Corporation has been functioning by adopting the business methods and techniques suitable to the achievement of its principal aims. Broadly speaking, the Corporation acts in the following ways:

(*a*) As a direct trader, as in the case of mineral ores.

(*b*) As a servicing agent for bringing together buyers and sellers, assisting them in implementing their business contracts and using its good offices to settle disputes amicably, as, for example, in the case of imports of essential machinery and capital goods from new sources of supply and exports of a variety of Indian products.

(*c*) As an agent to the Government, as in cement and fertilisers.

(*d*) As an agency for development of trade, for example, in the export of shoes, handicrafts and woollen fabrics.

The Corporation, it is claimed, has always endeavoured to supplement the efforts of private trade; consequently, all its contracts are implemented through the established trading channels. The Corporation has sought to specialise in link arrangements, linking imports of essential items to the exports of Indian manufactures. For this purpose, the Corporation has entered into special payment agreements with a number of countries. Under these arrangements all imports into India are paid for in rupees which are credited to a special account and are utilised for purchase of Indian goods for export. These arrangements have been so devised as to offer to businessmen and business organisations of the country reasonable opportunity for participation in link transactions.

These arrangements have enabled the Corporation to secure imports of essential materials from new sources of supply, to save foreign exchange by obtaining these imports on a rupee payment basis, and to ensure that the rupees in the special accounts are utilised by the countries concerned in the purchase of Indian goods, particularly those which have not figured prominently in the export trade of the country. The Corporation has entered into such arrangements with exporting/importing firms in Hungary, German Democratic Republic, Yugoslavia, Czechoslovakia, Poland, U.S.S.R., Egypt, North Korea and North Viet Nam. All these arrangements are operated within the framework of the trade agreements and/or arrangements with these countries and are specifically designed to develop trade in specified items.

The import trade of the Corporation can be divided into three categories:

(*a*) Raw materials, such as caustic soda, soda ash, raw silk, etc., which are imported solely through the Corporation; (*b*) agency items, such as machinery, capital goods, etc., imported either for distribution through the trade or for supply to Government departments; (*c*) items imported for maintaining buffer stocks, in order to stabilise prices, such as newsprint, photographic goods, etc.

The Corporation endeavours to arrange its imports from the foreign countries in such a way as to minimise the foreign exchange expenditure. As far as practicable, arrangements are made to balance imports with exports of Indian goods of equal value. By judiciously determining the quantities to be imported and released for distribution in the market, the Corporation, it is further claimed, has been endeavouring to stabilise the prices of essential raw materials, such as soda ash and caustic soda. Even though the prices of these items had risen considerably following the Suez crisis, the Corporation maintained its selling prices; the loss involved was borne by the Corporation itself. The Corporation has also been able to stabilise the prices of raw silk.

The Corporation makes, as far as possible, purchases for import on *f.o.b.* basis. It has set up a Shipping Department of its own for chartering ships or otherwise arranging freights departmentally. This has enabled the Corporation to secure certain economies in freight and thereby reduce the foreign exchange expenditure as well as the overall cost of imported items. The benefit of such savings, wherever possible, has been passed on to the consumers in the country as, for example, in the case of Chilean nitrate.

The Corporation has also been making arrangements for business houses in India to participate in trade fairs and exhibitions abroad. Trade teams composed of representatives of the Corporation and established business houses have participated in exhibitions held at Leipzig, Zagreb and Poznan.

Mineral ores have constituted the major portion of the Corporation's export business. The Corporation has been able to negotiate long-term contracts for the export of mineral ores at prices fair both to the buyers and the sellers. A contract for the export of 7.2 million tons of iron ore during a period of five years was entered into with the Japanese Steel Mills in 1956. This itself had the effect of doubling the country's annual exports to Japan. Similarly, a long-term arrangement has been made with Metalimpex of Czechoslovakia for the export of iron ore.

In view of the advantages of bulk handling of mineral ores, the Government of India has, with effect from the 1st July 1957, channelled the entire exports of iron ore through the Corporation. During the year 1957-58, the Corporation exported 2,241,960 tons of iron ore, as against the average export of about 1.2 to 1.3 million tons per annum. In order to maximise the exports of iron ore, the Corporation has not only made use of all the available transport and port facilities but also made shipments through minor ports such as Redi, Karwar, Mangalore, Belikeri, Paradip, Cuddalore, etc. The port of Cochin, which has a considerable surplus handling capacity, has been made use of for this purpose for the first time by the Corporation. Due to bulk handling of ores, the Corporation has been able to effect substantial improvement in loading rates in almost all the major ports. A world record in manual loading has been set up at Madras where 5,790 tons were loaded in a single day, as against a normal loading rate of about 700 tons. Similarly, bulk handling of cargoes has enabled the Corporation in certain ports to earn despatch money. This has enabled the Corporation not only to wipe out the losses on account of demurrage which had to be paid during the period of congestion at the ports but also effect some net savings.

In the case of manganese ore, the Corporation has been allotted a certain quota along with the private sector. The Corporation has been working in collaboration with the private trade to preserve and build upon traditional contacts with foreign buyers and international business houses. Joint sales programmes were worked out with principal producers. The total quantity of manganese ore covered by the Corporation's contracts during the period ended 30th June 1958 was 976,824 tons. The Corporation has also made a beginning in the export of chrome ore and some other mineral ores.

The manganese ore market has recently been passing through a period of severe recession. Consequently, stocks both with the private traders and with the Corporation have accummulated. The Corporation has just negotiated with the United States Commodity Corporation an agreement for the export of these accummulated stocks of manganese ore in exchange for the import of wheat from that country.

The Corporation has been endeavouring to increase the exports of traditional items to new markets as well as introduce new markets in the country's export trade. Its export list now covers a wide range of items. New items exported by the Corporation include shoes, woollen textiles, handicrafts, etc. Similarly, traditional items like tea, coffee, gunnies, etc., have been exported to East European countries. The Corporation has sought to evolve acceptable terms and conditions for the export of new items, to assist producers in making available goods of acceptable quality and generally to win, in a variety of ways, the confidence and goodwill of foreign buyers. In particular, small producers of shoes and handicrafts have been enabled to participate in the export trade.

The Corporation has recently taken steps to set up a new department for exports of handloom products. This department will function from Madras which is the principal centre of handloom exports.

The Government of India has entrusted to the Corporation, since July 1956, the task of acquiring cement from manufacturers and distributing it at an equalised price f.o.r. destination rail-head. In the initial stages, the Corporation was also required to import cement and sell it at an equalised price. Owing to shipping difficulties, only 4,69,002 tons could be imported. Meanwhile, the supplies within the country increased and the demand slackened, as a result of which surpluses arose in certain individual factories. The Corporation has undertaken the export of surplus Indian cement to the neighbouring countries. On these exports, the Corporation is having to incur certain losses which are made out of its own fund.

JOHNSONS' SURGICAL DRESSINGS PLANT

At Mulund, a distant suburb of Bombay, on a 24-acre plot, Johnson and Johnson, the world-famous manufacturers of surgical dressings, but better known to the lay public as the makers of the well-known Johnson's baby powder and soap, in collaboration with Mr. Kishore M. Premchand, a partner of Messrs. Premchand Roychand and Sons, Bombay, have put up a functional, streamlined and most up-to-date factory for the manufacture of surgical dressings and other allied products. This unique factory, designed and constructed with a view to ensuring production under the most exacting hygienic conditions, will manufacture such vitally needed surgical requisites as sutures, pressure sensitive tapes, medical plasters, and gynecic therapeutic products, in addition to the entire range of Johnson's famous baby products.

To begin with, the factory will acquire about 25 per cent. of its raw materials from indigenous sources and the rest will be imported. But, in due course, as much as 90 per cent. of raw materials will be found locally. About Rs. 2 crores worth of products are expected to be produced in the factory when it goes into full production.

Many advanced and interesting innovations have been built into the factory to make it as modern as any in the world. The method adopted for chemical sterilisation of sutures is said to be so advanced that this is the first time that it is being used on an industrial scale anywhere in the world. Working conditions for employees, it is said, will be ideal. Those portions of the building which are not air-conditioned will be ventilated by blowers and exhaust fans which change air at the rate of 75,000 cubic feet per minute. Colour schemes throughout the factory have been designed on the basis of the most up-to-date experience in colour dynamics. All floorings are dust-revealing. Lighting is provided by a special system giving shadowless light of a uniform intensity higher than in any other industrial establishment in India. Two hundred employees will work in this modern factory to the lilting tempo of soft music played at intervals.

But for a few technical consultants, appointed temporarily, the entire work in the factory will be carried out by Indian personnel. About 40 per cent. of the employees will be provided with housing in two years' time.

EXPORT ADVERTISING

It augurs well for the future of the country's export promotion efforts that the Union Government is becoming increasingly aware of the important role played by advertising in popularising Indian goods in the overseas markets. This is evident from the representation given in the Export Promotion Advisory Council to the Indian Society of Advertisers, which represents the leading manufacturers, industrialists and business houses in India and most of the members of which are leading exporters. Speaking at the last meeting of the Export Promotion Advisory Council, Mr. P. H. Brown, Managing Director, Corn Products Company (India) Private Ltd. and Vice-Chairman of the Society, who is himself a leading exporter, formulated two concrete proposals designed to boost the country's exports. Coming as they do from a body of national advertisers and industrialists, these suggestions merit special consideration. One of the proposals is that an export magazine to reach the big individual buyer, the importer, the distributor and the large retailer in the overseas territories be published, for distributing which Trade Commission channels and direct mail techniques are to be utilised. The journal should reflect in its get-up and contents the progress registered by modern India in the field of industrialisation. Advertising by exporters would go a long way towards meeting the cost of the publication. Trade inquiries would either be directed through the Trade Commissioner or directly to those concerned.

The second proposal pertains to the setting up of an Indian Commercial Broadcasting system. In the opinion of Mr. Brown not only would a high-powered Indian commercial radio station have the advantage of bringing individual manufacturers' messages to the consumer abroad, but it would also indicate the variety of goods manufactured in India. It could stop, according to him, the present drain on foreign exchange to the extent it was used by advertisers here. Again, if run with an internal beam, it would become a profitable venture for most advertisers, and the radio station could make a profit for the Government as well.

Of interest is Mr. Brown's disclosure that the Society at the moment is concentrating on the preparation of a survey, *A Guide to Export Advertising* which should be of immense value to all the advertising interests in the country.

LABOUR

(*Concluded from page 561*)

wage situation. In a statement recently issued by the I.C.F.T.U. the situation is described thus: Despite "difficulties involved in any attempts to estimate objectively the adequacy of wages, there are some clear indications that, even by very low standards, the wages of unskilled workers in Africa are near or below the level of mere existence, if not of downright poverty."

Largely due to the influence of international conventions, which often recur in the newer legislative enactments, the wide differences in working conditions in African territories which existed in the past, are on the decline. The provision for an eight-hour day and a 40 or 48 hour week is becoming more and more generalised; the granting of holidays with pay has become a normal practice; and weekly rest is completely general. Children and young persons are employed in various types of work in agriculture, where they are generally used on such jobs as picking and sorting, but also, to some extent, in industrial undertakings.

Looking forward into the future the *Survey* concludes:

"The range of social problems confronting Africa in the recent state of her economic and social development is wide; many of these problems have become of pressing urgency for political, economic and social reasons. In respect of social policy, as in other fields, Africa must evolve her own destiny by the co-operation of the Governments responsible for her affairs with their peoples of all races and with each other. It has been said that it should be the aim of policy to raise the standards of living and, in particular, of such aspects as nutrition and housing. The possibility of doing so depends on financial resources which in turn depend on productivity. Several ways have been indicated in which greater productivity can be stimulated, aided and indeed made possible. But when all is said and done the issue depends fundamentally on the African."

MEANING AND DEFINITION OF INDUSTRIAL DISPUTE

The question whether a dispute between a management and its employees required the backing of the majority of the employees for it to be called an industrial dispute within the meaning of the Industrial Disputes Act came up for decision before Mr. Justice P. V. Balakrishna Aiyar in the Madras High Court. It arose as a result of two writ petitions filed on behalf of the management of the Buckingham and Carnatic Mills to quash the order of the Industrial Tribunal, Madras, which held that the dispute referred to it for adjudication by the Government was an industrial dispute within the meaning of the Industrial Disputes Act.

The B. & C. Mills employ 14,000 employees, of which about 10,000 belong to the Madras Labour Union. Out of the 700 employees on the clerical staff, 434 are members of the B. & C. Staff Union. In 1955, the Madras Labour Union raised a dispute. After the arbitrator appointed by the Government had given his award in this dispute in January 1957, the Staff Union raised a dispute about the fixation of scales of pay for comptists and machine operators. The State Government maintained that the dispute was an industrial dispute and referred it to the Industrial Tribunal for adjudication. An objection was raised before the Tribunal, on behalf of the management, that an industrial dispute could be raised in respect of workmen in an industrial undertaking only if the dispute was taken up by a trade union of which the workmen, to whom the dispute related, were members and there was a concerted demand for redress by the majority of workmen in that undertaking. It was contended that the dispute in question was not an industrial dispute as defined in Section 2(*k*) of the Industrial Disputes Act. The Tribunal overruled the objection holding that members of the clerical staff, who belonged to a distinct well-organised section, could raise an industrial dispute.

His Lordship observed that the words used in the definition of "industrial dispute" in Section 2(*k*) of the Industrial Disputes Act were large enough to include even an individual dispute between a single workman and his employer. Judicial decisions had, however, held that individual disputes would become industrial disputes only if they were backed by what had been frequently said to be a substantial number of the employees of the establishment. His Lordship maintained that the definition of the word "workman" in Section 2(*s*) showed that the Act itself recognised that different categories of workmen existed and that it did not lump all employees into one mass or block. The definition of "public utility service" in Section 2(*n*) spoke of "any section of an industrial establishment." Since, by reason of the manner in which "public utility service" had been defined in the Act, a section of an establishment might, by itself, fall into the category of public utility service, while the other sections did not, it would be impossible to insist that the dispute raised by that section, which belonged to a public utility service, was not an industrial dispute, unless it had the backing of a majority of the strength of the establishment.

Section 18(3) of the Act, His Lordship added, made an award binding on "part of the establishment" also. That seemed to imply that there could be an adjudication of a dispute between the management and part of its establishment. That would seem to be inconsistent with the contention of the management that the dispute between a management and its establishment, in order to be an industrial dispute, must have the backing of a majority of the workmen under that particular management.

There might be establishments, His Lordship pointed out, the employees in which belonged to no union whatever. If, in such an establishment, a dispute of a general character arose between the employer and the employees, in which the employees as a whole were interested, would it be right to say that there was no industrial dispute at all? It must also be remembered that every individual had freedom of association and that all the employees were not bound to join the same union or in fact any union. The employees of one establishment might belong to a number of unions and each one might have its own views, methods and leadership. The claims put forward by one union might not necessarily be supported by the other unions. In such a case, to insist that the claims made on behalf of a section of workmen must be supported by a majority of the members employed in the establishment would be to make the Act unworkable or ineffective. The Industrial Disputes Act, His Lordship said, contained no provision for dealing with the situation where there were a number of unions in the field and each one claimed to be exclusively entitled to speak and act on behalf of the employees in a particular establishment or industry. "As the Act stands," he observed, "it will be impossible to insist that, before a dispute between a management and its employees can be called an industrial dispute, that dispute must have the backing of a majority of the employees under that management."

The decisions relied upon by the management, His Lordship added, did not go farther than saying that, before a dispute could be called an industrial dispute, it must have the backing of a substantial number of the employees. A substantial number need not be a majority. In the present case it would no doubt be difficult to say that 434 persons, who formed the Buckingham and Carnatic Mills Staff Union, formed a substantial part of the employees in the mills, since their number exceeded 14,000. But then the total strength of the clerical establishment of the mills was only about 700 and of these 434 belonged to the Staff Union. Four hundred and thirty-four was a substantial part of 700.

Summing up, His Lordship observed: "Unions based on crafts are a common feature of the modern industrial system and where a genuine union based on craft exists and that union has a majority of the employees engaged in that craft and belonging to that establishment, it will not ordinarily be proper to say that a dispute backed by such a union is not an industrial dispute." Holding that the view taken by the Tribunal was correct, His Lordship dismissed the writ petitions.

BOMBAY DYEING'S PROFIT DOWN AGAIN

DIVIDEND MAINTAINED BY DEPLETING RESERVES

IT is a well-known fact that the Bombay Dyeing and Manufacturing Company Ltd. (Managing Agents: Messrs. Nowrosjee Wadia and Sons Private Ltd., Bombay) is one of the leading and representative units of the cotton textile industry in this country. It has as many as 223,006 spindles and 4,211 looms. It is one of the largest exporting mills. Its production consists chiefly of coarse and medium counts, with a small proportion of fine counts. It is an up-to-date mill. Its management is competent and scientific; those who are in charge of the Company do not have too many irons in the fire and devote almost the whole of their time to the affairs of the Company. Its management is known for its scrupulousness in its dealings with labour and trade and for its conservative policy in regard to payment of dividends. It is an ideal cotton mill company in every respect. Accordingly, its financial results can be regarded as a genuine index of the state of affairs of the cotton textile industry in this country and are, therefore, of more than ordinary interest.

Some market commentators used to argue, since June last, that, as the Government had been reducing the excise duty on cloth and providing incentives for export, the industry's position was improving and that investors in textile shares had no cause to worry. It is true that the market value of textile shares has gone up appreciably since June last, but this does not necessarily mean that the industry's position, too, has improved to the same extent. The results of the Bombay Dyeing for 1958 show that market commentators were exaggerating the favourable effects of the reliefs given by the Government in excise duties. Indeed, they reveal that 1958 was worse than 1957, for, despite an increase in sale proceeds, the profit was lower for the second year in succession and the lowest to be witnessed since 1954.

The gross profit for 1958 at Rs. 90.70 lakhs discloses a fall of Rs. 19.61 lakhs or 17.7 per cent. from Rs. 110.31 lakhs for 1957, to which level it had declined from Rs. 125.80 lakhs for 1956. The net profit too has declined from Rs. 39.69 lakhs to Rs. 27.74 lakhs, a drop of Rs. 11.95 lakhs or 30 per cent. It is true that the provision for depreciation has been raised from Rs. 48.12 lakhs to Rs. 51.43 lakhs, but this has been more than offset by the reduction in the tax provision from Rs. 14.32 lakhs to Rs. 6.50 lakhs. The latter is inclusive of Rs. 3 lakhs allocated for wealth tax. A sum of Rs. 20 lakhs has been set aside to development rebate reserve, as against Rs. 45.80 lakhs transferred last year. In view of this, the Directors have been constrained to withdraw Rs. 17 lakhs from the dividend equalisation reserve in order to maintain the dividend at the modest level of 10 per cent. per annum. The amount by which this reserve was depleted in the previous year was as much as Rs. 23 lakhs.

The following comparative table shows at a glance the Company's progress since 1955.

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	9,57.03	8,33.01	7,54.45	7,25.60
Other income	14.70	15.48	15.41	10.08
Closing stocks	2,91.60	2,42.45	1,92.69	1,67.45
Excise duty paid	49.04	28.62	N.A.	N.A.
Expenses	8,88.22	7,45.78	6,51.19	6,23.25
Gross profit	90.70	1,10.31	1,25.80	1,18.20
Managing Agents' remuneration	5.03	8.18	12.18	12.31
Provision for—				
Depreciation	51.43	48.12	26.46	26.87
Taxation	6.50	14.32	33.00	29.60
Net profit	27.74	39.69	54.16	49.52
Transfer from reserves	17.00	29.65	..	..
To reserves and other provisions	20.00	45.80	27.38	24.21
To dividend	25.10 (10%)	25.10 (10%)	25.10 (10%)	25.10 (D. 8% +B 2%)
Carry forward	0.50	0.86	2.41	0.73

It will be noted that increases in expenses and excise duty paid have more than offset the rise in sale proceeds. As at the end of the year, the value of finished goods in stock was as high as Rs. 1.48 crore, as against Rs. 96.48 lakhs a year before. This means that, despite the reduction in excise duties in 1958 and the export incentives, the stocks with the mills were accumulating.

An analysis of the principal items of expenses reveals that, during 1958, the cost of cotton, chemicals and colours consumed went up by Rs. 72.14 lakhs to Rs. 4.83 crores and that of stores and spares by Rs. 21.26 lakhs to Rs. 78.76 lakhs. Salaries and wages, including dearness allowance, rose by Rs. 24.52 lakhs to Rs. 2.25 crores. Excise duty paid was higher by Rs. 20.42 lakhs at Rs. 49.04 lakhs.

Reviewing the conditions in cotton textile industry during the year under review, with particular reference to the Company, the Directors observe thus:

"The cotton textile industry passed through a very difficult year. Mounting stocks with mills and lack of demand from the consuming centres resulted in the closure of some mills in the country. The most important reason for the decline was the high price of foodgrains which absorbed a greater proportion of the purchasing power of the people, and the steep rise in the cost of living resulted in the payment of higher dearness allowance which affected manufacturing costs. In July, Government made some reductions in the excise duty on cloth, but, in spite of these, there was no relief from the burden of heavy stocks which the mills were carrying.

"Exports of cloth received a serious setback during the year due to keen competition from other exporting countries, particularly Japan, China and Hong Kong. The total quantity of cloth exported from India during the year receded to about 580 million yards, as compared to 854 million yards in 1957. The Company, however, was able to export 53.5 million linear yards of cloth, and the value of foreign exchange earned amounted to Rs. 4.84 crores during the year. Although the Company's exports were lower in 1958 when compared to 62.8 million linear yards and Rs. 5.03 crores in the previous year, the percentage of exports made by the Company in 1958 compared to the total exports from India was considerably higher than in the previous year, and the value per linear yard has gone up due to the export of more finished goods."

Commenting on the Government's export incentive schemes to tide over the acute foreign exchange position, the Directors state that, while the scheme may help towards attaining Government's objective, it is essential in the long run that production costs which are still very high in India, as compared with other countries such as Japan and China, must be brought down. They aver that this can be achieved only through automatisation and rationalisation in all departments of the mills.

During the year under review, new machinery amounting to Rs. 100.16 lakhs was received and Rs. 8.45 lakhs was spent in the construction of new buildings. The installation of 1,152 automatic looms was completed at the Spring Mills during the year and they are working very satisfactorily. Four new hot air sizing machines were also installed at the textile mills and have gone into production. The erection of the new bleaching, dyeing and finishing machinery was completed during the year and all the machines have gone into production. The transfer of most of the machinery from the old bleach and dye-house to the new bleach works has also been completed, except for a few items which are in the process of transfer at present.

The financial position of the Company, as disclosed by its balance-sheet as at 31st December 1958, is impressive. Its paid-up capital, all in ordinary shares of Rs. 25 each, is unchanged at Rs. 2.51 crores. This is supplemented by reserves and surplus aggregating Rs. 3.46 crores, of which the general reserve alone accounts for Rs. 1.96 crore. The current liabilities are of the order of Rs. 3.02 crores. The gross block of the value of Rs. 9.01 crores stands well written down at Rs. 4.58 crores, the difference, namely, Rs. 4.43 crores being the total depreciation provided up to the end of the year of review. This figure is inclusive of additions during the year amounting to Rs. 1.10 crore. The current assets aggregate Rs. 4.41 crores and exceed the current liabilities and provision for taxation by a very wide margin. The current assets include, among other items, investments in Government securities and shares of companies, together with interest accrued, at Rs. 38.52 lakhs, stock-in-trade at Rs. 291.60 lakhs, sundry debtors at Rs. 44.79 lakhs, loans and advances at Rs. 28.40 lakhs and cash and bank balances at Rs. 14.20 lakhs.

It will be pertinent to add here that, during the three years ended 1958, the Company has invested Rs. 3.36 crores on plant and machinery and Rs. 68.48 lakhs on building or a total addition of a little over Rs. 4 crores to the fixed assets. As a result of such large capital expenditure, the Company's mills have become quite modern and new.

The Rs. 25 fully paid-up ordinary shares are currently quoted at Rs. 59.80 *cum-div* (final dividend Re. 1.75). On an *ex-div.* basis, the shares provide a yield of 4.3 per cent. per annum. The yield, of course, appears low, but it reflects the investors' belief and hope that the heavy capital expenditure already incurred on modernisation and expansion of the mills will soon start yielding better results and that the Directors would be able to declare higher dividends.

It may be noted that, under the proposed new corporate taxation, the Company will save Rs. 3 lakhs on wealth tax alone, not to mention the saving of about 12 per cent. in the incidence of income-tax and corporate tax. This will, of course, be not sufficient to make good the loss of the benefit of "grossing," but it is optimistically assumed in the share market that the Company's profit margin will improve in the coming years which will enable the payment of a dividend that will more than offset the disadvantage.

KIL KOTAGIRI FARES BETTER

The Kil Kotagiri Tea and Coffee Estates Company, Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Calicut, Kerala) has reported better results for the year ended 31st October 1958, as compared with those for the previous year. This was obviously due to the sizable improvement in the production of tea. Notwithstanding larger production, the cost per lb. of tea increased by 10 nP to Re. 1.57. Fortunately, the average price realised also rose by 12 nP to Rs. 2.54 per lb. Consequently, proceeds of tea sales were higher. This helped reverse the decline noted in the Company's profit in the previous year. The improvement in profit is, however, not appreciable.

The gross profit at Rs. 8.37 lakhs for 1957-58 compares favourably with Rs. 7.88 lakhs for 1956-57, although it is still lower than Rs. 9.62 lakhs earned in 1955-56. The net profit at Rs. 3.62 lakhs is also a shade higher, as compared with Rs. 3.47 lakhs for 1956-57. To this has been added a sum of Rs. 1.68 lakh, being the estimated surplus provision for taxation made in previous years. The Directors have transferred Rs. 2 lakhs to general reserve, Rs. 1 lakh to dividend equalisation reserve and Rs. 7,604 to development rebate reserve, as against Rs. 3 lakhs allocated to general reserve in the previous year. The dividend on ordinary shares is proposed to be maintained at 15 per cent.

The salient features of the Company's working are given in the comparative table below:

(Value in rupees)

	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds of—				
Tea	21,32,130	18,87,077	15,85,066	8,09,075
Coffee	3,41,780	5,16,254	7,22,534	25,342
Stocks of tea	4,23,174	2,33,363	1,45,748	1,42,789
Expenses	18,30,259	16,33,000	15,45,614	5,65,434
Gross profit	8,37,495	7,87,082	9,61,792	4,30,506
Managing Agents' remuneration	57,804	55,128	41,130	23,203
Depreciation	62,779	53,208	49,496	28,293
Taxation	3,55,000	3,32,000	3,48,000	1,47,000
Net profit	3,61,822	3,47,346	5,23,160	2,32,010
Excess provisions written back	1,68,187	1,00,000	..	..
To reserves	3,07,604	3,00,000	3,25,000	1,00,000
Dividends—				
6 per cent. preference ..	15,000	15,000	15,000	15,000
Ordinary	1,28,780 (15%)	1,28,780 (15%)	1,71,708 (20%)	1,71,708 (20%)*
Carry forward	1,09,363	30,738	27,172	15,720
Tea crop (in lbs.)	875,450	760,044	342,560	374,800
	Rs.	Rs.	Cts.	Cts.
Cost per lb.	1.57	1.47	144.30	129.29
Average price realised per lb. ..	2.54	2.42	262.69	252.08
Coffee crop (in cwts.)	1,730	1,555	4,469	38
Cost per cwt. (in Rs.)	224.69	228.50	122.92	1,840.07
Value per cwt. (in Rs.)	162.00	190.51	192.91	176.18

*On the further increased capital as a result of the issue of shares to the shareholders of Nilgiri Neerugudi Estate, following the amalgamation of the two companies.

The crop of tea harvested during the year at 875,450 lbs. is a new record for the Company, having exceeded the previous year's best of 760,044 lbs. by no less than 115,406 lbs. The Directors state that the electricity cuts imposed during April, May and June 1958 severely restricted production. The power cut which was 50 per cent. in April was raised to 75 per cent. in May, until in June a total cut was imposed for several days and the factory had to be closed. But for these power cuts, the total crop for the season would have exceeded a million pounds of made tea.

The Company has a paid-up capital of Rs. 11.08 lakhs, made up of Rs. 2.50 lakhs in 6 per cent. cumulative preference shares of Rs. 10 each and Rs. 8.58 lakhs in ordinary shares of Rs. 2 each. The reserves and surplus aggregate Rs. 15.42 lakhs. The gross block of the value of Rs. 29.90 lakhs has been written down to Rs. 25.62 lakhs. Additions during the year were of the order of Rs. 1.68 lakh. The current liabilities stand at Rs. 6.11 lakhs, as against which there are current assets amounting to Rs. 9.48 lakhs.

The Directors of the Company have announced their intention to apply to the Government for permission to issue bonus shares in the proportion of one for one.

The Rs. 2 fully paid-up ordinary shares are currently quoted at Rs. 8.75 *cum-div.* On an *ex-div.* basis, the yield is 3.5 per cent. per annum.

Notices

THE GANESH FLOUR MILLS CO., LTD. DELHI

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 67th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Company, Ltd., Delhi, will be held at the Registered Office of the Company at Subzimandi, Delhi, on Tuesday the 21st April, 1959, at 10 a.m., to transact the following business:—

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September, 1958.
2. To declare Dividends.
3. (*a*) To elect a Director in place of Shri Balraj who retires by rotation and being eligible offers himself for re-election.

   (*b*) To elect a Director in place of Shri S. Vaidyanath Aiyar who died on 5th February, 1959, and was also due to retire by rotation in this Annual General Meeting.

   N.B.—Under Section 257(1) read with Section 281 of the Companies Act, 1956, a shareholder of the Company has given special notice of his intention to propose the name of Shri Brij Lal, Advocate, Chandni Chowk, Delhi, who will be 67 years of age next birthday, as a candidate for the appointment of Director of the Company in the vacancy created by the death of Shri S. Vaidyanath Aiyar, which occurred on 5th February 1959, in the next General Meeting and to consider and if thought fit to pass the following resolution of which, as mentioned above, special notice under Section 281 of the Companies Act 1956, has been received:—

   "Resolved that Shri Brij Lal, Advocate, Chandni Chowk, Delhi, who will be 67 years of age next birthday, be and is hereby elected a Director of the Company and it is hereby specifically declared that the age limit for a Director as prescribed under Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors for the year 1958-59 and fix their remuneration.
5. To consider and if thought fit to pass the following as special resolution:—

   "Resolved that in Article 67 the words 'six months' appearing in the fifth line of the Articles of Association of the Company be substituted by the words 'eight months.'"

By Order of the Board of Directors,

For THE GANESH FLOUR MILLS CO., LTD., DELHI,

(Sd.) KIRPA NARAIN,

Secretary and General Manager.

DELHI, *12th March*, 1959.

N.B.—(*a*) The Share Transfer Books of the Company will remain closed from 7th April, 1959, to 21st April 1959 (both days inclusive).

(*b*) Members unable to attend are requested to send their Proxy Forms duly stamped, signed and completed in favour of a person attending the meeting. Forms not properly signed, stamped and completed or received less than 48 hours before the meeting will be treated as invalid.

(*c*) A member entitled to vote is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company.

EXPLANATORY STATEMENT

In regard to the Special Business Under Items No. 3(b) and 5 of the Agenda set out above as required under Section 173(2) of the Companies Act, 1956.

Item No. 3(b).—A Shareholder of the Company has by a special notice proposed the name of Shri Brij Lal, Advocate, Chandni Chowk, Delhi, for being elected a Director of the Company in the vacancy caused by the death of Shri S. Vaidyanath Aiyar, which occurred on 5th February 1959, (who was also to retire by rotation in this meeting). As Shri Brij Lal is more than 65 years of age he is not capable of being appointed a Director unless the Company in General Meeting specifically approves that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.

Shri Brij Lal is a leading lawyer of Delhi having practised at the bar for more than 40 years. He has a sound knowledge and vast experience of Mercantile and Company matters and has been rendering valuable legal advice to the Company. His inclusion in the Board of Directors of the Company will be highly beneficial to the Company.

Item No. 5.—The existing Article 67 of the Articles of Association of the Company provides that the Annual General Meeting of the Company should be held within six months of the close of the financial year, i.e., by 31st March in each year.

As the Government of India Budget is presented to the Parliament on the 28th of February every year it would not be possible to take into account the impact of budget proposals in the Accounts of the Company if the Annual General Meeting is held within the limit now prescribed by existing Article 67 of the Articles of Association of the Company. Moreover, if the existing Article 67 is not amended it would result in payment of two dividends to the shareholders in one year.

Section 166(1)(c) of the Companies Act, 1956, prescribes the limit for holding Annual General Meeting within nine months.

It is, therefore, desirable that the existing Article 67 be amended and the words "six months" appearing therein be substituted by the words "eight months."

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting (being the one hundred and twenty-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 17th April 1959, at noon, to consider the Accounts of the Company for the year ended 31st December 1958, and to transact other ordinary business and the under-mentioned special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution, which will be proposed as a Special Resolution, of which special notice dated 10th March, 1959, as required by Section 261 of the Companies Act, 1956, has been received:—

"That Mr. C. A. Hill, an employee of the Managing Agents, who retires by rotation, be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Co. Ltd., an Associate of its Managing Agents, as defined by Section 2(4) of the Companies Act, 1958, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:

for sales of such flour and wheat products and other services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

it being a term of the above contract that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 3rd April, 1959 to 17th April, 1959, both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO. LTD.,

D. MANSON,

Secretary,

Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *11th March*, 1959.

MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, *31st March* 1959.

ANDHRA SUGARS STEPS UP DIVIDEND

EARNINGS OF DHANALAKSHMI MILLS LOWER

Andhra Sugars Ltd.

THE directors of the above Company (Managing Agents: Messrs. Ranga Rao & Co., Tanuku) present the audited accounts of the Company for the year ended 30th September, 1958.

The accounts show a profit of Rs. 18,77,691 (Rs. 15,66,094) for the year 1957-58 after providing Rs. 60,000 (Rs. 51,000) for payment of bonus to staff and Rs. 2,94,418 (Rs. 2,14,155) extra price for cane. To this amount is added the balance of profit brought forward from 1956-57 account of Rs. 15,080 (Rs. 1,90,836) and excess provision for bonus in 1956-57 Rs. 6,414 (Rs. 10,153) making a total of Rs. 18,99,185 (Rs. 17,96,783 including Rs. 29,700 being subsidy from the Government of India for Industrial Housing colony). After deducting expenses not relating to the year of account and donations of Rs. 62,089 (Rs. 6,704) leaving an available balance of Rs. 18,37,096 (Rs. 17,90,079). The directors propose the following appropriations:

To tax free dividend at 15 (12½) per cent. on the paid up capital absorbing Rs. 4,50,000 (Rs. 3,75,000), to transfer to the general reserve Rs. 2.50.000 (Rs. 9,00.000), to transfer to dividend equalisation reserve Rs. 1,00.000 (Rs. 2,50,000), to transfer to gratuity reserve Rs. 15,000 (Rs. 25,000) and to provision for taxes Rs. 10,00,000 (Rs. 2,25.000) leaving a balance of Rs. 22,096 (Rs. 15,079) to be carried forward to next year's account.

During the year under report the Factory commenced sugarcane crushing on 1st December 1957 and stopped on 13th May 1958. The sugarcane crushed during the season was 1,47,209 tons and sugar manufactured was 1,56,416 bags, with a recovery of 10.21 per cent., as against 1,07,078 tons cane, 1,16,425 bags sugar and 10.70 per cent. recovery of the last season. The total sugar produced was sold in free market excepting 3,809 bags taken by the Government for export purposes.

The directors report that with a view to develop the sugarcane cultivation on modern lines and educate the local cane growers on the improved methods of sugarcane cultivation, they have obtained the sanction of the Government and got a Liaison Farm established at Tanuku. The lease for the land and necessary revenue expenditure for the Liaison Farm are to be borne by the Company and the value of produce will be received by the Company.

The directors are also glad to report that the Andhra Sugars Ltd., is starting certain other industries. The Company has obtained licences from the Government of India for the establishment of an Industrial alcohol plant, acetic acid and acetic anhydride plants, sulphuric acid and superphosphate and caustic soda and chlorine plant. With a view to minimise the capitalisation, the Company is undertaking fabrication of a substantial portion of the machinery, while orders are being placed with foreign suppliers for the balance of machinery.

The authorised capital of the Company is raised to Rs. 1,00,00,000 (Rupees One Crore) and the directors have obtained the sanction of the Controller of Capital Issues for the issue of 7 per cent. tax free cumulative redeemable preference shares of the value of Rs. 30,00,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Gross block	84,58,962
Reserves ...	23,00,000	*Less*—Depreciation ...	24,22,569

Liabilities ...	40,93,097	Net block ...	60,36,393
Profit and loss account ...	22,096	Stock-in-trade	22,07,410
		Stores and loose tools etc. ...	10.57,374
		Other assets	28,947
		Debts, deposits and advances ...	9.15,763
		Investments	2,10.000
		Cash ...	1,83 409
Rs.	1,06,39,296	Rs.	1,06,39,296

Dhanalakshmi Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. M. Nanjappa Chettiar and Sons, Tirupur) submit the audited accounts of the Company for the year ended 31st December 1958.

After deducting all working expenses and interest and providing Rs. 5,35 033 (Rs. 3,71,472) for depreciation, the year's working has resulted in a net profit of Rs. 10.71,996 (Rs. 13,53,044). Out of this amount Rs. 2,301 (Rs. 12,900) has been expended by way of donations, leaving a balance of Rs. 10.69,695 (Rs. 13,40,144). As a consequence of awards and agreements, the following amounts were paid in the year of account in respect of prior years: Difference in dearness allowance for prior years Rs. 49.379 (Rs. 58.349) the balance of bonus for 1956 Rs. 1,79.200 making a total of Rs. 2,28.579. In making the payment of the said sum of Rs. 2.28,579, the following balances of the provisions made from the profits of prior years have been utilised: Difference in dearness allowance for prior years Rs. 29,175 and the balance of bonus for 1956 Rs. 54,836 making a total of Rs. 84.011. Thus, a sum of Rs. 2,28.579 minus Rs. 84.011 i.e. Rs. 1,44,568 has been paid in the year of account in respect of prior years from the profits of the year 1958, leaving a balance of Rs. 9.25.127 (Rs. 12,81,795) from the profits of the year 1958. With Rs. 1,965 (*nil*) carried forward from last year, there is a sum of Rs. 9,27,092 (Rs. 12,81,795). As this sum is not sufficient to make the appropriations recommended hereunder, a sum of Rs. 2,50,000 (*nil*) has been transferred from the reserve for dividend equalisation, thus making the sum available for appropriation as Rs. 11,77,092 (Rs. 12,81,795). The directors recommend the following appropriations therefrom:

To reserve for development rebate Rs. 3,50,000 (*nil*), to reserve for employees' gratuity Rs. 50,000 (Rs. 50,000), to provision for taxes Rs. 2,90,000 (Rs. 4,00,000) and to proposed dividends at 10 (10) per cent. tax free Rs. 4.85.888 (Rs. 4,79,830) leaving a balance to be carried forward of Rs. 1,204 (Rs. 1,965 after placing Rs. 3.50,000 to machinery replacement reserve).

According to the provisions of the Finance Act, unless an appropriation of at least 75 per cent. of the development rebate allowable in the income-tax assessment is made from the profits of the year, the benefit of the allowance as development rebate will be lost.

The directors deem it prudent to build up a gratuity reserve by appropriating year after year, sufficient profits so as to avoid the contingency of facing sudden and huge liabilities for payment of gratuity to employees who may be obliged to retire from the service of the Company in future years.

The profits of the year of account are low when compared with those of the previous year on account of the general slump in the textile trade. Moreover, the power cut that continued for nearly seven months in the year of account narrowed down further the margin of profit.

In the year of account 7.664 spindles were added, thus bringing the installed spindleage to 49,876. Orders have been placed for the purchase of 192 automatic looms and the necessary accessories. Of these 192 looms, 144 looms and the necessary accessories are to be purchased on the deferred payment system.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,58,875	Gross block	98,47,125
Reserves ...	26,75,000	*Less*—Depreciation ...	55,14,444
Provision for taxation ...	8.76,142		
Liabilities ...	33,07,948	Net block ...	43,32,681
Profit and loss account ...	1,204	Stock-in-trade	40,51,936
		Stores and spare parts	5.21,342
		Debts, deposits and advances ...	12,72,789
		Investments	4,77.691
		Cash ...	10.62,730
Rs.	1,17,19,169	Rs.	1,17,19,169

Premier Automobiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Aero-Auto Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1958.

The working of the year resulted, after providing for depreciation and taxation in a profit of Rs. 7.35.627 (Rs. 37,32,248) of which tax paid in respect of previous year absorbed Rs. 18.676 (*nil*) leaving a balance of Rs. 7,16,951 (Rs. 37,32,248). The amount brought forward from the previous year was Rs. 6.31,752 (Rs. 6.05,488) of which dividends paid on shares forfeiture of which was annulled, was Rs. 480 (Rs. 2.178) leaving an available balance of Rs. 13,48,223 (Rs. 43.35.558). From this amount the directors now propose a dividend of Rs. 4 (Rs. 6.00) per share without deducting income-tax absorbing Rs. 8,69.332 (Rs. 13.03,806) leaving a balance of Rs. 4,78,891 (Rs. 6.31,752 after placing Rs. 9.00.000 to general reserve, Rs. 5.00 000 to dividend equalisation reserve and providing Rs. 10,00,000 for contingencies) to be carried forward.

The fall in profit this year is due to a number of causes. Due to factory having remained closed for about two and half months during the period under review because of labour trouble the turnover for the year did not reach as high a figure as expected. The total sales this year fell to Rs. 14.47 crores against Rs. 18.08 crores last year. Expenditure on materials and wages had also gone up resulting in an overall increased cost for Fiat cars. In spite of this, the Government was reluctant to grant us increase in price for Fiat cars. The company had also to provide for payment towards taxes as agents of Chrysler Corporation under Section 43 of the Income-tax Act as a result of the disposal by the Appellate Assistant Commissioner of Income Tax of the appeals filed by the Company in this respect. The cumulative effect of these factors is reflected in the reduced margin of profit this year.

As stated in the previous year's report, the Fiat Engine, which is now on the production line, is making satisfactory progress. Components such as cylinder block, crankshafts, connecting rods are cast, forged, machined locally and assembled, right from the basic materials.

The Company has now received sanction of the Government of India for the manufacture of transmission and rear axle components for Fiat cars. Licences have been received and orders placed with the Fiat Company and other Italian machine tools manufacturers for the fixtures, jigs etc. required for the manufacture of these parts.

The manufacture of Timken axles is progressing satisfactorily. All machines have been received and installed. Also, castings and forgings of a number of components of the axles are ready and production of some components has commenced. Approval of the Government of India for manufacture of 5-speed transmission has been obtained and the designing and manufacture of tools, jigs and fixtures is in progress. An order for combustion heat treat furnaces has been placed. On receipt of these furnaces production of transmission and rear axles is expected to be accelerated due to the increased scientific control.

Due to import restrictions big cars will not be available for some time to come, although the Company will be selling spare parts for those already on the roads. The Company will have therefore to rely for the present on the sales of trucks and Fiat cars for its turnover. The potential in respect of the former will, however, suffer to a certain extent, as a result of the decision of the Government of India to manufacture trucks for the Defence Ministry at the Ordnance factories.

During the year under review negotiations were concluded for the issue of 1.60.000 6½ per cent. (subject to income-tax) convertible debentures out of the sanction of Rs. 2,00,00,000 debentures and this issue was offered to the shareholders in the first instance. These debentures were subsequently allotted. Out of the proceeds of the debenture issue, the balance of the loan of Rs. 45 lakhs was paid off in full to the Industrial Finance Corporation.

During the year under report the factory had to be closed down from 12th April 1958 for the duration of the strike as a security measure under the Standing orders, as the workers resorted to a sit-down strike. The strike was called off on 30th July 1958 and the factory resumed working thereafter.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,20,26.525	Gross block	3,90,61,158
Reserves ...	71,19,432	*Less*—Depreciation ...	1,93,68.002

Muttra Electric Supply Co., Ltd.

The directors of the above Company (Chairman: Mr. Ghanshyamdas Bhagat, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The number of consumers connected to the Company's system as at 31st March 1958 was 4,572 as compared with 3,922 at the close of the year ended 31st March 1957.

There was a long dispute between the Company and the Municipal Board of Mathura in connection with the renewal of the agreement between the Company and the Municipal Board for supply of electrical energy and the dispute has since been settled by entering into a fresh agreement. Satisfactory progress is being maintained in the following schedule:

Year Ended	*Units Sold*	*Revenue* Rs.
31st March, 1956	36,25,664	6,41,067
31st March, 1957	42,30,748	7,80,736
31st March, 1958	48,11,057	8,80,356

After providing for all charges and placing Rs. 10,107 (Rs. 9,172) to statutory contingencies reserve, Rs. 19,200 (Rs. 32,400) to provision for consumers' benefit fund, Rs. 10,421 (*nil*) to development reserve, Rs. 76,000 (*nil*) to provision for doubtful debts, Rs. 60,000 (Rs. 84,121) to provision for taxation and Rs. 36,979 (Rs. 44,228) to provision for director-in-charge's remuneration (which is payable subject to the approval of the shareholders) and bringing forward Rs. 19,008 (Rs. 15.088) from the year ended 31st March 1957, Rs. 32.928 (*nil*) from tariffs and dividends control reserve, Rs. 64.000 (*nil*) from general reserve, Rs. 4,654 (Rs. 4.654) from deferred taxation reserve, there remains a balance of Rs. 78,297 (Rs. 74,984 after placing Rs. 13,000 to general reserve) available for distribution and this amount the directors recommend be disposed of as follows:—

To payment of a dividend at the rate of 8 (8) per cent. per annum without deduction of tax for the year ended 31st March 1958 absorbing Rs. 55.976 (Rs. 55.976) and carrying forward to next year Rs. 22,321 (Rs. 19,008).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,99,850	Gross block	17,84,092
Reserves ...	1,83,973	*Less*—Depreciation ...	7,83,164
Provision for taxation ...	1,46,030		
Provision for wealth-tax	5.000	Net block ...	10.00.928
Liabilities ...	7,61,094	Capital work-in-progress	3,139
Profit and loss account ...	22,321	Stores, tools etc. ...	2,50,451
		Debts, deposits and advances ...	2.97.202
		Investments	1.29.352
		Cash ...	1,37,196
Rs.	18.18,268	Rs.	18.18,268

BANK ADVANCES NEAR RS. 1,000-CRORE MARK

(From Our Own Correspondent)

BOMBAY, 1st *April*

There has been no change in the conditions of the short-term money market since we reported last. If anything, the stringency is more acute, with the growing pace of demand for bank credit to finance the crop movement and to meet the requirements of trade and industry. The usual fiscal year-end needs for payment of taxes have also added to the pressure. Borrowers, therefore, predominate in a market which has already been depleted of its floating funds. The pace of increase in bank credit is gathering momentum, while that in deposits is slowing down, with the result that banks are drawing down their balances with the Reserve Bank and also increasing their borrowings from the Reserve Bank to meet their requirements. To some extent, these are met by reducing their investment portfolio also. The rise in bank advances is so fast that it has now almost touched the Rs. 1,000-crore mark.

There has, however, been no change in interest rates. Inter-bank call money is being done at 3½ per cent. among the Exchange banks and the big Indian banks and at 3½ per cent. among the smaller banks.

There has also been no change in the Treasury Bill discount rate at 2.760 per cent. per annum. But it seems that these bills are being taken up by special quarters, presumably the State Bank. This is evident from the fact that the amount offered this week was again no more than that invited, namely, Rs. 2 crores. Tenders for next week are unchanged at Rs. 2 crores. There have been no sales of Intermediate Bills during the week under review, but they are being continued.

The Reserve Bank of India statement for the week ended 27th March 1959 discloses a rise of Rs. 8.92 crores in notes in circulation and of Rs. 90 lakhs in notes held in the Banking Department. The consequent rise in total notes issued is covered mainly by an increase of Rs. 9.90 crores in rupee securities. There is no change in foreign securities, but balances held abroad have declined by Rs. 3.70 crores, bringing down the total amount of external assets to Rs. 213.06 crores. There has been a rise of Rs. 2.65 crores in Central Government's deposits, while deposits of other Governments are lower by Rs. 9.29 crores and those of banks by Rs. 6.65 crores. Loans and advances to Governments are up by Rs. 4.08 crores and other loans and advances by Rs. 41 lakhs. Banks' borrowings against usance bills show a rise of Rs. 3.19 crores.

A rise of Rs. 2.90 crores in demand deposits and a fall of Rs. 3.51 crores in time deposits are disclosed by the Scheduled banks' statement for the week ended 20th March 1959. Inter-bank borrowings are also lower by Rs. 3.65 crores. Borrowings from the Reserve Bank have increased by Rs. 14.28 crores and those from the State Bank by Rs. 1.02 crores. Advances (other than against bills) have jumped by Rs. 10.98 crores and bills purchased and discounted by Rs. 5.90 crores, raising the total bank credit to a record level of Rs. 995.93 crores, which is only short of the Rs. 1,000-crore mark by Rs. 4.07 crores. Investments stand reduced by Rs. 5 crores. While cash balances and balances with other banks have enlarged by Rs. 4.07 crores, money at call and short notice has shrunk by Rs. 2.85 crores.

Lethargic conditions prevail in the Gilt-edged market. Thanks to the acute stringency in the money market, investors are not making purchases. With only a few weeks to go for the announcement of the Centre's borrowing programme, sellers predominate in most counters. Interest in State loans also has waned and the L.I.C. has been out of the market for sometime now. In fact, there are sellers in many of the State issues.

3 per cent. 1986 Conversion Loan provides an exception with a rise of 10 nP to Rs. 74.10. 3 per cent. 1970-75 is unchanged at Rs. 91.15, while 3 per cent. 1966-68 has shed 10 nP to Rs. 93.75. 3 per cent. 1964 and 1963-65 have maintained their levels at Rs. 97 and Rs. 96.75, respectively. 3½ per cent. National Plan issues continue to be on offer, but, excepting 3½ per cent. 1965 which has declined by 5 nP to Rs. 99.55, all are unchanged. 4 per cent. 1960-70 has dropped 5 nP to Rs. 100.75. Among the State loans, Bombay 4½ per cent. 1969 is 5 nP lower at Rs. 102.50. Madras 4 per cent. 1964 has lost 5 nP to Rs. 100.20 and 1967 and 1968 to Rs. 100.10 each. U.P. 4 per cent. 1967 and 1968 are lower by 5 nP at Rs. 100.10.

The growing strength of sterling abroad had its effect on rupee also in terms of the U.S. dollar. Banks' selling rate for ready dollars has dropped from Rs. 475.75 to Rs. 475.25 per $100 and their buying rate from Rs. 472.25 to Rs. 472 per $100. In New York, spot sterling rose from $2.81¾-2.81.7/16 to $2.81.9/16-2.81¾ yesterday. This is the highest rate touched by sterling since the devaluation in 1949 and is only less than ¼c. below the official ceiling. Three months' forward has improved from $2.81.1/16-2.81¼ to $2.81¼-2.81.3/16.

SACKINGS DECLINE

(From Our Own Correspondent)

CALCUTTA, 31*st March*

The loss of a large part of the Burmese order for heavy goods to Pakistan recently would appear to justify the fears that are being held by shippers over the growing competition to India's jute industry. Though the order from Burma was not large, the fact that India is not in a competitive position to supply it is disappointing and has had a demoralising effect on the jute goods market in Calcutta. It is over two weeks since the order went to Pakistan, but the Calcutta market has not recovered from the bearish note it had struck.

BULLION RECEDES

(From Our Own Correspondent)

BOMBAY, 1st *April*

The persistently firm trend of the bullion market noted in the last four weeks abated during the week under review. In fact, the market put on a distinctly easy appearance. The bulk of the bear position having been squared up on the 23rd and the 24th ult., there was a shrinkage in turnover. There were also some offerings by professional interests, while the actual offtake was not large enough to absorb them. Consequently, both the metals suffered a setback. The lower levels, of course, attracted some replacement buying and short-covering. Nevertheless, today's closing rates were much lower than those at the end of last week.

In the silver section, April settlement came in for selling and fell from Rs. 201-8 to Rs. 199-5 yesterday and, after recovering to Rs. 200-3 today, reacted to Rs. 199-11 at the close. May settlement dropped Re. 1-14 to Rs. 199. The *badli* was against the bears; the rate widened from As. 12 on Tuesday last week to As. 14 on the 27th ult., but subsequently narrowed down to As. 11 today. Business in June settlement commenced at Rs. 198-15 on Thursday. The settlement was quoted today at Rs. 198-1.

Ready silver, which had touched a high of Rs. 202 on Tuesday 24th March, receded steadily to Rs. 199-10 yesterday. After recovering to Rs. 200-7 today, it finished lower at Rs. 199-15. The net loss over the week was Rs. 2-1. The daily average arrivals and offtake of silver were 12 bars and 13 bars, respectively. The floating stocks of silver are estimated at about 25,000 tolas.

April settlement in gold moved down from Rs. 119-1 to Rs. 118-11, after being lower still at Rs. 118-1 on Monday. May settlement suffered a loss of As. 12-6, today's closing rate being Rs. 117-13-6. The *badli* was payable by bears; it widened from As. 7 on Tuesday last week to As. 10 on Thursday this week, so that margin at the rate of Rs. 10 per tola became operative on bulls in the April delivery. Notwithstanding the margin, the *badli* widened further to As. 13-6 today. Business in June settlement commenced at Rs. 117-4-6 on Friday. With the *badli* payable by bears in May-June delivery being As. 8. margin at the rate of Rs. 10 per tola became operative on bulls in May delivery. The June settlement was quoted today at Rs. 117-7-6.

Ready gold encountered selling and eased from Rs. 119-15 to Rs. 119-1 on Monday. After recovering to Rs. 119-12 subsequently, it softened to Rs. 119-7-6 today before finishing at Rs. 119-11. The daily average arrivals of gold were 5,000 tolas, while the offtake was 4.500 tolas per day. The floating stocks of gold are reported to be around 25.000 tolas.

Ready and forward silver in London were both fully maintained at the last week's levels of 79¼d. and 79¼d., respectively. Ready gold, however, eased by ¼d. to 249*s.* 1¾d. Silver in New York was unchanged at 91.375 cents per fine ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	1-4-59	Highest	Lowest	24-3-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

* 23rd April settlement. † 24th April settlement.

During the week under review sackings continued to rule easy with a further decline in prices. Absence of any overseas buying and the easy trend in raw jute prices also affected sentiment. Hessians, however, ruled steady, mainly due to covering in ready eleven porters by shippers to meet their month-end commitments.

B. Twills (March) declined from Rs. 94 per 100 bags to Rs. 93.20 and April shipment from Rs. 94.50 to Rs. 93.65. April-June shipment closed at Rs. 93.90, having been marked down from Rs. 94.75. The July-September shipment shed 80 nP to Rs. 94.20. The steady tone in hessian is reflected in the rise of 40" x 10 oz. from Rs. 40 to Rs. 40.50 per 100 yds. The April shipment showed no change at Rs. 39.35, while the more distant shipments, namely April-June and July-September, were a shade lower at Rs. 38.90 and Rs. 38.85, respectively.

The raw jute market ruled easy, with sellers offering freely, following reports of good rainfall in growing areas. Mills' purchases were also limited, in view of the difficulty of finding storing space. With heavy deliveries coming in against their larger purchases in response to the I.J.M.A.'s request to mills to buy five months' requirements, mills are storing them in the open. Some mills are unable to carry out their undertaking and are, therefore, refraining from purchasing on account of this difficulty. The absence of any relief in export duty on raw jute, as requested by growers, also depressed prices. Exports of raw jute do not seem to be encouraging. The cumulative effect of these factors was the drop in prices all-round. The following are the latest quotations of raw jute (per maund) for April-May shipment: Northern Bottoms: Rs. 20.75; Assam Bottoms: Rs. 21 and Daisee Bottoms: Rs. 23.25.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 1*st April*

Firm conditions continued to prevail in the cotton futures market during the week under review, although the hectic buying witnessed last week receded. There was fresh support from up-country interests, besides good mill and investment buying. Firm advices from the spot market, prospects of a sharp reduction in crop and reports that mill consumption of Indian cotton was advancing imparted further strength to the market. Over the week, prices showed an improvement of about Rs. 3 to Rs. 4. A notable development of the week was the commencement of trading in I.C.C. Moglai Jarilla August 1959 contract on the 26th ultimo.

I.C.C. Moglai Jarilla May contract commenced the week at Rs. 676.25 and gradually rose to Rs. 684 yesterday before closing at Rs. 680.50. Commencing today's session at Rs. 680, the contract improved fractionally and finished at Rs. 679.50.

I.C.C. Moglai Jarilla August contract, which started its carrier on the 26th March at Rs. 683, firmed up to Rs. 689.50 yesterday. Opening at Rs. 686.50 today, the contract gathered 50 nP and closed steady at that rate. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	1-4-59	*High*	*Low*	24-3-59
I.C.C. Moglai Jarilla				
May 1959 ...	679.50	684	675	676.75
I.C.C. Moglai Jarilla				
August 1959 ...	687	689.50	682	683*

*On 26-3-59.

Sustained activity was witnessed in the spot section. Available lots of good quality cotton found ready buyers. Staple styles were getting scarce and rates hardened. Mill buying was mostly centred round Vijay, Digvijay, Laxmi, Kalyan Jarilla and 03940. The export front was subdued. Foreign enquiries were few and far between. Fresh business reported was negligible.

The Joint Chief Controller of Exports has notified that all contracts registered but remaining unshipped as on 31st March will be allowed to be transferred for the next period, April to August 1959, provided the shipment against such contracts so transferred is made not later than 15th April 1959. The bank guarantee furnished in respect of such registration will be required to be extended till the shipment is made by 15th April 1959. This concession, it has been specially stated, should not be treated as a precedent. Similar extension would not be allowed for contracts registered with the Joint Chief Controller of Exports under a bank guarantee during the next period that is, April-August, 1959.

The import section, in contrast, was very active. Keen interest was noted in Egyptian cotton. Sizable quantities of Egyptian Karnak and Menoufi varieties were purchased. Moderate business took place in Sudan and East African cotton.

It has been officially notified that the shipping period in respect of the import quota of 55,000 bales of cotton of staple length 1.3/16" and above (namely, Egyptian and Sudanese varieties) issued on 13th December 1958, has been extended till 31st May for Egyptian cotton and 30th June for Sudan cotton. The shipping period of East African cotton has also been extended from 30th April to 31st May 1959.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 690; Berar Jarilla 770; Khandesh 840; Vijay 970.

The Karachi cotton futures market ruled easy during the week under review also. The slackness of export demand and absence of domestic spinner demand discouraged support. At the same time, new crop arrivals exerted a downward pressure on prices. N.T.R.G. May dropped from Rs. 54-12 last week-end to Rs. 52-13-6. The March contract expired on the 25th March at Rs. 52-4. Trading in July commenced on the 25th March at Rs. 54-11-6. The contract ruled somewhat steady. It closed at Rs. 54-10-6 yesterday.

Conditions in the Alexandria cotton futures market remained unchanged. Activity was slow and turnover limited. Prices continued to fluctuate in a narrow range, Ashmouni and Karnak contracts were in the neighbourhood of 61 tallaris and 71 tallaris, respectively. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 71.25; July 71.50. *Ashmouni*: April 61.50; June 61.55.

Despite larger offers of C.C.C. stocks of cotton from U.S. shippers, cotton futures values in Liverpool scored handsome gains during the week. This was due to mill hedging and trade covering in new crop positions. Commission House support was also forthcoming. Better interest was noted in Sudan cotton contracts which, consequently, hardened. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 22.00. *Sudan*: May-June 22.60.

Cotton futures values in New York hardened during the week. There were good mill and Spot House support. Part of the buying was attributed

to reports that the number of farmers who opted for option B, which enabled them to increase their basic acreage by 40 per cent. and get a lower support price than that obtained by farmers who chose option A, was smaller than expected.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	31-3-59	24-3-59	17-3-59
Spot	35.90	35.80	35.65
March	35.81	35.63	35.38
May	35.11	34.82	34.46
July	32.79	32.47	32.16

SUGAR RALLIES

(From Our Own Correspondents)

BOMBAY, *1st April*

There was a sharp rise in sugar prices during the fortnight under review, as a result of excellent buying support induced by sustained demand from Malabar side and poor arrivals. The aggregate arrivals by rail during the week were no more than 3,620 bags. The buoyancy of the market was also due to three other factors. One, the ex-mill quotations for Bombay-Deccan sugar moved up. Two, the latest monthly release of sugar for sale in the free market was lower than the previous release, the quantity involved being 150,000 tons, as against 165,000 tons. Three, there were rumours that the Central Government might raise the controlled ex-mill prices of North Indian sugar and also concede partly the demand of cane growers for higher prices.

Over the fortnight, medium grain sugar registered a rise of Rs. 2 to Rs. 112-Rs. 113 per bag. Large grain gained a like amount to Rs. 114-Rs. 118. Small grain rallied from Rs. 109.50 to Rs. 111.

* * * *

HAPUR, *30th March*

The sugar market rules quietly steady. The rising trend of prices has been halted, thanks to selling pressure by factories which have to clear their last released stocks by 7th April. A fresh quota of 150,000 tons has also been released for open sale. Some factories in Moradabad division have stopped crushing operations, and some units in Meerut and Bulandshar districts were expected to close down within a few days, as cane supplies were inadequate. The prevailing prices of sugar in the Muzaffarnagar market are:—crystal spot delivery new Shamli D29 Rs. 36.75; Mansurpur D29 Rs. 38; wholesale mill delivery controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36; prevailing prices Rohana B29 Rs. 38.87; Mansurpur C29 Rs. 38.06; Lhaksar C29 Rs. 38.91; Deoband C29 Rs. 38.37; Khatauli B29 Rs. 38.37; Meerut D29 Rs. 37.69; Amroha D29 Rs. 37.12; Bijnore D29 Rs. 37; Dhampur D29 Rs. 37.19.

Khandsari also rules quietly steady. There are indications that the Government of India is thinking of making some changes in the proposed excise levy on *khandsari*. The prevailing prices are:—superior Rs. 33 to Rs. 36; inferior moist Rs. 29 to Rs. 32 per maund.

With the last week's fall in *gur* prices, demand for this commodity has again revived. Daily arrivals here are at an average of 2,000 to 2,500 maunds. Local stock is put at 87,000 maunds. Cane sowings for the next season is in full swing and, as *gur* prices all through the season have been fairly high, an increased acreage is expected in the next season. The prevailing prices are:—*gur pansera* Rs. 18.25 to Rs. 18.50; *balti* Rs. 18.37 to Rs. 18.62; *shakker* Rs. 18.50 per maund.

In the Muzaffarnagar market, arrivals of *gur* are at an average of 8,000 to 10,000 maunds daily. The latest prices are:—*gur chaku* Rs. 18 to Rs. 19; *ladu* Rs. 20 to Rs. 20.50; *pansera* Rs. 19 to Rs. 19.75; *shakker dara* Rs. 19.75 to Rs. 21.75; *masala* Rs. 24 to Rs. 25.25 per maund.

Forward trading in *gur* continues to remain suspended in accordance with the Government of India's instruction. The local Chamber has been assured by the Forward Markets Commission that the new rules submitted by it are under consideration and forward trading will be allowed soon.

YARNS GIVE WAY

(From Our Own Correspondent)

BOMBAY, *1st April*

Traders in yarn are anxiously awaiting the Government's decision regarding the import of art silk yarn. The import licensing policy for the current half-year announced yesterday does not make any mention of art silk yarn. This absence is attributed to the fact that the Government may be considering the question of linking the rayon yarn import policy to the modified export promotion scheme in rayon fabrics now being examined. It is reported that the Development Council for Rayon and Silk is meeting shortly to review the situation arising from the suspension of the export promotion scheme. One of the proposals expected to come up for consideration by the Council at this meeting relates to the distribution of domestic yarn among actual users. A scheme mooted in this regard envisages grant of ration cards for rayon yarn at the rate of 1½ lbs. per shift per loom to those consumers who submit regularly returns indicating the quantity of yarn actually consumed and the excise duty paid. The suggested distribution is 75 per cent. for powerlooms, 10 per cent. for handlooms, 9 per cent. for ancillary industries and 6 per cent. for doubling units. This scheme, it is understood, covers the quantity of yarn produced during the half-year ending September next. The provisional estimate of this output is put at 18.25 million lbs.

While the final official decision regarding imports of rayon yarn and distribution of yarn indigenously produced is awaited with much interest, the consensus of opinion among traders would appear to be that the supply position in respect of yarn would be quite comfortable in the coming months. It is not surprising, therefore, that prices have shown a tendency to decline. Business put through is, of course, on a restricted scale, because of uncertainties regarding the official policies.

Cupressa Bamberg art silk yarn (60 x 1) April delivery encountered selling and fell by Rs. 9 to Rs. 1,541. June delivery dropped Rs. 6 to Rs. 1,546. Spot Cupressa (60 x 1) Bamberg yarn was quiet at Rs. 7.72. 150 Italy moved down from 5 nP to Rs. 4.81. 120 Italy shed 4 nP to Rs. 4.96. 120 Japan was dull at Rs. 4.87, as also 150 Japan at Rs. 4.90. Indigenous yarns, however, were somewhat well supported, National Rayons 150 bright cones first grade rising by 4 nP to Rs. 4.28 and 120 bright cones first grade by 3 nP to Rs. 4.44.

Staple fibre yarns were subjected to selling and suffered a setback to values. 40 x 2 June delivery slumped by Rs. 11 to Rs. 623. April delivery receded by Rs. 7 to Rs. 621. Spot Citys declined by 5 nP to Rs. 3.14. Centurys lost 3 nP to Rs. 3.22. Foreign staple fibre yarn 80 x 2, on the other hand, elicited good buying support and registered an improvement. Fujis strengthened by 19 nP to Rs. 8.50. Paramounts advanced by 9 nP to Rs. 7.84.

In the cotton yarn section, 10 counts Moderns and Podars were unchanged at Rs. 13.37 and Rs. 12.19, respectively. Twenty counts Seksarias fell by 25 nP to Rs. 15.25, while Hinds met with some support and rose by 13 nP to Rs. 16. Forty counts Moderns were dull at Rs. 25.75. Minaxis, however, were better by 6 nP to Rs. 25.06. Sixty counts Raghuvamshis were unchanged at Rs. 55 and Finlays at Rs. 65. Among eighty counts, Finlays were neglected at Rs. 81, but Citys were enquired at Rs. 68, as against Rs. 67 last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	1-4-59	24-3-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg April	1,541	1,550
" " June (per case of 200 lbs.)	1,540	1,552
60/1 Cupressa Bamberg spot (per lb.)	7.72	7.69
120 Japan (per lb.)	4.87	4.87
150 Japan (per lb.)	4.90	4.90
120 Italy (per lb.)	4.96	5.00
150 Italy (per lb.)	4.81	5.00
Staple fibre yarn—		
40 × 2 April (per case of 200 lbs.)	621.00	628.00
40 × 2 June (per case of 200 lbs.)	623.00	634.00
40 × 2 Century (per lb.)	3.22	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
40s Minaxi	25.06	25.00
60s Finlay	65.00	65.00
80s City	68.00	67.00

MARGIN ON LINSEED

(From Our Own Correspondent)

BOMBAY, *1st April*

Irregular trends were witnessed in the oilseeds market during the week under review. Trading remained subdued for the most part of the week. The Government of India has decided to release export quota for groundnut cake, oil and H.P.S. In an announcement made on 30th March, the Joint Chief Controller of Exports, Bombay, said that the Government had decided to allow the export of 3½ tons of groundnut oilcake (expeller variety) by established shippers of groundnut oil for every ton of groundnut oil exported by them against contracts concluded during March-May 1959. It had also been decided to allow export of 4 tons of groundnut oilcake (expeller variety) by shippers of salad oil for every ton of salad oil exported by them against contracts concluded during March-May 1959. These special licences of groundnut oilcake (expeller variety) would be issued on production of bill of lading or other acceptable proof of having export of groundnut oil and salad oil. It has been decided to give further repeat allotment of groundnut oil to established shippers equal to 15 per cent. of their basic year exports after they completed shipment of groundnut oil against quotas granted to them in terms of previous notices. Similarly, established shippers of H.P.S. groundnuts would be given repeat allotment equal to 25 per cent. of their basic exports after they have completed shipment against the quotas granted to them. Co-operative societies of growers of groundnuts would also be given repeat allotment of H.P.S. groundnut after they completed shipment against quotas granted to them earlier. Shipment against repeat allotments granted in the manner would be allowed up to the end of June 1959 only.

The consensus of opinion among the traders is that the Government's export promotion drive in oilseeds and oils is of doubtful value, especially at this juncture when the statistical position of groundnuts is quite tight. It is feared that it might lead to undue speculation and rise in prices, rendering them out of parity with world prices.

Another development of significance to the market is that the Forward Markets Commission has asked the local Oilseeds Exchange to impose a special margin on linseed May 1959 hedge contract with immediate effect. When the closing prices of this contract on any day exceeds Rs. 33 per cwt., a margin will become effective at the rate of Rs. 3, if it exceeds Rs. 35, the margin will be Rs. 6, and Rs. 9 when the contract goes beyond Rs. 39. This measure has tended to bring down the values perceptibly.

The groundnut section remained featureless for the most part of the week. As has been already stated, the export promotion measure figured as the only redeeming feature. Traders felt apprehensive over the possible refusal by the Forward Markets Commission to permit the new August contract. Today, a prominent local trader is reported to have liquidated sizable stocks. The groundnut prices, thus, drifted to lower levels. The May contract which closed last Thursday at Rs. 186.62, after touching Rs. 184.50 on Saturday, advanced to Rs. 187.12 on Monday. It, however, reacted today to Rs. 185.00. Bold Ready sagged from Rs. 38.25 to Rs. 37.25 over the week. Oil ex-mill, after fluctuating between Rs. 20.00 and Rs. 19.75, closed today at Rs. 19.87, thus losing 12 nP over the week.

Comfortable supply position and lack of good support for oil pushed down the values in the castorseed section. There are, however, rumours that the U.S. will turn its attention to India since Brazilian crop is said to have been damaged. May contract which wound up last week at Rs. 156.25, lost ground subsequently and finished at Rs. 154.12 today. Ready Madras lost 37 nP over the week to close today at Rs. 30.12. Oil B.S.S., after moving in a narrow range, closed today lower at Rs. 16.31 as against Rs. 16.50 last Thursday.

Linseed witnessed quietly steady conditions. The Government of India has released a fresh quota of 15,000 tons of linseed oilcake for export during the period April to September 1959. It has also released fresh export quotas of 15,000 tons of coconut oilcake, 10,000 tons of nigerseed oil cake, 5,000 tons of *kardi* oilcake and 4,000 tons of other oilcakes for the same period. These quotas are for export to all permissible destinations excluding the Portuguese possessions in India, by all shippers without any restriction of maximum shipment by individual shippers. The export quotas are welcomed. But the strength imparted to the market by this release was somewhat impaired by the imposition of margins. Perhaps the prices will have to decline if export trade is to pick up. May contract declined by 62 nP to Rs. 32.00 on Saturday. It subsequently recovered and touched Rs 32.37 yesterday. Once again it lost ground when it closed today at Rs. 31.87. Bold ready moved down from Rs. 32.62 to Rs. 31.75 today and oil from Rs. 16.25 to Rs. 15.75. Cottonseed moved in sympathy with other seeds. May contract which closed last week at Rs. 131.25, after fluctuating in a narrow range, reacted to wind up today at Rs. 130.00.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	1-4-1959	24-3-1959	18-3-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	185.00	186.62	190.25
Bold ready	37.25	38.25	38.50
Cornmanded ready	38.12	38.50	39.00
Khandesh quality	38.12	38.50	39.00
Oil ex-mill ready*	19.87	20.00	20.19
Railway receipts*	19.56	19.69	19.94
Castorseed			
May 1959	154.12	156.25	158.75
Ready Madras	30.12	30.50	30.87
Ready Kumur	28.75	29.25	29.44
Oil B.S.S.†	16.31	16.50	16.81
Oil commercial†	14.94	15.31	15.50
Linseed			
May 1959	31.87	32.62	33.37
Bold ready	31.75	32.62	33.00
Oil ready†	15.75	16.25	16.81
Cotton seed May 1959	130.00	131.25	130.50
Niger seed	27.75	29.12	29.50
Kardi seed	23.75	24.25	24.37

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

BROKEN TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *26th March*

Offerings in sale No. 12, which was held on 24th March 1959 totalled approximately 775,000 lbs. The quality of teas offered in this sale was well maintained, and there were a number of high grown flavoury teas and good medium teas on offer. There was a good general demand, particularly for all broken grades, which were fully firm to occasionally dearer. Fannings, however, with the exception of low medium and finest high grown fannings, met with only limited enquiry and were the weakest feature of the sale. Withdrawals consisted almost entirely of fannings grades. There was keen competition for whole leaf grades which sold at dearer rates than last. The quotations were: Low medium Re. 1.55 to 1.65; medium Re. 1.73 to 2.20; good medium Rs. 2.30 to 2.85; and quality Rs. 2.70 to 5.42.

Dust Sale 'F':—Approximately 530,000 lbs. were offered in this sale which was held on Thursday, 25th March. A useful selection was on offer including a fair quantity of C.T.C. Dusts. The sale opened to a strong general demand and prices were irregularly dearer by 5 to 10 nP for everything. However, high growns and C.T.C. types met with only limited demand and sold at easier rates.

London Market: Sale of 23rd March 1959.—Better demand. Firm to dearer all descriptions, except thin liquoring kinds.

Sale of 24th March 1959.—Steady firm to dearer for improved qualities.

Colombo Market: Sale of 23rd March 1959.—Strong demand. Highgrown and mediums irregularly dearer following quality. Lowgrowns barely steady.

Sale of 24th March 1959.—Stalkiest kinds again lower. Others active demand generally firm to dearer.

Calcutta Market.—No sale this week.

Export Quota.—The Joint Controller's books closed on 20th March till the 31st March for all transactions in 1958-59 export quota. As a result, the market has been rather dull and little business has been done during the last week. However, there is a nominal quotation of 2 nP sellers and probable buyers at 1½ nP. From 1st April, all transactions in quota will be in the form of special transferable licence.

Forthcoming Auctions.—Sale No. 13 will be held on Tuesday, 7th April and Dust Sale 'G' on Thursday, 9th April.

Revised Dust Auction Programme.—The Tea Trade Association of Cochin has decided that weekly dust auctions will be held for a trial period May-June. The revised programme of dust sales is : May 7th, 14th, 21st and 28th and June 4th, 11th, 18th and 25th.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *30th March*

Distinctly easy conditions prevailed in the foodgrains market during the week under review, due mainly to mounting new crop arrivals of coarse grains, the prices of which recorded an appreciable fall and wheat also drifted lower in sympathy. It is learnt that the U.P. Government will soon start procuring wheat and gram in the surplus areas of western U.P. and some districts of east U.P. For this purpose, the fixation of price for wheat and the introduction of State trading in foodgrains are expected to be announced shortly. It is felt that the price of indigenous wheat will be fixed at Rs. 14 per maund, with slight variations according to local conditions. The Union Food Minister, Mr. Jain, has said that the zonal system of food distribution is working usefully and the Government is not changing it at present.

Wheat at Hapur recorded a fractional fall during the week to be quoted now on Monday at Rs. 21 per maund for *dara* quality and Rs. 23 to Rs. 23.50 for farm produce, while inferior quality was quoted upto Rs. 20.50 per maund. Demand was slack, as consumers preferred to buy their minimum requirements in expectations of lower prices when the new crop begin to arrive in the market after a fortnight.

Despite the record rice production of 29,721,000 tons in 1958-59, as compared with 24,885,000 tons last year, rice continues to rule steady at almost unchanged price levels. For arrivals from surplus areas were restricted by the State Government. The prices prevailing towards the week-end were: *basmati sela* Rs. 32.50; *mainpuri* Rs. 22.37; *rainmunia* Rs. 27; *gadda* Rs. 23 per maund.

New gram arrivals increased in some areas and prices registered a sharp fall during the week to be quoted at Rs. 17.75 per maund, as against Rs. 20 last week-end. Barley and *bejhar* also drifted lower, as new crop arrivals were mounting. Maize was losing seasonal demand, as stockists were anxious to liquidate their holdings. Prices, therefore, moved down. *Bajra*, *jowar* and *guwar* were also easy to be quoted now at (in rupees per maund); gram 17.75; barley 13; *bejhar* 12.50; maize 15 to 15.50; *bajra* 12 to 13.75; *jowar* 12 to 14 and *guwar* 14.75.

New peas arrivals were substantial here, as well as in other centres and they were expected to increase further shortly. Prices also ran down sharply under pressure of arrivals, which averaged 2,500 maunds daily here. Other pulses were also depressed in sympathy, although new *arhar* arrivals will not begin before the end of April and local stocks now were almost *nil*. Prevailing prices on Monday (in rupees per maund) were: peas *dara* 12.25; farm white 13.75 to 14.50; peas *dal* 15; *arhar* 18; *arhar dal* 24 to 25; *urd* 19; *moong* 21 to 24; *massor* 18.

Harvesting of coarse grains is nearing completion and wheat harvesting will begin after a few days. Last night's drizzle and rains will hamper arrivals by a few days.

READY LINSEED DECLINES

(Messrs. A. Bradley & Co.)

CALCUTTA, *30th March*

Ready linseed declined further by over Re. 1 per maund and reached the level at which forward delivery was quoted. Sellers were still keen, with increased new crop arrivals expected within the next few weeks. There was increased activity by crushers, for, despite the decline in cake prices to Rs. 14 per maund, operating margins were profitable. Daily turnover was good, though mainly confined to early deliveries. There was some activity in the oil market and, with prices declining, shippers made purchases from Rs. 50-8 down to Rs. 49-8, following an enquiry from Australia and reports of an improvement in the U.K. price to £95.

The latest available quotations for both ready and April-May is Rs. 22.50 per maund.

HIDES BUOYANT

(From Our Own Correspondent)

MADRAS, *30th March*

The hides and skins market ruled buoyant during the week. Sellers were holding back their stocks expecting better levels in a month or two, because importers were showing keen interest in all lines. Prices in the local market advanced sharply, and arrivals met with good clearance.

In the tanned goat skins section also, importers' demand was brisk and prices advanced by 3d. The tanned sheep skins market was steady and unchanged.

Notice

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE 33rd Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House," 57B, Free School Street, Calcutta, on Thursday, the 23rd day of April, 1959, at 11 a.m., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare Dividends.
3. To appoint Directors in place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification, the following resolutions:

5. "That Mr. James Alexander Moore, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Finance) of the Company upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."
6. "That Mr. Kenneth Claud Ferguson, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Works) of the Company upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."

By Order of the Board,

P. B. SEN GUPTA,
Secretary,

DUNLOP HOUSE,
57B, FREE SCHOOL STREET,
CALCUTTA, *26th March*, 1959.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 10th April, 1959 to 30th April, 1959, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 10th April, 1959.

Permanent investments of foreign nationals in West Germany joint-stock companies presently amount to about 3,000 million DM, out of a total share capital of 19,700 million DM. The largest share of foreign capital is invested in the mineral oil industry (820 million DM) automotive industry (312 million DM) and pit-coal mining (262 million DM). As to the provenance of foreign holdings in W. Germany, the U.S. holds the lead with 950 million DM, followed by Great Britain (630 million DM), the Netherlands (520 million DM) and Switzerland (350 million DM).

Water, water everywhere— all the family in *despair*

Certainly there is no need for them to be so. In fact, why live or work under damp, miserable conditions—why allow your property to deteriorate around you? Have it protected from dampness of ceiling, walls and floors, from acid and alkali action, by Shalimar Tar Stp bituminous based protective materials.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—From July 1954. H—Outstandings in respect of items in column 9 marked 'E' are not included.

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.B.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (h) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and *other reserves* and all other *funds*, which a *company may have* excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital.
K—Fort William Jute Co., has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co., Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page* 531)

career on 26th March, has also been rising gradually to touch a high of Rs. 690.50 today, prior to finishing at Rs. 689.50.

Sustained firmness has been witnessed in oilseeds, too, thanks to paucity of stocks and increasing demand from crushers and manufacturers. Neither the imposition of a stringent margin of Rs. 45 on groundnut (if the hedge contract rose to Rs. 185.50), nor the introduction of credit controls by the Reserve Bank could curb the rising trend in price. After a strident advance to Rs. 190.25 on 18th March, the May contract was tending to ease a little. But the Government's decision to allow export of further quantities of H.P.S. groundnut oil and expeller cake gave a fillip to the market. Groundnut May rallied from Rs. 185.75 on 30th March to Rs. 187 the next day as a sequel to the announcement. Shippers are, however, not enthused over the decision, because, the domestic prices being very high, it is difficult to do any substantial export business. Indeed, a large quantity of the quota already released is still lying unutilised and trade quarters are wondering why the Government decided to release further quantities and that too at a time when there is shortage of supplies in the country. The groundnut May contract receded to Rs. 185 yesterday. It, however, improved fractionally today to Rs. 185.87. The imposition of a margin of Rs. 3 on linseed if the price of the hedge contract exceeded Rs. 33 seems to have kept the price below that level. Linseed May contract is currently quoted at Rs. 32.12. Prices of other oilseeds, too, have gone up considerably since the commencement of the year.

* * * *

While the European Free Trade Area negotiations continue to remain suspended in view of the differences of opinion between the six Common Market countries and the eleven other nations of Western Europe, discussions are going on among the "Eleven" as to what they should do, if the "Six" do nothing to facilitate resumption of negotiations. Since the talks between the U.K. officials and the Federation of British Industries with Denmark, Norway, Sweden, Austria, Switzerland and Portugal are held confidentially, no information is available regarding the outcome of the talks. All that is known is that all the participating countries recognise the desirability of taking a common stand if and when negotiations are renewed with the C.M. countries.

One of the proposals mooted in this connection relates to the setting up of a customs union, or even free trade area, comprising Britain, Denmark, Sweden and Norway. The proposal is quite an interesting one, but there are innumerable problems which would have to be solved before it could, in fact, be given effect to. Among these problems, the Diplomatic Correspondent of the *Financial Times*, London, alludes, in particular, to the following:

On the Scandinavian side, there is the question of Danish agricultural exports. Denmark will find it practically impossible to take any step which will jeopardise the prospects for its exports to the C.M. countries, especially West Germany, unless assured of compensation in other markets.

From the British point of view, there is the additional problem that this country has a higher external tariff than the three Scandinavian nations. The formation of an Anglo-Scandinavian customs union will thus—under G.A.T.T. rules—lead to a lowering of the British tariff. The main beneficiaries of such a move at present will be the C.M. countries.

So far as Britain is concerned, Mr. Maudling, Paymaster-General and negotiator with the C.M. countries, made it clear in the House of Commons the other day that alternative ideas to a Free Trade Area were being considered with the utmost caution. Stating that the Government's view on the question had not changed in the past few weeks, Mr. Maudling reiterated that "a European Free Trade Area is the only satisfactory solution." Meanwhile, a close collaborator of Prof. Erhard, Germany's *Minister of Economics Affairs* and a supporter of Free Trade Area, is reported to be trying to persuade France to adopt a more conciliatory attitude.

DELHI LETTER

(*Concluded from page* 536)

cast iron, brass, aluminium and bronze. It is proposed to add other fluxes to this list suitable for welding other types of materials. A scheme has been undertaken by a firm to manufacture foundry fluxes. During the year under review, organised manufacture of compound electroplating salts for plating metal surfaces with nickel, copper, brass, zinc, tin, cadmium, etc., has been commenced. Manufacture of activated carbon on a modern and organised basis has been commenced in this year by a firm at Bombay.

"One of the firms commenced production of Sodium Perborate on a small scale, as a new project. Heat treament salts such as case hardening compounds, carbonising compounds, tempering salts, etc., have also been manufactured indigenously for the first time. Licences have also been granted for the production of the following new items: (1) Phosphorus Trichloride, (2) Mono Chloro Acetic Acid, (3) Acetyl Chloride, (4) Tetra Chloro Ethane, (5) Mercury Salts and (6) Water Treatment Chemicals.

"The cement industry has been steadily forging ahead. As against an installed capacity of 6.63 million tons at the beginning of the year, the capacity went up to 7 05 million tons by the end of November 1958. The actual production during the first eleven months of 1958 was 5 53 million tons, as against 5.01 million tons during the corresponding period in 1957. While 29 units were in operation at the beginning of the year, expansion of two existing units and establishment of two new units materialised by November 1958. A further capacity of 7.69 million tons has been approved for installation during the current plan period, which would raise the total capacity to 14.74 million tons. Out of this additional capacity, however, a capacity of 2.90 million tons only is covered by import licences for the import of cement-making machinery, so that the firm capacity expected during the Plan period is of the order of 9.94 million tons. Due to foreign exchange difficulties, it has not been possible to license any new schemes for manufacturing asbestos cement products.

"Production of mica insulating bricks for steel projects for their insulation requirements and production of Pea Magnesite has been commenced for the first time.

"The Government Porcelain Factory at Bangalore has made satisfactory progress in the production of high tension insulators and two more plants are expected to go into production by 1960. The manufacture of dental porcelain has been taken up commercially for the first time in India.

"The production of certain new items of glassware such as glass building blocks, glass-wool, syringes and optical glass and ophthalmic lenses is now under consideration.

"The setting up of an optical glass project in the public sector with the collaboration of the Government of U.S.S.R. is progressing satisfactorily.

"Brush quoted art papers and press-pahn paper are two of the important new items of production taken up during the current year, by two units in the private sector. In another unit, besides the production of vulcanised fibre sheets, it has also taken up the manufacture of vulcanised fibre rods and tubes as also seamless cards and sliver cans.

"Negotiations for the establishment of a second newsprint mill at Shakkarnagar (Andhra Pradesh) based on the bagasse resources of the Nizam Sugar Factory and adopting the A.Z. process have been in progress with a firm in West Germany and a final reply from them is awaited. However, the establishment of a 100-ton-per-day bamboo-based rayon paper pulp unit near Beypore (Kerala State) could not make satisfactory progress during the year under report. The Japanese Consulting Institute, after carrying out pilot plant studies on bamboo shipments to Japan arranged by the National Industrial Development Corporation, have furnished a project report for the establishment of a 100-ton-per-day bamboo-based rayon grade pulp mill in India. The matter is under consideration of the Government.

"The rayon industry continued to maintain the upward trend in production. Two units have completed their licensed plans for expansion for the manufacture of rayon and two more units are progressing satisfactorily and they are expected to start trial production by the middle of 1959. There is at present only one unit manufacturing acetate rayon yarn and, due to various problems faced in the manufacture of acetate yarn, they have decided to defer implementation of their scheme for doubling their present capacity of four million pounds per year. Manufacture of spun-dyed yarn has now been undertaken by the other units of the industry. The target for the production of rayon yarn for the second Five-year Plan has been revised to 100 million pounds. In addition, two schemes for manufacture of nylon based on the spinning of imported caprolactam have been approved."

