NEW ERA FOR WESTERN EUROPE

THE New Year has brought with it a new era of freedom for economic activity in Western Europe. That is the significance of currency convertibility simultaneously undertaken by as many as ten European countries, namely, Belgium, Denmark, France, West Germany, Italy, Luxembourg, the Netherlands, Norway, Sweden and the United Kingdom. The convertibility established is, of course, of a limited nature, in that it is applicable only to currencies held by non-residents; that is, non-residents can freely convert their currency holdings (cash, bank deposits and investments in Treasury Bills) not only into each other's currency as hitherto but also into U.S. dollars. There are, however, still restrictions on the transfer of capital in most of the countries, as also on the convertibility of currencies by residents and on tourist travel. Nevertheless, it must be conceded that the action taken by the aforesaid ten countries constitute a major step towards multilateral system of payments, a goal accepted by the countries of the free world when they subscribed to the treaty of Bretton Woods. The onward march towards multilateral trade has gained further momentum by reductions in trade restrictions and discrimination. If this move succeeds, the next step will be full convertibility and abolition of all quantitative restrictions on trade.

A notable feature of the developments last week is the close co-operation displayed by the ten countries. All of them acted in unison. This is all the more striking, because a few days before there were strong reports of serious differences of opinion among them and the possibility of a trade war was hinted at, as a result of failure of talks for reconciling the conflicts between the Free Trade Area enunciated by Britain and the Common Market of six Continental countries. To us, it looks as though this very failure has been responsible for the unity of action on the currency front.

The spirit of accommodation shown towards one another is evident from the help given by the stronger countries towards the weaker France, as also from the readiness with which France has subjected itself to financial discipline and relaxed the restrictions on trade. Sizable short-term credit facilities have been made available to France by West Germany, Britain, Holland, Belgium and the Bank for International Settlements, so that the franc can be defended effectively in case of a run on it. In return, France has devalued its currency by 17.55 per cent., increased the import quotas for the O.E.E.C. countries by 90 per cent. of the volume of private imports in 1948, freed the imports from dollar areas by 50 per cent., cut public spending and public subsidies, and abolished the unhealthy practice of "indexing" wages and other benefits to prices. In fine, the de Gaulle Government has taken firm measures to set right the French economy, nick-named as "the sick country of free Europe." It cannot be denied that, in doing so, General de Gaulle has put to good use the extraordinary powers he won for his Government through the new Constitution. There may be room for doubt whether what he has done so far in the fiscal and trade spheres is sufficient to restore strength to the French economy, for much will depend upon his political ambitions. But there can be no doubt that he has moved along right lines and shown courage which no other French Prime Minister did in recent years.

The achievement of convertibility by free Europe, limited though it is to non-residents, has overshadowed the inauguration of the Common Market. It has unified Western Europe which was threatened of a split by the Common Market. And it augurs well for the success of the forthcoming talks on the Free Trade Area, for it has already served many of the purposes of the F.T.A. It must be noted that the large measure of freedom which the European currencies and trade have now obtained is primarily the result of conscious economic policies pursued by their respective Governments ever since 1952, the year which saw the fall of socialists from power. The freedom might have come about much earlier but for the Suez incident and the serious economic dislocation it caused to the world. Convertibility of currencies cannot be had by merely wishing for it. It can be practised only if a country is economically strong and is prepared to submit itself to the discipline of economic laws.

The developments in Europe last week reflect, as the I.M.F. rightly remarks, "the great improvement in the European economic situation, including the strengthening of the monetary reserves." They have been made possible "not only by the general increase in production during the post-war period and certain other favourable circumstances, but more particularly by the pursuit of effective fiscal and credit policies." Great credit for this must be given to the conservative Governments in Britain and Germany. Both of them have demonstrated that sound economic progress can be achieved far more rapidly through a vigorous system of free enterprise, subject to a certain measure of fiscal and monetary discipline, as well as incentives, than through socialist methods of economic controls and State-ownership. France, which was lagging behind all these years in this respect, has now begun seriously to follow in the footsteps of Britain and Germany. If only it chose to cut the deadweight of Algeria and other colonial possessions in North Africa, it would be able to make rapid progress in regaining its economic strength.

Apart from the improvement in monetary reserves, the decline in the external liability of countries such as the U.K., the abatement of inflationary pressures, the continued favourable terms of trade and a substantial increase in the capacity to export, two other factors improved the psychological climate for convertibility. These were the growing misgivings about the invincibility of the U.S. dollar and the decision to enlarge the resources of the International Monetary Fund and the World Bank. The first factor has minimised the possibilities of a flight of capital to the U.S. The second factor has infused confidence among the Governments of Western countries that they can rely on the I.M.F. as a second line of defence, in the event of any unforeseen emergency. But the chief factors that triggered convertibility were the failure of talks between Britain and the Common Market countries in the third week of December 1958 and the brave decision of France to introduce drastic financial reforms to set its house in order.

The foregoing conclusion is warranted from the explanation of our distinguished London contemporary, *The Economist*. After pertinently pointing out that, in any normal circumstances, the proper priority in the scheme for securing

greater freedom for the pound sterling would be to ease or abolish the remaining restrictions on imports from the dollar area and on general tourist travel and not to technical convertibility, *The Economist* remarks that "a special conjuncture of events was required to justify reversing this order of things. It so happens that, by last week-end, such a special conjuncture had come about." Explaining what it was, our contemporary says:

"For political reasons, the French were eager that their devaluation should be accompanied by a declaration of convertibility for the franc, and it is possible that the Germans would have made this a prerequisite to granting the French their financial support. The chance thus arose of the concerted realignment of European currencies. It was a realignment involving more risks for Britain than anybody else. To give any foreigner who holds francs the right to convert them into dollars means very little, for few hold more francs than they irreducibly need, while sterling is a very widely held banking currency which convertibility could render more naked to future sudden squalls of distrust. But for Britain to have stood aside last week-end would have been to run the risk of plunging all these currencies into disarray and of making the pound look like the least desirable currency in Europe. The grant of convertibility to foreign holders of sterling became a necessary and desirable Christmas contribution to European solidarity."

So, when France, Germany and Britain decided on convertibility, albeit for non-resident accounts only, the other European countries, with much less international stake, must have also voted in favour of that step.

It will be seen from the aforesaid quotation that, in extending convertibility to foreign holders of sterling, Britain has assumed greater risks than the other countries which have acted likewise. It is true that, in actual practice, Britain has only given *de jure* recognition to a *de facto* situation existing for a long time, in that the Bank of England has been supporting transferable sterling in New York and Zurich ever since February 1955, a situation from which it would not have been easy for Britain to retreat without causing serious damage to the pound. But it is not so simple as all that, for Britain has accepted an obligation to convert the pounds held by foreigners at fixed rates of exchange which is intended to be permanent. In order to fulfil this obligation in times of adversity, Britain must be prepared to adopt internal deflationary measures, as it did in September 1957, besides losing a part of its hard-won dollar reserves. As against this risk, Britain has certain definite advantages, the most important of which is the re-emergence of London as a full-fledged centre of international banking and commodity trade. This will yield a sizable increase in its invisible exports by way of service charges.

The convertibility of sterling and other currencies has made little difference to the sterling area as a whole and to India, in particular. If the general assumption that this development will lead to increased world trade proves correct, India will gain indirectly. But it can do so only if its efficiency to export its raw materials and manufactured goods at competitive rates improves. For it must not be forgotten that convertibility of currencies and the coming into existence of the Common Market will result in keener competition and greater efficiency among manufacturers, as well as more scope for free enterprise. It is a moot point whether India will be successful in meeting this challenge, what with the diminishing freedom for its *entrepreneurs* and the growing dominance of the public sector, which is by no means efficient.

TAXATION IN UNDERDEVELOPED ECONOMY

A WELCOME development in recent years has been the increasing attention given to the problems of economic development of backward countries. Whatever the motives of those who have taken an interest in this subject—there are sometimes purely political reasons, though there is a broadly humanitarian motive behind the discussions on the subject initiated by the leaders of economic thought in the West—there is no doubt that they are responsible for the growing literature on the subject of development of backward economies. A vital aspect of such development is the pursuit of appropriate fiscal policies. Perhaps, this aspect has received less notice than it deserves. It is also a somewhat complicated subject, attracting to itself much emotional and political fervent. What is necessary is to cut one's way through to the core of the subject, clearing the ideological and sentimental cobwebs which have unfortunately grown around it. It is precisely such a service that has been rendered by Dr. M. H. Gopal, Professor of Economics, Ford Foundation Unit, Madras University, in the course of his presidential address at the forty-first session of the Indian Economic Conference, held at Lucknow towards the close of last month.

Dr. Gopal chose for his address the subject "Towards a Realistic Tax Policy for India 1959-66." A substantial part of his address was devoted to a theoretical discussion of the subject of taxation in an underdeveloped country which is anxious to obtain the resources for development and also to stimulate private investment. Against this theoretical background, he proceeded to discuss what ought to be the appropriate fiscal policy for India. Elsewhere in this issue, we have given the summary of his long address. Although the summary is adequate in its own way, it has not been possible, for obvious reasons, to incorporate the finer shades of thought and the strictly logical treatment of the subject for which one must read the full text of the address. There is no doubt that the address itself will be regarded as a permanent contribution to the literature on the subject of taxation. Within its 42 pages, the address covers a wide ground, and what is more, covers it so convincingly. Its compelling economic logic and strictly academic approach leave little room even for the most sophisticated thinker to raise any serious objection to the author's general reasoning and conclusions.

Most principles of taxation have been developed in the peculiar *milieu* of the highly industrialised West. When these principles are transferred to the underdeveloped world, they tend to be an exotic plant, lacking the necessary sustenance for organic growth. The Indian taxation system, in particular, suffers from indiscriminate borrowing from the modern West. Not merely is this true in the psychological sense—as, for instance, the gift tax which is so abhorrent to India's traditional concept of generosity—but also in the overall inhibiting effect of the tax system on the incentive for economic expansion at a time when such expansion is the need of the hour. Dr. Gopal has done well to indicate the characteristic difference in the fiscal issues as between the industrially advanced countries and the economically backward economies.

In the industrialised countries, the objectives of a tax policy include the raising of revenues for purposes of carrying on the administration and the stabilisation of the economy. In backward countries, as Dr. Gopal rightly points out, the objectives and the setting are different. A stabilising and neutralist tax policy would merely perpetuate stagnation. The Government should give the lead by providing the overheads, encouraging capital formation and directing the coarse of development. Accordingly, the need is for a "revenue-producing, investment-generating and diversionary policy." The tax principles which are appropriate to the conditions in underdeveloped countries, according to Dr. Gopal, are primarily productivity—that is, capacity to raise the revenues required—expediency —that is, effect on private investment and initiative—and only secondarily, equity—that is, fair distribution of the tax load among different individuals, groups and sectors in accordance with their ability to pay taxes. Since taxation of upper income groups and businesses would reduce private capital formation and retard enterprise, indirect taxes should be imposed. Further, the need for revenue suggests increasing consumption taxes and the necessity for development suggests reduction of direct taxes.

Dr. Gopal admits that it is a difficult choice for fiscal authorities when they have to choose between a "policy to stimulate economic growth and one to reduce tax burdens on the poorer sections." The problem is one of increasing mass purchasing power *versus* investment flow into capital formation. Referring to these alternatives, Dr. Gopal observes: "The inevitable, though unpleasant, choice is the latter—the policy for economic growth—for, in a way, and in the long-range interests of the poorer sections themselves, adequate and rapid development is the only means to reach the goal of social justice and greater equality." The key to economic development lies in the provision of incentives to private investment, so as to "maximise savings, mobilise them for productive investment and canalise them towards a balanced and active developmental programme." Again, Dr. Gopal rightly emphasises that the major aim of the policy should be to bring about a "massive" increase in real investment. He reiterates the point when he avers that, "where a tax policy is to be related to incentives and initiative, its material and psychological impact on the flow and pattern of resources towards capital formation in the private sector should be the most important criterion." Summing up his treatment of the subject, he observes:

"If, therefore, capital formation is the major objective of tax policy, if such saving and investment are largely to be done in the private sector, and if the saving and enterprise potential is in the upper income groups and institutions, it follows that, from the angle of development, the tax policy should tone down the effects on decisions to make risky investments, ease tax burden on equity financing, reduce tax factors inhibiting foreign private investment and strengthen further the automatic stabilisers in the tax system. That is, tax reliefs must be in the direction of the higher income groups and companies. Further, there should be a little more emphasis on the qualitative significance of taxation in relation to saving."

All this discussion is followed by a series of very realistic suggestions for the reform of the fiscal system. These include diversification of taxation so as to attain "depth and spread," simplification of tax structure, reduction in the burden of direct tax, liberalisation of depreciation and initial allowances, and integration of agricultural income-tax with general income-tax. By far the most notable of his suggestions—this is a corollary of his major thesis on the limited relevance of equity to the fiscal philosophy in an underdeveloped country—is for an increased emphasis on consumption taxes. Although the higher income groups will be more highly taxed on goods (for example, luxuries) entering consumption, the larger part of taxation for revenue should inevitably fall on lower income groups and on necessaries. He argues that, of the Rs. 11,400 crores of the national income (in 1953-57), only about 10 per cent. comes under income-tax—assessed income of Rs. 936 crores and possible evasion of Rs. 160 crores—whereas 90 per cent. of the national income escapes direct taxation. In 1957-58, the burden of indirect taxation amounted to Rs. 671 crores paid by 360 million people, or Rs. 17.6 *per capita*. An overall increase of 10 per cent. in the basic rate in indirect taxation would bring in about Rs. 60 crores a year. It could mean an additional burden of only Re. 1.7 *per capita*.

As regards direct taxes, he urges the modification of the Kaldor proposals "by accepting the capital gains and gift taxes fully, the wealth tax partially, restricting it to individuals, by adopting the comprehensive return device" and by rejecting the expenditure tax and the equity concept as a primary tax principle. He also pleads for the abolition of what he calls "nuisance" taxes—that is, taxes which have little revenue relevance and are acting as deterrents to investment. To this group belongs the tax on bonus shares, the expenditure tax and the wealth tax on companies.

Clearly, Dr. Gopal's proposals are, by and large, eminently suited to the developmental needs of the country. They are intended to steer clear of any sacrifice in revenue and also of disincentives for investment. The chief merit of his proposals thus lies in harmonising revenue considerations with the provision for necessary incentives for expansion. From this point of view, they ought to commend themselves to the authorities. The only possible objection to the acceptance of his proposals, especially those relating to consumption taxes, is that they may be politically unpopular. It is to be hoped that economic statesmanship will not be abandoned in favour of cheap political applause. In the long run, it is sober economic realism, and not sentimental shibboleths, that sustains political parties.

HUE OF CONGRESS SOCIALISM BECOMING REDDER

MONEY—STERLING—SUGAR—COMMODITIES

THURSDAY, 5 P.M.

THE share markets are in a better mood now than they were before closing down for the seasonal holidays. The L.I.C. and Mr. Nehru, India's Prime Minister, are chiefly responsible for this change in sentiment. The L.I.C. has supported a large number of equities on a fairly sizable scale, thereby establishing a sort of a floor for such speculative counters as Tata Steels, Indian Irons, Bombay Dyeings and Scindias. Mr. Nehru has expressed himself against fixation of ceiling on urban incomes, reiterating his two-year-old views on this subject. Both these developments have induced the bears to cover their position and has encouraged some fresh buying. It is, however, risky to regard this change in sentiment as decisive. There is, again, tendency to indulge in a lot of wishful thinking on optimistic lines. It is extremely risky to take it for granted that the budget for 1959-60 will contain no shocks. It is true that India is fortunate in having at present a sober person like Mr. Morarji Desai as Finance Minister, but, at the same time, one must remember that he is also a faithful follower of his leader whose recent pronouncements by no means sound encouraging for investors.

MARKET GOSSIP

The hue of Mr. Nehru's socialism is tending to become more red than before. The attack on private property has been stepped up. The emphasis is more and more on the public sector. The need for attaining social justice through a further reduction in inequalities of wealth and income is receiving renewed stress. Almost all the Ministers at the Centre, barring a few, are reiterating with one voice that business men must make more sacrifices. Even some of the knowledgeable Ministers have started distorting facts and seem to be deliberately painting the business community in black colours, in the hope of winning the support of the public for socialising trade. It remains to be seen how all this shouting against the private sector will end. Are they empty shoutings or a prelude to imposing further burdens on the private sector? Whether one should buy or sell shares now will depend on one's answer to these posers.

Here is a reading of the Congress Party's mind by the political correspondent of *The Hindu* of Madras. Bringing out the difference between the socialist pattern of society and the full socialism about which Mr. Nehru has been talking for some weeks now, this correspondent says in his despatch dated 6th January from Nagpur:

"A radical change in the basic objectives of the Congress has been brought in by the side door, as it were, by the Congress Working Committee in a resolution it adopted on planning this afternoon. While in the initial paragraphs the tasks to be accomplished for the successful implementation of the remaining phases of the second Plan and the approach that should govern the formulation of the third Plan have been explained in considerable detail, a vital change in the objective has been introduced in an inconspicuous manner, in the very last paragraph of the 1,500-word resolution. It says: 'The creation of a democratic and socialist society should be clearly and unambiguously placed before the nation as the objective of planning and all the implications of socialism, in the terms of individual and co-operative effort it requires, should be clearly explained to the people.' In other words, the Congress has now dropped the objective of the establishment of a 'socialistic pattern of society' and has now adopted the objective of a 'democratic socialist society.' The implication obviously may be that there should be hereafter no room for any uncertainty in the pursuit of socialist policies and that the scope for an elastic approach in regard to economic policies may be considerably restricted."

It may be that the time required for implementing the new socialist policy of the Congress Party will be longer than the seven weeks that are now left for the presentation of the budget. There was an interval of more than two years between the Avadi resolution and the introduction of Kaldorian taxes, though, even before that, every budget after Avadi had meant some addition to both direct and indirect taxes. But now, as Mr. Nehru seems to be impatient with the progress that his socialism has made, he may seek to accelerate its speed sooner than many believe.

* * * *

The short-term money market is fairly tight again. Even after the year-end requirements have been met, the interest rates have not declined. The inter-bank call rate at 3½ per cent. is ½ per cent. up on the rate that was prevailing during mid-December. Term money rates have been knocking against the ceilings fixed under the inter-bank agreement. The response to Treasury Bills this week was relatively poor, as compared with what it used to be before the holidays. All this is not surprising, because, in recent months, the banks have gone in heavily for Government securities. In fact, over the past year, their investments in these securities have been more than the increase in their net deposits. In other words, they have already lent to the Government not only the entire expansion in deposits during 1958 but also a part of the expansion that took place in 1957. It is not, therefore, wholly right to argue, as some seem to do, that the banks are flushed with funds and the Government can borrow more from them.

There are only two ways in which banks can lend further support to Government securities. One is through a fresh growth in their deposits and the other through borrowings from the Reserve Bank. While deposits will, of course, continue to grow, it is hard to determine its pace in advance. By restricting themselves to a ceiling on interest rates, the banks have placed an impediment, albeit invisible, to the growth in their resources, especially as the public sector has stepped up its campaign for collecting the people's savings. There is, however, good scope for borrowing from the Reserve Bank, for the present indebtedness of the banking system to it is only very small. But it will not be sound for banks to borrow from the Reserve Bank and lend the money to the Government. It may not pay them to do so for one thing. It will be inflationary for another. The prospects for the Government's borrowing programme in 1959 thus seem to be somewhat less bright as compared with the big success that attended its 1958 programme

* * * *

The convertibility of West European currencies for non-residents is one of the major developments in international finance since our last issue. The biggest of all these currencies is undoubtedly the pound sterling. So far, this development has had no adverse effect on sterling. On the contrary, sterling has been ruling firm. There was a fractional fall on 29th December 1958, when convertibility was announced and the transferable sterling disappeared; the unified rate for spot sterling in New York opened at $2.80.3/32, as against $2.80.13/32 on 28th December 1958. But it soon began to improve and was quoted at $2.80.17/32 yesterday. Similarly, three months' forward sterling has come back to $2.80.11/32, after being down at $2.79⅞ on 29th December 1958. The last quotation for transferable sterling before it went off the list was 279.80 cents per £. This was 0.40 cent higher as compared with the rate prevailing a week before the convertibility decision was taken. It is noteworthy that "security sterling," that is, the sterling which results from non-residents' sales of sterling securities and is not covered by the convertibility decisions, has come to be quoted on a par with free sterling. There is evidence that foreign demand for British securities has been stimulated by the heightened status of the sterling.

While warmly welcoming the British Government's decision to make non-resident sterling fully convertible, Sir Oscar R. Hobson, the talented money market commentator of the *News Chronicle* and a great believer in free market economy and in the efficacy of monetary discipline, has sounded a note of caution. He says:

"At the moment, I think the most important thing is to avoid being swept away by the swirling optimism and to keep one's feet on the ground. Let us, for example, remember:

"That trade recession is still with us.

"That, if a certain amount of more foreign money comes to London, we have big commitments to meet out of our reserves.

"That these commitments are actually increased by the winding up of the European Payments Union and the extension of the International Monetary Fund.

"Including the repayment of the dollar and E.P.U. credits and the provision of the gold portion of our increased I.M.F. quota, the total payable in gold will amount to well over £400 million.

"This does not count the annual instalments on the U.S. and Canadian debts, including the one, £65 million or so, payable today. (This has since been paid.) All this has to be found out of a reserve which is now only £1,150 million."

* * * *

Although more than a fortnight has elapsed since the Government of India announced its decision to release a quantity of 100,000 tons of sugar for export during the current season, no information is yet available as to whether steps have been taken to fix export quotas for individual mills. Perhaps, the Government is waiting for a clearer picture of the production trends and also for indications of the quantities likely to be produced by each factory. If this is true, as it appears to be, the Government has been in undue haste to announce its export programme for the current season. It has only helped the price of sugar to go up, a development contrary to its oft-repeated desire to keep prices down. It should have at least learned from the past year's mistake. By talking about exporting 200,000 tons, the Government was responsible, to a considerable extent, for the substantial rise in sugar prices last summer, though it finally decided to export only 50,000 tons.

The quantity of sugar fixed for export, namely, 100,000 tons, is certainly large in the context of surplus available in the country. It may even render the supply position somewhat unfavourable to consumers. The rate of cane crushing in mills is currently at a slower rate as compared with the corresponding period of last season. Evidence of this is provided by the fact that the quantity of sugar actually produced since the commencement of crushing operations upto 15th December is estimated at no more than 267,000 tons, as against 289,000 tons a year before. There are three important factors pointing to a decline in the total production of sugar in the current season. First, the sugarcane crop is expected to be poor; the all-India first estimate of cane for 1958-59 places the aggregate area at 4,795,000 acres, as against the adjusted first estimate of 5,031,000 acres and the final estimate of 5,021,000 acres for 1957-58. Secondly, the diversion of cane supplies to the manufacture of *gur* and *khandsari* continues to be large, owing to the relatively high prices commanded by the latter and the sizable tax advantage of Rs. 13 per maund enjoyed by them over white sugar. Thirdly, the agitation for a higher price for sugarcane in U.P. and Bihar has been interfering with the flow of cane into the factories. If the threatened strikes by the growers were to materialise even in part, it would have a markedly adverse effect on sugar production.

Even assuming, for argument's sake, that production will be at the last season's level of 1,976,000 tons, the supply actually available will be less, thanks to the smaller carryover of 364,000 tons. The total supply thus comes to 2,340,000 tons, as against 2,434,000 tons in 1957-58. While the supply of sugar is lower, the demand for it may rise further because of the continuous growth of population. In view of this, it is surprising that the Central Government should have decided upon larger exports (100,000 tons) in 1959 than in 1958 (50,000 tons). Indeed, it looks as though the consumer will have to pay more for his requirements of sugar in the coming months. Already, the ex-mill, wholesale and retail prices of sugar have registered a sharp rise all over the country, an unusual phenomenon in the beginning of the season. Medium grain sugar is now quoted in the Bombay market at Rs. 109.50-Rs. 114 per bag, as against Rs. 108-Rs. 110 towards the close of the last season (29th October 1958).

Apart from rendering the supply position of sugar unfavourable to consumers, exports of 100,000 tons of sugar will entail much loss to the country. The total loss on an export of this quantity will be of the order of Rs. 6.80 crores, while the foreign exchange earned will be no more than Rs. 4.60 crores. Of this loss, the industry's share will be about Rs. 2.90 crores and the Government's share (by way of remission of excise duty and cane cess) at least Rs. 3.40 crores. The exact loss will, of course, depend upon the trend of world sugar market. The amount of loss estimated above is based on an f.o.b. realisation of about £34 per ton.

It should not, of course, be difficult for India to export 100,000 tons in one year, if it is prepared to sell in world markets at competitive rates, irrespective of the loss involved. It may be noted here that, of the 50,000 tons of sugar released for export on 27th June 1958, the quantity actually shipped upto the end of October 1958 was 30,000 tons. The remaining 20,000 tons were exported during November and December 1958.

* * * *

With the exception of non-ferrous metals which are ruling easy, the commodity prices have shown a distinctly hardening tendency since the new year began. In particular, oilseeds have staged an impressive rally, as the figures given below will testify:

	Unit	Latest available	31st Dec., 1958
		Rs.	Rs.
Cotton I.C.C. Jarilla March	Per candy	646 00	641 25
Groundnut February 1959	Per qrt.	164 37	162 12
Castorseed May 1959	„	142 00	137 62
Linseed May 1959	„	81 62	80 81
Cottonseed February 1959	„	121 25	115 25
Sugar medium	Per bag	109½-114	109-112½
Black pepper	„	72	70
Copper scrap	Per cwt.	206	207
Brass scrap	„	163	164
Zinc	„	102	103
Lead	„	90	93
Tin	Per qrt.	153	154
Hapur—			
Wheat	Per maund	26 50	24.75-26
Rice (*Dasmati*)	„	30 00	29 00
Gram	„	20	19 75
Barley	„	16 50	16 50
Maize	„	15.25	15
Jowar	„	14.25	14·12

* 2nd January 1959.

The rise in oilseeds prices is chiefly the result of rumours that the release of a sizable export quota for groundnut oilcake (expeller variety) is impending, good buying of castorseeds by crushers, hopes of export business in castor oil with Communist countries in the near future, and enquiries for linseed from North Indian interests. The Government of India has decided to grant the established exporters of groundnut oil licences for groundnut cake equal in quantity to the oil they export till 28th February next. This decision has been generally welcomed by the trade. A section, however, feels that, barring some sales to Burma and Hong Kong, the outlook for large groundnut oil exports is not bright, thanks to the wide disparity—Rs. 160 per ton—against Indian as compared with world prices.

The firmness of cotton is due to persistent short-covering on account of small arrivals. There is also speculative purchase by a few operators on fears of shortage of supplies, owing to some damage to crops. Further, mill buying of staple varieties in the spot section has been quite active.

With regard to sugar, the advance in prices must be attributed chiefly to heavy buying influenced by fears of a shortage developing in the country. The fears are based on indications of a fall in output, smaller carryover from the previous season, and the Government's decision to export 100,000 tons. Expectations of the Government conceding the sugar millowners' demand for a rise of at least 50 nP to 75 nP per maund in the controlled ex-mill prices has also imparted strength. The bullish fervour has been fanned further by the spurt in *gur* prices in North India, despite the introduction of margin system at Hapur, Kanpur and Agra and rumours that the Government might ban futures trading.

The foodgrains markets which had developed a downward trend a few weeks ago following reports of excellent *kharif* rice crop and modest increase in coarse grains—that is, *jowar*, *bajra*,

EQUITIES FIRM

SIZABLE GAINS ALL ROUND

(From Our Own Correspondents)

BOMBAY, *8th January*

THE new account on the Stock Exchange which opened on Monday this week commenced on a promising note, notwithstanding the budget uncertainties and the imminent Congress session which is scheduled to discuss some important issues which are of significance to the private sector of the industry. The first two sessions of the New Year (which were also the last ones under the old settlement) were, however, quiet, with narrow movements in prices on end-of-account considerations, in distinct contrast to the cheerful tone with which the year 1958 closed.

The firm tone since the opening of the new account was inspired by the moderate *budla* charges in the last settlement, the encouraging production trends of the Tata Iron and Steel Company and the Indian Iron and Steel Company during December, the Prime Minister's statement at his monthly Press Conference on Saturday last that the Government had no intention of imposing ceiling on urban incomes, as such a step, in his view, would cramp initiative and dynamism, and the Life Insurance Corporation's support to some of the scrips. The Congress Working Committee's resolution on planning, to be submitted to the A-I.C.C. (adopted on Tuesday), in which it had recommended some measures to mobilise the resources of the country, particularly its emphasis that profits in the private sector should be controlled, did not have any effect on the market. On the contrary, the operators would appear to be optimistic that this resolution would not be brought into effect. The market seems to be also of the view that the Budget would be a sober one.

This review covers two trading weeks, the one ended 24th December 1958 and the first week of the New Year. In the intervening period, the market remained closed due to holidays. The variations in prices referred to below, therefore, represent the changes as compared with the closing quotations on 18th December last (the date of our last weekly review).

The steel section was firm on good support to Indian Irons from Calcutta and purchases of Tata Ordinaries by the L.I.C. The production of both the companies during December was encouraging. The output of saleable steel of T.I.S.Co. touched a fresh record high of 90,100 tons, as compared with 83,600 tons in November and 74,200 tons in December 1957. Steel ingots have gone up from 85,100 tons to 91,900 tons, the figure for the corresponding month of 1957 being 100,500 tons. Production of pig iron amounted to 98,900 tons, having gone up from 84,200 tons in the previous month and 95,100 tons in December 1957. The I.I.S.Co. produced 50,697 tons of saleable steel, as against 43,847 tons in November. Steel ingots rose by 1,115 tons to 61,372 tons and pig iron by 2,495 tons to 92,690 tons.

On the Stock Exchange, Tata Ordinaries, which had risen from Rs. 170.75 (as on 18th December) to Rs. 173 at the close of the year (that is, on 24th December), dipped to Rs. 171 on 3rd January on end-of-account considerations. Subsequently, the shares again staged a spurt to touch Rs. 175 today The closing was, however, a shade lower at Rs. 174.50. Indian Irons fluctuated between Rs. 25.55 and Rs. 25.10 in the closing week of the year before finishing at Rs. 25.30. After receding to Rs. 24.88 on the opening day of the New Year, the shares gained ground to Rs. 25.70 before closing today at Rs. 25 65.

Textile shares too participated in the upward movement on expectations that the demand for cloth would pick up following the rise in agricultural production. Bombay Dyeings which had risen from Rs. 54.50 to Rs. 55.40 in the closing week of December maintained the upward trend in the first week of the New Year also, closing today at Rs. 56. Centurys recorded a gain (over the three-week period) of Rs. 9.75 at Rs. 424. Kohinoors, which had come down from Rs. 235 to Rs. 231, more than made good the loss in the last two days when it finished at Rs. 236. Central Indias rose by Re. 1 to Rs. 88. Finlays were lower by a rupee at Rs. 258. Indu Ordinaries gained 20 nP to Rs. 8.68. Models were done Re. 1.50 higher at Rs. 174, while Morarjee Goculdas were unchanged at Rs. 235, as also Podars at Rs. 128. Shree Niwas Cottons gathered no more than a rupee to Rs. 136, and Simplex a like sum to Rs. 169. Standards were marked up by Rs. 3 to Rs. 408 and Svadeshis by as much as Rs. 7.50 to Rs. 212. Swans moved up by Rs. 5 to Rs. 350, while Tata Mills shed Re. 1 to Rs. 35.

The highlight of business in bank shares was provided by Barodas, which shot up by Rs. 6.50 to Rs. 128.50 and their 'B' shares by Re. 1 to Rs. 60. Centrals rose by 70 nP to Rs. 58.70 and their new shares by Re. 1.70 to Rs.61. Dena Banks advanced by Rs. 3 to Rs. 50. Bank of Indias stood Rs. 2 higher at Rs. 138.75, while their new shares were unchanged at Rs. 139.50. United Commercials picked up Re. 1.50 to Rs. 68.

Electricity shares attracted some investment support. Ahmedabad Electrics improved by 80 nP to Rs. 95.30. Amalgamated Electrics were placed at Rs. 10.92 *ex-div.*, as against Rs. 11.36 *cum-div.* Tata Hydros were done at Rs. 119.50 *ex*-interim dividend of Rs. 3, as against Rs. 122.50 *cum-div.*, Tata Powers at Rs. 1.192.50 *ex-div.* (Rs. 30 per share), as against Rs. 1,217.50 *cum-div.*, and Andhra Valleys at Rs. 1,170 *ex-div.* as against Rs. 1,195 *cum-div.*

Sugar shares were featureless. Belapurs moved within a narrow range, before being done at Rs. 276 *ex-div.* today, which on a *cum-div.* basis represents an increase of only Re. 1. Bhopals gained 30 nP to Rs. 26.30, while Changdeos lost a rupee to Rs. 31, Phaltans a like sum to Rs. 158 and Walchandnagars Rs. 2 to Rs. 269.50. In the cement group, Associated Cements provided a relatively dull feature, closing with a gain of only Re. 1.25 at Rs. 151.50. Digvijays advanced by Rs. 4.75 to Rs. 132 50 and Orissa Cements by 36 nP to Rs. 12.08. Ashoka Cements rose by 76 nP to Rs. 7.48 and Jaipur Udyogs by 36 nP to Rs. 10.20. Engineering shares shaped well, Alcock Ashdowns jumping by Rs. 6.25 to Rs. 247.50. Tata Locomotives gathered Rs. 2.50 to Rs. 158.25 and Premier Constructions Rs. 3 to Rs. 235.50. Larsen and Toubros recorded a rise of 72 nP to Rs. 16.88, while Mahindras were dull at Rs. 18.44. Among mining shares, Shivrajpurs stood Re. 1.50 higher at Rs. 87 and Indian Coppers 4 nP better at Rs. 3.56.

Hindustan Motors were marked up by 32 nP to Rs. 6.76, while Premier Automobiles shot up by Rs. 6.80 to Rs. 86.50. Scindias were prominent on reports of L.I.C. purchases and gained 56 nP to Rs. 21.56. Great Easterns were also favoured and rose to Rs. 24.04 *ex-div.* (dividend. Re. 1.80), as against Rs. 25.05 *cum-div.* Bharat Lines were quiet at Rs. 12.96.

In the miscellaneous group, Bombay Burmahs provided an exception to the general trend, with a decline of Rs. 8 to Rs. 467.50, reflecting the market's disappointment with the lower final dividend of the Company. The Directors have recommended a final distribution of 12 per cent. which with the interim one of 6 per cent. makes a total dividend of 18 per cent. for the year ended May 1959 on the increased capital of Rs. 1,33,75,000, raised by the bonus issue. The total dividend for 1957 58 is equal to 22.5 per cent. on the old capital, as against 32 per cent. paid for 1956-57 on the same. National Rayons were very firm with a smart rise of Rs. 11.50 to Rs. 242.50. Gwalior Rayons put on 16 nP to Rs. 13.68. Tata Chemicals were done 96 nP higher at Rs. 15.12 and Tata Oils 50 nP better at Rs. 44.25. Voltas picked up Rs. 3.50 to Rs. 138 and Wimcos Rs. 4.50 to Rs. 188. Killick Industries had business at Rs. 149 *ex-div.* which on a *cum-div.* basis represents a rise of Rs. 3.

• • • •

Calcutta Stock Exchange

CALCUTTA, *7th January*

The Calcutta Stock Exchange opened the New Year on 2nd January on a firm note, displayed an easier movement on the 3rd in the absence of incentives, and gradually steadied up from the 5th, following reports from Nagpur that the Working Committee's draft resolution calling for a ceiling on urban incomes and on profits in the private sector would be toned down considerably before it was placed before the open session of the Congress. In the meantime, enthusiastic note was taken of Mr. Nehru's opinion at his Press conference in New Delhi on Saturday last that imposition of a ceiling on urban incomes at this stage was not desirable. The volume of business did not, however, show an expansion. As much would depend upon further news from Nagpur, operators and investors preferred to follow a cautious attitude.

This review covers the period beginning from 16th December to date, and in the week ended 20th December conditions were steady. Miscellaneous and jute shares were in keen demand, and these, especially the low-priced scrips, recorded gains. After this, there were only four working days in the period from 22nd to 30th December, in view of the intervention of holidays. During these four days, price movements were narrow and that suggested that operators were in a holiday mood. Bear sales for meeting year-end cash requirements depressed prices a little, but the year closed with sizable gains. Market circles believed that speeches at the Congress session would indicate if further steps were in store in the forthcoming budget in the evolvement of the socialistic pattern of society. However, considering the havoc that the 1957 socialistic budget had caused to industrial progress, it was thought here that New Delhi would act with extreme caution and foresight on any recommendations that may come forth from the Congress.

Madras Stock Exchange

MADRAS, *6th January*

Since we reported last on the 16th ultimo, the Madras Stock Exchange has been ruling distinctly dull, the trend of prices being generally downward. Transactions put through are considerably restricted. For the operators would appear to be not inclined to enter into fresh commitments, pending the deliberations of the Congress session at Nagpur, in view of talks on curbing profits of private enterprise. Coffee shares are depressed on fears of overproduction as revealed by the Chairman of the Consolidated Coffee Estates (1943) Ltd. and reports of competition in world markets. In sympathy, tea and rubber shares are ruling easy. Textiles continue to be neglected, thanks to absence of any encouraging developments in the yarn and cloth markets. Banks and electrics are quiet, as also miscellaneous industrials.

Among tea shares in the planting section, Twyfords were marked down by a rupee to Rs. 15.75. Talayars dropped 50 nP to Rs. 7.90. Parksides declined by 40 nP to Rs. 19.25 and United Nilgiris by 35 nP to Rs. 17.25. Nonsuch Teas receded by 12 nP to Rs. 23.25, Kalasas by 5 nP to Rs. 3.35 and Waterfalls by 3 nP Rs. 3.45. Devasholas lost a like amount to Rs. 24.37. Blue Mountains shed 8 nP to Rs. 3.35.

In the coffee group, Balmadies fell by 20 nP to Rs. 3.30. Sangameshwars eased by 2 nP to Rs. 2.48. Bababudins were neglected at Rs. 12.75, Badras at Rs. 4.40 and Savamalais at Rs. 3.47.

Among rubber shares, Travancore Rubbers retreated by 15 nP to Rs. 17.25. Rajagiris and Vellimalais lost 10 nP each to Rs. 18.40 and Rs. 5.85, respectively. Nemmenys were quoted 7 nP lower at Rs. 15.65. Nilamburs were dull at Rs. 15. Thamarapallys at Rs. 27, Tropicals at Rs. 21.75 and Malankaras at Rs. 18.12.

In the textile section, Bangalore Woollens dropped Rs. 3.50 to Rs. 154.50. Loyals and Vasantas fell by Rs. 2 each to Rs. 27.50 and Rs. 201, respectively. Balasubramanias declined by Re. 1.50 to Rs. 50.50 and Coimbatore Cottons by Re. 1 to Rs. 135. Janardhanas and Ranga Vilas shed 50 nP each, the former to Rs. 68.50 and the latter to Rs. 49.50.

THE BANK OF MAHARASHTRA LTD.

Head Office: POONA, 2.

Net Profit for the year ended 31st December, 1958 (subject to Audit) after meeting all expenses and after making provision for payment of Bonus to Staff of Rs. 1,10,000 (as against Rs. 70,000 last year) and other usual and necessary provisions	Rs.	5,56,600 (4,69,000)
ADD: Balance of Profit brought forward from previous year ..		36,100 (32,000)
Total ..		5,92,700 (5,01,000)
LESS: Appropriations proposed :— Provision for Taxation ..		2,50,000 (2,10,000)
Transfer to Reserve Fund ..		1,50,000 (1,50,000)
Dividend at 6¼% per annum free of Income-tax *pro-rata* on the increased Capital of Rs. 25,22,400 as against Rs. 19,07,800 last year (approximate)		1,55,000 (1,05,000)
To be carried forward to next year's account		37,700 (36,100)

Amounts are rounded to the nearest hundred.
(Figures in brackets relate to corresponding items of the last year, i.e., 1957.)

MARKET GOSSIP

(Concluded from previous page)

maize and *ragi*—have since firmed up. It would appear that the agriculturists are trying to withhold crops on expectation of higher prices. The co-operative societies which are getting better credit facilities from the Government, it is said, are helping the agriculturists in this connection.

Two factors have been responsible for an advance in the prices of black pepper. One, inquiries from the U.S. and Communist countries are keen; the U.S. is reported to be willing to purchase at 22 cents per lb. Two, there has been a substaintial fall in arrivals.

In contrast to the generally upward trend of commodity prices, non-ferrous metals are ruling easy, as stated at the outset. Copper scrap has reacted to the drop in copper prices from £223 to £220 in London, following the Board of Trade's decision to release from stockpile the remaining quantity of 30,000 tons. There are also hopes that New Delhi may concede the request of the concerned interests for permission to borrow copper from stocks held by the S.T.C. for replacement from their own supplies later. Meanwhile, the traders are awaiting details of the copper distribution policy of the S.T.C. which, it is believed, will be announced shortly. In the case of zinc, there are reports that imports on S.T.C.'s account, which are expected to be received by the end of this month, will be distributed to the industries early next month. The fall in lead prices is due to selling by speculative interests who had bought sizable quantities last week. The cornering of tin stocks by some operators has abated and prices have tended to come down. The decline is expected to gather further momentum after the tin imported against quota licences granted to established traders starts arriving in the market. Brass scrap prices have declined as a result of the cut of Rs. 8.25 per 100 kilograms in the price of I.C.C. brass sheets. There would have been a more marked fall but for reports of closure notice by Indian Smelting from next week, continued restricted sales by Kamanis, and possibility of reduced allocations of I.C.C. brass scrap due to breakdown in Chatsila works.

NEWS IN BRIEF

THE Government of India proposes to provide five zonal cells of productivity experts in the country to advise industrialists.

Following the Indo-Iraq trade agreement signed recently, the Government of India has decided to increase the import quota for dates from 15 per cent. to 50 per cent.

The Government of India has decided to reintroduce the system of registration of contracts for Egyptian cotton import. This system had been discontinued on 13th December 1958.

The Government of India has decided to accept the offer of the U.S.S.R. to establish a two-million oil refinery at Barauni in Bihar. The proposed refinery will be entirely in the public sector.

The work done by the Regional Honorary Cement Advisers to the Government of India has been taken over by the officers of the State Trading Corporation of India with effect from the 1st inst.

The first lightweight third-class-cum-luggage-van designed and manufactured by the Integral Coach Factory, Perambur, Madras, was put on rail on the 3rd inst. by the Union Deputy Minister for Railways, Mr. S. V. Ramaswamy.

The Governments of India and West Germany signed an agreement on Tuesday last under which the latter will provide a long-term credit of $40 million to help India's second Plan. This credit is part of the agreement reached in August last under the auspices of the World Bank.

A committee, called the Intermediate Port Development Committee, headed by Mr. H. P. Mathrani, Development Adviser and *ex-officio* Joint Secretary in the Ministry, has been set up by the Central Ministry of Transport and Communications, to select suitable intermediate ports for intensive development in the order of priority.

The Government of India has tentatively decided to utilise about Rs. 3 crores annually from the funds of the Life Insurance Corporation for giving loans to middle income group housing schemes. Besides, a sum of Rs. 1 crore is expected to be made available from the Corporation funds to give grants to co-operative housing societies.

A 17-man committee has been constituted by the Madhya Pradesh Government to study and advise it on fixation of minimum wages for agricultural labour. The committee is headed by Mr. Brij Raj Narayan, retired Chairman of the State Board of Revenue and includes representatives of employers and employees. Its recommendations are expected to be submitted within three months.

The total electricity produced by public utility power stations in India in September 1958 amounted to 1,050.9 million kw.h. Of this, 843.1 million kw.h. were sold to ultimate consumers. The corresponding figures for September 1957 were 922.6 million kw.h. and 739.3 million kw.h., respectively, and those for September 1939 were 209.1 million kw.h. and 175.9 million kw.h., respectively.

India will receive a credit of £28.5 million from Britain under the Export Guarantees Act of 1949 which will be utilised for taking delivery of all U.K. goods already ordered. An agreement to this effect was signed in London on 20th December last between the Indian High Commissioner and the Secretary of the U.K. Export Credit Guarantee Department.

A new company, called the Heavy Engineering Corporation Limited, has been set up by the Government of India. The Company will undertake the administration of the different engineering projects under contemplation. The projects include the heavy machine building and coal mining machinery plants, for which assistance has been secured from the U.S.S.R., and the foundry forge plant which is being established with Czechoslovakian assistance.

The Government of Madhya Pradesh has prepared a detailed case for the location of a steel plant at Raughat in Bastar district and an aluminium plant at Amarkantak, in Vindhya Pradesh. This will be submitted to the Central Government shortly. An expert Committee appointed by the State Government in connection with the establishment of the proposed aluminium plant is understood to have favoured its location at Amarkantak, in view of the abundance of bauxite and coal in the region.

Negotiations between India and the U.S. to draft a convention aimed at avoiding double income-tax have made substantial progress, and agreement at the technical level has already been reached on most of the important points, according to the U.S. Treasury Department. An Indian Finance Ministry delegation was in Washington in this connection last month. The final round of negotiations is expected to take place in New Delhi shortly, when an agreement is expected to be reached on a draft convention which will be submitted to the respective Governments for approval.

At the meeting held at Bangalore on the 2nd inst., the standing committee of the Central Silk Board examined several schemes submitted by the State Governments with requests for financial assistance during the current financial year. The schemes included celebration Farmers' Day, development of Sericultural Research Institute at Channapatana and modernisation of silk filatures in Mysore State. The Committee also discussed various steps designed to promote exports of silk fabrics and stabilise prices of raw silk in the country.

Exports of Indian handicrafts earned foreign exchange worth over Rs. 6.36 crores during 1957. This does not include handicrafts sent by post parcels or those purchased by foreign tourists. The figure also excludes exports of handloom fabrics and handprinted cloth. Carpets and druggets led others, the value of their exports being about Rs. 4.19 crores. Brass and bronzewares earned over Rs. 96 lakhs, synthetic stones about Rs. 17 lakhs, fabrics of textile fibres mixed with metal about Rs. 11.8 lakhs, woollen shawls Rs. 11.7 lakhs and wood carvings about Rs. 11.3 lakhs.

It has been clarified by the Union Government that the fair ex-works selling prices of different grades of calcium carbide produced by Messrs. Birla Jute Manufacturing Company Ltd., announced on 9th October 1958, are for packings of 50 kilograms and 100 kilograms and not for 1 cwt. and 2 cwts. In its resolution dated 9th October, the Government had announced acceptance of the Tariff Commission's recommendation that protection to the calcium carbide industry should be extended for a period of three years beyond 31st December 1958 and that the fair ex-works selling prices of different grades of calcium carbide should be fixed as recommended by the Commission.

Production of railway wagons in India has increased nearly sixfold since independence. During 1947-48, production amounted to approximately 3,100 units. Five years later, that is, in 1952-53, it increased to 6,388. Production rose faster during the subsequent five-year period, the number of wagons actually manufactured in 1957-58 being 17,390. At the initial stages, only general purpose wagons were manufactured in the country and most of the special purpose wagons were imported. The manufacture of the latter types has since been developed in the country, and all requirements of the railways can now be met entirely from indigenous production.

• • • •

From Abroad

The Soviet oil output in 1958 is estimated to have touched 113.5 million tons, 15.2 million tons more than in 1957.

An agreement fixing the volume of Pakistan's cotton textile exports to the U.K. is expected to be signed by the end of this month.

The South African bank rate was lowered by half per cent. on the 5th inst. to 4 per cent., the level at which it stood between March 1952 and September 1955.

Spain has been granted loans amounting to $22.6 million from the U.S. Loan Development Fund. Of this, $14.9 million will be used for development of railways and the rest for agricultural projects.

The U.S.S.R. and the United Arab Republic signed an agreement on 27th December 1958 providing for a Russian loan of 400 million roubles to build the first stage of the Aswan Dam to harness the waters of the river Nile.

It is reported that China produced 270.2 million tons of coal in 1958, a quantity which was more than that Britain produced. If the report is true, China has become the world's third largest producer, the first two being the U.S. and the U.S.S.R.

Europe's longest pipeline installed in W. Germany, running 240 miles from Wilhelmshaven, a W. German North Sea port, to the Ruhr and Cologne, will shortly begin working. This 24-inch underground pipeline will eventually be able to handle annually about 20 to 22 million tons of oil.

A Swiss cow owned by a New Jersey farmer in the U.S., has set a world record by producing 34,850 pounds of milk in a single year. This is enough to supply four persons with a quart of milk every day for more than 11 years. The cow was exhibited at a farm convention held at Syracuse, New York.

A gas leak detector, so sensitive that it sniffs out leaks so small that it would take more than a year for 1/100th ounce of gas to escape undetected, has been announced by a U.S. manufacturer, the General Electric Company. The new detector is used by the Company to search for leaks in the Redstone and Jupiter rocket engine systems.

Malaya will raise its output of natural rubber to 850,000-900,000 tons by 1965, which represents a gain of over 30 per cent. in seven years, according to a forecast of the Natural Rubber Bureau, Washington. This will be the largest increase ever made in any similar period in this country's history.

Under an agreement signed between the U.S.S.R. and Indonesia on the 3rd inst., the latter country will receive from the former aid amounting to about £30 million for industrial and agricultural projects. The projects include establishment of an iron and steel factory and a superphosphate factory, rice farms and construction of new roads.

The Swedish Government has introduced provisional minimum specific tariffs for rayon, silk, woollen textiles, rubber tyres, in additions to the current *ad valorem* tariffs. The minimum tariffs on cotton knitwear and nylon stockings will remain in force. The new tariffs will affect only goods dumped from Eastern Europe and Italy and not regular imports of high quality goods.

The Benelux countries have concluded big bilateral commercial agreements with Poland and Hungary. The agreement with Poland provides for trade amounting to 2,600 million Belgian francs in both directions. It includes trade with Belgian Congo with some restrictions, particularly on Polish textiles. The agreement with Hungary covers trade valued at 700 million Belgian francs in both directions.

An upward trend in U.K.'s production is indicated in the index of industrial production for October which is estimated provisionally at 110, as compared with the revised figure of 107 for September. This shows signs of rising by another two or three points for November. The figures for September and October 1957 were 111 and 112, respectively.

A U.S. company has developed a process of welding metals by use of high frequency sound waves, according to Dr. C. E. Arntzen of the Westinghouse Electric Corporation. The process, still experimental and known as ultrasonic seam welding, is likely to become a practical and successful production line technique. The process requires no electric current or outside heat source applied to the surfaces of the metals to be welded.

Loans and stand-by credits amounting to $329 million have been extended to Argentina by the U.S. Government, the International Monetary Fund and a group of eleven U.S. banks, to assist the country to achieve financial reforms and promote economic development. Of this, the largest credit is for $125 million from the U.S. Export-Import Bank to finance power development and to expand meat, cement, pulp and other industries.

With a view to expediting oil exploration in the Sinai peninsula and offshore areas in Egypt, the Government of U.A.R. has granted substantial exploration concessions to the Egyptian Eastern Petroleum Company, in which E.N.I., Italy's State-controlled Petroleum Corporation, participates. With the new concessions, the Company's oil production is expected to rise from the present level of 2.0 million tons to about 8.0 million tons per annum.

The first "people's shares" will be issued in West Germany this year as part of the Government's bid to turn the country into a property-owning democracy. The new issue, amounting to £2.2 million, will be made by Preussag, a mining concern owned by the Government. It will be sold only to small investors earning less than £1,360 a year. Nobody will be allowed to buy more than £43 (nominal) of the new issue. Its issue price, yet to be fixed, will be kept as low as is in conformity with good business practice.

The average American family had a gross income of $5 000 per year, or four per cent. greater than in the previous year. Approximately four million of the nation's 44 million families received incomes of $10,000 or more in 1957, and another 18 million had incomes ranging between $5,000 and $10,000. About 15.5 million American families were in the $2,000 to $5,000 income bracket, while an estimated 6.5 million families had incomes of less than $2,000. The average income of non-farm families increased by 3 per cent. over the preceding year and was $5,200.

Japan is understood to have taken steps to simplify its trade, payment regulations with effect from the 2nd inst. This is so designed as to make it possible, for the first time after the war, of the payment of sterling for trade with hard currency areas. Under the new system, foreign currencies have been divided into two categories, namely, the hard currency areas of the dollar and dollar convertible currencies and the open account areas. As a result, with the exception of a few countries like South Korea and Formosa, traders can make payments in any currency for trade with most parts of the world.

PERSONAL

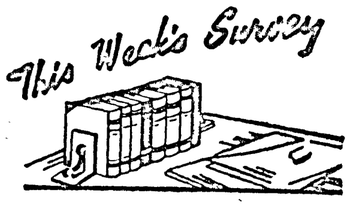
MR. C. P. N. Singh, until recently Governor of the Punjab, has been appointed Indian Ambassador to Japan, *vice* Mr. C. S. Jha.

Mr. N. Dandekar, I.C.S. (Retired), Managing Director of Cement Agencies (Private) Ltd., Managing Agents of the Associated Cement Companies Ltd., has been elected President of the Bombay Chamber of Commerce for the year 1959-60.

Mr. J. K. Srivastava, Chairman, Board of Directors, New Victoria Mills Company, Ltd., Kanpur, has been re-elected President of the Upper India Chamber of Commerce, Kanpur, for the year 1959.

Mr. M. R. Bhide has joined the Union Ministry of Community Development and Co-operation as Additional Secretary in charge of Co-operation.

Dr. N. Das, a former Home Secretary to the West Bengal Government, has taken charge as Director-General of the Employers' Federation of India.



FREE ENTERPRISE AND DEMOCRACY

IN the course of his last monthly Press conference, India's Prime Minister, Mr. Nehru, spoke about the role of private enterprise in a democracy. A correspondent asked him whether he agreed with the view that joint-farming co-operatives would strengthen totalitarian trends. Mr. Nehru replied that he differed from those who held such a view. He added: "It is like statements connecting private enterprise with democracy which I think is wholly unjustified. It has no meaning. I do not accept at all that private enterprise is an essential part of democracy. I shall go a step further and say that private enterprise may come in the way and does come in the way of the functioning of democratic apparatus."

Mr. Nehru has carried a little too far his socialist indignation against his democratic opponents. There may be some element of truth in his argument that private enterprise is not an inevitable part of democracy. This truth rests on the assumption that a democratic country has the right to vote in favour of socialisation of the means of production. Socialism may thus be brought about by democratic means. At the same time, it is well to remember the lessons of history which shows that countries which administered to themselves excessive doses of socialism ceased to be democracies. The only important nation which seriously tread the socialist path without sacrificing its democracy is the U.K. But the experiment was brief, having been confined to the duration of the Labour Party's stay in office. By and large, socialist ambitions of political parties have resulted in subversion of democracy, if not wholesale, at least to a considerable extent. Any experiment in excessive restriction of the area of economic freedom must nearly always end in the disappearance of political liberty. This danger is greater in underdeveloped countries where democracy has not struck firm roots.

In any case, it is one thing to say that private enterprise need not be a necessary concomitant of democracy, and quite another to contend that private enterprise is an obstacle to democracy. The danger to democracy may come from two quarters. It may come from unalloyed capitalism—such capitalism is only a figment of socialist fancy and does not exist anywhere in the world today—or, as historical experience shows, from extremist political ideologies. When property-owning classes use their wealth for corrupting the electorate or the elected representatives, there will no doubt arise a danger to democracy. But there are in all democratic societies ample safeguards against such misuse of wealth. Freedom of Press and freedom of speech, not to mention the elaborate electoral rules, are themselves a powerful safeguard against any such attack on democracy.

A far greater source of danger to democratic institutions is, however, the political party which makes the State its object of veneration and democracy the ladder by which it can go up to seats of power and then kick that ladder for all time to come. It is such a party, not the free enterprise system, that constitutes a threat to freedom. It is a pity that many democrats, not excluding Mr. Nehru, willingly swallow the whole camel of communist threat to democracy but strain at the non-existent gnat of danger to it from private enterprise. Actually, private enterprise is the loyal ally, and in no sense, an antagonist, of democracy. Indeed, in the context of the peculiar social conditions in this country, ridden as it is by the undemocratic caste system, a policy designed to encourage individual initiative and enterprise will strengthen the democratic structure whereas the creation of a new caste of bureaucrats, which socialism must inevitably throw up, may conceivably become a serious menace to democracy.

GINGERING THE THIRD PLAN

Although the Congress Party does continue by and large to retain its hold on the masses, it is certainly losing its hold on economic realities. And those who thought that the many, and not entirely unexpected, difficulties encountered in the progress of the second Plan had induced a lively sense of realism among Congressmen would be disappointed by the tentative version of the third Plan whose authorship is credited to the Congress Socialist Forum. This body, which is reputed to be the "ginger" group in the Congress, obviously believes in aiming high. It is not suggested that it is wrong to aim high. Only, that should not make one confuse what is desirable with what is practicable. Such a confusion is apparent in the Forum's blue-print for the third Five-year Plan which fixes the target of investment at Rs. 9,900 crores.

A more modest target, namely, Rs. 4,800 crores in the public sector, implied in the second Plan, has already meant considerable hardship to the Central and State Governments. Indeed, the Planning Commission has itself admitted that a "strain on resources, both internal and external, has been felt continuously since the commencement of the second Five-year Plan." After referring to the rise in prices, the growing inflationary pressures and the sharply adverse turn in the balance of payments position, the Commission stated that "these trends were symptomatic of the growing imbalance between the resources available and the demands on them." Undeterred by the warnings which this analysis contains, the "ginger" group has come out with an outline for a more ambitious plan. The group insists that there should be greater reliance on domestic resources for financing development programmes. It is not clear how it hopes to raise these resources. Nor is it clear how a programme with a large emphasis on heavy industries could be financed without adequate foreign exchange reserves.

True to its socialistic philosophy, the group has pleaded for socialisation of vital sectors of trade and commerce. It endorses the Government's decision to undertake State trading in foodgrains and suggests its extension to other basic commodities. The group believes that since trade and commerce account for 19 per cent. of the country's national income, the nationalisation of this sector will help raise large additional resources. Apparently, it forgets that the disruption of these normal trade channels which provide employment to a large section of the country's population will mean unemployment for this class of persons and render the political party unpopular in the rural and semi-urban areas, besides making the lot of the consumer particularly difficult.

The group's programme, it is stated, covers practically all aspects of planning and involves radical institutional changes for large-scale mobilisation of national effort for a plan which would impose greater burdens and sacrifices on the people. The question, therefore, is whether the ruling party would have the self-confidence to face the electorate with such a plan, the group avers. It adds: "The inability of the ruling party to do it can be the most serious limitation to the adoption of a historically adequate plan, which is more a function of political courage and farseeing statesmanship than of economic acumen and experts." These are fine brave words. But they overlook the fact that an overambitious plan which does not succeed is a great political disaster for a party, whereas a successfully implemented modest plan is an immense political asset.

COMMON MARKET

Exactly a year after the coming into force of the Rome Treaty (signed on 25th March 1957 and brought into effect on 1st January 1958), the six European Common Market countries—France, West Germany, Italy, Belgium, Luxembourg and the Netherlands—have begun reducing trade barriers among themselves. With effect from the 1st inst., all customs duties applied between member-States have, on the basis of the rates applicable on 1st January 1957, been reduced by 10 per cent. uniformly. This reduction has been made applicable not only to trade within the Common Market but also to imports from the other members of the O.E.E.C., the G.A.T.T. and from any other country with which it has most-favoured-nation agreements. Further, the Common Market countries have expressed their willingness to raise their import quotas for industrial goods by 10 per cent. in trade with any other O.E.E.C. nation which affords them the same concession. They have also expressed their willingness to raise the import quotas by another 10 per cent. as the result of bilateral agreements with the other O.E.E.C. nations concerned.

The aforesaid move marks the first step towards conversion of the six countries into a single customs union in a period of twelve years after which the commerce and trade of these countries will be like that of one country, with no barriers and with complete freedom of movement of workers and resources.

The 10 per cent. cut in tariffs now effected is in accordance with the minimum automatic reductions in the first two stages of four years each as provided in the Rome Treaty. This will be followed by further cuts as indicated below:

At 12 or 18 months' interval, each State will lower its total customs receipts by 10 per cent., making a reduction of at least 5 per cent. in the case of each product. In the case of products on which there would still remain a duty of more than 30 per cent. at any stage, a cut of at least 10 per cent. is required. The rate of cut may vary from one product to another. The average reduction is required to be at least 25 per cent. by the end of the first stage and 50 per cent. by the end of the second stage. It is expected that the total reduction by the end of the second stage will amount to 60 per cent. The balance of 40 per cent. reduction will be accomplished in the third stage; no plan of automatic reduction has been provided for this stage.

The common tariff applicable to the trade between the Common Market members and other countries is to be worked out on the basis of an arithmetical average of the rates actually in force in individual member-countries as of 1st January 1957, subject to certain ceiling rates. These rates vary from 3 per cent. on certain raw materials to 25 per cent. on certain organic chemicals, dyes, and plastic materials. Each member-State is required to bring its tariff into conformity with common customs tariff in three stages corresponding to the aforesaid three stages of the transitional period as follows:

End of first stage: The common tariff will be applied to all products on which the difference between the existing tariff and the common tariff is more than 15 per cent. and, in the case of products, the difference will be narrowed by 30 per cent.

End of second stage: The difference will be reduced by a further 30 per cent.

End of third stage: The difference will be eliminated altogether.

N.B.—The rates of duties in the common tariff are open to negotiations with third countries on a reciprocal and mutually advantageous basis.

The six countries of the Common Market together consisting of about 164 million people constitute a formidable group in the structure of international trade. They account for over 23 per cent. (or $21,890 million) of the total annual free world exports amounting to about $95,000 million (second quarter of 1958). The share (in million dollars) of each of the countries is: France: 4,884; W. Germany: 8,525; Italy: 2,520; Belgium-Luxembourg: 2,901; Netherlands: 3,055.

With the coming into effect of the Common Market, fears are expressed that Western Europe might be split into two conflicting economic blocs, unless, of course, fresh efforts are made to avoid such a split at the forthcoming Council meeting of the Organisation for European Economic Co-operation (O.E.E.C.), scheduled to be held at Paris on Thursday next. The attempts made so far to work out satisfactory trading arrangements that would avoid discrimination between the six Common Market countries and the eleven other European countries associated in the O.E.E.C. have not met with success, thanks to the divergence of opinion on several issues between the Six and the Eleven, particularly the U.K. Even prior to the signing of the Rome Treaty in March 1957, the latter group of countries expressed the difficulty in accepting discrimination inherent in the preferential arrangements within the Common Market. In order to avoid such discrimination, efforts were made by the U.K. and others to set up a Free Trade Area embracing all the 17 nations of Western Europe.

As time passed, the difficulties of establishing the Free Trade Area turned out to be more complex than originally expected and the negotiations actually collapsed in November last. It was, of course, recognised that Western Europe would not be allowed to split into two trading blocs. Alluding to this, the January *Monthly Bank Letter* of the First National City Bank of New York sums up the position thus:

"To alleviate the threat of immediate discrimination within Europe, the Six offered to extend the first tariff reductions scheduled for 1959 under the Common Market treaty to all nations subscribing to the General Agreement on Tariffs and Trade (G.A.T.T.) including the United States. They also offered extension of the first 20 per cent. increase in quotas to the eleven other European nations. At the same time, they wanted to apply to each other, but not to the other European countries, an arrangement provided for in the Treaty of Rome under which import quotas must equal at least 3 per cent. of each Common Market country's output of any particular product. The United Kingdom and most of the other Eleven offered to match the relaxations suggested by the Six, including the extension of the 3 per cent. formula. But this was not accepted by the Six on the ground that the mutual advantages under this formula are accompanied by mutual obligations provided for in the Common Market pact, the Eleven would not be allowed to join the club without paying the dues. Unable to agree on the Common Market countries' proposals, the Seventeen adjourned further discussions until 15th January."

There are two fundamental differences between the Common Market countries and the Eleven others. First, the Common Market countries see a real difficulty in a trading arrangement such as in Free Trade Area where one of the non-Common Market countries can suddenly and unilaterally lower its tariff *vis-a-vis* the outside world. But a common external tariff is held unacceptable by the U.K. and other countries on the ground that it would turn the Free Trade Area into an enlargement of the Common Market. Secondly, the Six are willing to forgo sovereign rights over certain economic activities by transferring final jurisdiction to a supra-national authority. In contrast, the Eleven are unwilling or unable to surrender any part of their sovereignty in exchange for the benefit of an integrated community. Switzerland and Austria are determined to safeguard their status of neutrality and the U.K. can join the Common Market only at the cost of abandoning its special relations with the Commonwealth.

The principal economic arguments against the U.K. joining the Common Market, according to an article by "A Good European," contributed to *The Economist*, London, arises from the fact that the Market has a harmonised outer tariff, being an average of the tariffs of the members. If all Britain's tariffs were harmonised, some of its ordinary tariffs would come down, but some of the zero or low tariffs it places on many Commonwealth raw materials and manufactures would rise. Critics argue that this change would raise Britain's raw material costs and upset the Commonwealth preference system.

While no agreement has yet been reached between the Common Market countries and the Eleven others, fears are expressed by the U.K. industrial circles that the Eleven will suffer discrimination against their goods entering Common Market countries. "There is," to quote a report from London to *Salivati Newsletter*, Bombay, "a sense of growing annoyance among the upper echelons of industry at what is considered the irresponsibility of politicians on certain economic issues, the question of European trade being only one. It is certain that, in future, Government negotiations on freeing European trade will be conducted under much closer scrutiny from the representatives of industry." Meanwhile, the President of the Federation of British Industries has held discussions with the spokesmen of the Swedish industry on the adoption of measures for creating a trade association among the Eleven.

So far as the U.S. is concerned, the January *Monthly Bank Letter* of the First National City Bank of New York points out that what is at stake is not only future trading arrangements within Europe but also the success of new opportunities for progress towards freer and less discriminatory trade throughout the free world. In its opinion, implicit in the Common Market concept is the strong possibility that it would put products from non-participating nations at a disadvantage. Nevertheless, the U.S. would appear to be friendly to both the Common Market and the Free Trade Area on the ground that a speedier advance towards freer trade among neighbours may prove acceptable so long as it does not raise new barriers to world trade. The hope is that the final result will be greater economic efficiency through an integrated Europe and, consequently, greater purchasing power and widening markets for imports from the U.S. and the rest of the world.

F.I.C.C.I.'S BROCHURES

The two brochures brought out by the Federation of Indian Chambers of Commerce and Industry about a fortnight ago—*Industrial Progress—Who Gains?* and *Sales Tax—A Re-appraisal*—make interesting reading. The brochure on industrial progress, while taking into account the great strides made by industries in the private sector during the last decade, seeks to highlight the fallacy contained in the assumption of some people that the management or the shareholders are the main beneficiaries of the growing prosperity in the country. During the period 1947-56, the total earnings of factory workers increased from Rs. 137 crores to Rs. 266 crores, and their average *per capita* annual earnings from Rs. 737 to Rs. 1,213. As the Reserve Bank's study of the appropriation of gross revenue of 1,001 public companies in 1956 shows, 58.7 per cent. of such revenue were spent on raw materials and other manufacturing expenses, 17.3 per cent. on salaries and wages and employees' welfare expenses, 1 per cent. on interest, 7.9 per cent. on miscellaneous expenses, 2.9 per cent. on depreciation, 0.7 per cent. on managing agents' remuneration, 2.6 per cent. on distributed profits, 1.7 per cent. on retained profits, 3.6 per cent. each on direct taxation and excise duty. The index for industrial profits (Base 1939=100) which stood at 260 in 1948 rose to only 326 by 1956, in spite of all the expansion that had taken place in the various industries. On top of this, during the last two years, the number of joint-stock companies has been actually declining. The recent trends in production and employment have also not been encouraging, thanks mainly to the excessive burden of taxation that weighs down private enterprise. The recent trends must cause serious concern. For, as the brochure points out, the programme of raising *per capita* income and the standard of living of the people will obviously depend upon the industrial sector contributing a larger and larger share to the national income. The need of the hour, therefore, is to improve the living standards of the masses through adoption of such policies as will create conditions conducive to the promotion of maximum industrial growth.

In the second booklet, the Federation brings into sharp relief the imperfections of the administration and levy of sales tax and outlines an integrated scheme. It is urged that sales tax should, as far as possible, be levied at the first point. Wherever Central excise is levied, sales tax should be collected along with it. In the case of imports, sales tax may be collected along with the customs duty, but refund should be given in case the imported article is used for

(*Continued on page 9*)

TRENDS IN PROTECTED INDUSTRIES

TARIFF COMMISSION'S REVIEW

From Our Special Correspondent

NEW DELHI, *6th January*

IN a review, submitted to the recent session of Parliament, of the work of the Tariff Commission in the period October 1957 to September 1958, there is a succinct analysis of the production and wholesale price trends in protected industries. The review of production trends covers the calendar year 1957 and the first quarter of 1958 under four categories of protected industries—capital goods, consumer goods, industrial raw materials and consumable stores, and transport. In the group of eight protected capital goods industries (ball bearings, cotton and hair beltings, cotton textile machinery, electric motors, engineers' steel files, grinding wheels, machine screws, and power and distribution transformers), the cotton and hair beltings industry suffered a decline in production of about 18 per cent. in cotton beltings and 15 per cent. in hair beltings. The spinning rings and plain looms sector of the cotton textile machinery industry also experienced a slight decline during the year under report. The remaining protected industries in this group were able to step up production by various degrees. In spite of persistent complaints about the Government's restrictive policy regarding installation of automatic looms, the production of this item had very nearly doubled during 1957. The production of ball bearings too increased by more than 50 per cent.

DELHI LETTER

A comparison of production during the first quarter of 1958 with the corresponding quarter of the preceding year would, however, indicate that the production of hair beltings, ring frames, spindles, fluted rollers and grinding wheels declined during the first quarter of 1958. With the exception of ring frames and grinding wheels, the production of which declined by about 35 per cent. and 24 per cent., respectively, none of the items listed above showed a substantial fall in their level of production. Amongst the commodities the production of which showed increases, mention may be made of automatic looms, ball bearings and machine screws. By and large, it may be stated that, with the exception of the few items listed above, capital goods industries did, on the whole, well during the first quarter of 1958. A sign of the healthy growth of certain industries in this group may be seen from the fact that five more manufacturing units were added to the electric motors industry and three to the power and distribution transformers industry during 1957. The plain loom sector of the cotton textile machinery industry was deprotected with effect from 1st January, 1958.

In the group of six protected consumer goods industries (electric brass lamp holders, oil pressure lamps, plastic buttons, cocoa powder and chocolate, matches and preserved fruits), three industries, namely, electric brass lamp holders, oil pressure lamps and preserved fruits were deprotected with effect from 1st January 1958. It is characteristic of the consumer goods industries that all of them were able to consolidate their positions during 1957, none of them having suffered a recession in their output during this year. There was nearly a fourfold increase in the production of cocoa powder, whereas the production of which more than doubled during 1957, is fruits in syrup. Substantial increase was also noticeable in the case of canned pineapples and jams, jellies and marmalades. A comparison of production during the first quarter of 1958, with the corresponding quarter of 1957, also reveals improvement in all the protected industries. An important event in this group was the addition of a large manufacturing unit in the cocoa powder and chocolate industry, which resulted in an all-round improvement in the activities of the industry.

In the group of 17 protected industrial raw materials and consumable stores industries aluminium, antimony, bichromates, calcium carbide, calcium lactate, caustic soda and bleaching powder, dyestuffs, hydroquinone, non-ferrous metals, oleic and stearic acids, P.F. moulding powder, plywood tea chests, sheet glass, soda ash, sericulture, titanium dioxide and wood screws), it is heartening to observe that a majority of items produced by them showed a tendency towards accelerated production. It may, however, be mentioned that, barring azoic dyes, the production of which increased by more than 100 per cent., gains of the remaining industries were not considerable. It is also a matter for some satisfaction that the industries, which failed to step up production, did not, at the same time, report substantial loss of production. A comparison of production during the first quarter of 1958 with the corresponding quarter of 1957 would also reveal a more or less similar trend, most of the protected items in this group having achieved improvement in production. The improvement was more pronounced in the case of calcium lactate, which recorded an increase of about 50 per cent. In the bichromates industry, one of the manufacturers of sodium bichromate went out of production in October 1956. The potassium bichromate sector also sustained a similar loss in the discontinuance of production by another manufacturing unit from 1957. On the other hand, the production of azoic dyes was favourably affected by the entry of a new unit in this line of production.

In the group of six protected transport industries (automobile hand tyre inflators, automobile leaf springs, automobile sparking lamps, bicycles, diesel fuel injection equipment and piston assembly), the production of only two items, namely, automobile hand tyre inflators and piston rings, declined during 1957. In neither case was the decline of any great significance. The decline in the production of automobile hand tyre inflators was to some extent due to suspension of production by one of the units in the industry from June 1956. The remaining items in this group recorded a steady improvement in their level of production and the improvement was considerable in automobile sparking plugs and diesel fuel injection pumps. A comparison of production during the first quarter of 1958 with that during the first quarter of 1957, reveals that the automobile hand tyre inflator was the only item the production of which declined. The production of 14 mm. sparking plugs had more than doubled while that of diesel fuel injection pumps increased by more than 70 per cent. Variation in the remaining industries was not significant.

In the review of wholesale price trends in protected industries, it is noted that, by and large, the wholesale prices of a majority of protected items either declined or remained unchanged during 1957. This tendency was most pronounced in the case of capital goods industries. A comparison of wholesale prices during the first quarter of 1958 with those during the corresponding quarter of the previous year would, however, show that the wholesale prices of seven commodities, i.e., cotton and hair beltings, spinning rings, fluted rollers, automatic looms, electric motors and grinding wheels, had increased. Among these, the largest increase, of about 11 per cent., was observed in the case of hair beltings. In the consumer goods industries, there was a mild increase of about 4 per cent. in the wholesale price of Golden Cocoa No. 1 and of about 7 per cent. in that of matches. The wholesale prices of 11 commodities in the industrial raw material and consumable stores industries increased during the first quarter of 1958. They are: aluminium ingots, sheets and circles, sodium and potassium bichromates, dyestuffs of Rapidogen Violet B and solubilised vat green I. B. varieties, P.F. moulding powder, plywood tea chests, raw silk, and wood screws. The highest increase of about 21 per cent. was observed in the Rapidogen Violet B variety of dyestuffs. In the transport industries group, the wholesale prices of automobile hand tyre inflators (with and without rubber tubes), automobile sparking plugs (both 14 mm. and 18 mm.) and pistons (except Royal Enfield 2.751" bore) increased during the first quarter of 1958.

In the capital goods industries group, engineers' steel file was the only item the wholesale price of which declined during the first quarter of 1958. The decline in the prices of the various types ranged from 10 to 19 per cent. Similarly, in the consumer goods industries group, the wholesale price of milk chocolate alone declined by 4 per cent. In the industrial raw materials and consumable stores industries, the wholesale prices of calcium lactate, caustic soda, liquid chlorine, refined copper and sheet glass declined during the first quarter of 1958. The largest decline, of about 27 per cent., was observed in liquid chlorine. In the transport industries group, the price of only one item, that is of Royal Enfield 2.751" bore pistons, declined during the first quarter of 1958. Here too, the decline was of less than 1 per cent.

CHRISTMAS CONVERTIBILITY

(From Our Own Correspondent)

LONDON, *3rd January*

THE Christmas holidays have seen the mass convertibility of most of the European Payments Union currencies and the consequent abolition of the E.P.U. itself. These are the fruits of the New Delhi Conference which only left the timing to be decided—a timing hastened in the end as much by the French decision to devalue and let the new franc stand on its own feet (with behind-the-scenes support from West Germany and the U.K. in that order) as anything else.

LONDON LETTER

What does this convertibility mean for sterling? Up till now, there have been three kinds of sterling: that held by the U.K. nationals resident in the U.K. which could only be converted into other currencies under the current Bank of England controls; that held by overseas holders and convertible freely into any currency other than American—known as transferable account sterling; and that which could be converted into dollars—known as American account sterling. What has now happened is the abolition of the restrictions on transferable account sterling which automatically becomes American account sterling, now to be known as convertible sterling. True and full convertibility would, of course, mean convertibility of sterling held by the U.K. nationals resident in the U.K., and this is not yet contemplated.

What is the significance of this convertibility of transferable account sterling? The Treasury argument is that, for practical purposes, it makes little difference—except to add to the prestige of the pound and to restore to London its pre-war position as the supreme exchange market, to the detriment of New York and Zurich. The latter centres had become markets in transferable and American account sterling—where one could be exchanged for the other with transferable sterling carrying a discount. Four years ago, the Bank of England began support operations whenever the discount on transferable sterling became too great. As a result, this country suffered a loss of gold and dollars whenever a speculative crisis against the pound caused a depreciation of transferable sterling, involving heavy support by the Bank of England.

And the Bank would argue that support was necessary since otherwise commodities which could be bought for sterling and sold for dollars would be dealt in at a profit (to convert sterling into dollars) and the U.K. would lose the normal dollar revenue from such business. Odd reasoning—since support for transferable sterling meant that, instead of losing dollar revenue, the Bank had to lose gold and dollars! In any case, the argument is specious, since the answer is to control the dollar-worthy commodities, as was done after the war, and so ensure the proceeds of their sale for dollars accruing to the U.K.

The Labour Party has opposed this new convertibility and the essence of their argument is essentially that sterling and sterling commodities saleable for dollars should be controlled and so enable the British economy to operate without being at the mercy of overseas speculation. This would mean that convertible (or as it was transferable) sterling should be allowed to depreciate on the exchanges in the event of a "confidence crisis," i.e., one not the result of an adverse balance of payments. But, then, such a theory is anathema to the gods of Threadneedle Street and of the Treasury—they never have admitted the desirability of a truly floating external pound. And, for all their criticism, it is questionable whether the Labour Party, if in power, would be prepared to accept a division between the internal pound and the external pound. Yet, is not that, namely, to concentrate on the balance of payments and to leave currency speculators to burn their own fingers without benefit of automatic Bank support, the logical alternative to what the Government has done?—*All Rights Reserved.*

AMERICAN LETTER

ATMOSPHERE OF STRIKES

MORGANS MERGE WITH GUARANTY TRUST

From Our Special Correspondent

NEW YORK, *31st December 1958*

THE second half of December saw the United States enveloped in a strike-laden atmosphere. In New York, nine newspapers were struck by the union of deliverers. In Boston, there was a walk out of transport workers. There were strikes on the west coast and sprinkled throughout the country. This is coupled with widespread talk of a "probable" major steel strike later this year.

The effects of the New York newspaper strike were bordering on the disastrous. Outside of the *New York Times*, the entire editorial and mechanical staffs of the papers were locked out without pay by the publishers. Only department heads, advertising people and some statisticians continued. Law-suits about this mess are yet to be filed.

The losses were enormous, despite the fact that all papers, collectively, have an insurance policy covering strikes. Under that, insurance companies have to pay $10,000 a day to each struck publication. Thus, losses to the *New York Times* are reported to have run at the rate of $95,000 a day, gross, and $85,000 a day, net. The net figure for the *New York Herald Tribune* is understood to be a loss of $35,000 a day.

Publishers were not the only losers, however. Because of the absence of any retail advertising in the large dailies during the holiday season, department store sales in New York are reported to have fallen off 7 per cent. from 1957. The latter year also was down from 1955 because of a strike of subway workers. The biggest city in the world was, indeed, hit.

Here are a few more facts about the New York strike. Out of a union membership of 4,500, a group of 877 voted for a walk out and 772 against it. Thus, only 105 votes decided the issue which cost 15,000 other newspaper employees a wage and salary loss of $1.5 million a week. Lost advertising and circulation revenues amounted to about $12 million a week.

The union's demands included a $10 a week pay boost, reduction in newspaper bundles from 53 to 40 pounds, another paid holiday to a total of nine such days a year and reduction in the work-week from 40 to 35 hours. The publishers offered an increase in wages of $7 a week over a two-year period and cut of paper bundles to 50 pounds. The only two papers not affected by the strike were the *Wall Street Journal* and the *Journal of Commerce*, which are available only at selected news stands.

The news blackout came at a time when momentous financial news broke. The stock market made new highs, the House of Morgan decided to merge with Guaranty Trust Company of New York and the American Telephone and Telegraph Company announced a three-for-one stock split and a 10 per cent. increase in dividends.

Wall Street Boom

The increasing stock prices are becoming more and more disturbing to old-timers who can remember the period preceding the 1929 market crash. Some of the symptoms are the same, some are not. As in the 1920s, there is constant reiteration that this is a new economic era which is only the beginning of bigger and better things to come. Of course, conditions then were not the same as they are today.

There was widespread stock speculation on margin before the great depression. There is hardly any today. There was no Government insurance of bank deposits, as there is today. There is also unemployment insurance, social security and an enormous backlog of savings. So the analogy is not quite as poignant as the pessimists suggest. This does not mean that a lot of people could not get hurt by a severe decline in stock prices.

In the past few weeks, the uptrading of stock prices was motivated a good deal by inflation psychology. There are strong voices, however, which suggest that there will be little of inflation in 1959. The shrinkage in factory employment is not expected to be easily corrected. Thus, the number of unemployed will probably remain at the present, relatively high, level. Almost everything is in ample supply now, in addition to surplus capacity.

Virtually, the only element which could put up prices is higher wages. There is presently much strike trouble in the airline industry. As the companies are shifting from propeller-driven to jet craft, the pilots demand that flight engineers be also trained as pilots. An emergency board appointed by President Eisenhower supported these demands. Opposed are the Civil Aeronautics Board and the engineers themselves.

Pilots are striking for what they consider is an additional safety margin and the engineers threaten to go on strike if contracts with the pilots should require them to be trained as pilots as well. The unions argue, of course, fewer crew members will be required with jets to transport more passengers faster. Each one wants to hold on to as many jobs as possible. It is a strike-laden atmosphere all right.

I used the word "momentous" news a little earlier advisedly. The three-for-one stock split decided by the Directors of A.T. & T. is the first one in the company's existence and the increase in dividends is the first one in 37 years. It was long overdue, I may add. At any rate, it was a holiday present for 1.6 million stockholders, including many employees, widows, children and pension funds. The price of the stock shot up to $226. It could have been had for $160 a year ago.

Morgans

The merger of J.P. Morgan & Co., Inc. with Guaranty Trust Company is another step in the trend towards bigness as an offsetting factor to rising costs. Morgan, with deposits of less than $800 million, was outranked too far to carry its former weight which goes back to three generations of the Morgan family. The elder J.P. Morgan established the firm in 1862. He was one of the key figures in reorganising and consolidating railroads in this country as well as establishing the U.S. Steel Corporation in 1901. He was the accredited savior in two national financial panics, 1895 and 1907.

John Pierpont Morgan Jr. took over after his father's death in 1913. World War I saw him active in aiding the Allied cause. He raised thousands of millions of dollars worth of loans for Allied Governments as their agent. The new name of the combined bank, significantly, will be Morgan Guaranty Trust Company. It would be the fourth largest bank in the U.S., superseded only by the Bank of America, the Chase Manhattan and the First National City.

The general business picture continues on an even keel. Dividends and family income (median) were about the same in 1957 and 1958. Total income for last year is now placed at $353,000 million, up by $5,000 million from 1957, a new record.—*All Rights Reserved.*

SURVEY

(Concluded from page 7)

producing some other article. In regard to commodities where Central excise is not levied, the Central Government with the concurrence of the States could levy this tax at the point of first sale after manufacture and the proceeds divided between the States. In regard to articles which are not covered by a Central levy, the State Governments should levy a tax at the first point. Refund should be given if the goods are subsequently exported or moved out of the State.

The Federation holds the view that manufacturers or traders with a turnover of less than Rs. 50,000 per year may be asked to be registered, but it should not be obligatory on their part to comply with all the formalities. A fee may be levied on them and they may be required to keep an account of their purchases or sales. The Federation also suggests that a multi-point tax, if it is at all to be levied, should be at a low rate of half per cent.

A suggestion worthy of consideration is the establishment of an Inter-State Taxation Council; this, it may be noted, was also recommended by the Taxation Enquiry Commission. Such a body will be best suited for bringing about co-ordination and uniformity in methods, rates and procedures in respect of not only sales tax, but also other taxes.

There's no head of hair so gone grey that Loma can't darken definitely!

Loma is not a dye but it is a natural hair darkener and at the same time a hair dresser with natural ingredients... So delightfully perfumed too!

BANK OF BARODA'S GOLDEN JUBILEE

IMPRESSIVE GROWTH IN THE PAST FIVE DECADES

THE history of the Bank of Baroda Ltd., which recently celebrated its golden jubilee, is almost similar to that of India's industrial development and Indian banking in general. The last 50 years were by no means a smooth period for Indian banks, because of interruptions by depressions and booms. There were two banking crises during these five decades, the first in the years 1914 to 1918 and the other in the early thirties, when several banks had to close their doors, involving heavy loss to the public. To weather these storms and to retain public confidence during the trying periods was no easy task. The success which attended the Bank of Baroda in withstanding their trials and in developing itself to be one of the "Big Five" in the Indian banking system, redounds to the credit of the men who had fostered the Bank and guided its destinies during the last five decades.

Registered under the Baroda Companies Act, III of 1897, the Bank of Baroda commenced business on 20th July 1908, under the patronage of Maharaja Sayajirao Gaekwad III, who was the largest single shareholder of the Bank. The Bank owes its birth to the vision of this benevolent ruler who had long wished that the people of his State would combine in the organisation of a joint-stock banking concern, believing, as he did, that a bank of this nature would "prove a beneficial agency for the lending, transmission and deposit of money and a powerful factor in the development of arts, industries and commerce of the State and the adjoining territories." That the Bank had more than fulfilled the ambition of its founder-royal patron is proved by its subsequent growth. Though the original idea was to establish a purely Indian banking institution organised on Western lines to meet the demand of the people of the State only, the Bank soon grew in scope and service even beyond the imagination of its promoters.

An indication of the progress made by the Bank since its inception is provided by the fact that its total working capital has risen from Rs. 25.84 lakhs at the end of 1909 to Rs. 83.16 crores as on 1st August 1958. Its paid-up capital has grown from Rs. 6.93 lakhs to Rs. 1.25 crore. During the first decade of its existence, the Bank was able to build up a reserve of Rs. 11 lakhs and this has since swelled to over Rs. 1.59 crore, as on 1st August 1958. Indicative of the public confidence in the Bank is the growth in the Bank's deposits from Rs. 18.52 lakhs to Rs. 67.69 crores as at the end of July last. The advances and bills discounted of the Bank have also gone up from Rs. 23.86 lakhs to Rs. 42.99 crores during this period. It is noteworthy that even in the first year of its operations the Bank earned a profit of Rs. 51,000 and distributed a dividend of 5½ per cent. For the year 1957, the profit aggregated Rs. 43.85 lakhs and dividend 14 per cent.

In 1910, the Bank was appointed bankers to the Baroda State and commenced treasury work on behalf of the State Government. The first branch of the Bank was opened in Ahmedabad in the same year. In April 1919, the Bank established its first office in Bombay and this has now become the principal business office of the Bank. The current decade has proved to be the most notable one in the history of the Bank, when it not only undertook new lines of business but extended its field of activities outside India too. A new department in the Bombay office was opened in 1950 to undertake executor and trustee business and the business of this department is said to be expanding almost daily, as more and more people are coming to realise the advantages of establishing trusts. In recent years, the Bank has also undertaken foreign exchange business, thus playing a great part in removing the misconception held at that time that Indian banks were not competent to do this kind of business, and in diverting a considerable amount of this business into Indian hands. The first overseas branches were opened in 1952 in Kampala, Mombasa and Nairobi. Another branch was opened in Dar-es-Salaam during 1956. In the following year, the Bank's London branch was opened and this enabled the Bank to undertake a substantial volume of foreign exchange business with the U.K. and Europe for its customers in India.

Starting with one office, employing not more than 20 people, the Bank has now 83 offices in India and abroad with a staff of 2,859. The highlight of the golden jubilee year was the absorption by the Bank of the entire business of the Hind Bank Ltd. on 1st August last. This amalgamation has enabled the Baroda Bank to increase its resources, besides providing it with opportunities for expansion, especially in Calcutta, and extension of its activities to new areas like Rajasthan and Pakistan, where it had no branches of its own. The amalgamation is in consonance with the general view that, if the banks are to play their role in the development of the country properly and efficiently, the various smaller units must amalgamate to form larger units. The advantages of such amalgamation are manifold from the administrative and economic points of view.

BANK PROFITS FOR 1958

Dena Bank

In consonance with the general expectations, the net profit of Devkaran Nanjee Banking Company, Ltd. for the year ended 31st December 1958 has suffered a fall. After providing a slightly larger sum of Rs. 1.80 lakh (Rs. 1.60 lakh in 1957) for bonus to staff, the Bank's profit (subject to audit) for the year amounts to Rs. 14.22 lakhs, which represents a fall of Rs. 2.94 lakhs or 17 per cent. from that for the previous year. After bringing in Rs. 2.80 lakhs from 1957, the Directors have reduced the provision for taxation from Rs. 8 lakhs to Rs. 5 lakhs, but have slightly raised the allocation to the reserve fund from Rs. 5.50 lakhs to Rs. 6 lakhs. The distribution to the shareholders is, however, proposed to be maintained at Rs. 3 per share of Rs. 50 each, including the interim dividend of Rs. 1.25 per share paid in respect of the first half of the year. The distribution requires Rs. 3 lakhs, leaving Rs. 3.02 lakhs to be carried forward.

The addition of Rs. 6 lakhs brings the total reserves of the Bank at the end of the year to Rs. 46 lakhs, as against a paid-up capital of Rs. 50 lakhs. The total deposits stand at Rs. 30 crores, having grown from Rs. 23.11 crores a year ago. There has been an addition of six branches during the year, bringing the total number to 75.

Bank of Maharashtra

The results of the Bank of Maharashtra Ltd. for 1958 will probably prove to be one of the exceptions to the general trend. For its profit for 1958, after raising the provision for payment of bonus to staff from Rs. 70,000 to Rs. 1.10 lakh, shows a rise from Rs. 4.69 lakhs to Rs. 5.57 lakhs. The provision for taxation has been enhanced by Rs. 40,000 to Rs. 2.50 lakhs, while the transfer to the reserve fund is unchanged at Rs. 1.50 lakh. The Directors have recommended a dividend of 6.5 per cent. per annum, free of income-tax, *pro rata*, on the increased capital of Rs. 25.22 lakhs, as against 6 per cent. on a capital of Rs. 19.08 lakhs. This will absorb an additional sum of about Rs. 50,000, at Rs. 1.55 lakh, leaving a surplus of Rs. 37,700 to be carried forward.

The deposits of the bank have expanded from Rs. 7.85 crores to Rs. 10.60 crores, while the rise in advances to Rs. 4.49 crores is of the order of only Rs. 66 lakhs. *Investments* stand strengthened from Rs. 2.56 crores to Rs. 4.81 crores.

RESTRAINT ON CREDIT AGAINST FOODGRAINS TO CONTINUE

The restrictions on bank advances against paddy and rice, wheat and other foodgrains are to continue during the current year, according to a directive issued by the Reserve Bank of India to all the scheduled banks. The circular to banks says that the minimum margin of 40 per cent. to be held against foodgrain advances and the ban on extension or enhancement of credit in excess of Rs. 50,000 to an individual borrower are to be continued.

The advances against paddy and rice in each month of 1959 should not exceed the level permitted to the bank individually in the corresponding month of 1958, subject also to the condition that the average aggregate level of credit of branches in Andhra Pradesh and Madhya Pradesh in each month during the current year should not exceed the level permitted to them in the corresponding month of 1958. A similar restriction is imposed on advances against wheat, except roller flour mills, subject to the condition that the monthly average aggregate advances of the offices in the Punjab should not exceed their outstanding total in the corresponding month of 1958. For this purpose, advances against wheat are to be considered separately from advances against other foodgrains.

The exemption granted in favour of offices opened on or after 1st January 1958 in places within a radius of 20 miles from which there is no other scheduled bank's office operating is to be continued during the current year also. In the case of offices opened after 1st January 1957, the exemption limit has, however, been raised to three times the ratio of advances against foodgrains to total advances of offices opened prior to 1st January 1957. The exemptions in respect of advances against pledge of receipts granted by the Central or a State Warehousing Corporation and in respect of advances to co-operative marketing and processing societies will also continue.

Explaining the reasons for the continuation of the credit restrictions, the Reserve Bank's circular says that, though the prospects for the current paddy crop appear satisfactory, the future course of rice prices appears to be uncertain. "Prices of wheat and foodgrains have been showing an upward trend in recent months," it adds, "while there is a certain measure of uncertainty regarding the output of wheat and other foodgrains."

STERLING AREA'S RESERVES

The closing month of the year 1958 witnessed a drop of £52 million in the sterling area's reserves. This is the first time in the past fifteen months that a fall has been recorded in the sterling area's reserves. After having successively grown from the low of £660 million at the end of September 1957 to £1,148 million at the close of November last, the reserves declined to £1,096 million last month. Notwithstanding this setback, the year on the whole closed with an increase of £284 million in the reserves, which also represent a rise of £436 million from the September 1957 level, when the British Bank rate was raised to 7 per cent.

The decline of £52 million in the month of December is mainly accounted for by the repayment of the equivalent of £70 million in dollars by Britain towards its U.S. and Canadian loans. But for this outgo, the sterling area's reserves would have shown an increase of £18 million, even after taking into account the payment of £4 million to the E.P.U. in respect of Britain's November deficit and £1 million towards old E.P.U. debts. The £70 million debts paid by the U.K. were made up of payments to the U.S. of £53 million (U.S. $147.5 million) and to Canada £17 million (Canadian $46.5 million), including the final instalment on the interest-free loan from that country.

Notwithstanding the decline in reserves during December, the position as at the end of 1958 is considered highly satisfactory, inasmuch as Britain has been able to repay the North American loans and to achieve partial convertibility of the pound. It must be noted that the reserves at the end of December include convertible currencies other than the U.S. and Canadian dollars. This has, however, improved the position only to an insignificant extent. Thanks to the status of convertibility attained by many European currencies in the last week of December, the sterling area's reserves are expressed in terms of gold and convertible currencies and not in terms of gold and dollars alone as hitherto. They are given in sterling and not in U.S. dollars.

On the basis of the provisional figures upto 27th December, when the European Payments Union (E.P.U.) gave place to European Monetary Agreement (E.M.A.), the U.K. incurred a deficit of £40 million, as a result of trade and currency movements. This included interest amounting to £2 million on the accumulated debt. This was the largest deficit since September 1957 and was brought about by exceptional circumstances connected with the convertibility of currencies. A substantial part of it was due to special operations —ratissage, as they are called—by France towards the end of the month. Of this deficit, a sum of £30 million will be paid in gold during the current month, while the balance will be added to the book debt.

CURRENCY REFORM IN ARGENTINA

The Government of Argentina has undertaken a comprehensive stabilisation programme, including a reform of its exchange system, which forms the basis for a 12-month, $75 million stand-by arrangement with the International Monetary Fund. The Argentine programme will be supported by additional financial assistance from the United States Government, and by credits provided by a group of private banks.

Argentina's stabilisation effort is aimed in particular at eliminating the inflationary financing of Government deficits. The Government is adopting rigorous measures to effect economies in the national budget and to increase its revenues through internal taxes, and taxes on exports and imports. Other steps are being taken in the field of bank credit and wage and price policy.

The Argentine exchange reform provides for the establishment of a single exchange market for the peso in place of the existing dual (official and free) exchange markets. The Argentine authorities will permit the peso to fluctuate freely in response to market forces, intervening only to avoid excessive variations arising from temporary factors. Amounts available under the stand-by arrangement with the Fund will be used for that purpose. The Government will remove all direct controls on trade and payments, including import licensing and import prohibitions, so that trade will be conducted on a non-discriminatory basis. All existing bilateral payments arrangements with members of the Fund are to be eliminated, but this provision does not exclude Argentina's co-operation with other Latin American countries in programmes to promote regional economic integration.

I.M.F. CREDIT TO U.K.

The International Monetary Fund has agreed, at the request of the Government of the United Kingdom, to renew for one year a stand-by arrangement under which the United Kingdom may purchase with sterling up to the equivalent of U.S. $738,530,000 in foreign currencies at any time during the next twelve months. Stand-by arrangements between the Fund and the United Kingdom have been in effect since 22nd December 1956. Drawings have not been made under them to date.

The U.K. Government has notified the Fund that it will repay $200 million of its December 1956 drawing of $561 million before the end of the Fund's financial year (30th April 1959) and, in accordance with the general principles applicable to drawings, will repay the outstanding balance monthly during 1960 and 1961. The U.K. Government will review the position in December of each year and accelerate these repayments if the position warrants it.

RESOURCES FOR I.M.F. AND WORLD BANK

EXECUTIVE DIRECTORS FINALISE PROPOSALS FOR RAISING THEM

THE Executive Directors of the International Monetary Fund (I.M.F.) and the International Bank for Reconstruction and Development (World Bank) have been prompt in carrying out the desire of their respective Governors for enlarging the resources of their institutions through increases in quotas of member-countries. This desire, it will be recalled, was expressed at the thirteenth annual meetings of these bodies held at New Delhi early in October last. The Executive Directors of both were asked to decide the extent of increase in the capital of their institutions, to put forward suitable proposals, and to suggest whether these proposals should be approved by the Governors at a special meeting or by vote without a meeting. The consensus of opinion among the Governors when they assembled at New Delhi was that (a) the quotas in the Fund and the Bank should be raised by 50 per cent. and 100 per cent., respectively, (b) the basic quotas of West Germany, Japan and Canada should be raised in keeping with the marked increase in their economic growth, (c) the doubling of the Bank's authorised capital should not result in any cash payment by its members, and (d) the Executive Directors should submit their proposals before the end of December 1958, so that Parliaments of member-countries may have sufficient time to give their approval sufficiently early in 1959.

The Executive Directors have observed the dead-line informally given to them. This should have presented no difficulty to them, for there had already been an understanding among their bosses on all the fundamental points. Even the case for increasing the capitals of the Fund and the Bank had been elaborately prepared and presented to the public in one form or another. The Fund's arguments for raising the quotas of its members, for instance, were stated in some detail in the document *International Reserve and Liquidity* published in September last by its staff. They were also eloquently presented by its world-famous Managing Director, Mr. Per Jacobsson, in his speeches at its last annual meeting and at the New York Section of the American Finance Association on 14th November 1958. Similarly, the Bank's case had been ably put forward by its President, Mr. Eugene Black. All that the Executive Directors had to do after the New Delhi meetings was to extend their formal approval to their Governors' decisions, to give the finishing touches to them and to present them in their proper legal form, together with the rationale for raising the quotas. They have done all this now. In India, the texts of their reports and recommendations have been printed and circulated by the Central Government, thereby helping the public and Members of Parliament to understand the subject. The fact that this was done simultaneously with the headquarters of the Fund and the Bank at Washington suggests that the Executive Directors must have finished their job well in advance of 29th December 1958 when the papers were released to the Press.

The I.M.F.

The recommendations of the Executive Directors to increase the resources of the Fund and the Bank are in accordance with the broad understanding reached at the New Delhi meetings. The following are the principal features of the proposals of the Fund's Directors:

1. There should be a general increase of 50 per cent. in members' quotas.
2. In the case of Canada, West Germany and Japan, the increase should be more than 50 per cent., in view of their "position in world trade and their recent relative economic growth." The proposed new quotas for these countries and their existing ones are as under:

(In millions of U.S. dollars)

	New quota	Old quota	% increase
Canada	550	300	83⅓
W. Germany	787½	330	138 3/5
Japan	500	250	100

3. Countries with small quotas should have an opportunity to increase them upto certain stated amounts, even though it may mean an increase of more than 50 per cent. This is in accordance with a policy on small quotas which the Directors have developed over recent years.
4. The increases in quotas will take effect only if and when member-countries having 75 per cent. of the total of present quotas have consented to the increases in their individual quotas. The last date for this purpose is 15th September 1959.
5. With certain exceptions, the orginal subscriptions were payable in the proportion of 25 per cent. in gold and 75 per cent. in the member-country's own currency. It is now proposed that 25 per cent. of the proposed increase in quotas should be paid in gold and the remainder in the member-country's currency by all members including those who, in accordance with the Articles of Agreement, have not yet been required to pay their original subscriptions. Some members, however, might find it difficult to make the full gold payment immediately. Provision, therefore, has been made for them to make deferred payments. But, in any case, full gold payment will have to be completed within a period of about four years.

The proposed general increase of 50 per cent. in quotas coupled with the special increases for Canada, W. Germany and Japan, would add the equivalent of $5,1 billion (one billion=1,000 million) to the Fund's resources, of which $1.3 billion would be in gold. The Fund's holdings of gold and U.S. dollars would double from $2.3 billion to $4.6 billion. Here are the full particulars:

Changes in Fund Holdings of Gold and Currencies as a Result of Quota Increases

(In millions of U.S. dollars)

	As of 30-11-1958	After quota increase	Increase
Gold and U.S. dollars:			
Gold	1,531	2,810	1,279
U.S. dollars	787	1,818	1,031
	2,318	4,628	2,310
Currencies of other countries:			
Belgian francs ..	169	253	84
Canadian dollars	210	397	187
Deutsche mark	183	526	343
Netherlands guilders	206	309	103
Sterling	1,618	2,106	488
Sub-total ..	2,386	3,591	1,205
Other currencies	4,507	6,106	1,599
Grand total ..	9,211	14,325	5,114

The following is a synopsis of the rationale put forward by the Executive Directors in their report to their Governors for raising the resources of the Fund:

The enlargement of the Fund resources will enable the Fund to promote more effectively the purposes for which it was formed. The two main tasks of the Fund, which are closely intertwined, are to further international monetary co-operation and exchange stability as a basis for the balanced growth of world trade, and to provide financial assistance to member-countries, in order to help them stabilise their currencies, maintain or move toward convertibility, and overcome temporary balance of payments problems without resort to policies that would be harmful to national or international prosperity. The possibility of access to the Fund's resources serves in itself as a second line of reserves, which gives members more confidence in undertaking efforts to restore balance, and may, indeed, encourage them to move faster toward achieving the purposes of the Fund than if they had to rely on their own resources alone.

The assistance which has been obtained from the Fund in recent years has been requested under a great variety of circumstances: in an emergency at the time of the Suez events, in conditions of boom and expanding world trade, and in periods of recession, as well as in a wider context when stabilisation efforts have been undertaken. It can only be concluded that the Fund must remain prepared for diverse contingencies, many of which cannot be clearly defined in advance.

Countries which receive assistance from the Fund make declarations of intent as to the policies they will follow. They do so in accordance with the principles governing the use of the Fund's resources which had been laid down by the Executive Directors and stated in annual reports well before the Fund's recent period of increased activity. By the close link that the application of these principles and practices establishes between the Fund's financial assistance and the maintenance or adoption of the necessary remedial measures in the countries concerned, the Fund supports the observance of that degree of financial self-discipline without which the international monetary system cannot function properly. It is in the general interest that, by means of a strengthening of the Fund's position together with continued observance of financial self-discipline, a sound monetary basis is created for the renewed expansion of world trade. It should, for instance, never be forgotten that pressure on one currency may, under adverse circumstances, affect the position of other currencies. While no progress can be achieved without appropriate steps being taken in individual countries, the granting of financial assistance through the Fund reflects the idea that international assistance may be required to enable countries to take these steps.

It is, therefore, in the interest of all members of the Fund that the common pool constituting a secondary reserve should be adequate to face the difficulties which may arise in the future. In considering the need for an increase in the Fund's resources, account must be taken of the fact that, in the last decade, the volume of world trade has nearly doubled. While reserves of gold and foreign exchange of countries outside the United States have increased by about 50 per cent. in that period, Fund quotas have, with minor exceptions, remained at the amounts determined in 1944; and the rise in dollar prices by at least 50 per cent. since that date has correspondingly reduced the real value of the Fund's existing resources.

Fortunately, over the last year, many countries have been able to strengthen their reserves. But the Fund cannot be concerned with only the present or the immediate future; its members must be assured that it is adequately equipped to meet the strains which may arise in emergencies or other adverse circumstances.

The Executive Directors have, therefore, concluded that it is highly desirable to enlarge the Fund's resources through increases in quotas. They have found that an increase of 50 per cent. is a reasonable basis for quota increases at this time, and this appears to be as much as members generally can be expected to contribute. If these new resources are made available, the member-countries will have increased confidence in the capacity of the Fund to perform its tasks in the coming period.

World Bank

So much for the increase in the resources of the Fund. As for the Bank, under the proposal of its Executive Directors, the authorised capital would be increased by $11 billion, that is, from $10 billion to $21 billion. This increase would be effective only when a minimum of $7 billion of new capital is taken up by its members. The time limit for this is 15th September 1959, but the date may be extended by the Directors. The increase proposed would permit member-Governments to double their present capital subscriptions and would still leave a margin of unsubscribed capital for admission of new members and for possible subsequent increase in individual subscriptions. No cash payments on the new subscriptions would be required by the Bank as an addition to its lendable funds. The new subscriptions would be left subject to call. The Directors have recommended that a specific provision should be made by way of a preamble to the resolution authorising the increase in capital, that calls shall be made only when needed to meet obligations arising from the Bank's borrowings, by sales of its bonds and other securities, and from its guarantees of loans made by other investors.

As in the case of the Fund and for the same reasons, Canada, West Germany and Japan are to be given higher quotas in the Bank also. In addition to the general 100 per cent. increase, Canada has been offered $100 million, West Germany $390 million and Japan $166 million special quotas. Accordingly, their total subscriptions will be as follows:

(In millions of U. S. dollors)

	Present	Proposed
Canada	325	750
Germany	330	1,050
Japan	250	666

Half of the special increases would be left uncalled on the same basis as the subscriptions under the general increase, but, of the other half, 20 per cent. would be called, in the form of gold 2 per cent. and member's currency 18 per cent.

It may be noted here that, in accordance with the Bank's Articles of Agreement, 20 per cent. of subscribed capital has been paid in. The remaining 80 per cent. can be called only to meet obligations arising from the Bank's borrowings or from its guarantees of loans. This 80 per cent. —amounting to $7,617,200 000—is in effect a guarantee fund securing the investors holding the Bank's bonds and guarantees. It has always been contemplated, the Bank's Directors point out, that the Bank would raise the bulk of its lendable funds through borrowings. The 80 per cent. portion of the capital is thus an essential factor in the Bank's ability to borrow.

To date, the Bank has undertaken loan commitments in 49 countries equivalent to $4,250,000,000, and it has sold the equivalent of $2,300.000,000 of its bonds and other obligations in leading capital markets, in order to finance a part of these loan commitments. Currently outstanding bonds and notes amount to the

INSTALLATION OF AUTOMATIC LOOMS

COMMITTEE SET UP TO SELECT UNITS

A SPECIAL two-man committee has been appointed by the Government of India to select the cotton textile mills for the installation of automatic looms during the next six months; it consists of Mr. D. S. Joshi, I.C.S., Textile Commissioner, and Mr. B. N. Dattar, Adviser in the Union Ministry of Labour and Employment. Soon after its constitution, the Committee issued circulars to cotton mills asking them whether they are desirous of having automatic looms. A vast majority of the units is reported to have already submitted replies asking for allotment. The Committee is expected to meet on the 17th inst., to select the mills to which the looms should be allocated and also to fix the number of looms for each one of them.

Three primary considerations have been laid down by the Government for the allotment of automatic looms by the Committee. First, preference should be given to units having established trade connections and sizable annual exports to their credit and to units which provide evidence that they can export if equipped with automatic looms. Secondly, the larger units capable of absorbing surplus labour and the units belonging to an employer who controls more than one unit of the same type in the same area and is in a position to provide alternative jobs. Thirdly, the total three-year target of 7,500 looms may be distributed evenly among different regions. The minimum and maximum number of looms to be allotted to an individual undertaking is fixed at 48 and 144, respectively. In exceptional cases, however, a maximum of 300 looms for a single unit may be allotted with the approval of the union or unions in the concerned unit.

Commendable but Belated

The speed with which the Government of India is giving effect to its decision to permit the installation of 7,500 automatic looms over the three years (1959, 1960 and 1961)—at the rate of 2,500 looms per annum—as a pilot project is commendable, but belated. This decision, it will be recalled, was first announced in the Lok Sabha early last month by Mr. Manubhai Shah, Union Minister for Industry, in the course of his reply to the debate on the present trends in export trade and the state of the textile industry. The Government of India convened at New Delhi on 22nd December 1958 a meeting of the representatives of millowners and labour to discuss the criterion for selecting textile units for the introduction of automatic looms and the number of looms to be allotted to each selected unit. The meeting was presided over by Mr. Gulzarilal Nanda, Minister for Labour and Employment, and was attended by Mr. Manubhai Shah. The employers were represented by Messrs. D. S. Bhakle, M. Mangaldas and J. K. Srivastava, while Mr. S. R. Vasavada represented labour. Mr. Asoka Mehta, M.P., attended in his personal capacity. Mr. S. A. Dange, M.P., who was invited to attend the meeting on behalf of the All-India Trade Union Congress, was not present.

At the above meeting, it was decided that, in choosing units for introducing automatic looms, the Government should consult the appropriate employees' and workers' interests and that the country must be divided into appropriate regions for distributing the looms. It was suggested that a two-man committee should be set up to select units and to allot looms. It was in response to the aforesaid suggestion that the two-man Committee mentioned at the outset came to be appointed. The meeting also discussed the machinery for the settlement of disputes arising in the course of implementing the scheme. It was agreed that the working of the scheme must be reviewed once a year, and more frequently if either party should desire it. It will thus be noted that the Government has been trying to carry the workers with it in the implementation of the scheme for introducing automatic looms.

It is gratifying to learn that the labour representatives who attended the New Delhi meeting accepted the principle of modernisation of the textile industry and recognised the importance of textile exports even from the point of view of trade unions, since dwindling exports would result in the loss of employment. It was felt that the proposal to install 2,500 automatic looms annually was marginal in character and could be supported without much difficulty by the industry and the unions. The participants agreed that, before the actual implementation of the scheme, the workers should be apprised of its object with a view to obviating any misapprehension. In this connection, emphasis was laid that the employers should desist from recruiting new hands when the existing workers were being rendered surplus.

The need for installing more and more automatic looms in cotton mills cannot be stressed too strongly, especially in the present context of things in India and abroad. The competitive capacity of the Indian industry has deteriorated greatly of late, thanks to the cost inflation from which the industry is suffering, due, among others, to the low efficiency of equipment, a good part of which is old and outmoded, as well as direct and indirect labour costs. A large majority of the machines in existence today was installed more than 40 years ago and has outlived its usefulness. Recognising this aspect, the Textile Enquiry Committee (Chairman: D. S. Joshi) clearly urged that, if the machinery and equipment were not replaced at an early date, the effect would be felt, as it has been felt in the case of marginal and sub-marginal units, in the form of low production, bad quality of products, engagement of a large number of workers and high cost of production.

Suitable Conditions Needed

At the New Delhi meeting, both Mr. Nanda and Mr. Manubhai Shah did well to draw pointed attention to the growing preference in foreign markets for flawless cloth produced on automatic looms and to warn that India's exports would continue to fall if the mills did not switch over to automatic looms. The mere emphasis on the need for installing automatic looms, of course, means nothing, unless the Government creates suitable conditions for facilitating the mills to carry out the task. This aspect must be specially stressed considering the absence of any worthwhile progress with the 18,000 automatic looms sanctioned in 1956 after arguing about it for quite a few years. We understand that, though more than 2½ years are over since the permission was given, not more than 600 out of these 18,000 looms have been installed. The reasons for the failure of this scheme are well known. The Government insisted that automatic looms are to be installed for producing cloth meant for export only. In order to make sure that no cloth from automatic looms is diverted to domestic markets, the Government attached three conditions: (1) All the cloth from automatic looms must be exported. (2) In addition, a mill must export 87½ per cent. of its current exports (that is, exports made in a basic period). (3) If, by any chance, a mill were to sell any of its cloth meant for export in the domestic market, it should pay a penal excise duty at a prohibitively higher rate. These conditions were no invitation to mills to introduce automatic looms. They were actually fetters. Naturally, hardly any mill came forward to avail itself of the Government's offer.

It must be noted that the aforesaid conditions were in addition to those meant for safeguarding the interests of workers, as well as those of the indigenous manufacturers of automatic looms. These latter, however, were less irksome and quite understandable.

The two-man committee will be wasting its time and the taxpayers' money if the Government has not abandoned the three impracticable conditions mentioned above. It is surprising that there is not a word on this vital question in the report about the conference which Mr. Nanda and Mr. Manubhai Shah had with the representatives of workers and the millowners. The public is entitled to know as to what are the Government's views on it. Does it still propose to stick to those conditions?

(*Concluded from next column*)

the principles involved, the experience of any one year is not sufficient explanation.

Now what have the Indian millowners to say on this development? Will they quietly accept the agreement reached earlier or ask for a revision? Is the reported ceiling of 140 million yards inclusive or exclusive of made-up goods and handloom fabrics? Are there no prospects of India exporting such made-up goods as shirts, sleeping suits and pillow cases to the U.K? These are some of the questions that require answers and only the spokesmen of millowners know them.

TEXTILE IMPORTS INTO BRITAIN

AGREEMENT SIGNED WITH HONG KONG

AFTER negotiations lasting for many months, Britain and Hong Kong have arrived at a final understanding on the question of voluntary limitation of exports of all types of cotton goods from Hong Kong to Britain. Under the agreement signed in Hong Kong on 30th December, 1958, producers of cotton goods in Hong Kong have agreed to limit their exports to Britain for three years with effect from 1st February 1959 to the levels mentioned below:

(In million square yards)

Cloth	120
Yarn-dyed cloth	3
Made-up goods	46*
Total ...	169

*Or actual level for the year ended September, whichever is higher.

The agreement is between the millowners in Hong Kong and Lancashire and not between the Governments of the two countries. Both the Governments, however, played a part in promoting it.

Announcing the conclusion of negotiations, Mr. J. D. Clague, Chairman of the Hong Kong Textile Negotiating Committee, made it clear that the Colony's undertaking was firm and irrevocable and not subject to similar arrangements being made with any other parties. Explaining the delay in arriving at a decision, he said: "On purely economic grounds, no ceiling can at the present time be justified. The restrictions create problems for the Colony's traditional free trade policy...the guiding principle has been to ensure the maximum amount of local employment. The pact will, I hope, open up a new phase of Commonwealth economic co-operation, in conformity with the spirit of the Montreal *communique*.

As requested by the Negotiating Committee, the Hong Kong Government, according to an official notification, has agreed to set up the necessary machinery of control and to administer it with the assistance and advice of a representative committee to be appointed for the purpose. Administrative arrangements, including allocation of quotas, it is said, are now being worked out and a further announcement will be made when they are completed. Meanwhile, the exporters have been warned that a letter of credit received on or after 31st December 1958 will not by itself qualify the exporter for an export licence.

Cloud of Secrecy Regrettable

The Hong Kong Government's statement says that "cotton goods exports to Britain will be voluntarily limited for three years in line with the actions already agreed in principle by India and Pakistan." Except for scattered Press reports here and there, we do not have any information on the understanding said to have been reached between the Lancashire millowners and the textile interests of India. Only two persons, we are told, know the details, that is, Mr. Kasturbhai Lalbhai and Mr. Neville Wadia who have been conducting negotiations. No doubt, the Government of India must have been kept informed about it. It is regrettable that a cloud of secrecy should continue to hang on this important issue.

In the absence of details, we have only to take the figure of 140 million square yards given by *The Economist*, London, as the ceiling for exports of cotton cloth from India to Britain (and 35 million square yards for Pakistan). This ceiling is higher than the actual exports during 1957 by just one million square yards, while the ceiling of 120 million square yards of piecegoods fixed for Hong Kong is well above the actual exports in 1957. Further, Hong Kong can export to Britain as many as 46 million square yards of made-up goods and 3 million square yards of yarn-dyed cloth. Hong Kong can thus ship cotton goods up to a total of 169 million square yards, that is, 29 million yards more than the reported ceiling allotted to India. It would appear from these particulars that the treatment accorded to Hong Kong by Lancashire is far more liberal than that given to India. By holding out for a longer time against the pressure from Lancashire millowners, Hong Kong has succeeded in getting a better deal. It may be argued by some that, in view of the fall in India's exports of cotton textiles to Britain in 1958, this point is only of academic importance. But the issue cannot be so lightly dismissed. DETAILS OF TEXTILE PACT WITH HONG KONG AWAITED

FUTURE OF YARN SPINNERS' AGREEMENT

From A Special Correspondent

MANCHESTER, 30*th December* 1958

AS the year ended, Lancashire traders were eagerly awaiting details of the reported agreement, which the Hong Kong negotiating committee had signed, relating to foreign cloth exports to the United Kingdom. In the absence of definite information, the local industrialists were disinclined to commit themselves to an elaborate comment on the situation and confined their opinions to the hopes that any terms arranged would not be unduly adverse to Lancashire.

MANCHESTER LETTER

The news coincided with the disclosure that, for the first time, exports of cotton grey cloth from Hong Kong to Britain had topped the 100-million-yard mark in a single year. To the end of November, arrivals exceeded 101 million yards, as compared with only 71 million yards in the whole of 1957. At this level, Hong Kong's shipments were only 10 million yards lower than comparable imports from India and were far in excess of the 38 million yards received from Japan and China. Most of the arguments about the scope of the Colony's trade in cotton goods with the United Kingdom has centred on the size of the probable quota not only on grey cloth but also on finished fabrics and made-up garments which are entering this country in substantial quantities.

A spokesman for the Cotton Board said: "We are now awaiting the terms which the Hong Kong millowners have agreed upon, but we can say nothing until they have been received on this side. We hope they will prove to be acceptable."

Shipments Tally

As a result of November's overseas trade in cotton goods, Lancashire's import-export gap has narrowed still further; barely 5,000,000 yards now separates the volume of cotton cloth leaving this country and incoming cargoes at British ports. For the 11 months, shipments of fabric aggregated 355,825,000 square yards, while arrivals amounted to 350,229,000 square yards. Although imports as a whole have declined by nearly 35,000,000 yards so far this year as compared with 1957, the drop in comparable exports is much greater, being in the region of 63,000,000 yards. The value of exports of cotton cloth has fallen from over £55,000,000 to £47,000,000.

Lancashire's leading customers so far as cotton cloth are concerned remain Australia, with 60,483,000 square yards, South Africa 46,556,000 square yards and New Zealand 32,539,000 square yards. In most cases, the major Commonwealth markets have shown a slight contraction in takings, New Zealand being the only exception. Cotton yarn shipments in November again exceeded 2,000,000 lbs., but the 11-month total of 24,876,036 lbs. compares with 35,009,942 lbs. shipped in the same period last year. Sharp falls have been recorded in cotton yarn shipments to India, Canada, Finland and Western Germany this year, but slightly bigger supplies have been sent to Australia and New Zealand.

Before the Verdict

The other vital outstanding matter likely to affect Lancashire trading conditions in the coming year is the pending decision on the future of the Yarn Spinners' Agreement following its investigation by the Restrictive Practices Court. Practically a month has now elapsed since the hearing ended but no verdict has yet been given.

So many widely differing views have been put forward prior to the investigation and during the proceedings that anyone not highly versed in the intricacies of the marginal rates system can well be forgiven for becoming confused. Sectional interests have had their say, both for and against the agreement, and traders in various branches would be unfaithful to their cause, if they did not take into consideration the different aspects of the scheme which concerned their everyday activities. Manufacturers as a whole would have been grateful to have a similar system operating on their behalf, while the merchanting section has for long been antagonistic to the plan, blaming the lack of elasticity in prices for their inability to secure more orders. One of the most eagerly scanned commentaries on cotton trade affairs is published periodically by Mr. William Butterworth, of Cook and Thorp, a leading firm of Manchester cotton merchants. To quote this observer: "It all seems so silly debating and arguing for six weeks about something that may or may not make a fraction of a penny difference to the shop prices."

High Retail Margins

When it is considered that the main purpose of the Restrictive Practices Court is to decide whether the various agreements brought before it are "contrary to the public interest," this fundamental fact should surely be borne in mind. To the ultimate consumer buying cotton goods over the counter, how much will be saved in ready cash at the expense of a possible severe dislocation of employment and production in what is still an important British industry? The report continues:

"Over the years spinners and manufacturers have not averaged much above a 5 per cent. return on their original capital, whereas retailers are not satisfied with less than 25 per cent. on sales. Does the housewife receive any benefit from the importing of sweated labour goods? These goods are usually sold over the counter as 'British-made' and only a small tab indicates that they were made in India or Hong Kong. The retailer takes the extra profit and generally pushes the sales of imported cloth, though there is no guarantee that the goods are up to Lancashire standards."

It has been suggested in some quarters that retailers have lately been deliberately reducing their stocks in the belief that prices would still decline. While this may well be so from the viewpoint of the raw cotton situation, any change in the spinners' agreement would have relatively little bearing on the cost of the finished article, however drastic might be the effect on individual mills.

If a poplin shirt requires up to 3¼ yards of cloth the dissolution of the spinners' price scheme might mean a difference of a few coppers on the garment. When selling prices of such goods range up to as much as £2 it is difficult to see what gain will be achieved by the retail customer. Even a catastrophic fall in yarn prices, caused by internal competition of the worst kind, would only scratch the surface of the final cost of many articles now available over the counter.

Maintaining Contact

The cosmopolitan character of the International Cotton Federation was emphasised by its new President, Dr. W. T. Kroese, of the Netherlands, when he visited the headquarters of the organisation in Manchester and delivered a lengthy statement, setting out the aims and achievements of the Federation. Although the main constituents are in Europe, close links are kept with other cotton-using countries on this side of the Iron Curtain. It is nonetheless significant that statistics were obtained from the Soviet Union this year for the first time since the war.

The members of the Federation, Dr. Kroese pointed out, consume more than 80 per cent. of all the raw cotton entering international trade and he hinted that the friendly relations with their colleagues in the United States might become even stronger in the near future. Countries participating in the organisation's affairs outside Europe include Japan and Egypt.

Towards the end of his statement, the President touched on the international aspect of Lancashire's prolonged negotiations on the subject of duty-free cloth imports. The hope that an agreement would soon be reached was shared, he said, even by those who did not look at the problem through Lancashire's eyes. Cotton industrialists on the Continent were closely following the efforts made to find a permanent solution to this problem, because they were themselves directly interested in it.

"It is not sufficiently realised that this matter goes far beyond the cotton industry and has much wider implications," continued Dr. Kroese. Lancashire, first in the Industrial Revolution, was now in the forefront of developments which threatened the industry with contraction. "Today, the cotton industry is suffering from the industrialisation of formerly agrarian countries in the East. We must realise that, in the next 10 or 20 years, practically all branches of industry will find themselves in a similar situation," he warned.

Although the problem of "live and let live" between East and West was only acute in one special sector of industry, it was unthinkable, he went on, to leave the provision of cloth for one

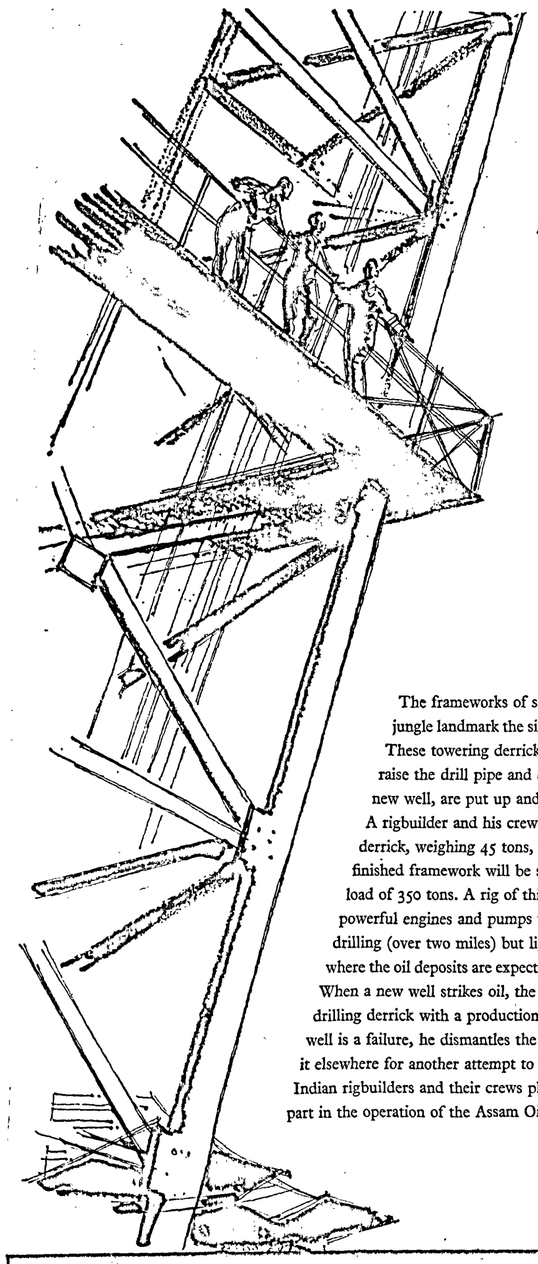
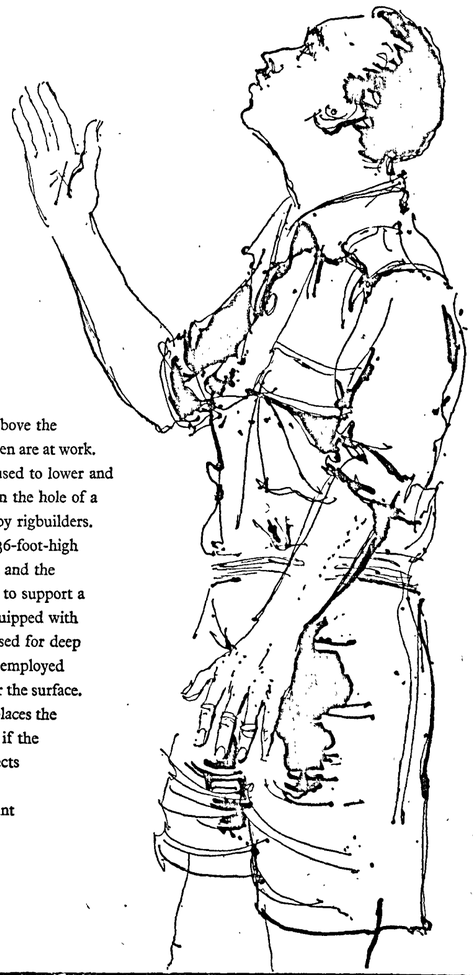
Men and Oil . . . 4

The Rigbuilder





The frameworks of steel that rise above the jungle landmark the sites where oilmen are at work. These towering derricks, which are used to lower and raise the drill pipe and drilling tools in the hole of a new well, are put up and taken down by rigbuilders. A rigbuilder and his crew can erect a 136-foot-high derrick, weighing 45 tons, in a few days, and the finished framework will be strong enough to support a load of 350 tons. A rig of this capacity, equipped with powerful engines and pumps to match, is used for deep drilling (over two miles) but lighter rigs are employed where the oil deposits are expected to be nearer the surface. When a new well strikes oil, the rigbuilder replaces the drilling derrick with a production derrick. And if the well is a failure, he dismantles the rig and re-erects it elsewhere for another attempt to be made. Indian rigbuilders and their crews play an important part in the operation of the Assam Oil Company.

WHAT PRICE FOR SUGARCANE?

U.P. GROWERS' PLEA FOR INCREASE UNJUSTIFIED

IT is indeed a matter for considerable satisfaction, at any rate for the present, that the Uttar Pradesh Co-operative Cane Growers Unions' Federation has withdrawn its threat to stop supplies of cane to sugar mills with effect from Wednesday next. The decision, announced on 30th December last, followed the conciliation talks held by the Federation with Dr. Sampurnanand, Chief Minister, and Mr. Mohanlal Gautam, Minister for Agriculture and Co-operation. The Chief Minister is reported to have agreed to convene a tripartite conference of the representatives of the Federation, sugar millowners and Government to reconsider the three demands of cane growers, namely, upward revision in the current statutory minimum price of cane—Re. 1.44 per maund—profit-sharing between cane growers and millowners from 1953 onwards, and appointment of a board for fixing the price of sugarcane with suitable representation. The proposed conference is expected to be held early next week, that is, after the return to Lucknow of the U.P. Chief Minister from the Nagpur session of the All-India Congress Committee.

That the cane growers' plea for an increase in price is not only unjustified but also untimely will be shown presently. Before doing so, a brief review of the developments preceding the aforesaid decision of the Cane Growers' Union may be made. Immediately after the current sugar season commenced (on 1st November 1958), the cane growers renewed the plea for higher price. A special resolution was moved by a member of the Opposition in the U.P. Legislative Assembly urging a rise in the price from Re. 1.44 to Re. 1.75 per maund. Deplorably enough, there was no opposition from the side of the State Government. The resolution was passed and forwarded to the Centre. If only the Chief Minister of U.P., his colleagues in the Government and other members of the Congress had stood firm on the issue of cane prices, the situation would not have taken such an ugly turn as widespread demonstrations and strike threats by cane growers.

Mr. Nehru's Opposition

In the Lok Sabha, too, a section of the opposition, consisting of socialists and communists, attempted to get an upward revision in cane prices. A special motion was brought before the House on 18th December by Mr. Brajraj Singh (Praja Socialist Party) and two other members. The motion was, however, defeated by a large margin of votes. Mr. Ajit Prasad Jain, Minister for Food and Agriculture, opposed it strongly. The Prime Minister himself felt so strongly on this issue that he intervened and convincingly explained that any increase in the price of cane, or, for that matter, any other agricultural commodity, was bound to have serious repercussions on other commodities. He emphasised that, in the matter of prices, one should proceed in a planned way and not do anything which would upset the general economy of the country. Here are the impressive arguments put forward by him:

"Unless our sugar price is cheap, we will not be able to compete in the international market. More land is going under sugarcane production. This should prove that the farmers are taking more to cash crops like sugarcane than foodgrains which are so essential for the country. It must also be a paying proposition. Hence there is no need for any additional incentive for sugarcane production.

"The issue of cane prices should not be isolated from the general economic picture in the country. This includes the entire concept of planning also. If we take any wrong step in increasing cane prices, many adverse consequences will follow. It will be highly improper to increase cane prices at the present time.

"I am not an expert on prices, but one thing is clear, that the price of sugar in India is much more than the world price. We want to export sugar, but we cannot compete in the world market with this difference in price. I do not think any millowner will export sugar at a loss. Nobody works at a loss in the private sector, although, for some time, this might be done in the expectation of future gain. Then the question arises: Should the Government subsidise the export of sugar to compete with world prices? It is clear, therefore, that any step that further increases the price of sugar in India will not make things easy for us. Another problem is that more and more land is being diverted from foodgrains to the cultivation of sugarcane. This means that the peasants are not suffering any loss by switching over to the cultivation of sugarcane. They seem to like it."

In his speech, Mr. A. P. Jain declared that the sugarcane producers had been fully protected. Drawing attention to the fact that the price of cane was fixed at Re. 1.44 per maund not arbitrarily but after the fullest consultation and approval of the State Governments, including U.P. and Bihar, Mr. Jain said that any increase in the price would also boost prices of foodgrains. He further pointed out that, as compared with the prices given to the producers of other agricultural commodities, the cane growers were getting a better deal and that those cane growers who supplied cane to sugar mills earned more profit than those who supplied it for *gur* production in cottage industries.

An Absurd Call

The explanations given by Mr. Nehru and Mr. Jain did not satisfy the critics. This is evident from the call for the resignation or dismissal of Mr. Jain from the Union Cabinet by the All-U.P. Co-operative Cane Growers Federation at a special meeting held at Lucknow on 23rd December. The resolution on the subject was passed despite the presence of a sizable section of Congress-dominated Union representatives. The Federation also issued a directive to the 119 cane growers' co-operative unions all over the State to stop cane supplies to the 69 sugar mills for an indefinite period after 14th January. Some delegates even criticised Mr. Nehru on the ground that he made a partisan statement in Parliament "without trying to comprehend the problems of growers and the fairness of their demand."

The cane growers' call for the resignation and dismissal of Mr. Jain is absurd and only exposes the utter hollowness of their plea for higher cane prices. The politicians who instigate and organise strikes suffer nothing. It is the cane growers who sustain losses, losses which they can ill afford and which the politicians cannot at all reimburse. Unlike many agricultural commodities, sugarcane cannot be kept after harvest for a long period; it has to be crushed forthwith for manufacturing sugar, white or brown. Even delays occurring in the transport of cane from the fields to the factories entail much hardship to the cultivators who are financially very poor, not to speak of the deterioration in the quality of cane. That any attempt on the part of cane growers to stop supplies to sugar factories will be suicidal to their own interests was aptly described by the U.P. Chief Minister in the State Assembly on 19th December. He said: "If the *kisans* withhold the deliveries of cane, they will not be able to get enough crushers (*kolhus*) even in Western U.P. to crush the cane for *khandsari* and *gur*. In Eastern U.P. where no *khandsari* and *gur* are manufactured, the cane will either dry up or rot. This will further worsen their condition. With delay in delivery, the yield of sugar per maund will fall and with it will fall the price of cane, causing loss to *kisans*."

CORRESPONDENTS ALL OVER THE WORLD

It is a pity that sugarcane should continue to be used as a political weapon either to browbeat the powers-that-be or to create false hopes among the cane growers, most of whom are illiterate. None among the agitators has cared to make a comparative study of the economics of sugar industry in India and in other parts of the world. If some of them have, then they are deliberately misleading the growers. As it is, the price of cane is high in all conscience. It accounts for as much as 60 per cent. of the cost of producing sugar. The cost of cane per ton of sugar produced is Rs. 405, which represents over 88 per cent. of the total price of sugar realised on exports. This is due to the defective system of paying for cane only on the basis of quantity, irrespective of quality considerations.

It has been explained in these columns countless times that, if India is to compete successfully with other sugar-producing countries and if the price of sugar to domestic consumers is to be kept at a reasonable level, the cost of cane must be reduced. This is the basic problem of sugar production which has unfortunately been completely overlooked by politicians in their anxiety to earn the goodwill and support of the agriculturists. The sugar factories are made to pay a high price of Re. 1.44 per maund of cane which has, on an average, a sucrose-content of less than 10 per cent. So long as the cane grower is assured of the minimum price, he will simply not care to make any effort to grow cane with richer sucrose-content. The aim should be to help the grower to increase the yield of quality cane per acre rather than endeavour to cripple the sugar industry by threat of strikes and demand for uneconomically high prices. This aspect has been well brought out by Mr. L. N. Sarin of Lucknow in the course of a letter to *The Pioneer*. Mr. Sarin says:

"There are two ways to raise the purchasing power of a cane-grower—one artificial and the other natural. The politician in India aims at the artificial method as it seems to promise political dividends. He, therefore, pleads for higher price and, having failed in his effort, instigates a strike. This gains him the mantle of a leader of men and puts on him a mask of public-spiritedness. The real aims of his mind, if hidden from the public gaze, are not difficult to understand. At the time of election, he can recapitulate his various activities to hoodwink the ignorant voter. If a Congress worker at the time of election talks of nothing but of his past fight with the British Government, his opponent has nothing more positive or creative to mention but his fasts, his raids, his walk-outs from the Assembly, etc. The natural way to help the grower fight his poverty is to help him in increasing his yield per acre. But this has no melodramatic appeal. While this would help the growers, it may mean no political return to the politician at the time of election."

There is considerable force in these observations. The politicians of Uttar Pradesh (and also Bihar) will do well to remember that any increase in the minimum price of sugarcane will, by upsetting the parity of agricultural commodity prices, result in the diversion of a large part of the cultivable land from foodgrains to cane and also lead to a further rise in sugar prices. It may be noted here that the price fixed for cane is just the minimum and it is always open to sugar millowners to give a higher price if they want to. This can be achieved only by growing and supplying the factories with superior varieties of cane and not by threats to stop cane supplies to factories. Such threats constitute an ill-wind that does no good to anyone.

Holding Consumers To Ransom

Any further increase in cane price which, as already said, accounts for 60 per cent. of the production cost of sugar, will amount to holding consumers to ransom. Inasmuch as the States of U.P. and Bihar together account for well over 66 per cent. of the total production of sugar in the country, the pressure exerted by the politicians of the two States for getting higher prices for cane tantamounts, as this journal has pointed out on several occasions in the past, to the imposition of the will of monopoly interests on nearly 70 per cent. of the sugar-consuming population.

The politicians of U.P. and Bihar would serve the cause of cane growers better if, instead of pleading for enhancing cane prices, they were to advocate the introduction of the scheme for payment of cane on the basis of both weight and quality, as against weight alone as at present. It is only such a scheme that will create quality-consciousness among the growers. On its part, the Government of India will do well to stick to its decision not to raise the price of sugarcane. For any concession to pressure tactics of agitators will only mean a "devastating confession of the Government's inability to govern where politics overlap economics."

GOVERNMENT OF INDIA TO BUY RAW JUTE

MILLS AGREE TO INCREASE THEIR STOCKS

THE question of imparting some strength to the raw jute market and helping the growers who have contributed a lot to India achieving near self-sufficiency in the golden fibre figured prominently in the series of discussions which the representatives of the industry and the trade had with Mr. C. S. Ramachandran, Joint Secretary, Union Ministry of Commerce and Industry, and Mr. D. Sandilya, Managing Director, State Trading Corporation of India, last week-end. Following these discussions both the manufacturing industry and the Government have agreed to support the raw jute market. The manufacturers on their part have decided to make additional purchases of the fibre immediately. The Government will also enter the market to purchase and stock raw jute for supply to the mills, as also for export.

Announcing these decisions, a Press note issued by the Ministry of Commerce and Industry says that the Indian Jute Mills Association, on behalf of the manufacturers, has undertaken to buy and hold stocks of raw jute to cover four months' requirements of member-mills. It will be recalled that in September last, the I.J.M.A. had advised its member-mills to increase their purchase of raw jute up to three months' consumption, with a view to arresting the decline in prices, but this did not have the desired effect. The mills' latest decision to hold stocks up to four months' consumption, read together with Mr. Lal Bahadur Sastri's statement in the Lok Sabha on 8th December last that mills were being persuaded to raise their purchases further, shows that mills have not voluntarily come forward to take this step in order to arrest the downward trend in raw jute prices.

Mills to Submit Statements

The mills have agreed to furnish the Jute Commissioner at specified intervals with information regarding their stocks, the purchases effected from time to time, etc. The Jute Commissioner will verify these returns, so as to enable the authorities concerned to take appropriate action against mills who fail to carry out their undertaking in respect of their advance purchases of their requirements of raw jute.

Among the voluntary measures recently taken by the industry and trade to maintain steadiness in the raw jute market was the decision of the East India Jute and Hessian Exchange, the officially recognised body to conduct futures trading in raw jute and jute goods, in September 1958, to impose margins on net outstanding sales of raw jute and jute goods at prices below those fixed by the I.J.M.A. The margins were stepped up last month, as indicated in the following table:

Item	Minimum price	Margin	
		As from 29-9-1958	As from 20-12-1958
	Rs.	Rs.	Rs.
Hessian cloth ..	89.50 per 100 yds.	1.50	2.00
Sacking bag ..	95.00 per 100 bags	3.00	5.00
Raw jute ..	22.50 per maund	2.25	3.00

The enhancement of the margins within less than three months after they were first imposed shows that the fixation of minimum prices was more honoured in the breach than in its observance. The tightening up of the margin system was opposed by a section of the trade and, as a protest, it refrained from trading on the Exchange for a few days. As a result, the margins and floor prices were modified in the case of sackings and raw jute. Thus, sellers in sacking below Rs. 100 per 100 bags, but above Rs. 95 are required to pay a margin of Rs. 3. If sales take place below Rs. 95 per 100 bags, a margin of Rs. 5 will have to be paid. In raw jute, while a margin of Rs. 3 will have to be paid on sales below Rs. 22.50 per maund, a lower margin of Rs. 2 is payable on sales below Rs. 23.50, but above Rs. 22.50. In view of the failure of the margin system and the persistence of sales below the "floor" prices, the Government of India's representatives have assured the Chairman of the Exchange that suitable measures will be taken to deal effectively with units responsible for undesirable practices.

As stated at the outset, the Government of India has decided to purchase raw jute from the growers and to stock it for sale to mills, as also for export. The State Trading Corporation, which is to handle exports of raw jute from India, has discussed this matter with the representatives of State co-operative organisations and has made arrangements to enter primary markets as substantial buyers. These purchases will soon be made in the markets at Forbesganj, Golabag, Kishanganj and Katihar in Bihar. Similar action in other markets is also contemplated. Wherever possible, these purchases will be effected through the apex co-operative societies or primary co-operative societies.

The Government of India is said to be keen on ensuring stability in the market for jute goods also. This is only as it should be, because stability and steadiness of prices of jute manufactures are essential for stability in the raw jute market. The Government feels that the steps already taken or contemplated to be taken by the Indian Jute Mills Association and the East India Jute and Hessian Exchange will help to achieve the desired result. At the same time, it is keeping a close watch on the situation and will not hesitate to take such further measures as will be found necessary to ensure a fair return to the producer and a smooth flow of goods to foreign markets. These measures will, if necessary, be taken in consultation with normal commercial channels and with their help.

The Commerce and Industry Ministry's Press note does not contain even a word on the question of fixing statutory minimum export prices for jute goods, discussions about which were reported to have been held between the I.J.M.A. and the Government. The I.J.M.A. is said to have suggested this step, with a view to putting an end to the violation of the Association's minimum price scheme. The Government of India has, it is stated, agreed in principle to the I.J.M.A.'s proposal and has agreed to support the scheme in future by buying its own requirements of jute goods directly from the mills at the minimum prices, instead of from the bazar even at below these prices, as it used to do hitherto.

The absence of any mention about the statutory minimum export prices for jute goods in the Government Press note apparently means that the Government is against that solution so far as the export market is concerned. Obviously, it feels, and rightly so, that such a scheme is not in the interests of the industry itself, in the light of the present trend in exports, as it will make Indian jute goods less competitive in world markets and will only induce foreign consumers to resort more to bulk handling or to use alternative means of packing. Indian jute goods depend on foreign consumers for more than 80 per cent. of its gunny production. India has not the monopoly in jute goods and cannot, therefore, compel foreign buyers to pay the price it wants.

It may well be suggested that, instead of fixing statutory prices for export, the Government of India can subsidise export of gunnies in some form or other, but even this proposal will be difficult of implementation. For the other major export industries, such as textiles and tea, which are also in a similar predicament, may ask for such subsidies, and the Government can hardly afford to do so.

The only other alternative to improve the industry's position is to reduce the loom-hours, and to close uneconomic units. This will mean large-scale unemployment and reduced consumption of raw jute. The question is whether the situation is so bad as to warrant this drastic step.

RAW JUTE PRODUCTION IN 1958-59

The final official estimate of raw jute production in India during the 1958-59 season places the crop at 5,178,000 bales, representing an increase of 1,126,000 bales or 27.8 per cent. over the previous season's output of 4,052,000 bales. The rise in production is accounted for partly by an increase in the area under jute which has gone up from 1,742,000 acres to 1,827,000 acres, or a rise of 4.9 per cent.

The increase in crop has occurred mainly in West Bengal and Bihar. A decline in output is reported from Assam, Orissa and U.P., due to adverse seasonal conditions and damage to crop caused by floods.

When Dunlop first opened an office in Bombay at the end of 1898, there was no fanfare, no handouts, no headlines.

Just about 10 years earlier, John Boyd Dunlop, a veterinary surgeon, had invented the first practicable pneumatic tyre. With the opening of the Dunlop office in Bombay the pneumatic tyre had come to India.

The old century was about to say its quiet farewell. Tagore had not yet started work on "Gitanjali" and Jamsetji Tata was yet to launch his epic search for iron ore. There was nothing, then, of the furious bustle that marks our days.

Soon, very soon, all these were to change as India was caught up in the swift currents of 20th-century history.

Dunlop has moved with the times and in 60 years it has become a familiar and intimate name throughout the country. The Dunlop factory at Sahaganj has grown to become Asia's largest rubber manufacturing enterprise, and this sixtieth year of Dunlop in India is marked by the setting up of a new tyre factory at Ambattur.

OUTLOOK FOR COFFEE

NEED FOR LOWER PRICES

THE new year was greeted in the London coffee market with a fresh marking down in prices. On the 2nd inst., Uganda Robusta grade for January shipment was quoted at 185s. per cwt., as compared with 197s. in mid-December and 261s. 6d. a year before. This persistent recession in prices has made the outlook for coffee more sombre than before. There are already rumours that Brazil, which accounts for about 50 per cent. of world production, proposes to lower the minimum prices for the poorer qualities of exportable coffee, with a view to making these varieties more competitive with African Robusta, which finds a good market for use in making soluble coffee. Along with the cut in minimum prices, it is further rumoured, the Brazilian Government is likely to raise the dollar premium paid to coffee growers.

If these moves become an accomplished fact, it will mean further depression for coffee. The anxiety of Brazil to cut its prices is understandable, because of its accumulating stocks, with no signs of world prices stabilising at any level. It is stated that Brazil alone is holding a stock of 15 million bags (or about 1 million tons) of unsold coffee, while the total world output in 1957-58 was 51.8 million bags. In these circumstances, the outlook for Indian coffee, as was pointed out in our last regular issue, is dim, particularly when its own output is expanding rapidly without any corresponding rise in domestic consumption. According to Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates (a text of whose speech is published on pages 26 and 27 of this issue), "there is every indication that production may increase at a pace entirely unanticipated and already there are thoughts of a possible 60,000-ton crop within the next few years." The current consumption in India is about 30,000 tons and, unless this is increased, a home must be found for the balance in the foreign markets. This, in other words, would mean the doubling of the present quantum of exports.

Large Internal Market

The question is whether India can find a market which will take this extra quantity, in view of the fact that it is only a recent re-entrant to world markets which are already more than adequately supplied from other producing countries with whom the principal consuming countries have the strongest commercial ties. "Under every circumstance, therefore," Mr. Paterson adds, "a stable and expanding market for our produce in India itself is a supreme necessity for the continued existence of the coffee industry and to this end it cannot be said that our needs are in full accordance with the export requirements of the country." He does not, however, minimise the importance of acquiring a more permanent place in world markets than we would appear at present to occupy. In short, with an expanding production, India is more fully dependent on its internal market, as well as overseas markets.

In the past, with smaller crops and good export prices, the grower, the trader, the co-operative, the consumer and the labour were all benefited. The requirements of the domestic market, in regard to quality and quantity, had, no doubt, received the first consideration and the internal price structure was carefully controlled in relationship with the minimum release price by gearing the quantity of coffee offered at the monthly auctions and by allotment through local sales depots. But, in the context of the present changed circumstances, Mr. Paterson suggests that a radical change in the basic approach of marketing coffee is necessary. The only solution to this problem, according to the Consolidated Coffee Estates Chairman, is to do "very active propaganda by all means available both in India and abroad." The task of the Coffee Board, which has taken upon itself the responsibility for doing propaganda, is not by any means an easy one. For it does not have the advantage which the tea industry enjoys, with its large firms of international repute and organisation for marketing the finished product.

Advocating a change in the approach to the marketing of coffee, Mr. Paterson suggests: "Coffee in its unroasted form does not particularly lend itself to individual advertisement and might find comparison with sugar, rice and some other basic food. It would appear on this account that it does not receive the necessary propaganda and advertisement from the trade which is so vital, if sales are to be rigorously pushed."

