** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co Ltd

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SURVEY

(*Concluded from page 803*)

trade who took advantage of the scarcity conditions and made undue profits." Apparently, Mr. Jain overlooks the fact that "scarcity conditions" always lead to higher prices, obeying the inexorable law of supply and demand. If some sections of traders commit malpractices, wisdom lies in trying to mend the system, rather than end it all on a sudden.

The meeting, at the conclusion of its session, made a number of suggestions, for improving the system of agricultural marketing. It held the view that greater competition between private enterprises should be induced at the village level. We are told that the lack of competition at the farm level is the main weakness of the existing marketing systems of this region. This, it was stressed, could be eliminated only by freeing individual farmers from obligations to sell their produce to the trader-creditors. Obviously, this can be done only by ensuring credit to the farmer from well-organised credit institutions. While this is a pragmatic approach, the Government of India has already made up its mind to go ahead with the socialisation of trade in wheat and rice, gradually replacing the private sector in the distributive trade. Many other important agricultural products, however, still remain in private hands. It would be in their self-interest to avoid any anti-social activities.

The meeting drew a distinction between credit for production needed by the farmer and credit for marketing but emphasised that these should be linked by an integrated co-operative system. It was felt that the progress so far achieved in this direction was not very significant. Warehousing of farm products, the meeting maintained, was essential for orderly marketing and for ensuring regular supply of produce both during the peak and lean periods. In India, Central and State Warehousing Corporations have been established and Government capital is being provided for these projects. Receipts given for products stored in the warehouses can be used to obtain short-term loans from the banks.

There is no doubt that quality control of agricultural products is a prerequisite for ensuring healthy trade—both domestic as well as international. In this connection, the meeting felt that the Agricultural Produce (Grading and Marketing) Act 1937 in India and Pakistan might be considered a model for legislation relating to standard grades and contract terms. It also recommended that market news service should be strengthened in countries where it has already been established and should be organised in other countries where it does not exist. The meeting emphasised the need for extension work both at the farm level and in the various markets and recommended the setting up of a marketing wing consisting of a number of qualified "practical" marketing specialists who could ensure that the marketing knowledge was passed on to the extension workers, farmers and traders.

The aforesaid measures, outlined by the meeting, do not, of course, cover any new ground. But they serve to highlight the important problems in the sphere of marketing of primary products.

DEVELOPMENT OF BACKWARD NATIONS

(*Concluded from page 810*)

the very regions which are termed underdeveloped. Asia supplies five-sixths of the world's natural rubber, almost the whole of jute, half its tin as well as substantial quantities of chrome, lead, zinc, copper and bauxite. The oil belt of the world runs through the underdeveloped areas. Moreover, the underdeveloped countries offer the largest potential consumers' market in the world. To give an idea of this potential, the underdeveloped countries today are spending on U.S. goods twice as much as they did after the end of World War II and five times as much as they did in 1938. There is no doubt that as they develop so will their purchasing power and trade with the advanced countries.

But it is not dollars, pounds or marks, as Mr. Hoffman emphasised, that these countries need. It is goods—wheat and other agricultural products, steel, trucks, machine tools, electric instruments, road-building machinery, mining equipment, construction machinery, cement, chemicals, fertilisers, transport equipment and so on. In fact, the "shopping list" of the things needed to break the technical bottlenecks which are holding up the utilisation of potential resources is an endless one. Many of these items, however, can be manufactured out of the unutilised capacities in the advanced nations and supplied to the underdeveloped countries.

Proceeding, Mr. Hoffman said:

"And that leads me right into another point which I hope will correct a common misconception of this economic aid programme. It need not be a giveaway programme. Its basis can be businesslike—in fact, good business. True, aid is going to countries where people are poor, desperately poor, but most of the countries are not inherently poor—they are just underdeveloped. They are underdeveloped because their resources, both physical and human, are not being used to anything like their full potentiality. If the underdeveloped countries are to make the best use of their resources one essential requirement is that they should know what those resources are and have the trained manpower with which to exploit them fully. In this respect much has already been done by the World Bank, by Governments through bilateral and regional programmes and through the United Nations Expanded Programme of Technical Assistance. But much, much more needs to be done. Only as it is done will there be a sound basis for the investment of the necessary billions of capital."

It is to assist this urgent task that the U.N. Special Fund was established. In most of the underdeveloped countries, very little is usually known about the geological base, river flows, soil content or about the possibility of raising agricultural yields by using modern biological techniques etc. By financing investigations of all kinds, the Special Fund hopes to establish new resources and technique with which the people in these countries may increase their production.

The Fund is, however, different from the World Bank, or the U.N. Technical Assistance Programme. The Fund seeks to bring into bankable shape many undertakings which would otherwise have remained only interesting ideas. By providing the finances necessary for surveys, training institutes and technical assistance, it helps to lay the basis for sound investment.

If the pre-investment activities are adequately financed, according to Mr. Hoffman, only one additional organisation is needed to ensure funds for the expanded programme of economic development. That is a multi-national development association such as that proposed by Senator Monroney, a proposal which is now under serious study by the U.S. Administration.

"A multi-nation institute," in the opinion of Mr. Hoffman, "has a distinct advantage over a national institution, because, by the very reason of its being multi-national, it is not subject to national political pressures. It can hold fast to sound investment criteria. This new lending institution, which could supply the long-term financing needed for hospitals, schools, transportation facilities, communication, etc., should work in the closest relationship with the World Bank. It could also serve usefully by providing guidance and leadership for the regional and national development associations which are springing up throughout the world."

ENGINEERING

(*Concluded from page 816*)

four years of its purchase and ten years of its being built, when the normal life of a ship is between 20 and 25 years. It doubts whether the survey carried out before the ships were purchased was thorough and satisfactory. The Committee was informed that supervision over construction of ships ordered by the Corporations from foreign yards had been entrusted to the firm of Lloyd's Register of Shipping, London, and the supervision over the construction of ships being built by Messrs. Hindustan Shipyard had been entrusted to Sir John Biles & Co., London, a firm of naval architects. The total fees charged by Lloyd's Register of Shipping for supervision of the four vessels under construction in Europe is £6,295 and the fees payable to Sir John Biles & Co. for supervision of three ships delivered so far by Hindustan Shipyard (including one of the Ministry of Home Affairs) is approximately £8,700. The Committee is surprised that for supervision of construction in a Government undertaking, the Eastern Shipping Corporation and the Government have had to incur such heavy expenditure. As the Shipyard has also engaged a separate firm of consultants to advise it and to supervise the construction of ships, the Committee doubts if it was necessary for the Corporation to engage another firm for supervision. If, however, it was necessary to have the ships supervised by an independent authority, it feels that the services of the Mercantile Marine Department might have been utilised for the purpose. The Committee does not also appreciate why the cost of supervision of three ships in India should be higher than the cost of supervision of four ships in Europe.

The working of the Hindustan Shipyard has also come in for criticism. It would appear that the Eastern Shipping Corporation did not yet enter into a formal contract with the Hindustan Shipyard with regard to the orders placed on the latter, the reason being that the Yard was not in a position to accept normal conditions which are incorporated in a shipbuilding contract. The Committee regrets that, even after a period of seven years of its working, the Yard is not in a position to accept normal conditions of contract and to adhere to the stipulated dates of delivery. In this connection, the Committee understands that the Japanese shipbuilders employ a unique technique in building vessels which takes only six to eight months to complete a vessel. The Committee feels that the opportunities of learning the Japanese technique should be explored.

A few important suggestions have been made by the Committee for augmenting the cargo carried by Indian ships, in general, and State-owned ships, in particular. The Committee considers it advisable for the Eastern Shipping Corporation to enter into tramp business. It has urged the reconsideration of the rates offered to Indian ships for carrying Government cargo, since, in the shipowners' opinion, the tramp rates on which the Government insists that its cargo should be carried are too low. It urges the Government to expedite the issue of its contemplated directive to the effect that (1) orders for import of stores, equipment, etc., from abroad should ordinarily be on f.o.b. terms and specific provision in this regard should exist in all such contracts; (2) orders for such shipment should preferably be centralised through the I.S.D., London, the I.S.M., Washington, or the Indian Embassies concerned to whom standing instructions have been issued to use Indian ships as far as possible; (3) in the case of c.i.f. contracts, endeavour should be made to include a suitable clause to enable the utilisation of Indian ships for carrying the cargo.

As regards the finances of the two Corporations, the Committee notes that their authorised capital is Rs. 10 crores each and the paid-up capital of the Eastern Shipping Corporation is Rs. 5.50 crores and that of the Western Shipping Corporation Rs. 3.5 crores. The Eastern Shipping Corporation has borrowed Rs. 1.62 crore from the Government, of which the outstanding amount as on 31st March 1958 was Rs. 1.12 crore. During 1957-58, the Eastern and Western Shipping Corporations made a profit of Rs. 4.24 lakhs and Rs. 3.49 lakhs, respectively, as against Rs. 35.12 lakhs and Rs. 20,000 in 1956-57. Since the Western Shipping Corporation has been in existence only for a brief period, the Committee has given more attention to the accounts of the Eastern Shipping Corporation. It notes that its profits are not steady. Also, its gross profit (in 1956-57) was only 13.8 per cent. of its sales, as against 18.9 per cent. for other companies, only 4.2 per cent. of the total capital employed, as against 8.2 per cent. for other companies and only 6.6 per cent. of net worth (paid-up capital plus all reserves other than taxation and depreciation), as against 10.2 per cent. for other companies.

The Committee notes that the Corporation has not contributed for many years any amount to the revenues of the Government. It feels that the "fluctuations in the working results of the Corporation have been too frequent and that the period of eight years is long enough for the public to expect stable results for the Corporation." It suggests that the Corporation might explore the possibilities of improving earnings and reducing its expenses, in order that the net profits may be higher and that a portion thereof might be contributed to the Government's revenues. By way of general observation, the Committee has made the suggestion that, in view of the fact that many of the State undertakings are not yielding profits and might not also be in a position to yield profits due to some of them assuming a social service character, there should be a separate organisation to evaluate the working of such undertakings. It notes that such an organisation has been set up in respect of community development projects. It feels that a similar organisation should be set up to examine industrial and commercial undertakings and that it should not be of an *ad hoc* nature but should be able to undertake examination of each undertaking periodically.

MARKET GOSSIP

(*Concluded from page 799*)

course of his address at the India-U.S. Conference in Washington:

"We agree that India needs economic progress. There is, of course, considerable disagreement as to how other nations may assist and work with the people and Government of India in attaining that progress. The easy answer would be, as far as the United States is concerned, to suggest that we best could assist by expanding what Government does, and I would certainly say here today that our technical assistance programmes, the programmes of loans through the Export-Import Bank and the Development Loan Fund, and other Government programmes certainly should be approved in the minimum amounts which have been requested by the administration. But I would be less than realistic if I were not to point out that, if you were to place exclusive or even primary reliance on Government assistance from the United States in order to attain this economic progress, we would be most unrealistic. And so, I was glad to note that, in the course of this conference, not only will you consider what Government can do, but also how private capital may also be attracted to this area of the world. And I would mention just three advantages that private capital has over Government capital, recognising at the outset that both are necessary and both have their place.

"First, private capital is expensible almost to an unlimited extent, whereas Government capital, in so far as our country, the United States, is concerned, is limited, limited by our own budget and by the considerations which always come up when budget problems are before a country. The second point is that, where private capital is concerned, there is and can be no question of any political influence going with it, and on occasions there is, of course, a question where Government capital is concerned that there might be political implications involved. And the third point is that private capital brings with it the skilled technical assistance which is needed, and without which capital might be wasted.

"These three advantages, I think, are worth mentioning. And I emphasise again that both private and Government capital are necessary. But, in your consideration, develop to the full how private capital can come in, because its greatest advantage is the first one I mentioned, that is, it is expansionable, whereas Government capital is definitely limited."

Here is an excellent exposition of the case for private capital investments in India. An additional argument in favour of foreign private (equity) capital is that it places less burdens on the balance of payments position than Governmental capital, because there are no guaranteed interest payments and, if the climate of confidence is well maintained, the bulk of the profits earned by such capital will be ploughed back for expansion. Such capital would certainly like to work with private enterprise in this country which, as the World Bank President, Mr. Eugene Black, is reported to have said at last London, deserves to be provided with additional incentives. Mr. Black said he believed that more incentives should be given to private investment "both internally and externally." In fine, to belittle the contributions of private enterprise to the Indian economy is certainly not the best way to provide the necessary incentives to it, whether Indian or foreign.

* * * * *

The firmness of the world sugar market noted last week has abated again this week. In fact, the market is currently ruling depressed. Spot Cuban sugar at New York is now quoted at 2.93 cents per lb. (f.o.b. Cuba), as against 3.00 cents to which level it had recovered from the previous low of 2.80 cents. Similarly, sugar at London which had gone up from £25⅞ per ton to £27½ has since dropped to £26⅞.

The fall in prices has occurred, though the fear of Cuba's new Government dumping in the world markets its vast surplus sugar stocks has not materialised. On the contrary, it was reported that Dr. Castro, Cuba's Prime Minister, who was in the U.S. recently, was trying to get its aid to finance the sugar stocks. It was this report which imparted steadiness to the world sugar market last week. If this steadiness has not continued, it is probably due to the report that the Cuban sugar crop in the current year is expected to be above 5.6 million tons, as against 5.2 million tons harvested in 1958. This quantity, though lower than the earlier estimate of 5.8 million tons by 200,000 tons, is considered to be quite heavy and "is bound to weigh on the market, preventing it from rising much further and possibly depressing it once more." There are, however, two factors which may act as a check against a sharp fall in world sugar prices. One, Venezuela and Colombia, once believed by many dealers to be net exporters of sugar, have turned out to be net importers. Two, Argentina has not so far exported its surplus sugar. In addition to these factors, there is the Sugar Council's hope that the reductions in the basic export tonnage of member-countries effected early this year would be sufficient to take care of world surplus production.

Twelve widely-used goods and services can be bought by the average American production worker today with less labour time than in 1953, the National Industrial Conference Board reports. The Board listed the following: a pound of bacon, a refrigerator, a wool suit, a pair of shoes, a house dress, a pair of nylon stockings, a pound of round steak, a pound of coffee, a dozen eggs, ten pounds of potatoes, a gallon of gasoline and a quart of milk.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2513 BOMBAY, 23rd MAY 1959 PRICE: Rs. 2

FRESH THINKING ON SUGAR NEEDED

THE Government of India's sugar policy has failed again. There has been a sharp rise in values in recent weeks and the consumer is paying a record high price. It is true that, after the swift increase in prices last week, there has been a slight fall, but prices are still too high. The Government has found it necessary to license the wholesale dealers and tighten the controls, short of introducing rationing, which everyone is anxious to avoid. Production has not been keeping pace with the demand. Stocks are so low that some are actually suggesting that India should import sugar from abroad, either as a loan from the International Sugar Council or through outright purchases from the world markets. So from an exporter to an importer of sugar! What a transformation! That this should happen in a planned economy is a striking commentary on the defects in planning.

The sugar that we are referring to here is white sugar. This industry, as readers are aware, is closely regulated by the Government. The creation of additional capacity to manufacture white sugar is determined by the Government. The place, persons and the type of management—whether co-operative or joint-stock company—for new capacity are also prescribed by the Government. The price payable to cane growers is fixed by it. Production is being reserved and marketed as per directions from New Delhi. Even the ex-factory price, which was left to be determined by market forces during the three or four years preceding June 1958, have again been subjected to Government control. The vast majority of sugar manufacturers have readily co-operated with the Government and have even acquiesced in some of its patently wrong policies. They have apparently done so out of a desire to keep the State Trading Corporation out of their way. They were afraid that, once the S.T.C. put its foot into the industry, either as exporter or internal distributor, the sugar industry was as good as nationalised, for it would be the story of the camel and the Arab tent.

Since the commencement of 1959, wholesale prices of sugar have gone up by 10 to 11 per cent. on an average. In Bombay, for instance, small grain has risen from Rs. 103 to Rs. 122 and large grain from Rs. 114 to Rs. 125 per bag of 224 lbs. Of this rise, as much as Rs. 7 and Rs. 9 in small and large grain, respectively, took place in less than a fortnight. Over the year, however, the increase in sugar prices works out to 12 per cent. only. It is thus evident that the recent spurt in prices is of a speculative nature and is not justifiable on moral grounds. But economic laws are no respecter of morals or ethics. It is human nature to make as much money as possible, if circumstances are favourable for doing so. Mere condemnation of speculation by the authorities will be of no avail. Nor will it be of much use if ex-factory and/or wholesale prices alone are regulated by fiats, leaving the retail prices out of control, especially when the excess of supply over demand is small. In a vast country like India, with sugar production concentrated in only a few areas, such piecemeal and partial controls are, as past experience has clearly shown, ineffective. To assume that only the millowners and wholesale merchants are given to profiteering and other malpractices and that the retail distributors are honest people, conscious of their moral obligations to the society they serve, is to indulge in wishful thinking. The recent kerosene muddle in the Bombay State provides clear proof, if any proof were needed, that, given the opportunity, retail merchants too will exploit consumers without any qualms whatever. It is a fashion these days to think of co-operative societies as a desirable alternative to private trade. But they too are not free from such defects. In any case, co-operatives are not available in all parts of India. If controls are to be had, they have to be exercised from top to bottom. Surely, this country has had enough experience of the futility of partial controls. Even total controls have not been a great success. Again, experience shows that such controls bring nothing but contempt for the Administration and the party in power, demoralise the officials and create a new set of vested interests. The Congress Party is fully aware of the unpopularity of total controls and is, therefore, reluctant to resort to them. But, in its attempts to avoid this unpopularity, it is unfair to millowners and wholesale merchants, because partial controls present only these two sections of the business community in an unfavourable light and make them the scapegoats. They give a convenient handle for the politician to turn public opinion against the private sector.

The only effective remedy to keep prices within reasonable limits is a comfortable supply position, as distinct from a small surplus over consumption. The supply of sugar available should be sufficient to cover both consumption and the normal level of stocks with the trade. The mischief starts the moment the level in the pipeline tends to diminish. It is here the Planning and Administrative wings of the Government have been shortsighted, and made a mess of the whole situation. They have failed not only in assessing the demand for white sugar properly but also in adopting appropriate policies that will ensure full utilisation of the new capacity that has been created. The authorities did well in permitting the Deccan and South India to have a larger number of new sugar factories than the rest of the country, for these areas have ideal climatic conditions for producing more sugar per acre. But the benefit of this wisdom has been partially neutralised by giving full play to their co-operative ideal. By earmarking almost all new factories only for co-operatives, they have slowed down the pace of growth in production, reduced the scope for competition and limited the chances for obtaining more sugar per acre through intensive cultivation. A comparative study of achievements in sugarcane cultivation in the plantations of joint-stock companies and in those belonging to co-operative sugar factories will be rewarding. Similarly, in U.P., the major sugar-producing State in India, expansion achieved in existing factories could not be fully utilised during the 1957-58 and 1958-59 seasons, owing to increasing diversion of sugarcane to *khandsari* and *gur* manufacture. The heavy taxation imposed on white sugar has been the main factor responsible for this diversion, as it has reduced the capacity of mills to compete with the cottage units for the available supply of sugarcane. The imposition of an excise duty on *khandsari* in the last budget was a belated and half-hearted attempt. Further, *gur* manufacture is exempt from almost all taxes. It may be noted here that, as against an increase of only 12 per cent. in the wholesale price of white sugar over the year, the price of *gur* has gone up by no less than 31 per cent.

The greatest drawback in the Government's sugar policy lies in the fact that, while white sugar has been subjected to a variety of regulations and a heavy burden of taxation, *gur* has been let scot-free and *khandsari* has been brought under a minimum degree of control only during the last few months. This point will be better appreciated if it is borne in mind that white sugar manufacture is more economical and gainful to the nation than *gur* or *khandsari* and that consumption of white sugar is steadily growing, following increasing urbanisation and the rise in purchasing power. But for the heavy excise duty on white sugar in the last four or five years, the expansion in consumption of this variety would have been more marked than it is. An important point that has not received the recognition it deserves is that, so long as *gur* fetches a high price, there will hardly be adequate incentive to the cane grower to grow better varieties of sugarcane. *Gur* is produced mostly by cane growers themselves. The sizable profit that they get on *gur* leads to inefficient cultivation. It induces them to produce more cane rather than better quality cane. It may be that there are enlightened *ryots* who realise the value of producing more *gur* per acre than cane. But their number must be very small. Thus, even the limited efforts that are being made by the authorities for improving the yield of sugar per acre through development zones, etc., are offset, to some extent, by the inefficiency engendered by the easy money available on *gur*.

Prime Minister Nehru and his colleagues are striving hard to raise the living standards of the Indian masses, more than two-thirds of whom are based on agriculture. We admire their zeal. But it is a pity that they have not yet realised that one of the easiest and quickest ways of bettering the lot of agriculturists is to bring about maximum utilisation of their produce. The peasants in U.P. and Bihar are, perhaps, the poorest and most ignorant in India, because of centuries of *zamindari* rule. The major commercial crop in these areas is sugarcane. If only sugarcane is utilised in a more profitable manner than is being done now—nearly 70 per cent. of cane grown in U.P. is used for *gur* and *khandsari* manufacture—the wealth of the growers and that of the country, in general, can be significantly raised. It may be noted that, if sugarcane is crushed in a factory, the sugar recovered will at least be 25 per cent. more than that in a cottage press. Again, one has only to think of the immense variety of by-products that can be manufactured from sugarcane to realise the heavy loss to the growers and the country. Space does not permit a full discussion of this vital point. Suffice it to say that the by-products include such valuable items as power alcohol, which is finding increasing use as a raw material for plastics and synthetic rubber, paper and newsprint, cattle-feed and wax. In sugarcane, India has a wonderful industrial raw material and it is our misfortune that the authorities in the Centre

and the States are allowing the bulk of it to go waste. Those who sing in praise of such cottage industries as *gur* and *khandsari* and those who frame and implement economic policies that favour these industries do not realise the grave harm they are doing to the country's economy, in general, and sugarcane growers, in particular. Mr. Nehru is never tired of pleading for dynamic action. But, in the sphere of sugar industry where there is enormous scope for dynamism, there has been nothing but statics. The only dynamism that we have seen in this sphere is in the application of such negative policies as controls and taxation and, above all, in the vituperation against the *entrepreneurs* who have made white sugar manufacture as the second largest processing industry, contributing a large revenue to the Exchequer.

Both the Government and the industry have persisted in their decision to develop export markets for sugar. The statistical position of sugar even last year was not encouraging enough to permit exports. The cost involved, in terms of loss of rupee resources, was also prohibitive. And yet 50,000 tons were sent out of the country and a decision was taken to export 100,000 tons this year. Steps were initiated to ship half of this quantity even when it was clear that the stocks on hand would be barely sufficient to cover three weeks' consumption and that the loss to be incurred would be larger than in the previous year. The Government was also clearly warned of the consequences of its unwise decision, but to no purpose. It is, therefore, difficult to resist the conclusion that the Government attaches more importance to considerations of prestige than to the interests of domestic consumers. The spokesmen of the sugar industry who supported the Government in this policy cannot also escape blame. In their anxiety to be in the good books of the Government and assailed by the unwarranted fear of a surfeit of sugar in the coming years, they did not apparently realise that they were working for the emergence of a situation in which they would be made the scapegoats for the rise in sugar prices and which would be conducive to build up public opinion against them by a section of politicians. If private enterprise is to survive in the present hostile atmosphere, it has to strive hard to carry the public with it and must not do anything that is likely to make the climate even more hostile. This is particularly important to manufacturers of white sugar, for even a small rise in the price of this commodity attracts severe criticism, though a much bigger increase in other commodities goes unnoticed.

Some in the sugar industry have sought to justify the export of sugar on the ground that no sacrifice is too much for earning foreign exchange. It is argued, for instance—*vide* pages 863 and 864 of this issue—that the cost of subsidising exports to the domestic consumer is negligible and that all sugar-exporting countries collect a larger price from the home market to make up for the lower price realised on exports. Such arguments are highly fallacious. In the first place, India has no surplus of sugar for export. Even if the remaining expansion schemes are implemented, there will be no surplus worth the name, having regard to the rising population, growing incomes and the definite preference of consumers for white sugar. Secondly, the loss on exports is not so small as is made out, if one takes into account the revenue which the Exchequer has to miss and if exports are to be of any significant size, not a mere few thousand tons, as has been the case in the last two years. Thirdly, for almost all the major sugar-exporting countries, sugar is a staple foreign exchange earner and they have to export it even if it means some sacrifice to them. This is not so in the case of India. Fourthly, the comparison is not proper, for the production of sugar per acre in these countries is larger than in India. And, fifthly, they are rich enough to afford a subsidy on sugar exports, whereas India is not. The *per capita* incomes and *per capita* consumption of sugar in India are the lowest as compared with the major sugar exporters. Thus, India's *per capita* consumption of white sugar is only 5.1 kilograms, as against 46.1 kg. in Cuba, 54.8 kg. in Australia, 41.4 kg. in Mauritius, 12.1 kg. in the Philippines and 7.8 kg. in Indonesia.

If India is not to keep on muddling in sugar, if adequate supply of clean, healthy sugar at reasonable prices is to be ensured for its growing population, and if the sugarcane resources are to be put to the maximum possible use, there is urgent need for fresh thinking on the subject. Now is the time for it. so that, in the third Plan period at least, sugar may not become a headache. There have been many committees and commissions for other crops and industries but none for sugar. It would be a good thing to have a high-powered independent commission, made up of knowledgeable persons, including a few foreign experts, to go into all the aspects of sugar industry and make suggestions for formulating a sensible, forward-looking sugar policy.

OIL BUSINESS

THE observations made by the Prime Minister at a Press conference on the 14th inst. on the subject of mineral oil clearly show that the Union Minister for Oils, Mr. K. D. Malaviya. fully enjoys his confidence and that the statements made by Mr. Malaviya in Parliament and elsewhere in the first half of last month only reflected Mr. Nehru's mind. It is necessary to make this point, because there are some who are inclined to feel that it is Mr. Malaviya who is forcing the pace of the public sector in the oil business. It seems to us that Mr. Malaviya is merely trying to implement the broad policy prescribed by the Prime Minister. This is borne out further by Mr. Nehru's statements nearly three years ago.

That Mr. Malaviya is quick and energetic in giving firmness to Mr. Nehru's thinking on oil is evident from the way in which he followed up the latter's remarks at the Press conference. Within 24 hours, he himself convened a Press conference, in which he confirmed the Prime Minister's announcements and elucidated them. It is obvious from the statements of both of them that the Government has finally made up its mind on four points: exploration, production, distribution and administration. On the first, this is what Mr. Nehru said:

> "Our broad policy is that we give naturally primary importance to the work (oil exploration) being done under the State auspices, but we do not rule out private prospecting and exploration, etc., and we are prepared to consider such offers. It will depend on the terms of the offer and whether we consider those terms attractive enough, because, remember, India is a big country and there is a vast scope for exploration all over. Naturally, we, as a Government, will continue (oil exploration) in the best fields and work there to our capacity. But we cannot cover the whole of India for a long, long time. We are, therefore, prepared to consider offers (by private parties), subject always to the terms being acceptable."

The Government's desire to take up the job of prospecting and exploration is understandable, in view of the urgency for discovering and producing oil in the country. But it should not reserve to itself a much larger field than it can handle efficiently. Again, its decision to keep the best and promising areas to itself is unlikely to attract efficient foreign prospectors to this country. It would, therefore, be better for the Government to go in partnership with foreign capital to cover the whole country, so that the possibilities of losses and gains may be more equitably shared and the cost may be cheaper. It should not be impossible to introduce suitable conditions in the contract to ensure that the foreign participant does not wilfully neglect his duty or deliberately refrain from making a quick discovery of oil. Such apprehensions do not seem to be warranted, for a foreign prospector does not come here to invest money for no returns. Mr. Malaviya himself has now publicly acknowledged that, if the Stanvac people, under the Indo-Stanvac Programme, have not located oil in the Bengal basin so far, it is not for want of effort; it is a case of bad luck. It is encouraging to hear from him that the Government has not laid down any hard and fast rule and that it would consider each offer for participation from private enterprise on its merit.

On production, no departure is to be made from the present policy. This means that the Government will have a sizable controlling interest in raising and refining the crude. "If we produce our own oil," Mr. Malaviya said, "we will refine it ourselves." The existing three refineries under foreign control and ownership will not be disturbed in any way.

On marketing and distribution, too, the Government has no intention to disturb the existing companies. But it has definitely decided to supplement them by establishing very soon a completely State-owned company. The reasons given by the Government for its decision to enter this complicated and large-capital consuming business are not sufficiently convincing. The main reason is that, having decided to have two refineries of its own, the Government must have its own company to distribute the products of these refineries. But not all manufacturers themselves distribute their products. Apparently, the Government thinks that it must keep to itself the profit on marketing and distribution of oil also. Another reason given is that, as the Government itself is a large consumer of petroleum products, it should secure its requirements through a company owned by itself. It is evidently from this angle that Mr. Malaviya feels that, in due course, the Government-owned company will even directly import finished petroleum products. Mr. Malaviya has, of course, made it clear that the Government company will not confine its activities only to Government agencies. At the same time, he has stated that the Government was hoping to get the co-operation and even collaboration of the private oil companies. This statement is welcome in so far as it goes. While it is to be hoped that a mutually satisfactory understanding will be reached between the Government and these companies, the atmosphere is by no means propitious for it. The Government's whole approach to these companies appears to be based on distrust and suspicion. If this is not so, it is hard to understand why the Government is unwilling to take them at least, if not the public, into confidence in regard to the report of its cost accountant who investigated their working. After all, these companies threw open their books to the Government's investigator and co-operated with him.

While none can say that there will be no room for one more company for marketing oil, the whole issue has to be decided from the point of availability of financial resources and know-how. The Government is not having either of them in plenty and there are many other calls on its resources and time which deserve a higher priority. And, what is more, neither Mr. Nehru nor Mr. Malaviya has given any idea of the resources that would be required by the Government for this marketing business. This also seems to be a case of first committing the country to a particular course of action and working out the cost and other implications later. The Government's spokesmen proclaim when they go to the U.S. that the public sector in India enters only those lines of business which are not within the capacity of the private sector or which have been badly managed by it. We do not think that the decision to establish a wholly Government-owned company to market oil is justifiable on either of these grounds. In any case, the Government has not so far sought to do so. If the Government is anxious that there should be some national participation in the benefits of marketing of oil, the objective can be realised by asking the existing foreign companies to allow Indian private capital to participate in their capital structure and to take more Indians on their technical and managerial staff.

The most welcome of the four decisions announced this week is the one to convert the Oil and Natural Gas Commission into a statutory Commission, with a large degree of autonomy which is necessary for the efficient handling of the highly technical nature of the job. This change will require the consent of Parliament and, pending its approval, the existing Commission will be given additional financial and administrative powers of the Ministry, so that the growing volume of work may be expeditiously carried out. Mr. Nehru has made it clear that neither the Minister in charge of the Corporation nor the Secretary to the Ministry concerned will be its chairman and that the new set-up will be manned and presided over by technical persons rather than purely by administrators. This is undoubtedly a right decision. It is needless to add that, if the objectives in reorganising the Commission are to be achieved, the technical experts chosen to be in charge of it should be highly competent persons, with rich practical experience and capable of judging issues without importing political considerations but strictly on their merits as business propositions. It is easier to state this condition than to fulfil it, as there is a great dearth of such talent in this country.

STOCK EXCHANGE BOOM WEAKENING?

NEW LOANS—EMPLOYEE SHARES—STATE TRADING IN FOODGRAINS—U.S. WHEAT SURPLUS

THURSDAY, 5 P.M.

MARKET GOSSIP

THERE has been a distinct break in the boom on the stock exchanges. The fall in equity values is widespread, though the depth varies. In some of them, the drop is quite substantial, while in the leading speculative counters, in particular, it is only of a modest nature, presumably because the bulls are trying hard to stem the tide. It remains to be seen how long they will be able to hold out, in the face of increasing deliveries and fairly high *badli* charges. Further, the investors appear to have ceased following the professional bulls, as the idea that, at current levels, almost all equities are highly priced is finding ready acceptance. A fortnight ago, one found it hard to sell this idea. Another significant development is sizable profit-taking by investors in blue chips and growth scrips. Such shares as Guest Keen Williams, Dunlops, Indian Oxygens, Alkali Chemicals, National Carbons, Voltas, Gwalior Rayons, Larsen and Toubros, and Ceat Tyres have more sellers than buyers and lost quite a good part of their recent gains. The chemical shares that were greatly fancied till a few days ago have lost their glamour. India Dyestuffs, for instance, have declined by Rs. 85 over the week. There is no mention of Colour-Chems at all now, though they were the rage 15 days ago. Advices from Calcutta and Madras also speak of a marked fall in bullish fervour in the purely investment counters.

Apart from the reaction that usually follows after a sharp rise, the prospect of quite a few new industrial issues being floated in the coming weeks is also a factor responsible for the change in the undertone of share markets. It is already known that the T.I.S.CO. will be raising a little over Rs. 8 crores, probably in August or September. Besides this, a crore and a half worth of 6 per cent., tax-free redeemable cumulative preference shares of Gwalior Rayon is being released to the market by their present holders. Texmaco also proposes to raise new capital in the form of preference shares. The prospectuses of Indian Rayon and Khandelwal Ferro Alloys Ltd. have been published. Baroda Rayon, another new company, will shortly be approaching the market. The West Coast Paper Mill is offering new capital. Then, there will be the usual annual long-term borrowings by the Central and State Governments, not to mention local bodies and financial institutions. In view of all this, the forthcoming slack season for the money market may not offer much comfort to the bulls.

* * * * *

The short-term money market has begun to show signs that the busy season is petering out. Speculation about the Central Government's borrowing programme has just begun and is bound to gather momentum in the next few days. The Reserve Bank has already given notice of redemption to the holders of 3 per cent. 1959-61. The amount outstanding against this loan is Rs. 113.66 crores. The holders of this loan will, of course, be given the option to convert into the forthcoming new loans. One can, therefore, safely take it for granted that the amount of new loans will be Rs. 200—225 crores. The general expectation in market circles is that, unlike last year, when three types of loans—5 years, 10 years and 15 years—were offered, the Government may issue only two types this year, skipping the short-dated. Since there are no maturities in 1969, the medium-dated loan is bound to be a 10-year issue again. As the yields have gone down over the year, the Government should be able to borrow on more favourable terms than last year. We, therefore, expect that it will offer no more than 3½ per cent. As regards the second type, it is bound to be quite a long-dated loan. With 4 per cent. 1973 issued last year standing at a premium of Re. 1.70 and giving a redemption yield of 3.84 per cent. and a running yield of 3.93 per cent., the authorities have two choices before them: either to reduce the rate of interest and keep the usance unchanged at 15 years or keep the rate unchanged at 4 per cent. and raise the period. Inasmuch as the current yield on a 14-year loan is well over 3.75 per cent. and as it would be inadvisable to make money cheaper than it already is through open-market operations, the best thing to do would be to keep the rate of interest unchanged at 4 per cent. and widen the period to, say, 18 or 20 years. There is, of course, still plenty of time for the authorities to think about the terms, for the money market will take at least a month more to become perceptibly easier.

* * * *

The conception of employee-participation in share capital of joint-stock enterprises in India, and given effect to by some leading industrial concerns, is different from that in Western countries, such as the U.K., the U.S. and West Germany. In this country, this is confined to reservation of a portion of a public issue of shares to employees or to distribution of the left-overs after the shares are taken up by the public, whereas, in the advanced countries referred to above, it is more or less linked to the profit-sharing scheme. Thus, whenever the employees participate in the profit of a company and get a bonus, fresh shares are created and offered to employees, so that the bonus amount, instead of being frittered away, can be usefully invested in the shares offered by the company. Such investment not only get the employees, particularly in the low-income group, a good return but also provide them a hedge against inflation. This has an additional advantage from the company's point of view. While making the shareholding more widespread, it finds its capital needs from its own resources.

It is deplorable that no concerted attempt has so far been made by joint-stock companies in India to induce their employees to participate in their share capital. The stock argument given by them is that their workers are not as advanced as their confreres in the U.S. or the U.K. This is not convincing. There is plenty of scope for making an impressive beginning in this social revolution, as there are a large number of big companies that can take the initiative.

To take the example of the Tata Iron and Steel Company just to show the extent of gain that can be achieved. The Company is distributing over a crore of rupees every year by way of bonus to employees. Even if 50 per cent. of this sum is invested in the equity shares of the Company, it can raise each year Rs. 50 lakhs of capital out of its own profit. If these shares are issued to its employees either at face value (Rs. 75 each) or at a suitable concessional price, and if the advantages of the scheme are properly explained to workers, the response is bound to be good.

That the employees' profit-sharing scheme has proved a success in the U.K. is evident from the speech of Sir Alexander Fleck, Chairman of Imperial Chemical Industries Ltd., at the annual general meeting of the Company held in London last week. According to him, no less than 91,014 of the Company's employees qualified for a bonus in respect of 1957 amounting to £5 million gross before personal income-tax. Of the ordinary stock distributed to them, ever since the profit-sharing scheme was introduced, about two-thirds had been retained by the employees at the end of 1958. In this connection, Sir Alexander made the following interesting observation:

> "It is gratifying to realise that, during the years when there have been so many temptations to spend money on other things, by far the greater part of the stock handed over to our employees has been retained as an investment in the Company. This tangible recognition of the community of interests between stockholders and employees in our great enterprise is of considerable significance, and is an added strength to our organisation."

It will be interesting to recall here the main features of the I.C.I. scheme, which was introduced five years ago. Every year, I.C.I. employees, who qualify by length of service, receive bonus representing a percentage of their own earnings and based on the distribution to the shareholders. It is paid not in cash but in the form of shares. These shares are issued to trustees appointed for the purpose. They are not issued at par, but at the market price on the day on which the issue is made. No restrictions are placed on the employees selling their shares whenever they want. Commenting on the I.C.I. scheme, the *Financial Times*, London, writes:

> "After five years, it is very interesting to know how well the scheme has worked. In his Chairman's speech, Sir Alexander Fleck told his shareholders that about two-thirds of the stock issued had in fact been retained by the employees who received it. There may have been a higher proportion of retentions among executives than among the ordinary industrial employees of the Company, but the figure of two-thirds must be considered a satisfactory one, particularly over what is now a substantial period. Members of the main I.C.I. Board are not eligible for the scheme.
>
> "The I.C.I. scheme is one which has aroused a good deal of interest in industry, but has not been widely followed. Its chief merit from the Company's point of view is that it does give the I.C.I. worker a sense that he is a partner in the Company. The I.C.I. employee can hardly feel that his interests are in conflict with those of the shareholders when he is, in fact, a shareholder himself. The number of employees who benefit is now a substantial one and over 91,000 qualified in 1958 in respect of 1957.
>
> "One of the reasons why other companies have not adopted the I.C.I. scheme is that they do not feel it fair to their workers to encourage them to hold shares in the company upon which their employment depends. For most companies—for all small or medium-sized companies and for large companies in highly cyclical industries—this is no doubt the correct view, just as it can be wrong for a firm to invest its pension fund in its own shares. Yet large companies with a strong growth record and a reasonable prospect of further growth need not necessarily take the same stand."

The main object of the scheme, apart from its creating a compulsory saving, to quote our London contemporary "is to create in the mind of the employee the notion that his profit-sharing bonus is a capital sum to be saved and not an income sum to be spent."

The success of the I.C.I. scheme reinforces our contention that the bigger companies in India too should try this experiment. They may issue, if necessary, a separate class of shares, called employee shares, in a smaller denomination, so that even the lowest income group employees can participate in the scheme.

* * *

The first major step in the implementation of the scheme for State trading in foodgrains has been taken by the Central Government. In a communication addressed to the States, the Centre has indicated the measures they should take in order to ensure a fairly uniform approach to the scheme throughout the country. Briefly summed up, the following are the main features of the Central Government's directions:

1. The entire wholesale trade, including the processing industries, should be licensed. The licensees should be required to furnish regular returns of stocks and a periodical check should be exercised over their stocks and accounts with reference to the returns, deterrent action being taken where a malpractice is detected.

2. Sufficient stocks should be acquired from the licensees for distribution through fair price shops at reasonable prices so as to make it difficult for the licensed wholesalers, even in respect of the stocks left with them, and for the retailers who may buy from the licensed dealers to charge higher prices.

3. There should be a strict enforcement of statutory control of wholesale prices, the prices in surplus and deficit districts being so fixed as not to impede the flow of foodgrains from surplus to deficit areas within a zone.

4. Minimum controlled prices for the producer of foodgrains should be fixed, with due attention paid to adequate safeguards for ensuring proper quality standards of foodgrains.

5. Suitable machinery should be established for purchasing direct from the producer at the fixed price, if he is unable to sell his produce at that price to a trader.

6. It is necessary to organise and develop co-operatives which can increasingly handle the marketed surplus of foodgrains; the State Governments are required to submit quarterly reports giving the number of societies at different levels organised for the purpose, as well as the nature and quantities of grains dealt with by them.

It will be seen from the foregoing account that the Central Government is goading the States to take upon themselves a rather very heavy responsibility. Apart from doubts whether all the States are willing to shoulder such heavy responsibility, the administrative apparatus in most States leaves much to be desired. Public memory is not so short as to forget the bitter experience of the control days only a few years ago. By its very nature, the Governmental machinery cannot have, as the Federation of All-India Foodgrains Dealers Association pertinently points out in the course of an interesting study on the production and distribution of foodgrains in India and State trading in foodgrains, that resilience which one would expect from a machinery that has to deal with various factors at various stages, and deal rationally with the different problems involved over all parts of the country. Surely, the State Governments will not be able to ensure a proper adjustment in consumption and supply of foodgrains by price variations as in a free economy.

The one definite consequence of State trading in foodgrains will be that the consumer will have to pay prices very much higher than those prevailing when the normal forces of supply and demand are allowed to operate. This is because of heavy administrative charges which work out to as much as 10 per cent. of the total price of foodgrains paid by the consumer. In its report (1957), the Ashok Mehta Committee has clearly shown how, during the period of controls and rationing, the issue prices of grains sold in ration shops were 12 to 25 per cent. higher than procurement prices. It was not the consumer alone who had to suffer. The Government itself incurred heavy loss in foodgrains trade. According to the Federation, procurement and distribution of foodgrains through official channels resulted in the huge loss of nearly Rs. 46.4 crores per year during the ten-year period of controls and that only in catering to less than 15 per cent. of the population brought under rationing.

The Federation estimates the net amount of money which the Government will have to invest in the scheme of State trading in foodgrains at Rs. 500 crores. This is certainly quite a large sum, especially when the rupee resources required for carrying out the other more important projects are scarce. Why should the Government think in terms of State trading in foodgrains involving investment of such large funds? The answer given is that traders exploit to their advantage even a small shortfall in the supply of foodgrains. But a mere revamping of distribution machinery and its transfer to the State will not solve shortages. The solution to scarcity lies in increased production. Instead of wasting time, money and energy on State trading in foodgrains, what the authorities should do is to concentrate all attention on measures designed to augment output such as provision of irrigation facilities, supply of fertilisers and manures, improved seeds, land reclamation and development, and improved agricultural practices. These are matters of prime importance which, as the Federation says, "are likely to be neglected in chasing the glow-worm of State trading in foodgrains."

The Federation foresees that introduction of State trading in foodgrains at this stage will only result in retarding the progress made in the direction of achieving self-sufficiency in foodgrains. Whether this forecast will fructify or not remains to be seen. But experience so far shows that, whenever bureaucracy intervenes in the working

EQUITIES REACT

HEAVY FALL IN PRICES

(From Our Own Correspondents)

BOMBAY, 21*st May*

THE share market suffered a shake out today and prices dropped precipitously over a wide front. Earlier in the week, equities were a little erratic, but the undertone was bullish, with many counters, under the lead of Tata Steels and Tata Locomotives, touching fresh high levels yesterday. This could not be sustained today, in the face of weaker advices from Calcutta, where equities had taken a downward trend during the last two or three days due to fears of heavy delivery. In addition, a news agency report that it might be necessary to levy heavy taxation to finance the third Plan created a stir in the market. This report said that the projected large size of the next Plan might necessitate fresh taxation to the tune of Rs. 2,000 crores over five years, as against the estimated yield of Rs. 900 crores from additional taxation during the second Plan period. While this suggestion may appear fantastic, the bears seized the opportunity to turn the market in their favour by hammering down some of the vulnerable scrips.

Tata Steel Ordinaries crept up earlier in the week from Rs. 192.75 to Rs. 195. After a setback to Rs. 192.50 on Tuesday, the shares shot up to Rs. 196 yesterday. Today, again they reacted sharply to Rs. 191 and closed at Rs. 192.25. The new shares closed at Rs. 190, after touching a high of Rs. 193. Indian Irons came up from Rs. 24.60 to Rs. 25 before receding to a low of Rs. 24.28 today. The closing was, however, a shade better at Rs. 24.36.

In the textile group, Bombay Dyeings hardened from Rs. 64.30 to Rs. 64.60 early in the week, but, subsequently, they gave way to close at Rs. 63. Despite the sharp fall from yesterday's high of Rs. 551 *ex-div.* to Rs. 537 today, Centurys disclosed a gain of Rs. 2 over the week. A similar rise is noted in Kohinoors at Rs. 278 *ex-div.*, notwithstanding the reaction from the peak of Rs. 293.50 *ex-div.* touched yesterday. Central Indias suffered a loss of Rs. 4 at Rs. 103 and Finlays Rs. 5 at Rs. 270. Gokaks fell by Re. 1 to Rs. 149. Indu Ordinaries by 40 nP to Rs. 7.88 and Indore Malwas by Re. 1.50 to Rs. 97.50. A drop of Rs. 10 was recorded by Khataus at Rs. 220. While Models lost Rs. 2.50 to Rs. 95, Mysore Spinnings moved up by Rs. 3.50 to Rs. 85. Podars shed Rs. 4 to Rs. 163, Shree Niwas Cottons Rs. 7 to Rs. 173, and Simplex Re. 1 to Rs. 187. Standards were placed at Rs. 499 *ex-div.*, which on a *cum-div.* basis showed a loss of Rs. 8 over the week. Svadeshis lost today Rs. 10 at Rs. 228 *ex-div.*, thus wiping out the earlier gain.

Bank shares ruled weak. The loss in value was pronounced in Centrals which declined by Rs. 3.70 to Rs. 51 and their new shares by Re. 1.80 to Rs. 55. Baroda shed Re. 1.50 to Rs. 102.50, Bank of Indias Re. 1 to Rs. 133 and their new shares Rs. 2.25 to Rs. 133.75. United Commercials were done Re. 1 lower at Rs. 64. State Bank of India shares changed hands at Rs. 390.

Among electricity shares, Ahmedabad Electrics disclosed a loss of Re. 1.20 at Rs. 91.80, and Bombay Suburbans fell by Re. 1 to Rs. 103. Tata Hydros were a shade quiet at Rs. 117.75. While Tata Powers were unchanged at Rs. 1,167.50, Andhra Valleys were marked down by Rs. 11.25 to Rs. 1,136.25.

Sugar shares, too, were affected by the general setback. Belapurs dropped over the week Rs. 4.50 to Rs. 308.50. Phaltans moved down by Rs. 6 to Rs. 159.50 and Walchandnagars by Rs. 13.75 to Rs. 290. Maharashtra Sugars recorded a fall of Rs. 9 to Rs. 201.

The downward trend in Associated Cements noted earlier in the week gathered momentum today and the shares closed at Rs. 152.50, with a loss of Rs. 5.25 over the week. Digvijays, however, gained a rupee, despite the decline today from Rs. 158 to Rs. 154. Orissa Cements were lower by 16 nP at Rs. 14.32, Jaipur Udyogs by 12 nP at Rs. 11 and Bagalkots by a similar extent at Rs. 8.20.

After touching a peak of Rs. 299, Alcocks suffered a precipitous fall to Rs. 271; the loss over the week was, however, less at Rs. 19. On keen support induced by reports that the Tata Locomotive and Engineering Company had obtained permission from the Government to increase its production of trucks from its present rate of 7,000 vehicles per annum to 12,000 and that it was likely to undertake production of small cars, the shares of the Company shot up from Rs. 201 to Rs. 214. Today, however, they slipped back to Rs. 205.50 before recovering to Rs. 208. Mahindras lost 40 nP to Rs. 23, notwithstanding the optimistic note struck by the Chairman about the outlook for the Company at the annual meeting held this week. Premier Constructions came down to a low of Rs. 318 before closing at Rs. 326, as against Rs. 341 a week ago. Larsen and Toubros shed 92 nP to Rs. 23.48. In the mining group, Shivrajpurs gave way from Rs. 100 to Rs. 95 and Indian Coppers from Rs. 4.28 to Rs. 4.12.

Shipping shares provided no exception to the general trend. Scindias slipped down from Rs. 18.64 to Rs. 17.92 before recovering to Rs. 18.08. Great Easterns were marked down by 60 nP to Rs. 23.12. In the automobile group, Hindustan Motors shed 80 nP to Rs. 8.24 and Premier Automobiles fell by Rs. 7.50 to Rs. 108.50.

In the miscellaneous group, Bombay Burmahs (old) moved up erratically from Rs. 559 to Rs. 566.50, but in today's reaction they gave way to a low of Rs. 542. The closing was a little better at Rs. 547. National Rayons provided an impressive feature with a rise from Rs. 303.50 to Rs. 316.50, but the gain has almost wiped out today when the shares touched Rs. 304. At the close, there was a mild recovery to Rs. 307. Gwalior Rayons were done 36 nP lower at Rs. 18.24. Chemical shares, too, came under pressure, Tata Chemicals being marked down by 16 nP to Rs. 17.56. Alembics dropped Rs. 9 to Rs. 200, Dhrangadhras Rs. 3 to Rs. 117 and Poly Chem Rs. 2 to Rs. 100. Amar Dyes fell by 11.50 to Rs. 160 and Indian Dyestuffs by Rs. 81.25 to Rs. 630. Tata Oils were Re. 1 lower at Rs. 54. Hindustan Levers changed hands Rs. 2 down at Rs. 29.25. Voltas suffered a drop of Rs. 5.75 to Rs. 162 and Wimcos Rs. 15.50 to Rs. 206.50 *ex-div.*

* * * *

Calcutta Stock Exchange

CALCUTTA, 20*th May*

After earlier steadiness, a weakening tendency was in evidence on the Calcutta Stock Exchange during the week under review. This was attributed to lack of incentives and the rather high levels which equity prices had touched in recent weeks. Genuine investors considered the present levels prohibitively high. At these levels, there was no question of purchasing for holding, in view of the increase in the tax burden on the shareholder, effective from the current working period for most companies. The week's recession was indeed fractional, as speculative elements could not afford a marked recession for fear of losses. However, as investors continued to be biding for time and the holding power of speculators declined, a levelling off should come about and the present resistance at higher levels should prove a passing phase. The pressure of delivery of shares also depressed prices a little and the volume of business also dwindled. Enthusiasm over the news of the decision of the Tata Iron and Steel Company, Ltd. for a new issue of shares was restrained, as the issue had not yet been approved by the Government. With the loan programme of the Central and State Governments, which would be announced shortly, there was a tendency on the part of operators to wait.

Sectionwise, excepting for selected features, the general trend in the jute section was downward. Buyers became more cautious, as there were signs of increasing Pakistani competition in goods. While Bally recovered to Rs. 210 from Rs. 200 before closing today at Rs. 208, Anglo-Indias moved from Rs. 232 up to Rs. 235 and closed at Rs. 233. Aucklands were driven down to Rs. 164 from Rs. 170. Howrahs, after giving way to Rs. 24.06, recovered to Rs. 24.37, but again reacted to Rs. 24.06. Birlas closed at Rs. 20.87, as against Rs. 21.12, a week ago. At Rs. 15.69, Megnas carried a net gain of 19 nP over the week. Deltas, for which a dividend of 6 per cent. has been declared for 1958, as against *nil* in 1957, changed hands at Rs. 184 against Rs. 181 previously.

In the engineering section, Indian Irons opened at Rs. 24.22 and steadily rose to Rs. 24.75, when a reaction pushed down the rate to Rs. 25.45. Since then, the rate gained strength and closed higher on balance at Rs. 24.79 after being higher at Rs. 24.95. Guest, Keen, Williams were a shade quiet at Rs. 41. Texmacos touched Rs. 26.10 from Rs. 25.60, but closed at Rs. 25.50. Indian Galvanizings were taken up to Rs. 17.87 from Rs. 16.94 on good prospects. Kumardhubis eased to Rs. 8.87 from Rs. 9.59.

Tea shares were subjected to profit-taking, Brooke Bonds declining to Rs. 20.31 from Rs. 20.87, and Teesta Valley to Rs. 21.50 from Rs. 21.75. Huldibaris encountered business at Rs. 24.25, as against Rs. 25.12 previously, while East Indias moved up to Rs. 20.56 from Rs. 19.62. Bishnaths gained to Rs. 22 from Rs. 21.37, but gave way today to Rs. 21.12 and Hantaparas, after being higher at Rs. 145, receded to Rs. 134. Earlier, Patrakolas advanced to Rs. 150 from Rs. 145, and Tezpores to Rs. 19.37 from Rs. 19.00, but the latter reacted to close at Rs. 18.75.

Earlier, miscellaneous industrials were firm, but, in accord with the general trend, gave way subsequently. Orient Papers dropped from Rs. 36.60 to Rs. 35.60. Indian Coppers were quiet at Rs. 4.22, while Metal Corporations, after gaining to Rs. 14.62 from Rs. 13.44, closed at Rs. 13.69. Alkali and Chemicals receded to Rs. 23.19 from Rs. 25.12 and Indian Oxygens to Rs. 27.75 from Rs. 28.25. Indian Cables were a fraction lower at Rs. 31. Indian Aluminiums were at one time higher at Rs. 21.75, but closed lower at Rs. 21.06, while Metal Boxes hardened to Rs. 37.75 from Rs. 36.62. National Carbons declined to Rs. 30.62 from Rs. 32.97.

* * * *

Madras Stock Exchange

MADRAS, 20*th May*

After presenting firm conditions during the major part of the week under review, the Madras Stock Exchange turned quiet today. The earlier firmness was engendered by good investment support, while floating stocks of several scrips were scarce. Values, as a consequence, registered a handsome improvement. Teas and coffees were well favoured. Textiles evoked persistent enquiries, although the enquiries were of a selective nature. Barring a few scrips which ruled easy, the miscellaneous section was active with notable gains in many counters. Today, however, the market developed a sagging tendency, as the buying fervour abated. There was also some profit-taking at higher levels. Sugar shares provided an exception in that they continued to be in the limelight.

In the sugar group, Cauverys advanced by Rs. 2 to Rs. 110. E.I.D's rose by 35 nP to Rs. 39.10. Indias gathered 2 nP to Rs. 13.12 *cum-div.* Travancores hardened by 17 nP to Rs. 12.62. Mysores were fully maintained at Rs. 52.25.

Among tea shares in the planting section, Haileyburias picked up 40 nP to Rs. 19.60. Nonsuch Teas and Parasides strengthened by 25 nP each to Rs. 27.35 and Rs. 22.50 *cum-div.*, respectively. Twyfords gained 15 nP to Rs. 17.40. United Nilgiris put on 20 nP to Rs. 20.30. Balanoors, Chembras and Waterfalls were firm at Rs. 21.25, Rs. 4.35 and Rs. 4.15, respectively. Peermades, however, encountered selling and dropped 65 nP to Rs. 19.75. Among coffees, Anaparais rose by 5 nP to Rs. 4.75. Consolidated Coffees increased by a like amount to Rs. 22.20. Cowcoodys were fully steady at Rs. 7.25. In the rubber group, Rajagiris gathered 5 nP to Rs. 17.45. Highlands changed hands at Rs. 12.10, same as last week. Malankaras were firm at Rs. 19.35, as also Nenmenys at Rs. 17 *cum-div.*, Pullangodes at Rs. 1.83, Thirumbadis at Rs. 2 and Vaikundams at Rs. 26.

A sharp rise of Rs. 12 to Rs. 164 in Premiers was the feature of trading in the textile section. Buckinghams rallied from Rs. 183 to Rs. 185. Cannanores and Radhakrishnas gained Re. 1 each to Rs. 152 and Rs. 131, respectively. Bangalore Woollens hardened by 50 nP to Rs. 175.50 and Cambodias by 45 nP to Rs. 9.85. Maduras, however, fell by 35 nP to Rs. 28.65, owing to deterioration in labour situation in the Mills.

In the miscellaneous section, W. I. Plywoods continued to be well fancied and spurted by Rs. 6 to Rs. 168. Orissa Cements moved up by Rs. 5 to Rs. 14.50 and Rallis by Rs. 3 to Rs. 70. Mysore Chemicals rose by 55 nP to Rs. 10.80. Ashok Leylands gathered 25 nP to Rs. 9.00 and India Cements 5 nP to Rs. 6.03. Mysore Papers were higher by 10 nP at Rs. 20.40. F.A.C.Ts, on the other hand, lost 5 nP to Rs. 9.40 *cum-div.*, Indian Steel Rollings declined by 13 nP to Rs. 15.37.

NEWS IN BRIEF

A MODERN plant to manufacture high-grade industrial alcohol has been installed at Asansol in West Bengal. The plant has an annual capacity of 1.2 million gallons.

The Government of India has decided to import copper from the U.S.S.R. and other steel manufacturing countries on rupee-payment basis through the State Trading Corporation, in order to tide over the scarcity of this metal in the country.

The Government of India has decided to issue supplementary licences for import of tyres and tubes for trucks and bicycles of all sizes during the licensing period April-September 1959. The supplementary licences will be granted to established importers for a value equal to one-fifth of the face value of the basic quota licences issued to them in the current licensing period.

The Punjab Government has submitted to the Centre a memorandum seeking reduction in its total debt liability of Rs. 225 crores, particularly with regard to loans granted for extending irrigation and power projects. Meanwhile, the State Government proposes to impose strict administrative control, in order to prevent large-scale evasion of taxes and accumulation of revenue arrears.

Five thousand village leaders in Patiala district of the Punjab State are being trained to launch a campaign for intensive cultivation of the *kharif* crop. About 3,000 persons have already been trained at 150 camps arranged by the Agriculture Department in the district. One hundred more camps will be organised shortly. Meanwhile, a sum of Rs. 5 lakhs is being distributed among peasants in this district in the form of loans and subsidies for minor irrigation works.

India and Rumania have signed a long-term trade agreement, under which Rumania will supply industrial equipment, mineral oil equipment, electrical material, machine tools, tractors, diesel motors, chemical and pharmaceutical products to India. In return, India will supply iron ore, iron alloys, textiles, raw hides, vegetable oils and coffee. As a result of the new agreement, the volume of trade between the two countries is expected to expand by three times the 1958 level.

The Indo-Iraq trade agreement signed on 20th December 1958 has been ratified by the Governments of the two countries. Under the agreement, which will be valid for one year, the two Governments will accord most favoured-nation-treatment mutually, subject to the existing or future preferences or advantages which either party accords to third countries. They will also seek to expand trade in traditional items such as Iraqui dates and Indian tea, besides introducing new products into their trade.

The Panchet power house of the Damodar Valley Corporation is expected to be commissioned in August 1959. Having an installed capacity of 40,000 kw., the power house will increase the total generating capacity of the D.V.C. power system to 254,000 kw. Work is also in progress for the installation of another generating unit at Bokaro with a capacity of 75,000 kw. In addition, a 150,000-kw. power station at Durgapur and another 125,000-kw. station at Chandrapura—the latter is for meeting the needs of railway electrification—are in hand. These additions would further increase the total generating capacity of the D.V.C. network to 604,000 kw.

The Government of India has decided to continue the present sugarcane price policy during the 1959-60 season also. Accordingly, the basic minimum price for cane payable by vacuum pan factories will be Re. 1.44 per maund for gate delivery and Re. 1.31 for delivery at rail centres. Further, there should be a deferred payment of an amount which may be found due under the formula prescribed by the Centre or under any alternative scheme applied in a State or region by the State Government concerned, with the previous approval of the Centre, for linking the price of cane to that of sugar realised by the factories concerned.

A four-man cotton trade delegation from Tanganyika, led by Mr. C. De. N. Hill, is now in India holding discussions with the representatives of cotton industry and trade on the ways and means of promoting exports of cotton to India. Although cotton production in Tanganyika has gone up markedly in recent years—the current annual rate of output is 200,000 bales—and the quality compares favourably with that of East African *Muwanza* variety, India has not yet made any large-scale purchases of this cotton. The leader of the delegation said in Bombay the other day that his country would buy more Indian cloth provided Indian mills imported its raw cotton.

The advanced management course sponsored by the Standard-Vacuum Oil Company was inaugurated by Mr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, at New Delhi on Monday this week. The course is being conducted by Mr. Louis A. Allen, a noted U.S. management consultant, and is open not only for the Stanvac management personnel but also for top-level industrial personnel from the private and public sectors. The course marks an important phase in the Company's Executive Development Programme, organised more than ten years ago, to prepare the maximum number of managerial staff for positions of higher responsibility within the organisation.

The National Productivity Council of India will be sending seven study teams abroad in specific subjects during the next three months, according to Mr. H. D. Shourie, Executive Director of the Council. Each team will consist of ten persons drawn from management, technicians and workers. The teams will study improved productive techniques in advanced countries. The expenses of this scheme will be met out of the $3.35 million aid granted by the U.S. Government under the T.C.M. programme. Fifteen more teams are expected to be sent abroad next year. Arrangements have also been made to secure the services of twelve U.S. and four I.L.O. experts in the next three or four months. These experts will organise programmes of training and give advice on productivity matters to industries.

A non-official trade delegation under the leadership of Mr. M. H. Hasham Premji, a leading business man of Bombay, has left for Iraq to explore the possibilities of promoting Indian exports. The delegation has been constituted by the Federation of Indian Chambers of Commerce and Industry in consultation with the Government of India. The visit of the delegation will synchronise with the opening of a wholly Indian exhibition, organised by the Government of India, in Baghdad, on 21st May. Consequent on the signing of a new trade agreement between the two countries in December 1958 and the facilities which India is giving to Iraq for the import of dates, a favourable climate has been created for exploring export possibilities in the Iraqi market. The delegation is expected to establish first-hand contacts with Iraqi merchants and importers.

The Select Committee on Rajasthan Land Ceiling Bill has fixed the ceiling area for land at 30 standard acres for a family of five or less than five members. The standard acre is defined as an area capable of yielding ten maunds of wheat a year. In the case of lands under other crops, the acre should be assessed as representing the money value of ten maunds of wheat. The money value of the produce of well-irrigated land should be taken as being equivalent to the money value of the produce of an equal area of unirrigated land. The Committee considers that the provision in the Bill seeking to relate the ceiling to the annual income of Rs. 2,400 to be derived by a family of seven or less than seven is unscientific. The Committee has also revised the principles governing the payment of compensation for lands, which, in its opinion, should be at the market value of land surrendered.

* * * *

From Abroad

A new oil well has been struck in the south-east of Fyzabad, Trinidad, with a capacity of 125 barrels of oil a day.

The population of the U.S. on 1st April last was 176.47 million, as against 173.34 million a year before, and 147.13 million on 1st April 1950.

The British Motor Corporation has concluded an agreement with its distributors in Holland for enlarging assembly capacity there to 20,000 cars a year. This is expected to result in higher exports of its cars to the Benelux countries.

The Sudanese Government and the Italian State-owned firm, Agip, have entered into an agreement, under which the firm will acquire oil prospecting rights along the Red Sea coast for 30 years. The profits, if any, will be shared equally between the two parties.

The improvement in British steel production which began in March last continued in April also. The actual output in April averaged 387,300 tons a week, as compared with 362,700 tons in the previous month. Steel furnaces worked to 81 per cent. of capacity, as compared with 76 per cent.

A departmental committee to review the law relating to the protection of industrial designs has been set up by the British Board of Trade. The Committee will examine the desirability of enabling U.K. designs to receive cheap and effective protection in other countries on the basis of reciprocity.

The ratio of costs of motoring in Sweden, including investments in roads, streets, etc., to the gross national product in 1958 is estimated at 12 per cent. At the same time, 8 per cent. of the aggregate private consumption was accounted for by the purchase, operation and maintenance of cars.

Britain, the U.S. and Soviet Russia have signed an agreement with the International Atomic Energy Agency for the supply of nuclear fuels to be used for peaceful purposes. The Agency has now at its disposal 5,100 kilograms of Uranium 235, sufficient to run 10 ordinary reactors or two large industrial reactors for their lifetime.

The assembly of a new gas-turbine supercharged engine of 300 h.p. has been announced by the U.S. Ford Motor Company. Its weight is only one-fourth that of a truck diesel engine of comparable horse-power. Its fuel economy rivals a diesel and is superior to conventional petrol engines under most operating conditions.

A Scottish firm of engineers has received a £500,000 order from the Government of Kuwait for what will be the largest "fresh-water-from-sea-water" plant in the world. The plant consists of two units, each of which will produce 1,000,000 gallons of fresh water a day—the greatest output ever achieved by a single flash distillation unit.

The U.S. Government proposes to construct a two-mile long atom smasher which is expected to advance man's knowledge of high energy physics.

PERSONAL

MR. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India, left Bombay on Sunday the 17th inst. for a month's tour of the U.K. and W. Germany.

Mr. V. T. Dehejia, I.C.S., Special Secretary to the Government of Bombay, Political and Services Department, has been appointed Chairman of the Bombay Port Trust *vice* Mr. L. T. Gholap, I.C.S.

Mr. Tenneti Viswanatham, who was Chairman of the Advisory Commission of the Company Law Administration hitherto, has been appointed Chairman of the Coffee Board. He took charge of his new post with effect from the 18th inst.

Mr. Frank de C. Matthews, former Manager of the Bombay Branch of The First National City Bank of New York, has been appointed its Resident Vice-President. He will continue to make his headquarters in Bombay. He is succeeded by Mr. Robert E. Grant as Manager of the Bombay Branch.

Sir John Elliot, former Chairman of London Passenger Transport, has been elected Chairman of Thomas Cook and Sons Ltd. and its subsidiaries with effect from 1st July 1959. He will succeed Mr. Stanley Adams, who is retiring. Mr. Charles Holt, at present Director and General Manager of the Company, will be its Managing Director.

The President has agreed to ask the U.S. Congress to appropriate $100 million for the construction of an electron linear accelerator. The project has been proposed by Stanford University in California and will probably be built there.

The number of unemployed in the U.S. fell more sharply in April than in any month since the recession, the actual decline being 4.335 million to 3.600 million. The proportion of the unemployed to the total labour force declined to 5.3 per cent. The improvement in the employment situation has been due to active hiring in construction and manufacturing, together with seasonal gains in farming.

Factory wages in the U.S. hit an all-time high in April, averaging $89.87 per week. Spendable income after taxes also reached an all-time high in the first quarter of the year, touching an annual rate of $1,823 for each man, woman and child in the U.S. The gross national product—the value of all goods and services—reached a record annual rate of $465,000 million in the same quarter.

The British Board of Trade has approved of the scheme to set up the Commonwealth Unit Trust Fund, sponsored by the A.E.G. group of unit trusts. The Fund is expected to invest in the securities of the main Commonwealth countries and units will be offered for sale to investors in all these countries. It is hoped that the various Commonwealth banks will act as selling agents and furnish investment advice.

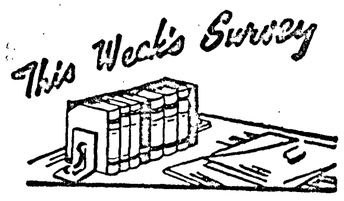
The Swedish Co-operative Union (KF.) has made an agreement with the Soviet co-operative organisation, Centrosojus, under which KF. will deliver shoes, rubber tyres, electric bulbs, textiles and steel manufactures valued at about Kr. 6 million in exchange for oil. Except for the textiles and steel manufactures, the goods will be supplied by enterprises belonging to the Swedish Co-operative movement.

The largest and most modern steel works in Spain, the reversing mill of Empresa Nacional Siderurgica S.A. at Alviles, has gone into production. The major part of the electrical equipment was engineered by the metal industries division of the English Electric Company. The mill, the first twin-drive in Spain, is designed to give an output of up to 1,000,000 tons of blooms a year. The two 3,500-h.p. motors were made at the Stafford works of English Electric.

A non-partisan organisation to popularise aid to underdeveloped countries is proposed to be established in West Germany. The initiative in the project has been taken by Professor Ludwig Erhard, Minister of Economics, who has already sought the co-operation of the representatives of industry, trade unions and the chambers of commerce. Meanwhile, a sum of £100,000 has been set apart for starting a training centre in West Berlin for technicians and others from underdeveloped countries.

The International Rubber Study Group puts the estimate of world consumption of natural and synthetic rubber in 1959 at 3,520,000 long tons. The estimate is based on the assumption that the non-member countries, such as the U.S.S.R., will continue to purchase at higher levels reached in recent years. World supply of natural rubber is expected to be above 1,970,000 tons. The annual production capacity of synthetic rubber in member countries will be of the order of 2,040,000 tons. World production and consumption of natural rubber in 1958 amounted to 1,855,000 tons and 1,995,000 tons, as against 1,902,500 tons and 1,887,500 tons, respectively, in 1957.

The Committee, set up by the French Government in February last to study the reform of the tax structure, has recommended an overall reduction of £150 million in the revenue from income taxes from 1960 onwards, but without any drastic changes in the fiscal system. The reduction is to be achieved by a cut in the proportional tax on private incomes by 2 per cent. per annum and a simplification of the surtax rates to give an average maximum rate of 50 per cent. (over and above the proportional tax). Individual savings would be encouraged by an unearned income allowance of £720 per annum for surtax purposes.



SHARING INDUS BASIN WATERS

IT would appear that, excepting for the establishment of certain "general principles" acceptable to both the Governments of India and Pakistan on the long-drawn-out canal waters dispute, the visit to the two countries of Mr. Eugene R. Black, President of the World Bank, and Mr. William A. B. Iliff, one of the Vice-Presidents of the Bank, has not been much of a success. Mr. Black himself stated at New Delhi just prior to his departure for Karachi on the 16th inst. that "there are some difficult obstacles that remain to be surmounted." Two days earlier, that is, in his monthly Press conference, Mr. Nehru observed: "There is a large number of stiff hurdles yet to be surmounted. Although, essentially, the problem is an encouraging one, it has financial and political aspects as well. Broadly speaking, Mr. Black's proposals are financially very big, rather overwhelming in our thinking, and, secondly, the period for execution of the projects is rather long."

What are the World Bank proposals? Neither Mr. Black nor Mr. Nehru nor any official of either Governments has given an account of these proposals. It is, however, generally understood that the proposals are based on the Bank's plan of 1954 and its *aide memoires* of 1956. The plan envisages division of the Indus Basin waters between the two countries by exclusively reserving the three western rivers, *which carry 80 per cent. of the total waters of the Basin*, for the use of Pakistan and the three eastern rivers for the use of India. It also envisages replacements and storage works as well as development works for both the countries at a total estimated cost of about Rs. 467 crores (£350 million).

Briefly, the "general principles" agreed to by both India and Pakistan, to which Mr. Black has made a reference, are:

1. India should have the right progressively to reduce the historic supplies of water which Pakistan has been getting from this country.

2. The six rivers of the Indus Basin should be divided equally between India and Pakistan for their exclusive use.

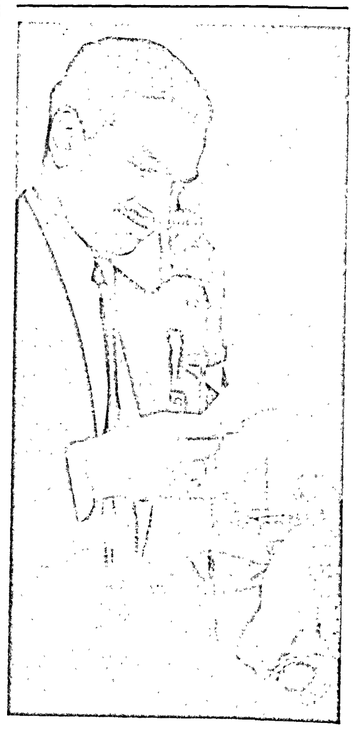
3. All the link canals and other irrigation works necessary to replace the present supply of 10 million acre-feet of water to Pakistan should be located in Pakistan.

The acceptance of the abovementioned principles by the two countries no doubt represents, as Mr. Black said, an important progress towards the settlement of the canal waters dispute. But it is not so much these broad principles as the details of the World Bank plan that have so far defied a solution. The two vital issues are the cost of the projects and the period of construction. There is also the issue of the construction, by Pakistan, of the Mangla Dam in Kashmir territory now under Pakistan occupation. Unless these issues are solved, the canal waters dispute will remain with us.

The Government of Pakistan has announced that it has, for all practical purposes, accepted the World Bank plan and has conveyed to Mr. Black its "willingness to go forward on the basis of this plan." This is only to be expected, considering that the plan, to the extent it can be comprehended from the various reports appearing in the daily Press, eminently suits Pakistan, in that it not only ensures to that country the exclusive use of as much as 80 per cent. of the Indus Basin waters but also holds out prospects of large financial assistance from India and other friendly countries, besides assuring supply of water by India for another ten years beyond 1962 pending the completion of the link canals and other construction works in Pakistan.

So far as India is concerned, however, the sacrifice involved in the acceptance of the World Bank plan is beyond its capacity. When the country is faced with the problem of scarcity of financial resources, how can it be asked to contribute towards the cost of link canals in Pakistan, amounting to a large sum of Rs. 103 crores, in addition to about Rs. 22 crores due by Pakistan for the water supplied all these years since the Partition and which this country is now asked to forgo? It may be noted that the aggregate figure of Rs. 125 crores is more than twice the sum of Rs. 60 crores, suggested initially by the Indian engineers. Even the payment of Rs. 60 crores to Pakistan should, in our view, be adjusted against the large-scale partition debt of Rs. 300 crores—the sum may actually be higher, according to Mr. Morarji Desai—which Pakistan owes India.

Another heavy sacrifice which India is asked to make relates to the supply of water to Pakistan for another ten years beyond 1962. It is most unjust of anyone to expect India to make this sacrifice, for India has given sufficiently long notice to Pakistan to make alternative arrangements. If Pakistan has persisted in ignoring this notice, India cannot be blamed for it. The State of Rajasthan has for long been thirsting for water. Anyone who cares to visit the desert areas in the State will fully appreciate the Central Government's anxiety to divert the waters to these areas in 1962. It is, therefore, highly unreasonable to suggest that India should continue water-supply to Pakistan beyond 1962. Fortunately for Pakistan, the position will not be so bad as its politicians are making out. In the first place, Pakistan has been quietly making arrangements to replace the water that India is entitled, under international law, to use. Secondly, the Government of India itself has been slow in implementing the Bhakra Nangal Project. Indeed, the position is that Pakistani farmers will be better off than their confreres in Rajasthan. By 1962, India is expected to draw only that much water which the Rajasthan canal would take. According to a report, this 425-mile canal will, when completed, draw about 8.0 million acre-feet of water, but, as things stand at present, the full length of the canal may not be completed by 1962. Consequently, some supply, though not the whole of the present 6.5 million acre-feet of water, is considered likely to be made available to Pakistan for some time beyond 1962.



THE SECRET RESERVES OF MR. K. He's going ahead fast, and he's a very busy young man. Every moment of his day is filled with business calls, conferences, important deals. Yet, Mr. K. stays active and alert the whole day through.

For alert Mr. K's Secret

Please see announcement opposite

VT-7698

It is thus evident that Pakistan will have enough time to complete the replacement, storage and development works programme. It is gratifying to hear, in this connection, that the World Bank is trying to enlist financial help for Pakistan to carry out this programme from the highly developed countries in the free world such as the U.S., the U.K., Canada, West Germany and Australia. We wish the World Bank all success in this attempt in the hope that it will facilitate solution of all Indo-Pakistan disputes and lead to amity between the two countries.

The aforesaid two issues apart, India is quite justified in its insistence that the construction of the Mangla Dam in the Azad Kashmir territory now in Pakistan's occupation must await the solution of the Kashmir dispute. In addition to the fact that Pakistan is constructing the Dam in a territory which is legally part of India, its catchment area would, it is feared, inundate more than 200 villages on the Indian side of Kashmir. Although this problem is not directly concerned with the canal waters dispute, Mr. Nehru considers it desirable to discuss all water disputes with the World Bank "in order to prevent trouble in future." The "way out" suggested is that Pakistan can give satisfactory assurances about the Mangla Dam's future and also pay, in the meantime, compensation for the villages which would be submerged in the catchment area. This is, indeed, a very reasonable demand and it costs Pakistan nothing.

TOBACCO

Ever since 1605 when tobacco was brought to Surat by the Portuguese for the first time, its cultivation gradually spread all over the country. Today, India has the distinction of being one of the major tobacco producing countries, next only to the U.S. and China. Out of an annual world production of about 7,500 million lbs. of tobacco, India accounts for about 575 million lbs. or about 13 per cent. The cured virginia tobacco, utilised for the manufacture of cigarettes, is the principal export variety. Besides India, the U.S., Southern Rhodesia, Nyasaland and Canada are the principal competitors of virginia in world markets. In India, the Andhra State is the leading producing centre, accounting, as it does, for about 33 per cent. of the country's total production. In this State is grown about 95 per cent. of India's virginia cigarette tobacco. Tobacco is a valuable foreign exchange earner, for, while consumers of this narcotic stimulant are found all over the world, it is produced only in certain countries. Indeed, India's exports of raw tobacco touched an all-time record in 1958, with their value amounting to Rs. 15 crores, as against about Rs. 12 crores in 1957. The U.K. is the leading importer of Indian tobacco; it bought last year about 44 million lbs. valued at about Rs. 11 crores. In recent years, the U.S.S.R. and China also have been taking substantial quantities of medium and low grades of flue-cured virginia tobacco. Last year, China bought for the first time even top grade flue-cured virginia tobacco of one million lbs.

Although exports of unmanufactured tobacco have made significant headway, the export performance of manufactured tobacco has been none to satisfactory. Their earnings remained more or less stable, at Rs. 160 lakhs. Mr. K. Rangaswami, Chairman of the Tobacco Export Promotion Council, was, therefore, quite pertinent when he remarked at the second annual general meeting of the Council, held at Madras on the 15th inst., that effective steps should be taken to expand the foreign markets for manufactured tobacco such as cigars and cheroots. Indian tobacco products are, according to him, cheaper and yet their exports are not going up. Why is it so? Answering this poser, he said that this was due either to an increasing demand in the home market or to the lack of sufficient incentive to Indian manufacturers or both. World consumption of tobacco is going up, despite warnings by medical bodies that smoking had certain injurious effects. By providing suitable incentives to exporters by effective propaganda and sales promotion and by marketing research it should be possible for India to step up its exports.

As in the case of every other article, the quality of tobacco and tobacco products also should be improved if attempts at stimulating their exports were to yield satisfactory results. The increased production of pale-faced variety of tobacco last year put the traders to difficulties. It is gratifying to find that the Council is making efforts to discourage the production of such varieties. The Council is also trying to dissuade farmers from growing tobacco on unsuitable lands. It has, according to Mr. Rangaswami, supported the proposal for inviting German blenders to India for studying the different qualities of Indian tobacco suitable for West Germany. All these are moves in the right direction.

In the meantime, in response to pressure from the Andhra Government, the Government of India has granted import licences for establishing two cigarette factories at Guntur, which is in the midst of the tobacco growing area. In case these units do not come into operation within the scheduled time, the Central Government, it is said, is prepared to licence the establishment of a State-owned factory at this place. Apparently, the Centre has given its consent because of the insistence of the Andhra Government. The latter has represented to the Centre, to quote Mr. Thimma Reddi, that either the State or the Central Government could set up the factory and sustain it in the initial years by asking the Defence Department to buy all its requirements from this factory. This is a strange economic logic; in effect, it means subsidy to the State-owned factory. The Commerce and Industry Ministry seems to have a different idea on the question of increasing the productive capacity for cigarettes. Actually, Mr. N. Kanungo, Union Minister for Commerce, for instance, has expressed the need for caution in establishing new units. His view is that the existing 16 factories are quite sufficient to cater to the needs of domestic consumption and to add to them would be to create the problem of glut in cigarettes and cigars. It may be noted, in passing, that India's annual capacity (on a single-shift basis) is estimated at 25,000 million cigarettes. It will not be easy to find export outlets for the surplus production, as the world markets are highly competitive. There is no exaggeration in this view, for it has already been shown that India's exports of tobacco products in recent years have been static. The issue of glut apart, it is not understandable why the public sector should think of entering the cigarette manufacturing business, when the private sector has already proved its competence and ability to meet all the requirements of tobacco products.

AUTOMOBILE INDUSTRY

Transportation is the conveyor belt of industry and it assumes, as Mr. K. C. Mahindra, Chairman of Mahindra and Mahindra Ltd., rightly points out (*vide* pages 866 and 867), greater importance as the emphasis on agricultural activity and the drive to produce more of each crop gain momentum. It is, therefore, necessary to see that more attention is paid to the movement factors of such growth in production. Accordingly, one cannot but share the sense of disappointment expressed by Mr. Mahindra at the Railway Minister's implied suggestion to place a curb on the growth of road services, when the latter ascribed the fall in railway freight earnings to the increased competition from road services. Mr. Mahindra expects a shortage of transport to move the target productions of both industry and agriculture at the end of the current Plan period, even after allowing for the completion of the ambitious railway plan and with whatever impetus given to the development of road transport. He, therefore, commends to the attention of the authorities his proposal, made last year, for the development of an extensive road haulage service, which would ensure the production of the requisite volume of trucks and trailers.

While the development of road transport, which is still largely in the hands of the private sector, thus offers good scope, the Defence Ministry's proposal to manufacture certain types of trucks and vehicles for their own requirements is viewed with concern by Mr. Mahindra. Apart from the fact that this move would curtail the activities of the private sector, the grounds on which Mr. Mahindra opposes the Defence Ministry's scheme are: (1) it is in conflict with the Policy resolution of the Ministry of Commerce and Industry which places the automobile industry in the protected category and directs that the manufacturing programmes of several units should be rationalised and speeded up; (2) it will diminish the incentive to private manufacturers to reduce their prices; and (3) the ordnance factories, with their limited capacities, will not be able to achieve production at a lower cost than that of private manufactures.

Mr. Mahindra is of the view that the present high prices of automobiles in the country are not due so much to the high cost of manufacturing as to the Government's curb on imports and its control on distribution and prices of automobiles which have led to a shortage of cars and trucks." There is no cure, where demand out-reaches supply," he went on to add, "except the pumping in of more supply or strictly regimented rationing of available supply." He does not see any solution to this problem, except a bold decision by the Government to import a sizable volume of cars and trucks. It may pertinently be asked whether it is worthwhile wasting valuable foreign exchange on such imports rather than on those items that will lead to an increase in the domestic manufacture of vehicles. But Mr. Mahindra is of the opinion that "this can be amply justified for curing the imbalance which has developed and which threatens to upset the delicate price structure already under severe pressure of inflationary forces."

But surely nothing should be done that would retard the progress that is being made in the programme for the manufacture of the whole vehicle in this country. This is the touchstone on which Mr. Mahindra's suggestion should be tested. The ideal solution to bring down the price of vehicles would be to raise the volume of domestic production and all impediments that stand in its way should be removed.

ONE MORE PAPER MILL

To the chain of twenty factories producing paper, paperboard and newsprint, one more has been added—the West Coast Paper Mills at Dandeli in the North Canara district of Mysore State. The factory was formally inaugurated on Saturday the 16th inst. by Mr. Morarji Desai, Union Finance Minister. Set up at a total capital outlay of Rs. 5 crores, the factory is claimed to be a self-contained unit with a daily capacity of 60 tons of writing, printing and kraft papers, including Manila. Speciality paper such as parchment is expected to be manufactured later. On the Company's rolls there are nearly 6,000 workers, of whom 4,500 are employed in felling the bamboo and transplanting it.

THE SECRET RESERVES OF MR. K.

Mr K. knows that he can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound, restful *sleep—in the soothing coolness of* his 'Crystal' conditioned bedroom.

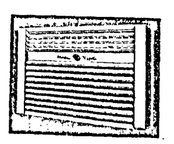
Keep Cool with a

Crystal trimline

ROOM AIR CONDITIONER

Only the 'Crystal' gives you all these advantages:

- Over one ton cooling capacity
- Protrusion of less than three inches into the room
- Universally adjustable air-flow
- Voltas' unrivalled after-sale service that never lets you down



Made by

VOLTAS

VT-7694

The Dandeli paper mill project was first conceived in 1955 when Mr. A. D. Chaudhari obtained the original licence from the Government of Bombay and, on 25th July 1955, an agreement was reached between Mr. Chaudhari and the West Coast Paper Mills to launch the project. Constructional activity started in November 1957 and the erection work was taken in hand in January 1958. Within a few months —in November 1958—certain sections of the factory were on trial operation. The unit as a whole was completed recently and trial runs on the two important sections, namely, bleached pulp and soda recovery sections, were made just a week prior to the formal inauguration. The successful implementation of the project must be attributed to (*a*) the vigour and drive of Bangurs and Somanis, (*b*) the encouragement given to the project in the initial stages by Mr. Morarji Desai when he was the Chief Minister of Bombay, (*c*) the active support lent by the Government of Mysore after the transfer of Dandeli town from Bombay State to Mysore State, (*d*) the financial assistance granted by the Industrial Finance Corporation and the Industrial Credit and Investment Corporation, and (*e*) the valuable work—location and preparatory—of Mr. A. K. Collinge, the Canadian paper expert and world-famous industrial engineer.

It is said that the new paper mill is a modern, up-to-date and integrated unit capable of economic and efficient performance. The Company, Mr. G. L. Bangur, the Chairman, revealed in his welcome address read by Mr. N. D. Bangur, had already plans to expand the factory. He stated that the lay-out had been designed in such a way that the expansion cost would be comparatively low. The prospects for expansion are, indeed, very bright, for two reasons. First, the bamboo and timber resources of the Dandeli forest area are so vast that paper production in the factory can be stepped up, as Mr. Morarji Desai stated while inaugurating the factory, threefold. Secondly, the consumption of paper in the country is rapidly rising. Alluding to this, Mr. Desai remarked that the country would need many such factories to make the country self-sufficient in paper.

It may be noted here that the total estimated requirements of paper and paperboard in 1960-61 are put at 350,000 tons. These can be fully met if the installed capacity of the industry comes to 450,000 tons, taking average production at 80 per cent. of capacity. During 1958, the aggregate installed capacity was 268,600 tons (excluding 30,000 tons representing the capacity of the newsprint sector), while actual output was of the order of 250,000 tons. Of this output, printing and writing paper accounted for 155,000 tons, kraft paper for 22,000 tons, other wrapping paper for 16,000 tons, miscellaneous varieties for 7,000 tons and pulp and paperboard for 50,000 tons. Newsprint production was about 2,000 tons.

A PROMISING VENTURE

It is a sad irony that many of the exportable commodities, of which India has had a monopoly or has been a leading supplier to the world markets, have come to face a buyer's market, thanks to the growing competition from other countries. To the rank and file of these commodities belongs manganese ore, of which India is known to have rich deposits. In the absence of sufficient steel producing capacity to absorb the available manganese ore, it has for long been exported in its raw form to countries engaged in steel production, particularly the U.S., Japan, the U.K., Germany and Belgium.

Since the latter half of 1957, the complexion of the trade in manganese ore has changed to the disadvantage of India, due to the recession in the U.S. and increasing competition from South America, Russia and Africa. The reduction in export duty on Indian manganese ore and its subsequent abolition last year have not proved helpful. The price in foreign markets is said to be unremunerative for India, even the high grade ore fetching not more than $30 per ton at present. In the circumstances, increasing the use of manganese ore within the country and exporting it in the form of ferro-manganese, which continues to enjoy a favourable market, provide the only solution. The establishment of units to produce ferro-manganese to feed the growing steel industry of the country, therefore, offers a promising venture. The importance of this industry has, it may be noted, been recognised by the Government of India, as is evident from the high priority assigned to it in the second Five-year Plan. Licences have been granted to about half a dozen industrial units

(*Continued on page 882*)

PROGRAMME FOR FERTILISER PRODUCTION

PLANS FINALISED INVOLVE INVESTMENT OF RS. 103 CRORES

From Our Special Correspondent

NEW DELHI, *19th May*

THE Agricultural Production Team sponsored by the Ford Foundation, it may be recalled, has recommended that "the procurement of fertilisers, and of the means of producing high-analysis fertilisers, must be given a top priority, including necessary foreign exchange."

DELHI LETTER

Although the targets for fertiliser to be made available at the end of the third Plan are described as soundly based, they are, in the opinion of the Team, conservative in relation to need. These targets amount to 1.5 million tons of nitrogen, 750,000 tons of phosphoric acid and 200,000 tons of potash. Whether the current fertiliser production will reach the second Plan targets and whether the desired expansion under the third Plan will take place are by no means certain. Either development would depend largely on the operation of the Government's policy governing encouragement to private parties who may come forward to start fertiliser factories. It is stated, in this connection, that proposals for the setting up of large-sized fertiliser factories in the private sector will be considered by Government on merits, if the parties interested in this development are able to secure the foreign exchange requirements of such projects on terms acceptable to Government. It is also stated that the question of setting up further additional capacity to meet the increasing fertiliser requirements of the country is under the Government's consideration.

At present, the main production units for nitrogenous fertilisers are the Sindri factory and the factory belonging to Fertilizers and Chemicals (Travancore) Limited, Alwaye. Small quantities are also produced by the factory in Belagola (Mysore) and as by-product ammonium sulphate in the steel plants and the coke ovens. The present total installed capacity is 87,000 tons of nitrogen per annum. The total production in 1957 was about 75,900 tons, and in 1958 about 76,800 tons, both in terms of nitrogen. The target capacity for nitrogenous fertilisers fixed by the Planning Commission is 380,000 tons per year by the end of the second Plan. Against this target, it is expected that production will reach about 400,000 tons of nitrogen per year by the end of 1961-62; but this is doubtful.

There are at present 14 factories in the country producing phosphatic fertilisers. All these, except one (the Bihar Government's factory), are in the private sector. The target laid down for the second Plan period is 120,000 tons of P_2O_5. The present capacity is 50,000 tons in terms of P_2O_5. The production of superphosphate during 1957 was 141,678 tons (22,670 tons of P_2O_5) and during 1958 approximately 180,000 tons (28,800 tons of P_2O_5); additional capacity to produce 279,100 tons of superphosphate corresponding to 44,656 tons of P_2O_5 has already been licensed.

The Fertiliser Production Committee constituted in October 1954, it may be recalled, was asked to make recommendations for the creation of additional capacity for nitrogenous fertilisers. The Committee had studied the possibilities of eleven locations besides Nangal before making their recommendations. These are indicated below in order of priority:—

Category I	...	1.	(*a*) Neyveli
		2.	(*b*) Bombay
Category II	...	3.	(*a*) Itarsi
		4.	(*b*) Vijayawada
Category III	...	5.	(*a*) Sawai Madhopur
		6.	(*b*) Hanumangarh
		7.	(*c*) Hathras
		8.	(*d*) Kothagudium
Category IV	...	9.	(*a*) Ramagundam
		10.	(*b*) Durgapur
		11.	(*c*) Sikka

The recommendations of the Fertiliser Production Committee were examined by the Government and it was decided that, in addition to the 60 per cent. expansion of Sindri and the establishment of a 70,000-ton nitrogen plant at Nangal, two more units should be established during the second Plan period in the public sector, one at Rourkela, utilising the hydrogen of the coke oven gases from the steel plant, and the other at Neyveli as part of the lignite project, with production capacities of 80,000 and 70,000 tons of nitrogen per annum, respectively. In addition to these, the Government has recently decided that a fertiliser factory at Bombay should be established based on refinery gases.

An official account of the progress made so far in the setting up of these units in the public sector is also available. First, the Nangal Fertiliser-Heavy Water Project is expected to cost about Rs. 30 crores according to the latest estimates, the total power required being of the order of 164,000 Kw. This power will be obtained from the Bhakra electricity power station. An American firm has been appointed as the technical consultants of the project. Contracts have been given on the basis of global tenders for the supply, erection and commissioning of the electrolysis plant with its accessories and auxiliaries to an Italian firm, fertiliser group of plants to a French firm, electrical equipment with its spares to an English firm and heavy water plant to a German firm. About 75 per cent. of the electrolyser plant has arrived at the factory site. Construction of nitric acid and ammonia plants and fertiliser production plant buildings has made sufficient headway to enable the erection work to start before the middle of this year. When in full production, the Nangal Factory is expected to produce 390,000 tons of nitro-limestone (equivalent to 80,000 tons of nitrogen as against the 70,000 tons only estimated earlier) and 14 to 15 tons of heavy water per annum. The end-product, which will have a nitrogen content of 20.5 per cent., will be ammonium nitrate mixed with powdered limestone to reduce its explosive hazards before making it available for use by the cultivator. The factory is expected to start production during the second quarter of 1960.

Secondly, the Sindri Expansion Scheme to expand Sindri's production by about 60 per cent. at a cost of over Rs. 13 crores, utilising the entire quantity of 10 million c.ft. of gas available daily from the coke oven plant and to make certain other adjustments and modifications, has been completed, and the plants are under commission and trial runs. It may be possible to forecast the probable date by which full production may be expected only after the plants have been run for some time. The target of production of this expansion project as designed is 140,000 metric tons of ammonium sulphate-nitrate (36,400 tons of N2) and 24,500 metric tons of urea (11,260 tons of N2) per year. The Government of India has sanctioned a loan of Rs. 9 crores for the expansion scheme out of which Rs. 6.86 crores have so far been released.

Thirdly, the Fertiliser plant at Rourkela will consist of two main parts: (i) ammonia plant and auxiliaries and (ii) nitric acid and nitro-limestone plant. It has been decided to award the contract for the construction of the nitric acid and nitro-limestone plants of the Fertiliser Factory at Rourkela to Sindri Fertilisers and Chemicals Ltd. at a contract price of Rs. 7.75 crores. It is proposed to award the contract for the ammonia plant and auxiliaries to Messrs. Uhde, West Germany, whose quotation was the lowest acceptable. The terms and conditions of the contract, particularly the deferred payment arrangements, are being finalised. The total cost of the plant is estimated at about Rs. 16 crores. The plant is designed for the production of 580,000 tons per year of nitro-limestone, equivalent to about 120,000 tons of nitrogen per year. This larger capacity is based on the revised assessment of the quantity which could be produced under certain favourable conditions.

Fourthly, the Neyveli Fertiliser Project contemplates the production of fertilisers with a fixed nitrogen content of 70,000 tons per annum in the shape of urea only (152,000 tons of urea per annum) by the total recycle process.

THE AMERICAN GOLD DRAIN

From Our Own Correspondent

LONDON, *15th May*

THE City is taking a special interest in American concern about their gold losses since it is joining in the game of selling gold to worried Americans. The hoarding of gold has long been supposed by Western countries to be an unenlightened activity indulged in only by peasant peoples, and the economist's finger of scorn has often been pointed at India, for example, by way of illustration of what not to do with one's capital wealth. But it seems that, when Americans buy gold, they are "investing" in it rather than hoarding it! They cannot buy gold from the Federal Reserve Banks which have also got the monopoly of the purchase of gold produced in the U.S. but they may buy gold outside. Similarly, London bullion dealers may not sell gold to British citizens in the sterling area but may sell it to persons outside the sterling area, whose sterling will be convertible under present arrangements and they may, of course, sell it direct for other convertible currency.

LONDON LETTER

Arrangements have now been made between one of the leading London bullion brokers, Messrs. Samuel Montagu, and a Canadian bank, the Bank of Nova Scotia, whereby each will issue gold certificates exchangeable against gold bars delivered in either London or Toronto. The certificates issued in London are exchangeable against certificates issued in Canada, though, if there is an arbitrage price difference between the two centres, then there may be a cash transaction for the difference to accompany the exchange of certificates. An American can, therefore, purchase for dollars a gold certificate in London, exchange it for a gold certificate in Toronto and exchange this in turn for gold bars to take home with him.

South Africa is another seller of gold and it is thought that comparable gold certificate arrangements may be made with that country; thus the gold certificate is becoming an international currency in the centres which have gold to sell and whose monetary regulations permit the sale.

But why is there this interest in the purchase of gold by Americans? In the last two years, there have been recurrent fears about the rate of gold drain out of the U.S., coupled with fears of a possible devaluation of the dollar, but the rate of gold outflow this year is a good deal lower than it was a year ago, although, in some weeks, some dramatic figures have appeared. In 1958, the gold loss of the Federal Reserve System was $2,300 million. In 1959, to date it has only been $278 million, but the total Federal Reserve gold stock is still $20,000 million, about the same level as it was at the end of the war. Such a vast stock is more than adequate to cover any likely flights from the dollar. Reasons for the recent outflow of gold undoubtedly stem back to the success of European countries in controlling the development of their own inflations and in making, as Great Britain has done, their balance of payments active.

But, from the Americans' point of view, they see the converse,—that their country is resuming its inflationary progress and the high cost of American goods is making their sales abroad more and more difficult. An obvious illustration is the increasing flow of American tourists to Europe and the Middle East, where they find their dollars go, holidaywise, very much further than at home; and more than ever Americans on this side of the Atlantic are found exclaiming at the cheapness of British and European goods in comparison with the prices they have to pay "back home." An American export drive now seems the logical sequel!—*All Rights Reserved.*

The Liberal Party in the U.K. has made several suggestions designed to encourage wider distribution of private property in the course of a pamphlet published by it recently. The suggestions include, among others, abolition of *ad valorem* stamp duty on share transfers as already obtains for the transfer of Government stocks, substitution of a legacy duty for estate duty so that tax would be levied on the size of the legacy and not on the size of the estate, and changes in the law regarding gifts *inter vivos*.

ADVERTISING BY BANKS IN U.S.

INTENSIVE EFFORTS MADE TO GAIN PUBLIC GOODWILL

By Al. Sathappan
INDIAN BANK LIMITED, MADRAS

IN the United States of America, many types of advertising on all sides attract our attention when we walk on the streets, drive an automobile on the highways, ride a street car, watch television, listen to radio, read newspaper or magazine or open our mail. In addition to these types of advertising, the banks are turning to the "casual publications" such as attractive booklets, pamphlets, brochures and folders, which win the attention and interest of the public. The banks use advertising extensively, with a view to familiarising their customers and the public with the services and the facilities they offer, in order to create a favourable attitude towards the banks. Most of the banks continue to follow a progressive advertising programme which is becoming an increasingly important factor in the development of new business for the bank. Practically all advertising is expected to build institutional goodwill to some degree, but in most cases this may be the primary objective.

The American Bankers' Association helps banks through its advertising department. It supplies information, suggestions and actual aid materials. Approximately 60 per cent. of the country's banks uses its services. The department furnishes newspaper mats, direct mail advertising (blotters, folders, booklets). lobby and window display posters and radio and television aids such as recorded and typewritten spot commercials, ready to appear locally as bank's own exclusive product. The newspaper service includes a "proofs-in-advance" plan for banks seeking to promote a variety of services and numerous special series covering a wide range of banking and trust services. One of the department's highly successful projects has been the special savings campaign on the theme "The Bank is the saver's best friend." "The School Saver," issued three times a year by the department for pupils of 9-14 years, features school savings accounts and a general thrift theme.

Public Support

The banks in the States enjoy public confidence and support. They realise the value of public relations, customer relations and community relations, without which the banks cannot achieve their objects and the business cannot operate successfully. The progressive bank's activity is to build goodwill and bring better public relations. More and more it is now being realised that almost every one of a bank's functions has an active role in any effective scheme for developing a better public attitude towards the bank individually and towards banking and bankers generally. The banks train the personnel intensively, so that it would serve as a real force in bringing about a better atmosphere in which to do banking as they realise that cultivating the goodwill of the customers requires team work and the cooperative effort of every department and every member of the staff. This is because the bank has to sell its service and it is judged not by what it says about it, but how it actually renders it each time to a customer who has any dealings with it. The banks very often revise what they offer in terms of the public's interest. They interpret it in terms of interest that is human and personal. As soon as they revise their plan of service, they call attention to it by means of publicity.

The banks are adding a number of features, in order to make their service efficient and attractive to the customers. One very popular move is the air conditioning of the main banking floors. Others include personal imprinting of cheques for special checking accounts, the establishment of "express" teller lines, and the opening of offices with "drive-in" facilities, and the development of inter-office deposit system. Many city banks have provided parking lot right next door. They keep pace with changing conditions and are alert to the developing requirements of the community they serve. The banks accord very good treatment to their customers in order to keep them in good humour, as a satisfied customer may bring them new customers through his recommendation.

There are other opportunities to build additional goodwill by rendering some service to the customers. The banks offer a good deal of practical management assistance to their customers on a free basis as their interest is strongly in favour of helping small firms to prosper and grow.

The officers and the other members of the staff are trained with the definite end in view of bringing about closer friendlier personal contacts with all types of people in the community round about. The managers and the other senior officers are very popular and friendly with the public. The advertising and publicity departments try to make the bank popular. The public relations department tries to build goodwill and create a favourable attitude in the minds of the public by its activities. The business development department tries to increase the business by aggressive personal contact and direct business development activities. Some banks adopt ultra-aggressive tactics in an endeavour to win for itself a firm acceptance in its community's life.

BANK OF AMERICA

A unique example of what the enterprise and genius of a private individual is capable of doing is provided by the Bank of America National Trust and Savings Association, San Francisco, California. The Bank was founded in 1904 with an initial paid-up capital of $150,000 by Mr. A. P. Giannini, an American-born son of Italian immigrants, as a small neighbourhood bank in San Francisco with the object of putting into practice the founder's belief that every one was entitled to banking service. In less than five and a half decades, it has grown into a world-wide financial institution with resources exceeding $11 billion.

From its inception, the Bank of America has been offering wage earners and small businessmen the same service which wealthy individuals and companies expect and receive from banks. The founder, Mr. A. P. Giannini, introduced many new bank services, such as loans for purchase of house, with rent-like monthly repayments, credit to small business owners based on the borrowers' integrity and prospects, credit and deposit services for all, regardless of the size of their accounts. Mr. Giannini is claimed to be a believer in widespread ownership of stock. In the Bank's early days, the maximum holding by an individual investor was fixed at 100 shares. Today, the Bank of America's stock, which are owned by more than 200,000 shareholders, are said to be the most widely distributed of any U.S. bank stock.

Under the U.S. federal banking regulations, a bank cannot open branches in States other than that in which its head office is situated and some State laws prohibit branch banking. It is, however, not so in California. The Bank of America, therefore, opened a network of branches in California, numbering 638 as on 31st December 1958 and is claimed to be the largest branch banking system in the U.S., spread over 350 cities in California. It provides employment for 23.500 people, offers 55 different services to its customers and the number of accounts on its books run to 7 million. The Bank owes much of its progress in recent years to its present President, Mr. S. Clark Beise, who joined the Bank in 1936. An idea of the extent to which its banking activities have spread is provided by the following passage from a recent article by Mr. George Curran, Vice-President of the Bank:

"For more than 30 years the Bank held first place in backing California agriculture; it was the first bank to extend credit to early-day motion picture producers in Hollywood, and maintains today a special department to handle motion picture and television industry loans at its Los Angeles headquarters. The Bank bought the first instalment of bonds on the world-famous Golden Gate Bridge across the San Francisco Bay when no other financing was available, and its loans to the Southern California aircraft and Northern California shipbuilding industries were of enormous importance in the production of World War II material. In the immediate post-war years. its activities included substantial credit to the fledging electronics industry, now an important part of the California economy and making more Government-insured housing loans to ex-servicemen than any other U.S. financial institution.

"The Bank is pioneering such customer-service innovations as an all-inclusive retail credit plan and pay-roll book-keeping and disbursing for small employers. Ideas for new customer services are formulated, researched and studied by Customer Services Research, a special department within the Bank. In the peaceful application of atomic energy the Bank has arranged with a leading research institution for provision of data on latest development to guide Bank of America officers in making loans and to heighten their advice and counsel to potential borrowers in the atomic power field."

Though a late-comer in the international banking scene—its first branch outside America was opened in London in 1931—the Bank of America has moved ahead considerably in world banking during the post-war years. It now operates two branches in London, four in Japan and one each in Manila, Bangkok and Agana, the capital of the U.S. Western Pacific territory of Guam. It wholly owns a subsidiary called the Bank of America (International). It maintains representatives offices in many countries, including India (at New Delhi). The Bank's representative in India is Mr. M. R. Ahuja, formerly India's Consul-General in San Francisco.

The Bank's services to India include its participation in World Bank Loans to Tata Iron and Steel Company Ltd. (to the extent of $3.5 million) and to the Calcutta Port ($613,000). Its commitments in the $15-million syndicate loan in conjunction with other U.S. commercial banks and the World Bank to Air-India International amount to $2.5 million. It is also extending facilities to its correspondents in India for commercial financing, including deferred payment credits.

The Bank's executive Vice-President, Mr. Russell G. Smith, is the head of the Bank's international banking activities. He is a Director of I.C.I.C. Ltd., Bombay, in which the Bank of America (International) is the only U.S. bank to invest.

PALAI CENTRAL BANK

Established in 1927 as a small village bank with resources just over Rs. 1 lakh, the Palai Central Bank Ltd. (Managing Director: Mr. K. Joseph Augusti, Palai, Kerala) has now grown to be the largest Scheduled bank in the Kerala State, with its total resources as at the end of 1958 exceeding Rs. 9.22 crores, of which deposits account for more than Rs. 8.55 crores. As the Bank's paid-up capital, reserves and deposits have together exceeded Rs. 7.5 crores and continued to be so for the last two years, it has been raised to the status of a B class bank, in terms of the Labour Appellate Tribunal Award as modified by the Government of India.

In keeping with the general trend, the Bank's deposits have grown during 1958 by over Rs. 63 lakhs to Rs. 8.55 crores; its advances have not risen in consonance with the rise in deposits, the increase being of the order of only Rs. 44 lakhs to Rs. 4.67 crores; and its gross income has gone up from Rs. 39.83 lakhs to Rs. 44.38 lakhs, while the net profit has shaded off from Rs. 3.98 lakhs to Rs. 3.68 lakhs. The decline in profit is due to the rise in interest payments, on account of the hardening of interest rates, and working costs, as also to the credit restraints enforced by the Reserve Bank of India. The slight fall in profit has reversed the upward trend noted since 1954, when it had stood at Rs. 2.75 lakhs, after having successively dropped from a high of Rs. 4.72 lakhs earned in 1952. The provision for taxation has been reduced from Rs. 2.01 lakhs to Rs. 2 lakhs, while the transfer to the reserve fund has been raised from Rs. 80,000 to Rs. 1 lakh.

"In view of the reduced profit and the need for strengthening the reserves," the Directors have not recommended any dividend for the year, after having paid 5 per cent. for each of the previous three years. It will be recalled that the Bank had consistently paid a dividend of 6 per cent. from 1939 to 1953 and that too on a growing capital raised during the intervening years. This was, however, pruned to 4 per cent. in 1954, but was enhanced to 5 per cent. in the following year. The Directors' decision to skip over the dividend for 1958 may seem surprising, in view of the fact that the profit for that year is higher than that for either 1955 or 1956. However, they have chosen to toe a conservative line, in view of the rising cost of bank service and the need for strengthening the resources.

The Bank's earning from interest and discount has gone up during the year under review from Rs. 37.25 lakhs to Rs. 40.51 lakhs and commission and exchange from Rs. 1.67 lakh to Rs. 1.76 lakh. The rise in income from these two sources has been offset by an increase in interest paid on deposits and borrowings from Rs. 24.15 lakhs to Rs. 27.07 lakhs and in expenses from Rs. 11.14 lakhs to Rs. 12.78 lakhs. Of the rise in expenses, salaries and allowances and provident fund alone account for Rs. 0.91 lakh, due to the higher emoluments that had to be paid to the staff following the rise in the Bank's status to Class B bank.

The following comparative table gives an idea of the Bank's growth in the last three years:

(In lakhs of rupees)

	As on 31st December			
	1958	1957	1956	1955
Paid-up capital ..	24.00	24.88	27.87	24.85
Reserves ..	15 60	14.00	13.80	13.20
Deposits ..	855.56	7.92.05	7.27.75	6.54.09
Advances ..	466.76	422.85	387.74	354.01
Investments ..	279.48	256.36	258.81	203.85
Cash ..	131.12	131.45	101.72	118.32
Net profit ..	3.68	3.98	3.86	2.05
Dividend ..	Nil	5%	5%	5%
No. of offices ..	23	23	23	23

It will be seen from the table that the Bank's deposits have expanded by over Rs. 2 crores or 30.5 per cent. within the last three years and advances by Rs. 1.12 crore or 31.5 per cent. The ratio of advances to deposits has been maintained at the moderate level of 53 to 54 per cent. and that of the liquid assets at 47 to 49 per cent.

RECENT ECONOMIC TRENDS IN THE U.S.

LESSONS OF THE LATE RECESSION

By C. Canby Balderston
VICE-CHAIRMAN, BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

THE cyclical contraction that ended in April of last year was one of the shortest on record. It has been followed by a recovery of classic pattern that has now pushed most of the business indicators through their previous ceilings. Personal income in constant dollars has gone 2½ per cent. beyond its pre-recession high. Real gross national product and industrial production have achieved new records. The trough from which we emerged followed a giant wave of consumer buying capped by plant expansion. Over-capacity and excessive inventories led inexorably to painful correction in the form of recession, with its worries, losses and tribulations.

It is now time to take stock of the residual difficulties that still face us. Three major problems may be summarised in three words: unemployment, prices, and debt.

Unemployment is down from its recession levels, but it continues to plague the mining regions and areas dependent upon heavy industry. The list of cities with one out of eight workers jobless contains the long-suffering coal towns of Scranton, Wilkes-Barre and Huntington. These have been joined by Buffalo, Erie and even Detroit, which had been the epitome of American initiative and mass production know-how. The rate of unemployment 19 months after the last cycle peak is only slightly above comparable experience in 1948-50, but is higher than the 1953-55 experience by about one per cent.

Such a comparison may comfort statisticians but not the families afflicted. Even though further expansion will tend to put the idle to work as overtime fails to meet the demand, an unemployment level of over 4 million beings should lead us to question whether job opportunities would not be greater if some prices were lower.

Competition

As expansion continues, the rising investment demand stemming from industrial research and management initiative will require an increased flow of savings. If we are to remain competitive at home and abroad, we shall need not only capital for implementing technological advance, but competitive prices as well. Competition is, of course, a relative matter. How do our products compare with those made in other countries as to quality, price and promptness of delivery? While we have improved, others may have been improving even more rapidly. Early this year our exports were down one-fifth from early 1957. This decline may be explained, in part, by cyclical developments abroad which reduced foreign demands for our raw materials and finished goods. At the same time, there is clear evidence that our cherished advantage in some types of machinery, as well as in autos and certain other mass-produced items has been diminishing. This is a situation that will not be cured by ignoring it, or by the mere passage of time, or by passing laws. The sole solution lies in keeping our costs (including labour costs) competitive, so that American firms may produce what enough people want, at prices they are willing and able to pay.

Prices were buoyant during the recent decline and subsequent recovery. In the recession, the industrial-price average fell less than one per cent., even though prices of materials slipped considerably. This was similar to the 1953-54 experience. Early last year, however, prices of farm products and foods went up sharply. As a result, the total wholesale price index rose one per cent. during the period of business contraction. Since the turn around in business activity in May 1958, the average of industrial prices has risen 2 per cent. and is now about 1½ per cent. above the previous all-time high. Though there has been unused capacity of human resources and manufacturing plants, industrial prices have risen sooner and faster than in the two previous recoveries when prices did not advance significantly until after output was well above its previous peak. One may ponder the question: have we paid the fee for an adjustment we did not get?

In this Devil's Brew of trouble, containing unemployment and advancing prices, there is also the ingredient of debt. I refer not alone to consumer and to business debt, but to that of local, State and Federal Governments.

In 1958, the growth in consumer instalment debt slackened, but total consumer indebtedness, including residential mortgage credit, still grew by $10.7 billion—a large figure even if less than the $18.9 billion rise in 1955. Practically all of last year's rise was in mortgage debt on family houses which mounted $10.4 billion to a total of $118 billion. Fortunately, this rise in the debt of individuals was more than offset by an increase in their financial assets, and, so 1958 was a year in which consumer saving continued at a high rate. Now, however, both consumer instalment and mortgage debt are rising sharply.

But the governmental debt situation is far different. It is not necessary to detail the plight of State and Local Governments in increasing their revenues. Their troubles are being widely publicised. The Federal Government's spending in excess of its revenue, however, is especially serious, because financing it has been complicated by the attitude of savers towards fixed-income securities in general, and Government Bonds, in particular. Thus, balancing the Federal budget is more than a problem for the Budget Director; it is an evidence of the nation's determination to protect the integrity of the dollar as a store of value. As such. our budget behaviour is watched by the financially sophisticated the world over.

Whereas the Federal Government had a cash surplus of $2.1 billion in fiscal year 1957 and a small deficit of $1.5 billion in fiscal 1958, it is incurring a whopping cash deficit of over $13 billion in the current fiscal year. Federal cash receipts in fiscal 1959 will be about the same as in fiscal 1958, but expenditures will be close to $12 billion larger than in fiscal 1958 and $15 billion larger than in fiscal 1957.

Balancing the Budget

Consequently, the Treasury has been frequently in the market for funds because of fiscal decisions made in the past. The deficit that has to be financed currently is arising out of decisions made a year ago and earlier. For some time in the future we will have to live with the fiscal decisions now being made. We are all aware of the circumstances that have given rise to large national defence expenditures. At the same time, non-military Federal expenditures have also increased, partly as the result of farm price-support programmes, partly as the result of governmental actions taken to offset recession, and partly as the result of such built-in stabilisers as unemployment compensation. Prospects are that, though economic recovery will bring a big increase in receipts next year, expenditures will continue large. The attainment of a balance is precarious, unless positive measures are adopted.

I turn now to certain Federal Reserve problems that are current. A basic function of the System is to supply banks with reserves that will provide the volume of credit that is in keeping with stable economic growth. The objective is to supply neither too much credit nor too little. Monetary policy made credit easy during the period of economic contraction in order to hasten the turn around. Credit continued easy throughout the early recovery period and the money supply expanded very rapidly from February to August. If the money supply be measured by currency and demand deposits, the annual rate of increase (seasonally adjusted) was about 8 per cent. in that brief period. For those who prefer to include time deposits in their definition, the rate of expansion was even more rapid. With vigorous recovery of business in the second half of the year, the Federal Reserve System acted to moderate expansion in the money supply, so that the increase for the

STEPPING UP COTTON CLOTH EXPORTS

MR. N. H. TATA URGES FULFILMENT OF FIVE CONDITIONS

A RECENT Press despatch from New Delhi avers that the Central Government is contemplating adoption of some fresh measures designed to check the falling trend in cotton textile exports and to lift them up, if possible. One of the measures, it is said, consists of two modifications in the export incentive scheme. These are: (1) upward revision in the quantum of import entitlements granted to mills and exporters in respect of machinery, raw cotton, dyes and chemicals; and (2) adoption of a graduated system for the entitlements related to the increase in exports recorded by particular firms or individuals.

Evidently, the aforesaid move of the Government has been prompted by the continued disquieting performance on the textile export front, notwithstanding the operation of the incentive scheme for several months now. The quantity of mill piecegoods shipped since the beginning of 1959—usually good export months—is said to have been at an annual rate of no more than 549 million yards, as against the estimated actual exports of 558 million yards in 1958 and 831 million yards in 1957. The total exports during the first quarter of 1959 are put at about 137 million yards, which compare unfavourably with 166 million yards and 246 million yards in the corresponding periods of 1958 and 1957, respectively.

The persistence of downward trend in India's cloth exports must be attributed to many factors, apart from the general slackness in the world cotton textile trade itself brought about by the establishment of cotton mills in several traditional textile importing countries and the consequent imposition of import restrictions on textiles to protect their own national industries and conserve foreign exchange. Mention, for instance, may be made of the trebling of import duty on cotton textiles by East Africa, withdrawal of cloth from open general licence by Sudan, extension of most-favoured-nation treatment to Japan by Australia, and intensive competition from China the textile exports of which are heavily backed by State subsidies.

Chinese Competition

The last-mentioned factor is the most important. An idea of the formidable nature of competition offered by China in world textile markets, especially in the Far East, can be had from the following table which gives exports of cotton piecegoods from China and India during the years 1957 and 1958, as compared with 1954:

(In million yards)

To	From India			From China		
	1954	1957	1958	1954	1957	1958*
Hong Kong	15 00	6 32	1.46	8.40	102 25	92.60
Indonesia	32 69	48 40	10 98	4.40	116 68	49 86
Singapore	26 37	15 00	16 84	—	20 71	28 62

Netherlands ..	N.A.	N.A.	1.98	—	4.41	9.04

— Nil.
* Projected figures on the basis of January-June shipments.
N.A.—Not available.

It will be seen from the above figures that China has succeeded in capturing a fair share of the cloth markets in Hong Kong. Indonesia, Singapore and Malaya. It has also penetrated into Western Europe and Africa. The techniques used by China for achieving this success must be quite familiar to our readers. They are: sales of textiles of comparable quality at cut prices; flexible and favourable terms of supply; short-term and long-term credits to finance exports; and use of the influential business community of Chinese origin which is rapidly rising in size in the South-East Asian countries.

Pointed attention to the growing competition from China in world textile markets was drawn by Mr. N. H. Tata, Chairman of Svadeshi Mills and Tata Mills, when he addressed the annual meetings of the two Companies held at Bombay last week. Mr. Tata said that China had emerged during the last two or three years as the second largest producer of cotton textile fabrics. Until a few years ago, India occupied the second place, with the U.S. as the world's largest producer. India's place had been taken by China now, followed by the U.S.S.R., so that India stood relegated to the fourth place. Quoting a report that China's plan for 1962 envisaged a cloth production of 10,000 million yards, he remarked: "This phenomenal expansion is not unnaturally viewed with considerable apprehension by the cotton industry in other parts of the world."

What Should be Done?

Considering the Chinese textile trade offensive and the other factors responsible for the poor performance on India's textile export front, the question naturally arises as to what should be done to build up and maintain the competitive strength of Indian cloth in world markets. This question was impressively answered by Mr. Naval Tata. Stating that the existing inducements offered under the export incentive scheme were scarely adequate to enable mills to establish themselves as exporters and to withstand international competition, he urged the indispensability of observing the following five conditions:

1. Modernisation and rehabilitation of the industry.
2. Rationalisation of labour.
3. Higher productivity and efficiency of management.
4. Stability in prices of cotton and stores.
5. Adequate incentives to exporters, whenever necessary.

Mr. Tata pointed out that the need of cotton mills in the Bombay region alone for the rehabilitation and modernisation of their plant and machinery was conservatively estimated at Rs. 150 crores spread over the next fifteen years; the outlay would be very much larger if account were taken of the requirements of mills in other centres. He was quite right when he declared that the cotton mill industry, with its present limited resources which were still being drained by the excessively heavy taxation policy of the Government and the ever-mounting costs of production, could not, by itself, execute this mammoth programme of rehabilitation and modernisation, unless the Government gave substantial financial assistance and encouragement. The specific plea which Mr. Tata put forward, namely, liberalisation of the present terms and conditions under which institutions such as the National Industrial Development Corporation and the Industrial Finance Corporation are giving loans, deserves to be considered. It must, of course, be stressed that, while enabling the mills in desperate need for funds to derive the maximum advantage in the quickest possible time, every care should be taken by the managements to see that the financial assistance rendered is utilised properly for implementing the rehabilitation and modernisation programmes.

"THE INDIAN COTTON TEXTILE INDUSTRY" 1957-58 ANNUAL

This *Annual* has been so very popular as a reference book on the cotton textile industry in India and abroad that it needs no fresh introduction. It is edited by Mr. M. P. Gandhi (Address: Nanabhai Mansion, Sir Phirozeshah Mehta Road, Bombay 1. Price: Rs. 6). The latest *Annual*, like its predecessors, gives a fairly detailed account of the different aspects of the industry, including the handloom sector—production and export performance, excise duties, financing of industry and labour. There are two special chapters, one devoted to the analysis of the world cotton textile situation and review of the recent trends in Pakistan's textile industry. Appendix A deals with raw cotton in India and the world, while Appendix B gives the up-to-date list of cotton mills in India and Pakistan, the names and addresses of managing agents, number of looms and spindles, quantity of cotton, consumed, number of persons employed, etc.

In the course of an interesting preface, Mr. M. P. Gandhi, the Editor, has drawn attention to some of the pressing problems confronting the Indian cotton mill industry. He has stressed the importance of applying techniques of productivity drive, quality control, budgetary planning and financial scrutiny and development of right personnel relations. It is through these means, he says, that the industry will be able to go forward to higher levels of production and prosperity.

FURTHER RELIEF TO ART SILK POWERLOOMS

The Union Finance Ministry has announced further tax concessions to the art silk weaving industry, with a view to encouraging higher production in small-scale units. Thus, with effect from the 15th inst., all four-loom units and the first four looms in nine-loom units have been completely exempted from payment of excise duty irrespective of the number of shifts worked, as against only one shift that was allowed by the Finance Minister on 20th April 1959. Again, the compound rates of duty (basic as well as additional) in respect of the first nine looms employed in all units have been reduced. Similar changes are being made in respect of warp knitting machines used in the production of rayon or art silk fabrics.

The latest decision of the Government is a sequel to the representation made by the art silk weaving interests in different parts of the country, especially in Surat. Early this month, about 85 small units in Surat were reported to have put up notices of closure with effect from 1st June 1959. Some protest meetings were also held and it was even said that the weavers were planning to hold demonstrations and stage a tooken strike before Mr. Morarji Desai.

Wool production in Soviet Russia has registered an appreciable expansion in the last decade. The total clip of wool in 1957-58 was 59.8 million lbs. which was twice as large as the clip of 298 million lbs. in 1948. The pre-war average clip was only 220 million lbs. The production target fixed for 1960 is 780 million lbs. The marked expansion in wool output has followed a large increase in sheep population, from 72 million in 1948 to 115 million in 1954, 125 million in 1956 and 134 million in October 1958. The estimated number of sheep at the end of 1960 is put at 179 million. The average yield of wool per sheep is now said to be of the order of 5.5 lbs. In 1956, a Russian Professor of Agriculture had put the fine wool production per sheep at 8-11 lbs.

SPINNERS DRAW UP NEW SCHEDULES

"BUY BRITISH COTTONS" CAMPAIGN ENDS

From A Special Correspondent

MANCHESTER, *12th May*

A NEW comprehensive set of conditions of sale for cotton and rayon yarns has been drawn up and is to be submitted to the Registrar of Restrictive Trading Agreements, under Section 12 of the Act. This was disclosed by Col. J. B. Whitehead, President of the Yarn Spinners' Association, who told the annual meeting that this was a serious attempt to formulate a basis of contract without bias to either seller or buyer. Full agreement, he said, had been reached between the Yarn Spinners' Association, the Cotton Yarn Doublers' Association and the Rayon Staple Spinners' and Doublers' Association, and the terms would be inspected by their legal advisers before submission to the Registrar. Although the Associations could not, for the time being, recommend their adoption, he urged that individual mills should follow the conditions as set out.

MANCHESTER LETTER

Commenting on the adverse judgment of the Restrictive Practices Court on the price maintenance scheme operated by the Association, which was withdrawn in February, Col. Whitehead said: "The ruthless decision of the Court was unexpected, but, contrary to our original beliefs, it now seems clear from subsequent cases that, under the existing Act and judgments of the Court, no agreement for the control of prices can be expected to survive." The purpose of the Act, he continued, was to protect the public from exploitation. Manufacturers said that the whole of the yarn price reductions, following the withdrawal of the scheme, had been passed on in cloth prices.

No Cheaper Textiles

"Logically, the price of textiles in the shops should have correspondingly fallen, but I have seen no evidence of this up to now," declared Col. Whitehead. "What we have lost, someone else has gained, but, on the evidence before us, the buying public, protected by the Act, has gained far less than the cost to public funds of having this protection thrust upon them."

The Association would continue in existence, Col. Whitehead added, following the obvious desire of the members. The latest cost inquiry was nearing completion and would provide spinners with average conversion costs for the various sections of the trade and should be most useful for comparison purposes. The joint Export Committee would continue to watch over the interests of producers on all matters concerning cotton yarn exports and imports. Spinners, he declared, had experienced "a shocking year." Figures indicating the length of order books at mid-April amounted to only 90 million lbs., as against 107 million lbs., at the same time last year—a drop of almost one-sixth. At the end of January, the order books had fallen to the extremely low level of only 57 million lbs., no doubt due to the final holding off attitude of buyers pending the decision of the Restrictive Practices Court.

On the Government's scheme for scrapping redundant machinery and assisting in re-equipment, Col. Whitehead hoped that every spinner would seriously consider his individual position. A modest reduction in spindles would not materially assist in the solution of the problems of the trade. Only a really drastic scrapping of machinery would bring the spinning potential into line with the immediate and probable future demand.

Compensation Talks Progress

Although owners of Lancashire's 1,000 cotton spinning and weaving mills hinted last week that the trade unions are still asking for too much compensation for operatives who become redundant when mills close down under the Government's £30-million scheme for putting the industry on a sounder basis, hopes rose that a mutually satisfactory settlement, of this vital issue would be reached. The three employers' organisations, the Master Spinners' Federation, the Cotton Spinners' and Manufacturers' Association, and the Condenser and Allied Spinners' Association, met at Manchester to examine in detail the counter-proposals for compensation put forward by the trade unions which have already rejected one offer by the millowners.

No official details have been given, but it is understood that this would have given a maximum compensation payment of around £200, roughly half the amount sought by the unions in their twice rejected claim before the advent of the Government's scheme. After the meeting, Mr. C. Henniker-Heaton, Director of the Master Spinners' Federation, said that the employers' reaction to the unions' counter-proposals would be outlined at a joint meeting on Friday. "We are still very widely apart, but now in the same field," he said. Some progress had been made, but it might be some time before a settlement was reached. Mr. Heaton added that the two sides had come to see each other's point of view. "It is now a question of level. We are talking the same language but there is still a long way to go."

A condition of the Government's offer to contribute £30 million towards the scrapping of surplus machinery and the re-equipment of the remaining mills is that the employers should undertake to compensate the redundant workers. Having thus had their views on compensation unexpectedly upheld, the trade unions are determined to secure what they consider ample payments to their members who lose their jobs even, as they have indicated, at the risk of wrecking the Government scheme.