BANKING

(*Concluded from page* 539)

Persians. The acquisition of the share capital of the Eastern Bank Ltd. in 1957 gave the Chartered Bank a direct interest in the Middle East and the assessment of the political and economic situation there convinced the Bank that its representation in the Middle East would be incomplete without an interest in Iran. As a result, the Irano-British Bank was floated during the year under review, with an authorised capital of Rials 200 million. Its paid-up capital is Rials 100 million, made up of 10,000 shares of Rials 10 000 each, of which the Chartered Bank holds 8,000 shares of Rials 10,000 each and the Eastern Bank 1,800 shares of a similar denomination. This gives the Chartered Bank 49 per cent. control over the Irano-British Bank, which has recently been registered and granted a banking licence.

The Bank has also taken effective measures of co-ordination in places where the branch organisations of the Chartered Bank and the Eastern Bank Ltd. overlap.

THIRD PLAN TARGET FOR COTTON TO BE REVISED?

(*Concluded from page* 543)

the seed multiplication and distribution schemes of the Cotton Committee. A committee, with Dr. B. N. Uppal as Chairman, was constituted last year for this purpose. It felt that the objectives of both the schemes were practically the same. It recommended that the entire financial aid to the States should be channelised through the Indian Central Cotton Committee. Financial assistance, it stipulated, should be given only if proper legislation under the Cotton Control Act, the Cotton Transport Act and the Cotton Ginning and Pressing Factories Act was enacted by the State Governments concerned. It also suggested sale of improved seeds in sealed bags. These recommendations, Dr. Randhawa maintained, were very important, and when adopted, would lead to considerable improvement of cotton development work. Some progress was made in the field of regional research on cotton oilseeds and millets. Six centres, one each at Coimbatore, Dharesagur, Surat, Amravati, Sirsa and New Delhi have started functioning.

It is common knowledge that a stage has now been reached when expansion of cotton area, to any large extent, would be neither possible nor desirable. The raising of cotton production, therefore, depended largely on enhancing yield per acre through intensive cultivation. This aspect was pinpointed by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, in the course of his inaugural address to the meeting. Provision of irrigation facilities, use of improved seed, application of manure, and adoption of plant protection measures, he rightly pointed out, were the only way of increasing yield. The Committee has been giving serious thought to this aspect under the cotton extension schemes. Although water was available under the various projects, much of it was not being utilised properly, as cultivators were new to irrigation or the rates were heavy. Larger utilisation of water by cultivators could be achieved by propaganda and demonstration on the cultivators fields. The Minister felt that water in the initial stages of utilisation should be made available at concessional rates. The State Governments, he said should take early steps to ensure proper utilisation of the water from the projects. He also suggested that a detailed plan for orderly cultivation of cotton and other crops in the areas served by the projects must be drawn up as early as possible. This was a matter of utmost urgency and importance.

As regards use of improved seed, Dr. Deshmukh pointed out that the area covered by such seed during 1957-58 was of the order only of 66 per cent. of the total area under cotton. The aim of the Committee was to cover the entire area under improved seed during the second Five-year Plan period. The Committee had now under consideration a co-ordinated scheme for seed multiplication and distribution which was designed to ensure the purity and quality of the cotton produced. As a result of past experience, multiplication had been proposed to be done in five stages, covering a unit area of 150,000 acres.

With regard to application of manure to the cotton crop, efforts at popularising the use of fertilisers were being made under cotton extension schemes. The fertilisers were best applied on irrigated areas or on areas of assured rainfall. While the farmers were conscious of the benefits derived from the use of fertilisers, such utilisation, according to the Minister, was limited due to poverty of the farmers on the one hand and economic backwardness on the other. The question of providing the required quality of fertilisers at cheap rates through co-operatives needed urgent attention.

Notice

THE RAYALASEEMA MILLS LIMITED
ADONI, KURNOOL DISTRICT

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRTEENTH ANNUAL GENERAL MEETING of The Rayalaseema Mills Ltd. will be held at the Registered Office of the Company at Rayanagar, Adoni-Tungabhadra Road. Adoni P.O., on WEDNESDAY the 3rd June, 1959 at 2 p.m. (S.T.), to transact the usual business and also special business, the details of which are contained in the Notice and the Explanatory statement accompanying the Notice as separately posted to the members of the Company. The Share Transfer Books and the Register of Members of the Company shall remain closed from the 25th May 1959 to 10th June, 1959, both days inclusive.

By Order of the Board,

For THE RAYALASEEMA DEVELOPMENT COMPANY,

M. SOMAPPA,
Senior Partner,
Managing Agents.

ADONI, *8th March*, 1959.

UNDER SECRETARY TO GOVT. 13 APR 1959 PUBLIC DEPARTMENT

TRADE IN FOODGRAINS

THE much-awaited scheme of State trading in foodgrains was announced last week (on 2nd April 1959) in the Lok Sabha. It would, perhaps, be wrong to describe it as a State-trading scheme, pure and simple. It would be more appropriate to call it State-directed trade in foodgrains, in which the State, the wholesalers and the co-operatives all have a place. In the immediate future, no serious break with the present organisation of trade is envisaged, though the ultimate aim is to give the State and the co-operatives a supreme role in the distribution of foodgrains. To the extent that the transition is to be gradual, the opposition to the change may be less strong than it would be if the Government had embarked on State trading straightaway. But neither the fact that the changeover is to be gradual nor the consideration that the existing channels of trade will, in the initial period, continue to be associated with foodgrain distribution can make the task of implementing the scheme an easy one. Again, by envisaging a co-operative order which is yet to come, it is making a heavy demand on the none too strong sense of co-operation in the country.

Only the broad outline of the scheme has now been published. Many details are lacking. This makes it difficult to examine how the scheme will work. Broadly speaking, the objective of the scheme, which was worked out by a working group set up by the Government, is stated to be the maintenance of price levels which are fair to the producer and the consumer and the reduction of the spread between the prices received by the farmer and those paid by the consumer. The scheme will apply only to the two chief cereals, rice and wheat, and work on a no-profit-no-loss basis. It envisages a steady expansion of purchases by the Government, designed to establish for the Government a position of strategic control over the market, and also the intensification of existing measures such as the licensing of wholesale traders and the system of distribution through fair price shops. It also provides for building up a comprehensive network of co-operatives, capable of taking over the entire marketable surplus. Presumably, all this is intended as a fairly long-term solution of the problem, though it is impossible to say as to how long it will be.

The inherent difficulties involved in embarking immediately upon a full-fledged State trading scheme have compelled the authorities to divide the scheme into two parts: (1) ultimate pattern and (2) the interim scheme to be worked till the establishment of full-scale State trading. The ultimate pattern, it is stated, will provide for the collection of farm surpluses through service co-operatives and the channelling of the surpluses through marketing co-operatives and apex marketing co-operatives for distribution through consumers' co-operatives; effective steps will be taken for the development of consumers' co-operatives. The Government has decided that efforts should be directed towards the speedy realisation of the ultimate objective and that, during the interim period, more and more of the wholesale trade in foodgrains should be taken over by the co-operatives as they are progressively organised and developed. The Government will not immediately undertake the purchase of the entire marketed surplus, because that "would at once cast upon the Government the responsibility for feeding the consumers in the urban and semi-urban areas." It will, however, acquire a larger and larger proportion of such surpluses with a view to controlling the market more and more effectively until full-fledged State trading is established. In the interim period, wholesale traders will be permitted to function as licensed traders who will purchase on their own behalf but will pay specified minimum prices to the farmer. The Government, it is stated, will have the right to acquire the whole or a portion of the stocks from the licensed traders at controlled prices. The traders will be at liberty to sell the remaining stocks to the retailers at prices not exceeding the controlled prices. They will be required to maintain proper accounts of their purchase and sale transactions and stocks and submit periodical returns to the Government.

From a study of what is stated above, it will be seen that by far the most vulnerable aspects of the scheme are the fixation of prices and their enforcement. To take the fixation of prices first. There is no Solomon alive who can specify what is the correct minimum price for an agricultural product. It is bound to vary in different periods of the year, from year to year and in different parts of the country. The Government is not unaware of this difficulty, for its scheme envisages fixation of different purchase prices for different States and regions. It even concedes that, in certain States, there are underdeveloped areas or highly deficit areas which may deserve special treatment in the matter of fixation of prices. How is this complex task to be accomplished? Whichever way the scheme is administered, there is bound to be a certain element of arbitrariness in the fixation of prices which will lead to discontentment in rural areas. The farmer can understand a market price to which he is traditionally reconciled. But *what he cannot understand* is an officially determined price. Further, there is always the danger of political parties exploiting the situation by promising extravagant prices in the event of their being returned to power. Political pressure, as experience in fixation of sugarcane prices shows, cannot be altogether ruled out.

It must be remembered that agricultural production is essentially different from industrial production. It is dependent upon several factors over which the farmer has no control. Prices, if they are to serve any useful purpose, must necessarily be announced before the sowing operations commence. If, for whatever reason, production falls, there will necessarily be a severe shortage, in which case the farmer may not be inclined to part with his produce at prices fixed by the Government. Nor will the wholesaler be ready to pay higher prices, since he is under an obligation to sell to the Government and the retail traders at specified prices. In the event of surplus production, there must be an elaborate machinery to effect country-wide purchases at minimum prices, in order to stem the fall in foodgrain prices. No such machinery is envisaged in the scheme which seems to rely on wholesale traders to carry out the Government's pricing policy.

The difficulties involved in any scheme of bureaucratic prescription of foodgrain prices obviously induced the Asoka Mehta Committee to recommend a system of purchase and sale of foodgrains by a Government-sponsored body. It recommended the setting up of a high-powered authority, the Price Stabilisation Board, for purposes of formulating a policy of price stabilisation. The Committee suggested that the Board should acquire sufficient buffer stocks as a first step. Whenever prices fell, the Board should step in and start purchasing at reasonable prices. Similarly, when prices tended to rise, this organisation should sell at reasonable prices. The Committee said that, if the organisation started operating from a position of strength, with sufficient finance and stocks at its disposal, it would soon find itself in the position of a dominant trader in the economy and be able to control the market effectively. This scheme, according to the Committee, would go a long way towards protecting both the producer and the consumer against violent fluctuations in prices. If the organisation purchased the surplus crop of a bumper year and carried it over to future years of short crop, it should be able to even out fluctuations. The Committee felt that, generally speaking, there should be no risk of loss for such an organisation, especially over a long period of, say, five years; even if there were some loss, it would be a worthwhile premium to pay for insurance against instability.

Even those who agree that food prices constitute too important a segment of national economy to be exposed to the blind fury of market forces will concede the need for maintaining a market which alone can determine correct prices. It should, of course, be open to the Government to influence prices by undertaking open market operations in foodgrains. But it may turn out to be an impracticable proposition for the Government to rely upon its own judgment for determining prices. If its judgment proves incorrect, it may seriously interfere with production. It must be remembered that nothing can prevent a farmer from switching over to uncontrolled crops in his understandable desire to escape irksome controls. In trying to be fair to the consumer and the producer, it will succeed in alienating the loyalty of both parties. Presumably, it is this consideration that prompted the Asoka Mehta Committee to recommend the establishment of a price stabilisation organisation. The Government has obviously rejected this approach. It does not seem to be in favour of establishing corporations in the States to deal with State trading. It argues that, "if a corporation is created and its functionaries and agents spread out, it may well create vested interests and cause delay in the development of co-operatives" and that, since such a corporation would be legally a separate entity, it would not be *competent to enforce control* over prices. In other words, the Government wants unlimited powers of control over food economy. It is easy to acquire them, but difficult to use them

wisely. This will be particularly true about the enforcement of price control at the retail end, where the dealers are more numerous than could be effectively dealt with. Thus, the fixation of prices and their enforcement may well be the two great obstacles in the implementation of the Government's scheme for trading in foodgrains. If it chooses the path of effective interference in foodgrain markets, there are better chances of success. For it is easy for the Government to build up buffer stocks from both domestic production and imports of cereals assisted by special barter deals which it can conclude with certain South-East Asian countries with surplus foodgrains to offer to India against payment in such Indian manufactures as jute goods, cotton textiles and light engineering products.

The Government is simultaneously embarking upon a whole set of new experiments in agricultural economy—ceiling on land, co-operative farming and State-directed co-operative trading in foodgrains. In its enthusiasm for achieving success in these experiments of doubtful merit, it may come to ignore the chief agricultural problem—the problem of increasing agricultural production. After all, the crux of the matter is raising India's per-acre yields. If overall production increases at a rate which will absorb the increased demand arising from rising incomes and increasing population, there will be no need to think in terms of elaborate schemes of State trading in foodgrains. And this problem cannot be tackled without giving the farmer the necessary facilities such as fertilisers and better seeds and without providing the necessary incentives which alone will enable him to devote his care and attention to the land he owns. The springs of energy are to be found in individual initiative—this is true of industry as well as agriculture—and not in the elaborate schemes prepared by men living in an iron tower, far away from the people for whom they plan.

SEARCH FOR OIL

THE chief justification for the top priority which the Government has assigned to its oil exploration programme is economic. Oil at present is a great consumer of foreign exchange. And the present rate of oil consumption is bound to increase in course of time, which will imply a further drain on India's foreign exchange reserves. Last year, India imported about 5 million tons of crude oil. The imports are expected to go up to 7 million tons by 1961 and to 14 million tons by 1966. If no oil reserves are located, India may have to spend Rs. 140 crores on imports of oil by 1961 and possibly double this amount by 1966. It is, therefore, of the utmost importance that new reserves should be located and, once they are located, prompt steps should be taken for their extraction and refining. Against this background, it is hardly surprising that the Press, Parliament and the public have welcomed and supported the Government's oil exploration programme.

It must, however, be emphasised that what really matters is not the programme, as such, but results. The public is entitled to demand that the Government does not sacrifice the chances of finding oil at the altar of some ideological policy, for, in the final analysis, it is not the policy but its success in delivering the goods that really counts. From this point of view, it is gratifying to note that Mr. K. D. Malaviya, Union Minister for Mines and Oils, emphasised, in the course of the debate on grants to the Ministry of Steel, Mines and Fuel in the Lok Sabha, that the Government was not committed to any doctrinaire policy. After referring to the fact that several experienced oil explorers had approached the Government with proposals designed to associate themselves in India's search for oil, he said: "We have no doctrinaire approach in this matter. It is first and last a business proposition. So long as we see that the business proposition made to us for oil exploration or for the discovery of oil is not in the interests of the country and the people, it will be impossible for this Government to accept that. But, if proposals are made to us which will discover oil for us and give legitimate benefit to the parties that discover oil, by all means we are prepared to sit down with them and consider any proposal that they make." This statement will be widely welcomed. And it is to be hoped that the spirit in which it was made will guide the Government's oil policy in all its forms—exploration, refining and distribution. It is further to be hoped that the Government will not continue to give the impression that it is interested in foreign help only when it comes from Communist countries. For how else can one explain the fact that several years were wasted in the process of reaching an agreement with the Assam Oil Company over the exploitation of oil reserves in Assam, while the Government has been only too ready to conclude agreements with Communist countries for the establishment of the two oil refineries—the oil refinery in Assam (with Rumanian aid) and the Barauni refinery (with Russian aid)? It must be mentioned that, until these refineries are ready, the crude oil must remain dormant in Assam's fields and swell the consequent loss of foreign exchange through unavoidable imports. And yet, the work on these refineries has hardly commenced. The position might have been different if the Government had not adopted the policy of locating the refineries only in the public sector.

Some interesting light was thrown on oil exploration, the future of oil prices and the establishment of refineries by Sardar Swaran Singh, Minister for Steel, Mines and Fuel, and Mr. K. D. Malaviya, in their speeches in the Lok Sabha. As is well known, the chief areas where oil is being explored are the Nahorkatiya fields in Assam (where oil has already been located), the Jwalmukhi area (the Punjab) and the Cambay area (Bombay) and the West Bengal Basin. The most significant development in the public sector has been in the Cambay area, where oil under pressure was located in September last. The oil reserves, however, have yet to be proved. Work in this direction has been held up through want of necessary drilling equipment. It would appear that, at a time when it was difficult to get drills from any part of the world, the Rumanian Government had agreed to sell two drills and Indian authorities expected them to arrive by March last. But it is now felt that the arrival of this equipment might be delayed by "one month, two months or three months." This has held up the programme at Cambay. The only oil reserves, now in sight, are those in the Nahorkatiya and Moran oilfields in Assam, for the exploitation of which Oil India Ltd. (in which the Government of India holds 33⅓ per cent. share, and the Burma Oil Company and Assam Oil Company hold the rest) has been formed.

On the question of prices of petroleum products, the Government, it may be recalled, reached an agreement with the oil companies in May last under which the latter effected *ad hoc* reduction in their selling prices. The reduction was not, of course, passed on to the consumer, for it was mopped up through additional excise and customs duties by the Exchequer which benefited to the tune of Rs. 10 crores. The arrangement was that, if the examination of costs of production, which the Government was to undertake, revealed that the Government owed some money to the companies, it would be deducted from the Rs. 10 crores and paid to them, but, if such examination revealed the scope for further reduction in prices, suitable steps would be taken to give further benefit to the Exchequer. The Government's Cost Accounts Officer, it is stated, has completed his examination of the costs of the oil companies and submitted his report to the Government. Referring to the Officer's findings, Mr. Malaviya said: "My first impression is that they (Government) are likely to get substantial further savings. It may not be possible for me at all to say as to what would be the precise quantum. We hope that, after discussions with different companies in this matter, we shall succeed in negotiating a new formula, which will and should give us a further additional sum over and above Rs. 10 crores that we have already got from them last year as a result of negotiations." It is not clear why the Government, once it is able to get a clearer picture of the quantum of possible reduction in oil prices, should not pass on the benefit to consumers, in general, or, at least to industrial consumers of petroleum products. It is true that money is needed for financing the public sector projects under the Plan, but, having regard to the fact that taxation on oil in this country is pretty high, some benefit of the lower cost of the commodity should be passed on to consumers also.

The Government, as is well known, has decided to undertake distribution of oil products in competition with the existing distributors. Referring to this decision, Mr. Malaviya said: "I only wish to state that it is a matter of time, but the Government's decision is firm." He said: "Obviously, if it would not have meant a lot of profit and be advantageous to the nation, we would not have taken this decision in principle to start this work in the public sector." Before the two refineries in the public sector are ready, the Government hopes to be in a position to know all about the technique of oil distribution. It has, according to our information, already requested the distributing companies to provide it with all available literature on the subject and an account of the system followed by them. The Minister made it clear that the Government was not seeking to establish a monopoly in this field. He averred: "We shall try our level best to do this work in competition with all those concerns which are existing here and which are undoubtedly rendering us a lot of help in the task of distribution." No decision, however, has yet been taken on the size of the State-owned company which will undertake oil distribution, nor about the magnitude of the work it will handle. In any case, so long as the proposed company serves the consumers in the manner in which the existing distributors serve them, there should be little ground for dissatisfaction over the Government's proposed move to undertake distribution of oil and oil products. Only, it is to be hoped that all this is not a prelude to nationalisation at a later stage. Further, it must be clearly realised that large sums of money will have to be invested, if the State-owned company is to function effectively and efficiently. Whether the resources of the public sector should be locked up in this business in priority over other projects is a question that deserves to be carefully examined, as savings in this country are limited and the calls on them are many. So far as consumers are concerned, there have been no complaints against the existing distributors. Nor have the latter shown any disinclination, to the best of our knowledge, to expand their services with the help of their own resources. If the Government is entering this line purely as a business proposition, as Mr. Malaviya claims, it will do well to give full information on this subject, so that the taxpayer and the public may know what they are in for. Even assuming that there is good profit in this business, it must be pointed out that the Exchequer, as a sleeping partner in all business enterprises, gets a lion's share of the profit made by private companies. Further, if the Government were to make less profit—as it well might—than private distributing companies, it might mean that the net gain to the Exchequer would not be as large as is assumed. In any case, the "profit" argument alone cannot justify so vast and so complex an undertaking as oil distribution.

Mr. Malaviya was not very convincing in his explanation of the Government's decision to reject the technical experts' recommendation for locating the refinery at Silighat. It may be mentioned here that the wholly State-owned Indian Refineries Ltd. (authorised capital: Rs. 30 crores), established in August last, will control and manage the proposed two refineries in the public sector. In the course of the debate, Mr. Feroze Gandhi, who is the Chairman of the Company, revealed that the Directors appointed a high-power engineering team, including an official of the Ministry, to go with the Rumanian experts who were required to recommend a site for the refinery in Assam. This team suggested the location of the refinery at Silighat. Mr. Malaviya, who gave an elaborate explanation for the Government's rejection of the technical experts' suggestion, stated in effect that its acceptance would have meant insufficient utilisation of the £10-million loan provided by the Assam Oil Company for building a pipeline and the Government would have had to construct a pipeline from Silighat to Barauni at an expenditure of Rs. 4 crores. He, however, admitted that "Silighat is the most suitable place, so far as technological matters are concerned." The point was made in the debate that the Government might lose far more through its anxiety to utilise the £10-million loan in full, if that meant the rejection of a technologically suitable site. Mr. Malaviya did not answer the point raised, but parried it with the retort that the assumption that the Government would be compelled to choose a wrong site was wrong. It remains to be seen where the Government will finally locate the refinery. Clearly, the longer the delay in choosing the site and commencing the construction of the refinery, the greater will be the loss of foreign exchange, which could be averted only through prompt establishment of refineries.

INVESTMENT DEMAND FOR EQUITIES STILL KEEN

TEXTILE SCRIPS—CLOTH EXPORTS—DEPOSIT RATES—GOLD—DIAMONDS

WEDNESDAY, 5 P.M.

MARKET GOSSIP

BARRING a few, industrial equities have gone ahead strongly. Yields on first class shares are not attractive, ranging as they do between 4 per cent. and 4.5 per cent. In some cases, as, for instance, Indian Oxygen and Indian Aluminium, they are less than 4 per cent. An investor can easily earn 4 per cent. on deposits with first class banks for one to twelve months and a little more than that on deposits for two to three years. And yet there are no signs of investors wanting to sell and book their profits. On the contrary, investment demand for these scrips is said to be keen and unsatiated. Apparently, investors are proceeding on the basis that low yields in the case of companies which are growing are not unjustified, as the companies will be in a position to raise the dividends when their investments on expansion yield production and profits. Shares of several new companies which are yet to declare dividends have also begun to command a sizable premium, as these companies have either commenced production or are about to do so.

An important factor which is keeping up equity prices is the prospect of an increase in inflation in the country. That equities are a hedge against inflation is well known. But to what extent they are so and what are their limitations are questions on which there has, perhaps, not been adequate discussion in this country. Readers' attention is, therefore, invited to an article entitled "How to Beat Inflation" published on page 589 of this issue. It will be seen therefrom that an investor has to be fairly skilful or command the services of experts who are sincerely interested in his welfare, if he is to be successful in hedging his savings against inflation by placing them on equities.

As compared with the continued buoyancy of certain investment scrips, Tata Steels and Indian Irons have been relatively sticky and attracting selling pressure at every rise. In addition to factors mentioned in these columns last week, some big investors appear to be using these counters as a hedge against their investments in other scrips. Such operations are not unusual in times such as the present, when equities have mounted up to levels highly vulnerable to any unforeseen adverse factors. It is customary on the part of large investors, with a flair for market technique and sufficient financial resources, to cover against depreciation in the value of their permanent investments by selling active speculative counters such as Tata Steels and Indian Irons. If any adverse developments were to take place and equity values decline, they would cover their sales in these scrips at the appropriate time and set off the gains made thereby against the fall in the value of their investment portfolio.

What is the outlook for cotton textile industry? Although the position of individual mills may vary, the general impression seems to be that the position is gradually improving. The offtake of cloth and yarn is better, but the prices of these have not gone up to any appreciable extent. Many mills are still complaining that the prices realised by them are not remunerative. But impartial observers of cloth and yarn markets are of the view that the demand for cloth will steadily increase, as consumption which had been deferred all along is bound to make itself felt. It may sound as an exaggeration to say that, in another eighteen or twenty-four months, the present level of cloth production will be found inadequate. But they point out that, with India's population increasing at the rate of six million a year and with the tempo of development expenditure being kept up, consumption is bound to broaden and that mills producing the right type of cloth should be able to report good profits. They further point out that the demand for cloth has always been liable to cyclical fluctuations. Now that the cotton mill industry has had depression for more than 2½ years, it should, in normal course, experience better trading conditions in the next two years. Anyway, the share market seems to be taking an optimistic view of the future for cotton mills, as will be seen from the following data:

	8-4-1959	2-1-1959	8-4-1958
	Rs.	Rs.	Rs.
Bombay Dyeing	60.10	55.00	56.20
Century	493.75	414.25	434.00
Central India	94.80	86.00	90.00
Finlay	273.00	255.00	278.00
Gokak	141.43	127.00	158.00
Kohinoor	253.00	231.50	283.50
Standard	483.00	403.00	451.00
Swadeshi	216.50	202.50	181.75
Tata Mills	37.25	34.75	40.50
Vishnu	83.00	93.00	102.50
	For week ended		
	29-3-1959	4-1-1959	28-3-1958
Index number* of cotton textiles ordinary shares	116.2	112.00	111.6

Source: Reserve Bank. * Base: 1952-53=100.

It is rather difficult to say to what extent the chances of improvement in the cotton industry's position have already been discounted by the share market. It will, however, be useful to refer here to the remark of Mr. Kasturbhai Lalbhai, Chairman of the Indian Cotton Mills' Federation, yesterday, when he addressed the annual meeting of the Federation. He did not seem to be unduly pessimistic. He had fewer complaints to make this time. He cautiously observed:

"From the very beginning, the Federation had to tackle very vigorously the problem of lifting the industry from the morass of cost inflation in which it had been bogged. Both in India and abroad, we could not market our goods at a price which the consumer was able and willing to pay. It must be said that a sense of realism permeated the deliberations of the Cotton Textile Inquiry Committee set up by Government in May 1958, and representatives of Government, industry, labour and the consumers, who worked on the Committee, were able to produce, within the scheduled period, a unanimous report, which was to prove a springboard for a series of steps taken by Government with commendable zeal. *We are not yet out of the woods, but there is reason to believe that the path that has been chosen will, in due course, take us out of them.*" (Italics ours.—ED.)

• • • •

Not all millowners are satisfied with the scheme of incentives for pushing up exports of cloth. In an earlier issue of this journal (*vide* page 274 of *Commerce* dated 21st February 1959), we published an article by Mr. K. P. Singhania, in which the author explained at great length how this scheme was not sufficiently helpful to the vast majority of coarse and medium count mills. Speaking at the annual meeting of the Azam Jahi Mills Ltd., at Hyderabad last Friday, Mr. C. Damodar Reddy, Chairman of the Company, also gave expression to a similar view. After explaining how the export incentive scheme worked, he observed that the main beneficiaries of it were fine and superfine mills which did not export and, therefore, did not earn foreign exchange, and not the coarse and medium count mills which exported their cloth at considerable expense to themselves by buying Indian cotton at prices well above the world parity. Describing the plight of coarse and medium count mills and suggesting a solution to it, he observed as follows:

"There has been a marked change in the pattern of consumption of Indian consumer and the realisation for fine and superfine qualities is much better than for coarse and medium varieties. It is obvious that the incentives given for exports are inadequate and need better planning. The condition of coarse and medium mills is getting precarious as is proved by the steep drop in production and the total closure of a number of mills in the country. As compared with 1956, there has been a short production to the tune of 400 million yards in the year 1958. In spite of the short production, there has been accumulation of stocks with the mills, the stocks being 580,000 bales at the close of the year.

"As a remedy to this and with a view to reducing the losses, the exporting mills are obliged to restrict their exports and divert their production, which was previously exported, to internal consumption which cannot but worsen the internal situation. It cannot, therefore, be denied that the solution to the present textile crisis lies only in more exports. The coarse and medium mills cannot be expected to continue making huge losses endlessly through exports, earn good foreign exchange for the country and give the benefit of this to import foreign cotton to fine and superfine mills. The export incentives should, therefore, be liberalised and so planned as to give the full benefit that accrues from the earning of the foreign exchange to the exporting mills. The exporting mills should be free to sell their foreign cotton entitlement in the open market and obtain the benefit that today goes to the fine and superfine mills. Alternatively, the premium payable to the exporting mills by the fine and superfine mills for the foreign cotton allotment made over to them should be reasonably increased in parity with the market price of foreign cotton. Such a step will enable the coarse and medium mills to meet the foreign competition which automatically would create a more healthy internal market. Any incentive scheme which can give immediate advantage to the exporting mills by way of cash return would be most welcome.

"Such of the mills that desire to retain the full quota of the foreign cotton entitlement should also be allowed to do so, in order that they may be able to change their pattern of production to suit the changing tastes of the internal consumer. The foreign cotton entitlement should not be based on the past exports, as this puts the new-comer at an advantage. The exporting mills who may have exported in the past larger volumes of their production without expecting any benefit are put to a tremendous disadvantage under the present scheme of foreign cotton entitlement.

"Yet another scheme formulated under the export incentive scheme is the machinery entitlement scheme. Under this scheme, the exporting mills earn entitlement for import of certain textile machinery. The advantage of this scheme can only accrue after a lapse of time and subject to the availability of finances with the mills and is, therefore, of doubtful merit. I, therefore, take this opportunity to appeal to the Government of India carefully to study the reaction and the effect of the various incentive schemes already formulated and modify the same in a manner so as to really benefit the coarse and medium mills and foster our exports. Unless the existing incentives are liberalised and well-planned as indicated above, our exports cannot increase and the textile industry cannot be stabilised."

Although similar views are held on this subject by quite a few coarse and medium count mills, Mr. Kasturbhai Lalbhai chose not to comment on them in his speech at the annual meeting of the Indian Cotton Mills' Federation. All that he said was that "we shall continue to keep the working of the scheme constantly under review, so as to attain our target of export." This is a colourless and non-committal statement.

A serious omission in Mr. Kasturbhai's speech is the absence of any reference to the talks he and his colleagues have had with the Lancashire millowners in regard to ceiling on exports to Britain. Why is Mr. Kasturbhai fighting shy of taking the public into confidence on this important subject? He could have at least said as to what exactly was the position. This silence on the part of the spokesmen of Indian cotton mill industry is in striking contrast to the stand taken by Lancashire and Hong Kong.

• • • •

Almost all the chairmen of Indian banks who have so far delivered their annual speeches have welcomed, with a sigh of relief, the inter-bank agreement on rates of interest on deposits. They seem to regard it as a boon, without which the cost of operation of banks would have gone up further. In fact, the Chairman of the Central Bank, Mr. Homi Mody, thinks that the ceilings on rates of interest need to be reviewed soon in the light of prevailing trend of banking profits. By this, he clearly means that the ceilings should be brought down. Another bank chairman, Mr. M. Ct. Muthiah of the Indian Overseas, has even gone to the length of wishing that this agreement would "open out possibilities of an agreement being reached on other items, such as charges and rates for various kinds of business based on evaluation of cost, so that the banking industry will be saved from an uneconomic rate structure." His desire is logical. Only, it would mean more regimentation, less competition, more comformity and greater scope for corruption and interference by the State—all inimical to the spirit and fundamental concepts of a healthy system of private enterprise. It is surprising how unconsciously and unwittingly the leaders of banking in this country are cutting the ground under the feet of private enterprise. They seem to have learned nothing from the fate that overtook life insurance. And that at a time when the rank of those demanding nationalisation of banking is steadily increasing. It is common knowledge now that Dr. V. K. R. V. Rao and Prof. P. C. Mahalanobis have together submitted a scheme to the Planning Commission that, in order to facilitate implementation of development plans, all banking should be nationalised. Knowledgeable circles aver that the Prime Minister is very much fascinated by this report but that no action might be taken on it until the commencement of the third Plan, that is, after the next General Elections.

Whatever that may be, the inter-bank agreement on deposit rates, which has just completed six months, has so far worked satisfactorily. Although there has been good demand for funds during the last four months, the deposit rates have not gone beyond the ceilings. There have been no serious complaints of infringement of the agreement by any of the banks concerned. It is true that, in cities like Bombay, Calcutta and Madras, interest paid by the banks on deposits have generally been at the ceiling levels, but, in several upcountry centres, the banks are said to be paying half to one per cent. less for term deposits.

It would appear that some of the big banks fully share the view of Mr. Homi Mody that the ceilings should be brought down. Indeed, it is learned that one of the "Big Five," which competed heavily for deposits and made a significant contribution to the rise in their cost, would now like to see the system of seven-day deposits abolished, so that, after current deposits, there would be only deposits for one month and onwards. It is further learned that the question of reducing the rates of interest on deposits was informally considered by the relevant Sub-committee of the Indian Banks Association this week and that it was decided to let the *status quo* continue until July next, by which time the slack season will have begun and the climate will be conducive to lowering the ceilings.

After an interval of nine years, the price of gold has crossed Rs. 120 per tola and is not far from the all-time record peak of Rs. 122 touched on 30th August 1948. The reasons for this spurt are recorded in the Market Reports section (page 626). Suffice it to add that the steady appreciation that has taken place in the value of gold in recent months suggests that the vigilance against smuggling is becoming increasingly effective. The denial of Kolar gold to the market and inflation in the country are, of course, important factors that have contributed to the rise in the value of gold. Nevertheless, it is significant that, though the disparity between the free market world price of gold (about Rs. 66 per tola) and the price here (Rs. 121) has widened markedly against India, smuggling of gold into this country has not increased; on the contrary, it would appear to have diminished, at any rate for the present. This, however, should not lull the authorities into complacency and induce them to give up their search for more effective measures to check smuggling. Indeed, they should seriously consider the

BUOYANCY IN SHARES KEPT UP

NATIONAL RAYONS REACT

(From Our Own Correspondents)

BOMBAY, *8th April*

EQUITIES continued to be buoyant on the Bombay Stock Exchange for yet another week. The absence of any adverse news and encouraging output of steel during the month of March strengthened bullish sentiment. The overall production figures for the year ended March 1959 in T.I.S.Co. and I.I.S.Co. are higher than those in the previous year. In the case of T.I.S.Co., the output of pig iron during the year aggregated 1,137,500 tons, as compared with 1,093,300 tons in 1957-58. The production of steel ingots shows a rise from 1,106,800 tons to 1,149,900 tons and that of saleable steel from 786,900 tons to 884,700 tons. The pig iron production by the I.I.S.Co. amounted to 959,933 tons, having gone up from 733,945 tons in 1957-58. Steel ingots have risen from 507,580 tons to 608,205 tons and saleable steel from 410,558 tons to 496,217 tons. Considering the fact that the production in T.I.S.Co. was considerably affected by labour strike in May last and that the million-ton expansion scheme which was recently completed has begun to yield full results, the Company can be expected to raise its output and earnings substantially in the current financial year. This consideration induced fresh support to steel shares which were somewhat docile last week. Textiles, engineerings, sugars, chemicals and several miscellaneous industrials were all in the limelight with a sharp jump in values.

Towards the close, however, there was a sizable profit-taking, induced by the high levels. The intervention of two holidays, tomorrow and the day after, also induced operators to lighten their commitments. Further, the disappointment over the dividend of National Rayons, which is to be maintained at 14 per cent. for the year 1958, caused heavy selling in this counter today and this also had its effect on the sentiment of operators.

Tata Steel Ordinaries climbed up from Rs. 181.75 to Rs. 184 before finishing lower at Rs. 183. The new shares were also marked up over the week by Re. 1.25 to Rs. 180.25. Indian Irons advanced from Rs. 24.03 to Rs. 24.76, before closing at Rs. 24.56.

Textile shares were a little erratic, but the overall tendency was bullish. Notwithstanding the profit-taking at close, gains were sizable and widespread. Bombay Dyeings rallied from Rs. 60 to Rs. 60.90 and, after a setback to Rs. 60.10, revived today to Rs. 60.50. At the close, there was a reaction again to Rs. 60.10. Centurys gained to touch a high of Rs. 500 early in the week, following the announcement that the dividend would be maintained at 22 per cent. for the year 1958 and that the Company proposed to issue new shares in the ratio of 1:5. There was, however, a retreat to Rs. 492 before gaining strength to Rs. 498.50 today. At the close, they were again marked down to Rs. 493.75. Kohinoors gained over the week Rs. 3 to Rs. 253, Central Indias Re. 1.30 to Rs. 94.80, Finlays Rs. 2 to Rs. 273 and Gokaks Re. 1 to Rs. 143. Indu Ordinaries lost 12 nP to Rs. 8.80, while Indore Malwas put on Re. 1.50 to Rs. 97.50 and Khataus Rs. 6.25 to Rs. 188.75. In sharp contrast to the general trend, Model Mills suffered a loss of Rs. 25 to Rs. 105 and New Greats Rs. 15 to Rs. 193.

A sharp fall of Rs. 7.50 to Rs. 108 in Barodas was a feature of the trading in bank shares. Their new shares dropped Rs. 4.50 to Rs. 50. Central Banks gained 40 nP to Rs. 57.20 and their new shares 20 nP to Rs. 59.20. Bank of Indias were unchanged at Rs. 136, while Jaipur Banks were done 50 nP lower at Rs. 45.50. Bank of Maharashtras had business Re. 1.50 higher at Rs. 51.50. United Commercials were placed at Rs. 65.50 *ex-div.*, as against Rs. 69.50 *cum-div.* a week ago.

Insurance shares were all done at fractionally lower prices. New Indias shed 80 nP to Rs. 51.50, while their new shares were unchanged at Rs. 54. Industrial and Prudentials declined by a rupee to Rs. 310. Indian Mercantiles by 50 nP to Rs. 44 and All-India Generals by 22 nP to Rs. 2.90.

Sugar shares attracted good attention in line with the general trend. Belapurs were taken up from Rs. 293 to Rs. 297 before closing at Rs. 295. Phaltans picked up Re. 1 to Rs. 157.50 and Walchandnagars Rs. 7.50 to Rs. 300. Cement shares provided no exception, though the rise in prices was not very marked. Associated Cements hardened from Rs. 146.50 to Rs. 150.50 before finishing at Rs. 149. Digvijays gathered over the week Re. 1.50 to Rs. 148, while other counters disclosed minor losses. Jaipur Udyogs shed 12 nP to Rs. 11.32, Dalmias 24 nP to Rs. 11.16 and Ashokas 16 nP to Rs. 9.40.

In the engineering group, Tata Locomotives stole the limelight with a jump from Rs. 185.25 to Rs. 198. At the close, however, there was a sharp reaction to Rs. 192. Alcock Ashdowns lost a rupee to Rs. 271, while Premier Constructions attracted good attention and rose over the week by Rs. 5.75 to Rs. 270.75. Larsen and Toubros were exceptionally strong with a rise of Re. 1.24 to Rs. 22.92. Mahendras changed hands 25 nP higher at Rs. 25.35, while their new shares lost 40 nP to Rs. 21.60. Cooper Engineerings moved up by Rs. 3 to Rs. 143 and Texmacos by Re. 1.24 to Rs. 24.64. A sharp jump of Rs. 15 to Rs. 250.25 was recorded in Structural Engineerings. Shivrajpurs, among minings, changed hands Rs. 3 higher at Rs. 100. Indian Coppers gained again to Rs. 4.36.

Premier Automobiles shot up to Rs. 120 from Rs. 115.50, but suffered a recession at the close to Rs. 116.75. Hindustan Motors gained 12 nP to Rs. 9.16.

Among miscellaneous industrials, Bombay Burmahs (old) were taken up to Rs. 519 from last week's closing of Rs. 509, before today's reaction almost wiped out the gain. The shares closed at Rs. 509.50. The Partly-paids lost over the week Rs. 2.50 to Rs. 175. National Rayons were erratic moving between Rs. 299 and Rs. 290.50, before reacting to Rs. 286.25 at the close with a loss of Rs. 7 over the week. Gwalior Rayons were done Re. 1.16 higher at Rs. 17.20. Hindustan Levers were done at Rs. 31.50 *ex-div.*, which on a *cum-div.* basis represented a rise of Re. 1.35 over the week. Tata Chemicals rose by 24 nP to Rs. 16.76 and Tata Oils by 30 nP to Rs. 50.30. Alembic Chemicals jumped by Rs. 7.50 to Rs. 183.50 and their new shares by Re. 1 to Rs. 168. Amar Dyes advanced by Rs. 3 to Rs. 151 Dhrangadhra Chemicals were done Rs. 4.50 higher at Rs. 101 and Poly-Chems rallied from Rs. 79 to Rs. 83. Ceat Tyres improved by Rs. 6 to Rs. 112. Voltas rose by Re. 1.25 to Rs. 156.50. Greaves Cottons gained Rs. 4.50 to Rs. 123.50 and Killick Industries Rs. 3.50 to Rs. 147. Wimcos provided one of the notable exceptions with a drop of Rs. 7 to Rs. 203, as also Indian Dyestuffs which declined by Rs. 52.50 to Rs. 430.

* * * *

Madras Stock Exchange

MADRAS, *7th April*

Although a little hesitancy was noticeable here and there on the Madras Stock Exchange during the week, the general undertone continued to be fully steady. Operators were somewhat inclined to extend their commitments on expectations of better business conditions in the new financial year. It was stated that the Life Insurance Corporation was supporting certain select scrips. Good support was lent to tax-free preference shares, while sellers were scarce. Section-wise, textiles were specially favoured, thanks to encouraging reports from yarn and piecegoods markets. In the planting section, there was sizable absorption of tea and coffee shares, but rubbers ruled irregular. The market noted the Central Government's reference of the question of rubber prices to the Tariff Commission and it was thought that the enquiry might take quite a long time to conclude. The miscellaneous section ruled active and several counters recorded handsome gains.

The star feature among textiles was Coimbatore Pioneers which rallied from Rs. 263 to Rs. 270, following the decision of the Directors not to cut but to maintain the dividend for 1958 at the previous year's level of 20 per cent. Cannanores picked up Rs. 6 to Rs. 142. Vasantas strengthened by Rs. 5 to Rs. 220. Coimbatore Cottons hardened by Rs. 2 to Rs. 133, Loyals by Re. 1.75 to Rs. 31.75 and Buckinghams by Re. 1.50 to Rs. 175. Ranga Vilas and Krishnarajendras gathered a rupee each to Rs. 51 and Rs. 63 *cum-div.*, respectively. Bangalore Woollens gained 50 nP to Rs. 171.50. Lakshmi 'A's and Virudhnagars rose by similar sums, the former to Rs. 53.25 and the latter to Rs. 34.50. Maduras attracted limited buying and improved from Rs. 25.50 to Rs. 25.70. Many are said to feel that it would be a good thing to average one's investments in this scrip at the current level.

In the tea group, Perksides met with renewed buying support and firmed up by 38 nP to Rs. 22.25 *cum-div.* Haileyburias put on 25 nP to Rs. 19. The Haileyburia Tea Estates Ltd. has decided to issue 62,500 new equity shares of Rs. 10 each at par to shareholders in the proportion of one share for every three held, instead of bonus shares, as the official permission for the issue of bonus shares has not been given. United Nilgiris rose by 5 nP to Rs. 19.55. Devasholas were done at Rs. 26.75 *ex-div.*, as against Rs. 27.12 *cum-div.* (interim). Balanoors were fully maintained at Rs. 21, as were Nonsuchs at Rs. 27.75 *cum-div.* Twyfords, however, eased by 10 nP to Rs. 17.50, reflecting disappointment of operators over the news that the Government had declined to grant permission to the Company for the bonus share scheme. The Company has resolved to issue 45,000 fresh equity shares of Rs. 10 each at par to shareholders in the ratio of two for every five held.

Among coffees, Coffee Lands improved by 15 nP to Rs. 23.50. Anaparais rose by 8 nP to Rs. 5.03. Cowcoodys, however, declined by 10 nP to Rs. 7.30 for lack of follow-up support.

Rubbers were, as already said, irregular. Nelliampattys dropped 43 nP to Rs. 2.52, Midlands 23 nP to Rs. 12.37 and Puthutotams 3 nP to Rs. 3.17, while Malankaras spurted by 75 nP to Rs. 19 and Rajgiris by 13 nP to Rs. 18.25. Highlands were unchanged at Rs. 12, Kailas at Rs. 5.20 and Vaikundams at Rs. 25.50 *cum-div.* (final).

Among miscellaneous industrials, Rallis registered a rise of Rs. 2 to be quoted at Rs. 68. Hindustan Levers gathered Re. 1.50 to Rs. 31.25 *cum-div.* Mysore Chemical Manufacturings strengthened by Re. 1.25 to Rs. 23.50. F.A.C.Ts were bid 53 nP higher at Rs. 8.68. Textools moved up by 50 nP to Rs. 179, Mettur Chemicals by 31 nP to Rs. 13.06 and Orissa Cements by 10 nP to Rs. 14.40. Binnys were firm at Rs. 170 *cum-div.*

MARKET GOSSIP

(Concluded from previous page)

advisability of blocking the rupee notes that are in circulation abroad and allow their repatriation to this country only against purchases of Indian goods. It may be noted here that, during the nine months ended September 1958, imports of currency notes into India amounted to Rs. 37.76 crores, that is, at an annual rate of about Rs 50 crores, as against Rs. 48.68 crores in 1957. The bulk of these imports is said to reflect the effect of smuggled goods into this country. Another suggestion that has been made to us is that the rupee notes that are officially allowed to be taken out of this country should bear a special imprint and that only these notes should be honoured when they are presented for payment. This suggestion implies that something effective should first be done about the notes that are already in circulation in foreign countries.

* * * *

The producers of diamonds in Africa and elsewhere can look forward to a fairly prosperous period during 1959. This anticipation is based not on the record sales of diamonds during the first quarter of the current year by the De Beers' Central Selling Organisation, which handles about 90 per cent. of the Western world's output, but on the trend of prices of gems and industrial stones since autumn last and the good market which gems generally enjoy in America and on the Continent. The business in gems has recovered substantially since June 1958 to the pre-recession levels and does not show any sign of slackening. Though Russia is said to have opened up new diamond mines, the threat from that source to the world market is considered to be rather remote. The De Beers' Organisation does not face any competition from synthetics, as the price of the latter is a little dearer. The Organisation has been able to keep the prices of its rough stones stable over a period of years and has even raised them slightly from time to time over the past ten years. The business in gems, no doubt, depends upon the general level of industrial activity in the Western world, particularly in the U.S., where the demand for diamonds expands considerably during periods of prosperity.

The sales of diamonds by the De Beers' Central Selling Organisation reached a record level (in terms of value) of £23.59 million in the first three months of 1959. Of these, sales of gems reached a peak of £15.87 million and those of industrial stones amounted to £7.72 million, the highest since June 1952. Sales in the previous quarter (to December) aggregated £20.25 million, made up of £15.33 million for gems and £4.92 million for industrial stones. In the corresponding quarter of 1958, they amounted to £15.29 million—gems £10.51 million and industrial stones £4.78 million. The following are the comparative figures for the past five years, as well as for the first quarter of the current year:

(Value in million £s)

Year	Gems	Industrial diamonds	Total
1954	45·6	16·5	62·1
1955	50·3	24·0	74·3
1956	56·5	24·0	74·5
1957	52·8	23·9	76·7
1958	49·4	16·1	65·5
1959 (first quarter) ..	15·9	7·7	23·6

If the rate of sales during the first quarter were to be maintained during the rest of the year, the year's aggregate sales would easily exceed the record of £76.7 million touched in 1957. Trade circles in London do not, however, expect this rate of sales to be maintained, particularly in industrial stones, as the high sales of the latter in the first three months of the year were due to exceptional purchases made by the U.S. for stockpile on a barter basis against sale of surplus farm produce. Such large purchases may or may not be repeated, as American buying has been erratic since 1957. It is, however, stated that the U.S. has ample stocks of industrial diamonds to meet any foreseeable demand. Moreover, the General Electric Company of America is now producing the synthetic industrial stone of "crushing boart," a very low grade of stone. Though these synthetic stones are somewhat dearer now, they are no less important from a strategic point of view. Despite the better supply position in the U.S., the short-term outlook for the diamond industry, for reasons stated at the outset, is regarded as hopeful.

WORLD RICE POSITION

Rice (paddy) production in the 1958-59 season, outside China, is estimated at some 124,000,000 tons—slightly higher than in the previous season but still below the high level of 1956-57, according to the latest report of the Commonwealth Economic Committee, just issued in London. India's production, earlier provisionally estimated at 42,000,000 tons, is shown to have increased still further to 43,707,000 tons, in the revised figures. This is more than 7,000,000 tons higher than for the previous year, and the highest for at least four years. Shipments of rice from Burma in 1958 amounted to 1,389,000 tons, as compared with 1,726,000 tons in 1957 and 1,833,000 tons in 1956. Exports to Commonwealth countries were reduced from 1,136,000 tons in 1957 to 918,000 tons. Consignments to India fell from 496,000 to 384,000 tons and those to Ceylon from 294,000 to 197,000 tons. Shipments to Pakistan, at 138,000 tons, showed a less marked fall, while Singapore and the Federation of Malaya took 151,000 tons, somewhat more than in 1957. Among Burma's non-Commonwealth outlets in Asia, Japan reduced the amount taken by more than half, to 50,000 tons, while dispatches to Indonesia rose from 209,000 to 244,000 tons. Burma's exportable surplus of rice for 1959 is now officially estimated at 1,800,000 tons. India is due to take up 350,000 tons under the long-term agreement of 1956.

NEWS IN BRIEF

A BILL seeking to vest in the Central Government powers to take over mismanaged and closed tea gardens is expected to be moved in the next session of Parliament.

The Government of Bombay has accepted in principle the recommendation of the Taxation Enquiry Commission for the gradual replacement of the urban immovable property tax by a corresponding municipal tax.

Fifteen schemes for the manufacture of watches in India in collaboration with competent foreign interests have been submitted to the Centre, of which five or six are attractive, according to Mr. Manubhai Shah.

The Government of Mysore has sanctioned the establishment of a drug testing laboratory costing Rs. 75,000 at Bangalore. The proposed laboratory will, in addition to its normal work, undertake the analysis of drug samples even from private firms.

The benefit of compulsory provident fund under the Employees' Provident Fund Act will be extended to cover about 14,000 workers in road motor transport establishments employing 50 or more persons with effect from the 30th inst.

Exports of dust teas to all destinations will continue to be allowed under licences without being required to be covered by export quota rights, if applications for such licences are received in the Tea Board's Office at Calcutta or Cochin before 31st March 1960.

The West Bengal Government's proposal for the establishment of a fertiliser plant at Durgapur will be considered along with other suitable sites when additional fertiliser factories are planned. This was disclosed by Mr. Satish Chandra in the Lok Sabha last week.

The Employees' State Insurance Corporation has decided to grant sickness cash benefits at half the normal rate for an extended period of 18 weeks and medical care for a further period of one year, beyond the normal period of entitlement, to insured persons suffering from leprosy, cancer and mental diseases.

The Forward Markets Commission has convened a conference of the Presidents of associations recognised under the Forward Contracts (Regulation) Act 1952 in Bombay for 2nd May 1959. The Conference will be inaugurated by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry.

Negotiations for setting up a small paper mill with a production capacity of 5 tons per day in the Udumalpet area in Madras State have been completed. The factory will be in the private sector. A few details about the scheme are, however, yet to be submitted by the Japanese Consultants who have drawn up the project.

The Government of India has decided to establish a Development Council for automobiles, automobile (ancillary) and transport vehicle industries, including scooters, motor cycles, autorickshaws, three-wheelers and other passenger as well as traffic carrying vehicles. The Council will discharge all the functions mentioned in the second schedule to the Industries (Development and Regulation) Act, 1951.

The problems relating to India's economic development will be discussed at a conference to be held at Washington on 4th and 5th May next under the auspices of the Committee for International Economic Growth. The main speakers at the proposed meeting will be Messrs. Richard Nixon (U.S. Vice-President), B. K. Nehru (India's Commissioner-General for Economic Affairs), Senator John Kennedy, Chester Bowles, H. V. R. Iengar, Averell Harriman, Asoka Mehta, Barbara Ward Jackson and Frank Moraes.

The total electricity produced during December 1958 by public utility power stations in India amounted to 1,120.2 million kwh., of which 932.0 million kwh. were sold to ultimate consumers. The corresponding figures for December 1957 were 956.6 million kwh. and 779.7 million kwh. and those for December 1951 were 499.2 million kwh. and 414.3 million kwh., respectively. The output and consumption of electricity have thus more than doubled since the beginning of the first Plan upto December 1958.

The arrival of the India Steamship Company's 9,000-ton cargo vessel *Indian Success* in Buenos Aires with Indian burlap, jute and shellac heralds the opening for the first time of a new direct shipping service between India and Argentine. At present, the frequency of the service will be approximately once in two months and the duration of sailing nearly 23 days from India to ports of the River Plato. With the addition of more vessels to the fleet, the service will be monthly. After unloading the cargo at Argentine and Uruguayan ports, the India liner will call at European ports for loading cargo for India.

The ninth In-Service-Training-Course in Educational Statistics organised by the Union Ministry of Education commenced on the 6th inst. The course, which will last three weeks, is being attended by 27 trainees from 21 universities. The course includes training in elements of statistics, techniques of designing statistical proforma, diagrammatic presentation of the data, use of mechanical devices, discussion of the various forms, scrutiny of forms, and compilation and consolidation of data. In order to broaden the outlook of the trainees and to make them familiar with the latest trends in education in India and abroad, special lectures by eminent educationalists are also being organised.

The Government-owned D.D.T. factory in Delhi nearly doubled its output in the year 1958-59 as compared with 1957-58. The production of technical D.D.T. and formulated D.D.T. during the year was 1,268 tons and 1,100 tons, as compared with 694 tons and 657 tons, respectively, produced in 1957-58. The increase in production was possible because of the completion of the expansion programme of the factory carried out with the assistance of the U.N. International Children's Emergency Fund and the U.N. Technical Assistance Administration. The increased output has enabled the Hindustan Insecticides to make a substantial reduction in the price of D.D.T. with effect from the 1st inst. The revised prices are Re. 1.31 per lb. (Rs. 4 per kg.) for technical D.D.T. and Re. 1.54 per lb. (Rs. 3.40 per kg.) for formulated D.D.T., as against Rs. 2.50 and Re. 1.75.

Thirty industrial estates for small industries have been completed so far in the different parts of the country. The estates contain factory buildings and other facilities for small industries. Of these, 25 have already been occupied by small industrialists. In the estates now completed, 514 factories have been allotted to small industrialists and 344 more factories are to be allotted shortly. The construction of 30 more industrial estates is well under way and is likely to be completed by the end of this year. Technical approval has been given for setting up another 25 estates and land has been acquired for most of them. Eleven more schemes are still to be received from State Governments. It is expected that, in all, 96 industrial estates would be completed by the end of this year. The total expenditure on these estates is estimated at Rs. 11 crores. When completed, these 96 industrial estates will have about 3,600 factories providing employment to about 50,000 people.

The management of the Okhla Industrial Estate was handed over to the Delhi Administration by the National Small Industries Corporation, Ministry of Commerce and Industry, on the 1st inst. There are 35 factories in the Estate and all of them have been allotted to small-scale units. Twenty-nine of them have already gone into production. The items manufactured by the units in the Estate include amplifiers, radio parts, electric motors, room coolers, power presses, automobile accessories, bicycle parts, lathes, drilling machines, machine tools, safety razor blades, insulated wires and household and utility articles. The small-scale units have already doubled their output. Nearly Rs. 8 lakhs worth of goods are now produced by these units every month. The number of workers employed has also almost doubled. There are now more than 800 workers in the various factories in the Estate. Under the expansion programme, land covering about 69.9 acres has been acquired, on which it is proposed to construct about 150 additional factory sheds.

The Government of India has issued fresh instructions regarding the arrangements for the sale of vehicles with a view to eliminating the malpractices brought to its notice. In order to ensure that registration is bona fide, it will be necessary for customers to furnish to the dealer a bank guarantee of Rs. 2,000 payable when the car is actually delivered, as well as certain particulars which have been prescribed by the Government. The persons whose names have already been registered will also have to comply with these regulations and, if bank guarantees are not furnished to the dealers concerned within one month, their names will be liable to be removed from the register. The dealers, for their part, will have to register all names subject to the fulfilment of the above conditions and sell vehicles to customers strictly in the order of registration. The State Governments have been asked to carry out frequent and periodic checks of the order books maintained by dealers to verify that deliveries are made strictly in the order of registration and not otherwise. Each State Government has also been allotted a small quota of cars from out of the supplies made to that State for meeting the demands of institutions and bodies deserving special priority and the requirements of the State Government. The automobile manufacturers have been advised that the supply of automobiles to different States should be broadly in the same proportion as it was in the years 1956 or 1957 when there were no shortages.

From Abroad

A factory for the manufacture of clocks at an outlay of £117,000 will be established at Butterworth in Malaya as a joint Malayan-Japanese enterprise.

The Italian Ministry of Merchant Marine budget for 1959 and 1960 provides for a large increase in the subsidies to shipyards, the sum earmarked being £8.6 million, as against £5.8 million paid in 1958.

Exports of U.S. cotton in the current season are not expected to aggregate more than 3.00 million bales, according to the Department of Agriculture. The previous estimate of exports was 3.5 million bales.

Oversea earnings of British films rose to £7,700,000 in 1958, an increase of £800,000 over the previous year. The increase was accounted for by rents, royalties, and sales of rights in films.

The Japanese Ministry of Transport authorised the building for export of 38 ships with a total tonnage of 763,233 G.R.T. during the financial year ended 31st March 1959. The total value of the ships is put at $188 million.

The Netherlands Government has lodged protests with the British Government and the G.A.T.T. against the recent increase of 50 per cent. to 2s. 6d. per lb. in the U.K. import duty on roses, carnations and anemones.

There was a sharp rise of 21,000 to 70,000 in the number of cars exported by France during the first two months of 1959, as compared with the same period in 1958. Shipments of commercial vehicles, however, were lower at 8,140, as against 8,800.

As many as 470,000 million cigarettes were produced in the U.S. during 1958, a rise of 6 per cent. as compared with the production in 1957. The average number of cigarettes smoked by a resident above the age of 15 during the year was 3,700, an all-time record.

The Government of Australia has removed restrictions on imports of 330 more dollar goods with effect from the 1st inst. The items involved cover trade worth about £A170 million a year and represent 20 per cent. of all imports. Already, 50 per cent. of imports had been freed from currency discrimination.

The aggregate exports of cotton cloth from the non-communist countries fell by about 13 per cent. during 1958 as compared with 1957, according to the U.K. Cotton Board. The decline was particularly marked in the case of India, being 30 per cent. Hong Kong, Italy and the Netherlands were the only important exporting countries which reported higher shipments. The total exports of fabrics woven from man-made fibres in the same year were lower by 9 per cent.

Britain's new nuclear power station at Chapelcross, in Dumfriesshire, Scotland, is to be opened on 2nd May 1959. Chapelcross is the first nuclear power station to operate in Scotland and the second in the United Kingdom. The Calder Hall station, in Cumberland, was the world's first to operate on a commercial scale. Chapelcross will consist of four reactors, the first of which began to produce electricity in February. When all four reactors are in operation at the beginning of next year, the station will be supplying about 140,000 kilowatts of power to the Grid system.

A notable expansion in the production capacity of Australia's motor industry has been forecast by Mr. McEwen, the Trade Minister. According to the Minister, about A36 million are likely to be spent on this expansion in the next four years and the total production capacity should rise in four years from the present annual level of 335,000 vehicles to 375,000 vehicles. The value of motor vehicles and parts exported by Australia is at the rate of £A5·6 million per annum. Australia is said to be favourably placed geographically in relation to large growing overseas markets and its motor industry is expected to become a more important earner of foreign exchange. The motor industry is founded mainly on the finance and technology of leading overseas producers. Certain other important overseas manufacturers are considering large-scale expansion in Australia.

A two-year tax holiday for limited companies established after the 1st inst., is one of the proposals contained in the Government of Pakistan's interim three-month budget announced on the radio by the Finance Minister. To qualify, the company's operations must be based mainly on Pakistani raw materials, their paid-up capital should be at least Rs. 2 lakhs and the company must reinvest a minimum of 60 per cent. of its profits during the two-year period. The other proposals are abolition of business profits tax, removal of the distinction between public and private companies, raising of income-tax limit from Rs. 5,000 to Rs. 6,000, tax relief on contribution to charitable institutions, and tax exemption to foreign technicians for a period of 24 months and not for two financial years. Another important tax concession is that the maximum tax payable by any tax-payer shall not exceed 75 per cent. of his income. The marginal rate of tax has been reduced from 87.5 per cent. (in certain cases 97.9 per cent.) to 80 per cent.

PERSONAL

MR. C. C. Chokshi has been elected President of the Council of the Institute of Chartered Accountants of India, in place of the late Mr. S. Vaidyanatha Aiyar.

Mr. T. Swaminathan, Indian Commissioner-General for Economic Affairs in Europe, arrived at New Delhi last week for routine consultations with the Government of India.

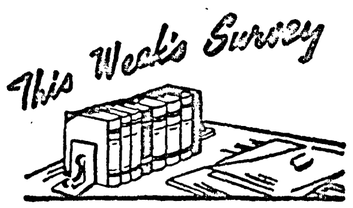
Mr. Jayachamaraja Wadiyar, Governor of Mysore, will be leaving India on the 15th inst. on a three-month lecture-cum-study tour of the U.S., Europe and Africa.

Mr. Rasiklal C. Nagri and Mr. Jaykrishna Harivallabhdas have been elected President and Vice-President, respectively, of the Ahmedabad Millowners' Association for the year 1959-60.

Mr. Vikramsinh S. Vallabhadass and Mr. H. M. Desai have been elected by the Indian National Steamship Owners' Association to represent it on the Board of Trustees of the Port of Bombay for a period of two years from 1st April 1959.

Mr. J. Vyoral, technical and commercial director of Bata Shoe Company Private Ltd., has been appointed the Manag.ng Director of the Company from April, 1959. He succeeds Mr. J. F. Bartos, due to retire next year.

Mr. B. M. Ghia has been elected President of the Association of Merchants and Manufacturers of Textile Stores and Machinery (India) for the year 1959. Mr. J. R. Engineer and Mr. T. Manekal have been elected Vice-President and Honorary Secretary, respectively.



OILS AND FATS

VERY few items of human consumption are as sensitive to income changes as oils and fats. They are foods of high caloric value and, consequently, as people get richer, they spend an increasing percentage of their income upon fats and a decreasing percentage on cereals. To a limited extent, the percentage of income spent on fats and oils can be taken as a rough index of the level of living, at least during the early stages of the migration from a low to a higher standard of living. Oils and fats are not merely items of food. They also form the raw material for a number of toilet products. The demand for these invariably increases, as the incomes and standard of living go up.

It will be interesting to project the demand for oils and fats in a country where incomes are rising and where concerted efforts are being made to make them rise faster. This was attempted by Mr. S. H. Turner, Chairman of Hindustan Lever, Ltd., in the course of his speech at the annual general meeting of the Company, held in Bombay on the 6th inst. According to Mr. Turner, assuming that, in twenty years time. the national income of India would double and that the population would be 600 million, the country will require 3.6 million tons of fat more to eat, and 900 000 tons of oil more for soap and paint. Thus, for food and industrial uses together, 4.5 million tons more fat would be required. The bulk of this would have to come from oilseeds, consumed either as oil or *vanaspati*, and for this 15 million tons more oilseeds would be required. This would mean, in terms of present yields, another 53 million acres under oilseeds, 14 per cent. of India's cultivated land. Obviously, diversion of acreage from other crops to oilseeds on such a scale is impossible.

This, according to Mr. Turner, underlines the need for making increase in yields of oilseeds a major objective of policy. Upto now. in research and in extension services, oilseeds have been given only a low priority. It is certain that, if the immense future needs are to be met, oilseeds' position in the list of priorities should be marked up. More research efforts in improving yield of oil per acre are called for. Not only that. The fruits of scientific research should be carried to the peasants too.

But, however successful these efforts, according to Mr. Turner, the gap between production and demand would continue to widen in the next twenty years. This could, however, be filled by putting up the price so as to cut down demand. But that would be equivalent to curbing the rise in standards of living. There was, however, a few other alternatives also to bridge the gap, partly at least. They are: (1) increased imports; (2) encouragement to crushing of cottonseed and discouraging its use as cattle food; (3) cultivation of new crops such as oil palm and better utilisation of the existing ones; and (4) adoption of better methods of extraction. These suggestions deserve to get top priority at the hands of India's planners.

MILL WORKERS' EARNINGS

Any impartial observer of trends in cotton extile economy in India and abroad will fully gree with the statement of Mr. Kasturbhai albhai, Chairman of the Indian Cotton Mills' ederation, made at the Federation's annual neeting held in the city on Tuesday this week, hat a progressive rise in the *per capita* earnings f mill workers "can be brought about only by ncreasing productivity through rationalisation nd modernisation." While the wage rates in ndian mill sector are very much lower than hose in several other countries, we have, as Mr. asturbhai Lalbhai aptly described, "the dubious distinction of having one of the highest, if ot the highest, wage cost per yard of cloth or per . of yarn." The proportion of salaries, wages nd money value of other benefits or privileges iven by cotton mills to the total ex-factory value of products comes to as much as 24-25 per cent. This is certainly a high ratio which, together with the marked rise in the prices of raw cotton, stores, fuel, etc., and the heavy incidence of taxation, has largely been responsible for the severe cost inflation from which the mills are greatly suffering now. The high labour cost and the use of antiquated machinery was, until recently, compensated by the advantage of cheap cotton. But, for some months now, Indian cotton prices are higher than the world parity. It is to be hoped that the recommendations of the Wage Board for the Industry will be so formulated as to reduce the top-heavy wage structure.

The aforesaid aspect will be appreciated better if one takes a look at what is happening to India's export trade in cotton textiles. The actual shipments of cloth at present is at an annual rate of not more than 600 million yards, as against 804 million yards sold abroad in 1956, 873 million yards in 1955 and 956 million yards in 1954. Mr. Kasturbhai Lalbhai attributed this to the following factors:

"Many of the importing countries are establishing their own mills and this factor, coupled with the inroads on our trade, made by the artificial fibres, has been responsible for a shrinkage in the international trade in cotton textiles from over 6,000 million yards pre-war to about 4,500 million yards. While the traditional exporters, including the U.K., Japan, Hong Kong and India, were competing for a share in the dwindling international market, the entry of China in the field has created an altogether new situation. Apparently, no price is too low for the product of the Chinese industry which is untrammelled by consideration of selling prices having some relation to costs."

An important point that needs to be noted, in this connection, is the fact that, in 1958, India's exports suffered a greater fall than those of any of its principal competitors. This should serve to pinpoint the need for enabling the Indian cotton mill industry to weather successfully the growing competition in world markets.

THE SECRET RESERVES OF MR. K. He's going ahead fast, and he's a very busy young man. Every moment of his day is filled with business calls, conferences, important deals. Yet, Mr. K. stays active and alert the whole day through.

For alert Mr. K's Secret

VT-7693

The Government of India has done well to allow installation of 3,000 automatic looms and replacement of plain looms by automatic looms at the rate of 2,500 automatic looms per annum. Commending this as a good beginning, Mr. Kasturbhai Lalbhai said that the pace of the much-needed reform must be accelerated in the near future. He was quite right when he urged that, in reconciling the needs of the various sectors of the cotton textile industry, the protection to the weak need not reach the point of strangulation of the strong. In this connection, he alluded to the maximum benefit of Government's benevolence derived by the small-scale powerloom units which neither paid taxes to the exchequer nor adequate wages to labour nor provided employment to large numbers. And he revealed that the Federation proposed to undertake a survey of the growth of these small powerloom units with a view to assessing their effect on the fortunes of other sectors. While the results of the proposed survey will be awaited with much interest, there is no denying the fact that, if a gainful decentralised mill industry is to be encouraged at all, it is best permitted to take the shape of powerlooms; the conversion of handlooms into powerlooms is the only effective solution to the basic defects of the handloom sector. This, however, does not mean that powerlooms should be allowed to grow in a haphazard manner. If properly regulated and co-ordinated with the needs of the economy, the powerlooms can make a significant contribution to both employment and production, without the help of subsidy from the Government which has to be expended on a large scale on handlooms, all at the expense of the mill sector. Indeed, they will even be in a position to contribute something to the Exchequer.

IMPORT POLICY

Both the industry and the trade have reason to feel gratified at the import trade control policy for the licensing period April-September 1959. The policy is notable for three distinct welcome departures from the previous half-yearly policies. First, the import licences for raw materials and components will be issued on a comparatively long-term basis of nine months to a year to 45 scheduled industries borne on the books of the Development Wing, in addition to their normal allotment. This policy will surely go a long way towards ensuring continuity of raw material supply and thereby enable the industries to make advance arrangements for purchasing raw materials and components for the succeeding half-year. Secondly, the basic period for 47 items has been extended by the inclusion of the year 1957-58. Thirdly, the list of items qualifying for actual users' licences has been expanded, alongside of upward revision in quotas for 53 items. The Government has, of course, reduced importers' quotas for several items and actually withdrawn some quotas. But the articles chosen are either less essential items the cuts in imports of which will not affect the cost of living or are those the indigenous production of which has registered an improvement of late.

The licensing of capital goods, heavy electrical plant and machine tools will generally follow the practice as in the previous half-years, with the change that the applicants are now required to indicate the particular country from which they propose to obtain equipment. As the funds available for such licensing from different countries vary and cannot always be used for import from other countries, the importers should, it is said, specify the source of supply, as well as indicate, if possible in order of preference, the alternative sources of supply.

The Government of India's move to adjust import quotas in such a manner as to give relief where it is urgently necessary is a commendable step. Many industries are now in a position to prepare production schedules well in advance without any fear of their being interrupted for want of raw materials and components. It will be recalled that. recently, several industrial establishments, especially in the non-ferrous metal sector, were forced to curtail production operations and some were even compelled to close down throwing out of employment a large number of workers. With the liberalisation of imports, the supply position in respect of many items such as copper and zinc may be expected to ease, although a section of the trade is of the view that the extent of liberalisation is not sufficiently large to have any significant effect on the price structure.

In formulating the import policy, the Central Government has certainly done its best with an eye on the foreign exchange situation. It is true that there has been a notable improvement in the situation; the total foreign assets of India for the week ended March 1959 amounted to Rs. 213.06 crores, as against the lowest level of Rs. 178.43 crores touched in the week ended 31st October 1958. Nevertheless, they are insufficient to cover all the commitments that have already been entered into by India. The assistance that has been promised by this country's friends is adequate only to meet these maturing obligations. Accordingly, fresh imports can be allowed only to the extent exports bring foreign exchange. It is clear, therefore, that the scope for any significant liberalisation in import policy will continue to be limited for sometime to come.

HOUSING

The housing policy of the Government of India came under fire in the Lok Sabha during the debate on the demands for grants for the Ministry of Works. Housing and Supply. Members of the Opposition criticised the Ministry for the unsatisfactory progress of some of the housing schemes. Mr. K. C. Reddy, the Union Minister for Works, Housing and Supply, was certainly justified in pleading that the performance of his Ministry should not be looked at against the background of the enormous housing needs of the country. But it would not suffice merely to point out, as he has done, that his Ministry was not the sole agency in charge of all the housing activities in the country and that the housing targets of the Plan were to be fulfilled by several other Ministries of the Central and State Governments, by institutions like improvement trusts and by the private sector. As the Minister for Housing, it is certainly his responsibility to see that the housing programmes progress according to schedule and, if not, to see that they do so. Otherwise, there is no justification for a separate Ministry for housing.

It is a pity that, despite the urgent need for more and more housing facilities, the housing schemes have not made much headway. The progress of co-operative housing scheme, in particular, has been very slow and this despite the fact that the Government had increased the percentage of loans to be given to them from 50 per cent. to 65 per cent., in addition to the subsidy of 25 per cent., thus leaving only 10 per cent. to be found by the societies. The rate of expenditure, which had lagged behind allotment, is showing some improvement and it is to be hoped that it will gather momentum in the next two years so that the reappraised allotment of Rs. 85 crores for housing under the second Plan will be fully utilised.

The Minister expressed the view that, in order to get over the limitation of finance, the Government would have to tap resources from institutions for implementing the various housing schemes. The Ministry had already approached the Life Insurance Corporation of India which allotted a sum of Rs. 4 crores as loans for 1958-59 and agreed to provide similar sums for a period of three years. Within two months, the entire amount of Rs. 4 crores has been withdrawn by the States. He suggested that the Central and State Governments, local bodies, and other building agencies should be enabled to raise debentures and loans on a large scale for housing. If these obligations were to be made tax-free, as a special incentive to investors and as is the case in several Western countries, large amounts could be raised for housing.

Finding adequate finance is not the only problem. Acquisition of the necessary land for housing construction is another bottleneck. The Government, according to Mr. Reddy, has almost finalised a scheme for bulk acquisition and development of land by the State Governments. A sum of Rs. 15 crores has already been allotted for this purpose in the second Plan. Since most of the major obstacles will thus have been removed, the pace of house-building activity henceforward should quicken. But it is doubtful whether it will actually do so, in the absence of adequate facilities for individuals to build houses. Group activity—co-operative or otherwise—is no effective substitute to individual drive and initiative. Until the Governments recognise this point and give effect to it, the progress of house-building will continue to be at inadequate pace.

PROSPECTS FOR 1959

RESULTS OF ECONOMIC SURVEY

From Our Own Correspondent

LONDON, 3rd April

AS a curtain-raiser to next week's Budget, the Government have published their annual *Economic Survey*. Externally, the picture is hopeful and the *Survey* points out that, for the year 1958, there has been a favourable balance on current account of £455 million. It will be recalled that the first six months of last year gave a balance of £327 million and the second half-year's £128 million is a very substantial reduction. It is, however, this half-year which is more than likely to compare with 1959. Imports are expected to increase steadily in volume as industrial expansion gets under way and it is encouraging that so far there is no indication that import prices are to go up. It is hoped that exports will improve in the coming year, particularly to manufacturing countries whose own industrial recovery is proceeding and partly to the primary producing countries as these increase their overseas sales with the anticipated all-round recovery of increased activity.

LONDON LETTER

But the *Survey* uses the ominous phrase that, in 1959, exports will be harder to sell. In point of fact, last year export earnings were already 3½ per cent. less than in the year before, although, in the latter part of last year, they were maintained at about the same level as the year before.

The U.K.'s overseas investments in 1958 are estimated at £236 million. This is not the measure of investment in the true sense, as it includes capital payments on the North American lcans. In the coming year, there are hardly likely to be the reserves to maintain such a high level, unless the sterling balances are increased. The reserves of the sterling area grew by £284 million in 1958 to a total of £1,098 million, but the *Survey* points out that, in 1959, there will be a number of special payments to be made. First is the payment of £71 million to the I.M.F.—this payment has now been made and as a result the gold and dollar reserves at the end of March fell by £6 million. This is, nevertheless, very satisfactory, since it means that there was a net income of £65 million and even if we deduct from this a special payment by Western Germany on capital account of £22½ million we are left with an increase in the reserves on current account of £42½ million. The general trend of overseas trade and the reserves governs the complacency of the *Survey's* tone on the prospects for the year ahead.

THE SECRET RESERVES OF MR. K.

Mr K. knows that he can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound, restful *sleep—in the soothing coolness of* his 'Crystal' conditioned bedroom.

At the same time, there is an awareness in the document which is obviously a warning in relation to the coming Budget that all the favourable factors can be reversed by an excessive inflation of spending, which does not have any counterpart in improved exports.

But we are also told that, in the last two months of last year, industrial production was higher than in the previous six months and that, in the recent months of this year, unemployment has declined. But it is rather understating the case to say "there is, however, scope for a further expansion of output as well as for employment." Another startling understatement is that "the economy can afford to expand more than in the past three years." As the *Survey's* table of changes in industrial production indicates that the economy has not been expanding at all during the past three years, one must trust that the prospective improvement will be substantial.

The danger to the expansion in the economy is still that wages may run ahead of production. This was happening in 1958, even though, in that year, the increase in wage rates was less than in the previous years. There was only a small increase in labour costs per unit and this increase was roughly offset by lower import prices. All these circumstances will not be repeated in 1959. Indeed, the *Survey* says that, if wage rates rise on the same scale in the coming year without a corresponding increase in productivity, there would be a threat to price stability!

On the other hand, it is generally assumed that purchasing power in 1959 can safely be increased by £300 million, but this is not a *Survey* figure. The document does, however, estimate the increase in investment in the coming year—public investment is expected to go up by £150 million, an increase of 11 per cent. and private investment is reckoned to be maintained at the 1958 level. The biggest increases in public investment are in electricity, railways, and roads. In the private sector, it will be in distribution and other services and housing—on the other hand, it is reckoned there will be a drop of about 10 per cent. in investment in manufacturing industry. In short, the *Survey* underlines what other examinations of the economy have already stated, namely, that there is nothing in the present outlook to indicate the sort of economic expansion which will be any good either to a growth in general productivity or in exports. It remains to be seen whether the Budget measures will provide the stimulus which the *Survey* indicates is also necessary.—*All Rights Reserved.*

HOUSING FOR PLANTATION LABOUR

The Ministry of Works, Housing and Supply, has pointed out, in its latest Annual Report, that the plantation labour housing scheme has not made much headway, because of the inadequate response of planters. The United Planters' Association of Southern India, Coonoor, has this to say on it:

"The plantation industry has always provided accommodation for its workpeople at their own expense without either charging a rent or seeking financial assistance from Government. The industry undertook to expand housing accommodation and modernise old houses at the rate of 8½ per cent. per annum. In South India, new construction and modernisation have been going on for several years at the rate of over 9,000 units per annum at a cost of over Rs. 1.5 crore.

"The Ministry's report refers to a loan scheme meant for only a section of the industry. Even if the response of that section came up to expectations, the housing completed with such assistance will amount only to a small proportion of the total programme, in the fulfilment of which considerable progress has been made as would be borne out by returns submitted by estates under the Plantations Labour Act. The fact that the loan scheme has not met with adequate response would only indicate that the section for which it is intended does not find it attractive enough to be availed of. For the vast majority of planters, it would be unfortunate if the impression is obtained that plantation labour housing programmes have not been in existence or was inadequate."

EXPERIMENTS IN CO-OPERATIVE FARMING

CONGRESS PARTY'S RESEARCH

From Our Special Correspondent

NEW DELHI, 6th *April*

DELHI LETTER

FOLLOWING the recent adoption by the Lok Sabha of a non-official resolution recommending the organisation during the next three years of service co-operatives all over the country so as to prepare the ground for voluntary constitution of joint farming societies, the National Development Council which has just concluded its deliberations here has had for its consideration the report of the Planning Commission's working group on co-operatives. Two patterns of co-operative organisation are visualised in the report. The first pattern is for general adoption; under this, the village co-operatives are to provide short- and medium-term credit, supply agricultural and other requirements and market agricultural produce. They are also to help formulate and implement a plan of agricultural production for the village and undertake other advisory functions. The second pattern of societies is recommended for tribal and chronically backward areas; under this, village co-operatives are to be responsible for production and development, while, for purposes of credit, there is to be a credit union covering a group of villages. It would appear that, even during the three-year period fixed for the organisation of service co-operatives, joint farming on a substantial scale is under contemplation in respect of tribal and backward areas and of surplus lands to be taken over following the imposition of ceilings on existing holdings by the end of 1959 or early in 1960.

In this connection, two notes recently prepared by the Bureau of Parliamentary Research of the Congress Party in Parliament have come to the knowledge of this correspondent. One of these notes is on joint farming and the other on land reforms. The note on co-operative farming starts with the proposition that peasants with small and inadequate holdings, many times lying scattered in fragments, cannot use modern scientific methods for increasing production by individual effort and that, therefore, a pooling of resources is essential therefor. The note then clarifies the main features of the Nagpur Congress resolution on agrarian reorganisation as follows:

(1) As a first step, Service Co-operatives should be organised throughout the country, within a period of three years.

(2) Even within the three-year period, wherever possible, land should be pooled for joint cultivation, the farmers continuing to retain their proprietary rights and getting a share from the net produce in proportion to their land.

(3) Whether a person owns land or not, if he actually works on land, he should get a share in proportion to the work put in by him on the joint farm.

(4) Ceilings should be fixed on existing or future holdings. Lands rendered surplus by the enforcement of ceiling laws should vest in the *panchayats* and should be managed through co-operatives consisting of landless labourers.

There is also an account in the note of the experiences of some democratic countries like Canada, France and Sweden in the field of co-operative joint farming. In Canada, according to this note, joint cultivation has taken the following forms:

(1) Co-operatives in which each farmer pools his equipment and labour while retaining full liberty in the cultivation of his land. (2) Same form as in (1) except that some farming is done jointly. (3) The same as in (1) but all operations are carried on jointly except for cattle breeding, which is still carried on individually. (4) The pure type of joint-farming co-operative in which everything is administered co-operatively: land, capital and labour. In the first three types the land remains the individual property of each member.

The following example of a successful co-operative farm in Canada is also cited:

The Sturgis co-operative farm, under reference, was set up by a group of farmers who pooled their land, their equipment and their labour. The women (wives or sisters) were admitted as members with the same rights as the men. At the outset, the land and the equipment of each of them was assessed and the respective amounts credited to each member as loan capital in the association. Altogether the total acreage cultivated by members of the group was 1,700 acres. In 1946, an 80-acre plot of land close to Sturgis Village was purchased and a communal group of houses erected. The houses are the property of the society. A rent determined by the value of each house is paid by the members occupying it. Returns to members are in the form of interest on capital, monthly wage or dividends from the surplus.

The general principles of some of the co-operative farming societies in France are as follows:

Each member retains the ownership of his land but leases it to the co-operative. The cultivation of these lands is the basis of their joint work. The number of members of the society is small—usually seven—with a total of five agricultural holdings. After an inventory, each member contributes all his cattle and agricultural implements as his share in the organisation. The contributions of each member are valued and equalised by the payment of supplementary shares in cash. The equal daily, monthly or annual sharings, based on the income from crops and animal products, are determined by the "general assembly." The larger families who are in need of supplements have prior right of purchase at the co-operative. At the end of the season, each member is granted a bonus proportionate to the area of the land leased by him.

The Swedish Government looks upon the existence of an independent peasantry as a social necessity, but relatively few Swedish farm holdings are large enough to permit full utilisation of the modern technical equipment that could raise net farm incomes high enough to discourage a drift from the land.

In 1946, a committee was set up by the Swedish Government. It recommended that the law should provide for the establishment of joint farming societies, which, according to the Committee's proposals, might take one of two forms: (a) Neighbouring farmers may pool their land, receiving in return a proportionate number of shares in the joint farming society, in which the property becomes vested.

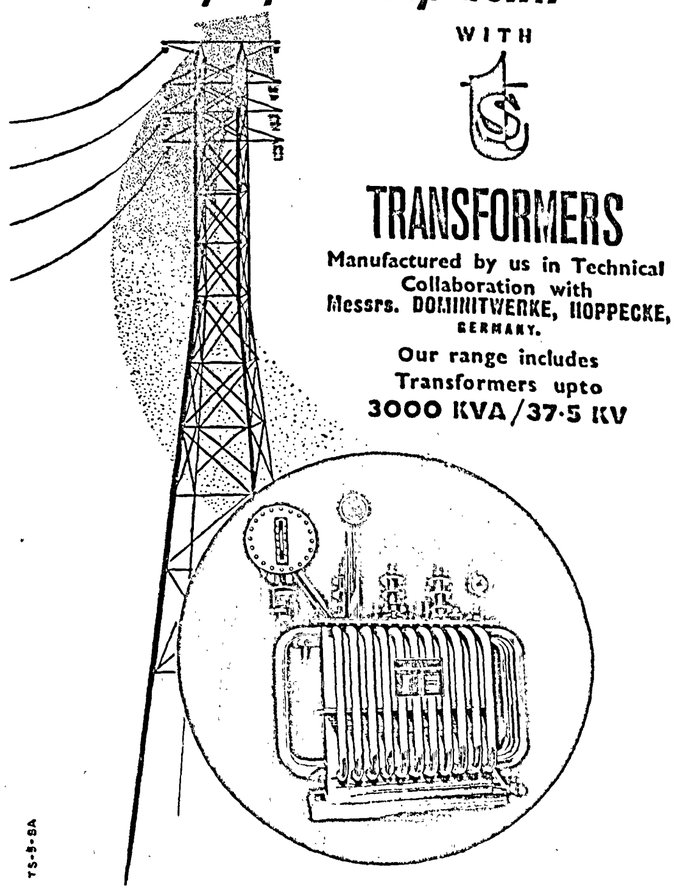
(b) Landless farm workers or other persons with agricultural experience may combine to purchase a large farm or to rent land from the State or a private owner with a view to operating it on a co-operative basis.

The societies would be registered with the State Board of Agriculture. Members would be both entitled and obliged to take part in the work on the joint farm and would receive payment therefor in accordance with the terms of the collective agreement for agricultural workers. After the prescribed wages had been paid and the specified sums allocated to reserves and the fixed interest charges met, any remaining surplus could be distributed as an extra wage bonus. In conclusion, the report emphasised that joint farming co-operatives should be eligible to receive Government loans and grants in the same way as individual farmers. The proposals of the Committee were adopted by the Swedish Government and approved by Parliament. Acts Nos. 218 and 219, promulgated on 30th April 1948, followed the main lines of the Committee's report.

Apart from activity on the legislative plane, a few spontaneous efforts at joint farming have been made in Sweden. For instance, a number of peasants in the province of Jamtland decided to develop their holdings on a more rational basis by pooling and jointly working the 130 hectares which they leased to the co-operative for 30 years. Each member further subscribed a share of 100 kroner per hectare to provide the society with funds to buy farm machinery. The members retain the use of that part of their property required for their family's subsistence. The creation of such co-operatives strengthens the small peasant holding thus associated by this method with a larger farm unit that can be cultivated more rationally.

On the basis of the foregoing account, the note prepared by the Research Bureau of the Congress Party in Parliament asserts that co-operative farming has been practised success-

(*Continued on page 628*)



HOW TO BEAT INFLATION

[Inflation is a world-wide problem. No country is free from it, the difference between one country and another being only one of degree. In some countries, it is mild; in others, it is moderate and, in quite a few others, it is pretty severe. People all over the world—we refer only to the free world here—are trying to protect themselves against falling value of money. But is there any effective protection against inflation to the community as a whole or even to the vast majority of people? An answer to this question is sought to be provided by the Monthly Bank Letter *of the First National City Bank of New York in its latest issue, namely, April 1959. The authors of the* Letter *have examined the efficacy of the various forms of hedge against inflation, such as gold, precious stones, housing, equities and commodities and come to the conclusion that none of these could protect the vast majority of people against inflation. Perhaps only a few lucky people, with sufficient resources and knowledge of the intricate technique of market operations, could hope to win the battle against inflation by resorting to these "shields." The only remedy for inflation, in their opinion, is for the people to get together and force the authorities to give up inflationary financing. The article is of topical importance to this country, inasmuch as our economy is characterised by built-in inflation and many investors are of the view that they can comfortably cover themselves against its corroding influence on values by placing their savings in shares, bullion, buildings and commodities. We, therefore, reproduce it on this page, with due acknowledgment to the First National City Bank of New York.—*EDITOR]

THERE is an old political adage that runs, "if you can't lick 'em, jine 'em." This same philosophy seems to have spread into the financial arena, as more people have come to believe in the inevitability of a dwindling dollar and have sought to shield themselves accordingly. Indeed, for many, the attitude is more than mere capitulation to the forces of inflation: it is a willingness to relax and enjoy it in the belief that they are clever enough to stay at least one whirl ahead in the spiral.