Proceeding he observes: "Hitherto, it would appear that the Coffee Board has been paying considerable attention to the pegging of prices and so controlling profits which are available to the trade and to the grower. While this undoubtedly is an important role and a necessary one for the consumer, one should not lose sight of the fact that the Board's first *raison d'etre* is to market our coffee, and in the conditions which we are likely to see in the future, that in itself will be no mean performance and, if success is to be achieved, must hold priority over all other considerations."

In other words, Mr. Paterson suggests that the marketing of coffee should be left in the hands of the private trade, if the level of consumption is to be raised. It is, however, difficult to hope that the Government or the Coffee Board will change its policy, especially when it is keen on extending State trading to every commodity possible.

Reorganisation of marketing arrangements and stepping up sales propaganda will be effective only if the price of coffee to the consumer is brought down. Despite increase in production and large unsold stocks, coffee prices in India are still beyond the reach of the vast majority of middle classes who are its principal patrons. It is regrettable that neither the Coffee Board nor the coffee growers seem to be conscious of this vital prerequisite for pushing up the domestic consumption of coffee.

REMITTANCES BY TEA COMPANIES

During the three years, 1954-55 to 1956-57, foreign-owned tea companies in India remitted abroad an aggregate sum of Rs. 32.6 crores, as compared with only Rs. 9.1 crores in the preceding three years, according to the Assam Tea Planters Association's *Bulletin*. Of this account, Rs. 30.9 crores represented profits of branches of foreign concerns, while the balance of Rs. 1.7 crore formed dividends of joint-stock companies registered in India. The comparative figures for the previous three years, that is, 1951-52 to 1953-54, were Rs. 8.1 crores and Rs. 1 crore, respectively.

In 1951-52, the total remittances aggregated Rs. 3 crores; in 1952-53, they declined to Rs. 1.8 crore before rising again to Rs. 4.3 crores in 1953-54. There was a rush of remittances in the following year (1954-55), when a record amount of Rs. 11.2 crores, made up of Rs. 10.4 crores of profits and Rs. 80 lakhs dividends, was sent abroad. The trend has since been more or less maintained, the figure for 1955-56 being Rs. 10.4 crores—Rs. 10 crores profits and Rs. 40 lakhs dividends—and for 1956-57 Rs. 11 crores—Rs. 10.5 crores profits and Rs. 50 lakhs dividends.

BURMAH-SHELL'S TRADING RESULTS

NET EARNINGS IN 1957 WORK OUT TO 4.75 PER CENT. OF CAPITAL EMPLOYED

THE level of oil consumption in a country provides an index of its industrialisation. A developing economy naturally implies a steady increase in the consumption of oil. From this point of view, it is gratifying to note that the increase in India's consumption of oil is higher than the world average increase in such consumption. Thus, according to the brochure *Survey of Activities—1957*, produced by the Burmah-Shell Oil Storage and Distributing Company of India Ltd., the total consumption of petroleum products in India increased by over 9 per cent. in 1957 to about 5.5 million long tons as compared with some 5 per cent. for the world as a whole. The increase in India was largely reflected in three products, namely, kerosene, furnace oil and high speed diesel oil.

The Burmah-Shell Oil Storage and Distributing Company of India Ltd. is a marketing company owned jointly by the Burmah Oil Company Ltd. and Royal Dutch-Shell Group. It distributes petroleum products supplied by the Burmah Oil Company (India Trading) Ltd., Shell Company, of India Ltd. and B.P. (India) Ltd. The sales of the Company in 1957 aggregated 3,161,517 tons which represents an increase of 8.14 per cent. over 1956. Supplies of crude and products, it is stated, were maintained satisfactorily throughout the year despite a temporary world shortage at the time of the Suez crisis.

Petroleum Products

There has been a steady growth in consumption of kerosene in India. In 1957, the total consumption of petroleum products included kerosene (30.41 per cent.), motor spirit (15.37 per cent.), high speed diesel oil (13.52 per cent.), light diesel oil (8.76 per cent.), furnace oil (16.65 per cent.) and other products (15.29 per cent.)

To revert to the Company's sales. There was a slight decline in the sales of motor spirit in 1957. This trend is expected to continue, unless basic changes in Government's taxation policy take place. Goods, trucks and buses in the past used to account for some 70 per cent. of the motor spirit sold in India. But the trend towards diesel machines restricts the demand for motor spirit. A goods truck or a passenger bus may use between 200 and 300 gallons of motor spirit a month, whereas few private cars use more than 50 gallons a month. The increase in the offtake of motor spirit by private cars is, therefore, more than offset by the decrease in its consumption by the larger vehicles. In this connection, it may be noted that a large part of the price of motor spirit is absorbed by taxation. Thus, out of Rs. 3.37 per gallon as at the end of 1957, Central Government duty absorbed 37 per cent. and State Government sales tax 12 per cent.; railway freight accounted for 9 per cent. and dealers' commission for 6 per cent. The Company's basic price is only 36 per cent. of the price paid by the customer.

Motor Spirit

Although the Company's sales of motor spirit in 1957 were somewhat less than in the previous year, those of high speed diesel oil increased by as much as 34 per cent. And the "spectacular" expansion of this product continues unabated. In October 1957, the sales of this product actually exceeded for the first time those of motor spirit. An analysis of the end-use of high speed diesel oil indicates that automative road transport accounted for 65 per cent., industry and development projects for 15 per cent., agricultural uses for 15 per cent. and rail diesels and miscellaneous purposes for 5 per cent. The railways have received several additional diesel electric locomotives and also ordered more locomotives of this kind. To cater to this new demand, extensive facilities have had to be provided and tanks, trucks and pumps made available. As in the case of motor spirit, taxation absorbs a large part of the price paid by a customer for high speed diesel oil. At the end of 1957, its price to the consumer was about Rs. 2.06 per gallon, of which Central Government duty absorbed 29 per cent. and State Government sales tax 13 per cent. The dealers' commission and railway freight accounted for 4 per cent. and 10 per cent. respectively; the Company's basic price was thus only 44 per cent. of the price paid by the consumer.

Among other products, furnace oil has commanded an increasingly larger market. The Company's sales of furnace oil increased by 21 per cent. in 1957. Textile mills took 22 per cent. of the total sales, international shipping 33 per cent. and coastal shipping 7 per cent. Other users include foundries, steel works, tea factories, sugar factories, railways, cement and chemical works, tobacco curing, power houses and glass and ceramic factories. Furnace oil can be used wherever steam production or heat processing is necessary. The Company also markets liquefied petroleum gas, under the trade name "Burshane." At the end of 1957, about 18,000 people in Western India were using "Burshane" in their homes.

Finance

As regards the financial results of the Company, the trading receipts in 1957 aggregated Rs. 131.68 crores. Of the total receipt, no less than 28.84 per cent. was absorbed by duties and taxes imposed by the Government, 4.95 per cent. by ocean freight, and 26.31 per cent. by distribution charges. The f.o.b. value of oil purchased accounted for 37.62 per cent. Net earnings, after payment of Indian and U.K. taxes, amounted only to Rs. 3 crores or 2.28 per cent. of the total receipts. Again, it is noteworthy that, in relation to the total capital employed—aggregating some Rs. 63.28 crores, made up of fixed assets at original cost (Rs. 23.04 crores), oil stocks (Rs. 25.39 crores) and other net assets (Rs. 14.85 crores)—net earnings constituted only 4.75 per cent.

A notable feature of the Company's activities is the training scheme it operates. It would appear that the Company's all-India residential training centre at Juhu (Bombay) is being expanded and the number of courses increased. No less than 149 Burmah-Shell assistants and 15 from associate companies in the South-East Asian countries attended the courses during the year. In addition, each branch conducted a number of specialised courses on an all-India basis which were also attended by supervisory staff from other branches as also courses for their clerical staff and labour employees. Retail marketing courses were held for the Company's sales staff, in order to help them improve the Company's services to the public.

NUCLEAR ENERGY

Nuclear energy and its application does not offer any magical short-term solution to the problems of the underdeveloped countries; but there is an important place for these techniques, provided they are used with common sense. This was the conclusion reached by Mr. W. J. Whitehouse, nuclear physicist at Britain's Atomic Energy Research Establishment at Harwell, when he addressed a conference on rural life at home and overseas held in Essex recently. His audience included people from 17 countries, among them Britons working in India. Mr. Whitehouse pointed out that statistics about national wealth could be misleading, and that a country which was not wealthy could afford several big enterprises, including a nuclear project, if it was large enough. If, for example, every inhabitant of India contributed the equivalent of 12 American cents—some 0.25 per cent. of his annual income—about $50,000,000 could be collected. To raise this sum, Mr. Whitehouse observed, the inhabitants of a small European country would have to contribute about $10 each, or about 2.5 per cent. of their average annual income. A country with a large population also had a great advantage in finding the highly trained and intelligent men needed to operate such a project, Mr. Whitehouse said. He pointed out that a big country like India might be able to muster 100 men trained to a certain standard in a subject like nuclear physics; whereas a small country, with the same average standards, but with a population less than 5,000,000, would only have one—"and he would not be able to accomplish very much by himself."

Discussing the size of nuclear power stations, Mr. Whitehouse said that while the majority of under-industrialised countries required small stations, India had several large industrial regions—such as those centred on Bombay, Ahmedabad, and Madras—which were a long way from the Central Indian coalfields. Careful calculations had shown, Mr. Whitehouse noted, that the cost of nuclear power compared favourably with the cost of power from conventional thermal stations. He recalled that—as Dr. H. J. Bhabha had recently stated—the same might be true for other countries in South-East Asia and the Far East. In general, Mr. Whitehouse felt that the effects of nuclear power in underdeveloped countries during the next few decades were not likely to be spectacular; but the long-term effects were sure to be revolutionary. Many countries, apart from the discovery of nuclear energy, would have no prospect of enjoying a high standard of living, because they had no adequate power sources within their boundaries. Mr. Whitehouse declared that there was now no reason why, in the long run, these countries should be appreciably behind the more fortunate countries.

BRITISH AIRCRAFT

During the first 11 months of 1958, the British aircraft industry's exports amounted to a record £142,176,592—some £26,000,000 more than for the whole of 1957, itself a record year, the Society of British Aircraft Constructors stated in London. This represents a weekly rate of about £3,000,000, or an annual figure of £155,000,000. Total aviation exports since the war have reached more than £775,000,000. The November figure, at £15,346,438, was the second-highest monthly total ever. It was boosted by record aero-engine sales, which, at £5,188,087, amounted to nearly £700,000 more than in the previous record month achieved in May 1958. Aircraft and parts, at £9,601,045, also sold well. Brazil was Britain's best customer, buying more than £1,500,000 worth of aircraft and parts, followed by South Africa, India, the United States, and West Germany.

The January-to-November total showed an increase of 43 per cent. over the same period the previous year, and a gain of 22 per cent. over the total for the whole of the previous year. During this period, India headed the list of oversea buyers, with £16,778,843 worth of aircraft and parts, followed by Canada, the United States, West Germany, Australia, the Netherlands, and South Africa. Other countries which bought £1,000,000 worth or more included New Zealand, the Irish Republic, France, Switzerland, Turkey, the Lebanon, Iraq, and Brazil. Sales to the United States and Canada during the first 11 months of the year amounted to £26,000,000. To this must be added aero-engine sales. The Society stated that so far this year the sale of aero-engines abroad has accounted for 32 per cent. of total aviation exports.

RESEARCH IN U.K.

A substantial part of the money required for the British Cotton Industry Research Association's programme for applying modern mechanisation and control techniques to the entire process of cotton spinning is being provided by the National Research Development Corporation as one of its new projects. "If this project is successful," says the Corporation's annual report, just published in London, "the spinning side of the industry will be greatly advanced and the competitive position of the cotton industry in the United Kingdom correspondingly improved." The report states that the British Government-sponsored corporation is at present assisting over 1,000 inventions. Its holdings in British and oversea patents and patent applications were close on 3,000 for the year ended last June.

The Corporation, says the report, is also sponsoring a new oil-drilling rig which aims at reducing unproductive time in deep drilling operations, and a new form of image intensifier which may have a wide field of application in such matters as reduction of radiation-exposure hazards in X-ray examination. Another important step taken by the Corporation is the making of a major financial contribution to secure early completion of the development of the ultrasonic flow-meter project at the British Scientific Instrument Research Association. This device is for metering the flow of fluids in, for instance, the chemical, pharmaceutical, food, and other industries.

The Corporation was established in 1948 by the Board of Trade to exploit or develop, in the public interest, inventions resulting from research carried out by Government departments and other public bodies.

HINDUSTAN MACHINE TOOLS

The Hindustan Machine Tools factory (H.M.T.) in Bangalore has been able to manufacture 95 per cent. of the parts required for the production of lathes. This information was given by Mr. M. K. Mathulla, Managing Director of the factory, at a press conference recently held at Bangalore. The percentage of components manufactured in the factory pertaining to milling machines is 60 while that in regard to radial drill is 30. These percentages will be progressively increased to 95 by 1960-61.

H.M.T. will make available by April next smaller and cheaper lathes for the use of medium and small-scale industries. These lathes will be manufactured in technical collaboration with the French firm, Messrs. Battingnolles. The smaller lathes will be marketed in five sizes—170 mm., 200 mm., 225 mm., 250 mm. and 275 mm. (centre height); the prices will range from Rs. 14,000 to Rs. 20,000.

The factory has exceeded the production target for machine tools. The original target was fixed at 400 machines to be reached by 1960-61. But, in 1957-58 alone, the factory turned out 402 machines. During the current financial year, production is expected to reach 600 machines. As regards prices of lathes, H.M.T. is now selling lathes at Rs. 29,500 each, as against Rs. 39,000 in 1956-57; the prevailing ex-factory price of a similar machine in Europe is Rs. 32,740.

STEELWORK DESIGNING

A British steel company recently completed the detailed design calculations for a power-station floor structure in two hours with the aid of a computer. It would have taken a design engineer several weeks to complete a similar task. The computer, in fact, does the job 50 times as fast. In addition to releasing skilled men for more creative work, this important new development in the structural engineering field paves the way for considerable economies in steelwork design, enabling more elaborate stress calculations to be made and the relative merits of various schemes to be assessed before a tender is submitted.

NEW PRODUCTS AND PROCESSES

Vacuum Tester

ONE of the essentials of success in food canning is to maintain a sufficient degree of vacuum in the canned product. since the high internal vacuum in canned foods helps to enhance their shelf life. The need of a suitable, convenient, efficient and inexpensive vacuum tester has long been felt by the Indian food preservation industry. At present, canners are using the commonly known 'tapping test,' which, however, is rather unsatisfactory. It has also been a common practice so far to measure the internal vacuum by puncturing the can with a small vacuum gauge, but in such testing procedure, the economic factor becomes of considerable importance when comparatively large numbers of cans are required to be tested Manufacturers very often, have to test dozens of cans even in one day's production and if such cans could be tested without puncturing or destroying them and then returned to the stock, considerable saving could result. An invention, developed by the Central Food Technological Institute, Mysore. is an improvement over similar type of imported instruments. The instrument is capable of being worked both on the mains and with the help of batteries (the conventional instruments are worked only on batteries). Besides being a convenient arrangement for the replacement of exhausted batteries, it is easy and simple to operate. The instrument comprises a device which permits the application of vacuum to a chamber formed above the lid of the can under test. The operator listens for a sound caused by flexure of the lid when the pressure in the chamber falls below the pressure within the can. The can to be tested is so placed in an electrical circuit containing a signalling device that the circuit is completed by the flexure of the lid of the can, engaging a contact. Other features of the instrument are: (1) The instrument records the vacuum existing in any canned food (namely, fruit and vegetable products, meat, fish, dairy products, etc.) without puncturing or destroying the can (2) The test is completed within a fraction of a minute. (3) Faulty cans can be easily located from a large stock of canned foods. (4) 'Hydrogen Swells' and 'CO_2 Swells' can be detected at the initial stages of formation, suggesting an early disposal or consumption of such canned goods. (5) A complete range of cans of all dimensions commencing from 2" to 6" diameter can be tested. (6) The instrument is compact and easily portable. The only auxiliary equipment needed is a source of vacuum, usually from a vacuum line in the factory or from suction pump attached to a water tap or alternatively by means of a small vacuum pump which may be attached to the instrument. (7) It is of great potential value to the food manufacturers in providing them an easy means of greater quality control over their products at less cost. (8) It can be of great use to the research workers in following up the changes in vacuum existing in individual or particular sets or lots of any canned foods under different storage conditions. Parties interested in taking up the manufacture of the instrument may contact the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

Injection Pump

C.A.V., of Acton, London, W.3, is now producing single-cylinder, distributor-type fuel injection pumps for diesel engines. They are claimed to have several advantages over other types. Many fuel injection pumps employ a separate pumping element for each engine cylinder, each element consisting of a plunger and barrel with some means of controlling output. With the distributor type pump there is only one pumping element and this is provided with a means of connecting the pump delivery to each of the injectors in turn. The pump, which is arranged for a simple direct drive, is a compact unit convenient for fitting to the smaller engines and suitable for operation horizontally, vertically or any other position Complete with governor, it is an oiltight unit in which pressure is maintained, thus preventing ingress of dust or water during operation.

X-Ray Equipment

A new industrial X-ray equipment has been developed by Marconi Instruments. St. Albans, Hertfordshire. It is designed for radiography in the range 6 kw. to 50 kw. and is mounted on a mobile stand. Both the control unit and the tube-head can be detached from the main unit, and an extension lead permits the controls to be operated at a safe distance from the tubehead. The tube has, it is claimed, an effective focal spot size 1½ millimetres square. The carriage enables a floor-to-target distance of from 16 inches up to 70 inches to be achieved. The tubehead, or X-ray source, can be rotated through 360 degrees about its long and short axes, thereby allowing the beam to be directed at any angle.

Magnetometer

The discovery of a new type of magnetometer, or device for determining the strength and characteristics of the earth's magnetic field, which could be useful in searching for oil and minerals has been reported by a University of Michigan physicist. The new device differs, it is claimed, markedly from previous types in utilising helium in a special gaseous state called metastable helium which makes possible a small and compact instrument. Also, unlike other instruments, it operates independently of temperature changes, thus eliminating the need for an oven to maintain it at a constant temperature. Little power is required and the lightweight device could be suspended under an airplane for mineral exploration, showing small variations in the magnetic field which can serve as indications to geologists of the presence of oil or mineral deposits.

COMMERCE
ANNUAL NUMBER 1958

On Sale Now

Price Rs. 10/- only

Besides a comprehensive review of important developments in the sphere of Finance, Industry and Commerce during 1958, this Number contains several feature articles by eminent economists, administrators and business men on subjects of topical interest. The subjects treated in the Number include industrial progress, investment, foreign aid, planning, taxation, banking, insurance, railways and labour. The Number ought to prove an invaluable guide to business men as well as teachers and students of Indian economics and to all those who are interested in the trends in Indian economy.

RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/-, postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/50 nP including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM DADAR BOMBAY-14

THE MYSORE TOBACCO COMPANY, LIMITED

CHAIRMAN, MR. M. MALLESHAYYA REVIEWS PROBLEMS OF TOBACCO INDUSTRY

SPEAKING to the shareholders of the Mysore Tobacco Company, Ltd., at their Twenty-first Annual General Meeting held in Bangalore on 17th December 1958, Mr. M. Malleshayya, Chairman, made a brief review of the problems of Indian tobacco industry. The three main problems to which he drew pointed attention were: (1) over-production of low grades and fall in output of higher grades tobacco, (2) competition in export markets from other countries, especially Rhodesia, and (3) the divergence in the requirements of home and overseas markets.

The following is the full text of Mr. Malleshayya's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending a cordial welcome to you to this the twenty-first annual general meeting of the shareholders.

"The report of the Directors and the audited accounts of the Company for the year ended 31st March 1958 have already been in your hands for some time and, with your permission, I shall take them as read.

"In my address to you last year, I had informed you that the seasonal conditions in 1957-58 were unfavourable to agricultural crops, in general, and tobacco, in particular. The seasonal conditions were most disappointing, as there was wide seasonal variation in weather within the season. The tobacco crop is most sensitive to the environment and these uncertainties of weather, as you all know, constitute the principal hazard for producing tobacco of high quality. The rainfall was ill-distributed and there was a long spell of drought. The weather was mostly cloudy, accelerating the development of diseases in the crop. We had a virulent attack of spot disease on tobacco in Mandya area, which has been our main area for producing very high quality leaf. Spot disease, more than reducing the quantity of the product, reduces the quality.

Lower Realisation

"We experienced a most unfavourable season and you will realise how the returns in our business are dependent on such extremities of natural factors in production of tobacco. This is evident in a comparative review of the results of 1956-57 and 1957-58. In the year 1956-57, in spite of the reduced outturn of cured leaf, we were able to secure higher profits due to the production of greater percentages of top grades. But in the year 1957-58, though the quantity produced in the Company's barns was almost the same as during the previous year, the realisation was very much reduced due to the fall in the percentage of top-grade production. But I wish to assure you that everything possible is being done to control the disease by obtaining advice of specialists in the Indian Central Tobacco Committee and we are assured that the disease can be controlled by spraying and other cultural methods.

"Again during our last meeting, I informed you that the Company assisted the construction of barns by our previous green-leaf growers, with a view to augmenting the supply of cured-leaf tobacco to the Company. By the several measures undertaken, there has been a quick rise in the production of cured tobacco by the private growers. We are happy that liberal aid given by the Company has increased the total production of cigarette tobacco in Mysore State and a number of private curers can now make a decent business out of agriculture. We have been able to give our private curers an assured price for their product. It is our intention to assure to the grower, the payment to his produce based on quality, so that the benefit of his efforts are suitably rewarded and a consciousness to quality is developed. We are furthering this objective in maintaining our payments based on grade outturns. In view of the large expansion of the tobacco in Mysore and its suitability for cigarette manufacture, there is a great interest evinced by other leaf buyers and we have seen this year a keen competition to buy increased quantities of the crop. Several of our growers have found it easy to dispose of their crop to other buyers in Gowribidnur area, at their own premises after rough grading. This has to some extent reduced our acquisition of tobacco from private curers, but this should not unduly disturb us, as we are maintaining to collect all the tobacco in several other areas of suitable leaf which is wanted by us.

"I wish to dilate here and describe to you the business of tobacco, particularly with reference to our dealings with private curers. The supply of tobacco from private curers is purely a voluntary association and each private curer is free to dispose of his tobacco to anyone he prefers. But we have been responsible for the development of this sector and many of our curers find it advantageous to supply their tobacco to our Company on account of the several facilities afforded to them, for the stable prices based on quality and also for the standard of our business relationship. Our shareholders are already aware that for successful production of tobacco both expert advice and experience are necessary. The production is so complicated that, without application of scientific results, the production of tobacco is increasingly difficult. Our Company's staff with long experience and knowledge of tobacco cultivation and curing can provide the technical know-how. We supply the requisites of production right from seedlings, fertilizer, plant protection material, to curing requisites. We have thus been providing reasonable aid within our resources and also ensuring a guaranteed price based on quality and a market for all the grades. All these resources are at their disposal and it is reasonable to expect that through these several facilities, this middle-class enterprise can take sustained interest in tobacco. The registered growers of the Company irrespective of their quality can always hope to dispose of the tobacco to us. The disposal of a portion of their tobacco to selective buyers cannot be considered advantageous, as a large proportion of low grades finds no sale. I am sure they will find their business with the Mysore Tobacco Company a more permanent and reliable proposition. I take this opportunity to thank many of our esteemed private curers for their continued co-operation and good relationship with the Company.

No Need for Anxiety

"I assure our shareholders that there is no need for anxiety on any account. With the experience gained for over 20 years, your Directors will do all their best to improve the financial stability of the Company. I may incidentally inform the shareholders that the outturn of higher grades has improved in the year 1958-59, as compared to the year under report. It is common knowledge that when the same crop is raised continuously for a number of years on the same land without suitable rotation, the yields will get naturally reduced and it will tell upon the quality also. Such a position has come about around Gowribidnur which was once considered as the most suitable area for Virginia tobacco cultivation. Hence your Directors are taking necessary measures to popularise the growing in other areas from which higher grades of tobacco could be obtained.

"I may incidentally and very briefly bring to your knowledge that the major problem of the tobacco industry in India is the overproduction of low grades and decline in production of suitable grades of tobacco. The green and the brown grades are produced in large quantities. These low grades can only be marketed with much difficulty at prices less than the cost of production. This brings less realisation to the growers and the general urge for higher rate can only be solved by the improvement of quality.

"The Indian tobacco, in general, faces competition in international market by other countries, chiefly Rhodesia, and, with disproportionately large production of sub-standard and green grades, the situation in export of tobacco is quite serious. In the export market the Indian tobacco is generally valued as a filler with neutral aroma. In the home market, the demand is for a leaf which has the required aroma and flavour to replace the American tobacco. The divergence in the requirement of tobacco for both home and export market is another complicated problem of the leaf industry. In brief, we have to find a solution to both the requirements of export and home markets. I am confident that the research and extension wings of the Indian Central Tobacco Committee and the Indian Leaf Tobacco Development Company, Ltd., who are our principal buyers, will strive to place the industry in a more secure position.

"Now, coming to the accounts, I would like to inform the shareholders that under fixed assets, you will find an addition of Rs. 1,12,194.37 towards additions under buildings. This has been in the direction of improving the grading and storage facilities at our main grading and redrying station at Whitefield. We have also added five new barns in some of the centres, which have been producing high grade tobacco, in order to increase the production. I am glad to report that we have since redesigned our redrying plant, in order that the tobacco may be redried in the form of tied hands by which the redrying output has increased by 50 per cent. This is the first step at future expansion of tobacco production as our capacity to handle a larger crop is fully met. This will reduce our operational costs considerably. We have added one tractor and trailer in order to minimise the transport charges and afford greater facility in the transport work of the Company.

"The prospects of our Company and the large number of tobacco growers and curers lies in improving the yield and the quality of tobacco and your Directors are taking every step to eliminate unsuitable areas and develop such areas known to produce quality. In the matter of control of diseases we are working with the Tobacco Research Station, Hunsur, for putting on the field the latest methods of control. These require more time to yield results. We are hopeful that the latest findings of research will show the way to greater production of quality tobacco. We are thankful for the most willing assistance we have received from the Research staff of the Tobacco Research Station, Hunsur.

Record Export

"You will no doubt be happy to note that in the matter of export of tobacco, our Company exported to foreign countries a larger quantity of tobacco than in any other year and have received high appreciation for the quality and standard of the grades sent to them. It is by these measures that we have built a high reputation for Mysore tobacco.

"Your Directors have sanctioned the payment of bonus amounting to one-fourth the annual basic pay to the staff in recognition of their work during the year under report.

"Realising the shortfall in the revenue of the Company out of the products produced by it, your Directors embarked on a new line of business to augment the resources of the Company by undertaking to process the tobacco of other agencies at Whitefield. We hope that, in the coming years, we will be able to make use of our plant for similar purposes for longer durations and get higher realisations.

"Ours being an agricultural industry, we have to face the vagaries of the seasons both in the production and the marketing thereof. Hence it is necessary for your Directors to have a prudent policy in regard to the dividends on the share capital. I am sure that you will appreciate the action of the Directors in not touching the dividend equalisation fund for the distribution of profits this year.

"Our thanks are due to the Indian Leaf Tobacco Development Company, Ltd., for their continued co-operation and cordial relationship with us and for their sympathetic consideration to buy a larger quantity of low grades to help us out of a poor season and also for arranging the supply of leaf from Giddalur for being processed in our redrying plant.

"Before I conclude, I would like to express on behalf of the Directors and the shareholders our thanks to the Government of Mysore for their continued interest in the progress of the Company. I am very grateful to my colleagues on the Board for their wholehearted support and valuable guidance.

"I now move that the Directors' report, audited accounts, balance-sheet and profit and loss account of the Company for the year ended 31st March 1958 with the auditors' report thereon be adopted."

Note:—This does not purport to be a report of the proceedings of the general meeting.

NATIONAL NEWSPRINT AND PAPER MILLS LTD.

OUTPUT EXPECTED TO REACH 22,000 TONS DURING CURRENT YEAR

DR. A. RAMASWAMI MUDALIAR'S SPEECH

THE Eleventh Annual General Meeting of the National Newsprint and Paper Mills Ltd. was held at Nepanagar, M.P., on 29th December 1958. Reviewing the progress of the Company, Dr. A. Ramaswami Mudaliar, Chairman, said that the production of newsprint during the current year was expected to reach 22,000 tons and a fair amount of profit, after allowing for depreciation, was also anticipated. As a result of the year's encouraging working, the ways and means position of the Company had so improved that it had not been found necessary to avail of the undrawn balance of Rs. 31 lakhs from the Government loan.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you to the eleventh annual general meeting of the National Newsprint and Paper Mills Ltd. Copies of the balance-sheet and profit and loss account for the year ended 31st March 1958 have been in your hands for some time and, with your permission, I shall take them as read.

"The balance-sheet and profit and loss account for the year under review which shows the results of the second year of commercial production is slightly better than last year. After meeting the depreciation and the interest on loans, the nett loss amounts to Rs. 33,38,113.51. Had our expectations to manufacture 18,000 tons newsprint gone through, the business would have shown a margin of profit, instead of loss. Unfortunately, we could not reach the planned production in 1957-58, owing to unexpected troubles at the Chandni thermal station which is the only source of supply of power and steam to Nepamills. We had to bear the mill operations with heavy restrictions to the draw of steam and power. Fortunately, we were able to prevent complete closure of the mill for about six months by switching over to batch operations to utilise whatever power that was made available. In this process, we had nearly lost an equivalent of 80 working days which would have yielded at least 4,500 tons additional quantity of paper. Considering the above handicaps, a production of 14,145 tons newsprint should be considered a definite improvement over the performance of last year.

Improvement in Power Supply

"Since March 1958 when the boilers were reconditioned for normal duty, the power position has improved and power is available to meet our present requirements. Simultaneously, every effort was made to utilise to the maximum extent the power offered to increase the production of paper. During the current year, it has been possible to reach a production of 1,900 to 2,000 tons during each month. In the months of May, August and September 1958, the production went slightly beyond 2,000 tons. With equipments belonging to stage II development still to arrive, the present production level shows a definite advancement in the progress of the mill. Because of the steady level of production during the current year, the total outturn during the last eight months has reached 15,647 tons so far. We hope to reach the estimated production of 22,000 tons during the current financial year subject to present operating standards and normal conditions. Apart from the efforts to retain the present level of maximum production, it is heartening to note that the cost of operations of the mill is regulated through a well defined budget and attempts are being made to reduce progressively the cost of production of newsprint and improve the profit margin.

"It has always been the endeavour of your Directors to see that the Company's finances are placed on a sound basis. The present capital position of the Company cannot be called satisfactory. As against the *gross block of Rs. 417 lakhs;* the share capital is only Rs. 133 lakhs. The need for conversion of the outstanding heavy amounts of loans into share capital had long been apparent. The proposals for reorganisation of capital structure have now been finalised and are before shareholders. We are grateful to the Central Government and the Government of Madhya Pradesh for having agreed to convert substantial portions of their loans into share capital. The Central Government have agreed to convert Rs. 250 lakhs out of a loan of Rs. 2,82,73,000 into equity share capital and the Madhya Pradesh Government Rs. 1,09,72,900, out of a total loan of Rs. 2,14,86,652.39, into equity share capital ranking *pari passu* with other shares already allotted by the Company. This conversion of loan into shares will have an effect of raising the subscribed share capital to rupees five crores, the authorised capital of the Company. This will leave a balance of loan due to the Central Government Rs. 32,73,000 and due to Madhya Pradesh Government Rs. 1,05,13,752.39. The accumulated interest up to 31st March 1958 is Rs. 95,76,043.32.

Outlook for 1958-59

"I stated last year that the Directors had suggested that the interest should be frozen and that the Governments may be pleased to allow the Company to repay the interest in annual instalments over a period. I am glad to say that the Madhya Pradesh Government have kindly agreed to treat this accumulated interest on loan and further interest till date of reconstitution as interest-free amount repayable in ten instalments. The payment of first instalment begins within one year after date of reconstitution of the capital structure. With this reconstitution of the capital structure, the outstanding loan would be Rs. 1,37,86,752.39 and recurring interest liability on account of the same would be about Rs. 7 lakhs, as against Rs. 19 lakhs at present. The accumulated interest also will be payable in ten equal instalments thereby distributing the liability over a period of ten years. You will appreciate that this is a very generous gesture on the part of both the Governments and paves the way for stabilising the financial position of the Company. The shareholders will have now something tangible to look forward to and there is every hope that the initial sacrifices they made and the long period they waited would bring in return its own dividends in due course. For the year 1958-59, we have budgeted for a production of 22,000 tons and anticipate a fair amount of profit after allowing for depreciation. As a result of the current year's working, the Company's ways and means position has also improved and it has not been found necessary to avail of the undrawn loan of Rs. 31 lakhs from out of the total loan applied for by the Company from the Government.

"Although production is being stepped up through strenuous efforts with an eye on the cost operations, I have to submit that the quality of Nepa newsprint has not yet reached a standard comparable to the imported varieties. Continuous research work is going on in the mill laboratories to improve the physical qualities and colour of newsprint. Encouraging results have been obtained. To exploit commercially the successful investigations, suitable equipments have been incorporated to the development work in progress. It is hoped that both the physical quality and finish of the newsprint would improve when the equipments belonging to the second stage development are tuned to service.

"The present electrical and steam load, as offered by the Chandni power station, is not adequate for a production level beyond 70 to 72 tons paper during each day. We have approached the Madhya Pradesh Electricity Board to arrange for the additional load to meet our requirements for a production of 100 tons paper per day through extensions to the existing installations. It is understood that the Governments have taken a decision to augment the capacity of the Chandni thermal station to the required capacity. It is hoped that additional power and steam would be made available when the equipments belonging to stage II development would be ready for service.

Sound Project

"The project is inherently sound and, if we consider the vicissitudes through which it has passed, the progress achieved is by no means small. It is contributing its modest share to the economy of this country and valuable foreign exchange is being saved. The forest resources of Madhya Pradesh are being properly utilised and opportunities for employment have been increased. The two Governments, the State Government of Madhya Pradesh and the Central Government, are vitally interested in the success of this project and, with their co-operation and with the goodwill of consumers, we can look forward to the progressive development of this project.

"I would like to mention a few words about the sales policy and the appointment of distributors. Prior to 1st April 1958 the supply of newsprint to newspapers was exempted from payment of excise duty. This was with a view to encouraging the use of indigenous newsprint by newspapers who were also getting the import licences for newsprint for their requirements. From 1st April 1958 the Government of India extended this exemption of excise duty in favour of printers and publishers of textbooks and books of general interest. This was with a view to encourage the use of newsprint for publication of textbooks and books of general interest and these demands had to be met first.

"The newsprint requirements of newspapers were to be met by us to the extent authorised by the Press Registrar. To implement this policy and to encourage the use of newsprint in the printing of textbooks and books of general interest, a number of distributors were appointed at important publishing centres. In spite of our attempts to encourage the use of this newsprint for publication of books of general interest the response has not been very encouraging. At the same time complaints have been received of diversion of the duty-free newsprint meant for the publishers. In view of this we have been considering how this concession could be better utilised to promote the use of newsprint in the printing and publication of textbooks and books of general interest.

Entirely Indianised

"I would like to inform you that the mill is now controlled and worked entirely by Indians who by their technical knowledge and devotion to duty have striven to work up to a steady production of 70 to 75 tons a day and are continuing to do their best to step up the production to the target of 100 tons a day. I would like to take this opportunity to thank all the staff for the enthusiastic manner in which they have made their contribution to the progress of the mill.

"Welfare of the workers continued to be given attention to by the Directors. During the year under review, the dearness allowance has been raised by Rs. 5 for employees getting a basic wage not exceeding Rs. 200 per month with effect from 1st June 1957. The construction of 200 tenements is rapidly progressing and is likely to be ready for occupation in another month or so. Other amenities are also being gradually extended. The workers also have shown a spirit of co-operation and the industrial relations remained cordial throughout the year.

"In view of the proposed reconstitution of the Board of Directors, all the nine Directors have resigned. I wish to place on record the appreciation of the services of the outgoing Directors who have been associated with me in this project. They have contributed in no small measure for its present progress."

AMERICAN STEEL INDUSTRY

The American steel industry, rapidly recovering from the recession, has prospects of reaching an operating rate of about 80 per cent. of its present capacity during the first six months of 1959. Announcing this recently, Mr. Roger M. Blough, Chairman of the U.S. Steel Corporation, said that this represents an increase of approximately 45 per cent. over sharply curtailed operations in the first half of 1958. In his year-end statement, Mr. Blough said that in its 1958 modernisation and expansion programme, U.S. steel spent $341 million for additions and replacements and authorised projects to be completed requiring expenditures of $740 million at the end of September. In the 1958 research programme, he said, the world's widest thin-gauge alloy and stainless steel sheets were developed by a new technique and a steel with a tensile strength level of 280,000 pounds per square inch, or six times greater than that of ordinary sheet steel, was processed.

CONSOLIDATED COFFEE ESTATES (1943) LTD.

FALL IN WORLD PRICES AFFECT POOL DIVIDEND

MR. R. C. PATERSON STRESSES NEED FOR EXPANDING DOMESTIC MARKET

A STABLE and expanding market for coffee in India itself is a supreme necessity for the continued existence of the industry and to this end it cannot be said that our needs are in full accordance with the export requirements of the country. At the same time, it is equally important that Indian coffee should secure a more permanent place in the world markets than at present. This view was expressed by Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates (1943) Ltd., in the course of his speech at the Fifteenth Annual General Meeting of the Company held in Pollibetta, on 30th December 1958.

The following is the full text of Mr. Paterson's speech:

"GENTLEMEN,

"It is with great pleasure that I welcome you here today on the occasion of the fifteenth annual general meeting of the Company.

"The Directors' report and the audited accounts for the year ended 30th June 1958 have been in your hands for the statutory period and, with your permission, I propose to take them as read.

"As indicated in my review a year ago, there has indeed been a very sharp shrinkage in the revenues of the Company in comparison with the results for 1956-57. Although that year was an exceptional one and should not properly be taken as a yard-stick for the future, it will facilitate your understanding of our position, if I make an explanation in regard to some of the larger differences.

"The total crop gathered for the year, at 2,462 tons, is slightly in excess of original estimates on blossom notified to shareholders in May 1957. It is, in fact, the second largest crop harvested by the Company, but is still substantially lower than last year's record of 3,179 tons. Arabica is down by 870 tons, while Robusta (by far the less valuable crop) is up by 153 tons, making a total shortfall of 717 tons of coffee. On the basis of last year's valuation of Rs. 2.50 nP. a point, this has meant a drop in receipts of over Rs. 30 lakhs.

Fall in Pool Dividend

"Further, owing to the continuous weakness in the world markets for coffee, the premium over the minimum release price which export sales gave us in former years has dwindled considerably, and this must necessarily reduce the total value of the pool dividend. This year, therefore, the crop has been valued at Rs. 2.25 nP., as against Rs. 2.50 nP. last year. A difference of As. 4 a point means a further fall in coffee receipts of Rs. 8 lakhs. A smaller crop and lower price have, therefore, cut receipts by as much as Rs. 38 lakhs.

"So far the total dividend declared and paid by the Coffee Board is Rs. 2.12 nP. per point, but in view of the present conditions one cannot look for much better than a total of Rs. 2.30 nP. or Rs. 2.35 nP. per point as final payment. As an indication of the serious decline that has taken place in the world markets in coffee prices over the past two years, the following figures are significant. In the 1957 season, the opening export auction prices for Plantation A was Rs. 345 per cwt. At the end of that season the same coffee was being sold at Rs. 300 per cwt. In regard to the 1958 season, for the first two auctions of the new crop in February this year prices ranged around Rs. 300 per cwt., but thereafter fell away steeply and have since fluctuated at around Rs. 240, a drop of over 20 per cent. The declines in the cheaper Arabica Cherry coffee have even been more marked and there is now little difference in these qualities between the export and internal sale price.

"From a recent Coffee Board *communique* it would appear that 14,126 tons of a total crop of 44,810 tons has been sold for export and that the present stocks unsold are over 12,000 tons, of which 500 tons may be earmarked for additional export.

"At all times it is extremely difficult to make an exact appraisal at this time of year of the final value of the pool dividend, particularly in the past when the practice of awarding bonus points to the main three types of coffee on market performance was in vogue, but now that the premium between the export price and the minimum release price in India has shrunk so considerably one cannot expect as a final figure so very much in excess of the minimum release price.

"It is true that at the end of September, the Government authorised an increase in the minimum release price for coffee to the internal market from Rs. 2.12 nP. a point to Rs. 2.20 nP., but this rise has come so late in the season that it will not make all that difference to the total pool receipts. It might well be labelled as being too late and too little.

Larger Crop Brought Forward

"Against the declines mentioned above, our receipts have been considerably swelled by the large carry forward from the previous year's crop. Against a valuation of the pool point of Rs. 2.50 nP. in last accounts, actual realisations were as high as Rs. 2.81 nP. This result is as welcome as it is unexpected, but it is regretted that under present market conditions it would be very wrong to expect such large carry forward in the coming or subsequent years. With the export premium now largely disappearing, it is unlikely that there will be in the future any large difference between the minimum release price and the total pool dividend.

"On the expenditure side, our accounts reflect the higher labour costs on which I made mention last year and, for the first time, the Company has operated over a full period of twelve months with these enhanced rates. The actual increase in labour wages, provident fund and leave with pay work out at 39¼ per cent., while during the year under review an agreement with the staff union was signed by the planting associations, whereby staff wages themselves were increased by a minimum of 20 per cent. or allowing for the enhanced D.A., approximately 25 per cent.

"A substantial increase in the price of many of our essential estate supplies has been seen, in particular artificial fertilisers and fuel. In the management of any coffee estate there are certain works which have to be done, whatever the size of the crop, and to some considerable extent, therefore, our estate expenditure bears but a limited relationship to the actual crop harvested. The savings through harvesting a smaller crop are limited—

(a) to the cost of gathering;
(b) handling at the pulperhouse and transporting to the curing works;
(c) curing charges;

and these savings are reflected in the accounts before you.

Depreciation

"You will see from the note at the foot of the profit and loss account on pages 14 and 15 that your Board has again altered the system for calculation of depreciation. Under the Mysore Agricultural Income-tax Act and Rules, the initial special depreciation of 20 per cent. given on new assets is written off the value of those assets for the purpose of determining ordinary depreciation allowances. This reduces the normal depreciation allowable and your Board have, therefore, decided that it is preferable to revert to the former system of calculating depreciation on the book value.

"In this regard I must comment again on the unsatisfactory depreciation allowances which are given in regard to motor vehicles. Ten per cent. depreciation allowance is quite unrealistic in relationship to the life of a lorry, and in the accounts before you under this heading we have increased the depreciation allowance to 25 per cent.

"On the last page of this review (vide columns 2 and 3 of page 27) is given a statistical statement from which it will be seen that not only is the crop the second largest we have harvested but the gross profits are also the second largest. The incidence of tax, however, is now such that the net profit after reserving for agricultural income-tax, Central income-tax, wealth tax and dividend tax is the lowest since 1950. Your Board has placed to reserve from the current profits Rs. 1,50,000 to help finance the very considerable capital expenditure which we have to incur.

"In addition, the debenture redemption reserve of Rs. 4 lakhs has now been freed by the repayment of the debenture loan last year and has gone to swell the general reserves. If this had not been available to the Company, a larger allocation to reserves might well have been considered necessary. Under the circumstances the dividend of 20 per cent. recommended by your Board is the maximum possible.

"Our accounts are presented in a slightly different form and include a schedule of fixed assets. Additions during the year amount to the not inconsiderable sum of Rs. 18,46,000. The Company during the year under review has acquired the properties formerly known as Charlotte and Delmore Group for a consideration amount slightly under Rs. 4 lakhs. This property is adjoining one of our existing properties and will prove a most convenient acquisition to the Company.

"Under the item buildings, erection of new labour lines and staff quarters in replacement of obsolete structures is the main item. It is possible to report, however, that the back of this work has now been broken, and with the exception of three estates all the rest are nearly fully equipped with lines conforming to the labour code.

"The item of water and sanitary installation refers mainly to schemes for piping water to selected reservoirs on the estates for the operation of our power sprayers for our Arabica coffee. These areas receive some 2,000 gallons per acre of Bordeaux mixture per annum, and a network of water installations to reservoirs from which water can be fed by gravity to the spraying points is an economic 'must'. This work as well, I am pleased to report, is now reaching completion.

Labour

"It is with some degree of mutual pride and satisfaction that we can report another year of good relations with our labour. It is true that union activity has been on the increase, and there has been a substantial increase in the number of minor disputes and conciliations, but so far we have entirely escaped the unfortunate conditions which seem to prevail in the neighbouring State of Kerala. It cannot be denied but that labour have received most substantial benefits during the past two years and this in itself must have removed most real causes for labour unrest. Unfortunately, in these days, economic considerations do not always hold first priority, and this being so, it is not possible in any way to take a long-term view on the labour situation in Coorg. The main bone of contention at present would appear to be the vexing question of annual bonus which has always been paid on a district-wide basis. This is indeed a problem common to all plantations throughout South India and it can only be hoped that reasonableness will be observed in whatever negotiations that take place.

"The accounts before you are a clear indication of the results of higher operational costs and taxation on a commodity which is considered one of the most speculative counters in the markets of the world, and if we are to maintain our economic balance there are very definite limits as to what further burdens the industry can bear.

"The year has not been an easy one for the coffee industry. Considerable apprehensions were felt earlier in the year regarding the availability of fertilisers and essential supplies for the maintenance of our properties. In particular, there are two major supplies on which no economies can be made. I would refer to the use of artificial fertilisers and also spraying machinery and spare parts. Unless our requirements are fully covered under these two headings, our whole future may be jeopardised. Although assurances have been given to the industry on this subject it has not made the actual acquisition of our supplies any easier. Applications for import permits as essential users of power sprayers get turned down on the ground that local manufactures are available in India, which on enquiry prove to be incorrect. Allotments of fertiliser are made and paid for, from stocks which apparently exist on paper only. With such limited foreign exchange available, I presume it is inevitable that instances of shortages must occur, but when one is the personal sufferer it makes the fact no less unpalatable.

Land Reforms in Mysore

"Considerable feeling of uncertainty has been experienced in the plantation industry as to how they will stand in relationship to proposed land reforms in Mysore State. First indications were made available early in the year following the publication of the 'Jatti Report.' Government have now published the draft Act, from which it would appear that coffee estates are excluded from its purview. As is widely known, coffee estates are really multiple farms and most of them, in Coorg at any rate, have their own extensive fields under paddy cultivation, pepper, cardamom and reserve jungle. It is not known as yet whether the exclusion will refer to coffee land only or to the whole estate as an economic unit. This is, of course, a matter of considerable importance to your Company.

"Apart from this, the main clause affecting coffee estates would appear to be the ceiling for new acquisitions being limited to 100 acres. This will naturally have most serious repercussions on the purchase and sale of larger properties. It has been a matter of popular discussion as to what constitutes an economic holding in coffee, but it is fairly obvious that if an estate has been designed as a large economic unit with centralised labour-lines, water-supply, godowns and pulperhouses, it cannot be split up even to units of 100 acres or thereabouts without drastically interfering with its whole economy.

"There are extensive areas in Coorg of Government reserve jungle suitable for the growing of coffee, in fact possibly a larger acreage than that already planted up with coffee on existing estates. This being so, there is ample land for all who might be tempted to take up this most hazardous occupation. It would not, therefore, in any way interfere with the moral issues at stake, if the coffee industry was excluded *in toto* from the Act. In so doing there would be considerable advantages economically.

"As the Bill stands at present, it would appear that your Company, in regard to further purchases of coffee estates, would be in the same position as any other potential purchaser, limited to a hundred acres only.

Future Prospects

"I cannot close these remarks without some reference to future prospects. It would appear that in Brazil alone they are holding a stock of unsold coffee of 15 million bags (something approaching a million tons). It is understood that an agreement has been reached among the Latin producers for restricting exports for 1959. Brazil has agreed to restrict her exports by 40 per cent. of the current crop, Columbia 15 per cent. and other countries 5 per cent. This would appear to be no cure for overproduction as stocks will only tend to accumulate even further in South American countries. It is understood that African producers have kept out of the agreement. In India, there is every indication that production may increase at a pace entirely unanticipated and already there are thoughts of a possible 60,000-ton crop within the next few years.

"The current consumption in India is in the neighbourhood of 30,000 tons per annum and, unless this is increased, it must necessarily mean that a home must be found for the balance in the foreign markets. This, in other words, would mean the doubling of present exports.

"Quite apart from the uncertainty of future world prices one cannot help wondering whether it would, in fact, be possible to find a market which will take this extra quantity of coffee bearing in mind that Indian coffee is in modern times a new re-entrant to world markets which are already more than adequately supplied from other producing countries with whom they have the strongest commercial ties.

"Under every circumstance, therefore, a stable and expanding market for our produce in India itself is a supreme necessity for the continued existence of the coffee industry, and to this end it cannot be said that our needs are in full accordance with the export requirements of the country. At the same time, it is, of course, of equal importance that we should acquire a more permanent place in the world markets than we would appear at present to occupy.

Marketing of Coffee

"In short, with the larger crops envisaged, we are now fully dependent on both internal sales and export for the disposal of our produce. In the past, with smaller crops and good export prices the Coffee Board has acquired the aurora of a kindly Father Christmas, benefiting all—the grower, the trader, the co-operative, the consumer and labour alike, in which the requirements of the internal market, both in quality and quantity, received first consideration and the price carefully controlled in relationship to the minimum release price by gearing the quantity offered at the monthly auctions and by allotment through local sales depots. With the prospect of declining world prices on a market glutted with overproduction, it seems to me that a radical alteration is necessary in the basic approach of marketing coffee. Very active propaganda by all means available both in India and abroad would seem to be necessary, if we are to avoid the prospects of being left with unsold stocks on our hands or at the best with unremunerative prices.

"The Coffee Board has indeed a most difficult task before it; nor does it have the advantage which is available to our sister industry tea, with its large firms of international repute and organisation marketing the finished product. Coffee, in its unroasted form, does not particularly lend itself to individual advertisement and might find comparison with sugar, rice or some other basic food. It would appear on this account that it does not receive the necessary propaganda and advertisement from the trade which is so vital, if sales are to be rigorously pushed.

"Hitherto, it would appear that the Coffee Board has been paying considerable attention to the pegging of prices and so controlling profits which are available to the trade and to the grower. While this, undoubtedly, is an important role and a necessary one for the consumer, one should not lose sight of the fact that the Board's first *raison d'etre* is to market our coffee, and in the conditions which we are likely to see in the future, that in itself will be no mean performance, and if success is to be achieved, must hold priority over all other considerations.

Fall in Coming Crop

"As disclosed in the Directors' report, we had estimated as our coming crop, a crop of 2,600 tons made up of 1,750 tons Arabica and 850 tons of Robusta. At the time of the report we had anticipated these estimates would be firm. Unfortunately, during the last week of November the whole of Coorg district suffered from monsoon, if not cyclonic conditions, and this has resulted in serious fall of crop. Some of this will, undoubtedly, be gathered as gleanings when we have finished picking, but, of course, a great deal will likewise have been lost.

"It is impossible at this juncture to give an accurate estimate, but it would appear that the loss in the Arabica crop may well be in the neighbourhood of 10 per cent. It is, however, possible that what is lost in Arabica may to some extent be made up in Robusta, which looks as if it may slightly exceed our original estimates. What is one man's meat, however, is another man's poison, and the rains, although harmful to our current harvest, will undoubtedly benefit next season's output. The new wood on the trees was already substantial and there has been additional growth following that week of monsoon conditions. The coffee is looking well and general expectations for 1959-60 are for another most substantial crop, although in agriculture where so much is dependent on the variance of the weather, it would be indeed rash to make any definite forecast.

"It remains to me to record our thanks to our managers, staff and workers for the good work that has been put in during the year."

Statistical Statement

Year ended 30th June	Net Profit		Ordinary Shares		Reserves	Crop			
	Before Tax	After Tax	Earned	Paid		Cwt. Arabica	Cwt. per acre on total area	Cwt. Robusta	Cwt. per acre on total area

TOWARDS A REALISTIC TAX POLICY

IMPROPRIETY OF IMPOSING HEAVY FISCAL BURDENS ON ENTREPRENEURIAL CLASS

[In his presidential address at the Forty-first session of the Indian Economic Conference, held at Lucknow just before the close of 1958, Dr. M. H. Gopal, Professor of Economics, Ford Foundation Unit, University of Madras, made a critical analysis of the objectives of a tax policy in a developing economy. He declared that, in such an economy, equity should be of secondary importance, particularly because the major problem was one of economic growth. Accordingly, he pleaded for more consumption taxes and for relief in tax burdens on those who save and invest their savings. In view of the great importance of the subject to the country's fiscal future and the strictly academic approach to it made by the President of the Conference, it is hoped that the comprehensive summary of his address, published below, will be read with keen interest.—ED.]

THE story of tax policy in India in the last decade has been both depressing and encouraging. It has been encouraging because a young, underdeveloped democracy is grappling with formidable, varied and complex problems; but depressing because the policy has been faltering, confused, inconsistent and, latterly, unreal. With half a dozen changes in policy and half a dozen custodians of the country's finances since independence, it has lacked continuity. While undergoing modernisation on foreign tax advice, the equally essential criterion of being related to the existing environment, aspirations and needs which are of special significance in backward but rapidly developing economy has been lost sight of.

The basic drawback has been that fiscal policy and experience of advanced countries have been drafted on to less advanced economies. A tax policy for a developing economy is conditioned by a number of factors like (1) the socio-economic institutional barriers, (2) dependable basic economic data relating to distribution pattern of national income, (3) the prevailing efficiency of tax administration and the degree of compliance, and (4) the national economic objectives.

A desirable tax system must be born out of the environment and not imposed upon it, however satisfactory a tax has been in an advanced country or from the angle of ideal tax theory. Arising from the basic objectives of a mixed economy, of the need to raise resources from taxation for developmental outlays in the public sector, of expanding production and of maintaining for a long time a climate favourable to private investment, the tax policy operating in India for the next few years must perform three major functions. It should (1) strike a balance between resources needed by the public sector; investment and incentives in the private sector and the ethically more important but immediately less practicable aim of redistributive justice; (2) build up a tax structure not only integrated within itself among the diverse taxes but also co-ordinated with other national policies—economic, social and, specially, monetary; and (3) co-ordinate union, state and local tax systems. During the transition, from a stagnant old order to a dynamic one, such a process raises problems of choosing between the short- and long-term objectives.

Problem of Choice

Choosing between these alternatives raises the fundamental questions of principles appropriate for a developing economy and their applicability (1) to a single tax or a related group of taxes, and (2) to the tax system as a whole.

The equity principle, which is often referred to as the dominant criterion by Prof. Kaldor in his *Report on Tax Reforms for India*, can be of limited success in a fast developing backward economy like India due to lack of economic data and of an efficient tax administration. Even the recapture approach of tax equity, resulting in the return of a part of the tax receipts to the lower-income brackets in the form of social services, cannot operate effectively in a developing economy. For one of the urgent and important aims of tax policy is raising additional revenue for which the consumption taxes are the mainstay and this goes against equity. This is borne out by the low proportion of benefit to burden in India (20 per cent. in 1948 and 27 per cent. in 1953) as against 80 per cent. in a developed economy like Britain.

This raises the issue: why are equity and ability concepts not applicable to backward economies? The answer lies in the objectives. In a developed economy, like the U.K. or the U.S.A., stabilisation and neutrality are the main tax objectives. The Government is expected to maintain the current economic climate, private enterprise doing the rest of economic development. Therefore, stabilisation becomes the overall objective, neutrality, the tax-*cum*-expenditure test and equity and ability the leading principles.

In backward economies where development has been retarded because of low saving and investment, absence of social overheads, entrepreneurial inertia and a static economic approach, a stabilising and neutralist tax policy would merely perpetuate stagnation. The Government should give the lead by providing the overheads, encouraging capital formation and directing the course of development. This objective demands a revenue-producing, investment-generating and diversionary policy. In operational terms, the tax policy looks to productivity, administrative practicability and incentives.

What then is the role of equity in the tax policy of a developing economy? In a mixed economy, it can be partially operative in many of the direct taxes; in a democracy, it can act as a political slogan; it can serve as a tax principle in the long run. Since formulating tax policy in the initial stages of development with equity as the main criterion would give a tax structure unsuited to the environment and objectives, primary considerations should be productivity, expediency and efficiency.

Tax Policy

The first step in formulating a tax policy is to determine the socio-economic goals. In a democracy like India, with its multiplicity of ends, a balance must be established among the competing objectives and a scale of preferences among them drawn up. In such a process, compromises, occasionally even in basic principles, will have to be made—at least in the short run, before the economy has taken the stride of development.

Not only is the tax policy relative to the priority among ends but it is also relative to the existing economic conditions. In order of priority, the major fiscal monetary issues facing a developing economy are: raising resources for the public sector—stimulating saving, investment and enterprise in the private sector; stabilisation of the economy; reduction of inequalities and holding down consumption. In the teething years of development, tax policy will have to take up as its major functions the raising of resources and the stimulation of private investment, leaving the redistributive aim largely to public expenditure and letting monetary policy tackle the problems of stabilisation and meeting inflationary pressures.

Policy for Resources

This objective claims priority because of the need to provide basic facilities like the social overheads as a prerequisite to increased participation of the private sector, to provide the means for accelerated development and for slowly expanding welfare projects.

The necessity to encourage investment in the private sector cautions against unduly heavy taxation of the saving and entrepreneurial class for raising revenues. Consumption taxes will, therefore, have to contribute the major share. The desirability of consumption taxes is conditioned by their fairness, inflationary effects and political consequence. Since the alternatives are to slow down the rate of development which is ultimately harmful to the poor or to resort to deficit financing which would infuse the masses indiscriminately through its inflationary effects, indirect taxation for raising resources is the least of the evils.

The problem of choosing between a policy to stimulate economic growth and one to reduce tax burdens on the poorer sections boils down to that of increasing mass purchasing power *vs.* investment flow into capital formation. The choice, once made, leads, in a mixed economy, to the private sector which, in an underdeveloped country, is the more important instrument of growth. In such a set-up, the tax policy must aim at incentives to private investment so as to maximise savings, mobilise them for productive investment and canalise them towards a balanced and active development programme.

Such fostering of initiative and investment is partly a question of taxation and partly of monetary and other wider policies. The success of fiscal policy in this respect is largely governed by an appropriate monetary policy and by their co-ordination. As for the tax policy, its material and psychological impact on the flow and pattern of resources towards capital formation in the private sector should be the most important criterion. Another consideration in this connection is the effect of tax policy on the quantitative and qualitative aspects of investment.

If, therefore, capital formation is the major objective of tax policy, if such saving and investment are largely to be done in the private sector, and if the saving and enterprise potential is in the upper income groups and institutions, it follows that, from the angle of development, the tax policy should tone down the effects on decisions to make risky investments, ease tax burden on equity financing, reduce tax factors inhibiting foreign private investment and strengthen further the automatic stabilisers in the tax system. Tax reliefs must be in the direction of the higher income groups and companies. Further, there should be a little more emphasis on the quantitative significance of taxation in relation to saving.

The directions of approach in such a theoretical framework would be: (1) to integrate closely tax policy with monetary policy; (2) to impart a hard core of permanence to the tax policy without depriving it of flexibility, required by the prevailing conditions; (3) to avoid nuisance taxes and their irritational effects; (4) to maintain a safe ratio of internal venture capital to external capital; and (5) to create public confidence that the tax system is not punitive or doctrinaire in its approach to the saving and entrepreneurial classes.

Integration

Tax policy, to be effective, must be viewed in relation to the wider national background and be co-ordinated with other policies; for taxation is only one of the forces implied in aggregative economic effects. This problem has a number of facets; some in the field of integration proper and some in that of co-ordination. The former includes the integration of the different structural details of any single tax, of the direct taxes among themselves, of the direct and indirect tax facets of the system, of short, intermediate and long period facets of taxation and of tax policy with expenditure and debt management. The latter cover co-ordination of fiscal and monetary policies, of fiscal policies of public bodies at all levels, and of fiscal and monetary policies with other related ones such as price, wage, trade and industrial policies. Such complete integration requires statistical and other data which, in underdeveloped countries, are still a long way off. However, in respect of the integration of fiscal and monetary policies, monetary policy must play a subsidiary, though important one in stabilisation. Such a co-ordination can be secured only when (1) there is a-day-to-day understanding between the Treasury and the Central Bank on a footing almost of equal partners and not as the subordinate of the other, and (2) there is a readiness on the part of the policy maker to analyse experience and learn lessons it holds for the future without making too many mistakes in the process. The co-ordination of foreign and domestic tax measures will also help a great deal in minimising obstacles to the flow and to internal growth.

Since the Taxation Enquiry Commission reported and particularly since the Kaldor reforms, the number and burden of taxes have increased very considerably and tax legislation has become more complex, particularly at the Centre. With 15 direct taxes, the number being the largest in the world, the present policy has resulted in unwholesome consequences. Apart from its frightening effects on private investment, it has laid new and heavy burdens on the tax administration which has been neither over-adequate nor over-efficient in relation even to the old taxes. Yet the Government has, like Oliver Twist, been looking for more revenue for the public sector. The tax burden in the private sector, the need to attract external capital and the necessity for more domestic resources have led to an incessant demand for a reorientation of the tax policy.

An alternative approach can be thought of on certain assumptions: (1) the long-term objective of the State, namely, a "socialist pattern of society" must be considered as an aim to be achieved in course of time; (2) of the four major resources for the public sector—(*a*) external assistance, (*b*) deficit financing, (*c*) domestic borrowings and (*d*) current budgetary surpluses—the last would be the most important means; (3) the major preoccupation in the next seven years will be increase in output; the public sector will not be able to do this all on its own, and the major responsibility particularly for consumer goods will be that of the private sector; and (4) the private sector, in spite of its patriotic fervour, is motivated mainly by the investment and profit opportunities and any tax policy must, therefore, be oriented towards incentives as well as the raising of public revenues.

In the context of these assumptions, the general principles that should underline tax policy may be stated as follows:

(1) While, for raising revenue as well as restraining consumption, there should be a diversification of taxation in order to attain depth and spread, widening it by multiplying taxes and by too steep a graduation, specially at the top income levels should be avoided. (2) Simplify the tax structure and tax law by partly scrapping taxes of little significance to revenue with great anti-incentive effect. (3) Reduce the tax burden on the direct tax side, especially on business. (4) Liberalise the depreciation policy and increase initial allowances, particularly in industries whose output is necessary for stabilisation and output. (5) The policy should activise equity markets and attract foreign investment. (6) Increase the emphasis on consumption taxes and make them more significant as well as for restraining consumption. (7) Irrespective of the desirability on a ceiling, on incomes, in consonance with the "socialist pattern" objective, it is advisable for the present not to make it a tax policy aim, but if necessary, try to attain it imperceptibly. (8) Reduction of inequalities may be effected through mild adjustments in tax rates, rather than fully training the tax weapon on that objective. It is desirable to make social justice a function more of public expenditure as far as practicable. (9) Reduce the incentives to evasion by (*a*) removing nuisance taxes and nuisance clauses in tax laws, (*b*) reducing the tax burden wherever it unnecessarily hurts, (*c*) giving large discretionary powers to tax administration, and (*d*) adopting the Kaldor comprehensive returns device. (10) Integrate agricultural income taxation with the general income-tax. (11) Centralise sales tax legislation and administration temporarily till 1966, 'renting' the tax, if necessary, on the Canadian model of 'renting' Income and Corporation taxes. (12) Land tax, betterment and irrigation levies must not be increased for a few more years. (13) The States should exploit further the revenue possibilities of smaller items like entertainment tax and stamp duties. (14) Co-ordinate the tax legislations of the States, as well as the Union and the capital exporting countries. (15) In spite of really important non-economic considerations, consider seriously the reintroduction of the salt tax and the scrapping of prohibition. (16) Modify the Kaldor proposals by accepting the capital gains and gift taxes fully, the wealth tax partially, restricting it to individuals, and by adopting the comprehensive return device; reject the expenditure tax and the equity concept as a primary tax principle. (17) Give up the rigid approach characterising the present policy.

Tax Changes

In the direction of simplifying the tax system, expenditure tax, wealth tax on companies and the tax on bonus shares may be withdrawn. Their withdrawal, whatever the ground, will ease the psychological situation. To remove uncertainties that would retard investment, losses may be allowed to be carried indefinitely, as was the case before 1956, instead of being restricted to eight years or less. In the case of new enterprises, extend carry forward of tax exemptions beyond the five-year limit. Such a liberalisation is worth the possibilities of greater business expansion. The incidence on companies, at present 56 per cent., may in the first instance, be brought down to 50 per cent. so as to reduce the total tax burden.

On the personal taxation side, place a ceiling on the overall direct tax burden, as a first step, at 80 per cent. as in Sweden and Germany. Although one or two concessions claimed by private business are not strictly desirable, the special super-tax on new enterprises may be withdrawn as a gesture of goodwill in view of the partners being liable for taxation as individuals at a high rate and of the inconsiderable loss of revenue. The 10 per cent. limit on income allowed to companies under Section 23A of the accumulated resources are in excess of the paid-up capital or the fixed assets, may be increased to 25 per cent. in order to provide a larger margin for expansion and also to bring these companies nearer the industrial companies, now allowed 55 per cent. While the surcharge on unearned income, capital gains and gift taxes have no reasonable claim for their abolition, in the case of limiting dividends to 6 per cent., flexibility in rates could be usefully introduced, keeping in view the needs of highly risky and desirable enterprises. Excess dividend tax may be considered for replacement at least in the third Plan period by the national development tax.

Next Seven Years

These proposals relate to the next seven years and will necessitate a reconsideration in 1965-66 in the light of its operation in 1959-66. In this context, while framing the Plan in the next two years is both undesirable and impracticable, the dependence on taxation will have to be larger than what the Planning Commission *Appraisal* presumes. The analysis of the revenue trend of current taxes indicates that the planners may not look for any substantial additional resources from the income and corporation taxes at least till the middle of the third Plan and any increase that may accrue should be treated as a windfall. However, an additional revenue of Rs. 15 to 20 crores can be expected during 1959-61 from direct taxes by making agricultural income-tax an all-India feature and by roping in evaders.

Among the indirect taxes, customs duties hold little promise, but an increase of 10 per cent. in the basic rate of excise on a few major commodities (say 15 in all) may yield about Rs. 25 crores a year. The additional burden of 65 nP *per capita* on this account, will only amount to one quarter of one per cent. of the *per capita* income. It may, incidentally, be noted here that the role of excise duties has been very insignificant in the textile, sugar and tobacco crises. Moreover, the producers may not grudge the 10 per cent. increase since such an increase will be dovetailed with reductions at the direct tax end. Centralisation of the general sales tax with a 10 per cent. increase on the existing rates coupled with effective plugging of loopholes may yield another Rs. 15 to 20 crores annually. This should be done at least on a temporary basis for the period of the second and third Plans by resorting to the Canadian device of "renting." A similar increase of 10 per cent. in the rates of State excises and motor vehicles levies may bring in about Rs. 7 crores more per annum.

Direction of Yield

The experience under the second Plan regarding domestic resources and foreign exchange, the need for consolidating and correcting the second Plan effort, the second Plan commitments regarding repayment of foreign liabilities, the advice of the international lending institutions to cut the coat according to the cloth and the operation of law of demand for capital resources in a planned economy suggest the size of the third Plan should not exceed that of the second Plan (i.e., of Rs. 4,500 crores). The resources needed would be about the same as in the second Plan and the budgetary contribution will have to be about 35 per cent. or Rs. 1,400 to 1,700 crores in five years. The revenue required can probably be raised under the policy suggested and the direction of yield may be as given below:

Tax Yield in 1961-66
(Rs. in crores)

		Annual	Five-year period
I.	*Union*—		
	(*a*) Tax receipts as estimated under the second Plan	..	725
	(*b*) Normal increase in yield (due to growth in national income and population)	50	250
	(*c*) Receipts from suggested increases, etc.—		
	Indirect taxes (—10 per cent.)	40	800
	Direct taxes (reduced evasion, etc.)	20	
	(*d*) Revenue from salt tax and abolition of partial prohibition	45	225
	(*e*) Increases in non-tax items	20	100
II.	State tax efforts (as in 1956-61) (Includes current rate of receipts of sales tax, agricultural income-tax and land revenue though the former two may be centralised; and in view of the second Plan experience, reduced dependence is placed on State efforts.)	..	175
			1,775
	Less estimating errors and relaxed efforts	..	125
	Probable net tax and non-tax receipts in 1961-66	..	1,650

To the extent the alterations in indirect taxation and on salt and prohibition fronts are not adopted, the tax receipts may fall to Rs. 1,100 to 1,300 crores, in which case the size of the third Plan would be affected. The need of the material advancement and future development should be enthroned over political considerations and ideologies in formulating the tax policy.

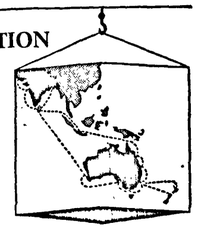
The possible repercussions of the suggested tax changes may be viewed from three angles: (1) equity; (2) inflationary potential; and (3) political effects. Equity should be of secondary importance in a developing economy and particularly when the major problem is economic growth. The inflationary argument has a little more substance, because of the increase in consumption taxes involved, but is not completely convincing because of negligible additional burden, neutralisers and the benefits of dovetailing and co-ordination. Moreover, the increased tax yield would naturally reduce the scope for deficit financing, with its more certain inflationary effects. As for political reactions, the party in power with its tradition of sacrifice, its devotion to socio-economic upliftment and its entrenched position, should be able to satisfy the electorate on the issue, which has only worse alternatives.

The application of the suggested tax policy requires a bold approach to the problems and objectives before the country. In the next seven years, there will have to be a slowing down, in practice, of the socialistic pattern of society. Not that the national objective should be abandoned or watered down, but that, since social justice and welfare are largely a function of larger production in the community, the years 1959-66 will be the initial period for raising the output for distribution later. Secondly, the role of the private sector, in this period, will definitely grow in significance and the composition of the "mixed economy" will have to be a little more private-sector-biassed. Finally, though the social justice aspect of fiscal policy will lean more on the expenditure side, the limitation of public revenues, the need for investment and the incentive requirement in the tax policy, will necessarily reduce the expenditure on welfare schemes. Very broadly, the emphasis in tax as well as in general policy should be mainly on resources in the short-term (second and third Plan period), on investment and incentives in the intermediate term (second to fourth Plans) and on social justice in the long-term (fourth Plan onwards).

Fifteen economists, discussing the U.S. business outlook at the annual economic forum of the National Industrial Conference Board, expect the upward trend of late 1958 to continue throughout 1959. At the same time, they warn that inflationary pressures are likely to continue. The group expressed the belief that the gross national product, the value of all goods and services, would reach a rate of $470,000 million to $480,000 million a year at the end of 1959. The present rate is about $450,000 million. Relative stability was forecast for consumer and wholesale prices. Indexes of each were expected to rise only slightly during the year. The penelists expect outlays for capital goods to increase during 1959, but foresee no sharp upsurge. An increase in investment in inventories is anticipated as business shifts from inventory liquidation to accumulation, the panelists agreed. Unemployment is expected to remain above pre-recession levels throughout the coming year, but by the final months of the year the jobless total may drop from a mid-year level of 4 million to an estimated 3.5 million.

Mr. Geoffrey H. Moore, Associate Director of Research for the Bureau, said: "A way to measure the extent of the recovery is by how far we are below the preceding peak. I think we stand today at a lower level relative to the preceding peak than at a similar stage in any of the four milder recessions since 1920, but a much more satisfactory level relative to preceding peaks than in the three more severe recessions since 1920... It is fair to say what we have experienced is very close to an average business cycle contraction as far as... historical data show, and a more severe one than the two preceding contractions of 1948-49 and 1953-54 ... The recovery from this recession of intermediate severity is likely to be of an intermediate character, not exceptionally vigorous and not exceptionally modest."

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI



Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

FERTILISERS AND CHEMICALS, TRAVANCORE LTD.

EXPANSION PLAN MAKES GOOD PROGRESS

DR. JOHN MATTHAI'S PLEA FOR HIGHER PRICE FOR AMMONIUM SULPHATE

THE first stage of the expansion plan of Fertilisers and Chemicals, Travancore Ltd., has made satisfactory progress and the expanded plant will be in production by the end of 1959. Disclosing this at the Fourteenth Annual General Meeting of the Company held at Eloor, Alwaye, on 26th December 1958, Dr. John Matthai, Chairman, said that the Company had sought the permission of the Government of India to go ahead with the second stage of expansion and, if the Government's approval and the import licences were received in time, the Company would be able to complete it by the end of 1960.

The following is the full text of Dr. Matthai's speech:

"GENTLEMEN,

"On behalf of the Board of Directors, I welcome you to this, the fourteenth annual general meeting of the Company. Printed copies of the accounts and the report of the Directors are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

"Before I deal with the working of the Company I wish to refer to the loss the Company has sustained in the death of Sri V. Seshasayee and I have no doubt you will join me in expressing our sorrow at the sad event. He showed remarkable initiative in the development of industrial enterprise, especially in this part of the country, and I take this opportunity of testifying to the success he achieved in the several fields in which he laboured and the contribution he thereby made to the economic development of the country.

Delay in Fixation of Price

"You will recall that when I addressed you last year, I undertook that in future, annual general meetings will be held before the end of September. Your Directors made every endeavour to keep the promise. The accounts, however, could not be finalised in time due to a circumstance entirely beyond our control. As you are aware, the whole of our production of ammonium sulphate is taken over by the Central Fertiliser Pool and the price to be paid to us is fixed by the Government of India. The fixation of the price of the sulphate supplied during the year under review, unfortunately, took more time than was anticipated and the final orders of the Government were received only by the 10th of November this year. This delay naturally held up the finalisation of accounts and necessitated postponement of this meeting to this date. We are, however, glad that the Government have, after investigation, fixed the price for the year 1957-58 and 1958-59 together. This would avoid delay in finalising and publishing the accounts for the year 1958. I am hoping that the accounts for the current year will be completed in time for the next annual general meeting to be held earlier, if possible by the middle of next year.

"The Directors' report gives a factual account of the working of the Company during the year under review. I do not wish to traverse the same ground, but would confine myself to a few matters which I feel require special mention.

"You will have noticed from the statement of accounts that the working results of the Company show a net profit of Rs. 9.83 lakhs, which has been utilised to reduce the previous years' losses to Rs. 7.08 lakhs. The profit is small compared to the working results of 1956, if the lower depreciation we have provided for is taken into account. This is mainly due to the high cost of production during the year, because of (1) the reduced production as a result of the labour strike, (2) the increased price of raw materials due to higher freight rates as a result of the Suez trouble, and (3) the inadequate return on capital allowed by the Government of India in fixing the final price for our ammonium sulphate. If the costing of individual products is examined, it will be seen that the profits that we earned from other products had to be utilised to some extent for subsidising the production and distribution of ammonium sulphate.

"It was with a view to overcoming this situation that a representation was made by the Company in February 1958, explaining the handicaps under which we were operating and asking for an enhancement of the price of sulphate. In making out the claim, the Company requested that the price should include a fair return on the capital invested. The matter was further pursued informally with the authorities concerned and, as a result, the Government of India finally fixed the price for two financial years 1957-58 and 1958-59 at Rs. 365 per ton, as against Rs. 353 paid to us for the previous years. This price, although an improvement on the price, previously in force, falls short of our expectation especially for the year 1957-58. If the price had been fixed on the basis of the costing adopted some time ago by the Expert Committee of the Government of India, taking into consideration only the increase in price of the raw materials during the year, we should have been entitled to a better price than has now been fixed. I still hope the Government will recognise the justice of our claim and agree to revise a decision which, in my judgment, hardly does justice to the equity shareholder.

"At the last meeting I indicated that it might not be possible to give a return to the shareholders from the working results of the year under review. I had, however, hoped that the Government of India would see its way to fixing a price which would enable us to wipe off the accumulated losses. The working of 1958 promises to be a little more encouraging and I feel it may be possible, as I indicated last year, to provide at least a token return to the shareholders in 1958.

"Although, for reasons I have already explained, we have had to defer holding the general meeting for 1957 till practically the end of 1958, I am in a position today to give you a fairly complete picture regarding production for the current year. We have produced till the middle of December 1958 11,806 tons of ammonia which has been converted to 31,897 tons of ammonium sulphate and 6,401 tons of ammonium chloride besides 351 tons sold directly. We also produced 17,123 tons of superphosphate and marketed 11,372 tons of sulphuric acid and 67 tons of carbon dioxide. Although the total ammonia production may not reach the output in 1955, taking an overall view of the various products manufactured by us, this year promises to be a record year in regard to our total production and sale.

Need for Good Labour Relationship

"This has been made possible to a large extent by the willing co-operation and helpful attitude shown by labour throughout the year. From letters I have received from shareholders I find that in some quarters there is a belief that in the benefits we have granted to labour, we have sacrificed the interests of shareholders. I would like to take this opportunity of assuring you that your Directors are fully alive to their obligations to the shareholders. At the same time you will appreciate that, in the context of events today and the current thinking regarding industrial relations, it would be shortsighted to ignore the key position occupied by labour in industry. No industry can prosper, unless it receives all the co-operation and help that its labour force can give. Improved industrial relations and better conditions of work go a long way towards making labour realise that it is in their own interest to maximise production and to help in maintaining the prosperity of the industry. The main reason for the poor working in 1957 was the strained relationship that existed between labour and management throughout the year. The settlement arrived at in December 1957 meant an additional burden on the Company, but its benefit is reflected in better working results during 1958.

"A point which requires special mention is the change we have adopted in regard to the provision for depreciation. Up to the end of last year, depreciation was provided at 7 per cent. on the original value of the machinery based on the straight line method. On a careful review of the position, the Board felt that it would be more appropriate to adopt the more widely used method of calculating depreciation on the written-down value of the assets at the rate of 10 per cent. for machinery. We consider that this provision is quite adequate.

"I briefly touched in my speech last year on the circumstances that led to the decision to expand the plant and on the various projects that had been included in the scheme of expansion. I am glad to say that the execution of the scheme of expansion has progressed satisfactorily. The air liquefaction plant has already been commissioned and is supplying nitrogen to the ammonia plant. The erection of the large sulphuric acid plant with a capacity of 160 tons per day has just been completed and initial starting operations have been commenced. The Hortonsphere built for increasing the storage of ammonia has already been commissioned and the erection of the new dryer at the bagging section is nearing completion. In regard to the rest of the items, I expect, having regard to the schedule of deliveries, that the expanded plant will be in production by the end of 1959.

Second Stage of Expansion

"In view of the progress we have made in the first stage of expansion, the Company has approached the Government of India for permission to proceed with the work connected with the second stage of expansion, namely, for ordering the equipment necessary for replacing the existing gas plant using wood. In making this request, the Company has also sought the permission of the Government of India to change the process to be adopted from the electrolytic hydrogen to hydrogen by oxygen gasification of oil. With the oxygen available as a by-product and with practically the same capital outlay, hydrogen for 80 tons of ammonia could be produced which would make it possible for us to produce 120 tons of ammonia per day. This project, if approved by the Government of India, would, besides increasing the production of fertilisers in terms of nitrogen to three times our existing capacity, also render the cost of production even lower than was originally contemplated. The progress that has been achieved in the field of gasification of oil with oxygen since the submission of the report by the Expert Committee appointed by the Government of India in August 1954 makes it obligatory on the part of the Company and of the Government to consider this alternative before proceeding with the electrolytic process. If the approval of the Government of India and the import licences are received in time, the Company will be able to complete the second stage of expansion also by the end of 1960.

"Before I conclude I wish to express our thanks to the Central Government and the Governments of Kerala and Madras and to the Industrial Finance Corporation of India for the valuable assistance we have received from them. I would also like to thank my colleagues, the Managing Agents and the members of the staff for their unfailing co-operation during a difficult year.

"I would now move that the Directors' report and the audited statements of accounts for the year ended 31st December 1957 be and are hereby adopted."

Note.—This does not purport to be a report of the proceedings of the general meeting.

TEA CONSUMPTION IN U.S.

Tea consumption in the United States will reach the second highest level in history in 1958 and is expected to continue to rise next year, according to Mr. Robert Smallwood, Chairman of the Tea Council of the U.S.A., Inc. The level of consumption this year is particularly significant in view of the rise in U.S. unemployment, the decline in consumer buying power, and the general economic slowdown which began in mid-1957 and continued throughout the first months of this year.

"For the year now closing, total tea sales to groceries and institutions are estimated at 108.1 million pounds," Mr. Smallwood said. The tea industry's overall optimism for 1959 stems from stepped-up promotion and advertising plans—collectively through the Tea Council, and individually by the brand packers.

Concluding its eighth year of operation, the Tea Council of the U.S.A.—a non-profit, international promotion agency, jointly owned by the Government of India, Ceylon and Indonesia, and the U.S. Tea Association—recently launched a $1,200,000 "hot tea" advertising campaign which will run in 18 major U.S. markets through the early part of next March. This programme constitutes the major portion of the Council's 1958-59 promotion budget of $2,300,000.

Hirakud Power Station is protected with Shalimar Tarfelt

Project proofing with Shalimar TARFELT

Waterproofing is our business and has been so for several decades now. As a result, in every corner of India, you will find scores of buildings from thermal power stations to the shell arch roofed working bays of new and expanding industries, from public buildings, old and new, to vast labour colonies, all waterproofed by Shalimar Tarfelt — manufactured, applied and guaranteed by Shalimar Tar Products.

Over 12,000,000 sq. ft. of Shalimar water-proofing Tarfelt were supplied in one year to protect the roofs of India.

INDIA STEAMSHIP COMPANY, LIMITED

RECORD FREIGHT EARNINGS—ENTERING SOUTH AMERICAN ROUTE

DR. A. RAMASWAMI MUDALIAR REVIEWS COMPANY'S PROGRESS

ADDRESSING the shareholders of the India Steamship Company Ltd., at their Annual General Meeting held in Calcutta on 22nd December 1958, Dr. A. Ramaswami Mudaliar, Chairman of the Company, controverted the impression held in some quarters that Indian shipping companies would ply their ships only on routes that were profitable and would decline to operate on other routes. He said that it was not the profitability of the route so much as the availability of the number of ships that had stood in the way of operating new routes and establishing direct connection between India and other countries. He disclosed that his Company would shortly be proceeding to the South American ports of the Atlantic seaboard.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ended 31st March 1958, have been in your possession for some time. With your permission I shall take them as read.

Trading Experience

"The Directors' report shows that the freight earned during the year was Rs. 7,75,04,245, as against Rs. 6,00,17,168 in the previous year and Rs. 5,26,11,831 in 1955-56. The total number of round voyages made during the year was 30.5. Both in the number of round voyages and in the amount of freight earned in the year under review, the figures exceed all previous records. The average duration of the round voyages is slightly less than in previous years. The increased earnings and the number of round voyages completed are partly due to the number of ships in service and operated during this period. Other factors which contributed to these satisfactory results will be referred to later.

"The Company made a net profit of Rs. 1,21,59,779 after setting aside Rs. 53,37,000 for development rebate and Rs. 59,37,481 for depreciation. The amount for development rebate has been shown separately and set aside for the purpose of expansion of the fleet in accordance with the recent legislation on the subject. This is a matter of sincere gratification to your Board, as I have no doubt it is to you.

Port Conditions

"Conditions in some of the ports are still causing concern to shipping companies, though for reasons different from those which have prevailed hitherto. In my address last year I said: 'I am glad to inform you that, owing to the vigorous steps adopted by the port authorities and the Transport Ministry, delay in finding berths for ships has virtually been eliminated and it is possible, certainly in Bombay and Madras and even in Calcutta, subject to draft restrictions, for a steamer to find a berth on arrival.' It is a matter for regret that these draft restrictions have developed so seriously that it is little satisfaction to the shipping companies to know that berths are available. In the port of Calcutta, the river drafts have fallen so sharply that the delays are now experienced at sandheads and ships awaiting proper drafts are held up for days before proceeding to the vacant berths. The port of Calcutta is the most important port from the point of the volume of traffic, both inwards and outwards. There are other minor disadvantages at this port arising out of the salinity of the fresh water in the river which add to the difficulties. The Government of India is showing a commendable desire to increase exports to various countries and an equal anxiety to bring about a reduction in freights to achieve its objective. The most practical way of achieving this objective is to improve conditions of navigability in the various ports of India and I trust that the measures contemplated for the purpose will be implemented at a very early date. I referred last year to the piece-rate system for dock labour in the port of Calcutta which I hoped would be introduced soon. It is a matter for regret that a scheme which has been found satisfactory in Bombay and Madras has not yet been introduced in the port of Calcutta where it is most needed and where healthy labour relations can be promoted by its adoption. I trust there will be no further delay in implementing the scheme.

Progress

"During the year, another ship, the *Indian Security*, has been added to your fleet. Two more ships, the *Indian Success* and the *Indian Strength*, have both been launched and the first of these is now on her maiden voyage to India. The other ship will, it is hoped, be ready for trials towards the end of the year and is expected to make the maiden voyage early in January. During the current year, there will, therefore, be in the service of the Company 15 ocean-going vessels and one coastal vessel. Within the last fortnight a new vessel has been launched at Visakhapatnam—the *Indian Industry*.

"This is the first ship which is being built by the Hindustan Shipyard for your Company. Besides these, two ships are on order in Germany and they are expected to be delivered by the end of 1959. All these ships were contracted for according to a phased programme in 1956.

"We are grateful to the Government for the financial assistance by way of loan which has been sanctioned and for the foreign exchange allotted which has enabled us to expand our fleet to this extent. We have, however, a further programme of expansion including an option with a German shipyard for the construction of two more ships in 1960 and additional ships in the following years. The foreign exchange requirements for some of these ships have been engaging the attention of both the Government and your Board and it is clear, despite the difficulties so obvious, that a solution has to be found.

Earnings and Dividend

"I have referred to the profit earned by your Company during the financial year. This profit, I wish to emphasise, is to be related not to the paid-up capital only but to the total capital employed including borrowed capital. On this basis, it will be realised that at the end of the year, i.e., 31st March 1958, the total cost of the fleet was Rs. 13,40,78,416 and, after deducting the amount written off for depreciation, the net value of your fleet was Rs. 10,19,90,379. I trust these figures will give a better perspective of the net profit earned by your Company and its ratio to the investment. As you are aware, the Directors recommended that the amount standing in the share premium account may be capitalised and issued as fully paid-up ordinary bonus shares to the shareholders in the proportion of one share to every ten shares held. The approval of the Controller of Capital Issues and your approval having been obtained, the recommendation has been given effect to.

"It will be noted that fairly substantial amounts have been credited to the various reserves which the Company is building up. These reserves and further increase in some of them, the Directors consider as essential and as dictated by a policy of prudent stewardship of the affairs of the Company. It will be appreciated that a substantial sum is due to the Government of India on account of loans granted for the acquisition of ships. The interest on these loans has been paid as it fell due. The instalment payments are beginning to fall due and your Directors have kept this in mind and have so provided reserves as to be in a position to meet these commitments without undue difficulty. I should also like to state that it is the experience of all shipping companies that, while boom periods are comparatively rare, lean years, when the quantity of freight falls and the rates drop down sharply, are more common. International shipping is peculiarly susceptible to world conditions, economic or political, and prudence requires conservation of resources to a reasonable extent.

"It is with regret that I refer once more to the restrictive practices that some conferences and individual lines have resorted to in preventing legitimate national shipping to develop. Year after year, in these addresses, I have referred to the unsuccessful applications for membership to various conferences which Indian lines have made. Indian lines have not been admitted to the conferences of lines trading from ports like those of Ceylon, Burma, Egypt and other ports on our direct route, to the ports of the United Kingdom or the Continent. But the Indian trade is a happy hunting field for shipping of numerous foreign countries. Neither their initial entry into the Indian trade nor the extent of shipping tonnage employed by them has any relation to the trade subsisting between India and such countries. I venture to state, with due deliberation, that the shipping lines of certain European countries are readily accorded by the conference the privilege of calling at several Indian ports irrespective of the volume of traffic or the number of lines that are already serving these ports. A solid front of opposition is presented to a reasonable demand by the Indian lines of serving the wayside ports. When this attitude is combined with the deliberate policy of accusing Indian lines of resorting to flag discrimination on the flimsiest of flimsy grounds, an intolerable situation arises and a determined effort is needed to remedy this state of affairs.

New Routes

"This brings me to the question of Indian shipping establishing itself in new routes so as to promote the trade of the country both in exports and in imports. The recent difficulty regarding foreign exchange and balance of payments has brought this question to the fore. The Ministry of Commerce and Industries, particularly through its State Trading Corporation, is anxious, and legitimately so, that the export and import trade should not be jeopardised, but, on the other hand, considerably facilitated by Indian shipping lines entering new routes and giving direct service for such trade. It is also anxious that the shipping freights are fairly reasonable and take into account from time to time the falling values of commodities transported. It is true that conferences are not unaware of the need of revising freight rates from time to time to suit altering conditions; but it is also clear that membership in each conference of one or other of the Indian lines facilitates the better appraisement of the situation having regard to the country's needs and brings to bear on the decisions of the conference a point of view and a presentation of facts which may not always be available in their absence. It has sometimes been suggested that Indian shipping lines are at one with other non-Indian shipping lines in fixing the maximum freight rates possible. That this is an entirely mistaken notion and has no factual basis will be borne out by the record of the attempts of Indian shipping to get freight rates adjusted so as to help and promote India's trade.

Desire to Promote Direct Service

"I wish to controvert another impression that is prevalent in some quarters that Indian shipping companies will ply their ships only on routes that are profitable and will decline to operate on other routes. The record of these lines during the past recent years will vindicate their claim that it is not the profitability of the route so much as the availability of the number of ships that has stood in the way of new routes and direct connection between India and other countries being established. Your Company, in addition to its normal route to the United Kingdom and the Continent, has been plying its ships to the Soviet and Rumanian ports of the Black Sea, to the Levantine ports of East Mediterranean, and will be shortly proceeding to the South American ports of the Atlantic seaboard. The other shipping company engaged in regular overseas trade—Scindias—has opened direct routes to the North American continent, to the ports of West Africa and the Mediterranean and to ports in the Black Sea. It is hardly necessary to state that our adventure into these new routes is an indication of the desire of Indian shipping companies to promote direct service to various countries and so help the trade of India.

"It seems to me that every effort should be made to encourage Indian shipping to expand and companies engaged in overseas shipping to operate new direct routes from India to various parts of the world. This was exactly what was envisaged by the Shipping Policy Committee which put as a target 2 million tons to be achieved during a period from the date of the report which has long since passed. From every point of view, therefore, it seems to be necessary that facilities should be given by way of loan, to build such ships as soon as possible both in Indian shipbuilding yards and in foreign yards. In either case, it is quite clear that foreign exchange will be necessary and it is my hope that, realising the gravity of the situation and the urgency of developing the Indian mercantile marine, a proper and appropriate priority will be given to the requirement of foreign exchange for building ships for Indian companies.

"It is hardly necessary to repeat that a ship begins to earn foreign exchange from the date that it is handed over after trial to the company. You have seen from the balance-sheet that the freight earned is Rs. 7,75,00,000 and a careful calculation has been made of how much this is represented by foreign exchange earnings, with the result that Rs. 3 crores or 40 per cent. of the earnings is the foreign exchange content of these receipts. The other companies engaged in overseas trade can show similar results and I would earnestly suggest that the time has come for considering the giving of a high priority for foreign exchange loans to Indian shipping companies.

Thanks

"We are indeed indebted to the Minister of Transport, to the Secretary and officers in the Ministry and to the Director-General of Shipping and his officers for the help they have rendered to Indian shipping and for the advice they have given from time to time. They have shown a deep and abiding interest in Indian shipping and have done their best to promote the expansion of such shipping. I trust that the importance that they have attached to such expansion is shared by the Government of India as a whole. A new Mercantile Marine Act has now been passed—a purely Indian law is now effective as much to promote and foster the development of Indian shipping as to regulate and prescribe its activities. I hope that both aspects of the law will receive equal attention and that Indian shipping will be made to feel that restrictions and controls are only one phase and occasional, while they are coupled with assistance and encouragement which will be constant and that both are equally for the benefit of the industry.

Tribute

"The results that I have referred to, of the financial working of the Company during the year, could not have been achieved without the wholehearted and devoted contribution which all its officers, afloat and ashore, of all ranks and its agents and brokers both in India and abroad, have made. On your behalf and on behalf of the Directors, I wish to convey our special thanks to all of them for their good and enthusiastic work throughout the year.

"We have received during the year the continued and firm support of some shippers both in this country and overseas and I should like to thank them for the confidence that they have placed in our service and the recognition that they have shown of the competency of that service. Our fleet, one of the fastest in cargo service from India to the United Kingdom and Continent, if not the fastest, has established itself for its reliability and for the reasonably careful handling of the cargo entrusted to it. It will still be our endeavour to improve further so that, comparatively new as we are to the shipping world, we shall have established a reputation second to no other shipping line, however long established it may have been. I wish to thank you, gentlemen, for your attendance at this meeting and to join with you in the hope that the Company will further progress in the years to come and have to its credit more than the financial results—the reserve of goodwill of all those connected with it, of our shippers, and I hope, of our Government too."

Rajasthan's tradition of chivalry, martial prowess and colourful pageantry has inspired artists, poets and musicians through the ages. It is reflected in the delicate artistry of the Rajasthani miniatures, the sensitive portrayal of musical moods in the Ragmala paintings and the ecstatic abandon of the Ghumar folk dance. The colour and intricate craftsmanship of Rajasthan's weaving, embroidery, pottery and brassware bear testimony to the rich artistic heritage of this picturesque land.

WHEREVER You Go in India, to get a glimpse of the colourful traditional way of life in Rajasthan or the bustling, cosmopolitan city of Bombay, there is the full, rich flavour of Wills' GOLD FLAKE, to enhance your enjoyment.

Wherever you go... they're good

PENSION SCHEME FOR WORKERS

STUDY GROUP'S SUGGESTIONS

A DEPLORABLE lacuna in India's social security structure is the absence of a pension scheme. Broadly speaking, the only class of employees who receive pensions today are Government servants who are eligible for pension, the actual quantum of pension depending upon the number of years of service prior to retirement. Other classes of employees are now expected to make their own arrangements for their old age. At present, the emoluments available for employees at the time of retirement in all quasi-Government undertakings and in most enterprises in the private sector consist of provident fund and gratuity. These lump-sum payments which the employees receive on retirement are of great benefit to them. Nevertheless, these cash benefits are no substitutes for a pension scheme.

Against this background, an interesting pension scheme has been worked out by the Study Group on Social Security set up by the Government of India. The chief feature of the scheme is to convert into a pension scheme the existing provident fund scheme, introduced in 1952 and covering nearly 3 million workers in over 5,800 factories; there are also separate provident fund schemes for coal miners and plantation workers. The Group has recommended for adoption a scheme of old age, invalidity and survivorship pension-*cum*-gratuity. It has suggested that in order to provide pensions of reasonable amounts the resources should be augmented by increasing the present rate of contributions of workers and employees to the provident fund from 6¼ per cent. of their wages to 8⅓ per cent. It is suggested that, while the statutory amendments and administrative arrangements required for introducing a pension scheme will take time, the increase of provident fund contributions to 8⅓ per cent. should come into effect immediately.

Cash Benefits

As regards the Employees' State Insurance Scheme, the Group has recommended that the quantum of cash benefits at present granted under the Act should be augmented. Thus, (a) sickness benefit should be payable upto a maximum period of 13 weeks in any three benefit periods of 26 or 27 weeks each; (b) extended sickness benefit, at full normal benefit rate, may be granted in case of tuberculosis or other prescribed long-term diseases for a further period of 39 weeks but only to such persons as have completed at least two years of qualifying service; and (c) maternity benefit rate should be raised so as to be equal to the full average wage of the insured woman and subject to a minimum of one rupee per day.

Statutory Maximum

The Group has stated that there is considerable scope for improving the standard of medical care and treatment for workers covered by the Employees' State Insurance Act. The prevision of medical care and treatment for families of workers is urgently needed, as it is this omission that has brought in quite legitimate criticism from organisations of workers and individual workers themselves. All these improvements could be provided only if substantial additional funds are available. For this purpose, the Group has suggested that the levy on employers should be increased to the maximum that the law already provides for. While the statutory maximum works out at 4¾ per cent. of the total wage bill, at present only 1¼ per cent. are paid by employers in areas where the scheme has been implemented. The Group has stated that the justification which existed for levying contributions at lesser rates has, with the considerable extension of the scheme, lost much of its force.

Single Agency

The Group has recommended the setting up of a single agency, which should, as a first step, assume administrative responsibility for the Employees' State Insurance Act and the Provident Fund Acts. In the case of workers covered by both the Employees' State Insurance Act and one of the Provident Fund Acts, employers will pay to this agency, in one single payment, contributions due under both. Inspectorate and supervisory staff will be unified. The Group has stated that these and other consequential measures will aim at simplification and added convenience to both employers and workers. It has further stated that it should be the aim to make the coverage under the two enactments identical as far as practicable and in stages by a prescribed target date. As a step towards facilitating this, the Group has recommended the deletion of the provision in the Employees' Provident Funds Act under which newly established factories are exempted from its provisions for the first three years. Thus, in the case of factories where workers are covered for the full range of benefits under the Employees' State Insurance Act and the proposed scheme of old age, invalidity and survivorship pension-*cum*-gratuity, the rates of contributions will work out to about 13 per cent. (4¾ per cent. plus 8⅓ per cent.) by employers and 10⅝ per cent. (2¼ per cent. plus 8⅓ per cent.) by employees.

In its report, the Group has stated that under existing conditions any large extension of social security measures will not be possible either in terms of coverage or actual benefits. The aim should be to improve upon existing measures and to simplify administrative procedure, restricting additional financial levy for the time being to what is required for this limited purpose.

Unemployment Benefit

The Group has stated that, while the provisions in the Industrial Disputes Act relating to compensation on retrenchment and lay-off have afforded some relief and acted as a deterrent to hasty retrenchment, certain unsatisfactory features have nevertheless been revealed. The permanent remedy may be in the form of a scheme of unemployment benefit, but a scheme of this type will not be practicable for some time to come. Till then, improvements should rather be in the direction of avoiding closures and consequent retrenchment, as far as possible —for example, by creating a fund through which industrial units in temporary difficulties can be assisted and kept running where such a course is in the interests of the workers and the public at large.

There is certainly a great deal to be said in favour of co-ordinating the various social security measures in this country and bringing them under a single administration. But the conversion of the provident fund scheme into a pension scheme raises certain difficult issues. The most important of these is the broader question of the equity or appropriateness of converting a provident fund scheme into a pension scheme. After all, provident fund amounts in the hands of retiring employees constitute a capital which they use for such purposes as buying a house or the marriage of their daughters. Since many classes of employees lose, on retirement, the housing accommodation which they enjoy during the period of their service, they are compelled to own a house. Provident Fund amounts often enable them to do so. Further, in the peculiar social set-up at present, the marriages of daughters cannot be arranged without heavy expenditure. For this purpose, too, provident fund amounts have been found to be helpful. What is, therefore, necessary is a pension scheme which will supplement, rather than supplant, the provident fund scheme. If this cannot be arranged in the present state of the country's economy, it is better to await the arrival of better days, rather than convert the provident fund into a pension scheme.

U.K. INDUSTRY

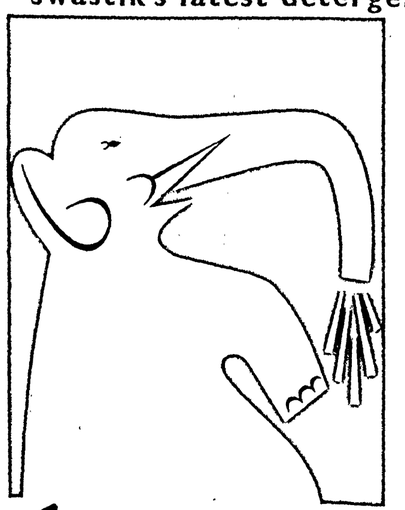
"We are all expansionists now," said Sir Miles Thomas, addressing industrialists and trade union leaders at a meeting of the British Productivity Council, held recently in London. The British Productivity Council is the body established as a result of the experience gained by the Anglo-American productivity teams some years ago, and its purpose is to bring together both sides of industry in the interests of increased productivity. Sir Miles, a leading British industrialist, said he found the prospect of being Chairman of the Council next year "particularly exciting," and added: "There is so much at stake. The prizes which broadened understanding and more efficient work can bring for everyone are so glittering, so enormous. . . . I do not hold out the prospect of a dramatic breakthrough, but we do see real prospects of steady and exhilarating progress. Better understanding, greater respect and confidence between individuals and the two sides could bring a new pride of purpose to British industry, which today is better equipped than ever before."

COLLECTIVE BARGAINING IN U.S.

Approximately 85 per cent. of American workers covered by collective bargaining contracts received wage increases this year, the U.S. Department of Labour reports. A preliminary annual report issued by the Department's Bureau of Labour Statistics showed that about 6,800,000 workers were included—in all industries except construction, services, finance and Government. The average raise was 12 cents an hour. The wage increases resulted almost equally from new contracts signed during the year and from cost-of-living adjustments or deferred increases negotiated earlier but not effective until this year.

announcing idet 5L

swastik's latest detergent in *liquid* form



- has excellent detergent, wetting, penetrating and emulsifying properties
- is equally effective in hard, acidic or alkaline water
- is virtually neutral in character and easy to rinse out
- stable to heat
- being liquid, convenient to measure accurately

idet—5L recommended uses:

- for wetting and penetrating in textile industry
- wet-processing of silk, rayon and other synthetic fibres
- cleaning of bottles, vessels and pipes in dairy plants, food and beverage industries, hotels, restaurants and hospitals
- cleaning floors, walls, paintwork, and tiles
- washing cars, coaches, vans, etc.

Available in 10 lbs tins and 40-45 gallon barrels

Swastik Technical Bulletin No. 8 which gives particulars of IDET 5L available on request.

PRINCIPLES OF INDUSTRIALISATION

SUGGESTIONS OF AN AMERICAN OFFICIAL

ALTHOUGH India is half-way through its second Five-year Plan, controversies continue on many vital issues of planning such as priorities, sectoral balance and choice of techniques of production. The latter, in particular, has been a subject of hot debate ever since the second Plan assigned an unprecedented, if not arbitrary, role to the cottage industries and laid too much stress on labour-intensive rather than labour-saving devices. While undue emphasis on small-scale industries is bound to restrict the pace and progress of capital formation in the country, it cannot be gainsaid that they have an important part to play in a co-ordinated development of the economy—a part which is complementary to, and compatible with, large-scale industries. It is, therefore, in the fitness of things that Mr. Nathaniel Knowles, leader of the United States Trade Mission, currently touring India, highlighted in the course of an interview at the U.S. Small Industries Exhibit, New Delhi, the importance of proper balance between large, medium and small industries in India for ensuring industrial efficiency and making the economy a strong one. Such an integrated approach, he said, would go a long way towards realising the goal of continually higher standards of living, with greater opportunities for the people to express their abilities and lead a full life. He pertinently pointed out that the solution of the basic economic problems is the key which would resolve many social problems. With these ends in view, he suggested a ten-point plan.

Mr. Knowles laid particular emphasis on the need for, and importance of, striking a balance among the large-scale and small-scale industries, as already indicated. He conceded that such a balance among the conflicting demands for community's resources might necessitate a certain amount of Government help to small producers and legal regulations in their favour, particularly with a view to preventing monopoly and protecting economically weaker units from exploitation by stronger ones. But he hastened to add that the legal measures for maintaining such balance must of necessity be marginal and should be restricted to the minimum. At any rate, the only real assurance for ultimate success, he said, depended upon the wisdom of the people themselves and their understanding of the implications of the problem.

Ancillary Role

Admittedly, the small-scale industries have a significant place in any scheme of development, but this need not, and should not, be exclusive and absolute. These industries, for instance, have a distinct contribution to make towards ensuring economic production, if they are so organised as to be ancillary and supplementary to the big industries. Elucidating this well-known, but often ignored (in this country) point, Mr. Knowles observed:

"Individual small industries are essential as suppliers to larger industries. The economic reasons for this are manifold. In brief, only small industries, each serving many larger businesses with specialised technical skills, can ensure economic production. Small industries as used here are distinct from cottage industries and service industries. The cottage industries of India can make a tremendous contribution, through handicrafts and artistic skills of the people, to the prosperity of India and the trade of India. Service industries are usually small by their very nature and perform such functions as putting wrinkles in hairs (hair dressing) and taking wrinkles out of automobile fenders (auto repair shops)."

There is a general tendency in this country to believe that small industries need not be equipped with modern labour-saving machines or use up-to-date processes. This is, of course, a wrong conception. We are glad that Mr. Knowles has strengthened the hands of those who have been trying to dispel it by pleading for modernisation of small industries as well. He said: "The maximum use of machinery is absolutely essential in supplier type small industries." And he added force to this argument by saying that "only thus can quality controls, technical standards and uniform production be maintained." He then stressed the need for constant effort to reduce costs by the use of machinery. In this connection, he sought to allay the fear that mechanisation could aggravate the problem of unemployment. "There is a paradox," he averred, "in that labour-saving machinery creates jobs and creates more employment. This has been demonstrated throughout the entire history of the U.S. By decreasing costs, markets are rapidly expanded, products more widely distributed and standards of living raised thereby. Jobs are operated not only in the industry in which the labour-saving machinery is installed but also as a result of the general increase in prosperity resulting from efficient production in many other segments of the economy."

The pace of mechanisation of small units, however, is conditioned by the availability of appropriate equipments in the country. Mr. Knowles, therefore, suggested that the thousands of machines essential for the development of small industries should be manufactured in India by medium and large-scale industries. He averred that this could best be done in collaboration, both financial and technical, with companies in other countries, specialised in the manufacture of such machines.

The ready availability of adequate number of machines at reasonable prices will definitely help the sustained growth of small units. This by itself will be of little assistance, unless arrangements are made for adequate provision of credit for small business men to finance their programmes. Mr. Knowles did well to emphasise that the small producer must be able to obtain loans from banks based largely on his demonstrated technical training, business knowledge and integrity. He also wanted that the small-scale producer must treat his banker as his intimate adviser and discuss freely with his banker all his problems. In turn, the banker must have, he added, a genuine wish to assist individual small business man to succeed.

Government Protection

Another important point made by Mr. Knowles was that "no business man should be guaranteed success by his Government or anyone else." In a competitive society there were of necessity many failures. He pointed out that the men who failed as individual business men must return to work for someone else. He was of the opinion that "to maintain by Government assistance an inefficient and incompetent business man is a drain on the rest of the economy with the inevitable lowering of standards of living." If only our planners and the Government had borne this point in mind, the Indian economy would have gained greater strength than it has done.

Alluding to the relative significance of manual labour and mental labour, Mr. Knowles felt that it was essential in any industrial economy that there be no artificial social distinctions between the two types of labour. Discussing this issue, he observed:

"The difference between the illiterate manual labour and educated managerial labour is one only of degree. Intermediate labour such as foremen and superintendents must be thoroughly trained in both activities. In general, top management will be recruited from the ranks of labour and will of necessity be able to do personally virtually any job in the business. Training programmes in all phases of production, covering both labour and management skills, are essential. Mobility of people must be encouraged both vertically and horizontally. It is indicated that a labourer must be free to rise to any more skilled or responsible work if his talents warrant. Similarly, he must be free to move from job to job and from location to location as the expanding economy and the creation of new jobs dictate."

Last, but not least, sufficient attention should be bestowed on the development of agriculture, which, in fact, conditions, and is conditioned by, the development of industries. Expanding business and mass production can furnish agricultural tools of all kinds at low cost and in large quantities. This and improved agricultural methods, according to Mr. Knowles, could increase the productivity of land, thereby making more food available for the entire population. This increasing standard of living, he believed, would be reflected in better health and more efficient and effective work by every one. Mr. Knowles was at pains to establish the point that eventually, agricultural employment would tend to decrease, as agricultural methods became more efficient. But this need not frighten anyone, because higher productivity in agriculture will facilitate the process of rapid economic growth through industrialisation.

OUTLOOK FOR U.S. INDUSTRIES

Industry in the U.S. is taking an optimistic view of the prospects for 1959. The U.S. Department of Commerce, after a survey of 75 industrial segments of the nation's economy, said that the expectation for continued improvement in 1959 is based primarily on the general strength of the economy following its recovery from the 1957-58 decline. Key elements in the bright 1959 picture are (1) higher automobile production—now estimated at 5,500 000 units; (2) a record construction estimate of $52,300 million, and (3) steel output figured at between 105 and 110 million tons.

The Commerce Department officials also reported that, in November, U.S. manufacturers continued their recovery from the recession, shipping $27,000 million worth of goods in that month. New orders were at the October level while inventories were steady. The 1959 outlook survey summarised the situation in auto output, construction, steel, aluminium and equipment as follows:—

Autos—"The skies are clearing for the automobile industry, the operating level of which affects so vitally many segments of the U.S. economy. Industry estimates look to production of 5.500,000 passenger cars, or 30 per cent. above the 1958 output of 4,240,000, lowest in a decade. The expected increase in automobile production would be reflected in increased markets for metals, glass, rubber and upholstery leather."

Construction—"Construction, the biggest single industry in the American economy, is expecting to pass the $50,000 million mark in 1959 for the first time, with advance estimates putting construction spending at $52,300 million, a seven per cent. increase over 1958. Private construction—largely housing—is expected to account for $35,200 million of the total. The prospective increase in private construction is figured at four per cent.; in public construction at 14 per cent."

Steel—"In the iron and steel industry, generally improved business conditions *plus* inventory build-ups are expected to push 1959 ingot production to 105 to 110 million tons. This compares with 85 million tons in 1958 and the peak production figure of 117 million tons in 1955..."

Electronics—"Spurred by military and industrial needs, total electronics output in 1959 is estimated at $7,900 million, a new record that exceeds 1958 levels by 14 per cent. More than half goes to the military. Consumer demand for radio and television receivers, phonographs and other consumer products is expected to recover from the dip registered in 1958, while the output of industrial and commercial electronics equipment will follow the trends of the expanding economy."

Aluminium—"Producers anticipate that aluminium shipments in 1959 will be 20 per cent. or more above 1958, because of increased usage in normal channels of consumption, plus the growing demand for the metal in new products..."

Plants and Equipment.—"Business outlays for new plants and equipment, after a decline during 1958 from the peak reached in 1957, were firmed toward the close of the year at a $30,000 million annual rate. Assuming at least the maintenance of the 1953 year-end rate of investment outlays, the broad group of capital goods industries finds the outlook generally favourable as the new year starts."

FOREIGN TRADE OF INDIA IN OCTOBER 1958

The total value of exports (including re-exports) of merchandise and treasure fell short of imports by Rs. 93 lakhs during the month of October 1958, in contrast to the favourable balance of trade witnessed in the previous month, according to the provisional figures of foreign trade by all routes —sea, air and land—on private and Government accounts published by the Department of Commercial Intelligence and Statistics, Calcutta. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) accounted for Rs. 55.76 crores, re-exports for Rs. 34 lakhs and imports for Rs. 56.99 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes amounted to Rs. 32 lakhs. There were, however, no exports of gold and those of current coins (excluding gold coins) were negligible. Imports of currency notes aggregated Rs. 4.18 crores, those of gold Rs. 4 lakhs and current coins (excluding gold coins) Rs. 2 lakhs.

The following table shows the trend of trade, month by month, during the ten months ended October 1958, as compared with that in the corresponding period of 1957:

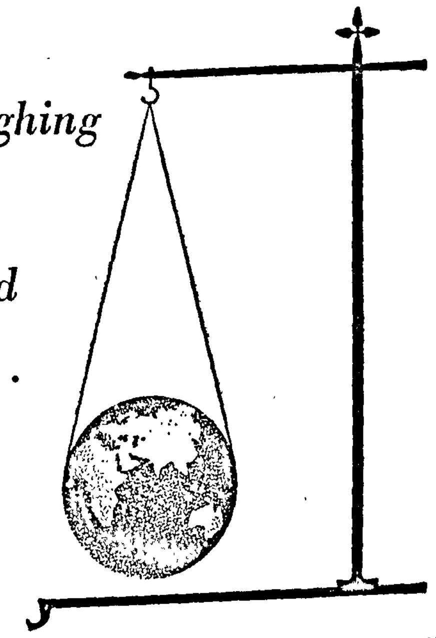
(Value: In crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1957			
January	78.00	55.27	—22.73
February	70.62	54.44	—16.18
March	79.45	53.94	—25.51
April	89.42	47.85	—41.57
May	85.41	52.83	—32.58
June	86.24	48.34	—37.90
July	81.15	55.79	—25.36
August	81.00	60.25	—20.75
September	83.32	61.55	—21.77
October	73.17	53.64	—19.53
1958			
January	66.07	54.81	—11.26
February	66.34	41.93	—24.41
March	70.61	46.68	—23.93
April	60.02	41.73	—18.29
May	63.33	44.71	—18.62
June	64.01	28.12	—35.89
July*	66.79	54.31	—12.48
August*	55.94	49.91	— 6.03
September*	58.63	59.02	+ 0.39
October*	57.03	56.10	— 0.93

* Provisional.

N.B.—This table shows the total of sea, air and land trade; includes treasure (gold only) but excludes transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan.

Weighing the world up...



....even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

LIONEL EDWARDS PRIVATE LIMITED

A.C.C.'S GROSS PROFIT BETTER

TAXATION, HOWEVER, TELLS ON NET PROFIT

AFTER experiencing a downward trend for two years in succession, the gross profit of the Associated Cement Companies Ltd. (Managing Agents: Cement Agencies Private Ltd., Bombay) has recorded a sizable improvement in the year ended 31st July 1958. This is the result of larger sale proceeds of cement, aided by a sizable rise in other income. But an increase in gross profit is by itself no great consolation to the shareholders of the Company, for it has been nearly offset by the heavy incidence of taxation.

Offtake of cement during the year under review increased from 3,205,000 tons in 1956-57 to 3,462,000 tons. In terms of value, the sale proceeds rose from Rs. 22.63 crores to Rs. 24.34 crores. So did other income from Rs. 53.92 lakhs to Rs. 80.27 lakhs. In all, the Company's income expanded by Rs. 1.97 crore. It is true that expenses, too, went up but by only Rs. 1.18 crore. Consequently, the gross profit at Rs. 550.90 lakhs is Rs. 63.49 lakhs higher than Rs. 487.41 lakhs for 1956-57. It is also Rs. 4.14 lakhs better than that (at Rs. 546.76 lakhs), for 1955-56, although as compared with that for 1954-55 (Rs. 588.43 lakhs), it still represents a drop of Rs. 37.53 lakhs.

In contrast to gross profit, the net profit (after substantially raising the provisions for both depreciation and taxation) stands only a shade higher at Rs. 182.07 lakhs, as compared with Rs. 177.86 lakhs for the previous year. The Company had to provide a considerably larger amount for depreciation as a result of addition to its productive capacity at progressively higher capital cost. Thus, over the year, the provision on this account has gone up from Rs. 156.04 lakhs to as much as Rs. 180.24 lakhs. The provision for taxation is also heavier at Rs. 147.57 lakhs, as against Rs. 117.45 lakhs. It must be noted here that the provision of Rs. 147.57 lakhs does not fully reflect the burden of taxation for the year under review, as it is exclusive of Rs. 29.38 lakhs transferred from deferred taxation reserve and another Rs. 19.41 lakhs from excess provision made in the previous year. If account is taken of these adjustments, it will be seen that the amount required to meet taxation is no less than Rs. 196.36 lakhs. While the heavy incidence of taxation made a deep inroad into the Company's profit margin, the sharp rise in expenses by Rs. 117.98 lakhs to Rs. 19.74 crores aggravated the position further. Of this rise, raw materials and coal, oil and gas, etc., increased from Rs. 505.84 lakhs to Rs. 562.30 lakhs, power and fuel from Rs. 138.72 lakhs to Rs. 164.38 lakhs and packing materials, stores and spares from Rs. 375.61 lakhs to Rs. 418.90 lakhs.

Explaining in detail the factors which adversely affected the net profit, the Directors, in their latest report, state thus:

"Despite a higher offtake of 34.62 lakh tons of cement during the year under report compared with 32.05 lakh tons in the preceding year, there has occurred a substantial decline in the net profit compared with the previous year. This was due entirely to further increases in the various elements of cost coupled with the very high incidence of taxation. Coal prices were increased, railway freight rates were enhanced and Central sales tax became leviable on inter-State movements of materials required for production, namely, coal, gypsum, gunny bags, stores and spares. In addition, prices of stores, spares and gypsum also went up and the incidence of wages rose appreciably on account of long-term settlements entered into with the labour unions at most of the factories for the maintenance of good relations with labour over a fairly long period. Moreover, electricity duty was imposed by State Governments at a very heavy rate at Bhupendra and Banmor factories, both on power purchased and generated. While these and other increases in production costs were more than offset by a sustained endeavour to increase production and effect economies, the results of these efforts were to some extent neutralised by the charge for depreciation which was considerably higher in consequence of expansion of productive capacity at progressively higher capital cost. Lastly, and perhaps most importantly, the incidence of taxation was very much higher than in the preceding year, despite the accretion to the depreciation allowance by reason of the capital assets newly brought into production; and this was due to two circumstances; firstly, higher profits (before charging depreciation); and, secondly, a net reduction in the aggregate depreciation allowance admissible not merely because of the accelerated depreciation allowances earned in preceding years but also because of the termination (for the relevant assessment year) of the allowance for extra depreciation (equal to normal) hitherto admissible under the present Income-tax law. Moreover, there was also the need to comply with the new statutory requirement by providing out of the profits of the year under report a sum equal to 75 per cent. of the development rebate on plant coming into use from 1st January 1958."

Although there has been no real increase in net profit, the amount allocated to reserves has been maintained at the previous year's level of Rs. 55 lakhs. While in the previous year, the entire amount was credited to reserve for plant reinstatement, this year the allocation consists of Rs. 34 lakhs to reserve for plant reinstatement and Rs. 21 lakhs to development rebate reserve. The distribution to shareholders has actually been lowered further to 8½ per cent. per annum from 9 per cent. for 1956-57 and 10 per cent. per annum for 1955-56 and 1954-55. With this cut, the dividend is back to the 1953-54 level. The year's dividend is, however, on a higher capital of Rs. 19.02 crores, consequent on the new shares becoming fully paid from 1st February 1958 (exclusive of 12,202 fully paid shares allotted to the employees of the Company). This rate is in proportion to the 8½ per cent. on the fully paid-up shares for the whole year. For the current year, both the new and the old shares will rank for the same dividend.

The following comparative table brings out the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1958	1957	1956	1955
Sale proceeds of cement	24,34.48	22,62.79	22,13.47	21,23.05
Other income	80 27	53 92	59 80	80 08
Stocks	1,01 80	92 60	65 63	64 38
Expenses	19,73.65	18,55.67	17,30.76	15,86.12
Gross profit	5,50 90	4,87 41	5,46 76	5,88 43
Managing Agents' commission	41.02	36.06	42.75	51.56
Provision for—				
Depreciation	1,80 24	1,56 04	1,35 64	1,06 89
Taxation	1,47 57	1,17 45	1,16 99	1,99 28

Excess provisions written back	20 13	12 30		
Transfer to reserves	55 00	55 00	1,28 88	1,04 82
Dividend	1,47 80 (8½%)*	1,35 61 (9%)†	1,27 18 (10%)	1,27 18 (10%)
Carry forward	1.93	2.59	2.94	5.63

* On a higher capital of Rs. 19 02 crores.
† On a higher capital of Rs. 15.79 crores.

The Tariff Commission submitted its report on the cement industry in 1958. All the recommendations made by the Commission were accepted by the Government, excepting the one relating to retrospective increase in price from 1st January 1958. The Directors state that, Government's disregard of this recommendation has had the most adverse effect on the Company's financial results for the year under review for two reasons: first, the Tariff Commission did not recommend any interim price increase during the progress of its enquiry; and, secondly, while costs were rising in all directions during the year, the price increase of Rs. 3.50 per ton that was eventually sanctioned was effective for only the last month of the year. The Government has, therefore, been approached to reconsider its decision and to allow either the price increase retrospectively from 1st January 1958 or to allow such further increase in the price for future sales as would make good the shortfall. The Company had urged the Tariff Commission to recommend the grant of an expansion allowance in the price in addition to the continuance of the rehabilitation allowance of Rs. 2 per ton (net after tax) allowed at the time of the first enquiry in 1952-53. Not only was this request ignored by the Commission, but even the allowance for rehabilitation was halved. The combined result of the unremunerative price for cement in the context of steadily rising costs, the absence of an expansion allowance and the reduction of the rehabilitation allowance is lower profits and reduced resources for the Company.

In view of the foregoing development and also because of the large expansion schemes to which the Company has already committed itself, arrangements have been made for obtaining further advances on cash credit accounts from the Company's bankers to the extent of Rs. 5 crores against the security of 6 per cent. first mortgage debentures of a like amount, ranking *pari passu* with the earlier debentures of Rs. 4 crores. These funds would be utilised for financing the various projects of modernisation and extension of the existing factories and for the construction of a new factory at Durg in Madhya Pradesh, as well as for investment in the heavy engineering project to be set up in collaboration with Messrs. Vickers Ltd. and Babcock and Wilcox Ltd.

An interesting chart entitled "Where did the money go in 1957-58" reveals that, of the money earned by the Company during the year under review, 49.44 per cent. was spent on raw materials, depreciation, maintenance and other manufacturing charges, 12.28 per cent. on freight and 17.57 per cent. on employees. Of the balance, administration charges constituted 5.40 per cent., taxes and duties 8.16 per cent., reserves 1.32 per cent. and shareholders 5.83 per cent. The table given hereunder indicates the position for the past four years:

	1957-58 %	1956-57 %	1955-56 %	1954-55 %
Raw materials, depreciation, manufacturing charges, etc.	49 44	47 94	40 30	36.11
Freight	12 28	12 38	18 65	19 47
Employees	17 57	19 52	18 60	17.52
Administration	5.40	5 32	4 62	5 30
Taxes	8.16	6 68	6.65	11.51
Reserves	1.32	2 34	6.57	4.11
Shareholders	5.83	5 82	5.61	5 89
	100.00	100.00	100.00	100 00

The following synopsis of the Company's balance sheet as at 31st July 1958 will give an idea of its latest financial position:

Liabilities	Rs.	Assets	Rs.
Capital	19,02,38,708	Gross block	36,32,76,342
Reserves and surplus	11,34,02,197	*Less*—Depreciation	12,79,15,052
Welfare and endowment fund	92,633	Net block	23,53,61,290
Reserve for taxation	1,85,25,387	Machinery, furniture and equipment in transit	21,58,265
Liabilities	12,28,46,731	Unallocated capital expenditure	60,47,305
		Stores, spares, etc.	14,10,44,842
		Stocks	1,01,79,965
		Debts, deposits and advances	2,06,20,927
		Investments	73,12,869
		Cash	1,33,80,082
Rs.	44,51,05,656	Rs.	44,51,05,656

Some of the main features of the Company's financial position are: (*a*) the block account is substantially higher than the paid-up capital, despite fresh issue of capital in the previous year; (*b*) the reserves and surplus are about 60 per cent. of the paid-up capital; (*c*) the floating assets are more than adequate to cover the current liabilities, although they are by all means heavy; (*d*) additions to the gross block during the year under review were of the order of Rs. 6.21 crores, while deductions were no more than Rs. 69.88 lakhs.

The Rs. 100 fully paid-up old shares of the Company are currently quoted at Rs. 149.75 *cum-div.* On an *ex-div.* basis, the yield works out to 6 per cent. per annum.

LABOUR UNREST AFFECTS F.A.C.T.'S WORKING

The accounts of the Fertilisers and Chemicals Travancore Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Alwaye, Kerala State) for the year ended 31st December 1957 show an all-round setback. The Company's production and turnover fell from the previous year's levels and so also its profit. A notable exception on the manufacturing side was the production of ammonium chloride and superphosphate which, however, was fairly satisfactory. The chief cause for the fall in output was the strained relationship that existed throughout the year between the management and labour. There was a total strike for a month from the middle of March. The strained atmosphere prevailed till December 1957 when a final settlement on all issues was reached with the workers. Since then the relationship with labour has been satisfactory.

In addition to the shortfall in production, the Company was hit by a sharp increase in the cost of raw materials. This was offset only in part by the increase of Rs. 12 in the price paid to the Company by the Central Fertiliser Pool.

The gross profit for the year under review at Rs. 31.62 lakhs makes an unfavourable comparison with Rs. 35.37 lakhs for 1956 and Rs. 42.04 lakhs for 1955. After lowering the provision for depreciation from Rs. 26.35 lakhs to Rs. 19.51 lakhs and setting aside Rs. 1.47 lakh as wealth tax, the net profit stands slightly higher at Rs. 9.83 lakhs, as compared with Rs. 8.26 lakhs for the previous year. As usual, the entire net profit has been utilised for reducing the accumulated loss incurred during earlier years. The amount still to be written off on this account stands at Rs. 7.08 lakhs. Three years before, the debit balance was as large as Rs. 44.67 lakhs. Sales during the year under review declined to Rs. 174 lakhs from Rs. 182.76 lakhs in 1956 and Rs. 188.26 lakhs in 1955. Expenses, on the other hand, increased from Rs. 145.74 lakhs to Rs. 162.18 lakhs.

During the year under review, 8,313 tons of ammonia were produced, as against 10,139 tons in the previous year. Sale of liquid ammonia amounted to 260 tons. The production of sulphuric acid was lower at 33,610 tons, as compared with 33,834 tons in 1956. In addition, 114 tons of oleum were produced and supplied to the D.D.T. factory. Also 10,264 tons of acid were sold to titanium and rayon factories. Production of ammonium sulphate dropped from 28,518 tons a year ago to 21,809 tons. As in the case of previous years, the entire production was taken over by the Central Fertiliser Pool of the Government of India. The market for superphosphate showed appreciable improvement. Hence, despite the labour trouble, it was possible to produce 17,073 tons, as against only 9,840 tons in 1956. Likewise, production of ammonium chloride was maintained at a high rate, output having risen from 4,682 tons in 1956 to 5,196 tons. The distribution arrangement with I.C.I. continued to work satisfactorily. The production of *caustic soda* by the Travancore-Cochin Chemicals Private Ltd. in which the Company holds Rs. 25 lakhs worth of shares continued to be satisfactory.

Referring to the Company's expansion scheme, the Directors observe thus:

"The scheme of expansion consists in doubling the capacity of our ammonia plant and in utilising the additional ammonia for producing a new product, namely, ammonium phosphate and for increasing the present production of ammonium sulphate. The work connected with the expansion scheme is progressing satisfactorily. The air liquefaction plant and the sulphuric acid plant forming part of the first stage of expansion have practically been completed and are expected to be in production before the end of 1958. The whole of the first stage of expansion is expected to be completed before the end of 1959. The total expenditure on development projects till 31st December 1957 amounted to Rs. 65.22 lakhs."

The Company has a paid-up capital of Rs. 346.06 lakhs, all in ordinary shares of Rs. 10 each. It has no reserves yet. The current liabilities stand at Rs. 133.16 lakhs, of which loans from banks secured against stock of raw materials, general stores and finished products, etc., account for Rs. 27.16 lakhs and from the Industrial Finance Corporation of India against mortgage of fixed assets, machinery, stores, spares, etc., for Rs. 42.69 lakhs. The gross block of the value of Rs. 429.70 lakhs has been written down to Rs. 191.49 lakhs. Amounts spent on development projects are of the order of Rs. 65.22 lakhs. Miscellaneous expenditure and losses to the extent not written off amount to Rs. 3.01 lakhs. The current assets aggregate Rs. 214.51 lakhs and exceed the current liabilities and provisions by a substantial margin.

The speech of Dr. John Matthai, Chairman, at the Company's annual meeting, is published on an earlier page. It will be seen therefrom that the outlook for the Company has improved and that the prospect of at least a token return to shareholders for 1958 is good.

The Rs. 10 paid-up ordinary shares are currently quoted at a discount of Rs. 2.80.

BRITANNIA ENGINEERING CO. LTD.

Despite a sizable decline in sale proceeds and the work done, the Britannia Engineering Company Ltd. (Managing Agents: Messrs. McLeod & Co. Ltd., Calcutta) has been able to maintain the gross profit for the year ended 31st December 1957 at the previous year's level. Sale proceeds and work done were lower at Rs. 122.85 lakhs, as compared with Rs. 143.59 lakhs for 1956. But the gross profit for the year under review at Rs. 10.13 lakhs does not compare too unfavourably with Rs. 10.39 lakhs for the previous year. This was possible on account of the fall in expenses from Rs. 128.64 lakhs in 1956 to Rs. 122.53 lakhs. The net profit, after paying Managing Agents' commission and providing for depreciation and taxation, however, stands lower at Rs. 3.58 lakhs, as against Rs. 4.95 lakhs for the previous year. The provision for depreciation has been raised from Rs. 4.53 lakhs to Rs. 4.92 lakhs. A sum of Rs. 1.13 lakh has been provided for taxation, inclusive of Rs. 43,000 for wealth tax, as against only Rs. 38,350 for wealth tax in the previous year. No amount has been transferred to the reserves, whereas a sum of Rs. 3 lakhs was credited to machinery reserve a year ago. The dividend on ordinary shares has been kept unchanged at 6 per cent. This has taken up Rs. 2.40 lakhs. The dividend on preference shares costs Rs. 5,197. The sum left to be carried forward is higher at Rs. 1.93 lakh, as against Rs. 84,849 brought in.

The Company is going ahead with the development of its wagon building plant at Mokameh, Bihar, where, in addition to railway wagons and B.G. railcoach underframes, the plant will have a capacity to fabricate steel structurals to the extent of 9,000 tons per annum. A piece of land measuring approximately 40 acres has been acquired for the Company by the Government of Bihar. The plant and equipment for the wagon building plant has been ordered, for which the Government of India has granted necessary import licences. The plant and equipment are expected to reach the site early in 1959 and the project is expected to be completed by the end of 1959.

The Company's paid-up capital amounts to Rs. 41.74 lakhs, of which Rs. 40 lakhs are in ordinary shares of Rs. 10 each and the balance in 6 per cent. tax-free cumulative preference shares of Rs. 100 each. It is noteworthy that its reserves and surplus at Rs. 41.40 lakhs are more than equal to the ordinary capital. There is a small debenture liability of Rs. 5 lakhs carrying interest at 5½ per cent. In addition, there are current liabilities of the order of Rs. 148.49 lakhs, of which provision for taxation accounts for Rs. 5.65 lakhs. The gross block of Rs. 83.14 lakhs, including Rs. 6.41 lakhs by way of additions, has been written down to Rs. 45.45 lakhs. Current asse's aggregate Rs. 188.65 lakhs, exclusive of Rs. 2.54 lakhs representing patent fees which are being written off every year.

The Company has been a steady dividend-payer. It paid 15 per cent. per annum for six consecutive years from 1950 to 1955. In the latter year, it expanded its capital by Rs. 30 lakhs through issue of new shares. The new capital has been used for financing expansion in the Company's manufacturing capacity, which has not yet started yielding results. When it does, the profits are bound to expand. It is, therefore, reasonable to assume that, in the years to come, the Company should be able to step up the dividend steadily. The Company is engaged in the manufacture of textile machinery, tea machinery, railway carriage and wagon components, signal lever frames and interlocking material, forgings and drop-stampings of all kinds. Repetition machine work and gear-cutting-castings in cast iron and non-ferrous metals are also produced. Besides the new factory at Mokameh in Bihar, the Company has its original works at Titaghur close to Calcutta.

At the time of writing, the Rs. 10 paid-up shares of the Company are being quoted at Rs. 11, at which rate the yield is 5.45 per cent. Considering the strong reserve position and the possibility of growth in profits in the coming years, the yield does not seem to be unattractive. It may be noted that, early in October last, that is, before the share markets began to take a downward turn, this scrip was quoted at Rs. 13.

RESULTS OF CONSOLIDATED COFFEE

DIVIDEND HALVED—FINANCES STRONG

LIKE some of its confreres, the Consolidated Coffee Estates (1943) Ltd. (Managing Director: Mr. R. C. Paterson, Pollibetta, Coorg) also has reported adverse results for its latest accounting year, namely, the year ended 30th June 1958. There was a substantial fall in the output of coffee and with lower price realisation, rendered worse by higher expenses, the Company's profits have experienced a sharp drop from the record level reached in the previous year. The value of coffee sold during 1957-58 declined sizably by Rs. 38.25 lakhs to Rs. 75.07 lakhs. The value realised on coffee sales was at Rs. 2.25 per point, as against Rs. 2.50 in the previous year, though it is anticipated that the final payment may be slightly in excess of this figure. The coffee crop was lower by 717 tons at 2,462 tons.

The gross profit at Rs. 38.74 lakhs is less than half of the record profit of Rs. 78.26 lakhs for the previous year. As a result of this fall, the upward trend in the Company's gross profit which had continued during the previous four years in succession has suffered a break. A redeeming feature, perhaps, is that the year's gross profit is a shade higher than the previous best at Rs. 38.59 lakhs earned in 1955-56. A fall in profit naturally means lower income for the Government. Accordingly, the provision for taxation has been reduced from Rs. 29.36 lakhs to Rs. 15.12 lakhs. This provision consists of Rs. 11.40 lakhs for agricultural and wealth tax, as against Rs. 26.75 lakhs last year, and Rs. 3.72 lakhs for Indian income-tax, as against Rs. 2.61 lakhs. The provision for depreciation, however, has been raised from Rs. 2.01 lakhs to Rs. 4.37 lakhs. After these essential provisions, the net profit amounts to a mere Rs. 15.88 lakhs, as compared with Rs. 39.75 lakhs earned a year ago.

Consequent on the fall in profit, the amount allocated to general reserve has been substantially cut from Rs. 10 lakhs to Rs. 1.50 lakh. Likewise, the dividend to ordinary shareholders has been halved to 20 per cent. from 40 per cent. for 1956-57, to which level it had been doubled from the same rate, namely, 20 per cent., paid for 1955-56.

The Company's progress during the past four years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Value of crop—				
Coffee	75.07	1,13.32	67.53	55.89

Pepper (tons)	96	47	77	101
Cardamoms (maunds)	457	354	418	310

* On the increased capital of Rs. 71.55 lakhs.

It will be observed that, though the results for 1957-58 compare unfavourably with those for 1956-57, they are as good as those for 1955-56. For an agro-industry like coffee, it will not be fair to make comparisons only with the best year. If right conclusions about the performance of the Company are to be drawn, it will be necessary to view its latest results against the background of those for a period of a few years. Such a study will show that there is no cause for dissatisfaction with the results for 1957-58. In fact, the net profit would have been better than it has been but for the higher incidence of taxation. A comparison of the tax provision for 1957-58 with that for 1955-56 will show that it is 50 per cent. higher, though the gross profits for both the years are practically the same.

The Company's estate consists of 10,608 acres. Of these, the area under coffee is 7,052 acres (arabica 4,449 acres and robusta 2,603 acres). Of the balance, 108 acres are devoted to oranges, 154 acres to cardamoms, 596 acres to rice lands and 41 acres to plantain and other fruits. Reserve lands account for 2,657 acres.

The Company's works at Kushalnagar cured 2,745 tons of coffee during the year under review, as against 2,741 tons in the previous year.

The Company's financial position as disclosed by its balance-sheet as at 30th June 1958, is impressive. It has a paid-up capital of Rs. 90.30 lakhs, made up of 75,000 six per cent. tax-free cumulative preference shares of Rs. 25 each and 715,500 ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 58.45 lakhs, of which the general reserve alone accounts for Rs. 51.75 lakhs. During the year under review, the Company redeemed debentures amounting to Rs. 10 lakhs in full. It has, therefore, transferred the sum of Rs. 4 lakhs which was in the debenture redemption fund to the general reserve. There was an addition of Rs. 18.46 lakhs to the gross block during the year, bringing its total value to Rs. 142.78 lakhs. This has been written down to a book value of Rs. 111.83 lakhs. The current liabilities amount to Rs. 77.93 lakhs and include a provision of Rs. 44.84 lakhs for taxation. As against these, there are current assets aggregating Rs. 114.85 lakhs. Of the latter, cash and bank balances alone amount to Rs. 19.72 lakhs.

The Rs. 10 fully paid up ordinary shares of the Company are currently quoted at Rs. 24.65 *cum-div.* On an *ex-div.* basis and on the basis of the dividend for the year under review, the shares provide a yield of 8.8 per cent. per annum.

As for the outlook, the following quotation from the Chairman's speech will give an idea:

"As disclosed in the Directors' report, we had estimated as our coming crop, a crop of 2,600 tons made up of 1,750 tons of Arabica and 850 tons of Robusta. At the time of the report we had anticipated these estimates would be firm. Unfortunately, during the last week of November the whole of Coorg district suffered from monsoon, if not cyclonic conditions, and this has resulted in serious fall of crop. Some of this will, undoubtedly, be gathered as gleanings when we have finished picking, but, of course, a great deal will likewise have been lost.

"It is impossible at this juncture to give an accurate estimate but it would appear that the loss in the Arabica crop may well be in the neighbourhood of 10 per cent. It is, however, possible that what is lost in Arabica may to some extent be made up in Robusta, which looks as if it may slightly exceed our original estimates. What is one man's meat, however, is another man's poison, and the rains, although harmful to our current harvest, will undoubtedly benefit next season's output. The new wood on the trees was already substantial and there has been additional growth following that week of monsoon conditions. The coffee is looking well and general expectation for 1959-60 are for another most substantial crop, although in agriculture where so much is dependent on the variance of the weather, it would be indeed rash to make any definite forecast."

Industrias Kaiser Argentina, Buenos Aires, an affiliate of Willys Motors, Inc., U.S.A., has announced that it would begin the manufacture of a new small passenger car in Argentina next year. The new car will have the world-famous Alfa Romeo, four-door sedan body (1900 series) and an IKA four-cylinder engine and mechanical components.

At the present time, IKA is building universal Jeeps, Jeep station wagons, Jeep pickup trucks and the Kaiser Carabela passenger car. The Carabela is a six-cylinder, five-passenger, standard size vehicle comparable to the 1955 Kaiser Manhattan.

It was announced simultaneously that an agreement had been signed between IKA, Willys Motors and Alfa Romeo, SPA, Milan, Italy, licensing IKA to manufacture the Alfa Romeo four-door sedan body at its plant in Cordoba, Argentina. The new car, which has not yet been named, will weigh approximately 2,200 pounds.

Production of the IKA small car will begin in October 1959 and the Company expects to build 1,350 units before the end of that year. A tentative schedule of 16,500 small vehicles has been set for 1960.

IKA, which has pioneered the manufacture of motor vehicles in Argentina, expects to further expand its production of Jeep vehicles and Carabela passenger cars in 1959. It has a tentative schedule of 32,500 Jeep vehicles and 3,500 Carabelas for next year.

RAJAGIRI RUBBER REPEATS DIVIDEND

PROFIT OF INDIAN VEGETABLE PRODUCTS LOWER

Rajagiri Rubber and Produce Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Kerala State) present the audited accounts of the Company for the year ended 30th June 1958.

The total estimated crop for the year under report was 5,70,000 lbs. rubber from Rajagiri and 8,00,000 lbs. from Shaliacary (total 13,70,000 lbs.) to be produced at an average cost of 74 nP per pound. The actual crop harvested was 14,10,177 (13,89,753) lbs., viz., 5,63,500 lbs. on Rajagiri and 8,46,677 lbs. on Shaliacary at an average estate cost of 77 (71.42 cents per pound) nP per pound. The average sale price realised was Re. 1.51 per pound as compared to Re. 1.50 for the previous year.

After providing Rs. 4,50,000 (Rs. 6,10,000) for taxation and after adjusting Rs. 1,01,250 (Rs. 1.35,000) towards interim dividend paid at 7½ (10) per cent. on the equity shares and Rs. 1,35,600 (Rs. 1,35,600) towards the dividend of 6 per cent. on preference shares for the year, a balance of Rs. 2,03,080 (Rs. 59,217) is available. This, together with the balance brought forward of Rs. 12,299 (Rs. 8,082) and Rs. 9,036 (Rs. 80,000 from dividend equalisation fund) transferred from reserve for Kuthakapattom land aggregating Rs. 2,24,414 (Rs. 1,47,299) is recommended to be disposed of as under:

To proposed final dividend of 12½ (10) per cent. [making 20 (20) per cent. for the year] on equity shares absorbing Rs. 1,68,750 (Rs. 1,35,000), to transfer to rehabilitation reserve Rs. 15,000 (*nil*) and to carry forward Rs. 40,664 (Rs. 12,299).

Estimate for 1958-59.—A total crop of 13,70,000 (13,70,000) lbs. of rubber—5,70,000 (5,70,000) lbs. from Rajagiri and 8,00.000 (8,00,000) lbs. from Shaliacary—is estimated to be harvested during 1958-59 season at an average cost of 80 nP per pound. The capital expenditure for the year is estimated at Rs. 1,26,900.

The estates have been regularly visited and are reported to be in excellent condition.

The directors would like to express their appreciation and satisfaction of the work of the Managing Agents and Superintendents and staff of the Company for the satisfactory results achieved during another year of successful working.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,10,000	Gross block	46,47,820
Reserves ...	8,36,102	*Less*—Depreciation ...	4,23,094

Indian Vegetable Products Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes, Forbes Campbell & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1958.

The results for the year show a profit of Rs. 4,86,482 (Rs. 7,20,006) but after providing for bonus to staff amounting to Rs. 27,000 (*Rs. 50,000*), depreciation Rs. 52,949 (Rs. 45,888), development reserve Rs. 15,676 (*nil*) and taxation Rs. 2,33,000 (Rs. 3,92,000) there is left a balance of Rs. 1,57,857 (Rs. 2,32,118). To this amount has to be added excess provision for previous years written back of Rs. 55,000 (*nil*) and the balance brought forward from 1957 of Rs. 3,693 (Rs. 8,325) making available a sum of Rs. 2,16,550 (Rs. 2,40,443). From this amount the directors recommend the payment of a dividend of Rs. 10 (Rs. 10) per share, free of income-tax, which will absorb (Rs. 2.11,750 (Rs. 2.11,750) leaving a balance to be carried forward of Rs. 4.800 (Rs. 3,693).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,17,500	Gross block	27,14,482

Western Bengal Coalfields, Ltd.

The directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1958.

The profit for the year before charging depreciation and taxation amounts to Rs. 7,54,443 (Rs. 5,28,489) from which are deducted provision for income-tax Rs. 1,25,000 (Rs. 53,928), provision for cess charges Rs. 1,04,500 (Rs. 49,000) and provision for depreciation Rs. 3,06,115 (Rs. 2,15,308) leaving a balance of Rs. 2,18,828 (Rs. 2,10,253) which, together with the balance brought forward from last year of Rs. 11,543 (Rs. 7,262) makes a total of Rs. 2,30,371 (Rs. 2,61,443 after including Rs. 43,928 being provision for taxation not required). Out of this after transferring to development reserve Rs. 22,500 (*nil*), there remains a balance of Rs. 2,07,871 (Rs. 2,61,443). The directors recommend payment of dividend at the rate of 40 (50) nP per share, absorbing Rs. 1,99,920 (Rs. 2,49,900) leaving a balance to be carried forward to the next year's account of Rs. 7,951 (Rs. 11,543).

As required by the New Finance Act, the directors have created a new reserve called "Development Reserve" to which has been credited 75 per cent. of the estimated amount of development rebate in respect of additions to plant and machinery during the period 1st January 1958 to 31st March 1958.

Raisings.—Total raisings for the year were 2,27,205 (1,98,893) tons and despatches 2,14.421 (2,02,320) tons. Occurrence of the fire in Pit Nos. 3 and 4 of the Samla *Manderboni Colliery* was mentioned in the directors' last report. This fire caused no small setback to the working of the Company during the year because of the heavy loss of revenue that was involved due to the subsequent closure and sealing of these pits. Permission from the Mines Department for the re-opening of these pits was received very recently. The pits have now been re-opened and necessary reclamation work is being carried out. It is hoped that these pits would reach normal production in another few months' time.

Depillaring operations were commenced at the Moira Colliery with satisfactory results. Workings at this colliery of the Company were and continue to be satisfactory.

Various changes in the cost structure of the coal industry were referred to in the last report. The excessive increase in cost of production due to these changes is being very acutely felt by the coal industry, but unfortunately the coal Price Revision Committee has not yet submitted its report and hence the revision of coal prices has been delayed. The industry is keenly awaiting the recommendations of the Committee.

United Breweries Ltd.

The directors of the above Company (Chairman: Mr. Vittal Mallya, Bangalore) submitted the audited accounts of the Company for the 43rd year ended on 31st March 1958.

The working of the Company for the year under review resulted in a profit of Rs. 3,83.566 (Rs. 1,21,343). To this is added the unappropriated profit brought forward from the previous year of Rs. 6.022 (Rs. 4,679) making a total of Rs. 3,89,588 (Rs. 1,26,022). The directors have paid an interim dividend at Rs. 7.50 (Rs. 7.50) per share, without any deduction for income-tax payable by the Company, on 31st March 1958, absorbing Rs. 60,000 (Rs. 60,000) and transferred to development rebate reserve Rs. 20,100 (*nil*) leaving an available balance of Rs. 3,09,488 (Rs. 66,022). The directors now propose the payment of a final dividend at Rs. 37.50 (Rs. 7.50) per share, without any deduction for income-tax payable by the Company, in the following manner: Rs. 12.50 per share in cash, which will absorb Rs. 1,00,000 (Rs. 60,000) and Rs. 25.00 (*nil*) per share by the allotment of one newly created share, which will absorb Rs. 2,00,000 (*nil*) leaving a balance of Rs. 9,488 (Rs. 6,022) which the directors recommend to be carried forward to the next year. The directors further recommend that each of the newly created shares of Rs. 25 fully paid allotted by way of dividend be consolidated with each of the existing shares of Rs. 75 fully paid so as to make the capital of the Company Rs. 8,00,000 consisting of 8,000 shares of Rs. 100 each fully paid.

Operations.—The demand for the Company's products remained at a high level throughout the year under review and but for the difficulties experienced in obtaining licences for the import of basic raw materials, the turnover would have been considerably higher. The prospects continue to remain very satisfactory.

Subsidiary Company.—The dividend on the equity share capital recommended by the directors of the subsidiary Company will be received and taken into account during the current year. The directors of the subsidiary Company are issuing 760 equity and 704 preference shares of Rs. 100 each, being the balance of the authorised capital of the subsidiary Company, and these have been offered in the first instance to the Company as the holders of the entire equity capital of the subsidiary pursuant to Section 81 of the Companies Act, 1956. The directors propose to accept the offer in respect of the equity shares and renounce the Company's rights in respect of the preference shares in favour of such persons as may be interested in purchasing them.

Bombay Safe Deposit Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes, Forbes Campbell & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1958.

The results for the year show a profit of Rs. 70,443 (Rs. 74,507) but after providing for bonus to staff amounting to Rs. 4,500 (Rs. 4.500), staff gratuity Rs. 2,725 (Rs. 2,500), depreciation Rs. 1,302 (Rs. 3,322) and taxation Rs. 30,500 (Rs. 41,500 there is left a balance of Rs. 31,416 (Rs. 22,685). To this amount has to be added the balance brought forward from 1957 of Rs. 324 (Rs. 339) making available a sum of Rs. 31,740 (Rs. 31.524 which includes Rs. 8,500 transferred from reserve fund). From this amount the directors recommend the payment of a dividend of Rs. 26 (Rs. 26) per share, free of income-tax, which will absorb Rs. 31,200 (Rs. 31,200) leaving a balance to be carried forward of Rs. 540 (Rs. 324).