Publicity Scheme

The Cotton Board's promotional campaign, with the slogan "Buy Britain's Cottons," has now come to an end after being discussed by the sectional organisations of the trade. The full cost of the project was £260,000.

Cotton's place as a fashion fibre, no less than its use in a multitude of industrial and domestic forms, has been firmly fixed in the minds of the public by this programme. Despite adverse comment at times, the money has undoubtedly been well spent. It was, perhaps, unfortunate that the campaign coincided with a period when the Government had introduced measures designed to curb spending power among consumers, but the constant repetition of the advantages offered by the fibre has driven the point home.

Ending of the special promotion levy by the Cotton Board means that the industry's activities in sales promotion and market research are now restricted to what can be financed out of normal revenue, assisted by grants from the American Department of Agriculture and the Cotton Council International. Individual firms will, however, continue to press forward the claims of cotton goods in their own advertising programmes. Everyone engaged in textiles is fully aware of the need to publicise on the widest possible scale the benefits of their products.

Machinery Shipments Higher

One of the consequences arising from the publication of the Government's willingness to subsidise re-equipment of Lancashire mills was a rise in the share values of textile machinery companies. Several of these have lately had a somewhat chequered career and recent financial results have not been exactly encouraging. Their gains will not be immediate, as the modernisation plan is spread over a five-year period, but, in the long run, their prospects must be improved.

In the meantime, there has been some revival in export trade in textile machinery over the first quarter of this year. The volume of plant shipped abroad remains below the comparable level in 1957, but to the end of March was 318,428 cwts., valued at £11,228,572, as against 288,559 cwts., worth £10,228,772, a year ago. India remains the biggest single consumer of British-made textile plant, having taken 28,788 cwts., but shipments have now noticeably dwindled as compared with previous years. In 1958, the first quarter's purchases were 41,575 cwts.

Cotton Prices Turn About

Only a few weeks ago, observers of trends in raw cotton were distinctly bearish in their outlook. The prospect of a bigger American crop and increasing supplies led to the opinion that the long decline in values would still persist. That the slide has been halted and an upturn has followed now requires some explanation.

One of the factors which has been responsible for this change in mood has been the low stocks of the raw material now held in Liverpool and Manchester. A sudden call for supplies on the spot found offerings limited as merchants had had no incentive to build up stocks during the idle months when spinners had been reluctant to do more than make hand-to-mouth purchases. According to reliable sources, existing supplies in Liverpool and Manchester have decreased

WORLD TRADE IN COTTON FABRICS

INDIA SUFFERS MORE THAN ANY OTHER COUNTRY

IT is common knowledge that world trade in cotton fabrics suffered a marked shrinkage during 1958 from the high level witnessed in 1957 and that this necessitated cuts in production in most of the countries in the free world. What is probably not so well known is that, of all the countries in the free world, India lost more ground than any other. This particular point deserves to be reiterated, because there is a tendency among some of the leaders in this country to draw some comfort on the score that what happened to India's exports of cotton goods was part of a world-wide trend. It would be sheer complacency, if this idea were to prevail and influence policy decisions pertaining to modernisation and rationalisation of production in the mill industry.

How badly India fared in the export of cotton piecegoods last year as compared with the rest of the world is clear from the International Cotton Advisory Committee's review of recent trends in cotton textile trade, published in its March 1959 issue of *Cotton*. World exports of cotton fabrics in 1958 dropped, as compared with 1957, by 12.4 per cent., that is, from 605,000 metric tons to 530,000 metric tons (estimate). The entire reduction was accounted for by the free world. The sharpest reduction, according to this monthly review of the I.C.A.C. (Washington) was suffered by India with its exports off 33 per cent. from 1957 and 25 per cent. from the four-year average 1954-57. It is true that Japanese exports, too, fell but only by 22,000 metric tons or 15 per cent. Further, unlike India, Japan was able to maintain its proportionate share of the world market, thereby proving that it was successful in maintaining its competitive position strong and face even the dumping by Communist China. It may be interesting to note here that, during the past five years, Japan has been able to hold its share in the world trade at between 20 and 25 per cent.

The following comparative table shows at a glance the trend of world exports of cotton fabrics (the totals of 36 exporting countries, including the communist countries):

(In '000 metric tons) *

Country	1954	1955	1956	1957	1958*
United States	71.6	64.2	60.6	65.5	59.8
United Kingdom	70.8	61.6	52.7	50.6	43.8
Continental Western Europe	161.4	143.8	139.3	145.1	130.2
Japan	124.8	111.7	123.0	147.0	125.0
India	89.7	90.6	81.6	99.7	67.0
Hong Kong	18.4	19.7	15.9	22.3	20.2
Other	6.5	7.3	11.1	9.8	11.5
Total free world	543.2	498.9	484.2	540.0	463.5
China	2.0	15.0	32.0	40.0	40.0
Other communist countries*	26.0	24.0	29.5	25.0	26.0
Total	28.0	39.0	61.5	65.0	66.0
World total	571.2	537.9	545.7	605.0	529.5

* Partly estimated.

It will be seen from the above table that exports from Communist China increased from 2,000 metric tons in 1954 to 40,000 metric tons in 1957, but that there was no further increase in 1958. Most of these exports were to Hong Kong, Indonesia, Malaya and Singapore and to other South-East Asian countries. In spite of the fact that total imports of cotton fabrics into the countries of Asia declined substantially in 1958, China, it is interesting to note, maintained its exports into these countries at the high level of 35,000 metric tons achieved in 1957. This it did at the expense of Indian and Japanese exports. An analysis of the regional trade indicates that Chinese exports have cut into Indian exports more than into Japanese. Other communist countries with exportable surpluses of cotton textiles are Hungary, Poland and Bulgaria, but only a negligible quantity of cotton fabrics is shipped by them to the free world.

In Europe, the "historical decline" in exports of cotton cloth from the United Kingdom continued in 1958. The latter's exports now stand at less than 50 per cent. of the post-war high mark of 100,000 metric tons registered in 1949. Principal demand for British cotton fabrics is now concentrated in the Dominions and Crown colonies, but British exports to even these areas are gradually declining. Exports to Australia declined from 13,600 metric tons in 1954 to 7,900 metric tons in 1957. New Zealand is the only country to which British exports have remained steady at around 3,800 metric tons a year.

French exports of cotton cloth declined from 53,800 metric tons in 1954 to 32,900 metric tons in 1956, but have since stabilised around this level. French possessions abroad account for about 90 per cent. of French exports. The principal cause of decline during 1955 and 1956 was the loss of the vast Indo-China market. Exports to this country declined from 13,400 metric tons in 1954 to 2,300 metric tons in 1956.

Discounting cyclical fluctuations, other West European countries have, according to the *Cotton* review, maintained their exports at a fairly stable rate during the past five years. Trade is mainly intra-European.

Exports of cotton fabrics from the United States have been declining since the rehabilitation of the textile industries in Japan and Western Europe. The United States continues to dominate the markets of Canada, Cuba and Venezuela. It has, however, lost considerable ground to Japan in the Philippines with exports to that country gradually declining from 14,400 metric tons in 1954 to 5,400 metric tons in 1958, while Japanese exports rose from 2,800 metric tons in 1954 to 8,000 metric tons in 1958.

Analysing the imports, *Cotton* observes that the United Kingdom, West Germany, the Netherlands and Canada, all substantial producers of cloth, have been taking more and more cotton cloth from other countries. United States imports increased from 7,500 metric tons in 1954 to 18,400 metric tons in 1956. In 1957, United States' imports declined to 12,500 metric tons, due, in part, to the voluntary restrictions imposed on Japanese exports but increased modestly in 1958 to 14,000 metric tons. Imports by Asian countries during 1958 declined by almost 40,000 metric tons, as compared with 1957. The decline was largely accounted for by Indonesia and Hong Kong. Indonesian imports in 1958 declined by almost 50 per cent. Imports into Hong Kong had expanded sharply from 11,800 metric tons in 1954 to 31,200 metric tons in 1957, but declined to 23,900 metric tons in 1958 due to a slackening off in exports. Turkish imports declined from 9,750 metric tons in 1954 to 1,400 metric tons in 1956. With the establishment of national industries, both Pakistani and Turkish imports since 1956 have been running at less than 1,000 metric tons a year. Little data on trade among the communist countries are available but exports from the free world to the communist countries have been of a small magnitude. Conversely, the emergence of mainland China as a major exporter means that the communist countries as a whole are now net exporters of cotton textiles to the rest of the world.

The following table shows the trend of world imports based on the data pertaining to 90 importing countries and territories:

Imports of Cotton Fabrics

(In '000 metric tons)

Country	1958*	1957	1956	1955	1954
Canada	25.0	24.4	22.5	19.7	16.9
United States	14.0	12.5	18.4	13.1	7.5
Other	23.0	23.9	22.0	19.5	20.5
North America	62.0	60.8	62.9	52.3	44.9
Venezuela	7.8	7.7	6.6	5.8	5.4
Other	1.2	1.4	1.6	1.9	3.6
South America	9.0	9.1	8.2	7.7	9.0
United Kingdom	41.0	46.3	34.0	33.3	29.7
F.R. of Germany	15.7	15.4	11.5	13.0	7.8
Netherlands	16.0	17.6	12.6	13.5	10.2
Other Continental Europe	57.3	57.4	47.4	46.2	44.1
Western Europe	130.0	136.7	105.5	105.0	91.8
Indonesia	28.0	57.5	60.5	52.3	58.5
Hong Kong	23.9	31.2	30.5	15.3	11.8
Australia	34.0	30.6	25.3	30.2	33.8
Malaya	17.5	18.8	19.4	19.5	14.9
Other Asia and Oceania	71.6	72.6	69.8	72.7	90.0
Asia and Oceania	175.0	210.7	205.5	190.0	209.0
Africa	156.0	160.0	142.0	162.0	178.0
Total free world	532.0	577.3	524.1	517.0	532.7
Communist countries]	26.0	26.0	26.0	25.0	25.0
World total	558.0	603.3	550.1	542.0	557.7

* Partly estimated.

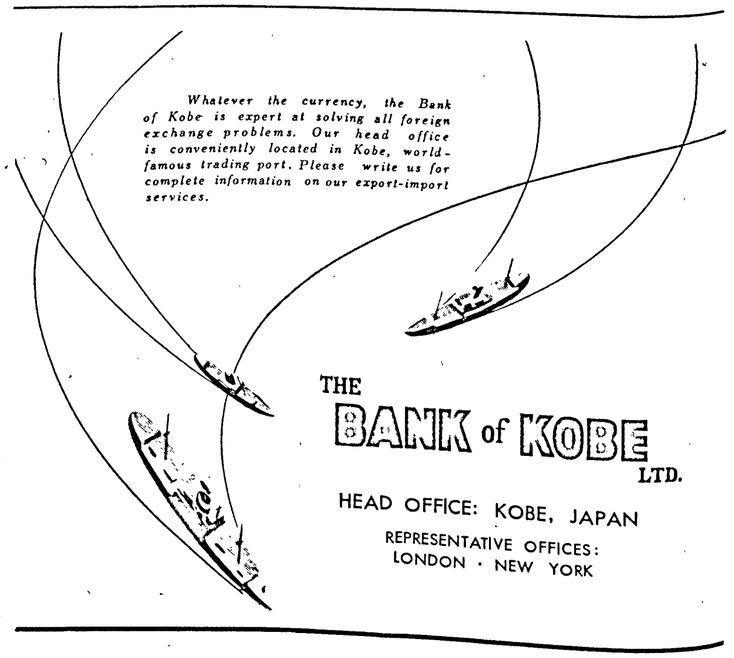
A notable feature of the I.C.A.C's aforesaid review of world trade in cotton fabrics is an assessment of the regional balance of trade. Here is the result of this analysis:

(In '000 metric tons)

Region	1958	1957	1956	1955	1954
North America	—0.5	6.5	—0.4	14.2	29.1
South America	—8.0	—8.1	—7.2	—6.7	—3.0
Western Europe	50.0	59.0	86.5	100.4	149.4
Asia	82.0	99.7	51.0	70.0	65.0
Africa	—150.0	—156.0	—137.8	—159.0	—176.0
Oceania	—42.0	—38.4	—32.0	—37.0	—40.0
Communist bloc	40.0	40.0	32.0	15.0	2.0

The highlights of the regional balance of trade are: (1) The centre of cotton textile industry has been shifting away from Western Europe and the United States towards Asia. (2) Exports and imports are nearly in balance for the continents of North and South America, whereas the net exports from Western Europe are rapidly declining. (3) In contrast, Asia and the communist bloc (China) are becoming increasingly important as net exporters of cotton fabrics, whereas Africa continues to be the largest importer. (4) Many of the less developed countries are moving rapidly in the direction of self-sufficiency in cotton fabrics.

"The pattern of world trade in textiles in the last few years has," says the I.C.A.C's review, "been materially affected by several factors. Among these are balance of payments difficulties in a number of important textile importing countries, the establishment of new industries outside the traditional textile centres, and the tendency to increase the protection afforded against imports in some of the older industrialised countries."



SUGAR IS A MUCH MISUNDERSTOOD INDUSTRY IN INDIA

ITS HANDICAPS ARE NOT CLEARLY REALISED BY CRITICS

By Shyam Sundar Kanoria

THE Indian sugar industry is one little segment of the Indian economy which, along with other aspects of the Indian scene, has become the focus of world attention. I think there is general agreement that we live at one of the great turning points of history. What is happening in India now and will happen within the next few years will decide the fate of Asia and perhaps of the world. Looked at in this light, the sugar industry acquires increased stature and significance. It can make a small, but important contribution towards the industrial development of the country and the success of the experiment in planned economic development. Momentous issues hang on the outcome of this experiment in democratic planning.

It would, perhaps, help to put the matter in proper perspective if I gave some facts and figures relating to the place of the sugar industry in the national economy. If we take into account the value of its output, it is India's second largest industry, the largest being cotton textiles. It now produces approximately two million tons of sugar worth about Rs. 200 crores. Out of this, about Rs. 68 crores go to the Central and State Governments as indirect taxes, sugar being one of the largest contributors to the Central excise duties. Another Rs. 80 crores go to the cane growers in the form of cane price and thus provides the cultivators of cane with purchasing power to buy the necessities of life. In Uttar Pradesh, and to some extent in Bihar, sugarcane is the only cash crop. The productive capital employed in this industry exceeds Rs. 110 crores and employment to a very large number of persons is provided. It being an agricultural industry situated in villages, the rural economy of several States, notably Uttar Pradesh and Bihar, is linked up with the prosperity of this industry. The indirect employment which the industry provides to those engaged in the manufacture of sugar machinery, ancillaries and by-products and in transport and distribution of sugar is very significant. It will thus be observed that the growth, expansion and prosperity of this industry is a matter of vital importance to the entire nation and not only to a handful of millowners. It is the country as a whole that suffers when the sugar industry encounters bad times.

Criticism Baseless

It is rather unfortunate that the contribution of sugar industry to the national economy has not been fully appreciated and the industry has been subjected to ill-informed and baseless criticism. I am particularly sensitive to the charge that the industry has not treated its consumers fairly. If this were true, it would be a grievous fault, for, after all, the ultimate purpose and final justification of the existence of any industry is to cater to the needs of the consumers. But this charge is based entirely on a misconception.

The widespread popular idea that the Indian consumer has to pay an exceptionally high price for sugar is simply not true. A list of prices of sugar in different countries of the world, as published by the International Sugar Council, which must be considered as authoritative reveals that, out of 46 countries, prices of sugar in 34 countries are higher than in India, though the element of taxation is probably the highest in our country. The prices in India are lower than those prevailing in industrially advanced countries such as the United States, France, New Zealand, Canada, West Germany, Japan, etc., in neighbouring countries like Afghanistan, Malaya, Ceylon, Sudan, Syria, Turkey and Pakistan, etc. and even in sugar producing countries like Australia, Formosa, Dominican Republic, Philippines, etc. Most people are not aware of the internal prices of sugar in other countries and are easily misled by the prevailing low prices in the world market. The truth is that the low world prices of sugar are artificial being heavily subsidised by all exporting countries and do not bear any relation either to the cost of production or the internal price of sugar in the country which sells its sugar in the world market at low prices. Thus, for example, Australia sells at about Rs. 16 per maund in the world market while its cost of production is much higher and the internal price is about Rs. 33 per maund. Similarly, Java sells at Rs. 16 while the internal price is Rs. 48 per maund. We should not, therefore, think that prices of sugar in India are higher by comparing them with world prices.

However, since India is a poor country and the purchasing power of the masses is low, the industry would be happy to be able to provide the consumers with cheaper sugar. But, in spite of the great anxiety and willingness of the industry, the cost structure is so rigid that it is almost helpless in the matter.

The controlled price of sugar in North India is at present Rs. 36 per maund, i.e., 95 naye paise per seer. The consumers have to pay slightly more, because sugar has to be transported from the factories to the consuming centres and distributed through wholesalers and retailers who add their costs and profit.

High Cane Prices

Out of the 95 naye paise about 37 naye paise, that is, about 39 per cent. goes to the canegrowers as cane prices. As readers are aware, there is an official minimum price for sugarcane at present Rs. 1.44 per maund which the factories are bound to pay. This cost is, therefore, completely beyond the industry's power to change. The prices of cane per maund are higher than in most other countries, though the quality is poorer. Whereas out of 100 maunds of cane it is possible to get 14.33 maunds of sugar in Australia, 12.25 maunds in Cuba and 11.40 maunds in Java, in India we hardly get 10 maunds. Whereas in other countries the price of cane is fixed on the basis of its quality, in India we have to pay the minimum price of sugarcane irrespective of the quality. It is common knowledge that, inspite of the high cost of cane, there was a serious agitation by the canegrowers in Uttar Pradesh to increase the minimum prices of sugarcane. The Government of India considered their demand to be unjustified and did not agree to increase their price as it would have further pushed up sugar prices. One can sympathise with the desire of the growers to increase their income and purchasing power, but, for this, they must improve their output, as well as quality, of cane per acre and not burden the consumers with their inefficiency. The State Governments who have taken upon themselves the task of development of cane and have imposed cane cess for this purpose should assist the growers in this matter. Then, there are the cane growers co-operative societies, the establishment of which has resulted in the lack of direct contact between the growers and the factories. These co-operative societies are entitled to a handsome commission from the factories and should take concrete measures to improve the yield and quality of cane.

Another 7 per cent. of the cost of sugar manufacture goes to workers as salaries and wages. This is another element over which producers have no control. Wage rates and other amenities are governed by legislation and tribunal awards and nearly every factory carries a load of surplus labour. Wage rates are low by international standards, but, as usually happens in such cases, those who criticise the industry for not paying wages received in other countries conveniently overlook the vital matter of labour productivity. Our wages are low, perhaps, but the labour is not cheap. Whereas in Australia the average production per worker is 144 tons of sugar, in India it is only 11 tons. Thus, the total labour cost per maund of sugar in India is higher than in most other countries.

There is one more big element in the cost of producing sugar over which producers have no control at all. This is indirect taxation of sugar, Central and State, which swallows up 33 naye paise of the rupee spent on sugar by the consumer. Only in the course of the last few years taxation has been increased to the extent of 20 naye paise per seer of sugar. The present excise duty at about 26 naye paise per seer yields a revenue of about Rs. 60 crores to the Government which is equal to about 8 per cent. of the Government of India's revenue budget and to about 20 per cent. of the total excise duties collected by it.

It will thus be seen that, out of the 95 naye paise per seer which goes to the manufacturer, 37 naye paise is paid to the canegrower, 33 naye paise to the Government as indirect taxes and 7 naye paise to the labour, making a total of 77 naye paise or 81 per cent. leaving a balance of only 18 naye paise per seer or 19 per cent. with the producers. From this amount all other manufacturing charges such as stores, chemicals, packing, interest, insurance, overheads etc., have to be met, dividends to shareholders have to be paid, reserves have to be built up for rehabilitation of plant and machinery and the Government gets a further share in the form of income and corporation taxes. What I want to impress upon you is that 81 per cent. of the total cost is completely beyond our control and the room for economy and efficiency is limited only to the balance 19 per cent. If cane growers, labourers and Government, all three of them, insist on their pound of flesh and together account for 81 per cent. of the cost, the industry cannot be expected to hold out any hopes for lowering sugar prices. If only the taxation were not increased by 20 naye paise per seer during the last few years, sugar could have been cheaper by this amount.

So far as our technical efficiency is concerned, it compares well with other sugar producing countries. Reduced overall recovery in 1955-56 which is the yardstick of measuring technical efficiency was 84.15 per cent. in India, as compared with 83.70 per cent. in South Africa, 83.90 per cent. in Mauritius, 83.33 per cent. in Java and 84.15 per cent. in the Philippines. As a member of the sugar delegation of the Government of India to Australia and Indonesia in 1955, I had the opportunity to study the cost of production of these countries and from our report one will find that, in Australia, the manufacturing charges are higher than in India by Re. 1-5 per maund and in Indonesia by Rs. 3 per maund.

Rigid Cost Structure

It will be realised from the foregoing account that the retail prices of sugar in India do not compare unfavourably with those in other countries. If, however, one thinks that these prices are still too high, in view of the low purchasing power of the people of India, the responsibility for this does not lie with the industry and, so long as the manufacturers have to work with the present rigid cost structure, they cannot hold out hopes of supplying consumers with cheaper sugar.

There are reports in the Press that this year the production is lower and there is a shortage of sugar. From an average production of one million tons during the pre-Plan control period, the production more than doubled and increased to 20.26 lakh tons in 1956-57 which was a notable performance, as compared with other industries. In 1957-58, the production was lower at 19.75 lakh tons due to the mushroom growth of *khandsari*. In 1958-59, the production is expected to be only about 19 lakh tons, because of adverse cane crop in West U.P. and further increase in *khandsari* production. The industry is very unhappy at this development, which has created scarcity of sugar in the country. Apart from vagaries of nature which is beyond anybody's control, Government is mainly responsible for lower production this season. Their tax policy encouraged the wasteful process of *khandsari*, as a result of which cane was diverted from sugar to *khandsari*. Because of this, those factories which expanded their capacity at the cost of valuable foreign exchange are not getting even their pre-expansion crush, especially in west U.P. In order to prevent a rise in sugar prices, the Government of India has imposed controls on ex-factory prices in Uttar Pradesh, and North Bihar at Rs. 36 and in Punjab at Rs. 36-8 per maund. There is no control on factories in other regions and prices in other States, especially in the South, are considerably higher. Even in North India, the control is only on the factories for ex-mill prices. Since there is no control at any other stage, the consumer derives no benefit from this control. It appears that the reasons for this control are more political than concern for the interests of consumers.

So far as *khandsari* is concerned, I am aware that, because it is called a cottage industry, there is popular sympathy in its favour. I would like to place certain facts from which

one will be able to judge for oneself whether it is in the national interests to encourage such a wasteful process. Before the recent taxation on *khandsari*, the white sugar industry had to pay Rs. 13.16 as taxes, against *nil* by the *khandsari*. The *khandsaris* were not obliged to pay the minimum price of sugarcane, nor were they subject to the same labour laws as the sugar factories. This encouraged their growth and, though they could get only seven maunds of sugar out of 100 maunds of cane against 10 maunds secured by us, they reaped handsome profits, because of the wide difference on account of taxation. The extra three maunds of sugar out of the 100 maunds of cane which we get while producing white sugar is simply burnt away in the *khandsari* process. This year it is estimated that about three million tons of cane were diverted from sugar to *khandsari*. From this quantity of cane, only 2.1 lakh tons of *khandsari* has been manufactured and the balance 90,000 tons of sugar worth about Rs. 5½ crores, excluding taxes, has simply been wasted.

No Room for Bullock-cart Economy

Whereas *khandsari* has given employment to the extent of about Rs. 3 crores, the Central and State Governments have lost about Rs. 10 crores of revenue which would have come to them as indirect taxes on white sugar and in addition led to unemployment among the sugar factory workers. Probably it would have been worthwhile for the Government to collect its taxes and distribute a part of it freely to those employed in *khandsari* rather than to allow them to waste valuable national resources. If our economy were to be based on *khandsari*, instead of sugar, we would require about one and a half times the land to be under sugarcane. But, unfortunately, even the small duty which the Finance Minister originally proposed on *khandsari* in the 1959-60 budget, was ultimately reduced, because of opposition from interested quarters and politicians whose spirit of *Sarvodaya* appears to be stronger than their sense of economics. We talk so much about vested interests nowadays but I think that the vested interest of the politicians to appease the ignorant voters and retain their political power even to the detriment of national interests and the lack of courage and foresight on their part to guide the country along the right path is doing the greatest harm to the country. We can fulfil the hopes and aspirations of millions of our countrymen to enjoy a richer and fuller life only if we discard the outmoded methods of production and take up the latest scientific techniques which both Russia and the United States are following, even though they believe in different ideologies. During my visit to the United States, Canada and other European countries in 1957 with the Industrial Delegation led by Mr. G. D. Birla, I was convinced that the standard of living of the masses in India cannot be raised without taking advantage of modern technological advances. There is no room for the bullock-cart economy in the jet age or, should I now say, the space age.

Now to say a few words about sugar exports which have become a subject of great controversy. First of all, let me make it clear that I do not advocate exports of sugar by creating shortage at home.

The industry has always tried to advise the Government to keep down exports, whenever there was a danger of a shortage of sugar for internal consumption. It was largely as a result of this pressure that, last year, only 50,000 tons of sugar were exported, as compared with the original target for the year of 1 lakh tons. This year also, we have already suspended sales of sugar for export and have urged the Government to reconsider its decision to export. But, as a long-term measure, I am convinced that exports of sugar are desirable. The objection to sugar export is that sugar can only be exported at a loss. But the loss on exports does not exceed Rs. 11 per maund even when the prices in the international market are as low as they are at present. Practically every country suffers losses when it exports sugar and makes it up by raising internal prices. This is the general pattern of the international sugar trade. In our case, because of a big internal market and comparatively lower quantity of export, the burden on consumers on account of sugar exports is not as heavy as is popularly believed. If we export only 50,000 tons, the loss, being spread over the entire consumption of 20 lakh tons, comes to only ½ naya paisa per seer. As compared with the excise duty of 26 naye paise per seer, this burden of ½ naya pasia does not appear to be so heavy. For this small sacrifice, the nation earns valuable foreign exchange. Sugar exports help us to diversify our export trade which is excessively dependent on the three traditional items of export, namely, jute goods, tea and textiles which contribute more than 50 per cent. of our foreign exchange earnings. Another very important consideration on account of which exports of sugar are necessary is that exports may act as a safety valve to regulate an even flow of sugar for internal consumption. Production of white sugar by its very nature being dependent on the vagaries of nature is subject to wide variations from year to year. In a developing country like ours consumption too is difficult to estimate with any approach to accuracy. The recurring crises of overproduction and underproduction which mark the history of the sugar industry could thus be avoided, if the volume of sugar exports is varied from year to year in such a way as to ensure a balance between supply and demand at home.

Moreover, exports of sugar will enable a rapid expansion of the industry which will be advantageous to us in many other ways. The growth of the industry will accelerate the process of industrialisation of the country, increase the gross national product, provide employment and income to labourers in sugar factories, cane growers, sugar merchants and traders and many others engaged in subsidiary industries. There are also the investors, banks, insurance companies and last but not the least the Government which reaps a rich harvest of tax revenue. If we halt or reverse this growth process, there will be a corresponding contraction in economic activity which must be considered as undesirable.

MANCHESTER LETTER

(*Concluded from page 861*)

until only about 100,000 bales are available, equivalent to a month's supply; three-quarters of these are regarded as expensive or are of lower grades not usually in demand. This tight supply position has been sufficient to cause a distinct rise in the basis. As so often happens, the "snowball" effect of demand forcing up prices and consumers following up price rises has already created a sharp upward trend in business for both the raw material and the finished products.

Some of the change in sentiment can also be attributed to reports of a more encouraging offtake in cotton textile goods in the United States. During the first half of the current cotton season, American cloth prices are said to have moved up considerably and mill margins are higher than at any time in the last two seasons. Some shortages of certain types of fabric for early delivery have even been reported. At the same time, raw cotton consumption in other areas during this period has been relatively low.—*All Rights Reserved.*

MAHINDRA AND MAHINDRA LIMITED

CHAIRMAN, MR. K. C. MAHINDRA, FORESEES FURTHER CAPITAL DEVELOPMENTS IN THE NEAR FUTURE

PLEA FOR GREATER EFFORTS TO IMPROVE TRANSPORT FACILITIES

ADDRESSING the shareholders of Messrs. Mahindra and Mahindra Ltd., at their Thirteenth Annual General Meeting held at the Taj Mahal Hotel, Bombay, on 18th May 1959, Mr. K. C. Mahindra, Chairman, indicated that there would be further capital developments within the ambit of the activities of the Company and its associated groups in the near future. He also referred, among other things, to the transport needs of the country and was apprehensive that, despite the ambitious plan to develop railways and the impetus given to development of road transport, sufficient transport would not be available to move the target productions of both industry and agriculture at the end of the second Five-year Plan. He, therefore, pleaded for greater efforts to improve and enlarge all forms of transport facilities in the country.

The following is the full text of Mr. Mahindra's speech:

"I welcome you to the thirteenth annual general meeting of your Company. That in this thirteenth year the Company would report a record level of earnings, is not a concession to any juxtaposition of stars, as perhaps our Hindu shareholders would claim, but it is a reflection of the hard work, selective judgment and constructive enthusiasm of the staff in our various divisions, many of whom are also proud shareholders.

"There was no change in the composition of the Board during the year, but it is sad to note that Raja Maharaj Singh, our respected colleague, ceases to be a Director, for, owing to illness, he does not wish to continue to serve on the Board. To him is due our grateful appreciation for his wise counsels throughout; and we extend to him our best wishes for speedy recovery.

"You have before you a proposal to increase the number of Directors from nine to twelve. In view of the rapid expansion in the activities of the Company, it is desirable that the Board be enlarged; it is also desirable that we continue to receive advice and counsel from men of varied experience in different parts of our country. I hope that you will approve of the proposal and thus extend the area of experience and guidance available for the management of the growing activities of the Company.

Increase in Share Capital

"During the year, the paid-up capital of the Company was increased from Rs. 80 lakhs to Rs. 187 lakhs; the programme for the issue of new capital was smoothly carried out and the support received from our shareholders was indeed gratifying. This large increase in the capital, necessitated by our various projects, enjoins upon the management and the staff the need to expand sales, to enlarge margins of profit through strict vigilance on expenses and ever to maintain a buoyant optimism for the future. The rapidity of expansion has become imperative by growing pressures of planned development. I make no apology for the growth which has enveloped your Company, for I consider it both an essential element of faith as well as consistent with business ideals that there remain in the Managers a continuous look at the future, a persistent glance to the yonder horizons, a corporate philosophy which assumes obligations to support loyally State plans for rapid economic development. In making this general statement I am envisioning further capital developments within the ambit of the activities of your Company and its associated groups in the near future.

"The report of the Directors refers briefly to the proposals for manufacturing one ton 4-wheel drive truck, and David Brown tractors. We expect these schemes to fructify during the year. Your Company is also participating in the expansion of the Otis Elevator Company (India) Ltd.—a company in our associate group which is increasing its capital fourfold and embarking on an ambitious programme for manufacturing various types of lifts required in the country. Few other schemes are under examination.

"The shareholders must have noticed the appropriation this year of a modest sum of Rs. 50,000 towards a research and development fund. This is the beginning of an organised effort to determine, through basic research, the essential adaptability of vehicles and other products to conditions prevailing in our country and through applied experimentation, design and develop something which will suit not merely the operating requirements but cheapen costs in conformity with the low purchasing power of the millions. Sustenance of demand is essential for a programme of growth, and unless the product is within the reach of multiple consumers of moderate means, demand cannot be sustained over the years.

Accounts

"Turning to the accounts, you will notice that additional depreciation, which amounts to about Rs. 2,71,000 over and above the normal permitted under the Income-tax Act regulations, has been provided. This has been done in order to conform to the realities of replacement of some of our fixed assets. A development rebate account appears in the profit and loss account, representing, as stipulated by the Finance Act, 75 per cent. of the amount admissible to the Company for tax reliefs. The provision for taxation for the year is double the amount provided last year, because of the great increase in the gross profits of the Company, being Rs. 71.25 lakhs, as against Rs. 43.10 lakhs last year (before providing for depreciation).

"Reference has been made in the Directors' report to the decline in the volume of turnover in sales and service, from Rs. 24.41 crores to Rs. 17.69 crores. The apparent decline does not give a correct picture, for a substantial quantity of steel imports was arranged through successful bids on tenders which did not require financing. The relative figures are as follows:

(In crores of rupees)

	1957	1958
Sale of steel material purchased and financed ...	18.82	13.65
Sale of steel material (No finance involved)	1.70	7.27

"In view of the changing pattern and incidence of taxation, it is difficult to present a comparable statistical picture of the operating results. It should, however, be gratifying to the shareholders to note that the profit margin on sales and service has more than doubled as compared to the previous year, but the quantum of corporate taxes for the year is also little more than double of what was provided in 1956-57 being Rs. 31.25 lakhs, as against Rs. 15.50 lakhs last year. Nevertheless, the net earnings per equity share have kept pace with increase in the profit margin and considering that the new capital came into service only for one month during the year, the results may be considered highly satisfactory.

Dividend

"As already reported by the Directors, the provisions of Section 23A of the Income-tax Act apply to the Company for this year and accordingly the Directors have recommended payment of a dividend of 22 per cent. per annum (free of tax) on ordinary shares—this percentage must be distributed according to the Act. I do not disguise my reluctance in respect of this dividend, for, at this stage of the Company's development, I feel that cash resources may be conserved to the maximum extent—and particularly in view of our enlarged programme, it is ordinary business prudence to maintain the cash ways and means position in a healthy state. I trust, however, that the shareholders will approve of the dividend recommendations with acclaim and join me in hoping that the future will also bring satisfactory returns.

"Even with increased emphasis on our manufacturing activity and consequent high costs, we have experienced satisfactory results during the last six months of the current year. The application of the American Loan funds towards some of our requirements of both capital goods and current vehicles has resulted in larger allocations and the volume of turnover in the Jeep division shows substantial increase as compared to last year.

"In the Steel Division, we are holding our ground and although orders so far booked indicate a decline in tonnage, this is according to anticipations. Interest is being increasingly diverted to enlarging internal distribution channels. With increasing production of steel in the country, our dependence upon imports will soon diminish and time is opportune for the formulation of a comprehensive policy relating to distribution, controls and prices. The Iron and Steel Controller's organisation, with experience now ranging over both the war and post-war periods, will have garnered sufficient data on the subject and I am sure they will be the first to recognise the technical complexities of steel production and distribution; satisfactory and advance programming of both aspects is a *sine qua non* for effective and maximum yields from the vast amount of capital invested in an industry which is basic for general economic advancement. I make a plea for an early enquiry and decisions in this matter, for hasty judgments and *ad hoc* policy announcements are more likely to retard than improve a rational consumption growth and useful utilisation of both plants and products.

Automobile Industry

"Of interest to the automobile industry several exciting things have happened during the year. The most momentous event was the very comprehensive enquiry into road transport, whose report is now receiving the attention of the Government. In my address to you last year I urged speedy development of an extensive road haulage service and submitted for discussion a proposal to ensure the production of requisite volume of trucks and trailers, on the one side, and the design for financing this development, on the other. Transportation as the conveyor belt of industry assumes greater importance as the emphasis on agricultural activity and the drive to produce more of each crop gain momentum. The movement factor of such growth in production, therefore, needs immediate attention. In this context, it looked rather odd to me that the Railways Ministry would ascribe temporary fall in their earnings to increased competition from road services, implying that a curb be placed on such activities. With the best will in the world and even after completing the very ambitious Railways Plan, which would absorb more than 25 per cent. of the second Plan expenditure and with whatever impetus is given to development of road transport, I remain apprehensive, in that there will not be sufficient transport available to move the target productions of both industry and agriculture at the conclusion of the second Five-year Plan. More detailed efforts are, therefore, necessary in the direction of improving and enlarging transport facilities all round.

Defence Ministry's Decision

"Another event which caused considerable excitement was the decision taken by the Ministry of Defence to commence production of certain types of trucks and vehicles for their own requirements; thereby threatening to curtail the scope of the market for similar vehicles presently being produced in several existing factories. The decision was explained on the ground that the present commercial producers have been very tardy in their programme of manufacture; that their prices are too high; that there was spare plant capacity in the ordnance factories; that the Defence Ministry desired to become self-sufficient in respect of its major requirements. I am not in a position to apprise properly the various comments which have been made on this policy, but would like to draw attention to the apparent lack of co-ordination between the Ministry of Defence and Ministry of Commerce and Industry. The latter regulates and controls the development of the automobile industry and a policy resolution on the subject announced in 1956 took the comprehensive view that the industry was being placed in the 'protected' category and it was desired that the manufacturing programme of the several units should be rationalised and speeded up. The report of the Tariff Commission, submitted in October 1956, which formed the basis for the policy resolution, contains an exhaustive review of the difficulties in respect of manufacture and of demand, of high local costs and relatively large capital needs. The smallness of the demand for motor vehicles engaged the attention of the Tariff Commission and I reckon that the recommendation to co-ordinate civilian and military requirements was made specifically for the purpose of ensuring a larger volume to the producers, which alone can form the base for reduced costs of production. In this context, the decision of the Defence Ministry means subtraction of an important part of the demand from the general volume which, to that extent, will diminish the incentive to lowering of prices. At the same time, it is axiomatic that the ordnance factories with their limited volume will not be able to achieve production at any lower cost level.

"Another event which has exercised enough comment has been the Government intrusions in respect of distribution and prices. The restrictions on imports which the industry began to feel from September 1957 have continued, with the result that fewer and fewer automobiles became available and a black or grey market has developed in this respect. I am glad that this position is not applicable to jeeps and allied vehicles for supplies have been fairly well maintained and distribution channels adequately supervised.

Controls At Wrong Points

"It is a notorious comment that 'Government have a habit of applying controls at wrong points of the supply line or of applying them piecemeal and half-heartedly.' This is as true of automobile regulations as of foodgrain policy. There is no cure where demand outreaches supply, except the pumping in of more supply or strictly regimented rationing of available supply. I do not see any practicable solution to the emergent black market and skyrocketing of prices, except a bold decision by the Government to bring in the country a sizable volume of cars and trucks. This expenditure on foreign exchange can be amply justified for curing the imbalance which has developed and which threatens to upset the delicate price structure already under severe pressure of inflationary forces. The Tariff Commission of 1956 considered this matter of short supply and price controls. They came to this firm conclusion:—

> 'It might appear that in the absence of price controls, the current shortage ... may lead to an excessive rise in prices. We are of the opinion, however, that even this possibility does not justify the present system of price control. . . . It is the shortage which creates opportunities for an excessive rise in prices and the correct remedy is to take measures to relieve the shortage. So long as the shortage persists a system of price control which prevents only the manufacturer from charging excessive prices cannot protect the consumer against exploitation by dealers and middlemen.'

"I commend this conclusion to the Government.

People's Car

"Another event of considerable import to the automobile industry was the announcement of a seven-man committee presided over by Mr. L. K. Jha to examine the possibility of producing a more economic car for the common man, that is, a low cost car within the price range of Rs. 5,000 to Rs. 7,000. It is stated that the Committee will examine various models of such cars that have been developed in different countries and suggest ways and means of manufacturing such a car in India. I welcome this move, as two years ago, I advocated exploration and research toward building a 'people's car.' I hope that the dreams will soon materialise and that the Committee would arrive at the conclusion that something should be done, and done quickly, to produce in the country what a person of small means can afford. You want a vehicle which will go and reasonably go anywhere, a vehicle which will suit the conditions of locomotion and roads available, a vehicle which is simple to operate and easy to service. Cost factor is, of coarse, most important for the people's car as for other vehicles and costs can be brought down only by volume production. There is no other way.

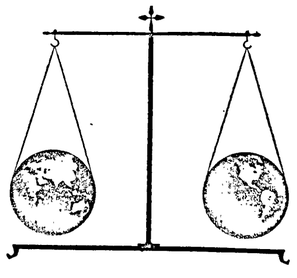
"As a start, the Government may consider licensing the import of, say, 2,000 small cars of approved make whose ultimate manufacture is being designed by the Jha Committee, on condition (*a*) that the retail price must not exceed 5 per cent. over landed cost, and (*b*) that the importer should bring in with each consignment equivalent of 5 per cent. worth of spare parts. The import of 2,000 cars will also help in relieving the pressure on prices of vehicles.

"In addition to the problems of production of a low cost vehicle which will engage the attention of the Jha Committee, I suggest that consideration be given to provide facilities for the present manufacturers to devise ways and means to increase their volume of production. One sure way is to permit them to experiment on different models with various combinations of functional components of the basic vehicle each is producing. I submit this as one of the measures which will reduce the costs of production and enable retail prices to be brought down.

"I have pleasure in reporting that a five-year agreement was signed last week with the union representing the workmen and members of the staff. This was made possible after a very exhaustive joint study and analysis of the various jobs, and through the goodwill and co-operation extended by the representatives of the union. This agreement, I am sure, will provide an incentive to attaining higher productivity.

"This has been a good financial year for the Company. In my opening remarks I have paid tribute to the management and the employees of the Company for the fine results. I am sure they will not rest on their laurels and will continue to give ungrudging service with readiness and enthusiasm and sense of layalty of which you and I should be proud. Join me in saying thank you to them, one and all."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.



In both hemispheres...

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to Public Inspection at the Registered Office of the Company. It must be distinctly understood that, in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme, or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking in Ramtek Tehsil, Dist. Nagpur (Bombay) of which a copy is open to Public Inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus having attached thereto the documents referred to hereafter has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60(2) of the Companies Act 1956.

Application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the shares of the Company.

The Subscription List will open at the commencement of Banking Hours on the 30th day of May 1959, and will close at the close of Banking Hours on the 6th June 1959, or later at the discretion of the Directors.

In the event of the Shares being subscribed in full, the Directors reserve the right to close the Subscription List earlier than the 6th June 1959, but not earlier, in any case, than the 3rd June, 1959.

KHANDELWAL FERRO ALLOYS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT 1956)

SHARE CAPITAL

AUTHORISED .. .. **Rs. 2,50,00,000**

Divided into :

(1) 1,50,000 Equity Shares of Rs. 100 each .. .. Rs. 1,50,00,000
(2) 1,00,000 7½ per cent. Tax-free Redeemable Cumulative Preference Shares of Rs. 100 each 1,00,00,000

Rs. 2,50,00,000

ISSUED

(1) 1,00,000 Equity Shares of Rs. 100 each .. .. Rs. 1,00,00,000
(2) 50,000 7½ per cent. Tax-free Redeemable Cumulative Preference Shares of Rs. 100 each 50,00,000

Rs. 1,50,00,000

No Shares will be issued for consideration other than cash.

Out of the above issue of Rs. 1,50,00,000, the following amounts have already been taken up by the Promoters, the Directors and their friends:—

65,063 Equity Shares of Rs. 100 each .. .. Rs. 65,06,300

PRESENT OFFER

The present issue, which is offered for public subscription at par, consists of the balance of Rs. 84,93,700 Capital, as follows :—

(1) 34,937 Equity Shares of Rs. 100 each .. .. Rs. 34,93,700
(2) 50,000 7½ per cent. Tax-free Redeemable Cumulative Preference Shares of Rs. 100 each 50,00,000

Rs. 84,93,700

The entire issue of Preference Shares has been jointly underwritten as under :—

		Rs.
1.	Messrs. Industrial Finance Corporation of India ..	37,50,000
2.	Messrs. P. R. Subramanyam	7,50,000
3.	Shri S. V. Bhavnani	5,00,000
	Rs.	50,00,000

In the opinion of the Directors, the resources of the said Underwriters are sufficient to discharge their respective underwriting obligations.

The amount payable in respect of shares comprising the present offer are as follows :—

	Preference Shares	*Equity Shares*
With application	Rs. 25 per share	Rs. 25 per share
On Allotment	Rs. 25 per share	Rs. 25 per share

The balance of Rs. 50 in respect of each Preference Share shall be payable in such calls as may be determined by the Directors, provided that no call shall exceed the sum of Rs. 25 per share and that prior notice of at least 30 days shall be given in respect of each call and there shall be a minimum interval of one month between any two calls.

The Directors do not propose to call the balance of Rs. 50 on Equity Shares at least for a period of two years.

MINIMUM SUBSCRIPTION AND FINANCIAL REQUIREMENTS

The minimum subscription in respect of the present offer on which the Directors will proceed to allotment is Rs. 50,00,000.

The financial requirements of the Company are comprised of :—

		Rs.
1.	Cost of Land and Building	47,00,000
2.	Cost of Imported Machinery including erection at site	68,00,000
3.	Brokerage, Underwriting Commission and Preliminary expenses	3,00,000
4.	Working Capital	32,00,000
	Total .. Rs.	1,50,00,000

The Refinance Corporation for Industry Private Limited have been pleased to sanction a loan of Rs. 40,00,000 for meeting the immediate requirements of Capital expenditure, through The Chartered Bank after the scheme having been thoroughly scrutinised and found sound both by The Chartered Bank and The Refinance Corporation for Industry Private Limited.

REGISTERED OFFICE

"KHANDELWAL BHAVAN," 166, DR. DADABHAI NAOROJI ROAD, BOMBAY 1.

The Company was incorporated on the 7th January, 1958. The Directors have filed with the Registrar of Companies, Bombay, a statement in lieu of Prospectus and received the Certificate for Commencement of business on the 23rd June, 1958.

AUDITORS' REPORT

In accordance with the provisions of clause 24 of Part II of Schedule II of the Companies Act, 1956, we report, that the accounts of Messrs. Khandelwal Ferro Alloys Ltd., have not been made up at any time since the incorporation of the Company.

A. F. FERGUSON & CO.,
S. B. BILLIMORIA & CO.,
Chartered Accountants.

BOMBAY:
Dated: 24th April, 1959.

CONSENT

The consent in writing of the Directors, Auditors, Bankers, and Legal Advisers to the Company to act in their respective capacities has been obtained, and has been filed with the Registrar of Companies, Bombay, and none of them has withdrawn the consent given.

RIGHTS OF PREFERENCE SHARES

The Preference Shares shall confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 7½ per cent. per annum free of Income-tax on the Capital for the time being paid-up thereon; and also the right in the event of a winding-up to a preferential payment of the paid-up Capital and all arrears of dividend, if any, whether earned, declared or not, upto the commencement of winding-up, in priority to the Equity Shares, but shall not confer any further rights to participate in the profits or assets of the Company.

TERMS OF REDEMPTION OF PREFERENCE SHARES

The Company shall have the right after five years from the date of issue of such preference shares to redeem at par from time to time all the said Preference Shares, or such of them by drawing lots, as the Directors of the Company may from time to time decide after giving six months' previous notice in writing in that behalf addressed to the holders of Preference Shares to be redeemed. All outstanding Preference Shares, if any, shall be redeemed within 10 years from the date of issue.

POWER OF BOARD TO REFUSE REGISTRATION OF TRANSFER

The Board may without assigning any reason, but subject to the right of appeal conferred by Section 111 of the Companies Act, 1956 decline to register any transfer of shares or debentures upon which the Company has a lien, or of shares which are not fully paid-up.

OBJECTS

The main object of the Company is to establish a Plant at Kanhan, Ramtek Tehsil, Dist. Nagpur, Bombay State, for the production of standard grade High Carbon Ferro-Manganese and other Ferro-Alloys complementary to Ferro-Manganese production and such other Products as could be manufactured in the Plant.

The Company's present scheme is to install a plant for the manufacture of Ferro-Manganese with an installed capacity of 30,000 tons per annum.

All the objects of the Company are in law main objects and therefore a copy of the Objects Clause of the Company's Memorandum of Association forms part of this Prospectus.

PROSPECTS

Ferro-Manganese, an indispensable alloy for the manufacture of steel, is produced from Manganese Ore. India has rich deposits of Manganese Ore and is a leading supplier of Manganese Ore to countries engaged in Steel Production, particularly the United States of America, Japan, United Kingdom, Germany and Belgium. India's Manganese trade has so far been confined to the export of raw Manganese Ore only. In the Second Five-Year Plan, Government have recognised the need for developing this industry and have assigned it high priority. Accordingly, licences aggregating to a total capacity of about 160,000 tons have been issued to about half a dozen Industrial Units. Of this capacity, about 60,000 tons would be required for indigenous steel production by the end of the Second Five-Year Plan. The balance capacity 100,000 tons has been sanctioned by Government for purposes of promoting exports and earning valuable foreign exchange, although in due course more and more of the output will be consumed in the country with the increase in indigenous steel production. The Promoters of the Company have considerable experience as Exporters of Manganese Ore and Importers of Steel and have wide contacts in the world markets for Ferro-Manganese.

PLANT AND MACHINERY

The Company has entered into an Agreement for the supply of Plant and Machinery on deferred payment terms with the well-known firm of Messrs. Elektrokemisk A/S, Oslo, Norway, whose several similar plants are successfully running in this country. The suppliers of machinery have also agreed to give technical assistance for the installation and commissioning of the Plant and the training of the Company's personnel. They have also executed a Performance Guarantee for the production of Ferro-Manganese of the required quality and quantity. This agreement and the Performance Guarantee are open for inspection at the Registered Office of the Company during office hours.

The Company has arranged for the guarantee (of deferred payments required by Messrs. Elektrokemisk) to be provided by The Chartered Bank, Bombay.

RAW MATERIALS

With regard to the availability of the Principal Raw Material, viz., Manganese Ore, it may be stated that the site selected, viz., Kanhan, near Nagpur, is situated in the heart of the Manganese Ore Mining Area. According to the Geological Survey Reports of the area, the deposits of Manganese Ore in this area are the largest in the country. The other essential raw material, viz., limestone, is available within a radius of about 20 miles from the plant site. Coke and Coke Breeze are also required for the manufacture of Ferro-Manganese and arrangements are being made to obtain good quality coke from the Coal Controller, Calcutta.

LOCATION

The Plant site at Kanhan is conveniently located 14 miles from Nagpur on the Bombay-Calcutta main line. On one side it is surrounded by the River Kanhan, the other side is the Kanhan Railway Station and on the third side is the Nagpur-Jubbulpore Highway. Therefore it has all the facilities for the transport of raw materials and finished products. Plans are being drawn up for providing railway siding facilities for the economic movement by rail.

LAND

Sufficient land for the construction of the Factory, for the storage of raw materials, provision of internal facilities, water-supply and electric installation and also for the location of staff colony, has been acquired.

ELECTRIC POWER

The Plant will require 15,000 kw. Electricity. Negotiations are in progress with the Bombay State Electricity Board who have agreed to provide the necessary Power Supply. The detailed terms and conditions for the supply are under discussion with the Bombay State Electricity Board, and on the finalisation of the details, the necessary agreement for the electric power supply to the Plant will be drawn up.

PROGRESS OF WORK

The construction work is in full progress. The first consignment of the Plant and machinery consisting of 1,085 packages has also been received at the site. Remaining shipments are due to arrive before September 1959 and the Plant is expected to go into production by early 1960.

SALE OF FERRO-MANGANESE

The Company has entered into an agreement for the sale of the entire output for a period of 7½ years with a minimum guaranteed price for the first 4½ years with one of the biggest Ferro-Manganese dealers in the world. This Agreement is open for inspection at the Registered Office of the Company during office hours.

ESTIMATE OF COST OF PRODUCTION AND PROFITS

Several estimates of Cost of Production of Ferro-Manganese were obtained from reputable Electric Furnace Suppliers, Consulting Engineers, etc. From these estimates taking the highest figure as the cost of production, the profits on a conservative basis are estimated to be in the vicinity of Rs. 50 lakhs per annum on a production of 30,000 tons.

The Company will enjoy the special benefits under the Income-tax Act as regards Development Rebate. In addition, as a new Industrial Undertaking, it will enjoy exemption from income-tax on Profits upto 6 per cent. on the Capital employed for the first five years of the Company's operation.

PRELIMINARY EXPENSES

Preliminary expenses, brokerage and underwriting commission payable by the Company will not exceed Rs. 3,00,000. Actual preliminary expenses upto the date of commencement of business of the Company were paid by the Promoters, Messrs. Khandelwal Brothers Private Limited, and Ramprasad Beharilal and Sons.

BROKERAGE AND UNDERWRITING COMMISSION

Brokerage of 1 per cent. will be paid to recognised Bankers or Brokers on allotments made in respect of applications bearing their stamps. An underwriting commission of 2½ per cent. will be paid to the Underwriters.

APPLICATIONS AND ALLOTMENT OF SHARES

Application for Preference and Equity Shares must be made on the respective forms accompanying this Prospectus, copies of which may be obtained at the Registered Office of the Company and from any office of the Bankers and from Messrs. P. R. Subramanyam and Shri S. V. Bhavnani.

APPLICATIONS MUST BE MADE FOR A MINIMUM OF FIVE SHARES OR A MULTIPLE THEREOF.

Applications must be completed in accordance with the directions contained therein and delivered before the closing of the subscription lists to (1) Khandelwal Ferro Alloys Ltd., Khandelwal Bhavan, 166, Dr. Dadabhai Naoroji Road, Bombay 1; (2) Khandelwal Ferro Alloys Ltd., 63, Mall Road, Kamptee (Dist. Nagpur); (3) Khandelwal Ferro Alloys Ltd., 33, Netaji Subhas Road, Calcutta; (4) Khandelwal Ferro Alloys Ltd., "Hauz Kazi," Delhi 6; (5) The Chartered Bank, Bombay and Branches; (6) The Central Bank of India Ltd., Bombay and Branches; (7) The Punjab National Bank Ltd., Bombay and Branches; (8) The Allahabad Bank Ltd., Bombay and Branches; (9) Messrs. P. R. Subramanyam, 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay 1, or (10) Shri S. V. Bhavnani, New Stock Exchange Building, Apollo Street, Fort, Bombay 1.

Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reasons. Failure to pay any amount on shares allotted when due will render the previous payment liable to forfeiture.

The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

The Share Certificates will be issued within three months of the date of allotment.

Bombay dated 15th May, 1959.

(Continued in next page)

PRODUCTION OF JUTE GOODS UP

STOCKS WITH MILLS, HOWEVER, DECLINE

THE jute goods market is ruling steady and the middle of last week witnessed a jump in prices of both hessian and sacking, thanks to the speculative activity inspired by the encouraging statistical position of jute goods with mills and reports that Australia was interested in cornsacks, that business in hessian had been concluded with Russia and that Argentina had reappeared as a buyer of low-grade hessian. Much of this rise was, however, wiped out subsequently on selling by mills at higher levels. At the time of writing, ready hessian 40"×10 oz. is being quoted at Rs. 40.40 per 100 yards and ready B. twills at Rs. 94.60 per 100 bags. These rates compare with the high of Rs. 41.20 and Rs. 95.10, respectively, touched last week and Rs. 40.30 and Rs. 94.65 quoted a week ago.

The statistical position of jute goods with mills as at the end of April is somewhat encouraging, in that a rise in production during the month is accompanied by a dwindling of stocks of manufactured goods, though the extent of variation in each case is not very large. The output of jute goods in April aggregated 84,400 tons, as compared with 83,300 tons in March, thus reversing the downward trend in production noted in the previous three months, when it dropped successively from 96,500 tons in December 1958 to 83,300 tons in March. It, however, fell short of the production (88,000 tons) in the corresponding month of 1958 by 3,600 tons, as will be seen from the following table:

(In tons)

	April, 1959	March, 1959	February, 1959	April, 1958
Hessian	38,100	38,100	36,000	30,900
Sacking	37,900	37,200	39,500	50,600
Others	8,400	8,000	7,200	6,500
Total ..	84,400	83,300	83,600	88,000

The increase in production during last month is shared by sacking and miscellaneous constructions, which have gone up by 700 tons to 37,900 tons and by 400 tons to 8,400 tons, respectively while the output of hessian is unchanged to 38,100 tons. Though the hessian production in April is 2,000 tons short of the high of 40.100 tons touched in December last, it represents an increase of 7,200 tons over the year, reflecting the effect of the switchover of the looms from sacking to hessian. This is also borne out by the fall of 12,700 tons in the sacking output over the year. Accordingly, the ratio of hessian output to the total has risen from 35.1 per cent. in April 1958 to 45.1 per cent. in the month under review, while that of sacking has declined from 57.5 per cent. to 44.9 per cent. The production of miscellaneous varieties is at its peak and constitutes 9.9 per cent. of the total, as against 7.4 per cent. a year ago.

The stocks of jute goods with mills as at the end of April show a decline of 1,800 tons, that is, from 106,800 tons to 105,000 tons. This decline is much less than that (4.000 tons) noted at the close of March; nevertheless, with this fall, the declining trend is maintained for the third month in succession. Over the year, the stocks disclose a rise of 7,500 tons, as the following comparative table shows:

Stocks of Jute Goods

(In tons)

	As on 30th Apr., 1959	As on 31st Mar., 1959	As on 28th Feb., 1959	As on 30th Apr., 1958
Hessian	19,600	17,000	15,500	20,400
Sacking	67,800	72,600	79,900	60,200
Others	17,600	17,200	15,400	16,900
Total ..	105,000	106,800	110,800	97,500

Last month's shrinkage has taken the stocks to the lowest level since April 1958. The dwindling of stocks is solely accounted for by sackings, which have gone down by 4,800 tons to 67,800 tons, a level not seen since April last year. At this level, they constitute 64.6 per cent. of the total stocks, as against 67.9 per cent. a month ago and 61.7 per cent. at the close of April 1958. The decline in sacking stocks has to a large extent been offset by the rise of 2,600 tons in stocks of hessian (to 19,600 tons) and of 400 tons in miscellaneous varieties (to 17,600 tons), lifting the former to the highest level since July last and the latter to a fresh peak level. Notwithstanding this increase, the share of hessian stocks in the total, at 18.6 per cent., is less than that a year ago, when it was 20.9 per cent. The stocks of miscellaneous varieties, which had exceeded those of hessian at the end of March, are lower than the latter by 2,000 tons at the close of April.

FORWARD TRADING IN JUTE

The history of forward trading in raw jute and jute goods will take a turn on 1st June next, when forward business will be done on the basis of transferable specific delivery contracts under the auspices of the East India Jute and Hessian Exchange, thus bringing it under the Forward Contracts (Regulation) Act 1952. This is being done with the object of bringing the existing system of trading on the basis of the I.J.M.A. contract forms and the transferable *pucca* delivery order for jute goods by mills under the rules of the only recognised body, namely, the East India Jute and Hessian Exchange.

It will be recalled that futures trading in gunnies and raw jute is being conducted under the auspices of the E.I.J.H.E. with effect from 29th March 1958. The forward business under I.J.M.A. transferable specific delivery contracts was, however, allowed to continue till such time as the necessary by-laws were framed, in order to avoid dislocation of business. The period of exemption was being extended from time to time and the latest extension is due to expire on 31st May. Consequently, as from 1st June, the provisions of Section 15 of the Forward Contracts (Regulation) Act 1952 will apply to all forward contracts. Further, transferable specific delivery contracts in raw jute and gunnies will be illegal with effect from that date, unless they are entered into between, with or through, members of the E.I.J.H.E., Calcutta. The E.I.J.H.E. has framed the necessary by-laws for regulating specific delivery contracts, as also for licensing of brokers. A new chapter has been added in the by-laws to regulate business in *pucca* delivery orders for jute goods by mills as well.

JUTE CULTIVATION IN BURMA

Burma has plans to put some 60.000 acres under the cultivation of jute this year, should the supply of seeds prove sufficient, according to the *Jute Bulletin* of the Indian Central Jute Committee. Of an estimated 30,000 acres planted in 1958, about 15,000 acres are believed to have produced good yields amounting to at least 5,000 tons. The ultimate target is an acreage of 120,000 to yield 40.000 tons of which 24,000 tons will be low grade jute for consumption in the State-owned Burmese mill and the remaining 16,000 tons will be high grade jute suitable for export. On an average, cultivators obtain a net yield of K250 an acre by growing jute, which compares favourably with the present profit rate for paddy.

Experimental growing of jute on the same land as paddy is showing promising results in Burma. The system is to plant jute in April followed by paddy about the beginning of September, planted while the jute is retting. It is hoped that it will be possible to run a three-crop pattern—jute, paddy, beans—in suitable districts.

REGULATION OF JUTE GROWING IN PAKISTAN

A strict control over the growing of raw jute is to be enforced in East Pakistan. In the course of a Press note issued last week by the East Pakistan Government, the jute growers have been warned that jute or mesta sown without licence or in excess of the licensed quota will be destroyed and the cost of destruction will be recovered from the growers. The Government has also warned that contravention of the regulation restricting the sowing of jute will be punishable with imprisonment ranging up to six months or with fine up to Rs. 350 or with both.

The Government has already ordered a plot-to-plot checking of jute and mesta growing lands by the Jute Regulation Section of the Department of Agriculture and farmers have been asked to destroy their excess production before the inspectors come. The Press note added that 14th May was the last day for issue of licences for growing raw jute.

PLANTING BRIEFS

The Government of India has authorised the Tea Board to make an interim release of tea export quota for 1959-60 to the extent of 55 per cent. of the best crop basis of tea estates, pending final notification on export allotment for the year. The first interim release of export quota for the previous year, it may be recalled here, was 50 per cent. (made at the end of May 1958). A further release of 10 per cent. quota was made in mid-June and another 5 per cent. in September, making a total of 65 per cent. till then for 1958-59. This, it may be noted, had already exceeded the export quota (of 63.4 per cent.) for the whole of 1957-58. The larger quota allowed was in line with the Government's policy of increasing exports of all commodities in order to earn the much needed foreign exchange. In January 1959, the Government made a final release of 2 per cent., making a total for the year of 67 per cent. of the best crop basis. This was equivalent to about 494.5 million lbs. as compared with 460.1 million lbs. for the 1957-58 season.

* * * *

Tea production in North-east India during April 1959 (the first month of the 1959-60 season) amounted to 19.8 million lbs., which represents an increase of 3.5 million lbs. over that (16.3 million lbs.) in the corresponding month of 1958.

The South Indian tea output in March 1959 recorded a decline from 15.1 million lbs. (in March 1958) to 10.9 million lbs. This has brought the aggregate production during the first three months of the current year to 29.5 million lbs., as against 33.7 million lbs. in the corresponding period of 1958.

Pakistan produced a crop of 3.2 million lbs. in April (the first month of the current season) which compares favourably with 2.5 million lbs. in April 1958. Ceylon's output in March shows a fall from 37.9 million lbs. to 32.8 million lbs. and this has brought the total crop in the first three months of 1959 down, from 102.6 million lbs. to 100.1 million lbs. Indonesia's output up to the end of February amounted to 15.9 million lbs., as against 16.4 million lbs.

Nil	12. Loss on revaluation of Investments	Nil			
1,02,791	13. Net Profit (Subject to Taxation)	54,907.31			
10,09,529	Total .. Rs.	11,32,568.22	10,09,529	Total .. Rs.	11,32,568.22

We have audited the foregoing Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at the 31st day of December, 1958, and also the foregoing Profit and Loss Account of that Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Branch so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking Companies and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bombay Branch of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit of the Branch for the year ended upon that date.

BOMBAY, 28th March, 1959.

A. F. FERGUSON & CO.,
Chartered Accountants.

ENERGY PROBLEMS OF UNDERDEVELOPED COUNTRIES

IMPORTANCE OF CAREFUL PLANNING STRESSED

A GOOD index of a country's economic prosperity is provided by the total availability of energy supply, the quantum of its utilisation in relation to industrial and other needs, and the terms on which the energy is made available. Indeed, since energy resources are basic to modern production and transport, they largely affect the standard of living itself. It is, therefore, urgent that energy production must be provided before other investments can become effective. This important point is well brought out by the United Nations Secretary-General in his interesting report on energy development in the underdeveloped countries, submitted to the Economic and Social Council at its twenty-seventh meeting held at Mexico City last month. The report is a useful and comprehensive document. It (*a*) reviews the work already done on general energy problems (resources, requirements, trade and prices), conventional fuels, non-conventional energy and electric power, (*b*) analyses the experience gained and the problems encountered in technical assistance, and (*c*) suggests measures considered appropriate for future work. A brief survey is also made of the work of non-U.N. organisations, in terms of their purposes activities and publications.

At the very outset, the report has sought to stress that development of energy production is a lengthy and capital-intensive process, a process for which careful programming is imperative. A reasonably clear picture, in its opinion, must be obtained, for example, of energy requirements and the pattern of demand for energy—as a consumer good and as a factor of production. The changes that followed from development must also be taken into account. Equally necessary are the survey and appraisal of the potential energy resources, for it is only on the basis of these that long-term energy prospects can be evaluated and guidance for specific investment decisions had. Still other factors to be considered are the relative location of resources and demand and the possibilities for trade. The question of prices, too, has to be examined, since prices regulate the supply-demand relationship and influence the selection and combined use of energy sources.

The report notes that prospecting and exploration of energy resources have not proceeded at the same rate in all regions and that several areas are veritable blank on the energy resources map. Geological mapping and mineral fuel prospecting have just begun or are to begin in most underdeveloped regions, while they constitute a continuous process in many countries. Pointed attention has been drawn to the need for introducing more economic analysis into the work of geologists and engineers. This is only as it should be. For how else can mapping and prospecting be directed towards the more economically promising areas and discoveries realistically evaluated in terms of economic development possibilities? What is more, constant progress in methods of exploration and utilisation of conventional and non-conventional resources of energy makes it necessary periodically to reappraise energy reserves.

Viewed thus, the report has done well to suggest that, with the help of a panel of experts and co-operation of world organisations such as the World Power Conference, an effort may usefully be made by the United Nations to develop methods for the economic appraisal of energy resources on a comparable international basis. As an integral part of this step, the recommended principles may be applied in a preliminary presentation of selected energy resources data. An appraisal of world energy resources would subsequently be prepared, with the understanding that it would be revised periodically, say, every five years, in order to incorporate new data and/or new energy resources.

The report has also drawn pointed attention to the need for analysing long-term costs and prices of fuel and power in a number of selected countries with different energy resources conditions and different levels of energy consumption. The importance of such an analysis lies in the fact that costs and prices influence greatly the relative roles of various fuels and power sources. Further, they have a considerable impact on international fuel trade and the orientation of capital investment.

There are several issues pertaining to energy development in the underdeveloped countries which have received either no attention or only negligible attention. The more important of these as listed in the report are: development of remote energy resources in places with inadequate transport facilities; means of satisfying energy requirements where demand is small or widely dispersed; ratio of investments in energy producing and utilising plants in various circumstances or patterns of industrialisation; foreign exchange expenditures entailed at various stages of energy development in countries not manufacturing their own equipment. It is disquieting to learn from the report that the officials responsible for energy development in the less developed countries and the experts called upon to advise them on specific matters lack the economic guidance needed to help them integrate engineering plans into the context of existing economic development conditions.

The report has certainly struck a note of realism when it urges that one appropriate way for the U.N. to help attack the problem of filling the aforesaid gap is the convening of seminars on economic aspects of energy development in which officials of such ministries as public works, power, development and economy would participate. Explaining how the seminars should be conducted, the report observes:

"The success of such seminars naturally depends very largely upon adequate preparation. The latter might be entrusted to the Bureau of Economic Affairs which, in co-operation with the regional offices, would prepare systematic outlines and background papers based, *inter alia*, on experience in technical assistance. The papers thus prepared might in due course be given a wider distribution among still other officials in underdeveloped countries carrying important responsibilities involving the problems in question. Such systematic papers would, in addition, serve as useful material in guiding and briefing technical assistance experts, who usually go forth from industrial countries to advise on technical matters but inevitably have to take the special economic problems of underdeveloped countries into account.

"It is suggested that, in the first instance, emphasis be placed on the economics of electrification in underdeveloped countries. Among the items which the agenda of a first seminar might include are the following: comparative overall capital and operating costs of different electricity producing systems; means of lowering capital costs in electrification; electrification and foreign exchange costs; structure of power consumption and load factor; electricity tariffs; developmental effects of electrification; and organisation of the electric power industry."

The organisation of seminars in the way suggested above will undoubtedly go a long way towards enabling many underdeveloped countries to chalk out suitable plans for the production and utilisation of energy resources. In particular, the results of the seminar will smoothen the work at various levels on energy supply, appraisal, statistics and related problems which "leaves much to be desired" at present. Besides conducting seminars, the U.N. should, as the report rightly urges, undertake a comprehensive survey of the technical assistance rendered by various bodies in the field of energy. Such a survey will not only facilitate co-ordination in the early stages of related energy projects in the underdeveloped countries but also encourage further co-operation.

(*Concluded from next column*)

harbour in three stages, the annual cargo handling capacity being one million tons, two million tons and three million tons, respectively. Even if a deep-sea harbour is developed at Tuticorin, small steamers and lighters, it is suggested, should be loaded and unloaded at the existing wharves and piers and no separate provision need be made for this type of traffic.

The utility of the Council's report would have been greater had it included a rough estimate of the probable capital outlay on the project in the three stages of development. The Council, however, considers that, as a result of the development of the deep-sea harbour, the port of Tuticorin will have an approximate gross income of Rs. 80 lakhs—Rs. 1 crore on one million tons of cargo (at the rate of Rs. 9.81 per ton on an average), not to speak of the financial advantages to the Central Government in the shape of higher exports to foreign countries, quick turnround of ships and avoidance of congestion at Indian ports.

DEEP-SEA HARBOUR AT TUTICORIN

RESEARCH BODY SUPPORTS THE PROPOSAL

THE definite prospects of a marked increase in the volume of exports and imports justify a decision to construct a deep-sea harbour at Tuticorin, now a minor port on the east coast of India in Madras State. This is the view which that well-known independent research body of New Delhi, the National Council of Applied Economic Research (Director-General: Dr. P. S. Lokanathan), has expressed in the report* drawn up by it after a survey of the potentialities of this port. The survey was in response to the request made by the Port Trust of Tuticorin.

Tuticorin has for a number of years earned the distinction of standing first among the intermediate and minor ports of India in respect of the annual volume of traffic handled. The total tonnage that actually passed through the port during 1957-58 was of the order of 700,000. The Council expects that this tonnage would expand to 1.2 million in the next five or six years, as against the Port's present maximum capacity to handle with difficulty 800,000 tons by means of lighters and other facilities. Of the estimated tonnage, exports account for 615 000 tons and imports for 585,000 tons. These estimates are based on the following anticipations:

In order to meet the requirements of cement factories and increased rail movements, additional quantities of coal will have to be imported through Tuticorin. The imports will rise from 200,000 tons at present to 400,000 tons at the end of six years.

With the enlarged production of 400,000 tons of cement at Thalaiyuthu and likely output of 200,000 tons at Sattur, cement exports through Tuticorin will be at least 175,000 tons.

Besides the movement of 150,000 tons of salt to West Bengal and Nepal, another 50,000 tons will be marketed in foreign countries, making a total of 200,000 tons for shipment.

The present volume of trade between India and Ceylon will be higher by 35,000 tons at 90,000 tons.

The existing volume of imported foodgrains and fertilisers (about 35,000 tons and 25,000 tons per annum, respectively) will continue.

There will be a substantial rise in the volume of traffic in raw cotton and exports of cotton yarn, piecegoods and cotton waste.

General cargo exported and imported through Tuticorin to and from Europe, America and South-East Asia amounts to 65,000 tons per annum. If Tuticorin is developed as a deep-sea harbour, a part of the cargo now handled at other Indian ports as well as transhipment cargo will pass through this port.

Other Benefits

Apart from coping with the future increase of traffic, the construction of a deep-sea harbour at Tuticorin will, the Council opines, facilitate various other kinds of new traffic that will materialise. Special mention is made of the port's potential future traffic provided by oils— petroleum, diesel, kerosene and fuel oils. The present consumption of these oils in the hinterland of Tuticorin is put at 150,000 tons which will increase at least by 10 per cent. every year. Moreover, a large quantity of bunkers will be required for steamers calling at the port. After ten years, it may not be possible to discharge the entire oil supplies through the existing major ports on account of heavy enhanced demand for oil all over the country. Again, the trade and the general public in the hinterland of Tuticorin will benefit, when oil will be sold at least As. 2 (12 nP) per gallon cheaper, which should be possible if it is discharged at Tuticorin.

Mention is also made of the demand for handling transhipment cargo arising from extreme congestion at other ports; possibilities of effecting large-scale shipments by the S.T.C. through Tuticorin; prospects for exports of ilmenite ores found in the immediate neighbourhood of Tuticorin, as well as of large quantities of iron, steel and other hardware; and general improvement in the volume of seaborne traffic consequent on the increased living standards of the South Indian people.

If some of the aforesaid developments materialise with the opening of a deep-sea harbour, the Council feels, Tuticorin may be called upon to handle a traffic of two million tons per annum in the course of the next ten years and possibly three million tons in the next twenty years. Accordingly, the Council has suggested the phasing of the construction of deep-sea

NEW PRODUCTS AND PROCESSES

New Air-powered Pumps

TWO new pumps produced by a North of England engineering company are claimed to be the smallest and lightest air-power-operated portable pumps in the world. The claim is based on a performance comparison basis. The development of the new pumps has resulted from experience gained in the design of portable equipment for coal-mines, and the manufacturers say that the new pumps can be useful in work being done by contractors, civil engineers, public-works authorities, and builders everywhere. The new pumps provide instantaneous starting and built-in silencers. They are simple in design and of robust construction. According to the makers, Blagdon-Durham Ltd., of Framwellgate Works, Durham City, the pumps are completely foolproof and exceptionally long-lasting and have unrivalled output performance in relations to air consumption.

Versatile Engine Using Cheap Fuel

Local supplies of wood, groundnut shells, cotton stripping, elephant grass, and industrial and agricultural waste can be used as fuel to provide steam power at negligible cost from a portable engine demonstrated in Britain for the first time recently. Unskilled operators will be able to manage the engine and raise steam in a matter of minutes with complete safety and minimum attention, E. Reader and Sons Ltd., Phœnix Engine Works, Cremorne Street, Nottingham, England, the manufacturers, claim. Over three years in development, the robust but relatively compact steam generator should prove ideal for use in the remote areas of the world where productive power is required for development purposes. Uses visualised for it include irrigation and other pumping duties, electricity for small workshops and tropical bungalows (10,000 gallons of water could be discharged an hour while about 3 kw. was provided for power and lighting), timber cutting by chain or circular saw, and corn milling.

A New Plastic

A new plastic, Delrin, which is said to be the first with strength properties approaching those of the non-ferrous metals, is to be put into commercial production in mid-1959 by Du Pont. It is a polymer of formaldehyde, developed for use in fields now dominated by die-cast metals. Over 75 per cent. of its potential applications are expected to involve replacement of steel, brass, aluminium and zinc. It is described as extremely rigid without being brittle, tough and yet as resilient as spring steel, and 20 per cent. lighter than magnesium. It can be fabricated by conventional methods on standard plastics processing equipment at mass-production rates and can be screwed, nailed, sawed, drilled, machined, painted, metallised and printed. It will sell initially at 95 cents per pound, subject to reduction as production volume increases. It is expected to lead to finished products costing less than those made of zinc or aluminium. Field tests are said to indicate that the new material would be useful in automobile instrument clusters, carburettor parts, gears, bearings, bushings, door handles and window cranks; in moving parts of clocks, cameras, home appliances, firearms and business machines. It could also be used in components of industrial equipment: in pipe, shower heads, faucet bodies and other plumbing fixtures; and in consumer products ranging from fishing reels to zippers, combs and aerosol bottles.

Automatic Hide Curing System

An automated system for curing hides which is said to require only two days instead of the usual 30 to 60 days has been developed by the International Shoe Company which reports that it is offering it to packers in the interest of maintaining a flow of quality leather to its shoe-making plants. The automated method, it is claimed, can be installed even by a small packer at a total cost of $8,000 or slightly less, and permits use of a curing process in which hides are washed, sterilised and salted in four hours. After 24 to 48 hours of draining, the hides are then ready either for shipment, or storage under conditions similar to storage of meat. Among advantages to packers claimed for the process are reduced inventory of hides, reduced space requirements, and elimination of putrefaction. The new process, it is claimed, should help to stabilise the value of hides by permitting them to be stored without rotting. With former curing methods, packers frequently had to sell hides cheaply to avoid loss from rot.

New Lens for the Partially Blind

With the aid of a new and unique kind of eyeglass, which has lenses similar to the ones used in lighthouses, many thousands of partially blind persons may be able to see again. The lens has already been used successfully by 281 patients. Dr. William Feinbloom of the Optometric Centre in New York City described the new lens recently to a meeting of optometrists, saying that it has a magnification range of from 300 to 2,000 per cent. The lens is made of clear transparent plastic. Its upper sector is a multiple lens system of eight optical surfaces that produce 300 per cent. magnification. The lower sector is a multiple lens system that produces up to 2,000 per cent. magnification for reading. The centre section provides a 120 degrees angle of vision for middle distance sight for use while walking or similar activity where intense magnification is not required. By using the new glasses, it is said, many persons with partial blindness associated with diabetes, cataracts and high myopia have been able to resume many of their normal activities.

All dressed up and nowhere to go...

Nowhere?

Not quite. There's a local festival.

A fair in a neighbouring village.

An open-air film show nearly twenty miles away.

Or perhaps a wedding just down the road.

Road?

That's just the trouble.

It's only a kutcha track at the best of times.

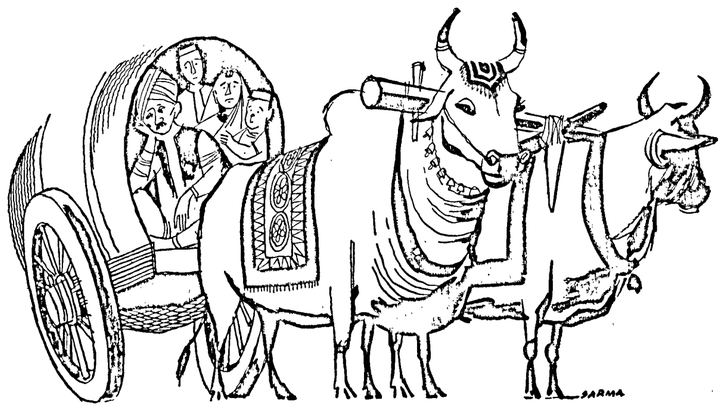
Impassable during the monsoon.

What are we doing about it?

A twenty-year plan has been drawn up to build 3,26,000 miles of new road.

Of this, 40% will be surfaced.

The object is to bring every village within 1.5 to 5 miles of a road.



Burmah-Shell Bitumen is backed by a technical service staffed by skilled engineers whose job it is to assist in the creation of roads. Good roads. Cheaper roads.

THE BULK METHOD OF DELIVERY, RECENTLY INTRODUCED BY BURMAH-SHELL, ELIMINATES DRUMS, SAVES STEEL AND LENDS ITSELF TO MECHANIZED ROAD CONSTRUCTION. REMEMBER, BULK BITUMEN IS MUCH CHEAPER IN INITIAL COST.

Road construction demands topmost priority.

That's why everything to do with roads is so important.

Bitumen, for example.

One of the better road-building materials.

Inexpensive. Easy to handle.

Long-lasting. Hard-wearing.

Supplied by Burmah-Shell.

BURMAH-SHELL BITUMEN FOR BETTER ROADS

WOMEN IN INDUSTRY

SOME SPECIAL PROBLEMS

By Dr. J. N. Mongia
UNIVERSITY OF PUNJAB

WORKING women are distinguished from all other industrial workers not by the arbitrary action of those who study their problems but by distinctive attitudes and actions of modern society, including employers, other workers, and women workers themselves. The simple fact is that women workers are generally regarded as a distinctive group in present-day society, as is evidenced by the extensive special legislation affecting their employment. This fact justifies special consideration of female workers and of the effects they exert upon the whole production process.

It has been said that the group of female workers is effectively distinguished from male workers by numerous current attitudes. The most important of them may be described as follows: (1) Western civilisation has until recently assumed that women might work but that their proper occupations were those of the home rather than the factory or the market. Even in recent years, women are frequently regarded as unusual rather than usual in the industrial structure. (2) Particularly because working women have seldom been economically independent, employers have tended to develop an attitude that depreciates the services of women workers. They are often regarded as cheap, easily controlled labour, as distinguished from more expensive and less docile male employees. (3) Many women workers regard themselves as inherently inferior and subordinate to men and thus consider their lesser positions inevitable. They know, in many cases, that they are 'extras,' that they are in industry but not of it, that their status is temporary. Their own conception of their position thus sets them apart from male workers and is probably as effective in achieving this end as is any other condition. (4) There is a rather distinct feeling of competition and opposition on the part of the male workers towards women in industry. It is unquestionably heightened in the industrial situation by the general belief on the part of male workers that women are unfair competitors, that they tend to injure working conditions in industry and to displace men. Overt manifestations of this current attitude are observable in opposition to the admission of women to membership in trade unions.

These current attitudes have left their mark upon the situation in which women workers are employed. Attitudes of the public, for instance, are reflected in legal limitations upon hours and conditions under which women are permitted to work. These characteristics of employers are shown in women's lower wages and in frequent harsh and arbitrary treatment accorded to female employees.

Role of Women

As men, women have always worked. In primitive societies, women workers performed almost as numerous and as varied tasks as did men, although some specialisation early appeared. Generally, this early division of labour was based primarily upon sex differences, and women found household tasks, cooking, the preparation of clothing, and the tending of agricultural patches delegated to them, because they were kept at home by their more intimate relationships with children. In the agricultural stage, this division of labour became more fixed, and the appearance of a class of independent male artisans encouraged its acceptance as customary and proper. Thus, early women workers were not directly competitive with males.

With the coming of factories, this situation was changed, for it was found that women workers were frequently as useful and efficient in certain types of factory production as were the more experienced male artisans of the older handicraft system. While a large proportion of women among labouring classes has continued to perform domestic duties, changes begun by the Industrial Revolution continued in the further development of women workers in manufacturing activities. The fact that women's earnings appeared necessary to the maintenance of working-class families in the early factory period, coupled with the current *laissez-faire* philosophy, forced the conclusion that there was little that anyone could do to prevent women's participation in industrial life or to improve the conditions of such participation.

As the economic status of workers improved in the nineteenth century, however, social approval for industrial employment of women waned somewhat, and it became customary to regard women in industry as socially undesirable and, on the whole, unnecessary. The idea of women's proper function as the home-maker was revived. Older, chivalrous philosophies again appeared; women were replaced upon their former industrial, social and moral pedestals; and their innocence and ignorance were once more made a matter of social idealism.

However, numerous social changes have encouraged their increasing participation since that time. Thus, the expanding use of machinery has continued the levelling process noted as one of the earliest effects of the Industrial Revolution so that women workers have become increasingly valuable in industry. As greater power has been placed at the disposal of each worker, the need for physical strength has lessened accordingly, and the numerous tasks that formerly required brawn, no longer place a premium upon this characteristic. Again, numerous tasks formerly performed in the home have been taken over by factories, laundries and other commercial establishments. Finally, women have been given, in recent years, increasing opportunities for training in successful participation in industry and business management which they have amply availed themselves and made use of.

Feminine Reactions

It must be conceded, however, that a woman's life in a factory is both hard and rough. From this, some have drawn the conclusion, though somewhat hastily, that a factory is no place for a woman, and that the employment of women should be abolished. Even if one wished to take such a step, perhaps it would be impracticable. It should be borne in mind that apart from the fact that women are specially suitable for certain types of jobs, practically two-thirds of women who work in factories do so because they have to, in order to live. In some of the highly industralised countries, the proportion of women with children to support who are single, widowed, divorced, separated or deserted by their husbands is very high. Also, in a working class household, where the husband is a labourer, or a semi-skilled worker, his wife has to work in order to supplement her husband's income and make both ends meet. It is, therefore, impossible to speak lightly about abolishing the employment of women in factories, however good one's intentions may be.

It is also most likely that women themselves will not want this to happen, for there is another factor which must be taken due note of. In recent times, a great upheaval has occurred in the role and place of women in society. There is considerable evidence of the efforts made by the women to enter more fully into the life of society and this tendency, far from diminishing, seems to be gaining in strength. The working woman has not had to fight for a place in industry. Moreover, she has gradually taken her place at the side of man in a number of fields, not excluding politics.

Various Problems

The employment of women in factories is by no means a simple phenomenon. It creates a number of problems some of which are urgently in need of solution when it is borne in mind that home life, the education of children, and the whole moral well-being of the working class depend, in the last resort, on the atmosphere created by the woman worker and the kind of home she makes. The question naturally arises as to whether factory life enables a woman to live and to fulfil herself. If not, what are the basic conditions needed to allow her to do so properly? Are progress and evolution favourable to such a development?

There are numerous questions of social policy that arise out of the employment of women. The most frequently mentioned and the first such problem to awaken popular concern involves the health of women workers and that of their children. A second considers possible effects of employment upon women's morals; and a third involves the effects of employment of women on normal family life.

It appears rather certain that some types of employment are especially unsuitable to the health of women workers. There is reason to believe that their distinctive physical characteristics make them particularly susceptible to certain industrial hazards by which men are much less affected and it is likely, also, that the dangers to subsequent offspring are much greater where women are exposed.

Aside from the fact that women workers may themselves find certain types of employment particularly hazardous, there is the further problem of possible effects of employment upon the health of future generations. Employment of mothers may affect the health of children in many ways. It may occasion a run-down physical condition that shows itself in undernourished infants and in their susceptibility to numerous complaints. It may prevent any actual mothering of children. Evidence of the existence of these hazards is conclusive. Infant mortality rates for children of working women are distinctly higher than those of other children.

A second social problem arising out of employment of women involves possible effects of employment upon morality. Early reformers who attacked objectionable features of the factory system were much impressed by the possibility that industrial employment might cause a general relaxation of moral restraints. A similar problem now arises out of the comparatively low wages of many working women.

One of the more generally recognised social problems is the effect of women's increasing employment upon family life. There are several ways in which the industrial employment of women operates to preclude normal family life. It prevents or encourages postponement of marriage. It appears certain that many women, when they have the opportunity, prefer to secure and retain commercial and industrial positions and the independence thus assured rather than to become dependent upon the earning power of a husband. And, the evidence of the social disorganisation this choice occasions is not difficult to discover. It appears in excessive labour turnover and in general restlessness and instability wherever large numbers of unmarried workers are congregated.

Where women who are employed marry and continue employment, the social consequences may be at least as serious. Industrial workers whose wives are also employed may find no more opportunity for a satisfactory home life than their unmarried fellows. The comparative economic independence of women leads to a less serious evaluation of marital bonds and probably makes divorce more frequent.

Unhappy Homes

Thus, it will seem that making a success of her private and family life is a formidable problem for a working woman. Unfortunately, the kind of high pressure existence she is often forced to lead in the modern world is hardly conducive to the relaxed outlook needed to create a quiet and tranquil home. The factory worker lives on her nerves and sometimes they give way; even when they do not, the result is a tenseness that has a disastrous effect on her husband and children, who look to her for love and affection. This explains why there are so many unhappy homes which in course of time split up completely. When this happens, the woman finds herself alone, facing a bleak future in which she has nothing to give and nothing to receive.

There are numerous economic effects of women's entry into and increasing participation in industry, several of which may be regarded as representing serious social problems.

There is, for instance, the widespread belief that increasing numbers of women workers have forced equal numbers of men out of employment. Growing numbers of working women have increased the total gainfully employed and the proportion of the population that is so occupied. They have contributed to a growing physical volume of production and have caused an increase in the *per capita* productivity of our population. On the other hand, it is evident that, in numerous specific situations, women have taken the places of men, and the latter have been forced to seek employment elsewhere.

At the same time, the more general participation of women has aided in raising living standards by reducing the number of dependents per wage earner or, looked at from another angle, by increasing the number of income receivers per family.

The effect of the more general employment of women that is of most concern to many workers is its tendency, in certain markets, to reduce wage rates. This effect results largely from the fact that the supply of feminine labour is much more elastic than that of male workers. The tendency of women workers to appear in increased numbers at critical economic periods has been frequently noted and is one of the most important aspects of the elasticity of supply that characterises this type of labour. Many women seek employment outside the home only when the earning power of someone—husband, father or brother—upon which they depend is reduced or removed. It is natural, of course, that this condition should frequently appear during times of depression when many other wage earners are similarly affected. In such cases, working women tend to reduce wage rates and to expand employment. In so doing, they may displace males and reduce the marginal productivity and wage rates of labour generally in the markets they invade, but they do, on the other hand, tend to increase employment and encourage business revival, because they offer an opportunity for profitable operations.

It must be recognised, however, that society as a whole gains materially from the work of women in industry and business, just as it gains from any other increase in total productivity. More production permits greater consumption and is reflected in higher material living standards. Hence, efforts to force women workers out of employment on the grounds that there is not work enough for all, that they are taking employment from heads of families, deserve careful critical scrutiny. Generally, their original impetus comes from some groups whose selfish interests stand to gain, rather than from any socially minded source.

Economic Position

The fact that women have entered industry primarily in response to an increased demand for labour should not, however, lead one to the erroneous conclusion that their wages have approximated those of adult males or that their bargaining position has been strong. Indeed, practically all studies show that women's wages are between one-third and one-half lower than those of male workers. The differences in remuneration as between the sexes are, of course, a reflection of the characteristics of women as an economic group. Thus, to the question as to why women's wages, generally speaking, are lower than those of men, the answer is not simple but complex. Among the major ones, the following may be noted.

It is a matter of common knowledge that the average working life of women is shorter than that of male workers, that a large number of them are young and inexperienced persons, and that the consciousness of the impermanence of the individual in industry—despite the permanence and increasing importance of the group—affects profoundly their attitudes and their economic status. Such workers are weak bargainers and frequently their value from the productivity point of view is less than that of male workers.

Employees generally have contended that the output of women, when doing the same work as men, is appreciably less, and there is evidence to support their contention. In part, the low wages of women are to be regarded as a consequence of the fact that they are compelled to enter occupations having a low value output, owing to the more limited range of occupations open to appreciable numbers of them. They are also partly due to the relatively lower output of women, as compared with men, in the same occupations. Also, the women workers are more difficult to organise than men, their tasks require less skill and industrial training and competitions for job is consequently keen among them, with the result that they do not expect wages comparable to those of male employees.

Another fact explaining the low wages of women workers is their relative immobility. Living with the family in many cases, they tend to accept work in the home community rather than to go where better-paying jobs are available.

Moreover, the extreme elasticity of the supply of female labour, in comparison with that of masculine labour, is a factor keeping the wages of women from rising. Often only a slight monetary inducement is necessary to get women to abandon non-industrial home-work and sell their services in factories, etc. Special circumstances, such as the loss of employment by the family's chief breadwinner, may cause women workers to enter industry for whatever they can get.

The general indifference of women workers toward organisation is a matter of common knowledge. Several factors account for the lethargy of women in organising for economic protection and improvement. Not expecting to remain wage earners permanently, they do not take the long-run viewpoint of their position necessary before immediate individual interests can be subordinated to the interests of the group. "The linking of the woman to her home has undoubtedly secured the perpetuation of the family, but it has at the same time created a state of introversion, an interest in her immediate surroundings and herself, which forms a real obstacle to any attempts at trade-union organisation when the woman enters the individual field."*

Finally, in an enumeration of the factors determining the economic status of women workers, mention should be made again of the fact that a great many, living with their families, do not have needs as great as the majority of adult males. Some of those who live at home, have less needs and are willing to work for relatively lower wages. However, in the majority of cases, it is safe to say, their participation in industrial life is due to the insecure economic position of the family. All members have to be supported somehow, and when the father's earnings are insufficient, the family must sell all of its available labour at the market rate. It is in this fact, more than in anything else, that the explanation of the willingness of home-dwelling women to accept very low wages is to be found.

The Future

The woman factory worker of today, who has no vocational training and is, therefore, greatly handicapped as compared with the male semi-skilled worker, is bound to view the future with misgivings. That women have rendered noteworthy service to the industry which was the first one to call women workers is indisputable. But techniques have changed and increasingly advanced machinery, soon to be followed by automation, is replacing and will continue to replace the jobs performed by women factory workers. This has made the future of women industrial workers doubtful. Will efforts be made to make the necessary adjustments?

While the twentieth century has witnessed an improvement in the status of women, it also threatens to reduce millions of women workers to hunger, unemployment and despair. Will the factory women workers, who pioneered the employment of women and are now, in a sense, responsible for the rise in their status throughout the world, be thrown on the scrap-heap in the world of tomorrow?

The employment of women in industry, on which opinions vary according to background, circumstances and viewpoint, confronts the mind and conscience of humanity with a number of serious problems. As a sociological fact, it is, perhaps, one of the most important human issues of the present time. It is not, of course, new, but its results have only unfolded by gradual stages and we now find ourselves confronted with a threefold economic, social and moral problem. Industrial progress and, above all, the future of humanity demand that we should squarely face the far-reaching issue of the status, future and destiny of women, particularly of the women in industry, in the world of tomorrow.—*All Rights Reserved.*

*Theresa Wolfson, *The Woman Worker and the Trade Unions*, page 26.

(*Concluded from next column*)

due as much to careful control as to better rates. Similarly, in the United States, though, as I have said, there have been rate increases there too, the partial recovery shown in 1958, which I believe will continue, reflects to a great extent the strenuous supervision which has been given to all aspects of our operations. We have, for instance, managed in this branch, without, I am sure, impairing the very high standard of service which we provide, to reduce the ratio of our expenses to our premium income steadily but appreciably during recent years. At the same time, our chief concern there, as in Canada, is by the most careful underwriting to maintain, and indeed to improve, the quality of the business on our books. Lastly, we have in both countries set ourselves conservative standards for reserving for our outstanding claims, and have followed an investment policy that has been a constant source of strength."

THE EMPLOYERS' LIABILITY ASSURANCE CORP. LTD.

CHAIRMAN'S STATEMENT

IN the course of his annual statement circulated to the shareholders, Viscount Knollys, Chairman of the Employers' Liability Assurance Corporation Ltd., observes that the Directors are confident that the U.S. and Canada present a vast area of great potentialities and that British insurance can continue to find ample scope for building up business of good quality and showing, in the long run, a reasonable degree of profit.

The following are extracts from Viscount Knollys' statement:

"The total premiums written by the four companies that comprise our group were £41,956,236. This is £3,523,863, or 9.2 per cent., more than they wrote in 1957. All classes of business have gone ahead, but rate increases on motor business in the United States made up a good part of the extra volume written in 1958, and so did the progress of our policy of expanding our fire portfolio there and in other parts of the world. Our trading result for the year, after an underwriting loss of £444,548, was a profit, after taxation, of £381,682, and your Directors recommend the payment of a final dividend of 3s. per share, making, with the interim dividend of 2s. 6d. per share, a total of 5s. 6d. per share for the year, which is the same as last year. We have accordingly provided for the total net cost of this dividend, which comes to £327,500. This leaves the amount of our carry forward at £1,290,377, which is somewhat larger than the amount at which it stood at the end of 1957. The total of our share capital and published reserves now stands at £8,375,994.

"The amount provided for taxation in the profit and loss account is abnormally high in proportion to the profit on which it is charged. This is mainly because the addition to our unexpired risk reserve for 1958 was unusually large, and when this is so, the formula which we have to use in computing our liability to tax operates against us.

"You may remember that, last year, I said that I could offer no great hopes of any rapid improvement in conditions in the insurance market of North America. I am glad to be able to tell you that in Canada the loss we suffered in 1957 was replaced by a good profit for 1958. In the United States, however, my fears were realised and we could not make enough improvement to finish without an underwriting loss, though it was not so severe as that in the previous year.

"We write a great deal of our business in these two countries, and, as I have told you in previous years, your Board is confident that they still present a vast area of great potentialities. Here, British insurance can continue to find ample scope in which to make steady, but satisfactory, progress in building up business of good enough quality to show, in the long run, a reasonable degree of profit. From time to time, both countries have gone through bad phases so far as insurance is concerned, and without any doubt the last two years have been exceedingly difficult for us and others who do business in North America.

"There are two basic ingredients for insurance business to be successful. The first is that rates of premium must be economic and must keep pace with claims experience. The second is that managements must be realistic and progressive. Rates in the United States have generally been increased during the last two years, though some are still well below a satisfactory level, and in many cases the rise has been too little and has come too late. In the State of New York, for instance, increases in rates for third party motor business, which has been compulsory since 1957, have at last been granted, but the amount of them is well below what the companies asked for. They have been made effective from 1st April 1959, and this means that very little of the benefit of them will be felt this year. Moreover, they have come at the end of a period of some eighteen months, in which rates, which were already inadequate, remained so, because the litigation over increases requested for 1958 has been so long protracted that, in fact, no increase was ever granted for that year.

"Turning now to our management in these two branches, I can assure you that steps have been, and are being, taken to cope with the grave difficulties with which we have been faced. The improvement which I have mentioned in our Canada Branch has been

(*Continued in previous column*)

WORLD SOCIAL STATISTICS

POPULATION—CONSUMPTION—HOUSING—RADIOS

WORLD population has increased at an annual rate of 1.6 per cent. since 1950; deaths of infants under one year per thousand births have drastically fallen in the last decade. The proportion of private consumption expenditure devoted to rent has been greatly reduced in many countries since 1938. In the less-developed countries, the commonest type of dwelling consists of one to two rooms, while, in six countries—Australia, Canada, Netherlands, New Zealand, United Kingdom and the United States—dwelling of over five rooms comprise half or more of all dwellings. In the majority of countries, the number of medical doctors has increased. It is estimated that there were 64 million television sets in use in the world at the end of 1957 of which 50 million of these were in North America. These are among the facts and figures revealed in statistics in social and cultural fields contained in the 1958 issue of the *U.N. Statistical Yearbook* published a few weeks ago.

This tenth issue of the *U.N. Statistical Yearbook** was prepared by the Statistical Office of the United Nations with the active co-operation of the statistical authorities of some 150 countries and territories and with the assistance of the United Nations specialised agencies and other inter-governmental bodies. The 187 tables of this bilingual (English and French) volume also include international statistics on economic and financial subjects, generally covering the immediate pre-war period, 1938; and some seven most recent years.

World Population

The population of the world was estimated to have been about 2,795 million in mid-1957, as compared with 2,493 million in 1950, an annual rate of increase of 1.6 per cent. World population is estimated to have been 2,246 million in 1940, 2,013 million in 1930 and 1,810 million in 1920.

Asia (excluding U.S.S.R.), with an annual rate of increase close to the world rate, is the continent with the largest population, accounting for almost 56 per cent. of the world total in mid-1957. Europe (excluding U.S.S.R.), with the lowest annual rate of increase (0.7 per cent.), is the most densely populated continent, while Oceania, with the highest rate of increase (2.2 per cent.), is the least densely populated. The population between 1953 and 1957 declined in a very few areas, notably East Germany, at an annual average rate of 0.9 per cent., East Berlin 1.3 per cent. and Ireland 0.5 per cent.

The continental distribution of the estimated mid-1957 population and the corresponding population density and annual rate of increase were as follows:

	Population (in millions)	*Density per sq. km.*†	*Annual rate of increase* 1950-57 %
World ...	2,795	21	1.6
Africa ...	225	7	1.8
America (North and South) ...	381	9	2.1
Asia‡ ...	1,556	57	1.8
Europe‡ ...	414	84	0.7
Oceania ...	15.4	2	2.2

† 1 square kilometre=0.386 square miles.
‡ Excluding U.S.S.R.

Infant Mortality Rates

The table on infant mortality rates (i.e., number of deaths of infants under one year per 1,000 live births) is limited to some 90 countries and territories for which complete or virtually complete registration data exist. During the last decade (1957 compared to 1948), these rates, which largely reflect levels of health and living conditions, have shown a sizable reduction in all areas of the world.

Among the countries with the highest rates in 1948, the infant mortality rate in 1957 declined from 186.2 to 75.1 in Mauritius; from 147.0 to 117.2 in Chile; from 142.7 to 82.1 in Rumania; from 117.4 to 100.5 in Guatemala; from 111.1 to 76.9 in Poland and from 100.4 to 87.0 in El Salvador.

For several countries, there was an increase in rates in 1957 over the previous year when the low rate of the decade had been reported (rates for 1956 in parenthesis): Mauritius 75.1 (66.0); British Honduras 92.4 (69.0); El Salvador 87.0 (70.3); Chile 117.2 (112.3); Czechoslovakia 33.4 (31.4); Finland 27.9 (25.4); Hungary 63.1 (58.8); Italy 49.8 (48.8); Luxembourg 38.6 (36.8); Poland 76.9 (70.7); Spain 53.7 (51.7); Yugoslavia 101.7 (98.3).

Among the new record low rates in 1957 (rates for 1948 in parenthesis) were the Netherlands 17.2 (29.3); Sweden 17.4 (23.2); Australia 21.4 (27.8); Switzerland 22.9 (35.9); the United Kingdom 23.9 (36.0) and New Zealand 24.3 (27.5).

Private Consumption Expenditure

To the table on *Private Consumption Expenditure* a column has been added in the 1958 *Yearbook* giving the value of private consumption expenditure in per cent. of gross national product at market prices. In the latest year shown (generally 1957 or 1956), the per cent. of G.N.P. ranged from 58 per cent. to 60 per cent. in Japan, Luxembourg, Netherlands, Finland and Sweden and was highest at 86 per cent. in Ghana, South Korea and Puerto Rico. Yugoslavia, whose value refers only to expenditure on material goods and productive services and is not strictly comparable to other countries shown, had a per cent. of gross material product of 54.

Expenditure for food constitutes the largest item of consumers' private expenditure in all the 30 countries listed. In the less advanced countries included in the table it accounted for roughly half of the total expenditure in the latest year shown (generally 1957 or 1956)—57 per cent. in Ghana and in the Republic of Korea, 50 per cent. in Honduras and in Ceylon, 49 per cent. in Ecuador, and the combined expenditure on food and the item "tobacco and beverages" represented 71 per cent. of total private consumption in Nigeria (1950). India is not covered in this table.

Among European countries, expenditure on food ranged from 29 to 34 per cent. in Sweden, Norway, the United Kingdom, Belgium, the Netherlands and Luxembourg; it was somewhat higher (35 to 36 per cent.) in Austria, France and Ireland, and reached 40 per cent. in Finland and 46 per cent. in Italy. In Denmark, the combined expenditure on food, tobacco and beverages was only 27 per cent. of total consumers' private expenditure.

Expenditure on food averaged around a quarter of total private consumption expenditure in the three largely self-sufficient food-producing countries listed: 23 per cent. in Canada, 25 per cent. in Australia, 24 per cent. in the United States.

Due to rent control, the proportion of private consumption expenditure devoted to rent has been drastically reduced in many countries since pre-war (1938); for example, it has fallen by about three-quarters in Italy, by one half in Ireland and Norway, and by a quarter in Sweden and the United Kingdom. In the latest year shown, it ranged from only 3 to 6 per cent. of total private consumption expenditure in France, Austria and Denmark. The decline since pre-war years was much less marked in Canada and the United States where, as compared with 1938, the proportion devoted to rent fell only from 16 to 15 per cent. in Canada and from 14 to 13 per cent. in the United States.

In most countries in the table, clothing is the item accounting for the major expenditure after food; it exceeded rent in all countries listed except Belgium, Canada, the Dominican Republic, Panama, Peru, Puerto Rico and the United States, and tobacco and beverages in all except Ireland, Panama and the United Kingdom. Expenditure on tobacco and beverages is shown as exceeding or equalling expenditure on rent in all countries for which data are shown except Belgium, Canada, Chile, Ecuador, Israel, South Korea, Panama, Peru and the United States.

International Levels of Food Supplies

The *Yearbook* provides data, at the retail level, on *per capita* supplies of foodstuffs, protein and calories in some 40 countries. The latest data given (generally for the split year 1956-57 or 1957-58) show that over 3,000 calories *per capita* were available daily in the following countries (arranged in alphabetical order: Australia, Canada, Denmark, Finland, Iceland, Ireland, New Zealand, Norway, Switzerland, United Kingdom and the United States.

Other countries having between 3,000 and 2,880 calories available daily *per capita* were: West Germany, Uruguay, Argentina, Sweden, Belgium, Luxembourg, Austria, France, Netherlands and Israel.

At the other end of the scale, there were less than 2,000 calories available daily *per capita* in India and the Philippines and less than 2,300 in Ceylon, Honduras, Japan and Pakistan, although the situation improved slightly over the previous period shown for most of these countries.

In Europe, annual *per capita* meat supplies have steadily recovered to equal or surpass the pre-war average in all countries given except Denmark, Greece and Norway. However, Denmark, the largest pre-war consumer of meat, fell short of the pre-war average by only 3 per cent.

The latest data available show milk supplies (measured in fat and protein 1956-57) were below the pre-war level in all 16 European countries listed, except Portugal, and of potatoes in all except Denmark, Greece, Iceland (1950-51), Italy, Portugal and the United Kingdom.

Annual *per capita* supplies of meat were over 100 kilos in Argentina, Uruguay, Australia and New Zealand while they amounted to 2 kilos in India, 3 kilos in Ceylon and 4 kilos in Japan and Pakistan. Among the low-meat-consuming countries, *per capita* supplies of cereals (flour and milled rice equivalents) were high, attaining 185-200 kilos in Egypt, Turkey and Yugoslavia, around 150 kilos (double the corresponding figures for Canada and the United States) in Greece, Japan and Pakistan, and 125-130 kilos in Ceylon, India, the Philippines and Portugal.

There were less than 60 grams of protein *per capita* per day available for five countries for which current figures are available; Ceylon, Pakistan, Philippines, Honduras and India. On the other hand, there were available over 100 grams *per capita* per day for France, Iceland and New Zealand.

Housing Conditions

The *Statistical Yearbook* provides data on the number, size and equipment of existing dwellings, in urban and rural areas, in some 60 countries and territories and on the density of population in almost 40 countries. Data for the following countries and territories have been added to this issue of the *Yearbook*: Canal Zone, Cuba, Dominican Republic, Ecuador, El Salvador, Greenland, Guam, Luxembourg, New Guinea, Nauru, Papua, Portuguese India. No data pertaining to India and Pakistan are, however, given.

From the latest post-war census data given, the commonest type of dwelling in the less developed countries is composed of one to two rooms (including kitchen). In British Guiana 90 per cent. of the dwellings were composed of one to two rooms, 86 per cent. in Paraguay, 85 per cent. in El Salvador (urban areas), 83 per cent. in Ecuador, 82 per cent. in Greenland (private dwellings) and Panama, 76 per cent. in Ceylon, 75 per cent. in Haiti (Port-au-Prince), 74 per cent. in Mauritius, 72 per cent. in Nicaragua, 69 per cent. in Guatemala (urban areas), 63 per cent. in Argentina, 56 per cent. in Egypt, 53 per cent. in the Dominican Republic, 51 per cent. in Chile and Portuguese India.

In Europe 57 per cent. of the dwellings in Finland had one to two rooms, 68 per cent. in Greece and, not counting the kitchen as a room, 80 per cent. in Yugoslavia (urban areas). On the other hand, dwellings of over five rooms constituted half or more of all dwellings in Australia, Canada, the Netherlands, New Zealand, the United Kingdom and the United States.

Overcrowding is measured by density of occupation (number of persons per room), and it is stated that dwellings are generally considered to be overcrowded when there are more than 1.5 person (United States) or 2 persons (Europe) per room. The census data show that there were two persons or more in over 93 per cent. of the dwellings in Paraguay, in 78 per cent. of the dwellings in British Guiana, in 75 per cent. (urban areas) and over 89 per cent. (rural areas) of the dwellings in Greenland.

At the other end of the scale, the proportion of dwellings with 1.5 or less persons per room ranged from 89 to 96 per cent. in the following countries: Australia, Canada, Denmark, the Netherlands, New Zealand, Norway, Switzerland, the United Kingdom and the United States.

Book Production

The table on book production shows the number of titles of books, pamphlets and other non-periodicals, including re-editions, published in over 60 countries and broken down into the ten subject groups of the Universal Decimal Classification. In 1957, Japan published 25,299 titles, the United Kingdom 20,719 titles, India 19,832 titles, the German Federal Republic 15,710 titles, and France 11,917 titles. The figures given for the United States (13,142 titles in 1957) relate only to books published by the book trade, thereby omitting large segments of book production such as official, university and church publications, etc. In 1956, the U.S.S.R. published 59,530 titles, of which 31,616 were placed on the market and the rest distributed free.

The breakdown by subject matter shows that, in 1957, the greatest number of works on *philosophy* were published in Japan, on *religion* in India and on *pure science* in the United Kingdom. There were no 1957 figures for U.S.S.R. but, in 1956, it published the greatest number of books on both *pure* and *applied sciences*.

Another useful set of data provided by the *Yearbook* relates to the production of newsprint, the total and *per capita* consumption of newsprint in some 80 countries and the number and circulation of newspapers in more than 130 countries.

Over the last decade, the world production of newsprint has increased from 7,530 thousand metric tons (1 metric ton=0.9842 long ton=1.1028 short tons) in 1948 to 12,150 thousand metric tons in 1957 or an increase of 61 per cent.

In Canada, the chief producer of newsprint, the output rose from 4,520 thousand metric tons in 1948 to 5,803 thousand metric tons in 1957, an increase of 28 per cent. The United States, the second largest producer of newsprint, had an output of 794 thousand metric tons in 1948 and 1,630 thousand metric tons in 1957, an increase of 105 per cent. Production in Japan rose by 450 per cent., in the United Kingdom by 119 per cent. and in Finland by 97 per cent. between 1948 and 1957.

In 1957, the United States accounted for 50 per cent. of all newsprint consumed in the world and the United Kingdom, the second largest consumer, 8 per cent. However, consumption in the United States in 1957 was 3 per cent. less than in 1956 and consumption in the United Kingdom was 6 per cent. greater for the same period. The *per capita* consumption of newsprint in 1957 was highest in the United States with 36 kilos (1 kilo=2.2046 lbs.), followed by New Zealand (28 kilos), Australia (27 kilos), Canada (25 kilos), Sweden (25 kilos) and the United Kingdom (20 kilos). The *per capita* consumption for the first four countries was less in 1957 than 1956, and, for the last two countries, somewhat higher (5 per cent.-6 per cent.). Total consumption of newsprint in India went up from 52,000 metric tons, being the average for 1947-50, to 83,400 metric tons in 1956, but was lower at 78,700 tons in 1957. The *per capita* consumption, however, remained practically unchanged at 0.2 kilo.

Radio and Television

Tables in the *Statistical Yearbook* show the number of radio broadcasting stations in more than 100 countries or territories and of television broadcasting stations in 30 countries, as well as the number of radio (wireless) and television sets in use (or licensed) in some 165 and 50 countries respectively.

According to the estimated totals, about 335 million radio sets, including loudspeakers attached to radio redistribution systems, were in use in 1957. Of these, 168 million were in North America (150 million in the United States alone), with more than a third—120 million—in Europe (including U.S.S.R.). The U.S.S.R. reported 29.6 million sets in 1956, of which 22.2 million were radio redistribution (wired) loudspeakers. It is estimated that, in 1957, for every 1,000 inhabitants there were 672 radios in North America, 229 in Oceania, 194 in Europe (including U.S.S.R.), 98 in South America, 17 in Asia (excluding U.S.S.R.), 16 in Africa, and 120 in the world as a whole. The corresponding figure for India alone is 64 radios.

The *Yearbook* estimates that there were 64 million television sets in use at the end of 1957, with 50 million in North America, 12.3 million in Europe (including U.S.S.R.), 700,000 each in Asia (excluding U.S.S.R.) and South America, and a few thousand in Africa and Oceania. The number of television sets per 1,000 inhabitants was put at 198 in North America, 20 in Europe (including U.S.S.R.), and five in South America. Between the end of 1951 and 1957, the number of television sets in the United States rose from 15.8 million to 47 million and in the United Kingdom (licences issued) from 1.16 million to 7.76 million. These two countries accounted for 86 per cent. of the world's televisions set at the end of 1957. The countries with the next largest number of television receivers were: Canada 2,730,000; U.S.S.R. 1,324,000; West Germany 1,220,000; France 683,000; Italy 674,000; Japan 650,000; Brazil 350,000; Cuba 300,000; and Mexico 300,000.

*The *Statistical Yearbook* 1958, 612 pages, is available clothbound at $8 and paperbound at $6.50 or the equivalent in other currencies at sales agents for U.N. publications throughout the world.

GWALIOR RAYON EARNS BUMPER PROFIT

MARKED IMPROVEMENT IN FINANCIAL POSITION

THE recent spurt in the value of ordinary shares of the Gwalior Rayon Silk Manufacturing (Weaving) Company, Ltd. (Managing Agents: Birla Gwalior Private Ltd., Gwalior), from Rs. 16.04 early in April to a peak of Rs. 19.04 two weeks back—its present market price is, however, lower at Rs. 18.56—was inspired by the news that the Directors of the Company had recommended the payment of all arrears of preference dividend up to the end of March 1959 and the distribution of a final dividend of 50 nP per share on the ordinary capital, making a total maiden dividend of Re. 1 per share or 10 per cent. for the year. The payment of preference dividends up to the end of 1958-59 and the ordinary dividend for the year ended 31st March 1959 requires no less than Rs. 88.89 lakhs. The distribution of such a large sum has been rendered possible by the bumper profit earned in 1958-59 and the encouraging performance during the current year so far.

The Company has earned a gross profit of Rs. 251.55 lakhs, as compared with Rs. 68.02 lakhs in 1957-58, thus reversing the downward trend noted in the previous two years when the profit declined successively from Rs. 101.26 lakhs for 1955-56. A sum of Rs. 11.95 lakhs has been provided for Managing Agents' commission. This includes a sum of Rs. 1.06 lakh relating to the previous year. The aforesaid provision for managing agency commission has been arrived at on the basis of 5 per cent. of the net profit. The Company had applied for an increase in the managing agency commission to 10 per cent. with effect from 1st March 1958. The Government of India has, however, agreed to allow a commission of only 5 per cent. (subject to a minimum of Rs. 50,000) on completion of certain formalities. Pending finalisation of the question with the Government, the Company has made a provision at the rate of 5 per cent. only.

The Directors have made a large provision of Rs. 204.44 lakhs for depreciation, and of Rs. 14.75 lakhs for taxation, pending the decision on the legal proceedings taken by the Company in respect of its right about depreciation and taxation. Last year, it may be noted, only a sum of Rs. 32.50 lakhs had been set aside for depreciation, representing the normal and extra shift allowance for that year. After making the above allocations, the net profit for the year under review shows a decline from Rs. 34.81 lakhs to Rs. 20.41 lakhs. After adding to it the sum of Rs. 100.49 lakhs brought in from the previous year, the Directors have transferred Rs. 59.60 lakhs to the development rebate reserve, as against Rs. 3.75 lakhs last year.

In view of the improved results of the Company for the year under review, the Directors paid in August last an interim dividend of 50 nP per share on ordinary shares. This was done without clearing even a part of the arrears of preference dividend. Such a step was, no doubt, an unorthodox one, but, as the preference shareholders had given their consent to keep in abeyance their right to dividend, it was not illegal. In any case, the Directors have now decided to clear off all arrears of preference dividend. The profit available for distribution, however, permits payment of such arrears up to the calendar year 1954 only in addition to the final dividend of 50 nP per share on the ordinary shares. They have, therefore, declared dividend on the preference shares for the remaining period (up to the end of March 1959) out of the profit for the current year (1959-60). This also appears to be an unusual practice. But the Directors must have had good reason for resorting to it. They must have been confident that the current level of earnings are such as to permit the payment of preference arrears as well as the dividends for 1959-60, in addition to earmarking a sizable amount to reserves.

The encouraging results of the Company for 1957-58 are due to the curb on imports of foreign staple fibre and the substantial improvement in the demand for indigenous fibre during 1958. This enabled the Company to utilise the capacity rendered idle by the large imports of fibre during 1956 and 1957. It may be noted here that, in 1957-58, the average production of staple fibre was only 23.3 tons per day, as against its capacity of 1,700 tons per month or 56.6 tons per day. On this basis and on what the Directors say in their latest report, the production in 1958-59 must have been double that in the previous year. There are reports in the market that, in the current year, the Company has been producing a little over 60 tons of staple fibre per day.

The higher production and better marketing conditions are reflected in (a) the rise in sale proceeds (gross) from Rs. 3.71 crores to Rs. 8.37 crores, (b) the consumption of raw materials from Rs. 2.35 crores to Rs. 3.71 crores, and (c) the fall in stocks of finished goods and goods in process by nearly half, from Rs. 89.74 lakhs to Rs. 41.40 lakhs.

The experiments on the Company's pilot plant for the manufacture of rayon grade woodpulp are said to have proved successful and a team of technicians will shortly be proceeding abroad for taking necessary steps to install a wood-pulp plant with a production capacity of 100 tons per day.

During the year under review, the Company received consent for the issue of 50,000 new preference shares of Rs. 100 each carrying 6 per cent. tax-free dividend. Up to the end of the year under review, only 763 new preference shares had been issued. The Company's application for converting the dividend on the old preference shares from 6 per cent. taxable to 6 per cent. tax-free has been granted with effect from 29th September 1958. All preference shares are cumulative and redeemable.

The paid-up capital as on 31st March 1959 stands at Rs. 400.76 lakhs (Rs. 150.76 lakhs in preference and Rs. 250 lakhs in ordinary shares) and this is supplemented by reserves and surplus aggregating Rs. 75.98 lakhs. The additional capital expenditure incurred during the year under review comes to Rs. 49.24 lakhs, bringing the total gross value of the fixed assets at the end of the year to Rs. 620.30 lakhs. As against this, the aggregate provision for depreciation is Rs. 368.54 lakhs, of which the contribution from the profit for the year under review alone is, as already said, Rs. 204.44 lakhs. Consequently, the net block is no more than Rs. 251.76 lakhs. The current liabilities and provisions aggregating Rs. 145.22 lakhs are covered by a very large margin by current assets of the value of Rs. 370.20 lakhs, of which cash balances alone account for Rs. 111.49 lakhs.

To sum up, the excellent results for 1958-59 have greatly helped to tone up the Company's financial position. The fixed assets have been well written down. The reserves and surplus are equal to about 30 per cent. of equity capital. All preference dividend arrears have been wiped out and the borrowings from banks amounting to Rs. 108 lakhs have been liquidated.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 18.56 *cum-div.* (final: 50 nP per share). On an *ex-div.* basis and at the current rate of dividend the yield on the shares works out to 5.5 per cent. per annum, free of income-tax.

VICTORIA MILLS LTD.

DIVIDEND WELL MAINTAINED

FOR the fourth year in succession the distribution on the ordinary shares of the Victoria Mills Ltd. (Managing Agents: Mangaldas Mehta & Co. Private Ltd., Bombay) is being maintained at 20 per cent., made up of a dividend of 15 per cent. and a cash bonus of 5 per cent.; the latest year for which this distribution is to be made is the one ended 31st December 1958. It is further gratifying to find that, while dividend for 1957 had to be paid out of the dividend equalisation reserve, that for the year under review has been earned out of the profit for the year, thanks to a notable improvement in earnings.

The gross profit for 1958 shows a rise of Rs. 3.68 lakhs to Rs. 14.17 lakhs, in refreshing contrast to the setback suffered in 1957. Notwithstanding this increase, it falls short of the profit for 1956 by Rs. 6.91 lakhs and, barring the 1957 figure, it is the lowest since 1949. Though the improvement in profit is thus small, it is in refreshing contrast to the experience of many other leading units and should be considered satisfactory in the face of adverse trading conditions which prevailed during the year. No doubt, the heavy burden of excise duty was reduced twice during the year, thus giving relief to medium and coarse medium varieties. It, however, took some time for the effect of this relief to be reflected in the improvement in cloth trade. Further, the relief in excise duty was offset, to some extent, by the higher wage bill (particularly owing to the steep rise in rates of dearness allowance), interest charges and cost of colours and chemicals.

The provision for depreciation has been reduced from Rs. 7.29 lakhs to Rs. 5.03 lakhs, while that for tax liability has been raised from Rs. 45,000 to Rs. 3.60 lakhs, leaving a net profit of Rs. 4.64 lakhs, which represents an increase of Rs. 2.40 lakhs, or more than 100 per cent. over that for 1957. While the transfer to the development and rehabilitation reserve has been pruned from Rs. 1.74 lakh to Rs. 0.43 lakh, a sum of Rs. 1.28 lakh has been utilised to create the statutory development rebate reserve.

The salient features of the Company's profit and loss accounts for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	2,10.07	2,02.02	2,03.84	2,05.12
Closing stocks	33.04	31.96	33.35	9.83
Cotton consumed	84.66	80 03	88.65	81.56
Expenses	1,16.67	1,04.45	1,04.18	97.73
Gross profit	14.17	10.40	21.08	10.13
Managing Agents' commission.	0.91	0.50	1.75	6.08
Provision for—				
Depreciation	5.03	7.29	7.07	8.50
Taxation	3.60	0 45	2.50	3.00
Net profit	4.64	2.24	9.76	1.55
To reserves	1.71	1.74	3.25	..
„ provision for "set on" bonus	..	..	3.00	..
Transfer from reserve	..	3.52	..	..
Dividends—				
4 per cent. preference ..	0.32	0.32	0.32	0.32
Ordinary	3.20 (20%)*	3.20 (20%)*	3.20 (20%)*	3.20 (20%)*
Carry forward	0.28	0.67	0.49	0.57

* Includes a cash bonus of 5 per cent.

The increase of Rs. 8.05 lakhs in sale proceeds is accompanied by a saving of Rs. 5.27 lakhs in the cost of cotton consumed. The bulk of this benefit has been offset by the rise of Rs. 12.22 lakhs in expenses, of which cost of stores, colours, chemicals and spares accounts for Rs. 7 lakhs and wages, dearness allowance and gratuity for Rs. 5.05 lakhs.

The Company's financial position is encouraging. Its reserves and surplus at Rs. 62.08 lakhs are more than two and a half times the paid-up capital amounting to Rs. 24 lakhs. The capital is made up of 16,000 ordinary shares of Rs. 100 each and 32,000 cumulative redeemable 4 per cent. tax-free preference shares of Rs. 25 each. There has been an addition of Rs. 8.80 lakhs to the gross block during the year; this is on top of Rs. 7.99 lakhs spent in 1957. This brings the value of the gross block up to the end of the year under review to Rs. 97.18 lakhs, on which the depreciation provided so far amounts to Rs. 59.32 lakhs. The net value of the block account is thus no more than Rs. 37.86 lakhs. The current assets aggregate Rs. 105.32 lakhs, which far exceed the current liabilities and provisions totalling Rs. 57.10 lakhs (including Rs. 27.39 lakhs representing unsecured loans).

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 287.50 *cum-div.* On an *ex-div.* basis, they provide a yield of 7.5 per cent. per annum, free of income-tax.

ASHOK LEYLAND'S PROFIT RISES SHARPLY

FURTHER CAPITAL TO BE RAISED

ADDRESSING the shareholders of Ashok Leyland Ltd. (Managing Director: Mr. A. E. L. Collins, Ennore, Madras) at their annual general meeting a year ago—on 26th May 1958, to be precise—Dr. A. Ramaswamy Mudaliar, Chairman of the Company, had stated that sales of "Comet" chassis produced by the Company had increased steadily and that there was every indication that this trend would continue. He went on to add that the shareholders could look forward to 1958 as being an outstanding year in the Company's history both in regard to sales and progress of manufacturing programme. That this confidence was not misplaced is borne out by the Directors' report and accounts of the Company for the year ended 31st December 1958. Thus, the Directors observe that "the implementation of the manufacturing programme continued to be maintained satisfactorily and, as at the end of 1958, components representing approximately 45 per cent. (net deletion) of the c.i.f. value of a complete chassis were being manufactured at the Ennore factory." The percentage value of the chassis made in India, however, is short of the figure (55 per cent.) indicated by the Chairman.

The sale proceeds (gross) have gone up by over Rs. 70 lakhs to a peak of Rs. 5.01 crores, and, in the course of the last three years, these have advanced by Rs. 3.50 crores. The gross profit, too, has recorded an impressive rise of Rs. 15.22 lakhs in 1958 (or 60 per cent.) to Rs. 40.66 lakhs. That the Company's programme of phased manufacturing has yielded good results is evident from the fact that its gross profit four years back (that is for 1955) was only Rs. 3.22 lakhs. In consonance with the progress of the manufacturing activity, the provision for depreciation has been raised substantially from Rs. 6.99 lakhs (in 1957) to Rs. 12.66 lakhs. The provision for taxation has been increased from Rs. 3.50 lakhs to Rs. 8.09 lakhs, so that the increase in net profit amounting to Rs. 19.91 lakhs, is of the order of Rs. 4.96 lakhs.

Out of the net profit, the Directors have created a development rebate reserve with Rs. 8.73 lakhs, but have not added anything to the general reserve, which had received Rs. 5 lakhs last year. The distribution to shareholders is unchanged at 6 per cent. per annum, free of income-tax, but this is on a higher capital.

The following comparative table gives an idea of the Company's march since 1955:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	5,01.49	4,30.69	2,89.05	1,50.95
Other income	4.68	4.50	2.80	5.23
Closing stocks of vehicles, finished components and work-in-progress	43.97	29.58	26.09	31.84
Consumption of raw materials, spares, stores, etc.	4,44.83	3,81.51	2,56.25	1,41.30
Other expenses	35.02	31.18	18.34	10.65
Gross profit	40.66	25.44	12.11	3.22
Provision for—				
Depreciation	12.66	6.99	3.55	1.43
Taxation	8.09	3.50	2.55	1.19
Net profit	19.91	14.95	6.01	0.60
Excess provision written back. .	0.02	..	3.12	..
To provision for sale tax ..	..	6.07	..	..
„ reserves	8.73	5.00	1.50	..
„ bonus to employees ..	1.25	0.78	0.30	..
Dividend	10.29 (6%)	6.45 (6%)	3.97 (6%)	..
Carry forward	0.28	0.61	3.97	0.02

The progress of manufacturing programme is reflected in the rise of Rs. 63 lakhs in consumption of raw materials and of about Rs. 4 lakhs in other expenses.

The Company's authorised capital was raised in May 1958 from Rs. 2 crores to Rs. 3.25 crores, made up of 6,500,000 shares of Rs. 5 each. The subscribed and paid-up capital, as at the close of December 1958, was Rs. 1.87 crore, but this has since gone up to Rs. 2 crores. The balance of the authorised capital, namely, Rs. 1.25 crore (2,500,000 shares of Rs. 5 each at par) is offered to shareholders now. The additional capital is for financing further expansion of the Company's manufacturing activity. The Company, it will be recalled, has a programme to increase the production of "Comet" chassis to 3,000 units per annum and to manufacture Leyland "Tiger" and "Titan" chassis.