Growing inflation consciousness may seem unwarranted, in view of official assurances that the cost of living will be "quite stable in the months ahead." Excess productive capacity, tightening up on business efficiency during the recession, and lower food prices should help to hold consumer prices in check over the near term.

Those who foresee long-pull inflation (interrupted now and then by periods of overall price stability) base their belief on continuance of the cold war with its requirement of heavy defence spending, pressures of higher wages and taxes, Government "full employment" policies, and, generally, the growth of the Welfare State, which emphasises abundance of spending power.

There is no lack of evidence that fears of continued inflation have been influencing people's investment decisions. As a consequence, ironically, the worst price inflation has been in popular inflation hedges, such as the stock market.

Seeking Inflation "Shields"

Cost-of-living escalator clauses in wage contracts now cover over four million workers—more than double the number in 1955, according to the U.S. Labour Department. Last August, the American Federation of Government Employees called for an escalator plan of annual adjustments that would "keep pay in line with living costs." Not long ago, a business leader urged the Treasury to put out "inflation-proof" bonds with interest payments tied to the cost of living. And a prominent economist suggested last month that Social Security checks be fitted with the same kind of escalator clauses.

Variable annuity plans have been developed under which assets would be invested in part in common stocks and annuity payments would vary with investment results, including dividends and changes in market value. Price supports for agriculture put farmers on a sort of escalator which increases their income as their costs go up.

In the money market, higher interest rates reflect among other things the demand of savers for better rates and the expectation that the dollar repaid tomorrow may be worth less than the dollar lent today. In the security markets, investor eagerness for stocks and lack of enthusiasm for fixed-income bonds stems in part from what a Federal Reserve Board Governor described not long ago as "almost psychotic fears of inflation in the future." And, finally, another sign of the times is the announcement last week that New Jersey will put some of its $750 million pension funds in stocks. Previously, they could only be invested in bonds.

This heightened interest in inflation "shields" makes timely an analysis of their effectiveness as safeguards against the hardships and inequities brought on by a currency that steadily loses value.

First, a word or two about escalator clauses in wage contracts, which link wages to the cost of living through the consumer price index.

While the buying power of the pay cheques covered by such contracts might be preserved in the face of price rises, that of other items not covered—such as insurance policies, bank accounts, government savings bonds, etc.—would go down. And, of course, gains to those able to hedge through escalator arrangements are at the expense of everyone else in the community whose incomes do not go up and whose purchasing power is reduced by the higher prices.

Perhaps more fundamental, wage escalation weakens the resistance of workers to inflation, even giving them a sense of profiting from the process. Thus, they fail to support efforts to get at basic causes, including excessive government spending and deficits financed by "cheap" money. Inflation becomes "built-in." As higher wages and costs bring on higher prices, escalators give wages a further push. Then, as costs go up, prices rise again, bringing still another turn of the wage screw, and so on in a mounting spiral.

Dr. Paul McCracken, a former member of the President's Council of Economic Advisers, summed up the impact of escalators in the *Michigan Business Review* of September 1955:

Price inflation is the way market forces endeavour to boil the surplus purchasing power out of the system. But, if we set up escalator machinery by which as fast as the excess is removed, it is promptly pumped back into the economy, the end result of a policy of slowly rising prices is certain to be prices rising not so slowly.

Gold, Art Treasures and Gems

In foreign countries, gold, art treasures, and gems have been historic inflation hedges.

While people in this country (the U.S.) cannot acquire gold at the statutory price of $35 an ounce, they can buy it and have it stored in foreign countries such as England, Switzerland, and Canada. However, the buyer must pay storage charges, meantime receiving no return on his investment—unless, of course, the price of gold is raised. Even then, there is the risk that tax or other impediments may bar a gain on such an increase.

Some people buy *objets d'art*. An auction in London not long ago, widely publicised in the press, provided examples of how the right paintings can show fantastic appreciation in value. A Van Gogh, reportedly bought 30 years ago for $15,000, brought more than $369,000.

But not all paintings prove so lucrative, as the *Saturday Review* pointed out in a 6th December article, "Does Rembrandt Pay Dividends?":

Consider some of the prices paid by the late Edward T. Stotesbury of Philadelphia, and those brought for the same pictures when sold at auction in 1944. George Romney's "Portrait of Captain Stables" declined from $50,000 to $5,500; Sir Thomas Lawrence's "The Hon. Caroline Upton," $50,000 to $9,000; . . Hoppner's "The Tambourine Girl," $300,000 to $10,000; Romney's "The Vernon Children," $225,000 to $22,000.

Being able to select the right paintings requires a high degree of knowledge and skill—and even expert judgment may be proved wrong because of unpredictable changes in tastes and fashions.

(*Continued on page 591*)

BRITISH BANK OF THE MIDDLE EAST

FALL IN TURNOVER

THE connection of the British Bank of the Middle East with India dates back to 1891, though it has not been a continuous one. It had a branch in Bombay from 1891 to 1900 and again from 1919 to 1934 and another one in Calcutta from 1892 to 1895. The main reason for the lack of continuity in its connection was the then trend of trade between this country and Persia (Iran). After a long break, the Bank re-established itself again in India in 1954 by taking over the branches in Bombay and Calcutta of the Nationale Handelsbank N.V. with effect from 1st January of that year, thanks to the improved trade relations between India and the Middle East, where the Bank has branches. The branches of the Nationale Handelsbank N.V. were taken over as going concerns, thus securing a foundation on which the British Bank of the Middle East could enlarge considerably the business which had been built in the immediately preceding years. In 1957, however, the Directors of the Bank decided to close its office in Calcutta, as they felt that the trade between the Middle East and India could be adequately served by maintaining an office in Bombay alone. The Calcutta office was accordingly closed in April 1958.

The results of working of the Bank in India during the year ended 31st December 1958 are not strictly comparable with those of the previous year, as they relate to only one branch, whereas those of 1957 relate to two offices. Attendant upon the closure of the Calcutta office, the Bank had to incur heavy additional expenditure, such as payment of additional gratuity and compensation to the retrenched staff. This largely accounted for the substantial shrinkage in the Bank's profit for 1958 from Rs. 11.17 lakhs to Rs. 1.27 lakhs.

With the sum of Rs. 5.28 lakhs brought in from the previous year, the Directors have remitted to the London office of the Bank a sum of Rs. 4.24 lakhs, leaving to be carried forward Rs. 2.31 lakhs.

Reflecting the shrinkage in business is the fall of Rs. 9.92 lakhs in interest and discount earned to Rs. 14.24 lakhs and of Rs. 2.80 lakhs in commission and exchange to Rs. 8.87 lakhs. Interest paid on deposits and borrowings has also dropped by Rs. 2.70 lakhs to Rs. 2.29 lakhs. Expenses have not, however, declined. On the contrary, for reasons stated already, they have gone up from Rs. 19.66 lakhs to Rs. 20.46 lakhs, as will be seen in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	14.24	24.16	15.04	20.36
Commission and exchange	8 87	11 67	14.12	13.11
Interest paid	2.29	4 99	6 62	5 84
Expenses	20.46	19 66	20.92	18.00
Depreciation	0.08	0 20	0 11	...
Profit	1.27	11.17	1.59*	9.63*
Provision for taxation	...	5 82	...	...
Remitted to London Office	4.24	0 24	3.33	8.59
Carried forward	2.31	5.28	0.18	1.92
	As on 31st December			
	1958	1957	1956	1955
Deposits	1,21.94	1,67.06	2,40 99	2,44.45
Borrowings from other banks	...	71.00	15.00	10.00
Bills for collection	85.94	1,49.68	1,31 07	1,31.10
Acceptances and endorsements	2,34.92	1,91 27	2,38 85	2,03.52
Advances	2,92 05	3,45.70	4,10 26	5,57.45
Investments	35.55	42.28	38 53	30 92
Cash	21.70	34.19	51.68	74.04
Balance-sheet total	6,71.73	7,63.95	8,73.61	9,99.44

* After providing for taxation, the exact amount set aside for the purpose is not known.

The deposits of the Bank have declined by Rs. 45 lakhs to Rs. 1.22 crores, thus maintaining the downward trend noted since 1955. It must, however, be noted that the fall in deposits during 1958 is much less than that in 1957. Fixed deposits show a slight expansion from Rs. 21.63 lakhs to Rs. 22.24 lakhs, while current and other accounts have shrunk from Rs. 144.43 lakhs to Rs. 99.70 lakhs. As against a decline of Rs. 45 lakhs in deposits, the fall in advances to Rs. 2.92 crores is of the order of Rs. 54 lakhs. With this, the Bank's advances have dropped by Rs. 2.65 crores in the last three years. Loans, cash credits and overdrafts have declined from Rs. 1.80 crore to Rs. 1.31 crore and bills purchased and discounted from Rs. 1.65 crore to Rs. 1.60 crore, mainly due to the fall in bills payable outside India from Rs. 1.35 crore to Rs. 81 lakhs. Bills payable in India are higher at Rs. 79.13 lakhs, as against Rs. 30 lakhs a year before.

CANARA BANKING CORPN. EARNS MORE

DIVIDEND MAINTAINED

THE working of the Canara Banking Corporation Ltd. (General Manager: Mr. V. R. Kamath, Udipi) during the year ended 31st December 1958 has resulted in a slightly higher profit of Rs. 4.02 lakhs, as compared with that of Rs. 3.75 lakhs in the previous year. This rise—albeit small—provides one of the few exceptions to the general trend and has taken the Bank's profit to a fresh record level in its history. There has been an expansion of Rs. 1.34 crore in the Bank's deposits, accompanied by a rise of Rs. 52 lakhs in advances and of Rs. 92 lakhs in total liquid assets.

Following the rise in profit, the provision for taxation has been raised from Rs. 1.60 lakh to Rs. 1.75 lakh. The allocation to the reserves has also been stepped up from Rs. 80,000 to Rs. 93,000. The Directors have also made a provision for payment to all permanent staff of the Bank of a bonus equal to 1/12th of the basic pay earned by them during the year. The distribution to ordinary shareholders has been maintained at 10 per cent. made up, as usual, of a dividend of 8 per cent. and a cash bonus of 2 per cent.

The growth of the Bank in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	34.91	28.38	23.18	18.05

Cash	15.2	16.1	14.8	22.1

* 1/12th of the total basic pay drawn during the year.
† Ratio arrived at after taking into account the investments pledged against borrowings from other banks.

The rise of Rs. 6.53 lakhs in interest and discount earned is accompanied by an increase of Rs. 1.70 lakh in commission and exchange. As against this, "interest paid" has gone up by Rs. 5.07 lakhs and expenses by Rs. 2.89 lakhs. Though the profit of the Bank for the year under review is slightly higher than that for 1957, its ratio to gross income has shrunk from 10.7 per cent. to 9.3 per cent.

The total working funds of the Bank have improved by Rs. 1.69 crores during the year under review, thus maintaining the upward trend noted in previous years, thanks to the rise of Rs. 1.33 crore in deposits. It may be noted here that the pace of expansion in deposits during the year under review is larger than that in 1957 or in 1956. The rise is shared by all classes of deposits. Fixed, cumulative and other time deposits, at Rs. 4.72 crores, account for the bulk of it, namely, Rs. 95 lakhs. Savings bank deposits have gone up by Rs. 10 lakhs to Rs. 1.14 crore and current and other accounts by Rs. 29 lakhs to Rs. 1.33 crore.

On the assets side of the balance-sheet, there has been an increase of Rs. 52 lakhs in bank credit, of which bills purchased and discounted alone, at Rs. 1.30 crore, account for Rs. 43 lakhs. Loans, cash credits and overdrafts show a rise of only Rs. 9 lakhs, at Rs. 2.66 crores. The investments have been enlarged by Rs. 76 lakhs and cash balances by Rs. 15 lakhs. The unencumbered investments and the cash resources together provide a coverage of over 55 per cent. to the deposits, as in the previous year, though this ratio is much lower than that (64.0 per cent.) maintained at the close of 1956.

The Bank opened four new branches during the year, bringing the total number to 53.

YEAR OF EXPANSION FOR CANARA BANK

PROFIT, HOWEVER, SHRINKS

THE year ended 31st December 1958 was one of expansion in many directions for the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Bombay). Its deposit resources expanded by Rs. 6 crores and, over the year, its advances rose by over Rs. 2 crores. The liquid assets were strengthened by Rs. 4 crores. There was an addition of seven branches during the year and the Bank's ties with leading foreign banks were strengthened. A few officers of the Bank had had refresher courses in America and Hamburg. The Bank also added to its range of services the Executor and Trusteeship business.

The profit of the Bank for the year under review, however, suffered a slight drop from the record level of Rs. 15.29 lakhs to Rs. 14 lakhs, thus reversing the upward trend noted in the previous ten years. The fall in profit, which is in consonance with the general trend, is due to the rise in interest rates on deposits, sharp increase in administrative expenses and to the fact that the level of advances was generally lower than that in the previous year. Consequent on the fall in profit, the provision for taxation has been reduced, albeit at a larger scale than the decline in profit, from Rs. 7.30 lakhs to Rs. 3.91 lakhs. No addition has been made to the reserves, which had received Rs. 4 lakhs from the profit for 1957. The provision for bonus to staff has, however, been raised from Rs. 1.90 lakh to Rs. 2.10 lakhs. The dividend on ordinary shares has been maintained at 10 per cent., but this is on an increased capital.

The Bank earned during the year by way of interest and discount an income of Rs. 91.11 lakhs, which represents an increase of Rs. 29.05 lakhs over the year. This rise compares favourably with that of Rs. 12.52 lakhs recorded in 1957. Income from commission and exchange has also recorded a rise of Rs. 0.63 lakh to Rs. 24.41 lakhs. The larger income from these two sources has, however, been more than offset by the increase of Rs. 23.29 lakhs in interest paid and of Rs. 7.57 lakhs in administration expenses, as will be seen from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	91.11	62 06	49 54	36 34

* Includes golden jubilee bonus.
† Includes a golden jubilee bonus of 5 per cent.

The Bank issued, during the year, 42,000 new ordinary shares of the face value of Rs. 50 each at a premium of Rs. 15 per share. Of this issue, 34,800 shares were offered to the then existing shareholders of the Bank and 7,200 shares to its confirmed employees. The issue was fully subscribed. The shares set apart for employees were taken up by a majority of them.

The Bank's deposits swelled by Rs. 5.92 crores to Rs. 23.76 crores. Contrary to the general trend, this expansion in deposits was much more than that in either of the two previous years. The bulk of the rise is accounted for by fixed deposits, which rose by Rs. 4.66 crores to Rs. 12.60 crores. Savings bank deposits also increased by Rs. 56 lakhs to Rs. 3.39 crores and current and other accounts by Rs. 50 lakhs to Rs. 7.77 crores. Of the rise of Rs. 2.14 crores in the Banks' credit portfolio, loans, cash credits and overdrafts account for Rs. 1.64 crore, at Rs. 6.97 crores, and bills purchased and discounted for Rs. 50 lakhs, at Rs. 3.96 crores.

HOW TO BEAT INFLATION

(Concluded from page 589)

Many people consider precious stones, rare coins, stamps, manuscripts, and antiques as good inflation hedges. Like paintings, these objects can give pleasures of possession. But they have uncertain markets and involve expenses to hold, insure, and resell. The job is one for the shrewd judge of values, not for the amateur.

As for the more mundane hedges—real estate, common stocks, commodities—the following table illustrates what happened from December 1948 to December 1958, the most recent decade for which figures are available.

During that period the consumer price index rose over 20 per cent., cutting the purchasing power of the dollar by about 17 per cent. The table shows changes in principal values over the decade, measured both in current dollars and in dollars of 1948 buying power.

Changes in the Nominal Value of Various Types of Investments 1948-58, in Current Dollars and in Dollars of 1948, Purchasing Power

	Nominal Value		% Change in Nominal Value	% Change in 1948 Dollars

Selling Price, Typical 1-Family Residence*	14,231	17,220	+ 21.0	+ 0.8
Farm Real Estate, Department of Agriculture Index (1947-49=100)	106	163	+ 53.8	+ 28.1

* Computed from Roy C. Wenzlick & Co., *The Real Estate Analyst.*

It will be seen that, *for this particular period, the owner* of property or equities in property, has—typically—come out well ahead of holders of cash or fixed income investments.

Thus, the owner of a "typical" one-family residence saw his investment about keep pace with the cost of living. But how many own a "typical" residence? Actually, many homeowners did considerably better, others considerably worse, than is recorded in the table. Investing in housing can be hazardous, involving all sorts of risks—location, neighbourhood shifts, changes in style preferences, rent controls (in the case of landlords), to say nothing of the impact of the alternating cycles of ups and downs, both in the economy at large and in the building industry itself. And realising on paper profits can involve a long wait, as well as costs of sale.

Farm land values registered an even larger increase in the period shown—though the rise was not without interruptions. Farm land prices declined in 1949 and again from mid-1952 to the end of 1953. As in the case of homes, "average" farm values can be much different from specific cases.

Buying Common Stocks

As for common stocks, the "average" investment paid off handsomely over the decade. In actual practice, of course, investors do not buy an "average" stock but a specific issue. Thus "average" gains can be misleading.

Many stocks have declined in value, or have become worthless, even though the general market trend has been upward. At the end of 1958, more than one-third of all common stocks listed on the New York Stock Exchange were selling below their highs of 1946, twelve years earlier.

Not only what to buy but when to buy is important. Investors who bought at peak periods in the market have had to be patient indeed. It took 16 of the 30 stocks presently in the Dow-Jones industrial average more than 20 years to get back up to 1929 highs—and four of the stocks still haven't made it. Measured from 1946, 12 stocks took between five and seven years to recapture their '46 high. Two others took more than 12 years and one has not yet regained its '46 peak.

Picking the right stocks at the right time is no simple matter. The increasing popularity of mutual funds (net sales of shares totalled nearly $1.5 billion last year, as against only $433 million five years earlier) reflects a growing willingness on the part of the investor to pay "load" charges, in order to get diversification and expert management. Even so, there are problems of selecting the right fund. The National Association of Investment Companies lists more than 150 mutual fund members.

Five other points need to be noted when considering stocks as an inflation hedge.

First, common stock prices, contrary to popular notion, do not move up in any systematic way with the cost of living. Indeed, stocks have quite often declined at the same time as consumer prices were rising. The following table, based on stocks in the Dow-Jones industrial average, gives the record for more than half a century:

Some Common Stock Declines Since 1900 *vs. Consumer Price Index*

Period	Stock Prices % Change	Consumer Prices % Change	Interval to recover Stock Price High

Source: November, 1957, *Journal of Insurance*—except for the last two periods which are our own computations.

Second, at recently prevailing price levels, the stocks of many well-known companies are selling at prices which give a current yield of 2½ per cent. and even less. Purchases at such prices can be rationalised by the shrewd investor on a basis of anticipated dividend increases over the years to come. As the following table shows, however, purchases of stock on a yield of 2½ per cent. involve either a long period of waiting for a more substantial return, or quite rosy expectations for the future course of dividend payments.

*Purchase of Stock Yielding 2½ per cent.**

Assumed rate of annual dividend Increase	Years to equal return at top of column					
	5%	6%	7%	8%	9%	10%
3%	23½	29½	35	39½	43½	47
5%	14½	18	21½	24	26½	28½
10%	7½	9½	10½	12½	13½	14½
15%	5	6½	7½	8½	9½	10

* Calculations from Moody's Investors Service.

Third, when measuring nominal gains, allowance must be made not only for the general rise in prices hedged against, but also for the capital gains tax.

Fourth, the value of stocks must reflect, in the long run, the earning power of business. This, in turn, will be vitally affected by government programmes and policies, taxes, controls and regulations. Rising business profits and dividends do not necessarily follow from higher consumer prices. It is worth noting what happened to common stocks in Great Britain during the years 1946-50 when the Labour Party was in power. During those years—marked by very high taxes, nationalisation (and threat of nationalisation) of industry, rigid government controls, and basic antagonism towards private business—though the British cost of living rose nearly 22 per cent., prices of industrial shares dropped 17 per cent.

Finally, using common stocks as an inflation hedge would prove futile if everybody tried it. Shifting to equities would develop accelerating advance in their prices to a point where collapse from overvaluation would almost certainly ensue. In eluding inflation, as in fleeing from a burning theatre, the greater the number of people who try to crowd through the same exit the smaller the chance for successful escape.

Putting Money in Commodities

As for commodities as an inflation hedge, the warehousing of bulk commodities is not a practical enterprise for most people. Dealings in "futures" markets for cotton, cocoa, wheat, and so forth are pretty much short-term speculative ventures for people not engaged in the particular business, rather than long-term investments. Frequent moves in and out of commodity markets mean commission costs which eat into profits.

Moreover, commodity prices can register violent swings under the influence of war (or threat of war), weather and crop developments, and changes in Government programmes and policies. Individually, their movements can be quite independent of the cost of living. It is impossible to anticipate tomorrow's needs for living at today's prices.

The record for 10 commodities in the past decade is shown in the table. Prices of half were lower than 10 years earlier.

Changes in Spot Prices of Basic Commodities
(Dollars per unit)

	31-12-1948	31-12-1958	% Change
	$	$	%
Cocoa, lb.	0.30½	0.40	+31.1
Copper, lb.	0.23¼	0.29	+23.4
Corn, bu.	1.41	1.13	—19.9
Cotton, lb.	0.33	0.34	+ 3.0
Platinum, oz.	91.61	52.00	—43.2
Rubber, lb.	0.19	0.31	+63.2
Silver, oz.	0.71½	0.90	+25.9
Tin, lb.	1.03	0.98	— 4.9
Wheat, bu.	2.27	1.93	—15.0
Wool, lb.	1.80	1.10	—38.9

There is no question but that some people have defended themselves against inflation through shrewd (and sometimes lucky) investments in art treasures, commodities, stocks, or real estate. For the most part, however, such people were skilled in the techniques of the various markets and had capital they could risk.

Not everyone has these opportunities. A person, in good conscience, cannot speculate with funds put aside for family emergencies or for the children's education. And not everyone is financially sophisticated, expert enough to avoid frequent investment pitfalls.

No one can really know what will be the best inflation hedge in the decade to come. What worked in the past 10 years is not necessarily a guide for the future. All that is sure is that the pattern will be different.

What this all adds up to is that for the individual there is no foolproof method of protection against inflation at all times and under all circumstances. And for the community as a whole there is no hedge against inflation. The only way to beat inflation is to prevent it and have money people can trust.

C. Canby Balderston, Vice-Chairman of the Federal Reserve Board of Governors, made this point in a speech last November before the Society of Chartered Life Underwriters in Hartford:

"While the majority of investors cannot outrun inflation, they can do something to protect themselves against it; that is, they can unite to fight it by demanding prudence in the management of national affairs and by exercising it in the conduct of their own. In short, they can insist that the nation not spend more than it earns through production and that their government live within its income."

STATE BANK OF SAURASHTRA

The activities of the State Bank of Saurashtra (General Manager: Mr. G. D. Puri, Bhavnagar), incorporated under the Saurashtra Ordinance No. X of 1950, are confined to the area comprised of the old Saurashtra State. It has branches in practically every important business centre of this region, the total number of offices now aggregating 61, made up of 24 branches and sub-branches and 37 pay offices. Though there was no expansion of branch banking during the year ended 31st December 1958, the Bank extended safe deposit facilities to two more offices during the year under review, bringing the total number of offices where such facilities are available to 38.

The Bank continued to extend, in an increasing measure, banking facilities throughout the region where it serves, thus making a useful contribution to the promotion of trade, commerce and industry in that region. The Bank continued to afford special facilities on favourable terms to co-operative banks and land mortgage banks. All these resulted in an expansion of the Bank's business during the year under review, despite the keen competition of private commercial banks. Its deposits grew by Rs. 73 lakhs to Rs. 16.45 crores and advances by nearly a crore to Rs. 7.87 crores. The gross income, too, rose from Rs. 82.09 lakhs to Rs. 84.99 lakhs.

The net profit of the Bank, however, suffered a sizable shrinkage from Rs. 22.84 lakhs to Rs. 16.29 lakhs, thus not only reversing the upward trend noted in previous years but bringing it down to the lowest level since 1953. The profit was affected by "payment of high rates of interest on deposits and higher establishment expenses." In line with the general experience of banks. The Directors have added a sum of Rs. 3.30 lakhs to the general reserve, Rs. 1.20 lakhs to the investment reserve and Rs. 2 lakhs to the bad debt reserve. A sum of Rs. 2.40 lakhs has been set aside as provision for bonus to staff and Rs. 30,000 as pension contribution to covenanting State servants. The Government's share of the profit amounts to Rs. 7 lakhs, of which a sum of Rs. 2.5 lakhs has already been paid.

The Bank's income from interest and discount has risen from Rs. 68.38 lakhs to Rs. 72.71 lakhs and that from commission and exchange from Rs. 7.19 lakhs to Rs. 7.27 lakhs. These are offset by the increase of Rs. 7.80 lakhs to Rs. 47.95 lakhs in interest paid and of Rs. 1.58 lakh to Rs. 19.47 lakhs in expenses.

The deposits of the Bank as at the end of the year amount to Rs. 16.45 crores, made up of fixed deposits Rs. 7.45 crores, savings bank deposits Rs. 4.43 crores and current and other accounts Rs. 4.56 crores. There were no outstanding borrowings from other banks at the end of the year, while at the close of 1957 they aggregated Rs. 1.68 crore. Advances have risen from Rs. 6.88 crores to Rs. 7.87 crores, while, contrary to the general trend, the Bank's investments (at or below cost) stand lower at Rs. 7.35 crores, as against Rs. 9.07 crores a year before. The market value of these investments is Rs. 7.09 crores. Cash balances too have shrunk from Rs. 3.22 crores to Rs. 2.92 crores.

TRENDS IN WORLD SILK ECONOMY

MARKED EXPANSION IN PRODUCTION

THE past five years have witnessed a distinct expansion in the world production of raw silk, the queen of fibres. The aggregate quantity actually produced during the calendar year 1958 is estimated at about 33,000 metric tons (1 metric ton=2,205 lbs.), as against 26,100 tons in 1953, representing an increase of as much as 26 per cent. The bulk of the increase—4,154 tons, to be precise—has occurred in Japan which accounts for nearly three-fifths of the total world output of natural silk; production in 1958 was 19,197 tons, that in 1953 being 15,043 tons. Silk production in India also has gone up, from 846 tons in 1953 to 1,122 tons in 1957, while production in other Asian countries, notably South Korea, has remained stationary. The trend of silk output in Italy and France, however, has been continuously downward, despite Government measures to encourage sericulture. The production in Italy has shrunk by almost half between 1953 and 1957, the actual output in the latter year being 789 tons, as against 1,478 tons four years before.

Relatively rapid increases appear to have taken place recently in China and the U.S.S.R., according to the *Monthly Bulletin of Agricultural Economics and Statistics* (December 1958 issue), published by the F.A.O. The official figures put the output in China during 1957 at 8,500 tons, as against 5,390 tons in 1953, and in the U.S.S.R. at 2,500 tons, as against 2.180 tons in 1955.

Consumption

The upward trend in world silk production was accompanied by rising consumption till 1956 since when there has been a marked shrinkage, as the following table shows:

(In metric tons)

	1953	1956	1957	January-June 1957	January-June 1958
Production:

* January-September period. —Not available.

During 1958, deliveries of silk manufacturers in Japan were running at 20 per cent. below the 1957 rate, according to the aforesaid F.A.O. *Bulletin*. In the U.S. where silk consumption had been increasing steadily as a result of a growing demand in a widening range of uses, including blended fabrics, the recession caused a 22 per cent. drop in silk consumption in 1957. Information available suggests that a further, albeit less severe, drop occurred in 1958, but, being accompanied by a reduction in stocks, this had a relatively adverse effect on imports. United States' stocks at the end of October amounted to a little more than one month's consumption, as compared with 2½ months a year earlier. In Western Europe, there is still a downward trend in consumption as a result of competition from the wide variety of synthetic fibres, aggravated by protective tariffs making raw silk relatively expensive in the case of Italy, and, to a lesser extent, France. During the 1955-56 boom, consumption in Western Europe failed to attain the 1953 volume, while the 1957-58 recession brought consumption down to the lowest level since 1947. The heaviest fall occurred in Italy and the United Kingdom. In Western Europe, stocks have recently been reduced; in mid-1958, they represented only a little over three months' requirements.

The world trade in raw silk registered a marked improvement during the period from 1953 to 1956, but suffered a setback in 1957 which continued during 1958 also. The actual extent of the fall was 10 per cent. in 1957 and 20 per cent. in the first half of 1958. All exporting countries shared in the decline, although, in 1958, Japanese exports were relatively less affected The table above gives the exports of raw silk from the main exporting countries during the years 1953, 1956 and 1957, as well as in the first half of 1957 and 1958.

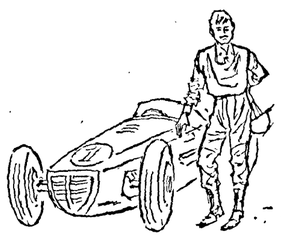
The world prices of raw silk have tended to move downward over the past five years, thanks to increasing pressure of supply in Japan and growing competition in export markets, especially from China. In recent years, the Japanese Government has taken steps to ensure price stability in the world silk market. Specific floor and ceiling prices have been fixed at which the Government purchases and sells raw silk. Market prices reached the lower limit of the stabilisation range on two occasions in 1956, but recovered subsequently following official purchases. Commenting on this development, the *F.A.O. Bulletin* observes:

"While this possibly occasioned some loss of export markets to other suppliers, the quantities taken off the market were relatively small and could be readily financed. It was only with the falling off in demand in 1957-58 that resources available for operating the stabilisation scheme became very scarce. Big purchases at the floor price raised Government stocks from 370 tons to 2,860 tons in the seven months ended June 1958. Repeated extensions of the Stabilisation Fund's borrowing limit and the raising of additional funds to finance the 1958 cocoon crops proved inadequate, and market prices fell below the minimum. Early in July, the Government ceased direct purchase of raw silk, leaving it to the Raw Silk Export Custody Company (a body of silk and doupion reelers financing exports of raw silk). Market prices were maintained at the minimum in July and August, but in September again dropped below it. Stocks in the hands of the Custody Company had mounted to 1,890 tons—a quantity sizably larger than the January-September exports. It was feared that the reserves of the Custody Company would run out."

Recently, however, world raw silk prices have staged a recovery. This is due to prospects of smaller supply, better demand from the U.S. and West European markets, and new arrangements for silk disposal in Japan. The Japanese Government has lately laid considerable stress on the need for formulating an integrated programme covering not only silk price stabilisation but also production and distribution with a view to improving the set-up of the sericulture industry. This is revealed by the White Paper on the industry issued by the Raw Silk Bureau, Ministry of Agriculture and Forestry.

The White Paper says that the Raw Silk Industry Promotion Council proposes to consider the question of delineating the future of the sericulture industry and thereby help the Government to determine its policies and take such courses of action as would facilitate private managements also to fix their operational targets. The three important issues to be specially examined, it is said, are (*a*) the range of markets that can be quickly restored to silk and the possibility of tapping potential silk markets, taking into account the competition from other fibres; (*b*) the scope and limit of rationalisation by the introduction of new techniques; and (*c*) the competitive power of sericulture in respect of farm management *vis-a-vis* other textile industries. As regards the formulation of a basic programme for silk production and distribution, particular attention will be devoted to the measures designed to lower cost structure, prevent the tendency of concentration, adoption of a combined technique of extension of sericulture and general farming, improvement in the distribution of cocoons and raw silk, and reconsideration of the silk reelers' licensing system in consonance with the progress of reeling technique and change in demand.

The implementation of the aforesaid programmes, together with the efforts made to bring about the rationalisation of the reeling sector, is expected to place the Japanese silk industry on a more solid and sound footing. Several silk reelers have already replaced their equipment with automatic silk reeling machines. Encouraged by the improved performance of these machines, more and more reelers are taking similar action. The percentage ratio of automatics to the total capacity in 1957 was 22.1 for mills and 10.4 for basins.



WORLD CHAMPIONS CHOOSE

Firestone

..SO SHOULD YOU

because — in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

To the ever growing list of Firestone racing champions, comes Mickey Thompson who recorded an average speed of over 266 miles an hour at Bonneville Salt Flats in Utah.

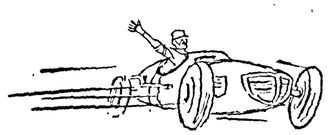
TUBELESS OR WITH TUBE



FINANCES OF TEXTILE COMPANIES

NET PROFITS LOWER—AVERAGE DIVIDENDS CUT

From A Special Correspondent

MANCHESTER, *3rd April*

MANCHESTER LETTER

TWELVE months ago, it was possible to review the financial results of Lancashire cotton companies announcing their figures in the first quarter of the year and report comparatively favourable earnings. Certainly, at that time, the mood of inertia which has persisted subsequently was already widely apparent. Warnings were duly given that trade trends made an improvement in profits unlikely in the latter part of 1958.

This prophesy was fulfilled, so that last year's annual returns were, not unexpectedly, depressing. So far this year, the results show a continuation of the decline in profitability. The following list shows the profits and dividends announced by textile companies since the beginning of 1959, bearing in mind that the accounts in many cases cover most of the calendar year 1958:

	1959		1958	
	Profit or Loss (—) £	Dividend Per cent. (Less tax)	Profit or Loss (—) £	Dividend Per cent. (Less tax)
Spinners				
Cotton and Rayon Spinners	78,301	18¾	119,163	18¾

William Yates ..	— 6,033	5	16,918	8½

Total net profits earned by the 25 companies involved were £843,512, as compared with £1,421,049 twelve months ago. The average profit has fallen from £56,842 to £33,740 per company and the average dividend has been reduced from 11.62 per cent. to 9.78 per cent.

Dwindling profits can be discerned in each section of the trade. In spinning, the average net earnings have declined from £42,602 to £23,881 per company, and the dividend has been cut from 15.60 per cent. to 14.35 per cent. Firms combining spinning and weaving have reported an average profit of £68,077, as against £105,448, the dividend being reduced from 10.84 per cent. to 8.35 per cent.

The weaving branch has for long been the "Cinderella" of the trade, and those firms concentrating on manufacture have frequently suffered more than other sections from narrowness of margins. So far this year, reports of average earnings show a drop from £21,635 to £8,583 and the dividend has been lowered from 6.84 per cent. to 4.88 per cent.

The first quarter of 1959 has been a highly eventful period for the industry and there will obviously be important changes in the months ahead. Looking back on the past few weeks, however, traders cannot be entirely reassured by the prevailing trends following the abandonment of the Yarn Spinners' Agreement. Perhaps too much was expected in the way of fresh turnover after the adjustment of the price structure, but the response from buyers has lacked the initiative anticipated by the producing element.

Complicated problems which will undoubtedly arise in settling the development programmes ahead may prolong the reluctance of users to increase their forward commitments. In the circumstances, it would be unwise to predict any marked change in the financial results which will come to hand during the remainder of the year. The situation is governed by too many imponderables, but, provided action is not unduly delayed, the prospect of a more efficient industry gives some hope for the future.

Man-made Fibre Prices

Changes in terms of sale and prices of man-made fibres have recently been announced, indicating a tendency towards more inter-fibre rivalry. To some extent, this movement follows the abandonment of the Yarn Spinners' Price scheme at the beginning of February and the subsequent revisions in selling rates for cotton yarn.

The major change has been a reduction of 1½d. per lb. for standard bleached viscose rayon staple announced by Courtaulds Ltd. This is the first adjustment for nearly six years, the prices having remained at 24d. per lb. throughout that period. The charge for standard bleached crimped staple has been simultaneously reduced by 2d. per lb. to 25d. On behalf of the Company, it has been stated that the cuts are in line with the policy of encouraging turnover as far as possible. A new factory was brought into production in 1957 and current deliveries are running at a high level. The aim of the reduction is to maintain and possibly increase the rate of deliveries, it being added that Yorkshire demand for staple has been particularly keen in recent weeks.

Changes in terms of sale for Acrilan are also expected to lead to users in the United Kingdom paying less for the fibre. Coinciding with the start of commercial scale production at Coleraine in Northern Ireland, the fibre in both staple and tow form will be sold by the makers Chemstraud Limited, delivered free in Great Britain and Ireland. The producer is to bear transport costs to any customer in those countries.

Defeating Its Purpose

Direct contact between the cotton industry and the Restrictive Practices Court largely ended when the Yarn Spinners' Agreement was branded as being against the public interest. Indirect attention is still centred on its rulings inasmuch as they have a profound bearing on industrial affairs generally. The latest decision, indicating that most of the regulations adopted by the Blanket Manufacturers' Association were also against the public interest, has created concern and caused some commentators to question the validity of the arguments being used by the Court. In its findings it was freely admitted that several aspects of the agreement operated by the blanket manufacturers did not affect the general public one way or the other. Under the terms of the Act, however, the Court decided that the public did not derive benefits from these arrangements and they were, therefore, declared contrary to the public interest.

It is hardly surprising that, in the circumstances, observers have pointed out that the real purpose of the Act, aimed at the suppression of restrictive trade practices, is not being carried out when perfectly innocuous agreements not affecting the public are being ruled out of order. From the first few cases investigated by the Court, it is already clear that it will be remarkably difficult to satisfy its members that any agreements at all are in the public interest. The interpretation of the Act so far bids fair to put an end to official co-operation between firms in any industry whose regulations are investigated.

The cotton yarn spinners put forward a very reasonable case indicating their firmly held belief that the abrogation of the scheme would lead to unemployment in the area. The Court accepted this contention but were apparently complacent about it, expressing the opinion that contraction in textiles was to be encouraged, and implying that labour should be shifted to other trades. No wonder one commentator has described this attitude as "a most extreme stringency of interpretation, based on economic assumptions that were perhaps not fully argued."

Finding the Labour

Any industry which has suffered so severely as cotton over the past few years, to say nothing of previous setbacks, invariably finds it difficult to recruit an adequate labour force from the youth of the area. The average age of the current manpower presents a problem in itself. Mr. Ernest Hirst, President of the Master Spinners' Federation, set out the advantages which can still be offered by the mills, once a realistic reconstruction scheme has been adopted, when he addressed the recent annual meeting of the organisation. He said:

"The industry has the know-how and the determination to install the most modern machinery and equipment if there are reasonable prospects of running it economically. Already, our best mills can compete with any in the world and we have made a point of keeping up-to-date by means of special trade missions and individual visits to other industries throughout the world. With the help of the new wage structure which has been

MR. T. KRISHNA RAO, B.A., B.L.

AUDITOR:
MR. A. UMANATH RAO, B.A., F.C.A., Chartered Accountant.

DIRECTORS' FIFTY-THIRD ANNUAL REPORT.

The Directors have pleasure to submit to the shareholders the Fifty-third Annual Report for the year 1958. After making the necessary provisions a sum of Rs. 9,45,008.69 is available for distribution. The Directors recommend the following appropriations:

	Rs.	nP.
To Provision for Income-tax	3,91,000	00
To Preference Dividend	51,625	00
To Dividend on Equity Shares at 10 per cent.	2,55,000	00
To Bonus to Staff	2,10,000	00
	9,07,625	00
Leaving Balance to be carried forward	37,383	69
Rs.	9,45,008	69

The Bank's advances at the end of the year were 46 per cent. of the deposits as against 49 per cent. the previous year. The level of advances was generally lower compared to the previous year resulting in a reduced profit for the year.

The Equity Shares issued this year were fully subscribed. The shares set apart for employees were taken up by a majority of them. The limited number of shares remaining after allotment to the old shareholders were allotted to as many as we could of the large number of patrons at our newer branches who had also applied for shares.

Eight new branches were opened during the year, at Matunga in Bombay City, at Bangalore Cantonment, Bellary, Jijapur, Gadag and Raichur in Mysore State, at Tellicherry in Kerala State and at Kolhapur in Bombay State. All these are making satisfactory progress and more branches are planned for 1959. Our Karachi office was closed during the year.

The year witnessed further strengthening of our ties with leading Foreign Banks. A good number of representatives of our correspondents and others who came as delegates to the World Bank Conference in Delhi accepted our invitation to visit us in Bombay and Bangalore. These visits provided opportunity for useful exchange on topics of mutual banking interest.

During the year one of our Directors visited the West Asian countries accompanied by a Deputy General Manager of the Bank, and another Director visited Tokyo, Osaka, Honskong, Singapore, Bangkok and Colombo, both to study the possibilities of increased foreign business, chiefly exports, in keeping with the country's export promotion drive. The contacts made during these tours have been extremely useful.

Thanks to the co-operation of our Foreign Correspondents, one senior officer returned after a study of banking methods in the U.S.A. at the Bank of America, and two officers after a refresher course at the Deutsche Bank, Hamburg. One more senior officer will soon be proceeding to the U.S.A., and 2 officers to Hamburg. The experience gained with the Foreign Banks will further assist development of the Bank's activities on modern lines.

A new addition to the Bank's range of services is the Executor and Trustee Department. Our thanks are due to the Central Bank of India, Ltd., who provided training in this line for one of our officers at their Executor and Trustee Co.

The long-felt need of the Bank to have its own building to house the Administrative Offices at Bangalore is to be fulfilled early. The Government of Mysore have been pleased to alienate to us a spacious plot in the heart of the City opposite the Bangalore Town Hall for this purpose.

The Directors thank all shareholders, customers and staff for their help and co-operation during the year.

ADMINISTRATIVE OFFICE,
BANGALORE-2,
Dated 16th January, 1959.

By Order of the Board,
A. DAMODAR PAI,
Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1958.

EXTRA-LONG STAPLE COTTON

SUPPLY EQUAL TO TWO YEARS' REQUIREMENT

THE surplus problem in world cotton is not confined to the long, medium and short staples. Extra-long staple cotton, that is cotton of staple length over $1\frac{3}{8}$", which at present forms no more than 6.5 per cent. of the total free world production of the fibre is also facing a situation characterised by supplies exceeding offtake. For instance, aggregate free world production of extra-long staple cotton during the last season was 1.2 million bales while consumption was of the order of only 770,000, thus leaving a wide margin of 430,000 bales.

The situation at the beginning of the current season was unquestionably one of surplus. Stocks in producing countries aggregated nearly 700,000 bales, equal to about seven months supply in terms of annual offtake. According to the estimates of the International Cotton Advisory Committee, Washington, aggregate production during the current season will set an all-time record of 2 million bales, an increase of about three-fourths of a million bales, as compared with 1957-58 and almost double the 1950-51 to 1954-55 average of 1.1 million bales. The sharp increase in production is attributed to the marked increase in acreage and yield, particularly the latter. Total acreage is estimated at a record 2.1 million, 20 per cent. higher, as compared with last season, while average yield, estimated at 444 lbs. per acre, is higher by over thirty per cent.

Production

Production in Egypt alone is estimated at around 1.2 million bales, which is roughly equivalent to total world demand for these staples in recent years. Acreage of extra-long staples this season was expanded to a record 1,174,000 acres. Although this, undoubtedly, was the major factor explaining the increase in production, the importance of yield must not be overlooked. Average yield per acre rose by 15 per cent. which is reflected in the marked improvement in yield of the Karnak variety and the increased acreage sown to the higher yielding Menoufi variety.

There has been further significant increase in acreage and a return to more normal yields in the Sudan and production, consequently, could set a new record. With the continued development of irrigation facilities, acreage is estimated to have reached a record 637,000 acres, as against 495,000 acres last season. The Gezira Board's first estimate of yield was 450 pounds per acre, but subsequent crop progress have led trade sources to predict that yield could be even higher. Production in the Sudan, therefore, could surpass the previous record of 554,000 bales harvested in 1956-57 to reach a new record of 560,000 bales.

Based on present estimates, total supply of extra-long staples is put at nearly 2.7 million bales, an increase of about 750,000 bales as compared with 1957-58. The seriousness of the present surplus is evident from the fact that supply represents over 2 years' requirements in terms of the present rate of offtake. The surplus in extra-long staples is, therefore, more burdensome than it has been in other staples since the end of the war.

The following table indicates the supply position of extra-long staple cotton in the producing countries:

(In '000 bales of 478 lbs.)

* Preliminary. † Includes 50,000 bales from stockpile.

As regards exports, it would appear that world exports of extra-long staple cotton over the first three or four months of the season were running at a rate significantly higher than a year ago, with most of the increase going to communist countries. Shipments from Egypt to the free world continued to decline significantly while that to the communist countries increased considerably. The major decline in exports to free world countries has occurred in the case of the U.S. Exports to Italy were well maintained while those to France were higher. Exports to the communist countries during the first half of the season were higher by over 40 per cent., as compared with the same period in 1957-58. The rate of export to the U.S.S.R. is far ahead of that in any other season. So was the case with shipments to China. Czechoslovakia and East Germany also absorbed sizable quantities. In the aggregate, communist countries presently account for about 60 per cent. of Egypt's total exports of extra-long staple cotton.

During the period, August to September 1958, exports from Sudan were slightly lower, as compared with that in the same period a year ago. But exports to communist countries were about in line with those of last season, although the quantity shipped was still relatively small. Following the recent abolition of the system of reserve prices and the decision to sell by auction and the consequent decline in price, export demand has picked up and substantial export sales have been effected of late. The U.S. shipped 200,000 bales of extra-long staple cotton to Spain during the first five months of the season under a P.L.480 agreement. But U.S. prices being higher than those of competitive growths—the U.S. has not granted a subsidy on extra-long staple cotton—exports to other countries are virtually non-existent.

Reflecting this surplus position, there has been a further decline in the prices of extra-long staple cotton during January and February. Prices are now at the lowest level since the end of the war and the substantial premium over medium staples normally given to these cotton have almost disappeared.

Domestic prices in Egypt have stabilised at slightly above the support level in recent months but export prices continue to decline. Sudan cotton prices declined sharply following the decision to abolish the system of reserve prices and are now considerably lower than at the beginning of the season. Lower prices of

AUDITOR'S REPORT

I beg to report that I have audited the above Balance Sheet of the Canara Bank Limited as at 31st December, 1958, and also the annexed Profit and Loss Account of the Bank for the year ended that date with the Books of Account and Certified Returns from the branches and that I have visited some major branches of the Bank during the year and have examined the Books of Account and Cash and Securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of the audit.

(b) Such information and explanations have been found to be satisfactory.

(c) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank.

(d) The Returns received from the branches have been found adequate for the purpose of my audit.

(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the Books of Account and the Returns.

(f) In my opinion and to the best of my information and according to the explanations given to me the said Accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December, 1958.

(g) In my opinion proper Books of Account as required by law have been kept by the Bank so far as appears from my examination of those books.

A. UMANATH RAO, B.A., F.C.A.,
Chartered Accountant,
Auditor.

SUGAR SUPPLY POSITION NOT ENCOURAGING

MILLS CARRY LOW STOCKS

CRUSHING operations in many sugar factories are practically over and are drawing to a close in several others. But it is not yet possible to say precisely as to what the total output of sugar would be in the current season (November 1958-October 1959). For the available figures relating to the quantity of sugar actually produced cover only the first four months of the season, that is, up to the end of February 1959. There are two divergent estimates of the production for the current season, one official and the other trade. Thus, the Union Food and Agriculture Ministry, in its latest Annual Report (1958-59), points out that "the prospects of sugar production for the current season appear to be the same as last year (1,979,000 tons)." The trade estimate, however, places the output much lower; addressing the recent annual meeting of the Indian Sugar Mills' Association, Mr. P. Hadfield said: "....the latest estimates available with the Association show that production is likely to come down to about 1,850,000 tons."

The low level of sugar production has been in evidence despite the marked expansion of nearly 176,000 tons in the capacity of sugar industry. Ten new factories, of which nine are co-operatives, with an aggregate capacity of over 70,000 tons, have gone into production in the current season, and 23 existing units had completed their programmes for an additional annual capacity of 104,000 tons by the end of the last season. With this addition, the total productive capacity of the industry works out to 2.20 million tons, on the basis of 120 working days and 10.00 per cent. recovery. Assuming that sugar production will be 1.85 million tons as assessed by the trade, the actual setback in output will be much more than a comparison with the production in the previous season.

Reduced Cane Supply

The inability of white sugar industry to maintain a high level of output, let alone an increase in production, must be attributed to the substantial reduction in the supply of cane to the factories. This, in turn, is due to the continued large-scale diversion of cane to *khandsari* and *gur* manufacture, owing to the relatively high prices commanded by these commodities. The position would have been worse but for the slight improvement in the size of the cane crop on account of the increase in the area sown to cane. The all-India second estimate of the crop for 1958-59 puts the total area at 4,896,000 acres, as against the corresponding adjusted estimate of 4,849,000 acres for 1957-58. The area at the second estimate stage forms roughly 95 per cent. of the area under the crop finally reported. On this basis, the area under cane comes to 5,154,000 acres, as against 5,021,000 acres (1957-58 final estimate). Taking the average yield of cane per acre at 12.73 tons, same as last year, the aggregate quantity of cane harvested in the current season may be estimated at 65.61 million tons, which compares favourably with 64.14 million tons harvested in 1957-58.

The low level of white sugar production, together with the lower carryover of the previous season, has resulted in a fall in the available supply of sugar, as the following table shows:

(In thousand tons)

	1958-59	1957-58	1956-57
Opening stocks	336	435	533
Production	1,979*	1,979	2,029
Total supplies ..	2,315	2,414	2,562
Exports	50†	36	144
Supplies available for domestic consumption	2,265	2,378	2,418
Offtake for domestic consumption.	2,073‡	2,042	1,983
Closing stocks as on 31st October..	192**	336	435

* Official estimate. † Quantity released.
‡ On the basis of figures up to end of February 1959.
** Estimate only.

It will be seen from the above table that the closing stocks of sugar with the mills at the end of the current season will be very poor, being just 192,000 tons, as against 336,000 tons a year before and 435,000 tons two years before. In view of this, one may expect a distinct hardening tendency in sugar prices in the coming month, assuming that no further controls will be introduced by the Government. Considering the increase in domestic demand, there is certainly little justification for exports of sugar and that at a very heavy loss. The world price of sugar has declined perceptibly in recent weeks, notwithstanding the cut in the export quotas of the International Sugar Agreement member-countries and the additional voluntary limitations imposed recently by the Sugar Council. Cuban raw sugar is now quoted in the New York market at 2.94 cents per lb. (f.o.b. Cuba), as against 3.67 cents in the beginning of the year. Even the quotation for 1960 delivery has gone down appreciably. Spot sugar in London has come to be quoted at as low a level as £27⅛ (about Rs. 362) per ton, as against £32 (Rs. 427) per ton. This compares with the average f.o.b. price of £33¾ (Rs. 450) per ton realised by this country on its exports in the latter half of 1958. To quote a report from London: "Buyers are cautious and they are not willing to take anything except bare requirements. The Cuban Government has set an output target of 5.8 million tons. If the production were to reach this size, bearishness could be stimulated."

Export Policy

It is against this background that one has to view the Government of India's policy of compulsory exports of sugar. During 1958, the policy, as Mr. B. M. Krishnan, Chairman of the Mysore Sugar Company, Limited, observed in his speech at the Company's annual general meeting last week, entailed not only a sacrifice on the part of the industry at the rate of about Rs. 300 per ton of sugar but also a loss of substantial excise and other revenues to the Central and State Governments. Mr. Krishnan is right when he points out that, with the international sugar markets showing no improvement in the marketability of sugar at economic prices, with the downward trend of production in the country as a whole, the steadily rising demand for internal consumption and the issue of exports having been challenged, a situation has arisen which merits a reconsideration of the entire export policy, so far as the current year is concerned.

The trend of sugar output and despatches during the first four months of the current season as compared with the corresponding period of 1957-58 is indicated below:

(In tons)

	Production		Despatches	
	1958-59	1957-58	1958-59	1957-58
November	89,700	104,948	104,763	153,857
December	356,510	356,809	141,646	140,446
January	474,790	431,209	188,600	145,918
February	410,000	414,434	196,000	195,487
Total ..	1,331,000*	1,336,000†	691,000	635,702

* Excludes 31,050 tons of sugar produced prior to November, 1958.
† Excludes 31,029 tons of sugar produced prior to November, 1957.

MOVEMENT OF COAL

PRIVATE MERCHANTS IN A SAD PLIGHT

RAILWAYS have a virtual monopoly in the transport of coal and their policy in respect of movement of this important fuel is expected to be sufficiently flexible and efficient to keep pace with the increasing production, so that the larger output may be promptly moved to meet the growing needs of industries. The railways, however, have their indisputable say in the imposition of limitations, restrictions, routing, availability of empties, allotments, movement in bulk, etc. While it is not denied that such restrictions are required for purposes of operational expediency of the railways, it is often found that the producers' and consumers' wants in both normal and abnormal times are not given the attention they deserve and the decisions of the railway authorities in such matters are often completely devoid of any sympathy and consideration for the difficulties of producers and consumers.

While making the aforesaid complaint, at the annual general meeting of the Indian Coal Merchants' Association, held at Calcutta a few days ago, Mr. Madhusudan Shethia, Chairman of the Association, pointed out that the difficulties of upcountry consumers, in respect of wagon offerings, had remained unsolved, though the situation had improved to some extent in respect of down-country consumers. In fact, the position in the South Eastern Railway has, according to him, worsened. This Railway has been called upon to cater to the increased flow of traffic to the steel plants at Rourkela and Bhilai, as a result of which other consumers have been put to extreme hardship. In such situation, the role of the coal merchant who acts as a middleman between the producer and the consumer is far from happy. Giving an instance of such hardship, Mr. Shethia said:

"Collieries situated in Jharsaguda sphere which were hitherto getting piecemeal allotments for down direction have suddenly been told that they should arrange to load block rakes or half rakes for consumers in down direction; otherwise, no piecemeal allotments would be given, as it is operationally inconvenient to the Railways who have no spare line capacity to do the shunting and sorting of mixed consignments of coal for up and down directions. Such peremptory deviations from the established system of allotment not only put the collieries to great inconvenience and loss but the coal suppliers have also to take a good deal of beating from their buyers who are not prepared to listen to anything and only gauge the supplier's efficiency strictly in terms of his despatch performance."

Mr. Shethia quoted another incident where the wagons, after being loaded by the colliery, were left unmoved by the railways for over a fortnight. This precluded further daily allotments and drove the consignees to such a point of exasperation that they laid the blame on the shoulders of the suppliers.

The consumers' requirements of soft coke are also not being adequately met. This, according to Mr. Shethia, is due to the quota coupon system which is being adopted in respect of movement of soft coke. It is stated that some of the collieries are not inclined to manufacture soft coke, in order to increase the sale of their steam coal. Sometimes, the production of soft coke is said to be hampered by the inadequacy of space at the collieries' siding. It is stated that, in the last quota period, about 11,000 wagons remained unutilised by the collieries. This means that about 20 per cent. of the soft coke quota coupons issued for that period was unutilised. Mr. Shethia was of the view that the soft coke quota system should be dispensed with, just as the 'BRK' quota coupon system in respect of coal had been abolished.

While on the subject of soft coke quota coupon system, the Chairman of the Coal Merchants' Association referred to the discrimination made in favour of the State Trading Corporation, which he said was allowed the undue privilege of being permitted to move soft coke without quota coupons. The coal merchants view this special prerogative accorded to the S.T.C. with some concern and anxiety, as it is likely to affect their business. Expressing this concern, Mr. Shethia observed:

"Depot holders are sooner or later bound to realise that State Trading Corporation can do what coal merchants cannot hope to do and, naturally enough, they will place their permits with State Trading Corporation for compliance rather than remain tied to coal merchants. I should think this prerogative is of ominous significance, as it would undermine the very foundation on which the private sector is functioning, taking the risk of supplying on credit to their constituents, satisfying them on the score of quality, sufficiency of movement, etc. I personally feel that the authorities, who have conferred this prerogative on the State Trading Corporation, should review the matter and, in all fairness to the private sector, withdraw these special privileges to the State Trading Corporation or let the private sector also enjoy the same privileges."

Another serious question which has been confronting the coal merchants for some time now, and to which Mr. Shethia made a reference, is the shortage in weight of coal at destination, as compared with that marked in the railway receipt. Repeated representations to the railway authorities have been of no avail. On the contrary, the authorities are said to be seeking protection under the provisions of the Railways Act which absolve them of all responsibility for the shortage in weight. The provisions also exonerate the railways from admitting that they have received so much weight as is recorded over their own weigh-bridge and then embodied in the railway receipts. The result is that the loss on account of the shortage in weight and the freight thereon have to be borne by the coal merchants. The pilferage of soft and hard cokes from open wagons is said to be on a much larger scale than in the case of coal. The merchants' representation for provision of covered wagons to reduce the loss has so far been a cry in the wilderness. It is somewhat disquieting to hear from Mr. Shethia that the facility of providing covered wagons for loading soft coke is being extended in full to the State Trading Corporation. In addition, the S.T.C. is being allowed the facility of having its personnel at weighbridges to watch and witness the weighment of wagons. It is not known on what special grounds such overriding consideration is being shown to the S.T.C. Is it an indication of the future for private trade in coal?

COAL PRODUCTION

Mr. A. Zaman, Coal Controller, has suggested a probe into the factors responsible for the disquieting trend of slackened tempo in coal production with a view to finding out a workable solution of the problem. Addressing the twenty-sixth annual general meeting of the Indian Colliery Association at Lhanbad last week, Mr. Zaman said that the increase in coal production in 1957 had been to the extent of 10 per cent. over 1956, but only a 4 per cent. increase was recorded in 1958 over 1957. This showed a slackening tempo in production.

Mr. Zaman referred to the difficulties standing in the way of importing coal-mining machinery from abroad and said that this was a problem which this country as a whole was facing.

He said that the Coal Prices Revision Committee's decisions had been delayed as all aspects of the question of changes in the price structure had to be considered carefully. Coal was a basic material and any change in its price would also affect other industries. Some delay in arriving at a decision was therefore, inevitable.

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National D'Escompte de Paris, as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-section (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Calcutta Branch;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian branches of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

BOMBAY, 28th March, 1959.

THE MYSORE SUGAR COMPANY, LIMITED

SPEECH OF MR. B. M. KRISHNAN, CHAIRMAN, AT ANNUAL GENERAL MEETING

SUGAR EXPORT POLICY MUST BE RECONSIDERED

THE Twenty-fifth Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Registered Office of the Company at Bangalore on Tuesday, 31st March 1959, under the chairmanship of Mr. B. M. Krishnan, I.A.S. (Retired), Chairman and Managing Director of the Company. Following are extracts from the speech of the Chairman on the occasion:

"It gives me very great pleasure to welcome you to this twenty-fifth annual general meeting of the shareholders of the Mysore Sugar Company, Ltd. The Directors' report and the audited statements of account for the year ended 30th June 1958 have been in your hands for the required statutory period and may, I suggest, be taken as read. An examination of these accounts would have given you an idea of the all-round progress recorded by your Company during the year under report, which, I am happy to say, has been in very many respects one of the best in its 25 years' existence.

"Before I proceed with my review of the position of the sugar industry in the country and of the working of your Company, in particular, I deem it my duty, on this occasion, to make a reference to the sad demise of Sir Mirza M. Ismail, former Dewan of Mysore, a few months ago. The sugar industry at Mandya and your Company owe their existence, in a large measure, to the foresight and vision of this gifted son of India. He continued in his lifetime to take a keen interest in the progress of the Company and guided it along progressive lines throughout the period that he was the administrative head of the old State of Mysore.

A Critical Year

"To the sugar industry in India, the year 1957-58 was rather a critical one. Sugar production, which was steadily rising for some years and which had reached 20.26 lakh tons during 1956-57, which was very near the target of 22.5 lakh tons fixed in the second Plan, declined to 19.75 lakh tons during 1957-58, in spite of the fact that there was an increase in the number of factories from 147 to 157. The fall in production was pronounced in the two predominant sugar-producing States of Uttar Pradesh and Bihar. As against this, there was a marked rise in production in the factories in Bombay and the South Indian States.

"With reference to the State of Mysore, it may interest you to know that the number of sugar factories has risen to six after the States Reorganisation in November 1956 and that a seventh one is fast coming up at Pandavapura within about 18 miles of our factory at Mandya. As against a production of 72,000 tons by four factories in the year 1957-58, the future production of sugar in this State is estimated to be in the order of about 1,20,000 tons, which, by any reasonable estimate, would render the State self-sufficient in regard to this important essential commodity.

"In June last year, the Government of India promulgated a law relating to sugar exports, under which every sugar factory in India was called upon to offer for export 2½ per cent. of its production during 1957-58 season, so as to make available 50,000 tons for export, in order to earn the much needed foreign exchange. Conditions in the sugar market have materially changed from what they were in the previous year when India was able to export a sizable quantity of sugar on favourable terms. The scheme of compulsory exports entailed not only a sacrifice on the part of the industry at the rate of about Rs. 300 per ton of sugar but also a loss of substantial excise and other revenues to the Central and State Governments. The export quota allotted to our factory was 1,000.3 tons and the loss on this transaction is estimated at Rs. 3 lakhs. Although the sales actually took place during the current year, the impact of the loss has partly been absorbed in the accounts of the year under report. The policy of compulsory exports of sugar has been proposed to be continued for the current year and an increased quota of one lakh tons has been allotted to the industry for this purpose, of which a moiety has already been released. With the international sugar markets showing no improvement in the marketability of sugar at economic prices, with the downward trend of production in the country, as a whole, the steadily rising demand for internal consumption and the issue of exports having been challenged, a situation has arisen which merits a reconsideration of the entire export policy, so far as the current year is concerned.

New Cane Price Formula

"Another development of a far-reaching consequence has been the statutory recognition accorded by the Government of India to the principle of linking the price of sugarcane with the price of sugar by an amendment made in September 1958 to the Sugarcane (Control) Order, 1955. This consists in guaranteeing to the cane grower a deferred price for sugarcane, over and above the initial price, calculated according to a formula. The formula, as originally published, caused us grave concern and I had dwelt on it at some length in my speech to the general body last year. By the application of the formula, the raw material supplier has been virtually made a partner in the profits of the sugar industry, for which, perhaps, there is no close parallel in any other industry. It is a matter for gratification that, as a result of representations made by the industry, the Government of India have recognised the need for inclusion of an adequate allowance for rehabilitation of plant and machinery in the cost structure of sugar for purposes of fixing the percentage share of sugar price to be passed on to the growers. This question of rehabilitation allowance is also now under examination by the Tariff Commission and its recommendations are awaited with interest.

"Turning now to the affairs of your Company, I am glad to state that the results of working during the year 1957-58 have been satisfactory from all points of view. Production of sugar in our Mandya factory rose to 39,520 tons which, I may say, comes to 2 per cent. of the total production of all the 157 sugar factories in the country. The quantity of sugarcane crushed in the mills was 3,83,775 tons, the percentage of sugar recovery being 10.4. Both the figures of cane crushed and sugar produced are the highest so far in the history of the Company. There was a substantial increase in the sales of sugar which amounted to a record figure of Rs. 3,63,90,683. This is inclusive of excise duty at the rate of Rs. 291.25 per ton, in which is also merged the sales tax that was being separately levied on sugar till the middle of December 1957. As in the previous years, the sales were regulated according to the release orders issued by the Ministry of Food and Agriculture on a monthly basis. This system ensures an even flow of sugar to the markets at steady prices, but it throws a heavy administrative and financial burden on the factory in having to keep large stocks under difficult storage conditions and involving locking up of funds, which necessitate resort to bank overdrafts to an unprecedented degree.

"The statutory price of sugarcane remained unchanged at Rs. 39.20 per ton for 'gate' cane and Rs. 35.66 per ton for 'rail' cane. Over and above this, your Directors, after a careful consideration of all the implications of the problem, have recently sanctioned an additional price of Rs. 3 per ton of cane, on an *ad-hoc* basis, in keeping with the practice of paying an extra price or 'bonus' to the cane supplier in the past. The cost on this account comes to Rs. 11,51,442, which is merged in the item of cost of cane shown in the accounts and is under disbursement. In respect of the previous year also, which was a comparatively unfavourable year, your Directors have, on reconsideration, granted an additional price of Rs. 2 per ton, meeting the cost from the profits of the year under report. If any justification is to be advanced in support of the above measures, suffice it to say that these payments were decided upon to preserve and consolidate the continued cordial relationship that has all along existed in the Mandya area between the sugarcane growers and the management, in the belief that they have contributed not a little to the present state of development of the Mysore Sugar Company.

Distillery

"On the distillery side, production and sale of alcohol showed a marked improvement over its results in the previous years, though there was no corresponding increase in profits earned. The prices that we were able to realise on sale of alcohol to industries, using alcohol as raw material, have been steadily falling even below cost of production. It is, therefore, a matter for serious consideration why, with a large supply of alcohol at our disposal, we should not embark on some useful and remunerative schemes of development which would automatically solve our alcohol problems. In this aspect, this is not a new problem at all. The Alcohol Committee set up by the Government of India have reviewed the industrial utilisation of alcohol on an all-India basis and suggested a high target for our Company to reach, i.e., manufacture of cellulose acetate. Though not possible of fulfilment in the immediate future, our Company, in my personal view, should pursue its endeavours in this direction for a realisation of this ideal in as near a future as possible.

"As you would have seen from the report and accounts, the gross profit earned during the year under report has been Rs. 45,70,846, of which, the net profit that is available for distribution is Rs. 6,87,575. The corresponding figures for the previous year were Rs. 15,65,562 and Rs. 4,33,225, respectively. This impressive rise in profit is to be attributed to the higher production and sales of sugar, as also to the higher level of price realised on the year's sales. But, more than these, it is the improvement in the percentage of recovery, with the consequent lower cost of production, that has contributed to the increased profit. While the provision for depreciation at Rs. 6,72,785 is more or less the same as in the previous year, the provision on account of income-tax has gone up to Rs. 15 lakhs, as against a *nil* provision in the previous year. Besides, a sum of Rs. 49,065 has been transferred to development rebate reserve, as required under the Finance Act, 1958. A new item of provision, which your Directors have thought essential to make, is a reserve for rehabilitation of plant and machinery, for which a sum of Rs. 6 lakhs has been set apart. I shall revert to this subject later on.

"As regards the distribution to the shareholders, in addition to normal dividend, which has now come to stay, as it were, at 20 per cent., your Directors have declared a Silver Jubilee bonus of 10 per cent. in commemoration of the year under report as the Silver Jubilee year of the Company. This will absorb Rs. 6,53,784. After providing Rs. 1,00,000 to the employees' gratuity fund, there is a surplus of Rs. 1,44,257 which is proposed to be carried forward. I may also mention that the employees of the Company have been granted a special Silver Jubilee bonus of one month's pay, in addition to the normal bonus of three months' pay.

Financial Position

"Experts in company finance have assessed the Company's balance-sheet as at 30th June 1958 and pronounced that it discloses 'a sound financial position.' This assessment is based on the fact that the paid-up capital is Rs. 21.79 lakhs and reserves and surpluses aggregate to Rs. 94.17 lakhs, the general reserve alone accounting for Rs. 62.50 lakhs. The current liabilities are at Rs. 133.13 lakhs, including a provision of Rs. 30.47 lakhs for taxation. The gross block of Rs. 157.31 lakhs stands written down at Rs. 61.13 lakhs and there have been additions, during the year under report, to the tune of Rs. 5.34 lakhs. Note will also have to be taken of the fact that capital works are in progress accounting for Rs. 2.04 lakhs, the current assets aggregating to Rs. 185.93 lakhs, which cover the current liabilities and also a provision for taxation by a comfortable margin.

"Judged by its performance against the all-India background for sugar industry, your Company has taken the second place for having handled the highest crush by any single factory during 1957-58. Similarly, it is the second highest factory in India during the year under report accounting for the largest production of sugar. Your Company has also kept up its tradition on an all-India basis for occupying the 'first place' for managing to have the longest crushing season during 1957-58.

Labour-Management Relations

"Labour-management relations gave cause for some anxiety during the year 1958-59. There was an insistence for an effective and immediate settlement of some arrear demands for 1955-56 which were *sub judice* along with some others formulated and put up for 1956-57. The demands related to such important and complicated issues as revision of scales of pay, raising of the D.A. scales in force, grant of additional bonus, etc.—issues of some significance and serious financial commitment which required a careful and meticulous examination. They overlapped in some places the examination by the Central Wage Board for the Sugar Industry, now engaged in dealing with matters pertaining to a fair-wage structure and a bonus scheme for sugar industry in the country. I am glad to say that, as a result of direct negotiations between the representatives of the management and labour, all the old and fresh disputes have been amicably settled and an agreement in this regard was signed on 8th December 1958.

"I shall be failing also in my duty to the employees, if I do not place before you the psychological outcome of all the above measures. That labour in our Company is not merely satisfied in fighting for what it considers to be its legitimate demands is more than borne out by the fact that, keeping in view what it owes to the general prosperity of the country as a whole as its duty, along with the other sectors of citizenship, it has voluntarily agreed to contribute towards the success of the second Five-year Plan by investing in National Savings Certificates. Their aggregate effort is likely to result in a final investment of Rs. 1½ to 2 lakhs. Let me offer thanks to our employees, on your behalf and on my own, for this laudable and patriotic effort.

Bagasse for Paper Production

"An important development relating to the working of our factory at Mandya in future, to which I wish to make a reference here, is the arrangement which your Directors are now engaged in finalising for the release of bagasse, obtained in the sugar factory, to the Mandya National Paper Mills, Ltd., for the manufacture of paper. It may be recalled that, two years ago, the then Chairman of the Company, while addressing you, had referred to a proposal received from an *entrepreneur* for setting up a factory at Mandya for the manufacture of paper from out of bagasse. This venture has now become an accomplished fact by the formation of a company to be located in Belagula in Mandya District, called the Mandya National Paper Mills, Ltd. After a series of negotiations between the promoters of the Paper Mills and your Directors, both directly as well as under the auspices of the Government of Mysore, and after a careful consideration of all aspects of the matter, your Directors have finally agreed to release a portion of the bagasse turned out by our sugar factory at Mandya to the Paper Mills.

"I have no hesitation to assure you that the agreement will be so drafted finally as to safeguard fully the interests of the Mysore Sugar Company. Your Directors feel that the manufacture of paper in our country at this juncture has become a national problem and, therefore, any help and co-operation which your Company, as a premier concern in sugar industry in this part of the country, would be ready to offer to the Mandya National Paper Mills, should be construed as a national effort, besides being a reasonable business deal.

Rehabilitation Problem

"The problem of rehabilitation of plant and machinery of your Company has become in the last few years a most pressing one. In this respect, we face a situation in common with the great majority of sugar companies in India which, as you are aware, were originally set up during the depression period when prices of machinery were less than a sixth of what they are today. The provision for depreciating a plant under admissible Income-tax Rules does nothing to provide the present replacement values where, as in the case of sugar machinery, prices, as I have said, have multiplied six times. Nor are the reserves of your Company, any more than those of smaller companies established at the time, available for this purpose. This is partly because we have already utilised all these reserves to expand our factory's crushing capacity which is now nearly three times the original capacity, but it is also because of the far greater needs of working capital. There are thus no *free* and readily available reserves, as such, that can be addressed to our urgent rehabilitation needs. It is for this reason that your Company has joined with other members of the Indian Sugar Mills' Association in submitting a special memorandum to the Tariff Commission on the urgency of rehabilitation allowances, to take account of the inescapable and pressing expenditure which must be incurred in about the next five years in this direction.

"The financial problems raised by these needs have caused great concern. In part, as you are aware, new financial problems have been created by the demands of labour and of cane growers to share in the profits of the Company, to which I have already referred. As already stated, we have reached recently a settlement with our employees which involves an additional charge for labour in the factory amounting to Rs. 7 lakhs non-recurring and Rs. 6 lakhs recurring. At the same time, we have this year reached an understanding with cane growers in regard to a system of price-linking, which has lost the Company about Rs. 16 lakhs in the current year. In one way or another, a diminution of profits available for distribution by about Rs. 20 lakhs has thus to be reckoned with hereafter. This figure, I might remind you, is about four times the figure required to service the equity capital of the Company. It is obvious that the sum we can pay to reserves, under conditions like these, is severely limited, and that some approach to the capital market has to be made if the Company's inescapable rehabilitation and expansion programmes are to be put into operation and the acute shortage of working capital remedied. It is after a careful consideration of all these factors that your Directors have eventually decided that, to start with, Rs. 6 lakhs may be set apart for purposes of building up a 'rehabilitation reserve, for the year under report. Whether we would be able to maintain this rate of contribution hereafter is a matter on which I am unable to give any definite opinion at this stage.

Rationalisation of Capital Structure

"This leads me on to the analogous question of rationalisation of the capital structure of this Company, to which I made a reference in my speech last year and to which references have also been made in the years previous thereto, by my predecessors. I said last year that, 'during this memorable year of the silver jubilee of the Company, we may be able to bring about a reorganisation of the capital structure of the Company.' Your Board of Directors are actively pursuing this question and it is too early for me to place before you any definite and final results of their deliberations. Nevertheless, I may inform you that, while examining the capital rationalisation question, your Board of Directors felt that there is a need for a thorough examination of the assets position of your Company and, for this purpose, they have entrusted the task to Mr. P. R. Balakrishnan, Industrial Adviser to the Government of Mysore. He is particularly qualified to examine this question and tender advice, because of his close connections with the factory at Mandya and the Directorate in the years past, in some capacity or other.

"He has covered most of the ground and has placed in my hands very recently an interim report. I have not been able to examine his findings and draw my own conclusions so far. After I do so and formulate my own proposals, your Board of Directors will have to take some momentous decisions on the capital expansion of your factory in the very near future. The report reveals that our factory, taken as a whole, leaves nothing to be desired except that the Company has to embark very soon upon the capital expansion programme to replace and modernise a few vital units of its plant and machinery. Funds will have to be found very soon for this purpose and it is my personal view that this question of capital rationalisation has become inextricably bound up with our needs to find capital for expansion purposes.

"It is a little difficult, at this stage, to give a forecast of events to come and how this question of capital rationalisation will eventually take a definite shape. I am sure that, very soon, your Board of Directors will take some important decisions in this regard, and you may have to meet again before the close of this year to participate in some momentous decisions.

"It only remains for me now to express my warm and sincere thanks to my colleagues on the Board for their kind co-operation and guidance in the management of the affairs of the Company. I am also deeply beholden to the Government of Mysore for their uniform sympathy and support to the Company. Finally, I wish to take this opportunity to pay my tribute to the cane growers of Mandya area for their efforts and to the employees of the Company for their loyal and efficient work, which have largely contributed to the outstanding success of the working of the Company during the year under report."

The report and accounts for the year 1957-58 were adopted and payment of dividend of 20 per cent. and a Silver Jubilee bonus of 10 per cent. to the shareholders was approved. The co-option of Mr. H. K. Veeranna Gowdh as Director in the casual vacancy caused by the resignation of Mr. M. Malleshayya was also approved. The retiring Directors, Mr. V. T. Krishnamoorthy and Mr. B. M. Abu Baker, I.A.S., were re-elected unopposed.

With a vote of thanks to the chair proposed by Mr. C. D. Gopala Iyengar, the meeting terminated.

H. MAHARUDRIAH,
Secretary.

BANGALORE, 1st *April* 1959.

Note.—This does not purport to be a report of the proceedings of the general meeting.

The Indian Bank Limited

H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

There are now no fewer than 112 Branches of the Bank functioning not only in India but also in Ceylon and Malaya.

In addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

London Agents: Westminster Bank Limited.
New York Agents: First National City Bank of New York.

D. P. PARTHASARATHY
Secretary.

ANNUAL REPORT OF THE BOARD OF MANAGEMENT

The Board of Management of the Bank have pleasure in submitting the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

The net profit for the year 1958, including the balance of Rs. 9,215.10 nP. brought forward from the previous year and after providing for all working expenses and depreciation on the Bank's properties, amounted to Rs. 16,37,854.78 nP., which the Board has decided to appropriate as under:—

	Rs. nP.
(i) To General Reserve Fund	3,30,000 00
(ii) To Government's Share of Profit	7,00,000 00
(iii) To Investment Reserve Fund	1,20,000 00
(iv) To Bad Debts Reserve Fund	2,00,000 00
(v) To Provision for Bonus to Staff	2,40,000 00
(vi) To Pension Contribution of covenanting State Servants	30,000 00
(vii) Balance to be carried forward to next year's account	17,854.78
Rs.	16,37,854 78

With its activities confined within the area comprised in the old Saurashtra State, the Bank has already opened its offices at practically every important business centre in this region, and no further expansion of Branch banking was undertaken during the year under report. The number of Branches and Sub-Branches, therefore, remains unchanged at 24 and that of Pay Offices at 37, in all 61 offices.

It has, however, continued to extend in an increasing measure banking facilities throughout the region making an appreciable contribution to the promotion of trade, commerce and industry in the area. Institutions such as Co-operative Banks, Land Mortgage Bank, etc., continued to be afforded special banking facilities on favourable terms. Safe Deposit Vault facilities have been further extended to two offices, such facilities being now available at 38 offices of the Bank.

It is gratifying to note that despite keen competition encountered from other Banks, our business at various centres has shown a further all round expansion, especially in the collection of deposits and money lent resulting in higher gross earnings. The Bank's net profit for 1958 was, however, affected by payment of high rates of interest on deposits and higher establishment charges, in line with the general experience of the banking industry in the country during the year.

The programme of carrying out additions and improvements to the Bank's buildings was followed with due regard to economy in such expenditure. Substantial extensions have been effected to the Bank's old building at Botad, and further additions and alterations made on a reasonable scale to the buildings at Bhavnagar, Palitana, Junagadh and Lathi, to provide better accommodation to the staff as well as the Bank's clients.

A comparative statement of the progress made by the Bank during the last 5 years is appended below:—

	As at 31st December				
	1954 Rs.	1955 Rs.	1956 Rs.	1957 Rs.	1958 Rs.
Deposits ..	10,82,76,000	13,34,69,000	14,25,16,000	15,72,24,000	16 45,07,000
Advances ..	2,84,35,000	2,70,24,000	4,41,61,000	6,88,13,000	7,86,80,000
Investments ..	7,24,86,000	9,54,09,000	9,56,95,000	9,06,63,000	7,35,41,000
Gross Earnings ..	41,28,000	55,94,000	65,62,000	82,09,000	84,99,000
Net Profits ..	18,99,398	19,25,662	22,55,431	22,83,538	16,28,639
No. of Offices ..	32	53	61	61	61

As the groundnut crop in Saurashtra in the 1957 season was considerably below the normal, there was little carry over of stocks, with the result that prices ruled high from the very beginning of last year and the bullish trend continued unabated throughout the year.

Though the Bank rate throughout the year remained unchanged at 4 per cent., competition amongst banks to attract deposits at higher rates became keener and a stage was reached when the Banks on a voluntary basis imposed a ceiling on deposit rates since the beginning of October 1958, which has been a helpful factor to a certain extent in eliminating unhealthy competition amongst Banks.

The Board is pleased to place on record their genuine appreciation of the untiring and devoted services rendered by the General Manager—a veteran of proved ability and mature experience in sound banking traditions—the Branch Managers and other officers and staff whose loyal and sustained team work have mainly contributed to the mounting prestige and popularity of the Bank.

J. S. PARIKH,
Chairman.

BHAVNAGAR, 18th March, 1959.

BALANCE SHEET AS AT 31st DECEMBER 1958

31-12-1957 Rs.	CAPITAL AND LIABILITIES	Rs. nP.	Rs. nP.

NORTH INDIAN TEA COMPLETES A FAVOURABLE SEASON

EXPORTS IMPROVE SIZABLY

IE 1958-59 season (April to March) for North Indian tea estates has come to an end and ort sales are over except for some clearing auctions. The season has proved to be some- at encouraging in terms of both exports and ces fetched, notwithstanding an increase of 7 million lbs. in the North Indian crop to .1 million lbs. and a rise of 60.6 million lbs. 1,340.9 million lbs. in the production of all ding tea growing countries. The internal rket too displayed good strength, resulting prices of plain teas remaining above those ing in other centres. Medium broken orange koes and, to a lesser extent, orange fannings, less they were of bright liquors, were, how- er, difficult to sell in the last few months. ssia also stopped buying teas of this nature a w weeks back and this caused a slight setback prices towards the close.

On the whole, prices fetched in the 1958-59 ason have been higher in both export sales d internal auctions, as will be seen from the llowing table:

(In rupees per lb.)

	Export sale		Internal sale (dust)	
	Up to 17th Mar., 1959	Up to 18th Mar., 1958	Up to 18th Mar., 1959	Up to 18th Mar., 1958
sam	2.34	2.36	2.06	1.99
char	1.79	1.74	1.76	1.80
arjeeling	3.32	3.02	2.17	2.12
oons	1.89	1.82	1.80	1.64
ral	1.86	1.77	1.77	1.90
ipura	1.74	1.70	1.71	1.55
her places	1.76	1.94	1.78	1.57
een tea	..	..	0.83	0.55
Average ..	2.19	2.15	1.99	1.89

The exports of North-east Indian tea during ie season (upto 14th March) 1958-59 amounted) 383.55 million lbs., which, as compared with nose in the corresponding period of 1957-58, now a rise of 55.34 million lbs. from those epresent a fall of 24.37 million lbs. from the a the corresponding period of 1956-57, when hey reached 407.92 million lbs. The in- rease in exports, as compared with 1957-58 eason, is due to larger offtake by the .K., which lifted 31.46 million lbs. more, at 49.55 million lbs. The exports to Russia rose rom 11.92 million lbs. to 24.26 million lbs. The ext country of importance to which exports ere higher was Egypt which took 23.17 million bs., as against 14.79 million lbs. Middle East ountries (other than Iran, Persian Gulf, Iraq nd Egypt) took 4.53 million lbs. more, at 11.78 illion lbs. Exports to Persian Gulf and Iraq ave increased from 5.91 million lbs. to 6.99 mil- ion lbs., while those to Iran have declined from 1.54 million lbs. to 10.25 million lbs. and to rish Republic from 15.72 million lbs. to 13.76 million lbs.

The season 1958 for South Indian tea presented a mixed trend. While the export sales fetched generally a higher price, the prices realised in internal dust sales were lower. Thus, the average price fetched in export sales during 1958 was Rs. 2.09 per lb., as compared with Re. 1.93 per lb. in 1957, while that of dusts sold for internal consumption was Re. 1.56 per lb., as against Re. 1.61 for the previous year.

During the calendar year 1958, shipments of tea from South India aggregated 91.14 million lbs., as compared with 77.66 million lbs. in 1957. Exports to the U.K. show a rise from 51.38 million lbs. to 59.19 million lbs. and those to U.S.S.R. from 1.25 million lbs. to 4.68 million lbs. Small increases are also noted in exports to Canada, the U.S., Australia and a few other countries.

Taking the exports of North-east Indian tea also, it is seen that, during the calendar year 1958, the total exports of Indian tea amounted to 500.74 million lbs., as against 437.57 million lbs. in 1957, thus making good to a large extent the decline from 512.25 million lbs. exported in 1956. The country-wise shipments during the last three years are compared in the following table:

(In million lbs.)

	Twelve months ended December		
	1958	1957	1956
Britain	329.84	298.81	356.83
U.S.S.R.	25.28	16.07	13.02
Canada	19.13	16.96	21.72
United States	25.46	23.31	27.91
Australia	7.29	7.59	9.44
*All other places**	93.74	75.03	83.33
Total ..	500.74	437.57	512.25

* Of these, exports from North India to—

Irish Republic	15.60	15.90	16.62
Rest of Europe	6.73	5.38	11.58
Turkey	7.97	7.09	6.67
Iran	11.05	12.15	8.23
Persian Gulf and Iraq ..	6.52	5.83	7.40
Egypt	23.08	14.35	15.32

Note:—The break-up figures of exports from South India to all countries, except the first five, are not available.

While exports of Indian tea rose by 63.17 million lbs. during 1958, Ceylon raised them by only 43.04 million lbs. to 410.77 million lbs. In 1956, Ceylon's exports aggregated 348.13 million lbs. Ceylon's tea enjoys a good market in Africa, Australia and New Zealand, the exports to these countries during 1958 (with comparative figures for 1957 in brackets) being 36.12 million lbs. (36.45 million lbs.), 41.64 million lbs. (34.81 million lbs.), and 15.05 million lbs. (13.73 million lbs.), respectively. Ceylon has stepped up its exports to Irish Republic to 3.37 million from 1.89 million lbs. and to the other European countries from 12.82 million lbs. to 15.81 million lbs. During 1958, Ceylon entered the Russian market and sold 2.73 million lbs. Its exports to the U.S., Egypt and other Middle East countries, however, declined.

TARIFF COMMISSION TO ENQUIRE INTO RUBBER PRICES

The Government of India has referred to the Tariff Commission the question of fixing the prices of different grades and qualities of raw rubber. The maximum and minimum prices for various grades and qualities of raw rubber, it may be noted, were fixed in October, 1952 on the recommendation of the Commission which had submitted a report on the subject. The position was reviewed in 1955, following representations received from the plantation industry asking for an increase in the rubber prices. As a result of the review, the prices were raised on 15th February 1955, partly to meet the increase in the cost of production and partly to enable producers to put by adequate funds for the replanting of rubber which had to be undertaken on a considerable scale as also for new planting, if necessary. When the cess on rubber was increased in August, 1955 the prices for various grades of rubber were revised to the extent of the increase in the cess.

The Government has recently received further representations from producers for revision of prices for raw rubber on the ground that the cost of production has increased considerably since 1955, on account of increased expenditure on wages and provision of amenities and provident fund benefits to labour. The rubber goods manufacturing industry, on the other hand, has represented that the controlled prices of indigenous rubber are already high. The industry is of the view that any upward revision of prices would not be justified, particularly because the manufactured articles are not able to withstand competition in the world market. The Government has carefully examined the matter. Although the fact that the rehabilitation element which is included in the prices fixed for raw rubber has not been utilised adequately by the producers, the Government considers that there is a case for referring the question of the prices of raw rubber to the Tariff Commission for investigation.

COFFEE AGREEMENT TO BE REVISED

The Board of Directors of the Latin American coffee agreement has adopted a six-point programme for the fifteen signatory nations to the agreement, as a result of the study undertaken by a committee entrusted with the task of revising the basis for a new agreement which will replace the existing one when it expires on 30th September next.

The Committee has unanimously suggested the adoption of a fixed export quota agreement among the coffee producing countries, as an effective and equitable means to secure adequate balance between supply and demand, thus benefiting the producers and consumers alike. It is considered advisable that the new agreement should be in force for a period of at least two years.

In order to give the market a greater stability, the Board has decided that the second period for which exports are to be fixed should cover in addition to the quarter April-June 1959, the month of March also, since exports for this month have not yet been completed. Thus, the availability of supplies for export, as well as the demand, have been calculated for a period of four months, March-June 1959. In determining the demand, the exports during the corresponding period of 1958 were adopted as the basis. The demand for coffee produced by the participating countries of the agreement has been fixed at 8.78 million bags (of 60 kilos each) and the supply has been adapted to this quantity.

The Board has also adopted a resolution, which aims at exercising a strict control over coffee shipments, in order to avoid re-exports, which are detrimental to the market stability and to the interests of the exporting countries.

STATE BANK OF SAURASHTRA—*Continued*

AUDITORS' REPORT TO THE BOARD UNDER RULE 21 (2) OF THE STATE BANK OF SAURASHTRA RULES, 1950.

We have audited the annexed Balance Sheet of the State Bank of Saurashtra, as at 31st December, 1958, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the authenticated returns from Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from Branch offices of the Bank have been found adequate for the purpose of the audit;

(d) the Profit and Loss Account shows a true balance of profit for the year; and

(e) the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank.