The deposit was well patronised during the year under review and income from rentals was almost maintained at last year's level.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rajendra Coffees Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Balehonnur) submitted the audited accounts of the Company for the year ended 31st March 1958.

The result of the Company's working for the period under review shows a profit of Rs. 1,75,537 (Rs. 1,32,874) and after making provisions for depreciation written off Rs. 7,768 (Rs. 6,190), Company's contribution to provident fund Rs. 1,948 (Rs. 1,861) and debenture interest and income-tax payable thereon of Rs. 8,029 (Rs. 10,272), there is left a net profit of Rs. 1,57,792 (Rs. 1,14.551). To this amount is to be added a sum of Rs. 31,341 (Rs. 24,290) being the last year's balance brought forward making a total of Rs. 1,89,133 (Rs. 1,38,841). The directors have transferred to agricultural income-tax reserve and other taxes Rs. 43.000 (Rs. 46,000) and to general reserve Rs. 20,000 (*nil*) leaving for appropriation a sum of Rs. 1,26,133 (Rs. 92,841). The directors recommend payment of a dividend at 6 per cent. tax-free on 10.000 preference shares absorbing Rs. 6,000 (Rs. 6,000), a dividend at 5½ per cent. tax-free on 10.000 redeemable preference shares absorbing Rs. 5,500 (Rs. 5 500) and a dividend at 40 (25) per cent. tax-free on 40.000 ordinary shares absorbing Rs. 80,000 (Rs. 50,000), leaving a balance of Rs. 34,633 to be carried forward to next year.

The estimated agricultural income-tax and other taxes for 1957-58 are Rs. 43.000 and the directors have transferred a sum of Rs. 43.000 to agricultural income-tax reserve to meet the contingent liability.

Working.—The directors feel that the working results for the year ending 31st March 1958 have been quite satisfactory. As against a profit for the year ending 31st March 1957 Rs. 1,14,551 the profit and loss account for the year ended 31st March 1958 shows a sum of Rs. 1,57,792. The general condition of the estate has improved as may be noted from the estimated crop for the coming year. The Horikhan Estate has been sold. The expenses for the year incurred on the above estate have not been included in profit and loss account since the expenses incurred were reimbursed by the purchaser of the Horikhan Estate.

Crop.—The coffee crop realised for the year under review was 123 (82) tons robusta against the estimate of 120 tons robusta.

The coffee crop estimate for the year 1958-59 is 147 tons robusta and one ton arabica. The average cultivation cost of coffee per acre is Rs. 337.32.

As per the agreement signed by the representatives of the Planters' Association in Mysore and the Estate Staffs' Union of South India, the Company revised the salary and the scale of the estate staff and implemented the other terms of the agreement with effect from 1st July 1957.

Teekoy Rubbers (India) Ltd.

The directors of the above Company (Managing Agents: East India Agencies Private Ltd., Palai, Kerala State) submitted the audited accounts of the Company for the year ended the 31st March 1958.

The area of the Company's Estate remains unchanged at 1,178 acres seedling rubber, 276 acres budded rubber and 416 acres reserve land. In pursuance of the replanting programme mentioned in our previous report, 85 acres of the seedling area were replanted with high yielding clones during the year under the Rubber Board's subsidised replanting scheme. Sanction from the Board has also been received for the replanting of another area of 85 acres in 1959. Under the Scheme, the Company gets from the Board a subsidy of Rs. 250 per acre spread over seven years which is the period required for a plant to begin yielding. The total expenditure on replanting per acre for the seven-year period is estimated at Rs. 1,300. It is proposed to continue the replanting programme as far as possible. The amounts under the general reserve, reserve for doubtful debts and the debenture redemption fund (less Rs. 1,29,600 being the amount of outstanding debentures) have been transferred to a replacement reserve, to which is charged the replanting expenditure during the year.

The net profit for the year, after meeting all working expenses and charges and the replanting expenditure of Rs. 27,182 incurred in the year, is Rs. 1,48,070 (Rs. 1,61,918). This amount together with Rs. 9,940 (Rs. 8,472) brought forward from the previous year and Rs. 27,182 (*nil*) brought down from replacement reserve makes available a total of Rs. 1,85,192 (Rs. 1,70,390). Out of this, the directors have paid the dividend on preference shares for the year ended the 31st March 1958 amounting to Rs. 36,000 (Rs. 36,000) and provided for taxes Rs. 72,500 (Rs. 64,450). The balance Rs. 76,692 (Rs. 69,940) may be allocated as under:—

To dividend on ordinary shares at 6 (6) per cent. absorbing Rs. 60,000 (Rs. 60,000) and to carry forward Rs. 16,692 (Rs. 9,940).

The crop obtained during the year is 4,40,602 (4,01,436) lbs. rubber. This is in excess of the previous year's figure by 39.166 lbs. The Estate cost per 100 lbs. rubber is Rs. 94 (this does not include expenditure on replanting) compared to Rs. 97 in the previous year. But for the increased crop, the average Estate cost would have gone up on account of the additional charges the industry had to meet in the year such as Provident Fund benefits to labour from the 30th April 1957, enhancement of salaries and allowances to staff with retrospective effect from the 24th October 1956, increased wages to labour from the 1st November 1957, etc. The average net price obtained for rubber is Rs. 151.50 per 100 lbs., as against Rs. 154 in the previous year.

The amount of debentures at present outstanding is Rs. 1,27,600. In accordance with the terms of issue, this amount has to be paid off on the 31st March 1959.

The price of rubber in India continues to be fixed at Rs. 155.75 per 100 lbs. Since the last fixation of price in September 1955, there has been substantial increase in costs of production which warrant a revision in price.

Pulgaon Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Hardayal Sons, Bombay) submit the audited accounts of the Company for the year ended 30th June 1958.

The working of the mills in the year has resulted in a loss of Rs. 1,97,964 (profit of Rs. 5,91,026 out of which provision for depreciation amounted to Rs. 5,06,222. The balance of Rs. 84,804 along with the amount brought forward from 1955 of Rs. 1.099 made a total of Rs. 85,903. From this, ordinary dividend at 50 nP per share, absorbed Rs. 75,000, leaving a balance to be carried forward of Rs. 10,903) exclusive of depreciation.

The difficulties through which textile mills producing medium counts are passing is well known. The mills mainly produce medium counts depending on cotton available in the vicinity. Added to the adversity there had been a most unfortunate and ill-conceived strike of over two months by labour. In view of these circumstances and in comparison with the results of several other mills, the directors are happy to state that the Company has steered fairly well out of the crisis mainly because of very careful purchases, sales and working of the mills. The crisis is not yet over and still further efforts have to be made to avoid losses in the coming year and the directors are endeavouring to do their best to meet the situation. A dividend cannot be declared for the year, which was being continuously given except for two in last twenty years of the Company.

By a resolution dated the 23rd April 1952, the lands, buildings and plant and machinery belonging to the Company were written up by Rs. 15,00,000 being the estimated appreciation in their values. On recent reconsideration the Board has decided to write down these assets. A sum of Rs. 1,100 to the debit of goodwill account was adjusted against the appreciation of Rs. 50,000 allocated to the appreciation in lands, as such Rs. 48,900 have now been written off against lands, Rs. 4,50,000 against buildings and Rs. 10,00,000 against plant and machinery. This write-off was done as the Board felt it necessary, having regard to the uncertain condition of the textile trade leading to the value of the block as a whole depreciating to the extent the same had appreciated in 1952.

Accounts in brief are as under:—

Dibrugarh Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit, after providing for depreciation, of Rs. 3.81,530 (Rs. 4,56,139) to which must be added unclaimed labour bonus written back Rs. 8,733 (*nil*) and the balance of profit brought forward from 1956 of Rs. 33,396 (Rs. 53,921) making a total of Rs. 4,23,659 (Rs. 5,10,060). From this amount must be deducted—adjustment account Rs. 16,634 (Rs. 3,861), bad debts written off Rs. 379 (Rs. 717 being stores written off), provision for taxation Rs. 1,54,000 (Rs. 1,57,807) and provision for wealth tax Rs. 5,000 (*nil*) leaving a balance of Rs. 2,47,646 (Rs. 3,18,396 after providing Rs. 29,279 for labour bonus). From this balance the directors have set aside to general reserve Rs. 25,000 (*nil*) and to buildings and machinery reserve Rs. 74,000 (Rs. 1,50,000) leaving an available balance of Rs. 1,48,646 (Rs. 1,68,396) which, the directors recommend, should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1957, at the rate of Rs. 2.50 (Rs. 3.00) per ordinary share on 45,000 ordinary shares, absorbing Rs. 1,12,500 (Rs. 1,35,000) leaving to be carried forward Rs. 36.146 (Rs. 33,396).

Crop.—The saleable crop weighed out at 6,832 maunds against an estimate of 7,200 maunds and was disposed of at an average price of Rs. 2.73 nP per lb. The usual comparative statement for previous seasons is given below:—

Season	Crop	Avg. Price per lb.
	Mds.	Rs.
1956	7,323	2.64
1955	7,245	2.37
1954	7,222	3.26
1953	6,233	2.09

The revised estimate for season 1958 provides for a saleable crop of 8,000 maunds at a total revenue expenditure of Rs. 9,90,000.

The smaller crop made in 1957, was mainly due to adverse weather conditions.

2. The relative explanatory statements pursuant to Section 173 of the Companies Act, 1956 of the special business under item No. 5 and 6 set out above are annexed herewith.

3. If the Dividend on Shares as recommended by the Directors is passed at the Meeting, it will be paid on or after 28th January, 1959, through the Company's Bankers to those Shareholders whose names are on the Company's Register of Members on 28th January, 1959.

By Order of the Board of Directors,
HOMI F. MEHTA,
Director.

BOMBAY, *16th December*, 1958.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act 1956.

The following explanatory statements as required by Section 173 of the Companies Act 1956 set out all material facts relating to the special business mentioned in the Notice dated 16th December, 1958.

Item No. 5 of the Notice:

Shri D. D. Chothia was appointed as an additional Director in August, 1958 by the Board of Directors under Article No. 107 of the Articles of Association of the Company. Under Section 260 of the Companies Act 1956, he can hold office only upto the date of this Annual General Meeting. As required by Section 257 of the Act, a notice has been received from some members signifying their intention to propose his appointment as a Director. Shri D. D. Chothia is a capable and active business man of repute and experience and it is in the interest of the Company that he should continue to be a member of the Board.

Item No. 6 of the Notice:

Shri M. D. Chothia being a relative of Shri Dickey D. Chothia, a Director of the Company, it is necessary to pass a Special Resolution for his employment, under Section 314 of the Companies Act, 1956. He is a B.A., LLB., of the Bombay University and worked as an Articled Clerk in the firm of Messrs. Mulla & Mulla and Craigie Blunt & Caroe for three years. He has lately been practising as an Advocate. As such his knowledge and experience will be useful to the Company, if he is employed in its service. The Directors have thought fit to employ him as a Deputy Manager at a salary of Rs. 425 per month and the usual Dearness Allowance and other benefits available to other employees will be available to him also. The future increases in his remuneration will be according to the discretion of the Directors. Your Directors commend the Resolution for your approval.

HOWRAH MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors of this Company have today declared the following interim dividends payable to those Members whose names are registered in the Books of the Company on the 31st January, 1959 or to their mandatees.

An Interim Dividend on the Preference Shares at Rs. 3.50 nP. (Rupees three and naye Paise fifty only) per share for the year ending 31st March, 1959.

An Interim Dividend on the 'A' Preference Shares at Rs. 3.50 nP. (Rupees three and naye Paise fifty only) per share for the year ending 31st March, 1959.

An Interim Dividend on the Ordinary Shares at Rs. 0.50 (Fifty naye Paise only) per share for the year ending 31st March, 1959.

The Share Transfer Books of the Company will be closed from the 24th to the 31st January, 1959.

By Order of the Board,
JARDINE HENDERSON LIMITED,
D. SMALLEY,
Chief Accountant,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *29th December*, 1958.

Kemp and Co., Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) submit the audited accounts of the Company for the year ended 31st March 1958.

The net profit for the year ended 31st March 1958, after providing Rs. 67,562 (Rs. 66,471) for depreciation, Rs. 90,000 (Rs. 88,000) for taxation and Rs. 34,350 (Rs. 34,773) for bonus to staff and workers amounts to Rs. 91,122 (Rs. 94,544). To this is added the amount brought forward from last year of Rs. 15,313 (Rs. 14,719) making a total of Rs. 1,06,435 (Rs. 1,09,263). After adding to this excess of provision for taxation transferred back of Rs. 10,000 (*nil*) there is a total amount available of Rs. 1,16,435 (Rs. 1,13,476 including Rs. 4,213 being surplus provision for bonus in past years written back). The directors recommend appropriation of this amount as follows:—

To distribution of a dividend at Rs. 15 (Rs. 15) per share (Rs. 200 paid up), free of income-tax absorbing Rs. 90,000 (Rs. 90,000) leaving a balance to be carried forward of Rs. 26,435 (Rs. 15,313 after providing Rs. 3,270 for Bombay sales tax for the year 1954-55 and Rs. 4,893 for Inter-State (Bihar) sales tax for the period from April 1953 to September 1955.

The directors consider the provision for taxation as sufficient to meet this liability, and the depreciation on fixed assets as adequate.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	12,00,000	Gross block	25,97,593
Reserves ...	6,23,983	Less—Depreciation ...	13,03,860
Provision for taxation ...	1,96,507	Net block ...	12,93,733
Liabilities ...	15,85,303	Stock-in-trade	11,13,101
Profit and loss account ...	26,435	Goods-in-transit ...	377
		Debts, deposits and advances ...	11,55,335
		Investments	17,544
		Cash ...	57,138
Rs.	36,32,228	Rs.	36,32,228

STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, *7th January*

The last three weeks under review witnessed extremely stringent conditions in the short-term money market. In the closing weeks of last month, the demand for funds was rather heavy, due to year-end requirements of banks and scarcity of floating funds in the market. Indeed many of the banks had to seek accommodation from the Reserve Bank and the State Bank. The position did not, however, improve since the beginning of the New Year. Contrary to expectations banks continued to be heavy borrowers, with the result that interest rates in the inter-bank call money section hardened further. The rate among the Exchange banks and big Indian banks rose from 2½ per cent. in the second week of December to 3¼ per cent. towards the close of the year. Similarly, the rate among the smaller Indian banks rose from 3 per cent. to 3¼-3½ per cent. These rates continued even after the turn of the year and could be had even at the time of writing. House money at seven days' notice was bid at 3½ to 3¾ per cent., as against 3¼-3¾ per cent., three weeks ago. The rate on short-term deposits too hardened from 3¼-4 per cent. to 3¾-4 per cent. for one to six months, depending upon the period and the amount.

The sale of 91-day Treasury Bills was resumed this week after a break of two weeks. As against an invitation for Rs. 3 crores, the total amount offered was no more than Rs. 3.05 crores. Tenders at Rs. 99.385 were accepted in full. This represented a discount rate of 2.460 per cent. per annum, as compared with 2.445 per cent. in the last sale. In view of the present stringency in the money market, the Reserve Bank has reduced the tenders for next week to Rs. 2 crores. No sales of intermediate Treasury Bills were held during the last three weeks, but the Bank has announced that they will be resumed this week at the fixed rate of Rs. 99.401 per cent. If sales materialise at this rate, it would mean a yield of 2.396 per cent. per annum, as against 2.356 per cent. per annum at the last sale of these bills.

The Reserve Bank of India's statement for the week ended 2nd January 1959 discloses, as compared with that for the previous week, an expansion of Rs. 12.57 crores in notes in circulation and, with this rise, the note circulation has once again crossed, after a lapse of over six months, the Rs. 1,600-crore mark. Notes held in the Banking Department are lower by Rs. 3.31 crores and the net increase of Rs. 9.26 crores in total notes issued is covered by a rise of Rs. 10 crores in rupee securities and a drop of Rs. 74 lakhs in rupee coin. There is no change in foreign securities at Rs. 164.67 crores, but balances held abroad have registered a rise of Rs. 35 lakhs to Rs. 24.52 crores. The total foreign assets now stand higher at Rs. 189.19 crores, as against Rs. 180.62 crores a month ago. There has been a decline of Rs. 2.89 crores in deposits of the Central Government, while those of other Governments have gone up by Rs. 1.30 crore. Deposits of banks have dropped by Rs. 4.36 crores. Loans and advances to Governments are up by Rs. 1.28 crore and other loans and advances by Rs. 12.06 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.20 crore. Investments have declined by Rs. 11.36 crores.

The year-end state of affairs in the short-term money market is fully reflected in the Scheduled banks' statement for the week ended 26th December 1958. Over the week, while demand deposits have gone up by Rs. 7.49 crores, time deposits are lower by Rs. 6.47 crores. Inter-bank borrowings repayable on demand are higher by Rs. 4.55 crores, but those of a time nature show a fall of Rs. 5.85 crores. Borrowings from the Reserve Bank are almost unchanged, whereas those from the State Bank show a rise of Rs. 1.21 crore. The upward trend in advances has been maintained with a fresh rise of Rs. 4.47 crores during the week under review and bills purchased and discounted too are higher by Rs. 1.27 crore. Investments stand reduced by Rs. 5.22 crores, bringing the total fall in three successive weeks to Rs. 12.06 crores. Cash balances show a rise of Rs. 9.60 crores and money at call and short notice Rs. 1.26 crore.

The Gilt-edged market ruled steady during the last three weeks. While business in the Central Government loans was scanty, the State loans continued to be active, on good demand, the main buyer being the Life Insurance Corporation. 4 per cent. 1967 and 1968 loans, as well as 4½ per cent. issues were particularly in favour and they recorded further smart gains.

Among the Central Government securities, 3 per cent. 1986 Conversion Loan and 3 per cent. 1970-75 were in demand, the former having buyers 35 nP higher at Rs. 73.50 and the latter 20 nP higher at Rs. 90.85. 3 per cent. 1966-68 were a fraction lower at Rs. 93.95, while 3 per cent. 1964 and 1963-65 each gained 5 nP to Rs. 96.95 and Rs. 96.85, respectively. 3½ per cent. 1965 was placed at Rs. 99.75 *ex*-voucher, as against Rs. 99.80 *cum*-voucher three weeks ago. 3¾ per cent. 1974 gained 10 nP to Rs. 98.45, due to proximity of interest payment. The Reserve Bank has stopped sale of this security. In the State loans section, Bombay 4 per cent. 1970 recorded a rise of 25 nP to Rs. 99.25. 4½ per cent. 1969 improved by 15 nP to Rs. 101.25, 1970 by 5 nP to Rs. 101.15 and 1971 by 20 nP to Rs. 101.10. West Bengal 4 per cent. 1967 and 1968 were marked up by 10 nP each to Rs. 99.85 and Rs. 99.80, respectively, while 4½ per cent. 1970 rose by as much as 30 nP to Rs. 100.90. Madras 4 per cent. 1967 gathered 20 nP to Rs. 100.10 and 1968 a like amount to Rs. 100. 4½ per cent. 1970 moved up by 20 nP to Rs. 100.90.

GOLD TOUCHES NEW HIGH LEVEL

(From Our Own Correspondent)

BOMBAY, *7th January*

A bullish tone prevailed in the bullion market since our last report three weeks ago. Though prices of both silver and gold moved somewhat erratically, the general trend was upward, which gathered momentum particularly after the turn of the new year. The highlight of the trading was, however, provided by gold, which moved up to a new high of Rs. 116-7 for ready and Rs. 116-5 for forward (January settlement) on the 5th inst. The rate for the February settlement touched a still higher level of Rs. 116-8. The peak level for ready gold touched this week was higher than last year's high of Rs. 114-15 by no less than Re. 1-10 and was, in fact, the best level seen since the middle of 1951.

The rise in bullion prices, under the leadership of gold, was largely due to speculative buying and heavy short-covering, inspired by reports that seasonal demand had set in and by expectations of still larger offtake in the coming months.

Forward gold (January settlement) advanced from Rs. 113-13 (on 17th December, the date of our last report) to Rs. 115-3 on 26th December. After a setback to Rs. 114-4 on the 30th, forward gold for the current settlement advanced to a high of Rs. 116-4 on 5th January. There was a setback yesterday to Rs. 115-7, on heavy profit-taking, but today sentiment was again better pushing up the price to Rs. 115-14 at the close. Business in February settlement commenced on Monday this week at Rs. 116-1 and, after moving up to Rs. 116-8, finished at Rs. 116-4.

Ready gold gained over the three weeks from Rs. 113-8 to Rs. 115-14; the highest level touched was, as stated earlier, Rs. 116-7.

The floating stocks of gold are estimated at 30,000 tolas, having declined from 36,000 tolas in the second week of December. The daily average arrivals were 3,000 tolas and the offtake was also of the same order.

Silver for forward delivery (January settlement) suffered an early setback from Rs. 194-6 to Rs. 192-11 on 19th December, but, in consonance with the trend of gold, it gained ground to Rs. 194-8 (for the current settlement) on the 26th ultimo. After a decline to Rs. 193-9 on the 29th, the January settlement advanced to Rs. 195-14 on Monday this week before closing at Rs. 195-2 today. Business in February settlement commenced on 30th December at Rs. 194-9, and, after touching a high of Rs. 196-13, the price shaded off to Rs. 196-1 at the close today.

Ready silver quoted at Rs. 194-4 today, after having gained ground from Rs. 192-13 to Rs. 195.

The floating stocks of silver are reported to be 1,400 bars. The daily average arrivals were 25 bars, while the offtake was less than 15 bars per day on an average.

In New York, the price of silver was stepped up from 89.625 cents to 89.875 cents, while in London it was unchanged at 75¾*d.* for spot and 75¾*d.* for forward. Gold moved erratically and closed lower at 250*s.* 2*d.*, as against 250*s.* 3*d.* quoted on 17th December.

The following comparative table shows at a glance the trend of the market during the three weeks under review:

	7-1-59	Highest	Lowest	17-12-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	115 14	116 7	112 15	113 8

* 24th January settlement. † 27th January settlement.

FAIR CLEARANCE IN HIDES

(From Our Own Correspondent)

MADRAS, *5th January*

Although U.K. trading in kips was selective, values hovered slightly above previous levels, reflecting that importers were likely to enter the market after the Christmas holidays. Locally, arrivals of tanned cow hides and calves were moderate and clearance was fair. Prices ruled firm, because U.K. buyers were reluctantly paying half to one penny advance, as sellers declined to accept levels lower than those ruling early in December 1958. Buffalo calves were in good demand from the U.K. and the U.S.A., and prices improved by 5 nP. As the raw markets remained out of line with the tanned parity, tanners slowed down their activity in the North India raw centres.

There was good call for light weight goat skins and lower grades in all average weights and prices ruled firm. Other lines were easy. Tanned sheep prime and medium tannages were unchanged and prices in the local market were higher than U.K. importers' ideas, because shippers had large orders on hand to complete.

Shipments during December 1958 were:—To the U.K.: 2,495 bales tanned cow hides, 208 tanned cow calf, 2 tanned buff hides, 360 tanned buff calf, 542 tanned goat and 608 bales tanned sheep skins; to the Continent: 7 bales tanned cow calf, 1 tanned buff calf, 394 tanned goat and 197 bales tanned sheep skins; to the U.S.A. ports: 9 bales tanned cow calf skins, 137 tanned buff hides, 197 tanned buff calf and 195 bales tanned goat skins; to Japan: 106 bales tanned sheep skins.

COTTON FUTURES MOVE UP

(From Our Own Correspondent)

BOMBAY, *7th January*

After presenting a distinctly firm trend during the fortnight ended 31st December 1958 the cotton futures market began the New Year on a bearish note which persisted practically till the close yesterday. Today, the market put on a cheerful appearance. The earlier firmness was aided by renewed purchases by spot interests and short-covering due to small arrivals. There was also replacement buying by bull operators. Consequently, cotton prices registered handsome improvement. The upward trend was halted on the 2nd inst., when the market developed a sagging tendency. Spot interests and a leading bear operator were inclined to sell, but fresh support was lacking, with the result that prices suffered a setback. After a brief recovery on the following day, the market again staged a relapse in the subsequent two sessions, but picked up considerable strength today, thanks to reduced arrivals from Nagpur area and a feeling that some mill groups might enter the market to cover their requirements in case they failed to receive deliveries against December delivery contracts. A large part of the previous losses was made up and today's closing rates were higher than those three weeks ago.

I.C.C. Moglai Jarilla March 1959, which stood at Rs. 631.75 on 17th December, met with renewed buying support and gradually moved up to touch a high of Rs. 652.00 on 31st December. It was, however, subjected to selling pressure subsequently and receded to Rs. 638.75 yesterday. Today, the contract staged an impressive recovery to Rs. 646 before finishing a shade easy at Rs. 645.50. The net rise over the three weeks was Rs. 13.75.

The following table indicates the trend of prices of the contract during the three weeks under review:

(In rupees per candy of 784 lbs.)

	7-1-59	*High*	*Low*	17-12-58
I.C.C. Moglai Jarilla (March 1959) ...	645.50	652.00	629.00	631.75

The spot market ruled quite active during the period and there was a sharp rise in prices. Staple varieties evoked increasing attention, while arrivals were small. Many mills in Bombay and Ahmedabad were reported to have made sizable purchases of Khandesh and other varieties.

No large-scale fresh business was reported in exportable styles. Export sales continued to be meagre. Out of the new crop quotas of 250,000 bales Bengal *Deshi*, 200,000 bales ¾" cotton and 50,000 bales cotton below ¾", the sales actually registered up to 30th December 1958 were no more than 41,267 bales, 9,834 bales and 250 bales, respectively.

In the foreign section, most of the mills are said to have covered their requirements of East African cotton against their recent quota allotments. Sizable business was put through in new crop A.R. Uganda, B.P 52 and Busoga for January-February shipment but at prices lower than those paid in previous weeks.

The last date for submitting applications for import of cotton under the Textile Export Incentive Scheme for July-September 1958 quarter has been extended up to the 15th inst. and that for the quarter ended December is fixed as the 31st inst. It is clearly stated that no further extension of time limit will be granted. In the meantime, the Government of India has reintroduced the system of registering contracts with the State Bank for imports of Egyptian cotton.

The latest available quotations—in rupees per candy of 784 lbs.—for Sewri are as follows, the figures in brackets being the closing rates for 17th December:

Bengal *Deshi* 650 (630); Berar Jarilla 710 (670); Khandesh 785 (760); Vijay 910 (885); Jaydhar 860 (840).

A distinctly bearish trend was in evidence in the Karachi cotton futures market during the week under review. New crop arrivals continued to be heavy, while actual offtake by mills and shippers was not large. The latest estimate of the current (1958-59) season's cotton crop places the aggregate yield at 1,425,000 bales of 478 lbs. net, as against 1,350,000 bales in 1957-58. There were reports that purchases of Pakistan cotton by Japan in the coming weeks might be lower, since three leading Japanese trading enterprises have reached an agreement with the U.S. Commodity Credit Corporation on a barter trade transaction involving exchange of 12,000 tons of ferro-chrome for 40,000 bales of U.S. cotton. N.T.R.G. January delivery fell from Rs. 62-7-6 on 31st December to Rs. 61-6 yesterday. March position dropped from Rs. 64-2-6 to Rs. 62-10.

The latest available quotations—in rupees per 82 lb.—for a few popular varieties of Pakistan cotton prevailing at Karachi are: Sind *Deshi* 65; Punjab *Deshi* 58; 4F Punjab R.G. 59-1; S.G. 64-9; L.S.S. Punjab R.G. 63-5; S.G. 67-1; N.T.R.G. 65-9; S.G. 73-1; 289F Punjab R.G. 69-1; S.G. 79-1.

The Alexandria cotton futures market ruled steady during the week. Overseas enquiries were quite good. It was stated that French spinners had completed purchases of cotton worth two million Egyptian pounds in a barter deal with Egypt. The United Arab Republic has discontinued cotton barter deals with Britain from the 1st inst. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 72.00; March 72.47. *Ashmouni*: February 63.20; April 63.15.

Dull conditions prevailed in the Liverpool cotton futures market. Buyers were holding off pending the decision of the Restrictive Practices Court on the minimum price scheme of the Yarn Spinners' Association. It was felt that, if the decision were to go against the Association, there might

be a considerable shake-out in prices. Trade circles were also awaiting the publication of the exact details of the agreement entered into between the textile interests of Britain and Hong Kong on the question of imports into Britain. There was hedge selling against some cheap purchases of Central American cotton which could not be absorbed well by mill fixing and trade covering order. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 22.20; May-June 21.55; July-August 20.50; October-November 20.00; December-January 20.00. *American cotton mixed growth contract*: March-April 21.95; May-June 21.55; July-August 20.20; October-November 19.48; December-January 19.48. *Sudan Lambert seed contract*: January-February, May-June and July-August 25.75.

The New York cotton futures market presented a firm trend during the week. The firmness was aided by reports of a further increase in certified stocks, buying by traders who had sold late last year for tax purposes and the average price at the 14 primary markets being well below the loan level. Cotton circles were inclined to believe that the demand for cotton would improve. Meanwhile, the shipment offering prices of U.S. cotton remain higher than those of American style growths, particularly Central American, Mexican and Nigerian.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	6-1-59	30-12-58	23-12-58
Spot	35.70	35.70	35.70
March	34.64	34.10	34.26
May	34.79	34.22	34.46
July	33.88	33.52	33.64

RAYON YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, *7th January*

The last three weeks under review witnessed an improvement in the prices of rayon yarns, while staple fibre yarns and cotton yarns continued to rule easy. The firmness of rayon yarns was due to renewed enquiries from important consuming centres and smaller arrivals of imported yarns. Staple fibre yarns were generally neglected. Demand for 2/40s particularly was far from satisfactory. There were reports that several South Indian mills had made sizable sales of staple fibre yarn in the Punjab where scarcity conditions were said to be prevailing. The prospects of higher indigenous output of staple fibre in the coming months also imparted weakness. Even the Government of India's decision, announced this week, to allow exports of staple fibre yarn on "first-come-first-served-basis" during January-June 1959 within a ceiling of 1.5 million lbs. failed to have any effect, since it was felt that the Indian yarns would not be able to compete with the much cheaper Japanese yarns. Cotton yarns continued to rule dull, thanks to poor offtake from internal markets and keen competition in export markets from China, Pakistan and other countries.

Among art silk yarns, 120 Japan rallied 18 nP to Rs. 4.87. 150 Italy rose by a like amount to Rs. 5.37. 120 Italy was fully maintained at Rs. 5.25. 150 Japan, however, receded by 7 nP to Rs. 5.12. Among indigenous yarns, National Rayons 120 bright first grade gained 6 nP to Rs. 4.47. But 150 bright cones first grade lost 6 nP to Rs. 4.44.

Cupressa Bamberg art silk yarn (60/1) February delivery improved from Rs. 1,595 (per case of 200 lbs.) on 31st December 1958 to Rs. 1,640. Spot 60/1 Cupressa went up by 7 nP to Rs. 8.44 (per lb.)

Staple fibre yarn (40×2) February delivery encountered selling and dropped Rs. 7 to Rs. 620. In the spot section, 40×2 Citys receded by 4 nP to Rs. 3.18 and Kohinoors by 3 nP to Rs. 3.28. Centurys were quoted 6 nP lower at Rs. 3.22. Among foreign yarns, Paramounts fell by 25 nP to Rs. 8.87. Fujis were neglected at Rs. 8.87.

In the cotton yarn section, ten counts Podars were dull at Rs. 12.25. Among twenty counts, Moderns lost 6 nP to Rs. 16.25. But thirty counts Hinds rallied 12 nP to Rs. 19.12 on special support. Among forty counts, Moderns decreased by 12 nP to Rs. 25.25, while Minaxis hardened by 36 nP to Rs. 24.94. Sixty counts Finlays were stagnant at Rs. 65.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and three weeks before:

	7-1-1959	31-12-1958	17-12-1958
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.	Rs.
120 Japan (per lb.)	4.87	4.78	4.69
150 Japan (per lb.)	5.12	5.12	5.19
120 Italy (per lb.)	5.25	5.25	5.25
150 Italy (per lb.)	5.37	5.37	5.19
Staple fibre yarn (per case of 200 lbs.)—			
40 × 2 December	—	609.00	617.00
40 × 2 February	620.00	624.00	627.00
40 × 2 Kohinoor (per lb.)	3.28	3.28	3.31
40 × 2 Century (per lb.)	3.28	3.30	3.34
Cotton yarn (per bundle of 10 lbs.)—			
10s Podar	12 25	12 25	12.25
20s Modern	16 25	16.25	16 31
30s Hind	19 12	19 00	19 00
40s Minaxi	24 94	25 00	24 58
60s Finlay	65.00	64.00	65.00
80s Modern	—	—	—

EXPORT OF GROUNDNUT CAKE

(From Our Own Correspondent)

BOMBAY, *7th January*

The much-awaited release of export quota for groundnut cake has now been announced. An announcement made by the Union Commerce and Industry Ministry in this connection on the 6th inst., says that the Government of India has reviewed the position regarding the export of groundnut oil, and decided, as a promotion measure, to grant established exporters of groundnut oil, export licences for groundnut cake equal in quantity to the oil they export between now and the end of February 1959 against their current quotas. Although the measure is widely welcomed, it was not an unmixed blessing to the trade. For, the release of quota for cakes is clubbed together with that of oil, the prices of which in foreign markets are relatively lower. At any rate, this measure seems to have given new hopes, after a prolonged spell of dull conditions. Another development is the commencement of new hedge contracts (May 1959) in groundnuts and cottonseed with effect from 5th inst.

The oilseeds market, during the last three weeks following our last review on 17th of last month, witnessed quietly steady conditions, except for an overnight recovery today, under the leadership of groundnuts, thanks to the release of export quotas for cakes. The sustained subdued sentiments which characterised the working of the market in the major part of the period are due to larger arrivals and lack of encouraging exports from abroad.

The groundnut section moved within narrow ranges for the major part of the last three weeks, with a bearish undertone. The pressure of arrivals, particularly of oil, had a depressing effect on the market. The decline would have been more pronounced, had it not been for encouraging local demand, especially from *vanaspati* manufacturers. Groundnut February Contract, which stood at Rs. 162.50 on 17th December 1958, moved down to Rs. 160.25 before winding up the year at Rs. 162.12. The contract moved both ways and recovered to Rs. 163.50 yesterday. It further advanced to Rs. 164.87 today. May 1959 contract opened on 5th inst. at Rs. 165.50 and rallied to Rs. 169.00 today. Bold ready also recorded minor fluctuations and rose from Rs. 32.62 to Rs. 32.75 after touching a low of Rs. 31.75. Oil ex-mill, which closed at Rs. 33.50 on 17th December, fell to Rs. 32.50 on 24th December, but recouped later to Rs. 32.62 at the end of the year. Although it opened the current year on an easy note, its prices rallied to Rs. 32.75 today.

The castorseed section suffered a notable setback in view of larger arrivals, particularly from Hyderabad region and of the continued lull in the export section. Slight recovery was in evidence during the close of this week, due mainly to persistent rumours about business in oil with the U.K. Castorseed May 1959 contract, which stood at Rs. 142.87 on 17th December, was hammered down to Rs. 137.62 on 31st December. It, however, recovered to Rs. 138.62 on the 2nd inst. and improved progressively to touch Rs. 142.25 today. Ready Madras, in sympathy, moved down from Rs. 28.75 to Rs. 27.62 at the close of the year. It recovered subsequently and finished at Rs. 28 today. Oil B.S.S. closed today at Rs. 15.25, as against Rs. 15 on 31st December and Rs. 16.37 on 17th December.

In the absence of any fresh developments, linseed section ruled quiet during the major part of the last three weeks. During the last few sessions, however, linseed witnessed steady conditions, mainly on account of good support from North Indian speculators and in sympathy with other seeds. Linseed May 1959 contract fell from Rs. 31.75 on 17th December to Rs. 30.81 at the end of the year and recovered later to close today at Rs. 31.81. Bold ready, which closed on 17th December at Rs. 37.50, after moving in either directions closed today at Rs. 35.25. Oil prices stood at Rs. 17.87 today, as compared with Rs. 17.78 on 31st December and Rs. 18.62 on 17th December.

The prices in the cottonseed section was conditioned mainly by the speculative activities. Cottonseed February 1959 contract fell from Rs. 116.75 to Rs. 115.25 at the end of 1958 but later recovered in sympathy with other seeds to close today at Rs. 120.25. May 1959 contract which opened at Rs. 115.00 on the 5th inst. improved to close today at Rs. 116.50.

The following table shows the prices of oils and oilseeds today, as compared with those at the end of a week and three weeks before:

	7-1-1959	31-12-1958	17-12-1958
Groundnut	Rs.	Rs.	Rs.
February 1959	164.87	162.12	162.50
May 1959	169.00	..	..
Bold ready	32.75	32.00	32.62
Coromandel ready	32.12	32.62	33.50
Khandesh quality	33.25	32.62	33.50
Oil ex-mill ready*	17.37	17.12	17.62
Railway receipts*	17.31	17.00	17.37
Castor seed			
May 1959	142.25	137.62	142.87
Ready Madras	28.00	27.62	28.75
Ready Kanpur	27.00	26.50	27.75
Oil B.S.S.†	15.25	15.00	16.37
Oil commercial†	14.19	14.00	14.62
Linseed			
May 1959	31.81	30.81	31.75
Bold ready	35.25	33.00	37.50
Oil ready†	17.87	17.78	18.62
Cotton seed			
February 1959	120.25	115.25	116.75
May 1959	116.50	..	..
Niger seed	26.50	26.25	28.00
Kardi seed	19.62	19.50	19.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR ADVANCES

(From Our Own Correspondents)

BOMBAY, *7th January*

There has been a sharp rise in sugar prices since we reported last on 17th December. The rise has followed hectic buying influenced by fears of sugar shortage in the current season. The fears are based on three factors, namely, fall in output small carryover from the previous season, and the Government's decision to export 100,000 tons. The anticipated fall in output is attributed to poor cane crop, continued diversion of large cane supplies to *gur* and *khandsari* production, and frequent threats of U.P. and Bihar cane growers to withhold supplies to factories with a view to securing higher prices. Meanwhile, the sugar millowners are actively agitating for an upward revision of at least 50 nP to 75 nP in the controlled ex-mill prices.

Medium grain sugar has gone up over the past three weeks by Rs. 2 to Rs. 109.50-Rs. 114 per bag. Large grain has advanced from Rs. 113-Rs. 119 to Rs. 115-Rs. 120. Small grain is fully maintained at Rs. 108.

The total arrivals of sugar by rail into the market during the week amounted to 12,560 bags.

* * * *

HAPUR, *5th January*

Sugar prices ruled quiet during the fortnight, with the release of 165,000 tons for free sale by the Government out of the 1958-59 season production. Crushing is in full swing in west U.P. where cane supplies are adequate, but latest estimates reveal a moderate setback in sugar output in the country, as production upto 15th December in the current season was 267,000 tons, as against 289,000 tons in the corresponding period last year.

The Muzaffarnagar sugar market was quiet. Heavy business was done by some factories at controlled prices for different destinations in the Punjab, U.P., Delhi, Gujerat and Saurashtra. The latest prevailing prices, were: Spot delivery old Deobund C29 damaged Rs. 36; Sakoti D29 dry Rs. 36.62; moist Rs. 35.75 to Rs. 36; new Saharanpur D29 Rs. 37; Shamli D29 Rs. 37; wholesale mill delivery Shamli B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36.

Ex-mill delivery sugar prices registered an upward trend in the Kanpur market, following increased demand from the principal consuming areas. Some of the mills, which were given individual allocations from the new season's quota below consumption requirements, were charging slightly better prices than the controlled rate. The latest ex-mill controlled prices were: Kanpur Rs. 36 a maund; spot per bag C29 Basti Rs. 105; Gola Rs. 103; D29 Gola, Balrampur and Tulsipur Rs. 101-4; Gargaon and Waltergunj Rs. 101.

Khandsari prices ruled quietly steady. Production is gradually increasing. New quality *khandsari* dry is quoted at Rs. 30 to Rs. 35, and wet at Rs. 25 to Rs. 28.

Ready *gur* registered an improvement of about Re. 1.50 per maund in the last fortnight, as arrivals were small at an average of 2,000 to 3,000 maunds daily following rains and inclement weather. Demand from the consuming areas was fairly good and loading facilities were easy. The latest prevailing prices were: *Gur pansera* Rs. 15.75 to Rs. 16.12; *balti* upto Rs. 16.25; *shakker* Rs. 17 per maund.

Prices in the Muzaffarnagar market also improved due to poor arrivals and prevailing prices were: *Chaku* ready Rs. 16 to Rs. 16.50; *pansera* Rs. 15.50; *shakker dara* Rs. 16.50; *masala* Rs. 18.50.

Gur futures recorded a sharp advance during the week on continued bull support from Agra and other operators. In order to check this unduly rise, the local Chamber increased the deposit on every buying transaction in *gur fagun* and also fixed the maximum limit for a firm to 200 transaction. *Gur fagun* opened at Rs. 14.90 on Monday last and was quoted today at the highest touched so far at Rs. 15.60.

HINDUSTHAN MERCANTILE BANK LIMITED

Head Office:

10, CLIVE ROW, CALCUTTA-1

Chairman: **SRI M. L. JALAN**

CAPITAL

P. H. KOTHARI, B.Com., LL.B.,
General Manager.

STRONG DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, *6th January*

Strong demand pushed up prices during the export sales held yesterday, and prices for the good quality teas made some gains. This was so despite the increase in U.K. stocks to 182 million lbs. in the week ended 26th December from 177 million lbs. in the preceding week. For this increase was considered as a normal feature for that time of the year. U.K. stocks would continue to rise in the first two or three months of the year reflecting the seasonal weight of the tea shipments from Calcutta.

Trade circles feel that it is time that West Bengal and Assam abolish the entry tax on teas, inasmuch as it affects plain teas. This subject was naturally referred to by Mr. W. E. Postlethwaite when he recently addressed the Calcutta Teas Traders Association in his capacity as Chairman. He said that the recent reductions in export and excise duties had fallen below the relief necessary to place gardens producing common teas on an economic basis. He advocated a further reduction in these duties, and declared that the reduction in duties brought no improvement in the prices of low medium and common teas, because the prices in Calcutta had generally been higher than in London. Mr. Postlethwaite termed the recent relief as resulting from inadequate appreciation of the industry's real difficulties by the Government.

Export offerings during yesterday's sales amounted to 65,200 packages. The general demand was strong, and increased as the sales progressed. The strongest feature was provided by fannings among plain brokens, as these sold above valuations. Keen competition was offered for the better types in C.T.Cs, while the prices for the poorest types were unchanged. Medium brokens and fannings were steady as were the medium B.O.Ps; but the brighter liquoring lots improved. O.F's attracted considerable attention and rose. Whole leaf grades were fully steady, but Darjeelings were below valuations. Non-wither legg cut teas realised valuations. The quotations (in rupees per lb. with those of the last auctions) were: Best Assam C.T.C. fannings 2.40 nominal (2.30 nominal), best Assam C.T.C. B.P. 2.25 nom. (2.20 nom.), clean black pekoe 2.00 (1.98), medium fannings 1.80 to 1.90 (1.72 to 1.78), plain B.P. 1.54 to 1.60 (same, medium B.P. 1.62 to 1.64 (1.62), and plain fannings 1.70 to 1.80 (1.66 to 1.72).

Export quota changed hands at 2¼ nP, but soon sellers put up the rate to 3¼ nP.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *6th January*

The outstanding event in the period under review commencing from 16th December was the further measures taken by the Government, the industry and the market to arrest raw jute prices. These measures have not yet begun to have any significant effect, since throughout the period, conditions were quiet and raw jute prices moved within very narrow limits. As for jute goods, while hessian prices recovered impressively, sacking always lagged behind with B. twills being quoted well below the I.J.M.A. minimum price. However, the report that the Government of India was likely to accept the I.J.M.A.'s recommendations to fix minimum export prices for the various categories of jute goods caused a slight recovery in sacking prices subsequently. However, this expectation did not materialise, and there was also no reference to this in the Government's announcement on 3rd January relating to measures being taken to stabilise the raw jute market. According to these, the State Trading Corporation will soon begin making purchases both from stockists and producers direct for export. Purchases in the interior will be made in the markets at Forbesganj, Golapbag, Kishanganj, and Katihar in Bihar. However, it is doubted here if producers have much to offer of the good quality fibre suitable for export, since they had already disposed most of their holdings to the traders and other middlemen to meet hard-pressed cash requirements. Market circles feel that the West Bengal Government, which has also been permitted to export raw jute, will possibly entrust its quota to the State Trading Corporation. Quantities suitable for export are naturally the best varieties which cannot be offered for export, in veiw of their acute need at home. However, it was thought here that some of the inferior varieties might find a market in the United Kingdom, since they could be mixed up with the good variety to produce miscellaneous constructions and sacking goods. The S.T.C. will have to meet a competitive market, since it is known here that Red China has by now increased raw jute production significantly to be able to offer superior varieties in world markets at prices attractive to buyers. It is also reported that Pakistan is contemplating cancellation of the export duty on raw jute in order to step up exports and arrest decline in prices consequent on the bumper crop.

The I.J.M.A. mills are also doing what they can in order to steady raw jute prices. They have now increased their purchases to four months' requirements from three months. The East India Jute and Hessian Exchange Ltd. has regulated trading further. The prices below which margins are collected have been increased. The margins for sacking and hessian will be payable when trading take place below the minimum prices fixed by the I.J.M.A. Under these new rules, the seller will have to pay a margin of Rs. 3 on all outstanding sacking sales at the close of each day in respect of contracts below Rs. 100 per 100 bags and Rs. 5 for contracts below Rs. 95. In regard to hessian, the margin is Rs. 2 for contracts below Rs. 39.50 per 100 yards. For raw jute, the margin to be deposited by the seller is Rs. 2 for sales at rates below Rs. 23.50 but above Rs. 22.50. and Rs. 3 for sales below Rs. 22.50. The increases in margin deposits have naturally been unwelcome, and it is too early for these to have any marked effect in the course of prices. But the Government statement relating to the measures disclosed that the Chairman of the East India Jute and Hessian Exchange has assured the Government that suitable measures would be taken to deal effectively with units responsible for undesirable practices.

Note was taken here of the fall in U.S. burlap consumption in November to 65 million yards from 79 million yards in October, and with the figure for December still to come, it appeared that there would be no change in the average monthly consumption which was 69 million yards up to November 1958, as also in 1957. This is a matter of interest, since despite the economic recession of last year, burlap consumption in the U.S.A. was maintained at the 1957 level. This was indicative of the strong demand for the commodity as heavy-duty packing and industrial fabrics, according to Mr. William A. Nugent, the Vice-President of Burlap Council in the United States.

On the 16th December, there was selling pressure in the futures market, and B. twills moved down to Rs. 94.25 from Rs. 94.80 and hessian 40" 10 oz. to Rs. 40 from Rs. 40.15. Soon, sacking prices became steadier, following reports of raising of the margin for futures trading and also of the price of B. twills to the level fixed by the I.J.M.A. By the week ended 20th December, B. twills recovered to Rs. 94.40, but in view of lack of demand hessian 40" 10 oz. moved down to Rs. 39.90. On 22nd and 23rd December, there was no trading in the futures market, as a protest against raising of the margins, which were modified later on as detailed above. While demand for ready hessian increased and the price for the 40" 10 oz, construction improved to Rs. 40.95 by the week ended 27th December, B. twills were weak and sagged to Rs. 93.00. In the following week, a recovery was noted in hessian 40" 10 oz. to Rs. 42 and in B. twills to Rs. 95.25. This followed buying pressure in futures, following the announcement of the modifications in margins. Yesterday, there was covering in ready hessian goods and the 40" 10 oz. remained unchanged at Rs. 42, while B. twills sagged to Rs. 94.60 as there was no business.

During the entire period under review, the raw jute market was dull. although mills purchased a fair quantity after the holidays. Daissee bottoms are quoting at Rs. 22.75, but earlier the rate had moved down to Rs. 22.00 from Rs. 22.75. From Rs. 21.25, Assam bottoms gave way to Rs. 20, but following the Government announcement that the S.T.C. had been authorised to make purchases from stockists as well as from cultivators in the interior markets, the rate recovered to Rs. 21.50. The latest quotations for January-February delivery are:

	Middles Rs.	Bottoms Rs.
Pakistan:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	23.50	21.00
Assam	24.00	21.50
Orissa	26.50	24.00
Desal	22.25	19.75
Murshidabad	21.25	18.75
Jungli	21.00	18.50
Daissee	24.50	22.00
Uttar Pradesh	21.00	18.50
Daissee mesta	20.00	17.50
Bimli f.a.q.		Rs. 18.50

Pucca bales 1st marks Rs. 145.00 per bale ready.

GOOD DEMAND FOR DUST TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *2nd January*

There was 626,523 lbs. on offer in the last dust sale for 1958. which was held on Tuesday, 30th December. This smaller quantity met with a strong general demand which continued throughout the auction. All descriptions met with useful competition and prices were irregularly 5 to 10 nP dearer. The sole exception to this was highgrown dusts which were barely steady. The smaller selection of C.T.Cs. which were on offer met a good demand and were dearer.

London Market:—*Sale of 29th December 1958.*—Market firm for all kinds, except C.T.C. teas, which were generally at a lower level. Very best C.T.C., however, remained firm."

Sale of 30th December 1958.—Slightly dearer tendency, expect for very plainest descriptions which were irregular.

Colombo Market.—No sale this week.

Calcutta Market.—No sale this week.

Export Quota.—The market has hardened during the week, and business has been done at 2¼ nP. There are sellers at 2¼ nP and buyers at 2 nP.

Forthcoming Auctions.—Dust sale 'A' will be held on Thursday, 15th January 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 1.—1,300,000 lbs. Good general demand, particularly for low-medium and medium which are 5 to 10 nP dearer. Highgrowns were in limited demand and prices easier following quality."

BASE METALS EASY AT CLOSE

(From Our Own Correspondent)

CALCUTTA, *6th January*

The period under review covers three weeks to date. While in the earlier two weeks prices of free base metals were hardening due to the delay in the grant of import licences for consumers, profit-taking was a feature in the latest week, following issue of licences and expected easiness in supply position. Reflecting this trend. tin shot up to reach a high of Rs. 617 from Rs. 609 to move down to Rs. 608 at which rate the old year closed. Thereafter, the price continued to move down, and the latest quotation was Rs. 605. Stockists reported lack of demand, and there was some selling pressure on this score. The price in Bombay continued to be higher than in Calcutta, and, despite this, not much diversion took place.

Electrolytic zinc rose from Rs. 102 to Rs. 107, but closed on 31st December at Rs. 103.50 on account of profit-taking. The opening for the New Year saw the rate recover to Rs. 104 following a tender from Tatas for 1,700 tons. The railways had also earlier invited tenders. Virgin lead was earlier quoted at Rs. 87, but moved down to Rs. 84. Demand was not impressive, and the supply position was easy. Indigenous lead supplies also contributed to increase market stocks. It was noted here that, prior to the Christmas holidays, copper on the London Metal Exchange was steady, but since reopening, spot copper declined from £223½ to £221. A recessionary trend was also reported from New York. Noted with enthusiasm in industry circles here was the statement in Calcutta by the Union Minister of State for Oils and Mines, Mr. K. D. Malaviya, that, in the third Plan, exhaustive exploration for locating copper, zinc, lead and sulphur mines in the Himalayan and other regions would be taken on hand. At present, the country spent Rs. 25 crores a year on the import of these minerals. Consumption of these is increasing, and the Minister declared that the next Plan projects would need minerals worth Rs. 150 to 200 crores.

"KHARIF" GRAINS SUPPLY SATISFACTORY

(From Our Own Correspondent)

HAPUR, *5th January*

Quiet to steady conditions prevailed in the foodgrains market during the past fortnight. The supply position of *kharif grains*—rice, maize and *bajra*—was satisfactory in the markets and supplies of *rabi* grains—wheat and gram—was small, while *rabi* crop prospects had brightened following very good winter rains over a wide area of U.P. and Punjab. The U.P. Government has begun procurement of rice in the State. For this purpose, export of rice from 23 "rice surplus" districts of the State has been banned and the Government is confident of achieving its procurement target of 150,000 tons of rice. The Bihar Government has also started procurement of rice and paddy in the State. The Union Government, in its latest order, has banned export of paddy from Punjab.

Wheat prices at Hapur were quoted slightly lower than the highest touched so far and were quoted on Monday at Rs. 24.75 per maund for average quality and upto Rs. 26 for farm produce. Some wheat reached here from outside during the session and better crop prospects following winter rains was also a depressing factor.

Rice prices, however, registered some gains, as imports from the surplus districts had been banned and supplies were restricted. Week-end prevailing prices were: Rice *basmati sela* Rs. 28.75; *mainpuri* Rs. 21.75; *ramajawayan* Rs. 25; and *raimunia* Rs. 26 per maund.

Gram ruled quiet. Despite poor local stocks with the trade, demand was slack. There were reports that the standing crops here and in Punjab had benefited from timely winter rains. Barley and *bejhar* were listless, while maize tended to move down despite good consumer seasonal demand. For stocks were good. *Bajra* eased slightly with better supplies in the market and *jowar* and *guwar* tended to run down as demand was dormant. The prevailing prices on Monday (in rupees per maund) were: Gram punjabi 19.75; barely 16.50; *bejhar* 17.12; maize white 15; red 14.75; *bajra* 16.25; *guwar* white 15; *jowar* 14 per maund.

Pulses continued to be devoid of notable activity. Peas stocks were small and demand was dormant. *Arhar* stocks were put at about 30 *khatties*; it was all owned by one firm which was not selling in the open market but was grinding it in *dal* for sale. Conditions of the standing peas and *arhar* crop was satisfactory. New *moong* and *urd* are reaching the markets. Prevailing prices were: Peas Rs. 19 to Rs. 21; *arhar* Rs. 22; *urd* Rs. 18.75; *moong* Rs. 20; and *massor* Rs. 17.50 per maund.

STRONG DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, *5th January*

A feature of trading in the hides and skins market during the week under review was the strong demand for high grade buff and cow. The prices of these registering a rise. Arrivals of buff and cow from western U.P. districts were good, while those from northern Bihar region were lower. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 360 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 2 lbs. 10 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 375 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 350 and 2nd grade Rs. 325 per 100 pieces.

LINSEED DECLINES

(Messrs. A. Bradley and Co.)

CALCUTTA, *5th January*

Absence of buyers and generally dull conditions in the oil market caused a decline in linseed prices. After touching Rs. 27, linseed was quiet today at Rs. 26.75, with buyers' bids a shade lower. In the oil section, small local business was reported at Rs. 57 earlier in the week, but buyers' ideas were now around Rs. 56.50. Stocks, however, were rather limited.

The latest quotation for ready—January is Rs. 26.75 per maund.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—From July 1954. H—Outstandings in respect of items in column 9 marked 'E' are not included.

** These shares carry the right of a preferential dividend at the rate of 5 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. out of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating

(f) Participating preference shares. (g) Redeemable at Rs 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares received 6 per cent. dividend (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice (s) Participating to 9 per cent (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 5 years after the date of Issue at a premium of Rs 10 per share on 3 months' notice. (z) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

PRIVATE LIMITED COMPANIES

A REVIEW OF THEIR FINANCIAL POSITION

THE December 1958 issue of the *Reserve Bank of India Bulletin* contains an interesting article which presents the results obtained by analysing the published accounts of 333 private limited companies for the accounting years 1955 and 1956. The scope of the regular study of company finances made by the Department of Research and Statistics of the Bank, which was so far confined to public limited companies only, has now been extended to private limited companies also. The present study revealed that the financial structure of private limited companies and their operating results differed widely from those of public limited companies.

The main income (sales) of the companies showed a spurt from Rs. 196 crores in 1955 to Rs. 232 crores in 1956. Of the total, 98 companies had trading as their main business and the sales of these companies moved up from Rs. 86 crores in 1955 to Rs. 98 crores in 1956, that is by 13.6 per cent. The sales of the remaining companies, majority of which are manufacturing concerns, rose from Rs. 109 crores to Rs. 134 crores, representing an increase of 22.8 per cent. The total salaries and wages of the 333 companies were higher at Rs. 27.3 crores, as against Rs. 23.6 crores. Managing agents' remuneration declined from Rs. 43 lakhs to Rs. 35 lakhs.

Profits before tax amounted to Rs. 13.2 crores in 1956, as compared with Rs. 11.0 crores in 1955. Tax provision showed a sharp rise from Rs. 5.2 crores to Rs. 7.1 crores and, consequently, profits after tax showed only a small increase, from Rs. 5.8 crores to Rs. 6.1 crores. Despite higher provision for taxation, engineering companies and cotton mills showed a substantial increase in profits after tax which was partly offset by the decline in the case of trading companies.

Taxes and Profits

For all the industries together, tax provision rose from 47 per cent of profits before tax in 1955 to 54 per cent in 1956. Distributed profits, however, remained unaltered around 31 per cent of profits before tax during both the years, while retained profits fell from 22 per cent to 15 per cent. As percentage of profits after tax, dividend distribution in 1956 was higher at 68, as compared with 59 in 1955. During the two years together, half of the profits before tax was provided for tax purposes and a little less than one-third was distributed among the shareholders.

The profitability of equity capital as measured by the ratio of profits after tax to net worth (paid-up capital plus all free reserves), which is perhaps a more appropriate index of profitability, recorded a slight rise from 7.3 per cent in 1955 to 7.5 per cent in 1956.

The average rate of dividend on ordinary shares of the 333 companies rose from 5.7 per cent of paid-up capital to 6.9 per cent in 1956, while the corresponding rate for preference shares declined from 4.5 per cent to 3.9 per cent. The increase in the rate of dividend on ordinary shares was substantial in the case of trading companies. A more precise indicator of profitability, namely, dividend as percentage of net worth, rose from 4.3 in 1955 to 5.1 in 1956, the rise being reflected in many of the individual industries.

Capital Formation

The total assets formation in these 333 companies during 1956 amounted to Rs. 21.5 crores. Gross capital formation during 1956 was of the order of Rs. 13.8 crores, of which gross fixed assets accounted for Rs. 6.3 crores and inventories for Rs. 7.5 crores. The rate of growth of gross fixed assets was 10.4 per cent per annum and the corresponding figure of inventories was higher at 13.5 per cent. Net fixed assets formation amounted to Rs. 3.1 crores, showing an annual rate of growth of 9.3 per cent.

Of the total funds of Rs. 21.5 crores used for financing assets formation, paid-up capital (excluding capitalised reserves) amounted to only about Rs. 1.0 crore. Borrowings at Rs. 7.5 crores contributed more than one-third of the total funds and formed the most important source of finance; of this amount, bank borrowings amounted to Rs. 4.2 crores. Depreciation reserves acounted for Rs. 3.1 crores and taxation reserves for Rs. 3.0 crores. The contribution of free reserves (general reserves and other reserves) was very small, being Rs. 62 lakhs. Next to borrowings, "trade dues and other current liabilities" was the most important item and it contributed Rs. 5.9 crores. A measure of the internal financing of the industries may be provided by the net additions to (1) depreciation reserves, (2) taxation reserves, (3) capital reserves, and (4) general and other free reserves. It would appear that internal financing was relatively small at Rs. 6.7 crores, as compared with Rs. 14.7 crores provided by external sources.

The paid-up capital of these 333 companies as at the end of 1956 amounted to Rs. 61.8 crores. As against this, their total liabilities/assets (net) amounted to Rs. 203 crores. The paid-up capital thus formed roughly one-third of the total liabilities. This proportion holds good also for the 1,001 public limited companies referred to earlier. Free reserves (excluding taxation and depreciation reserves) formed only 10 per cent of total liabilities of the 333 private limited companies, while the corresponding percentage was almost double for the 1,001 public limited companies. Borrowings and trade dues and other current liabilities accounted for 43 per cent in the case of public limited companies, as against 52 per cent in respect of private limited companies.

On the assets side, net fixed assets at Rs. 36.8 crores formed 18 per cent of the total net assets of the 333 companies, the corresponding figure for the 1,001 public limited companies was 38 per cent. For all industries other than trading, the ratio of net fixed assets to total net assets works out at 22 per cent for private limited companies, as against 39 per cent for public limited companies.

Financial Claims

The two important items of financial claims, namely, receivables and investments, together formed about 37 per cent of the total net assets, as against 22 per cent for the 1,001 public limited companies. It would thus appear that, in relation to public limited companies, the financial claims of the private limited companies on the assets side and borrowings and current liabilities on the liabilities side are substantially higher.

Just as the financial structure of private limited companies differed widely from that of public limited companies, capital formation and operating results also showed considerable differences. The rates of capital formation (gross and net) during 1956 in respect of private limited companies were lower than for public limited companies. Profitability ratios also were lower for private limited companies during both the years 1955 and 1956. Private limited companies provided a relatively higher proportion of their profits before tax for tax purposes during both the years; profits distributed were slightly lower. Retained profits were lower in proportion in the case of private limited companies than in public limited companies.

The principal indicators of the growth and operating results of the 333 selected companies are shown below:

(Amounts in crores of rupees)

	1955	1956	*Percentage increase*
Paid-up capital plus free reserves (net worth) at the end of the year ..	79 6	81.2	2.0
Gross fixed assets at the end of the year ..	60.1	66.3	10.4

ANNOUNCEMENT

BOKARO & RAMGUR LIMITED

REDEMPTION OF DEBENTURES

THE BOARD OF DIRECTORS AND THE Board of Debenture Trustees of Bokaro and Ramgur Ltd. of 22, Chittaranjan Avenue, Calcutta 13, have pleasure in announcing that 4½% Mortgage Bearer Debentures of Rupees Ten Lakhs consisting of 1,000 Debenture Bonds of Rs. 1,000 each which were floated in 1948 for a period of 10 years have been redeemed with interest in full to the satisfaction of all the Debenture-holders in compliance with the provisions of the Debenture Trust Deed, dated 3rd June 1948 and the Supplemental Deed of Trust, dated 27th October 1948.

By Order of the Board,
RAMGARH INDUSTRIES (COAL) CO.,
Managing Agents.

CALCUTTA, 18*th December*, 1958.

BANKING AND MONEY

(*Concluded from page* 11)

equivalent of $1,800,000,000, and are held by investors in at least 35 countries.

After expressing satisfaction with this record, the Executive Directors express the opinion "that, in today's conditions, the present capital structure does not give the Bank the borrowing capacity needed to enable it to meet the reasonable requirements of its lending operations in the near future." To support this view, their report cites the 75 per cent. increase in lending in the last fiscal year and a continuing high rate of lending in the current year. The report also holds it prudent to assume that Bank lending will continue at or above recent levels in the foreseeable future. To finance continued lending at the current rate, the Bank will have to borrow on a greater scale than before.

While the Bank has raised about half of its borrowed funds from investors in other countries, the United States is the principal market for Bank obligations, and institutional investors in that country are the main source of its long-term funds. The soundness of the Bank's loans and the guarantees of members other than the United States have also been of great importance in marketing the Bank's obligations. Nevertheless, in the opinion of the Bank's Executive Directors, "most... U.S. institutional investors and many of the non-U.S. investors in the Bank's dollar securities have been willing to take up, at reasonable rates of interest, the increasingly large and frequent offerings of the Bank's bonds, chiefly because the bonds have the backing of the $2,540,000,000 guarantee of the United States." The Executive Directors express the belief that investors may in future attach increasing importance to the guarantees of members other than the United States. But to take no action now to increase the Bank's capital, they conclude, would be to run the risk of a curtailment of lending.

The Executive Directors are of the view that the proposed increase should be sufficiently large to avoid the necessity of seeking frequent changes in the Bank's capital structure in the future, and emphasised that the responsibility for strengthening the Bank's resources should be shared generally by the members. Hence their recommendation that authorised capital should be increased by 100 per cent. in addition to a further increase of $1 billion, as a margin of authorised but unsubscribed capital for future members or possible later individual increases of subscriptions. They are confident that a cent per cent. increase in the authorised and subscribed capital would not necessitate any further increase during the next decade.

MANCHESTER LETTER

(*Concluded from page* 14)

part of the world's population to industries situated many thousands of miles away in another part of the world.

An encouraging account of raw cotton shipments to the Port of Manchester during the past year was given by Mr. A. L. Hughes, President of the Manchester Cotton Association, at the annual meeting. In the past season, he said, arrivals of all types of cotton into the United Kingdom declined by more than 200 000 bales, but supplies reaching Manchester were only 4,573 bales below those imported in the previous 12 months.

No one in his position should be expected to give a glowing account of conditions in the raw cotton trade, and Mr. Hughes did not gloss over the many problems facing merchants and brokers. He bluntly accused spinners of failing to support the spot market by purchasing almost all their requirements on a shipment basis, pointing out that it was not reasonable to expect a large and comprehensive stock of cotton to be available on the spot at low prices awaiting the day when the spinner might take an interest in it.

The increase in the number of growths of cotton, while complicating business for the merchant, brings advantages to consuming countries. Government control, according to Mr. Hughes, would by now have destroyed the element of competition if Lancashire had remained dependent on a small number of countries for the supplies for the mills. The development of cotton growing in many lands, not least British Colonial territories, had kept the price of the commodity down. Strong competition and pressure from discriminating buyers had resulted in a steady improvement in quality, classification and packing and in marketing and shipping facilities.—*All Rights Reserved.*

SOCIALISM AND BUSINESS MEN

THE resolution on planning and economic development finalised by the Congress Working Committee and adopted by the sixty-fourth session of the Indian National Congress is practically the same as the draft approved by the Working Committee at its New Delhi meeting four weeks ago and commented upon by this journal in its issue dated 20th December 1958. The plea for more realism in the approach to planning voiced by us, as also by the vast majority of the Press in this country, has gone unheeded. This is not surprising, because the Congress High Command is so utterly devoted to its high-sounding ideals that it will not just think in terms of practicability. It is just India's bad luck that its destinies are now in the hands of those who are unable to realise that its progress in the economic field is being impeded by their ideological predilections and who have little experience in practical planning.

As though the ideological content in the draft resolution was not enough, one more para has been added to it in the end. A reference to this addition was made in our last issue, *vide* page 3. This last minute addition says that "the creation of a democratic and socialist society should be clearly and unambiguously placed before the nation as the objective of planning and all the implications of socialism in terms of individual and co-operative effort it requires should be clearly explained to the people." It is not clear why the Working Committee found it necessary to make this amendment to its draft resolution. When Mr. K. Hanumanthaiya, a former Chief Minister of Mysore State, asked Mr. Nehru and the Congress Working Committee to explain the meaning of the phrase "democratic and socialist society," he did not get much of a reply. What is the difference between the "socialist pattern of society," which was supposed to be the goal hitherto, and the "democratic and socialist society" now chosen as the objective? If there is little or no difference, why change the phrase then? It may be noted here that the phrase "socialist pattern of society" itself was carefully chosen through an amendment moved by Mr. Jagjivan Ram at the Amritsar session of the Congress to the phrase coined at Avadi, namely, "socialistic pattern of society." This development is recalled just to show that changes in the key phrases of the Congress Party are not made just casually but after deliberation. So, there must be a significance to the latest change and the authors of the resolution have been unfair to the public in not having explained as to why they chose to make this alteration.

The socialism of the Congress Party is the vaguest of its kind in the world, for it has never been fully defined. Mr. Nehru, its author, has repeatedly stated that it is not doctrinaire socialism, but he has not said what it is. Nevertheless, in actual implementation, his socialism has not been far different from the doctrinaire socialism practised in the West. Indeed, in some respects, it has been worse than that, for what India has had so far is State capitalism rather than socialism. Mr. Nehru blames business men for refusing to accept the consequences of socialist pattern of society when they criticise the extension of the public sector to trade, industry and finance. He is not quite fair to them in doing so, for he never defined in precise terms what his socialism meant. Had he said at the time the socialist pattern of society was first chosen as the goal that life insurance would be nationalised, that a big part of commercial banking would be brought under State ownership, that the State Trading Corporation would be formed to take over the trade not only with the Communist countries but also to be progressively extended to other spheres, that the wholesale trade in foodgrains would be virtually nationalised, etc., the business community would probably not have endorsed the Avadi resolution through its accredited body, the Federation of Indian Chambers of Commerce and Industry.

This does not mean that the business community was right in accepting an objective without knowing fully what it was. That was undoubtedly unbusinesslike, for he is not a good business man who accepts commitments without a clear idea of the liabilities involved in them. To this extent, Mr. Nehru is technically right in saying that business men have no business to complain, grouse and quibble. But, morally, he is wrong, for he must be aware that, had he spelled out his socialist pattern of society instead of leaving it vague, business men would have made their reservations before accepting it. When business men supported the socialist pattern, they apparently thought that they were being called upon to endorse the ideal of a Welfare State and not State capitalism. The note of caution given in these columns was ignored, unwisely as subsequent developments have shown. It may be argued that they had no choice in this matter. While there is force in this argument, we feel that they should have had the courage of conviction to disassociate themselves from an ideology which they knew full well was not the right one for the material advancement of this economically poor country. It is wrong to think that political expediency is paramount to all other considerations. To say so would be to place opportunism at a high premium. At least now, business men know what the socialist pattern of society means, for, as will be seen from the next article, the private sector, in the eyes of Mr. Nehru, is vastly inferior to the public sector. Accordingly, the public sector will have precedence over the private sector. Even though the new phrase of the Congress Party has not been explained, its meaning, in the context of the several speeches made by Mr. Nehru, is not in doubt.

THE TWO SECTORS

THE public sector *versus* private sector controversy received a fresh lease of life when the Defence Ministry decided to go into the business of manufacturing automobile trucks in partnership with a firm in the private sector in West Germany. Naturally, the automobile manufacturers in this country protested against this new intrusion by the State. There would have been some justification for the Government to take over this additional responsibility on its shoulders had there been no surplus capacity in the automobile works in the private sector or if these works were incapable of doing the job. But there is no room for such justification. The Government could have been at least dignified in turning down the plea of automobile manufacturers. Instead, Prime Minister Nehru himself came down heavily on the private sector as a whole and declared in a public meeting at Calcutta that all those who opposed the growth of public sector would be swept aside with a broom. The opposition from traders to the proposed nationalisation of wholesale trade in foodgrains was an additional factor that infuriated him against the private sector.

At his last monthly Press Conference at New Delhi, the Prime Minister again reiterated his preference for the public sector and spoke in an uncomplimentary tone about the private sector. Stating that the Government was committed to encourage the public sector, he averred: "The public sector will always get priority wherever it can do things economically and profitably.... The policy of the Government is to proceed towards a socialist pattern of society—may be slowly, if you like—and, therefore, encourage the public sector whenever it can be encouraged." He also made it clear that, normally, whenever he spoke about private enterprise, he referred to big enterprises and not petty shops.

In less than a week after this Press Conference, Mr. Nehru referred to this subject again. This time it was at the Nagpur session of the Congress Party. If the reports in the daily Press fully reflect what he said there, it seems to us that his indignation against the private sector must have been high. He also gave his reasons for being so—reasons which are interesting and highly significant. On 8th January 1959, Mr. Nehru said: "I believe that the public sector represents the dynamic urge to go towards a certain society which we are seeking to build up. The public sector has to grow not only in extent but in importance, strategic importance, but, even so, there is a vast field of expansion left for the private sector, provided it does not impinge on the public sector and does not challenge the right of the public sector to do what it is doing." He then went on to add that the private sector came in for criticism, because it tried to challenge the right of the public sector and impinge on it. He conceded that "the public and the private sectors in their right places are necessary today" and that, "in its

right place, the private sector should have freedom to function and not have criticism or quibbling about it." He further conceded that he did not mind the private sector criticising the public sector, for this was a free country for anybody to say anything, sense or nonsense. But, at the same time, the private sector should not object to his saying in his own language what he thought of it. He also alleged that there was a tendency recently on the part of the private sector "to check or make us shift from the basic position he had adopted."

Mr. Nehru spoke again on this subject on the following day (9th inst.) almost in the same vein. Referring to the criticism that there was too much corruption in the public sector, he admitted that there was corruption here and there, but explained that this was inevitable, to some extent, in a rapidly expanding public sector. He thought that, having regard to the large expansion of the public sector in recent years, the extent of corruption was much less. He would even go further and say that it was less than that in the private sector. Striking a somewhat friendly note towards the private sector, he remarked that he had at times strongly criticised not the private sector but some leaders of private enterprise, because of the wrong assumptions and criticisms they were making of the public sector. While he wanted to encourage the private sector within its proper field, he advised it not to come in the way of the public sector or try to do something against which the country had decided and meant to carry it out. "All beautiful pamphlets," he asserted, "are not going to make any change in our decision."

This somewhat lengthy summary of his observations has become necessary, in order to substantiate two things. First, as a democrat, he realises that criticisms of his policies are bound to be made and have to be tolerated. He also recognises that, in a democracy, everyone has a right to influence public opinion against the party in power. At the same time, he insists on his right to criticise those who criticise him. All this is fair enough. He has every right to expose the specific faults and failings of the private sector. In fact, it will be for the good of this sector if he does so. We would even go further and add that not only should he do so, but actually see to it that the guilty members of private enterprise are brought to book. It is no exaggeration to say that the inefficiency of his administration is to a large extent responsible for the increase in the number of black sheep in the private sector. But Mr. Nehru's resentment of either healthy criticisms of the public sector or the legitimate attempts made by some to influence public opinion against its growth is pointless and unjustifiable. There is no evidence that there has been any unhealthy criticisms of the public sector or any undesirable attempts to mould public opinion against it. Secondly, Mr. Nehru's attitude towards the private sector is not based on any conviction of its virtues or of its recognition as a necessary element in a democratic society. It is one of tolerance of, and patronage to, the private sector. Such an attitude is not conducive to a healthy and vigorous growth of the private sector.

Another important point made by Mr. Nehru was that he was in favour of competition between the two sectors for two reasons. One, it would keep the public sector up to the mark, and, two, he disliked monopolies anywhere, whether in the public or the private sector. It is gratifying to hear that the Prime Minister realises the value of competition, but will competition between the two sectors be always fair? In some cases, it may turn out to be a competition between the giant and the dwarf. Again, if he dislikes all monopolies, why has he created a monopoly in life insurance and why does he oppose even now all suggestions for introducing a strong element of competition in this field? It is to be hoped that his reply to this poser will not be that this is a case of the Devil quoting scripture.

LAND REFORM

THE Congress has now committed itself to a definite line of agricultural policy. At its Nagpur session this week, it reaffirmed its faith in co-operation. The deliberations of the Party, in general, and the speeches made in support of land reform, in particular, should leave no one in any doubt as to what the Congress hopes to achieve on the agricultural front. It is co-operativisation of agriculture, pure and simple, that the Congress seeks. "The organisation of the village," it declares, "should be based on village *panchayats* and village co-operatives, both of which should have adequate powers and resources to discharge the functions allotted to them." Both the *panchayat* and the co-operative, it is stated, should be the "spearheads" of all developmental activities in the village and more especially should encourage intensive farming with a view to raising the per-acre yield of agricultural produce.

In broad terms, the future of agrarian pattern has been indicated by the Party. It will take the form of co-operative joint farming, in which the "land will be pooled for joint cultivation, the farmers continuing to retain their property rights and getting a share from the net produce in proportion to their land." Further, those who actually work on the land, whether they own the land or not, will get a share in proportion to the work put in by them on the joint farm. It is indicated that, as a first step prior to the institution of joint farming, service co-operatives should be organised throughout the country. This stage should be completed within a period of three years, though, even within this period, joint cultivation may be started wherever such cultivation is possible. In order to remove uncertainty regarding land reforms, it has been suggested that ceilings should be fixed on existing and future holdings and legislation to this effect, as well as for the abolition of intermediaries, should be completed in all States by the end of 1959. The surplus land, arising from the imposition of ceilings, should vest in *panchayats* and be managed through village co-operatives.

In considering the whole complex of agricultural situation which must arise through implementing the Congress resolution, it is just as well that two factors are clearly understood. In the first place, there is no doubt whatever that a ceiling on land and the proposed co-operativisation of agriculture are imposed decisions. There is no evidence to show that it is a reform for which there has been any insistent plea. It is a reform which some political leaders at the top think is good for the country. It has never been a live political issue. It is true that the Communist Party has been advocating it for a long time now. By stealing its thunder, the Congress cannot hope to win many new votes. For the Communists are bound to represent this imitation as the sincerest form of flattery to its ideals. Secondly, the move towards co-operativisation of agriculture does not stem from any proved success of co-operative experiments. Actually, all available evidence suggests that, even in spheres where co-operative endeavour ought to be able to show good results, there has been a singular lack of co-operative spirit.

In particular, co-operative farming has never been a pronounced success in India. A study of co-operative farming societies, made by the Programme Evaluation Organisation of the Planning Commission, reveals a state of affairs which is by no means encouraging. Many societies are overcapitalised and few have resorted to improved agricultural practices. Again, Mr. S. S. Puri, Registrar of Co-operative Societies in Punjab, whom we quoted in our issue of 15th November 1958, warns that fiscal relief and other concessions to co-operatives have led to what he rightly calls the "growing menace of spurious brand of co-operation." What the country has achieved so far is the pomp and vain glory of co-operation, not its reality. It is on this record, not of encouraging success but deplorable failure, that the Congress Party is trying to erect the imposing edifice of co-operative farming, which even countries with high co-operative traditions have hesitated to sponsor.

What the country needs today is a reform not of land-ownership but of agriculture. No great benefit is likely to accrue to the country by the application of the legislator's axe for parcelling out lands. The failure on the agricultural front is largely due to the lack of facilities, physical, educational and financial, for adopting superior cultural methods. This defect cannot be remedied by introducing co-operative farming. Further, if increased agricultural production is the objective of the new reform—as, in fact, it ought to be—it could be achieved without tinkering with the present form of ownership in land. As the Indian Co-operative Union pointed out in its study of co-operative farming, Japan, despite its small holdings, has achieved significant results in agriculture. The *per capita* cultivated land in Japan is only 0.07 hectare, as compared with 0.29 hectare in India. While in India, 50 per cent. of holdings are less than five acres in size, such holdings account for about 95 per cent. in Japan. And yet, the yield of paddy in Japan is 48.1 quintals per hectare, as compared with 12.2 quintals in India, 28.3 quintals in the U.S. and 21.5 quintals in the U.S.S.R. It is unnecessary to go the whole hog of co-operative farming for achieving higher agricultural productivity.

An average peasant is greatly devoted to his land. No inducement offered by co-operative farming can wean him away from his devotion to that plot of land. In his valuable study on co-operative farming, Dr. Otto Schiller, Professor of Agricultural Economics, Stuttgart-Hohenheim, Germany, who spent a year studying co-operative farming in Pakistan and also visited India, observes that "it is hardly possible to show any examples that peasants in an existing village have voluntarily given up their individual use of land and have pooled their land for joint utilisation." He adds: "This seems to be true also for India. If so, it is quite surprising that so much is expected from the introduction of co-operative farming in this country." Dr. Schiller does not believe that economics of large-scale agriculture can come only through co-operative farming. He says: "It is a mistake to believe that the advantages of large-scale operations can be brought to the small cultivator only on condition that he gives up his independence and merges his holding with others to make a big managerial unit." He rightly suggests that, "if the small cultivators could gain most of the assured advantages of co-operative farming without giving up their individual plots of land and without losing their economic independence, they might easily be ready for co-operation." In the context of Indian conditions, it would be folly to attempt any large-scale experimentation in co-operative farming which implies the abandonment of invidual freedom.

The practical difficulties in co-operative farming are so numerous that the best administrative talent—the country does not possess it—would find it difficult to implement it. There are not sufficient administrative personnel even for implementing relatively easier forms of co-operation, such as credit and marketing. Where is one to find the personnel for co-operative farming? Again, the losses suffered by co-operative farming institutions would be a drag on the Exchequer. It must be remembered that, since the proposals for ceiling on land and co-operative farming have already tended to dry up private sources of agricultural credit, the Government will be increasingly called upon to foot the bill for agricultural operations. In addition to finding resources for the second and third Plans, it will have to undertake the task of financing agricultural production, besides its commitments arising out of State trading in foodgrains. Nor should it be forgotten that co-operative farming which may have to be supported by the State Governments, at least in the initial stages, will mean less land revenue for these Governments and possibly the virtual abandonment of revenue by way of agricultural income-tax, betterment levy and other sources of income.

Above all, in the actual working of co-operative farming, there is bound to be considerable discontentment, because of the inherent difficulties in the determination and apportionment of profits and wages; unlike in industry, profits and wages are not so easily determined in agriculture. The Programme Evaluation Organisation of the Planning Commission, in its study of co-operative farming, was told that persons who do heavy work are paid the same wages as those who do "light work." The members of a co-operative farming society expressed the view that "it would be difficult to ascertain the amount of labour put in throughout the year by each member and to pay him accordingly." These administrative difficulties would lead to nepotism and corruption, which, in their turn, would worsen the social conditions in villages which are already bad in all conscience. Co-operation will thus serve as a smoke-screen behind which a large variety of social and economic sins can multiply unhindered.

All this is not to suggest that co-operation has no place in agriculture. Actually, agriculture is an occupation in which co-operation can be practised with much benefit. In the dispensation of credit, in making available superior agricultural machinery and implements, and in the distribution of the physical requirements of better farming, co-operation can and should be adopted. There is thus a place for co-operative credit and co-operative management of agricultural services common to the community. To attempt things beyond this stage of co-operation is to import into the rural regions an ideological ferment which is bound to take a heavy toll in the shape of economic disruption and seething social discontentment.

SHARE MARKETS NOT DEPRESSED BY CONGRESS RESOLUTION

SOME BANK RATES—COTTON SITUATION

THURSDAY, 5 P.M.

THE share markets have refused to be frightened by the resolutions adopted by the Indian National Congress at its Nagpur session this week. In fact, they have replied to them by staging a small boomlet. Apparently, the operators feel that, having done its worst to the private sector, the Congress Party cannot do any more damage to it. That similar smug assumptions in the past proved disastrous to equities have been *ignored* for the moment. Really speaking, one should not read too much into this recovery of share markets, because it is more due to bear covering than to any large-scale fresh buying. A few of the leading bears, who had ultimately proved successful on a previous occasion by operating on the theory that the Congress Party's insistent talk of socialist pattern of society would surely hurt the private sector one day, chose to lighten their commitments this week. This seems to have led some to believe that these bears do not feel the same way this time. Whether this inference is right or not will be known only in course of time. It may be that the bears are playing a trick on an unsuspecting market. Or it may be that they might have had hints of some forthcoming development or developments which might prove bullish to equities. It is significant that, during the past one week, 3 per cent. 1986 Conversion Loan has gone up from Rs. 73.50 to Rs. 74.25, whereas all the other dated loans have either remained unchanged or moved up by only 5 or 10 nP. The spurt in this speculative counter of the Gilt-edged section is attributed to rumours of a reduction in the Bank rate in the not distant future. This rumour, it must be added, has not yet become widespread. Nor is it believed by many. There is, of course, no case for a reduction in the Bank rate, unless the Government wants to facilitate the banking system to lend more to it, even by borrowing from the Central banking institution, if need be.

MARKET GOSSIP

* * * *

Be that as it may, Mr. Nehru's remarks at Nagpur on taxation and ceiling on incomes are not as reassuring as many seem to feel. In order to soften the opposition to the ceiling on land within his own Party, he has stated that ceiling on land did not mean a ceiling on agricultural incomes. Evidently, his idea is that, after the ceiling on land is initially determined, the cultivator should be free to raise his income by striving hard to increase the yield from his land. In fact, an elucidation to this effect was given by some of his colleagues in the Party when they spoke on the relevant resolution. This is undoubtedly an improvement over the previous stand which sought to fix the income of an agriculturist at Rs. 3,500 per annum. But it is a relatively small mercy.

In so far as urban incomes are concerned, Mr. Nehru said that, while the Congress aimed at "progressive equalisation of incomes in rural and urban areas," it was not practicable to attempt ceilings on both the sectors simultaneously. To put them on the same basis might be sentimentally good but, practically, obviously, it was not so. The general principle that the country should move towards equalisation was natural, but, he added, to suggest that every person should have from tomorrow onwards equal incomes was not socialism. "If you do that, it will be death to India," he asserted, and pointed out that it would mean that there should be no incentive, no industrialisation, except living on the "sad brink of existence." At the same time, he hastened to add: "But I quite agree that our policy should be directed towards bringing about a certain measure of uniformity between urban and rural incomes."

It will thus be noted that Mr. Nehru has hedged his remarks on ceiling on urban incomes in such a way that they can be quoted by both the protagonists and the antagonists of ceiling on incomes in their favour. Since, in the hustings, it is the former who are more vocal and influential than the latter, in future, the stress may be more and more on the equalisation of incomes rather than on incentives for investors. In any case, it appears that the Congress Party has made it extremely difficult for the Finance Minister to give any tax relief to them. If this inference is right, the private sector's dependence on the Government for its resources will be greater than it is now.

* * * *

Since the beginning of the New Year, four countries have changed their Bank rates; while three of them have cut the discount rates of their Central Banks, one has stepped it up. South Africa, Belgium and West Germany were the three which lowered their discount rates and Pakistan provided the exception.

The first in the field was South Africa, which reduced its Bank rate from 4½ per cent. to 4 per cent. with effect from the 5th inst. This is the first change since September 1955, when the Union's Bank rate was raised to the erstwhile level from 4 per cent., which again was kept unchanged from March 1952 to September 1955. The present cut brings the South African Bank rate on par with the British Bank rate which was last reduced in November 1958 from 4½ per cent. In fact, the cut in the U.K. reduction in the South African rate, though the move was somewhat belated. The main reasons for the cut, according to Dr. M. H. de Kock, Governor of the South African Reserve Bank, were: (1) the existence of appreciable slackness in several primary and secondary industries, (2) a continued slowing down in the tempo of economic activity, (3) the decline in interest rates in the London money market following the cut in Bank rate in November last, and (4) the need for avoiding the possibility of South Africa attracting hot money from London.

Following the cut in the South African Bank rate, there was a fall in short-term rates too; the Reserve Bank of South Africa reduced its rates for transactions in Government stocks with maturities of not more than one year and between one and two years to 3¾ per cent. and 4 per cent., respectively, from the previous uniform rate of 4½ per cent. for all maturities up to three years. The Bank did not, however, see any reason for a reduction in medium- and long-term rates, as the prevailing conditions of supply and demand in local and overseas capital markets did not appear to justify a cut in these rates.

The reduction in South African Bank rate followed the relaxation of credit squeeze on commercial banks made last month. Neither of the two measures is expected to provide the necessary stimulus to the Union's flagging economy and further measures, such as easing of restrictions on hire purchase, are anticipated. The latest move is, however, taken as an indication of the Government's anxiety to do something to stimulate the economy.

Belgium reduced its Bank rate by ½ per cent. to 3½ per cent. with effect from the 7th inst. This was the fifth successive cut since the Belgian National Bank put up its discount rate to a high of 4½ per cent. in July 1957. It was lowered to 4½ per cent. in May 1958, to 4 per cent. in June, to 3¾ per cent. in July, to 3½ per cent. in August and now to 3½ per cent. The latest reduction was not an unexpected move. For the growing liquidity in the Brussels money market has in recent weeks been spreading from Government funds into industrial shares. In the present industrial recession, the demand for credit is said to be insufficient to absorb the available funds. It is, however, expected that industrial conditions are more likely to improve than to deteriorate and the latest cut in the Bank rate may provide the necessary stimulus.

The West German Bank rate was cut on the 9th inst. from 3 per cent. to 2¾ per cent., the lowest discount rate ever known in Germany since the first Central Bank of the country was established in 1879. This has followed five successive reductions in recent years—½ per cent. each time—from 5½ per cent. established in May 1956 to 3 per cent. in June last. Simultaneously, the Central Banking Council of West Germany reduced the rates for 60-90 days Treasury Bills by ¼ per cent. to 2¼ per cent. and that for 30-59 days bills by a like extent to 2¼ per cent. The interest rate on six-month Treasury Bonds was lowered from 2¾ per cent. to 2½ per cent. and on two-year bonds from 3¼ per cent. to 3¼ per cent.

No reason has so far been assigned for the latest cut. It is, however, in consonance with the Bundesbank's policy of reducing interest rates as an instrument for stimulating capital exports and encouraging the flow of short-term funds abroad. Since the beginning of the year, West German banks are said to have placed on the London, New York and Montreal money markets several million marks. The total of money market funds placed abroad is estimated at over £40 million. Welcoming the cut in discount rate, Dr. Erhard, Minister for Economics, West Germany, said that it would enable the country to overcome any difficulties which might have been caused by the advent of convertibility.

The latest in the field to change the Bank rate is Pakistan, which raised it yesterday from 3 per cent. to 4 per cent. This is the first change since 1st July 1948, when the State Bank of Pakistan was established. The Bank gave no reason for the stepping up of the rate, but it is considered as part of the measures to combat the inflationary pressure on the country's economy.

* * * *

Close on the heels of a cut in the Bank rate to the record low rate of 2¾ per cent., West Germany has restored "full" convertibility to the D-mark with effect from the 12th inst., thus fulfilling the long cherished hope of its financial wizard, Dr. Erhard. As a result of this development, Germans are now free to purchase any foreign currency (including dollars) in bank notes, coins, cheques or travellers' cheques up to any amount. German residents can also open foreign currency accounts abroad and keep foreign exchange either in their homes or in German bank accounts without any obligation to offer them for exchange. This step has been taken two weeks after free convertibility to non-residents was assured in company with Britain and other West European countries.

West Germany's action is not a surprise move. In fact, it is only a formal recognition of an existing facility to German residents. For even before the restoration of "free convertibility," German residents and non-residents were able to get any amount of foreign exchange after going through the necessary formalities. The latest step only amounts to the abolition of these formalities.

The D-mark is, however, not fully convertible within the meaning of Article VIII of the Articles of Agreement of the I.M.F. For there are still some restrictions on commercial dealings abroad. Although the currency is now freely convertible, there are limitations on capital transfers. Certain conditions are also to be fulfilled when doing business in the fields of films, insurance and transport services. There are some restrictions on exchange of goods also.

* * * *

The Government of India has directed the sugar industry to export, in the first instance, 50,000 tons of sugar out of the 100,000 tons which it decided last month should be exported in the 1958-59 season. The first instalment of export quota to each mill has been allotted on the same basis as in the last season. It is believed that the Government will allocate the remaining 50,000 tons in June or thereafter and the quotas to individual mills will presumably be adjusted then, taking into account their actual production.

* * * *

Commodity markets have hardened further considerably this week. The upward trend is pronounced in oilseeds. The buoyancy has been whipped up by the release of a further quota (20,000 tons) of groundnut oilcake—expeller variety—for export during the period ending March and postponement of the proposed rise in freight charges for oil and oilcakes by the Karmahorn Conference. In addition, there are strong rumours of sizable export quotas for H.P.S. groundnuts (20,000 to 30,000 tons) and castorseeds. On top of these bullish factors, it is reported that the U.S. is interested in purchasing Indian castor oil (commercial quality) at Rs. 15.68 per quarter. Foodgrains prices have advanced sharply, owing chiefly to speculative support. In particular, gram in North India has spurted to Rs. 21.25, a level never touched before in the past fifteen years. The sugar market continues to be bullish, for reasons mentioned last week.

Among non-ferrous metals, copper scrap and brass scrap prices have registered a rise, on account of the delay in the announcement of "final" import licences to certain scheduled industries. The delay, it is pointed out, has prevented the industries from chalking out their future manufacturing schedule. Zinc, lead and tin prices, however, continue to move downward on expectations of better supply following arrivals of imported metals and distribution of zinc imported by the State Trading Corporation.

The following table gives the latest available prices of commodities, as compared with those a week before and at the end of December 1958:

	Unit	Latest available	8th Jan. 1959	31st Dec. 1958
		Rs.	Rs.	Rs.
Cotton I.C.C. Jarilla March ..	Per candy	662	646 00	641.25*

Jowar	"	15.00	14 25	14.12

* End January 1959.

* * * *

The firmness of raw cotton continues unabated, thanks to hectic short-covering and fresh buying by bulls. On Monday alone, a prominent "bear" was reported to have covered his sales to the extent of 30,000 bales. *Impetus to a bull market* has been provided by three factors—fears of crop damage due to cold weather, sustained mill demand, and slow pace of new crop arrivals. Consequently, cotton prices have registered a strident advance. I.C.C. Jarilla March 1959 is now quoted at Rs. 662 per candy of 784 lbs., as against Rs. 640 a week ago and Rs. 638.75 on the 6th inst., the lowest after the commencement of 1959. The *current rate* is the highest to be touched after *Deepavali*; the closing rate in the *moorat* session on Monday 11th November 1958 was just Rs. 608.25 and a low of Rs. 593.50 on 1st November 1958 (misprinted in our *Annual Number* as Rs. 693.50).

The impressive rise in cotton futures has been based essentially on the encouraging performance of the spot market. It is said that the mills are holding only small stocks of cotton and they are not finding it easy to secure ready supplies of good quality cotton, especially the longer staple *Indian* varieties. For arrivals are still below normal for this time of the season. Reflecting these trends, cotton prices at Sewri have shown a distinctly hardening tendency. Over the week, Bengal *Deshi* has gone up by Rs. 50 to Rs. 700, *Berar Jarilla and* Khandesh by Rs. 40 each to Rs. 750 and Rs. 825, respectively, Vijay by Rs. 30 to Rs. 940, and Jayadhar by Rs. 25 to Rs. 885.

The unusually poor arrivals of cotton have led many observers to believe that the current season's crop will be much smaller than what had all along been anticipated. In fact, one estimate of the crop places the aggregate production at no more than 5.1 million bales (of 400 lbs. each), which compares very unfavourably with the preliminary estimate of 5.43 million bales and the last season's actual harvest of 5.25 million bales. It is thus evident that the hopes of a bumper cotton crop have receded. The latest position in respect of the crop is described by a leading firm of cotton brokers as follows:

"On the production side, notice has been taken of the poor condition, not only in yield but also quality-wise, of the Punjab crops. Continuous and partly heavy rains have apparently caused damage from which the plants never really recovered. Here, the crop will definitely be below last year's production figures. Some reduction compared with last

(*Continued on next page*)

BUOYANCY IN SHARES MAINTAINED

SPURT IN ASSOCIATED CEMENTS

(From Our Own Correspondents)

BOMBAY, *15th January*

BUOYANT conditions continued to prevail in the share market this week also and activity was brisk. There were no fresh bullish developments, but in the absence of any adverse news equities continued to enjoy speculative support and to gain fresh ground. The rise in prices over the week was less marked than in the previous week, except in textiles and a few miscellaneous counters, due to profit-taking today on end-of-account considerations. Textiles attracted renewed support on reports of an improvement in offtake of cloth, particularly in Ahmedabad, and Associated Cements, Alcocks, Premier Constructions and Tata Oils were conspicuous in the miscellaneous industrial section.

In the steel section, Tata Ordinaries rallied from Rs. 174.50 to Rs. 177 yesterday, but profit-taking brought them down to Rs. 175.50 at the close today. Their new shares gained over the week Re. 1.25 to Rs. 172.75. Indian Irons displayed considerable strength, rising from Rs. 25.65 to Rs. 26.20, before closing at Rs. 26.

In the textile group, Bombay Dyeings crept up from Rs. 56 to Rs. 56.80, but on profit-taking dipped to Rs. 56.30 at the close. Centurys again staged a rally from Rs. 424 to Rs. 434.75, before reacting to Rs. 431.25. After an early decline from Rs. 236 to Rs. 233.25, Kohinoors spurted from Rs. 236 to Rs. 245 on rumours about the prospect of a change in management. At the close, however, there was a drop to Rs. 241.50. Central Indias jumped from Rs. 88 to Rs. 91. Finlays too gained Rs. 3 to Rs. 261 and Gokaks Rs. 5 to Rs. 132. Indu Ordinaries were up by 28 nP at Rs. 8.96. New Greats declined from Rs. 219 to Rs. 215, before moving up to Rs. 218. Models were lower by Re. 1.50 at Rs. 172.50 and Mysore Spinnings by Rs. 4 at Rs. 81. Simplex rose by a rupee to Rs. 170. Standards recorded a rise of Rs. 13 to Rs. 421 and Svadeshis Re. 1.25 to Rs. 13.25. Tata Mills put on 50 nP to Rs. 35.50.

Barring a smart rise of Rs. 5.75 to Rs. 48.25 in Bank of Maharashtras, bank shares were dull and disclosed fractional changes. Barodas were a shade quiet at Rs. 128. Centrals gained a fraction to Rs. 59, while their new shares were unchanged at Rs. 61. Bank of Indias changed hands at Rs. 139.25 and Jaipurs at Rs. 45.75. Union Banks were a shade better at Rs. 7.52 and their new shares at Rs. 7.20.

A feature of the business in the insurance section was the sudden spurt in Orientals to Rs. 4,010 from Rs. 3,850, on rumours that full compensation to the shareholders would be paid soon. New Indias were marked up by 30 nP to Rs. 52.50, while their *new shares were unchanged at Rs. 52.70. All-India* Insurance had business at Rs. 3.12.

Small variations were recorded in electricity shares. Ahmedabad Electrics were brought down from Rs. 95.30 to Rs. 94.90. Bombay Suburbans were done 50 nP higher at Rs. 110.50 and Surat Electrics 75 nP better at Rs. 112.75. Tata Hydros were a fraction higher at Rs. 19.75. Andhra Valleys picked up Rs. 2.50 to Rs. 1,172.50, while Tata Powers shed Re. 1.25 to Rs. 1,191.25.

After an early dip from Rs. 276 to Rs. 273, Belapurs rallied to Rs. 278, but this gain was more than wiped out today when shares finished at Rs. 275. Phaltans, however, closed with a gain of Re. 1 at Rs. 159 and Walchandnagars improved by Rs. 3 to Rs. 272.50. Maharashtra Sugars gathered Rs. 6 to Rs. 160. Associated Cements provided the highlight of the cement group, with a spurt of Rs. 4.50 to Rs. 156 on reports that the stocks of *cement with the Company had considerably de*clined, as also on revival of rumours about bonus issue. While some of the operators did not give credence to these rumours, others confidently hoped that the bonus issue would be announced at the forthcoming annual meeting of the Company. Digvijays were a shade quiet at Rs. 132, while Orissa Cements were marked up by 40 nP to Rs. 12.48. Dalmia Cements gathered 44 nP to Rs. 9.64, and Ashoka Cements 32 nP to Rs. 7.80. *In the engineering section, Alcock Ashdowns staged* a smart rise of Rs. 7.50 to Rs. 255. Tata Locomotives were erratic, moving between Rs. 157 and Rs. 161 before closing at Rs. 158.25, with no change over the week. Premier Constructions advanced by Rs. 3.50 to Rs. 239 and Texmacos by 52 nP to Rs. 21.16, while Larsen and Toubros were a shade quiet at Rs. 16.84. Shivraipurs, among minings, maintained their upward trend with a further rise of Rs. 3 to Rs. 90. Indian Coppers were steady at Rs. 3.60.

Hindustan Motors scored further gains from Rs. 6.76 to Rs. 7.24, while Premier Automobiles shed a part of their last week's gains with a *decline* from Rs. 86.50 to Rs. 85.20. Scindia Steamships fluctuated between Rs. 21.40 and Rs. 21.76 before closing at Rs. 21.52. Great Easterns were steady at Rs. 24.08.

In the miscellaneous group, Bombay Burmahs (old) suffered a further drop from Rs. 467.50 to Rs. 460 early in the week, but revival of *buying lifted them up to Rs. 471.50* yesterday. Subsequently, there was again a slight setback on profit-taking to Rs. 466.50. National Rayons came up to Rs. 247 from Rs. 239.50, to which level they had reacted early in the week, but closed at Rs. 244 with a net gain of Re. 1.50. Gwalior Ravons gained ground from Rs. 13.68 to Rs. 13.92. Sirpur Papers, which had been admitted into the forward list of the Bombay Stock Exchange, *rose by 56 nP to Rs. 13.68.* Tata Chemicals picked up 20 nP to Rs. 15.32 and their new shares 56 nP to Rs. 14.56. Tata Oils were *conspicuous with a* rise of Re. 1.75 to Rs. 46 on renewed rumours of a bonus issue. Wimcos were another bright feature, with a rise of Rs. 3 to Rs. 191. Tractors Indias greeted the increase of 25 nP in dividend for the year ended June 1958 to Rs. 2.25, with a spurt of Rs. 2.16 to Rs. 20.24. Killick Industries jumped from Rs. 149 to Rs. 153.25.

Calcutta Stock Exchange

CALCUTTA, *14th January*

Although the volume of transactions put through on the Calcutta Stock Exchange during the week under review was far from impressive, the undertone was fully steady and, in fact, favourite counters in most groups recorded substantial gains. This was so on account of short-covering, and prospect of larger support from the Life Insurance Corporation. A factor which caused particular enthusiasm in market circles was the decision by the L.I.C. to hold periodic deliberations by its Investment Committee in the investment centres other than Bombay also. The Committee is expected to meet here on 22nd January, when it would consider offers from Calcutta brokers. Mr. Nehru's spirited reference to the need to have both the public and private sectors side by side, coming as it did in the wake of his recent unfavourable remarks about the private sector, also helped prices improve, despite lack of adequate business. The resolution of the Congress referring to the need to control profits would have normally brought in a wave of chillness, but in the light of the speeches delivered in Nagpur, especially those of the Prime Minister at the A.-I.C.C. and the open session, it was apparent that any attempt to limit or control dividends of joint-stock companies was remote. For, if the Government did so, that would amount to the abolition of the private sector in its entirety. Speeches by Congress leaders have amply shown that this is not the intention, at any rate for the time being! However, it was thought here that other methods for achieving the aim of the Congress resolution were taxation and statutory control over production. Direct taxation is already too high, and it is difficult to imagine any addition to the same. It was this line of argument which paved the way for restoring confidence, notwithstanding budget uncertainties.

Sectionwise, jute shares continued to rise. At Rs. 175, Aucklands added a substantial gain of Rs. 8. Ganges were fully steady at Rs. 77.50. Howrahs, after being higher at Rs. 20.12, gave way to Rs. 19.60 on profit-taking. Anglo-Indias were higher at Rs. 217 on investment buying, although transactions took place in small lots only. Kinnisons added a few points, to stand at Rs. 190. Nationals were fully firm at Rs. 26. Gourepores gathered strength to harden to Rs. 364 from Rs. 361. Unions improved to Rs. 226 from Rs. 210.

The star feature in the coal section was the advance in Bengals to Rs. 273 from Rs. 268, while Burrakurs were back at Rs. 16.56.

Among minings, Indian Coppers continued to recover and hardened to Rs. 3.58, while a strong feature in this section was the rise in Metal Corporations to Rs. 8.94.

Although the number of transactions declined in the engineering section, business was done at hardening levels. Indian Irons rose gradually to put on a fractional gain at Rs. 25.92. Following suit, Texmacos gained Rs. 20.80 from Rs. 20.30.

Among miscellaneous industrials, India Steamships, after realising Rs. 14.12, sagged to Rs. 14.06 on profit-taking. Titaghur Papers rose to Rs. 40.87 from Rs. 40.25. At Rs. 13.81, Sirpur Papers maintained the earlier rise. Orient Papers recovered to Rs. 30.70. National Pipes earlier fell to Rs. 15.19 following news of labour troubles leading to strike, but soon recovered to Rs. 15.44 due to proximity of dividend. Indian Oxygens drew attention at Rs. 23.75, but gave way to Rs. 23.31. Martin Burns at Rs. 29.19 added a small gain.

• • • •

Madras Stock Exchange

MADRAS, *12th January,*

The easy trend noted on the Madras Stock Exchange in the past three weeks abated during the week under review. In fact, the market put on a distinctly steady appearance, with values showing a hardening tendency. The Prime Minister's statement at the Nagpur session of the Congress that he was opposed to the imposition of a ceiling on urban incomes at the present stage had a salutary effect on the market. The stress on the need for some sort of control on the profits of companies was taken note of, but it was considered that it might not be implemented, at any rate, in the near future. Select tea and rubber shares met with enlarged buying inquiries. Coffee shares, however, were easy, as operators seemed to be worried over possible overproduction and uncertain trend of world prices. Textiles evoked good support, induced by reports of higher offtake of cloth for both domestic consumption and export. Banks, sugar and miscellaneous industrials ruled fully steady.

Among tea shares in the planting section, Nonsuch Teas spurted by 75 nP to Rs. 24. Kil Kotagiris *improved by 20 nP to Rs. 6.85.* Chembras advanced by 17 nP to Rs. 3.57. T.R. & Ts gathered 5 nP to Rs. 6.80, Neelamalais 3 nP to Rs. 5.03 and Periakaramalais 2 nP to Rs. 3.88. Woodcotes were firm at Re. 1.50 *cum-div.*, despite the lower dividend of 6 per cent. for the year ended 30th June 1958, as against 9 per cent. for the previous year. Balanoors were fully maintained at Rs. 17.62, as also Mlamallays at Rs. 36, Peermades at Rs. 19.62 and United Nilgiris at Rs. 17.25.

Among rubber shares, Midlands recorded a gain of 25 nP to Rs. 10.85. Malankaras climbed up by 13 nP to Rs. 18.25. Puthutotams were quoted 15 nP higher at Rs. 2.80. Kailas strengthened by 8 nP to Rs. 4.93, Thirumbadis by 5 nP to Re. 1.71, Highlands by 3 nP to Rs. 11.40 and Teekoys by 2 nP to Rs. 6.67.

Deals in coffee shares were put through at reduced prices. Consolidated Coffees were marked down by 65 nP to Rs. 21.60. Coffee Lands dropped 50 nP to Rs. 24. Ouchterlonys eased by 10 nP to Rs. 5.37 and Savamalais by 2 nP to Rs. 3.45.

In the textile section, Buckinghams and Dhanalakshmis advanced by Rs. 2 each to Rs. 175 and Rs. 169, respectively. Bangalore Woollens rallied Re. 1.50 to Rs. 156. Janardhanas, Lakshmis, Pankajas and Rajalakshmis hardened by 50 nP each to Rs. 69, Rs. 94.50, Rs. 38.50 and Rs. 66, respectively. Travancore Rayons gathered 60 nP to Rs. 16.60.

MARKET GOSSIP

(Concluded from previous page)

year has also to be faced in respect of 197/3 in C.P., Berar and Khandesh, whereas, elsewhere in the Oomras, a yield on at least last year's levels seems to be assured. The development in Gujerat and Kathiawar has been normal and we may look forward to better crop this year than we had last year."

Reports from South India point to the possibility of Karunganni and Cambodia crop falling short of earlier expectations for want of adequate rains. It is, however, a little too early to envisage the size of this crop with any degree of accuracy.

Despite the setback to the cotton crop, the supply position in the current cotton season as a whole may be said to be quite comfortable. As against the estimated crop of 5.1 million bales, mill consumption is expected to be about 4.6 million bales. After taking into account the consumption by surgical manufacturers and spinners, there will still be a surplus of 400,000 to 450,000 bales for export cut of this year's crop "without," to quote the aforesaid firm, "eating into last season's rather heavy end-season carryover" (of 2.05 million bales).

It is considered doubtful whether the country will be able to export as much as 500,000 bales already permitted by the Government. The total quantity of cotton actually shipped during the first four months of the season (September-December 1958) was no doubt higher at 125,000 bales, as compared with a bare 22,000 bales in the corresponding period of 1957-58, but the bulk of the shipment was against business concluded earlier. Indeed, it is said that "very little fresh sales have been concluded" in recent weeks. This is attributed to two factors. One, prices of Indian cotton are not attractive enough, notwithstanding the recent adjustment in export duty. Two, textile activity the world over is at a low ebb and, with prospects of a large U.S. acreage in 1959 and lower support levels, "it is all too obvious that lower world prices are inevitable." It is no wonder then that many cotton-producing countries outside the U.S. are anxious to liquidate their surplus before the U.S. *cotton becomes cheaper; they are actually prepared* to make considerable price concessions. To quote the firm again: "As a result, Indian prices, which for many years—internally—were the lowest in the world, now happen to be far above world parity for our longer staples and are at the moment also very much on the high side for shorter exportable styles." This state of affairs is due, to a considerable extent, to the stringent restrictions on imports of long-staple cotton and to the pattern of excise duties on cloth which is in favour of coarse and medium varieties.

Viewed thus, it will be clear that the trend of cotton prices in India in future will be influenced not so much by the performance on the export front as by the demand from mills. Mill consumption of Indian cotton in the current season, as already noted, is estimated at 4.6 million bales, which represents a rise of nearly 200,000 bales as compared with the previous season. There are indications that the actual consumption may be higher still. Offtake of cloth in the domestic market is reported to have improved and overseas enquiries have been broadening of late, resulting in some reduction in the stocks of cloth with traders. A section of cloth trade believes that, in view of the notable expansion in the production of foodgrains and other agricultural commodities, there will be a distinct increase in the offtake of cloth.

Just as in India so also in Pakistan, the current season's cotton crop is said to have suffered a setback. The latest estimate places the total yield at 1.57 million bales, that harvested in 1957-58 being 1.69 million bales. This production, together with the carryover of 180,000 bales, gives a total supply of 1.75 million bales. Excluding the anticipated mill purchases of 1.00 million bales and making allowance for a normal carryover of about 150,000 bales, Pakistan is likely to export 600,000 bales. By the end of December 1958, it had shipped nearly 240,000 bales. In view of the comfortable supply position, cotton prices in Karachi have declined substantially, the extent of fall since the beginning of October last being as much as 20 per cent.

NEWS IN BRIEF

THE Madras Government has suggested to the Union Government the pegging of production of mill-made cloth at 4,800 million yards per year.

The first blast furnace of the Rourkela steel plant will be ready for test operation by the end of this month, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel.

The first blast furnace of the Bhilai Steel Works will be commissioned on the 26th inst. The plant has the capacity to produce 1,000 tons of pig iron every day.

The Government of India has removed the individual ceiling limit of 50 tons per shipper in respect of potatoes introduced on 15th November 1958. The other licensing procedures for exports, however, will remain.

The Government of Mysore has decided to invest Rs. 40 lakhs in the paper mill proposed to be started near Mandya by a private *entrepreneur* in collaboration with an American firm. The proposed mill, it is said, will utilise bagasse, the waste of sugarcane used in the Mysore Sugar Factory.

Arrangements are being made by Mr. Venkataswami and Mr. G. K. Devarajulu, both prominent cotton millowners of Coimbatore, to establish an aluminium plant in Salem with the co-operation of Italians. The project report on the aluminium plant drawn up by the foreign technicians, who were in South India last month, are expected to be in their hands in April 1959.

The Government of India has decided to release a further quota of 20,000 tons of groundnut oil cake (expeller variety) for export during the period ending March 1959 to all permissible destinations. Established shippers will be given a quota equal to 20 per cent. of their basic year exports, subject to a maximum of 400 tons per shipper from all the ports. Shipments will be allowed up to the end of March 1959.

The validity period of the Indo-Swedish trade agreement has been extended to 31st December 1959. In terms of the latest letters exchanged, several new commodities have been added to the list of items available for export from India. These include lycopodium, tooth brushes and shaving brushes with nylon bristles, tents, surgical dressings such as bandages, etc., cotton, wool, prawns and other canned provisions, knitting wool, animal casings, pearls and precious stones.

The Punjab Governor has promulgated an Ordinance empowering the State Government to realise betterment charges with effect from the 1958-59 *kharif* harvest. Under the Ordinance, all those persons who are liable to pay such betterment charges are required to pay the Government advance payment of betterment charges in respect of his "matured area" in each harvest at a rate not exceeding Rs. 25 per acre of such areas as the Government may determine.

The Indian Council of Agricultural Research has constituted a sub-committee, under the chairmanship of Dr. B. N. Uppal, Agricultural Commissioner, Government of India, to test the efficacy of special Chinese techniques of paddy production under Indian conditions. The sub-committee will draw up a plan for experimentation with these techniques in different parts of India. There have been reports from China that phenomenally high yields of paddy and other crops have been obtained by the adoption of these techniques. The first meeting of the Sub-Committee is to be held at Cuttack on 9th February.

Ways and means of developing labour relations in companies and corporations in the public sector will be discussed at a conference at New Delhi on the 21st inst. Representatives of the employing Ministries, State Governments and the Central Trade Unions will attend the meeting which will be presided over by the Union Labour Minister, Mr. G. L. Nanda. With the steady expansion of the public sector in recent years, the maintenance of harmonious industrial relations in undertakings in this sector has assumed importance. At present, there are 33 undertakings of the Centre, which employ about 350,000 workers.

A pilot scheme to mechanise country-craft transport was launched by the Union Government on the 14th inst., with the introduction of mechanised water transport in the Ganga river from Buxhar to Ragmahal. The tug or power boat provided by the Central Government will tow a number of country boats tied together to their destination. After two months, the tugs will be taken to Kerala, where mechanisation has immense potentialities. The object of the Government in launching the scheme is only to show the advantages of the project and then leave it to the private or the public sector to organise it on a co-operative basis.

The employment opportunities generated by the Five-year Plans have helped reduce the volume of unemployment, though the number of job opportunities occurring has failed to keep pace with the growing labour force, according to a study of trends in the number and type of employment-seekers between 1953-57, made by the National Employment Service of the Ministry of Labour and Employment. While the number of applicants on the live registers of employment exchanges increased steadily throughout the period under review, the rate of increase went down from 8,344 per month in 1955 to 6,012 in 1957.

An agreement has been signed between the Governments of the Punjab and Rajasthan, under which both the States have agreed to collaborate in the construction of a dam across the river Sutlej at Bhakra as well as other ancillary works included in the Bhakra Nangal project for extension and improvement of irrigation and generation of hydro-electric power. They have also agreed to share the supplies of water in the river Sutlej in certain proportions. The cost of Bhakra dam is estimated at Rs. 68.31 crores, including the cost of works for left and right power houses. About 84.87 per cent. of the cost will be borne by the Punjab and the rest by Rajasthan.

Cash rewards and commendation letters have been given to nearly 120 railwaymen belonging to various categories for inventions and suggestions made by them and accepted by railway administrations. For accepted suggestions and inventions, the successful employees receive either cash rewards or advance increments in pay, preference for grant of study leave or a record made in their service sheets for purposes of promotion in future. The scheme has been working satisfactorily and, during the 15 months ended 30th June 1958, as many as 1,378 separate inventions and suggestions were turned in by the employees. Cash rewards were given to 83 employees and letters of appreciation or commendation issued to another 35. In one case, an advance increment in pay was sanctioned.

Indian export goods were displayed in 16 international exhibitions and fairs in the first seven months of the current financial year. This display is part of the publicity drive for promotion of exports. Of the displays, five were in Italy, two in the U.S.A., two in East Germany and one each in Poland, Canada, Sweden, Yugoslavia, Afghanistan, Sudan and France. It is expected that India will have participated in five more exhibitions before the current financial year ends. A large variety of exportable merchandise ranging from traditional export goods to the products of India's engineering industries are displayed in these exhibitions.

A British firm of consultant engineers (Messrs. W. S. Atkins and Partners) has been appointed by the United Kingdom Government under the Colombo Plan to prepare for the Government of India a detailed project report for a heavy structural fabricating works and a heavy plate and vessel shop. The project report will be in sufficient detail to enable the Indian Government to ask for competitive tenders for each project as a whole, or for major sections of each project, if it wishes to do so. The consultants hope to be able to deliver their reports by the summer. The heavy structural fabricating works and the heavy plate and vessel shop are among the projects dealt with in a report prepared by a U.K. mission led by Sir Eric Coates, which was appointed more than two years ago, under the joint auspices of the Colombo Plan and the Federation of British Industries, to advise the Indian Government on the expansion of heavy engineering capacity in India.

A survey of clay resources of the country has recently been published in the form of a monograph, entitled *Indian Clays: Their Occurrences and Characteristics, Part I*, by the Council of Scientific and Industrial Research, New Delhi. The monograph, the price of which is put at Rs. 8, deals with essential data regarding the character and composition of the major occurrences of clay. The Geological Survey of India was responsible for the collection of samples from various places and the laboratories of the Central Glass and Ceramics Research Institute, Calcutta. The preliminary results of examination of about 500 clay samples, mostly china-clays and fireclays, collected from 15 Indian States during 1950 to 1952, are incorporated in this publication. Information on the location, extent of deposits, visual and washing characteristics, behaviour on drying and firing, refractories and suitability for use in production of ceramicware is included in the monograph.

From Abroad

Australia has ratified the new International Sugar Agreement.

The U.S. has agreed to give Yugoslavia a loan of $22.5 million to finance a nitrogen fertiliser plant.

The population of the U.S., as at the end of 1958, was about 175.6 million, representing an increase of 3.0 million over the year.

The Pakistan Government is considering a proposal to change the fiscal year from April-March to July-June, that is, in line with the American model.

The U.S. has granted a loan of $47.5 million to Persia, to assist its second seven-year development plan, due to end in 1962. The loan will be repayable in dollars in 12 years.

Malayan rubber exports in 1958 aggregate 1,080,656 tons, a rise of nearly 8 per cent., as compared with 1957. The 1958 level is the highest for the past seven years and the third highest since the war.

The United Arab Republic Government has accepted the Russian tender to construct the Alexandria Naval Shipyard at a cost of £6 million. Another tender is expected to come up shortly for the construction of a dry dock at Alexandria.

PERSONAL

MR. Ramnath A. Podar has been re-elected Chairman of the Millowners' Association, Bombay, for the third successive year.

Mr. V. Shankar, I.C.S., took charge as Chairman of the Indian Airlines Corporation on the 7th inst., in addition to his duties as the Director-General of Posts and Telegraphs.

Mr. Babubhai Chinai, M.P., has been unanimously elected representative of the Federation of Indian Chambers of Commerce and Industry on the National Shipping Board.

The Duke of Edinburgh will arrive in India on the 21st inst. to participate in the Forty-sixth Indian Science Congress to be held in New Delhi from the 21st to 28th inst. on behalf of the British Association for Advancement of Science.

Mr. N. K. Sengupta, till recently Postmaster General of Ambala, has taken over charge as the General Manager of the Bombay Telephones *vice* Mr. S. R. Bashyam, who has been transferred to Ambala as Postmaster General.

Mr. U. J. Bhat, Chief Engineer (Road and Buildings) of Bombay State, has been elected President of the Indian Roads Congress for the next year. *Messrs. N. Durrani, Chief Engineer for Highways, Andhra Pradesh; B. Prasad, Chief Engineer* for Roads and Buildings, Bihar, and L. R. Patel of Messrs. William Jacks, have been elected Vice-Presidents.

The Economic Council of the Arab League has unanimously decided to establish an Arab Development Bank, with a capital of £40 million. The proposed bank will finance and supervise the development projects in member-countries.

Japan's population is estimated at 92 million as on 1st October 1958, an increase of 19.85 million as compared with 1945. Of this, 46.78 million were females and 45.22 million males. The density of population was 249 per one square kilometre.

Denmark has concluded a contract for the purchase of Soviet diesel oil worth Kr. 3 million for the Danish State Railways. The price per ton of oil is lower by about Kr. 40, as compared with British and American prices.

An increase in freight rates to Colombo, with effect from 2nd February 1959, has been announced by the British and Continental Shipping Conferences, following the marked rise in the actual cost of discharging cargo such as increased port and labour charges in Colombo.

The prices of light and heavy industrial fuel oil in the U.K. have been raised by 1d. a gallon by the main distributors, with effect from the 7th inst. The increase will affect only the industrial users, particularly the steel industry and electric power stations, which are the biggest consumers of fuel oil.

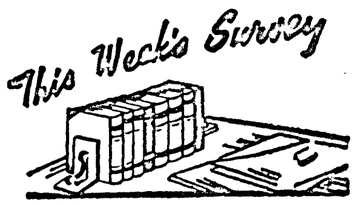
French Equatorial Africa (Sahara) has entered the world market for crude oil. The French African Oil Exploration Company has offered the Argentine Petroleum Agency 80,000 cubic metres of crude oil. The Company, which operates five oilfields in Gabo, produced slightly more than 500,000 tons in 1958.

The population of the world rose by about 90 million during 1957 and 1958 and will gain another 100 million in the next two years, according to a memorandum prepared by the secretariat for the U.N. Population Commission. The experts predict that world will have 3,000 million inhabitants by 1962 and 4,000 million by 1967.

The U.S. Export-Import Bank has granted a credit of Rs. 10 lakhs ($210,000) to Warner Lambert (Pakistan) Ltd., Karachi, an affiliate of the Warner Lambert Pharmaceutical Company of Morris Plains, New Jersey, for the construction of a drugs and toiletries manufacturing plant. The repayment of the loan is to be made over a period of six years.

About 121 million Americans had some sort of health insurance at the end of 1958. During the year, an estimated total of $4,800 million in health-care benefits was paid out, some 14 per cent. more than the previous year. During 1958, two out of every five American families used the amount to help defray medical expenses and seven out of ten families had used their health insurance at some time during the period their policies were in force. Substantial progress was made last year in providing sound programmes for persons over 65 years of age through employer-sponsored group plans as well as individual health policies.

The Pakistan Government has radically liberalised its import policy by almost reverting to the open general licence in order to boost export trade. Under the new scheme, which has been enforced from the 15th inst., allocation of foreign exchange to various industries and categories of commercial importers has been abolished. Instead, the industries earning foreign exchange by their exports have been allowed a percentage for importing their own requirements, etc. The other exporters have also been allowed a certain percentage of their actual foreign exchange earning for importing items detailed in a list which includes over 250 items covering most consumer goods.



ROLE OF RESERVE BANK

THE role of a central bank in underdeveloped countries formed an interesting part of the address which the Governor of the Reserve Bank of India, Mr. H. V. R. Iengar, delivered at a meeting of the Commerce Graduates Association in Bombay. Mr. Iengar said that, whereas in industrially advanced countries, central banks were chiefly concerned with the stability of the currency and of the level of economic activity, their counterpart in underdeveloped countries had to perform similar functions and also render positive assistance to the economic development which was a dominant problem in these countries. Referring to Indian conditions, he said there was a "compulsive desire" to show some material progress within a short period. He added: "This desire acquires further urgency, because, unlike Western democracies, where adult franchise was given after the Industrial Revolution had time to evolve itself into a state of massive productive ability, India is operating a full-fledged democracy in conditions of abject poverty and mass illiteracy. The political compulsions created by this heroic decision are continuously aggravated by a population pressure whose dimensions look to be even more serious than is generally supposed." The result of these pressures, he said, is that the Government is compelled to resort to deficit financing. Although the Reserve Bank is consulted about the size of the Plan, the "decision is ultimately taken by the Government and necessarily the Bank has to function within the conditions created by the effort to carry out the Plan."

It will thus be seen that the Reserve Bank has a particularly difficult role to play. While it can make its influence felt at the consultative stages of planning, there is no guarantee that it will always carry the day. Its political masters may, and perhaps do, create conditions in which it will find it difficult to perform its important function, namely, the maintenance of the purchasing power of the money. In one sense, this difficulty is an inevitable result of nationalisation of a central bank in any country. Only, in India its proportions are bound to be greater, thanks to the Government's political need for showing quick results. Having regard to this difficulty, the Reserve Bank may claim some credit for the success—limited though it may be—it has achieved on the price front. Mr. Iengar traced the course of index number of wholesale prices to show how the rise in prices was not abnormally high. The index number (base: 1952-53=100) was 120 in April 1951, 97 in May 1952, 110 in July 1953, 89 in April 1955, 112 in August 1957, 105 in February 1958 and is in the neighbourhood of 117 now. These figures would show that present prices are no doubt high as compared with those of April 1955. But the two periods, according to Mr. Iengar, are not strictly comparable, since April 1955 was a period of steep fall in food prices which then caused much concern to the authorities.

Not all will accept this argument unreservedly. Even if it is accepted, the fact remains that the current level of prices is nearly as high as they were in the post-Korean boom and has to be regarded as abnormal. Again, if prices have not moved up higher than they have done, the credit for this mainly goes to the fiscal policy of the Government which has sought to restrain consumption as also to the rigorous controls exercised by the Government on the prices of coal, oil, electricity, cement, steel and several other basic commodities and manufactures. Another factor that has prevented the price line from jumping too high has been the large import surplus at the expense of India's external reserves and the generous supply of U.S. wheat under P.L.480. The Reserve Bank, therefore, cannot claim much credit even for the so-called limited success on the price front. Indeed, the Reserve Bank has been a helpless spectator of the heavy deficit financing indulged in by the Governments during the past three years. Even where it could help, as, for instance, in the sphere of interest rates, it has followed a policy of least resistance. One of the real indicators of the value of the rupee is provided by the capacity of Indian goods to compete effectively in the external markets. If this test is applied, it will be seen that the rupee is not as strong as is made out by Mr. Iengar and others belonging to the Treasury Benches. That India has become a high-cost economy is clear from the none too satisfactory export performance of several of its manufactured goods.

What about the future? It is not known to what extent the Government will resort to, or be compelled to resort to, deficit financing which will undoubtedly exercise a pressure on prices. It is, however, gratifying to note Mr. Iengar's assurance that "it will be a task of primary importance for both Government and the Reserve Bank to see that, in the difficult years that are still ahead of us, this performance is maintained and the value of the rupee is not allowed to be eroded." It is to be hoped that the Government will take note of this point when preparing the third Plan.

Reviewing India's recent achievements in the economic sphere, Mr. Iengar pointed out how national income at constant (1948-49) prices had moved up from Rs. 8,850 crores in the pre-Plan year to Rs. 11,010 crores in 1956-57, showing an increase of 24 per cent. over a period of six years. The base year taken for this comparison, it must be noted, is different from the one adopted for measuring the value of the rupee. Gross fixed capital formation, according to a study of the subject by the Reserve Bank, increased from less than 6 per cent. per year in 1951 to 16.5 per cent. in 1957. In this connection, he said: "All available information suggests that the organised private sector in industry, mining, plantations, electricity undertakings and transport other than railways have invested in the first half of the Plan itself almost as much as it was expected to invest over the whole of the Plan period." It is not clear on what set of data Mr. Iengar bases this opinion. The Planning Commission, on its part, has held that investment in the private sector over the Plan period may aggregate only Rs. 475 crores, as against Rs. 685 crores envisaged in the Plan and Rs. 840 crores which it would really need in order to reach the physical targets set for it.

Again, Mr. Iengar was, perhaps, underestimating the rigour of the Government's economic policy towards the private sector, when he suggested that the "range and scope of private enterprise in India are in fact immense" and the scope for this sector in India "compares very favourably with that in certain West European countries which are regarded as having a basically private sector economy, e.g., France, Italy and Sweden." This explanation leaves a few relevant questions unanswered. In the first place, the comparison is not apt. Sweden has been a socialist economy for a long time. It is also a relatively small, indeed tiny, country as compared with India, its population being no more than 7.4 million, equal to the combined population of Calcutta and Bombay cities alone. After the war and until recently France and Italy were under the control of socialist Governments and could by no means be called private enterprise economies in the real sense. Secondly, it is undeniable that, on purely ideological grounds, the area for the private sector is being abridged year after year. Thirdly, the Government has not only bitten more than it can chew but has betrayed, despite its jaws being full, an insatiable hunger for more economic and industrial power. And, fourthly, whether by accident or design, there has been a virtual denial of resources to the private sector, which are mopped up largely by the Government, so that the scope allotted to the private sector is a theoretical possibility rather than something capable of early achievement.

STATE TRADING IN FOODGRAINS

It is now almost certain that the Government of India will introduce a system of State trading in foodgrains (wholesale), as recommended by the National Development Council early in November last, although the exact manner in which it will be done is not known. Intervening in the debate on the resolution on planning at the Nagpur session of the Indian National Congress this week, Mr. Nehru declared that the decision "is of vital importance and an essential and inevitable thing, and, no doubt, we shall pursue it to the end." This statement, we are told, evoked loud cheers among the audience, which shows that the majority of Congress men welcome and support State trading in foodgrains. In fact, the resolution on agrarian organisational pattern adopted at the session urged that the decision "should be fully given effect to." Mr. A. P. Jain, Union Food and Agriculture Minister, vigorously defended the decision in his speech on the planning resolution laying down the broad approach to the third Plan moved by Mr. Nehru. Mr. Jain said:

"State trading in foodgrains is meant to check the activity of hoarders and speculators. These private traders have treated the people as victims of their speculative activity and profiteered at their expense by manipulating prices at will. The peasant will also benefit from State trading, as he will be assured of a price for his produce; he will no longer be at the mercy of price fluctuations manipulated by the private trader. The policy of price support is also meant to keep prices at reasonable levels, and it is a part of State trading. The middlemen have to be removed by having producers' co-operatives and consumers' co-operatives."

These observations of Mr. Jain give the impression that the Government has decided to introduce State trading in foodgrains solely to curb the unsocial activity indulged in by a section of the trade. It is true that there were reports of such activity having brought about an increase in prices of foodgrains some months ago. This factor should not be exaggerated, since there is evidence to show that production was well below the demand for foodgrains. Be that as it may, the situation has lately changed, thanks to prospects of a marked improvement in supplies. The total production of foodgrains in the current season (1958-59) is expected to exceed, according to a Bombay merchant, 70 to 71 million tons, as against 62 million tons in 1957-58 and 68.75 million tons in 1956-57. The rice crop alone is placed at a record high level of 29 million tons, that harvested in the previous season being just 24.8 million tons.

Considering this and taking into account the impending imports of wheat from the U.S. under P.L.480—these are expected to be at the rate of 400,000 tons per month in the next three months—the foodgrains supply position is at present quite comfortable and bids fair to remain easy in the coming months. The trend of prices may, therefore, be expected to be downward. The prices of rice have already suffered a setback; rice *basmati* is now quoted in the Hapur market at Rs. 30 per maund, as against Rs. 33-Rs. 34 two months ago, that is, when the N.D.C. made the recommendation on State trading in foodgrains. The prices may recede further when more quantities move into the market. It may be noted here that the new crop wheat will begin arriving in the market in April.

If, however, the Government still feels that State trading in foodgrains is necessary, it should be confined only to licensing of wholesale dealers. It should not extend to include direct procurement, movement, distribution and fixation of prices. Such an extension of Government activity is beset with two disquieting consequences. First, the attention of the Government and the public will be diverted away from policies and programmes to increase production which is the real solution of the problem. Secondly, there will be disruption of the channels of distribution which have been well organised for generations. In addition to these, the introduction of State trading in foodgrains entails considerable investment of money by the Government. Mr. Babubhai Chinai did well to draw special attention to this aspect at the Nagpur session of the Congress. Estimating the investment required at as high as Rs. 2,100 crores, Mr. Chinai said: "While the country is facing a shortage in resources, it is necessary to utilise the available resources for furthering the objects of planned development." He rightly warned that State trading in foodgrains "is a big step and, if the Government makes a slip, it will prove disastrous."

The view that State trading in foodgrains might do incalculable harm and create an artificial scarcity was expressed by Mr. M. H. Hasham Premji, a well-known authority on foodgrains trade, while addressing a meeting organised by the Forum of Free Enterprise in Bombay last week. Characterising the scheme as ill-conceived and hastily projected, Mr. Premji feared that a "complete mess up" would result, if officialdom tried to usurp the position of the grain trader. He averred that the Government could utilise its energy and efforts with far better results, if it concentrated on increasing food production. In this connection, Mr. Premji pointed out, and rightly so, that, if only the Government were to modify or drop the present zonal system, build up buffer stocks for lean seasons, abandon the idea of State trading, and utilise about Rs. 300 crores required for minor and medium-scale irrigation projects, better seeds, and production and distribution of fertilisers, the real problem before the country namely, increased food production, could easily be solved in the next few years.

A recent Press report from New Delhi avers that the Working Group, constituted by the Union Ministry of Food and Agriculture, in respect of the N.D.C.'s decision to embark on State trading in foodgrains, has prepared a report which has been circulated among the State Governments for comment. The Working Group was presided over by Mr. B. B. Ghosh, Secretary to the Ministry of Food and Agriculture, and included officers of the Planning Commission, the Reserve Bank of India and the State Bank. In its report, the group is understood to have laid particular stress on control over marketable surplus of foodgrains, the wholesale dealers being made accountable to the authorities. It would appear that the group has drawn attention to the difficulties in the way of State trading in foodgrains, with special reference to finance, storage and administration.

After the State Governments submit their views on the scheme and the Planning Commission reports to the Cabinet on the results of its discussions with the various Central Ministries, the Government will finally take the decision on the machinery and the ways and means of implementing the policy decision taken in regard to State organisation of foodgrains trade. An official announcement is expected to be made early next month. In view of the utmost importance attached to the scheme, the announcement will be awaited with considerable interest by both the foodgrains trade and the public at large.

A NEW ROAD PLAN

A notable development of recent years is the possibility of the targets for roads set by the Nagpur Plan being exceeded. But this should not induce an attitude of complacency in the authorities for, considering the size of the country, India's road mileage is still inadequate and, what is more deplorable, the quality of a large part of roads leaves much to be desired. What is necessary, therefore, is an extension of, as well as improvement in, the network of roads. From this point of view, it is gratifying to note that the Indian Roads Congress, which has been rendering a great national service by spreading the gospel of the importance of roads, has already drawn up a long-term plan for road transport.

Reviewing the salient features of the Plan, Mr. W. X. Mascarenhas, the well-known authority on road problems, observed in the course of his presidential address to the annual session of the Indian Roads Congress, held last week at Hyderabad, that it was proposed to increase by the end of 1980-81 the total road mileage from 331,000 (Nagpur Plan target) to 657,000, of which about two-fifths will be surfaced. This, it is computed, will give a network of 52 miles for 100 sq. miles. The objective of the new Plan is to bring every village (*a*) in a developed and agricultural area within four miles of a metalled road and 1.5 mile of any road; (*b*) in a semi-agricultural area within about eight miles of a metalled road and three miles of any road; and (*c*) in a non-agricultural area within 12 miles of a metalled road and five miles of any road. The break-up of the new Plan, the Nagpur Plan targets and anticipated road development by 1960-61 are:

	Nagpur Plan targets	Estimated development by 1960-61	New Plan targets	Cost of new plans
	(In miles)			(Rs. in crores)
National Highways ..	20,000	13,800	32,000	980
State Highways ..	53,000	35,000	70,000	1,580
Major Dist. Roads ..	50,000	95,200	150,000	1,360
Other Dist. Roads ..	70,000	78,300	180,000	650
Village Roads ..	138,000	156,700	225,000	630
Total ..	331,000	379,000	657,000	5,200

Clearly, the new Plan involves a large investment. Such investment is placed at Rs. 5,200 crores. It would, however, be unwise parsimony to grudge this expenditure, considering that roads confer immense benefits on the community. These benefits are both indirect (in the sense the roads facilitate marketing and movement of goods and services) and direct (in the sense they reduce costs of vehicle operation). Bad roads constitute an invisible form of taxation on vehicles. The loss to motor transport on account of bad and inadequate roads has been placed at Rs. 38 crores per year. A pilot investigation has shown that the cement-concreting of a road can bring down costs of vehicle operation by 17 per cent. The waste and loss inflicted by bad roads, according to Mr. Mascarenhas, result from (*a*) waste of time through reduced vehicle speed and stoppages, (*b*) high fuel consumption, (*c*) heavy wear on tyres, (*d*) avoidable accidents reflected in cost of insurance, and (*e*) wear and tear of vehicles leading to increased cost of repairs and maintenance. Although road users derive much direct benefit from new and improved roads, it would be unjust to continue the present policy under which they, as a class, are expected to finance all, or nearly all, the expenditure on roads. Mr. Mascarenhas suggested that at least half the expenditure should be met from general revenues. Whatever the proportion that may commend itself to legislators, it is only just and fair that the general community, which benefits through the extension of the road system, should bear a reasonable share of the cost of road development

INDO-U.S. COLLABORATION

Although the importance of foreign collaboration in the field of large-scale industries is widely recognised in the country, sufficient attention has not been given to find out the ways and means by which advanced countries can help develop the medium and small-scale industries. It is gratifying to note, therefore, that the six-man U.S. Trade Mission, which toured India for about a couple of months—from 10th November 1958 to 9th January 1959—made a particular study of this aspect of economic development in the country. The Mission, headed by Mr. Nathaniel Knowles, Deputy Director of the U.S. Bureau of Foreign Trade, visited 14 leading industrial cities in North India and inspected 60 manufacturing plants and establishments, ranging from small cottage industries to large-scale industries. It has come to the conclusion that there is good scope for promoting U.S. collaboration in the field of producing American-type equipment and machinery in India to the mutual advantage of the two countries. This is the substance of a note submitted by the Trade Mission to the Union Ministry of Commerce and Industry.

The Mission feels that among those Indian industries in which substantial advancement could and would be recorded in the near future are those concerned with the production of machine tools and metal-working machines, hand tools, paper and paper products, electric light bulbs, electric household appliances, industrial and domestic air-conditioning equipment, electronic components, fractional horsepower motors, road-building equipment, aluminium structural materials, insulation materials, shoe manufacturing machinery, hardware and plumbing fixtures, and hospital and surgical supplies. The interest of the United States Trade Mission, however, was focussed primarily upon India's plans for the development of small and medium-scale industries, and in proposals calling for the collaboration of American equipment, finance, and technical know-how in such projects. Meetings with officials of the National Small Industries Corporation and with private businessmen in the small industries field served to emphasise that collaboration on the part of the American business community with both the private and public sectors of the Indian economy in the formation and operation of essential small industries could prove mutually beneficial to all concerned.

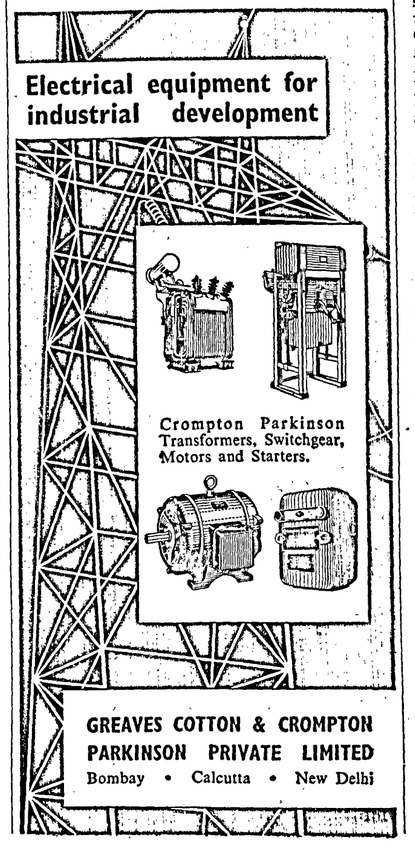
The Mission has highlighted the fact that a rapid increase in the number of small individual production units using machinery would help the development of, and serve as suppliers to, larger plants and would prove beneficial to industry in India. It is the consensus of opinion among Mission members that the future demand for machines to be used by small industries in India will increase substantially within the next few years and that available financial resources will probably not be sufficient to satisfy this demand through imports from overseas suppliers. Consequently, the Mission is of the view that there are good opportunities for American businessmen and Indian businessmen to collaborate in the production in India of certain American-type equipment and machinery through joint ventures or licensing arrangements. This process of providing "tools to make tools" should benefit both countries. The expanded use of machinery by small industries, as well as by large industries should, in the opinion of the Mission, enable Indian industry to reduce unit cost, expand employment and aid in the raising of living standards. In larger industries, such a procedure should result in mass production, with low unit profits instead of limited production with high unit profits, and the Mission feels that this, in turn, will uncover a new field of consumers.

It is generally held that prices of certain types of American machinery and equipment are higher than those of other countries. Answering this criticism, the Mission points out that "Indian management appears to be well aware that the initial cost of such equipment is not the final cost and that purchases made on lowest-first-cost basis often prove more expensive in the long run, if rates of service, maintenance, and performance are evaluated." Consequently, the Mission feels that there is a good market in India for essential types of American machinery and equipment, even though the initial cost of such items may be higher, in certain instances, than that quoted by suppliers in competitive countries.

The Mission devoted a part of its time to the study of Indian production methods and techniques and its impressions are highly valuable. According to it, the Indian industrial and business community is well equipped to respond to new production and marketing concepts; the work being done in labour and management training is most important; and there is adequate room for increased American collaboration in the establishment of training centres in India and in the expansion of training programmes for Indian personnel with American industries and universities.

Surveying the prospects for U.S. private investment in India, the Mission holds the view that there has been an improvement in India's foreign investment climate. It believes that Indo-United States Investment Guarantee (Convertibility) Agreement and negotiations currently being held on an Indo-United States convention for the avoidance of double taxation are illustrative of the *rapprochement* existing between India and the United States in the field of economic and commercial relations. It has also welcomed the investment centre which the Government of India has under consideration.

The Mission has made some good suggestions for promoting India's exports to the U.S., particularly handicrafts. It is confident that India can step up exports of its "unique and beautiful" handicrafts, if proper merchandising techniques are employed. To facilitate the expansion of Indian exports to the U.S., the mission suggests that consideration may be given to the establishment of permanent sales rooms in the U.S. or in the operation of a retail speciality store, perhaps in New York City, where Indian merchandise could be displayed and sold. It may be noted here that Japan has already opened a Department store in New York to push sales of its handicrafts.



EUROPEAN MONETARY AGREEMENT

From Our Own Correspondent

LONDON, *9th January*

AS far as the *City of London* is concerned, they are so satisfied at the moment with the working of the convertible sterling arrangements and the extra business it is bringing into the London foreign exchange market that they are not bothering their heads at all about the death of E.P.U. and the emergence (for it was born more than three years ago) of E.M.A.—European Monetary Agreement. E.P.U. had to die once transferable accounts sterling was turned into dollar convertible sterling, because, otherwise, any country having an account in European currencies which it could settle through the machinery of E.P.U. would prefer to convert the whole of that account into gold or dollars rather than receive settlement of only three-quarters in gold and the remaining 25 per cent held as a European currency balance. Conversely, debtor countries, i.e., countries finding themselves debtors on balance of the other E.P.U. countries, would enjoy not having their currencies converted fully into gold or dollars, but only so converted as to 75 per cent. In brief, debtor countries would want E.P.U. to continue, because of the 25 per cent. credit that they would get, and creditor countries would not let it continue because they could collect all their debts 100 per cent. in gold or dollars. So came to an end that very useful system of which the only other analogy is with the sterling area, whereby inter-country debts could be settled by book entries without the need of having to find gold or dollars. Of course, in the last resort, when the limits of credit have been reached, payments would have to be made in gold and dollars, but E.P.U. brought in a great element of elasticity into European debt settlements, an elasticity which can only be appreciated by a country of the sterling area if it thought that the whole of its payments with the rest of the sterling area would have to be met suddenly in gold or dollars as each arose. But that is the position now of the seventeen countries of the O.E.E.C., now that the European Payments Union has been dissolved.

LONDON LETTER

It was just over three years ago that convertibility was envisaged and the European Monetary Agreement drawn up in anticipation. To make it sound good it has been described as a system (*a*) of multi-lateral settlements and (*b*) a Fund the O.E.E.C. will supervise, both these parts through a Board of Management under the Council's control.

First for the so-called multi-lateral system of settlements. With convertibility, every country is obviously free to convert its foreign exchange holdings of other members directly into gold or dollars through the foreign exchange markets. But, if they do not wish to do this, they can run accounts with one another through E.M.A. In other words, every country party to the agreement is allowed to run a credit with other countries up to a limit, beyond which limit it must settle anyway, whether it likes or not. This system, therefore, provides for limited credit and settlement between members at ruling foreign exchange market rates.

Now as for the Fund, this is intended to have a capital of $600 million to be used at the discretion, that is, not automatically, of the O.E.E.C. to help countries having temporary balance of payments difficulties. A little under half the capital will be found from funds transferred from the E.P.U. and a little over half will come from gold contributed by members. The money will be paid in by these members as and when required, the general idea being that, apart from the short-term credits, the Fund should have in hand around $100 million as a float. All this is very small money, indeed, but no doubt some of the debtor countries of Europe will be grateful for small mercies.

So, on a realistic appraisal, Europe has lost a system which at one time would have provided a clearing house for debt settlements and gained what is nothing more than a means of limited and temporary finance for distressed members. There is no importance at all to be attached to the business of monthly settlements *apart from* the small credit limits allowed. The members of E.M.A. are in exactly the same position as a customer of a bank which says to him: your overdraft is for £X. You can have up to that and beyond that pay cash.

On the other hand, it must also be realised that, since the inception of the O.E.E.C. ten years ago, the original function of the E.P.U. has been steadily whittled away. Its originally broad concept was that European countries would consume their own smoke as it were, the bad creditors spending the foreign exchange they had acquired with the debtor countries and all payments would be kept even. But, gradually, the creditors insisted on a higher and higher percentage of gold being paid to them against their debts, until, in the end, the paid creditors were hardly penalised at all. So ends a once good experiment in free exchange in a limited area which had gradually outlived most but by no means all of its virtues. And, once again, the sterling area is left as the only appreciable trading area, where one currency not convertible into gold or dollars is still used as the basis of trade with the object of making the debts incurred self-liquidating.—*All Rights Reserved.*

The Japanese Government has decided to restrict exports of all types of cotton fabrics, including *sarongs*, to South-East Asia countries in the current year. The restriction will be applied through quarterly country-by-country quotas to shipments to Hong Kong, Viet Nam, Cambodia, Laos, Thailand, Singapore, Malaya, Burma, Ceylon, the Philippines and Indonesia. The official control is expected to be more effective than the voluntary control applied by leading trading firms last year, which excluded many small exporters. It is estimated that Japanese exports to these countries in 1958 aggregated 430 million square yards, as compared with 605 million square yards in 1957.

The cost of some of the new U.S. bombers, such as B-58 and 43J, exceed their weight in gold, according to a spokesman of the White House, Washington. B-58 bomber (air force) for instance, weighs 47,000 lbs. and costs $26,700,000 or $567 a pound. The 43J bomber (navy) weighs 27,000 lbs. and costs $17,600,000 or $650 a pound. As compared with these, gold at $35 a troy ounce, costs about $500 a pound, figured at the rate of 16 ounces a pound used in weighing aeroplanes.

FLAGS OF CONVENIENCE—OR NECESSITY?

THE controversy surrounding the registration of shipping under flags of convenience has flared up again in recent weeks. To mark its opposition to the practice the International Transport Workers' Federation sought during the first four days of December to organise a world-wide boycott of "Panlibhonco" vessels whose owners had no agreement with any of the unions. The ban was ignored in many ports, but the Federation claims that it was observed in 17 countries and that over 200 ships were affected. It undoubtedly drew public attention to a subject hitherto of little concern outside shipping circles. Since one-quarter of the world's tankers now fly one of these flags of convenience, it is worth inquiring why some owners resort to the practice and why others so strongly protest against it.

Until the end of 1958, four countries were mainly concerned—Panama, Liberia, Honduras and Costa Rica: hence the nickname "Panlibhonco." But the practice was not popular in Costa Rica and, by an Act passed in November, this country (which some time ago abolished its army) has now withdrawn facilities for shipping registration. A glance at the statistics shows how rapidly the fleets of these countries have been growing in recent years. In 1939, and again just after the war, these fleets totalled about 750,000 gross tons, those of Liberia and Costa Rica being negligible. By the end of 1950, the total had risen to 4 million gross tons, and by 1958 to well over 15 million. And the President of the Chamber of Shipping of the United Kingdom has ventured the opinion that, on present indications, the Negro republic of Liberia alone might have a fleet of well over 30 million gross tons in 10 years time; this would make her the world's biggest "maritime" country, though, in fact, she has no ocean-going vessels of her own.