The Company has yet to build its reserves; these aggregate only Rs. 17 lakhs as at the end of 1958. Thanks to the additional capital expenditure to the tune of Rs. 71.59 lakhs during the year under review, the gross block stands at Rs. 171.81 lakhs, on which the depreciation provided so far aggregates Rs. 43.09 lakhs. The current liabilities and provisions (including bank loans to the extent of Rs. 40.44 lakhs) at Rs. 129.54 lakhs are more than adequately covered by current assets amounting to Rs. 204.92 lakhs.

For some time past, the Rs. 5 fully paid-up shares of the Company have been fancied well by investors and have crept up from Rs. 5.80 at the beginning of 1959 to the current level of Rs. 8.95 which includes the dividend for 1958 and the rights for the new issue. Over the past 12 months, they have more than doubled themselves in value, having gone up from Rs. 4.13 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the shares provide a yield of 3.47 per cent. per annum, free of income-tax. On ex-right basis and assuming that the dividend would be maintained on the increased capital, the yield works out to a little over 4 per cent.

BURMAH OIL COMPANY

Operations in the new oil areas of upper Assam continued during 1958 "at the pace required to reach the production target by the time the two refineries of the Government of India are due to come on stream," says the Chairman of the Burmah Oil Company, Ltd., Mr. W. E. Eadie, in the annual statement circulated with the accounts. It is understood, the statement adds these two refineries—one at Gauhati, Assam, and the other at Barauni, Bihar—will be ready to receive crude oil in April 1961 and April 1962, respectively. Discussions about the provision of finance for building a pipeline from the oilfields to these refineries are now taking place with the Government of India, the report adds, noting that the Company has undertaken to provide up to £10 million for its construction.

Sales of petroleum products through Burmah Oil's subsidiary and associated companies in India were, overall, 4.5 per cent. greater in 1958 than in the previous year, the report notes. This was despite a reduction in the trade in kerosene and motor spirit.

Discussing oilfield operations in India, the report notes that, while efforts to find fresh reserves in the Digboi field have so far had no success, development went ahead successfully in the Nahorkatiya, Hugrijan, and Moran areas. Of the 12 wells drilled, 10 were oil producers. Up to the end of 1958, says the report, the number of wells drilled in these areas was 48, of which 36 were oil producers. Estimates of the reserves continue to indicate a production potential of 2,500,000 tons of crude oil yearly from these three areas. Excellent drilling speeds were maintained, says the Burmah Oil report, and Nahorkatiya well No. 38 was completed at 10,335 ft. in just over 18 days.

Training schemes for nationals of the Asian countries in which Burmah Oil operates, the report adds, are showing satisfactory results. Increasing attention has been paid to widening the experience of the Company's Asian staff by visits to operations in other parts of the world and by training in Britain.

PREMIER CONSTRUCTION COMPANY

The Directors of the Premier Construction Company, Ltd., are reported to have taken no decision on the question of the reorganisation of the Company's capital structure at their meeting on Thursday last week. The scheme pertaining to the conversion of promoters' shares into ordinary shares and the issue of bonus shares by capitalising the reserves appears to have been considered by the Board, following the recent informal discussions between the management and representatives of the Company's shareholders. It is believed that it will take some more time before the Directors could reach a decision, as several questions concerning the scheme will have to be fully considered by them.

COMPANY MEETINGS AND DIVIDENDS

VICTORIA MILLS LTD. Annual General Meeting, Bombay, 28th May 1959. Dividend: Rs. 20.00 per share (includes a bonus of Rs. 5.00 per share), payable from 15th June 1959. Transfer books remain closed from 15th to 28th May 1959, both days inclusive.

INDIAN GALVANIZING CO. (1926) LTD. Annual General Meeting, Calcutta, 29th May 1959. Dividend: *Nil.* Transfer books remain closed from 19th to 29th May 1959, both days inclusive.

DEORIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 30th May 1959. Transfer books remain closed from 21st to 30th May 1959, both days inclusive.

SIRSILK LTD. Annual General Meeting, Somajiguda, Hyderabad-Deccan, 30th May 1959. Dividend: *Nil.* Transfer books remain closed from 16th to 30th May 1959, both days inclusive.

TROPICAL PLANTATIONS LTD. Annual General Meeting, Kottayam, Kerala State, 1st June 1959. Dividend: Re. 1.50 per share. Transfer books will remain closed from 26th May to 1st June 1959, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 4th June 1959. Dividend: Rs. 7.50 per share (includes interim dividend of Rs. 2.50 per share). Transfer books remain closed from 21st May to 4th June 1959, both days inclusive.

DELTA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 4th June 1959. Dividend: Rs. 6.00 per share (includes interim dividend of Rs. 2.00 per share). Transfer books remain closed from 21st May to 4th June 1959, both days inclusive.

ARVIND MILLS LTD. Annual General Meeting, Ahmedabad, 5th June 1959. Dividend: Rs. 28.00 per share.

INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 5th June 1959. Dividend: Rs. 6.50 per ordinary share, payable on and after 6th June 1959. Transfer books will remain closed from 25th May to 5th June 1959, both days inclusive.

ARUNA MILLS LTD. Annual General Meeting, Ahmedabad, 6th June 1959. Dividend: Rs. 25.00 per share.

UNITED FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 8th June 1959. Dividend: Rs. 3.75 per share (includes interim dividend of Rs. 2.25 per share). Transfer books will remain closed from 1st to 8th June 1959, both days inclusive.

KRISHNA INDUSTRIAL CORPORATION LTD. Annual General Meeting, Madras, 8th June 1959. Dividend: Re. 1.00 per share or 10 per cent. Transfer books will remain closed from 1st to 8th June 1959, both days inclusive.

SIVANANDHA MILLS LTD. Annual General Meeting, Coimbatore, 10th June 1959. Dividend: Re. 1.50 per share or 15 per cent. Transfer books will remain closed from 27th May to 10th June 1959, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Annual General Meeting, Calcutta, 11th June 1959. Dividend: Re. 1.00 per share, (includes interim dividend of 40 nP per share). Transfer books will remain closed from 28th May to 11th June 1959, both days inclusive.

GWALIOR RAYON SILK MANUFACTURING (WEAVING) CO., LTD. Annual General Meeting, Birlagram, Nagda, 16th June 1959. Dividend: Re. 1.00 per share (includes interim dividend of 50 nP per share). Transfer books will remain closed from 25th May to 16th June 1959, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 25th June 1959. Dividend: Rs. 14.00 per share, payable on and from 26th June 1959. Transfer books remain closed from 11th May to 9th June 1959, both days inclusive.

FERTILISERS AND CHEMICAL, TRAVANCORE LTD. Annual General Meeting, Eloor, Alwaye, 15th July 1959. Dividend: 4 per cent. or Re. 0.40 per share, payable on and after 15th August 1959. Transfer books will remain closed from 6th to 15th July 1959, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Final dividend of 14 per cent. on the ordinary shares, for the year ended 31st December 1958.

PULLICAR MILLS LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 3rd to 17th June 1959, both days inclusive.

TRAVANCORE CEMENTS LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 31st December 1958. Transfer books will remain closed from 20th June to 10th July 1959, both days inclusive.

COMPANY REGISTRATIONS

H. K. INDUSTRIES PRIVATE LTD. (First Director: Mr. W. R. Gupta.) Business: Manufacturers, importers and exporters of all kinds of railway equipment etc. Authorised capital: Rs. 25,00,000. Private company. Address: 87, Nagdevi Cross Lane, Bombay 3.

UNITED DYCHEM INDUSTRIES PRIVATE LTD. (First Director: Mr. A. W. Rane.) Business: Manufacturers of dyes, colours, synthetic dyestuffs, etc. Authorised capital: Rs. 5,00,000. Private company. Registered office of the company will be situated in the State of Bombay.

SYNOPSES OF COMPANY REPORTS

Sirsilk Ltd.

THE directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th September, 1958.

The profit and loss account after providing a sum of Rs. 15,18,551 (Rs. 14,68,978) being interest on loans, Rs. 10,00,000 (*nil*) towards depreciation, Rs. 2,00,000 (*nil*) towards provision for contingencies, Rs. 8,332 (*nil*) towards preliminary expenses, Rs. 38,571 (*nil*) for prospecting and investigation and Rs. 2,89,985 (*nil*) towards brokerage on shares, shows a surplus of Rs. 5,00,540 (Rs. 49,292) which has been adjusted against the loss brought forward. Only a part provision for depreciation could be made on account of inadequacy of profits.

During the year under review, the production of yarn and fabrics almost reached to its full capacity as a result of the steps taken by the management in improving the working and efficiency of the various plants, by effecting repairs and renovations of the chemicals and cellulose and Acetate sections of the Factory.

As already reported, an application was made to the Government of India for fixation of fair selling price of yarn produced by the Company. The Government of India after examining Company's cost of production have permitted an increase in the selling price of yarn by 10 annas per lb. only, which is much less than that requested for. This increase was effected in the month of June 1958, i.e., only three months prior to the closing of the financial year under review. This has resulted in a slight improvement in the financial results of the Company. On further representations by the Company the Government of India referred the matter of fixation of fair price of the yarn to the Tariff Commission, who have gone into the question. It is expected that the Commission would take a fair view in the matter and thus help the Company in improving its working results for the current year.

During the year under report the cost of raw materials, chemicals and stores materials, etc., have recorded a further rise. According to the new Budget proposals of the Government of India, the duty on art silk fabrics is being raised from 6 pies per square yard to 6 naye paise.

Accounts in brief are as under:—

Tropical Plantations Ltd.

The directors of the above Company (Managing Director: Mr. P. T. Thomas, Kottayam) submit the audited accounts of the Company for the year ended 31st December 1958.

Acreage.—The area under tea is 500 acres and that under rubber is 2,170.86 acres. Pepper, arecanuts, etc., take up 153.99 acres. Cardamoms cover 25 acres. The area under coffee plantations is 180.34 acres. Teak and other tree plantations comprise 126.71 acres.

Crops and prices.—During the year under review there was a general strike throughout the plantations in Kerala, which lasted a few weeks and it affected the Company's estates also to an appreciable extent. But for that regrettable strike and the general go-slow attitude of the labour, the crops of both tea and rubber would have been remarkably higher.

In August last, unusually heavy rains caused serious damage in the Company's rubber estates, especially Vengathanam Estate, where landslides occurred—causing heavy loss by the destruction of rubber trees, damages to roads, bridges, etc. Owing to the gradual deterioration in the health and yield of the palms, the whole coconut area has been planted with rubber.

Tea.—During the year 5,61,670 (4,75,367) lbs. of tea [1,123 (955) lbs. per acre] was harvested at an all-in-cost of Re. 1.18 (Re. 1.41) per lb. and the average price realised is Re. 1.44 (Re. 1.48) per lb.

Rubber.—The total crop harvested during the year is 5,91,889 (5,74,196) [350 (336) lbs. per acre]. The all-in-cost per lb. is Re. 1.02 (Re. 1.10) and the average price realised is Re. 1.49 (Re. 1.50).

After charging depreciation and after providing for taxation, the net profit of the Company for the year amounts to Rs. 1,88,995 (Rs. 95,880). This, together with Rs. 167 (Rs. 66,287) brought forward from the previous year, aggregates to Rs. 1,89,162 (Rs. 1,62,167). Out of this, the directors have transferred Rs. 60 000 (Rs. 36,000) to reserve for development leaving a balance of Rs. 1,29,162 (Rs. 80,167 after providing Rs. 46,000 for previous year's taxation) available for distribution. The directors recommend payment of a dividend of 6 (4) per cent. [Re. 1.50 (Re. 1.00) per share], free of income-tax and agricultural tax absorbing Rs. 1,20,000 (Rs. 80,000) and to carry forward the balance of Rs. 9,162 (Rs. 167) to 1959 accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Gross block	31,23,164
Reserves ...	96,000	*Less*—Depreciation ...	8,27,273

Liabilities ...	3,75,603	Net block	22,95,891
Profit ...	9,162	Stock-in-trade	1,48,363
		Stores, spare parts and loose tools, etc. ...	67,547
		Loans and advances ...	12,421
		Cash ...	1,51,662
Rs.	26,75,884	Rs.	26,75,884

Kirlampudi Sugar Mills Ltd.

The directors of the above Company [Managing Agents: Messrs. Kubera Sugar, Managers (Private) Ltd., Madras] present the audited accounts of the Company for the year ended 30th June 1958.

Crushing for 1957-58 season commenced on 26th November 1957 and closed on 13th June 1958. 1,51,044.25 tons of cane were crushed at a recovery of 8.68 per cent., yielding 13,095.1 tons of sugar. The quality of cane delivered to the Factory deteriorated considerably from the middle of March 1958, and the Mills' crushing season had to be prolonged to June 1958 in order to take up all the cane that was offered. Steps have now been taken to restrict the quantity of cane crushed, so that the season is not prolonged into the dry hot months of May and June when the sugar content in cane falls down appreciably and the Mills' working is uneconomical. The results of season 1958-59 appear to be good.

The excise duty on sugar was further raised from Rs. 225 per ton to Rs. 291.20 per ton from 14th December 1957 and cane cess was also raised from Rs. 3 per ton to Rs. 5 per ton of cane crushed with effect from 1st November 1957. These imposts took away most of the profits of the Company. Cane cess alone accounted for a reduction of the Company's profit by Rs. 3 lakhs.

Capital expenditure on plant and machinery to the extent of Rs. 12.53 lakhs incurred in the previous years and this year upto 15th November 1957 (the date on which the new units were put into commission) was brought into account, and this expenditure balances the plant to crush upto 900 tons of cane per day.

This year's working has resulted in a profit of Rs. 6,24,485 (Rs. 7,48,302) and after providing Rs. 4,02,822 (Rs. 3,45,480) for depreciation on the assets, the net profit earned for the year is Rs. 2,21,653 (Rs. 4,02,822). This profit of Rs. 2,21,653 (Rs. 4,02,822) has to be set apart for debenture sinking fund as per the Trust deeds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,96,700	Gross block	72,59,099
Debentures	34,00,000	*Less*—Depreciation ...	26,57,302

		Debts, deposits and advances ...	3,49,076
		Investments	20,25,241
		Cash ...	2,54,199
		Loss ...	20,19,763
Rs.	1,59,29,325	Rs.	1,59,29,325

United Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1958.

The Company's profit for the year is Rs. 4,75,072 (Rs. 5,81,293). And after providing taxation on profits for the year of Rs. 2,73,442 (Rs. 4,03,640), there remains a balance of Rs. 2,01,630 (Rs. 1,77,653). To this amount is to be added provision for development reserve no longer required Rs. 3,370 (*nil*) and amount brought forward from the previous year of Rs. 22,031 (Rs. 17,273) making a total of Rs. 2,27,031 (Rs. 2,25,401 including Rs. 30,475 being provision for taxation no longer required.

Out of this the directors have declared an interim dividend of 22½ (25) per cent. (already paid) absorbing Rs. 1,12,500 (Rs. 1,25,000) and they now recommend a dividend of 15 (15) per cent. payable without any deduction for income-tax paid by the Company absorbing Rs. 75,000 (Rs. 75.000) leaving a balance of Rs. 39,531 (Rs. 25,401). After deducting transfer to development rebate reserve of Rs. 20,186 (Rs. 3,370) there is a credit balance to be carried forward of Rs. 19,345 (Rs. 22,031).

Trading Conditions.—The prices of wheat products continued to be controlled, and the Government of India remained the only source of supply for wheat, which on the whole was received quite regularly throughout the year. There was keen demand for the Company's products, enabling production to be maintained at a high level.

In addition to supplies being made available to Government nominated fair price shops, the Company's products reached the public through a large number of retail shops throughout Calcutta and this arrangement is still in force.

Production during the year was 5,86,613 maunds as compared with 5,52,344 maunds during the year ended 30th November 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Gross block	8,06,727
Reserves ...	6,00,186	*Less*—Depreciation ...	5,28,386

Liabilities ...	6,56,606	Net block ...	2,78,341
Profit ...	19,345	Expenditure in progress	35,180
		Stock of wheat, flour, etc. ...	5,88,783
		Stores ...	39,639
		Debts, deposits and advances ...	9,46,858
		Investments	18,046
		Cash ...	1,44,290
Rs.	20,51,137	Rs.	20,51,137

Travancore Rubbers, Ltd.

The directors of the above Company (Managing Director: Mr. Eapen Thomas, Kottayam) submit the audited accounts of the Company for the year ended 31st December 1958.

Acreage.—The area under rubber is 1,203.25 acres. Coconut gardens comprise 32.60 acres and the acreage under pepper is 104.75.

Crop and prices.—The crop harvested during the year amounted to 4,82,401 (4,17,379) pounds rubber i.e., 421 (364) lbs. per acre and the all-in cost of production was Re. 1.22 (Re. 1.01) per lb. which includes the cost of spraying the whole area. The average price realised was Re. 1.46 (Re. 1.47). Rubber production in the estates suffered a heavy set back due to the strikes by the rival trade unions with wilful obstruction and violence against those who were willing to work, during the best part of the tapping season, which lasted for about a month.

After charging depreciation and after providing Rs. 54,000 (Rs. 77,500) for taxation and a bonus of 2 (2) months' basic salary to the staff, the net profit of the year is Rs. 73,023 (Rs. 93,984). This together with Rs. 1,271 (Rs. 2,286) brought forward from previous year aggregates to Rs. 74,299 (Rs. 96,270). The directors recommend that the available total of Rs. 74,299 (Rs. 96,270) be apportioned as under:—

To pay a dividend of 10 (15) per cent. absorbing Rs. 60,000 (Rs. 90,000), to transfer to reserve for capital expenditure Rs. 13,000 (Rs. 5,000) and to carry forward to next year's accounts Rs. 1,299 (Rs. 1,270).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Gross block ...	11,45,900
Reserves ...	46,742	*Less*—Depreciation ...	4,92,700
Provision for taxation ...	1,22,949		
Liabilities ...	1,85,730	Net block ...	6,53,290

		Stores and spare ...	21,227
		Nursery ...	5,066
		Loans and advances ...	18,636
		Cash	1,24,076
Rs.	9,56,719	Rs.	9,56,719

Ceat Tyres of India Ltd.

The directors of the above Company (Chairman: Mr. A. D. Shroff, Bombay) submit the first audited accounts of the Company for the year ended 31st December 1958.

The Company's issue of 1,15,000 ordinary shares of Rs. 100 each was fully subscribed, out of which 68,850 ordinary shares were subscribed by CEAT S.p.A. of Turin, Italy, to finance the cost of capital goods to be imported.

The site for the proposed factory initially suggested by the Government at Kalyan was subsequently selected, with Government's approval, in Bhandup, owing to the better facilities afforded by such location. The land was obtained under the Land Acquisition Act through the Government of Bombay and possession was entered into on 20th December 1958.

The licence for import of capital goods obtained at the initial stage had to be amended during the year, as several items which were formerly available locally, had also to be imported. The directors have now pleasure in informing the members that the Company has been able to obtain the licence for all the machinery and equipment required.

The directors report satisfactory progress of the factory construction, and expect the Company to go into production by the beginning of 1960. This would mean a remarkable achievement, even though there has been a delay of six months on the programme initially contemplated, in view of the fact that the Company was confronted with several difficulties during the year.

The Company intends to manufacture tyres and tubes of the same quality and standard as the world reputed CEAT tyres. A licence of the value of Rs. 10 lakhs for giant tyres was obtained to test these tyres on Indian roads. The directors report that the market has reacted favourably to the performance of these tyres. In order to complete the appraisal, the Company has applied for a further licence.

After providing for depreciation and taxation, a profit of Rs. 27,205 for the year has been carried over. This profit has resulted entirely from the sale of imported tyres and tubes.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,47,750	Gross block ...	6,10,061
Provision for taxation ...	30,000	*Less*—Depreciation ...	2,892

Profit ...	27,205	Net block ...	6,07,169
		Building materials ...	2,35 522
		Unerected machinery	2,667
		Stocks ...	1,575
		Debts, deposits and advances ...	7,83,631
		Cash	41,74,730
		Miscellaneous expenses and losses ...	2,92,462
Rs.	60,97,756	Rs.	60,97,756

Associated Stone Industries (Kotah) Ltd.

The directors of the above Company (Managing Agents: Rajputana Mining Agencies Private Ltd., Ramganjmandi) submitted the audited accounts of the Company for the year ended 30th September 1958.

The working of the company has been very satisfactory, the sales of all kinds of stones being the highest of all years, since the inception of the company. The sales of rough stone was 1,18,34,692 square feet as against 93,66,212 square feet of last year; that of polished and re-polished machine cut stone was 14,03,477 square feet as against 10,23,621 square feet of last year and that of sand and *Madana Stone* was 11,52,748 square feet as against 10,10,227 square feet of last year.

The working during the year has resulted in a profit of Rs. 11,14,977 (Rs. 5,49,022) after allowing depreciation of Rs. 98,113 (Rs. 1,20,456) on the assets and after making the provisions for development rebate of Rs. 15,491 (*nil*) and for bonus to staff and labourers, gratuity and provision for wealth tax, etc. The total profits after adding the brought forward profit of the previous year and the amount recovered from managing agents for excess payment of commission for 1956-57 amount to Rs. 24,02,329 (Rs. 16,46,740). Out of this during the year, the directors have, on 1st May 1958, declared an interim dividend of Rs. 2,77,500 (Rs. 1,27,500) on 1,85,000 (85,000) ordinary shares at Re. 1.50 (Re. 1.50) per share. A sum of Rs. 5,00,000 has been appropriated towards the conversion of deferred shares into ordinary shares and a sum of Rs. 11,35,000 (*nil*) has been transferred to general reserve fund. The directors have made the following appropriations in the accounts out of the balance of Rs. 4,89,829 (Rs. 13,35,240 after paying Rs. 1,84,000 as dividend on deferred shares at Re. 1-13-6 per share).

To provision for charity and donations Rs. 25,000 (Rs. 15,000), to provision for bad and doubtful debts Rs. 25,000 (*nil*), to provision for doubtful advances to labourers Rs. 25,000 (Rs. 25,000), to provision for proposed dividend at 6 per cent. (free of tax) on 2,000 cumulative preference shares absorbing Rs. 12,000 (Rs. 12,000) and to provision for proposed final dividend on ordinary shares at Rs. 2 (*nil*) per share (free of tax) absorbing Rs. 3,70,000 (*nil*) leaving a balance of Rs. 32,829 (Rs. 12,83,240) to be carried forward.

The uncompleted flooring job works have been taken at the book value in the accounts and no profit or loss has been ascertained on such uncompleted jobs as at the date of balance sheet.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,50,000	Gross block	13.05,892
Reserves ...	14,90,281	*Less*—Depreciation ...	7,13,067

		Stock-in-trade	10,60,596
		Stores, etc. ...	1,37,446
		Work-in-progress ...	1,98.135
		Debts, deposits and advances ...	15.95,675
		Investments ...	92.854
		Cash ...	11,43.552
Rs.	47,61,083	Rs.	47,61.083

Indian Galvanizing Co. (1926) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie and Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The loss for the year after crediting items relating to previous years and after providing for depreciation, was Rs. 11,31,207 (profit of Rs. 3,49,237). From this is deducted the balance brought forward from 1957 Rs. 4,22,513 (Rs. 90,223) leaving a debit balance of Rs. 7,08,694 (credit of Rs. 4,39,460). The Board has transferred the balance of general reserve amounting to Rs. 4,35,000 (*nil*) to profit and loss account leaving a debit balance on the latter of Rs. 2,73,694 (credit of Rs. 4,22,513 after paying a dividend of 6 per cent. on cumulative preference shares amounting to Rs. 16,947) to be carried forward.

Operations.—In spite of the difficulties in obtaining supplies of steel the Bombay factory continued to operate satisfactorily. The overall loss for the year was occasioned by the closure of the Calcutta factory and the consequential liability for retrenchment compensation. The Board is unable to recommend any dividend on either the ordinary shares or the preference shares.

An Agreement is proposed to be entered into with Industrial Containers Ltd. for the acquisition of certain assets of the Calcutta factory and one is proposed to be entered into with Steel Containers Ltd. for the acquisition of the business of the Company's Bombay factory. Manufacturing Licences have now been received from the Central Government under the Industries (Development and Regulation) Act, 1951 for each of these new Companies, and after the necessary Resolutions are passed, Agreements will be executed and the formal acquisition will then take place.

A licence has not yet been obtained for the manufacture of "Hopes" windows and doors, as the terms of foreign collaboration are still under negotiation with the Central Government.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,77,040	Gross block ...	46,81.461
Liabilities ...	19,75.473	*Less*—Depreciation ...	28.61 241

Notices

THE OSMANSHAHI MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Annual General Meeting of the Shareholders of the Osmanshahi Mills Limited will be held at the Registered Office of the Company at 269/270, John's Lane, Gunfoundry, Hyderabad, on Friday the 19th day of June 1959, at 3-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September 1958.
2. To appoint a Director in place of Khan Bahadur C. B. Taraporvala, who retires by rotation under Clause No. 101 of the Company's Articles of Association and is eligible for re-appointment and has offered himself for re-election.
3. To appoint a Director in place of Shri Pannalal Bansilal Pitty, who retires by rotation under Clause No. 101 of the Company's Articles of Association and is eligible for re-appointment but has intimated that he does not seek re-election.
4. To appoint a Director in place of Dr. M. N. Desai, who retires by rotation under Clause No. 101 of the Company's Articles of Association and is eligible for re-appointment and has offered himself for re-election.
5. To appoint a Director in place of Shri P. K. Namjoshi, who has been co-opted by the Board as a Director of the Company under Clause No. 93 of the Company's Articles of Association and who will hold office as a Director only up to the date of the next Annual General Meeting of the Company, and in respect of whose re-appointment notice under Section 257 of the Companies Act, 1956, is received by the Company.
6. To appoint Auditors for the current year and fix their remuneration.
7. To consider and, if thought fit, to pass the following resolutions which will be proposed as Special Resolutions:—
   (a) "*RESOLVED that, subject to the approval of the Central Government, the maximum number of Directors of the Company permissible to be appointed under its Articles of Association be increased from ten to twelve (inclusive of ex-officio Directors and Debenture Directors, if any), and that accordingly Article 89 of the Articles of Association of the Company be altered by substituting the word 'twelve' for the word 'ten' therein.*"
   (b) "*RESOLVED that Clause VI of the Memorandum of Association of the Company be and the same is hereby deleted.*"
   (c) "*RESOLVED that the Articles of Association of the Company be altered as follows:—*
      (i) *That in Article 1 the following definition of the word "Agents" be inserted:—*

      "Agents" shall mean the Managing Agent of the Company."

      (ii) *That the following Article be substituted as Article 91 in place of the existing Article 91:—*

      "91. The Managing Agent shall be entitled to have and to appoint two of its nominees as the Directors of the Company in case the total number of the Directors of the Company exceeds five and to have and appoint one of its nominees as a Director of the Company in case the total number of the Directors of the Company does not exceed five. The said nominees and their successors in office appointed under this clause shall be called ex-officio Directors. The Managing Agent may, at any time, remove any Director so appointed by it, and appoint another Director in his place or in the place of a Director so appointed who resigns or otherwise vacates his office or ceases to be a Director. An ex-officio Director shall not require any qualification and shall be entitled to hold office unless requested to retire by the Managing Agent and accordingly he shall not be bound to retire by rotation or be subject to the relevant Articles of Association of the Company with regard to the retirement of Directors by rotation. An ex-officio Director may at any time by notice in writing to the Company resign his office. One of such ex-officio Directors shall be the Chairman of the Board of Directors. The right of appointment or removal of an ex-officio Director shall not be affected or determined by any change in the name and/or constitution of the Managing Agent or its successors in office."

      (iii) *That the following Article be substituted as Article 120 in place of the existing Article 120:—*

      "Bansilal Bisesardas Private Limited has been appointed the Managing Agent of the Company (herein called 'the Agents') upon the terms mentioned in the Agreement dated the 14th day of April 1958 between it and the Company, a copy of which is hereto annexed."
8. To consider, and if thought fit, to pass *the following Resolution:—*

   "*RESOLVED that the Authorised Capital of the Company be and the same is hereby increased to Rupees One Crore and Twenty-five lakhs divided into 1,25,000 Ordinary (Equity) shares of Rs. 100 each.*"

An Explanatory Statement in respect of the above items 5, 7(a), 7(b), 7(c) and 8 is hereto annexed.

The Transfer Books of the Company will be closed from 25th May 1959 to 19th June 1959 both days inclusive.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND SUCH A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,

For THE OSMANSHAHI MILLS LIMITED,
For BANSILAL BISESARDAS PRIVATE LTD.,

K. B. DAGA,
Director,
Managing Agents.

HYDERABAD-DECCAN, 11*th April*, 1959.

Note: The relative Explanatory Statement pursuant to Section 173 of the Companies Act 1956 in respect of the above item of business has been posted to each Shareholder individually to his last given address.

SURVEY

(*Concluded from page 855*)

for an aggregate capacity of 160,000 tons, of which 60,000 tons would be required for indigenous steel production by the end of the current Plan period. The balance of 100,000 tons has been sanctioned for the purpose of export, though, in due course, the requirements of India itself will exceed 60,000 tons.

One of the units which has received a licence is the Khandelwal Ferro Alloys Ltd., belonging to the House of Khandelwal. The Company proposes to set up a plant with an installed capacity of 30,000 tons, which is nearly 20 per cent. of the total capacity sanctioned for all the six units. This Company has some special advantages, indicating that the success of this venture is assured. In the first instance, the promoters have considerable experience as exporters of manganese ore and importers of steel and have wide contacts in world markets for ferro-manganese. A Norwegian firm has agreed to supply the necessary plant and machinery on deferred payment terms, to provide technical assistance for installing and commissioning the plant and to train the Company's personnel. It has also executed a performance guarantee for production of ferro-manganese of the required quality and quantity. The factory will be situated at Kanhan, near Nagpur, which is the heart of the manganese ore mining area, with rich deposits of ore, where limestone, the other essential raw material, is easily available, and which is conveniently located from the point of view of transport, water-supply and electricity.

Another most important advantage which the Company enjoys is that it has entered into an agreement with one of the biggest ferro-manganese dealers in the world for sale of the Company's entire output for a period of 7½ years with a minimum guaranteed price for the first 4½ years.

The construction work at the factory premises is said to be in full swing and part of the plant and machinery has already been received. The remaining shipments are expected to be received before September this year. Addressing a Press Conference on Saturday last week, Mr. Ramprasad Khandelwal, a Director and one of the promoters, said that the first of the two furnaces, with a capacity of 15,000 tons each, would go into production early in 1960 and the second by the end of 1960 or early in 1961, depending upon the availability of power. He added that provision had been made to set up six furnaces.

The terms of the Company's public issue of capital were referred to in our last issue and are contained in the announcement published on pages 868 and 869 of this issue. The success of the issue seems to be assured, in that the entire preference issue has been underwritten. Incidentally, it may be noted, this is the first preference issue to be underwritten by the Industrial Finance Corporation. The Company has been granted a loan of Rs. 40 lakhs by the Refinance Corporation for Industry Ltd., through the Chartered Bank, the first loan to be given by the Corporation since its inception. Evidently, the scheme must have been scrutinised thoroughly and found satisfactory by the two institutions.

DELHI LETTER

(*Concluded from page 856*)

About half a million tons of lignite per annum will be utilised for this scheme. Global tenders invited for the manufacture, supply and erection, where necessary, of plant and machinery needed for all the different parts of the scheme are now under scrutiny. Firm orders for the supply and erection of all plant and machinery are expected to be placed shortly. The project is expected to cost about Rs. 20 crores and commercial production of urea is expected to commence in March 1962.

Fifthly, a proposal to establish a fertiliser factory at Bombay, utilising the gases available from the oil refineries at Trombay, has also been under the active consideration of the Government. A comprehensive study of the various aspects of the project has just been completed. The scheme has been approved by the Government, in principle, subject to negotiations for the price of the gas with the oil companies proving satisfactory. The scheme, when implemented, will produce 90,000 tons of nitrogen per year partly in the form of urea and partly as complex fertilisers (nitrophosphate). The project is estimated to cost about Rs. 24 crores. The construction of the factory will take about three years.

As for the third Plan period, the Government of India has recently set up a Technical Committee for preparing preliminary reports on the scope for establishment of fertiliser factories at a number of suitable sites. The terms of reference of the Committee are:

1. Preparation of preliminary reports to help in deciding the establishment of fertiliser factories at (i) Vijayawada/Kothagudium, (ii) Rajasthan, (iii) Itarsi, (iv) Durgapur (based on coke oven gases) and such other sites as may be referred to the Committee, with a view to determining the types and quantities of fertiliser that can most suitably be produced at the various sites, having regard to the facilities available at these places and the pattern of production indicated by the Department of Agriculture for the third Plan period, and also the order of capital cost likely to be involved and the probable cost of production. The Committee, it is expected, will complete its work and submit its report within a period of six months. The target suggested by the Food and Agriculture Ministry for the Third Plan will mean an increase of fertiliser production from about 80,000 tons in 1958-59 to 1,500,000 tons in 1965-66 in terms of nitrogen alone. If this target is accepted by the Committee, it alone will involve a total investment outlay of not less than Rs. 400 crores till 1965. Besides this, substantial investment will be required for the phosphatic and potassic part of the fertiliser programme.

MONEY LESS STRINGENT

(*From Our Own Correspondent*)

BOMBAY, 20*th May*

Conditions in the short-term money market are somewhat less stringent. During the last few days, funds have started returning from the interior, but the flow is not yet on such a scale as to relieve the pressure to a marked extent. As the latest Reserve Bank statement indicates, banks have reduced their borrowings considerably and have even increased their balances with the Reserve Bank. Banks are no doubt still borrowers in the market, but, in inter-bank dealings, the Exchange and big Indian banks are not prepared to pay more than 3½ per cent. on call money, whereas they were paying till last week up to 3¾ per cent. The rate among the smaller banks is, however, unchanged at 3¾ per cent. House money at seven days' notice continues to fetch 3¾ per cent., while short-term deposits are being offered at 3½ to 4 per cent., as against 3¾ to 4 per cent. last week.

The Treasury Bill discount rate is again unchanged at 2.800 per cent. per annum. The offerings at yesterday's sale amounted to Rs. 2.40 crores, as against Rs. 2 crores invited. Presumably, in view of the fact that conditions in the money market have not shown definite easiness, the authorities have not raised the Treasury Bill amount for next week from Rs. 2 crores. Indeed, as the Central Government will be entering the capital market some time next month for raising long-term loans, there is no likelihood of the amount being raised in the succeeding weeks either. There were no sales of intermediate bills last week also, but they have not been suspended.

The Reserve Bank of India statement for the week ended 15th May 1959 shows a contraction of Rs. 8.74 crores in notes in circulation and a rise of Rs. 8.46 crores in total notes held in the Banking Department. There has been no change in foreign securities, but balances held abroad have resumed their decline with a fall of Rs. 1.11 crore. This brings the total foreign assets down to Rs. 202.62 crores. While the Central Government's deposits are up by Rs. 1.21 crore, those of other Governments have dwindled by Rs. 6.71 crores. Deposits of banks are higher by Rs. 3.65 crores, while loans and advances other than to Governments show a sizable fall of Rs. 12.89 crores, of which advances to Scheduled banks against usance bills account for Rs. 4.06 crores.

A fall of Rs. 8.23 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 8th May 1959, but this is partly made good by the rise of Rs. 2.15 crores in time deposits. Of the net decline of Rs. 6.08 crores, the State Bank of India accounts for Rs. 4.64 crores. Borrowings from the Reserve Bank have gone up by Rs. 11.43 crores, the share of the State Bank alone being Rs. 7.50 crores. Advances have risen by Rs. 8.13 crores, including Rs. 2.79 crores on account of the State Bank, while bills purchased and discounted are lower by Rs. 1.93 crore, which is solely accounted for by the State Bank. A rise of Rs. 9.89 crores in the latter's investment portfolio has raised the total investments of all banks by Rs. 9.95 crores. Cash in hand and balances with the Reserve Bank have together dwindled by Rs. 15.24 crores, the whole of which is accounted for by the State Bank.

Barring a slight demand in short-dated securities, with the resultant hardening of prices by 5 nP, the Gilt-edged market has not shown any livelihood. Conditions continue to be extremely dull and the volume of business has not enlarged. With the L.I.C. out of the field, State loans are lifeless. In refreshing contrast to the sustained fall noted in previous weeks, there has been a rise of 5 nP in 3 per cent. 1986 Conversion Loan at Rs. 73.55. 2½ per cent. 1961 has hardened by 5 nP to Rs. 97.30 and 3 per cent. 1963-65 by a like extent to Rs. 96.70. 3½ per cent. 1963 and 1965 have each gone up by 5 nP to Rs. 99.95 and Rs. 99.55, respectively. Among the long-dated issues, while 3 per cent. 1970-75 is up by 10 nP at Rs. 91.30, 4 per cent. 1973 has shed 5 nP to Rs. 101.65.

In consonance with the slight weakening of sterling abroad, the rupee also is ruling a little quiet in terms of the U.S. dollar. Banks' selling rate for ready dollars has gone up from Rs. 475.25 to Rs. 475.75 per $100 and their buying rate from Rs. 472 to Rs. 472.25 per $100. In New York, spot sterling has declined from $2.81.9/16-2.81⅛ to $2.81⅛-2.81.7/16 and three months' forward from $2.81.7/32-2.81.9/32 to $2.81.5/32-2.81.7/32.

TANNED HIDES FIRM

(*From Our Own Correspondent*)

MADRAS, 18*th May*

Tanned hides ruled firm during the week while cow calf and buff calf were quiet. U.K. demand was mostly for top marks in cow hides and all marks in lower grades. Importers' efforts to bid the market down did not materialise.

E.I. tanned goat skins were a shade easy and sheep firm.

In the London public sales which commenced on the 4th inst., buyers were highly discriminating. Tanned goat skins advanced by 2s. to 2s. 6d. per lb. and sheep by 2s. to 3s. per lb. on prime tannages and the best parcels were sold.

LINSEED STEADY

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 18*th May*

Steady conditions prevailed in the linseed market throughout the week. With keen demand and shortage of supplies, seeds advanced by 50 nP to 75 nP per maund. Owing to better prices obtainable at the centres, despatches were poor and there was little response to the improved demand from crushers. Despite lower prices, there were few enquiries for oilcakes. Local buyers were uninterested, and overseas prices declined further. The oil market was very active. With keen enquiries from local buyers and sellers rather hesitant prices advanced by about Rs. 2.50 per maund. A fair turnover was reported with buyers chiefly interested in forward positions. As a result of the present advance, Indian quotations are entirely out of parity with overseas prices.

The latest quotations are: Ready May Rs. 23.62 and June-July Rs. 23.75 per maund.

BULLION STRONG

(*From Our Own Correspondent*)

BOMBAY, 20*th May*

The downward trend noted in the bullion market last week continued during the first two days of the week under review, abated on Saturday and yielded place to a moderately bullish trend in the subsequent days. There was persistent bear-covering which found offerings scarce. Spot houses were keen buyers of both gold and silver. Values, as a result, recorded a rise. This trend was accelerated as the week progressed by the seizure of 1,500 tolas of contraband gold from the shop of a leading bullion merchant in the city by customs officials, firm Calcutta advices, continued improvement in offtake and buying against option transaction. Towards the close of today, however, values tended to move down on account of profit-taking. Nevertheless, the closing rates were higher than those on Wednesday last week.

In the gold section, May settlement, after declining from Rs. 118-9 to Rs. 115-14, recovered gradually to Rs. 121-6 today before finishing at Rs. 120-4. June settlement, which had receded to Rs. 115-2 on the opening day, as against Rs. 117 at the close of last week, improved in the course of the week to touch Rs. 119-8 today. Towards the close, it was weak at Rs. 117-10, owing to heavy profit-taking. August settlement stood at Rs. 116.15 today, as against Rs. 116-6 last week-end.

The backwardation rate (*budli* in favour of the bulls) also widened considerably from Re. 1-9 last week to Rs. 2-10 today, indicating the strong hold of bulls in this settlement which will be maturing on Friday the 23rd inst. The bulls, of course, had to continue depositing a margin of Rs. 25 per tola throughout the week, since the backwardation rate was over a rupee. The backwardation rate for June settlement was also higher, albeit by only an anna, at As. 11. With regard to July settlement, since the closing rate of Rs. 115-5 on Thursday the 14th inst., was lower by more than Rs. 5 as compared with the starting rate, a margin of Rs. 7 per tola became operative on bears.

Ready gold began at Rs. 117-15, as against Rs. 118-9, and, after declining to Rs. 116-4 the same day, moved up thereafter by stages and touched Rs. 121-10 today before closing at Rs. 120-12. The net gain over the week is Rs. 2-3. The daily average arrivals and offtake of gold were 4,000 tolas and 4,500 tolas, respectively. The floating stocks of gold are estimated at 15,000 tolas.

May settlement in silver improved from the low level of Rs. 191-2 on Friday to Rs. 197-4, but finished easy at Rs. 195-11. June settlement advanced from Rs. 190-15 at the end of last week to Rs. 193-2 today before closing at Rs. 191-11. Over the week, July settlement gained As. 5 to Rs. 190-8; at one time today, it saw a high of Rs. 191-9.

The backwardation charge for May settlement, which had narrowed down from Rs. 3-10 to Rs. 2-8 last week, widened markedly again during the week under review and stood at as high as Rs. 4 today. The margin of Rs. 2,500 per bar on open bull position in the settlement continued to be in force throughout the week. The backwardation rate for June settlement exceeded a rupee on Monday and rose further to Re. 1-3 today, so that margin at the rate of Rs. 1,000 per bar became effective on bulls in this settlement. With July settlement closing on Thursday the 14th inst., Rs. 7 lower than the starting rate, a margin of Rs. 500 per bar became operative on bears.

Ready silver encountered selling early in the week and fell from Rs. 194 to Rs. 191-14. Subsequently, a recovery ensued and the rate touched Rs. 196-10 today before finishing at Rs. 195-3. The net gain over the week is Re. 1-3. The daily average arrivals of silver were 10 bars, while the offtake was 20 bars per day. The floating stocks of silver are reported to be around 400 bars.

There was no change in ready and forward silver in the London bullion market which stood at 79¼d. and 78¾d. per ounce, respectively. Silver in New York also was unchanged at 91.375 cents per ounce. Ready gold in London, after firming up from 249s. 6¼d. to 249s. 7¾d., eased to 249s. 6¾d. induced by strength of the pound sterling *vis-a-vis* the dollar. The latest available dollar rate of gold in London is $35.14.

The following comparative table shows at a glance the trend of the market during the week under review:

COTTON FUTURES FINISH BETTER

(*From Our Own Correspondent*)

BOMBAY, 20*th May*

After ruling easy during the major part of the week under review, the futures section of the cotton market showed a distinctly hardening tendency today. The earlier easiness was due to rumours regarding cotton import quota—this was, in fact, announced yesterday—and even the small tenders against the maturing contract, that is, I.C.C. Moglai Jarilla May 1959, were ignored. The total quantity actually tendered so far is put at no more than 3,500 bales. Selling by some Ahmedabad operators and unencouraging advices from other commodity markets also engendered some weakness. Today, the market put on a cheerful appearance, despite the release of import quota of 240,000 bales to be channelled through textile export entitlement schemes, because prices had gone down earlier in expectation of this development. The factors which influenced the operators favourably were reports of higher offtake in piecegoods and strong spot advices. Not only were the previous losses completely made good but today's closing rates were higher than those at the end of last week.

I.C.C. Moglai Jarilla May 1959 opened the week at Rs. 694.50, as against Rs. 695.25, and gradually receded to touch Rs. 689.50 on Saturday. Thereafter, it recovered to Rs. 699 today before finishing at Rs. 698.50. The net gain over the week is Rs. 3.25. August 1959 delivery declined from Rs. 708 to Rs. 701.25 yesterday, but improved to Rs. 709 today. The trend of prices of the two contracts during the week is indicated below:

(In rupees per candy of 784 lbs.)

20-5-59	*High*	*Low*	13-5-59
I.C.C. Moglai Jarilla			
May 1959 ...	698.50	699.00	689.50	695.25
August 1959 ...	709.00	709.25	701.25	708.00

In the spot section, prices registered a handsome improvement during the week. Berar Jarilla elicited good mill buying and rallied from Rs. 690 to Rs. 730 per candy. Khandesh quality was also well favoured, the quotation spurting by Rs. 20 to Rs. 890. Laxmi was fully maintained at Rs. 1,050.

Among exportable styles, Bengal *Deshi* attracted the attention of shippers and advanced by Rs. 25 to Rs. 720. This variety was reported to have elicited fresh enquiries from abroad, especially from Japan. The other exportable styles, however, continued to rule quiet.

Activity in foreign cotton was subdued till today when the Government of India announced the import quota. The quota amounts to 240,000 bales, bringing the aggregate release for the whole season to 600,000 bales. The imports will, however, be effected through the textile export entitlement schemes announced from time to time. It is expected that the total entitlement licences in the first quarter of 1959 cover about 100,000 bales of cotton. The licences will be issued "within the next couple of weeks and will provide for imports from different sources". A proposal for advance imports of a small quantity of raw cotton which can be supplied against entitlement on the basis of performance in the second quarter is under consideration. Meanwhile, the authorities hope that it will be possible for the textile industry to augment exports of textiles substantially. The entitlement for the second quarter is expected to work out to a larger figure.

Cotton traders are awaiting the outcome of the discussions now being held by the four-member Tanganyika cotton trade delegation in Bombay with the representatives of cotton and mill interests, as well as with the Government of India officials. The object of the delegation's visit is to explore the possibility of selling a sizable quantity of Tanganyika cotton to India.

The Karachi cotton futures market remained closed throughout the week under review, as the Karachi Cotton Association banned fresh trading in May and July contracts with effect from the 10th inst. The spot section continued to rule subdued, with limited turnover and narrow fluctuations in prices.

A firm trend was in evidence in the Alexandria futures market. Buying support was quite sustained, thanks to renewed hopes of enlarged demand from overseas countries following the recent upward revision in discount rate on Egyptian cotton from 27.75 to 32.50 per cent. Traders noted the distinct improvement in exports of cotton so far during the 1958-59 season, the quantity actually shipped in the first eight months ended April 1959 being 855,775 bales (of 730 lbs. each), as against 655,300 bales in the corresponding period of 1957-58. It was reported that the entire current season's crop of 1,327,000 bales would be fully utilised by the anticipated seasonal exports and domestic consumption, so that the carryover into the new season would be about unchanged from the stocks of 271,000 bales brought into the season.

The latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets relating to previous week's closing rates, are:

Karnak: May 74.10 (72.50); July 74.05 (72.55). *Ashmouni*: June 69.20 (65.80); August 68.00 (64.85).

The Liverpool cotton futures market ruled irregular during the week. Thus, near deliveries showed a hardening tendency, while distant positions came in for selling and suffered losses. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May-June 22.85; July-August 22.74; October-November 21.75; December-January 21.50.

American cotton mixed growth contract: May-June 23.75; July-August 23.15; October-November 22.20; December-January 21.55.

Sudan Lambert seed contract: May-June, July-August and September-October 26.75.

Easy conditions prevailed in the New York cotton futures market. There was scattered liquidation in old crop July, together with hedge selling in the nearer crop months and profit-taking in the distants. Traders were generally inclined to await further new crop developments.

On the 13th inst., the U.S. Agriculture Department announced the export sale of 33,648 bales of Government-owned cotton at 28.48 cents per lb., basis middling inch. Based on the official schedule of premia and discounts applicable to the 1959 cotton crop, the purchase price (under choice A programme) and loan rate (under choice B programme) for middling one inch cotton at average location will be 34.10 cents and 28.40 cents per lb., respectively. The current loan rate, it may be noted here, is as high as 35.08 cents. The Commodity Credit Corporation will offer its owned stocks in the coming season for sale at minimum 110 per cent. of the choice B loan rate, that is, 31.24 cents per pound. Beginning from October this year, the prices will be higher by carrying charges which are 10 cent points for that month and 15 cent points monthly for period beyond till the end of the season. The export subsidy has been announced at 8 cents per pound. Assuming that the domestic market value will be around the C.C.C. sale price, then for Middling one inch at average location an approximate export price of 23.24 cents would appear to be indicated. Under the C.C.C. export sales programme for the current season, recent average price at average location accepted for Middling one inch cotton was 28.51 cents per pound.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-5-59	12-5-59	5-5-59
Spot	36.25	36.25	36.25
July	34.70	35.09	34.96
October	32.78	32.87	32.77
December	32.71	32.77	32.68

MARGIN EXEMPTION FOR CASTOR OIL EXPORTS

(From Our Own Correspondent)

BOMBAY, 20*th May*

In a bid to promote exports of castor oil, the Forward Markets Commission announced, on Monday, the 18th inst., margin exemptions on open long positions held as hedge against commitments in respect of castor oil exports. Against one ton of castor oil sold for export, exporters have been permitted to hedge forward sales to the extent of 10 candies, without depositing margin. The scheme, introduced as an "experimental measure," is designed to enable genuine exporters to cover their export commitments on the futures markets without having to go to banks for credit to make the heavy margins payable at higher levels of prices. Despite this measure, both castorseed and castor oil recorded a fall in prices.

The final official estimate of castorseed for 1958-59 was published this week. The area and production of crop for the current year is placed at 1,193,000 acres and 111,000 tons as against the partially revised estimate of 1,184,000 acres and 89,000 tons in 1957-58. The present estimate shows an increase of 9,000 acres or 0.8 per cent. in area and 22,000 tons or 24.7 per cent. in production, over the last year. The increase in current year's area is accounted for mainly by Bombay and is due probably to favourable climatic conditions at the time of sowing. The substantial increase in current year's production occurred mainly in Andhra Pradesh and Bombay and is attributed partly to increase in area and partly to higher yield per acre as a result of favourable seasonal conditions during the growing period of the crop. The all-India per-acre yield in the current year works out to 208 pounds, as against 168 pounds in 1957-58, showing an increase of over 24 per cent.

The spectacular rally in prices in the oilseeds market, witnessed during the last three weeks, has come to a halt. The initial sessions during the week ruled distinctly firm; but the market gave way not long before on heavy bull liquidation. This trend was aided further by the gradually improving supply position.

Although *vanaspati* manufacturers and crushers lent good support to the groundnut section, there was a sharp setback, thanks mainly to heavy arrivals from Saurashtra and other places. Even the report that Communist countries would eventually turn to India for groundnut oil failed to enthuse the market. The nervous bulls liquidated their stocks. Groundnut May and August contracts, which had closed last week on a steady note at Rs. 204.25 and Rs. 206.25, respectively, improved to Rs. 204.75 and Rs. 207.25, respectively; subsequently, they eased to wind up the week today at Rs. 200.50 and Rs. 202.50. Bold ready after fluctuating between Rs. 42-12 and Rs. 40.50, finished today at Rs. 42.00. Oil ex-mill ready also depicted a declining trend, having fallen from Rs. 22.25 last Wednesday to Rs. 22.00 today.

The buoyancy in the castorseed section was arrested during the week under review. The U.S. seems to have adopted a wait and watch attitude towards buying Indian castor oil. The rapid rise in prices in India has naturally discouraged importers in the U.S. In these circumstances, the exemption of margin on exports of castor oil too made hardly any impression on the market. Castorseed May and September contracts suffered a severe setback and wound up the week at Rs. 168.12 and Rs. 172.37, respectively, as against Rs. 172.75 and Rs. 176.00, a week ago. Ready Madras declined from Rs. 34.12 last week-end to Rs. 33.12 today, and oil B.S.S. from Rs. 18.31 to Rs. 17.62.

Linseed and cottonseed witnessed sympathetic movements. Larger arrivals further dampened the linseed section. Buying support was also lacking. Linseed May contract which stood at Rs. 34.62 last week-end moved within a narrow range and finished today at Rs. 34.19. Bold ready lost 50 nP to close at Rs. 33.75 today. Linseed oil was, however, at Rs. 16.50 today, as against Rs. 16.87 last Wednesday. Cottonseed September contract fell by Rs. 3 to Rs. 136.25 on Monday. It recovered later to end the week at Rs. 16.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	20-5-1959	13-5-1959	6-5-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	200.50	204.25	201.00
August 1959	202 50	206.25	204.50
Bold ready	42.00	42.12	41.00
Coromandel ready	42.25	42.62	41.25
Khandesh quality	42.25	42.62	41.25
Oil ex-mill ready*	22.00	22.25	22.00
Railway receipts*	21.87	22.00	21.75
Castorseed			
May 1959	168.12	172.75	156 00
September 1959	172.37	176.00	171.25
Ready Madras	33.12	34.12	32 62
Ready Kanpur	31.69	33.12	31.37
Oil B.S.S.†	17 62	18.31	17 62
Oil commercial†	16.75	18.31	16.69
Linseed			
May 1959	34.19	34 81	33.81
September 1959	34.87	35.50	34.81

Oil ready†	16 50	16.87	16.25
Cotton seed			
May 1959	—	138.25	135.50
September 1959	—	139.25	137.75
Niger seed	31.25	13.50	30.75
Kardi seed	24 00	24.50	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR DECLINES

(From Our Own Correspondents)

BOMBAY, 20*th May*

There was a decline in sugar prices during the week, due to stern official warning, slackness in spot demand and profit-taking at the high levels touched in the past fortnight. Arrivals of sugar by rail into the market were also quite large, being 17,810 bags, as against 13,030 bags in the previous week.

Small grain sugar fell by Rs. 2 to Rs. 120 per bag. Medium grain shed a like amount to Rs. 121-123. Large grain was quoted at Rs. 124-125, as against Rs. 125-129.

Apropos the Central Government's directive on the issue of licensing wholesale sugar dealers, the State's Minister for Civil Supplies is reported to be busy collecting statistical data and considering appropriate steps to prevent undue rise in sugar prices. Sugar traders are wondering as to how the licensing scheme of wholesale dealers will, in fact, operate. To quote one of them: "In view of the fact that there is no control over ex-mill prices in this part of the country and considering that several co-operative factories sell their sugar to many parties on tender basis at varied prices in different zones on different days, it is not clear how the margin of wholesalers will be fixed." It is, however, generally believed that both the mills and the traders will be more cautious in dealing with the next release of free market sugar which is expected to be announced before the month is out.

• • • •

HAPUR, 18*th May*

Sugar prices continued to be steady to firm during the past week and special release of 5,000 tons for U.P. failed to bring down prices, as supplies in the market were restricted and reports of delay in acceptance of tenders still persisted. The partial control on ex-factory prices of sugar in Punjab, U.P. and North Bihar has failed miserably and prices in important markets are being quoted at a premium of about Rs. 4.25 per maund over the controlled rates. The system of allotment of sugar by tender has also not benefited the consumers, as most of the allottees are earning undue profits on their allotment. There has been no control on sugar prices in other States where also factories are making huge profits and some trade interests have suggested that, as the Government has no proper distributing machinery for the commodity, the entire business of sugar may be left open to the trade and sufficient releases may be made to bring down prices. On the other hand, due to encouraging demand from consumers and trade, due to summer and marriage season, there is reported to be a hoarding tendency, prompted by reports of lower output this year and fears of scarcity in the lean months of August and September.

The Government of India has advised the State Governments to license wholesale dealers in sugar to check the rising trend and the U.P. Government is opening fair-price shops of sugar to meet that end. Most of the mills in this area have exhausted their released quota and are not quoting sugar prices. Sugar prices ruled steady in the Muzaffarnagar market where demand was reported brisk from consuming areas coupled with paucity of stocks with the mills against free sale quota. Prices further shot up and were quoted at a premium ranging from Rs. 4.25 to Rs. 4.62 a maund over the controlled price.

A regular tussle was witnessed in the Kanpur market during the past week, as following good demand prices tried to go up, while Government machinery was actively at work to curb the rising tendency by accepting more of tenders and rush supplies of sugar in the market. Spot prices have dropped from peak levels and fair-price shops are being opened.

Khandsari prices recorded further gains during the week, in sympathy with firmness in crystal sugar and brisk demand. Production was on a low ebb and the latest prices are: *kandsari desi* inferior Rs. 34 to Rs. 36, superior Rs. 37 to Rs. 38.50, Lallawali and Maheshwari Rs. 38.75 a maund.

Gur prices recorded sharp gains during the week, due to good demand for dry quality which is still reaching the market at an average of 300 maunds daily, out of the stocks retained by producers. *Kotha* dry-wet quality is also in demand and local stocks are running down and is now put at about 86,000 maunds. The Government of India has announced the price of cane for the 1959-60 season which is to remain unchanged at Re. 1.31 to Re. 1.44 per maund. The latest prices of *gur* here are: *pansera* Rs. 21 to Rs. 22 and *shakker* Rs. 22.50 per maund.

Gur prices also improved in the Muzaffarnagar market due to good outside demand. Daily arrivals averaged 4,000 to 5,000 maunds and the prices are: *Chaku* dry Rs. 22.75 to Rs. 24, *kotha* dry-wet Rs. 22.50 to Rs. 23, *ladu* Rs. 21 to Rs. 22, *pansera* Rs. 21 to Rs. 21.50, *shakker dara* Rs. 21.50 to Rs. 22, *masala* Rs. 25 to Rs. 26 per maund.

Trading in *gur* futures has not yet been sanctioned by the Government in any centre.

BLACK PEPPER DULL

(Messrs. Parekh & Co.)

BOMBAY, 20*th May*

The last three weeks proved a tame affair for Malabar black pepper, there being small fluctuations in the prices. New York continued to be out of mraket, there being pressure of sizable arrivals from Lampong. Spot in New York moved between $0.24¼ and $0.25¼. Singapore was reported to be fairly steady as far as black pepper was concerned, while white showed downward trend under pressure of arrivals from Mentok and Sarawak and for lack of foreign demand. Ready ungarbled at Cochin moved between Rs. 645 and Rs. 670, and Tellicherry from Rs. 690 to Rs. 715.

Business on the forward ring was slow and thin, as speculators preferred to await new incentives and for want of hedging orders from Bombay, where business in specific delivery remained closed. July delivery at Cochin showed a fractional fluctuation. Despite very poor inquiries from overseas, Malabar black showed remarkably steady undertone, which itself denotes that the technical position of the market is sound. The future, however, depends upon the foreign demand. Even small enquiries from either the U.S. or U.S.S.R. are likely to push up the prices, as holdings with the growers and the second-hands are limited. Black pepper at Singapore is also very steady, as arrivals from Lampong are few and far between. As a result the holders are not showing any anxiety to liquidate. The crop prospects as far as Lampong and Sarawak are concerned are reported to be not so rosy. Ready pepper at Bombay is moving between Rs. 90 and Rs. 95. New arrivals are small for want of replacing parity. Local traders are unwilling to build up stock when hedging facilities are not available in the local market.

HIGH GROWN TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 15*th May*

A total quantity of 700,000 lbs. were offered in sale No. 18, which was held on 12th May 1959. Quality showed little change from the previous sale and there were still some useful teas catalogued. The market opened to a good demand which was maintained throughout the sale. Low medium and medium teas met with keen enquiry and were fully firm—in particular fannings grades were well supported. Good mediums and high growns met with only fair demand and these sold at irregularly 10 to 20 nP below last rates. Demand for whole leaf grades continued and these were stronger and dearer. The quotations were: Low medium Re. 1.75 to Re. 1.85; medium Re. 1.90 to Rs. 2.15; good medium Rs. 2.35 to Rs. 2.65 and quality Rs. 2.40 to Rs. 3.77.

Dust Sale 'J':—Just over 400,000 lbs. were offered in this sale, which was held on 14th May 1959. A useful selection of dusts were catalogued. There was a good general demand for all descriptions, though there was some irregularity in prices and these were occasionally easier. Black grainy dusts met a keen enquiry and sold at dearer rates. C.T.C. dusts sold well but prices were slightly below last.

London Market: *Sale of 11th May* 1959.—Generally firm to dearer, except thin stalky kinds.

Sale of 12th May 1959.—No change.

Colombo Market: *Sale of 11th May* 1959.—Strong demand. Dimbula Dickoya brokens lower, following quality. UVA sorts and mediums about 15c. dearer. Lowgrowns steady.

Sale of 12th May 1959.—Liquoring dusts lower, following quality. Other offgrades strong demand at firm rates.

Calcutta Market: *Export*.—No sale.

Internal.—21,500 packages dust. Strong general demand. Orthodox up to 4 nP dearer. Powdery types sold well. Best C.T.C. 10 nP easier. Plainer varieties irregularly easier.

Export Quota.—The market has been rather quiet and inactive this week and practically no business has been registered. There is a nominal quotation in special licence at 1 nP seller with probable buyers.

Current Quota.—There are sellers at 6 nP with no buyers.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 19:—700,000 lbs. Good demand, except for highgrowns which are unwanted. Low medium and mediums fully firm. Good medium 10 to 20 nP easier."

EXPORT SALES IN NEW TEA CROP BEGIN

(From Our Own Correspondent)

CALCUTTA, 19*th May*

An export sale was held yesterday when new season's teas were offered. The offerings were Darjeelings only in 14,205 packages. As expected, there was good demand, and the keenest attention was paid to teas possessing useful flavour.

On the eve of the new season, the Tea Board announced an interim release of export quota for 1959-60 to the extent of 55 per cent. of the crop basis.

Transferable quota changed hands at 1½ nP before declining to ½ nP with no sellers at this rate. Non-transferable quota was offered at ½ nP, but buyers were prepared to respond at ¼ nP only. New season's quota did not change hands.

Although there was good general demand during the internal sales held last week, when dusts on offer amounted to 21,595 chests, conditions were irregular. In medium C.T.Cs, powdery kinds received fair attention and prices advanced, but the few liquoring C.T.Cs gave way by 10 nP. The smaller types also sagged. Orthodox teas rose by 4 nP. Legg-cut Dooars were firm at previous rates. The few Darjeelings on offer eased in an irregular trend. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.60 to Rs. 2.95, medium Assam C.T.C. Rs. 2.05 to Rs. 2.20, medium Assam grainy Re. 1.74 to Re. 1.78, and medium Dooars Re. 1.78 to Re. 1.82.

Leaf on offer amounting to 451 chests met an irregular market.

Tea shipments in 1958-59 were higher than in the previous year, and there was an increase in internal consumption too. India's internal consumption in 1958-59 is believed to have exceeded 240 million lbs., which should be the remainder of the crop after deducting exports. Hence, it is reasonable to presume that the carryover to the new season would not exceed the carryover to the 1958-59 season. Such an analysis indicates a good beginning for the 1959-60 season.

However, a rosy picture cannot be drawn for common teas. Export prospects for these teas are indeed bleak, as China and East Africa continue to expand their acreage. Advantage for East African teas is the lower cost of production than in India. Pakistan is also increasing acreage under tea. Under a Government edict, the gardens there would be statutorily obliged to increase acreage by 3 per cent. every year. The intention is to raise output to 80 million lbs. a year. Production in 1958-59 was only 57 million lbs. Up till now competition from Pakistan in foreign markets has been insignificant, but with increased production and the need to earn more foreign exchange, that country must be able to sell more abroad.

India has also to face severe competition from Ceylon in common teas. Recently, the export duty on the poor quality teas has been reduced in Ceylon, and appeals have been made to the Government of India for lowering the fiscal burden on common teas. If this is not heeded, there is the fear if adequate money can be left for replanting. Replanting is highly essential. With the increasing trend in internal consumption, it is necessary to increase production of common teas in the years to come, although for the immediate present there is no fear of production of these teas falling below demand.

Regarding quality teas, the prospects are indeed bright. Stocks in London have been falling in recent weeks, and the early auctions of the new season should witness a buoyancy in demand.

RAW JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, 19*th May*

There was moderate activity in both the jute goods and fibre markets during the week under review. Earlier in the week, there was a fair amount of covering for ready goods in the futures market. This generated speculative enthusiasm, and soon rates touched the highest levels for the week. There was profit-taking at this stage, and the week's gains could not be maintained. The report that U.S. consumption of burlap in April fell to 74.3 million yards from 82.7 million yards was not seriously taken note of in the market, in view of the buying interest shown by Russia and Argentina. At the end of March, stocks of finished goods with mills amounted to 106,800 tons, and adding production for the month of April amounting to 84,401 tons, the total supplies aggregated 191,201 tons. Stocks at the end of April being 105,000 tons, demand was for 86,201 tons which was higher than production. It was such an analysis in the market which prevented a reaction following news that production in April increased to 84,401 tons from 83,301 tons.

Fibre prices were firm. This was due to the decline in arrivals, and reports of the possibility of a lower crop in Pakistan. It has been known here that Pakistan has been taking measures for the prevention of a glut in fibre supplies. In the current season, the excess supplies in Pakistan have been really a major problem for the authorities, and even now distress reports continue coming from jute districts. It is not, therefore, surprising that the Pakistani Government has warned jute growers not to grow more jute or mesta in excess of the licensed acreage. If excess is discovered, the same will be destroyed, the grower concerned having to meet the cost of destruction. There was a report coming from Dacca that the Pakistan Government's insistence on cultivators to buy from Government godowns a bag of fertiliser at Rs. 7 before licence for jute cultivation was issued had already contributed to diminished sowing in this year. There were farmers among prospective licensees who could not afford this extra cost for output. Further, it was stated that fertilisers in summer was injurious to the plants. These factors led to firm prices in Pakistan during the week. Meanwhile, reports of satisfactory condition of the crop in India continued. The weather was dry for most part of the week, and rains were needed. The heat wave was again in evidence. There was the fear that if the present drought continued, arrivals of the new crop would be delayed. However, since mills were believed to have large quantities of the fibre in their godowns, no disturbance to the manufacturing programme would be caused.

Meanwhile, cultivators in Bihar have expressed anxiety whether last year's experience of low prices would be repeated in the new season. It was thought here that this would be improbable because of the continuation of the export policy. In the 1958-59 season, only after a glut in supplies had taken prices down to dangerously low levels and in an alarming way, the Government announced the limited export scheme. An interesting report of the week under review from Pakistan was that experiments conducted there and abroad had shown that fine quality paper could be produced from jute stocks, which are at present being disposed of as fuel.

On Tuesday last, B. twills reached the highest level of the week at Rs. 95.10, following good covering business done in ready goods in the futures market. Hessian 40" 10 oz. spurted to Rs. 41.20 from Rs. 40.65. Fair interest was shown for the inferior quality of hessian on behalf of the Argentine, and in heavy goods Australia showed renewed interest in cornsacks. On Wednesday, however, B. twills eased to Rs. 94.85 on profit-taking, and hessian 40" 10 oz. moved down to Rs. 41.05 in sympathy. At low levels, fresh business was not put through, and apart from some speculative transactions there was not much doing on Thursday. B. twills weakened to Rs. 94.50 and hessian 40" 10 oz. to Rs. 40.85. Even at this stage, foreign buying was not done, and B. twills, therefore, eased further to Rs. 94.30 on Friday and hessian 40" 10 oz. to Rs. 40.60. However, raw jute prices were fully firm, and the goods market derived support from this. Over the week-end, B. twills recovered to Rs. 94.65 and hessian 40" 10 oz. to Rs. 40.65. Yesterday, prices for the ready goods declined as the demand for such goods had been fully met. Hessian 40" 10 oz. quoted at Rs. 40.45 and B. twills at Rs. 94.35. Forward delivery goods received more attention.

Raw jute prices, after being quiet, exhibited a firm tendency, following reports of lower arrivals. The latest quotations for the outstanding 1958-59 crop, May-June delivery, are:

	Middles Rs.	*Bottoms* Rs.
Indian:		
Northern	23.00	20.00

Pucca bales 1st marks—Rs. 160.00 per bale ready.

WHEAT TRADE COMES TO A STANDSTILL

(From Our Own Correspondent)

HAPUR, 18*th May*

Steady to firm conditions continued to prevail in foodgrain prices during the past week. Following the implementation of the wheat levy scheme by the State Government, according to which 50 per cent. of wheat arrivals are to be sold to the Government at the controlled price of Rs. 13 to Rs. 15 per maund, wheat arrivals here and in all other assembling centres have nearly stopped and trading in wheat has come to a standstill. The cultivators are holding their produce and consumers are finding it difficult to meet their requirements. The Government is also not in a position to buy wheat and while the Government blames the trade for this unhappy state of affairs at current harvesting time, the traders assert that, if the Government had not imposed these restrictions, wheat prices which had recorded heavy fall and were quoted at Rs. 15 to Rs. 16 per maund would have gone down further and enabled the Government to make adequate purchases.

Wheat prices at Hapur recorded sharp gains in the past few days and wheat was not available in the open market even up to Rs. 20 per maund. Arrivals which had improved to an average of 500 to 600 maunds daily before the implementation of the wheat levy scheme, have dwindled to almost *nil* and whatever small quantity reaches the market and escapes the eyes of the Government marketing staff is purchased by consumers at fancy prices. Bullish trend in wheat prices has also affected price movements of all other grains.

Rice prices ruled quietly steady, thanks to better supply position. The State Government's procurement operations are reported to be satisfactory and latest prices here are: *basmati sela* Rs. 33 to Rs. 35, *raimunia* Rs. 26.50, *mainpuri* Rs. 21.50 and *gadda* Rs. 22.50 a maund.

After early sharp gains to touch the highest level of the week at Rs. 14.25 per maund, gram prices eased fractionally in the week-end, thanks to easy advices from Punjab and better arrivals from outside. Prices of other coarse grains also tended to fall in the week-end. The latest prevailing prices on Monday (in rupees per maund) were: gram 13.75, barley 13.25, *bejhar* 13.12, *jowar* 13 to 15, *bajra* 13.50 to 15.50 and *guwar* 15.50.

Pulses recorded a hardening trend for most part of the week, but prices ruled quietly easy in the week-end, due to fall in demand at higher levels. Peas attracted good support as grain and pulses and arrivals averaged 1,200 to 1,500 maunds daily. *Arhar* prices spurted to touch new heights in mid-session on brisk demand for *dal*, but prices in the week-end were quoted slightly lower than the peak. Arrivals averaged 500 maunds daily and total arrivals of peas and *arhar* here from the beginning of the season were: 80,000 and 13,000 maunds, as against the corresponding figures last year at 99,000 and 32,000 maunds, respectively. The latest prices and stocks of pulses here are: peas *dara* Rs. 13.25, farm Rs. 14 to Rs. 15, peas *dal* Rs. 15, *arhar* Rs. 18.12, *arhar dal* Rs. 22 to Rs. 23, *urd* Rs. 19.25, *moong* Rs. 21 to Rs. 23, *massor* Rs. 14 to Rs. 18 a maund; stocks peas 31 *khatties* and *arhar* 10 *khatties*.

The establishment of an expert committee to advise the Government of India on the food situation, particularly on the price structure of foodgrains, was suggested by a deputation of the Federation of All-India Foodgrain Dealers which met the Prime Minister at New Delhi on the 17th inst. The other suggestions put forward covered abolition or readjustment of the existing zonal system, in order to adjust prices and availability of foodgrains in different areas so as to ensure fair prices to both producers and consumers.

METALS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 19*th May*

Contrary to the trend on the London Metal Exchange and in the New York and Singapore markets, metals at Calcutta gave way during the week under review. This was due to prices here having gone up too high in recent weeks. The higher levels could not be sustained, since they were not in comparison with replacement costs.

Tin opened at Rs. 578 and sagged to Rs. 576.50. On the London Metal Exchange, spot metal hardened from £783 to £784½ per ton. In New York, the price at 11.65 cents per lb. recorded a fractional advance. Locally, stocks of tin were in abundance and consumer demand was only for meeting day-to-day needs. There was no hurry to cover needs, as note was taken of the Union Commerce and Industry Minister, Mr. L. B. Sastri's statement that no shortage in imported raw materials would be allowed to be felt by the industry, and that, if need be, the Finance Ministry would be approached for increased allotment of foreign exchange in this regard in the current licensing period ending September.

Lead closed lower at Rs. 75.50, as against the opening of Rs. 77, with Indian lead quoting at Rs. 73 and scrap at Rs. 70. On the other hand, in London, spot metal gained to £71½ from £70½ per ton.

Zinc at Rs. 98.50 disclosed a loss of Rs. 1.50 in the absence of demand, while on the L. M. E., the spot metal moved up from £76½ to £77½.

In contrast with the above trend, there was good demand for copper scrap here, with utensil scrap being quoted at Rs. 232, as against Rs. 225 a week earlier. In London, spot copper moved up from £230½ to £233½, following good demand from New York.

Notice

THE BENGAL PAPER MILL COMPANY, LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Company the following final dividends for the year ended 31st December, 1958:—

Ordinary Shares	14%
Cumulative Preference Shares ...	3½%

RECENT ECONOMIC TRENDS IN THE U.S.

(*Concluded from page 859*)

entire year 1958 was about 4 per cent. Was this sharp counter-recession increase of the appropriate amount? Or did it exceed the needs for stable growth?

Another problem faced by the System is to help achieve and maintain a proper relation between the total of demands on the capital markets and the total flow of saving. If these capital needs cannot be met out of voluntary savings and if an increase in the money supply under such circumstances would be inflationary, a monetary policy geared to sustainable growth must be restrictive and some would-be borrowers must be disappointed.

Some Lessons

It is illuminating to ponder recent history, in order to distill from it whatever lessons it may teach us. Take business capital expenditures. In the year 1955, we enjoyed an extraordinarily high level of consumer expenditures for automobiles, for housing, and for many durable goods. Business men, encouraged by these strong demands, stepped up their capital expenditures, partly because they were projecting these demands into the future. The record level of outlays for fixed capital helped sustain economic activity in 1956 and much of 1957, even though consumer spending for durables and housing had receded sharply. Then business men in many industries decided their capacity was great enough to match foreseeable demand—sometimes even greater. They cut back their expansion programmes. The consequent falling off of business capital expenditures in 1957 was clearly a major factor in the recession.

By the same token, the inventory policies that had seemed appropriate in the light of peak business activity were found by the fall of 1957 to be out of keeping with existing needs. And so there began a period of rapid inventory liquidation. Query: Is the present rate of inventory accumulation sustainable?

Many of the currently prevailing prices and wage rates also represent decisions made some time ago. We are not sure of the extent to which the inflexibility of industrial prices during the recession represented lags in the price and wage determining process. But price rises during a recession are certainly no help in fostering recovery.

Inflation An Evil

Diluting the purchasing power of the dollar does not provide permanent employment opportunities. Persistent depreciation in the value of the dollar does injure those who must live on fixed incomes. But the protection of the purchasing power of the dollar goes beyond the important consideration of equity for such individuals. For one thing, inflation diverts business energy into speculation and away from the increasing of output and of productivity. We know that hyperinflation is disruptive to the productive process; even small doses of inflation are inconsistent with well-maintained productive activity.

Per capita growth is largely dependent upon technological advances bolstered by sufficient capital to take advantage of them. It is a mistake to equate economic growth with governmental spending. We must ask ourselves: What kinds of growth are most beneficial? What kinds of governmental spending are conducive to stable growth and what kinds are detrimental?

I should observe, in passing, that G.N.P. (Gross National Product) is too limited a measure of a country's progress and of its ability to satisfy human wants to serve as the sole basis for comparing our country with other countries that operate under entirely different rules. The dollar value of G.N.P. may rise while living standards fall or while job-creating activity declines. Furthermore, material goals are only one aspect of our way of life. In the economic sphere, however, what is it we desire to be able to produce in greater quantity? Is it more missiles, or more perfume? More plant capacity, or more schools and roads, or more farm crops? More producer goods, or more consumer goods and services? In our economy, of course, the majority of these decisions are made in the market place. The role of Government, however, has been progressively widened.

Government spending will not enhance the savings required to provide the tools and other capital equipment needed. Spending dictated by pressure groups will scarcely achieve the changes needed for real and sustainable growth—in fact, it may impede such changes. Economic growth has been associated with the shifting of resources, human and material, to new industries and from less productive industries and occupations to those of higher productivity. A major example of changes in patterns of resource utilisation is the continued shift of farm workers and land to urban uses. The shifting of resources nonetheless may exact temporarily a price in unemployment. In New England, it is only in recent years that the decline of the textile industry has been offset by the emergence of the electronic and other new industries.

Bank Credit and Growth

Healthy growth of the economy can be attained only by a close gearing of bank credit expansion with that of the economy generally. Such growth requires that the central banking system provide enough but not too much money to achieve and maintain balanced growth without inflation. Recent historical research of the National Bureau of Economic Research shows that, while growth rates have fluctuated considerably in the short run, the growth process, if measured by decades, has been remarkably durable. Except for the decade containing the Great Depression, we have had appreciable growth during every decade for the last 70 years. A highly significant point brought out by this research is that growth was strong during the period of falling prices which came in the last third of the nineteenth century; and that growth was rapid during the decade of the 1920's when prices were fairly stable. This evidence suggests that price stability and rapid growth are quite compatible. The essential point is that *per capita* growth depends to a considerable extent on greater productivity. Productivity, in turn, depends on the existence of a flexible economic system, one ready to use advanced technology.

The decision-making process needs guideposts. It needs to be governed by some general view as to our ultimate goals; what we think worthwhile and are willing to strive for. National economic objectives permeate the decision-making process. As long as our citizens deal with general objectives, there is very little dispute. Everyone wants the country's standard of living to continue to rise. Prosperity and adequate job opportunities are goals that all agree upon, and so sustainable growth without inflation is high among our accepted objectives. Political and economic freedom are American hallmarks.

Wisdom and Restraint

The freedom to make private economic decisions is not only consistent with our system of economic and governmental organisation; it is one of the basic human values that we prize. But freedom can be preserved only so long as it is accompanied by wisdom and restraint. Moreover, our freedom does not include freedom from the consequences of natural economic law. Each time we elect to spend, we must figure out how the bill will be paid.

In homespun language, "There is no such thing as a free lunch." Government cannot give to some citizens what it does not take from others. A nation cannot spend more than it earns through production. The goods we enjoy have to be produced by someone's sweat and by someone's saving. Intemperate and unwise decisions could squander our resources, magnificent as they are. But, if our decisions are prudent and balanced, and if we assess correctly our nation's capacity to grow and prosper, we should enjoy the great bounty that it can produce. It would be tragic if inept financial husbandry were to injure a future that appears to be so rich in promise and in hope.

MARKET GOSSIP

(*Concluded from page 851*)

of industries and trade, the result is a mess and less progress than could be legitimately expected. Sugar, jute, coal and cotton textiles are striking examples of such retarded progress. It, therefore, requires an extraordinary degree of optimism to feel that this sorry state of affairs will not be repeated in the sphere of foodgrains production.

• • • •

It is no secret that the U.S. Government's policy of domestic price support and piling up wheat stocks, in order to assure the American farmer a good living and a fair share of the national income, has proved very costly and the Government has become greatly concerned about it. That something effective should be done about the surplus wheat is the view of the Administration. According to President Eisenhower, the wheat surplus is the "most critical situation of all." The country has now in stock two and a half times its annual consumption. By the end of next month, the U.S. would have invested no less than $3,500 million in stocking the wheat surplus, involving a recurring cost of about $250 million per annum to store this wheat, all these at the taxpayers' cost. What makes the situation more grave than it appears is the Agriculture Department's forecast of a winter wheat crop of about 1,000 million bushels, on top of a harvest of 250 million bushels of spring wheat still to be added.

Under the U.S. law, the deadline set for taking suitable legislative action either for giving a fresh lease to this "thoroughly discredited programme" or for enunciating a new policy was 15th May. In January last itself, the President had recommended that an urgent legislation be passed, but this has not been done so far. Meanwhile, the Congress passed a joint resolution on the 12th inst., giving the Secretary of Agriculture, Mr. Benson, time till 1st June to proclaim marketing quotas and national allotments for wheat out of the 1960 crop, the seeding of which will begin this autumn for winter wheat.

In the course of a message to the Congress last week, the President made a strong plea for a revision of the U.S. domestic wheat price support and crop control programme and said: "The Congress should use this added time to enact a realistic and constructive legislation that will effectively avert the impending disaster in wheat."

The main obstacle in the way of revision of the U.S. wheat policy is the opposition by some Congressmen, both Republicans and Democrats, to Mr. Benson's suggestion for a reduction in the present high support price. In fact, for some months past, the Agricultural Committees of both the Houses have considered a number of Bills on this subject, but they have not been able to arrive at a solution which is at once acceptable to both Democrats and Republicans.

While the deadlock over the question of establishing a free trade area in Western Europe continues, thanks to the fundamental differences of opinion between the six Common Market countries and the eleven others, a fresh move is afoot to set up a smaller seven-member free trade area comprising Britain, Norway, Sweden, Denmark, Switzerland, Austria and Portugal. The initiative in this matter has been taken by Sweden. Preliminary discussions on the proposal have already been held among the Government officials of these countries and the discussions are expected to be resumed early next month, followed by a Conference of Ministers before the start of the summer holiday season. It is believed by economic observers in Britain that, after the discussions are over, the proposal will be ratified by the Parliaments of the countries concerned and the area will be brought into being by the end of the year, unless, of course, negotiations on the larger 17-member European Economic Association are resumed.

Details of the proposal envisaging the formation of the proposed free trade area are not available. It is, however, gathered that the proposal provides for "loose" institutions with provisions for complaints and procedures for cases in which one or other of the participants considers itself to be unfairly damaged. With regard to tariffs, two alternative solutions are suggested. First, the member-countries can reduce tariffs by equal annual instalments of 20 per cent. over five years. Secondly, tariffs can be eliminated altogether from the start over a wide field, permitting each country to dismantle the remaining tariffs over a number of years; the vulnerable industries may be afforded protection during the transitional period by allowing the members a certain percentage of total imports on which the reduction of tariffs would proceed at a reasonably leisurely rate.

If the aforesaid free trade area comes into effect, there will be two customs blocs in Western Europe—one comprising the six Common Market nations already functioning and the other consisting, as already said, of seven members. The number of W. European countries left out of the two blocs will thus be four. They are Greece, Iceland, Ireland and Turkey.

JET SILENCERS

A "hush-hush house" of a new Swedish design that reduces the 125 decibel roar of the Caravelle jet engines to a "whisper" of some 30 decibels has been taken into use by the Scandinavian Airlines System at the Stockholm-Bromma airport. Representing a novel departure in anti-noise hangar design, the house is a steel and concrete structure enclosing the tail part of the aircraft whose engines are to be test-run for overhaul. Two 20-ton sliding gates with pneumatic rubber lining provide an effective seal round the fuselage. The silencer installation consists of intake and exhaust silencers and extra silencers for the secondary cooling air. They were designed by the Stockholm firm Rostfria Andersson, the stainless steel product specialists belonging to the Johnson group of industries, on the basis of acoustic principles laid down by the Gothenburg engineer Stig Ingemansson. All silencers are of screw type except the low-frequency stage of the exhaust silencer which has been designed as a double-walled resonator. The "hush-hush house" has cost Kr. 750,000, about $145,000. The present type is suitable for all aircraft with the jet engines mounted on the fuselage. The new device is said to have attracted great interest among experts all over the world.

OIL-RESISTANT GLOVES

A new range of industrial gloves and gauntlets made from Hycar, a nitrile rubber highly resistant to oils, is being produced by the Dunlop Rubber Company, Ltd., General Rubber Goods Division, Cambridge Street, Manchester. These gloves are especially resistant to petroleum products, vegetable and animal fats, oils, alcohols, glycols, and many common solvents. They have many advantages over other types normally used for resisting solvents, in that they give longer service, greater flexibility, and do not harden after use. The Hycar gloves and gauntlets are made in one weight only, in sizes 9, 10 and 11.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2514 BOMBAY, 30th MAY 1959 PRICE: Rs. 2

EXPORT-IMPORT BANK CREDIT

A LITTLE discussed problem is the non-utilisation of the credit given by the U.S. Government through its Export-Import Bank. It is about a year and half since India was allotted a credit of $150 million. Although details are not available, it is well known that not even 7 per cent. of this credit has been utilised so far. It was left to the Government of India to decide how this amount should be used. It reserved two-thirds or $100 million for the public sector, leaving the balance—$50 million—for the private sector. According to one report, the public sector has absorbed only $5 million and the private sector even less. The Export-Import Bank proposes to send one of its representatives, Mr. Sidney Sherwood, to New Delhi to find out the reasons for this slow use of its credit and to facilitate speedier absorption. Meanwhile, the inability of India to avail itself of this facility, even in the face of an acute scarcity of foreign exchange, has been quoted against it by some of the U.S. politicians who are opposed to stepping up foreign aid. The problem certainly deserves to be carefully examined and the visit of Mr. Sherwood will be helpful for this purpose.

The extremely slow rate of absorption of Export-Import Bank credit is in striking contrast to the rapidity with which the loan given by the Development Loan Fund (D.L.F.) has been exhausted. There are quite a few reasons for this phenomenon. The D.L.F. loan is expendable not only in the U.S. but anywhere else in the world, whereas the Export-Import Bank credit can be spent only in the U.S. In effect, therefore, the dollar obtained through the D.L.F. is convertible, but not the dollar through the Ex-Imp Bank. And, as readers are aware, the dollar buys more outside the U.S. than inside. Here is the chief explanation for the phenomenon. It is true that, by special arrangements with Conference Lines, the shipping freight rates from America to India have been reduced. There is also considerable force in the contention that U.S. plant and machinery are superior in quality to those of Western Europe and elsewhere, and that, therefore, their ultimate price is quite competitive. Nevertheless, the fact remains that neither the public sector nor the private sector has shown any great enthusiasm for drawing on the Ex-Imp Bank credit. The coal industry in the private sector, for instance, has frankly expressed its inability to avail itself of this credit facility for the very reason that coal machinery in the U.S. is costlier than elsewhere.

Another reason for the thoroughly unsatisfactory progress in the utilisation of the Ex-Imp Bank credit is the alleged red-tapism in the public sector. It is pointed out that the machinery and procedure for processing applications for loans are cumbersome and time-consuming. The India Supply Mission is said to be slow in these matters. The Secretariat in New Delhi itself is no better. Further, purchases for the public sector are to be made on the basis of world market prices ascertained through global tenders. It should, however, be possible to remove this handicap through proper co-ordination of the activities of the Ministries concerned. Instead of trying to buy at the lowest world price, the Government may decide to buy at the lowest price in the U.S. consistent with quality and schedule of delivery dates. After all, the Ex-Imp Bank loans are for a long period of 15 years and the additional cost involved may be worked off during this period by more efficient management of the enterprises financed by them. If the problem is looked at from the point of view of the necessity for expeditious implementation of development projects, so that more and more employment opportunities can be created for the swelling ranks of unemployed, the authorities might not be deterred by the high cost of American machinery. Again, the public sector is buying plant and machinery from several parts of the world. It can equalise the cost of American equipments by pooling them with those bought elsewhere in the same way as the low-cost Indian steel is pooled with the high cost imported steel. This is largely a question of book adjustment, for which the projects under the public sector are eminently suitable. Too much preoccupation with cost is not good. The country has to get on with the job of development and solving the problem of unemployment.

There are four principal causes for the lack of interest among the private sector in the Ex-Imp Bank credit. First, the high cost of American machinery is, as already stated, a greater impediment to this sector than to the public sector. Secondly, the Central Government has been refusing to give the private sector the benefit of long-term credit it obtains from the Ex-Imp Bank. Thirdly, a large number of industries in the private sector had rushed to cover their requirements of foreign exchange by booking their orders for equipment in the first two years of the second Plan and are, therefore, not in need of the facility arranged with the Ex-Imp Bank. And, fourthly, the Government is reluctant to permit the use of this facility for projects for which American machinery are suitable even pricewise but which either do not enjoy a high priority in the Plan or are not included at all in it.

Now, how are these difficulties to be overcome? It is not desirable to compel an industrialist to buy American machinery at a cost higher than the world price. He can, however, be induced to go in for them by providing some incentives. An incentive which the Government could surely offer without any loss to itself is the benefit of 15-year credit. At present, the Government is insisting that an industrialist, who wishes to buy American machinery under the Ex-Imp Bank credit, should pay cash down, so that it can strengthen the rupee resources at its command. This insistence is not in keeping with the spirit of accommodation given by the Ex-Imp Bank, for the Government is trying to convert the facility obtained from the foreign bank into ready cash at home. It wants to have the cake and eat it at the same time. The industrialists are, therefore, justified in asking the Government to permit the use of Ex-Imp Bank credit more or less on the same terms at which it receives it. It is pertinent to note, in this connection, that, as the Bank has allotted to the Indian Government a lump sum credit, it will not entertain applications for credit from individual units, at any rate not so long as this line of credit is not used up. Accordingly, an industrialist is perforce compelled to get Ex-Imp Bank facility only through the Government of India. The latter, however, is entitled to have adequate safeguards for any possible failure of the industrialist to honour his commitments when they fall due.

The desirability or otherwise of extending a direct incentive to industrialists to buy American machinery with the help of Ex-Imp Bank loan may also be carefully considered. If it is in the national interest to see an industry established at an early date, some form of rebate or subsidy may be allowed to the *entrepreneur* who comes forward to put up that industry with costly American equipment. There is a precedence in support of this suggestion in the distribution of foodgrains obtained from the U.S. under P.L. 480. There is, of course, a fundamental difference between Ex-Imp Bank loan and P.L. 480, in that, while the former is a hard loan, repayable in dollars and carrying a high rate of interest of no less than 5 per cent., the latter is a soft loan, repayable in rupees, with a certain element of subsidy. It can also be argued that the Government cannot be expected to give machinery that high rating which it accords to food. But, at the same time, it must not be forgotten that provision of employment is no less important than supplying foodgrains and that, since the Government is already having the benefit of large counterpart funds, it need not mind transferring a part of it for subsidising, in a suitable form, the import of high-priced U.S. machinery at least for those industries which are a must.

There are undoubtedly good grounds for not allowing the Ex-Imp Bank credit facility for establishing industries not included in the Plan or which are not essential. The Ex-Imp Bank credit is by no means cheap and there is no point in adding to the external debt of India for creating production facilities which the country can do without or wait for better times. Nevertheless, it would be better if each project brought to the Government for permission were examined on its merit, instead of being summarily dismissed. The primary problem before the country is provision of *gainful* employment and, if some of the projects can help reduce this problem, there is no reason why they should not be encouraged to utilise the Ex-Imp Bank credit. If this is not done and if, at the same time, the projects included in the Plan do not fructify, the employment opportunities, which are already below the original target in the Plan, will shrink further. It would, therefore, be a good thing to have a certain degree of elasticity in these matters.

Experience during the past one year clearly shows that it would be easier and cheaper for India if the U.S. credit were in dollars that could be spent anywhere in the world. It must, however, be recognised at the same time that the U.S. cannot go on doing this without any limit. Already its gold reserves are declining at a pace which must be causing its authorities some concern. A *via media* must be found, whereby Ex-Imp Bank credits could be put to profitable use through a third country, which needs dollars to be spent in the U.S. and could supply India's requirements of industrial equipment. The feasibility of such a triangular arrangement may be examined by the authorities in India and the United States.

MARKET REPORTS	919-921

TAKE WORKERS INTO CONFIDENCE

NEVER in the industrial history of the country was the need for enlisting the support and co-operation of workers in the operation of industries more urgent than it is today. The urgency arises not only from the immediate national need for maintaining a continuous and rising flow of output but also from the longer-term objective of preserving free enterprise. For, at a time when even the basic philosophy of free enterprise is frowned upon and its citadels are facing a mighty political assault, if the managements of private industry fail to carry workers with them by trying all reasonable methods consistent with sound economic principles, their future is certainly bleak. How can this be done? The answer is obviously simple in theory, but not so its actual translation into practice, because it requires a degree of imagination and foresight and a readiness to break away from outmoded traditions. It demands from the employers a willingness to take workers into confidence, to impress upon them that they have a stake in the organisation they work and that their interests are not separable from those of investors. Even if they are made to realise that their future is closely tied up with the economic soundness of the enterprise concerned, they will feel that they have a stake in it and be prepared to defend it only if they are sure that they will not only get due rewards for their labour, but, as partners in production, will also be allowed a share in the profits. If employers in this country and those who cherish the value of freedom succeed in creating among the workers a sense of partnership that will be lacking in State-owned enterprises, they will certainly have built up the most effective defence for free enterprise. In fact, in countries where free enterprise is most firmly established, such as the U.S., the U.K. and West Germany, the workers are not only its strongest bulwark against communist attack, but they are, as one of the principal beneficiaries, its most enthusiastic supporters.

There are many ways for creating an abiding interest among the workers in their concerns and thereby get their co-operation and support. The two that come readily to the mind are: first, workers should be enabled to have an insight into the working of the undertaking, so that the mystery surrounding its operations is cleared, and, second, they should be associated with management, albeit only in regard to those matters in which their interests are directly involved. While some attention is being devoted to the latter, the former seems to be relatively neglected.

Employers should not find any difficulty in supplying workers data about the working of their concerns. They are, of course, not expected to reveal all information, especially those which are liable to be taken advantage of by competitors in the field. They are not, for instance, expected to divulge the position regarding sales, orders and costs, or about their plans for expansion until they are finalised, or the results of the research they are conducting. But there is a large mass of information which involves no such risks and which can be safely released. In fact, there are some companies even in this country, reputed for cordial labour-management relations, which give such information to workers. The Tata Iron and Steel Company, Jamshedpur, and the Indian Aluminium Company, Calcutta, are two instances in point. These two undertakings were selected for case studies in labour-management relations by the Union Labour Ministry. In the Indian Aluminium Company, there is a system of information sharing. A fair amount of information is passed across to the Union and the employees in formal negotiating sessions and joint committee meetings through announcement of a routine nature and by informal exchanges. The data on profits, sales orders, costs, etc., are, however, not supplied to the Union. In the T.I.S.Co., the Chairman issues an annual report to the workers which reviews the Company's working every year and explains its prospects and future plans of expansion, modernisation, etc. If any worker is interested, he can even obtain a copy of the balance-sheet and annual report given to the shareholders. This attitude of the management has certainly had beneficial results and the conclusion of the case study is that "labour-management consultation and co-operation are working to the advantage of both parties and have yielded dividends to both. Labour has been assured job security and a fair deal in regard to remuneration and conditions of work. High morale among the employees and industrial peace have been the main gains of management."

The good that such simple things can do to employer-employee relations has not yet been sufficiently realised by the vast majority of employers in this country. The recent experience in this regard of the Kannan Devan Planters' Association of Kerala should be an eye-opener to all. According to Mr. J. B. Soutar, Chairman of the Association, the experiment of releasing information on the finances of companies has yielded encouraging results. Characterising this as a development of great promise, he says:

"Until quite recently, we were very chary about releasing balance-sheets, profit and loss accounts, and details of the financial background of companies. This policy has now been abandoned, and I think that the benefit has been immeasurable. The Association's representatives on Government committees and other bodies concerned with negotiations on labour matters are in a position to produce and to argue from a tremendous amount of factual data. A case in point was the Committee which the Kerala State Government set up to examine the wage structure on plantations and to endeavour to work out a long-term settlement of the bonus problem. Companies were asked to answer a comprehensive questionnaire and the response was very gratifying. It is admitted that the Union representatives found it embarrassing to have to try to make an appreciation of the capacity of the industry to pay from the mass of information which was presented to them. . . ."

Having thus realised the value of this experiment, Mr. Soutar says that his Association would continue this process of giving information to workers and do its utmost to clear the atmosphere of mystery about its operations which cause misunderstanding and suspicion. Emphasising the need for supplying such information, he averred:

"I would go so far as to say that our future depends on the extent to which we can convince public opinion in the widest sense of the worth of our enterprise to the community. If we cannot show to our own workers that we are giving them a square deal, there is little hope for our activities in any larger sphere."

We are, indeed, delighted to find that a leading planter and a large employer like Mr. Soutar has so frankly recognised the point of view which this journal has been urging all along. We have no doubt that soon more employers will concur with this stand. There is, therefore, no reason for concern about the warning of Mr. Nanda that the Government may resort to compulsion, if need be, to ensure that a certain minimum information about the working of an industry was made available to workers. The employers should readily volunteer to comply with this requirement and make it unnecessary for the Government to exercise any compulsion. Mr. Nanda was certainly right in maintaining that workers and the community had a right to know how any unit in an industry was working. It is gratifying to hear from him that he was prepared to make this requirement obligatory on undertakings in the public sector also.

FORESTRY

FORESTRY and silviculture have a vital role to play in an expanding economy. Forests are the chief source of timber, which subserve the requirements of a wide range of industries, constructional activity, communications and defence. Besides, they provide grazing and fodder. They also serve to prevent soil erosion. Thus, every advance in economic growth and industrialisation will make increasing demand for forest resources. It may be noted that the continued industrial wood requirements of Europe and North America rose from 351 million to 551 million cubic metres, or by 57 per cent., between 1913 and 1956. World industrial consumption of wood during the post-war years went up far more rapidly, that is, from 589 million to 917 million cubic metres between 1946 and 1956. No less important is the fact that economically advanced countries have attained the highest *per capita* consumption of wood. India's *per capita* consumption of round wood is as low as 1.4 c.ft., as compared with 58 c.ft. in the U.S.A. Similarly, the *per capita* consumption of pulp products in India is only 1.6 lb., as against 78 lbs. in the U.K. Now on the threshold of economic development, India can ill-afford to overlook the potential assets lying embedded in its forests and the need for following a scientific policy of afforestation and preservation. Because of past neglect and thoughtless felling of trees, there has been considerable depletion of India's forests and what is left now is by no means adequate. According to official data, India's forests cover 281,000 sq. miles or 22 per cent. of the total land surface. In other words, the *per capita* forest area in India is no more than 0.2 hectares (1 hectare=about 2.5 acres), which compares unfavourably with 3.5 hectares in the U.S.S.R. and 1.8 hectares in the U.S.A. The actual position in India may be worse than that indicated by the figure mentioned here, because, in several cases, the density of forests in land shown in the official records is very poor indeed and the data published do not reflect the vandalism committed in several parts of the country following abolition of *zamindaris, jagirdaris* and *inamdaris*.

When viewed against this background, it seems appropriate that the Central Board of Forestry, which met at Pachmarhi, Madhya Pradesh, a fortnight back (from the 14th to the 16th inst.), should have given serious thought to outlining an integrated policy for the preservation and development of forestry in the country. Although about a fifth of India's geographical area is under forests, they are unevenly distributed. Further, their productivity is low. It is estimated that productivity of Indian forests per acre per annum is 2.5 c.ft., whereas it is 57 c.ft. in France, 37 in Japan and 18 in the U.S. These facts and figures are sufficient to indicate the imperative need for accelerating the tempo of development of forestry in India—both intensively and extensively. Dr. Punjabrao Deshmukh, Union Minister for Agriculture, who inaugurated the aforesaid meeting, rightly called for efforts to increase the acreage under forests to 33.3 per cent. of the total land area. This was no more than a reiteration of the targets laid down by the Forest Policy Resolution in 1952. In the last six or seven years, however, pretty little has been done to realise this object, notwithstanding the fanfare with which *vanamahotsava* was launched. This serious failure on the part of the much boosted public sector is an instance of tall talk and poor achievement.

Undaunted by this failure, the Central Board of Forestry has chalked out a very ambitious scheme to be included in the third Plan. It has suggested a Plan outlay of Rs. 116.9 crores for forestry, as compared with Rs. 9.6 crores in the first Plan and Rs. 27 crores in the second Plan. Out of this, a sum of Rs. 50 crores is proposed to be set apart for the development of farm forestry in dry zone areas, with a view to improving wastelands. The scheme is to be worked out with the aid of community development personnel. Another provision of Rs. 3 crores is made for "nature conservation." The meeting decided that a trained forest ranger should be appointed in each national extension block for implementing the forest extension programme. It is estimated that as many as 5,000 officers, with specialised training for at least one year, will be required for this purpose. Another decision taken was that deforestation should be strictly regulated, by evoking special legislation if necessary. India already has three research stations for doing regional research on forests. The meeting decided to establish a fourth one at Madhya Pradesh. This decision is to be welcomed, since there is enormous scope for research in India on the question of preserving the health of forests, logging and extraction of woods, conservation and seasoning of timber, and discovering new ways of improving the utility of timber.

A sensible forest policy should provide for a judicious exploitation of the matured trees and for replantation. Unlike mineral wealth, forest wealth constitutes renewable assets. It can be inexhaustible, provided "large-scale compensatory plantation and regeneration operations are continuously in force to replace the trees that are removed." Again, while forests should be protected against indiscriminate felling, it would be a waste of land to allow our forests to be covered with inferior species of trees of little or no use. Equally wasteful it would be not to make use of the trees, which, if allowed to stand for a much longer time than necessary, deteriorate in quality. All these points have to be borne in mind in evolving and implementing conservation methods.

Forestry is not a simple science and art. The fact that it is a State subject makes the problems more complicated for this country. In view of this and also of the great importance of forests to the economy of the country, it would be desirable to have a Forestry Commission, as suggested by Mr. J. Banerji, I.F.S., in an article to the *Statesman* last week. Such a Commission could be entrusted with the task of seeing that the plans for the development of forests are effectively implemented all over the country.

RIPPLES IN THE BULL MARKET

BANKING AND MONEY—MORE CONTROL ON SUGAR

THURSDAY, 5 P.M.

THERE has been further evidence of ripples in the bull market in shares. There are minuses and pluses in the list, but the former dominate the latter. The bulls are trying to keep the ring under their control by pushing up the popular counters, but they seem to be meeting with stiff resistance. The "growth" shares of companies operating in the field of engineering, chemicals, automobiles and road transport are still retreating, though slowly. Cotton textile scrips have been most prominent this week on exaggerated reports of the prospects for the mill industry. Stocks of cotton manufacturers have, of course, fallen to more manageable levels, but this outcome is the result of lower production and distress selling by mills. It does not necessarily mean that mill profits, in general, have improved to such an extent as to enable the companies to declare dividends that will give a yield of 5.5 to 6 per cent. per annum at the current market value of their shares. First class mills like Bombay Dyeing, Century and Standard may be doing better than the rest. It is, however, doubtful whether even these would be able to pay the aforesaid dividends, having regard to the new system of company taxation. Operators are proceeding on the assumption that, as the stocks of cloth have been worked down, the mills will soon be able to raise their selling prices and improve their profit margins. This is quite possible, but, perhaps, not to the extent expected by them. Higher prices for cloth, let it be noted, will attract consumer resistance. An important point that is missed by the operators in their calculation is the fact that Indian cotton, as is the case with Indian labour, is no longer cheap.

MARKET GOSSIP

With discussions on the third Five-year Plan tending to increase, the share markets are in for a period of psychological jitters. Last week, there was a report that a calculation of resources for the next Plan showed that additional taxation to the tune of Rs. 2,000 crores would be required. Today, there are reports that a large number of papers on the various aspects of the Plan will be read and discussed at the meeting of the A-I.C.C. Planning Sub-Committee at Ooty from 30th May to 5th June. It would be advisable for one to be prepared for some shocking reports on the implications of socialism to savings and wealth.

* * * *

At a time when frequent demands are being made by a section of politicians for nationalisation of banking, Mr. C. D. Deshmukh, a former Finance Minister and Governor of the Reserve Bank of India, did well in cautioning the country against conceding them. At a Press conference in New Delhi on the 26th inst., he observed that nationalisation of banks would not yield any additional resources for financing the third Plan. He reiterated the well-known fact that the Reserve Bank possessed enough powers of control and regulation to enable it to take care of the monetary sector and to tune it to meet the requirements of the development plans. He apprehended the danger of an inexperienced Government not using the nationalised institutions in an appropriate manner. Even if the extent of interference by the Government were not large, there might be, he thought, temptations for using these institutions for providing jobs to the "favourites" of the party in power. Surely, Mr. Deshmukh should know what he is talking about, having nationalised life insurance and fathered the L.I.C. There is not an iota of exaggeration in what he said. How we wish this wisdom had dawned on him before making life insurance a monolithic monopoly of the State!

* * * *

The declaration of "high" rates of dividends by the leading Indian banks, ranging from 14 per cent. to 21 per cent., has caught the eyes of those in high circles and is being quoted as an argument in favour of nationalisation of banks, though, on many occasions Ministers of the Government of India have ruled out the possibility and practicability of such a step. It is not, however, easily realised that these high rates of dividends are paid on a low capital base. Even those who ought to know better and are professors of economics have used this false argument in their case for nationalisation of banks. Anyway, the scope for such criticisms could have been minimised, if banks had taken steps to increase their capital by issuing right shares, so that their "own" funds could bear a more reasonable relationship with their deposits which have grown by more than 50 per cent. within the last two years alone. A perusal of the Reserve Bank's latest report on the *Trend and Progress of Banking* shows that the "own" funds (paid-up capital and reserves) of all Scheduled banks have risen by no more than Rs. 8.1 crores, as against an increase of Rs. 218.6 crores in their net deposits, thus bringing down their ratio to deposits from 6.2 per cent. at the end of 1956 to 4.8 per cent. About three-fourths of this expansion in "own" funds was accounted for by a rise of Rs. 5.7 crores in reserves.

The ratio of "own" funds to deposits of Indian banks is not far higher than that of banks in the U.K. till recently. In the case of most British banks, at the end of 1958, it was 2 to 3 per cent. which was lower than it had ever been before. In order to bring the "own" funds more closely to deposits, leading British banks have lately been raising their capital by a rights issue, accompanied, in some cases, by a bonus issue. The lead in this direction was given by the Midland Bank which, in February last, made a rights issue of one share for every eight held at 40s. per share, that is at a premium of 20s. per share. This was accompanied by a free scrip issue in the ratio of 1 : 3, both these issues raising the paid-up capital from £16.16 million to £23.56 million. This has raised the ratio of the Bank's capital and reserves from 2.1 to 2.4 per cent. This was followed by Lloyds Bank in March by a rights issue amounting to £13.05 million in the ratio of 1:4, thus lifting the ratio of "own" funds to gross deposits from 3.6 per cent. to 4.6 per cent. The latest to fall in line among the "Big Seven" is the District Bank which proposes to raise new capital by a rights issue. This leaves out only the Westminster Bank (among the "Big Seven") in the field. Among the bumper issues to be made so far is one by Barclays Bank, which has announced a one-for-five rights issue amounting to £11.12 million. This will be followed by a bonus issue also in the ratio of 1:5, bringing down the published reserves from £21 million to £19.89 million. These two issues will increase the issued capital of Barclays from £28.58 million to £40.81 million, thus making the Bank the most heavily capitalised one in the U.K. The increased capital along with the reserves will bear a ratio of 4.06 per cent. to deposits, as against 3.32 per cent. before.

* * * *

During the past one year, banks in the U.K. have come to enjoy freedom from many of the controls which had been imposed from time to time in the last two decades. They are, however, not completely free from official direction as to their lending operations. The powers of control are "enshrined" in the three Acts of Parliament, namely, the Bank of England Act, the Borrowing (Control and Guarantees) Act and the Exchange Control Act. The question whether the still existing restraints on the freedom of bankers are necessary even in the middle of the twentieth century was discussed by Lord Monckton, Chairman of the Midland Bank, in the course of his presidential address to the Institute of Bankers, London, last week. "As bankers," he said, "we are naturally reluctant to admit the necessity of official regulation, direction or request in the conduct of our business. If, however, we look at the matter objectively, I think, we shall find less reason to resent restrictions upon our freedom that spring from the accepted needs of current circumstances."

The financial needs and transactions of the Government are far larger than before the war, as also relatively to those of the private sector. Consequently, control on banks on the same pattern as in pre-war days is inadequate. Lord Monckton, therefore, said that banks might have to become accustomed to restraints upon their freedom of operation which would have been bitterly resented by their forebears. He did not, however, express precisely what form of control was desirable. Nevertheless, he drew the attention of the Radcliffe Committee, which is yet to submit its report, to four problems that confront the bankers in their operations. They are: (1) the incidental consequence of severe direct credit controls in restricting the scope for healthy competition and enterprise among the banks; (2) the reaction of those affected by the control to find still unregulated means of obtaining the goods and services denied to them and the possibility of bank credit restriction being offset by a diversion of financing arrangements into channels of supply not readily susceptible to control; (3) difficulty of integrating or harmonising the various controls and organs of control; and (4) some of the instruments of monetary regulation in the hands of public departments which are subject to political control. In making a reference to the last problem, Lord Monckton did not impute a low standard of economic objectivity in administering these controls. What he meant was that the administration of controls was always suspect, unless its objectivity could be made manifest.

* * * *

The recent decision of the major commercial banks in New York to raise their prime rate on business loans (for four to six months) from 4 per cent. to 4½ per cent. has given rise to speculation in the U.S. whether the Federal Reserve discount rates also would be stepped up before long. The increase in prime rate was preceded by the decision of major commercial banks in Chicago to increase their interest rates for savings bank deposits from 2 per cent.—a rate which they have been paying since the middle of 1956—to 3 per cent., the legal maximum permitted by the Federal Reserve Board for national banks. The higher rate on time deposits will be effective from 1st July next.

The spurt in prime lending rate of U.S. commercial banks has so far been delayed by the slackness in demand for commercial bank credit, but the recent pressure on demand for credit has forced banks to raise their lending rates. The hardening of interest rates on Government securities, with short-term bills now selling at well over 3 per cent. and longer maturities at more than 4 per cent., has added to the pressure on New York banks. The banks have also made a move to get the Federal Reserve Board's approval for an increase in the present ceiling of 3 per cent. on the foreign time deposits, a rate which is considered unrealistic as compared with the yields on other similar investments. In the wake of the rise in prime rate, the other interest rates have also hardened.

An increase in Federal Reserve discount rates is considered most likely, because of the wide gap between the current Federal discount rate of 3 per cent. and the prime rate. This expectation is based on past experience. For the Federal Reserve Board in Washington had not in the past delayed for long its authorisation to member-banks to step up their discount rates when there was such a wide margin between the discount rates and the open market rates. An increase to the peak level of 3½ per cent. in the discount rate is not ruled out and is, in fact, considered to be consistent with the Reserve Board's policy of tightening credit gradually as the recovery in the economy is gaining momentum. The last occasion when the Federal Reserve discount rates were revised was in March last; they were raised from 2½ per cent. to 3 per cent. There was a similar rise in November 1958 from 2 per cent. Another reason for the possibility of an upward revision in interest rates in the U.S. is that it will check the current flow of gold from the U.S., as foreign banks will be more inclined to keep their funds in the form of cash, instead of purchasing gold.

The upward trend in interest rates is not confined to the U.S. alone. In Canada, the Bank rate has just touched a new peak of 5.30 per cent., which compares with the all-time low of 1.12 per cent. reached only ten months ago—in August 1958. Though the changes in Canadian Bank rate are not comparable with those in other countries—it is automatically fixed every week at ¼ per cent. above the 91-day Treasury Bill rate—they provide a true guide to the underlying conditions in the money market. The interest rates in Canada have been generally following the trend in the U.S. Nevertheless, the Treasury Bill rates in Canada are now nearly 2 per cent. higher than those in the U.S.

* * * *

About ten months ago—*Commerce* dated 2nd August 1958—we observed in these columns that it would not be surprising if sugar became a commodity subject to full-fledged control, from the producer to the consumer. Unfortunately, it looks as though this forecast will prove correct, for the Central Government has taken one more firm step towards the mire of controls. Just yesterday, it announced its decision to requisition the entire sugar production of mills and to allocate the same directly, according to the needs of the situation. The reserved quota for direct allocation hitherto was only 25 per cent. of the season's output. This means that the freedom for the mills to get higher prices by fair or foul means is practically gone. They cannot be masters of their stocks.

The Government announced two other decisions:

1. To maintain the ex-factory prices of North Indian sugar at the existing levels, namely, Rs. 36 per maund for U.P. and North Bihar mills and Rs. 36.50 for mills in the Punjab, till a fresh review is made after the Tariff Commission submits its report; and

2. to release for internal sale 50 per cent. of the frozen export quota of 50,000 tons, confining the total exports to the remaining 25,000 tons, of which 7,500 tons have already been exported; this small export quota is considered necessary for maintaining existing contacts with overseas markets.

The aforesaid decisions, coming as they do close on the heels of Sugar Dealers Licensing Orders issued by the State Governments, the large release of 190,000 tons for sale in the free market, and the Union Food Minister's stern warning against any unwarranted rise in prices given when the Chairman of the Indian Sugar Mills Association met him at New Delhi on Monday this week, signify a fresh bid on the part of the authorities to ensure supplies of sugar to consumers at a "reasonable" price. It is true that, during the last few days, sugar prices have fallen perceptibly from the dizzy heights touched a fortnight ago. Small grain sugar is now quoted in Bombay City at Rs. 113.50—114.50 per bag, as against Rs. 122 on the 13th inst. Similarly, medium and large grains are lower at Rs. 115—118 and Rs. 119—124, as against Rs. 123—124 and Rs. 125—129, respectively.

Two pertinent questions arise now: Will the downward trend in sugar prices persist in the coming weeks? Will the steps which have so far been taken enable the consumer to get sugar at fair prices? The supply position of sugar, as is explained at some length on page 904 of this issue, is rather tight. Excluding the frozen export stocks of 25,000 tons and the latest "free" release of 190,000 tons, the stocks currently held with mills aggregate no more than 943,000 tons. The crushing operations have come to an end and there are still full five months left for the ensuing season to begin. On the basis of the trend of despatches so far, the closing stocks of sugar with mills at the end of the current season (that is, 31st October 1959) will be very negligible. One estimate places the total of these stocks at only 75,000 tons, representing less than a fortnight's consumption requirements. This is undoubtedly a very uncomfortable position for the buyers.

Now to come to the next question, namely, whether the measures so far taken are adequate to prevent consumers being squeezed in the coming months. It must be noted that, while the sugar mills have been put in a straight-jacket and the scope for their taking a premium over the controlled price has been practically eliminated, there is no price control on wholesale merchants. The busy season is, of course, over and the slack season is well on the way. Accordingly, in the monsoon months, there may not be any appreciable spurt in prices. No merchant would like to hoard during the wet season. But, after the rains are over and the festival months begin, there is every possibility of prices looking up again. That will be the trying period for the consumer. The four months September to December will be the most difficult period for him and the room for exploitation by wholesalers and retailers will be fairly large, if not enormous. It remains to be seen what the Government will do when such a situation arises.

SHARE MARKET EASY

PRICES FALL FURTHER

(From Our Own Correspondents)

BOMBAY, *28th May*

BARRING a few select textile, engineering and miscellaneous scrips which were well supported, the share market ruled easy. Transactions put through were on a reduced scale, with values moving generally downward. For operators were hesitant to enter into fresh commitments either way, as they preferred to await the results of the seven-day seminar commencing at Ootacamund on the 30th inst., under the auspices of the All-India Congress Committee. At this seminar, it is said, several papers on various aspects of planning will be read, the contributors of papers including, among others, Mr. U. N. Dhebar, Dr. V. K. R. V. Rao, Mr. C. D. Deshmukh, Mr. G. L. Nanda, Dr. B. N. Ganguli and Mr. C. Subramaniam. Although no final decisions may be taken on the views expressed by these persons, market circles feel that the trend of discussion may form the basis for formulating the third Five-year Plan.

Meanwhile, several rumours were suddenly put into circulation yesterday, when there was heavy liquidation and bear-selling. One rumour had it that dividends would be controlled. Another claimed that steel retention prices would be reduced. A third said that the Government might not agree to the T.I.S.Co's proposal to issue new ordinary shares at par. Equity values, as a consequence, suffered a setback. Some select textile scrips, however, managed to hold their heads high, thanks to the announcement of further concessions in the textile export promotion scheme. A few engineering and miscellaneous shares were also fully steady on hopes of better working results.

Tata Steel Ordinaries opened the week at Rs. 192.50, as against Rs. 192.25, and receded to Rs. 189.75 on Monday. After recovering to Rs. 193.50 in the subsequent two sessions, they came down to Rs. 188.50 today before finishing at Rs. 190.25. The net loss over the week was Rs. 2. The new shares declined by a like amount to Rs. 188. Indian Irons retreated in the course of the week from Rs. 24.36 to Rs. 24.24.

Among textiles, Khataus encountered selling and fell by Rs. 6.25 to Rs. 213.75. Finlays dropped Rs. 4 to Rs. 266. Central Indias and Simplex shed Rs. 3 each to Rs. 100 and Rs. 184, respectively. Mysores lost Rs. 2.50 to Rs. 82.50, Morarjis Re. 1.50 to Rs. 257.50 and Svadeshis 75 nP to Rs. 227.25. Gokaks were quiet at Rs. 149. Podars, however, spurted by Rs. 13 to Rs. 176 on excellent buying support induced by the decision of the directors to maintain the dividend for the year 1958 at Rs. 10 *plus* a special bonus of Rs. 8 per ordinary share. Centurys were also well favoured, the quotation rising by Rs. 7 to Rs. 544. Standards put on Rs. 4 to Rs. 503 and Shree Niwas Rs. 2 to Rs. 175. Bombay Dyeings hardened from Rs. 63 last week-end to Rs. 64.70 yesterday. They opened at Rs. 63.60 today and, after easing to Rs. 63.30, recovered to close at Rs. 64.40. The net gain over the week was Re. 1.40. Kohinoors gathered Re. 1.25 to Rs. 279.25, after being still higher at Rs. 286 yesterday.

Electricity shares were dull. Andhra Valleys shed Re. 1.25 to Rs. 1,135. Bombay Suburbans declined by 50 nP to Rs. 102.50, Tata Hydros by 25 nP to Rs. 117.50 and Ahmedabads by 10 nP to Rs. 91.70. But Tata Powers picked up Rs. 2.50 to Rs. 1,170 on special support.

Sugar scrips were subjected to some selling pressure, following the latest move of the Central Government to requisition the entire production of mills for direct allocations. Belapurs, which stood at Rs. 308.50 last week, came down to Rs. 299 on Monday. After improving to Rs. 305 yesterday, they again receded today to Rs. 294.50, though they finished a little higher at Rs. 295.50. Over the week, Phaltans fell by Rs. 4.50 to Rs. 155 and Walchandnagars by Rs. 3.75 to Rs. 286.25. Bhopals proved an exception, in that they recorded a rise of 12 nP to Rs. 23.44.

Associated Cements ruled firm during the major part of the week, the quotation advancing from Rs. 152.50 to Rs. 155.25 yesterday. Today, however, they came in for selling and declined to Rs. 151.75, before finishing at Rs. 152.50. Digvijays stood at Rs. 154 today, same as last week. Orissas gathered 24 nP to Rs. 14.56, while Jaipur Udyogs receded from Rs. 11 to Rs. 10.76.

In the engineering group, Premier Constructions dropped Rs. 3 to Rs. 323. Alcock Ashdowns, which had slumped by Rs. 19 to Rs. 271 last week, staged a recovery this week, the closing rate today being Rs. 273. Mahindras gathered Re. 1.60 to Rs. 22.40 *ex-div.*, Tata Locomotives Re. 1.50 to Rs. 209.50 and Larsen and Toubros 12 nP to Rs. 23.60. Among mining shares, Shivrajpurs fell by Rs. 9 to Rs. 86, following the Chairman's statement at the annual meeting that the results of the Company for the current year could not possibly be as good as those in the preceding year. Indian Coppers were unchanged at Rs. 4.12.

Automobile shares showed a hardening tendency. Premier Automobiles picked up Re. 1.50 to Rs. 110. Hindustan Motors improved by 24 nP to Rs. 8.48. Among shippings, Scindias shed 8 nP to Rs. 18, while Great Easterns were quiet at Rs. 23.12.

A further sharp fall of Rs. 12 to Rs. 535 in the quotation for Bombay Burmahs characterised the trading in the miscellaneous section. At one time today, the rate was as low as Rs. 528. Alembic Chemicals receded by Rs. 7 to Rs. 193, Polychems by Rs. 3 to Rs. 97, Dhrangadhras by Rs. 2 to Rs. 115 and West Coast Papers by Re. 1.50 to Rs. 138.50. Hindustan Levers were unaltered at Rs. 29.25. Indian Dyestuffs, however, advanced by Rs. 5 to Rs. 685. Tata Oils hardened by Rs. 2.20 to Rs. 56.20, Wimcos by Re. 1.50 to Rs. 208 and Voltas by Re. 1.25 to Rs. 63.25. National Rayons rose by 50 nP to Rs. 307.50. Gwalior Rayons put on 28 nP to Rs. 18.52. Tata Chemicals were higher by 40 nP at Rs. 17.96.

* * * *

The ordinary shares of Gwalior Rayon are expected to be included in the forward list of the Bombay Stock Exchange in the very near future.

Calcutta Stock Exchange

CALCUTTA, *27th May*

Equities on the Calcutta Stock Exchange suffered a shake-out during the week under review. This is not surprising because it was becoming only too well evident that the uptrend since the Budget had been too fast and persistent and that attempts by those interested to maintain the higher levels could not continue when the genuine buyers preferred to be on a holiday. It was against this background that the report that the third Plan would require a colossal sum of Rs. 11,000 crores and that the Finance Minister would extract an additional sum of Rs. 2,000 crores by way of taxes from the much-maligned private sector circulated. The stage was thus set to cry halt to the resistance for a show-down by speculative holders, and the fear of more taxes was taken as an excuse for a corrective reaction. It was realised that the higher levels had no relation to yield consideration even after adding growth prospects. The genuine investor could not even now be attracted to enter the market, since he was doubtful if he could continue to get the present rate of return even after changes to company taxation became effective from next year.

In this circumstance, not all offerings met with buyers, who were reserved and cautious. It was, however, felt in some circles that, with a better technical position, shares would attract increased interest. For, if the third Plan envisaged the investment of a colossal amount, it was presumed that there should be a colossal increase in industrial activity, leading to increased returns to the investor despite higher taxes. It will be recalled in this connection that the American Trade Mission, which visited Calcutta recently, had stated that taxation in India was as high as in the U.S., but that the difference between the two countries was that one was in need of foreign capital, but the other was flowing it out. In the circumstances, the possibility of any increase in direct taxes was considered to be remote; it might as well be the increase would be in indirect taxes and broadbasing of the excise duties. Market circles are, therefore, keenly awaiting the outcome of the seminar to be held in Ootacamund under the auspices of the A.-I.C.C. from Saturday next when the problems relating to the remaining period of the second Plan and to the third Plan are expected to be discussed.

Jutes were devoid of enthusiasm, following doubts if working results would be as satisfactory as in the last accounting period, in view of keen Pakistan competition in jute goods. Howrahs drifted to Rs. 23.12 from Rs. 24.06. At Rs. 85, Ganges disclosed a loss of Rs. 3. Birlas receded to Rs. 20.12 from Rs. 20.87, and Nationals from Rs. 24.25 to Rs. 23.75. Agarparas were quiet at Rs. 12.44. Megnas changed hands at Rs. 15.44 against Rs. 15.50 previously, while Cheviots were lifted to Rs. 217 from Rs. 214.

The silence in New Delhi over the recommendations of the Coal Price Revision Committee and the delay in granting higher prices retarded sentiment in coals, and a shrinkage in the volume of business was recorded. Bengals after giving way to Rs. 307 from Rs. 308 staged a recovery and gained to Rs. 311 to again fall to Rs. 308. East Indians toppled down to Rs. 23.75 from Rs. 25.50 and Burrakurs to Rs. 17.50 from Rs. 18.12. Equitables at Rs. 31.75 were lower by 37 nP, while Western Bengals fluctuated between Rs. 6.31 and Rs. 6.09. Khatras Jherriahs changed hands at Rs. 73.25 against Rs. 75.25 previously, while South Karanpuras after falling to Rs. 12.81 recovered to Rs. 13.

Despite the announcement of export incentives, cotton textiles, in common with other sections, trod a dull path, with Elgin Mills being pushed down to Rs. 14.50 from Rs. 15.

Teas shared the general trend, despite the general belief that the prospects for the new season were bright. Brooke Bonds earlier changed hands at Rs. 20.31, but gradually derived strength to improve to Rs. 20.94. The closing was again lower at Rs. 20.56. Hantaparas had buyers at Rs. 132 against Rs. 134 earlier, Gungarams declined to Rs. 155 from Rs. 158 previously. Methonis were pushed down to Rs. 24.75 from Rs. 24.87 and Dibrugarhs to Rs. 33.25 from Rs. 34.12.

Among engineerings, Indian Galvanizings continued to advance to touch a high of Rs. 18.31 from Rs. 17.87. Indian Irons were subjected to renewed offerings. The scrip opened at Rs. 24.75 and after realising Rs. 24.82 declined to Rs. 24.18. On the other hand, Jessop & Cos. staged a recovery to Rs. 31 from Rs. 30.25.

The downtrend in evidence in the miscellaneous section is portrayed in the following table:

		Week's		
		Opening	*Closing*	*Loss*
		Rs.	Rs.	Rs.
Indian Coppers	...	4.24	4.09	0.15
Alkali & Chemicals	...	23.50	22.62	0.88
India Steamships	...	14.75	14.12	0.43
Dunlop Rubbers	...	32.12	31.50	0.62
Metal Boxes	...	37.37	37.25	0.12
Indian Aluminium	...	21.31	20.32	0.99
National Pipes	...	19.37	17.37	2.00
Rallis	...	70.25	68.25	2.00
Hindustan Motors	...	8.87	8.69	0.18
Martin Burn	...	29.50	28.12	1.38

Madras Stock Exchange

MADRAS, *27th May*

A distinctly easy trend was in evidence on the Madras Stock Exchange during the week under review. The sentiment of operators was adversely affected by reports suggesting the possibility of the Government raising by way of fresh taxation as much as Rs. 2,000 crores to finance the third Five-year Plan, as against the estimated yield of Rs. 900 crores in the second Plan. Excepting a few scrips which elicited investment support, fresh buying was lacking. Sugar shares were neglected, in contrast to the sustained buoyancy noted in the past few weeks. Tea shares encountered selling, thanks to estimates of lower production released by many companies. Rubbers and coffees were featureless, with restricted turnover. The textile section was subdued, despite liberalisation of the export incentive scheme for textiles. Miscellaneous industrials also ruled easy in sympathy with the general trend.

In the sugar group, Cauverys suffered a loss of Re. 1 over the week to close today at Rs. 119. Travancores dropped 40 nP to Rs. 12.20, and E.I.Ds 35 nP to Rs. 38.75. Mysores were dull at Rs. 52.25, as also United Breweries at Rs. 400. Indias were done at Rs. 12.10 *ex-div.*, as against Rs. 13.12 *cum-div.*

A feature of today's trading in the planting section was the inclusion in the list of the Exchange of two new shares, Ossoor Estates and Wartyhully Estates. Brisk business was in evidence in both the scrips, the closing rates being Rs. 3.61 and Rs. 3.60, respectively. Among tea shares, Peermades fell by 75 nP to touch Rs. 19. Kil Kotagiris receded by 23 nP to Rs. 8.30 and Waterfalls by 8 nP to Rs. 4.05. Chembras and Kalasas lost 5 nP each to Rs. 4.30 and Rs. 3.97. Nonsuch Teas, Balamoors and Twyfords were dull at Rs. 27.36, Rs. 21.25 and Rs. 17.40, respectively. United Nilgiris, however, improved by 10 nP to touch Rs. 20.40. Hailleyburias gained 5 nP to Rs. 19.65. In the coffee group, Coffee Lands eased by 25 nP to Rs. 24. Cowcoodys shed 5 nP to Rs. 7.20. Anaparais were unchanged at Rs. 4.75. Among rubbers, Midlands were marked down by 25 nP to Rs. 12.25. Thirumbadis lost 4 nP to Re. 1.86. Malankaras were quietly steady at Rs. 19.35, Rajagiris at Rs. 17.45 and Vaikundams at Rs. 26.