IMPRESSIONS OF WORLD BANKING—I

By G. Lakshminarayanan

ASSISTANT GENERAL MANAGER, INDIAN OVERSEAS BANK, LTD.

THIS study covers, in the main, the United Kingdom, Germany, Switzerland, Italy and the United States of America, with brief cross-references to six other countries, Norway, Sweden, Denmark, Netherlands, France and Belgium. Broadly, these can be called "advanced countries," advanced in industry and technology, some of them in the crest of material prosperity, with so much in common between them, yet each so much different from the other. Each has its own peculiar problems, and each is trying its own set of solutions. England, till recently the world's financial centre, is making a determined bid to preserve the pound sterling. Germany, abundant in steel and technical talent, is making a saga of economic revival. Switzerland, though bereft of raw materials, landlocked and rugged, has nevertheless attained the high *per capita* income of Rs. 4,500. Italy, which was the doyen of Western banking and the 'lighthouse' of the Mediterranean, but now a weak partner in Western Europe, is in ceaseless search for new openings for its emigrants. The U.S. is the land of the survival of the fittest, verily an inexorable battle of wits.

I have made a rapid survey of banking, and much that goes with it, during the four months of my world tour. Such a multitude of thoughts of what I saw and heard crowd into my mind that it is a real composition to reduce them to a few pages, or to narrate them with any cogency. I have tried to relate in the following pages some of my impressions of world banking, which, though by no means exhaustive or detailed, cover the salient features. For the sake of convenience, I have rendered a subject-wise treatment rather than country-wise.

Objectives, Approach and Treatment

My observations are drawn from discussions with bank executives abroad, the men "behind the banks." I have tried to assess the historical background of world banking, the socio-economic environments shaping banking in each country, and how it has adapted itself to the tremendous changes of the post-war era. I have tried to understand national objectives, how they find expression in the approach to and treatment of problems, how other sectors influence banking and how banking itself influences other sectors.

A study of banking is, in essence, a discussion on the wider area of its application, agriculture, trade, industry, currency, finance, politics and sociology. One aspect of managerial responsibility in modern banking is a continuous appraisal of geographical risk, political risk, currency risk, commodity risk, personal risk.... and unforeseen risk.

Theme of Banking

We in India, who have built our edifice of banking on the British model, regard this system with considerable faith. But a study of contemporary banking in Europe and America shows that banking in each country has been conditioned according to its national requirements, that, while a central theme governs the principles and practice of banking, the theme itself varies from country to country. The theme of British banking itself is eminently in unison with its economic structure. Banking in Britain overwhelms every other activity, and it is in Britain that one realises that production of goods is only one of the economic functions, that trade and division of labour are virtually impossible without currency and credit. Within that one mile radius around Threadneedle Street, there is an array of institutions—the Baltic Exchange, where practically every shipowner in the world is represented, Lloyds Insurance, a sanctified name in world-wide underwriting, incidentally, without any corporate liability, Coleman Street, Mincing Lane, Plantation House, etc., for practically every commodity in the world, the London Stock Exchange described by *Punch* as "a place in which some people sell what they have not got to those who do not want it"—each buzzing with tremendous activity, but all converging to one focal point, the 'Bank.' Until recently the world's financial capital, London, thrived from international trade, overseas investment and re-finance, a clearing house for practically the whole of Western Europe. The prerequisite for this leadership is a strong pound sterling, and the dominant theme is the defence of the pound. The Export Credit Guarantee Department (E.C.G.D.) runs "dollar drive" policies and provides cover against losses arising from promotional activities such as market survey, advertising, etc. in the U.S. The Midland Bank Chairman remarked not long ago: "No country is involved in so much intricate and complex a manner and degree as is the United Kingdom in the course of business affairs in other parts of the world."

When the United Kingdom emerged from the war as a major debtor, it was doubted if she could extinguish these borrowings even over several decades and the pound was neglected. Resourcesful Britain set about strengthening its precious sterling. By careful husbanding of resources, bilateral trade gave place to multilateral trade and sterling of restricted convertibility found wider acceptance, and gradually attained multilateral convertibility. The policy of the U.K. Exchange Control has been guided by a high sense of practical wisdom, progressive easing of restrictions, reduction in the volume of regulations and a more lenient attitude in the day-to-day administration. Sterling has not only gained lost ground, but has also gathered greater momentum, and, despite considerable increase in world trade, more than 40 per cent. of it is still accounted for in sterling. Britain considers no sacrifice too dear to protect its sterling. Bank rate was taken to the unparalleled high of 7 per cent. in spite of widespread repercussions. The conventional investors in Government securities suffered considerable depreciation, and the Midland Bank disclosed an unrealised diminution of nearly £23 million as at 31st December, almost equal to the entire reserves of the Indian Scheduled banks. The British Government is actuated by business considerations and is deeply concerned about its various constituents. And yet the Bank of England did not desist from this momentous step.

Typically in the British way, the entire banking system has contributed to this marvellous achievement by traditional adherence to national policy, with minimum of statutory enforcement, despite numerous constituents making the system, namely, the clearing banks, exchange banks, overseas banks, merchant bankers, etc. The Bank of England wrote in a commemoration pamphlet on the occasion of the Festival of Britain thus: "Over two centuries and a half, the Bank of England has developed in a typical British way into something quite different from what it was to start with but without any kind of revolution, and experience taking the place of any elaborate written constitution. Tradition plays its part... foresight and business skill are not purely modern arts and, though the methods may change, the past is not to be lightly discarded."

Banking in Socialist Sweden

While one is thus struck at the amazing stature of British banking, the Continent establishes that banking is not a set of axioms, however lofty, but a product of the soil of each country, an integral part of the varying economic environments. To start with Sweden. Here is a country, whose central bank, the Bank of Sweden (*Sveriges Riksbank*) is the world's oldest (founded in 1656) and probably again the first to issue paper money. The Royal Bank and Stock Exchange Inspection Board exercises considerable control over commercial banks. Banks are not to grant credits for longer terms than 12 months in the case of overdrafts and six months in the case of loans. Yet 35.7 per cent. of commercial banks' advances in the year 1957 was for house construction—other real estate loans apart—while industry claimed only 20.9 per cent. and agriculture 4.2 per cent. Once instalment repayment reduces each advance to 50 per cent. of house value, banks cease to take any notice of these outstandings. The compelling reason is State policy; in a Welfare State, housing is an important plank of social security. In the same way, total advances form a high ratio of deposits. In May last, commercial bank advances amounted to Kr. 11 billion, as against deposits of Kr. 14 billion. In Norway, the ratio is even higher, commercial bank advances being N. Kr. 5.2 billion against 5.3 billion deposits. The savings banks with deposits amounting to Kr. 6.8 billion (exceeding those of commercial banks) carry Kr. 4.3 billion advances, more than half of them on mortgage. At the same time, price level is sought to be kept low to avoid any hardship to the non-rich (I believe there are no poor people in Scandinavia) and Norway's bank rate of 3½ per cent. was insulated from Sweden's rate of 4½ per cent. and Denmark's 5 per cent., despite considerable intercourse between the three countries.

In Germany

In Germany, whose mainstay is industrial prowess, the integration is complete. Though commercial banks do not make long-term or block advances, 58 per cent. of aggregate bank lending went to industry and handicraft, and trade accounted for 26.8 per cent. In addition, commercial banks, which are also members of the bourses, participate in the issue of bonds of local bodies and private firms. The Deutsche Bank took part in 71 issues for about DM. 582 million in 1957 for domestic and foreign customers, though the ultimate year end holding of these amounted to DM. 58 million only. General managers of leading banks are on the boards of numerous industrial, insurance and shipping corporations. An anti-trust legislation was passed some years ago, restricting maximum number to 20, but existing directorships were exempted. German banks have a panel of legal experts on their staff to advise their general manager on these outside interests. These directorships do not necessarily arise from share promotion or participation. It is an age-long custom to associate bank executives in company directorships, but, certainly, an evidence of close association between industry and banking. Also, banks' customers having interest in industrial equities, generally nominate banks as proxies.

In Belgium

On the contrary, in the neighbouring country, Belgium, two-thirds of commercial bank deposits are immobilised to augment, in effect, Government funds. Belgium banks are subjected to the highest liquidity ratio in the world, 65 per cent. in statutory balances, overnight call money and treasury bond and short-term Government security. Statutory cash balance with National Bank of Belgium is 4 per cent. Of the balance of 61 per cent., at least half is to be in three months' Treasury Bills and not more than 15 per cent. in six months' Treasury Bills. Three months' bills yield just 1-15/16 per cent. and, apart from low yield, banks are left with 35 per cent. deposits only for assistance to trade and industry. This regressive liquidity ratio is a remnant of the historic depression of the 1930s, when banks with mixed interest fell like a pack of cards, and the Government was compelled to take these extreme measures. Of course, several specialised institutions with Government participation have been sponsored—the institution for industrial medium-term credit for instance—and the National Bank grants special advances to promote export import trades at concessionary rates of 3¼ per cent. and 3¾ per cent., respectively, but these reliefs do not adequately redeem the near 'suspicious' treatment accorded to well-established commercial banks. Banks are continuing to agitate, but the relaxation has only been a progressively larger percentage in short-term bond holdings, instead of entirely in Treasury Bills.

With all this handicap, commercial banks are making headway, and have shown considerable resourcefulness, as I shall show in greater detail a little later. Suffice it to say here that *Banque de Bruxelles* operates 560 branches, while the largest bank in the Netherlands has 350 branches only. Belgium has 9 million population only, while the Netherlands has 11 million.

Swiss Free Market and Gold

The theme of Switzerland is its celebrated free market, and market for international investment. Politically, it stands out as a neutral State amidst tremendous upheavals all around, and, financially, it insulates the interest rate and free flow of money with a fine balance. Banks are not only members of the bourses, but they are the only members, do considerable arbitrage operations in stocks and bonds, on customers' account and on their own, and display of share quotations is a common feature at every bank office. Commission tariff is high and banks make considerable profit from stock exchange operations. Practically, every internationally known scrip is dealt with in the Swiss bourses. A consortium of banks have monopoly right in underwriting cantonal bonds, etc. About 40 per cent. of bank deposits in Geneva area is of

foreign origin, and even introduction for current accounts is not insisted upon. At the same time, lest Switzerland loses in the bargain, interest rates are held low. For the first time in 20 years Bank rate was raised from 1½ per cent. to 2½ per cent. in May last. Also, heavy influx of foreign funds, particularly hot money, can create a vulnerable situation; national policy seeks to give the maximum protection against every contingency. Swiss is, perhaps, the only currency in the world with more than full backing in gold. At the end of 1957, the Swiss National Bank notes in circulation amounted to Frcs. 5.9 billion, against gold holding of 7.4 billion (120 per cent.). In fact, gold is still popular in Switzerland, as in France, and many presents are made in gold slabs. In the recent past, when there was a flight from the pound sterling, Swiss banks entered into a gentlemen's agreement not to pay interest on foreign deposits, since revoked with return to normalcy. But Swiss banks are after 'big chunks.' Branch banking is not extensive, and there is extreme decentralisation of branch administration.

Human Skill

Another plank of Swiss national policy is to promote high technological advance as the only competitive factor in the hard economic structure of the country. Enthronement of human skill is the greatest asset of the Swiss people. Though a tourist paradise, with enchanting lakes and mountains, for the Swiss, life is a battle against rugged terrain, and, during winter, Switzerland relies on power supply from Italy. Banking hours are the longest in Switzerland, as many as seven hours to the public. Switzerland earns Frcs. 1,303 million annually by export of watches. The Swiss Re-Insurance Company, derives 90 per cent. of its income from abroad. Unemployment in Switzerland is 2,000, but vacancies are 5,000. Though considerable tourist income accrues, Switzerland will not sacrifice the hereditary skill of its people, and has permitted 250,000 Italian immigrants, most of whom serve in hotels, even though the latter account for an annual foreign exchange drain of some Frcs. 500 million. Hydro-electricity is highly developed and 90 per cent. of Swiss railways run on electricity. In spite of hundreds of motor boats swarming across the lake of Zurich, one does not hear the slightest noise. One fine morning Swiss administration totally banned all motor boats which disturbed the peace of the area and soon came about the invention of noiseless motor.

State Ownership

Italy presents a marked contrast to its neighbour Switzerland. Switzerland is a free market but Italy has rigid exchange control. Interest rate is low in Switzerland, but high in Italy. Unemployment is low in Switzerland but Italy faces an acute population problem. The country, according to Italian sources, can stand about only half of its present population of 48 millions. Control on banking is nominal in Switzerland, while there is a high concentration of State ownership in Italy. The largest commercial bank, *Banca Nazionale Del Lavoro* (assets Rs. 800 crores), is wholly State-owned and is termed a public credit institution. Three other large banks, the *Banca Commerciale Italiana, Banco Di Roma* and *Credito Italiana* are State-owned to the extent of 80 to 96 per cent., through the Institute for Industrial Development. More interesting still, *Banco Di Napoli* and *Banco Di Sicillia* (assets Rs. 500 crores and Rs. 200 crores, respectively) are charitable institutions. As the name of the holding institute would reveal, the State policy is a drive for development of industry and, as a corollary, these institutions are allowed to compete freely, and there is no regimentation of their operations to any particular pattern. The *Banca Nazionale* has separate annexed sections to finance mortgage credit, hotel and tourist credit, motion picture credit, credit to medium and small industries, credit to co-operatives, etc. The assets of these annexed sections aggregate Rs. 90 crores, but the Bank's participation in these sections has been written down to Lira 1.

Emigrant Service

Another sphere of interest is the emigrant service. The *Banco Di Napoli* was commissioned by the State to open its first representative office in New York as early as 1901. More representative offices have since been opened in different parts of the world by this and other banks and they handle millions of remittance every year. The *Banco Di Roma* runs a branch in Belgium solely to serve 50,000 emigrants working in coal mines and, lest it should lose its goodwill with local banks, this branch handles no business other than of Italian workers. In fact, Italian banks have made a fine art of emigrant service, dealt with at greater length in a subsequent part of this article.

Keeping Wheels of Industry Moving

In the U.S., the accent is on keeping the wheels of its gigantic industry moving, both by direct financial assistance, and indirect sales promotion through the means of consumer credit. Banking in the U.S. figures prominently in other sections of this report, and the mention here is just to emphasise that banking in different countries has been evolved according to local genius.

II

Aggressive Versus Conservative

Not only has banking in each country a purpose of its own, there is considerable divergence of approach even as between leading commercial banks in the same country. Treatment of problems varies, and there are banks traditional, banks progressive and banks venturesome. These are but general descriptions, the dividing line is somewhat blurred, and there is no precise yardstick. Again, there are intermediate types, say, banks traditionally progressive, and progressively venturesome. The merits or demerits of each approach depends, again, on the economic climate of the time and the country, as also on the capacity of each institution itself. For example, take the Midland Bank and Barclays Bank in Britain. The Midland, the biggest of the 'Big Five,' has let itself be overtaken by Barclays in deposits, and, while there has been shift in their rank from time to time, Barclays is making a determined bid to retain the first place. Midland firmly believes, with considerable success, in serving international trade and banking without any affiliate or other interest abroad, and even today the extent of its foreign business is the largest. But Barclays has more than one affiliate or associate in Europe and elsewhere. Midland grants modest discretionary powers to branch managers, but Barclays is more liberal, which incidentally posed some extraordinary problems during the operation of credit control. Midland Bank did not recognise the National Union of Bank Employees but Barclays alone, among the 'Big Five' hastened to do it with, I believe, subsequent second thoughts and regrets. Each bank might call the other 'aggressive' or 'conservative' according to its own light.

Platform Versus Cubicle

Again, the story of the Bank of America, the unrivalled giant among world banks—it became a giant in a short time—is as enchanting as the mystery of German economic revival. This bank's deposits exceed twice the deposit of the largest bank in the U.K., and is about thrice the entire Scheduled banks' deposits in India. Gianini, the Founder of this Bank, has become a hallowed name in banking. He helped California and California helped him. He was the first to make advances of even a few hundred dollars to agriculturists. He began the platform type for seating executives, instead of the British cubicle type. He said he wanted his customers to see them, even if it be just to wave at them. Until some years ago, the National City Bank, the Chase National Bank and the Bank of America were running neck to neck, but the first two have unmistakably lost to the third. Even as between the National City and the Chase, who have extensive operations abroad, the policy differs considerably. It is beyond the scope of this review to dilate further, but, perhaps, a good inference will be that no dogma, whether at either end or in the middle, is prudent, that the essence of banking is a sober balance between opportunity and capacity.

'Short' and 'Long'

Another point of interest is the oft-repeated slogan "borrowing short and lending long." The fact that there is in effect no such thing as lending short is gaining wider acceptance, and it was only recently a professor of banking made a strong plea in England for loans of seven to fourteen-year maturity. With some leading banks in the world, it is still an article of faith, while some equally leading banks brush it aside as one of mere technical importance. So 'borrowing short,' which in terms of aggregate amount and in the usual process of banking, is by no means 'short,' so long as credit and confidence are the main planks of bank operations.

Managed Banking

But these varying themes, approaches and treatment lend themselves to a broad conclusion, namely, that banking can stand a measure of management, just as any other field of activity. Perhaps, the first to be heard in this century is 'managed currency.' By gradual process of application, such management has been extended to export-import, export promotion by subsidies and incentives of different order and scope, import by way of quantitative restrictions, tariff walls and preferential treatment. More important is a sort of management in agricultural production, say, area limitation, price support, special compensation for land left fallow so as to relieve pressure on surplus production, etc. There are again a series of conventional measures to counteract trade cycles, both in times of depression and unhealthy boom. Why not then managed banking?

Banking A 'Power House'

The subject of 'managed banking' leads me to an enquiry into credit economy. Looking back over centuries, the introduction of money economy so profoundly influenced the growth of material progress that its impact could be deemed as significant as the splitting of the atom. But the growth of credit economy in the present century has made its parent, the money economy, almost primitive and, today, credit is as important a power to drive the wheels of economy as coal or electricity. In fact, the measure of credit growth of a country is a measure of its prosperity, and banking is a privileged 'power house.' Taking, for purpose of comparison, the deposits of commercial banks and notes in circulation in representative countries, the table above throw some light on banking in India.

Deposit in India have since attained near parity, a landmark in our banking history, and the gratifying addition to bank resources over the last year is a welcome record. But the effect of banking on living standards will be significant if, say, deposits were to treble. Such prosperity as has come by the way of Indian banking is but a foretaste of what can be in the fullness of economic development.

(To be continued)

As at end of 1957

Country	Currency in millions	Commercial banks' deposits	Notes in circulation	Percentage of deposits to notes in circulation
U.S.A.	U.S. $	201,326	29,724	680
U.K.	£ Sterling	6,929 (Clg. bks.)	2,127	330
West Germany	Deutsche Mark	35,918	16,133	220
Sweden	S. Kroner	14,143	5,357	260
Norway (June 1958)	N. Kroner	5,376 (Deposits of Savings banks 6,807 m.)	3,279	160
Denmark (May 1958)	D. Kroner	8,350	2,928	280
Switzerland	S. Francs	10,579 (5 big com. banks)	5,931	180
India	I. Rupee	13,600 (Scheduled banks)	15,080	90

Men and Oil . . . 7

The Welfare Officer

Most of the world's great oilfields lie under deserts, swamps and jungles, far away from established centres of civilisation. Near the wells and refineries live the geologists, drillers and technicians, and as operations expand so the oil camps grow into permanent settlements. In time, new towns are established, whose citizens are the thousands of people employed in the industry.

Oil companies are very much aware of their responsibility for the welfare of these new communities, and most oil towns are, for that reason, models of thoughtful planning and administration.

So it is in Digboi. Once just a clearing in the dense jungle, Digboi is now one of India's most modern industrial towns. The Assam Oil Company devotes great attention to the provision of health services, good housing and sanitation, schools and other amenities for its employees.

And this is where the Welfare Officer comes in. He is the link between the Company and the community; the man who administers projects that make a fuller, happier life for everybody.

Just as the Assam Oil Company recognises that it has a duty to serve the people of India, so, through its Welfare Officers, does it promote the happiness and benefit the lives of the men who make their living by oil.

UNDER SECRETARY TO G... 13 APR 1959 PUBLIC DEPARTMENT

HINDUSTAN LEVER LIMITED

CHAIRMAN, MR. S. H. TURNER, DISCUSSES INDIA'S FUTURE NEEDS OF OILS AND FATS

WITH the population growing and the national income rising, the demand for oils and fats in India is bound to be enormously larger than it is at present. If we are to have an adequate supply to meet this great demand, we must begin to plan for it now. This means giving oilseeds a priority in money and men and research and extension work which they have never yet had. This view was expressed by Mr. S. H. Turner, Chairman, Hindustan Lever Limited, in his speech at the Annual General Meeting of the Company held at Bombay on Monday, 6th April 1959.

The following is the full text of Mr. Turner's speech:

"It gives me great pleasure to welcome you to this annual general meeting of the Company.

"I shall take as read the report and accounts for the year 1958 which have been with you for some time. I have also circulated to you my review of their salient features. I shall, therefore, proceed to talk to you about some aspects of vegetable oils and fats which are the principal raw materials of our industry.

"Fat is a food. This is true whether it is solid or liquid, whether it is ghee or *vanaspati* or oil, whether it comes from a cow or out of the ground. It is, indeed, a food of very high value. Weight for weight it provides 2½ times as many calories, 2½ times as much energy, as the foodgrains, and the hard fats, *vanaspati* and ghee, have a vitamin A and D content the foodgrains lack.

"Therefore, when we plan for a future in which the national income is to double and the population to go up to perhaps 600 million in twenty years, it is just as important to provide for our fat supplies as for our rice and our wheat. In some ways, it may even be more important. As people get richer, they spend an ever-lessening percentage of their income upon cereals, but an ever-increasing percentage on fat. In technical terms, the expenditure elasticity of demand for edible oil is 0.5 and for hard fat 1.7 which gives a total elasticity of approximately 1. In other words, for every increase of 10 per cent. in income there will be an increase of 17 per cent. in the demand for hard fat and of just about 10 per cent. in the demand for all fat. A population of 600 million with a national income twice that of today will require 36 lakh tons more fat to eat.

Low Consumption of Soap

"Moreover, vegetable oil is not only used as a food. It is also used in the manufacture of other products, such as soap and paint and as a hair dressing. Much more of all these will be required in a richer and more urbanised country. Paint will be needed for machinery and for the new buildings in the growing towns and the better buildings we all hope to see in the countryside as the villagers get richer. The habit of using oil to dress the hair is universal, and as the farmer and the worker get more prosperous, one must expect to see them put oil on their hair with a regularity which at present only a clerk or a shopkeeper can afford. Finally, no country in the world sets a higher value on cleanliness than India does, yet very few countries have a lower consumption of soap per head.

"The explanation for the last is twofold. First, there is poverty. Many people cannot afford as much soap as they would like. Secondly, many villagers still live a largely self-contained existence and they use earth or gram flour or plain water to clean themselves and their clothes.

"As poverty diminishes and the villager gets drawn more and more into the money economy, all past experience suggests that the demand for soap will go up sharply. Our own expectation is that every time the national income goes up by 25 per cent., which the planners expect it to do roughly every five years, the demand for soap will go up by over 40 per cent. In twenty years' time, a population of 600 million, with twice the present national income, will need 9 lakh more tons of oil for soap and paint and their hair than is needed at present.

"Taking food and industrial uses together, we will in twenty years' time need 45 lakh more tons of fat. Twenty years is no longer than the time which separates us from the outbreak of the Second World War. But since 1939 our output of fat (ghee and oilseeds together) has gone up by only 5 lakh tons. Obviously, the effort that will be needed from now on, if our needs are to be met, dwarfs anything that has been done up to now.

"We can hope for very little extra supplies of ghee and butter. Over the last 20 years, production has, if anything, declined. The demand for liquid milk goes up so sharply when the national income increases and communications improve that the supply from the whole of India's cattle may only just keep up with this demand.

"The 45 lakh tons of fat which are needed will have to come from oilseeds, consumed either as oil or *vanaspati*. How large a requirement of extra oilseeds this will mean depends on which oilseeds are grown. Groundnuts have an oil content of over 40 per cent., rape and mustard of only 30 per cent. Even if we assume that the great bulk of the demand will be met by groundnuts—and this will be the sensible thing because groundnuts give much the highest yield of oil per acre—at least 150 lakh tons more oilseeds would be required.

"At present yields, this would mean another 53 million acres under oilseeds. This is 14 per cent. of India's present cultivated land. Diversion from other crops on such a scale is not possible. We should not, however, assume that there can be no diversion at all. As our standards of farming go up we might be able to produce our requirements of foodgrains on smaller acreages. When that happens there will be an automatic shift from millets to groundnuts, which are a more profitable way of using the same acreage. The farmer has been inhibited from making the shift in the past because he had to grow the millets for his family to eat. Once he can satisfy the needs of his family from a smaller part of his land, he will naturally, and probably without any Governmental urging, turn the land thus freed over to oilseeds.

Per Acre Yield Must Be Raised

"Over a generation this might increase the present output to a sizable extent. By itself, however, it will not solve the problem. It is necessary also to make an increase in the yield of oilseeds per acre a major objective of policy. Up to now, far less research has been done on, for instance, improved seeds and manurial requirements for oilseeds than has been done for rice or wheat or cotton. And even what has been done has not been properly conveyed to the farmer. In the National Extension Service the village level worker talks a great deal about the Japanese method of rice cultivation, or the advantages of longer staple cotton and rustless wheat. He very rarely mentions oilseeds, and very few of his demonstration plots demonstrate any method by which our fat requirements could be more adequately met. If our immense future needs are to be satisfied, this error in priorities must be corrected. In such States as Andhra, Bombay and Madras, where oilseeds form a large part of the acreage under crop and they contribute an even larger part of the farmer's cash income, oilseeds must be given top priority.

"Over the last 20 years in other countries, increases in yield per acre of between a quarter and half in many crops have been achieved; and India has the advantage that since it starts from particularly low present yields, the scope for improvement is quite specially large. Moreover, the application of science to tropical crops is relatively recent. Research efforts in oilseeds particularly have been relatively small and unco-ordinated. From the next plan onwards, if the very large targets which the planners habitually give for oilseeds is followed up with an equally big programme of research, it should be possible to develop improved seeds and practices and manures and to increase resistance to disease at a speed far faster than anything that has been done in the past.

"It is not enough to find the research answers. They must be taken to the people. Improved seed that stays in the seed farm, better methods that are known only to the scientist at the research centre, grow no groundnuts. The seed and the fertiliser must be made available to the farmer where he wants them and when he wants them; and if he needs money to pay for them there must be a co-operative society or other suitable agency to lend it to him. The new methods must be taught to the village level worker in terms simple enough for him and the farmer to understand them, and the village level worker must be able to demonstrate them on a plot in the farmer's own village, and using implements and bullocks of a sort the farmer himself uses.

"Nevertheless, whatever the future triumphs of science, however high the priority given to oilseeds, and however large the diversion from millets to groundnuts, it is probable that the next twenty years will see an increasingly widening gap between the amount of oils and fat we produce and the amount we want for soap, for hair oil, and for edible purposes. This gap *can* be filled simply by letting the price of fat go up relatively to that of other commodities. When the demand for a product is so sensitive to income as that of fat, relatively limited increases in price can cut down demand very sharply. But this is obviously a last resort. If the price of fat has to increase to an extent that makes people buy something else instead, then we will hardly be raising their standard of life.

"There are other possible ways of filling, at any rate, part of the gap. The first is imports. In 10 or 15 years of time, if the need for foreign exchange is not quite so desperate. India might be able to import more of her requirements from abroad. More immediately, it might be possible to get quite large quantities of soya bean oil from the United States under P.L.480.

Cottonseed Crushing

"Secondly, the Government's policy of encouraging cottonseed crushing is likely to have more and more success. Four per cent. of the oil the *vanaspati* industry used last year was cottonseed oil and we shall strive to increase this to 10 per cent. by 1961. But the key, here as so often, rests with the farmer. If he will feed his cattle with cottonseed cake instead of cottonseed, to their very considerable benefit, the raw cottonseed will naturally go to the crusher. The Government has now decided to launch a vigorous campaign to persuade the farmer to make this change in his habits. It is important that the village level worker should do a good educational job in the field. If he succeeds and all the country's cottonseed goes to the crusher, it would add 150,000 tons to our oil supply every year.

"Thirdly, there are possibilities with new crops or with the fuller utilisation of old ones. The cultivation of the oil palm on Indian soil is well worth examination. Meanwhile, great efforts are being made to collect minor oilseeds.

"Finally, as more and more solvent extraction plants go up, they wll recover more and more of the oil which *ghani* crushing leaves behind in the cake, and will thus reduce what has hitherto been a serious national waste. This by itself might increase oil supplies by 30,000 tons a year.

"Any attempt to look forward into the future is necessarily liable to a very large margin of error. A successful campaign of family planning might keep population below 600 million. On the other hand, circumstances might prevent the national income from increasing at quite the rate the Planning Commission thinks it will. Again, our estimates of the elasticity of demand have been based upon the figures for the fourth to the seventh rounds of the National Sample Survey. They are, therefore, figures for the conditions of the early 50's. In the different India and the different world of the 1960's, the elasticities might be different too. If, for instance, television were to come to India, it is possible that many people who today celebrate an increase in income by buying some more ghee or some more *vanaspati*, might decide to pay an instalment on a television set instead. Or in the India of the late 60's people might do more of their washing of themselves and their clothes with non-soapy detergents and less with soap, as has already happened in the United States of America. On the other hand, the use of fat in the diet is only one-fourth of the nutritional optimum, and it is particularly low in the villages. An increase in village incomes and village knowledge of simple nutrition might well lead to an even larger increase in the demand for fat than we have assumed.

"We need not argue about just which assumptions one should make. Whatever assumptions one may choose, if we develop at all, the demand for fat is bound to be enormously larger than it is at present; and the increase will be for purposes, notably food and cleanliness, upon which the citizen's happiness depends. If we are to have an adequate supply to meet this great demand, we must begin to plan for it now; which means giving oilseeds a priority in money and men and research and extension work they have never yet had."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at the 31st day of December, 1958, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by th Indian Branches of the Bank so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account; and

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

P. L. SANDEMAN,
Manager.

BOMBAY, 30th March, 1959.

PROGRESS OF STATE-OWNED STEEL PLANTS

INCREASED TEMPO OF CONSTRUCTION

THE upward revision in the estimates of the cost of the State-owned steel plants, the award of contracts to certain firms and the import of foreign technical personnel were among the points which came up for sharp criticism at the debate on the Demand for Grants for the Ministry of Steel, Mines and Fuel, which took place in the Lok Sabha last week. The whole story of the three steel plants, it was alleged, was a "story of lack of planning, gross neglect and criminal extravagance." The Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, in the course of his closely reasoned reply to the allegations, pointed out that the additions and improvements were necessary for better performance of the plants and for better economic return and that the rise in world prices of certain essential articles was largely responsible for the increase in original estimates. He also explained the circumstances under which the contracts came to be given to the firms to which exception had been taken by the House.

In the course of his speech made while moving the demand for grants, Sardar Swaran Singh threw some light on the progress of the steel plants and the future of steel industry. As a result of the development in the sphere of Indian steel industry, the shortage of pig iron, which was acute in the last two or three years, has been made good and the allotment of raw materials, that is, billets, to re-rolling mills has been increased. The first blast furnaces in Bhilai and Rourkela, as is well known, have already been commissioned. It would appear that, in the current year, the tempo of construction achieved in 1958 would be maintained. The tempo of construction warrants the hope that the first saleable steel, namely, billets from Bhilai and plates from Rourkela will flow out towards the end of 1959. The structural mill in Bhilai and the continuous strip mill in Rourkela will be ready for operation, if not in actual operation. In Rourkela, 305,000 tons of equipment and material have been received; only about 45,000 tons more remain to be shipped. The civil engineering work in the rolling mills and blast furnaces is well up to schedule. The steel melting shops, the primary rolling mill and the plate mill will be ready for operation by the end of the year. The second and third blast furnaces are expected to be ready for operation in good time to meet the demand for iron either for steel making or export. Actual production in the first blast furnace has been rather low, the rate being 400 to 500 tons a day. This is attributed not to any defect in the blast furnace itself but to some minor difficulty in the pig casting machine. The defect has been remedied. The furnace will soon be working at full capacity.

In Bhilai, the high tempo in construction is being maintained. The production of iron in the first blast furnace is satisfactory. About 36,000 tons have been produced by the end of March last and despatches to consumers have begun.

Durgapur

In Durgapur, where work is proceeding to schedule, the first blast furnace is scheduled to be commissioned in November next and the first rolling mill in April 1960. Much of the equipment has been received, about 150,000 tons, as against a total of 250.000 tons. It has, however, come to the notice of the authorities that some piling foundations are defective. The Union Minister revealed that the matter was being investigated so as to "establish beyond doubt that all other piling foundations are free from defects." It may be mentioned here that the Indian Steel Works Construction Co., Ltd., which is building the Durgapur plant, observes, in the course of a Press statement, that, early in February last, a number of defective piles was discovered and immediate investigation was taken in hand. It was found that due to bad workmanship, a few piles in a small localised area of the melting shop had not been sunk in such a manner as to carry the required loads. The Company says: "The investigation was extended to other parts of this area and has so far yielded satisfactory results; the investigation is continuing and will be extended to other areas. Remedial measures to correct the faulty workmanship in the affected areas have already been put in hand. These measures will in no way affect the cost to Government or delay construction."

As regards the subsidiary projects, the single largest unit to come up will be the Rourkela fertiliser plant which will be based upon surplus gases from the coke ovens and the free nitrogen from the oxygen plant and which will produce 580,000 tons of nitro-limestone. Orders for the plant, it is stated, have been placed partly on a foreign firm and partly on Sindri. The plant is expected to be ready in early 1962. The Government has decided to set up an alloy and special steels plant, though no decision has yet been taken about its location. It hopes to place an order for the plant by the middle of the year.

In order to investigate the possibilities of small-scale manufacture of iron, a Government-sponsored technical team has gone to China which is believed to have made progress in this direction. The Government has also licensed a few small-scale units where steel will be produced either by using low-grade coal or with the lower grades of raw materials. Since the availability of metallurgical coal is limited, the Government is studying the problems connected with the establishment of furnaces which could use non-metallurgical coals. A pilot low shaft furnace has been set up in the National Metallurgical Laboratory.

Estimates

Replying to the various points raised in the Lok Sabha, Sardar Swaran Singh stated that the increase in the estimates of the works was not due to any lack of planning or foresight. It was largely due to additions and improvements considered necessary for better performance of the plants and for better economic return and the rise in world prices of certain essential articles like structurals and refractories. In 1956, the revised estimates of Rourkela and Durgapur works were placed at Rs. 170 crores and Rs. 138 crores respectively; in 1957, the revised estimate of Bhilai was placed at Rs. 131 crores. Since then, there had been no upward revision of the estimates. Referring to the argument that a contract had been given to the firm of Messrs. Uttam Singh Duggal against whom the Public Accounts Committee had made certain adverse remarks, the Minister said that at the time the contract was signed the Committee had not made those remarks which might have put the Government on its guard. The firm had a good record of work to its credit in executing engineering works in the sphere of railways, public works and oil refineries. Those who were responsible for awarding the contract could not, therefore, be blamed for not instituting any special inquiry into the antecedents of the firm. Turning to the contract given to Messrs. Hochtief-Gammon & Co., he wished that the transaction could have been avoided, because the Company itself had submitted the drawings for the contract. But the alternative was to give the contract to one of the other two firms, of which one was from the U.K. and a contract with the firm involved foreign exchange considerations and the other firm had its hands full. The matter was considered and it was decided that there was no risk in giving the work to Hochtief-Gammon & Co. But, at the same time, it had been arranged that the Company would have nothing to do with consulting work and supervision.

As regards the demand for assistance to the Bhadravati Iron and Steel Works, the Minister said the Government had been giving it the necessary assistance from time to time; the Mysore Government had agreed to bring the works under the management of a Corporation.

Future

In the course of a reference to the future of the steel industry, the Minister observed that the very fact that the country possessed the necessary raw material for the steel industry and the Government had acquired rich experience in setting up steel plants warranted the confidence that production could be stepped up. Even the plants under construction were capable of expansion at comparatively lower order of costs. The Government, according to the Minister, would first concentrate on expansion of the existing plants before it took up the question of establishing a fourth plant. At the same time, the Government was studying the possibility of setting up such a plant. It would appear that the preliminary action taken in this direction includes the appointment of a firm of Indian consultants which will make a project study and provide the necessary data for considering the question of the establishment of the fourth steel plant.

GAS INDUSTRY

The view that in the economic field, the gas industry was in the throes of a veritable revolution owing to the increased development of natural gas, and, as a consequence, the international prospects of this industry were broadening and international co-operation was becoming imperative was expressed by Mr. Le Guellec in his opening statement at the fifth session of the *Ad Hoc* Working Party on Gas Problems of the United Nations Economic Commission for Europe (E.C.E.), held at Geneva last month. The items on its agenda which particularly engaged the attention of the Working Party were the economic and legal problems of underground storage in Europe. In connection with this item, the Secretariat had prepared a study which has described as most valuable by the members of the Working Party; they recommended that the study should be circulated as a general document as soon as possible. Endorsing the conclusions of the study, the Working Party expressed the opinion that underground storage apparently offered the best solution to the most difficult problem faced by the gas industry, that of fluctuating demand.

The European method of underground storage is technically revolutionary, since it creates artificial gas reservoirs of considerable capacity. For the first time, an attempt has been made to compare systematically existing or projected forms of underground storage with each other. This attempt comes at an opportune moment when all European countries are experimenting with underground storage and when each is trying to assess the economic prospects opened up by this means of storage. It is generally recognised that the cost factor of underground storage is attractive, but as yet it is uncertain exactly what methods should be employed for the purpose of using the gas stored underground to greatest advantage from the economic point of view. In addition, the Working Party examined the legal problems of the underground storage of gas in Europe. This is a new problem, since the regulations governing underground storage are still being worked out. It was, therefore, decided that the study of the problem should be continued, in the light of the regulations already in force in various countries (the term "regulations" including not only legislative provisions but also the technical rules).

As regards gas tariff policy as a means of evening out demand, the Working Party decided to continue the study of the principles governing the tariff policy in force in various countries and emphasised the importance of tariff policy as a factor in the harmonisation of supply and demand. The French delegation presented a report on a seminar on methods of forecasting future gas demand, which was held in Paris in December 1958, and which was attended by the representatives of ten countries. At that seminar, many problems connected with the methodology of estimating gas demand were considered and a full list of these problems was prepared. The Working Party decided that the study of this question should continue, with special attention to certain problems. Other subjects considered by the Working Party were: flexible production units complementary to coke-ovens and gas-works of the conventional type; regulations governing the distribution of natural gas by international pipe-lines; economic problems connected with the production of electric power by nuclear power stations and the progress of gas statistics.

USES OF NICKEL

The wide range covered by the literature summarised in the February issue of *The Nickel Bulletin* is indication of the growing importance of nickel in almost every branch of industry. Its role in the field of magnetic materials is, for example, illustrated by papers delivered at a conference on non-linear magnetic and magnetic amplifiers. Engineering interests are represented by an item on Ni-Hard chill-cast rolls and by abstracts dealing with the influence of shot-peening on the fatigue strength of nickel-containing steels and the use of such steels in the blades on the "Rotodyne" vertical-take-off aircraft. In the non-ferrous field attention is directed to some recently published American specifications, and abstracts concerned with the operational aspects and applications of nickel plating include reference to a process for deposition of patterned coatings. The major importance of nickel in the production of heat- and corrosion-resisting alloys and steels is reflected in papers reporting, for example, investigation of creep, thermal fatigue, scaling and stress-corrosion characteristics.

THE CANARA BANKING CORPORATION LIMITED

(INCORPORATED IN INDIA WITH LIMITED LIABILITY)

ESTABLISHED 1906

DIRECTORS' FIFTY-THIRD ANNUAL REPORT

The Directors have the pleasure to submit to the Shareholders, the Bank's Balance Sheet as on and the Profit and Loss Account of the Bank for the year ended 31st December, 1958, duly audited by the Auditor of the Bank, along with his report to the Shareholders.

Net Profits of the Bank for the year 1958, are Rs. 4,02,045.61, and with a sum of Rs. 5,670 02 brought forward from previous year's account, the sum available for distribution is Rs. 4,07,715.63. After placing a sum of Rs. 82,000.00 to the Statutory Reserve Fund and a sum of Rs. 11,000 00 to the Contingent Fund of the Bank, the Balance left over is Rs. 3,14,715 63, and the Directors recommend the following appropriations in this behalf. It may be added that due provision has also been made for payment to all the permanent staff of the Bank of a bonus equal to 1/12 of the basic pay earned by them during the year 1958.

	Appropriations Recommended.	Rs. nP.
1.	To provision for Taxes	1,75,000.00
2.	To pay a dividend at 5 per cent. and 4½ per cent. per annum on 7,000—5 per cent. and 18,000—4½ per cent. First Preference Shares, i.e., Rs. 2 50 and Rs. 2.25 per Share respectively and a dividend and bonus at 8 per cent. and 2 per cent. respectively, i.e., at Rs. 5.00 per Share on 15,000 Ordinary Shares (all free of Indian Income-tax)	1,33,000.00
3.	To carry forward to next year's Account	6,715.63
	Total .. Rs.	3,14,715.63

Thanks to the unabated patronage of the Bank's constituents—Deposits, Advances, Reserves, Profits and total Working Capital have all moved up, this resulting in all all-round improvement.

Four new Branches, viz., Mylapore (Madras), Dodballapur, Proddatur and Calcutta were opened during the year thus bringing the total number of Branches to 53.

The Directors wish to express their thanks to the Shareholders and Customers for their unstinted co-operation in the greater progress achieved by the Bank and to the Staff for their loyal and devoted services.

(By authority of the Board)

U. SUNDER RAM PAI,
Chairman.

DETERIORATION IN LABOUR SITUATION

REVIEW OF LABOUR LAWS URGED

INITIATING the debate on the Labour Ministry's demand for grants, Mr. G. L. Nanda, Union Minister for Labour, asserted in the Lok Sabha on the 4th inst. that there was no justification whatsoever for the "public agitation" that the labour laws of the country were such that they placed a heavy burden on the industry, hampering economic progress. Mr. Nanda quoted figures of wages and productivity to substantiate his statement. Between 1947 and 1957, he pointed out, real wages had increased by 33 per cent., or an annual average increase of 3.3 per cent. But from 1951 to date, total real wages had increased by 14 per cent. As against this, between 1951 and 1956, productivity of workers had gone up by 20 per cent. This would show, according to him, that neither the ratio of labour cost to total cost of production nor that to the value added by manufacture had increased. It was practically steady. He, therefore, asserted that the cost of production, on account of what had been paid to labour, was not at all a factor which was hindering the progress of industry.

This is a challenging conclusion, in that it runs contrary to the widely held view that productivity of workers has not improved commensurate with the rise in their income and that labour in India is no longer cheap. Further, it seems to be a misleading conclusion, for it proves nothing. What is most important is the productivity of workers in each individual industry. Could Mr. Nanda confidently assert that productivity of workers in coal, jute, cotton textiles, sugar, iron and steel, paper, tea, coffee, rubber, and engineering units, let alone the railways, has improved to such an extent as to warrant his general conclusion? It would be interesting to see how the figures compare in this respect. Will his Ministry be good enough to publish them in a consolidated and easily comparable form for the information of the public? Equally important is a comparison of the productivity of workers in this country with those of their confreres in some of the important countries with which India has to compete. For, after all, the progress of an industry depends upon its ability to compete effectively.

Mr. Nanda was certainly right in deprecating the agitation, if there is any, against labour laws, for the agitational path, whether it be for redressing the grievance of the employer or the employee, is certainly not desirable when other methods are still available. But he cannot, with equal justification, find fault with those who honestly feel that, despite the numerous legislative enactments that were added on to the Statute Book during the past twelve years or, perhaps, because of it, the labour situation in the country is far from satisfactory. For it is common knowledge that, despite the existence of suitable machinery for the settlement of disputes, strikes are a common occurrence even in some of the most vital sectors of the economy. But what is more distressing is that there has been a marked deterioration in discipline in industry. The Government certainly cannot absolve itself of all the responsibilities for the situation which can be attributed, partly at least, to its policy of pampering labour, the kid-glove manner in which labour is dealt with when it goes astray from the path dictated by national requirements.

The causes of the present unsatisfactory labour situation were elucidated by Mr. E. F. G. Hunter, Chairman of the Employers' Federation of South India, in his address to the annual general meeting of the Federation held in Madras on 31st March. Mr. Hunter felt that the increase in labour disputes and the growing indiscipline in industry were entirely due to the unrealistic manner in which Government handled labour disputes and to its unrealistic labour policy.

Since independence, there has been a spate of labour legislation, one enactment following another, all of which, he pointed out, were characterised by their one-sidedness, in that they provided considerable gains for labour in the shape of improved terms and conditions of service and expensive welfare measures. But they failed to emphasise equally important aspects such as labour's responsibilities, better discipline and greater output. As an instance of Government yielding to pressure from labour, he cited the abolition of the Appellate Tribunal. Labour became dissatisfied with the Appellate Tribunal, because it undid some of the pro-labour decisions made by lower courts. Further, there were continued criticism from labour leaders. The abolition of the Appellate Tribunal left the High Courts and the Supreme Court as the only bodies to be approached if a party was dissatisfied with an award or if a case in which a substantial question of law was involved arose. It was because these courts were responsible for reversing the decisions of the lower courts that labour was anxious to avoid such litigation and considered that reliance should be placed on arbitration against which there was no appeal. All these paternal legislation, which were designed to improve the lot of labour, had in fact only made labour more discontented and unruly. Employers, he hastened to add, were not opposed to increased benefits being given to labour. In fact, they welcomed and supported it. Only, labour should behave in a disciplined way and negotiate their demands in a rational manner using the weapon of strike only as a last resort. But the actual picture was different. Irresponsible stoppages, usually without notice, and more often than not without real cause and, on occasions, without any demand having been made, had become a common occurrence.

Current legislation made it reasonably clear, Mr. Hunter went on to say, when strike was legal and when it was not. Since much of it was enacted to eradicate stoppages of work, all right-thinking people would agree that illegal strike resulting in work stoppage should be strongly condemned. Unfortunately, Government frequently gave those who resorted to illegal strike much, and sometimes more, sympathy than was given to those participating in legal strike. Mr. Hunter illustrated this by citing two recent instances. First was the Calcutta Tramway strike. Irrespective of whether or not there was any merit in the labour's claim that adjudication proceedings had been dilatory, the strike, he observed, highlighted the fundamental weakness of the current labour laws and the contempt in which they were held by labour. In the light of the laws, now in force, the tram strike, was illegal, as it was organised during the pendency of a reference to a tribunal for adjudication. Not only was no action whatever taken against the strikers, but, on the other hand, the West Bengal Government attempted to conciliate those responsible for what was undoubtedly a defiance of law.

Another case of illegal stoppage of work which received sympathy from the Government was that which occurred in the Buckingham and Carnatic Mills, Madras, last May. This strike was called because the management had decided to impose a penalty on certain workers who had participated in an earlier illegal strike. It was not surprising, therefore, that, since August last, there were no less than fifteen short illegal stoppages of work, some involving sections of workers, others involving departments and one, the whole mill.

The Federation, Mr. Hunter said, was gravely concerned at this attitude of Government and workers towards strikes. The idea was now prevalent among workers that those who participated in illegal strike could not be subjected to disciplinary proceedings. There were also tribunals which had gone so far as to hold that illegal strikes could be justified. Fortunately, the High Court had not subscribed to this view.

Emphasising that an objective and impartial appraisal of labour laws and their effects were called for, Mr. Hunter said:

"I suggest the situation regarding strikes and the interpretation of the labour laws has become so confusing that the time has come when there should be a thorough and impartial review of the various labour laws and the way in which they have been applied. At the same time, tripartite codes and other similar recommendations, which have been treated with scant respect, could be examined. The purpose is to ascertain the extent to which labour policy, both of the Centre and of the State Governments, has succeeded or failed in promoting industrial harmony. If the conclusion is that the policy has failed, then immediate consideration must be given to its revision."

The tendency on the part of the Government to interfere with matters which fell entirely within the power of management was strongly condemned by Mr. Hunter. The maintenance of discipline sometimes resulted in the imposition of penalties on individual workers. The Government's present policy of referring to adjudication all disputes regarding punishments, however minor, was most undesirable. "If all disciplinary action taken by the management," he warned, "are to be investigated, as in civil

AUDITOR'S REPORT.

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited, as at 31st December, 1958, and also the Profit and Loss Account of the Bank for the year ended on that date with the books of accounts and certified returns from Branches and visited some of the major Branches of the Bank during the year and examined the books of accounts and cash and securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit;
(b) Such information and explanations have been found to be satisfactory;
(c) The returns received from the branches have been found adequate for the purpose of my audit;
(d) The transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank;
(e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required;
(f) In my opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1958
(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
(iii) proper books of accounts as required by law have been kept by the Bank so far as appears from my examination of those books; and
(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

HOW IS BUSINESS IN EUROPE?
PROSPECTS FOR RENEWED GROWTH BRIGHT

[The Economic Research Department of the Chase Manhattan Bank, New York, has just published an interesting Report on Western Europe. It contains a discussion on the outlook for Western Europe against the background of the Common Market and the economic reforms carried out by France. We publish on this page the Department's views on the outlook.—ED.]

FOR most countries in Western Europe, the economic prospects for 1959 are regarded as moderately good—and getting better. Few observers look for the booming rate of expansion which has characterised Europe's growth in most post-war years. But at least the general direction of business could be upward—despite the sobering effects on confidence of the Berlin crisis and the fact that some of the adjustments set in motion by last year's mild recession have not been completely worked out.

Even with the letdown in 1958, production, incomes, and employment all started off this year at extremely high levels. Over the next few months, exports could start moving up in line with the strong recovery in the U.S. and a moderate rebound in world trade. For late 1959, there are prospects for more growth in capital investment—tied mainly to the overall recovery in Western Europe but also to the more efficient plant and equipment needed under Common Market competition.

In individual countries, there were several signs of strength as 1959 got under way. The Dutch have turned 1958's spurt in building activity into a more general recovery. While Belgium's coal crisis has come to a head, the worst of her recession appears to be over. In France, production weakened perceptibly only in late 1958 and is still running at a high level. Germany and Italy have both weathered the recession extremely well. British industrial production still hovers at 1957 levels, though there is general confidence in a spring upturn.

For the first quarter of 1959, total industrial output in the six Common Market countries should come close to matching last year's peak. But even with no year to year gain, output would still be some 45 per cent. above the 1953 average. By contrast, U.S. production has not yet reached its former peak and is now running only 7 per cent. above the 1953 level. The recovery here has come sooner and been more substantial than in Western Europe. But the U.S. recession was considerably sharper, and growth over the past few years has been far less than in major countries on the Continent.

The prospects for renewed growth in Europe during 1959 seem good. Many of the factors which kept last year's recession to such mild proportions—a strong demand for consumer durables, full employment and stable prices—are still very much in Europe's favour. The weak spots in industrial production were never widespread. While the coal, steel and textile industries have suffered, auto, chemical and machinery output remains strong. Moreover, most Governments have been easing credit and taking measures to encourage consumer demand and industrial expansion. Compared to late 1957, central bank rates are down sharply—from 7 per cent. to 4 per cent. in Britain, from 5 per cent. to 2.75 per cent. in Holland, from 4 per cent. to 2.75 per cent. in Germany. This should encourage capital investment which—unlike that in the U.S.—did not decline sharply last year, but merely levelled off.

Most important, Western Europe has far stronger reserves than a year ago. Despite the slump in world trade and the U.S. recession, European exports held up remarkably well in 1958. In some cases—notably autos from Britain, France, Germany and Italy—there were sizable increases. Meanwhile, Europe needed fewer imports (because of better crops, slower growth, less need to build up inventories) and paid less for them with the drop in primary commodity prices. The result was substantial improvement in Europe's trade position and additions to gold and dollar reserves throughout 1958.

West Germany: More of the "Miracle"

Germany is preparing for a good year in 1959. Though production fell more than seasonally in December and January, this is not unusual during or preceding periods of expansion. And there are signs of strength in the building industry, consumer goods inventories, and the export sector.

Another source of optimism is the progress of the Common Market—which is hand tailored for the German exporters. Almost 60 per cent. of Germany's $16.2 billion trade is with the 16 other O.E.E.C. countries, half of it with her five Common Market partners. As Europe's leading exporter of both consumer durables and capital goods, Germany enjoys a chronic trade surplus with her neighbours.

1958 was hardly a bad year, even by German standards. Industrial production was up 3 per cent. Unemployment hit a new post-war low (1.7 per cent. in September) and prices were stable. German exports were up 3 per cent., imports down slightly in dollar terms. Gold and dollar reserves increased, but less so than in recent years, as Germany is now exporting capital. This year, the few weak sectors are still textiles, the steel industry and heavy stocks of coal in the Ruhr. (Germany took steps to curb U.S. coal imports in late 1958.) These three areas are expected to improve gradually in 1959. Meantime, prospects for the remaining elements in German industry appear favourable. Building activity is bolstered by a large backlog of orders and lower interest rates. Plant and equipment outlays are still rising. And, most important of all, the surge in consumer spending continues. Car output last year was up by 25 per cent., and TV output 80 per cent.

Consumer spending is the key to German optimism in 1959. So far in its post-war development, the Federal Republic has been a high investment, low consumption economy. Germany now exports about half of her 1.5 million auto output. Meanwhile, there is only one car for every 14 persons in Western Germany, as compared with one for every 9.3 in Britain, 8.5 in France. Incomes are rising, employment is high, savings are at a record level. These are the makings of a real consumer boom, the first stages of which could get underway in 1959, granted the maintenance of confidence.

France: The Hidden Potential

President De Gaulle's reforms set the framework for 1959. Devaluation raised the cost of imported raw materials to French producers. New taxes and loss of subsidies mean higher costs for coal, transport, gas and electricity—and higher prices for food, wine and other consumer items. To the average Frenchman, the outlook for 1959 is (as President De Gaulle put it) a year of "severity and austerity."

Meanwhile, despite these economy measures, the French economy itself is basically strong. Since the first of the year, France has added more than $500 million to her gold and dollar reserves. Unemployment is still relatively low, despite a sharp rise in the last few months. Industrial output tipped down during most of the year, but still averaged some 6 per cent. above 1957.

The important point is that the French economy is not weak internally. Compared to her partners in the European Economic Community, France has a richer, more balanced economy. *Per capita* income is hiher than in most other countries of Western Europe. French industry has developed some of the strongest skills in engineering on the Continent. As opposed to official reserves, private holdings (gold, currencies, securities) are estimated at well over $10 billion. Since 1952 industrial production in France has shown one of the fastest growth rates in Europe.

But while rich at home, France has had problems in international trade—with uncontrolled inflation, chronic balance of payments problems, successive devaluations of the franc. Her basic problem is not production but financial stability. The recent reforms are aimed at bringing out the hidden potential behind this problem. And, potentially, France is not the weak sister of the Common Market, but one of its strongest members.

Benelux: Troubled by Recession

As far as trade is concerned, the three Low Countries of Europe are already one unit. Belgium and Luxembourg have been linked formally since 1929, both with Holland since 1947. Together, the Benelux countries had an external trade of $11.4 billion in 1958—about tied with Canada as the fourth largest commercial power in the world (5.8 per cent. of world trade).

In 1958, the Benelux partners had something more unfortunate in common. With an early slump in Holland, a coal crisis and weak steel demand in Belgium-Luxembourg, they were the hardest hit by the recession in Western Europe.

So far, recovery has been mostly limited to the Netherlands. Housing and public investment led to a fairly steady improvement in late 1958. Even more encouraging was the strong recovery in the Dutch balance of payments. The 1958 surplus was almost 1.4 billion guilders—more than twice the normal figure and a reversal of 1957's deficit. The improvement was brought about by sharp reductions in imports (particularly from Indonesia) and heavy sales of Dutch securities abroad. This year, rising exports—tied closely to U.S. orders—should pace the overall recovery. General outlook for the Netherlands in 1959: Moderate gains, marred in part by higher unemployment than usual and a budget deficit.

As the trading nations of Europe, the Benelux countries have a large stake in the Common Market, and are sympathetic to the idea of a Free Trade Area. Their strong points are high productivity, skilled workers and substantial direct American investment. In Belgium, for example, two dozen U.S. firms (including du Pont and Union Carbide) opened up new operations in 1958. The total investment of some 280 American firms in Belgium now runs to well over $200 million.

Italy: The Long-term Challenges

Italy had a good year in 1958, and activity is still rising. Last year's gain in output was moderate, but a good harvest made it possible for agriculture to take over where industrial production left off. The overall volume of goods and services increased by 3-4 per cent., compared to almost 6 per cent. in 1957. Investment declined slightly.

Italy's balance of payments is also firm. Exports held at the 1957 level last year, imports declined slightly, and the terms of trade shifted in Italy's favour. Added to this were substantial "invisible"—shipping profits, tourist payments, emigrant remittances—which swelled Italian reserves to over $2 billion. The resulting liquidity of the Italian banking system has prompted a few worries about inflation. But generally speaking, Italy is in good condition, both externally and internally for the first year of the Common Market. Italian industry is confident it can withstand the competitive strain coming from the initial tariff and quota cuts. Since Italy has already liberalised more than 98 per cent. of her trade, the January moves affected only a few goods—autos, in particular, and a few high tariff items such as cameras and optical equipment.

On the other hand, Italy brings to the Common Market venture some problems of long standing. As a low wage country with chronic unemployment, the labour mobility envisioned under the Common Market is particularly important to Italy. According to O.E.E.C. projections, nearly one half of the 3 million increase in the Common Market labour force from 1955 to 1965 will be Italians. Italy's other concern over the long run is development of the poor, underdeveloped south. Despite Italy's own Vanoni Plan to industrialise this region, she will need substantial investment aid from her Common Market partners.

Britain: A Recovery Under Way

The long awaited recovery in Britain could get under way in 1959. Yet there are several factors which give the outlook for the year a cautious note. Britain has yet to work out a *modus vivendi* with her Common Market competitors on the Continent. Part of sterling's remarkable strength over the past year was due to fortuitous terms of trade, which may not be as favourable in 1959. Also, there's Britain's internal problem. The official policy is "expansion without inflation" and Britain's chronic tendency has been towards too little of the first, too much of the second.

Still, there are signs that the recession is over. Industrial production bottomed out last fall, and overall output is expected to increase by 2 per cent. to 3 per cent. this year. This would bring the economy back to its level of operation in the best months of 1957. The weakest sector is private capital spending. Current excess capacity is still a deterrent to capital goods recovery—ranging from 10 per cent in chemicals to 25 per cent. in steel, according to recent estimates by the National Institute of Economic and Social Research.

Britain did wind up 1958 with a record balance of payments. And sterling, following its remarkable comeback last year, has continued strong in the first few months of external convertibility. At home, consumer demand is still buoyant after responding quickly to last fall's easing of restrictions on instalment buying. But there is some question whether the budget, when presented, will be of a nature to stimulate economic expansion.

RESULTS OF INDIAN ALUMINIUM EXCELLENT

OUTLOOK PROMISING—FURTHER EXPANSION CONTEMPLATED

THE progress made by the Indian Aluminium Company, Ltd. (Managing Director: H. Vance Echols, Calcutta), during the year ended 31st December 1958, is highly encouraging and engenders a feeling of optimism for the future. Both production and financial results are excellent, reflecting as they do the hard work put in by the workers and the management alike. They show that the fruits of forward planning based on diligent estimates of the country's requirements of aluminium products are beginning to bear fruit. Production, sales, profit, dividend to shareholders, salaries and wages to workers and contribution to the Exchequer were all a record high in 1958. That is only as it should be for a company which is still young and vigorously growing and there is no doubt that, given peace, understanding by workers and help and co-operation from the Government, the Company will be able to establish new peaks in the coming years.

The highlights of the Company's achievements in 1958 are the following:

As compared with 1957, sale proceeds have gone up by 37 per cent., from Rs. 544 lakhs to Rs. 743 lakhs, thanks to keen demand for the Company's products and increase in production.

Gross profit has risen by about 50 per cent., from Rs. 91.64 lakhs to Rs. 137.06 lakhs.

Provision for depreciation has been stepped up from Rs. 26.30 lakhs to Rs. 27.95 lakhs.

Taxation, which had taken up only Rs. 7 lakhs in 1956 and Rs. 38.97 lakhs in 1957, absorbs no less than Rs. 61.43 lakhs.

After depreciation and taxation, the net profit has advanced from Rs. 26.38 lakhs to Rs. 47.67 lakhs, an increase of 80 per cent.

A sum of Rs. 11.10 lakhs, equivalent to 23.5 per cent. of the net profit, has been conserved by way of development rebate reserve.

The distribution to ordinary shareholders has been raised from 60 naye paise per share of Rs. 10 each to 70 naye paise.

The undistributed surplus has more than doubled, from Rs. 7.20 lakhs to Rs. 15.26 lakhs.

Results Compared

The comparative table below shows at a glance fuller particulars of financial results:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	7,42.97	5,44.39	4,24.97	3,65.67
Other income	3.47	4.06	2.08	2.32
Manufacturing and other expenses	6,19.31	4,56.81	3,61.47	3,19.34
Gross profit	1,37.06	91.64	65.58	48.64
Provision for—				
Depreciation	27.95	26.30	22.79	21.55
Taxation	61.43	38.97	7.00	...
Net profit	47.67	26.38	35.79	27.09
To reserves	11.10	..	..	10.00
Dividends—				
5 per cent. preference ..	1.37	1.37	1.83	2.00
Ordinary	28.07*	23.13	27.07	14.40
	(7%)	(6%)	(10%)	(9%)
Carry forward	15.26	7.20	11.06	4.18

* Provision for ordinary dividend has been made on the assumption that the entire outstanding convertible loan stock will have been converted into ordinary shares on the date of declaration of dividend.

It will be noted that manufacturing and other expenses have jumped up from Rs. 457 lakhs to Rs. 619 lakhs. Much of this increase must be attributed to expansion in the Company's activities. Nevertheless, the general inflation in costs must also have been a significant contributory factor. Salaries, wages and bonus alone have risen from Rs. 88.14 lakhs to Rs. 101.47 lakhs. As at the end of 1958, the number of employees was greater at 4,222 as compared with 3,696 a year before.

Despatches Higher

A clear idea of the improvement in the Company's turnover in 1958 can be had from the fact that the aluminium products despatched were 10,380 tons of the Company's own manufacture and 1,376 tons of agency and distributor products, the corresponding figures for 1957 being 8,221 and 848 tons, respectively.

On the expansion side, the main achievements of the Company are the completion of Hirakud Smelter (in Orissa) and the expansion of the alumina plant at Muri (Bihar) to 18,000 tons annual capacity. The Hirakud Smelter began operations only on 6th January 1959 and as such their effect on the financial results will be felt in the current year. The expansion of the alumina plant in Muri was completed in July 1958, so that the results for that year reflect this progress only in past. They will make their full impact this year. The Company's smelter in Alupuram (in Kerala) produced slightly more ingots, 5,664 tons, as against 5,448 tons in 1957. The extrusion plant in that centre also turned out more, 1,084 tons as against 740 tons. The fabricating plant at Belur (in West Bengal) rolled out 8,834 tons, as against 7,283 tons in 1957. It will be noted from these figures that the Company fabricated more products than its own production of ingots. This it could do with the help of imports of ingots, mostly from Canada under the Colombo Plan aid. As already stated, the demand for aluminium products in India was strong in 1958 and "business conditions," to quote the Directors' report, "continue to be satisfactory."

Further Expansion Plans

The following extract from the Directors' report will give an idea of the Company's plans for further expansion:

"Negotiations proceeded with the Orissa Government for the supply of additional electric power to enable expansion of the Hirakud smelter from its present installed capacity of 10,000 tons to 20,000 tons ingot production per annum.

"In order to meet all of the alumina requirements of the Hirakud and Alupuram smelters from indigenous sources, the Company will shortly undertake a further expansion of its alumina plant at Muri. Annual alumina capacity will be increased from its present level of 18,000 tons to 32,000 tons.

"To facilitate the expansion of the Hirakud smelter to 20,000 tons ingot capacity and the corresponding alumina and bauxite facilities, the Company's Canadian shareholder, Aluminium Limited, has signified its willingness, upon satisfaction of certain conditions, to offer a loan to the Company of up to six million dollars, which is the estimated foreign exchange requirement for the expansion. To enable the Company to take advantage of this generous financial offer, it is hoped that both the Government of India and the State of Orissa will assist in the speedy implementation of this project on terms that will permit the most economic development of India's natural resources for aluminium production."

The balance-sheet total of the Company as at 31st December 1958 is up from Rs. 859 lakhs a year before to Rs. 1,097 lakhs. The increase of Rs. 238 lakhs is chiefly the result of an addition of Rs. 207 lakhs in fixed capital assets. The gross value of these assets is Rs. 924.60 lakhs, as against which a depreciation of Rs. 248.87 lakhs has been provided so far, so that the net block is Rs. 675.73 lakhs. This excludes the small sum of Rs. 6.14 lakhs on deposit with banks abroad for machinery purchases. Stock-in-trade appears at Rs. 293.91 lakhs, an increase of nearly Rs. 50 lakhs over the year. The rest of the current assets total Rs. 121.27 lakhs. More than half of the net block is financed by paid-up capital which stands at Rs. 428.06 lakhs, of which all but Rs. 40 lakhs are in ordinary shares. The Rs. 40 lakhs are in 40,000 5 per cent. cumulative preference shares of Rs. 100 each. A little over two years ago, the Company raised Rs. 268.13 lakhs in the form of 5 per cent. taxable loan, with right to the stockholders to convert them into ordinary shares. Of this loan, the unconverted portion at the end of 1958 was only Rs. 18.52 lakhs. By now, almost all of this might have been converted into equity capital. The reserves and surplus amount to Rs. 144.28 lakhs, of which the share premium is Rs. 72.93 lakhs. Thus, the total owned funds of the Company aggregate Rs. 572.34 lakhs. The liabilities amount to Rs. 524.83 lakhs, including Rs. 218.19 lakhs of secured loans from banks and Rs. 110.70 lakhs provision for taxes payable.

After remaining neglected for a long time during the depression of 1956-57-58, the ordinary shares of the Company began to evoke the interest of investors during the last past one year. But it is only since the commencement of 1959 that they have been a keenly sought after counter. They are now standing at Rs. 21.06, as against Rs. 17.00 at the end of February 1959, Rs. 16.00 at the beginning of 1959 and Rs. 12.87 a year ago. In 1956, before the depression hit the market and the Company issued additional capital, these shares had touched a high of Rs. 25.25. The highest level seen in 1955 was Rs. 22. At the current rate, the yield on these shares works out to about 3.4 per cent. In raising the dividend from 6 to 7 per cent. for 1958, the Directors say that "they have been mindful of the recent budgetary announcements." This apparently means that they are confident of ensuring the same gross dividend as at present, if not something better. The low yield shows that investors' rating of the Company's shares as a growth scrip is high.

KILLICK INDUSTRIES LTD.

Apropos our report on the last annual meeting of Killick Industries Ltd., the Secretary to the Board of the Company, Mr. H. J. MacQueen, writes, in a letter dated 2nd April 1959, as follows:

"The attention of the Board has been drawn to a report published in column 2 of page 439 of your issue dated 21st March 1959, which reads as follows:—

'The meeting adopted two resolutions entered in the agenda as 'special business' at the instance of the group of shareholders who chose to collect proxies against Mr. Purshotamdas Thakurdas, Mr. Chunilal V. Mehta and Jaisinh Vithaldas. One resolution pertained to the election of Mr. M. N. Cama as a Director, subject to the approval of the Government. The other resolution was as follows:

'That this meeting views with deep regret the hasty and derogatory remarks made against Messrs. E. D. Sheppard and K. G. Milne, the Managing Directors of this Company, by some shareholders of the Ahmedabad Electricity Co., Ltd., at its last annual general meeting and declares its full confidence in the said two gentlemen.'

'The aforesaid resolution was adopted with an amendment which sought to convey the shareholders' best wishes to Mr. Sheppard and Mr. Milne in view of their impending retirement.'

"We would point out that, instead of the above resolution regarding Messrs. Sheppard and Milne, the following amendment was finally passed:—

'That this meeting extends its good wishes to Mr. E. D. Sheppard and Mr. K. G. Milne on the occasion of their impending retirement and hopes that they will enjoy many years of health and happiness.'

"The Board also observes that you have indicated that a certain number of proxies were lodged in favour of Mr. Sheppard and a certain number in favour of Mr. Purshotamdas Thakurdas. The figures given by you are not correct, in view of revocations received up to the time of the meeting.

"It will be very much appreciated if the above clarification is made in your next issue."

[A representative of this journal was present at the meeting right from the beginning to the end. Our report was based on his impressions of what happened at the meeting. He does not agree with the contention of the Board. The resolution that is now said to have been finally passed might have been the intention of the Board and the parties concerned, but, from the way in which both the resolutions were moved—the one quoted by us and the other quoted in the aforesaid letter—it was clear to our representative that the latter was an addition, and not a substitute, to the former. The chairman of the meeting, Mr. Chunilal V. Mehta, did not say anything on this issue, nor did he indicate as to which resolution was being adopted. No one said that the resolution which was first moved and duly seconded had been withdrawn or rescinded. Indeed, several observers got the impression that the procedure followed in regard to the resolution now said to have been finally adopted was highly irregular.

As regards proxies, the figures mentioned by us are not our figures, but the total of proxies of old and new shares as announced by a shareholder who examined the proxy register. Here are the breakdown figures of the proxies as read out at the meeting:

	For Mr. Sheppard	For Mr. Purshotamdas Thakurdas
Old	49,465	31,905
New	10,254	9,250

Our representative's impression is that the aforesaid figures were given as net after revocations. Anyway, the aforesaid figures were neither repudiated nor challenged, nor qualified by anyone. If they were incorrect, as is now claimed by the Board, why did not Mr. Chunilal V. Mehta, as the chairman of the meeting, give the correct figures? In fact, not only did he not respond to the repeated requests made by certain shareholders for the results of proxies lodged with the Company, but remained silent on this point.—EDITOR.]

NESTLE PRODUCTS

The Nestle Company, the well-known manufacturer of milk and cocoa products, is understood to have decided to set up a manufacturing counterpart in India. A new company under the name of Food Specialities (Private) Limited has been established in Punjab. The authorised capital of this company is likely to be around Rs. 60 lakhs. There is a possibility of Indian participants being invited to take up equity shares to the extent of 10 per cent. of the total capital. The manufacturing programme includes milk and milk products.

DUNLOP MAINTAINS DIVIDEND

RISE IN COSTS CUTS THE PROFIT MARGIN

IN the equities section of the stock exchanges in India, the shares of the Dunlop Rubber Company (India) Ltd.—Managing Director: John Luckham—have come to hold a pride of place as a blue chip. They have always been held in great esteem by investors for three important reasons: sound management, steady dividend record and excellent growth prospects. And yet even this scrip could not escape the crisis of confidence that hit the stock exchanges in the third quarter of 1956 and persisted almost up to the middle of last year. In 1957, the scrip touched a low of Rs. 17 *ex*-right, when the stock markets were in the nadir of depression. Even a year ago, it was quoted at no more than Rs. 24.75 *ex*-dividend. Today, it is firm at Rs. 34.75 *ex*-dividend. The low levels to which the Company's share had fallen during the past two years reflects the general loss of confidence among investors brought about by the Government's socialist policies. The subsequent recovery is the cumulative result of the absence of any further serious damage to investors' rights, the fresh momentum gained by inflationary forces, the impressive growth of the Company itself, and scarcity of sellers in the face of growing buying orders for the scrip. It may be added, for the benefit of those who may be inclined to think that the scrip has gone up to a dizzy height now, that the highest levels touched by it in 1954, 1955 and 1956 were Rs. 40.25, Rs. 41.37 and Rs. 35, respectively, and that the Company's results for the current and future years will reflect the operations of its new factory at Ambattur (Madras) and the expansion that has been effected in the Sahaganj (Calcutta) factory. The outlook for all the products manufactured by the Company—automobile and cycle tyres, industrial belts, cushions, pillows and mattresses, etc.—is promising.

The Company has done well in 1958, notwithstanding a sizable rise in the cost of production and the consequent reduction in the profit margin. Its total sales went up, as compared with 1957, by Rs. 2.25 crores or 11½ per cent. Due to rising costs, the margin of net profit as a percentage of sales, however, deteriorated from 4 per cent. to 3.7 per cent. This is a point which the critics of the private sector and labour leaders will do well to remember, lest the popularity of the Company's scrip and the high level at which it is standing should engender wrong notions among them. Indeed, the rise in costs is disquieting.

The following comparative table will show at a glance the salient features of the Company's financial results:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	22,27.76	19,97.00	16,99.80	15,11.60
Other income ..	5.21	4.67	4.28	3.45
Manufacturing, selling and other expenses	17,70.25	15,85.50	13,94.50	12,33.08
Excise duty	2,53.08	2,15.21	1,89.61	1,55.95
Debenture interest	7.31	5.72	6.50	6.50
Gross profit	2,02.33	1,95.17	1,33.23	1,19.53
Provision for—				
Bad debts	0.30	0.30	0.30	0.30
Depreciation	31.47	27.68	30.54	27.51
Taxation	88.13	86.52	47.34	49.32
Net profit	82.43	80.67	55.10	40.40
To reserves	30.00	30.00	26.00	22.00
Dividends—				
6% preference (tax-free) ..	1.80	1.80	1.80	1.80
6% II preference (less tax) ..	1.04	1.04	1.77	1.77
Ordinary	48.75	38.25	24.00	24.00
	(16⅔%)	(16⅔%)*	(15%)	(15%)
Carry forward	22.46	22.23	13.25	11.72

* Includes a final dividend of 8½ per cent. on the increased capital, raised by the issue of 1,400,000 ordinary shares of Rs. 10 each.

It will be seen therefrom that, while sale proceeds have climbed up from Rs. 19.97 crores to Rs. 22.28 crores, gross profit has risen by only Rs. 7.16 lakhs to Rs. 2.02 crores. It is so because manufacturing, selling and all other expenses have advanced by no less than Rs. 1.85 crore, excise duty by Rs. 37.87 lakhs and interest on debentures by Rs. 1.58 lakh. The increase in net profit from Rs. 80.67 lakhs to Rs. 82.43 lakhs is even less than that in gross profit, as the provisions for taxation and depreciation have had to be stepped up. The amount taken to reserves has been kept unchanged at Rs. 30 lakhs. The dividends have been maintained. Ordinary shares get for the second year in succession 16.25 per cent. per annum. A notable point about this dividend is that the whole of it is on the increased capital, whereas for 1957 only the final dividend was so. Consequently, the amount utilised for ordinary dividend is higher by Rs. 10.50 lakhs. Nevertheless, the carry forward is a shade better than the sum brought in. It may also be noted that the Company had uniformly maintained the dividend at 15 per cent. per annum for six years, from 1951 to 1956.

A significant point brought out by the above table is that the increased revenue the Exchequer has obtained as a result of the enhanced activity of the Company is far greater than that of the share of shareholders.

The following extracts from the Directors' report will enable readers to understand the appropriations made during the year and the policy behind them:

"The Finance Act, 1958 requires the Company to credit to a reserve account 75 per cent. of the development rebate allowed from the accounting year 1958 onwards and the foregoing transfer of Rs. 30,00,000 to development rebate reserve will adequately meet this requirement for the year under review. Due to the establishment of the Company's new factory at Ambattur, the development rebate allowable and consequently the amount of the initial transfer to development rebate reserve is abnormally high. The Directors, therefore, do not consider it necessary to make a further appropriation to general reserve on this occasion.

"Additions to fixed assets to the extent of Rs. 2,29,13,735 were made during the year, as compared with Rs. 97,03,843 in 1957. The Company's Sahaganj factory expansion was successfully carried out and the new Ambattur factory was virtually completed by the end of 1958.

"In September 1958, Rs. 1 crore of 6½ per cent. debenture-stock 1968-73, ranking *pari passu* with the balance of the original debenture-stock created in 1950, was issued to the public at par. To facilitate this, the conditions attaching to the original debenture-stock were altered. The expenses of the new issue, amounting to Rs. 5,19,907, have been charged to general reserve.

"The Directors consider it advisable to consolidate the free reserves as far as possible by transferring the special depreciation reserve to general reserve."

The financial position of the Company is sound and reflects the large investments made in recent years on expansion and modernisation. The Company has a paid-up capital of Rs. 3.70 crores, of which Rs. 70 lakhs are in preference shares and the balance in ordinaries. Including a share premium of Rs. 70 lakhs, the reserves and surplus exceed the paid-up capital by over a crore of rupees, their total being Rs. 4.87 crores. Debentures and secured bank overdrafts amount to Rs. 3.37 crores and other current liabilities and provisions Rs. 2.39 crores. The gross value of fixed assets is Rs. 8.77 crores and the written down value Rs. 5.80 crores, the depreciation provided so far being Rs. 2.97 crores. The total current assets is as large as Rs. 8.53 crores of which stock-in-trade alone is Rs. 5.03 crores. The fact that cash balances are no more than Rs. 2.89 lakhs is a striking indication of the extent to which the developmental activities of the Company have strained its resources.

At their current market value, the Company's shares give a yield of about 4.7 per cent.

MANCHESTER LETTER

(*Concluded from page* 593)

negotiated with the trade unions and which is specially suited to make the best use of modern machinery, we feel that we can achieve effective use of manpower and good working conditions."

In the long run, Mr. Ernest Hirst went on, a reconstructed industry working shifts may be able to employ as many, or more than the numbers now on the books, if due allowance is made for natural losses owing to retirement and to the customary labour turnover. Unions and employers are already meeting to discuss what can be done in appropriate cases to provide assistance for workers where firms go out of business or close down mills in any statutory reorganisation scheme which may be introduced for streamlining the industry.

Shortsighted opposition to marking schemes to indicate cloth made solely in the United Kingdom was decried by Mr. Hirst. Many men and women, not only in Lancashire, he said, would buy no other than British products if the goods were plainly marked with a Union Jack. "In the future, as in the past, the public will still buy Lancashire goods when the highest quality and reliability of texture and colouring are required," he declared.—*All Rights Reserved.*

COMPANY MEETINGS AND DIVIDENDS

SHRI AMBICA MILLS LTD. Annual General Meeting, Ahmedabad, 20th April 1959. Dividend: Rs. 30.00 per share (includes bonus of Rs. 5.00 per share). Transfer books remain closed from 11th to 25th April 1959, both days inclusive.

SHORROCK SPINNING AND MANUFACTURING CO., Ltd. Annual General Meeting, Ahmedabad, 22nd April 1959. Dividend: Rs. 22.00 per share (includes bonus of Rs. 2.00 per share). Transfer books remain closed from 1st to 21st April 1959, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 22nd April 1959. Dividend: Rs. 15.00 per share. Transfer books remain closed from 11th to 25th April 1959, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Annual General Meeting, Calcutta, 23rd April 1959. Dividend: 16¼ per cent. free of tax. Transfer books remain closed from 10th to 30th April 1959, both days inclusive.

FINLAY MILLS LTD. Annual General Meeting, Bombay 23rd April 1959. Dividend: Rs. 16.00 per share, payable on and after 24th April 1959. Transfer books remain closed from 26th March to 23rd April 1959, both days inclusive.

GOLD MOHUR MILLS LTD. Annual General Meeting, Bombay, 24th April 1959. Dividend: Rs. 15.00 per share, payable on and after 25th April 1959. Transfer books remain closed from 26th March to 24th April 1959, both days inclusive.

OOCHTERLONY VALLEY ESTATES (1938) LTD. Annual General Meeting. Kozhikode, 24th April 1959. Dividend: 10 per cent. or Re. 0.20 per share. Transfer books remain closed from 10th to 24th April 1959, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Annual General Meeting, Kozhikode, 25th April 1959. Dividend: 15 per cent. or Re. 0.30 per share. Transfer books remain closed from 11th to 25th April 1959, both days inclusive.

HUKAMCHAND MILLS LTD. Annual General Meeting, Indore, 27th April 1959. Transfer books will remain closed from 15th to 27th April 1959, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Annual General Meeting, Calcutta, 27th April 1959. Dividend: Re. 0.70 per share. Transfer books remain closed from 6th to 27th April 1959. both days inclusive.

GOKAK MILLS LTD. Annual General Meeting, Bombay, 29th April 1959. Dividend: Rs. 8.00 per share.

TRICHINOPOLY MILLS LTD. Annual General Meeting, Ramjeenagar, Tiruchirapalli, 30th April 1959. Dividend: 7½ per cent. or Re. 0.75 per share, free of tax. Transfer books remain closed from 11th to 30th April 1959, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Interim dividend of Rs. 2.00 per share, for the year ended 31st April 1959. Transfer books remain closed from 10th to 13th April 1959, both days inclusive.

SAMNUGGUR JUTE FACTORY CO., LTD. Dividend of 5 per cent. or 1s. per ordinary share, less income-tax at 8/6d. per £ for the year 1958. Transfer books were closed from 19th March to 2nd April 1959, both days inclusive.

VICTORIA JUTE CO., LTD. Dividend of 5 per cent. or 1s. per ordinary share, less income-tax at 8/6d. per £, for the year ended 31st December 1958. Transfer books were closed from 19th March to 2nd April 1959, both days inclusive.

TITAGHUR JUTE FACTORY CO., LTD. Dividend of 3 per cent. or 7 1/5d. per ordinary share, less income-tax at 8/6d. per £, for the year ended 31st December 1958. Transfer books were closed from 19th March to 2nd April 1959, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Interim dividends of 12 nP per share, on preferred ordinary shares and Re. 1.13 per share, on 'A' and 'B' ordinary shares (including a bonus of 25 nP per share), for the year ended 31st March 1959, payable on or after 8th May 1959. Transfer books remain closed from 11th to 24th April 1959, both days inclusive.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Dividend of Rs. 18.00 per share (inclusive of bonus), for the year ended 31st December 1958, payable on 11th May 1959. Transfer books remain closed 24th March to 14th April 1959, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Dividend of Rs. 2.00 per share, for the year ended 31st December 1958, payable on 11th May 1959. Transfer books remain closed from 24th March to 14th April 1959, both days inclusive.

STANDARD MILLS CO., LTD. Dividend of Rs. 20.00 per share, for the year ended 31st December 1958, payable on 11th May 1959. Transfer books remain closed from 24th March to 14th April 1959, both days inclusive.

RESULTS OF AMBICA MILLS BETTER

VISHNU AND LAKHSHMI COTTON MILLS SUFFER LOSSES

Shri Ambica Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Harivallabhdas & Co., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1958.

After providing a sum of Rs. 14,65,243 (Rs. 12,33,338) for depreciation, a sum of Rs. 2,00,000 (Rs. 6,50,000) for rehabilitation reserve, a sum of Rs. 6,50,000 (*nil*) for development rebate reserve and a sum of Rs. 51,00,000 (Rs. 40,50,000) for estimated taxation, the working of the year shows a profit of Rs. 30,48,979 (Rs. 14,18,190). To this amount may be added the balance of profit from the previous year Rs. 1,76,451 (Rs. 2,63,336) making a total of Rs. 32,25,430 (Rs. 16,81,526). This amount the directors recommend to be disposed of as under:—

To general reserve Rs. 10,00,000 (*nil*), to gratuity reserve Rs. 2,00,000 (*nil*), to dividend on 5,600 cumulative preference shares of Rs. 100 each at Rs. 5 per share free of income-tax for the year ended 31st December 1958 absorbing Rs. 28,000 (Rs. 28,000), to dividend on 7,000 second cumulative preference shares of Rs. 100 each at Rs. 4 per share free of income-tax for the year ended 31st December 1958 Rs. 28,000 (Rs. 28,000) and to dividend on 63,759 (57,963) ordinary shares of Rs. 100 each at Rs. 25 (Rs. 25) plus Rs. 5 (*nil*) as bonus per share free of income-tax for the year ended 31st December 1958 Rs. 19,12,770 (Rs. 14,49,075) leaving to be carried forward Rs. 56,660 (Rs. 1,76,451).

During the year under report, the price level of Company's products did not show any appreciable variation. Upward trend in the prices of stores, colours, chemicals, fuel and power continued unabated. The rise in cost of living index resulted in the corresponding rise in the dearness allowance payable to workers. The position of the industry deteriorated in the latter part of the year due to general depression in the market. However, the directors hope the working result of the Company will be found satisfactory in these circumstances.

With regard to the Lalbhai Tricumlal Mills Ltd., the directors state that as a result of the amicable settlement arrived at in the matter, the Company's Petition in the High Court at Bombay, was allowed to be withdrawn in the month of April 1958, the Provisional Liquidator appointed by the Court was discharged and the directors of that Company took charge of the properties and assets of that Company from the Provisional Liquidator. Also in terms of the settlement aforesaid the directors obtained delivery of 6,440 ordinary shares of the Lal Mills of the nominal value of Rs. 100 each at the price of Rs. 50 each from the members and the relatives of the old managing agents of that Company and these 6,440 ordinary shares have since been transferred in the name of the Company. Thus the Company's total holding of ordinary shares of the Lal Mills comes to be 12,525 shares with the result that the Lal Mills have become a subsidiary of the Company as from 29th October 1958.

As regards the unsecured loans to and investments in the Lalbhai Tricumlal Mills Ltd., the directors state that no specific provision has been made in the accounts of the Company against the deficiency, if any, arising in the realisation of such loans and investments, as the reserves of this Company are adequate to meet any such contingency.

There are 94,128 spindles and 1,790 looms in your mills.

Vishnu Cotton Mill Ltd.

The directors of the above Company [Managing Agents: The Bombay Co. (Private) Ltd., Bombay] present the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a loss for the year of Rs. 9,02,672 (Rs. 9,54,275). The directors have transferred from depreciation, renewal and extension fund Rs. 6,26,601 (*nil*) leaving a balance of Rs. 2,76,071 (Rs. 954,275). The directors have decided to provide balance depreciation of 1956 Rs. 2,22,000 (Rs. 34,603 to gratuity fund) and part initial depreciation of 1952 Rs. 3,243 (Rs. 18,500 for balance of wealth tax for 1956) showing a loss of Rs. 5,01,314 (Rs. 1,90,456 after adjusting previous year's credit balance of Rs. 16,922). In view of the loss sustained, the directors are unable to recommend the declaration of any dividend on ordinary shares, but they recommend that a dividend of Rs. 35 per share less income-tax on the 3,133 preference shares be declared absorbing Rs. 75,114 (Rs. 75,114) to meet which a transfer from reserve fund has been made of Rs. 80,000 (Rs. 80,000). This leaves a net loss of Rs. 4,96,427 to which must be added last year's loss of Rs. 9,85,569 making a total debit of Rs. 14,81,997 to be carried forward. It has not been possible, in view of the loss, to make any provision for arrears of depreciation for the year 1957, amounting to Rs. 11,84,277. Forfeited dividends amounting to Rs. 2,732.87 have been added to reserve fund.

Trading Conditions: There was no improvement during the year as compared with 1957 in off-take or prices, and in particular there was a serious fall in exports arising from a contraction in the international textile trade and a heavy fall in the prices of foreign cottons which deprived India of any export advantage in respect of raw material costs. The situation cannot be expected to improve either in respect of exports or the inland markets, which latter remain fully if not over stocked with cloth, while the continuing high cost of food continues to claim a disproportionate part of the ordinary man's domestic budget.