Tankers Dominate

The proportion of vessels flying flags of convenience is much higher for tankers than it is for dry cargo ships—24 per cent., against 8½ per cent. For tankers, as the following table shows, Liberia heads the list, followed by Panama and Honduras; Costa Rica was never of much importance from this point of view. (Incidentally, in terms of deadweight tons, flags-of-convenience tankers account for 13 million out of a total world fleet of nearly 53 million tons.) Most of the tankers so registered are owned either by American interests (mainly U.S. oil companies) or by owners of Greek origin or nationality. The reasons why these owners resort to flags of convenience differ in the two cases, though financial considerations are common to both.

For American owners, the dominant motive is the urge to reduce operating costs—primarily wage costs. This is not to imply that the crews of tankers registered in Liberia or Panama are paid low wages or work under bad conditions: quite the reverse. For example, Mr. Niarchos, the well-known Greek shipowner, recently claimed that, although most members of his crews have elected not to join a trade union (and though it was not his policy to create a "closed shop"), they enjoy terms that are generally more favourable than those laid down by the unions in the countries in which they are recruited. The prevailing wage scales and food expenditure per man on his ships are, he claimed, second only to those of vessels registered in the U.S.A.

U.S. Shipowners

This immediately pinpoints the problem facing American shipowners in this highly competitive industry: if they register their vessels in their own country, they must pay their crews according to American wage scales, which, being related to general wage levels in the U.S.A., are 60 to 100 per cent. above those of most other maritime nations. For U.S. liner companies whose vessels ply between the U.S.A. and other countries, this wide disparity in wage rates creates no problem, since they enjoy a Government subsidy deliberately designed to remove the disability. (This is granted for security reasons: in time of war, liners immediately become troop carriers.) U.S. shipbuilders are also subsidised to enable them to compete with builders in countries where wages are lower. But no such subsidy is payable to the owners of tankers or tramp ships. Hence tanker owners can escape the burdens of the American wage scale only by resorting to flags of convenience—or, as they would say, "flags of necessity," for U.S. owners have recently formed the American Committee of Flags of Necessity, to defend their interests. And it is the contention of shipowners elsewhere that this flight to "Panlibhonco" flags is encouraged by the U.S. Government.

Greek Shipowners

For Greek owners, flags of convenience are attractive for other reasons. Immediately after the war, unstable political conditions and the election of left-wing Governments aroused fears of nationalisation among Greek shipowners. They were also handicapped by obsolete shipping laws—now substantially amended. Finally, and most important, they were subject to heavy taxation, as were owners in most other maritime countries. Registration in Liberia or Panama offered, and still offers, a ready and a legal means of escape from these financial and other burdens.

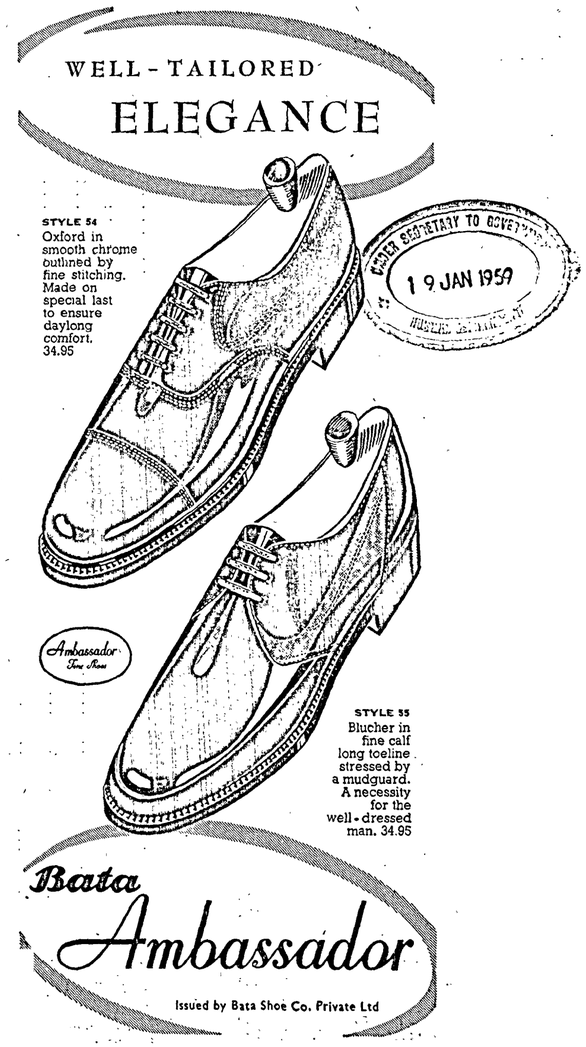
It is the very considerable tax advantage enjoyed by shipping companies registered in Liberia, Panama, etc., which constitutes these countries' main appeal to shipowners outside the U.S.A. Liberia and Panama charge a registration fee of U.S. $1.20 per net ton, while Honduras asks only 25 cents. In addition, owners pay an annual tax of 10 cents per net ton in Liberia and Panama, and of 5 cents in Honduras. This means, for example, that the owner of a 38,000 d.w. tons tanker (which would have a net tonnage of about 14,000) would pay in Liberia an initial registration fee of $16,800 *plus* an annual tax of only $1,400. Incidentally, Liberia has undertaken not to increase these charges for 20 years from the date of initial registration, and Honduras for as long as 30 years. No other taxation is payable by the shipowner in these countries, and very few obligations attach to the right of registration.

Host Governments

From the shipowner's standpoint, these charges are negligible, as compared with the taxation levied, largely in the form of income and profits taxes, in the traditional maritime countries. But it represents an easy source of revenue for the host Governments. And for Liberia, in particular, it is an important source. In the year to last July, some 2.6 million gross tons of shipping were registered under the Liberian flag for the first time, while the total so registered at the end of the period was over 10 million gross tons. If net tonnage is reckoned to be about 60 per cent. of gross tonnage, it may be roughly calculated that the registration fees and annual taxes on this shipping must have brought in some $2½ million. As a proportion of the Government's total revenue, this is of the order of one-seventh.

A similar calculation shows that Panama must have obtained only about $425,000 from

(*Continued on page 86*)



FOREIGN ASSISTANCE TO INDIA

AUTHORISATIONS AGGREGATE OVER RS. 1,373 CRORES

IT is common knowledge that India has come to depend to a very large extent on external assistance for economic development. In spite of the Government's vigorous efforts to mobilise domestic savings and to augment its income by a series of fresh tax measures, India could not do without the aid of foreign countries to achieve the targets set under its two Five-year Plans and to bridge the gap in its balance of payments. A number of foreign countries and international agencies have given generous aid. This has taken the form of long-term loans and deferred payment facilities, grants, equipment and commodities. Besides, some of these countries have made available to India the services of technical experts in various fields of development programme. Notable among the countries which have given substantial economic assistance are the U.S., the U.K., the U.S.S.R., West Germany, Canada, Australia, New Zealand, Norway and Japan. International agencies, such as the World Bank and the I.M.F., as also private U.S. banks, have given loans to India to assist a number of development projects in the public and private sectors alike. Besides, private philanthropic agencies in the U.S., like the Ford Foundation and the Rockefeller Foundation, and agencies of the United Nations such as the F.A.O., the U.N.I.C.E.F., the U.N.E.S.C.O., the W.H.O., and the I.L.O. have provided funds for the procurement of equipment and technical experts.

India has implemented one Five-year Plan and has almost completed three years of the second Five-year Plan. Yet, there has not so far been any connected and consolidated account of the external assistance promised and disbursed. In fact, this journal, in its issue dated 18th October 1958, drew pointed attention to the need for the Union Ministry of Finance or the Planning Commission undertaking the task of making a detailed assessment of the foreign assistance authorised and utilised, so that the public will have the benefit of accurate and latest idea of the position in respect of external resources required for implementing the Plan. It is gratifying to note that the Department of Economic Affairs, Ministry of Finance, Government of India, has just published a brochure, *External Assistance* 1958, giving a consolidated account of the nature of external assistance promised and received since the beginning of the first Five-year Plan. The table published at the foot of this page gives, at a glance, the details of such assistance.

Total Assistance

It will be seen from the table that the total foreign assistance, by way of loans and grants, authorised so far, since the beginning of the first Five-year Plan, aggregates Rs. 1,027.43 crores. This takes into account the additional credit of $100 million from the Development Loan Fund (U.S.) for which an agreement was signed on 24th December 1958. In addition to these loans and grants, India has been authorised so far a loan of Rs. 32.47 crores under P.L. 665 and Rs. 345.89 crores under P.L. 480 for purchase of U.S. surplus agricultural commodities. Taking these also into account, the total amount of external assistance authorised comes to Rs. 1,373.32 crores. The loan part of the authorisations (other than the credits under P.L. 665 and P.L. 480) accounts for Rs. 845.85 crores and grants for Rs. 181.58 crores. Of these, loans disbursed up to the end of March 1958 by the donor countries amount to Rs. 265.89 crores and grants to Rs. 131.67 crores, leaving a balance of authorised • funds available amounting to Rs. 629.87 crores.

A country-wise analysis shows that the U.S. has by far been the biggest benefactor of India, the total amount of Government loans and grants (including the credit for purchase of surplus agricultural commodities) being no less than Rs. 682.46 crores. In addition, the private U.S. bank credit authorised amounts to Rs. 5.33 crores and Export-Import Bank loan to Rs. 71.43 crores. Thus, the total U.S. assistance comes to Rs. 759.22 crores, of which loans and grants disbursed up to 31st March 1958 account for Rs. 207.30 crores and deposits made in the U.S. Government account in India in respect of purchases under P.L. 665 and P.L. 480 aggregate Rs. 171.66 crores.

The U.S. has been providing economic assistance on a large scale since 1951. The first loan was for $190 million granted in June 1951 for the purchase of two million tons of foodgrains from the U.S. to meet the food crisis in India resulting from floods and drought in 1950. The entire loan amount has been received by India. The loan carries interest at 2½ per cent. per annum and is repayable over a period of 30 years. Recently, the U.S. Government has agreed to reschedule (that is, re-lend to India) about $23 million of principal payments and about $39 million of interest payments. As a result of this, the completion of payments on the loan has been deferred from the present terminal date of 30th June 1986 to 30th June 1995. Further, no interest will be charged on the amounts of principal and interest so deferred. Are not these terms more generous than those offered by Russia, about which much trumpeting has gone on not only in India but throughout Asia and Africa?

T.C.A. Aid

In pursuance of the Point Four Programme, the Government of India and the U.S. Government signed the Indo-U.S. Technical Co-operation Agreement (T.C.A.) on 5th January 1952 which provided for the execution of agreed projects in co-ordination with India's Five-year Plan. For the execution of projects mutually agreed upon under this agreement, operational agreements were entered into from time to time, the number of such agreements signed up to the end of September 1958 being 88. The T.C.A. laid down limits up to which funds were to be allocated by the U.S. Government for each fiscal year ending 30th June. The allocations were as follows:

(In million dollars)

Fiscal Year	Amount allocated • Grant	Loan	Total
1952	50.00	..	50.00
1953	38.35	..	38.35
1954	82.50	..	82.50
1955	30.50	45.00	75.50
1956	22.50	37.50	60.00
1957	25.00	47.50	72.50
1958	15.06	95.00	110.06
1959	..	100.00	100.00
Total	263.91	325.00	588.91

• Does not include allocation for technical experts and Indian trainees sent abroad.

The T.C.A. agreement signed in 1952 contemplated the undertaking of joint projects with special emphasis on agricultural development. From the fiscal year 1954, separate funds were allocated for economic development and technical assistance and the aid was described as development assistance, which extended over such fields as transport and industrial development. It will be seen from the above table that, during the first three years, the aid was in the form of grants.

The new feature introduced in 1955 was that the major part of the aid should be in the form of loan and that 50 per cent. of the development assistance should be taken in the shape of U.S. surplus agricultural commodities. A new concept of aid has been introduced with effect from the fiscal year 1958. A "Development Loan Fund" has been established and the financing of projects is extended to the private sector also. The entire aid has to be in the form of loans carrying interest at the rate of 3 to 4 per cent. and repayable in not more than 40 years either in local currency or in dollars at the borrowers' option. The total amount of loan allocated in 1958-59 is $175 million, for which agreements have been signed. In addition, an allocation of $20 million has been received from the U.S. President's Asian Economic Development Fund for the Orissa iron ore project.

Commodities Agreement

The Agricultural Commodities Agreement between India and the U.S. under Public Law 480, signed in August 1956, provides for the sale of surplus agricultural commodities worth $302.90 million during the three years ending 30th June 1959. In addition, the U.S. Government has agreed to finance 50 per cent. of the total ocean freight to the extent of $59.5 million. A supplementary P.L. 480 agreement was signed in June last for $57 million for the purchase of wheat, maize and milo. Under another agreement signed in September 1958, India has received an allocation of $238.8 million out of the extended P.L. 480 for financing the purchase of wheat, maize and milo. The rupee equivalents of these P.L. 480 loans are to be utilised as follows:

(In million dollars)

	Under agreement dated 29-8-1956	23-6-1958	26-9-1958
U.S. expenses	74.3	7.7	28.7
Grant for economic development	54.0	..	..
Loan " "	234.1	35.1	114.6
Mutually agreeable loans to U.S. and Indian firms	..	14.2	59.7
Grant for non-self-liquidating projects	..	..	35.8
Total	362.4	57.0	238.8

Out of the loan of 234.1 million dollars under the first agreement, a sum of $55 million has been reserved for re-lending to private enterprise. For this purpose, a Refinance Corporation has been set up. India is also purchasing surplus agricultural commodities under section 402 of P.L. 665. In this case also, the rupee equivalent is deposited in the U.S. Government account in India, from which a loan of Rs. 7 crores has been given for Rihand Valley Development. During 1958-59, the U.S. Government has made available to India third country currency assistance to the extent of $4 million for the purchase of fertilisers and tube-well equipment. This will be in Italian lira, Japanese yen and French francs. The rupee equivalent of these foreign currencies is to be deposited in the U.S. Government account in India. For the present, no loan out of these funds is envisaged.

Russia

Next in order of foreign countries which have rendered assistance is the U.S.S.R. The total amount authorised up to the end of March 1958 was Rs. 123.33 crores, while disbursements made aggregate only Rs. 15.98 crores, leaving a balance of Rs. 107.35 crores available. Under the agreement signed in 1954-55, Soviet Russia agreed to supply equipment and structural steelwork worth Rs. 63.07 crores for the Bhilai steel plant. Out of these, equipments worth Rs. 15.22 crores were received in 1956 and 1957. By the end of 1958-59, total credit to the extent of Rs. 45.23 crores is expected to be utilised, leaving a balance of Rs. 17.84 crores. The utilisation of credits and supplies from Russia are said to be according to schedule. Further credits to the tune of about Rs. 60 crores have been offered by the Soviet Government to be utilised from 1959 onwards to finance (1) heavy machine building works, (2) mining machinery plant, (3) power station at Neyveli, (4) optical glass factory, and (5) development of Korba coalfields. The Soviet Government has also given grants to the extent of Rs. 76 lakhs in the form of agricultural machinery for the establishment of a State-mechanised farm at Suratgarh.

West Germany

Out of the loan of Rs. 75 crores granted by West Germany to finance the Rourkela steel project, the amount received up to the end of March 1958 was Rs. 13 crores, leaving a balance of Rs. 62 crores.

Britain

The U.K. Government has entered into an agreement for the grant of a loan of £15 million (Rs. 20 crores) to finance a part of the Durgapur steel plant. No withdrawals have so far been made against this loan. It is, however, expected that the entire amount will be drawn during 1958-59, that is, in another 2½ months. In addition, a consortium of British banks has agreed to give a loan of £11.5 million for financing the sterling portion of the payments to be made to ISCON with whom a contract has been entered into for the construction of an integrated steel plant at Durgapur. Out of this, a sum of £500,000 only has been drawn.

Canada

The total amount of Canadian aid from 1951-52 to 1957-58 comes to about $140 million (Rs. 66.68 crores). This includes a grant of $30 million and a loan of $25 million for wheat, $15.82 million for copper and aluminium, and about $7.5 million allocated for the Canada-India Reactor at Trombay. The Canadian aid covers a wide variety of projects, such as hydro-electric projects at Umtru, Mayurakshi and Kundah, locomotives, locomotive boilers, diesel generating sets, locust control, plant protection and æromagnetic survey for oil prospecting in Rajasthan. Besides the amount mentioned above, Canada has allocated a sum of $17 million as aid during the current year (1958-59). In addition, wheat worth $8.8 million will be received as loan. There will also be a separate grant for wheat. In all, aid by Canada upto the end of the current year is as much as $165.80 million, excluding the grant for wheat just referred to.

World Bank

The largest external assistance, other than those from foreign Governments, has been provided by the World Bank. The loans granted upto the end of September 1958 aggregate $315.82 million (Rs. 150.39 crores) for the public sector and $191.27 million (Rs. 91.08 crores) for the private sector, bringing the total to $507.09 million or Rs. 241.47 crores. Out of the loans sanctioned for the public sector, a sum of $60.84 million (Rs. 28.97 crores) was drawn during the first Plan period, leaving a balance of $254.98 million (Rs. 121.42 crores) for the second Plan, of which a sum of $90.82 million (Rs. 43.25 crores) has been drawn up to 30th September 1958. Out of the loans amounting to $191.27 million granted to the private sector, the actual amount utilised comes to $143.23 million. Repayments in res-

A Great Sound of Machines...

WHEN BALBIR SINGH came to Jamshedpur from Bahrein in 1957, the site for the new Rs. 100-million Blooming Mill—a key unit of Tata Steel's Two Million Ton expansion programme—had just been cleared after levelling a large hillock.

Today this new 46" Blooming Mill, the largest of its kind in India, with a rolling capacity of two million tons, is all set to produce the blooms and slabs from which rails, structurals, plates, sheets and many other products will be rolled.

Despite the Suez Crisis which delayed vital supplies and other difficulties, the rapid completion of the Blooming Mill was made possible by the devoted service of men like Balbir Singh. He and hundreds of other Indians, assisted by American and German technicians, worked round-the-clock on this major expansion project to produce more steel to strengthen India's economy.

MORE ABOUT U.K.-HONG KONG TEXTILE PACT

QUITE A FAVOURABLE DEAL TO THE COLONY

AS readers are aware, a reference was made in these columns last week to the agreement on the voluntary limitation of cotton cloth exports from Hong Kong to Britain signed between the textile interests of the two countries in Hong Kong on 30th December 1958. Since then, further details of this agreement have been made available at Manchester. These show a slight difference in the ceiling on exports of cotton piecegoods from Hong Kong to the United Kingdom. The ceiling on piecegoods is 115 million square yards and not 120 million square yards as reported last week. The ceilings on the other two types remain unchanged, so that the total which Hong Kong can export is 164 million square yards per annum, instead of 169 million yards as was claimed by reports from Hong Kong last week.

The ceiling of 115 million square yards on piecegoods refers to cloth in loomstate. This ceiling, it is interesting to note, applies to cloth imported by Britain from Hong Kong for retention. The inclusion of words "for retention" raises the question whether cloth imported by Britain and re-exported after processing will be outside the ceiling. If so, Hong Kong has had a far more favourable deal than we had assumed last week.

The ceiling of 115 million square yards, under the agreement, is for each year of the three-year period, namely, 1959, 1960 and 1961. If the ceiling is not reached in any particular year, the shortfall can be carried forward for use within the first six months of the following year. In addition, a ceiling of three million square yards is to be applied specifically to yarn-dyed cloth and towelling exported in excess of four million yards. The ceiling for made-up goods and garments is set at 46 million square yards, but the quantity of cloth shipped to the U.K. can be varied within the limits of this ceiling, so that, if more garments are exported than the 46 million square yards limit, the quantity of grey cloth to be exported in the following year will be reduced by an equivalent quantity. This means that the ceiling for made-up goods is flexible. Further, the agreement excludes cotton yarns and threads, articles manufactured from cloth of U.K. origin, sacks and bags, stocking and socks, knitted underwear, outerwear and gloves, fabric gloves, plimsolls and canvas shoes. It also excludes any other manufactures of cotton which the Hong Kong Government specifies as not properly coming within the scope of the undertaking.

The agreement provides the opportunity for both sides to hold, during the period of the arrangement, negotiations to adjust the situation should major changes occur in the pattern of U.K. import trade in cotton textiles to the detriment of either the Hong Kong industry or the British industry. Further consultations can then be held at the request of either industry to consider whether any modifications to the undertaking are necessary. The Hong Kong Negotiating Committee, of course, reserves to itself the right to withdraw the undertaking, if the Hong Kong Government at any time decides that economic conditions in the Colony have deteriorated to such an extent as to justify the withdrawal.

The U.K.-Hong Kong textile pact has been generally welcomed in Britain. Lord Rochdale, Chairman of the Cotton Board, for instance, is very pleased that some agreement has been secured, though he recognises that the industry in Lancashire would have preferred lower figures than had been achieved. Expressing the hope that the Indian and Pakistan cotton industries would now ratify the agreements on similar lines reached in principle last year, he said that such a move "should bring stability to the home industry and enable traders to turn away from this problem and concentrate on other important matters such as re-equipment and the reorganisation of the structure of the industry." He added that the rapid increase of duty-free imports had been sufficient to put off any reinvestment in the industry. Sir Cuthbert Clegg, Vice-President of the Cotton Manufacturers Association and leader of the Lancashire mission to Hong Kong, says that it had been imperative to get the arrangement fixed up in order to restore confidence in the Lancashire cotton industry. He feels that the agreement will have an important psychological effect both on the industry in the U.K. and on textile industries abroad.

From the aforesaid brief account, it would appear that the U.K. cotton textile interests will, in the course of their talks with their Indian and Pakistan counterparts, insist on adherence to the agreement provisionally negotiated which envisages a ceiling of 140 million square yards and 30 million square yards, respectively, as against the total ceiling of 164 million square yards fixed for Hong Kong. How the proposed ceilings on exports of cotton piecegoods from India, Pakistan and Hong Kong compare with the actual imports into Britain during the last four years is indicated in the following table:

(In million square yards)

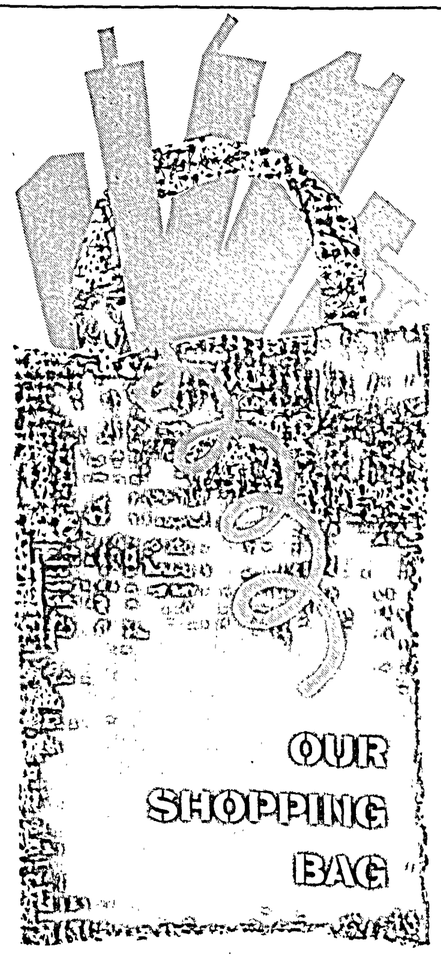
	Ceiling	1958*	1957	1956	1955
Hong Kong	164	106	75	58	51
India	140	124	186	133	136
Pakistan	30	1	6	6	N.A.
Japan	..	43	58	32	64
China	..	36	28	9	5
Others	..	51	64	69	43
Total ..	..	361	417	307	299

* Based on the trend during the first nine months.
N. A. Not available.

It will be seen from the foregoing figures that the ceiling for exports of piecegoods from Hong Kong and Pakistan are very much higher than the actual exports during the year 1957, while, in the case of India, the proposed ceiling is lower by as much as 46 million yards. Now that the quota of a tiny island like Hong Kong is so generously fixed at 164 million yards, one wants to know whether the Indian millowners will come out with a plea for a corresponding upward revision in the ceiling on their exports. Many millowners would appear to feel that the ceiling figures for Hong Kong are much higher than that mentioned during the "understanding" reached between Indian and British textile interests in London. Stating that the Hong Kong industry's past performances of the last two years in regard to exports to the U.K. have not been taken into account, some characterise the agreement as "complete surrender" by the U.K.

The reaction of Pakistan millowners and Government spokesmen to the U.K.-Hong Kong textile agreement is one of mixed feeling. Thus, any limit on Pakistan's cloth exports is considered to be undesirable in that it would cut the country's foreign exchange earnings at a time when they are needed most, but the need for giving a helping hand to the Lancashire industry to tide over its crisis is accepted. Official sources are reported to have confirmed that Pakistan would agree to limit its textile exports to 30 million square yards annually and an arrangement to this effect is likely to be concluded shortly. The whole issue was discussed by the Pakistan Textile Millowners' Association

(Continued on page 86)



Limestone and dolomite from the dusty quarries of Katni, steel and pig iron from the roaring furnaces in Asansol and Jamshedpur, coal from the dark depths of the earth in Bihar . . . each year, from all over this vast land a stream of materials worth about Rs. 3 crores, pours into our shopping bag. Out flows from Texmaco's production lines another stream, a stream of finished products manufactured to international standards—sugar, cotton and jute mill machinery, rolling stock, industrial and locomotive boilers, hydraulic dam equipment and other steel structurals. Thus playing its part in the complex pattern of India's developing economy, Texmaco is linked with a multitude of other enterprises, large and small. As Texmaco grows so too the other industries prosper.

REACTIONS TO ACCORD WITH HONG KONG

BREATHING SPACE FOR THREE YEARS

From A Special Correspondent

MANCHESTER, 6th January

MANCHESTER LETTER

AFTER so many "inspired" statements indicating the details of the arrangement with Hong Kong on future imports of cotton goods, the release of the official document came as something of an anti-climax. There were no real surprises, except possibly the interchangeable limits between arrivals of grey cloth and garments from year to year.

Oddly enough, some commentators still persisted in describing the undertaking as "cuts" in Hong Kong's trade, whereas the reality is that, for three years at least, a limit of nearly 165 million square yards has been fixed, curbing any substantial increase in imports. Nor should the final paragraph of the undertaking be disregarded; this provides the Colony's negotiating committee with the right to withdraw from the scheme should the Hong Kong Government at any time decide that local economic conditions have deteriorated to such an extent as to justify this action.

From Lancashire's standpoint, the establishment of a ceiling offers a three-year breathing space, with the opportunity to get to grips with the main problems confronting the trade—obsolescence of existing machinery, the acknowledged excess of plant to cope with the smaller level of demand and the need for consolidation to re-establish the industry on a more limited but more effective basis.

A Voluntary Undertaking

Secrecy over the progress of the negotiations between Hong Kong and the British cotton industry, with conflicting rumours as to the exact nature of the ceilings proposed on exports from the Colony to this country, has persisted to the bitter end. The acceptance of a voluntary undertaking by the Hong Kong millowners to establish a limit on their shipments was worthy of the type of guarded welcome which Lord Rochdale accorded the decision, but, amid the mill towns of Lancashire, traders generally are cynically-minded enough to suggest that "the proof of the pudding is in the eating."

Throughout the discussions, Hong Kong has taken the lead in publicising, under a thin guise of anonymity, details of the basis on which the talks were proceeding. When it came to a final agreement, the story was put out for world consumption that Hong Kong had made substantial concessions to Lancashire. If the figures quoted by "a source close to the negotiations" can be accepted as a guide to the probable ceiling, it is extremely doubtful whether such a claim could be substantiated.

A limitation of grey cloth shipments to Britain at a rate of approximately 115,000,000 yards a year, without any ceiling on goods arriving for processing and re-export, would mean that Hong Kong would be free to raise its shipments to Britain by about 50 per cent. above the current level. Imports in 1958 were around 110,000,000 square yards, but, of this quantity, some 25 per cent. was for re-export. The current volume of retained imports at near 80,000,000 square yards can now apparently be raised to 115,000,000 square yards—some concession!

Meanwhile, during the much-publicised negotiations with Hong Kong, there has been a tendency to forget that India and Pakistan are also deeply involved in this situation. Both these countries have agreed in principle to the suggestion of a limitation on their exports to the United Kingdom, but details have awaited the conclusion of the discussions with Hong Kong. The latest developments may cause some adjustment in the arrangements already tentatively agreed in Bombay and Karachi.

Cotton Mill Statements in 1958

Despite the uneven nature of trading in Lancashire throughout the past year and the inability of most firms in the cotton trade to secure fresh business, the results published by public companies have been reasonably well maintained. A fall in profits could hardly have been avoided in the circumstances, as the contraction of the industry has continued on such an obvious scale, but the accounts now being surveyed offer abundant evidence for the frequently expressed opinion that the financial position of most firms in the trade is strong enough to withstand at least temporary setbacks.

It should be emphasised, yet again, that the figures which follow are those announced during the past 12 months. They, therefore, include some firms the accounts of which are made up in the early part of the year, thus reflecting the more favourable trading which took place during 1957. At the same time, the reports from individual mills and some of the leading groups which have been released even in the past few weeks, thus covering most of 1958, have been by no means as disappointing as some observers might have led us to believe.

According to a special analysis, the average profit announced by 45 spinning mills during 1958 was £25,099 per company, as compared with an average of £26,245 for 51 firms in 1957 and £21,077 for 49 companies in 1956. The average dividend paid by 45 spinning mills last year was 18.51 per cent., as against 18.84 per cent. for 52 firms in 1957. The average profit of 19 concerns which combine spinning and weaving was £71,504 per company in 1958, as compared with £72,292 for the same companies in the previous year. The average dividend paid by these firms was 10.74 per cent., as against 11.37 per cent. For the whole of these 64 companies, the average profit was £38,876 in 1958, as against £41,029 for the same firms in 1957. The dividend for 64 firms was 16.23 per cent. on average, as against 16.63 per cent. Aggregate credit balances accumulated by these 64 firms, mainly engaged in spinning, but with some weaving capacity, now total £10,849,713, an average of £169,527. A year ago, 70 companies had credit balances amounting to £11,157,218, an average of £159,389. These figures in themselves illustrate the underlying strength of many concerns to hold out against difficult trading conditions for some time ahead.

It has been the practice in the past to comment on the tendency for those firms in the trade which are mainly dependent on weaving for their livelihood to display distinct weakness in profitability. During recent years, the earnings achieved by this section have dwindled and manufacturers have often been in an unenviable "squeeze" between the price arrangements adopted in the spinning and finishing branches. Latterly, a good deal of the burden caused by foreign cloth imports has been felt by weavers.

The latest analysis, however, indicates only a minor reduction in profits, which is in line with that incurred by the other sections. Average profits of 23 weaving concerns last year amounted to £25,015, as against £28,414 for the same firms in 1957. Dividends averaged 5.07 per cent., as against 7.00 per cent. Credit balances amounted on average to £99,966 per company, as against £103,369 a year previously.

Combines' Earnings Drop

As compared with the experience of some of the smaller individual units in the trade, the results returned by the larger combines during the past year show a wider disparity in earnings. Total profits of the 14 large groups and their subsidiaries announced during 1958 amounted to £3,300,026, as against £4,937,026 in 1957. The average profit was £235,716, as against £352,644 in 1957. The dividend distributed averaged 10.79 per cent., as against 12.72 per cent. in 1957.

Again, the tendency towards retaining substantial sums in credit balances to be carried forward is apparent. Aggregate credits maintained by these 14 groups amounted to £9,300,404, as against £9,052,067 in the previous year, an average of £664,315, as against £646,576.

Capital changes affecting cotton textile companies during the year were not extensive although repayments became more popular. In four cases scrip bonus issues were made, totalling £242,488, whereas in the previous year the bonuses amounted to £1,099,526, including one substantial issue by a large group. Capital repayments numbered eight, the firms concerned distributing £636,397 to shareholders, whereas in the previous year four companies had distributed £560,037 in this way.

The Cotton Board's quarterly statistical review, commenting on conditions in the third quarter of the year, reached the industry just before 1959 dawned. Cotton yarn production in the leading countries covered by the survey was 6 per cent. down on the same period in 1957 and world trade in cotton fabrics slumped by 18 per cent. The Cotton Board estimates that China shipped about 350,000,000 square yards of cotton cloth to overseas markets in 1957 and forecast that exports in the following year would be even larger. On this assumption, Chinese overseas trade is running at about the same level as British exports.

Lancashire yarn output in November was 17 per cent. below the same month in 1957, despite the fact that those spun from man-made fibres and mixtures were fractionally higher. Total cloth output in October was 18 per cent. down as compared with November 1957, the drop in cotton cloth output being 20 per cent.—*All Rights Reserved.*

PROSPECTS FOR WORLD COTTON CONSUMPTION

DOWNWARD TREND EXPECTED TO PERSIST

THE first half of the current world cotton season (from 1st August 1958 to 31st July 1959) is drawing to a close and it looks as though the season will witness the continuation of the downward trend in consumption of cotton in the free world noted during 1957-58. The International Cotton Advisory Committee, Washington, estimates the total consumption at about 27.72 million bales, a decline of 750,000 bales (or more) as compared with 28.47 million bales consumed in 1957-58. The rate of decline is, of course, less than that in the previous season when it was of the order of over one million bales.

An interesting analysis of the prospects for cotton consumption in the free world during the 1958-59 season is contained in a recent issue of *Cotton*, the monthly review of the Committee. The analysis is based on the actual position during the first four months of the season.

According to the Committee, two influences which may have some bearing on the present situation, particularly with respect to the regional distribution of cotton consumption, are textile exports and competition from other fibres and materials. In the last three decades, cotton cloth exports have shrunk to the point where they now represent only 10 per cent. of total free world production and their importance as a factor determining total consumption has correspondingly diminished; the raw cotton equivalent of cotton cloth exports is currently between 2.5 and 3.0 million bales of raw cotton per annum. In 1957, textile exports increased signficantly, though still well under the post-war peak. Of the major exporting countries, the U.K., the cotton goods exports of which have declined every year since 1954, was the only exception. The increase in the cotton cloth exports of the free world during 1957 was equivalent to a little less than 300,000 bales, whereas aggregate consumption rose by over a million bales in that year.

Cloth and Yarn Exports

The aggregate free world exports of cotton cloth during the first half of 1958, as compared with the same period in 1957, was lower by about 16 per cent., representing a loss of more than 200,000 bales in raw cotton consumption, the fall in the total free world consumption being a million bales. Data on cotton yarn exports are incomplete, but the crop was probably of a similar magnitude to cotton cloth. The following table gives the actual shipments of cotton cloth and yarn from the major exporting countries during the first half of 1957 and 1958, as also in the whole of 1956 and 1957:

(In thousand metric tons)

	First half		1957	1956
	1958	1957		
Cloth—				
Japan	63.3	69.0	147.0	123.0
India	35.1	55.8	99.7	81.6
U.S.	32.3	34.4	65.5	60.6
U.K.	23.1	26.4	50.6	62.7
France	15.3	17.7	33.3	32.9
W. Germany	10.1	10.3	21.8	20.7
Netherlands	12.3	12.6	25.0	25.6
Belgium	17.5	22.1	22.4	22.2
Hong Kong	9.7	10.8	22.3	15.0
Others	24.0*	23.7*	47.4	48.5
Total free world	242.7*	282.8*	535.0	483.7
Yarn—				
Japan	6.7	7.9	14.6	12.4
India	1.8	2.0	7.6	5.5
U.S.	3.2	4.5	8.8	7.1
U.K.	6.6	9.1	17.1	16.2
France	1.8	2.2	3.8	4.3
W. Germany	1.0	1.4	3.3	2.0
Netherlands	3.3	3.4	6.1	6.6
Belgium	7.7	10.3	19.0	20.3
Hong Kong	6.7	8.4	15.0	14.0
Italy	6.2	6.0	12.5	10.7
Pakistan	7.6	11.9	18.3	12.6
Exypt	5.5	4.9	10.9	11.3
Others	6.0*	6.0*	12.0	10.1
Total free world	64.1*	76.0*	149.0	133.0

* Estimate only.

Although the importance of cotton textile exports in determining the aggregate level of cotton consumption has declined, fluctuations in the volume of textile trade, it is said, may sometimes be of overriding importance in certain countries. Evidence of this is provided by the inexorable contraction in textile exports—and consumption—in the U.K. since the first World War and, in more contemporary times, by the rehabilitation of the Japanese industry based, to a large extent, on the rapid rise in export trade in the early fifties, especially after the Korean war. Cotton has undoubtedly lost markets to rayon since the end of World War II, particularly in the industrial field. Nevertheless, there is nowadays increasing indication that rayon, in turn, may be more vulnerable to other fibres and materials, including cotton, in some countries. Referring to this, the Committee says:

"Certainly, the effects of the present recession in rayon production in many countries has been every bit as marked as on cotton. Even before this, statistics show some loss of momentum in the expansion of rayon production. Indeed, world production of rayon and acetate yarn has levelled off since 1955 and, in staple fibre, the increment to production in 1957 was noticeably smaller than in previous years."

It is estimated that, in the 17 countries which together account for nearly 70 per cent. of the world total, rayon production during the first half of 1958 was down by as much as 19 per cent. as compared with the same period in 1957. While the setback to production has brought about some improvement in the inventory situation, there are apprehensions over the competitive position of rayon, in view of the recent trend of raw cotton prices.

As regards non-cellulose fibres, the year 1957 witnessed a noticeable acceleration in the rate of increase in production and the capacity is expected to double in 1959. Even here, however, production in the U.S., which accounts for well over half the world total, showed a marked decline during the first half of 1958, despite stepping up of programmes for advertising and promotion. In Japan, the Tokyo Rayon Company has decided to cut nylon production by about 10 to 15 per cent. from October 1958 to March 1959.

Two Other Factors

In addition to textile exports and inter-fibre competition, short-term fluctuations in cotton consumption are closely associated with inventory policy (which, in turn, is related to price) and political factors. While on the former, the Committee points out that the build-up of cotton textile stocks contributed to the increase in world cotton consumption in 1957, but overproduction, once the climate of demand changed, intensified the degree of adjustment required to re-establish equilibrium. Political factors in the past have brought about marked fluctuations in cotton consumption. The speculation following the outbreak of hostilities in Korea, for instance, gave a decided fillip to cotton consumption in many countries, notably the U.S. Any estimate of world consumption during the current season must, therefore, be on the basic assumption that the international situation will preserve its *status quo*.

The review of the cotton consumption prospects in different countries, as made by the Committee, reveals that the recession in textile trade concerns primarily the older established industries in North America, Western Europe, India and Japan which together account for 80 per cent. of the total free world cotton consumption. Some improvement has been noted in the U.S. in recent weeks and official sources predict an increase, albeit small, in cotton supplies as compared with the last season's total of 8.0 million bales. At the consumer level, expenditure on apparel is said to be rising, but, at the manufacturing end, profit margins are still small, notwithstanding some recent increases in cloth prices. With prospects of lower cotton prices, policy is geared to reducing textile inventories.

Reports from Canada indicate an overall improvement in cotton textile industry which may be reflected in increased cotton consumption in the current season.

The position in Western Europe is that large stocks of yarn and cloth call for a continued readjustment in production schedules. Most countries anticipate a reduction of about 10 per cent. and, therefore, the prospects are that aggregate consumption will be off by over half a million bales.

The textile situation in India is described to be enigmatic. To quote the Committee: "All the facts seem to indicate that the recession continues; yet some sources look for an increase in cotton consumption this season. However, significance must be attached to the large-scale accumulation of cotton piecegoods in Bombay, Ahmedabad and other textile centres and rising production costs." It may be noted here that the total consumption of cotton (Indian and foreign) in mills during the three months ended October 1958 was only 1,270,633 bales of 392 lbs. each, as against 1,291,767 bales in the corresponding period of 1957.

In the case of Japan, the present restrictions on cotton yarn production are expected to continue through March. The policy thereafter will be influenced by the inventory position and the market trend, but trade sources believe that controls may be relaxed somewhat towards the end of the season. The domestic demand may improve, but, so far, there is little to show any revival in textile exports. On balance, cotton consumption is expected to decline by about 100,000 bales.

The consumption of cotton outside the aforesaid main regions, representing 20 per cent. of the free world total, is likely to be at least as high as in the last season with probable increases in some countries. Consumption in Hong Kong is still rising but has stabilised in Korea and Formosa.

In the opinion of the International Cotton Advisory Committee, immediate expansion in world cotton consumption will depend, to a large extent, on the development of export markets for cotton textiles. "One of the factors sustaining a high level of world consumption," the Committee says, "has been the marked increase in textile production in cotton-producing countries where, in the aggregate, consumption has doubled in the last ten years. To a large extent, however, these countries have now reached a degree of self-sufficiency compatible with their general economic development and, consequently, some slowing down in the rate of increase may be expected in the future."

Alluding to the communist countries, the Committee points out that aggregate cotton consumption in these countries has gone up by over 40 per cent. since the Korean crisis, as compared with only 11 per cent. for the rest of the world. The U.S.S.R., it is said, is making every effort to expand the textile industry. Cotton consumption in mainland China depends on domestic cotton crop and, with a record crop, the presumption is that consumption will be higher than in 1957-58 when it amounted to 6.7 million bales.

PROSPECTS FOR WOOL IN 1959

After passing through a difficult phase during 1958, there are encouraging signs that the world wool industry may experience better trade conditions during 1959, according to the International Wool Secretariat trade correspondent in Bradford. The most hopeful indication is that, in several of the chief manufacturing countries, the decline in the rate of wool consumption, which persisted during the greater part of the year, was arrested during the later months and, in some instances, reversed. Final figures for the year will not be available for some time, but the later months of 1958 revealed an upward turn in activity. This was especially true of the U.S., where the recession was the first to set in and wool usage has shown a particularly sharp decline. By October last, however, a sharp rise of 17 per cent. was recorded on the corresponding month of the previous year, and there is reason to believe that the improvement has been substantially maintained.

In a more modified form, the same trend was seen in the U.K. during October, and as the U.K. uses more wool than any other country and is the world's largest exporter of wool products, particular significance attaches to the experience of this country. West Germany and Italy are also showing better figures than a year earlier, although, among the principal manufacturing countries, signs of improvement are still awaited in France and Japan.

Although world consumption of wool has been running throughout the greater part of 1958 at an average level about 14 per cent. below that of the previous year, the offerings of Commonwealth wool which came on to the market last September have been moved with great freedom. As the second stage of the selling season is about to open, only normal quantities await disposal during the second half. Wool values have reflected the easier trend which has characterised most commodities but, at the outset of the New Year, they are considered to be at an attractive level and one calculated to encourage commercial operations. In most qualities, they are well below the average level for other commodities, and the relative stability which they have displayed at public auction in recent weeks is steadily promoting that confidence which is essential to sound business.

IMPORT OF TEXTILE MACHINERY

The State Trading Corporation has entered into special agreements with the manufacturers of textile machinery in Japan, the German Democratic Republic and Czechoslovakia for the supply of various types of textile machinery on deferred payment terms ranging between four and five years. The machinery and equipment covered by these agreements include weaving machinery, finishing machinery, blow room equipment, carding engines, drawing frames, combing sets, speed frames, ring frames, complete cotton waste spinning plant, winding and warping machines, sizing machines, automatic looms, etc. The imports will be subject to the Import Trade Control Regulations current from time to time. The supplies available from these countries through the agreements may cover bulk of the requirements of the textile mills which may require modernisation and rehabilitation in pursuance of the public notices issued by the Government of India on 31st October 1958 and 5th November 1958. For fuller particulars, the prospective importers may contact the Regional Manager, State Trading Corporation of India Ltd., 159, Churchgate Reclamation, Bombay-1.

SUGAR MILL MACHINERY MANUFACTURE

TWO CONSORTIUMS OF PRODUCERS TO BE FORMED

THE initiative taken by the Government of India for holding a conference at New Delhi last week to discuss the ways and means of expediting the manufacture of sugar mill machinery is commendable for two reasons. One, the sugar industry is on the threshold of a new era of expansion under the second and subsequent Five-year Plans and, unless energetic steps are taken to produce machinery from now alone, the pace of expansion is bound to slow down. Two, to the extent sugar mill machinery is manufactured in India, the dependence on foreign countries will be reduced and much precious foreign exchange saved; it may be noted here that the setting up of a sugar plant with a daily cane crushing capacity of, say, 1,000 tons, entails a foreign exchange expenditure of as much as Rs. 55 lakhs.

The New Delhi conference was held for three days (6th, 7th and 8th inst.) under the presidentship of Mr. Manubhai Shah, Union Minister for Industry. It was attended by the representatives of six sugar machinery manufacturers, the promoters of twelve sugar factories (eleven of which are co-operatives), the State Governments concerned, and the Central Ministries of Food and Agriculture, Community Development and Co-operation, and Commerce and Industry.

At the conference, agreed decisions were reached for the supply of twelve complete sugar plants for setting up new sugar factories, all but one in the co-operative sector. The plants will be manufactured by two sugar consortiums. The first will consist of the Walchandnagar Industries, the Textile Machinery Corporation, and the Indian Sugar and General Engineering Corporation. The second will consist of K.C.P. Ltd., Binny & Co., Ltd., and the New India Development Corporation. Of the twelve plants, four are expected to be delivered to four of the co-operative sugar factories during the crushing season 1960-61 and the eight remaining plants in the season following it (1961-62). All these twelve units will together produce about 160,000 tons of sugar per annum.

Sizable Indigenous Content

Of the twelve sugar plants, eleven will have a daily crushing capacity of about 1,000 tons to 1,200 tons each, with provision for expansion up to 1,500 tons. The remaining unit, belonging to the Bist Industrial Corporation, will have a capacity of 2,000 tons. The total value of the order for the machinery is estimated at Rs. 11 crores and it is said that the indigenous content of the machinery of each unit will be more than 75 per cent. The terms of the draft supply agreement, payment, delivery and performance guarantees have been finalised between the sugar co-operative societies and the machinery manufacturers.

As regards finance, each co-operative sugar society has agreed to collect funds up to Rs. 20 lakhs from the agriculturist shareholders, "as a mark of their greater contribution to co-operative effort." The balance of the amount is proposed to be raised as loans from the Industrial Finance Corporation of India and the State Apex Co-operative Banks and as share capital participation by the State Governments concerned. With a view to promoting the growth of co-operatives, the Central Government has decided to assist the societies, even in the present difficult foreign exchange situation, by a phased release of about Rs. 3 crores to Rs. 3.5 crores of exchange during the next four years. This amount will be utilised to import essential raw materials for fabricating the plants, as well as for such equipment as turbo-generators which are not yet manufactured in the country. Of the eleven co-operative sugar mills, four are being located in Andhra, two each in the Punjab and Bombay, and one each in Mysore, Orissa and Uttar Pradesh.

Explaining the decisions arrived at at the New Delhi conference, a Government of India Press note observes: "These decisions constitute a major step forward in the direction of heavy machinery in the country. . . . They will also enable the country for the first time to manufacture eight to twelve complete sugar plants every year, after the first order of twelve sugar mills is completed within the next two years. This will make India more or less self-sufficient in the field of sugar machinery manufacture."

The sugar mill plants include a wide range of machinery—(*a*) machinery for cane crushing section, (*b*) high-speed and/or continuous type centrifugals, and (*c*) machinery for clarification, evaporation, condensation, etc. At the commencement of the Second Plan, six firms were engaged in the manufacture of machinery falling under section (*c*). These were: Bery Brothers, 24-Parganas, West Bengal; Saran Engineering Co., Marhourah; Richardson and Cruddas, Bombay; Arthur Butler & Co., Muzaffarpur; Indian Sugar and General Engineering Corporation, Ambala, and Port Engineering Works, Calcutta. During the year 1955-56, the following applied for permission and were allowed to install factories for the manufacture of the entire range of sugar mill machinery:

Company	*Technical collaboration with*	*Capacity*
Walchandnagar Industries.	Skoda Works of Czechoslovakia.	One mill in 1957-58 and two per annum on double-shift basis thereafter.
Protos Engineering Co...	Buckau Wolf of Germany.	Two mills per annum on double-shift.
Texmaco	Storks Worspoor of Holland.	Two mills per annum.
Indian Sugar and General Engineering Corporation.	A. F. Galg & Co., Ltd. of Scotland and Eachr Wyas Ltd. of Zurich.	Two mills per annum on double-shift.

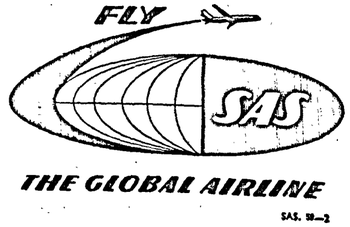
N.B.—In addition to the above, certain firms undertook to produce parts of sugar mill machinery.

Recent Progress

No information is available regarding the latest position of the sugar mill machinery manufacturing programme. The annual report of the Union Ministry of Commerce and Industry for 1957-58 gives an account of the progress made up to the end of 1957. According to the review, there was a considerable rise in the production of sugar mill machinery in 1957, the total value being estimated at Rs. 1,62,05,825, as against Rs. 32,06,125 in 1956. The number of units engaged in production was twelve, as against seven. By the end of 1957, a firm in Bombay (Walchandnagar Industries) had completed preliminary arrangements for taking up the assembly of a cane crushing plant, one of the major items of a sugar plant, in collaboration with a Czech firm. It was already producing other items of sugar machinery such as vacuum pans, evaporators and condensers. Another firm (Protos Engineering) had installed in its factory most of the plant and machinery required for the project. A firm in Madras was reported to have manufactured and despatched sugar machinery for four co-operative units in the Bombay State.

The importance attached to the manufacture of sugar mill machinery is only as it should be. On the basis of replacement requirements alone, the Planning Commission says that, after 1960-61, there would be need, annually, for the equivalent of five sugar plants with a daily cane crushing capacity of 1,000 tons each.

The expansion of the sugar industry under the second Plan involves an investment of Rs. 50 crores, covering expenditure on land, buildings, machinery, etc., over the five-year period. The demand for sugar machinery alone is put at Rs. 20 crores—Rs. 4 crores per annum—exclusive of electrical equipment, steam raising plants and the like. Assuming that the rate of expansion of sugar industry in the third Plan would be the same as that in the second Plan, the Planning Commission feels that there would *prima facie* be much scope for expansion of facilities for producing sugar mill machinery.



LABOUR WELFARE IN COAL MINES

PROGRESS OF HOUSING SLACK

WELFARE measures for coal miners in India began during the war years, as an exigency measure, in order to keep up the productive efficiency of the industry and the morale of workers. For this purpose, a labour welfare adviser was appointed in 1942 and a coal mines welfare fund was instituted in 1944. The welfare measures provided by the industry to its workers did not, however, cease even after the war-time exigencies. On the contrary, they were extended and the fund also grew within a short period, developing into a State organisation. In order to place the organisation on a sound footing, the Government of India passed, in 1947, the Coal Mines Labour Welfare Fund Act which came into force on 14th June 1957.

The Act provided for the setting up of a fund, called the Coal Mines Labour Housing and General Welfare Fund, to be maintained under two separate heads—the Housing Account and the General Welfare Account. The Fund is derived from the levy of an excise duty on coal and coke despatched from the collieries, at a rate of not less than As. 4 and not more than As. 8 per ton fixed by the Central Government. The present rate of duty is As. 6 per ton. At this rate and on the basis of the total despatches made during the year ended 31st March 1958, the total collections to the Fund during the year, according to the Coal Mines Labour Welfare Fund's annual report for 1957-53, are expected to amount to Rs. 138.59 lakhs (the figure is still provisional). The proceeds are distributed between the housing account and general welfare account in the ratio of 13 : 3. A sum of Rs. 12.53 lakhs is also expected to be credited to the Fund on account of other receipts, of which the receipts under housing account amount to Rs. 8.36 lakhs and those under general welfare account Rs. 4.16 lakhs. This brings the total collections credited to the Fund to Rs. 151.12 lakhs, made up of Rs. 26.64 lakhs under general welfare account and Rs. 124.48 lakhs under housing account. As against these, the total expenditure incurred during 1957-58 amount to no more than Rs. 60.39 lakhs—Rs. 57.55 lakhs on general welfare and Rs. 2.84 lakhs on housing. Since the inception of the Fund, the total receipts amount to Rs. 915.39 lakhs for the general welfare account and Rs. 510.15 lakhs for the housing account and the total expenses incurred on general welfare aggregate Rs. 596 lakhs and on housing Rs. 125.86 lakhs. The closing balance as at the end of the year in the general welfare account is Rs. 319.39 lakhs and that in the housing account Rs. 384.29 lakhs.

The receipts and expenditure under the two major group of welfare for the last five years are compared in the following table:

(In lakhs of rupees)

	General Welfare		Housing	
	Receipts	Expenditure	Receipts	Expenditure
1953-54 ..	111.12	45.81	33.61	7.62
1954-55 ..	71.50	57.15	25.35	11.43
1955-56 ..	103.90	56.83	34.53	9.64
1956-57 ..	92.92	58.52	27.48	3.25
1957-58 ..	26.64	57.55	124.48	2.84

Note.—Figure for 1957-58 are provisional.

The total receipts for the year under review show a rise of more than 25 per cent. over those for 1956-57 and are perhaps a record. On the other side of the account, the expenses have maintained a downward trend for the third year in succession.

The expenditure on medical facilities provided during the year amounted to Rs. 25.28 lakhs, as against Rs. 19.70 lakhs in 1956-57, on anti-malaria operations Rs. 6.27 lakhs (Rs. 5.96 lakhs), on adult education centres Rs. 2.71 lakhs (Rs. 2.19 lakhs) and on women welfare centres Rs. 3.12 lakhs (Rs. 2.56 lakhs).

Under the scheme of construction of experimental townships, the Coal Mines Labour Housing Board has so far constructed in all 1,566 houses at Bhuli, 48 at Bijoynagar, 219 at Bokaro, 180 at Kargali, 50 at Giridih, 50 at Bhurkunda and 40 at Kurasia. Out of the total number of 2,153 houses thus built under the township scheme, only 1,466 are occupied by coal miners, 445 are lying vacant and the rest are occupied by others. As this scheme did not prove a success, in view of the distance between the township and mines, a decentralised construction scheme was introduced. Under this scheme, the colliery owners were entitled to a subsidy of Rs. 600 per house which was later raised to 25

(*Continued on page 85*)

GUNNY STOCKS WITH MILLS MOUNT UP

HESSIANS, HOWEVER, SHOW A DECLINE

AN enlargement of 4,500 tons to 109,900 tons in stocks of gunnies with mills is disclosed by the statistics of jute goods relating to the month of December 1958. This increase is in distinct contrast with the successive declines noted in the previous five months, when stocks fell from a peak of 134,000 tons (as at the end of June 1958) to 105,400 tons (at the close of November). The rise in stocks has mainly occurred in sackings and miscellaneous constructions, which have gone up by 4,900 tons and 1,100 tons, respectively, over the month, while hessian stocks have actually declined by 1,500 tons.

The fall in stocks of hessian during December is on top of a small drop of 500 tons noted in the previous month and has taken them to the lowest level since November 1950, when a low of 13,500 tons in stocks of hessian was touched. In the absence of figures of production for the month under review at the time of writing, it is difficult to assign any precise reason for the sharp fall in stocks of hessian. It is, however, known that shipments of this variety of goods during the month have been substantially higher than in November. Over the year, stocks of hessian are lower by 9,400 tons and are 15,200 tons less than the year's (calendar year) peak of 31,000 tons touched at the end of June last. At level touched last month, hessian stocks constitute 14.4 per cent. of the total stocks, as against 33.6 per cent. at the end of 1957 and 23.1 per cent. as on 30th June 1958.

As stated already, stocks of sacking have recorded a rise of 4,900 tons to 80,400 tons, thus reversing the downward trend experienced in the previous four months. This is the sharpest increase noted in any month since June last, lifting the December-end stocks by 42,000 tons over the year. At 80,400 tons, the stocks of heavy goods constitute 73.2 per cent. of the total stocks, as against only 51.2 per cent. at the close of 1957. Even in June last, when stocks of all varieties were at a high of 134,000 tons, sackings accounted for only 65.6 per cent. of the total. In view of the growing proportion of heavy goods in stocks with mills for want of sufficient overseas inquiries, it is not surprising that sackings are very much depressed in the Calcutta market and mills are anxious to dispose of their stocks, with a view to cutting their losses. Notwithstanding the fixation of minimum prices by the I.J.M.A. some of the mills are reported to have sold last week sizable quantities of sacking at below the minimum prices.

The upward trend in stocks of miscellaneous goods has been maintained for the third month in succession with a rise of 1,100 tons to 13,700 tons, the highest level since June last.

The following comparative table shows the monthly variations in stocks of jute goods with mills during 1958 and the end-of-year (calendar year) variations during the last five years:

(In tons)

At the close of		Hessian	Sacking	Others	Total
January	1958 ..	29,700	53,700	13,200	96,600
February	,, ..	27,200	53,300	14,400	94,900
March	,, ..	24,300	54,800	15,000	94,300
April	,, ..	20,400	60,200	16,900	97,500
May	,, ..	25,000	71,800	15,300	112,100
June	,, ..	31,000	87,900	15,100	134,000
July	,, ..	19,900	89,600	12,400	121,900
August	,, ..	19,000	86,400	11,800	117,200
September	,, ..	17,000	80,200	11,800	109,000
October	,, ..	17,800	77,500	12,100	107,400
November	,, ..	17,300	75,500	12,600	105,400
December	,, ..	15,800	80,400	13,700	109,900
	1957 ..	25,200	38,400	11,400	75,000
	1956 ..	19,700	64,700	11,300	95,700
	1955 ..	23,500	34,400	5,600	63,500
	1954 ..	23,300	45,000	1,300	69,600

It will be noted with interest that, notwithstanding the fall during the five months July-November, the stocks at the end of 1958 represent an increase of 34,900 tons over those at the close of 1957. They are also at the highest level since 1952. The stocks of sacking (so far as calendar year-end is concerned) constitute a record since 1947.

While mills are burdened with such heavy stocks, the move to fix statutory minimum prices for exports is not a wise one. It is true that the bumper jute harvest during 1958-59 is encouraging overseas buyers of gunnies to stay out of the market and to look for lower and still lower prices. To fix floor prices and to hope for foreign consumers to come in for jute goods at those prices once their stocks get exhausted is not realistic. For the foreign buyer will know that the stocks of jute goods with mills are increasing and that some day they will get tired of sitting on these stocks. He will, therefore, buy only his minimum requirements till his hopes are realised. In a buyers' market, it is practically impossible for the seller to dictate his terms. It may be noted here that such tactics as those now advocated by the Government of India have not always yielded satisfactory or sustained results. Other countries have tried them, with the full support of the Government, with other commodities. But the ultimate result was failure. Only last week, we referred in our columns to the unsuccessful experiment of Brazil to hold the price of coffee at a particular level. There may be some chance of success if there is an understanding between all the producers of raw jute and jute goods in the world in regard to production and marketing. But, in the present political atmosphere between India and Pakistan, such a solution is unthinkable. The Government of India, however, can buy jute goods and exchange them with some of the South Asian countries and Australia for foodgrains required for building up a buffer stock. Such exchanges, however, will necessarily include an element of subsidy to the importing country. But the experiment is worth a trial.

GOOD OUTLOOK FOR BURLAP IN U.S.A.

The outlook for burlap as India's most important dollar earner is good for the current year in the American market, according to Mr. William A. Nugent, the acting representative in North America of the Indian Jute Mills' Association and Vice-President of the Burlap Council. The consumption of burlap in the U.S.A. for 1958, he added, should just about equal the 830 million yards consumed in 1957, in spite of industrial recession of the last year "which was an indication of the strong demand for the commodity as a heavy duty packing and industrial fabrics."

The Calcutta mills which supply about 25 per cent. of the U.S. burlap requirements are the backbone of India's foreign trade, since they account for 41 per cent. of India's dollar earnings and 20 per cent. of that country's total foreign exchange earnings.

(Concluded from next column)

show a rise from 220.72 million lbs. to 234.72 million lbs., but fall short of those (278.51 million lbs.) in the corresponding period of 1956, as the following table of exports of North Indian tea show:

(In million lbs.)

Countries	Eleven months ended November		
	1958	1957	1956
Britain	234.72	220.72	278.51
Irish Republic	13.84	14.45	13.16
Rest of Europe	6.29	4.96	10.48
U.S.S.R.	17.22	14.82	9.65
Turkey	6.82	6.12	5.23
Canada	10.79	9.62	13.68
U.S.	15.26	14.41	19.26
South America, Central America and West Indies	1.21	0.94	0.19
Iran	9.84	10.98	7.69
Persian Gulf and Iraq	5.74	5.23	7.05
Egypt	23.08	13.15	13.77
Other Middle Eastern Countries ..	14.66	4.08	6.40
Other places	1.58	2.02	5.09
Total ..	361.05	323.30	390.18

It will be noted from the table that exports to U.S.S.R. have maintained the upward trend and those to Egypt and Middle Eastern countries have actually recorded a sharp rise. Exports to the U.S. show a meagre rise.

Exports of South Indian tea for the ten months ended October 1958 amounted to 76.05 million lbs., as against 60.85 million lbs. and 65 million lbs. in the corresponding periods of 1957 and 1956. Exports to the U.K., which had shrunk from 41.87 million lbs. to 38.05 million lbs., have jumped up to 44.99 million lbs. Exports to the U.S.S.R. are higher at 3.17 million lbs., as compared with only 1.25 million lbs. in the corresponding period of 1957. There were no exports of South Indian tea to that country in 1956.

PEPPER EXPORTS

Exports of black pepper from India during the last season from November 1957 to October 1958 amounted to 2,61,336 cwts., as against 2,93,554 cwts., during the corresponding period of 1956-57, thus showing a decline of 32,218 cwts. This steep fall in export is mainly attributed to the smaller purchases by the U.S., the principal buyer of Indian pepper in recent years.

A county-wise analysis of exports reveals that U.S.S.R. was the largest buyer of Indian pepper having absorbed during the 12 months under review 93,370 cwts., or 35.73 per cent. of the total. The U.S. came next with an offtake of 62,515 cwts., which was 23.92 per cent. of the total. Italy came third with an import of 22,152 cwts., or 8.48 per cent. of the total. An important feature in the trend of export during the year was the increased demand from the Communist countries having purchased 127,258 cwts., that is, about 48 per cent. of the entire exports.

TEA PRICES STILL BELOW LAST YEAR'S LEVELS

LARGER WORLD SURPLUS

THE Calcutta tea market presented a cheerful tone last week, thanks to a substantial improvement in demand. Prices at export auctions, as well as in sales for internal consumption, staged a rise from those which prevailed at the closing auctions for 1958, though the increase was not marked. Notwithstanding the better trend at the opening sales of the year after the Christmas and New Year holidays, the prices fetched at the auction for export were still below those at the corresponding sale of 1958 and much less than those at the first sale of 1957, as will be seen from the following comparative table:

	Export auction held on		
	5-1-1959	6-1-1958	2-1-1957
	Rs.	Rs.	Rs.
Clean B.P.	2.00	2.30 to 2.35	2.34
Plain B.P.	1.54 to 1.60	1.58 to 1.62	2.25
,, Fannings	1.70 to 1.80	1.68 to 1.72	..
Medium B.P.	1.62 to 1.64	1.64 to 1.68	2.34
,, Fannings	1.80 to 1.90	1.78 to 1.82	..
Best Assam C.T.C. B.P.	2.25*	2.60 to 2.80	2.81 to 2.87
,, ,, Fannings	2.40*	2.50 to 2.60	..

* Nominal

The rise in prices at last week's internal auctions was, however, more marked and this has lifted the rates well above those a year before, but not to the levels of 1957, as is evident from the data given below:

	Internal sale held on		
	7-1-1959	7-1-1958	3-1-1957
	Rs.	Rs.	Rs.
Medium Dooars dust	1.70	1.60	2.00 to 2.03
,, Assam grainy dust ..	1.80 to 1.84	1.62 to 1.64	2.06 to 2.09
,, ,, C.T.C. dust ..	2.00 to 2.15	1.90	2.31 to 2.37
Best Assam C.T.C. dust	2.50 to 3.00*	2.50 to 2.80	2.55

* Nominal

It is stated that, at last week's export auctions, Egypt appeared as a prominent buyer and placed orders for about 10 million lbs. Russia, the U.K. and other countries were also said to have shown some interest. Some feel that the buying interest will be sustained for a few weeks more. It is, however, too early to place much hopes on this, though the Egyptian delegation which visited India recently and the Russian delegation which has completed a visit to this country have assured that there are possibilities of an expansion in their offtake of Indian tea. Any improvement in the outlook for Indian tea on this ground must be judged against the background of world production, which shows a rising trend.

The total output of North Indian tea up to the end of November 1958 aggregated 539.3 million lbs., an increase of 22.8 million lbs. over that (516.5 million lbs.) in the corresponding period of 1957 and was even a fraction better than the 1956 crop (up to November) of 538.6 million lbs. The South Indian crop up to the end of November amounted to 148.1 million lbs., as against 139.4 million lbs. and only 116.3 million lbs. in the corresponding periods of 1957 and 1956, respectively. Thus, the Indian output of tea alone has recorded a rise of 31.5 million lbs. upto the end of November. Pakistan's production during the same period is higher by about 7 million lbs. at 50.5 million million lbs. Ceylon's crop too (up to the end of October) has gone up by 7.8 million lbs. to 341.3 million lbs. Indonesia has more or less maintained its output (up to the end of September) at 73.6 million lbs., while British East Africa has raised its production by 2.9 million lbs. to 46 million lbs. during the same period. Thus, the total production of major tea-producing countries (on the basis of statistics available at the time of writing) is higher by 49.2 million lbs. In the face of such larger supply and substantially higher stocks in Britain, prices cannot be expected to go much higher than the present level.

The trend of exports during the past year has no doubt been encouraging as compared with 1957, though not with 1956. The exports of North Indian tea during the eleven months ended November 1958 aggregated 361.05 million lbs., representing an increase of 37.75 million lbs. over those in the corresponding period of 1957, but they are 29.13 million lbs. less than those in the first eleven months of 1956. Exports to Britain

INDIA'S FOREIGN TRADE IN 1958

DISQUIETING EXPORT AND IMPORT TRENDS

THANKS to the austere import policy in force in the last one year and more, India's unfavourable balance of trade in the nine-month period January-September 1958 has been of the value of only Rs. 146 crores, as against an adverse balance of Rs. 253 crores in the comparable nine-month period of 1957. This restrained adverse trend in the sector of foreign trade has been partly due to the steep reduction in imports of iron and steel, petroleum products and industrial raw materials. The commodity-wise statistics for the two comparable periods of 1957 and 1958 given in Table I show that the import trade in the former year amounted to an aggregate value of Rs. 745 crores and in the latter to Rs. 571 crores. On the other hand, the export trade (including re-exports) in 1957 was of the value of Rs. 491 crores, whereas in 1958 it was Rs. 425 crores. It would appear that there has been simultaneously a disquieting trend of a fall in the country's exports. If this fall in exports had not been there, the adverse balance of trade in the nine-month period of 1958 would have been substantially less than what it actually was.

Judging by the monthly averages of exports and imports in the January-September period of the year under review, it may be that 1958 (January to December) has closed with an aggregate adverse balance of trade amounting to about Rs. 200 crores, as against Rs. 383 crores for all the twelve months of 1957. It may be recalled, in this connection, that, in the twelve months of 1957, India's import trade amounted to a value of Rs. 1,026 crores, while her export trade (including re-exports) came to Rs. 643 crores. That the monthly average of adverse trade balance in the first nine months of 1958 has been just about half of the monthly average of adverse balance in the comparable period of 1957 may be deemed an encouraging factor in the situation.

Decline in Exports

But a closer look at the commodity-wise figures of exports and imports during the comparable nine-month periods of 1957 and 1958 would show some disquieting trends. To take export trade first. For example, sugar exports in the relevant period of 1957 were valued at Rs. 13.6 crores but they were only Rs. 1.8 crore in the relevant period of 1958; this, of course, was due to the steep fall in world sugar prices and the delay in the matter of evolving a suitable scheme of subsidised exports of Indian sugar. Exports of raw wool have also come down from Rs. 10.8 crores in 1957 to Rs. 7.4 crores in the year under review. Iron ore and scrap exports have come down from Rs. 11.9 crores to Rs. 9.3 crores, while exports of non-ferrous metal ores were valued at only Rs. 15.2 crores in 1958, as against Rs. 26.5 crores in 1957. Vegetable oils also have fared rather badly, with exports in 1958 being of the value of Rs. 6.4 crores, as against Rs. 10.2 crores in 1957, and leather exports have come down from Rs. 17.0 crores to Rs. 13.8 crores.

It is, however, in the matter of exports of standard cotton fabrics that the situation has deteriorated greatly, for, in 1958, they have amounted in value to Rs. 34.6 crores, whereas they represented Rs. 52.2 crores in 1957. The exports of made-up textile articles other than clothing have also come down from Rs. 46.5 crores to Rs. 36.5 crores in the current year. Of the chief foreign exchange earners, tea alone has more or less maintained its 1957 level of exports in the past year; the value of tea exports in 1957 was Rs. 85.2 crores, whereas in 1958 it has been Rs. 89.9 crores. The export of unmanufactured tobacco has increased to Rs. 13.8 crores in the past year from Rs. 10.9 crores in 1957. It would thus appear that barring these two export commodities, the important foreign exchange earners have performed badly in the first nine months of 1958; at this rate, it may be that 1958 (January to December) must have closed with a total export trade of the value of about Rs. 570 crores, as against Rs. 643 crores in the twelve months of 1957. The fall in export earnings during 1958 as compared with the last year's may, therefore, be broadly put down at about Rs. 75 crores.

Decline in Some Crucial Imports

On the import side, too, the trend has been disquieting in some lines, though the reduction (from Rs. 118.3 crores in 1957 to Rs. 68.3 crores in 1958) in the imports of iron and steel has been due to the fact that the larger part of the requirements of the three public sector iron and steel projects was imported in 1956 and 1957. Even after allowance is made for this fact in respect of iron and steel imports, it will be seen that the reduction in the imports of certain other crucial commodities—crucial to the maintenance of the level of industrial production in the country—has been rather substantial. For example, the imports of non-ferrous metals and scrap which come in the category of industrial raw materials have come down by Rs. 8.3 crores. The imports of raw cotton have come down from Rs. 43.7 crores in the relevant period of 1957 to Rs. 24.7 crores in the comparable period of the current year; there has also been a fall of Rs. 2.0 crores in the import value of raw jute. Similarly, imports of petroleum and petroleum products have come down from Rs. 75.5 crores to Rs. 53.6 crores in the first nine months of 1958. Imports of pulp for paper making, of crude minerals and of chemical elements and compounds have come down from Rs. 39.4 crores to Rs. 30.8 crores. Similarly, imports of dyeing, tanning and colouring materials have fallen by Rs. 4.2 crores. Imports of some metal manufactures probably constituting spares and stores have also come down substantially from Rs. 17.1 crores to Rs. 10.1 crores. The only redeeming trend has been in respect of imports of fertilisers which have been Rs. 6.3 crores in 1958, as against Rs. 2.7 crores in 1957; this should have been of some help in increasing agricultural production.

It would thus appear that the reduction in imports has been fairly substantial even in the matter of crucial raw materials and spares required for the maintenance of industrial production in the country. Although the index of value per unit of imports in general has come down from 98 in 1957 to round 94 in 1958 and, thus, there should have been a corresponding increase in the quantum of imports in the current year, the reduction in imports of industrial raw materials in terms of both quantity and value is still found to be substantial. The index of industrial production also shows that there is a *prima facie* correlation between the level of imports of raw materials and spares and the level of industrial production in the country. This correlation is seen in the moderate rise of the general index of industrial production from about 138 in 1957 to round 141 in 1958, as compared to the increase in 1957 of five points over the index for 1956. While indigenous availability of industrial raw materials may have increased to some extent, *prima facie* there is warrant for the inference that the reduced level of imports of raw materials and spares has meant a reduced rate of increase in industrial production in 1958 as compared with 1957.

Of course, this reduction in the imports of industrial raw materials has been accompanied by a substantial reduction in imports of consumer goods as well. The only exception is in the matter of foodgrain imports which in the first nine months of 1958 have increased by Rs. 33 crores over the comparable period of 1957. Of course, these foodgrain imports have been on commercial account; actually, imports have been much larger under the P.L. 480 agreement with the United States. Otherwise, there has been in the past year a substantial reduction in the imports of a wide range of consumer goods like condensed or dried milk, dairy products, fruits and edible nuts, medicines and pharmaceuticals, paper and paper board, standard textile fabrics other than cotton textiles, standard cotton fabrics, sanitary and other fittings, watches and clocks and some other manufactured articles. The aggregate reduction in the imports of these consumer goods in the past year, as compared with 1957, is of the order of Rs. 25 crores.

If imports of industrial raw materials and consumer goods have come down substantially, those of some items of machinery have also been less in 1958, as compared with the last. For example, imports of mining, construction and other industrial machinery have been Rs. 61.9 crores in the relevant period of the past year, as against Rs. 85.2 crores in the comparable period of 1957. Similarly, imports of road motor vehicles have also come down from Rs. 28.7 crores in 1957 to Rs. 14.7 crores in the year under review. But, by and large, all imports of machinery and transport equipment have been maintained at a fairly high level, although they have come down from Rs. 218.9 crores in 1957 to Rs. 181.1 crores in 1958.

Sterling Draw-down

The broad conclusion that emerges from this examination of the commodity-wise statistics of India's foreign trade in 1957 and 1958 is that the substantial reduction in the unfavourable balance of trade has been entirely due to the reduction in imports and not to any increase in exports. If anything, exports have declined in 1958 in terms of value and, to a somewhat lesser extent, in terms of quantity inasmuch as the index of value per unit of exports in general has come down from about 95 in 1957 to round 91 in 1958. It is, therefore, obvious that export promotion which may have any effect, if at all, only over the long-term has not produced any significant results, in the year under review at any rate. In the circumstances, the drain on the country's sterling balances has continued, though at a reduced rate as compared with 1957, taking that adverse trade balances have been largely responsible for the sterling draw-down. It may be noted, in this connection, that, according to the last Friday figures of 1956, the sterling balances were Rs. 529.9 crores, while, according to the last Friday figures of 1957, they were Rs. 297.6 crores; and that, according to the last Friday figures of September 1958, they were Rs. 183.9 crores.

COTTON YARNS

OF ALL DESCRIPTIONS

FOR HANDLOOM, POWERLOOM AND HOSIERY FACTORIES

Trade With Commonwealth

Table II in this article gives the country-wise statistics of India's foreign trade. It will be seen from these figures that India's exports to the Commonwealth countries in the first nine months of 1958 have not declined too steeply as compared to the relevant period of 1957. The respective figures for the two comparable periods are Rs. 205.3 crores and Rs. 220.3 crores. Of the value of export trade to the Commonwealth countries, the United Kingdom has continued to account for more than 50 per cent. in the past year as in the previous. It is worthy of note, in this connection, that India's exports to the United Kingdom have been maintained at nearly the same level as in 1957. On the import side, imports from the Commonwealth countries have come down from Rs. 272.4 crores in 1957 to Rs. 202.9 crores in 1958. It is again worthy of note that the larger part of this reduction in imports from the Commonwealth countries has been due to the steep fall in imports from the United Kingdom. The only other Commonwealth countries to which India has exported merchandise at about the same level as in 1957 are Aden, Kuwait and Bahrein Islands, Pakistan, Malaya, Ceylon, Canada, New Zealand and Nigeria.

Trade With Non-Communist Countries

In Table II, the statistics pertaining to foreign countries have been divided into two sections, one dealing with non-Communist countries and the other with Communist countries. As far as the non-Communist foreign countries are concerned, it will be seen that India's exports (Rs. 188.5 crores) to them in the nine months of 1958 have been far less than her imports (Rs. 338.7 crores) from those countries. Of course, this situation is not so bad as in 1957, when India's imports from those countries amounted to Rs. 438.7 crores, as against her exports to them of Rs. 243.9 crores. Among the countries to which India has exported substantially less in 1958 than in 1957, the more important are the United States of America, France, Japan, Indonesia and Burma. Among the countries from which India has imported substantially less in the year under review than in 1957, the more important are West Germany, Sweden, Belgium, France, Switzerland, Italy, Iran, Japan, Egypt and the United States of America. Broadly, it will be seen from the figures pertaining to non-Communist foreign countries that India continues to run a very large adverse balance of trade with them, whereas she has now a small favourable balance of trade with the Commonwealth countries. It may be noted here that India's imports from the Commonwealth countries amounted to Rs. 203 crores in 1958 as against Rs. 205 crores of exports to them.

Trade With Communist Bloc

The statistics pertaining to Communist countries do not show any spectacular change in 1958 as compared to 1957. In 1957, the U.S.S.R. accounted for more than 50 per cent. of the entire export trade of India to the Communist bloc countries; in 1958 also she has continued to account for more than 50 per cent. of India's export trade to them. On the import side, again, the U.S.S.R. has accounted for more than 50 per cent. of imports from the Communist bloc countries in 1958, as in 1957. India's trade with People's China has been second in order of importance, but in absolute terms it is nothing very substantial. It will be seen from the figures that, with some Communist countries, like East Germany, Hungary, Bulgaria, Rumania and North Viet Nam, India's export and import trade is by no means of very great significance.

In spite of the efforts made by the State Trading Corporation in the matter of exports to and imports from the Communist bloc countries on the basis of special trade agreements and rupee payment arrangements, it is, indeed, surprising that the aggregate trade with those countries has not substantially increased. As a matter of fact, India's exports to those countries have been of the order of Rs. 24.8 crores in the nine-month period of 1958, as against Rs. 23.8 crores in the comparable period of 1957. On the import side, it does not look as though the Communist bloc countries have stepped in to supply industrial raw materials, because the total imports from those countries in the nine-month period of 1958, have been only Rs. 29.7 crores, as against Rs. 33.5 crores in the comparable period of 1957. The only striking feature is that India's exports to and imports from the Communist bloc countries are much better balanced than her trade with many non-Communist countries. But the more significant fact is that India's trade (exports and imports) with the Communist countries continues to represent only a small part (5.5 per cent. in 1958, as against 4.7 per cent. in 1957) of its entire foreign trade.

ECONOMIC TRENDS IN CANADA

PACE OF ACTIVITY REMARKABLY STRONG

By Gordon Churchill

CANADIAN MINISTER OF TRADE AND COMMERCE

THERE are many signs of renewed economic growth in the Free World and particularly in North America. At different stages within the past two years, most areas of the world have encountered some easing in the tempo of economic activity. This interruption was relatively more pronounced in the United States than elsewhere. Business conditions in that country underwent a relatively sharp, but short, setback during the period from late summer 1957 to the spring of 1958. Although the subsequent recovery has been rapid, overall output for 1958 as a whole has been below the level of the preceding year. The adverse effects upon the rest of the world of reduced activity in the United States have been less consequential than might have been expected. During this period imports into the United States declined less than either exports or industrial production. Partly as a result of this decline in the trade balance of the United States and also reflecting the high level of foreign investment and aid, reserves of the non-dollar trading areas have increased substantially. Notwithstanding improved international liquidity, reduced activity in the United States and moderately lower factory output in a number of other industrial countries has been reflected in a decline in world trade from the 1957 level.

As a major supplier to the United States and other manufacturing countries, Canada could not escape the adverse effects of this world-wide decline in production. Material-producing industries in particular encountered a fall off in demand for their products. Nor were these effects confined to export shipments. They have also exerted a dampening influence upon business investment which has been accentuated because of the fact that much of the build-up in productive capacity in recent years has been concentrated in export-oriented industries.

Considering the severity of the impact of these adverse influences from abroad, the pace of economic activity in Canada has been remarkably strong. Weaknesses in some areas of demand have been offset by increasing strength in others and business conditions have in general remained favourable. The downward trend in overall production and employment in evidence in the closing months of 1957 was checked early in 1958. Despite Canada's sensitivity to world market influences, the extent of contraction in the Canadian economy was of much smaller dimensions than in the United States.

On the basis of nine-month figures, it now appears that Canada's Gross National Product for 1958 will exceed $32,000 million, 2 per cent above the figure for 1957. Prices on average have increased by almost the same percentage. Overall production in volume terms has equalled the level of the preceding year. Employment also has held up well and, by the last quarter, job-holders numbered about the same as a year ago. Industrial employment has been running moderately lower, but this has been offset by a further filling out in service occupations. The labour force has grown at a slower rate this year, reflecting a level of immigration less than half that of 1957. Unemployment has been higher, but the percentage increase from the same date a year ago has been narrowing sharply.

Foreign Trade

Despite conditions of ample supply in world commodity markets, Canada's sales abroad have not followed the downward trend of world trade at large. Total exports in 1958 have remained at about the same level as in the preceding year. Substantially increased sales have been achieved for several commodities. Prominent among these is wheat, exports of which reached 316 million bushels in the crop year 1957-58—up from 267 million bushels in the preceding year. Sales in commercial markets accounted for a good part of this increase. The improved protein quality of the 1957 and 1958 crops has been an important factor contributing to higher sales. Shipments made to Colombo Plan countries under long-term credit and aid arrangements have further added to the total movement. Barley also has been exported in larger quantities during the past year, most of the increase going to the United Kingdom. Canadian beef has been moving into the United States market in substantially increased volume to supplement drought-depleted supplies in that country. The annual export value of this item has surpassed the $100 million mark for the first time since 1950. Among Canada's newer exports, sales of uranium have risen more than twofold since last year to a figure well in excess of one-quarter billion dollars annually. With the delivery of natural gas through the West Coast transmission line, the export value of this item is fast approaching the $20-million level. Within the category of manufactured goods, deliveries of military aircraft to N.A.T.O. countries have added more than $100 million to exports during the past year. Among Canada's more traditional markets, sales of farm implements to the United States have been substantially higher during 1958. Increases in the value of exports of the foregoing items have roughly offset declines in a number of Canada's principal forest and mineral export commodities. On the whole, the reduction in exports of industrial materials has been relatively moderate when considered in relation to the decline in industrial activity in the United States.

Imports into Canada, on the basis of figures available to date, are about 10 per cent. lower in 1958 than in the preceding year. A more moderate pace of industrial activity in Canada and reduced outlays for plant and equipment have involved widespread declines in imports. Smaller outlays for industrial materials, machinery and related investment goods have accounted for most of the reduction in total purchasing from abroad. Some consumer goods imports have declined also, particularly cotton and woollen products and North American-type cars and parts.

A sustained level of merchandise exports, and lower imports, has entailed a substantial decline in Canada's merchandise deficit which for the first 10 months of the year stands at $242 million compared with $733 million for the same period in 1957. Most of this reduction has occurred in the commodity deficit with the United States which has declined from $983 million to $589 million. On the other hand, Canada's imbalance on non-merchandise items, such as tourist expenditures and interest and dividend payments, has been increasing. For the first nine months of 1958, Canada's deficit with the rest of the world on all current transactions amounted to $795 million, as compared with $1,150 million in the same period of the previous year.

Capital Investment

At mid-year, capital spending plans, both private and public, provided for outlays of $8.5 billion in 1958. Housebuilding as proceeded more rapidly than anticipated at that time. Capital expenditures of other types appear to have reached and possibly exceeded the level previously indicated. Overall capital outlays for the year may fall but little short of the record $8,700 million spent in 1957.

Though little changed in total, there has been a substantial shift in the composition of capital outlays in 1958. Much of the recent build-up in mineral and forest product industries had been completed by the end of 1957 and expenditure of this type has been down substantially. One the other hand, large outlays have been involved in the late construction stages of the St. Lawrence Seaway and the Trans-Canada gas pipeline system. Power development also has held close to the record pace of last year. Expansion in the fields of trade, finance, and other service industries has continued at an undiminished rate. At the same time, institutional and Government building has continued upward in response to the growing need for additional facilities.

Another factor having an important sustaining effect upon general activity during the past year has been the high level of consumer spending supported by rising personal incomes. Of the principal forms of income, social security payments and other types of Government transfers to individuals contributed more than any other category to the increase in current purchasing power. On the basis of nine-month figures, payments of this type have been running more than one-fifth higher this year compared with last. Farm income has shown a similar percentage gain mainly as a result of substantially larger livestock marketings. Certain categories of investment income also have increased quite sharply. The percentage rise in employee earnings, on the other hand, has been of more moderate proportions. Slightly lower employment, together with a moderating upward trend in wage rates, has resulted in a 2 per cent increase in labour income. Personal income, in total, increased by about 5 per cent between 1957 and 1958. Personal direct tax payments have been lower, so that income left at the disposal of individuals has risen by about 6 per cent. *Per capita* income in real terms has maintained an upward trend.

Consumer spending in 1958 has increased by about 4 per cent from the level of the previous year, reflecting mainly higher outlays for food and other soft goods, services, and certain durable lines. Of the major consumer items, automobiles is the only one to show a significant decline. While spending more, Canadians have also been saving more. As a proportion of disposable income, personal savings have increased from 7 per cent in 1957 to about 9 per cent in the current year, much of this in liquid form. This is one of the highest ratios on record for a peace-time year. The financial position of consumers, on average, has been strengthening while living standards have been maintained.

Industrial Conditions

The changing pattern of market demands during the past year has resulted in quite divergent conditions among Canadian industries. Many consumer lines, construction, and related material-producing industries have had a good year—in some cases a record one. On the other hand, most durable goods producers and export processing industries have experienced setbacks. In aggregate terms, shipments from domestic sources have declined less than imports, but, in some manufacturing lines, import competition has been felt keenly.

Among the consumer-based industries, the food-processing group has had an unusually busy year, as a result of rising domestic demand and increased marketings of livestock and other farm products. In the clothing and textile trades, a high level of purchasing at retail has been accompanied by a quite substantial drawing down of stocks, and output in the industry has declined temporarily. In the case of cotton and woollen fabrics, imports have shown about the same percentage fall as domestic shipments, indicating that most domestic producers have been holding their own against foreign competition. In synthetic lines, however, domestic manufacturers have witnessed a further diminution in their share of a somewhat smaller market. Leather goods manufacturers, on the other hand, have maintained a fairly steady volume of business. Automobile producers have been affected by a moderate decline in total sales in the Canadian market and also by quite substantial inroads on the part of European-type cars. In the first nine months of 1958, automobile and truck production fell off by about 18 per cent: however, output has picked up in the last quarter. Household appliance producers, on the other hand, have enjoyed a stronger market this year and in all major lines (except refrigerators) have held their own against foreign competition.

A number of Canada's principal material-producing industries have had a lower level of output in 1958 because of declining export demand. These include pulp and paper, nickel, asbestos, petroleum and iron ore. For certain other items such as copper, lead and zinc, output in tonnage terms has been maintained but lower prices have meant substantially reduced dollar sales and profits to producers. The market for lumber products on the other hand, has improved in 1958 mainly in response to the upsurge in domestic housing but also reflecting larger shipments to the United States. Some mineral industries also have done better. Gold production is up moderately. More natural gas has been needed to provide for expanding domestic and foreign outlets, and uranium output has moved up to the level provided for under-existing contractual arrangements. While the Canadian market has absorbed substantially less steel this year, most of this reduction has fallen on imports. Although operations in the primary iron and steel industry were affected for a time by a strike shut-down, otherwise the operating rate has been considerably higher in Canada than in the United States.

Prospects for 1959

Of the industries which had previously suffered a decline, most have experienced some degree of improvement by the year-end. In

(*Continued on page 85*)

THE ASSAM SILLIMANITE LIMITED

STEADY PROFIT MAINTAINED, LOSSES MADE UP

MR. S. M. WAHI ON NEW ERA OF PROSPERITY FOR COMPANY

ADDRESSING the shareholders at the Seventh Annual General Meeting of the Assam Sillimanite Ltd., held at Gauhati on 20th December 1958, Mr. S. M. Wahi, Chairman, said:

"Seven years have been a long waiting for this mining company and though during the last three years of operation a steady profit has been maintained, it has gone to make up the losses of the earlier years. It is gratifying to observe that the profit of Rs. 6,91,000 earned in the last three years has now wiped out the entire previous losses amounting to Rs. 6,80,021.1.11 and it has been possible to carry forward a net profit of Rs. 11,746.38 to the next year. A new era of prosperity for the Company seems to have dawned.

"The Directors' report and the balance-sheet along with the auditors' report have been with you for some time and, with your permission, I shall take them as read.

"With the mechanisation of the mine and replacement of the old fleet of transport vehicles with four-wheeler heavy duty diesel trucks, specially suited for hill-road conditions, the production and transportation have increased by 50 per cent., compared with last year and by almost 100 per cent. when compared with the year before last. The effect of mechanisation has not yet been fully reflected in production and sale, as all the equipment, which took some time to reach the site, and the new crusher, have only recently been installed. The limitation on production is presently being placed by the excessive amount of quarrying that has to be done and the large quantities of overburden that have to be removed, compared with earlier years.

"An appreciation of the work done since the mine has been mechanised would be revealed by the fact that over 5,901,064 c.ft. of overburden has been removed as against the total of 333,790 c.ft. during the first six years of operation. Such has been the magnitude of work done at the mine, that too under extremely hard conditions during the year.

Effective Steps

"Effective measures taken to maintain the quality of the material and considerable vigilance exercised in selecting and grading the material, have resulted in increased and growing demand for Khasi Sillimanite in newer markets, as also in attracting new customers in the existing markets. Even with the strong competition from Mullite and other such materials being marketed under the trade name of 'Sillimanite' the increased production of 5,495 tons and sale of 5,551 tons this year could not fulfil the market demands. The position is that we are left with pending orders for approximately 4,500 tons, valuing over Rs. 17.00 lakhs, which shall have to be executed in the next year. This situation and demand of nearly 10,000 tons has come about even after our accepting orders with much restrictions and only against confirmed letters of credit from new parties.

"Our intensive sales campaign in the overseas market is being maintained and consequently Khasi Sillimanite has continued, and would seem to continue to be, a good foreign exchange earner. The general recession in the United States, which affected European markets, did not, however, affect the price of and demand for our product overseas. The demand for sillimanite bricks and shapes from the ceramic industry and high temperature furnace manufacturers in most parts of Europe, has urged a lot of refractory plants to go in for use of Khasi Sillimanite as raw material.

"Japan, France and some of the South-East Asian markets, which had difficulties with their foreign exchange situation, still continue to import Khasi Sillimanite and pay for it at world market prices. These facts bring out two major points for our guidance. First, that Khasi Sillimanite will continue to be used, despite competition by substitutes, and recessions, and other factors; secondly, that we have to gear up our production to a yearly output of 10,000 tons, so as to be able to meet the minimum needs of our customers, both within the country and overseas.

"Excessive rain, sometimes heavy monsoons, continue for longer than four to five months and adversely affect our capacity. Besides, unexpected rain upsets the plans. The Company's road has again been redone and is constantly being maintained and improved. While this means a lot of investment and continued recurring cost, nevertheless this road, being the backbone of the entire operations at the mine, has to be kept in good shape; more so, as the road has been playing an important and useful role in linking some of the tribal areas with the rest of the country. No progress could be reported so far with regard to handing over this 22-mile stretch of road to the Government against the reimbursement of the cost incurred by the Company. The management is still pursuing the matter, as the reimbursement, when received, could be very usefully employed for the development plans of the Company, as enunciated in last year's report.

Development of Mine

"At the last annual general meeting, the position regarding the increase in export quota of Sillimanite and our request for the same was still resting with the Government of India. Since then we had a visit by the Joint Secretary in the Ministry of Natural Resources, Government of India, to examine on the spot, the possibilities of the development and potentialities of the mine. Subsequent to this visit, a confirmation was received from the Ministry that, subject to our agreeing to fulfil certain conditions, we would be permitted to export larger quantities. The Company has taken necessary steps to meet these requirements of the Government.

"One of the major conditions imposed, however, was that effective steps would be taken to establish a refractory plant in India. In this direction steps were taken to explore the possibility of establishing such an undertaking. The economic soundness of the project—linked with our mining operations—in the general context of the industrial development programme as envisaged in the core of the Plan of the country, has since been a matter of study and constant review by the Board of Directors. One of our Directors, who has been specifically working on this project, with a group of consultants and with technical assistance that was available through the refractory plant manufacturers in Europe, has drawn up a comprehensive project for submission to the Government of India as per requirement envisaged in the procedure for establishment of industrial undertakings.

"It is likely that the licence for the establishment of a refractory plant would be issued with an installed capacity of 40,000 tons approximately, as our Company is more or less following the suggestions and recommendations of the Government in this respect. This project is a large one, but a very sound one. It would involve a capital investment of Rs. 85 lakhs and, with an installed capacity of 40,000 tons, the annual production would be of the value of Rs. 70 lakhs of refractory bricks, which are, up till now, being imported from abroad.

"As a scheme of this magnitude could not be undertaken by the resources of this Company—both technical and financial—it is proposed to go in for financial and technical collaboration with some established and renowned refractory works in Europe, who have evinced interest in this undertaking and with whom negotiations are going on. A separate company for this undertaking may have to be promoted, while this Company may continue to provide the necessary minerals. Also the Company itself could consider increasing its capital structure, if the refractory plant project has to be implemented.

Meeting Demands

"To meet the demands from customers for raw materials for their refractory works, the Company has to look for raw materials like magnesite, kyanite, chrome and quartzite. If they wish to take advantage of the patronage they are getting from some of the world markets at present, it would be appropriate to undertake mining of some similar minerals required for refractory works.

"As has been mentioned in the Directors' report, Mr. C. F. Shaw-Hamilton is to leave India shortly and in the vacancy caused in the Board of Directors, Mr. P. G. Price, the General Manager of Messrs. Steel Brothers and Company, Ltd., who is also a Director of Messrs. Indo-Burma Petroleum Co. and Balmer Lawrie & Co., Ltd., has agreed to join the Board. His association would, no doubt, be found a great asset to the Company.

"Mr. Fakruddin Ali Ahmed, Bar-at-Law, was one of the Directors from the very inception of this Company. The Board of Directors had always been benefited by his advice and guidance from time to time. We are indeed sorry to have lost his valuable association, now that he has joined the Assam Government as Finance Minister, and has expressed his inability to continue on the Board. We wish him all success in his new assignment, as his work as the Finance Minister of the State of Assam is, surely, of great importance to the country. In his place, the Directors decided to co-opt Mr. Mahendra Mohan Choudhury, who was the Minister for Agriculture and Development of the Government of Assam, till he quit this office to take over the stewardship of the Congress organisation in the State. The Board expects the benefit of his advice and guidance from time to time, for the utilisation of the mineral resources of the State, for the economic development of the country and the local people.

"The Board appreciates the attention and co-operation the Company is getting from their Managing Agents, the United Provinces Commercial Corporation, in the development of the mine and progress of the Company.

"The Directors also wish to express their appreciation of the endeavours of the Mine Manager, who continues to look after the mine work in increasingly difficult and hard conditions. It specially commends the welfare work that has been done for the workers in this period by the Managing Agents and hopes that the hard work of all those deeply attached to their duty, would continue to be recognised and respected."

SOME NEW YEAR THOUGHTS ON LIFE INSURANCE

SERVICES TO POLICYHOLDERS SHOULD BE IMPROVED

IT is symptomatic of the new age in which we live, with its nuclear power, jet airplanes and man-made satellites of the earth and the moon that the traditional practice of forming New Year resolutions seldom evokes the enthusiasm it used to do in the past. However, for life insurance men, more than to any other class of persons, a new year ought to signify the commencement of new business connections. Although life insurance is one of those contracts which literally last through one's life, and are thus among the long-term contracts which a man makes in his life, the fact remains that those who are actively engaged in the business of life insurance begin every year with a determination to exceed their previous best records. To them, every year is new; it is a period of immense, if uncertain, possibility.

A Duty

Life insurance salesmen and staff owe a duty to themselves, to the corporation under which they work and to the wider public they serve in order to help spread the gospel of insurance. This is by no means an easy task, considering that few countries in the world have attached less importance to the mundane things of life than India. Fortunately, the great traditions of salesmanship and service built up by the private insurers in the pre-nationalisation era do indeed stand the Corporation and its men in good stead. The point to be stressed in this country—or what the publicity experts would call the "selling" point—is that it is possible, nay desirable, for a person to combine a high sense of philosophical idealism with that sound sense of economic realism which life insurance policy signifies. From this point of view, it is worth recalling what that great European philosopher, Schopenhauer, had to say on the problems of life. Now, this philosopher who was as keen a student as an ardent admirer of the Indian philosophical lore in general, and the *Upanishads* in particular, deserves to be read with respect in this country. He said:

"In estimating the possibility of danger in connection with any undertaking an ordinary man will confine his inquiries to the kind of risk that has already attended such undertakings in the past, whereas a prudent person will look ahead and consider everything that might possibly happen in the future, having regard to a certain Spanish maxim... a thing may not happen in a year and yet may happen within two minutes.... What I mean is that a man should not hesitate about spending time, trouble and money, or giving up his comfort, or denying himself if he can thereby shut the door on the possibility of misfortune. The most terrible misfortunes are the most improbable and remote—the least likely to occur. The rule I am giving is best exemplified in the practice of insurance—a public sacrifice made on the altar of anxiety. Therefore, take out your policy of insurance!"

A Great Thinker

Here is an excellent exposition of the case for life insurance by a man who was at once a great thinker, a clear writer and a man of much profound insight into human nature. And Schopenhauer's wise counsel ought to provide the necessary corrective to a country like India, where misfortunes are attributed to the fury of a blind fate and people pin their faith to astrological prediction rather than the art of sane living. By relieving a man of all anxiety and releasing his mental energy for higher purposes, a policy of life insurance performs a service which no State with the best organised welfare organisation can render.

It must, however, be admitted that, if people ought to appreciate the role of life insurance in their lives, they should first be convinced that the authorities are really imbued with a high sense of their calling. The field force and the office staff of the Life Insurance Corporation will be judged by the degree of satisfaction which the policyholders, actual as well as potential, feel in their dealings with the Corporation. Hitherto, one has been treated to stories of their discontent, rather than to the solid record of L.I.C.'s work. It is time this was reversed, and ample evidence were given in order to show that the period of agitation has ended and the era of service begun.

Occasionally, one does come across letters to the Press from policyholders complaining of absence of prompt attention by the authorities. Even if one allows for the fact that some sensitive spirits suffer from an irrepressible desire to rush to the Press to ventilate their grievances, fancied or real, there is evidence to show that there is room for improvement in the Corporation's services. Again, no longer can deficiencies be attributed merely to the teething troubles of a nationalised enterprise. Further, it is no comfort to the public to know that it is a vast national enterprise, and not some private undertaking, that is the cause of inconvenient delays, any more than it is to a mother to be told that her child met with an accident, not from a nondescript public vehicle but from a royal carriage. Efficiency and service ought to be the hallmark of a nationalised institution, no less than they are the chief justification for any public undertaking. A re-dedication to these virtues deserves to form the content of insurance men's New Year resolution.

PROFITS COVER

A loss of plant and machinery by fire or any other cause of damage implies, as is well known, more than mere material damage. It involves the loss of profits for that enterprise. In many cases, the receipt of the amount for which the plant was insured is no guarantee that the enterprise will start functioning. There is often a considerable time-lag between the receipt of such money and the restarting of the enterprise. In several large undertakings, such time-lag could be considerable, in view of the fact that the necessary plant and machinery cannot always be obtained at short notice. Since this will necessarily involve considerable loss of profits, large industrial groups take out, besides a fire policy, a loss of profits insurance. Discussing the problems of "loss of profits" insurance, the insurance correspondent of the *London Financial Times* observes:

"The period of indemnity under the profits insurance needs to be sufficient to cover the largest possible interruption, for if the period runs out before turnover or trade has been fully restored, the continuing loss will fall upon the insured company.

"The linking of units in an industry means that a serious fire or explosion may affect the earning power of several units in the group. Sometimes there is merit in effecting the profits insurance to cover the whole group in a single policy, but this is not always necessarily an advantage.

"Where separate policies are maintained, the profits policy of a member of the group can be extended in such a way as to provide that the consequences of a fire at one or more of the other units in the group will be fully covered. The customer concern's policy can include loss caused at the supplier's factory, and the supplier can insure against a fire at the customer's premises.

"A careful examination of the relationships between the companies in a group will show to what extent damage at one premises could affect the business of other members, and profits insurances can be extended to include other premises wherever this seems necessary.

"To some extent grouping of companies may minimise the possible size of any profits loss. In the event of one premises being put out of action, the manufacture or trade might with advantage be transferred elsewhere. This can only be done, however, when there is unused capacity at the alternative premises, and if suitable additional labour is readily available there. In practice it is not usual to find that anything more than a moderate proportion of any loss can be avoided in this way.

"Other extensions of profits policies too often overlook are those covering damage at premises of suppliers, sub-contractors and major customers not in any way allied to the concern insured. A component manufacturer the bulk of whose output is taken by one or two large customers would suffer severe loss if, though a fire at one of these customers' works, his products could not be absorbed. His profits policy can be extended to include this contingency.

"Profits policies can also be made to include the consequences of fire or other damage at public utilities supplying power or gas."

LIFE BUSINESS

The proposed and completed new life business, as on 22nd December 1958, by the Life Insurance Corporation, according to certain Press reports, are Rs. 310 crores and Rs. 227 crores, as compared with Rs. 275 crores and Rs. 215 crores on the corresponding date of 1957, and Rs. 314 crores and Rs. 277 crores respectively at the end of 1957.

According to the latest issue of the *Memento de l'Assureur Belge*, there were 546 insurers in Belgium in 1957—470 stock companies, 27 co-operatives, 24 mutuals and 25 others. According to their nationality, of 195 companies registered with head offices in Belgium, 108 were British, 78 French, 48 Holland, 22 Swiss, 12 Swedish, and the rest of different nationality.

HEROS' 89

ABUNDANT SUPPLIES OF NICKEL

BRIGHT PROSPECTS AHEAD

THE free world nickel industry witnessed some important changes in the calendar year 1958. Supplies were abundant. Indeed, the production capacity of nickel in the free world touched new heights. Dr. John Thompson, Chairman of the Board of the International Nickel Company of Canada, estimates, in the course of his comprehensive review of the developments in the sphere of nickel industry, free world production capacity at about 525,000,000 lbs., almost double the capacity existing prior to the Korean conflict. The free world consumption, however, not only failed to keep pace with production, but suffered a marked setback. In 1958, it is expected to have been between 325,000,000 lbs. and 335,000,000 lbs., as compared with about 415,000,000 lbs. in the previous year. This decline is attributed mainly to business recession in the U.S. and Canada which hit hard the production of durable goods, the major consumers of nickel.

It must have been a blessing in disguise, then, that actual production also lagged behind. Thanks to a fall in demand and a strike in September, the production of the International Nickel Company of Canada Limited, the major producing unit in the free world, declined to an annual rate of about 200,000,000 lbs., equal to about two-thirds of its capacity. In addition, production in Cuba also fell, owing primarily to lower demand and internal disorders in that country. In these circumstances, prices continued to be more or less stable during the year. The market price for electrolytically refined nickel remained throughout the year at 74 cents (U.S. currency), including 1½ cents U.S. import duty.

Although the demand for nickel fell short of supply during 1958, there are reasons to believe that it will soon pick up. This is so, because the U.S. is fast recovering from the recession and the nickel industry is making great strides to find new applications, in the field of both civilian and defence consumption. Dr. Thompson expresses the belief that the improvement in consumption, witnessed during the end of 1958, will continue in 1959 as well. He, however, emphasises the need for capturing new markets for nickel and observes:

"The nickel industry is entering into a period of vigorous competition. During the past period of nickel shortage, producers of competitive materials have naturally taken advantage of the fact that large quantities of nickel were required for defence production and were also put into Government stockpile. As a result, substantial inroads were made into traditional civilian markets for nickel. Now that nickel supplies are plentiful, both for defence and civilian purposes, the nickel industry must re-capture these markets and create new uses for nickel-containing products."

Future Consumption

The belief that consumption requirements in future are bound to go up can by no means be regarded as mere wishful thinking. The year just passed bears testimony to nickel's versatility. For, as Dr. Thompson himself has sought to stress, the abundance of supplies in 1958 also brought with it new applications and a restoration of older uses which had been in effect prior to the period of restricted civilian supplies.

Free world consumption by different industries, during the year under review, was as follows: stainless steels 28 per cent., engineering alloy steels 16 per cent., nickel speciality alloys 16 per cent., foundry products 15 per cent., electroplating 14 per cent., copper and aluminium base alloys 6 per cent. and miscellaneous 5 per cent.

Nickel is, thus, being put to a wide range of uses. Although the total production of stainless steel dropped substantially in 1958, the percentage of nickel-containing grades showed some increase relative to the total. It is to be noted that, in the U.K., Sweden and other European countries, productive capacity for stainless steel has increased. Dr. Thompson feels confident that, with a plentiful supply of nickel assured for the future, the use of nickel-containing stainless steels will continue to increase in all fields of application, particularly in those which for a period had remained either dormant or incompletely developed. Some of these fields, which are receiving the greatest attention from steel producers, are household products, automotive functional trim, and architectural applications including curtain-wall construction, all of which, according to him, show great progress and development potentials.

Free availability of nickel during the year under review made it possible for engineering alloy steel consumers to return to the higher nickel-containing types for established applications such as in automobiles, trucks, tractors, aircraft, military equipment, farm machinery and road-building and transportation equipment. The most important new applications were those involving heat-treated structural plates and shapes containing up to about 3 per cent. nickel for bridges, pressure vessels, and hulls for naval vessels.

Nickel and its alloys of copper and of chromium are increasingly employed in aircraft as also in the production of small gas turbines. Austenitic nickel cast irons, long-established for high temperature service, such as in diesel engine components, and for service under corrosive conditions in the chemical processing industry, are now made available in ductile forms, which are found useful in industry as a supplement to the heat and corrosion resistant steels used hitherto. There has also been an increased use of abrasion-resisting nickel-chromium cast irons for grinding and crushing. Among the countless other applications of nickel, mention may be made of its traditional use for coinage, which increased by 50 per cent. last year. Further, there are good potentialities for extending the application of nickel in such industries as nickel-cadmium storage battery.

Plans for Expansion

In the light of the scope for such an expanding market for nickel, it seems possible, as well as necessary, to develop the industry. It is gratifying to note that various schemes are under way, designed to raise progressively the existing free world annual nickel production capacity to about 550 million lbs. by 1959, 600 million lbs. by 1960 and 650 million lbs. by 1961. Giving a detailed account of the sources of increased supplies, Dr. Thompson says:

"A substantial part of the estimated increase in free world nickel production capacity by 1961 will be forthcoming from International Nickel's Thompson Mine in Manitoba which has been under development for two years. This project is scheduled to start its breaking-in period some time in the latter half of 1960. Full production at the annual rate of 75,000,000 lbs. will be reached as soon as possible after the end of the breaking-in period. At this rate, International Nickel's production capacity at its operations in Ontario and Manitoba will total 385,000,000 pounds per year.

"The Manitoba project will be the world's second largest source of nickel, exceeded only by the Company's operations in Sudbury District of Ontario which have an annual nickel production capacity of 310,000,000 pounds. This project is being financed from Company funds and without any Government guarantee of a market.

"The free world's total potential output in 1961 also includes from Canada that of Falconbridge Nickel Mines Limited and Sherritt Gordon Mines Limited. As a result of expansion programmes in which these companies have been engaged, their respective capacities will reportedly amount to 55,000,000 and 27,500,000 pounds per year. It has also been reported that the capacity of the United States Government-owned plant at Nicaro, Cuba, will be 54,000,000 pounds annually, and Freeport Sulphur Company has announced it will produce 50,000,000 pounds of nickel annually from its deposits at Moa Bay, Cuba. The capacity of producers in the United States is estimated at some 20,000,000 pounds of nickel, annually, orginating largely from the M. A. Hanna Company's deposit at Riddle, Oregon. According to published statements, the French nickel company, Societe Le Nickel, with mines on the island of New Caledonia, contemplates increasing its nickel output to some 50,000,000 pounds per year. In addition, there will be a relatively small output of nickel in Japan, which is also produced from New Caledonia ores."

The sustained growth and development of the industry depends to a large extent on the discovery of new applications of nickel. This is the only safeguard for ensuring to the industry strength and stability not only in the current year but also in the years to come.

JAPAN'S EXPORT PROMOTION

Japan has been making all-out efforts to boost its exports. One of them is the launching of a fresh international promotion campaign, jointly sponsored by the Japanese Government, semi-governmental and private organisations headed by the Japan Export Trade Promotion Agency (JETRO). This scheme lays particular emphasis on making the people conscious of the fact that trade supports the nation. The main objectives of the campaign are to educate people in the realisation that the nation exists by trading, to promote trade-consciousness at every level, to improve productivity in export industries and strengthen competitive ability through improving quality and design, to establish a broad and orderly system of trading by combining manufacturers, exporters and foreign dealers and to strengthen co-operation among official and private organisations for the promotion of trade. Behind the campaign is the belief that, in order to strengthen its ties with other countries of the world, it is necessary for Japan to expand its foreign trade.

CHEMICALS
THAT HELP INDUSTRY TO BRING
A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

CHEMICALS FOR EVERY INDUSTRY

NEW PUBLICATIONS

Prosperity Through Competition. By Dr. Ludwig Erhard. Published by Messrs. Thames and Hudson, London. Price: 25s. net.

ALL those who are enthusiastic, if somewhat uncritical, supporters of a socialist economy for India will do well to peruse carefully the 258 pages of the book *Prosperity Through Competition*, written by that economist of world repute, Dr. Ludwig Erhard, Vice-Chancellor and Minister for Economic Affairs of the German Federal Republic. Such a perusal will clearly dispel the several wrong notions held by many politicians and economists. The core of Dr. Erhard's philosophy is simple and straightforward; it is as follows:

"The most successful means for the achievement and retention of prosperity is competition. Only by competition can an economy expand to serve all people, especially in their capacity as consumers, and dissolve all advantages that do not result directly from higher performance. Free competition thus leads to progress and profits for the whole of social order."

These are, indeed, wise words, coming as they do from a person who, in a world of inflationary troubles, has transformed the economy of West Germany into a most powerful and stable unit in just a decade's time. The achievement is very remarkable considering that conditions in West Germany were abnormal when Dr. Erhard took over the direction of its economic affairs at the beginning of 1948. When the country was in the grip of a severe inflation, Dr. Erhard came out with his decree to end rationing and price controls. He said then: "Turn the people and the money loose and they will make the country strong." He did prove correct. Thanks to the courageous principle and application of *die soziale Marktwirtschaft*—that is, social market economy—unemployment in W. Germany is now low and workers' real wages have gone up by 60 per cent. as compared with 1950. Germany is today the third largest producer of steel in the world and a major exporter of engineering, chemical and other allied products. Naturally enough, it was not surprising that the English edition of Dr. Erhard's book *Wohlstand für Alle* ran through six editions during the brief period of nine months after it first appeared early in 1957.

Dr. Erhard has described in his own inimitable style how he has attempted to apply, in practice, the principles of modern national economics, which all the countries of the West have evolved, with a view to overcoming the age-old antithesis of an unbridled liberalism and a soulless State control, to finding a sound middle way between out-and-out freedom and totalitarianism. The learned author begins his study with a brief note on what he calls the "Thread." The "Thread," to quote him, "is a desire, after years of effort, for increased general prosperity and, if the only possible path leading to this goal is through increased economic competition, then economic policy is bound, at the same time, to strengthen the many traditional basic human freedoms." He has rightly laid stress on the importance of giving "first consideration" to the freedom of every citizen to live his life according to his financial circumstances, personal desires and values. This basic principle of freedom for the consumer must logically be counterbalanced by freedom for the producer to make and sell what he believes to be marketable, that is, what he has found, after studying individual needs, to be essential and likely to succeed.

In the next five chapters, Dr. Erhard reviews the developments since the birth of the market economy. His review shows that the economic prosperity of West Germany has been achieved not through rigidity of planning but through a realistic economic policy free of ideological considerations. Any dispassionate student of economics will agree with Dr. Erhard when he says that "the yardstick and criterion of what is good or bad in economic policy are not dogmas or the points of view of pressure groups, but exclusively the human being, the consumer, the people; economic policy can only be regarded as good, if and as long as it is regarded simply as useful and welcomed by the individual."

Being a firm believer in the conception of social market economy, Dr. Erhard is naturally very outspoken in his views on cartels. A fairly big chapter is devoted to this subject. The author regards all attempts at forming cartels as a crime against the sanctity of life, the inner meaning of which is change, movement and progress and, therefore, cannot respond to the uncouth methods of planning regulations and stabilisation. Warning against the dangers of collective agreements gaining the upper hand in the camp of business men, he pertinently remarks that, much earlier than these business men would like to believe, the time will come for the question to be put politically: What defence is there for private ownership in production and what right has the business man to make economic decisions?

There is an interesting chapter entitled: "Does Prosperity Lead to Materialism?" Dr. Erhard is of the opinion that, only if consumption, including productive consumption, exercises a constant pressure on the economy will that force remain active which adopts itself in the sphere of production to increasing demand. Elucidating this view, he rightly observes: ".... the better we succeed in increasing prosperity, the rarer will be man's tendency to adopt a purely materialistic attitude towards life, because an increase in prosperity creates the ambient in which man is lifted from a purely primitive materialistic way of thinking."

Dr. Erhard has a few notable observations to make on Welfare State—"the modern delusion." He minces no words when he says that social policy must not damage national economic productivity even indirectly and run counter to the basic principles of the market economic order.

It must be said to the credit of Dr. Erhard that he thinks as an internationalist, and not merely as a German. Referring to some who regard a free economic policy as the sum of those measures which, in different ways, are expressed in bilateral agreements, dealing case by case, commodity by commodity and country by country, he declares that such a policy is almost undignified in its arbitrariness and lack of consistency and that it is not at all suited to the conduct of peaceful economic relations among the peoples and the countries of the free world. To quote him: "It can only be disturbing." It is here that Dr. Erhard considers the integration of Europe as being more necessary than ever before. The best kind of integration, in his view, depends not on the establishment of new offices and administrative procedures or a growing bureaucracy but on the "reconstruction of a free international order as best and most completely expressed in a free convertibility of the currency; convertibility of the currency, of course, includes complete freedom of movement of goods, services and capital."

In conclusion, Dr. Erhard has sought to remind his countrymen that they do not live alone in the world, but that their well-being depends both on the fitting of their country into the free world without tensions and on the friendship and confidence among the peoples.

Company Law and Problems of Corporate Enterprise. By F. R. Ginwalla. Published by Messrs. N. M. Tripathi Private Ltd., Princess Street, Bombay. Pages: 211. Price: Rs. 10.

Law is made for man and not man for law. Legislation in this country has come to a stage where every thinking man is bound to feel some concern over the complex nature of the growing body of laws. The Indian Companies Act of 1956 is a complex piece of legislation. It is a mass of sections and sub-sections. We have had in the space of ten years two expert committees to advise the Government on the subject. But both committees have failed to simplify the law and make it precise. The Bill to amend the Companies Act based on the Sastri Committee Report will be introduced in Parliament during

MYSORE KIRLOSKAR'S PROGRESS STEADY

ADDITIONAL CAPITAL PROPOSED

YET one more year of highly encouraging working has been completed by the Mysore Kirloskar Ltd. (Managing Agents: Messrs. Kirloskar Associates, Yantrapur P.O., Harihar), the period referred to being the year ended 30th June 1958. The Company's sale proceeds made a substantial advance over those for the previous years which itself had witnessed a sizable growth. The gross profit, too, has recorded an impressive rise. The dividend to shareholders has also been increased to 7½ per cent., from 6 per cent., at which level it had remained steady for the preceding three years, after having been stepped up from 5 per cent. paid for 1953-54.

The gross profit for the year under review at Rs. 17.70 lakhs represents an increase of Rs. 5.49 lakhs or 45 per cent, from Rs. 12.21 lakhs for the previous year. It is twice as much as that for 1954-55 and a little more than that for 1955-56. Such a smart rise in gross profit reflects the growth of a young Company engaged in a key engineering industry and must not be misinterpreted as pointing to profiteering or anything of that sort.

In contrast to the sharp rise in gross profit, the net profit is up by only a meagre sum of Rs. 16,000 to Rs. 2.55 lakhs. This is because of the marked increase in the provision for depreciation from Rs. 6.01 lakhs to Rs. 10.15 lakhs, inclusive of Rs. 3.81 lakhs provided as development rebate. The provision for taxation also is higher at Rs. 3.61 lakhs, as against Rs. 3.15 lakhs. It includes Rs. 25,000 on account of wealth tax and another Rs. 16,442 towards wealth tax paid for 1955-56. The amount set aside to gratuity fund has been raised from Rs. 40,000 to Rs. 60,000 but nothing has been transferred to debts redemption fund which had been the recipient of Rs. 50,000 a year before. Instead, a smaller sum of Rs. 1,500 has been transferred to bad and doubtful debts reserve, as against *nil*. The dividend equalisation fund has been credited with Rs. 2,050 and this represents the surplus from the amount earmarked for dividend in the previous year.

The following comparative table provides an idea of the Company's progress in terms of financial results for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	86 62	54.43	44.59	
Other income	2 30	1.08	1.37	
Closing stock	18.67	21.20	19.41	N.A.
Expenses	68 69	45.09	44.92	
Gross profit	17.70	12.21	7.77	8.86
Managing Agents' remuneration	1.39	0.66	0.47	0.91
Provision for—				
Depreciation	10.15	6.01	4.33	4.30
Taxation	3.61	3.15	0.60	2.10
Net profit	2.55	2.39	2.37	1.55
Provisions written back ..	..	..	44.42	..
Adjustments relating to previous year	0.14	..	..	..
To reserves	0.61	0.90	45.41	0.25
To L. K. Kirloskar memorial ..	0.25	..	..	..
To dividend	1.87 (7½%)	1.42 (6%)	1.38 (6%)	1.35 (6%)
Carry forward .. .. Rs.	2,792	7,234	467	1,106

N. A.—Not Available.

As will be seen from the aforesaid table, sale proceeds have jumped up from Rs. 54 lakhs to Rs. 87 lakhs. Other income, too, has advanced notably. Closing stock is substantially lower, which is evidently due to good demand for the Company's products. A good part of the rise in sale proceeds apparently reflects the growth in production. But it would appear that the increase in expenses is more than proportionate to the expansion in business. This is evident from the ratio of expenses to the total of sale proceeds and closing stock. This ratio has risen from 59.5 in 1956-57 to 65.2 in 1957-58. The Directors' report tells us that increase in dearness allowance to employees itself meant an additional expenditure of as much as Rs. 1 lakh to the Company.

The Company, according to the Directors' report, has made good progress in the manufacture of new types of lathes. The negotiations for technical collaboration with Messrs. Alfred Herbert Ltd., Coventry, U.K., were concluded and the manufacturing agreement with them was recently executed as from 1st August 1958. As a result of this collaboration, the Company will be taking up new lines of Capstan and Turrets in addition to normal expansion of production and this will necessarily require additional finance. The Directors have therefore proposed to issue additional capital to the tune of Rs. 15 lakhs for which, it is stated, circulars will be sent to the shareholders in due course. The consent of the Central Government has also been received for the issue of the said capital. The Company has availed of a loan of Rs. 21 lakhs from the Industrial Finance Corporation of India so far and the balance of the loan of Rs. 4 lakhs is still due from the Corporation. A fly in the ointment, however, is the continued acute shortage of raw materials, particularly quality steel. No wonder the Directors have expressed their concern over this matter.

A satisfactory finanical position is disclosed by the Company's balance-sheet as at 30th June 1958. Against a paid-up capital of Rs. 24.87 lakhs, all in ordinary shares of Rs. 100 each, it has reserves and surplus aggregating Rs. 23.20 lakhs. Of this amount, Rs. 7.19 lakhs belong to development reserve and Rs. 4.64 lakhs to initial depreciation account. The current liabilities stand at Rs. 51.64 lakhs, of which secured loans account for Rs. 23.93 lakhs, unsecured loans for Rs. 7.82 lakhs and provision for taxation (approximate tax liability for three years) for Rs. 7.29 lakhs. The gross block of Rs. 81.26 lakhs which includes additions during the year of the value of Rs. 20.23 lakhs, has been written down to Rs. 37.02 lakhs. Buildings under construction were of the order of Rs. 55,922. The current assets aggregate Rs. 62.14 lakhs and cover the current liabilities and the provision for taxation by a comfortable margin of Rs. 10.50 lakhs.

The Rs. 100 paid-up ordinary shares are currently quoted at Rs. 130 *cum-div.* and on an *ex-div.* basis, the yield is 6.12 per cent. per annum.

WESTERN SHIPPING CORPORATION FARES BETTER

The Western Shipping Corporation (Private) Ltd. (Chairman: Dr. Nagendra Singh, I.C.S., Bombay), another Government-owned shipping company, earned a higher gross profit of Rs. 9.92 lakhs for the year ended 31st March 1958, as against Rs. 1.72 lakh for the period from 22nd June 1956 (date of incorporation) to 31st March 1957. After providing Rs. 6.43 lakhs for depreciation, as against Rs. 1.51 lakh, the net profit was Rs. 3.49 lakhs which compares well with only Rs. 20,955 for the previous accounting period. No provision has been made for taxation as no tax liability is anticipated for the year under report on account of additional depreciation allowable to the Company under the Income-tax Act. Adding the sum of Rs. 20,955, the amount of profit brought forward from the previous year's account, the sum available for disposal was Rs. 3.70 lakhs. Out of this, the Directors have appropriated Rs. 2.50 lakhs to provision for special survey reserve and another Rs. 50,000 to deferred taxation reserve. This leaves a balance of Rs. 69,897 which is proposed to be carried forward.

The Directors report that the time charter arrangements with Messrs. Shell Tankers Ltd., London, regarding tanker s.t. *Desh Sevak* (the only operating unit of the Company), came to an end in March 1958 and the vessel was put under four-yearly special survey during April-May 1958. According to the new charter arrangements, for a period of three years from 1st April 1958, agreed to between the Company and Messrs. Burmah-Shell Oil Storage and Distributing Company of India Ltd., London, the vessel was delivered to the charterers on 29th May 1958. The charter hire is at the enhanced rate of 32s. 6d. per dw.t. per month, a rate which is expected to yield better results for the current year.

The Directors state that the construction of vessels in the European yards has made good progress; the vessel under construction at the Uljanik Shipyard, Pula, Yugoslavia, was launched on the 14th September 1958. This vessel is expected to be delivered by April 1959. The execution of orders placed with the Apuania Yard in Italy and with the Lubecker Yard in Germany is also progressing satisfactorily. Delivery of the vessels by these yards is expected in 1959-60. It is stated that the commitments under the contracts in respect of the five vessels on order (four with European yards and one with Hindustan Shipyard, Visakhapatnam) are approximately Rs. 572.07 lakhs as at 31st March 1958. An order for construction of a 10,000-ton tanker has been placed with the Harima Shipbuilding and Engineering Company, Ltd., Japan. The specifications of this tanker were settled with Caltex to suit its requirements. The price of the tanker is fixed at 815.5 million yen (about £815.500) and compares favourably with £1.5 million quoted by certain Continental yards for building a tanker of the same specifications. The cost of this tanker will be met from funds to be obtained under the loan agreement with the Export-Import Bank of Japan under the line of yen credit entered into by the Government of India with that Bank. A provisional contract in this regard was signed on 29th August 1958 and the loan application for 815.5 million yen was made. It is under the consideration of the Ministry. The contract provides that Harima will give delivery of the tanker within ten months after the contract becomes effective. On this basis, it is expected to be delivered in 1959.

The paid-up capital of the Company as at 31st March 1958 is Rs. 350 lakhs, all in ordinary shares of Rs. 100 each, of which Rs. 35 per share has been called up. Its reserves and surplus are small and amount to only Rs. 3.70 lakhs. The current liabilities stand at Rs. 2.37 lakhs. The fleet account of a value of Rs. 90.02 lakhs stands depreciated at Rs. 82.07 lakhs. Payments made on account of ships under construction aggregate Rs. 207.07 lakhs. The current assets amount to Rs. 66.92 lakhs.

On the outlook for the Company, the following extract from Dr. Nagendra Singh's speech will be read with interest:

"Although the prices of ships have registered a steady decline, it has not been possible for the Corporation, owing to the present acute foreign exchange difficulty, to acquire any suitable second-hand ship and commence operation in any of the trade routes allotted to it. Nevertheless, during my visit to Europe in April-May last, to attend the 41st Maritime Session of the I.L.O. Conference, I investigated the possibility of acquiring tonnage for the Corporation on deferred payment basis. Though vessels of the type needed by us were available at economic prices, it was not possible to acquire any, owing to non-availability of free foreign exchange. Even deferred payment terms which were available required initial payment of foreign exchange and since the allotment of Rs. 15 lakhs in free foreign exchange made to the Ministry of Transport was all allocated to the private sector, there was no possibility of acquiring any secondhand vessel in the public sector. It is hoped that when the fresh allotment of free foreign exchange is made for the quarter beginning from 1st January 1959, there will be some free foreign exchange earmarked for the public sector which would enable us to take advantage of the falling market to acquire suitable secondhand tonnage for the Corporation. In any case, with the delivery of the three vessels under construction in Yugoslavia, Italy and Germany, the Corporation is expected to commence operation in overseas trades next year."

N.Y. STOCK EXCHANGE MECHANISED TO HANDLE HUGE BUSINESS VOLUME

Last year, the New York Stock Exchange was open for business a total of 251 days, and in that relatively short time a staggering 714¼ million shares changed hands. This involved thousands upon thousands of daily transactions among the 657 member-firms. And at the end of November, the volume was running about 30 per cent. higher than in the previous year.

Set up to handle the mechanics of this tremendous volume of business is the Stock Clearing Corporation, a wholly owned subsidiary of the New York Stock Exchange, which is able to do the job with the help of 65 I.B.M. machines varying from keypunches, collators, and tabulators, to interpreters, calculating punches, and electronic sorters. Today's new machines are on an average 50 per cent. faster than the machines they replaced. For example, the electronic sorters now feed 1,000 cards per minute, as compared with the former capacity of 650.

Speed is vitally important, because each day's operations must be completed that same day. Here is the procedure: Monday's transactions—stock, price, number of shares, member-firms involved—are reported by the seller Tuesday morning and transcribed to punched cards. From these cards lists of all sales and purchases are prepared. These are in the hands of member-firms (both buyers and sellers) by 8 a.m. Wednesday. Any corrections on Monday's transactions are due in Stock Clearing before noon Wednesday, and adjustment lists are returned to member-firms before 3 p.m. of the same day.

At 8 a.m. on Thursday, a summary is delivered to each member-firm showing the total value of purchases, sales, balances to receive and to deliver, and the net cash credit or debit. On this summary are based Friday's cash settlements and deliveries of securities.

Clearance is not the only operation performed on the machines. Using data supplied by member-firms, and often employing statistical sampling techniques, the Clearing Corporation develops information significant in every area of Exchange activity and interest.

One of the most complex studies ever attempted on standard I.B.M. machines is currently being worked on by Stock Clearing—a 1959 census of shareowners. The survey will cover over 5,000 publicly-held companies with about 8,000 different stock issues represented. One thousand brokerage firms and all stock exchanges in the U.S. and Hawai will co-operate in the census. Approximately, 400,000 cards will be analysed during the study, designed to give a new count—and a new portrait—of the American stockholder. The census will show the composition and geographic spread of all American shareowners, as well as establish such facts as their ages, occupations, and income and education levels.

The Exchange conducted a similar survey in 1956 and found that America had 8.6 million shareowners—an increase of 33 per cent. over a study made four years earlier.

The Directors of Messrs. Smith Stanistreet and Company Ltd. have decided to issue 100,000 new ordinary shares of Rs. 5 each for cash at par. They will rank in all respects *pari passu* with the existing ordinary shares, except that they will not participate in any dividend declared in respect of any period ending on or before 30th June 1957. The aforesaid shares will be offered in the first instance to the holders of ordinary shares in the ratio of one new share for every two full ordinary shares held.

EASTERN SHIPPING CORPORATION

PROFIT DECLINES SHARPLY

THE results of the Eastern Shipping Corporation Ltd. (Chairman and Managing Director: Mr. R. R. Saksena, Bombay) for the year ended 31st March 1958 are disappointing. As a result of non-availability of adequate cargoes and a precipitate and steep decline in freight rates, the Company's profit has suffered a sharp setback from the encouraging level reached in the previous year. The gross profit for the year under review at Rs. 41.57 lakhs represents a fall of Rs. 27.55 lakhs from Rs. 69.12 lakhs for the previous year, to which level it had increased from Rs. 67.21 lakhs for 1955-56. The provision for depreciation has been raised from Rs. 32.05 lakhs to Rs. 37 lakhs. But the provision for taxation has been reduced from Rs. 1.75 lakh to Rs. 13,000. These amounts refer to taxation liability abroad as there was no liability on account of Indian income-tax for these years. After the aforesaid provisions, the net profit amounts to a mere Rs. 4.44 lakhs, as compared with Rs. 35.32 lakhs earned a year earlier.

The decline in profit has had an adverse effect on the amount allocated to reserves. Thus, as against Rs. 35.50 lakhs in the previous year, a sum amounting to no more than Rs. 4.50 lakhs has been conserved. This has been credited to fleet special repairs reserve. The amount allocated in the previous year consisted of Rs. 26 lakhs to deferred taxation reserve and Rs. 9.50 lakhs to general reserve. The provision for gratuity, however has been maintained at the previous year's level of Rs. 20,000.

As readers are aware, this Shipping Company is owned and managed by the Government of India.

The following comparative table shows at a glance the Company's financial results for the past three years:

(In lakhs of rupees)

	For the year ended 31st March		
	1958	1957	1956
Freight, passage money, etc.	255.37	263.88	220.84
Other income	8.27	7.88	6.10
Expenses	222.07	202.64	159.73
Gross profit	41.57	69.12	67.21
Managing Agents' commission ..	..	..	3.54
Depreciation	37.00	32.05	29.05
Taxation	0.13	1.75	2.00
Net profit	4.44	35.32	31.71
Excess provision written back ..	..	0.69	..
To provision for gratuity	0.20	0.20	..
Transfer to reserves	4.50	35.50	13.00
Indemnity amount refundable to Government of India	..	..	17.99
Carry forward	0.30	0.56	0.24

The Company's income from freight and passage money declined from Rs. 263.88 lakhs in 1956-57 to Rs. 255.37 lakhs for the year under review—a drop of Rs. 8.51 lakhs. At the same time, expenses increased by Rs. 19.43 lakhs to Rs. 2.22 crores.

During the year under report, 40 complete voyages were performed by the Corporation's vessels, as against 36 performed in the previous year. Five round voyages were completed by three of the Company's vessels on the India-Australia service. All the three vessels carried general cargo from Calcutta and returned with wheat for Calcutta on Government of India account along with available general cargo from the main Australian ports for Colombo, Madras and Calcutta. On the India-Far East Service, three vessels completed two voyages each to Japan during the year. As in the previous year, they carried general cargo both ways besides wheel-sets and other railway materials from Japan to India on Government account. The t.s.s. *State of Bombay* completed 11 voyages during the year on the India-East Africa Service. The t.s.s. *State of Madras* completed 14 voyages to the Straits ports during the year.

As regards expansion in the Company's fleet, the Directors report that the m.v. *State of Orissa*, the second of the two 8,000-tonners ordered from the Hindustan Shipyard, Visakhapatnam, was delivered to the Corporation on 31st December 1957. With the addition of this ship, the Company's fleet now comprises eight owned ships with an aggregate gross registered tonnage of 52,892. The Company's intention is to build at the Hindustan Shipyard eight cargo ships for itself and the Western Shipping Corporation, another State-owned concern. The Hindustan Shipyard has commenced execution of orders for three ships. Of these three, one vessel has been allotted to the Western Shipping Corporation. These vessels will be of Lubecker design, with dw.t. of 9,500 each and a speed of 17 knots.

The following extract from the latest Chairman's speech (delivered on 23rd December 1958) will throw further light on the Company's position in regard to its expansion plans:

"In my speech last year I had stated that our future programme of fleet expansion included provision of four ships on each of the Australian and the Far East runs, with an additional relief ship to fill gaps caused by temporary withdrawal of any of the regular ships for survey, repairs, etc. As we have only six ships to cater to these trades, an additional three ships are required for this purpose. We also must consider seriously replacing the t.s.s. *State of Bombay* which, as I have pointed out elsewhere, has not been rendering satisfactory service on the Bombay/East African run. We need a passenger-*cum*-cargo vessel for the Madras/Rangoon service and another vessel for the Tuticorin/Colombo trade. The two Liberty ships namely, the *State of Saurashtra* and the *State of West Bengal*, are also now due for replacement as they have outlived their useful life. We thus need for our immediate requirements eight ships, both passenger and cargo. During the year under review, no new acquisitions were added to our fleet except m.v. *State of Orissa* in fulfilment of our requirements. We have on order with the Hindustan Shipyard three vessels of Lubecker design of 9,500 dw.t. each and a speed of 17 knots. The contract for these vessels has still not been entered into with the Hindustan Shipyard though we have met all the demands made by the Shipyard for payment of instalments due on these vessels. It is indeed a pity that the Shipyard is still not in a position to indicate definite dates of delivery of the vessels, which they are building for us. We are unable, therefore, to say when these units will be added to our fleet. I have also to mention with regret that the performance of the Hindustan Shipyard in building ships for us has not so far been entirely satisfactory and ships built by them have had to be immobilised for long periods for rectification of defects and deficiencies. Let me once again express the hope that the Shipyard will soon begin to build ships which will in no way be inferior to those built in the best shipyards of the world. As regards our other requirements, negotiations have been conducted for the purchase of second-hand vessels and offers have been received for new constructions in Japan. It has unfortunately not been possible to bring negotiations for purchase of second-hand vessels to a successful conclusion or to accept offers for new construction in the Japanese shipyards. These questions are, nevertheless, receiving our active consideration and it is my fervent hope that we shall be able to make additions to our fleet in the near future."

The Company has a paid-up capital of Rs. 550 lakhs, all in ordinary shares of Rs. 100 each. The reserves and surplus aggregate Rs. 74.96 lakhs. Secured loans from the Government of India on mortgage of a part of the Company's fleet stand reduced from Rs. 126.39 lakhs to Rs. 112.17 lakhs. The other current liabilities and provisions stand at Rs. 84.57 lakhs. Unfinished voyages amount to Rs. 9.83 lakhs and security and general average deposits to Rs. 42,561. Of the gross block of Rs. 682.50 lakhs, the fleet account stands at Rs. 680.08 lakhs, including additions of the order of Rs. 107 lakhs during the year under review. This has been written down to Rs. 540.42 lakhs. Payments on account of ships under construction amount to Rs. 29.01 lakhs. Miscellaneous expenditure and losses account for Rs. 16.05 lakhs. The current assets aggregate Rs. 244.64 lakhs. Of the current assets, cash and other balances alone amount to Rs. 80.78 lakhs.

NEW PUBLICATIONS

(*Concluded from page 81*)

the Budget session. A series of articles on this report appeared in this journal. Mr. Ginwalla, the author of those articles, clearly brought out the pitfalls in the Act of 1956 and analysed the features of the report also. These articles have now been published in book form. The author has taken pains to make the book comprehensive in that the book not only consists of the articles, but also several additions. The book will thus prove useful not only till the amendments are made law but even after they have been placed on the Statute Book. It contains the history of company legislation, and a discussion on the new Act, the objectives of the Act and the role of the public and private sectors under the Act. The author has ably explained the shortcomings of the Sastri Committee's report which should be useful to legislators. There are also a chapter on accounts, a digest of the case law up to date and the recent Government notifications. The lucid manner in which the sections are explained and the analytical study of the various suggestions of the Sastri Report are features which ought to appeal to laymen and lawyers alike.

COMPANY MEETINGS AND DIVIDENDS

JAM SHRI RANJISINGHJI SPG. AND WVG. MILLS CO., LTD. Annual General Meeting, Bombay, 19th January 1959. Dividend: *Nil*. Transfer books remain closed from 10th to 19th January 1959, both days inclusive.

KOTAMULLAI TEA CO., LTD. Annual General Meeting, Calcutta, 21st January 1959. Transfer books remain closed from 14th to 21st January 1959, both days inclusive.

CALCUTTA SAFE DEPOSIT CO., LTD. Annual General Meeting, Calcutta, 22nd January 1959. Transfer books remain closed from 16th to 22nd January 1959, both days inclusive.

SHEVEROY ESTATES LTD. Annual General Meeting, Kannankurichi, Salem, 24th January 1959. Dividend: 7½ per cent. or 15 nP per share. Transfer books will remain closed from 18th to 24th January 1959, both days inclusive.

KEMP AND CO., LTD. Annual General Meeting, Bombay, 28th January 1959. Dividend: Rs. 15.00 per share, payable on or after 28th January 1959. Transfer books will remain closed from 22nd to 28th January 1959, both days inclusive.

TINGAMIRA TEA SEED CO., LTD. Annual General Meeting, Calcutta, 29th January 1959. Transfer books will remain closed from 20th to 29th January 1959, both days inclusive.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th January 1959. Dividend: Re. 0.68 per share, payable on or after 9th February 1959. Transfer books will remain closed from 19th to 29th January 1959, both days inclusive.

NEW HUNTODIH COAL CO., LTD. Annual General Meeting, Calcutta, 31st January 1959. Dividend: *Nil*. Transfer books remain closed from 19th to 31st January 1959, both days inclusive.

MYSORE KIRLOSKAR LTD. Annual General Meeting, Harihar, 31st January 1959. Dividend: 7½ per cent. Transfer books will remain closed from 25th January to 5th February 1959, both days inclusive.

VITA SUPPLIES CORPORATION PRIVATE LTD. Annual General Meeting Calcutta, 31st January 1959.

MADHUSUDAN MILLS LTD. Annual General Meeting, New Delhi, 31st January 1959. Transfer books remain closed from 10th to 31st January 1959, both days inclusive.

LOYAL TEXTILE MILLS LTD. Annual General Meeting, Kovilpatti, 2nd February 1959. Dividend: *Nil*. Transfer books will remain closed from 27th January to 2nd February 1959, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Annual General Meeting, Bombay, 4th February 1959. Final dividends of Rs. 300 per share, on the original shares, Rs. 15 per share, on the old shares and Rs. 6 per share, on the new shares, for the year ended 31st May 1958. These dividends are payable on and from 23rd February 1959. Transfer books will remain closed from 27th January to 17th February 1959, both days inclusive.

WOODCOTE ESTATES LTD. Annual General Meeting, Coonoor, 5th February 1959. Dividend: 6 per cent. Transfer books will remain closed from 29th January to 5th February 1959, both days inclusive.

HOWRAH MILLS CO., LTD. Interim dividend of Re. 0.50 per share, for the year ending 31st March 1959. Transfer books will remain closed from 24th to 31st January 1959.

CHRESTIAN MICA INDUSTRIES LTD. Interim dividend of 6 per cent. on ordinary shares and 6 per cent. on the deferred shares, for the year ended 31st December 1957. Transfer books will remain closed from 22nd to 31st January 1959, both days inclusive.

MADRAS SAFE DEPOSIT CO., LTD. Dividend of 5 per cent. or Rs. 4.00 per share, for the year ended 30th June 1958. Transfer books remain closed from 12th to 19th January 1959.

NEW SWADESHI SUGAR MILLS LTD. Dividend of Rs. 20.00 per share, for the year ended 30th June 1958, payable on 2nd February 1959. Transfer books remain closed from 15th to 23rd January 1959, both days inclusive.

OUDH SUGAR MILLS LTD. Dividend of Rs. 12.50 per share, for the year ended 31st July 1958, payable on 2nd February 1959. Transfer books remain closed from 15th to 23rd January 1959, both days inclusive.

HINDUSTHAN SUGAR MILLS LTD. Dividend of Rs. 15.00 per share, for the year ended 30th June 1958, payable on 18th February 1959. Transfer books will remain closed from 24th January to 10th February 1959, both days inclusive.

ZANDU PHARMACEUTICAL WORKS LTD. Dividend of Rs. 7.00 per share, for the year ended 31st March 1958, payable on 16th February 1959. Transfer books remain closed from 15th to 29th January 1959, both days inclusive.

COMPANY REGISTRATIONS

HINDUSTAN ALUMINIUM CORPORATION LTD. (First Director: Mr. G. D. Birla.) Managing Agents: Messrs. Birla Gwalior Private Ltd. Business: Manufacturers and dealers in alumin'um and aluminium products. Authorised capital: Rs. 20,00,00,000. Public company. The company is registered in the State of Bombay.

BHARTIA ENGINEERING CORPORATION PRIVATE LTD. (First Director: Mr. D. T. Javeri.) Business: Engineers, founders and smiths, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 'Victoria Buildings', Parsee Bazar Street, Bombay.

RESULTS OF SIJUA JHERRIAH ELECTRIC

BISRA STONE MAINTAINS DIVIDEND

Sijua (Jherriah) Electric Supply Co., Ltd.

THE directors of the above Company [Secretaries: Messrs. Bird and Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 31st March 1958.

The profit and loss account shows the figures of income and expenditure for a period of 12 months as compared with the corresponding figures of the previous accounting period of 15 months.

The profit and loss account, after crediting Rs. 2,000 (Rs. *nil*) for unclaimed debentures of the old issue, providing for all charges and making provisions of Rs. 1,60,000 (Rs. 1,13,000) for taxation on income, Rs. 14,000 (Rs. 12,000) for wealth tax and Rs. 1,35,726 (Rs. 1,66,833) for depreciation shows a profit of Rs. 2,68,634 (Rs. 2,95,604) to which is added the balance brought forward from the last account of Rs. 2,346 (Rs. 19,430) making a total of Rs. 2,70,980 (Rs. 3,46,209 which includes Rs. 31,175 transferred from general reserve). From this is deducted the amount transferred to capital reserve not available for dividend of Rs. 2,000 (*nil*), to reserve for contingencies Rs. 35,872 (Rs. 43,227), to tariffs and dividend control reserve Rs. 11,435 (Rs. 26,575), to provision for rebate to consumers Rs. 11,435 (Rs. 21,940), to general reserve—forfeited dividends Rs. 934 (Rs. 1,621), to debenture redemption reserve Rs. 60,000 (Rs. 60,000) and to development reserve Rs. 34,347 (Rs. 33,000 to development rebate reserve) leaving a balance of Rs. 1,14,957 (Rs. 1,59,846). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the ordinary shares for the year ended 31st March 1958, at the rate of 68 (94 for 15 months ended 31st March 1957) naye Paise per share without any deduction for income-tax payable by the Company absorbing Rs. 1,14,240 (Rs. 1,57,500) and by carrying forward Rs. 717 (Rs. 2,346).

By a recent amendment to the 6th Schedule to the Electricity (Supply) Act, 1948, the quantum of profits available for distribution as dividend has been considerably reduced. This will permanently affect the dividend payable.

In particular from this year the interest on debentures and loans amounting to Rs. 62,503 is no longer a charge before arriving at "clear profit" and, therefore has to be met from the balance at the disposal of the Company before dividend can be considered.

Units sold in the year under review was 103,626,146 as compared with units sold in the period of 15 months ended 31st March 1957 of 124,809,948. The D.V.C. supplied 31,662,150 units during this year as compared with 37,210,750 units supplied during the period of 15 months ended 31st March 1957. In view of the sub-normal rainfall this year, sales may be considered satisfactory.

Labour was restive and expressed difficulty in interpreting the Industrial Tribunal Award on the issue of revised wage structure and merger of dearness allowance. These matters have been referred to arbitration and the outcome is awaited.

Rising costs of labour and fuel resulted in a steady increase in the cost of generation and distribution and to off-set these increases, the directors have circularised to "B" and "C" grade tariff consumers their decision to increase the existing surcharge by 7 per cent. effective from 1st November 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Bisra Stone Lime Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird and Co. (Private) Ltd., Calcutta] submitted the audited accounts of the Company for the year ended 31st March 1958.

Limestone :—Raisings increased from 8,19,208 tons to 9,26,412 tons. Sales also improved from 7,80,026 tons to 8,35,535 tons. Sales of reject stone recorded an increase from 36,888 tons to 43,398 tons.

The shortage of wagons continued during the period under review, with slight improvement in the position towards the close of the year.

Dolomite:—Raisings increased to 70,470 tons from 49,795 tons with an increase in sales from 51,656 tons to 68,303 tons.

Lime:—Production again recorded an increase from 12,73,549 maunds in the last year to 13,74,687 maunds this year. Sales also showed considerable improvement from 12,65,697 maunds to 15,66,269 maunds.

Labour :—Relations with the labour were satisfactory during the year. The use of Gorakpuri labour has continued during the period under review.

The profit and loss account after providing for all charges, and making provision of Rs. 4,50,000 (Rs. 5,15,000) for taxation and Rs. 1,70,625 (Rs. 1,36,100) for depreciation shows a profit of Rs. 5,09,115 (Rs. 3,31,813). To this amount is to be added the balance brought forward from the previous year of Rs. 18,440 (Rs. 20,179) making a total of Rs. 5,27,555 (Rs. 3,51,952). From this is deducted amounts transferred to general reserve of Rs. 49,926 (Rs. 15,977), to mechanisation reserve Rs. 2,15,000 (Rs. 1,25,000), to tax contingency reserve Rs. 19,000 (Rs. 8,000) and to development rebate reserve Rs. 56,000 (Rs. 9,575) leaving a balance of Rs. 1,87,629 (Rs. 1,93,440).

The interim dividend declared on 9th June 1958 on the ordinary shares at Re. 0.87 per share, without any deduction of income-tax payable by the Company absorbed Rs. 87,000 leaving a balance available of Rs. 1,00,629 (Rs. 1,93,440). The directors propose to dispose of this amount by payment of a final dividend on the ordinary shares at Re. 0.88 (Re. 1.75) per share without any deduction for income-tax payable by the Company absorbing Rs. 88,000 (Rs. 1,75,000) and by carrying forward Rs. 12,629 (Rs. 18,440).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Bishnauth Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Williamson Magor & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit on revenue account of Rs. 4,37,750 (Rs. 16,73,076) after providing for depreciation amounting to Rs. 1,66,528 (Rs. 1,80,836), writing off development expenditure of Rs. 65,027 (Rs. 14,183) incurred during the year on tea estate and providing Rs. 2,39,600 (*nil*) for contingencies. After transferring the above profit, making various adjustments and setting aside Rs. 2,90,000 (Rs. 7,00,000) for taxation, the balance available on profit and loss account amounts to Rs. 6,66,234 (Rs. 11,51,326) from which it is proposed to transfer to staff account Rs. 16,334 (Rs. 25,000) and pay a dividend of 10 (20) per cent. for 1957 absorbing Rs. 3,30,000 (Rs. 6,60,000) and to carry forward Rs. 3,19,900 (Rs. 3,16,326 after transferring Rs. 50,000 to general reserve, Rs. 50,000 to repairs and renewals reserve and Rs. 50,000 building reserve).

Tea crop amounted to 36,35,385 (38,79,539) pounds and was sold at an average sale price of Rs. 2.58 (Rs. 2.74) per pound.

The estimate for 1958 provides for a crop of 38,64,000 lbs. of tea at a cost of Re. 1.96 per pound.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Gross block	79,93,588
Reserves ...	15,39,600	*Less*—Depreciation ...	30,33,388

Rs.	1,14,69,715	Rs.	1,14,69,715

Calcutta Tramways Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Hays, Akers and Hays, London) submitted the audited accounts of the Company for the year ended 31st December 1957.