In the textile section, Maduras declined further by Re. 1.15 to Rs. 26.85, due to continued labour troubles. Rajalakshmis and Cannanores receded by Re. 1 each, the former to Rs. 64.50 *cum-div.* and the latter to Rs. 151. Bangalore Woollens dropped 50 nP to Rs. 175. Cambodias decreased by 5 nP to Rs. 9.80. Coimbatore Cottons were unchanged at Rs. 141, Premiers at Rs. 164 and Radhakrishnas at Rs. 131.

Among miscellaneous industrials, only a few scrips showed any sign of improvement. Rallis receded by Re. 1.75 to Rs. 68.25. F.A.C.Ts gave way from Rs. 9.40 to Rs. 9 *cum-div.* Mysore Papers declined by 30 nP to Rs. 20.10, Mettur Chemicals by 10 nP to Rs. 12.75 and Dalmia Cements by 5 nP to Rs. 10.50. Orissa Cements eased by 15 nP to Rs. 14.35, and Spencers by 10 nP to Rs. 20.35. Andhra Cements was quiet at Rs. 10.10, India Cements at Rs. 6.08, Indian Steel Rollings at Rs. 15.37, Mysore Chemicals at Rs. 10.80 and Travancore Cements at Rs. 9.85. Ashok Leylands were done at Rs. 7.20 *ex-div.*, as against Rs. 9 *cum-div. cum-right.* Western India Plywoods, however, met with renewed buying support and spurted by Rs. 2.50 to Rs. 170.50. Standard Motors gathered 25 nP to Rs. 14.25.

COMPANY MEETING TELEVISED

The first televised shareholder meeting in Germany's history was just offered to 1,250 share and proxy-holders of the Bayer Works in Leverkusen, one of the I.G.-Farben successors. The share and proxy-holders present at the meeting represented 76 per cent. of the Company's 660 million D.M. share capital, the largest share capital of an individual company in W. Germany's industry. Altogether, the Company has 155,000 shareholders, about three shareholders to every employee.

To permit everybody to follow the proceedings of the annual meeting in the main conference room, the Company had installed a closed circuit in adjacent rooms. In order to promote the shareholders' understanding of technical innovations, the Company also showed them a live T.V. cast from a 10 miles distant, affiliated mineral oil-processing plant.

NEWS IN BRIEF

THE next session of the Lok Sabha will commence on 3rd August 1959.

A "Trade Unions in the U.S." exhibition, jointly sponsored by the Bombay Labour Welfare Board and the U.S. Information Service, commenced in the city on Monday this week.

The Government of Madras has launched an intensive survey of the bamboo areas of the State, with a view to assessing the availability of bamboo for industrial purposes such as manufacture of paper and rayon grade pulp.

The Finance Minister of Pakistan, Mr. A. Shoaib, has accepted the invitation from the Union Finance Minister, Mr. Morarji Desai, to visit New Delhi for talks on outstanding financial problems between the two countries. He is expected to be in India by the middle of July next.

The U.S.S.R. will help India to develop its oil industry by sending equipment and highly qualified oil experts. An assurance to this effect was given by Mr. P. Y. Antropov, Soviet Minister for Geology and Mineral Resources, who was on a short visit to India. During his stay in the country, he visited a number of prospective oil-bearing regions.

The Ford Foundation has granted $155,539 (about Rs. 8 lakhs) to the Municipal Corporation of Delhi for initiating six pilot projects in urban community development. Each project will cover about 250 families, organised into *vikas mandals*. The *mandals* will study local problems and suggest ways and means of solving them on a self-help basis, with the minimum dependence on external assistance in the initial stages.

India has agreed to buy 350,000 tons of rice from Burma during 1959-60. An agreement laying down the price to be paid for this rice is expected to be signed shortly. The five-year Indo-Burmese rice agreement provides for the purchase of two million tons of Burmese rice over a five-year period from 1956-57 to 1960-61. The price per ton stipulated for the first three years was £34, £33, and £32, respectively. The price for the last two years was left to be settled for future negotiations between the two countries.

The Bharat Electronics, Bangalore, has concluded a ten-year technical collaboration agreement with Philips of Holland for the manufacture of radio receiver valves. The Company proposes to manufacture all types of receiving valves required by the broadcast receiver industry, besides special quality valves used in defence electronics equipments. Philips have agreed not only to give the requisite technical assistance for implementing the scheme but also to provide facilities for training Indian personnel in its works at Holland.

The validity of the trade agreement between India and China, concluded in 1954, has been extended till the end of 1959. The total value of trade between the two countries in 1957 and 1958 amounted to Rs. 8.6 crores and Rs. 8.7 crores, respectively. In 1957, imports from China to India were Rs. 4.9 crores, as against exports worth Rs. 3.7 crores. Imports during 1958 amounted to Rs. 5.3 crores, as against exports of Rs. 3.4 crores. The main items of imports from China were newsprint, chemicals, steel, cassia and raw silk, while the important among the Indian exports to China were tobacco, raw cotton, shellac and jute manufactures.

The Heavy Industries Plan Committee of the U.P. Government has initiated a survey to assess the State's mineral resources for exploitation during the third Five-year Plan period. A preliminary survey report presented to the Committee by Dr. Krishna Mohan, Director of Geology and Mining, U.P., has revealed the presence of iron ore in Naini Tal, Garhwal, Mirzapur and a few other districts, coal at Singrauli, copper ore in Garhwal and Almora, limestone deposit suitable for the cement industry in Dehra Dun and about three million tons of good quality of fire-clay, which can be utilised for the manufacture of refractory bricks, cement, crockery, sanitaryware and insulators, in Mirzapur district.

The possibility of establishing a raw film plant and a factory to produce rayon pulp from bamboo in India with Japanese co-operation is expected to be explored by the Union Minister for Industry, Mr. Manubhai Shah, during his ensuing visit to Japan in the middle of June. It is said that the Minister will hold discussions with two leading Japanese firms, namely, Fuji Films and Kokuaku Pulps. The earlier proposal to set up a raw film factory in collaboration with Agfa, East Germany, is said to have been dropped, owing to the inability of this firm to supply the required equipment in time. Mr. Shah is also expected to make a special study of the methods of financing and developing small-scale industries in Japan, besides seeking technical aid from Japanese interests for the establishment of such new industries in India as watches, sheet glass, cameras and binoculars.

A plea to stop imports of raw jute cuttings from Pakistan has been put forward by the Bharat Jute Sellers' Association, Calcutta, in a communication addressed to the Secretary to the Union Commerce and Industry Ministry. According to the Association, a portion of daisee jute should be allowed for export immediately, as foreign buyers are keen on purchasing this quality even at a premium. Growers in the daisee areas hold stocks twice as large as usual this time of the year and buyers are scarce in the country even at discounted prices, although daisee is superior to mesta. Apart from daisee, the inflow of other jute to mofussil markets has not shown any marked reduction, indicating the obvious position that rural areas still have a good portion of their crop to be moved out for consumption. Mill consumption, it is pointed out, has also diminished, of late, as a result of the further and recent sealing of loomage.

A British-made airfield control radar, claimed to work in any weather in which flying is possible, is to be installed shortly at the Madras airport. This type of approach and landing aid (Decca 424) has been in use at the Dum Dum airport, Calcutta, for the past two years. It is a high definition plan position indicator approach system, incorporating an advanced form of variable polarisation to suppress rain echoes. The operator is able to "tune out" rain. The cost of the equipment is estimated at £12,000-20,000. The equipment—an advance on the original system produced in 1953—provides extremely accurate approach information, with fully duplicated transmitters, receivers and displays. It also has a good measure of all-round surveillance, enabling aircraft in circuit to be motioned and traffic to be controlled before the final approach. Some 80 of these radar sets are in use at airports throughout the world.

* * * *

From Abroad

A seven-man official delegation of Pakistan has gone to Kuala Lumpur to negotiate a trade agreement with the Federation of Malaya.

Pakistan is understood to have entered into a barter deal with the U.S.S.R., under which it will import 50,000 tons of Russian cement in exchange for jute.

The negotiations for the possible merger of two leading U.K. companies, namely, Standard Motors and Rovers, which commenced in March last, have been discontinued, as no agreement could be reached.

The number of unemployed in Canada in the middle of April 1959 was lower at 445,000 as compared with 525,000 a month before and 522,000 a year before. This is about 7.3 per cent. of the total labour force estimated at 6.1 million.

With a view to conserving foreign exchange, the Government of Pakistan has imposed restrictions on the use of petroleum products. All organisations have been asked to lower their consumption by 10 per cent. The annual value of imports of petroleum products is of the order of Rs. 22 crores.

A Polish trade delegation, headed by the Deputy Minister of Internal Trade, Mr. Edvard Schneider, has arrived in Belgrade, in order to acquaint itself with the organisation of Yugoslav trade. The Polish delegation thus returns the visit paid recently to Poland by a Yugoslav trade delegation.

More passenger cars than ever before were in service in the U.S. in 1958. Passenger car registrations aggregated 56,870,684, an increase of 1.7 per cent. from the year before. With trucks and buses included, registrations were 68,299,408 or 1,168,337 more than in 1957. The number of trucks in use was 11,158,561. There were 270,163 buses.

An exhibition, entitled "India, Germany's Economic Partner," sponsored by the German-Indian Society at Stuttgart, West Germany, was inaugurated on the 23rd inst. The primary object of the exhibition is to promote mutual economic and commercial relations and to further the scope for marketing India-made goods in W. Germany.

Total outlay on advertising in the U.K. in 1958 aggregated £375 million, equivalent to 2.5 per cent. of all consumer expenditure. In the first three months of 1959, advertising expenditure was running at the rate of £400 million per annum, keeping pace with the 4 per cent. increase in the value of retail sales.

Ford Motors of the U.S. has decided to acquire 75 per cent. of the capital stock of the Canadian Ford Motor Company, in which it is already holding 27.5 per cent. This it proposes to do by taking up a maximum of 775,628 shares of A class (non-voting) and 30,208 shares of B class (voting) at $188 per share which is nearly 30 per cent. above the closing price on the American Stock Exchange on 20th May 1959.

The Nepal Government is considering a proposal to nationalise the year-old Royal Nepal Airlines Corporation. The Corporation was floated with Government assistance. It has only one plane of its own, purchased by the Government, and another hired from India. Nepal is planning to establish a well-equipped civil aviation system within the next three years, with assistance from the U.S. and India.

The automobile industry in the U.K. set up an all-time production record in April last, when the average weekly output rose by 25 per cent., as compared with the average for the previous six months. Exports of automobiles which account for half the total production also registered a notable increase due mainly to heavy shipments to North America.

Hong Kong exported about 40 million square yards of cotton piecegoods to the U.K., during the first quarter of the current year. Of this quantity, allocated quota shipments accounted for 20.2 million square yards, free quota for 7.7 million square yards, finished piecegoods for 82,030 yards, yarn dyed piecegoods for 587,977 yards and made-up goods for 10.5 million yards.

The view that West Germany will certainly give financial assistance to the second stage of the Aswan High Dam Project has been expressed by the three-member goodwill mission of the W. German Bandestag (Lower House), currently in the United Arab Republic (U.A.R.) Professor Erhard, W. German Economics Minister, is expected to visit Cairo towards the end of this year in this connection.

Almost four out of ten West German televiewers are production workers, according to a poll by a W. German Broadcasting Company. Of all televiewers, office employees account for 26 per cent., self-employed for 20 per cent., liberal professions for 9 per cent., civil servants for 6 per cent. and farmers for 1 per cent. The total of registered television sets in W. Germany as on 1st April this year was 2,534,000.

The value of exports from West Germany during the first quarter of 1959 aggregated DM 12,200 million, representing an increase of 5 per cent., as compared with the corresponding period last year. Imports were higher by 3.7 per cent. at DM 10,500 million. The rise in the volume of exports and imports was more than that in their values, since average import prices were lower by 6 per cent. and export prices by 3 per cent. during the period under review.

The Government of Pakistan has decided to set up an Economic Council, with the President as its Chairman and consisting of the Ministers of Finance, Industries and Commerce and the Governors of East and West Pakistan to ensure the balanced development of all parts of Pakistan. It has also decided to constitute a Cabinet Economic Committee, with the Finance Minister as Chairman, to direct and supervise the implementation of economic projects sanctioned by the Cabinet.

Advertising outlays in West Germany have almost trebled in the last five years. The total expenditure on advertising in 1958 stood at DM 1,670 million, an increase of 11.5 per cent. over the previous year. The percentage share of the different media of advertisement was 59 for newspapers, 33.3 for periodicals, 2.5 for radio, 8 for television and 4 for posters. Of the total advertisement outlay in periodicals, 45.5 per cent. was spent for consumer goods, 27 per cent. for durable goods, 25.4 per cent. for investment goods and 2.1 per cent. for services.

Wage and salary earners bought three out of four newly registered cars in W. Germany during the 12 months ended July 1958. In mid-1958, 2.77 million private cars (466,100 more than in mid-1957) were registered (without W. Berlin and the Saar), of which 41 per cent. was driven by wage and salary earners. About 477,900 private cars (17.3 per cent. of total) now belong to production workers. While the number of motor-bikes belonging to production workers doubled from 1952 to mid-1957 (total 1,489,000), it fell by some 90,000 from mid-1957 to mid-1958 in favour of the four-wheeled car.

PERSONAL

MR. S. Y. Krishnaswamy, I.C.S. (retired), has been appointed Adviser for Agricultural Planning to the Kerala Government.

Mr. P. Y. Antropov, Soviet Minister for Geology and Mineral Resources, left India for Moscow on the 21st inst., after a week-long tour of this country.

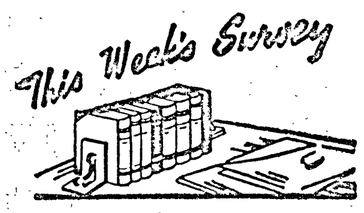
Mr. P. P. Agarwal, I.C.S., Joint Secretary to the Planning Commission, has taken over charge as Joint Secretary to the Ministry of Irrigation and Power *vice* Mr. Kshetrapal.

Mr. Madanmohan R. Ruia, leader of the eight-member goodwill trade delegation sponsored by the Federation of Indian Chambers of Commerce and Industry, returned to Bombay from Rome on Monday the 25th inst., after a two-month tour of the U.S., the U.K., W. Europe, Japan and Hong Kong.

Mr. Abdur Rashid Ibrahim, formerly Financial Adviser to the Finance Ministry, Government of Pakistan, has been appointed Deputy Executive Secretary of the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.) in place of Mr. U. Nyun who has assumed charge as the Executive Secretary.

Mr. Gulzarilal Nanda, Union Minister for Labour, Planning and Employment, will lead the Indian delegation to the forty-third session of the International Labour Conference to be held at Geneva from 3rd to 25th June 1959. The other members of the delegation are Messrs. V. V. Dravid, Arvind N. Mafatlal, and G. D. Ambekar.

Mr. Henry R. Labouisse has been appointed a Consultant on the staff of the World Bank. He will take up his duties next month. Mr. Labouisse was formerly chief of the Special Mission to France for the Economic Co-operation Administration and its successor agencies and at the same time Minister for Economic Affairs in the U.S. embassy in Paris. From 1954 until last year, he was the Director of the U.N. Relief and Works Agency for Palestine Refugees.



UNEMPLOYMENT

THE serious unemployment problem that has been confronting this country is showing no sign of easing. On the contrary, it is tending to assume unmanageable proportions. In fact, the employment situation and the prospects for the immediate future, as described by Mr. G. L. Nanda, Union Minister for Labour Employment and Planning, in the course of his address to the first meeting of the Central Committee on Employment held at New Delhi on Monday, are dismal indeed. Mr. Nanda preferred to speak out the truth, however unpalatable it might be. He said that, at the beginning of the third Plan in 1961, India would have a larger back log of unemployment of 7 million than at the beginning of the second Plan when it was only 5.5 million. The original employment target of 8 million under the second Plan had to be reduced to 6.5 million, because, within one year of its operation, the second Plan came up against heavy odds both in respect of external finance and in the matter of adequate resources for development within the country. Other problems too accentuated the difficulty. Production in primary sectors could not rise up to the level of requirements and price levels, particularly of agricultural commodities, took an upward trend. The rise in prices would itself have curtailed the physical targets and, therefore, the employment potential of the Plan, even if the original size had been maintained. The size of the plan outlay had to be cut down to Rs. 4,500 crores in the middle of last year. The target for employment generation had, therefore, to be reduced from 8 million to 6.5 million. Mr. Nanda was doubtful whether even the reduced target of 6.5 million jobs would be achieved. It is estimated that, during the first three years of the Plan, employment generation has been of the order of one million jobs per annum. It is unlikely that the balance of 3.5 million jobs would be created in the current and the next year, unless a miracle were to happen.

The Minister candidly admitted that, judging from experience, it would be too optimistic to expect that the third Plan could, even at its best, succeed in wiping out the problem of unemployment totally. The difficulties are many. The third Plan has to carry the heavy backlog of unemployment of about 1.5 million more and many more will enter the labour force during 1961-66 as compared with the previous five years. The most conservative estimate places new entrants to the labour market at 14 million during the third Plan. Together with the 7 million remaining unemployed at the beginning of 1961, total employment seekers during the third Plan will be as many as 21 million, which is nearly equal to three times the population of Sweden (7.3 million in 1958).

Surely, the third Plan, however big it might conceivably be, cannot be expected to create employment opportunities of this magnitude. The goal, according to Mr. Nanda, is sought to be fixed at a lower level, that is, to create employment opportunities sufficient to absorb new entrants in the labour field. It is not realistic, he conceded, to expect, in the normal way, to attain a level of employment higher than this.

A disquieting feature of the unemployment situation is the large number of educated unemployed. The output of educational institutions is increasing rapidly and the pace of economic development is not fast enough to provide in sufficient numbers the kind of jobs the educated persons seek. The problem of educated unemployed is, therefore, increasing in size year after year. The problem is difficult enough as it is. The Minister, therefore, emphasised that every effort should be made to see that there was no further aggravation of unemployment in the coming years. In this connection, he suggested that, considering the magnitude of the problem, there was need to explore unorthodox ways of enlarging the scope of productive employment in the country for the many who could not be absorbed in the normal pattern of employment opportunities created through Plan investments and the regular agency of the market. It is true, as he pointed out, that there are enough tasks of economic utility to be performed and plenty of natural resources remaining to be utilised for this purpose. But he did not say how precisely this could be done. It is not clear what exactly he meant by saying "unorthodox ways."

To add to this problem of unemployment is the problem of underemployment, especially in rural areas. According to a recent report of the National Sample Survey, 28 per cent. of the gainfully employed rural population had work for less than 28 hours a week. In the country as a whole, according to Prof. P. C. Mahalanobis, there were 20 million people who had only an hour's work a day and 45 million people with less than four hour's work a day. An idea of the magnitude of investments that will be required to solve the problem can be had from a note prepared by the Union Ministry of Labour and Employment for discussion at the meeting of the Central Committee. According to the calculations contained in the note, to tackle the problem of unemployment in both the agricultural and non-agricultural sectors, an investment of Rs. 43,000 crores in the next 15 years, covering three Five-year Plans, will be necessary.

DEVELOPMENT OF MADRAS STATE

The broad lines of economic strategy that planners in Madras should adopt in the coming years to generate a cumulative growth process in the State's economy were impressively indicated by Dr. P. S. Lokanathan, Director-General, National Council of Applied Economic Research, New Delhi, while addressing the third quarterly meeting of the Southern India Chamber of Commerce at Madras last week. Development of engineering industries, Dr. Lokanathan declared, was the key to this strategy and zonal action the appropriate approach to it. To quote him: "At any rate, the engineering phase of development is inevitable for taking the economy into a self-generating growth process. Hence, it has to be nurtured regardless of all other considerations. The progress already achieved by Madras in this direction is significant enough to demand a concentrated effort in the shape of an immediate and direct stimulus."

These observations, though they were addressed to Madras, apply with equal force to the other Southern States, namely, Andhra Pradesh, Kerala and Mysore, as well. But the question is whether, in the present context of things, any ambitious programme of developing engineering industries can be successfully launched in these States. There is, for instance, a scarcity of natural resources like fuel, coal and coke and raw materials like iron and steel. There is also the chronic transport bottleneck.

An account of how these handicaps have adversely affected the engineering industries in Madras State was given by Dr. Lokanathan. It is seen therefrom that the long haulage of heavy raw materials from distant parts of the country have not only enhanced the cost of production but also created a shortage of raw materials, with the result that a great deal of capacity of even the existing engineering industries remains unutilised. The value added to manufacture in this sector is less than that in certain other States, notwithstanding the high skill of Madras workmen. Firms in the South experience great difficulty in obtaining prompt delivery of machinery spare parts and similar items, and even minor breakdowns of equipment put machines out of order for weeks. Consequently, the great majority of engineering concerns in Madras produce only 60 or 70 per cent. of plant capacity. Under-utilisation of capacity is the most pressing problem of the State. The raw material shortage has aggravated the flow of working capital to the industry and has often stunted industrial units to below economic sizes.

Despite the aforesaid handicaps, why has Dr. Lokanathan advocated such high priority to the development of engineering industries in the State? Here is his explanation: "The solution to the chronic shortage (of raw materials) does not lie in the abandonment of the engineering industries or in the adoption of a slower rate of growth on the ground that they are locationally unsuitable. This will be not only a counsel of despair but also reversing the very historic pattern of development towards progress." In his considered opinion, the engineering and chemical industries have the largest capital-absorptive capacity all over the world, and Madras has both market and skilled labour, the two decesive factors in the development of engineering industries.

Dr. Lokanathan felt that the problem of fuel in Madras was well on its way to a solution in a big way since the "fabulous" discovery of the Neyveli lignite which, he said, would be the spearhead of the third phase of the State's industrial development. In this connection, he mentioned that coal was twice or thrice as costly in Madras as it was in Northern India. Another spearhead of development, he added, lay in the exploitation of the marine resources around Tuticorin. In particular, he suggested the establishment of a factory for the recovery of valuable chemicals from bitterns now thrown into the sea.

The learned economist drew pointed attention to the need for strengthening the agricultural base for industrialisation and expanding the power resources. The desideratum can be met through extension of double-cropping to at least 12 per cent. from the present low level of 8.4 per cent. of the irrigated area. The percentage of double-cropping land in the State is very small as compared with 12.7 for all-India, 25 for Bihar, 27 for the Punjab and 24 for the U.P. The assessment of power potential as made by Dr. Lokanathan reveals that, though Madras is the third among the States of India in overall power production, second in hydro-electric development and first in rural electrification, the demand for power has been fast overtaking generating capacity. The total of this demand is expected to reach by 1970 one million kw., that is, double the hydro-capacity of the State. Lignite-based power can produce 20,000 kw. only or perhaps a little more later. For the rest, the State has to lean heavily either on the power potential of the neighbouring States or on the development of atomic installation. It is in this connection that Dr. Lokanathan observed that the ready source of atomic energy available in the monazite sand in Kanyakumari district was a consideration important enough to weigh the decision in favour of an atomic plant of 200 or 500 M.W. capacity somewhere in Madras. It may be noted here that the Madras Government has already urged the Centre to establish an atomic power station in the State.

The implementation of the economic development programme on the lines suggested by Dr. Lokanathan will entail a large capital outlay, amounting to an aggregate of Rs. 1 000 crores (including Rs. 300-350 crores for the expansion of existing industries and establishment of new ones), during the third and fourth Five-year Plan periods. On this basis, the annual rate of investments expenditure will have to be Rs. 100 crores, as against the yearly average of Rs. 28.17 crores incurred in the first Plan and Rs. 34.61 crores provided for the second Plan.

It is somewhat doubtful whether the funds required to meet such large-scale expenditure can be raised. But Dr. Lokanathan asserts that only an investment of this size can bring about a self-sustaining growth process in the economy of Madras. We wish the doctor had given a rough idea as to how the financial resources required could be raised. One of the principal ways of finding the funds is to encourage both indigenous and foreign private enterprise to establish industries. The Madras Government would be well advised to follow a realistic policy, under which it can offer suitable incentives for attracting capital and entrepreneurial skill to the State. It can even explore the possibility of getting American or British private capital for establishing nuclear power plants. A special feature of Madras State is the large investment of private savings in agriculture mainly in the form of loans and mortgages. These funds will gradually gravitate into industries, as progress is made in providing agriculture with cheap credit through State-sponsored institutions and in implementing the various land reforms. The pace of this movement of savings from agriculture to industry can be speeded up by making investments in industries more attractive. Since the economic policies of the Centre are not favourable for private investment, the Madras Government must request the Centre to modify its policies.

MORE ON SHARING INDUS WATERS

Since we wrote on the issue of sharing Indus Basin waters in these columns last week, there have been indications pointing to the possibility of a settlement between India and Pakistan, unless, of course, the latter country develops an intransigent attitude once again. The World Bank President and his deputy would appear to have already gathered support from the friendly countries to finance the

$1,000-million replacement-storage-development works programme. Of this amount, India's contribution is said to be about $200 million (about Rs. 96 crores). The World Bank itself expects to lend about $110 million to Pakistan and hopes to secure grants to the extent of $70 million from three Commonwealth countries, Britain, Canada and Australia, and $35 million from the U.S. The balance to be found is $585 million. Observers at New Delhi feel that the only country that could meet this sum is the U.S. Whether that country would agree to provide this amount even as a loan remains to be seen.

The reported willingness on the part of India to contribute such a huge sum as Rs. 96 crores, besides forgoing Rs. 22 crores due from Pakistan for the water supplied all these years, is taken as an indication of its anxiety to secure a peaceful settlement of a dispute which has plagued its relations with Pakistan for more than a decade. While this anxiety is understandable, it must be reiterated that, considering the none too happy foreign exchange position, India should, instead of paying its entire contribution in free foreign exchange as is reported in a section of the Press, pay it partly in the form of goods such as cement and mostly in the form of debts which Pakistan owes India.

The $1,000 million that will be raised by way of loans and grants, according to the World Bank proposal believed to have been accepted by the two countries, will be placed at the disposal of an Indus Basin Development Commission. This Commission, we are told, will consist of representatives of the Indian and Pakistan Governments and the World Bank. The functions assigned to the Commission will be: (1) to formulate the construction work programme for each year of the transitional period and regulate the supply of water to Pakistan and the withdrawal by India, (2) to ensure that the work progresses according to a strict time schedule, and (3) to frame the annual financial budget for the work to be done.

The proposed Commission can be established only after India and Pakistan have signed a final, "definite" agreement. It is reported that there are still two outstanding issues of the dispute to be thrashed out further. These relate to India's contribution towards the cost of the project and the interim period during which India has to allow Pakistan to draw water from its resources. This is expected to be done in the tripartite conference of India, Pakistan and the World Bank which is likely to be held at London in the middle of July next. After these issues are satisfactorily solved, the World Bank will convene, probably in Washington, another tripartite conference to draw up a water treaty. The drafting of such a treaty, there is no doubt, will take a fairly long time, for the legal and irrigation experts "will have to wrestle with the details for many weeks." The draft treaty will then have to be referred to the respective Governments before it is signed and may have to be ratified by Parliament. It is to be hoped that the forthcoming discussions between India and Pakistan will be fruitful and bring about what is appropriately called "the end of a dismal chapter" in the history of Indo-Pakistan relations. In conclusion, a word of praise is due to the officials of the World Bank who have patiently sought to promote a settlement of this complicated problem.

TELECOMMUNICATIONS IN ASIA

Four recommendations designed to accelerate progress in the implementation of the telecommunications programme in Asian countries were made by the E.C.A.F.E. Working Party of Telecommunication Experts after the end of the one-week session at Tokyo on the 11th inst. The recommendations, which the Party wanted the Inland Transport and Communications Committee to consider, covered: (1) special efforts by all the E.C.A.F.E. countries to speed up the development of all types of telecommunication services, more especially those having a direct effect on the development of commerce, industry and transport; (2) convening of regional conferences; (3) participation of E.C.A.F.E. countries in the work of the International Telecommunications Union (I.T.U.) to the fullest possible extent; and (4) continued co-operation of the E.C.A.F.E. and the I.T.U. in promoting the development of telecommunications.

The meeting of the Working Party was attended by about 100 representatives from 25 countries and territories. In his opening address, Mr. Yutaka Terao, Japanese Minister of Posts and Telecommunications, described the speed of progress in the telecommunications technology as "really amazing" and pointed out that its utilisation had come to exercise a far-reaching importance on the development of industries, expansion of economic activities, promotion of community life and elevation of cultural level. He urged that the problems of telecommunication development in South-East Asia should be examined in the light of these developments. How imperative is this aspect will be evident from the fact that the development of telecommunication facilities in this region has lagged behind the achievements of the industrially advanced countries of the world. The statistical data furnished by Mr. M. S. Ahmad, Chief of the E.C.A.F.E. Transport and Communications Division, in the course of his opening statement, reveal that, aside from Japan, the number of telephones per 100 inhabitants in the region as a whole varied from 1.65 in Hong Kong to 0.03 in Pakistan, as against 30.60 in the U.S., 23.18 in Canada and 11.69 in the U.K. The total number of telephones in service in India at the end of 1958, it may be noted, was 376,000. On this basis and taking the population as 395.44 million, the number of telephones per 100 persons will work out to 0.09.

The principal obstacles hampering the rapid pace of development of telecommunication facilities in the E.C.A.F.E. region, we are told, are severe financial limitations, general shortage of adequately trained personnel, lack of equipment due to the absence of indigenous production in most countries, and dependence on foreign sources for the supply of equipment. Mr. Ahmad stressed the importance of finding financial means to develop an adequate system of telecommunication facilities in order to meet current and future requirements and the need for making available the services of a sufficient number of trained personnel to operate modern telecommunication equipment, as well as to maintain it, so that improved techniques may be economically introduced to ensure efficient working of telecommunication systems. It seems desirable, as he said, to give "at a very early stage," some consideration to the possibility of administration of certain items of equipment to help the supplying countries to meet the urgent needs; one possible method of achieving a degree of standardisation on a regional basis will be to ensure a freer exchange of information and pooling of knowledge and experience.

INDUSTRIAL RESEARCH

In the scheme of industrial research, the Council of Scientific and Industrial Research holds a key place. It is the principal agency for promoting, guiding and co-ordinating scientific and industrial research in national laboratories, universities and other institutes. The Council, which was established in 1942, has now been in existence for 17 years. In every field of development there are pressing problems which require scientific study and investigation. To cope with the increasing research needs, the Council has vastly expanded its scope and operations in recent years. This is reflected in its greatly increased budget. For instance, during the three years ended March 1959, that is, the first three years of the second Plan, the Council was provided with Rs. 15.50 crores for new development projects and Rs. 9.75 crores for continuing the schemes initiated during the First Plan period.

In the last three years, the Council has geared the research programmes of the national laboratories to industrial development and planning. This period has also been one of considerable growth and development, both

GOOD FALL IN UNEMPLOYMENT

GOLD FLOW IS NO THREAT TO DOLLAR

From Our Special Correspondent

NEW YORK, *20th May*

THERE is much pointing with pride and viewing with alarm these days in the United States. In the first category falls the rise in corporate earnings and dividends as well as the rise in employment.

Official figures, released a few days ago, show a greater rise in employment and a greater decline in unemployment than is usually the case in April. Increases occurred in agriculture, construction and in some hard goods industries. Employment gained more than one million, while unemployment dropped to about 3,625,000. In April 1958, the unemployed numbered 5.1 million.

Building activity also continues at a record pace. The dollar volume of construction put into place during April rose to a new high of $4,200 million, thus exceeding the $3,800 million record set in March.

Troublesome aspects are the stubborn Soviet attitude over Berlin, coupled with the obvious threat of war. On the economic front, the United States Treasury's recent refinancing was somewhat less than a success. About 31 per cent. of the holders of maturing securities demanded cash rather than new issues. This was the second highest attrition in recent fiscal operations.

While this represents no real threat to the Federal Budget, it is significant just the same. Of equal significance is the continual loss of gold by the United States. It amounts to about $2,000 million in the last twelve months, or to a little less than 10 per cent. of monetary gold stocks, as reported weekly by the Federal Reserve Banks.

Mr. Per Jacobson, Managing Director of the International Monetary Fund, said that the recent outflow of gold from the United States "represents a warning about the trend of costs and prices." He added, "I do not think the U.S. gold outflow represents any threat to the dollar. With the U.S. possessing more than half the world's gold stock, it would be absurd to say this."

In the international perspective, the redistribution of gold is, of course, salutary for all those of us who can remember the days of dollar and gold shortages which impeded world trade.

In this connection, it may be interesting to note that an increasing number of new and old U.S. investment companies are including in their portfolios other than U.S. securities. The reasons are that the rise in productivity in other industrial countries is greater, the returns are better because of lower costs and prices and a better relationship between the two factors.

The so-called "hard money" policies of the Federal Reserve system which have achieved a near-stable cost-of-living level, are being attacked again in Congress and by labour leaders. Certain Senators denounce these policies, because "goods and services are not in short supply now, have not been and are unlikely to be for some time."

Labour, not the rank and file, but the leaders, argues simply that more dollars in the hands of their membership assures continued prosperity for the country as a whole. The shortsightedness of the argument is that, if a disproportionate part of operating profits is syphoned off into one single cost factor, the others have to suffer. Because of this, modernisation of plant has become increasingly difficult.

Owing to inflation and technological developments, the dollar that buys machinery has deteriorated much faster than the household dollar. Since 1940, equipment and machinery costs have trebled, generally speaking. This is not taken into account either by labour or the U.S. taxing authorities.

Unlike India, which has the most enlightened laws on depreciation allowances of any country in the world, U.S. laws permit merely write-offs on the original dollar cost of machinery and equipment at the average rate of 4 to 5 per cent. a year, unless exceptions can be proved.

So far as India-U.S. relations are concerned, "India Our Friend," said a headline in the *Overseas Press Bulletin* of 16th May. It referred to remarks which were made by former Governor of New York, Averell Harriman, before the Club's members after his return from a trip around the world.

"I find India one of the most important allies we have and India is not neutral," was the gist of Mr. Harriman's talk. Mr. Harriman during his extended stay in India had four long talks with Prime Minister Nehru.

The people of India, he said, value their freedom and "they will not let China or anyone else overcome their independence." Other Harriman quotes were, "anyone fighting for individual liberties is triply our friend—and that's Nehru—India's policy is not pro-West, but is pro-India and that means they are our friends." Economic aid to India is a sound investment, he suggested, "and, besides, we have no alternative, for, if anything happened to India, the whole South-East Asian and African structures would collapse."

Strong voices for aid to India were also heard at a meeting of the Committee for International Economic Growth. Both Vice-President Nixon and Senator John F. Kennedy joined in this plea. This is a fairly interesting combination, since both men may be heading the Republican and Democratic Presidential tickets next year.

Mr. Nixon said private capital, as well as U.S. Government money, should be put to work in India. He added that where private money enters India, there is no question of political implications.

Senator Kennedy's main point was "it is not enough that we participate on a cash basis for temporary relief. We must be willing to join with other Western nations in a serious long-term programme of long-term loans, backed up by technical and agricultural assistance, designed to enable India to overtake the challenge of Communist China."

In U.S. home affairs, perhaps the most talked about subject is the almost certain steel strike. Negotiations for a new labour-management contract are now two weeks old. Insiders of management who have attended the last five negotiations for contract renewals which resulted in as many strikes, since the end of the war, told me privately the atmosphere this time is the most bitter of them all.

Steelworkers' President MacDonald is bent upon getting the biggest benefits yet for his membership, and the management is equally determined not to give in to such fantastic demands. No wonder, the expectation still is for a long and bitter steel strike, commencing from 1st July.—*All Rights Reserved.*

LONDON LETTER

MORE DOLLAR TROUBLE

From Our Own Correspondent

LONDON, *22nd May*

THE London *Times* this week published a survey from a special correspondent in New York, analysing the movement of America's gold losses of $1,700 million over the past year. This American gold loss has accounted for half the increase in the gold and dollar holdings of the whole of the rest of the world, but, physically, the greater part of this gold loss, amounting to 1,400 tons has only moved from the custody of the U.S. Treasury to that of the Federal Reserve Bank in New York and we are told that the U.S. Treasury has still got 9,000 tons of gold left.

But the effect of this gold loss has been to provide a stick whereby protection-conscious American business interests can beat the State Department and the Department of Commerce in any attempts they make towards a more liberal attitude to European and Commonwealth imports. Now the counterpart to these American business fears has been oddly enough the fears of British businessmen that their businesses were being bought from under their feet by American capital. After all, a part of the gold loss is due, not to a soft balance of payments, but to an active investment policy, both Government and private. All countries have, in the past years, and particularly in the past twelve months, been steadily increasing their overseas investment. In the case of the United Kingdom, investment is a two-way traffic with British private investors putting about £200 million a year into Commonwealth and colonial countries, in particular, and, on the other hand, British shares are attracting American investment in this country. But, if Americans are to invest in Britain and in Europe (attracted undoubtedly to some extent by the thought that, if they cannot ship goods into Europe, at least they can claim an interest in the European production of these same goods), then, over the long-term, America must have an export surplus.

Part of the American trouble as seen by City eyes here is their very high cost level at present rates of exchange. High American costs make their goods unattractive to British buyers, quite apart from currency controls, and equally they make British goods attractive purchases for Americans. In short, it is becoming increasingly clear that the dollar is overvalued.

However odd the concept of an overvalued dollar may be, this must not obscure the general reasoning, in such circumstances, that devaluation may be necessary. When the suggestion is made that America should raise her price for gold, the intention is that the dollar should be devalued, not only in terms of gold but in terms of world currencies. America would be doing no more than every other country in the world has done since the war and by a relatively small devaluation make her goods easy to sell and discourage the sales of British goods in the United States which are causing such concern among the so-called tough businessmen of the Eastern States and the Middle West.

But, both here in the City and in America, there is a school of thought which is so wedded to the idea of non-discrimination and freedom at all costs (provided the freedom does not extend to the abolition of American tariffs) that they would rather see American dollar difficulties solved by giving a further helping hand to distressed American exporters. This helping hand would consist of removing all restrictions by Britain and other European countries on dollar purchases. The removal of restrictions on the movement of goods is an experiment which businessmen would consider is surely being carried too far, when a Europe, which is only just beginning to develop active trade balances, is compelled to open its arms even wider to American imports, while American discrimination against Britain, Europe and Commonwealth imports continues unchecked.

The question of devaluation is one for America herself to decide. The question of trade discrimination is one which Britain, on her own behalf and that of the Commonwealth, can well discuss now with the United States on the basis of an easement of restrictions. Such discussions would have far more sense at the present time, when Europe can afford such easement, than they made when put forward from time to time in recent years when America was a very aggressive seller and Europe a weak buyer.—*All Rights Reserved.*

SURVEY

(*Concluded from page 895*)

organisationally and in terms of achievements. Of the major changes brought about in the structure of the national laboratories, the most important are the constitution of executive committees for each and a fair amount of delegation of administrative powers to the institutions themselves. This has enabled the Council to concentrate its attention on policy-making. Another development has been the organisation of an effective industrial liaison. An Industrial Liaison Officer at the Centre and four regional officers have been appointed to facilitate a two-way traffic in consultation and advice between the industry and the research laboratories. Similar contracts have been built up with Central Ministries of Commerce and Industry, Steel Mines and Fuel and Works, Housing and Supply.

Among the new institutes started by the Council during the three-year period mention may be made of the mechanical engineering research institute at Durgapur, the public health engineering research institute at Nagpur and the national æronautical research laboratory at Bangalore. The Council has also organised research centres at Poona, Bangalore, Kanpur and Kerala for work on essential oils. A research centre has also been set up at Kanpur for undertaking work on gas turbines.

An idea of the work of the research laboratories and institutes can be had from the fact that the number of scientific workers recruited during the three-year period under review was 2,000, and the number of research papers published 1,200. The number of patents filed, which stood at 50 in 1955, had increased to 72 in 1958. The number of foreign patents also increased from five in 1957 to 23 in 1958. Out of the total 575 patentable inventions developed by the Council, as many as 207 were developed during the period 1956-59. Out of the 113 patents filed between April 1957 and December 1958, 58 were licensed out. It is gratifying to hear that as many as 35 processes have been leased out to industry, of which six are said to be under profitable production. It is estimated that the value of output from the processes which are to be leased out during 1959-60 would be over one crore of rupees and those to be leased out during 1960-61 over Rs. 2.5 crores.

In addition to conducting research, the national laboratories have also undertaken surveys of raw materials and resources which are of basic importance to industrial development. A new of these are the survey of coal resources, survey of raw materials for glass and ceramic industry and foundry sand for the metallurgical industry. The Council has also endeavoured to impress upon the laboratories the importance of user interests and so orient their research programmes that their fruits may become useful to ultimate users.

A section of informed public opinion in this country, however, is still not impressed with what the Council has done. This section holds the view that the return on the vast sums of money spent on research is not adequate and that a large part of the investment has gone down the drain. But the Council may feel encouraged by the testimonial given by Dr. Wallace R. Brode, a distinguished American scientist and Science Adviser to the U.S. Secretary of State. He said the other day in Bombay that the laboratories in India were better equipped than any he had seen in other parts of the world, including his country.

The Union Government has decided to set up a Working Group to make definite recommendations on the ways and means of ensuring efficient development of co-operative farming in the country. The Group will have a prominent person in public life as its Chairman. The members will include a representative each of the Reserve Bank of India, the Planning Commission, the Department of Community Development and the Department of Co-operation in the Centre, a Development Commissioner and a State Registrar of Co-operative Societies. Amongst the non-officials in the Group will be one member of Parliament and a person connected with co-operative farming. The Group will visit the different parts of the country to study successful experiences, as also the problems encountered in the field. It will review the work done, the methods adopted and the techniques evolved in co-operative farming. It will have to make specific suggestions, particularly with regard to types and methods of organisation and financial as well as administrative requirements for a country-wide programme.

Offer for Sale of 1,00,000 6% (Free of Income-tax) Redeemable Cumulative Preference Shares
Fully Paid-up (Series 'A') of Rs. 100/- each
OF

THE GWALIOR RAYON SILK MFG. (WVG.) CO., LTD.

Redeemable on 31st March 1972
Entire Offer underwritten
Offer opens on 1st June 1959 and will close on 15th June 1959 unless closed earlier

1. We, the JIYAJEERAO COTTON MILLS LTD., GWALIOR and SUTLEJ COTTON MILLS LTD., AMRITSAR, being shareholders of the Gwalior Rayon Silk Mfg. (Wvg.) Co., Ltd., offer for sale at par 1,00,000 6 per cent. (Free of Income-tax) Redeemable Cumulative Preference Shares (Series 'A') of Rs. 100/- each fully paid-up of the said company. An application will be made by the said company to the authorities of the Bombay Stock Exchange for listing these shares.

2. The shares will be redeemed by the said company on 31st March 1972.

3. The dividend on these shares upto and inclusive of the period ended 31st March 1959 has been declared and paid by the company. The buyer will be entitled to the dividend on these shares from 1st April 1959.

4. The company has its registered office at Birlagram, Nagda (W. Railway).

5. The Managing Agents are: The Birla Gwalior Private Ltd.

6. The Authorised capital of the company is Rs. 6 crores divided into 3,50,000 Ordinary shares of Rs. 10/- each and 1,50,000 series 'A' 6% (Free of Income-tax) Redeemable Cumulative Preference shares of Rs. 100/- each and 1,00,000 series 'B' 6% (Free of Income-tax) Redeemable Cumulative Preference shares of Rs. 100/- each.

7. The Subscribed and Paid-up capital of the company is:

As on 31st March 1959.

25,00,000 Ordinary shares of Rs. 10/- each,
1,50,000 Series 'A' 6% (Free of Income-tax) Redeemable Cumulative Preference shares of Rs. 100/- each,
763 Series 'B' 6% (Free of Income-tax) Redeemable Cumulative Preference shares of Rs. 100/- each.

8. The company carries on the business of manufacture of staple fibre at Nagda and is the only company of its kind at present manufacturing staple fibre in this country. The present capacity and production is about 55 tons of staple fibre per day. The company's Weaving division at Gwalior carries on manufacture of quality rayon fabrics which are widely known in this country.

9. According to the Balance Sheet for the year ended 31st March 1959 recently published by the company, the Gross block is Rs. 6,20,30,185/-.

	Rs.
Less: Depreciation provided upto 31st March 1959	3,68,54,000
Nett Block as on 31st March 1959 will be	2,51,76,185

SYNOPSIS OF THE BALANCE SHEET

THE GWALIOR RAYON SILK MFG. (WVG.) CO., LTD.

Position upto 31st March 1959

LIABILITIES	*In thousands* Rs.	Rs.	ASSETS	Rs.	*In thousands* Rs.
Paid-up Capital:			**Block:**		
25,00,000 Ordinary Shares of Rs. 10 each	2,50,00		Gross Block	6,20,30	
1,50,000 6% (Income-tax free) Preference shares of Rs. 100 each—'A' class	1,50,00		*Less:* Depreciation	3,68,54

10. The entire offer has been underwritten by the Bank of Baroda Ltd., and the United Commercial Bank Ltd. and some prominent brokers.

11. A brokerage of 1 per cent. will be paid out of the commission of 2 per cent. payable to the underwriters on acceptances of applications which bear stamps of Bankers and Brokers of recognised Stock Exchanges.

12. Applications for shares which should be for 5 or in multiples of 5, must be in prescribed form accompanied by remittance of Rs. 100 per share applied for and will be received in the office of the Bank of Baroda Ltd., Apollo Street, Fort, Bombay, and in the office of United Commercial Bank Ltd., Petit Building, Dadabhoy Naoroji Road, Fort, Bombay, during office hours from 1st June 1959 to 15th June 1959. If, however, the offer made is fully subscribed, the list will be closed earlier, but not earlier than the close of the office hours on 3rd June 1959. Application forms may be obtained from the above-named two Banks.

13. The purchaser will have to bear the cost of having the shares transferred to his name including the registration fee.

14. On the application being accepted, the shares together with the transfer form duly executed by the transferor will be delivered by the Bank to the applicant on his surrendering the receipt duly discharged. In case of up-country applicants, the shares with the transfer deeds will be posted by registered post on the applicant sending to the Bank the application receipt duly discharged. If an application is not accepted, the application money will be refunded to the applicant without interest, before 30th June 1959.

Application forms may be obtained from the following:—

1. Bank of Baroda Ltd., Apollo Street, Fort, Bombay.
2. United Commercial Bank Ltd., Petit Building, Dadabhoy Naoroji Road, Fort, Bombay.
3. Industrial Investment Trust Ltd., 61, Apollo Street, Bombay.
4. Batlivala and Karani, Union Bank Building, Dalal Street, Fort, Bombay.
5. Chimanlal J. Dalal & Co., Stock Exchange New Building, Dalal Street, Bombay.
6. Devkaran Nanjee & Co., Devkaran Nanjee Building, Horniman Circle, Fort, Bombay.
7. Kantilal Pratapshi, Stock Exchange New Building, Bombay.
8. M. M. Loyalka, Agakhan Building, Dalal Street, Bombay.
9. Narottam B. Javeri, 35, Stock Exchange New Building, Apollo Street, Bombay.
10. Navalchand T. Shah & Co., 102, Stock Exchange, Dalal Street, Bombay.
11. Rasiklal Maneklal & Co., Stock Exchange Old Building, Dalal Street, Bombay.
12. S. A. Deshpande & Co., Old Stock Exchange Building, Dalal Street, Bombay.

Dated the 23rd May 1959.

TREND AND PROGRESS OF BANKING

RESERVE BANK CALLS FOR GREATER EFFORTS TO SPREAD BANKING HABIT

THE urgency of more determined efforts on the part of banks to stimulate the banking habit over a wider region and by reaching down to the lower income groups is stressed by the Reserve Bank of India in its latest Annual Report on the *Trend and Progress of Banking in India during the year* 1958 submitted to the Government under Section 36(2) of the Banking Companies Act. "It is for banks now," the Report goes on to add, "to show greater initiative and resourcefulness in extending the benefits to all people. In a period of rapid economic development, banks should not only widen their network of branches but adapt their operations to the growing requirements of the community. A quicker and cheaper banking service will bring its own reward in the growth of economic activity and scale of bank operations."

Though the Report admits that the growth of banking habit has been gathering momentum to some extend and that a significant number of small income earners, particularly in the semi-urban areas, have been inclined to save, in the form of bank accounts or postal deposits, it is of the view that banking services should be widespread, because it has been found that a "major portion of the new incomes generated by developmental expenditure throughout the economy has not found its way into the organised banking system." It is significant to note, in this connection, that, notwithstanding the substantial accretion during the last two years, the bank deposits have hardly registered any significant increase in those States where some major Plan projects have been undertaken involving substantial expenditures on wages and growth in complementary economic activity. In other words, the Reserve Bank implies that banks have taken no active steps to mobilise savings in these areas.

Personal Loan Scheme

That the banks are in a position to extend their field of activity and have the adaptability to changing circumstances is evident from the introduction of the personal loan scheme by a few banks. Opinion on this scheme differs. Some bankers are sceptical about its success in the present context, when consumer goods are in short supply, and are of the view that it will only lead to inflationary pressures. The Reserve Bank of India, however, lends a qualified support to the scheme, and utters a note of caution against financing goods that are in short supply. Thus, the Report says:

"The scheme may assist to some extent the development of banking habit, in so far as new customers with low incomes, who would not have otherwise come to banks, would be attracted to them because of the facility. This is an interesting development in our banking system, but it requires to be watched carefully. Wisely administered and with due restraint, the scheme has useful potentialities, in that it will enable people, such as salaried classes, to acquire relatively durable articles, e.g., bicycles, radio sets, furniture and sewing machines, and pay for them gradually in the form of instalments which, in the absence of this facility, they might not be able to afford. This would particularly help people in the middle or low-income groups to own useful articles and thereby improve their standard of living to some extent, and at the same time, encourage increased production in lines for which scope may exist, with beneficial results to the economy. Banks, however, would have to proceed cautiously with this type of financing and avoid financing goods in short supply, as that would lead to an aggravation of inflationary pressures."

Describing Indian banking in 1958, as one of "steady growth with stability," the Report says that, during last year, there was a relatively large accretion to deposit resources of banks in relation to credit extended by them. This was only a continuation of the trend noted in 1957, thus easing the extreme monetary stringency experienced in the first year of the second Plan period. Taking the three-year period as a whole, it is seen that the deposits of Scheduled banks have increased by no less than 55 per cent., while their total advances have risen by only about 40 per cent., thus providing the banks with a high degree of liquidity. The excess liquidity has not, however, called for any action on the part of the Reserve Bank, as a large proportion of it has been diverted to investment in Government securities. Whether this trend will continue or not is a matter which, according to the Reserve Bank, "would bear closer scrutiny."

Referring to the impact of the major developments in the Indian economy on the banking system during 1958, the report points out that the large expansion in deposits was due to the accumulation of investment resources by business firms with the banking system, as a result of the sluggishness in private capital investment, which, in turn, is attributed to severe restrictions on imports. Over the year as a whole, net deposits of all banks (Scheduled and non-Scheduled) rose by Rs. 215.2 crores to a peak of Rs. 1,561.8 crores, as against an increase of Rs. 221.5 crores in 1957. The most important factors which contributed to this growth were: (1) the deposit of the U.S. counterpart funds, (2) the inclusion of five more banks in the Second Schedule to the Reserve Bank of India Act, (3) the growth of banking habit engendered by the larger incomes as a result of the large developmental outlay, and (4) the expansion of branch banking.

As evidence of the growth of banking habit, the Reserve Bank report points out that, excluding P.L. 480 funds, "the rate of deposits expansion has been the greatest since 1955 in centres with a population of 50,000 and less, as against a smaller rise in the larger centres. Even on the basis of absolute figures, the increase in deposits in the smaller centres represented over a fourth of total deposit expansion." This is also borne out by the fact that, over the same period, the number of savings deposit accounts, which are mainly all personal accounts, have shown an increase of about 20 per cent.

A feature of the expansion in deposits during 1958 was the record rise of about Rs. 227.7 crores in time deposits of Scheduled banks. Though this is partly the result of a shift from demand deposits, as indicated by their decline (of Rs. 9.2 crores), for the first time in the last three years, it is also "indicative of a satisfactory growth of savings through the banking system."

Another noteworthy feature of the increase in net deposits of all banks is that it was confined entirely to Scheduled banks whose deposits rose by Rs. 218.6 crores. Again, out of this increase, 96.1 per cent. was accounted for by larger Scheduled banks (that is, those with deposits of Rs. 25 crores and over each), three banks each with deposits of Rs. 100 crores and over alone obtaining as much as 56.6 per cent. of the increase. Deposits of non-Scheduled banks, however, declined by Rs. 3.4 crores to Rs. 45.7 crores. This was partly due to the inclusion of five of the larger non-Scheduled banks in the category of Scheduled banks.

Bank Credit

The slowing down of economic activity in the private sector is reflected in the smaller pace of increase in bank credit. Thus, over the year, the total advances of Scheduled banks rose by only Rs. 11.1 crores (to Rs. 830.6 crores), as compared with an increase of Rs. 74.6 crores in 1957 and Rs. 151.3 crores in 1956. Another reason for the slower pace of increase in bank credit was the credit restriction imposed by the Reserve Bank in order to prevent speculative use of bank finance. As in the case of deposits, the expansion in bank credit was confined to the larger Scheduled banks, each with deposits of Rs. 25 crores and over. Thus, these banks accounted for an increase of Rs. 18.2 crores, while those with deposits less than Rs. 25 crores showed a contraction of Rs. 7.1 crores. A noteworthy feature of the trend of bank credit over the whole year was that it was generally steady, unlike in the previous year, when it rose in the first half and tapered off thereafter. Thus, the expansion of bank credit in the busy season of 1957-58, at Rs. 90 crores, was very much smaller than that (Rs. 148 crores) in the corresponding season of 1956-57. "This moderate seasonal expansion was of significance," the Report adds, "in that it had been preceded by a seasonal contraction of credit by Rs. 33 crores and was followed by a much greater contraction of credit by Rs. 119 crores." This is taken as evidence of the fact that, "by and large, bank credit was not a factor making for inflationary pressures in the economy during the year."

Despite the lower level of bank credit in the aggregate, as also to particular sectors, the credit policy of the Reserve Bank continued to be one of restraint and vigilance, especially in view of the underlying inflationary trends in the economy. On the whole, the Bank's credit policy, though restrictive in its general tenor, continued to assist the flow of bank credit to essential sectors of the economy. This is borne out by the purpose-wise break-down figures of advances. Thus, industrial credit of Scheduled banks upto the end of October 1958 showed a further increase of Rs. 14.4 crores over the year to Rs. 398.1 crores. This was no doubt very much smaller than that (Rs. 78.2 crores) recorded in the corresponding period of 1956-57, but its share in the total Scheduled bank credit rose from 43.6 per cent. at the end of October 1957 to 47.9 per cent. The share of commercial advances, however, declined from 42.7 per cent. to 37.6 per cent. and this was mainly responsible for the fall in Scheduled bank credit from Rs. 880.6 crores at the close of October 1957 to Rs. 831.5 crores a year later.

Investments

Thanks to the improvement in liquidity, banks were able to increase their investment portfolio by Rs. 206.2 crores during the year under review. This was the sharpest rise noted in recent years. Of this increase, Government securities alone accounted for Rs. 202.3 crores. The share of the State Bank of India in the increase in investments of all banks was particularly large, as a result of the investment of the U.S. counterpart funds in gilt-edged securities. A group-wise analysis of bank investments shows that the increase was shared by all the groups, though, as is only to be expected, banks with deposits of Rs. 100 crores and over accounted for the largest proportion, namely, 60.5 per cent. of the increase in Scheduled banks' investment in Government securities. This was followed by banks in the second group (each with deposits of Rs. 25 crores to Rs. 100 crores) with 30 per cent. The share of banks with deposits of less than Rs. 25 crores was 9.5 per cent.

Branch Banking

On the organisational side, as stated earlier, there was an expansion in branch banking. Though the new branches of the State Bank of India constituted the largest number opened by any single institution, the progress of branch expansion by other banks, according to the Reserve Bank Report, was also encouraging. The total number of offices of all classes of banks rose by 241 to 4,616. There was a net increase of 354 in Scheduled banks' offices, of which 86 offices were of the five non-Scheduled banks which were raised to the status of Scheduled banks. The actual number of new offices opened was 283, including 105 relating to the State Bank of India. Existing offices closed aggregated 15. The number of offices of non-Scheduled banks declined by 113; apart from the 86 offices mentioned above, 72 existing offices were closed, while 45 new offices were opened. The regional distribution of new offices opened during the year shows that 67 were in Bombay, 64 in Madras, 35 in Mysore, 23 in Kerala, 21 in Andhra and 30 in Delhi. West Bengal accounted for 18, U.P. and Rajasthan for 12 each, the Punjab for 13 and the other areas for the balance. Of the total number of offices opened, as many as 88 were in places where there were no banking offices at all earlier. Of the 87 offices closed during the year, Kerala accounted for the largest number, namely, 37, including 32 non-Scheduled banks.

Indian Banks Abroad

The number of Indian banks operating abroad and their foreign offices declined by one each to 27 and 103, respectively. The fall was, however, confined to Pakistan; this was in continuation of the post-partition trend. One of the Scheduled banks opened an office in Malaya. The overall business of Indian banks abroad, the Reserve Bank Report says, showed a slight improvement over that in 1957, though the trend was not uniform in all countries. There was a setback in business in the U.K., Japan and Thailand, but this was more than made good by the expansion in British East Africa, Aden, Ceylon and Hong Kong. The combined liabilities of Indian banks abroad stood at Rs. 96.3 crores at the end of 1958, representing an increase of 4.4 per cent. Deposits rose from Rs. 65.5 crores to Rs. 70.4 crores, with time deposits alone accounting for a rise of Rs. 3.8 crores. There was a slight increase in advances from Rs. 43.5 crores to Rs. 44.3 crores, which formed slightly less than 50 per cent. of the total assets abroad. While investments, wholly held in Government securities, rose by Rs. 2.2 crores to Rs. 24.6 crores, cash resources declined by almost a like amount.

GOLD FLOW FROM THE UNITED STATES

IS IT A DESIRABLE THING?

By Edwin L. Dale, Jr.
WASHINGTON BUREAU OF "NEW YORK TIMES"

THE United States last year lost a record total of $2,300 million of its large stock of gold to foreign countries. In the first quarter of this year, the outflow slowed to a trickle—only $92 million in the three months. Then in April and the first week of May the outflow picked up sharply again, totalling $186 million for the five weeks. This has caused renewed discussion of the gold situation.

What is the role of gold in the money systems of the world?

Ever since the days of the Greeks and Romans, men have deemed gold an acceptable "medium of exchange" for other goods and services. That is, a man would always accept gold as "good" money, because he knew he could buy other goods and services with it. As the expansion of commerce gradually required the use of paper money, Governments always used gold or, in some cases, silver, as backing for the paper money. The gold standard simply meant that a holder of paper money could turn it in at any time for gold, in an amount equal to the value of the paper money as decided by the Government. This is no longer true. Since 1934, a holder of a dollar has been unable to turn it in for gold. He is not allowed to hold gold, except in such forms as jewellery. The United States and the rest of the world are now off the gold standard.

What then is the present role of gold?

Its present function is to settle international accounts between nations. The world's gold, except for private hoarding in nations, such as France and India, is all held by the world's treasuries and central banks. Each nation continues to fix a gold par value of its currency (in the United States, the dollar is worth .888761 grams of gold, which means $35 an ounce). Thus, balances owing from one nation to another can be converted into a quantity of gold and payments made by a transfer of gold. Typically, a nation that exports more than it imports, first builds up holdings of foreign currencies. If it builds up dollars, it can then go to the United States Treasury and convert the dollars into gold at $35 an ounce. If it is short of dollars it can sell gold to the Treasury and get $35 for each ounce sold. This is the mechanism for settling international accounts.

What is the world gold supply?

Altogether, there is about $39,900 million worth of gold (at $35 an ounce) in the central banks and treasuries of the world, excluding the Communist countries. This total rises by nearly $1.000 million a year from new gold production, most of which flows into Government stocks. Of the $39,000 million, $20,250 million is held by the United States, more than all the rest of the non-Communist world put together.

How did the United States get so much?

The great bulk of it flowed to the United States during the depression years. It flowed here, because the United States was running a large and persistent surplus in its transactions with the rest of the world. These transactions include exports and imports, but are by no means limited to them. For example, if a Frenchman buys stocks on the New York Stock Exchange, or simply transfers some of his money to a bank in New York for safe keeping, that counts the same as an export in the total United States balance of payments. It is a United States receipt. A disbursement of dollars in Germany by the United States Army there counts the same as an import. It is a United States payment. Foreign aid, investment by United States business abroad, payment for shipping—these and other elements enter the total balance.

In the thirties a combination of forces, including a large export surplus by the United States and a large flow of "scare" money from Europe to New York, led to a huge surplus each year in the total United States balance of payments. Foreign countries used up any surplus dollars they had and then had to sell gold to the Treasury to get more. Thus, the United States gold stock rose, from $4,226 million in 1932 to $22,042 million in 1940.

World War II brought a temporary reversal. For special reasons, the United States ran a deficit in its payments and some gold flowed out. But the end of the war found the United States, with its economic machinery intact, running a heavy surplus again. The gold stock rose to its peak in 1949, when the United States held $24,600 million, and the rest of the world had to get along on the obviously inadequate total of $10.500 million.

What happened in the post-war period?

Since 1949, though the point is not generally realised, the United States has persistently run a deficit in its balance of payments with the rest of the world. Foreign countries have been net earners of dollars almost every year since that time. For the most part, they simply allowed dollar balances to build up in New York banks, investing part of them in short-term securities, such as Treasury bills to earn a little interest. But from time to time a nation with ample dollar balances would convert some of them to gold. Thus, the United States gold stock declined from $24,600 million at the end of 1949 to $22,800 million at the end of 1957. This was universally considered a healthy and desirable trend. It meant that the rest of the world's reserves of gold and dollars were slowly building up.

Why the big outflow of gold recently?

In 1958, the outflow of gold from the United States suddenly accelerated. There were two reasons. The first was that the United States not only ran a balance-of-payments deficit with the rest of the world but also ran an unusually big one. Exports were off sharply, for a number of special seasons, while imports fell very little. Low interest rates in New York prompted foreign Governments and private companies to float a post-war record amount of new stocks and bonds in the United States, sparking an overflow of dollars as they were paid for. Other elements in the balance were unchanged or worked against the United States. The second reason was that in 1958. in contrast with most earlier years, foreign countries decided to convert the bulk of their added supplies of dollars into gold. The United States deficit was about $3,300 million and foreign countries converted $2,300 million of this into gold.

They did so, in part, because the dollar working balances of many nations had already been built up far enough and, in part, because the big dollar earners last year were European nations that traditionally hold most of their reserves in gold. Britain's gold holdings rose $1,250 million last year, Holland's by $300 million Belgium's by $350 million and Italy's by $600 million. As a result, there was the largest gold outflow on record. The United States stock fell to $20,600 million at year-end.

To most people in the international financial world this was nothing to get alarmed about. It was more of the same desirable thing —a move toward a more even distribution of the world's reserves. But many of these same men began to wonder for the first time about the problem of a chronic deficit in the United States balance of payments that, over the long run, could exhaust even the huge United States stock of gold. The continuation of the gold outflow this year, slow for the first three months and then a big jump in April, has kept this sort of concern alive.

If the deficit and gold outflow continue, what can be done about it?

The United States could impose barriers on imports, widely regarded as the least desirable solution. It could cut out foreign aid, but that is a two-edged sword, because the great bulk of the aid dollars finance United States exports. That is, a cut in aid on the outflow side would be matched by a nearly equivalent cut in exports on the inflow side. In the end, presumably, it would devalue the dollar by raising the gold price, but this idea brings shudders to practically everyone who contemplates it.

By all odds, the favourite solution is a programme of anti-inflation policies. This would lower export prices, thus augmenting exports. The same policies, involving higher interest rates, would bring more foreign money into the United States and make foreign borrowers look to non-United States money markets. The combination might solve the balance-of-payments problem. In the meantime, the problem has not yet become pressing, with the gold stock at a comfortable $20,255 million as of Wednesday, 6th May 1959.—*Copyright by the New York Times Company.*

MITSUI BANK LTD.

A setback in profit from Rs. 1,02,791 to Rs. 54,907 is disclosed by the audited accounts of the only branch in India of the Mitsui Bank Ltd. for the year ended 31st December 1958. Though the fall in profit is in consonance with the general trend of bank earnings, it is in distinct contrast to the gradual improvement noted in its own earnings in the previous two years. In the first seven months of its operation in this country (that is, from 28th May to 31st December 1955), the Bank had sustained a loss of Rs. 1.03 lakh in its banking operations. In addition, it had a loss of Rs. 1.67 lakh on sale of investments, making a total loss of Rs. 2.70 lakhs. In 1956, however, the Bank earned a small profit of Rs. 29,412, but this was more than wiped out by a loss of Rs. 88,312 on sale of investments, leaving a deficit of Rs. 58,900. In the following year (1957), the Bank turned the corner and earned a profit of Rs. 1,02,791. With this, the Bank wiped out a loss of Rs. 50,819 brought in from 1956 and transferred Rs. 32,038 to its London office, leaving a surplus of Rs. 19,934.

This surplus brought in from 1957, together with the profit of Rs. 54.907 earned in 1958, makes available Rs. 74,841 for disposal. Out of this, the Directors have made a provision of Rs. 18,896 for taxation and transferred Rs. 1,11,918 to the London office, thus bringing in a loss of Rs. 37,077 to the current year.

The Bank's income from interest and discount shows a rise from Rs. 7.16 lakhs to Rs. 7.89 lakhs and that from commission and exchange from Rs. 2.94 lakhs to Rs. 3.43 lakhs. The larger income from these two sources has been more than offset by the increase in interest paid from Rs. 5.33 lakhs to Rs. 6.67 lakhs, by a slightly larger outgo in expenses (at Rs. 3.62 lakhs) and a higher provision for depreciation on the Bank's fixed assets.

The Bank's deposits in India, as at the end of the year, have gone up by Rs. 4.32 lakhs to Rs. 108.63 lakhs. This is accompanied by a rise of Rs. 3.53 lakhs to Rs. 141.76 lakhs in advances. Investments stand at Rs. 5.01 lakhs, as against nil a year ago, and cash balances have risen by Rs. 3.86 lakhs to Rs. 8.68 lakhs.

W. German post-war private investments abroad increased by some DM 81 million during the first quarter of the current year and aggregated DM 2,300 million on 1st April. More than half of the total (DM 1,165 million) was in America, DM 830 million in Europe, DM 148 million in Africa and DM 156 million in Asian countries and Australia. From 1952 to March 1959, basic iron and steel industries accounted for the biggest investment outlays abroad (DM 333.4 million), followed by chemicals and pharmaceuticals (DM 253.7 million), electrotechnical industry (DM 225.2 million), banking and investment and holding corporations (DM 180 million), the machine building industry (DM 141.2 million) and automotive industry (DM 120 million).

TEXTILES EXPORT PROMOTION SCHEME MODIFIED

MR. SHASTRI URGES PROPER MAINTENANCE OF MILLS' EQUIPMENT

THE rumours current for some time regarding modifications in the cotton textiles export promotion scheme have proved correct. The Government of India has announced its decision to raise, with effect from the ensuing quarter (July-September 1959), the quantum of import entitlements for certain coal-tar dyes, textile chemicals and gums to exporters of mill textiles from one to two per cent. of the *f.o.b.* value of grey cloth or dyed or processed cloth. It has also announced liberalisation of the procedure governing entitlement to foreign cotton. This, too, will come into force on 1st July next. The details of the two modifications are as follows:

Dyes and chemicals: The registered processors of cloth, whether in bond or duty-paid, will be given import licences equal to 4 per cent. of the *f.o.b.* value of exports of dyed or processed cloth. The mills and exporters will be entitled to import licences equal in value to 2 per cent. of the *f.o.b.* value of grey, dyed or processed cloth exported. The entitlement percentage in respect of yarn exports will be two for mills in respect of grey yarn, two for registered yarn processors in respect of processed yarn and two for exporters in respect of grey or processed yarn. Any party who performs more than one of the functions of manufacturing, processing and exporting will be entitled to claim licences equal to those admissible under the respective categories, whether manufacturer or processor or exporter. Licences will be granted only once a quarter on the basis of exports effected in the preceding quarter.

Cotton: The mills which export cloth, yarn or both will continue to be entitled to 66 2/3 per cent. of the *f.o.b.* value of such exports for the purpose of importing cotton. The percentage will, however, be the full value of the entitlement with regard to exports of fine and superfine cloth and yarn of counts 66s and above, provided it is shown to the satisfaction of the Textile Commissioner that such exported cloth is produced out of the foreign cotton imported by the mill. In other cases, it will be 20 per cent. of the value of entitlement, as against the present 10 per cent. The upcountry mills located at a distance of over 200 miles but less than 400 miles from the ports of Bombay, Madras and Calcutta may import and retain for their own use 22 per cent. of the value of the entitlement. The entitlement is fixed higher at 25 per cent. in the case of other mofussil mills located at distance of more than 400 miles. If, for any reason, the mills do not desire to retain this cotton, they will get a premium of 20 per cent. of the value of such cotton which will then be allotted by the Textile Commissioner to other mills. The Commissioner will also decide from time to time the benefit which the exporting mills will get against the entitlement cotton released for allocation to actual user mills.

Millowners' Plea Conceded

The import entitlement for cotton, it will be recalled, was reduced in February last from 15 per cent. valid for the six months ended December 1958 to 10 per cent. for the first two quarters of 1959. The reduction was criticised by several millowners as being unjust. In fact, the millowners wanted the entitlement to be raised to 20 per cent. The plea was endorsed by the Cotton Textiles Consultative Board at its meeting held at New Delhi on 23rd April 1959. The plea has now been conceded by the Central Government. Another demand of millowners conceded, albeit partly, relates to the upward revision of the premium at which the mills importing cotton against textile exports can sell to other mills from 10 per cent. to 20 per cent. A section of millowners, however, feels that even the premium of 20 per cent. is not adequate. This view is based on the ground that the exporting mills, which are mostly coarse and medium units, have to buy Indian cotton at high prices and utilise this for making cloth for export, but whatever they earn by way of import entitlement for cotton has to be given to other mills which are fine and superfine units at a mere 20 per cent. margin of profit. The equivalent varieties of Indian cotton, it is pointed out, are priced anywhere from 50 to 60 per cent. higher than the imported cotton, so that the fine and superfine mills will have a further advantage: they will be assured of foreign cotton, it is argued, at considerably lower prices, namely today's import level of prices *plus* 20 per cent.

While the aforesaid decisions will be welcomed by trade and the mills in the spirit of something is better than nothing, the question arises as to whether they will be sufficient to check the downward trend in cotton textile exports, let alone to bring about any perceptible improvement from the current low level. Competition in world textile markets is becoming keener and keener, especially from Communist China, Japan, Hongkong and Pakistan and that at a time when several countries which used to import textiles from India and others are setting up their own cotton mills. Incentives of aforesaid nature will be of limited value for overcoming the obstacle of competition. In fact, they only delude the authorities and tend to cover the basic weaknesses in the industry, in particular, and the economy, in general. At best, they are palliatives and, as all palliatives, they will cease yielding any appreciable result after some time, unless the potency of the palliatives increased from time to time by further concessions. The fact that concessions given last year have now been found inadequate and have had to be broadened only confirms this view. But, obviously, there is a limit upto which this can be done.

Equipment Maintenance

If India is to weather the increasing competition in world markets, it is of the utmost importance that the quality of textiles must be improved, prices lowered and delivery made in time. All this will be possible, if the productive equipment of mills is maintained well, if there is close collaboration between the millowners and the exporters, if the workers do their work consciously and endeavour to increase the output per man, and if the cost of raw material is competitive. There is little recognition of the last point among the authorities. Today, the bulk of the varieties of Indian cotton costs more than the comparable varieties in foreign markets. It would have been possible for Indian mills to put up with this handicap and yet offer its goods at competitive prices had they been given freedom to re-equip themselves with up-to-date machinery. The country is now paying through its nose for the short-sighted policies of the Government.

There is, of course, no point in crying over spilt milk. But the lessons of experience have to be brought home, if costly mistakes are not to be repeated. Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, certainly struck a note of realism when he urged, while inaugurating the All-India Textile Conference at Bangalore on Sunday this week, joint efforts on the part of (1) management, technicians and labour to ensure the maintenance of mills in good condition and (2) millowners and traders to boost exports. Mr. Shastri considered it a social crime for any management to permit a productive unit to go waste. But no management will resort to such a course, unless it is compelled by circumstances beyond its control, for the management has a far greater stake in the mills than either the Government—the sleeping partner—or the workers. The factors responsible for the continued closure of many mills or for the curtailment of operations include, among others, old and outmoded nature of equipment, excessive labour demands and heavy tax incidence.

Automatic Looms

Until recently, the authorities had not permitted the mill sector to modernise its equipment and rationalise production methods. It was only a few months ago that the Government allowed installation of 2,500 automatic looms per year during the three years beginning from 1959 to 1961, in replacement of ordinary looms, besides, the scheme for installing 3,000 automatic looms on condition that the entire production on such looms will be exported. The results of this relaxation in the Government's policy will take some years, even assuming that it will be promptly availed of by the mills. Even this change, it must be said, constitutes only a modest beginning, considering the marked leeway still to be covered. At present, automatic looms in India are no more than 7 per cent. of the total looms in place, as against as much as 100 per cent. in the U.S. and 67 per cent. in Japan. Further, automatic looms alone do not provide the answer. Their introduction has to be balanced by suitable strengthening of all the preparatory machinery, right from the spindles to the finishing equipment. Consequently, the financial requirements of rehabilitation of the cotton mill industry are, as Mr. Shastri himself admitted, very large. It will be recalled that the Bombay Cotton Textile Industry (Rehabilitation) Enquiry Commission has estimated the rehabilitation requirements of mills in Greater Bombay alone over the fifteen years at Rs. 105 crores (Rs. 66 crores for machinery and Rs. 39 crores for buildings). Greater Bombay accounts for only 30 per cent. of the total cloth production in the mill sector and a good number of them have already spent large sums in improving their plant and machinery. Since the problem of modernisation and rehabilitation is so vast and urgent, the Government should, as Mr. K. Srinivasan, President of the Textile Association of India, rightly declared, give all possible facilities to enable the mills to modernise the plants.

Industry's Position

In his speech, Mr. Shastri claimed that there had been "a definite and positive improvement" in the position of the cotton mill industry. In support of this claim, he pointed to the drop in the stocks lying with mills from 660,000 bales (of 1,500 yards each) at the end of 1957 to 582,000 bales a year later (end of 1958) and further to 406 000 bales (216,000 bales unsold stocks and 190,000 bales sold but not lifted stocks) in the middle of May 1959. As regards unsold stocks, Mr. Shastri said that the monthly averages, which had been of the order of 292,000 bales in 1953 and 284,000 bales in 1954, came down in 1955 and 1956, when there was an apparent shortage of cloth, and, at the present level, the stocks were very much lower than the average monthly production of over 270,000 bales. In this connection, Mr. Shastri said:

"There is no doubt that the improved position is partly due to the fact that production is run at a lower level. But production is not abnormally low. The loomage of the mill industry has been stable for the last six years. During 1955, which was more or less a normal year, the production of cloth was only 5,094 million yards. The spurt to the level of 5,300 million yards during 1956 and 1957 was somewhat abnormal and the pattern of production has undergone a change. While there have been wide fluctuations in the production of cloth, the actual demand seems to have been remarkably steady. If deliveries of mill cloth for civil consumption are taken as a better index of sales at the retail end, the deliveries for civil market during 1957 were 4,083 million yards, while, during 1958, it was 4,391 million yards. There is a rise in the deliveries of cloth from the handloom and the powerloom sectors as well. Any anticipated increase in the demand in the internal market can be easily met. Hence I see no cause for the repetition of the 1956 phenomenon, when, under the continued pressure of demand, cloth prices steadily increased."

It seems to us that Mr. Shastri is rather too assertive here. It is quite possible that, unless new capacity of the industry increases perceptibly, a shortage of cloth may occur again in a year or two. It must, however, be stressed that the improvement in mill deliveries of cloth for internal consumption, to which Mr. Shastri has referred, has been due largely to the forced sales at lower prices made by several mills with a view to avoiding the high cost of storing cloth, not to speak of the pressure on godown space. Reports from the cloth markets show that, despite a revival of demand, there has been little or no increase in the ex-mill prices. This only shows that hitherto the mills have been anxious to get rid of their stocks. How else can one explain the continued fall in the production of mill cloth? The total quantity that actually came off the looms during the first four months of 1959 was no more than 1,637 million yards, as against 1,643 million yards and 1,836 million yards produced in the corresponding periods of 1958 and 1957, respectively. Surely, it would be unwise as a matter of larger economic policy even to lose temporarily the inflation-containing power of a plentiful supply of clothing.

Be that as it may, Mr. Shastri gave an account of the official survey work of cotton mills. The review reveals that the Survey Wing of the Textile Commissioner's Organisation has so far examined 150 units, of which 67 are in connection with the applications for loans from the National Industrial Development Corporation. Sixty-eight surveys have been carried out at the instance of various Central Ministries, the State Governments and the Industrial Finance Corporation, and 15 surveys at the request of the mills themselves. These surveys cover good mills and bad ones. It would be useful if the results of these surveys were made available to the public, so that there might be a better understanding of the industry's position.

ESTIMATES OF EXCESS CAPACITY IN COTTON INDUSTRY

AGREEMENT REACHED ON RETRENCHMENT COMPENSATION

From A Special Correspondent

MANCHESTER, *20th May*

THE major issue in the cotton industry, and likely to remain so for a considerable time, is the far-reaching plan for reorganising the industry. The Government White Paper on the reorganisation scheme, while leaving many details unanswered, at least shed some light on the extent to which the industry could contract if all the expendable machinery were removed. Figures contained in the report showed that, out of some 24 million "mule equivalent spindles" in running mills, some eight million were idle in April and others were only partly used. The Master Cotton Spinners estimate the full extent of excess capacity at about 12 million mule equivalent spindles.

MANCHESTER LETTER

The doublers estimate their excess at about 60 per cent. and the condenser spinners estimate theirs at about 10 per cent. Weaving capacity should, according to the industry, be reduced from 240,000 looms, which were in place in running mills in February, to 170,000 looms. Re-equipment of the remaining spinning capacity is estimated by the industry to cost about £40 million; of the doubling section about £8 million; and of weaving between £30 and £45 million. The finishing section proposes to eliminate surplus capacity and reorganise what is left rather than to re-equip. The White Paper says nothing about the basis of compensation for scrapped machinery.

No Detailed Arrangements Yet

Lord Rochdale, Chairman of the Cotton Board, said in Manchester that everyone recognised that the industry must work with maximum speed in carrying through the reorganisation. Speaking shortly after publication of the White Paper, he emphasised that the task of working out details of the scheme was only just beginning. The White Paper did not set out to provide an answer to all questions but merely to amplify and reinforce the statement which the President of the Board of Trade, Sir David Eccles, made in the House of Commons on 23rd April.

The work which it would be possible to undertake in the next month or two would be of a tentative nature, because nothing could be finalised until the Bill became an Act of Parliament and legislation was completed. Detailed arrangements would not come to light until orders were laid under the Bill in both Houses of Parliament. Lord Rochdale spoke of "quite a degree of misunderstanding" in some quarters about these detailed arrangements. There was a belief that these had crystallised into actual schemes, but this was not the case.

It was not possible at this stage to say how many workers might be affected by the closing down of mills. It would all depend upon the number of mills which decided to take advantage of the opportunity to close down and, at this stage, there were so many imponderables that it was quite impossible to make a forecast of the number of workers who would be affected. "It is a voluntary operation. There is no compulsion on any mill to close down."

Mr. A. G. B. Burney, a senior partner in the firm of chartered accountants appointed by the Board of Trade to advise, attended the Press conference in connection with the Government's proposals. He said that, until the details of the scheme had been worked out, it was impossible to say how acceptable they were going to be to individual sections of the cotton industry.

Workers' Compensation

A condition of the Government's offer to help the industry is that the redundant workers should be compensated and agreement between employers and trade unions was reached this week on a scheme, based on age and wages. Payments are linked to a sliding scale, ranging from one week's pay for a 21-year-old worker to 30 weeks for a worker aged 65 or over. The average age of cotton workers at the present time is around 43 and the compensation scale for workers in this age group is nine weeks. Compensation of about £400 can be expected by some key men in their sixties, but, on the basis of average age and average earnings throughout the industry—just short of £8 a week—the average compensation payment will be around £72.

A Working Party of employers and union officials is being set up to work out details of the agreement. One of the questions to be settled is the length of service a worker must have spent in the industry before he can qualify for compensation. Other points to be cleared up is whether compensation payments will be subject to income-tax and also whether a redundant worker drawing compensation can also receive unemployment benefit. It is believed that, in both cases, the official ruling will be favourable to the worker.

A fresh plea to the Government to steer new industries to Lancashire to provide work for cotton workers who become idle as the industry contracts was made by the 60,000-strong Weavers' Amalgamation—the biggest of the cotton unions. "It will take many years to re-equip the weaving industry with modern looms, working three shifts," said the Association in its annual report. "Meantime, more mills will close, leaving workers to seek alternative employment. This throws up a social problem from which the Government ought not to abdicate. It is bad enough that they should leave cotton textiles defenceless against the onslaught of Asiatic competition, but it is unforgivable that they should leave cotton folk without alternative work of any kind."

The report said that, if the Government believed that cotton workers should transfer to other industries, it was a Government responsibility to see there were other industries to which they could transfer. "An 'orderly contraction' of the industry will be terribly disorderly to those who lose their jobs without hope of finding others."

A smaller, more efficient industry, said the report, would in the long-term be able to pay better wages and give better conditions. With fewer young people entering the mills and the older workers retiring, the labour force would find its own level. Proceeding, the report observed: "We would rather see a smaller industry capable of paying good wages than a big industry maintained because of low wages. But we cannot play any enthusiastic part in helping to transform our industry unless the human beings involved are considered equally as much as the machines and capital. While we are ready and willing to play our part, we shall not be parties to any ideas which might forget them, while remembering everything else."—*All Rights Reserved.*

(*Concluded from next column*)

Independent peasants are also under attack. By forcing them into co-operatives, the share of privately used arable land will be down to one half of the farmland in 1960. While the craftsmen had been able to remain almost fully independent until the end of 1957, they are now being coerced into co-operatives which already account for 10 per cent. of all handicraft workers in the Zone. Nor do the Communists spare the small shop-owners and retail dealers who are degraded to mere employees of the State-run wholesale business.

In the meantime, production and trade of the countries within the Soviet orbit are subject to Moscow's long-term requirements through long-range plans establishing target figures for many years ahead. The domestic needs of the Zone have therefore only very low priority. It is the Plan that counts and not the needs of the human beings; thus the population is bearing the brunt of this new kind of economic imperialism. Each month, some 12,000 to 16,000 people, equalling the population of a medium-sized city, still flee from the Soviet Zone to the Federal Republic which attracts people from beyond the Iron Curtain like an economic magnet.

NOTES FROM WEST GERMANY

EXPANSION SLOWS DOWN

(From A Correspondent)

COLOGNE, *20th May*

OVERALL economic expansion in the Federal Republic has slowed down. The annual rate of increase of industrial production, for instance, has fallen from 14 per cent. eight years ago to three per cent. now. While a part of this slowdown certainly reflects the return to normal economic growth, there are also some clouds appearing on the horizon. Economic expansion is not evenly spread any more. There are some industries still basking in the sun of prosperity, such as automobiles, electrical appliances, the building trades and some other mass consumption industries. On the other side of the ledger, there are quite a few industries which have actual sales problems, connected with unused capacities and unemployment. Outstanding among the weaker industries are coal mining, steel production and textiles which together account for 1.9 million workers, more than one-fourth of the industrial labour force.

The coal mines are trying hard to reduce their pit-head stocks of unsold coal. Working hours underground have been cut from 43 to 40, with the trade unions even consenting to temporarily forgo full wage compensation in order to prevent mining costs from mounting. Steel plants are still suffering from lack of orders, although the situation has now improved somewhat. The textile and the garment industries have been particularly hit by weak sales and, at the same time, by strong foreign competition promoted by the Federal Republic's trade liberalisation policy. Competition in the textile field is often unfair, leaving German industry no chance to react with price cuts matching the foreign offer, because such cuts would involve substantial wage reductions for its own workers which, of course, are fully out of the question.

In terms of the development of production and sales of the various W. German industries, there are large disparities. Such disparities, in turn, have caused a certain sensitiveness of the overall W. German economic set-up. An added apprehension because of this sensitiveness is caused by the disparities in the progress towards the liberalisation of foreign trade. While the Federal Republic has long since adopted a low-tariff policy and a policy designed to liberalise her imports to the fullest possible extent still consistent with her vital national economic requirements, it is somewhat disappointing to see that other nations have not yet progressed that far and that fast. While German industry continues to support world-wide liberalisation of trade wholeheartedly, it thinks that now something should be done to harmonise the national steps towards this goal and to eliminate, by common consent, the more severe distortions of competition, so that the nations which have already made the biggest strides towards free trade are no longer penalised.

Economic Imperialism

The rulers of the Soviet Zone of Occupation in Germany have recently announced the targets of their new Seven-year Plan for the 1959-65 period. The plan makes it crystal clear that its foremost aim is to speed up both the "Sovietisation" of the German areas since 1945 under Moscow's control as well as their forced integration into the Soviet orbit. Though these aims have been pursued by the Communists ever since the end of World War II, their implementation has undoubtedly been stressed since about a year ago.

Whereas a "triangle of freedom" composed of personal and political freedom and of free enterprise marks life in the W. German Federal Republic, life in the Soviet Zone is under the dictatorship of economic planning and exploitation. With utter disregard of its geographical, historical and social background, the economy of the Soviet Zone of Germany was and is forcibly geared to the requirements of the Red bloc. The Soviet Military Authorities, in ordering wholesale confiscation of private property after the end of World War II, gave the green light to a wave of nationalisation measures which has not abated since. Privately owned factories accounted for only 12 per cent. of industrial production in 1957. In 1958, their share had shrunk to 8 per cent., and it will be further reduced to a bare 5 per cent. by the end of this year.

(*Continued in previous column*)

COTTONSEED OIL INDUSTRY

RECOMMENDATIONS FOR ITS DEVELOPMENT

BARRING two suggestions, namely, that excise duty on cottonseed oil should not be levied for another five years and that the export duty of 30 per cent. *ad valorem* on first-cut lint, which was abolished early in 1958, should not be re-imposed for another five years, the Government of India has accepted all the other major recommendations of the *Ad Hoc* Committee on development of cottonseed oil industry. The Committee, which was set up in October 1957, was asked to examine the problems of cottonseed oil industry and recommended measures for its speedy development.

The Committee has recommended a plan for the development of the industry in two stages and suggested a production target of 70,000 tons per year. The first stage envisages the production of 60,000 tons of cottonseed oil by the existing and licensed units and by establishing nine additional units, each with a capacity of 12,000 tons of cottonseed per annum. Of the nine units, two, it is suggested, should be set up in Madras, two in Madhya Pradesh and four in the Punjab and one in Rajasthan. In the second stage, a production of 70,000 tons of oil is to be achieved by setting up five more units of similar capacity, one in Madhya Pradesh and four in the Punjab.

The Committee holds that there is full justification for increasing the foreign exchange expenditure of Rs. 1.6 crore for the immediate development of the industry. It feels that special efforts may be necessary to develop cottonseed oil industry on modern lines in the Punjab.

The Committee has made certain suggestions for increasing the production of cottonseed oil. It has suggested that for this purpose first preference should be given to existing oil mills and *vanaspati* factories. New units, according to it, should be encouraged only if existing units do not take to cottonseed crushing expeditiously.

The Committee is of the view that, while every encouragement should be given to the organisation of the industry on co-operative lines, existing oil mills, *vanaspati* factories and new *entrepreneurs* should not be prevented or discouraged from setting up cottonseed oil mills on modern lines at approved locations. The Government, however, holds a different view. It considers that co-operatives should receive preference in the matter of granting licences for setting up of cottonseed oil mills and that every encouragement should be given to them for this purpose. The Government would specify for the purpose of implementing this policy areas or States which would be reserved for the development of the industry on co-operative basis. Even in areas not so reserved, licences to private *entrepreneurs* will be issued only when there is no prospect of a co-operative coming forward to take up cottonseed crushing within a reasonable period.

Apart from direct encouragement to production, the Committee has also suggested certain fiscal measures designed to give the necessary incentive for the crushing of cottonseed and the consumption of cottonseed oil as a cooking medium and in the manufacture of *vanaspati*. They are: (1) that the State Governments should waive the sales tax levy on cottonseed and exempt cottonseed which is used as cattle feed from payment of sales tax and (2) that the State Governments should advise local bodies to consider the abolition of octroi duty on cottonseed.

It has also been suggested that the Reserve Bank of India should be asked to advise all Scheduled Banks to consider the question of advancing loans on cottonseed and cottonseed products. The State Financial Corporations should also be instructed to accord a high priority to cottonseed oil industry in the scheme of assistance to private industrialists. Some of the other recommendations of the Committee are that production of balanced ration for cattle composed of decorticated cottonseed cake, hulls, rice bran, grain, etc., should be undertaken on a large-scale and that intensive propaganda for popularising cottonseed cake should be launched. It has also expressed the view that production of undecorticated cottonseed cake need not be discouraged. It has, however, stressed that delinting of seed should be done in all cases. As an animal feed stuff undecorticated cake could replace the whole seed more readily than decorticated cake in the initial stages.

Alluding to problems of research, the Committee has pointed out that investigational work on cottonseed and cottonseed products should be co-ordinated by the Council of Scientific and Industrial Research. The Committee has stressed the need for active steps to extend the cultivation of the fuzzy variety of cottonseed in different regions of the country. It has also held that the linter industry should be organised on the basis of production of first-cut and second-cut as the latter is the most suitable raw material for high grade chemical cotton essential for the manufacture of plastics, rayon, films, explosives, etc.

The Government has accepted these recommendations and will soon take steps to implement them. The recommendations pertaining to States will be brought to the notice of the State Governments concerned, wherever necessary, for implementation. The proposals that no excise duty on cottonseed oil should be levied for another five years and that the export duty on first-cut linters, which was abolished in 1958, should not be reimposed for another five years, were, as noted earlier, not accepted. The reason given is that the Government could not give any such assurance. But, if this is all the explanation, there is nothing in it. The Government ought to have given reasons why it could not accept the suggestions of a Committee which had made a detailed study of the situation. There is nothing basically wrong with these two suggestions. Since it is a well-known fact that the growth of cottonseed oil industry will result in greater utilisation of a raw material by avoiding the waste that is going on now, and thereby add to the wealth of the country, it would be eminently desirable to encourage the growth of this industry by offering the types of incentives advocated by the Committee.

TANGANYIKA COTTON DELEGATION

The Government of India has agreed to consider a suggestion made by the Tanganyika Lint and Seed Marketing Board delegation, that a portion of the recently announced cotton import quota might be reserved in such a way as would enable Tanganyika exporters to ship their cotton to India in September-October next.

Disclosing this, Mr. C. De N. Hill, leader of the delegation told a Press Conference in Bombay this week, that this suggestion was made on behalf of the delegation by him to the Union Commerce and Industry Minister, Mr. Lal Bahadur Shastri. Mr. Hill said that Tanganyika produced enough quantity of cotton of stapling 1-1/16 inches and above. In fact, 75 per cent. of the cotton crop of 170,000 bales this year was of this variety of cotton.

India, he said, had a favourable balance of trade with Tanganyika which was a leading market for Indian textiles in East Africa. It is mainly because of lack of information about Tanganyika cotton that Indian spinners preferred other varieties of cotton. The delegation, he added, had been able to remove several misunderstandings in regard to Tanganyika cotton.

The four-man delegation which arrived here on 17th May left for Tanganyika on Friday.

The Government of India has extended the shipment period for the import of 140,000 bales of raw cotton stapling 1-1/16 inches and above but below 1-3/16 inches from all areas from the end of May to 30th June 1959.

The import of this quota was authorised by the Government on 13th December 1958.

Safe and Attractive Investment
For Small Investors
THE
BANK OF MAHARASHTRA
LIMITED
3 and 5 Years Cash Certificates
are available in the denominations of-
Rs. 100, Rs. 500 and Rs. 1,000
offering yield at 4% per annum and 4½% per annum at compound interest respectively.
Two New Branches of the Bank have been opened at
KHAMGAON and YEOTMAL
on Akshyatritiya the 10th May 1959.
The Bank's Branches now total forty-six.
The public is requested to utilize their services.
Head Office: C. V. JOAG
Bajirao Road, Poona-2. Manager.

MILL CONSUMPTION OF COTTON

TREND DURING FIRST HALF OF CURRENT SEASON

FIGURES relating to mill consumption of Indian raw cotton during the first six months of the current season, namely, 1st September 1958 to 28th February 1959, indicate that consumption has been running at a higher rate than in the corresponding period of the previous season. Thus, Indian mills consumed 2,349,807 bales of cotton of 400 lbs. each during the six-month period ended 28th February 1959, as against 2,296,661 bales during the same period last season. Consumption of foreign cotton, in contrast, has registered a decline. It was 224,752 bales, as against 293,286 bales in the corresponding period of the previous year. The total consumption of both foreign and Indian cotton was, therefore, a shade less at 2,574,559 bales, as compared with 2,589,947 bales in the corresponding period of the 1957-58 season. The average monthly consumption of Indian cotton during the period was about 391,630 bales, as against 382,780 bales in the same period last season. The average monthly consumption of foreign cotton, on the other hand, was lower at 37,460 bales, as against 48,880 bales in the same period last season.

The higher rate of mill consumption of Indian cotton was due to shortage of foreign cotton and some improvement in the offtake of coarse and medium count cloth. But the fall in total consumption shows that all was still not well with the mill industry.

As a result of the higher rate of consumption, stocks of indigenous cotton with mills have been considerably reduced. Thus, the period of availability of stocks with mills at the end of February was 2-3/5 months, as against 3½ months at the same time last season.

Consumption of foreign cotton, as already noted, has been running at a lower rate. Stocks with mills were also very limited as mills could not freely replenish them due to stringent restrictions on imports. The period of availability of stocks with mills at the end of February was 1-4/5 months, as against 3½ months at the end of February 1958.

Variety-wise breakdown of foreign cotton consumed by mills shows that East African cotton accounted for the largest share in the total consumption, followed by Americans, Egyptians and Sudans. The following table gives a comparison of foreign cotton consumed during the first half of 1958-59 with that in the same period last season:

(In bales of 400 lbs.)

Description	Consumption during	
	Sept. 1958 to Feb. 1959	Sept. 1957 to Feb. 1958
East African	88,247	78,385
United States of America	40,383	131,915
Total Egyptian cotton	44,525	38,849
Sudan Egyptians	44,349	87,462
Peruvians	502	4,340
Sudan American	276	46
Russian	58	..
Mexico	..	61
Belgian Congo	..	821
Other foreign cotton	700	2,605
Total foreign cotton ..	224,752	293,286

If the trend of consumption during the first half is maintained during the rest of the season, the total consumption of cotton during the entire season may well aggregate 5.14 million bales, of which the share of Indian cotton will be of the order of 4.7 million bales, as against 4.43 million bales consumed in the whole of the 1957-58 season. This is almost the same as the expected crop for the current season, the latest estimate of it being no more than 4.7 million bales. This undoubtedly explains the sustained firmness of Indian cotton in both the spot and futures sections of the market.

I.C.A.C. MEETING

Mexico City has been selected as the Venue for the 1960 meeting of the International Cotton Advisory Committee. Before adjourning the 18th plenary session held at Washington the Committee unanimously accepted the invitation extended by Dr. Julian Saenz, the Mexican delegate, to meet in the Mexican capital next May. The exact dates for the meeting would be determined later by the group's standing committee.

United States cotton policies came under fire at the final meeting. A resolution adopted at the meeting stated: "In the opinion of most delegates the uncertainty arising from existing Government cotton export programmes seriously affects the stability of international cotton markets and tends to reduce cotton trade and consumption."

Men and Oil . . . 8

The Fire Officer

Tremendous fires blaze all day long in the oil industry—under steam boilers, inside heaters and in refinery units. All these fires are kept under control by trained operators.
It is for the other kind of fire that the industry's fire brigades are on the watch day and night; the accidental blaze that flares up quickly, silently, and without warning.
For a spark in an oilfield can cause an outbreak of fire disastrous to life and property.
A chance error in a refinery could put the whole plant out of action.
Oil fires, because they spread so quickly, must be fought with special apparatus, and the industry's firemen, under their Fire Officers, are specially trained for the job.
In the Assam oil industry, fire brigades are on constant duty at all important centres, ready at a moment's notice to tackle this most treacherous enemy.
Indian run, the brigades perform a vital service to an important Indian industry.

SUGARCANE PRICES FOR NEXT SEASON

STATUTORY MINIMUM UNCHANGED—GROWERS TO GET SHARE IN SUGAR PROFITS

AS was briefly stated in this journal last week, the Government of India has decided to continue the present sugarcane price policy during the ensuing season, that is, November 1959-October 1960, also. Accordingly, the basic minimum price for cane payable by vacuum pan sugar factories will be Re. 1.44 per maund for gate delivery and Re. 1.31 for delivery at rail centres. Further, there would be a deferred payment of an amount which may be found due under the formula prescribed by the Centre or under any alternative scheme applied in a State or region by the Government concerned, with the previous approval of the Centre, for linking the price of cane to that of sugar realised by the factories.

The Government's decision to continue the present basic minimum price for cane, notwithstanding the persistent agitation of cane growers for an increase in price, strongly backed by politicians not excluding the members of the Congress Party, reflects its determination to hold the price line. It is true that this minimum price has been in force since the 1953-54 season, and that, during the period of five to six years, prices of commodities in general have gone up by eleven per cent. But it must be remembered that, first, the minimum price for sugarcane was fixed in 1953-54 on a very liberal scale, secondly, it suffered no fall when other commodities declined in value in 1954-55, and, thirdly, in addition to the minimum, the growers have been receiving a share in the prices realised by the factories. Nowhere in the world, with the exception, perhaps, of Japan, is the price of sugarcane so high as it is in India. Indeed, one wonders if any other agricultural commodity pays the cultivator as much as sugarcane does. To take the position in Uttar Pradesh, the State where the cane growers have allowed themselves to be a victim of pressure tactics adopted by politicians. One acre of land devoted to the cultivation of cane gives the farmer, on an average, a monetary yield of Rs. 400 in the form of cane price on the basis of existing statutory minimum. This monetary yield is much more than what is obtained by the farmer from other food crops. The yield comes to just Rs. 95 from *jowar*, Rs. 112 (controlled price) and Rs. 152 (open market price) from wheat, and Rs. 236 from rice.

Price Quite Profitable

It is the continued high monetary yield from sugarcane thus that has been responsible for the marked expansion in the acreage under the crop in recent years, particularly in areas supplying cane to sugar mills. The official final estimate of the sugarcane crop for the season 1957-58 puts the total acreage in the U.P. at 3,017,000 acres, as against 1,973,000 acres in 1953-54. The area under cane in the current season is believed to be still higher, probably at 3,098,000 acres. Surely, if the price offered for cane had not been very profitable, the growers would not have devoted such a large area to the cultivation of sugarcane.

Even the existing minimum price for cane is regarded as too high, accounting as it does for nearly 60 per cent. of the cost of producing sugar. The heavy incidence of the cost of cane is due to the low sucrose content of sugarcane and, so long as price is fixed only on the basis of quantity, irrespective of quality considerations, the grower has no incentive to improve the sugar content in the cane. This fact and the fixation of the minimum price at a fairly high level ensure full protection to the cane producers. Any further upward revision in cane price will have two disquieting consequences. First, there will be a diversion of large areas now under food crops to the cultivation of sugarcane. Secondly, the cost of sugar will go higher still, thereby penalising the consumer.

If the cultivators are to derive a larger monetary yield, they must put forth their best to grow from the given bit of land a larger crop of cane with richer sucrose-content. After all, it may be noted, the price fixed for the cane is just the minimum and it is always open to sugar factories to give a higher price, if they want to, which can be achieved only by growing and supplying superior varieties of cane and not by frequent agitations for higher price. This is the most sensible approach to sugarcane prices. It is deplorable that the Government of India has decided to continue the system of deferred payment of cane price, which in effect means a share to the grower in the profits of mills, even though he will not have in any way contributed to the improvement in the mills' profit. We do not say that the Government is unaware of this defect. It is quite conscious of it. But practical considerations and political exigencies make it difficult for the Government to follow a scientific policy. While these difficulties cannot be lightly ignored, the Government could have at least related the payment of an extra price for regular delivery of cane to the factories. It is needless to reiterate that, so long as the cane grower is assured of not only a statutory minimum price but also a share in the sugar mills' profit, there is no incentive for him to raise the efficiency of cane culture. He simply does not bother to grow cane which gives a higher yield of sugar per acre.

Alternative Schemes

It is, however, gratifying that the Government has excluded from the purview of its policy the States of Bombay, Andhra and Madras where the State Governments concerned have applied alternative schemes with the approval of the Centre. In the Bombay-Deccan, for instance, the Government of Bombay has been following a policy of fixing a higher minimum price for cane supplied to sugar mills by private cultivators. The price fixed for the ensuing season (1959-60) is Re. 1.72 per maund (or Rs. 47 per ton), which is higher than Re. 1.69 (Rs. 46) paid in the current season (1958-59). It is also higher than the all-India minimum price of Re. 1.37 per maund (Rs. 37.29 per ton). The price of Re. 1.72 is the minimum every factory has agreed to pay and does not affect any contracts for higher price, if any, made by the factories with cane growers. It may be noted, in passing, that, in the Bombay-Deccan, the bulk of the cane required by the factories is grown in their own plantations, so that the quantity of outside cane bought by them is not large. In the Madras and Andhra States, the payment for sugarcane is based on the "S.I.S.M.A." formula evolved by the South Indian Sugar Mills Association. Under this formula, the price of cane payable by a factory is determined roughly on the basis of both quantity and quality. Thus, the cane price is calculated on the net amount realised by individual factories from the sale of sugar and on the average recovery obtained by the individual factories of the whole crop for the whole season. This scheme is by no means perfect, but it is a little better than the one followed in U.P., Bihar and other parts of North India.

SUGAR DEALERS LICENSING ORDERS

Almost all State Governments have now issued sugar dealers licensing orders in pursuance of the directive received from the Central Government. Under these orders, which will come into force with effect from 1st June 1959, no dealer who is engaged in the business of purchase, sale or storage for sale of any variety of sugar containing more than 90 per cent. sucrose in quantity exceeding 137 maunds at a time can carry on business as a dealer except under and in accordance with the terms and conditions of a licence issued in this behalf by the licensing authority. Any person who stores more than 137 maunds of sugar at any one time shall, unless the contrary is proved, be deemed to store it for the purpose of sale. A separate licence will be required by a dealer for each place of business. The licensed dealers will have to submit to the licensing authority concerned a true return in the prescribed form of stocks, receipts and deliveries of sugar every fortnight, so as to reach the authority within five days after the close of the fortnight.

In the Bombay State, there will be two licensing authorities—the Controller of Foodgrains Distribution, Bombay, in the case of sugar dealers in Greater Bombay and the Collectors and Additional Collectors of respective districts in the case of dealers elsewhere in the State. The licence fee is fixed at Rs. 5 for the issue, Rs. 2 for the renewal thereof and Rs. 10 for a duplicate licence.

The mere licensing of sugar dealers will not, however, succeed in checking a further rise in sugar prices, except that it may, to some extent, discourage hoarding of stocks. For the supply position of sugar is not so comfortable as to leave sizable closing stocks with the mills at the end of the current season. On the basis of the production and stock figures for the first six months of the season, the total of these stocks are expected to be no more than 100,000 tons, as the following table shows:

Sugar Balance Sheet

(In thousand tons)

	1958-59	1957-58	1956-57	1955-56
Opening stocks	336	435	533	543
Production	1,000	1,979	2,029	1,865
Imports	Nil	Nil	Nil	05
Exports	10*	36	144	Nil
Total supply	2,186	2,378	2,418	2,473
Offtake for internal consumption	2,092†	2,042	1,983	1,940
Closing stocks	94	330	435	533

* Estimated actual shipment. Quota released is 50,000 tons.
† On the basis of offtake during the six months November 1958-April 1959.

Sugar production during the month of April 1959 was 173,000 tons, as against 197,000 tons in April 1958. The total production during the six months 1st November 1958 to 30th April 1959 was 1.87 million tons, as compared with 1.97 million tons in the corresponding period of 1957-58.

The offtake of sugar from factories during April 1959 was 184,000 tons, bringing the total production in the aforesaid period to 1,046,000 tons. The corresponding figures for 1957-58 were 183,000 tons and 992,000 tons, respectively.

The closing stocks of sugar with mills at the end of April last aggregated 1,157,000 tons, as against 1,349,000 tons a year before.

The Government of India has released 190,000 tons of sugar for sale. This quantity is appreciably higher than that released last month, namely, 140,000 tons. In the case of sugar factories situated in U.P., North Bihar and the Punjab, sales are to be effected at prices not higher than the ex-factory price fixed by the Government of India on 22nd December, 1958.

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1959

MORE COMPREHENSIVE THAN OTHERS

★

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on Investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other Financial Institutions, and leading business houses use it, is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of Income and Super Taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, and Estate Duty. Price Rs. 12.50 nP. Postage Rs. 2/-. Add 50 Naye Paise to outstation cheques. Available from the Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta 1.

COMPANY LAW SUPPLEMENT
(*Monthly Journal*)

Main object, to keep the readers informed on all aspects of company law, contains among other matters Queries on problems relating to company law and their answers, amendments of company law, notifications, articles of general importance, digest of cases, etc.

PROBLEMS OF TEA INDUSTRY

TEA BOARD CHAIRMAN DEFENDS EXPORT DUTY

MUCH familiar ground was covered by Mr. T. Kanoria, the outgoing Chairman of the Tea Association of India, in his address at the third annual meeting of the Association held at Calcutta on Friday the 22nd inst., when he reiterated the tea industry's case for further relief and aid from the Government. This does not, however, minimise the importance or the validity of Mr. Kanoria's arguments for restoring the competitive capacity of Indian tea abroad. For the fundamental problem of the industry is the large proportion of common tea it produces at a cost much higher than that incurred by producers of this variety elsewhere in the world and at a cost not much less than that of its own production of quality teas. No doubt, the industry has received some fiscal reliefs by way of a reduction in export and excise duties and its overall performance during the past year has been fairly good, but the growers continue to feel that adequate relief has not been given to common teas.

India's production of tea in 1958 grew to 711.4 million lbs. from 680.6 million lbs. in the previous year, thus exceeding the target of output fixed for the second Five-year Plan. Its exports, too, were encouraging, having gone up by 13.7 per cent., that is, from 442.6 million lbs. to 503.4 million lbs., though they were second only to the record level (523.6 million lbs.) reached in 1956. Sales to all the main tea consuming countries increased, except to the Irish Republic, where they actually declined. The total export earnings from tea during 1958 amounted to Rs. 135.96 crores, representing an increase of Rs. 12.57 crores over those in 1957. Mr. Kanoria, however, pointed out that there was no reason for any complacency over this performance, for the world output of tea was increasing, without any corresponding rise in consumption, so that the supply was outstripping demand at a widening pace. If this trend were to continue, he felt, it would have adverse repercussions on the industry as a whole. As the largest producer of common teas, Indian tea industry would be more easily vulnerable to them. Mr. Kanoria, therefore, said that it was desirable to revive the International Tea Agreement, as mere voluntary crop regulation would not in any way solve the problem. He wanted India to take active steps to see that the agreement was revived and ensure that the major tea producing countries were parties to it.

Referring to the problem of common teas, Mr. Kanoria drew attention to the increasing competition from other countries, particularly from East Africa and, more recently, from China. Exports from East Africa had gone up by 26 per cent. (from 65.9 million lbs. in 1957 to 83 million lbs.) in 1958. China supplied about 10 million lbs. to the U.K. last year. There was a tenfold increase last year in Chinese exports of tea to Egypt. Both China and East Africa are expected to raise their output and sell their teas at competitive prices. While acknowledging the concessions given by the Government of India by way of reduction in export and excise duties, Mr. Kanoria said that they had been "inadequate to improve the overall position of our common teas." His main ground on which further relief for common teas is sought is that "there is little possibility of reducing the cost of production of these teas." Mr. Kanoria suggested that the pros and cons of the tea export duty, as also the West Bengal entry tax and Assam road tax, should be re-examined. He reminded the authorities that the abolition of the latter two levies had been recommended by the Plantation Enquiry Commission.

Mr. Kanoria felt that the prospects of pushing up tea exports to the U.S.S.R. were bright. While its consumption is estimated at 123 million lbs., its own production is said to be of the order of only 71.5 million lbs., the balance being met by imports, mainly from China and India. The Tea Association Chairman said that it was desirable that efforts be made at Government level to increase our exports to Russia, as the Russian economy was controlled by the State.

While the output of tea is increasing, the prospects for exploring new markets for absorption of the surplus tea are, as already stated, not bright. It is obviously necessary, therefore, that internal consumption should be encouraged. In this connection, Mr. Kanoria suggested that, instead of opening tea centres in cities where tea was already popular, less expensive arrangements should be made for the supply of liquid tea from quality teas and vigorous propaganda should be made in areas where consumption of tea was low or *nil*.

Another problem of tea growers to which Mr. Kanoria referred is the difficulty in obtaining loans to finance the harvesting and movement of crop. In North India, for instance, the harvesting begins in April and a sizable crop starts moving out from June only. More than 60 per cent. of the expenditure for the season has to be incurred in the preceding period. The finance for all this, as Mr. Kanoria pointed out, has to be obtained in advance, mostly from banks by hypothecation of the crop. The agricultural nature of the industry introduces an element of uncertainty as to the ultimate result and, as such, the planters experience difficulty in obtaining the necessary finance. Over and above this, the industry requires finance for replantation of estates and modernisation of factories, as also for providing housing and other amenities to workers. No doubt the State Governments are giving loans to small planters for housing, but the industry does not enjoy the benefit of subsidy offered to other industries. In view of the agricultural-*cum*-industrial nature of the industry, no assistance is available to it from the Industrial Finance Corporation or other Governmental financing agencies. As a result of the representations made by the planters, the Government of India is considering the question of setting up a Tea Guarantee Fund on the initiative of the Tea Board. Welcoming this proposal, Mr. Kanoria requested the Tea Board to see that the scheme came into being at an early date.

Another topic to which Mr. Kanoria made a reference related to the supply of sulphate of ammonia, the main fertiliser for tea plants. The supply has been curtailed to 50 per cent. of the industry's requirement, on account of a drastic cut in imports. The use of substitutes like urea, ammonium sulphate nitrate, etc., to quote Mr. Kanoria, has been found to be unsuitable to the North Indian tea estates, on account of their hygroscopic nature. In fact, the use of substitutes, it is feared, will affect the quality of the crop. In view of the need for improving the quality of tea, Mr. Kanoria pleaded that the industry's requirement of sulphate of ammonia should be met in full, even if it be at some cost of foreign exchange, and the Tea Board should make arrangements for the supply and equitable distribution of fertilisers, particularly sulphate of ammonia.

Answering some of the points raised by Mr. Kanoria, Mr. A. B. Chatterjee, Chairman of the Tea Board, who inaugurated the meeting, said that an international agreement on tea was no doubt necessary, but he personally felt that the time was inopportune for countries to come to such an agreement. In the absence of any details, it is difficult to see how Mr. Chatterjee came to this conclusion. Referring to the plea for further fiscal reliefs, the Tea Board Chairman said that he was yet to be convinced how a reduction in export duty on common tea would promote its sale abroad and that the steps already taken in this direction by the Government were substantial. He asked the critics to remember that the Government required resources for the development of the country. He saw no objection to taxing a commodity like tea which was in general demand as money was required to implement the development plan. This is a familiar argument in support of the Government's fiscal policies but is the least convincing. There is a limit up to which resources for financing the Plan can be raised through taxation on an export commodity such as tea. Neither the Government nor the industry has any control over the world markets, the trend of which is determined by the law of supply and demand. There is ample evidence to show that tea is having a buyers' market. To subject Indian tea to heavy export taxation is to extend the protective umbrella to its competitors, young and old alike. If this policy is persisted in, a time may come when a reduction in, or even abolition of, export duty will fail to have any beneficial effect. No doubt, the industry has done well during the past season, but to defend the continuance of tax burden on the industry on this ground is a bit shortsighted. The whole position should be judged from a long-term point of view, especially when the trend of world output is upward and consumption is not keeping pace with it. A further relief when the going is good will surely help the industry to secure a firm footing in world markets and the shortfall in tax revenue will be more than made good by larger exports and bigger foreign exchange earnings.

The Tea Board Chairman confirmed that the scheme for "Tea Guarantee Fund" was actually ready and was with the Government. He added that the Tea Board was also studying a scheme for replanting tea bushes. He expected to send the scheme to the Union Government shortly.

RUSSIAN PURCHASES OF RUBBER

Russia purchased 24,806 tons of rubber from Malaya during April. This represented nearly 23 per cent. of the total quantity of rubber exported during the month and was the largest quantity ever shipped to the Soviet Union in any month. Thus, Russia was the best customer for Malaya's rubber for the second consecutive month. Purchases in March aggregated 20,810 tons. During the first four months of 1959 shipments to Russia aggregated 72,223 tons, representing 18.4 per cent. of the total exports. The U.K. purchased 50,782 tons during the same period. The U.S. offtake was 56,148 tons and that of Japan 37,708 tons.

Rubber industrial circles in the Malayan Federation are said to be interested in Western Australia, where a project has been launched to grow high yielding Guayule rubber, capable of producing 10 million lbs. from 10,000-acre units per annum. According to a spokesman of the Rubber Producers' Council in Kuala Lumpur, it is not unduly concerned over this development, as by the time Australia was in a position to produce new rubber on a large commercial scale the world rubber demand would also have increased.

MEXICAN COFFEE

The Latin American Coffee Convention, drawn up recently, in substitution of the agreement subscribed to earlier in Mexico, has fixed an export quota of 1.33 million bags for Mexican coffee. At the current prices (U.S. $24 to $28 per quintal) the income from coffee exports is estimated to be of the order of 117.7 million dollars, since it appears to be feasible to find a market for the entire quota. Exports of coffee from Mexico during 1958 amounted to 78,478 metric tons, quoted at between U.S. $16 and $20 per quintal. In the current year, exports are expected to reach the figure of 79,800 metric tons at the price fixed in the Latin American Coffee Convention. As a result of unfavourable weather conditions, the present crop will be smaller than that of last year, but this will be made good by the substantially larger income from coffee trade. In addition, domestic consumption of coffee is said to have increased very considerably in Mexico. In 1957, the internal market consumed only 250,000 bags, but the present demand sets that figure at 425,000. Local consumption is almost certain to increase even more, if the Mexican consumer is provided a pure product at a reasonable price as a result of current efforts to investigate and eliminate the practice of coffee adulteration.

Because you value your car
you should use Mobiloil

A VALUABLE investment — your car! Naturally you want to protect it . . . keep it in top condition for a long, long time.

MOBILOIL gives you *full protection*. From the moment you start your car, to top operating temperatures, MOBILOIL separates moving parts with a tough, protective film. Also, MOBILOIL cuts down on power-robbing friction. All this results in *increased power* and *longer life* for your car's engine.

SCIENTIFIC RESEARCH IN INDIA

CONSIDERABLE PROGRESS MADE, BUT STILL MUCH BEHIND EVEN CHINA

By G. N. Das

[The author, an Indian anthropologist, here reviews the progress of science in modern India and its impact on society. Like several other scientists, he advocates "the breakdown of the traditional and self-contradictory distinction between the Sciences of Man and the Sciences of Nature; for all sciences rest on nature."—Ed.]

ANCIENT India made great contributions to astronomy, mathematics, metallurgy, medicine and other fields of scientific endeavour. But, in latter ages, this activity came to a standstill, because Indians did not keep up that vigorous spirit of enquiry, observation and experimentation which form the life-blood of science.

The mother of science in modern India is the Asiatic Society in Calcutta which was established by Sir William Jones in 1784 "for inquiry into the History, civil and natural, the Antiquities, Arts, Sciences and Literature of Asia." However, research and teaching of science were in a very unsatisfactory level till about the beginnings of this century. Today, the picture has completely changed and India can boast of 20 national laboratories under the Council of Industrial and Scientific Research, about 88 research institutes and centres, 54 scientific and technological associations and departments for science teaching and research in 37 universities.

The premier scientific societies and academies are the National Institute of Sciences, the Indian Science Congress Association, the Indian Association for the Cultivation of Science, the Indian Academy of Sciences and the National Academy of Sciences (India). The Council of Scientific and Industrial Research, which was established by the Government in 1942 as an autonomous body, has done much for the promotion and co-ordination of scientific and industrial research, for the establishment and management of scientific laboratories and institutes and for the collection and dissemination of scientific information.

National Laboratories and Natural Sciences

The national laboratories are engaged in fundamental research as well as in applied work dealing with the practical problems of industry and with subsidiary activities like research for the maintenance of standards. As remarked by Professor Humayun Kabir, the Union Minister for Scientific Research and Cultural Affairs, though one cannot lay down a time-table for science, yet, in both pure and applied research, the output of the national laboratories has been quite promising. Almost every laboratory can lay claim to one or two striking achievements and is trying to make new things from indigenous instead of imported materials.

A solar cooker has been developed by the National Physical Laboratory and the use of solar energy for refrigeration is being experimented upon. Silver mica capacitors of great use to the radio industry have also been fashioned by the same Laboratory.

Work at the Central Building Research Institute, Roorkee, has shown that it is possible to manufacture bricks of good quality from black cotton soil and has led to the development of a hand-operated machine for making bricks at the rate of 2,000 per day. The Institute has also developed a wash having silicone for waterproofing mud walls and a foaming agent for foam concrete which will economise the use of cement. Mention should, in addition, be made of the processess evolved here for the use of local building materials in constructing buildings at a reduced cost.

The Central Road Research Institute, Delhi, has been carrying on studies to stabilise black cotton soil and thus make road-making cheaper.

The Central Electrical Laboratory in Karaikudi has prepared a process for making cuprous oxide for the manufacture of underwater paints.

Coal deposits have been recently discovered in Madhya Pradesh. Bihar and the Garo Hills and they show that our coal reserves are greater than what has been estimated recently. Moreover, researches undertaken by the Council of Scientific and Industrial Research indicate that we can blend weekly coking coal with good coking coal and upgrade the coal by washing and thus greatly augment our coking coal resources which are so essential for the steel industry. Further, the Fuel Research Institute at Jealgora is studying the preparation of insecticides from coal. A smokeless solid fuel for domestic use has been developed through the recovery of by-products and this appears to be superior to soft coke now sold in the market.

The National Metallurgical Laboratory, Jamshedpur, has evolved a method for making stainless steel by using manganese in the place of nickel. It has been shown that fosterite and sillimanite, of which there are abundant deposits, can be used more and more for the manufacture of refractories. Methods for upgrading manganese ores, chromite, wolfram, pyrites, etc., have also been studied with fruitful results.

The National Chemical Laboratory, Poona, has demonstrated that tobacco waste, of which about 28 million lbs. are available, can be used to manufacture a powerful insecticide for agricultural spraying, called nicotine sulphate.

The Central Leather Research Institute, Madras, has found methods for improving raw hides and skins, for better tanning and for producing leather auxiliaries and industrial leather. It has discovered 15 indigenous materials to substitute wattle bark in leather tanning.

Since the inauguration of the second Plan. the glass industry has made much progress in the manufacture of safety glass, glass shells, rods and tubings for electrical purposes and containers for penicillin and vaccine. Foam glass which is used in refrigeration and construction industries is being made from local materials by the Central Glass and Ceramic Research Institute, Calcutta. It is also giving attention to sun goggles, optical glass, signal glass, methods for testing the quality of glass containers, low melting resistant glasses, etc. A process has been developed under which the popular red bangles can be made without the use of the imported, scarce and costly colouring agent called selenium. There is every reason to hope that, if the present tempo of research is maintained, India will soon equal the achievement of other developed countries in the field of ceramic industries which may be classified into: (i) white ware comprising translucent china, extra-light fine earthenware dinner sets, porcelain domestic crockery, etc.; (ii) heavy clay industries, consisting of building bricks, roofing tiles, sewage pipes and sanitary equipment; and (iii) refractories like fire-bricks, etc., used in the making of industrial furnaces.

That poor and coarse articles can be turned into nutritious food has been proved by the Central Food Technological Research Institute at Mysore. Here means have been evolved for making a macaroni product which exceeds rice in its nutritive value from such a common tuber as tapioca. A multi-purpose food, an Indian version of the American MPF, the twentieth century loaves and fishes, has been developed at the Institute. It consists of a mixture of 70 parts of processed groundnut flour and 30 parts of roasted Bengal gram flour together with minerals and synthetic vitamins and is a valuable food supplement for relieving malnutrition. "The seasoned variety can be cooked as a savoury dish like *Uppma* or incorporated in various preparations used in the daily diet such as *dal*, vegetable, and different kinds of savoury snacks. The unseasoned variety can be made into a porridge with milk or skim milk or cooked as *halva* and can also be added to bland preparations, thus raising the nutritive value of the dishes to which it is added. One ounce of this food, costing about half an anna, will provide substantial amounts of protein, vitamins and minerals to the Indian diet which is deficient in these essential nutrients."

Importers, Stockists and Suppliers of:
ALL INDUSTRIAL CHEMICALS

The Government of India has set up a separate organisation for research and development of defence science and about 50 scientists are now engaged in this work. This is a welcome move, for even a peace-loving nation has to depend upon science and technology for its defence and national survival.

Advanced work in nuclear energy is going on in the three important industrial countries of Asia—Japan, India and China. Both India and Japan have declared that they will not manufacture nuclear weapons and will not use them under any circumstances. India is going ahead in research on atomic energy for peaceful purposes and is far in advance of several Asian countries in this respect. She has an Air Monitoring Division which measures the radio-activity of air, water and food and has found that airborne radio-activity is on the increase. One hundred and twenty-five geologists and 62 physicists are now busy prospecting for atomic minerals. The latest report of the Atomic Energy Department shows rapid progress in the production of isotopes and radio chemicals. Of the three experimental reactors, the "Apsara" went into operation on 4th August 1956 and the Zero Energy Reactor may be ready in June 1959. With the establishment of the Canada-India reactor during the middle of 1960, India would possess one of the best isotope producers in the world. It has further been stated that it is possible to start the first atomic power station by 1964. The cost of power from it may be about 2.6 nP per unit, which is lower than the cost of electricity generated for thermal stations.

Agricultural Research

It is a matter for regret that India, which is largely an agricultural country, has an annual shortage of about two to three million tons of foodgrains. Recent research has proved that the application of radio-active fertilisers does not increase crop growth. But the ionizing radiation which radio-isotopes "emit is capable of inducing heritable changes in plants, and so plant breeders have in them a relatively inexpensive and readily available tool for enlarging the variation available to them. Lastly, the sterilising effects of radio-active substances on biological material offer great promise for the food preservation industry and for pest control."

The Indian Council of Agricultural Research which was set up in 1929 has carried out an immense amount of research on various problems of agriculture. Scientific selection and breeding have enabled the development of better strains of millets and cereals, like high-yielding rice and rust-resistant wheat, well adapted to conditions obtaining in different parts of the country The sugarcane evolved in Coimbatore has become world-famous. In jute India has almost become self-sufficient and cotton has registered considerable improvement. Problems relating to animal husbandry like breeding disease control. nutrition, etc., of livestock, are being actively tackled. A Central Fisheries Research Station for marine fish has been set up at Mandapam and another for fresh-water fish in Calcutta and researches are being carried on here and elsewhere to assess the country's resources of fish. A Central Soil Conservation Board, with several centres devoted to research and training, is applying itself to soil conservation. Extension work with the object of applying the results of research to farming is being vigorously attended to by the Indian Council of Agricultural Research. Its annual report for 1957-58 points out that, in the case of paddy, green manure gives the highest yield (31.77 maunds an acre), while fertilisers give only 27.21 maunds.

Irrigation Research

India, having as it does "the largest and most extensive canal irrigation system in the world," has 14 irrigation research stations, the work of which is co-ordinated by the Central Board of Irrigation and Power. As stated by Professor M. S. Thacker, Director, Council of Scientific and Industrial Research, they study "the laws governing the flow of water in channels, the transportation of suspended solids by flowing water, the sub-soil flow, the analysis of stresses in complicated structural members and massive structures like dams and weirs, the theory and technique of model experiments to get at the behaviour in prototype, the durability and characteristics of the various materials of construction for different engineering works and a number of other problems on the solution of which depend the correct design and economical construction of the major engineering works."

The meteorological services of India are organised by the Meteorological Department of the Government of India. This department and the Atmospheric Research Committee of the Council of Scientific and Industrial Research have been studying rain and cloud physics, medium-range forecasting, meteorological aspects of flood control, arid zone research, methods for developing meteorological, seismological and allied instruments, etc.

Medical Research

Since independence, medical research has been considerably expanded in range and scope, with the object of advancing the health and well-being of the nation. The activities of the Indian Council of Medical Research are mainly aimed at developing teaching and research in medical colleges and universities, at problems of environmental sanitation and control of communicable diseases, the study of indigenous drugs, improving the standards of nutrition and discovering methods of family planning through the study of human reproduction.

Thanks to its efforts, the control of malaria, filariasis, leprosy, tuberculosis, plague and virus diseases like small-pox and rabies, has become possible, and our knowledge of diseases like kala-azar, typhus and the anæmias and toxæmias of pregnancy has made considerable progress. The study of dietary habits has shown that "using iodized salt in our food would control goitre, that avoidance of eating *lathyrus sativus*, popularly called *kesari dhal*, would prevent lathyrism and that the eating of parboiled rice instead of polished rice by people who are chiefly rice-eaters would help in increasing the supply of B vitamins and thus prevent the occurrence of beriberi."