In view of the foregoing, the policy of forward sales, however, unremunerative, was maintained, but even so, stocks of cloth were markedly higher at the end of the year than at the close of 1957. There is little doubt, however, that the Mill was working better in itself.

The managing agents have agreed again this year to accept a reduction in their minimum remuneration as continued sacrifices on all sides are necessary to maintain the working of the Mill under market conditions that show no sign of early improvement. The Company's cotton buying agents have also agreed to accept a similar cut in their commission.

Lakhshmi Cotton Manufacturing Co., Ltd.

The directors of the above Company (Chairman: Mr. E. S. Vernon-Jones, Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a loss for the year of Rs. 3,52,051 (Profit of Rs. 2,12,935). The credit balance brought forward from last year is Rs. 2,294 (Rs. 20,376). This leaves a debit balance of Rs. 3,49,756 (credit of Rs. 2,33,310). To this must be added depreciation for previous years of Rs. 9,97,894 (*nil*) and provision for wealth tax of Rs. 52,000 (*nil*) making a total debit of Rs. 13,99,650 (credit of Rs. 2,33,310). The directors have transferred from building fund Rs. 3,16,095 (*nil*), engine and machinery fund Rs. 10,34,246 (*nil*), dividend fund Rs. 2,46,800 (Rs. 2,05,000) and from reserve fund Rs. 50,000 (*nil*) leaving a credit balance of Rs. 2,47,490 (Rs. 4,38,310). Out of this balance the directors recommend a dividend of Rs. 12.50 (Rs. 12.50) per share less income-tax on 6,400 preference shares and a dividend of Rs. 15 (Rs. 15.00) per share free of income-tax on 12,800 ordinary shares absorbing Rs. 2,46,800 (Rs. 2,46,800) and to carry forward the balance of Rs. 690 (Rs. 2,294 after transferring Rs. 33,216 to gratuity fund and Rs. 1,56,000 to reserve for taxation). With the transfer of a sum aggregating Rs. 13,50,341 for the building and engine and machinery funds, the fixed assets have been fully written down. Forfeited dividends amounting to Rs. 3,041.34 have been added to the reserve fund.

Trading Conditions: There was no improvement during the year, as compared with 1957, in offtake or prices. Although there was some curtailment of production by the Industry as a whole, this was offset by a reduction in exports, as a result partly of a deterioration in international textile trade and partly of a heavy fall in the prices of African and other medium staple cotton. As a result of this, India seems to have lost its last advantage of a cheap raw material. At the present moment, there is no sign of market improvement, and since cloth production appears to be rising it looks as though the least economic units will be forced to close.

Absenteeism continued very high, and the figure in the production departments is unfortunately higher than the average through the labour force as a whole.

Bengal Flour Mills Co., Ltd.

The directors of the above Company Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 5,48,335 (Rs. 9,10,908) to which is added the balance brought forward from 1957 of Rs. 2,01,787 (Rs. 90,879) making a total of Rs. 7,50,122 (Rs. 10,01,787). Out of this total the Board paid an interim dividend of 12½ (12½) per cent. on 14th November 1958, amounting to Rs. 1,50,000 (Rs. 1,50,000). The Board has transferred Rs. 4,081 (*nil*) to development rebate reserve and Rs. 2,26,501 (Rs. 5,00,000) to general reserve, leaving a balance of Rs. 3,69,540 (Rs. 3,51,787) available for distribution, which it is recommended be dealt with as follows:—To final dividend of 12½ (12½) per cent. absorbing Rs. 1,50,000 (Rs. 1,50,000) leaving a balance carried forward of Rs. 2,19,540 (Rs. 2,01,787).

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against the current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—Although there was an increase in production over the previous twelve months, there was a reduction in the selling prices of most commodities and this was particularly so in the case of bran. Controls on prices and distribution continued and the extraction rate of atta was maintained at high levels. At the request of Government, regular weekly allotments were made to a large number of retail shops throughout the Calcutta area with the object of ensuring continuing supplies of flour and atta at mill rates.

The difficulty in obtaining foreign exchange has prevented the fulfilment of the Board's programme of greater modernisation and improvement but it is considered desirable to continue to build up funds for this purpose. A further transfer to general reserve has been made with this in view.

Accounts in brief are as under:—

Ravalgaon Sugar Farm Ltd.

The dirrctors of the above Company (Managing Agents: Messrs. Walchand & Co. Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th September 1958.

The net profit for the year after providing Rs. 2,25,000 (Rs. 8,50,000) for taxation is Rs. 10,43,731 (Rs. 13,96,064). To this is added the amount brought forward from the previous year of Rs. 70,575 (Rs. 67,511) making a total of Rs. 11,14,306 (Rs. 14,63,575). The directors have allocated to special depreciation reserve Rs. 1,29,100 (Rs. 2,75,000), to general reserve Rs. 55,000 (Rs. 1,45,000) and to debenture redemption fund Rs. 2,40,000 (Rs. 2,00,000) leaving a balance of Rs. 6,90,206 (Rs. 6,88,575 after placing Rs. 80,000 to dividend equalisation reserve and Rs. 75,000 to reserve for contingency). The directors recommended the following dividends—On preference shares at 5½ per cent. (less income-tax) Rs. 1,10,000 (Rs. 1,10,000), on ordinary shares at Rs. 12 (Rs. 12) per share (without deducting income-tax) Rs. 4,80,000 (Rs. 4,80,000) and on deferred shares at 7 per cent. (less income-tax) Rs. 28,000 (Rs. 28,000) leaving a surplus to be carried forward of Rs. 72,206 (Rs. 70,575).

No adjustment has been made for excise duty on stock of sugar as on 30th September 1958 and consequently the valuation of stock of sugar as on that date is also without taking credit for the same.

The Factory commenced crushing on 31st October 1957 and the same was stopped on 14th April 1958. Sugarcane crushed during the season was 1,62,304.5 tons while sugar manufactured was 1,65,468 bags with a recovery of 15.29 per cent. During the year under report the Confectionery plant produced about 922.5 tons of confectionery and the candy plant produced about 18.081 maunds of sugarcandy. The Factory continued to produce wax from cane mud. About 3,640 lbs. of wax was produced during the year. The Company has received a licence for manufacture of Sugar Mill Machinery and Component parts.

Gwalior Sugar Co., Ltd.

The directors of the above Company [Managing Agents: Sir J. P. Srivastava & Sons (Madhya Bharat) Private Ltd., Dabra, Madhya Pradesh] submitted the audited accounts of the Company for the year ended 30th June 1958.

After providing Rs. 2,18,069 (Rs. 2,43,603) for depreciation and Rs. 8,50,000 (Rs. 8,92,448) for taxation, show a net profit of Rs. 5,71,407 (Rs. 5,78,205) to which has to be added Rs. 7,975 (Rs. 6,568) on account of sale of old stores and old liabilities written back, and Rs. 6,691 (Rs. 14,799) brought forward from the previous year, leaving at the credit of the profit and loss account a sum of Rs. 5,86,073 (Rs. 59,952), which the directors recommend to be disposed of as under:—

To dividend at 7 per cent. on 6,750 redeemable cumulative preference shares of Rs. 100 each, for the year ended 30th June, 1958 absorbing Rs. 47,250 (Rs. 47,250). to dividend at 7 per cent. on 5,000 cumulative preference shares of Rs. 100 each, for the year ended 30th June, 1958 absorbing Rs. 35,000 (Rs. 35,000), to dividend at 10 (10) per cent. on 15,939 equity shares of Rs. 100 each, for the year ended 30th June, 1958 (free of Indian income-tax) absorbing Rs. 1,59,390 (Rs. 1,59,390), to transfer to development rebate reserve Rs. 60,269 (Rs. 73,700), to transfer to reserve for redemption of redeemable cumulative preference shares Rs. 75,000 (*nil*), to transfer to dividend equalisation reserve Rs. 2,00,000 (*nil*) and to carry over to next year Rs. 9,164 (Rs. 6,691 after adjusting Rs. 2,59,989 in valuation of opening stock of sugar to conform to closing valuation).

During the year under review the factory crushed 31,23,990 maunds of cane in a season of 156 days duration, and obtained an average recovery of 9.87 per cent. The quantity of cane crushed, and the recovery of sugar, have both been lower than in the last year, chiefly due to the fact that the harvesting of the cane crop in the previous season, which was of an unprecedented long duration, had to be extended and did not allow for proper ratooning or timely planting of cane. Furthermore, the subsequent year's cane crop also suffered to some extent from insufficient rainfall.

The directors regret to report that despite the best efforts of the management, the implementation of the scheme for the extension of factory plant has been retarded due to further restrictions imposed by Government for granting import licences. The directors, however, hope that with the progressive manufacture of sugar machinery in the country being undertaken by the recently formed Consortium of sugar machinery manufacturers, it should be possible to carry out the major part of the extension scheme with the machinery which would become available indigenously.

New Shorrock Spg. and Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Mafatlal Chandulal & Co. Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

The accounts show that the profit for the year after deducting managing agents' commission of Rs. 7,03,504 (Rs. 4,62,011), depreciation of Rs. 7,70,842 (Rs. 10,02,201), provision for development rebate of Rs. 4,65,035 (Rs. 5,02,315) and taxation provision of Rs. 32,20,000 (Rs. 23,75,000) comes to Rs. 27,84,373 (Rs. 12,09,578). To this is added the amount brought forward from last year of Rs. 92,673 (Rs. 1,31,095) making a total of Rs. 28,77,046 (Rs. 18,00,673 including Rs. 4,60,000 transferred from general reserve). Out of this amount the directors recommend payment of dividend at Rs. 30 (Rs. 30) plus Rs. 5 (*nil*) bonus per share, free of income-tax. on 41 600 ordinary shares absorbing Rs. 14,56,000 (Rs. 12,48,000). transfer to general reserve of Rs. 7,00,000 (*nil*) and to dividend equalisation fund Rs. 6,00,000 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 1,21,046 (Rs. 92,673 after transferring Rs. 4,60,000 to taxation provision being short provision for the year 1956).

It will be observed that a sum of Rs. 3,48,776 being 75 per cent. of the total development rebate to which the Company is entitled under the Income-tax Act has been kept to the credit of the statutory development rebate reserve account in accordance with the statutory requirements of the Income-tax Act leaving a balance of Rs. 1,16,259 which has been kept to the credit of development rebate reserve account in accordance with the past practice.

Accounts in brief are as under:—

Kothari Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Kothari and Sons, Madras) submit the audited accounts of the Company for the period of 18 months ended 31st December 1958.

As intimated to the shareholders by Circular dated 30th December 1958 the financial year of the Company has been changed from 30th June to 31st December and hence the accounts presented herewith are for a period of 18 months, viz., from 1st July 1957 to 31st December 1958. The financial year of the Company will thus be the calendar year in future. Corresponding figures given in brackets pertain to 12 months ended 30th June 1957.

The result of the Company's working for the period under review is a profit of Rs. 2,42,059 (Rs. 5,28,330 for 12 months ended 30th June 1957 after providing depreciation). To this is added the amount brought forward from last year of Rs. 91,772 (Rs. 41,942) making a total of Rs. 3,33,831 (Rs. 5,70,272). From this amount is to be deducted appropriaton towards depreciation of Rs. 2,39,907 leaving a balance of Rs. 93,924 (Rs. 5,70,272). With the transfer from the dividend equalisation fund of a sum of Rs. 1,00,000 (*nil*) the available amount becomes Rs. 1,93,924 (Rs. 5,70,272). The directors recommend that this amount be disposed off as under: To pay a dividend of 6 per cent. per annum on the preference shares (for 18 months) Rs. 1,62,000 (Rs. 99,750 for 12 months) leaving a balance of Rs. 31,924 (Rs. 91,772 after paying a dividend of 10 per cent. on the old ordinary shares and 7.708 per cent. on the new ordinary shares absorbing Rs. 3,78,750) to be carried forward to next year. The directors regret that they are unable to recommend any dividend on the ordinary shares.

The total depreciation for the 18 months, viz., 1st July 1957 to 31st December 1958 comes to Rs. 7,90,907. A sum of Rs. 2,39,907 has been provided in the profit and loss account and the balance of Rs. 5,51,000 is covered by the excess depreciation provided in the year ending June 1955.

Expansion:—The new Mill at K. Vadamadurai (Coimbatore) could not be brought into production as envisaged because of delay in the delivery of the machinery and want of electric power. However, the directors are glad to report that 7,000 spindles are ready to go into production and it is expected that by about June this year 12,000 spindles out of the new 24,000 spindles will go into production.

During the period under review the price of yarn came down to very low levels due to accumulation of stocks as a result of poor off-take. This affected the results of the mills very adversely since the Mills had a carry over of high priced imported cotton. Further the delivery of high priced imported cotton purchased earlier was made to the Mills during this time. The directors had, therefore, to sell the yarn at prices unremunerative in relation to cotton. The mills also lost production to the extent of about 18 per cent. on spindles and 30 per cent. on looms on account of a very severe power cut.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	85,09,800	Gross block	1,40,72,730
Reserves ...	18,25,000	*Less*—Depreciation ...	40,50,212
Liabilities ...	66,59,145		
Profit and loss account ...	31,924	Net block ...	1,00,22,518
		Stock-in-trade	29,13,292
		Work-in-progress ...	4,28,566
		Stores and spare gear	6,20,186
		Materials for factory expansion ...	5,27,765
		Debts, deposits and advances ...	18,03,371
		Investments	4,15,361
		Cash ...	2,39,900
		Miscellaneous expenditure and losses	54,910
Rs.	1,70,25,869	Rs.	1,70,25,869

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COTTON

(*Concluded from page 595*)

extra-long staples in the U.S. this season reflect the reduction in the support rates for the 1958 crop by an average of 5.75 cents. The minimum support rate is 53.95 cents, 65 per cent. of the July 1958 parity price of 83 cents per pound. The United States has not included extra-long staples in its export subsidy programme and, consequently, spot quotations have been more than 20 cents higher than foreign staples. This explains why virtually none of this cotton has been exported this season except to Spain.

It is obvious that if equilibrium between demand and supply is to be eventually reached in the short-run, considerations may have to be given to curbing the present rate of acreage expansions. Indications at present are that the next season may witness a definite swing in this direction, although there will still be a long way to go before the surplus problem could be resolved.

For the 1959-60 crop of extra-long staple cotton in the United States, a national marketing quota of 74,000 bales and a national acreage allotment of 71,000 acres was proclaimed on 13th October and approved at the December referendum. For the 1958 crop, the marketing quota and acreage allotment were 79,000 bales and 83,000 acres.

It appears that the total area planted to extra-long staples next season, and presumably production, may decline as compared with the present season, but it is doubtful whether this will do more than partly offset the expected increase in carry-over and the situation is, therefore, still likely to be one of chronic surplus. Lower prices may, of course, do something to promote greater use of these staples but consumption appears unlikely to increase to a level which, in relation to production next season, will permit any liquidation of existing surpluses.

LABOUR

(*Concluded from page 613*)

appeals, by labour courts and industrial tribunals who may not always have the necessary industrial management knowledge, or the background, the task of maintaining discipline in industry is going to become more and more difficult. The idea that labour courts or tribunals should sit as courts of appeal on all disciplinary actions taken by management seems to be peculiar to India, for it is certainly not the practice in industrially advanced countries."

Mr. Hunter also criticised the reported move of the Madras Government to get permission from the Union Government to effect certain important amendments to the Industrial Disputes Act. One such proposed amendment was to enable workers, against whom disciplinary action was taken, to refer their cases to an authority appointed by the Government for review and, possibly, for final decision. If each and every case of disciplinary action was to be the subject matter of an appeal by an outside authority, the position would be to deprive the managements of one of their fundamental rights. It was most disconcerting, Mr. Hunter added, that action on such an important subject was contemplated by the Madras Government without consulting employers and without taking into consideration the possible repercussions the enactment was likely to have on production. Matters of this nature, he pointed out, should not be taken up for legislation by State Governments; they should form the subject matter of discussion with the representatives of all-India organisations of employers and workers.

Referring to the question of recognition of trade unions and the principles of recognition adopted at the sixteenth session of the Indian Labour Conference held at Nainital last year, the Chairman recalled that it was agreed at this conference by representatives of Government, employers and labour that the union with the largest membership should be recognised. The Government, according to Mr. Hunter, did not in practice, seem to have recognised the principle underlying this agreement. The reference of disputes raised by minority unions, which sometimes had a membership of an insignificant percentage of workmen in the undertaking or the industry. for adjudication was not in keeping with the spirit of the agreement reached at Nainital. Surely, the recognition of splinter group unions and inter-union rivalry, as Mr. Hunter pointed out, makes collective bargaining impossible.

Notices

THE LAKHSHMI COTTON MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-fourth Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, Bombay, on Wednesday, the 22nd day of April 1959, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1958.

(2) To sanction the declaration of a Dividend.

(3) To confirm the appointment of Mr. G. V. Nath as Director.

(4) To elect a Director in the place of Mr. E. S. Vernon-Jones who retires by rotation but being eligible offers himself for re-election.

(5) To elect a Director in the place of Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation and is eligible for re-election, and to consider, and if thought fit, to pass the following resolution, of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act 1956, Sir Chunilal V. Mehta, K.C.S.I., who has attained the age of 78 years, and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(6) To appoint Auditors for the current year and to fix their remuneration.

(7) To consider and if thought fit, to pass the following resolution as a Special Resolution:

"THAT the Articles of Association of the Company be altered in manner following:—

Article 17: To be revised as under:

Company's Lien on Shares

"17 (*a*). The Company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that Clause 19 thereof is to have full effect. And such lien shall extend to all dividends and bonuses from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien if any on such shares.

As to Enforcing Lien by Sale

(*b*) For the purpose of enforcing such lien the Board of Directors may sell the shares subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, curator bonis or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice.

Validity of Sales in Exercise of Lien and After Forfeiture

(c) Upon any sale after forfeiture or for enforcing a lien in purported exercise of the powers hereinbefore given, the Board of Directors may appoint some person to execute an instrument of transfer of the shares sold and cause the purchaser's name to be entered in the Register in respect of the shares sold, and the purchaser shall not be bound to see to the regularity of the proceedings, nor to the application of the purchase money, and after his name has been entered in the Register in respect of such shares the validity of the sale shall not be impeached by any person, and the remedy of any person aggrieved by the sale shall be in damages only and against the Company exclusively.

Board of Directors may issue New Certificates

(*d*) Where any shares under the powers in that behalf herein contained are sold by the Board of Directors and the certificate in respect thereof has not been delivered upto the Company by the former holder of such shares, the Board of Directors may issue a new certificate for such shares distinguishing it in such manner as they may think fit from the certificate not so delivered."

Article 22: In the second line, between the words "writing" and "in", the words "in the usual common form or" to be inserted.

Article 25: To be deleted.

Article 26: To be revised as under:

"Subject to the provisions of Section 111 of the Companies Act 1956, or any statutory modification thereof for the time being in force, the Directors may, at their own and absolute discretion and without assigning any reason decline to register or acknowledge any transfer of shares and in particular may so decline in any case in which the Company has a lien upon the shares or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee."

Article 42: At the end, a new sentence as under to be added:

"Such Capital paid up in advance of Calls, whilst carrying interest, shall not confer a right to participate in profits."

By Order of the Board,
For THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED,
E. S. VERNON-JONES,
Chairman.

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

Warrants for the Dividends, if declared, will be posted to shareholders on 4th May 1959 and will be payable on and from that date.

The Transfer Books of the Company will be closed from 11th April 1959 to 25th April 1959 both days inclusive.

Shareholders are requested to notify to the Company any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

9, WALLACE STREET,
BOMBAY, 20*th March* 1959.

Explanatory Statement as Required by Section 173(2) of the Companies Act, 1956.

Resolution under Item 5:

Sir Chunilal V. Mehta, K.C.S.I., a Director of the Company, who retires by rotation and is eligible for re-election, has attained the age of 78 years and he cannot therefore be appointed a Director of the Company except by a Special Resolution, in respect of which a special notice has been given in accordance with Sections 190 and 281 of the Companies Act 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in item 5. It is in the interest of the Company that the experience and valuable services of Sir Chunilal V. Mehta, K.C.S.I., should continue to be made available, and accordingly the resolution is commended for acceptance.

Resolution under item 7

The amendments are necessitated to conform to the Securities Contracts (Regulation) Act 1956, and the Securities Contracts (Regulation) Rules 1957. These changes are proposed at the instance of the Bombay Stock Exchange to retain the privileges of official quotation of the Company's shares in the Stock Exchange.

By Order of the Board,
For THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED,
E. S. VERNON-JONES,
Chairman.

9, WALLACE STREET,
BOMBAY, 20*th March* 1959.

THE VISHNU COTTON MILL LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-second Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, Bombay, on Thursday, the 23rd day of April 1959, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1958.

(2) To sanction the declaration of a Dividend on the Preference Shares.

(3) To elect a Director in place of Sir Chunilal V. THE EMPIRE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th day of April, 1959, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st July, 1958, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. D. N. Kapur, the Director retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. D. N. Kapur be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 30th April, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

J. P. SAXENA,
Secretary.

DALMIANAGAR, 30*th March*, 1959.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

EXPLANATORY NOTE

To Item No. 5: One of the shareholders applied for 100 Ordinary shares and paid the full amount within 31st July 1956, but the shares were allotted after 31st July 1956, and one shareholder did not pay the call money before the closing of 31st July 1956 and some shareholders did not pay the call money even before the closing of 31st July 1957. The dividend for respective years were, however, paid to these shareholders on the amount paid up by them. Subsequently they paid the call money along with interest and claimed the dividend for the respective years. The balance dividend as mentioned in the Resolution was paid to them. The said payment is submitted for the approval and confirmation of the shareholders.

To Item No. 6: The Government of Bihar have acquired land, buildings, tube-wells and irrigational channels of Lauriya Farm for settlement of refugees from East Pakistan on terms and conditions mutually settled with them by the Company. The said settlement is submitted for the approval and confirmation of the shareholders. The Directors and/or the Managing Agents have no interest in the said acquisition. The total price fixed by the Government is given in the Directors' Report.

TREND OF MARKETS

(From Our Own Correspondents)

MONEY

BOMBAY, *8th April*

The short-term money market continues to be tight. Lenders are still scarce and there is no sign of any slackening of demand for bank credit, though there is only a few weeks to go for the end of the traditional busy season. On the contrary, the trend of bank advances continues to be upward and stand at Rs. 1,013 crores (as on 27th March 1959), as against Rs. 962 crores on the corresponding day of last year. With the pressure of demand still on, the interest rates are being well maintained at the previous week's levels. Inter-bank call money rate stays at 3½ per cent. among the Exchange banks and big Indian banks and at 3¾ per cent. among the smaller banks. House money at seven days' notice is being done at the self-same ceiling rate of 3¾ per cent. and short-term deposits at 3½ to 4 per cent. for one to six months, with the latter rate being more representative than the former.

A better indication of the state of the money market is provided by the results of the Treasury Bill sales. The response to these bills this week has again been from the special source, the amount offered being no more than that (Rs. 2 crores) invited. And, what is more, the average discount rate has hardened to 2.780 per cent. per annum from 2.760 per cent., to which level it had risen two weeks ago. Tenders for next week are again unchanged at Rs. 2 crores. There have been no sales of Intermediate Bills in the week under review also, but they are being continued.

The notes in circulation, which had crossed the Rs. 1,700-crore mark in the week ended 27th March 1959, have expanded by a further Rs. 42.79 crores to Rs. 1,744.31 crores in the week ended 3rd April. The notes held in the Banking Department are fractionally lower. The rise of Rs. 42.61 crores in total notes issued is covered by an increase of Rs. 39.99 crores in rupee securities and of Rs. 2.62 crores in rupee coin. There is no change in foreign securities, but balances held abroad are up by Rs. 1.28 crore, so that the total foreign assets stand at Rs. 214.34 crores. Deposits of the Central Government have increased by Rs. 6.78 crores, while those of other Governments are lower by Rs. 14.89 crores. There has been a rise of Rs. 5.51 crores in deposits of banks. Loans and advances to Governments have risen by Rs. 6.49 crores, while other loans and advances have declined by Rs. 15.59 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.16 crores. A fall of Rs. 20.23 crores is noted in investments and a rise of Rs. 17.93 crores in Government Treasury Bills.

The Scheduled banks' statement for the week ended 27th March 1959 shows a fall of Rs. 7.35 crores in demand deposits and a sharp increase of Rs. 20.52 crores in time deposits, lifting the total net deposits of banks to a peak of Rs. 1,636.58 crores. As against a net rise of Rs. 13.17 crores in deposits over the week, advances have gone up by no less than Rs. 17.04 crores, of which loans, cash credits and overdrafts account for Rs. 12.56 crores and bills purchased and discounted for Rs. 4.48 crores. Investments are lower by only Rs. 30 lakhs. Cash balances, including balances with other banks in current account, have declined by Rs. 2.23 crores and money at call and short notice by Rs. 1.68 crore.

The Gilt-edged market continues to be sluggish with very little business passing. Most of the issues are on offer, particularly the 4 per cent. 1967 and 1968 loans of the State Governments. 3 per cent. 1966 Conversion Loan has been marked down by 5 nP to Rs. 74.05. Proximity of voucher has attracted some interest in 3 per cent. 1970-75, which, as a result, has gained by 5 nP to Rs. 91.20. 3 per cent. 1966-68 is unchanged at Rs. 93.75 and 3 per cent. 1964 and 1963-65 at Rs. 97 and Rs. 96.75, respectively. 3½ per cent. and 3¾ per cent. National Plan issues are all dull, with no change in prices, as are 4 per cent. 1972 and 1973. Among the State loans, Madras 4 per cent. 1967 has shed 5 nP to Rs. 100.05 and 1968 10 nP to Rs. 100. Andhra 4 per cent. 1967 and 1968 have also returned to par, with a drop of 10 nP over the week. U.P. 4 per cent. 1967 and 1968 have declined by 10 nP each to Rs. 100.05 and Rs. 100, respectively.

The rupee is ruling steady in terms of the U.S. dollar, in consonance with the trend of sterling abroad. Banks' selling rate of ready dollars is unchanged at Rs. 475.25 per $100 and their buying rate at Rs. 472 per $100. Though sterling has dropped from the peak level touched during the week, the undertone is still steady. In New York, spot sterling rose from $2.81.9/16-2.81⅝ to $2.81.21/32-2.81.23/32 before declining to $2.81.17/32-2.81.19/32. After moving up from $2.81¼-2.81.3/16 to $2.81.9/32-2.81.11/32, forward sterling (three months) has softened to $2.81.1/16-2.81¼.

BULLION

BOMBAY, *8th April*

Today was an eventful day in the history of the bullion market. Ready gold touched Rs. 121-3 per tola, the highest level since 31st August 1948 when it stood at Rs. 122. The all-time peak so far is Rs. 122 and not Rs. 120-1 as was mentioned in *Commerce* on a few occasions in the past. Today's closing rate of Rs. 121-2 is higher by Re. 1-7 as compared with the last week-end rate of Rs. 119-11. This scaling-up by gold was the result of strong demand induced by fears of acute scarcity of the metal in the coming months. The fears were born of rumours that the Central Government was contemplating some fresh measures designed to check smuggling, especially from the West Asian region. The rise in values was accelerated further by nervous short-covering and some purchases against options. In sympathy with the yellow metal and on account of restricted fresh offerings due to hopes of better demand in the coming months, silver also staged an impressive rally on Monday, yesterday and today. Not only were the losses suffered early in the week following heavy unloading—as many as 400 bars—by a prominent bull fully recovered, but today's closing rates were higher than those at the end of last week.

In the silver section, April settlement, which was quoted at a discount of As. 4 under ready, was at par practically throughout the week under review. Opening at Rs. 199-15, the settlement attracted excellent support from speculators and rallied to Rs. 201-3 today before finishing an anna lower. May settlement advanced from Rs. 199 to Rs. 200-5, after being higher at one time today at Rs. 200-11. The *badli*, which was against bears, narrowed down considerably from As. 11 on Wednesday last week to As. 7 today. June settlement rose from Rs. 198-1 to Rs. 199-14 before finishing at Rs. 198-8.

Ready silver met with good support and spurted from Rs. 199-15 to Rs. 201-3 today. Towards the close, however, it was lower at Rs. 200-12, owing to profit-taking. The daily average arrivals of silver were 15 bars, while the offtake was 16 bars per day. The floating stocks of silver are reported to be around 800 bars.

Under the impetus of persistent buying orders, April settlement in gold forged ahead from Rs. 118-11 to Rs. 120-5 today before closing at Rs. 120-4. May settlement registered a rise of Re. 1-10-6 over the week, today's rate being Rs. 119-8. As the *badli* payable by bears continued to be higher than As. 8, margin at the rate of Rs. 10 per tola was operative on bulls in the April delivery throughout the week. The *badli* today, was, of course, an anna and a half lower as compared with As. 13-6 prevailing a week ago, though it was higher at As. 14-6 yesterday. June settlement hardened from Rs. 117-7-6 to Rs. 118-12. With the *badli* payable by bears in May-June delivery being As. 12, margin at the rate of Rs. 10 per tola was operative on bulls in May delivery also.

Ready gold, as stated at the outset, touched a high of Rs. 121-3 today. The closing rate was a shade easy at Rs. 121-2. The daily average arrivals and offtake of gold were 3,250 tolas and 3,000 tolas, respectively. The floating stocks of gold are estimated at 25,000 tolas.

Ready gold in London suffered a setback early in the week on selling induced by firmness of pound sterling against the dollar and some Russian offerings. The quotation for the metal on the 2nd and 3rd inst., stood at 249*s.* 0¼*d.*, the lowest level since 15th April 1958, as against 249*s.* 1⅞*d.* a week ago. Subsequently, however, a marked recovery was in evidence, following buying by Continental central banks, yesterday's rate being 249*s.* 2¼*d.* Ready silver was unchanged at 79¾*d.* this week, too, while forward silver eased from 79¼*d.* to 79⅛*d.* Silver in New York was quoted at 91.375 cents. per fine ounce, same as in the past five weeks.

The following comparative table shows at a glance the trend of the market during the week under review:

	8-4-59	Highest	Lowest	1-4-59

COTTON

BOMBAY, *8th April*

The firm trend of the cotton futures market, noted last week, gained momentum during the week under review. There was sustained mill buying and good support from upcountry interests. These were influenced by firm spot advices and encouraging news from the cloth market. Operators noted that, while the crop estimate was sharply reduced, consumption was running at a rate higher than that in the previous season, thus indicating the possibility of supplies getting scarer in the coming months, especially as imports were restricted. This prompted extended support. Under pressure of presistent buying, the Jarilla May contract advanced to Rs. 688 and the August contract to Rs. 695.50 on the 6th inst. The high levels, however, gave rise to fears that the Forward Markets Commission might intervene to check further rise in prices. This induced a mild reaction. A slowing down of mill activity in the spot section, owing to the prevailing high prices, also exerted a downward pressure on futures which, consequently, staged a retreat. Nevertheless, the week's closings were higher than last week-end quotations by Rs. 3.50. to Rs. 6.

I.C.C. Moglai Jarilla May opened the week at Rs. 682 and rose to Rs. 688 on Monday. It receded to Rs. 683 yesterday. Commencing today's session at Rs. 683.75 the contract gained one rupee before closing at Rs. 683. I.C.C. Moglai Jarilla August started the week at Rs. 689.50 and, after advancing to Rs. 695.50 on Monday, declined to Rs. 692.25 yesterday. The opening quotation for the contract today was Rs. 692. After moving higher to Rs. 693, it receded to Rs. 690.50. But the finishing was higher at Rs. 693. The trend of price of the contracts during the week is indicated below:

(In rupees per candy of 784 lbs.)

	8-4-59	*High*	*Low*	1-4-59
I.C.C. Moglai Jarilla May 1959 ...	683	688	680	679.50
I.C.C. Moglai Jarilla August 1959 ...	693	695.50	687.50	687

In the spot section, keen mill demand was noted early in the week. But towards the close, activity slowed down. Mills were reluctant to make large purchases in view of the high prices. They were inclined to take a wait-and-watch attitude. The scarcity of staple varieties was increasingly felt. Vijay was much sought after, especially because of the quality damage suffered by Laxmi and Jaydhar. But offerings were limited and price, consequently, hardened further. Other varieties which attracted attention were Khandesh, Kalyan, 0394, CO2, Surti, etc.

The export section was subdued. Demand did not broaden to any perceptible extent. Stray enquiries were, however, noted for Bengal *Deshi* from Japan and the Continent. But business done was negligible. Japan and Hong Kong were also interested in yellow pickings.

In the foreign section, the extension of the contracting period for Egyptian cotton from 31st March to 7th April enabled mills, especially Southern mills to book more of Egyptian cotton. Most mills have covered their share of the quota allotment. Sudan and East African cotton also evoked some attention.

Mills and importers are anxiously awaiting fresh import allocation for Egyptian, Sudan, East African and American cotton. Of the planned import target of six lakh bales of cotton during the present season, so far the Government has permitted 357,000 bales. The balance of 243,000 bales has yet to be released in the remaining period of this season.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 690; Berar Jarilla 780; Khandesh 850; Vijay 1,000.

In contrast to the easy trend noted last week, Karachi cotton futures market ruled fully steady during the week under review. A limited volume of buying and some export demand led to a modest improvement in prices. N.T.R.G. May moved up from Rs. 52-13-6 last week-end to Rs. 53-6 at close. The July contract put on three annas over the week to Rs. 54-14. Exports from the commencement of the season till 12th March aggregated 435,092 bales, as against 353,509 bales during the same period last season.

Better activity was reported on the Alexandria Cotton Exchange during the week. Futures values, however, made only small gains. There was renewed demand from India. Rumours that negotiations were going on between Egypt and East Germany for enabling the latter to lift more cotton from the former in exchange for heavy industrial equipment imparted some strength to the market.

Trading in cotton futures in Liverpool was inactive. Prices moved in a narrow range. There was some hedge selling and profit-taking which was absorbed by trade buying and short-covering. Over the week, prices showed modest improvement.

Cotton futures values in New York moved up during the week on buying by New Orleans interest and trade support influenced by optimism regarding export and expectation of higher export subsidy. News of higher cotton consumption also favourably affected sentiment.

YARN

BOMBAY, *8th April*

Everyone engaged in yarn business seems to be greatly perturbed over the reported move of the Silk and Art Silk Mills' Association (S.A.S.M.A.) to set up a corporation to handle the distribution of art silk yarn—both indigenously produced and imported from abroad. It is understood that the proposal was considered by the Development Council at its meeting held at New Delhi on Friday this week and that it would take final shape at the meeting of the Council convened in Bombay for the 18th inst. A strong protest against the proposal has been lodged with the authorities by the Yarn Merchants' Association and Exchange Ltd. In the course of a communication addressed to the Textile Commissioner, the President of the Association has pointed out that the acceptance of the above proposal would result in further considerable hardship to as many as 15,000 persons depending on yarn trade who are already "facing economic crisis as a result of the restricted import policy. The President has suggested that his Association be entrusted with the task of distributing art silk yarn either directly or through a special corporation. In this connection, he has assured that the Association would shoulder the responsibility for sound, efficient, and equitable distribution to consumers.

In view of the S.A.S.M.A.'s proposal for art silk yarn distribution as also of uncertainty regarding import policy for this yarn which is still not announced, traders are somewhat anxious to reduce their commitments at a time when larger quantities of imported yarn are arriving in the market. Thanks to this development and to the easy tendency in nylon yarn prices, art silk yarns have suffered a setback to values. Staple fibre yarns have also tended to move down, owing to slackness in demand from consuming centres and fears regarding pressure of sales by local mills, especially in *2/40s bright*. Cotton yarns are ruling dull. Business put through is restricted, with prices moving narrowly.

Under the impetus of continued selling pressure. Cupressa Bamberg art silk yarn (60×1) April delivery moved down from Rs. 1,541 to Rs. 1,531. June delivery fell by Rs. 5 to Rs. 1,541. Spot Cupressa (60×1) Bamberg yarn dropped 16 nP to Rs. 7.56. 150 Japan receded by 9 nP to Rs. 4.81. 120 Italy declined by 6 nP to Rs. 4.90. 150 Italy shed a like amount to Rs. 4.75. 120 Japan was dull at Rs. 4.87. Indigenous yarns, however, were maintained at the last week's levels. National Rayons 150 bright cones first grade was quoted at Rs. 4.28 and 120 bright cones first grade at Rs. 4.44.

Among staple fibre yarns, 40×2 April delivery climbed down by Rs. 4 to Rs. 617. June delivery was lower at Rs. 622, as against Rs. 623. Spot Citys lost 2 nP to Rs. 3.12. Kohinoors changed hands at Rs. 3.31 and Centurys at Rs. 3.22. Among imported yarns, Paramounts declined by 3 nP to Rs. 7.81, but Fujis firmed up by 30 nP to Rs. 8.80.

In the cotton yarn section, 10 counts Moderns and Podars were unchanged at Rs. 13.37 and Rs. 12.19, respectively. Forty counts Minaxis eased by 6 nP to Rs. 25. *Sixty counts Raghuvamshis* were quiet at Rs. 55, as also Finlays at Rs. 65. Eighty counts Citys decreased by a rupee to Rs. 67. *Mahendras were neglected* at Rs. 70.50. Finlays, however, were well favoured, the quotation rising by 50 nP to Rs. 81.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	8-4-59	1-4-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg April	1,531	1,541
" June	1,541	1,546
" (per case of 200 lbs.)	7.56	7.72

60s Finlay	67.00	68.00
80s City		

OILSEEDS

BOMBAY, *8th April*

A notable development of the week in the oilseeds market was the commencement of trading in new hedge contracts on the 3rd inst. The delivery months for the new contracts are August (for groundnut) and September (for other seeds). Along with the grant of permission for trading in the new contracts, the Forward Markets Commission directed the Oilseeds and Oils Exchange to revise the margin regulations in respect of cotton seed hedge contracts with a view to imposing a "more effective check on excessive speculation." Accordingly, the level at which margin becomes operative was lowered by Rs. 5 to Rs. 130 at which level a margin of Rs. 15 per candy was payable on all net "long" positions in respect of both the May and September deliveries. If, however, the price reached Rs. 140 the margin payable was Rs. 30 per candy during non-delivery period and Rs. 70 per candy during delivery period.

Despite the tightening of controls on cottonseed and the inauguration of the new contracts, oilseeds in general ruled firm during the major part of the week under review. The lowering of margin levels made cottonseed hesitant, but other seeds advanced. Since yesterday, however, prices tended to ease. Over the week, prices of most seeds went up.

Groundnuts hardened early in the week on sustained buying by crushers and manufacturers, but declined towards the close in sympathy with castorseed. Castorseed was firm at start on reports that large-scale business was done with the U.S. Exporters were, therefore, eager to cover available supplies. Values eased yesterday due to rumours that Brazil had re-entered the international market and sold castor oil to the U.S. The expectation in trade quarters here was that Brazil would not sell oil until at least June. Linseed was well favoured at the beginning, thanks to expectation of Australian tenders for linseed oil. But rumours, which developed later, that the tenders would be delayed induced a mild recession in prices. Cottonseed, as noted above, was a bit hesitant, thanks to the margin. The September contract however attracted bear-covering and fresh support and pierced the Rs. 130 level to quote at Rs. 131 on the 6th inst. The margin of Rs. 15 per candy, therefore, came into effect.

Groundnut May advanced from Rs. 185.87 at the beginning of the week to Rs. 188.25 on the 6th inst. before receding to close at Rs. 187.50 today. The August contract firmed up from Rs. 188 to Rs. 192 before closing at Rs. 191.50 today. Spot prices continued to rule firm. Bold ready advanced from Rs. 37.75 to Rs. 38.25.

Castorseed May firmed up to Rs. 157.50 on Monday. It turned a shade easy in subsequent sessions and closed at Rs. 156.50 today. The September contract rose from Rs. 159.25 to Rs. 161.62 before finishing today at Rs. 160.62.

Linseed contracts also showed a similar trend. Linseed May rose from Rs 32.12 to Rs. 32.44 on Monday before receding to Rs. 32.31. Linseed September reached a high of Rs. 33 on Monday but finished lower at Rs. 32.94 today.

Cottonseed May, after rising to Rs. 129.75, declined to close at Rs. 128.50, while cottonseed September rose to Rs. 131. It, however, closed lower at Rs. 130.25 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	8-4-1959	1-4-1959	24-3-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	187.50	185.00	186.62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ Closing rates on 3rd April, 1959.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR

BOMBAY, *8th April*

The sugar market continued to rule bullish during the week under review, with a further sharp rise in prices. Demand from Malabar side was quite sustained. The ex-mill quotations for Bombay-Deccan sugar were raised by a rupee per bag. The increase in prices would, perhaps, have been more marked but for fairly large arrivals of sugar by rail, the arrivals aggregated 15,700 bags, as against 3,620 bags in the previous week.

Small grain sugar climbed up by Rs. 2 to Rs. 113 per bag. Medium grain sugar spurted by a rupee to Rs. 113-114. Large grain was firm at Rs. 114-Rs. 117.

• • • •

HAPUR, *6th April*

The sugar market ruled quiet during the week, due to easy supply position and slack demand from consuming areas, although prices were quoted at about a rupee per maund higher than those fixed by the Government. Some factories in west U.P. have closed their crushing and the rest are facing shortage of cane supplies. Indications are that the overall sugar production in the country will be slightly lower than that of last year.

Sugar at Muzaffarnagar, after an early decline, improved slightly towards the week-end on good inquiry from different destinations of South India. Business was done during the week to destinations in the Punjab, *Gujerat, Saurashtra* and Delhi. Several factories sold their goods at the controlled price, while the quotations of some factories were still higher, being at a premium ranging from 75 nP per maund to Re. 1.62 per maund. The latest prevailing prices were:—crystal spot delivery Shamli C29 Rs. 36.75; Mansurpur D29 Rs. 38; wholesale mill delivery controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36; market quotations:—Mansurpur C29 Rs. 38; Laksar C29 Rs. 37.87; Amroha D29 Rs. 37.12; Bijnore D29 Rs. 37; Dhampur C29 Rs. 37.62; Meerut D29 Rs. 37.12; Daurala A29 Rs. 39.25; Modinagar C29 Rs. 37.69; Mawana A29 Rs. 39.12; C29 Rs. 37.75.

The Kanpur market presented a firm trend due to renewed demand in the wake of deficient supplies. The prevailing latest prices were:—spot per bag C29 Basti Rs. 106; Gola Rs. 104-4; D29 Gola. Burhwal, Balrampur and Tulsipur Rs. 103-8; Lakhimpur, Hargoan and Balrampur Rs. 103-4.

Khandsari ruled quietly steady. Production in some centres is being continued. The final decision regarding the proposed excise levy on *khandsari* is keenly awaited. Prevailing prices were:—*khandsari* superior Rs. 33 to Rs. 36; inferior moist Rs. 29 to Rs. 32 per maund.

Ready *gur* registered modest gains towards the week-end, due to good demand in the face of drop in daily arrivals to an average of 1,500 to 2,000 maunds. Total arrivals of *gur* here so far during the season which is shortly to come to a close were about 625,000 maunds, representing an increase of about 50 per cent. over last year's total arrivals.

Cane sowings is in full swing and an increased acreage is expected. Local *gur* stock is put at 91,000 maunds, as against 130,000 maunds in the corresponding period last year. Prevailing prices to-day were:—*gur pansera* Rs. 19.50; *balti* Rs. 19.37; *shakker* Rs. 19.50 per maund.

FOODGRAINS

HAPUR, *6th April*

Foodgrain prices were quiet to easy during the week, thanks to increased arrivals of new crop grains into the market. The Government of India has announced the much-awaited scheme of State trading in foodgrains which will be in two parts —the interim and the ultimate.

Wheat at Hapur registered slight gains towards the week-end, due to tight supply position at the tag-end of the season. Wheat harvesting is in full swing and the new crop will begin to flow into the market by week-end. There are reports of damage to the standing crops in many areas as a result of untimely rains and hailstorm, but, on the whole, the crop is very good. Rice ruled quiet during the week. The latest prevailing prices on Monday were:—wheat *dara* Rs. 21; farm quality Rs. 23.50 to Rs. 24 and inferior Rs. 20.50; rice *basmati sela* Rs. 33.50; *mainpuri* Rs. 22.50; *raimunia* Rs. 27; *gadda* Rs. 23.

New gram was arriving here from Agra and Kanpur sides and prices recorded further fractional fall during the week. The total fall in gram prices since the advent of new crop in the market has been heavy, being about Rs. 6 per maund. Barley and *bejhar* were also reaching the market in larger quantity and prices recorded a bearish trend. Maize and *bajra* lost the seasonal demand and stockists were reported to be anxious to liquidate their stocks. *Jowar* and *guwar* also drifted lower. The latest prevailing prices were:—gram Rs. 16.25 to Rs. 17; barley Rs. 13; *bejhar* Rs. 12.50; maize Rs. 14.50 to Rs. 14.87; *bajra* Rs. 11.50 to Rs. 13.50; *jowar* Rs. 11.75 to Rs. 13.75; *guwar* Rs. 14.75 per maund.

New crop peas arrivals, which were hampered earlier this week following rains, again improved and were now at an average of 2,000 to 2,500 maunds daily. Outside demand was fairly good, mostly in the form of pulses and local stock was put at 2 *khatties*. The total arrivals of peas here from the beginning of the current season were about 35,000 maunds. Other pulses ruled quietly steady during the week to be quoted on Monday at:—peas *dara* Rs. 12.25; *farm white* Rs. 13 to Rs. 14; peas *dal* Rs. 14; *arhar* Rs. 17; *arhar dal* Rs. 23 to Rs. 24; *urd* Rs. 19; *moong* Rs. 21 to Rs. 24; *massor* Rs. 17.50.

HIDES AND SKINS

MADRAS, *6th April*

The kip market ruled bullish during the week under review. U.K. dressers were resisting the prices demanded at origin, but importers were following Madras levels probably buying for later sale. Arrivals of kips were better, but clearance was slow on account of higher prices demanded by commission agents here. Light weights and mediums cow were in good demand, as also cow calf and buff calf.

As regards tanned skins, common tannages and low-priced items were in keen demand, but stocks were negligible. Prices of tanned goat lights and middle class sheep skins increased by 20 nP per lb., and the tone was bullish.

PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *8th April*

Malabar black pepper passed through the third uneventful week in succession. Prices softened for want of foreign inquiries. Ungarbled, after touching Rs. 600, improved to Rs. 637½. Fall in Calicut was more pronounced. Tellicherry ungarbled went down to Rs. 680. Garbled at Cochin sagged to Rs. 107. May delivery on the ring broke to Rs. 109. Soft attitude adopted by some of the Indian sellers for attracting new business was taken as a sign of weakness of Malabar black and scared away the prospective buyers from the U.S.A. This made Indian exporters all the more anxious who offered March shipment in New York at as low as $0.24 but with small success. In contrast, the growers resisted lower levels and brought down only small quantity on the terminal markets. Most of the growers were bullishly inclined because they expected development in the foreign demand in the near future. The news of a sale of 3,000 tons of Lampong black to Russia failed to unnerve them, as they thought that the lifting of such a big quantity would lessen burden on Singapore which was sure to react sharply on any favourable future development in overseas inquiries.

Looking to the poor prospects of new crops in both Sarawak and Indonesia, the future of Malabar black pepper looks eventful, but much depends upon the timely foreign demand.

Singapore, after going down to Str.$150, is now quoting Str.$152 for white and Str.$82 for black with sellers resisting. At the time of writing, Cochin is quoting ungarbled at Rs. 637½, garbled at Rs. 111 and May delivery at Rs. 115. Calicut is showing improving tendency and quoting ungarbled at Rs. 710. Inland demand, which was dormant until now, is now showing signs of revival, as prices are now stabilising round about the present level.

Ready pepper in Bombay, after touching Rs. 88, is now quoted at Rs. 91.

LINSEED

(Messrs. A. Bradley and Co.)

CALCUTTA, *6th April*

The linseed market was active during the week and there was some fluctuation in prices. The week began on a distinctly quiet note and seed prices declined to Rs. 22 for ready as well as forward delivery. At this stage some oil business was done by shippers at Rs. 48.50, with sellers over. Towards the mid-week, with offers for seeds from the centres slackening, the general tone began to show some improvement and there was a gradual recovery in seeds prices to Rs. 22.75 today for ready delivery. Crushers continued to show interest, despite the decline in cake prices to Rs. 13. At this level, business was done with the U.K., following the recent announcement of fresh export quotas. The oil market improved to Rs. 49.75, but shippers withdrew, as export parities were considerably below the levels ruling locally.

The latest quotations are: Ready Rs. 22.75 and April-May Rs. 22.50 per maund.

Notice

THE KOHINOOR MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting, within the meaning of the Companies Act, 1956 (being the Sixty-fourth Ordinary General Meeting) of THE KOHINOOR MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, on Thursday, the 7th May, 1959, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1958.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. Yogindra N. Mafatlal who retires by rotation but who offers himself for re-election.
4. To elect a Director in the place of K. K. Lala, who being appointed under Article 106 of the Company's Articles of Association, retires under Section 260 of the Companies Act, 1956, but who offers himself for election. Special notice has been received from some members signifying their intention to propose Mr. K. K. Lala as a candidate for the office of a Director of the Company.
5. To elect Mr. P. D. C. R. Clark, an "Associate" of Killick Industries, Ltd., the Managing Agents of the Company, as a Director and to consider and if thought fit, to pass the following Special Resolution, of which special notice as required by Section 261 of the Companies Act, 1956, has been received.

   "THAT Mr. P. D. C. R. Clark, who is an 'Associate' of Killick Industries, Ltd., the Managing Agents of the Company, be and he is hereby elected and appointed a Director of the Company in terms of Section 261 of the Companies Act, 1956."
6. To appoint Auditors until the conclusion of the next Annual General Meeting of the Company and to fix their remuneration.
7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "THAT pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a contract being entered into (in terms of the draft initialled for the sake of identification by the Chairman) with Narandas Rajaram & Company Private Ltd., who are or may be deemed to be Associates of the Managing Agents, Killick Industries Ltd., for the purchase by the Company from the said Narandas Rajaram & Company Private Ltd., of not more than 15,000 bales of cotton (being goods in which the said Narandas Rajaram & Company Private Ltd., regularly trade or do business) for the period commencing from 7th May 1959, until the next Annual General Meeting of the Company at rates which are not less favourable than the market rates."

By Order of the Board,

For THE KOHINOOR MILLS COMPANY, LIMITED,
Per Pro KILLICK INDUSTRIES LIMITED,

A. C. B. MILLAR,
Managing Agents.

BOMBAY, 30*th March*, 1959.

N.B.—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NOT BE A MEMBER. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any), under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Office not later than forty-eight hours before the time for holding the meeting at which the person named in the instrument proposes to vote, and in default the instrument of proxy shall not be treated as valid.

(b) The Transfer Books of the Company will be closed from Monday, the 20th April, 1959, to Thursday, the 7th May, 1959, both days inclusive.

(c) The Dividend, when sanctioned, will be made payable at the National and Grindlays Banks Ltd., Bombay, on and after 14th May, 1959, to those shareholders whose names stand on the Register on the 7th May, 1959, to whom Dividend Warrants will be posted.

ANNEXURE TO THE NOTICE

Explanatory statements under Sections 173(2) *and* 261(3) *of the Companies Act,* 1956.

Item No. 5.—The Company has received Special Notice from members of their intention to propose Mr. P. D. C. R. Clark as a Director of the Company. The Special Resolution states that Mr. P. D. C. R. Clark, a Senior Assistant in Killick Industries Ltd., the Managing Agents of the Company, has been closely associated with the business of the Company. Consequent upon the resignation of Mr. K. G. Milne as a Director it is deemed desirable in the interest of the Company to appoint Mr. Clark as a Director in place of Mr. Milne in order to have the benefit of his experience. The Special Resolution is accordingly commended for acceptance.

Item No. 7.—The Company for many years has been purchasing a part of its requirements of cotton from Narandas Rajaram & Company Private Ltd. Under the Companies Act, 1956, however, Narandas Rajaram & Company Private Ltd., are or may be deemed to be an "Associate" of the Company's Managing Agents, Killick Industries Limited, by virtue of Sir Purshotamdas Thakurdas, K.B.E., C.I.E., a Director of the Managing Agency Company, exercising more than one-third of the voting power in Narandas Rajaram & Company Private Ltd., and it is, therefore, advisable, having regard to the provisions of Section 360 of the Companies Act, 1956, for the Company to approve, by Special Resolution, the contract (a copy of which is open to inspection at the Registered Office of the Company on working days except Saturdays from 11 a.m. to 4 p.m.) proposed to be entered into between the Company and Narandas Rajaram & Company Private Ltd. The Special Resolution is, accordingly, commended for acceptance.

Sir Purshotamdas Thakurdas is interested as a Director and Shareholder of Killick Industries Limited and also as a Director of Narandas Rajaram and Company Private Ltd. Mr. A. N. Haksar is interested as an Associate and Shareholder of Killick Industries Limited. Mr. Maneklal Premchand is interested as a Shareholder of Killick Industries Limited. Killick Industries Limited, who are Managing Agents of the Company and are Associates of Narandas Rajaram and Company Private Limited, are interested for these reasons and as Shareholders of the Company.

By Order of the Board,

For THE KOHINOOR MILLS COMPANY, LIMITED,
Per Pro KILLICK INDUSTRIES LIMITED,

A. C. B. MILLAR,
Managing Agents.

BOMBAY, 30*th March*, 1959.

DELHI LETTER

(*Concluded from page* 588)

fully in certain countries. There is no information in the above account on the *actual* working of the farming co-operatives concerned and on their present state of affairs after the passage of ten or fifteen years. One wonders, therefore, if there is *prima facie* justification for the Bureau's conclusion that such co-operatives can be formed to meet common needs by pooling resources and efforts in the belief that group action provides a better means of achieving individual aims.

The economic, social and technical advantages offered by co-operative farming are listed in the Bureau's note as follows:

(1) Increased production with reduced working expenses; (2) benefit to each unit of centralised management with decentralised control; (3) ability to engage agricultural experts and to extend to the utmost division and specialisation of labour; (4) ability to purchase modern machinery to speed up the work cycle and reduce the cost of producing crops; (5) ability to command financial resources and facilities both for the purchase of essential materials and the marketing of produce; (6) development in the individual workers a social sense and a group spirit; (7) development of social security and crop insurance which may instil confidence and a sense of security among individuals; (8) development of better housing and improvements in communal services such as electrification, improved communications and recreational facilities, etc; (9) savings in time and labour, and improvements in working conditions.

VOL. XCVIII. No. 2508 BOMBAY, 18th APRIL 1959 PRICE: Rs. 2

INDIAN SHIPPING

THE inauguration of the National Shipping Board marks a new milestone in the progress of Indian shipping. Small wonder, the Union Minister for Transport and Communications, Mr. S. K. Patil, in the course of his speech at the first meeting of the Board held at New Delhi this week, called it a "red-letter day" in the annals of India's mercantile marine. Created in terms of the Indian Merchant Shipping Act, 1958, the Board is the highest policy-making body. No limitations have been placed in regard to matters that will come up before the Board. It is gratifying to note that Mr. Patil gave the assurance that the Government would treat the Board's recommendations "with the greatest respect." This, in fact, casts a special responsibility on the Board which should be realistic and far-sighted in dealing with the many complex issues confronting the industry. Fortunately, the Board has in its Chairman, Mr. G. L. Mehta, a man who brings to his new position not only a sound knowledge of men and things and rich experience gained in such diverse fields as business and diplomatic relations but also his specialised knowledge of shipping industry with which he was connected for well over two decades. His guidance will be of inestimable value to the Board.

Even a confirmed enthusiast of Indian shipping will concede that the Government has evinced utmost sympathy with the aspiration of Indian shipowners. The industry has found in successive Commerce and Transport Ministers men who were not merely willing but anxious to appreciate the industry's problems and give it such succour and aid as will enable it to come into its own. But so grievous has been past neglect, so limited is the Government's own finances and so grave the foreign exchange crisis that it has been really difficult for the industry to make more rapid progress. The measures which the Government has so far adopted in the interests of shipping development include grant of loans to shipping companies—on some occasions, the loan has amounted to 95 per cent. of the cost of additional fleet—the reservation of coastal trade for Indian shipping, the establishment of a Shipping Development Fund and the creation of a Shipping Co-ordination Committee and the Freight Investigation Bureau. Despite these and other constructive measures, Indian shipping finds that it has a long way to go before India can attain a maritime status which will be consistent with its large and growing foreign trade and its own extensive coastline. Although the present tonnage at 646,000 is a great improvement over the level at which the industry found itself in 1946 when it was no more than 125,000, it is far from the modest target of two million tons envisaged by the Shipping Policy Sub-Committee in 1947. Reviewing the progress of Indian shipping, Mr. Mehta pointed out that, as against the second Plan target of 900,000 g.r.t., there are now ships in operation with a total tonnage of 646,000 and another 120,000 tons under construction. Allowing for old ships which may have to be scrapped, the industry must acquire a little more than 170,000 tons before it can reach the target under the second Plan.

It was originally contemplated that India should be in a position to carry in its own ships some 50 per cent. of its trade with overseas countries. The Planing Commission fixed a modest target of 15 per cent. of such trade to be reached by March 1961. At present, it has been computed that Indian ships carry only about 7 per cent. of the country's foreign trade. This proportion should be increased as early as possible. The Government should not relax its efforts designed to ensure that Indian ships get a fair share of the trade covered by its trade agreements with foreign countries. Again, the Government is already a major importer, accounting as it does for some 40 per cent. of the value of imports and is also becoming an important exporter, thanks to State Trading schemes. It should, therefore, be possible for the Government to see that a large portion of the trade in which it is a participant goes to Indian ships. Further, steps should be taken to ensure that India attains as early as possible the target of 75 per cent. of the trade with its adjacent countries, as against the present level of some 30 per cent.

A somewhat urgent problem is the need for stimulating coastal trade. It is estimated that the tonnage employed in coastal trade is about 250,000, as compared with the target of 412,000 by March 1961. It will be difficult to reach the target, unless special efforts are made to see that coastal ships get a fair share of the trade which, for economic and geographic reasons, is best carried in ships. There is a widespread feeling among shipowners that the railways are diverting the coastal traffic to themselves. While we would like to see that a certain element of competition among the different modes of carriage continues to prevail in the sphere of transport, there is perhaps a special case for aiding Indian shipping on the coastal trade in respect of some specific routes and classes of goods. Further, Indian shipping companies, if they are to hold their own against more powerful rivals on the high seas, should be assured of some freedom from competition nearer home. Such assistance will provide the basis on which they can face the risks which are inseparable from operation on international routes where competition is always keen.

Finance ought not to be allowed to become an insuperable obstacle to the achievement of the modest target fixed under the second Plan. Indeed, if it is possible, the target should be exceeded. It has been computed that the industry will require some Rs. 30 crores to reach its target of 900,000 tons. It may be mentioned here that the sum allotted under the second Plan for Indian shipping, *namely*, Rs. 37 crores, has been exhausted. More recently, shipowners have themselves arranged for both internal and external finance to buy the vessels they need. They may be able to draw upon their own internal resources to a limited extent. But, by and large, Government aid will be necessary, if the target is to be reached. It is to be hoped that the Government will not, on grounds of lack of finance, deny the industry the monetary assistance it needs. As regards allotment of foreign exchange, shipping deserves high priority, because a ship, unlike any other industrial enterprise, contributes to foreign exchange earnings from the very day it commences its operations on the international sea routes and, in a period of four to five years, it earns all the foreign exchange involved in its purchase and thereafter adds to foreign exchange earnings. Discussing the foreign exchange aspect of the problem of augmenting Indian tonnage, Mr. Mehta made the important suggestion that a foreign exchange pool should be built up. He said that, "if the intentions of Parliament are to be effectively implemented, the Shipping Development Fund has to have adequate foreign exchange resources at its disposal to enable the acquisition of tonnage from abroad." He added: "I, therefore, suggest that we should think in terms of a foreign exchange pool under the ægis of the Shipping Development Fund constituted initially by an allocation from free foreign exchange resources and built up later by earnings of ships purchased in future." The implementation of the suggestion will go a long way towards ensuring that shipping development is not held up for want of foreign exchange resources.

A problem which is now engaging the attention of the Government is the establishment of the second shipbuilding yard. There is much to be said for the project, considering that no nation can carve for itself an important place in the world maritime map without shipbuilding facilities. With his characteristic historical insight, Mr. Nehru pointed out how, till Napoleon's days, Indians were great shipbuilders. He rightly emphasised that it was the capacity to build the basic requirements, whether in industry or shipping, that really governed the progress of a nation. While this larger perspective must never be lost sight of, it may be wondered whether the second shipbuilding project cannot be postponed by a few years, at least until the time the first shipbuilding yard at Visakhapatnam produces ships of quality and at prices which will compare favourably with those produced in the West. Lack of personnel, if not also of finance, indicates a lower order of priority for the second shipbuilding yard. While no one would suggest that the scheme should be put in cold storage, it would be wrong to divert the Government's energy, resources and personnel, limited as they are, to the establishment of a second yard at a time when all these are needed to reach the target for Indian shipping and to lay the foundations for a more rapid rate of progress in the third Five-year Plan. Perhaps, some expert probe and fresh appraisal are called for before irrevocable decisions on the project are taken.

LABOUR RELATIONS

THE address delivered at the annual general meeting of the Employers' Federation of India by Mr. H. P. Mody, the retiring President, was not really a swan-song as he, with his characteristic modesty, preferred to call it. It was, in fact, a recipe for rational and realistic economic and labour policies. A clear-eyed realist that he is, Mr. Mody felt that a philosophy of planning which persistently refused to recognise realities and related ends to means would only land the country in recurring troubles. The same sense of realism seems to have restrained him from being over-enthusiastic about the much talked of labour codes evolved for regulating the relations between employers and workers. It will be remembered that two codes were evolved last year, a code of discipline and a code for maintaining harmonious relations among the various trade unions. As the objectives of these codes are laudable, Mr. Mody naturally welcomed the codes and gave the assurance that employers, on their part, would do everything they could to make them a success.

The code of discipline came into force from June 1958. Its basic principles are "a just recognition by employers and workers of their rights and responsibilities and a willing discharge by both of their obligations consequent on such recognition." Mr. Mody thought that it was too early to pronounce any verdict on this code, not an unreasonable view, as it has been in force for only nine months. Nevertheless, he revealed that even the little experience which employers have had so far had suggested the need for certain amendments to the code, in order to remove certain practical difficulties in the way of giving effect to some of its provisions. He was aware that the amendments would have to secure the assent of the other parties to the agreement. Mr. Mody gave no details of the practical difficulties of employers nor of the amendments they desire. But it is needless to add that, if the code is to be a success and endure the passage of time, it must be suitably modified in the light of experience.

The success of the second code doubtless depends on the extent to which there is a spirit of tolerance among the various trade unions. Unfortunately, inter-union rivalries and the conflicts arising therefrom have shown no signs of abatement. On the contrary, they have been on the increase in certain parts of the country, more notably in Kerala. The recent happenings in the plantation estates in that State point to the prevalence of a vicious atmosphere. It is, therefore, not surprising that Mr. Mody regarded the results of this code so far as none too encouraging. Indeed, inter-union rivalries constitute a threat even to the code of discipline. Discouraging though the atmosphere is, all the parties concerned must persevere and try to make the codes a success. It is not an act of statesmanship to throw up the sponge. The warring trade unions must be brought together and there should be no further delay in creating the machinery contemplated for this purpose, namely, a body consisting of representatives of the four central labour organisations, with an independent chairman.

Since control of trade unions by political parties is the bane of the trade union movement in India, Mr. Mody did well to emphasise that trade union leadership must spring from within the ranks of workers. From this point of view, the formation of the Central Board of Workers' Education, as recommended by the Ford Foundation, is undoubtedly a step in the right direction. The Board, as readers are aware, will organise programmes to provide instruction in trade union consciousness, the conduct of union-management relations and the observance of the code of discipline. It should not be long before a sufficient number of workers is trained in trade union principles and practices and enabled to assume leadership of unions and gradually to eliminate all outside influences. All lovers of genuine trade unionism will certainly associate themselves with Mr. Mody in his hope that "there will emerge in the trade union field, in the not distant future, a government of the workers, by the workers and for the workers." It is, perhaps, not yet widely known that the Government has already recognised this principle and sought to give effect to it in so far as its employees are concerned. Thus, in the rules recently formulated by the Central Government for recognising "service associations" of its employees, it is laid down that no person who is not a Government employee shall be connected with the affairs of any "service association" and that the executive of a "service association" should be from amongst the members only.

Surely, what is good for employees of the Government cannot be bad for employees in the private sector, at least for employees of identical stature and calibre, such as the so-called white-collared workers. There may be some case for the workers in factories to be led by outsiders for some more time, as the majority of them are illiterate and ignorant, but there is none whatever for the workers in commercial establishments to find trade union leadership from outside their ranks. It is, however, necessary to add that, in this respect, a lot depends on employers themselves. It is not enough to appeal to the Government to be reasonable and to be firm in rejecting uneconomic demands from workers. There is need for a new approach. The employers should seriously try to inspire confidence among the employees and to wean them away from the influence of outsiders. There is no future for private enterprise and, therefore, even for democracy, if employers fail to keep the workers, in general, reasonably contended. If they cannot carry conviction even to the middle class employees, they have no hope of survival. The problem is partly psychological and partly economic. They have to educate their workers in the virtues of free enterprise and the first step in this direction is to take them into confidence. This is undoubtedly a difficult task, but it has to be faced and tackled. The employers in this country can learn quite a few useful lessons from the way in which cordial employer-employee relations are maintained in progressive concerns in the U.S., the U.K. and West Germany. They have to erase the impression that workers can better their lot only by seeking the help of politicians by wresting the initiative for reforms and labour welfare from the hands of the latter. It is nothing short of defeatism to say that this is impossible. That will, indeed, be sheer bankruptcy of statesmanship and foresight.

The employees, on their part, must realise the futility of making unreasonable and economically unsustainable demands on their employers. As Mr. Homi Mody rightly pointed out, there is a limit to the capacity of industry to pay and bigger rewards can only come from better efforts. They have to co-operate with employers in implementing measures designed to raise productivity. They should not obstruct, out of a mistaken sense of security of employment, programmes for modernisation of plant and machinery and for introduction of new machines that will yield larger production. They must recognise that "a steady increase in the productivity of labour is an essential condition for assuring a higher standard of living to all classes of the population and notably wage earners." This quotation, we may add for the benefit of workers, is from an I.L.O. publication, recording the conclusions of experts appointed to consider the practical methods of increasing productivity in manufacturing industries. While it is a matter for gratification that there is an increasing awareness of this fundamental fact in Government circles, the workers and their leaders have yet to realise it. Accordingly, no opportunity should be missed to drive home this point among the latter also.

Apparently, Mr. Mody was in no mood to cross swords with those in authority who have of late been making certain claims which cannot stand the test of scrutiny. But he did not let go unchallenged the statement of Mr. G. L. Nanda, Union Minister for Labour, Planning and Employment, in Parliament the other day, that no undue burden had been placed on industry in the form of benefits to labour and labour laws, that the ratio of labour cost to the total cost of production had not increased, and that remuneration paid to workers was not a factor hindering the progress of industries. The experience of most industrialists in the country, Mr. Mody averred, was to the contrary. He wanted the Labour Minister to disclose the data on which he had based his conclusions. More important is his suggestion that the Government should undertake a review of the cumulative effect of the legislation enacted in the last ten years with regard to wages, other emoluments and benefits and working conditions. Such a survey will show how far the Government has gone in its policy of conceding the demands of workers regardless of the effect on production and consumption. As it will be in the interest of everybody to conduct a research into this question, the Labour Minister should have no difficulty in accepting and implementing this simple suggestion.

CHEAPER AUTOMOBILES

THE long queues of anxious consumers awaiting their turn for motor cars may give an entirely false picture of the fortunes of India's automobile industry. The fact is that the industry has not made—and it may not be incorrect to add, has not been allowed to make—the progress which, under different circumstances, it might have so easily achieved. Again, a modest automobile, which a middle class man could own, has for long been the patriotic dream of many an Indian. This dream has never come true. It has eluded the grasp of the planners. It remains to be seen whether the probe into the industry which the Government has now ordered will result in measures designed to speed up the progress of the Indian automobile industry. The Government has set up a seven-man committee with Mr. L. K. Jha, Additional Secretary, Ministry of Commerce and Industry, as Chairman, to assess the progress made by the automobile industry and examine the possibility of producing a more economic car for people of average means.

This Committee will presently take stock of the developments since 1956, when it was last assessed by the Tariff Commission. It is expected to review the progress of the automobile and automobile ancillary industries and recommend measures to increase the indigenous content of different vehicles in the shortest possible time, after taking into account the targets and schedule envisaged in 1956 when the manufacturing programmes of different producers were approved. It will also recommend the targets of production of different types of vehicles in the third Five-year Plan, the measures for reducing the cost to the consumers of different vehicles like cars, jeeps and trucks, and the appropriate pattern of organisation for the future expansion of the industry. It will indicate the foreign exchange implications of the different production programmes.

An interesting aspect of the Committee's terms of reference is that the Committee will examine the feasibility of producing a low-cost car within the price range of Rs. 5,000 to Rs. 7,000. The Committee will examine not only schemes previously presented to the Government but also other models of cars which have been developed in different countries and suggest ways and means of manufacturing such a car in India. This problem may well be regarded as both a challenge and an opportunity to the Government, on the one hand, and the manufacturers, on the other. It is by no means easy to find a solution to this problem, if one takes into account the limited character of the Indian market for automobiles and the high taxation on vehicles and petrol. The Tariff Commission, in the course of its analysis of the problem in 1956, observed that a baby car, so-called, should not cost more than Rs. 7,000 to the consumer; it felt that even this figure was on the high side. It expressed the view that the "commitments already undertaken with respect to small cars preclude any prospect of a baby car being produced in India in the near future at the low production cost desired by the consumer, unless, of course, one of the existing small cars shows potentialities (hitherto unexpected) for achieving such cost." The position has not materially altered since this view was expressed.

Nevertheless, there is a great deal to be said in favour of a fresh investigation of the problem. It would, however, be wrong to underestimate the magnitude of the difficulties If a car is to cost Rs. 5,000 to Rs. 7,000 to the consumer, it must cost much less at the factory site. One way of achieving the production of a low-priced car is to make it a strictly utility vehicle without sacrificing its capacity too far; the average Indian family is larger than its counterpart in the West. The market for it could be widened through appropriate tax reductions which would make the purchase and maintenance of the small car an attractive proposition for prospective consumers. The problem is, however, more easily stated than solved. The Committee's suggestions for solving it will, therefore, be awaited with interest.

I.T.O.'S RIDICULOUS MOVE

KIRLOSKAR–I.F.C. DEAL—SUGAR PROSPECTS

WEDNESDAY, 5 P.M.

MARKET GOSSIP

A SOMEWHAT deplorable development in the administration of company taxation is that, contrary to the established practice of many years, companies are sought to be brought within the mischief of Section 23A of the Income-tax Act on the mere ground that their articles of association contain a clause empowering the directors to refuse transfer of shares without assigning reasons. This new development is all the more reprehensible for the reason that past assessments of these companies are being reopened. In any case, it is hardly calculated to inspire confidence in the minds of the assessees who have, for long, been told that, so long as they conceal no part of their income and are honest in their payment of taxes, they need suffer from no fear of inquisitional examination of their past.

Section 23A of the Act, as is well known, imposes penal taxation on companies in which the public are not substantially interested, the phrase "public interest" being defined as a state of affairs under which a company allots at least 25 per cent. of its ordinary capital to the public and its shares are dealt in on the stock exchange or are freely transferable. It is now contended by the income-tax authorities that, even if the prescribed proportion of share capital of a company is held by the public, the existence of a clause giving the board powers of refusal of registration of shares would convert the joint-stock enterprise into a Section 23A company and bring it within the mischief of that section.

The question is whether the existence of the clause, by itself, can convert a public limited company into a Section 23A one, thereby enabling the authorities to impose penal taxation on its income. In considering this issue, it would, in the first place, be folly to ignore the normal practice in transfers of shares, for it cannot be too strongly emphasised that the clause, giving to the board powers of refusal of transfer of shares, is seldom, if ever, invoked. In fact, it would be surprising if a board ever looked into transfers of shares very minutely. They constitute a routine operation, often performed by an obscure clerk in a remote corner of the company's office. Thus, the clause is in the nature of a safeguard which some company managements think they should possess in order to meet any contingency.

Secondly, it is stretching the language of the income-tax law a little too far to suggest that the existence of the clause would by itself, adversely affect free transferability of shares, by making it dependent upon the sweet will and pleasure of a capricious board. To argue in this manner is to suggest that slavery should be deemed to prevail in a country with a constitutional monarchy, merely because orders of government appointments in that country contain the conventional phrase that such appointments will be held during the "pleasure" of the monarch.

Finally, if the power of refusal of transfer of shares were really contrary to public good, would Parliament, in its wisdom, have agreed to Section 111 of the Companies Act which gives precisely such powers to the directors? Whichever way the matter is looked at, whether on grounds of equity, public good, normal practice in company administration or even the narrower interpretation of the law, there seems to be little justification for condemning a public company into a Section 23A list only on the ground that its directors have the power to refuse transfer of shares—a power which they may never have used in the past and which they may never intend using, except under the gravest of provocations.

• • • • •

The International Finance Corporation, Washington, concluded this week a successful deal with one of India's well-known and highly respected engineering companies, Kirloskar Oil Engines Ltd., Poona. This is the second investment of the I.F.C. in India. The amount involved is $850,000 (Rs. 40.80 lakhs) and will be used for expansion and diversification of the Company's manufacturing activities. The investment will be in the form of U.S. "dollar notes" (that is, debentures), bearing interest at 6½ per cent, and maturing from 1965 to 1970. A feature of this deal is that the I.F.C. has an option to subscribe at par to the ordinary shares of the Company. In addition, it will also receive contingent interest in rupees depending on the amount of the Company's earnings.

Kirloskar Oil Engines Ltd.—K.O.E.L., for short—which is said to have about 2,000 shareholders, has an impressive expansion programme which will cost the equivalent of $4.3 million, that is, a little over Rs. 2 crores. The balance of the funds required after the I.F.C. loan will be found by the Company by additional share capital and by funds generated from its operations. The main features of the Company's expansion programme, according to a Press release by the I.F.C., are:

The manufacture in India for the first time of 80-440 h.p. diesel engines for stationary generating sets, small shunting locomotives, and marine auxiliary and propulsion units; of a 3 h.p. diesel engine, especially designed for pumping sets in demand by small farm-owners; and of bi-metal bearings for use in internal combustion engines.

The expansion will also enable increased production of K.O.E.L.'s 5-40 h.p. diesel engines which it has been manufacturing since 1949. Since 1954, when K.O.E.L. started exporting its diesels, its export markets have steadily grown and now include countries in Asia and the Far East, the Middle East and Africa and Central America. K.O.E.L.'s export business is expected to increase further with its expanded operations.

K.O.E.L. has entered into licensing agreements with Glacier Metal Company of England for manufacture of bi-metal bearings and with Maschinenfabrik Augsburg-Nurnberg A.G. (M.A.N.) of Germany for the manufacture of the 60-440 h.p. engines.

Upon completion of the aforesaid programme, K.O.E.L. will be the largest manufacturer of diesel engines in this country.

The share market has reacted to the above news in a very bullish manner; the Company's shares (Rs. 10 paid-up) have jumped up in value by 43 per cent. to Rs. 20. This development should make the Company's task of raising additional capital easier—an indirect advantage of its financial arrangement with the I.F.C. Apparently, investors' confidence in the success of the Company's expansion programme has been strengthened by the fact that the I.F.C. has found it worthwhile to support it.

The K.O.E.L.'s dividend record is good. For the year ended 31st March 1958, it paid dividend of 10 per cent., as against 9 per cent. for 1956-57, 6 per cent. for 1955-56 and 5 per cent. for 1954-55. Even at the current market value, its shares yield 5 per cent., which is by no means unattractive, having regard to the possibility of a right issue and gainful growth prospects.

• • • •

The latest reports about the trend of white sugar production suggest that the output of white sugar in the current (1958-59) season will be very near the estimate of Mr. Hadfield rather than that of the official estimate. Addressing the I.S.M.A. annual meeting at New Delhi on 9th March 1959, Mr. Hadfield expected white sugar production to be no more than 1,850,000 tons, that is, about 129,000 tons less than the official estimate of 1,979,000 tons. The production in Uttar Pradesh alone is expected to be less by 105,000 tons at 837,000 tons, according to Mr. Shyam Sunder Kanoria, President of the U.P. Branch of I.S.M.A. The crushing in the Deccan also has come to a premature end. It is stated that sugarcane in this area had flowered unexpectedly, with the result that its supply was substantially affected. According to one reliable report, the Deccan factories have had to stop crushing 15 days earlier than was expected. This means a drop of about 20,000 to 25,000 tons or 9 per cent. in their production, as compared with the last season. On this basis and after allowing for the export quota of 50,000 tons already permitted, the stocks of sugar at the end of the current season will hardly be 80,000 tons, equivalent to 15 days' consumption in the country, as against 336,000 tons brought in and 435,000 tons at the end of the 1956-57 season. This is not a pleasant prospect for either the consumer or the producer. Past experience shows that, whenever the supply of sugar is not adequate to meet the demand, the producers of sugar are maligned and harassed more than any other section of the commercial community.

In fact, the Kanpur Sugar Merchants' Association has just fired the first shot of campaign against the sugar mills for the current season. The Association is reported to have alleged that many of the sugar mills are selling their quotas of sugar at a high premium, that they are diverting sugar to the black market and to fictitious parties indirectly, that some factories sell a part of their releases to genuine dealers and dispose of the balance in the black market through their nominees, and that sales against the last release are being made very slowly and at higher prices. The Association has, therefore, suggested to the Union Food Ministry that the mills should be ordered to sell their free quota of sugar within a week from the date of the release order. Another suggestion of the Association is that sugar should be allotted in sufficient quantity to all distributing centres, so that all neighbouring districts may meet their requirements from there. A third suggestion of the Association is that the export programme should be abandoned until production improves sufficiently to meet the demand.

The last mentioned suggestion is the most sensible. In view of the fact that the supply position will become extremely tight in the second half of the current season, the Government should conserve the production for domestic consumption and stop exports forthwith. In any case, not much sugar has been sold for export out of the 50,000 tons quota. If exports are stopped now, it should be possible to save 40,000 to 45,000 tons for domestic consumption.

Further, prices of sugar in world markets have gone down, which means that India will have to suffer a greater loss than was contemplated when the export programme was drawn up. The world sugar markets continue to be distinctly bearish, with a marked drop in prices. The latest available quotation for Cuban raw sugar in the New York market is as low as 2.85 cents per lb. (f.o.b. Cuba), which compares unfavourably with 2.94 cents prevailing a fortnight ago and 3.67 cents in the beginning of the year. Spot sugar in London is quoted at £26½ (Rs. 349) per ton, as against £27½ (Rs. 362) and £32 (Rs. 427) in the aforesaid periods, respectively. As compared with the current London price of Rs. 349 per ton, the f.o.b. cost of Indian sugar, after allowing for the full remission of excise duty and cane cess, comes to about Rs. 775. On this basis, the loss on every ton of sugar exported works out to as much as Rs. 426, in addition to the loss of Rs. 342.10 in revenues to the Governments (Rs. 291.20 and Rs. 50.90 by way of excise duty and cane cess, respectively). Is it worthwhile earning foreign exchange at such a heavy loss?

The weakness of world sugar has persisted, despite the effective cut of 17½ per cent. in the export tonnages of International Sugar Agreement member-countries made by the Sugar Council in February last. Prompted by this extremely unsatisfactory situation and with a view to improving the tone of the market, Mr. Eric Roll, Executive Director of the Council, is currently visiting the various I.S.A. member-countries. The object of his visit is, it is said, to find out how member-countries feel about the position and to learn what further action they think should or could be taken. The tour of Mr. Roll is scheduled to be completed early next month. Meanwhile, the Sugar Council would appear to be still hoping that the cut enforced in February would have the desired effect on market prices and that its estimate of this year's surplus of sugar, namely, 745,000 tons, will prove to be more accurate than the trade's estimate of 1.5 million tons. It is rather difficult to say whether the Council's expectations would materialise, because a few weeks are still to go before additional statistical information in the current season will come to hand.

Viewed thus, it would appear that any further action by the Sugar Council may be delayed for a few weeks. If the market does not improve by then, what will happen? The *Financial Times*, London, points to two possibilities. One is that another cut in export quotas will be imposed under one or other of the Sugar Agreement's provisions, though there is a distinct limit to what can be done along these lines, as the exporting countries have the right to export 80 per cent. of their quotas before 1st September. The second, and clearly more important, possibility is a unanimous decision among the participating countries to take some other action beyond that which the Agreement at present allows.

Commenting on the trend of world prices of sugar, the *Economist*, London, observes:

"Although the Council's estimates of supply and demand over the year as a whole may turn out to be not far off the mark, sugar is clearly in surplus now. And, on such a residual market, a small change in supply or demand can bring a disproportionately big change in sugar prices. Some recovery in prices is to be expected later on, as the premiums for forward deliveries on the futures markets show. The season of heavy production of cane sugar will be past, and European beet-producing countries should need more imported sugar. The Council has to decide whether to sit tight until its next meeting in June, or whether it should act before then. It still has power to cut export quotas by a further 12½ per cent., and it could also increase the amount of sugar temporarily withheld from the market. But its exporting members are not necessarily equally keen to raise prices by restricting their sales. Cuba, the largest producer, tends to be more interested in tonnage than in the level of prices on the free market, because it obtains a substantially higher price for its preferential sales to the United States. But, if prices remain low, Cuba's attitude could change."

• • • • •

New Delhi reports point to the possibility of Mr. Morarji Desai yielding to pressure from the supporters of *khandsari* sugar by reducing even the modest excise duty on *khandsari* which he announced on 28th February last. It is to be hoped that these reports are nothing more than wishful thinking. If the white sugar industry in U.P., in particular, and the taxpayer and the consumer, in general, are not to suffer further, Mr. Morarji Desai should stick to his stand. Some illuminating data of the extent to which the country as a whole has been a loser, following the growth of *khandsari* manufacture at the expense of white sugar, were given by Mr. S. S. Kanoria at the annual general meeting of the U.P. Branch of the I.S.M.A. held at Lucknow last Sunday.

In West U.P., although several factories have expanded their capacities at the cost of scarce and valuable foreign exchange worth crores of rupees, they have not been able to get enough supply of sugarcane to maintain even their pre-expansion crush, because of the mushroom growth of *khandsari* units after the tremendous increase in the excise duty on white sugar. Consequently, the production of white sugar in West U.P. during the current season is expected to be no more than 530,000 tons, as against 752,000 tons in 1956-57.

On the basis of a recovery of 7 per cent., some 3,000,000 tons of sugarcane have been crushed additionally by the *khandsari* units to yield 210,000 tons over and above their normal production of 100,000 tons. If these three million tons of cane had been crushed by the sugar mills, 300,000 tons of white sugar would have been produced, that is, 90,000 tons more than *khandsari*.

The revenue lost as a result of not producing these 300,000 tons of white sugar is Rs. 10.66 crores, made up of Rs. 8.73 crores by way of excise duty, Rs. 1.55 crore as cane cess and Rs. 38 lakhs as co-operative societies' commission. This is the minimum loss, in that it is exclusive of the Income-tax and super-tax which the Government could have collected from the sugar mills on the profit made by them on 300,000 tons.

Incidentally, this minimum loss is a little more than the amount squeezed out of the consumers of petroleum products on the ground that more funds are needed for implementing the Plan. In other words, while an additional revenue of Rs. 10 crores was found from one source, a sum more than that was lost by not taking prompt action to check the growth of a capital-wasting cottage industry at the expense of a capital-saving large-scale industry.

(Continued on next page)

EQUITIES REACT

BULLS LIQUIDATE

(From Our Own Correspondents)

BOMBAY, *15th April*

THE share market suffered a reaction during the week under review and, barring a few counters, prices were marked down by a sizable extent, on liquidation by bulls over a wide front. The downward trend was in continuation of the setback witnessed on the closing day of the previous week. Barring the growing incidents on the Indo-Pakistan border, there was no other adverse factor to affect the sentiment of the operators. Even the border incidents do not seem to have been taken too seriously by the market. It is, therefore, felt that this week's decline in prices is no more than a corrective reaction to the almost uninterrupted rise in equities since the Budget.

Good corporate news continue to flow in. The latest Directors' report of the Century Mills discloses that a scheme of renovation of the Company's old machinery, at a cost of Rs. 1.82 crore, has been drawn up and that negotiations are in progress with the National Industrial Development Corporation for a loan to finance the scheme. The Company's rayon plant is said to be working satisfactorily and a further capital expenditure to the tune of Rs. 1.75 crore has been undertaken to make the plant more efficient and versatile.

The National Carbon Company has earned a higher profit for the year 1958 and its development programmes are stated to be yielding good results. The Company has made arrangement for supply of alcohol, the major raw material for the manufacture of plastics and chemicals, the plant for which is now under construction and is expected to be completed in 1960.

Thanks to the encouraging results of the year ended March 1959, the Directors of Gwalior Rayon have recommended the payment of arrears of dividend on the Company's 6 per cent. preference shares up to the end of the year 1958-59; this amounts to Rs. 63.79 lakhs. The production of staple fibre is said to be now running at 55 tons per day. A fresh survey of bamboo resources is being undertaken in connection with the Company's proposed rayon grade pulp project in Kerala. Meanwhile, arrangements are in progress to purchase the necessary equipment for the factory, which is estimated to cost about Rs. 7 crores.

Another company which has reported encouraging results is the Western India Match Company, Ltd. The gross profit of the Company for the year 1958 has gone up from Rs. 77.47 lakhs to Rs. 104.41 lakhs. The Company's paper plant went into production in December last and is at present producing paper for the Company's own requirements.

To revert to the trend of prices. In the steel section, Tata Ordinaries were marked down from Rs. 183 to Rs. 179.25 before closing at Rs. 179.50. The new shares lost over the week Rs. 3 to Rs. 177.25. After an early recovery from Rs. 24.56 to Rs. 24.72, Indian Irons reacted to a low of Rs. 23.96 at the close of business today.

Textile shares too suffered a setback. Early in the week, Bombay Dyeings hardened from Rs. 60.10 to Rs. 60.60, but moved irregularly lower to Rs. 60 at the close. Centurys gave way from Rs. 493.75 to Rs. 486 before improving slightly to Rs. 488.25. Kohinoors jumped early in the week from Rs. 253 to Rs. 264.50, but the disappointing results of the Company for 1958 brought the quotation down to Rs. 253.50 yesterday. Today, however, they recovered to close at Rs. 258, which shows a gain of Rs. 5 over the week. The Company's net distributable profit for the year is so low that even the reduced dividend of Rs. 10 per share (as against Rs. 18 per share paid for 1957) is to be met almost wholly out of the dividend equalisation and machinery reserves. Last year also, a sum of Rs. 10.25 lakhs was drawn from the reserves to meet a good part of the dividend of 18 per cent. Finlays lost Rs. 3 over the week to Rs. 270 and Khataus Rs. 11.25 to Rs. 177.50. Models suffered a further drop of Rs. 11.30 to Rs. 93.70. New Greats declined by Rs. 15 to Rs. 178; this fall is on top of a similar decline in the previous week. Shree Niwas Cottons shed Rs. 3 to Rs. 151 and Simplex Re. 1.50 to Rs. 167.50. Standards moved down by Rs. 9 to Rs. 474, Svadeshis by Rs. 4.50 to Rs. 212 and Tata Mills by Re. 1.25 to Rs. 35.