The result of the year's working was as follows:—The revenue for the year, after transferring £80,000 (£80,000) to renewals and replacements account amounted to Rs. 137,041 (£157,196). Against this total has been debited:—Provision for income-tax and wealth-tax £61,831 (£61,000), 4½ per cent. first debenture stock interest £14,692 (£14,745) and 5 per cent. second debenture stock interest £7,937 (£8,251). The income-tax deducted from debenture interest paid, less tax deducted from investment income amounted to £12,254 (*nil*). Thus there is an available balance for the year of £64,835. In accordance with the agreement dated 30th August 1951, between the Governor of the State of West Bengal and the Company, there has been credited to shareholders' account the sum of £87,457 (£87,457) leaving a debit of £22,622 (£14,257) which has been transferred to special reserve account in the terms of the above agreement. The amount credited to shareholders' account, as above, is £87,457 (£87,457). Out of this amount is payable the cost of £2,389 first debenture stock purchased for cancellation of £1,589 (£10,831) and the contribution for the year to second debenture stock redemption account £6,680 (£6,268). The dividend on preference shares less income-tax, absorbs £7,188 (£7,188). It is now proposed to pay a dividend for the year on the ordinary shares of 2½ (8½) per cent., free of income-tax (net) £17,500 (£59,500) leaving to be added to the amount carried forward on shareholders' account, the balance of £54,500 (£3,670).

In view of the strike in all departments, which completely closed down the tramway services from the 12th August to 22nd September 1958, it has become necessary to conserve the Company's financial resources. The Board regrets, therefore, that it is unable to recommend a greater dividend than 2½ per cent. free of tax on the ordinary shares for the year 1957.

The renewals and replacement account at the commencement of the year stood at £334,622. Deducting therefrom £121,859 written off for renewals and replacements during the year and adding £80,000 allocated out of the 1957 profit, there remains a balance of £292,763 to the credit of the account.

Accounts in brief were as under:—

Liabilities	£	Assets	£
Capital ...	950,000	Block ...	2,863,932
Debentures ...	483,068	Other assets	12,757

Sathe Biscuit & Chocolate Co., Ltd.

The directors of the above Company (Managing Agents: Sathe Food Industries Private Ltd., Poona) submitted the audited accounts of the Company for the year ended 31st March 1958.

The accounts disclose a profit of Rs. 4,68,424 as against the profit of Rs. 3,51,798 during the previous year. (Both figures are subject to depreciation). Adding to this the amount of Rs. 19,106 (Rs. 9,738) brought forward from the last year, the total comes to Rs. 4,87,530 (Rs. 3,61,536) which the directors disposed of as follows:—

To provision for depreciation Rs. 2,35,633 (Rs. 2,58,420), to redeemable cumulative preference shares redemption fund Rs. 50,000 (Rs. 50,000), to payment of dividend on 7 per cent. redeemable cumulative preference shares on the paid-up value *pro rata* Rs. 31,590 (Rs. 25,000), to payment of dividend on ordinary shares at 6 (6) per cent. on paid up value Rs. 59,010 (Rs. 59,010), to provision for taxation Rs. 11,000 (*nil*), to employees' gratuity fund Rs. 50,000 (*nil*), to provision for doubtful debts Rs. 10,000 (*nil*) and to carry forward Rs. 40,297 (Rs. 19,106).

The amount of Rs. 2,35,633 proposed to be appropriated to depreciation includes arrears of depreciation of Rs. 1,41,638 for the year 1952-53. Now there is no arrears of depreciation to be provided for. However, the old biscuit machinery of the value of about Rs. 48,000 has yet to be written off.

The income-tax assessment for the last year is yet to be finalised. It is, however, estimated that there would be no income-tax liability because of the carryover or loss for tax purposes due to various depreciation allowances. Therefore, no special provision for income-tax has been made.

The tax liability on dividend of preference shares will be met with, either from the amount carried over from profit or provision made during the past years which is considered to be sufficient. To be on safe side a provision of Rs. 11,000 has been made for Wealth-tax.

The sales during the period under report show an increase of about Rs. 6,07,000 over that of the last year which shows the satisfactory progress made by the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,83,550	Gross block	30,83,514
Reserves ...	1,13,295	*Less*—Depreciation ...	8,64,403
Provision for taxation ...	11,000		
Liabilities ...	16,54,828	Net block ...	22,19,111
Profit and loss account ...	40,297	Stock of finished goods ...	2,45,173
		Raw materials	3,28,942
		Work-in-progress ...	23,442
		Stores and loose tools	59,987
		Debts, deposits and advances ...	3,50,645
		Investments	1,454
		Cash ...	74,216
Rs.	33,02,970	Rs.	33,02,970

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COAL

(*Concluded from page 71*)

per cent. of the cost, subject to a maximum of Rs. 750 in cases of houses which were completed before the end of 1953. 2,805 houses were sanctioned under the scheme, but only 1,623 were reported to be completed as on 31st March 1958 and 24 were under construction. Applications for 926 houses were withdrawn. Out of 1,623 houses reported as complete, claims in respect of 1,599 for subsidy amounting to Rs. 11.02 lakhs were received and payments aggregating Rs. 10.87 lakhs were made.

In view of the poor progress of this scheme it was revised to make the terms more attractive to colliery owners, by providing subsidy, as well as loan. The scheme provides for a subsidy of 25 per cent. and a loan of 37½ per cent. of the cost of the house subject to the ceilings of Rs. 735 and Rs. 1,102-8, respectively, per house. Under the subsidy-*cum*-loan scheme, applications from 59 collieries for construction of 3,677 houses were sanctioned, but only 1,639 houses were completed by the end of the year. 552 houses were under construction at the end of the year and applications in respect of 415 houses were withdrawn.

Since the response under the old subsidy scheme as well as under the subsidy-*cum*-loan scheme was poor, a new housing scheme was recently sanctioned, under which the Fund itself will construct houses on sites provided by the colliery owners. The scheme provides for the construction of 30,000 houses during the next five years. It is proposed to construct 10,000 houses during 1958-59. The cost of construction of each house will be Rs. 3,300 in Bengal, Bihar and M.P. coalfields and Rs. 3,100 in the Orissa, Hyderabad, Rajasthan and Chanda coalfields. The rent for each house is Rs. 2 per month and this will be paid by the employees. The maintenance of houses also will be the responsibility of the employers. Out of the 10,000 houses proposed to be constructed during the current year, 5,516 houses have already been allocated to the various collieries. It is not known how many houses have actually been constructed so far during the current year.

ECONOMIC TRENDS IN CANADA

(*Concluded from page 76*)

aggregate terms, the pick-up in production to date has been quite moderate. There is, however, strong indication of a further expansion in market demand. Partly as a reflection of this improvement and also contributing to it is the fact that inventory liquidation is now coming to an end. In the first part of 1958, the tendency to meet orders by a drawing down of stocks was quite prevalent throughout a broad segment of Canadian industry. Conditions in this respect still vary from one trade to another. On balance, however, it now appears that the full impact of market demands are being reflected in new orders at the producer level. Operating levels are rising in a number of industries and this, in turn, is having a favourable effect upon earnings. In the months immediately ahead, this underlying improvement will be masked by the customary winter slow-down in outside operations, accompanied by a relatively high level of unemployment. Nevertheless, construction activity is likely to be higher than usual this winter, partly due to the record carryover of unfinished houses and also as a result of the special measures which have been taken to stimulate off-season work.

The strength of further recovery will depend in large part upon external influences. In this regard, recent economic developments in the United States are encouraging. Production, in that country has already recovered nearly all of the previous decline and employment, after making allowance for usual seasonal changes, is now moving upward. Moreover, the present upswing appears to be broadly based and prospects of sustained expansion are generally considered to be good. Increased activity in the United States will, in turn, reinforce measures being taken internally in other industrialised countries to stimulate stronger rates of growth. Recent additions to hard currency reserves means that, in a number of these countries, some rise in domestic consumption could occur without strain on foreign balance positions. In these circumstances, some upturn in world demand for industrial material is likely to occur during the coming year. With greatly increased capacity in export industries and expanded reserves of proven resources, Canada is better equipped than ever before to meet increases in requirements from abroad.

In recent months, new capital expenditure plans have been appearing in increasing volume. In terms of the actual amount of physical capital being put in place, this rising volume of new work may not for a time fully compensate for the termination of work on large projects now being completed. What is presently known of capital expenditure plans for 1959 indicates that business investment will be up in some sectors but moderately down in total. However, a period of improving business conditions tends to encourage the creation of new expansion programmes and the speeding up of existing ones. In the current situation, there is likely to be a further filling out of business investment intentions affecting the short as well as the longer term.

Perhaps, the sharpest impetus to demand in the period immediately ahead will come from the consumer. This new punch may be sparked by the resurgence of consumer interest in durable goods, particularly automobiles, sales of which have been lagging in the last two years. Also, the rising volume of housing completions will give further momentum to the upward trend in purchases of home appliances. New incentives to buy will be reinforced by the improved financial position of consumers and the continuing rise in personal incomes. These conditions augur well for the enterprising retailer.

All in all, the current improvement in economic conditions is proceeding on a sound basis. The upward movement of wage rates has moderated, but employment prospects are improving and purchasing power at the disposal of the wage earner is being maintained. Prices of materials have firmed, but, with capacity being ample, have not surged upward. At the same time, output in many industrial establishments is moving closer to the optimum level of plant operation. These developments should help to restrain the upward pressure on prices and also contribute to some recovery in business earnings. The market forces which have been described give promise of a progressive increase in physical demand, yet give little indication of an upsurge of boom proportions. In the continuation of such a balanced improvement lies the hope of achieving prolonged and steady growth.

FLAGS OF CONVENIENCE—OR NECESSITY?

(*Concluded from page 65*)

registration fees and taxes on shipping in 1957-58; this represents a mere 1 per cent. of its total revenue. As for Costa Rica, that country will sacrifice between $50,000 and $100,000 a year by withdrawing its registration facilities.

It is mainly the relief from taxation through registration in "Panlibhonco" countries which shipowners in the maritime nations have in mind when they speak of the unfair competition to which they are subjected. They argue, moreover, that the advantage enjoyed by owners of flags-of-convenience tonnage tends to be cumulative: not only do these owners have untaxed profits which they can re-invest, but they are in a favourable position for borrowing from finance houses, especially in the U.S.A.

A year or two ago, it was commonly said that these financial advantages, coupled perhaps with a less considerate attitude to crews, would enable owners of "convenience" tonnage in time of slack trade to cut their freight rates drastically and so to drive other owners out of business. The freight markets have certainly been depressed during the past 18 months, but, so far as tankers are concerned, the depression seems to have hit the "Panlibhonco" vessels more severely than the rest. Flags-of-convenience vessels comprised 24 per cent. of the total commercial fleet afloat in 1958, but they accounted for over 40 per cent. of the 4 million tons of tankers laid up at the end of the year.

Common Objections

Common objections levied against the practice include the fact that the Governments of Liberia, etc., are not in a position to exercise effective jurisdiction over, or to give diplomatic protection to, the vessels they register (as the maritime nations are); and that the existence of large flags-of-convenience fleets is undermining the influence of the maritime powers in world shipping matters. The seamen's unions in the maritime countries fear that the growth of "convenience" fleets may jeopardise their own employment opportunities or lead to a lowering of standards as regards conditions of employment, etc.

Why do not more owners escape this "unfair competition" by following the example of the Americans and the Greeks? One answer is that, in many cases, their Governments will not allow them to transfer their vessels to overseas registration. And, even if they could, this might not offer a complete solution. A U.K. owner, for example, may set up a subsidiary company in Bermuda, where there are no income-taxes, and acquire new ships for registration there. He may then re-invest the profits in additional vessels, thus gradually building up a sizable fleet. If control of the ships lies in Bermuda, no U.K. tax is payable, but, immediately he wants to repatriate any of the profits of the enterprise to the U.K., the remitted profits will be subject to U.K. income-tax and profits tax at the standard rate.

Solution

Can one envisage an internationally agreed solution? The Maritime Transport Committee of the O.E.E.C., in a study released early in 1958, were unable to recommend specific action on an international level. And last year's Geneva conference on the law of the sea failed to agree upon any proposal. Perhaps, the biggest obstacle is that U.S. owners, who account for about two-fifths of the total flags-of-convenience tonnage, fear that they would be driven out of business if they were forced to register their vessels under the U.S. flag; and the U.S. Government would certainly not contemplate this result with equanimity. However, a conference is to be held in Washington in the near future at which the European and U.S. Governments will get together to discuss the problem.

If the chances of an international agreement on the question seem remote, the only solution is for individual Governments to take steps to remove the disability under which their nationals labour, if they register vessels under their own flags. In practice, this means making tax concessions. Britain's Chancellor pointed the way when he raised the investment allowance—granted to shipowners and to no one else—from 20 per cent. to 40 per cent. in his 1957 budget. The effect is that, for every £100 invested in new ships, the depreciation chargeable against profits for tax purposes will be £140. The concession naturally has no relevance, unless profits are being made; but, where they are being made, a considerable tax relief is enjoyed—though owners say that it does not go far enough. It is surely by such fiscal measures as these that the challenge of the "Panlibhonco" fleets will have to be met.—*By Special arrangement with* Petroleum Press Service.

MONEY AND BANKING

(*Concluded from page 67*)

pect of the various loans up to the end of September last were $27.85 million.

HONGKONG AND SHANGHAI BANKING CORPORATION

The working of the Hongkong and Shanghai Banking Corporation during the year ended 31st December 1958 has resulted in a profit (subject to audit) of HK$23,466,050 (approx. £1,467,000), as compared with HK$21,035,543 (£1,315,000) earned in 1957. This profit has been arrived at after making provision for taxation. As in the previous year, the Directors have utilised a sum of HK$4 million to write off Bank premises. The Directors have recommended a final dividend of £1 17s. 6d. per share, which, together with the interim one of £1 2s. 6d. per share, makes a total distribution of £3 per share for the year. While both these distributions for the year under review are on the increased capital of HK$50 million raised by a script-for-scrip bonus issue, only the final one of £1 12s. 6d. per share for 1957 was on the present capital. The interim payment of £2 per share was on the old capital.

It may be noted here that the recent negotiations between the Bank and the Mercantile Bank over the offer of the former to purchase the shares of the latter concluded in the last week of December and an agreement was reached in principle, subject to formal contract over the same. Under this agreement, the Hongkong Bank has offered to exchange its shares to the holders of the Mercantile Bank shares on the basis of one new share of HK$125 for every 20 shares of £1 each of the Mercantile Bank. Those who do not wish to exchange their shares have the right to cash their holdings at the rate of 44s. per share *ex-div.* The new shares of the Hongkong Bank to be issued for this purpose will not be entitled to the final dividend for 1958 mentioned above, but thereafter, they will rank pari passu with the existing shares. The offer is conditional, among other things, upon acceptance in respect of 90 per cent. (or such less percentage as the Hongkong Bank may decide) of the Mercantile Bank shares other than those already held by the Hongkong Bank. The Directors of the Mercantile Bank have agreed to recommend this offer to its shareholders for acceptance. If the offer is successful, it is intended to retain the identity of the Mercantile Bank with its head office and Board in London.

WORLD BANK ISSUES BONDS IN SWITZERLAND

The International Bank for Reconstruction and Development offered last week in Switzerland bonds of the value of Sw. Fr. 100 million (about $23.2 million). The bonds were issued, on behalf of the Bank, by a group of three Swiss banks—the Swiss Bank Corporation, the Swiss Credit Bank and the Union Bank of Switzerland—which underwrote the issue, as they did the previous offerings of the World Bank.

The bonds were offered at par and have a maturity of 15 years, carrying interest at 4 per cent. per annum. The bonds will have no sinking fund and will not be redeemed for ten years. On and after 1st February 1969, however, the World Bank may redeem at par all or part of the issue on any interest payment date after giving 45 days' notice in case of partial redemption and three months' notice for total redemption.

This is the seventh public issue of the World Bank in Swiss Francs and brings the total funded debt of the Bank to the equivalent of about $1,370 million in U.S. dollars and other currencies, after taking into account the deliveries of bonds under delayed delivery contracts and the amounts to be drawn down under a Deutsche Mark borrowing.

BANK OF INDIA LTD.

The profit of the Bank of India Ltd. for the year ended 31st December 1958, after making the usual provisions for contingencies and subject to audit, amounts to Rs. 85.77 lakhs, thus suffering a setback from the record level of Rs. 93.47 lakhs touched in 1957. This drop of Rs. 7.70 lakhs has wiped out, to a large extent, the increase in profit recorded during the previous two years. After bringing in the previous year's surplus of Rs. 16.02 lakhs, the Directors have pruned the provision for taxation from Rs. 28 lakhs to Rs. 25 lakhs, while no addition has been made to the reserve fund as in the previous year. The dividend is unchanged at 16 per cent. per annum, free of income-tax, made up of an interim distribution of 6 per cent. and a final one of 10 per cent. The dividend absorbs Rs. 48 lakhs, leaving a surplus of Rs. 28.79 lakhs to be carried forward, subject to payment of bonus to staff, for which purpose a sum of Rs. 15 lakhs was utilised last year.

WORLD BANK LOAN TO EL SALVADOR

The World Bank granted last week a loan of $5 million to El Salvador to finance the construction of 21 feeder roads and some additional work on the Coastal Highway of the country. The First National City Bank of New York, the Grace National Bank and the National Bank of Washington participated in the loan without the World Bank guarantee for a sum of $300,000, representing the first two maturities which fall due on 15th April and 15th October 1963. The loan is for a term of 15 years and will bear interest at 5½ per cent. per annum, including the usual commission of 1 per cent.

TEXTILES

(*Concluded from page 68*)

at a meeting held this week and the Association agreed to accept the abovementioned export limit.

Reports from Hong Kong say that textile manufacturers in that Colony are still studying the exact effects of the pact. Some are inclined to feel that the impact on trade with the U.K. will be little and that the ceilings may not be reached over the next three years. There are, however, a few others who think that the pact has "put a stopper on expansion here for some time," though they admit that the ceiling is not ungenerous to the Hong Kong industry.

The leading textile manufacturers of Hong Kong have failed to agree on how to administer the new quota agreement with Britain. One group has strongly opposed the idea of allocations under the 115 million square yards annual export ceiling based on past performance on the score that it would shut out new progressive concerns from the U.K. market, while another section maintains that, without some form of allocation, increased competition would cause a fall in prices. Some observers feel that the "new quarrel" would be patched up.

Meanwhile, the clothing industry in Britain has criticised the terms of the arrangement. The figure for made-up goods (46 million yards), it is pointed out, does not constitute any limitation and, in fact, can be increased. A deputation of clothing trade leaders has already met Sir Frank Lee, Permanent Secretary to the Board of Trade, and other senior officials in this connection. The deputation has made it clear that the industry does not in any way accept the agreement between Lancashire and Hong Kong cotton industries as binding upon the clothing manufacturers.

TEXTILE MACHINERY IMPORT

The Government of India has decided to call for applications for import entitlement and for import of the required types of textile machinery from mills intending to import textile machinery (other than automatic looms) against export of cloth and/or yarn. The mills manufacturing and exporting in any one year, cotton cloth and/or yarn by value in excess of 75 per cent. of the average of its exports in the three calendar years 1954, 1955 and 1956 put together or in excess of exports valued at Rs. 1,500 per installed loom per year in the case of cloth and Rs. 10 per installed spindle per year in the case of mills manufacturing and exporting cotton yarn, whichever is higher, will be eligible for import entitlement equivalent to 50 per cent. of the f.o.b. value of such excess exports. The permissible import entitlement shall be utilised by the mills for import only of specified textile machinery necessary for the modernisation and/or rehabilitation of the productive equipment in the mill, subject to such terms and conditions as may be prescribed by the Textile Commissioner.

Notice

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-fifth Annual General Meeting of the Shareholders of the Corporation will be held at the Jehangir Art Gallery, Fort, Bombay, on Wednesday, 4th February, 1959, at 4 p.m. S.T., for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1958.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Mr. M. G. R. Aitken who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and is eligible for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To appoint Branch Auditors at a remuneration to be fixed by the Board.

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

BOMBAY, *6th January*, 1959.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to Shareholders on 23rd February, 1959, and will be payable on and from that date.

The Transfer Books of the Corporation will be closed from 27th January, 1959 to 17th February, 1959, both days inclusive.

MONEY RATES HARDEN FURTHER

(*From Our Own Correspondent*)

BOMBAY, *14th January*

The short-term money market continued to experience stringent conditions during the week under review also. With the progress of the busy season, there was a further expansion in the demand for credit, while funds were in short supply. Many of the banks had to seek accommodation from the Reserve Bank to meet their requirements. The prevailing conditions were reflected in a further rise in inter-bank call money rate from 3½ per cent. to 3¾ per cent. among the Exchange banks and big Indian banks. The smaller Indian banks offered up to 3¾ per cent., but today they were borrowers at no more than 3¾ per cent. House money at seven days' notice were bid at 3¾ to 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to six months.

Notwithstanding the cut in the amount of tenders from Rs. 3 crores to Rs. 2 crores, the response to this week's Treasury Bill sales was not very encouraging and the average discount rate hardened further from 2.460 per cent. to 2.470 per cent. per annum. The total amount offered (Rs. 2.05 crores) exceeded the amount invited by only Rs. 5 lakhs. Tenders at Rs. 99.385 were accepted in full and those at Rs. 99.380 allotted approximately 95 per cent. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of intermediate Treasury Bills last week, but sales of these bills have been announced for this week at Rs. 99.396 per cent., which will mean a discount rate of 2.416 per cent. per annum.

The upward trend in notes in circulation is being maintained with a sharp expansion of Rs. 25.36 crores during the week ended 9th January 1959. Disclosing this, the Reserve Bank of India statement for that week shows a drop of Rs. 2.11 crores in notes held in the Banking Department. The rise of Rs. 23.26 crores in total notes issued is covered by an increase of Rs. 25 crores in rupee securities and a fall of Rs. 1.74 crore in rupee coin. While foreign securities show no change, balances held abroad have improved by Rs. 2.51 crores, bringing the total foreign assets to Rs. 191.71 crores. Central Government's deposits are up by Rs. 13.16 crores, while those of other Governments are lower by Rs. 7.64 crores. Deposits of banks too have fallen by Rs. 7.17 crores. Loans and advances to Governments have risen by Rs. 6.68 crores and other loans and advances by Rs. 12.56 crores. There has been a further substantial decline in investments to the tune of Rs. 26.10 crores.

The Scheduled banks' statement for the week ended 2nd January 1959 discloses an increase of Rs. 11.06 crores in demand deposits of banks and a drop of Rs. 4.50 crores in their time deposits. Inter-bank borrowings have declined by Rs. 6.52 crores, while borrowings from the Reserve Bank have gone up by Rs. 11.87 crores, of which those against usance bills account for Rs. 1.20 crore. A sharp rise of Rs. 13.87 crores is noted in advances and of Rs. 3.50 crores in bills purchased and discounted. Investments are lower by Rs. 3.56 crores. Cash balances, too, have shrunk by Rs. 2.28 crores, as also money at call and short notice by Rs. 5.56 crores.

With the growing stringency in the short-term money market, activity in the Gilt-edged market was dull. Barring the 1986 Conversion Loan and 3 per cent. 1970-75, almost all other issues in the Central Government list were on offer. The rise in the above two securities was due to covering by those who had sold short on expectation of a cut in the Bank rate. State loans continued to be in demand, from institutional investors.

3 per cent. 1986 Conversion Loan jumped up by 65 nP to Rs. 74.15 and 3 per cent. 1970-75 by 15 nP to Rs. 91. 3 per cent. 1964 was better by 5 nP at Rs. 93.95. 3 per cent. 1964 was better by 5 nP at Rs. 97, while 3 per cent. 1963-65 shed 5 nP to Rs. 96.80. 3½ per cent. 1963 was unchanged at Rs. 100.05, while 3½ per cent. 1964 declined by 5 nP to Rs. 99.85, as also 3½ per cent. 1965 to Rs. 99.70. 3½ per cent. 1974 looked up by 5 nP to Rs. 98.50, due to proximity of half-yearly interest payment. Among State loans, Bombay 4 per cent. 1967 and 1968 were quoted at par, disclosing a rise of 15 nP and 20 nP, respectively. Andhra 4 per cent. 1968 gained 10 nP to Rs. 99.90. Madhya Pradesh, Bihar, Punjab and Orissa loans were all keenly sought after and they recorded smart rises over the week.

In the foreign exchange section, the rupee was featureless in terms of the U.S. dollar, with no variations in quotations. Banks' selling rate of ready dollars was stagnant at Rs. 477 per $100 and their buying rate at Rs. 473.75 per $100. In New York, sterling showed a slight weakness. Spot sterling dropped from $2.80.17/32-2.80.19/32 to $2.80½-2.80.9/16. Transferable sterling moved down from $2.80.11/32-2.80.13/32 to $2.80½-2.80.5/16.

HIDES QUIET

(*From Our Own Correspondent*)

KANPUR, *12th January*

During the week under review, hides and skins market was quiet. Fresh arrivals were large. The main purchasers were the local tanners and the Madras dealers. The country tanners were luke warm.

The latest quotations are: wet salted cow 1st grade Rs. 360, 2nd grade Rs. 260 to Rs. 265 and 3rd grade Rs. 190 to Rs. 210 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat 1st grade Rs. 400 and 2nd grade Rs. 350 to Rs. 375 and 3rd grade Rs. 190 to Rs. 200 per 100 pieces; sheep 1st grade Rs. 325 to Rs. 350 and 2nd grade Rs. 300 per 100 pieces.

GOLD MOVES UP AGAIN

(*From Our Own Correspondent*)

BOMBAY, *14th January*

The bullion market ruled steady during the week under review, under the leadership of gold, which gained further ground on persistent demand from Madras. Over the week, gold recorded a rise of As. 7 per tola, while silver was a shade lower.

The market remained closed today on account of *Makar Sankaranthi*.

Early in the week, silver was subdued on selling pressure from Calcutta operators and discouraging advices from upcountry centres. Fall in demand in the ready section and rumours that heavy duty had been paid for import of silver coins from Tibet affected sentiment in the white metal. Gold, too, suffered a slight reaction in sympathy with silver. Thereafter, the bullish trend reasserted itself on revival of demand for gold from Madras, absence of any arrivals from Tibet and reports of trouble in Tibet which gave rise to hopes that there would be no import of coins from that country for some time to come. Nevertheless, silver could not fully make good the earlier loss, while gold advanced to fresh high levels.

Silver forward (January settlement) declined from Rs. 195-2 to Rs. 193-14 on Friday, but crept up to touch a high of Rs. 195-6 yesterday. At the close, however, profit-taking brought it down to Rs. 194-15. The February settlement came down from Rs. 196-1 to Rs. 194-12 before gaining ground to Rs. 195-14.

Ready silver closed with a gain of As. 5 over the week at Rs. 194-9. The floating stocks of silver are reported to be 1,400 bars. The daily average arrivals were 16 bars, while the offtake was lower at 14 bars per day.

After an initial reaction from Rs. 115-14 to Rs. 115-5, gold for forward delivery (January settlement), rallied to touch Rs. 116-10 yesterday. The closing was done at Rs. 116.5. The February settlement came down from Rs. 116-1 to Rs. 115-12, but recovered to a high of Rs. 117-1 yesterday. At the close, there was again a setback to Rs. 116-13.

Ready gold advanced from Rs. 115-14 to Rs. 116-12 and closed at Rs. 116-7. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 3,000 tolas, while the average offtake was a shade better at 3,500 tolas per day.

In New York, there was a further rise in the price of silver from 89.875 cents to 90.125 cents. The London prices too hardened from 75½d. to 76¼d. for spot and from 75¾d. to 75¾d. for forward. Gold weakened from 250s. ¾d. to 249s. 10¾d.

The following comparative table shows at a glance the trend of the market during the week under review:

	13-1-59	Highest	Lowest	7-1-59

ELECTROLYTIC ZINC ADVANCES

(*From Our Own Correspondent*)

CALCUTTA, *13th January*

The feature in the metal market during the week under review was the impressive advance in the price of electrolytic zinc following good demand from upcountry, while other base metals receded. Stocks of zinc depleted and, until fresh arrivals were received, the price should be maintained at the higher level. The tender for 1,300 tons of zinc by Tata Steels was opened, and this would also contribute to tightness in supply. In the meantime, the report that the State Trading Corporation would soon import about 7,000 tons of zinc from the U.S.S.R. was circulating, but, in the absence of confirmation of this news, it failed to have any effect on the market. The opening quotation was Rs. 102.50 and the rate soon spurted to Rs. 104.00, following demand from alloying industries upcountry. When the demand was fully met, the price gave way to Rs. 101.50, but, since stocks were insufficient, the price recovered to close fully steady at Rs. 103.

In tin, since the Bombay quotation was higher at Rs. 620, upcountry demand was diverted to Calcutta. Opening at Rs. 605, the price improved to Rs. 606, but closed lower at Rs. 603. The price moved down, following the grant of licences to established importers.

Virgin lead moved down from Rs. 84 to Rs. 82.50. There was no demand from local consumers, while demand from Bombay was fair, since the quotation in Bombay was higher at Rs. 92. The supply position was easy. This factor also contributed to the easing trend, despite demand from upcountry.

In London and New York, copper was steady and, according to reports, an increase in U.S. customs smelter price was considered imminent. The higher trend was attributed to fears of labour troubles affecting production in Belgian Congo and good demand from West Germany.

COTTON FUTURES FIRM

(*From Our Own Correspondent*)

BOMBAY, *14th January*

The firm trend noted in the cotton futures market on Wednesday last gathered momentum during the week under review and prices registered a handsome improvement. The firmness was due to large-scale short-covering—to the extent of nearly 30,000 bales—by a leading bear operator against heavy commitments earlier. The bullish fervour was also fanned by fears of crop damage due to cold weather, as well as by reports regarding enlarged offtake of cloth—domestic and overseas. The trade estimate of cotton crop in the current season places the yield at 5,150,000 bales, as against 5,425,000 bales estimated earlier. Advices from the spot market were quite encouraging. Arrivals were said to be small, while there was good mill buying of staple varieties.

I.C.C. Moglai Jarilla March 1959 opened the week firm at Rs. 647.50, as against last week's closing rate of Rs. 645.50. Under the impetus of hectic short-covering, the contract spurted to touch a high of Rs. 659.50 today, the net gain over the week being Rs. 14. There would have been a more marked advance but for intermittant profit-taking by some bull operators.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	14-1-59	*High*	*Low*	7-1-59
I.C.C. Moglai Jarilla (March 1959) ...	659.50	659.50	645.00	645.50

Trading in the spot market during the week was characterised by persistent mill demand for staple varieties of cotton. In particular, Vijay-Digvijay came in for good business by Ahmedabad and Saurashtra mills.

Among exportable styles, old crop Berar 25/32" and Bengal *Deshi* superfine attracted attention of shippers. Moglai was also moderately sought after, as also the delivery contracts of Wagad, Kala and Mathia. Traders noted with satisfaction the marked rise in the purchase of Indian cotton by Japan; the total of these purchases during the first eleven months of 1958 is put at 201.191 bales, as against 187,627 bales in the same period of 1957. The purchases are expected to be larger still in the coming months. The expectation is based on a recent report from Japan which suggests that the cotton industry there has requested the Government to liberalise imports of raw cotton.

In the foreign section, B.P. 52 and higher grade Sudans elicited persistent demand. Traders were awaiting the outcome of the discussions being held by an Egyptian trade delegation on a satisfactory arrangement for enabling Indian mills to buy more Egyptian cotton.

The latest available quotations—in rupees per candy of 784 lbs.—from Sewri are as follows, the figures in brackets being the closing rates a week ago:

Bengal *Deshi* 685 (650); Berar Jarilla 730 (710); Khandesh 800 (785); Vijay 920 (911); Jayadhar 875 (860).

Cotton traders noted with great interest the auction sale on the 7th inst. of 50 bales of Sea Island Andrews cotton grown in about 1,600 acres in Mysore and Kerala. The Central Government had fixed Rs. 2,300 per candy as retention price, though the East India Cotton Association graders' valuation was Rs. 2,800. The price actually obtained at the auction was Rs. 3,510. Auctions of this cotton will be held at an interval of 15 days for six fortnights, the next auction being fixed for the 21st inst.

The Karachi cotton futures market presented an irregular trend during the week under review. Thus, the N.T.R.G. January delivery firmed up from Rs. 61-6 to Rs. 63-0-6 on good buying support, while the March position encountered selling and declined from Rs. 62-10 to Rs. 62-4-6 before recovering to Rs. 62-8-6 yesterday. Prices in the spot section registered a handsome improvement on hopes of better export business with Japan. The hopes were based on reports that the Japanese cotton industry had requested the Government to liberalise imports of raw cotton. Special significance was attached to the reports, because exports of Pakistan cotton to Japan had so far been at a slow pace; the quantity actually shipped during the first eleven months of 1958 was no more than 226.874 bales, as against 294,963 bales in the corresponding period of 1957. The latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, with figures in brackets indicating last week's rates, are given below:

Punjab *Deshi* 59 (58); Sind *Deshi* 64-8 (65); 4F Punjab R.G. 61-5 (59-1); S.G. 66-5 (64-9); L.S.S. Punjab R.G. 63-13 (63-5); S.G. 67-13 (67-1); N.T.R.G. 66-13 (65-9); S.G. 73-13 (73-1); 289F Punjab R.G. 72-5 (69-1); S.G. 82-5 (79-1).

Firm conditions prevailed in the Alexandria cotton futures market during the week. The firmness was aided by renewed buying inquiries from abroad. The record estimate of the Egyptian cotton crop for 1958-59 puts the aggregate yield at 1,353,288 bales (of 730 lbs.), which together with the carryover of 273,138 bales, gives a total supply of 1,626,426 bales. Of this quantity, about 291,826 bales had been exported and 107,533 bales consumed by the end of December, so that the remaining visible supply as at 31st December 1959 was 1,227,068 bales.

The latest available quotations—in tallaris per lb.—for Alexandria are: *Karnak*: January 72.80 and March 72.85. *Ashmouni*: February 64.17 and April 64.03.

The Liverpool cotton futures market ruled distinctly easy during the week under review. There was large-scale selling, while trade covering was limited. Outside interest was lacking. Traders preferred to await the decision of the Restrictive

Practices Court on the minimum price scheme of the Yarn Spinners Association. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton 1" staple contract: March-April 22.05; May-June 21.45; July-August 20.40; October-November 19.90; December-January 19.90. *American cotton mixed growth contract*: March-April 22.25; May-June 21.60; July-August 20.35; October-November 19.78; December-January 19.94. *Sudan Lambert seed contract*: January-February, May-June and July-August 24.75.

After remaining fully firm in the initial sessions of the week, the New York cotton futures market developed a sagging tendency later. The initial firmness was due to support lent by commission houses on expectations that the mid-January parity price might move up rather sharply. Consequently, prices recorded a rise. The upward trend was halted subsequently, following scattered hedging and profit-taking, along with selling attributed to lack of follow through to previous late buying movement. Yesterday, however, the market staged a recovery induced by demand being associated with the Government loan programme which was expected to tighten up free market supplies later in the season and the belief that many farmers would restrict their acreage this year for a high support price.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	13-1-59	6-1-59	30-12-58
Spot	35.70	35.70	35.70
March	34.68	34.64	34.10
May	34.82	34.79	34.22
July	33.94	33.88	33.52

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, *14th January*

The yarn market had only four working sessions during the week under review, as it remained closed yesterday and today. During this brief period, the market put on a distinctly easy appearance. In particular, rayon yarns encountered selling, thanks to decline in demand from weaving centres in the wake of increased supplies from indigenous manufacturers. Staple fibre yarns also came in for selling on fears of enlarged supplies. The fears were based on reports that the production of staple fibre in the Gwalior rayon factory had been stepped up from 40 tons to 60 tons per day, as well as on the belief that several mills might switch over from spinning cotton yarn to spin staple fibre yarn, in view of the low margin of profit on the former. There were, besides, rumours of large sales of staple fibre yarns by several South Indian mills in the Punjab at lower prices in anticipation of getting sufficient raw staple fibre from the indigenous manufacturer. Some Bombay mills were also reported to have made sales at reduced prices. Cotton yarns lacked support.

In the art silk yarn section, 150 Japan dropped 12 nP to Rs. 5. 120 Japan eased by 3 nP to Rs. 4.84. 150 Italy were neglected at Rs. 5.37. 120 Italy, however, advanced by 6 nP to Rs. 5.31 on special support. Among indigenous yarns, National Rayons 120 bright cones first grade receded by 6 nP to Rs. 4.41. 150 bright cones first grade were dull at Rs. 4.45.

Cupressa Bamberg art silk yarn (60/1) February delivery was subjected to selling pressure and fell by Rs. 10 to Rs. 1,630 per case of 200 lbs. Spot 60/1 cupressa eased by 7 nP to Rs. 8.37.

Staple fibre yarn (40 x 2) February delivery slumped by Rs. 13 to Rs. 607. In the spot section, 40 x 2 Citys climbed down by 18 nP to Rs. 3. Centurys and Kohinoors each lost 3 nP to Rs. 3.25. Foreign yarns, however, fared better, Paramounts rising by 13 nP to Rs. 9 and Fujis by 7 nP to Rs. 8.94.

In the cotton yarn section, ten counts Podars decreased by 13 nP to Rs. 12.12. Twenty counts Moderns were stagnant at Rs. 16.25. Among 30s, Hinds were unchanged at Rs. 19.12. Forty counts Minaxis were quoted 25 nP lower at Rs. 24.69. Moderns changed hands at Rs. 25.25, same as last week. Sixty counts were dull, Raghuvamshis being quoted at Rs. 53 and Finlays at Rs. 65.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted on the 12th inst., as compared with those five days before:

	12-1-59	7-1-59
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	4.84	4.87
150 Japan (per lb.)	5 00	5.12
120 Italy (per lb.)	5.31	5.25
150 Italy (per lb.)	5.37	5.37
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	607.00	620.00
40 x 2 Kohinoor (per lb.)	3.25	3.28
40 x 2 Century (per lb.)	3.25	3.28
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.12	12.25
20s Modern	16.25	16.25
30s Hind	19.12	19.12
40s Minaxi	24.69	24.94
60s Finlay	65.00	65.00
80s Modern	..	..

GROUNDNUTS BUOYANT

(From Our Own Correspondent)

BOMBAY, *14th January*

Buoyant conditions prevailed in the oilseeds market during the week under review. The marked recovery, which was in evidence during the last week-end, gained considerable momentum, thanks mainly to encouraging demand for exports and *relatively lower quantum of arrivals.*

This improvement was the result of many helpful factors. On the 7th inst., the Government of India announced its decision to release a further quota of 20,000 tons of groundnut oil cake (expeller variety) for export during the period ending March 1959 to all permissible destinations. Established shippers will be given a quota equal to 20 per cent. of their basic year exports, subject to a maximum of 400 *tons per shipper from all the ports.* On top of it came the news that the Karmahom Conference has decided to postpone the proposed enhancement of freight for oil and oil cakes in February by a month.

In these circumstances, prices of oil and seeds made an impressive rally, under the leadership of groundnuts. There were rumours of export business in groundnut oil with Burma, Hongkong and certain countries of the Communist block. Groundnut February contract which stood at Rs. 164.87 *last Wednesday, after fluctuating between* Rs. 164.37 and Rs. 167.50, closed at Rs. 168.25. May Contract gained by Rs. 3.50 over the week and touched Rs. 172.50 today. Bold ready, which stood at Rs. 32.75 last Wednesday, wound up the week at Rs. 33.56. Oil ex-mill, which opened on a steady note at Rs. 17.37 last Wednesday, moved up to Rs. 18.00 today.

Rumours of sizable export demand for castor oil, particularly from the U.S., constituted the main sustaining factor in the castor section. The rally in prices was also aided by the strength in other seeds and oils. Castorseed May 1959 contract, although it fell by 25 nP on Thursday, gained considerable ground and it closed firm today at Rs. 145.00. Ready Madras also looked up, it having closed today at Rs. 28.75, as against Rs. 28.00 last week-end. Oil B.S.S. advanced from Rs. 15.25 to Rs. 15.87.

Sympathetic movements were in evidence in the linseed section. Some prospects for exports of linseed oil from Australia were in sight. However, these factors failed to enthuse the market, in view of the fears of increased competition following de*valuation of Argentine currency and selling* pressure. Linseed May 1959 contract, which stood at Rs. 31.81 last week-end, after a decline by 19 nP on the following day, rallied to Rs. 32.00 on Monday. It fell to Rs. 31.37 yesterday but advanced today to close at Rs. 31.62. Bold ready, however, gained by about 25 nP, to close today at Rs. 35.50. Linseed oil, after experiencing minor fluctuations was quoted today at Rs. 18.00, as compared with Rs. 17.87 last week-end.

Cottonseed witnessed cheerful conditions dur*ing the week under review*, thanks to lower crop estimates and good export demand for cakes, apart from the speculative support. Cottonseed February 1959 contract moved up from Rs. 120.25 last Wednesday to Rs. 123.50 on Monday, but eased slightly today to Rs. 122.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	14-1-1959	7-1-1959	31-12-1958
Groundnut	Rs.	Rs.	Rs.
February 1959	168.25	164.87	162.12
May 1959	172.50	169.00	..
Bold ready	33.56	32.75	32.00
Coromandel ready	34.50	33.12	32.62
Khandesh quality	34.62	33.25	32.62
Oil ex-mill ready*	18.00	17.37	17.12
Railway receipts*	17.94	17.31	17.00
Castor seed			
May 1959	145.00	142.25	137.62
Ready Madras	28.75	28 00	27.62
Ready Kanpur	27.75	27.00	26.50
Oil B.S.S.†	15.87	15.25	15.00
Oil commercial†	14.62	14.19	14.00
Linseed			
May 1959	31.62	31.81	30.81
Bold ready	35.50	35.25	35.00
Oil ready†	18.00	17.87	17.78
Cotton seed			
February 1959	122.50	120.25	115.25
May 1959	118.50	116.50	..
Niger seed	27.75	26.50	26.25
Kardi seed	20.62	19.62	19.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, *except linseed, which is in cwt. A candy is 560 lbs.*, except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, *14th January*

The sugar market continues to rule firm, thanks to paucity of stocks in the city and renewed demand from Malabar side. Both spot and ex-mill delivery prices have tended to move up. Reports of hooliganism by cane growers in the U.P. have also imparted *strength to the market. Even* the report that the normal monthly release will be made on the 24th inst., if not earlier, has had no effect. Trade circles in the interior are inclined to feel that sugar production in North India would be lower as a result of the diversion of cane supplies to *gur* manufacture.

Arrivals of sugar by rail into the market during the week aggregated 14,400 bags, as against 12,560 bags in the previous week.

Over the week, small grain sugar has gone up by a rupee to Rs. 109. Medium grain is fully maintained at Rs. 109.50-Rs. 114 and large grain at Rs. 115-Rs. 120.

* * * *

HAPUR, *12th January*

Sugar prices ruled quietly steady during the week under review. Although the supply position was reported satisfactory, there were reports of scarcity conditions in certain areas where sugar was not allotted in required quantities. It was also felt in some trade circles that the Government did not have sufficient stocks in hand to rush supplies to deficit areas. Production in the country upto 22nd December 1958 aggregated 348,159 tons of which 205,354 tons were in factories in Northern India and 142,805 tons in Southern India and despatches upto this date were 262,587 tons.

Sugar prices ruled steady in the Muzaffarnagar market, owing to good support from the Punjab, Delhi, Gujerat and Saurashtra. In no case were the quotation for mill delivery lower than the con*trolled prices fixed by the Government. Crushing* was in full swing. Recovery was reported to be 7.87 per cent. in Moradabad division, while, on this line, it was 8.72 per cent. The latest prevailing prices were: Crystal spot delivery old Deoband C29 Rs. 37; New Deoband D29 Rs. 37.25; Saharanpur D29 Rs. 36.75; Deoband D28 Rs. 36.75; Shamli D29 Rs. 36.75; E29 Rs. 36.56.

Sugar prices ruled quiet in the Kanpur market. The latest prices were: Ex-mill controlled for Kanpur Rs. 36 per maund, spot per bag C29 *Basti Rs. 105*; Gola Rs. 103-8; D29 Gola Rs. 101-4; Hargaon, Balrampur and Tulsipur Rs. 101. Warhwal and Waltergunj were unstocked.

Khandsari ruled quiet and production was reported to be *gradually increasing* and demand was slack. The prevailing prices were: dry Rs. 30 to Rs. 34; wet Rs. 26 to Rs. 29 per maund.

Ready *gur* continued to rule steady. Although outside demand was slack, stockists had entered the market, with the result that the local stocks were *now put at 12,500 maunds.* Daily arrivals continued to be small at an average of 3,000 to 4,000 maunds and this was due to fodder scarcity, as producers were crushing only that amount of cane which was needed for daily fodder requirements. Ready *gur* was quoted slightly higher in the *mofussil* areas and, while *pansera* quality was put in stocks, *balti* quality was being despatched to Gujerat side. Prevailing prices on Monday were: *pansera* Rs. 16.50 to Rs. 16.75; *balti* Rs. 16.75; *shakker* Rs. 17.25 per maund.

Ready *gur* also improved by 62 nP to Re. 1 per maund in the Muzaffarnagar market, due to *good demand from consuming areas of Gujerat* and Madhya Pradesh. The latest prevailing prices were: *Chaku* Rs. 16.50 to Rs. 17.25; *pansera* Rs. 16 to Rs. 16.50; *ladu* Rs. 16.25 to Rs. 16.50; *khaupa* rusket Rs. 11.50 to Rs. 12.50; *shakker dara* Rs. 16.50 to Rs. 17.25; *masala* Rs. 19 to Rs. 19.75.

Future *gur* ruled quietly both ways during the week in alternate bouts of buying and selling. Opening at Rs. 15.60 on Monday and touching the highest at Rs. 15.86 and lowest at Rs. 15.37, *fagun delivery* was quoted today at Rs. 15.55.

SACKINGS AND RAW JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, *13th January*

Excepting for steadier hessian prices, the jute markets were featureless during the week under review. Sacking goods were quiet, and B. twills were throughout available at below the minimum price. Raw jute, after being steady for a time, moved down, following depression in the goods market. During the week, the details of jute goods in stock with mills at the end of December were announced, and the total of all constructions at 109,900 tons recorded a significant increase of 4,500 tons. This increase did not surprise market circles, as it had been anticipated in view of the Christmas and year-end holidays in foreign markets. It was noted that stocks now exceeded a month's production, although, considered construction-wise, hessian at 15,800 tons declined by 1,500 tons and was only about a fortnight's output. Ready hessian continued to be in short supply. It is a pity that mills have not yet transferred as many sacking looms to hessian manufacture as would give a better balance in production. Technical difficulties are said to be a problem. Sacking stocks at 80,400 tons increased by 4,900 tons and, with such a huge figure, it was not surprising that shippers were finding it difficult to book business at and above the minimum price.

Market circles considered that, without a better balancing of production, any attempt to fix minimum prices might prove futile. Alternatively, if Government would increase its purchases of sacking goods for a few months' consumption and thus relieve the mills of a portion of the stocks, it would go a long way towards stabilising the minimum prices. Instead of some such realistic action on the above lines, it was felt that mere control by shippers' associations and mills over the minimum prices would only contribute to weakness.

Reports of worsening conditions in Pakistan markets continued. In the border areas, there is said to be acute distress, owing to accumulation of output and also to the inferior quality produced in these areas. Further, China is exporting raw jute at competitive rates. The Pakistan Government has banned cultivation of jute in the Indo-Pakistan border areas in the districts of Barisal, Chittagong, Jessore, Khulna, Kusthia, Noakhali, Rajashai and Rangpur. Other crops would be grown in these areas. This decision was arrived at not only to prevent smuggling across the border but is also a recognition that, for the inferior quality jute, overseas market is shrinking. Another measure which the Pakistan Government has taken in order to relieve distress in the border areas is to request Pakistan exporters to purchase as much as they can from these areas. It would be remembered that India was Pakistan's largest market for jute cuttings, but, with near self-sufficiency here, imports from Pakistan have been cut down to a small quantity of the superior fibre only. This has resulted in huge accumulation of cuttings in Pakistan, and balers are put to much inconvenience, as funds have been blocked up. According to a report from Dacca, the Pakistan Government has requested the mills there to conserve jute cuttings in larger quantities.

Reflecting the stock position, *shipments of sacking* in December were lower than in the previous month, but those of hessians were higher. On Tuesday last, there was good covering demand for *hessian*, and the 40"×10 oz. advanced to Rs. 42.10 from Rs. 42. In sympathy, ready B. twills at Rs. 94.80 represented an increase of 20 nP. At this stage, mills increased their offers of *hessian* and reported fair offtake. This pushed down ready hessian 40"×10 oz. to Rs. 42 on Wednesday. B. twills sagged to Rs. 94.55. Reports from New York indicated that there was moderate demand for both afloat and ready goods. Market circles noted with satisfaction the optimistic outlook for burlap entertained by Mr. William A. Nugent, Vice-President of the Burlap Council in the United States. His premises are two: (1) Consumption in the United States in 1958 was almost equal to that of 1957, despite economic recession for some time; and (2) industrial uses of burlap were expanding and in 1958 burlap consumed for backing for tufted carpets registered a significant increase.

Despite these reports, the price of hessian 40"×10 oz. gave way to Rs. 40.75, for, in view of the earlier heavy sales, business was lacking. By the week-end, however, there was a recovery to Rs. 41. B. twills were quiet at Rs. 94.85. Prices were depressed yesterday following selling pressure in futures. A small amount of covering *business* was done and the ready 40"×10 oz. was around Rs. 41. Ready goods were in short supply. In the absence of business, ready B. twills declined to Rs. 94.65.

Quietness prevailed in the raw jute market in sympathy with goods. Buyers were discounting offers, and, in fact, at discounted rates some business took place. From Rs. 21.50, Assam bottoms fell to Rs. 20.75 and Daissee *bottoms* to Rs. 21.25 from Rs. 22.75.

The fall in jute prices was the subject of discussion at a conference held here yesterday, which was attended by representatives of the Eastern States, the State Bank, the S.T.C., co-operative *marketing* societies and the Central Warehousing Corporation. Several speakers demanded a price support policy, which they said was essential for increasing production. There was recognition that storage and warehousing facilities were inadequate. The need for co-operative marketing and storing was much stressed, and it was probable the State Bank might provide sufficient funds to the co-operatives. If the recommendations are accepted and executed, they would prove to be a boon to the cultivators.

Latest quotations for the different varieties January-February shipment are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50

Daissee mesta	19.25	16.75
Bimli f.a.q.		Rs. 17.50
Pucca bales	Rs. 137.50 first mark ready.	

TEA IN GOOD FORM

(From Our Own Correspondent)

CALCUTTA, *13th January*

Fair activity was continued to be exhibited by buyers in the export auctions held yesterday. A small increase in prices was recorded. Tea districts in North India reported fairly good weather in December, and it is now expected that the total of 1958 production would reveal a substantial increase over 1957. This increase, however, might not adversely affect the market trend in the coming few weeks, as not only internal consumption has increased but overseas buyers are expected to operate actively.

The fall in prices in the sales held in Mincing Lane (London) during the past week was attributed to poor quality. The North Indian teas offered in London was mostly of the "*rains*" description. In the local auctions, however, British buyers showed fair interest, and Russia was not lagging behind. The United Arab Republic's demand was considerable, judging from the interest being displayed by Egyptian buyers. Egyptian sorts have naturally added gains in prices, and indications available were that, in the next few weeks, the U.A.R. would purchase about 10 million lbs.

In the meantime, an interesting report from Colombo has set tea circles athinking. For, according to it, the Ceylon Government would soon revise the export duty levied on tea. It was not known here if the proposed revision would lower the existing rates. The indication was that the present flat rate would be withdrawn and a new basic flat rate would be applicable to all teas. For teas realising prices more than the minimum or determined price, for which the flat rate would be levied, higher levies would be computed on an *ad valorem* basis. There was anxiety here if the contemplated revision was directed to increase the competitive nature of Ceylon tea in foreign markets.

Another report of some amount of anxiety here was the increasing nature of imports of Chinese tea into the United Kingdom. In the eleven months to November last, these amounted to over 8¼ million lbs., representing an increase of 2 million lbs. over the figure in the corresponding period in 1957. In January to November 1956, Chinese tea sent to the U.K. were only 1¼ million lbs. Tea trade circles were inclined to interpret these figures to mean that China must have been exporting tea in even more impressively increased quantities to the Communist countries. At the same time, India's exports to the U.K. have also increased. This suggests that world consumption has also increased. In the last sales in London, black tea of Chinese origin, amounting to 524 packages, met with keen competition.

In the internal sales held here last week, dusts on offer amounting to 17,477 chests received the keen attention of buyers, and, as the sales proceeded, demand increased considerably. Orthodox grades were fully steady, with the cleaner teas improving by 10 nP. Legg-cut Dooars also recorded a similar addition. C.T.C. teas were buoyant, and rose by more than 10 nP., with the demand for the small powdery teas being greater. In Darjeelings, quality teas were shown preference, and these advanced. The quotations were: Best Assam C.T.C. Rs. 2.50 to 3.00 (nominal), medium Assam C.T.C. Rs. 2.00 to 2.15, medium Assam grainy Re. 1.80 to 1.84, and medium Dooars Re. 1.78 to 1.82.

Leaf amounting to 1,337 chests rose by 2 to 4 nP on good demand.

Steady conditions were also in evidence in the sales held in Chittagong on 7th January when offerings were leaf 16,392 chests and dusts 5,794 chests, in addition to a supplement of 64 chests. Leaf teas advanced by 8 as. Green teas amounting to 630 chests gained As. 6 to 8. The quotations were: O.F. Rs. 2-7-6, B.O.P. Rs. 2-7, B.P.s Rs. 2-6 to 2-6-6, O.P. Rs. 2-7, P.F. Rs. 2-5-6, B.P. Rs. 2-6, and Pekoes Rs. 2-4.

Dusts rose by As. 4 to 5 with the quotation for Sylhets at Rs. 2-3.

The 21st January has been fixed as the date for the next sales.

Export offerings during yesterday's sales amounted to 64,367 packages. The strong and general demand pushed up prices. The cheaper lots of C.T.C. Assams realised prices above valuations, while the best varieties were a shade irregular. Plain and medium B.Ps were steady, with the cleaner sorts rising above valuations. On the other hand, medium Assam B.O.Ps and tippy kinds eased by 20 nP, and O.Fs in this category by 10 to 15 nP. Whole leaf grades were fully firm and often dearer with the stylish lots receiving more attention. Darjeelings were firm. Non-wither Dooars met with ready buyers. The quotations were: best Assam C.T.C. fannings Rs. 2.30 (nominal), clean black pekoe Rs. 2.00 to 2.04, best Assam C.T.C. B.P. Rs. 2.15 to 2.20 (nominal), plain fannings Re. 1.72 to 1 76, plain B.P. Re. 1.58, medium fannings Re. 1.76 to 1.84, and medium B.P. Rs. 1.58 to 1.62.

Export quota after being done at 4½ nP declined to 4 nP.

MEDIUM TEAS IN DEMAND

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *8th January*

Approximately 1,300,000 lbs. were on offer in Sale No. 1, which was held on Tuesday, 6th January. Quality was rather irregular, although some low medium and medium teas showed improvement. High growns were a little disappointing and some of these declined slightly in quality. The sale opened to a good general demand and, in particular, buyers showed interest in low medium and medium teas. Under keen competition these types, both brokens and fannings, advanced by 5 to 10 nP per lb. *High grown teas were irregular*, but generally slightly easier. There was an improved demand for whole leaf grades but tippy teas sold at easier rates. A feature of the sale was the demand for clean black leaf brokens and fannings. The quotations were: Low medium Re. 1.50 to 1.60; Medium Re. 1.65 to 1.80; Good medium Re. 1.90 to 2.25 and Quality Rs. 2.10 to 3.65.

The average price of tea realised in Sale No. 1 was Re. 1.83 per lb., as compared with Re. 1.92 per lb. in the previous sale and Re. 1.94 in the corresponding sale of 1958.

London Market: Sale of 5th January 1959:—Better liquoring and well-made teas steady; others irregular and generally 1d. to 2d. lower.

Sale of 6th January 1959:—Market fully steady.

Colombo Market: Sale of 5th January 1959:—Good demand. Best Dimbula Dickoyas lower. Others down 15 to 25c. Good mediums slightly lower; low mediums 5c. dearer. Low growns slightly dearer.

Sale of 6th January 1959:—Good demand. Dusts and black leaf fannings dearer. Other kinds slightly lower.

Calcutta Market: Export:—Good general demand. Plain B.P. steady. Fannings irregularly dearer. C.T.C.s firm to occasionally dearer.

Internal:—Strong active demand strengthening as sale progressed. Orthodox closed 6 nP to 10 nP dearer. C.T.C. good demand steady.

Export Quota:—The market has developed a stronger tone and at the time of writing business has been done at 3½ nP.

Forthcoming Auctions:—Sale No. 2 will be held on Tuesday, 13th January and Dust Sale 'A' on Thursday, 15th January.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 2:—800 000 lbs. Market irregular. Low medium and medium fannings and whole leaf strongest feature and 5 to 10 nP dearer. Low medium and medium brokens steady. All others, particularly highgrowns, irregular and easier."

FOODGRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, *12th January*

Firm conditions prevailed in the foodgrains market during the week under review. Brisk demand from consumers locally and from rural areas where reserve stocks had been exhausted and firm conditions in the Punjab and Delhi were the main influencing factors. As a step to check the rising trend in prices in Delhi, the Government of India has banned exports of wheat and wheat products from there and a large number of fair-price shops have been opened. In order to check the sympathetic rise in prices in the State, the U.P. Government has increased the daily supplies to fair-price shops from 25 maunds to 30 maunds and increased the number which is now put at 4,500.

Wheat prices touched new heights for the season registering an advance of about Rs. 2 per maund in the past week to be quoted at Rs. 27.50 per maund for average quality and upto Rs. 30 for farm produce. Good quality wheat was not available in the market. Arrivals continued to be scanty and only five fair-price shops here and two in rural areas are insufficient to meet the daily requirements of the area. Some more fair-price shops are to be opened shortly.

Rice prices recorded gains during the week in sympathy with prices of other cereals and due to restricted supplies following ban on exports from the surplus districts of the State. The prevailing prices towards the week-end were: rice *basmati sela* Rs. 30.50; mainpuri Rs. 23; *ramajwayan* Rs. 25; *raimunia* Rs. 27 per maund.

Gram prices recorded an advance of Re. 1 per maund, due to poor local stocks and firm Punjab advices. Barley and *bejhar* also sought higher levels in sympathy with the bullish trend in wheat prices. Maize spurted to touch new heights on brisk consumer demand locally and from rural areas. Although arrivals from outside were small, local stocks were reported to be comfortable. *Bajra* prices also registered gains and prices of all other foodgrains recorded further hardening trend. Prices on Monday (in rupees per maund) were: gram punjabi Rs. 21; barley 17.50; *bejhar* 18; maize 16 to 16.50; *bajra* 17; *jowar* 14.75; *guwar* 15.

Pulses were devoid of notable activity, barring *urd* and *moong* the prices of which recorded modest gains on good seasonal demand. Peas stocks were nominal and demand too was dormant. *Arhar* stocks were fast dwindling and were now put at 19 *khatties*. The latest prevailing prices (in rupees per maund) were: peas 20 to 21; *arhar* 22; *arhar dal* Rs. 26.50; *urd* 19; *moong* 19.50; *massor* 18.

GOAT SKINS EASIER

(From Our Own Correspondent)

MADRAS, *12th January*

Arrivals of tanned hides and calves were on usual scale, while offtake by shippers was steady at unchanged prices for F.A.Q. marks. Superior standards were held firm. Traders, however, felt that prices were likely to weaken, if U.K. buying continued to be small for a week. There was good demand for lower grades for inland trade, and shipment business was small in this section.

Prices of tanned goat skins were a shade easier than the earlier week, but those of sheep medium classes were firmer.

In the tanned skins London public auctions, 250,000 goat skins and 350,000 sheep will be available for sale. As the quantities are small, it is likely that prices will show increases all round to some extent.

The total shipment of tanned goat and sheep skins to all overseas ports during 1958 were 25,030 bales of 560 lbs. each, as against 29 259 bales in 1957 and hides and calves 31.586 bales of 600 lbs. each during 1958, as against 42.911 bales in 1957.

LINSEED FIRM

(*Messrs. A. Bradley & Co.*)

CALCUTTA, *12th January*

There has been no change in the linseed market this week. Prices are firmly held and trading *conditions* are dull. With little interest from either buyers or sellers and scarcity of local supplies, turnover is poor. The oil section is inactive. Although few enquiries have been received, prices are maintained, owing to limited stocks available.

The latest quotation for ready-January is Rs. 26.75 per maund.

Notice

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

THE BOARD OF DIRECTORS HAVE declared an interim dividend of Rs. 3 on each Preference Share and 44 nP. on each Equity Share—both tax-free—for the year 1958-59. The dividends are payable to the shareholders standing in the registers of the Company as on 28th February 1959.

The Share Transfer Books of the Company will remain closed from 20th February, 1959 to 28th February 1959, both days inclusive.

By Order of the Board,

SESHASAYEE BROTHERS (PRIVATE) LTD.,

Managing Agents.

METTUR DAM R.S., 10th *January*, 1959.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—From July 1954. H—Outstandings in respect of items in column 9 marked 'E' are not included.

(f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
†† Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1935.
‖—Interest free to first 12 years. t—Interest free for first 7 years. Z—Ex six instalments but inclusive of accrued interest.
M—At the option of Government after three months' notice. K—On September, 1986, or later at option of Government after three months' notice.

CONVERTIBILITY OF RESIDENT STERLING

IMPLICATIONS ANALYSED

By John Kingsley

THE British Treasury's recent announcement that all sterling held or acquired by non-residents of the Sterling Area was to be freely transferable throughout the world and could, therefore, be converted into dollars at the current rate of exchange was foreshadowed by the Chancellor of the Exchequer at last year's Commonwealth Conference in Montreal and the International Monetary Fund meeting in New Delhi. Observers of the financial situation, however, had expected that this step would be taken some time in 1959, and the actual date (27th December 1958) of the announcement came, therefore, as a surprise.

The United Kingdom Government has been able to take this step earlier than expected because sterling has regained a position of strength. Three conditions necessary for the introduction of external convertibility (convertibility for non-residents) have been fulfilled.

First, thanks to the drastic measures taken in September 1957, inflation has been checked in the U.K. Restrictions have been progressively eased or removed since last spring and it is confidently expected that economic expansion in the U.K. will be resumed in 1959 without danger of new inflationary pressures. Secondly, after an uninterrupted rise, from October 1957 to November 1958, the reserves of the U.K.—which, in fact, are the reserves of the whole Sterling Area—are now adequate to bear any temporary strain which unpredictable changes in the international situation may impose. Lastly, U.K. exports kept up better during the recession of world trade in 1957 than was expected and, partly as a result of the end of the American recession, the prospects of international trade are now satisfactory.

No Direct Benefit

The new system of external convertibility does not mean an end to exchange control, and the policy regarding capital transfers to countries outside the Sterling Area remains unchanged. There is no immediate relaxation in import restrictions and payments for services. Thus neither the man in the street nor the businessman in the U.K. and the rest of the Sterling Area is directly affected by the new move. But, indirectly, he will benefit from the advantages that foreign holders of sterling now enjoy.

Non-resident convertibility completes the process of amalgamating the different types of non-resident sterling (sterling held by non-residents) which has been going on since the end of the war. These different types arose from the special exigencies of the war and the immediate post-war period. By March 1954, only two main types were left—official sterling and transferable sterling.

Holders of official sterling (U.S. and Canadian account sterling) were permitted to use this sterling for payments to any part of the world, or to convert it into dollars at the official rate. Holders of transferable sterling could use it for payments to all countries outside the dollar area, but were not permitted to convert it into dollars at the official rates. There had developed, however, unofficial markets for transferable sterling, mainly in Zurich and New York, and since 1955, when the U.K. authorities began to support the rates in these markets, the discount at which transferable sterling could be exchanged into dollars was very small.

This "informal" convertibility marked great progress towards formal external convertibility. Under the new system, holders of sterling in all countries outside the Sterling Area (both the former dollar area and the transferable sterling countries) may use their sterling for payments to the Sterling Area and to all "third" countries, or convert it into dollars at the official rate.

This will contribute to the further strengthening of sterling's use as an international trading currency. (It already finances probably about 40 per cent. of world trade.) If foreigners hold more sterling, they will be inclined to buy more from the sterling countries. Thus the new move is likely to benefit both the U.K. and the rest of the Sterling Area.

The introduction of informal convertibility has meant the closing down of the unofficial markets for sterling, since no business is left for them. A large part of the business formerly done by them is now carried out in the London market. This will give additional earnings to the City in the form of commissions, and these will be reflected in the reserves, which are the central reserves of the Sterling Area. It can also be expected that foreigners will make extended use of the commodity markets and the gold market and this, in turn, should lead to additional business for insurance and other services provided in the City.

With the introduction of external convertibility, the European Payments Union (E.P.U.) has been replaced by the European Monetary Agreement. E.P.U. has played a great part in facilitating European trade and payments during the past eight years and, with the association of the Sterling Area, has had a world-wide significance from the start. But its provisions for automatic credit and centralisation of payments were not designed for conditions of convertibility, nor was it ever intended to be a permanent institution.

A Good Omen

The European Monetary Agreement provides for short-term credits out of a new European Fund for countries in temporary difficulties. These will no longer be automatic, but at the discretion of the Organisation for European Economic Co-operation. Thus, European mutual help for countries in payments difficulties will continue in the new era of external convertibility. There will also be a monthly settlement of outstanding balances between member countries; but this will be voluntary, and probably mainly used only by the members who have not adopted external convertibility. It is a good omen for the future of European co-operation that the transition from E.P.U. to the Monetary Agreement is the result of a concerted move by the major European countries.

As a result of the end of E.P.U., private banking institutions will play a larger role in the financing of international transactions, and central banks will again become "banks of last resort." This will give greater flexibility to the international banking mechanism, comparable with the greater flexibility to trade discussed earlier. Such flexibility will add to the strength of sterling, which alone made the new step possible. It is likely that this move will be followed by a further relaxation on dollar import restrictions in the course of this year.

THE CENTRAL BANK OF INDIA LIMITED

PROFITS FOR 1958

The Net Profits of The Central Bank of India, Ltd., for the year ended 31st December 1958, subject to audit, including the sum of Rs. 18,44,046.05 brought forward from the previous year's account, amounted to Rs. 1,19,86,110.29.

The following appropriations have been made:—

	Rs.
An *ad-interim* dividend paid for the half-year ended 30th June, 1958, at the rate of 12% per annum, free of income-tax, i.e., Rs. 1.50 per share on 12,58,170 shares ..	18,87,255.00
Amount provided for Taxation ..	16,50,000.00
Amount transferred to Staff Gratuity Fund	10,00,000.00
Amount provided for Bonus to Staff	32,00,000.00
Rs.	77,37,255.00
The balance of Rs. 42,48,855.29 the Directors propose to recommend to the shareholders to dispose of as follows:—	
To pay a final dividend for the half-year ended 31st December, 1958, at the rate of 16% per annum, free of income-tax, i.e., Rs. 2 per share on 12,58,170 shares (making in all 14% per annum for the whole year) ..	25,16,340.00
To carry forward to next year's account	17,32,515.29
Rs.	1,19,86,110.29

U.S. ECONOMIC POLICY

THE U.S. economic policy, domestic as well as foreign, continues to be guided by the principle of freedom. "America means freedom," declared President Eisenhower in his State of the Union Message. Appropriately enough, the loyalty to ideals of freedom forms the general theme of Mr. Eisenhower's State of the Union Message last week and the budget and other economic reports to the Congress submitted this week. The U.S., as the chief exponent of the democratic way of life, must necessarily ensure that permanent values of freedom are not endangered by extremist political dogmas which derive their inspiration from a philosophy of enslavement of man. A high defence expenditure in the American budget is thus a reflection of the American people's determination to defend freedom. This does not mean that the budget is dominated only by defence requirements. For both social security and welfare measures nearer home and economic aid for foreign countries are now among the important features of the American economic balance-sheet. There is, further, a declared adherance to the objective of economic progress which is sought to be achieved without sacrificing stability.

The U.S. economy has left the recession which threatened it last year far behind. In the last quarter of 1958, its annual income rose to a record annual rate of some $453,000 million. Its population is growing steadily and at the end of the next five years should exceed 190 million. Nearly a million more people were at work in December 1958 than in July. Nevertheless, unemployment among workers is still a disturbing factor. Although the unemployed were one million less than in the period of recession, they still aggregate a little over four million. This is attributed to the impact of rapid increase in population. Governmental action, including unemployment insurance, serves to soften the rigour of the impact of unemployment on the economy. The chief aim of the Administration is to stabilise the economy and yet provide the basis for continued progress. The budget has been balanced at a level of about $77 billion. National security constitutes the major item, claiming some 60 per cent. of the expenditure. Mr. Eisenhower called the budget a "positive budget," in that it was designed to respond to national needs with due regard to urgencies and priorities, without being either "extravagant or unduly limiting."

In the sphere of domestic economic policy, the U.S. is determined to "safeguard and improve the institutions of our free competitive economy." Mr. Eisenhower said that their objective must be to "establish a firm foundation for extending economic growth with stable prices into the months and years ahead." He felt that there was reason for the confidence that the improvement in business activity which commenced in the second quarter of 1958 would continue in the current year. The importance of curbing Governmental spending is recognised. There is determination to defend the dollar. Inflation is acknowledged as a potential enemy which must be continuously fought. Indeed, the warning against inflation is among the most inspiring passages in the State of the Union Message. After emphasising that, if they were wise and resolute, they would not tolerate inflation in the years to come, he said:

"... history makes clear the risks inherent in any failure to deal firmly with the basic causes of inflation. Two of the most important of those causes are the wage-price spiral and continued deficit financing. Inflation would reduce job opportunities, price us out of world markets, shrink the value of savings and penalise the thrift so essential to finance a growing economy. Inflation is not a Robin-hood, taking from the rich to give to the poor. Rather, it deals most cruelly with those who can least protect themselves. It strikes hardest those millions of our citizens whose incomes do not quickly rise with the cost of living. When prices soar, the pensioner and the widow see their security undermined; the man of thrift sees his savings melt away; the white collar worker, the minister and the teacher see their standards of living dragged down. Inflation can be prevented. But this demands statesmanship on the part of business and labour leaders and of government at all levels. We must encourage the self-discipline, the restraint, necessary to curb the wage-price spiral and we must meet current costs from current revenue."

Among the measures which President Eisenhower has suggested are examination by the Treasury of appropriate tax proposals for increasing the incentives for all Americans to work, to save and to invest and reduction in "federal operations in an area where private enterprise can do the job." He has also suggested more effective use of the large federal expenditure for agriculture. The farm-price support programme will cost the administration over five billion dollars for the current fiscal year, at the end of which there will be in Government hands surplus farm products worth about nine billion dollars; by 1st July 1959, Government expenditure for storage, interest and handling of agricultural stocks will reach one billion dollars a year. Mr. Eisenhower obviously regards this level of expenditure as one on the high side. He recalled that he had in the past sent messages to the Congress requesting greater freedom for the farmers to manage their farms and greater freedom for markets to reflect the wishes of producers and consumers. He emphasised the need for further action along these lines.

Discussing the U.S. foreign economic policy, Mr. Eisenhower averred that its two chief objectives were the maintenance of mutual security of the free world and the promotion of conditions favourable to the exchange of goods, services, technology and capital among nations and assistance in economic growth and development. The U.S., as is well known, has given generous assistance to underdeveloped countries both on its own and through the specialised agencies of the U.N. A notable feature of Mr. Eisenhower's economic report is the emphasis on the reduction of trade barriers. This should meet the oft-repeated demand for trade, as distinguished from aid. Last year, the Congress extended the Reciprocal Trade Agreement Act by four years. The new authority provided under the Act, Mr. Eisenhower said, would be used "in further efforts to reduce trade barriers on a reciprocal basis." He recommended an expenditure of $3,930 million for the Mutual Security Programme, made up of $1,600 million for military aid, $700 million for Development Loan Fund, $835 million for defence support, $211 million for technical co-operation and $584 million for contingencies and other aid.

Commending the work of the World Bank and the International Monetary Fund (I.M.F.), Mr. Eisenhower said that these two institutions had "proved their worth as instruments of international co-operation." Accordingly, he requested the Congress to approve the suggestion of the Executive Directors of these two bodies for an increase of member-countries' subscriptions by 100 per cent. for the Bank and 50 per cent. for the I.M.F. The U.S. budget includes a request for $1,375 million for the I.M.F., of which $344 million are to be paid in gold and the balance in non-interest bearing treasury notes. He disclosed that the U.S. was negotiating with Latin American countries for the establishment of an inter-American development banking institution which would facilitate the flow of private and public capital to Latin American countries. New authority for spending $700 million, besides supplemental appropriation of $225 million for the 1959 fiscal year, for the Development Loan Fund (D.L.F.) is another request made by Mr. Eisenhower. This Fund, which was created in 1957, provides loans to the less developed countries on terms more favourable than are normally available from other sources. It finances both public and private projects. The Fund, it is stated, will have committed virtually its entire capital by the end of this month. India is one of the largest beneficiaries of the D.L.F.

The importance of the flow of private capital to underdeveloped countries was rightly stressed by Mr. Eisenhower. As he pointed out, the "greater share of investment capital and technical ability in the U.S. and other highly developed countries is to be found in private hands." The U.S., on its part, has supported the conclusion of tax treaties designed to encourage its citizens to invest their capital in foreign countries. The Export-Import Bank is "actively seeking more private participation in its loans and is selling a part of its portfolio to private investors." Mr. Eisenhower revealed that he would recommend legislation for expanding the Mutual Security Investment Guarantee Programme which offers guarantee to American private investors against losses on foreign investment that are caused by inconvertibility of currencies

either due to expropriation or war. It is to be hoped that these measures will stimulate the flow of private capital from the U.S. But it should be clear that the greatest stimulus is the one which the underdeveloped countries alone can offer, namely, the creation of an attractive climate for foreign investors. Capital is better attracted from without than stimulated to move out from within.

POPULATION PROBLEM

IT is a truism to say that population control is of utmost importance to India, if its plans for raising living standards are to succeed. The need for formulating a national population control policy and implementing it fully and vigorously cannot be too strongly stressed. Although this need is fully recognised by the Government and the Planning Commission, they do not seem to have accorded it the priority it deserves. True, some provision has been made in the Plan for popularising family planning as a method of population control. But, considering the magnitude of the problem, what is being attempted in the field is inadequate and cannot touch even the fringe of the problem. In fact, the Second Plan provision of Rs. 4.9 crores for family planning is far too inadequate. The sum earmarked for health services—desirable in itself, but, will have the opposite effect of accelerating the rate of increase in population growth—is many times more. The recent world developments in the sphere of health services are so spectacular that even a relatively small outlay can bring about substantial results in the form of a sharp fall in death rate. It is already admitted that the current rate of increase in India's population has gone up from 1.5 per cent. per annum assumed in the Second Plan to 1.75 per cent. Some even say that it is 2 per cent. Unless, therefore, measures to control birth rate are more vigorously pursued from now onwards, India will witness in future a further acceleration in the rate of population growth.

Viewed against this background, considerable significance attaches to the Sixth International Conference on Planned Parenthood, due to be held at New Delhi from 14th to 21st February. The main theme of the Conference will be Family Planning—its motivations and methods. Since the Conference takes place at a time when ideas about the third Five-year Plan are beginning to crystallise, the sponsors could not have selected a better venue for the Conference. For, on the demographic map of the world, India is one of the major areas of crisis. The deliberations of the Conference will be of direct and immediate interest to India. In fact, no other country in the world is more in need of family planning than ours with its deplorably low living standards. Further heavy additions to the already outsized population of the country will have grave repercussions on the economic potential of the country and make the task of democratic planning extremely difficult. A few of these repercussions are indicated in a technical study of population trends in India, sponsored by Princeton University's Office of Population Research and supported by the World Bank. The authors of the study are the noted demographer Ansloy C. Coale and the economist Edgar M. Hoover. The conclusions of the study are set out in a book entitled *Population Growth and Economic Development in Low-Income Countries: A Case Study of India's Prospects.*

The study attempts to correlate India's population growth and its economic potential. For this purpose, it makes projections of three alternative possibilities. In all the three cases, it is assumed that public health programmes will bring about a decline in death rate by at least 40 per cent. by 1986. The first projection assumes no reduction in India's present rate of population growth and a consequent population of 775 million by 1986. Increases in living standards would thenceforth be progressively cancelled out by population growth. The second projection assumes a downward trend in birth rate commencing from 1966 and progressing to a 50 per cent. drop by 1981. The population under this projection is expected to reach 634 million by 1986 and a slight increase in living standards is not altogether ruled out. The third projection assumes a downward trend in birth rate initiated immediately and progressing to a 50 per cent. drop by 1981 and a consequent population of 589 million by 1986. It holds out reasonable hope for economic growth.

It must be noted here that even the lowest Coale-Hoover projection for 1986 of 589 million, assuming that effective birth control programmes are initiated immediately, is considerably higher than the projection of 529 million made by Mr. R. A. Gopalaswami in the *Census of India*, 1951. In fact, the study discounts his projections as too modest, though they caused great consternation among some, when they were first published, and had evoked the criticism that he was too pessimistic. One must not, however, jump to the conclusion that the distinguished American economists are out to cause alarm amongst us. They have only sought to figure out possibilities in a diligent manner.

The aforesaid U.S. study indicates the possibilities for economic growth under each of the three projections. They are certainly not reassuring. These possibilities, as summed up by the Washington correspondent of the *Hindustan Times*, are as follows:

> "Whereas, given the 589 million population, the increase in income per consumer jumps from 1.5 per cent. annually in the 1956-61 period to 3.4 per cent. annually in 1981-86, the increase reaches only 2.8 per cent. annually under the 634 million figure. Given an unchecked birth rate and the 775 million figure, there is a steady decline in the rate of increase from the present 1.4 per cent. down to 0.9 per cent. in 1981-86. Similarly, consumption per consumer (described as income per consumer *plus* welfare outlays directed to the existing population at each point in time) shows a decline in the rate of increase from 1.2 per cent. annually to 0.8 per cent. under the high population 775 million figure."

Under the top projection (population of 775 million in 1986), only 10.1 per cent. of India's national income, according to the U.S. authors, would be available for direct growth investments in 1986. The percentage of direct growth investment would be 8.9 in 1971, 9.4 in 1976, 9.9 in 1981 and finally 10.1. Under the medium projection, the percentage of national income available for investment would be 9.6 in 1971 and 13.5 in 1986, while, under the low projection, the percentage would be 10.4 in 1971 and 14.7 in 1986. The difference between 10.1 per cent. and 14.7 per cent. of the national income may not seem impressive. But, as Mr. Robert Cook, editor of *Population Bulletin*, comments, to a nation struggling to emerge from a marginal agrarian economy, it may well mean the difference between victory and defeat. It is thus clear from this study that India has to bestir itself forthwith and take appropriate measures to bring down its birth rate effectively.

The essence of India's population problem is this. If the birth rate is not brought down, sheer numbers will stifle economic development and the present and future Plans will fail to make any significant impression on the standard of living. Will the Government and the Planning Commission bear this in mind when formulating the Third Plan making allocations for the various items of outlay?

WORLD CO-OPERATION IN SHIPPING

THE establishment of the Inter-Governmental Maritime Consultative Organisation (I.M.C.O.), the first session of which commenced this month in London, deserves to be welcomed. The need for such a body has been felt for a long time now. Although shipping, by its very nature, is international in scope and operation, there has been no specialised agency for shipping at the international level. Shipping has thus remained the only major means of transport and communication without a permanent organisation for co-operation among governments. The establishment of the I.M.C.O. thus rectifies a major defect in the international consultative machinery.

The idea of establishing an international agency to deal with shipping matters is by no means new. The U.N. Transport and Communications Commission declared as early as 1946 that a permanent central maritime agency should be established to deal with technical shipping problems. At the U.N. Maritime Conference, held at Geneva in 1948, the Convention on the Inter-Governmental Maritime Consultative Organisation was adopted by 20 of the participating nations. The Convention did not come into effect till March 1958, when the legal requirements for bringing the organisation into effect were satisfied. It stipulated that the headquarters of I.M.C.O. should be in London; the new organisation will thus be the first specialised agency of the U.N. to have the capital of the U.K. as its permanent home. Thus, the U.K., which has played so notable a part in world maritime history, becomes the home of the new shipping body. Pending the establishment of the I.M.C.O., the U.K. has been carrying out the duties imposed by the two international conventions concerned with maritime safety measures and pollution of sea by oil. These duties will now be taken over by the new agency.

Briefly, the I.M.C.O. will provide machinery for co-operation among governments in solving the technical problems of international shipping, including those concerning safety at sea. Never was the need for such international consultation more vital than today. For the application of many recent scientific developments, including radar and nuclear power, presupposes the exchange of information and results of research at the international level. The I.M.C.O.'s objectives include the encouragement of the removal of discriminatory action and unnecessary restrictions by governments which may affect international shipping. In addition, it will consider matters relating to unfair restrictive practices by shipping concerns. It will also take action on any matter connected with shipping that may be referred to it by other international bodies.

A commendably reassuring note was struck by the British Minister of Transport, Mr. Harold Watkinson, when he welcomed nearly 300 delegates from twenty-eight countries to the first assembly of the I.M.C.O. He gave the assurance that the U.K. intended to play a full part in removing barriers which might hamper international shipping. He said: "Ships are still the main carriers of passengers across the seas and are prime movers of the bulk of the commodities that are exchanged between the countries of the world. Making full allowances for the development of air travel, the sea routes will provide the essential means of communication between countries." He added: "I urge you to remember that the heart of your task and the basis of your activity are the ships themselves and, even more important, those who man them. Without ships and the exercise of maritime skill, civilisation as we know it could not exist." Among the subjects considered by the Assembly was the acceptance of the initial work programme. It was decided to refer this matter along with other matters to the Administrative and Finance Committee. The Assembly has elected a 16-member Council which will consist of representatives of Argentina, Australia, Belgium, Canada, France, India, Greece, the Netherlands, Norway, Sweden, the U.K., the U.S., Italy, Japan, Russia and W. Germany.

Although the full text of the Assembly's proceedings, which are expected to last till the end of this week, is not yet available, it is clear that the new maritime organisation will have to bring to bear on its tasks both imagination and goodwill. The treatment accorded to India is, however, not calculated to inspire confidence among underdeveloped countries. The Assembly has voted in favour of a U.K. resolution granting India only restricted membership of the I.M.C.O. without a vote. Dr. Nagendra Singh, India's Director-General of Shipping, rightly insisted that international organisations could not be reduced to the status of private clubs. Again, it is not without significance that the Scandinavian countries have insisted that the I.M.C.O.'s activities should be confined to purely technical and shipping matters and should not deal with economic or commercial aspects. The U.S. delegate declared that his country would oppose any attempt to extend the Organisation's sphere into economic activities.

It is noteworthy that India, in the course of its ratification of the I.M.C.O. Convention, made a declaration which, according to the President of the Assembly, amounted to a reservation; the reservation related to the practice of State aid for its shipping. In this connection, a realistic concession is the one made in the definition of the objectives of the I.M.C.O. Thus, although the I.M.C.O. is pledged to encouraging the removal of discrimination by governments in shipping matters, it recognises that assistance and encouragement given by a government for the development of national shipping and for purposes of security would not by itself constitute discrimination, provided that such assistance and encouragement is not based on measures designed to restrict the freedom of shipping of all flags to take part in international trade. Since shipping is a subject which could easily arouse national fervour, it is of the utmost importance that the member-nations should be convinced that the I.M.C.O. is neither a supra-national authority which demands excessive sacrifice of national sovereignty, nor an organisation designed to protect the rights of countries which have become maritime powers by historical accident and have been trying to check the growth of shipping in younger countries.

FURTHER UNCERTAINTY DISTURBS SHARES

AUTOMATIC LOOMS—U.K. BANK RATE—WORLD SUGAR MARKET—A.C.C.'S NEW VENTURE

THURSDAY, 5 P.M.

THE budgets of the Central and State Governments are anxiously awaited. The market most concerned with this hardy annual is the Stock Exchange. While the budget of the Central Government is the main source of its worry, there is no inclination on its part to feel that State budgets will be innocuous. A general criticism against State Governments has been that they have not done their best to raise their tax revenue. Will not the State Governments try to meet this charge by imposing more taxes in their budgets for 1959-60? There is already a fear in the Bombay share market that the Bombay Government may introduce agricultural income-tax. This apprehension has depressed sugar scrips. Over the week, Belapurs have fallen from Rs. 278 to Rs. 262-8 and Walchandnagars from Rs. 273-8 to Rs. 267.

MARKET GOSSIP

There is room for fear that even the Railway budget may impose some new burdens, because of the stress in the Congress Party's latest resolution that investments by the public sector must make a significant contribution to capital formation.

The Centre will present its budget on 28th February 1959, that is, five weeks hence. The recent speeches by Congress men and a few officials, emphasising the need for finding more resources for the public sector, have caused considerable misgivings about the outlook for investors. Consequently, there has been a sizable bull liquidation during the last few days. As the desire to take risks is at a low ebb, there is little fresh business and turnover has shrunk. The recovery witnessed last week has proved to be a short-lived affair. Most of the scrips have wound up the week with modest losses.

It is, however, not possible to say whether the share markets have fully discounted the worst possible budget. The general feeling in market circles is that, if the *status quo* is maintained in taxation, there will be a good recovery in equity values. This is apparently based on the theory that, as the recession in recent weeks is due to apprehensions of increase in taxation, values are bound to look up when the apprehensions turn out to be wrong. Further, after Mr. Morarji Desai's categorical statement at Calcutta early last month that there could be no relief in taxation, the markets have reconciled themselves psychologically to the prospect of the budget not containing any reduction in taxation. But this does not necessarily mean that investors will be satisfied with such a budget.

While the market is generally in a state of suspense about the Central budget, there are two minority opinions. One is still optimistic enough to expect a modification of the tax on bonus shares in favour of investors. This school also believes that some of the nuisance taxes may be made a little easier. In fine, it is confident that the Finance Minister will do something that will at least make the camel feel that a part of the burden has been taken off its back. Of course, those who feel this way are very much in a minority.

The other minority is a little sizable. It feels that, notwithstanding all the recent speeches of Ministers, officials, and Congress men in favour of more taxation, there will be no significant increase in the burden. It expects the *status quo* to be maintained. Two reasons are given in favour of this surmise. One is that the latest campaign, which has frightened the markets and investors, has been deliberately started with a view to countering the pressure from influential quarters for a reduction in the tax burden. The other reason is that any increase in taxation which will make the task of the private sector more difficult than now might upset the climate for getting foreign assistance. It is significant, in this connection, that the second meeting of five Western countries and the World Bank, which have promised to help India with sufficient foreign exchange to see its second Plan through, is scheduled to take place only in the second half of March next, that is, after the presentation of the Union budget. It is at this meeting that the terms of the credit for 1959-60 and 1960-61 will be decided. If the budget and the financial and fiscal policies that go with it appear to be unrealistic to these creditor countries, the results of the meeting may not be quite favourable to India.

* * * *

A brief reference to the applications invited by the Textile Commissioner from mills which wish to install automatic looms in replacement of their existing plain looms and the conditions governing allotment is made on page 104 of this issue. The total number of automatic looms that will be allowed for installation now is 2,500. This is part of the 7,500 looms to be installed over the three years (1959, 1960 and 1961) under the "pilot project" first announced by Mr. Manubhai Shah, Union Minister for Industry, in Parliament early in December 1958 and later discussed at the conference of the representatives of millowners and labour at New Delhi on 22nd December (*vide* page 12 of *Commerce* dated 10th January 1959).

It is, indeed, gratifying to hear that the Government has no intention of imposing, as a condition for giving permission for the installation of 7,500 automatic looms, any "obligation of export" on the mill concerned. The mills will be completely free to dispose of the entire quantity of cloth produced on these looms in whatever manner they like—to sell either for export or for domestic consumption. This is a healthy and hence welcome departure from the policy governing the installation of 18,000 automatic looms—announced in 1956—which pins down mills to the condition of maintaining 87½ per cent. of their exports in any of the three preceding years, besides exporting the full production of automatic looms. It is, of course, stated that, while making allotment of automatic looms, preference will be given to units having established trade connections and sizable annual exports to their credit and to units which provide evidence that they can export if equipped with automatic looms.

In addition to the 7,500 automatic looms in replacement of the existing plain looms, the Government has also decided to allow installation of 3,000 additional automatic looms in pursuance of the recommendations of the Textile Enquiry Committee. The only condition attached to this scheme is that the entire production of the looms in question must be exported, though no definite stipulation is made that the mills concerned must give a guarantee to that effect. The condition is somewhat vague. It raises the question as to what will happen to the quantity of cloth produced under the scheme, if world market conditions are not favourable to its export. Will the Government let the mills sell this production in the internal market, without subjecting it to the penal excise duty proposed in 1956?

* * * *

The latest advices from London point to the possibility of a further cut in the British Bank rate. The general employment situation in the U.K. is still a source of concern for the Government. Undercapacity is still widespread in industry and underemployment among workers is on the increase. The Government, however, is said to be keen on improving this state of affairs at an early date, apparently because the General Elections are drawing near. Besides this factor, the general trend of interest rates on the European Continent is downward, in contrast to the hardening tendency in the U.S. and Canada. The easier trend in the non-dollar countries, to which a reference was made in these columns last week, is placing the U.K., according to the Money Market Correspondent of the *Financial Times*, under an actual pressure to lower rates and liberalise short-term credit facilities. This, it is felt, will be necessary to safeguard London from the growth of competition for international financing business from other centres. Another ½ per cent. cut in the British Bank rate before long is, therefore, envisaged. If this expectation were to materialise, it would bring the Bank of England rate to 3½ per cent., that is, ½ per cent. below the Reserve Bank of India rate.

The increase in surplus industrial capacity in Britain and the anxiety of the British Government to bring about a speedy improvement in the economic situation are likely to help India indirectly. There are already reports that the Export Credit Guarantee Department has shown readiness to liberalise the terms for deferred payment arrangements in favour of India. This is likely to help India's imports of British machinery. Now that the Government of India also has relaxed the conditions for introducing automatic looms by cotton mills, the prospects for British textile machinery makers' business in India appear to have improved somewhat.

* * * *

The outlook for exports of Indian sugar has turned bleaker, thanks to the continued weakness of world sugar markets. In the past few days, spot Cuban raw sugar at New York has fallen, from 3.67 cents on 30th December 1958 to 3.25 cents per lb. (f.o.b. Cuba). This is the minimum price fixed under the new International Sugar Agreement which came into force on the 1st inst. The Agreement, it will be recalled, stipulates that, if the New York market price falls below 3.25 cents and then averages less than that figure for seventeen consecutive market days and is actually below it on twelve of these days, the Sugar Council must immediately reduce the basic export tonnages of member-countries by 2½ per cent. Thereafter, it must meet within seven days. If the Council fails to agree on the action to be taken, the quotas shall be cut by a total of 5 per cent., provided they are not then less than 90 per cent. of this basic figure, unless the prevailing price is below 3.15 cents in which case further reduction in quotas may be made within the limits prescribed by Article 23.

It is, of course, not possible to assess at present what the above-mentioned reductions mean in terms of actual tonnages, since the initial export quotas for 1959 have still not been fixed. Naturally enough, sugar traders the world over are eagerly awaiting the outcome of the Sugar Council's forthcoming meeting scheduled to begin in London on Wednesday next. The meeting will consider general matters arising out of the new Agreement and fix the initial export quotas for 1959. Until then, the Agreement "is operating," to quote a London report, "in something of a vacuum, though dealers are able to take heart from the fact that all the main producing countries (including Brazil, Peru, Italy and Denmark, none of which had joined the old Agreement) are now members."

Meanwhile, world sugar trade circles would appear to be uncertain about the trend of sugar prices in the immediate future, in view of the difficulty of foreseeing the effect of political events in Cuba, the world's largest exporter of sugar, on the market sentiment. Generally speaking, however, everybody seems to feel that the aggregate world supplies of sugar would be fully adequate to meet requirements for sometime to come. The preliminary estimate of the world sugar crop places the current year's output at 50.6 million tons (raw value), representing a rise of over 3.0 million tons as compared with the 1958 crop. Of this rise, the European beet sugar production alone is expected to account for more than 2.0 million tons, the anticipated output being 18.0 million tons. The Cuban sugar crop is estimated higher by 400,000 tons at 6.0 million tons.

Considering the potential oversupply position thus, the effect of political upheavals in Cuba on world sugar prices has been lessened greatly. European beet sugar has already been on offer at competitive rates, particularly by Belgium and Poland. Cuban sales are expected to be quite large shortly. Fresh supplies of Brazilian sugar will be ready in the summer, although the size of this year's crop is said to have been below expectations. All these factors have imparted weakness to the world sugar market, leading to a marked fall in prices, as noted at the outset.

It is against this background that one has to assess the outlook for sugar exports from India. The currently ruling average price of sugar in Bombay is about Rs. 1,100 per ton, as against the world price of Rs. 393 (London). After excluding the full remission of excise duty (Rs. 291.20 per ton) and cane cess (Rs. 50.90), the export price (f.o.b.) of Indian sugar will come to Rs. 768 per ton. In other words, the loss involved to sugar producers alone in exporting one ton of sugar amounts to as much as Rs. 375. The loss to the country as a whole will be not less than Rs. 750 per ton, if not more, as against which foreign exchange earned will be no more than Rs. 393.

* * * *

The Congress Party has been trying to create the impression in this country, as well as abroad, that the private sector lacks entrepreneurial skill to undertake heavy engineering projects and that, consequently, the public sector has to establish these industries. That this impression is wrong is borne out by the incorporation of a new company last week under the name of A.C.C.-Vickers-Babcock Ltd., for the purpose of undertaking the manufacture of a wide variety of heavy industrial plant and machinery. The A.V.B. project, a joint venture of the Associated Cement Companies Ltd., Vickers Ltd., London, and Babcock and Wilcox Ltd., London, is in fact one of the largest heavy engineering projects to be started in the post-war period.

The idea of setting up a project of this kind was conceived three years ago, but many impediments had to be got over before the scheme was finalised. At one time, it looked as though the project would fall through, due to the sharp rise in the British Bank rate to as high as 7 per cent. and the enforcement of credit restrictions in the U.K. The change in the Government of India's policy towards the private sector and the heavy taxation imposed in 1956 and 1957 also stood in the way of the promoters going ahead with the project. That the scheme has been finalised against those heavy odds provides positive proof that the private sector is vigorous and enterprising.

The new company, A.C.C. Vickers-Babcock Ltd. (A.V.B. in brief) was registered on the 16th inst with an authorised capital of Rs. 10 crores, of which Rs. 5.40 crores are expected to be issued just before the Company goes into production. The Company is also expected to raise debenture capital to the tune of Rs. 4 crores by private negotiation. Of the share capital, A.C.C. will hold 49.8 per cent., Vickers Ltd. and Babcock and Wilcox Ltd. 24.9 per cent. each, and Killick Industries Ltd., F. E. Dinshaw Ltd., Tata Sons (Private) Ltd., and Mulraj Khatau and Sons (Private) Ltd. 0.1 per cent. each. The Company will be directly managed by a Board of Directors, with Mr. Dharamsey M. Khatau as Chairman.

The A.V.B. project is an outstanding example of collaboration among the members of the Commonwealth not only in finance but also in technical know-how in the field of heavy engineering. It is a big step forward in India's industrial development and progress towards self-sufficiency. Arrangements have been completed for acquiring land and other facilities in Durgapur, where the Company's works will be situated.

The Company's manufacturing programme covers a wide range and includes manufacture of machinery for cement making, general mining and coal mining, the well-known Babcock water-tube boilers, pressure vessels and ancillary items. It will be noted with interest that the A.C.C. has been manufacturing machinery for producing cement for the last 15 years and its workshops will form an integral part of the new project. An appreciable part of the products envisaged under the project will be turned out in A.C.C. workshops. The construction of the A.V.B. works is expected to be completed in 1961 and, when in full production, will provide employment for over a thousand workers.

The foreign exchange cost of the project will be met by the two British participants. When the plant goes into full production, it will not only save substantial foreign exchange now spent on importing certain items of heavy engineering items but may even prove to be a source of foreign exchange earner through exports of some of the products to the neighbouring countries, after meeting India's own requirements.

EQUITIES QUIETLY STEADY

SUGARS RULE WEAK

(From Our Own Correspondents)

BOMBAY, 22*nd January*

WITH only five weeks to go for Mr. Morarji Desai, Union Finance Minister, to present his maiden Budget, the share market entered a sluggish spell during the week under review and turnover also declined. After a sharp rise earlier in the week, equities staged a modest retreat, but today again they looked up a little, due to support at lower levels. Nevertheless, the enthusiasm which marked trading during the past two weeks, notwithstanding the resolutions of the Congress, was conspicuous by its absence this week and prices over a wide front were lower on balance. Fresh fears of additional tax measures and control on profit would appear to have induced operators to be cautious, but there was no heavy selling pressure. The undertone remained steady and the technical position of the market was also healthy, as witness the normal *budla* charges at the last settlement and smaller number of shares to be delivered in respect of that settlement.

Tata Ordinaries rose on Friday last from Rs. 175.50 to Rs. 176.75, but staged a retreat subsequently to touch Rs. 174.25 yesterday. Today again they recovered a little to Rs. 175.50 at the close. The new shares were a fraction lower at Rs. 172.25. Indian Irons came up to Rs. 26.35 from last week's closing of Rs. 26, before receding to Rs. 25.95. At the close, however, they gained to Rs. 26.20.

Barring Centurys, which displayed wide variations and scored a moderate gain over the week, textile shares ruled quiet. After an initial spurt from Rs. 431.25 to Rs. 438, Centurys retreated to Rs. 429.50 yesterday. Part of this loss was, however, made good today, when the shares finished at Rs. 434.50. Bombay Dyeings moved between Rs. 56.60 and Rs. 55.60 before closing with a loss of 30 nP over the week at Rs. 56. Kohinoors shed Rs. 2.50 to Rs. 239, thus wiping out a portion of the previous week's gain. Central Indias lost a rupee to Rs. 90 and Finlays Rs. 2 to Rs. 259. Indore Malwas were marked down by Re. 1.50 to Rs. 97.50, Khataus by Rs. 3 to Rs. 153.75 and Morarjees by Rs. 2 to Rs. 230. Shree Niwas Cottons provided an exception with a rise of Rs. 3.50 to Rs. 140. Simplex were done Rs. 2.50 lower at Rs. 167.50. Standards declined by Rs. 3.50 to Rs. 417.50, Svadeshis by Rs. 3.75 to Rs. 209.50, Swans by Rs. 3 to Rs. 347 and Tatas by Re. 1 to Rs. 34.50.

Bank shares presented a mixed trend. While Bank of Barodas gained Re. 1 to Rs. 127, Centrals were 20 nP lower at Rs. 58.80. Bank of Indias put on Re. 1.75 to Rs. 141 and their new shares Rs. 2.75 to Rs. 142.25. Punjab Nationals were done Re. 1 lower at Rs. 59, and United Commercials 50 nP down at Rs. 68, while Union Banks were better by 12 nP at Rs. 7.64.

In the insurance section, New Indias were in the limelight with a rise of Re. 1.50 to Rs. 54. Their new shares jumped by Re. 1.40 to Rs. 54.10. Orientals were done at the previous week's rate of Rs. 4,010.

Electricity shares were featureless with minor fluctuations. Ahmedabad Electrics were a shade quiet at Rs. 95, Bombay Suburbans at Rs. 110 and Surat Electrics at Rs. 112.50. Tata Hydros closed with a gain of Re. 1 at Rs. 120.75 and Tata Powers put on Re. 1.25 at Rs. 1,192.50, while Andhra Valleys were unchanged at Rs. 1,172.50.

Sugar shares ruled weak, with a sizable fall in values, due to fears of agricultural income-tax being imposed by State Governments in the forthcoming budgets and growing competition from producers of *khandsari*. Belapurs recorded a decline of Rs. 12.50 to Rs. 262.50. Phaltans were done at Rs. 144.75 *ex-div.* (dividend: Rs. 10 per share), which on a *cum-div.* basis represented a loss of Rs. 4.25 over the week. Walchandnagars were marked down by Rs. 5.50 to Rs. 267, Maharashtra Sugars by Rs. 10 to Rs. 170 and Kesar Sugars by Re. 1 to Rs. 55.50. Among cement shares, A.C.C. came down from Rs. 156 to Rs. 153.25 before finishing at Rs. 154.25. Digvijays were dull at Rs. 132.50 and Orissa Cements at Rs. 12.52. In the engineering and mining group, Alcocks were a bright feature with a rise of Rs. 13 to Rs. 268. Tata Locomotives were marked up by Rs. 3.25 to Rs. 161.50. Mukand Irons, which had been included in the forward list, gained 76 nP to Rs. 13.76. Larsen and Toubros were done 28 nP higher at Rs. 17.12. Premier Constructions were picked up Rs. 2.50 lower at Rs. 236.50. Shivrajpurs shed Rs. 2 to Rs. 88. Indian Coppers were dull at Rs. 3.58.

Scindias fluctuated between Rs. 21.56 and Rs. 21.28 before closing at Rs. 21.48. Great Eastern Shippings closed with a loss of 20 nP at Rs. 23.84. Among automobiles, Premier Automobiles recorded a decline of Re. 1.50 to Rs. 83.70 and Hindustan Motors 8 nP to Rs. 7.16.

In the miscellaneous section, Bombay Burmahs (old) gave way to Rs. 460, after an initial rise from Rs. 466.50 to Rs. 469.50. Towards the close there was a partial recovery to Rs. 463. National Rayons lost Re. 1.25 over the week at Rs. 242.75. Tata Chemicals gained 12 nP to Rs. 15.44. Tata Oils advanced by Re. 1.25 to Rs. 47.25. Voltas staged a rally from Rs. 137.75 to Rs. 144, on expectations of higher dividend, while Wimcos shed Re. 1.50 to Rs. 189.50.

Calcutta Stock Exchange

CALCUTTA, 21*st January*

A firmer trend under the lead of speculative counters was in evidence on the Calcutta Stock Exchange during the week under review. Had it not been for the pre-budget caution, the volume of business would have shown an impressive increase. Operators were looking forward with interest to the forthcoming Calcutta meeting of the L.I.C. Investment Committee, and that accounted for the features in the miscellaneous industrials section. For the Committee would consider offer of shares from Calcutta brokers. The Committee would in future also periodically meet in Calcutta. Another encouraging thought is the expected commissioning of a blast furnace each in Bhilai and Rourkela within the next fortnight, and consequent prospect of acceleration of industrial progress. All the same, the news of a wide gap of Rs. 19 crores in November's foreign trade introduced caution.

Another discouraging news during the week was the lockout, from the 19th January, in the works at Shamnagar of Messrs. National Pipes and Tubes Company Ltd., Messrs. National Rolling and Steel Ropes Ltd. and Messrs. National Insulated Cables Company of India Ltd., belonging to the managing agency of Messrs. Associated Industrial Development Company, Private Ltd. This followed a sit-down strike from 5th January, following alleged differences over the recruitment policy between the trade union and the management. All the three companies belong to the category of essential manufacturers for Plan projects, and their products are of a wide variety including non-ferrous rods and tubes, steel wires and ropes, and electrical insulated cables.

Section-wise, jutes were put through at hardening rates. For, despite the Government's price support policy, raw jute is still selling at low rates. If mills succeed in getting minimum export prices fixed for goods, mills' profitability is bound to increase. This expectation accounted for the buying spree in the section. Gondalparas came to business this week, and, at Rs. 780, were higher by Rs. 40. Aucklands continued to rise and touched a high of Rs. 184, as against Rs. 176 earlier. Gourepores received keen attention and made a substantial gain to Rs 387. Dalhousies hardened to Rs. 137 from Rs. 129 and Anglo-Indias were firm at Rs. 227. Kinnisons, at Rs. 195, were fully steady.

Coals received more attention, and most counters recorded fractional gains. Operators believed that working of collieries would show improved results in view of the increased production. Thus, Burrakurs, at Rs. 17.62, added 37 nP, but this gain was lost in yesterday's trading. New Beerbhoums picked up to Rs. 20 from Rs. 19.37. South Karanpuras changed hands at Rs. 12.31, as against Rs. 12 previously, and Equitables at Rs. 23.75, as against Rs. 23.25. In cheerful trading, Bengal Coals were pushed up to Rs. 284 from Rs. 273, finishing slightly lower at Rs. 282.

In minings, after last week's rise, Metal Corporations were subjected to profit-taking and the rate receded to Rs. 7.78 from Rs. 9.25, but there was a spurt to Rs. 9.06 yesterday on interested buying. Indian Coppers were maintained at Rs. 3.62.

Engineering shares were keenly sought following the enthusiastic discussion in Nagpur on the bumper third Plan prospects. Moreover, fabricating industries are assured of steel supplies in the third Plan period, and the imminent opening of the blast furnaces in Rourkela and Bhilai was noted with enthusiasm. Indian Irons opened at Rs. 26.02, and after rising to Rs. 26.38, closed at Rs. 26.14. Britannia Engineerings at Rs. 11.12 recorded an impressive rise, while Texmacos, after rising to Rs. 21.05, receded to Rs. 20.80.

Among miscellaneous industrials, Dunlop Rubbers were fractionally higher at Rs. 30.37 and National Pipes hardened to Rs. 15.65 from Rs. 15.44. National Cables were looked at lower at Rs. 29.25. Indian Oxygens recovered to Rs. 23.81 from Rs. 23.25, but Indian Aluminiums receded to Rs. 15.25 from Rs. 16.37. From Rs. 52, Indian General Navigations rose to as high a rate as Rs. 63. India Steamships moved between Rs. 13.97 and Rs. 14.12. Indian Cables were quiet at Rs. 29.25.

The news of higher output in December checked enthusiasm in tea shares; had it not been for this, the rises in selective counters would have been more impressive. Tezpores gave way to Rs. 15.06 from Rs. 15.87, while Bishnaths, after being lower at Rs. 17.75, recovered to Rs. 17.87. Another feature was the rise in Sungmas to Rs. 15.56 from Rs. 14.31. Methonis were better at Rs. 19.62 and Hattikhiras improved by Re. 1 to Rs. 11.50.

• • • •

Madras Stock Exchange

MADRAS, 20*th January*

The Madras Stock Exchange had only three working sessions during the week under review, as it remained closed on three days owing to *Pongal* holidays. During this short period, the market ruled easy, the trend of prices being generally downward. The operators were disappointed at the categorical statement of Mr. Gopala Reddi at the meeting of the Indian Chamber of Commerce, Coimbatore, held this week that "situated as we are today, we cannot think of reducing taxes." Plantation shares encountered selling. In particular, coffee shares were marked down on persistent fears of overproduction. Textiles were depressed, despite reports of encouraging offtake in piecegoods, domestic and overseas. Banks, electrics and sugars were dull. The only exception to the general trend was provided by select miscellaneous industrials which evoked good buying support and tended to move up.

Among tea shares in the planting section, Kil Kotagiris and United Nilgiris lost 5 nP each to Rs. 6.80 and Rs. 17.20, respectively. Twyfords receded by 3 nP to Rs. 15.62. Blue Mountains, Chandramalais and Chembras shed 2 nP each to Rs. 3.25, Rs. 2.85 and Rs. 3.55, respectively. Balanoors were neglected at Rs. 17.62, Coonoors at Rs. 25.75, Nilgiris at Rs. 7.25 and Parksides at Rs. 19.25. Nonsuch Teas, however, climbed up by 35 nP to Rs. 24.35 on special support.

In the coffee group, Consolidated Coffees slumped by 95 nP to Rs. 20.65. Coffee Lands dropped 75 nP to Rs. 23.25. Kumergodes eased by 10 nP to Rs. 6.65, Cowcoodys by 8 nP to Rs. 7.12 and Sangameshwars by 3 nP to Rs. 2.45.

Deals in rubber shares were put through at reduced rates. Vaikundams declined by 23 nP to Rs. 23.12. Kalpettas fell by 15 nP to Rs. 11.75. Midlands receded by 10 nP to Rs. 10.75. Velimalais lost a like amount to Rs. 5.65. Swintons shed 5 nP to Rs. 2.40, Kailas 3 nP to Rs. 4.90 and Cochin Malabars 2 nP to Rs. 5.43.

Among textile shares, Maduras dropped Rs. 2.40 to Rs. 25.50. Vijayeswaris were quoted Re. 1.50 lower at Rs. 83.50. Coimbatore Cottons shed a rupee to Rs. 134. Cambodias softened by 5 nP to Rs. 7.85. Bangalore Woollens were dull at Rs. 156, Buckinghams at Rs. 175, Metturs at Rs. 328, Radhakrishnas at Rs. 135 and Lakshmis at Rs. 94.50.

MORE BANK RESULTS

The results of working of a few more leading banks released during the last one week serve to confirm the general pattern of lower profits for the year ended 31st December 1958. All of them have, however, maintained the dividend levels at the rates paid for the previous year.

Central Bank of India

The Central Bank of India Ltd. has earned a net profit of Rs. 101.42 lakhs for the year under review, as compared with Rs. 108.74 lakhs in 1957. The drop of Rs. 7.32 lakhs is in distinct contrast to the rise of Rs. 4.38 lakhs recorded in the previous year and of Rs. 26.60 lakhs in 1956. After bringing in Rs. 18.44 lakhs from the 1957 account, the Directors have stepped up the provision for taxation from Rs. 13 lakhs to Rs. 16.50 lakhs and made larger provisions for staff. The amount set aside for staff gratuity fund is Rs. 10 lakhs, as against Rs. 6.50 lakhs, and that for bonus is Rs. 32 lakhs, an increase of Rs. 2 lakhs over the year. Presumably, in view of these larger allocations, which together absorb Rs. 9 lakhs more than in the previous year, the Directors have not made any transfer to the investment account, which had received Rs. 15 lakhs in each of the previous four years. The dividend is, however, proposed to be maintained at 14 per cent. per annum, made up of a 6 per cent. interim distribution already made and the final one of 8 per cent. now recommended. This dividend, which is being repeated for the third year in succession, requires Rs. 41.03 lakhs, leaving to be carried forward Rs. 17.32 lakhs.

United Commercial Bank

The results of the United Commercial Bank Ltd. are a little more disappointing, in that its profit has suffered a fall of Rs. 14.32 lakhs, that is, from Rs. 59.70 lakhs to Rs. 45.38 lakhs. This decline is more than that in the case of other leading banks which have so far published their results. The year's profit is the lowest since 1955. The provision for taxation has been pruned sharply from Rs. 18.50 lakhs to Rs. 9 lakhs and the allocation to the reserve fund has been reduced from Rs. 19 lakhs to Rs. 14 lakhs. The provision for bonus to staff has, however, been raised slightly from Rs. 7 lakhs to Rs. 7.25 lakhs. The dividend is to be kept unchanged at 7½ per cent. per annum, to which level it had been successively raised from 4 per cent. paid for each of the four years 1950 to 1953. The 7½ per cent. dividend will absorb Rs. 15 lakhs, leaving to be carried forward a small sum of Rs. 62,097, including Rs. 49,432 brought in from 1957.

Union Bank of India

One of the exceptions to the general trend is provided by the Union Bank of India Ltd. The Bank's profit is a fraction better at Rs. 14.75 lakhs, as compared with Rs. 14.71 lakhs earned in the previous year. After bringing in Rs. 1.50 lakh from the previous year's account, the Directors have maintained the provision for taxation at Rs. 4 lakhs. While the transfer to the reserve fund has been raised from Rs. 2.50 lakhs to Rs. 3 lakhs, the allocation to the contingency account has been reduced from Rs. 1.50 lakh to Rs. 50,000 and the amount set aside to write off Bank's premises from Rs. 1 lakh to Rs. 50,000. As in the case of other banks, the provision for bonus to staff has been raised from Rs. 2.50 lakhs to Rs. 3.15 lakhs. The dividend is proposed to be repeated at 8½ per cent. on the increased capital. This will mean that the holders of the 800,000 old shares will receive 44 nP per share and those of the 400,000 new shares will receive a *pro rata* dividend of 11 nP per share (for the three months from October to December 1958). The sum proposed to be carried forward is Rs. 1.14 lakh.

NEWS IN BRIEF

THE Government of Uttar Pradesh is expected to introduce in the coming budget session a Bill which will give effect to the Congress resolution on co-operative farming.

India is one of the 50 countries invited to the fifteenth International Dairy Congress to be held in London between 29th June and 3rd July next.

The management of the Cawnpore Cotton Mills, a B.I.C. unit which has been on a lay-off since the beginning of last month, has put up notice of closure. It has a complement of 7,400 workers.

The East German Government is expected to provide about Rs. 2.5 crores for the establishment of the proposed raw film factory in India. The total foreign exchange requirements of the project are put at Rs. 4 crores.

A permanent training centre for the southern zone of the Life Insurance Corporation of India was inaugurated at Egmore, Madras, on the 19th inst. The centre will impart training to different categories of its development personnel—agents, field officers and branch managers.

The first consignment of Russian equipment for the Indian Institute of Technology, Bombay, has been received. Under an agreement recently signed between the two countries, equipment worth three million roubles, mostly engineering apparatus, will be landed in Bombay during the years 1959 and 1960.

The Government of India has sanctioned about Rs. 1.75 crore for the development and upgrading of about 160 miles of existing roads in the north and north-western region of Dandakaranya, besides constructing a 50-mile new road from Kondagaon to Paralkote. These schemes are designed to provide employment to a large number of displaced persons moving into the area.

A three-point suggestion to strengthen the democratic trade union movement in India was put forward by Mr. Joseph D. Keenan, a prominent American trade union leader. Trade unions in India, according to him, should (1) federate on an industry-wise and craft-wise basis, (2) be divorced from political parties, and (3) dispense with compulsory adjudication. Compulsory adjudication, he averred, had a retarding effect on the growth of trade union movement.

The Government of India has set up a panel of experts to recommend the lines on which the manufacture of clocks, timepieces and watches should be developed in India. Mr. S. D. Joshi, Managing Director, National Instruments Ltd., is the Chairman of the panel. The panel will assess the present and future requirements of different types of clocks, timepieces and watches, examine the facilities already existing in the country for their manufacture and recommend measures for future development.

With a view to promoting application of atomic energy to food and agriculture, the Department of Atomic Energy, Bombay, will supply radio-isotopes and other equipment to scientific workers in universities and other institutions. Grants-in-aid will also be made available for those engaged in investigating the use of atomic energy in agriculture, food processing, animal husbandry, fishery, forestry and allied subjects. A ten-member committee, presided over by Dr. B. P. Pal, Indian Agricultural Research Institute, New Delhi, has been appointed to advise the Department in this connection.

From Abroad

Holland has lowered its Bank rate from 3 to 2½ per cent. with effect from the 21st inst.

Greece has decided to introduce decimal metric system with effect from 1st April 1959.

West Germany has made further relaxation of restrictions on imports of goods from hard currency areas.

The U.K. had a visible trade deficit of £426 million during the year 1958, about 30 per cent. less than in 1957; it is the smallest gap since 1950.

The Egyptian Government has enhanced the ceiling on company dividends to 20 per cent. per annum, as against 10 per cent. originally envisaged.

Shell Oil has reduced its purchase price of crude oil by 7 per cent. per barrel in West and West Central Texas, South-East New Mexico and Kansas.

The Monsanto Chemicals Company, U.S., has decided to expand its investment in the U.K. by putting up a new plant to manufacture maleic anhydride, with a capacity of 15 million lbs. per annum.

West German private investments abroad from February 1952 up to the end of 1958 are estimated by the West German Industrial Institute at £230 million. Of these, 35 per cent. is said to be in Europe, 29 per cent. in Latin America, and 8 to 10 per cent. in Africa and Asia.

Exclusive exploration rights for oil in Eire has been granted to the U.S. firm, Ambassador Irish Oil, a wholly owned subsidiary of Ambassador Oil Corporation, Texas. The amount expected to be spent by Ambassador Irish Oil is about $12½ million over a period of 20 years.

A new product, Unistrength pipe, has been announced by the Aluminium Company of America. This product is expected to compete with steel for making tubular goods. The new aluminium product is a seamless one-piece pipe that combines thin walls with a standard wall thickness at tube ends. It is stated that, price-wise, the new product is quite competitive with steel.

The U.S. became a full member of the Colombo Plan Council for Technical Co-operation in South and South-East Asia and of the Technical Co-operation Scheme with effect from the 15th inst. The U.S. had been a member of the Colombo Plan since 1951, but had not been a direct participant in the Technical Co-operation Scheme, which works in conjunction with the capital-aid programme of the Colombo Plan.

More than 130,000 U.S. motorists in 1958 bought British cars, the total value being about $170 million putting Britain once again ahead of all other countries exporting cars to the U.S. The British share of imported car sales in the U.S. was 36 per cent. The Federal Republic of Germany supplied 34 per cent. and France 18 per cent. It is estimated that U.S. sales of British cars this year may rise to 185,000.

France has lifted quota restrictions on imports of a wide range of raw materials from the dollar area and the non-O.E.E.C. countries, thereby bringing into effect an increase in the percentage liberalisation on dollar goods from 13 to 50 (on 1953 basis) announced last month. The goods include bars of aluminium, chrome, zinc, lead, molybdenum and thorium for both the regions and natural rubber, pulp, cotton, raw copper and certain leathers and skins for the dollar area only.

The fifth agreement between Spain and the U.S. for the supply of U.S. agricultural surpluses valued at £34.4 million ($96.4 million) was signed at Madrid on the 13th inst. The commodities covered under the agreement include edible oils, cotton, tobacco, barley and other foodgrains. The largest item is edible oil which accounts for £18.3 million. Including the latest agreement, the total U.S. aid to Spain has aggregated £393 million ($1,100 million). The aid excludes military aid and base construction which amount to £143 million and £135 million, respectively.

China has agreed to give a long-term loan of 55 million roubles (£4,824,561) to Albania between 1961 and 1965 which will be utilised for the purchase from China of equipment for a cotton mill, a flax mill and a glass works, other machinery, dyes, paint, paper, etc. The loan is repayable in the form of commodities to be supplied over a ten-year period starting from 1981. A long-term trade agreement covering the above period has been signed between the two countries. Under the agreement, China will import from Albania vegetable oil, rice, paper, rubber and steel materials in exchange for crude oil, petroleum, copper and chrome ore.

PERSONAL

MR. Shreelal J. Kajaria, a Bombay business man, has been elected Chairman of the Western India Minerals Association for the current year.

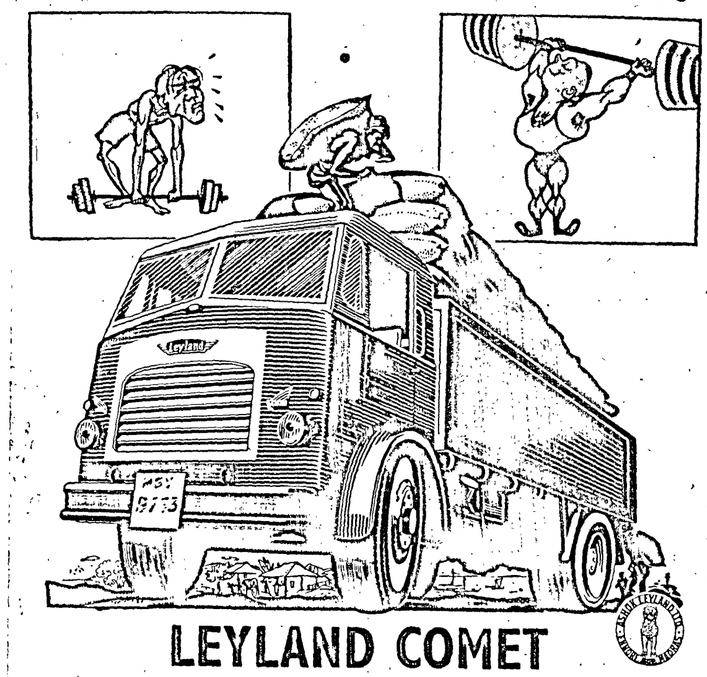
Mr. D. N. Shroff and Mr. J. K. Tarakhia have been elected Chairman and Vice-Chairman, respectively, of the Silk and Art Silk Mills Association Ltd., Bombay, for the current year.

Lord Knollys, Chairman of Vickers Ltd., visited Bombay City for a few days this week, on special invitation by the Board of Directors of the A.C.C.-Vickers-Babcock Ltd., the first meeting of which was held on 20th inst.

Mr. Lalchand Hirachand, a prominent business man of Bombay, belonging to the House of Walchand Hirachand, has been elected President of the Indian Merchants' Chamber, Bombay, for the year 1959. The Vice-presidentship of the Chamber for 1959 has gone to Mr. Pratapsinh Mathuradas, another leading business man belonging to the House of Vissonjis.

Messrs. Vithal Chandavarkar, T. V. Baddeley, Krishnaraj M. D. Thackersey, Neville N. Wadia, G. D. Somani, Radhakrishna R. Rula, M. L. Tapuriah, S. P. Jain, E. D. Sheppard, Pratap Bhogilal, Arvind N. Mafatlal, Naval H. Tata, Babulal Bubna, F. H. Kemple, F. Edwards, E. S. Vernon Jones, C. H. Campbell, Chandrakant Mulraj Khatau and Debiprasad Poddar have been elected members of the Committee of the Millowners' Association, Bombay, for 1959.

BUILT TO CARRY HEAVIER LOADS



LEYLAND COMET

THE BIG CHASSIS FOR THE BIG JOB

The Leyland Comet is built to carry at least 50% more goods every time than any other chassis made in India. That means you save on time, save on fuel and save on maintenance. It's truly the BIG chassis for the BIG job—the only 7½ ton payload chassis made in India.

ASHOK LEYLAND LIMITED Ennore, Madras

CODE OF INDUSTRIAL EFFICIENCY?

THE Union Ministry of Labour is reported to be having under active consideration the question of sponsoring a tripartite code of industrial efficiency and welfare which will supplement the code of industrial discipline finalised at the Naini Tal session of the Indian Labour Conference last year and already ratified by organisations of employers and workers. Mr. G. L. Nanda, the Union Labour Minister, would appear to have already sounded the State Governments, employers and workers in this regard and the initial responses are said to be favourable. An informal conference or seminar on the subject is expected to be held sometime in the near future as a preparatory to a special conference or session of the Indian Labour Conference.

Unlike the code of industrial discipline evolved by the Indian Labour Conference at Naini Tal, which merely enumerated a series of 'dont's" for the workers and employers, the proposed code of efficiency and welfare is a positive one, in that it will specify what the employers and workers should do, in order to ensure better industrial relations and higher production.

It is common knowledge that employers frequently complain about the inefficiency of workers, while the latter on their part, complain of lack of amenities for them. Employers will, therefore, be called upon to state specifically what they expect the workers to do to increase production and improve efficiency. Workers' organisations, on their part, will be asked to state what, in their opinion should be done by employers and the Government to enable them to give of their best. When both sides have put forward their suggestions, it is expected that a common approach can be evolved, binding the parties concerned to certain positive codes of conduct. It is felt that it is not difficult to agree upon a mutually acceptable method of ensuring higher production and increased efficiency. Various industrial productivity teams have pointed out that, by scientific management and better arrangement of work, the output of existing industrial units could be increased. It is also possible to improve the efficiency of workers without having to increase the workload to any great extent. In so far as workers' welfare is concerned, there is scope and need for improving welfare activities in industrial concerns.

Experience during the brief period in which the code of discipline has been in force has underlined the fact that a negative code in itself cannot ensure industrial peace. Some of the major strikes such as the T.I.S.Co. strike, the Premier Automobile strike, the plantation strike in Kerala and the Calcutta Tramway strike occurred despite the presence of the code. Enquiries have been instituted to ascertain the causes of these strikes. These are in the nature of case studies which will provide lessons for the future. The code of efficiency, now proposed, in so far as it seeks to make a positive approach, is likely to lead to more tangible results. One of its commendable features is that, while committing employers and Government to undertake and implement various welfare measures, it will commit the workers too to make their contribution for increasing production and better efficiency.

FOUNDRY INDUSTRY

A well organised foundry industry must necessarily form part of any scheme of industrial expansion. The Indian foundry industry, despite the progress it has made so far, is at present faced with shortage of raw materials, including pig iron, ferro-silicon and hard coke. Naturally enough, this problem figured prominently in the speech of Mr. K. L. Chowdhary, President of the Indian Foundry Association, at the annual meeting of the Association, held last week at Calcutta. The Union Minister for Industry, Mr. Manubhai Shah, who inaugurated the meeting, gave the assurance that the Government would see that the Indian machinery manufacturers were not hampered through shortage of raw materials. Reviewing the progress of machinery industry, he said that India produced machines worth Rs. 60 crores in 1958, as against only Rs. 5 crores in 1951. The proposed Government-owned National Forging and Foundry, at Ranchi, he said, would turn out the heaviest varieties of machines they could conceive of in heavy engineering. He rightly urged the machinery manufacturers to design new machines instead of merely copying the existing models.

The inadequate supply of pig iron constitutes the chief difficulty which the foundry industry has to face. It would appear that sufficient quantities of scrap are also not available from the railways. The supply of hard coke, according to Mr. Chowdhary, is "inadequate, irregular and hectic." The foundries manufacturing C.I. pans need additional quantities of M.S. rods. Supplies of ferro-silicon are also stated to be less than the demand of the foundry industry. An important section of the foundry industry, namely, the steel foundry industry, is, however, stated to be faced with a shortage of orders for its products. Mr. Chowdhary asked whether, against the background of the difficulties of the steel foundry industry, the Government was well advised in starting a new steel foundry at Chittaranjan. The Government, in its present mood, is not likely to abandon any project merely on the ground that it will create surplus capacity in any industry of which the project is a unit. Even so, the Government will do well to consider how best excessive surplus capacity which will mean a national waste could be avoided.

Steel and pig iron shortages, which the foundry industry, along with other engineering industries is facing, are likely to ease when the expansion schemes in the steel industry in the private sector and the State-sponsored steel projects are implemented. In two weeks' time, the steel projects at Rourkela and Bhilai, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, will be ready for the production of iron. The blast furnaces in Rourkela and Bhilai are due to be commissioned by the President of India, Dr. Rajendra Prasad, on 3rd and 4th February 1959, respectively. Addressing a Press conference at New Delhi last week, Sardar Swaran Singh stated that the commissioning of the blast furnaces was an important development, inasmuch as these furnaces consisted of a complex network of inter-connected operations and services—the coal and ore handling system, coke ovens, a by-product plant and a power plant, blowers, a gas cleaning plant and provision and distribution of power, gas and water. The commissioning of blast furnaces is, however, only a first step. For, in order to complete the steel works, two more blast furnaces, steel milling shops and rolling mills will have to be commissioned. Production of steel, as distinct from iron, in Rourkela and Bhilai is expected to start in the middle of the year and saleable steel from the rolling mills is expected to be produced before the end of the current year.

The supplies of pig iron and steel products should improve in the course of the current year. The supply position of railway materials and plates and sheets will improve when the rolling mills in Rourkela and Bhilai go into production. Rourkela will produce 20,000 tons of plates, 470,000 tons of hot and cold-rolled sheets and 50,000 tons of tinplate, besides about 50,000 tons of foundry iron. The fertiliser plant will produce 580,000 tons of nitro-limestone. The by-product plant will utilise 130 tons of tar per day to produce benzol, creosote, naphthalene and other products. A similar plant is being set up in Bhilai. The production programme in Bhilai envisages the manufacture of 200,000 tons of rails and sleeper bars, 160,000 tons of heavy structurals and 260,000 tons of medium structurals, besides 150,000 tons of billets for the re-rolling industry and 300,000 tons of iron for the foundry industry.

CONCEALED INCOMES

An Ordinance further to amend the Indian Income-tax Act 1922 has been promulgated by the Union President. The Ordinance empowers the Income-tax Department to reopen assessments which had become more than eight years old by 1st April 1956. It also empowers the Government to retain the moneys already paid by assessees on concealed incomes disclosed by them voluntarily for adjustment against the liability that may be raised by issuing notices under Section 34 of the Act; this has been done through the introduction in the Act of a new provision (section 49EE).

The promulgation of the Ordinance has been necessitated by the fact that Parliament is not in session and circumstances exist which render it necessary to take immediate action. It will be recalled that Section 34 of the Income-tax Act, as it stood prior to 1956, permitted re-assessment of concealed incomes within a period of eight years from the assessment year to which the concealed income related. This limit was removed in 1956 by an amendment which empowered the Income-tax Department to reopen assessments in cases of concealment for any back year without limitation of time, subject to the condition that the Department could not reopen any assessment falling beyond eight years unless the concealed income was Rs. 1 lakh or more. Some High Courts, however, have held that the amended section cannot be applied to assessments which had become more than eight years old by 1st April 1956, in the absence of express provision to that effect. The Ordinance now promulgated is intended to make it clear that the provision applies to such cases also.

The above provision and the new provision (section 49EE), it is said, are necessary to deal with cases in which proceedings leading to settlements of tax and penalty on admitted concealed incomes by assessees whose cases were referred to the Income-tax Investigation Commission were invalidated by a recent judgment of the Supreme Court. Giving its decisions on the appeal preferred by Mr. Basheshar Nath of Delhi against the order made by the Commissioner of Income-tax, Delhi, calling upon him to make payments of tax in terms of the settlement arrived at between him and the income-tax authorities, the Constitution Bench of the Supreme Court held on 19th November 1958, that the Government could not recover tax from an assessee in terms of the settlement arrived at under Section 8A of the Taxation on Income (Investigation Commission) Act 1947, the main provisions of which had been declared to be unconstitutional by the Court. It also held by a majority that no person could give up or waive a breach of his fundamental right guaranteed by Article 14 or relieve the State of the solemn obligation imposed on it by the Constitution.

What was invalidated by the Supreme Court's judgment has now been made valid by the issue of an Ordinance. Accordingly, the income-tax authorities are now enabled to resume proceedings under Section 8A of the Taxation on Income (Investigation Commission) Act 1947. The total number of assessments affected is put at over 500, the amount of tax involved being estimated at Rs. 20 crores; about half of this sum is said to have already been paid.

STABILISING JUTE PRICES

The desire for achieving self-sufficiency in raw jute has gathered such momentum, as witness the sharp rise in output during 1958-59, that the problem now is not one of getting adequate supply of the golden fibre from within the country, but that of ensuring an economic price to growers and providing them adequate credit, marketing, warehousing and processing facilities. With prices of jute still remaining at low levels, while those of rice, wheat and other articles of food are highly expensive, the need for evolving a solution to meet the distress of jute growers has assumed considerable urgency. In saying this, we do not mean that nothing has been done so far in this direction. Indeed, the Governments of India and West Bengal, as well as the jute mills, have been seized of the problem for some months now.

Several measures have already been taken to arrest the declining trend in raw jute prices. Thus, "floor" prices were fixed; margins were imposed on sales below the "floor" prices; mills were induced to buy raw jute up to four months' requirements; and the Government of India came forward to support the market through purchases of certain quantities of jute through the State Trading Corporation. The S.T.C., in turn, appointed co-operative marketing societies as its agents for this purpose and, in fact, has started purchases in Bihar, Orissa, Assam and four northern districts of West Bengal. The purchases so far made by the S.T.C. through co-operative societies are said to be to little to have any significant effect on prices. The mills are said to have acquired adequate stocks, equivalent to four and a half months' requirements, and they are, therefore, not very much interested in buying more.

It is possible that some individual mills which had not cared to buy sufficient raw jute before the S.T.C. stepped in and [illegible]

the baling centres during the last two or three days to fulfil its needs even by paying a little more than the S.T.C. This, however, does not mean a perceptible change in the trend of raw jute market. In fact, the available rates for raw jute at the time of writing are a shade lower than those at the commencement of the year which themselves were sufficiently low to cause concern to all the parties concerned.

It will be recalled that the question of assuring a minimum price to the jute grower was discussed at some length by the Jute Enquiry Committee under the chairmanship of Dr. S. R. Sen, Economic and Statistical Adviser, Union Ministry of Food and Agriculture, in its report submitted to the Government of India in September 1957. The Committee had recommended, among other things, that mills should be asked to build up at least two to three months' stocks during the first five months of the season. This step, the Sen Committee had conceded, could only be a short-term solution to the problem. The more permanent and long-term solution would, according to the Committee, be provided by setting up either a Government organisation or a co-operative marketing organisation which would buy jute from the cultivators at a reasonable price at the harvest season and sell it to the mills later at a competitive price. "Such an organisation alone," the Committee had opined, "will be able to protect the interests of the cultivator effectively. It, however, such a system is put into operation and adequate warehousing facilities are available, a regulated stock policy for the mills, as suggested above, will go a long way in solving the problem."

The Committee, however, had added that a minimum stock policy would not be effective, if as a result of either increased production of jute (as is the case now) or any other market factor, prices fell heavily and minimum purchases by mills were not sufficient to impart the necessary strength to prices. Answering the question whether, in such an event, the mills should be asked to buy more than their normal requirements of two or three months, the Committee thought that such a solution would be unfair to the mills, unless the Government was prepared to finance them and bear the loss that might be incurred by them on this account. The Committee realised that this would cause complications and did not, therefore, recommend it.

The Sen Committee had, of course, not envisaged the emergence of a situation such as the present. It was, therefore, content to recommend that the regulation of stock policy and imports from Pakistan would be sufficient to stabilise prices. But now even purchases by mills to the extent of 4½ months' requirements and the dumping in of the S.T.C. have not yet stopped the rot. If the Sen Committee is taken as the guide, the only thing that remains to be tried is the formation of a co-operative marketing organisation which will effectively operate in mopping up the surplus jute from the markets and stock-pile the commodity. This is what the S.T.C. is trying to do. Perhaps, it is too early to judge the results of its operation.

Meanwhile, it is gratifying to find that the authorities are continuing to bestow thought on the problem, with a view to finding an effective solution. Thus, the problem of marketing, warehousing and processing of jute through co-operatives was discussed last week at a conference of the representatives of the Governments of the jute growing States (namely, West Bengal, Assam, Orissa, Bihar, U.P. and Tripura), the State Bank of India, the Central Warehousing Corporation, co-operative marketing societies, the State Trading Corporation of India and the Jute Commissioner. Mr. B. Venkatappiah, Deputy Governor of the Reserve Bank of India, was in the chair. The conference recognised that the present tempo of progress in providing storage and warehousing facilities was not commensurate with the requirements. It was agreed that co-operatives should have their own baling units; otherwise, they would not be able to make much progress in the marketing of jute. As the entire programme of marketing and processing, the Conference recommended that the National Co-operative Development and Warehousing Board should make necessary funds available. The representative of the State Bank of India stated that the Bank would consider the provision of necessary funds, if the co-operatives were prepared to take up the business. Since these measures are not of immediate import, they have not provided any strength to the market.

ARECANUT CULTIVATION

When the Indian Central Arecanut Committee laid special emphasis on intensive cultivation, at the tenth annual meeting held in Trivandrum last week, it merely echoed what has been repeatedly said for a number of years now. Despite the much valuable work done by the Committee since its inception more than nine years ago—in September 1949, to be precise—the conditions obtaining in the arecanut economy continue to be none too happy. The production of arecanuts has not only not registered any improvement but actually suffered a distinct setback. The estimated output for 1957-58 was no more than 2.3 million maunds, which compares unfavourably with about 3.3 million maunds in 1949-50. This production is sufficient to meet just two-thirds of consumption requirements, so that India continues to spend every year foreign exchange of about Rs. 3-4 crores for importing arecanut, the quantity involved being about a million maunds.

Thanks to the low level of output as well as to the restriction on the quantity imported and the imposition of a heavy import duty, the internal prices of arecanuts have shown a distinctly hardening tendency in recent months. The average quality arecanut is now quoted around Rs. 240 per maund, as against Rs. 160-Rs. 170 a year before. The growers of arecanut should not, however, be jubilant over the prevailing high prices. They must, as Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, urged, while inaugurating the Central Arecanut Committee meeting, endeavour to step up production and bring down prices to such levels as would be within the easy reach of the consuming classes, a vast majority of whom are agricultural and industrial workers. With the protection to arecanut through a restrictive import policy, the trend of prices "will remain quite reasonable for the growers to go ahead with their operations for intensive cultivation and for establishing new gardens where conditions are most optimum for the development of this crop."

The shortage in the supply of arecanut already existing is bound to become more acute in the coming years, what with the increase in population and higher rate of consumption. The Planning Commission has estimated the total consumption requirements in 1960-61 at over 3.51 million maunds, while the production target is fixed at 2.70 million maunds. It may be noted here that arecanut trees take eight to ten years to bear fruit. Unless, therefore, energetic steps are taken from now alone to raise production of arecanut, there will be a critical shortage of the commodity and prices will soar further, assuming that imports will remain severely restricted.

Considering the urgency of the situation thus it is certainly disquieting to be told that the funds allotted by the Central Government for development schemes in the States have not been fully utilised and that comprehensive schemes having a direct bearing on enhanced production have yet to be finalised and implemented. Mr. Krishnappa did well to draw special attention to this slow progress. As he rightly pointed out, the recognised ways of increasing internal production of arecanut are to bring a larger area under arecanut and to step up output in the existing gardens by adopting more intensive methods of cultivation, protecting palms against pests and diseases, removing uneconomic bearing palms and substituting them by quality seedlings, and providing adequate facilities to arecanut growers to market their produce at a fair price. The Minister called upon the State Governments to accord high priorities for the provision of facilities to arecanut growers in regard to better methods of irrigation, manuring and plant protection measures.

At the end of the meeting, the Arecanut Committee recommended the complete abolition of imports within the next five years by which time it expected that the arecanut regions would be able to take to intensive methods of cultivation, in order to improve production. It is rather difficult to agree with this view. For the imposition of a total ban on imports will, by providing a closed market for arecanut growers, take away the incentive on their part to produce quality arecanut at a reasonable cost. The tendency among growers will generally be to exploit the situation which means holding consumers to ransom. Be that as it may, some of the other decisions taken by the Arecanut Committee will go a long way towards achieving self-sufficiency in arecanuts. These decisions cover establishment of a permanent technology wing of the Committee at Mysore, spreading arecanut cultivation in regions like North Bihar and Teria regions of East Uttar Pradesh where natural conditions are reported to exist for the development of the crop, and a long-term programme for intensifying research on arecanut.

COCONUT INDUSTRY

India has the distinction of being the second largest coconut growing country in the world, next only to the Philippines, producing as it does, about 4,100 million nuts annually. Yet, it is not self-sufficient in this commodity and has to depend on imports for a sizable part of its requirements, its deficit being placed at about 30 per cent. of its total production. During the 10 months ended October 1958, imports of coconut and oil amounted to Rs. 13.06 crores, as against Rs. 10.63 crores during the corresponding period in 1957. There is no doubt that, with the increase in population and industrial expansion, the demand for palm products will go up. What is, therefore, necessary is to make every effort to step up production, by adopting the techniques of both intensive and extensive cultivation. Dr. M. S. Randhawa, President, Indian Central Coconut Committee, did well to call upon the coconut cultivators to avail themselves of the opportunity provided by the Government's restrictive import policy to increase internal production. In the course of his address to the twenty-sixth plenary session of the Committee held at Trivandrum, Kerala State, on the 17th inst., Dr. Randhawa said he felt confident that the deficit could be made good, if only the existing coconut gardens were properly manured and fertilised and pests and diseases controlled effectively.

Besides manuring, adequate attention should be bestowed on the selection of good quality seedlings, which is an important item in the long-term programme. A report prepared by a sub-committee on this subject is now in the hands of the Committee. This is likely to give some idea of the seedlings required by each State and thus expedite the production and distribution of good quality seedlings. Dr. Randhawa also stressed the need for setting up "mother palms" in the States of Kerala, Mysore, W. Bengal and Assam. He insisted that nuts from selected mother palms alone should be taken for propagation and planting in new areas, so that they developed into progeny gardens.

Another long-term measure is the planting of coconut in new areas, in suitable waste lands, bunds of paddy fields, banks of irrigation canals and channels, etc. In the working paper on coconut development during the third, fourth and fifth Five-year Plans, it has been suggested to bring under coconut a new area of 20,000 acres during the third Plan and 16,000 acres under each of the fourth and fifth Plans. Dr. Randhawa disclosed that the Madras Government had sanctioned a scheme to plant 50,000 seedlings on the bank of canals in the State. He considered this as a forward step and commended it to the other States for emulation.

Dr. B. Ramakrishna Rao, Governor of Kerala, who inaugurated the session, pointed out that the lives of lakhs and lakhs of people in the State were inextricably bound up with the fortunes of coconut industry, and its development was, therefore, to them a matter of great importance. The Governor commended the Committee's efforts designed to achieve self-sufficiency for India in coconuts and their products. The activities of the Committee included research on the breeding of better varieties of palm, eradication of pests and diseases, supply of quality seedlings to cultivators and propaganda regarding better methods of cultivation. These measures, he said, would go a long way towards expanding production. He, however, urged the Committee to find out ways and means by which coconut growers in the country, most of whom were small cultivators, could be provided with the necessary manure and credit for undertaking these operations.

Further, the Governor made a fervent plea to recognise coconuts also as a food crop, so that these cultivators might receive all the kinds of assistance extended to growers of food crops. For, though coconut oil enters industry to some extent, particularly in the manufacture of soaps and hair oils, it has to be remembered that coconut is primarily and fundamentally an essential article of food in Kerala and several other parts of India. About 80 per cent. of the country's production of nuts is used for edible purposes—54 per cent. as fresh nuts, 10 per cent. as edible copra and 16 per cent. as edible oil. The Kerala Governor's plea is, therefore, quite pertinent.

AFFAIRS OF FRANCE

From Our Own Correspondent

LONDON, *16th January*

YOUR Correspondent arrived in Paris on the day that General de Gaulle was inaugurated as President of what is called the fifth Republic and, in a few days' hurried tour of the capital, formed a valuable impression of the mood of the new Government and the mood of the people in receiving it. The first thing that emerges is that these moods are both different! The Government is determined to make France "great" and that the French people shall foot the necessary bill! That bill has *already been presented*—it amounts to a 17 per cent. devaluation of the franc, the cutting down of subsidies to agriculture to the tune of some Fr. 250 milliard, some economies in social services and, on the other side, a substantial increase in taxation. All this is accompanied with exaltations in speech, through the Press and by posters throughout the City to Frenchmen to play their part in the new programme.

LONDON LETTER

But one of the costliest burdens, what has been called a millstone round the necks of both *the fourth and the fifth Republics*, is not referred to. That burden is the continuing cost of the Algerian war reckoned at Fr. 800 milliard a year —say £600 million. There is a good deal of evidence that de Gaulle knows that the cost of this is too high and that its continuation can ruin all his plans, but his colleagues in the Government have not yet faced up to the possibility of getting a cease fire at, perhaps, any cost. Notably the Kingmaker, Mr. Soustelle, who levered the General into power but has been rewarded by the General only with the post of Assistant Premier instead of that of Premier for which he angled, reckons that the whole de Gaulle movement swung to victory on the policy of keeping Algeria, with its vast mineral worth, an integral part of France. During the next few weeks, the political struggle inside the Government will continue and it is not too much to say that France's salvation will depend upon the outcome of this struggle and the progress made to resolve the Algerian question.

Now for the attitude of the French. The percentage of votes for the General ignores the high percentage of abstainers. The country is not as solid for the General's policy as the 80 per cent. victory suggested. What the French are asking themselves under the guidance of the dissident parties, notably the Communists whose smaller posters rival the General's propaganda, is that the cost of de Gaulle-ism is considerable. Frenchmen are certainly glad to have got out of the squabble of parties which are incapable of setting up suitable Governments but they do not like paying for the privilege. Already, notices appear in the restaurants that the prices of meals are being put up because of the increase in prices for particular foodstuffs, and it seems clear already, as far as tourists are concerned, that the 17 per cent. devaluation is being swallowed up by rising prices. These rising prices will percolate through into every Frenchman's household. On Algeria, the majority of French feeling is that the revolt ought to be put down and the Government must, therefore, continue in its policy of either winning the war or making a gainful peace. It has certainly not percolated through the mass of Frenchmen that the cost of the war is likely to be the principal cause of their financial distress in the months ahead. The ordinary pattern of French life, never much affected by politics, appears to go on undisturbed and, unless the problems of France become too great—and this really means the Algerian war—there is unlikely to arise any factor which would make the General put his cause once again to the country and possibly this time lose it.—*All Rights Reserved.*

OUTLOOK FOR BRITISH ECONOMY

There is enough unused labour and capacity to permit a rise in United Kingdom industrial production of from 10 to 15 per cent. in two years. This is the conclusion of a new two-monthly review—the *National Institute Economic Review*—just published in London by the National Institute of Economic and Social Research. The conclusion is based on the view that there is wide-spread spare capacity in industry, suggested both by global estimates of the increase in the quantity of capital in industry and by a survey made by the Institute in July last year, which it has since amplified. It is also based on a review of unemployment figures which, the Institute thinks, do not fully reflect the size of the labour reserve.

On the current position, the *Review* thinks *the United Kingdom economy is beginning to* emerge from the mild recession brought about mainly by reduced stock-building and by a fall in exports. Industrial production is now no higher than in 1955, and so there is enough unused capacity and labour to permit a rise of from 10 to 15 per cent. in two years.

On the prospects for 1959, the *Review* argues that, if no further Government measures were introduced, demand would recover gradually, but there would not, in effect, be much change. The expected fall in private investment should be offset by the rise in public investment and in Government current expenditure. Exports may rise gradually, and the fall in stocks may soon be reversed. Discussing the prospects for production in different sectors of industry, the *Review* says: "Prospects are best for industries producing consumers' durable goods which are already benefiting from the rise in home sales."

The *Review* thinks that Government measures to raise demand would probably not have much effect on prices, because there is sufficient scope for higher productivity to prevent a rise in costs per unit. *And on the move to convertibility*, it argues that it should not have much direct effect on the balance of payments.

EXPORT OF £ NOTES

The Bank of England has announced that, in future, authorised banks will be able to export sterling notes to non-residents of the £ area, against payment in sterling from an external account or any foreign currency without seeking official sanction.

The banks have for some time past been able to send sterling notes to their correspondents abroad on the condition that they could satisfy the authorities that the notes were needed to cover demands for U.K. currency from travellers planning to visit the U.K.

As sterling has now been made convertible for non-residents, it is felt that the banks can now be given complete freedom in this matter.

The first new ocean-going vessel in the world fitted with three-piston exhaust gas turbine, built in a shipyard in Glasgow, has completed successful trials. This vessel is a 9,200-dw. tonner and belongs to Scottish Ore Carriers. It has also several other new features including electrically driven hatch covers which work on the principle of a roll-top desk.

AMERICAN LETTER

ECONOMIC RECOVERY ONLY SELECTIVE

INFLATION PSYCHOLOGY GAINING FORCE

From Our Special Correspondent

NEW YORK, *15th January*

THE business recovery from the recession low is proceeding. But it is a selective recovery. So far, the winter in the industrial north-east of the United States has been rather severe.

It has helped some business and retarded others. It certainly has been no inducement for buyers of new automobiles. Assemblies of new automobiles, a major factor in the U.S. economy, fell to 4,244,005 cars in 1958, the lowest in 10 years. The 1948 figure was 3,911,350 cars. Strangely enough, America's own low-priced car, the Rambler, manufactured by American Motors, nearly doubled its sales.

Overall figures are somewhat deceiving. The Federal Reserve Board's industrial production index reached 140 in December, as compared *with 139 in* December 1957. December employment was nearly 64.7 million, against 64.9 million twelve months previously, but unemployment was 3.9 million, against 3.2 million.

The recovery is quite selective. Factory employment is still not what it used to be. Yes, steel is doing better, operating as *it does at about* 76 per cent. of capacity, but insiders expect a long and bitter strike when present labour-management contracts expire in the middle of the year. Higher steel wages, almost inevitably, would mean higher steel prices—and an additional inflationary pressure.

There are other things to be thankful for. Personal income for December was given at the annual rate of $360,000 million, against $350,200 million twelve months previously.