The Central Drug Research Institute, Lucknow, has obtained gratifying results in its efforts to prepare a drug from a plant to cure certain types of leucoderma and another drug from a plant called *kundru* to cure diabetes. In the latter case, the diabetes of 80 per cent. of rats used in experiments has been cured and the sugar content of others has been definitely brought down. Rauwolfia has been world famous for its use in hypertension, but "what is more important is the still unknown secrets of this plant, its utility in insanity, schizophrenia and other nervous disorders." All this is being investigated.

In addition to the researches described above, including those patronised by the Council of Scientific and Industrial Research, the Indian Council of Agricultural Research and the Indian Council of Medical Research, several governmental agencies like the Ministries of the Government of India in charge of Scientific Research, Industry, etc., and the departments concerned with scientific surveys. like the Geological Survey, etc., have increased their activities, while research societies under the joint sponsorship of several industries like the Research Association of the Ahmedabad Textile Industry, have conducted investigations of considerable national importance on questions like productivity, efficiency, etc.

For the popularisation of science, Government has set up 18 *Vigyan Mandirs*, which are centres of scientific education with cultural centres attached to them wherever possible. By the end of the second Plan period, there will be 90 *Vigyan Mandirs* all over the country and it is hoped that they will train the villagers in scientific methods in so far as they apply to their problems. It is intended to supplement them by science clubs meant for adults, school children and teachers, by lectures on popular scientific subjects and by publications on popular science.

In March 1958, in what has been hailed as a charter for scientists. the Government of India laid down that "the aims of their scientific policy will be: (i) to foster, promote and sustain, by all appropriate means, the cultivation of science and scientific research in all its aspects—pure, applied and educational; (ii) to ensure an adequate supply, within the country, of research scientists of the highest quality and to recognise their work as an important component of the strength of the nation; (iii) to encourage and initiate, with all possible speed, programmes for the training of scientific and technical personnel on a scale adequate to fulfil the country's needs in science and education, agriculture and industry, and defence; (iv) to ensure that the creative talent of men and women is encouraged and finds full scope in scientific activity; (v) to encourage individual initiative for the acquisition and dissemination of knowledge and for the discovery of new knowledge in an atmosphere of academic freedom; and (vi) in general, to secure for the people of the country all benefits that can accrue from the acquisition and application of scientific knowledge."

Despite the considerable progress in recent years, much still remains to be done to enable science in India to come into its own. As remarked by Professor P. C. Mahalanobis. the U.K., the U.S. and the U.S.S.R. "have the highest *per capita* income, energy, steel and expenditure on research. China is way behind but has already outstripped India in all items, although only a few years ago China was less developed than India. Expenditure on research is Rs. 65 crores in China as compared with Rs. 6 crores in India, or more than ten times higher. As a fraction of national income, China spends 0.4 per cent. which is seven times higher than the Indian figure of 0.06 per cent. The per person expenditure in China is Re. 1.1 per year which is again seven times higher than the Indian expenditure of Re.0.15 per year. In 1943, Dr. J. C. Ghosh, in his presidential address to the National Institute, had raised the slogan of 'one per cent. of the national income per year for scientific research.' The three advanced countries are spending nearly twice as much at present; and China has almost achieved half the target while, after 15 years, India has gone only one-sixteenth of the way." Nevertheless. the fact remains that scientific research has increased considerably in this country, a suitable climate for it has been created and it is being used more and more in planning for the economic and industrial growth of the nation.

With the advance of science and technology and the development of the scientific outlook in India, a new order of society will be ushered in and many of her ancient ideals and social and cultural institutions are bound to be modified or even uprooted. While this development is to be welcomed, it is necessary to ensure that those eternal moral and spiritual values which alone are conducive to the fullest expression of human personality and the growth of democratic life, are not undermined.

NEW PRODUCTS AND PROCESSES

Peaceful Use of Atomic Products

THE so-called "tracer" operations comprise the most widespread present use of radioisotopes, the extremely valuable peaceful products of atomic energy that have added a "new dimension" to progress in medicine, agriculture and industry. Radioisotopes are ordinary chemical elements that have been made radioactive in a nuclear reactor. In tracer operations, minute quantities of radioisotopes are introduced into various objects or substances, and their movements are then traced, or followed, by the use of radiation detection instruments.

The overall growth of radioisotope uses is increasing very rapidly. An indication of this can be seen in the fact that, in the United States alone, some 2,000 medical institutions and physicians, 1,500 industrial firms, and 250 universities now use radioisotopes.

Some examples of how radioisotopes are used as tracers are: *Medicine*: (1) Exact location of brain tumours, enabling surgeons to remove tumours with greater precision; (2) diagnosis of thyroid diseases through having the patient drink a harmless "isotope cocktail," then photographing the thyroid as the isotope concentrates in it; (3) measuring rate of blood flow and finding arterial constrictions through injecting isotopes into the blood stream. *Agriculture*: (1) Fertiliser studies which show that fertiliser can be just as effective when applied through the leaves as through roots; (2) pioneer work on exactly how livestock and poultry feeds affect animals, leading to improved meat, milk and egg production; (3) studies of how insecticides and weed killers work, permitting development of more effective varieties. *Biology*: Radioisotopes are making possible for the first time a look into the mystery of photosynthesis, the process by which plants convert solar energy into food. In the past two years much new information has been gained through the use of radioactive isotopes of carbon, phosphorous and other elements. *Industry*: (1) Tracing of oil flow in pipelines by adding radioisotopes to the oil; (2) studies of wear of bearings, tyres, etc.; (3) detection of leaks in pipes carrying water or other liquids.

Simple Calculator

A very rapid and simple form of calculator for use in business or scientific calculations which was originally developed in Switzerland is now to be made available in the U.K. The complete unit is easily portable and non-mechanical. It operates on the "card index" principle. The unit depends on the use of 99 tables, each of which is marked with a pre-fix number tab which indicates the horizontal—from side to side—prefix number of each table. Each table also has a series of vertical columns of numbers ranging from 1 to 99. The horizontal figures, or multiplicands, have either three, or four digits. The operation of the device when demonstrated was certainly far quicker than a slide rule—and more accurate—and at the same time proved capable of undertaking calculations accurately that could not be undertaken at all with a slide rule. Typical examples are specialised engineering calculations and others concerning rocket research into outer space. At the same time calculations into complex banking sums could be undertaken within a minute or two-certainly faster than with a mechanical hand-operated calculator, once the system was learnt. The unit, which packs inside a carrying bag and costs only £25, is to be bought by a number of large U.K. corporations.

Ford's New Gas Turbine

A new gas turbine supercharged engine of 300 h.p. has been developed by the U.S. Ford Motor Company. Its weight is only one-fourth that of a truck diesel engine of comparable horsepower while its fuel economy rivals a diesel and is superior to conventional petrol engines under most operating conditions. It has been under development for 2½ years. According to Mr. B. T. Howes, Associate Director of Engineering Research and Advanced Product Study, the design team had deliberately by-passed many conventional approaches. Maximum fuel economy was attained in a range of 25 to 100 per cent. of power, he revealed. The Ford 704 weighs 650 lbs. installed, complete with all accessories built into it and requiring only the addition of electrical power and fuel. A diesel truck engine of comparable horsepower weighs about 2,700 lbs. The "package" size is 38 inches long, 29 inches wide and 28 inches high. A wide variety of fuels can be used—unleaded gasoline, kerosene, jet engine fuel (JP4) or light diesel fuel—and no warm-up period is required. Ford expects to be testing the new engines in vehicles before the end of the year.

Plastic Golf Club

When a golfer is "off his game" the cause may be damp atmosphere rather than a temporary loss of skill! Tests have proved that moisture absorbed from the air causes distortion and keeps changing the face angle of any wooden golf club head. Even one degree of misalignment can make a perfectly stroked ball veer off 40 feet in a 225-yard drive. A new kind of golf club which eliminates such distortion developed by Anchor Chemical Company, Ltd., will be shown at the International Plastics Exhibition at Olympia, London, in June. Made from a new plastic so tough that it can be used for cartridge and shell cases, these heads are entirely moisture-proof and their shape never varies, no matter how soggy the atmosphere! They are more durable than wood yet give the same "feel" and "click." Moulded plastic golf club heads are said to have another advantage—everyone is exactly alike, whereas conventional clubs vary with the natural characteristics of the wood. Other applications for this remarkably rugged plastic include roller and ice skates, shoe heels, safety helmets and covers for motor mowers.

Electronic Computer

An electronic analysing recorder under development in the Surrey factories of Microcell Ltd. will help the British Transport Commission in its railway modernisation programme—by testing the A.C. electrification works and obtaining design information for use with future A.C. electrification. Based on the computer principle, the analysing recorder is intended to save the thousands of man-hours which would be involved if the information were obtained by observers watching instrument dials and noting down the results on paper. Instead, all information covering an experimental section of track will be automatically recorded in a form which can be assimilated later by computers, thus enabling the various phenomena to be predicted when the present railways are converted from steam and diesel traction to the overhead electrification system.

Leak Detector

A gas leak detector unit which is said to be five times more sensitive than previous units of similar design has been developed by the Consolidated Electrodynamics Corporation of California, U.S.A. The operation of the device depends on the use of a special valve which is fitted between the manifold and the diffusion pump. This valve can be set—when open, or closed—by means of two adjustable stops. The detector is said to be capable of recording gas leaks occurring at the rate of 2×10^{-3} atmospheres cubic centimetres per second. The unit, which is mobile, has a visual indicator to locate leaks and to determine their leakage rate. An audible alarm is also fitted to enable the operator to locate leaks while he is concentrating on probing the suspected area.

Refrigerator That Hangs on a Wall

A refrigerator that takes up little room yet gives plenty of storage space has been designed by a British firm, Pressed Steel Company, Ltd., Cowley, Oxford, after years of research. It is designed chiefly to meet the needs of housewives with small kitchens, one-room flats, and smaller houses. A novel, space-saving feature of this refrigerator is that it can be hung on the wall. Alternatively, it can be used as a normal floor-standing model, with a right- or left-hand door, and it can be slipped under the draining-board, placed in a corner, fitted into a kitchen unit, or even stood on a table. It has enough shelf space for about a week's supply of perishable foodstuffs for the average family.

New Type of Generator

A potential method of lighting whole cities with small, efficient generators which would operate by shooting electrons and ions through a magnetic field has been described by a Republic Aviation Corporation scientist in a paper delivered to the American Physical Society. By forcing an electrically conducting plasma (a gas broken into electrons and ions) through a strong magnetic field, efficiencies as high as any known power generation method can be obtained, it is claimed.

ASSESSMENT FOR INCOME TAXATION

TOO MUCH STRESS ON THE REVENUE POINT OF VIEW

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

THE present tax personnel is so wedded to the "revenue point of view"—the view which yields more taxes—still more taxes, that they hardly notice how severely they react on the assessee's mind so as to make him cry in anguish: "Providence giveth, And the tax collector, taketh it all away."

I am giving in this article a few instances of actual cases which show how 'bad will,' not goodwill, is created between the taxpayer and taxgatherer.

Registration of Firms

A partnership was refused registration by the Income Tax Officer on the ground that profit and losses had not been apportioned according to the terms of partnership deed. Briefly, the facts of the case were as follows:

'X,' a firm of managing agency, consisted of A, B, C and D, with each partner sharing equally. 'D' retired from the firm on 15th December 1954. There was a net loss of Rs. 24,000 and odd, which the partners divided equally, instead of striking a balance as on 15th December 1954, dividing the loss upto that date equally among the four and from 16th December 1954 to 31st December 1954 equally among the three. The firm was registered for many years and, therefore, was genuine. Yet, because of a slight difference in apportionment of shares of loss, the whole partnership was treated as an unregistered firm. The parties agreed to readjust the difference, which was hardly a few hundred rupees, if the registration were to be refused. But the authorities would not heed. And Income Tax Officer and Appellate Assistant Commissioner, even the Tribunal, rejected the appeal. This is a clear instance of how the "revenue point of view" is made to prevail against the view of natural justice and fairness.

Managing Agents' Commission

Assesses were the managing agents of 'X' mills, entitled to a monthly allowance of Rs. 1,000 *plus* 10 per cent. on the net profits. In the year of account, namely, the calendar year 1951, the mills made no profit and, therefore, all that the assessee was entitled to receive was a sum of Rs. 12,000. It was found as a fact that this amount was not received by the assessee in that year, though the amount did accrue to the assessee. The Department sought to tax this for the assessment year 1952-53. The assessee contested and said that, since they maintained their books on cash basis and not on the mercantile basis, this amount may not be liable to tax in the year 1951. The Income Tax Officer accepted the method of assessee's accounting to be cash, but he invoked the proviso to Section 13, on the ground that the method adopted does not show true profits. He, therefore, converted the cash basis into mercantile and taxed the sum. And, strange to say, both the Appellate Assistant Commissioner and the Tribunal confirmed the Income Tax Officer's assessment. It was left to the High Court to set right the injustice of the case.

It held: "If the assessee maintained his accounts on cash basis and if they were entitled to do so, then it is clear that if this amount accrued to the assessee in the year of account was not received by him, the amount could not be assessed to tax."

I ask: could such a case have reached the stage of a High Court reference to understand the mere elementary principle of law? But it did, for the personnel of the Income Tax Office are concerned more with the "revenue point of view" than with the need for doing justice, not only in the letter of the law, but also in spirit.

Grossing Up Dividends

Dividend in a case was not grossed up for the assessment year 1956-57, on the ground that the Company declaring the dividend had made no assessable profits. A sum of Rs. 24,600 received by the assessee could not be grossed up, because there was no rate applicable to the Company and grossing up had to be done at the rate applicable to the Company during the year the Company had paid, credited or distributed profits. Here, admittedly, no tax was payable, as there was no assessable income. That was so, in spite of the fact that, if there were no assessable profits, the dividend must be deemed to have been declared out of the Company's past taxed profits. The Central Board of Revenue, after the amendment of Section 16(2) in 1956, had clearly issued instructions that, where dividends are declared out of past profits, grossing up must be allowed, although, during the accounting year, the Company had no assessable profit. The assessee's protest that this view was contrary to the Central Board of Revenue's circular was not heeded, for, by the time the case came up before the Tribunal, some Kerala High Court judgment held the view that the Department's stand was correct. What is the use of the circular and instruction of so high a body as the Central Board of Revenue, if they are flouted with such impunity? And, above all, why did the Central Board of Revenue allow a case to go forward to the High Court in Kerala, when its own considered view was that grossing up of dividend in such case was justified? One can read through the lines, namely, it suits the "revenue point of view."

Bonus To Employees

In the case of a mill company, bonus to employee was provided in the accounts, but not paid. The Income Tax Officer disallowed it, on the ground that it was a provision, not a charge, as it was not adjusted in the accounts. Next year, when the claim was renewed, it was turned down, on the facile ground that it was not incurred in the year of account. So, the assessee did not get the deduction in the year it was provided, nor in the year it was paid. Thus, an intolerable situation was created by the I.T.O. and it could not be rectified, until the matter went to the High Court and the Department invited the following stricture from the judges:

"We have often wondered why Income Tax Authorities in a matter such as this where deduction is obviously a permissible deduction under the Act raise disputes as to the year in which the deduction should be allowed . . . one should have thought that the Department had not frittered away its energies in fighting matters of this kind. But, obviously, judging from the references that come up to us every now and then, the Department appears to delight in raising points of this character which do not affect the taxability of the assessee or the tax that the Department is likely to collect from him whether in one year or the other."

Bad Debt

An honest businessman takes the view that a particular debt becomes irrecoverable in a particular year and on that basis he claims deduction. It takes a long time before the ultimate decision is given by the Tribunal. In this case, we are dealing with the assessment year 1944-45, the year of account is 1943-44, and the decision of the Tribunal is given in 1955, and it is ultimately held by the Tribunal that the debt did not become a bad debt in the year in question. Now, what is the businessmen to do? He cannot claim this in the next year, because the assessment of that year had been completed long ago. Therefore, the businessman finds himself in this extraordinary predicament where, though there is a genuine debt and though that debt had become irrecoverable and he had never received it, he can never claim that bad debt as a deduction, because of a strange interpretation of the law by the Income Tax Officer. The businessman was thus compelled to seek justice from the High Court. And here is what the Court said on the subject:

"We strongly wish to urge upon the Government and the Taxing Authority the necessity of some provision in law, whereby it would be open to Income Tax Officer, if the debt is held to be irrecoverable in a particular year, to permit a deduction in some later year in which the Income Tax Officer finds that the debt, in fact, became irrecoverable. As the position stands now, the Tax Department is in an extremely happy position. All that they hold is that a debt becomes irrecoverable in a particular year. That is a finding of fact. That finding of fact cannot be successfully assailed and, having come to that conclusion that they can comfortably sit back in their chair and refuse to give any relief to the assessee, because they know that the assessee cannot claim in any subsequent year, as the assessment for subsequent year has already been concluded. If the taxing department should be strict and severe with business people who seek to evade payment of tax, they should be equally considerate to those business people who honestly claim deduction to which they are entitled in law."

Even if the High Court is moved by such spectacles of hardship, what about the hardship of a number of poor, dumb, small assessees, who cannot afford the luxury of appeals and High Court references? They must just bear and grin. Is it?

Section 23A Companies

A company is incorporated as a public company on the condition that its shares are freely transferable. Now there are several public companies with a clause in their Articles of Association that Directors may refuse to register a share transfer without giving any reason. A tribunal judgment has held that such a restriction even by a public company renders the Company liable to the provisions of compulsory distribution under Section 23A(1), meaning that such company is not a company in which the public are substantially interested even though in actual practice its shares may be widely held. Now should the Department have taken advantage of a safety clause in the Articles of Association to bring into the net of taxation such purely public companies with numerous and widely spread holding? The fact of the public being substantially interested is not denied. But the Department says that the shares, though freely otherwise transferable, must be technically held not to be so freely transferable because of the aforesaid restriction. Does not this also prove that, in the ultimate analysis, not the justice or equity, but "revenue point of view" prevails?

In another case, a company had reduced its capital under a scheme of reduction by writing down certain capital assets. When the question came up before the Income Tax Officer to determine whether the Company attracts 100 per cent. distribution provision, it was argued that, in comparing, as the law requires, paid-up capital *plus* shareholders' loan capital with either the reserve or the actual cost of fixed assets, the Department must take paid-up capital at the figure before reduction, on the ground that paid-up capital, by the process of adjustment in the books, does not become any the less paid-up capital. In support of this contention it was pointed out that, notwithstanding that capital assets may have been reduced or written off, one has to take, for purpose of comparison, their actual cost. Similarly, the factor of paid-up capital must be taken at the original figure and not at the reduced figure. Goodwill that was paid for by the company and written off out of profits subsequently was thus claimed as part of fixed assets at original cost. Since the Income Tax Officer could not resist the claim for reinstatement of goodwill in computation, he sought ingeniously to argue that, if the claim is pressed, he will augment the reserve by a similar amount on the ground that, but for writing off the goodwill, the profits would have increased the reserve. Paid-up capital, he held, must be capital as reduced in the balance-sheet. Now can one contest the view that the Department has ingenious ideas to snatch taxes as the assessees have ideas to evade? Can one build up goodwill and public confidence on the basis of interpreting the law from the point of view of revenue? Not only the assessee must be done justice. but he must feel that justice is being done. And I dare say one cannot attain the millennium by purely legalistic view, which defeats, if not kills, the spirit of law.

Speculation Loss

A person suffers in one year a speculation loss. This is segregated for purpose of Section 24(1) set off. The tax is levied on the other sources of income. Next year, he makes a speculation profit. Is the last year's loss permitted to be carried forward and set off first under speculation profit? No, indeed. Such losses are first processed under Section 24(1). that is, speculation profit is absorbed first by losses in non-speculation business and, if there is a balance left, it may then be eligible to receive the right of a set off. Can logic be more cock-eyed than this? But that is exactly what it is. Is this not sufficient to prove that it is the "revenue viewpoint" that inspires the Tax Department in their dealing with the public?

To give another actual instance. A cotton trader purchased forward 500 American bales for March delivery. At the time when the shipment arrived, the person was in financial difficulties. He, therefore, took delivery of 400 bales and he settled the balance of 100 bales by paying the difference. The loss incurred on 100 bales was disallowed as speculation loss. Why? Because it was a transaction supported by no deliveries. But was it speculation? The assessee argued that 500 bales contract was one inseparable contract and, therefore, unless you hold that the contract for 100 bales is separable, you cannot say it was a contract intended to be a contract where deliveries were not contemplated. Here is a contract, which, on account of partial fulfilment, attracts damages. The Income Tax Officer does not challenge the *bona fide* nature of the contract for 500 bales for delivery. And yet he holds that the 100 bales transaction was speculative. Why? Perhaps because that suits better the prevalent "revenue point of view." It any way yields larger revenue.

Advance Payment

To take another actual case. A mill company made an estimate. By the time the last instalment was due, it paid an instalment large enough not only to make up for previous instalment, deficiencies, but more than the tax ultimately found due upon assessment. The Department levied penal interest for short payment in the previous instalments as per the estimate. The assessee argued that, notwithstanding the previous short estimate, if it had chosen to put in a revised estimate, no penal interest would be due. What else has the assessee done by paying large enough final instalment? If penal interest could be condoned in one case, it could be condoned in the other. But the Department did not listen, for the "revenue point of view" must ultimately prevail and, strange to say, it did prevail. The Commissioner of Income Tax who reviewed the case gave some relief, but would not admit the justice of the claim for complete exemption. If the Department had interpreted the law for once in the spirit of the section and not in the letter of the law, it would have built goodwill.

Under Section 18A(3), an assessee who has not hitherto been assessed shall, before the 15th day of March in each financial year, make an estimate. If he fails to make an estimate, penalty and penal interest may be levied. In one case, a Government contractor, an estimate was not made, because there was one inseparable contract, spread over a period of five to seven years, the profit on which could not be ascertained. The Department, however, made an assessment on certain basis showing profit for each year. Now the Income Tax Officer passed an order on 28th February 1959, that is, before the final date the assessee could make an estimate, but he is careful to hold it back. He does not deliver it before the expiry of the last date for making an estimate. Now he has issued notice to show cause why penal interest and penalty should not be levied. The assessee contends that, inasmuch as the assessment order has been passed before the date the final instalment is due, the assessee had no obligation to make an estimate. It was the obligation of the Income Tax Officer to serve him with notice of payment of advance tax based on the last completed assessment. The assessee seems to be right—but did he succeed? Oh, no! How can he, when the "revenue viewpoint" stares him in the face?

Stock Valuation

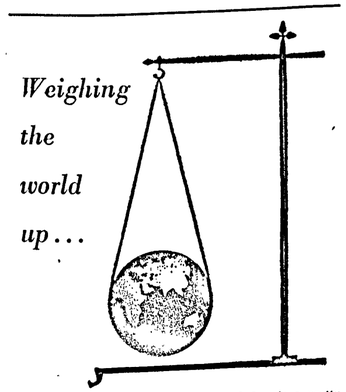
In a case there was a *bona fide* mistake made by the assessee in including stocks that were on the premises but were not billed. As the goods were on the spot, they passed through the inventory as stock-on-hand. When the relevant invoice was received, they passed through the purchases in the next year. When the mistake was detected by the assessee, he wrote to the Income Tax Officer explaining the fact of overassessment in the previous year and said that either the old assessment should be revised or the subsequent assessment should be reduced by the inclusion of last year's purchases—an eminently reasonable request. The Income Tax Officer agreed that the mistake was genuine, but wondered how last year's purchases could be allowed as admissible deduction this year. "How can I revise," he asked, "last year's assessment completed long ago, since you did not file an appeal?" The assessee said that if he had a mind to be fair, he could do it, for this was purely a question of mistake apparent on the records filed for the two years. But the Officer would not agree, not until the Commissioner of Income Tax intervened to set the matter right. Must the case have gone to the Commissioner of Income Tax? Could it not have been settled at the level of Income Tax Officer? But who these days will take the risk of giving a relief to an assessee when so many superiors are watching his work and pulling him up sometimes (or is it often!) by the ears? Surely, the goodwill with the public cannot be built on such foundation of sands. Can it?

These days there is a risk, even in accommodating friends in the matter of encashment of their cheques through your bank account and paying them cash by drawing self-cheques. A person, carrying on commission agency business, paid into his bank account a cheque, of his friend, for Rs. 34,250. Next day, he withdrew it by self-cheque Rs. 34,000. The explanation that he had accommodated a friend would not wash before the Income Tax Officer nor as usual before the Appellate Assistant Commissioner. They came to the conclusion that this was profit from dabbling in the share market. He deposited these profits in his account and then withdrew it by a self-cheque. If it were a genuine accommodation as the assessee tried to make out, argues the Income Tax Officer, he would certainly have issued a cheque in favour of the friend or he should have refused to encash it. The Appellate Assistant Commissioner says: "if securing cash against cheque was the only objective, he could have done through the firm's account rather than through somebody else." And strange that such 'lame' argument passed muster even with the judicial tribunal. They went a step further and pronounced it as a shady transaction. It is impossible, they said, that the assessee had no interest in the transaction.

It was left to their Lordship of the High Court to throw out the utterly unsupportable case of the Department, by this pertinent observation:

"Counsel for the Revenue was unable to point out to their Lordship any evidence on which the conclusion reached by the Tribunal could be found. On the materials brought on record before him, it was not possible to reach that conclusion nor was there evidence at all on the record which could go to support that inference."

Here is a case where the Department, obviously keeping in mind the "revenue point of view," wanted, on unpermissible surmises and conjectures, to raise an assessment. Can you build goodwill with the taxpaying public by such scant regard for law of evidence? It is true that such *modus operandi* is sometimes resorted to by tax-dodgers, and Income-tax Officers have to be wary and eagle-eyed. But it does not necessarily mean that the honest and the dishonest assessees should all be herded together and driven by the same stick. "Let ten guilty persons escape, but let not one innocent person suffer" is the ideal principle of justice. Let the Department live up to this ideal and goodwill will come in abundance and with goodwill, taxes too.—*All Rights Reserved.*



. . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

EMPLOYMENT IN U.S.

Sixty-five million Americans had jobs in April, 1959, an all-time record. The employment figures, announced in a joint statement by the Commerce and Labour Departments, also disclosed that the number of unemployed dropped by 700,000 to 3.6 million. The total number of Americans employed rose 1.2 million last month. The changes reflected better-than-seasonal gains attributed in part to pickups in construction and durable goods manufacturing. It was the second monthly drop in the rate of unemployment in the labour force. During the winter months the seasonally adjusted rate of the unemployed was six per cent. It dropped to 5.8 per cent. in March and is now 5.3 per cent.

Total non-agricultural employment, including the self-employed, domestics and family workers, totalled 59.2 million in mid-April. Manufacturing jobs rose about 30,000 to a total of 16 million. This was in contrast to a usual decline in April. Durable goods employment jumped up by 75,000, largely because of gains in steel and other metals and machinery industries.

The report said substantial job gains in building and highway construction was one of the chief factors in improved employment conditions. Increases for both the factory work-week and in earnings were also reflected in the report. The manufacturing work-week of 40.3 hours was about two hours above April a year ago and weekly earnings increased 63 cents over March to reach a record of $89.87 per week for the average industrial worker. This was about $9 more than in April a year ago.

CODE FOR GENERAL INSURERS

FRESH REVISION PROPOSED

IN spite of the best intentions that inspired its initiation, the Code of Conduct for general insurers does not seem to have been much of a success. The general feeling among insurers is that, barring the payment of premium in advance on the assumption of risks, the Code has failed to achieve any of its objectives. In an atmosphere of keen competition between a large number of companies in a relatively restricted market, many units seem to have found strict adherence to the provisions of the Code none too tempting. Consequently, practices and precedents which run counter to the spirit of the Code have continued to persist in one form or another.

There are some who believe that the primary reason for the failure of the Code is the perpetuation of the institution of inspectors even under the revised Code. Those who hold this view strongly feel that this exotic institution, said to be transplanted to this country from Britain, is not suited to the conditions here. They point out as a solution that, from the nucleus of the fairly large numbers of highly experienced agents, a new pattern of organisation broadly representing a happy compromise between the British Inspectorate system and the American general agency system should be evolved. While opinions may differ as to the wisdom and desirability of this suggestion it appears that failure of the Code is due partly to the defects inherent in it and partly to the peculiar pattern and limitations of the insurance market in the country.

Revised Code

The Code, it may be recalled, was evolved in 1952 and adopted by general insurers in the country as a self-imposed discipline aimed at eliminating the undesirable practices of the trade, setting up standards and putting their own house in order. Many changes and modifications were effected in the Code, in order to remedy the defects that were exposed in the course of its actual working. In view of the growing feeling that the Code had, by and large failed to produce the desired results, the Executive Committee of the General Insurance Council reviewed the whole position and a revised Code of Conduct was brought into operation on 1st January 1957. The revised Code has been in force for more than two years now and the general impression among insurers is that the situation has not improved much.

The Executive Committee had for some time past under considerations modification of the provisions of Part 4 of the Code of Conduct concerning the appointment of salaried field workers and the forms of applications and statements connected therewith. A complete redraft of these regulations and supporting forms was adopted by the Committee and forwarded, along with supplementary rulings and interpretations of the provisions of the revised regulations, to all insurers. The Executive Committee appointed in March last a sub-committee "to take stock of the present position in general insurance industry and recommend on the future course." The Sub-committee is expected to review, among other things, the working of the revised Code during the last two years and suggest, if found necessary, further modifications in the Code. It will meet representatives of various insurance interests receive representations and views from them and will submit its report some time towards the end of July next.

Suggested Changes

The Indian Insurance Companies' Association has appointed a five-man sub-committee to meet the Sub-committee of the Executive Committee. While the points to be pressed before the Sub-committee have yet to be finalised, it is understood that the majority of the committee is of the view that (1) while the system of inspectors may be inherently good, it has been greatly abused in actual practice and it should, therefore, be abolished, (2) the payment of commission to agents should be on a graded scale, companies being divided for this purpose into four categories according to the size of their net premium and a certain amount of weightage being allowed in favour of small and medium sized companies *vis-a-vis* big insurers when fixing commission slabs and (3) the existing provisions under Rule 17E under which the quantum of management expenses permissible to companies is determined in relation to their gross premium income written direct in India, is found to be unscientific and inequitable and that the position should, therefore, be reviewed in order that a new formula, based possibly on net premium income which is more rational and equitable, should be devised. The committee of the Association, we learn, will meet the Sub-committee towards the end of this month.

EMPLOYERS' LIABILITY ASSURANCE

The progress of four companies that constitute the Employers' Liability Assurance Corporation Ltd., London (General Manager: C. E. Keysell), in respect of new business written in recent years, is reflected in the steady improvement in the premium income from all classes of business during the five-period 1954-58. From £29.25 million in 1954, premiums in all the departments combined, namely, fire, motor, accident and general, marine and life, improved to £34.60 million in 1956 and £38.43 million in 1957. This upward trend, was fully maintained in 1958 as the audited accounts for the year ended 31st December 1958 indicate, also, with premium income rising to £41.96 million, representing an increase of 9.2 per cent, over the previous year and as much as about 44 per cent. over the 1954 figure.

All the departments shared in the increase, but a good part of it was accounted for by motor business in the U.S. where there has been a welcome increase in premium rates. Premium income in the fire, motor, accident and general, marine and life departments increased from £5.1 million, £13.60 million, £15.79 million, £0.50 and £3.44 million in 1957 to £6.13 million, £15.17 million, £16.42 million, £0.55 million and £3.68 million, respectively, in 1958, making a total of £41.96 million.

The following table indicates the trend of growth of premium income during the period 1954-58:

(In £ '000)

	1954	1955	1956	1957	1958
Fire	3,194	3,008	4,779	5,110	6,129
Motor	10,536	11,115	11,887	13,592	15,172
Accident and General	12,757	13,593	14,400	15,789	16,421
Marine	411	441	488	502	551
Life	2,352	2,927	2,982	3,439	3,683
Total ..	29,250	32,074	34,596	38,432	41,956

Despite the increase in premium income, the Corporation suffered, during the year, an underwriting loss of £444,548, thanks to the adverse claims experience. But it may be noted that the loss was considerably lower than the deficit in the previous year which was as much as £1,303,063. By careful controls and strenuous supervision of all aspects of operation, the Corporation's trading result for the year has turned out to be a profit, after taxation, of £381,682. The Directors have decided to maintain the dividend at 5s. 6d. per share.

Receipts of the Corporation in respect of interest, dividend, and rents during the year amounted to £1,493,950 which, together with life profits to the tune of £87,493 from the Clerical, Medical and General Life Assurance Society amounted to £1,581,443. This, after making good the underwriting loss of £444,548 and deducting staff pensions and expenses not charged to other accounts to the tune of £442,108, leaves a surplus of £694,787. Out of this, £313,105 has been earmarked as the net provisions for taxation, leaving a net balance, after taxation, of £381,682 which together with £1,236,195 brought forward from last year's account, makes a total of £1,617,877. The dividend of 5s. 6d. per share, comprising the interim dividend of 2s. 6d. declared in November 1958 and a final dividend of 3s., absorbs £327,500 leaving a balance of £1,290,377 to be carried forward.

The Corporation has total assets exceeding £62 million and its capital, reserves and carry forward aggregate £8.37 million.

COST OF SOCIAL SECURITY

The period after the Second World War witnessed an unprecedented growth of social security systems throughout the world. As the social security operations acquired greater and greater importance in the economies of the different countries, considerable interest developed in the financial aspects of social security and its repercussions on national economy. The International Labour Office, in recognition of this fact and as part of its task of compiling, analysing and making internationally available information on activities in the social and labour field, undertook a series of inquiries regarding the cost of social security in its various member-States. The publication under reference (*The Cost of Social Security* 1949-54: Published by the I.L.O., Geneva. Pages: 201. Price $3 or 18 shillings) is the third work on this subject since World War II.

The first inquiry covered the year 1949; the second dealt with the period 1950-51 but for comparative purposes it included also the data for 1949. The third inquiry covered the period 1949-54, and has two fundamental objectives. First, to present a consolidated statement of the financial operations of all the social security schemes existing in the individual countries falling within the scope of the inquiry, second, to compare the distribution of the charges of social security between the different sources of revenue and the economic incidence of social security in the different countries and to determine the trends in social security costs during the period covered by the inquiry.

The publication falls into two parts, Part I dealing with basic tables and Part II with comparative tables. The former contains an analysis of receipts (by sources) and expenditures of each of the 32 countries for the latest year covered, namely, 1954. The latter presents data regarding total receipts of and expenditure on social security schemes in each of the 32 countries from 1949 to 1954. Data relating to eleven countries, which supplied only rudimentary information, have been presented separately in appendices.

RECORD SAVINGS THROUGH LIFE INSURANCE IN U.K.

A record total net new savings of £366 million were channelled through life insurance in Britain last year. This was made up of £200 million in the ordinary branch and £66 million in the industrial branch. Approximately £32 million of the total was accounted for by business transacted overseas by British companies.

These figures are arrived at by adding the total premiums paid in 1958 to the interest earned on invested funds and deducting all payments, e.g., claims, annuity payments and expenses. In other words, they represent the increase in total funds held by the life offices against their future liabilities to policyholders and are thus a fair measure of new net savings arising from life assurance.

The comparable figure for 1957 was £334 million (ordinary branch £272 million, industrial branch £62 million). The total invested funds held by the life offices at the end of 1958 amounted to well over £4,500 million.

TREND OF FOREIGN TRADE IN 1958

BOTH EXPORTS AND IMPORTS DECLINE

THERE was a distinct setback in India's foreign trade in 1958. Exports fell by 11 per cent., from Rs. 643 crores in 1957 to Rs. 579 crores in 1958. Similarly, imports dropped by 17.6 per cent., that is, from Rs. 1,026 crores to Rs. 864 crores. These figures are based on the returns of the Department of Commercial Intelligence and Statistics, Government of India, published in the *Monthly Statistics of Foreign Trade of India.* To take another indicator, the index of exports (1952-53=100) declined from 119 in 1957 to about 107 during the first 11 months of the year; and that of imports fell more sharply from 156 to about 120. The decline in imports was due to the sustained restrictive import policy pursued by the Government, with a view to stopping the heavy drain on foreign exchange resources. Its favourable effect on the balance of payments position would have been much more pronounced but for the lag in exports. It may be recalled that the annual target for exports during the period of the second Plan was originally laid down at Rs. 593 crores—a very modest target indeed, as compared with Rs. 596 crores in 1955. Subsequently, however, the Export Promotion Committee (1957), constituted by the Government of India, revised this figure upwards to Rs. 700—750 crores. The actual performance last year fell short of even the original modest target. Here is an instance to show how unrealistic the authorities are in laying down targets.

Exports

India had to fight against heavy odds last year—both in the internal and international spheres. The year opened on a note of anxiety and uncertainty, with the U.S. and some countries of W. Europe, which are India's leading customers, passing through one of the worst post-war business recessions. The situation, however, changed for the better in the latter half of the year. The implementation of the Rome Treaty on 1st January 1958, which seeks to establish a Common Market of the six in W. Europe (France, Germany, Italy and the Benelux countries), was another source of headache for this country, as it was feared that this regional trade bloc would have an adverse effect on India's exports, though, in the past year as such, it could not have had any marked impact, since the Common Market began to function only late that year. The other factors which inhibited India's exports were the decline in commodity prices, the rapid development of synthetic substitutes as industrial raw materials, the restriction on imports in some of the customer countries which had also suffered a fall in their exports, and, above all, stiff competition from China and Hong Kong for cotton textiles and from Pakistan for jute goods. At home, the situation was none too satisfactory. While there was hardly any improvement in the general level of production, the increased tempo of development and the consequent rise in incomes led to a growing pressure on domestic supplies and rise in prices. This development, coupled with a shortfall in the production of agricultural raw materials, reduced the competitive capacity of Indian manufactures.

A feature of India's trade last year was a perceptible improvement in its balance of payments position, in refreshing contrast to the strain experienced in 1957. This was due partly to the sizable help received from foreign countries and largely to the sharp fall in private imports, particularly in iron and steel, plant and machinery, drugs and medicines, and industrial raw materials. This decline was sharp enough to offset the increase in Government imports and a lower surplus on invisibles. The current account deficit, after taking credit for various official grants, narrowed down from Rs. 452 crores in 1957 to Rs. 355 crores in 1958. The downward trend in foreign exchange reserves which had been almost continuous since 1956 was arrested, and slightly reversed, since October 1958. The reserves (including gold coin and bullion) stood at Rs. 344 crores at the end of last year, as against Rs. 330 crores at the end of October and Rs. 448 crores a year before. The following table shows at a glance India's external payments position in 1958, as compared with that in 1957:

(Rs. crores)

	Total	
	1958	1957
Imports *c.i.f.*		
(*a*) Private	541.5	737.8
(*b*) Government	503.0	478.7
Total imports	1,044.5	1,216.5
Exports *f.o.b.*	565.1	622.0*
Trade balance	—479.4	—594.5
Official donations	+ 39.8	+ 37.2
Other invisibles (net)	+ 84.8	+105.4
Current account (net)	—354.8	—451.9
Errors and omissions	— 8.2	— 16.8
Official loans	+183.2	+ 95.8
Other capital transactions (net) ..	+ 75.4	+137.7
Movement in foreign exchange reserves ..	—104.4	—235.2

* Exclusive of transactions relating to repatriation of lend-lease silver of Rs. 74.4 crores.

N.B.—The above table has been compiled from the *Reserve Bank of India Bulletin.* The Reserve Bank takes the figures from Exchange Control records. Even the import and export trade figures differ considerably from those of the D.G.C.I. & S.

It will be seen from the above table that both donations and loans from abroad in 1958 were higher than in 1957, the increase in the latter being quite marked.

A commodity-wise and country-wise analysis of trends in trade during the last two years is given in the accompanying tables. Tea is by far the leading export commodity in India, accounting as it did for about Rs. 137 crores in 1958, as against Rs. 123 crores in 1957. This is about 25 per cent. of the total value of India's exports. Owing to the weakening demand in the U.K. for tea following recession India's tea exports to that country did not fare well in the first half of the year. The trend was reversed in the second half of the year, on account of the general economic recovery in the U.K., the depletion of stocks in London and, to a certain extent, on the lower levels of tea exports from Ceylon. Moreover, the adjustments in excise and export duties with a view to stimulating exports must have also helped the recovery. There was fairly good demand for Indian tea from the U.S.S.R. and a few West Asian countries.

In contrast, India's exports of jute goods and cotton textiles among manufactured goods, and manganese oil and vegetable oils among raw materials, were unsatisfactory. Exports of jute goods fetched Rs. 125.2 crores, a fall of about Rs. 20 crores as compared with 1957. The value of cotton goods exports fell from Rs. 82.3 crores to Rs. 62.2 crores over the year.

The exports of non-ferrous metal ores fell by Rs. 16 crores to Rs. 19 crores. Iron ore and scrap exports were lower by Rs. 3 crores at Rs. 11 crores. The recession in the steel industry, larger exports by the U.S.S.R. and the intensity of competition from sources situated near areas of consumption combined to restrict the scope of Indian exports of ores, especially manganese.

Mixed trends were evident in agricultural products. Tobacco was a bright spot with its exports touching Rs. 16 crores, as compared with Rs. 13 crores in 1957. Coffee and raw cotton too gave a good account of themselves in overseas markets. The most unsatisfactory performance was in the exports of vegetable oils, particularly of castor oil and cottonseed oil; their earnings slumped from Rs. 11 crores to Rs. 7 crores.

The contribution of industrial products to export earnings continued to be relatively small in the year under review. The total value of exports of chemicals was lower at Rs. 4 crores in 1958, as against Rs. 6 crores in 1957. Some improvement in exports, however, was evident in the case of fruit products, woollen fabrics, silk fabrics, hydraulic break fluid, bicycle accessories, electric fans, steel furniture, scientific and surgical instruments, air-conditioning sets, rice and flour machinery, centrifugal pumps, sewing machines, water-fittings, electric batteries and umbrella fittings.

Imports

The downward trend in imports was shared, among others, by iron and steel, machinery and industrial raw materials. The spectacular fall in the import of iron and steel from Rs. 147 crores in 1957 to Rs. 97 crores last year is attributed to the fact that the large part of the requirements of the three steel projects in the public sector had been imported in 1956 and 1957. The fall in the industrial raw materials, in particular, affected adversely the expansion in many vital industries. Imports of non-ferrous metal and scrap went down by Rs. 12 crores to Rs. 99 crores. The imports of raw cotton fell from Rs. 49 crores to Rs. 31 crores, and those of jute from Rs. 7 crores to Rs. 3 crores. Similarly, imports of petroleum and petroleum products moved down from Rs. 108 crores to Rs. 76 crores. Imports of other raw materials too suffered a setback except perhaps those of fertilisers, which amounted to Rs. 8 crores in 1958, as against Rs. 4 crores in the previous year.

There was a fall in the imports of consumer goods as well, barring those of foodgrains, which went up from Rs. 55 crores to Rs. 148 crores.* Most of the other consumption goods

*These figures are very much out of line with those given by the Reserve Bank of India, which actually show a different trend. According to the latter, food imports showed a reduction of Rs. 30 crores to Rs. 133.5 crores, in contrast to the sharp rise of Rs. 95 crores witnessed in 1957. Again, the quantum of imports of foodgrains, according to the *Agricultural Situation in India*, was 3,168,883 tons in 1958, as against 3,544,342 tons in 1957.

witnessed varying degrees of decline in their imports. These include condensed or dried milk, fruits and edible oils, medicines and pharmaceuticals, paper and paper board, standard textile fabrics, sanitary and other fittings. Not only imports of industrial raw materials and consumer goods, but those of some items of machinery too suffered. Thus the value of imports of machinery and transport equipment aggregated Rs. 248 crores in 1958, as against Rs. 309 crores in 1957.

A country-wise analysis of India's trade is given in Table II. From this, it will be seen that the U.K. and the U.S. continued to be India's major trading partners. Together they accounted for 45 per cent. of India's exports in 1958, as against 40 per cent. in 1957. The proportion of imports from these two countries, however, remained unchanged at about 40 per cent. of the total. Naturally, both these countries accounted for the bulk of the decline recorded in respect of imports. India's imports from the U.K. were lower at Rs. 169 crores in 1958, as against Rs. 239 crores in 1957; and those from the U.S. were Rs. 161 crores as against Rs. 170 crores. India's shipments to the U.K., however, registered a small increase from Rs. 161 crores to Rs. 166 crores, but those to the U.S. declined sharply from Rs. 132 crores to Rs. 93 crores. There was also a marked fall in India's exports to Japan, Australia, Singapore and France. The U.S.S.R., on the contrary, increased its imports of Indian goods from Rs. 18 crores to Rs. 23 crores. Small increases were also noted in the offtake by some other countries such as Canada, Ceylon, New Zealand, and Nigeria. While imports into India from W. Germany, Japan and Iran registered a perceptible decline, those from Burma and Saudi Arabia increased. Moderate increases in imports took place from Australia, Canada, Kenya and Sudan. Taking the Commonwealth countries as a whole, their purchases from India were higher by Rs. 3 crores at Rs. 294 crores. Their supplies to this country, however, were lower by about Rs. 60 crores at Rs. 294 crores.

ELECTRIC FAN INDUSTRY

Some of the light engineering industries have recently been making steady progress. They have increased production and are making an earnest bid to step up exports. Electrical fan industry is one of them. It attained a record production of 632,000 units in 1958, as against 520,000 units in 1957 and 239,000 units in 1954. At this rate of growth, the industry, it is expected, will be able to attain the target laid down in the second Plan, namely, 9 million units. The installed capacity of the industry by the end of last year stood at 765,600 units, as compared with 402,000 in 1957 and 303,600 in 1954. Along with raising production the industry has paid attention to improve quality as well. Quality-wise too, the progress has been satisfactory. It is claimed by the domestic manufacturers that they are producing one of the finest ceiling fans in the world and that they have been able to compete with established brands from other countries. Small wonder then that it has been able to raise the total value of exports from Rs. 9.52 lakhs in 1954 to Rs. 18.15 lakhs in 1957 and Rs. 23.24 lakhs in 1958. India is exporting ceiling fans to about 36 countries, mainly in Asia and Africa. And what is more, as Mr. I. Sukumar observed in his presidential speech at the eleventh annual general meeting of the Fan Makers Association of India held at Calcutta on the 21st inst., there are good prospects for developing the existing and other markets, provided a more determined and purposeful effort is made. Mr. Sukumar is confident that exports of table and pedestal fans also, besides ceiling fans which have already secured a name, will be possible, if manufacturers effect improvements in design and finish.

In distinct contrast to most of the industries in India, the electric fans industry has only a limited range, if any, of grievances. With the commissioning of two steel plants in the public sector, the supply position of pig iron has definitely improved; this is bound to ease further in future. There is no reason to be concerned over the supply of steel either. Moreover, fan producers are in a position to dispense with imports of vital raw materials such as enamelled winding wires, for they are available in the country in plenty. Condensers are also expected to be manufactured within the country shortly. Mr. Sukumar, however, wants the producers to be assured of regular supply and equal distribution of these two raw materials.

Although the industry is thus well in the saddle making steady progress, no effort should be spared to keep pace with its confreres in the advanced countries, where technological changes are taking place rapidly. This calls for development and adoption of new techniques of production and improvement of quality consistent with consumer preferences. Mr. Sukumar has done well to stress that fans have to be competitively designed and mass-produced with the best of technique available. He is of the view that the Government should encourage the manufacturers to change their old methods of fabrication and adopt modern methods by allowing imports of special machine tools for the purpose. For instance, pressure die casting technique, which has been in vogue in Western countries for more than 50 years as the basis of mass production, is yet not known in India. There is thus an urgent need for encouraging the formation of such die casting foundries as feeders to fan industry in the country.

NATIONAL RAYON'S RESULTS IMPRESSIVE

SATISFACTORY AGREEMENT CONCLUDED ON TYRE CORD PROJECT

THE recommendation of the Directors of the National Rayon Corporation Ltd. to maintain the dividend on ordinary shares for the year ended 31st December 1958 at 14 per cent. per annum, a rate which had been paid for the previous two years, announced some six weeks back, was viewed with some disappointment in the market. For it was generally expected that the Company would easily pay a higher dividend, as it was known that it had done exceedingly well during the past year and that its profit would show a distinct improvement. The full details of the Company's accounts, now available, confirm the latter impression, as witness the expansion of about Rs. 1 crore in sale proceeds and the rise of over Rs. 59 lakhs in gross profit. If, however, the Directors have not chosen to enhance the dividend level, it is because the net profit (after providing for depreciation and taxation) is actually lower than that for 1957. What is more, it is the lowest since 1952.

With a rise of Rs. 59.14 lakhs during 1958, the gross profit has touched the record level of Rs. 209.62 lakhs. A provision of Rs. 16.01 lakhs has been made for managing agency commission (subject to adjustment) as against Rs. 10.89 lakhs in the previous year. This provision has been made, according to the Directors, at the rate of 10 per cent. of the net profit in conformity with the provisions of Sections 349 and 350 of the Companies Act 1956, as was done in the previous year. Some doubt, however, seems to exist about the precise method of arriving at the net profit for the purpose of calculating managing agency commission. The Company is seeking legal advice on this point and, in the light of such advice, the managing agency commission will be suitably adjusted.

The provision for depreciation has been raised substantially from Rs. 75 lakhs to Rs. 92 lakhs and that for taxation from Rs. 12 lakhs to Rs. 55 lakhs. These leave a net profit of Rs. 46.61 lakhs, which represents a fall of Rs. 5.98 lakhs from that for 1957 and of Rs. 11.72 lakhs from the net profit for 1956. The net profit would have been much less if the whole of the estimated tax liability for the year had been met out of the profit. For the tax liability comes to Rs. 70 lakhs. This has been provided for fully by setting aside Rs. 55 lakhs from the year's profit and by drawing the balance of Rs. 15 lakhs from the deferred taxation reserve. No amount has been set aside to general reserve, which had received Rs. 13.35 lakhs last year, but a sum of Rs. 3.25 lakhs has been utilised to create a development rebate reserve. As in the previous three years, the debenture redemption reserve gets Rs. 10 lakhs. The gratuity reserve receives Rs. 3 lakhs, the same as last year.

The following comparative table shows the progress of the Company since 1955:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	6,37.11	5,37.48	4,22.38	3,42.50

Carry forward	0.97	1.24	5.52	5.12

* Less tax.
† Includes proportionate dividend on new shares.

The figure of cost of raw materials consumed in 1958 is not comparable with that relating to 1957, as certain expenses in respect of manufacturing caustic soda and other chemicals are not included in that. On the contrary, they are debited to the respective heads. The sale proceeds for 1958 include sales of these chemicals also.

The Company's rayon yarn, sulphuric acid and carbon disulphide plants worked to full capacity during the year, except for a brief period of a week or so of enforced shut-down due to heavy and unprecedented floods. The caustic soda chlorine plant, which was commissioned by about the end of 1957, could not be worked to its capacity during 1958. It is, however, gratifying to hear that the teething troubles experienced earlier have been got over and the plant is now working satisfactorily. The Company's tyre cord manufacturing scheme could not make much progress during the year under review, due to certain factors beyond the control of the Company. After protracted negotiations with the Consultants, who were to provide the technical know-how, a satisfactory agreement has recently been signed with them.

The estimated cost of the tyre cord plant is Rs. 3 crores, for which the Company has been able to arrange dollar credits to the tune of Rs. 1.20 crore. A sum of Rs. 80 lakhs will be found from the Company's internal resources and the balance is to be met out of the new capital issue made last year. The Company, it may be noted, issued 80,500 ordinary shares of Rs. 100 each at a premium of Rs. 25 each. These shares rank for dividend from 1st January 1958 on the amounts for the time being called up and paid. At the end of 1958, only Rs. 80 per share had been called, on which calls unpaid amounted to Rs. 1.09 lakh, so that the total paid-up capital stood at Rs. 398.17 lakhs. Subsequently, the balance of Rs. 20 per share was also called. Now the entire new issue has been fully paid, except for a small sum of Rs. 42,675.

The reserves and surplus as at the end of 1958 (including the share premium) aggregate Rs. 167.69 lakhs. Thanks to the new issue of capital, the Company has been able to reduce its borrowings (other than the debenture loan of Rs. 1.50 crore) from Rs. 160.79 lakhs to Rs. 3.81 lakhs. The other current liabilities and provisions aggregate Rs. 189.51 lakhs. There has been an addition of Rs. 55.46 lakhs to the block capital during the year, besides works under construction amounting to Rs. 34.91 lakhs, bringing the total value of the gross block to Rs. 10.94 crores. The depreciation provided so far comes to Rs. 4.32 crores, so that the net value of the block account is Rs. 6.62 crores. The other assets aggregating Rs. 247.30 lakhs far exceed the current liabilities and provisions.

The current market value of the Company's Rs. 100 fully paid-up shares is Rs. 307.50 *cum-div.* A year ago, they had stood at Rs. 232.50. At the *ex-div.* rate, the yield on the shares works out to 4.8 per cent. per annum, free of income-tax.

NATIONAL CARBON

1959 marks the Silver Jubilee year of the National Carbon Company (India) Ltd. During the two and a half decades of its history, the growth of the Company has been phenomenal. It started with a small plant capable of assembling, with the aid of imported parts, six million flashlight cells per annum, whereas now it operates two battery plants which are capable of manufacturing over 142 million dry cells per year of various types, including the well-known "Mini-Max" flat cell. In addition, it operates a plant for processing manganese ore, a strip mill for alloying and processing of zinc and a new plant at Lucknow capable of manufacturing up to six million flashlight cases a year. What is more, a good part of the raw materials used and practically all the component parts are of indigenous origin.

The following statistics given by the Chairman of the Company, Mr. J. R. Galloway, in his statement at the annual general meeting of the Company held a few days ago, provide further proof of the Company's growth during the past quarter of a century:

		From	*To*
Gross sales	Rs.	7,65,000	6,05,00,000
Fixed assets	Rs.	5,34,000	2,34,00,000
Personnel employed	No.	406	2,540
Annual wage bill	Rs.	75,000	92,00,000
Annual tax bill	Rs.	17,900	86,14,600

The Company has under construction at Trombay a plant for the manufacture of organic chemicals and polyethylene resin at a cost of about Rs. 4.5 crores. It is expected to be completed during the latter part of 1960. When in full production, the combined output of chemicals and plastics will, according to the Chairman, come to about 15 million lbs. per annum, having a net sale value of over Rs. 2 crores. The Company's products to be manufactured, such as butyl alcohol, butyl acetate, acetic acid, etc., are basic chemicals required for manufacturing paints, dyestuffs and pharmaceuticals, including antibiotics. The use of polyethylene in India is increasing rapidly, particularly for industrial applications, and the Trombay plant of the Company will produce six million lbs. of polyethylene per annum, thus paving the way for India's self-sufficiency in this important plastic.

KAMANI ENGINEERING RETURNS TO DIVIDEND LIST

After a lapse of five years, the ordinary shares of the Kamani Engineering Corporation Ltd. (Managing Agents: Messrs. Kamani Brothers Private Ltd., Bombay) have returned to the dividend list, following the Directors' recommendation to make a modest distribution of 5 per cent. for the year ended 30th September 1958. The latest dividend is double that paid on the previous occasion, namely, 2½ per cent. for the year 1951-52. This follows a distinct improvement in the working of the Company, as reflected in the marked rise in earnings. The turnover of manufactured articles (in terms of value), at Rs. 1.58 crore, is 78 per cent. more than that in the previous year. Agency business rose by about 65 per cent. to Rs. 1.27 crore. The gross profit, which had gone up from Rs. 4.59 lakhs to Rs. 6.74 lakhs in 1956-57, has jumped up to a record high of Rs. 15.52 lakhs in the year under review.

In addition to depreciation amounting to Rs. 3.38 lakhs provided for, in respect of the year under review, the Directors have utilised Rs. 3.63 lakhs to wipe out all arrears of depreciation in full. The provision for taxation has been raised from Rs. 25,000 to Rs. 4.05 lakhs, leaving a net profit of Rs. 3.26 lakhs, as against Rs. 2.50 lakhs for 1956-57. While no provision has been made for doubtful debts (for which a sum of Rs. 25,000 had been set aside last year), the Directors have transferred Rs. 24,603 to the development rebate reserve and Rs. 25,000 to the general reserve, both of which had not received anything last year.

The following comparative table provides an idea of the Company's progress in recent years:

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	2,84.76	1,66.19	1,65.40	2,34.02

Dividends— 5½ per cent. preference	0.56	1.65*	0.82†	1.65‡
Ordinary	2.25 (6%)	..	..	..
Carry forward	0.11	0.56	0.37	0.16

* For the years 1955-56 and 1956-57.
† For the year 1954-55.
‡ For the years 1952-53 and 1953-54.

The "other income" shown in the above table includes Rs. 6.61 lakhs received during the year under review as commission from a foreign principal, as against Rs. 12.77 lakhs in 1956-57. No credit has been taken for the sum of about Rs. 5.95 lakhs received as a result of settlement which was arrived at since the close of the year under review and this represents income which would have accrued over a period of years.

The manufactured products and erection services undertaken by the Company are mainly for the national projects under the Five-year Plan. Even after reaching the record level of production, the Company is said to have a considerable surplus production capacity available. For utilising this, the Company is making efforts to secure more orders and to procure the required steel which is in short supply. Export possibilities are also being explored. In order to utilise the existing surplus capacity, new machinery has been ordered to balance certain operations to reduce the cost of production and diversify the production.

The Company, which has pioneered the design, precision, fabrication and "hot dip" galvanising and erection of transmission line towers in India, continues to maintain the lead. In the field of designing, the Company has the distinction of developing, for the first time in India, extra high tension transmission towers for 220 K.V. double circuit line. These have been successfully fabricated and tested.

The Company's paid-up capital, at Rs. 59.98 lakhs, is made up of 449,625 ordinary shares of Rs. 10 each and 15,000 5½ per cent. (less tax) cumulative redeemable preference shares of Rs. 100 each. The preference shares are redeemable at any time after 6th May 1950 at a premium of Rs. 5 each. The reserves and surplus are very low at Rs. 3.25 lakhs. The gross block of the value of Rs. 56.91 lakhs stands written down to Rs. 33.59 lakhs, the depreciation provided so far being of the order of Rs. 23.33 lakhs. The other assets aggregating Rs. 173.19 lakhs exceed the current liabilities and provisions, at Rs. 143.56 lakhs, by a comfortable margin. The assets include those at Lahore of the value of Rs. 7.53 lakhs. The Lahore branch of the Company ceased to operate in 1946-47. The net assets at Lahore continue to be shown, as in previous years, at values at which they had stood on 30th September 1947, in the absence of proper records.

The Rs. 10 paid-up ordinary shares of the Company are being quoted at Rs. 9.72 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the shares give a yield of 5.4 per cent. per annum, free of income-tax.

SYNOPSES OF COMPANY REPORTS

Sivanandha Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. S. R. P. Ponnuswamy Chetty & Sons, Coimbatore) present the audited accounts of the Company for the year ended 31st December 1958.

The working of the Mill during the year was satisfactory. The Mills had to go in for Indian cotton also during the year since the allotment of Foreign Cotton was utterly inadequate.

The Mill was running with an installed capacity of 25,088 spindles. The average number of spindles worked during the year was 21,396 which would have been more but for the power cut during the period from 15th January 1958 to 30th June 1958 ranging from 25 per cent. to 75 per cent. Six sets of combing equipments ordered for from Switzerland were received and installed during the year. The machinery required for installation of 6,272 spindles sanctioned under the normal expansion scheme has been ordered for and these will be installed during 1959.

In spite of increased expenditure in wages and dearness allowance on account of the rise in the cost of living index, working of generators etc., it will be noted that after deducting all working expenses, interest and providing Rs. 5,77,600 (Rs. 5,04,872) for depreciation on the assets of the Company, the year's working resulted in a net profit of Rs. 4,65,817 (Rs. 1,63,282). Adding to this Rs. 4,266 (Rs. 4,498) being the balance of profit of last year, there is a sum of Rs. 4,70,083 (Rs. 1,43,531 after paying donations amounting to Rs. 24,249) available which, the directors recommend, may be appropriated as follows:—

To pay a dividend at 15 (12) per cent. per annum, for the year 1958 absorbing Rs. 1,49,966 (Rs. 1,19,937) and to set apart for provision for taxes Rs. 3,17,000 (Rs. 8,000) leaving a balance to be carried forward of Rs. 3,117 (Rs. 15,594).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,99,713	Gross block	51,57,412
Reserves ...	6,43,782	*Less*—Depreciation ...	25,99,155

Profit and loss account ...	3,118	Stock-in-trade	10,80,328
		Stores and spare parts	37,659
		Debts, deposits and advances ...	4,21,971
		Investments	2,15,050
		Cash ...	3,88,519
Rs.	47,01,784	Rs.	47,01,784

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1958.

The accounts, after charging all expenses and writing back provision against sales tax in respect of previous years, show a profit of Rs. 1,83,601 (loss of Rs. 82,708) of which short provision for taxation in the previous years requires Rs. 20,800 (*nil*), leaving a net profit of Rs. 1,62,801 (loss of Rs. 82,708) from which the directors have transferred to development rebate reserve Rs. 888 (*nil*) leaving a balance of Rs. 1,61,913 (Rs. 67,292 after transferring Rs. 70,000 from dividend equalisation reserve and Rs. 80,000 from general reserve). To this is added the balance brought forward from the last year of Rs. 5,857 (Rs. 8,565) making a total available for distribution of Rs. 1,67,770 (Rs. 75,857). From this amount the directors recommend payment of dividends on preference shares at Rs. 7.00 (Rs. 7.00) per share absorbing Rs. 70,000 (Rs. 70,000) and on ordinary shares at Rs. 5.00 (*nil*) per share absorbing Rs. 79,750 (*nil*) leaving a balance to be carried forward of Rs. 18,020 (Rs. 5,857).

Wealth tax for the year is estimated to amount to Rs. 22,500 and this has been provided for by transfer of this sum from general reserve.

In accordance with the working time agreement of the Indian Jute Mills Association the Company's mill worked 48 hours per week with 12½ per cent. of the total looms sealed during the period to which the accounts pertain. From the 2nd March 1959, a further 1½ per cent. of the looms have been sealed.

As shareholders were advised in February 1959, the directors of the Company, in conjunction with the directors of other Jute Mill Companies under the managing agency of Andrew Yule & Co., Ltd., are examining proposals for closer integration of their operations. This matter is still under consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,95,000	Gross block	83,51,524

Hooghly Docking & Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

General: The value of work billed during the year amounted to Rs. 81,83,506 against Rs. 1,43,27,800 in the year 1957 and the gross profit earned in the year under review was Rs. 6,59,829 against Rs. 8,64,560 in the previous year. Work-in-progress at the end of the year was Rs. 74,42,886 against Rs. 46,14,416 at the beginning. The entire property of the Company has been in good order and repair throughout the period.

After charging all expenses including depreciation and writing back to revenue an excess provision of Rs. 1,12,853 (*nil*) against sales tax made in the earlier years, the net profits for the year amounted to Rs. 4,76,404 (Rs. 4,60,028 to which has been added the balance brought forward from the previous year of Rs. 5,810 (Rs. 13,963) making a total of Rs. 4,82,214 (Rs. 4,73,991). Out of this amount there has been provided for income-tax Rs. 2,70,000 (Rs. 2,55,000), for wealth tax Rs. 21,000 (Rs. 38,181) and for statutory development rebate reserve Rs. 7,000 (*nil*) leaving a balance available for distribution of Rs. 1,84,214 (Rs. 1,80,810). The directors recommend that this balance be disposed of as follows:—

By payment of a dividend of 10 (10) per cent. free of tax absorbing Rs. 1,25,000 (Rs. 1,25,000), by transfer to development reserve Rs. 50,000 (Rs. 50,000) and by carrying forward the balance of Rs. 9,214 (Rs. 5,810).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Gross block	60,24,546
Reserves ...	24,07,000	*Less*—Depreciation ...	39,12,107

		Cash ...	36,809
Rs.	1,00,40,791	Rs.	1,00,40,791

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1958.

The accounts show a profit, after charging all expenses, of Rs. 7,32,929 (Rs. 5,03,195) of which taxation provision requires Rs. 4,90,000 (Rs. 2,40,000) leaving a balance of Rs. 2,42,929 (Rs. 2,63,195). The balance brought forward from last year was Rs. 83,316 (Rs. 53,598) making a total available for appropriation of Rs. 3,26,245 (Rs. 3,16,793). The directors have transferred to development rebate reserve Rs. 48,034 (Rs. 36,209 to capital reserve and Rs. 50,051 to bad and doubtful debts) leaving a balance of Rs. 2,78,211 (Rs. 2,30,533). The interim dividends at 3½ per cent. on preference shares absorbed Rs. 7,000 (Rs. 7,000) and at 40 (37) nP per ordinary share absorbed Rs. 71,049 (Rs. 65,721). The directors now recommend final dividends at 3½ per cent. on preference shares absorbing Rs. 7,000 (Rs. 7,000) and at 60 (38) nP per ordinary share absorbing Rs. 1,06,574 (Rs. 67,496), leaving a balance to be carried forward of Rs. 86,588 (Rs. 83,316). Wealth tax in respect of the year, estimated at Rs. 24,000, has been provided for by transfer from capital reserve.

Raisings for the year totalled 6,21,721 tons compared with 5,30,672 tons in the previous year and 4,48,242 tons in the year ended 31st October, 1956. Despatches amounted to 6,26,445 tons as compared with 5,29,938 tons and 4,55,573 tons in the two previous years.

The new sandstowing arrangements at Victoria and Victoria West collieries have now been completed and this has resulted in increased output of Selected "A" grade coking coal, particularly at the latter colliery. Raisings have also increased substantially at New Kendah colliery where arrangements are being made to work the Dobrana Seam in addition to the Topsi Seam.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,76,230	Gross block	1,40,15,207
Reserves ...	19,89,613	*Less*—Depreciation ...	97,89,286

		Debts, deposits and advances ...	36,31,252
		Investments	4,447
		Cash ...	1,82,592
Rs.	92,86,779	Rs.	92,86,779

Sendra Coal Co., Ltd.

The directors of the above Company (Chairman: Mr. D. L. V. Rowe, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

Colliery:—The directors are pleased to report that the buyers have continued to pay the sums promised on completion of documents and four of the five annual instalments towards the purchase price have now been received. The last instalments of Rs. 1,30,000 is due to be received on 31st December 1959.

Karanpura Mining Syndicate.—During the year ended 31st December 1958, 1,80,082 (1,88,747) tons of coal were raised and 1,80,627 (1,88,067) tons were despatched. The managing contractor continues to raise and sell coal from Religara colliery and this arrangement continues to work satisfactorily.

The profit and loss account after providing for all charges and making provision of Rs. 16,619 (Rs. 29,032) for taxation and Rs. 4,110 (Rs. 8,450) for wealth tax shows a loss of Rs. 5,273 (Rs. 2,465). From this amount is deducted the balance brought forward from the previous year of Rs. 628 (Rs. 5,166) and the amount transferred from general reserve of Rs. 5,000 (Rs. 15,000) leaving a balance of Rs. 355 (Rs. 628 after transferring Rs. 2,927 from reserve for taxation and paying a dividend 2½ per cent. per annum absorbing Rs. 20,000) which the directors propose to carry forward.

Accounts in brief are as under:

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Gross block	52,491
Reserves ...	4,86,289	*Less*—Depreciation ...	28,867

		Net block ...	23,624
Provision for wealth tax	8,267	Debts, deposits and advances ...	1,86,962
Liabilities ...	25,314	Investments	1,75,088
Profit ...	355	Cash ...	9,55,574
Rs.	13,41,248	Rs.	13,41,248

Rajnagar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The Company's profit for the year is Rs. 2,11,339 (Rs. 94,452). And after providing for taxation on profits for the year amounting to Rs. 1,51,233 (Rs. 73,763), there is a balance of Rs. 60,106 (Rs. 20,689) to which is to be added amount brought forward from the previous year of Rs. 1,18,279 (Rs. 1,66,870) making a total of Rs. 1,78,385 (Rs. 1,87,559). After deducting provision for taxation for previous years amounting to Rs. 34,118 (Rs. 34,080), there remains an available balance of Rs. 1,44,267 (Rs. 1,53,479). Out of this, the directors have transferred to development rebate reserve Rs. 2,990 (*nil*), leaving a credit balance to be carried forward of Rs. 1,41,277 (Rs. 1,18,279 after paying a dividend of 11 per cent. absorbing Rs. 35,200). It will be observed that a sum of Rs. 34,118 has been provided in respect of taxation for previous years. The directors deemed it expedient to make this provision in view of pending appeals against assessments made in Pakistan which may or may not succeed.

No remittances have been received from Pakistan since the date of the last report despite the best efforts to obtain sanction from the State Bank of Pakistan for the transfer of past profits to India. Representations on this subject are still continuing.

In the meantime no funds are available in India and the directors regret that they are unable to recommend payment of a dividend.

The total crop harvested during the year was 5,818 maunds as compared to 4,701 maunds in 1957. The average sale price realised for season 1958 was Rs. 2.18 compared with 1957 average of Re. 1.97 per lb.

The area under tea is 668 acres. The garden remains in good order.

The estimates for 1959 provide for production of a crop of 5,000 maunds at a total cost on revenue account of Rs. 7,37,736.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Debts, deposits and advances ...	1,86,743
		Investments	1,007
		Cash ...	3,38,488
Rs.	12,42,808	Rs.	12,42,808

Travancore Ogale Glass Mfg. Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Ogale Bros. (Private) Ltd., Alwaye] submit the audited accounts of the Company for the year ended 31st December 1958.

During the year under Report, there was improvement in the turnover and the sales exceeded Rs. 10½ lakhs. The Company was able to earn a net profit of Rs. 57,700 (Rs. 40,556) after providing for all working expenses, depreciation, wealth tax, etc. After setting off the carried over loss of Rs. 7,432 (Rs. 47,988) there is a balance of Rs. 50,268 (debit of Rs. 7,432) available for disposal.

The supply position of raw materials is rather difficult. The Company has to find finance for its

expansion programme. In the circumstances, the Board proposes to recommend a dividend of four (*nil*) per cent. and the balance profit to be carried forward to next year's accounts.

Reference was made in last year's report to the awards made by the Industrial Tribunal in respect of the demands of workers and staff members which would have imposed heavy burdens on the Company. Writ petitions for quashing the awards filed before the High Court were allowed *in toto*. The Company has now entered into long term agreements with the employees. It is hoped this will ensure peace in the industry.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th November 1958.

The accounts, after charging all expenses and writing back provision against sales tax in respect of previous years, show a profit of Rs. 5,27,082 (loss of Rs. 50,051) from which the Directors have transferred to general reserve Rs. 1,50,000 (*nil*) and to development rebate reserve Rs. 1,889 (*nil*) leaving a balance of Rs. 3,75,193 (debit of Rs. 50,051). To this is added the balance brought forward from the last year of Rs. 529 (Rs. 20,580) making a total available for distribution of Rs. 3,75,722 (Rs. 70,529 after transferring Rs. 1,00,000 from general reserve). An interim dividend was declared on 1st December 1958, on ordinary shares at Rs. 3.00 (*nil*) per share absorbing Rs. 54,000 (*nil*). The directors now recommend payment of final dividends on preference shares at Rs. 7.00 (Rs. 7.00) per share absorbing Rs. 70,000 (Rs. 70,000) and on ordinary shares at Rs. 12.00 (*nil*) per share absorbing Rs. 2,16,000 (*nil*) leaving a balance to be carried forward of Rs. 35,722 (Rs. 529). Wealth tax for the year is estimated to amount to Rs. 27,000 and this has been provided for by transfer of this sum from investment realisation surplus.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 12½ per cent. of the total looms sealed during the period to which the accounts pertain. From the 2nd March 1959, a further 1½ per cent. of the looms have been sealed.

As shareholders were advised in February 1959, the directors of the Company, in conjunction with the directors of other Jute Mill Companies under the managing agency of Andrew Yule & Co., Ltd., are examining proposals for closer integration of the'r operations. This matter is still under consideration.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Gross block	84,40,054
Reserves ...	26,46,123	*Less*—Depreciation ...	46,52,038
Provision for wealth tax	27,485	Net block ...	37,88,016
Liabilities ...	15,22,592	Stock-in-trade	20,28,783
Profit ...	35,722	Stores and loose tools	6,22,993
		Work-in-progress ...	1,82,145
		Debts, deposits and advances ...	3,45,595
		Investments	64,388
Rs.	70,31,922	Rs.	70,31,922

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(*Concluded from next column*)

pany has introduced, with effect from 5th February this year, three-shift working. The three shifts have been working successfully to the maximum extent permitted by available power supply. "Until the introduction of power drive, which is one of the features of the proposed modernisation scheme," the Chairman says in his statement circulated to the shareholders, "and until also additional supply of power can be obtained, it is not possible further to increase production and a portion of the mill's productive capacity must perforce remain idle." The Chairman, however, hopes that the position will be rectified within a year from now.

ANGLO-FRENCH TEXTILES

DIVIDEND MAINTAINED

THE Chairman of Anglo-French Textiles Ltd., Mr. T. Rogers, in his statement to shareholders last year, stated that he was not without hopes that, during 1958, the Company could operate at a profit, despite the difficult times through which the textile industry was passing, but he made it clear that he could not hold out much hope that the profit would be substantial. That this expectation has come true is borne out by the audited accounts of the Company (situated in Pondicherry) for the year ended 31st December 1958. The Company has earned a gross profit of Rs. 6.82 lakhs during the year under review, which, as compared with that (Rs. 12.86 lakhs) for 1957, shows a fall of Rs. 6.04 lakhs. "This position, though revealing," the Chairman says in his latest statement, "is not fully symptomatic of the seriousness of the situation which confronted the cotton textile industry in India during the year, particularly those units which, like your Company, were producing principally coarse and medium varieties."

The net profit, however, shows, a relatively smaller setback, having dropped from Rs. 6.73 lakhs to Rs. 5.14 lakhs, on account of the lower provisions for depreciation and taxation. No amount has been set aside for reserves, but the dividend is unchanged at 6 per cent., as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds (gross)	2,13.78	2,07.19	1,46.26	58.43
Closing stocks	32.75	40.28	33.36	18.24
Cotton consumed	1,12.38	1,19.30	85.30	31.30
Other expenses	87.86	83.58	77.53	30.79

The Company's production of yarn shows a slight fall from 9.38 million lbs. of an average count of 15.97 to 9.29 million lbs. of an average count of 16.09, while the output of cloth rose from 17.51 million yards to 19.42 million yards. Sales of yarn (in terms of value), however, improved from Rs. 47.86 lakhs to Rs. 56.13 lakhs, while those of cloth were a little lower at Rs. 155.73 lakhs, as compared with Rs. 156.98 lakhs in 1957. but the aggregate sales of cloth and yarn show an increase from Rs. 204.84 lakhs to Rs. 211.86 lakhs. In consonance with the general trend of textile exports, the Company's exports of cloth and yarn also dropped from Rs. 121.44 lakhs to Rs. 118.17 lakhs.

During the year under review, the Company received a further distribution of capital amounting to Rs. 5.65 lakhs from the liquidator of the Company's subsidiary, the Anglo-French Textile Company, Ltd., which went into voluntary liquidation in August 1955. This has further reduced the cost to the Company of the fixed assets taken over from the liquidator in 1956 and, in view of this, the Directors have not considered it necessary to provide any depreciation for 1958 on these assets, though depreciation on subsequent additions has been fully provided for the year.

The Company has been sanctioned a loan of Rs. 40 lakhs by the National Industrial Development Corporation for modernisation of its plant. But, as the legal formalities have not yet been completed, on account of the complicated nature of the laws in Pondicherry, it has not been able to utilise the loan and implement the modernisation programme. While every attempt is being made to expedite the matter, the Company has, in the meantime, made additions to the plant and machinery to the tune of over Rs. 6 lakhs during the year under review, as part of the modernisation programme.

The Company has no reserves at all to supplement the paid-up capital of Rs. 48 lakhs. The current liabilities amount to Rs. 71.59 lakhs. The gross block of the value of Rs. 32.25 lakhs stands written down at Rs. 26.63 lakhs. The current assets aggregate Rs. 93.08 lakhs, exceeding the current liabilities by Rs. 21.51 lakhs.

In addition to the programme of modernisation to reduce manufacturing costs, the Com-

COMPANY MEETINGS AND DIVIDENDS

RAJNAGAR TEA CO., LTD. Annual General Meeting, Calcutta, 4th June 1959. Dividend: *Nil*. Transfer books remain closed from 26th May to 4th June 1959, both days inclusive.

RAIPUR MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 5th June 1959. Dividend: Rs. 25.00 per share.

ANGLO-FRENCH TEXTILES LTD. Annual General Meeting, Pondicherry, 8th June 1959. Dividend: Rs. 6.00 per share, free of French Indian income-tax. Transfer books remain closed from 18th May to 8th June 1959, both days inclusive.

UNITED FLOUR MILLS CO., LTD. Annual General Meeting, Calcutta, 8th June 1959. Dividend: Rs. 3.75 per share (includes interim dividend of Rs. 2.25 per share). Transfer books will remain closed from 1st to 8th June 1959, both days inclusive.

KRISHNA INDUSTRIAL CORPORATION LTD. Annual General Meeting, Madras, 8th June 1959. Dividend: Re. 1.00 per share or 10 per cent. Transfer books will remain closed from 1st to 8th June 1959, both days inclusive.

SIVANANDHA MILLS LTD. Annual General Meeting, Coimbatore, 10th June 1959. Dividend: Re. 1.50 per share or 15 per cent. Transfer books remain closed from 27th May to 10th June 1959, both days inclusive.

NAIHATI JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 11th June 1959. Dividend: *Nil*. Transfer books remain closed from 29th May to 11th June 1959, both days inclusive.

KAMANI ENGINEERING CORPORATION LTD. Annual General Meeting, Bombay, 11th June 1959. Dividend: 5 per cent. or Re. 0.50 per share, payable on and from 22nd June 1959. Transfer books remain closed from 21st May to 11th June 1959, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Annual General Meeting, Calcutta, 11th June 1959. Dividend: Re. 1.00 per share, (includes interim dividend of 40 nP per share). Transfer books remain closed from 28th May to 11th June 1959, both days inclusive.

SENDRA COAL CO., LTD. Annual General Meeting, Calcutta, 12th June 1959. Dividend: *Nil*. Transfer books remain closed from 29th May to 12th June 1959, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 15th June 1959. Dividend: Re. 1.00 per share (final). Transfer books will remain closed from 1st to 15th June 1959, both days inclusive.

HOOGHLY DOCKING AND ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 15th June 1959. Dividend: 10 per cent. or Rs. 5.00 per share. Transfer books will remain closed from 6th to 15th June 1959, both days inclusive.

GWALIOR RAYON SILK MANUFACTURING (WEAVING) CO., LTD. Annual General Meeting, Birlagram, Nagda, 16th June 1959. Dividend: Re. 1.00 per share (includes interim dividend of 50 nP per share). Transfer books remain closed from 25th May to 16th June 1959, both days inclusive.

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad, 19th June 1959. Dividend: *Nil*. Transfer books remain closed from 25th May to 19th June 1959, both days inclusive.

VIJAYA MILLS CO., LTD. Annual General Meeting, Ahmedabad, 22nd June 1959. Dividend: Rs. 40.00 per share (includes bonus of Rs. 5.00 per share), free of income-tax, payable from 29th June 1959. Transfer books remain closed from 18th May to 7th June 1959, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 25th June 1959. Dividend: Rs. 14.00 per share, payable on and from 26th June 1959. Transfer books remain closed from 11th May to 9th June 1959, both days inclusive.

FERTILISERS AND CHEMICAL, TRAVANCORE LTD. Annual General Meeting, Eloor, Alwaye, 15th July 1959. Dividend: 4 per cent. or Re. 0.40 per share, payable on and after 15th August 1959. Transfer books will remain closed from 6th to 15th July 1959, both days inclusive.

HOARE MILLER & CO., LTD. Interim dividend of Re. 0.50 per share, for the year ended 31st December 1958, payable on or after 29th May 1959.

BENGAL ASSAM STEAMSHIP CO., LTD. Dividend of Rs. 6.00 per share, for the year ended 31st October 1958.

HUKUMCHAND JUTE MILLS CO., LTD. Interim dividend of Rs. 3.50 per share, free of income-tax, for the year ended 31st March 1959, payable after 13th June 1959. Transfer books will remain closed from 6th to 13th June 1959, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Final dividend of 14 per cent. on the ordinary shares, for the year ended 31st December 1958.

PULLICAR MILLS LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 3rd to 17th June 1959, both days inclusive.

TRAVANCORE CEMENTS LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 31st December 1958. Transfer books will remain closed from 20th June to 10th July 1959, both days inclusive.

FINANCE AND PRIVATE INVESTMENT

VIEWS OF U.S. TRADE MISSION

[A seven-man U.S. Trade Mission, headed by Mr. Paul H. Brent, toured Eastern India (West Bengal, Bihar, Orissa and Assam) for nine weeks, studying economic conditions and prospects for establishing industries. It visited 14 cities, met 34 business groups consisting of nearly 3,000 persons and held a Trade Information Centre in the U.S. Small Industries Exhibition in Calcutta. The Mission's objective was to explore ways and means of developing a larger two-way trade between India and the U.S., as well as an accelerated flow of U.S. private capital investment in India. The Mission's tour lasted from 14th February to 18th April 1959. The preliminary impressions of the Mission were surveyed on page 678 of our issue dated 25th April. The full text of the Mission's final report, received in this country this week, makes interesting reading, containing as it does several suggestions of importance to Indian business men, banks, and the Government. We are publishing on this page an extract from the Report dealing with finance and taxation aspects. Another extract pertaining to trade and investment opportunities is published on page 931.—ED.]

THE Indian Government is maintaining a flexible policy in its treatment of applications from foreign investors to participate with Indian nationals in new enterprises. Despite statements which appear frequently in the Indian Press about the growth of the socialist system in the country, it is quite evident that the field for private sector investment is increasing. The record of American firms operating in India has been favourable. Reasonable profits comparing favourably with U.S. rates can be earned and transferred in dollars. U.S. investment has gone up from 84 million dollars in 1954 to an estimated 225 million dollars in 1958. The Mission encountered representatives of various U.S. firms surveying the market and possibility of manufacturing in India. Tax rates are high, however, in comparison to other countries, including other Asian countries, and necessity for more favourable tax treatment was emphasised in order to meet more attractive situations prevailing elsewhere.

The draft of an Indo-U.S. agreement for the avoidance of double taxation is now in its final stages prior to consideration for ratification. Such a double taxation agreement should be a considerable incentive to new investment. The Mission hopes that both countries will proceed with ratification of the agreement. In addition, investment guaranty insurance is available against non-convertibility of earnings and capital. Discussions are in process for expanded coverage under this guaranty insurance similar to that in effect in other countries. If guaranty insurance coverage were expanded and a new commercial treaty negotiated it should have a salutary effect in attracting more favourable thinking by American businessmen on possibilities of joint venture with Indian firms.

Vast Scope

Licensing agreements are approved by the Indian Government and even royalty agreements, depending upon the product, are acceptable, although the Indian Government does prefer actual capital investment with technical know-how. While there is a general policy in the Government furthering the role of the public sector in certain basic or reserved industries, Prime Minister Nehru has declared officially the country's desire to have foreign private investment participate in India's economic development and has indicated that the needs of the country are so great that private enterprise will have an important role to play in satisfying them. It is significant that many prominent Indian business leaders share this same point of view regarding the future of the private sector.

Other points discussed relate to the necessity for India to compete in the world's capital markets for foreign investment and the necessity for prompt executive action in approval of projects. The story of India's expanding opportunities must be more widely told in order to attract foreign enterprise to come to India on a long-term basis in order to accelerate the pace of economic development. Constant efforts were urged by the Mission to improve the investment climate in India, so that overseas capital would flow into the country in increasing amounts. It was clearly stated on various occasions that U.S. private capital will come to those countries offering the most favourable investment conditions with a real opportunity at the same time to contribute to the country's development.

Banking and Finance

The financial policies and procedures of Indian banks and finance companies were discussed with Government officials, commercial bankers, investment bankers, manufacturers, and tradesmen. There is a great need for more adequate credit facilities, particularly for moderate and small industries and the service industries, in order to facilitate the rapid growth of the country as scheduled in the Five-year Plans.

A programme of public information should be launched in India regarding the importance of credit to the economy of the country and its place in community and industrial development.

There is need for a credit association supported by banks and industries for quick clearance of credit information. This association could also assist in the educational programme through group meetings and seminars as done in the United States.

Tax Structure

Some revision in India's tax structure might be made to encourage further investment without diminishing the net revenue accruing to the Government, as an expanding economy with greater employment and higher productivity would soon offset such concessions through a consistently larger volume of business and permanent investment. The Government of India has made tax concessions for various types of heavy industries which have the effect of encouraging foreign investment. A comprehensive study of taxation and foreign investment has been made by the National Council on Applied Economic Research which makes specific recommendations designed to further encourage foreign investment. These recommendations, if adopted, could well serve to stimulate some of the moderate-sized American companies to venture into the Indian market and collaborate with local manufacturers.

Under Section 15c of the Indian Income Tax Act, new industrial enterprises are granted exemption from both income-tax and super-tax on profits up to 6 per cent. of the capital employed. This concession is applicable for five assessment years from the commencement of production. During the first five years of operation, a new company usually incurs many exceptional and sometimes unforeseen operating expenses, many of which are non-recurring. The result is that many companies do not show a profit during these formative years and in fact show operating losses.

The National Council on Applied Economic Research has recommended the Act be modified so that unused tax concessions could be carried forward to be applied against profits that might be made during the next three-year period of the industrial undertaking; in the same manner that operating losses, development rebates, and depreciation allowances are now permitted to be carried forward.

Rapid Growth

Since it is the policy of many American firms operating overseas to re-invest their earnings in their expanding branch plants or subsidiaries, they capitalise their surplus and frequently declare stock dividends rather than deplete working capital needed to maintain their growth and expansion. The payment of stock dividends has been a common practice in the United States for many years and has assisted a great many companies to finance their rapid growth.

Many countries overseas have benefited substantially by attracting American business and private investment of equity capital. This is of great benefit to the host country, as it is more flexible and is of a Government nature. Such investments do not require any regular periodic payments for amortization, and they are usually quite permanent, especially if the investment climate continues to be favourable. Foreign private investment does not create the same problems and difficulties associated with fixed foreign-exchange-repayment obligations, and this inflow of new capital can help materially to offset balance of payment deficits.

Some sort of a sound financial plan should be formulated by the Government finance corporations and the commercial banks so that their present lending policies can be liberalised to provide the money necessary not only to increase productivity but to finance distribution of finished goods to the ultimate consumer.

The counterpart rupees built up in India by the United States under its Public Law 480 programme have not been as effectively utilised as they might. These large sums should be distributed more widely so that they will find their way into the bloodstream of the country and be actively utilised for the development of small and moderate-sized industries.

At the present time the commercial banks process development loans and make the advance on their own responsibility and at their own risk in case of eventual loss. It is manifestly unfair to expect commercial banks to make venture capital loans and extend term credits to new and untried industries utilising depositors' money for which they are trustees and responsible for repayment on demand. The State Bank of India permits the commercial banks to rediscount these loans in order to maintain liquidity, but this is not enough.

The Mission recommends that some sound plan be worked out by the Government authorities and the banks whereby certain types of venture capital and developmental loans of benefit to the economy of India and consistent with its Five-year Plans be processed and made through the usual commercial bank channels on a guaranteed basis. Some sort of a programme could be worked out so that banks making such approved advances would be provided with counterpart rupees for possibly 90 per cent. of the loan and guaranteed against loss for this amount. The bank itself should advance a minimum of 10 per cent. of the amount at its own risk and thus continue to have a real interest in the advance and its ultimate repayment.

Credit Insurance

An alternate plan might be to establish a National Credit Insurance Corporation supported by counterpart rupees to insure the banks, at a nominal charge, against loss of principal and interest on approved credits.

The first plan would be more effective in actually putting the rupee funds to work and would produce quicker results.

Many businessmen have complained about the length of time required to get their loan applications processed. It is imperative, therefore, that a simple, efficient process be established to have such loans approved with a minimum delay. These development loans using U.S. counterpart rupees should be made available to Indian companies and to the branches or subsidiaries of American companies established in India.

A recurrent experience of the members of the Mission was the apparent lack of information on the part of many Indian medium and small-sized firms regarding the areas of the economy requiring new investment. Repeatedly, business visitors asked the members for their own opinions as to the industries that they should enter and how financial assistance could be obtained. More vigorous efforts should be made either by the Government or by the chambers of commerce, or perhaps by both acting jointly, to supply more information to the small businessmen regarding the kinds of products that are in short supply in India and the facilities offered by Indian Government and banks to firms willing to undertake their production.

The post-war recessions have cost the U.S. about $40,000 million with 'a disturbing impact' on underdeveloped countries, according to the latest world economic report of the United Nations. In the U.K., industrial production has been almost at a standstill since 1955 and the true dimensions of the world trade boom from 1955 to 1957 were modest. In 1957-58 alone, the decline in commodity prices, coupled with the inching up of prices of manufactures, led to a loss of more than $2,000 million to the primary producing countries. The sensitivity of commodity markets was enough to reduce prices and export earnings of the underdeveloped countries by 8 per cent., over the year July 1957 to June 1958.

A draft convention relating to atom risks insurance has been drawn up by the European Commission for the approval of the Common Market countries. The convention seeks to enable all nuclear risks in the six Euratom countries to be covered upto $100 million. It supplements the O.E.E.C. convention which lays down a minimum of $5 million for the insurance cover to be provided by the operator of any nuclear reactor. The O.E.E.C. convention, it is suggested, should be binding on all parties, but there must be extra cover for the risks involved. If the damage from any accident exceeds $100 million, the Euratom draft envisages a joint cover undertaking by the signatory Governments.

GILT-EDGED LOOKS UP

(From Our Own Correspondent)

BOMBAY, *27th May*

The stringency in the short-term money market has eased a little more this week, thanks to the growing pace of return of funds to banks and the gradual fall in demand for fresh bank credit. This is borne out by a further accretion to banks' deposits with the Reserve Bank and the reduction of their borrowings from the latter. Banks are nevertheless, borrowers in the market and the rates offered by them show no decline. Thus, inter-bank call money is still being taken up at 3½ per cent. by the Exchange banks and big Indian banks and at 3½ to 3¾ per cent. by the smaller banks. House money at seven days' notice is quoted at 3¾ per cent. and short-term deposits at 3½ to 4 per cent. per annum, depending on the period.

After remaining steady at 2.800 per cent. for five successive weeks, the discount rate on Government of India Treasury Bills has dropped to 2.790 per cent. per annum this week. The amount offered at Rs. 2.15 crores was, however, less than that in the previous week, when it aggregated Rs. 2.40 crores, as against an invitation for Rs. 2 crores in both the weeks. Tenders for next week are unchanged at Rs. 2 crores. Though there were again no sales of Intermediate Treasury Bills last week, they are being offered this week at Rs. 99.321 per cent., as against Rs. 99.316 per cent. last week. This will mean a fall in the discount rate from 2.736 per cent. per annum to 2.716 per cent.

A further contraction of Rs. 13.63 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 22nd May 1959. Notes held in the Banking Department are also lower by Rs. 1.14 crore, so that the decline in total notes issued is of the order of Rs. 14.78 crores. This is covered by a fall of Rs. 15 crores in rupee securities and a small rise of Rs. 22 lakhs in rupee coin. There is no change in foreign securities. The balances held abroad continue to decline, though the extent of drop in the week under review is only fractional at Rs. 32 lakhs. There has been a rise of Rs. 1.43 crore in Central Government's deposits, of Rs. 8.07 crores in other Governments' deposits and of Rs. 8.08 crores in deposits of banks. Loans and advances to Governments have declined by Rs. 10.91 crores and other loans and advances by Rs. 7.94 crores. Of the latter, advances to scheduled banks against usance bills account for Rs. 1.67 crore.

The Scheduled banks' statement for the week ended 15th May 1959 discloses a rise of Rs. 3.41 crores in demand deposits and of Rs. 3.11 crores in time deposits. Inter-bank borrowings too have gone up by Rs. 4.66 crores, while borrowings from the Reserve Bank have dwindled by Rs. 14.16 crores. Advances have declined by Rs. 4.57 crores, of which the State Bank of India accounts for Rs. 2.49 crores. Bills purchased and discounted are also lower by Rs. 1.41 crore. There has been a drop of Rs. 8.31 crores in investments, but cash and balances with the Reserve Bank have enlarged by Rs. 3.05 crores and money at call and short notice by Rs. 3.51 crores.

The gilt-edged market is steady, with a rise in the values of a number of issues ranging from 5 to 20 nP. The slight relaxation in credit stringency has brought about a revival of demand from institutions. More than the actual buying, the withdrawal of sellers from the market and scarcity of stocks in some counters have hardened sentiment. 3 per cent. 1986 Conversion Loan has buyers 20 nP higher at Rs. 73.75. 3 per cent. 1970-75 has picked up 10 nP to Rs. 91.40. 3 per cent. 1966-68 has gathered 20 nP to Rs. 93.90. While 3 per cent. 1964 is well maintained at Rs. 97, 3 per cent. 1963-65 has gained 15 nP to Rs. 96.85, part of which is due to voucher hunting. 3 per cent. 1959-61, which is due to mature, has hardened by 5 nP to Rs. 99.80. 2¾ per cent. 1962 is 5 nP better at Rs. 96.95. 2¾ per cent. 1960 has risen by 10 nP to Rs. 99.10 and 2½ per cent. 1961 by 5 nP to Rs. 97.35. 3½ per cent. 1964 and 1965 is marked up by 5 nP each to Rs. 99.75 and Rs. 99.60, respectively. A similar rise is noted in 3½ per cent. 1968 at Rs. 99.

Sterling has been moving erratically. Spot sterling in New York rose from $2.81.7/32-2.81.9/32 to $2.81.11/32-2.81.13/32 on Friday last, but this gain has been nearly wiped out subsequently, the quotation having dropped to $2.81¼-2.81.5/16. After moving up from $2.80.31/32-2.81.1/32 to $2.81.1/16-2.81⅛, three months' forward has fallen to $2.81-2.81.1/16. This trend is, however, reflected only in the banks' buying rate for U.S. dollars in India, which has been moving between Rs. 472.50 and Rs. 472.25 per $100. Banks' selling rate for ready dollars is, however, unchanged at Rs. 475.75 per $100.

LINSEED EASY

(Messrs. A. Bradley and Co.)

CALCUTTA, *25th May*

Although linseed has eased somewhat, the recession has been purely nominal and a generally firm undertone still prevails. Following some improvement in supplies, the daily turnover has increased, with crushers fully absorbing sellers offers. Oilcake prices have registered a further fall, but fresh export sales are still unworkable at buyers indications overseas. With a small decline in the price of oil, there has been renewed activity in the market and shippers have done business for early delivery against a recent sale to Australia. Interest from local buyers has continued for forward deliveries which are quoted at a premium of Re. 1 to Re. 1.50 per maund.

The latest quotations are Ready May Rs. 23.25 and June-July Rs. 23.62 per maund.

BULLION SPURTS AGAIN

(From Our Own Correspondent)

BOMBAY, *27th May*

There are strong rumours in the bullion market that the Forward Markets Commission will bring futures trading in both gold and silver under its control with effect from Monday, 1st June 1959. It is expected that the transactions in the existing nearby settlements—that is, 22nd June for gold and 23rd June for silver—will be squared up at the closing rates for ready deliveries as on Saturday the 30th inst., with corresponding adjustments for the July settlements. This expectation has imparted considerable strength to the market, since the spot rates for the two metals are at a substantial premium over those for the June settlements, to the extent of Rs. 3-12 in the case of gold and Rs. 4 in respect of silver.

The yellow metal ruled firm throughout the week, while silver was distinctly subdued in the first two sessions, but picked up strength thereafter. The persistent firmness of gold was due to sustained demand from spot houses and small arrivals. Silver suffered a setback on Thursday and Friday, owing to fears of Tibetan coin imports and renewed offerings by Calcutta and Delhi operators. The subsequent sessions, however, witnessed a marked recovery induced by enlarged offtake and spurt in gold. Not only were the earlier losses completely made up but today's closing rates were higher than those at the end of last week.

May settlement in gold went off the board at Rs. 121-12 on the 23rd inst., as against Rs. 120-4 on Wednesday last and Rs. 118-2 at which business in this delivery commenced on 18th March. June settlement rallied in the course of the week from Rs. 117-10 to Rs. 120 today, before finishing at Rs. 119-7. July settlement advanced from Rs. 116-15 to Rs. 118-1 today, after being higher at Rs. 118-5. The backwardation rate (*budli* in favour of the bulls) for June settlement widened from As. 11 last week-end to Re. 1-2 yesterday. Since the rate was more than a rupee, the bulls in this settlement were required to pay a higher margin of Rs. 25 per tola, as against Rs. 10 previously. Notwithstanding the enhanced margin, the backwardation rate widened further today and stood at Re. 1-6.

Ready gold met with good buying support and spurted over the week by Rs. 2-7 to Rs. 123-3; at one time today, it was higher at Rs. 123-12. The daily average arrivals of gold were 2,600 tolas, while the offtake was 3,400 tolas per day. The floating stocks of gold are reported to be around 15,000 tolas.

In the silver section, May settlement went off the board at Rs. 193-12-6 on the 25th inst. This rate compares with the last week's closing quotation of Rs. 195-11 and the starting rate of Rs. 198-14 when business in the settlement commenced on 21st March. June settlement opened the week at Rs. 191-5, as against Rs. 191-11, and, after declining to Rs. 189-13 on Friday, recovered subsequently to touch Rs. 192-5 today, before closing at Rs. 191-12. July settlement stood at Rs. 190-4, as against Rs. 190-8; at one time on Friday, it saw a low of Rs. 189-1. The backwardation rate for June settlement widened from As. 12 on Friday to Re. 1 on Tuesday, obliging the mills to pay a margin of Rs. 1,000 per bar. The backwardation rate today was wider still at Re. 1-8.

Ready silver declined from Rs. 195-3 to Rs. 192-9 on the 22nd inst., but recovered subsequently and touched a high of Rs. 196-5 today. Towards the close, it was a shade easy at Rs. 195-12. The daily average arrivals and offtake of silver were 14 bars and 13 bars, respectively. The floating stocks of silver are estimated at 400 bars.

Ready silver in the London bullion market was unchanged at 79¼d. per ounce, while forward silver eased from 78¾d. to 78¾d. Silver in New York was unaltered this week too at 91.375 cents per ounce. Ready gold in London firmed up from 249s. 6¾d. to 249s. 9d. early in the week, but moved down to 249s. 7¾d. later, due to weakness of the pound sterling *vis-a-vis* the dollar. The latest available dollar rate for gold in London is $35.12½.

The following comparative table shows at a glance the trend of the market during the week under review:

	27-5-59	Highest	Lowest	20-5-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

JARILLA MAY MATURES

(From Our Own Correspondent)

BOMBAY, *27th May*

A notable development of the week was the expiry on Monday of the Jarilla May contract at Rs. 702. The contract, which commenced its career on 5th February at Rs. 676.50, after declining to the lowest level of Rs. 651 on 26th February improved to touch a high of Rs. 706 on the 22nd inst. prior to its expiry. Total tenders against the contract aggregated 4,750 bales comprising 4,350 bales Laxmi A, 300 bales Cambodia, 50 bales Laxmi B and 50 bales Jaydhar A.

With the exit of the May contract trading interest was concentrated on the other running contract, namely, I.C.C. Jarilla August which, however failed to improve. On the contrary, it staged a decline. The announcement of an import quota for 240,000 bales of cotton seemed to have induced a feeling among the operators that mills, which were forced to rely increasingly on superior Indian cotton for their raw materials requirements, would now be in a position to replenish their stocks by imports and that the pressure of demand for indigenous growths might ease. This consideration, coupled with lower advices from the spot market, induced a slightly downward trend. There was, however, a recovery on Monday, thanks to higher upcountry advices, encouraging news from the cloth market and the firmness in seeds. The trend gathered momentum in kerb trading yesterday, the market having been officially closed. A fully steady trend was witnessed today.

I.C.C. Moglai Jarilla May commenced the week at Rs. 699, as against the previous day's closing of Rs. 698.50 and, after rising to Rs. 706 on Saturday, declined to finish at Rs. 702 on Monday.

I.C.C. Moglai Jarilla August opened the week lower at Rs. 707, against Rs. 709 and receded to Rs. 702 on Saturday. It recovered to Rs. 704.25 on Monday and further to Rs. 707 yesterday. Commencing today's session at Rs. 707.25 the contract improved to Rs. 708.25 before closing at Rs. 707.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

I.C.C. Moglai Jarilla	27-5-59	*High*	*Low*	20-5-59
May 1959	*702	706	699	698.50
August 1959 ...	707.25	708.50	702	709

*On 25th May 1959.

In the spot section, there was a slowing down of mill activity in indigenous cotton as attention was focussed on foreign growth. Popular styles were in moderate demand. Stockholders were, however, inclined to hold on in anticipation of a renewal of mill buying towards the end of the season. Prices did not record any marked decline.

Marketing of cotton is almost over in the Broach-Surat regions. It is expected to come to a close in a fortnight in Gujerat and Saurashtra. The season in the Southern region will be over by about the middle of next month.

Export demand was brisk. Most exportable varieties met with enquiries. Bengal *Deshi* was well favoured and its quotation improved. Kala and Wagad varieties also evoked interest.

Foreign cotton was the centre of attraction. Following the announcement of the quota, mills were keen buyers of permissible varieties. Sizable business was put through in East African cotton. 2,000 bales of Busoga were purchased by a prominent mill group at Rs. 1,285 per candy c.i.f. for June-July shipment.

The shipping period for the import of 140,000 bales of cotton of stapling 1-1/16" and above but below 1-3/16", permission for which was given in December last, has been extended from the end of May to 30th June 1959.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 735; Berar Jarilla 725; Khandesh 880; Laxmi 1,035.

The future section of the Karachi cotton market continued to remain closed. Listless conditions prevailed in the spot market. Export interest was low, while mill activity was confined mostly to covering immediate requirements.

Cotton futures in Alexandria receded during the week. The export demand, which followed in the wake of the recent raising of the discount rate, slackened. New crop progress report was encouraging. The market was lacking in support. Values tended to look down. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing:

Karnak: 74.38 (74.10); July 72.95 (74.05).
Ashmouni: June 68.28 (69.20); August 67.10 (68.00).

Cotton futures values in Liverpool recorded handsome gains during the week. Trading was active on improved trade buying in distant months and firm mill support to near months. Sudan contracts ruled quiet and values were unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract:—May-June 23; July-August 22.81. *Sudan*:—May-June, July-August and September-October 26.75.

New York cotton futures market suffered a setback during the week, thanks to fairly large Commission House liquidation and selling by New Orleans interest. The main influencing factor was the growing concern in the Congress over the high cost of the price support and loan programmes. The report that the Senate had approved of a ceiling on price support for farm product aggravated selling. The majority of traders were inclined to

discount the efforts being made in Washington to put through legislation designed to quicken the movement of surplus agricultural commodities into export channels.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	26-5-59	19-5-59	12-5-59
Spot	36.25	36.25	36.25
July	34.67	34.70	35.09
October	32.58	32.78	32.87
December	32.55	32.71	32.77

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 27*th May*

The yarn market presented an easy trend during the fortnight under review. Art silk yarns encountered selling on fears of heavy arrivals of yarn imported under the export promotion scheme. The fears followed the Central Government's announcement regarding the constitution of a committee to scrutinise pending applications for import licences for yarn under the scheme which was suspended on 6th March last. The statement of the Finance Minister at Surat this week that he was engaged at present in finding a solution to counter certain devices adopted by some art silk manufacturers to escape payment of taxation also acted as a damper. In sympathy with art silk yarns and owing to discouraging reports from consuming centres such as Surat, Punjab and West Bengal, staple fibre yarns also came in for selling. Cotton yarns, however, were generally well supported, thanks to enquiries from hosiery goods manufacturers. The local mills were reported to have sold fine and superfine counts for forward delivery up to September-October 1959.

The Government of India, as already stated, has set up a committee to scrutinise pending applications for import licences for art silk yarn under the export promotion scheme. Under the scheme, which was suspended on 6th March 1959, licences for the import of art silk yarn were being issued to exporters of Indian art silk fabrics, *saris*, garments, hosiery and other art silk manufactures. The Committee, now appointed, will scrutinise applications which were submitted to the port licensing authorities up to 6th March and which were not finally disposed of. Applications in respect of which a partial relief was given for want of ceiling or for production of further documents by the applicants or for the verification of values, etc., will also be treated as pending applications. The Government has also decided that exporters who had completed all the formalities connected with the export of the goods and had also earned the foreign exchange before 6th March 1959, and were otherwise eligible to apply for import licences under the scheme before its suspension may submit their applications for import licences to the port licensing authorities concerned before the 31st inst. Any applications for import licences already submitted by exporters fulfilling the above conditions to the port licensing authorities after 6th March 1959, will also be considered by the Committee.

In the art silk yarn section, Cupressa Bamberg yarn (60 x 1) encountered selling and fell from Rs. 1,471 to Rs. 1,448 per case of 200 lbs. Spot yarn lost 3 nP to Rs. 7.19 per lb. 150 Japan dropped 7 nP to Rs. 4.68. 120 Japan receded by 5 nP to Rs. 4.70. 150 Italy declined by 6 nP to Rs. 4.62 and 120 Italy by 3 nP to Rs. 4.97. Among indigenous yarns, National Rayons 120 bright cones 1st grade retreated by 12 nP to Rs. 4.50. 150 bright cones 1st grade was quiet at Rs. 4.28.

Staple fibre yarn (40 x 2) June delivery moved down from Rs. 608 to Rs. 598. August position was dull at Rs. 605 today. Spot (40 x 2) Centurys fell by 16 nP to Rs. 2.97. Citys decreased by 12 nP to Rs. 3. Kohinoors shed 6 nP to Rs. 3.22. Among foreign yarns (80 x 2), Paramounts suffered a loss of 19 nP, today's closing rate being Rs. 7. Fujis were dull at Rs. 7.16.

Among cotton yarns, ten counts Podars advanced by 6 nP to Rs. 12.25. Moderns were firm at Rs. 13.25. Twenty counts Moderns picked up 25 nP to Rs. 16.50. Among 40s, Minaxis strengthened by 12 nP to Rs. 25.37. Moderns were fully maintained at Rs. 26. Sixty counts Raghuvamshis hardened by 50 nP to Rs. 57. Among 80s, Mahendras rose by 50 nP to Rs. 71.50. Finlays were firm at Rs. 81. Citys, however, were lower at Rs. 65 today, as against Rs. 66.50 a fortnight before.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a fortnight before:

	27-5-59	13-5-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg		
June (per case of 200 lbs.)	1,448	1,471
60/1 Cupressa Bamberg spot (per lb.)	7.19	7.22
120 Japan (per lb.)	4.70	4.75
150 Japan (per lb.)	4.68	4.75
120 Italy (per lb.)	4.97	5.00
150 Italy (per lb.)	4.62	4.68
Staple fibre yarn—		
40 x 2 June (per case of 200 lbs.)	598.00	608.00
40 x 2 Century (per lb.)	2.97	3.13
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.25	12.19
20s Modern	16.50	16.25
40s Minaxi	25.37	25.25
60s Raghuvanshi	57.00	56.50
80s Finlay	81.00	81.00

CASTOR AND GROUNDNUT EASE

(From Our Own Correspondent)

BOMBAY, 27*th May*

The oilseeds market ruled easy during the week under review. The major oilseeds suffered a serious setback on heavy bull liquidation and bear selling. An improvement in the supply position of groundnuts brought down their values. The castorseed section, too, gave way, owing to continued lack of response from the U.S. to Indian offers of castor oil. Linseed, however, was quietly steady. Similarly, cottonseed also looked up slightly.

The groundnut section encountered heavy selling pressure, particularly on account of the large arrivals of supplies which had remained hoarded in Saurashtra for some time past. This tended to ease the acute shortage felt in the groundnut section for weeks together. The possibility of a precipitous fall in their values is, however, ruled out; for there is still good buying support from *vanaspati* manufacturers and crushers. Their stocks are said to be fast getting exhausted. The larger arrivals had the immediate effect of bringing down the price. Thus, groundnut August 1959 contracts, which stood at Rs. 202.50 last Wednesday, reacted subsequently to close today at Rs. 198.00, after witnessing minor fluctuations. Bold ready lost 50 nP over the week to close at Rs. 41.50. Oil ex-mill fell from Rs. 22.00 to Rs. 21.87; but it recovered at the end of the week to touch Rs. 22.

The castorseed section, as already said, reacted. The absence of any revival in the U.S. demand for castor oil acted as a damper. Export advices were far and few between. Shippers have turned out to be cautious buyers. Large arrivals from all the principal producing centres, namely, Gujerat, Hyderabad and Bihar, further aggravated the decline. Castorseed May and September contracts, which wound up last week at Rs. 168.12 and Rs. 172.37, respectively, reacted on Saturday to Rs. 163.37 and Rs. 167.62. These contracts later recouped to close today at Rs. 165.50 and Rs. 169.75. Ready Madras dropped 37 nP when it finished today at Rs. 32.75. Oil B.S.S. was lower by 6 nP at Rs. 17.56.

Linseed, in contrast, managed to hold its ground. The hope that Australia would enter the Indian market for linseed oil shortly led to a notable improvement in prices. Shippers were covering in oil against previous commitments and in anticipation of export business. Linseed September, which had closed last week at Rs. 34.87, fluctuated between Rs. 33.62 and Rs. 34.62, and ended today on a subdued note at Rs. 34.44. Bold ready advanced by 25 nP to Rs. 33.50. Linseed oil, however, receded by 25 nP to Rs. 16.25.

Cottonseed also improved on speculative support. September contract rose from Rs. 137 at Rs. 137.25 at close today, after moving within a narrow range during the week under review.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	27-5-1959	13-5-1959	20-5-1959
Groundnut	Rs.	Rs.	Rs.
May 1959	—	200.50	204.25
August 1959	198.00	202.50	206.25
Bold ready	41.50	42.00	42.12
Coromandel ready	41.75	42.25	42.62
Khandesh quality	41.75	42.25	42.62
Oil ex-mill ready*	22.00	22.00	22.25
Railway receipts*	21.75	21.87	22.00
Castorseed			
May 1959	165.50	168.12	172.75
September 1959	169.75	172.37	176.00
Ready Madras	32.75	33.12	34.12
Ready Kanpur	31.37	31.69	33.12
Oil B.S.S.†	17.56	17.62	18.31
Oil commercial†	16.75	16.75	18.31
Linseed			
May 1959	34.25	34.19	34.81
September 1959	34.44	34.87	35.50
Bold ready	33.50	33.75	34.25
Oil ready†	16.25	16.50	16.87
Cotton seed			
May 1959	137.50	—	138.25
September 1959	137.25	137.00	139.25
Niger seed	32.25	31.25	13.50
Kardi seed	24.75	24.00	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR BEARISH

(From Our Own Correspondents)

BOMBAY, 27*th May*

The sugar market ruled distinctly bearish during the week under review, with a sharp drop in values. Selling was quite pronounced, thanks to the stern warning against any unwarranted rise in prices given by the Union Food and Agriculture Minister. The issue of Sugar Dealers Licensing Orders by State Governments, the large release of 150,000 tons, and the fall of Rs. 5 per bag in ex-mill quotations for Bombay-Deccan sugar also imparted weakness to the market. Arrivals of sugar by rail were, of course, smaller, being 10,620 bales, as against 17,810 bags, but this had no effect on the market.

Small grain sugar slumped by Rs. 5.50 to Rs. 114.50-115.50 per bag. Medium grain fell by Rs. 5 to Rs. 116-118. Large grain receded from Rs. 124-125 to Rs. 119-127.

• • • •

HAPUR, 25*th May*

Steady to firm conditions continued to prevail in the sugar market during the week under review, due to paucity of stocks left out of the release for free sale by the Government. Last week-end, the Government released 190,000 tons for sale which was appreciably higher than the quantity released in April. But latest release sugar is not yet available in the market. The Government of India is, however, reported to be taking important steps, besides the licensing of wholesale sugar dealers in various States, to curb the continuing rise in sugar prices. Of these, the most important is the imposition of control on the wholesale and even retail prices of sugar. Further, the Government is likely to announce that there will be no export of sugar this year in order to have sufficient supplies for the country's requirements.

Sugar production in the country by end of April 1959 was 1.87 million tons, as against 1.91 million tons in the corresponding period of last season and the total despatches from factories during the first six months of the season 1958-59 were 1.05 million tons, as against 992,000 tons in the corresponding period of last year and closing stocks on 30th April 1959 was 1.16 million tons, as against 1.35 million tons on the same date of last season.

Mills having exhausted their last released quota, mill delivery prices were not quoted in the Muzaffarnagar market. The undertone, however, continued to be firm as a result of good demand from consuming areas. Unofficial quotations of sugar were at a premium of Rs. 4.25 to Rs. 4.50 per maund over the controlled prices. Preponderance of buyers accounted for firm conditions in sugar prices in Kanpur market during the past week and, while spot prices moved between Rs. 110 and Rs. 112 per bag, *ex-mill* delivery section was devoid of notable activity. Reactions to the latest release for free sale are not yet available.

Khandsari prices continued steady to firm during the week, in sympathy with crystal prices, coupled with brisk demand for summer and marriage season. Production of *khandsari* on galawayat account is yet to begin and prevailing prices are: superior quality Rs. 37 to Rs. 40, inferior quality Rs. 35 to Rs. 37 per maund.

Gur prices continued quietly steady during the week and arrivals out of stocks retained by producers were at an average of 300 to 400 maunds daily and outside demand for dry quality was fairly heavy. *Kotha* dry-wet stocks are also running down and is now put at 79,000 maunds, the corresponding figure last year being 135,000 maunds and 87,500 maunds in 1957. Total arrivals of *gur* during the season were about 650,000 maunds, as against 395,000 maunds in 1958 and 467,000 maunds in 1957. Condition of the standing cane crop for next season is reported to be fairly good as no pests were reported. Prevailing prices of *gur* dry now are: *Pansera* Rs. 21.50 to Rs. 22.50, as against Rs. 16.50 on this date last year and Rs. 12 per maund on this date in 1957.

Gur chaku prices also ruled steady in the Muzaffarnagar market during the past week, due to good demand from Gujerat and Madhya Pradesh. Arrivals averaged about 2,000 maunds daily. The latest prevailing prices are: *pansera* Rs. 22 to Rs. 22.50, *shakker dara* Rs. 23 to Rs. 24 per maund.

Trading in *gur* futures has not yet been sanctioned here or in any other market in the country.

HIDES ARRIVALS SMALL

(From Our Own Correspondent)

BOMBAY, 25*th May*

Arrivals of E.I. tanned cow hides are on usual scale, while those of cow calf and buff calf are small. Shippers are not active in the local market, because stockists are quoting fantastic prices. As U.K. inquiries have been patchy, it is expected that the stockists will revise their selling limits to more reasonable levels. Importers in U.K. are interested in top marks cow hides at full prices, but are quoting 2d. less for other standards. There has been no fresh buying at abnormal prices for shipments to East European ports; and U.K. importers do not expect prices to return to the levels ruling in March 1959. The market may be said to be steady all-round, and importers are likely to adjust themselves to the new conditions.

In the tanned skins section, there are more inquiries for tanned goat skins 8/9 lbs., some demand for 5½/6 lbs. and poor call for heavier weights. Semi-prime sheep skins are firm, but middle class weak. Arrivals of common sorts are negligible. The raw markets rule steady, due to the all-round buying of E.I. tanners.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 22*nd May*

Just over 700,000 pounds of tea were offered in sale No. 19 held on the 19th inst. The offerings showed a further seasonal decline in quality. The market opened to a good demand, with the exception of high grown brokens which were neglected. There was, however, a fair enquiry for similar fannings at lower rates than last. There was useful enquiry for low medium and medium teas which were fully firm and, in this category, buyers showed particular interest in fannings grades. But good medium brokens were irregularly easier by 10 to 20 nP, although similar fannings did not suffer the same decline. Whole leaf grades, particularly flowery pekoes, were well supported. The quotations were: Low medium Re. 1.80 to 1.90; Medium Rs. 1.95 to 2.15; Good medium Rs. 2.20 to 2.50; Quality Rs 2.30 to 3.04.

Approximately 300,000 pounds were offered in dust sale K held on the 21st inst. There was good demand for all descriptions at slightly lower rates than last. Prices for all types were generally easier by 5 nP, with the exception of best liquoring dusts which were steady. A small selection of C.T.C. dusts met with useful support, but sold at slightly easier rates.

London Market.—There was no sale this week.

Colombo Market: Sale of 18th May 1959.—Strong demand. Dimbula Dickoya brokens lower by 15-20 cents. Following quality mediums irregular. Lowgrowns firm. The *ad valorem* sales tax now passed in Parliament and Senate is likely to become effective from 1st June next. *Sale of 19th May* 1959: Less demand. Blackleaf fannings and dusts lower by 10-15 cents, all other kinds were dearer on active demand, particularly liquoring fannings and dusts which were substantially dearer.

Calcutta Market: Export.—14,200 chests. Darjeeling best met with good but selective demand. The remainer met with only fair demand, with a fair number of withdrawals towards the close. *Internal*: 21,800 chests. Less general demand. Orthodox easier by 2 nP. Medium C.T.Cs irregular and often easier. Few best C.T.C. easier.

Export Quota.—The Government of India has announced an interim release of 55 per cent. of 1959-60 season's quota. The news of this release has not affected the market and the market still remains quiet. However, there is a nominal quotation of sellers at 6 nP, with no buyers.

Special Licence.—The market continues to rule rather quiet and no business has been registered last week. At present, there are sellers at 1 nP, with no buyers.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"At Sale No. 20, held on the 25th inst., 800,000 lbs. were offered. Demand was good but at easier rates. Low medium and medium brokens were easier by 5-10 nP, as also good medium brokens by 10-15 nP. All fannings ruled irregularly easier by 5 nP. High growns evoked poor demand at much reduced rates."

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 25*th May*

Steady conditions continued to prevail in the foodgrains market during the week, as despite Government efforts *rabi* grain arrivals have not at all improved. On the other hand, overall production of foodgrains in U.P. has touched new heights. The product on figures of both *khariff* and *rabi* crops come to about 13.1 million tons, which is an increase of about 2.3 million tons over last year's yield. The U.P. State Government has claimed that wheat arrivals in markets which had come to a standstill after implementation of new wheat levy scheme, are now gradually increasing, but trade circles dispute this claim.

Although the Government purchase price of wheat is fixed at Rs. 13 to Rs. 15 per maund, wheat is hardly available in the market even at Rs. 19 to Rs. 20 per maund. Consumers are finding it difficult to meet their requirements and the Government too is not in a position to purchase wheat here. Pressure of sales of wheat through fair-price shops is increasing. The U.P. State Food Minister has stated that there will be no change in the control price of wheat and levy scheme will be continued throughout the year.

Rice prices recorded modest gains last week in sympathy with the wheat prices. The State Government is opening fair-price shops to sell rice in some east U.P. districts to check the rising trend in prices. The State Government's rice levy scheme is, however, progressing well. So far, about 74,000 tons have already been procured and this figure is expected to cross the 100,000-ton mark next month, as against a target of 150,000 tons for the whole year. Gram and other coarse grain prices were steady during the week, although heavy quantity of gram is reaching here from Punjab side. Barley and *bejhar* supply position continues to be tight in face of good consumers demand, and *jowar* and *guwar* prices were unchanged. Last week-end prices (in rupees per maund) were: rice *basmati sela* 33 to 36, *mainpuri* 22.50 *raimunia* 27, *gadda* 22.50, gram 13.75, barley 13.25, *bejhar* 13, *jowar* 13.50 to 15.25 *bajra* 14 to 16, *guwar* 15.75.

Peas prices continued steady due to good demand from east U.P. and Bihar and with arrivals averaging 1,500 to 2,000 maunds daily, local peas stock is put at 34 *khatties*, as against 185 *khatties* on the corresponding date of last year and 57 *khatties* in 1957. Total arrivals of peas from the beginning of the current season were 88,000 maunds, as against 105,000 maunds in the corresponding period of last year. *Arhar* prices were quiet and arrivals averaged 600 to 700 maunds and local stock is put at 15 *khatties*, as against 131 *khatties* on the corresponding date last year. Prices of other pulses were steady to be quoted on Monday at: peas *dara* Rs. 13.12 to Rs. 13.25, farm Rs. 14 to Rs. 14.75, peas *dal* Rs. 15.12, *arhar* Rs. 18.12 to Rs. 18.25, *arhar dal* Rs. 22.25 to Rs. 23, *urd* Rs. 19.25, *moong* Rs. 20 to Rs. 23, *massoor* Rs. 14 to Rs. 18 per maund.

Industrial production in Yugoslavia in the first quarter of 1959 increased by 10 per cent., as compared with the same period last year. The greatest increase in production was seen in electric equipment industry—by 31 per cent. In the chemical industry the increase was 25 per cent., printing industry 18, timber industry 17, building materials industry 15, electric energy 13, oil production 10, ferrous metallurgy 9, coal production 8, metal industry 11, textile industry 7 and in the leather and footwear industry 6 per cent.

**These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.

R.O.—Redeemable at option. N.B.—Non-Redeemable. P—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months, notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redee-mable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stadns for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SCOPE FOR INDO-AMERICAN ECONOMIC COLLABORATION

U.S. TRADE MISSION'S FINDINGS OPTIMISTIC

INDIA offers a rich field for collaboration between Indian and American enterprise. It is a growing economy spearheaded by the second Five-year Plan with emphasis on industrialisation. Other European and Asiatic competitors are rapidly entering the market, often-times with complete, well-designed plants quoted or delivered at competitive prices and even prices below comparable American offers. Price competition was often cited as a barrier to more sales of U.S. products. India is moving so rapidly that it is imperative for American business to survey the opportunities immediately before the competitors obtain a long-term foothold through supply of their machinery with consequent flow of maintenance parts. There are many opportunities for participation with Indian firms in joint venture or licensing agreements in the manufacture of a variety of products and for the utilisation of certain American engineering skills.

Electric Power

Everywhere in eastern India, there is power rationing and power shortage with a few possible exceptions. To develop industry at any place there must be adequate power at reasonable prices. India needs electric power in excess of the demand for commerce and industry. This requires more long-range planning and development of both hydro and thermal generating stations. Certainly much progress has already been made in this field.

Agriculture

In all the four States agriculture is very important, and offers opportunities for the manufacture of simple agricultural machinery which can be hand-propelled, drawn by draught animals, or powered with small, simple engines. Under present methods of production, India's agriculture is inadequate to supply India's food needs. On all sides there is clear evidence of the need for increasing productivity and income through the use of more modern techniques and implements. Increased use of natural and manufactured fertilisers is vital. India is apparently not ready for mechanised farming as known in the United States, since most of the land is held in small parcels or even in small tenant status. Proper storage and transportation facilities, however, would avoid spoilage and loss of needed farm products. Financing is a problem for the Indian farmer, but the Government is considering ways for overcoming this obstacle. Improvement in agricultural methods provides also the opportunity for American firms to collaborate with Indian firms in the manufacture of the many successful small farm machinery so common to our country. As India's agricultural productivity increases, the standard of living for the 80 per cent. of the people who now depend upon the land will improve—in turn creating a market for consumer durable goods for a population of 380 million people which challenges the foresight of the Indian and overseas producers.

Machine Tool and Die Industry

The production of sheet steel is rapidly expanding and provides an opportunity to design many commodities for production as metal stampings. Metal stampings offer opportunities for low cost mass production, which should be directed towards the farm market. A host of products needed to improve farm operations, such as rakes, picks, hoes, shovels, spades, pitch forks, wheel barrows, steel ploughshares and harrows, storage bins, screening, and metal containers, all are ideal products to be produced by the stamping industry. Furthermore, the stamping industry can be organised on a small unit basis, which is seriously needed for the Indian economy. There is great need for all kinds of industry in India, but those industries manufacturing products to help increase the farm income are needed most of all.

The foreign exchange shortage requires a thorough study whereby the least dollars spent for equipment will cover the largest production area. To enable the small industries to equip and tool-up quickly, it would therefore be wise to spend the "short dollars" in equipping machine tool plants, since their machines can reproduce themselves. It is necessary to organise tool and die shops equipped with engineering and production planning departments to manufacture special tooling, with priority for machine tools, so that these shops can begin to produce the special tooling and dies for small industries. The small industrial plants can easily co-ordinate welding, assembling, and finishing into their operations. Small industries cannot progress without special tooling.

Increasing the farm income of India will rapidly radiate into all segments of the economy. The increased demand for supplies and equipment of all types, utensils, household appliances, and consumer goods, will require more industrial plants, thereby increasing buying power and creating an endless cycle of expansion.

India's economy should attract some energetic, enthusiastic tool engineers from the United States; it offers excellent opportunity for investment in the tool and die industry. The importance of the special tool shops in the expanding economy of the United States indicates the need for this industry in India.

Sub-contracting of individual parts to smaller plants can develop into an excellent supporting service. Most smaller plants can produce parts at lower cost than large plants because of greater flexibility and lower overhead costs. Ultimately, the smaller plants can develop and contract sub-assemblies and component parts, thereby creating an integral operation with the larger plants. The special tool and die shops quite frequently evolve into this type of operation.

Under present Indian import controls, a more rapid increase of productivity in the manufacturing area has been deterred by lack of raw materials, such as tool and alloy steels as well as other types of steel. Vital repair parts for foreign-made equipment that cannot be made by Indian firms for lack of technical know-how are short or unavailable. This has resulted in immobilising valuable production equipment, particularly in coal mining and heavy construction industries.

While most Indian businessmen are aware of the fact that more employment can be created by labour-saving machines or increased production equipment, much needs to be done to correct the impression that the use of machines means reduction of total manpower needs. The Indian Government has made progress in its efforts to develop a greater understanding of the relationship of new machinery and improved techniques to enhanced employment opportunities. The relative immobility of labour in India for various reasons does make the impact of a new labour-displacing machine much greater in an Indian community than in the United States. It is necessary, however, that quantity and quality production at low cost and unit profit be established if the standard of living, the purchasing power of the individual, and the national economy are to be improved and increased.

Technical Skills and Productivity

There is a need for trained skilled mechanics and technical engineers. The training of youth through apprenticeship plant employment should be encouraged and extensively developed through engineering associations, unions, universities, commercial and industrial organisations, and Government agencies.