Sugar shares followed the general trend, Belapurs moving down from Rs. 295 to Rs. 287. Phaltans lost Rs. 4 to Rs. 153.50 and Walchandnagars Rs. 5 to Rs. 295. Cement shares proved no exception, but the decline was negligible. Associated Cements moved within a narrow range between Rs. 150.75 and Rs. 148 before closing at Rs. 148.50. Digvijays dropped Re. 1.50 to Rs. 146.50 and Orissa Cements 12 nP to Rs. 14.36. Jaipurs Udyogs declined by 28 nP to Rs. 11.04.

Notwithstanding the good outlook, engineering shares reacted, Tata Locomotives dipping to Rs. 188.75, after advancing from Rs. 192.50 to Rs. 195. Alcock Ashdowns lost Rs. 4 to Rs. 267 and Premier Constructions Rs. 5.75 to Rs. 265. Larsen and Toubros were done 24 nP lower at Rs. 22.68 and Mahindras 25 nP lower at Rs. 25.10. Kamani Engineerings, however, rose by Re. 1.12 to Rs. 8.12 and Structural Engineerings by Rs. 4.75 to Rs. 255. Texmacos put on 32 nP to Rs. 24.96. Among mining shares, Shivrajpurs were a shade better at Rs. 100.50 while Indian Coppers were done 8 nP lower at Rs. 4.28.

Shipping shares looked down, Scindias dropping 44 nP to Rs. 17.88 and Great Easterns 60 nP to Rs. 20.96. Bharat Lines were dull at Rs. 12.92. Automobile shares did not evoke any fresh support. On the contrary, they declined, Hindustan Motors losing 8 nP to Rs. 9.08 and Premier Automobiles Rs. 2.75 to Rs. 114.

In the miscellaneous group, Bombay Burmahs (old) gave way from Rs. 509.50 to Rs. 498, while their partly paids were steady at Rs. 175.50. National Rayons reacted from Rs. 286.25 to Rs. 280.25. Despite the encouraging news from the Company, Gwalior Rayons lost over the week 48 nP to Rs. 17.04. Tata Chemicals were done 12 nP lower at Rs. 16.64. Tata Oils changed hands Re. 1.05 lower at Rs. 49.25. Voltas lost Rs. 2.75 to Rs. 153.75. Indian Dyestuffs lost further ground from Rs. 430 to Rs. 400. Wimcos attracted good attention and rose by Rs. 6 to Rs. 209. Kirloskar Oil Engines responded favourably, with a rise of Rs. 6 to Rs. 20, to the news that the I.F.C. had agreed to invest $850,000 (Rs. 42.5 lakhs) in the Company towards financing the expansion and diversification of its manufacturing activities. I.C.I.C. had business at Rs. 81.50 and W. H. Brady at Rs. 300.

Madras Stock Exchange

MADRAS, *13th April*

The Madras Stock Exchange continued to present fully steady conditions during the major part of the week under review. Business put through was, however, small, due to scarcity of floating scrips. Here is what Messrs. Maconochie & Co., a leading firm of share brokers in Madras, say on the recent trend of the share market:

"The bull market has gained further momentum in the last three weeks. Scarcity of floating scrips has accentuated the price inflation and several scrips have reached new peaks. Investment hunting has been a disheartening affair, and the daily rise in share values has, if anything, deterred genuine investors from making long-term commitment; for they naturally wonder if this boom will endure. The current fashion is to go in for scrips that would yield profit in the 'short run' and to turn to shares quoting below par, for long-term investments. The correct significance of the recent changes in respect of tax refunds on tax-free shares will be realised only when a few dividends under the new set-up are received and, until then, there will perhaps be no disposition to calculate the net return from equities. Markets are moving on the roller-skates of sentiment and the bull psychology reigns supreme."

Several select textile shares met with renewed buying support and values moved up further. Premiers provided the brightest spot, forging ahead as they did from Rs. 135 to Rs. 145. Dhanalakshmis strengthened by Rs. 3 to Rs. 185. Buckinghams spurted by Rs. 2 to Rs. 177 *cum-div.* (final). Coimbatore Cottons and Vasantas advanced by a like sum to Rs. 135 and Rs. 222 *cum-div.*, respectively. Coimbatore Spinnings hardened by Re. 1.50 to Rs. 51. Maduras picked up Re. 1.05 to Rs. 26.75.

Rubber shares were generally held at the last week's levels. Today's closing rates for a few prominent counters are: Kallas Rs. 5.20; Nilamburs Rs. 15.25; Pullangodes Re. 1.77; Puthutotams Rs. 3.17; Rajagiris Rs. 18.25; Travancore Rubbers Rs. 18.25 *cum-div.*; and Vaikundams Rs. 25.50 *cum-div.* (final). Mercars recorded a rise of 25 nP to Rs. 9.20.

Activity in the coffee section was somewhat restricted, thanks to reports of drought in some areas. Operators noted the sentiment in the latest issue of the Indian Coffee Board's *Newsletter* that "planters are getting alarmed about the coffee crop prospects for 1959-60." According to the *Newsletter*, the showers which the planters had been anxiously waiting for since early March have not materialised, except at a few scattered points. Hopes of a 50,000-ton crop are receding, with every day of dry weather on the hills. This report did not, however, have much adverse effect on the market, presumably because it would mitigate the problem of surplus coffee. Panchuras were in request and put on 20 nP to Rs. 3.90. Ouchterlonys jumped up by 10 nP to Rs. 5.65 *cum-div.* Sheveroys gained a naya paisa to Re. 1.91.

Tea shares were generally subdued, despite better outlook for exports, as a result of the proposed levy of export duty on *ad valorem* basis on Ceylon tea. Twyfords dropped 50 nP to Rs. 17. Haileyburias fell by 40 nP to Rs. 18.60 and Parksides by 38 nP to Rs. 21.87 *cum-div.* (final). Peermades declined by 13 nP to Rs. 19.87 *cum-div.* (final). Devasholas, however, elicited good enquiries and rose by 25 nP to Rs. 27 *ex-div.* Lucky Valleys gathered 5 nP to Rs. 12.75. Kalasas were unchanged at Rs. 3.90, as were United Nilgiris at Rs. 19.55, Nonsuchs at Rs. 27.75 *cum-div.* (interim) and Balanoors at Rs. 21. Kil Kotagiris were quiet at Rs. 8.45 *cum-div.* for lack of fresh support. Periakaramalais, however, were steady at Rs. 4.26.

A sharp rise of Rs. 17.50 to Rs. 325 *ex-div.* in United Breweries characterised the trading in the sugar and breweries section. E.I.Ds improved by 50 nP to Rs. 35 *ex-div.* and Deccans by 3 nP to Rs. 11.23. Mysores, on the other hand, encountered selling and gave way from Rs. 53.50 to Rs. 51.50 *ex-div.* Indias shed 30 nP to Rs. 13.10 *cum-div.*

Among miscellaneous industrials, Rallis continued to be well favoured and rose from Rs. 68 to Rs. 72. Western India Plywoods spurted by Rs. 2 to Rs. 155. Singarenis and Textools rose by a rupee each to Rs. 17.50 and Rs. 180, respectively. National Rubber Manufactures picked up 87 nP to Rs. 16.87. Mysore Chemical Manufactures hardened by 75 nP to Rs. 24.25 *cum-right.*

MARKET GOSSIP

(Concluded from previous page)

The aforesaid loss of revenue is not the only loss, for the difference between the *khandsari* and white sugar production, namely, 90,000 tons—in actual fact, it must have been more—is another loss, the value of which is Rs. 5.5 crores. None has gained by this loss, for the sugar was not recovered at all from cane; it was allowed to go waste and burnt as fuel along with the bagasse. Then, there is the loss of employment to workers engaged in sugar mills.

Again, if our economy were to be based on *khandsari*, it would need about 1½ times the land to be under sugarcane for having the same amount of *khandsari* as compared with white sugar. Can India, which is anxious to increase production and raise the living standards of its people, afford this luxury of its *Vedic* age?

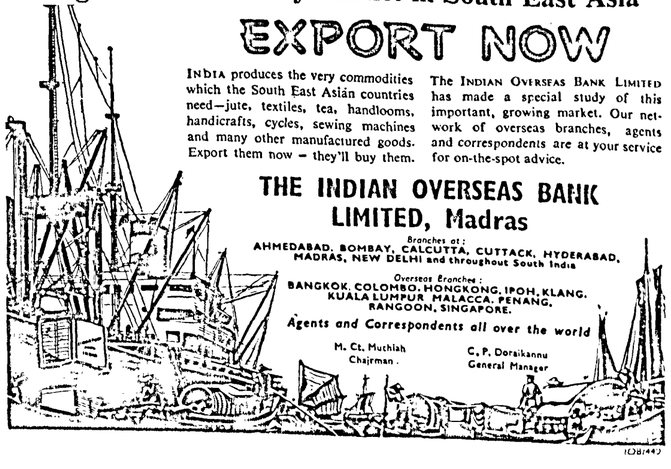
Notwithstanding all these irrefutable facts, there are many in high places, both in Parliament and outside, who passionately feel that manufacture of *khandsari* sugar should be encouraged, simply because it is a cottage industry. Even the Finance Minister was apologetic in defending his levy of Rs. 4.64 per maund on this brown sugar and confessed that he had a soft corner for *khandsari*. So poor is their sense of economics and so strong is their *Sarvodaya* spirit that it is a pity no amount of argument will convince them.

* * * *

Following reports of early closing of crushing by the sugar mills in the Deccan, sugar shares quoted on the Bombay Stock Exchange have lost some ground. Thus, Belapurs have declined by Rs. 8 over the week, Phaltans by Rs. 4 and Walchandnagars by Rs. 5. Other scrips, such as Changdeo and Maharashtra Sugars, also are a shade lower. An idea of the drop in the production of Walchandnagar was given by Mr. Gulabchand Hirachand at the annual meeting of the Company yesterday. He said that the quantity of cane crushed in the 1958-59 season was less at 205,509 tons, yielding 238,861 bags of sugar, as against 227,487 tons and 262,509 bags in the 1957-58 season. Although the recovery was a little higher—at 11.8 per cent., as against 11.6 per cent.—it was not sufficient to offset the lower crushing. Again, prices realised on the sale of sugar were better than in the previous year, but, perhaps, insufficient to make good the fall in production. There are reasons to believe that this must have been the experience of almost all the sugar factories in the Deccan.

The table relating to Stock Exchange Trend appearing on page 628 of our last issue covers the transactions for the week ended 8th April 1959, and not 7th April 1959 as stated therein.—ED.

Your goods have a ready market in South East Asia



EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now – they'll buy them.

THE INDIAN OVERSEAS BANK has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

THE INDIAN OVERSEAS BANK LIMITED, Madras

Branches at:
AHMEDABAD, BOMBAY, CALCUTTA, CUTTACK, HYDERABAD, MADRAS, NEW DELHI and throughout South India

Overseas Branches:
BANGKOK, COLOMBO, HONGKONG, IPOH, KLANG, KUALA LUMPUR, MALACCA, PENANG, RANGOON, SINGAPORE.

Agents and Correspondents all over the world

NEWS IN BRIEF

EXPORTS of pashmina wool will continue to be licensed freely on shipping bills without any quantitative restrictions upto the end of September next.

The Government of India has decided to appoint shortly a committee of three or four experts to report on the production of dehydrogenated oils and their effects on consumers.

The validity of the shipment period for the unutilised quota of 1,500 tons of copper sheets, circles, strips and plates released for export on 6th January last has been extended till the end of September 1959.

The preliminary estimate of the *baisaki* lac crop for 1959 places the aggregate yield at 735,000 maunds, as against the final estimate of 600,000 maunds for 1958 and the ten-year average of 674,000 maunds before 1957.

A contract for exporting 1.5 million jute bags from India to the Democratic Republic of Viet Nam was signed between the Managing Director of the State Trading Corporation of India and the Consulate-General of Viet Nam at New Delhi on the 10th inst.

The total allotment of steel for the current quarter (April-June 1959) is fixed higher at 751,000 tons, an increase of over 100,000 tons as compared with the previous quarter's allotment. The bulk of this increase is meant for covering the needs of agriculture.

The Kerala Government has submitted to the Centre a scheme for the development of the coir industry under the second Five-year Plan. The total expenditure involved is put at Rs. 2.46 crores, of which the finacial assistance sought from the Centre is 50 per cent.

Considerable supplies of caustic soda and soda ash, the import of which has been arranged by the State Trading Corporation of India, will be shipped to India at short intervals. About 15,000 tons of caustic soda and 7,000 tons of soda ash are expected to arrive this month. Further supplies will follow.

As a measure of export promotion, the Government of India has decided to allow drawback of customs duty paid on imported rough diamonds processed in India and exported as finished diamonds. Rebate of customs and Central excise duties of polyvinyl chloride cables has also been allowed.

With effect from the 1st inst., the Indian shipping companies are no longer bound to ask importers in India to pay in sterling the freight on cargoes from the U.K. This has been rendered possible by the acceptance, by the non-Indian members of the U.K.—India conferences, of the principle of receiving freight on cargoes from the U.K. in rupee currency.

Mr. Lal Bahadur Shastri, Union Commerce and Industry Minister, made it clear in the Lok Sabha last week that the additional foreign exchange of Rs. 50 lakhs for imports of car components had been released to relieve the shortage of small cars and that it could not, therefore, be utilised for importing components of big cars such as Dodge, Plymouth and Standard Vanguard.

India can develop cocoa production on a considerable scale, but the growing of basic types of cocoa will suit its purpose better than trying to restrict itself to the limited production of a special type. This is the main conclusion of an investigation conducted by Mr. D. H. Urquhart, the results of which have been published by Cadburys.

The extent to which agreements, awards, etc., in labour disputes have been implemented in Andhra Pradesh will be assessed by two separate committees now set up by the State Government, one for the private sector and the other for the public sector. The constitution of the two committees is in pursuance of the decisions of the sixteenth session of the Standing Labour Committee.

The Central Government has decided to invite two foreign firms, one from Britain and the other from France, to submit detailed project reports on the setting up of an alloy and special steel plant in the country. The companies are being asked to send their representatives to India early next month to finalise details. The capacity of the proposed plant will initially be 40,000 tons which will be doubled later on.

The laboratory of the Central Public Health and Engineering Research Institute at Nagpur, the twenty-second in the chain of national laboratories spread over the country, was opened on the 8th inst., by Prof. M. S. Thacker, Director-General, Council of Scientific and Industrial Research. The Government of Bombay has donated over 100 acres of land for the Institute which will have a building costing about Rs. 5 lakhs.

The Government of India has a proposal to start work on a fertiliser plant in Bombay State during the current Plan period. The proposal will be considered along with other suitable sites when additional fertiliser factories are planned. The question of setting up a fertiliser factory in Rajasthan was studied in detail when the question of fertilised production during the second Plan was considered. Raw materials for the production of ammonium sulphate are available in Rajasthan, but the main problem there is scarcity of water supply and electricity.

The functioning of works committees has not been up to expectations, as both the workers and the managements expect too much from these committees, according to Mr. L. N. Mishra, Parliamentary Secretary to the Union Minister for Labour. Special investigation, it is said, is in progress regarding the working of these committees and its results will be discussed at the forthcoming session of the Indian Labour Conference.

A cable manufacturing factory, with an authorised capital of Rs. 2.50 crores, is expected to go into production in Bombay by the end of June next, according to Mr. Manubhai Shah, Union Minister for Industry. A private firm in Bombay has entered into an agreement with Siemens Engineering and Manufacturing Co., which, in turn, has executed an agreement for securing manufacturing rights from two firms under Siemens Group in West Germany. When full production is established, foreign exchange worth Rs. 1.5 crore is expected to be saved.

* * * *

From Abroad

The motor industry in Russia has plans to produce a new 50 m.p.h. four-passenger car weighing 12 cwts., the smallest on the Russian market.

Both Australia and Canada are expected to press for a slowing down in American agricultural surplus disposal practices at a conference being convened by the U.S. for next month.

What is claimed to be the world's biggest iron-ore mine will go into operation in the Krivoi Rog Basin, South Ukraine, Russia, in 1961. The annual rate of output is expected to be 7.4 million *tons* (commercial ore).

West Germany has agreed to extend a credit of DM 30 million to Pakistan to finance agricultural development. The details will be discussed by the Pakistan Minister for Refugees when he visits Bonn on the 20th inst.

Capital expenditure by the British coal, gas and electricity industries will be £70.5 million higher in 1959 than in 1958. The combined total of approved expenditure for the three industries is £525 million, as against £454.5 million.

The aggregate gold and foreign exchange reserves of Japan at the end of March last stood at a post-war high of $974 million, representing an increase of $33 million over the end-February total and of $345 million as compared with those a year before.

The U.S. Export-Import Bank has announced the grant of a $9.3-million credit to Persia to finance the purchase of 40 diesel-electric locomotives and equipment in the U.S. The loan is authorised under a $53-million line of credit established by the Bank in 1955.

The Italian Government has expanded the scope of the export credit insurance system operated by it. The new move has enabled the Italian exporters to extend the percentage of long-term credits from 70 to 85 of the total credit granted.

PERSONAL

MR. V. T. Dehejia, Special Secretary to the Government of Bombay, will shortly be appointed Chairman of the Bombay Port Trust *vice* Mr. L. T. Gholap.

Mr. A. K. Roy, Secretary for Economic Affairs, Government of India, will lead the Indian delegation to the economic conference of Colombo Powers which is to open at Colombo on the 16th of next month. Mr. J. J. Anjaria, Economic Adviser in the Ministry of Finance, will be one of the members of the delegation.

Mr. Naval H. Tata was elected as President of the Employers' Federation of India for 1959 at the annual general meeting of the Federation held at Bombay on the 14th inst., following the retirement of Mr. H. P. Mody, who had held the presidentship ever since the foundation of the Federation 26 years ago, excepting for two brief intervals.

Under a new three-year trade and payments agreement between Hungary and the U.A.R., the former will buy cotton and other Egyptian products and supply capital equipment, including railcars and electric gear. The total value of the trade between the two countries during 1958 was £E.8.3 million.

Discussions are taking place at Tokyo between the Japanese Government and the wool textile industry over a complaint about unfair marking of Japanese cloth lodged by the wool textile industry in the U.K. The British complaint is that Japanese wool cloth is being sold in export markets with woven selvedges bearing inscriptions in English which tend to deceive buyers and consumers into thinking that they are getting British cloth.

Sweden's population at the end of 1958 stood at 7,436,066, an increase of 43,194 over the year, according to the Central Bureau of Statistics. In 1957, the population rose by 51,750. The population of cities, which was previously lower than that of rural areas, at the beginning of 1958 accounted for 50.3 per cent. of the total, and a further increase to 50.8 per cent. was noted during the year. Of all inhabitants, 3,709,716 were males and 3,726,350 females, that is, a surplus of women of 16,634. This surplus has shown a gradual decline in recent years.

Marine hull and cargo insurance policies in Britain are now put on a par with the non-marine policies for purposes of stamp duty, as a result of the appreciable cut in stamp duty on the former announced by the Chancellor of the Exchequer. The saving is claimed to be considerable for many high-value strips, as insurance of a £1 million hull now costs just 6d., as against about £50 hitherto. This means that foreign owners will not have to bear the additional impost imposed on U.K. underwriting and it is expected to help the U.K. insurance market in competition with foreign insurers.

An assurance that, if the British footwear industry were to apply for an additional tariff on imports, the Board of Trade would "look on the application with great care" was given recently by the President of the Board, Sir David Eccles. Referring to the complaints of dumping of cheap shoes in Britain from East-European countries, Sir David said that, "if the footwear industry feels that there is a case for an anti-dumping duty, let them make it and we will have a look at it." At present, there is an *ad valorem* import duty of about 15 per cent. on most kinds of shoes.

D. V. C.

MUCH interest attaches to the programme for increasing the power potential of the region served by the Damodar Valley Corporation (D.V.C.). In the welter of controversy over the change of the headquarters of the Corporation and the inter-State responsibility for the development of the region, there is a grave danger that the wider economic issues, raised by the power shortage in the area, may be ignored. At a conference on the D.V.C., held at New Delhi this month, where the two participating Governments, West Bengal and Bihar, were represented, the view was expressed that the potential demand for power from essential industries in the D.V.C. area could not be met if additional generating capacity were not installed at an early date. It is estimated that the shortage of power would be 179,000 kw. by 1960-61 and that this might increase to 2,65,000 kw. by 1962-63 and to 719,000 kw. by 1965-66. Appropriately enough, the Conference has recommended the establishment of two thermal power units—one at Durgapur in West Bengal and the other at Chandrapura in Bihar—with a total installed capacity of 250,000 kw. The units, which would be taken in hand in the second Plan period, would be commissioned by 1962-63. The Conference did well to project its thoughts beyond the second Plan. It would appear that it favoured the installation of four more units (each with a capacity of 125,000 kw.) in the period of the third Plan. The power programme for this region deserves top priority if the existing and the prospective industrial enterprises are not to languish for want of their essential energy requirements.

Among the decisions reached at the Conference, mention must be made of the West Bengal Government's readiness to take over the cold storage plant at Kanainstal, with a capacity for preserving 17,500 maunds of agricultural produce, the spun pipe factory at Durgapur and the irrigation canals under the barrage. The Canal system which has a total mileage of 1,555, will be transferred for maintenance and operation to the West Bengal Government on 15th December 1959. The Conference also decided to transfer gradually the D.V.C. headquarters from Calcutta to Panchet and Maithon. There has been some dissatisfaction in Bihar over the location of the headquarters at Calcutta, though certain subsidiary offices have been located in Ranhi (Bihar). The transfer of the headquarters is expected to be completed by 1962. Yet another important decision was that the Corporation was urged to formulate a concrete programme of soil conservation measures on the basis of an annual allotment of Rs. 40 lakhs. Presumably, the allocation of funds on D.V.C. projects among West Bengal and Bihar and the Centre came up for discussion at the Conference. For Dr. B. C. Roy, W. Bengal's Chief Minister, revealed the other day at Calcutta that the whole question would be examined afresh by the Chief Justice of India and his award would be binding on the parties concerned.

The Government has announced its decision on the question of the reconstitution of the D.V.C. Board. It may be recalled that the Government acquired in December 1957 powers to appoint a Chairman and members on wholetime or on a part-time basis in accordance with the state of work of the Corporation. In April 1958, the Board was reconstituted with Mr. J. P. L. Shenoy as a wholetime Chairman and Messrs. A. B. Ganguli and T. B. Singh as part-time members. The Government then announced that the position would be reviewed at the end of one year. Such a review has revealed that the Panchet hill dam and the Durgapur canal system have been completed and substantial progress has been made at Durgapur thermal station and the fourth unit at Bokaro. The Government, therefore, feels that it is no longer necessary to have a wholetime chairman. Accordingly, it has decided that the executive functions of the Corporation will be concentrated in the Secretary-*cum*-Chief Executive Officer, Mr. U. K. Ghosal. It has also decided to appoint a non-official of high standing as part-time Chairman; pending this appointment, the Secretary to the Ministry of Irrigation and Power has been appointed part-time Chairman for a period of three months. The terms of the two part-time members have, however, been extended for a period of two years.

PRODUCTIVITY

"Productivity is practically a synonym for progress. For us it means not merely progress but survival." In these two short sentences, Mr. G. L. Nanda, Union Minister for Labour, Planning and Employment, admirably summed up the significance and importance of higher productivity to India. Speaking of productivity in its larger economic context, at the first annual meeting of the National Productivity Council, which was inaugurated by Prime Minister Nehru on the 11th inst. at New Delhi, Mr. Nanda pointed out that, in the long run, productivity made possible increased employment opportunities so necessary to take the burden of numbers off the land. Productivity, he pointed out, was no new concept. What made it new was its greatly broadened scope. This was also what made it a movement and had helped create a climate and given tone to current thinking on the subject.

There has of late been a keen awareness of the importance of productivity for economic development. Higher productivity, it is common knowledge, leads to a reduction in cost of production, which enables sales at lower prices, which, in turn, expand markets, enabling the goods to compete effectively in world markets. It yields more wages to the workers, means shorter working hours and greater leisure for them. In fact, as Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, pointed out, the strength of a country, the prosperity of its economy, standards of living of the people and the wealth of the nation are very largely determined by the extent and measure of its production and productivity.

While productivity is generally recognised as a factor in promoting higher production and better standards of living, not many seem to be aware of the actual contribution it has made to the economic progress of some of the advanced countries of the West. The remarkable growth of the U.S. economy in the past 100 years, for instance, has been the result far more of improvement in productivity than of increases in the stock of capital. Professor Moses Abramovitz's study for the U.S. National Bureau of Economic Research has shown that, between 1869-78 and 1944-53, net *per capita* output in the U.S. would have increased by only 14 per cent. if productivity had remained the same and if the country had only had the use of the additional capital which savings had made possible. But, actually, productivity of a representative group of resources increased by about 250 per cent. over the period. There is no reason why the same conclusion should not be equally, if not more, valid for underdeveloped countries.

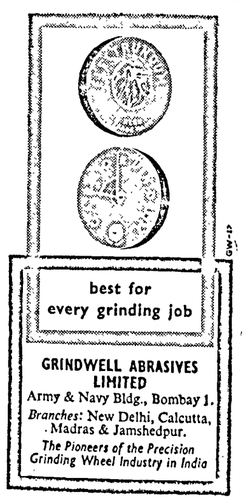
Appropriately enough, the importance of productivity for rapid economic growth was underlined by all the speakers at the aforesaid conference. Mr. Nehru, in his inaugural address, laid particular stress on increasing productivity for reducing the cost of production of export goods. This consideration, he pointed out, was likely to be overlooked in a country like India where there was an abundance of cheap labour. But it was forcing itself on us as a result of competition from abroad.

Productivity and wages have a definite correlation. Improvements in the former are almost invariably followed by a demand for higher wages. Mr. Nehru did well to emphasise that, though demand for higher wages as a result of increased productivity was justified in certain cases, it would, if conceded all along the line, dry up the surpluses that might accrue as a result of productivity measures. At the same time, he pointed out that the importance of incentives for combating the inertia among workers should not be overlooked. It should not be difficult to strike a happy medium between the two if a scientific approach is made to the problem.

It is obvious that the productivity movement, if it is to succeed, should be based on popular appeal. This means obtaining the willing co-operation of the workers. The National Productivity Council, which was established last year, with a view to launching a movement of higher productivity in the country, could do a lot in the matter. During the first year of its existence, the Council has tried to generate an appropriate climate for the introduction of various productivity techniques categorised under the broad headings of scientific management, industrial engineering and industrial relations. Through the media of publications, exhibitions, audio-visual activities and technical enquiry service, it is seeking to create a demand within the industries to know more about productivity techniques. An extensive programme of training has been prepared for providing training in various subjects of productivity to suit all the different levels of management down to supervisors and foremen. Technical exchange is being promoted, and research in subjects of productivity is planned. These activities have been initiated by the Council with the help of funds provided by the Government of India, and the U.S. Technical Co-operation Mission. The I.L.O. has also rendered valuable assistance by furnishing productivity experts who are assisting the training programmes.

With the help of this aid, the Council has worked out a programme for sending study teams abroad for making intensive studies in general subjects of productivity as well as in specific subjects. Trainees will also be sent abroad for training in subjects of industrial management, industrial engineering and industrial relations. The Council has taken up the task of promoting the establishment of local productivity councils in industrial centres. The local councils are patterned on the same model as the National Council. Seven councils have so far been established, one each at Bombay, Madras, Bangalore, Coimbatore, Kolhapur, Delhi and Kerala. Councils will shortly be registered at Kanpur, Faridabad, Baroda, Ludhiana, Calcutta and Amritsar. At about 20 other places preparatory steps have already been taken for establishing local councils. It is expected that, in the next few months, an adequate network of these councils will be established. Through these councils, the productivity drive will be carried to the plants.

The scope of the National Productivity Council and local councils could be further expanded to cover all spheres of the nation's economy. Initially, however, the National Council has decided to limit its activities only to industries. In this sphere, however, its activities cover the large-scale, medium and small industries in both the public and private sectors. Particular attention is being paid to small-scale industries.



STORAGE OF FOODGRAINS

For an agricultural country like India, storage of foodgrains is an important problem. Total production of foodgrains in this country aggregates, on an average, over 65 million tons annually. A sizable quantity is also imported. Last year, the total quantity of foodgrains imported amounted to about 3.2 million tons. The second Plan has laid down an annual production target of 80.5 million tons to be attained by the end of the Plan period. Although the surplus available out of this for storage for long periods is not much, a considerable quantity has to be stored for short periods before being distributed. Proper storage and inspection of foodgrains are necessary for their preservation and to avoid wastage.

Some useful suggestions for improving the storage and inspection of foodgrains and related matters were made by the four-man team sent by the Union Ministry of Agriculture at the invitation of the U.S. Department of Agriculture to study the methods of storage and inspection of grains in the U.S. The team, which was headed by Mr. C. A. Ramakrisnan, Director General of Food, Ministry of Food and Agriculture, in its report to the Government of India, has recommended that steps should be taken to improve the system of inspection of grains in storage and that farmers should be encouraged to adopt improved methods of storage, with a view to avoiding storage loss and preserving the quality of the grain.

The team feels that, on account of the differences in the conditions between the U.S. and India, some of the characteristic features of U.S. farming and storage hardly apply to India. For instance, there is no need in India, according to it, to use machines and appliances on the farm and in storage depots which are primarily aimed at reducing human labour. Similarly, the scope for large and mechanised silos is also restricted in India, inasmuch as the quantity of grain available for public storage in bulk is not very large, turnover is much quicker and the centres of storage are more numerous and more scattered.

Indian farmers, it is suggested, should be encouraged to take an intelligent interest in the characteristics of wheat, like protein content, so that the quality of wheat produced could be improved. The need for encouraging flour mills in India to establish their own laboratories for conducting tests of wheat and wheat flour and for undertaking campaigns for publicising the numerous uses to which wheat products can be put such as manufacture of bread, cakes, pastries, noodles, etc., has also been emphasised. The team has recommended that competent and experienced bakers should be sent to the Baking Institute of the U.S.A. for advanced training in baking.

The team has made some suggestions in the matter of purchases of wheat from the U.S. According to it, as far as possible, only wheat with less moisture content and lesser refraction than the maximum allowed by the U.S. grade specifications should be purchased by India. Wheat in the farms and elevators in the U.S. has generally moisture content below 12 per cent., as against the 14 per cent. allowed by the U.S. grade specifications. A reduction of one or two per cent. in moisture content in the wheat supplied to India would, according to the team, mean savings to that extent in the cost of the wheat and freight rate. The amount thus saved, it is pointed out, can be utilised in buying better quality wheat. Since India is importing large quantities of wheat, it is worthwhile to consider how much saving can thus be effected.

U. S. AID TO PAKISTAN

The way in which the U.S. International Co-operation Administration has handled the aid programme in respect of Pakistan has come in for severe criticism at the hands of the General Accounting Office, the G.A.O., for short, of the U.S. Government. The amount actually involved under the programme during the period 1952 to 1957 aggregated as much as Rs. 287.50 crores ($604 million), including surplus agricultural products. The aid, says the G.A.O., has been more costly and less beneficial than it should have been. The four serious deficiencies pointed out by the Office in the administration of the aid programme may be summed up as follows:

1. Assistance has been given beyond the technical and financial capacity of the country to absorb.

2. The aid efforts have been spread over a very wide range of projects, thereby rendering effective administration difficult, if not impossible.

3. Too many projects are initiated, planning is insufficient, money is obligated prematurely and equipment is not effectively used.

4. There is considerable lack of co-ordination. The irrigation pumps procured by the I.C.A. at a cost of $650,000, for example, have remained unused, and expensive earth-moving and transport equipment financed by the U.S. have been idle.

These deficiencies in the administration of the U.S. aid to Pakistan are bad enough. But what is worse is the alleged "malpractices" of Pakistani officials and business men which have caused losses in the commodity import programme. Special mention is made of the resale of import licences to unauthorised parties and the use of political influence in obtaining licences. Such malpractices, if they are not curbed, will surely rob the aid programme of its grace from the point of view of not only the giver but also the receiver. One would certainly want to know as to why the U.S. International Co-operation Administration denied the G.A.O. "access" to its special study of the Pakistan programme of 1957. Was it because the study revealed Pakistan in more unfavourable light than the aforesaid observations do?

WEST EUROPE'S ECONOMY

It is on a note of "moderate optimism" that the U.N. Economic Commission for Europe (E.C.E.) records, in its latest annual survey (*Economic Survey of Europe in* 1958. Price: $2.50), the recent trends in the economy of seventeen West European countries. A significant conclusion arrived at by the Commission is that the relaxation of some official restraints and the adoption of certain—though, in most cases, still cautious—measures to stimulate demand in Western Europe, the reduction in the stocks of many raw materials, and the progress of economic recovery in the U.S. have already contributed towards creating an improvement in the economic climate in recent months. The favourable factors in the present situation include, first, a slowing down of wage increases and moderation shown in wage claims, secondly, achievement of price stability in the majority of West European countries, and, thirdly, improvements in most countries' foreign exchange reserves.

The Commission's review of the economic situation in Western Europe reveals a rise in industrial production, better labour market conditions, high consumer incomes and expenditures, strengthening of balance of payments position, continued inflow of foreign capital and aid, and easing of conditions in money and capital markets. The last mentioned factor is said to be primarily responsible for reviving economic activity. But, it contains a warning that the mere lowering of interest rates and more ample supply of credit cannot be expected to induce a quick revival of demand for industrial investment, except, perhaps, for replacement and modernisation or for long-maturing projects intended to meet growing final demand in the most distant future. The Commission does not expect any marked spontaneous revival of private industrial investment in the short run. This view is based on the grounds that renewed expansion of aggregate demand or of a change in expectations is absent and that excess capacity exists over a wide range of industries in many countries. The Commission is, of course, not pessimistic about the future. On the contrary, it is quite optimistic, as witness its remarks:

"Once the economic climate changes, whether in response to tangible evidence of an upturn and in anticipation of Government measures taking effect, or simply as a result of imponderables affecting business men's expectations, the existence of excess capacities will probably no longer prevent *entrepreneurs* from raising their investment targets again. In such circumstances, the present opportunity for cheap and ample finance should be used much more extensively than has been the case so far, though it may, of course, be expected to exert its main influence outside industry proper —on the construction of dwellings and long-term infra-structure investments. In addition, there exists the incentive to invest in order to introduce new techniques and new products; and, even if total final demand does not rise rapidly, any appreciable change in its structure may induce larger investments in expanding fields, which then, in turn, may accelerate the growth of total demand. Progress towards the full establishment of the Common Market of the E.E.C. may be expected to stimulate such structural changes."

As for long-term prospects, the Commission's assessment is divided into two parts. The first part relates to countries with smaller additions to labour supply. Industrial expansion in these countries will increasingly depend on a deepening of the capital structure, designed primarily to raise productivity rather than to provide additional employment opportunities. The second part pertains to countries where larger additions to labour force will occur in the next few years and/or where unemployment is high. Emphasis is laid on the need for widening investment for creating new jobs.

The Commission has done well to draw pointed attention to the virtual abandonment in Western Europe of attempts to insulate national economies from external developments and the general reliance on monetary and fiscal policies to maintain both external and internal balance which, as it rightly avers, call even more urgently than did past practices for international harmonisation of policy objectives and measures. It has also done well to stress the imperative necessity for ensuring balanced and relatively rapid growth without violent changes in the pattern of expansion. Describing this as "the main requirements of economic policy," the Commission observes:

"Even assuming that the cause and the nature of any strains in the economy can be quickly identified, the success of counteracting measures may well depend on their selectivity... Even if a steady and balanced growth can be ensured by appropriate policies, the question remains whether such growth at high levels of employment can be achieved without cost and price inflation.... The need is for arrangements both to hold the general rise of wages within the limits required for the attainment of overall price stability and to strike a balance between the two objectives: to spread the benefits of productivity advances to all groups and to promote the adjustment of labour supply to demand through the inducement provided by wage differentials. Such an arrangement would imply price falls in sectors where productivity rose fastest and price rises in some others. Such sectors where productivity rises only slowly when faced with rising wage-costs will be under pressure to rationalise faster. But the wage discipline necessary for such arrangements to operate successfully could only be expected, if a corresponding restraint were also exercised by *entrepreneurs* in their price policies. To encourage this, the increased competition from imported goods resulting from trade liberalisation could well be supplemented by measures—such are, in fact, being introduced or extended in a number of countries—to limit monopolistic practices and by campaigns to make buyers more price-conscious. If conditions more conducive to expansion at high levels of employment with price stability cannot be achieved by the means suggested above, the need will be the more urgent both for consideration of means of averting the more unfortunate social consequences of price inflation within a country and for international co-operation in mitigating the effects of balance of payments strains due to disparate rates of cost-price inflation from one country to another."

There is considerable force in the aforesaid observations which, though they are addressed to the West European countries, are pertinent to India also to some extent. A careful perusal of the E.C.E's Survey by both planners and the powers-that-be will bring out a very important lesson—that of bestowing utmost care and attention on the need for avoiding excess pressure on resources and continued wage and price increases.

The new coal washery, set up by the National Coal Development Corporation at Kargali, was opened by the Union Home Minister, Mr. Govind Ballabh Pant, on the 15th inst. The washery will supply 1.1 million tons of washed coal to Rourkela and 500,000 tons to Bhilai. Said to be the largest composite unit in Asia, it will help in conserving the metallurgical coal resources of India which are limited. The work of installation of the washery was entrusted to a Japanese firm. The total cost of the project, including the ancillary services, is Rs. 2.38 crores. The annual requirements of washed coal for the three steel plants in the public sector and the expanded steel plants in the private sector are estimated at 8.27 million tons. There are at present three washeries which, with certain improvements, will supply 1.2 million tons of washed coal. Three new washeries, one each in Dugda, Bhojudih and Patherdih, all in the Jharia coalfields, will be set up to meet the requirements of all the steel plants.

TARGET FOR FOOD PRODUCTION IN THIRD PLAN

FORD TEAM'S SUGGESTION EXAMINED

From Our Special Correspondent

NEW DELHI, 14*th April*

THANKS to the initiative taken by the Ford Foundation in India, a twelve-man team of agricultural experts from the United States has been in the country in recent months to assist the Planning Commission's Working Group on Agriculture in formulating a national programme for increasing food production. The more important findings and recommendations of the Team are critically examined in this despatch in the light of some relevant facts. In the first place, the Team has confirmed that the provisionally-suggested target of production of 110 million tons of foodgrains by the end of the Third Plan is reasonable. In accepting this target as possibly attainable, the Team has given the further finding that the current rate of foodgrains production in India must be tripled in the Third Plan period.

DELHI LETTER

The question of determining a realistic target is much too crucial to be disposed of without some close examination. Some relevant points in this connection are:

Neither the Second Plan's original target of 75 million tons nor its revised target of 80.5 million tons fixed for 1960-61 may in fact be attained. If the 1958-59 level of foodgrains production which is estimated at about 70 million tons comes to be bettered in the last two years of the Second Plan, the improvement may still not be more than 2 or 3 million tons. In which case, only about half the revised target of *additional* foodgrains production (15.5 million tons) will have been achieved. If, in the circumstances, the Third Plan target of *additional* foodgrains production over and above the 1960-61 level of production (which may be reasonably assumed as 72.5 or 73.0 million tons) becomes 37.5 million tons. the present rate of production will have to increase fivefold by 1965-66, instead of threefold as the Team has figured out on the basis of the Second Plan's target.

An *additional* foodgrains production of 37.5 million tons by 1965-66 does not appear to be a feasible proposition for two important reasons. One is that there will have to be, in financial terms, anything from four to five times the Second Plan's outlay on agriculture and irrigation. And the other is that even if resources could be found on such a scale for foodgrains production, it could only be at the expense of commercial crops like cotton, jute, sugarcane, oilseeds, etc., the production of which, too, would have to be increased *pari passu* with the increase in population.

Another relevant point is that the *per capita net* availability of foodgrains after allowing for seed requirements and wastage and including imports to the tune of about 3 million tons was 14.4 ounces per day in 1958. Although at this level of food availability there should have been, as always. some under-nourishment, there was no acute shortage bordering on famine conditions. A higher level of foodgrains consumption for partially relieving under-nourishment could be at 16 ounces per head per day. For the estimated population in 1965-66 a *per capita* net availability of 16 oz. per day, with imports eliminated, would involve a total foodgrains production of 87.5 million tons covering both consumption needs and seed requirements. A possible target at that level for the Third Plan would represent a doubling of the *additional* foodgrains production that may be actually achieved by the end of the Second Plan. This target would, in the writer's opinion, be realistic in the light of present achievement and of the likely resources that will be available.

The Team's finding that a ninefold increase in the supplies of nitrogenous fertilisers and a still larger increase in the supplies of other chemical fertilisers has ignored the possibilities of extensive green manuring. It merely confirms the estimates of the Food and Agriculture Department. The financial implications of the Team's recommendation that top priority should be given to the production and procurement of fertilisers would be enormous by way of foreign exchange and rupee resources required for establishing probably 20 fertiliser factories of the size of Sindhri. Any such grandiose development may have to be ruled out as unlikely. This in turn would mean that the intensive use of fertilisers in selected irrigated areas recommended by the Team for maximum results cannot take place on any substantial scale. This, again, would mean that a realistic target for foodgrains production has to be much smaller than what the Planning Commission's Working Group has suggested and the American Expert Team has confirmed.

The Team's recommendation that the question of land ceilings should be settled very soon has ignored the relevant consideration as to what, on the average, should be the optimum size of a holding that would be consistent with the objective of maximisation of production. In Madras, it has been suggested by the State's Revenue Minister that it should be 100 acres, of which a fifth would be irrigated land. The Planning Commission, it is learnt. would not generally agree to a higher ceiling than 30 acres. The size of the possible ceiling is most crucial, because, if it is fixed, on the average, at 100 acres, the existing substantial holdings which are predominantly (to the extent of about 85 per cent.) owner-cultivated will be mostly intact. In such a situation, maximisation of production on such holdings would be easier for obvious reasons. If the ceiling comes to be fixed at a low level, the chances are that it will militate against the very objective of maximisation of production which the Ford Foundation's Expert Team has set before itself.

MODERNISATION OF TEXTILE MILLS

The National Industrial Development Corporation has approved of a new scheme for speeding up the pace of modernisation and rehabilitation of cotton textile and jute mills. According to the scheme, the N.I.D.C. will offer short-term assistance to cotton textile and jute mills for installation of new machinery for replacing old and worn out machinery in the mills. This scheme will, however, apply only to purchase of machinery manufactured in this country.

Any cotton textile or jute mill intending to install new machinery manufactured in India will deposit 25 per cent. of the total amount of the cost of machinery with the N.I.D.C., which will make the machinery available to the mills. The balance of 75 per cent. will be payable in five equal annual instalments and the rate of interest will be 6 per cent. The Managing Agents or two Directors of the Mill will have also to guarantee the repayment of the balance amount to the N.I.D.C. In case mills are prepared to pay 40 per cent. of the total amount in advance to the N.I.D.C., such a guarantee will not be necessary.

This scheme has been principally formulated for assisting the modernisation of cotton textile mills for which a very large portion of machinery is manufactured in this country.

The N.I.D.C. has already been granting loans for installation of new machinery for modernisation and rehabilitation. These loans are repayable in fifteen annual instalments. Loans totalling over Rs. 7½ crores have so far been sanctioned to different cotton and jute mills for modernisation and rehabilitation. Over 60 per cent. of the jute mills have been modernised in the last few years through the help of the N.I.D.C. as well as through the resources of the jute mills themselves. In the cotton textile mills, modernisation is going ahead and the new scheme is expected to further assist in quickening the pace. The scheme will also help the manufacturers of cotton textile and jute machinery in finding a ready market.

ASSIGNMENT BUDGET

From Our Own Correspondent

LONDON, 10*th April*

THE Chancellor of the Exchequer tried to combine in this week's Budget putting additional purchasing power in the hands of the public, encouraging investment by industry and at the same time not giving an impression of encouraging inflation.

The year 1958-59 finished with a surplus of £377 million and the estimates for the year just commencing show that surplus will increase slightly to £397 million. The Chancellor decided to give most of this last sum away and leave himself with a surplus of only £102 million. The interest of the Budget from the point of view of the consumer and the investment spender lay, of course, in the Chancellor's proposals for giving away the sum of nearly £300 million.

LONDON LETTER

The major gift was a tax reduction at all stages of income-tax, in particular 9d. in the pound off the basic or standard rate, and this cost nearly £200 million. The remaining third of the Chancellor's gift went in reductions in indirect taxation, in particular the varying rates of tax charged on a wide range of consumer goods known as purchase tax, the tax on beer and some minor reliefs. Part of these taxation remissions went to industry in the form of allowances from taxation in respect of expenditure on new plant and machinery. The practical effect of this particular relief is to give a gift to industry of freedom from taxation of one-fifth of the total amount of capital expenditure *in addition* to the writing off of the whole of the expenditure over a period of years.

The reductions in income-tax have been welcomed by everybody except the lowest bracket earners who pay very little and the Chancellor's 2d. off beer is not regarded as adequate compensation by the 60 per cent. of the nation who are alleged not to drink beer anyway. They cannot even find much solace in the reductions in purchase tax which have been applied only to the highest rates of tax (e.g., the top rate on luxury articles is now reduced from 60 per cent. to 50 per cent.), and worthwhile savings can only be made by the purchasers of motor cars, jewellery, fur coats and the more expensive items of domestic equipment. The purchase tax of 5 per cent. on a wide range of everyday domestic equipment remains, and it is a fair criticism to say that he would have done a lot more good to more people and saved a great deal of administrative cost in business and the Civil Service if he had wiped out these trivial taxes. One can only imagine that he must have been advised not to do it on the ground that, if the reflationary machine should later have to be put into reverse, it is much easier to push up taxation from, say 5 per cent. to 10 per cent., than introduce new taxation on untaxed goods. There is no more specious argument in public administration.

But the Chancellor does not only have to look at the Budget balance between ordinary income and expenditure, he must also look at the Government's investment programme. Doing this, the Chancellor said that, although in the year just finished he had shown a budget surplus of £377 million, he had had outgoing to local authorities, colonial loans, nationalised industries, export credits and so on, to a net figure of £559 million. On balance, therefore, even last year the Government was out of pocket to the tune of £182 million.

In the current year, he estimates that Government capital expenditure will rise by some £200 million to a total of £752 million. On top of that, he is proposing to pay about £70 million in reimbursement of "post-war credits". These were sums of super-taxation levied during the war under a plan of Lord Keynes with the promise that some day they would be repaid. Repayments are now being made to taxpayers over 65 and the Chancellor is proposing to lower the age at which the repayment should be made, as well as to pay interest on the capital sums outstanding. If from these outgoings is deducted the remaining budget surplus of £102 million, there is a net Government deficit of £720 million, i.e., £540 million more than in the year just finished.

That then is the measure of the Chancellor's reflationary dose—£540 million. It is not, of course, the measure of the reflationary dose which the nation will receive, because it takes no account of additional money spent by industry or made available by the banking system to the Government's contribution.

Because the Chancellor has given such substantial relief in taxation this year, and since he could have done it last year, but did not, the Opposition are able to characterise his Budget as an assignment with the General Election!—*All Rights Reserved.*

AMERICAN LETTER

U.S. CITIZENS ARE IN SPENDING MOOD

MANY ARE CONCERNED OVER BOOM IN WALL STREET

From A Special Correspondent

NEW YORK, 10*th April*

DESPITE inclement weather, the American public has been in an unexpected spending mood. Retail buying at Easter, as measured by department store sales, was 7 per cent. higher than last year and only 2 per cent. below the record Christmas volume of last December.

Most of the buying went into soft goods rather than capital goods and appliances. Retail behaviour is one of the unpredictable factors in the United States economy. An upswing in buying is, usually, interpreted as an optimistic mood which generates optimism all the way to manufacturers who have to adjust their inventory positions.

The basic factor behind this public spending is rising personal income. This covers a multitude of factors, including unemployment insurance payments and higher social security payments which became effective earlier this year. Some of these are the new "built-in stabilisers" of the budding U.S. Welfare State.

Personal income, as reported in March, was running at an annual rate of $364,500 million, as compared with $347,500 million twelve months previously. It is an impressive gain in the face of nearly 4.8 million unemployed, against 5,173 million a year ago. Employment was 62.7 million, against 61.9 million in the same period of 1958.

Change in Fashion

There has been a better tone in textiles and apparel. New styles for women again favour a natural waistline, unlike the sack and chemise fashion of last year which ruined a good many businesses, because of lack of consumer acceptance. In this general picture, it may also be noted that the number of marriages in the early part of this year was about 5.5 per cent. higher than in 1958.

Automobile dealers had a good month in March. About half a million new cars were sold last month. Used autos, too, were in good demand. The result is that discounts from list prices on new cars has declined about 3 per cent. since last November.

Registration of new businesses was also considerably higher than a year ago. As reported at the end of March, 15,758 new companies were incorporated in the preceding month, as compared with 10,466 in the like 1958 period.

Money Supply

The U.S. money supply is now at 128 per cent. of the 1947-49 average of 100 per cent. and the activity in the turnover of bank deposits has reached about 150 per cent. of the same base. All these are indicators of good business.

Credit is getting somewhat tighter. Insiders expect another rise in the discount rate by the Federal Reserve Banks. In recent weeks, the spectacular rise in stock prices has been halted as yields on equities reached ridiculously low levels in relation to bonds. An outstanding example is International Business Machines. This stock yields about 1 per cent. Yet, it is in great demand by investment managers because of its alleged "growth" features.

The threat of a prolonged steel strike later this year is very much on the mind of the business community. There is also the possibility of other walk-outs in major industries in 1959. It is too early to tell what will happen eventually.

Along with increased retail buying, there has also been a boost in consumer instalment debt. The gain was $333 million in February. It contrasted with a reduction of $167 million in February 1958. It brought instalment credit outstanding to $473 million above year-earlier levels. New auto credit continued to be a major factor.

Building contract awards set a new high in March. They rose 18 per cent. above a year ago to $2,300 million. Stepped-up home building provided much of the push. Significantly, industrial building contracts increased for the first time since the recession.

The strongest upsurge was in housing. Dwelling contracts jumped 44 per cent. from a year ago to 85,000 units and the dollar volume was up 48 per cent. to more than $1,000 million. Heavy engineering contracts increased 11 per cent. with most types of heavy work showing gains.

The ailing railroad industry has been helped also by greater business activity. Rail shipments in the second quarter are estimated by the Regional Advisory Boards at 6.3 million cars which would be 12.4 per cent. above the same 1958 period. Total loadings through March 21 were 5.9 per cent. ahead of a year ago.

Business Looking Up

The National Association of Purchasing Agents, which usually makes quite accurate forecasts, says that overall business conditions are improving irregularly. Capital goods industries are seeking new orders and there is general agreement that improvement will continue through the second quarter of the year.

But, with or without a steel strike, there is much concern about the effect the current buying spree will have on business in the third quarter. About 48 per cent. of the Association's members reported increases in new orders in March, while 44 per cent. listed no change and 8 per cent. showed declines. Production also was boosted as 47 per cent. attained more output, 46 per cent. were unchanged and 7 per cent. declined.

Wall Street

There is much soul searching in Wall Street these days. This is not because the market is high in terms of averages, but because there have been periods of intense speculation not only in low-priced equities, but also in so-called "glamour" stocks, owing to their alleged potential growth which is as yet unproven.

Warnings, or rather cautionary statements have been issued by the Securities and Exchange Commission, by G. Keith Funston, President of the New York Stock Exchange and by other leaders in the industry. Popular interest in securities is illustrated by the fact that, in the first quarter of the year, salesmen, registered in this business, have increased at the rate of more than 3,300 a month. This compares with 2,000 a month in the first quarter of 1958.

Several larger brokerage houses have spent their own money on expensive advertisements in the daily papers highlighting such themes as "A Matter of Some Concern," or "More Reasons for Caution," or "What Every Investor Should Know About Today's Stock Market."

This is quite encouraging. Leaders in the industry show true public responsibility. Unfortunately, this is not uniform. There are still many "boiler rooms" in Wall Street staffed by irresponsible telephone salesmen who use every ancient trick known to mankind to sell their wares for the sake of commissions and without regard to inherent values.

The Federal Reserve Board also got in the act by asking brokers for suggestions on a proposed further tightening of credit in the stock market. Present margin requirements are 90 per cent.—*All Rights Reserved.*

RECENT TRENDS IN INDIAN BANKING—I

RESERVE BANK EXERCISES GREATER CONTROL THAN BEFORE

By D. Bright Singh, M.A., Ph.D.
READER IN ECONOMICS, MADRAS UNIVERSITY

THE growth of financial and monetary institutions of a country is closely bound up with the progress of its economy. The development of agriculture, industry, trade, transport and commerce requires an adequate supply of financial resources and credit facilities which can be provided by banks or other special institutions. The expansion in the activities of these agencies in turn depends on the prospects of economic advancement. At the same time, economic backwardness of a country is reflected in the underdeveloped state of its monetary institutions. In these countries, the preference for cash transactions, the paucity of trade bills, the generally conservative attitude of banks to industry and the tendency on the part of commercial banks to maintain large excess reserves with the central bank considerably restrict the scope of the usual weapons of control in the hands of the central banking institution. The financial contact between the central bank and the commercial banks is not close and, therefore, it becomes difficult for the former to implement any monetary policy effectively.

It is, however, neither possible nor desirable to lay down any fixed pattern of development of banking institutions as an ideal one in a growing economy. Much depends on the nature of the economy, habits of the people, tradition and the ideology of the Government. Obviously, the type of financial and banking institutions which are necessary and which fit in well in the economy of a country where there is considerable scope for free enterprise and where the activity of the public sector is narrowly restricted will not be so in another country where the organisational set up of the economy is different. The hall-marks of a good and progressive monetary system which one generally has in one's mind are associated with the institutions which have developed in the course of the last two centuries or so in some of the modern highly advanced countries in circumstances so different from that which obtain in the underdeveloped countries of today. In the former group of countries, growth of banking was, to a large extent, a spontaneous one, developing in step with agriculture, industry and trade of the country through private enterprise. It is not possible now for the underdeveloped countries to wait for such spontaneous growth to take place. Since it has become obligatory on the part of the Governments in these countries to accelerate the pace of economic development through Government enterprise and investment, the responsibility of determining the shape and form of the financial system that would adequately meet the special needs of such economies has, to an equal extent, devolved on them.

Lines of Progress

If the economic objectives of a planned economy are known, it is possible to indicate in broad outline the pattern of development for its financial and banking institutions. The Indian Five-year Plans aim at bringing about a rapid increase in national income through the development of agriculture and all types of industries, small, medium and large-scale, expansion of the public sector in industry and the attainment of a socialist pattern of society. In conformity with these requirements, three lines of development in the banking sphere can be indicated. In the first place, the banking system should be really amenable to control by a central agency. The commercial banks should not merely be passive purveyors of credit but should be active agencies to promote the particular patterns of investments conceived by the Planning Authority. Furthermore, the monetary and financial problems that arise in a developing economy can be satisfactorily solved only if the central bank has as close a control over the operations of the commercial banks as possible. Secondly, in so far as Government envisages large public investment outlays and expansion of the public sector, leading to the establishment of a socialistic pattern of society, it is necessary that Government has some real control over the banking system of the country. Thirdly, since economic growth requires larger savings and the proper mobilisation of such savings, it is of the greatest importance that banking habit among the people is fostered and banking facilities extended especially to those regions of the country where they are not available now and where, as a result of the recent economic developments, the savings potential has considerably increased.

Against the background of these requirements, it is worthwhile examining the recent trends in banking in India. In the last few years, there has been a growing integration of the banking system and the Reserve Bank's control over the joint-stock banks in the country is becoming more and more effective. This welcome trend has been due partly to the force of circumstances, and partly to the measures adopted by the Reserve Bank by making good use of the opportunities of control presented by these circumstances. The significance of these factors may be briefly explained.

Demand for Credit

The rise in the level of economic activity in both the public and private sectors has brought about an increasing demand for bank accommodation. In the years during the Second World War, and in the early post-war years, there was considerable increase in bank deposits and, since outlets for private investment were severely restricted, there was a large accumulation of liquid balances. The position has completely changed in the last few years. The trend in bank advances and deposits since the commencement of the First Five-year Plan falls into three distinct phases reflecting the combined effect of the Reserve Bank's monetary policy, budgetary deficits, balance of payments position and the level of economic activity in the country. In the first three years of the First Five-year Plan, there was a decline in bank advances, though net deposits slightly increased. The decline in bank advances was halted in 1954 and, since then and up to 1957, there was a marked expansion in bank credit. This phase synchronises with the end of the First Plan and the beginning of the Second Plan—a period marked by considerable increase in Government investment and large deficit financing. Against the rising credit needs of a developing economy, the rate of deposit expansion slowed down, resulting in acute financial stringency. Since the middle of 1957 up to nearly the end of 1958, however, there was a marked deviation in the trend—deposits accumulating faster than bank advances.

The rapid increase in bank advances at a faster rate than deposits between the years 1954 and 1957 compelled the banks to draw more and more from their balances with the Reserve Bank and also to borrow more freely from the latter. And this trend was considerably reinforced by the measures taken by the Reserve Bank in 1951-52. The decision of the Reserve Bank late in 1951 not to buy Government securities for meeting the seasonal requirements of commercial banks, but to make only advances against Government and other approved securities at the Bank rate and the introduction of the Bill Market scheme not only forced the banks to approach the Reserve Bank for funds but also facilitated their getting accommodation from the central bank. The Reserve Bank thus acquired greater control over the commercial banks, and the opportunity to scrutinise the loan applications of commercial banks helped it to control or prevent non-essential borrowing. Subsequent extension of the Bill Market facilities and the recent measure declaring certain types of export bills eligible for rediscounting have largely extended the scope of Reserve Banks control over commercial banks. This tendency on the part of the commercial banks to rely increasingly on the Reserve Bank for funds is seen in the steady rise in Reserve Banks advances to scheduled banks under Section 17(4) A and C. Simultaneously, the ratio of the scheduled banks cash in hand and balances with the Reserve Bank to total net deposits declined from about 11 per cent. before the commencement of the First Plan period to about 8 per cent. at the end of 1957. Also the excess of their balances over the statutory minimum steadily came down from Rs. 22.9 crores in 1951 to Rs. 10.1 crores in 1956. These changes indicate the pressure on bank funds, on the one hand, and the effectiveness of the measures to provide greater borrowing facilities by the Reserve Bank which made it unnecessary for the commercial banks to maintain a very high cash ratio.

Economic changes in the country have been responsible for bringing about other improvements in banking. One is the narrowing of the range of seasonal fluctuations in bank advances. While the peak level of advances in the busy seasons has steadily gone up, the lowest point reached in the slack seasons has risen at a faster rate. This is broadly the effect of the expansion of the economy, and increase in money supply. It may also be due to the fact that, while advances to industries with an agricultural base like cotton, jute and textiles have remained on the whole stationary or declined, advances to industries like coal mining, engineering, cement, etc. with a non-agricultural base have substantially increased in the last few years. Thus, of the total bank advances, cotton textiles accounted for 8.0 per cent. in 1951. The proportion rose to 10.6 per cent. in 1953 and 1954, declined to 7.7 per cent. in 1955 but again went up to 14.7 per cent. in October 1958. The proportion of advances to coal mining increased from 0.6 per cent. in 1951 to 1.2 per cent. in October 1958, that of engineering from 2.7 per cent. to 8.7 per cent. and cement from 0.1 per cent. to 1.6 per cent.

Pattern of Advances

The general pattern of bank advances has also undergone a slow change. The proportion of bank advances to industry has gradually increased at the expense of commerce. Industry claimed 33.5 per cent. of the bank advances in 1951 and commerce 52.8 per cent. In 1958, the former increased to 48 per cent. and the latter declined to 37 per cent. A similar shift in the

NATIONAL AND GRINDLAYS BANK

SETBACK IN PROFIT

1958 constitutes the first year for the National and Grindlays Bank Ltd. (General Manager: Mr. W. Kerr, London) after the amalgamation of the National Bank of India Ltd. with its own subsidiary, Grindlays Bank Ltd. The name of the amalgamated bank was shortened from the National Overseas and Grindlays Bank Ltd. to its present form on 1st January 1959. The first year of operation of the amalgamated bank does not, however, seem to have proved profitable. The balance-sheet total has declined by £10.62 million to £151.41 million, following a drop of £7.69 million in current and other accounts and of £3.05 million in fixed and short deposits. On the assets side, there has been a sharp fall of £14.62 million in loans and advances.

The consolidated net profit has also declined by £55,783 to £371,707. This is on top of a small fall of £5,345 witnessed in 1957. This setback has not, however, affected the allocation to the premises account at £100,000. But the transfer to the contingencies reserve account has been cut from £80,000 to £30,000. The distribution to the shareholders is unchanged at 15 per cent. per annum, less income-tax, made up of two interim distributions of 7½ per cent. each.

Explaining the fall in profit Mr. J. K. Michie, Chairman of the Bank, observed in his statement to the shareholders, as follows:

"The reasons for the smaller profit figure are several. One which will be non-recurring is the inescapable expenditure in connection with the amalgamation, which, though limited by all possible means, was still considerable. Then, as will emerge from my remarks on our individual territories, apart from the ever-increasing competition which is a feature of banking in the East and in East and Central Africa—in some cases from growing indigenous banks and in others from new entrants in the field, or from both, in none of our territories were conditions more favourable for bankers and in most they were more difficult than in recent times."

There are reasons to believe that the Bank's business in India also must have suffered a shrinkage. For, thanks to the contraction in India's foreign trade, a good part of which used to be financed by foreign banks in India, the business of these banks suffered during 1958. Another adverse factor is the increasing competition from Indian banks for the available foreign exchange business. Referring to the position of foreign banks in India, Mr. Michie observed:

"The balance of payments position resulted in a distinct reduction of the amount of overseas business flowing through normal banking channels in 1958 and, in consequence, the exchange side of banking was and still is adversely affected. Indeed, this movement has been accentuated by the methods of purchase followed by the Government of India, as an increasing part of such business is being channelled through the State Bank of India, which, in other circumstances, would be spread over commercial banks in general. The growth of indigenous banking has always appeared to us to be both desirable and inevitable and our hope—until recently justified by events—has been that, though our share of banking would be smaller in percentage, it would not necessarily be so in volume."

The following table presents the salient features of the balance-sheets of the Bank as at the close of the last four years.

(In thousands of £'s sterling)

	As on 31st December			
	1958	1957	1956	1955

Investments	27,981	28,078	31,267	35,872
Bills of Exchange (including Treasury Bills)	28,504	23,636	22,629	23,241
Advances and loans	69,127	83,747	76,409	75,741
Fixed assets	3,841	3,314	2,927	2,567
Balance-sheet total	151,409	162,033	166,741	171,007

Note:—The statistics relating to the years 1956 and 1955 have been arrived at by adding the figures of the National Bank of India and Grindlays Bank.

During the year under review, there was a considerable improvement in the value of British Government securities. Consequently, the Bank was able to strengthen its inner reserves.

CANARA INDUSTRIAL AND BANKING SYNDICATE

FRESH CAPITAL TO BE ISSUED

AN expansion in turnover is indicated by the audited accounts of the Canara Industrial and Banking Syndicate Ltd. for the year ended 31st December 1958. The balance-sheet total at the end of the year shows a rise from Rs. 12.82 crores to Rs. 17.08 crores. The deposits have gone up by Rs. 2.80 crores, borrowings from other banks have risen by Rs. 1.31 crore, advances are up by Rs. 1.66 crore and the gross income has increased by Rs. 18.96 lakhs. The Bank has added no less than 11 offices to its list of branches. The expansion in turnover has not, however, brought about any rise in profit, which, on the contrary, is a share lower at Rs. 10.22 lakhs, as against Rs. 10.62 lakhs earned in 1957. Nevertheless, it is the second highest earned in the history of the Bank.

The provision for taxation is unchanged at Rs. 4 lakhs, while the allocation to various reserves has been reduced from Rs. 3.75 lakhs to Rs. 3.20 lakhs. The pattern of allocation has also been changed. Thus, whereas the transfer to the statutory reserve fund has been raised from Rs. 2.50 lakhs to Rs. 3 lakhs, no amount has been set aside to the contingency reserve and premises reserve fund, which had received Rs. 50,000 and Rs. 75,000, respectively, in the previous year. Instead, a sum of Rs. 20,000 has been added to the investment reserve fund. There has been an increase in the provision for bonus to staff from Rs. 80,000 to Rs. 1 lakh, evidently due to the increase in pay scales and the addition to branches. The distribution to the ordinary shareholders is unchanged at 15 per cent. per annum.

The progress of the Bank in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955

Investments	6.09.72	3.84.10	3.42.55	3.07.71
Cash	1.39.33	1.14.00	98.25	81.06
Balance-sheet total	17,08.01	12,81.66	10,64.10	8,70.32
Ratio to deposits of—	%	%	%	%
Advances	61.1	61.5	60.5	59 1
Investments*	35.9	35.7	37.6	38 6
Cash	10.6	11.1	11.6	12.3

* Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

As will be seen from the above table, the income from interest and discount has gone up by Rs. 17.64 lakhs, thanks to the rise in the Bank's advances, and that from commission and exchange by about Rs. 53,000. "Interest paid" has risen by Rs. 10.48 lakhs following the expansion in time deposits and the hardening of interest rates during the year. Other expenses, too, are higher by Rs. 8.89 lakhs, of which salaries and allowances and provident fund alone account for Rs. 6.93 lakhs, consequent on the increase in salaries of staff, as a result of the application of 'B' class pay scales to them.

The paid-up capital of the Bank was increased during the year, by raising the paid-up value of the 5 per cent. preference shares of various denominations. The Directors have decided to increase the issued capital to Rs. 50 lakhs by a fresh issue of ordinary shares, as they feel that the time is now opportune because of the increase in deposits. The Bank's deposits have expanded by Rs. 2.80 crores. Fixed deposits have gone up by Rs. 1.87 crore to Rs. 8.69 crores, savings bank deposits by Rs. 45 lakhs to Rs. 2.37 crores and current and other accounts by Rs. 49 lakhs to Rs. 2.05 crores. The increased funds on account of a rise in deposits and the various restrictions on bank credit kept most of the Bank's funds unutilised for the greater part of the year. The Bank has, therefore, had to increase its investment portfolio, which over the year, shows a rise of Rs. 2.25 crores. With the commencement of the busy season towards the close of 1958, there was an increase in demand for bank credit—this is reflected in the rise of Rs. 1.66 crore in the Bank's advances. The Directors thought it better to meet this demand by borrowing rather than by liquidating a part of the Bank's investments. It will thus be seen that, over the year, the Bank's borrowings have risen from Rs. 23 lakhs to Rs. 1.56 crore. Of the investments, holdings in Government securities (at cost) account for Rs. 6.07 crores, the market value of the same being Rs. 6.08 crores.

INDIAN BANK'S DIVIDEND MAINTAINED

PROFIT, HOWEVER, LOWER

FOR the second year in succession, the profit of the Indian Bank Ltd. (Secretary: Mr. D. P. Parthasarathy, Madras) has suffered a setback, even though its gross income was higher. In 1956, the Bank had earned a record profit of Rs. 45.71 lakhs, but it dropped to Rs. 32.01 lakhs in the following year, in distinct contrast to the experience of many other banks. In 1958, the profit has shrunk further to Rs. 21.31 lakhs, thus more than halving itself within two years. The setback in the year under review is, however, in consonance with the general trend of bank earnings for reasons too well known to bear repetition. A special reason for the fall in profit of the Bank during 1958 is said to be the drastic curtailment of iron and steel imports, in the financing of which the Bank was playing a large part.

In view of the lower profit, the provision for taxation has been reduced from Rs. 15 lakhs to Rs. 6.50 lakhs. The transfer to the reserve fund under section 17 of the Banking Companies Act 1949 has also been reduced from Rs. 10 50 lakhs to Rs. 7.30 lakhs. No amount has been set aside to the sinking fund, the development fund. or the gratuity fund, which had received Rs 1.50 lakhs, Rs. 50,000 and Rs. 50,000, respectively, while a slightly larger sum of Rs. 30,000 (as against Rs. 25,000 a year ago) has been added to the Bank's building account. No cut has, however, been made in the distribution to shareholders; it is maintained at 13 per cent., made up of a dividend of 10 per cent. and a cash bonus of 3 per cent., a rate which is being repeated for the third year in succession, though on an increasing capital as a result of fresh calls on the partly paid-up shares and payment of unpaid calls. For the year 1957, it may be recalled, a special dividend of 2 per cent. was paid to commemorate the Bank's Golden Jubilee.

The Bank's income for 1958 from interest and discount has risen by Rs. 37.19 lakhs to Rs. 180.36 lakhs, but this has been offset, in part, by a drop of Rs. 20.13 lakhs to Rs. 44.15 lakhs in commission and exchange earned. Further, there has been a sharp increase of Rs. 23.95 lakhs (to Rs. 107.76 lakhs) in "interest paid." The administrative expenses also have recorded a rise of Rs. 5.08 lakhs to Rs. 99.48 lakhs, as the following table shows:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount	1,80.36	1,43.17	1,25.77	1,06.66

* Including a golden jubilee dividend of 2 per cent.

† Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

Notwithstanding a slight drop over the year, the Bank's reserves, including share premium amounting to Rs. 31.17 lakhs, are at an impressive level. The deposits have recorded a further increase of Rs. 5.72 crores to Rs. 40.93 crores. A break-up of the deposits shows that all classes have contributed to the rise. Thus, fixed deposits have gone up from Rs. 12.39 crores to Rs. 14.28 crores, season and short-term deposits from Rs. 4.64 crores to Rs. 6.76 crores, savings bank deposits from Rs. 6.93 crores to Rs. 7.35 crores and current and other accounts from Rs. 11.24 crores to Rs. 12.55 crores.

As against an increase of Rs. 5.72 crores in deposits resources, the Bank's advances are up by Rs. 3.17 crores, of which loans, cash credits and overdrafts (at Rs. 18.43 crores) account for Rs. 2.23 crores and bills purchased and discounted (at Rs. 4.72 crores) for Rs. 94 lakhs. Investments also have been strengthened by Rs. 4.16 crores to Rs. 14.19 crores, but cash balances are lower by Rs. 1.83 crore.

PLIGHT OF COTTON INDUSTRY IN U.P.

MILLOWNERS URGE IMMEDIATE OFFICIAL ACTION AND ASSISTANCE

THE stresses and strains to which the cotton mills of Uttar Pradesh continue to be subjected were highlighted by Mr. J. K. Srivastava, President of the Upper India Chamber of Commerce, in his speech while welcoming Mr. D. S. Joshi, Textile Commissioner, and Mr. N. Majumdar, Industrial Adviser (Textiles), Government of India, at a meeting held at Kanpur recently. The precarious condition of the U.P. cotton industry, Mr. Srivastava declared, called for immediate action and, unless financial assistance was made available immediately and special measures taken for the procurement of foreign cotton, dyes, chemicals, etc., the position could not be improved. He even went to the extent of warning that "the struggle for existence that we have been waging for the last two and a half years has brought us to the brink of disaster and will lead to further closures and distress."

Mr. Srivastava has certainly not cried "wolf." Even a cursory glance at the statistical data relating to the U.P. cotton industry will fully reveal how disquieting has been the situation confronting the industry. Out of the 24 units in existence, as many as seven are reported to be not working and a few are running at a loss. The closure of mills has resulted in a marked reduction in the utilisation of capacity, as the following table pertaining to the month of December 1958, the latest period for which official figures are available, as compared with the corresponding period of 1957, shows.

	December, 1958	December, 1957
Average number of workers at work ..	53,765	63,431
No. of spindles installed*	844,432	823,429
No. actually worked (average):		
First shift	546,456	533,882
Second shift	509,934	555,600
Third shift	294,396	387,504
No. of looms installed*	13,674	13,630
No. actually worked (average):		
First shift	10,196	10,560
Second shift	9,636	10,518
Third shift	6,029	6,959

* As at the beginning of the years.

Thanks to the under-utilisation of capacity thus, the production of both cloth and yarn has suffered a distinct setback. During the calendar year 1958, not more than 329 million yards of cloth came off the looms of U.P. mills, as against 407 million yards in 1957. The total quantity of yarn spun was lower at 130.69 million lbs., that for the previous year being 137.57 million lbs.

Rise in Production Cost

The one disquieting problem facing the U.P. cotton mills, it is said, relates to the appreciable increase in production cost in the past six months. The total increase is put at Rs. 4 lakhs per month per unit, representing a rise of 20 per cent. The situation is stated to have been further aggravated by receding cloth prices which, together with the strained financial position, are forcing the mills to resort to distress sales. Mr. Srivastava attributed the marked rise in cost of production to three factors. First, the price of indigenous cotton has gone up by Rs. 200 per candy, involving an additional average expenditure of Rs. 3 lakhs per mill. Secondly, there has been a rise in labour costs, owing to enhanced food allowances because of higher food prices. Thirdly, the prices of dyes and chemicals have risen perceptibly and, even at such high prices, adequate supplies are not available. Mr. Srivastava admitted that the accumulation of cloth had eased in recent months, but pointed out that it did not provide a correct index of the situation, inasmuch as whatever reduction in stocks that had taken place was due to lower production on account of 25 per cent. of capacity being idle, diversion of some supplies to Government contracts even at unremunerative prices, distress sales, and increase in sales on consignment basis.

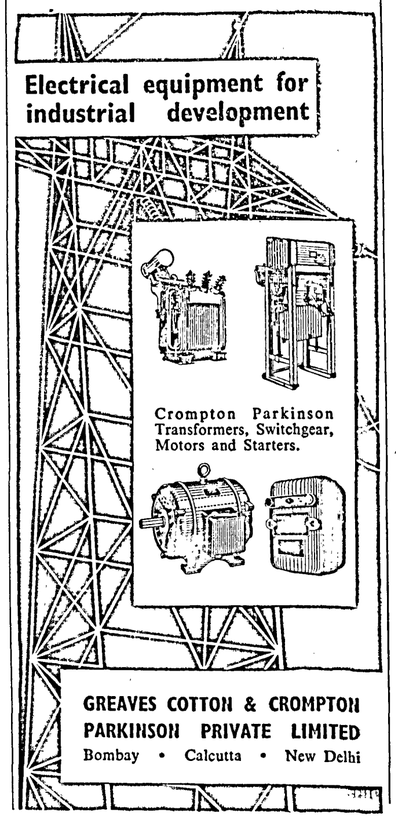
After drawing attention to the seriousness of the cotton textile situation, Mr. Srivastava urged that the Technical Survey Wing in the Textile Commissioner's Office should "immediately start operating in such trouble spots and weak spots as U.P. and prescribe timely action to prevent closure and distress, instead of merely holding *post mortems*." In his opinion, the three specific questions which must be examined by this Wing related to (1) cost structure of mills and a thorough study of international disparities in costs; (2) incidence of taxation and other regional obstacles; and (3) provision of technical and other advice to mills in distress.

Similar views were expressed by the Textile Sub-Committee of the Employers' Association of Northern India at a separate meeting with the aforesaid official spokesmen. It was pointed out on behalf of millowners that the Government should persuade the Reserve Bank, the State Bank and other Scheduled banks to allow advances up to 90 per cent. of the value of stocks pledged with the banks and to recommend to the banks extension of usance bills' discounting facility to mills and wholesale cloth dealers "as a matter of course." Further, it was emphasised that exports of cotton piecegoods and yarn to Nepal should be treated as normal exports and taken into account for all import entitlements under the Export Incentive Scheme. The other suggestions put forward covered modification of import policy governing foreign cotton, cut in rates of excise duty on coarse and medium cloth, reduction in railway freight on movement of textiles from upcountry centres to ports and suitable amendment of the Central Sales Tax Act.

In his reply, Mr. D. S. Joshi, the Textile Commissioner, is understood to have made it clear that the restrictions and regulations were not meant to hamper the cotton industry and expressed his confidence about the industry's capacity to tide over the present crisis. The rise in the internal consumption of yarn and cloth in recent days, he said, was an encouraging development; while there had been a drop of about 200 million yards of cloth in exports, the domestic consumption had risen by 300 million yards. Mr. Joshi assured the representatives of the industry that he was always prepared to discuss individual problems with mill interests and help them in all possible ways, while the problems of a general nature could be discussed at the Cotton Textiles Advisory Committee on which U.P. mills were already represented. He further stated that the Government was trying to ensure fair distribution of imported dyes and chemicals among the different claimants and that he was willing to examine the specific points of criticism against the Government's export policy.

The cotton mills in U.P. undoubtedly have special problems arising from their location and the relatively low productivity of labour. Their plea for special consideration, therefore, deserves sympathetic hearing and action. But, at the same time, it cannot be denied that, following the change in ownership and management of most of these mills after independence, there has also been considerable deterioration in their running of most of these mills and dissipation of financial resources that had been carefully husbanded during the war and early post-war years. It would be interesting to see how much money has been invested by the present managements on modernisation and expansion of these mills. If these mills are to be put on a sound footing and that with special assistance from the Government, two things will be essential. One, the labour employed in U.P. mills must agree to take on a higher work-load. Secondly, there should be an expert investigation into the managements of mills. Those managements which have utilised the liquid resources of mills for purposes unconnected with the mills, as, for instance, for buying controlling interest of other industrial concerns, must be asked to find the bulk of funds required on their own for improving their productive capacity. It will also be necessary to take suitable precautionary steps to ensure that there is no recurrence of bad management and indifferent behaviour by labour.

Until all this is done, there is no point in pleading that the banks should be directed to liberalise the terms of their credit to cotton mills in U.P. The very fact that, even when the banks are anxious to increase their advances portfolio in order to earn more profit, they prefer to have larger margins than in the case of mills in other parts of India, shows that their rating of the creditworthiness of mills in U.P. is not very high. In any case, it would be unwise on the part of the Government to give directions to banks on this point, for it would tantamount to assuming responsibility for the safety of depositors' money with banks.



REPORT OF TEXTILE DELEGATION TO AFRICA

It is surprising that the Cotton Textiles Export Promotion Council has taken more than four months to release for publication the report of its delegation to East and Central African countries, Madagascar and Mauritius. The delegation (leader: Mr. Chinoobhai C. Javeri), it will be recalled, returned to India as early as on 30th November 1958 after a two-month tour of the aforesaid places and submitted its report to the Council early in December. The Council would have done well to release promptly at least a summary of the conclusions and recommendations of the delegation before it actually sat down to consider them and initiate action on them.

The report of the delegation, a copy of which has just been received by us, is quite exhaustive, in that it not only includes thorough study of the conditions obtaining in the textile markets of the countries visited but also several valuable suggestions designed to promote exports of Indian textiles—yarn and cloth, handloom goods, ready-made garments and hosiery. Since the report is a fairly bulky one and as this number has to go to press a day earlier than usual owing to Friday being a holiday, it has not been possible for us to cover the delegation's findings in detail this week; we propose to do it next week. Meanwhile, mention may be made here of the two important points stressed by the delegation. One, the Indian manufacturers and exporters must make a continuous and systematic study of the export markets with a view to assessing properly the changing tastes of consumers. Two, installation of automatic looms and rationalisation of production are essential prerequisites for exports. The delegation has urged improvement of sampling methods, markings and packings of bales, and proper enforcement of Itex Inspection Scheme.

The Government of India's import policy for the half-year ending September 1959 announced recently does not provide for the grant of quota licences for wool weaving yarn. In the last licensing period—October 1958 to March 1959—it will be recalled, the Textile Commissioner's Office had been empowered to grant licences on an *ad hoc* basis to actual users, the validity of licences being one year. The import policy for other wool items such as blankets and rugs, woollen hosiery and knitted apparel, however, remains practically unaltered.

The new export policy for the period April-September 1959 remains unchanged from that in force during October 1958-March 1959. Accordingly, an individual shipper can continue to export any quantity of raw wool on a contract basis within the ceiling (undisclosed) set by the Government as was the case in the previous period. (On consignment basis, that is, consignment for auction abroad, no one shipper may export more than a total of 100 bales.)

RIVALRY AMONG DIFFERENT FIBRES?

DEMAND FOR TEXTILES SLACKENS IN CONSUMING COUNTRIES

From A Special Correspondent

MANCHESTER, *7th April*

MANY of those living in the area in which the cotton textile industry has for long been the major source of employment cannot avoid looking askance at the latest economic survey issued by the Government. This preamble to the Budget statement offered an optimistic forecast of things to come, but, to many individuals, not only those directly concerned with the cotton trade, the industrial outlook does not appear as promising as officialdom views it. The survey noted the two main clouds on the economic horizon as the tendency for exports to fall and for wages to rise without a corresponding increase in productivity. These fundamental aspects of the industrial scene are surely of supreme importance and, if current trends were not reversed, they could easily unbalance the economy, as has happened in the past.

MANCHESTER LETTER

This bright review of events naturally stimulated hopes of useful tax concessions being provided in a Budget which is presumably the last before the next General Election. From the angle of the cotton trader, incentives are badly needed to extend purchasing power, so that pressure for supplies could once more have a direct bearing on the rate of activity of the mills. For so long has the industry languished in the depths of discouragement and hand-to-mouth trading that any revival, even on a modest scale, would be more than welcome.

A record surplus in the country's balance of payments position and the better visible trade figures are the stimulating features of the economic survey, while a rise of 2 per cent. in real incomes is an encouragement to the individual. Unfortunately, as regards textiles, this expansion in income has drifted away into other fields where modern selling techniques have successfully competed for the surplus cash available to be spent on clothing. Even as compared with a generation ago, there are so many more ways in which money can now be used that it is hardly surprising that some of the traditional products have been by-passed.

Cotton *vs.* Rayon

Centre of discussion within the industry in the past week has been the prospective interrelationship among prices of the different fibres. The reduction of 1½*d.* in the basic cost of rayon staple—the first change for nearly six years—has turned the spotlight on the probability of increased rivalry in this direction. Quotations for raw cotton have been moving steadily downwards during the past year or two and rayon's competitive position has naturally suffered.

Exports of rayon fabrics have been equally affected as those of cotton during the period when overseas trade has been dwindling. According to the latest bulletin issued by the Rayon Weaving Association, this has been due to no small extent to the dual pricing arrangements practised by many of Britain's competitors. Consultations are going on with the fibre producers in order to offer the trade effective assistance to arrest and reverse this serious trend. Some measures to provide manufacturers with better facilities to compete with their rivals abroad are clearly needed.

Building Up Again?

Firmer rates for new crop deliveries in the American futures contract in Liverpool which have ruled for the past week or two have caused some surprise, in view of the prevailing world raw cotton situation. Evidence has accumulated that stocks likely to be available at the end of the current season will be well in excess of the requirements of spinners and a dangerous build-up of supplies is hovering on the horizon.

Only last month, one of the most authentic of Manchester cotton merchants firmly rejected the possibility of any bull point being discernible anywhere in the raw cotton situation. As was then pointed out, Lancashire is not the only manufacturing area in the doldrums, but every country growing or spinning cotton is hampered by the superabundance of the raw material and the prospect of an even larger American crop.

Farmers in the United States have for so long been feather-bedded with pegged prices, that their competitors growing rival products have gained—at the expense of the American taxpayer. Under the revised farm legislation in the United States, fewer than 75,000 farmers out of more than 950,000 have decided to increase their cotton acreage under the 1959 choice programme.

New Crop Supplies

It has been estimated that the area under cultivation to cotton will be around 16 million acres, as against only 12 million acres in the current season. A new crop approaching 16 million bales would not be surprising, whereas the offtake will be very much below that total, even if a revival takes place in demand for finished cotton products. In the first six months of the current season, exports of United States cotton were 1,400,000 bales, almost exactly half the shipments recorded in the comparable period a year ago. It is unlikely that exports over the full season will reach 3 million bales, as against 5,700,000 bales in 1957-58. Another significant factor is that the consumption of cotton per head in the United States last year, at 22.2 lb., was the lowest for 20 years.

Although there are some observers who believe that the trend towards a marked surplus in raw cotton by the end of this season has already been fully discounted in the market, it is difficult to provide evidence to encourage any bullish sentiment. Traditionally, the period of the year is one in which few sharp price movements can be anticipated, but the downward pressure, which has persisted practically throughout this season, is not likely to be relieved without some unexpected world political development.

Over-Stocking in Africa

Slackness in overseas trade in cotton goods is by no means always the fault of the manufacturer, or even the distributor. Exporters in many different areas have for months past been hampered by the reluctance of dealers in importing countries to purchase more than the most modest requirements. From reports quoted in the *Overseas Review* published by Barclays Bank, it can be seen that the position is much the same in numerous consuming centres. In South Africa, for example, fierce competition and price-cutting in clothing items has failed to shift the high volume of stocks. Clearance and bargain sales continued throughout February, and storekeepers are said to have "resorted to every conceivable means of enticing buyers on to their floors and into their showrooms."

Another aspect of this situation is the entry of foreign producers into South Africa itself. "Overseas manufacturers arrive on almost every mail ship to investigate prospects for establishing branches or factories in the Union," adds the current report. One of the latest visitors has been the Chairman of Courtaulds, whose Company is said to be "showing more than passing interest" in a prospective new rayon yarn plant on the Natal south coast.

Competition Growing

The South African garment trade has gained a useful order for the supply of locally-manufactured clothing worth more than 2,000,000 dollars which a leading Capetown house has negotiated with one of the largest distributing organisations in the United States. The garments will be sold chiefly in New York, but also in Canada. In Southern Rhodesia, more frequent reports have come to hand of retail price differences between shops which cater for the same areas. In some cases, a stock reduction policy is being carried out, but competitive conditions are growing in the country. Over-stocking in cotton textiles is still a feature of trading in Nigeria and cloth is among the various products on which customs duties have lately been increased. Import charges on knitted fabrics, piecegoods and other textiles have been raised to secure additional revenue.

Sole exception to these widespread indications of excess supplies is in the Sudan, where an acute shortage of almost all kinds of imported goods is reported. Importers, wholesalers and retailers are now said to be without essential articles, as the goods obtained since the beginning of the year from China were rapidly sold and no stocks remain. Import licences have been issued for textiles from Egypt, but only on a very small scale. Licences for British cotton cloth were also issued to retailers who could prove that the goods were manufactured specially for the Sudan before the imposition of existing restrictions.

STATISTICAL POSITION OF COTTON

SHARP FALL IN PRODUCTION

THE raw cotton market, both spot and futures, has been ruling very firm of late. This firmness seems to be a reflection of the increasing tightening of the supply position, as a consequence of the continuous scaling down of the crop estimate. The crop, estimates of which ranged between 5.4 and 5.5 million bales at the beginning of the season, is now placed at no more than 4.8 million bales. Damage to cotton in the Punjab, lower yields in Berar and Khandesh and the South have adversely affected both the quantity and quality of the crop. The arrival of the crop till the end of February is an indication of the size of the crop. Last season, with a commercial crop of about 5.2 million bales, arrivals up to the end of February amounted to as much as 3.28 million bales which was roughly 63 per cent. of the final crop outturn, despite the fact that last season's Saurashtra and Broach-Surti crop was late. This season, arrivals till the end of February have been of the order of only 2.5 million bales. Assuming that the crop will be about 4.8 million bales, only 52 per cent. of the crop has arrived.