Also, the Gross National Product, the total of goods and services produced, in the last quarter of 1958 returned to the record rate of the third 1957 quarter. *Individual* savings are also at extraordinary levels.

Public optimism is reflected in a $142 million increase in the hire-purchase debt in November. But the total was $440 million less than total outstandings a year previously.

Perhaps, the most bullish element is building and construction. A statistical documentation is that building permits, issued in 217 cities in November, was equal to $485,756,268. This compares with $330,817,963 in November 1957. The increase is far above inflationary price increases.

It may be interesting to note that figures in the *Survey of Current Business* by the U.S. Department of Commerce will be quoted "in terms of actual current dollars." This will apply particularly to the quarterly Gross National Products statistics. The only trouble is that these "constant" figures are stated in terms of 1957 dollars.

The year 1957 is not particularly interesting —it may be more appropriate to choose 1947, when controls were removed after the last war, or even 1950 which has been chosen as a base for other indices.

For example, G.N.P. for the third quarter of 1958 were given at $439,000 million which is about equal to the average for 1957 as a whole. However, stated in terms of 1950 dollar, the figure would be $355,100 million.

In other words, the current dollar G.N.P. figure recorded a gain of 54 per cent. between 1950 and the third quarter of 1958. On a *per capita* basis, the improvement was only 8.3 per cent.

The constant G.N.P. dollar figure shows an increase of only 25 per cent. between 1950 and the third quarter of 1958. In the same period, the Government sector rose 74 per cent. which shows the increasing dependence of the U.S. economy on Government spending of tax revenue and of the spending of borrowed money by the Federal, State and Local Governments.

If this trend was apparent in the past, there is no reason to assume it will be reversed in the future. Almost everybody expects the new Congress, which has just convened, to be inclined to spend rather than save, even though the President in his State of the Union Message is pledged to fight inflation.

Professor Slichter of Harvard University contended the other day, there was hardly a chance anything drastic would be done to stem inflation, since, so far, most people had been helped rather than hurt by inflation. He was, of course, widely attacked for this statement.

The opposition comes from bankers, the Federal Reserve Board and the White House as well as others, who, unfortunately, are labelled "conservatives"—a term, not exactly endearing to the masses of people who think of them as "tycoons" and "tories" who are interested only in feathering their own nests, not to protect the people's savings and property.

The boom in stock prices into 1959, accompanied by another dip in Government securities' quotes, continued to amaze U.S. financial circles. Treasury obligations bearing 2½ per cent. coupon are now so low that, at current prices, they yield 4 per cent. if held to maturity, for example.

Present prices of most stocks seem not only high in relation to current earnings, but also to a reasonable assumption of improvement in business. It may be of interest to quote at this point a research corporation on its opinion of the U.S. equity markets.

"This deviation from conventional measurements (earnings to prices' ratios) in itself *represents a degree of vulnerability to disappoint*ments and to any unpredictable shocks. But, on a day-to-day basis, it still seems probable to us that the present intense inflation psychology is more likely to intensify further over the next several *months than reverse.*"

Consumers seem to see a rosy future ahead, judged by the latest retail trade indications. Late last year, sales did not come quite up to expectations, but volume was good in soft good lines which were priced reasonably.

Another reason for current bullishness over the long-term are the projections of the Census Bureau. The present U.S. population is given at 175,560,000. It is estimated, on the basis of the present growth rate, by 1965 there will be 194,300,000 consumers in this country.

Individual savings have been mounting. They were $5,200 million in the third quarter of 1958, a figure higher than that for the third *quarter of 1957.*

An interesting suggestion is heard again this year regarding the establishment of a privately-owned World Surplus Bank which would acquire surpluses from the Governments all over the world and swap wheat for burlap—coffee for cotton and so on. I shall write more about the subject as developments occur.—*All Rights Reserved.*

U.S. BUDGET

President Eisenhower presented Congress, on 20th January, a balanced $77,000 million federal budget for the fiscal year beginning 1st July. Mr. Eisenhower called it a "responsible...confident...positive...attainable" budget. He said it "*proposes to increase* our military effectiveness, to enhance domestic well-being, to help friendly nations to foster their development, to preserve fiscal soundness, and to encourage economic growth and stability, not only in the fiscal year 1960 but in the years beyond." In his message to Congress accompanying the 1,027-page budget. Mr. Eisenhower declared: "With continued vigorous economic recovery, and with the relatively few new tax adjustments proposed herein, budget receipts in fiscal year 1960 are expected to reach a total of $77,100 million, an increase $9,100 million over fiscal 1959. Thus a very modest surplus of about $100 million is estimated for 1960 compared with a recession-induced deficit of $12,900 million in the current fiscal year."

The estimated budget for the current fiscal year, reflecting both a decrease in revenue and an increase in expenditure resulting from the recent economic recession, shows receipts of $68 000 million and expenditures of $80,900 million. The 1960 budget estimates a $3.900-million decrease in expenditure *from the present fiscal year coupled* with $9 100-million increase in receipts. The budget estimates allocation of 59 per cent. of expenditure for major national security items, 10 per cent. to pay interest on the national debt, eight per cent. for agricultural activities, seven per cent. for

CURRENCY REFORMS IN FRANCE

RESERVES RISE BY $250 MILLION

THE closing week of December proved to be a momentous one for France, inasmuch as it witnessed the introduction of one of the most sweeping economic and monetary reforms since the war. The French franc was devalued by 17.55 per cent., accompanied by the restoration of convertibility to non-resident franc. An austerity budget was introduced, with a 50 per cent. cut in subsidies, higher taxes and increase in the price of service and goods of nationalised industries. A new "heavy" franc, worth 100 old francs, was created to be introduced gradually during the current year. The French Government also freed from quota restrictions 90 per cent. of its 1948 trade with other O.E.E.C. countries. All these were interlinked measures which the French Government was compelled to take, in order to restore strength to its heavily depleted economy.

The utterly bad shape of the French economy was the result of continued high level of expenditure which was far beyond the country's means. While, on the one hand, France had been making heavy capital investments in plants to keep pace with Germany and Britain and to exploit the oil sources in Sahara, its war against Algeria had been costing the country no less than $1,000 million per annum. These two factors alone had created such inflationary pressures that the situation could no longer be kept under check. The Government found that the growing defence expenditure, which it was unwilling to cut, could be met only by reducing home consumption and raising taxation. The austerity budget is expected to reduce the deficit to 600 milliard francs.

As a result of inflationary pressures, French goods were not competitive with those of other European countries. Even in June last, French industrialists openly admitted that they could not compete with Germany and Italy, owing to high cost of operation. An industry-wise survey had shown that the average cost of French production was 10 per cent. higher than in Germany. The French budget, with its cuts in subsidies and the rise in internal prices, would have further widened the gap between French and other European prices on the eve of the inauguration of the Common Market. With the gradual reduction and final elimination of tariffs and trade quotas, French goods would have been completely priced out of the Common Market. It was the fear of this development that induced France to devalue its currency.

Changes in Exchange Rates

As a result of devaluation (by 17.55 per cent.), the French franc is now officially quoted at 493.7 francs per U.S. dollar, as against the previous rate of 420 francs to the dollar, a rate which had been in existence since 11th August 1957. France had altered its exchange rate several times since the war, as will be seen from the following table of annual average of exchange rates for the U.S. dollar:

Year	*Francs per U.S. dollar*
1937	25.14
1938	34.96
January—August 1939	37.85
September 1939—2nd November 1944 ..	43.80
2nd November 1944—26th December 1945 ..	49.62
26th December 1945—26th January 1948 ..	119.11
26th to 16th October 1948	214.40—261.00
16th October 1948—19th September 1949 ..	263.80—322.80
19th September 1949—12th August 1957 ..	350.00
12th August to 28th October 1957 ..	350.00—420.00
28th October 1957 to 29th December 1958 ..	420.00
Thereafter	493.70

France had multiple exchange rates in effect from January 1948 to September 1949. From 26th January to 16th October 1948, a rate of 214.4 francs per U.S. dollar applied to all foreign exchange transactions in non-convertible currencies and to selected imports paid for in convertible currencies. For all other transactions, the effective rate was an average of 214.4 and the "free" rate. The "free" rate was approximately 206 francs per dollar for February-August and 312 for September-October, making the effective rate 260 and 264 francs per dollar. On 16th October 1948, the average rate was made applicable to all transactions, except non-trade transactions in convertible currencies. During the period October 1948 to September 1949, the effective rate gradually depreciated from about 264 to 273 francs. In September 1949, the single rate of 350 francs was set for all transactions. On 11th August 1957, a 20 per cent. surcharge on this rate was imposed for most of the import payments and a 20 per cent. premium was granted on the proceeds of most exports. This effective rate was extended to all transactions on 28th October 1957 and, on 20th June 1958, the surcharge and premiums were incorporated in the exchange rate, giving a uniform rate of 420 francs per dollar.

It will also be noted with interest that France has not established an agreed par value for its currency with the I.M.F. since 26th January 1948. However, the latter's holdings of French francs have since then (up to 29th December 1958) been valued at the official exchange rate of 420 francs per U.S. dollar. The previous par value was 119.107 francs per dollar, established on 18th December 1946.

Complementary Measures

As stated already, France has devalued its currency many times since the war. It has resorted to this extreme step every time only when the reserve position left it no choice. There is, however, one difference between the latest step and the previous ones. On earlier occasions, the country could not derive any benefit that would normally accrue as a result of devaluation, because most of these benefits were dissipated soon after devaluation was resorted to. This was so, because, for political reasons, complementary measures designed to check inflation and impart stability and flexibility to the nation's economy could not be taken. The result was that, within a few months after each devaluation, there used to be a fresh spiralling of internal prices. This time, however, France has taken care to see that the earlier mistake was not repeated. This is evident from the series of fiscal measures mentioned earlier. It is accordingly hoped that the beneficial effects of devaluation will be sustained at least for some time to come. Though there will be a rise in internal prices, as a result of the permission given to nationalised industries to adjust the prices of their products according to costs, the new tax measures, together with cuts in subsidies, severe limitations on wage increases and social service payments, will reduce home consumption and make available more goods for export. The latest devaluation, which was 2 to 3 per cent. more than expected, will also make these goods competitive in foreign markets.

The occasion created by the currency convertibility and devaluation was availed of by France to revalue its currency internally and create a new "heavy" franc. This was done, in effect, by erasing the two zeros from each unit of 100 francs. Thus, the new currency, "heavy" franc, is equal to 100 old units and has 100 times the purchasing power of the old currency. Immediately after the creation of the "heavy" franc, all foreign currencies were quoted at the new rate of exchange, namely, 13.82 francs per £ and 49.37 francs per $. Internally, the "heavy" franc will be introduced gradually over the year. This currency reform has thus restored the old French centime which had passed out of currency.

France has resorted to this new device, because it has been found to be a more convenient method of giving new life to a country's currency, rather than allowing it to depreciate and go out of existence, as did the German mark and a number of other Central European currencies in the twenties of this century. When this stage was reached, the Governments concerned usually scrapped their currencies and introduced new currencies. This resulted in cancelling all monetary obligations. In the years following the Second World War, Germany, Belgium, China, the U.S.S.R. and many other countries resorted to "conversion operations," which had the effect of replacing many existing currency units by a very much smaller number of new heavy units, sometimes accompanied, and sometimes not, by an adjustment in the exchange rate. More recently, Greece carried out a currency reform by cancelling the last three zeros, as a result of which the exchange rate changed from 84,000 to 84 drachmas per £ sterling. Tunisia, following its liberation from France recently, replaced the franc by a dinar currency, each unit of which was equivalent to 1,000 francs.

The latest French currency reform, which was a double-pronged move—devaluation accompanied by a revaluation—does not mean that it will not be necessary for France to take any drastic steps to avoid further depreciation of its currency. It, however, removes the several disadvantages of having a currency unit of a very low value, in which case, any further depreciation is likely to lead to a complete collapse. These disadvantages are: (1) calculations are rendered complicated, in that even small operations have to be expressed in thousands and large transactions in millions of units; (2) even small depreciations in the low valued currency undermine the confidence of one's own countrymen as well as of foreigners; and (3) once this confidence is shaken, it will be difficult for the Government to borrow fresh money. More than anything else, this sort of currency reform will have a psychological reaction in the minds of the people who will have the feeling that their currency has regained its old solid value.

Franc Gains Strength

Immediately after devaluation the devalued franc, quoted in its new "heavy" form, displayed some strength, but this was largely due to covering by those who had sold short. In London, it closed on 29th December (the date of devaluation) at 13.73¼ francs per £, as against the previous Wednesday's rate of 1,178½ old francs. In Paris, dollar was unofficially quoted below the official parity, for the first time in several years, at 4.92 francs, as against the new official parity of 4.94 francs. Sterling was unofficially dealt with on that day at 13.75 francs, as against the official parity of 13.82 francs. It is significant that even the latest rates are still below the new official parity, reflecting the continued firmness of the franc in terms of U.S. dollar and pound sterling. Thus, the latest rates in Paris are 13.77 francs per £ and 4.90 francs per U.S. dollar.

The rupee-franc rate was in the neighbourhood of 8,842 francs per Rs. 100 before devaluation. Immediately after devaluation, it was 103.06 "heavy" francs per Rs. 100, that is, a rupee was equal to 1.03 "heavy" francs. The rate at the time of writing is 103.22 "heavy" francs per Rs. 100.

In order to bolster up the new franc parity and strengthen the French currency reserves, the Bank of England, the Central Banks of Germany, Holland and Belgium, and the Bank for International Settlements have spontaneously offered to place at the disposal of the Bank of France substantial sums, but the extent of aid is not known. A group of American banks, headed by the Chase Manhattan Bank and the First National City Bank of New York, have also offered the French Government a standby credit of $200 million. The confidence reposed by foreign investors in French economy as a result of the measures taken by the de Gaulle Government is also reflected in a rise of $250 million in the French reserves since the beginning of the year. With this increase and taking into account the standby credit offered by foreign banks, the French reserves are estimated to stand at about $1,500 million.

THE
UNION BANK OF INDIA
LIMITED
BOMBAY

PROFIT FOR THE YEAR 1958

The net profit of The Union Bank of India Ltd., for the year ended 31st December 1958 including the sum of Rs. 1,50,331.79 nP brought forward from the last year's account amounts, subject to audit, to Rs. 16,25,551.87 nP. Out of this sum the Directors have made the following appropriations:—

	Rs. nP
(1) To Reserve Fund Account ..	3,00,000.00
(2) To Contingency Account ..	50,000.00
(3) To Depreciation on Bank's Building	50,000.00
(4) To Provision for Taxation Account	4,00,000.00
(5) To Provision made for Bonus to Staff	3,15,000.00
(6) To Balance	5,10,551.87
Rs. ..	16,25,551.87

Out of the above balance the Directors propose to recommend to the Shareholders at the next General Meeting payment of dividend at the rate of 8½% per annum, free of income-tax or 44 nP per share, on 8,00,000 Old Shares and, at the same rate, on 4,00,000 New Shares for three months from 1st October 1958 to 31st December 1958 (11 nP per share), leaving Rs. 1,14,551.87 to be carried forward to the next year's account.

TEXTILE ADVISORY COMMITTEE SET UP

ITS SUGGESTIONS MUST BE IMPLEMENTED PROMPTLY AND EXPEDITIOUSLY

THE long-awaited constitution of the Cotton Textiles Advisory Committee was announced by the Government of India on Thursday the 15th inst. The functions of the Committee, according to the relevant Press note, will be to render advice to the Textile Commissioner on any general or particular questions relating to the cotton textile industry. These include production control, demand for and supply of cloth and yarn for domestic as well as export purposes, rationalisation, rehabilitation and modernisation, and procurement of raw materials, machinery, stores and accessories, etc., required by the industry.

Inasmuch as the scope of the Committee's functions is very comprehensive, the Government has done well to take special care in selecting the personnel of the Committee. Two vital considerations would appear to have been taken into account. One, the members must have intimate knowledge of the problems of the cotton textile industry. Two, due representation should be given to the different interests concerned with the industry—mills, handlooms, cotton, textile and machinery traders, textile machinery manufacturers and labour. The personnel of the Committee is as follows:

Chairman: Mr. D. S. Joshi, I.C.S., Textile Commissioner.

Members: Messrs. K. M. D. Thackersey, Ramnath A. Podar, S. Hatheesingh, Chandansingh Barkatia, G. Sarabhai, Ramratan Gupta, T. P. Chakravarti, R. Deshmukh, G. Devarajulu, I. Cameron, Bharat Ram, Konda Laxman, Raghavendrachar Jaghirdar, Manilal Patel, R. G. Saraiya, N. L. Kara, C. H. Satya, Ratansi Champsi, J. C. Morton, R. L. Makharia, Prabhu V. Mehta, G. A. Kulkarni, S. A. Kher, N. Ullal, A. N. Ghosh, S. R. Vasavada and Miss Maniben Kara.

Secretary: Under Secretary (Co-ordination), Textile Commissioner's Office, Bombay.

The formation of the above Committee is in pursuance of the recommendation made by the Textile Enquiry Committee (Chairman: Mr. D. S. Joshi) in its report submitted to the Government in July last year. In that report, the Committee drew special attention to the absence of any machinery which would ensure a timely survey of the operations of individual mills, particularly of mills which had been found to be operating on unsound or inefficient lines ever a period of years, so that, on getting clear indications of a major worsening of the situation, corrective action could be suggested. It also drew attention to the fact that, even when a closed mill had been restarted after investigation, there was no machinery to ensure that the mill did not get into bad ways again. It was for these and for other reasons connected with the sound and progressive working of the textile industry that the Committee felt that an Advisory Committee consisting of all interests and having representatives from all important textile centres should be set up.

If the advice the Committee will render is to be sound and effective, it is imperative that measures must be taken to see that the Committee is in possession of adequate, correct and up-to-date information on the trends in textile economy not merely in India but the world over. It will be recalled that the Joshi Committee had specifically referred to this aspect and urged the strengthening of the special Survey Wing in the Textile Commissioner's organisation with adequate staff. The Committee stated:

"It would obtain adequate and correct knowledge of the fluctuations in the fortunes of the industry and be forewarned of anticipated difficulties in respect of the industry as a whole or of any unit of the industry, in particular. The Textile Commissioner, assisted by the Advisory Committee, will then be in a position to come to their assistance with constructive suggestions before the crisis develops into something necessitating more drastic remedies."

While the constitution of the Textile Advisory Committee will be widely welcomed, it is necessary to point out that whatever suggestions put forward by the Committee should be implemented promptly and expeditiously. It is necessary to stress this point because there are innumerable instances of the authorities having simply pigeonholed the findings of expert bodies and advisory committees in the past. It is to be hoped that the textile policy of the Government in future would be based strictly on the basis of the Advisory Committee's recommendations.

The appointment of the Committee is of great importance, as the cotton mill industry is passing through a crisis of great magnitude. The cost structure of the industry is persistently rising, on account of heavy taxation—direct and indirect—increase in raw cotton prices, enhanced fuel and power cost, and rise in basic wages, dearness allowance and other benefits conferred on workers by statute or otherwise without regard to productivity. The advance in cost of production has not been accompanied by a corresponding rise in prices of cloth. On the contrary, several mills have had to reduce prices with a view to stimulating consumption. It is not surprising, therefore, that there has of late been a marked fall in mill cloth production brought about by putting certain looms out of commission, by closure of shifts and, in certain cases, by complete closures. If, in spite of the adverse conditions, many mills are trying their best not to close down, it is due to the fact that they are reluctant to undertake the commitments in respect of retrenchment compensation and gratuity on retrenchment.

When one speaks or writes about cotton mill industry, one usually remembers only the composite mills and the purely spinning mills are usually forgotten. It is, therefore, necessary to say a word about them separately. The spinning mills too have been faring no better than the composite mills. Most of them have suffered equally badly, especially as the handlooms, to which they sell their yarn, have also been hit by the depression. An idea of the setback experienced by the spinning mills will be evident from the report that the Madura Mills Company, Ltd., the largest spinning unit in the country, has sustained a loss of Rs. 56 lakhs in 1958. Of this loss, lay-off and retrenchment compensation alone amounted to Rs. 32.25 lakhs. This will show how costly it is to terminate the services of surplus labour.

The basic question confronting the cotton mill industry is how best production cost could be scaled down without adversely affecting the interests of workers. This question figured prominently at a meeting of the Indian Cotton Mills Federation held in Bombay on Thursday last week. The discussions were based on the report prepared by a sub-committee of the Federation, headed by Mr. Ramnath A. Podar, Chairman of the Millowners' Association, Bombay. The contents of the report have not been disclosed. From a brief Press note issued after the meeting, it is gathered that, among the various remedial measures suggested by the Federation was the plea for speeding up rationalisation and modernisation.

At the meeting, it was pointed out that the difficulties of the cotton mill industry began in 1956 consequent on the imposition of a heavy additional excise duty on mill cloth in September and the adoption of other restrictive measures by the Government. At the same time, the industry was called upon to incur heavier manufacturing charges as a result of the increase in dearness allowance and the general rise in the prices of articles consumed by mills. The cumulative effect of all these adverse measures was an abnormal reduction in the volume of production. The situation was further aggravated by the steep fall in exports of cloth in 1958 when they amounted to no more than 600 million yards, on the basis of preliminary estimates.

AUTOMATIC LOOMS

Those cotton mills which wish to install automatic looms in replacement of their existing plain looms are required to apply before 15 th February next in the prescribed forms that can be obtained from the Office of the Textile Commissioner. The allotment of automatic looms, it is said, will broadly be governed by the following conditions:

1. The normal minimum and maximum number of looms allotable for a single unit is fixed at 48 and 144, respectively.

2. The reed space formula currently applicable for replacement of plain looms by plain looms will also be applicable for replacement by automatic looms.

3. The allotment of these looms will be governed by the principles contained in the recommendations of the fifteenth session of the Indian Labour Conference (I L C)—held in July 1957—in regard to modernisation and rationalisation.

Steel is the starting point in a country's progress towards economic self-sufficiency. In India today there exists a wide gap between requirements and production of steel. While the present annual production is only 1,430,000 tons, by the end of the Second Five Year Plan the country will need at least 6,000,000 tons a year.

The public and private sectors have joined hands to narrow this gap by the establishment of three new

SPINNERS CRITICISE PACT WITH HONG KONG

PLEA FOR REMOVING WORLD TEXTILE SURPLUS

From A Special Correspondent

MANCHESTER, 13*th January*

IT was only to be expected that such a controversial issue as the Hong Kong cotton pact, which has hung fire for so long, should, on its conclusion, create a prolonged talking point for Lancashire traders. Whatever the subsequent attitude of India and Pakistan to this arrangement, the local trade is not likely to drop the topic for some time to come. At best, the scheme offers Lancashire some relief from prevailing doubts as to how much cloth will be imported in the future for retention in the home market. Given a guide for a three-year period, plans can be laid. The mood of millowners, however, is far from tranquil enough to allow them to settle their future quite so easily. Hong Kong was only one obstacle ahead, even if it was the most highly publicised one.

MANCHESTER LETTER

Decisions on whether to continue trading, whether to go flat out for intensive modernisation or whether to diversify to a greater extent their activities are matters which individual managements can only work out for themselves in their own particular circumstances. Hopes that new-found stability would usher in a changed era, expressed in some quarters at the conclusion of the negotiations with Hong Kong, cannot be fulfilled immediately, nor even in the three-year breathing space.

"High" Ceiling

Not all the comment on the voluntary undertaking by Hong Kong, however, was even moderately favourable. The Central Committee of the Cotton Spinners' and Manufacturers' Association, representing owners of nearly 1,000 Lancashire weaving mills, said in Manchester that the settlement was not all that could be wished and the ceiling for piecegoods was uncomfortably high. But they added that it would at least provide stability and give assurance that imports into the United Kingdom home market from Hong Kong could not exceed certain limits during the next three years.

Mr. J. Michael Grey, the Chairman, said after the meeting in a prepared statement: "If similar agreements provisionally negotiated with India and Pakistan can now be ratified then the United Kingdom industry and its customers in the home market will be assured of some stability and defence against a problem which has been growing unchecked for several years. This would at least provide Lancashire with breathing space in which to adjust itself to the likely future conditions."

The new agreement between Lancashire and Hong Kong on the limitation of textile shipments to Lancashire came in for more criticism from owners of 400 Lancashire spinning mills. After examining the terms of the undertaking in detail in Manchester, the Master Spinners' Federation, representing the spinning employers, said that they considered the ceiling figures fixed for retained imports of grey cloth and made-up goods—115 million square yards and 46 million yards, respectively—were "higher than was justified." They also deplored that no provision had been made in the agreement limiting imports of yarn from Hong Kong.

In a statement, the Federation pointed out that it still felt that the U.K. Government itself should take the responsibility for fixing and implementing ceiling figures of imports from Colonies and Commonwealth countries, in view of the fact that imports from low standard living areas within the Commonwealth were a problem affecting large sectors of U.K. industry in addition to textiles. It added: "We now consider that it is more important than ever that legislation should be passed to ensure that all textiles sold in the U.K. should be clearly marked to indicate their exact origin and that only goods spun, woven, finished and made-up in the U.K. should qualify as being of U.K. origin."

Garment Imports

Nor is the clothing industry happy about the terms of the agreement under which Hong Kong has voluntarily agreed to limit its textile exports to the United Kingdom for a period of three years. Mr. A. L. Beckett, Chairman of the Garment Manufacturers Section of the Manchester Chamber of Commerce, told the annual meeting that a deputation of clothing trade leaders had already met Sir Frank Lee, Permanent Secretary to the Board of Trade, and other senior officials and had made it clear that the industry did not in any way accept an agreement between the Lancashire and Hong Kong cotton industries as binding upon clothing manufacturers. Mr. Beckett said: "They maintained the right to approach H.M. Government at any time on the subject of clothing imports and to demand such protection as might be justified by evidence produced."

These representations were made before the announcement of final agreement with Hong Kong, but there is nothing in the agreement likely to change the clothing manufacturers' attitude. Their attitude is that, while a figure for made-up goods is included in the agreement, this does not constitute any sort of limitation and, in fact, can be increased, in the words of Mr. Beckett, "so as to account for the whole amount of the quota agreed for cotton goods of all kinds."

Figures quoted at the meeting underlined the progress made by Hong Kong's clothing industry in developing exports to the United Kingdom. Although the woven shirt trade showed a declined in the first ten months of last year, there were sharp rises—and, according to Mr. Beckett, an "alarming threat"—in shipments of other types of garments. Arrivals of brassieres rose to 1,200,000, as compared with only 120,000 in the first ten months of 1957, blouses to 5,000,000 garments, as against 2,500,000, headwear to 12,400 dozen, as against, 4,500 dozen, and arrivals of woven nightwear and nightwear from Hong Kong increased in value to £154,000, as compared with £41,000 in the same period of 1957.

Cotton Compensation

The claim by the Lancashire cotton unions for compensation payments to millworkers who lose their jobs when mills close down is to go before the Industrial Disputes Tribunal. The hearing will take place in London on 3rd February. The employers' organisations have twice rejected the unions' application which proposed the setting up of a central fund from which payment could be made. At the outset, they urged that each mill should pay into the fund each week the equivalent of one quarter of one per cent. of its wages bill.

In turning down the application, the millowners said that protection against unemployment was a matter for the State. But they pointed out that, whilst they were opposed to a central compensation claim, there was nothing to prevent individual mills paying compensation to redundant workers, if they wished to do so.

Surplus Output

An international study of textile production and consumption problems in a bid to narrow the gap between the two has been urged by Mr. W. Crossley, Chairman of the Finishing and Allied Trades Section of the Manchester Chamber of Commerce. He told the annual meeting: "It seems clear that, in spite of the fact that a large portion of the world's population is still inadequately clothed, there is at present—in the free world at any rate—more production than the consumer is either capable or desirous of absorbing."

Mr. Crossley said that, failing a move on these lines, the textile finishing industry in Britain would have to consider its redundancy problem. In his opinion, "it may be that our ultimate salvation will lie in a marked reduction in the number of individual units engaged in the industry."

Overseas Opportunities

Perhaps because so many doubtful factors clouded the outlook at the time they were written, the annual sectional reports issued by the Manchester Chamber of Commerce this year make less forceful reading than on some past occasions. On the export side particularly, the continual reference to lower shipments of textiles offers a depressing note, not calculated to create much confidence for the future. The report of the Africa section emphasises that native crops have a major bearing on purchasing power in most of the territories involved. Current crop advices indicate a sharp fall on last season's levels. In Northern Nigeria, the groundnut crop is distinctly lower and the prices being paid to farmers have also been reduced. Raw cotton supplies are also likely to show a contraction, from over 120,000 tons to 75,000 tons. "Unless there is an unusually sharp fall in imports in the last four months of the year," the report adds, "it seems safe to prophesy very adequate supplies of textiles will be available in Nigeria. By contrast, the indications are that textile imports into Ghana will be lower than in recent years."—*All Rights Reserved.*

COTTON EXPORT POLICY

NO REDUCTION IN DUTY

THE cotton traders' meeting with Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, on the 16th inst. at Bombay, provided an appropriate occasion for them to apprise him of their difficulties and grievances. Mr. Shastri showed genuine appreciation of the difficulties of the trade and spent considerable time discussing them. However, those who had entertained hopes of a reduction in, or abolition of, export duty were naturally disappointed at the Minister's categorical statement that there was no intention of reducing the export duty in the present circumstances. The recent large export quota, he pointed out, had met with the wishes of the cotton dealers and the reduction of export duty had further helped them. In spite of the large quota, exports had not been satisfactory. He urged the trade to pay special attention to exports and hoped that it would be possible to exhaust the full quota. He asked the trade not to be content with reaching the export level of last year which was of the order of barely 300,000 bales.

The Minister's statement is welcome, if for no other reason, at least for the fact that it will set at rest all speculation regarding duty reduction. He did well to point out that no uncertainty should be created in the market which might affect exports.

Despite the announcement of a large quota in the season and the reduction in duty to Rs. 25 per bale, exports have failed to pick up. For instance, of the total quota of 500,000 bales released so far in the season, sales registered up to the end of last month aggregated only a little more than 50,000 bales. Sluggish conditions in the world textile market, keen competition from countries like Pakistan, and currency shortage with India's traditional customers are the main reasons for the poor export performance. It is recognised on all hands that every effort should be made both by the Government and the cotton trade to push up exports.

Trade quarters had urged that the Government, on its part, should not only remove all fiscal impediments such as export taxes or other levies, but also give sufficient incentives for stepping up exports. A section of the trade, however, was sceptical whether a reduction in, or even an abolition of, the export duty would help exports. Past experience had shown that a reduction of export duty, instead of resulting in larger sales abroad, had the opposite effect of a rise in prices. Moreover, a mere fiscal manipulation, it was felt, would be of little help in a situation brought about by higher domestic prices and the slackness of world textile market. Obviously, the Government had been influenced by this line of reasoning.

Suggested Measures

Mr. Shastri was of the view that, since the Government had done almost all that could possibly be done in the matter, it was now up to the trade to do its best to push up exports. But the trade felt that there was much that the Government could still do in promoting exports. Mr. Madan Mohan Ruia, President of the East India Cotton Association, urged that special consideration should be given to some urgent measures for stimulating larger exports. It was suggested, for instance, that cotton should be included in the export incentive scheme formulated by the Government for various export items and that exporters should be allowed to retain a percentage of the foreign exchange earnings obtained on exports of cotton for importing foreign cotton. It was also urged that, considering the currency shortage with India's traditional customers, bilateral trade agreements, permitting foreign buyers to pay for their purchases of cotton in their own currencies, should be concluded. Another suggestion was that the Government should take up with the Shipping Lines the question of revision of freight rates on raw cotton shipments.

Although the Minister did not make any specific commitments regarding these suggestions, his statement that the Government was keeping a constant watch over the situation and was ready to take steps in the light of developments was interpreted as indicating a helpful attitude in the matter.

Mr. Shastri did not agree with the plea of Mr. Ruia that the floor and ceiling prices fixed for cotton should be abolished, so as to enable the hedge market to function smoothly. He pointed out that there was no price control for cotton at present. Only the floors and ceilings were fixed which he felt was in the best interest of the grower, the industry and the trade.

The trade took the opportunity to tell the Minister of the tight supply position of long-staple cotton and urged the release of sufficient quotas. He assured the trade and the mills that the Government would keep in mind the needs and requirements of the industry and take necessary steps at the appropriate time.

WORLD COTTON SITUATION

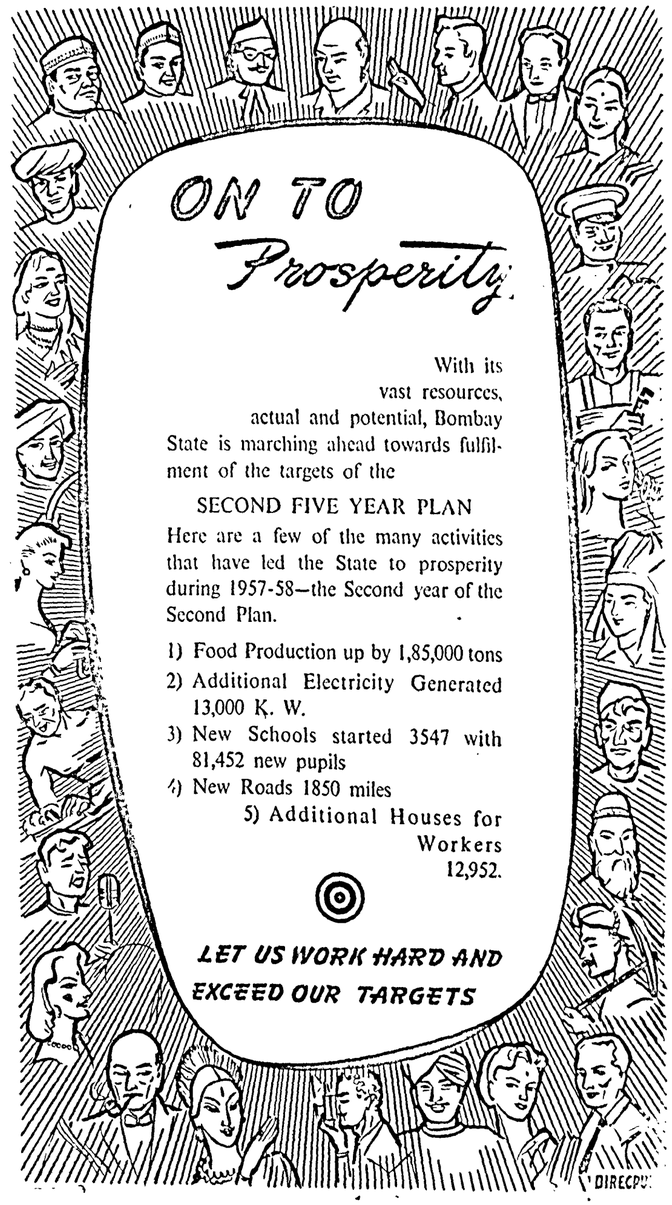
The world cotton situation this season did not appear to be favourable, according to the International Cotton Advisory Committee, Washington. The Committee, in its December review of the world cotton situation, forecast that production this season would increase and consumption decline. This possibility, according to it, had already been reflected in lower cotton prices in many markets. There was also a danger of a recurring cotton surplus. The Committee held that, if the present relationship between the price of U.S. cotton and other growths persisted, the United States was likely to bear the brunt of any contraction in cotton trade. U.S. exports could fall to below 3.5 million bales, as compared with the 5.7 million bales exported last season, and the opportunity for reducing carryover stocks on 1st August 1959, was quite limited.

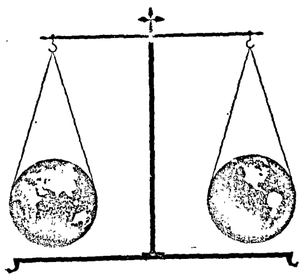
GAMMA-RAYS BOOST COTTON CROP YIELD

An experimental plantation of the Uzbek University in U.S.S.R. has obtained a big crop of cotton raised from seeds subjected to treatment of gamma-rays of the isotope of cobalt before being planted. Research has shown that seeds subjected to irradiation of radioactive substances display new qualities—increased vitality, 100 per cent. germination, more intense vegetation (the plants ripen seven to ten days sooner than usual). By applying gamma-rays of the isotope of cobalt each cotton bush on the experimental plantation yielded on an average five bolls more than on the control plants. Each of these bolls weighed from 1.5 to 2 grams more.

PAKISTAN COTTON

The latest estimate of the area under cotton in Pakistan in the 1958-59 season puts the acreage at 3.33 million, as against the corresponding estimate of 3.41 million last season. Although the acreage thus showed a decrease of 2.2 per cent., production of cotton is estimated higher at 1.6 million bales, as against 1.58 million bales last season. Of the estimated production, 1.43 million bales are expected to be American seed cotton and 170,000 bales *Desi* variety.





In both hemispheres...

... there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

WHY ARE SUGAR PRICES HIGH?

PRODUCERS' EXPLANATION

ALTHOUGH the sugar industry in India has been endeavouring its best to maintain as high a level of output as possible, it is unfortunately subjected to much unwarranted criticism in Parliament and a section of the Press. The criticism is mainly on the score that the currently ruling high prices of sugar are due to profiteering by manufacturers. Such an impression has been created, to a large extent, by the politicians of Uttar Pradesh and Bihar, not excluding Congress men, who, with the sole motive of winning votes, have launched a persistent campaign for higher cane prices and share in the profits of sugar mills. The allegations of profiteering, etc., levelled against the sugar industry are not only baseless but also unjustified and must be refuted with full facts and figures. The President (Mr. P. Hadfield), and members of the Indian Sugar Mills Association (I.S.M.A.) certainly did well in holding a Press conference at New Delhi on the 15th inst. with the object of enlightening the public on the correct position of the industry and the series of disquieting problems confronting it.

The spokesmen of sugar millowners sought to emphasise in particular that, out of every rupee the public spent on sugar, cane cost accounted for as much as 36.5 per cent., taxation—Central and State—for 33 per cent., and transport and retail distribution charges for 10 per cent., leaving the industry with just 20.5 per cent. to cover manufacturing charges, to put money aside for reserves, so that machinery may be replaced at today's enhanced costs when it is worn out, and to pay a dividend. They cited the Reserve Bank statistics (1951-55) to show that the profits after taxation as percentage of net worth (paid-up capital and reserve plus balance of profits) in the case of sugar industry compared unfavourably with the profits earned by other industries, being only 10 per cent., as against the percentage share of 17.6 for iron and steel, 14.3 for tea, 14 for other plantations, 11 for cement and 11 for matches. Why then, they asked, was the sugar manufacturer exposed to criticisms to a much greater extent than producers of other products? The answer to the poser given by the spokesmen of the sugar industry is as follows:

"....the supplier of raw material to the sugar factory is intimately connected with the factory which processes his product. The grower of cotton has no means of knowing whether his crop is finally turned into cloth in a local mill or one situated many hundred miles distant. He does not know who to blame for what he regards as less than satisfactory prices. The grower of sugarcane, on the other hand, is tempted to lay responsibility for his lack of prosperity at the door of the factory to whom he delivers his cane, and it is the common experience of those who wish to plead a cause in a democracy that, the louder they shout, the better the chances of their pleading meeting with success. This great difference between the sugar industry and others is, the Association believes, the main cause for much unreasonable criticism."

Cost Structure

There is considerable force in these remarks, as also in the statement that there is absolutely no scope for increasing the share of cane in the existing price of sugar. This point would be appreciated better if one were to take into account the changes in the cost structure of the industry during the last few years. The table below explains the correct position:

	1946-47	1957-58	Rise or fall
	Rs.	Rs.	Per cent.
Sugarcane price, including transport charges	12.62	14.70	+16
Taxes (Central excise duty, cane cess, co-operative societies' commission) ..	2.97	13.16	+342
Manufacturing charges, including salary, wages and packing	3.75	6.05	+61
Overhead charges and profit subject to taxation	2.20	2.19	—0.5
Total ..	21.54	36.10	
Less for molasses	0.10	0.10	
Ex-factory price	21.44	36.00	+68

It will be seen from the above figures that the taxes levied by the Government show a phenomenal increase of 342 per cent., the cost of cane has gone up, and manufacturing charges have risen, thanks chiefly to higher prices of stores and enhanced labour charges. In sharp contrast to the increase in all these items, the one item which has declined is that of overheads and the gross profit margin allowed to the industry. In this connection, attention was drawn at the New Delhi Press conference to the fact that reduced duration of the current crushing season and lower recovery of sugar from cane would increase the manufacturing cost; the cost would further go up as a result of the reported recommendations for an interim wage increase of Rs. 3 made by the Central Wage Board for Sugar Industry.

The sugar industry's spokesmen regretted that the Government had not appreciated the industry's viewpoint and had saddled it with a very uneconomic price which, they warned, would definitely affect in the long run the industry's efforts to further progress. "The fixation of uneconomic ex-factory prices (Rs. 36 per maund for sugar of I.S.S. D.29 for U.P. and North Bihar and Rs. 36.50 for Punjab)," to quote them, "is bound to affect sugar production, because the factory cannot afford to draw cane from distant areas, particularly towards the close of the season."

Growth of "Khandsari"

A disquieting problem facing the sugar industry, to which the President and members of the I.S.M.A. drew pointed attention, related to the "sudden and large-scale" growth of *khandsari* units. How such a growth has hampered the production of white sugar, especially in West U.P., will be evident from the fact that the total quantity of sugar actually produced in this region (West U.P.) during 1957-58 was no more than 621,000 tons, as against the peak output of 752,000 tons in 1956-57); the estimated production in 1958-59 is put lower still at 587,000 tons. The diversion of cane to *khandsari* in West U.P. during the 1957-58 season accounted for a loss of about 20 per cent. of the estimated cane supply. In certain cases, factories have reported loss of as much as 40 per cent. of the estimated supply. As a result, while the production of sugar has suffered, the production of *khandsari* in the areas of these factories has shown an appreciable increase. According to the Union Food Minister, the production of *khandsari* last year amounted to 200,000 to 300,000 tons, as against about 100,000 tons in the previous years, which means 200 to 300 per cent. of the previous output. This has been mostly at the cost of sugar production and to a lesser extent of *gur* also.

The marked growth of the *khandsari* industry was attributed, and rightly, to the growing tax burden on white sugar, as compared with the complete immunity of *khandsari* units from such burden. The Central excise duty on white sugar, which was only Rs. 4.12 per maund before May 1957, is now as high as Rs. 10.70. Besides this tax, the sugar factories pay cane cess and co-operative societies' commission which bring the total tax burden to Rs. 13.16. Being completely exempt from such a crushing burden, the *khandsari* units get an indirect protection to the extent of Rs. 13.16 per maund.

No one will oppose the existence of *khandsari* units as a cottage industry supplementing the cane growers' earnings in areas where there are no sugar factories to buy their cane. But what one does not appreciate is the justification for permitting these units in the cane areas of sugar factories. Although the Government has appreciated this point and issued a warning to prospective *khandsari* manufacturers, no effective action has yet been taken to halt the actual setting up of these *khandsaris*. In the considered opinion of white sugar producers, the only effective way for the Government to deal with the situation is to impose an appropriate excise duty on *khandsari* sugar. It is feared that, as time passes, more and more *khandsari* units will be put up and the problem thereafter will become more difficult. To quote the spokesmen of the industry again:

"With the advantages now enjoyed by the *khandsari* units, it is likely that this will not remain confined to West U.P., but, in due course, will spread in other areas also and dominate the sugar industry in the whole country. The difficulties encountered by the textile industry as a result of the undue encouragement given to the powerlooms are too well known. A similar situation may develop in the case of sugar industry also, if timely and appropriate steps are not taken."

The apprehensions of the growth of *khandsaris* dominating the sugar industry in the whole country are, however, somewhat exaggerated. As this journal pointed out on an earlier occasion, *khandsari* production will not touch a level that will offer stiff competition to white sugar, especially when the sugar consuming capacity of the country is expanding. Moreover, the consumption of *khandsari* sugar is rather limited and, although it is available at lower prices than white sugar, consumer preference is and will always be for white sugar.

The situation, however, needs to be carefully watched and the Government should take steps to see that the growth of *khandsaris* is not at the expense of the white sugar industry. Few would deny that the nature of *khandsari* production is uneconomic and wasteful. A *khandsari* unit recovers 6 to 7 per cent. sugar from cane crushed, as against 10 per cent. in the vacuum pan sugar factory. The diversion of 1.5 million tons of cane in West U.P. during 1957-58 resulted in a loss of Rs. 4.5 crores for the country (in terms of sugar lost), Rs. 4.4 crores by way of excise to the Centre, in addition to loss of corporation tax as a result of lower profits of mills, and Rs. 76 lakhs by way of cane cess to the State Government.

FUEL NEEDS OF INDIA

CENTRAL RESEARCH INSTITUTE'S USEFUL WORK

THE quantum of energy generated and utilised by a country provides an index of its prosperity and industrial activity. Measured by this yardstick, India, which consumes about 100 therms of energy per head per annum (equivalent to ¼ ton of coal), is ranked as one of the most underdeveloped countries. In most countries, solid fuels form the largest source of energy. This is true of India too. Although there is vast scope for further development of hydel energy, liquid fuel and atomic energy, coal will hold the field for many decades to come, for India has large reserves of it which can be more easily developed than the others.

Even the known reserves of coal in India are estimated to be sufficient, in terms of quantity, for any demand that may arise in future. But all the coals that it has are not suited for the particular and the various specialised needs of industries. The problem is, therefore, one of ascertaining whether the country possesses sufficient quantities of coal of the required varieties to meet the needs of its growing industries. It is here that scientific research comes into play. Fuel research, particularly coal research, serves another purpose. Fuel leaves many by-products valuable for the chemical industry. From coal are derived such important products as dyes, drugs, disinfectants, industrial explosives and fertilisers. Research enables us to extract these and other useful commodities from coal. These considerations and objects led to the establishment of the Fuel Research Committee in 1940. The Committee's chief recommendation was the formation of a well-equipped institute for fuel research. Accordingly, the foundation of the Fuel Research Institute was laid at Digwadih, about nine miles from Dhanbad, situated in the heart of the Central India coalfields area. The Institute was opened in April 1950.

The First Task

The first task of the Institute was to assess the nature of coal reserves and to this end a systematic physical and chemical survey of the various coalfields was organised. Six regional coal survey stations, with fully equipped laboratories, were established in the major coalfields of India, namely, at Jharia, Raniganj, Ranchi, Bilaspur, Jorhat and Hyderabad. The survey is a continuous one and the aims and objects of it vary with the immediate and long-term industrial objectives of the country.

The Fuel Research Institute's survey has revealed that the country is extremely short of high quality coals of all kinds, coking, gas, high calorific value, non-coking coals, etc. Along with this survey, the Institute undertook the task of upgrading inferior coals of all kinds for replacement of the naturally occurring high quality coals when the demand exceeds the supply of the latter. Large reserves of coking coal of inferior variety have been surveyed for upgrading. Simultaneously, blending tests have been carried out for coking of coal for metallurgical coke manufacture, so that the existing reserves of metallurgical coal can be conserved further. The work done in this respect (at the Fuel Research Institute and at the Coal Blending and Coking Research Organisation at Jamshedpur) has shown that it is possible to obtain good metallurgical coke to meet the requirements of the iron and steel industry.

The Central Fuel Research Institute has been a pioneer in the field of coal cleaning in India. This fact was amply recognised by the

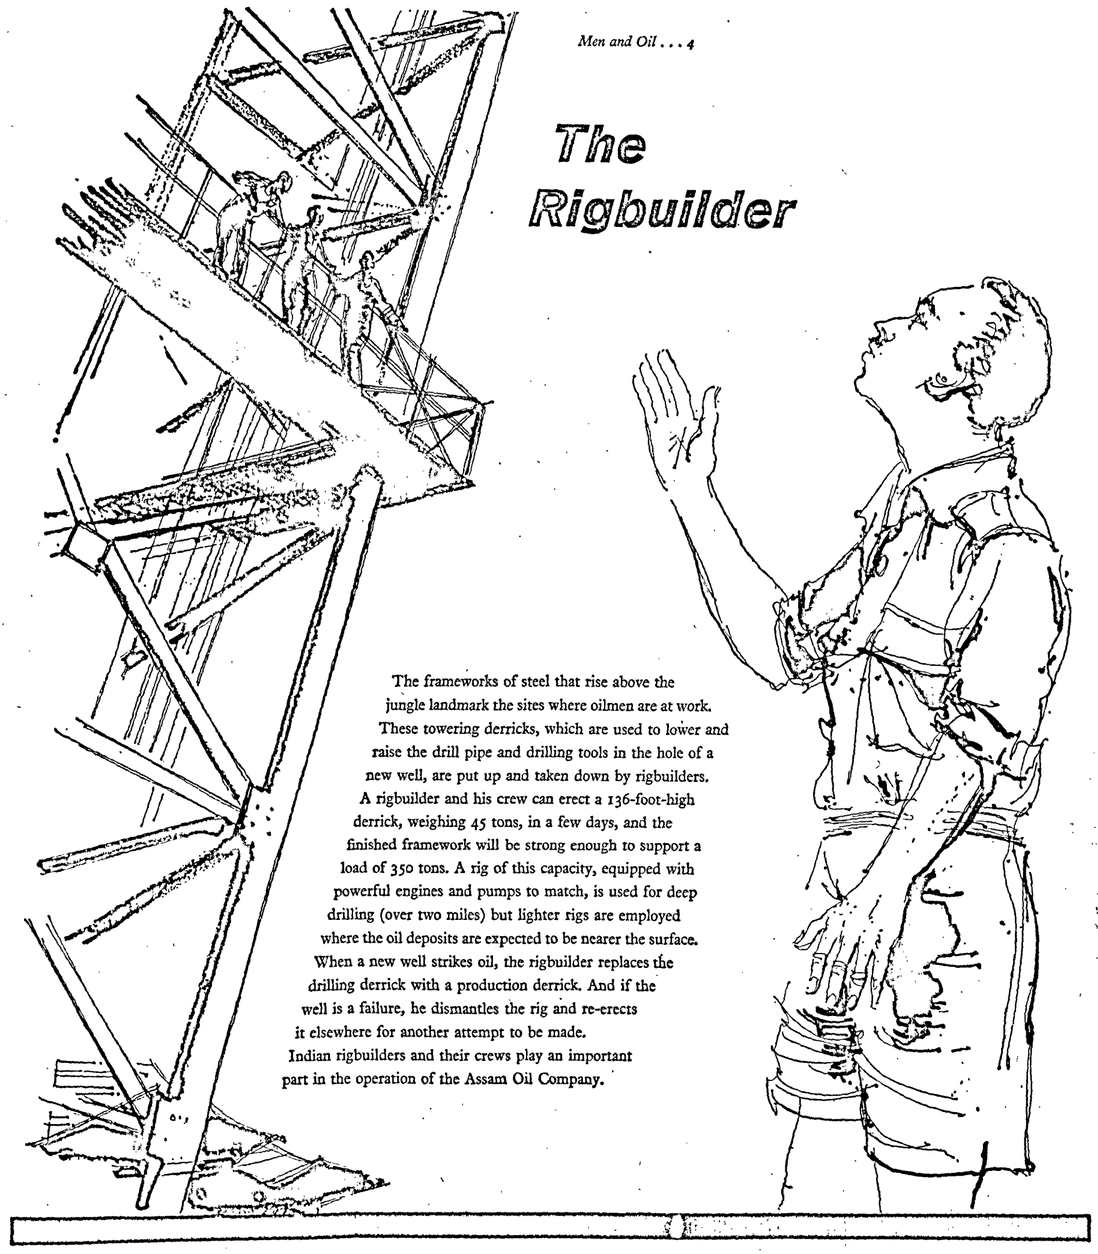
Men and Oil . . . 4

The Rigbuilder



The frameworks of steel that rise above the jungle landmark the sites where oilmen are at work. These towering derricks, which are used to lower and raise the drill pipe and drilling tools in the hole of a new well, are put up and taken down by rigbuilders. A rigbuilder and his crew can erect a 136-foot-high derrick, weighing 45 tons, in a few days, and the finished framework will be strong enough to support a load of 350 tons. A rig of this capacity, equipped with powerful engines and pumps to match, is used for deep drilling (over two miles) but lighter rigs are employed where the oil deposits are expected to be nearer the surface. When a new well strikes oil, the rigbuilder replaces the drilling derrick with a production derrick. And if the well is a failure, he dismantles the rig and re-erects it elsewhere for another attempt to be made. Indian rigbuilders and their crews play an important part in the operation of the Assam Oil Company.

BIRKMYRE BROTHERS LIMITED

JOINT COUNCIL FORMED BY T.I.S.CO.

CLOSER ASSOCIATION OF WORKERS IN MANAGEMENT

AT Jamshedpur, the Ruhr of India, a notable experiment in industrial democracy is being tried by the workers and management of the Tata Iron and Steel Company (T.I.S.Co.). The experiment, which seeks to associate the employees with the management of T.I.S.Co., is said to be working successfully. With the inauguration of the Joint Consultative Council of Management on the 12th inst. at Jamshedpur, the three-tier structure of joint councils, envisaged in the agreement the Company entered into with the Tata Workers' Union in August 1956, is complete. The Council stands at the apex of the three-tier structure of joint councils. As provided for in the agreement, to begin with, 27 Joint Departmental Councils were set up for the various works departments in 1957. A Joint Works Council was formed in March 1958 for the works side and a parallel Joint Town Council was set up in November 1958 covering the departments outside the works side. Above the Works and Town Council, at the apex, stands the Joint Consultative Council of Management, now formed. The Council consists of eight representatives of the management and an equal number of representatives of employees, in addition to the Chairman, Mr. Jehangir Ghandy, Director-in-charge of T.I.S.Co.

The Council will advise the management of T.I.S.Co. on all matters concerning the working of the industry in the fields of production and welfare as also in regard to economic and financial matters placed before it by the management, excluding questions affecting the relations of the Company with its shareholders or managerial staff or those concerning taxes or other confidential matters. The Council will also consider and advise on any matter referred to it by the Joint Works Council or the Joint Town Council.

Speaking at the first meeting of the Council, Mr. Jehangir Ghandy referred to the delay in the formation of the Council. Since T.I.S.Co., he pointed out, was the first organisation in India to initiate a scheme for closer association of employees with management, "it was a new field for us and there was no sign-posts to guide us." A lot of spade-work had, therefore, to be done before the scheme could be put into practice and a lot of teething troubles had to be overcome and various procedural matters settled from time to time.

In contrast to the failure of joint consultation in some of the other industrial concerns in India and the reluctance of many organisations to provide for employees' association with management, joint consultation in T.I.S.Co. has been a success. According to Mr. Ghandy, not only had the relatively orthodox form of joint consultation been practised with success for many years now at T.I.S.Co., but the new joint councils, set up under the agreement of 1956, have also been functioning effectively, as was reflected in the working of the Joint Works Council. For instance, out of a number of items discussed in the Council in 1958; 68 per cent. had been implemented, 12 per cent. either dropped or had failed to command general agreement and only 20 per cent. were pending consideration. Further, both the Joint Works Council and Joint Departmental Council had, of late, shown a gradual shift of emphasis from welfare to production. It may be noted here that this is in keeping with the trend of similar councils in Europe.

The Joint Consultative Council of Management will certainly aid in securing increased productivity and better functioning of the various departments. It will also give employees an opportunity for self-expression which is bound to promote better employer-employee relations. But no scheme for associating employees with management will succeed, unless there is a proper definition of the functions of the Joint Council. The representatives of workers and management have, therefore, done well to specify what the Council should do and what it should not. It is also important, as Mr. Ghandy pointed out, that there must be a proper appreciation of the terms of reference within which the Council has to function. Given the necessary help and co-operation between the workers and the management, the Council can fulfil the purpose for which it has been set up.

T.I.S.Co.'s experiment is of more than local importance. It will set the pattern for other organisations which might desire to try the experiment. It will not only contribute to the prosperity of the Company and promote good relations between the management and workers but will also help in the development of better industrial relations in India as a whole. The success of the scheme will depend to a large extent on the attitude of workers to it. It is heartening to note that Mr. Michael John, President of the Tata Workers' Union, has assured the Union's co-operation in making it a success. The T.I.S.Co. workers have a long tradition of solving their problems by negotiation with the management. Prof. J. H. Richardson, the well-known British expert in Industrial Relations, currently in India, who was present at the first meeting of the Council, noted that there was a genuine desire on the part of both management and employees to work together for the success of the new scheme. He hoped that the rank and file would be interested in the new system of joint consultation and that necessary information would constantly travel up and down. Both the management and workers at Jamshedpur, he felt, were convinced of the value of joint consultation.

INDUSTRIAL EMPLOYMENT ACT

The Industrial Employment (Standing Orders) (Bombay Amendment) Act, 1957, has been brought into force from 15th January 1959. The revised rules under the Industrial Employment (Standing Orders) Act, as amended, and two sets of model standing orders, one for workmen doing manual or technical work and the other for workmen employed on clerical or supervisory work, have also been brought into force with effect from the 15th inst. The main changes effected by the new Act are given below: (1) The Industrial Employment (Standing Orders) Act, which is at present applicable to establishments employing 100 workmen or more, will apply to all establishments employing 50 workmen or more and thus cover a larger number of establishments and workmen employed thereunder. (2) The definition of "workmen" having been enlarged to include even supervisory and technical workmen, two sets of model standing orders have been prescribed, one for manual and technical workmen and the other for clerical and supervisory workmen. (3) The standing orders which have already been certified under the Act and have come into operation will not be affected and will continue to apply to the establishments concerned. In regard to other establishments and categories of workmen to whom certified standing orders are not applicable, the model standing orders will be applicable from 15th January. (4) Within six months from 15th January the employers and workmen concerned may submit to the certifying officer, namely, the Commissioner of Labour, Bombay, draft amendments to the model standing orders applicable to them according to the requirements of each individual establishment. The certifying officer will, after consulting the other party, decide whether any modifications to the draft amendments are necessary and then certify draft amendments with or without modifications, as the case may be. (5) The definition of the term "employer" is enlarged and the owner of an establishment who enters into a contract with a person for doing any work which is ordinarily part of the establishment would be the employer for the workmen employed by the contractor on the premises of the establishment. (6) Suitable provision has been made for dealing with contraventions of the Act or rules made thereunder and the courts competent to deal with cases of such contravention have been empowered to require an employer to pay adequate compensation to the workmen affected by the contravention. (7) In order that a suitable provision can be made in the standing orders for prescribing the age for retirement or superannuation of the workmen, a new item, namely, age for retirement or superannuation, has been added in the schedule.

P 3206

ACHIEVEMENTS OF INTERNATIONAL GEOPHYSICAL YEAR

SUCCESSFUL LAUNCHING OF ROCKETS

BY far the most important achievement of the International Geophysical Year (I.G.Y.) which commenced on 1st July 1957 and ended on 31st December 1958, is the successful launching of artificial satellites. It will be some time before the data collected during the period are analysed and presented to the public. These are bound to throw a great deal of new light on the facts of world geography and the universe around the earth. But the year will, however, be long remembered as a period which marked the commencement of a new era which has brought the possibility of inter-planetary travel well within the bounds of human possibility.

Reviewing the tentative findings of the I.G.Y., Mr. William I. Laurence, writing in the *New York Times*, points out that an intense band of radiation increasing in intensity with altitude to a height as yet undetermined has been discovered to begin at a height of 250 miles. New light has been shed upon weather and climate, the influence of the Antarctic on world weather, the currents in the oceans and on the inter-relationships of phenomena in the upper atmosphere and terrestrial events. Further, according to the author, a vast mineral-rich region has been discovered in the Pacific. Millions of square miles of the South-West Pacific, it is stated, bear a bottom sludge laden with nodules of manganese and iron with upto 1 per cent. of cobalt mixed with copper. The value of these minerals is estimated at about $500,000 per square mile and the economics of dredging is stated to be promising.

Few events have had a greater psychological impact on the lay and the scientific world than the launching of the cosmic rocket by Russia on 2nd January. In the race into space between the U.S. and the U.S.S.R., which commenced some 15 months ago, with the Russian announcement of the launching of the first satellite around the earth, the lead has been maintained by Russia. The following is the chronology of the events in the space era:

4th October 1957. Russians launch Sputnik I; 184 pounds; maximum altitude 560 miles. Disintegrated after three months.

3rd November 1957. Russians launch Sputnik II; 1,120 pounds, with a dog aboard; maximum altitude 1,056 miles. Disintegrated after four and one-half months.

31st January 1958. U.S. launches Explorer I; 30.8 pounds; maximum altitude 1,587 miles. Expected to orbit for three to five years.

17th March 1958. U. S. launches Vanguard II; 3.25 pounds; maximum altitude 2,466 miles. Expected to orbit at least 200 years.

26th March 1958. U.S. launches Explorer III; 31 pounds; maximum altitude 1,741 miles. Disintegrated after three months.

15th May 1958. Russians launch Sputnik III; 2,925.53 pounds (including 2,129 pounds of instruments and a carrier of unspecified weight); maximum altitude 1,168 miles.

26th July 1958. U.S. launches Explorer IV; 38.43 pounds (including 18.26 pounds of instruments); maximum altitude 1,380 miles. Expected to orbit for a few years.

11th October 1958. U.S. launches Pioneer I in an effort to hit or orbit the moon. Soared 71,300 miles, then fell back and disintegrated.

8th November 1958. U.S. launches Pioneer II in a second attempt to reach the moon. Crashed back after flight of 7,500 miles.

6th December 1958. U.S. launches Pioneer III aimed at passing the moon. Tumbled back and disintegrated after reaching height of 66,654 miles.

18th December 1958. U.S. launches Atlas I; weight 8,700 pounds (including 167 pounds of instruments); maximum altitude 928 miles.

Launched into a trajectory in the direction of the moon, the Russian cosmic rocket, which has been named the Lunik, passed the moon on 4th January to swing into the sun's orbit and thus become the first artificial solar satellite. The rocket is believed to have reached its nearest point to the sun on 14th January at a distance of about 91 million miles from the sun and is now on 214-million mile orbit which it would take 15 months to complete; it will attain a maximum distance of 122 million miles in September next. It may be mentioned here that the earth's average distance from the sun is 93 million miles.

The plane of the rocket's orbit is said to be virtually identical to that of the earth's orbit. The rocket, which weighs about 1.45 ton, is equipped with a special container, inside which are placed the measuring instruments for carrying out scientific observations relating to the magnetic field of the moon, the cosmic rays outside the magnetic field of the earth, cosmic radiation, the radioactivity of the moon, gas components of inter-planetary matter, corpuscular solar radiation and meteoric particles. The main purpose of launching the rocket, it is stated, is to obtain fundamentally new scientific data on cosmic rays unaffected by the earth's magnetic field and also new information about inter-planetary substances.

To break into space, the Lunik had to achieve what the Russians call second cosmic speed, about 7 miles per second; the first cosmic speed would be about 6.5 miles per second needed to put a satellite into orbit. It is the achievement of the second cosmic speed that has made inter-planetary flights possible. Some Soviet scientists predict that space travel by man might become a practical possibility within seven years. According to the Soviet Communist Party newspaper, the *Pravda*, the "next stage must be the further exploration of cosmic space round the sun, the investigation of the planets and the solar system and manned flights to other planets." Russia, it is stated, has already started training the first man to be rocketed into space.

The planets which are frequently mentioned in connection with inter-planetary travel are Venus, Mars and the moon. So far as it is known, none of these planets has a hospitable climate. Venus is boiling hot and Mars is known to be freezing cold. At the claimed rocket speed of 4,000 miles an hour, the moon is only 65 hours' journey from the earth. But there is a total absence of atmosphere, so that oxygen masks will have to be used by visitors to the moon. They will also have to cover themselves with suits, the temperature in which can be controlled, considering that outside temperature in the moon will be about 200° F below zero in the morning and 200° F above zero in the noon. They will, however, not be able to communicate with each other, thanks to the absence of air, except by means of a radio. Only they will be able to move about, as well as lift things, more freely, because the moon has only one-sixth the gravitational force of the earth; a man who can lift 100 lbs. on earth can lift 600 lbs. on the moon or a man who can jump 5 ft. in the air can clear on the moon a hurdle 30 ft. in height. However, it is not known whether life, as we know it, is to be found in the moon or in any other planet, for that matter. Discussing this question, the famous scientist, Dr. J. B. S. Haldane, in the course of an interesting article in the *Hindu*, observes:

"In the present state of astronomical theory we cannot state with any confidence whether planetary systems like our own, are common or rare. But more astronomers guess that they are not very rare, and Eta Cassiopeiæ is one of the ten or so visible stars from which the light reaching us tonight started in my lifetime which is like enough to the sun and otherwise qualified, to have planets which are possible abodes of life. Among the disqualifications is a companion star close enough to disturb the orbits of the planets. This, for example, probably rules out Procyon as a likely sun round which habitable planets may revolve. Of course, it may turn out that even when a planet has the correct temperature the proper chemical conditions for life are usually lacking. It may be that it only originates under quite unusual conditions, or that only very rarely does life blossom into mind, even of the rather poor quality found in most of our species. However, unless there are unexpected difficulties, I think there must be many planets in our galaxy whose inhabitants are far superior to ourselves both intellectually and morally. We ought, however, I suppose, to consider one other possibility. It may be a law of nature that whenever conscious beings discover the sources of energy which would enable them to journey from one planet to another, they use them to destory themselves."

Whatever may be the outcome of man's continuing probe into the mysterious universe, in which the earth on which he lives is but a small speck, there is no doubt that the future may unfold many new things unknown to him hitherto. It may be that the rocket age is the beginning of a new era of exciting possibilities.

P.A.A.'S RESULTS

An upswing in traffic in the last half of 1958 will give Pan American Airways an increase of 11 per cent. this year over 1957 on its transatlantic routes. according to Mr. Willis C. Lipscomb. Pan American's Vice-President, Traffic and Sales. Announcing this in a year-end report, he said that in the last six months of 1958, traffic in these routes gained 18 per cent. over the last half of 1957, in a dramatic upswing. This growth in transatlantic business, said Mr. Lipscomb, was the result of improved business conditions and of introduction of jet service on the Atlantic. The stimulating effect of the jets, he said, could be judged from the fact that advance bookings to Paris, Rome and London —Pan American's jet Clipper destinations—during the period January through April 1959, were two and a half times those on the books for a similar period a year ago. Cargo ton-milcage also increased this year over 1957, Mr. Lipscomb said. The Airline's east-bound transatlantic cargo ton-miles showed a 45 per cent. increase for the first ten months of 1958 over the same period in 1957 and were estimated to hold to that level for the full year.

Looking forward to 1959, Mr. Lipscomb predicted that the business improvement of the last half of 1958 would continue through 1959. Traffic this winter, he said, was already showing a considerable increase over last year. Next summer jet flights would stimulate more travel to Europe than ever before. The year 1958 was studded with important developments for Pan American. It saw the opening of the first United States commercial jet service with Boeing 707 flights to Paris, Rome and London. The first six Jet Clippers now in operation had set speed records of 5 hours and 41 minutes to London, and six hours and four minutes to Paris. And they had been operating with an average of 95 per cent. of their capacity filled. Also, its jet lease arrangement with National Airlines this year made it possible for the airline to operate two jet flights every day between New York and Miami. This year also saw the opening of a 15-million-dollar hangar and the start of construction on a revolutionary new terminal at Idlewild. An umbrella-designed cantilevered roof, covering 4 acres, would extend well beyond the terminal building itself, providing cover for parked aircraft and weather protection for passengers and cargo.

ELECTRICITY INDUSTRY

The view that, while in an essential public utility like electric supply, consumer interest must receive due consideration, it was no less important that the power system, whether in the public or the private sector, should not be exposed to the "dangers inherent in regulations not keeping in step with the needs of the industry" was expressed by Mr. N. N. Adajania, Vice-President of the Association of Electrical Undertakings, Bombay Province, in the course of his address at the annual meeting of the Association held last week at Bombay. He said that the industry had to reckon with rapid strides in the economy and growing needs for power by industries and homes. These needs, he said, postulate an ever-expanding generating capacity. He hoped that the situation faced by the industry would engender realistic regulatory policies.

Mr. Adajania also expressed the hope that the Bill to amend the Indian Electricity Act, now at the Select Committee stage, would embody the desirable improvement suggested by the industry. Commenting on the scheme of financial assistance to the electrical supply undertakings in respect of rural electrification, he said that the scheme indicated a "policy free from doctrinaire considerations, the emphasis being that whichever party is best situated to develop a given area should be permitted to do so." Referring to the incidence of electricity duty, he said it was a "hardy annual." He added: "I bring this point up not in the hope that a measure of relief could be obtained, but to emphasise that the industry has in no way reconciled itself to this form of taxation." He pointed out that the objectionable feature of the duty was that it was a levy on progress and to that extent, it was regressive and militated against the growth of tax potentials in other directions.

TRANSISTOR-CONVERTER

A new type of compact transistor converter designed to replace existing types of rotary converters and mechanical vibrators in the 50-1,000 volt output range has been developed by the A.B.E.M. Company, Stockholm. Its small size and low weight —about one-quarter of that of a conventional rotary converter with the same output effect—is claimed to make it suitable for many applications in both commercial and military fields. The A.B.E.M. Company—also known as AB Elektrisk Malmletning—has long been specialising in prospecting acitivities in Sweden and abroad. In 1955, when the activities were expanded to include airborne electromagnetic, magnetic and radio-activity surveys, the Company's research engineers were faced with the problem of designing a low-weight converter to obtain a high voltage D.C. from the 24-volt D.C. aircraft supply. The outcome of this research work was the semi-conductor TO-1310, which after exhaustive tests is now being launched on the market.

INDIAN ALUMINIUM

Mr. H. V. Echols, Managing Director of Indian Aluminium Company Ltd., announces the commencement of operations on 6th January, at its new smelter at Hirakud (Orissa). The smelter has an installed production capacity of 10,000 tons of aluminium ingot per annum, which, at a stroke, more than doubles India's production of the metal. Production at the Company's Alupurum smelter in Kerala is about 5,500 tons of ingot per annum. The Company plans to further increase its production of aluminium by expanding the Hirakud smelter to 20,000 tons annual capacity. The construction of the additional capacity is expected to be taken in hand as soon as negotiations with the Orissa Government for the additional power requirements are completed.

NEW PRODUCTS AND PROCESSES

Metal Forming Process

A NEW process for forming metal parts which, it is claimed, could eliminate the need for large expensive presses has been developed by the Ordnance Division of the Aerojet General Corporation, U.S. The operation of the process depends on the use of explosives. The blank metal material from which the part is to be formed is placed over a shaped metal mould. The explosive is then fastened over the blank and the blank metal and the explosive are both secured to the mould. The entire unit is then lowered into a tank of water and a pipe and hose are attached to the mould in order to create a partial vacuum within it. The explosive is then detonated and the forming process is completed—leading to a "geyser" of water being thrown out of the tank. The shapes produced are said to be extremely accurately formed. Although the process was developed initially for use in the construction of guided missile parts, it is expected that it will also have widespread industrial applications.

Plating Watches

The pinions, cog wheels, levers, springs and other moving parts used in the manufacture of watches can be protected from wear and corrosion, it is claimed, by means of a form of tin-nickel plating developed in the U.K. The ordinary wrist watch has between 50 and 100 pinions, cog wheels, levers, springs, etc., and some of the screws used may be far smaller than the smallest pin-head. All these parts are subject to wear, and the threat of corrosion from the sweat on fingers of the watch makers, or from oil and condensation when the watches are in use. The tin-nickel plating is said to prevent corrosion and finger marking all through the life of the watch, and, since it is as hard as chromium, surfaces which bear on or engage each other are protected from wear. Since watch parts are so finely engineered plated coatings must be very thin. Tests carried out in conjunction with watch makers are said to have shown that tin-nickel coatings as thin as three hundred-thousandths of an inch still provide worthwhile protection for the smallest screws in a watch.

Metal Address Plates

In addition to standard address plates for a seven-line punched text, an addressing-machine factory, Hapee Adresseermachine Mij c.v. Veldm. Montgomeryweg 9-17 Soesterberg (Holland), also manufactures address plates provided with a legible coloured address strip. These address plates can contain five lines of punched text and a coloured two-line cardboard strip which is also visible during printing in the machine. The strips can be attached to the top or bottom of the plate, but the addressing machine in which they are to be used should be adapted to the place of the strip on the address plate. The strip is always on the side of the plate opposite that containing the two holes for the riders, which continue to be visible in the machine. If the strip is attached to the top of the plate the riders are invisible in the storage drawers. The seven available colours of the riders and the six available colours of the strips enable an extensive sorting system to be used. As each plate has two rider-holes it can hold two differently coloured riders.

Measuring Tensile Stress

An electronics laboratory, Laboratorium voor electronica Peekel, Alblasstraat 1, Rotterdam (Holland), has manufactured an apparatus for measuring tensile stress by means of tensile strain gauges. The apparatus is operated by transistors fed by a small built-in nickel-cadmium 6-volt storage battery which can be charged by the electric light mains via a built-in rectifier. As the voltages and currents are exceedingly low the apparatus is absolutely explosion-proof and suitable for measuring tensile stresses and tensions in coal mines and other spaces exposed to explosion hazards. The meter comprises a very small oscillator which feeds an A.C. of 1,000 cycles per second to the Wheatstone bridge consisting of tensile strain gauges; an amplifier with a demodulator, and an indicator. The tensile stress of the tensile strain gauges and the resultant diagonal voltages are not measured direct but compared to a second voltage. This compensating voltage is taken from a built-in, manually operated slide wire which also forms part of a bridge circuit. The slide wire is provided with a calibrated graduation. The measuring range is calibrated from 0-2,000 micro-tensile stress and can be extended to a maximum total range of 30,000 micro-tensile stresses. Even one micro-tensile stress can be detected as a result of the high sensitivity. The accuracy of the apparatus is ± 1%, that is, about 5 micro-tensile stresses. The apparatus is housed in a small metal cabinet with handle and cover.

Metal Testing Device

The patented "Intactor Microport Minor" method and equipment, developed in Hungary, ensures a cheap and speedy method of testing the internal structure of metal objects without fracturing them, and makes possible a new method of quality inspection formerly discarded either because of the absence of appropriate instruments or on account of the long time and high costs involved. The essence of the equipment is an electrolytic head which prepares the surface of the object for microscopic testing without fracturing it. The importance of the new device is in the fact that, contrary to other metallographical equipment in use hitherto, which involved a stationary and usually slow and expensive method of testing, it provides a portable equipment that can be used with equal success in the laboratory as in the shop or out of doors and at a great distance from, and even independently of, electric mains.

INDIA'S DEVELOPMENT EFFORT

AN ASSESSMENT AND PROGNOSIS

By J. J. Anjaria

ECONOMIC ADVISER, MINISTRY OF FINANCE, GOVERNMENT OF INDIA

SINCE the commencement of the first Five-year Plan about eight years ago, the main objective of economic policy in India has been development. Over these years, the country has made considerable progress. But, it can hardly be said that India has crossed the "threshold." Only a few first steps have been taken. We have another two years to go before the third Plan starts, but it is necessary to consider fully at this stage how far we have moved in the direction of our accepted goals, what the limitations and shortcomings of our effort and of our achievement have been, and how we can advance more rapidly hereafter. I have, therefore, to be not only backward-looking, but also forward-looking. It will, I suppose, be agreed that we are entering a crucial stage in our planning, and both the pattern and speed of development hereafter will depend upon whether we take the right decisions at this juncture.

When the first Plan was formulated, the reaction of most people was: "This is too little and too slow. More should be attempted." Some even said the first Plan was not a plan of economic development; it was merely a piecing together of schemes some of which had already been begun earlier. The second Plan was relatively more ambitious, if one may use that term. It called for a larger effort; it asked for more rapid advance in the dynamic sectors of the economy; and it promised more substantial increases both in income and in employment. There was a view that less should have been attempted, although there was another view that even more was required at least in certain directions. Similar differences in emphasis, if not in basic approaches, are likely to arise in connection with the third Plan, and it is the essence of the democratic approach we have accepted that all these aspects of further planning are fully discussed. It is likely that the nearer we are to a particular task, the more difficult it is likely to look. But development is a continuing and inescapable task. It is *the* problem before the country; there is hardly any other that really matters from the point of view of the welfare of the common man, especially the coming generation, and the preservation of the basic ideals and values we cherish.

What has been the rate of development attained so far? Is this rate satisfactory? What have been the costs? Have the strains and stresses in the system been too great? Must we, therefore, move forward more slowly, or is there a way of maintaining and accelerating the pace? These are the basic questions to which it is essential to attempt answers as objectively as possible in order to see that development planning proceeds along right lines and with the full awareness of what it involves.

Significant Advance

There is no doubt that the Indian economy has registered a significant advance over the last eight years or so. National income has increased by about 25 per cent. in real terms, and there has been an increase of 13 to 15 per cent. in *per capita* incomes. Industrial production has gone up by more than 50 per cent., and—what is even more significant—the industrial structure is becoming rapidly more diversified and more capable of serving the needs of a developing economy. The transportation system has been greatly strengthened and social services have been expanded substantially. Electricity generation has gone up by about 100 per cent. The value of mineral output is now 60 per cent. higher than in 1950-51. A number of industrial projects are under way, both in the public and in the private sector, and there is in the system a new expansionary impulse which augurs well for the future.

In agricultural production, the results are not up to the mark, because the outturn still depends mainly on the monsoon. There have, therefore, been large variations in agricultural production from year to year. But it is fair to say that the underlying trend is upward. The index of agricultural production (1950-51=100) rose to 119.5 in 1953-54; it reached a peak of 129.5 in 1956-57, and receded to 118.5 in 1957-58, which was a bad year. For 1959-60, the level of agricultural production is expected to be higher than in 1956-57. The progress achieved is by no means adequate relatively either to potentialities or to needs. The facts must, however, be noted. Irrigation facilities are being steadily expanded. By the end of the two Plans, irrigation potential to cover some 16 million acres would have been created by way of major and medium projects and about an equal area would have come under minor irrigation. On full development, the major and medium irrigation projects in hand will represent an irrigation potential of 22 million acres, and minor irrigation could be extended rapidly if the necessary manpower and local resources are mobilised effectively. In the community projects and national extension organisation, we have machinery that can be turned to good account for the sort of push we wish to give to agricultural production. The abolition of intermediaries represents an important step in land reform and co-operative credit has also made considerable headway with the help extended by the Reserve Bank.

Investment

The most crucial determinant of development is investment, and in this regard the progress made has been impressive. During the first Plan, investment was stepped up from 5 per cent. of national income to a little over 7 per cent. Currently, the rate is between 10 and 11 per cent. A few figures will be of interest in this connection. In 1951-52, the first year of the Plan, public investment was Rs. 212 crores. In 1955-56, it had risen to Rs. 482 crores. For the first three years of the second Plan, the estimated figures are Rs. 587 crores, Rs. 718 crores and Rs. 850 crores. This represents a fourfold increase in seven or eight years' time. Net private investment (not including inventories) also rose from about Rs. 390 crores in 1951-52 to about Rs. 416 crores in 1955-56, and is at present around Rs. 470 crores. In broad terms, total investment in the economy has of late been around Rs. 1,300 crores a year, which is 2½ times the investment at the beginning of the first Plan. Although an investment rate of 10 to 11 per cent. cannot be considered high or even adequate when compared to requirements, the step-up achieved is quite significant. The stresses and strains of which one hears so much these days will appear less frightening if one views them, as one should, in this perspective.

Private Sector

Nor is it true that only the public sector has gone forward. The advance in the private sector, especially in what may be called the organised industrial sector, has been large. For the first Plan period as a whole, private investment in industries was Rs. 233 crores or an average of about Rs. 46 crores a year. In 1956-57, this was Rs. 100-110 crores and this was also the level probably in 1957-58. In the iron and steel industry alone, investment in 1957-58 was about Rs. 68 crores. Over the second Plan period, investment in the organised industrial sector, including an expenditure of about Rs. 100 crores on replacement and modernisation, is expected to total Rs. 575 crores. The Reserve Bank analysis of the balance-sheets of companies (manufacturing, plantations, mining and trading) indicates that net fixed investment in these lines in 1956-57 was about 3½ times the investment in 1953-54. This was financed mainly from internal resources, though, of late, there has been relatively larger reliance on external resources. The shortage of foreign exchange has been a limiting factor, but it cannot be argued that the growth of private industry has been affected prejudicially by the advance in public investment. Despite the cut in plan outlay in the public sector and some slowing down of private investment because of the foreign exchange situation, aggregate investment in the economy over the period of the second Plan will be close to the level of Rs. 6,200 crores postulated in the Plan.

Judged in terms of investment which means an increase in, and diversification of, the production potential, the Indian economy today is markedly stronger than seven or eight years ago. It offers more opportunities for gainful work, even if they are not up to requirements. More skills are being developed. New techniques are being learnt. In any case, we have moved forward to the extent that economic stagnancy is no longer regarded as part of the natural order of things. The economy is on the move.

Source of Finance

So far the credit side. Let us now see how this investment has been financed. But, before going on to this, a word must be said about the trend of prices. It must be emphasised, in this connection, that all this development has taken place with what must, on the whole, be regarded as moderate increases in prices. Prices were high in the earlier phase of the first Plan; they came down in the latter phase. Since the second Plan began, inflationary pressures have been themselves felt, and the index of wholesale prices now is 10-12 per cent. above the April 1956 level. One should not minimise the hardship caused by high prices. Nor should one underrate the importance of price stability. It must be noted, however, that the price rise that has occurred so far is not, when taken in relation to the step-up in investment, something to complain of bitterly, especially since a part of it, at any rate, is attributable to the shortfall in food production. It is arguable, though one might not press this point too far, that the fluctuations in prices that we have had, e.g., the sharp fall in 1954-55 and the sharp rise in 1957-58, are more objectionable than the net rise over the period of the two Plans.

The major difficulty that has been encountered in the implementation of the second Plan is that the rate of savings in the economy has not been going up *pari passu* with the needs of investment. The current rate of saving is about 8 per cent. which means that the step-up since the second Plan began has been small. The consequence has been that a great deal more external assistance has become necessary for implementing the Plan. This is not to suggest that external assistance is undesirable or unnecessary. All countries need external finance in the early stages of development. But external finance is good as a supplement to domestic savings, which must show improvement progressively. In actual fact, the step-up in investment in the latter part of the second Plan is being financed from external assistance.

External Assistance and Deficit Financing

During the first Plan period, of the total investment—this is different from Plan outlays—of Rs. 1,500 crores in the public sector, about 23 per cent. was financed by public savings (i.e., the surplus of Government's current receipts over current expenditure), some 43 per cent. by loans and small savings, 23 per cent. by deficit financing and only 12 per cent. from external assistance. For the first three years of the second Plan, public savings will have contributed about 5 per cent. of the total of Rs. 2,100 crores or so of investment outlay; 31 per cent. will have been raised by way of loans, small savings, etc.; deficit finance would account for about 42 per cent. of the total and some 22 per cent. would represent external assistance. In other words, while in the first Plan period, the contribution of external assistance and deficit financing was 35 per cent., in the first three years of the second Plan, as much as 64 per cent. of the investment outlays will, roughly speaking, have been financed from these two sources. For the second Plan as a whole, the contribution of these two sources to investment in the public sector might approximate 60 per cent. All this is, of course, only another way of saying that the resources available to the public sector have not been increasing sufficiently.

For the economy as a whole, by the end of the second Plan period, external assistance utilised will be of the order of Rs. 1,300-1,400 crores. To this we should add the drawing down of sterling balances by Rs. 600 crores—which represents past savings. Thus, a little less than one-third of the expected investment of Rs. 6,200 crores will have been financed from a draft on foreign savings.

Public Savings

It would take me into too much detail, if I attempt an analysis of these figures on an annual basis. The point to stress is that public savings have been going down in spite of the large increases in taxation. Now, public savings ought to be an important element in financing a development plan if the State is really to be in a position to take on the role assigned to it. But, the initial estimates in the Plan regarding revenue surpluses at existing rates turned out to be overoptimistic, and part of the new taxation was claimed by non-Plan uses. This decline in public savings has meant that the public sector plans must depend vitally upon the success of Government's borrowing operations. These, in turn, are affected by the relative ease or stringency in the money and capital markets. The fact that, in 1957-58, money was tight meant correspondingly heavier reliance on deficit financing. Altogether, the whole financing pattern has been inadequate and unstable.

The second Plan came up against foreign exchange difficulties almost from the start. Various factors contributed to this. When the Plan was drawn up, the needs of the various newly-developed industries which had a large foreign exchange component were underrated. There was underestimation on other counts also. The import requirements in respect of food turned out to be larger. Some of the new non-development items involved foreign exchange. In the result, foreign exchange reserves have been drawn down heavily, in spite of external assistance on a larger scale than was at first envisaged. Exports have not risen either, and it is only in recent months that serious attention has been given to this problem. Exports are also a form of saving, a particularly valuable form because their proceeds can be used to buy imports. The inelasticity of export can be accounted for in terms of various factors, but, in the last analysis, it, too, represents inadequacy of savings. The result is that the third Plan has to begin with a handicap in so far as sizable payments by way of interest and repayment of the obligations incurred will have to be made from out of current production. These payments will be a first charge to be met before we import the equipment and capital goods needed for that Plan.

Effort Not Adequate

What, then, is our assessment of the developmental effort made so far? The answer, clearly, is that the effort has not been adequate. The Plan has been looked upon as so much expenditure. Those who put forward projects are, naturally, anxious to see that they get their due share of the total expenditure to be incurred. But, in all this, there is insufficient balancing of costs and returns, and not enough care or effort is devoted to make sure that the projects earn adequate returns. It cannot be said that the country has not taxed itself. Nor can it be argued that some classes, e.g., the fixed-income earners, have not had to make sacrifices, because of the rise in prices and cost of living. What has lagged behind is organisational effort, i.e., the bringing together of unutilised resources, full utilisation of whatever production facilities are available, the assiduous collection of surpluses from the commercial and industrial enterprises in the public sector; the welding together of the community for continuous, co-ordinated hard work and austerity. The effort at producing more has thus been inadequate, though it can be argued that the savings effort has also not been up to the mark. Given the levels of production, a greater restraint on consumption was called for, but the techniques for achieving this have not been used. More production as well as more savings require an organisational effort which has not been forthcoming. And we seem to have assumed that development planning is possible without sweat and tears.

Taxation

The complaints one hears about excessive taxation are perhaps illustrative of the sort of ambivalence we often display in our thinking. The burden of taxation, it is said, is too high, and there are not enough incentives for producing more and earning more. One cannot, of course, deny that taxation is high, but to argue that taxation should be reduced—and, by implication, the Plan cut correspondingly—is to ignore the fact that incomes will themselves tend to get reduced if investment is curtailed. The burden of taxation cannot be judged by itself, and certainly not in relation to past levels. The fact of the case is that taxation in India does not bring into the public exchequer more than 9 per cent. of the national income. In industrialised countries the ratio is between 20 and 30 per cent. Their *per capita* incomes, it must be granted, are high. But, even in countries not so well developed, a significantly larger proportion of national income—around 15-20 per cent.—is drawn into the public exchequer through taxation. There is, of course, no arguing with those to whom development is not a desideratum. But, if we are agreed as to the urgency of development, the problem becomes one of devising an optimum pattern of taxation, profits from commercial and other enterprises, loans—internal and external—and, if you like, deficit financing for raising the quantum of resources required. It is possible to take the line that taxation in particular directions is too high or that tax yields can be improved by better administration so as to obviate the need for higher tax rates. One could also legitimately argue that certain sections of the community are highly taxed. But it must be recognised that development involves the raising of resources and an important element in the scheme has to be taxation. It is illogical to approve expenditure and the objects for which it is to be incurred and to be lukewarm in the matter of taxation. The criterion of sound finance in a developing economy, I suggest, is that the receipts from taxation increase faster than national income, which means, in effect, that the marginal rate of taxation must be higher than the average rate.

Public Sector Must Make Profit

Another inhibition we seem to have is that public enterprises must not make a profit. There might have been some justification for this when the role of governments in economic activity was marginal. The attitude is untenable if the public sector is to grow and to assist the private sector financially at crucial points. All investments must yield a profit, and as large a proportion of these profits as possible should be ploughed back. That is the correct principle. The pricing policies of public enterprises must be formulated with a view to maximising the surplus of receipts over costs. Hard cases for subsidisation might, of course, be considered on merit. The principle of accumulation in capitalist, socialist and mixed economies is the same. There has to be a surplus of production over consumption, of receipts over costs. And maximisation of returns and keeping down of costs are vital both for the public as well as the private sector.

Scope for Deficit Financing

I must now say a few words about the much talked of and controversial issue of deficit financing. The dangers of deficit financing are obvious. But I think we must recognise that, under conditions, deficit financing is not only safe, but necessary. This is true not merely under recessionary conditions in industrially advanced countries. It holds for underdeveloped economies which are trying to increase output by utilising the idle resources within the system. Deficit financing for the public sector has the same role as bank credit for the private sector. Both have the same limitations. When prices are high, and foreign exchange reserves are small, deficit financing has great dangers, and the less of it there is, the better. But, those who argue against deficit financing as such are, one suspects, sceptical of any planned development at all. For them, investment must be equal to voluntary savings, and since the latter are by definition voluntary, the actual level is always the optimum. In a developing economy, the question is how the rate of investment can be stepped up, how the rate of saving can be raised, and how, to the extent there is an imbalance between the two, the adverse effects of it can be mitigated. There is everything to be said for building up defences against deficit financing. But the device has a place. Suppose, for instance, that food production increases steadily for the next two years: that the machinery for increasing crop yields has been functioning on the field; that the pipe-lines for food are full; and that Government have sizable stocks in hand when the third Plan begins—in these circumstances, I should say, there would be a case for deficit financing in order to step up investment.

It must be emphasised that a developing economy is necessarily subject to inflationary pressures, as the object is to push up investment beyond the levels that would otherwise have materialised. It is, therefore, necessary to keep in hand certain levers or techniques with the help of which to tide over the periods of imbalance between the demands for various types of resources and their availability. This is where allocations and controls come in. They can function, provided their role and purpose are understood and accepted. If they are eschewed, as it were, on principle, there is nothing left but to cut down investment.

Third Plan

I shall now go on to the prognosis that I promised. In the second Five-year Plan, the system has been strained a great deal. Can it be operated so as to ensure better results for the third Plan? The task is, evidently, difficult. But, it is not impossible of achievement. There *are* unutilised real resources in the system. There *is* idle manpower. There are skills which can be drawn upon, with some re-polishing and re-training if we like. There is the urge for progress, which awaits canalisation.

In the first and second Plans, a broad picture of the increases in investment and in national income required over a period of 25 years was given. On that basis, an investment of Rs. 9,900 crores (at 1952-53 prices) would be required for the third Plan. This would imply stepping up investment from 11 per cent. to about 14 per cent. of national income. Domestic savings at present do not come up to more than 8 per cent., but they will have to be raised to at least 10 or 11 per cent. if the Plan is not to depend too much on external assistance.

While this is important, I must add that this question of external assistance has to be approached from the point of view of the requirements of an *optimum plan*, rather than with any set ideas about how much external assistance we ought to take or how much will be forthcoming. There is no need to be chary of external assistance as such, if we are sure that the investments thus undertaken are the right ones and are capable of generating the surplus out of which interest and amortisation can be paid. Mere totals of external assistance need not be a matter of concern. A relatively small but unproductive external debt can cause a serious upset, while an apparently large volume, but undertaken for projects which add directly and cumulatively to the national product can be an excellent device for lifting the economy from stagnation. But there are balance of payments considerations, and it is conceivable that an economy which is still developing finds it difficult to secure a surplus on external account to pay for past debts. What is required, basically, is, therefore, determination to raise internal resources to the maximum and this presupposes an improvement not only in financial but also in organisational techniques.

If the problem is viewed as one of enlarging savings from a static pool of resources, the task is hopeless. But this pool *can* be enlarged. The key to this is increased agricultural production, mainly through utilisation of idle manpower and improvements in techniques. The inelasticity of agricultural output has been the major bottleneck in our plans. If this is broken, investment as well as employment can be increased. For an important limiting factor in the way of more investment and more rapid enlargement of employment opportunities is the availability of food on which the bulk of the new incomes generated get spent. This is not a question of finance so much as of *organisation*. If food production can be increased substantially, finance can be provided for investment on a big enough scale.

Conclusion

To conclude: while as a result of the developmental effort of the last eight years, the economy has been strengthened markedly, it will be some time before it can reach the stage of self-sustaining growth. The "take-off" has yet to take place. It will be necessary for this to improve both upon the scale and intensity of financial and organisational effort. The third and fourth Plans will represent a crucial phase—a turning point—in the country's development. If the investment in these Plans is adequate, and if the pattern is carefully laid out, the barrier will have been crossed. Difficulties of the type experienced in the second Plan will continue until the country is in a position to make its own equipment and capital goods for further development. Any slowing down at this stage will, therefore, mean a more than proportionate setback. The problems of resource mobilisation must be viewed in this larger context, and the necessary sacrifices made. What is required is *organisation*, especially of the agricultural sector, and economic policies and techniques to ensure that consumption does not rise too fast and scarce resources are utilised for priority purposes. It is vital for the future progress of the country that this perspective is kept in view while considering the size and shape of the third Five-year Plan.—*Text of address to the Commerce Graduates Association, Bombay.*

The inflow of gold and foreign currency into West Germany has receded in 1958, although export surpluses have reached another high, the monthly bulletin of the German Bundesbank disclosed. The net increase of foreign currencies in bank accounts amounted to some 4,000 million D.M. during 1958, as against 5,200 million in 1957 and 4,700 million in 1956. Changes in terms of payment, less surpluses in service transactions and increasing deficits in invisible and capital transactions are cited by the Bank as reasons for this downward trend.

AN ESTIMATE OF INDIA'S NATIONAL INCOME

SIGNIFICANT DOWNTURN IN 1957-58

By M. S. Parthasarathi

NATIONAL income studies have assumed a new and increasing importance since the Great Depression of the early thirties. Before then, national income analysis was thought of primarily as having some historical value in indicating the magnitude of the national income, the rate at which it had been growing and the relative prosperity and rates of growth of different countries. The influence of the late Lord Keynes and other economists who followed in his footsteps and the remarkable success of Roosevelt's New Deal measures in tackling the depression in the U.S. led to the final abandonment of classical theory, which conceived of economics as a negative, passive science rooted in *laissez faire* ideas, and to the adoption of the New Economics which seeks to avoid, remove and, where inevitable, minimise human misery and actively promote human welfare. A corollary of this doctrinal revolution was that the only social institution capable of handling the complex tasks arising therefrom was found to be the Government, which was, therefore, assigned an increasingly dominant role in the operation of the economic system—a development that would have shocked economists even in the first quarter of the century.

From this followed a new set of demands on economics for providing a variety of information to the new central authority to help it to discharge its duties in the economic field. This meant that the Government needed to know, first of all, how the total economy was functioning and behaving and, secondly, how the various sectors of the economy were moving by themselves and in relation to each other. Thus arose the new importance of national income analysis, since an estimate of the national income of a country measures the total volume of commodities and services produced within that country during a given period of time (usually a year), counted without duplication. Further, for ease of estimation, as well as for purposes of analytical study, it is the practice to distinguish the important sectors of the economy, such as agriculture, industry, transport and commerce. A set of national income accounts will, therefore, not only provide an overall view of the economy, but also highlight the weak spots by showing how the individual sectors are faring. As long as the Government did not have the responsibility for maintaining economic stability and promoting economic progress, such complex studies were not felt to be essential. Lately, national income research has led to further econometric studies such as input-output analysis and linear programming, all further aids to Government in its new role and based on national income data.

Importance

If national income studies have been found to be of great value to Governments in advanced countries in formulating economic policy, with the principal object of staving off recessions and maintaining a steady rate of growth, they are even more important to underdeveloped countries like India which are trying to attain a minimum level of economic development in the shortest possible time. Not only studies of their national income but also of the national incomes of developed economies have lessons for them. In particular, the experience of western economies during the early stages of their growth can reveal to them many pitfalls they should and can probably avoid. But, if they are to avoid these pitfalls, they must have fairly reliable national income data themselves so that they can know well in time what is happening in their economies and take the appropriate steps without delay.

The Government of free India realised the importance of preparing and maintaining on an up-to-date basis the country's national income data as early as 1949 and appointed a committee "to prepare a report on national income and related estimates, to suggest measures for improving the quality of the available data and for the collection of further essential statistics and to recommend ways and means of promoting research in the field of national income." A National Income Unit was also set up to compile authoritative estimates of national income, the two reports of the Committee serving as guide lines in its work. Unfortunately, however, the estimates put out by the National Income Unit of the Central Statistical Organisation are a year too late to be of any use to the Government in formulating economic policy for the next twelve months. There is a big lag which needs to be made up. In the course of the paragraphs that follow, an attempt is made to estimate the national income of India in 1957-58 and to indicate its probable magnitude in 1958-59 within the limitations imposed by published available data.

Limitations

It is necessary to underline the limitations, because even the official estimates are far from satisfactory. The National Income Committee, in its final report submitted in February 1954, observed: "The existing estimates have been arrived at, in the main, by calculation of the national product in the major fields of agriculture and organised industry. Data for estimating national product even in these fields are not completely satisfactory today. The main existing shortcomings are (*a*) incomplete coverage, and (*b*) systems of compilation of varying accuracy." The situation in 1959 is unlikely to be radically different from what it was in 1954, when the National Income Committee itself admitted that the error in the official estimates might be as much as 10 per cent. All we can hope is that the error is on the same side throughout so that the trends are not distorted.

Table 1 presents the national income data as published in March 1958 by the National Income Unit in terms of 1948-49 prices along with estimates for the principal sectors, while Table 2, presents the trends in national income and the principal aggregates on an index basis. An examination of Table 1 reveals that, while the growth of almost all sectors has been more or less steady, progress has been steadier and more uniform in the non-agricultural sectors. One is also struck by the close correlation between the growth of income in industry and the other two non-agricultural sectors. In fact, the two service sectors, "commerce and transport" and "other services," have been growing faster than the two real productive sectors. Bearing these trends and relationships in mind, it is possible to venture an estimate of national income in 1957-58 and of its probable level in 1958-59.

Sector-wise

The index of agricultural production in 1957-58 (base: 1949-50=100) is placed by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, at 113.4, a fall of 8.4 per cent. from the 1956-57 level. This should mean that the income generated in 1957-58 in "agriculture and allied activities" would approximately be Rs. 43.2 abja (abja=100 crores). From the indices of industrial production for calendar years and for months published by the Directorate of Industrial Statistics, Ministry of Commerce and Industry, it can be concluded that industrial production in 1957-58 was just about 2.0 per cent. above that in the previous year. Assuming that the output of small enterprises did not move very differently, a not entirely unreasonable supposition, it can be calculated that income generated in "industry" in 1957-58 was Rs. 18.8 abja. Again, it is logical to expect that increases in incomes generated in the other two sectors will bear the same relation to increases in incomes generated in industry as in the preceding years. On this basis, income generated in 1957-58 in "commerce and transport" will be Rs. 21.3 abja and in "other services" Rs. 18.7 abja. These calculations indicate that India's national income in 1957-58 was about Rs. 107.0 abja in 1948-49 prices, that is to say, approximately 3.0 per cent. below the 1956-57 level.

The outlook for 1958-59 is, however, quite bright. There are reports of a bumper rice crop and all indications are that food production in 1958-59 will be almost 10.0 per cent. higher than in 1957-58. Also, the second Plan targets for jute and tea are reported to have been achieved even in the current crop year. It will not be surprising even if total agricultural output in 1958-59 is 10.0 per cent. above last year, in which case income generated in agriculture in the current year will be Rs. 53.1 abja. Industrial production is not likely to be more than 3.0 per cent. higher than last year's level, so that incomes generated in the other sectors will be as follows: industry Rs. 19.4 abja; commerce and transport Rs. 22.2 abja; and other services Rs. 19.5 abja. This will give a national income figure of Rs. 114.2 abja for 1958-59, an increase of 6.7 per cent. over 1957-58.

Rate of Growth

It must be emphasised that even this expected sizable rise in national income in the current year will not alter the long-term growth trend. Statistical calculations show that the trend is for national income to grow at the compound rate of 3.5 per cent. a year, accompanied by an annual rate of growth of 3.0 per cent. in agricultural production and 5.7 per cent. in industrial production. These trends have been calculated from the data presented in Table 2. These incidentally show up some minor inconsistencies between the agricultural output series as revealed in national income statistics and the indices of production prepared by the Ministry of Food and Agriculture. Perhaps, a part of the apparent inconsistency is due to the fact that the indices of agricultural production are for the crop year July to June, though the small quantity of crops harvested in the months April to June makes it almost certain that all of the inconsistency cannot be thus explained away. Moreover, the indices of agricultural production are based on gross value while the contribution of agriculture to national income is based on value added in the process, and this may cause some discrepancy. Again, however, it must be pointed out that, in such a primary industry as agriculture, almost the whole value of the output will be value added in the process. Table 2

That was the beginning of exports by the Indian Sugar Industry to earn foreign exchange. Geographically, India is within easy reach of sugar importing countries in the Middle, Near and Far East. In quality too, Indian Sugar compares favourably with that produced in other countries. With a better understanding of the industry's structure and problems and co-operation from the Government and consumer, the Industry can consolidate the position it has secured in the world market and improve it further to earn more foreign exchange: so vital for the progress of the Second Five Year Plan.

Today the Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.16 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

GOVERNMENT'S IMPORT POLICY

MR. SHASTRI'S ELUCIDATION

FURTHER light on the import policy of the Government of India was thrown by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, when he addressed the third quarterly meeting of the All-India Importers' Association last week. He said that he had no doubt that the third Five-year Plan would be much bigger than its predecessor. Accordingly, he thought imports would have to be made on a bigger scale and that importers would have to play an important role. Having this prospect in view, he described the broad features of the future import policy as follows:

1. Reduce imports through indigenous production and increase our exports, so that there is a favourable trade balance for our country.

2. Import of essential raw materials will have to be continued and not further reduced, if the development of economy has to be maintained. It will be most unfortunate, if the shortage of raw materials leads to a decline in production. That eventuality has to be avoided at all costs.

3. Goods imported should be properly distributed at reasonable prices.

4. Actual users' licence should not be done away with, but the Government would always be willing to examine any specific proposal about a specific commodity.

Mr. Shastri took a pragmatic view of the future for import trade and listened to the grievances of the traders, as listed by Mr. Shantilal M. Shah in his speech, with sympathy and understanding. He appreciated the services rendered by these middlemen and gave convincing reasons for limiting their activities through restrictions on imports, issue of licences to actual users and the State Trading Corporation. Mr. Shah referred to all these three subjects in his speech.

Actual Users' Licences

Alluding to the subject of licences to actual users, Mr. Shah contended that there was a strong case for dividing the available foreign exchange between the actual users and established importers equitably. He argued that "our economic structure is such that neither all actual users can afford to apply for licences nor many of them have sufficient means and resources to import on their own account. Moreover, the end-use of an item is so diversified that a number of actual users might require very insignificant quantity and imports made by them will be neither worthwhile nor economical." He gave the specific instance of coconut oil, the import of which through established trade is banned; only millers are allowed to import it. Explaining the effect of this ban on prices, he observed:

"Imported copra is very widely used for edible purposes and by small *ghanis* in villages. All this demand is starved under the present policy. Further, the object which the Government had in view of lowering the price of coconut oil is not only not served but completely defeated since the prices are now ruling at Rs. 30 per quarter, while the cost for the miller is below Rs. 24. When established importers were issued licences for copra, there was healthy competition, serving as a check on and maintaining the prices of coconut oil around Rs. 24 to Rs. 25 per quarter. Same is the case with copper, metals and art silk yarn. These examples provide ample evidence to support our plea that at least 25 per cent. to 30 per cent. of the foreign exchange import ceiling, even of raw materials, should be allocated for imports through the established trade."

Not Convinced

Apparently, Mr. Shastri was not wholly convinced by these examples, for they do not explain why the actual users have preferred to import their requirements direct, instead of using the established trade channels. Giving the Government's reasons for changing the policy of issuing import licences in favour of actual users, Mr. Shastri said:

"As far as I can see, it was done, as the actual users were not fully satisfied with the dealings of the importers. There have been demands from other trades also to provide for licences being given to actual users. Two reasons seem to be obvious: (1) That there has not been fair distribution, and (2) the profits charged were very much on the high side. I need not mention, but it is a well-known fact that, sometimes, the profits made by the established importers have been highly excessive and it has led to increases in the prices of manufactured goods. The members of your Association should, instead of criticising the Government, think over these two points and try to rectify their own mistakes. It is often better to look within than to look to the deficiencies of others. It is an irony of fate that, in this country, which produced a man like Gandhiji, who was always prepared to shoulder the responsibility for the faults and short-comings of others, we should now be so critical of each other. It is in that old spirit that I will suggest to you to examine this matter."

Mr. Shah was, however, right in saying that not all the users were able to use the licences given to them. These are mostly small producers. Mr. Shastri appreciated Mr. Shah's point and remarked that the established importers had a very good opportunity to serve these relatively small actual users, provided they functioned well and did not act merely in their own self-interest. He promised to consider favourably Mr. Shah's suggestion for a co-operative organisation to handle the imports of small actual users.

State Trading

On S.T.C., Mr. Shah's complaint was that it had been gradually encroaching on the legitimate sphere of import trade. He gave paper, camphor and photographic goods as recent instances in the import of which the S.T.C. had taken interest without any justifiable reason. He pointed out that, while the established importers were given no licences for the import of camphor, the S.T.C. was favoured with one. Proceeding, he observed:

"There is also a good deal of heart-burning and misunderstanding regarding the distribution methods adopted by the State Trading Corporation for goods imported by it. In some cases, the representatives of the manufacturers of similar commodities have been entrusted with the distribution, while, in other cases, local agents of foreign manufacturers from whom the goods have been imported have been permitted to do so. Both these methods are unsatisfactory and unjustified. Wide experience, specialised knowledge and vast contacts of the normal trade channels to import economically and distribute advantageously should be profitably utilised for the purpose. Another suggestion which I would like to make is that an advisory committee, consisting of non-officials, should be appointed to advise the State Trading Corporation on its policy matters. Such a step will not only benefit the State Trading Corporation to utilise the experience and know-how of the intricacies of the trade whose well-organised and improved distribution services will be of great asset, but will also help to remove the misunderstanding and misconception on the part of the traders."

Replying to the aforesaid criticisms, Mr. Shastri said:

"The question of prices and the consumers' interests comes up. Whenever it is found that there is scarcity and there is a fear of cornering of goods and the prices have soared high, Government advises the S.T.C. to import, in a limited way, those particular commodities, so that the industries or the actual users do not suffer. I might, however, frankly admit that the present arrangements for distribution made by the S.T.C. are not wholly satisfactory. There is no doubt that, unless new arrangements have been made, the normal channel should be allowed to function. Our general policy still is to arrange for distribution through the established importers as far as possible."

Mr. Shastri, however, did not give any reply to Mr. Shah's suggestion for an advisory committee of traders to help the S.T.C.

ROPE INDUSTRY

Reviewing the problems of, and prospects for, the Indian rope industry, Mr. K. L. Jalan, the retiring President of the Indian Rope Manufacturers' Association, Calcutta, observed, in his speech at the eighth annual meeting of the Association, that, with a helpful import policy, the industry would come to occupy an important place in India's economy. The indigenous industry, he said, was producing all types of ropes and cordages required by the country. The combined capacity of the production of the members of the Association of rope and cordages of Manila, sisal and aloe, etc., is over 15,000 tons a year. In addition, they have a capacity to produce 10,000 tons of ropes and cordages from coir, jute, cotton and hemp.

The major problem confronting the industry relates to raw materials. The industry is completely dependent upon imports for such raw materials as Manila hemp and sisal. The world supply position of sisal was comfortable in 1958, while that of Manila hemp suffered a contraction. Consequently, while the price of sisal moved within a narrow range, that of Manila hemp ruled high. India's need of these raw materials is small as compared with those of the U.K., the U.S., Japan and Continental Europe. What caused a handicap to the Indian rope industry was the restrictive import policy of the Government. The import restrictions still continue and adequate supply of raw material has become a big problem for rope manufacturers. Referring to this problem, Mr. Jalan observed:

"While I am thankful to the Government for restricting the issue of licences to the actual users only, I may point out that since October 1956, when the import of these fibres was removed from the Open General Licence, our member factories have not been given licences for the import of their requirements in full with the result that they have been compelled to curtail their production.... The world prices for Manila and sisal fibres have already gone up and if the rope factories are not given licences adequate to meet not only their current requirements but also for building up sufficient stocks, they will have no other alternative but to pay very high prices for these fibres in the coming months. Thus, as a result of the restrictive policy pursued in the matter of issuing licences, more foreign exchange will have to be spent for import of these fibres later on, which would run contrary to the Government's intention of conserving foreign exchange. Moreover, the capacity of the rope factories has been increased recently, in some cases by about 20 to 25 per cent. or even more. The total foreign exchange involved in the import of sisal and Manila fibres is about Rs. 50 lakhs, while the saving effected by the restrictive import policy would come to about Rs. 12½ lakhs which, I consider, is insignificant in the country's total import bill of about Rs. 900 crores per year. Since most of our members have been left at present with meagre stocks and as the industry has to depend for these essential raw materials on foreign sources, I would urge upon the Government to take a sympathetic view of the situation and allow the factories to import Manila

A Boon To Individual Investors

WHY SUBSCRIBE OUR SERVICE?

There are a number of reasons for subscribing our service.

(1) We *supervise* accounts constantly watching your transactions in Share and Commodities, advise when to buy or sell specific shares or commodities; write personal letters and send telegrams when necessary, but you do your own trading.

(2) We assist you in selecting a good broker suitable to your requirements and opening your account on most favourable terms. Thus you are able to transact greater volume of business with comparatively less capital and your incidental expenses are considerably reduced.

(3) We do not buy and sell for any one. We have nothing to sell but service.

(4) Being out of the market and not buying or selling anything or handling any promotions, we can give you better expert opinion, based on mathematical science and our market reading than any banker, broker, or astrologer.

(5) We must keep you making money in order to retain your patronage. There can be no loss in good service; it is all pure gain. The more we help others, the greater we are benefited.

(6) Whether you want to deal in Shares or Commodities, Oilseeds, Bullion, Yarn or Jute, you can consult us. We have experienced staff to advise you on buying and selling.

(7) We publish a large volume of helpful information and distribute it at nominal cost amongst our customers.

Our services are valuable to you because as stated above, we work in your interest. We maintain various types of charts on Shares, Commodities, Bullion and Oilseeds, etc. We study the market from an unbiassed standpoint and the outcome of our research work is at your disposal.

These are just a few of our services. In short, we do everything possible to give investors as well as Speculators anywhere—even thousands of miles away—the greatest possible help in respect of dealing in Securities, Shares, Cotton, Bullion, Jute and Oilseeds etc. You can consult us on any special problem you may face concerning investments or speculative Commitments. Our contacts and original research sometimes offer you aid not obtainable elsewhere.

Full information on Advisory and Forecasting Service is yours for the asking.

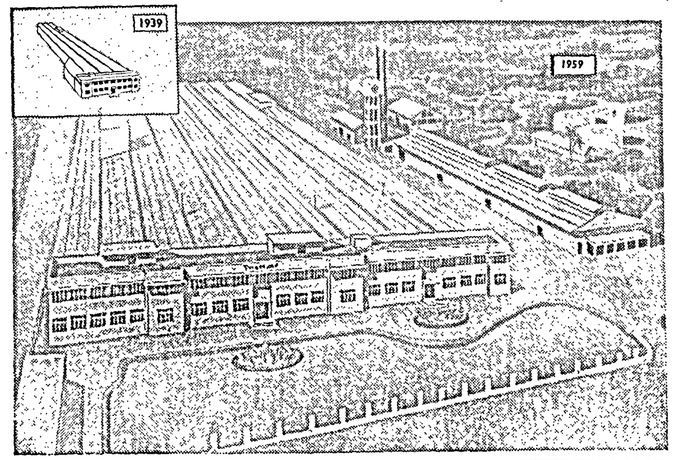
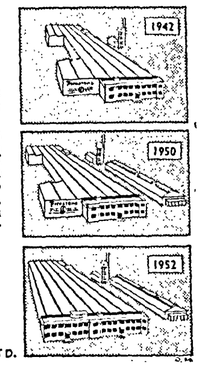
Over 5,500,000 tyres ago



Year by year expansion of Firestone-India keeps in step with nation's requirements



It was in 1939 that the original Firestone Plant in Bombay went into operation. But from the commencement, plans were envisaged for a series of expansions, and staff training programmes were prepared in order to meet the production needs of the years to come.
Through the critical war period, and the years that followed, the Firestone plant continued to expand, and introduced the first balloon tyre; the first double white sidewall tyre, the first earthmover tyre and the first Nylon tyre manufactured in India.
And now the Firestone plant reaches the final stages of the original expansion programme. With a proud record of producing over five and half million tyres in India, Firestone aims to keep the wheels of transportation moving, still retaining the original policy which is now a tradition—"Best Today—Still Better Tomorrow"

Firestone
BEST TODAY—STILL BETTER TOMORROW
FIRESTONE TYRE & RUBBER COMPANY OF INDIA, PRIVATE LTD.

SHARP FALL IN BOMBAY BURMAH'S PROFIT

RESULT OF POOR EARNINGS FROM TIMBER BUSINESS

THE trading results of the Bombay Burmah Trading Corporation Ltd. (Secretaries and Treasurers: Messrs. Wallace & Co., Bombay) for the year ended 31st May 1958, are disappointing. The Company's earnings for the year under review have sustained a precipitous fall from the record levels at which they had been maintained in the preceding two years. Indeed, the year 1957-58 would appear to have been the worst for the Company in recent years. The gross trading profit from its various branches of business amounts to no more than Rs. 73.96 lakhs. This is less than half of Rs. 151.84 lakhs for 1956-57 and Rs. 151.81 lakhs for 1955-56. In fact, the aggregate trading profit would have been still lower had it not been for the sizable rise in the trading profit from South Indian plantations. It is the profit on the timber business that has registered the sharpest fall.

The aggregate net profit amounting to Rs. 31.58 lakhs makes a very unfavourable comparison with Rs. 52.38 lakhs for 1956-57 and Rs. 49.10 lakhs for 1955-56. This is the position even after substantially lowering the provision for taxation from Rs. 68.87 lakhs in 1956-57 to Rs. 9.19 lakhs. A breakdown of this provision shows that foreign tax takes up only Rs. 94,035 (as against Rs. 19.30 lakhs in 1956-57), agricultural tax Rs. 5.50 lakhs (Rs. 12.35 lakhs) and wealth tax Rs. 2.75 lakhs (Rs. 2.50 lakhs). No provision has been made for Indian income-tax and super-tax which claimed Rs. 34.71 lakhs in the previous year, as it is calculated that there is no taxable profit. The depreciation account, however, has received a larger provision of Rs. 34.40 lakhs, as against Rs. 30.36 lakhs a year ago. Other income has shown a modest rise from Rs. 37.29 lakhs to Rs. 37.69 lakhs. But it should be noted here that, of the latter amount, as much as Rs. 13.99 lakhs do not represent any actual income, but only provisions made in previous years written back. If this factor is taken into account, the net profit for the year under report would be still lower. Another factor which arrested a steeper decline in net profit is the saving made in the Secretaries and Treasurers' remuneration (subject to adjustment) which has come down from Rs. 9.75 lakhs to Rs. 3.22 lakhs.

The following comparative table brings out the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st May			
	1958	1957	1956	1955
Trading profit on—				
Timber ..	20 07	102 42	97 06	43 75

* On the increased capital, raised by the issue of 10,000 ordinary shares of Rs. 125 each after the close of the accounting year.
† Includes the special dividend of 6 per cent. paid in respect of 1955-56. The balance of 18 per cent. is on the increased capital raised by the bonus issue.

It will be seen from the above table that, barring the South Indian plantations, all other sections have shown a sharp decline in their trading results. The Company's timber business which had shown progressively better results year after year has yielded a mere Rs. 20 lakhs, as against Rs. 102 lakhs in the preceding year.

The dividend is proposed to be lowered to 18 per cent. from 32 per cent. for the preceding two years, to which level it had been stepped up from 30 per cent. paid for 1954-55. It should, however, be noted that the year's dividend is on a higher capital of Rs. 133.75 lakhs, raised by the capitalisation of Rs. 26.75 lakhs from the amount standing to the credit of the share premium account and a part from the general reserve and issued as fully paid bonus shares. These shares rank for dividend for the year ended 31st May 1958, subject to certain special provisions in regard to fractional certificates issued under the bonus issue. In addition, the shareholders received during the year a special dividend of 6 per cent., amounting to Rs. 6.42 lakhs, in respect of the year ended 31st May 1956 declared on 8th August 1957, that is, prior to the issue of bonus shares. It may be recalled that, under the scheme of arrangement for extinguishing the preferential rights, it had been agreed that, out of the preferential dividend payable for the year 1955-56 amounting to Rs. 10.50 lakhs, a sum of Rs. 4 lakhs was payable immediately on the 10,000 shares of Rs. 125 each issued under the scheme to the beneficial owners of the founder shares. The balance of Rs. 6.50 lakhs, which had been kept in suspense, has since been paid by way of special dividend to the shareholders in accordance with the scheme of arrangement.

The Company has trading activities in India, Burma, Thailand and Borneo. Referring to its activities in Burma, the Directors report that the volume of repair work in the dockyard was limited, but progress was made in the construction of timber and steel launches. It was necessary, during the year, to restrict somewhat the output from the plant for the manufacture of concrete pipes and similar products until demand is developed to absorb full potential production. The plant for the manufacture of asbestos cement sheeting came into production in April 1958. Here, too, a demand for the products of the factory is being steadily built up. Sales of lubricating oils and greases continued, but without any appreciable progress in the volume of sales. Import controls continued to limit the volume of sundry trading activities.

In Namhsan (tea factory in Burma), output of made tea dropped to 627,502 lbs. from 742,230 lbs. in 1956-57. Sales totalled 507,984 lbs. at an average price of K.3.09 per lb., as against K.3.08 in the previous year. Costs stood higher at K.2.90, as against K.2.65 per lb. Stocks were, in the main, disposed of to the Government of Burma tea blending plant as in previous years. A start was made in May in the resumption of sales through normal market channels. It is stated that difficult weather conditions and competitive demand from new local factories resulted in green leaf supplies being limited and expensive. This, together with restricted demand from the Government tea blending plant, affected results during the year.

The Directors report that, in Thailand, the small residue of logs extracted under the old leases was disposed of during the year. The Joint Timber Company L.d., in which this Company has 26 per cent. of the equity, started operations in October 1957. The late start caused by delay in the issue of working permits prevented disposal of any of the production in the year under review and the Company, consequently, made a small loss in 1957-58. Production of starch by Thai Tapioca Ltd. in 1957-58 amounted to 4,035 metric tons, as against 1,535 tons in 1956-57. Results for the year again showed a loss mainly due to the fall in commodity prices in the U.S.A.

In Borneo, production and purchases of hardwood logs at the Company's branch in Wallace Bay reached a record of 86,681 tons, as against 83,692 tons in 1956-57. The bulk of supplies was shipped in log form. Mill production of sawn timber amounted to 6,640 tons, as against 2,730 tons in the previous year. The North Borneo Timbers Ltd. made further progress in reducing the debit balance in profit and loss account.

The Company's South Indian tea estates produced a record crop of 6,738,359 lbs., as compared with 5,677,690 lbs. a year ago. Unit costs per lb. of made tea rose from Re. 1.34 in 1956-57 to Re. 1.44 in 1957-58, while average gross returns dropped from Rs. 2.46 in 1956-57 to Rs. 2.29. There has been a steady development of the area under tea in the South Indian plantations. Production of coffee in the Company's estates in Mysore amounted to 12,885 cw.s., including 2,753 cwts. from the estate purchased in 1957-58, as against 14,465 cwts. in 1956-57. Closing stocks have been valued at Rs. 2.25 per point. Further development of the Company's coffee acreage has taken place in South India. These areas will come into maturity over the next few years.

In Tanganyika, development continues on the Company's holdings of land in the Usambaras. Six hundred and twenty acres had been planted by 31st May 1958.

The financial position of the Company, as disclosed by its balance-sheet as at 31st May 1958, is quite strong. The paid-up capital stands raised from Rs. 94.50 lakhs to Rs. 133.75 lakhs, consequent on the issue of bonus shares referred to

CHAMPARUN SUGAR RESUMES DIVIDEND

PROFIT OF SMITH STANISTREET HIGHER

Champarun Sugar Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th June 1958.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a surplus of Rs. 5,69,985 (loss of Rs. 3,72,666). From this amount there has been transferred to rehabilitation reserve [including Rs. 13,000 (*nil*) for development rebate reserve] Rs. 40,000 (*nil*) leaving a balance of Rs. 5,29,985 (debit Rs. 3,72,666). From this the directors have deducted the debit balance brought forward from the previous year of Rs. 3,43,163 (credit of Rs. 29,503) leaving at credit of profit and loss account Rs. 1,86,822 (debit of Rs. 3,43,163). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of Re. 1 (*nil*) per share, free of income-tax, for the year ended 30th June, 1958 Rs. 1,80,000 (*nil*) and carry forward to next account Rs. 6,822 (debit of Rs. 3,43,163).

The improved financial results over the previous year have been largely due to the improved quality of sugarcane supplied to Barrah Factory although the reduction in the cane crushed by that Factory may have mitigated against maximum profits. The results have also been favourably influenced by the improved quality and quantity of sugarcane supplied to the Chanpatia Factory in the past year, which has been very largely due to the efforts made under the Company's *Cane Development Scheme*. The relative figures for crush and extraction are given in the following table:—

	Barrah	Chanpatia
Cane crushed—	Mds.	Mds.
1956-57	35,32,463	27,60,361
1957-58	23,18,329	30,98,892
Yield of sugar—	Per cent.	Per cent.
1956-57	8.57	9.31
1957-58	9.65	9.98

The cane price remained at the previous rate of Rs. 1.44 nP per maund for cane delivered at the Factory gate and Rs. 1.31 nP per maund for cane delivered at outstation.

The results shown in these accounts are considerably affected by stocks of sugar as at 30th June, having been valued at a rate lower than the market rate for the particular sugars. This is due to the imposition of a control on the price and distribution of sugar by the Government of India in July, 1958. The Company, in collaboration with others, strongly protested to the Government and have indeed taken the matter to the Supreme Court.

The efficiency of both the factories has been well maintained and in the season under review a considerable increase in the crushing capacity at the expense of technical efficiency was introduced. This increase in the crushing capacity was made for several reasons not the least of which being to encourage the planting of cane for future seasons.

For the current season, the prospects are similar to last season, in that the cane to be crushed is approximately the same and quality also about the same.

Accounts in brief are as under:—

Smith, Stanistreet & Co., Ltd.

The directors of the above Company (Chairman: H. N. Nicholls, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

With the increased acceptance of the Company's products and the restrictions on imports now imposed by the Government of India the opportunity has been taken substantially to enhance the sales force and research activities in order further to develop the Company's markets and whilst they may not be marked in the coming year it is expected that the results will place the Company in an increasingly satisfactory position.

It is also opportune to report that the Company has been privileged to participate in the capital of Messrs. Parke Davis (India) Private Ltd. to an extent of Rs. 3,00,000 which in view of that Company's potential in this country must prove a very sound investment as well as being regarded as a concrete record of the goodwill that Company bears to this Company, its distributors, in a substantial part of India.

In the accounts, after making adequate provision for depreciation and all other charges and transferring Rs. 1,00,000 (Rs. 1,00,000) to General reserve the profit for the year amounted to Rs. 2,90,090 (Rs. 2,18,970). After bringing in the amount of Rs. 87,365 (Rs. 1,18,395) carried forward from last year the balance at the credit of the profit and loss account as at 30th June, 1958, is Rs. 3,77,455 (Rs. 3,37,365) which sum the directors recommend should be disposed of as follows:

To payment of a dividend for the year to 30th June, 1958, on the preference shares at 10 per cent. per annum, free of income-tax absorbing Rs. 50,000 (Rs. 50,000), to dividend for the year to 30th June, 1958, on the ordinary shares, inclusive of the rights issue, at 16 (20) per cent. per annum, free of income-tax absorbing Rs. 2,40,000 (Rs. 2,00,000) and to carry forward to the next account Rs. 87,455 (Rs. 87,365). Shareholders are reminded that of the above an interim dividend of 10 per cent. on ordinary shares including the rights issue was paid on 30th December, 1958 and amounted to Rs. 1,50,000.

The Company has become a subsidiary of Turner, Morrison & Co. Private Ltd. in terms of the Companies Act 1956 and certain changes in the Board have been made.

Accounts in brief are as under:—

Woodcote Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Goodall & Co., Coonoor) submit the audited accounts of the Company for the year ended 30th June 1958.

After providing for taxation the net profit (including adjustment) is Rs. 3,123 (Rs. 3,451) to which is added the balance brought forward from 1956-57 of Rs. 16,960 (Rs. 26,409) making a total of Rs. 20,083 (Rs. 29,860). Out of this amount the directors recommend payment of a dividend of 6¼ per cent. tax-free on the preference capital absorbing Rs. 3,900 (Rs. 3,900) and payment of a dividend of 6 (9) per cent. tax-free on the ordinary capital absorbing Rs. 6,000 (Rs. 9,000) leaving to be carried forward a balance of Rs. 10,183 (Rs. 16,960).

The estimates for 1958-59 provide for an estate crop of 80,000 lbs. and leaf to be purchased outside 25,000 lbs.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	3,10,295	Rs.	3,10,295

East India Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The season's working resulted in a profit on revenue account of Rs. 1,41,878 (Rs. 2,89,553) after providing for depreciation amounting to Rs. 74,357 (Rs. 66,227), writing off development expenditure of Rs. 10,745 (Rs. 50) incurred during the year on Tea Estate, and making a provision of Rs. 86,277 (*nil*) for contingencies. After transferring the above profit, making various adjustments, setting aside Rs. 43,000 (Rs. 65,000) for taxation, the balance available on profit and loss account amounts to Rs. 2,57,293 (Rs. 2,72,777) from which it is proposed to transfer to building reserve Rs. 1,00,000 (*nil*) and pay a dividend of 5 (10) per cent. for season 1957 on Ordinary shares absorbing Rs. 50,000 (Rs. 1,00,000) and carry forward Rs. 1,07,293 (Rs. 1,12,777 after transferring Rs. 25,000 to general reserve; Rs. 25,000 to repairs and renewals account and Rs. 10,000 to staff account).

Tea crop for 1957 was 1,182,837 (1,045,926) pounds. The average selling price per pound of tea was Rs. 2.48 (Rs. 2.72).

The estimate for 1958 provides for a crop of 1,140,000 lbs. of tea at a cost of Rs. 2.04 per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	29,79,027

Rs.	42,17,515	Rs.	42,17,515

Chundeecherra Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

Crop.—A crop of 7,835 maunds was manufactured and was sold in Pakistan for internal consumption. The average price per lb. realised was Re. 1-15-3 as compared with Rs. 2 per lb. obtained for the previous season's crop of 8,623 maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 622 acres.

The revenue account shows a profit of Rs. 5,49,372 (Rs. 6,75,586). After deducting from this gratuity Rs. 1,325 (Rs. 10,725), staff commission and bonus Rs. 22,783 (Rs. 71,798), managing agents' remuneration Rs. 50,000 (Rs. 57,019), advances—written off Rs. 33,847 (*nil*), provision for taxation Rs. 2,50,000 (Rs. 2,60,000) and depreciation Rs. 31,646 (Rs. 49,904) there is left a sum of Rs. 1,59,771 (Rs. 2,25,281 after deducting Manager's planting commission Rs. 859). To this is added the dividend on investments (net) Rs. 235 (Rs. 329), profit on sale of motor vehicle Rs. 10,501 (*nil*) and excess provision of staff commission in respect of previous year—written back Rs. 26,675 (*nil*) giving a net profit for the year of Rs. 1,97,182 (Rs. 2,25,610). After adding to this the adjusted credit balance of Rs. 1,14,550 (Rs. 42,062) brought forward from the previous year, there is a credit balance of Rs. 3,11,732 (Rs. 1,14,550 after transferring Rs. 1,50,000 to buildings and machinery reserve and deducting Rs. 3,122 on account of sundry adjustments) on profit and loss account. The directors regret that owing to lack of funds in India they are unable to recommend the payment of any dividend at present. As and when funds are available in India a dividend will be declared. Meantime the balance at credit of profit and loss account is to be carried forward.

The estimates for season 1958 provide for a crop of 8,000 maunds at a total cost of Rs. 7,75,413 which excludes Rs. 3,32,500 being estimated capital expenditure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

COMPANY AFFAIRS

(*Concluded from page 120*)

earlier and by the issue of 10,000 ordinary shares of Rs. 125 each for extinguishing the special rights of founder shares of Rs. 2,500 each. The reserves and surplus aggregate Rs. 345.34 lakhs. The current liabilities amount to Rs. 278.29 lakhs. The gross block of the value of Rs. 528.19 lakhs has been written down to Rs. 307.78 lakhs. Additions during the year were of the order of Rs. 69.44 lakhs. These are exclusive of buildings, machinery, roads, etc., under construction amounting to Rs. 18.73 lakhs. Investments in shares of subsidiary companies, other companies and Government securities, together with interest accrued, are shown at Rs. 84.36 lakhs. The other current assets aggregate Rs. 347.34 lakhs and include, among other things, stores at cost Rs. 50.77 lakhs, stock-in-trade of timber, tea, coffee, etc., and sundry trading stock Rs. 52.15 lakhs, sundry debtors Rs. 47.84 lakhs, loans and advances Rs. 96.17 lakhs and cash and bank balances Rs. 99.21 lakhs.

The Rs. 125 fully paid-up shares of the Company are currently quoted at Rs. 468 *cum-div.* (final dividend Rs. 15). On an *ex-div.* basis, the dividend of 18 per cent. for the year under review means a yield of 5 per cent. per annum, free of tax.

TREASURY BILL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, 21*st January*

There has been no notable change in the state of the short-term money market. It continues to be stringent, thanks to the growing seasonal pressure of demand for bank credit. Weekly scheduled bank statistics show that bank deposits are slowly declining, while the pace of increase in their lendings is gathering momentum. Cash balances are dwindling and borrowings from the Reserve Bank are rising. These borrowings have so far been mostly against Government securities, as the outstanding borrowings against usance bills are no more than Rs. 3.21 crores.

There has been no change in interest rates in the market, inter-bank call money being done at the self-same rate of 3½ per cent. among the Exchange banks and big Indian banks. They, however, do not appear to be in a mood to pay more. The rate among the smaller Indian banks is 3¼-3½ per cent. House money at seven days' notice continues to fetch 3½ to 3¾ per cent. and short-term deposits for one to six months at 3¾ to 4 per cent. depending upon the period and the amount.

The tight money conditions are reflected in a further hardening of the Treasury Bill rate from 2.470 per cent. to 2.490 per cent. per annum this week. While the amount offered is unchanged at Rs. 2.05 crores, against an invitation for Rs. 2 crores (same as in the past week), biddings were at the lower rate of Rs. 99.375, as against Rs. 99.385 and Rs. 99.380 last week. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate bills this week also. Nevertheless, the Reserve Bank has decided to continue their sale at Rs. 99.391 per cent.

A further small expansion of Rs. 2.34 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 16th January 1959. Notes held in the Banking Department are lower by Rs. 2.43 crores. There has been no change in foreign securities, but balances held abroad have risen further by Rs. 5.56 crores, so that the total foreign assets stand at Rs. 197.27 crores. Central Government's deposits have declined by Rs. 13.92 crores, while other Government's deposits show a sharp rise of Rs. 36.26 crores. Deposits of banks, too, are higher by Rs. 2.81 crores. Loans and advances to Governments have declined by Rs. 7.54 crores, while other loans and advances have gone up by Rs. 4.94 crores. Investments have risen by Rs. 29.21 crores; this is in sharp contrast to the sharp fall in the preceding two weeks.

The Scheduled banks' statement for the week ended 9th January 1959 discloses a decline of Rs. 13.60 crores in demand deposits and a rise of Rs. 3.14 crores in time deposits. Inter-bank borrowings are higher by Rs. 65 lakhs, borrowings from the Reserve Bank by Rs. 12.48 crores and those from the State Bank of India by Rs. 99 lakhs. A sharp rise of Rs. 16.39 crores is noted in advances and of Rs. 1.97 crores in bills purchased and discounted. Cash balances have shrunk by Rs. 8.80 crores.

The Gilt-edged market continues to rule dull. There has been very little interest in Central Government loans, due to the stringency in the money market, which is keeping out institutional buyers. State loans continue to attract attention. The Life Insurance Corporation seems to be out of the market for the present. 3 per cent. 1986 Conversion Loan has gained a further 15 nP to Rs. 74.30, while 3 per cent. 1970-75 is unchanged at Rs. 91, as also 3 per cent. 1966-68 at Rs. 93.95. 3 per cent. 1963-65 is stagnant at Rs. 96.80, 3½ per cent. 1961 at Rs. 100.10, 3½ per cent. 1963 at Rs. 100.05, 3¾ per cent. 1964 at Rs. 99.85 and 3½ per cent. 1965 at Rs. 99.70. 3½ per cent. 1967 is placed at Rs. 99.15 *ex*-voucher, as against the same rate before payment of half-yearly interest. 3¾ per cent. 1967 and 3¾ per cent. 1968 stands unchanged at Rs. 100.80 and Rs. 100.60, respectively. 3½ per cent. 1974 is placed at Rs. 98.50 *ex*-voucher, as against Rs. 98.50 *cum*-voucher a week ago. Among State loans, Bombay 4½ per cent. 1969 has picked up 45 nP to Rs. 101.70, 4½ per cent. 1970 60 nP to Rs. 101.75 and 4½ per cent. 1971 40 nP to Rs. 101.50. Andhra 4 per cent. 1967 and 1968 has gained 5 nP each to Rs. 99.95. M.P. 4 per cent. 1967 has put on 10 nP to Rs. 99.80 and 1968 30 nP to Rs. 99.80.

In the foreign exchange section, rupee has gained some strength in terms of the U.S. dollar, following the recovery of sterling abroad. Banks selling rate of ready dollars is being quoted today at Rs. 476.75, as against Rs. 477 per $100 a week ago, and their buying rate at Rs. 473.50 per $100, as against Rs. 473.75. In New York, spot sterling has risen from $2.80½-2.80.9/16 to $2.80.11/16-2.80¾ and three months' forward from $2.80½-2.80.5/16 to $2.80.7/16-2.80¾.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 19*th January*

Firm conditions prevail in the linseed market. Both seeds and oil prices have advanced in sympathy with sharp rises recorded by other oilseeds, notably groundnut and mustard. With supplies still being very scarce, sellers have shown no interest, whilst there have been livelier inquiries from millers. The oil market is firm. Stocks are limited and only small lots are changing hands at higher prices.

The latest quotation for ready-January is Rs. 27 per maund.

FURTHER RISE IN GOLD

(From Our Own Correspondent)

BOMBAY, 21*st January*

There was a further rise in the price of gold during the week under review, while silver remained subdued, though some recovery was in evidence even in this metal yesterday and today. Today, the price of the yellow metal touched a level of Rs. 118-1, which was only Rs. 2 below the all-time peak of Rs. 120-1 touched on 6th May 1950 and As. 11 below the peak seen in 1951.

The persistent upward trend in gold is the result of hecting buying by speculators who are exploiting the situation caused by poor floating stocks, thanks to small arrivals and good demand from the interior. The small arrivals must be attributed to sharp decline in smuggling, seizure of large parcels of contraband gold by the customs and continued suspension of Mysore gold sales. Incidentally, there are rumours that the Union Government will shortly take steps to regulate the outflow of rupee notes to Arab countries with a view to checking smuggling activity more efficiently. When such is the position, buying inquiries have broadened and there are indications of the present bullish trend gathering further momentum in the coming weeks, what with the marriage season demand as well as improvement in the production of food and other agricultural commodities. A section of the trade feels that a large part of the increased incomes in rural areas will be spent on purchases of gold jewellery.

As for silver, there has not been any large-scale fresh buying. Operators appear to be cautious on reports that import duty on about 35,000 Tibetan coins was paid on Wednesday last week. Consequently, prices have tended to move down. The decline in prices would have been more marked but for replacement buying at lower levels yesterday and today.

Gold for forward delivery (January settlement) opened the week distinctly firm at Rs. 116-12-6, as against Rs. 116-5-6, and spurted to touch a high of Rs. 117-11 today before finishing at Rs. 117.10. The net gain over the week was Rs. 1-4-6. The February settlement moved up from Rs. 116-13 to Rs. 118. At the close today, it was an anna lower. The carry forward charge, which stood at As. 7-6 against bulls last week, narrowed down to As. 5 today.

Ready gold met with excellent buying support and registered a rise of Re. 1-13-6 to Rs. 118; at one time today, it was as high as Rs. 118-1. The daily average arrivals of gold were 4,000 tolas, while the offtake was 2,500 tolas per day. The floating stocks of gold are estimated at 30,000 tolas.

Silver forward (January settlement) came in for selling in the earlier sessions and receded from Rs. 194-14 to Rs. 193-3 on the 19th inst. It, however, recovered subsequently to Rs. 194-13 today before finishing easy at Rs. 194-12-6. The February settlement, after declining from Rs. 195-13-6 to Rs. 194-3, rose to Rs. 195-12 today. The carry forward charge remained unchanged at As. 15-6 against bulls throughout the week.

Ready silver, which stood at Rs. 194-9 last week-end, gradually declined to Rs. 193-9 on Monday. Thereafter, it recovered a little, today's closing rate being Rs. 194-12. The daily average arrivals and offtake were 14 bars and 12 bars, respectively. The floating stocks of silver are estimated at 1,400 bars.

The ready and forward silver prices at London were unchanged, the former at 76½*d.* and the latter at 75¾*d.* The price of gold in New York moved up from 249*s.* 10¾*d.* to 250*s.* 0¼*d.* Silver, too, rose from 90.125c to 90.375c.

The following comparative table shows at a glance the trend of the market during the week under review:

	21-1-59	Highest	Lowest	13-1-59
Gold	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	118 0	118 1	116 8	116 7

TRADING IN KIPS PATCHY

(From Our Own Correspondent)

MADRAS, 19*th January*

Trading in E.I. hides and calves with the U.K. has been patchy, because importers are making selective purchases with emphasis on lower ends, while shippers wish to sell more top selections. Prices are likely to ease to some extent, due to financial reasons at this end. Arrivals are moderate, but clearance of stocks is restricted. The tone is bearish, which is not, however, warranted by the prices ruling in the raw section.

In the tanned skins section, inquiries from overseas buyers have been mostly for light weight goat skins and medium sheep fifths. As tanners have large orders to ship, they do not seem to be keen on booking orders, unless at 6*d.* above last established prices, which has been turned down by importers. Prices in this section as well as in kips will have to decline to some extent in order to stimulate export trade.

COTTON FUTURES FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 21*st January*

Despite the categorical statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, in Bombay on the 15th inst. that there will be no reduction of export duty on cotton, the cotton futures market ruled fully firm during the major part of the week under review. Although the possibility of a reduction of duty was thus ruled out, most operators were inclined to take an optimistic view of the future, considering Mr. Shastri's appreciation of the problems of the trade and his keen desire to see that exports are stepped up. Reports of improvement in offtake of piecegoods and the prospect of a smaller crop favourably affected sentiment. However, large arrivals in up-country markets and the consequent fall in prices induced a reaction in the market on Saturday. But it proved shortlived as values spurted on Monday following extensive buying by Ahmedabad and Akola interests in Bombay. This was prompted by fears of damage to the crop due to the wet spell in Gujerat and Saurashtra. Large-scale local mill and investment buying aided the upward trend. The Jarilla contract firmed up by as much as Rs. 7.25 on Monday, although it eased slightly the next day. The market ruled steady today.

I.C.C. Moglai Jarilla March opened the week at Rs. 659, and after improving to Rs. 664 the next day, declined to Rs. 655 on Saturday. The contract, however, rose to Rs. 677.75 on Monday, but receded to Rs. 664.75 yesterday. Commencing today's session at Rs. 665, it improved to Rs. 667.25 before finishing at Rs. 664.50. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	21-1-59	*High*	*Low*	14-1-59
I.C.C. Moglai Jarilla (March 1959) ...	664.50	667.75	655	659.50

The spot market also ruled firm. Values registered improvement. Sustained inquiries were reported for staple styles like Vijay, 197/3, CO2, O394, Rajapalayam, Khamgaon, etc.

In the export section, since there was no possibility of reduction in duty, trading interest was at a low ebb. Overseas demand continued to be discouraging. Some inquiries were, however, noted for Oomra *Deshi*, Bengals and old crop Berar 25/32″ staple and a moderate volume of business was reported.

The foreign section was quiet. Traders were eagerly awaiting an import allocation for cotton of stapling 1.3/16″.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing rates:

Bengal *Deshi* 685 (690); Berar Jarilla 730 (740); Khandesh 810 (800); Vijay 945 (920); Jaydhar 900 (875). *Delivery contracts*: Bengal 622; Mathia 610.

The Karachi cotton futures market ruled easy during the week under review. A larger crop forecast by the Ministry of Food and Agriculture during the current season in its latest estimate and slack foreign demand imparted weakness to the market. N.T.R.G. January declined from Rs. 63-0-6 last week-end to Rs. 62-4-6, while the March position eased by As. 12 to Rs. 61-12-6. In the spot section, prices of *Deshi* varieties declined while those of other varieties showed some improvement. Punjab *Deshi* was quoted Re. 1-8 lower at Rs. 57-8. Sind *Deshi* declined fractionally to Rs. 64. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 62-7; S.G. 67-7; LS.S. Punjab Roller 63-15; S.G. 68-7; N.T. Roller 66-11; S.G. 73-15; 289F Punjab Roller 72-15; S.G. 82-15.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Values showed a sagging tendency. In the absence of any fresh development, trading interest was subdued. Domestic spinner demand was negligible. Foreign inquiries were few and far between.

Export sale of new crop from the commencement of this season till the end of December aggregated 474,193 bales of (720 lbs.), as against 392,911 bales sold during the same period of last season. Actual shipments during the season up to 7th January were 335,179 bales, as against 252,758 bales in the same period last season.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: *January* 72.12 (72.80); March 72.70 (72.85). *Ashmouni*: February 64.14 (64.17); April 64.05 (64.03).

Cotton futures values in Liverpool scored handsome gains during the week. There was large scale buying by spinners in anticipation of a general improvement in the textile trade. Commission Houses also supported the market. Sudan cotton contracts in Liverpool were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closings:

American cotton one inch staple contracts: March-April 22.45 (22.05); May-June 21.90 (21.45); July-August 20.70 (20.40); October-November 20.00 (19.00). *American cotton mixed growth contract*: March-April 22.95 (22.25); May-June 22.30 (21.60); July-August 21.00 (20.35); October-November 20.00 (19.78). *Sudan*: January-February, May-June, July-August 24.75 (24.75).

The New York cotton futures market suffered a setback during the week under review. There was heavy New Orleans selling and Commission House

liquidation. This was prompted by the news of the steady build up in the certified cotton stocks and reports of discouraging export prospects during the rest of the season. The forecast of the International Cotton Advisory Committee, Washington, that the U.S. exports could fall below 3.5 million bales, as compared with 5.7 million shipped last season, also adversely affected the sentiment of operators.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	20-1-59	13-1-59	6-1-59
Spot	35 55	35.70	35.70
March	34.35	34.68	34.64
May	34.52	34.82	34.79
July	34.03	33.94	33.88

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 21*st January*

The yarn market ruled dull during the week under review. Transactions put through were limited and values *moved narrowly*. Art silk yarns were quiet, thanks to enlarged supplies from indigenous manufacturers and large arrivals of foreign yarns against export promotion licences, while demand from consuming centres was at a low ebb. Staple fibre yarns were somewhat well supported, despite large offerings from local and upcountry manufacturers. Cotton yarns continued to rule depressed. Demand from internal markets was poor. Nor were advices from export markets encouraging; it was reported that there was continued keen *competition from* China, Hong Kong, Italy and Japan. The firmness of raw cotton had no effect.

The year 1958 witnessed a sharp drop in imports of art silk yarn, due to the Government of India's restricted import policy. The *actual* imports into Bombay port aggregated *no more* than 27.4 million lbs., as against 36 million lbs. in 1957. Imports of cotton yarn amounted to 1.46 million lbs. as compared with 1.50 million lbs. in 1957. The quantity of staple fibre yarn imported was only 16,699 lbs., that in the previous year being as much as 290,481 lbs. There were no imports of raw staple fibre during 1958, while, in 1957, 8.36 million lbs. had been imported.

In the art silk yarn section, indigenous yarns lacked support. National Rayons 150 bright cones first grade dropped 7 nP to Rs. 4.38. 120 bright cones first grade shed 3 nP to Rs. 4.38. 150 Japan were quiet at Rs. 5, as also 120 Italy at Rs. 5.31 and 150 Italy at Rs. 5.37. 120 Japan hardened by 7 nP to Rs. 4.91.

Cupressa Bamberg art silk yarn (60/1) February delivery was subjected to heavy selling pressure and climbed down by Rs. 32 to Rs. 1,598. Spot 60/1 cupressa were dull at Rs. 8.37.

Staple fibre yarn (40 x 2) February delivery gathered Rs. 2 to Rs. 609. April delivery was done at Rs. 617. Spot (40 x 2) Citys rose by 12 nP to Rs. 3.12. Kohinoors put on 5 nP to Rs. 3.30. Centurys were firm at Rs. 3.25. Foreign yarns, however, were neglected, Paramounts receding by 13 nP to Rs. 8.87 and Fujis by 7 nP to Rs. 8.87.

In the cotton yarn section, ten counts Podars were dull at Rs. 12.12. Moderns were on offer at Rs. 12.75. Among twenty counts, Moderns were quoted at Rs. 16.25. Thirty counts Hinds, however, put on 13 nP to Rs. 19.25. Among forty counts, Minaxis receded by 19 nP to Rs. 24.50. Moderns were quiet at Rs. 25.25. Sixty counts Raghuvamshis changed hands at Rs. 53, same as last week. Finlays were on offer at Rs. 65.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those nine days before:

	21-1-59	12-1-59
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	4.91	4.84
150 Japan (per lb.)	5.00	5.00
120 Italy (per lb.)	5.31	5.31
150 Italy (per lb.)	5.37	5.37
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	609.00	607.00
40 x 2 Kohinoor (per lb.)	3.30	3.25
40 x 2 Century (per lb.)	3.25	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.12	12.12
20s Modern	16.25	16.25
30s Hind	19.25	19.12
40s Minaxi	24.50	24.69
60s Finlay	65.00	65.00

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 21*st January*

The firm conditions witnessed in the local oilseeds market last week was turned into a bullish fervour during the week under review, thanks mainly to sustained prospects for sizable exports of oils and relatively tight supply position.

There was spectacular rally in prices in the groundnut section. This was aided by good demand for groundnut oil, oilcakes and H.P.S., particularly from Hong Kong and Canada and better prospects ahead. The reduction in freight rates in respect of H.P.S. on the India-Atlantic Ocean ports was another helpful factor. Arrivals were more or less limited, presumably as a result of the increased holding capacity of the farmers. There were, in addition, reports of lower crop from Saurashtra region owing to unfavourable weather conditions Margin considerations do not seem to have made much impression on the market, especially in the light of the distinct support from the North Indian speculators. Prices touched new high levels on Monday, which were more or less kept up yesterday as well. Today, however, there was slight setback mainly on account of technical considerations.