The Indian worker can be trained to a high degree of skill for industrial production. Considerable progress has already been achieved in this direction through the Indian Institute of Technology at Kharagpur, West Bengal, which is patterned after the Massachusetts Institute of Technology, and lesser schools devoted to technological training. A tremendous pool of labour is available for training and production work to man the new enterprises needed by India. Productivity at present does not compare to U.S. standards, but with proper training methods instituted, productivity can be greatly improved. This was observed by the mission in visits to various plants jointly owned by Indian and foreign owners producing a quality of products equivalent to our best. The basic resource of labour is plentiful in India and needs only guidance and training.

There is a tremendous field for collaboration between American engineering concerns and Indian consulting engineers in furnishing complete plant layouts of machinery, know-how of machine operations, and techniques of various types of manufacturing enterprises, such as foundries, machine shops, screw and bolt production, nail production, steel fabricating plants, tool and die shops, plywood, cardboard, and paper box mills, and fertiliser and chemical plants. Much can be accomplished by American engineering companies and engineering associations working with recognised Indian consulting engineers in the fields of mechanical, electrical, civil, and hydraulic engineering. Possibly this collaboration might best be worked out through the national associations of the various engineering societies in each country.

Consulting Work

There is great need for and lack of sufficient consulting engineering service in India. Good qualified men have been met, but they are not getting contracts nor doing enough consulting work. To help solve this problem and to point out its importance, the mission proposed a series of seminars to be held at suitable colleges or universities where consultants and consulting engineers could get information and inspiration to do a better job. The seminars could be held quarterly for two-week periods with enrollees paying for dormitory room and board and the school or Government arranging for a top-notch faculty. The U.S. Technical Co-operation Mission could probably assist with talent.

The importance of low cost quantity production based on technical knowledge of the machines and products is recognised quite generally by businessmen in the private sector and among technical Government officials. The mission believes that such quantity production cannot be accomplished unless training of skilled manpower in the tool and die field accompanies the development of steel mills, power projects, and irrigation, and general industrial progress.

Opportunities for Joint Ventures

Every American businessman, when considering an Indian proposal or project, must be prepared to appraise thoroughly the specific situation. Real care should be used to avoid automatically letting assumptions and patterns which have been generally followed in their business apply to appraisals made on Indian projects. There is no question but that India can wisely use technical assistance and joint venture arrangements with American firms. There is no doubt that a great many Indian firms can properly handle these relationships. The mission emphasised to Indian business men the necessity for developing all pertinent facts, statistics and market data in presenting their proposals to American business firms in order to insure consideration.

A great many American products should be and can be on the Indian market. A very large part of the 380 million population can be expected to be reached with products that have a useful purpose in India. In addition, India can be the base for manufacturing and supply of other Asian markets. American industry must be aware that these opportunities will not be available to them for ever. European and Asian interests are extremely active in establishing themselves. It is believed that the only reason they have exceeded American activity is because American manufacturers are not yet aware of the potential opportunities for their products in India. American firms should consider seriously well developed proposals presented to them by Indian firms for operations in India.

Personal Guidance

It is not going to be easy to do business in India for a considerable length of time. Materials are in short supply; markets are undeveloped. The ability to make decisions quickly and reasonably accurate needs to be developed. Apathy that results in avoidable delays, deterioration of quality, and loss of confidence must be constantly guarded against. It is necessary to provide personal guidance in actual operations and to train and encourage Indian partners in learning to follow many common practices that make the American economy work.

Although there are many problems in doing business in India at this time, there are ways to do it extensively and properly. Manufacturing in India for the Indian market should be a basic goal. Many good Indian firms with ample Indian capital and management ability are willing to consider joint ventures and collaboration agreement on a basis that they would not otherwise grant except for the dollar exchange problem. Technical assistance, special tooling, product reputation, and the thousand and one management needs in producing and distributing a specific product can often be the American contribution to good joint ventures.

The mission, through its many individual discussions, discovered favourable opportunities for joint ventures for the production of many products including the following:

Air compressors, automobile accessories and parts, bearings, brick-making machinery, chemicals and pharmaceuticals, coal mining machinery, coal-tar dyestuffs, composition board, dairy processing equipment, electrical appliances, electric lighting equipment, electric motors, electrical porcelain goods, electric service meters and switches, gas engines, gears and hoists, hand and power tools, industrial adhesives, industrial paints, machinery and spare parts of various types, manganese, metal and paper containers, mica, molasses, nails, bolts and nuts, paper, paper pulp, pipe fittings, plywood, railway equipment, scientific apparatus, shrimp processing, springs, stainless steel products, and wire products.

Summary

Comparatively, India is a land little known to American business—it has been an independent country for only 12 years. For most Americans, it is almost the other side of the world, and yet here is a country of 380 million people favourably disposed towards the United States, eager to absorb American technology and anxious to enlarge its trade and financial relationships with the U.S. This trade mission has observed in its many discussions and individual consultations with business men that there is a great desire to improve the business structure of the country. Many small firms are eagerly seeking new lines to manufacture. In most cases, these kinds of firms may not be attractive to American business, but there are many medium-sized and well financed organisations which offer real opportunities for collaboration with American business. Our technological progress is recognised, and there is a keen desire for American-type products.

The mission talked with numerous business men concerning export to the U.S. of various basic products such as manganese, mica, jute, tea and other primary food products. All of these commodities are subject to international competition and, therefore, India needs to closely analyse the prices of its export products and also the problem of maintaining consistent quality. Producers in these fields could develop with the Government some sound inspection system upon which acceptable certificates can be issued. The Export Councils offer the means for strengthening India's export drive and the mission encourages these efforts.

American business has a real opportunity to participate with Indian business men in the building of a strong economy which may well be the rallying point for other nations in Asia in the critical battle for improving the standard of living and strengthening the free world countries.

IDEOLOGY STILL DOMINATES PLANNING

REPORTS from Ootacamund on the seminar organised by the Planning Sub-committee of the All-India Congress Committee on the third Plan now on the anvil are lacking in clarity. This is apparently due to the discussions being held *in camera*. From the public speeches of Prime Minister Nehru and such other reports as have appeared in the daily Press, however, it seems to us that the ideological approach to the Plan has changed little. If anything, it has received further reinforcement. It also appears that the Congress Party's thinking on the subject is confused and contradictory. Much precious time is being wasted on issues on which a decision has already been taken, with the result that uncertainty about the future has deepened. An atmosphere of this sort is hardly conducive to the rapid economic growth which everyone desires.

In his inaugural address to the A.-I.C.C. Seminar, Mr. Nehru spoke in general terms. A refreshing feature of this address was his emphasis on practical approach based on existing realities and limitations. He conceded that there was a limit beyond which people could not be forced to sacrifice. He wanted the planners to remember that there should be no setback to production, even temporary setback, as a result of the change-over from the existing system. He made it clear that there could be no approach either to a socialist society or to any other advanced society without first making certain material progress, that they should think in practical terms and not in emotional terms, and that they should come to grips with immediate problems and face them. He deplored the present tendency for always theorising and saying idealistic things. Many other statements of this nature could be picked out from Mr. Nehru's addresses. But their abundance does not necessarily mean that Mr. Nehru himself has become realistic. There are passages in the very same speeches which show that he has not changed a bit. His adverse reactions to the sensible observations made by Rajaji and Mr. M. R. Masani at Bangalore are sufficient proof, if any proof were needed, of this fact. His reiteration of the Nagpur resolution on land ceilings, cooperative joint-farming, and State trading in foodgrains reveals that he does not contemplate any departure from it and that he stands unconvinced by all the arguments against these steps. Another indication of no change in his attitude is his reaffirmation that the public sector is any day superior to the private sector.

A few days ago, it was stated by both Mr. U. N. Dhebar, the erstwhile Congress President, and Mrs. Indira Gandhi, the present President, that the time had come for defining the socialism of the Congress Party. But Mr. Nehru has, once again, stated that he is deliberately not making any precise definition of socialist pattern of society. He said at Ooty: "We must not be too rigid in our outlook. At any rate, we are not; I am not. We are constantly experimenting what to do and what not to do. I consider myself a socialist, but I am not bound down by any dogma. I want the basic characteristics of socialism to fit into conditions in India. I should change any step if it proves harmful and is not fitting with Indian conditions. So, we proceed without any rigidity, without any religious, economic or social dogmas." It is, of course, a good virtue to have an open mind. But flexibility should not mean indecision. Nor should it mean adjustments in policy and practices only in one direction. Unfortunately, Mr. Nehru thinks that one is dynamic only if one moves towards the left. While he is continuously preaching to others to move with the times, he himself does not do so. He does not seem to realise that his economic thinking is out of date and that even Russia is beginning to realise the value of incentive, individual initiative and enterprise. Mr. Adlai Stevenson, who paid a visit to Russia last year, discovered that a Soviet construction chief made about $18,000 a year (Rs. 86,400) and paid taxes amounting to about 6 per cent. of his income.

Mr. Nehru is blindly repeating that co-operation is the only way out. He considers it as the essence of modern life and that, if a person did not understand it, he lived in some other century and not in the middle of the twentieth century. His faith in the co-operative movement as the panacea for all ills is pathetic. He wants to try co-operatives in agriculture after every democratic country has tried and given it up as a useless substitute for individual effort. He talks of success of co-operatives in some States of India such as Madras and Bombay, but forgets that even the limited success of these societies has been at the expense of taxpayers and that too in spheres other than joint-farming. While co-operatives are exempt from taxation, a joint-stock company, which is also a form of co-operative system, is compelled to pay heavy taxes. If co-operatives were to dominate the economic scene, there would be a heavy fall in tax revenue, without any corresponding reduction in expenditure. It is pertinent to recall here that no estimate of the financial implications of the Nagpur resolution has been made at all, as though money is of no consequence.

A special team has been appointed by the A.-I.C.C. Seminar to report on the implications of the socialist pattern of society. Another team has been asked to examine the changes to be made in the institutional pattern, in order to achieve better results under the third Plan. The assumption here is that the existing pattern is not suitable. Such an assumption is untenable, for, if the second Plan got into difficulty and had to be cut, it was because of factors other than the pattern of the society. The planners are, therefore, simply wasting their time in trying to evolve a new pattern. This country has already chosen its basic pattern of life, namely, democracy. There is a limit within which economic life can be remodelled to suit the pace of development, without upsetting this basic pattern. That limit has already been crossed, without any significant rise in the rate of development. If anything, the economic growth has been well below the optimum rate.

The prerequisites for a development plan are capital, trained manpower and plentiful supply of raw materials. Accordingly, what is required now is concentration of effort on finding these prerequisites and not its dispersal in ideological pursuits. It is, of course, necessary to carry the people in implementing the development plans and, as the vast majority of people are have-nots, this is an extremely difficult task indeed. But the powers-that-be are seriously mistaken, if they think that the only way to win the support of the masses is to rouse their jealousy against the haves and try to appease it by imposing redistributory taxes on the haves, by placing a ceiling on incomes, and by introducing restrictions on the number of enterprises that one can establish. In a country like India, the economic potentialities of which have not been fully developed yet, such a policy of abolishing "income inequalities" may help the party in power to remain in power, albeit for some years, but will not bring any sustained tangible benefit to the have-nots, for the amount of wealth available for distribution among them is negligible. On the contrary, this policy may do more harm than good, because it deals a double blow to the real ingredients of economic progress and rising living standards. Explaining this point, the June *Monthly Letter* of the National City Bank of New York observes as follows:

"Sharply progressive taxes penalise the productive and cripple accumulation of capital for risky ventures, while welfare programmes make more remote the tie between a person's income and what he contributes to society. Individual responsibility and the will to work are undermined and people become increasingly dependent on a paternal Government.

"Loss of opportunity takes the zest out of life for those who, in other circumstances, might have built great enterprises and made great gifts. Government meanwhile accumulates more and more dependents, removed from the labour force. The growing tax burdens shift inexorably towards the same masses the socialist State is intended to help. In the end, everyone is poorer than he would have been, if rare and gifted individuals had been stimulated to go ahead and seek out new and better ways to produce and satisfy human needs and wants."

We would like the planners and the politicians in this country to ponder these pertinent observations on the implications of socialism. Mr. Nehru and his colleagues are never tired of telling the people not to look to the Government for everything they want but to help themselves. They blame business men for asking the Government to give them loans at cheap rates of interest and protection against competition. Little do they seem to realise that this advice conflicts with their desire to establish a socialist society, under which the State will buy and sell even such things as foodgrains, sugar, cement, and drugs. It is strange that most of our politicians should think that, if an individual is in business, he is capable of swindling the public, but, once he enters politics or joins the bureaucracy, he becomes an angel.

The Prime Minister has stated many times in the past that it is neither desirable nor feasible to fix a ceiling on incomes. And yet one of the issues that are being seriously discussed at Ootacamund pertains to this very subject. It is said that the sub-committee on

wages, income, price and profit policy has recommended that salaries should not be permitted to exceed Rs. 2,000 per month. Is it not a waste of time, energy and taxpayers' money to reopen closed issues? Is the flexibility of Mr. Nehru's socialism meant to cover such diversions? It is agreed by almost everyone that it will not be possible for India to achieve rapid economic development without the help of foreign capital, as its resources are insufficient. It is also obvious that the bulk of external assistance has to come from the free world and anyone who has closely followed the thinking on this subject in that part of the world will admit that the stress there is more and more on private capital and that even Governmental loans will come in substantial sums only if the receiving countries follow appropriate economic policies that will ensure the vigorous functioning of private enterprise. The discussions at Ootacamund show that our policy-makers are completely oblivious of this requirement. Otherwise, would they put forward such fantastic proposals as a ceiling on salaries and further penalisation of unearned incomes? It may, of course, be that they are under the impression that, in view of India's strategic importance in the present international political situation, the Western countries are bound to come to the help of India, irrespective of the type of economic policies and programmes it follows. If so, they seem to be taking too much for granted.

L.I.C.-MUNDHRA DEAL

AN unsavoury episode has come to an unsatisfactory end. It is a sorry state of affairs that, despite two judicial enquiries, supplemented by a departmental scrutiny, the truth behind the misuse of a little over Rs. 1.25 crore belonging to the Life Insurance Corporation has not been discovered. There are no satisfactory answers yet to two vital questions: Who decided that the shares of the Mundhra concerns held by Mr. Mundhra should be bought? Why was such a decision taken? It is astonishing that no one connected with these transactions maintained any written record to establish the source of authority for these transactions. Why did not such experienced senior civilians like Mr. H. M. Patel keep any notes? He knew very well that he was being asked, accepting for the moment his contention, to carry out a decision, which even a person with the slightest acquaintance of share markets and the affairs of Mr. Mundhra would consider as strange and unsound. As one who had been closely associated with the Government's decision to nationalise life insurance and had laboured hard to bring the L.I.C. into existence, he must have been fully aware that the funds of the L.I.C. were not meant to be used for this purpose. Why then did he not advise his Minister, if the latter had asked him to go ahead with the deal, against such a course? He should have at least taken sufficient precaution to secure his position by getting the directive from the Minister in writing, instead of relying on oral instructions. His explanations on these questions are absolutely unconvincing. It is obvious that he had erred badly and, if the public is still not satisfied with his *bona fides*, he has only to thank himself. Even the Government, it may be noted, has given him only a qualified discharge by conceding that there is some force in the arguments of the only dissenting member of the Union Public Service Commission who came to the unambiguous conclusion that "the charges against Mr. Patel are proved" and that he should be compulsorily retired.

The stand of Mr. T. T. Krishnamachari is also unconvincing. And this has strengthened the position of Mr. Patel to a considerable extent. It is evident from all that has been stated in the enquiries that Mr. Krishnamachari was quite aware of what was being done with the funds of the L.I.C. and that a large sum had been invested in the shares of Mundhra concerns. Mr. Krishnamachari was no stranger to the business world. Both as Commerce and Industry Minister and Finance Minister he was taking active interest in the developments in this sphere and was keeping abreast of them. He knew that the affairs of Mr. Mundhra and his companies were not in a healthy state. He had even known the existence of spurious shares on the market and cautioned Mr. Patel against them. Why did he not prevent the deal from going through? Even if it was too late for him to do so, he should have at least taken Mr. Patel to task for having put through a deal of questionable merit. The fact that he did not do so clearly undermines his plea of innocence. If, therefore, many people are inclined to think that his responsibility is more than constitutional, he too has to blame himself.

Poor Mr. Kamat has been censured by all the enquiry commissions. In his case, no inconvenient questions were involved and those who were asked to judge his conduct had no complicated issues to solve. He himself frankly admitted, even before the Chagla Commission, that he had merely carried out the directives of Mr. Patel. By this, he meant that he did not care to exercise his rights and duties as the Chairman of the Life Insurance Corporation. The faith that he placed in his superior and his chief executive (Mr. L. S. Vaidyanathan) has let him down badly. As for Mr. Vaidyanathan, the less said the better. That he should have allowed the deal with Mr. Mundhra to go through was a betrayal of trust. He is an expert on insurance and knows the trusteeship character of this business. His knowledge of share markets and of the principles to be followed for investing life funds is unquestionable. And yet what did he do? He quietly acquiesced in this dubious transaction and, in putting it through, did not even take the usual precautions to see that everything was in order. He failed to stand by the policyholder. No wonder that neither the Chagla Commission nor the Vivian Bose Board of Enquiry had any difficulty in fixing the charges of negligence and undue haste against him. It remains to be seen what action the Board of the L.I.C. takes against him, having already permitted him to resign and retire.

The Government of India has done all it can in this matter. It did not try to evade its responsibilities. The very fact that it referred the whole question to be examined by two judicial bodies and submitted their findings to the Union Public Service Commission for its recommendations is sufficient to show that it had nothing to hide nor did it want to prevent the truth from coming out. The inference of the Bose Board that there must have been a political *quid pro quo* for supporting Mr. Mundhra does not appeal to commonsense. But both the Bose Board and the Chagla Commission are right when they say that the real truth could not be found out and that those who could have helped them to find it were shirking their responsibility and withholding facts. In the light of this irrefutable conclusion, the Government was very unwise in playing the role of the final arbitrator. Its assertion that the initiative for the purchase of Mundhra shares did not emanate from Mr. T. T. Krishnamachari, which is not supported by either of the judicial enquiries and is definitely contrary to the findings of the majority of the U.P.S.C., is surely neither prudent nor just. It has given no reasons for arriving at this conclusion.

The best thing to do now is to bury the whole episode and let bygones be bygones. No useful purpose will be served by keeping the episode alive. The country will have gained something, if the lessons of this affair are ever borne in mind. Of these lessons, three are important. First, the Ministers should refrain from giving orally policy directives or vital decisions of the nature under discussion to their Secretaries. Nor should their Secretaries receive them except in writing; they should not in any case fail to maintain proper notes. The adoption of this procedure will not in any way impede the work of Administration or lead to a lowering of its efficiency. Secondly, all officers should discharge their duties in the light of their responsibility to the public. If they have reasons to feel that any instructions given by their superiors are not in the interests of the public, they should bring it to the notice of their superiors in appropriate manner, leaving the final decision to their sense of responsibility. Where, of course, they strongly feel that the ultimate decision of their superiors is wrong, they could either go to higher authorities or resign in order to focus public opinion on the issue. If only Mr. L. S. Vaidyanathan had done so in the L.I.C.-Mundhra deal, he would have earned the admiration of the public. And, thirdly, it is undesirable for the Government to nationalise undertakings in the private sector or to take on too many business responsibilities. By doing so, it is needlessly exposing itself to charges of corruption and scandalous allegations which are liable to bring it down in the estimation of the public.

A UNIQUE AWARD

IT is a truism to say that the ends of social justice will not be met if, in disputes between management and workers, industrial tribunals and law courts are swayed more by the niceties of civil law than by considerations of equity and fairness. It is also equally true that, if the scales are heavily weighed in favour of workers, it amounts to virtual denial of justice to employers. There is no exaggeration in saying that labour, especially industrial labour, is a much-pampered section of the community in this country. The Government's paternal attitude towards industrial labour and its undue obsession with safeguarding workers' interests have not always had a healthy influence on industrial relations in this country. The Government's stand in respect of industrial disputes has sometimes given rise to the impression that its policy is conditioned by the assumption that labour is always the oppressed and management the oppressor.

One consequence of this cock-eyed view is that many flagrant violations of industrial law by workers and their unions have been overlooked. The award of the arbitrators in the dispute between Rohtas Industries Ltd. and the Ashoka Cement Ltd. of Dalmianagar and their workmen is a clear indication that labour is not always more sinned against than sinning, and that it too can be guilty. It also clearly establishes the sound principle that violations of law, whoever is responsible for them, should not go unpunished. The award in this case is that about 7,000 workmen of these two companies should pay compensation to the managements concerned for going on an illegal strike in 1957. This is a unique award, in that this is the first time in India that workmen have been asked to pay compensation to the management for committing breach of law. The arbitrators deserve to be complimented, for they have shown a high sense of duty and moral courage and upheld the principle mentioned at the outset.

The facts of the case are: The workers of the aforesaid two companies went on strike on 3rd September 1957, even when their claim for bonus was before the labour tribunal for adjudication. The strike was thus illegal. But the workers persisted and did not call it off until 3rd October 1957, following an agreement between the workers' union and the management. The workers wanted wages and salaries for the strike period, but the management not only refused this demand but claimed compensation for the losses it had suffered. Finally, the union and the management agreed to submit this dispute to arbitration. Mr. J. N. Majumdar and Mr. R. C. Mitter, the arbitrators—both are former High Court Judges and former members of the Labour Appellate Tribunal—held that the workmen were not entitled to wages and salaries for the strike period. On the contrary, they felt that the management was entitled to compensation, assessed at Rs. 6.90 lakhs for Rohtas Industries Ltd. and Rs. 80,000 for Ashoka Cement Ltd., from workers who participated in the strike.

This is a fair award and should be an eye-opener to the militant trade unions in this country which are prone to stampede the workers into strikes at the slightest provocation. It should serve to impress upon them that they cannot go on doing so with impunity.

SHARES IGNORE SHOCKS FROM OOTY

U.S. BANK RATE—COTTON POLICY—PAPER INDUSTRY—LITTLE FREE TRADE AREA

THURSDAY, 5 P.M.

ALTHOUGH the trend of discussions in the A.-I.C.C. Seminar at Ooty is by no means encouraging to investors in the private sector, the share markets have so far shown no signs of undue anxiety. The fall in prices in the initial days of the week has been made good to some extent and the trend at the time of writing is quietly steady. It looks as though the market is in strong hands, the weak bulls having cleared out. The downward trend in cash scrips seems to have been arrested. Some of them have reached levels at which the yields are not unattractive, having regard to their growth potentialities. That investors are prepared to wait for even two or three years is evident from the good response to the capital issues of both the new companies, namely, Indian Rayon and Khandelwal Ferro Alloys. The offers made by them have been oversubscribed. This development is particularly heartening, in that the new issues came on the market at a time when the bullish sentiment had been greatly undermined.

MARKET GOSSIP

Besides the shocks that are being given by the policymakers of the Congress Party, an uncertain factor worrying the share market is whether the Government will give permission to the T.I.S.Co. to raise new capital on the lines proposed by the Board. There are some who feel that, while the Government may not object to the issue of preference shares, it is likely to insist on the ordinary shares being issued at a premium. The doubt is confined only to a minority, as the majority feels that the Company's management would not have convened the shareholders' meeting for passing the necessary resolutions without an informal understanding with the Government on this issue.

The stringency in the money market is steadily yielding place to comfortable conditions, with lenders over. The Central Government's borrowing programme is expected to be implemented next month, probably from 15th July, if not from 1st July.

The early arrival of the monsoon has cold-douched the enthusiasm of bulls in the commodity markets. This is purely a psychological reaction, for the statistical position of commodities will remain unaffected until the new crop comes on the market after five or six months.

* * * *

The expectations of an increase in the U.S. Federal discount rate, referred to in these columns last week, have materialised. The Federal Reserve Board in Washington has authorised five of the Reserve Banks, including New York, to raise their discount rates by a straight ½ per cent. to 3½ per cent., with effect from 20th May. With this rise, the U.S. discount rate has been restored to the peak level set in August 1957 during the boom period and is double the rate which prevailed at this time last year.

An increase in the discount rate came to be regarded as a certainty when the commercial banks stepped up their prime rates charged to leading corporate borrowers from 4 to 4½ per cent. on 18th May. Other interest rates also were raised, thus creating a wide gap between the market rates and the federal rate. The increase also reflects the growing tightness in the U.S. money market. It is taken as an indication of the move towards greater restraint on the growth of money and credit. It may be noted, in this connection, that the Federal Reserve Board does not normally increase the discount rate when Treasury financing operations are in progress. If it has done so this time, it means that the Central banking authority in the U.S. has been viewing with anxiety the growing momentum of inflationary forces generated by large-scale deficit financing resorted to as an anti-recession measure. Financial circles in the U.S. expect that the upward trend in interest rates will continue as the tightness in money grows. This does not necessarily mean that a further rise in Federal discount rate can be expected in the near future. For it is already at the post-war high for the second time within two years.

While the rise in the discount rate is a continuation of the Federal Board's anti-inflationary policy followed since late last summer, when it started stepping up the discount rate from the low of 1½ per cent., it has the incidental advantage of being a deterrent to the persistent drain on U.S. gold stocks. The general rise in short-term rates may not have any effect on the trade position immediately, but it offers an incentive to overseas Central banks to retain their balances in dollars rather than convert them into gold. The policy of high interest rates in the U.S. has raised cost of overseas borrowings in the U.S. capital market. The World Bank, for instance, has already stepped up its lending rate to as high as 6 per cent. per annum for 15 to 25 years.

One immediate effect of the hardening of interest rates in the U.S. is the fall in the value of sterling in terms of the dollar. With the short-term interest rates in New York looking more attractive, there has been a tendency for liquid funds to move across the Atlantic from Britain and Continental countries. But this is not the only factor which has brought about a pressure on sterling. There are other seasonal causes. Basically, the position of sterling is strong and Britain has already made further liberalisation of imports from the U.S. and Canada. Both the balance of trade and the terms of trade continue to be in favour of Britain.

* * * *

Some details of the discussions at the eighth plenary meeting of the International Cotton Advisory Committee held at Washington from 14th to 22nd May have just reached us. They show that, as was generally expected, the U.S. cotton export policy came in for sharp criticism at the Conference. Delegates representing cotton manufacturing and exporting countries voiced serious concern over the impact of the flexible export subsidy programme of the U.S., sought assurances from that country that nothing would be done which would undermine the stability of cotton prices, and appealed to the U.S. to define, in quantitative terms, what the Department of Agriculture precisely meant by the so-called "fair and historical" share of American cotton in world markets. Spokesmen of the host country, on their part, reassured the visitors that the U.S. would take the utmost care to see that world prices were not disrupted and promised that it would consult other countries regarding its price policy and afford opportunity for exchange of views. Nevertheless, the delegates seem to have left the Conference room with the same apprehensions and doubts which they had when they entered it, although the reassurances by the U.S. spokesmen ought to have made them feel less intensely about them. This inference is justified from the final resolution adopted at the meeting which read: "In the opinion of most delegates, the uncertainty arising from existing Government export programmes seriously affects the stability of international cotton markets and tends to reduce cotton trade and consumption."

Presenting the views of the International Federation of Cotton and Allied Textile Industries, Manchester, which represents the interests of raw cotton consumers comprising two-thirds of the world's total cotton spindles and looms and consuming more than 80 per cent. of all the raw cotton that moves in international trade, Dr. W. T. Kroese, its President, stated that the desire of the cotton textile industry to achieve conditions of more stable and sustained prosperity depended to a large extent for its success on the stability of raw cotton supplies and prices. He pointed out that the U.S. had a great responsibility in ensuring stability in prices, because, as the leader of the world cotton economy, every regulation adopted by it had a particularly strong international impact. Dr. Kroese drew pointed attention to what he called the "psychological effect of a small, seemingly unimportant sentence" in the recent announcement of the U.S. Government in which it was said that the rate of the export subsidy might be adjusted from time to time during the coming year. It was precisely this factor of the possibility of a periodical review of the subsidy, he emphasised, which created uncertainty within the industry and trade. The reassurances given by the U.S. that no drastic action would be taken, he said, did not remove the uncertainty. Nor did they contribute to stability. He, therefore, felt that an early announcement of the amount of subsidy to be valid for a definite period, that is, the coming cotton year, would help to restore confidence.

Dr. Kroese disputed the theory of "fair and historical share" of American cotton in the world market. According to him, in view of the structural changes that had come over the textile industries of the world, this U.S. concept of the fair and historical share in the world market had to be given clear consideration.

Another aspect of the problem to which the President of the Federation referred was the effect of the two-price system. Under this, he pointed out, spinners could not cover their risks in the normal way. He urged the U.S. to take further steps to speed up the programme of arriving at a one-price system and to facilitate the proper working of futures markets, so as to enable spinners to cover their risks.

In addition to relative price stability, the actual level of cotton prices, Dr. Kroese pointed out, was also a determining factor for any increase in cotton consumption, especially in the face of competition from man-made fibres. The ultimate aim of all cotton growers, shippers, spinners and manufacturers alike, he emphasised, consisted of an increase in consumption. If this could be achieved—maintaining cotton competitive in price and quality and stimulating consumption through joint efforts of consumers and producers were essential for this purpose—many of the problems of cotton would vanish.

It must have, indeed, been a hard job for Mr. Marvin McClain, the U.S. Assistant Secretary for Agriculture, to vindicate his country's policies. But his defence, reinforced as it was by the experience of the past three years, was as effective as could possibly be. He observed that there was nothing new in the U.S. announcement that the export subsidy was subject to change. His country's policies were always subject to changes, if developing circumstances indicated a need for revision. He stressed that such changes as the U.S. made during the past three years had actually resulted in increasing its export price. Experience during this period clearly indicated, according to him, the continuing desire of the U.S. Government to implement its policies in such a manner as to avoid injury to the traditional competitive position of friendly countries and disruption of world markets. The U.S., he added, shared the interest of other countries in maintaining prices at reasonable levels.

Referring to the demand for a definition, in terms of bales, of the "fair and historical share," Mr. McClain said:

"The term 'fair historical share' is naturally a general and flexible concept. We believe that it is a variable dependent, to a large extent, upon total world trade. It would be unrealistic to attempt to fix an absolute bale figure as the fair historical share of the world market for United States cotton. In 1956-57, we exported 7.6 million bales, without causing any decline in prices, while other exporting countries were able to sell all of their export availabilities. The United States exported 5.7 million bales in 1957-58 without seriously interfering with the exports of other producing countries. On the other hand, our exports during the current season will probably be less than three million bales; and, if we attempted to force five million bales into the market this season, world prices would probably be seriously disrupted. It is, therefore, obvious that periods of good demand should be permitted to offset periods of weak demand.

"For these reasons, it does not appear feasible for the United States to announce a firm bale figure to be exported from the United States in any given period. If that figure could be exceeded without interfering with the normal exports of other countries, it would be unwise for the United States to embargo exports when they reached such a figure. On the other hand, in a period when the export of such a quantity would cause serious disruption to world prices, the United States certainly would not attempt to force the announced quantity into the export market."

The problems of national policies having international impact are easy to comprehend but difficult to solve. It is obvious from the aforesaid observations of Mr. McClain that the U.S. has shown commendable awareness of the genuine difficulties of other countries and has endeavoured to adjust its policies to avoid hardships to them. Its past actions and the assurances given for the future leave little room for doubt that it will continue to do so. On the whole, the latest meeting of the International Cotton Advisory Committee has enabled an exchange of views and a better appreciation of each other's point of view. This is no mean achievement.

* * * *

The paper industry is making steady progress and recently one more unit was added to the list of manufacturers. The production of paper and paper boards set up a fresh record of 253,000 tons in 1958, having risen from 210,000 tons in 1957 and 193,404 tons in 1956. Its present installed capacity is 268,800 tons per annum, whereas the target of capacity to be achieved by the end of the second Five-year Plan is 450,000 tons and that of production is 350,000 tons. In view of the foreign exchange difficulties, it is generally expected that the capacity target may not be achieved. On the basis of the schemes now in progress, the industry's capacity is likely to reach 410,000 tons. Even if this is achieved, it should be possible for the industry to reach the production target of 350,000 tons by the end of 1960-61. But this is subject to one condition, namely, that the industry gets a fair price for its products, a price that would allow a fair return to investors and provide adequate internal resources for rehabilitation of the existing plant and machinery and for future expansion.

The Tariff Commission is at present engaged in enquiring into this question. It is to be hoped that the Commission will pay some thought to the points made by Mr. I. A. Macpherson, Chairman of the Indian Paper Makers' Association, in his address to the annual meeting of the Association, *vide* page 963. Mr. Macpherson has asked for a "proper extra" in the price to be fixed by the Commission for lightweight papers to provide "adequate coverage and incentive" for production of this variety, the demand for which is mounting up, but which most of the units are not equipped to manufacture. The manufacture of lightweight papers is said to result in a heavy loss to the industry.

He is of the view that price fixation should not apply to special qualities of paper, the production of which forms a small percentage of the total output. His reasons for seeking exemption of the specialities are not unconvincing. There is a genuine demand for these special varieties and mills have to experiment continuously and produce them to satisfy this demand. Unlike normal varieties of paper, there cannot be any standardised specifications for special qualities, as the particular characteristics to be imparted to the paper will vary according to the customer's requirements and the use to which they are put. Mr. Macpherson, therefore, avers that it will not be wise to bracket these with normal varieties of writing and printing papers for the purpose of price fixation.

The revision of railway freight structure in October last has proved to be a mixed blessing to the paper industry. For, as Mr. Macpherson points out, while the wagon-load scales have been somewhat favourable for finished papers, the increase in freight on raw materials used by paper mills will add to their cost structure. Another burden on the industry will be the transit tax on bamboo from Orissa, which supplies the bulk of the large mills' requirements of bamboo. The Select Committee has recommended a ceiling rate of Rs. 2 per 100 bamboos. The industry has made representations to the Government of Orissa for a substantial reduction in, if not the abolition of, the tax.

While on the subject of bamboo, which is the only raw material which can sustain the existing units and their expansion until other alternative

CAUTIOUS TRADING IN SHARE MARKET

UNDERTONE SUBDUED

(From Our Own Correspondents)

BOMBAY, *4th June*

WITH all eyes turned towards Arronmore Palace at Ootacamund, the venue of the A.-I.C.C. Seminar on planning, the share market was in a hesitant mood during the week under review. The final outcome of the deliberations (which will come to an end tomorrow) after the Congress Planning Body had considered the reports of its various sub-committees, is being keenly awaited. The sub-committees are reported to have made several suggestions for raising the resources for the third Plan, namely, imposition of additional taxes to the tune of Rs. 1,500 to 2,000 crores, extension of State trading to selected commodities, including certain items of the export and import trade, enhancement of land revenue, levy of a surcharge on commercial crops, fixation of a ceiling on salaries at a maximum of Rs. 2,000 per month, with overall income range not exceeding the ratio 1 : 20, taxation of unearned incomes and speculative profits, operation of public enterprise on a profit basis and diversion of these profits to further development, etc. Meanwhile, the market chose to toe a cautious line. Price fluctuations were confined to a narrow range, but the underlying trend was downward. Over the week, equities suffered modest losses over a wide front.

Sectionwise, Tata Steel Ordinaries drifted down from Rs. 190.25 to a low of Rs. 186.25 on Tuesday this week. In the last two days, there was a partial recovery on short-covering to Rs. 188.50, despite reports of a further fall in the Company's output during May. The production of pig iron has dropped from 130,600 tons in April to 128,800 tons and that of steel ingots from 124,200 tons to 116,400 tons. The saleable steel output, which had fallen from 100,700 tons in March to 93,300 tons in the following month, has declined further to 91,400 tons last month. Indian Irons reacted from Rs. 24.24 to Rs. 23.76, but recovered to touch today Rs. 24.28. The closing was, however, a shade lower at Rs. 24.12. The fear of this scrip being deleted from the Stock Exchange list has gone, following the Company's acceptance of the new listing regulations. The Company's production performance during May is encouraging. The fall of 19,556 tons in the output of saleable steel noted in April has been made good to some extent by the rise of 9,319 tons (to 49,470 tons) in May. Pig iron output has gone up from 86,826 tons to 94,105 tons, while steel ingots show a fall from 61,182 tons to 57,483 tons.

Despite the recent announcement of export incentives, textiles gave way. Bombay Dyeings came to the limelight on the opening day of the current settlement, that is, Monday, with a jump from Rs. 63.60 touched on Friday last to Rs. 65. Subsequently, however, the shares lost ground rapidly to Rs. 63.50 today and closed at Rs. 64. Centurys moved down from Rs. 544 to Rs. 529.50, but this loss was largely made good when they finished today at Rs. 540. Kohinoors moved erratically between Rs. 280.50 and Rs. 271.50 before closing at Rs. 277, the loss over the week being Rs. 2.25. Central Indias lost Rs. 2 to Rs. 98, Gokaks Re. 1 to Rs. 148, Morarjees Rs. 2.50 to Rs. 255 and Shree Niwas Cottons Rs. 4 to Rs. 171. Standards shed no less than Rs. 13 to Rs. 490 and Swans Rs. 30 to Rs. 380, while Svadeshis provided an exception with a rise of Rs. 2.25 to Rs. 229.50.

Bank shares presented a quiet front. Barodas were a fraction lower at Rs. 102. Centrals lost 70 nP to Rs. 52.30 and their new shares 20 nP to Rs. 55.80. Bank of Indias were marked down by Re. 1.25 to Rs. 131 and their new shares by Rs. 2.25 to Rs. 131.50. Punjab Nationals were done 24 nP lower at Rs. 22.24 and United Commercials changed hands Re. 1 lower at Rs. 61.

Trading in the insurance section was highlighted by a spurt in New Indias, the old shares gaining Rs. 4.60 to Rs. 56 and the new shares Rs. 5 to Rs. 57. Indian Mercantiles were done at the self-same rate of Rs. 42.50. All-India Generals, however, disclosed a loss of 40 nP at Rs. 2.

Electricity shares were generally steady and business in select counters was done at higher rates. Ahmedabad Electrics were picked up 22 nP higher at Rs. 92 and Bombay Suburbans 50 nP better at Rs. 103. Tata Hydros gained a fraction to Rs. 117.75. Tata Powers were, however, a shade lower at Rs. 1,168.75 and Andhra Valleys declined by Rs. 10 to Rs. 1,125.

Sugar shares maintained their downward trend, Belapurs losing Rs. 2.50 to Rs. 293. Notwithstanding an improvement today, Phaltans closed on balance with a loss of Re. 1 at Rs. 154. Walchandnagars moved down by Rs. 3.75 to Rs. 282.50. Cement shares were listless. Associated Cements moved a bit erratically between Rs. 151 and Rs. 154.75 before closing at Rs. 153.25. Digvijays lost on balance Re. 1.50 to Rs. 152.50, while Orissa Cements gained 12 nP to Rs. 14.68.

In the engineering section, Alcock Ashdowns were done Rs. 4 lower at Rs. 269. The gross profit of the Company for 1958 shows a fall from Rs. 11.21 lakhs to Rs. 7.19 lakhs. Tata Locomotives failed to sustain the upward trend noted for some weeks past. There was heavy selling pressure in this counter on rumours that the dividend might not be more than Rs. 9 per share. Consequently, they dropped from Rs. 209.50 to a low of Rs. 197.50 on Tuesday. Subsequently, however, they regained some ground to touch Rs. 204.50, but the closing was again lower at Rs. 202.50. Premier Constructions disclosed a loss of Rs. 7 at Rs. 304 *ex-div.* Larsen and Toubros were listed *ex-right* and closed at Rs. 21.24, as against Rs. 23.60 *cum-right* a week ago. Mahindras shed 52 nP to Rs. 19.88. In the mining group, Shivrajpurs were done at Rs. 80 *ex-div.*, which on a *cum-div.* basis represented a gain of Rs. 2 over the week. Indian Coppers were quiet at Rs. 4.06.

Among shippings, Scindias gave way from Rs. 18 to Rs. 17.24 before gaining ground to Rs. 17.84 at the close. There was a sudden dip in Great Easterns from Rs. 23.12 to Rs. 21.96. Their new shares too dropped from Rs. 16.36 to Rs. 14.92. Bharat Lines were done 24 nP lower at Rs. 12.48. In the automobile group, Hindustan Motors were steady, gaining 16 nP to Rs. 8.64, while Premier Automobiles softened from Rs. 110 to Rs. 108.25.

Miscellaneous industrials did not show any variation from the general trend. Bombay Burmahs (old) fell from Rs. 535 to Rs. 516 before improving to Rs. 528.50 today. At the close, they shaded off to Rs. 525.50. National Rayons were subjected to pressure earlier in the week, the shares dropping from Rs. 307.50 to Rs. 301. This was, however, more than made good subsequently when they recovered to close at Rs. 309. Gwalior Rayons gained on balance 12 nP to Rs. 18.64. Chemical shares attracted some attention. Tata Chemicals were picked up 36 nP higher at Rs. 18.32. Alembic Chemicals spurted from Rs. 193 to Rs. 200, following the announcement that the Company proposed to issue 20,000 new ordinary shares of Rs. 100 each to the existing shareholders in the ratio of one share for every four. The Company has obtained sanction for the issue. Tata Oils were 80 nP higher at Rs. 57, while Voltas were marked down by Rs. 3.25 to Rs. 160 and Wimcos by Rs. 4.50 to Rs. 203.50. Ceat Tyres were in demand and rose by Rs. 5.50 to Rs. 144.

There was selective buying in preference shares at hardening rates. Tata Steel 1st Preference (6 per cent. taxable) were done Rs. 2.75 higher at Rs. 160. National Rayons (5 per cent. taxable) rose by 30 nP to Rs. 80.50. Premier Constructions 1st Preference (6½ per cent. taxable) improved by Rs. 2 to Rs. 86. Central Indias (5 per cent. tax-free) were a shade better at Rs. 352.

* * * *

Calcutta Stock Exchange

CALCUTTA, *3rd June*

The shake-out in equities noted last week continued to make further inroads into prices on the Calcutta Stock Exchange during the week under review also, and indications are that it has not spent its full force. Throughout the week, the movement was downward and speculative holders, who had acquired at the rise in recent months, rushed to unload whenever possible in an attempt to reduce losses and/or be content with taking whatever profits that current levels permitted. Meanwhile, genuine investors continued to keep off the market, and were content in paying attention to the new issues of shares. The Government loan programme is anticipated in the near future, after which a series of new joint stock issues is expected to follow. Investors are, therefore, keeping apart their funds. As a result, the stock market was devoid of outside support in a noticeable way, and thus there was no stabilising influence. Nervous unloading without buyers in some cases paved the way for the depression. Rumours from Bombay about proposals to introduce margins on forward transactions in the listed scrips and to increase levies on indirect gains had their full play in a market which was devoid of genuine investment.

As in other sections, jutes suffered a shrinkage in the volume of business, and a weaker goods market depressed prices further. Nationals were forced down to Rs. 21.50 from Rs. 23.75. Chitavalsahs were extremely quiet at Rs. 14.94, as against Rs. 15.56 previously. The announcement of 5 per cent. dividend for Kamarhatty fell below expectations and that explained the fall in this scrip to Rs. 200 from Rs. 202 previously. Belvederes were unchanged at Rs. 173, while Birlas recovered to Rs. 20.31 from Rs. 20.06.

The delay in New Delhi's decision over the industry's claim for price increase subdued coal shares. From Rs. 6.25, Western Bengals gave way to Rs. 5.91. Central Indias finished at Rs. 7.41 after opening at Rs. 7.53. Bengals were hammered down to Rs. 305 from Rs. 310, while Khatras Jherriahs at Rs. 75.25 recorded a fractional improvement of 25 nP.

In the engineering section, Indian Irons were subjected to selling pressure following uncertainty about the scrip being continued to be permitted in the forward list on the Bombay Exchange. However, it was announced later in the week that the difficulties in this regard had been overcome, the Company having agreed to accept the listing regulations of the Exchange. Indian Irons opened at Rs. 24.24 and after being better at Rs. 24.40 for a time gave way to Rs. 23.84. The finish was, however, at Rs. 23.96. Indian Galvanizings were able to resist the general trend and hardened to Rs. 19 from Rs. 18.25, while Texmacos were quiet at Rs. 25.40.

Sugars searched lower levels induced by profit-taking following official measures to arrest the rise in prices of the commodity. Belsunds changed hands at Rs. 12.31, as against Rs. 12.81 previously. Carews were quiet at Rs. 8.87, as against Rs. 9.37 earlier.

Teas were neglected on reports of rising output and keener competition by improved African teas. Sungmas, in the Darjeeling group, fell to Rs. 19.25 from Rs. 19.69. Banarnats at Rs. 304 disclosed a loss of Rs. 6, while Tezpores, after being lower at Rs. 18.25, recovered to Rs. 18.62. East Indians were quiet at Rs. 20.87, as were Hantaparas at Rs. 132.

Miscellaneous industrials recorded lower levels. Indian Coppers were quiet at Rs. 4.07, as against Rs. 4.12 earlier. Metal Corporations gave way to Rs. 13.87 from Rs. 14.06. India Steamships receded to Rs. 14.09 from Rs. 14.44. Orient Papers opened at Rs. 35.60 and closed higher at Rs. 35.70, while Indian Cables lost to Rs. 30.19 from Rs. 30.62. Dunlops were steady at Rs. 31.37. Indian Aluminiums realised Rs. 20.19, as against Rs. 20.69.

* * * *

Madras Stock Exchange

MADRAS, *3rd June*

Barring a few select scrips, which met with some investment support, equities on the Madras Stock Exchange continued to drift lower during the week under review also, thanks to such rumours as official control over dividends of companies and tax on unearned incomes. Many operators were inclined to liquidate their holdings, but fresh buying enquiries were lacking, for many preferred to await a clear picture of the proceedings of the A.-I.C.C. Seminar at Ooty and the suggestions emerging thereat. Consequently, transactions actually put through were restricted. Tea shares encountered selling on reports of continued lower production in several estates. In sympathy, rubbers and coffees ruled easy. Textiles were subdued, as also sugar and miscellaneous industrials.

Among the sugar shares, Cauverys dropped Rs. 3 to Rs. 106. E.I.Ds receded by Rs. 2.50 to Rs. 33.25. Deccans were quoted lower at Rs. 11.80, as against Rs. 12.35 on Wednesday last. Travancores lost 45 nP to Rs. 11.75. Indias, Mysores and United Breweries were dull at Rs. 12.10, Rs. 52.25, and Rs. 400 respectively.

In the planting section, United Nilgiri Teas shed 30 nP to Rs. 20.10 and Twyford 28 nP to Rs. 17.12. Hailleyburias declined by 5 nP to Rs. 19.60. Chembras eased by 4 nP to Rs. 4.26. Balanoors were quiet at Rs. 21.25, as also Kalasas at Rs. 3.97, Kil Kotagiris at Rs. 8.50 and Nonsuch Teas at Rs. 27.35. The newly introduced shares, namely, Ossoors and Wartyhullys, however, elicited good support. The former improved by 12 nP to Rs. 3.73 and the latter by 7 nP to Rs. 3.67. Among coffees, Coffee Lands decreased by 25 nP to Rs. 23.75. Cowcoodys retreated by 20 nP at Rs. 7.00. Anaparais were neglected at Rs. 4.75. Among rubbers, Kailas lost 5 nP to Rs. 5.10. Thirumbadis lost by 4 nP to Rs. 1.92. Malankaras were dull at Rs. 19.35 and Rajgiris at Rs. 17.45. Highlands and Vaikundams, however, rose by 50 nP each to Rs. 14 and Rs. 26.50, respectively.

In the textile section Cannanores were dull at Rs. 151, Coimbatore Cottons at Rs. 141, Pioneers at Rs. 285 and Dhanalakshmis at Rs. 197.50. Vasanas were quoted at Rs. 210 *ex-div.*, as against Rs. 222 *cum-div.* Radhakrishnas dropped Re. 1 to Rs. 130. Maduras suffered a further setback, the quotation declining by 67 nP to Rs. 26.18. Rajalakshmis and Virudhunagars lost 50 nP each at Rs. 64.00 and Rs. 39.00 respectively. Metturs, on the other hand, provided a bright spot and rallied from Rs. 398 to Rs. 402.50. Buckinghams gained a rupee to Rs. 187. Cambodias gathered 10 nP to Rs. 9.90.

Among miscellaneous industrials, F.A.C.Ts fell by 60 nP to Rs. 8.40. Mettur Chemicals receded by 5 nP to Rs. 2.50. Mysore Chemicals lost a like amount to Rs. 10.55. Ashok Leylands shed 15 nP to Rs. 7.05. Dalmia Cements, India Cements and Indian Steel Rollings were all a shade lower at Rs. 10.60, Rs. 6.03 and Rs. 15.35, respectively. Western India Plywoods were done at Rs. 170.50, same as last week. Standard Motors provided an exception in that they were bid higher by 50 nP at Rs. 14.75. Orissa Cements were also well favoured and advanced by 40 nP to Rs. 14.75. Rallis strengthened by 25 nP to Rs. 68.50. Mysore Papers picked up 15 nP to Rs. 20.35.

I.I.S.CO. AND INDIAN COPPER ACCEPT LISTING RULES

The Indian Iron and Steel Co., Ltd., in the course of a statement, says that in view of the decision of the Government of India that there should be one uniform listing agreement for all the Stock Exchanges of India, it has agreed to accept the listing regulations of the Bombay Stock Exchange. This Company and the Indian Copper Corporation Ltd. are reported to have informed the Bombay Stock Exchange authorities of their decision to comply with their requirements. Earlier, it was reported that Indian Iron and Indian Copper might be delisted from the Bombay Stock Exchange, because these two companies "had declined to comply with certain listing regulations of the Stock Exchange."

KHANDELWAL FERRO ALLOYS LTD.

The public issue of 34,937 equity shares and 50,000 7½ per cent. tax-free redeemable cumulative preference shares of Khandelwal Ferro Alloys Limited has been oversubscribed. Consequently, the list which was opened on 30th May 1959 was closed immediately on completion of the minimum stipulated period on the 3rd June 1959.

NEWS IN BRIEF

THE three steel towns of Bhilai, Rourkela and Durgapur will be linked by double railway lines under an expansion programme drawn up by the South Eastern Railway.

A grain storage research and training institute has been opened at Hapur by the Central Government. The Institute, the first of its kind in India, offers two courses—one lasting for two weeks and the other eight weeks—relating to the methods of inspection and preservation of foodgrains on scientific lines.

An exhibition of "industrial design today in America and India," sponsored by the Museum of Modern Art, New York, at the request of the Union Ministry of Commerce and Industry, will be on show at Madras from the 10th to 30th inst. It seeks to focus attention of both consumers and manufacturers in India on some trends and examples of industrial design in the Western world.

India made record shipments of animal feeding stuffs to the U.K. during the first four months of this year, the actual value of shipments being £4,973,000—more than three times that for the corresponding months of 1958. The shipments for the whole of last year only reached a value of a little more than £6 million. Exports of oilseed cake and meal mainly from groundnuts accounted for £4,833,000. During the first four months of this year, India also exported to the U.K. £404,000 worth of oilseeds, oilnuts and oil kernels, as against just £6,000 in the corresponding months of 1958.

The representatives of coal industry and the workers have agreed that the coal award of 1956, which gave a wage increase to workers, should continue to be in force till 25th May 1960, subject to any modifications that may be made either by agreement between the parties concerned or through arbitration. Issues on which there is no agreement will be referred to an arbitrator. Meanwhile, both employers and workers have agreed not to give notice of termination of the award. Although the period of the award actually expired on 25th May, the award itself does not automatically lapse until terminated by the parties concerned. It was agreed that outstanding issues relating to the coal award should be discussed by the sub-committee of the Tripartite Industrial Committee on coal mining at a meeting to be held in Calcutta on the 9th and 10th inst. The issues which are not settled at the meeting will be referred to an arbitrator, who will be requested to give his decision within 45 days.

The U.P. Government has estimated the cost of implementing its proposed scheme for consolidation of holdings in the State at Rs. 11 per acre, half of which will be realised from tenants. An extra charge of 75 nP per acre will be recovered from tenure holders of areas in which the rectangular system of consolidation has been adopted. Hitherto, they were paying Re. 1.50 per acre as a tentative first instalment. The Government has also decided to realise the cost of land obtained for common purposes from all tenure holders of a particular area irrespective of whether their holdings are affected or not. Of the Rs. 11 per acre, the Centre will pay 25 per cent., the State Government 25 per cent. and the tenant the remaining 50 per cent. The expenditure incurred by the State is likely to be partly compensated by increase in land revenue and by correction of consolidation into rectangular holdings. The Government has decided to introduce this system as far as possible in new areas.

From Abroad

The U.K. Iron and Steel Board has reduced by an average of 2 per cent. the price of steel purchased in lots of 10 tons or more.

World consumption of wool in the first quarter of 1959 was about 6 per cent. higher than in the corresponding quarter of 1958, according to the Commonwealth Economic Committee.

The number of unemployed merchandise ships laid up in the U.K. ports rose further, though at a slower pace, during April to 255 with a gross tonnage of 1.44 million. Of the total laid up tonnage, oil tankers accounted for 384,992 tons.

The Indonesian Government proposes to set up a three-man Committee in London to promote sales of its agricultural products in Europe. The Committee will make recommendations on the posting of trade commissioners in the European capitals.

France's first "heavy franc" bank notes will be put into circulation next month. The complete changeover from the present franc to the new currency will be completed by 1st February 1961. The first notes under the new currency will be of 100, 50 and 10 "heavy franc" values equivalent to 10,000, 5,000 and 1,000 present francs, respectively.

For the first time since September 1958, the number of registered unemployed in the U.K. fell below half a million, 481,000 to be precise, in the middle of May last. This number represented 2.2 per cent. of the working population. The fall in unemployment during the month was 50,000, in contrast to an increase of 4,000 in the corresponding month last year.

The terms and conditions relating to the proposed U.S. loan of $135 million to the Euratom of the Common Market countries have been finalised at Brussels. An agreement to this effect had already been signed in November last. The loan will finance a part of the $215 million nuclear research programme outlined in the Euratom Treaty, including the creation of a six-nation research centre.

The Stock Exchange in Frankfurt, W. Germany, has commenced trading in Imperial Chemical Industries stock, the first British stock to be introduced in the Exchange. It is expected that other British stocks will follow. Many investors are reported to have turned to foreign stocks with the object of avoiding the narrowness of the market. There has been brisk trading in Dutch and Italian stocks as well as Austrian, French and U.S. shares.

The largest Dutch company, N. V. Philips Gloeilampenfabriekan, has agreed to introduce a 45-hour five-day week, with effect from May 1962 at the latest. The decision is a sequel to a three-year collective agreement entered into with the employees. The engineering industry has already made such an announcement. The 48-hour week is the standard week in Holland. In view of the latest moves of industries, the Government is expected to consider the possibility of introducing a shorter week.

The National Planning Council of Ceylon has suggested to the Government not to effect any immediate further nationalisation, but favoured its spreading out progressively over ten years or more. The other suggestions put forward by the Council are: (1) the Government should give first preference in regard to the shares of rupee companies; (2) there should be progressive Ceylonisation of companies at management level; (3) sterling companies should be gradually converted into rupee companies; and (4) compensation should be paid to all nationalised undertakings.

A group of Colombian economists is now in Europe for the purpose of finding new markets for the country's coffee, the basic export product of the country. It has full power to make trade agreements with Western European and Middle Eastern countries. The new trade agreements will permit payment for coffee in currencies other than the dollar. Likewise, merchandise imported by Colombia under these agreements will be paid for in Colombian pesos. This will be the first time Colombia agrees to receive payment for its coffee in currencies other than the dollar.

A Japanese company, Arabian Oil, proposes to commence oil drilling operations near the Neutral Zone in the marine area of the Persian Gulf. The Company succeeded in getting the concession for prospecting last year against intense competition. Under the terms accepted by the Company, 57 per cent. of the net income from any oil found in the Kuwaiti half of the marine area will go to the Government of Kuwait and 56 per cent. of the income from oil in the other half to the Saudi Arabian Government. The terms are for a period of 44½ years, but the Kuwait Government may terminate the agreement if no oil is found by the end of 1962.

India is among the 48 countries participating in the fifth World Petroleum Congress now in session at New York. The session is said to be the world's largest international oil meeting, with about 5,000 oilmen attending it. The basic objective of the meeting is presentation and discussion of 300 scientific and operational reports detailing world-wide research designed to find quicker and more direct ways of locating new oil fields, of developing more efficient production methods, of improving petroleum products, and of expediting transportation of crude and processed oil. For the first time, a complete session of the programme is devoted to the way in which atomic energy is being put to work for the oil industry.

PERSONAL

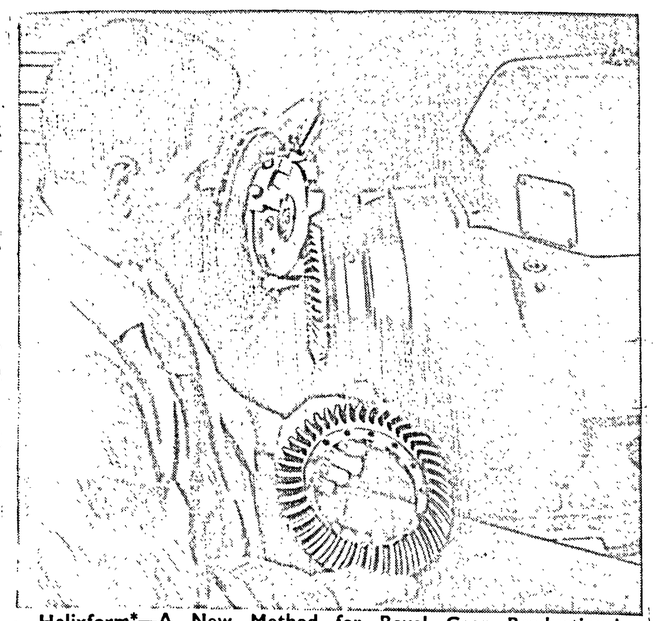
MR. Madan Mohan R. Ruia, a leading industrialist of Bombay, and Mr. N. R. Patel, have been elected President and Chairman of the Commerce Graduates Association, Bombay, for the year 1959-60.

Mrs. Sumati Morarjee, Managing Director, Scindia Steam Navigation Company, Ltd., left for London on 31st May for a short tour of the U.K. and the Continent.

Mr. K. R. Damle, I.C.S., Secretary for Agriculture, Government of India, will represent India at the Food and Agriculture Organisation Council session commencing at Rome on the 15th inst.

Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission, left for Vienna to attend a meeting of the Scientific Advisory Committee of the International Atomic Energy Agency which commenced there on the 4th inst.

Mr. Gulzarilal Nanda, Union Minister for Labour and leader of the Indian delegation to the I.L.O. Conference which commenced at Geneva on the 3rd inst., left New Delhi last week-end. Before returning to India he will visit Yugoslavia, West Germany, Denmark and the U.K.



Helixform*—A New Method for Bevel Gear Production!

The new No. 112 Hypoid Helixform Gear Finisher assures improved quality and increased production on spiral bevel and hypoid non-generated ring gears up to 4" in diameter, and 2 DP. such as employed in passenger car axles.

FINANCE MINISTER ON TAXATION

IT is gratifying to hear, once again, from Mr. Morarji Desai, Union Finance Minister, that he is quite willing to consider the revised scheme of corporation taxation and provide relief where needed. Replying to an address presented by the Indian Chamber of Commerce at Coimbatore on Friday last week, Mr. Desai said that, as the result of experience gained during the current year, he would consider what could be done about the difficulties arising from the change in the taxation of companies. In particular, his statement that "if additional revenue means more hardship to companies from which this revenue comes, naturally, this is an argument which will be considered" should allay the fears that the new system, due to be enforced in the fiscal year 1960-61, is intended to collect more revenue from the corporate sector. Few will, of course, disagree with Mr. Desai when he said that, if revenues came from companies which continued to prosper, the contribution to the country, on whose prosperity the companies depended, was quite justified. But what everyone should wish is that the contribution a prospering company is asked to make must leave a reasonable margin to remunerate the shareholders and be commensurate with the expanding resources requirements of the company concerned.

Mr. Desai was not convinced by the argument that more revenues could accrue to the Government as a result of the revised company tax scheme. It is to be hoped that Mr. Desai's words will prove correct. The several analyses of the scheme made so far by tax experts, however, have clearly brought out the fact that most companies, and consequently, their shareholders, will be adversely affected, in that, as a result of the 45 per cent. non-refundable tax, most of the companies will not be in a position to make up to shareholders the loss incurred through withdrawal of "grossing."

Alluding to the question of sharing the tax burden, the Finance Minister observed that greater effort should be made by those who could afford to bear the burden and, yet, the burden had been borne more by those who could not bear it. In this connection, he said: "A large section of the population is poor and, yet. it pays a great deal through indirect taxation and even through some direct taxation. Even an ordinary agriculturist who owns three acres of land pays taxes. The number of excisable articles is increasing day by day, and they are consumed more by the poor than by the rich. But they have got to do this, because everybody has to contribute if the nation is to advance." While the increasing reliance on excises for a large part of the additional taxation raised by the Government is justified, it must be emphasised that there is need for exercising utmost care in choosing the commodities for the purpose of excise levy. The new sources for excises should be such as would not add to the cost of living to any significant extent or make the cost structure of industries more rigid. There is also the need for reducing the heavy incidence of excise on articles which are essentials of life such as sugar, cloth and vegetable oils. Incidentally, more items can be transferred from the States' sales tax list to the Central excise list. For excise duty in the place of sales tax, as Mr. Desai said, is a better method even from the point of view of States, and also easier of recovery, besides being less liable to evasion.

While on the question of sharing the burden of taxation, a brief reference may be made to the remarks of Mr. C. D. Deshmukh, a former Union Finance Minister and now Chairman of the University Grants Commission. at a Press conference at New Delhi the other day. Mr. Deshmukh averred: "To the extent to which resources might come from the one per cent. (capitalist) class, well and good, but, to the extent to which it does not come, it has to come from the 99 per cent. This question has to be squarely faced, though political courage is still not evident." This is certainly a correct assessment of the whole issue of taxation which the planners will do well to bear in mind while formulating the third Five-year Plan.

To revert to Mr. Desai's speech. He touched on the size of the third Plan and pointed out that the actual size would depend on many considerations. Mr. Desai certainly struck a note of realism when he observed that the two chief considerations would be the "concrete" requirements of the country and the resources that could be mobilised both internally and externally. Surely, the mistake of overestimation of resources committed while drafting the second Plan should be avoided. It is needless to add that, but for the Government's preoccupation with physical planning and its unwillingness to let the country face the realities of the resources position, the Plan would not have been surrounded by great confusion. Readers will recall that no sooner two years had elapsed after the second Plan had been launched than the Planning Commission came out with an appraisal of the Plan (May 1958). The assessment of resources made in this appraisal differed considerably from the original targets. Within four months thereafter, there emerged a reappraisal which gave an entirely different sets of figures relating to resources. All this confusion could be safely avoided if the planners were to make a fairly reasonable assessment of the resources *in sight* and to so fix the size of the third Plan as to fit in with the availability of such resources.

The aforesaid aspect has to be stressed for three reasons. One, the country is no longer in a position to enjoy the cushion of large sterling balances which came in so handy all these years. Two, the scope for large additional taxation, particularly direct taxation, is limited. Three, a heavy dose of deficit financing cannot be resorted to, since the inflationary pressures generated by the implementation of the first and second Five-year Plans have already caused great hardship to the masses.

HANDLOOM INDUSTRY

The production of handloom cloth is believed to be currently running at an annual rate of nearly 1,950 million yards, as against the actual output of 1,798 million yards in 1958, 1,643 million yards in 1957 and 805 million yards in 1950. Such an encouraging performance has been due not to any material improvement in the structure of the handloom industry but to the artificial props given by the Governments, Central and State. The props include complete tax holiday, rebate on sales of handloom cloth, and liberal loans and grants amounting to several crores of rupees, in addition to reservation of markets in certain fields *vis-a-vis* the mill sector and assurance of adequate and regular yarn supplies.

All these measures. though they have succeeded in giving a boost to handloom cloth output, cannot be expected to offer an effective, lasting solution to the problem of low manufacturing efficiency and high production cost. For the equipment of handloom industry is outmoded and, unless it is mechanised through introduction of power, production is bound to be uneconomic, necessitating continuance of the abovementioned props for all time. This is the basic issue involved, and not formation of more and more co-operatives by weavers, as Mr. Morarji Desai declared in his reply to the memorandum submitted by the Southern India Millowners Association during his visit to Coimbatore last week. Mr. Desai said:

> "Since the handloom industry is disorganised, greater effort is needed to bring it into the co-operative fold. If the Government fails to distinguish between the weavers in the co-operative sector and those outside, it will be a signal for breaking up the co-operative unions which are already there. The industrialists should form more and more co-operatives and thus push up the sales of handloom fabrics which have no rivals in the foreign countries."

The co-operatives can, of course, render some useful work in the direction of supplying the needs of the weavers and marketing their products. But they cannot provide a cure for the basic weaknesses of the handloom industry. Further, although there is a fairly large number of co-operative handloom societies, the way in which many of them are working has not been quite satisfactory. Several instances are on record that the societies have misappropriated the loans and grants received under the handloom industry development schemes, thereby forcing the lending banks to write off the debts. As Mr. Desai himself frankly admitted, "the subsidy given to handlooms has been greatly misused." If the co-operative societies are to be effective agencies for the promotion of development activity in the handloom sector, it is imperative that they are manned by persons known for their integrity and knowledge and that the resources position of the societies should be sufficiently strong to meet all the working capital requirements of their weaver-members. Equally imperative is the need for these societies availing themselves of commercial credit from financing agencies and not depend on official concessional credit. If this is done, the funds so released from the cess fund can be utilised for other developmental activities of the handloom industry, or, if these funds are not required, the cess on mill cloth can be abolished or at least reduced.

EVALUATION OF CO-OPERATIVE SOCIETIES

The Programme Evaluation Organisation of the Planning Commission, in its report on the working of large and small co-operative societies, has made a critical assessment of the comparative performance of each. The full text of the report has not yet reached us. But even from a summary of it in the daily Press it is clear that, while the defects and merits of these societies, as revealed by their actual working, have been brought out and certain caustic remarks on the effects of Government intervention in the affairs of the societies have been made, the Organisation has not expressed itself definitely in favour of either. There are only three plausible explanations for this shyness of the P.E.O. to give a clear verdict. First, the working of both these types of societies revealed more defects than merits, making it politically inconvenient for the investigators to pronounce a definite verdict. Second, since the issue of small *versus* large societies has not yet outgrown the stage of controversy, the P.E.O. must have considered it prudent not to add fuel to the fire. Third, the P.E.O. was, perhaps, not required to pronounce on the superiority of either. Anyway, it has provided enough material to enable impartial observers to form their own judgment.

The evaluation report contains a wealth of factual data collected through a firsthand study of the working of the societies. Two independent inquiries were conducted. The first concerned societies in areas outside the Reserve Bank's pilot projects. Under this, a total of 33 large and 84 small societies in 18 blocks were surveyed. The second inquiry related to the working of the integrated credit and marketing scheme in two areas in Khandesh and Broach selected by the Reserve Bank for its pilot projects and an area in Kolhapur which the State Co-operative Bank had selected for a similar experiment.

The report on the first inquiry points out that, in respect of coverage, the performance of both types of societies was poor. Not even a fourth of the households under their jurisdiction have yet been covered. Only in one block (Morsi in Bombay) have both large and small societies achieved complete coverage. On the other hand, some societies in other areas include only 10 per cent. of the total households. None of the two types of societies was able to show a better record than the other. In other words, large societies have not reached a greater number of smaller cultivators than the small. In fact, small cultivators constituted a smaller proportion of the membership of large societies than of small ones. It is true that the large societies attracted more landless labourers. But it should be borne in mind that the term "landless labourers" included. in some cases, members who were well off and who do not resort to borrowing. In both societies, fewer small cultivators could secure loans. Large societies had a better record in respect of "overdues" while in respect of repayment of loans smaller societies showed better results.

The report brings to light many malpractices prevailing in both types of societies. The larger ones, according to it, tend to be dominated by the "headquarters villages" and, in a number of instances, big and medium landlords dominate the committees and, in a few, either moneylenders or moneylenders-*cum*-landlords occupy positions of power and indulge in manipulated operations. Taking a highly critical view of the general practice followed by the State Governments of giving their nominees on the board of directors of large societies the right to appeal to them against the decisions of the general body of members or the board, the report comments: "Commonsense and experience would suggest that such powers of intervention, wherever they are given, never remain on the statute books only; they tend to be put into use and come in the way of the co-operatives developing into people's institutions."

A study of the administration of the societies revealed that, although large societies have more talent to draw upon for the offices of president and secretary, the proportion of those who seemed to become semi-permanent is as high in large societies as in small ones. The basis on which the societies determine credit limits to members has also been criticised. Right in land continues to remain the most important consideration in setting the maximum credit limit. Only in a few cases, it has been found, is credit limit related to the crop produced. Even in these. little attention is paid to the cost of cultivation or the productive requirements of the borrower. In none of the societies was credit linked with marketing. Discrimination in favour of landlords against tenants has also been found to persist in both small and large societies.

Supervision of societies, it has been found, is lax and inspection perfunctory. Though local supervisory committees have been recommended for large societies, only three centres out of fourteen have reported the existence of such committees. An encouraging feature, however, is that only nine per cent. of the large and five per cent. of the small societies report that there has been no auditing.

The report makes a comparative study of the finances of the societies. Large societies are organised on the basis of limited ability, while, in a majority of small societies, the individual member's liability is unlimited. The average large society has a membership of 418 persons and covers 11 villages, while the average small society has 64 members and covers two villages. The former has a share capital of Rs. 14,232 and the latter Rs. 1,921. Although both large and small societies depend largely on help from outside, the small ones receive this help entirely in the form of interest-bearing loans from central banks, whereas large societies get considerable help in the form of State contributions to their share capital. The large societies have about six times as much money as the small and they loan a higher proportion of it. This is ascribed to Government participation in the share capital and the selection from the small societies of the better ones for amalgamation or expansion. The report comes to the conclusion that in "pure business terms" the large societies have a better chance of paying their way than the small.

DEVELOPMENT OF OILSEEDS

In any scheme of agricultural planning in India, it is necessary to provide a prominent place for oilseeds. In recent months, there has been a spectacular rise in the prices of oilseeds and oils, due to the growing demand for oilseeds for consumption as food, for industrial uses and for exports and the failure of production to keep pace with it. The total production of oilseeds was about 5.9 million tons in 1957-58. as against about 6.2 million tons a year before. Complete figures are not available for the 1958-59 season, but the preliminary estimates for groundnut (4.81 million tons, as against 4.43 million tons in 1957-58) and castorseed show that the short-fall experienced in the previous season would be more than made good. If in spite of this improvement prices are ruling higher, it is because of the marked increase in demand. Raising the production of oilseeds is, therefore, an urgent problem. Unless concerted efforts are made to initiate intensive and extensive cultivation, it is doubtful whether the target of 7.5 million tons envisaged in the second Plan will be achieved by 1960-61. Viewed thus, the Central Supervisory Committee for Planned Production of Oilseeds in India which met at Bangalore on 29th and 30th May, did well in deciding to initiate a drive for boosting production of oilseeds in the remaining two years of the Plan. There are also signs that the Government has recognised, though belatedly, the crucial importance of promoting production of this commercial crop. Indeed. many of the schemes received its serious consideration only last year—the third year of the second Plan. A scheme for development of oilseeds jointly financed by the Central and State Governments on a 50:50 basis is already in force. Besides, the Indian Central Oilseeds Committee is financing many other programmes in 11 States. The impact of these programmes, we are told, would be felt from 1959-60 onwards.

On the basis of these programmes. the Supervisory Committee is optimistic of realising the second Plan targets in time. The Committee, therefore, straightaway started considering the country's requirements of oilseeds in the third Plan period. It is reported to have discussed at length the working paper on this question. The Committee is also reported to have considered the proposed target of nine million tons to be achieved in 1965-66, the final year of the third Plan. Its conclusion on this target is not known. Whatever its decision, the target is by no means unduly high from the point of view of India's requirements. If anything, it seems to be on the low side. But whether it can be reached is another question. If appropriate incentives and facilities were provided and administrative bottlenecks were removed, it should be possible for this country to raise nine million tons of oilseeds in another seven years.

The Supervisory Committee has made the following recommendations for the consideration of State and Central Governments:

1. A Committee should be appointed in each State to plan and review the oilseeds production against the targets fixed.

2. As large areas of land will become available for growing oilseeds when the irrigation projects now under execution are completed, the Union Government should constitute a committee to assess the total area available for irrigating various crops and the share to be assigned for different oilseed crops.

3. A portion of the foreign exchange earned from the export of oilcakes should be earmarked for the import of fertilisers.

The first two recommendations are pertinent, while the third is not sound. If foreign exchange obtained through all staple exports were to be earmarked for specific purposes, the exchange available for other urgent purposes would be automatically reduced. Such reservations in a planned economy make nonsense of planning.

BANK PROFITS IN 1958

An analysis of the earnings and expenses of twenty-five larger Indian Scheduled banks (each with deposits of Rs. 5 crores and above) for the year 1958, made by the Reserve Bank of India in its latest annual report on *Trend and Progress of Banking*, shows that, for the first time, the rising trend in net profits noticed since 1953 suffered a reversal last year. This was largely due to a greater rise in expenses than in gross earnings of banks. Thus, whereas their aggregate gross earnings, largely made up of interest and discount, rose by Rs. 10.7 crores over the year to Rs. 64.4 crores, their total expenses were up by Rs. 11.3 crores at Rs. 56.5 crores, as will be seen from the following comparative table relating to the last four years:

(In crores of rupees)

	1958	1957	1956	1955
Gross income	64.4	53.7	44.0	37.0
(1) Interest and discount	51.4	41.0	32.9	28.1
(2) Other Income ...	13.0	12.7	11.1	8.9
Total expenses	56.5	45.2	36.3	31.0
(1) Interest paid ...	28.3	20.6	14.5	11.2
(2) Establishment expenses	21.2	18.3	16.2	14.9
(3) Other expenses ...	7.0	6.3	5.6	4.9
Net profits	7.9	8.5	7.7	6.0

Of the increase in expenses, as much as Rs. 7.7 crores was on account of interest payments on deposits (and borrowings) which banks had accepted at higher rates of interest to augment their resources. This increased burden of interest payment, as the Reserve Bank points out, was not, however, fully compensated for by the rise in bank earnings, as the demand for bank advances slowed down, owing to factors explained in these columns last week. The cumulative effect of these factors was a narrowing down of the margin between banks' borrowing and lending rates and consequently the net profits declined from Rs. 8.5 crores to Rs. 7.9 crores.

(*Concluded from next column*)

going for a union. on the same lines as the Common Market, with the "Little Six"—Norway, Sweden, Denmark, Austria, Switzerland and Portugal. Throwing Britain in with the "Little Six" accounts for under 30 per cent. of Europe's internal trade, as against about 70 per cent. inside the Common Market. Moreover, the "Little Six" and Britain, not having a common and all-embracing frontier, would have to operate a little differently. The idea is that they would set a common tariff between each other, but each would retain their own tariffs against the rest of the world. Each country's controlling all its own imports would ensure that there was no abuse of entrepot trade from the outside world by passing it into this little free trade area through the lowest tariff country. But, in respect of trade between the Scandinavian countries and Britain, which is already well established on international lines—and incidentally whether Britain would hardly gain by having to lower her tariffs—the whole scheme seems slightly artificial.—*All Rights Reserved.*

MORE IMPORTS FROM DOLLAR AREA

AN ARTIFICIAL GROUPING

(From Our Own Correspondent)

LONDON, *29th May*

LONDON LETTER

NO news is good news. The lack of excitement on the external economic front these weeks is evidence of Britain's quiet stability. But, even without excitement, things are going on. And, on the auspicious side, one can record this week the decision to allow increased imports from the dollar area. At the Montreal Conference in the autumn, the President of the Board of Trade said that Britain was aiming to permit larger imports of machinery and certain manufactured chemical goods from the United States. At that time, 60 per cent. of Britain's dollar imports were free and the additional freedom raised the liberalised trade group to 73 per cent. The President then foreshadowed a start in trading imports from the dollar area of consumer goods and the remaining foodstuffs. The order was to be: "First, we should remove the controls on as wide a range of consumer goods and foodstuffs as we could. Secondly, we should establish increased quotas for items where, in our judgment, the cost of total liberalisation might be greater than we could afford at that time. The next stage would be progressively to increase these quotas until the items were completely free. Thirdly, there would remain a limited number of items presenting special difficulties . . . exactly what we shall be able to do and when, will depend on certain well-known conditions."

The well-known conditions were an expansion of world trade and freedom from inflation at home. These conditions have been fulfilled this year and thus a start on a more liberal import policy is practical. Broadly, what is happening is that, on a substantial group of items, imports from America are being treated exactly the same way as imports from Western European countries, and, on a secondary group of items, quotas are being retained on goods which are freely imported from Western Europe. These semi-restricted goods include textiles and clothing, pharmaceutical products, cheap literature, meat, fish and canned fruits.

The Board of Trade does not expect much addition to Britain's import bill, since all the goods which are affected can already be imported freely from Western Europe, there is no shortage of supply and importers will merely be free to decide whether to switch away from Europe to America, if it pays them. The only risk that Britain takes is that we may spend more in dollars instead of in Western European currencies, but, since we made Western European currencies convertible into gold and dollars in December last, there is no risk in practice. On the other hand, Britain's sources of supply have become more competitive.

A Record

Politically, the move is very well-timed. The United Kingdom exports to the dollar area have increased 6½ times since the end of the war—and the U.S. is now our most important single export market at a total of £273 million in 1958—while current exports are running over a third higher. Moreover, the U.K. is now able to boast that it has a favourable balance of trade with the U.S. for the first time for over 100 years. In April, British exports to the U.S. totalled £36 million *f.o.b.* and imports were only £27 million *c.i.f.* The true surplus on an *f.o.b.* basis on both sides is, therefore, higher, and for the first four months of the year combined there is a favourable balance.

And, of course, this sort of move, which in effect costs the country nothing, is an ideal way of combating American traders' pressure for more protection for the American market—when, of course, the real trouble is excessive domestic costs.

Going with the Little Six

Less worthwhile news, although interesting, is the Board of Trade's and the Treasury's efforts to rescue something out of the collapse of the Free Trade Area negotiations. There are ten W. European countries outside the Common Market, and Turkey and Greece are not well placed to combine with others, so Britain is

(*Continued in previous column*)

TREND OF COMMODITY PRICES AND ITS IMPACT ON PRIMARY PRODUCERS

U.N. ADVICE TO DEVELOPED COUNTRIES

WHILE recovery from recent economic setbacks has been encouraging—especially in the United States as compared with other industrial countries—it has not yet advanced as much as warranted by available idle resources of labour and equipment. The problem of inflation continued to be the dominant source of concern during the recovery, as it had been prior to the recession. "Fear of a long-term threat of inflation has not only influenced anti-recession policy but may also be coming to have an important bearing on long-term growth." Thus, the *World Economic Survey*, 1958, Part I, comments on the recent world-wide recession and recovery. The Survey was published in New York on 25th May, 1959 by the United Nations. Together with Part II, due to be released in about two weeks, it will serve as the main background document for discussion of the world economic situation at the forthcoming session of the Economic and Social Council in Geneva. Part I contains a study of international commodity problems and policies, while Part II will analyse current developments in the world economy as well as the outlook for 1959.

The following are the more important points contained in the general introduction and the study of commodity problems and policies:

1. The recent recession was world-wide in character. Unlike the two preceding post-war recessions, the recent downturn in the United States was accompanied by a slackening of production in other industrial countries.

2. One of the most serious aspects of the recent setback was its impact on the underdeveloped countries. Their export earnings declined 7 to 8 per cent. from mid-1957 to mid-1958. Together with the inching up of industrial prices, this represented a loss in import capacity equivalent to about six years' lending to the underdeveloped countries by the International Bank for Reconstruction and Development at 1956-57 rates.

3. Because of their dependence on exports of primary commodities, the underdeveloped countries are faced with slow, long-term growth in their export receipts. While world manufacturing output rose by 146 per cent. between 1928 and 1955-57, exports of the underdeveloped countries grew by only 53 per cent. and, if petroleum is excluded, by only 23 per cent.

4. Liberalisation, on a selective basis, of protective and price-support policies by the industrial countries is likely to yield substantial benefits to some of the underdeveloped countries.

5. In the centrally planned economies, scarcities of major primary commodities have been a persistent feature of most post-war years.

Demand Fails to Keep Pace with Production

The Survey states that, in contrast to the two preceding post-war recessions, no special factors of major significance can account for the downturn in the United States economic activity in 1957-58. Nor were they present in the virtual standstill in total West European production in the course of 1958. These setbacks can be explained only by failure in the growth of demand to keep pace with the mounting capacity to produce.

While the three post-war recessions have been of short duration, it would be unwise, the Survey states, to assume that these have set a pattern for future recessions. Automatic stabilisers such as progressive tax systems. social security and farm price-support programmes have considerably strengthened the industrial economies. But these stabilisers can only slow down a rate of decline; they cannot in themselves initiate an upturn. So long as the underlying market forces continue to push private investment and consumption upwards, recessions may be mild and short. But, in the absence of adequate effective demand making for a sustained and cumulative upturn, vigorous Government intervention may be necessary, not only in the field of monetary policy, but also in the fiscal areas.

The Survey notes that mounting concern over inflation has not only influenced anti-recession policy but may also come to have important effects on long-term growth. But at the same time, it points out that it would be wrong to minimise the dangers of inflation. "Crawling deflation" has its dangers no less than creeping inflation. Idle resources of labour and equipment involve social losses which are no less than the losses caused by inflation.

The Survey recalls that, in the United States, even in the peak quarter of 1957, the volume of industrial production did not exceed the pre-recession peak level of 1953 by more than 6 per cent. Although the rate of growth has generally been higher in other industrial countries, it has been quite modest in a number of them, notably in the United Kingdom.

Recession Affects Primary Produce

The Survey observes that a most serious aspect of the industrial recession was its impact on markets for primary products, particularly since it came at a time when available supplies in these markets were being appreciably expanded. The consequent decline in primary product prices, together with the continued inching up of industrial prices, represented a loss of over $2 billion in both the real income and the capacity to import of primary producing countries in 1957-58.

Nor are the longer-run export prospects of the primary-producing countries more encouraging. These depend largely on the growth in demand of the industrial countries; but demand of the industrial countries for primary products entering international trade has lagged considerably behind the growth of their income and output.

In contrast to the lag in import demand of industrial countries, the import demand of most underdeveloped countries has tended to exceed the growth of their domestic output. For, in most of these countries, economic development has necessitated a large expansion in imports, particularly of capital equipment. In face of the slow growth in their exports earnings, however, the expansion in imports has led to increased balance of payments difficulties. It is this conflict which threatens to jeopardise the possibility of attaining or sustaining adequate rates of economic growth in the primary-producing countries.

The Survey remarks that the developed countries could help materially if they were prepared to moderate the degree of protection they grant to domestic primary production, or were to lower the high rates of taxation which have been traditionally imposed on a number of primary commodities such as coffee, tea and tobacco. At the same time, it adds, progress is bound to be disappointingly slow in the absence of adequate support from the entire world community. It needs only to be realised, the Survey points out, that, on a *per capita* basis, the present level of total international aid amounts to only $5 per annum for the contributing countries and no more than $2 for the receiving areas.

The International Monetary Fund has played an increasingly important role in recent years in helping Governments to cope with short-term balance of payments difficulties, but, the Survey points out, the Fund's activities have a marginal, rather than central, bearing on the problem of commodity instability. "If the problem of commodity instability, came to be viewed not in a narrow context of price haggling between producer and consumer interests, but in the perspective of the need to place economic development on a more stable footing," the Survey concludes, "there can be little question but that solutions could be found for many of today's apparent insolubles."

Trade in Primary Commodities

The Survey notes that, while the volume of trade in primary commodities expanded with rising world income and output between 1928 and 1955-57, its growth was much slower. The growth in trade was in fact confined entirely to the post-war period. Over the thirty-year period ending in 1957, the export volume of the less developed primary-producing countries rose less than two-fifths as much as world manufacturing output. Even this, however, exaggerates the expansion in trade of most countries, since by far the largest growth took place in crude petroleum.

Underlying the lag in trade of primary commodities has been the persistent tendency of demand for these commodities to grow less rapidly than economic activity in the industrial countries. While the quantity of food demanded grows with rising levels of real income, the increase in *per capita* demand tends to be less than proportionate to the advance in incomes in the industrial countries which already enjoy high income levels. Other factors are the growing use of synthetic raw materials and the rapid growth since the war of those industries which consume less raw materials. Furthermore, considerable economies have been achieved in the utilisation of some materials through the introduction of new processes. Reinforcing these patterns of consumption has been the increased self-sufficiency in many commodities achieved by industrial countries, particularly in West Europe.

Increases in the prices of primary products relative to manufactures have made for less of a lag in the purchasing power of primary product exports than in the volume of exports. The purchasing power of exports of the less developed countries has nevertheless lagged considerably behind the growth of world manufacturing output. Thus, if petroleum is excluded, the increase in their external purchasing power was only two-fifths of the expansion in manufacturing activity between 1928 and 1955-57.

Instability in primary commodity markets has also been a continuous post-war problem. The value of trade in most individual commodities, on the average, can be expected to be 12 per cent. greater or smaller from year to year solely on account of short-run changes in market conditions. The instability in value of trade has diminished appreciably for some commodities since the period between the wars, but, for others, there has been little or no improvement. While the average year-to-year fluctuation in price fell from 16 per cent. in the inter-war period to 11 per cent. in the post-war years, the degree of instability in trade volume experienced no improvement, averaging about 8 per cent., as in the earlier period.

Both the long-term trends and the short-period instability in trade of primary commodities have profoundly affected the growth and stability of the underdeveloped countries, since investment in these countries is heavily dependent upon their ability to finance imported supplies of capital equipment. Not only have the trends in export earnings set limits to the expansion of domestic investment, but fluctuations in these earnings have also necessitated periodic cuts in investment activity.

National Commodity Problems

The Survey then goes on to highlight the divergent attitude of the industrial countries, on the one hand, and the primary-producing countries, on the other, toward both the long-term commodity problem and commodity market instability, and attributes this to the fundamental difference in the role of the primary-producing sector. It finds that the impact of protective and price-support policies adopted in the industrial countries has hampered the growth of primary product imports, especially in West Europe, and increased the export availability of certain agricultural products in the United States. Many of the restrictions on West European agricultural imports from outside the Continent affects products chiefly exported by other high-income countries. Among the policies affecting the primary exports of underdeveloped countries are those seeking to protect the domestic production of sugar and the high revenue taxation imposed on imported non-alcoholic beverages.

As for the United States, the Survey finds that agricultural support policies have been such as to provide no check to the rapid expansion of output in consequence of the rise in productivity, and this has led to the emergence of massive exportable supplies and the accumulation of heavy surpluses. The Survey notes that, in recent years, mineral policies in the United States have also become more concerned with the protection of domestic producers and have resulted in the introduction of import restrictions. As with European policies, the impact on the trade of underdeveloped primary-producing countries is probably less than on that of other high-income countries. Moreover, the export disposals of the United States have in many cases been of significant benefit to the recipient countries which are invariably low-income countries. A notable contribution towards alleviating the severity of the commodity problem as it confronts low-income countries is considered possible by the Survey, if the industrial countries were to reduce protection of agricultural and mineral products on a selective basis.

The Survey then describes the policy responses of Governments in primary-producing

Centenary Celebrations in Czechoslovakia

Here are some of our major contributions since 1945

1. One complete Sugar Factory for the Panipat Co-operative Sugar Mills Ltd., Panipat (Punjab).
2. One complete Sugar Factory for The Assam Co-operative Sugar Mills Ltd., Baruabamungaon (Assam).
3. One complete Sugar Factory for Madurantakam Co-operative Sugar Mills Ltd., Madurantakam, Madras State.
4. Complete Plant and Equipment for the Extension of Government Cement Factory, Churk (Dist. Mirzapur), U.P.
5. New Cement Factory for Madras Cements Limited, Rajapalaiyam, Madras State.
6. Complete Plant and Equipment for the Second Extension of Utran Thermal Power Station, Utran, Dist. Surat.
7. High Tension Insulator Factory for the Government of Bihar State.

JUBILATION AROUND THE WORLD!

As a token of our overflowing joy at the Centenary Celebrations of our Great Suppliers, the Industrial and engineering colossus known around the world after the name of Emil Skoda, we promise India greater participation in all her planned development schemes.

What we promise, We Fulfil !

FOREIGN PRIVATE INVESTMENTS IN UNDERDEVELOPED COUNTRIES

TREND UPWARD—LATIN AMERICA FAVOURED MOST

PROSPECTS for a greater flow of private capital to under-developed areas and for a greater contribution of this capital to economic development appear better than ever before, but the situation is still "very uneven" and some countries remain unable to attract any form of private investment in significant amounts, a new United Nations study indicates. The study also shows, among other things, that:

(1) "The most significant development of recent years" is the fact that western European countries are again becoming important suppliers of private capital.

(2) In Africa and Asia, the needs remain "particularly great" and the inflow of private long-term capital "particularly small." Latin America is the most favoured by private investors, but they contribute little in countries of lowest income in that region.

(3) Legislative measures designed to attract more foreign investors have "multiplied" in underdeveloped countries in the past few years.

The study, entitled *The International Flow of Private Capital*, 1956-58, was released towards the close of last week by the United Nations as background documentation for discussion of the question of economic development of underdeveloped countries at the Economic and Social Council's session at Geneva opening on 30th June 1959.

The study notes that, in the four years 1955-58, the total outflow from the main capital-exporting countries (including retained profits of foreign branches and subsidiaries) appears to have exceeded $17 billion, with a peak of $5.7 billion recorded for the single year 1957. This is more than three times the total outflow of approximately $5 billion in the five years 1924-28, and it indicates that, in spite of the decline in the purchasing power of the dollar since then, the outflow of private capital is now considerably higher.

The outflow of long-term private capital to low-income, underdeveloped countries, however, appears to have averaged no more than $2 billion a year during the period 1955-58, approximating the flow of Government grants and loans to the underdeveloped world. The geographic distribution of official and private imports of long-term capital taken together is less uneven than that of the two flows considered separately. Thus, while the net inflow of long-term private capital into Latin America was only slightly under $1.5 billion in 1957, the region's net receipts of long-term *official* capital amounted only to some $130 million. On the other hand, 10 low-income countries of Asia, which received less than $100 million of private long-term capital, had a new inflow of more than $600 million in official long-term capital and grants.

Outflow 1947-58 Listed

A table in the report shows gross outflow of private long-term capital from the main capital-supplying countries in the period 1947-58. It indicates that private capital from the United States rose from $1,185,000,000 in 1947 to a peak of $3,920,000,000 in 1957. Other figures for 1957 are: United Kingdom, $755,000,000; total for Continental Western Europe $1,025,000,000; grand total $5,700,000,000.

Another table shows the geographic distribution of United States private long-term investments, 1953-58. It indicates that U.S. investments in high-income countries reached a peak of $1,246,000,000 in 1958. At the same time, such investments in low-income countries reached $844,000,000, of which slightly more than half was in Latin America. During the period 1953-57, the United States direct investments abroad (net outflow of new funds *plus* retained profits) have been about 10 times as great, on the average, as the net outflow of United States portfolio capital (new issues minus redemptions). Direct investments, it may be noted, imply control by the investor of an enterprise abroad, while portfolio investments imply purchase of foreign securities.

Foreign direct investments in the Western Hemisphere at the present time consists mainly of United States investments in Canada and Latin America. Most of this capital has gone into petroleum, chiefly in Venezuela and the Caribbean. Investment in manufacturing was concentrated in the three countries with the largest markets, namely, Argentina, Brazil and Mexico. Most of the British investment also was in oil. More than half of German private direct investment abroad has been in the Western Hemisphere, concentrating in the iron and steel, chemical, and machinery industries.

Nearly one-fifth of total outstanding United States direct investments at the end of 1957 was in Europe, concentrated in the United Kingdom, France and the Federal Republic of Germany. These investments, the report states, "practically doubled in value between 1952 and 1957." No estimate can be made of total intra-European direct investments.

The chief attraction for foreign investment in most of Africa is the existence of large mineral deposits. The importance of French private investments in oil development in Africa has been rising in recent years, as the French Government has been reducing its share in the financing of this industry. Direct investment in the Belgian Congo is concentrated in the mining of copper, cobalt, tin and manganese. The development of gold and copper mines has attracted much foreign capital to Southern Africa, mainly from the United Kingdom and the United States.

In recent years, the Middle East has continued to attract foreign private capital, practically all of it for investment in petroleum exploration and extraction.

Foreign direct investment in India, according to the report, was traditionally concentrated in plantations, trading and transport, but, in recent years, investment in manufacturing, including petroleum refining, has become more important. Most of the foreign controlled enterprises in Japan are owned by the U.S. investors, who have increased their investments nearly ten-fold since 1950, when they were only $19 million.

The United Kingdom remains "by far the most important investor in Australia," accounting for over 75 per cent. of outstanding direct overseas holdings in 1957.

Portfolio Investments

Portfolio investments have shown a considerable increase of late. The contrast, however, persists between the post-war period, characterised by the predominance of direct investments, and the times before the First World War, when the public floating of Government bonds in leading capital markets represented the major international investment activity. In the United States, a substantial increase in floating of foreign securities began in 1956. In that year, new issues amounted to $457 million; in 1957, they rose to nearly $600 million, and the rise continued in 1958. More than half of the United States foreign portfolio is accounted for by Canadian securities. While Latin America is the region in which United States companies concentrate their direct investments, Latin American issues represent a steadily decreasing proportion of United States holdings of foreign dollar bonds.

In the United Kingdom, from the very low level of the immediate post-war years, capital issues on overseas account rose to more than £50 million in 1950. Since then, they have continued to grow and, after reaching an exceptional level of almost £80 million in 1954, they have reverted to an annual average of £60 million in recent years. Foreign issues on the United Kingdom capital market now represent approximately 20 per cent. of the domestic issues.

The study remarks that, in addition to direct investments by *ent-epreneurs* and purchases of foreign bonds and shares by individuals or institutions, the credit extended by banks makes a significant contribution to the international flow of private capital. In recent years, this contribution has assumed "increased importance," mainly on account of the participation of commercial banks in loans of the International Bank for Reconstruction and Development and the United States Import-Export Bank, as well on account of the export credits and other medium-term and short-term credit advanced by commercial banks. It is interesting to find from the U.N. study that, in recent years, private banks have done far more for underdeveloped countries than merely to facilitate their current trade. By participating in direct foreign investments, as well as by supplementing official loans, "they have somewhat obviated the inability of low-income countries and their enterprises to float issues on international capital markets." The study avers in conclusion that greater availability of credit from official and private institutions has bred confidence in the credit-worthiness of the underdeveloped countries, thereby improving their capacity to attract foreign equity capital.

RATE OF INTEREST ON WORLD BANK LOANS UP

In the past two weeks, the World Bank granted three loans for an aggregate sum of $85.45 million to three different countries, namely, Honduras, Colombia and Iran, for periods ranging from 15 years to 25 years. A feature of these loans is that all of them carry a uniform rate of interest of 6 per cent. per annum (including the usual commission of 1 per cent.), which represents an increase of ½ per cent. over those lent till recently. Even the loan of $25 million granted to the Koyna hydro-electric power project in India and that of $20 million to the Southern Italy Development Fund granted towards the close of April last carried only 5¾ per cent. per annum. Of the three loans, the first two are for development of hydro-electric power and the third to Iran is for road development.

The loan to Honduras amounts to $1.45 million, in which the Bank of America and the National Bank of Washington (D.C.) are participating, without the World Bank's guarantee, to the extent of $123,000 representing the first three maturities which fall due between 1st September 1962 and 1st September 1963. It is for a period of 15 years and is guaranteed by the Government of Honduras. The total cost of the power project, which will raise the capacity from 7,100 to 9,600 kilowatts, is estimated at $1.78 million and the World Bank loan will cover the foreign exchange cost of it.

A loan of $12 million for a similar purpose has been given to Colombia, which will provide 96,000 kilowatts of additional generating capacity to some towns in West Central Colombia. The Grace National Bank of New York is participating in the loan, without the World Bank's guarantee, to the extent of $100,000, representing part of the first maturity which falls due on 15th February 1963. The total cost of the project is the equivalent of $19.35 million and the World Bank loan will cover the foreign exchange requirements. The loan is for a term of 25 years and guaranteed by the Government of Colombia. Amortisation begins on 15th February 1963.

The loan to Iran granted last week is to the tune of $72 million for construction and improvement of roads included in Iran's second Five-year Development Plan. This is the largest loan given by the Bank so far for a road development project. Four private American banks, namely, the Bank of America, the Chase Manhattan Bank, the First National City Bank of New York and Irving Trust Company, are providing $12 million out of the loan, which is for a period of 17 years. The amortisation will begin on 1st May 1961.

This is the second loan granted by the World Bank to Iran, the previous one being for $75 million given in January 1957 to provide interim financing for development projects in the initial years of Iran's second seven-year Development Plan. The road development project of Iran will cost $185 million in Iranian rials and foreign exchange, the foreign exchange requirements and a small part of the local currency costs of which will be covered by the latest World Bank loan.

I.F.C. TO INVEST IN EL SALVADOR

The International Finance Corporation has agreed to invest $140,000 in Industrial Textiles S.A. (INTEXSA), of San Salvador, El Salvador, for expansion of production and improvement of quality of knitted textiles. The I.F.C. investment will provide finance for the purchase of machinery and working capital to the Company. It will be in U.S. dollar notes bearing interest at 7 per cent. per annum and maturing by 1969. In addition, the I.F.C. has the right to participate in the profit of INTEXSA and the option to subscribe at par to the ordinary shares of the Company.

The U.S. Export-Import Bank has decided to grant two credits, together amounting to about 1,200 million lire (about £686,000), to be equally shared between two Italian firms. The credit will be utilised for the establishment of a carbon black plant and for the expansion of the manufacture of telecommunication equipments. The credits are to be made available out of the proceeds realised from the sale of U.S. farm surpluses to Italy which have been set aside for investment in Italian enterprises.

MILL WORKERS AND RATIONALISATION

MADURA MILLS' EPISODE

IT is, indeed, regrettable that a section of cotton mill workers in India should continue to take a shortsighted attitude on the issue of rationalisation, which, as is widely admitted the world over, is the only feasible solution to the problem of high production cost and low quality of textile goods. How else can one explain the forced suspension of operations in the Madura Mills group of companies, Madurai, Madras State, with effect from 18th May 1959? The suspension has been due to the workers striking work by refusing to carry out their allotted duties. Here is what the management of the Mills says in the notice put up by it: "As a result of workers striking work in both the old and the new Mills by refusing to carry out their allotted duty, production has been brought to a forced stoppage, and it is impossible to run the Mills. In the circumstances, work in the Mills will be resumed only when, in the management's opinion, sufficient satisfactory assurances have been received that the workers are willing to work in accordance with the notice dated 24th April 1959 (increasing the workload for certain categories), to ensure an adequate flow of production."

The main contention of the Madura Mills management has been that certain workloads implemented in the Coimbatore Mills should be accepted as standard workloads and be implemented in Madura Mills, local adjustments being made, where necessary, in view of the different conditions that may be prevailing in a particular unit or shop. The labour is, however, "definitely unwilling to accept the new workloads." This attitude is certainly unreasonable. The workloads, it will be recalled, were recommended as far back as 1947 by the Standardisation Committee on the Textile Industry appointed by the Madras Government on which labour was adequately represented. These loads being higher than those prevailing in the State, the Committee itself made certain interim recommendations which were implemented by almost all the mills, particularly in the Coimbatore area.

Revised Workloads Not Heavy

The revised workloads introduced by the management of the Madura Mills are said to be the barest minimum necessary to put the mills on an even keel. The workloads concern only a few categories of workers numbering in all about 4,000 out of the 22,000 in all the three units of the Mills—Madurai, Ambasamudram and Tuticorin—and rovers, spinners, reelers, etc., are not affected by the change. Even these 4,000 workers are now asked only to work such workloads as are well within their capacity to perform and which are, to a larger extent, based on the standards obtaining in other mills as far back as from 1948, that is, before the Coimbatore and other mills had modernised. In fact, higher workloads than these obtain in some mills. Since the Madura Mills pay a full night allowance and, in a few categories, an enhanced basic average, it is imperative, as the management rightly says, that the number of operatives per 1,000 spindles be brought in line with the Mills' competitors.

Further, the management has notified departmentally that any permanent worker found surplus by reason of only the revised workload will, in the meantime, be granted special leave with wages for a few days, in order to make the changeover smooth and to remove any hardship to the workers concerned. As regards workers who are moved to occupations earning lower wages, the individuals will meanwhile be allowed the benefit of higher pay already drawn by them. The management has also notified that the workers—numbering nearly 1,300—rendered surplus as a result of the introduction of new workloads will be absorbed in other departments without prejudice.

It is thus evident that the adoption of the revised workloads in the Madura Mills will not at all result in any retrenchment or diminution in the wages of employees. Why then should workers oppose the move? Evidently, they have been influenced by the politicians who dominate the trade unions. The workers of the Madura Mills must remember that continued closure of the Mills will not be in the interests of either themselves or the management or the country as a whole, because such closure involves loss of wages to workers and reduction in return on investment to shareholders, not to speak of the loss of revenue to the Governments—Central and State. Indeed, the Madura Mills suffered a heavy loss of well over half a crore of rupees in 1958 and the shareholders, who were regularly receiving, a dividend of 20 to 17½ per cent., had to forgo their dividend. The market value of the Company's shares (Rs. 15 paid-up) has slumped to about Rs. 26, which is just half of the level prevailing three years ago. The shareholders have thus lost heavily both ways. The workers should realise that they are inflicting on themselves and the shareholders serious financial injury. It is a pity that trade union leaders should misguide the workers by making wrong statements and false promises. If they are really anxious to serve the cause of labour, they must recognise all this and induce the workers of the Madura Mills to accept the revised workloads, instead of putting forward such a fantastic suggestion as the one made by Mr. B. T. Randive, a Communist leader, namely, taking over of the Madura Mills by the Madras Government, as if the latter has nothing else to do. This is an absurd suggestion, for it amounts to asking the Government to take sides in the dispute. Nowhere in a democratic country does the Government take possession of a manufacturing unit just because of a dispute between workers and management.

The Government of Madras, especially the Minister for Labour, Mr. R. Venkataraman, has been making efforts to bring about a settlement, but these have not proved sucessful. In the course of a Press note issued on 16th May 1959, the Government said:

". . . Having due regard to the history of adjudications of disputes in these mills for over a decade, the Government are not hopeful of the issues moving forward to a settlement by a further reference to adjudication on an issue of this nature relating to workloads. As the parties, namely, management and the labour unions, are not prepared to move from the respective stands they have taken, the Government deeply regret that all their efforts over the past one year to secure an amicable settlement have proved fruitless. The Government wish to make it clear that its good offices will be always available, if both parties seek it at any stage of the dispute."

In the aforesaid circumstances, there is nothing that one can do, except to hope that the workers will realise their mistake in good time and return to work. A strike does no good to anybody.

(Concluded from next column)

should rise nearer to the level obtaining in Japan and other industrially advanced countries; when this was achieved, there would be less difficulty to meet the demands for higher wages. He dismissed as untenable the argument that higher workload would create unemployment and said: "India, not realising its human potential, is the only country that is wasting it. If a lakh or two out of a population of 400 million are additionally employed in textiles, it is not going to solve our great problem of employment. Does not the question of employing more hands and paying higher wages depend upon the capacity to bear the burden of such measures? The survival of the mother is vital to the life of the child."

Mr. Chettiar no doubt conceded that workers were entitled to a living wage, besides housing and other amenities, but asked: May not the Government that employs more men than the industry be the first to set an example? This is certainly an interesting poser. The figures cited by him reveal that, in the Madras State, a police constable, who must have a certain minimum standard of education and a high sense of public service and who has to face risks of all sorts, is paid only a basic salary of Rs. 25 and a dearness allowance of Rs. 31 per month, whereas a sweeper in a textile mill gets a basic salary of Rs. 30 and a dearness allowance of Rs. 58. Exclaiming "What a difference!", he asked: "If the Government that mints money and prints paper notes cannot disburse higher wages to its employees, how can a sinking industry be expected to afford it? Yet, the textiles are made to pay the highest wages obtaining in India. What a double standard!". While the textile industry is not a sinking industry as Mr. Chettiar described it to be, there is no doubt that the powers-that-be have two policies, one for workers in the public sector and another for workers in the private sector.

WAGE AND WORKLOAD IN COTTON INDUSTRY

EQUITABLE PROPORTION URGED

THE sponsors of the All-India Textile Association's sixteenth annual conference at Bangalore last week must be congratulated for having arranged a special discussion on time and motion study in relation to workload and wages in the cotton textile industry. Although the importance of the study has been emphasised for quite a long time now, the progress actually achieved in the direction has not been much. A proper appreciation of the study, as Mr. Karumuttu Thiagarajan Chettiar, a prominent millowner of Madura, aptly stated in his presidential speech at the section meeting, is of the utmost importance to a country that is in the progress of rapid industrialisation; if the textile industry is to survive, it should be enabled to manufacture goods at a standard cost.

How urgent is this need will be evident from the fact that the proportion of wage bill to the total production cost of mills is too large, being as much as 32 per cent., next only to that of raw material which accounts for 50 per cent. Mr. Chettiar attributed this high proportion not only to want of scientific fixation of workload and wages but also to the "fond attachment to ancient machinery which remained housed in time-honoured buildings." Urging that the machinery in mills is centuries old and calls for gradual, if not immediate, replacement, Mr. Chettiar observed:

"With the introduction of the Super-high-draft in spinning and of automatic looms, the antique ring frames with their unwanted and costly array of roving, intermediate and slubbing frames, as well as the ordinary looms, will readily provide valuable metal for modern foundries.

"It is a pitiable plight that India should persist in copying machinery of antiquated forms and installing them in new factories! Vain attempts are being made to rejuvenate at great cost old machinery. Is this not an expensive game, leading only to a self-inflicted suicidal tragedy?

"Are we not wasting time, energy, capital and labour by processing clean staple fibres through blow room and cards (intended only for impure cotton), instead of spinning their filament straight-away from ring frames as is being successfully done in France? When characteristically crude equipments and methods prevail in India, how can any amount of time and motion study be of any avail to our industry? Is it not up to the Government of India to afford facilities to modernise the industry and to bring it up to the level of excellence in other countries?"

Defects in Mills' Layout

Drawing pointed attention to the defects in building and layout of mills, Mr. Chettiar candidly remarked:

"Many old buildings are also quite unsuitable, with insufficiency of light, air and moving space, last being due to the cramming of machinery. Tons and tons of superfluous steel could be removed from old mills without disturbing their working. You will find a 12 x 6 girder of 44 lbs. a foot for the bottom chord of a truss, instead of a 3 x 2 angle of 4.25 pounds a foot. Some mills remind one of the Howrah bridge with their elaborate heavy steel fabrications!

"It is uncommon to find new buildings coming up even today, unscientifically conceived, with no care for orientation, the builders of which seem to be in blissful ignorance. Instead of designing them so as to let in light through northern windows, these have been placed on the south, east and west just to make the structure face a road! It is not realised how efficiency suffers from exposure to the direct rays of the sun both in the forenoon and the afternoon. From the standpoint of working convenience, a terraced building or a hall without pillars seems to be ideal. All these and other considerations are indirectly related to this subject of discussion here.

"Modern research institutions should help industry along scientific lines. When it is not forthcoming, it may be due to the paucity of personnel endowed with keen intellect, wide imagination and devoted aptitude for the difficult work of research."

Mr. Chettiar's object in referring to these defects was to stress the fact that environmental and psychological factors contribute to a reduction or an increase in workload, with reactions on output and wages.

Any impartial observer of trends in countries such as Japan and the U.S. where the textile industry has attained a high level of efficiency will fully appreciate the force of these observations of Mr. Chettiar, as also his statement that there is need for a just and equitable proportion between wage and workload. Unless such a proportion is ensured, one cannot expect a reasonable return on investment to which the millowners look forward and higher wages sought by labour. In the considered opinion of Mr. Chettiar, workload in the cotton industry

REORGANISATION OF TEXTILE INDUSTRY

COTTON BOARD CHAIRMAN STRESSES VOLUNTARY NATURE OF THE SCHEME

From A Special Correspondent

MANCHESTER, *26th May*

IT seems that a few more weeks will have to elapse before the vital details of the various schemes for reorganising the different sections of the cotton trade are made public. The Government White Paper gave glimpses of what is to be expected, but the compensation payments on which so much hinges are still being negotiated within the different branches. Until they are established, the extent of the response from interested parties cannot be gauged. A full-scale re-equipment programme covering the various branches would involve expenditure of nearly £100 million. This is in addition to the £100 million already spent since the war in capital equipment in the spinning and weaving sections. If such an extensive programme is carried through, the Government would contribute some £25 million towards the cost.

MANCHESTER LETTER

An important clause in the White Paper stipulates that the Board of Trade, advised by the Cotton Board, will decide after the closing date for redundancy in each section whether the amount of surplus capacity to be eliminated is sufficient to justify the Government grant towards modernisation and re-equipment. Only if this approval is given will millowners get the 25 per cent. subsidy for their new plant.

Under the terms of the plan, it is not proposed that the Cotton Board should purchase redundant machinery or assume the responsibility for disposing of it. Compensation payment will only be given in exchange for an undertaking that the plant will be physically scrapped. The Cotton Board will have powers to see that the provisions of such an undertaking are duly carried out.

The textile machinery manufacturers have assured the Board of Trade that they should have little difficulty in meeting reasonably phased demands from the mills for re-equipment. There is, incidentally, no stipulation that the machinery should be British-made. Although the majority will be purchased in this country, the firms concerned will retain their freedom to buy plant best suited to their needs from any source they like.

Compulsory Levy

Lord Rochdale, Cotton Board Chairman, among others, has stressed the voluntary nature of the scheme. No mill will be forced to close down, nor will owners be forced to scrap machinery. The incentive will be provided partly by the compensation payment, but also by the fact that the remaining plant will be subject to a compulsory levy based on terms laid down by individual sections. The uneconomic producer will, in this way, become even less competitive.

The one surprise contained in the White Paper was the short time suggested between the introduction of a sectional scheme and the final date for registering redundant plant. Only a month is likely to be allowed, but it has been explained that the compensation details will be available as soon as the schemes are submitted as an Order before Parliament. In this way managements will have sufficient time to decide their policy before the time limit expires.

Any assessment of the labour likely to be displaced by this reorganisation must depend on the response from the industry. Although it must be assumed that the number of mule spindles in operation will be sharply curtailed, there is the possibility that the more efficient use of machinery in other branches will not necessarily involve any big reduction in manpower. Over the past twelve months, it must be remembered, the available labour force in spinning and weaving alone has fallen by about 35,000. The White Paper comments: "If the present proposals are carried out, the large majority of those now employed in the industry will gain increased security in their jobs."

Exports in April

No striking change occurred in the appearance of Lancashire's overseas trade position last month. Cotton cloth imports once more exceeded comparable shipments by a clear margin, widening the adverse balance over the first four months of the year to a marked degree. In mitigation of this constant reiteration of glum tidings, it must be reported that exports of cotton yarn and fabric were the highest since November. Against this, cloth imports rose as compared with both the previous month and last year.

By the end of April, cotton cloth shipments had aggregated 110,831,000 square yards and imports amounted to 160,906,000 square yards, of which grey cloth accounted for 136,796,000 square yards. Comparative figures a year ago were exports of 147,640,000 square yards and arrivals of 139,875,000 square yards, including 122,914,000 square yards of loom-state fabric. Cotton yarn exports in April exceeded 2,000,000 lbs. for the first time since January. Imports aggregated 1,693,773 lbs., so that, after four months of 1959, the position is that arrivals at 7,968,323 lbs. are still 100,000 lbs. higher than shipments.

Earnings from all types of cotton goods so far this year have amounted to £20,904,259, as against £27,255,240 in the first four months of 1958. The cost of imports has been £13,775,566, as against £11,528,002.

Meanwhile, the first quarter's production totals have been issued by the Cotton Board. They show that single yarn output was over 40 million lbs. lower than in 1958, the comparative figures being 183,250,000 lbs., as against 224,240,000 lbs. The fall in cotton yarn production alone was almost 35 million lbs. Cloth output declined by more than 100 million yards at 472,820,000 yards, as against 579,530,000 yards. Roughly 85 million yards of this loss were in cotton fabrics.

Although the reduction in available manpower in spinning and weaving has slackened during the past month or two, the decrease in March still amounted to nearly 1,500. At the beginning of April, the labour force stood at 203,540, as against 207,990 at the end of last year. Twelve months previously, the number of operatives on the books was 235,750.

European Cotton Survey

Introducing a new statistical survey, covering European cotton markets, the International Federation of Cotton and Allied Textile Industries says that the need has lately been felt for an improvement in compiling this information and adapting it to changing conditions. The coming into effect of the European Economic Community has made such efforts increasingly essential.

Cotton spindleage in place in Europe declined in all categories in 1957, but the number of active spindles showed hardly any change. Available spindles decreased by 2.4 per cent., while those active amounted to 86 per cent of those in place. It is significant that Common Market countries increased their active spindleage from 18,035,000 to 18,348,000.

In the second quarter of 1958, spindle activity declined in all sections by 13 per cent. as compared with the same period in the previous year. Spindle hours worked per active spindle were at a high point of 817 in the first quarter of 1957, a figure which declined gradually to 687 in the second quarter of last year.

While cotton looms in place declined by 31,411 during 1957, the number of active looms decreased by only 15,375 in this period. In the weaving section, as in spinning, the Common Market countries on the whole showed a higher degree of activity than the rest of Europe.

Yarn production was lower in the first two quarters of last year than in the same period of 1957, ranging from a fall of 4 per cent. in cotton yarns to 7 per cent. in mixture yarns. In the first half of 1958, there was an average drop of 5 per cent. in cloth production in all European countries. Rayon filament fabric showed the sharpest decline, being 18 per cent. down, but mixture cloths increased by 13 per cent. in production. The Common Market countries, states the Federation, again made a better showing than the other European countries, including the United Kingdom.—*All Rights Reserved.*

NEW COTTON STRAIN

A scheme for the multiplication and distribution of C.J. 73 (Sanjay) cotton in the Saurashtra region has been sanctioned by the Bombay Government for one year ending February next in the first instance. The scheme will cost about Rs. 69,000. The improved strain of cotton called "Pratap" was first introduced in the Mathio tract of Saurashtra region in 1953-54 and the scheme was in operation till February last. Later, it was discovered that the new strain, namely, C.J. 73 (Sanjay) evolved by crossing Kanpur 520 and Jarilla cottons was superior in all respects to "Pratap" strain.

AN ADVERSE SEASON FOR RAW COTTON

OUTPUT HIGHER—OFFTAKE AND PRICES LOWER

WITH hardly two months left for the new 1959-60 world cotton season to start, the time would appear to be appropriate to look back upon what has transpired in the current season. Statistically speaking, the present season marks a turning point in the world cotton situation. By the beginning of the season, stocks had fallen to their lowest level since 1953 and, since then, production and disappearance have been roughly in balance. The liquidation of cotton surpluses has thus been brought to an end. The prospects as at present are, however, for a build-up of stocks in the next season, thanks to the relaxation of acreage controls in the U.S. and a possible increase in production.

How did raw cotton fare in the present season? According to the annual review of the world cotton situation, published in the latest monthly review of the International Cotton Advisory Committee, Washington, the 1958-59 season has been an adverse one for cotton. This verdict is borne out by the fact that prices have fallen to their lowest levels in recent years, consumption has continued to decline in many countries, while, intensified by the prevailing uncertainty over the future trend of cotton prices, there has been a further marked contraction in international trade. The net result of all these, according to the review, is that producers and consumers alike have been faced with insuperable difficulties as far as cotton is concerned. Declining prices have adversely affected the financial resources of many producing countries, while there is a growing concern over what is likely to happen in the future. The textile recession in rayon as well as cotton has materially affected incomes and employment in the textile industries of Western Europe and Japan. Ultimately, this may tend to determine investment in these countries.

The 1958-59 season started with a carryover of 18.4 million, which was 2 million bales lower than that at the beginning of the previous season. The continued decline in U.S. stocks during the last season was accompanied by a noticeable build-up in stocks in other producing countries. In most cases, however, the increase was quite modest, but substantial increments were noticed in Mexico and Egypt. Sudan was the only real exception, as stocks in this country declined sharply.

Free world production of cotton this season was 1.2 million bales higher at 29 million bales of 478 lbs. The U.S. share in the rise was 500,000 bales, while 700,000 bales were accounted for by other free world countries. With five million acres in the Soil Bank programme and harvested acreage in the U.S. the smallest since mid-1870s, it seemed that there would be every possibility of a further reduction in stocks this season, despite the expected increase in production in other countries and the less favourable outlook for consumption. The situation was changed, however, when the national average yield in the U.S. rose to nearly a bale per acre. This was over 50 lbs. higher than the 1955-56 record and more than offset the reduction in acreage with the result that production actually increased by half million bales.

Record Acreage

Elsewhere in the free world, acreage set a new record this season. There were marked increases in Mexico, Brazil, the Sudan and Uganda, with smaller increases in the U.A.R. and Turkey. This occurred at a time of generally falling cotton prices, proving once again that, up to a certain point, cotton production may be relatively inelastic during a downswing. Average yield increased only fractionally, though there were wide differences in respect of individual countries. Aggregate production outside the United States set a new record of 17.5 million bales which can be mainly attributed to acreage expansion. The increase was entirely in the extra-long staple group; production of Upland types may have declined fractionally. Supply outside the United States during the current season is presently estimated at 27.2 million bales, with the increase of 1.4 million bales over last season's figure about evenly divided between the addition to stocks and the increment to production.

While production was higher, consumption in the free world countries as a whole showed a decline from 28.5 million bales in 1957-58 to 27.9 million bales during this season. Consumption in the U.S. was higher, but the rise was offset by the decline elsewhere, so that world consumption showed a net decline of 600,000 bales. Higher consumption in the U.S. was due to the improvement in the textile situation. After a prolonged recession, which lasted for over two years and which carried consumption to its lowest level for the entire post-war period, the textile situation in this country has shown a marked improvement this season. Nevertheless, manufacturers have shown a certain caution in respect of inventory policy, and, in terms of cotton consumption, the increase is likely to be limited to 300,000 or 400,000 bales. Consumption in Canada is now running significantly ahead of that a year ago and some increase is in prospect for the full season. Continuing the trend initiated last season, cotton consumption in Western Europe is expected to show a marked decline this season. To some extent, this can be attributed to cyclical factors. Overproduction in 1956-57 and the early months of 1957-58 amplified the degree of adjustment necessary when once the climate of demand changed and the situation has been further aggravated by the uncertainty surrounding cotton prices. Declining exports of yarn and cloth and continuing high level of imports are other factors in the unfavourable textile situation in these countries. Competition from foreign imports is responsible for the growth in protectionist sentiment recently.

Apart from cyclical factors, it has long been recognised that there is considerable excess capacity in the Western European textile industry which has adversely affected operating efficiency and weakened Europe's competitive position in world markets. In the light of the experience of past few years, however, plans are afoot towards rationalisation in many countries to put the industry on a firmer footing in the future. Nearly every country in Western Europe has been affected by the textile recession. Cotton consumption in the United Kingdom showed a decline of over 20 per cent. and this country is now second to the Federal Republic of Germany.

Elsewhere in Western Europe, consumption in many instances is at, or near, its lows for the post-war period and even below pre-war level in some cases. Portugal, Greece and perhaps Spain are the only exceptions to the general trend. Indications are that, at the present rate, consumption in Western Europe this season will decline to 6.6 million bales, as compared with 7.5 million bales, last season. Cotton yarn output continues to be under control in Japan and various other measures have been taken to alleviate the textile situation, including the freezing of surplus yarn stocks and buffer stock purchases of cotton cloth. The present curtailment rates will continue in effect during the second quarter of 1959 and, on this basis, consumption during the whole season will decline to around 2.2 million bales, the lowest level since 1954-55 and about 650,000 bales lower than the 1956-57 peak.

In India, the decline in cotton textile exports has been offset by increased domestic demand and consumption is expected to be on a par with that of last season.

The following comparative table gives the supply and distribution of cotton during the three seasons 1956-57, 1957-58 and 1958-59.

(In million bales)

	1958-59*	1957-58	1956-57
Opening Stocks—			
United States	8.7	11.4	14.5
Other net exporters	3.8	3.0	2.6
Net importers†	5.9	6.0	5.0
Total	18.4	20.4	22.1
Production—

United States	2.7	5.7	7.6
Other countries	7.8	6.9	6.7
Total	10.5	12 6	14.3

*Estimated. † Including India and afloat.

Reflecting the decline in cotton consumption and some apprehension over cotton prices, international trade has fallen to the lowest level for many years. Of the total decline of more than two million bales, over one million is attributed to lower consumption and the balance to spinners' long position which is a clear indication of the adverse effect on cotton price of price instability.

In the U.S., with prices remaining uncompetitive, despite a 6.5 cent subsidy, exports are likely to aggregate 2.7 million bales or less than half of last season's figure. The decline in U.S. exports exceeds the total reduction in free world trade and it follows, therefore, that, in the aggregate, exports from other countries will have increased.

Export Availability

With a much large carryover and record production, export availabilities outside the U.S. have increased to over 9 million bales this season. Trade has been highly competitive, but exports from many countries have increased and total exports are presently expected to be between 7.5 and 8.0 million bales, as compared with less than 7 million bales in each of the two previous seasons. Despite this relatively good performance, however, there may be a further increase in carryover in these countries on 1st August 1959. Also, export earnings will be much lower than last season by reason of sharply reduced cotton prices which has contributed to deterioration in the balance of payments position of primary producing countries recently.

By contrast, the strengthening in reserves in Western Europe was accompanied by a movement towards currency convertibility and prompted further trade liberalisation measures. Japan, too, has added materially to its reserves over the past year. It may be said, therefore, that discrimination in cotton purchases due to currency factors is now less obvious than in earlier years.

Prices in the United States, particularly the higher grades, have remained below the support level this season and, consequently, a record proportion of the 1958 crop has been placed in the Government loan. Limited free supplies in the U.S. are expected to have some effect on domestic prices towards the end of the season and prices have already recovered from their February levels. The support level for 1958 Upland cotton, Middling 1-inch staple, was 35.08 cents per pound, as compared with 32.31 cents in 1957-58. The C.C.C. export sales price for this quality has averaged around 28.50 cents. Prices in other markets have declined sharply this season and most medium staples are now selling at prices ranging from 5 to 7 cents under the level prevailing at the beginning of the season. Under pressure from a record supply, however, the most serious decline has occurred in the extra-long staple group where prices have fallen by up to 30 per cent. The substantial premia which these cottons normally command have thus been virtually eliminated.

Result of Fall in Prices

As a result of the fall in prices, many countries have been forced to continue their price support operations to ensure adequate remuneration to producers. Reduction in export prices of cotton manufactures to meet foreign competition has been accomplished by various methods, such as preferential exchange rate for cotton, discounts on cotton exports, direct subsidies, and bilateral trade agreements all of which, in effect, amount to dual price systems. Export taxes have been reduced in a number of countries which have helped to cushion producers from the full effects of the decline in prices.

The experience of the season surely holds out certain lessons for the future. The difficulties experienced during the period amply demonstrate the dangers of unilateral action on the part of producing nations and highlight the need for greater co-operation in planning for the future. Competition, intense as it is, and the volatile nature of the textile trade are gradually bringing home to manufacturers of cotton the inevitability of structural changes in the textile industry and the need for rationalisation.

RAISING EFFICIENCY OF SUGAR INDUSTRY

INDIA CAN LEARN MUCH FROM AUSTRALIA

CONSIDERING the continuously rising population, the changes in the dietetic habits of people and the increase in purchasing power as a result of national development plans, consumption of white sugar in India is bound to expand considerably in the coming years as compared with the present annual rate of about 2.05 to 2.10 million tons. It is, therefore, necessary to take energetic steps from now alone to raise the level of efficiency in all the branches of sugar industry and its capacity. The problems confronting the industry are quite varied and complex. One of the ways of finding the right solutions for them is to make a detailed study of the ways in which other cane-sugar producing countries have tackled similar problems and achieved notable progress. Australia is one such country from which India can learn much.

Australia is the world's eight largest sugar producing and fifth biggest exporting country. The average annual production is about 1.2 million tons (1.4 million tons in 1958) approximately valued at £A58 million, of which a little more than half is exported, according to an interesting article published in the London, *Financial Times* supplement on Australia. The sugar industry in this advanced country in the South consists of three sectors—the cane farmers, the sugar mills in the cane-growing districts, and the sugar refineries usually in or near the main centres of production. The sugarcane crop is limited only by the market outlets for it and, in order to cope with the situation, the industry has become one of the most highly organised in Australia.

Productivity of Cane Farms

There are about 9,000 sugarcane farms, averaging 50 acres each, which supply cane to 34 crushing mills. Fourteen of these farms are owned co-operativcly by the farmers, seven by the Colonial Sugar Refining Company and the rest by various other firms. The productivity of the cane farms is very high. The average yield of cane per acre comes to as much as 25 tons and recovery to 15.14 per cent. The average comparative figures for India are 12.73 tons and 10 per cent., respectively. The sugarcane grown in Australia is claimed to be the sweetest in the world, the sugar per acre averaging nearly 3.50 tons, as against 1.26 ton in India.

The high efficiency attained in the cultivation of sugarcane is attributed to the incentive of personal ownership, high degree of mechanisation, specialisation (few Australian cane farmers grow other crops), and the readiness with which farmers adopt new ideas from the technical advisory services. This quality must be attributed to the high degree of literacy among the farmers. It is said that machines are used for almost every operation on the farms—ploughing, planting, fertilising, cultivating and assisting with the harvest. There are about three tractors for every two farms.

While no restrictions exist on the growing of sugarcane, control on production in Queensland, which accounts for 90 per cent. of the total sugar output of Australia, is exercised through a system of assigning cane lands within any mill area to that mill. The grower must deliver his cane only to that mill and the mill must accept delivery if the cane is of the required minimum standard quality. New areas for cane cultivation will not be assigned unless the mill situated there can both manufacture and market the additional sugar. This system of control is operated by the Central Sugarcane Prices Board.