While, on the one hand, crop estimates have been continuously pruned down, on the other, mills' consumption of Indian cotton is running at a higher rate. Thus, during the six months of the season, that is, from 1st September 1958 to 28th February 1959, mills consumed 2,345,197 bales of Indian cotton, as against 2,296,661 bales during the same period last season.

The following table indicates the trend of mill consumption of cotton during the first six months of the season, as compared with the corresponding period of the previous season:

Consumption of Cotton

(In bales of 392 lbs.)

	Indian		Foreign	
	1958-59	1957-58	1958-59	1957-58
September	382,499	399,125	42,554	49,310
October	394,558	372,781	41,303	48,415
November	363,650	390,784	35,644	51,031
December	419,814	391,490	39,301	51,858
January	413,181	392,007	34,370	49,804
February	371,495*	350,474	31,508*	43,868
Total ..	2,345,197	2,296,661	224,080	293,286

* Provisional

It is noteworthy that monthly consumption of cotton, which had reached a high of 419,814 bales during December 1958, declined slightly to 413,181 bales in January. But it fell sharply to 371,495 bales in February which, though higher than the quantity of 350,474 bales consumed in the same month of the previous season, was nevertheless the lowest for the six month-period. This marked fall in consumption in February is mainly attributed to the smaller number of mill working days in the month. It is not regarded as indicating a declining trend in cotton consumption.

Export business, on the other hand, continues to be sluggish, thanks to the generally poor demand from abroad and shortage of supplies. The crop failure in the Punjab has affected both the quantity and quality of short staples like Bengal *Deshi* and Oomra *Deshi*. Other exportable varieties such as Kalagin and Wagad, too, are in short supply. In addition, price-wise, they are out of parity with comparable styles in world markets. Nevertheless, exports of cotton so far this season have been running at a higher rate, as compared with the same period last season. Shipments till the end of March amounted to 227,048 bales, as against 69,074 bales in the same period last season. The improvement is mainly attributed to the fairly heavy shipments, as per contract concluded in the beginning of the season against quotas issued in the second half of last season. The following table shows the trend of exports:

Exports of Cotton

(1st September to 28th March)
(In bales of 392 lbs.)

Destination	1958-59	1957-58
United Kingdom	7,256	5,087
Continent	20,357	7,724
Hong Kong	33,870	3,046
China	6,886	—
Japan	153,950	48,362
U.S.A.	2,663	3,984
Other countries	2,066	871
Total ..	227,048	69,074

Stocks with trade and mills at the beginning of the season are estimated to have aggregated 2,045,000 bales, which, together with a crop of 4.8 million bales commercial, give an aggregate supply of 6.8 million bales. Mill consumption, on the basis of the consumption in the first half of the season, will probably reach 4.7 million bales. Assuming that exports will be of the order of 350,000 bales, as has been estimated by a leading cotton firm and cotton used up by handspinners and surgical industry about 50,000 bales, total disappearance will aggregate 5.1 million bales. This will leave 1.7 million bales on 31st August 1959 to be carried over to the next season, as compared with 2 million bales on the same date last season.

U.S. COTTON EXPORT POLICY

Writing in the *Cotton Trade Journal* of Memphis, U.S.A., Mr. Willian K. Love, Jr., President of the New York Cotton Exchange, recently drew attention to the "serious consequences" of the cut-rate export sales programme of the U.S. Department of Agriculture. It has, according to Mr. Love, seriously affected the competitive position of U.S. textile industry in the domestic market to the benefit of foreign manufacturers, by providing the latter with raw material at a price substantially below the cost to the American manufacturer. It has vastly enlarged the operation and control by the C.C.C. in the marketing of cotton. It has put the United States in the position of being accused by friendly nations of "dumping" in the export market. It has failed completely to make agriculture self-supporting. It has resulted in making the United States Government the arbiter of cotton prices, not only domestically, but the world over, and this fact, Mr. Love feels, is resented in all areas where cotton is grown, handled or consumed.

U.S. exports have also been seriously affected. In Mr. Love's own words:

"Cotton stocks abroad in producing countries are now eagerly seeking markets at prices appreciably under United States export prices but, even so, are moving slowly. These countries cannot finance carryovers, and are obliged to sell their crops, and will. In fact, regardless of the price at which the U.S. might offer its cotton at the present time, these countries admittedly would offer at prices still lower. U.S. cotton has been offered unsuccessfully to foreign cotton-consuming countries at better than 15 per cent. discount under our regular export prices under the P.L. 480 barter programme. As a result of this situation, United States exports as of 30th December 1958 were 55 per cent. of those at the same time one year earlier, and, if they continue at this rate for the balance of the season, total exports will amount to only 3,150,000 bales of cotton.

"The effect of this deterioration on the futures exchanges has been a drastic decrease in the volume of business handled and in the income received to the point at which their very existence is most precarious. If this deterioration continues, and under present legislation it will, the futures exchanges may be ruined and forced to close, just as may many of our cotton gins, shippers, buyers, crushers, oil-millers, textile mills and producers. The C.C.C. will continue dominant in the cotton trade and free enterprise in the cotton industry will be a thing of the past."

Is a solution to this problem possible? Yes, says Mr. Love. But the longer effective corrective action is put off, he points out, the more bitter the pill will be to take. The only effective regulation of the output of any industry and of any commodity is price which is governed by supply and demand. If, at any time since 1929-30, the U.S. had permitted a free market determination of the price of cotton, the situation today, according to Mr. Love, would be one of an annual offtake greatly in excess of the current year's offtake of 11.3 million bales. Such an increased offtake would be tremendously beneficial to cotton ginners, buyers, shippers, crushers, oil-millers, textile mill producers, tax-payers and cotton futures markets. What is needed for cotton is market. It can only be obtained, according to him, through a freely-operating one-price system for cotton.

INVESTMENTS OF L.I.C. IN INDUSTRIAL SECURITIES

NEED FOR FORMULATION OF SOUND POLICY

By V. S. Krishnaswami

FORMER PRESIDENT, MADRAS STOCK EXCHANGE

A STAGE has been reached where it is necessary for the Life Insurance Corporation of India to formulate the policies relating to the disposition of the large funds at its disposal in such manner that the interests of the policyholders are more carefully protected and at the same time the well being of the country in its various regions is more effectively promoted. There has no doubt been an attempt to reorientate investment policy after the calamitous mistakes committed in putting through the Mundhra deal. The latest report of the Corporation, for the 16 months ended 31st December 1957, reveals visible scars and it would appear that quite large parcels of the shares involved in the Mundhra deal have not yet been registered in the name of the Corporation. Even where such registration has been effected the title is open to challenge. Fortunately, the substantial appreciation in market values throughout 1958 and, later, after the publication of the Central Budget proposals for 1959-60, have enabled the losses in these and other directions to be absorbed.

The authorities have much to learn in a field which calls for specialised skill. The greater awareness recently shown by the Chief Executives, as well as the Investment Committee of the Corporation, augurs well for the future. But it will be necessary to be alert and keep an open mind if the various interests have to be served effectively and the serious mistakes, which it has been said were committed by the private life offices, are to be avoided.

Additions to Assets

There is no doubt that the L.I.C. is a very powerful institution at the present moment in promoting investment activity. Indeed, there are indications to suggest that, given proper management on the administrative side, the additions to assets in the coming years will be on a considerably larger scale. From the figures relating to investments at the end of 1958 it would appear that the additions in a twelve-month period amounted to Rs. 32 crores, as against Rs. 33 crores in a sixteen-month period. These additions could have been very much more if the expense ratio had been kept down and if there had been greater expedition in the finalisation of new business. The report itself accepts that the renewal expense ratio is rather high and that efforts are being made to reduce working expenses to more manageable proportions. The total investments in various types of securities amounted to Rs. 414 crores, as against Rs. 388 crores at the end of 1957. The distribution in regard to various types of securities will be evident from the figures given below:—

	As at 31-12-'57 (Rs. crores)	*As at* 31-12-'58 (Rs. crores)
Indian and State Government and other approved securities ...	260.61	295.00 (Approx)
Debentures and shares of joint stock companies in India ...	69.14	75.00 ,,
Mortgages of properties	13.86	13.00 ,,
House property ...	21.38	21.00 ,,
Other investments	16.91	10.00 ,,

The bulk of the investments has naturally been in Central and State Government securities and loans of public bodies. With the investment of the greater proportion of available funds in earlier years by some of the bigger insurers mostly in Government securities, the proportion has naturally been high. There was, however, an anxiety to improve the yield on investments in the three years prior to nationalisation by acquiring debentures, preference and ordinary shares. This diversification of investments in an expanding phase of business led to the building up of investments amounting to Rs. 60 crores prior to nationalisation. Since then, there has been an increase of Rs. 15 crores, the total of all investments under this head as at the end of 1958 being Rs. 75 crores.

While it is generally agreed that the loans of the Central and State Governments have to be liberally supported, the controversy has related more to the manner of investment in industrial securities. The additions under debentures, preference and ordinary shares to the tune of Rs. 15 crores by way of purchases of securities quoted already in the open market or subscriptions to new debentures, preference and ordinary capital in the case of established companies have proved to be greatly helpful to the stock markets during a period when prices had been pushed down to very low levels. The debacle that was caused by the sweeping Central budget proposals of Mr. T. T. Krishnamachari in May, 1957 will be recalled in this context.

Strong Technical Position

In the absence of a boom in new flotations, the absorption of larger parcels of securities of existing companies has vastly improved the technical position of the market and the rise in prices in recent weeks has been attributed more to a strong technical position than any jubilation over the Budget proposals for 1959-60. In fact, several tax experts have been pointing out that the simplification of corporate taxes will lead to an increase in the overall burden on companies and shareholders combined and that, with the rising trend of working expenses, considerable difficulty might be experienced in making the necessary adjustments in dividend payments.

It is not clear yet what exactly has brought about the changed sentiment, though it is generally expected that the abolition of the wealth tax on companies and excess dividend tax has a great psychological value and that the budget for 1960-61, if Mr. Moraji Desai continues in power, will not also have any disturbing effect.

The investment climate can, therefore, be said to have improved to a considerable extent and there has been a lowering in the yield basis. It would, therefore, be worthwhile to find out, in the present context, whether ways and means can be devised in such a way that, with the resources at the disposal of the Life Insurance Corporation, the requirements of new and old companies in terms of new capital, can be more easily found. There has no doubt been greater response for new capital issues of the established companies, though even here it has been necessary for the L.I.C. to absorb the shares in some cases. The policy of pumping L.I.C. funds into the companies concerned through purchase of rights of new issues has to be preferred to the large-scale acquisitions of shares of existing companies in the open market. It may, however, be found, over a period, that the absorption of gilt-edged industrials will release funds for purposes which could be considered more risky by the Corporation but which the investors might be prepared to undertake. It will thus be necessary to watch new trends and frame policies accordingly. But if right issues are preferred, it will also have to be considered whether new flotations as such can be encouraged. Of late, the payment of interest during the period of construction at 4 per cent. or thereabout has been encouraged and the shareholders have been led to expect that they would be obtaining the same yield as from fixed deposits immediately, with the prospect of obtaining better yields after the propositions concerned reached the production stage. In some cases, guarantees in regard to payment of interest during the period of construction have been given by State Governments. It has, therefore, to be determined whether the L.I.C. can divert in this direction some proportion of the funds that are committed every year for investment. If the Corporation can find its way to extend support to entirely new flotations, the average investor would be greatly encouraged. Alternatively, funds can be lent to the State Governments for investment in propositions which are sponsored by them in co-operation with private enterprise.

It is rather unfortunate that institutional support is required in greater measure for furthering industrial development. Even though private enterprise has been allotted a large field and a number of paper mills, engineering units, chemical units, etc., could be started in the definite expectation that they would be paying their way right from the beginning, there has been no large units in Madras and other places. It is necessary, therefore, that over and above the expansion programme's of the established companies, entirely new units should be formed. It has been amply borne out by the developments in the immediate post-independence period that the companies formed in 1944-46 have proved to be greatly helpful in broadening the basis of the industrial structure in the late 'forties and early 'fifties. Presently, new capital issues are of the order of Rs. 35 crores a year, of which the quota provided by the L.I.C. alone is as much as Rs. 6 crores. It is in bringing about an effective dispersal of this sum, which will certainly be increasing over a period, that the greatest benefit can be imparted to the internal economy.

With complete justification, the Corporation can thus make a sincere attempt to bring about a better diversification of investments through open market sales whenever there is a substantial profit on earlier purchases and through the acquisition of shares of comparatively new undertakings having good prospects in different regions. It should also subscribe to the issues of additional capital whenever it is apparent that the requisite support will not be forthcoming from existing shareholders. That there would be ample scope for effecting profitable purchases, when rights issues on a large-scale are made, has been amply borne out by the substantial appreciation in prices that has taken place for the new shares of Indian Irons, National Rayon, Alkali and Chemical, Indian Aluminium and Dunlop Rubber, to mention only a few. It was not anticipated at the time when the new issues were offered by these companies to the public that there would be such a substantial appreciation over such a short period. The difficulty does not lie in an inadequate appreciation of the future prospects but in an unwillingness to put out large sums which might not fetch attractive rates of interest for a short period. Even here, the calculations have not proved correct as Dunlop Rubber has been able to pay a higher dividend on the increased capital while the shareholders of Alkali and Chemical and Indian Aluminium have substantially benefited through sharp capital appreciation, with the prospect of good dividends being paid soon after the expansion programmes have been completed. Considerable thought should be given to this aspect of the question, especially as the investment portfolio of the Corporation at the present moment is somewhat lop-sided.

Investment Portfolio

Because of the policies pursued by the earlier insurance companies in their individual capacities, the investment portfolio, as it relates particularly to industrial securities, is somewhat uneven as will be clear from the details given below:

(In lakhs of rupees)

Banks	263.12
Cements	365.96
Chemicals and Pharmaceutical ...	119.94
Coal	191.93
Cotton	690.85
Electricity	829.21
Engineering	714.21
Insurance	135.62
Investment Trusts	50.42
Iron and Steel	548.40
Jute	414.63
Managing Agents	168.44
Mining	33.65
Oil (Mineral)	—
Paper and Pulp	309.00
Plantations	135.52
Railways	70.58
Shipping and other Transport	121.39
State Enterprises	—
Sugar and Breweries	142.55
Textiles (other than cotton) ...	89.34
Vegetable oils	33.22
Miscellaneous	1,456.18
Co-operative Housing Societies	29.61
Total	6,913.77

A greater proportion of funds has been locked up in shares of companies belonging to four or five major industries. Textile issues in Bombay have been favoured by the former life offices having their headquarters in that city because of the boom conditions that were prevalent in that industry in the earlier years. Likewise, substantial parcels of jute and coal shares have been acquired, presumably due to the activities of the bigger Calcutta insurance companies. The purchases of plantation shares also have related to those of companies operating

STEPPING UP SUGAR CONSUMPTION

DEVELOPMENT OF CONFECTIONERY DESERVES ENCOURAGEMENT

ALTHOUGH India is the second largest producer of sugar (white and brown combined) in the world, the *per capita* consumption of this sweetening agent continues to be very low. It is no more than 30 lbs. which is less than a third as compared with consumption in the economically advanced countries of the West such as the U.S., the U.K., Canada, Norway, Switzerland, Denmark and Ireland. The low level of *per capita* consumption in India must be attributed to two factors. First, the use of sugar in normal diet is poor, being about 1.47 ounce per adult per day, as against 2.00 ounces considered as the desirable minimum by nutritional experts. Secondly, industrial consumption of sugar is negligible.

One of the ways of stepping up *per capita* sugar consumption lies in the development of the confectionery industry. Quality confectionery, as Mr. Khanchand J. Pamnani, President of the Indian Confectionery Manufacturers Association, stated in his speech at the thirteenth annual general meeting of the Association held at New Delhi on Friday last week, is recognised in other countries as of considerable national value and is regarded as an important ingredient of a balanced diet, "as it combines sugar and glucose in an assimilable form and thus provides one of the best methods of replacing the energy which the human body continuously expends through physical and mental exhaustion." In India, however, confectionery is regarded as a luxury item and its importance as a nutritive supplement to our diet is not yet fully appreciated. Mr. Pamnani attributed this to the low standard of living and the comparatively backward industrial structure of the country, and expressed his confidence that, with the progressive increase in the standard of living of the masses as a result of the implementation of Five-year Plans, the position would improve for the confectionery industry.

Despite the vital role played as an important food industry, it is unfortunate that the confectionery industry should continue to pass through difficult times. Thus, as against the estimated annual installed capacity of 50,000 tons on a single-shift basis, the capacity now being actually utilised is just 20 per cent. It may, however, be noted that the current annual rate of output is more than the production target of 10 000 tons (capacity of 40,600 tons) fixed for 1960-61 by the Planning Commission. In 1957 itself, the industry produced 10,980 tons. Drawing special attention to the underutilisation of capacity, Mr. Pamnani observed:

"This partial working of the units in the industry results, among others, in unnecessarily pushing up our overhead expenses and thus increase our production costs. Our ideal should, therefore, be to see that the various units in the industry, which have been put up after great efforts and at considerable cost and who have the modern and up-to-date machinery and the technical know-how for production of quality goods, which can stand comparison with those produced in any other foreign country, are enabled to work at least for one single shift, which alone would result in their economical working and thereby enable the industry to reduce the price of its products to some extent. This would be possible only by creating an increased demand for quality confectionery. As you all know, the present low demand for quality confectionery in the country is due to its high prices which is mostly accounted for by the comparatively high cost of its various raw materials. As is well known, India is a poor country where a large part of the populace can hardly afford to purchase quality confectionery at the prevailing high prices. Therefore, the internal demand can be stepped up only by a drastic reduction in the price of the industry's products."

The high prices of quality confectionery are due to the heavy incidence of both raw material cost and taxation. Sugar is one of the basic raw materials which accounts for as much as 45 per cent. of the total cost of producing confectionery. The price of sugar, including excise duty of Rs. 10.68 per maund, is Rs. 38 per maund, as compared with about Rs. 17 ruling in world markets. In certain countries such as Australia, sugar is supplied for industrial purposes—for example, preserved fruit industry—at subsidised prices. There is certainly justification in the plea put forward by Mr. Pamnani that a similar policy should be followed in respect of sugar supplies to the confectionery industry, as this alone will enable it to reduce its production costs. Failing this, the Government should at least exempt sugar utilised for confectionery manufacture from all internal taxes. Since the principle is already being followed by the Government in the case of certain excisable commodities such as power alcohol, cotton fabrics, tea waste and certain kinds of paints and pigments, when used for industrial purposes, there is no reason why a similar policy should not be followed in the use of sugar utilised by the confectionery industry. The State Governments can also grant remission of cane cess in respect of sugar which would reduce the price of sugar to the confectionery industry by Re. 1.73 per maund. In this connection, Mr. Pamnani said:

"I feel that the grant of these concessions should not be difficult for the Government, in view of the fact that the total quantity of sugar required by the confectionery industry now may not be more than about 5,000 tons in a year, which is a very insignificant percentage of the total production of about two million tons. On the other hand, this would enable this industry, which is now facing a serious situation due to lack of demand for its products, to stabilise its position and make available quality confectionery at comparatively cheaper prices and thus create an increased demand, thereby enabling it to utilise more of its idle capacity. Thus, the existing units will be able to carry on economical working and, at the same time, provide more employment opportunities."

The Government of India has allowed the confectionery industry drawback of customs duty paid on imported raw materials and excise duty on indigenous materials used in the manufacture of four varieties of confectionery meant for export as suggested by the industry. But this concession is said to be not adequate to promote exports. What is wanted is assured supply of sugar at a reasonable price.

It is gratifying to hear from Mr. Pamnani that "the Government of India now seem favourably inclined to our request for arranging supplies of sugar to the confectionery factories for the purpose of export at about the same price at which it is exported out of India, and they are already considering ways and means for ensuring sugar supplies to the various food processing industries, including the confectionery industry." The implementation of this decision and the acceptance of the industry's suggestion for granting 50 per cent. rebate of railway freight will go a long way towards building up a good export market for Indian confectionery products. Mr. Pamnani rightly averred that it would be in the interest of the country to export sugar products such as confectionery in place of sugar. For one maund of sugar exported earns foreign exchange of only about Rs. 16, whereas, if this quantity is converted into confectionery and exported, it would bring in much more foreign exchange, besides affording additional employment to labour and resulting in increased utilisation of the existing idle capacity.

The Confectionery Manufacturers Association President urged the Government to take steps designed to enable the industry to maintain production at the desired level. The steps suggested cover the following:

1. Adequate and regular supply of tin containers to the confectioners so as to avoid any setback to production of goods.

2. Grant of necessary licences for importing tagger tin plates.

3. Provision of necessary facilities to the confectionery factories for importing their full requirements of printed waxed papers, as also those laminated with aluminium foil overstrip until such time as these materials are available in the requisite quantity and quality from indigenous sources.

4. Permission to import adequate quantities of essences and colours.

5. Reduction of at least 50 per cent. in the rate of sales tax on confectionery products and adoption of the lower rate on a uniform basis throughout India.

In the course of his speech, Mr. Pamnani did well to allude to the continued keen competition offered by hand-made confectionery manufactured under unhygienic conditions, notwithstanding the enactment, since 1954, of the Prevention of Food Adulteration Act and the rules framed thereunder. This, it is said, is due to several State Governments not having taken any action for the strict enforcement of the legislation. There is no exaggeration whatever in his remark that, while the organised sector conforms to the provisions of the law and thereby incurs higher cost of production, the unorganised sector evades the law and thus not only defeats the very objective of legislation but also offers keen competition to quality confectionery by reason of its very low price. Considering that confectionery is gradually assuming an important place among the list of food articles, especially for growing children, in view of its nutritional value, "it is very necessary," to quote Mr. Pamnani, "that, in the interest of public health, spurious brands of confectionery not conforming to the provisions of the food laws are not allowed to be sold in the market." The Central and State Governments should immediately take effective steps for a strict enforcement of food laws.

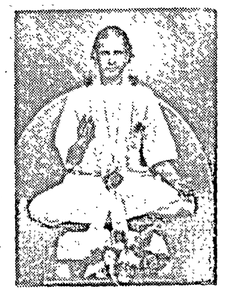
Lectures

On every Saturday in the evening and Sunday in the morning, Lectures by Shri Yogiraj Umeshchandraji and other learned dignitaries are delivered on various subjects like Yoga, Vedanta, Devotion, Spiritual Strength, etc., at Shri Ramtirth Yogashram.

UMESH YOGA DARSHAN (First Part)



SHRI YOGIRAJ UMESHCHANDRAJI

In Four Languages: English, Hindi, Gujarati and Marathi.
(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji, is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 100 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho-Therapy and many other Therapies. The book is the best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

PRICE: **Rs. 15/-** Plus Postage **Rs. 2/-** extra.
No V.P.P. sent.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available from here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2·50** including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers are available for Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and lets sleep sound. Most ideal for body massage. It is useful to every one in all seasons. Prices: **Rs. 4/-** for big bottle and **Rs. 2/-** for small. Available everywhere.

TREND OF SOUTH INDIAN TEAS

OUTLOOK CONSIDERED QUITE BRIGHT

THE year 1958 witnessed more than one tea producing country using all its ingenuity to place the common tea on a better footing. The Government of India, too, gave some relief to these teas by way of a reduction of export duty and excise duty. Notwithstanding such efforts, the basic problems that confront the industry remain unsolved. These are: (1) the supply is still far in excess of demand; (2) too much of a poor quality tea is being produced throughout the world; (3) competition is strong among producing countries; and (4) the difference between a profit and a loss to the common tea producer has often been parallel to the rates of export duty imposed in any one country.

Considered against this background, the performance of South Indian tea industry during 1958 can be considered satisfactory. The tea crop harvested was a record one at 160 million lbs. (provisional figure), representing an increase of nearly 6 million lbs. over the 1957 output of 154.2 million lbs., shipments were substantially larger, the quality of tea manufacture showed some improvement and prices fetched in export auctions were higher than those in 1957. The rise in production of dust teas was, however, more marked and this naturally had its adverse effect on their quality and prices.

The progress of the South Indian tea industry was marred by a recurrence of labour unrest and indiscipline, which took a serious turn during the later part of the year. Apart from the loss of production and the deterioration in quality caused by the strike, there was a considerable loss of internal revenue and foreign exchange.

Higher Crop

As stated earlier, the South Indian tea crop for 1958 is estimated at 160 million lbs. Since this is subject to revision, as complete returns have not been received yet, the final crop is likely to show an increase of more than 6 million lbs. over that for 1957. The pace of increase in production, however, considerably slowed down during 1958, as will be seen from the following table:

(In million lbs.)

Year	Crop	Year	Crop
1950	98.02	1955	128.95
1951	114.94	1956	126.94
1952	112.06	1957	154.20
1953	120.87	1958	160.00*
1954	128.53		

* Provisional.

The relatively smaller increase in production during 1958, as compared with that in the previous year, was due to a fall in production in the latter half of the year. Several reasons are attributed to it, among which are: adverse weather, lack of hydro-electric power and the labour unrest.

Russian and Egyptian Buying

There was an improved demand for South Indian tea during the year under review. The U.S.S.R. and the U.A.R. continued to be buyers in the Cochin market. Commenting on the Russian operations, the *Tea Review*, 1958, published by Messrs. Forbes, Ewart and Figgis (Private) Ltd., Cochin, observes that "these received widespread and somewhat ill-advised publicity in 1958 and, as a result, the effect was rather more marked when the U.S.S.R. ceased buying early in the year. As this buyer does not buy fannings grades, prices of these types in the better liquoring ranges have generally sold at a discount in comparison with their equivalent brokens." Referring to the Egyptian buying, The *Review* says:

"The Egyptian contract for 1958 was made at a price level far below the previous year and, as a result, the buyer was only able to purchase the cheaper sorts in both dusts and fannings. This maintained prices for these types, but it also resulted in the sale of quantities of tea which otherwise would not have been considered for export. It is pleasant to note that the contract which has been made early in 1959 appears to reflect a higher standard of quality than at any time since private trading ceased and, as a result, there has been a return to the traditional Egyptian types of black leaf dust and fannings."

There was also a diversion of demand during the year from Ceylon, thanks to the strikes and labour trouble in that Island at a time when the rush teas were being offered. In addition, the market is reported to have received good support from internal buyers—the internal consumption in India continues to expand—and this is said to have been a stabilising factor on many occasions.

The average price realised in the export auctions during the year under review was Rs. 2.09 per lb., as compared with Re. 1.93 in 1957, thus reversing the downward trend noted since 1954, as the following table shows:

(Per lb.)

Year	Price	Year	Price
1954	Rs. 2.83	1957	Re. 1.93
1955	Rs. 2.29	1958	Rs. 2.09
1956	Rs. 2.23		

As already stated, there was an increase in production of dust teas, the quantity on offer being 30 per cent. more than that in 1957, which itself had shown an increase of 40 per cent. over 1956. According to Messrs. Forbes, Ewart and Figgis, a number of the dust offerings were of a poor standard. "Too many producers," they add, "are continuing to offer on this market dusts which contain a high percentage of stalk and fibre and would be better denatured or used to make organic manure for estate use." Consequently, the prices fetched for dust teas were well below those in the previous year. The average price realised during 1958 was Re. 1.56 per lb., as against Re. 1.61 fetched in 1957 and Re. 1.75 in 1956. It is to be hoped that sale of such poor quality teas will be discontinued and that associations representing producers will, in the larger interests of the industry as a whole, look into this matter and take suitable steps for preventing manufacture of such teas.

Larger Shipments

The shipments of tea from Cochin during the year under review were encouraging, having aggregated 96.0 million lbs. as compared with 85.4 million lbs. in 1957 and 80.2 million lbs. in 1956. The following is the trend of shipments during the last five years:

(In million lbs.)

Country	1958	1957	1956	1955	1954
U.K.	53.32	47.37	45.09	44.36	53.72
U.S.A.	7.95	7.03	6.71	6.78	8.61
Canada	7.08	6.22	7.02	5.47	6.36
Australia	6.63	6.55	6.87	2.66	1.15
Indian Ports ..	10.75	11.71	7.11	11.66	5.26
Other countries ..	10.27	6.48	7.38	5.00	2.04
Total ..	96.02	85.36	80.18	75.03	78.04

Exports to the U.K. rose by about 6 million lbs. and represented a little more than a third of the total South Indian crop. The U.S. absorbed almost a million lbs. more and Canada increased its imports by over 800,000 lbs. Australia continued to be a good customer, though its purchases did not show any marked expansion.

The fall of about 1 million lbs. in the shipments to Indian ports is not of much significance, as Messrs. Forbes, Ewart and Figgis feel that "there is ample evidence that internal consumption is being maintained and increased." The latest published estimate of internal consumption is 212 million lbs., but, according to the *Tea Review*, "this figure must now be considered well below current sales" and, in its opinion, "the internal consumption in India is probably now in the region of 250 million lbs. per year." The *Review*, however, points out that a part of the internal demand is swinging to leaf grades and more activity in export grades by internal buyers was noticeable during the past year. Such a shift is attributed to the larger production of dust teas of a lower grade. This naturally raises the problem of the future of tea dust production in India. Posing this question, the *Tea Review* says:

"As the internal consumption in India rises, so the public taste will improve also, and we believe that poor standards of dust manufacture may produce a buyer resistance which would transfer demand to the leaf grades over a period of time. It is, therefore, in the interests of all producers to maintain the highest standards of dust manufacture in order that both prices and demand are kept at an economical level."

The keen competition for markets among the tea producing countries can be met effectively only by reducing the cost of production. In the face of rising level of taxes and greater demands on employers, the only way by which the cost of production can be reduced is to raise the yield per acre. According to Messrs. Forbes, Ewart and Figgis, there is scope in South India for improvement in this direction, in view of the low yields which were obtained in the past. But they go on to add:

"However, great strides have been made in the last five years and there are now estates in South India producing in excess of 1,800 lbs. per acre. Unless very careful control is exercised, there must be a corresponding drop in quality and this can be a serious matter in a world which seems already to produce too much plain tea. There must, of course, be some compromise between crop and quality and it is probably up to each planter to decide the balance which produces the best possible answer. Much of the secret lies in plucking, but this can be a difficult thing to control in these days of indisciplined and unruly labour. Nevertheless, careful control of this stage of manufacture will be amply repaid."

It is also gratifying to find that many companies in South India have improved and extended their factory facilities, although this is by no means universal and must still be considered a priority, if South Indian teas were to maintain quality with quantity. During the past year, far more interest in manufacture was shown and this is a healthy sign for the future if the industry is to prosper in the face of keen international competition.

Outlook

The outlook for South Indian teas appears to be "quite bright" at present. An important factor which bids fair to improve the prospects is the proposed introduction of *ad valorem* duty on tea by Ceylon. According to Messrs. Forbes, Ewart and Figgis, this will widen the differential between the high grown teas of Ceylon and South India and can easily influence buyers in favour of South Indian teas or fetch a lower price for Ceylon teas of similar quality. Much, however, seems to depend on the plucking and the quality of tea manufactured. This is substantiated by the trend of demand for various kinds of tea during the past year. Thus, the *Tea Review* observes:

"A factor of 1958 has been the irregular demand for medium teas. These types have generally suffered on all markets, particularly at times when medium quality has not been outstanding. A feature of the year has been the sustained demand at all centres for the better liquoring types and during this season we have had ample proof that the consumer wants the best possible tea. There has also been demand for the cleaner low grown as price breakers and the only category of tea which has been consistently difficult to sell has been the plainer type of medium grown tea. Under the circumstances, it is essential that producers of these types concentrate on the highest standards of plucking and manufacture."

In short, Messrs. Forbes, Ewart and Figgis do not, at present, see any reason for the current (1959) season to fall below the average price of 1958. Given industrial peace, they do not see why the tea trade in South India should not continue to support and repay the many thousands who depend upon it for their existence.

RECENT TRENDS IN INDIAN BANKING—I

(*Concluded from page 638*)

pattern of deposits is discernible. Against a decline in the deposits of trading concerns and personal deposits there has been an increase in Government deposits and in the deposits of manufacturing concerns. The figures in Table II bring out this trend.

Apart from economic factors which have helped in bringing about greater integration of the banking system and in enhancing the Reserve Bank's control over commercial banks, certain measures taken on the administrative side by the Reserve Bank have strengthened this tendency. Since 1949, when the Banking Companies Act came into operation, the Reserve Bank has been maintaining a close supervision of the commercial banks, with a view to improving the efficiency and the tone of the banking system as a whole. Under Section 11 (1) and Section 11 (3) of this Act, banks with paid-up capital and reserves of less than Rs. 50,000 are required to cease transacting business, with the result that banks of this category have come down in number from 83 in 1949 to 7 in 1957. At the same time, steps are taken to promote amalgamation of small banks in the interests of depositors and greater stability and, in order to prevent the springing up of mushroom growths which cannot be operated efficiently. Furthermore, the system of inspection of banks by the Reserve Bank started in March 1950 provides an opportunity to the Reserve Bank to acquire an intimate knowledge of the conduct of business by these banks. These regular inspections have resulted in the exposure of some of the common defects of small-sized banks and in the general toning up of the banking system.

IMPRESSIONS OF WORLD BANKING—II

CONSUMER CREDIT—CREDIT CHECKING

By G. Lakshminarayanan

ASSISTANT GENERAL MANAGER, INDIAN OVERSEAS BANK, LTD.

THE adoption of 'consumer credit' by commercial banks in the U.S. is a landmark in the evolution of "credit economy." Commencing 50 years ago primarily as another line of business, the mechanism of sales finance emerged in course of time from a state of condemnation to one of respectability. Today, it is a response to American social needs, as the standard of living, the world's highest, is a measure of widespread ownership of homes, automobiles, household appliances and every other consumers' durables. A third of all retail sales in the U.S. is on credit, and instalment credit has fulfilled the twin functions of promoting consumer demand and releasing the production potential of factories. Dealers have to secure buyers for about six million new automobiles every year, a greatly excessive number of used cars, refrigerators, washing machines, television sets, etc. While sales finance companies, consumer finance companies, personal finance companies—institutions who assume credit and collection functions for their customers by purchasing their receivables without recourse to customers for credit losses—have done yeoman service to popularise this mechanism, the effective stimulation of consumer credit started with the participation of commercial banks. The (First) National City Bank of New York 'ventured' into this field 30 years ago, and true as a pioneer, has carried the grand tote to some 6.7 million loans aggregating $4.1 billion till the end of 1957. At the year-end, this bank carried 556,000 loans amounting to $310 million. The Manufacturers Trust Company, also established in 1812, is the second leading in the line, and today banks who stood aloof are employing ingenious methods to gain lost ground. At the end of last year, commercial banks' holding of consumer credit amounted to $15.7 billion, a sixth of their total advances. Incidentally, American banks' personal loans alone amount to nine times the *total* advances of all Scheduled banks in India. Total consumer credit through all agencies amounted to 44.7 billion dollars or Rs. 21,230 crores.

Another Version of Democracy

A bank executive characterised the "personal loans" as another version of democracy in the U.S.; the man in the street can obtain credit with the same ease with which the General Motors Corporation can. So it is. When I was in New York, the Chrysler Corporation floated a $150 million loan and banks' tenders amounted to $200 million, interest rate being no more than 3½ per cent. In the same way, and in spite of cost-consciousness, American banks compete for consumer credits ranging from $60 to $10,000. They announce through special handouts that account relationship is not a condition for these loans; apart from extensive branch organisation, most banks employ field workers called "credit interviewers," trained in personal loans technique and salesmanship. As special incentive, an officer completing his monthly quota gets $25. Each automobile loan gets $1, and each account transferred from another bank fetches 50 cents. The Manufacturers Trust Company has 97 such interviewers. An exhaustive manual of instructions starts with the preamble that the various plans and guides are no more than suggestive, that every case should be taken up for consideration on merits, and rules are not to supersede sound judgment. The despatch is so prompt that a loan application submitted by 2 p.m., is disposed of before noon next working day. In the interval, the application goes through exhaustive scrutiny, the credit interviewer himself uncovers every material fact, the Central Department checks with the applicant's employer as well as his previous bank. By mutual understanding, credit enquiries are lodged with banks until 2 a.m., and are replied by 8.30 a.m. Personal Loans Department works round the clock. By 10 a.m., credit checking with the employer is complete and the application is admitted or rejected by noon. While sanction can be made by one officer, rejection calls for concurrence of two officers. A new borrower gets a "welcome letter" and one completing satisfactory repayment gets a "thank you letter."

Each bank has tried to outwit the other in personal loan service. and now this financing covers practically every sort of loan requirements, payment of medical bills, taxes, insurance premium, making cash purchases, going on vacation, etc., and "education loan plan" for tuition fees, automobile financing for new and used cars, instalment credit for home appliances, group loans to cover almost the whole household requirements, say at the starting of life by newly married couple, moving to more spacious house, etc., property improvement loans for modernisation, repairs and extensions, boat loans, collateral loan plans against bonds and stocks, small business loans up to $25,000 repayable in monthly instalments, extending to 50 months. The First National City Bank advances $9,000 against taxi-cabs, which, including licence, costs $18,000, while the car value itself is some $3,000 only. Commercial banks' holding of automobile paper alone is six billion dollars, 3½ times the total of scheduled bank advances in India. Every day, thousands of repayments are handled, with hundreds of thousands of outstanding loans, borrowers are divided not alphabetically but phonetically.

Loss Ratio

The reason for the astounding growth of consumer credit is not far to seek, for personal loan is a means of reaching practically every home. While big 'chunks' get only 3½ per cent. return, personal loans earn 4½ per cent. discount or nearly double that net. Market research has revealed that many families become hereditary borrowers of each bank; when one availment is complete, another is taken. And thanks to credit judgment of loaning officers, average loss ratio is not more than one-fifth of one per cent. and huge sums built up in special reserves in the early life of the scheme have since been merged with general reserves. Automobile repossessions for non-payment has not been more than one in 330.

I consider consumer credit to be of vital importance to India, from the point of view of banking, and larger perspective. Consumer credit promotes consumer demand by creating a market, boosts production, increases employment opportunities, adds to tax revenue and gives an upswing to national prosperity. It broadens the incidence of consumer demand, evens out purchasing power and balances price relationship. Without effective purchasing power in the masses, even well administered price control will be of no avail, as the privilege of buying under a scheme of rationing can be acquired at a premium by the rich. In fact, this has been amply demonstrated in the war and post-war years. Secondly, consumer credit gives fillip to consumer industry towards a balanced economy. Disproportionate weightage to basic industry without adequate development of consumer industry can well pose serious problems in the price front and inflation control. And, while basic industries are being established under State initiative as the keystone of national economy, consumer industries, numerous and varied, have to rest necessarily on the initiative of private enterprise, and no *entrepreneur* can stand it without a market. Again, consumer preference will be a guide to rationalisation, since the ultimate success of an industry will rest on its ability to satisfy consumer wants.

Power Not Known Before

Banks in India can make a useful contribution to economic evolution by a studied phase of consumer credit. For example, they can assist the artisan to take to modern implements and power. We are fast developing electrical energy and Indian companies produce lathes, electric motors, etc. The Indian artisan, who is still weighed down by primitive methods, can give precision and speed to his products, can reduce drudgery of work, if only he has the means to equip himself. Each 'slum' of the artisan can rise into a small factory of five or six people. This will increase their standard of living and reduce the evils of gigantic units. Socially such a scheme can have sobering effect on the individual and the society itself and a step towards the "Welfare State." Banks can similarly assist in providing building equipments, road-making equipments, etc. They can help installation of sanitary equipments, electric fans, purchase of furniture, sewing machines, typewriters, radio sets, musical instruments, washing machines, motor cars, scooters, bicycles, etc. They can finance road and water transport agencies and reduce the strain on railways. They can assist house building, modernisation, electrification, can promote education, particularly vocational, by appropriate loan plans. In short, bank finance can open up vistas yet unknown in this country, and can revolutionise living standards. And the psychological impetus to extension of banking habit will place in Indian banks an influence and power not known before.

Deutsche Mark *Versus* U.S. Dollars

Yet another aspect of consumer credit is the influence of a large domestic market on the strength of the local currency. As an example, here are two countries, the U.S. and West Germany, which in technological advance and industrial production have attained a very high degree of development. Germany has surplus industrial production and mounting foreign exchange balance, same way as the U.S. The Deutsche Mark is intrinsically as strong as the U.S. Dollar, yet at no conceivable future can the Deutsche Mark attain parity with the U.S. dollar in the wider sense of the term. One important reason is that the Deutsche Mark lacks the wider base of the U.S. dollar. Germany has a limited market as compared with the U.S. India, with its teeming population, offers unique opportunities for a high industrial potential, if only consumption will keep pace with production, if production and consumption react on each other to take both to higher levels. The intermediary for this consummation is the credit mechanism.

Legal Climate

The successful working of consumer credit in the U.S. has been assisted by salutary statutory protection. The chattel mortgage has been accorded high sanctity, with easy recourse both to goods and personal liability. Similar protective legislation will be necessary in India. As we gain experience in practical administration, we could move the Reserve Bank of India for enabling legislation. Similarly, the facility of group life insurance in the U.S. has relieved both banks and borrowers the consequences of mortality, as, for a nominal premium, banks can cover this risk. May be this again can be moved at high levels at the Life Insurance Corporation of India.

Crack in British Citadel

There has been some reservation outside the U.S.—with English banks as the chief protagonists until a year ago—on the propriety of commercial banks associating themselves with consumer credit. One ostensible ground is the virtue of specialisation that goes with such banks. But banking experience in several countries shows that specialisation is itself only an intermediate state, denoting the competence and organisational efficiency of a set of institutions in a certain sphere of activity, and the yet higher stage of consummation is a state of versatile banking. A specialised institution uses its knowledge and organisation to extend its sphere of operation beyond its early confines, acquires proficiency in the extended field, and ultimately becomes specialised in every type of activity. Also with gradual evolution of economy, commercial banks have come to attract the largest share of resources, and no scheme of credit can be adequate without direct participation by this class of privileged institutions. Also commercial banks, by the privilege of international association, have organisational facility, and the larger the sphere of these bank operations, the greater will be the service to customers. A pamphlet of the Manufacturers Trust Company details 70 ways in which it serves its customers. These particulars are reproduced below:

Service Rendered by Manufacturers Trust Company

General Banking

Regular Checking Accounts
Special Checking Accounts
Savings Accounts
Register Check—Personal Money Orders
Christmas Club Accounts
Gift Checks
Collections
Transfers of Money by Wire
Depositary for Withheld Taxes
U.S. Savings Bonds—Sale and Redemption
Freight Bill Payments
Certificates of Deposit

Loans and Extension of Credit

Commercial Loans
Personal Loans—Single Name and Co-Maker
Automobile Loans
Property Improvement Loans
Life Insurance Loans

(*Continued on page 651*)

GROWTH OF INDIAN RAILWAYS

THEIR ROLE IN INDUSTRIAL PROGRESS

FROM modest beginnings in 1853, the Indian Railways have grown from strength to strength and attained today the distinction of being the largest nationalised enterprise. Again, as is perhaps only to be expected, they have played no mean part in India's industrial progress. A study of the history of industrialized regions in the country will bear out the claim that the extension of the Railway system to a region is invariably followed by the establishment of industrialised enterprises in that region. The Railway week, which commenced on 10th inst., provides an occasion for viewing the Railways in retrospect and assessing their future role.

In 1853, India's railway operated on a mere 20-mile route. By 1871, the route-mileage exceeded 5,000 and by 1890, it crossed the 16,000-mark. In 1910, it was about 32,000 and 41,000 by 1929-30. With the partition of the country, the Railways were left with 34,000 route miles in 1947-48; they increased to 35,000 miles by 1956-57. The freight carried by the Railways has grown with the increase in route mileage and in agricultural and industrial production. In 1871, the freight originating on Indian railways stood at 3.5 million tons and passengers at 19.2 million. In 1899, these figures were respectively 22.6 million and 110 million and by 1929-30, they had increased to 87.3 million and 630 million. In 1956-57, the goods traffic was 125 million and the passenger traffic 1,380 millions. The capital-at-charge moved up from a mere Rs. 37 lakhs in 1853 to Rs. 90 crores in 1871, Rs. 213 crores in 1890, Rs. 439 crores in 1910, and to Rs. 1,350 crores in 1958-59. Similarly, gross earnings and working expenditure went up from Rs. 90,000 and Rs. 41,000, respectively, in 1853 to Rs. 6 crores and Rs. 3 crores, respectively, in 1871; they rose to Rs. 20 crores and Rs. 10 crores in 1890 and still further to Rs. 116 crores and Rs. 75 crores in 1929-30. In 1958-59, gross earnings aggregated Rs. 394 crores and working expenditure Rs. 319 crores. In the beginning, the Government had agreed to pay the railway companies a minimum guaranteed interest on their investments. For a number of years, the Government had to meet the loss of the Railways from general revenues. The position was reversed from 1924-25, for, since that year, the Railways have been making a substantial contribution to the general revenues, which, in 1956-57, amounted to Rs. 38 crores. The following table gives some important statistical data relating to the working of the Railways in 1938-39, 1948-49 and 1957-58:

Class I Railways

	1938-39	1948-49	1957-58
Works machinery and rolling stock programmes (in crores of Rs.) ..	9.41	54.01	250.66
Total staff	641,099	856,795	1,111,026
Total gross receipts (in crores of Rs.).	103.5	225.7	391.4
Total working expenses (in crores of Rs.)	68.8	178.0	309.3
Tons originating (in million)	84.4	78.5	132.1
Ton miles (in million)	21,873	22,337	44,861
Passengers originating (in million) ..	499	1,114	1,410
Passenger miles (in million)	17,988	37,129	43,043
Total stores purchases (in crores of Rs.).	9.38	100.4	221.8
Rolling stock as on 31st March—			
No. of locomotives	7,919	7,761	10,025
No. of passenger carriages (in units).	16,620	12,665	17,599
No. of wagons including special wagons (in units)	205,017	198,863	275,970

The Indian Railways, according to figures compiled by Mr. P. C. Mukherjee, Chairman of the Railway Board, provide about the cheapest form of transport in the world. Thus, the average rate per passenger-mile in India is 5.33 pies and the average rate per ton-mile is 11.3 miles, as compared with 15.5 pies and 33.9 pies respectively in the British Railways and 24.5 pies and 12.7 pies in the U.S. Class I Railways. The average rate per passenger-mile and the average rate per ton-mile (shown within brackets) for other national railways (in pies) are:

Canadian National 29.1 (13.9); Canadian Pacific 27.5 (13.2); French National 21.4 (27.0); German Federal 13.4 (26.1); Italian State 11.1 (18.0); Japanese National 5.4 (11.2); Swedish State 18.8 (24.7) and Swiss Federal 17.2 (48.1).

A notable feature of the development of the Railways is that, in many regions, it has synchronised with India's industrial progress. As Mr. G. P. Shahani, General Manager, South Eastern Railway, points out, "over the past century, industrial development has followed in the footsteps of the Railways." Bombay got its first textile mill in 1854, a year after its first railway communication was established. In the Calcutta area, the Railways came in 1854, and later, in that very year, the first jute mill was set up. The history of the East Indian Railways, now part of the present Eastern and Northern Railways, follows the growth of the coal industry. Oil was struck in Assam in 1867 and the first oil was drilled in 1889, after the then Assam Railways and Trading Company had completed their railway track in 1882. Tea industry in Assam and Bengal grew with the extension of Railways to this region which was undertaken at the request of tea planters.

Besides providing, as noted above, indirect fillip to industrial progress, the Railways stimulate progress in a relatively more direct manner in two ways. In the first place, they are large consumers of stores, so that many industries, large-scale as well as small-scale, are dependent on the Railways for the offtake of their products. Between 1950-51 and 1956-57, the purchases of indigenous product by the Indian Railways increased from Rs. 62 crores to Rs. 126 crores. The Railways have substantially contributed to the development of such ancillary industries as those manufacturing wagons, wheel castings, vacuum brake fittings, train lighting equipment and paints and brushes. Secondly, the Indian Railways are themselves the manufacturers of a wide range of transport equipment, including locomotives and coaches. The values of the equipment manufactured by the Railways in 1957-58 with the corresponding figures for 1947-48 in brackets, are: (Rs. in lakhs);

Engineering plant and components 35.8 (5.6); workshop machinery and tools 89.6 (7.7); permanent way material 24,00.9 (379.4); steam locomotives and parts 13,59.2 (60.9); wagon underframes and parts 14.50.6 (275.7); signalling equipment 201.9 (15.6); electrical telegraph and telephone equipment 735.4 (33.4).

Realising the importance of the Railways to national economy, the Government has stepped up the outlay on the Railways from Rs. 400 crores in the first Five-year Plan to Rs. 1,125 crores in the second Plan. The second Plan aims at increasing the capacity of the Railways to a level at which they will be able to carry 168 million tons of freight traffic, as against 114 million tons in 1956. No decision has yet been taken on the third Plan. Some tentative estimates, however, have been made. Thus, Mr. Mukherjee observes that "with even the very little that can be foreseen at this stage, it appears that an annual freight capacity of 260 million tons may be required to be built up by the end of 1965." He, however, points out that the third Plan for the Railways "can be formulated in more precise terms only after a clearer picture is obtained of the major industrial and agricultural developments to be undertaken in the third Plan period." There is no doubt that, in the context of the rising tempo of India's industrial progress and the vast tracts in the country which have yet to be opened up to rail communication facilities, the Indian Railways will be called upon to shoulder an increasingly larger burden of freight and passenger traffic in the coming years.

B.O.A.C.'S ROUND-THE-WORLD PLAN

The B.O.A.C.'s plan to operate round-the-world fast flights by employing two of its fastest airliners —the Comet 4 and the jet-prop Britannia 312—has been upset by a U.S. operator, the Northwest Airlines. It will be recalled that the B.O.A.C. had proposed to operate this plan from 1st April 1959. But till the time of writing, only a part of the plan has been in operation.

The plan for putting a jet girdle round the earth, so that one can fly around the world in a little less than 87 hours, is in two parts. One is west-bound with Britannia jet-prop liners in use, from London to Hong Kong via New York, San Francisco, Honolulu, Wake Island and Tokyo. The other part covers the East, from London to Tokyo, via West Asia and India. On this route is used the new Comet 4 jet. The second part of the plan is already in operation but, of the first part, the operations covering the mid-Pacific have had to be postponed, because of the objection raised by the Northwest Airlines.

Explaining the hitch, Mr. Basil Smallpeice, Managing Director of B.O.A.C., said that, under the Air Services Agreement between the U.S.A. and U.K. Governments, the B.O.A.C. could operate a route from San Francisco across the Pacific to Tokyo and Hong Kong. "As at today," he observed, "we have the right to do so and the B.O.A.C. could start to operate commercial flights at once, but for one fact." He added: "Under American procedure, we are required, before starting to operate commercial flights, to have a permit from the American Civil Aeronautics Board. Under British procedure, and under the same agreement, an American operator obtains an operating permit virtually automatically from the U.K. Government and can begin to operate services immediately after designation has been accepted, which takes only a matter of days. The B.O.A.C. application reached the American C.A.B. on 4th November 1958, having been lodged originally with the State Department on 23rd October in accordance with their requirements. Today, some five months later, we have still not received any permit, despite the stipulation in the agreement that permission to operate shall be granted without undue delay. By any standard, five months is more than an undue delay."

Referring to the protest by Northwest Airlines, Mr. Smallpeice said: "This airline operates commercial flights from New York through Seattle to Tokyo, but it does not serve San Francisco or Honolulu on the route. Its traffic is, therefore, mainly different from that on the B.O.A.C. route from San Francisco through Honolulu and Tokyo to Hong Kong. Nevertheless, Northwest Airlines complains of potential competition from B.O.A.C.'s new service. It also complains of its failure to obtain rights from the U.K. Government for a new route beyond Tokyo to Hong Kong which is not included in the present agreement."

"It should be made clear," said Mr. Smallpeice, "that what we in B.O.A.C. are seeking to do is merely to exercise our right under the present agreement to provide the British counterpart to the American services across the mid-Pacific which have been operated by Pan American Airways since 1946, linking Hong Kong with San Francisco. On this route, P.A.A. is already operating services over the sector between Tokyo and Hong Kong and actually carries more traffic than any other operator between these two points, one British and the other Japanese. In our view, it would, therefore, be quite unreasonable for yet another American carrier, the Northwest Airlines, to be granted a new route into Hong Kong, additional to the present agreement."

In the light of Mr. Smallpeice's explanation, it sounds strange that the Northwest Airlines should have raised the objection at the last minute and that the American C.A.B. should have entertained it. But in the U.S., domestic industry has a powerful voice and is strongly protected. The airlines are no exception. Although the U.S. State Department considers that the B.O.A.C. is within its right in seeking to add Tokyo to its route network, it is helpless. Under American law, the Civil Aeronautics Board, which is the governing body of civil aviation in the U.S., is obliged to hear any objections made by American carriers to plans by foreign airlines to increase their services to and through the U.S. The contention of the Northwest Airlines, apart from the one referred to by Mr. Smallpeice, is that the B.O.A.C. plan would divert traffic worth almost $13 million per annum from domestic lines. The outcome of this contest is awaited with great interest by airline operators all over the free world, for it involves an important matter of principle. Explaining this point, the *Financial Times*, London, says:

"Should the Northwest Airlines' objection to B.O.A.C. be upheld, it is likely that other American carriers would feel encouraged to make similar objections to other foreign route applications in the future. This might well result in the eventual closure of the U.S. market to foreign airlines wishing to operate new through services—a situation which could do nothing but harm to the development of world civil air transport."

Meanwhile, the B.O.A.C. has announced its plans for the introduction of Comet 4 jets on other routes. Thus, Sir Gerard d'Erlanger, Chairman of the B.O.A.C., stated that the Corporation would introduce Comets to Australia and South Africa before the end of the year and probably also to South America in 1960. The Comet 4 jetliner, as is well known, is a pioneer among the world's jetliners. It is, therefore, called a pure-jet-airliner. With a length of 111 ft. 6 in. and height of 28 ft. 6 in., it has a wing span of 114 ft. 10 in. It can carry 9,000 gallons of kerosene which it consumes at the rate of 4,000 gallons an hour during the take off but only 800 gallons an hour when it attains the cruising height of 40,000 ft. It flies at an average cruising speed of 500 miles per hour. The aircraft moves so smoothly and steadily that, despite its immense speed, one feels no sensation of flying.

The Comet 4-jet will cover the distance from Bombay to London in 13 hours and Delhi to London in 15 hours, as compared with 12 days taken by the first air service in 1927. The first half of the round-the-world trip has proved that the Comet 4 is admirably suited for the London-Far East route. The Comet has also set up a new civil record on the Beirut-Karachi sector by flying 2,165 miles in 3 hours 56 minutes.

The Britannia jet prop airliner has completed the second half of a round-the-world flight from Tokyo to London, a distance of 13,000 miles, in 33 hours and 16 minutes. The 3,980-mile flight from Tokyo to Honolulu—the longest over-water crossing in the world—took 10 hours 44 minutes. The flight from Honolulu to San Francisco—2,460 miles —took 7 hours 9 minutes. The Britannia flew 2,845 miles non-stop across the United States in 6 hours 55 minutes. Then, after a brief halt at New York, it made the Atlantic crossing to London in 8 hours 28 minutes.

DEAFNESS
Ostalgin Drops Externally .. Price 2.50
Ostalgin Pills Internally .. Price 2.50

GIRGAUM, BOMBAY, 4

NEW PRODUCTS AND PROCESSES

New Electronic Thermometer

A NEW type of electronic thermometer which will measure the temperatures immediately it is placed in contact with objects has been developed by the Wayne Kerr Laboratories of the U.K. The device, which is at present in prototype form, can be used, it is claimed, to measure the heat lost from particular windows of buildings, doors or ceilings, or office heating systems, as well as during the different stages of industrial processes. It could also, the results achieved so far suggest, be used to give virtually instantaneous measurements of the temperature of the human body—within a second or so of its initial application to the surface of the skin. This would be an important advance in clinical medicine. A useful feature of the new instrument, is the fact that the temperature measuring probe can be operated at a distance of up to 1,000 feet from the recording device. The device depends on the use of a temperature-sensitive metalic oxide lead which is connected to a sensitive direct current bridge measuring circuit. The complete unit weighs 4 lbs., and is 8¼ inches by 6 inches by 4½ inches. One of the prototype models of the thermometer is now in use by a geological exploration party in New Zealand.

Anti-corrosion Coating for Metals

Anti-corrosion coatings that can be applied to metals and used also as a protective surface for concrete are being offered by Wolseley Holdings of Caton Road, Lancaster. Seven different grades of the coatings are offered, each formulated to satisfy a given range of conditions. They are made from synthetic resins produced in Germany and are applied by spray, the surface having previously been subjected to a cleaning process such as shot blasting. Some of the coatings are hardened by baking, while others harden catalytically. They are said to be particularly suitable for giving protection against the action of flue gas dew point corrosion and for protecting heat exchanges from attack by sea and brackish water. Another advantage claimed for the coatings is their low co-efficient of friction which makes them a suitable material for lining coal bunkers and chutes. Marketed under the name Lanshield Sakaphen, the coatings are usually applied at the dompany's Lancaster works, but teams of operators are available to carry out on-site application. The cost works out at between 7s. 6d. and 9s. 6d. per square foot. Vessels and other equipment weighing up to 20 tons, 42 feet long and 13 feet in diameter can be handled at the Lancaster works.

Mothproof Wool

As a result of research and tests carried out by a British company, Shell chemical it is now possible to manufacture all forms of woollen goods completely mothproofed. The development makes unnecessary annual mothproofing of knitwear, baby clothes, underwear, carpets, underfelts, soft furnishings, coats, suits, dresses, and bedding. The new product is applied by the manufacturer at the processing stage, and is not suitable for domestic application. It is relatively low in cost and makes economically possible the mothproofing of the full range of woollen goods. It cannot be detected on the wool and the mothproofed garments, nor is the product affected by long wear or the effects of sunlight. If applied under certain conditions laid down by the producing company, the mothproofing effect is maintained after repeated washing or dry-cleaning. Carpet manufacturers have been making effective use of the product for some time.

A New Machine Tool

A Swiss firm, Tarex Ltd., Geneva, which specialises in the manufacture of precision machinery, has produced a new automatic lathe, which will be shown at the next European exhibition of machine-tools, to be held in Paris in September. From the practical point of view, this single-spindle lathe, it is said, makes it possible owing to its numerous technical innovations, to reduce, by nearly 40 per cent., the time required for production with the use of normal machines. Among its particularities, mention should be made of the pre-selection of the spindle speeds obtained by means of electronic control; in this way, it is possible to fix any desired speed in respect of each position of the turret-head, which is thereupon automatically thrown into gear during the cycle of work.

Copper Chlorophyll from Stinging Nettle

A process to prepare copper chlorophyll direct from the stinging nettle leaves has been developed at the Forest Research Institute, Dehra Dun. Dried stinging nettle leaves powdered to a fineness of 10 to 60 mesh are extracted with ethyl alcohol after wetting with copper sulphate solution. The extract is concentrated under acidic conditions and refluxed in the presence of a suitable copper salt whereby copper chlorophyll separates out. The product obtained is washed with hot water and purified. The economics of the process has been studied in a pilot plant set up at the Shri Ram Institute for Industrial Research, Delhi, where several batches of 4 kgs. of dry leaves have been successfully processed. Extraction efficiency of about 80 per cent. has been achieved giving a yield of 4.5 per cent. of the product on dry leaves. The product has been tested by some leading soap manufacturing firms who have reported favourable results. Copper chlorophyll finds wide applications in the soaps, oils and cosmetics industries as a pigment. It is also used in the manufacture of green paints for military purposes.

CANARA BANK LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

SPEECH delivered by the Chairman, Mr. A. D. Pai, at the Annual General Meeting of the Shareholders of Canara Bank Limited held on 20th February 1959 at the Bank's Registered Office at Mangalore.

"The 53rd annual report with the balance-sheet as at 31st December 1958 and the profit and loss account for the year 1958 has been already in your hands, and with your permission I shall take it as read.

"In keeping with the trend of the previous year, the year 1958 saw a further increase in the banking resources of the country, deposits increasing by about Rs. 207 crores during the year. But unlike in the previous years, banks were in a very comfortable position. The deposits of your Bank rose from Rs. 17.84 crores to Rs. 23.76 crores, an increase of Rs. 5.92 crores as against nearly Rs. 3.5 crores of the previous year.

"In spite of this increase in deposits, banks continued to offer higher rates for deposits for fear of losing the deposits they had. The only course open to banks under these circumstances was to resolve the difficulty by co-operative endeavour. The Indian Banks Association took up the matter in right earnest, and, in spite of several obstacles in their way, finally succeeded in ironing out the differences and reaching an agreement which came into effect as from 1st October 1958. Under this All-India Inter-Bank Agreement, maximum rates of interest on deposits are fixed, and certain terms for accepting call deposits are agreed upon. It is yet too early to assess the effects of this agreement. But one noteworthy feature of the present trend is that in spite of this stabilising of interest rates, deposits of Scheduled Banks have been registering satisfactory increase.

Good Response to Fresh Capital Issue

"The issue of capital during the year under report met with good response from shareholders as well as employees of the Bank. There was heavy over-subscription, and the number of shareholders increased by nearly 1,300. There is as at the end of the year under report a small amount of unpaid calls of Rs. 19,180.00, and to that extent the paid-up capital falls short of Rs. 50 lakhs.

"Our reserve fund stands at Rs. 45 lakhs, and the share premium collected during the year amounted to Rs. 6,24,246. This latter amount has been shown separately in the balance-sheet.

"The increase under deposits referred to already is reflected in the increase under investments and advances. Our investments at the end of the year were almost twice those at the beginning. The pattern of investments of Scheduled banks in general has been similar. The steady and increased demand for gilt-edged securities by banks and other investment institutions has resulted in an upward trend in security prices. The market value of our holdings is higher than their book value by over Rs. 16 lakhs.

Advances Higher

"Our advances though higher by Rs. 2.14 crores over the previous year were still only 46 per cent. of our deposits as against 49 per cent. of the previous year. In this, as under investments, our advances have followed the pattern of other banks in the country. Consequent on increased burden of interest due to larger deposits, and the difficulty experienced during the year in finding outlets for the fast increasing surpluses, the profits of the Bank have been lower. This is in consonance with the general pattern of bank profits so far revealed by the operating results of other banks.

"In this context must be seen the greater competition among banks for a larger share of advances to customers which is resulting in the lowering of the rates of interest on advances. It is to be seen how far banks will be able to take advantage of lower rates on deposits to maintain their profit level after meeting growing demands under expenditure.

"One item under expenditure which does not abate with lower profits is that of salaries and emoluments of the employees. The Bank Award, which has been in force for some years past, lapses by next month-end, and bank employees are already agitating for higher emoluments and better amenities. Employees play a part as important as that of capital and management in the earnings of the bank, and therefore, their reasonable demands deserve consideration. The income of any commercial institution comes from the joint efforts of capital, management and labour, and consequently the net earnings are to be shared between them. The share of each can rise only if the net earnings go up. We in the management shall do everything possible to augment the net earnings, and I am confident that employees will also play their part effectively by showing a greater consciousness of their duties and by giving better turnout of work and by displaying a higher standard of discipline.

Eight New Branches

"During the year eight new branches were opened, one in Bombay City, five in Mysore State, one each in Kerala and Bombay States. These, and the branches opened in 1957, are making satisfactory progress. Arrangements for opening branches at Bhavnagar, Poona, Malmaddi (in Dharwar), Byculla, Chembur and Vijayawada are being made, and these branches will be shortly opened. Your Bank has also plans for opening some branches in other important commercial centres for which licences from the Reserve Bank of India are awaited.

Foreign Department

"In spite of the import restrictions and lower exports, our Foreign Department is making satisfactory progress. Two officers of the Foreign Department have returned after training in West Germany. One of our Deputy General Managers has returned after studying banking methods in the U.S.A. and another will be shortly leaving for Japan, the U.S.A. and the U.K. Two more officers are also proceeding this year to West Germany.

Executor and Trustee Department

"An Executor and Trustee Department has started functioning, and the response so far received from the public is highly encouraging. Your Bank expects better results in this new department in the current year.

President Rajendra Prasad Lays Foundation Stone

"The ceremony of laying the foundation-stone of the Administrative Offices of the Bank performed by Dr. Rajendra Prasad, President of India, on 2nd February 1959, marks an important milestone in the history of the Bank. On this occasion hundreds of messages of good wishes were received from far and near. These messages have strengthened our confidence to be of greater service to an increasing number of patrons. Special mention may be made, in this connection, of Dr. Rajendra Prasad's speech from which the following extracts are taken:

"'The history of your Bank has a special feature to commend itself. The very idea which motivated its founders, particularly the late Shri A. Subba Rao Pai, principal among them, was that of improving the economic condition of the people by starting an institution to instil the habit of thrift and saving and to give financial assistance of a moderate scale to business and others needing such aid.

"'Glad as I am to know the contribution of your Bank to the economic and commercial development of these parts during the last half a century, I have felt particularly drawn towards your various welfare activities.

"'To-day there lie before it possibilities and opportunities of which its founders may never have dreamt. It is so gratifying to know that these opportunities are being utilised by the Directorate of the Bank not only in the interest of the Bank and its clientele alone but also of the nation as a whole.

"'I congratulate all connected with the Canara Bank and responsible for its progress.'"

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

To be placed before the shareholders at the ensuing Fifty-second Annual General Meeting to be held on Friday the 24th April, 1959 at 11 a.m. at the Registered Office of the Bank, "The Indian Bank Buildings," North Beach Road, Madras-1.

DIRECTORS' ONE HUNDRED AND THIRD REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1958. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 21,30,556.94 and together with the sum of Rs. 2,04,375.82 carried from the previous year's account, makes a total of Rs. 23,34,932.76.

3. Out of this sum, the Directors have made the following interim appropriations:—

	Rs.	nP.
An ad interim dividend at the rate of 5 per cent. and a Bonus of 1½ per cent. (both free of income-tax) was paid which absorbed	4,32,000	00
The Directors now recommend that the following further appropriations may be made:		
To pay a final dividend of 5 per cent. and a Bonus of 1½ per cent. (both free of Income-tax) thereby making the dividend and bonus for the year amount to 13 per cent.	4,32,000	00
To provision for Taxes	6,50,000	00
To transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949	7,30,000	00
To transfer to Bank's Buildings Account	30,000	00
To carry forward	60,932	76
Total .. Rs.	23,34,932	76

4. The Bank rate remained unchanged at 4 per cent.

5. Offices of the Bank were opened during the year at Kothwal Bazaar (Madras), Alwaye, Ballapatam, Basvangudi (Bangalore), Malleswaram (Bantzalore), Mandya, Karol Bagh (New Delhi), Pondicherry, Poona, Ekambarakuppam (Nazari), Gobichettipalayam, Karur, R. S. Puram (Coimbatore), Town Hall Road (Madurai), and Udumalpet.

6. In the vacancy caused by the sad demise of Rao Bahadur Dr. M. R. Guruswami Mudaliar, Director of the Bank, Sri Ramdas Purushottamdas was co-opted as a Director.

7. In accordance with Articles 92 and 93 of the Articles of the Association of the Bank read with Section 256 of the Companies Act, 1956, four directors, Messrs. Dr. Rajah Sir M. A. Muthiah Chettiar of Chettinad, O.M.SP.L.M. Meyyappa Chettiar, K. Arunachala Mudaliar and Ramdas Purushottamdas retire this year by rotation and they, being eligible, offer themselves for re-election.

MADRAS, 26th March, 1959.

That this view in gaining ground is shown by the crack in the conservatism of British banking. The biggest of the "Big Five" created a sensation in the world Press by the introduction of "personal loans" effective from 1st September 1958. The scheme which is available for bank's customers holding a conventional account, current or deposit, is to assist in "exceptional non-recurring items of expenditure, such as house repairs and decorations, the purchase of cars and furniture and substantial items of household appliances and professional equipment." In the great majority of cases, the bank requires no security of any kind. Loans can be had from £50 to £500. Now this scheme, which is about 30 years behind time as compared with the U.S., covers a few sections of consumer credit in the U.K. But the conservative traditions of British banking have begun to yield place to progressive banking.

Credit Checking

Another speciality of American banking is credit checking. Perhaps inter-bank competition is the keenest in the U.S., the land of the survival of the fittest, but to the resourceful American banker enlightened co-operation offers the best security, what of the inexorable risks that he is called upon to take every minute. Credit-checking is a specialisation with the U.S. banker and every material information in his files is at the disposal of his fellow banker on mere call, even over long-distance telephone call between cities and cities. A guide to credit officers carries names and private numbers of their opposites at other banks in and outside the city. The code of conduct is: no custom should be solicited by the enquiring bank within six months of checking. This code is scrupulously followed by all respectable banks. It is different if the customer himself takes the initiative. An overseas banker should mind his wits before he elects to brag about the "lines" he has with another bank, because credit checking extends to correspondent banks as well, and is as complete as a non-banker customer. I wish the Indian banker who has followed with infinite faith the severe taciturnity of his English preceptor will take a leaf out of the pages of U.S. banking, and not only not refuse to give information, but put some value in the information. I am glad that the Reserve Bank of India has taken the lead for the creation of a Central Credit Information Bureau, and let us hope this will become an effective organisation. In the U.S., there are private agencies as well, such as Dun and Bradstreet, who have earned a reputation for their work, and there is a case for similar agencies in India, of course, under right guidance.

Open Skies

Such information exchange is not on customers alone, practically every manual and every form used in banks is freely available. If we show interest in any aspect of American banking, a beautiful folder is presented with compliments. The only exception is *Inspection Manual*, as it lays down some methods of sample checking, and this has necessarily to remain private. I asked a bank executive how this free exchange came about as against the unhelpful attitude in other countries. He confessed that American banks started likewise but soon found that their best secrets appeared in newspapers, and the right remedy was "open skies". Even annual reports of American banks give far more information than British. In fact, the reports of British banks hardly reveal anything but the barest of data. Barring the number of branches, even the number of staff is not disclosed, leave alone detailed analysis of funds, employment, etc., and every bit is shrouded in the thickest veil of secrecy.

(To be continued)

The inflow of gold and foreign exchange into France since the beginning of the current year amounted to $793 million. This compares with the total reserves of no more than $19 million at the end of May 1958, that is, when General de Gaulle formed the new Government.

Switzerland has granted a five-year loan of 25 million francs to the United Arab Republic for the purchase of Swiss textiles machinery. The loan carries an interest rate of 5 per cent. It is guaranteed by the Swiss Government and is being made by a group of banks and textile concerns.

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December 1958 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches, other than those in Malaya, and with certified returns from Malayan Branches and report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;

(b) Such information and explanations have been found to be satisfactory;

(c) The returns received from the branches have been found adequate for the purpose of our audit;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required;

(f) In our opinion,

(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1958;

(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

CHAIRMAN, DR. T. M. A. PAI'S SPEECH

SUGGESTIONS FOR RATIONALISATION OF OPERATING COSTS

ADDRESSING the shareholders of the Canara Industrial and Banking Syndicate Ltd. at their Annual General Meeting held in Udipi on 30th March 1959, Dr. T. M. A. Pai, Chairman of the Bank, made several suggestions for rationalisation of operating costs of banks. These were: (1) utilisation of the entire branch system of one bank by another bank as its own, (2) exchange of credit information among banks, and (3) spreading out the risks by joint handling of certain advances, if they were too large for any one of them.

The following is the full text of Dr. Pai's speech:

"GENTLEMEN,

"The year 1958 has been one of peculiar circumstances to the Indian banking system and we could not be an exception to these difficulties. There was keen competition among banks for deposits and even the bigger institutions did not hesitate to enter this rate-war, making it more difficult for smaller institutions to keep away. Though our deposits improved from Rs. 10,31,06,670 to Rs. 13,11,30,055 in 1958, the deposits generally carried a higher rate of interest which is reflected by a steep rise in the interest paid to the depositors which increased from Rs. 25,01,406 to Rs. 35,49,449. If the increase in rates of interest offered by banks was due to a rise of general rates, one could appreciate this situation. But when it was only for attracting deposits from one another this was suicidal to the banking system. However, this situation came to an end when from October 1958 all the members of the Indian Banks Association agreed to restrict the interest rates payable on deposits. However, what has been prescribed as the maximum rate is tending to be the minimum offered by the banks, as the keenness to increase the deposits and retain the old deposits still continues. I would suggest that banks do reconsider the position and see whether a more rational rate-structure could not be agreed upon to reduce the interest liabilities, because the Indian banking system will be increasingly called upon to face the new problems of adjustments and increase their efficiency which should be reflected by the reduction in expenditure and unit cost of service.

Increase in Capital

"The paid-up capital of the Bank increased from Rs. 23,47,071 to Rs. 23,96,276. Our Directors decided that it is opportune now, on account of increase in deposits, to issue new ordinary shares to raise the capital to Rs. 50 lakhs. When the capital is fully paid up, we propose to increase the authorised capital of the Bank to Rs. 1 crore. With the transfer during the year and from the profit and loss account, the reserves have gone up from Rs. 22 lakhs to Rs. 26½ lakhs.

"You will see that the Bank had at the end of the year bank borrowings of Rs. 1,56,00,000 and as against this our investments in Government securities, etc., had improved from Rs. 3,84,19,146 on 31st December 1957 to Rs. 6,09,71,648 on 31st December, 1958. The increased funds on account of a rise in deposits and various restrictions on foodgrains advances generally kept most of the funds unutilised. And, therefore, the Bank had to increase its investments. But with the commencement of the busy season when there was a rise in advances, the Directors thought that it is better to meet their demands by temporary borrowings rather than by the liquidation of the securities. The investments in Government securities reduced by these borrowings along with cash in hand and balances with the banks constituted nearly 44 per cent. of the deposit liabilities, while advances which increased from Rs. 6,34,40,707 to Rs. 8,00,62,891 constituted 61 per cent. of the deposit liabilities. A happy feature of the investment in securities was to wipe out all the deficit in the market value of the earlier years and show, in fact, an improvement over cost during the year. The total working resources of the Bank have increased from Rs. 12,81,65,913 to Rs. 17,08,00,940.

"The salaries of the staff members were increased from the beginning of the year, 'B' class pay scales being applied, and the rise in salaries and allowances may be noted at Rs. 25,93,328 from Rs. 18,94,782. Last year, though there was an increase in gross profits from Rs. 63,21,392 to Rs. 82,17,744, the net profits were slightly lower at Rs. 10,22,350, while they were at Rs. 10,61,999 last year. During the year, branches have been opened at Bangalore—Chickpet, Bangalore—Cantonment, Bangalore—Seshadripuram, Baroda, Belgaum—Camp, Belgaum—Shahapur, Bombay—Mandvi, Hungund, Koppa, Mangalore —Bunder and Tiptur.

Role of Banks

"It is my desire now to place before you some of the problems that should face us in the future along with many rapid changes that are taking place in the economy of the country. Banks are being called upon increasingly to adapt themselves to meet the growing needs of the economy. In a planned economy, it is imperative that banks follow positive policies which make for the success of the Plans. In spite of recent efforts at opening new offices and consolidation of banking in the country, the fact remains that a very large section of the people require to be brought in touch and linked up with a modern bank. When the economy of the country is inevitably infused with deficit financing as a settled fact, some sort of persuasion to postpone spending and maximise savings in order to avoid inflationary conditions spiralling themselves and all-out efforts towards small savings supplementing the Governmental efforts in this direction are called for on the part of banks. But this means banks being willing to bear the burden of this national responsibility in the face of increasing costs.

"The usual avenues of advances being encroached upon as more and more selective credit controls are imposed, banks are being compelled to seek new customers and new lines of advances. Here again, their duty would be to do nothing to encourage speculative activities or encourage hoarding. Purpose of the borrowing should be as important a consideration from the national viewpoint, as security and liquidity from the banker's. If the loan helps the country towards productive activities and increase of national wealth, it should merit the banker's consideration. Small industries and small business which might have suffered for credit facilities hitherto require more attention. Agricultural operations which have languished hitherto for ready availability of credit in time are required to be catered to on a decentralised basis in close co-operation or collaboration with the State Governments and semi-Government agencies. Recently, warehouses have been started by the Central and the State Warehousing Corporations and the warehouse receipt as a credit instrument deserves to be fully popularised by banks.

Rationalisation of Operations

"Closer co-operation among banking institutions will tend to considerable rationalisation in our operating costs. Though, for many valid reasons, amalgamations may not be a practical proposition normally, there is no reason why there should not be agreement for co-operation in several directions. By a proper arrangement, the entire branch system of one bank should be capable of being used by another as its own, so that the service to the customers of each bank could be economically rendered and lack of branches is not a handicap to any bank. The entire network of branches of the State Bank of India developed as a national institution subsidised by the Exchequer should be permitted to be used by the other banks, in order to cater to the needs of the public, since this is the only way the entire banking system could be closely knit as one organisation. There should be a more free exchange of credit information among the banks on the clear understanding that such information passed on will not be abused for canvassing the account from the bank that has supplied the information. Such information should be detailed and full, given in strict confidence, rather than happily vague as now, if it should be of any use to the banks gathering it. Besides, the banks should have a system of black-listing clients for dishonest practices and cheating, so that the banking system as a whole might be protected against the malpractices of some. Banks could also spread out the risks by jointly handling certain advances, if they are too large for any one of them. It shall be our endeavour to translate these ideas in practice as far as possible.

"To face the future with confidence and success, it is clear that our staff should be encouraged to train and qualify themselves. Our Staff Training College now fully equipped has considerably improved with experience. Sri K. K. Pai, our Superintendent of Branches, who attended the Summer School of Banking in Aberdeen, also visited the various training classes in England and the Continent recently and he is himself under training in the Administrative Staff College of India at Hyderabad. Two of our officers under training in Germany are due to return this year.

"In conclusion, I should appreciate the co-operation and support given by our officers and staff to our General Manager, Sri T. A. Pai, in the successful expansion and development programme of the Bank. I wish the year 1959 would yet again be a new milestone in the history of the Bank." *Jai Hind.*

Notices

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4 p.m. on Tuesday the 12th day of May 1959, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1958.
2. To declare a Dividend and a Bonus.
3. To elect a Director in the place of Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company:

   "RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who has attained the age of 78 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by Section 280 of the Companies Act 1956 shall not apply to him."
4. To elect a Director in the place of Mr. M. G. R. Aitken, who retires by rotation and is eligible for re-appointment and offers himself accordingly.
5. To appoint Auditors for the ensuing year and to fix their remuneration.
6. To consider and if thought fit to pass the following resolution as a Special Resolution:

   "RESOLVED that this Company hereby approves of sales being made to the Assam Match Co. Ltd., an associate of the Swedish Match Company, the Managing Agents of the Company, of paper, machinery, spare parts and any other material connected with the manufacture and sale of matches at a rate equivalent to the Company's cost price plus 10 per cent. profit and that the Assam Match Co. Ltd. shall pay to this Company the cost of paper, machinery, spare parts and other materials within one month from the date of supply."

The Transfer Books of the Company will be closed from the 22nd day of April 1959 to the 12th day of May 1959, both days inclusive.

By Order of the Board,
A. HYDARI,
Executive Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, 1*st April* 1959.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER OF THE COMPANY.

The dividend and bonus when sanctioned will be payable at par at all Indian offices of the Central Bank of India Ltd. on and after the 15th day of May 1959 to those shareholders whose names stand on the Register on the 12th day of May 1959 and warrants will be posted in due course to each shareholder at his registered address. Shareholders are kindly requested to notify immediately any change of address.

Explanatory Statement issued under Section 173 of the Companies Act 1956 in connection with the items of special business to be transacted at the Thirty-sixth Annual General Meeting to be held on the 12th day of May 1959.

As required by Section 173 of the Companies Act 1956 the following explanatory statement is issued with the Notice of the Thirty-sixth Annual General Meeting of the Company and sets out all material facts relevant to items 3 and 6 in the Notice.

Item 3:—Your Director, Sir Chunilal V. Mehta, is retiring by rotation. He has attained the age of 78 years and as such he cannot be re-appointed unless the shareholders pass a resolution specifically declaring that the age limit of 65 years prescribed under Section 280 of the Companies Act 1956 shall not apply to him. As required by Section 281 of the Act a special notice has been received by the Company proposing that Sir Chunilal V. Mehta be re-appointed a Director of the Company and that the age limit of 65 years prescribed under Section 280 of the Act shall not apply to him.

Sir Chunilal V. Mehta joined the Board of Directors of the Company on 14th January 1937 and became the Chairman on 8th December 1938. During his long association of over 22 years he has rendered very valuable services to the Company and it is in the interest of the Company that your Board should continue to receive the benefit of his advice. Sir Chunilal V. Mehta is a very well known businessman of wide and varied experience. It is desirable that he should be re-appointed a Director.

Item 6:—The Assam Match Co. Ltd. is an associate of your Managing Agents and carries on the business of manufacturing matches at Dhubri, Assam. It is a public limited company registered in India. Your Company are acting as the Selling Agents for the matches manufactured by the Assam Match Co. Ltd. Your Company are already supplying to them chlorate of potash and glue of the Company's manufacture at cost price plus 10 per cent. profit as sanctioned by the Special Resolution passed on 23rd October 1956. Now that your Company has started a Paper Mill the Assam Match Company Ltd. would be willing to buy from the Company the paper required for their use. Your Company also has facilities for manufacturing certain types of machinery and spare parts, which the Assam Match Co. Ltd. may be interested in purchasing from us. It is proposed that such paper, machinery and spare parts as may be required by the Assam Match Co. Ltd. be supplied to them at cost price plus 10 per cent. profit. Sometimes the Assam Match Co. Ltd. require other materials, like chemicals, splints, etc., and it is in our interest to assist them to maintain their production, because we earn commission on the sales of their matches. It is therefore proposed that the shareholders should permit the Company to sell such other materials as may be required by the Assam Match Co. Ltd. at cost price plus 10 per cent. profit.

Your sanction to the sale of paper, machinery and spare parts and other materials connected with the manufacture and sale of matches is required in terms of Section 360 of the Companies Act 1956.

Your Director, Mr. D. D. Romer, is interested in the Special Resolution regarding dealings between this Company and the Assam Match Co. Ltd. inasmuch as he is also a Director and shareholder of the Assam Match Company Ltd. Your Directors, Sir Chunilal V. Mehta and Mr. D. M. Khatau are also interested, being shareholders of the Assam Match Company Ltd.

Your Directors, Mr. Akbar Hydari and Mr. Sven Gosta Gothberg are interested in the aforesaid Special Resolution inasmuch as they are employees of your Managing Agents, the Swedish Match Company being their Joint General Managers in India. They are also Joint Managing Directors and shareholders of the Assam Match Co. Ltd.

Your Managing Agents, the Swedish Match Company, are interested in the proposed Special Resolution as shareholders of the Assam Match Co. Ltd., which is also their associate within the definition of that term given in Section 2(3)(c) of the Companies Act 1956.

By Order of the Board,
A. HYDARI,
Executive Director.

THE INDIA SUGARS & REFINERIES LIMITED

5, Deenadayalu Street
MADRAS-17

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Company will be held at the Registered Office of the Company at No. 5, Deenadayalu Street, Madras-17, on Friday the 15th May 1959, at 10.15 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and audited accounts, for the year ended 30th September, 1958.
2. To declare a dividend on Ordinary Shares.
3. To elect a Director in place of Rukn-ul-Mulk S. Abdul Wajid who retires by rotation, but being eligible offers himself for re-election; but he having attained the age of 72 years, to consider and if thought fit, to pass the following Resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:

   "Resolved that Rukn-ul-Mulk S. Abdul Wajid who has attained the age of 72 years and who retires under Article 104, be and is hereby re-appointed a Director of the Company and that the age limit for Directors prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To elect a Director in place of Sri S. M. Ramakrishna Rao who retires, but being eligible, offers himself for re-election.
5. To elect a Director in place of Sri O. V. Alagesan who retires and is eligible for re-election.
6. To appoint Auditors for the year 1958-59 and fix their remuneration.

You are requested to be present in person or by proxy.

The Share Transfer Books of the Company will be closed from 1st May to 15th May 1959, both days inclusive.

By Order of the Board,
Per pro THE INDIA SUGAR AGENCIES PRIVATE LTD.,
C. D. CHOUDHARY,
Managing Agents.

BOMBAY, 3*rd April* 1959.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received at the Registered Office of the Company not less than 48 hours before the Meeting.

The dividend when declared will be made payable on or after the 22nd May 1959 at the State Bank of India, Madras, and Dividend Warrants will be posted to the Shareholders, whose names stand in the Register of Members as on 15th May 1959 or in accordance with their mandates. Shareholders may kindly intimate to the Company any change in address immediately.

ANNEXURE TO THE NOTICE
Explanatory Statement required under Section 173 of the Companies Act 1956

Item No. 3.—Rukn-ul-Mulk S. Abdul Wajid, a Director of the Company, who retires by rotation, has attained the age of 72 years and he cannot, therefore, be reappointed a Director of the Company except by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a Special Notice from a Member of the Company notifying his intention to move the resolution as set out in the said item.

Rukn-ul-Mulk S. Abdul Wajid has been a Director and also Chairman of the Company for a long time and has been rendering valuable services to the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of the advice of Sri S. Abdul Wajid as a member of the Board, it is desirable that he be reappointed a Director of the Company.

THE PATIALA BANASPATI & ALLIED PRODUCTS COMPANY, LTD.

OUTLOOK FOR FERTILISERS

VAST SCOPE FOR PRODUCTION FROM PETROLEUM HYDROCARBONS

AS the world's population is increasing at a steadily accelerating rate, so are its needs for its daily food. By far the greater part of the inhabitants of this planet are farmers. And yet, nearly three-quarters of the present world population of about 2,800 million people still subsist on a diet inadequate for good health. The worst deficiencies in this respect prevail in Asia and Africa, whose populations account for almost two-thirds of the world total, but, in many Latin American and Eastern European countries, too, the number of underfed people still runs into hundreds of millions.

Agricultural science and technology have long provided the means for multiplying the food-raising power of the earth without a proportionate expansion of arable land, which would, indeed, often be impossible to achieve. Of the many aids to raising farm yields per acre, outstanding importance attaches to the efficient application of chemical fertilisers, supplies of which are becoming available in ever-growing abundance—especially in the case of nitrogen—containing fertilisers, based on synthetic ammonia.

World Production

In the past eight years, world production of fertilisers has risen from 12.8 million to some 22.5 million metric tons—an increase by 75 per cent. or six times the rate at which the world's population has grown in this period. These tonnages comprise the total production of the three main groups of fertilisers, namely, nitrogenous, phosphatic and potash fertilisers, and they denote their respective nutrient contents of pure nitrogen, phosphoric acid, and potassium oxide, which are the essential agents for propagating plant life. In 1950, phosphate production accounted for over 40 per cent. of the world total, with nitrogen and potash sharing the balance in roughly equal proportions. Since then, however, the production of nitrogen has gone up so much faster than that of phosphate and potash, that it now represents 35 per cent. of the world total, while phosphates account for 34 per cent. and potash for 31 per cent.