Groundnut February 1959 contract, which closed last week at Rs. 168.25, *moved* both ways in a narrow groove until Saturday. Monday saw an impressive rally in prices and the contract gained overnight about Rs. 6.75 nP to close at Rs. 176.00. It, however, eased to Rs. 174.25 today. The May 1959 contract, similarly, made headway from Rs. 172.50 last week-end to Rs. 180.50 yesterday, but it wound up today's session at Rs. 178.75. Bold ready which opened the week on a firm note at Rs. 33.56 readily picked up strength mainly on account of good demand from *vanaspati* manufacturers and touched Rs. 35.37 on Monday, but slightly declined to Rs. 35.25 today. Oil ex-mill improved from Rs. 18.00 to Rs. 19.12 yesterday. It, however, sagged today to Rs. 18.75.

The castorseed section was firm on prospects for exports of oil. Traders expect that the U.S. and the countries of the Communist block will be in the market in due course. The bullish sentiments might also be attributed to the good upcountry support and bear covering. Castorseed May 1959 contract spurted from Rs. 145.00 last week-end to Rs. 149.75 today, but not before touching a high of Rs. 150.25 yesterday. Ready Madras hardened from Rs. 28.75 to Rs. 29.25 today. Oil B.S.S. made considerable headway during the week. It rallied from Rs. 15.87 to Rs. 16.37 yesterday, but gave way to close today at Rs. 16.19.

There were no significant developments affecting the linseed section, but it improved in sympathy with other seeds. In view of the comfortable world supply position in linseed oil, it is difficult to predict the future course of export demand. Linseed May 1959 contract, after experiencing minor fluctuations, wound up the week with an overall gain of 88 nP at Rs. 32.50. Bold ready moved between Rs. 35.50 and Rs. 36.00 but was hammered down today to Rs. 35.62. Oil prices lost 19 nP over the week to close today at Rs. 17.81. Cottonseed moved up in sympathy with the cotton market. Cottonseed February 1959 contract advanced from Rs. 122.50 last Wednesday to Rs. 125.75 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	21-1-1959	14-1-1959	7-1-1959
Groundnut	Rs.	Rs.	Rs.
February 1959	174.25	168.25	164.87
May 1959	178.75	172.50	169.00
Bold ready	35.25	33.56	33.75
Coromandel ready	35.75	34.50	33.12
Khandesh quality	35.75	34.62	33.25
Oil ex-mill ready*	18.75	18.00	17.37
Railway receipts*	18.62	17.94	17.31

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for future contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR MOVES DOWN

(From Our Own Correspondents)

BOMBAY, 21*st January*

The firm trend noted in the sugar market in the past two weeks abated during the week under review. In fact, the market presented a distinctly easy appearance, though the sentiment was somewhat better today. The easiness was due to substantial arrivals of sugar by trucks into the city. The arrivals by rail were also quite heavy, being 23,360 bags, as against 14,400 bags last week. The highly comfortable supply position, together with rumours of the normal monthly release being announced on the coming Saturday, and the drop of a rupee per bag in the Bombay-Deccan ex-mill values, induced selling, with the result that prices suffered a setback. There was some recovery today, but it was not marked enough to make up the earlier losses, so that today's rates were much lower than those at the end of last week.

Over the week, large grain sugar fell by Rs. 2 to Rs. 112-Rs. 118 per bag. Medium grain declined by a like amount to Rs. 109.50-Rs. 111. Small grain lost 50 nP to Rs. 108.50.

• • • •

HAPUR, 19*th January*

Steady conditions were witnessed in the sugar market during the past week and prices of some grades were higher than the controlled rates fixed by the Government. The President of the Indian Sugar Mills' Association has urged the Government either to withdraw price control on sugar or to raise its price to a fair level, as also to impose an appropriate excise duty on *khandsari* in order to avoid unfair competition with mills. Crushing operations of mills in west U.P. were reported to be in full swing, as cane supplies were adequate.

The supply position in the Muzaffarnagar sugar market during the past week was quite comfortable, as demand tapered off towards the week-end on account of heavy despatches against previous commitments. Some business, however, was done for the Punjab, Gujerat and Saurashtra. The latest prevailing prices were: Crystal spot delivery Deoband C29 moist Rs. 35.25; New Deoband D29 Rs. 37.

Fresh demand lacking, the Kanpur sugar market ruled dull during the week. Sentiment in the ex-mill delivery section was well maintained, as the share of U.P. mills in the last quota was found to be short of requirements. The trade was now awaiting the release of fresh quota for restarting its buying operations.

After an early fall, ready *gur* tended to move up, due to good support by bulls. Arrivals were modest, the average being 3,000 to 4,000 maunds and local stock swelled to 25,000 maunds. Prevailing prices were: *gur pansera* Rs. 15.37 to Rs. 15.63; *balti* Rs. 16.25 to Rs. 16.44; *shakker* Rs. 16.75 per maund.

S.T.C. BUYS RAW JUTE

(From Our Own Correspondent)

CALCUTTA, 20*th January*

Quiet conditions prevailed in both raw jute and jute goods market during the week under review. In response to the price support policy, the State Trading Corporation commenced buying raw jute in a few districts, but this did not go far enough to have any effect on the trend of prices. For the Corporation's purchases have so far been meagre, as compared with the quantities on offer. The Corporation is caught between two horns of a dilemma: if only the Corporation purchases in greater quantities, the market can be relieved of surplus of the mesta varieties. If the Corporation must purchase in greater quantities, proper storage facilities will present a problem in the first instance. Again, it is unlikely that all the mesta quality fibre can be exported. In that case, the S.T.C. will be obliged to dispose of its holdings to mills at a later date. Further, it will be several months before mills may need to buy from the Corporation, as they have in their godowns fibre adequate for 4½ months' consumption. It is doubtful whether, even at a later date, the Corporation will be able to sell mesta to mills without putting itself to any loss, because mills can buy at competitive rates from the open market.

Trade circles here believe that some portion of the surplus of the inferior varieties can be exported, but point out that this field is entirely new to the Corporation. If only the services of the trading firms, which had much experience in the export of raw jute during the pre-partition time, could be utilised, trade circles feel, a greater quantity could be exported than the Corporation could achieve by acting alone.

Meanwhile, mills have stepped up purchases of the fibre. As a measure of support, mills bought from the same areas where the S.T.C. was operating. Even this has failed to impart steadiness to the market. There was a report that, in these districts, agencies of mills were offering premium price. However, the Indian Jute Mills Association was not aware of this. It was pointed out here, on behalf of the Association, that negotiations were in progress between the S.T.C. and the Association on the question of buying jute by mills from the Corporation. If in the area where the Corporation is buying raw jute mills offer higher prices, that will put the Corporation to difficulties. The area of activity of the Corporation comprises four northern districts of West Bengal, Bihar, Assam, and Orissa, where, due to a glut in supplies of the inferior varieties, prices have touched very low levels. The S.T.C's price is higher than the market rate, and the margin is to be shared by the growers and the local co-operative marketing societies.

During the week under review, there was the happy news from New York that burlap consumption in the United States in December was as high as 73.6 million yards, as against 64.5 million yards in the previous month. This news lent support to the hessian section of the goods market. On the other hand, the report of higher production in December checked enthusiasm. For production totalled 90,500 tons, representing an increase of 9,500 tons over November. Sacking increased to 49,200 tons from 44,900 tons, and hessian to 40,100 from 35,800 tons. At 7,200 tons, other constructions, too, recorded a small rise. The increase in production was due to increased working hours. As stocks at the end of November were 105,400 tons, goods available in the month of December were 201,900 tons. Stocks at the end of December were 109,900 tons, so that demand in the month was only 92,000 tons, that is, much less than production. On Tuesday last (13th January), ready B. twills were fractionally better at Rs. 94.70 and hessian 40"×10 oz. at Rs. 41 was steady. The news that the recent tender for heavy Cees was being kept pending soon spread and in the next day B. twills sagged to Rs. 94.15. In sympathy, hessian 40"×10 oz. fell to Rs. 40.90 and there were also rumours of an expected fall in U.S. burlap consumption in December, which proved incorrect subsequently. At this stage, bear-covering developed and B. twills on Thursday recovered to Rs. 94.25, while hessian 40"×10 oz. remained unchanged at Rs. 40.90. No business, however, took place, and, by the week-end, B. twills fell to Rs. 93.50. The recovery in hessian 40"×10 oz. to Rs. 41 on Friday could not be sustained, as the rate fell to Rs. 40.90 by the week-end. Yesterday, with the quotation at Rs. 92.20, ready B. twills reached the lowest level of the week. The decline followed selling pressure in the futures market. Although hessian 40"×10 oz. also declined, the ready goods at Rs. 40.75 were nevertheless steady due to shortage for ready goods.

The raw jute market was dull, despite buying interest shown by mills and the State Trading Corporation. Prices in the agencies, however, were firm, in view of buying by mills there. Northern bottoms, after falling to Rs. 20, recovered to Rs. 20.25, while Daissee bottoms were unchanged at Rs. 22. Daissee mesta bottoms changed hands at Rs. 17 with the middies being quoted at Rs. 19.50. Fair interest was shown in this variety. Mills were anxious to purchase this quality, since, in view of its satisfactory quality, consumption was increasing. As mills have stepped up purchases and already have with them fibre for four to five months' consumption, they have been put to difficulties for storage of fresh arrivals.

The latest quotations for the different varieties for 1958-59 crop, January-February delivery are:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	22.75	20.25

Pucca bales 1st marks ready.	... Rs. 140.00 per bale	

BLACK PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, 21*st January*

Malabar black pepper, after fluctuating within a narrow range of Rs. 10 last week, rallied sharply during the week under review, following news of reduction of freight from India to the U.S.A. from $70 to $50 per ton Smaller arrivals at all terminal markets helped the sentiment. The bulls were not slow in exploiting the situation. The improvement in seeds and ginger proved a supporting factor. Outside speculators were reported to be paying more attention to pepper, as they thought that the present prices were low.

Both Indian exporters and growers are likely to try their best to pocket for themselves the advantage of the reduction in freight. They are quoting the same price as before. New York, however, will haggle for the concessions. If the exporters remain firm and in the meantime Singapore does not undercuote India, the market is likely to advance further.

Alleppey improved from Rs. 550 to Rs. 587½ for ungarbled, while garbled at Cochin from Rs. 93½ to Rs. 99. There were heavy fluctuations in February on the forward ring, owing to short-covering by bears and fresh buying by bulls. February delivery spurted from Rs. 95½ to Rs. 100. Calicut improved to Rs. 625, as arrivals were restricted, owing to rain in the interior.

Singapore remained steady with minor fluctuations, but news from Djakarta were encouraging, as speculators were buying both at Telok Betong and at Djakarta. Reduction of freight from Singapore to New York appeared imminent. New York spot, after improving to $0.24, came down to $0.23¾.

The future of the market depends upon the buying policy of New York dealers, for most of the sales to Russia and the East European countries stand covered.

In specific delivery, February improved from Rs. 526 to Rs. 563, while April delivery was forced up to Rs. 583 by speculative support.

Business in A.S.T.A. was very much restricted, as support from New York was lacking. New York continued to buy hand to mouth and paid $0.22 to $0.22½ for January shipment.

Today's nominal quotations are: Ready delivery Rs. 79 per Bengal maund; February Rs. 563-Rs. 568 and April Rs. 583-Rs. 588 per candy of 5¼ cwts.

MEDIUM TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 15*th January*

891 280 lbs. were on offer in sale No. 2, which was held on Tuesday, 13th January. The quality of the high grown teas was maintained, and some improvement was noticeable in the good medium teas. The market opened to an irregular demand, with internal buyers competing for the low mediums, and the export buyers showing interest in the good medium and high grown teas. Low medium and medium fannings and whole leaf were the strongest feature of the sale and these descriptions were 5 to 10 nP dearer. The Egyptian buyer showed interest in black leaf fannings. Low medium and medium brokens were steady, but all others, particularly high growns, were irregular and easier. The quotations were: low medium Re. 1.53 to 1.63; medium Re. 1.68 to 1.83; good medium Re. 1.90 to Rs. 2.30 and quality Rs. 2.10 to 2.60.

Dust Sale 'A':—In the first dust auction of 1959 held on Thursday, 15th January there was 617,124 lbs. on offer. From the outset there was a very strong general demand for all teas up to good medium. Prices were irregularly 10 to 15 nP dearer and sometimes more. The sole exception were high grown dusts which can be quoted about steady. A quantity of C.T.C. dusts met keen competition and sold at dearer rates.

London Market:—Sale of 12th January 1959.—Good demand. Best dearer; others fully firm.

Sale of 13th January 1959.—Only best steady; others easier.

Colombo Market.—Good demand. Dimbula Dickoya B.O.Ps declined 15 to 20c. Corresponding fannings dearer. Useful medium brokens up 15c. Plainer sorts steady. All lowgrowns, including Gulf types, about 5c dearer. Offgrades strong demand, generally 5 to 10c dearer.

Calcutta Market:—Export.—Continued strong general demand. Plain brokens and fannings firm to dearer. C.T.Cs good demand; best irregular; poorer types dearer. Darjeelings less support.

Internal.—17,500 packages dust. Continued strong demand. Orthodox firm to dearer. C.T.Cs strong; poorest 5 to 10 nP dearer. Few best also dearer.

Export Quota.—The market improved during the week, and a fair volume of business was transacted at 4¼ nP. The market has since shown a slightly easier tendency, and the latest quotation is sellers 3¾ nP, buyers 3¼ nP.

Forthcoming Auctions.—Sale No. 3 will be held on Tuesday, 20th January 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 3:—845,000 lbs. Strong general demand. Low medium brokens fully firm, fannings dearer, medium good medium and best liquoring prices higher following quality."

TEA FARES WELL AGAIN

(From Our Own Correspondent)

CALCUTTA, 20*th January*

Strong demand was again a feature during the tea sales held yesterday for export. A similar tendency was also in evidence in the internal sales held in the last week.

Meanwhile, reports from London also encouraged the stimulating trend here. Although warehouse and about-to-be landed stocks in the United Kingdom in the week ended 9th January rose from 183.3 million lbs. to 187.7 million lbs.—the increase in weight in landings has been due to the rains character of the tea—it was noted that there was a strong belief there that world consumption was increasing. Traders in London would be offered a bigger quantity each week in the next month. May be, buyers will consider higher quantities as involving no risk.

The production figure for North-East India for December is now available. Adding the December figure, which, incidentally, was 6.000 lbs. lower as compared with December 1957, production in 1958 aggregated 551 million lbs., thus recording an increase of 22.71 million lbs. This surplus is not such as to be a botheration, think market circles, but, considering the growing competition from China and East Africa, it remains to be seen if common teas will prove economic to gardens. It is to be hoped that the industry's just demand to both the West Bengal and Assam Governments to abolish the entry tax on tea will be conceded at an early date. This tax alone costs the industry about Rs. 4 crores, according to estimates.

In the internal sales held last week, dusts on offer totalled 17,470 chests, which met with a strong general demand. C.T.C. Assams provided the star feature of the sales. The better varieties rose by 20 nP and the poorer and medium sorts by 10 nP. The clean orthodox grades received good support, and the black leaf exportable teas and the smaller coloury grades advanced by 10 nP. The quotations, in rupees per lb. excluding the excise duty, were: best Assam C.T.C. 2.40 to 2.90 (nominal), medium Assam C.T.C. 2.00 to 2.15, medium Assam grainy dust 1.74 to 1.80, and medium Doars 1.78 to 1.80.

Leaf on offer totalled 1,859 chests, prices of which rose as demand was good.

On offer during yesterday's export sales were 66,325 packages. Prices showed an irregular tendency. Orthodox B.O.Ps were in good demand at declining rates, but the few bright liquoring kinds were fully firm. O.Fs were in demand at lower rates. In the C.T.C. group, the poorer sorts rose, and the remainder realised valuations. The leafy teas in the plain and medium B.P. group were in keener demand and their prices hardened. The P.Fs occupied a shady corner, while the better medium teas receded. Although demand was good, legg-cut teas lost by 2 to 4 nP. Whole leaf grades were firm, with the stylish lots and the well-made B.P.Ss in greater attention, realising higher prices. Darjeelings were in strong demand, and realised improved prices. The quotations were: best Assam C.T.C. fannings Rs. 2.30 (nominal), clean black pekoe Rs. 2.00 to Rs. 2.04, best Assam C.T.C. B.P. Rs. 2.25 (nominal), medium B.P. Re. 1.60 to Re. 1.64, plain B.P. Re. 1.60 to Re. 1.62, and plain fannings Re. 1.72 to Re. 1.76.

Export quota was offered 2¼ nP towards the close, after earlier business at 3 nP.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 19*th January*

Steady conditions continued in the foodgrains market during the week on reports of acute shortage of rabi grains. Thanks to the record rice crop, which is expected to reach 30 million tons against the peak of 28.8 million tons in 1956-57, the Central Government's procurement target of 1.5 million tons is expected to be exceeded. With procurement operations in full swing in various States, two million tons of rice or more are expected to be easily procured.

Wheat, after touching the peak level of Rs. 28 to Rs. 30 per maund during mid-session, eased slightly to be quoted on Monday at Rs. 27.50 to Rs. 29.50 per maund, thanks to some arrivals from outside by road and a wagon-load from Lalitpur (Jhansi).

Rice also recorded modest gains during the week in sympathy with wheat. Supplies were restricted, as it was not freely possible to bring rice from surplus areas due to Government restrictions. The prevailing prices were: *basmati sela* Rs. 31.50; *mainpuri* Rs. 22.50; *raimunia* Rs. 27; coarse Rs. 18.25 per maund.

Gram touched an all-time high level by recording further advance of Re. 1 per maund during the week, due to paucity of stocks and firm advices from Punjab and Delhi, where prices had spurted to new heights. Barley and *bejhar* also tended to move up. The condition of the standing *rabi* crop is satisfactory, but the new crop will not be available before the first week of April. Maize improved fractionally, following brisk consumer demand from rural areas. *Bajra*, *jowar* and *guwar* sought higher levels to be quoted towards the week-end (in rupees per maund) at: gram 21.75; barley 17.75; *bejhar* 18.25; maize 16.25 to 16.75; *bajra* 17; *jowar* 15; *guwar* 15.50.

Pulses remained steady. While local peas stocks were negligible, *arhar* stocks were fast running down. Heavy frost earlier this week adversely affected standing peas and *arhar* crops. *Urd* and *moong* were also steady and prevailing prices were: peas Rs. 20 to Rs. 21; *arhar* Rs. 22; *arhar dal* Rs. 26.50; *urd* Rs. 18.75; *moong* Rs. 20 to Rs. 22.50; *massor* Rs. 18.50.

METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, 20*th January*

Listless conditions were in evidence in the metal market during the week under review. In the absence of buying support, prices of base metals searched lower levels. Tin gave way to Rs. 592 from Rs. 602. Business done was very poor, and stockists reported a satisfactory supply position. It was expected that the higher trend in Bombay could not be maintained for long. Copper scrap was in good demand. Brass scrap was also wanted in higher quantities. Copper scrap at Rs. 227 a cwt. registered a small rise. On the other hand, copper-wire met with a poor market and, even at Rs. 2.31 per lb., buyers were few.

Encouraged by anticipations of a decline in warehouse stock, it was noted here, the price of copper on the London Metal Exchange advanced to £229 from £224. In New York also, a rise was reported, and stockists there anticipated that consumers might add to their inventory in view of a possible strike in mines. The U.S.S.R. and Red China continued to show interest in copper on London and demand from Europe was also increasing.

Locally, electrolytic zinc opened at Rs. 103 and gave way to close at Rs. 100. There were some arrivals during this week and, in the absence of sales, these increased stocks in the bazaar and had an effect on price. Lead sagged from Rs. 82.50 to Rs. 81. The price in Bombay was higher at Rs. 91 and, as a result, Bombay parties placed orders on Calcutta. Despite these sales, the stock position here continued to be comfortable.

HIDES IN GOOD DEMAND

(From Our Own Correspondent)

KANPUR, 19*th January*

The hides and skins market ruled fully steady during the week despite fairly considerable fresh arrivals. For the demand for upper level cow and buff was strong, the main purchasers being the local tanners. The Madras dealers and the country tanners were active in the goat and sheep sector. The latest available quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 360 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 2 lbs. 1 oz. and 2nd grade 2 lbs. 3 ozs. per rupee: goat 1st grade Rs. 375 and 2nd grade Rs. 300 per 100 pieces; sheep Rs. 350 per 100 pieces.

Notice

THE BRITANNIA BISCUIT CO., LTD.

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend of 4 per cent. on Ordinary Shares and 4 per cent. on Preference Shares has been declared by the Directors for the year ending 31st March, 1959. The Dividend will be payable to those shareholders whose names appear on the Register of Members on the 11th February 1959. Warrants will be posted on or after that date to the addresses or in accordance with the instructions recorded in the Company's books.

The Register of Members of the Company will remain closed from the 4th February 1959 to the 11th February 1959, both days inclusive.

By Order of the Board,

A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA, 27, 17*th January*, 1959.

* National income at factor cost—the aggregate of all incomes earned in the production of goods and services in the course of a year including net income from abroad.

Source: *International Financial Statistics*, October 1958.

† Preliminary estimates (at 1948-49 prices) are based on the fifth issue of the annual paper on national income issued by the Central Statistical Organisation.

†† According to budget speech of Pakistan Finance Minister.

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus prfiots available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (h) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills— Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital.
K—Fort William Jute Co., has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co., Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

AMERICAN LETTER

(*Concluded from page* 101)

veterans' affairs, and the remaining 16 per cent. for all other federal activities.

The President was asking for $40,945 million for the Defence Department, $145 million more than estimated 1959 fiscal year expenditure. He emphasised that this represented a *strengthening* of the effectiveness of the nation's defence forces through modernisation and improved efficiency. "In addition to strengthening our own armed forces, and recognising the inseparability of free world defence, the budget continues to provide through military assistance the critical margin of weapons and equipment required by *our allies who,* with us, forge a strong shield against possible aggressors," Mr. Eisenhower said. Mr. Eisenhower also recommended continued efforts to "assist free nations in their economic development through well-considered programmes." As part of this effort, the President recommended increased U.S. subscriptions to the International Monetary Fund and World Bank, a $225 million supplement to the U.S. Development Loan Fund, creation of a Development Institute for Latin America, and increased emphasis on economic development in the mutual security programmes.

The President called for total 1960 fiscal year expenditure of $3,498 million for the mutual security programmes, a $383 million reduction from the current year's estimated expenditures. The decrease reflects a reduction both in military assistance and the defence support programme, and accompanying small increases in economic programmes. "In a world which still contains much want and suffering," Mr. Eisenhower said, "it is a goal of our foreign policy to promote the economic stability and growth of less-developed countries. ... Although military danger persists, a strengthened free-world defence system enables less-developed countries to concentrate much of their effort on needed economic progress. Increased international trade, private investment, public programmes of lending, and technical assistance are essential to these efforts."

Noting the growing importance of scientific research and space explorations, Mr. Eisenhower called for a record expenditure of $5,484 million for national research and development.

Emphasis would be on "space exploration, peaceful uses of atomic energy, and basic science," Mr. Eisenhower said. He added: "Extensive space exploration investigations are being initiated, utilising satellites and probes. Development work is going forward on high-energy fuel rockets, a million-pound thrust engine, and a nuclear rocket engine." Other major items in the budget included: interest on the National Debt, $8,096 million; agriculture, $5,996 million; veterans' services and benefits, $5,088 million; labour and welfare, $4,129 million; atomic energy programme, $2,745 million; and commerce and housing, $2,243 million.

COAL

(*Concluded from page* 108)

Government of India, when it entrusted to the Institute the task of drawing up the specifications for new washeries in the public sector. These washeries are to be located at Kargali, Dugda, Bhojudih, Patherdih and Korba. In addition, the Institute will shortly take up investigations and planning for at least three more Central washeries for the Indian railways.

Since reserves of natural oil in India are considered insufficient for our needs, extra importance is attached to developing suitable methods for its production synthetically. The production of synthetic diesel oil is intimately connected with the fuel problems of the domestic sector, which still remains the largest consumer of coal. At present, the bulk of domestic fuel need is fulfilled with cowdung and firewood, with baneful effects on agriculture. To avoid the use of these fuels, it is necessary to find a suitable alternative fuel. The work on the development of soft-coke done at the Fuel Research Institute is of great value in this connection. Research workers at the Institute have succeeded in developing a simple process for the production of soft-coke for domestic use.

Fuel research does not, however, end with the survey and selection of coals for different industrial or domestic uses. It also extends to such needs as utilisation of tars and to find uses for other by-products obtained from coal. Among the important by-products of coal obtained at the Institute are chemicals used in water softening and for the manufacture of glucose from starch; ashless carbon for the manufacture of electrode carbon and other moulded products; certain types of resins from Indian coal tars for paint, varnish, rubber and paper industry, floor coverings, printing inks and adhesives; montan wax from South Arcot lignite and pyrites from the washery rejects from coal. The great value of these products to Indian economy can be judged from the fact that large quantities of some of these materials were until recently imported from foreign countries.

INDIA'S NATIONAL INCOME

(*Concluded from page* 116)

also brings to light some discrepancy between the indices of industrial production and the indices of organised industry's contribution to the national income. This discrepancy is the more difficult to understand, since the industrial production indices are based on value added in manufacture, and should normally correspond to the trends in the share of organised industry in national income.

To conclude this study, it is obvious that the first Five-year Plan accomplished nothing remarkable since the growth of national income, aided by favourable monsoons and unutilised capacity in industry when the Plan began, has only been in keeping with the long-term trend of a compound rate of growth of 3.5 per cent. a year. The second Plan seems unlikely to achieve even this rate of increase, unless the economy is aided by favourable monsoons in the next two years. This seems to be a disheartening conclusion to reach. Certainly any higher pace of development will call for far greater efforts than are being put in now. This should be obvious, since agricultural production will have difficulty in maintaining even the 3.0 per cent. rate of increase indicated by the trend calculations. Any higher rate of increase in national income will, therefore, have to come from industry which must rise more than the 5.7 per cent. shown by the trend, and industry needs much larger investments than any other sector for producing a given rise in income.

COMMERCE AND INDUSTRY

(*Concluded from page* 118)

and sisal fibres in adequate quantities so as to enable them to maximise production."

Mr. Jalan referred to the Export Promotion Scheme also. Under this scheme, licences for the import of fibres are issued for 75 per cent. of the foreign exchange received in payment of the f.o.b. value of the ropes exported. This provision, in his opinion, does not give sufficient incentive to the exporters to increase their exports, because the current selling prices of ropes for export would not even cover the processing charges. The result is that manufacturers are trying to maintain their exports even without any margin, surely with a view to build up the export trade. Mr. Jalan, therefore, considered that the value for which import licences were given under the scheme should be raised at least 100 per cent. of the foreign exchange received.

Emphasising the need to modify the procedure in the present scheme under which only those who exported in excess of the quantity exported in the previous year were given the benefit of importing the fibres, Mr. Jalan wanted the benefits to be extended to those who maintained their exports at the previous level. He also suggested that exporters of ropes should be permitted to import fibres against all kinds of ropes exported under the scheme when alone it would be possible to develop the export of ropes and utilise the installed capacity to the maximum extent.

It may be noted here that India exported coir ropes worth Rs. 22 lakhs between April 1957 and March 1958. Coir ropes are produced entirely from indigenous raw material. Burma is already emerging as a competitor in this business in Malaya. India is at present exporting ropes of all kinds to countries like Pakistan, Ceylon, Thailand, Malaya, Indonesia and others. It is, however, experiencing stiff competition from advanced countries, especially Japan. As a result, the exports of Indian sisal rope have come down from the peak figure of Rs. 8,31,921 during 1953-54 to about Rs. 8,610 during 1957-58.

In order to put the industry on a stable foundation and to raise its competitive capacity in world markets, it is essential to ensure self-sufficiency in hard fibres and to improve their quality. The quality of sisal and aloe fibres grown in India is not up to the standard. Out of 10,000 tons of sisal and aloe fibres required by the industry, only 4,000 tons of aloe fibres are available, mostly from South India and the Western districts of Ahmedabad. Consequently, 6,000 tons of hard fibre have to be imported. The West Bengal Government has taken steps to grow sisal over an area of 1,000 acres at Rajnagar. But, according to Mr. Jalan, this will be able to begin supply of fibre only in 1961.

Notices

ASHOKA CEMENT LIMITED

NOTICE IS HEREBY GIVEN THAT THE Third Annual General Meeting of the shareholders of the Company will be held on Tuesday, the 24th February, 1959, at 11.30 a.m., at the Registered Office of the Company at Dalmianagar to consider the Balance Sheet and accounts for the period ended March, 1958, to elect a Director in place of the retiring Director and to appoint the Auditors for the current year and to fix their remuneration. The Share Transfer Books of the Company will remain closed from 16th February, 1959 to 24th February, 1959, both days inclusive.

The Board of Directors in their meeting held on the 13th January, 1959, have declared an interim dividend of 30 Naye Paise per share for the current year payable to those shareholders whose names stand registered in the books of the Company on 24th February, 1959.

By Order of the Board,

H. D. BISHNOI,

General Secretary.

DALMIANAGAR, 17*th January*, 1959.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

THE ANNUAL GENERAL MEETING OF THE shareholders of the Company will be held on Monday, the 23rd February, 1959, at 11.30 a.m., at the Registered Office of the Company, at 11, Clive Row, Calcutta, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts of the Company for the financial period ended 31st March, 1958.
2. To declare dividends.
3. To elect Directors in places of Shri A. K. Jain and Shri M. L. Shah, who retire by rotation, but being eligible offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

As special business:

5. Resolved that the appointment of Messrs. Cathie Dempster & Co. Ltd., Nathan's Buildings, Grey Street, Wellington, C.1., New Zealand, as sole distributors for New Zealand for the sale of Jute Carpet Backing and other jute speciality goods manufactured by the Company, as per draft agreement placed before the meeting and duly approved by the Board of Directors, be and is hereby approved in accordance with Section 294 of the Companies Act, 1956.

The Share Transfer Books of the Company will remain closed from 16th February, 1959 to 23rd February 1959, both days inclusive.

By Order of the Board,

For SAHU JAIN LIMITED,

A. K. JAIN,

Managing Director,

Managing Agents.

CALCUTTA, 17*th January*, 1959.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory Note to item No. 5: Under Section 294 of the Companies Act appointment of Sole Selling Agents for any area is required to be approved by the Company in General Meeting. Messrs. Cathie Dempster & Co. Ltd., Nathan's Buildings, Grey Street, Wellington, C.1., New Zealand wholly managed by nationals of that country, are being appointed as sole distributors for the sale of Jute Carpet Backing and other jute speciality goods manufactured by the Company in New Zealand, from the date of approval in the General Meeting.

The said Agreement is available for inspection of the shareholders on all working days during business hours at the registered office of the Company and will be placed before the Company at the General Meeting.

The Managing Agents and/or the Directors of the Company have no interest in the said Agreement.

ELECTRICAL INDUSTRIES

FEW industries have made more rapid strides of progress than the electrical industry. In the range and quantum of output, the group of electrical industries, which includes both light electrical goods like lamps and relatively heavy electrical equipment like transformers and motors, has established new records of production. Indeed, the pace of progress in some of these industries has outstripped the demand for their products. Clearly, the future prosperity of these industries is bound up with the overall economic progress, in general, and the development of power resources, in particular. The scope for power development is vast. To take only hydro-electric resources, the country's potential resources are estimated at 40 million kw., of which not more than 15 per cent. will have been exploited by the end of the second Plan. Again, the fact that the *per capita* consumption of electricity in India is only 25 units, as compared with 1,270 units in the U.K. and 4,400 units in the U.S., must give some idea of the scope for further consumption of electricity in this country.

It must, however, be admitted that, in the recent past, the generation of electric power has expanded at a rapid pace. During the first Five-year Plan period, the installed capacity rose from 1.8 million kw. to 3.4 million kw. At the end of the second and the third Plan periods, the installed capacity is expected to go up to 6.4 million kw. and 12 million kw., respectively. So far as the immediate future is concerned, the fear has been expressed that a shortage of power may develop in certain key industrial regions. Thus, Mr. K. J. Cleetus, Chairman of the Indian Electrical Manufacturers Association, in his speech at the annual meeting of the Association, held at Calcutta this week, averred that the generation of electric power had not "kept pace with the actual needs of development." He added: "There is admittedly a power shortage and this is most unfortunate at a time when the country is planning large industrial development." It would appear that the shortage of power is particularly acute in the D.V.C. area, where, despite the increase in power generation that has taken place, the "prospects of the generating capacity meeting the full requirements of the area and the important industries that are going to be established there are not encouraging." Any continued shortage of power in this region will mean a serious threat to a whole group of very important industries, including iron and steel. Since the generation and distribution of power are the basis of an expanding industrial economy, the authorities should lose no time in perfecting the arrangements for installation of new capacity. Further, since it is immaterial whether power comes from the public or the private sector, they should not hesitate to provide such incentives as will facilitate the flow of capital into this key industry.

The demand for the products of electrical industries depends on the availability of power. If this supply grows with the increasing demand for power for both domestic and industrial consumption, the prospects for electrical industries are bright indeed. The authorities should, therefore, ensure that industrial development is not held up through shortage of power and that electrical industries are given the necessary facilities for expanding their production. It must be remembered that some of the products of electrical industries, notably those of the heavy section, are in the nature of capital goods. When the State-owned Heavy Electricals (Private) Ltd. at Bhopal goes into full production, it will be able to meet the demand for many different kinds of electrical equipment. As Mr. Cleetus pointed out, the establishment of this plant will lead to the production in the country, for the first time, of a wide range of electrical goods. It is designed to produce such items as electrical generators, transformers, switch gears, turbines for river valley projects, traction equipment for railways and insulating materials. Mr. Cleetus, however, rightly pleaded for the avoidance of "duplication of capacity, because that would be a waste which this country cannot afford." It is to be hoped that the manufacturing programme of the Heavy Electricals Project will be so arranged as to cause minimum disturbance to existing industries in which large amounts have been sunk after a period of pioneering effort.

The electrical industry in the private sector has already made a notable contribution to the country's economic development. Among the products of the relatively heavier section of this industry are A.C.S.R. conductors, batteries, motors and transformers. The demand for A.C.S.R. and all-aluminium conductors has increased so rapidly that the original (1960-61) target of capacity fixed at 21,570 tons has had to be raised to 30,000 tons. The industry will require larger quantities of aluminium rods and wires. It will take some time before the approved plans for increased aluminium production are implemented. Meanwhile, there is need for imports of aluminium which has to pay a prohibitive duty of 35 per cent. Mr. Cleetus reiterated the demand for an appropriate reduction in the burden of this duty. The production of storage batteries has expanded from a monthly rate of 9,200 units in 1948 to 30,000 at present.

The manufacture of electric motors and power transformers has also recorded impressive progress in the last decade. The monthly rate of output of electric motors in 1958 was about 51,000 h.p. as against 5,000 h.p. in 1948; the corresponding figures for transformers are 96,000 k.v.a. and 7,000 k.v.a. In the last few months, however, production of transformers and motors has shown some fluctuations. Manufacturers are faced with a certain slackness in demand. Reviewing the problems of the electrical motor industry, Mr. Cleetus said that the "general feeling is that there is considerable amount of over-production in this field, relative to the actual demand as distinct from the assessed demand." One of the principal reasons for this state of affairs in the industry is stated to be the existence of a large number of small manufacturers. Mr. Cleetus said: "New capacity that is being rapidly established in the unorganised sector has led to over-production and all its attendant evil consequences." He warned that a state of unhealthy competition had developed which might ultimately undermine the strength and stability of the industry as a whole.

It should not be difficult to see the truth of Mr. Cleetus's complaint that the small units are not capable of manufacturing equipment of standard design and performance. He rightly felt that, before such units were allowed to be established, it was "the duty of the Government to convince themselves that these units possess the necessary technical competence, equipment, capital resources, etc." Generally speaking, there are two reasons why the Government, in relation to electrical goods industry, will be well advised in abandoning its policy of excessive zeal for small-scale units. In the first place, electrical goods, as stated at the outset, form the capital goods for a host of industries, large-scale as well as small-scale. It is no service to the small-scale industries that they should depend for their equipment on ill-equipped suppliers who cannot produce quality products. Secondly, industrial accidents may easily occur through the use of electrical goods of sub-standard quality. In the interests of industrial safety, it is necessary that electrical goods are allowed to be produced only by those who have the technical and financial resources for maintaining high standards of quality.

INTERNATIONAL WHEAT AGREEMENT

THE present International Wheat Agreement is due to expire on 31st July 1959 and, with it, a decade of experiment in one of the very few world commodity agreements designed to stabilise prices will have been over. A five-week Conference has just begun (on Monday, 26th January, to be precise) at Geneva to decide the future of this commodity agreement. The current agreement is the third one concluded in May 1956. A feature of these wheat agreements is that they have been covering only a part of the wheat entering the world trade, each successive agreement being less important than its predecessor. The quantity of wheat covered by the first agreement (1949-53) was 581 million bushels, equal to 61 per cent. of world export trade in wheat. It fell to 395 million bushels or 40 per cent. of world exports under the second agreement (1953-56) and still further to 303 million bushels or 25 per cent. of world trade under the third agreement. A second feature is that not all the countries are members of the agreement. The first agreement failed to rope in Argentina, an important wheat producing and exporting country. The second agreement fared worse, in that both Argentina and the U.K., the largest wheat importer in the world, accounting as it does, for nearly one-fifth of world imports of wheat, were not party to it. The third agreement fared a little better in one sense, in that all the principal wheat producing and exporting countries participated in it, though, among the importing countries, the U.K. continued to stay out. A third feature of the agreements pertains to the minimum and maximum prices, related to the market quotation for No. 1 Manitoba Northern wheat in bulk in store at Fort William—Fort Arthur. The minimum and maximum rates per bushel were \$1.50 and \$1.80 under the first agreement, \$1.55 and \$2.05 under the second agreement and \$1.50 and \$2.00 under the third agreement. The understanding under the agreements is that, if the free market price of wheat rose above the maximum, the importing member-countries could call upon the exporting

member-countries to deliver the agreed quantities at the maximum price. Similarly, when the free market price fell below the minimum, the exporters could ask the importers to take up the agreed quantities at the minimum price.

The first agreement was concluded at a time when wheat was a relatively scarce commodity. It, therefore, worked well, in that the importing countries, including the U.K. which was a member then, took wheat from the exporting countries at the maximum price whenever it was below the free market price. By the time the second agreement came to be negotiated, the supply position had vastly improved and the U.K. insisted that this change in position should be reflected at least in the minimum price. It fell out as the principal exporting countries would not concede even its minimum demand that the minimum price must remain unchanged at $1.50 per bushel. Argentina, having enjoyed certain advantages by not being a member of the first agreement, did not have any incentive to join the second pact. But it changed its mind when the third agreement came to be negotiated and was willing to accept a small quota. Apparently, the continued increase in the surplus stocks of wheat in the world had induced it to safeguard its position at least to some extent. Britain, however, preferred not to come in again. Since the wheat surplus had grown in size, Britain, as the largest importer of wheat, had nothing to lose by staying out of the pact. Even the reduction in the minimum price to $1.50 per bushel, for which it fought hard without success when the second agreement was negotiated, did not attract it. On the contrary, it stipulated a fresh condition that the agreement should provide for measures for solving surpluses, for regulating production and for restricting the scope for bilateral deals by the principal exporting countries for the disposal of their surplus stocks. This condition, however, was unacceptable to exporters, especially to the U.S. and Canada which together account for about 70 per cent. of world exports.

The maximum price under the agreement has not come into force even once since 1953. This is not surprising, because, all these years, the world has been confronted with a surplus. Nor has the minimum price operated during this period. This, too, is not surprising, but it is unnatural. In the case of other commodities suffering from a surfeit of supply, prices have crashed, because the surplus has occurred in countries which have no holding power. In the case of wheat, however, the countries that have to hold the surplus production are all rich, with plenty of resources to nurse them. The U.S., Canada, Australia and Argentina are the largest producers and exporters of wheat in the world as will be seen from the tables appearing on this page. It is unnecessary to describe the financial strength of the first two countries, as it is common knowledge. Australia is, of course, relatively less strong as compared with the first two, but its surplus problem was reduced to a considerable extent by bad crops in some years. Argentina is poorer than Australia, but the size of its surplus is not that large; besides, it has been successful in disposing of a good part of its production to the U.K. and other European countries at competitive prices. But even Argentina is better off than some of the other Asian countries which have been faced with the problem of surplus commodities.

TABLE I

World Wheat Production

(Million metric tons)

Country	Pre-war Average	1951-52-1955-56 Average	1956-57	1957-58 (Preliminary)

Others*	5.6	4.4	3.5	5.5
World	18.1	26.5	32.2	28.0

* Including U.S.S.R. Eastern Europe, Mainland China.

The fact that the principal producing countries could themselves stabilise the price of wheat is, however, not something to be deplored. It cannot be denied that, if Canada and the U.S. were not keeping a firm hold on their surpluses, the wheat trade would be thrown into chaos. It is little consolation to the underdeveloped countries to see one more commodity in the doldrums, even though it may not be their principal export crop. It is easy to criticise the price support programmes of the U.S. and Canada, but it must not be forgotten that their wheat surpluses have saved the free world from starvation in times of emergency and are even now being utilised to support the economies of underdeveloped countries which have undertaken big programmes of development for raising their living standards. The U.S., in particular, which has the largest surplus stocks of wheat in the world, has been supplying these countries with large quantities of wheat with a considerable element of subsidy. And India has been one of the principal beneficiaries. This important point needs to be borne in mind by those who are inclined to criticise the International Wheat Agreement on the ground that its price provisions are unrealistic and not sufficiently attractive for a large importing country like the U.K. to become a member of the pact. If one were to analyse carefully the current agreement, one would find that it came into being more because of the desire of the smaller importing countries to have a sort of hedge against future uncertainties than because of any large concern on the part of the U.S. and Canada. After all, the quantities to which these countries are committed under the agreement constitute only a fraction of their total surplus. Not all the importing countries can afford to take the risks which a rich country like the U.K., with a small population of 50 million people, can assume. Another point that must be remembered is that the principal wheat producing and exporting countries are not the only ones to subsidise their production. Almost all countries have been doing so. Indeed, it has been estimated that nearly 96 per cent. of the world's wheat crop is produced under some kind of price support or official assistance to wheat cultivation.

It is against this background that one has to view the prospects for the renewal of the International Wheat Agreement. The present conference is taking place at a time when the chances of a record surplus of wheat are bright. Notwithstanding two poor crops in Canada and a bad one in Australia, the carryover at the end of the current crop year is expected to be the heaviest ever seen, on account of a bumper wheat harvest this year in the U.S., thanks to a sharp rise in the yield per acre and of huge stocks in Canada. If, however, the Conference now going on in Geneva were to engage itself in the task of finding a solution to this huge surplus problem, it would hardly achieve anything, for the problem has become chronic. Besides, it is a national problem of the U.S., Canada and the other principal producing-*cum*-exporting countries. There is enough evidence that the U.S. has been conscious of it, as witness the steps it has taken to bring down the acreage under wheat and to reduce the quantum of price support. It is a different matter if these steps have not yet yielded the results desired. All that the Conference can, therefore, do in this respect is to recommend measures for discouraging excessive production and stimulating consumption. But it would be unrealistic to insist, as Britain has been doing, that these measures should form part of the agreement. It would, however, be quite pertinent for the Conference to attempt a revision of the price levels and the quantity of wheat to be covered and to bring a larger number of countries under the agreement.

ECONOMIC ASSISTANCE

LONG before the question of assistance by industrially advanced countries to the economic development of underdeveloped regions won international recognition, several banking institutions from the West had established traditions in serving the economies of these regions. The services they have rendered in the past, and continue to render today, are no doubt modest, especially in relation to the regions' massive requirements of capital for purposes of development. Even so, their help has not been inconsiderable. And, in opening up new markets for what the regions export, the foreign banks have undoubtedly played a notable part. It is of the utmost importance to the future of their economy that their traditional markets should be maintained and expanded, so that they could rely upon their exports to help finance the imports they would need for carrying through their development programmes. An aspect of this problem was discussed by The Rt. Hon. Sir Oliver Franks, Chairman of Lloyds Bank, in his statement to the Bank's shareholders. After stressing that the whole question of the trading relations between industrialised countries and less developed countries had been rendered a matter of lively international concern by the decline in commodity prices, he recalled that the difficulties of developing countries had been repeatedly stressed in the report of the Montreal Conference where it was agreed that the industrially advanced countries should do all in their power "even to the extent of some sacrifice" to assist in the solution of these difficulties.

Some in the U.K. fear that the favourable swing in Britain's terms of trade facilitated by a reduction in the export incomes of its overseas customers might react adversely upon its export industries. Alluding to this misgiving Sir Oliver felt that these anxieties were "excessive." He argued, in effect, that a reduction in demands upon export industries could be something of a blessing in disguise, in that it might lead to a release of resources for meeting domestic demand "without a relapse into inflation." At the same time, the Lloyds Bank Chairman recognised that, from the international point of view, the fall in incomes of underdeveloped countries was "more serious." He said: "With some exceptions, the standard of living of primary producers, especially in tropical areas, is deplorably low by European standards. There is an obvious danger of the gap between rich and poor countries widening still further. Aside from all other considerations, the political dangers of this are apparent." These remarks remind us of what Mr. Jawaharlal Nehru, India's Prime Minister, said at the annual meetings of the World Bank and the I.M.F. at New Delhi in October last. Mr. Nehru said almost the same thing which Sir Oliver has now emphasised. It is gratifying to find that Sir Oliver is in agreement with Mr. Nehru on this point, especially because some of the British bankers who attended these meetings were rather critical of this aspect of our Prime Minister's speech.

Naturally, Sir Oliver proceeded to pose the question as to what should be done to give "practical expression" to the Montreal undertaking. He urged the industrially advanced countries to concede that they would have to cover by finance or by gift the gap in balance of payments which would develop in underdeveloped countries through the implementation of schemes of economic development. He added: "It is of mutual advantage that the export earnings of the primary producers should be raised, if only to prevent this gap from becoming too wide." The underdeveloped countries could reasonably demand that their products should not be unfairly denied access to the markets in the industrial countries. As regards export of capital to the underdeveloped countries, he said: "Whether transfers of capital take the form of investment or of aid, the essential condition is that we should have a surplus in the balance of payments available for investment overseas." Further, he stressed that "co-operation, not exclusiveness; that, surely, must be the guiding principle throughout the free world."

The underdeveloped countries, too, on their part, should do all they can to attract the flow of capital from abroad and to avoid placing impediments to its flow. As Sir Oliver himself pointed out, the underdeveloped countries "cannot be free to embark upon development programmes, regardless of their own resources, and then demand that the industrial countries underwrite these to any extent that the former may wish." This is a pitfall which is best avoided in the initial stages of planning itself. But an important prerequisite for this is that the developed countries should help the underdeveloped even in the initial stages of their plans by displaying a sympathetic understanding of their needs and aspirations. The underdeveloped countries, besides adopting realistic fiscal and economic policies, should, of course, realise that the mere fact that there is a payment surplus in the capital-exporting countries is no guarantee that capital will, in fact, be exported, in the absence of an attractive difference in interest rates. After all, money goes only to centres where it is sought after and its use is reasonably, if not richly, rewarded.

OUTLOOK FOR ASSOCIATED CEMENTS

L.I.C.—TWO ABSURD SUGGESTIONS—RUSSIA AND TIN AGREEMENT

THURSDAY, 5 P.M.

MARKET GOSSIP

THE move by the shareholders of the Associated Cement Companies Ltd. to have the amount standing to the credit of the share premium account capitalised and issued as bonus shares has had a favourable response from the management. Addressing the shareholders at the annual general meeting of the Company held this evening, Mr. Dharamsey M. Khatau, Chairman, announced the decision of the Directors to capitalise the share premium account amounting to Rs. 1.27 crore, and issue, subject to the sanction of the Controller of Capital Issues, a scrip bonus in the ratio of one share for every 15 shares held by them.

Many shareholders expressed their dissatisfaction at the cut of half a rupee in the dividend for the year ended 31st July 1958 and opined that the management would have done well to maintain the distribution at Rs. 9 per share. They complained that, whereas the Government, the workers and the Managing Agents had all their shares increased, the shareholders did not get a fair deal. In support of their contention, they quoted the statistics published by the Company itself, according to which, during the last twenty-two years, the return to shareholders on the total invested capital had exceeded 7 per cent. only twice, once in 1936-37 and again in 1941-42. The shareholders' grouse was strengthened by the Chairman's announcement that the Managing Agents had volunteered to cut a part of their remuneration and distribute it to the employees by way of bonus (a reference to which is made later). They added that the Company's position would not have been worse, if the dividend had been maintained. The cut of half a rupee, according to them, had resulted in a depreciation of over Rs. 1 crore in the market value of their shares.

Mr. Khatau, in his reply, did not agree with the shareholders that they had not had a fair deal. He took pains to explain to them the unhappy circumstances in which the industry had been placed, following the accumulation of cement stocks. If the cut in dividend was any indication of the future, Mr. Khatau said, the position during the current year would be worse. Thanks to the accumulation of stocks in the face of a fall in demand and rising output, a number of small factories had to close down or cut their production. Fortunately, in the case of the A.C.C., the production was being maintained. Nevertheless, the A.C.C. Chairman added that the Company would have to face difficulties throughout the current year, despite the fact that it would have the benefit of the increase of Rs. 3.50 per ton in the cement price for full twelve months, as against only one month in 1957-58. It is obvious from these remarks of Mr. Khatau that the shareholders should consider themselves fortunate if they got the same rate of dividend for 1958-59.

In reply to a series of questions as to why the Company should go on with their expansion programme, in view of the "dismal" outlook for the industry, Mr. Khatau said that, if the A.C.C. had not undertaken the expansion of their works, somebody else would have taken the place, and the position would not have been different. If the Company had not done so, its production would have been less and the unique position which it occupied in the cement world would have been lost. He asserted that a certain amount of expansion was necessary in order to reduce costs. Moreover, the Company had planned to establish factories in some places for various reasons and it had chosen these places with an eye on freight, cost of raw materials, cost of coal, etc. Mr. Khatau claimed that the Company had not blindly rushed into expanding their output. In fact, he said, the percentage of the Company's production in terms of the total output of all units was declining. And the management, he disclosed, had given up some of the expansion programmes which it had earlier wanted to have. He pointed out that, even when the 10-million-ton target which the Commerce and Industry Minister had in mind originally for the second Five-year Plan was reached, A.C.C.'s own production at the end of the Plan period would not exceed 4 million tons.

Answering the criticism that the Managing Agents had only favoured the employees, Mr. Khatau explained that, in view of the substantial fall in net profit (after providing for taxation), the Directors had, along with the cut in dividend to the shareholders, decided to reduce the bonus to employees also from one-fourth to one-fifth of their annual basic salaries. Subsequently, the Managing Agents voluntarily agreed to forgo one-fifth of their remuneration, yielding a sum of Rs. 8.20 lakhs, and to utilise this amount to restore the cut in employees' bonus. This arrangement is, however, subject to the approval of the Central Board of Revenue. In other words, the employees will get the enhanced bonus only if the Managing Agents get the benefit of the tax relief (which will be Rs. 4 lakhs) on this cut. In response to some shareholders' demand that the Managing Agents should move with the times and reduce their remuneration, the Chairman announced that the Managing Agency agreement would soon be revised.

Some of the shareholders considered the A.C.C.-Vickers-Babcock and Wilcox project as a mere prestige venture, as they did not see a good future for it. Disagreeing with their view, Mr. Khatau explained that the project was of considerable importance and was the first of its kind in this country. Being a heavy engineering project, it would take time to go into production. He added that many changes had taken place during the last three years since the project was first negotiated. The cost of the scheme went up considerably and the British Bank rate was raised to 7 per cent. The British collaborators had at one time thought that it would not be profitable to go ahead with the project. Subsequently, the scheme was revised to suit the capital available. Mr. Khatau assured the shareholders that he and his colleagues would try to bring the project into production as early as possible.

In reply to a suggestion whether the surplus cement could not be exported, Mr. Khatau said that about 5 per cent. of the country's output could be exported, but the prices in other consuming countries were considerably lower. This would mean a loss of Rs. 20 to Rs. 40 per ton and would have to be borne by the industry as a whole.

According to the Chairman of the A.C.C., the Life Insurance Corporation holds only a little over 10 per cent. of the Company's share capital.

* * * *

The ordinary shares of Rallis India Ltd. have of late been in the limelight with a spurt in their value to Rs. 47.50 per share (of Rs. 100 each) from Rs. 39.50 quoted at the close of 1958. A year ago, they stood at no more than Rs. 26.75. The latest rise is attributed to reports that the Company has almost turned the corner with the addition of several new lines of business. Its recent acquisition of the Teddington Chemical Factory Private Ltd., the well-known manufacturers of pharmaceutical products in Bombay, has greatly improved its prospects. With imports of pharmaceuticals drastically cut, the T.C.F. products enjoy a good market. The Wolf electric tools venture, under the name of Ralliwolf Private Ltd., formed in collaboration with Wolf Electric Tools Ltd., London, is also said to be progressing well. The foundation-stone of the factory premises of this venture was laid last week near Mulund on the Bombay-Agra Road. It is expected that this factory will be opened in June this year. The Company is also believed to have taken steps to consolidate its financial position by cutting out a lot of deadwood.

* * * *

With commendable pioneering zeal, the Life Insurance Corporation of India is attempting new experiments in popularising insurance. The *Janata* scheme and the pilot scheme of rural insurance introduced in some regions are conceived in this spirit, though the results of these endeavours are not yet known. It is, indeed, heartening to note that the Corporation is aware that, as the sole agency for developing life insurance in a growing economy, it cannot remain content by keeping to the beaten track but has to explore fresh avenues and new techniques of expansion. The Chairman of the L.I.C., Mr. P. A. Gopalakrishnan, disclosed a few days ago at Patna that, under the Corporation's rural insurance scheme, it was proposed to make *gram panchayats* the sole agency for securing life insurance business in villages. The Corporation must, obviously, have felt that the setting up of independent agencies in each village would be uneconomical, as the turnover might not be sufficiently large. It might also have thought it undesirable to have too many agencies in villages for collecting the people's savings. The small savings schemes of the State Governments are also sought to be promoted through village *panchayats* and, presumably, the Corporation found that life insurance could be sold through the same agency.

There is, however, a section of opinion which doubts the wisdom of this step. It points out that small savings and life insurance are competitive schemes, in the sense that both compete for the people's savings and, if the same agency handles both, one or the other or both will suffer. But it may be pointed out in answer to this criticism that life insurance has certain features which the small savings do not possess, as, for instance, cover against risks. The selling agency can explain to the prospective investors the merits of both forms of savings and leave the choice to them. Be that as it may, too many savings agencies in small villages are not only not desirable but costly too. The experiment to sell life insurance through *panchayats* may well be tried and, if found defective, suitable modifications could be made. But there is hardly any need or justification for making *panchayats* the exclusive agency for life insurance in rural areas. There is no reason why enterprising individuals with initiative and drive should not be allowed to canvass business, assuming that they come forward. Insurance has to be sold, after all, and an element of competition is desirable. Giving monopoly to *panchayats* will not even enable one to judge whether or not they are exerting enough to get life business and to popularise it.

While the L.I.C. is thus making efforts to popularise life insurance, some dangerous suggestions are reported to have been put forward—it is not stated by whom—for consideration at the forthcoming meeting of the National Development Council, which, if accepted, would bring to naught all the efforts, present and future, of the Corporation to sell insurance and also those of others to promote savings and divert them to profitable channels. The suggestions are two:

1. A moratorium on full withdrawal of life insurance money on maturity of policies by placing a ceiling on the amount of cash payment and retaining the balances in the shape of Government bonds.

2. A ceiling on the encashment of National Savings and Plan Certificates.

These proposals are akin, in some respect, to the suggestion for converting provident schemes into pension schemes, made by the Study Group on Social Security appointed by the Government of India (*vide Commerce* dated 10th January 1959, page 34). It is difficult to conceive of more incentive-killing remedies. The surprising thing is that such proposals should at all be made at a time when the supreme need is for more and yet more savings and for their investment in productive projects. Apart from the question whether a contractual obligation could be unilaterally altered legally, as is implied in the aforesaid suggestions, it is pertinent to ask whether there will be many who will be prepared to take out a life policy which promises, in return for hard cash paid regularly for a lifetime, a bunch of paper bonds. What guarantee is there that these bonds will not depreciate in value or will be redeemed against cash at maturity and that the policyholder will not be served with yet another instalment of bonds when the early ones mature. These absurd proposals, which are said to have been meant for raising funds for the third Plan, will have two immediate effects even if they are countenanced by the National Development Council, let alone their implementation: (1) a sharp setback to life insurance and small savings and (2) a further fillip to the habit of hoarding in precious metals and stones, both of which, far from helping the Plan, will only impede it. Even investments in Government securities will be adversely affected.

As we do not think that any sensible person will make such proposals as those mentioned above, we do not wish to give any credence to them. Nevertheless, it will be desirable for the Government of India to refute them forthwith, so that any misgivings that might have already been created in the minds of investors might be removed.

* * * *

Among non-ferrous metals in India, tin continues to rule depressed, in company with others. Spot tin is now quoted at Rs. 151 per quarter, a drop of Rs. 4 as compared with the rate prevailing early in the month. The setback is attributed to two factors. One, the metal is subjected to persistent selling induced by expected arrivals of considerable quantities of tin imported against quota licences granted to established importers. Two, a prominent bull operator is reported to have adopted dilatory tactics and delayed taking deliveries.

The weakness of tin is in contrast to the distinctly firm trend of this commodity in world markets. The currently ruling price of tin on the London Metal Exchange is around £762-£763 per ton, which compares very favourably with £745½ prevailing early in the year, £730½ a year before and £640, the lowest level touched on 19th September 1958 when the Buffer Stock Manager withdrew his support from the market. The sizable rally in tin thus has followed reports of Russian exports being limited under an agreement believed to have been concluded with the International Tin Council recently. No details of the agreement have yet been announced, but it is gathered that Russia has given an undertaking to restrict its exports of tin to just 13,000 tons per annum, or 5,000 tons less than in 1958.

The aforesaid report follows protracted negotiations. It was as early as in June 1958, it will be recalled, that the International Tin Council decided officially to approach Russia and invite it to become a producer-member. This would have entailed limitations on Russian tin exports similar to those accepted by Malaya and other producers in the Far East. Russia, however, was prepared to join the Council only as an observer-member. The Council members were divided on this issue; some were willing to accept the Russian offer, while others wished to reject it. Renewed negotiations were, therefore, held by the Council with Russia which has since agreed to limitation on exports of tin, presumably after being "impressed," to quote a report, "by the damage which falling prices and production cutbacks did to the South-East Asian economies last year." The heavy competition offered by Russia at cut prices had seriously undermined the financial position of several producing countries. Consequently, Russia had become very unpopular in these regions. The importing countries of the International Tin Agreement also took measures to restrict imports of Russian tin. These steps would appear to have induced Russia to change its tactics.

It may be noted that the country which has suffered most is Malaya, the world's largest producer of tin. The total output during 1958 was no more than 38,458 tons, representing a fall of 35 per cent. as compared with the previous year; the figure is the lowest for the past eleven years. Several mines were forced either to close down completely or to curtail production drastically. The number of active mines at the end of 1958 was markedly lower at 417, as against 731 a year before. The percentage net closure of dredges, gravel pumps and other mines was 52, 44 and 23, respectively. The number of workers affected by the slump was 13,618, the number at the end of the year being 23,153.

The decision of Russia to limit its exports of tin to 13,000 tons annually may not have any significant effect on the world market, since the quantity mentioned is considered to be just about as much as Russia could be expected to ship this year, in view of the import quotas on Soviet metal which are now in force and the efforts Russia is making to extend its sales in other markets.

(*Continued on page 168*)

EQUITIES STEADY

SMALL GAINS IN VALUES

(From Our Own Correspondents)

BOMBAY, *29th January*

THE share market ruled steady during the week under review, but the trend of prices was two-sided. Over the week, however, prices showed minor gains. In the earlier part of the week the tone was subdued and equities suffered minor losses on stray liquidation. Expectations that L.I.C. support might not be forthcoming for some time to come and Budget uncertainties were the main bearish factors to depress prices—albeit to a small extent. The news that the Indian Iron and Steel Company had sealed off all its blast furnaces at Burnpur on the 26th inst., following a strike by the crane drivers of the smelting shop since the 21st, brought selling pressure from Calcutta operators, but there was some resistance from Bombay. It is stated that the opening of the new furnace, with a capacity of 14,000 tons of steel per month, was scheduled to take place on 21st inst., but on that day the crane workers struck work. It was feared that if the cranes of the smelting shop were not started immediately all other shops would have to be closed within a day or two. It would also take some time before they were brought into operation after they were relighted.

There was, however, a recovery during the last two days on revival of support. Reports that the strike at Burnpur had been called off induced buying and short covering in Indian Irons. Since the L.I.C. had finalised its buying programmes in Calcutta, it was expected that the Corporation would once again turn its attention to the Bombay market.

Tata Ordinaries were marked down earlier in the week from Rs. 175.50 to Rs. 173.50, but they gained ground to touch Rs. 176 today. The closing was done at Rs. 175.50. The new shares were a fraction lower at Rs. 172. Indian Irons declined from Rs. 26.20 to Rs. 25.75 before they recovered to Rs. 26.20. They, however, closed at Rs. 26.10.

Textile shares were on the whole steady, with small gains over the week on a wide front. After an early dip from Rs. 56 to Rs. 55.70, Bombay Dyeings revived to Rs. 56.90 and closed at Rs. 56.70. Century Mills were erratic. They moved down from Rs. 434.50 to Rs. 431.75, before staging a spurt to Rs. 439 today on expectations of encouraging working results. At the close, there was heavy profit-taking which pushed them back to Rs. 434.50. Kohinoors moved within a narrow range and finished with a gain of Re. 1 at Rs. 240. Central Indias were lower by a rupee at Rs. 89, while Finlays were marked up by Rs. 2 to Rs. 261. Gokaks were unchanged at Rs. 132 and Indu Ordinaries ruled steady at Rs. 8.88. Indore Malwas were a shade quiet at Rs. 97. Khataus were maintained at Rs. 153.75, while Morarjee Mills were a fraction higher at Rs. 230.50. New Greats were stagnant at Rs. 219, while Simplex put on Re. 1 to Rs. 168.50. Standards advanced from Rs. 417.50 to Rs. 421, before finishing at Rs. 418. Svadeshis gained 25 nP to Rs. 209.75 and Swans Rs. 3 to Rs. 350, while Tata Mills were a shade quiet at Rs. 34.25.

Bank shares were quiet. Barodas suffered a fall of Rs. 6 to Rs. 121, following the cut in dividend from 14 per cent. to 12 per cent. Their 'B' shares shed Rs. 3.30 to Rs. 56.70. Centrals were dull at Rs. 58.70. Bank of Indias lost 75 nP to Rs. 140.25 and their 'A' shares Re. 1.25 to Rs. 141. United Commercials were unchanged at Rs. 68.

In the insurance group, Orientals gained Rs. 10 to Rs. 4.020. New Indias were done 30 nP lower at Rs. 53.70 and their 'A' shares 40 nP down at Rs. 53.70. All-India Generals picked up 14 nP to Rs. 3.26.

Electricity shares were featureless. Ahmedabad Electrics changed hands 10 nP lower at Rs. 94.90, while Bombay Suburbans were unchanged at Rs. 110. Surat Electrics gained a fraction to Rs. 112.75. Tata Hydros lost Re. 1.75 to Rs. 119. While Tata Powers gathered Re. 1.25 to Rs. 1,193.75, Andhra Valleys showed no change at Rs. 1,172.50.

In the sugar group, Belapurs maintained their downward trend early in the week with a further drop from Rs. 262.50 to Rs. 259.50, but staged a rally before closing at Rs. 263. Bhopal Sugars lost 70 nP to Rs. 25.05 and Phaltans Rs. 3.25 to Rs. 141.50. Walchandnagars were a fraction lower at Rs. 266.25.

Associated Cements moved within a narrow range between Rs. 155 and Rs. 153.25, and closed at Rs. 154.75. Digvijays dropped a rupee to Rs. 131.50, while Orissa Cements put on 12 nP to Rs. 12.64. Jaipur Udyogs changed hands at Rs. 10.04 and Dalmia Cements at Rs. 9.80.

In the engineering and mining group, Alcocks were featureless but steady, at Rs. 267.50. Tata Locomotives gained strength from Rs. 161.50 to Rs. 163.50. Premier Constructions were a shade better at Rs. 237.25. Larsen and Toubros were steady at Rs. 17.08. Brady Engineerings had business at Rs. 64.70, as against Rs. 65 at which the previous transaction was done. Cooper Engineerings lost a rupee to Rs. 130. Shivrajpurs were picked up 50 nP higher at Rs. 88.50 and Indian Coppers 4 nP lower at Rs. 3.54. The cut in the dividend of B.B. Petrols to 2 per cent. brought the shares down by 32 nP to Re. 1.70.

Scindias fluctuated between Rs. 21.52 and Rs. 21.20 before closing at Rs. 21.40, as against the previous week's closing of Rs. 21.48. Great Easterns gained 9 nP to Rs. 23.92. Premier Automobiles gathered over the week Re. 1 to Rs. 84.70, despite the cut in dividend from Rs. 6 to Rs. 4 per share. Hindustan Motors were steady at Rs. 7.20.

In the miscellaneous section, Bombay Burmahs (old), after an earlier setback from Rs. 463 to Rs. 459.50, rallied to Rs. 466.50. Profit-taking at the close, however, brought the shares down to Rs. 464.50. National Rayons were erratic. Declining from Rs. 242.75 to Rs. 240, the shares jumped to Rs. 246, but again reacted to Rs. 243.50 at the close. Gwalior Rayons were done 16 nP lower at Rs. 13.76. Tata Chemicals lost 12 nP to Rs. 15.32 and Tata Oils Re. 1.50 to Rs. 45.75. Voltas moved down by Rs. 3.75 to Rs. 140.25 and Wimcos by Rs. 2.50 to Rs. 187.

• • • •

Calcutta Stock Exchange

CALCUTTA, *28th January*

With two holidays on the 23rd (Netaji Bose's birth anniversary) and the 26th (Republic Day) intervening and fresh incentives lacking, conditions on the Calcutta Stock Exchange during the week under review were generally quiet and uneventful. There was a sharp reaction yesterday, when the Indian Iron and Steel Company, Ltd., announced that, following labour troubles, the blast furnaces in the smelting shop had been sealed with effect from the 27th as a safety measure. Crane drivers in the shop were on strike from 21st January, entailing a loss in production of 2,000 tons of steel a day. The market was anxious over the fact that when once the furnaces are sealed it would be a long time before they are brought to the operational stage again after lighting.

The dullness in jute goods and the continued fall in prices contributed to shrinkage of interest in the jute section. Great expectations had been kindled when the L.I.C. Investment Committee met on Friday last. It interviewed brokers, who suggested that investment in jute and tea shares would prove profitable. This was followed by the report that the Committee had rejected certain offers of Jutes as also of Indian Irons, and this contributed to the declining interest in the market. Brokers pointed out to the Committee that, because of increasing internal consumption, tea shares were a good field for investment, and that jute shares should be considered attractive, in view of the modernisation that had taken place in mills. The Committee had earlier showed interest in the working of these two industries by enquiring the investment prospects from brokers. It is understood the Committee discussed the working of the other important Calcutta industries, namely, engineering, sugar, coal and miscellaneous industrials. Brokers endeavoured to impress on the Committee the need for its sittings in Calcutta. There was a natural reluctance on the part of both operators and genuine investors to enter into long-term commitments, in view of the Budget uncertainties arising from the Nagpur resolution for a ceiling on profits, although there was no nervousness whatsoever.

Sectionwise, jutes trod a hesitant ground, as, in addition to the factors stated above, there was uncertainty about the minimum prices for goods being maintained. Kinnisons were hammered down to Rs. 190 from Rs. 195, and Anglo-Indias, after recovering to Rs. 225 from Rs. 222, were dealt with at Rs. 215 in small lots. Barnagores were quiet, declining to Rs. 142 from Rs. 145. At Rs. 77, Ganges lost Rs. 2 with Nationals being fractionally lower at Rs. 26.25. Northbrooks improved to Rs. 19.25 from Rs. 18.50.

Coals were mostly quiet, but there were rises on selective buying. Thus, while Central Indias eased to Rs. 7.19 from Rs. 7.25, Bengals were pushed up to Rs. 285 from Rs. 282. Pench Valleys recovered to Rs. 24 from Rs. 23.94. At Rs. 17.50, Burrakurs were for a time fractionally higher, but soon receded to Rs. 17.25.

Minings were quiet, with Indian Coppers changing hands at Rs. 3.57 and Metal Corporations at Rs. 9.06.

Among engineerings, Indian Irons opened at Rs. 26.07 and improved to Rs. 26.18 on the eve of the L.I.C. Investment Committee's meeting. After the meeting and on the reported disinclination of the Committee to accept the offer for this speculative scrip, the rate sagged to Rs. 25.86 on Saturday. A low of Rs. 25.60 was touched yesterday before finishing at Rs. 25.73. Texmacos were fractionally better at Rs. 21.15 before easing to Rs. 20.70. Indian Galvanizings were transacted at Rs. 16.62, as against Rs. 16.50 previously.

Among miscellaneous industrials, Assam Saws received support from interested quarters and rose impressively to Rs. 4.25 from Rs. 3.94. Angelo Bros. hardened to Rs. 20 from Rs. 19.87, but closed at Rs. 19.81. Indian Aluminiums, after rising to Rs. 16.69 from Rs. 16.25, gave way to Rs. 16.50, and Indian Oxygens changed hands at Rs. 23.31, as against Rs. 23.75 earlier. Alkali and Chemicals were firmer at Rs. 17.94, but closed lower at Rs. 17.80. Indian Cables eased to Rs. 28.62 from Rs. 29.25.

Selected tea scrips put on strength following enquiries by the L.I.C. Carrons were traded at Rs. 122 or Rs. 6 higher than previously. Hantaparas at Rs. 123 were better by one rupee. Methonis improved to Rs. 19.81 from Rs. 19.62 and Birparas to Rs. 161 from Rs. 160. Hatikhiras picked up to be quoted higher at Rs. 11.81, as against Rs. 11.50 earlier.

Madras Stock Exchange

MADRAS, *27th January*

Easy conditions continued to prevail on the Madras Stock Exchange during the week under review also. Tea shares encountered selling on rumours of the Madras Government contemplating to raise agricultural income-tax. Coffee shares were depressed, thanks to the gloomy picture of overproduction, rising costs and falling prices painted by the Chairman of the Coffee Board at Bangalore recently. Rubber shares, however, were somewhat steady, with prices tending to look up. Textiles were neglected in the absence of encouraging reports from yarn and cloth markets. Banks, electrics and sugars lacked support. Miscellaneous industrials ruled dull with the exception of certain select counters which evoked scattered buying enquiries.

Among tea shares in the planting section, Devasholas declined by 25 nP to Rs. 24.12. Lucky Valleys retreated by 22nP to Rs. 12.18 and Kil Kotagiris by 20 nP to Rs. 6.60. Woodlands were quoted 12 nP lower at Rs. 8. Nilgiris eased by 10 nP to Rs. 7.15. Parksides lost a like amount to Rs. 19.15. Periakaramalais shed 9 nP to Rs. 3.94 and Blue Mountains 2 nP to Rs. 3.23.

In the coffee group, Coffee Lands were marked down by 50 nP to Rs. 22.75. Kumergodes dropped 30 nP to Rs. 6.35. Ouchterlonys fell by 22 nP to Rs. 5.05. Consolidated Coffees eased by 10 nP to Rs. 20.55. Anaparais and Balmadies lost 5 nP each to Rs. 4.30 and Rs. 3.25, respectively.

Rubber shares, as already stated, were steady. T.R. & Ts improved by 20 nP to Rs. 7.20. Highlands and Midlands hardened by 10 nP each, the former to Rs. 11.50 and the latter to Rs. 10.85. Puthutotams gathered 3 nP to Rs. 2.93. Velimalais 5 nP to Rs. 5.70 and Pullangodes 2 nP to Rs. 1.59. Thirumbadis, however, shed 2 nP to Rs. 1.80 *cum-div.*, despite announcement of higher dividend of 10 per cent. for the year ended 30th September 1958, as against 5 per cent. in the previous year.

Deals in textile shares were put through at reduced rates. Coimbatore Pioneers and Vijayalakshmis declined by Rs. 2 each to Rs. 263 and Rs. 84, respectively. Loyals dropped Re. 1.25 to Rs. 25.25. Coimbatore Cottons lost a rupee to Rs. 133. Janardhanas softened by 50 nP to Rs. 68.50, Travancore Rayons by 25 nP to Rs. 16.58 and Mysore Spuns by 15 nP to Rs. 5.60.

Among miscellaneous industrials, Textools slipped down by Rs. 2 to Rs. 175 *cum-div.* Aluminium Industries declined by 35 nP to Rs. 18.35. Dalmia Cements receded by 30 nP to Rs. 9.70. Ashok Leylands by 15 nP to Rs. 6. India Cements by 10 nP to Rs. 5.35 and F.A.C.Ts by 5 nP to Rs. 7.23. Hindustan Levers, however, attracted investment support and hardened by Re. 1.45 to Rs. 27.75. Rallis moved up by Re. 1.50 to Rs. 46

THE

CHARTERED BANK

(Incorporated in England by Royal Charter 1853)
(Liability of Stockholders Limited)

Capital (Paid-up) - - - £5,000,000
Reserve Fund - - - £5,500,000

Branches throughout India, Pakistan and the East

Branches of

THE EASTERN BANK LTD.

a wholly owned subsidiary of the Chartered Bank are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.

AFFILIATED BANK IN INDIA:

THE ALLAHABAD BANK LTD.,

with over 70 offices in India

The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for fixed period and at short notice are received at rates which may be ascertained on application.

The Bank's London Office undertakes Trusteeships and Executorships.

Head Office :

38, BISHOPSGATE, LONDON, E.C.2.

Branch: 28, Charles II St., Haymarket, London S. W. 1.

Manchester Branch: 52 Mosley Street.

Liverpool Branch: 28, Derby House, Exchange Buildings, Liverpool, 2.

Hamburg Agency: Borsenbrucke 2A Hamburg 11

New York Agency: 65, Broadway, New York 6

Branches in Japan: Kobe, Osaka, Tokyo and Yokohama.

Branches in Cyprus: Famagusta, Kyrenia, Larnaca Limassol, Nicosia and Paphos.

Bombay Branch:

23-25, Mahatma Gandhi Road, Bombay 1.

NEWS IN BRIEF

THE West Bengal Government has decided to fix minimum wages for agricultural labour in the State as early as possible.

The Orissa Government has imposed a purchase tax on fish and betel leaves, with effect from 1st February 1959, at the rate of 3 per cent.

The Kerala Government has constituted a Conciliation Board, with Mr. Justice T. K. Joseph of the State High Court as Chairman, to bring about a settlement of the plantation dispute relating to bonus for 1957.

The first meeting of the newly established Geological Society of India was inaugurated by Mr. K. D. Malaviya, Union Minister for Mines and Oil, at the Indian Science Congress session at New Delhi on the 23rd inst.

The 37-mile Barhan-Etah rail link in western U.P. has been formally inaugurated by President Dr. Rajendra Prasad. The Rs. 1.34-crore project is expected to give an impetus to economic development of the backward regions of Etah district.

India figures as the largest recipient of the U.S. farm surpluses during the period 1955-58, accounting for imports of the value of $349 million, nearly 14 per cent. of the total U.S. exports under Public Law 480.

The agreement for the avoidance of double taxation between India and Sweden will come into force from the assessment year beginning 1st April 1959. The agreement provides for taxation of industrial and commercial profits, dividends, interest, royalties and pensions only by the country in which the source of the income is located.

The Union Defence Ministry has entered into an agreement for collaboration with Pye Telecommunications, England, for manufacturing army type signals at the Bharat Electronics, Bangalore. The agreement is a licensing one and the Bharat Electronics will build radio communications equipment to Pye designs.

The Government of India has brought the cashewnut industry within the scope of the registration and licensing provisions of the Industries (Development and Regulation) Act, 1951. Owners of industrial undertakings in the cashewnut industry who use power and employ 50 or more workers or those who employ 100 or more workers without the use of power, have now to obtain licences under the Act.

The Government of India has announced its decision not to allow any of its employees to undertake other work of a casual or occasional character, even though such employment may be after office hours. The ban, applicable to 1.7 million employees, has been imposed to prevent any deterioration in efficiency. In rare cases, however, permission may be granted to accept part-time employment.

The average monthly income of an industrial worker in Kerala in the year 1957 was Rs. 47.52, according to a report of the Statistical Department of the State. In 1957-58 over 98,200 persons were employed in 1,621 factories in the State. Of these 40.2 per cent. were women workers and the employers had spent an average of Rs. 148 per woman worker on maternity benefit schemes.

Workers of the Hirakud Dam Project units have served a strike notice on the authorities. They have planned to strike work on 26th February unless, in the meantime, their demands are met. Their demands include recognition of the employees' union, withdrawal of the order under Section 144, Cr.P.C., from the project area and a grant of 20 per cent. construction allowance to all workers.

The Government has fixed maximum prices at which certain varieties of fine and coarse and other varieties of rice and paddy may be sold in nine districts in Andhra Pradesh. The control prices for the finer varieties of paddy range from Rs. 11.27 per maund to Rs. 14.29 per maund and of rice from Rs. 17.50 per maund to Rs. 22.00 per maund. The prices for the coarse varieties range from Rs. 9.78 to Rs. 10.77 per maund in respect of paddy and from Rs. 15.50 to Rs. 17.00 per maund in respect of rice. For other varieties the price is Rs. 10.11 per maund of paddy and Rs. 16.00 per maund of rice.

The Government of India has further relaxed the conditions for movement of goods by rail to the ports for export under higher priority, in order to help exporters. The movement of all export goods to ports other than programmed movement of traffic, such as iron ore, manganese ore, etc., has so far been permitted under item 'D' of the Preferential Traffic Schedule on the consignor supplying to the station master of the despatching station a certificate from the shipping agents that space has been reserved. Cotton textiles will hereafter be moved under priority 'D' without the production of the shipping agents' certificate if the outer coverings of the bales containing textiles offered for booking bear the mark "For Export Only." This will be subject to verification of particulars to be given at the time of registration with the station master concerned for priority movement. Molasses, power alcohol and raw tobacco will also be moved to ports for export under the higher priority without the production of the shipping agents' certificate, on the basis of quarterly programmes accepted by the Ministry of Commerce and Industry (Directorate of Export Promotion), in consultation with the Ministry of Railways.

From Abroad

The U.S. Development Loan Fund has approved of a $5-million loan to the Philippines.

Ghana had a surplus balance of payments to the tune of £11 million in 1958, as against a deficit of £14.5 million in 1957.

It is reported that a number of businessmen in Kuala Lumpur, Malaya, are planning to establish sugar plantations and set up factories to manufacture white sugar.

The automobile industry in Italy produced over 400,000 vehicles in 1958, as against 351,799 in 1957. Out of this production a little over 150,000 vehicles were exported.

The net income of the Shell Oil Company, the U.S. unit of Royal Dutch-Shell group, for 1958 is $116.5 million or $3.85 a share, as compared with $135.08 million or $4.46 a share in 1957.

West Germany's gross national product was £18,900 million in 1958, representing a gross increase of 6.1 per cent. over that in 1957. After allowing for price increases the net rise was of the order of 2.8 per cent.

The Chilean Government has again devalued the peso by lowering its value in free bank exchange dealings. The new exchange rate has been fixed at 1,004 to 1,006 pesos per U.S. dollar as compared with 991 to 993 per U.S. dollar on 9th December 1958.

Total W. German exports to Communist block countries have been assessed at 1,440 million DM. during January-October 1958, as against 980 million DM. in 1957. Imports amounted to 1,120 million DM., as against 982 million DM. in 1957.

The West German Government has under consideration a proposal to impose an import duty on coal to help its mines get over their present difficulties. Duty will be charged at the rate of DM 20 a ton on coal coming from outside the European Coal and Steel Community.

Exports of butter by the main producing countries of the world during 1958 fell by about 2 per cent. The Commonwealth's share of world butter trade, however, was higher. The heavy supplies from New Zealand more than offset the slight fall in Australian shipments.

An American oil company, Plymouth Oil, Delaware, has secured a concession from the Australian Government to explore for oil in an area of about 29 million acres in Queensland, in the north-eastern part of Australia. It plans to begin exploration work immediately.

The Central Bank of Malaya having the appellation *Bank Negara Tanah Melayu* in Kuala Lumpur, has commenced business with effect from the 26th inst. with assets no less than $M100 million. The Bank will act as a clearing house for commercial banks, which already have made deposits for a working system.

The British Co-operative Permanent Building Society has decided to give its borrowers the option of making their annual payment in 10 instalments, instead of 12 as at present. This measure is designed to freeing the borrowers from the obligation to make payments in December and a summer month.

The cost of living in the U.S. in December last fell by two-tenths of one per cent. to 123.7 per cent. of the 1947-49 average, the first decline since August last. While cost of rents, medical care and some other consumer items rose, there was a perceptible decline in the cost of food, cars and clothing.

Some of the Latin American countries, particularly Brazil, Uruguay and Chile, are considering the possibility of simplifying their present cumbersome multiple exchange rate system. Argentina, it may be noted, has already done so. This would be an essential step towards a Latin American Payments Union and Common Market.

West Germany has removed the restrictions on security deals which had been retained since convertibility. In future, there will be no bar to the import and export of German or foreign securities and residents in W. Germany will be permitted freely to buy and sell foreign securities This applies also to bonds of German loans raised abroad.

The U.S.A. will send, in the nearest future, mail by guided missile through outer space to all corners of the globe. Disclosing this, Mr. Summerfield, the Post-master General, stated that before man reached the moon—which is estimated to take another ten years—the mail would be delivered within hours from New York to California, to England, to India, or Australia by guided missiles.

The U.S.S.R. has started mass production of a new midget car, the Ogonyok, well suited to difficult road conditions and capable of carrying four passengers at about 46 m.p.h. Another report claims that an automobile capable of speeding at 161 m.p.h. has also been produced by the U.S.S.R. The body of this car is made of a new light plastic said to be as durable as steel.

The Government of France proposes to amend its Company Law in such a way as to compel joint-stock companies in France to disclose more particulars about their financial affairs than they are doing at present and to publish their financial statements at frequent intervals. This measure is designed to encourage foreign investment in France and to persuade small savers to invest in commercial ventures instead of putting their earnings in gold or real estates.

W. Germany's 15,000 cigarette workers are the first to enjoy a regular 40-hour week in the Federal Republic of Germany. The shorter work week was introduced on 1st January 1959 by collective agreement. Simultaneously, about 2.5 million metal workers and 80,000 printers saw their regular work week cut by one more hour to 44 with full pay. Already, the 44-hour week had been introduced for some 300,000 workers of the garments industry since 1st October 1958.

The Latin American countries are expected to set up a Development Bank of their own. It is tentatively suggested that the proposed bank will have a capital of $850 million. Of this, $700 million will be covered by loans in hard currencies, of which the U.S. will contribute $300 million The remainder will be subscribed by the Latin American countries themselves. Of the $150 million cover for loans in soft currencies, the U.S. share will be $100 million.

The Singapore Government proposes to impose protective tariffs on manufactured goods, according to a new Customs Bill just passed into law. The Bill, which met with vigorous opposition when published, was originally drafted to enable the Government to impose duties on any goods besides intoxicating liquors, tobacco, and motor cars. The Bill, however, was later so amended as to protect light industries by imposing restrictions on imported goods similar to those produced by local industries.

The Economic Sub-Committee of the Baghdad Pact countries which met at Karachi last week has passed a resolution asking the experts to prepare a scheme for establishing free trade in the region as early as possible. In another resolution, it has urged the speedy implementation of the economic projects on which survey had already been completed. These projects include a micro-wave wireless link between the Pact capitals, a coastal highway linking the Pact countries through railway from Pakistan to Iran and from Pakistan to Turkey and development of some ports on the coasts of Pakistan, Iran and Turkey.

PERSONAL

MR. George Gellhorn, President of the U.S. Financial and Development Fund, arrived in Bombay on the 23rd inst.

Mr. R. Tarmoedji, till recently Acting Consul for Indonesia in Bombay, left here for Djakarta, where he will join the External Affairs Ministry.

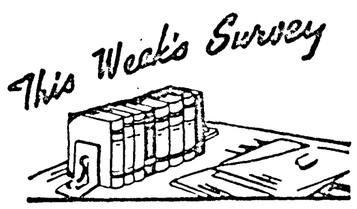
Mr. Chinubhai Kilachand and Dr. F. P. Antia have been elected President and Vice-President, respectively, of the Indian Roads and Transport Development Association for the current year.

Mr. R. K. Choudhry, a retired Judge of the Allahabad High Court, has been appointed Chairman of the Railway Rates Tribunal. The two other members of the Tribunal are Mr. Gorakhnath Sinha and Mr. S. K. Mukerji.

The Earl of Inchcape, a Director of the British India Steam Navigation Company Ltd., London, has been appointed a Deputy Chairman of the Company. Mr. M. W. J. Campbell and Mr. C. S. Mundy, O.B.E., also Directors of the Company, have been appointed Managing Directors.

Mr. Ananthasayanam Ayyangar, Speaker of the Lok Sabha, who led the Indian delegation to the meeting of the Commonwealth Parliamentary Association General Council, recently held at Barbados, in West Indies, returned to India via Bombay on Tuesday last.

Mr. Stefan H. Robock, a former Chief Economist for the Tennessee Valley Authority, U.S., and one time U.N. Economic Adviser to the Brazilian Government on the development of North-east Brazil, will arrive in New Delhi shortly to advise the National Council of Applied Economic Research in a survey designed to provide an objective basis for balanced industrial development in India. The services of Mr. Robock have been secured for three months by the Government of India under the U.N. Technical Assistance Scheme. Currently, Mr. Robock is Deputy Director of Business Education of the Committee for Economic Development, a private research and educational organisation in the U.S.



EDUCATIONAL STANDARDS

MR. G. D. Birla, speaking at Pilani, where he has pressed into the service of India's youth his generous instinct and great organisational abilities by creating a vast educational enterprise under an endowment, made the point that the standard of education in India had gone down in the last decade. If this were an isolated expression of a baseless fear by a man who is given to happy reminiscences by decrying the "unworthy" present, it might be dismissed without any comment. Actually, Mr. Birla is a great optimist and not given to uncritical admiration of all that is old. Further, Mr. Birla's fear of the fall in educational standards is shared by many other impartial observers in this country. It is time some investigation were made in order to ascertain the extent of deterioration in educational standards and the reasons for it and to suggest appropriate remedies. Obviously it would be statistically difficult to compare the average educational standards of today with those of the past, thanks to absence of reliable data. But it should not be difficult to arrange for an international comparison which could reveal how India's educational achievements compare with those of other leading countries. If such a comparison reveals that the average standards are low, the malaise must be explained and appropriate remedial measures adopted. It is of the utmost importance to national progress in all directions that average educational standards—as distinguished from the standards of "top" students—are reasonably high.

There is considerable truth in the view, now held by many, that the fall in educational attainments could be traced to the neglect of the English language. Mr. Birla, who seemed to hold a similar view, rightly pleaded for giving the same importance to the study of English as had been attached to it till the achievement of independence. He said that we should not ignore English in a mistaken zeal to promote the national language. This plea was heartily endorsed by Mr. S. K. Patil, Union Minister for Transport and Communications, who was the chief guest on the occasion. Protagonists of any language, he said, should remember that "trying to foster their language was like closing all windows but one and expecting all the air to rush in." He urged them to remember further that English was not only the "carrier of knowledge to India's doorsteps but also the language which had helped the nation's leaders to negotiate with the ruling power and attain freedom for the country."

We commend these observations to the attention of the authorities in the hope that, in any scheme of educational reorganisation, they will ensure that English retains the importance it has received in the past. In particular, the cause of scientific education, as Dr. A. L. Mudaliar, President of the Indian Science Congress, pointed out, in effect, is best advanced by the use of English as a medium of instruction. He said: "The language that science speaks is international and one must recognise that, whatever may be the vehicle through which scientific thought can be conveyed, the use of this international language is absolutely essential if progress in science in any country is to be speeded up." Surely, to ignore English or even to reduce the emphasis on its study may well lead to an all-round deterioration in educational levels.

AGRICULTURAL MARKETING

The Seminar on Regulated Markets, held at Mysore on Friday the 22nd inst., is of significance for two reasons. One, the Seminar is the first of its kind ever organised in the country under the auspices of the Union Ministry of Food and Agriculture. Two, for the first time, both officials and non-officials met together to exchange views on the development of agricultural marketing. Such an exchange of views, it is needless to say, will help improve conditions in the markets of India which are, as Mr. Mullick, Joint Secretary, Department of Agriculture, Government of India pointed out in his speech at the Seminar, far from satisfactory. In many cases, the producers do not get a fair price, so that they lose the incentive to grow more. This is an age-old weakness of agriculture which has become a stock argument against middlemen. But farmers today are not as backward as they were, say, 20 years ago or even 10 years before, in that they are better informed about the trend of markets and have large holding power. The authorities must try to find out to what extent the evil still persists and in which parts of the country it is strong. A fresh survey of marketing conditions in all the principal crops at least is necessary, in order to ascertain what part of the rupee realised on sale of agricultural crops reaches the hands of the grower and how bad is the influence of middlemen. After such a survey, proper solutions for eradicating the evil must be thought of and applied.

In the context of the planned development of agriculture, regulated markets play a vital role. The chief objective of such markets is to secure for the farmer his due share of the price paid by the consumer through elimination of the malpractices associated with buying and selling of commodities and arrangements for the efficient distribution of marketable surpluses from producing to consuming areas. Despite all the stress laid on the importance of regulated markets, the progress actually achieved so far is not much. For this, the State Governments are largely responsible. While the Congress Party has been crying hoarse against middlemen, its representatives in charge of Governments have done precious little in the promotion of such positive reforms. The number of markets newly established since the second Five-year Plan began is just 100, the total number now in existence being 552 (as against 265 in 1950-51). Incidentally, it may be noted that there are at present 1,800 wholesale markets and 2,300 periodical markets. It is in these markets that conditions are to be improved. Mr. Mullick, therefore, did well to call upon the State Governments' representatives to get the necessary legislations passed and set up regulated markets in their respective areas.

Inaugurating the Seminar, the Governor of Mysore, Mr. Jayachamaraja Wadiyar, certainly struck a note of realism when he declared that co-ordinated efforts were required to solve many practical difficulties in the working of regulated markets. Special mention was made by him of the difficulty faced at the time a new regulated market starts functioning on account of the opposition from strongly entrenched vested interests. On the other side, the producers who are mostly illiterate people, get utterly confused and treat the regulated market machinery as an infliction. They even begin hating the institution, especially when they find that the system of advances made by wholesale merchants against produce is abolished, and there is delay in starting equally prompt arrangements for such advances within the framework of the regulated market machinery.

Several useful suggestions were made by Mr. Mali Mariappa, Minister for Co-operation, Government of Mysore, who presided over the Seminar. They included (1) inclusion of fruits, vegetables, livestock and its products under the purview of the Regulated Markets Acts; (2) regulation of foodgrains for the purpose of purchase and sale in wholesale *mandis;* (3) *ad valorem* basis of levy of market cess as one of the means of increasing the income of market committees; (4) improvement in the service conditions of staff working in the various regulated markets; (5) the co-ordination of the various aspects of marketing development such as co-operative marketing, warehousing, grading and standardisation of regulated markets; (6) introduction of a system of sales on the basis of description according to prescribed standard; (7) co-ordination of developmental activity on an all-India basis; and (8) uniformity in units of quotation, market charges, etc. Surely, all these suggestions are quite pertinent and will, if implemented in right earnest, go a long way towards the development of regulated markets on a sound and solid footing. Surely, Mr. Mariappa, who seems to have a clear grasp of the problem, could set an example for other State Governments, by energetic implementation of the reform of regulated markets in his own State, namely, Mysore.

LICENCES FOR INDUSTRIES

The Government of India has taken certain welcome steps to expedite the issue of licences for the expansion of industries in the private sector. It may be noted that the Licensing Committee, constituted under the Industries (Development and Regulation) Act, 1951, is entrusted with the task of scrutinising the applications for new units and expansion of existing capacity in the scheduled industries. Thus, the Committee advises the Government in matters of industrial expansion in the country, keeping in view the broad pattern and targets of development envisaged by the Planning Commission, except, of course, in the case of those industries covered under separate Development Councils. There is no doubt that the elaborate formalities associated with the functions of the Committee in some cases are either superfluous or irrelevant. Besides, they often lead to unnecessary delay and inhibit the rapid growth of industries. The steps taken by the Government at present for streamlining the role assigned to the Committee have come not a day too soon.

In the first place, the Government has, in consultation with the Licensing Committee, decided that applications for the production of new articles by the existing industrial undertakings need not now be referred to the Committee, if these do not involve the installation of additional machinery and the use of imported raw materials. Such schemes will be approved without reference to the Committee, by the Senior Industrial Advisor concerned, provided there is scope for fresh capacity. The Licensing Committee, however, will periodically be informed about these applications and the action taken on them. Again applications for shifting the location of industrial undertakings from one State to another will be disposed of by the Ministry of Commerce and Industry, subject to the condition that the State Governments concerned do not have any objection.

All other applications for grant of manufacturing licences will be placed before the Committee immediately. In order to facilitate quick action on those applications, the local members of the Committee will meet every two or three weeks and discuss cases which have been considered by the Development Wing of the Ministry of Commerce and Industry. The views of the local members will be circulated to the other members of the Licensing Committee (representatives of State Governments). If there are any differences of opinion among them, they will be considered at the meeting of the full Licensing Committee. The Committee will meet every six weeks or two months. Under the procedure followed so far, all the applications were being disposed of only by the full Licensing Committee, which met once a month or sometimes once in two months. The Directors of Industries or Secretaries of Departments of Industries of State Governments attended these meetings. Now that the local members of the Committee have been given wider powers for taking decisions, it is expected that the system of granting licences will function more expeditiously.

BOMBAY PORT TRUST

The Report of the Bombay Port Trust for the year 1957-58 shows that the port is making steady progress in handling an increasingly larger volume of trade. It is gratifying to note that, despite the rather unhelpful attitude adopted by labour, the aggregate weight of the cargo handled at the docks and bunders during the whole of the year touched a new record of 13.11 million dw. tons, as against 11.98 million dw. tons in the previous year. The traffic in passengers, however, was lower at 708,605, as compared with 767,903.

There was a perceptible improvement in the aggregate revenue on General Accounts (including surcharge), such having gone up from Rs. 11.07 crores to Rs. 12.09 crores. The total expenditure amounted to Rs. 9.98 crores in 1957-58 as compared with Rs. 8.74 crores in the previous year. The total revenue and expenditure on General and Pilotage Accounts (excluding social receipts) for the year was Rs. 12.32 crores and Rs. 9.10 crores, respectively, in 1957-58, as against Rs. 11.27 crores and Rs. 8.87 crores in the previous year.

To revert to the volume of traffic. Both docks and bunders accounted for the increased volume of traffic. The volume of imports rose from 3.53 million tons in 1956-57 to 4.42 million tons. The volume of exports at 1.87 million tons, however, remained practically the same as in the previous years. The total traffic aggregated 6.29 million tons, as against 5.39 million tons in the preceding year. Excluding mineral oils (in bulk) and foodgrains (in bulk), iron and steel continued to form the largest single item in the foreign import trade passing through the port. There was a fall in the closing months of the year in the overall volume of dry cargoes imported and exported the fall being marked in respect of imports. The volume of imports handled at the bunders rose from 4.71 million tons in 1956-57 to 4.88 million tons and that of exports from 1.88 million tons in 1956-57 to 1.94 million tons. The total traffic aggregated 6.82 million tons, as against 6.59 million tons in 1956-57. The increase, both in imports and exports, was chiefly under bulk mineral oils.

The Report also draws attention to the various programmes of development and modernisation undertaken by the Port Trust during the year under review. Mention may be made of the preliminary steps taken regarding the scheme for the modernisation of Princes' and Victoria Docks, reconstruction of transit sheds in these two docks, labour housing projects, installation of electric cranes for Ballard Pier and Alexandra Dock and reorganisation of electrical distribution system in the docks. We are also told that the entire fleet of seven dredgers was fully employed during the year. A fleet of three suction dredgers was used for dredging the Alexandra Dock approach channel, Princes' and Victoria Docks channel and Pir Pau access channel. The grab dredgers were mostly employed for dredging the dock berths, turning basins and harbour wall berths.

The section on labour records that unrest among the Port Trust workmen showed no signs of abatement and the tendency to stop work at the slightest provocation continued to manifest itself. However, the authorities continued their policy of emphasis on labour welfare activities. For instance, nine welfare centres have been opened by the Labour Department at Port Trust residential settlements for workmen. Literary classes and reading rooms are being run. Clinics for women and children are being conducted. It is to be hoped that port workers will display a better awareness of their responsibilities and co-operate with the Port Trust authorities to enable the Bombay Port to discharge its growing responsibilities expeditiously.

LAND REFORMS IN PAKISTAN

A strange feature of the land reform measures announced by President Ayub Khan on the 24th inst., is that it is applicable only to West Pakistan. They seek to lay down a land tenure policy for West Pakistan which would satisfy, on the one hand, the social need for greater equality of opportunity and status and, on the other, the economic need for increasing agricultural production and improving the standard of rural living and securing a more equitable distribution of income from land. For this purpose, the President proposed, among other things, the break up of the feudal system prevailing in West Pakistan, ceiling on land holdings, resumption of *jagirs* without payment of compensation, ban on fragmentation of holdings below economic level, compulsory consolidation of fragmented holdings and security of tenure for tenants. A remarkable feature is the speed with which the Government arrived at a decision on the recommendations of the Land Reforms Commission. It took hardly four days for the Government to make up its mind. It is, however, not clear why East Pakistan has been excluded from this reform.

The salient features of the reforms are as follows:

No person will be allowed to own more than 500 acres of irrigated land or 1,000 acres of unirrigated land. Existing landlords will be allowed to retain such additional land to which they would have been entitled had the ceiling been fixed as equivalent to 36,000 produce index units allowed in the case of refugees. They can additionally retain up to 150 acres under orchards and alienate by gift a limited area to their heirs.

Land in excess of the ceilings will be resumed by the Government for redistribution to tenants and other deserving climants, in order to avoid displacement of existing tenants and disruption of production. Tenants already cultivating the resumed areas will be given the option to buy them on instalments spread over 25 years.

The landlord will be paid fair compensation for the resumed land in the form of interest-bearing bonds redeemable in 25 years.

The quantum of compensation will be fixed by a sliding scale, according to which the compensation payable decreases as the surplus land in excess of the ceiling increases. The formula is based on what is termed as produce index unit. The produce of 500 acres of fertile land in Lyallpur district in West Punjab is reckoned as equivalent to 36,000 produce index units. For the first 18,000 produce index units (roughly equivalent to 250 acres of irrigated land), the compensation payable is Rs. 5 per unit. For the next 24,000 units Rs. 4 per unit, for the next 36,000 units Rs. 3 per unit, for the next 72,000 units Rs. 2 per unit and for the balance Re. 1 per unit.

Compensation will be paid out of a special fund to be created by depositing the sale proceeds of resumed land and it will be operated by a Land Commission which will implement the reforms. The fund will also be utilised for the liquidation of bad debts, development of resumed lands and the administrative charge incurred in the implementation of the reforms.

Occupancy tenants will be converted into full owners of the land throughout West Pakistan. Tenants in congested areas will, as far as possible, be accommodated in the programme for colonisation of State land. They will have security of tenure. In the event of an ejectment according to a process of law, they will be entitled to a fair compensation for improvement of land and disturbance of possession. An embargo will be placed on enhancement of rents, and illegal exactions in the shape of fees, free labour or services from tenants, will be eliminated.

All *jagirs* will be resumed without payment of compensation and other intermediary interests will be abolished. In order to prevent progressive fragmentation of holdings, division of holdings below a certain economic or subsistence level will be forbidden. Immediate steps will also be taken to introduce a province-wide scheme for the compulsory consolidation of fragmented holdings.

On a comparison of these measures with those of some of the Indian State Governments, a few points of contrast stand out prominently. In the first place, the ceiling proposed in Pakistan is fairly high. Secondly, *jagirs* are to be taken over without paying any compensation, whereas, in India, compensation of varying amounts was paid both for *jagirs* and *zamins*. Thirdly, unlike in India, fragmentation of holdings is banned and compulsory consolidation of uneconomic holdings is proposed. Other features of the reform, such as security of tenure, are to be found in India, too.

EXPORT TRADE OF INDIA

FEDERATION'S REPORT

From Our Special Correspondent

NEW DELHI, *27th January*

DELHI LETTER

THE Federation of Indian Chambers of Commerce and Industry has just brought out a study analysing, countrywise, the recent trends in India's export trade. This study, it is stated in the foreword, will form the background paper to the Conference on Promotion of Exports to be held in Calcutta on the 29th and 30th of this month. The Federation's analysis is most welcome for the reason that it deals, in one compass, with different commodity exports to different countries. The only limiting factor of the study is that it generally ends with an analysis of figures for 1957. Since exports have declined further in 1958, the need for knowing and overcoming, if possible, the difficulties in the way of export promotion should be obvious. The Federation's study should go some way in fulfilling this need.

As of 1957, the four most relevant countries in the matter of India's direction of exports are the United Kingdom, the United States of America, Australia and Japan. The percentage shares of these countries in India's export trade were 26.6, 15.6, 4.1 and 4.5, respectively. A general picture of trends in commodity exports to these four significant countries (each accounting for more than 4 per cent. share of this country's export trade) is given in the following paragraphs.

As far as the United Kingdom is concerned, exports of tea to that country declined from Rs. 98.4 crores in 1956 to Rs. 82.4 crores in 1957. Thus, while total imports of tea in the United Kingdom in 1957 were higher by 15 per cent. over the previous year's record shipment of 513 million lbs., exports from India declined by 17 per cent. or so. The Federation believes that the exports of tea from India can be increased to the level achieved in 1956 provided the Indian tea is made cheaper. It is also urged that possibilities of setting up a Joint Tea Promotion Council in London should be explored. As for hides and skins, their exports to the United Kingdom have remained more or less stable, being of the value of Rs. 16.3 crores in 1956 and Rs. 15.6 crores in 1957. It is stated that some sections of the trade in Britain are against the free imports of Indian skin into that country. The prospects, however, for Indian leather and leather goods, according to the Federation's study, appear to be favourable, except in the glove leather trade. In spite of systematic increase in the use of substitutes in the U.K., particularly for sole leather, there is at present a growing demand for Indian skins and leather, and the prospects of increasing our exports, therefore, appear to be good. As for mill-made cotton piecegoods, their exports to the United Kingdom have been to the value of Rs. 11 crores in 1957. But they have gone down in 1958 and the agitation of the textile industry in Lancashire has introduced an element of uncertainty. Since this country is expected to restrict her cotton piecegoods exports voluntarily, any promotion of exports in this direction is ruled out. The decline in manufactured jute exports to the United Kingdom from Rs. 9.3 crores in 1956 to Rs. 5.9 crores is attributed to the keen competition from paper bags. This, in its turn, is the direct result of the U.K. Jute Control which sells Indian jute goods at greatly inflated prices to bring them into line with the prices of Dundee goods. It is, therefore, urged that, if Indian jute goods are to recover the ground lost to paper bags, a substantial reduction in the mark-up of Indian jute goods in the U.K. is essential.

India's exports to the United States have increased since 1956, principally in respect of manganese ore. Its exports in 1956 were of the value of Rs. 3.3 crores and in 1957, Rs. 14.6 crores. That country accounted for nearly half of the total exports of that ore from India in 1957. American demand for it has, however, abated in 1958, with export earnings showing a sharp decline. It is stated that, apart from the effect of recession in the American market, the competition from Brazil, Morocco and South Africa has increased considerably. Because of lower steamer freight rates from these destinations, the American buyer has turned increasingly to these sources of supply. Exports of Indian manufactured jute goods to the United States have, however, remained more or less stable, being of the value of Rs. 34.0 crores in 1956 and Rs. 33.6 crores in 1957. As for tea exports to that country, they have been to the value of Rs. 7.8 crores in 1956 and Rs. 6.4 crores in 1957. Although in 1958, there has been some rise in tea exports to America, much more remains to be done, in the opinion of the Federation, to bring down the cost of exports in a market where Indian teas, quality for quality, were costlier than teas from other sources. As for exports of cashew kernels to the United States they have also been more or less stable, being Rs. 10.9 crores in 1956 and Rs. 11.0 crores in 1957. According to the Federation's study, there is scope for a moderate increase in their exports to that country. One of the limiting factors, however, is the difficulty in augmenting internal supplies in the short run for even now we are dependent, to some extent, on the import of raw cashew nuts from East Africa.

India's exports to Australia have remained more or less stable in respect of manufactured jute and cotton piecegoods. Exports of the former commodity were to the value of Rs. 12.0 crores each in 1956 and 1957; exports of the latter were Rs. 3.9 crores in 1956 and Rs. 5.0 crores in 1957. There has been a decline in jute exports in 1958, because the fall in production of wheat in Australia has reduced the demand for packaging materials. According to the Federation, there is a positive scope not only for maintaining our present market in Australia but for bringing about some increase in export of jute goods to that country. As for exports of cotton piecegoods to Australia, the Federation's study has referred to the likely adverse effect of increased import duties levied since October 1958 in Australia on plain weave sheetings, bleached and dyed.

India's exports to Japan also have remained more or less stable in recent years. In 1956, raw cotton exports were to the tune of Rs. 10.9 crores and in 1957, Rs. 8.8 crores; iron ore exports were Rs. 5.4 crores and Rs. 7.0 crores in the respective years; and manganese ore exports were Rs. 2.3 crores and Rs. 2.5 crores, respectively. Iron and steel scrap exports, however, came down from Rs. 3.6 crores in 1956 to Rs. 1.9 crores in 1957. The decline in raw cotton exports to Japan has been due largely to competition from the United States, Mexico, Pakistan and Brazil. The prospects for maximising our raw cotton exports to Japan, in the opinion of the Federation, do not seem to be very bright. Nevertheless, it is expected that Japan's textile industry would be able to take up much larger quantities of our Bengal *deshi* varieties than hitherto, since their imports into Japan are allowed under the Foreign Exchange Allocation System and no import duty is levied. The decline in exports of scrap iron is attributed to two factors, namely, the large carryover of stocks by the Japanese steel mills and the Indian Government's policy of restricting scrap exports in order to preserve them for use in India.

BANKERS EXPOUND

From Our Own Correspondent

LONDON, *24th January*

LONDON LETTER

THIS year's Bank speeches lack peculiarly in interest. Some paid special attention to what has been happening overseas but even the Chairman of Lloyds had little new to say. He noted that the increase in the gold reserves was well founded and the continued prospects for sterling therefore better than in the past. Sterling countries had drawn down their balances by £200 million and non sterling countries increased theirs by £100 million—a net reduction of indebtedness of £100 million. Others commented that, while in the early part of the year (indeed since autumn 1957), American production had been going down, in the last eight months this had been half recovered. However, U.S. exports had consistently fallen and over the past year America had lost $2,000 million in gold—largely to Europe.

Thus, American recession appeared to have done more good than harm—though against this the general world recession had sent commodity prices tumbling to the detriment of the less developed countries. Two of the Bank Chairmen suggested that such countries could not expect everything they might like to have, but that, if the U.K. went on building up an export surplus, then they would stand a better chance of getting more than otherwise!

The fall in import prices had benefited the U.K. over the past eighteen months by some £400 million—hence the balance of payments surplus. But every banker was well pleased with the strength of sterling and had no criticism to make of the means whereby this had been achieved. Some—such as Westminster—even minimised the cost in production and unemployment to this country. Others were just disappointed that production had not expanded. There were even fears that, if consumers were too much encouraged to spend, then exports might be diverted—without much increase in home production—imports somewhat increased and our last state be worse than our first. But there seemed no real fear that this Government would push reflation too far.

On Europe, there was on the whole a realisation that the European Economic Community was a necessary start towards a *politically* unified Western Europe, but a lot of fears of possible discrimination to come against the remaining eleven countries and the rest of the world. No one wanted to see the O.E.E.C. die—but mostly this was because of the repercussion on the U.K. which sent £500 million of exports per annum to the Common Market countries.

At home, there was jubilation at the freeing of the bankers from their bonds though Westminster did not like the new weapon which the Treasury has brought in of demanding special receipts from the banks to restrict credit. It was noted that, if the hire-purchase houses developed the idea of financing themselves by direct deposits from the public they would, in future, be less amenable to credit restriction applied through the banking system. The banks are all satisfied with their incursion into hire-purchase finance by purchase of finance houses or shares in them and also with the drive they are making for more accounts with the general public. Not all are agreed just which measures are best: Some want to popularise the use of cheques by people who have never had a banking account—a new sort of cheap restricted (no overdraft) account is being introduced; others like the new idea of lending small sums on personal security only for specific purposes and for repayment in a specified time. But all comments in this field show how competitive British banking has become since the ending of the credit squeeze.

The only real piece of forward looking on the part of British bankers was on trade with the undeveloped areas. They opined that the export earnings of these areas should be increased, that there might be a case for considering price stabilisation schemes for some of their primary commodities (anathema to the British Government) that, of course, real surpluses earned in overseas trade should be invested in these territories.—*All Rights Reserved.*

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

BOWREAH COTTON MILLS COMPANY, LIMITED

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the Prospectus dated the 30th December 1958 having attached thereto the documents required by Section 60 of the Companies Act, 1956 has been delivered for registration to the Registrar of Companies, West Bengal. Copies of the Prospectus and application forms may be obtained from the registered office of the Company and from the Company's Bankers and Brokers.

Application will be made to the Stock Exchange at Calcutta for permission to deal in and for quotation for the whole of the Stock now being offered.

The Subscription List will open on the 2nd February, 1959 and will close at the discretion of the Directors.

BOWREAH COTTON MILLS COMPANY, LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1882)

SHARE CAPITAL

AUTHORISED		ISSUED AND FULLY PAID
Rs.		Rs.
88,00,000	Ordinary Shares of Rs. 100 each	24,00,000
6,00,000	Cumulative "A" Preference Shares of Rs. 100 each	6,00,000
6,00,000	Non-Cumulative "B" Preference Shares of Rs. 100 each	6,00,000
1,00,00,000		36,00,000

LOAN CAPITAL

Rs. 20,00,000/- 6½ per cent. Debenture Stock 1968/73 being the Stock now offered.

The Company has no mortgages, debentures or other loan capital outstanding other than the Stock now offered and an overdraft with Lloyds Bank Limited, secured by hypothecation of stocks of cotton, cotton waste, yarn, cloth and book debts, an overdraft with Bank of Baroda Ltd., secured by hypothecation of stores. As at 15th November 1958 such overdraft with Lloyds Bank Ltd. amounted to Rs. 68,48,273/- and with The Bank of Baroda Ltd., to Rs. 11,95,000/-. The Company has also an overdraft with The Union Bank of India Ltd. secured by deposit of certificate of Debenture Stock of the nominal value of Rs. 20,00,000/- and as at 15th November, 1958 such overdraft amounted to Rs. 13,45,732/-.

The amount of unsecured loans from the Managing Agents was Rs. 33,89,173/- as at 15th November, 1958 and from Kishore Trading Company Ltd. was Rs. 5,00,000/- as at 15th November 1958.

OFFER OF

Rs. 20,00,000/- 6½ PER CENT. DEBENTURE STOCK 1968/73 AT PAR.

DIRECTORS

RANG NATH BANGUR, Merchant, 21, Strand Road, Calcutta.
HENRY JOSHUA SILVERSTON, Solicitor, 29, Netaji Subhas Road, Calcutta.

BANKERS

LLOYDS BANK LIMITED, 29, Netaji Subhas Road, Calcutta.
BANK OF BARODA LIMITED, India Exchange Place, Calcutta.

SOLICITORS

ORR, DIGNAM & CO., 29, Netaji Subhas Road, Calcutta.

AUDITORS

PRICE, WATERHOUSE, PEAT & CO., Chartered Accountants, B4, Gillander House, Calcutta.

The Rs. 20,00,000 of Debenture Stock was created by a Resolution of the Board of Directors of the Company passed on the 28th April, 1958 and is secured by a Trust Deed dated the 16th May 1958 in favour of Messrs. R. N. Bangur and J. L. Esplen and Dalhousie Holdings Ltd., as Trustees for the Stockholders.

The Trust Deed provides, *inter alia*, as follows:—

1. INTEREST

Interest will be payable on the 30th June and the 31st December in each year in respect of the half-yearly periods ending on those dates. The first payment will be made on the 30th June, 1959 in respect of the period from the date of receipt by the Company of the Application Form accompanied by a remittance for the amount due and will be at the rate of 6½ per cent. per annum, income-tax being deducted at the appropriate rate;

2. SECURITY

(a) Payment of principal and interest will be secured by a first fixed charge on the Company's immovable properties, including fixed plant and machinery relating thereto, and by a floating charge on the remainder of its undertaking and assets, present and future, excluding any uncalled capital, such floating charge being subject as to the Company's Stocks of cotton, cotton waste, yarn, cloth, stores, chitty bills and book debts to the hypothecation in favour of Lloyds Bank Limited, and as to the Company's Stores to the hypothecation in favour of The Bank of Baroda Ltd. In respect of leasehold property (if any) for which the consent of the Landlord is required for the creation of the charge therein but has not been obtained when the Trust Deed is executed, the charge affecting such property will not be of immediate effect but will be postponed until such consent has been obtained.

(b) The Company may create mortgages or charges on its stocks of cotton, cotton waste, yarn, cloth, shares, chitty bills and book debts ranking in priority to or *pari passu* with the floating charge to secure sums borrowed from or obligations incurred to bankers in the ordinary course of business of the Company but save as stated the Company may not create any charge ranking in priority to or *pari passu* with the floating charge and/or the fixed charge.

3. REDEMPTION

Such part of the Stock as has not been previously purchased or redeemed will mature for payment at par plus accrued interest on the 31st December, 1973. The Company may redeem the whole or any part (to be selected by drawings) of the Stock on or at any time after the 31st December, 1967 at par plus accrued interest on giving three calendar months' previous notice to the Stockholders.

The Company was incorporated on the 22nd February 1900 and its mill is situated at Bauria in the District of Howrah and consists of 42,880 spindles and 841 looms. It is one of the oldest cotton mills in West Bengal.

The Board of Directors of the Company have undertaken a scheme for modernisation of the plant and machinery and electrification of the Mills with a view to manufacturing finer qualities of cloth and cotton goods and other varieties which were not manufactured by the Company. The debenture stock now being offered has been issued in favour of the Bank as security for such overdraft. It is proposed in the first instance to repay out of the net proceeds of this issue the amount borrowed by the Company from the Bank in full and, if the proceeds are insufficient, partly to the extent of the net amount received by the Company so that the Debenture Stock or a part thereof, as the case may be, would be released from the Bank and issued to the applicants for the Stock. The balance of the proceeds will be utilised towards the repayment of the other loans.

TRADING AND FUTURE PROSPECTS

In these days, the demand of the public in respect of cotton goods appears to be for quality products, and the mills have been manufacturing cotton goods of finer quality and the Company is adopting the policy of producing improved quality goods. Whilst the Directors can give no assurance as to future prospects, they expect that the Company will be able to produce still better quality of cotton goods and increase the output and that the sale of cloth and other varieties of cotton goods will increase.

MANAGING AGENTS

The Company's Managing Agents are Kettlewell Bullen & Co., Ltd.

APPLICATION FOR DEBENTURE STOCK

Application for the Stock (which must be for Rs. 500 or multiples thereof) must be made on the accompanying Application Form in accordance with the terms thereof and sent to the Company's Bankers, Lloyds Bank Limited, at 29, Netaji Subhas Road, Calcutta, or at Dr. Dadabhoi Naoroji Road, Bombay, The Bank of Baroda Limited, India Exchange Place, Calcutta, or to the Company's Brokers, Messrs. Place, Siddons and Gough, or to the Company's Registered Office. Cheques/Drafts should be crossed "Not Negotiable" and made payable to "Bowreah Cotton Mills Co., Ltd., or Order." Any alteration from "Bearer" to "Order" must be signed by the drawer. A separate cheque must accompany each Application Form. Cheques drawn on and presented in Calcutta, Bombay and other places where The Bank of Baroda Ltd. has branch offices need include no allowance for collection charges. All other cheques drawn must include commission at the rate of 25 nP. per Rs. 100. Any non-resident person, firm or company applying for Stock must first apply for and obtain the sanction of the Reserve Bank of India.

Copies of this Prospectus and Forms of Application may be obtained from the Registered Office of the Company and from the Company's Bankers and Brokers.

BANK PROFITS SUFFER A SETBACK

YEAR-END DATA ANALYSED

THE financial results of four of the "Big Five" scheduled banks (in the private sector) and of the State Bank of India (in the public sector) for the year 1958 published so far confirm that the high level of deposits, particularly time deposits, accumulated by them has on the whole proved to be unremunerative. All these four Scheduled banks, namely, the Central Bank of India Ltd., the Bank of India Ltd., the Bank of Baroda Ltd. and the United Commercial Bank Ltd., have reported lower profits, the fall being more pronounced in the case of the last two institutions. The State Bank of India has, however, earned a higher profit, but the rise in profit is less marked than that in the previous year. In any case, the State of Bank of India is in a different category, enjoying as it does certain privileges which the other commercial banks do not. It will be no exaggeration to say that the State Bank's average cost of deposits is less than that of the ordinary commercial banks. It is, of course, true that the State Bank provides the country with certain services at below cost. But this disadvantage is more than offset by the advantages it has.

The following table shows at a glance the trend of profits of the five banks during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
State Bank ..	190.14	187.45	156.18	135.93
Central Bank ..	101.42	108.74	104.36	77.76
Bank of India ..	85.77	93.47	92.03	84.91
Bank of Baroda ..	27.42	43.85	39.90	29.65
United Commercial.	45.38	59.70	56.52	36.69

All of them, except the Bank of Baroda, have maintained the dividend; the Baroda Bank has cut the distribution by 2 per cent., but as the lower dividend is on a higher capital, the amount to be distributed is higher.

Main Factors

The main factors which have brought about the setback in bank earnings were fully discussed in our 1958 *Annual Number*. In short, it is due to the high rate of interest which banks had to pay on the business funds which were kept with them as short-term deposits, as these idle funds could not find any remunerative investment, thanks to the import restrictions and contraction in opportunities for expansion by the private sector. This in turn affected the demand for bank credit. The selective credit control exercised by the Reserve Bank also kept down the volume of bank credit. In the result, banks had to invest these idle funds in the less remunerative Gilt-edged securities.

The analysis made in our 1958 *Annual Number* was based on the statistics of Scheduled banks up to the end of November. The year-end consolidated figures now available shows that the position is not far different, as will be seen from the following comparative statement relating to Scheduled banks as a whole and to the State Bank of India, in particular:

As at the end of the year—on 26th December 1958, to be more precise—the total net deposits of all Scheduled banks stood at a little over Rs. 1,574 crores, that is, Rs. 15 crores short of the notes in circulation (over Rs. 1,589 crores) on that date, and represent an expansion of Rs. 207 crores over the year. This rise is entirely accounted for by time deposits which have gone up by Rs. 214 crores and that on top of an increase of Rs. 208 crores in 1957. Demand deposits have, on the contrary, suffered a drop of Rs. 7 crores, in contrast to the rise of Rs. 58 crores in the previous year. Of the expansion of Rs. 207 crores in total (net) deposits, the State Bank of India alone have, as will be seen from the above table, contributed over Rs. 107 crores, thanks to the deposit of U.S. counterpart funds under P.L. 480 and section 402 of P.L. 665. It is difficult to say, nor are statistics available to show, to what extent these funds have contributed to the rise in deposits of the State Bank of India. It will, however, be noted that the total amount deposited in the U.S. Government account out of the sale proceeds of agricultural commodities imported under these two laws (since the beginning of the first Five-year Plan) upto the end of March 1958 was Rs. 171.66 crores (Rs. 140 crores under P.L. 480 and Rs. 31.66 crores under P.L. 665). Since March last further authorisations under P.L. 480 aggregate Rs. 140.85 crores. It may also be noted that the rise in deposits of the State Bank of India during 1958 was less than that (Rs. 123 crores) in 1957.

Small Rise in Advances

As against a rise of Rs. 207 crores in deposits, the Scheduled banks' advances have gone up by only Rs. 8.68 crores; the net expansion in bank credit during 1957 was about Rs. 69 crores; in 1956, it was of the order of Rs. 157 crores. These figures show that the pace of increase in bank credit had considerably slowed down. This may seem strange in a developing economy, but the authorities have had to clamp down controls on credit in order to check inflationary pressures. Industrial production was slightly down on top of a sizable fall in production of agricultural commodities. Consequently, the volume of internal trade must have been perceptibly lower during 1958 as compared with 1957. This had its adverse repercussions on the business of banks. With a view to arresting the depletion of foreign exchange reserves, imports had to be cut drastically and this also restricted the demand from traders and manufacturers. This is reflected in the fall of Rs. 20.90 crores over the year in bills purchased and discounted.

The level of advances of the State Bank of India was almost unchanged. The slower pace of increase in advances of Scheduled banks brought down the credit ratio from 71.6 per cent. at the end of 1956 to 62.7 per cent. a year later and to 55 per cent. at the end of 1958. The drop is more pronounced in the case of the State Bank of India. From 57.9 per cent. at the end of 1956, it declined to 46.8 per cent. at the close of 1957 and still further to 36 per cent. by the close of 1958.

Almost the entire expansion in deposit resources of Scheduled banks was utilised to boost their investments in Government securities, the rise in the latter being of the order of Rs. 204 crores, nearly half of which was accounted for by the State Bank of India alone. This has raised the ratio of investments to total (net) deposits from 31.7 per cent. at the close of 1957 to 40.5 per cent. Over 60 per cent. of the State Bank's deposits at the end of 1958 was invested in Government securities, as compared with 50 per cent. a year before. Cash balances of all Scheduled banks were a little higher, but, in view of the substantial expansion in deposits, the cash coverage declined from 12.6 per cent. to 11.1 per cent. This ratio has been arrived at after taking into account balances with other banks and money at call and short notice. During the greater part of the year, the cash ratio was invariably below 10 per cent., the slightly higher ratio at the end of 1958 being due apparently to window dressing

MORE BANK RESULTS

State Bank of India

Contrary to the general trend of bank results, the State Bank of India has earned a higher profit for the year ended 31st December 1958, but the pace of increase has considerably slowed down as compared with that in 1957. Thus, the Bank's profit for the year under review amounts to Rs. 190.14 lakhs, as compared with Rs. 187.45 lakhs in 1957 and Rs. 156.18 lakhs in 1956. With the sum of Rs. 55.99 lakhs, brought in from the previous year, the total sum available for disbursement is Rs. 246.13 lakhs, as against Rs. 229.37 lakhs a year ago. The transfer to the reserve fund has been stepped up substantially from Rs. 25 lakhs to Rs. 37.50 lakhs. The amount set aside to pension funds and bonus to staff are also higher at Rs. 6.90 lakhs (Rs. 6.37 lakhs) and Rs. 36 lakhs (Rs. 32 lakhs) respectively. While the allocation to the staff welfare fund has been reduced from Rs. 10 lakhs to Rs. 5 lakhs, the transfer to the staff co-operative housing fund has been raised from Rs. 10 lakhs to Rs. 15 lakhs. The dividend is unchanged at Rs. 16 per share which requires Rs. 90 lakhs, leaving a surplus of Rs. 55.73 lakhs.

Canara Bank Ltd.

A fall of Rs. 1.29 lakh to Rs. 14 lakhs in profit is disclosed by the working results of the Canara Bank Ltd. for the year 1958, thus reversing the upward trend noted for some years past. After bringing in the previous year's surplus of Rs. 44,768, the Directors have transferred to the statutory reserves Rs. 5 lakhs (as against Rs. 4 lakhs added out of the profit for 1957) and have made a provision of Rs. 3.91 lakhs for taxation, the corresponding allocation last year being Rs. 7.30 lakhs. Bonus to staff has been raised from Rs. 1.50 lakhs to Rs. 2.55 lakhs. The dividend is unchanged at 10 per cent., but this is on an increased capital raised by a fresh issue of shares. The dividend absorbs Rs. 2.55 lakhs, as against Rs. 1.50 lakh a year ago. The surplus left to be carried over is Rs. 37,383.

The Bank's paid-up capital stands higher at Rs. 49.8 lakhs (as compared with Rs. 29 lakhs at the end of 1957). The reserves stand strengthened to Rs. 45 lakhs. The deposits have enlarged by Rs. 5.92 crores to Rs. 23.76 crores and advances by Rs. 2.14 crores to Rs. 10.93 crores. Investments aggregate Rs. 10.07 crores, being almost double the previous year's figure of Rs. 5.46 crores.

Andhra Bank Ltd.

The profit of the Andhra Bank Ltd. for the year 1958 (subject to audit) amounts to Rs. 7.98 lakhs, having gone up from Rs. 7.03 lakhs, but this rise does not fully make good the drop in the previous year's profit from Rs. 8.46 lakhs. After taking into account the previous year's surplus of Rs 1.909 (Rs. 11,996 out of 1956 profit) and deducting the amount distributed as interim dividend at 5 per cent. per annum, for the half-year ended 30th June 1958, which had taken up Rs. 1.03 lakh (the corresponding distribution for 1957 being Rs. 1.47 lakh at 8 per cent. per annum), the net profit available for final appropriation is Rs. 6.97 lakhs.

Bank of Baroda Ltd.

The results of the Bank of Baroda Ltd. for the past year make depressing reading, in that the profit has not only suffered a sharp fall of Rs. 16.43 lakhs, that is from Rs. 43.85 lakhs to Rs. 27.42 lakhs, but has touched the lowest level since 1953. It will be recalled that from Rs. 22.45 lakhs earned in 1953, the Bank's profit had successively risen to Rs. 43.85 lakhs, thus nearly doubling itself in five years. Even this lower profit for 1958 includes that of the Hind Bank Ltd., which was taken over by the Bank in August last. With the sum of Rs. 4.11 lakhs brought in from the previous year, the amount available for appropriation is Rs. 31.53 lakhs, as compared with Rs. 48.61 lakhs a year ago. The provision for taxation has been cut from Rs. 21 lakhs to Rs. 5.50 lakhs and bonus to staff from Rs. 9.50 lakhs to Rs. 8 lakhs. The dividend for the year has been reduced from 14 per cent. to 12 per cent. per annum, but this is on a higher capital of Rs. 1.25 crore, raised by the issue of 100,000 shares of Rs. 25 each to the holders of the Hind Bank shares following the amalgamation of the latter Bank with the Baroda Bank. The Directors had made an interim distribution of Rs. 3 per share on the old shares of Rs. 50 each and of Re. 1.50 per share on the new 'B' shares of Rs. 25 each. They have now recommended the final dividend also at the same rate. The total dividend will absorb Rs. 15 lakhs, as against Rs. 14 lakhs in the previous year. This will leave a sum of Rs. 3.04 lakhs to be carried forward.

Bank of Patiala

Despite an increase in the cost on deposits and establishment expenses, the profit of the Bank of Patiala Ltd. for the year 1958 has recorded an improvement from Rs. 8.68 lakhs to Rs. 10 lakhs, the highest in the last ten years of the Bank's history. The Bank has appropriated a sum of Rs. 1,60,500 for payment of bonus to the staff, on the basis of two months' substantive pay.

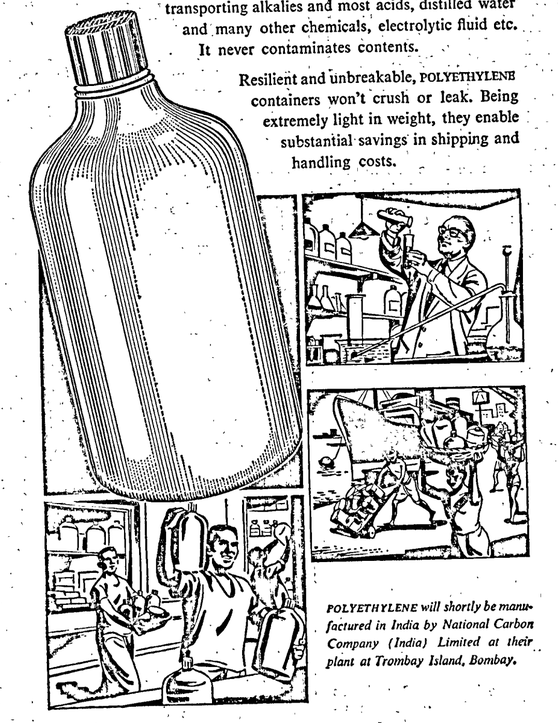
Safe way to store and handle corrosives

Carboys and containers moulded from POLYETHYLENE provide industry with a new, effective way to store and ship corrosives. Chemically inert, POLYETHYLENE is ideal for storing and transporting alkalies and most acids, distilled water and many other chemicals, electrolytic fluid etc. It never contaminates contents.

Resilient and unbreakable, POLYETHYLENE containers won't crush or leak. Being extremely light in weight, they enable substantial savings in shipping and handling costs.



POLYETHYLENE will shortly be manufactured in India by National Carbon Company (India) Limited at their plant at Trombay Island, Bombay.

WORLD COTTON OUTLOOK

SIGNIFICANT REDUCTION IN EXPORTS LIKELY

IN contrast to the improved cotton situation during the past two seasons, the outlook for the current season, namely, 1958-59, does not appear to be favourable. The bleak outlook, according to the International Cotton Advisory Committee, Washington, is already reflected in sharply reduced raw cotton prices in many markets. Free world cotton stocks declined by about 4 million bales (of 478 lbs.) during the 1956-57 and 1957-58 seasons so that on 1st August 1958, stocks aggregated 18.3 million bales, the lowest since 1953. This reduction in stocks can be mainly attributed to lower production, especially in the U.S. Higher consumption in the 1956-57 season, when it reached 29.6 million bales, as compared with 28.5 million bales in the previous season, also helped to bring down stocks. During the last season, however, consumption declined by over a million bales to 28.5 million bales. This was partly offset by larger shipments to communist countries which were of the order of 1.3 million bales, as compared with 0.7 million bales in 1956-57.

In its latest (December 1958) review of the world cotton situation, the Committee forecast that in the current season production of cotton will show a sizable increase while all indications are that consumption will be lower in many countries. On the basis of present estimates, disappearance is expected to equal production roughly and the liquidation of surplus stocks will be halted. Inherent in the larger production potential in 1959-60 is the danger of recurring surplus.

The following table illustrates the position:

Production and Disappearance

(In million bales of 492 lbs.)

	1958-59*	1957-58	1956-57	1955-56
Production	29 2	27.8	28.9	31.0
Disappearance ..	29.2	30.0	30.6	29.4
Of which :				
Consumption ..	27.8	28.5	29.6	28.5
Net exports to-communist countries	1.3	1.3	0.7	0.7
Destroyed	0.1	0.2	0.3	0.2
Variation in end-season stocks	..	—2.1	—1.7	+1.4

* Preliminary.

Record yields per acre in the United States more than offset the further drastic cut in acreage and production is estimated at 11.5 million bales, which is higher than last season's outturn by half a million bales. Disappearance is unlikely to exceed production and the opportunity for reduction in carryover stocks on 1st August 1959 is, therefore, quite limited. The combination of larger acreage and higher average yield in other free world countries is expected to carry aggregate production to a new high level of 17.7 million bales, an increase of one million bales as compared with 1957-58. Acreage has been expanded significantly in Mexico, the Central American countries, Egypt, the Sudan, Uganda and Brazil. Production is noticeably higher in all these countries except Brazil. With aggregate stocks at the beginning of the present season about half a million bales higher, total free world supply outside the United States, estimated at 27.3 million bales, will set a new record. This is in striking contrast to the expected decline in consumption from 28.5 million bales in 1957-58 to 27.8 million bales in the present season.

Trade prospects are not reassuring. The prime factors in assessing the prospects are the level of consumption and stock policy in net importing countries. Both these indicate that there is likely to be a significant reduction in exports this season. Assuming no change in exports to communist countries, free world exports are expected to decline to between 11 and 11.5 million bales, as compared with 12.6 million bales exported last season and the record exports of 14.3 million bales in 1956-57. Importers are covering only immediate requirements, thanks to the recession in world textile markets and the bearish trend in cotton prices. Imports in many instances are currently running at levels below last year's.

The Committee forecasts that if the present relationship between the price of U.S. cotton and other growths persists, the U.S. is likely to bear the brunt of any contraction in cotton trade. In the position of residual exports, exports from the U.S., according to the Committee, could fall to below 3.5 million bales, as against 5.7 million bales shipped last season.

Export availabilities outside the United States are expected to increase to over nine million bales and, unless there is any change in price outlook, exports from these countries should increase despite the reduction in total world trade. In most instances, exports over the first three or four months of the current season were running significantly ahead of last season. There is not likely to be any reduction in stocks in net importing countries at the end of the present season.

Domestic prices in the United States have moved within narrow limits but of late futures quotations have weakened perceptibly. Export prices declined slightly in November and December. Elsewhere, markets continue to rule weak. Prices are now significantly lower than at the beginning of the season and the downward trend continues in most markets. The price differential between U.S. and other growths has also widened appreciably.

EXTRA LONG-STAPLE COTTON

Notwithstanding the vigorous attempts being made to make good the deficiency in cotton production, Indian textile mills continue to depend on imports to meet their requirements of extra long-staple cottons. However, it would appear that the necessity of such imports has been minimised to a large extent, thanks to the progress of cotton breeding. India is self-sufficient in respect of its requirements of long and medium staple cottons.

There is, however, a gap of nearly 600,000 bales of superior quality cottons which are definitely not being produced in this country. Indications are that there is a great possibility of bridging this gulf by about 50 per cent. from indigenous production in the near future.

Notable achievement in regard to the isolation of superior long-staple strains of 1.1/16" and above has been recorded at Surat under the scheme for interspecific hybridisation, where two strains, namely, 170-Co. 2 and 134-Co. 2-M, have been released for general cultivation which answer, to some extent, the requirements for finer cottons. These strains have proved extremely popular, particularly in the Gujerat area, and, in 1955-56, are estimated to have been grown over an area of 260,000 acres with an estimated production of 125,000 bales. However, these strains are lacking in yarn strength resulting in their being utilised for spinning only lower counts than what their imported counterparts are used for.

Another improved strain is MCU-2 which is adapted for cultivation in the Southern districts of Madras State in the summer season. This new variety spins from 36s to 38s counts. In addition to the breeding of extra long staple Cambodia cottons, attempt have also been under way to acclimatise Sea Island cottons on the West Coast. These trials have indicated that the most promising variety is "Andrews" which gave in 1955-56, 1,600 lbs. of *kapas* per acre and recorded a spinning capacity of 70s counts. Further trials are under way as also attempts to extend its cultivation in suitable areas.

The other potential area for cultivating extra long staple cottons is the Punjab. Past experiments have resulted in the isolation of extra long-staple strains of the LL series Nos. 43, 51, 52, 53, 54 and 56, which are now in advanced stages of trials. The best among these, namely, LL 56, possess a spinning capacity of 58s H.S.C. Other promising strains are LL 53 and 54.

Work is also being done in Mysore on the acclimatisation of Egyptian cottons. Two of these Egyptian strains, namely, Giza 7 and Giza 12, were found to be promising with a spinning capacity of 65 to 70s H.S.C. Further work is in progress to find out the agronomic conditions for obtaining maximum yields.

The prospects of evolving extra long-staple cottons of 1.1/16" to 1¼", therefore, appear to be bright and it is hoped that within the course of two to three years, it would be possible to reduce considerably, if not entirely do away with, the imports of cotton of this range of staple and save an annual drain of Rs. 28.74 crores from the country.

BRITISH WOOL AND THE EUROPEAN COMMON MARKET

Analysing some of the first effects upon the wool textile industry of the inauguration of the European Common Market, the National Wool Textile Export Corporation observes that the Common Market countries do not intend, at present, to grant to outside countries all the increases in quotas which they are giving to each other. There are, however, no quota restrictions on the import of wool textiles into Belgium, Holland, Luxembourg, Western Germany and Italy, while France has within the past few days removed quota restrictions on the import of wool textiles.

On 1st January 1959, according to the Corporation the countries in the Common Market reduced their import duties in favour of each other by 10 per cent. Thus, the import duty on wool cloth entering Holland, Belgium and Luxembourg has been cut by 1.8 per cent., from 18 to 16.2 per cent. in favour of Common Market countries. These countries have stated that they will accord this 10 per cent. reduction to other countries, such as the United Kingdom, provided that the rate of duty does not fall below the rate which will eventually become the external tariff rate for the whole of the Common Market. This external tariff rate is to be the average of the duties levied on the particular item in the various Common Market countries at the time of the signing of the Treaty. A commission has been engaged in working out the external tariff rates, but they have not yet been published.

Discussions are to take place between the Common Market countries and other European countries, including the United Kingdom, and these may change the position as now defined.

WOOL CONSUMPTION IN BRITAIN

The rate of wool consumption in the United Kingdom continues to show an upward trend. There was a further improvement during November, the most recent month for which official figures are yet available, and the number of productive workers employed in the industry increased by no less than 819 to an estimated total of 147,102. The rate of wool consumption was more than 8 per cent. higher than in October, and 7 per cent. more than in November 1957. Merino topmaking output was 10 per cent. higher than that a year earlier, and crossbred top production one per cent. higher. In the woollen section of the industry, November consumption was nine per cent. higher than in October and showed a similar gain on a year earlier.

The delivery rate in worsted yarns was 3 per cent. higher than in October but 4 per cent. below a year earlier, while the wool cloth delivery rate was 2 per cent. higher than in October but 6 per cent. below November 1957. November output figures were: Wool consumption, 39.68 million lbs. (clean); top production, 25.76 million lbs.; worsted yarns delivered, 18.44 million lbs.; woven wool fabrics delivered, 29.96 million square yards; blankets delivered, 2.66 million square yards.

U.K. COTTON DELEGATION TO SUDAN

Two prominent representatives of the Lancashire cotton industry will fly to Khartoum next month, at the invitation of the Sudanese Government, for talks with Sudanese cotton interests. The delegation is expected to arrive in the Sudan by the 20th February. During the visit talks are likely to take place on raw cotton marketing methods and the possibility of bringing Sudan cotton prices more into line with those of comparable types. The visit of the Lancashire delegation follows the talks held in Manchester and Liverpool recently by two representatives of the Sudan Gezira Board. The invitation to Khartoum, however, was received by the Lancashire cotton industry from the Sudanese Government a month before these talks.

COTTON PRODUCTION IN CHINA

Cotton production in Communist China is said to have increased eightfold since 1949 to reach a record of 3.35 million tons of ginned cotton in 1958. The national per hectare average yield in 1958 is put at 563 kilogrammes of ginned cotton which is said to be almost double the previous year's yield. In many areas, it is said, per hectare yields of 750 kilogrammes were harvested. Last year's cotton harvest was characterised by the universal success of all cotton growing areas. With this "unprecedented" success, Chinese cotton growers, it is claimed, fulfilled the targets laid down in the 12-year National Agricultural Development Programme nine years ahead of schedule.

The factors that contributed to this spectacular achievement were spotlighted at a National Agricultural Exhibition in Peking early this month. The more important of these were: moderately deep ploughing, ample watering and manuring, appropriate advancement of sowing, closer planting, good strains, pest control and intensive field work in the later stages of growth.

REDUNDANCY PROGRAMME FOR COTTON INDUSTRY?

MR. WINTERBOTTOM'S CRITICISM

From A Special Correspondent

MANCHESTER, *20th January*

WHEN the details of Hong Kong's voluntary undertaking to limit exports for retention in Britain's home market were announced, Lord Rochdale commented that this development should provide stability for the home industry and enable traders to turn away from consideration of this problem and concentrate on "other important matters such as re-equipment and the re-organisation of the structure of the industry." This was taken to mean, in many quarters, a further attempt at consolidation and probably some movement towards a redundancy programme.

MANCHESTER LETTER

This controversial topic has been revived by Mr. Roger M. Lee, Chairman of the Lancashire Cotton Corporation, whose annual statement sets out his belief in the need for an organised redundancy scheme. Commenting on the reduction of considerably more than 1,000,000 spindles annually during recent years, Mr. Lee adds: "There is no doubt that this contraction will continue to take place, but it may be that the best interests of the industry would be served, if some means could be devised to expedite the process, in order to bring about quickly a balance between productive capacity and potential demand. This could be achieved by an organised scheme to deal with the excess capacity."

Leaders of the trade are evidently divided in their views on this important subject. Mr. Lee speaks for the Corporation in announcing the Board's readiness to do everything possible to promote the best interests of the industry in general and expresses the hope that others will join the combine in these endeavours. He points out that the Corporation was formed in 1929 to bring about a measure of rationalisation in the industry and is still ready and willing to play an active part in any such measures.

Wrong Approach?

On the other hand, in a recent contribution to an annual review surveying the prospects of the trade, Mr. W. T. Winterbottom, Chairman of Fine Spinners and Doublers Ltd., is critical of an organised plan of this kind. "I am convinced," he says, "that this is entirely the wrong approach." The idea is based on the completely false assumption that the industry's problem is one of redundancy. This is a negative and defeatist attitude." In Mr. Winterbottom's view, there is no redundancy in the trade in the true sense of the word, meaning too much of the right kind of machinery. He believes that there is too little of the right kind and too much of the wrong kind, bringing obsolescence and not redundancy.

Opponents of any redundancy scheme contend that it could not be made selective and would tend to preserve some of the wrong type of mills and eliminate some of the better ones. "There are many mills in operations today where the shareholders would, quite rightly, be only too glad to be given the opportunity to put their money to more profitable use," continued Mr. Winterbottom, urging the introduction of "an intensive cleaning-up operation."

Among those who answered the questions on this point from the platform at the Cotton Board's conference last year, there was no diversity of opinion about the necessity for further contraction in the number of mills and machinery. Few were prepared to quarrel with Mr. Winterbottom's declaration that foreseeable demands in the spinning section could be met by 10,000,000 modern ring spindles working on a single shift or 6,000,000 working two shifts. Disagreement was only evident on the way this reduction in capacity could be achieved.

Although textile take-over moves have been relatively quiet in the past month or two, the past week has seen two fresh developments of this kind. A bid for the issued capital of Sir Elkanah Armitage and Sons, the old-established Salford spinning and weaving firm, which concentrates on fabrics for industrial use, is under consideration, the prospective buyer remaining secret. Fine Spinners and Doublers Ltd. has made arrangements to purchase John Stansfield and Son, a Burnley weaving firm, controlling more than 800 looms, thus adding to the group's manufacturing capacity.

Commonwealth Trade

Reference was made last week to certain sectional reports of the Manchester Chamber of Commerce; others which have since come to hand offer no further solution to Lancashire's export trade problems. Most of them are content to record falling shipments to foreign markets with the customary note of regret. Even in the Commonwealth markets, which have in recent years been the main standby for Lancashire's overseas cloth business, the prospects offer little encouragement. The sectional survey mentions the New Zealand-Japanese Trade Agreement signed last September as a development viewed with the greatest apprehension. "The Agreement will and has already facilitated a greater flow of Japanese goods to the New Zealand market," adds the report.

A disturbing fall in the volume of exports of cotton and rayon piecegoods to the Australian market is also mentioned. Competition has become more intense, particularly from Japan, mainly as a result of the Australian-Japanese Trade Agreement, signed in 1957. This accorded most-favoured-nation treatment to imports from Japan, coupled with the removal of specific import licensing arrangements. Australian producers of textiles are also protesting at this threat to their local trade.

Recording a 10 per cent. drop in shipments of cotton cloth from the United Kingdom to South Africa last year, the report describes the market as being one of the most competitive in the world, with a very liberal import policy and a low basic tariff on a wide range of fabrics. While Lancashire still retains her place as the principal supplier of cotton piecegoods to South Africa, her position is being contested by the United States, Japan, Hong Kong, Holland and Western Germany.

When it comes to reviewing the export position in such one-time giant importers as India and adjacent countries, the Chamber's sectional report is understandably gloomy. Total shipments in the first ten months of last year to India, Pakistan, Ceylon and Burma were only slightly more than half the quantity exported in 1957. The fall as regards Pakistan is described as "catastrophic." At the same time, on a value basis British cotton goods accounted for 82 per cent. of total imports of such textiles into the Indian market, however small the actual quantity involved.

Labelling of Goods

A call to the British Government to insist, by legislation if necessary, on imported goods being marked with the country of origin, has been made by the North-West Regional Council of the National Union of Manufacturers, representing 1,100 firms, mainly in the Lancashire textile belt. The Council expressed "very grave concern" at the growing volume of imports sold in the United Kingdom without any clear indication of where they were produced.

Under the Merchandise Marks Acts, most imported goods did not have to bear any indication of origin and where indication was given it was at present sufficient in law for the goods to be marked "foreign" or "Empire." The Council said: "The result is that goods are coming into the United Kingdom on an ever-increasing scale, in some cases flooding in, and being offered for sale as if they may have been manufactured in this country. The advent of the European Free Trade Area will make the position even worse."

In a resolution, the Council urged the Government to ensure, by fresh legislation if necessary, that all goods imported into the United Kingdom must indicate the precise country of origin without any special separate application for marking orders under the Merchandise Marks Act.

Anglo-Sudan Cotton Trade

It has been announced in Manchester that a small Lancashire cotton delegation will fly to the Sudan next month for talks with Sudanese cotton interests on raw cotton marketing methods and the possibility of bringing prices for Sudan cotton more into line with comparable types. The visit is being made at the invitation of the Sudan Government. The delegation will consist of Mr. E. R. Orme, President of the Liverpool Cotton Association, and Mr. H. Tonge, a Director of the Lancashire Cotton Corporation. They are expected to arrive about 20th February. The visit follows quickly on talks held in Manchester and Liverpool earlier this month with two representatives of the Sudan Gezira Board when Sudan's attitude towards barter deals was among the matters discussed.—*All Rights Reserved.*

FIXATION OF FAIR PRICES FOR SUGAR

SUPREME COURT DISMISSES APPEAL

THE Central Government notification fixing the ex-factory price of sugar in the Punjab, Uttar Pradesh and North Bihar—issued on 30th July 1958—has been held valid by the Constitution Bench of the Supreme Court. The judgment was delivered by Mr. Justice Wanchoo on Friday last week while dismissing the writ petitions filed by some sugar factory owners challenging the validity of the notification issued under the Sugar (Control) Order of 1955 as promulgated under the Essential Commodities Act.

Two arguments had been put forward on behalf of factory owners. First, the notification did not fix any price at which persons purchasing sugar from the mills should sell it and it was open to the middleman who bought sugar from factories to sell it at any price. The notification thus discriminated not only between sugar factories in the specified areas and those in other parts of the country but also between the producers selling sugar and the middlemen selling it. Secondly, the fixation of the price was arbitrary, as it did not take into account the production cost of a large number of units in the country, besides failing to provide for a fair and equitable distribution of sugar at a reasonable price.

In the opinion of the Supreme Court, it cannot be said that the Sugar Control Order of 1955 gives "uncontrolled and unguided power" to the executive to fix prices arbitrarily, as much as Clause 5 of the Order makes it amply clear that the price is to be fixed after taking into account all reasonable factors which usually play a part in its determination. Elucidating the position, Mr. Justice Wanchoo said: "It is well known that the wholesale and retail prices depend upon ex-factory price in the case of a commodity like sugar. Therefore, if fixation of price at the factory level is enough to ensure a fair price for the consumer, there is no reason why the Government should also go on to fix wholesale and retail prices." Pointing out that the petitioners had not even alleged that the wholesalers and retailers were profiteering and making it impossible for sugar to be available for the general public at a fair price, he stated that "what price the Government should fix would depend upon this estimate of the situation."