The next stage, that is, raw sugar production, is regulated by allotting each mill a "peak" figure up to which payment will be made at ruling prices. A mill may, of course, produce sugar beyond its "peak," but the disposal of this excess output will be dependent on markets beyond the aggregates of the "peaks" or upon shortfalls in other mills. The sugar produced over the "peak" may—and generally does—fetch a lower price than the other sugar.

Since as far back as 1900, Queensland has maintained sugarcane research centres. There is a bureau in Brisbane and four fully equipped experimental stations with sub-centres in the producing areas. The finance required for meeting the expenditure on research is raised by means of a levy on every ton of cane delivered to the sugar mills, such being borne equally by the grower and the miller. The Queensland Government also contributes to this fund, while the Commonwealth Government makes grants for specific projects such as research in harvesting and mechanisation. In India, it may be noted, the State Governments collect every year crores of rupees from sugar factories through the imposition of a cess on the cane used for making white sugar. The proceeds of the cess are utilised not only for cane development work but also for wide and varied purposes other than cane development. The cane grower does not contribute anything in return for the benefits he obtains as a result of development and research work.

Sugar Marketing

The Australian sugar marketing system has also special features. All raw sugar produced in Australia is purchased and marketed by the Queensland Sugar Board. The raw sugar will be refined in the refineries—there are four refineries in Australia—which act as the Board's agents. Marketing of sugar is regulated under a series of agreements between the Australian Government and the Queensland Government. The latest agreement made in 1956 will run until 1961. The agreement ensures protection to the sugar industry against sugar from "cheap labour" countries. This is done through an embargo on sugar imports. In return, the Queensland Government undertakes to control production; to acquire all raw sugar produced; to make sugar and sugar products available for sale in Australia at prices specified in the agreement; to pay export rebates on the sugar content of manufactured goods containing sugar; to assist the manufactured fruits industry by contributing to the Fruit Industry Sugar Concession Committee; and to accept responsibility for any loss arising from the export of sugar from Australia.

Since the import embargo gives the Australian sugar a monopoly of the domestic market, some controls over prices is found essential. The domestic price is specified at the commencement of the agreement, but may be varied later according to production, cost movements, etc.

Overseas marketing of sugar is governed by the British Commonwealth Sugar Agreement (B.C.S.A.) and the International Sugar Agreement (I.S.A.). These agreements together give Australia an export quota of 632,000 tons for 1959 and 650,000 tons a year for 1960 and 1961. Under the B.C.S.A., half the Australian quota is sold to the U.K. at a negotiated price and the remainder at world price *plus* preference. The Australian quota may be increased, if supply from other Commonwealth producers fall short. In recent years, Australia has developed profitable markets for sugar in Eastern countries, notably Japan. New Zealand and Canada are other good customers.

About half the raw sugar produced is consumed at home. The *per capita* consumption in Australia is the highest in the world. In 1957, it was 54.8 kilograms (0.45 kg=1 lb.), as against 5.1 kg. in India, 51.5 kg. in the U.K., 42.6 kg. in the U.S., 46.1 kg. in Cuba, 54 kg. in Denmark and 46.3 kg. in the Netherlands. This high consumption, it is said, "is an index of low-priced refined sugar and of high average income per head (as much as Rs. 5,117 per annum), combined with a comparatively even spread of income."

The high level of efficiency in the Australian sugar industry is due not a little to the efforts of the designers and manufacturers of milling equipment who have supplied by far the greater part of the plant at present in use in Australia. The Associated Engineering Manufacturers of Australia is a firm formed in 1955 with Government support to gain export business in sugar milling plant (and other engineering products). This Company has supplied sugar machinery to India, Mauritius, South Africa and the Philippines.

Features built into the DUNLOP Rayoncord VEE Belt

Designed to meet the new American Standard Horse Power ratings.

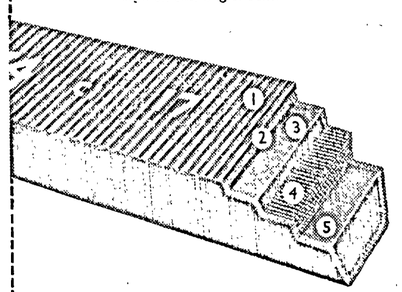
1 TOPPING RUBBER seals and protects the Jacket overlap.

2 JACKET of multilayer rubber impregnated fabric armours the belt against surface wear.

3 FILLER RUBBER holds the cords in correct place, resists distortion and cushions the cords against sudden starting shocks.



4 REINFORCING MEMBER of high strength rubber impregnated synthetic textile cords provides adequate strength and resistance to strain and fatigue.

5 BASE RUBBER specially compounded to resist frictional heat provides an ideal foundation for the cords and gives a large gripping surface on the sides.

LARGER ALLOCATION OF COFFEE FOR EXPORT

ROBUSTA CROP AT A RECORD LEVEL

THE Coffee Board has, at its forty-seventh meeting held at Bangalore on 28th May 1959, decided to allocate a quantity of 10,000 tons of plantation coffee from the 1959-60 season for export, subject to the availability of stocks. This represents an increase of 1,850 tons over the revised quantity (8,150 tons) recommended by the Marketing Committee out of the 1958-59 crop—the original allocation from the current crop being 8,406 tons. The allocations from other varieties have not been announced. The larger allocation of plantation coffee from the next crop has been made with a view to earning more foreign exchange and also to making available quality coffee in foreign countries. Although the hopes of harvesting a bumper crop of 50,000 tons of coffee during the 1959-60 season have receded due to the delay in the seasonal showers, the next crop is expected to be higher than the current season's crop.

Addressing the Board meeting earlier, Mr. Tenneti Viswanathan, the newly appointed Chairman, in his maiden speech, stressed the need for increasing production and raising its quality. While striving to give the domestic consumer the quantity he required in better quality, Mr. Viswanathan said that, by increasing production, it should be possible to capture the attention of world markets. This statement does not sound convincing. It is not clear how a mere increase in production or the necessity to earn foreign exchange is sufficient to bring about an increase in exports. It is the ability of Indian coffee to compete effectively in world markets that will ensure exports. World market conditions have changed in favour of buyers and the price of Indian coffee is above world parity. In these circumstances, it will be pretty difficult to step up exports of coffee, unless special incentives are offered.

The Coffee Board, in pursuance of its scheme of developing coffee industry sanctioned by the Government of India in 1956, has provided for intensive cultivation of 14,000 acres of land already under coffee and for bringing fresh land under coffee to the extent of 23,700 acres. In addition, it has undertaken a survey of the Agency tracts in Andhra and Orissa, at the request of the respective State Governments, to assess their suitability for cultivation. The hilly tracts in West Bengal and Assam have shown promise of vegetative growth of coffee, but the possibility of production on a commercial scale has yet to be established.

The latest estimate of the 1958-59 crop, as revised by the Coffee Marketing Committee, is 45,430 tons, made up of 19,050 tons of Plantation, 7,020 tons of Arabica Cherry and 19,360 tons of Robusta, as against the previous estimate of 44,810 tons, consisting of 27,895 tons of Arabica and 16,915 tons of Robusta. The current season's Robusta crop is said to be the highest on record, the previous best being 14,710 tons picked in 1957-58. In view of the revised estimate, which places the Arabica variety at a lower level and the Robusta higher, the Marketing Committee has recommended a slight reduction in export allocation of Plantation coffee and an increase in Robusta, the quantities recommended being 8,150 tons of Plantation (as against 8,406 previously recommended), 3,332 tons of Arabica Cherry (3,327 tons) and 5,505 tons of Robusta (2,761 tons), the total of all varieties being 16,987 tons, as compared with 14 281 tons exported out of the 1957-58 crop and 15,472 tons out of the 1956-57 crop. Out of this allocation, 9,322 tons (8,146 tons of Plantation, 786 tons of Arabica Cherry and 390 tons of Robusta) have been sold for export up to the end of May, the corresponding figure for the previous year being 5,499 tons. This includes 1,600 tons sold to the German Democratic Republic, 600 tons to the U.S.S.R., 300 tons sent to London for sale on consignment basis and 80 tons sent to London under the quality control programme.

The internal offtake also shows an encouraging trend. The releases to the internal market from January up to May 1959 amount to 12,687 tons, as compared with 10,619 tons in the corresponding period of 1958. The total internal consumption during the current year is expected to exceed 30,000 tons, as against an offtake of 27,570 tons in 1958, 26,620 tons in 1957 and 24.189 tons in 1956.

The payment to growers on their deliveries to the 1958-59 pool amounted to Rs. 2.30 per point and the final payment is proposed to be made during the current month. The total pool payment for the 1957-58 season was Rs. 2.81 per point. Loan assistance under the Coffee Development Plan has been availed of by 207 applicants to the tune of Rs. 10.81 lakhs.

To revert to the decisions of the Coffee Board. In addition to allocating larger quantity of Plantation coffee for export out of the 1959-60 crop, the Board, with a view to improving the quality of coffee delivered at the pool, has accepted the recommendation of the Coffee Quality Committee to make certain deterrent deductions, in the payments to be made on coffee delivered under-dried to the pool by the planters. The Board has accepted, in principle, the constitution of a wage board for plantations, but has recommended to the Government that regional as well as production committees should be appointed, instead of a single wage board for the whole of the country for all the plantation crops.

NEW USES FOR BRAZIL'S "EXPURGO" COFFEE

Tin Pan Alley long ago informed the world that, "there's an awful lot of coffee in Brazil." At times, there's even more. This fact has kept many a Brazilian official awake at night—not from drinking the coffee, but from trying to decide what to do with the surplus. In the years of good crops, the coffee surplus is held off the market by the Government on the recommendation of the Brazilian Coffee Institute (B.C.I.) as a measure to prevent the depression of world coffee prices. The reserve built up can also serve as a buffer for poor crop years. However, the stored surplus had grown to 12.5 million 60-kilogram bags (820,000 tons) by last fall—about six months' normal production. This is too much to hold for lean years, and the costs for warehousing were mounting. Naturally, also, beans held too long in storage deteriorate somewhat.

To reduce the surplus and to forestall wastage, the B.C.I. has lately been withdrawing the poorest 10 per cent., labelled "expurgo" grade coffee. This has been offered to industry within the country to make whatever non-beverage use of the beans it could. Except for the extraction of small amounts of oil for use in soap and salad oil, expurgo coffee has served no useful purpose.

In December last, at the B.C.I's invitation, Dr. R. M. Silverstein, senior organic chemist of the Physical Sciences Division of the Standford Research Institute and S. A. Cogswell, senior chemical technologist of the Economics Research Division, made a trip to Brazil to study the situation. The B.C.I. officials hoped for some simple method of extracting caffeine—which amounts to about 0.8 per cent. of the beans—and oil from expurgo coffee. They also hoped to find some commercial applications for the residue. Their research resulted in a process that converted the beans to caffeine, oil, and a meal.

The process begins with the flaking of the green coffee beans into particles less than two millimetres thick. Then, by using non-corrosive hot benzol, the caffeine and oil are extracted together. They are then separated from each other and refined. Caffeine can be sold in world markets for use in drugs and soft drinks. Brazil has a shortage of edible oils, hence the oil extracted from the expurgo coffee should find a ready domestic market. Meal containing about 16 per cent. protein remains after the extraction. After this is steamed to remove the benzol, it is expected to be suitable for animal feed.

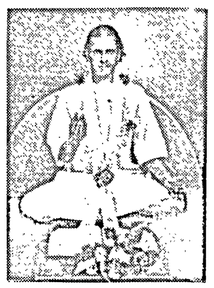
Investigators who worked on the project anticipate that the process may be scaled up to commercial size for use in existing extraction plants in Brazil. A pilot-plant run was set up for the process on 31st December, and at present the results of the plant's operation are being evaluated. The overall result of the new process is to transform bags of expurgo coffee—a low grade that is a burden to store—into products having many times the value of the original beans.

Brazil has declared that, only on condition that its position as main coffee supplier of the world be taken into account, will it sign future agreements on the exportation of coffee. During the last seven months, Brazil has recovered its traditional share of world exportation and its shipments for the present coffee year will amount to 17 million bags, that is, several millions over the 1957-58 season. These figures form the basis upon which any future system of assignments would have to be calculated. The present stability in the price of coffee is in large part due to the great effort exercised by Brazil to buy up excess production internally.

Lectures

On every Saturday in the evening and Sunday in the morning, Lectures by Shri Yogiraj Umeshchandraji and other learned dignitaries are delivered on various subjects like Yoga, Vedanta, Devotion, Spiritual Strength, etc., at Shri Ramtirth Yogashram.

UMESH YOGA DARSHAN (First Part)



SHRI YOGIRAJ UMESHCHANDRAJI

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji, is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 100 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho-Therapy and many other Therapies. The book is the best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

PRICE: **Rs. 15**/- Plus Postage **Rs. 2**/- extra. No. V.P.P. sent.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available from here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2.50** including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers are available for Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and lets sleep sound. Most ideal for body massage. It is useful to every one in all seasons. Prices: **Rs. 4**/- for big bottle and **Rs. 2**/- for small. Available everywhere.

WORLD CHAMPIONS CHOOSE Firestone ..SO SHOULD YOU

Jimmy Bryan, winner of the world-famous 'Indianapolis' 500-mile race, paid a glowing tribute to Firestone tyres, which stood up so well to a speed of 180 miles an hour, subjected to brutal pounding, twisting and grinding on this exacting race track. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

EARNINGS OF FACTORY WORKERS

INCREASE OF FOUR PER CENT. IN 1957

DESPITE their many limitations, statistics of *per capita* average earnings of factory workers compiled on the basis of the data received under the Payment of Wages Act, 1936, from the various States and Union territories, serve at least to indicate the broad trend of the movement of factory workers' wages from year to year. But, in drawing conclusions from them, one has to be very circumspect, because the returns themselves do not often contain all the relevant data nor is their quality such as to reflect a precise picture. Further, not all factories covered by the Act furnish their primary returns to the State authorities, even though it is a statutory obligation. Consequently, the consolidated returns submitted by the States relate to factories giving the data only and not to all factories covered under the Act. The proportion of factories not submitting returns varies from year to year. Thus, in 1957, the latest year for which figures are available, of the 21,558 factories covered under the Act (excluding Railway workshops and seasonal industries) returns were submitted by only 15,014. In 1956, only 14,219 factories out of a total of 19,679 factories covered under the Act submitted returns. This shortfall, it may be noted, vitiates to some extent the comparability of the available statistics.

In addition to this, the method of computation of the average annual earnings from the data contained in the returns is, inevitably, such as not to reveal the correct position. To illustrate, the average daily employment for an industry is derived by summing up such figures (obtained by dividing the aggregate number of attendances during the year by the number of working days) reported by individual units belonging to that industry. In order to arrive at the average annual *per capita* earnings, the total gross wage bill of an industry is divided by the corresponding average daily employment. The average annual earnings thus derived are obviously subject to the variations in the number of working days and contain an element of error in any comparison made on the basis of these figures. To eliminate the effects of variations in the number of working days, figures of average daily *per capita* earnings can be derived by dividing the gross wage bill by the corresponding total man-days worked. But there are difficulties even here.

Subject to all the limitations of the statistics indicated above, *per capita* annual earnings, taking all the States and Union territories together, according to an analysis of the trend of earning of factory workers in 1957 contained in a recent issue of the *Indian Labour Gazette*, advanced from Rs. 1,186.8 in 1956 to Rs. 1,233.9 in 1957, representing a rise of about 4 per cent. This conclusion is based on the data supplied by 70 per cent. of the factories covered under the Act which furnished returns during 1957, as against 72 per cent. during 1956. The coverage was particularly poor in Madhya Pradesh and Rajasthan during both the years, though there was some improvement in the position during 1957, as compared with earlier years.

A state-wise analysis of figures of earnings reveals that the States in which an appreciable rise in *per capita* average annual earnings was recorded between the two years were Andhra Pradesh, Assam, Madhya Pradesh, Rajasthan and Mysore. The following table gives the State-wise breakdown of earnings during 1957 and 1956:

Average Annual Earnings of Factory Workers—State-wise

States	1957		1956	
	Average daily employment	Average *per capita* annual earnings	Average daily employment	Average *per capita* annual earnings
		Rs.		Rs.
Andhra Pradesh ..	46,862	1,030.8	46,086	949.9*
Assam	8,946	1,833.6	9,128	1,525 9
Bihar	1,07,842	1,299.2	1,06,514	1,235.6
Bombay	7,25,808	1,452.4	7,37,864	1,414.8
Kerala	44,627	805.0	63,502	735.9
Madhya Pradesh ..	59,804	1,138.7	81,242	982.4
Madras	2,41,987	978.9	2,06,045	950 1
Mysore	11,117	967.3	25,718	852.5
Orissa	15,659	956.8	13,771	948.5
Punjab	52,210	955.3	41,006	991.0
Rajasthan ..	13,497	907.1	16,258	769 6
Uttar Pradesh ..	1,72,708	1,077.5	1,69,005	1,014.1
West Bengal	5,37,146	1,173.6	5,37,752	1,141.6
Andaman and Nicobar Islands ..	2,808	657.1	3,787	688.3
Delhi	46,903	1,493.4	44,857	1,466.9
Tripura	61	933.0	111	854.3
Total ..	20,87,845	1,233.9	20,43,636	1,186.8*

* Revised.

Note.—The above figures do not cover railway workshops (the returns in respect of which are not collected by State Authorities) and the seasonal group of industries consisting of food beverages, tobacco and gins and presses.

Industry-wise, increases in average annual earnings were recorded by the majority of industry group. The chief among the industries showing a rise in earnings were footwear and other wearing apparel, furniture and fixtures, printing, publishing and other allied industries, paper and paper products, leather and leather products, chemicals and chemical products, products of petroleum and coal, machinery, electrical as well as non-electrical, electricity, gas and steam, water and sanitary services, recreation and personal services. Average annual earnings in the textile industry taken as a whole was more or less unchanged, those in non-metallic mineral products registered only a minor rise, while earnings in industries such as wood and cork, rubber and rubber products, basic metal, and transport and transport equipment showed a decline. The following table illustrates the position:

Average Annual Earnings of Factory Workers—Industry-wise

(In rupees)

	1957	1956	1955
INDUSTRY GROUPS			
Textiles	1,243.3	1,244.5	1,191.3
Footwear, other wearing apparel ..	1,308.1	1,093.1	1,101.3
Wood and cork except furniture ..	726.8	762.2	670.0
Furniture and fixtures	958.6	716.0	681.0
Paper and paper products	1,157.6	1,030.4	1,062.5
Printing, publishing, etc.	1,217.5	1,188.6	1,152.1
Leather and leather products	889.8	756.6	836.6
Rubber and rubber products	1,497.2	1,501.7	1,388.4
Chemicals and chemical products ..	1,147.3	980.9	957.2
Products of petroleum and coal ..	1,900.3	1,688.2	1,492.9
Non-metallic mineral products	835.3	833.3	781.5
Basic metal industries	1,463.2	1,487.9	1,673.4
Metal products (except machinery and transport equipment)	1,145.4	1,119.5	1,048.2
Machinery (except electrical) ..	1,189.3	1,136.2	1,100.4
Electrical machinery, apparatus, etc. ..	1,437.9	1,314.4	1,340.0
Transport and transport equipment ..	1,481.5	1,509.1	1,439.6
Electricity, gas and steam	1,591.8	1,455 1	1,371.7
Water and sanitary services	1,147.5	1,115.9	1,041.4
Recreation services	1,302.0	1,227.4	1,037.0
Personal services	488.4	405.2	362.8

Note.—The footnote given under the above table applies to this table also.

The breakdown of *per capita* average annual earnings during 1957 into the various components shows that basic wages and cash allowances (including dearness allowances) constituted about 53 per cent. and 39.4 per cent. respectively of average annual earnings for all the States. Of the remaining 7.6 per cent., bonus accounted for 5.6 per cent., money value of concessions 1.6 per cent. and arrears 0.4 per cent. The share of bonus in average annual earnings was comparatively high in Assam (13.3 per cent.), Bihar (12.6 per cent.) and Andhra Pradesh (9.4 per cent.) and the share of money value of concessions was comparatively high in Assam (10.8 per cent.), Madras (8.9 per cent.) and Bihar (4.7 per cent.).

Average daily earnings, taking all the States together, ranged from Re. 1.35 in processes allied to agriculture to Rs. 6.29 in products of petroleum and coal, the overall average for all industries together being Rs. 3.67. In Bombay, the range was from Re. 1.60 in the tobacco industry to Rs. 6.85 in products of petroleum and coal, with an overall average of Rs. 4.54; in Madras, from Re. 0.63 in food to Rs. 5.60 in electricity, gas and steam with an overall average of Rs. 2.61, in Kerala from Re. 1.27 in food to Rs. 6.89 in products of petroleum and coal with an overall average of Rs. 2.11, in Rajasthan from Re. 0.60 in food to Rs. 5.44 in electricity, gas and steam, with an overall average of Rs. 2.53, in Delhi from Rs. 2.52 in rubber and rubber products and non-metallic mineral products to Rs. 6.68 in products of petroleum and coal, with an overall average of Rs. 4.89; in Orissa from Re. 1.28 in personal services to Rs. 5.27 in machinery, except electrical machinery, with an overall average of Rs. 2.78.

These statistics, it may be noted, give at best only rough indications for inter-State and inter-industry differentials in the level of earnings.

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast funds of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor complete die cast casing, centre less ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Years ahead in look and performance

OC-158

SHIVRAJPUR SYNDICATE LIMITED

CHAIRMAN, MR. A. N. HAKSAR, NOT OPTIMISTIC ABOUT CURRENT YEAR'S OUTLOOK

ADDRESSING the shareholders of the Shivrajpur Syndicate Ltd., at their Annual General Meeting held at Bombay on 27th May 1959, Mr. A. N. Haksar, Chairman, said that it was difficult to assess the future prospects with any degree of accuracy, owing to the various hurdles with which the industry was at present confronted. "On the facts known to me," he added, "I feel, I must warn you that the current year cannot possibly be as good as the year under review."

The following are extracts from Mr. Haksar's speech:

"GENTLEMEN,

"You will have seen from the report that the total output during the year under review amounted to 91,626 tons, as against 92,748 tons in the previous year; while shipments and sales totalled 91,462 tons, as compared with 114,337 tons in 1956-57. The depression in the manganese ore trade continued throughout the year and there was practically no demand for low grade ore. Consequently, with a view to reducing expenditure, steps were taken to practise economy wherever possible, certain labour also being retrenched in August 1958.

"While the immediate cause of the general decline in exports may have been due to the recession in the U.S. steel industry, subsequent events have proved that the intrinsic cause for the poor demand for Indian ores is the tremendous headway which Brazilian manganese ore has made in that country in recent years. Brazil has more than gained at India's expense, increasing her share of total American exports from about 8 per cent. just three years ago to something like 56 per cent. at present.

Competition From Brazil

"Some of the major factors that have contributed to this change are the competitive prices of Brazilian ore, low sea freight rates, and the export subsidy offered by the Brazilian Government in the form of bonus payments in local currency on dollar earnings of exporters. This competition has seriously affected the Indian trade, and while the Government, recognising the need to step up exports, rather belatedly abolished export duty on all grades of manganese ore with effect from 24th November 1958, it has failed so far to afford other relief measures. For example, it has been suggested that the enhanced railway freight rates brought into force from 1st October 1958, as well as the present royalty rates should be reduced forthwith, but despite assurances by the authorities of some expected relief in this connection, no official announcement has yet been made. Further, it is essential that the Government should ease all burdens on production, such as allowing liberal import of essential machinery and spares, which would avoid the present long delays and procedural difficulties. I feel, they should permit manganese exporters to retain some portion of their foreign exchange earnings for this purpose.

"From the accounts, you will see that the net profit of Rs. 8,69,932 is lower by Rs. 2,63,106 than in 1957. A sum of Rs. 2,75,000 has been debited this year to profit and loss account and credited to development rebate reserve as required under the Indian Income-tax Act. The debit balance of Rs. 2,72,590 in development account appearing in the balance-sheet since 1956 has been written off after withdrawing an equivalent amount from mine development and prospecting reserve, and a sum of Rs. 3,00,000 has been set aside to equalisation of dividends reserve. After effecting the above appropriations, your Directors have recommended a dividend of Rs. 5 per share and a bonus of Rs. 3 per share, both free of income-tax, for the year.

Prospects

"Owing to the various hurdles with which the industry is at present confronted, it is difficult to assess the future prospects with any degree of accuracy. Over the last few months American steel production has been steadily rising and is currently running at approximately 90 per cent. of its present capacity; but, despite this sharply improved steel output, there is virtually no demand for ore in the U.S.A., due mainly to the fact that there are large accumulated stocks of manganese ore, as well as ferro-manganese. There is also good reason to believe that consumers are reluctant to pile up further stocks, due to the threatened steel strike in the States in the coming autumn. Moreover, the trade is deeply concerned over a possible setback to this country's manganese ore exports as a result of Russia, probably the world's largest producer, entering the world market as a supplier of this strategic mineral; since it is reported that she is trying to interest U.S.A. consumers in large quantities of both manganese and ferro-manganese. Russia has also delivered substantially into Japan, thus jeopardising another traditional market. As I stated last year, it should always be appreciated that the fortunes of the trade are largely dependent upon the world steel industry, which accounts for the consumption of about 95 per cent. of the manganese ore output, mainly in the production of ordinary carbon steel. It may interest you to know that, if by 1970 steel production reaches the levels forecast, Western demand for manganese ore for metallurgical use could grow to 9.3 million long tons of an average 46 per cent. as now being used, as compared with 6 million long tons estimated to have been consumed in 1957.

Blanket Control On Export

"Although the Government's notification dated 29th January 1959 liberalising the export policy for manganese ore raised genuine hope that the trade would be permitted to secure bulk business on a long-term basis, the subsequent clarification issued by the Joint Chief Controller of Imports and Exports, Bombay, on the 17th March 1959, has considerably altered this view. While in the earlier notification, exporters were advised to proceed with their plans for contracting bulk orders with foreign buyers on a long-term basis regardless of the Government's future export policy, the latest notice now seeks to restrict the trade, in so far that before firm price commitments are made, the approval of the Export Trade Controller must be sought; who, in turn, must obtain clearance from the headquarters of the State Trading Corporation. It is, therefore, felt that the recent notification is tantamount to a blanket control on the export of manganese ore.

"As has been stated in the Press to subject an exportable commodity like manganese, which is facing keen foreign competition, to a rigorous control on price, movements and delivery, and this at a time when the need for augmenting foreign exchange earning is most urgent, is, to put it mildly, most unwise. This move appears illogical and amounts to a creation of a monopoly, for which I can see no good reason. Apart from disrupting the existing trade channels, the Government's latest notification is bound to affect exports adversely; which, as I have just stated, is all the more regrettable at a time when the country is facing a severe foreign exchange shortage. Nevertheless, an encouraging factor is the growing realisation on the part of the authorities, that the trade has genuine local difficulties to contend with, but even so, as in the case of the removal of export duty, there is always a tendency on the part of the Government to treat all representations in a dilatory manner, which is most unfortunate.

Indo-U.S. Barter Deal

"As you are probably aware, after considerable delay, agreement on the much discussed Indian manganese/U.S. wheat barter deal was finally reached at the beginning of March 1959, although little is known at present about the detailed conditions agreed upon by the respective Governments. This deal, although welcome, has not had any significant effect so far on the country's manganese ore export trade. On the other hand, this is a method of trade, which I feel is likely to increase in future years and thus should prove beneficial to the manganese industry as a whole. Your Company have concluded contracts with their regular overseas buyers to the extent of 17,500 tons in relation to barter deals, which we hope may be the forerunner of increased business. However, the present position cannot be viewed with any degree of complacency, conditions being what they are, and for this reason, as already reported, certain steps have been taken by the Company to ensure maximum economies in the workings of the mines, which I hope will begin to show results shortly. Finally, on the facts known to me, I feel, I must warn you that the current year cannot possibly be as good as the year under review."

Note: This does not purport to be the proceedings of the general meeting which is being sent separately to shareholders.

COMMERCE EDUCATION IN INDIA

NEED FOR REFORM URGENT

By Prof. S. S. Jhanwar

COMMERCE Education in our country has come in for a good deal of criticism. This should serve to make us clear about its nature and objects, about its courses and methods of teaching, about the liaison between commerce colleges and commercial professional institutes, on the one hand, and between commerce colleges and business houses, on the other, as also about its role in providing the nation with suitable personnel to man her growing industries and commerce.

Commerce education, as all other specialised types of education, should, however, also bear in mind the main principles of general education. The units of a federation should be governed by the general laws of the federal authority. We would, therefore, do well to ask ourselves here a few questions. (1) What is the aim of education in general. (2) What is the objective of commerce education. And (3) how should we impart commerce education, so that this inner circle of commerce education efficiently renders its due service within and in keeping with the outer circle of general education. While attempting to answer these questions, we shall come across many problems and we may also have something to say about students, teachers, teaching methods, co-operation and active contact between our commerce colleges and industrial establishments, etc.

Aim of Education

Education is—we should always remember—an integrated life-long process. In the true sense of the word, every one of us should remain a student throughout our life. Actually, it is stated that a pupil gets a fourth of his education from his teacher, another fourth by his own intellectual effort, a third fourth from his fellow students and the rest in course of time through life and experience. Thus, attempts should ever be made to gain practical knowledge and acquire realistic training. All this must have a central purpose and that, to my mind, should be to make a man (or woman) really a man (or woman)—humane, courageous and useful as also balanced, liberal and progressive. This is variously described and the aim of education is said to develop the whole personality of a man or to make him an integrated and well-developed being or to make him a charactered social entity. This main aim of education should never be lost sight of, whether we are dealing with liberal, professional or technical education. After all, scientists and engineers all through their life will remain human beings and will have to deal with human beings and to do things, ultimately, for human beings. They must, of necessity, be human beings first. This applies equally to managers, salesmen and accountants.

Education and Social Order

Education is also imparted and obtained, keeping in view the social order. We have laid down our objectives in our Constitution as Democracy, Justice, Liberty, Equality and Fraternity and all our activities—including education—should conform to and promote these objectives. For achieving these ends, thereby establishing a socialist pattern of society, we have adopted the medium of planning. Our plans and planning should, as they do, include the planning of commerce education. Our plans endeavour to expand our industries, trade and commerce, with a view to raising our purchasing power so that ultimately our welfare and happiness may grow. Under the first Plan, Rs. 179 crores (i.e., 7.6 per cent.) were provided for industries and mining, out of the earlier total estimate of Rs. 2,356 crores on the whole Plan. In the second Plan, out of Rs. 4,800 crores. a sum of Rs. 890 crores (i.e., 18.5 per cent.) is earmarked for industries and mining. And now that we have begun to think about the third Plan (with yet larger outlays on industries), we can understand that the Plan expenditures are rising in geometric progression. From Rs. 2,400 crores to Rs. 4,800 crores and then to Rs. 9,600 crores (or more) in the third Plan clearly indicate this trend. All these developments in this sector of the economy will be complemented and supplemented with almost equal efforts and outlays in the private sector. These figures and activities should present a very encouraging picture to our commerce graduates. Not only will this sector require the services of commerce graduates but the other sectors, both in the public and private fields like transport, communications, social services, agriculture, community development, irrigation and power and taxation departments will also need and utilise the abilities and training of our commerce students.

Object of Commerce Education

We are now confronted with the problem: What is expected of us in commerce education at the universities? What does society want a B.Com. or an M.Com. to know and to be? What, so to say, is the object of commerce education? Is it just a general or liberal education like the Arts studies or is it professional and purposeful? Those subjects that generally train the emotions and the spirit may be included in the broad term "liberal education." Literature, philosophy and social studies are examples of such education. Training of emotions and inculcation of values should form part of all types of education; liberal education will, however, produce artists and thinkers for the society. But the community requires various categories of people. Commerce education is not liberal education in the sense in which Arts education is. We do not study history of philosophy here, nor do we study literature and fine arts. Thus, we do not plumb here the deeds of the past rulers or the meaning of life nor do we soar high in the skies. In commerce education, we talk of the earth and deal with concrete realistic problems facing the economy and the industry. Stenotyping, accounts, income-tax, statistics, public finance, costing methods, business administration, commercial law, banking, transport, etc., do not provide us with liberal education as such but they provide us with specialised knowledge of different operations and performances pertaining or incidental to industry and commerce. These courses also enable our students independently to take to industry and commerce—in their various forms and facets—or to serve as secretarial or managerial staff at such establishments.

Commerce education, *inter alia,* provides us with the knowledge of the working of the different forces affecting the economy and the factors that bring about its development and growth. Thus, both theoretical and practical knowledge is attempted to be imparted here. After acquiring this education, a student is better equipped to face the actual problems of commerce and economics. He can then better analyse the facts of the situations that may present themselves to him and find a way out. His intellect has been made sharper, his capacity to think enriched and developed. Thus, a commerce graduate is more suitable for occupying any job or handling any situation in the field of commerce and economics than a purely arts graduate. This is so even today, when the education that is imparted to him is rather theoretical.

We must now pay some more thought to the subject. We need not only thinkers and analysers of economic and commercial situations, but we also need properly trained persons to assume responsibilities for actual jobs and practical duties. Here then we are led to the irresistible conclusion that commerce education should provide both theoretical and practical training and that it ought to become purposeful and professional. Theoretical principles are taught and studied in technical education also, but more emphasis is laid here on practical work and experiments and on the solution of 'problems.' Commerce education should also adopt these methods and practical bias should be given to commerce studies. Commerce education, then, is not liberal education, but professional, purposeful and practical education. It prepares us both for the business of living as also for business life.

Co-ordination

As stated earlier, commerce education should not lose sight of the main principles of education. An accountant or a manager, a statistician or a salesman ought to be a human being first and so the creation of values and the development of character should ever be borne in mind. Here, the teachers and the university and the Government authorities have a sacred responsibility. If this duty is duly discharged, much of the corruption that we find in the public and private sectors will gradually disappear. Once we are clear about the role of commerce education within the orbit of general education and consistent with our goal of a socialist pattern of society, we may proceed to frame suitable courses of studies and methods of teaching, etc. Here, again, the different subjects taught should be properly integrated and a teacher teaching and a student studying, say, economic development of India or corporation finance or public finance or company law or even accounts, should clearly know why he is teaching or learning it and how it is related to and integrated with the other subjects and with the entire course and how this entire course is integrated with overall education and how this educational sector is a vital limb of our socialist society organism and of planning. Only then will there be proper teaching and proper learning. "If intellectual fragmentation and anarchy are to be avoided," to quote the report of the University Education Commission, "the student must acquire a frame of reference which will give meaning and direction to his college work as he moves from class to class to study different subjects. The different studies should be treated as parts of a whole. There must be an intellectual integration of his varied knowledge." This also applies—and with greater force—to the teacher. This may need changes in courses, in teaching practices and the teacher's outlook and in the general atmosphere of colleges and universities. We will have to bring these about, if we are to do justice to ourselves and to the tasks entrusted to us.

Commerce education thus is very important and the Government, the university and the industry should soon realise this. Only when we equip it to provide the expanding economy with persons who have had integrated and practical training for actual jobs and responsibilities that the developing industries, trade and commerce and other sectors will be able to get suitable personnel to rotate the wheels of industry and steer the ships of trade and commerce.

Teaching Methods

What should be the courses for commerce education, how to make them practical?. These questions will now arise. Three-year degree course has now been accepted by all in our country and, in my view, during these three years, education should be imparted in the following subjects to a student preparing for the B.Com. degree: English (including "commercial English"), planning in India, business methods, industrial organisation, banking, public finance, economic development of India, accounts (including cost accounts), income-tax, auditing, commercial law, statistics, trade and transport and principles of economics. Whether Hindi essay should also be compulsorily taught throughout the country is a moot point here. Hindi must, of course, be taught to everyone as a compulsory subject at the higher secondary stage. The subjects listed above are very nearly the same as are being taught for this degree at present by many Indian universities, but now the contents will have to be modified and practical bias imported. Planning should, of course, be added as a compulsory subject, in view of its well established importance. Commercial geography may not now find a place in the degree course and may be completed at the higher secondary stage. Co-operation and labour problems should relatively be given more attention and this may be done by laying larger stress on these aspects in the "Economic development of India" paper.

Of course, I need not go here into a detailed working of the courses. A few—only a very few like stenotyping, salesmanship, insurance, etc.—papers may be included in the "optional" category and, excepting these, all the other subjects should be compulsorily taught. The contents and sphere of the subjects so taught will have to be wider and deeper and their study will have to be supplemented with practical training and field work. While lecturing, the teachers may kindly bear this in mind, while taking examples to make their points clear they should take such examples which may inculcate better values among the students, lead to integrated growth of their personality and foster their practical outlook. Besides seminars and tutorials, there should be questions and answers in the class as these discussions not only make the subject clearer but also enable the teacher to know his students better. A teacher is not to be a neutral organ of speech, but a medium of living contact between himself and his students. Then there is need for surveys and field work, for the statistical laboratory and for the demonstration and use of modern office appliances, etc. Further, we should have in every commerce college (department), a very well equipped museum which should possess all up-to-date information and objects pertaining to the various matters dealt with in the courses. Students will be expected to enrich the museum. The present position regarding reference journals and libraries will also have to be improved. Extension lectures and talks by business executives should also be arranged. Gradually, better traditions will thus be built up and the present atmosphere of tolerating commerce studies and somehow doing the work will be changed. Only when one takes real joy in one's work that one can do it well. I can well understand the argument that, when commerce education is accorded proper importance and when it is accepted by all as purposeful and useful, our students and teachers will be able to put their heart in the work. Yet, I submit that, in order to see that such recognition is given, we all have to play our part well. If commerce education is worth imparting, it is worth imparting well.

So Many Holidays: National Loss

I propose now to offer a new suggestion. Our commerce classes meet only for about 120 days in 365 days of a year. So many holidays entail national loss. I suggest that our colleges and classes should meet for at least 200 days in a year. I know that teachers require time for examination and evaluation work, for rest and for research studies, but 165 days should be enough for all these. Are we not prepared to work even for 56 per cent. of the year? In other countries, we do not find so many work days lost—especially in a planned and developing economy and where such practical or technical courses are concerned. The sooner we willingly realise this, the better. If this is agreed, we will get 80 additional working days every year. A part of these may be utilised in more intensive and extensive studies and the remainder (every Saturday) may be utilised as indicated below.

Planned Practical Training

Commerce studies have a bearing mainly on industries, banks, insurance companies, transport, labour, trade including *mandies* and exchanges, accounts (including cost accounts), collection and interpretation of data, Governmental budgeting, and sales and income-taxes. These activities are, or work in their connection is, carried on in specialised institutions, establishments or offices. Some 30 Saturdays will be available to us during the 200 working days proposed. On Saturdays, there may be no lecture periods. Instead, for the full duration of the lecture periods, the class (in suitable batches) will visit (with a teacher) these institutions, establishments and offices and every student will maintain a diary ('practical' register) wherein the working of the institution, establishment or office visited will be recorded and the talks between the management or the organiser and the class will also be mentioned. Suggestions, if any, on the working of these mills and establishments may also be offered by the students. These diaries, etc., will then be examined and evaluated. Thus will practical training be initiated and a valuable liaison set up between the commerce colleges and the industry, etc. Even during the course of such visits, promising students may actually be picked up by the management. Thus, the students will be able to widen their mental horizon and to have a peep into the practical working of such establishments. During the course of three years, the students will be able to visit about 90 such establishments and concerns or intensively study some 30 of them. In this manner, our students will get real and practical training, as they will face, study and deal with actual problems in the factories, etc., which will, for the time being, assume the role of laboratories for them. Such practical training should, of course, be properly correlated with class lectures and the entire scheme of work should be an organic and integral whole. These studies will then be comparable to scientific studies. The students will have to work harder and more written work will also become necessary. They will then really be better fitted to take up actual jobs. This is bound to be mutually advantageous—both to the establishments and to the students. To these visits may be added certain surveys or field work, including collection of primary data, the study of a problem ('project'), assisting in actual audit work, in the filing of a return and in the discussion of a municipal budget, etc. All this can be worked out and a purposeful course carved.

Co-operation Required

Certainly, all this will require proper appreciation by, and active co-operation of, industry, other establishments and organisations, the university, the Government and such other bodies. It is expected that this will be forthcoming. This will also entail larger strain on the teacher and will require more efficiency from him. Service conditions and the status of the teachers shall have to be greatly improved, so that proper persons are attracted to this line and they are able to work with all their heart.

In my view, only those students who had offered "commerce" for their higher secondary examination should be entitled to join the first degree course in "commerce." Surely, the study of "commerce" at the higher secondary stage will also need to be improved. And, while admitting students to the graduate class, selection should be made and admissions should be based on merit. Up to the higher secondary stage, education may be for the many, but higher education should be meant for the selected deserving ones. The classes should be small, so that standards may be raised, discipline and quality improved and, above all, there may be individual attention and closer contacts between the teacher and the taught. As I visualise it, the first degree course should give broadbased education in many commerce subjects, coupled with practical training, so that this graduate is fit to take up a job in the second grade like that of a junior salesman, assistant manager, superintendent, assistant accountant, deputy revenue officer, chief stenotypist, etc. After this, admission to M.Com. class should be yet more restricted and only those who have passed the B.Com. examination in the second division should be admitted to the M.Com. class. Otherwise, as we see at present, many of these students, who have no interest in their subject and who are not mentally equipped to profit by higher studies, only waste their time and money and in the end fall a prey to frustration. It is better that they leave their studies after B.Com. to enter the business of life. For those who will ultimately join the M.Com. class, one of the following four specialised courses should be offered. In "commerce" today about 35 papers are taught and these can well be grouped in four departments. In my view, these departments should be (1) commerce and industries, (2) business administration and law, (3) applied economics and finance and (4) income-tax and accounts departments. Science studies, as we know, comprise the departments of physics, chemistry, mathematics, zoology and botany, etc., and persons secure the Master's degree in science by specialising in chemistry or in physics or in mathematics, etc. Similarly, we should have the abovementioned four departments in the Faculty of Commerce. For M.Com. degree a person may join any one of the four departments. There should be eight papers in each of these four subjects or branches (departments). We shall then have persons with Master's degree in Commerce, who have specialised in business administration and law or in income-tax and accounts or in applied economics and finance, etc. There should be very intensive, specialised and advanced study of these subjects at the M.Com. level. Here also practical training—intensive practical training—shall be given and the entire studies shall be related to real problems and factual requirements and conditions.

Regrouping

This brings us to certain administrative problems and to necessary changes on the administrative plank. I am convinced that these four departments should very soon be created in every college teaching commerce and each department should be placed under a Professor (where post-graduate teaching in the departmental subject takes place) or a Reader (where the departmental subject is taught upto the B.Com. standard). Only thus would due importance be given to commerce education. I am glad to state here that my suggestion that the Commerce Faculty should comprise four full-fledged departments has, after due consideration, been accepted by the Vikram University Faculty of Commerce at its meeting held on the 9th February 1959.

I may also suggest here how the different papers should be grouped (or what papers should be taught) in the four departments. This and many other things remain to be done by our universities and Governments. The grouping may somewhat be as follows:

I. *Commerce and Industries Department*: 1. Organisation and Finance of Industries (M.Com.)—two papers; 2. Industrial Organisation (B.Com.); 3. Statistics (M.Com.); 4. Statistics and Applied Statistics (M.Com.)—two papers; 5. Corporation Finance (M.Com.); 6. International Trade and Fiscal Policy (M.Com.); 7. Labour Problems, Industrial Relations and Industrial Psychology (M.Com.); and 8. Organisation of Markets including Sales Promotion, Exporting and Trade Commissions. (M.Com.)

II. *Business Administration and Law Department*: 1. Business Management and Economic Administration (M.Com.)—two papers; 2. Personnel Administration (M.Com.); 3. Company Law and Management and Secretarial Work (M.Com.)—three papers; 4. Industrial Law (M.Com.); 5. Commercial Law (B.Com.); 6. Secretarial Practice (B.Com.); 7. Actuarial Science and Insurance (B.Com.); 8. Insurance in India (M.Com.); 9. Business Organisation (B.Com.); 10. Stenotyping (B.Com.); and 11. "Commercial English" (B.Com.).

III. *Applied Economics and Finance Department*: 1. Advanced Business Economics and Principles of Economics (M.Com. and B.Com.); 2. Currency and Banking, Advanced Banking and Banking and Foreign Exchange (B.Com. and M.Com.); 3. Transport (B.Com. and M.Com.); 4. Co-operation (B.Com. and M.Com.); 5. Rural Economics (M.Com.); 6. Economic Development of India and of other countries (B.Com. and M. Com.); 7. Economic Planning (B.Com.); 8. Principles of

Advanced Accounts including Corporations, Banks, Insurance Companies and Actuarial Work, Government, Municipal and Double Accounts (M.Com.)—three papers; 4. Auditing (B.Com. and M.Com.); and 5. Income-tax, Estate Duty, Excise Duty and other Taxation Laws and Accounts (M.Com.)—three papers.

Special Committee

It is heartening to note that commerce education has now attracted the keen attention of the Union Government. The Minister for Scientific Research and Cultural Affairs, in his capacity as Chairman of the All-India Council for Technical Education, has appointed a special committee for commerce education, under the chairmanship of Dr. V. K. R. V. Rao, Vice-Chancellor of the University of Delhi, to "enquire into and report on the present position of commerce education in India in all its aspects and suggest measures for its reorganisation and improvement, so that a sound and reasonably uniform system of commerce education suited to the needs and resources of our developing economy may be provided for the whole country." We have been imparting commerce education in some form or other for the last more than 50 years* and for some time there has been a demand for an enquiry into commerce education, so that it may be reoriented and, as far as possible, made uniform throughout the country. The Special Committee's Report will, therefore, be eagerly awaited. It will, however, take them some months to complete the work. Meanwhile, with a view to helping the committee in its work, we should think about and discuss this subject thoroughly. The present article is a humble attempt in this direction.

The very fact that the Special Committee has been appointed indicates that commerce education is to be practical and purposive. We have to prepare ourselves for making it really so. The University Education Commission also recommended practical bias to be given to our studies and advised that commerce students should do practical work as well.

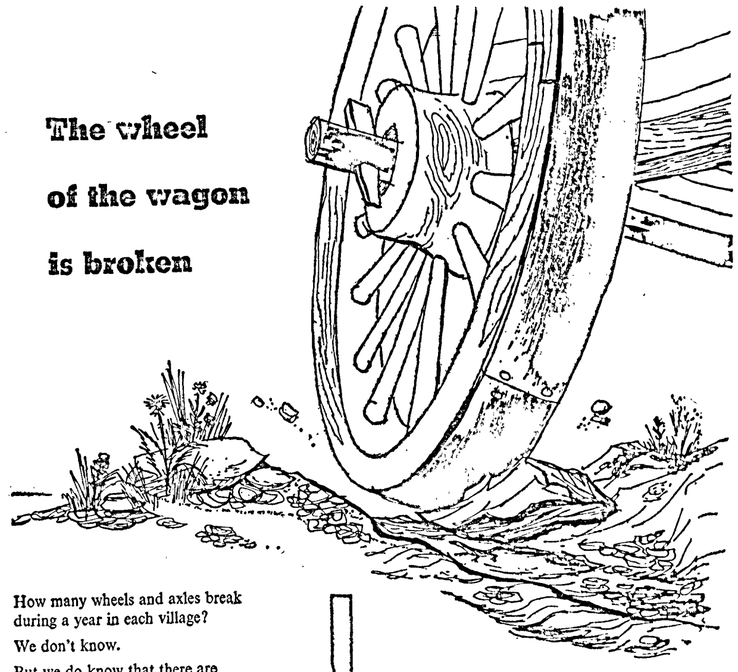
We will also be required to establish and develop proper relationship between our commerce studies and the professional training imparted (or examinations held) by some institutes like the Chartered Accountants. Once commerce education is rationalised and given its due importance, these matters can easily be settled. Probably, in course of time, the M.Com. degree in Accounts and Income-tax may be considered equal to the Chartered Accountants' Examination. A M.Sc. in Statistics is even today comparable to one who passes the examination of the Indian Statistical Institute, Calcutta. Actually, the main function of such institutes should be to develop methodology, carry out experiments, surveys and research and to publish learned papers and journals. In any case, liaison between these institutes and commerce colleges can certainly be gradually established.

A Word of Caution

A word of caution here may not be out of place. Let us not go away with the impression that, after the advocated practical training, our graduates or M.Coms will be fit immediately to take up important practical jobs. No. It may yet be necessary for them to acquire further training in the particular office or establishment that they join and here the "intra-organisational" or departmental training will be given to them to acclimatise them with the particular atmosphere and needs of the individual industrial house or organisation. At Tatas, the new graduates in engineering (which, all will agree, is a highly practical course) are not immediately entrusted with actual operational responsibilities. What Sir J. J. Ghandy, Director-in-Charge of the T.I.S.Co., says, in this connection, is well worth quoting: "It will be necessary that all technicians above supervisory levels should have training for at least a year or more before they are entrusted with actual operational responsibilities." Further, "management training is a continuous process that should cover the entire management cadre in an industry. The neglect of such training indeed carries a price which few organisations can afford in the competitive conditions of today." Equally imperative is the need for executive training both through external and internal resources. Some of the bigger organisations in the country have already made intra-organisational arrangements to train their supervisors." Then, of course, for training for yet higher executive posts, we have the Administrative Staff College, Hyderabad. Thus, our new commerce graduates and post-graduates, with their realistic studies and practical bias, will immediately be able to take up some types of jobs (or start a business or an industrial unit on their own). But, for slightly higher jobs, they will be better equipped to profit by the in-factory training in the industries or other organisations and for yet higher jobs they will, after they have served for some years on responsible posts, be given further training and, ultimately, they can have the benefit of joining the Administrative Staff College, Hyderabad, for equipping themselves with the necessary knowledge, insight and personnel administration techniques for the highest executive posts that the country may have to offer. For all these and at all these stages, our new commerce students should—as they are bound to—be the most suitable persons. We have to bear this in mind and prepare our students accordingly. Our commerce students will also be required for the Industrial Management Pool and the Economic Administration Service. The country faces not only the problem of technical personnel but also the problem of managerial, secretarial, commercial and executive personnel. Commerce education, on right lines, can solve the latter problem.

Commerce education has been growing in importance and dimensions. Out of 31 Indian universities, 25 provide commerce education. In 1956, about 60,000 students were pursuing commerce education at the university level. In the same year, the universities awarded commerce degrees to about 10,000 pupils. The numbers have since increased. We want now the quality and contents to be improved and bettered. Let everyone of us do our bit in increasing the importance and worth of commerce education, so that there emerges an adequate supply of properly trained personnel for managerial, commercial, secretarial and business administration duties in our expanding private and public sectors. Let these personnel also be inculcated with moral values, so that our planning really becomes successful—productive of requisite social welfare!

*Shri M. L. Tannan's article "Banking Education in India" in the *Commerce Annual Review Number*, 1957, gives an interesting account of the early history of our commerce education.



The wheel of the wagon is broken

How many wheels and axles break during a year in each village?

We don't know.

But we do know that there are 5,58,089 villages in India.

And that each wheel takes time to repair. And money.

For want of a nail, the battle was lost.

Faulty road surfaces damage motor transport too.

And that means heavier repair charges—an estimated Rs. 10 *crores* each year.

Good roads mean a direct reduction in the cost of vehicle operation.

And they bring indirect benefits, expressed in terms of a higher standard of living.

Road construction demands topmost priority.

That's why everything to do with roads is so important.

Bitumen for example.

One of the better road-building materials.

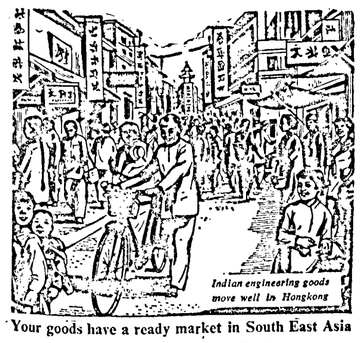
Inexpensive. Easy to handle.

Long-lasting. Hard-wearing.

Supplied by Burmah-Shell.

Burmah-Shell Bitumen is backed by a technical service, staffed by skilled engineers, whose job it is to assist in the creation of roads. Good roads. Cheaper roads. THE BULK METHOD OF DELIVERY, RECENTLY INTRODUCED BY BURMAH-SHELL, NOT ONLY ELIMINATES DRUMS AND SAVES STEEL, BUT ALSO LENDS ITSELF TO MECHANIZED ROAD CONSTRUCTION. REMEMBER, BULK BITUMEN IS MUCH CHEAPER IN INITIAL COST.

BURMAH-SHELL
BITUMEN
FOR BETTER ROADS



Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need — jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

100 years of service to the nation marks the famous leading House of JUGGILAL KAMLAPAT Founded in the middle of last century, this illustrious house by steady and consistent progress has become a gigantic institution of its type in India—a truly national concern having in its fold multifarious manufacturing and commercial lines.

J.K. ORGANISATION

KANPUR — BOMBAY — CALCUTTA

By setting up factories all over India of such goods as were imported from abroad J. K. Industries have planted India's feet firmly on the road to adult self-sufficiency and material prosperity. *The trade mark of this House is your guarantee of quality.*

PETROLEUM INDUSTRY COMPLETES HUNDRED YEARS

WIDE MEASURE OF INTERNATIONAL CO-OPERATION

FITTINGLY, this month's Fifth World Petroleum Congress is being held in New York so as to mark the hundredth birthday of the oil industry in the U.S.A. Oil had been produced at other places before Colonel Drake found oil at Titusville, Pennsylvania, some 350 miles west of New York, on 27th August 1859. But few would contest the claim that this was the genesis of the modern oil industry and the first significant step towards establishing an industry destined to make available a major new source of energy.

Today, it is difficult for a middle-aged westerner to conceive what kind of world his grandfather or great-grandfather lived in—possibly an urban society, yet without any motor vehicles, no oil-burning machinery of any kind, no mineral lubricants, no bitumen-surfaced roads. A visit to some not very remote parts of southern Europe, Latin America, Africa, the Middle East or Far East will readily provide food for his imagination. Much more difficult to bring to mind—and the historians do not help us a great deal here—are the many changes that have occurred down the years in the climate of business and the day-to-day conditions in which we work.

Indeed, change is the evident factor whenever one tries to cast the mind back. Yet we are always in danger of attaching an undue sense of permanency to the present and to that with which we are familar. We insist on believing that past rates of growth of oil consumption will apply in the future, that today's pattern of supply and trade will continue, and that the political-social relations that have proved so fruitful in the West must perforce be the desideratum for the rest of the world. Nevertheless, though unforeseen and unforeseeable change often makes forecasts wrong, there is a sameness in some of the problems that have continually recurred through the industry's life. The tendency to excess production seems to be a chronic trouble often curbed only by accident; unbalanced demand for the various products is a continuing challenge to sales and research staffs; and more and more in evidence is the desire on the part of Governments to exert influence upon any oil operations within their country.

Change and Continuity

A glance back to events within one lifetime will serve to reveal this combination of change and continuity that characterises the oil business. For instance, for a few years round the turn of the century, Russia became the biggest crude producing country. But, from 1902 onwards, Russian production ceased to rise and did not regain its then level of output for 25 years. And the historic Lucas gusher at Spindletop in Texas in 1901 restored the U.S.A. to its erstwhile position as the biggest producer, a position it has continued to hold ever since. Until the Second World War, the U.S.A. was also the world's largest oil exporter, but it has yielded its place to Venezuela and is now by far the biggest importer. For many years, Russian (and to a lesser extent Rumanian) oil played a leading role in the world's markets, only to be eclipsed and now to reappear. And we may recall that, during 1918-27, Mexico was second only to the United States in crude production and a major supplier to the world market. As far back as 1921, Mexico produced 193 million barrels, a higher rate than has yet been achieved in Western Canada. Today's biggest exporting country, Venezuela, did not begin to produce until 1917, and the second largest, Kuwait, until 1946.

It is a striking fact, however, that any country which has once become an oil producer is still an oil producer today. And in very few countries, indeed, where there is now significant production—say, one million tons or more—is today's output lower than in the past. (Only in Hungary and Mexico is production now lower, but, in both, it is now rising.) Some producing areas within countries, of course, have fallen below their previous peaks, as, for example, in the United States, the Appalachian region and California. Today, the Middle East offers very big scope for future expansion and holds two-thirds of the world's reserves. Yet it has come to the fore only in the post-war years. And even a few years ago, the idea that there might be oil in the Sahara was still regarded as a pleasant dream.

Kerosine and Fuel Oil

By contrast with the kaleidoscopic history of world production, the major areas of consumption have throughout been much the same, that is, the industrialised countries. Even in the heyday of the kerosine lamp, Europe was the biggest oil-importing region, as it still is today. Kerosine now accounts for only six per cent. of world consumption, but, when the industry had already passed its half-centenary, kerosine still accounted for over twenty per cent. of all oil consumption, as indeed it still does now in some of the underdeveloped regions. Kerosine displaced whale and vegetable oils for lighting—and the "coal oil" produced in Scotland by James Young—and was itself displaced later by gas and electricity, only to be now finding fresh markets where these competing fuels are abundant. Fuel oil has displaced coal for some uses, and is now being displaced in some areas by natural gas. Oil has become a new raw material for the chemical industry. And in almost every sector of energy consumption, there is a continuing process of substitution between oil and other forms of energy or between different petroleum products.

Of all the agents of change affecting the oil industry, technology is by far the most important. Above all, the application of the internal combustion engine to road transport has been perhaps the most potent agent of development of our age. It has opened the way for markets for motor fuel, which now account for one-third of the industry's trade. It is the development of the various uses of the internal combustion engine, the devising of techniques and equipment for burning oil fuels, and the finding of ways of best applying hundreds of petroleum by-products which have made the continuous big growth of oil demand possible. And the counterpart is the use of many sciences and the application of many technologies in finding and producing oil, and in refining and transporting it. Lending itself so well to the use of new knowledge and skills, it is little wonder the oil industry has itself become a large provider of this new knowledge and skill, and one of the most capital-intensive, and one of the most competitive, industries of our day.

Abundance of Supplies

Those who 100 years ago celebrated the discovery at Titusville could hardly have dreamed that they were witnessing the birth of a world-wide industry on today's scale. And we may well reflect on the complex human motives and efforts that have brought forth the world's present abundance of oil supplies. But in all this, too, there is a change. There are more and more entities in the oil business and, in more and more countries, local oil industries are being developed. Oil resources are more widely spread than was formerly thought and local skills are growing quickly. Yet the very nature of the industry always calls for a wide measure of international co-operation, whether in the exchange of ideas, information and experience, in the buying and selling of equipment and know-how, in the provision of capital and services, or in the supply of crude oil and products to fit in with each country's needs.

Happily, it can be said that, among the oilmen of all countries, there is a basically co-operative attitude, whatever their nationality, creed or race. Without it, this month's Congress could not have been held. Like its highly successful predecessors, it will not only bring new knowledge; it is certain also to promote, among the six or seven thousand oilmen attending from over 50 countries, that spirit of *camaraderie* and appreciation of mutual interest which has contributed so much to the industry's progress, and success.—*By special arrangement with Petroleum Press Service.*

Some Salient Dates in the International Oil Industry, 1859-1959

1859 First oil discovered by drilling in U.S.A. at Titusville, Penn.

1861 First cargo of oil (kerosine) shipped from U.S.A. across the Atlantic, in wooden barrels to the U.K.

1885 Daimler produces his first motor car.

1890 *World production exceeds 100 million metric tons.*

1892 First loaded tanker passes through the Suez Canal.

1893 Exports begin from Indonesia.

1894 First successful solely oil-burning merchant vessel.

1897 Pipeline built from Baku to Batum for export of oil.

1907 Full partnership of Royal Dutch and Shell Transport begins.

1911 Standard Oil Company dissolved by U.S. Supreme Court into 34 separate companies.

1912 First sizable ocean-going diesel ship.

1913 Exports begin from Iran.

1917 Production and exports begin in Venezuela. All private oil properties in Russia confiscated.

1921 Mexico's production reached its peak of some 29 million tons.

1928 U.S. oil companies secure participation in Turkish Petroleum (later Iraq Petroleum).

1929 *World production exceeds 200 million metric tons.*

1930 East Texas field discovered.

1932 Pro-rationing Act becomes law in Texas.

1934 Exports begin from Northern Iraq by pipeline to the Mediterranean.

1937 Catalytic cracking (Houdry) first used commercially.

1938 Foreign oil properties in Mexico nationalised.

1939 Exports begin from Saudi Arabia.

1946 Exports begin from Kuwait.

1947 *World production exceeds 400 million metric tons.*

Discovery of Leduc field in Alberta.

1948 Foreign oil properties in Rumania confiscated.

1949 Platforming (catalytic reforming) first commercially used.

1950 Exports begin through Tapline from Saudi Arabia to the Mediterranean.

1951 Anglo-Iranian's properties in Iran nationalised.

1954 International Consortium begins operations in Iran.

1956 *World production exceeds 800 million metric tons.*

1957 Western Europe's consumption exceeds 100 million metric tons.

Suez Canal nationalised, passage blocked.

1958 *World production exceeds 900 million metric tons* of which U.S.A., 327 million; Middle East, 215 million; Venezuela, 138 million; U.S.S.R., 113 million; all other countries 112 million.

WORLD TANKER SURPLUS

There will be a shortage in the aggregate world supply of oil tankers in 1963, or possibly earlier, in distinct contrast to the substantial surplus at present. This is the forecast of the Iino Kaiun Kaisha, a leading Japanese Shipping Company. The anticipated deficit in 1963 is put at over 2.52 million deadweight tons, as against the surplus of 4.8 million tons in 1959 and 5.30 million tons in 1960. The forecast is based on the following grounds:

1. The world demand for oil in the next 4½ years will rise at an annual rate of 6 per cent.

2. All oil tankers of 25 years' age or over, as well as about 30 per cent. of the 10.75 million tons of war-built tankers constructed between 1943 and 1945, will be scrapped in the next 4½ years; the scrapping will account for nearly 7.5 million tons, representing about 12½ per cent. of the existing world fleet.

3. The scheduled deliveries of new tankers during the next few years are: 7 million tons in 1959, 6 million tons in 1960, 5 million tons in 1961, 4½ million tons in 1962 and 4 million tons in 1963.

4. Cancellation of existing orders by 1963 will aggregate 1,859,000 tons, on the basis of a cancellation or concession to dry-cargo vessels of 20 per cent. of orders placed by independent owners.

Taking all these factors into consideration, the Iino Kalun Kaisha estimates the total world tanker fleet by the end of 1963 at 71.3 million tons, which represents an increase of 13.0 million tons as compared with the present tonnage of 58.3 million. The trend of tanker employment during 1959 and in the next four years is given below:

(In T-2 equivalents*)

	1959	1960	1961	1962	1963
Supply	3,604	3,918	4,132	4,338	4,501
Demand	3,313	3,599	3,910	4,295	4,713
Of which: Ocean-going tankers	2,650	2,879	3,128	3,436	3,770
Coastal tankers	663	720	782	859	943
Surplus or deficit	+291	+319	+222	+ 43	—152

* The T-2 was a general-purpose-size war-built tanker of 16,600 deadweight tons.

NEW PRODUCTS AND PROCESSES

New Use for Cashewnut Shell Liquid

A PROCESS for the manufacture of cation exchange resins from cashewnut shell liquid has been developed at the National Chemical Laboratory, Poona. Large quantities of soft water are required for boilers, textile processing departments, air-conditioning units, ice plants and various other industrial purposes. Natural water contains salts in varying quantities which have to be removed to render water soft. Various materials have been used for water softening and a comparatively recent development is the use of ion exchange resins. In addition to the use of natural zeolites, synthetic resins of various types are being commercially manufactured in foreign countries for use as a water softening agent. Only one type of resin, namely, Carbion, is so far being produced in India for water softening. Now a process for the manufacture of cation exchange resin from cashewnut shell liquid has been developed. The resin can be used both in the sodium form and hydrogen form. In sodium form it can be used in place of zeolites for softening water for boilers and air-conditioning units under certain conditions. In the hydrogen form it can be used in combination with anion-exchange resins for demineralisation of solutions. Economics of the manufacturing procedure has been studied on a pilot plant capable of handling 75 lbs. of cashewnut shell liquid per batch. The equipment and accessories for the two processes are simple and can be easily fabricated locally. Raw materials, except formalin, are available from indigenous sources.

Novel Stove

A novel form of stove for burning either coke or coal has been developed by a Swedish combustion expert. Experiments with the stove are said to have shown that it can achieve combustion percentages of the order of 99.9 per cent. The stove utilises a new type of combustion principle and further investigations into its method of operation and production are currently being carried out in London. At the same time production plans for a prototype unit are being developed in Dublin, Eire. Full details of the method of operation of the stove are being withheld from the public at present, but certain patents have been taken out, and commercial development of the stove is now being carried forward. The stove is said to be both cheap to build and to operate.

Telescope to Probe Age of Universe

Studies made with the 200-inch Hale telescope on Mount Palomar in California have made possible "a more realistic concept of the size and age of the universe," according to a recent report of the California Institute of Technology. The latest estimate of the age of the universe now ranges from 7,000,000,000 to 13,000,000,000 years, according to Dr. Allan S. Sandage of the Palomar Observatory. Geologists of today base their estimates on the decay of radioactive elements in rocks and meteorities. In doing this, they use a method made possible by development of peaceful uses of atomic energy.

Portable Irrigation System

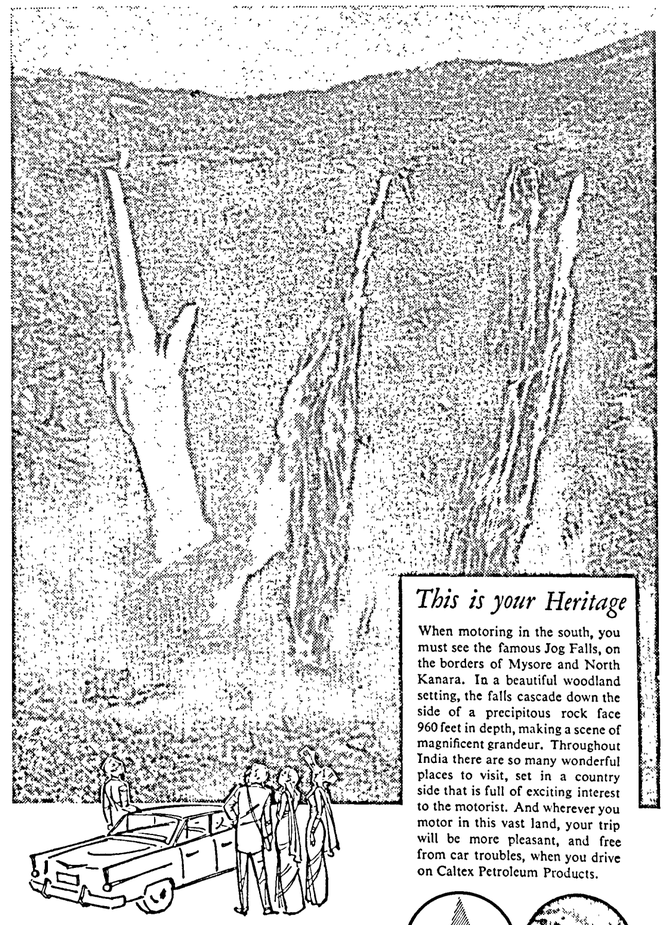
A portable irrigation system, which can be assembled in a few minutes without any tools, has been developed by a British engineer at Evesham, the heart of Britain's market-gardening area. A 200-yard section is sufficient to water three-quarters of an acre and will deliver the equivalent of one inch of rain in four hours. So much interest is said to have been shown in the system—the "Waterboy"—that a first consignment has already been sent to Salisbury (Federation of Rhodesia and Nyasaland). The new watering system has several interesting features, the most important of which is a patented coupling which locks a section of pipe together in a waterproof joint at the flick of a lever. The most striking feature is the precision-built oscillator unit, which automatically moves the water pipes back and forth so that there is an even distribution of water over the whole area. The non-rusting "Waterboy" unit is powered by a tractor-driven pump.

Flame-proof Coal Drill

The hazard of frictional sparking with light alloys on drilling machines has been eliminated by the introduction of a new flame-proof coal drill to be shown at the forthcoming Underground Users Machinery Manufacturers' Exhibition at Olympia, London. The coal drill, developed by a British firm, Victor Products (Wallsend) Ltd., Wallsend, Northumberland, to eliminate the hazards of conventional drill-case materials, has all external parts made from ferrous material containing no aluminium, magnesium, or any other substance even remotely likely to cause an ignition or explosion from a frictional spark. The overall weight is 33 lbs., 10 lbs. less than the standard 50-cycle aluminium coal drill.

New Packaging Material for Fragile Products

A new packaging material for fragile equipment, described as possessing all the useful properties of rubberised hair, has been announced by a British firm, Xetal Products Ltd., Speke Hall Road, Liverpool. Some of its advantages, according to the manufacturers, are that it is virtually unaffected by climatic conditions, is inert to most oils and solvents, has very good aging properties, and does not stain silver. It is much harder than rubberised hair at comparable densities. Made with a new synthetic adhesive, the material was produced after consultations with the British Government about the developing of a cheaper and more efficient means of shielding fragile products against the blows and shocks of land, sea, and air travel. It has already been used extensively for Government contracts involving delivery of electronic and radio apparatus and other delicate equipment.



This is your Heritage

When motoring in the south, you must see the famous Jog Falls, on the borders of Mysore and North Kanara. In a beautiful woodland setting, the falls cascade down the side of a precipitous rock face 960 feet in depth, making a scene of magnificent grandeur. Throughout India there are so many wonderful places to visit, set in a country side that is full of exciting interest to the motorist. And wherever you motor in this vast land, your trip will be more pleasant, and free from car troubles, when you drive on Caltex Petroleum Products.

ANGLO-SOVIET TRADE AGREEMENT

BOTH CONSUMER AND CAPITAL GOODS COVERED

IN a world split by political squabbles, one way of fostering goodwill and restoring confidence among nations is to promote commercial relations between the countries of differing ideologies. Viewed from this point of view, the five-year bilateral trade agreement between the U.K. and the U.S.S.R. is most welcome. It is also welcome for the reason that, if it leads to a strengthening of the economies of both Britain and Russia, it will indirectly help India, too. The spade-work for the agreement was done during the recent visit of Mr. Macmillan, British Prime Minister, to Moscow. Russia, too, has been keen on developing its trade with Britain. There were detailed trade discussions between the representatives of the two countries for about 10 days, culminating in the signing of the trade pact on 24th May 1959, which would come into force from 1st July.

The agreement is designed primarily to construct a basis on which it would be possible, with goodwill on both sides, to expand Anglo-Soviet trade. The two Governments anticipate a considerable increase in the trade in both directions. Increased sales are expected in the U.K. of traditional and other Soviet goods, including grain, timber and timber products, wood-pulp, manganese ore, asbestos, ferro-alloys, non-ferrous metals, mineral fertilisers, and flex. It is also expected that substantial orders will be placed by Soviet trading organisations for British goods, including equipment for the chemical industry (especially for the manufacture of synthetic fibres and synthetic materials); equipment for the pulp and paper industry; forging; stamping, and casting equipment; metal-working machine tools; equipment for the electrotechnical and cable industry; equipment and instruments for the automation of production processes; pumping, compression, and refrigerator equipment; equipment for sugar-beet factories and other types of equipment for the food industry; equipment for the building industry; light industry, and other branches of industry; as well as industrial products and raw materials customarily bought from U.K. firms.

Exchange of Consumer Goods

Another feature of the pact is that it stipulates, for the first time, an agreed exchange of consumers goods between the two countries. In the first year of the agreement, additional quotas will be granted to the tune of £2 million in each direction, including quotas for new categories of goods. Exports from the Union of Soviet Socialist Republics will include motor cars, cameras, watches, musical instruments, hand-knotted carpets, medicines, toys, handicrafts, tinned crab, matches, vodka, wines and brandies. Exports from the United Kingdom will include motor vehicles; textile manufactures, including cotton textiles, ready-made clothing, knitwear, and hosiery; footwear; floor covering; machine-made carpets; leather goods; medicines; photographic materials; sports goods; musical instruments; toys; cured herring and white-fish.

Although the agreement covers a period of five years, provision has been made for an annual re-examination of its working. Both the Governments will meet once in every year in London and Moscow alternatively and take stock of the experiences, with a view to improving mutual trade relations. The pact also provides for exchange of information among the organisations and business concerns of both the countries. The two Governments will enter into talks, not later than the first half of 1960, for the conclusion of a treaty of commerce and navigation to replace the temporary commercial agreement of 1934. It is stated that Russia has agreed to do nothing that will disrupt the present price pattern in the U.K. by way of dumping Soviet goods. The anti-dumping laws in the U.K. will be applicable to offending Soviet goods, if any, as in the case of goods from other countries.

Observers in London are hopeful that there will be a perceptible improvement in the trade between the two countries even in the first year. Although no definite figures have been worked out, Sir David Eccles, President of the U.K. Board of Trade and the leader of the mission which negotiated the deal at Moscow, said that the imports of Soviet goods would rise from about £57 million last year to about £80 million in the current year. While it was impossible for him to predict Russian purchases of British goods, he was confident that last year's figure of about £25 to 30 million of direct exports to the U.S.S.R. "will go up all right." Proceeding, he observed that care had been taken to prevent commonwealth trade from being injured by the new agreement.

No Provision for Credit

Comments in the British Press suggest that Russia was keen on getting sizable credit from the U.K. Government to finance large purchases of British-made capital goods and also in selling its surplus oil, but that it has not succeeded in realising these objectives. According to London advices, it had been made clear to the U.S.S.R. that the U.K. would not be granting Government credit to cover Soviet purchases, and that the U.K. Government feels that the members of the Commonwealth, particularly the underdeveloped countries, have a prior claim for British credit. This is, of course, the unanimous verdict of the British Press as well. Nevertheless, the U.K. will help the U.S.S.R. to get commercial credit through the Export Credits Guarantee Department. It may be noted that the E.C.G.D. does not advance credit but only provides insurance facilities on a strictly commercial basis. This enables the exporter in Britain to get credit from his bank. In this way, Russia can manage to raise a sizable amount of commercial bank credit in the U.K.

Russia might have been disappointed in not being able to get credit facilities and sell oil to Britain. But it has other reasons to feel satisfied with the outcome. In the first place, it has realised the long-cherished object of entering into a bilateral trade agreement with the U.K. —one of the few W. European countries without a trade agreement with it till now. This has great propaganda value, especially as the U.S. has been consistently refusing to conclude a similar agreement with Russia. Secondly, there has been a growing realisation in the U.S.S.R. of the need for concentrating attention on producing consumer goods. A major part of its imports from the U.K. will be either consumer goods or machinery for making them. These imports will have the additional advantage of serving Russia's Seven-year Plan. Again, Russia has still not ruled out the possibility of getting sizable credit from the U.K. It is believed that, in course of time, the E.C.G.D. will accommodate Russia in some form or other. It is significant that Sir David has stated that the British Government would watch how Soviet credit requirements developed.

U.K's Reaction

British industry and trade are said to be happy over the outcome. Britain has been striving hard to find new outlets for a wide range of its manufactures in order to utilise its surplus industrial capacity and to maintain a high level of employment. The representatives of automobiles, cotton and other textiles seem to share the view that there is good scope for promoting the sale of their goods in Russia.

Commenting on the prospects for exports of British goods to Russia, Sir David Eccles stated that Lancashire might get a "foot in the door" in Russian trade. Exports of textiles would be on a small scale in the initial stages, but quotas could be reviewed every year to make neces-

TRAVANCORE RAYONS' RESULTS HEARTENING

PROFIT AT A RECORD LEVEL—EXPANSION PROGRAMME IN FULL SWING

THE performance of Travancore Rayons Ltd. (Managing Agents: Messrs. Emcete and Sons (Travancore) Private Ltd., Rayonpuram, Kerala State) during the year ended 31st December 1958 has been impressive. The Company's production, sales and profit have all gone up substantially to touch new high levels, with the result that it has been able not only to strengthen its financial position by retaining as much as 66 per cent. of its net profit in business but also enhance the dividend level on ordinary shares from 10 per cent. to 12½ per cent.

The output of rayon yarn and cellulose film reached 9.24 million lbs. during the year under review, representing an increase of 3.73 million lbs. over the year, thus more than making good the setback noted in the previous year, when production fell from 7.07 million lbs. to 5.51 million lbs. Both rayon yarn and cellulose film have contributed to the increase in production. There was, no doubt, an addition of 1.8 tons per day in the capacity of rayon yarn production. No less a favourable factor to the larger production during the year was the satisfactory supply position of raw materials. The Directors record with gratitude the Government of India's assistance through the necessary licences for import of raw materials, in spite of foreign exchange difficulties, in order to maintain continuous production. Though there was some delay in getting the licences, production went on satisfactorily.

The sale proceeds show an increase from Rs. 2.55 crores to Rs. 3.28 crores. The gross profit has gone up by nearly 64 per cent., that is from Rs. 60.25 lakhs to a peak of Rs. 98.64 lakhs, in refreshing contrast to the fall of Rs. 10.11 lakhs noted in 1957 from the previous record of Rs. 70.36 lakhs, thus reflecting the full effect of the Company's expansion programmes. The managing agency remuneration takes up Rs. 6.66 lakhs, as against Rs. 3.01 lakhs for 1957. The provision for depreciation has been raised from Rs. 34.55 lakhs to Rs. 37.39 lakhs. With this, the unabsorbed depreciation has been wiped off and, for the first time, the Company's profit has become taxable with effect from the year under review. The Directors have not, however, made any provision for this liability out of the year's earnings. They propose to meet this out of the deferred taxation reserve built up in earlier years and now standing at Rs. 30 lakhs.

The net profit for the year under review amounts to Rs. 53.51 lakhs, as compared with Rs. 21.64 lakhs for 1957. Thanks to the substantial rise in net profit, the Directors have stepped up the transfer to the general reserve from Rs. 10 lakhs to Rs. 30 lakhs and have also created a development rebate reserve, with an allocation of Rs. 5.80 lakhs, and a gratuity reserve with Rs. 1 lakh. The distribution on ordinary shares is being raised to 12½ per cent. per annum from 10 per cent. paid for each of the previous two years. The Company, it will be recalled, began remunerating its shareholders in 1953 with a maiden dividend of 5 per cent. Since then it has successively raised the return to them, except last year when it was unchanged at 10 per cent.

The following comparative table shows the progress of the Company during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955

* Wealth tax only.

With the substantial improvement in its earnings, the Company's financial position has become quite comfortable. Its paid-up capital is unchanged at Rs. 1.50 crore ever since its inception, despite the vast expansion it has made during the period. The reserves and surplus stand at the impressive level of Rs. 19 lakhs. The borrowings from banks, which had stood at Rs. 32.49 lakhs as at the close of 1957, have been completely repaid and those from the Kerala State Government have been reduced from Rs. 27.50 lakhs to Rs. 15 lakhs. The other liabilities and provisions aggregate Rs. 47.26 lakhs. The additions to gross block during the year under review were Rs. 31.61 lakhs, of which plant and machinery alone account for Rs. 30.62 lakhs. The gross value of the block account as at the end of 1958 is Rs. 417.25 lakhs, on which depreciation provided so far amounts to Rs. 230.18 lakhs, so that the net block stands at Rs. 187.07 lakhs. The other assets aggregating Rs. 142.11 lakhs exceed the current liabilities and provisions by Rs. 61.85 lakhs. Even after the substantial reduction in borrowings, the cash balances as at the end of the year amount to Rs. 54.32 lakhs, which are readily available to meet the expansion costs, tax payments, dividends, etc.

The Company raised its installed capacity of rayon yarn during the year, by 1.8 ton per day by installing six spinning machines, bringing the total capacity to 8.6 tons per day. It is proposed to increase it by another five tons and the matter is under correspondence with the Government of India for the necessary permission. The Company has received permission to set up a plant for producing cellulose film with a capacity of about 2,000 tons per annum. The plant is expected to go into production by the middle of next year. Besides, a sulphuric acid plant, with a daily capacity of 50 tons, has been received at site and is now in process of erection. It will be commissioned by August this year. The second moisture-proofing plant is due to be shipped now and production in this section is expected to commence before the end of this year. When the expansion schemes are completed, the Company will be one of the largest manufacturers and exporters of cellulose products in India.

In view of the good outlook, the shares of the Company (Rs. 10 paid up) have been ruling steady at Rs. 21.22 *cum-div.*, despite the general setback in the share market during the last few days. At the beginning of the year, they had stood at Rs. 16 and a year ago at Rs. 14.10. On an *ex-div.* basis and at the current rate of dividend, the shares provide a yield of 6.3 per cent. per annum.

NATIONAL RUBBER MANUFACTURERS LTD.

The first full year of working of the National Rubber Manufacturers Ltd. (Managing Director: Mr. K. N. Mookerjee, Calcutta), namely, the one ended 31st December 1958, after it was converted into a public limited concern in November 1957, proved to be one of progress in production and sales. Thanks to the coming into production towards the end of 1957 of some of the new plant and machinery under the expansion programme launched during the year, the Company's output recorded an increase and its sales (in terms of value) rose by 24 per cent. over that in 1957, that is, from Rs. 1.32 crore to Rs. 1.63 crore. The profit, however, has not kept pace with the increase in turnover. On the contrary, it is a shade lower, the gross profit having fallen from Rs. 7.19 lakhs to Rs. 6.86 lakhs. This was due to the rising cost of production, particularly under the heads of raw materials, stores and maintenance, and reduction in the selling prices of certain products on account of competitive market conditions. While the gross profit has fallen only fractionally, its ratio to sales has declined from 5.4 per cent. to 4.2 per cent.

In contrast the net profit is a shade better at Rs. 3.95 lakhs, as compared with Rs. 3.46 lakhs earned in 1957, mainly on account of the lower provision for taxation, which has been reduced from Rs. 1.53 lakh to Rs. 48,463. This is made up of Rs. 35,000 towards wealth tax for 1958 and Rs. 13,463 towards adjustment of short provisions for previous years, the corresponding allocations made last year being Rs. 22,000 and Rs. 1,062, respectively. No provision for income-tax has been made in respect of 1958, while a sum of Rs. 1.30 lakh had been set aside a year ago. This is evidently due to the rebate which the Company is entitled to on its expansion scheme. After raising the provision for depreciation from Rs. 2.20 lakhs to Rs. 2.43 lakhs, the Directors have credited Rs. 3.22 lakhs to the development rebate reserve. Following this, they have had to draw Rs. 2 lakhs from the dividend equalisation fund (which was set up two years ago with a similar allocation) to pay a dividend of 6 per cent. on the increased ordinary capital of Rs. 50 lakhs (less calls in arrears), raised by calling up the uncalled liability on the new shares. The dividend rate for 1957 was 10 per cent. Although it is lower for 1958, the amount taken up is a shade larger.

The following comparative table shows the Company's progress in the last two years:

(In lakhs of rupees)

	For the year ended 31st December		
	1958	1957	1956
Sale proceeds (net)	1,63.46	1,32.17	1,09.93
Closing stocks of finished goods and work-in-progress	44.26	27.13	21.43
Raw materials, stores and spares consumed	1,14.42	84.68	78.20
Other expenses	60.81	47.43	33.29

Transfer from reserves	2.00	..	..
To reserves	3.22	..	2.00
Dividends—			
6 per cent. preference	0.57	0.02	..
Ordinary	2.99 (6%)	2.99 (10%)	1.60 (20%)
Carry forward	0.97	1.80	1.27

With the increase during 1958, the average annual sales turnover of the Company for the four years 1955 to 1958 reached Rs. 1.27 crore, having nearly doubled itself from that of Rs. 66 lakhs for the previous four years, reflecting the progressive expansion in the Company's activities. The Directors expect the sales turnover to increase to Rs. 2 crores during the current year and to the target of Rs. 3 crores in 1960. As was indicated earlier, cost of raw materials, stores and spares has gone up nearly Rs. 30 lakhs. Among the other expenses, freight and transport charges show a rise of Rs. 1.93 lakh, customs duty Rs. 2.37 lakhs, excise duty nearly Rs. 2 lakhs, salaries, wages, etc., Rs. 4 lakhs and miscellaneous expenses Rs. 1.10 lakh.

The Company's paid-up capital of Rs. 59.35 lakhs is supplemented by reserves and surplus amounting to Rs. 8.19 lakhs. The outstanding unsecured loans at the end of 1957 (Rs. 7.02 lakhs) have been repaid, while secured borrowings from banks and the West Bengal Financial Corporation have increased from Rs. 36.59 lakhs to Rs. 55.35 lakhs. The other current liabilities and provisions stand at Rs. 29.82 lakhs. An additional capital expenditure of Rs. 22.37 lakhs was incurred during the year under review; this represented 44.5 per cent. of the total expenditure up to the end of 1957 and more than 100 per cent. of their net value as at the close of the year. The gross block at the end of 1958, at Rs. 72.59 lakhs, stands written down to Rs. 41.55 lakhs. The other assets aggregate Rs. 111.16 lakhs, exceeding the current liabilities and provisions by Rs. 30.99 lakhs.

Substantial progress was achieved during the year in implementing the Company's latest phase of expansion programme. The bulk of the plant and machinery ordered was received and partly installed. The expansion of installed capacity, in respect of products like cycle tyres, industrial V-belts and fans belts, was fully achieved. The production of cycle tubes has now been taken in hand and additional capacity will be installed during 1959 for the manufacture of substantial quantities of transmission and conveyor belting.

OSMANSHAHI SUFFERS LOSS AGAIN

For the second year in succession the Osmanshahi Mills Ltd. (Managing Agents: Messrs. Bansilal Bisesardas Private Ltd., Hyderabad) has suffered a sizable loss and has had to draw on the reserves to wipe it out. The accounts of the Company for the year ended 30th September 1958 show a loss of Rs. 10.26 lakhs, on top of a deficit of Rs. 8.55 lakhs in 1956-57. The loss for the year under review has been arrived at after taking into account a profit of Rs. 1.66 lakh earned on sale of shares of the Azam Jahi Mills Ltd. held by the Company, so that the actual loss on trading is as much as Rs. 11.92 lakhs. The Directors have added a sum of Rs. 45,000 to the development rebate reserve, raising the net loss, subject to provision for depreciation, to Rs. 10.71 lakhs. The Directors have, as already mentioned, drawn a like sum from the general reserve to cover the loss, the aggregate sum drawn in the last two years for this purpose being Rs. 19.13 lakhs. In view of the heavy loss, the Company has not been able to provide anything for depreciation this year also, the accumulated arrears of depreciation up to the end of September 1958 being Rs. 65.29 lakhs, excluding initial depreciation amounting to Rs. 19.40 lakhs. It has also had to skip over the dividend for the second year in succession.

The adverse results for the year under review are not surprising, in view of the uneconomic working of the industry as a whole and particularly when the Company had already had a lean period in 1957. The Directors regret that they could not do any better than what the accounts show.

Following the withdrawal of a sum of Rs. 10.71 lakhs, the reserves and surplus of the Company stand at Rs. 29.31 lakhs, as against a paid-up capital of Rs. 87.23 lakhs. Borrowings from banks have been reduced from Rs. 77.42 lakhs to Rs. 59.56 lakhs, but other liabilities and provisions, at Rs. 22.94 lakhs, are higher by Rs. 4.02 lakhs. The gross block of the value of Rs. 176.87 lakhs has been written down to Rs. 109 lakhs, the depreciation provided so far being no more than Rs. 67.87 lakhs. The other assets amounting to Rs. 90.04 lakhs more than adequately cover the current liabilities and provisions.

The Directors have considered it desirable and necessary, in the interests of the Company, to effect considerable renovation and modernisation of the old machinery of the mills. The cost of renovation and modernisation is estimated at Rs. 12 lakhs. In addition to the finance required for this purpose, the Company is in need of Rs. 1 lakh being the erection charges of new machinery and Rs. 12 lakhs as working capital. The aggregate sum of Rs. 25 lakhs is proposed to be borrowed against the issue of debentures of the value of Rs. 100 each, carrying interest at the rate of 7½ per cent. per annum, secured by a first mortgage of the fixed assets of the Company. The debentures are redeemable after five years. The debenture holders will have the option to convert their debentures into ordinary shares in the ratio of one share for each debenture, after giving three months' notice. In order to provide for the exigency of all the debentures being converted into ordinary shares, the authorised capital of the Company is being sought to be raised from Rs. 1 crore to Rs. 1.25 crore. Negotiations are going on for getting the debentures underwritten. The Company has no debenture capital at present.

Messrs. Bansilal Bisesardas Private Ltd. took over the managing agency of the Company with effect from 9th May 1958 from the Industries (I.F.) Department, Government of Hyderabad, which had to relinquish the office, as the mill came within the State of Bombay following the reorganisation of States.

MODERN MILLS LTD.

The extremely difficult conditions in cloth trade, particularly in coarse and medium varieties during 1957-58, have had an adverse effect on the earnings of the Modern Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) for the year ended 31st October 1958. The bulk of the Company's products is of the coarse and medium category which had to be sold at unremunerative prices. The effect of this development is fully reflected in gross profit which has dropped to Rs. 5.03 lakhs from Rs. 8.65 lakhs, to which level it had declined in 1956-57 from Rs. 18.54 lakhs earned in 1955-56. Thus, within a short span of two years, the Company's profit has dwindled by 70 per cent., taking it to the lowest level since 1952-53.

After providing for Managing Agents' remuneration of Rs. 44,525 (as against Rs. 53,577 for 1957), for depreciation Rs. 3.37 lakhs (Rs. 3.37 lakhs) and for taxation—wealth tax—Rs. 42,545 (Rs. 44,145), the net profit for the year comes to a mere Rs. 79,217, as compared with Rs. 4.30 lakhs for the previous year and Rs. 12.08 lakhs for 1955-56. This is supplemented by drawing Rs. 3.50 lakhs from general reserve and Rs. 1.65 lakh from machinery rehabilitation reserve and writing back Rs. 11,743 being the excess provision for taxation made in previous years. The Directors have added Rs. 1.20 lakh (Rs. 1.09 lakh) to the gratuity reserve and Rs. 2.19 lakhs to the development rebate reserve (*nil*). They have also recommended a dividend of Rs. 3 per share (of Rs. 50 each) or 6 per cent. on the enhanced capital of Rs. 46.47 lakhs, raised during the year by capitalising Rs. 13.28 lakhs out of the share premium account and issue of two shares for every five. The dividend for the previous year was 10 per cent. paid on a paid-up capital of Rs. 33.19 lakhs. On the old capital, the distribution of 1957-58 represents a dividend of 8.4 per cent.

The paid-up capital of the Company, at Rs. 46.47 lakhs, raised by the issue of bonus shares, as stated above, is supplemented by reserves and surplus amounting to Rs. 30.36 lakhs. These include a sum of Rs. 2.80 lakhs being the balance on share premium account. The Company has spent Rs. 13.37 lakhs on additions to the block account, bringing the total cost to Rs. 141.23 lakhs. The depreciation provided so far is almost 50 per cent., at Rs. 70.57 lakhs, so that the book value of the fixed assets is no more than Rs. 70.66 lakhs. The other assets aggregate Rs. 99.98 lakhs, as against which the current liabilities and provisions amount to Rs. 71.26 lakhs. The Company has also a debenture loan of Rs. 12 lakhs secured by fixed assets.

The Company is one of those very few, if any, which had long ago introduced in its capital structure the class of shares, called employee shares, which we had commended in our issue dated 23rd May 1959 (*vide* page 851). The number of such shares is only 4,500 and their face value is no more than Re. 1 each, as against Rs. 50 each of the ordinary shares. It must, however, be noted that these shares so far remain unissued.

FIAT MOTORS

Fiat S.p.A. Turin (Italy), the world-famous producers of Fiat cars, earned a profit of 16,631,218,276 lire in 1958. The Directors have declared for the year a dividend of 80 lire per share. The main features of the Company's achievements in 1958 are:

(1) 341,252 cars and commercial vehicles (315,029 cars) were produced, that is, 35,132 more than in 1957; (2) 16,315 farm and industrial tractors were turned out, half of which were exported; (3) 650,000 tons of ingot steel were produced; and (4) total sales aggregated 373,000 million lire (23,000 million lire more than in 1957); (5) 145,500 cars were exported (an increase of 34,000 over the preceding year) to 112 markets in every continent, the total value of exports being 113,000 million lire (18,000 million lire more than in 1957).

Fiat employs at present 80,000 people, including 61,512 factory workers.

The production of Fiat cars is at a high European level, at present about 1,600 units a day. Sales of Fiat models 500, 600, 1100, 1200 are steadily growing in Italy and abroad. The Company recently introduced the new 1800 (also available with a 2100 c.c. engine) at the Geneva Motor Show. Fiat's aviation production is developing under the sign of the success of the "G 91" jet aeroplane, winner of the N.A.T.O. competition.

NOTES FROM WEST GERMANY

CONCENTRATION OF ECONOMIC POWER

(From A Correspondent)

COLOGNE, *29th May*

THE top level grouping of independent business men in West Germany devotes its annual meeting this week to such issues as economic concentration and economic power in a free enterprise economy as well as to the discussion of measures for the promotion of small and medium-sized enterprises. Known as the A.S.U. (Arbeitsgemeinschaft Selbstandiger Unternehmer), this grouping now has some 1,000 members who simultaneously own and manage their mostly small or medium-sized companies. The A.S.U. is not an employers' association engaging, for instance, in collective bargaining. Instead, it serves its members as a respected platform for opinions on important matters of economic and social policy.

Industrial concentration is an old-timer among the economic and political issues in many countries. The problem itself is widely recognised by German business of all sizes. Nobody disagrees on the necessity and the desirability—from many points of view—of maintaining and developing a sound business structure embracing healthy small and medium-sized businesses. The system of free enterprise is working—basically—for a natural division of labour between "Big" and "Small," as can be seen in all free societies. There is a necessity for large enterprises, of course, and also for many mergers. But the very development of larger firms usually gives birth to quite a few small and medium-sized firms, serving either as very able and specialised suppliers, or as similarly specialised processors, not to speak of the wealth of independent firms developing in "tertiary industry," such as trade, wholesaling, and the service industries in general.

The problem deserves careful investigation, of course, particularly since the Common Market in Europe will speed up the process of specialisation. But the example of the U.S. market clearly shows the unchanged importance of small or medium-sized businesses, acting as indispensable suppliers or as processors, in close interaction with larger firms. It should not be denied, however, that unfavourable influences upon small business may result from such obstacles as discriminatory tax systems. Full agreement exists, therefore, on the necessity of adjusting the W. German tax structure, in order to eliminate all possible obstacles to an "equal start for everybody."

In the final analysis, there cannot be one-sided growth, either of "Big" or of "Small" alone. Mutual growth rather than one-sided and artificial growth or retardation is at stake in all free societies. Mutual growth must unite business of all sizes in a common stand against the real threat of our time, the ruthless concentration of economic power in the Communist orbit aiming at world domination.

* * * * *

Denationalisation plans for the Volkswagen Works are being closely studied by the West German Government. The Volkswagen Works are, it is said, the third State-owned enterprise to be "privatised" by the issue of people's shares, patterned after the successful "Preussag" scheme. The second enterprise on the denationalisation list will be the Federal Republic's VIAG concern, owning, among others, aluminium works and power plants. The VIAG's present capital stock amounts to 200 million DM. It is planned to increase this stock to a total of 400 million DM, of which 100 million DM would be offered to the public this year by selling "people's shares."

W. Germany's precision instruments and optical goods industry shipped goods worth 233 million DM abroad during first quarter of this year, representing an increase of one per cent. over the shipments. Imports of precision instruments and optical goods, however, went up by 13 per cent. to 31 million DM. Bestseller of the industry were cameras totalling 80 million DM (73 million in first quarter of 1958), followed by precision instruments: 50 million DM (59 million), and watches: 46 million (50 million). Precision instruments had the lead in imports (10 million DM, as against 7 million the year before), followed by watches (9 million DM, down 2 million DM) and optical goods without cameras (7 million DM, up 2 million DM).

COMPANY MEETINGS AND DIVIDENDS

TRAVANCORE RAYONS LTD. Annual General Meeting, Rayonpuram, Kerala State, 18th June 1959. Dividend: 12½ per cent. or Re. 1.25 per share. Transfer books remain closed from 26th May to 20th June 1959, both days inclusive.

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad, 19th June 1959. Dividend: *Nil*. Transfer books remain closed from 25th May to 19th June 1959, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 22nd June 1959. Dividend: Rs. 10.00 per share, payable on and after 22nd June 1959. Transfer books remain closed from 2nd to 22nd June 1959, both days inclusive.

KUNCHUNPORE TEA CO., LTD. Annual General Meeting, Calcutta, 23rd June 1959. Dividend: *Nil*. Transfer books will remain closed from 16th to 23rd June 1959, both days inclusive.

OKAYTI TEA CO., LTD. Annual General Meeting, Calcutta, 24th June 1959. Dividend: Rs. 32.50 per share. Transfer books will remain closed from 17th to 24th June 1959 both days inclusive.

RUNGLEE RUNGLIOT TEA CO., LTD. Annual General Meeting, Calcutta, 24th June 1959. Dividend: Rs. 30.00 per share. Transfer books will remain closed from 17th to 24th June 1959, both days inclusive.

JEWANLAL (1929) LTD. Annual General Meeting, Calcutta, 25th June 1959. Dividend: *Nil*. Transfer books will remain closed from 18th to 25th June 1959, both days inclusive.

NATIONAL RUBBER MANUFACTURERS LTD. Annual General Meeting, Calcutta, 26th June 1959. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books will remain closed from 15th June to 4th July 1959, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 26th June 1959. Dividend: Re. 0.50 per share.

PICKERS LTD. Annual General Meeting, Ahmedabad, 27th June 1959. Transfer books will remain closed from 12th to 27th June 1959, both days inclusive.

SAVAMALAI ESTATES LTD. Annual General Meeting, Calicut, Kerala State, 4th July 1959. Dividend: 12½ per cent. or Re. 0.25 per share. Transfer books will remain closed from 27th June to 4th July 1959, both days inclusive.

TEXTILE MACHINERY CORPORATION LTD. Annual General Meeting, Belgharia, 24-Parganas, West Bengal, 7th July 1959. Dividend: Re. 1.50 per share, free of income-tax. Transfer books will remain closed from 23rd June to 7th July 1959, both days inclusive.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. Dividend of 6 per cent. on the ordinary shares, or Re. 0.60 per share, for the year ended 30th September 1958. Transfer books will remain closed from 15th to 29th June 1959, both days inclusive.

SRI BALASUBRAMANIA MILLS LTD. Dividend of 10 per cent. or Rs. 4.00 per ordinary share and Rs. 7.00 per share on 'B' ordinary shares, for the year ended 31st December 1958. Transfer books remain closed from 4th to 18th June 1959, both days inclusive.

SRI RAMAKRISHNA MILLS (COIMBATORE) LTD. Dividend of 16 per cent. or Rs. 16.00 per share, for the year ended 31st March 1959.

BANGALORE PRINTING AND PUBLISHING CO., LTD. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 15th to 27th June 1959, both days inclusive.

HIGHLAND PRODUCE CO., LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st December 1958.

PODAR MILLS LTD. Dividend of Rs. 18.00 per share (includes a special bonus of Rs. 8.00 per share), for the year ended 31st December 1958. Transfer books will remain closed from 23rd June to 16th July 1959, both days inclusive.

JYOTI LTD., (BARODA). Dividend of Rs. 12.00 per share, for the year 1958, payable on and from 16th July 1959. Transfer books will remain closed from 19th to 29th June 1959, both days inclusive.

NEW GREAT INSURANCE CO. OF INDIA LTD. Dividend of Rs. 2.00 per share, free of income-tax, for the year ended 31st December 1958. Transfer books will remain closed from 25th June to 11th July 1959, both days inclusive.

COMPANY REGISTRATIONS

GLOBE THEATRES PRIVATE LTD. (First Director: Mr. K. A. Kooka). Business: Management of theatres, music hall, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Capitol Cinema Building, Victoria Terminus, Fort, Bombay.

MEHTA LEONARDT PENS PRIVATE LTD. (First Director: Mr. Ramnath Mehta). Business: Manufacture of steel pens, stationeries of all types, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Registered office of the Company will be situated in the State of Bombay.

TECHNI-GLASS PRIVATE LTD. (First Director: Mr. B. Tolasingh). Business: Manufacture of all kinds of glass products. Authorised capital: Rs. 5,00,000. Private company. Address: Kasturi Buildings, Jamshedji Tata Road, Bombay-1.

SHANTI LEENA PRIVATE LTD. (First Director: Shrimati Shantibai Chandrakant Khatau). Business: Importers, exporters, manufacturers and dealers in merchandise goods, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 6, Laxmi Buildings, Ballard Road, Bombay.

GUEST, KEEN, WILLIAMS, LIMITED

MANAGING DIRECTOR, MR. WILLIAMS, REVIEWS PROGRESS

CAUTIOUS OPTIMISM ABOUT CURRENT YEAR'S RESULTS

THE Twenty-ninth Annual Meeting of Guest, Keen, Williams, Limited was held at Calcutta on 29th May 1959. In the course of the annual statement to the shareholders circulated on the occasion, Mr. H. M. L. Williams, Managing Director of the Company, said that the profit-earning contribution of the new units of the Company, which were expected to go into production before the end of the current year, to this year's trading results was not likely to be large, but, he added, unless unforeseen circumstances occur, the year's results could be expected to show "some valuable consolidation and pave the way for real improvement twelve months from now."

The following is the full text of Mr. Williams' statement:

"GENTLEMEN,

"The Directors' report and statement of accounts have been circulated and I propose, with your permission, that they be taken as read. Before proceeding with the formal business of the meeting I would like to review some of the more important events which have affected your Company during the last trading year and since our last annual general meeting.

"It is with regret that I report the retirement from the Board of Mr. K. C. Mahindra. Your Company has been fortunate in enjoying the benefit of Mr. Mahindra's advice ever since 1956 when he joined the Board. He now leaves us due to the many other pressing calls on his services, and I would like to place on record my appreciation of his assistance; his understanding and experience of modern business problems have been of great help to the Board and of inestimable value to the Company. The vacancy created by Mr. K. C. Mahindra's retirement, it is proposed, shall be filled by the appointment to the Board of Mr. S. L. Dass, who has signified his willingness to accept office.

Full-time Directors

"In the notice of the meeting you will read that it is intended to elect to the Board two more full-time Directors. The explanatory statement accompanying the notice sets out the reasons for these appointments; in view of the expanding nature of the Company's business and to cater for impending retirement, I commend to you the need for these appointments.

"Trading in 1958 generally followed the upward trend of the previous years, but due to the shortage of foreign exchange supplies of imported steel were again insufficient and irregular, resulting in some of the production units not being worked to their full potential.

"Although the income of the Company in 1958 was about 13 per cent. higher than in the previous year, profits have not been maintained at the same level. The rising trend in manufacturing expenses and salaries and wages, already evidenced in 1957, continued throughout 1958; the increase of salaries and wages alone was 13 per cent. of the 1957 figures. The surplus before taxation is lower than that of 1957, but I would point out that this fall is due, to a great extent, to higher financing charges by way of debenture interest and overdraft interest. On a smaller surplus the provision for taxation is greater than that of 1957, because of the withdrawal in 1958 of additional depreciation allowances for tax purposes.

Operating Results

"The total earnings for the 53 weeks ended 3rd January 1959 amounted to Rs. 10,37,98,977, as compared with Rs. 9,18,58,837 for the previous year and the surplus before taxation dropped from Rs. 1,41,13,317 to Rs. 1,30,19,406. From the surplus, taxation for the period under review has absorbed Rs. 74,20,000 which is Rs. 2,20,000 higher than in 1957; included in the provision for 1958 is Rs. 2,41,000 for wealth tax. I have already mentioned in this report the effect on taxation of the additional depreciation allowance having been discontinued, but I would like to advise shareholders in this context that the reduction in tax allowances for depreciation will enable them to obtain 100 per cent. tax relief on any dividends declared out of 1958 profits, because the total tax allowances available will not exceed the provision in the accounts.

Appropriations

"The Directors' report clearly sets out the various appropriations which have been made. Two new items which appear are the expenses of Rs. 7,14,264 incurred in connection with the issue of debentures and the statutory transfer to development rebate reserve of Rs. 8,42,291. Having paid an interim dividend of 80 naye paise per share without any deduction for tax, your Directors now recommend a final dividend of Rs. 1.20 per share without any deduction for tax and they also recommend that the balance of the available surplus amounting to Rs. 1,35,600 be transferred to general reserve.

Balance-sheet

"Considerable progress has been made during 1958 towards the implementation of the Company's development schemes, as can be seen from the figures shown in the balance-sheet under fixed capital expenditure. Whilst actual additions to fixed assets during the year amounted to Rs. 57,70,489, the expenditure incurred on development projects still to be completed was very substantial and at 3rd January 1959 totalled Rs. 2,51,14,914.

"You will observe that, in spite of having issued Rs. 1,50,00,000 6½ per cent. 1966-71 debenture-stock, the Company had a bank overdraft at 3rd January 1959 amounting to Rs. 1,15,72,610, an increase of Rs. 23,02,345 over the previous year-end. This position is to be expected, in view of the large sums of money spent during the year on the development schemes and for general rehabilitation. I think, it is only fair to tell shareholders that this demand on the Company's liquid resources is likely to continue until such time as benefits can be derived from the various development schemes, now in the course of completion. Last year, I referred to the problems of book debts outstanding, and I am now pleased to report to you a general improvement in the position during 1958.

"The Directors, being of the opinion that it would be in the interests of the Company to increase the issued share capital, an application was made last year to the Controller of Capital Issues for his consent to a bonus share issue, the intention being to liquidate the share premium account and make an immediate issue of three new shares for ten existing shares. Unfortunately, the reply to this application specifically precluded the issue of shares from the share premium account. More recently, under the 1959 Finance Act, issues from share premium accounts have been subjected to tax at the rate of 30 per cent., and the Directors, therefore, do not consider it to be in the interests of the Company to recommend the issue of bonus shares at the present time.

Production

"Bhandup Works, where wood screws and all the smaller sized fastenings are made, is of necessity dependent upon imports for steel supplies and suffered a very serious drop in production for five months when the Works was forced by raw material shortage into short-time working. Since the end of the year, imported steel has again become available and this Works is gradually being brought back to full-scale operation.

"At Calcutta Works, the steel melting furnace and the rolling mills once again operated at record capacity and played their full part in supplying the manufacturing departments. The railway switch and crossing section, although planned for considerably greater production than in 1957, was unfortunately prevented from reaching its targets, because of serious deficiencies in supplies of steel normally available from indigenous sources. The bolt and nut works, although showing a rise in despatches, was another section which fell short of expectations in the production of fish bolts for the railways, solely due to insufficient supplies of steel. Of the other manufacturing sections, the change-over in steel sleeper production was completed and since the end of the year production has been firmly established. The section making railway track fittings was the only one where a fall in demand was experienced and, although this has continued into the early months of 1959, it is not expected to be permanent.

"A problem which affects your Company, as many others, is the continual rise in production costs. Earlier in this review, I have mentioned the rise in wages and salaries of the Company's employees; such increase is to be welcomed as a sign of improved benefits to those who work in your interests, but unless this increase is accompanied by a corresponding increase in production, inflation occurs and after a short space of time the greater emoluments to employees are of no benefit to them and do not raise their standard of living. Other rising costs are noticeable in nearly every purchase of stores and equipment, or essential raw materials and outside services. All this is a very distressing feature for a company which is in a competitive market and in an industry striving to take its place in serving the country's internal needs, and is furthermore being exhorted to produce for the export market.

Agency Department

"Your Company represents a number of the leading overseas manufacturers of plant and equipment, and the demand for these imported products continued to rise during 1958, due to the general industrial expansion of the country. The business we obtained was not, however, at an equivalent level, due to very severe competition and to increasing import restrictions. In addition to the traditional competition from countries like Germany and Japan, we are now faced with a steady penetration of the Indian market from Eastern European and Asian countries, which we do not represent, and whose goods are often supplied under barter agreements providing for payment in rupees, thus eliminating for them the difficulty of obtaining import licences. In spite of this, the invoiced sales and commissions for 1958 totalled Rs. 25,94,667, and the value of outstanding orders at the end of 1958 exceeded the value at the beginning of the year by Rs. 12,18,743. Electrical stud welding is included in the Agency Department results for 1958, but this enterprise, which started from a small beginning as a fully imported business, is now being changed over to indigenous manufacture and shows promise of substantially increased sales.

Development and Future Prospects

"The management of your Company is fully aware of the need for improving efficiency, and has under continual study ways and means of introducing improved manufacturing techniques and making more economical use of materials and equipment. The solutions to these problems are not to be found overnight, they are matters needing constant vigilance and the realisation of everyone that the prosperity of our Company and the industry depends on putting to the greatest possible use all our resources of manpower, machines and money.

"The Company now has very considerable sums of money at stake in new developments. In January 1959, the second steel melting furnace was brought into full-scale production and before the end of this year we expect to bring into production the new nut making plant, the first stage of the steel road wheel plant and a substantial part of the new rolling mills. These new units can be expected to have their teething troubles, in the case of wheels, not the least of which may be the supply of raw material. Their profit-earning contribution to the 1959 trading year is not, therefore, likely to be very large, but unless unforeseen circumstances occur, the current year's results can be expected to show some valuable consolidation and pave the way for real improvement twelve months from now.

"I would also draw your attention to the circular letter informing shareholders of the proposal to acquire the share capital of Sankey Electrical Stampings Private Ltd. This proposal is to be considered by shareholders at an extraordinary general meeting later today and, if adopted, will result in your Company having

INDIAN PAPER MAKERS ASSOCIATION

CONSUMPTION OF PAPER OUTPACES RISING PRODUCTION

MR. I. A. MACPHERSON REVIEWS SOME PROBLEMS OF THE INDUSTRY

THE Annual General Meeting of the Indian Paper Makers Association was held at Calcutta on 1st June 1959. The following is the full text of the speech of the Chairman, Mr. I. A. Macpherson, which was read, in his unavoidable absence, by Mr. M. L. Zutshi, Vice-Chairman of the Association:

"As I shall be proceeding to the U.K. on home leave at the end of March, I regret, I am unable to address the meeting of the Association, but Mr. M. L. Zutshi, Vice-Chairman of the Association, has kindly consented to read my speech on my behalf and I should like to extend a cordial welcome to our guests to this annual general meeting of the Indian Paper Makers Association.

"The annual report for the year 1958 has been circulated to members for them to study before this meeting.

"The year 1958, like the previous year, has been one of very steady progress and one new unit, namely, the West Coast Paper Mill, came into production in October. The final figures of production will perhaps show that the paper industry has produced nearly 2½ lakh tons of finished paper and this was certainly an achievement and would prove beyond doubt how sincere the efforts have been in the paper industry to fulfil their obligations under the second Five-year Plan. As hitherto, the valuable advice to the industry readily available from the Paper Development Wing of the Ministry of Commerce and Industry is always fully appreciated.

Tariff Commission's Enquiry

"In September last year, the Government of India authorised the Tariff Commission to carry out an enquiry into paper and paper board prices. The Commission sent out a detailed questionnaire to the Association as also to individual mills. The Association, jointly with the Indian Paper Mills Association, submitted a memorandum to the Commission setting out their views on various important aspects of the price fixation, particularly in regard to what they considered a fair return on capital employed and a suitable allowance for the rehabilitation of plant, machinery and equipment installed in the mills. I have, no doubt, that the Commission will consider the views of the industry and ensure that the price structure recommended would be such as would allow a fair return to the shareholders and also provide adequate internal finances for rehabilitation of the existing plant, machinery and equipment and future expansion to meet the growing demand for paper and board.

"In all, eight mills were selected for purposes of cost investigation. The members of the Commission visited some of the units in different parts of the country. The Association pointed out to the Commission that the units selected for cost investigation did not represent a fair cross section of the industry and, at the suggestion of the Commission, some of the non-selected mills submitted to the Commission data regarding their cost of production. I hope that the Commission would also go very carefully into this cost data and take it into consideration while fixing a fair price for paper and board.

"I do not consider it necessary to refer in this address to all the points which came up for discussion at Bombay during the Tariff Commission hearings. I would, however, like to touch on a few points which are of common interest to the industry and the consumer.

Manufacture of Light Weight Papers

"Of late, there has been an increase in demand for the supply of light weight papers. Unfortunately, most of the existing units are not really equipped to manufacture normal varieties of writing and printing papers of low weights. Consequently, manufacture of light weight papers results in considerable loss of production and unusual wear and tear of the machinery. If, therefore, the industry is to be called upon to manufacture light weight papers on a large scale, adequate coverage and incentive in the shape of a proper extra should be provided and I have no doubt the Commission would give their most sympathetic consideration to this.

"While we have been hearing a lot about the high prices of paper, it is generally overlooked that State and Central taxes, like excise, sales tax and octroi, account for a big slice of the price structure. I would like to take this opportunity of suggesting that there should be a reduction in the excise duty on paper and, if possible, a total removal of sales tax on a consumer commodity like paper which is needed for the spread of literacy and education in the country.

Specialities

"It is only proper that due consideration is given to the requirements of a class of selective users who need 'special qualities' of paper. I do appreciate that the present needs of the country demand production of ordinary varieties in large quantities, but one can hardly overlook the fact that the requirements of selective users who in the past were depending on imported specialities have now to be met from out of indigenous production. It is, therefore, a welcome sign that mills should be continuously experimenting and producing special types of paper to meet the genuine demand that exists in the country today for these varieties. In this connection, one thing I would like to emphasise is that, unlike normal varieties of paper, there cannot be any standardised specifications for special qualities as the particular characteristics to be imparted to paper will have to vary according to the customer's requirements and the use to which the paper is to be put. That being so, it would in my opinion be most inadvisable to bracket these along with normal varieties of writing and printing papers for the purpose of price fixation, as it will put a halt to the recent healthy trend to produce special papers for the specialised jobs. The production of these superior varieties after all represents a very small percentage of the total production of the country and anyway the manufacture thereof will always be guided by demand and supply. Accordingly, I am of the view that price fixation should not apply to these varieties.

"With regard to paper sales, there has been no change in prices since the Chairman's speech last year.

"One point of interest during the past year has been that certain institutions, particularly some of the larger university bodies, have been unwilling to accept any limitation in their supplies, and even in cases where they have received a tonnage equivalent to their 1957 offtake, they have still endeavoured to obtain further supplies for their own consumption.

Consumption Rising

"It is appreciated by the mills that consumption in this country is steadily increasing, particularly among educational bodies. If the demand from such bodies cannot be met in full, it is not a subject of criticism for the mills, provided that each mill does meet the equivalent of its 1957 commitments. Obviously, the mills must try to meet the increasing demand, but at the same time self-help and some degree of economy must be effected by those parties using large quantities of paper.

"During the meeting this year between the Government and the paper industry concerning the new rate contract, agreement was reached for part of the new year's allocation to be supplied by each mill at existing rates. The balance allocation is expected to be supplied at Tariff Commission rates following a further meeting between Government and the industry.

"Whilst the overall Government offtake from industry this year may be considered as reasonable when compared with previous years' offtake, there is no doubt that the Government does require an increased tonnage of the essential printings and writings. It is anticipated that at least 35 per cent. of each mill's capacity of such qualities will be required by the Government.

"It has been agreed that under no circumstances will text book papers be indented for under the rate contract, but in our opinion the question should be asked whether or not the present contract between the Government and industry covers too wide a scope. No longer are we required under the contract to supply paper solely for administrative purposes. Advertisements, brochures, encyclopædias, etc., are all legitimate requirements under the present contract.

"Paper production is increasing yearly in this country and Government offtake is increasing likewise in terms of tonnage. Whilst increased civil consumption of paper is a healthy sign of progress, it is by no means certain that a similar increase in consumption on the part of a country's Government is a like indication of a healthy state of affairs.

Freight Rate

"In October of last year, the Railway Minister announced the introduction of the revised freight structure on Indian railways, which in the case of various raw materials used by the paper mills increased the railway freight payable thereon. On finished paper the wagonload scales are somewhat favourable, but the increase on the raw material freight will add to the cost structure of the paper mills and particulars have already been furnished to the Tariff Commission. The shortfall in the expectation of earnings in the Railway Budget this year would appear to indicate that in many cases the maximum point of freight realisation has been reached and the Railway Ministry must give adequate incentive for the carriage of consignments to continue on the railways at the expected level.

"In addition to the foregoing, the Government of Orissa appointed a Select Committee on the proposed transit taxation on bamboo from Orissa, which supplies the bulk of its bamboo requirements to the larger paper mills in India and we cannot understand why this Select Committee has recommended a ceiling tax of Rs. 2 per 100 bamboos. I feel most strongly that the Government should pay greater attention to the impact on the industry of measures which they enforce to increase revenue and it should be appreciated that often Government action has been responsible for the increase in the cost of production. Adequate representations have been submitted to the Government of Orissa and we sincerely hope that this proposed taxation on bamboo will be substantially reduced, if not waived altogether.

Bamboo Resources

"Bamboo, as we are all aware, is the industry's main raw material and to all intents and purposes and until other alternative raw materials can be developed, is the only raw material which can sustain the existing industry and its present expansion. Whilst bamboo resources of the country may be vast, proper assessment to meet economic exploitation within reasonable working distance from the existing units is still to be made. It seems a great pity that some States still allow preference to the paper industry within their limits in the form of leases, etc., completely disregarding that the paper production in India should be taken as a whole and not on the basis of a State. The increase in outturn of bamboo from areas worked by long-term lease holders should make it perfectly clear that it is in the interests of State Governments to grant long-term leases to paper mills and in this matter all paper mills should receive equal treatment from the States concerned.

"I consider that the planting of bamboo should form a special part of Government's forestation scheme and this matter should be gone into very seriously.

"At this stage, I would like once again to refer to the electricity duty paid by mills in West Bengal with effect from 1st February 1958, which is a very heavy burden on the industry and increased the cost of paper by approximately Rs. 21 per ton. Since 1st April 1958, raw materials have increased by approximately Rs. 5 per ton of paper, stores chemicals and coal around Rs. 49.5 per ton of paper and labour in the region of Rs. 26 per ton of paper.

Notices

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

AN EXTRAORDINARY GENERAL MEETING of THE TATA IRON AND STEEL COMPANY, LIMITED, will be held on Thursday, the 25th June, 1959, at 4-30 p.m. (S.T.) at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, to transact the following business:—

To consider and, if thought fit, to pass the following resolutions as Special Resolutions:—

I. "The capital of the Company be increased from Rs. 30,86,22,100 divided into 50,000 6% cumulative Preference Shares of Rs. 150 each, 700,000 7½% cumulative Second Preference Shares of Rs. 100 each and 3,081,628 Ordinary Shares of Rs. 75 each to Rs. 39,25.00,000 divided into 50,000 6% cumulative Preference Shares of Rs. 150 each, 700,000 7½% cumulative Second Preference Shares of Rs. 100 each, 375,000 7½% cumulative "A" Second Preference Shares of Rs. 100 each and 3,700,000 Ordinary Shares of Rs. 75 each by the creation of 375,000 7½% cumulative "A" Second Preference Shares of Rs. 100 each and 618,372 new Ordinary Shares of Rs. 75 each, and that the conditions of the Memorandum of Association of the Company shall be altered accordingly."

II. "Subject to the consent of the Controller of Capital Issues being obtained and the conditions that may be prescribed by the terms of such consent the said new Ordinary Shares of Rs. 75 each and the said "A" Second Preference Shares of Rs. 100 each shall be issued upon the following terms and conditions and subject to the following rights:—

(a) 613,933 new Ordinary Shares shall be issued and offered in the first instance to the holders of the existing Ordinary Shares on the Register of Members of the Company on such date as may be fixed by the Directors (with the right to renounce in favour of a person or persons approved by the Directors) in the ratio of one new Ordinary Share for every five existing Ordinary Shares held by such holders respectively.

(b) 371,909 "A" Second Preference Shares shall be issued and offered in the first instance to the holders of the existing Preference and Second Preference Shares on the Register of Members of the Company on such date as may be fixed by the Directors (with the right to renounce in favour of a person or persons approved by the Directors) in the ratio of one "A" Second Preference Share for every two Preference or two Second Preference Shares or one Preference Share and one Second Preference Share held by such holders respectively.

(c) The offer of the said new Ordinary Shares and "A" Second Preference Shares shall be made by notice specifying the number of shares, which each holder of existing Ordinary and/or Preference and/or Second Preference Shares shall be entitled to apply for and take up, wholly or in part, and limiting a time within which the offer if not accepted will be deemed to have been declined, with liberty to the Directors from time to time to extend the time for acceptance as aforesaid either generally or in respect of any particular holder or holders.

(d) In the event of any holder of existing Ordinary Shares holding less than five Ordinary Shares or a number which is not a multiple of five on the aforesaid date, one coupon each for one-fifth of a new Ordinary Share shall be issued to him for each existing ordinary share comprised in a holding of less than five shares or for each share in excess of a holding of five or a multiple of five shares. Any five of such coupons, if presented not later than a date to be fixed by the Directors which may be extended from time to time at the discretion of the Directors, either generally or in respect of any particular case or cases, together with the application form shown on the reverse thereof duly filled in and signed and together with the sum of Rs. 75 shall confer the right upon the person presenting the same and making such payment to the allotment of one new Ordinary Share subject to the right of the Directors of the Company in their absolute discretion to reject without assigning any reason such application and to refuse any such allotment to any person (other than a holder of existing Ordinary Shares of the Company) presenting such coupons and application form who is not approved by them. If the coupons are not presented with the necessary application and payment for allotment of new Ordinary Shares on or before the date fixed by the Directors or within such extended date as the Directors may fix, the Directors may dispose of the rights conferred by such coupons or any of them in such manner as the Directors may in their absolute discretion think fit. The coupons will not carry any right to dividend and shall be negotiable by delivery.

(e) In the event of any holder of existing Preference and/or Second Preference Shares holding on the aforesaid date only one Preference or one Second Preference Share, or a number of such shares which in the aggregate is not a multiple of two, one coupon each for one-half of a "A" Second Preference Share shall be issued to him for the odd existing Preference and/or Second Preference Share held by him. Any two of such coupons if presented not later than a date to be fixed by the Directors which may be extended from time to time at the discretion of the Directors either generally or in respect of any particular case or cases, together with the application form shown on the reverse thereof duly filled in and signed and together with the sum of Rs. 100 shall confer the right upon the person presenting the same and making such payment to the allotment of one "A" Second Preference Share subject to the right of the Directors of the Company in their absolute discretion to reject without assigning any reason such application and to refuse any such allotment to any person (other than a holder of existing Preference or Second Preference Shares of the Company) presenting such coupons and application form who is not approved by them. If the coupons are not presented with the necessary application and payment for allotment of "A" Second Preference Shares on or before the date fixed by the Directors or within such extended date as the Directors may fix, the Directors may dispose of the rights conferred by such coupons or any of them in such manner as the Directors may in their absolute discretion think fit. The coupons will not carry any right to dividend and shall be negotiable by delivery.

(f) The full amount of Rs. 75 per each new Ordinary Share and Rs. 100 per each "A" Second Preference Share shall be payable to the Company on application for such new Ordinary and "A" Second Preference Shares as aforesaid respectively.

(g) The new Ordinary Shares shall not confer on the holders thereof the right to any dividend declared at or prior to the Annual General Meeting to be held in the year 1959, but shall entitle such holders to rank as from the date or dates of allotments thereof to all dividends declared after such meeting in proportion to the capital for the time being and from time to time paid up on such shares and such shares shall for all other purposes rank *pari passu* with the existing Ordinary Shares of the Company.

(h) The "A" Second Preference Shares shall confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 7½% per annum on the capital for the time being paid up on such shares and shall rank (save as hereinafter provided) in all respects *pari passu* with the existing Second Preference Shares of the Company without any difference or distinction between the two classes of shares and subject to the right of the holders of the existing Preference Shares of the Company shall rank in a winding-up both as regards capital and dividends up to the commencement of the winding-up, whether declared or not, in priority to the Ordinary Shares of the Company and shall not confer any further right to participate in profits or surplus assets provided that

(A) The "A" Second Preference Shares shall not confer on the holders thereof the right to vote at any meetings of the Company save to the extent and in the manner provided by Section 87(2) of the Companies Act, 1956, that is to say:—

(a) Subject to the provisions of the Companies Act, 1956 and save as provided in sub-para (b) of this paragraph, every such holder shall in respect of the "A" Second Preference Shares held by him have a right to vote only on resolutions placed before the Company which directly affect the rights attached to his "A" Second Preference Shares.

Explanation: Any resolution for winding-up the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to the "A" Second Preference Shares within the meaning of this paragraph.

(b) Subject as aforesaid, every such holder shall, in respect of the "A" Second Preference Shares held by him, be entitled to vote on every resolution placed before the Company at any meeting, if the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting.

Explanation: For the purposes of this sub-paragraph, dividend shall be deemed to be due on "A" Second Preference Shares in respect of any period, whether a dividend has been declared by the Company on such shares for such period or not on the expiry of fifteen days after the date fixed for the Annual General Meeting of the Company in respect of the year to which the dividend relates or on the expiry of nine months after the close of such year, whichever is earlier.

(c) Where the holder of any "A" Second Preference Share has a right to vote on any resolution in accordance with the provisions hereof, his voting right on a poll as the holder of such "A" Second Preference Share shall, subject to the provisions of Section 89 and sub-section (2) of Section 92 of the Companies Act, 1956, be in the same proportion as the capital paid up in respect of such "A" Second Preference Shares bears to the total paid up Ordinary capital of the Company.

(B) The "A" Second Preference Shares shall not confer on the holders thereof the right to any dividend declared at or prior to the Annual General Meeting of the Company to be held in the year 1959, but thereafter shall entitle such holders to rank for dividend as from the date or dates of allotment thereof respectively *pari passu* and rateably with the existing Second Preference Shares of the Company in proportion to the capital, from time to time and for the time being, paid up on such "A" Second Preference Shares.

(i) The Directors shall be authorised and empowered, subject to the consent of the Controller of Capital Issues being obtained and the conditions that may be prescribed by the terms of such consent, to dispose of and allot any of the new Ordinary Shares and "A" Second Preference Shares remaining undisposed of (including the new Ordinary and "A" Second Preference Shares not taken up by the holders of the existing Ordinary, Preference and Second Preference Shares) out of the 618,372 new Ordinary and 375,000 "A" Second Preference Shares to such persons, whether shareholders of the Company or not, as the Directors may think fit, at a price that shall not be less than the par value in regard to the "A" Second Preference Shares and at such price or prices as the Directors shall consider fair and reasonable in respect of the new Ordinary Shares.