The spectacular rise in world supplies of nitrogen in the past eight years, from nearly 3.6 million to some 7.9 million metric tons, is largely attributable to the growing availability of petroleum hydrocarbon base stocks for the manufacture of synthetic ammonia, which, until the mid-1940s, rested almost wholly upon coke-based and electrolytic processes. About four-fifths of the world production of nitrogenous fertilisers is derived from synthetic ammonia. These are produced either in the form of liquefied anhydrous (water-free) ammonia gas and aqueous ammonia solutions, or of ammonium sulphate, ammonium nitrate or compound fertilisers. Naturally occurring nitrogen compounds, such as Chile saltpetre, now meet only a fraction of current demand.

Water Power and Ammonia

Ammonia is a chemical compound of one atom of nitrogen—the fertilising agent—and three atoms of hydrogen. It can be synthesised by various routes, but all involve the use of large amounts of hydrogen for "fixing" the nitrogen extracted from the atmosphere, over three-quarters of which consists of nitrogen. The choice of processes for producing the hydrogen essentially depends on local conditions. In coal-producing countries, there is an obvious incentive for making the hydrogen from coke or coke-oven gas. In the classical Haber-Bosch water-gas synthesis of ammonia—which since its inception in Germany, some 45 years ago, has remained one of the primary methods of nitrogen fixation in many parts of the world outside North America—the hydrogen is obtained by passing steam over incandescent coke. Where water power is abundant and electricity cheap, as in Scandinavia and parts of India, Japan, Tasmania, etc., the electrolytic decomposition of water into hydrogen and oxygen may be the most advantageous route to ammonia synthesis.

An even more prolific source of hydrogen is, however, provided by the petroleum hydrocarbons contained in natural gas, from which the hydrogen may be recovered either by reacting the natural gas with steam over a catalyst, or by partial oxidation, or by cracking the gas into hydrogen and carbon black. In the synthesis of ammonia from natural gas, the nitrogen is produced in an air separation plant or, in the case of the methane-steam process, by injecting the air directly into the mixture of hydrogen, carbon monoxide and carbon dioxide. In more recent years, increasing amounts of hydrogen have become available also from refinery gases, especially in catalytic reforming, in which substantial quantities of by-product hydrogen are derived from the dehydrogenation of naphthenes to aromatics. At the same time, growing use is being made of the possibility of making hydrogen directly from petroleum by partial oxidation of heavy residuals, a process akin to the partial oxidation of natural gas. In yet another way, petroleum hydrocarbons enter into fertiliser production, in that sulphur extracted from sour gases or petroleum fuels may be used for making sulphuric acid, an essential chemical for the manufacture of some types of fertilisers.

Gas and Oil

It is, however, as a source of hydrogen for the fixation of nitrogen, that natural gas and oil have become most valuable to the ammonia industry. A million cubic feet of natural gas can produce up to 30 tons of fixed nitrogen, dependent on the choice of process routes. Though the first ammonia plant based on natural gas was set up in the United States as early as 1931, the U.S. ammonia industry as a whole began to adopt the natural gas process on a wider scale only about ten years later. But from then onwards, it has rapidly made natural gas its principal source material for fixing nitrogen.

Of the United States' current nitrogen production of some three million tons a year, representing about three-quarters of available capacity, about 70 per cent. is now based on processes using natural gas, and another 5 to 10 per cent. on refinery gases and fuel oil. About three-quarters of the country's overall consumption of nitrogen goes to the manufacture of fertilisers, while the balance consists of ammonia for various industrial and military uses, including metallurgical and chemical applications and the preparation of rocket fuels. Canada also relies already on natural gas and petroleum for the larger part of her domestic production of nitrogen, totalling about a quarter million tons a year.

Every Description of Banking Business Undertaken.

T. R. LALWANI, *General Manager.*

Outside the North American continent, Italy is so far the only country whose output of ammonia from petroleum hydrocarbons has surpassed that from other sources, though it was not until the early 1950s that Montecatini started up its first plant in Ferrara to make ammonia from natural gas; the same concern now operates another plant of this kind at Novara. Last year, the state-owned ENI group commenced the large-scale manufacture of nitrogen compounds from natural gas, in conjunction with that of synthetic rubber, at its new petrochemical facilities at Ravenna. On their full completion, Italy's total capacity for making nitrogenous fertilisers from petroleum hydrocarbons will be equivalent to some 250,000-300,000 tons of fixed nitrogen.

Elsewhere in Western Europe, the production of ammonia from petroleum hydrocarbons is virtually confined to a few plants in France, Western Germany, the United Kingdom and the Netherlands. Of France's total output, amounting last year to over 500,000 tons in terms of nitrogen content, about a quarter was derived from natural gas, whose share is likely to grow further with the rapid development of the large gas deposits at Lacq; another five per cent. was obtained from refinery gases and fuel oil, which in Britain and the Netherlands are the only petroleum basestocks used in the manufacture of nitrogenous fertilisers.

Middle East

The resources of natural gas in Western Europe are, of course, easily put into the shade by those in North America, and in many other parts of the world. Alone, the amounts of gas unavoidably released in oil operations in the major producing countries in the Middle East and in South America exceed several times the total current production of natural gas in Western Europe. In some areas, most of the gas inevitably produced with oil must at present be flared to waste for lack of suitable economic uses for it. Many projects have emerged in recent years for establishing local facilities to utilise those ample and cheap supplies of natural gas, as well as by-product gases and fuel oil from domestic refining operations, for the manufacture of nitrogenous fertilisers. But, with the exception of an Egyptian plant at Suez, currently making some 30,000 tons a year of ammonia from refinery gas, few of these plans have as yet been carried into effect.

Well advanced is a Persian scheme, jointly sponsored by the National Iranian Oil Company and the Ministry of Mines and Industry, for using natural gas in a fertiliser plant in the Shiraz area to produce 90,000 tons a year of ammonium nitrate; the building contracts have been awarded to a British and two French companies, with the Italian firm of Montecatini acting as the Persian Government's consultant. Of several Indian proposals for an ammonia plant, one—at Trombay—is based on the use of refinery gases. A committee of experts appointed by the Government of Bombay has advised an output target of 90,000 tons a year of fixed nitrogen, for making about 350,000 tons of fertilisers (some 250,000 of nitro-phosphates and 100,000 tons of urea). The main feedstock and fuel for this plant would be refinery gases, with fuel oil being contemplated as an alternative.

Pakistan

In West Pakistan, the French group ENSA is building at Multan, at the northern end of the Sui gas pipeline, an ammonia plant to produce 50,000 tons a year of fixed nitrogen from Sui gas, for making urea and other nitrogenous fertilisers. In East Pakistan, a similar plant near the Sylhet gas field is to be built for the Government by a Japanese group. In Japan's own ambitious programme for the establishment of a petrochemical industry, drawn up under the Government-sponsored five-year development scheme of 1955, the manufacture of ammonia from petroleum hydrocarbons plays, however, as yet only a modest part. Her domestic production of nitrogenous fertilisers—which, at the equivalent of some 900,000 tons a year of fixed nitrogen, is surpassed only by that of the U.S. and of Western Germany—is likely to remain predominantly based on coke, on electrolysis and on calcium cyanamide made from the country's plentiful limestone resources.

Of the countries in the Middle East, Iraq was among the first to examine the prospects of exploiting its wealth of natural gas for the large-scale production of nitrogenous fertilisers. A special study made by a World Bank mission in the early 1950s at the Government's request suggested the utilisation of waste gases of the Kirkuk oilfields for making 500,000 tons a year of ammonium sulphate, plus 100,000 tons of elemental sulphur, and 10,000 tons of carbon black. Last year, the Iraqi Government invited tenders for plant construction, but has not yet disclosed to what extent the mission's proposals are to be carried into practice.

Various projects for the manufacture of petrochemical fertilisers are still hanging fire in a number of other countries, e.g., in Saudi Arabia and Lebanon, and equally uncertain is the outcome of recent plans mooted in Indonesia for making ammonia from fuel oil in East Java, and from natural gas of the oilfields of Sumatra. In Latin America, a few plants for producing fertilisers from natural gas, refinery gases or fuel oil are either in operation, under construction, or projected in Mexico, Venezuela, Cuba, Colombia and Brazil.

Little authentic information is available on the general pattern of ammonia production in the countries of the Communist bloc, but the use of petroleum hydrocarbons for this purpose seems to be still in the early stages behind the Iron Curtain. As far as the free world is concerned, petroleum hydrocarbons today provide between 35 and 40 per cent. of its current overall supply of fixed nitrogen, while coke-based processes account for about 50 per cent., and electrolytic and other methods for 10 to 15 per cent. Considering that the United States alone now produces over four-fifths of all the free world's petrochemical ammonia, but only about 30 per cent. of its total supply of fertiliser nitrogen from all sources, the high share of petroleum hydrocarbons in the latter is the more notable as petrochemical ammonia production only got fully under way after the war.

All indications point to a continued growth of the contribution of petroleum hydrocarbons, though conceivably not quite at the same brisk pace as in the past, when the striking advance of petrochemical fertilisers was almost entirely due to the sweeping transformation in the pattern of the U.S. ammonia production. The overall plant capacity at present available for fixing nitrogen exceeds the current rate of nitrogen consumption in the free world by 15 to 20 per cent. This surplus, largely caused by the rapid growth of newly built ammonia facilities during this decade, will no doubt be absorbed within the next few years with the further rise of demand. But the present pressure of excess capacity is likely to slow for some time the flow of new orders for plant construction, including those for the manufacture of petrochemical fertilisers.

For underdeveloped countries at present dependent for all or most of their fertiliser supply upon imported materials, but with large oil and gas resources of their own, the inducement for exploiting the latter for establishing domestic ammonia manufacture is bound to remain strong—on the grounds of balance of payments, as well as of national aspirations for creating local industries. Yet the considerable number of long-standing projects of this kind that have so far failed to materialise, is a measure of the complex problems involved not only in meeting, in such areas, the capital needs and technical requirements for the setting-up and the efficient operation of ammonia factories but, above all, in finding a large enough and profitable market for their products. In many cases, the minimum economic plant capacities may appreciably exceed current local demands for nitrogenous fertilisers. So the commercial justification for new installations would from the outset rest on the assurance of ready outlets for exportable surpluses, which in most instances will be impossible to find under the present conditions of a substantial over-supply of nitrogenous fertilisers in the world as a whole.

The current level of fertiliser consumption in underdeveloped areas is, by and large, still far below that in the highly developed countries where the overall average today is about 15 tons per 1,000 hectares (2,470 acres), or seven times that in the rest of the world. Within both these groups, however, the intensity of fertiliser usage differs very widely between one area and another, and so does the pace of its growth. Since 1955-56, nitrogen consumption in Western Europe has gone up by some 12 per cent., and in North and Central America it rose by more than 15 per cent.; but in the countries of South and South-East Asia the overall increase was nearly 30 per cent., while in Pakistan alone consumption has quadrupled over the past three years.

That in many underdeveloped countries fertilisers are today still not used to the extent desirable, is not due to any lack of available or potentially producible supplies, but to the fact that people who could and should eat more food, mostly cannot pay for it as they do not themselves produce anything to offer in exchange. As the economies of these countries expand, however, there will be wide scope for greatly increasing the use of fertilisers, especially where the staple food is rice, whose cultivation benefits in particular from the ample application of nitrogenous fertilisers. In some of the highly-developed countries, too, there is still much room for raising the consumption of soil nutrients. As the demand for synthetic ammonia continues to grow throughout the world, more and more opportunities will open up for meeting it from petrochemical sources, wherever these can be exploited to economic advantage.—*By Special arrangement with Petroleum Press Service.*

Notices

THE DURBHANGA SUGAR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Ordinary General Meeting, being the Annual General Meeting of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat, on the 5th day of May, 1959, at 10.30 a.m., for the following purposes:

(1) To receive and adopt the Directors' Report and Accounts for the year ended the 31st August, 1958, and Balance Sheet and Report of the Auditors thereon.

(2) To declare a Dividend.

(3) To elect a Director in place of Shri Kanhaiya Jha, who retires under Article 107 and, being eligible, offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

As Special Business:

(5) To elect a Director in place of Rajkumar Jeeveshwara Singh, who retires under Article 104 and, being eligible, offers himself for election.

(6) To consider the payment of extra remuneration to the Directors for the year ended the 31st August, 1958.

(7) To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

By Order of the Directors,
W. F. MALDEN,
Secretary.

LOHAT, DISTRICT DARBHANGA,
22nd March, 1959.

Note—(1) A Member of the Company, who is entitled to attend and vote, is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member.

(2) The Share Transfer Books of the Company will be closed from the 19th April to the 5th May, 1959, both days inclusive.

(3) Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 5th May, 1959.

Explanatory Statement in accordance with Section 173 of the Companies Act, 1956, with regard to Item Nos. 5 and 6 of the Agenda

Item No. 5 on the Agenda.

Rajkumar Jeeveshwara Singh was appointed a Director in the vacancy caused by the demise of Raja Bahadur Vishweshwar Singh and retires in accordance with Article 104 of the Company's Articles of Association. A notice has been received from a Member of the Company proposing his election to the Board.

Item No. 6 on the Agenda.

A notice has been received from a Member of the Company of the intention to propose, as a Special Resolution, that the Directors be paid 1 per cent. of the net profit to be equally divided amongst them.

Under Section 309(4) (*a*) of the Companies Act, 1956 and Article 93 of the Articles of Association of the Company, the Directors are entitled to extra remuneration not exceeding 1 per cent. of the net profit as computed in accordance with Sections 198, 349 and 350 of the Act.

Only the Directors are equally interested in this proposed Resolution.

THE DHUNSERI TEA COMPANY LIMITED

ISSUE OF 23,103 ORDINARY SHARES OF RS. 10/- EACH AT PAR
(This is NOT an offer)

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have decided to purchase Dhendai Tea Estate situated in Darrang District of Assam from Messrs. Bishnauth Tea Company, Ltd., Calcutta, and to finance this deal they have determined to issue 23,103 new Ordinary Shares of Rs. 10 each at par. The new Ordinary Shares will rank *pari passu* with the existing Ordinary Shares in all respects save and except that they will participate only in dividends which may be declared in respect of the financial year ending 31st December 1959, and will be offered for subscription at par to the Ordinary Shareholders whose names are entered in the Register of Members of the Company on 9th May 1959 in the proportion of one new Ordinary Share for every two Ordinary Shares held by the shareholder on that date (The holders of the fractional shares will be ignored) with the right to renounce all or any of the shares so offered in favour of third parties, and the right to apply for additional shares at par subject to the condition that those shareholders who renounce their rights would not be entitled to apply for additional shares.

The Register of Members of the Company will remain closed from 4th May 1959 to 9th May 1959 (both days inclusive).

Persons holding shares on blank transfer deeds are advised in their own interest to lodge properly completed transfer deeds with the relative share certificates at the Company's Registered Office, 2, Dalhousie Square East, Calcutta, for registration of the shares in their names before 4th May 1959, in default of which no claim by such persons shall lie against the Company. Circular Letters setting out the terms of the offer and detailing the procedure to be followed and Letters of Rights with forms of Renunciation, Acceptance and Request for additional shares will be issued to the aforementioned members on 9th May 1959 or as soon as practicable thereafter.

By Order of the Board,
S. L. DHANUKA,
Managing Director.

2, DALHOUSIE SQUARE EAST,
CALCUTTA-1, *3rd April* 1959.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS
(Railway Board)

Sub:—Requirement of Roller Bearings with Axleboxes and Wheelsets—Tender No. G.P. 16, 1958-59

THE LAST DATE OF RECEIPT AND opening date of the above tender are extended as under:—

(i) Roller Bearing Axleboxes
Not later than 11 a.m. on 5th May 1959.
Offers received will be opened at 11 a.m. on 5th May, 1959.

(ii) Wheelsets
Not later than 11 a.m. on 6th May 1959.
Offers received will be opened at 11 a.m. on 6th May, 1959.

Offers should reach the Director, Railway Stores, Railway Board, State Entry Road, New Delhi, not later than the dates indicated above.

G. P. BHALLA,
Director, Railway Stores,
Railway Board,
State Entry Road,
New Delhi.

DATED *9th April*, 1959.

BINNY GROUP MILLS FARE WELL

DIVIDENDS MAINTAINED

THE Bangalore Woollen, Cotton and Silk Mills Company, Ltd., and the Buckingham and Carnatic Company, Ltd., two of the leading textile units of South India, managed by Messrs. Binny & Co. (Madras) Ltd., have both done well during the year ended 31st December 1958, having been able to sell their full production, despite the depression in the internal textile market, and improve their earnings over the year. The performance of the former is, particularly, gratifying, in that the profit for the year under review is substantially higher than that for 1957. Both the Companies, however, propose to maintain the dividend at 10 per cent. on their respective ordinary share capital.

Bangalore Woollen

The gross profit of the Bangalore Woollen has recorded a sharp rise from Rs. 59.95 lakhs to Rs. 86.03 lakhs, thus making good substantially the setback suffered in 1957 when the profit dropped from Rs. 95 08 lakhs. The provision for depreciation has been raised slightly from Rs. 12.72 lakhs to Rs. 14.89 lakhs. The substantial rise in profit, the withdrawal of the allowance for extra normal depreciation and a reduction in the claim for development rebate, all account for the rise in the provision for taxation from Rs. 12 lakhs to Rs. 29.50 lakhs. Consequent on this, the net profit, at Rs. 35.29 lakhs, has recorded only a small rise of Rs. 3.85 lakhs over the year. This has been utilised to enlarge the internal resources of the Company. The transfer to the development rebate reserve has been reduced from Rs. 3.59 lakhs to Rs. 1.50 lakh, while no allocation has been made to the deferred taxation reserve (which had received Rs. 3 lakhs last year), following the withdrawal of the extra normal depreciation. A sum of Rs. 2.50 lakhs has been added to the workpeople's housing fund and Rs. 6 lakhs to the general reserve, as against *nil* last year.

The dividend, as already stated, is to be repeated at 10 per cent. on the present capital of Rs. 121.50 lakhs, raised in March 1957 by the capitalisation of Rs. 81 lakhs from out of the general reserve and the issue of two ordinary shares for one as bonus. This represents 30 per cent. on the old capital, a rate which had been paid from 1954 onwards. The dividend recommended will bring the total distribution to more than 45 per cent. of the assessable income-tax thereon and the provisions of Section 23A of the Income-tax Act will not, therefore, apply to this Company.

The Company's progress in recent years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	5,54.18	5,42.44	5,33.80	4,81.94
Finished stocks and stocks-in-process	87.15	72.50	71.74	60.15
Expenses (including raw materials consumed)	4,84.85	4,87.10	4,53.80	4,04.66
Gross profit	86.03	59.95	95.08	80.78
Managing Agents' commission	6.35	3.78	7.87	6.26
Provision for—				
Depreciation	14.89	12.72	17.60	18.17
Taxation	29.50	12.00	29.75	20.25
Net profit	35.29	31.44	39.86	36.10
Excess provision written back	..	..	3.32	..
To reserves and other funds	10.75	7.34	18.75	12.75
,, bonus to employees	11.95	11.51	11.48	10.90
Dividends—				
6 per cent. cum. preference	0.36	0.36	0.36	0.36
Ordinary	12.15 (10%)	12.15 (10%)	12.15 (30%)	12.15 (30%)
Carry forward	2.98	2.90	2.83	2.39

The Company's production during 1958 in the two main sections, namely, "cotton and union cloth," is said to have recorded a satisfactory increase. In view of the fall in demand and unremunerative prices fetched for coarse rugs, the production of the fine woollen section was stepped up at the expense of the coarse varieties. Industrial cloths were added to the range of products in the fine section. A part of the Company's silk plant remained closed during the year, thanks to the shortage of imported spun silk. The position has been further aggravated by the recent closure of the only local source of supply.

The rise in stocks of finished goods is mainly accounted for by union cloth held on Government account and cloth awaiting despatch against orders. The Directors report that the profit margin on cotton cloth showed no change and the improved results are due to higher production and sales, particularly of Cotswol. There was a fall of Rs. 20 lakhs in the cost of raw materials during the year under review, but this was offset by a corresponding rise in manufacturing cost, particularly stores, machinery parts, wages, dearness allowance, power and fuel. More than 50 per cent. of this increase is accounted for by the sharp rise in the costs of dyestuffs and chemicals

Buckingham and Carnatic

The gross profit of the Buckingham and Carnatic Company, Ltd., shows a rise of only Rs. 2.03 lakhs to Rs. 128.56 lakhs, but this is in refreshing contrast to the successive decline in the previous two years from Rs. 143.55 lakhs (earned in 1955) to Rs. 126.53 lakhs. The profit would have been much more but for the illegal strike in June last, which continued for 21 days, and the interference in production again in November due to stormy weather and unusual floods in Madras. Altogether, the Company lost one month's production valued at over Rs. 75 lakhs. Though the cost of some raw materials, such as foreign cotton, showed a tendency to fall, any possible saving on that account was offset by the rising cost of manufacture.

After providing for depreciation and taxation, the net profit, at Rs. 64.69 lakhs, does not show any sizable rise, as the following comparative table shows:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	9,88.58	9,07.65	9,36.68	9,00.78
Other income	14.19	11.45	13.95	8.88
Stocks of process and finished goods	1,09.10	1,26.09	1,14.48	96.60
Raw materials and stores consumed	4,76.93	5,06.06	4,73.99	4,71.11
Other expenses	3,80.29	3,88.12	3,57.31	2,93.07
Gross profit	1,26.56	1,26.53	1,37.21	1,43.55
Managing Agents' commission	7.51	7.80	10.11	11.29
Provision for—				
Depreciation	35.22	35.80	40.07	30.60
Taxation	20.50	18.50	15.00	39.00
Net profit	64.69	64.43	71.14	62.66
Provisions and reserves written back	..	..	..	..
Profit on sale of machinery	0.34	6.21	5.03	..
To reserves and other funds	0.29	0.57	1.82	..
,, bonus to employees	13.61	30.01	37.32	23.00
Dividends—	41.99	22.11	21.33	20.52
7½ per cent. cum. preference	1.60	1.60	1.60	1.60
Ordinary	17.85 (10%)	17.85 (10%)	17.85 (10%)	17.85 (10%)
Carry forward	1.83	1.92	2.29	2.38

The allocation to the debenture redemption reserve has been reduced from Rs. 5 lakhs to Rs. 3 lakhs, while the transfer to the development rebate reserve has been raised slightly from Rs. 8.10 lakhs to Rs. 8.67 lakhs. No amount has been set aside for deferred taxation reserve (which had received Rs. 12.10 lakhs in the previous year), on account of the withdrawal of the extra normal depreciation. The provision for workpeople's gratuity has been reduced from Rs. 3.50 lakhs to Rs. 0.64 lakh. It will be noted from the table above that a sum of Rs. 41.99 lakhs has been provided for bonus to employees. This is made up of the usual bonus of Rs. 27.10 lakhs provided on the basis of the old agreement which had linked bonus to dividend, and an additional bonus of Rs. 14.89 lakhs for the years 1955, 1956 and 1957. The old agreement had provided that bonus was to be calculated as a percentage of basic earnings, such percentage to be doubled the rate of tax-free dividend declared on the ordinary share capital. However, the workers demanded an additional bonus for four years 1954-57. After protracted negotiations between the Government of Madras, the Company's management and the labour, the dispute was finally settled and the Company agreed to pay additional bonus for the three years 1955-57 and calculate the future bonus payments on the basis of two and a half times the rate of tax-free dividend declared on the ordinary capital. The additional bonus charged in the accounts has resulted in a saving of taxation and a sum of Rs. 9 lakhs has, therefore, been written back from the reserve for taxation, to supplement the distributable profit.

Notwithstanding the fact that, for a period of almost one month during the year, no goods could be cleared for shipment, the Company's export sales amounted to Rs. 1 85 crore. This is no doubt a creditable achievement from which the Company will benefit substantially in respect of incentive schemes The Rs 100 paid-up shares of the Bangalore Woollen are now being placed at Rs. 172 *cum-div.* and those of the Buckingham and Carnatic at Rs. 175 *cum div.* On an *ex-div.* basis, the shares provide a yield of 6 per cent. and 5.9 per cent. per annum, free of income-tax, respectively.

PROFIT OF STANDARD MILLS HIGHER

LARGE SUM SPENT ON MODERNISATION

THE sharp setback in the results of the Standard Mills Company Ltd. (Managing Agents: Messrs. Mafatlal Gagalbhai and Sons, Bombay) suffered in 1957, when its gross profit dropped from Rs. 121.44 lakhs to Rs. 89.16 lakhs, has been retrieved to some extent, albeit by a very small margin, during the year ended 31st December 1958. The gross profit for the year amounts to Rs. 93.83 lakhs, representing an increase of only Rs. 4.67 lakhs over that for 1957. Nevertheless, it is the second highest one earned by the Company after the amalgamation of the New China Mills Ltd. with it with effect from 1st January 1955.

It will be recalled that, following the amalgamation of the New China Mills and thanks to the implementation of the scheme of modernisation, the Company's profit nearly doubled itself from Rs. 30.61 lakhs earned in 1954 to Rs. 60.44 lakhs in 1955. In the following year, it again doubled itself to Rs. 121.44 lakhs. There was, however, a substantial setback in the profit to Rs. 89.16 lakhs in 1957, as stated already, consequent on the depression in the textile trade during the year, due to heavy excise duties on cloth. Though there was no notable improvement in the general offtake of cloth during 1958, the Company would appear to have been able to push up its sales. The large saving in the cost of foreign cotton consumed has also been a helpful factor in increasing its profit.

The net profit, after providing for Managing Agents' commission, depreciation and taxation, which had dropped from Rs. 48 lakhs (in 1956) to Rs. 23.61 lakhs in 1957, has risen to Rs. 27.48 lakhs, as the following comparative table indicates:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	6,01.32	5,79.26	5,70.41	5,33.62
Other income	15.24	14.12	14.04	11.75
Closing stocks of finished goods and in process	68.07	60.59	63.64	49.30
Raw materials and stores consumed	3,17.48	3,08.77	2,91.05	4,74.83
Other expenses	2,12.73	1,92.40	1,85.70	
Gross profit	93.83	80.16	1,21.44	60.44
Managing Agents' commission	7.43	6.78	10.19	4.28

4 per cent. preference	0.48	0.48	0.48	0.48
Ordinary	21.05 (D. 20%)*	19.75 (D. 20% + B. 2½%)	19.75 (D. 20% + B. 2½%)	17.56 (D. 20%)
Carry forward	0.02	1.56	2.03	0.13

* On the increased capital of Rs. 109.75 lakhs raised by the capitalisation of Rs. 21.95 lakhs.

It will be noted that the provision for taxation is Rs. 10.05 lakhs more than that set aside for 1957, while the gross profit itself is only Rs. 4.67 lakhs more. This is due to the withdrawal of the extra normal depreciation allowance under the Finance Act 1958. No doubt, the Company had to make an additional provision of Rs. 6 lakhs in the previous year, in terms of the Finance Act 1956, but this was met by transferring a corresponding sum from the rehabilitation and development reserve. After transferring Rs. 8.69 lakhs (being 75 per cent. of the total development rebate allowable) to the statutory development rebate reserve and the balance of Rs. 2.90 lakhs, as usual, to the development rebate reserve (other than the statutory one), as against Rs. 4.75 lakhs in all set aside last year, the Directors have supplemented the profit available for appropriation by transferring Rs. 5 lakhs from the rehabilitation and development reserve. They have also recommended a dividend of 20 per cent. on the increased ordinary share capital of Rs. 109.75 lakhs, as against 22.5 per cent. paid for each of the previous two years on the old capital of Rs. 87.80 lakhs. In April 1958, it may be recalled, the Company's paid-up ordinary capital was raised from Rs. 87.80 lakhs to Rs. 109.75 lakhs by the capitalisation of Rs. 21.95 lakhs from out of the share premium account and bonus shares were issued in the ratio of one share for every four.

The programme of modernisation of the Company's mills, initiated in the year 1953, was continued during the year under review also and a sum of Rs. 45.82 lakhs was spent in 1958 alone on installation of new machinery and Rs. 4.78 lakhs on construction of new buildings.

E.I.D.'S PERFORMANCE ENCOURAGING

FINANCIAL POSITION STRONG

THE performance of the East India Distilleries and Sugar Factories Ltd. (Managing Director: Mr. G. N. Noel-Tod, Madras) for the year ended 30th September 1958 is gratifying, in that the net profit is better and the distribution to shareholders has been raised. But it is somewhat disturbing to find that the trading profit for 1957-58 was actually lower, that sugar, the mainstay of the Company's business, did not fare so well as in the previous year, and that costs moved up further. This is said not by way of criticism of the management, but only to stress the prevalence of a malignant trend in the affairs of most companies, a trend which is being ignored by the stock exchanges in their strident march to establish new high levels.

Sales during the year fetched £10,851,525 (the Company is still a sterling one), an increase of £634,819 as compared with 1957. But, as costs went up from £8,492 690 to £8,810,469, net realisation at £2,491,195 was higher by only £317,040. Income by way of commissions and service fees was down by about £36,000 at £450,139 so that gross trading income amounting to £2,491,195 was greater by no more than £281,120. But this increase is actually less than the inflation in excise duty (from £367,536 to £586,957) and the selling and administrative expenses (from £1,095,078 to £1,192,055). Accordingly, the net trading profit, after depreciation, is down by £36,278 at £712,183. The provision for depreciation is a shade larger at £112,775, as against £100,161 a year before. There is a small increase of about £10,000 in other incomes. This, together with a substantial reduction in the provision for taxation from £505 922 to £427,242, has helped to raise the net profit from £223,358 to £290,892. With the addition of undistributed surplus of 1956-57 brought in, the profit available for distribution is £71,774 higher at £354,581. Nearly half of this amount—£159,775, to be precise—has been credited to reserves, the corresponding figure for the preceding year being £122,625. The dividend on the 7 per cent. preference share capital takes up £14,000. The return to ordinary shareholders has been stepped up from 15 per cent. to 20 per cent. and takes up £109,990, as against £82,493 a year ago. Notwithstanding these higher allocations, the sum to be carried forward is better by a little more than £7,000 at £70,816.

It will be noted from the aforesaid particulars that the sum distributed to shareholders accounts for only about a third of the profit available for distribution, so that nearly two-thirds have been conserved. This is undoubtedly a cautious policy of appropriation. This is further evident from the fact that the increase in the dividend to ordinary shareholders is in the form of a special dividend of 5 per cent.

In order to see that the shareholders get their return as quickly as the Directors could manage, the Board has been following the policy of declaring the dividends in the form of first and second interims, making it clear at the time of the second interim that there would be no more dividend for the year under reference. Consequently, although the annual meeting of the Company is due to be held on the 29th April, the shareholders have already received their dividend. This solicitude for shareholders is, indeed, commendable.

During the 1957-58 season, the Company produced 29,132 tons of sugar from 350,137 tons of cane, giving a recovery of 8.32 per cent. This compares with 33,413 tons (recovery 9 per cent.) in 1956-57 and 29,574 tons (recovery 8.47 per cent.) in 1955-56. If only the Company can succeed in getting better quality sugarcane, it will be able to show better results on the sugar side.

The consolidated balance-sheet of the Company as at 30th September, 1958 is a picture of health, with a pleasing appearance. Its strong financial position will be clear from the fact that the excess of current assets over current liabilities is no less than £1,400,000; a year before this figure was £1,250,000. As for more details, readers' attention is invited to the following synopsis of the balance-sheet:

Liabilities	£	Assets	£
Capital:		Gross block ...	1,861,707
Preference	200,000	*Less*—Depreciation ...	996,904
Ordinary ...	549,950		
	749,950	Net block ...	864,803
Reserves and surplus ...	1,338,357	Assets under construction	41,987
Liabilities ...	3,679,448	Investments	170,883
		Current assets	4,690,082
Total	5,767,755	Total	5,767,755

With such a strong financial position, an excellent dividend record and a fairly diversified production and trading activities, there is no wonder that the Company's equity shares (of £1 each) are highly prized by investors. Since they are strongly held, they do not constitute a speculative scrip and, even during the depression of 1956-57-58, they did not go down very much. After touching a high of Rs. 34.75 in 1956, they saw a low of Rs. 26.25 in 1957, when the share markets were at their worst. A year ago, they were standing at Rs. 27.40 and are currently standing at Rs. 35 to yield 7.62 per cent. This is, indeed, a sumptuous yield in these days when many other first class scrips are offering a yield no more than 4.5 to 5.5 per cent.

INDIAN OXYGEN EXPANSION

Loan arrangements involving a total sum equivalent to £562,500 have been completed between the Commonwealth Development Finance Company of the U.K., the Industrial Credit and Investment Corporation of India and the Indian Oxygen Company Ltd.

The Commonwealth Development Finance is lending the Indian Oxygen £225,000, and the Industrial Credit of India is lending the equivalent of £337,500.

The Indian Oxygen is a subsidiary of the British Oxygen Company. Thirty per cent. of its Ordinary capital is held by the Indian investing public.

The loan is to meet a part of the capital cost of a replacement and expansion programme planned to be completed in 1960 amounting to over £2 million. The balance of the cost is being financed by the Indian Oxygen and the British Oxygen. The aim is to provide additional capacity to enable the Indian Oxygen to meet the increased demands for its products expected to arise from the current industrial development in India and in particular the expansion of steel production in the second Five-year Plan.

The greater part of the loan will be used in connection with the purchase of plant and equipment manufactured in the U.K.

ATIC INDUSTRIES LTD.

A new plant to manufacture a wide range of vat dyestuffs—a major extension to the existing plant of the Atic Industries Private Ltd., manufacturing Atic jade green dyestuff—was opened at Bulsar, Bombay, by Mr. Manubhai Shah, Union Minister of Industry, on the 9th inst. The cost of the project is Rs. 1.3 crores and the plant has an installed capacity of about 315,000 lbs. per month.

The new plant will manufacture vat purple, blues, blacks, browns, olive, yellow, orange and some solubilised vats. The plant, which has taken two years to complete, is expected to meet a large part of the country's requirement of vat dyes, thus saving a substantial amount of foreign exchange. It will also consume indigenous raw materials.

Atic Industries Private Ltd. is a joint enterprise of Imperial Chemical Industries (India) and Atul Products Ltd.

COMPANY MEETINGS AND DIVIDENDS

COONOOR TEA CO., LTD. Annual General Meeting, Belmount, Coonoor, Nilgiris, 25th April 1959. Dividend: 20 per cent. or Rs. 2.00 per share (includes first interim dividend of Re. 1.00 per share and second interim dividend of Re. 0.50 per share). Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

MAFATLAL FINE SPG. AND MFG. CO., LTD. Annual General Meeting, Bombay, 27th April 1959. Dividend: Rs. 18.00 per share (includes bonus of Rs. 3.00 per share). Transfer books were closed from 24th March to 14th April 1959, both days inclusive.

SASSOON SPG. AND WVG. CO., LTD. Annual General Meeting, Bombay, 27th April 1959. Dividend: Rs. 2.00 per share, payable from 11th May 1959. Transfer books were closed from 24th March to 14th April 1959, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Annual General Meeting, Calcutta, 27th April 1959. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share and a bonus of Re. 0.50 per share), payable on or after 6th May 1959. Transfer books remain closed from 14th to 27th April 1959, both days inclusive.

MAHARASHTRA SUGAR MILLS LTD. Annual General Meeting, Bombay, 29th April 1959. Dividend: Rs. 17.00 per share (includes Silver Jubilee bonus of Rs. 2 00 per share), payable on and after 11th May 1959. Transfer books remain closed from 16th April to 6th May 1959, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Annual General Meeting, Bangalore, 29th April 1959. Dividend: Rs. 10.00 per share (includes interim dividend of Rs. 4.00 per share). Transfer books will remain closed from 22nd to 29th April 1959, both days inclusive.

PARRY AND CO., LTD. Annual General Meeting, Madras, 29th April 1959.

BENGAL COAL CO., LTD. Annual General Meeting, Calcutta, 29th April 1959. Dividend: Rs. 17.50 per share (includes interim dividend of Rs. 7 50 per share). Transfer books remain closed from 14th to 29th April 1959. both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, 30th April 1959. Dividend: Re. 1.00 per share. Transfer books will remain closed from 21st to 30th April 1959, both days inclusive.

STANDARD COAL CO., LTD. Annual General Meeting, Calcutta, 30th April 1959. Dividend: 12½ per cent. or Re. 1.25 per share, payable on or after 7th May 1959. Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

BUCKINGHAM AND CARNATIC CO., LTD. Annual General Meeting, Madras, 30th April 1959. Dividend: Rs. 10.00 per share (includes interim dividend of Rs. 4.00 per share). Transfer books will remain closed from 25th to 30th April 1959, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1959. Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

EMPIRE JUTE CO., LTD. Annual General Meeting, Calcutta, 30th April 1959. Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1959. Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

PRESIDENCY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th April 1959. Transfer books remain closed from 16th to 30th April 1959, both days inclusive.

JAWAHAR MILLS LTD. Annual General Meeting, Salem, 1st May 1959. Dividend: 15 per cent. or Re. 1.50 per share of Rs. 10 each and Re. 0.75 per share of Rs. 5 each. Transfer books remain closed from 18th April to 1st May 1959, both days inclusive.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 6th May 1959. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books will remain closed from 20th April to 6th May 1959, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 7th May 1959. Transfer books will remain closed from 23rd April to 7th May 1959, both days inclusive.

KOHINOOR MILLS CO., LTD. Annual General Metting, Bombay, 7th May 1959. Dividend: Rs. 6 00 per share (final), payable on and after 14th May 1959. Transfer books will remain closed from 20th April to 7th May 1959, both days inclusive.

VIJAYESWARI TEXTILES LTD. Annual General Meeting, Pulampatti-via Pollachi. 9th May 1959. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 26th April to 9th May 1959, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Alleppey, 12th May 1959. Dividend: 10 per cent., i.e., Re. 1.00 per share (final). Transfer books will remain closed from 29th April to 15th May 1959, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 12th May 1959. Dividend: Rs. 11.00 per share (includes a bonus of Re. 1 00 per share), payable on and after 15th May 1959. Transfer books will remain closed from 22nd April to 12th May 1959, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Madras, 15th May 1959. Dividend: 10 per cent. or Re. 1.00 per share, payable on or after 22nd May 1959. Transfer books will remain closed from 1st to 15th May 1959, both days inclusive.

COIMBATORE PIONEER MILLS LTD. Annual General Meeting, Peelamedu. Coimbatore. 10th June 1959. Dividend: 20 per cent. or Rs. 20.00 per share. Transfer books will remain closed from 27th May to 10th June 1959, both days inclusive.

PROFITS OF COONOOR TEA LOWER

RESULTS OF FINLAY GROUP MILLS

Coonoor Tea Estates Co., Ltd.

THE directors of the Coonoor Tea Estates Co., Ltd., submit the audited accounts of the Company for the year ended 30th September 1958.

The net profit for the year after making allowance for taxation and depreciation is Rs. 1,13,462 (Rs. 1,20,423) to which is added the balance brought forward from the previous year of Rs. 27,028 (Rs. 6,981) making available a total Rs. 1,40,490 (Rs. 1,45,762 including Rs. 17,419 transferred from general reserve and Rs. 939 being excess provision for sales tax in previous year). Out of this the directors have transferred to general reserve Rs. 20,000 (*nil*) and to dividend equalisation reserve Rs. 15,000 (*nil*) leaving a balance of Rs. 1,05,490 (Rs. 1,45,762). The dividend on preference shares at 6 per cent. less income-tax absorbed Rs. 7,866 (Rs. 7,961). The first interim dividend of 10 (7½) per cent. on ordinary shares free of tax absorbed Rs. 37,782 (Rs. 28,336) and the second interim dividend of 5 (5) per cent. on ordinary shares free of tax absorbed Rs. 18,891 (Rs. 18,891). The proposed final dividend of 5 (7½) per cent. free of tax will absorb Rs. 18,891 (Rs. 28,337) leaving a balance to be carried forward to next year of Rs. 22,060 (Rs. 27,028 after transferring Rs. 1,618 to development rebate reserve, providing Rs. 15,000 for additional taxation in respect of previous years and Rs. 18,591 for additional and balance of bonus to workers for 1952-56). The directors recommend that a final dividend of 5 (7½) per cent. free of tax be paid which together with the interim dividends of 15 (12½) per cent. free of tax already paid, brings the total dividend for the year to 20 (20) per cent.

The total area of the Estate remains unchanged at 442.41 acres distributed as follows: Tea in full bearing 384.58 acres, tea in partial bearing 7.50 acres, fuel clearings 17.84 acres and buildings, roads, jungle and waste lands 32.49 acres.

Crop	1958 lbs.	1957 lbs.
Coonoor and Adar	320,854	353,467
Bought leaf	13,023	11,475
Total	333,877	364,942

The Estate cost of production for the year was 177.05 cents per lb. against the estimate of 152.86 cents per lb. The difference being due to shortfall in crop on account of generally adverse weather conditions. In particular, the severe hail storm experienced in April is estimated alone to have caused a loss of over 20,000 lbs. of tea. The net average selling price for the year amounted to 301.27 cents per lb. compared with 248.58 cents per lb. for the previous season, which has enabled the profit figure to be maintained at almost last season's level inspite of the reduced crop. The cost of production continues to increase, and it is therefore essential that the sale price of the Company's teas are maintained at the highest level. Whilst the above figures are satisfactory, the Board considers that improvements to the Factory machinery are necessary to enable the Company to maintain its position against the steadily increasing competition in high grown teas.

Estimates for the season 1958-59 have been framed for a crop of 3,50,000 lbs. made tea to cost 151.35 cents per lb. including 17.83 cents per lb. for manuring.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Finlay Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working after providing Rs. 6,78,000 (Rs. 6,13,000) for depreciation, Rs. 1,93,545 (*nil*) for development rebate reserve and Rs. 5,00,000 (Rs. 3,30,000) for taxation shows a profit of Rs. 4,09,432 (Rs. 7,57,898). From this the directors have appropriated to general reserve No. 1—(taxed) Rs. 3,14,567 (*nil*) and to general reserve No. 2—(untaxed) Rs. 94,865 (*nil*). The balance brought forward from the previous year's account of Rs. 37,155 (Rs. 79,257) has been carried forward to next year's account. The directors have transferred from general reserve No. 1 representing taxed profits of earlier years (i.e., before appropriation from the current year's profit) a sum of Rs. 8,00,000 (*nil*) to the profit and loss appropriation account for payment of proposed dividend for the year 1958 at the rate of Rs. 16 (Rs. 20) per share on 50,000 shares (free of income-tax) absorbing Rs. 8,00,000 (with Rs. 79,257 being the balance brought forward from previous year and transferring Rs. 2,00,000 from equalisation of dividend reserve there was a total of Rs. 10,37,155. The dividend on 50,000 shares absorbed Rs. 10,00,000 leaving a balance of Rs. 37,155 to be carried forward).

In the accounts for the year under review, the directors have transferred a sum of Rs. 58,42,296 to general reserve No. 1—(taxed) and a sum of Rs. 6,87,579 to general reserve No. 2—(untaxed) being balances as at 31st December 1957, standing to the credit of the general reserve, rehabilitation and development reserve, development rebate reserve and equalisation of dividend reserve. In addition, the directors have transferred from the profit of the current year a sum of Rs. 3,14,567 to general reserve No. 1—(taxed) and Rs. 94,865 to general reserve No. 2—(untaxed). An amount of Rs. 8,00,000 representing the taxed profits of the earlier years has been transferred from general reserve No. 1 to the profit and loss appropriation account for the payment of the proposed dividend for the year 1958. These transfers have been made with a view to segregating in general reserve No. 1, profits which have already been taxed and which are available (if required) for the payment of non-taxable dividends. General reserve No. 2 consists of other profits of the Company, viz. profits which have not been taxed.

The Alexander and Finlay Thread Co., in which the Company has a 50 per cent. share, experienced a better trading year and the accounts show a small profit of Rs. 581 (after allowing for depreciation of Rs. 50,000) as compared to a loss of Rs. 1,53,217 for the previous year. By mutual agreement, the selling agency arrangements with the Central Agency, Limited, were terminated with effect from 1st April 1958 and the partnership undertook its own selling thereafter. Gross sales in 1958 showed an increase over the previous year and considerable progress was made in the reduction of stocks.

Installation of the additional machinery in the Spinning department has now been completed and, as a result, the installed spindles have been increased to 63,212. By the re-arrangement of certain machinery in the Spinning block, it has been found possible to install the major portion of the additional machinery without the necessity of extending the present building except for a small extension to the Carding department.

While cloth prices remained steady during the first half of the year, this was offset to some extent by the relatively high prices for long staple cotton ruling at the time. The position improved during the second half of the year, although there was some decline in cloth prices. On account of the restricted imports, the supply position of long staple cotton has become difficult. With effect from July 1958, the excise duty on the Company's bleached, mercerised and dyed qualities was increased by a further 3 per cent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Gold Mohur Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working [after crediting the excess provision for Bonus in previous years amounting to Rs. 45,088] (Rs. 1,39,518) and after providing Rs. 3,60,000 (Rs. 2,20,000) for depreciation, Rs. 1,76,920 (*nil*) for development rebate reserve and Rs. 7,06,000 (Rs. 6,30,000) for taxation, shows a profit of Rs. 5,27,085 (Rs. 6,02,444). From this amount the directors have appropriated to general reserve No. 1—(taxed) Rs. 4,78,909 (*nil*) and to general reserve No. 2—(untaxed) Rs. 48,176 (*nil*) the balance brought forward from the previous year's account is Rs. 10,233 (Rs. 1,57,789) and has been carried forward to next year's account. The directors have transferred from general reserve No. 1 representing taxed profits of earlier years (i.e., before appropriation from the current year's profit) a sum of Rs. 7,50,000 (*nil*) to the profit and loss appropriation account for the payment of proposed dividend for the year 1958 at the rate of Rs. 15 (Rs. 15) per share on 50,000 shares (free of income-tax) absorbing Rs. 7,50,000 (with Rs. 1,57,789 brought forward from the previous year the total amount available was Rs. 7,60,233 out of which dividend at Rs. 15 per share, absorbed Rs. 7,50,000 leaving a balance to be carried forward of Rs. 10,233).

In the accounts for the year under review, the directors have transferred a sum of Rs. 45,26,588 to general reserve No. 1—(taxed) and a sum of Rs. 3,71,434 to general reserve No. 2—(untaxed) being balances as at 31st December 1957, standing to the credit of the general reserve, rehabilitation and development reserve, development rebate reserve and equalisation of dividend reserve. In addition, the directors have transferred from the profit of the current year a sum of Rs. 4,78,909 to general reserve No. 1—(taxed) and Rs. 48,176 to general reserve No. 2—(untaxed). An amount of Rs. 7,50,000 representing the taxed profits of the earlier years has been transferred from general reserve No. 1 to the profit and loss appropriation account for the payment of the proposed dividend for the year 1958. These transfers have been made with a view to segregating in general reserve No. 1 profits which have already been taxed and which are available (if required) for the payment of non-taxable dividends. General reserve No. 2 consists of other profits of the Company, viz., profits which have not been taxed.

Swan Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working after providing Rs. 6,40,000 (Rs. 4,50,000) for depreciation, Rs. 1,69,314 (*nil*) for development rebate reserve and Rs. 8,22,000 (Rs. 6,00,000) for taxation, shows a profit of Rs. 8,20,551 (Rs. 8,24,187). From this amount the directors have appropriated to general reserve No. 1—(taxed) Rs. 5,95,228 (*nil*) and to general reserve No. 2—(untaxed) Rs. 2,25,323 (*nil*). The balance brought forward from the previous year's account is Rs. 26,062 (Rs. 1,01,875) and this has been carried forward to next year's account. The directors have transferred from general reserve No. 1 representing taxed profits of earlier years (i.e., before appropriation from the current year's profits) a sum of Rs. 9,00,000 (*nil*) to the profit and loss appropriation account for payment of proposed dividend for the year 1958 at the rate of Rs. 25 (Rs. 25) per share on 36,000 shares (free of income-tax) absorbing Rs. 9,00,000 (with the previous year's balance brought forward of Rs. 1,01,875, there was a total available sum of Rs. 9,26,062 from which dividend absorbed Rs. 9,00,000 leaving a surplus to be carried forward of Rs. 1,01,875).

In the accounts for the year under review, the directors have transferred a sum of Rs. 63,41,201 to general reserve No. 1—(taxed) and a sum of Rs. 1,47,264 to general reserve No. 2—(untaxed) being balances as at 31st December 1957, standing to the credit of general reserve, rehabilitation and development reserve, development rebate reserve and equalisation of dividend reserve. In addition, the directors have transferred from the profit of the current year a sum of Rs. 5,95,228 to general reserve No. 1—(taxed) and Rs. 2,25,323 to general reserve No. 2—(untaxed). An amount of Rs. 9,00,000 representing the taxed profits of the earlier years has been transferred from general reserve No. 1 to the profit and loss appropriation account for the payment of the proposed dividend for the year 1958. These transfers have been made with a view to segregating in general reserve No. 1 profits which have already been taxed and which are available (if required) for the payment of non-taxable dividends. General reserve No. 2 consists of other profits of the Company, viz., profits which have not been taxed.

The extension to the Tyre Cord department is now under way after some considerable delay as a result of the difficulties experienced in arranging deferred payment terms acceptable to the Government of India. Orders for the major portion of the machinery involved have now been placed and shipment of a small part of the machinery has already commenced. It is estimated that the new machinery will be installed and in operation by April 1960. The airconditioning plant for the Spinning department has now been installed and is in operation.

Accounts in brief are as under:—

Gokak Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes Forbes Campbell & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The results for the year show a profit of Rs. 10,06,728 (Rs. 12,31,069). After providing for depreciation Rs. 6,54,225 (Rs. 3,68,894) and taxation Rs. 52,000 (Rs. 69,262) the profit shown in the accounts comes to Rs. 3,00,503 (Rs. 7,92,913) to which is to be added the amount brought forward from

1957 of Rs. 4,172 (Rs. 8,155) producing a total of Rs. 3,04,675 (Rs. 8,01,068). After deducting additional provision for payment of bonus for previous years of Rs. 1,510 (*nil*), provision for contingency reserve of Rs. 2,25,000 (*nil*) and transfer to general reserve No. 2 of Rs. 73,993 (*nil*) leaving a balance of Rs. 4,172 (Rs. 8,01,068). To this amount is to be added the amount transferred from general reserve No. 1 of Rs. 3,90,480 (Rs. 3,00,000 from reserve account and Rs. 1,00,000 from equalisation of dividend account) making available a sum of Rs. 3,94,652 (Rs. 12,01,068). From this, the directors recommend the declaration of a dividend of Rs. 8 (Rs. 8) per share without deduction of income-tax, which will absorb Rs. 3,90,480 (Rs. 3,90,480) leaving balance to be carried forward of Rs. 4,172 (Rs. 4,172 after providing Rs. 1,30,000 for additional provision for taxation and Rs. 6,76,416 for development reserve account).

Reserves: The following transfers have been made to general reserve No. 1:—From reserve account Rs. 33,12,570, from development reserve account Rs. 6,76,416 and from equalisation of dividend account Rs. 50,000. In the accounts for the year under review, the directors have transferred a sum of Rs. 73,993 from the profit and loss appropriation account to general reserve No. 2 and an amount of Rs. 3,90,480 (equivalent to the proposed dividend) from general reserve No. 1 to the profit and loss appropriation account. These transfers have been made with a view to segregating in the general reserve No. 1, profits which have been already taxed. The general reserve No. 2 consists of the profits of the Company for the year under review, which, it is estimated will not be taxed.

Accounts in brief are as under:—

Mafatlal Fine Spg. and Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Navinchandra Purshotamdas & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show that the profit for the year after deducting managing agents' commission of Rs. 3,73,746 (Rs. 2,11,763), depreciation of Rs. 8,37,116 (Rs. 10,82,607), statutory development rebate of Rs. 1,96,791 (*nil*), development rebate of Rs. 65,597 (*nil*), and after providing Rs. 17,21,000 for taxation for 1958 amounts to Rs. 7,63,300) Rs. 14,66,598 (Rs. 4,48,119). To this is added the balance brought forward from last year of Rs. 25,268 (Rs. 1,52,649) making a total available balance of Rs. 14,91,866 (Rs. 10,25,768 after transferring Rs. 4,25,000 from general reserve). From this amount the directors have appropriated to general reserve Rs. 3,00,000 (*nil*) and propose payment of dividends (free of income-tax) as follows: to 16th dividend on 14,500 redeemable cumulative 1st preference shares at Rs. 4.50 per share (free of income-tax) absorbing Rs. 65,250 (Rs. 65,250), to 15th dividend on 14,500 redeemable cumulative 2nd preference shares at 4.50 per share (free of income-tax) absorbing Rs. 65,250 (Rs. 65,250), to 24th dividend on 58,000 ordinary shares at Rs. 15.00 (Rs. 15.00) per share (free of income-tax) absorbing Rs. 8,70,000 (Rs. 8,70,000) and to bonus dividend on 58,000 ordinary shares at Rs. 3.00 (*nil*) per share (free of income-tax) absorbing Rs. 1,74,000 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 17,366 (Rs. 25,268). A sum of Rs. 1,96,791 being 75 per cent. of the total development rebate to which the Company is entitled under the Income-tax Act has been kept to the credit of statutory development rebate reserve account in accordance with the statutory requirements of the Income-tax Act leaving a balance of Rs. 65,597 which has been kept to the credit of development rebate reserve account in accordance with the past practice.

MANCHESTER LETTER

(*Concluded from page 641*)

While discussions in Lancashire still centre on the early launching of redundancy schemes in the different sections of the cotton trade, similar projects are afoot in other countries where textile manufacturers are finding progress difficult by reason of dwindling demand, particularly from overseas markets. In some areas, official guidance to the smaller firms to merge their interests, either amongst themselves or with the already established larger groups, has been given. Such advice has come from the French Federation of the Cotton Industry, stimulated by the prospect of increasing activity following the establishment of the European Common Market. The traditional individuality of old-established small firms may well be affected by such developments, as it is widely felt that the bigger organisations can cater more effectively for the extended area of consumption provided by the larger European project.

Reports from Paris speak optimistically of the outlook for the French cotton industry, which has already been aided by the devaluation of the franc and the opportunities of operating within the new European market. French millowners last year established a fund to assist exporters and an improvement in shipments abroad is confidently anticipated.

In the meantime, a survey of the situation in the U.S. textile industry is also less pessimistic than some recent reports. Over the past three months mill production has been well maintained and by avoiding a build-up of expensive stocks, the owners are now gaining "a moderate but welcome return."

The backlog of orders in most lines of cotton goods is sufficient to provide hopes that the current level of activity will be maintained throughout the present year, but the main threat to this belief lies in the spread of competition overseas. In this case also, the dumping of cotton goods at cut-throat prices in Asia and even in more highly developed areas, offers a severe problem. According to the survey, the textile industries of Western Europe have suffered even more severely than American mills from the tremendous surge of textile imports from the Soviet Union and Asia. American manufacturers are looking to Congress for tariff protection, but they are also stepping up research and development projects aimed at reducing production costs and improving their products.

Redundancy Payment

Although no final confirmation has been obtained, it has been reliably reported that the cotton employers in Lancashire have accepted the principle of compensation for workers made redundant in the reorganisation plans now being considered in the various sections of the industry. Miss Alice Foley, Secretary of the Bolton Weavers' Association, has reported that the compensation question has been fully considered at the meetings of the joint sub-committee appointed by the Cotton Board, to consider the future size of the industry and suggest methods for eliminating surplus machinery. She added that nothing had been settled, but forecast that the shape and size of the industry would be known by October and that, in a more compact industry, there would be better wages and conditions.

The cotton industry of the future would be based on modernised machinery, mainly automatic so far as looms were concerned, and mainly high-speed warping beaming in the preparation departments. There would be fewer people actually producing, many people measuring what was produced, and more administration. Miss Foley said that she would not be surprised, if there was not a shortage of skilled operatives by the time the reorganisation plans were complete.—*All Rights Reserved.*

A three-man trade mission representing the British rain-wear industry left Manchester last week for Western Germany to explore export opportunities. The mission will visit the larger stores and retail organisations and have discussions with trade associations. The visit follows that made to this country at the end of last year by a West German retail foreign trade mission.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co Ltd

* National income at factor cost—the aggregate of all incomes earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, October 1958.
† Preliminary estimates (at 1948-49 prices) are based on the fifth issue of the annual paper on national income issued by the Central Statistical Organisation.
†† According to budget-speech of Pakistan Finance Minister.

TREND OF MARKETS

(From Our Own Correspondents)

MONEY

BOMBAY, 15th April

There has been no change in the state of affairs of the short-term money market this week also. The acute stringency noted for the past several weeks persists without any sign of slackness. On the contrary, the demand for bank credit is growing, in the face of an acute shortage of floating funds in the market. Banks are unable to get their requirements in full from the market. They are often obliged to seek accommodation from the Reserve Bank and the State Bank. The inter-bank call money rate also shows a tendency to harden. While the common rate continues to be 3½ per cent., some business has been done even at 3¾ per cent. among the Exchange banks and big Indian banks. The corresponding rate among the smaller banks is, however, unchanged at 3¾ per cent. In view of the agreement among banks, the rate for house money at seven days' notice and short-term deposits did not pierce the ceilings fixed for them at 3½ per cent. and 4 per cent respectively.

The Treasury Bill rate, which had hardened from 2.760 per cent. to 2.780 per cent. per annum last week, has maintained the latter level this week. The amount offered against these bills is no more than that (Rs. 2 crores) invited. The poor response to the bills (which are being taken up only by the special source) has not deterred the Government from continuing the sales. Tenders have been invited for Rs. 2 crores next week also. There have been no sale of Intermediate Bills this week, but it is being continued.

A further expansion of Rs. 20.17 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 10th April 1959. This brings the aggregate rise during the past three weeks to Rs. 71.83 crores. Notes held in the Banking Department are lower by Rs. 1.19 crore. The consequent increase of Rs. 18.97 crores in the total notes issued is covered by a rise of Rs. 20 crores in rupee securities and a contraction of Rs. 1.02 crore in rupee coin. Foreign securities are unchanged, but balances held abroad are a fraction lower. Deposits of the Central Government and other Governments have declined by Rs. 11.02 crores and Rs. 4.33 crores, respectively, while those of banks have gone up by Rs. 18.45 crores, presumably because of borrowings from this Central banking institution. Loans and advances to Governments show a rise of Rs. 4.73 crores and other loans and advances a decline of Rs. 8.80 crores. Investments stand reduced by Rs. 19.95 crores, while Government Treasury Bills purchased and discounted have advanced by Rs. 11.15 crores.

There has been a sharp rise of Rs. 30.35 crores in Scheduled banks' deposits (net) during the week ended 3rd April 1959, of which demand deposits account for Rs. 26.23 crores and time deposits for Rs. 4.07 crores. The rise in deposits may have been largely due to P.L. 480 funds, the funds of the State Bank alone having gone up by Rs. 15.05 crores during the week under review. Reflecting the keen demand for money, there is an increase of Rs. 6.07 crores in inter-bank borrowings. There has, however, been a net repayment of Rs. 13.17 crores in borrowings from the Reserve Bank and of Rs. 1.33 crore in borrowings from the State Bank. Advances (including bills purchased and discounted) maintain their upward trend with a rise of Rs. 8.15 crores. While investments are lower by Rs. 1.94 crore, cash balances (including balances with other banks) have gone up by Rs. 9.57 crores and money at call and short notice by Rs. 3.13 crores.

The Gilt-edged market is lethargic with very little business passing, due to absence of institutional enquiries on account of acute stringency in the money market. There are sellers in most of the counters at quoted rates. State loans also are devoid of any support. 3 per cent. 1986 Conversion Loan is on offer at Rs. 74.05. 3 per cent. 1970-75 is unchanged at Rs. 91.20, while 3 per cent. 1966-68 is 5 nP lower at Rs. 93.70. 3 per cent. 1964 and 1963-65 are dull at Rs. 97 and Rs. 96.75. 3½ per cent. 1961 is on offer at Rs. 100.10, 3½ per cent. 1963 at Rs. 99.95 and 3½ per cent. 1964 at Rs. 99.80. 3½ per cent. 1965 and 1967 have held their own at Rs. 99.55 and Rs. 99.05, respectively. 3½ per cent. 1967 is being quoted at Rs. 100.80 and 3¾ per cent. 1968 at Rs. 100.60. 4 per cent. 1960-70 is neglected at Rs. 100.75, 4 per cent. 1972 at Rs. 101.65 and 4 per cent. 1973 at Rs. 101-60. State loans have attracted sellers, but the quotations are all unchanged over the week.

There has been a hardening of the rupee in terms of the dollar this week, in consonance with the trend of sterling abroad. Banks' selling rate of ready dollars has declined from Rs. 475.25 to Rs. 475 per $100 and their buying rate from Rs. 472 to Rs. 471.75 per $100. In London, spot sterling has advanced from $2.81.17/32-2.81.19/32 to $2.81.11/16-2.81⅛ and three months' forward from $2.81.1/16-2.81⅛ to $2.81⅛-2.81.3/16.

BULLION

BOMBAY, 15th April

Both gold and silver rallied further during the week under review under the impetus of bull support induced by inflationary psychology and deteriorating Indo-Pakistan relations. The rise in the yellow metal was more marked. Some prominent operators were reported to be fully exploiting the situation of paucity of floating stocks in the city owing to poor arrivals and good offtake from upcountry centres. Silver continued to move up on renewed speculative demand which found offerings scarce. There were, of course, rumours regarding a possible heavy inflow of silver coins from Tibet in the near future which led to some selling yesterday, but the offerings were well absorbed. The undertone of the market was distinctly firm.

Ready gold touched today a high of Rs. 121-7 per tola, a level which is just As. 9 below the all-time peak of Rs. 122 reached on 31st August 1948. The closing rate was, however, lower at Rs. 121-5. The net rise since the rate had declined to Rs. 120-2-6 on the 11th inst. was Re. 1-2-6. The daily average arrivals of gold were 5,000 tolas, while the offtake was 5,500 tolas per day. The floating stocks of gold are reported to be around 25,000 tolas.

April settlement in gold evoked good buying support and advanced from Rs. 120-4 to Rs. 121-1 today before finishing at Rs. 120-15. May settlement registered a rise of As. 13-6 to Rs. 120-5-6. The *badli* was against the bears, but the rate narrowed down from As. 12 last week-end to As. 9½ today. June settlement was quoted today at Rs. 119-10-6, as against Rs. 118-12. Margin at the rate of Rs. 10 per tola continued to be operative on bulls in both April and May deliveries throughout the week.

In reply to a question in Parliament, Mr. B. R. Bhagat, Deputy Minister for Finance, stated this week that the value of smuggled gold confiscated by the Customs authorities in 1958 was Rs. 1.06 crore, as against Rs. 2.13 crores in 1957.

Ready silver was well supported, the quotation spurting from Rs. 200-12 on Wednesday last to Rs. 201-11 today. Towards the close, however, it was a shade easy at Rs. 201-8, owing to profit-taking. The daily average arrivals and offtake of silver were 10 bars and 14 bars, respectively. The floating stocks of silver are estimated at 800 bars.

In the forward section, April settlement opened the week firm at Rs. 200-14, as against Rs. 200-12, and rallied to Rs. 201-11 today before closing at Rs. 201-9. May settlement rose from Rs. 200-5 to Rs. 201-5 on Monday. After receding to Rs. 199-13 yesterday, it recovered to Rs. 201 today before finishing at Rs. 200-12. The *badli* payable by bears, which had narrowed down from As. 11 to As. 7 last week, widened again this week to As. 13. June settlement improved from Rs. 198-8 last week-end to Rs. 199-10-6 today.

The London bullion market presented an easy trend during the week under review. Ready silver encountered selling induced by slackness in demand for "essential" industry and poor Continental enquiry. The quotation for the metal receded from 79¾*d.* per fine ounce to 79¼*d.* Forward silver was done lower at 78¾*d.*, as against 79¼*d.* Ready gold declined from 249*s.* 2¼*d.* per ounce to 249*s.* 0¼*d.* owing to firmness of pound sterling. The dollar price of gold was $35.07½-35.09½ per fine ounce. Silver in New York continued unchanged at 91.375 cents per ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	15-4-59	Highest	Lowest	8-4-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON

BOMBAY, 15th April

In sharp contrast to its recent firmness, the cotton futures market depicted an easy trend during the week under review. There were persistent bull liquidation and large-scale selling by upcountry interests. Cotton futures values consequently receded. The selling was prompted by fears of the probability of large tenders against the maturing May contract and not due to any basic change in sentiment. Slackening of mill buying in the spot market, in the context of steady arrivals, also imparted weakness to the market. However, the crop estimates have been sharply reduced while mill consumption is running at a high rate. At the end of February, the crop was estimated at no more than 4.8 million bales, as against 5.4 million bales at the beginning of the season. A leading cotton firm has revised its estimates further down to 4.6 million bales which was even below the estimated consumption during the current season. The supply position was, therefore, tight. It was this consideration which prevented a further fall in price.

I.C.C. Moglai Jarilla May opened the week at Rs. 683.25 and gradually declined to Rs. 679.25 yesterday. Commencing today's session at Rs. 678, the contract improved fractionally to Rs. 678.75 but declined to Rs. 675.50. It, however, rose to the opening level and closed at that rate.

I.C.C. Moglai Jarilla August opened at Rs. 692.75 and receded to Rs. 689.75 yesterday. Commencing today at Rs. 688, it gathered Rs. 2 before receding to Rs. 686. The closing was, however, higher at Rs. 690.

The following table indicates the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	15-4-59	*High*	*Low*	8-4-59
I.C.C. Moglai Jarilla May 1959 ...	678.75	683.50	676.50	683
I.C.C. Moglai Jarilla August 1959 ...	690	693	687	693

In the spot section, mill buying slackened slightly. But arrivals continued to be normal. Consequently, prices tended to ease. Ready lots of quality cotton continued to find buyers, although higher levels met with resistance. Stockholders were not eager to sell either. They were inclined to hold on in anticipation of higher prices. Some of the varieties which attracted attention were Jaydhar, Laxmi, Surti, Vijay, Digvijay.

Listless conditions prevailed on the export front. Stray inquiries were noted for Bengal *Deshi* from Japan, but business put through was negligible. Japan was also said to be interested in Dholleras. France and U.K. also enquired for this growth. Shippers noted with interest the report that, very soon, Japan might issue exchange allocation for sterling area cotton.

The foreign section was quiet. Only limited interest was noted in foreign cotton. U.S. styles and Sudans received some inquiries. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 690 ; Berar Jarilla 775 ; Khandesh 845 ; Vijay 990.

Karachi cotton futures market relapsed into a spell of easiness during the week under review. Export demand was weak. Domestic spinner interest was also at a low ebb. Arrival of new crop was normal but fresh buying was not forthcoming. N.T.R.G. May declined from Rs. 53-6 last week-end to Rs. 51-4-6 yesterday. July eased from Rs. 54-14 to Rs. 53-9-6.

Trading was livelier in the Alexandria cotton futures market during the week. Brisk demand from communist countries and renewed inquiries from some of the traditional customers of the free world imparted strength to the market. Both the Karnak and Ashmouni contracts received support. Prices recorded a modest rise. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 72.30 ; July 72.41. *Ashmouni*: April 62.15 ; June 62.10.

Barring the near months of the American cotton contracts which were easy, reflecting the continued offering of cheap C.C.C. cotton, the Liverpool cotton futures market ruled fully steady during the week. The steadiness was due to speculative support to new crop positions. Sudan cotton futures also hardened on good spot house buying. The following are the latest available quotations—in pence per lb.—from Liverpool:—

American Cotton One Inch Staple Contract: May-June 21.95 (22.15) ; July-August 21.70 (21.75); October-November 20.85 (20.50) ; December-January 20.20 (19.95). *American Cotton Mixed Growth Contract*: May-June 22.65 (22.65); July-August 21.70 (21.65) ; October-November 20.75 (20.50) ; December-January 20.10 (19.85). *Sudan*: May-June 23.00 (22.70) ; July-August 23.00 (22.75) ; September-October 23.00 (22.80).

Cotton futures values in New York receded during the week on scattered hedging and liquidation. The undertone, however, was steady, thanks to the growing feeling that supplies would become scarce at the current season drawing to a close.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	14-4-59	7-4-59	31-3-59
Spot	35.90	35.95	35.90
March	35.65	35.79	35 81
May	35.03	35.40	35.11
July	32.68	32.70	32.79
October	32.63	32.70	

YARN

BOMBAY, 15th April

There was a landslide in price of art silk yarns and staple fibre yarns. Art silk yarns were subjected to nervous liquidation by bulls who feared that arrivals of yarns against import licences granted in respect of the Export Promotion Scheme would be considerable in the coming weeks. The other bearish factors were the marked drop of 50 nP to Re. 1 per lb. in the price of nylon yarns and discouraging advice from art silk fabrics markets. Reports of heavy stocks with indigenous manufacturers also imparted weakness. The selling pressure was equally pronounced in the staple fibre yarn section, thanks to poor offtake from consuming centres and large offerings from several mills in South India. Cotton yarns ruled irregular. Thus, while coarse counts tended to move down, medium and finer counts evoked good support although the rise in prices was not marked.

More than 4.97 million lbs. of art silk yarn were imported into Bombay port during the month of March last as compared with 3.21 million lbs. in the previous month. In the same month, 241,257 lbs. of synthetic yarn, 51,500 lbs. of staple fibre yarn and 41,667 lbs. of cotton yarn were imported. The aggregate exports of cotton yarn from Bombay port during March were 639,649 lbs.

Cupressa Bamberg art silk yarn (60 x 1) June delivery came down from Rs. 1,541 to Rs. 1,503. April delivery fell by Rs. 27 to Rs. 1,501. The spread between the two contracts narrowed down from Rs. 10 last week-end to Rs. 4 today. Spot Cupressa (60 x 1) Bamberg yarn dropped 12 nP to Rs. 7.41. 120 Japan and 150 Japan declined by 3 nP each to Rs. 4.84 and Rs. 4.73, respectively. 120 Italy lost a like amount to Rs. 4.87. 150 Italy was quiet at Rs. 4.75. Among indigenous yarns National Rayons 150 bright cones first grade eased by 2 nP to Rs. 4.26. 120 bright cones first grade was quoted at Rs. 4.45.

April delivery in staple fibre yarn moved down from Rs. 617 to Rs. 597. June delivery suffered a loss of Rs. 19, today's closing rate being Rs. 603. Spot Citys receded by 6 nP to Rs. 3.06. Kohinoors shed 3 nP to Rs. 3.23. Centurys declined by a similar sum to Rs. 3.19. Among imported yarns, 80 x 2 Fujis decreased by 2 nP to Rs. 8.78, while Paramounts were better by 3 nP at Rs. 7.84.

In the cotton yarn section, ten counts Moderns came in for selling and receded by 13 nP to Rs. 13.25. Podars were neglected at Rs. 12.19. Twenty counts Moderns were dull at Rs. 16.25, as also Seksarias at Rs. 15.50. Among forty counts, Minaxis gathered 6 nP to Rs. 25.06. Moderns were dully maintained at Rs. 26. Sixty counts Raghuvamshis hardened by 50 nP to Rs. 55 50. Finlays were unchanged at Rs. 65. Eighty counts Mahendras gained 50 nP to Rs. 71. Citys were fully steady at Rs. 67. Finlays, however, declined by 50 nP to Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days before:

	15-4-59	8-4-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg (per case of 200 lbs.) ..	1,504	1,531
" " " April/June	1,503	1,541
60/1 Cupressa Bamberg spot (per lb.)	7.44	7 56
120 Japan (per lb.)	4.84	4.87
150 Japan (per lb.)	4.73	4.81
120 Italy (per lb.)	4.87	4.90
150 Italy (per lb.)	4.75	4.75
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.)	597.00	617.00
40 x 2 June (per case of 200 lbs.)	603.00	622.00
40 x 2 Century (per lb.)	3.19	3.22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
40s Minaxi	25.06	25.00
60s Finlay	65.00	65.00
80s City	67.00	67.00

SUGAR

BOMBAY, 15th April

A quiet trend was in evidence in the sugar market during the week under review. Spot demand was poor, while arrivals by rail were quite large, being 24,200 bags, as against 15,700 bags in the previous week. Consequently, prices showed a tendency to decline. The fall would have been more marked but for sustained enquiry from Malabar side.

Small grain sugar eased by 50 nP to Rs. 112.50. Medium grain was unchanged at Rs. 113-Rs. 114, as also large grain at Rs. 114-Rs. 117.

METALS

CALCUTTA, 14th April

The feature of trading in the metal market during the week under review was that, while lead and tin continued to decline, zinc and copper scrap recorded a hardening tendency. Electrolytic zinc which had fallen to Rs. 79 last week recovered to Rs. 84, this week. The recovery followed the knowledge that the quota allowed for established importers under the new licensing policy was infinitesimal. However, it should be said that the fall and recovery were more of a psychological character in the market, as business was not done either at the fall or at the rise. Quotations were nominal. Such a state of affairs was due to stocks being plentiful, and consumers felt confident that they could have their requirements at any time. Note was taken of the fall in the price of zinc on the London Metal Exchange, leading to shortening of the gap in the backwardation. The spot metal gave way to £71¼ from £72¾. In New York also, a downward trend was in evidence.

Copper scrap continued to be quoted at high rates, thus reflecting the tight supply position of this material. It was felt that the restoration of the quota to the extent of 20 per cent. to established importers would not relieve the shortage.

Tin opened at Rs. 595 and gave way to close at Rs. 583. Some supplies were on the high seas, and their arrival, it was feared, might depress the price further.

Lead eased to Rs. 68 from Rs. 70. Demand was poor, but the supply position of the virgin metal was good, although the same was not the case in regard to lead scrap.

OILSEEDS

BOMBAY, 15th April

The oilseeds market had only four trading days during the week. It was closed on the 9th and 10th inst. on account of *Gudi Padva* and *Ramzan-Id*. During this short week, sustained firmness was witnessed in the market. Both futures and spot prices hardened on all-round buying. In the groundnut section, in particular, the firmness flared up into a virtual boom. The acute shortage of the ready material and persistent demand from crushers and manufacturers fanned the bullish fervour. Renewed demand from foreign countries and better prospects for exports of oil and oilcake to Europe and Far East countries also helped sentiment. Futures values consequently shot up, with groundnut May touching a new peak of Rs. 193.25 and August Rs. 197.75 yesterday. This spurt forced the Forward Markets Commission to tighten the margin rates further today. Accordingly, a margin of Rs. 65 was made payable if the contract rose to Rs. 196. Castorseed also met with keen buying prompted by rumours of the possibility of large-scale business with the U.S. and communist countries. Slackening of new crop arrivals in Gujerat and Hyderabad and a further hardening of spot prices were other favourable factors. The strength of groundnut and castor affected linseed which, despite the delay of Australian tenders, firmed up in sympathy. Trading in cottonseed, in contrast, was featureless, thanks to the stringent margin and easier advices from the cotton market. The raising of the margin on groundnut today had a signal effect on the market which turned easy. The easiness persisted till the close.

Groundnut May met with firm support and improved from Rs. 189.50 at the beginning of the week to Rs. 193.25 yesterday. It, however, eased to Rs. 191.25 today. The August contract rose from Rs. 193.50 to Rs. 197.75 but finished lower at Rs. 196.25 today. Spot groundnut found keen buyers. Bold ready was quoted at Rs. 39.50 yesterday, as against Rs. 38.75 early in the week. It, however, eased to Rs. 39.12 today. Oil prices recorded a modest improvement.

Speculative buying pushed castorseed May from Rs. 158.62 early in the week to Rs. 159.62 yesterday. The contract, however, softened to Rs. 158.87 today. Castorseed September firmed up from Rs. 162.75 to Rs. 164 before finishing at Rs. 163.37. Castor oil was firm on reports of demand from communist countries. Oil B.S.S. rallied from Rs. 16.94 on Saturday to Rs. 17 yesterday, although it closed today a shade lower at Rs. 16.87.

In anticipation of Australian tenders operators supported linseed May and September which rose from Rs. 32.69 and Rs. 33.44 at the start of the week to Rs. 33.00 and Rs. 33.81 respectively, yesterday. Today's closing was lower at Rs. 32.75 and Rs. 33.50 respectively. Ready prices also improved over the week.

Cottonseed futures were relatively neglected. Cottonseed May and September recorded a sympathetic rise from Rs. 128.25 and Rs. 130 respectively at the start of the week to Rs. 129.50 and Rs. 131.75 yesterday but receded today to the same levels as obtained at the beginning of the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	15-4-1959	8-4-1959	1-4-1959
Groundnut	Rs.	Rs.	Rs.
May 1959	191.25	187.50	185.00
August 1959	196.25	191.50	188.00‡
Hold ready	39.12	38.25	37.25
Coromandel ready	39 37	38.62	38.12
Khandesh quality	39.37	38.75	38.12
Oil ex-mill ready*	20.26	19.87	19.87
Railway receipts*	20.50	19.75	19.56
Castorseed			
May 1959	158.87	160.50	154.12
September 1959	163.37	160 62	159.25‡

September 1959	130.25	130.25	129.75‡
Niger seed	29.50	29.50	27.75
Kardi seed	23.37	23.25	23.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ Closing rates on 3rd April, 1959.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

HIDES AND SKINS

MADRAS, 13th April

Arrivals of E.I. tanned cow hides was of usual volume and sellers were quoting 10 per cent. more than last week's levels, which shippers declined to follow. A few sales of kips to the U.S.A. at 5 per cent. over the pre-Easter prices, upset the market, and tanners were quoting fantastic prices. It is stated that world raw prices have advanced by 100 per cent. as compared with the last year's level. Though E.I. tannages are not generally influenced by world prices, the trade expects that still higher prices over today's parity will have to be paid in sympathy, because they have to buy raw stocks in the same markets competing with chrome tanners.

Demand for buff calf from the U.S.A. was good and sellers quoted 15 per cent. over February levels. There were inquiries from the Continent also. Importers of tanned goat and sheep skins were feverishly calling for offers and several parcels were sold at increased prices. The tone was firmer all round.

JUTE

CALCUTTA, 14th April

Conditions in both the jute fibre and goods markets were extremely quiet during the week under review. The news that for the second time in recent weeks Pakistan was able to divert from India an Australian order for heavy goods chilled sentiment. For this showed that production in Pakistan was increasing and that Pakistan was left with some export surplus. Hitherto, Pakistani activity in the export market for goods was negligible, as production was hardly sufficient to meet that country's domestic demand. No doubt, Pakistan now and then had exported token quantities of hessian to the United States. Even now, it is by no means certain that Pakistan's bid to secure the two orders from Australia indicates that it is able to ensure regular supplies to the foreign markets. However, there is no gainsaying the fact that the quality of Pakistani production is infinitely better than the goods produced in India. This is due to the natural advantage Pakistan enjoys in jute of the finest quality. This factor brings to the forefront the imperative need for improving quality of Indian jute, according to market circles.

On Tuesday last, the goods market was featureless in the absence of interest being shown by buyers for export. On the next day, there was some interest shown by Australian buyers for woolpacks, but the quantities involved were so small that they had no effect on the market. Ready B. twills at Rs. 93.20 were lower by a few nP., and ready hessian 40" 10 oz. drifted to Rs. 39.55 from Rs. 40.75. At this stage, the news of a fall in stocks of jute goods with mills as at the end of March was available, but this, contrary to expectations, did not arrest the downward trend. The declining trend continued and on Thursday ready B. twills gave way to Rs. 93. However, hessian 40" 10 oz. at Rs. 39.65 was better by a few nP. Overall, the stocks of jute goods fell by 4,000 tons. Sackings declined by 7,300 tons, but this was offset by the increase of 1,800 tons in miscellaneous goods and of 1,500 tons in hessian. On Friday, the market was closed. Over the week-end, hessian 40" 10 oz. improved to Rs. 40, while B. twills declined further to Rs. 92.50, despite repetition of Australian interest for woolpacks and cornsacks, albeit for small quantities. Conditions during yesterday continued to be featureless with no incentives for quotations improving in the absence of business with foreign buyers. There is a shortage of ready goods in hessian, but even then the 40" 10 oz. for April was quiet at Rs. 39.85. However, ready B. twills was slightly better at Rs. 92.75.

Raw jute prices declined by about 25 nP per maund. Mills showed meagre interest, and another cause was the reports of satisfactory condition of the young plants wherever sowing has already taken place. The latest quotations for April-May delivery of the outstanding 1958-59 crop are:

	Middles	*Bottoms*
	Rs.	Rs.
Indian:		
Northern	23.00	20.00
Assam Upper ...	23.25	20.25
Cuttack	25.00	22.00
Desal	22.25	19.25
Murshidabad	20.75	18.25
Jungli	20.50	18.00
Daissee	23.50	22.00
Uttar Pradesh ...	20.50	18.00
Daissee mesta ...	20.75	18.25
Bimli f.a.q.	...	Rs. 18.75
Pucca bales 1st marks ...	Rs. 160.00 ready per bale.	

TEA

CALCUTTA, 14th April

Much earlier than usual, the export sales of the 1958-59 North Indian tea came to a close with the auctions held a week ago. However, it is likely that one or two more sales of a miniature type would take place. These would be aimed at clearing away any quantities that might have left the gardens, but not reached Calcutta so far.

It was with a measure of enthusiasm that trade circles noted that practically the exportable types of the 1958 production stood exhausted. The export sales for this year's production would commence from June, and that gives a break of six weeks between the closure of the 1958-59 auctions and the beginning of the 1959-60 auctions for export. By this time, the new season's teas should be arriving in substantial quantities, and the trade felt that in the early auctions accumulation of demand would lead to buoyancy.

The same rosy position cannot be painted of common teas. A fair quantity of dusts still remain to be marketed, and as such internal auctions would continue for some time to come. Meanwhile, the West Bengal Labour Minister, Mr. Abdus Sattar, received last week a deputation of representatives of gardens in the Terai and Dooars producing common teas. They represented the uneconomic nature of these gardens and presented a strong case for tax relief. The news from New Delhi that a decision had been arrived at to take over uneconomic gardens which had been closed was noted here with concern. For it was felt that by taking over these gardens, the Government would in no way bring a solution to the problem of uneconomic working. The decision, at best, would only prolong the disease. The correct course would be to make a detailed enquiry as to the working of these gardens and grant them tax relief. The present decision would only mean that the taxpayers' money would be utilised to meet the loss that would be incurred in working the uneconomic gardens by the Government. The question that is being asked here is whether gardens incurring loss after being worked in accordance with commercial principles could be worked by the Government without loss. The answer is anybody's guess.

Dusts on offer in internal sales held last week amounted to 21,250 chests, which met with good demand. In the C.T.C. group, competition was offered to the small powdery lots the prices of which rose. However, mediums gave way, as also the few best liquoring types. On the other hand, orthodox teas were in good demand. Legg cut Dooars recorded a hardening tendency with buyers favouring the brighter liquorings. In Darjeelings, the better lots were fully steady, but the poorer ones were quiet. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.60 to Rs. 3.00, medium Assam C.T.C. Rs. 2 to Rs. 2.15, medium Dooars Re. 1.82 to Re. 1.86, and medium Assam grainy Re. 1.76 to Re. 1.82.

Leaf amounting to 3,390 chests met with poor demand. Prices eased.

COCHIN, 10th April

Just over 900,000 lbs. were offered in sale No. 13, which was held on 7th April 1959 and the quantity offered in this sale was slightly larger than last. The sale opened to a good general demand, although good medium and best liquoring broken grades met with less support than in recent sales and sold at much easier rates. How-

ever, there was better enquiry for corresponding fannings in this sale, although prices were slightly lower. Low medium and medium teas met with good demand and sold at irregularly dearer rates. A fair selection of whole leaf grades met with keen competition from all buyers and sold at higher rates and were the strongest feature of the sale. The following are the quotations:—Low medium Re. 1.60 to 1.70; medium Re. 1.80 to 2.25; good medium Rs. 2.25 to 2.85; and quality Rs. 2.60 to 5.12.

Dust Sale 'G'.—Approximately 500,000 lbs. were on offer in Dust Sale 'G' which was held on Thursday, 9th April 1959. The sale opened to a strong general demand for all types. Milled dusts, however, were generally easier and prices for these types were five naye paise below last. Rates for all other types were irregular and can be quoted barely steady. A slightly larger quantity of C.T.C. dusts met an improved demand at above last rates.

London Market:—Sale of 6th April 1959.—Generally firm to dearer.

Sale of 7th April 1959.—Generally dearer following improved quality.

Sale of 8th April 1959.—Steady. Good demand.

Colombo Market:—Sale of 6th April 1959.—Strong demand. Dimbula dickoya brokens irregularly lower, following quality. Medium and useful liquoring Uvas 10c. to 15c. dearer. Small leaf low growns 5c. dearer. Gulf types slightly lower.

Sale of 7th April 1959.—Off grades strong. Active demand. Generally dearer, particularly good liquoring dusts.

Calcutta Market:—Export.—64,600 packages export. Fair general demand. Prices irregular. Black clear leaf sold well at dearer rates. Teas for price plain and medium brokens irregularly dearer. Poorer fannings up to 12 nP easier. Any stylish whole leaf well supported. Best C.T.C. sold well. Poorer sorts irregularly easier.

Internal.—21,300 packages dust. Strong general demand. Grainy orthdox types about steady. Powdery dearer. C.T.C. irregularly 8 nP easier, except powdery kinds which are firm.

Export Quota 1959-60.—Although the Government has not announced the first release of 1959-60 export quota, a small business in new quota has taken place at 8 nP and at the time of writing there are sellers at 8 nP and buyers at 6 nP.

Special Licence 1958-59.—The market has continued to be rather quiet last week and small business has gone through at 1¼ nP. At present, there are sellers at 1¼ nP and probable buyers at 1¼ nP.

Forthcoming Auctions.—Sale No. 14 will be held on Monday, 13th April 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale* 14.—900,000 lbs. Good general demand. Low medium and medium brokens and fannings irregularly 5 nP dearer. Good medium high-grown brokens easier. Similar fannings better. Enquiry at lower rates."

PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *15th April*

Ready pepper in the local market during the week improved from Rs. 91 to Rs. 98 under pressure of inland demand and in view of tight stock position. Ungarbled at Cochin climbed up to Rs. 681¼, while forward delivery for May rallied to Rs. 120 from Rs. 114. Calicut hardened to Rs. 750.

Inquiries from Russia and other Communist countries proved to be a supporting factor. Spot in New York, after touching $0.24¼, improved to $0.25¼. The outstanding feature of the U.S. market is that the quotations for forward delivery are now higher than spot rates after a period of a couple of years. Dealers there seem to have realised that the future supply available for the remaining period of the year will be smaller than the consuming requirements of the world, as the new crop of both Sarawak and Lampong are expected to be smaller.

Singapore improved to Str.$83 for black and Str.$154 for white, with sellers scarce.

Small business for Malabar for April shipment was reported done at $0.23. There are sizable inquiries at round about this price, but sellers are unwilling to sell for anything less than $0.26. The inland market is likely to improve as further reduction in the freight from India to the U.S.A. is very likely, in view of the competition from tramp liners and of the fact that many ships which have been bringing farm products from the U.S. to India have to go empty for the return voyage.

Stocks of ready pepper have been reduced considerably, as new arrivals are smaller, in view of disparity and distressed selling by the weak stockholders having been finished. Demand for ready pepper is improving.

Ready pepper is quoted between Rs. 98 and Rs. 105, according to quality.

LINSEED

(Messrs. A. Bradley and Co.)

CALCUTTA, *13th April*