Mr. Justice Wanchoo also rejected the sugar factory owners' contention that their cost of production was above the prices fixed by the notification, as also their argument that the notification imposed an unreasonable restriction on their right to carry on their trade. Commenting on the price of sugar in India, His Lordship averred that the price depended upon the price of factories in Uttar Pradesh and Bihar, which were called mainly surplus areas. In these circumstances, he declared, if the price was fixed in the specified areas, the price all over the country was practically fixed, and it was not necessary to fix prices separately so far as factories in other States, which were said to be mainly deficit, were concerned.

Case for Fair Price

Whatever may be the legal aspect of the notification fixing the ex-factory prices of sugar (I.S.S.D. 29 grade) at Rs. 36.00 per maund for factories in Uttar Pradesh and North Bihar and Rs. 36.50 for factories in the Punjab, it must be said that these prices are not adequate fully to cover the cost of production and the loss on exports. As a result, many sugar factories, particularly in East Uttar Pradesh and Bihar, are expected to show losses. The case of the sugar industry for the fixation of a fair price for its product is based on the following grounds:

The comparative figures of estimated duration for 1958-59, as also the actuals for the 1957-58 season, are given below:

	1958-59	1957-58
West U.P.	123	136
East U.P.	112	118
North Bihar	113	115
Weighted average for U.P. and North Bihar ...	116	124

The comparative figures of to-date recovery for West U.P. and East U.P. and North Bihar for the period ended 31st December 1958 for which figures are available are given below:

	Recovery up to the week ended 31st December 1958	Corresponding week of the preceding season	Drop
West U.P. ...	8.67	8.98	0.31
East U.P. ...	8.91	9.17	0.26
North Bihar ...	9.08	9.30	0.22

It will be seen that the average drop in recovery is expected to be of the order of 0.27 per cent.

The combined effect of a fall in duration by eight days and recovery by 0.27 per cent. on the various items of cost of production is as follows:

	nP
Cane cost	38
Cane cess	5
Manufacturing cost	30
Total	73

Besides, the cost of production would further go up as a result of the agreement reached at the last meeting of the Wage Board to give an interim increment in the wages by Rs. 3 per month to unskilled workers. This would increase the cost by 9 nP per maund of sugar.

Therefore, the cost of production based on the Naidu Scale would be higher in the season 1958-59 by 82 nP per maund of sugar, as a result of the estimated fall in duration and recovery and higher wages (73 nP for duration and recovery and 9 nP for higher wages).

Owing to the aforesaid factors, the sugar prices fixed at present are said to leave just Rs. 2.19 per maund for overheads and profits before tax. The profit margin, it is urged, is meagre and must be enhanced at least to Rs. 5. In other words, the fair ex-factory price of North Indian sugar, according to the I.S.M.A., comes to about Rs. 39 per maund. The Government, however, is unlikely to concede the demand for three reasons. One, any upward revision in sugar prices will result in a renewed clamour for an increase in cane prices. Two, the price differential between sugar and *khandsari* will widen further in favour of the latter, so that the *khandsari* producers will be able to compete more effectively with the sugar mills for the normal cane supplies. Three, a rise in sugar prices will add further to the cost of living which has already gone up quite markedly in the last two years. If all this is to be avoided, the sugar industry's plea for a more reasonable margin of profit could possibly be conceded by a reduction in the present high level of excise duty—Rs. 10.70 per maund—while keeping intact the ex-factory prices.

Rehabilitation Allowance

It would appear that the Government will not take any decision till the Tariff Commission, which is currently examining the cost structure of the sugar industry and the fair price payable to it, completes its findings and submits its recommendations. The Indian Sugar Mills Association has already submitted a memorandum to the Commission on the allowances for rehabilitation of plant and machinery. The full text of the memorandum is not available. From scattered Press reports, it is gathered that the Association has asked for a higher rehabilitation allowance of Rs. 3.44 per maund of sugar, as against 52 nP allowed at present. The allowances for factories established between 1930 and 1940, it is said, are particularly inadequate. For these factories, the figure of nearly six times the cost between 1930 and 1935 is considered to be appropriate. The net rehabilitation allowance after depreciation is computed at Re. 1.72 per maund.

The Association is also reported to have emphasised in its memorandum to the Tariff Commission that, in prescribing a fair price for the sugar industry, the net return to the investor must be not less than that allowed to the other industries. To quote it: "In order to build up reserves which would be necessary to the extent that current rehabilitation allowances are not adequate for the full replacement of the machinery in time, sugar companies should be allowed reserves which should be at least two-thirds of the amount provided for dividends." The Association has also demanded full compensation for the losses sustained owing to export, as also for "contingent inescapable expenditure" like increase in wages that might be proposed by the Wage Board.

VALUATION OF LIFE INTERESTS FOR WEALTH-TAX PURPOSE

By K. A. Pandit
CONSULTING ACTUARY, BOMBAY

A LIFE interest is created under a Trust. The income of the Trust is made payable for lifetime to one or more beneficiaries. Thus, a person may have a part of his wealth in the form of life interest arising out of a Trust; and it is the value of such a life interest that requires determination for Wealth Tax purposes.

Statutory Valuation

The value of the life interest, like any other asset, has to be determined under Section 7(1) of the Wealth Tax Act, 1957, which lays down as follows:

"The value of any asset, other than cash for the purposes of this Act, shall be estimated to be the price, which, in the opinion of the Wealth Tax Officer, it would fetch if sold in the open market on the valuation date."

Thus, the value has to be determined, keeping in view that the same shall be open market price, that is to say, what it would fetch if sold on the valuation date.

This statutory requirement of a market price has to be kept in view even if any asset has no market. The considerations which would enter into the determination of a market price cannot be set aside if there is no market for any asset. They are to be interpreted on the assumption that there exists a hypothetical buyer and what would be his considerations if he has to quote a market price. Accordingly, life interests, like other properties, are to be valued on the market basis.

The mere fact that the price is to be determined which in the opinion of the Wealth Tax Officer the property would fetch, does not mean that the Wealth Tax Officer is free to determine any price. He has to take into consideration the same factors which enter into the calculation of a market price; only, he is free to interpret these factors in the light of the current market conditions which in his opinion are fair.

Determination of Market-Value

The primary consideration of the valuation of a life interest is the mortality factor. No buyer would ever quote a price, unless he is satisfied that his investment is safe even when the interest ceases on death of the beneficiary. Thus, life interest valuation is always associated with insurance cover. Out of every year's income, a buyer would always calculate how much deduction would be necessary so as to pay an insurance premium for purchasing a Whole Life policy on the life of the beneficiary for an amount equal to his investment, since, in case of death of the beneficiary, such a life policy would pay the value.

Secondly, he has to consider whether the life of the beneficiary is insurable at ordinary rates or extra if the life is sub-standard. In case the life is not insurable at all, perhaps no market value is possible and hence the Wealth Tax assessment may have to be made on some arbitrary low figure.

Thirdly, the past income may be fluctuating and the life interest may not arise in future at the same average rate as in the past. Thus, some average rate has to be assumed which can be taken as fairly available for future years.

Fourthly, the income at the hands of the purchaser would be taxable. Thus, he would receive net, that is, after deduction of income-tax and super-tax. What he would consider is, therefore, the net life interest that would be receivable in future *in lieu* of the purchase price he pays.

Fifthly, what interest yield should be expected on the investment? This would naturally be net but would vary according to the nature of Trust assets. If the life interest arises out of ordinary shares or building property, the yield that would be expected on the purchase price should be at least at par with the market rate obtainable on similar investment. Further, since the investments of the Trust may vary according as the Trustees may think proper, some margin by way of higher yield is usually adopted while calculating the purchase price. Generally speaking, a life interest would not be saleable, unless a fairly higher yield is obtainable and thus it is usual to value at 6 per cent. or more.

Lastly, the purchaser would have to consider as to what incidental charges like stamp duty, etc., he has to incur before quoting the purchase price.

Just as life insurance business has to be valued by an actuary periodically for determination of its policy liabilities, a life interest cannot be valued without actuarial help.

The life interest depends upon the payment of a particular income during the lifetime of a beneficiary, and thus its valuation is dependent upon mortality considerations and has to be done by actuarial methods. Any *ad hoc* formula fails to give even an approximation and has to be discarded.

Board of Revenue's Directions

The Board of Revenue has given the following directions for valuing a life interest.

"In valuing rights for life, the benefit derived from the right during the year ending on the valuation date may be assumed to arise at the same average rate for the rest of the life and the present value of the future benefits may be evaluated accordingly. For the purpose of calculation, life rights may be assumed to continue till the beneficiary attains the age of 65 or for a period of 25 years from the valuation date whichever gives the shorter period in any particular case."

The above directions merely take into account the following assumptions:

1. Life interest may be assumed to arise at the same average rate as the benefit derived during the year ending the valuation date.

Usually, life interest may be of a fluctuating nature, particularly if such interest arises from income on ordinary shares. Thus, the above assumption is only approximate, and may sometimes bring out a higher valuation.

2. For the purpose of calculation, life interest may be assumed to continue upto age 65 or 25 years whichever gives a shorter period.

The above assumption limits the period of valuation and is intended to lead to an approximation to the market value. This assumption, however, cannot rule out other principles of the actuarial valuation. In fact, it should be taken to limit the valuation for a fixed period only and thereby give some relief to the assessee.

3. Subject to the above two assumptions, the present value of the future benefits may be evaluated.

Thus, ultimately, what is required is to find out the present value of the life interest and this present value should not be higher than the open market price or the value determined on open market considerations.

In this context, I may point out that—

(a) valuing life interest by merely multiplying the income with 25 or by a figure equal to age 65 *minus* age of the beneficiary, whichever is less, is entirely wrong and is never intended by the Wealth Tax Act nor by the directions of the Board of revenue.

In fact, this method, which is very often loosely adopted, gives a valuation which sometimes exceeds the corpus of the Trust. This is really fallacious. How can the market value of a particular life income exceed the value of assets?

If assessees for Wealth Tax purposes are to pay tax on the method of valuation now followed by the authorities, it can be said that such tax is unjust and never intended by law.

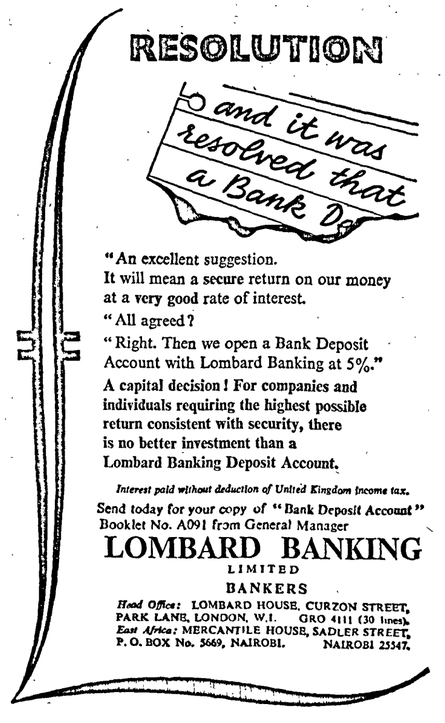
(b) Valuing life interest for 25 years or for years equal to age 65 *minus* the beneficiary's age whichever is less by adopting compound interest annuity functions is also an equally wrong method. How can a life interest, which is dependent upon survival of the beneficiary year by year and the *investment whereon* is likely to be lost in case of earlier death, be valued as a term certain annuity? Would any purchaser pay such a heavy price of a term certain annuity for purchasing a life income which may be lost even the next day if the beneficiary dies?

The above method not only brings about a high valuation figure but is a wrong interpretation of the directions of the Board of Revenue. These directions, as pointed out above, have never indicated a method for term certain annuity. All that is required is to find the present value and such present value should be either as a matter of approximation, arrived at by adopting both market rate of interest and suitable mortality factors, or by a proper actuarial valuation.

In conclusion, I may say that the assessments for the purposes of Wealth Tax are sometimes found to be based on the wrong interpretation of the directions from the Board of Revenue. The life interest valuation is strictly actuarial and a proper method of valuation should be adopted, so that undue hardship and overassessment to the tax-paying public may be avoided.—*All Rights Reserved.*

FIRST ATOMIC REACTOR INSURANCE POLICY

The German Pool for the insurance of atomic risks, consisting of 86 national and foreign companies operating in Germany, issued the first policy on 18th October 1958, covering all fire, machine, storm, water and other risks on the one hand, and the liability risk on the other of a 5 MW.—research-reactor, owned by a society for the use of atomic energy in ship-building and navigation in *Geesthacht-Tesperhude* near Hamburg. The Pool has an underwriting capacity of DM.25-millions per reactor but this capacity can be increased considerably by way of reinsurance and reciprocal exchange of atomic insurances with other countries.



WORLD COFFEE PRICES LOOK UP

LONG-TERM OUTLOOK STILL BLEAK

THE trend of prices in world coffee markets during the last few days indicates that the downward trend noted since August 1958 has been arrested. In London, for instance, the price of Uganda Robusta grade 10, which had slided from a peak of 309s. per cwt. touched in August 1958 to a low of 173s. on 13th January this year, staged a recovery to 213s. per cwt. on the 23rd inst. This slight reversal of the trend is said to be due to buying by roasters, who had earlier been holding off in order to get a clearer picture of the Brazilian situation. They have come into the market to cover their immediate requirements. Some buying from the U.S. has also been unavoidable on account of the very low stocks. It is stated that the stocks of green coffee in the U.S. may be no more than 1 million bags at the end of this month and that this is considered to be very low for this part of the season when consumption usually runs high. It is reported that three U.S. steamers are in Mombasa loading coffee and buying has, therefore, been somewhat heavy.

Another important factor which has contributed to the present rise in prices is the change in the marketing policy of the Uganda Coffee Industry Board. The Board has decided to restrict the quantity of coffee for sale much more than what was expected. Dealers have, therefore, been caught napping and are finding it difficult to meet their commitments; this has resulted in a squeeze on nearby supplies. If the American buying continues, this squeeze will persist for some time to come.

This improvement in coffee prices does not mean that the long-term outlook for the industry has changed for the better. The excess of supply over demand is expected to continue for a few more years. The members of the Latin American Coffee Agreement have decided to extend the agreement to limit exports beyond the present expiration date of September this year. Though the prospect of African producers coming within a world agreement is still dim, it is suggested that it will be in the interests of both the Latin American growers and African growers that they enter into a common agreement.

Though India is not a leading producer in the world, Indian coffee is a useful earner of foreign exchange for the country, in that about a third of its output is being exported. To this extent, the Indian coffee industry is concerned over the long-term outlook for world coffee. Expressing this concern at the meeting of the newly constituted Coffee Board, Mr. K. Srinivasan, Chairman, observed that, while he did not wish to be unduly pessimistic, the conclusion was inevitable that the coffee industry is in for an anxious time ahead, perhaps for the next five or six years at least. Dilating on this point, he said:

"The prices are steadily falling all the time, and production is going up substantially in almost all countries in spite of it all, India not excluded, and notably too even in Brazil, Angola, Uganda, etc. In Brazil, for instance, there has been an increase of 11 per cent. in exportable production in 1958-59, over the previous year. This percentage is true of the total world exportable surplus also. The European Common Market Scheme, which is reported to have come into existence on New Year Day, is still a dark horse and we do not know how this will affect the coffee industry as a whole, and the prospects of our own coffees in particular, because our main market is Western Europe and our own production of coffee is increasing. Most of the coffee producing countries are finding themselves in an unenviable position of having more coffee to market at lower prices, and, at the same time, the costs of the manufactured articles they have to import are also going up, making the gap in their balance of trade position wider. It is beyond question that this situation regarding coffee is going to lead us into more difficult positions in the next few years. The economy of the Mexico Agreement countries has been subjected to a considerable strain these two or three years, and this strain will be increasingly greater in the future. Coffee men have serious misgivings about the capacity of these countries to bear this strain indefinitely.

"I do not wish to be unduly pessimistic, but we have to be realistic. The conclusion is inevitable that the coffee industry is in for an anxious time ahead, perhaps for the next five or six years at least. Conferences and discussions between the various countries of the old and the new world, as also between the producer and consumer countries, are continuously going on, specially constituted Study Groups are hard at work all the time, and it is difficu t to say when, if at all, a solution may be found to lessen the anxiety and to bring hope to the situation. A satisfactory solution, in the very nature of things, will be difficult to find for some years. It is common knowledge that, in spite of all the promotion work, consumption of coffee all the world over has been increasing at a far lower rate than that of production. The surplus stocks today have been estimated at six to nine months' needs."

Mr. Srinivasan's solution to this problem of overproduction is to restrict world output to reasonable limits, not to such an extent as to make it a monopoly and to compel the consumers to pay unreasonably high prices. He admitted that it was very difficult to say what a fair price should be, fair to the consumer as well as to the producer. Given the will and the honesty of purpose on both sides, and perhaps the time, it should not, according to him, be difficult to find a way out.

In addition to the external adverse influence on prices, Indian coffee industry has its own internal problems, in the shape of increasing taxation, rise in labour and cultivation charges and the problems stemming from the proposed land reforms. Mr. Srinivasan warned that it would be extremely hazardous on our part to overlook these factors. The industry could hope to survive the challenges in the increasingly adverse market only by enforcing economy in production expenditure, wherever possible, improving quality and increasing the yield per acre. India depends for two-thirds of its coffee output on the domestic market. This journal has been advocating the need for enlarging internal consumption and for bringing down internal prices to promote consumption. Mr. Srinivasan was in agreement with this view, when he said, "We ought to be able to rely more and more on the internal market, and expand our consumption at home, even as Brazil and other large producers are doing now. More promotional activities in India are necessary and one of the biggest incentives to increased consumption would be to bring down the prices. It is my fervent hope that the Board will be able to face this challenge successfully."

The 1957-58 crop was estimated in April last at 43,619 tons. The actual receipts to the pool out of this crop were, however, a little higher at 44,149 tons, a record in the history of India coffee industry. These were made up of 21,504 tons of Plantation, 8,046 tons of Arabica Cherry and 14,599 tons of Robusta. The Coffee Board had originally provided 29,434 tons for internal consumptions and 13,137 tons for export out of the 1957-58 crop. The actual exports were, however, slightly higher at 14,281 tons, thanks to better receipts of Robusta and Plantation. They would have been but for the decline in exports of Cherry, due to paucity of exportable grades. While the total quantity exported was higher, the aggregate realisations on exports showed a decline, on account of the fall in prices.

Sales in the internal market during 1958 aggregated 27,570 tons, as compared with 26,622 tons released in 1957 and 24,189 tons in 1956. It was, however, 1,864 tons short of the Board's original estimates. The prices in the internal market were fairly steady during the first half of the year. In view of the large stocks then in the hands of the trade and the tendency for the prices to go down from June onwards, the quantities released were reduced correspondingly. But as prices, especially of Plantation and Robusta began to rise in November, larger quantities were released in December and early January. This held the prices, but there has been decline again this month. The stocks at the end of the year 1958 aggregated 8,307 tons, an increase of 1,250 tons over what the Board had wished to keep in hand.

The estimate of the 1958-59 crop, now under harvest, is placed at 44,810 tons, consisting of 27,895 tons of Arabica and 16,915 tons of Robusta. This estimate was made in November last. Judged by past performances, the Coffee Board Chairman felt that the actual output might be still higher. The Board has allocated 30,760 tons for sale in internal market during 1959 and 14,494 tons for exports, but these also may be revised on the basis of the final crop.

Despite the none too bright outlook for the industry and the growing level of output in the face of it, efforts are being made by several States to grow coffee. The Governments of Assam and West Bengal are said to be anxious to introduce cultivation of coffee, in order to settle the hilly tribes or to find alternative occupation to the labour engaged on cinchona plantations. The Coffee Board Chairman said

(Continued on page 165)

GUNNY OUTPUT RISES

INTERNAL OFFTAKE, TOO, EXPANDS SUBSTANTIALLY

THE statistics of production for the month of December 1958 confirm that the rise of 4,500 tons in stocks of gunnies at the end of the month, as compared with those at the close of November, has been mainly due to the expansion in output of mills during the month. Thus, while production shows a rise of 9,500 tons, total despatches have gone up by only about 2,900 tons. The output for the month under review, at 96,500 tons, falls short of the year's peak (98,300 tons) touched in January 1958 by 1,800 tons, but represents an increase of 3,700 tons over that for December 1957. The higher production last month is due to the larger working hours, namely, 217.5, as compared with 197.5 in the previous month and 209 in the corresponding month of 1957.

A break-up of the month's output shows that all varieties of goods have contributed to the expansion. Thus, hessian production has gone up from 35,800 tons to 40,100 tons, the highest level since June 1948. As compared with December 1957, it shows an increase of no less than 8,000 tons, and forms 41.5 per cent. of the total output, as against 34.6 per cent. in the closing month of 1957. Sacking output has risen during the month from 44,900 tons to 49,200 tons, a monthly record since May last. Over the year, however, it shows a fall of 5,500 tons. While in December 1957 the production of sacking formed 58.9 per cent. of the total output, in the month under review it was 50.9 per cent. The production of other varieties aggregates 7,200 tons, as compared with 6,300 tons in the previous month and 6,000 tons in the corresponding period of 1957.

The total production of gunnies during the whole of 1958 aggregates 1,061,800 tons, which represents an increase of 31,900 tons over that in 1957. It, however, falls short of the 1956 output of 1,092,800 tons by 31,000 tons. It will be noted here that, barring in 1956, the past year's production was the highest since 1912. This rise is accounted for by sacking and "miscellaneous varieties," and would have been substantially large but for the fall in output of hessian. Thus, the production of sacking has gone over the year from 549,700 tons to 582,400 tons and miscellaneous constructions from 66,900 tons to 72,300 tons, while hessian has shrunk from 414,300 tons to 407,100 tons.

The following comparative table shows the monthly variations in output of gunnies during 1958 and the annual production from 1954 onwards:

(In tons)

	Hessian	Sacking	Others	Total
1958				
January	34,400	57,300	6,600	98,300
February	30,100	49,300	5,900	85,300
March	30,400	49,500	5,400	85,300
April	30,900	50,600	6,500	88,000
May	34,200	53,700	7,000	94,900
June	31,300	45,900	5,200	82,400
July	35,300	48,000	5,500	88,800
August	35,400	44,300	5,500	85,200
September	35,900	45,700	5,700	87,300
October	33,300	48,000	5,800	87,100
November	35,800	44,900	6,300	87,000
December	40,100	49,200	7,200	96,600
Total 1958 ..	407,100	582,400	72,300	1,061,800
1957 ..	414,300	548,700	66,900	1,029,900
1956 ..	415,200	605,500	72,100	1,092,800
1955 ..	401,400	674,700	61,100	1,027,200
1954 ..	388,900	606,100	32,700	927,700

As stated earlier, the despatches of gunnies during the month of December show a rise of only about 2,900 tons, that is, from 89,200 tons (in November) to 92,100 tons. As compared with the corresponding month of 1957, they disclose a rise of 4,000 tons from 88,100 tons. This is the second month in succession for which despatches from mills have recorded a rise, though the pace of increase during December has been slower than in November. Even this rise has been mainly due to the larger offtake for domestic consumption, which has gone up from 18,800 tons (in November) to 22,300 tons, while despatches for export purposes have shrunk a little from 70,400 tons to 69,800 tons. The total despatches during the whole of 1958 aggregate 1,021,300 tons, as compared with 1,043,300 tons in 1957 and 1,054,900 tons in 1956. Thus, the fall in despatches is more marked in the past year than in the previous year. This is due to the shrinkage in despatches for export purposes from 864,500 (in 1957) to 815,800 tons, thus reversing the upward trend noted since 1950. Despatches for internal consumption have, however, gone up from 179,300 tons to 205,500 tons, thus more than making good the substantial decline in 1957, when the internal offtake fell from 193,400 tons to 179,300 tons. Further, they are also a record since 1950.

National Sales Executives International—NEW YORK, and Sales Executives' Association of India have pleasure to announce

a marketing conference in BOMBAY

by the visiting National Sales Executives' team of United States of America

VENUE:

Taj Mahal Hotel

Saturday, February 21st, 9-30 A.M. to 5 P.M.

Name & Status	Subject for discussion
E. R. Krueger, President, Paper Art Company, Indiana.	Development of consumer market potentials
R. Martin, President, Northern Indiana Brass Company, Elkhart, Indiana.	Sales and Selling methods.
Dr. M. R. Neifeld, Vice-President, Beneficial Management Corporation, Morristown, New Jersey.	Consumer Credit.
D. C. Sloan, President, D. C. Sloan & Company, Investment Securities Portland 4, Oregon.	Breaking through the sales barrier.
L. Smith, Divisional Manager, Independent Order of Foresters, Sherman Oaks, California.	Efficient communication techniques.
C. C. Walther, President, Walther Bros. Co., Inc. —Walther Paint Co., New Orleans, Louisiana.	Wholesale distributor.
M. Burgess, Executive, Western Distributor of Group Securities, Inc. San Francisco 4, California.	Selling ownership of business and industry to the consumer.
E. C. Keene, Chairman of the Board, Keene's Klothes & Boot Shop, Inc. Elkhart, Indiana.	Modern retail distributor.
J. J. Stukas, Manager, NSE-International, 630, Third Avenue, New York City.	NSE-International Means Business

Secretary.

WORLD OIL OUTPUT IN 1958

NEW HIGH LEVEL TOUCHED

WORLD production of crude oil touched a new high level in 1958 when it aggregated 905.2 million tons, as against 882.2 million tons in 1957 and 837.7 million tons in 1956. The free world accounted for 775.9 million tons last year or 6.4 million tons more than in 1957 and as much as 36.1 million tons more than in 1956. The increase in free world output would have been more marked but for the fact that, in the first half of 1958, there was a decline in production, reflecting sluggish conditions of demand in the U.S. and elsewhere. Last year, production in Communist countries aggregated 129.2 million tons, as compared with 112.7 million tons in 1957 and 97.9 million tons in 1956. After presenting an analysis of the trends in oil output, the *Petroleum Press Service*, in its January issue, points out that "all the indications are that demand will rise continually, unless any political obstacles intervene, and a world production of 1,000 million tons annually could be reached within two of three years."

Production

The following table gives the country-wise breakdown of world oil output in 1958, 1957 and 1956:

(In '000 Metric Tons)

Countries	1958	1957	1956
World Total	**905,238**	**882,246**	**837,731**
North America	349,200	377,526	375,975
Of which			
California	43,000	45,700	47,376
Other States	284,500	307,255	305,473
Canada	21,700	24,481	23,126
Latin America: Caribbean Area	149,700	156,099	139,330
Of which			
Venezuela	138,000	145,315	128,923
Colombia	6,600	6,479	6,284
Trinidad	5,100	4,905	4,129
Other Countries	24,800	22,425	21,673
Of which			
Mexico	13,250	12,401	12,796
Argentina	4,900	4,543	4,408
Peru	2,550	2,550	2,540
Brazil	2,400	1,321	530
Middle East	214,760	177,943	172,455
Of which			
Kuwait	70,100	57,286	54,982
Saudi Arabia	50,400	40,002	48,622
Persia	41,000	35,500	20,530
Iraq	35,800	21,880	31,313
Quatar	8,070	6,643	6,876
Kuwait Neutral Zone	4,000	3,328	1,670
Egypt	3,000	2,338	1,629
Bahrein	2,000	1,597	1,597
Turkey	300	299	296
Israel	90	70	30
Far East	23,765	22,847	20,008
Of which			
Indonesia	16,800	15,470	12,730
Br. Borneo	6,100	5,590	5,690
India	425	429	380
Burma	465	398	236
Japan	300	321	314
Pakistan	315	309	283
W. New Guinea	300	330	375
W. Europe	12,300	11,822	10,216
Of which			
Germany	4,420	3,960	3,506
Austria	2,850	3,186	3,428
Netherlands	1,550	1,523	1,094
Italy	1,500	1,281	607
France	1,400	1,415	1,261
Africa (excluding Egypt)	1,411	281	140
Of which			
Gabon	500	173	..
Sahara	435	..	..
Nigeria	300	..	..
Free World	775,998	709,548	739,803
Of which			
Western Hemisphere	523,760	556,650	536,984
Eastern Hemisphere	252,238	212,893	202,819
Eastern Europe and China	129,240	112,698	97,923
Of which			
U.S.S.R.	113,500	98,230	83,796
Rumania	11,500	11,188	10,920
China	2,200	1,460	1,176

It will be seen from the table given above that, in 1958, there was a striking contrast between the production of oil in the Western hemisphere and that in the Eastern. The former showed a decline of about 33 million tons and the latter an increase of nearly 40 million tons. In the U.S., production declined by 25½ million tons, in Venezuela by 7 million tons and in Canada by nearly 3 million tons. But there were record increases of 37 million tons in the Middle East, and of over 15 million tons in the U.S.S.R.

Production in the main crude oil producing countries of the Western hemisphere was boosted early in 1957 because of the Suez crisis, but was adversely affected, late in 1957 and early in 1958, by the trade recession in North America. Helped by seasonal demand, production in the U.S.A. and Venezuela has, however, revived in recent months, and is expected to do so soon in Canada. By contrast, the Middle East has benefited from the continued good increase in oil demand in Europe and elsewhere in the Eastern hemisphere and last year supplied an increasing share (over 27 per cent.) of the free world's needs. An event of great potential importance last year was the start in January of commercial production in the Sahara.

The one per cent. increase in the free world's production in 1958 compares with average annual increase of about seven per cent. since the end of World War II. In that period, only once—in the recession year of 1949—has there been a decline. With the U.S. recession ended and with demand elsewhere continuing to expand, the rise in world production will again gather speed. It is of interest that the United Nations index figures for the free world's industrial production show an overall increase of 19 per cent. during 1953-57, while crude oil production rose by 30 per cent. during the same period.

United States

Reaching in March 1957—owing to the Suez crisis—a record of over 7.7 million barrels daily (equivalent to about 380 million tons a year), output in the U.S. was reduced to between 6.6 and 6.7 million b/d late in 1957 and early in 1958, and then to between 6 and 6.2 million b/d in March-May last year. There followed, however, a gradual recovery in June-July, when the formerly excessive stocks had been worked off and inland consumption began to pick up, and the production rate in August-December varied between about 6.7 and over 7 million b/d. The result was that the U.S. output in 1958 was about 25 million tons (7 per cent.) lower than in 1957 or in 1956, and 7 million tons less than in 1955. The share of the U.S. in the free world's crude oil production was last year reduced to 42 per cent. compared with 46 per cent. in 1957, and with over 50 per cent. in 1954 and earlier years.

The Middle East continues to set new records in oil production. Last year, it accounted for 214.7 million tons or more than 50 per cent. of the free world's output outside North America. Since 1946, production in this region has increased sixfold. The most rapid growth has taken place in Kuwait, where output has recently reached an annual rate of over 75 million tons. The rate of expansion in Saudi Arabia has slowed down. Production aggregated some 50½ million tons in 1958, as against 49 million tons in 1957. In this connection, it is stated that, apart from the difficulties of selling "dollar" oil in Eastern hemisphere countries, production has been affected by the relatively low demand and the import restrictions in the U.S. Persia has continued its substantial and steady advance under the consortium arrangements and production rose last year by 5½ million tons to a record of 41 million tons. The revolution of last July has not affected Iraq's oil production, now at a rate approaching 40 million tons a year. There are proposals for raising the country's production capacity to over 60 million tons annually by the end of 1961. In the Far East, the increase in Indonesian production comes mainly from new fields discovered some time ago.

Russia

Crude oil production in the U.S.S.R., advancing from 23 million tons in 1946 to 98 million tons in 1957 and 113½ million tons in 1958, has risen since the war at a rate somewhat similar to that in the Middle East. The recently announced Seven-year Plan foresees a further increase to 230-240 million tons in 1965, while a target of 350-400 million tons has been set for 1972.

Since the leap forward in Rumania's production in the early 1950s when the new Moldavia, Oltenia, and Pitesti areas were being developed, expansion has greatly slowed down. Hungary produced last year about 840,000 tons, or little more than half the record rate (1.6 million tons) reached in the summer of 1956 before water encroachment reduced output at Nagylengyel. But, with remedial measures at Nagylengyel, and with new finds in Central Hungary, production is now rising again, and it is hoped to reach 2 million tons by 1962. In Albania, where an important oilfield extension has recently been found, production is now rising with a target of over 2,000,000 tons set for the year 1960.

Information from China indicates a 50 per cent. increase in crude oil production in 1958 which appears to have reached about 2.2 million tons, including, say, about 1.6 million tons natural crude, the balance being shale and coal oil. This steep advance has been made possible by the development of various new fields, including a major field recently located in Central Szechwan, and it is claimed that there are excellent prospects of further rapid advances, facilitated by the forthcoming completion of railway extensions to outlying oil regions and by the projected construction of new shale oil facilities with an output capacity of 2,000,000 tons of oil a year.

HYDRO-ELECTRIC EXPANSION

There has been a significant development of power resources in the second Plan period, and, more so, in 1958-59. At the end of the first Plan period, the total installed capacity of power generating plants—hydro and thermal—was 3.4 million kw., and electricity production during 1955-56 was 8,782 million units. During the first two years of the second Plan, the additional installed capacity increased, on an average, by 0.29 million kw. and output by 1,270 million units annually. The rise in both installed capacity and power production will be more impressive in the current financial year than in 1956-58, the current estimates being higher by about 40 per cent. in the installed capacity and by 11 per cent. in production.

To give the latest detailed data available here, six major power plants were commissioned till the end of November 1958, raising the installed capacity at the end of 1957-58 by 0.16 million kw. Among the plants which contributed to this progress were Maithon (D.V.C.), according to 40,000 kw., Hirakud 37,500 kw., Periyar 35,000 kw., Madras (Thermal) 30,000 kw., Ahmedabad (thermal)15,000 kw., and Delhi (thermal) 6,100 kw. In addition, eight thermal and two hydro power plants, with an installed capacity of about 0.25 million kw., are expected to be commissioned in the next four months. The hydro plants will be at Periyar (70,000 kw.) and Machkund (42,500 kw.). The additional thermal plants, which will start functioning by the end of March 1959 are at Delhi (6,400 kw.), Gorakhpur, Sohwal and Mau in Uttar Pradesh (15,000 kw.), Sikka (8,000 kw.), Utran (30,000 kw.), Kanpur (15,000 kw.), Kandla (6,000 kw.), Korba (30,000 kw.), Kotah (2,000 kw.) and Chola (18,000 kw.).

The above figures include the contribution of power projects which are aided by the Central Government or are being implemented by the States. The more important Centrally-aided power projects are Bhakra, D.V.C., Chambal, Koyna, Rihand, Hirakud and Tungabhadra. The Bhakra Nangal system includes the Nangal power stations with an installed capacity of 96,000 k.w., which, along with the Uhl River system, supply power to Delhi, Jammu and Kashmir and Himachal Pradesh, in addition to Punjab. The work on the erection of five units each of 90,000 kw. at Bhakra Dam is continuing, and it is expected that the first unit will be commissioned in 1959-60 and the entire power house by 1960-61. Two more units of 29,000 kw. each at Ganguwal and Kotla power houses will also be commissioned during the second Plan period.

The Bokaro power station of the D.V.C., with an installed capacity of 150,000 kw. is working at full capacity. The second and third units of Maithon power station of 20,000 kw. each were commissioned in May-August 1958. The work on the Bokaro thermal station extension and on a new thermal station at Durgapur is progressing, and an installed capacity of 225,000 kw. is expected to be commissioned before the end of 1959. The Panchet Hill Station (40,000 kw.) is scheduled for completion next year. The first set of 23,000 kw. of the Chambal Project will be commissioned in 1959-60 and the remaining two sets in 1960-61. The Koyna and Rihand projects are also progressing fast, as also the second stage of Hirakud project.

Towards the end of the second Plan the total installed capacity will be about 6.4 million kw. In the third Plan the installed capacity will further increase to about 12 million kw. The power generation will also increase proportionately, as also the demand for it.

Such spectacular progress both in practice and planning in power development is, indeed, gratifying, but, viewed against the immense hydro resources of the country, these achievements shrink into tiny steps towards electrification of the country. For, according to available topographical surveys, the hydro resources in India are estimated at 40 million kw.

This represents the potential for the sites which are capable of being developed economically on the basis of present-day costs. Further detailed investigations are likely to reveal additional sites, increasing available hydro-electric potential of the country considerably.

These apart, on the borders, particularly in the Himalayas and the Brahmaputra river, very large hydro-electric resources are available, which, with technical developments in high tension transmission systems, might eventually be economical to tap for the benefit of the country.

HARDWARE INDUSTRY

The importance of ensuring adequate and regular supplies of raw material to the manufacturers of builders' hardware was emphasised by Mr. A. Paul, President of the Builders' Hardware Association of India, in the course of his speech at the annual meeting of the Association, held last week, in Calcutta. It is gratifying to note that most sections of the industry have reached a stage where they are able to meet the country's requirements for their products. The industry produces such items as hinges, padlocks, pad-bolts and tower-bolts. At present, there are 54 units in the industry, employing some 10,000 workers. The major section of the industry is the one that produces steel hinges. Production in this section is running at an annual rate of four million dozen-pairs, as against the domestic demand of 2.5 million dozen-pairs. In this connection, Mr. Paul urged the Government to continue the policy under which imports of hinges have been banned.

The industry requires for manufacturing purposes such raw materials as steel sheets, sheet cuttings and rods. It would appear that the industry is not able to secure adequate supplies of these raw materials. Mr. Paul stressed the need for enhancing the steel quota for the industry, especially the quota for sheet cuttings of appropriate gauges. The industry also requires H.B. wire of 3/12 gauge. Mr. Paul appealed to the Government to make some satisfactory arrangemen's for supply of H.B. wires from commercial imports.

NEW PRODUCTS AND PROCESSES

Production Control System

A DATA recording and production control system which is said to provide the production supervisor in his office with an "almost visual" check of factory operations and could permit a great reduction in work orders, time sheets and other paper work, has been developed in the U.S. The system uses electro-mechanical counters which show, at a central control point, the output of each machine. Other counters, after being pre-set at the beginning of a production run, indicate completion of an order. Each station on the production line it is claimed, is equipped with alarm buttons and lights to summon help in case of trouble. A plug-in telephone jack at each station allows a foreman to communicate with the supervisor. With a special key, the foreman also can control a mechanism in the data recorder to show an individual worker's "down" or "non-production" time for piecework records.

Fluorocarbon

A new range of fancy whipped foods which, it is claimed, are capable of remaining frothy and appetising for two to three days could be dispensed from aerosols employing a new liquified "fluorocarbon" propellent Freon-C318, developed in the U.S. It is described as odourless, tasteless, non-toxic, chemically stable, and particularly suitable for food products of low to moderate viscosity which are sprayed or foamed. The new propellent is insoluble in water. Once the foam is produced by the propellent's expansion, it remains intact because the chemical is not soluble in the water forming the boundaries of the bubbles and therefore does not diffuse through. The new propellent also is said to provide a constant, uniform pressure in the container at any given temperature throughout use of the product so that flow rate and consistency are the same when the package is nearly empty as when it is full.

Automatic Tractor

An automatic tractor has been invented by I. Loginov, a tractor driver at the Irtyshsky State Farm in Pavlodar Region of U.S.S.R. This machine does not have to be driven by man. He only has to make the first furrow, after which a special automatic device takes over. It sees to it that the tractor moves parallel with the first furrow and at specified distances. Tests have shown that automatically-driven tractors can be used not only for ploughing, but also for harrowing, cultivation and some other jobs. They operate irrespective of the weather or time of the day. Soon automatic tractors will come in for wide use in the fields of the Soviet country. It is also intended to equip some of the existing machines with automatic control devices. This will further lighten the labour of peasants and improve the quality of field work.

Alloy Tablets for Aluminium

An agreement has been concluded between Murex Ltd. and a West German manufacturer for the production and sale in the U.K. and Commonwealth of alloy tablets based on manganese, chromium, titanium, antimony, copper and other metals. The chief function of these tablets is to provide a more satisfactory and economic means of introducing alloying element directly into aluminium and its alloys by eliminating the "hardener" stage. Not only is the hardener stage eliminated but many positive advantages can be claimed. Because the tablets (with a few exceptions such as silicon and magnesium) have a high specific gravity, they are self-sinking and, therefore, do not need mechanical aids such as plungers. Slight turbulence caused by the tablets going into solution leads to a homogeneous distribution of the alloying element, at the same time enabling such elements already present to be more thoroughly distributed. The time required to allow the element to go into solution is cut down and thus labour and fuel costs are reduced, with the complementary advantage of enabling increased production to be achieved from a single furnace unit. Little or no mechanical stirring is necessary, which means that dross is virtually eliminated. No additional heating is required to put the element into solution, and up to 100 per cent. recovery of the alloying element can be expected. The cleansing and grain refining properties of the tablets are considered, by some users, to be the prime advantages, and the removal of contaminants results in improved flow ability and castability. The element concerned is incorporated in the tablets to give a fixed weight of useful content, which makes the weighing and observation of changing composition unnecessary. The form in which the element can be added and the speed of solution enables final corrections to analysis to be achieved easily.

Raw Material for Paints

An important raw material for the manufacture of paints and plastics industry which has been produced previously in the U.S., but not in Britain, is now to be made in the U.K. The material, which is called dimeric acid, is now being manufactured in the U.K. by Victor Wolf, of Manchester, by means of a new process. A new plant, fitted with equipment of novel design, has been operating for a few weeks. This new product, which is called "Dimac," makes users of dimeric acid in the U.K. independent of imports. It is also said to have colour and colour retention to an extent never previously achieved.

THE MYSORE KIRLOSKAR LTD.

This is neither a Prospectus nor an invitation to the public to subscribe for the Equity Shares, but is only an announcement.

The Prospectus along with the documents required under Section 60 of the Companies Act, 1956, has already been delivered to the Registrar of Companies in Mysore, Bangalore, for registration.

Copies of the Prospectus are obtainable from the Registered Office of the Company or from Messrs. R. R. Nabar & Co., Share and Stock Brokers, 31, Dalal Street, Fort, Bombay.

The consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

THE MYSORE KIRLOSKAR LTD.

YANTRAPUR P.O., HARIHAR

SHARE CAPITAL

AUTHORISED CAPITAL

Rs. 50,00,000 (Rupees Fifty lacs) divided into 50,000 Equity shares of Rs. 100 each.

ISSUED CAPITAL

Rs. 25,00,000 (Rupees Twenty-five lacs) divided into 25,000 Equity shares of Rs. 100 each.

PAID-UP CAPITAL

Rs. 24,95,450 as at 31st October, 1958

PRESENT ISSUE

15,000 Equity shares of Rs. 100 each:

PAYABLE AS FOLLOWS:

Rs. 25 per share (Rupees Twenty-five) per share on application. Rs. 25 (Rupees Twenty-five) per share on allotment and the balance of Rs. 50 per share as and when required in calls of Rs. 25 each at intervals of not less than three months.

The whole of the said issue is offered in the first instance to the existing shareholders of the Company whose names shall stand in the Register of Members on the 6th December, 1958, in the proportion of three such new shares for every five existing equity shares held by such shareholders respectively, no fractional certificates being issued. The existing shareholders have the right to renounce the offer in favour of any other person and can also apply for additional shares as stated in the notice sent to them.

Such of the said new shares as are not taken up by the existing shareholders will be allotted to Messrs. R. R. Nabar & Co., a firm of Share and Stock Brokers in Bombay, who have underwritten this issue or to persons whom they may procure to subscribe for such shares in terms of the Underwriting Agreement.

DIRECTORS

1. Sri M. D. SHIVANANJAPPA, Director and Vice-Chairman, The Mysore Iron and Steel Works, Bhadravati.
2. Sri CHANNAGERI RANGAPPA, C/o Channageri Rangappa and Sons, Davangere.
3. Sri PANDURANG S. SIRUR, Prince Extension, Davangere.
4. Sri V. P. VARDE, C/o R. R. Nabar & Co., 31, Dalal Street, Fort, Bombay.

MANAGING AGENTS

Messrs. KIRLOSKAR ASSOCIATES, Yantrapur P.O., Harihar (Mysore State).

GENERAL MANAGER

R. L. KIRLOSKAR, Esq., Yantrapur P.O., Harihar.

BANKERS

THE BANK OF MYSORE LTD., Bangalore and Davangere.

THE CENTRAL BANK OF INDIA LTD., Davangere.

THE BANK OF MAHARASHTRA LTD., Bombay and Harihar.

THE BANK OF INDIA LTD., Calcutta, Bangalore and Madras.

SOLICITORS

Messrs. MANILAL KHER AMBALAL & CO., 51, Mahatma Gandhi Road, Fort, Bombay 1.

UNDERWRITERS

Messrs. R. R. NABAR & CO., Share and Stock Brokers, 31, Dalal Street, Fort, Bombay 1.

AUDITORS

Sri S. R. MANDRE, Chartered Accountant, Bangalore.

Messrs. P. G. BHAGWAT, Chartered Accountant, Bombay.

REGISTERED OFFICE

YANTRAPUR P.O., HARIHAR, MYSORE STATE.

BUSINESS

The main object of the Company is to carry on business of Iron Founders, Mechanical Engineers, etc., and the other objects are referred to in Clause III of the Memorandum of Association of the Company. The Company from its inception took up the manufacture and sale of machine tools of various types and has been manufacturing and selling them.

DIVIDENDS DECLARED

For the year ended 30th June, 1954 : 5% per annum tax-free

For the year ended 30th June, 1955 : 6% per annum tax-free

For the year ended 30th June, 1956 : 6% per annum tax-free

For the year ended 30th June, 1957 : 6% per annum tax-free

For the year ended 30th June, 1958 : 7½% per annum tax-free (proposed).

OBJECTS OF THE ISSUE

The Company has entered into an agreement for technical collaboration with Messrs. Alfred Herbert Ltd., Coventry, England, for the manufacture of Capstan and Turret lathes and has also expansion plans for its existing lines. The money raised by this issue will be required for this purpose.

LIFE INSURANCE IN SWEDEN

EFFORTS TO MAINTAIN VALUE OF SAVINGS

THE rapid expansion of life insurance in Sweden in the post-war period clearly illustrates how important are a high and stable level of employment and increasing real incomes to the growth of life insurance. The Swedish economy had maintained a high level of activity since the War. The recessions, which were noticeable in many other countries, have had no great influence on the economy of Sweden. The growing economic prosperity of the country was fully reflected in the almost uninterrupted increase in life insurance. Life insurance coverage in Sweden at the end of 1957 was about four and a half times as large as in 1940, comprising five million individual life insurance policies in a population of 7.4 million. In addition, 1.4 million policyholders were covered by group life insurance and 177,000 salaried employees were members of pension groups. The highlights of this remarkable development are summed up by Mr. Kjell Hansson, Economist of the Thale group of insurance companies, the largest insurance organisation in Sweden, in an article contributed to a recent issue of *The Policy-Holder*, Manchester.

According to Mr. Hansson, the rising standard of living in Sweden and the accompanying increase in the number of marriages are among the main factors which explain the rapid growth of life insurance. The reduction in the premium rates on individual and group life insurance in 1955 also led to a conspicuous increase in the amount of new business. The following table indicates the trend of progress of life insurance in Sweden during the period 1940-57.

(In million Swedish Kroner)

	Ordinary and *Industrial* life	Group Life	Group Pension	Total
1940	5.6	..	0.1	5.7
1950	11.1	0.2	0.2	11.5
1955	17.8	2.6	0.5	20.9
1956	19.1	3.9	0.5	23.5
1957	20.1	5.2	0.6	25.9

A remarkable feature of this growth is the rapid progress in group life insurance. This form of insurance was first introduced in the country in 1948 and now, after ten successful years, the business in force exceeds five million Swedish Kroner and comprises 20 per cent. of total life insurance. The increase in 1957 alone was as much as 33 per cent. It is said that there is still scope for expansion in this class of insurance, especially since it was recently extended to cover credit groups as well.

Another interesting feature is the tendency, recently evident, to switch over to temporary insurance. Purchases of life insurance during the last few years have been characterised by an ever-growing change to temporary assurance, of which the expansion of group life assurance is an example. Individual insurance is also marked by a change to policies with little or no element of saving.

This changeover was fully reflected in the 1956 new business wherein the increase was mainly confined to temporary insurance. A further development in the same direction took place in 1957. There was a decrease in endowment life insurance by approximately 300 million Swedish Kroner in 1957 while the acquisition of individual temporary insurance was more or less unchanged as compared with 1956.

The increased interest in life insurance without the element of saving has many possible explanations. Two of the most obvious are: first, continuing inflation has contributed greatly to the diminution in saving by life insurance and, second, the recent intense debates on the national pension scheme have discouraged the tendency to save through life insurance.

Inflation is also threatening to undermine the value of life insurance savings. Measures to protect the value of insurance savings are rendered difficult by the existing rigid laws regulating investment of life funds.

In contrast to conditions in Great Britain, the investment of life funds in Sweden is strictly controlled by legislation. The primary principle is safety. Consequently, the major portion of the funds must be put into Government or other gilt-edged bonds, loans to municipalities, mortgages, etc. Legislation permits 10 per cent. of the fund to be freely invested, but not in shares. There is no limitation on the investment of bonus funds, which amounted to 9.4 per cent. of the total funds at the end of 1957. It is, however, prescribed that the portfolio of investment shares should not exceed 5 per cent. of the voting shares of joint-stock companies. The following table indicates the distribution of investment of life funds:

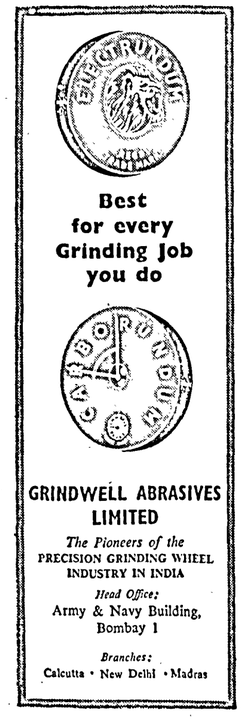
(In million Swedish Kroner)

		%
Bonds	5,003	44.9
Mortgages	3,106	27.9
Loans to municipalities	1,298	11.4
Other Securities	602	5.9
Life assurance loans	615	5.5
Real property	325	2.9
Shares	173	1.5
Total ..	11,152	100.0

There have been frequent complaints that the Swedish Insurance Act, regulating investment of insurance savings, seriously checks the efforts of companies to maintain the value of savings. Methods that might be adopted to maintain the real value of savings were the subject of much discussion of late. The political debates on the National Supplementary Pension Scheme, in which provision is made for pension benefits to maintain their purchasing power, have intensified this question. One possible solution suggested is that the companies should be permitted to invest more of their assets in shares. This, it is pointed out, can only be a partial solution since the Swedish stock market is not large enough to offer much scope for this kind of operation. Nonetheless, it is important. Another possibility much discussed in Sweden is to maintain the real value of savings through securities linked with price-index clause. This method has already been tried in a number of countries, for instance, in Finland.

Swedish life insurance, according to Mr. Hansson, can at present be said to be faced with two main problems—inflation and the Government pension reform. Both tend to discourage savings and their adverse influence on life insurance appeared in 1956 and even more markedly in 1957 and continued in 1958. New individual life insurance policies, for instance, have declined by more than 19 per cent. in the period January to September 1958.

In Sweden, as in most other countries, the last 10 years have been characterised by a high propensity to consume. Long-term voluntary saving has become less tempting. This is especially the case where the public is expecting a gradual decline in the purchasing power of money. It is strongly felt that life insurance companies must very soon be enabled to invest their funds in order to protect the policyholders from the consequences of inflation.



"NEW YEAR THOUGHTS"

Apropos our article entitled "Some New Year Thoughts on Life Insurance" which appeared in these columns two weeks ago, Mr. D. S. Mehta, Zonal Manager, Bombay Zone, Life Insurance Corporation of India, writes to us as follows:

"I have just read, with considerable interest, the article 'Some New Year Thoughts On Life Insurance' appearing on page 78 of your issue dated the 17th instant which has just come to hand. I am particularly impressed by the quotation from Schopenhauer and am taking the liberty of repeating it in a future of issue of our House Magazine, together with your incidental comments in this connection.

"We are fully alive to our shortcomings in the matter of service to be rendered to the policyholders. I am also in agreement with your remarks that the field force and the office staff of the Life Insurance Corporation will be judged by the degree of satisfaction which the policyholders ... feel in their dealings with the Corporation. Let me assure you, and through the columns of your esteemed journal, your readers—that we are doing all in our power to ensure greater efficiency in our servicing at all levels. The Chairman himself has been showing keen personal interest in all matters of service to policyholders and effective measures have been taken, and are being taken from time to time to step up efficiency and expeditiously dispose of matters.

"That there has been considerable improvement in this direction is obvious from the fact that complaints are less and we do receive, regularly, letters of appreciation for efficient and prompt disposal of matters. Unfortunately, it is only those who have grievances that go to the Press. Letters of appreciation come to us. We are hesitant to use such letters of appreciation lest it be held against us that we advertise our merits to cover our shortcomings. It must not be forgotten that many of the ills attributed to the Corporation are a consequence of a *malaise* that existed much earlier, about which the public know very little (since it was not, then, the practice for policyholders to ventilate their grievances in the Press) and which we have inherited. The cure cannot be effected overnight.

"You have paid a well deserved tribute to the great traditions of salesmanship and service built up by some private insurers in pre-nationalisation era. But what you have omitted to mention are the potent ills which accompanied some of the hectic competition that existed in the pre-nationalisation days and which it will take time to eradicate. I am writing this to you not in any spirit of controversy but so that the public may know that positive efforts are being made to improve our servicing and, with their co-operation, we hope to be able to attain that standard of efficiency which would be the envy of the private sector.

"Incidentally, in giving particulars of the life business for 1958 *on the same page, you have*, while discussing position of business as at 22nd December 1958, also made mention of the actual figures for close of books for that year. This might create some wrong impression in the minds of your readers. We would, therefore, appreciate your giving a further note on the more up-to-date position as revealed on the 12th January 1959 when the introduced business is shown to be Rs. 375.74 crores, out of which business of Rs. 275.40 crores stands completed on that date. Over and above this, there is a considerable amount of business accepted and paid for—in respect of which policies are still being issued. When the final figures are announced—probably at the beginning of February, we are sure that the substantial increase in the figure of introduced business will be reflected in equally substantial increase in our completions for 1958 as compared with 1957."

We are gratified to learn that the authorities are quite aware of the importance of service to policyholders and are making efforts to improve it. Success in this sphere is bound to build up goodwill with the public, which, in its turn, will enable the Corporation to write increasingly larger life insurance business.

EXPORT CREDIT GUARANTEE IN U.K.

The Export Credits Guarantee Department of the U.K. recently simplified arrangements for cover on those engineering goods commonly sold on credit terms ranging from six months to three years maximum, whatever the unit value of those goods, which are covered by "Extended Terms" endorsements or memoranda attached to the normal short-term cover. The normal short-term cover will continue to apply to raw materials and consumer goods. (For one class of consumer goods—motor cars—terms in excess of six months have been and will continue to be covered on a case-by-case basis.) Hitherto the credit terms acceptable for insurance within this field have been decided for each application for cover on an individual transaction. E.C.G.D. has now informed such policyholders that they can assume there will be no objection to credit terms up to two years maximum in respect of orders of £20,000 or more for either commercial credit users (such as distributors) or for end-user buyers; and that there will be no objection to terms up to three years maximum for orders of £50,000 or more for end-user buyers.

The E.C.G.D. hopes that this will relieve exporters of uncertainty as to credit terms in much of the Extended Terms field, and thereby assist them in negotiation of business. Where the exporter seeks to give credit for longer periods than provided for above, it will still be necessary for him to make an individual case to E.C.G.D.

WORLD TRADE IN AGRICULTURAL PRODUCTS

RATE OF EXPANSION SLOW

DESPITE many disturbances in the world economy, the aggregate volume of world trade in agricultural products in 1957 rose, but at a slower pace, thus continuing the upward trend that had started in 1955, after several years of stability at about the pre-war level. The increase was no more than 3 per cent. as compared with 1956, which compares quite unfavourably with an average rise of 8 per cent. in the two preceding years. According to the Report on the *State of Food and Agriculture* 1958, published by the Food and Agricultural Organisation (F.A.O.) of the United Nations (available in India from *Orient Longmans* Private Ltd.), the expansion in the volume of trade was due, as before, largely, though by no means entirely, to the surplus disposal operations of the U.S. and to a much lesser extent to subsidised exports by West European countries. On the imports side, about 60 per cent. of the increased volume of trade was shared by Western Europe, mainly of raw materials and beverages, and about 30 per cent. by countries of the Far East, which imported foodgrains—partly for reserve stocks and the rest for current consumption—in spite of the record rice crop harvested late in 1956. It may be noted that the volume of total trade in agricultural products, as throughout the post-war period, increased a good deal more slowly than the volume of world trade as a whole.

Production

These trends in trade, obviously, owe their origin to certain significant developments in the supply and demand position of agricultural commodities. The steady expansion in world agricultural output witnessed in the post-war years was arrested, for the first time, in 1957-58. Thus, the F.A.O. index of agricultural production (average 1952-53=100) fell by 1 point to 119, and world *per capita* agricultural production by 2 points to 107, as compared with 1956-57. The output of world's fisheries and forests was also slightly lower in 1957-58 than the year before. Agricultural production continued to increase in the Near East and more slowly in Europe, the U.S.S.R. and Latin America. But, in the Far East, there was no increase over the record level of 1956-57, while in Africa, Oceania and, especially, North America, agricultural production in 1957-58 was appreciably lower than in the year before. The comparative Table I at the bottom of this page shows the trend of production of major commodities. The setback in production in the year under review is attributed to unfavourable weather conditions in a number of producing areas. In addition, many of the advanced countries, notably the U.S., chose to pursue policies designed to restrain production, in view of their growing agricultural surpluses.

While production thus fell, world demand for agricultural commodities also weakened to some extent due to recession in the U.S. and the slowing down of economic activity in Western Europe. In contrast, the demand for domestically produced foodstuffs, and, in general, for agricultural raw materials, was generally well maintained in both industrial and less developed countries.

There is no doubt that these trends—surplus situation in the more industrialised countries and the decline in the exportable surplus in the less developed countries, in the light of their own growing consumption requirements—are bound to affect the course and pattern of trade in primary products. The recent trends in world trade in major agricultural commodities are indicated in Table II on this page. Describing the trend of exports in 1957, the F.A.O. Report says:

"Exports of agricultural products from Latin America declined, and there was no change in the general level of African exports, but, with these exceptions, all regions of the world exported more agricultural products than in 1956. As in the two previous years, however, by far the largest part of the increase in world trade in 1957 resulted from larger North American exports, due mainly to surplus disposal operations. Exports of food and foodstuffs from North America were in fact rather smaller than in 1956. The Western European demand for cereals receded from the high level of 1956, when European crops were below average. France, which in 1956-57 became exceptionally a wheat-importing country, is likely to export over 2 million tons in 1957-58. There was also some fall in North American exports of livestock products, though these were partly offset by larger exports of oils and fats. But the rise in cotton exports more than outweighed the smaller shipments of foodstuffs from North America. The heavy fall in Latin American exports occurred in coffee and textile fibres, and included wool and, especially cotton; larger exports of sugar, oils and fats, fruit, and meat, however, led to somewhat increased shipments of food as a whole, despite some decline in cereals."

Underdeveloped Countries

Discussing the position of underdeveloped countries, the Report observes:

"Under the pressure of rapidly growing requirements, outrunning the growth of production, gross food exports of the less developed regions of the world have declined, and, in addition, considerable imports of foodstuffs into Asia and Latin America have developed from North America and Australia. These consist primarily, but by no means exclusively, of cereals. Both the Far East and the Near East, formerly substantial net exporters, have had large net imports of foodstuffs in nearly every year since the war. Net food exports from Latin America have generally ranged from 20 to 40 per cent. below the pre-war average. Africa has been an exception, and in recent years net food exports from that region have been some 20 to 30 per cent. higher than before the war. Nevertheless, net exports of food and feedingstuffs from the less developed regions of the world as a whole to the industrialised countries had shrunk by 1956 and 1957 to little more than one-third of their pre-war volume. Net exports of non-food products including both beverages (e.g., coffee) and fibres and other raw materials, have been maintained and in some cases expanded. Their production has increased, and domestic consumption of these commodities has not yet begun to expand at the rate that the requirements of the less developed regions for foodstuffs has expanded. Non-food products thus account for an increasingly important share of the total agricultural exports and foreign exchange earnings of the less developed regions. As a result, net agricultural exports of all kinds from these regions have fallen by only 10 to 20 per cent. from the pre-war volume, compared with the fall of some 60 per cent. for foodstuffs alone."

In contrast, agriculturally more advanced regions, particularly Oceania, have expanded their net exports in the year under review. A large share of this increase, according to the Report, went to Asian countries rather than to the traditional importers in Western Europe. The Report adds that the North American region, which before the war was a small net importer of foodstuffs and a large net importer of agricultural products as a whole, has been a consistent net exporter of foodstuffs, and in 1956 and 1957 became also a net exporter of agricultural products as a whole (in terms of volume weighted at 1952-53 prices. In 1956 and 1957 Western Europe thus became for the first time the sole net importing region for agricultural products, though for foodstuffs alone the Far East and the Near East are also net importers. Nevertheless, for the products which Western Europe itself produces the pressure of its own expanding production, stimulated by

SCINDIA STEAM'S RESULTS ENCOURAGING

EXPANSION PROGRESSING—FINANCES STRONG

THE working of the Scindia Steam Navigation Company Ltd. (Chairman: Mr. Dharamsey M. Khatau, Bombay) during the year ended 30th June 1958 has yielded satisfactory results. There was a sharp fall in the tramp freight rates and this had its impact on the Liner trade and Conference freight rates of several bulk commodities which have fallen to uneconomic levels. The Company, however, was fortunate in having the benefit of high rates for a greater part of the year. Further, it was able to lift more cargo than in the previous year, the tonnage carried in 1957-58 being 2,072,792, as against 1,866,932 in 1956-57, an increase of 205,860 tons or 10.7 per cent. Consequently, its earnings from freight and passage money increased from Rs. 12.46 crores in 1956-57 to Rs. 13.95 crores, a rise of Rs. 1.49 crore over the year or 12 per cent. But this increase falls far short of the rise of Rs. 2.27 crores registered in the previous year. The income from other receipts also was better at Rs. 51.72 lakhs, as against Rs. 35.63 lakhs. Expenses, too, increased by Rs. 140.79 lakhs, or 15.3 per cent. to Rs. 10.52 crores. Although percentage-wise the increase in expenses was greater than that in earnings, it was relatively small in absolute terms. The gross profit, therefore, has been able to show an improvement and at Rs. 395.39 lakhs, it represents an increase of Rs. 24.91 lakhs or 6.7 per cent. over that for 1956-57. With this increase, the upward trend in gross profit has been maintained for the third year in succession, in pleasant contrast to the progressive decline in gross profit from Rs. 242.29 lakhs in 1952-53 to Rs. 117.69 lakhs in 1954-55. The net profit at Rs. 137.21 lakhs, however, shows a drop of Rs. 1.41 lakh, as compared with Rs. 138.62 lakhs for 1956-57. This is due to the large stepping up in the provision for depreciation from Rs. 187.19 lakhs to Rs. 234.18 lakhs. The provision made this year consists of Rs. 144.18 lakhs normal depreciation and Rs. 90 lakhs special depreciation, representing development rebate. This provision is, as readers are aware, compulsory under the Income-tax Act. Explaining the details of the provision, the Directors say that Rs. 38 lakhs out of the Rs. 90 lakhs is on the basis of 25 per cent. of the cost of ships acquired up to 31st December 1957 and that the balance of Rs. 58 lakhs represents 75 per cent. of 40 per cent. development rebate allowed on ships acquired after that date. The provision for taxation, however, has been lowered from Rs. 31 lakhs to Rs. 24 lakhs.

The dividend to shareholders is proposed to be maintained at the previous year's rate of 6¼ per cent. per annum and compares with 2½ per cent. per annum for 1953-54 and 1954-55 and 5 per cent. for 1955-56. Out of the net profit, the Directors have transferred Rs. 10 lakhs (same as in the past few years) to debenture sinking fund and another Rs. 56 lakhs to other reserves, as against Rs. 53 lakhs provided a year before. The allocation to deferred taxation reserve has been raised from Rs. 24 lakhs to Rs. 36 lakhs but that to dividend equalisation reserve has been pruned from Rs. 24 lakhs to Rs. 20 lakhs. The sum left to be carried forward is a shade higher at Rs. 6.65 lakhs, as against Rs. 5.84 lakhs brought in.

The table below brings out the salient features of the Company's working during the year under review, against the background of those for the preceding three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Freight and passage money	13,95 56	12,46 03	10,18 75	8,88 22
Other income	51 72	35 63	42 41	25 68
Expenses	1,051 89	9,11 18	7,01 85	7,09 21
Gross profit	3,95 39	3,70 43	2,69 31	1,17 69
Agents' commission	..	13 67	25 74	10 27
Depreciation	2,34 18	1,87 19	1,72 16	74 70
Taxation	24 00	31 00	..	..
Net profit	1,37 21	1,38 02	71 41	32 73
Transfer from reserves and excess provisions	..	..	55 08	11 75
To reserves	56 00	53 00	53 68	11 00
To debenture sinking fund	10 00	10 00	10 00	10 00
" gratuity reserve	..	..	13 00	..
" dividend	70 40	70 40*	46 93	23 47
	(6¼%)	(6¼%)	(5%)	(2½%)
Carry forward	6.65	5 84	5.62	2.74

* On the capital raised by the transfer of Rs. 1·88 crore from share premium account.

It will be observed from the table above that, despite the rise in other income, the gross profit for the year under review constitutes only 28.3 per cent. of the freight and passage income, as against 29.7 per cent. in the previous year. This is due to the rise of Rs. 140.71 lakhs in expenses. Of this rise, the lion's share has been taken up by stevedoring, claims, transhipment and charter hire, etc., which have increased from Rs. 219.42 lakhs to Rs. 288.22 lakhs and by marine dues, light dues and customs charges, etc., from Rs. 57.36 lakhs to Rs. 77.01 lakhs.

As regards new tonnage, the Directors report that the Company has now two ships on order with the Lubeck Yard, the keel of one of which has already been laid and the ship is to be delivered in the middle of 1959. The other ship is expected to be delivered some time in April 1960. Out of the two ships on order with the Visakhapatnam Shipyard, one, namely, m.v. *Jalavikram*, has been delivered to the Company's subsidiary, the Kamal Shipping Company Private Ltd., while the other m.v. *Jalaveera*, has been delivered to the Company.

The Government of India has negotiated a yen loan from Japan. Of this loan, yen 5 billion have been earmarked for shipping, of which one billion yen have been allotted to the Company, which has placed an order for a ship with Messrs. Mitsubishi Heavy Industries Reorganised Ltd., Kobe. It is stated that, as soon as the loan agreement is finalised by the Government of India, the order will be confirmed with the builders. In pursuance of the policy of modernising the Company's fleet, the Directors have acquired two sister ships of the s.s. *Silverburn*. These two ships, together with the s.s. *Silverburn*, have been bought on deferred payment basis.

Since July last, the Company has restarted its India/U.S.A. service on a monthly basis. The Company met with initial difficulties but feels confident that it will gradually establish itself in this new trade.

The Company's financial position is quite impressive. Its paid-up capital as on 30th June 1958 stands raised from Rs. 9.40 crores in 1956-57 to Rs. 11.28 crores due to the capitalisation of Rs. 1.88 crore out of the share premium account, after the closing of the last accounting year, through the issue of bonus shares in the ratio of one fully paid-up share for every five shares held. Even after such large capitalisation, its reserves and surplus aggregate Rs. 10.93 crores. Notwithstanding such large reserves, the Company has 4½ per cent. 1953 debentures amounting to Rs. 3.63 crores and loans from the Government of India of the order of Rs. 9.19 crores and these, together with overdrafts from banks, etc., bring the total of long-term secured liabilities to Rs. 14.69 crores. These are matched by fixed assets which, after normal and special depreciation, appear at Rs. 23.11 crores. Of this, the net value of fleet account is Rs. 22.24 crores and payments on account of steamers under construction Rs. 64.79 lakhs. The gross value of the fixed assets amounts to Rs. 30.05 crores, against which the total depreciation provided comes to Rs. 6.95 crores. The current liabilities stand at Rs. 8.53 crores, against which the current assets aggregate Rs. 22.38 crores. Of the current assets, cash and bank balances alone amount to Rs. 8.90 crores, having risen from Rs. 3.58 crores as at the end of 1956-57.

The Rs 20 fully paid-up shares of the Company are currently quoted at Rs. 21.24 *cum-div.* and, on an *ex-div.* basis, the shares provide a yield of 6.25 per cent. per annum.

The Directors have given no indication of the outlook for the Company, especially as freight rates have fallen. Nearly seven months of the current year have passed and it should be possible for them to say how the Company has fared so far. It is to be hoped that the Chairman will give the necessary information in his speech at the forthcoming annual meeting of the Company.

CHANGDEO SUGAR

The gross profit of Changdeo Sugar Mills Ltd. for the year ended 30th September, 1958, has declined to Rs. 18.04 lakhs from Rs. 24.98 lakhs for 1956-57. This is mainly due to lower yields from the farms caused by shortage of irrigation water and shortfall in late rains. The directors, however, have maintained the dividend at Rs. 2.25 per share of Rs. 12.50, equivalent to 18 per cent. per annum.

SPENCER'S PROFIT DROPS

DIVIDEND, HOWEVER, MAINTAINED

THE year ended 30th June 1958 has turned out to be a year of adverse working results for Messrs. Spencer and Company Ltd. (Chairman: Mr. Z. R. Irani, Madras). The Company's business turnover would appear to have suffered a setback, while at the same time expenses, other than those on raw materials consumed, have increased to touch a level at which they are the highest during the three years ended 30th June 1958. Consequently, the Company's profit has registered a sizable decline from that earned a year ago. The Directors have effected a small cut in the allocation to the reserves. The distribution to the shareholders is unchanged at 15 per cent., a rate which the Company had consistently paid from 1952 onwards.

The gross profit, at Rs. 22 lakhs, shows a drop of Rs. 4.51 lakhs from Rs. 26.51 lakhs for the previous year. It is, however, a shade higher than that of Rs. 21.86 lakhs earned in 1955-56. The net profit at Rs. 8.65 lakhs, compares unfavourably with Rs. 10.87 lakhs for 1956-57 and Rs. 10 lakhs for 1955-56. The provision for depreciation has been raised from Rs. 1.99 lakh in 1956-57 to Rs. 2.45 lakhs, whereas that for taxation has been reduced from Rs. 13.65 lakhs to Rs. 10.90 lakhs. The latter amount is inclusive of Rs. 1 lakh provided for wealth tax in respect of the year 1957-58; the corresponding provision for each of the previous two years was Rs. 75,000 set aside from the profit for 1956-57. A sum of Rs. 1.87 lakh has been transferred to the various reserves, as against Rs. 2.09 lakhs in the previous year. This consists of Rs. 1 lakh (Rs. 1 lakh) to fixed assets depreciation reserve, Rs. 39,000 (Rs. 93,200) to provision for current repairs, Rs. 36,351 (Rs. 11,405) to capital reserve and Rs. 12,000 (*nil*) to development rebate reserve.

The following comparative table provides an idea of the Company's progress in working during the past two years:

(In lakhs of rupees)

	For the year ended 30th June		
	1958	1957	1956
Sale proceeds and other income	304 90	330.37	308 02
Closing stocks of finished goods and work-in-progress	69 04	75.49	64.87
Raw materials and finished goods consumed	106 31	225 53	211 09
Other expenses	86 70	78 62	75 29
Gross profit	22 00	26 51	21 86
Provision for—Depreciation	2 45	1 99	1.91
Taxation	10 90	13 65	9 05
Net profit	8 65	10 87	10 00
Excess provisions written back	2.50	3 22	4.18
Transfer to reserves	1.87	2 09	3.55
Dividends—			
6% "A" cum. preference	1 03	1 07	1.11
8½% "B" cum. preference	2 14	2 22	2 31
Ordinary	6 00	6 00	6 00
	(15%)	(15%)	(15%)
Carry forward	9.13	9 03	6.33

The setback in the turnover is reflected in the fall in sale proceeds and other income and in the cost of raw materials and finished goods consumed. Closing stocks of finished goods and work-in-progress at Rs. 69.04 lakhs are also lower, as compared with Rs. 75.49 lakhs a year before. Of the rise in expenses, salaries, wages, bonus and pensions account for Rs. 4.38 lakhs at Rs. 46.16 lakhs and office and establishment for Rs. 1.35 lakh at Rs. 9.16 lakhs

A satisfactory financial position is disclosed by the Company's balance-sheet as at 30th June 1958. It has a paid-up capital of Rs. 100 lakhs, made up of Rs. 40 lakhs in ordinary shares of Rs. 10 each and the balance in two categories of A and B cumulative preference shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 93.18 lakhs. The gross block of a value of Rs. 123.83 lakhs stands written down to Rs. 55.22 lakhs, the depreciation provided so far being Rs. 73.61 lakhs. Buildings in course of construction is shown at Rs. 82,730. The current assets aggregate Rs. 204.10 lakhs and are equal to more than three times the current liabilities and the provision for taxation, amounting to Rs. 61.97 lakhs. Of the current assets, it is significant that the Company's quoted investments of a book value of Rs. 23.74 lakhs have a market value of Rs. 26.36 lakhs.

The Rs. 10 fully paid-up ordinary shares are currently quoted at Rs. 19.60 *cum-div.* (final dividend Re. 1). On an *ex-div.* basis, the yield is 8 per cent. per annum free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

SPENCER AND CO., LTD. Annual General Meeting, Madras, 5th February 1959. Dividend: Re. 1.50 per share (includes interim dividend of Re. 0.50 per share), free of income-tax. Transfer books remain closed from 30th January to 5th February 1959, both days inclusive.

CHERRA-CHHATAK ROPEWAY CO., LTD. Annual General Meeting, Calcutta, 7th February 1959. Dividend: Re. 0.25 per share. Transfer books remain closed from 29th January to 7th February 1959, both days inclusive.

SMITH STANISTREET & CO., LTD. Annual General Meeting, Calcutta, 10th February 1959. Dividend: 16 per cent, or Re. 0.80 per share. Transfer books remain closed from 27th January to 10th February 1959, both days inclusive.

CHAMPARUN SUGAR CO., LTD. Annual General Meeting, Kanpur, U.P., 11th February 1959. Dividend: Re. 1.00 per share. Transfer books remain closed from 27th January to 11th February 1959, both days inclusive.

BIRDS INVESTMENTS LTD. Annual General Meeting, Calcutta, 18th February 1959. Dividend: Re. 0.70 per share. Transfer books will remain closed from 4th to 18th February 1959, both days inclusive.

SCINDIA STEAM NAVIGATION CO., LTD. Annual General Meeting, Bombay, 18th February 1959. Dividend: Re. 1.25 per share, free of income-tax, payable on or after 25th February 1959.

KHARDAH CO., LTD. Annual General Meeting, Calcutta, 19th February 1959. Dividend: Rs. 8.00 per share. Transfer books will remain closed from 3rd to 19th February 1959, both days inclusive.

BRITISH BURMAH PETROLEUM CO., LTD. Annual General Meeting, Bombay, 23rd February 1959.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 23rd February 1959. Dividend: Re. 1.50 per share. Transfer books will remain closed from 16th to 23rd February 1959, both days inclusive.

ASHOKA CEMENT LTD. Annual General Meeting, Dalmianagar, 24th February 1959. Dividend: Re. 0.30 per share (being interim dividend). Transfer books will remain closed from 16th to 24th February 1959, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of 4 per cent. on ordinary shares, for the year ending 31st March 1959. Transfer books will remain closed from 4th to 11th February 1959, both days inclusive.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Interim dividend of 44 nP per ordinary share, free of tax for the year 1958-59. Transfer books will remain closed from 20th to 28th February 1959, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Dividend of Rs. 2.00 per ordinary share, free of tax, for the year ended 30th September 1958, payable on 1st April 1959. Transfer books will remain closed from 7th to 21st February 1959, both days inclusive.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Interim dividend of Rs. 3.00 per share, for the year ending 31st March 1959, payable on 3rd February 1959. Transfer books remain closed from 5th to 24th January 1959, both days inclusive.

HINDUSTAN ELECTRIC CO., LTD. Dividend of Re. 7.00 per share, for the year ended 30th April 1958, payable on 29th February 1959. Transfer books remain closed from 15th to 29th January 1959.

COMPANY REGISTRATIONS

ENGINEERING PRODUCTS PRIVATE LTD. (First Director: Mr. H. B. Patel.) Business: Manufacturers and dealers in machinery, plants, etc. Authorised capital: Rs. 25,00,000. Private company. The company is registered in the State of Bombay.

V. LILARAM CORPORATION (INDIA) PRIVATE LTD. (First Director: Mr. B. V. Lilaram.) Business: Importers and exporters. Authorised capital: Rs. 5,00,000. Private company. Mandvi Chambers, 3rd Floor, Samuel Street, Bombay-9.

SURFACTANT PRIVATE LTD. First Director: Mr. S. H. Sheth.) Business: Manufacturers and dealers in dyes and chemicals. Authorised capital: Rs. 5,00,000. Private company. Address: 28, Apollo Street, Fort, Bombay 1.

FOTO RESEARCH LABORATORIES PRIVATE LTD. (First Director: Dr. B. N. Purandare.) Business: To manufacture photographic materials. Authorised capital: Rs. 5,00,000. Private company. Address: 172A, Girgaum, Bombay 4.

GOPHIL LABORATORIES PRIVATE LTD. (First Director: Mr. B. G. Gandhi.) Business: Manufacturers and dealers in pharmaceuticals. Authorised capital: Rs. 5,00,000. Private company. The company is registered in the State of Bombay.

GREAVES DRONSFIELD PRIVATE LTD. (First Director: Mr. J. W. Dronsfield.) Business: Manufacturers and dealers in plastic and other materials. Authorised capital: Rs. 4,00,000. Private company. Address: 1, Forbes Street, Bombay-1.

LLOYDS BANK LIMITED

SATISFACTORY GROWTH IN VOLUME OF BUSINESS

RT. HON. SIR OLIVER FRANKS ON FREE WORLD'S NEED FOR CO-OPERATION, NOT EXCLUSIVENESS

THE Annual General Meeting of Lloyds Bank Ltd. will be held on 13th February at the Head Office, 71, Lombard Street, London, E.C. 3. The following is an extract from the circulated statement by the Chairman, The Rt. Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E.:

"The profit for the year 1958, at £2,727,535, is £225,144 higher than last year and the dividends paid or proposed represent an effective increase from 13 per cent to 15 per cent allowing for the enlargement of the capital by the issue of one new share for every two shares held.

"The business of the Bank has shown a satisfactory growth over the year, and this applies to all categories of our domestic affairs; the number of our customers continues to increase as the banking habit spreads to a wider section of the population."

"The offers to purchase the ordinary and preference share capital of Olds Discount Company Ltd. were accepted to the extent of 99½ per cent of the ordinary share capital and 97¼ per cent of the preference capital. Steps are being taken to acquire the outstanding balance in each case. The purchases were made in conjunction with The National Bank of Scotland Ltd., and The Commercial Bank of Scotland Ltd., and have since been transferred to a new holding company, Lloyds and Scottish Finance Ltd., to which company the Commercial Bank of Scotland has similarly transferred its holding of shares in Scottish Midland Guarantee Trust Ltd. The Commercial Bank of Scotland and Lloyds Bank each hold 50 per cent of the capital of this company at a cost to us of £10,300,000.

"Our Bank has also subscribed for 2,000,000 new ordinary shares of 5s. 0d. each in Bowmaker Ltd. at 29s. 6d. per share, costing £2,950,000.

Eastern Branches

The year 1958 proved a difficult one for our Eastern branches. The continuing restriction on imports in both India and Pakistan has inevitably been reflected in a reduced call for our services; in addition to which we have during the year under review seen some decrease in the rather exceptionally heavy demand for bank advances which we experienced in 1957.

"In spite of these adverse factors our Eastern branches have succeeded in maintaining our business at a satisfactory level, thanks in no small measure to the high standards of loyalty and service of our officials and staff. We are grateful for all they have done during the year.

"I hope and believe that Lloyds Bank, with the benefit of the experience we have gained in past years, can continue to play its full part in furthering the interests of the countries in which we operate in the sub-continent."

Towards Convertibility

In the course of his review of economic affairs, Sir Oliver Franks said:

"Meeting at Bretton Woods in 1944 to thrash out a post-war monetary system, forty-four nations agreed that the interests of the world would best be served, after a transition period, by a regime of stable and convertible currencies, free of exchange restrictions and discrimination.

"The recent return to convertibility of the leading Continental currencies, and the merging of the official and transferable rates for sterling, clearly brings us a long step nearer to such a system than anything we have seen hitherto. It opens a fresh chapter in world currency relations, a new phase in which the dollar will be only one among many convertible currencies and in which, therefore, special discrimination against dollar goods will cease to have any point.

"The most disappointing feature of our situation has been the failure of production to expand. During the first decade after the war the world passed through a major boom. In the last two or three years the pace of activity has slackened, not only in this country but in North America and most other industrial countries. In our own case, after two years or more of stability at high level, production fell away perceptibly after the spring, though in recent weeks there have been signs of improvement. In the United States, on the other hand, after a very sharp decline in activity during 1957, a pronounced upswing had already set in before the middle of 1958, with the result that nearly the whole of the lost ground had already been regained by the end of the year. Whether, and if so at what rate, that recovery will be maintained is one of the outstanding questions in the world economic outlook.

European Economic Community

"On the long view, the most significant developments of the past year have been the entry into force of the Rome Treaty creating the so-called European Economic Community, and the attempt to bring into being, as an adjunct to the common market of the six countries of that Community, a free trade area that would include the United Kingdom and other members of the O.E.E.C.

"The aim is that in the end the economies of the six nations will be welded into a single economic unit of a great power. And this in an area which in 1957 took about £500 millions of this country's exports and a further £1,000 millions of goods supplied by the overseas sterling countries.

"It remains to be seen what direction the European Economic Community will take as it develops. It could become either a great area of complete free trade internally, trading liberally with the outside world; or it could become a discriminatory bloc.

"This is not just an issue between the Common Market and other industrial countries. The agrarian countries also have much at stake. To mention only a few examples, the countries of the European Economic Community take nearly a third of the exports of Ghana and Kenya, a quarter of the exports of Pakistan, getting on for a quarter of the exports of Australia and Nigeria.

"Apprehensions on the score of possible discrimination by the Common Market countries reinforce those which are felt in underdeveloped countries about the limitation of the outlets for their products by agrarian protectionism in Europe and in the industrial countries generally.

"The whole question of the trading relations between industrialised and less developed countries has been rendered a matter of lively international concern by the decline in commodity prices. The difficulties of developing countries are repeatedly stressed in the report of the Montreal Conference, where it was agreed that we must do all we can, "even to the extent of some sacrifice," to assist in their solution, knowing that in the end this would be of material benefit to us all. What the underdeveloped countries can reasonably demand is that their products should not be unfairly denied access to the markets of the industrial countries. Nobody supposes that agrarian protectionism is going to disappear overnight, in the Commonwealth or anywhere else; but the Commonwealth is at any rate committed in general terms to its reduction."

Sir Oliver concluded his review: "Co-operation, not exclusiveness; that, surely, must be the guiding principle throughout the free world. The arrangements between the six countries of the Common Market, the discussions in Montreal, are each in their own way recognitions of the growing interdependence between nations; yet neither of these groupings is sufficiently embracing by itself to provide a satisfactory answer to the problems they set out to solve. Our interest is that a solution should be found of the difficulties in the relations of the Common Market and of the developing countries with the rest of the free world which gives an extension of liberal trading policies over the widest possible area."

ASSOCIATED CEMENT COMPANIES LIMITED

TWENTY-SECOND ANNUAL GENERAL MEETING

SPEECH OF THE CHAIRMAN, MR. DHARAMSEY M. KHATAU

SPEAKING at the 22nd Annual General Meeting of the Associated Cement Companies, Ltd., the Chairman, Mr. Dharamsey M. Khatau, said:

"The year under review has been one of increased production and despatches, the latter having increased by 2.57 lakh tons. Nevertheless, we have ended the year with considerable diminution in the profits available for distribution mainly due to the aggregate burden of taxation and the mandatory development rebate reserve."

Basic Industry

"It is beyond one's comprehension," the Chairman continued, "that a basic industry which has such an impressive record of progressive performance, which has contributed so much to the country's economic progress and in which the public from all classes has invested so much with such confidence, should be expected to operate under the burden of such exactions. The result is a ridiculous position, in which everybody, with the sole exception of the shareholder, seems to come out on the right side, at any rate in monetary terms. But that is not by any means the end of this dismal story. The final net result of the last year's working of your Company affords ample proof of the serious effect of taxation policy on corporate finance. For, apart from depreciation, the net 'plough back' of profits after a whole year's working on a vast scale is only about Rs. 6 lakhs! And it is from this paltry sum that your Company is expected to meet not merely the cost of replacements and renewals at steadily rising prices but also the needs of an expanding business!"

Tariff Commission

"It is in this context," the Chairman stated, "that the recommendations of the Tariff Commission have to be examined. Your Company had high hopes that the Commission would be alive to the realities of rising costs and increasing taxation and would recommend a fair price, such as would cover *all costs* and leave a fair margin of net profit after tax. Unfortunately, our hopes have been belied and the only substantive outcome has been the award of a totally inadequate increase of Rs. 3.50 per ton in the ex-works price of our cement. And even here, the Commission's recommendation that this price increase should be retroactive from 1st January 1958 was rejected by Government without assigning any cogent reasons save that it would involve 'administrative and financial complications.'"

Fair Return

While commending the concept of 'fair return' on 'capital employed' accepted by the Tariff Commission as a welcome departure from past practice, Mr. Khatau remarked, "the substance of this 'fair return' on capital employed was taken away by the incomprehensible proposition that such return was intended to cover not merely taxation and dividend, but also such charges as the annual bonus to employees and the commission contractually payable to Managing Agents which were manifestly items of overhead costs. Moreover, while it can be accepted that any reserve that may be voluntarily created by a company out of its profits (and which can be drawn upon by the company at any time), should be ignored in fixing the 'return' to be allowed, such cannot obviously be the case with the mandatory reserve which is statutorily required to be made at 75 per cent. of the development rebate. But the price structure as now determined and which is to remain in force up to July 1961 totally ignores these considerations, with the result that your Company will have to provide for all these charges besides taxation and dividend out of the 12 per cent. return on capital employed that has been allowed to it in the price of cement.

"Your Company, therefore, submitted a representation to Government that items of cost such as stockists' commission, bonus to employees, Managing Agents' remuneration, etc., and the charge for 75 per cent. of the development rebate should be allowed as legitimate and necessary elements of 'overheads' in computing costs and that the price of our cement ex-works should be refixed accordingly. We also requested the Government to allow the price increase with retrospective effect from 1st January 1958 as recommended by the Tariff Commission, in view of the considerable loss of profits suffered by the Company since the time the industry's case was referred to the Tariff Commission in 1957. I regret to have to report that our proposals have not found favour with Government and the representation has been wholly negatived."

Expansion

Mr. Khatau reported that the various expansion projects of the A.C.C. were proceeding satisfactorily. The *dry-process* plant at Mancherial, which went into operation recently, though slightly higher in initial capital cost, would economise in coal consumption. The extensions to the Sindri and Chaibasa works had been completed and those of the Kymore and Shahabad works were proceeding satisfactorily. The Chairman also announced that the Company would manufacture blast furnace portland cement at Chaibasa by utilising the slag obtained under agreement from the T.I.S.Co. works at Jamshedpur.

Finance for Expansion Projects

Speaking about the enormous capital outlay involved in financing the Company's expansion and modernisation projects, Mr. Khatau stated: "As the internal resources of the Company were diminishing and as the funds which had been already raised through borrowing against debentures for Rs. 4 crores issued in 1954-55 and by the offer of equity capital were inadequate to meet these requirements, your Board has now made arrangements for obtaining further advances to the maximum limit of Rs. 5 crores on cash credit accounts from the Company's bankers against the security of 6 per cent. first mortgage debentures of a like amount ranking *pari passu* in all respects with the earlier debentures. The proceeds will be utilised partly for financing the immediate needs of our modernisation and expansion programme and partly for investment in the heavy engineering project set up in collaboration with Messrs. Vickers Ltd. and Messrs. Babcock and Wilcox Ltd., of the U.K."

A.C.C.-Vickers-Babcock Ltd.

The Chairman announced that a new company under the name of A.C.C.-Vickers-Babcock Ltd. had been formed and registered as a public company, with its headquarters in Bombay. The first Board meeting of the new Company was held on the 20th of January. "The authorised capital of the Company is Rs. 10 crores, of which about Rs. 5.4 crores will be subscribed and fully paid-up over a period of some three years. Your Company's share of this will be 49.8 per cent. while the two overseas shareholding companies will take up 24.9 per cent. each. The balance of 0.4 per cent. will be held equally by the four firms who are the principal shareholders in the Cement Agencies (Private) Ltd.

"The works of the new Company will be located at Durgapur, West Bengal. It will manufacture cement-making machinery, general machinery, pumps, water tube boiler plants and accessories and pressure vessels. Production is expected to commence in 1962 and the works will attain its target of full manufacturing capacity by 1965." The project is expected to save a substantial amount of foreign exchange and in course of time perhaps *earn* foreign exchange through export of machinery items.

"This project constitutes an important step in the diversification of your Company's activities. The returns will be slow, because it may take as long as seven years before any dividends begin to come in; but when they do, they will be sure, though not spectacular. In itself the project will be one of major significance in the national economy."

The Chairman expressed his thanks to the Government of India for their continued encouragement and guidance and to the Government of West Bengal for their assistance in acquiring land and other facilities at Durgapur.

Central Workshops

Referring to the A.C.C.'s Central Workshops, the Chairman reported that their surplus capacity was being utilised to meet the requirements of outside parties and said that these workshops would be operated integratedly with the works of A.C.C.-Vickers-Babcock Ltd.

Demand for Cement

Mr. Khatau then referred to the sharp drop in the demand for cement since August last and remarked: "Any further deterioration in the situation would compel us to curtail production. In fact, whereas at one time the Government of India were continually pressing us to expand production capacity even more rapidly than we thought either practical or prudent, they have been recently suggesting that we should curtail production. But the stand we have taken is that in the best interests of the country such a desperate remedy should not be resorted to until all other measures have first been tried to correct the imbalance between supply and demand."

The Chairman narrated how the cement target under the Second Five-year Plan was raised again and again—starting with 10 million tons in 1954 to 12.5 million tons in 1955 and then to 15 million tons or so in 1956. This was contrary to the industry's considered advice, based on a careful assessment of the market conditions then prevailing, that the target should be pitched at 8 million tons. Referring to this unrealistic target of 15 million tons, Mr. Khatau remarked: "In cement, as in most other basic industries, 'physical planning' based on a 'plan frame' held the field, in total disregard of all such relevant considerations as the availability of transport or resources (whether internal or external), or the relationship between over-rapid investment, deficit finance, costs and prices, or between demand and supply at any given level of costs and prices, etc."

Mr. Khatau then listed (a) the licensing of excessive capacities for new factories and for the extensions to old factories, based on fanciful targets; (b) the rapid pace of such expansion, which is running quite out of step with, and far ahead of, the demand for cement both for Government requirements and for private and industrial consumption; (c) the licensing of expansions at the wrong places and (d) shortage of reinforcement steel, as the main causes of the serious imbalance between supply and demand, and warned that "this imbalance will intensify as more and more production becomes effective every year between now and 1960-61."

Coming to the immediate causes of the sudden drop in demand, he hoped that the falling off in Government demands was temporary and that the offtake would soon pick up again and that as regards private and industrial demands the position would also improve gradually over the next year or so. He expressed some concern over the one million tons or so of additional cement capacity which would come into production in the meantime.

"In these difficult circumstances, and following upon the deliberations at a conference of cement producers convened by the Government of India in October last, we joined with other producers in submitting a memorandum to Government suggesting certain specific remedial measures. Among the more important of the suggestions so made were: (1) diversion of large quantities of cement to road building, (2) rapid promotion of cement exports, (3) suspending further work on licences for the expansion of existing factories and for the establishment of new factories in those cases where no substantial financial commitments had yet been made and (4) reduction in price by reducing the excise duty back to Rs. 5 per ton."

Regarding cement prices, Mr. Khatau observed that while the excise duty on cement was raised from Rs. 5 per ton in 1954 to the incredible figure of Rs. 24 per ton in 1958, "the price of cement remained steady at an average of Rs. 90 to Rs. 91 per ton packed (f.o.r. destination) until the middle of 1956 when, with the advent of State trading in cement, it was pushed up to Rs. 102.50 per ton. In May 1957, the price of packed cement was raised again to Rs. 117.50 per ton (f.o.r. destination), at which level it stands today."

Tax Burden

Referring to the tax burden which cement has to carry apart from excise duty, Mr. Khatau observed: "The other indirect tax burdens included in the price of cement—at any rate for A.C.C. cement—account for an aggregate average of Rs. 2.23 per ton (based on 1957-58 figures) for royalties, duties, sales taxes, municipal taxes, etc. This does not include the incidence of *direct* taxes such as income-tax, corporation tax, etc., because it may be objected that, being taxes on profits, they do not enter into the make-up of the price of cement. This is, of course, totally wrong, because in the case of commodities such as cement where the price is controlled and fixed by Government from time to time, not only the net profit element but also the direct taxes do enter *as a specific load* in the final make-up of the price so fixed. In the case of A.C.C. cement, the incidence of this load was Rs. 5.52 per ton based on 1957-58 figures.

"The total tax-loading (including excise duty) in the price of unbagged A.C.C. cement is therefore as much as Rs. 31.75 per ton ex-works as against the present ex-works selling price of Rs. 82 per ton (inclusive of excise duty). It is against this background that the suggestion to cut back the excise duty to Rs. 5 per ton must be considered because there is, I submit, ample justification for this proposal in the facts I have just outlined. It should also not be overlooked that excise duty was increased in 1957 and 1958 with the specific purpose of inhibiting demand when cement was in short supply. This purpose it has served admirably; but today, when there is urgent need to stimulate demand and increase sales, the high excise duty is acting as a serious deterrent.

"As I have said earlier, it would be quite wrong to attempt to resolve the present surplus situation by recourse to desperate measures such as curtailing production until all other remedies have first been tried. The various measures to which I have referred in this connection are designed, on the one hand, to increase the offtake in such directions as accelerated programmes for building cement roads and exporting cement to the near markets and, on the other, to stimulate demand by a substantial, necessary and fully justifiable reduction in price by reducing the load of excise duty.

Labour-Management Relations

Turning to labour-management relations, the Chairman stated: "Except at the two collieries our relations with employees at our various works continued to be harmonious. I would like to congratulate our employees and trade union officials at the various factories on their growing sense of realism, maturity and increased awareness of their responsibilities in our common and joint endeavour.

"We have reached three-year agreements with the workers' unions at Katni, Kistna, Dwarka, Lakheri and the new works at Mancherial. These bring the total number of works covered by such agreements to eleven. Though it is too early to evaluate the results of these settlements, it is evident that they have been beneficial both to workers and management, by fostering goodwill and mutual trust, and ensuring smooth working, better emoluments and minimum loss of production time through industrial strife."

Wage Board

Referring to the Central Wage Board for the cement industry constituted by the Government of India, the Chairman observed: "The responsibility lies squarely on employers as well as on labour to put all relevant facts before the Wage Board and to assist the Board in arriving at correct conclusions. An even heavier responsibility lies on the Board itself to make recommendations, after a thorough study, which will be found acceptable to labour as well as to employers."

Shares for Employees

Mr. Khatau announced that the 12,202 shares of the new issue which had been offered to permanent employees as they had remained unapplied for by shareholders, had been fully subscribed for by the employees.

Bonus

The Chairman expressed regret that due to the substantial reduction in net profits, the Directors were compelled not only to reduce the net appropriations to reserves and to lower the dividend to 8.5 per cent., but also to scale down the bonus to employees to one-fifth (instead of one-fourth) of their annual basic salaries. The Chairman concluded by recording the Company's warm appreciation of the unremitting hard work and unstinted co-operation of all the Company's employees.

Note: *This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders on request.*

KHARDAH JUTE EARNS HIGHER PROFIT

RESULTS OF DECCAN SUGAR GOOD

Khardah Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The revenue account after deduction of all working charges and commissions shows a profit of Rs. 10 69,427 (Rs. 8,43,192) to which is added the amount brought forward from last year of Rs. 27,027 (Rs. 56,928) making a total of Rs. 10,96,454 (Rs. 9,00,120). After providing for depreciation Rs. 4,94,127 (Rs. 3,43,643), for taxation Rs. 64,128 (Rs. 43,450) and for development rebate reserve Rs. 6,366 (*nil*) there remains an available balance of Rs. 5,31,833 (Rs. 5,13,027). Which the directors recommend be dealt with as follows:—

For payment of dividends for the year ended 31st March 1958, without any deduction in respect of income-tax paid by the Company:—On preference shares at the rate of 6 per cent. per annum absorbing Rs. 54,000 (Rs. 54,000) and on ordinary shares at the rate of Rs. 8 (Rs. 8) per share absorbing Rs. 4,32,000 (Rs. 4,32,000) leaving to be carried forward Rs. 45,833 (Rs. 27,027).

In compliance with the working time agreement of the Indian Jute Mills Association, the Mills worked during the period under review, and are still working, 48 hours per week with 12½ per cent. of the total complement of looms sealed.

Since the directors' last report the working condition of the industry has improved to a certain extent. Till the end of January 1958 sacking constructions were showing good manufacturing profit although prices of hessian cloth were uneconomic. Later, however, the prices of raw jute started declining rapidly with consequent fall in prices of manufactured goods and in February 1958 the Indian Jute Mills Association decided to recommend to the Member Mills not to sell manufactured goods below Rs. 39.50 for 40" x 10 oz. Hessian cloth and Rs. 100 for heavy cees and B. twills. This step was primarily intended to arrest the decline in the fibre prices in order to ensure a satisfactory jute crop for the ensuing year, i.e., 1958-59. The prices in all sections showed considerable improvement thereafter, although these remained below the minimum level fixed by the Association from time to time. In July 1958 markets reacted sharply to the Middle East crisis and prices of sacking as well as hessian cloth went appreciably above the minimum level.

The recession in trade in the United States was practically overcome by the middle of the year 1958 and since then the consumption of burlap in that country has improved very considerably. The stocks of hessian cloth which continued to rise till June 1958 started declining and by the end of December 1958 stood at only 15,800 tons, which is the lowest figure for the last decade. As a result of the increased offtake of hessian cloth, prices in this section remained at a high level throughout the latter half of the year 1958. Prices of sacking constructions which remained at a higher level than the minimum during the months of July and August 1958, started falling steeply since the beginning of September and have been a source of constant worry to the jute mills. The bumper jute crop of this year resulted in heavy fall in the prices of raw jute and these also have been causing a very serious concern to the industry as well as the Government. In order to prevent a further fall in the prices of the fibre the Indian Jute Mills Association in consultation with the Government of India have recommended to the Member Mills to maintain the minimum price agreement arrived at in February 1958 but sacking constructions are still ruling below the minimum level in spite of all effort's by the industry as well as the Government. The fibre prices have come down to what may be considered as an uneconomic level for the cultivators and although the industry is having at present a good manufacturing margin it is apprehended that the present level of prices of raw jute will seriously hamper the jute cultivation during the coming year which may result in unsatisfactory working conditions again.

The East India Jute and Hessian Exchange started its operations from the end of March 1958 and has since been functioning satisfactorily as a regulated futures market, although it is too early to say that the desired stabilisation of prices has been achieved. It must, however, be mentioned to its credit that the directors of the East India Jute and Hessian Exchange have taken timely and appropriate measures which have saved the catastrophic fall in the raw jute prices.

As a result of bumper jute crop during the present year it is felt by Government of India as well as the jute trade that a limited quantity of raw jute must be exported in order to improve the prices of raw jute. The Government have entrusted the State Trading Corporation with the task of carrying on the export trade and it is hoped that after a period of nearly 10 years India will start its export business in raw jute again.

The modernisation programme of the Mills continues according to schedule. The machinery for the 3rd and 4th phases of the modernisation programme has started arriving and several units have already commenced working. As a result of modernisation certain workers who were rendered surplus created dissatisfaction amongst other workers resulting in a strike by the workers and the Mills remained closed from the 8th March 1958 to the 15th March 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,00,000	Gross block	2,00,52,835

Deccan Sugar and Abkhari Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry and Co., Ltd., Madras) submitted the audited accounts of the Company for the year ended 31st May 1958.

The net profit for the year before providing for taxation was Rs. 30,39,224 (Rs. 26,54,871) upon which taxation amounts to Rs. 17,57,581 (Rs. 17,05,211) leaving a net profit after taxation of Rs. 12,81,643 (Rs. 9,49,660). To this should be added the surplus brought forward from last year amounting to Rs. 1,16,220 (Rs. 1,23,240) making the profit available for appropriation of Rs. 13,97,863 (Rs. 10,72,900). Out of this amount the following appropriations have been made by the directors:

To capital reserve Rs. 32,000 (Rs. 30,000), to general reserve Rs. 3 00,000 (Rs. 3,00,000), to dividend equalisation reserve Rs. 1,50,000 (*nil*), to dividends, free of income-tax, for the year on preference share capital, 7 per cent. absorbing Rs. 49,000 (Rs. 49,000) and on ordinary share capital: an interim dividend of 5 (5) per cent. absorbing Rs. 1,99,200 (on old capital Rs. 99,600), and a final dividend of 13 (12) per cent. (including a special dividend of 3 per cent.) absorbing Rs. 5,17,920 (Rs. 4,78,080 on increased capital) leaving a surplus to be carried forward to next year of Rs. 1,49,743 (Rs. 1,16,220).

Reserves: As at 31st May 1958 the capital and revenue reserves and surplus of the Company, excluding the taxation equalisation reserve, aggregated Rs. 28,46,243 as against Rs. 23,30,720 last year.

Financial Position: The Company's financial position has improved considerably and the excess of current assets over current liabilities and provisions amounted to Rs. 44 lakhs as at 31st May 1958 as compared with Rs. 22 17 lakhs last year.

Review of Operations: *Samalkot*: The 1957-58 season started on 29th November 1957 and finished on 14th May 1958. During this period 1,11,567 tons on cane were crushed and 10,015 tons of sugar were produced as compared with 1,16,881 tons of cane crushed and 10,822 tons of sugar produced during the previous year.

Pugalur: The 1957 special season started on 20th August 1957 and finished on 12th November 1957. 66,028 tons of cane were crushed and 5,805 tons of sugar were producer at a recovery of 8.79 per cent. The main season for 1957-58 started on 1st December 1957 and finished on 7th June 1958. At the request of the ryots the season was extended by 7 days in June to crush unregistered cane. A total of 1,61,179 tons of cane was crushed and 15,083 tons of sugar were produced at a recovery of 9.36 per cent.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,84,000	Gross block	1,19,44,328

Notices

THE BHOPAL SUGAR INDUSTRIES LIMITED

NOTICE

THE FIFTEENTH ANNUAL GENERAL MEETING of the Bhopal Sugar Industries Limited will be held on Saturday, the 21st February 1959, at 2-30 p.m. (S.T.), at the Registered Office of the Company, Sehore, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 30th September 1958.
2. To declare Dividends on Preference and Equity shares.
3. To elect a Director in place of Shri K. H. Bhiwandiwalla who retires under the Articles of Association of the Company, and to consider, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the said Act.

   "RESOLVED that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri K. H. Bhiwandiwalla who retires by rotation under the Articles of Association of the Company, and who is also a Director and member of A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

4. To elect a Director in place of Shri Jayantilal J. Mulji who retires under the Articles of Association of the Company, and to consider, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the said Act.

   "RESOLVED that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Jayantilal J. Mulji who retires by rotation under the Articles of Association of the Company, and who is also a Director and member of A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

5. To appoint Auditors for the current year and to fix their remuneration.

Notice is also hereby given that the Transfer Books of the Company will be closed from 7th February 1959 to 21st February 1959, both days inclusive.

By Order of The Board of Directors,

V. R. JHAVERI,
Secretary.

BOMBAY, 12*th January* 1959.

Note

(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and to vote instead of himself, and a proxy need not be a member of the Company.

(*b*) If Dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 21st February 1959. The payments will be made on and after the 1st April 1959.

(*c*) Shareholders are requested to intimate change, if any, in their registered address.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act 1956

To

THE SHAREHOLDERS OF
THE BHOPAL SUGAR INDUSTRIES LTD.

DEAR SIR/MADAM,

In conformity with the Companies Act, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to the special business mentioned in the Notice dated the 12th January 1959.

Item No. 3: In respect of Item No. 3 of the Notice it is notified that Shri K. H. Bhiwandiwalla who is a Director of the Company and who retires by rotation under the Articles of Association of the Company, is also a Director and member of A. H. Bhiwandiwalla & Co. (Bombay) Private Limited, the Managing Agents of the Company. Under Article 122 of the Articles of Association of the Company the said Managing Agents are authorised to appoint two Directors as Ex-officio Directors, and they have in pursuance of the said authority, appointed Shri A. H. Bhiwandiwalla, and Shri Maneklal Ujamshi as Ex-officio Directors of the Company. Accordingly, under Section 261 of the Act, Shri K. H. Bhiwandiwalla cannot be re-appointed as a Director of the Company on retirement by rotation except by a Special Resolution passed by the Company and hence the necessity for passing the resolution set out in the aforesaid Notice. A special notice to move the resolution has been received by the Company from a member as required by the said Section 261. Shri K. H. Bhiwandiwalla has been a Director of the Company since long and has been associated as one of the Directors of the Managing Agents with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his advice as a member of the Board, it is desirable that his re-appointment be made by Special Resolution in accordance with the provisions of Section 261 of the Act.

Item No. 4: In respect of Item No. 4 of the Notice it is notified that Shri Jayantilal J. Mulji who is a Director of the Company and who retires by rotation under the Articles of Association of the Company, is also a Director and member of A. H. Bhiwandiwalla & Co. (Bombay) Private Limited, the Managing Agents of the Company. Under Article 122 of the Articles of Association of the Company the Said Managing Agents are authorised to appoint two Directors as Ex-officio Directors, and they have in pursuance of the said authority, appointed Shri A. H. Bhiwandiwalla, and Shri Maneklal Ujamshi as Ex-officio Directors of the Company. Accordingly, under Section 261 of the Act, Shri Jayantilal J. Mulji cannot be re-appointed as a Director of the Company on retirement by rotation except by a Special Resolution passed by the Company and hence the necessity for passing the resolution set out in the aforesaid Notice. A special notice to move the resolution has been received by the Company from a member as required by the said Section 261. Shri Jayantilal J. Mulji has been a Director of the Company since long and has been associated as one of the Directors of the Managing Agents with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his advice as a member of the Board, it is desirable that his re-appointment be made by Special Resolution in accordance with the provisions of Section 261 of the Act.

By Order of The Board of Directors,

V. R. JHAVERI,
Secretary.

BOMBAY, 12*th January* 1959.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the members of the Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta, on Tuesday, the 24th day of February, 1959, at 3 p.m., to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

As a Special Resolution:

1. That the authorised capital of the Company be increased to Rs. 16,00,00,000 by the creation of 20,00,000 further Ordinary shares of Rs. 10 each.

As a Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:

   Article 5(1) shall be deleted and the following substituted therefor—

   "5(1). The capital of the Company is Rs. 16,00,00,000 divided into 1,30,00,000 Ordinary Shares of Rs. 10 each and 3,00,000 Five per cent Cumulative Preference Shares of Rs. 100 each."

As an Ordinary Resolution:

3. That it is desirable to capitalise the sum of Rs. 2,07,34,830 out of the amount standing to the credit of the Share Premium Account as at the 31st March, 1958, and that such sum be capitalised accordingly and that such sum be applied in paying up in full at par 20,73,483 Ordinary Shares of Rs. 10 each to be allotted and distributed as fully paid bonus shares (hereinafter referred to as "Bonus Shares") to and amongst the holders of Ordinary Shares in the Company whose names appeared on the Company's Register of Members on the 22nd January, 1959, in the proportion of one Bonus Share for every five Ordinary Shares of Rs. 10 each held on that date and that the Bonus Shares shall rank in all respects *pari passu* with the existing Ordinary Shares of Rs. 10 each except that the Bonus Shares shall not rank for dividends for any period ending on or before the 31st March, 1959.
4. That the Chairman of this Meeting be and he is hereby authorised on behalf of the holders of the existing Ordinary Shares of the Company on the said 22nd day of January, 1959, to enter into an Agreement with the Company in the form submitted to this meeting and that such Agreement be and is hereby approved.
5. That the said 20,73,483 Bonus Shares be and they are hereby allotted and credited as fully paid up in pursuance of and subject to the provisions of the above-mentioned Agreement.

By Order of the Board,

MARTIN BURN LIMITED,

F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 28*th January*, 1959.

Note: (1) A MEMBER WHO IS ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE ON HIS BEHALF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

(2) The Share Transfer Books and Register of Members were closed from the 12th to the 22nd January, 1959, both days inclusive.

(3) Definitive Certificates for Bonus Shares along with cheques in payment for fractional entitlements will be posted to the registered addresses of shareholders who are entitled or to their mandatees promptly after the resolutions are passed at the Meeting.

N.B.—Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been sent to all Shareholders.

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, 28*th January*

Inter-bank activity in the money market continues to be on a limited scale, due to paucity of floating funds and growing demand for bank credit. Banks' requirements are being mainly met by running down their deposits with the Reserve Bank and by taking fresh loans from the Reserve Bank and the State Bank of India. In spite of the stringency, the rate of interest on inter-bank borrowings among Exchange banks and big Indian banks is unchanged at 3½ per cent. this week also, as banks are unwilling to pay more. The rate among the smaller Indian banks is also maintained at 3½-3¾ per cent. *House money* at seven days' notice is being done at 3½-3¾ per cent. and short-term deposits fetch 3¼-4 per cent. for one to six months.

This week's sale of 91-day Treasury Bills has brought no better response than in the previous week, the total amount offered being unchanged for the third week in succession at Rs. 2.05 crores, against an invitation for Rs. 2 crores. The average rate of accepted tenders has hardened further to 2.50 per cent. from last week's rate of 2.49 per cent. Tenders for next week are unchanged at Rs. 2 crores. There have been no sales of Intermediate Treasury bills in the week ended 23rd January too. Nevertheless, they are being continued at Rs. 99.391 per cent.

The Reserve Bank of India statement for the week ended 23rd January 1959 show a shrinkage of Rs. 5.83 crores in notes in circulation, while notes held in the Banking Department have risen by Rs. 6.45 crores. Foreign securities disclose no change, but balances held abroad have maintained their upward trend, though the extent of rise during the week under review is small, being no more than Rs. 70 lakhs. This raises the total foreign assets to Rs. 198.03 crores. Central Government's deposits are higher by Rs. 3 crores, while those of other Governments and banks have declined by Rs. 5.14 crores and Rs. 4.02 crores, respectively. Loans and advances to Governments are lower by Rs. 46 lakhs and other loans and advances by Rs. 10.23 crores. Scheduled banks' borrowings against usance bills, however, have gone up by Rs. 1.62 crore.

The Scheduled banks' statement for the week ended 16th January 1959 shows a rise of Rs. 3.25 crores in demand deposits and a decline of Rs. 6.21 crores in time deposits. Inter-bank borrowings have fallen by Rs. 1.44 crore, while those from the Reserve Bank are higher by Rs. 5.97 crores. Advances show a fractional rise of Rs. 74 lakhs, while bills purchased and discounted are actually lower by Rs. 1.97 crore. Investments are almost unchanged, but cash balances have gone up by Rs. 2.60 crores. Money at call and short notice have declined by Rs. 1.14 crore.

The Gilt-edged market is featureless, with activity very much restricted in the absence of demand for Central Government securities. In fact, some of the loans have started looking down, though the fall in prices is small and is confined to select counters. State loans, however, continue to be in demand at higher prices.

3 per cent. 1986 Conversion Loan has suffered a drop of 15 nP to Rs. 74.15, while 3 per cent. 1970-75 is unchanged at Rs. 91, as also 3 per cent. 1966-68 at Rs. 93.95. 3 per cent. 1963-65 has had some enquiries and is quoted 10 nP higher at Rs. 96.90. Among the 3½ per cent. loans, 1963, 1964, 1965 and 1967, each is being quoted 5 nP lower at Rs. 100, Rs. 99.80, Rs. 99.65 and Rs. 99.10, respectively. 3½ per cent. 1968 has picked up 10 nP to Rs. 98.95. 3½ per cent. 1975 stands 5 nP higher at Rs. 98.55, following the rise in the official selling price. 4 per cent. 1960-70 is marked down by 5 nP to Rs. 100.75, while 4 per cent. 1972 has hardened by 5 nP to Rs. 101. Rs. 101.30 and 4 per cent. 1973 by 10 nP to Rs. 101. Among the State loans, Bombay 4½ per cent. 1970 has risen by 5 nP to Rs. 101.80 and 4½ per cent. 1967 has gained 10 nP to Rs. 101.80. 4 per cent. 1967 has 1969 by 10 nP to Rs. 100.60. West Bengal 4½ per cent. 1970 is higher by 10 nP at Rs. 101 and 4 per cent. 1964 by 5 nP at Rs. 100.15. Madras 4½ per cent. 1967 has shed 5 nP to Rs. 101, while 4 per cent. 1970 has put on 10 nP to Rs. 100.05. Mysore, Saurashtra, Madhya Bharat and Rajasthan loans have all been marked up.

There has been a further hardening of the rupee in terms of the U.S. dollar. Banks' selling rate of ready dollar is quoted at Rs. 476.50, as against Rs. 476.75 per $100 a week ago, and their buying rate at Rs. 473, as against Rs. 473.50 per $100. This is in tune with the growing strength of sterling abroad. In New York, spot sterling is being quoted ¼c. higher at $2.80.15/16-2.81. Three months' forward has gained ground from $2.80.7/16-2.80½ to $2.80-23/32-2.80¾.

KIPS TEND TO DECLINE

(From Our Own Correspondent)

MADRAS, 27*th January*

Arrivals of E.I. tanned hides and calves were of the usual volume, and prices showed a decline of 2 nP to 3 nP per lb. Shipment business with the U.K. was spotty and demand centred round mostly lower selections for which inland demand was brisk. U.K. buyers showed less interest in buff calf and cow calf skins and prices were expected to decline in this section.

As regards tanned skins, a few sales were made in premium marks at full prices and sellers did not seem to be anxious to take counter bids.

In the January London tanned skins public sales, prices of goat skins of good quality advanced by 3d. to 6d. on December levels, while those of sheep declined by 6d. when sold.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, 28*th January*

Buoyant conditions prevailed in the bullion market during the week under review and the prices of both silver and gold made a strident advance. The buoyancy was engendered by expectations of better demand for the precious metals in the coming weeks and the firmness of commodity markets. Reports from upcountry centres already received indicated signs of growing offtake. On the option settlement day on the 22nd inst., option dealers were keen buyers, while there was stopless buying by bears. Consequently, values registered a handsome improvement. Yesterday, when business in March silver delivery commenced, a prominent bull operator was reported to have extended his commitment in this position.

January settlement in silver opened the week distinctly firm at Rs. 195-3, as against Rs. 194-12-6 on the preceding day. After easing slightly on Friday, it moved up thereafter to touch a high of Rs. 195-14 yesterday before finishing at Rs. 195-12-6 at which level the settlement terminated. The February settlement spurted from Rs. 195-12 last week to Rs. 196-12 today. Towards the close, it was an anna lower. The carry-forward charge against bulls, after narrowing down from As. 15-6 to As. 13 on the 24th inst., widened again yesterday to As. 15-6. Business in March settlement commenced on Tuesday at Rs. 196-5. The quotation for this settlement today was Rs. 197-3.

Ready silver met with good buying orders and advanced from Rs. 194-12 to Rs. 196-4 today before closing at Rs. 196-3. The net gain over the week was Re. 1-7. The daily average arrivals and offtake were 13 bars and 12 bars, respectively. The floating stocks of silver are estimated at 1,400 bars.

In the gold section, January settlement, which stood at Rs. 117-11 on Wednesday last, improved to Rs. 118-4 and terminated at Rs. 117-12 on the 24th inst. February settlement rose from Rs. 117-15 to Rs. 118-8 today before finishing at Rs. 118-7.

Ready gold opened at Rs. 118-5, as against Rs. 118, and hardened on good buying support to touch Rs. 118-14 today. Towards the close, it was a shade easy at Rs. 118-13. The daily average arrivals of gold were 4,000 tolas, while the offtake was 3,500 tolas per day. The floating stocks of gold are reported to be around 25,000 tolas.

Ready silver in London rose from 76½d. to 76⅝d. and forward from 75⅞d. to 76⅜d. Gold in London declined steadily, the rate yesterday being 249s. 6¾d., as against 250s. 1d. on the 20th inst. Silver in New York remained unchanged at 90.375 cents throughout the week.

The following comparative table shows at a glance the trend of the market during the week under review:

	28-1-59	Highest	Lowest	21-1-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

BLACK PEPPER RISES FURTHER

(Messrs. Parekh and Co.)

BOMBAY, 28*th January*

The firmness of Malabar black pepper reported last week continued unabated. Prices rose further under pressure of speculative buying and short-covering. The speculators switched their interest mainly to the specific delivery for the month of April, as the Bombay market was still below cost parity at all terminal centres and whatever arrived was taken up by consuming centres. The chances of any sizable export business failed to improve materially, as prices at almost all primary markets went up. This was considered to be a weak spot in the picture, since the major part of production was to be marketed.

Alleppey rallied from Rs. 587½ to Rs. 650. Garbled at Cochin for February delivery spurted from Rs. 100 to Rs. 115. Heavy fluctuations were seen on the forward ring, as the control of the market seemed to have passed into the hands of a couple of prominent bulls. Calicut improved from Rs. 625 to Rs. 710, with limited arrivals. With the advance in prices, growers became reserved sellers. Consequently, arrivals became restricted. This emboldened the bulls to push up prices almost daily.

Lampong pepper in Singapore showed a hardening tendency. Sizable business with New York was reported done at prices ranging from $0.22 to $0.23.

Spot in New York, after showing a temporary fall to $0.23, improved to $0.24¼, as inventories with the grinders were reported to be low.

Ready in Bombay hardened to Rs. 88. Arrivals were low, owing to higher replacing parity.

At the time of writing, Alleppey is reported quoting Rs. 625, while Cochin at Rs. 106 for garbled. Calicut is reported quiet at Rs. 680.

In A.S.T.A., January was done at $0.23¾, while Feb.-March at $0.24¼. In specific delivery, February is quoted at Rs. 595, while April at Rs. 615.

Today's nominal quotations are: Ready delivery Rs. 86 per Bengal maund, February Rs. 595-Rs. 600, April Rs. 615-Rs. 620 per candy of 5¼ cwts.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, 28*th January*

The cotton futures market, which ruled easy from the commencement of the week till Saturday, staged a smart rally on Tuesday. The earlier easiness was attributed to heavy profit-taking and persistent liquidation prompted by weaker spot and upcountry advices. Yesterday's firmness was due to large-scale buying touched off by reports of unwanted rains in Vidarbha area and crop-killing snow in the Punjab. The crop in Punjab was already unsatisfactory and, with the weather taking an adverse turn, considerable deterioration in crop was feared. Weather news from the South and Gujerat and Saurashtra regions also was not encouraging. Under pressure of all-round buying orders, cotton futures spurted. The market ruled fully steady today.

I.C.C. Moglai Jarilla (March 1959) opened the week at Rs. 663.50 and, after improving slightly to Rs. 667.25, declined to Rs. 656 on Saturday. The market was closed on Monday it being Republic Day. The contract rose to Rs. 672 yesterday. Commencing today's session at Rs. 670, the contract improved to Rs. 671.50 before finishing at Rs. 670.25. The price trend of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	28-1-59	*High*	*Low*	21-1-59
I.C.C. Moglai Jarilla (March 1959) ...	670.25	672	656	664.50

The spot section, which was quiet during the early part of the week, became active towards the close. The adverse crop reports prompted mills to make fresh purchases. Prices continued to rule firm. Ahmedabad mills were interested in Moglai Jarilla, Rajapalayam, Khandesh, Berar 0394, etc., also evoked interest. Vijay was well favoured.

The export section was dull. Foreign demand was practically negligible. Higher price of exportable styles and deterioration in the quality of crop were said to be keeping foreign buyers off the market. Meanwhile, it is reported that the proposal for sending a cotton delegation to Japan, Hong Kong, Western Europe and the U.S.A. has taken practical shape. The main object of the visit will be to renew personal contacts, study the requirements of these countries and how India can help in meeting them.

Activity on the import front came to a virtual standstill, thanks to the failure of the much-awaited import quota announcement to materialise. The quotas so far issued have been already exhausted and fresh business is not possible until further quotas are announced. Limited interest was noted for East African growths. Egyptian cotton was considered too dear *vis-a-vis*, Sudans, especially after the latest reduction in reserve prices.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 685; Berar Jarilla 735; Khandesh 820; Vijay 960; Jaydhar 920. *Delivery contracts*: Bengal 625; Mathia 610.

In contrast to the easy trend noted last week, Karachi cotton futures market ruled fairly firm during the week under review. There was good demand from mills, although export demand was poor. N.T.R.G. March improved from Rs. 61-12-6 last week-end to Rs. 62-4-6. The January contract expired on the 24th inst. at Rs. 62-4. The spot section was active. Prices of all varieties registered improvement. Sind *Deshi* was quoted one rupee higher at Rs. 65. Punjab *Deshi* advanced by a like amount to Rs. 58-8. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 62-12; S.G. 67-12; L.S.S. Punjab Roller 65-4; S.G. 69-4; N.T. Roller 66-8; S.G. 73-12. 289F Punjab Roller 73-4; S.G. 82-2.

Easy conditions prevailed in Alexandria cotton futures market during the week. The further reduction in the reserve prices of the Sudan Gezira Board had a dampening effect on the sentiment of operators in Alexandria cotton futures market. It was feared that Egyptian cotton would have to face renewed competition from Sudanese styles. Karnak January contract expired on the 26th inst. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 72.80; May 73.30. *Ashmouni*: February 64.10; April 63.95.

The Gezira Board is reported to have lowered its reserve prices once again For unsold stocks of 'S' cotton the reserves have been reduced from 112 penny points per pound to 162 penny points per pound while those for 'L' cotton have been lowered from 50 points per pound to 125 points per pound.

Reports on new crop developments continued to be very encouraging. According to some private advices, there is a distinct chance of the crop surpassing the 1956-57 season's record harvest of 626,630 bales (of 425 lbs. each). The weather has been very favourable to plant growth and insect infestation has been light. No announcement has been made about the selling policy for new crop by the Gezira Board.

Further gains were recorded by the Liverpool cotton futures market during the week under review. In the absence of selling pressure, and on the emergence of trade covering and investment buying, values advanced. Both the American and American type contracts registered improvement. Sudan contracts were inactive. Values were unchanged. The latest available quotations—in pence per lb.—from Liverpool are as follows:

American cotton one inch staple contract: March-April 22.75; May-June 22.20; July-August 20.85; October-November 20.00. *American cotton mixed growth contract*: March-April 23.05; May-

June 22.35; July-August 20.97; October-November 20.10. *Sudan*: January-February, May-June, July-August 24.75.

The New York *cotton futures* market ruled more or less *firm* during the week under review. The near deliveries in particular received good mill and trade support, and the quotations rose. The improvement would have been more marked but for reports of steady build-up in certified stocks.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	27-1-59	20-1-59	13-1-59
Spot	35.75	35.55	35.70
March	35.30	34.35	34.68
May	35.41	34.52	34.82
July	34.67	34.03	33.94

STAPLE FIBRE YARN IMPROVES

(From Our Own Correspondent)

BOMBAY, *28th January*

Easy conditions were in evidence in the yarn market during the week under review, with the exception of staple fibre yarns which were somewhat steady. Offtake continued to remain restricted with values moving further downward. Art silk yarn was subjected to pressure of deliveries from indigenous manufacturers against contracts entered into earlier. Arrivals of foreign imported yarns against export promotion licences were also reported to be heavy. Demand from important consuming centres was poor, due to low offtake of cloth. Despite firmness of raw cotton prices, cotton yarns continued to remain depressed. Weavers were reported to be reluctant to augment their stocks of yarn, as demand for handloom fabrics had not picked up. Prices would have shown a marked fall but for hopes that, with the advent of the hosiery season in the next few weeks, offtake of yarn would show some improvement. Staple fibre yarns, however, evoked good demand on expectations of enlarged offtake of staple fibre fabrics.

In the art silk yarn section, 150 Japan, 120 Italy and 150 Italy declined by 6 nP each to Rs. 4.94, Rs. 5.25 and Rs. 5.31, respectively. 120 Japan receded by 2 nP to Rs. 4.89. Among indigenous yarns, National Rayons 150 bright cones first grade lost a naye Paisa to Rs. 4.37, while 120 bright cones first grade were neglected at Rs. 4.38.

Cupressa Bamberg art silk yarn (60/1) February delivery encountered selling pressure and dropped Rs. 20 to Rs. 1,578. Spot 60/1 Cupressa eased by 18 nP to Rs. 8.19.

Staple fibre yarns, as stated earlier, elicited some support. February delivery (40x2) gathered Rs. 2 to Rs. 611. April delivery was steady at Rs. 617. Spot (40x2) Citys improved by 4 nP to Rs. 3.16. Kohinoors put on a naya Paisa to Rs. 3.31. Centurys were firm at Rs. 3.25. Among foreign yarns, Fujis strengthened by 7 nP to Rs. 8.94. Paramounts were fully maintained at Rs. 8.87.

In the cotton yarn section, sixty counts were neglected, Finlays being quoted at Rs. 65 and Raghuvamshis at Rs. 53. Among forty counts, Moderns changed hands at Rs. 25.25, same as last week. Minaxis, however, rose by 6 nP to Rs. 24.56. 32 counts Sarojas declined by 12 nP to Rs. 20.50. Moderns eased by a like amount to Rs. 21.25. Maduras were quiet at Rs. 21.75. Among thirty counts, Hinds were stagnant at Rs. 19.25. Twenty counts Moderns were dull at Rs. 16.25. Ten counts, however, were better, Moderns rising by 50 nP to Rs. 13.25, and Podars by 7 nP to Rs. 12.19.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	28-1-59	21-1-59
Art silk yarn (per case of 200 lbs.)—	Rs.	Rs.
120 Japan (per lb.)	4 89	4.91
150 Japan (per lb.)	4 94	5.00
120 Italy (per lb.)	5 25	5.31
150 Italy (per lb.)	5.31	5.37
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	611.00	609 00
40 x 2 April	617.00	617.00
40 x 2 Kohinoor (per lb.)	3.31	3 30
40 x 2 Century (per lb.)	3.25	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.12
20s Modern	16 25	16 25
30s Hind	19 25	19 25
40s Minaxi	24 56	24 50
60s Finlay	65 00	65.00

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, *28th January*

The impressive rally in prices of oils and oilseeds witnessed last week showed no signs of abatement during the week under review. Indeed, prices generally touched new high levels. The rise should be attributed to speculative support, particularly by certain North Indian interests and to demand from crushers. The margin considerations and the advice of the Forward Markets Commission proved of no avail. The spot prices, also moved ahead, particularly in view of relatively lower arrivals. The firmness of groundnuts gathered considerable momentum today following the announcement of the Central Government's decision to grant additional (bonus) quotas of H.P.S. groundnuts and groundnut oil for export up to the end of June 1959. The trade notice issued in this behalf by the Joint Chief Controller of exports gives the following details:

Quota holders will be allowed a quota of two tons of H.P.S. groundnuts for every ton of H.P.S groundnuts exported by them before the end of September 1958. Similarly, for every ton of groundnut oil exported by them up to the end of September 1958, they will be allowed three tons of *groundnut oil*. Export of H.P.S. groundnuts will be allowed in the form of kernels only. Shippers of H.P.S. groundnuts and groundnut oil should submit their applications along with the necessary documentary evidence, such as bills of ladings and export invoices and statement of the evidence as proof to show that they have actually shipped the goods on or before the end of September 1958, when the necessary allotment memos will be issued to them.

The Government of India has decided that all varieties of vegetable non-essential oils exported out of India on or after the 24th inst. will be granted rebate of excise duty at the rate of Rs. 104 per ton, as against Rs. 88 per ton admissible till then. In the case of exports of linseed oil, castorseed oil and tobaccoseed oil, however, full excise duty of Rs. 112 per ton is admissible, as has been the practice hitherto.

Distinctly bullish sentiments prevailed in the groundnut section. This was aided by lower levels of offerings. The upcountry operators lent support to the market. The impressive rally in prices led to heavy short covering. In the spot section, there was good demand both from *vanaspati* manufacturers and crushers. Groundnut February and May contracts which closed last week at Rs. 174.25 and Rs. 178.75 on a firm note, after experiencing minor fluctuations with a distinctly steady undertone, wound up the week at Rs. 179.62 and Rs. 184.37. Bold ready moved up from Rs. 35.25 to Rs. 36.37. Oil prices, in sympathy, advanced from Rs. 18.75 to Rs. 19.12.

There was sizable improvement in the castor-seeds section. Advices from abroad were, however, limited. Nevertheless, castorseed registered considerable gains mainly on account of special active support. There were rumours that Brazil's crop has been adversely affected by unfavourable weather conditions. It cannot, however, be overlooked that the soaring prices in castor oil widens the disparity between Indian and foreign prices. It is likely to affect adversely India's export business in castor oil. Castorseed May 1959 contract spurted by Rs. 5 to touch a high of Rs. 154.75 today. Ready Madras hardened from Rs. 29.25 to Rs. 30.50. Oil B.S.S. which closed last week at Rs. 16.19 rallied to Rs. 16.75.

The strength in other markets gave an impetus to the linseed section. There were unfavourable weather reports from the Punjab. Linseed May 1959 contract which stood at Rs. 32.50 last Wednesday, fluctuated between Rs. 32.31 and Rs. 33.06, but it secured renewed strength today to close at Rs. 33.25. Bold ready lost about 12 nP over the week to touch Rs. 35.50. Linseed oil, however, gained by 19 nP to close at Rs. 18.00 today. Persistent short-covering and scarcity of fresh offerings pushed up cottonseed prices. Firmness in the cottonseed cakes aided this improvement. Cottonseed February 1959 contract rose from Rs. 125.75 to Rs. 132.00 yesterday; it, however, reacted today in sympathy with the cotton market to touch Rs. 131.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-1-1959	21-1-1959	14-1-1959
Groundnut	Rs.	Rs.	Rs.
February 1959	179 62	174 25	168 25
May 1959	184 37	178 75	172 50
Bold ready	36 12	35 25	33 56
Coromandel ready	36 37	35 75	34 50
Khandesh quality	36 50	35 75	34 62
Oil ex-mill ready*	19 12	18.75	18.00
Railway receipts*	18.04	18.62	17.94
Castorseed			
May 1959	154.75	149 75	145 00
Ready Madras	30 50	29 25	28.75
Ready Kanpur	29 50	28 25	27 75
Oil B.S.S.†	16.75	16.19	15 87
Oil commercial†	15.50	14.94	14.62
Linseed			
May 1959	33.25	32.50	31.62
Bold ready	35.50	35 62	35.50
Oil ready†	18 00	17.81	18.00
Cottonseed			
February 1959	131.50	125.75	122.50
May 1959	127.25	122.25	118 50
Niger seed	29 00	28.25	27.75
Kardi seed	21.50	21.00	20.62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, *28th January*

The sugar market ruled firm during the week under review, in contrast to the distinctly easy trend noted last week. There was an overall rise of 50 nP per bag in ex-mill quotations. Traders feel that sugar production in the current season will be lower than in 1957-58. This factor, together with rumours regarding imposition of agricultural income-tax on sugarcane plantations in the forthcoming Central Government budget and levy of excise duty on *khandsari*, has imparted much strength to the market. There are also expectations of upward revision in ex-mill prices of North Indian sugar and cane prices.

Arrivals of sugar by rail into the market during the week were small, being just 12,710 bags, as against 23,360 bags last week.

Large grain sugar advanced by a rupee to Rs. 113-Rs. 118 per bag. Medium grain gained a like amount to Rs. 109-Rs. 112. Small grain was done at Rs. 103.

HAPUR, *26th January*

The sugar market ruled quiet during the week, due to better supplies following a further release of 165,000 tons for free sale by the Government of India. Crushing here in west U.P. is in full swing and the cane supply is reported to be adequate, but, on the whole, the sugar production in the country is tending to decline. The supplies of cane to factories in U.P. is being threatened again as strike has been announced from 5th February if cane price is not increased from Re. 1.44 to Rs. 17.75 per maund.

The Muzarfarnagar sugar market ruled quiet. Crystal spot delivery old Deoband C29 moist was quoted at Rs. 35, new Deoband D29 at Rs. 37, Saharanpur D29 at Rs. 37, Rohana D29 at Rs. 37 and Shamli D29 at Rs. 36.75. Mill delivery rates were: Rohana B28 Rs. 36.75; Raja D29 Rs. 36; Iqbalpur A29 Rs. 37.75; Khatauli A29 Rs. 37.75; B29 Rs. 37.12.

Sugar prices at Kanpur were quiet in the absence of new urges. The latest prices were: Ex-mill controlled Rs. 36 per maund; spot per bag C29 Basti Rs. 104-4; Gola Rs. 103; D29 Gola Rs. 102; Rurhwal Rs. 101-12; Tulsipur and Belrampur Rs. 101-4; Lakhimpur and Hargaon Rs. 101 per bag.

Khandsari ruled quietly steady. *Khandsari* of crystal quality is also being manufactured. This is being quoted lower than mill crystal. The *khandsari* manufacturers are buying cane upto Re. 1.37 per maund. The prevailing prices were: superior Rs. 30 to Rs. 35; inferior moist Rs. 26 to Rs. 29 per maund.

Ready *gur* registered an improvement of about Re. 1 per maund during the week, as arrivals were low, following cloudy weather and some rains. Continued bull support from speculators was also a bullish factor. The total arrivals from the beginning of the season were 403,000 maunds, as against 290,000 maunds in the corresponding period last year. The latest prices were: *gur pansera* Rs. 15.75 to Rs. 16; *Balti* Rs. 16.75 to Rs. 17, *shakker* Rs. 17.

Gur recorded fractional gains in the Muzaffarnagar market where arrivals averaged 6,000 to 7,000 maunds daily. The latest prices were: *chaku* Rs. 17.25; *pansera* Rs. 16; *ladu* Rs. 16; *shakker dara* 17; *masala* Rs. 18.

Future *gur* prices moved both ways during the week but the undertrend continued to be bullish. Opening at Rs. 15.23 last Monday, *fagun* touched the highest at Rs. 15.78 in midsession and, on Saturday, it was done at Rs. 15.41.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, *27th January*

Although raw jute remained steady and a small rise in price was recorded for the best variety, jute goods were dull and uninspiring, in the absence of adequate business during the week under review. The steadiness in raw jute followed further purchases by the State Trading Corporation and the rumour that a few baling presses had been granted export quotas for raw jute. Business was in fact done for export in respect of a few thousand bales at about £88 per ton. Sacking goods were dull, and B. twills were throughout the week well below the I.J.M.A. minimum level. Sentiment was further chilled by the report that a well-established old firm of gunny brokers had decided to close down, as it felt that it was no longer remunerative to trade in sacking goods. Although, the December consumption of burlap in the United States showed a rise, hessian did not show any cheer, as the December-end stocks at 235.3 million yards were higher by 12.4 million yards. The news that no further shipments should be made from Calcutta until fresh import licences were granted by Argentina spread, and this shook the confidence of the market by a further marked degree.

Market circles felt that when prices of goods were continuously depressed in the absence of adequate business with overseas buyers, the best that could be done was to permit unrestricted exports of raw jute for some time at least. This, they said, would not only push up raw jute prices to a level, which will not only be fair to the cultivator but also contribute to confidence in goods also. The fact that prices of jute goods has for some time now continued to be much below the minimum prices and business at the reduced rates still left a margin of profit, in view of the heavy fall in prices of raw jute, made traders discuss the question whether it would not be possible to lower the minimum prices and thereby remove the hesitancy on the part of the foreign buyers. So, when the Committee of the Indian Jute Mills Association met to discuss the market conditions for jute goods, the expectation that the minimum prices would be lowered ran high and business was brought to a standstill. However, the Committee met and dispersed, and the minimum prices continued to be enforced at the existing levels. This brought further nervousness and foreign buyers were not attracted to enter the market. The possible thought in their minds would have been that an unreal relationship between the raw material and the manufactured goods' prices could not long be maintained; they, therefore, anticipated a corrective sooner or later. That explained for their wait-and-see attitude, which has driven away confidence from the market.

Earlier in the week, there was much selling pressure in the futures market and this contributed to depression in the ready market. Ready B. twills lost to Rs. 92.00 from Rs. 92.20, and ready hessian 40" 10 oz., although unchanged at Rs. 40.75, was extremely quiet. This was followed by some covering demand in the futures market, and, although business was lacking in the ready market, B. twills nominally recovered to Rs. 40.75. At this stage that is, on Wednesday, the news of increase in

United States burlap stock, both spot and afloat, was available, and this depressed hessian 40" 10 oz. to Rs. 40.60, and to Rs. 40.50 on Thursday. However ready B. twills registered a recovery to Rs. 93.05 on Thursday, as there was buying pressure in the futures. The market was closed on Friday on account of Netaji Bose's birth anniversary. After reopening on Saturday, small business continued to be done with hessian 40" 10 oz. remaining unchanged at Rs. 40.50 and B. twills at Rs. 93.00 being fractionally lower. There was no market yesterday being Republic Day.

In raw jute, the superior varieties picked up fractionally, while the poorer qualities remained unchanged at or about previous rates. The news that the State Trading Corporation released small quantities for export had only a small reaction, in view of the continued weakness in the manufactured goods market. Traders felt gravely that when, even in this year of near self-sufficiency, fibre prices had gone down much to the disadvantage of traders and cultivators, the situation in a year of self-sufficiency could be only anybody's guess. This way of thinking was provoked by reports that in Rajasthan displaced persons from Pakistan were bidding well to growing jute. They pointed out that the sooner India reverted to unrestricted raw jute export as in the pre-partition period, the better. Daisees bottoms February-March improved to Rs. 23 from Rs. 22, while Northern bottoms, at Rs. 20.50, were unchanged but steady.

TEA PRICES GAIN FURTHER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *22nd January*

Sale No. 3 which was held on Tuesday, 20th January amounted to 814,533 lbs. Teas from the Anamallais district showed a marked improvement, with a number of invoices having very useful quality. Nilgiri teas continued to show a seasonal improvement. The sale opened to a strong general demand from both exporters and internal buyers. The exporters competing strongly for the improved quality teas. Low medium brokens were fully firm, but equivalent fannings were dearer. The medium good medium and best liquoring teas met with useful competition and prices for these teas were higher following quality. There was a better demand for whole leaf teas, but tippy teas sold at dearer rates. The quotations were: low medium Re. 1.55 to 1.65, medium Re. 1.75 to 1.90, good medium Rs. 2.10 to 2.40 and quality Rs. 2.35 to 3.75.

The average price realised in Sale No. 3 was Rs. 2.11 per lb., as against Rs. 2.02 in the previous sale and Rs. 2.29 in the corresponding sale of 1958.

London Market:—*Sale of 19th January 1959.*—Better demand and dearer tendency, particularly for plain teas which were 1d. to 2d. higher.

Sale of 20th January.—Firm to dearer.

Colombo Market:—*Sale of 19th January 1959.*—Less demand. Highgrown brokens declined 20 to 30c. Good mediums down 15 to 20c. Plainer mediums down 10c. Lowgrowns 3 to 5c.

Sale of 20th January 1959.—*Offgrades* good demand. Black leaf sorts firm. Other kinds slightly lower.

Calcutta Market:—*Export.*—66,000 chests. Good general demand. Plain and medium B.P. occasionally dearer. Similar pekoe fannings less enquiry. C.T.Cs firm.

Internal.—17,500 packages dust. Good general demand. Grainy orthodox 4 nP easier. Powdery types strongest. C.T.Cs irregularly dearer rates.

Export Quota.—The market has been easier, and very little business has been transacted during the week. Last business was done at 2¾ nP. There are sellers and possible buyers at 3 nP.

Forthcoming Auctions.—Sale No. 4 will be held on Tuesday, 27th January and Dust Sale 'B' on Thursday, 29th January.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* No. 4.—900,000 lbs. Market irregular, rather less demand for low mediums which are barely steady. Mediums and best liquoring dearer following quality."

GOOD DEMAND FOR TEA DUSTS

(From Our Own Correspondent)

CALCUTTA, *27th January*

The weekly export auction was not held yesterday on account of Republic Day. During last week's sales for internal consumption, there was good demand, but prices followed an irregular pattern.

It was enthusiastically noted here that, despite an abnormal increase in the U.K. warehouse and about-to-be-landed stocks to 190.2 million lbs. in the week ended 16th January from 187.7 million lbs. in the previous week—incidentally these stocks created a post-war high record—fully steady conditions were in evidence in the last sales held in Mincing Lane.

Figures relating to tea shipments of North Indian tea up to 10th January from 1st April last, show a striking increase, as compared with those in the corresponding period of 1957-58. The total of all shipments comes to 337.7 million lbs. or 71.7 million lbs. more than in the same period of 1957-58. Countrywise, impressive increases are noted in shipments to the United Kingdom, the U.S.S.R., and the Middle East, at 231.3, 19.4 and 41.4 million lbs., as against 182.2, 10.8 and 30.1 million lbs., respectively. Exports to Europe and America show small increases at 11.4 and 22.9 million lbs., from 9.4 and 21.3 million lbs., respectively. Eire records a slight decline at 10.2 million lbs., as against 10.4 million lbs., followed by Far East and miscellaneous countries at 800,000 lbs. and 300,000 lbs., respectively, as against 900,000 lbs. each. These figures speak impressively, but the only comment in the tea trade was that if only an analysis was made according to value, that would unfold a different story. For prices realised during auctions have been much lower than in the previous season. All the same, the blessing in disguise is that these figures conclusively prove that world consumption is increasing along with the rise in world output.

The production figure for 1958 for North-east India is also now available, and as expected, a small rise at 551.1 million lbs. (as against 528.4 million lbs. for 1957) is recorded. Pakistani output amounts to 54.1 million lbs., recording an advance of 7.6 million lbs. Up to October, production in British East Africa was 52.1 million lbs., as against 46.8 million lbs.; up to September, Indonesia produced 73.6 million lbs., as compared with 73.5 million lbs. and up to November South India and Ceylon raised crops amounting to 148.1 and 375.3 million lbs. as against 139.4 and 369.6 million lbs., respectively. If, as expected, the figures for the closing months of the year showed increase, the net increase would even be larger than at present indicated. It is believed that an impressive increase in production in China has taken place; possibly also in other areas less significant.

Dusts on offer during last week's sale amounted to 17,455 chests. The star feature of the sale was the keen demand in C.T.C. descriptions. Medium descriptions and smaller powdery teas were taken at advancing rates, while the fibrous lots realised valuations. Although orthodox teas were in good demand, prices declined by 4 nP. There was keen competition for the smaller and powdery teas in the orthodox variety. Offerings of Darjeelings were limited, but these were irregular. Legg-cut teas tended easier. The quotations were: Best Assam C.T.C. Rs. 2.50 to Rs. 3.00 (nominal), medium Assam C.T.C. Rs. 2.00 to Rs. 2.20, medium Assam-grainy dust Re. 1.74 to Rs. 1.78, and medium Dooars Re. 1.74 to Rs. 1.78.

Leaf offerings amounting to 1,789 chests met with good demand at higher rates.

Export quota changed hands at 2½ nP; subsequently there were buyers only at 2 nP while sellers demanded 2¼ nP.

WHEAT PRICES RECEDE

(From Our Own Correspondent)

HAPUR, *26th January*

Quiet conditions prevailed in the foodgrains market during the week, thanks to better supply position of wheat with some arrivals by rail from east U.P. and increased sales by the Government through fair-price shops. Beneficial rains for the standing *rabi* crops during the week also acted as a depressing factor. The U.P. Government has announced two measures to relieve the distress to people caused by high prices. One, ration cards are to be issued to all persons with a monthly income upto Rs. 250 per month, which was hitherto being allowed only for persons with incomes upto Rs. 150 per month. Two, it has been made obligatory on the part of all traders possessing 50 maunds or more of foodgrains for sale at any time to secure licence.

Wheat at Hapur registered a fall of about Re. 1 per maund during the week to be quoted now at Rs. 26.50 per maund for average quality and upto Rs. 28.50 for farm produce. In retail, wheat was quoted at Rs. 29 per maund. Apart from arrivals by rail from east U.P., some wheat was also flowing into the market from rural areas. Fall in wheat prices in Delhi and Punjab also acted as a depressing factor.

Rice, however, continued to rule steady, due to restricted supplies. The Government's procurement plan from surplus areas was progressing satisfactorily. Prevailing prices of rice here were: *basmati sela* Rs. 32; *mainpuri* Rs. 22.25; *raimunia* Rs. 27 per maund.

The bullish trend in the gram section continued unabated and prices touched all-time new heights, due to poor supplies and sharp advance in prices in Punjab. Barley and *bejhar* ruled quiet. Trading was limited, due to poor demand. Maize continued to attract good seasonal demand and prices were unchanged, as stock position was comfortable with fresh arrivals from outside and bright prospects of *rabi* crops due to timely winter rains. *Bajra* registered downward trend, due to fall in seasonal demand, but *jowar* and *guwar* sought higher levels on account of poor local stocks. The prevailing week-end prices (in rupees per maund) gram *punjabi* 23.25; barley 17.50; *bejhar* 18.25; *maize* 16.25 to 16.50; *bajra* 16.62; *jowar* 15.25; *guwar* 15.50.

Pulses were devoid of notable activity. Peas was nominally quoted at Rs. 20 to Rs. 21 per maund, due to very poor stocks left and dormant demand. *Arhar* stocks were running down to be put at 10 *khatties* now. Urd and *moong* improved slightly to be quoted in the week-end at: *arhar* Rs. 22; *arhar dal* Rs. 26.50; *urd* Rs. 19; *moong* Rs. 21.50 to Rs. 24; *massoor* Rs. 18.25 per maund.

LINSEED WELL MAINTAINED

(Messrs. A. Bradley and Co.)

CALCUTTA, *27th January*

There has been no change in the linseed market. The undertone is firm and prices are well maintained. Only small business has been reported with neither buyers nor sellers showing much interest. The oil market is dull. Prices have shown no change, but few enquiries have been received.

The latest quotation for ready-January is Rs. 27 per maund.

PLANTING

(Concluded from page 152)

that the vegetative growth of coffee in those areas was vigorous and full of promise, but it was too early to say anything of the possibilities of growing coffee there on an economic basis, as also of the quality of the output. The Governments of Mysore, Bombay and some other States are also equally keen on growing more coffee. While the cases of Assam and West Bengal were considered by the Coffee Board Chairman as exceptional, in view of the peculiar circumstances there, he felt that it would be wise to go slow in the matter of extension of area under coffee in the context of the present world coffee position.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) **declare their value in writing at the time of booking, and**

(2) **pay a percentage on the value so declared, over and above the normal freight charges,**

failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the I.R.C.A. Coaching Tariff No. 17.

The Station Master of the nearest station will give you detailed information if you contact him.