(j) The certificates in respect of the new Ordinary and "A" Second Preference Shares shall be completed and be ready for delivery within nine months after the last allotment thereof respectively.

(k) For the purpose of giving effect of this resolution the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such new Ordinary and "A" Second Preference Shares and to give such other directions as may be necessary or desirable and settle any questions or difficulties whatsoever (including any question or difficulty that may arise in regard to the issue and allotment of the new Ordinary and "A" Second Preference Shares, or in connection with any deceased or insolvent shareholder or any shareholder suffering from any disability) as they may think fit.

III. "The Articles of Association of the Company be altered in the manner following:—

(i) The following Article shall be substituted for Article 4 of the Articles of Association of the Company:—

"4. The present capital of the Company is Rs. 39,25,00,000 divided into 50,000 6% cumulative Preference Shares of Rs. 150 each, 700,000 7½% cumulative Second Preference Shares of Rs. 100 each, 375,000 7½% cumulative "A" Second Preference Shares of Rs. 100 each and 3,700,000 Ordinary Shares of Rs. 75 each."

(ii) The following Article shall be substituted for Article 5 of the Articles of Association:—

"5. The 700,000 Second Preference Shares of Rs. 100 each and 375,000 "A" Second Preference Shares of Rs. 100 each shall rank for dividend and otherwise next after the existing Preference Shares of the Company and confer on the holders thereof as between the two classes *pari passu* and without any difference or distinction, the right to a fixed cumulative preferential dividend at the rate of 7½% per annum on the capital for the time being paid-up on such Second Preference and "A" Second Preference Shares respectively and subject only to the right of the holders of the existing Preference Shares of the Company shall rank in a winding-up, both as regards capital and dividends, up to the commencement of the winding-up, whether declared or not (as between the two classes of shares *pari passu* and without any difference or distinction) in priority to the Ordinary Shares of the Company and shall not confer any further right to participate in profits or surplus assets.

Provided that the "A" Second Preference Shares shall not confer on the holders thereof the right to vote at any meetings of the Company save to the extent and in the manner provided by Section 87(2) of the Companies Act, 1956, that is to say:—

(a) Subject to the provisions of the Companies Act, 1956 and save as provided in clause (b) of this sub-clause, every such holder shall in respect of the "A" Second Preference Shares held by him have a right to vote only on resolutions placed before the Company which directly affect the rights attached to his "A" Second Preference Shares.

Explanation: Any resolution for winding-up the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to the "A" Second Preference Shares within the meaning of this clause.

(b) Subject as aforesaid, every such holder shall, in respect of the "A" Second Preference Shares held by him, be entitled to vote on every resolution placed before the Company at any meeting, if the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting.

Explanation: For the purpose of this clause, dividend shall be deemed to be due on "A" Second Preference Shares in respect of any period whether a dividend has been declared by the Company on such shares for such period or not, on the expiry of fifteen days after the date fixed for the Annual General Meeting of the Company in respect of the year to which the dividend relates or on the expiry of nine months after the close of such year, whichever is earlier.

(c) Where the holder of any "A" Second Preference Share has a right to vote on any resolution in accordance with the provisions hereof, his voting right on a poll as the holder of such "A" Second Preference Share shall, subject to the provisions of Section 89 and sub-section (2) of Section 92 of the Companies Act, 1956, be in the same proportion as the capital paid up in respect of such "A" Second Preference Share bears to the total paid up ordinary capital of the Company."

(iii) The following clause shall be added as sub-clause (d) of Clause (2) of Article 99:—

"(d) In respect of every "A" Second Preference Share, his voting right shall be as provided in the proviso to Article 5."

(iv) The following Article shall be substituted for Article 175:—

"175. Subject to the provisions of these Articles and the terms of the Scheme of Arrangement sanctioned by the Court for conversion of the former Deferred Shares of the Company into Ordinary shares, the profits of the Company which it shall, from time to time, be determined to divide in respect of any year or other period shall be applied first in paying the fixed cumulative preferential dividends at the rate of six per cent. per annum on the capital paid up on the Preference Shares to the close of such year or other period, and secondly in paying the fixed cumulative preferential dividends at the rate of 7½ per cent. per annum of capital paid up on the Second Preference Shares and the "A" Second Preference Shares respectively (as between the two classes of shares *pari passu* and without any difference or distinction) to the close of such year or other period, and the balance of such profits shall be divisible among the holders of Ordinary Shares in proportion to the amount of capital paid up on the shares held by them respectively to the close of such year or other period

Provided always that any capital paid up on a share during the period in respect of which a dividend is declared, shall, unless the terms of issue otherwise provide, only entitle the holder of such share to an apportioned amount of such dividend proportionate to the capital, from time to time paid up during such period on such share."

IV. "The Company hereby reappoints Tata Industries Private Ltd. as Managing Agents of the Company as and from the 16th day of August 1960 for the period at the remuneration and upon the terms, provisions and conditions set out in the draft agreement (with such modification, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Ltd. of the second part and Tata Sons Private Ltd. (as guarantors for the observance and performance of the terms and conditions of the said agreement by Tata Industries Private Ltd. as Managing Agents) of the third part and which draft agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof, with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956, to vary or alter such of the terms, provisions and conditions of the said draft agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."

Note:—(a) The Relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Resolutions I, II, III, and IV above are annexed hereto.

(b) *A member entitled to attend and vote is entitled to appoint a proxy to attend and vote in respect of himself and the proxy need not be a member.*

By Order of the Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BENGAL POTTERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE 47th Annual General Meeting of the Bengal Potteries Limited will be held at the registered office of the Company, 45 Tangra Road, Calcutta, on Tuesday the 23rd June 1959, at 3-30 p.m., to transact the following items of business:—

1. To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December 1958.
2. To declare a Dividend.
3. To elect Directors in place of those retiring and in connection therewith to consider and if thought fit to pass the following resolutions, which will be proposed as Special Resolutions:—

(a) Whereas Lala Shri Dhar, a Director of the Company, is also a member of Madan Mohan Lall Shri Ram & Co. Private Ltd., one of the partners of Bharat Ram Bhagat & Co., the Managing Agents of the Company, and is also a member of Bharat Ram Charat Ram & Co. Private Ltd., a partner of Messrs. Allied Distributors & Co., the selling agents of the Company AND WHEREAS it can be deemed that the said Madan Mohan Lall Shri Ram & Co. Private Ltd., and Bharat Ram Charat Ram & Co. Private Ltd., are private companies holding offices of profit under the company AND WHEREAS Lala Shri Dhar is one of the Directors who retires from office at this general meeting by rotation.

"RESOLVED that Lala Shri Dhar be and he is hereby re-elected a Director of the Company."

(b) WHEREAS Maharaj Kumar Somendra Chandra Nandy is the sole proprietor of Maharaja Cossimbazar China Clay Mines and is a partner of Rajmahal Quartz-Sand and Kaolin Co. AND WHEREAS the said Maharaja Cossimbazar China Clay Mines and Rajmahal Quartz-Sand and Kaolin Co., supply a part of the requirements of China Clay of the Company and as such it can be deemed that the said Maharaj Kumar Somendra Chandra Nandy holds an office of profit under the company AND WHEREAS the said Maharaj Kumar Somendra Chandra Nandy is one of the Directors who retires from office at this general meeting by rotation.

"RESOLVED that Maharaj Kumar Somendra Chandra Nandy be and he is hereby re-elected a Director of the Company."

4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"RESOLVED that sanction be and is hereby accorded to the Board of Directors of the Company borrowing (excluding temporary loans from time to time obtained by the Company from its bankers in ordinary course of business) in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose as the Board may from time to time deem necessary for the purposes of the Company."

6. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"RESOLVED that the draft agreement expressed to be made between the Company of the One Part and Bharat Ram Bhagat & Co., the present Managing Agents of the Company of the Other Part relating to the re-appointment of the said Bharat Ram Bhagat & Co. as Managing Agents of the Company for a fresh term of 10 years commencing from the 16th day of August 1960, laid before the meeting and signed by the Chairman of the meeting for the purpose of identification be and the same is hereby approved and that subject to the approval of the Central Government the said Messrs. Bharat Ram Bhagat & Co. be and they are hereby re-appointed Managing Agents of the Company for a fresh term of 10 years commencing from the 16th August 1960 at the remuneration and upon the terms and conditions contained in the said draft agreement with such modifications thereof as the Central Government in according such approval may impose and the Directors of the Company are hereby authorised, after such approval of the Central Government is obtained, to complete the said agreement with such modifications if any as may be imposed by the Central Government in according such approval."

Explanatory Statements Under Section 173(2) of the Companies Act 1956

Item No. 3(a) of the Agenda

Special notice under Section 261 of the Companies Act 1956 was received by the Company on the 23rd of May 1959 of the Special Resolution set out under this item of the Agenda from three of its members. The material facts have been stated in the Resolution itself.

Item No. 3(b) of the Agenda

Special notice under Section 261 of the Companies Act 1956 was received by the Company on the 23rd May 1959 of the Special Resolution set out under this item of the Agenda from three of its members. The material facts have been stated in the Resolution itself.

Re: Item No. 5 of the Agenda

The Company has a cash credit account with the Punjab National Bank Ltd., Bhowanipore Branch.

In view of the provisions of Section 293(1)(d) of the Companies Act 1956, which provides that consent of the Company in General Meeting is required, to authorise the Board of Directors to borrow moneys where the moneys, so to be borrowed, together with the moneys already borrowed by the Company apart from temporary loans obtained from the Company's bankers, in the ordinary course of business will exceed the aggregate paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes, the said Bank desires that this resolution should be passed as a Special Resolution.

Re: Item No. 6 of the Agenda

By an agreement dated the First day of July 1955 Messrs. Bharat Ram Bhagat & Co., a co-partnership firm (of which Madan Mohan Lall Shri Ram & Co. Private Ltd., and M. G. Bhagat & Sons Private Ltd., are partners) were appointed Managing Agents of the Company for a period of 10 years commencing from the 1st day of July 1955.

The Companies Act of 1956 came into operation after such appointment and by Section 330 of that Act it has been provided that where a company has a managing agent at the commencement of the said Act the term of such managing agency shall expire on the 15th day of August 1960 unless before that date the managing agent is re-appointed for a fresh term according to the provisions contained in the said Act.

Although under the provisions of the said agreement dated the first day of July 1955 Messrs. Bharat Ram Bhagat & Co. are to continue as Managing Agents until the 30th day of June 1965, in view of the provisions of Section 330, the managing agency will expire on the 15th August 1960.

Your Directors think that the affairs of the Company have been managed very successfully by its present Managing Agents and it is in the interest of the Company that the said Messrs. Bharat Ram Bhagat & Co. should be re-appointed Managing Agents of the Company for a fresh term of 10 years from the 16th day of August 1960.

Under Section 326 of the Act such re-appointment is to be made by the Company in General Meeting and approval of the Central Government thereof is required to be obtained.

Sir Shri Ram and Lala Shri Dhar, Directors of the Company, are members of Madan Mohan Lall Shri Ram & Co. Private Ltd., a partner of Bharat Ram Bhagat & Co., the Managing Agents of the Company and Mr. M. G. Bhagat a Director of the Company is a member and Director of M. G. Bhagat & Sons Private Ltd., the other partner of Bhagat Ram Bhagat & Co.

The draft agreement referred to in the resolution set out in item No. 6 of the Agenda can be inspected at 45 Tangra Road, Calcutta, the registered office of the Company on any working day during usual business hours.

The Share Transfer Register of the Company will be closed from 15th June to 11th July 1959 both days inclusive.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA, *28th May*, 1959.

THE ELGIN MILLS COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from the 13th to 29th June, 1959, both days inclusive.

By Order of the Board,
Per Pro BEGG, SUTHERLAND & Co. PRIVATE LIMITED.
R. P. MATHUR,
Secretary,
Managing Agents.

KANPUR, U.P., *29th May*, 1959.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS
(Railway Board)

Indian Railways' Requirements of Electrical Signalling Equipment

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to obtain from established or prospective and reliable manufacturers supply of Block Instruments, Signalling Cables, Lever Locks and Circuit Controllers, Point Machines and Detectors, Relays, Repeaters, Route Indicators, Colourlight and Shunt Signals, Signal Machines, Reversers and other Electrical Signalling Equipment.

2. The relevant tender documents are obtainable from the Research Design and Standardisation Organisation, Baroda House, Annexe, New Delhi, and the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W.3, on payment of Rs. 10 each. Drawings and specifications will also be available from the two sources mentioned above on additional payment.

3. Quotations should reach the undersigned:

(i) Not later than 31.7.59 for items as per List No. 10,

(ii) Not later than 17.8.59 for items as per List Nos. 1 and 11,

(iii) Not later than 31.8.59 for items as per List Nos. 2 and 6,

(iv) Not later than 14.9.59 for items as per List Nos. 4 and 5; and

(v) Not later than 30.9.59 for items as per List Nos. 3. 7, 8 and 9.

QURBAN SINGH,
Director, Railway Stores,
Railway Board,
State Entry Road,
New Delhi.

MONEY MORE COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 3rd *June*

A further drop, for the second week in succession, in the Treasury Bill discount rate from 2.790 per cent. to 2.780 per cent. per annum gives an indication of the present state of the short-term money market. With the increasing pace of return of funds to banks, as shown by the rise in their deposits and the consequent reduction in their borrowings from the Reserve Bank, conditions have become a little more comfortable than in the previous week. In the inter-bank call money section, there are more lenders than borrowers, but the rate of interest is generally unchanged at 3½ per cent. among the Exchange banks and big Indian banks. Some stray transactions are reported to have been done even at 3¼ per cent. The rate among the smaller Indian banks is unchanged at 3½ to 3¾ per cent. House money at seven days' notice is still being quoted at 3¾ per cent. and short-term deposits for one to six months at 3½ to 4 per cent.

The amount offered at this week's Treasury Bill sales was Rs. 2.40 crores, as against Rs. 2.15 crores last week. Tenders at Rs. 99.305 were allotted approximately 93 per cent. Lower tenders were rejected. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate Bills in the week ended 30th May 1959, but these are being continued this week.

There has been a contraction of Rs. 13.69 crores in notes in circulation during the week ended 29th May 1959, thus bringing the aggregate decline in the past three weeks to Rs. 36.07 crores. Foreign securities are unchanged at Rs. 178.01 crores, but balances held abroad have fallen by Rs. 3.29 crores to Rs. 21.00 crores, bringing the total foreign reserves down to Rs. 199.01 crores. Deposits of the Central Government show a rise of Rs. 17.34 crores, but those of other Governments have declined by Rs. 1.83 crore and of banks by Rs. 6.55 crores. Loans and advances to Governments are up by Rs. 1.48 crore, while other loans and advances are lower by Rs. 5.70 crores. Of this fall, advances to Scheduled banks against usance bills alone account for Rs. 3.19 crores.

With a rise of Rs. 13.38 crores during the week ended 22nd May 1959, the Scheduled banks' deposits (net) have crossed the Rs. 1,700 crore-mark to stand at Rs. 1,702.10 crores. Demand deposits have risen by Rs. 8.44 crores to Rs. 722.44 crores and time deposits by Rs. 4.94 crores to Rs. 979.66 crores. Borrowings from the Reserve Bank stand reduced by Rs. 8.39 crores and those from the State Bank by Rs. 1.34 crore. Advances have declined by Rs. 4.84 crores, while bills purchased and discounted have risen by Rs. 2.64 crores. Cash balances are also higher by Rs. 7.13 crores.

The Gilt-edged market continues to rule steady. Thanks to the more comfortable conditions in the money market, institutional demand for securities is picking up and there has been a further marking up in prices of some short and short-medium dated loans. The volume of business, however, has not gone up on account of shortage of scrips and absence of sellers, 3 per cent. 1986 Conversion Loan is unchanged at Rs. 73.75 and 3 per cent. 1970-75 at Rs. 91.40. 3 per cent. 1966-68 has added another 10 nP. to Rs. 94, while 3 per cent. 1964 shows no change at Rs. 97. 3 per cent. 1963-65 is being quoted at Rs. 96.80 *ex*-voucher, as against Rs. 96.85 *cum*-voucher. 3 per cent. 1959-61 has maintained its ground at Rs. 99.80. 2½ per cent. 1962 and 1960 each gained 5 nP to Rs. 97 and Rs. 99.15, respectively, and 2½ per cent. 1961 staged a similar rise to Rs. 97.40. Among the 3½ per cent. loans 1964 has hardened by 5 nP to Rs. 99.80.

There have been no worthwhile variations in State loans.

Sterling was a little subdued in terms of the dollar, though the trend was two-sided. Thus, spot sterling declined from $2.81\frac{1}{2}$-2.81.5/16 to $2.81.3/32$ before gaining some ground to 281.22c.-281.25c. Three months forward, however, closed a fraction higher at 281.06c.-281.09c., as against $2.81-2.81.1/16$.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 1st *June*

Kips were a shade quiet. Importers were trying to buy E.I. tanned cow hides lower grades at 2*d.* below asking prices. Sellers were not keen to book orders ahead, in view of the low raw stock position with the tanners. Prices would appear to have got stabilised and importers seemed to have adjusted themselves to the new conditions and were hopeful of doing steady business shortly. Top marks ruled exceptionally firm, while other standards suffered small declines. Arrivals were small and clearances good. Inland demand for low grade kips was poor and prices declined to some extent, especially on light weights.

The tanned goat market was weak, due to meagre orders for shipment, though the tanners had well sold ahead. Tanned sheep semi-primes ruled firm, while middle class was quiet. Stocks arriving from tanneries were small.

LINSEED IRREGULAR

(Messrs. A. Bradley and Co.)

CALCUTTA, 1st *June*

The linseed market ruled irregular during the week under review. Lowest levels were reached early in the week at around Rs. 23.12 for ready and at Rs. 23.62 for forward delivery, but, subsequently, prices advanced to Rs. 23.50 and Rs. 23.87, respectively, turning easier again towards the close. Arrivals on the whole improved, and increased offers from upcountry were readily consumed by local crushers. The oilcake market improved, following enquiries from shippers, but the price of £33 10*s.* at which export business was last done was somewhat below the present local parity. The oil market was active. With jobbers unloading or settling their May holdings, ready price declined. Forward prices, however, remained firm, with sellers reserved. A fresh enquiry for 550 tons from Australia, for specific shipment from Bombay, did not affect the local market.

The latest quotations are: May-June Rs. 23.37 and July-August Rs. 23.75 per maund.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The rumour that the Forward Markets Commission would bring futures trading in both gold and silver under its control with effect from the 1st inst., referred to in these columns last week, have not yet materialised. Enquiries made subsequently show that no final official decision has yet been taken in the matter. It will be recalled that, as far back as 1957, the Commission had recommended the application of the Forward Contracts Regulation Act to bullion, but the Union Government had decided to maintain the *status quo* for the time being.

Both silver and gold suffered a distinct setback during the week under review, thanks to nervous liquidation by bulls who had gone long on the expectation that transactions in existing nearby settlements—that is, 22nd June for gold and 23rd June for silver—would be squared up at the closing rates for ready deliveries as on 30th May. There was also some selling on reports of an increase in the inflow of contraband gold. The general undertone of the market was easy.

In the gold section, June settlement moved down from Rs. 119-7 at the close of last week to Rs. 117-10 on Monday and, after recovering to Rs. 118-10 today, eased to Rs. 118-6-6 towards the close. Over the week, July settlement declined by Re. 1-0-6 to Rs. 117-0-6, after being lower still at Rs. 116-11-6 on Monday. As the backwardation rate (*budli* in favour of the bulls) for June settlement was more than a rupee throughout the week—it stood at Re. 1-6 today, same as last week—the bulls in this settlement continued to pay the higher margin of Rs. 25 per tola, as against Rs. 10 applicable when the *budli* is less than a rupee.

Ready gold came in for selling and fell from Rs. 123-3 to Rs. 118-14 on the 1st inst. After recovering to Rs. 120-1 today, it finished lower at Rs. 119-13-6. The net loss over the week was Rs. 3-5-9. The daily average arrivals and offtake of gold were 3,200 tolas and 2,500 tolas, respectively. The floating stocks of gold are estimated at 15,000 tolas.

June settlement in silver began the week at Rs. 191-13, as against Rs. 191-12, and gradually rose to touch Rs. 194-3 on Saturday. Thereafter, it receded to Rs. 192-4-6 before finishing today at Rs. 192-10. July settlement, after improving from Rs. 190-4 to Rs. 193-2, declined to Rs. 191-8-6 today. Towards the close, it was better at Rs. 191-15. The backwardation rate for June settlement, which stood at more than a rupee in the first two sessions of the week, narrowed down subsequently and stood at As. 11 today, so that the bulls in this settlement were no longer required to pay the margin of Rs. 1,000 per bar.

Ready silver ruled firm in the first three sessions, the quotation advancing from Rs. 195-12 to Rs. 197-15 on Saturday. In the following sessions, however, it was subjected to selling pressure and retreated to Rs. 194-4-6 today before closing at Rs. 194-10. Not only were the initial gains completely erased but today's closing rate was lower than last week's rate by Re. 1-2. The daily average arrivals of silver were 14 bars, while the offtake was 13 bars. The floating stocks of silver are reported to be around 350 bars.

For the first time since 9th April 1959, ready silver in the London bullion market fell from 79¼*d.* to 78⅞*d.* per ounce on 28th May and further to 78¼*d.* yesterday. Forward silver also declined in the course of the week from 78⅝*d.* to 78¼*d.* Silver in New York was unchanged at 91.375 cents per ounce. Ready gold in London, which moved down from 249*s.* 7½*d.* to 249*s.* 6¼*d.* early in the week, recovered subsequently to 249*s.* 8¼*d.* following firmness of the pound sterling *vis-a-vis* the dollar. The latest available dollar rate for gold in London is $35.09½-35.11½, as against $35.12½ a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	3-6-59	Highest	Lowest	27-5-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.995 fine Mint)	119 13½	122 15	118 14	123 3

* 22nd June settlement. † 23rd June settlement.

COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The cotton futures market, which ruled distinctly firm till Saturday, suffered a setback on Monday, with prices taking a downward course. The downward trend gathered momentum in subsequent sessions and persisted till the close today. The earlier firmness was due to large-scale speculative support and good investment buying. Traders felt that the present shortage of quality cotton might persist until at least the arrival of new crop. They took note of the recent liberal import quota. But the general feeling was that, with imports of cotton linked to exports of cloth, obtaining the necessary supplies was a process involving considerable delay and that good quality cotton would, therefore continue to be in keen demand. This conclusion was borne out by the sustained firmness of the spot market. This imparted further strength to the market. The firmness of cottonseed was another helpful factor. Under pressure of persistent buying values spurted, notwithstanding fears that the F.M.C. might intervene. The August contract firmed up to touch the highest level of its career so far, namely, Rs. 712.75 on Saturday.

On Monday, however, as noted earlier, there was a reaction in prices following selling by upcountry interests and news of a sharp break in prices in Ahmedabad. Report of welcome showers in some of the leading cotton tracts accelerated the downward trend. Over the week, future values showed a net decline of Rs. 2.75.

I.C.C. Jarilla August opened at Rs. 708, as against the previous day's close of Rs. 707.25, and steadily rose to quote at Rs. 712.75 on Saturday. The contract dropped from that level to Rs. 708 on Monday and still lower to Rs. 705.25 yesterday. Commencing today at Rs. 704.75, it improved fractionally, receded to Rs. 703.50 and recovered to close at Rs. 704.50.

In the spot section, mill demand was brisk early in the week but, towards the close, it slackened. Nevertheless, staple varieties continued to attract attention and their prices were well maintained. Among the chief varieties which received the attention of spinners were Digvijay, Laxmi, Jaydhar, Kala and Wagad. The announcement of the details of the import quota does not appear to have had any appreciable effect on prices, though a slackening of interest in Jaydhar, Laxmi and other longer-staple cotton was noticed.

Export demand was fairly good early in the week. Shippers covered sizable quantities of Bengal *Deshi* and Kala against previous export commitments. Prices, consequently, hardened. Japan was also interested in these cottons. Towards the end of the week, however, foreign demand dried up and prices tended to ease.

The much-awaited details of the import quota of 100,000 bales, announced on 19th May, have been published. The quota, as usual, is divided into two parts. One is for 60,000 bales of cotton stappling 1.3/16" and above and the other for 40,000 bales of cotton stapling 1.1/16" and above but below 1.3/16". The imports under both these categories are allowed under the export incentive scheme. Giving details, the trade notice issued by the Joint Chief Controller of Imports and Exports adds that, subject to the staple length stipulation, the cotton may be imported from any country. Import licences issued will be valid for shipment upto the end of August 1959 in the case of the 60,000 bales of cotton stapling 1.3/16" and above and in the case of the 40,000 bales of cotton stapling 1.1/16" and above but below 1.3/16", the licences will be valid upto 15th October 1959.

The quantity will be distributed on the basis which was adopted for import under the export incentive scheme. The Textile Commission will issue allotment letters to actual users, namely, mills on the basis of the information already furnished by them herebefore in their applications made under previous announcements in respect of import of cotton.

The announcement has been received by importers with a sigh of relief. They have noted with satisfaction the allocation of 60 per cent. of the quota for cotton of staple length 1.3/16" and above, especially because Egypt, whose cotton falls under this category, has raised the discount rate offered to India from 32½ per cent. to 35 per cent. provided payment is made in rupees under 'B' account and shipment is effected before August, thereby making Egyptian growths cheaper to Indian mills than comparable Sudan cotton by about Rs. 100 per candy.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri: Bengal *Deshi* 725, Berar Jarilla 715, Khandesh 870, Laxmi 1,000, Jaydhar 920.

No trading was done in cotton futures in Karachi as the futures market continued to be closed. In the spot section, moderate spinner interest was evident. Export demand was reported to be better. The latest available spot quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistani cotton prevailing at Karachi is given below:

Sind *Deshi* 82; Punjab *Deshi* 71; 4F Punjab Roller 69; S.G. 71; 4F Punjab Roller 69; S.G. 71; L.S.S. Punjab Roller 73; S.G. 74; N.T.R.G. 71-8; S.G. 75-8; 289F Punjab Roller 73; S.G. 78.

A mixed trend was witnessed in the Alexandria cotton futures market during the week. While the longer staple Karnak contract advanced on speculative support prompted by good export demand, the medium staple Ashmouni contracts eased. Trading in new crop contracts commenced on 23rd May. Karnak new crop November opened at 72-90 tallaris and Ashmouni new crop October started at 65.10 tallaris. The new crop positions have ruled steady.

It has been officially announced that the marketing policy for the new Egyptian cotton crop would be on the same basis as for the current season. The Government has undertaken to buy all new crop cottons at the minimum support price which is unchanged from that of the present season. Discounts for export sales for current and old crop stocks will be continued at 32½ per cent. but for the new crop the discount will be 30 per cent. This is subject to revision every week. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: July 73.95 (72.95); November 73.70.

Ashmouni: June 67.55 (68.28); August 67.00 (67.10).

Steady conditions prevailed in the Liverpool cotton futures market during the week. Trading was dull, consisting mainly of inter-month switchings. The near position attracted short covering. Business in other positions remained generally quiet with light hedging off setting trade support. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July-August 23.50; October-November 21.35; December-January 21.55.

American cotton mixed growth contract: July-August 23.75; October-November 21.95; December-January 21.35.

Sudan: July-August, September-October, November-December 26.75.

Cotton futures in New York depicted a divergent trend. While the near delivery declined, the more forward positions improved on Commission House buying which followed as a natural reaction to the recent fall. Over the week, while the nearby July receded, others registered a small gain.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	2-6-59	26-5-59	19-5-59
Spot	36.25	36.25	36.25
July	34.65	34.67	34.70
October	32.61	32.58	32.78
December	32.59	32.55	32.71

SUGAR MOVES UP

(From Our Own Correspondents)

BOMBAY, 3rd *June*

There was a rise in sugar prices during the week under review, in contrast to the sharp drop noted last week. The rise followed active pre-monsoon demand from the interior and an increase of a rupee per bag in the ex-mill quotations for sugar in the Bombay-Deccan area. Arrivals of sugar by rail into the market also continued to be poor, being just 5,000 bags, as against 10,620 bags in the previous week and 17,810 bags in the week preceding it.

Large grain sugar spurted by Rs. 2 to Rs. 121—127 per bag. Medium grain put on a like amount to Rs. 118—120. Small grain rallied from Rs. 114.50—115.50 to Rs. 115—117.

The Secretary to the Union Food Ministry, Mr. B. B. Ghosh, and another top official in the Ministry, Mr. K. B. Jain, were in the City on the 1st inst. with a view to studying the sugar situation. They held discussions with the representatives of sugar industry and trade, as well as with the State's Civil Supplies Minister. Mr. Ghosh is understood to have warned the trade and industry against any attempts to rig up prices. He has made it clear that, if the warning is not heeded, the Government will requisition the entire sugar stocks from the mills and distribute them to licence holders. This warning, however, had no effect on the sugar market.

Meanwhile, it is said that the Deccan Sugar Factories Association has submitted to the Food Ministry a tentative scheme to despatch at least 7,000-8,000 tons of sugar to Bombay City at a price not exceeding Rs. 40 per maund (Rs. 110 per bag) f.o.r. Wadi Bunder. Since the price falls within the "fair price" idea of the Government, the scheme is expected to be approved and come into operation within a fortnight. The sugar traders have requested the authorities not to disrupt the normal trade channels in any scheme of distribution envisaged by the Government.

* * * *

HAPUR, 1st *June*

The sugar market continued to rule firm during the week. In order to check this rising trend, the Government of India has decided that the entire production of sugar mills would be at the disposal of the Government for direct allocation, as against 25 per cent. hitherto. The control prices for U.P., Punjab and North Bihar, however, remain unchanged. Fifty per cent. of the earlier frozen stock of 50,000 tons for export is now to be released for internal sales. A heavy release of 190,000 tons as monthly quota has been made for free sale, but, as yet, prices here have not gone down. But reports from Delhi indicate that, following the imposition of ban on exports of sugar from Delhi, prices there fell sharply. Crushing operations in all mills have almost come to a close. Prices here continued unchanged at Rs. 115 to Rs. 116 per bag and, in retail, sugar was being sold at Re. 1.09 per *seer*.

Sugar was steady in the Muzaffarnagar market. The Government's decision to control distribution of sugar did not affect the sentiment. Certain mills were reported to have sold sugar during the week at a premium ranging between Rs. 3.50 and Rs. 5.25 per maund over the controlled prices fixed by the Government.

Sugar at Kanpur ruled quiet. As the traders preferred to watch the reactions of the latest official policy, they did not enter into commitments either way.

Khandsari continued to rule steady in sympathy with crystal prices and good seasonal demand. Prevailing prices were: superior Rs. 37 to Rs. 39; inferior Rs. 35 to Rs. 37 a maund.

Following a fall in ready demand, *gur* sought lower levels during the week. Arrivals from rural areas also dropped to an average of 200 maunds and local stock was put at 72,000 maunds. The condition of the standing cane crop is reported to be fair, but rains are now needed. Prevailing prices here were: *pansera* dry Rs. 22; *kotha* dry-wet Rs. 21.25; *shakker* Rs. 23.

Gur also eased fractionally in the Muzaffarnagar market, due to lack of buying interest. Want of support from Rajasthan accounted for sagging tendency in prices of *shakker*. The week-end prices were: *Gur chaku* Rs. 21.50 to Rs. 22.50; *Kotha* dry-wet Rs. 21; *ladu* Rs. 20 to Rs. 20.50; *rusket khurpapar* Rs. 14 to Rs. 15; *rusket ladu* Rs. 14 to Rs. 16; *shakker dara* Rs. 21 to Rs. 23; *masala* Rs. 25 to Rs. 27 per maund.

Forward trading in *gur* still remains suspended.

YARNS EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The easy trend noted in the yarn market last week gathered further momentum during the week under review, with values continuing to move down. Selling pressure in art silk yarns persisted practically throughout the week. This was due to fears of heavy arrivals of imported yarns in the coming months. The fears were based on rumours that the Central Government would soon announce its decision on the export promotion scheme for fabrics. There would have been a more marked drop in prices but for encouraging advices from consuming centres and firmness of nylon yarns. Staple fibre yarns also suffered a setback, owing to pressure of sales, though reduced, by several South Indian mills. Cotton yarns ruled dull on reports that a few mills in Ahmedabad had sold for export to Rangoon some quantity at lower rates.

Business in Cupressa Bamberg yarn (60 x 1) August contract, with the new packing of 100 kilograms (220 lbs.), as against the old packing of 200 lbs., commenced at Rs. 1,600 on Monday, the 1st inst. The contract stood lower at Rs. 1,588 today. June contract was hammered down from Rs. 1,448 to Rs. 1,416 per case of 200 lbs. Spot Cupressa declined by 10 nP to Rs. 7.09. 120 Italy fell by 22 nP to Rs. 4-75. 150 Italy dropped 6 nP to Rs. 4.56. 120 Japan was quiet at Rs. 4.70, while 150 Japan gathered 2 nP to Rs. 4.70. Among indigenous yarns, National Rayons 120 bright cones 1st grade eased by 8 nP to Rs. 4.42. 150 bright cones 1st grade shed 3 nP to Rs. 4.25.

In the staple fibre yarn section, 40 x 2 June contract receded from Rs. 598 to Rs. 591 and August contract from Rs. 605 to Rs. 598. Spot Kohinoors were dull at Rs. 3.22. Centurys, however, were well supported, the rate advancing by 17 nP to Rs. 3.14. Citys were also better by 9 nP at Rs. 3.09. Among foreign yarns (80 x 2), Paramounts lost 6 nP to Rs. 6.94, but Fujis picked up 9 nP to Rs. 7.25.

Cotton yarns, as already stated, were dull. Ten counts Podars decreased by 13 nP to Rs. 12.12. Moderns, however, spurted by 25 nP to Rs. 13.50. Twenty counts Moderns were unchanged at Rs. 16.50, as also forty counts Minaxis at Rs. 25.37 and Moderns at Rs. 26. Among 60s, Raghuvamshis gained 50 nP to Rs. 57.50. Eighty counts Mahendras and Finlays were quiet at Rs. 71.50 and Rs. 81, respectively. Citys, on the other hand, met with good buying support and rose by a rupee to Rs. 66.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before:

	3-6-59	27-5-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg June (200 lbs.) ..	1,416	1,448
60/1 Cupressa Bamberg August (100 Kg.) ..	1,588	—
60/1 Cupressa Bamberg spot (per lb.) ..	7.09	7.19
120 Japan (per lb.)	4.70	4.70
150 Japan (per lb.)	4.70	4.68
120 Italy (per lb.)	4.75	4.97
150 Italy (per lb.)	4.56	4.62
Staple fibre yarn—		
40 x 2 June (per case of 200 lbs.)	591 00	598.00
40 x 2 August (")	5 98	6 05
40 x 2 Century (per lb.)	3.14	2.97
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 12	12.25
20s Modern	16 50	16.50
40s Minaxi	25 37	25.37
60s Raghuvanshi	57 50	57.00
80s Finlay	81 00	81.00

OILSEEDS DECLINE

(From Our Own Correspondent)

BOMBAY, 3rd *June*

As a measure of export promotion, the Forward Markets Commission has exempted from the operation of margin, open long positions in groundnuts and linseed held as a hedge against commitments in respect of groundnut oil and linseed oil exports. This measure is designed to enable exporters to cover their commitments on the futures market without having to make heavy payments by way of margin at higher levels. Similar exemption, it may be noted, had been granted to castor oil two weeks ago.

After an early firmness, the oilseeds market turned easy at the close of the week. The closing prices of groundnut and groundnut oil were a shade higher than a week ago. The prices of castor, linseed and cottonseed, however, declined perceptibly.

The strength of the groundnut section during the initial sessions was induced by good export enquiries for oil and oilcake. Rumania is said to have bought large quantities of oil. The exporters anticipate further business from countries of the Communist bloc. There are now better prospects for exports to the U.K. and the Continent as well. But the early onset of the monsoon disheartened the bulls as it was interpreted as a harbinger of larger production in the next season. The psychological climate thus turned in favour of the bears towards the close. There was a wave of profit-taking by bulls which brought the values down by the close of the week. Groundnut August contract which closed last week at Rs. 198.00 advanced to Rs. 203.50 on Saturday, but later gave way to close today on a quiet note at Rs. 199.25. In the face of continued paucity of stocks, bold ready, however, hardened from Rs. 41.50 to Rs. 42.75, after moving within a narrow range. But oil ex-mill dropped 25 nP over the week to close at Rs. 21.75.

The castorseed section eased due to a lull in the export demand and heavy arrivals of seeds from producing centres. It is expected that the U.S. will shortly enter the market for oil. The weakness in the ready section also had a dampening effect on futures. Castor September 1959 closed today at Rs. 166.12, as compared with Rs. 169.75 a week ago. Ready Madras eased from Rs. 32.75 to Rs. 32.00, and oil B.S.S. from Rs. 17.56 to Rs. 17.25.

The linseed section was featureless. September contract, which wound up last week at Rs. 34.56, after an initial firmness, lost ground and touched Rs. 34.25 today. Cottonseeds, too, gave way in sympathy with the cotton market, with September contract moving down by Rs. 3.50 to Rs. 134.00 over the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	3-6-1959	27-5-1959	13-5-1959
Groundnut	Rs.	Rs.	Rs.
August 1959	199 25	198.00	205 50
Bold ready	42 75	41.50	42.00
Coromandel ready	43 00	41 75	42.25
Khandesh quality	43 00	41.75	42.25
Oil ex-mill ready*	21 75	22 00	23 00
Railway receipts*	21.62	21.75	21.87
Castorseed			
September 1959	166 12	169 75	172.37
Ready Madras	32 00	32.75	33 12
Ready Kanpur	30 50	31.37	31 69
Oil B.S.S.†	17.25	17.56	17 62
Oil commercial†	16.50	16.75	16.75
Linseed			
September 1959	34.25	34 44	34.87
Bold ready	33 25	33.50	33 75
Oil ready†	15.75	16.25	16.50
Cotton seed			
September 1959	134 00	137.25	137.00
Niger seed	32 00	32.25	31.25
Kardi seed	24.50	24.75	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 3rd *June*

Malabar black pepper ruled quiet during the fortnight under review for want of foreign demand, as most of the pepper dealers in the U.S.A. were away in California to attend the Annual Spice Traders Convention. The yearly convention usually serves the purpose of a platform where every spice dealer discusses the statistical position and the future of the commodities he is interested in. The lot of buying and selling among members is also done at the time of the Convention. This year, very little business was transacted because the U.S.A. market remained overburdened with unsold supply of Lampong from Singapore and grinders worked from hand to mouth.

Alleppey moved narrowly between Rs. 650 and Rs. 625, while garbled at Cochin from Rs. 110 and Rs. 113. Forward was neglected for lack of new development. The highest paid August delivery was Rs. 117, the lowest being Rs. 114. Calicut was comparatively softer, the highest and the lowest being Rs. 690 and Rs. 670, respectively.

Throughout the fortnight, Singapore ruled quiet, but steady at St. $80, while a small fall was noticed in white, highest and lowest being $140 and $136, respectively.

New York spot was neglected at $0.24½, owing to preoccupation of dealers at the yearly Convention. May shipment was quiet at $0.25. There being no replacing parity, offers from the producing countries were restricted. Stockholders at Singapore and the growers in India are firmly inclined, as they are expecting higher prices in the near future. Exporters are fearing to go short, as replacing is very difficult because sellers are unwilling to part with stock.

The future of pepper depends upon the prospects of the coming crop of Lampong and the

political situation at Singapore, Djakarta and in Kerala which at present appears uncertain.

Ready pepper is normally quoted at Rs. 89-Rs. 93.

TEA PRICES LOWER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *29th May*

A total quantity of 800,000 lbs. was offered in Sale No. 20, which was held on 26th May 1959. The offerings from all districts showed a further seasonal decline in quality. The sale opened to a good demand, although prices were easier for all descriptions. Low medium and medium brokens met with useful enquiry, but were easier by 5 to 10 nP. There was useful demand for good medium brokens, although these sold at 10 to 15 nP lower than last. All fannings grades were well supported at irregularly 5 nP below last rates. There was poor demand for highgrowns and these were considerably easier with many withdrawals. There was a useful enquiry for whole leaf grades at easier rates. The quotations were: low medium Re. 1.70 to 1.85; medium Re. 1.85 to Rs. 2.05; good medium Rs. 2.15 to 2.40; and quality Rs. 2.20 to 2.94.

Dust Sale 'L'.—350,000 lbs. were offered in this sale which was held on 28th May 1959. There was a fair demand, but prices were generally easier for all descriptions. Low mediums were easier by 5 to 10 nP. Better descriptions declined further and sold 15 to 20 nP below last rates. Black grainy types met with only a fair enquiry and were considerably easier and there was lack of export demand for these types. There was a poor demand for C.T.C. dusts and in particular milled C.T.C. dusts were difficult to sell.

London Market: Sale of 25th May 1959.—Best Assams strong to dearer. Others unchanged, except for light liquoring which were irregular and easier.

Sale of 26th May 1959.—Irregular but good demand. Some B.O.Ps dearer.

Colombo Market: Sale of 25th May 1959.—Strong demand highgrown brokens 20 to 30c. lower, following quality. Mediums declined 10 to 15 c. Lowgrowns steady.

Sale of 26th May 1959.—Offgrades active demand. Generally dearer.

Calcutta Market: Export.—No sale this week.

Internal.—22,816 packages dust. Met fair demand. Orthodox 4 nP to sometimes 6 nP easier. Medium Assam C.T.C. 6 to 10 nP easier. Best C.T.C. 10 to 15 nP easier.

Export Quota 1959-60.—The market continues to remain quiet with last business being done at 5 nP.

Special Licence 1958-59.—A small business was transacted this week at ¾ nP. At the time of writing there are large Sellers at ½ nP with buyers being scarce.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 21.—1.25 million lbs. Fair demand, weakening towards the close. Low mediums and mediums 10 to 15 nP easier. Good mediums 15 to 20 nP. Highgrowns limited demand. Fannings grades better demand than brokens."

DEMAND FOR EXPORT TEAS POOR

(From Our Own Correspondent)

CALCUTTA, *2nd June*

In the export sales held yesterday, offerings amounted to 11,104 packages. Following a decline in quality, demand was poor. Prices eased and withdrawals were heavy.

The new season's export right was quoted at 4 nP with no business passing, while in the outstanding export quota for 1958-59 the transferable special licence realised 1½ nP. There was no business in non-transferable shipping licence but it was quoted at 1½ nP.

It was noted that, in London, tea stocks on 22nd May were as low as 137 million lbs., as against 142 million lbs. in the preceding week. As soon as the new season's sales started in full swing and quality showed improvement, it is expected that buying for shipment to the United Kingdom for replenishment of stocks would improve and continue for some weeks together.

Dusts on offer during last week's internal sales amounting to 22,784 chests met with poor demand, and prices, therefore, declined. Generally, prices eased by 4 to 6 nP. Legg-cut Dooars eased by 4 nP. The best C.T.Cs had buyers at prices which were 15 nP below valuations. The medium C.T.Cs which were lower by 6 nP at opening were down by 10 nP as the sale progressed. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.50 to Rs. 2.80 (nominal), medium Assam C.T.C. Re. 1.90 to Rs. 2.10, medium Dooars Re. 1.72 to Re. 1.76 and medium Assam grainy dust Re. 1.68 to Re. 1.72.

Leaf on offer amounting to 224 chests met with good demand at hardening rates.

Transferable export quota changed hands at ½ nP and non-transferable export quota at ½ nP. New season's quota was on demand at 5 nP with no sellers.

HESSIAN ADVANCES

(From Our Own Correspondent)

CALCUTTA, *2nd June*

Prices of hessian added gains during the week under review, while those of sacking goods fluctuated within narrow limits as genuine business passing was confined to small quantities. Fibre prices eased fractionally, following satisfactory pre-monsoon showers in areas where the plants require rains. In view of this, the earlier forecast of a higher crop in this season, surpassing the bumper of 1958-59, could be affirmed. On account of lack of rains, sowings could not be completed in several districts in Orissa and Bihar and in Murshidabad. Last week's rains were much helpful, and highly satisfactory reports continued to emanate from the jute districts in North Bengal and Assam.

An outstanding event of the week under review was the commencement from yesterday of regulation of trading in transferable specific delivery contracts in raw jute and jute goods, by the East India Jute and Hessian Exchange Ltd. A *communique* issued by the Union Commerce Ministry on 31st May declared that such contracts, unless put through the Exchange, would be illegal. It would be remembered that Section 15 of the Forward Contracts (Regulation) Act 1952 became operative for jute and jute goods as from March of last year, and the E.I.J.H.E., which was recognised, was given time to complete all preliminaries before it could take up the transferable specific delivery contracts. The formalities having been completed, the regulation came into effect yesterday. However, with a view not to dislocating trade, contracts entered into before 1st June will be exempted from the purview of the regulation by the E.I.J.H.E. It was also announced that the export contracts in raw jute and goods would continue to be put through as at present, that is, outside the scope of the regulating provision of the Forward Contracts (Regulation) Act.

A feature of trading during the week under review was the steadiness in hessian constructions following good overseas enquiries. As regards, shipping, May was a completely satisfactory month for hessian, and the stocks are expected to dip further. With the expectation of commencement of buying by Argentina and the United States in this month, the stock figures as at the end of May were awaited with interest. On Tuesday last, ready hessian 40" 10 oz. was unchanged but steady at Rs. 41, but business passing was small. Ready B. twills, however, fell to Rs. 93.85 from Rs. 94.30, following the setback in raw jute prices due to heavy pre-monsoonish showers. On Wednesday, scattered sales were reported, which were, however, insufficient to maintain prices. Thus, B. twills eased to Rs. 93.65 and hessian 40" 10 oz. to Rs. 40.95. At this stage, there were reports of further rains from jute districts, which adversely affected the fibre market. The result was that on Thursday prices sagged further, B. twills being quoted at Rs. 93.20 and hessian 40" 10 oz. at Rs. 40.75. Although on Friday, only small business was put through with buyers for export, prices firmed up, following keen activity in futures. B. twills gained to Rs. 93.45 and hessian 40" 10 oz. to Rs. 40.80. Ready goods derived support, and hessian 40" 10 oz. at Rs. 41.12 reached the highest level of the week. B. twills firmed up to Rs. 93.75. Yesterday, hessian 40" 10 oz. hardened to Rs. 41.20 while B. twills declined to Rs. 93.35.

Expectations of a higher crop in this year following heavy rains were heightened, and fibre prices gave way in the week. Northern bottoms eased to Rs. 20 from Rs. 20.50 and Assam bottoms to Rs. 20.50 from Rs. 21. Daiseee was, however, unchanged at Rs. 23. Mills showed only little interest, and as such there were not enough buying to absorb offerings. There were instances of small lots changing hands at cheaper rates. New crop did not attract interest, as buyers anticipated that prices for the same should be lower than present when the crop actually reached the market.

In the Narayanganj (Pakistani) market, fibre prices were firm to steady. Sellers were reserved and were not prepared to consider discounted offers. Arrivals from the interior were about 10,000 maunds per day. The quality of fibre was not good. Jat white B. bottoms were unchanged at Rs. 24-8, as were Tossa C. bottoms at Rs. 27. In the *pucca* bales group, the quotations were: Dacca Tossa 4 £135, Dacca Tossa 5 £111, mill firsts £110, output tossa 2/3rd £88, NC cuttings £50, MC £29, and export lightnings £80, all per ton c.i.f. the Continent and the United Kingdom.

METALS RECEDE FURTHER

(From Our Own Correspondent)

CALCUTTA, *2nd June*

A further decline in prices was the feature of trading in the metal market during the week under review. This followed a fall in demand, as well as weaker advices from the New York, London and the Far Eastern markets. The Union Commerce and Industry Minister, Mr. Lal Bahadur Sastri's reiteration that no industry would suffer for lack of raw materials and that a higher quota was being planned during the year also imparted weakness. On the London Metal Exchange, spot copper opened at £241½ and at one time was as low as £238½ but closed at £240¾. The subsequent steadiness in London was attributed to fair absorption on European account. New York followed a similar trend, since spot closed at 32.25 cents per lb. after being lower at 32.00 cents, as against the opening of 32.72 cents. Locally, demand for copper scrap suffered a setback, following lack of interest by small consumers whose requirements had been met earlier by the State Trading Corporation.

Tin at Rs. 565 disclosed a loss of Rs. 4. Demand was insignificant as compared to stocks, but buyers were reserved in anticipation of further easiness. On the other hand, in London and New York, steadiness was in evidence. In these centres, the anticipation was an increase in export quota of producing countries. In London, spot tin closed at £785, as against £784½ earlier.

Electrolytic zinc was at one time as low as Rs. 95.75, as against the opening rate of Rs. 97.50 but closed at Rs. 96. The fall would have been more pronounced if the stockists had not been more nervous, as they anticipated emergence of demand in the near future. For the stock position could not be considered comfortable. In London, spot zinc was earlier in the week at £78¾, but soon gave way to £78¼, following selling pressure.

Lead closed here at Rs. 73, after opening at Rs. 74. In London, the loss at £70 was 10s.

WHEAT STEADY

(From Our Own Correspondent)

HAPUR, *1st June*

A divergent trend prevailed in the foodgrains market during the week. Thus, while wheat continued to rule steady, due to poor arrivals and paucity of stocks, gram and other coarse grains drifted lower. Wheat arrivals, which had picked up just after the harvest, dropped sharply following the imposition of wheat levy scheme by the State Government early in May, under which the trade is to surrender half of its purchases to the Government at controlled price of Rs. 13 to Rs. 15 per maund according to quality. Although the agriculturist is now free to sell half his arrivals to consumers at market rates and the other half to the Government at controlled rates, the stalemate continues and wheat arrivals are almost nil, with the result that neither Government purchases are possible nor is consumers demand met. The State Government, however, has declared that the wheat levy scheme will continue for the whole of the year at the prices fixed and producers have been advised to bring their produce to the market before the rains set in.

Wheat at Hapur was steady in the open market to be quoted at Rs. 18.50 to Rs. 20 per maund. Whatever small quantity reached the market, it was picked up privately by consumers at higher prices. Facing shortage of wheat in the market, the consumers are now running to villages for their requirements.

Rice continued steady. The State Government is reported to have procured about 50 per cent. out of its target of 150,000 tons to be procured during the year. Rice advanced in some east U.P. markets and State Government is opening fair-price shops for sale of rice there to check this rising trend.

Gram was reaching here in heavy quantities from the Punjab and prices eased slightly, due to better supply position. Barley and *bejhar* also ruled quiet. The U.P. State Government has increased the purchase price of gram from Rs. 11.75 to Rs. 12.50 and that of barley and *bejhar* from Rs. 10 to Rs. 11 per maund. As prices were higher than those fixed by the Government, no purchases could be made on Government account. *Jowar* and *guwar* attracted good demand for seed purposes. Week-end prices (in rupees per maund) were: Rice *sela basmati* 33 to 36; *mainpuri* 22.25; *raimunia* 27; *gadda* 22.25; gram 13.50; barley 13; *bejhar* 12.75 to 13.12; *jowar* 13.50 to 15.50; *guwar* 13 to 15; *bajra* 14 to 16.

With modest arrivals—at an average of 1,000 maunds daily—and slack outside demand, peas stocks were gradually increasing and were put at 39 *khatties* of about 800 maunds each. Arrivals averaged 1,200 to 1,500 maunds daily and prices eased slightly during the week. Demand for *arhar dal* was still brisk and *arhar* arrivals averaged 500 to 600 maunds daily and prices were steady. Other pulses were quiet. The latest prices on Monday (in rupees per maund) were: peas *dara* 12.75; farm 13.50 to 14.50; peas *dal* 15.25; *arhar* 18; *arhar dal* 22 to 23; *urd* 19.25; *moong* 20.50 to 22.50; massor 15.50 to 19.

COMMERCE AND INDUSTRY

(Concluded from page 958)

sary adjustments. He also discounted the fear that domestic cars would be hit by Soviet competition. He said that there were many other things, besides cars, which Russia had to sell in the British market within the £2 million quota. Although there is a clause in the Government which permits Russia to sell its machinery in Britain, the British machinery makers do not appear to be upset by it, apparently because they believe that this clause will remain a dead letter. Commentators in the British Press say that it will not be easy for Russia to sell its machinery in Britain. In any case, in the initial years of the agreement, the trade in machinery will be one-way traffic, from the U.K. to the U.S.S.R. Indeed, the latter has already placed large orders with British companies.

INDIA'S FOREIGN TRADE

India's exports were lower at Rs. 135.46 crores during the first quarter of 1959, as against Rs. 143.37 crores during the same period last year. Imports, too, declined by about Rs. 11 crores to Rs. 191.98 crores. Consequently, India's adverse balance of trade narrowed down from Rs. 59.45 crores to Rs. 56.52 crores.

In the month of March 1959—the latest month for which figures are available—the adverse balance of trade was of the order of Rs. 18.43 crores, as compared with Rs. 23.88 crores in March 1958, according to the provisional figures of India's foreign trade by all routes, that is, sea, air and land, on private and Government accounts, published by the Department of Commercial Intelligence and Statistics, Calcutta. Exports (including re-exports) of merchandise amounted to Rs. 47.22 crores, as against Rs. 46.68 crores in March 1958. Similarly, imports receded from Rs. 70.56 crores to Rs. 65.61 crores.

MARKET GOSSIP

(Concluded from page 935)

raw materials are developed, Mr. Macpherson deplores the policy of some State Governments in showing preference to mills within their States in the form of leases, etc., completely disregarding the fact that production of paper should go up all over India and not on a State-wise basis. He, therefore, suggests that paper mills should be given long-term leases by the States and that all paper mills should receive equal treatment in this respect. This is, indeed, a reasonable request.

* * * *

As was mentioned in these columns a fortnight ago, discussions on the possibility of forming a "Little Free Trade Area" were resumed at Stockholm, Sweden, on Monday this week, when a working party of officials from Britain and six other non-Common Market countries (Norway, Sweden, Denmark, Switzerland, Austria and Portugal) commenced its "secret" meeting. The discussions must be on the basis of the report of Mr. Hubert de Besche, a Swedish Foreign Ministry official, circulated to the delegates in advance. The contents of the report are not known, but it is gathered that the report sums up the attitudes of the seven different countries and the scope for reducing trade barriers in the area. Before finalising his report, Mr. Besche visited all the countries concerned, gathering information from Governments. On the first day of the meeting, the Working Party is believed to have unanimously agreed that the most important thing was to hold together the 17 countries of the O.E.E.C. and not to split Western Europe's economy.

The chief edifice on which the idea of Little Free Trade Area is built is described thus: From the start, all the seven countries must accept the full obligations of membership of an organisation providing for the removal of barriers to trade among them in a manner consistent with the development of world-wide multilateral trade and the provisions of the G.A.T.T. Whatever may be the final state of the idea, the future course of Commonwealth trade relations will naturally undergo a change. The British Government, however, has again given the assurance that "Commonwealth interests will, as usual, be kept fully in mind." The Commonwealth Governments, says an announcement made by the U.K. Treasury, will be kept informed of what happens at Stockholm.

The anxiety of the majority of the seven countries to go ahead with the Little Free Trade Area plan has been prompted, it is said, by three considerations. First, there is no immediate chance of a successful resumption of negotiations on an O.E.E.C.-wide basis, at any rate until the French Government changes its attitude; it is only such a change that can make resumption of negotiations possible. Secondly, if and when negotiations are resumed, they may well move more smoothly between the two blocs than between the Common Market as a whole and individual "outsiders." Thirdly, when the Little Free Trade Area functions resulting in an improvement in the trade between its members, business men inside the Six will come to realise the need for a European solution and will bring pressure to bear on their Governments.

It is thus apparent that, although the seven non-C.M. nations mean business, they are still quite earnest about the establishment of a multilateral association among all the 17 countries of Western Europe. This is further evident from the following *communique* issued by Britain, the predominant partner in the Little Free Trade Area:

"In accepting the present invitation from the Swedish Government, the British Government has been moved by the belief that, if such an association of countries outside the Community (of Six) can be created, it will not only be valuable in itself but also make possible a new approach to European economic co-operation. It will be possible, once it is formed, to negotiate with the Community of Six and other O.E.E.C. members (some of whom will have special problems calling for special treatment), in order to remove trade barriers and so establish a multilateral association embracing all members of O.E.E.C., as has been the British Government's aim throughout."

Among the seven countries covered by the Little Free Trade Area scheme, Portugal, it is said, will have to make the heaviest sacrifice as a result of the reduction in tariffs. For this country has the highest tariff, the proceeds from which account for as much as a quarter of its total revenue. The average tariff level (per cent.) in the remaining six countries is: Austria and the U.K. 22½; Norway 17½; Sweden 10; Switzerland 5-6; Denmark 5.

The reactions of London City to the proposed scheme are mixed. Some, for instance, feel that the formation of the area will help British exports of iron and steel products, metal manufactures, machinery, motor vehicles and chemicals to the six other members of the Area which are at present importing these goods largely from West Germany. According to one estimate, the value of British exports to the six countries under reference will increase by £100-200 million in course of time. There is, however, another section which is rather sceptical about the benefits. This section fears that several industries will no longer enjoy the protection through imposition of quotas. The industries specially mentioned are motor car, optical and scientific instruments, sports goods and toys, cutlery and glassware, paper manufactures, watches and clocks, and dyestuffs. This section also fears that there will be increased competition for British paper manufacturers from Scandinavia, larger sales of Swedish ball bearings and some special alloy steels, and higher sales of certain Austrian and Swiss machine tools, in addition to concessions on fish products to Norway and guarantees to Denmark regarding agricultural exports, especially bacon.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 29th May, 1959

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	5,00,00,000
Reserve Fund	80,00,00,000
National Agricultural Credit (Long-term Operations) Fund	25,00,00,000
National Agricultural Credit (Stabilisation) Fund	3,00,00,000
Deposits:—	
(a) Government—	
(1) Central Government	71,74,12,000
(2) Other Governments	15,95,87,000
(b) Banks	73,84,69,000
(c) Others	119,25,32,000
Bills Payable	15,87,55,000

TREND OF COMMODITY PRICES

(*Concluded from page 940*)

countries to the long-term aspect of commodity problems, as well as the measures they have adopted to deal with the problem of short-term instability in primary commodity markets. A few countries, still in the early stages of economic development, have succeeded in expanding their primary exports. But this development, the Survey points out, has frequently implied a rising share of the world market for these countries at the expense of other primary-producing countries. In a number of countries, the drive to industrialise has been the main concern in the belief that the scope for continued expansion of primary exports is severely limited. The Survey notes that their experience has served to illustrate the difficulties surrounding this line of policy, difficulties that are not likely to be overcome until such time as their export structure has been diversified to include manufactures.

Almost without exception, says the Survey, primary-producing countries have adopted policies designed to increase the domestic output of goods which replace imports. While in many countries it has been possible to achieve a greater degree of self-sufficiency in basic foodstuffs, experience indicates that a net displacement of manufactured imports through the growth of domestic industry is extremely difficult to achieve.

Among the national policies that have been adopted to remove or alleviate the harmful consequences of excessive short-term commodity fluctuations, relatively few have sought to influence the world market for a particular commodity, and among these, some have succeeded for brief periods, but at some cost, in achieving favourable terms for their primary exports. The limited scope for such intervention in the world market, however, has impelled many countries to fall back on various policies seeking to insulate the domestic economy from the impact of external fluctuations. A few countries have adopted policy instruments which proved effective in stabilisation, but most, remarks the Survey, appeared not to regard the objective of stabilisation as important enough to warrant comprehensive control over the export sector.

The Survey concludes, more generally, that, while there is clearly much scope for industrial countries to adopt less restrictive commodity import policies, and for underdeveloped countries, by their own efforts, to reduce their vulnerability to the commodity problem, there are serious limitations, even under the best conditions, on what any one country can accomplish for itself, acting alone.

International Commodity Policies

Since the commodity problem imposes on a large number of underdeveloped countries severe limitations on economic growth, and since national measures for dealing with this problem are entirely inadequate, there is, according to the Survey, a valid case for an international commodity policy. However, "international policy, in the context of sovereign nations and conflicting national interests, is in essence a policy arrived at among nations rather than above nations. There is, therefore, a strong tendency to gravitate to the compromise solution. ... What is seriously objectionable tends to be weeded out, but the final product often suffers from lack of vigour." The chief accomplishment of post-war international commodity arrangements is found in an area of little controversy—the provision of a useful forum for airing views, in promoting better information and research and in confronting national policies with international requirements.

"In more formal approaches to international commodity arrangements, the degree of success," to quote the Survey, "is more limited. ... The chief accomplishment here is the emergency of a set of new principles." One of them is that of equal representation, in the establishment of commodity agreements, of producers and consumers. Another is that international agreements should, as far as possible, be consistent with a rational allocation of resources and the bringing about of orderly adjustment with the aid of the market mechanism.

The Survey makes a detailed analysis of the advantages and disadvantages of various operating principles of major international commodity agreements actually in force. It comes to the conclusion that, within limits, post-war international commodity arrangements have provided stabilising mechanisms, while carefully avoiding the serious difficulties of restrictionism experienced before the war. It should not be thought, however, that existing arrangements are capable of meeting all contingencies in a dynamic world. The Survey, therefore, suggests flexible and perhaps combined use of various mechanisms, and warns against undue reliance on rigid automatic rules of control. It adds that, if Governments are not content with the scope of current activities in dealing with the commodity problem, a bolder and perhaps more comprehensive approach beyond the commodity-by-commodity approach may be indicated. Among the various proposals examined, those for increasing international liquidity, especially of exporters of primary commodities, for multi-commodity insurance and for surplus disposal appear to be of particular interest.

Centrally-planned Economies

In the centrally-planned economies, a major feature of post-war experience has been the persistent scarcity of most primary commodities. In part, the reason for this is in the heavy emphasis placed upon industrial development in economic plans. Investment in primary production was accordingly severely restricted. The Survey, however, points out that, despite the central planning and allocation of resources, prices of primary commodities also influenced the demand-supply situation. While very high rates of growth of industrial production were achieved during the post-war period by all centrally-planned economies, expansion of agriculture was very moderate as a whole. This expansion of farm output was slow for foodstuffs though more substantial for other agricultural raw materials. The expansion of mining output also lagged behind the expansion of manufacturing in all centrally-planned countries, but this lag was moderate, unlike that of agriculture.

Important steps were taken in almost all these countries after 1953 to correct the defects inherent in the prevailing pricing system. The reforms were generally framed to align relative prices more closely with relative costs. Most important, agricultural prices were considerably increased. The increase in prices paid to agricultural producers in all European centrally-planned economies resulted, after 1953, in a recovery of the terms of trade between agricultural primary commodities and goods purchased by the peasants. The new long-term plans of economic development adopted during the past three years provide for very substantial increases in output and trade of primary commodities. For most commodities the rates of expansion set in these new plans are higher in relation to planned increases in manufacturing than in the past, and the growing importance of the Soviet Union as the main supplier of raw materials was one of the reasons which prompted several East European countries to synchronise their national plans with the new seven-year plan of the Soviet Union.

GUEST, KEEN, WILLIAMS, LIMITED

(*Concluded from page 962*)

an interest in the electrical industry, which investment will form another source of income. Bearing in mind the present and future development potential of the electrical industry, such investment can be expected to show a good return.

"On the subject of taxation, the provisions of the 1959 Finance Act removing the excess dividend tax and the wealth tax on companies are most acceptable and the simplification of the tax structure will, I think, be acknowledged as a welcome reform. It is to be hoped that future taxation measures will facilitate capital formation and from time to time enable a developing industrial company, without being penalised, to expand its capital structure commensurate with the needs of its physical development. This is a subject requiring early attention if those keen to assist in the country's development are not to be discouraged. Furthermore, overseas sources of both technical assistance and financial credit could, I believe, be encouraged towards greater participation in India, if the present measures of inter-corporate taxation and taxation of foreign shareholders could be made less of a disincentive.

Training

"Under this heading, I am pleased to tell you that the Company's second candidate to the Administrative Staff College at Henley in England satisfactorily completed his course of management training. Four graduate engineers are at present undergoing training in England. Twelve other employees have during the past year been sent abroad for various kinds of specialised training in connection with technical sales or production, or with operation of the new plant now being installed here. The assistance and co-operation which we receive from Guest, Keen, and Nettlefolds Ltd. in arranging overseas training of all kinds for our employees is invaluable. This service is greatly helping the Company to build up its management and technical strength to meet the administrative needs of the present and the future. At both Calcutta and Bhandup Works, the various apprenticeship and special training courses under the personal supervision of the senior management are working well.

Acknowledgment

"The last year has not been a particularly easy one, there have been a number of difficulties to overcome in looking after your interests, but no one is more conscious than I am of the splendid team spirit which exists within the Company and as a result of which these difficulties have been surmounted. I would like to thank personally, and on your behalf, the staff and all those employees who have contributed by their loyalty, enthusiasm and keenness to make the year 1958 a successful one."

INDIAN PAPER MAKERS ASSOCIATION

(*Concluded from page 963*)

This, it will be seen, is an all-round very substantial increase, with no decreases whatsoever in any material, and the present trend is still inclined to be on the upward grade both for indigenous and imported material. The supply of materials generally during the year have shown an improvement, but sodium sulphate is still very difficult to procure locally and is one of those items that until the Government of Rajasthan are able to supply mills with their requirements it will be necessary to import this commodity which in itself requires a considerable amount of foreign exchange.

Labour Relations

"I would now like to say a few words in respect of labour relations during the past year. In the sphere of labour-management relations, the past year appeared to be one of sustained progress. Statistics showed that, except in the case of a few industries, there had been fewer strikes and lockouts in the country, as a whole, and in West Bengal, in particular, resulting in less number of man-days lost than in the previous year. This heartening trend bids fair to a brighter future for the country's industrial progress.

"The Government has been exhorting everyone to be productivity-conscious by a systematic inoculation of a constructive attitude. What is primarily required is a sense of keen competition based on devotion to work carefully fostered at all levels. Employers, workers and State and Central Governments who are now committed to a number of 'don'ts' in the field of industrial relations are likely to work out in the next few months a series of 'dos' to ensure lasting industrial peace and increased production. Proceeding from the largely negative code of discipline prohibiting strikes, violence, go-slow by workers and lock-outs and victimisation—we are told that a code of efficiency and welfare is to be evolved shortly. Let us hope this will commit the worker to give his best and willingly to increase production in every way.

"Far too often we are faced with demands from trade unions for increase in wages out of all proportion to the increase in production contributed by labour. It is to be hoped that trade unionism in this country will be guided by loftier motives than has been in the recent past. The leaders of trade unions should restrain themselves from using their position to self-gain and instead endeavour to guide and train followers, so that they may become conscious of their correct role in industry and thereby become useful citizens of the country.

"Before closing, I would like to congratulate the Government on the general improvement in the movement of wagons of raw materials, with one exception, that is, the movement of sabai grass from certain areas in Orissa and Bihar, which is chiefly due to the re-laying of narrow-gauge sections with heavier rails, shortage of locomotives and narrow-gauge wagons, dislocation due to the Rourkela Steel Works, etc., but the fact remains that sabai grass is a valuable and much needed commodity and should be moved as expeditiously as possible, as it is highly inflammable and deteriorates rapidly in the rains."

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

MUDDLED THINKING IN A.-I.C.C. SEMINAR

AN official summary of the recommendations of the All-India Congress Committee's week-long Seminar on the third Plan was released shortly after our comments on Mr. Nehru's inaugural speech, and the discussions that followed, in these columns last week. This statement has not rendered any of our comments irrelevant or inappropriate. Nevertheless, it is necessary critically to analyse the Seminar's suggestions, as there is every reason to feel that they will greatly influence the drafting of the third Plan and the policies to be followed by the Government for implementing the Plan. It would not, indeed, be surprising, if a beginning were made with the policies even before the commencement of the third Plan on the plea that it is necessary to prepare the ground well in advance.

Appropriately enough, the *communique* begins with the basic approach to the third Plan. There is nothing new in what the Seminar says on this subject. It is said that, "while the solution of the problem of poverty and backwardness lies in the rapid growth of industry, giving rise to increasing production and widening opportunities of employment, this would be possible only if there were to be a simultaneous increase in agricultural production. The key to the improvement in agricultural production in India is a steady increase in the yields per acre achieved through intensification and diversification of agriculture." The Seminar feels that "intensification of agricultural production, on the one side, and expansion of the basic capital goods industries, on the other, should receive the highest importance in the Plan." There will be general agreement with this broad approach, which has already characterised the second Plan. It is now agreed by all that, for a vast country like India with its teeming population, a strong agricultural base is a prerequisite for large-scale modern industrialisation. That it is also possible to have such a base is evident from the achievements of the U.S. and Russia, as well as from the attempts that are being made by China.

As for the basic capital goods industries mentioned above, there is room for difference of opinion on the extent of emphasis to be placed on such industries and their types. The approach to this subject should be practical and not sentimental. It has to be reconciled with the need for obtaining a sizable rate of return necessary for augmenting the resources required for financing a progressively rising rate of development. The heavy industries need large amounts of capital, adequate supply of highly qualified and experienced engineers, and a large army of technicians. They take time to yield a return on the capital invested. But they are the mother of other industries and, without them, there can be no large-scale industrialisation of the order this country has in view. The issue is thus a complicated one and has to be decided by experts, who have to strike a balance of competing claims on the resources available. It will involve much thought and discussion not only between the experts in the Planning Commission but also with some of the foreign countries, the co-operation of which is necessary for implementing the Plan.

The Seminar has also laid stress on small and cottage industries, with a view to achieving a balanced distribution and fuller utilisation of the productive potential of the mass of idle or semi-idle people. The growth of these industries is to be promoted in rural areas and small towns, preferably on co-operative lines. There can be no difference of opinion on this proposal. The system of industrial estates is already in operation in several parts of the country and many useful lessons can be learnt from its working for furthering gainful small and cottage industries. The Seminar has rightly drawn the attention of Governments to the need for training personnel in adequate numbers and quality. It is very refreshing to find that the Seminar has suggested that "the rural orientation of the Plan should not be conceived in such a way as might hinder the growth of our economy" and that "the use of power and improved techniques must be encouraged, wherever it is feasible to do so." If this suggestion means anything, it is that the policy so far followed for sustaining and stimulating the growth of certain types of cottage industries such as handlooms, *ambar charkas*, oil *ghanis*, hand-pounding of paddy, *gur* and *khandsari*, and cottage matches must be modified on lines suggested by this journal from time to time. It also means that modernisation of most of the small and cottage industries should be encouraged and not opposed, as is being done by some at present. One of the proposals of the Seminar in regard to these industries is, however, not very clear. It is that there should be a definite price policy for the products of these industries. Does this mean that there should be a support price for these products, as has often been suggested for agricultural produce? The economic implications of such a policy have to be carefully worked out before a beginning is made in this direction.

A welcome suggestion of the Seminar is that idle and semi-idle manpower in rural areas must be harnessed for the development of rural areas. There is plenty of scope for utilisation of such manpower. It can be used in the construction of houses, roads, bridges, irrigation canals and channels, in soil conservation, afforestation, maintenance of sources of irrigation in villages, and similar jobs. If these tasks are to be carried out economically, the level of wages and amenities should not be fixed high. The Seminar is, therefore, right in saying that some kind of special employment projects of a productive character should be provided at whatever wage rates are practicable. This question, it is needless to add, has to be viewed in the spirit of something is better than nothing.

It now looks as though the size of the next Plan, in terms of finance, will be Rs. 10,000 crores. The Seminar, too, has given its blessings to this figure and the Prime Minister has come to the conclusion that this size is not beyond the limits of practicability. This figure has apparently been chosen on the assumption that the *per capita* national income should be raised at least by 6 per cent. per annum, but it is not exactly clear how the resources are going to be found. Nor is it clear how the authors of this figure have arrived at the conclusion that an investment of Rs. 10,000 crores in five years

will yield a 30 per cent. increase in the *per capita* income, making allowance for the rise in population. What are the industries to be started? Who is going to manage them? How much of the proposed investment is for agriculture and how much for basic services? How much is going to be spent on social welfare measures? Unless clear answers to these questions are available, it is not possible to comment on the investment target of Rs. 10,000 crores. But, if the discussions on socio-economic policies at the Ooty Seminar and elsewhere are any indication of the shape of things to come, an investment of this large order does not seem to be a practical proposition. It is proposed that two-thirds of the suggested amount be invested in the public sector and only the balance in the private sector. It is suggested that high priority should be given to heavy capital goods industries, that, by way of incentive to hard work, people should be allowed to have an adequate supply of food, clothing and other consumer goods, that primary and secondary education should be free to the children of low-income group and that these children should be given free lunch. These proposals imply that a sizable part of the investment will go in consumption and in consumer goods industries. At the same time, it is suggested that indirect taxes should be raised substantially in order to find a good part of the additional resources required for financing the Plan. These are surely contradictory objectives, on the proper balancing of which will depend whether or not a plan of Rs. 10,000 crores will be feasible.

On the question of prices, profits, wages and income, the Seminar's conclusions are not startling. The view that, in a planned economy, prices cannot be left to be determined by market forces and that it is necessary to ensure stability of prices through State trading, controls, buffer stocks, fair-price shops, etc., has been reiterated. This view has been stated and re-stated numerous times ever since India attained Independence. Efforts have also been made to give effect to it. And yet prices have risen and today the rupee buys less than it did a decade ago. The only consolation that one can have is that things could have been worse. It is idle to expect that an annual investment of Rs. 2,000 crores on an average, representing about 20 per cent. of national income, could be made without generating inflationary pressures and that such pressures could be suppressed through controls. Nevertheless, controls are necessary and have to be endured as a lesser evil; without them, the position would become intolerable. Only, the controls must be enforced diligently and honestly. These conditions do not necessarily mean that the State itself should undertake the functions of marketing and distribution. If the responsibility implied in controls is to be minimised, production of food, cloth and houses should be kept up. It would be infinitely better if the authorities bestowed more thought and attention on these positive steps for keeping prices stable than on the negative means of controls and State trading.

For some months past, planners in this country have been saying with commendable frankness that the commercial enterprises in the public sector should make substantial profits, in order to augment the resources available for this sector, and the principle "no-profit-no loss" should be abandoned. The realisation of the value of profits by those who have condemned profit-motive as anti-social is an encouraging development. If it had dawned on them ten years ago, there would have been a marked increase in the resources available for the public sector and the heavy erosion of capital that has taken place could have been avoided. It is, however, to be hoped that this realisation will not be conveniently forgotten when determining the prices and profits policy for enterprises in the private sector and that, in applying the new principle to the public sector, the interests of consumers will not be ignored. In their anxiety to raise resources, the authorities may be tempted to allow the pendulum to swing too far to the other side and copy the practice of authoritarian countries where State monopolies are used as a machinery for extracting resources from the public and for restraining consumption of articles that are in short supply. There should be suitable checks to prevent this from happening.

The main features of the wage policy favoured by the Seminar are: there should be a national wage and salaries policy applicable to both the public and private sectors. Wages should be related to productivity. There should be a definite maximum for salaries, subject to exceptions in the case of personnel with specialised qualifications. Profits, after deduction of all necessary payments, including normal remuneration, are intended not only for the benefit of those working in the concern but also for the society as a whole. Such profits must, therefore, also be utilised for financing development schemes in the interests of the society. This policy is good in part and revolutionary in some respects. Even that portion which sounds good is not easy to implement. It is, of course, desirable to link wages to productivity, but its application in all industries is not feasible. This does not mean that it should not be tried in as many industries as possible. Again, the suggestion that a part of the surplus profit should be utilised for the benefit of the public is perfectly sound. In effect, it means that the distribution of bonus to workers should not be extravagant, as is now being ordered by some of the adjudicators. As the State is already taking away more than 50 per cent. by way of taxation in the case of joint-stock companies and much more in the case of partnerships, private limited companies, and closely-held companies, there is, however, no justification for it to try and take away a part of the surplus profit also. This surplus, after deducting the labour's share, should be used by the companies for expansion and for reducing the costs through modernisation and research. It is undesirable to fix a ceiling on salaries, as it will impair efficiency and discourage enterprise. A negative approach of this nature is not conducive to the emergence of dynamic leadership in the economic sphere. It will hamper the healthy growth of entrepreneureal skill, without which there cannot be any worthwhile dispersal of economic power. There will also be practical difficulties in implementing the ceiling on salaries. And, above all, it will result in too much interference by the State, gross discrimination between salaried employees and further whittling down of the democratic rights of individuals.

After advocating a ceiling on salaries and other urban incomes, the Seminar seriously suggests that profits in both the public and private sectors should be linked to efficiency. Elaborating this point, it says:

> "Norms of productivity should be set up for different industries on the basis of a sample survey of different concerns in each industry and the targets formulated. Concerns fulfilling or exceeding the norms deserve special recognition, while those that fail to do so require to be censured. The same procedure should also be applied to enterprises in the public sector. A socialist society has to be more efficient in its economy than a capitalist society and it is, therefore, that the Seminar places so much emphasis on efficiency and productivity."

The Seminar has followed up this suggestion with two more proposals. One, "special taxation should be levied on unearned, functionless, speculative and windfall incomes. In particular, increments in urban land values should be subjected to this taxation." Two, "positive steps should be taken to bring about a substantial reduction in the existing disparities of income and wealth, in both rural and urban sectors of the national economy." In the context in which this idea has been put forward, "positive steps" here do not mean levelling up the have-nots but levelling down the haves.

To sum up in simple language, the planners who participated in the Seminar want efficiency in production, honesty of purpose and single-minded devotion to the job. They also want the people to spend less and save more for the future. At the same time, they are advocating, in the name of social welfare, confiscatory types of taxation which penalise efficiency, honesty, hard work, and thrift, that is, those very qualities which they want to encourage. The contradictions in these objectives are so apparent that they can be made only by idealists with their feet not on the ground, or by muddle-headed thinkers, or by political opportunists, or, of course, by a combination of all the three types. There are, however, many in this country and elsewhere who admire this kind of planning and objectives, because they believe in the art of tactics and statesmanship. They consider the contradictions as constituting the carrot for the donkey of have-nots, without whose votes no political party can be in power in India. Time alone can show whether this type of statesmanship will succeed.

THE TEN PILLARS OF ECONOMIC WISDOM

[In view of the discussions that have taken place at Ootacamund under the auspices of the Congress Party for establishing a "democratic socialist society," the description of the ten pillars of economic wisdom by the American Economic Foundation, New York, is of topical importance. We, therefore, make no apology for highlighting them on our editorial page. Our planners and politicians in power are welcome to profit by the incisive thinking that must have preceded the preparation of these points. But we are not confident that they will do so. The points will, however, help the public to judge the socialist economic policies of the Congress Party on right lines.—ED.]

1. Nothing in our material world can come from nowhere or go nowhere, nor can it be free; everything in our economic life has a source, a destination, and a cost that must be paid.

2. Government is never a source of goods. Everything produced is produced by the people, and everything that Government gives to the people, it must first take from the people.

3. The only valuable money that Government has to spend is that money taxed or borrowed out of the people's earnings. When Government decides to spend more than it has thus received, that extra unearned money is created out of thin air, through the banks, and, when spent, takes on value only by reducing the value of all money, savings and insurance.

4. In our modern exchange economy, all pay-roll and employment come from customers, and the only worthwhile job security is customer security; if there are no customers, there can be no pay-roll and no jobs.

5. Customer security can be achieved by the worker only when the 'boss' is allowed, by the worker, to do the things that win and hold customers. Job security, therefore, is a partnership problem that can be solved only in a spirit of mutual understanding.

6. Because wages are the principal cost of everything, widespread wage increases, without corresponding increases in production, simply increase the cost of everybody's living.

7. The greatest good for the greatest number means, in its material sense, the greatest goods for the greatest number, which in turn, means the greatest productivity per worker.

8. All productivity is based on three factors: (a) natural resources, whose form, place and condition are changed by the expenditure of (b) human energy, both muscular and mental, with the aid of (c) tools.

9. Tools are the only one of these three factors that man can increase, and tools come into being in a free society only when there is a reward for the temporary self-denial that people must practise, in order to channel part of their earnings away from purchases that produce immediate comfort and pleasure, and into new tools of production. Proper payment for the use of tools is essential to their creation.

10. The productivity of the tools—that is, the efficiency of the human energy applied in connection with their use—is highest in a competitive society, in which the economic decisions are made by millions of progress-seeking individuals, rather than in a State-planned society, in which those decisions are made by a handful of all-powerful people, regardless of how well-meaning, unselfish, sincere, and intelligent those people may be.

T.I.S.CO. NEW ISSUE NOT AT PAR?

BANKING TRENDS—SHIPPING CONFERENCE IN U.S.

COMMODITY MARKETS

THURSDAY, 5 P.M.

MARKET GOSSIP

WILL the Tata Iron and Steel Company, Ltd. receive permission for issuing its proposed ordinary capital at par? This question is uppermost in the minds of speculators in the share market. The doubt was there last week itself, but it was not as widespread as it is now. In fact, none cared to entertain it, when we raised the point in our issue of 4th April 1959, presumably because of the strong assurance given by the Vice-Chairman of the Company at the last annual meeting of its shareholders that the Directors would not agree to the new shares being issued at par. This statement had led many to infer that there must have been some informal understanding between the Company and the Government on this question.

If more people than before are now having doubts on this issue, there are good reasons for it. First, many in the market have come to know that, though the extraordinary general meeting of the Company for getting the shareholders' approval for the issue of new shares is only two weeks ahead, the management has so far not received the Government's sanction and that a spokesman of the Company will shortly be proceeding to New Delhi to discuss the question. Secondly, it is reported that the Government itself has not yet come to any decision. And, thirdly, in an overbought market, with bulls in a defensive mood, doubts of this nature find more listeners than they usually do when bulls are aggressive and confident.

Our own information, according to reliable sources, is that the Finance and the Commerce and Industry Ministries are studying the question in consultation with their advisers. The Secretariat is credited with the view that the Company should be asked to collect a premium on the new issue as was done on the previous occasion. The Government's advisers also are said to have given their support to this view.

As stated in our issue of 4th April, the main reason for companies abandoning the time-honoured practice of issuing new shares at a premium is the Government's punitive tax policy, especially the 30 per cent. tax on bonus shares and its extension to capitalisation of share premiums also. If the Government wants companies to resume this practice, then it should amend its fiscal policy by withdrawing the tax on capitallsation of reserves and premium on shares.

The Secretariat is reported to be contending that, if a company does not want to continue a policy considered as sound merely because of the aforesaid taxation, it amounts to tax avoidance to which the Government should not be a party. It is also not convinced, so we understand, that the fact that permission was given to several well-established companies to issue new shares at par after the compulsion exercised on the T.I.S.Co., I.I.S.Co. and A.C.C. in the past is a sufficient argument for the extension of that policy to the T.I.S.Co. In any case, the departure is regarded as a mistake and there is no reason why it should not be rectified. It may be noted here that it was after Mr. T. T. Krishnamachari became the Finance Minister this departure was made.

In the light of this background, will Mr. Morarji Desai and Mr. Lal Bahadur Shastri overrule the views of their departments and let the T.I.S.Co. issue new ordinary shares at par? One has to wait and see. Meanwhile, it can be confidently stated that the Company's spokesman who is proceeding to New Delhi to place its case before the Ministers and the officials will not find his task easy.

* * * *

It is now four weeks since the pull on the short-term money market has been on the wane, the volume of bank credit having recorded a fall of Rs. 15.81 crores from the peak of Rs. 1,027.26 crores touched on 8th May to Rs. 1,011.45 crores on 29th May, the latest date for which figures are available. During this period, Scheduled banks' deposits have risen by Rs. 24.61 crores to a record of Rs. 1,706.81 crores and this has enabled them to reduce their borrowings from the Reserve Bank by Rs. 30.02 crores. While their investments do not reveal any worthwhile addition, their cash balances and money at call and short notice stand strengthened by Rs. 11.40 crores.

Now that the busy season is over, it would be appropriate to analyse the variations in Scheduled banks' data during the last two busy seasons. The end of April is usually said to mark the close of the busy season, but this year it had prolonged by a few days. Since the peak of bank advances was touched on 8th May, we have taken this date, for the purpose of the analysis, as the end of the busy season. Between the end of October last and 8th May, Scheduled banks' deposits went up by nearly Rs. 105 crores, as against over Rs. 146 crores in the corresponding period of 1957-58, as will be seen from the table published at the bottom of this page. The slower pace of expansion in deposits this season is mainly accounted for by time deposits, which have risen by only Rs. 83.5 crores, as compared with Rs. 142.5 crores in the 1957-58 season. Demand deposits show an increase of Rs. 21.4 crores, which is nearly six times that in the 1957-58 busy season. In other words, a greater use of funds was made this season than in the previous year, notwithstanding the import restrictions. This is due to an increase in agricultural production during the 1958-59 season as well as in the production of several industries. The increase in economic activity is further indicated by the larger pace of expansion in bank credit; this has gone up by nearly Rs. 188.5 crores, that is more than double the rise in the 1957-58 busy season. The larger credit expansion has been met by increasing the borrowings from the Reserve Bank by over Rs. 38 crores (in the 1957-58 season, there was a reduction of about Rs. 6 crores in this portfolio) and by reducing the cash balances by more than Rs. 53 crores. There has, however, been an addition of over Rs. 15 crores to the investment portfolio. In the corresponding season of the previous year, Scheduled banks' cash balances had risen by over Rs. 10 crores and investments in Government securities by Rs. 21 crores.

It may also be noted that the rise (Rs. 43 crores) in State Bank's deposits in the 1958-59 busy season is only Rs. 5 crores less than in the 1957-58 season and the expansion in advances is more or less the same as in the last busy season. This means that the major beneficiaries of the rise in bank credit in the 1958-59 season have been the other Scheduled banks. The increase of Rs. 15 crores in the investments of Scheduled banks as a whole is solely due to the rise of Rs. 43 crores (as against Rs. 7 crores in the 1957-58 season) in the State Bank's holdings. It is thus apparent that the other Scheduled banks must have reduced their investments in Gilt-edged securities by about Rs. 28 crores. Of the drop of Rs. 53 crores in cash balances of all Scheduled banks, State Bank accounts for nearly Rs. 33 crores.

Notwithstanding the increase of Rs. 79 crores over the year to a peak of Rs. 1,027 crores in advances, the credit ratio as on 8th May is lower than that a year before. This is due to the substantially larger rise (Rs. 177 crores) in deposits. Consequent on the addition of Rs. 208 crores in investments between 9th May 1958 and 8th May this year, which is much larger than that in deposits, the ratio of investments to deposits has risen from 28.2 per cent. to 37.7 per cent.

An analysis of the latest position of Scheduled banks (as on 28th May 1959) shows that their deposits (net) have gone up over the year by more than Rs. 200 crores to Rs. 1,706.8 crores. As against this, the rise in advances, at Rs. 1,011.45 crores, is of the order of only Rs. 88 crores, thereby bringing down the credit ratio from 61.3 per cent. to 59.3 per cent. Investments stand at Rs. 635.10 crores, representing an increase of Rs. 157 crores over the year. At this level, they constitute 37.2 per cent. of the deposits, as against 31.7 per cent. a year before. Cash balances have dwindled by Rs. 14.26 crores to Rs. 166.23 crores, but this is solely accounted for by money at call and short notice which has been reduced from Rs. 55.09 crores to Rs. 39.06 crores.

* * * *

Now in session at Washington is a closed door ten-nation inter-Governmental conference on shipping affairs which began on Monday this week and is due to end tomorrow. The participating countries are the U.S. and nine West European powers—the U.K., Belgium, Denmark, France, W. Germany, Italy, the Netherlands, Norway and Sweden. The discussions at the conference are on the U.S. policies and laws resulting in what are called "three evils": (1) Flag discrimination in the form of cargo preference laws under which at least 50 per cent. of all cargoes financed by the U.S. Government or shipped under the foreign aid programme should be carried in U.S. vessels; (2) subsidies for the building and operation of ships which otherwise cannot compete; and (3) official approval to U.S. shipowners operating under tax-free flags of convenience. Out of the estimated world tonnage of 125 million at present, nearly 17 million tons are believed to have been registered under tax-free flags of convenience.

The aforesaid U.S. policies and laws have been severely criticised by British and Continental shipowners as having damaged the interests of the traditional maritime nations. Attention is particularly drawn to the reduced level of sea-borne trade which "has helped to produce a huge and growing surplus of ships" in many countries. In the U.K. ports alone, as many as 255 merchant vessels aggregating 1,439,038 gross tons, were laid up at the beginning of last month. It is said that several shipping companies in the U.K. and the Continent, including some having the most modern and efficient vessels, are finding it difficult to meet operating costs and depreciation requirements.

The U.S. Government, however, seems to attribute the shipping slump not to its policies but to the surplus of tonnage throughout the world. Whatever may be the factors responsible for the shipping slump, it is pointed out, the U.S. Administration will not agree to change its attitude towards flags of convenience. At best, the Administration is expected to yield a little on flag discrimination and subsidy policies. Before taking any final decision, the Administration has to consult the domestic shipping interests who are already complaining that their share of carriage of U.S. trade has declined since 1956. These interests have been assured by the State Department that the Washington talks with European representatives are informal and do not represent negotiations.

* * * *

A significant development in the world economic situation during the first half of the current year is the sustained economic recovery of the Western world. The recent rise in world commodity prices is an indication of this general movement towards better economic conditions as also of the optimism regarding the future. Reflecting the improvement, the *Financial Times* index of sensitive world commodity prices shows a strident advance. Although, up to the middle of February, the increase in commodity prices was of a marginal nature—just over one per cent.—the upward trend gathered momentum since then. The *Financial Times* index (base: 1st July 1952=100), which stood at 78.95 at the end of December, rose to 80.20 by the end of February, ascended to 82.06 by the end of March and still further to 84.10 by the end of April. At the end of May, it stood at 84.04.

A welcome feature of the rise in prices is that it has not only been consistent but also not confined to a few commodities. The upswing is shared by almost all the major commodities. Another feature is that, comparatively, the industrial commodities benefited more from the recovery in economic activity than the agricultural commodities, barring a few exceptions. Rubber, copper, tin, wool, etc., have recorded substantial gains. The major agricultural commodities still seem to be weighed down by the heavy surplus in the U.S. where the principal crops are still in excess of demand.

To the primary producing countries, in particular, the rise in commodity prices, however small, is a desirable development, because it will surely go to increase their export earnings, help correct the imbalance in their trade and improve their buying power of essential capital goods. These countries were among the worst hit by the recession, as commodity prices fall faster in a recession. According to a U.N. estimate, published in our last issue, during the one year ended mid-1958, export earnings of primary producing countries fell by 7 to 8 per cent. Their balance of trade position was further adversely affected by a rise in prices of manufactures. These two factors together have been responsible for a drop in their import capacity equivalent to about six years' loan by the World Bank.

So far in the current year, primary producers have benefited from the rise in commodity prices only to a limited extent for two reasons. In the first place, a part of the demand arising from the revival of economic activity has been met from accumulated stocks in the consuming countries. This is particularly true of wool and tin. Secondly, there has hardly been any fall in the price of manufactured goods, so that the terms of trade are still running against the underdeveloped countries.

Although commodity markets are still maintaining a steady undertone, there has, of late, been a tendency for prices to stop rising and for the price curve to flatten out. Reflecting this development, the *Financial Times* index, as on the 5th inst., has dropped to 83.50. This lull is attributed to seasonal factors and is not regarded as an indication of a reversal of the basic trend. Market observers consider the current slackness as a passing phase and the general expectation is that, with the economic recovery in the West continuing, the short-term prospects are for a rise rather than a fall in commodity prices.

Commodity prices in India, especially raw cotton and oilseeds prices, have been distinctly firm so far during the year. The strength of cotton has been due mainly to the tight supply position. As a result of the progressive decline in crop estimates, which currently stand at about 4.85 million bales, as compared with 5.4 million bales estimated at the beginning of the season, operators felt that there would not be enough cotton to cover the requirements of mills, especially as consumption was showing signs of recovery. Even today, the feeling is that, if the current trend of consumption were maintained, the 1958-59

N.B.:—8th May 1959 has been chosen as the end of season 1958-59 because the level of advances touched the peak. Thereafter, there has been a decline in bank credit. In 1957-58, the peak was touched on 2nd May 1957.

EQUITIES HESITANT

BOMBAY BURMAHS, HOWEVER, SPURT

(From Our Own Correspondents)

BOMBAY, 11*th June*

THE share market was indecisive during the week under review and the main speculative counters moved irregularly within a narrow range. The conclusions of the A.-I.C.C. Seminar, released at the end of the deliberations in the course of a Press statement, did not cause any jitters in the market. The main points of the suggestions which are of interest to share markets are: (1) the public sector is to be continuously expanded with appropriate machinery for the regulation and control of large-scale units of production which remain in private hands; (2) the expansion of organised private sector should be subject to regulation in the light of socialist objectives; (3) private initiative is to be channelled as far as possible into small-scale and cottage industries and co-operative enterprise, subject to necessary safeguards; (4) foreign exchange is to be economised by utilising as much as possible indigenous materials and locally available design, construction and manufacturing capacity; (5) prices are to be regulated in social interests; (6) wages must be related to productivity; (7) unearned, functionless, speculative and windfall incomes, and, in particular, the rise in ruban land values, are to be subjected to special taxation and (8) existing disparities in income and wealth are to be reduced.

The share market would appear to have given no thought to the implications of these suggestions. If it has chosen to do so, it is probably because it must have thought that, with nearly two more years to go for the third Plan to commence, there was time enough to bother about them and that, in any case, they were only proposals with no certainty that the Government would implement them. Of more immediate importance is the uncertainty regarding the price at which the new issue of the Tata Iron and Steel Company, Ltd., is to be made. This, coupled with the heavy load of Indian Iron shares out of the recent sale by Dalhouse Holdings, as also of Tata Locomotives, proved to be a drag on the market. There were, however, a few bright futures, as, for instance, Bombay Burmahs, National Rayons, Premier Constructions and Shivrajpurs in the forward section and Alembic, Amar Dyes, Ceat Tyres and Indian Dyestuffs in the cash section. Selective scrips in the preference share list also came into favour.

Sectionwise, Tata Steel Ordinaries shaded off early in the week from Rs. 188.50 to Rs. 187, but soon rallied to touch Rs. 192.75 on Tuesday. In the last two days, however, uncertainty regarding the issue price of the right shares gained ground and the shares dipped to close today at Rs. 189. The new shares gained over the week Re. 1.25 to Rs. 187.25. Indian Irons moved between Rs. 23.84 and Rs. 24.16 before closing at Rs. 23.92, the loss over the week being 20 nP.

In the textile section, Bombay Dyeings came up to Rs. 64.60, but gave way towards the close to Rs. 63.80. After an early relapse from Rs. 540 to Rs. 533.50, Centurys spurted to Rs. 551.50, only to react to Rs. 543 at the close. Kohinoors finished with a loss of Rs. 3.50 at Rs. 273.50. Central Indias were unchanged at Rs. 98 and Finlays at Rs. 266, while Indu Ordinaries shed 28 nP to Rs. 7.68. Khataus picked up Rs. 2.50 to Rs. 216.25. New Greats receded from Rs. 172 to Rs. 167 today before gaining ground to Rs. 171 at the close. While Simplex suffered a loss of Rs. 3 at Rs. 177, Shree Niwas Cottons advanced by Rs. 3 to Rs. 174, Standards by Rs. 11 to Rs. 501 and Svadeshis by Rs. 3 to Rs. 232.50.

Bank shares were steady with fractional gains. Barodas rose by 50 nP to Rs. 102.50, Centrals by 80 nP to Rs. 53.10 and their new shares by 20 nP to Rs. 56. Bank of Indias were done higher at Rs. 131.25 and Punjab Nationals at Rs. 22.64. United Commercials were maintained at Rs. 61.

Barring a dip in Ahmedabad Electrics and Surat Electrics, which declined from Rs. 92 to Rs. 90.90, and from Rs. 107.25 to Rs.105.50, respectively, electricity shares ruled steady. Bombay Suburbans were slightly marked up to Rs. 103.75. Tata Hydros gathered Re. 1.25 to Rs 119, Tata Powers Rs. 2.50 to Rs. 1,171.25 and Andhra Valleys Rs. 5 to Rs. 1,130.

Sugar shares presented a mixed pattern. While Belapurs were subdued at Rs. 292.50, after touching Rs. 295, Phaltans disclosed a gain of Rs. 3 to Rs. 157. Walchandnagars were marked up by Rs. 8.75 to Rs. 291.25 and Maharashtras by Rs. 15 to Rs. 208. Cements were featureless, Associated Cements moving between Rs. 154.50 and Rs. 152.50 before finishing at the latter level. Digvijays were unchanged at Rs. 152.50, while Orissas gained 32 nP to Rs. 15 and Jaipur Udyogs 16 nP to Rs. 10.84.

In the engineering group, Alcocks were a dull, but steady, feature at Rs. 269. Tata Locomotives retreated early in the week from Rs. 202.50 to Rs. 197.75, but soon rallied to touch Rs. 206.75 on Tuesday. Subsequently, however, they gave way to close at Rs. 203. Premier Constructions were a strong feature with a rise of Rs. 7.50 at Rs. 311.50. Larsen and Toubros hardened from Rs. 21.24 to Rs. 22.08 but reacted to close at Rs. 21.80, following the announcement that the Company proposes only to maintain the dividend for the year ended March 1959 at 12½ per cent. Mahindras were a shade quiet at Rs. 19.80, while Voltas rallied from Rs. 160 to Rs. 170. Among mining shares, Shivrajpurs shaped well, with a rise of Rs. 4 to Rs. 84. Indian Coppers were just steady at Rs. 4.08.

Scindias were listless. After an early rise from Rs. 17.84 to Rs. 17.96, they relapsed to Rs. 17.48 at the close. Great Easterns, which were marked down heavily last week, recovered from Rs. 21.96 to Rs. 22.52. Premier Automobiles were steady at Rs. 109 and Hindustan Motors at Rs. 8.68.

Bombay Burmahs provided the highlight of the miscellaneous section, on reports that the Company was contemplating the entry into a new venture. The old shares jumped up from Rs. 525.50 to Rs. 552 today, before closing at Rs. 544. Their partly paid-ups were, however, featureless at Rs. 182.50. National Rayons attracted considerable attention and rose from Rs. 309 to Rs. 319.75. The closing was, however, lower at Rs. 317.25. Gwalior Rayons were in good demand and rose by Re. 1.80 to Rs. 20.44. Tata Chemicals were a shade better at Rs. 18.44 and their new shares gained 24 nP to Rs. 17.24. Alembics had business Rs. 10 higher at Rs. 210. Amar Dyes hardened by Rs. 10.50 to Rs. 170.50 and Indian Dyestuffs by Rs. 77.50 to Rs. 762.50. Dhrangadhras provided an exception with a drop of Rs. 3.50 to Rs. 111.50. Tata Oils rose by 50 nP to Rs. 57.50 and Hindustan Levers by Re. 1 to Rs. 30.25. Killick Industries were steady at Rs. 139.50, while Wimcos improved by Re. 1.25 to Rs. 204.75, West Coast Papers by Rs. 2 to Rs. 139, W. H. Brady by Re. 1.25 to Rs. 325 and Greaves Cottons by Rs. 2 to Rs. 131.

In the preference share group, Tata Chemicals were done Re. 1.50 higher at Rs. 98. Premier Constructions 1st preference gained Re. 1 to Rs. 87 and their 2nd preference put on Rs. 2 to Rs. 85. Indian Irons changed hands a fraction lower at Rs. 103 and Tata Hydros Rs. 2 lower at Rs. 115.50.

* * * *

Madras Stock Exchange

MADRAS, 10*th June*

The Madras Stock Exchange ruled quiet during the week under review. The various suggestions put forward at the A.-I.C.C. Seminar at Ooty withdrew a large part of investment support which was in evidence in recent weeks. In particular, the fixation of the third Plan outlay at Rs. 10,000 crores was considered to involve imposition of a heavier tax burden on companies and individuals. The operators noted the special emphasis laid on appropriate controls and regulation of large-scale units of production in the private sector, as well as on checking monopoly profits and unearned incomes. Tea shares encountered selling on reports of lower prices at the recent auctions. In sympathy, coffees and rubbers ruled easy. Textiles lacked support, thanks to slackness in offtake of yarn and piecegoods. Miscellaneous industrials were dull. Transactions put through were limited, with values moving narrowly. Sugar shares, however, provided an exception in that they elicited buying enquiries and tended to move up.

In the sugar section, United Breweries advanced by Rs. 5 to Rs. 405. Cauverys hardened by a rupee to Rs. 107. E.I.Ds picked up 75 nP to Rs. 37. Deccan Sugars rallied from Rs. 11.80 to Rs. 12.30, following the announcement of an interim dividend of Rs. 7½ per cent. (taxable) for the year ended 31st May 1959, as against the interim dividend of 5 per cent. paid in the previous year. Travancores gained 25 nP to Rs. 11.95.

Among tea shares, Kalasas dropped 12 nP to Rs. 3.85. Kil Kotagiris shed 10 nP to Rs. 8.20. Chembras were a shade lower at Rs. 4.27. Balanoors, Haileyburias and Twyfords were on offer at Rs. 21.00, Rs. 19.60 and Rs. 17.12, respectively. Nonsuch Teas, however, were well fancied and rose by 40 nP to Rs. 26.75. United Nilgiris gathered 15 nP to Rs. 20.25. In the coffee group, Cowcoodys lost 20 nP to touch Rs. 6.80. Anaparais eased by 5 nP to Rs. 4.70. Coffee Lands were neglected at Rs. 23.75. But Consolidated Coffees improved by 15 nP to Rs. 21.85. Ossoors gained 2 nP to Rs. 3.75 and Wartybullys 2 nP to Rs. 3.75. Among rubbers, Malankaras fell by 35 nP to Rs. 19. Highlands were subdued at Rs. 14 as also Rajagiris at Rs. 17.45, Thirumbadis at Re. 1.92 and Vaikundams at Rs. 26.50.

In the textile section, Buckinghams, Cannanores, and Coimbatore Cottons eased by a rupee each to Rs. 186, Rs. 150 and Rs. 142, respectively. Metturs shed Rs. 50 nP to Rs. 402. Virudhunagars lost 25 nP to Rs. 39.25. Dhanalakshmis, Premiers, Trichinopolys, Vasantas and Venkateshas were dull at Rs. 197.50, Rs. 164, Rs. 11.05, Rs. 210 and Rs. 117, respectively. Coimbatore Pioneers, however, met with good buying support and advanced by Rs. 5 to Rs. 290 *cum-div*. Bangalore Woollens improved by Rs. 2 to Rs. 177.

In the miscellaneous section, F.A.C.Ts were lower by 45 nP at Rs. 8.85. Andhra Cements, Mysore Papers and Orissa Cements shed 10 nP each to Rs. 10.20, Rs. 20.25 and Rs. 14.85, respectively. Ashok Leylands lost 5 nP to Rs. 7. Indian Cements and Indian Steel Rollings were a shade lower, the former at Rs. 6.05 and the latter at Rs. 15.34. Dalmia Cements were dull at Rs. 10.60, Mettur Chemicals at Rs. 12.50 and Mysore Chemicals at Rs. 10.55.

MARKET GOSSIP

(Concluded from previous page)

cotton crop would only be barely sufficient to meet it. Apart from the downward revision of indigenous cotton production, the restrictive import policy also helped prices to remain firm. Export demand for cotton, though none too encouraging, was still better than in the last season and shipments so far during this season have been at a higher rate. It is true that the recent import quota has improved the supply position. This is reflected, to some extent, in the recession in prices during the last few days. Further, a section of speculators has made much of the onset of monsoon a few days earlier than last year. It is surprising that the market memory is so short that it has forgotten how a 5.4 million bale crop estimated at the height of the monsoon finally turned out to be no more than 4.8 million bales. Some in the market, therefore, feel that this is only a temporary phenomenon. The tight supply position is expected to assert itself soon.

Oilseeds, as already noted, have also shown steady upward trend. Groundnut, in particular, has displayed sustained strength since the turn of the year. Although the crop is said to be slightly higher, demand from crushers and manufacturers has been rising. In spite of stringent restrictions imposed by the Forward Markets Commission to curb the rise in prices, the trend has been firm almost throughout the first five months. The setback during the past few days is attributed to unfavourable weather in Western India and withdrawal of *vanaspati* manufacturers from the market in anticipation of a seasonal fall in prices. It is also expected to be short-lived, as demand prospects are bright.

Castorseed, too, has been in fine form, thanks to export interest. It has gained by the reverses suffered by the crop in Brazil, one of India's principal competitors. The United States, which did not purchase a single ton of castor oil from this country last year, has reappeared as a buyer. The difficulty of getting supplies from Brazil seems to have prompted the U.S. to turn to India.

* * * *

An important meeting of the International Sugar Council is scheduled to be held at London on Tuesday next week. The one question that is uppermost in the minds of everybody is: What further action will the Council decide to take, in order to stabilise the world sugar market which continues to rule depressed? The cut of 17½ per cent. in the basic export tonnages of the Sugar Agreement's member-countries, imposed by the Council in February last, has so far failed to bring about any recovery in sugar prices. Even the removal of the risk of Cuba releasing its surplus stock of nearly a million tons of sugar, following its ratification of the Agreement on 29th May—the last date for the signatures of countries joining the Agreement was 1st June 1959—has not had any effect. On the contrary, there has been a further fall in prices. Cuban raw sugar is now quoted in the New York market at 2.87 cents per lb. (f.o.b. Cuba), as against 2.96 cents on 22nd May 1959 and 3.67 cents early this year. The latest available quotation for spot sugar in London is £26½ (Rs. 352) per ton, as against £27¼ (Rs. 363) and £32 (Rs. 427) on the aforesaid dates, respectively.

The currently ruling price of Cuban raw sugar at New York, namely, 2.87 cents per lb., is well below the Sugar Agreement's minimum of 3.15 cents. Even the prices of sugar for 1960 delivery have sagged lately. Indeed, it looks as though the sugar market would be in a fairly prolonged spell of low prices. To quote a report from London:

"The buyers are taking supplies on a hand-to-mouth basis. There is a continued lag to Cuban sales and, as it happens in a declining market, this tendency has brought down the prices further. It is stated that, under similar circumstances, Cuba would previously take some effective measures by reducing its quota, etc., so that the declining trend in the market might be checked. But nothing of this nature has been heard by this time."

In view of the persistent weakness of sugar, trade circles in London are inclined to feel that sugar supplies will again be curtailed at the forthcoming meeting of the Council. They, of course, admit that "there is a distinct limit to what can be done under the terms of the Sugar Agreement itself, but much broader action could presumably be taken, if the Council gave its unanimous consent." It is not possible to anticipate the Council's decision. For much will depend on the attitude of Cuba, which has, as already stated, ratified the Agreement. Cuba is now practically the sole supplier of sugar in the world market, since a good deal of sugar has already been sold by the other larger producing countries. Sugar production in Cuba up to 15th May was 5.3 million tons and it is expected to reach 5.6 million tons by the time all the mills have completed grinding.

Meanwhile, the Cuban President, Dr. Fidel Castro, has formulated a new agrarian reform one of the primary objectives of which is to prohibit large holdings of land. If this reform were to be implemented successfully, future production of sugar in Cuba might be considerably affected. The reform, it is said, falls heavily on the American companies which together own more than a million acres of land and produce a third of the total sugar in Cuba every year. The assets of the companies would be expropriated with very inadequate compensation if the law is put into effect as it stands. This has naturally caused much resentment in the U.S. which imports far more sugar from Cuba than from any other foreign country. For 1959, the U.S. has fixed the consumption quota at 9.20 million tons. Of this, Cuba alone will be accounting for 3.06 million tons. If the Cuban law reform is implemented, the U.S. domestic sugar producers are likely to urge the Administration to reduce the Cuban sugar quota drastically.

NEWS IN BRIEF

THE Centre has decided to allow drawback of customs duty paid on imported materials used in the manufacture of aluminium cables and conductors and plastic sequins.

A five-man committee has been appointed by the Union Government to inquire into the problems of the leather and footwear industry in the country and to suggest methods for its development.

A farmers' bank with a share capital of Rs. 20 crores is proposed to be set up by the Central Government for giving credit and other facilities to peasants, according to Dr. Punjabrao Deshmukh, Minister for Agriculture.

The Punjab Government has banned the manufacture of edible oils from groundnut, mustard and til seeds by power-driven crushing mills, except with the permission of the district licensing authorities.

In view of the acute power shortage in Assam, the State Government proposes to fix the outlay on power development in the third Five-year Plan higher at Rs. 15 crores, as against Rs. 4 crores in the second Plan.

The Hapur Chamber of Commerce has been recognised by the Government of India to conduct forward trading in *gur* for three years, subject to directions given by the Forward Markets Commission.

Restrictions on movement of wheat products from the Northern Zone to the Southern Zone as well as from Bombay and Madhya Pradesh States to Rajasthan have been withdrawn. Restrictions on exports of wheat and their products from Greater Bombay, however, will continue.

In a bid to regulate exports of raw goat skins on a quota basis, the Government of India has decided to permit established traders to ship up to 100 per cent. of their best year's exports during the three calendar years 1956, 1957 and 1958. The measure will be enforced with effect from the 15th inst.

The number of tourists visiting India has risen sixfold to 92,000 in 1958, as compared with 1951, the foreign exchange earned improving from Rs. 7.7 crores to Rs. 20 crores. Tourist traffic is expected to double in the next five years, as a result of the development of jet air service and organised promotional efforts.

The farmers of 20 selected villages in each of the 10 National Extension Service blocks in Mysore will be given as much loans as they require for augmenting agricultural production. These loans will be granted exclusively through co-operative societies on condition that the farmers should sell their produce only through co-operative marketing societies.

The Bihar Sales Tax Act, 1959, which will come into force from 1st July next, will replace the existing single-point sales tax by a composite system of taxation, as recommended by the Taxation Enquiry Commission. The present Act provides for a general sales tax of ¼ per cent. at each stage of sale and also a special sales tax of 3 per cent. on higher taxable turnover.

The Madhya Pradesh Government has drawn up a comprehensive programme to bring the entire rural population in the State under the co-operative movement by the end of the third Plan. The programme seeks to establish 21,000 new village co-operative societies, and convert the existing 22,000 societies, mostly catering to credit, into service co-operatives.

The desirability of encouraging the use of pneumatic tyres by bullock carts will be discussed at the forthcoming meeting of the Transport Development Council at New Delhi. Out of the 10 mill on bullock carts in the country, only those carts which ply on *pucca* roads are proposed to be encouraged to give up the traditional wooden wheels and take to rubber tyres.

Soviet experts have prepared the technical project report on the establishment of a big factory to manufacture machines and equipment for a steel mill with a capacity equal to that of the Bhilai Steel Plant. The report will be submitted to the Government of India shortly. Meanwhile, the Government is examining a project for a mining equipment works prepared by the Russian experts.

A thirty-member Iron and Steel Advisory Council is expected to be set up by the Union Government shortly to advise on matters relating to production programmes, distribution and transport as well as imports and exports of steel. The Council will be represented by steel producers, consumers and trade associations and will have as its chairman the Minister for Steel, Mines and Fuel.

The Government of India is considering a proposal to amend the Employees' Provident Fund Act in such a way as to relate the contribution to the provident fund to the cumulative total emoluments, including, besides basic salary and dearness allowance, all other payments such as night allowance, incentive and other bonuses, retainer allowance, and leave compensation allowance. At present, contribution is made on the total of basic pay and dearness allowance only.

The first all-India electric multiple coach unit manufactured by Messrs. Jessop & Co., Ltd., Calcutta, has been handed over to the Union Railway Ministry. This is the first of the 34 units, for which the Government has placed orders with the firm. Of these, sixteen will be used in the suburban services of Calcutta and the rest in Bombay. Each unit will have three coaches and will take in 290 passengers—26 first class seats, 212 third class seats and a separate compartment to accommodate 52 ladies.

The fruit and vegetable producers of Bardoli, Surat, have set up a Co-operative Shipping Society with a share capital of Rs. 5 lakhs, with the object of promoting exports from Bombay State to Middle East countries. The Government of Bombay will contribute Rs. 2 lakhs towards the share capital of the Society. The Central Government has agreed to advance a loan of Rs. 10 lakhs to the Society for the purchase of two vessels with cold storage facilities—one of 350 tons and the other of about 200 tons.

With a view to ensuring expeditious movement of increased freight traffic, especially to steel works, the South Eastern Railway has decided to introduce special goods trains carrying a total freight of 5,000 tons each, over 2½ times the load of the existing ones. Three diesel engines will pull the train which will have two brake-vans. The engines and brake-vans will be provided with wireless sets for communication between the driver and the guard to ensure co-ordinated control over the train in heavy graded sections.

The possibilities of setting up a tan extract factory at Bhatgar in Poona District have been explored by the Forest Department of the Bombay Government. It is estimated that the reserved forests of Government in this district will give annually about 4,500 tons of *hirda* (the chebulic myrabolan), which can be supplemented by supplies from private *malki* forests estimated at about 2,500 tons annually. These supplies of *hirda* are said to be adequate to feed a 7-8 tons capacity tan extract or powder plant.

A part of the Rs. 50-crore co-axial telecommunications development scheme has been completed with the laying of a direct underground cable between Agra and Delhi. Calls can now be directly made between the two cities without the help of the local exchanges. Similar direct cables are being installed in Bombay-Agra, Agra-Kanpur, and Lucknow-Calcutta routes. When these projects are completed, it will be possible for 960 circuits to be operated simultaneously and at least four times more trunk calls can be made within a given period.

Joint ventures for the establishment and operation of new industrial projects have been proposed by three firms in India to business men in the U.S., according to the U.S. Commerce Department's Foreign Commerce Bureau. Investment in the form of equity capital, machinery and technical know-how is sought for a variety of industries. The Conduit Industries of Panipat (Punjab) is seeking equity capital investment and machinery for expansion of plant facilities. The Bombay firm of Messrs. McKenzies Ltd. is seeking participation of U.S. firms to extend its activities in paper products, chemicals and pharmaceuticals. Machinery and technical assistance for the manufacture of portable typewriters, copying machines, postal franking machines and addressographs, in return for active management participation and a share in the enterprise, is sought by Messrs. Teekayess and Sons, manufacturers of typewriter replacement parts.

From Abroad

The International Civil Aviation Organisation (I.C.A.O.) will commence a four-week session at San Diego, California, on the 16th inst.

The number of unemployed in W. Germany in May 1959 was 320,800 (representing 1.6 per cent. of the registered labour force), the lowest level touched since the end of the Second World War.

The Government of New Zealand has decided to grant additional import licences to cover goods worth £20 million during the current licensing year. This brings the official estimate of private imports for the year to £230 million.

The West German Parliament Upper House has approved of Government proposals to raise the country's quota in the I.M.F. to $787.5 million and its share of the World Bank's capital to $1,050 million. The quotas of both at present are $330 million.

The employment situation in the six European Common Market countries has worsened in the past one year, particularly in Belgium and, to a lesser extent, in the Netherlands and France. This is revealed in a report prepared by the Secretariat of the European Economic Community (E.E.C.).

British Guiana is now seeking financial assistance from the U.K. for its development programmes. A three-man delegation, consisting of Sir Patrick Renison, Governor, Mr. Cheddi Jagan, Minister of Trade and Industries, and the Financial Secretary of the territory, is expected to visit the U.K. shortly.

The U.S.S.R. claims to have designed the world's largest blast furnace. The 2,700-cubic metre furnace will produce about 5,000 tons pig iron daily. The country is also constructing a hydraulic station, said to be the biggest in the world, at Bratsk, Siberia, with a capacity of 4.5 million kw.

PERSONAL

MR. H. K. P. Wood, Chairman of the International Wool Secretariat, has resigned. The resignation will be effective from the 30th inst.

Mr R. K. Birla, Chairman, Federation of Woollen Manufacturers of India, left Bombay last week on a two-month business tour of the U.K., Continent and the U.S.S.R.

Mr. D. P. Karmarkar, Union Minister for Health, returned to India on Tuesday last after attending the annual conference of the World Health Organisation held at Geneva recently.

Mr. Pravinchandra V. Ghandhi, Managing Director, Devkaran Nanjee Banking Co., Ltd., has been elected representative of the Indian Merchants' Chamber in the Senate of the Bombay University.

Mr. D. S. Savkar, Economic Adviser to the Reserve Bank of India, has been appointed Director of the Asian Department of the International Monetary Fund. Mr. Savkar left for Washington on Tuesday this week to take up his new assignment.

Italy has announced further liberalisation in imports from the dollar area, particularly those on finished industrial goods, machine spare parts, apparatus, semi-finished products and raw materials. This latest measure raises to over 80 per cent. the goods which may be freely imported from the dollar area.

Under the new award of the Australian Arbitration Commission, the basic average wage of a worker has been raised by 15s. to £A13 16s. a week. The benefit of the rise will be derived by about two-thirds of the country's three million employees, the total annual national wage bill increasing by about £A50 million.

A plea for equalisation of taxes and other fiscal burdens throughout the European Common Market as a means to ensure fair competition has been put forward by the Cloth Makers Association in West Germany. The Common Market Commission proposes to approach, the member-countries shortly to negotiate on this point.

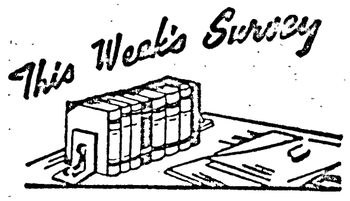
The view that the U.K. electrical industry must attract an adequate share of the nations' development capital, if the country is to survive as a leading industrial power, was expressed by Mr. A. N. Irens, Chairman of the South Western Electricity Board, in the course of his speech at the eleventh British Electrical Power Convention held at Torquay on the 3rd inst. Mr. Irens said that, at present, only about 8 per cent. of the nation's annual capital investment was devoted to the development of power supplies.

The first U.S. public demonstration of a new electronic "sky-writing" radar system that keeps tabs on fastest jet and conventional aircraft flights was made at Washington recently. The "sky-writer," a combination of the most advanced radar and television techniques, presents a continuous flight path of aircraft showing the plane's direction, speed and position simultaneously. When in use, the system is expected to help ground controllers speed the flow of fair traffic between American cities.

There may be a 100 per cent. increase in the amount of petroleum recovered from U.S. oil wells through the use of fluid injection methods, according to research scientists who participated in the Fifth World Petroleum Congress held at New York last week. Two-thirds of the oil found in the U.S. cannot be produced by primary drilling methods but can be recovered only through fluid injection processes. The scientists predict that, over the next 50 years, these methods may yield an additional 85,000 million barrels of oil, the same quantity that is expected to be obtained through ordinary recovery methods.

Seven small Dutch plantation companies, formerly operating in Indonesia, have jointly founded the *Cultur Mij Transatlantica N.V.* in Amsterdam with nominal capital of Fls. 2.25 million (£212,000). The new company proposes to concentrate its activities in South America. Some of these seven companies already possess a combined 36 per cent. interest in a banana and cocoa estate in Ecuador. Plans are being worked out at present for starting a tea-processing plant in Argentina. With the formation of the new company, the shareholders of the original seven companies have been asked to convert their shares into Transatlantic units on the basis of the intrinsic value of original shares, which are substantially higher than market values.

The Government of Ghana has accepted the recommendations regarding the modification of the existing company law, contained in a recent interim report submitted by Prof. L. C. B. Gower, Professor of Commercial Law, the University of London. The recommendations are: (1) The minimum number of persons required to form a company should be reduced from seven to two. This is designed to restrict the breakdown of the business assets in the country on the death of the owner. (2) The Registrar General should be empowered to make changes in the name of any company, if it is found misleading or undesirable. (3) The existing upper limit of £30 on registration fees should be abolished and replaced by a fee of ¼ per cent. of authorised capital. If a company advertises its capital without giving details of authorised, issued and paid-up capital, it must be considered as an offence. This suggestion is designed to discourage companies from announcing inflated figures of authorised capital.



ADJUDICATION OF DISPUTES

IF justice delayed is justice denied, a judicial system which inevitably involves long delays in disposal of cases stands condemned on that score alone. The large number of industrial disputes pending before law courts has been a subject of much comment of late. The number of cases going up in appeal to the Supreme Court increased to such an extent in recent years that the Law Commission felt constrained to draw attention to it in its report. It observed:

"The situation created by these large number of appeals causes concern in two respects. It has the natural effect of clogging the work of the Supreme Court. The graver aspect, however, of the matter is that labour matters are being thrust upon a court which has not the means or materials for adequately informing itself about the different aspects of the questions which arise in these appeals and therefore finds it difficult to do adequate justice. Equally grave are the delays caused by these appeals in the disposal of industrial matters which essentially need speedy disposal."

Many suggestions have been put forward from various quarters to improve the situation, some seeking to supplement the present system and others to supplant it altogether. For instance, it has been proposed that a separate Bench should be created in the Supreme Court for hearing appeals in industrial disputes. The State Government of Madhya Pradesh, on the other hand, has suggested that, at the forthcoming Indian Labour Conference, consideration should be given to the question of replacing the labour courts and industrial Tribunals by arbitration boards consisting of representatives of employers and workers selected out of panels maintained by the Government, the Chairmen of these boards being independent persons with a judicial background. In effect, this proposal means the substitution of adjudication by compulsory arbitration.

To these and a number of other suggestions and proposals have now been added the views of Prof. J. H. Richardson, an I.L.O. expert on industrial relations. Prof. Richardson, who has been working with the Union Ministry of Labour for about six months, in his report has laid down the basic principles that should govern reference of disputes for adjudication and the machinery for it.

In Prof. Richardson's opinion, the number of disputes referred to adjudication during the last ten years was seriously excessive, resulting in overloading the tribunals with more work than they could handle and causing heavy expenditure and often long delays. There are many factors responsible for this situation. These are: changing economic and industrial conditions, inadequacy of principles for settling disputes, inexperience of conciliation officers and a tendency, resulting largely from fear of strikes and lockouts, to refer disputes to adjudication whenever settlements are not reached by conciliation.

The Government has wide discretion in deciding whether or not to refer a dispute to adjudication. The desirability of limiting such reference is now being gradually realised. According to Prof. Richardson, in establishing guiding principles for this purpose, a distinction should be drawn between (1) disputes arising out of existing legislation, agreements, awards and other defined conditions and (2) disputes arising from demands for new conditions which may require consideration of economic factors affecting an undertaking, a whole industry or even the economy of the country. Disputes belonging to the first category usually affect only individual workers or small groups of workers and should, according to him, be rarely referred to protracted adjudication procedures. He suggests that Labour Commissioners should be empowered to give binding decisions in such cases or be authorised to appoint competent impartial persons to make decisions.

Disputes belonging to the second category can broadly be of two types, namely, those involving a large number of workers in vital industries and those affecting fewer workers in industries in which strikes or lockouts would not have severe dislocating effects on the economy. Adjudication, says Prof. Richardson, should be reserved mainly for disputes of the former kind, while, in the latter, the parties should be left to reach settlements by further negotiation, or further conciliation or arbitration. In any event, Prof. Richardson asserts, adjudication should be much more sparingly used than in the past and only when there is no further scope for conciliation.

Four kinds of disputes are listed by the learned Professor as deserving reference to adjudication. They are: (1) Those in which stoppages of work would seriously injure the economy of the country, including the progress of the Government's development plans, (2) those in which stoppages of work would inflict serious hardship on the community, particularly by interruption of essential public utility services or of food and other necessary supplies, (3) those which would be likely to involve serious danger to the maintenance of law and order, and (4) those which raise important issues of principle or where there seems to be a *prima facie* case of victimisation or other unfair labour practices or injustice.

The I.L.O. expert maintains that reference to adjudication should normally be withheld where there has been resort to illegal strike or lockout, unless the strike or lockout is terminated. He also mentions a few other kinds of disputes which he thinks are unsuitable for adjudication. Prof. Richardson emphasises that what is more important than the principles suggested by him for general guidance is the attitude of the Governments towards adjudication. A drastic reduction in the number of disputes referred for adjudication will depend not only on the establishment of principles for reference or non-reference but the way they are applied in practice. The Government and the officers concerned, he suggests, should endeavour persistently to reduce adjudication to a minimum.

It is as regards the machinery for adjudication of disputes that Prof. Richardson makes his most notable suggestion. He maintains that, except in strictly judicial issues, reference of industrial disputes to the High Courts and Supreme Court is unsatisfactory. These courts, he admits, are highly competent to deal with technical legal aspects of disputes, but in many industrial disputes, he points out, the issues are not primarily legal and cannot be effectively determined on judicial lines. They involve such economic considerations as capacity of the industry, standards of living, workloads, intricate relations between production and pay, and the balance of power between the parties in the dispute. Obviously, these matters cannot be settled by the ordinary principles, precedents and processes of courts of law. In the practical application of such principles and concepts as 'social justice,' 'fair wage,' etc., he rightly maintains, a legalistic approach has not only no special value but may even be distinctly harmful. He points out that, in order to deal adequately with such problems, there is need for tribunals consisting of people who combine a sound knowledge of law and procedures with a comprehensive understanding of economic problems and industrial and labour conditions.

There are considerable disadvantages, in the present machinery for industrial relations which is mainly *ad hoc* without permanence and continuity. To remedy these defects, Prof. Richardson has suggested that a permanent court of industrial arbitration and adjudication should be established for adjudication of industrial disputes of national importance. The court should consist of a president and four other members of the highest legal standing appointed from among persons who have a special interest in industrial and labour questions. The members should have, according to the distinguished adviser, continuity of service and security of tenure and have status and prestige similar to those of judges of the Supreme Court. The court could be assisted by assessors, and should also have the services of highly qualified economists and accountants. By its permanence the court would progressively accumulate the specialised experience necessary for dealing with industrial disputes. Appeals to the Supreme Court should be rare and only on legal issues strictly defined.

Such a court, Prof. Richardson points out, would resemble, in some respects, the Australian Commonwealth Court and the Industrial Court of the U.K. which for many years have been effective in the settlement of industrial disputes. He feels that the establishment of such a court is essential for purposes of co-ordination and would enable a body of principles to be established which would progressively facilitate the settlement of disputes throughout the country. Its scope could include the public and private sectors, except in cases where other arrangements are considered more appropriate.

The aforesaid suggestions will receive the consideration of the forthcoming session of the Indian Labour Conference. Its decisions thereon will surely be awaited with interest.

RESOURCES FOR THIRD PLAN

In his speech at the third Five-year Plan Seminar of Professors associated with Planning forum in colleges and universities of Bombay State, held at Poona on Sunday last, Dr. Jivraj N. Mehta, Finance Minister of Bombay, declared that "sizable" fresh taxation might become necessary even to balance the revenue account and to take up a larger programme in the Plan period. In support of this view, Dr. Mehta mentioned two important factors. First, with the drawing down of foreign exchange resources, the present level of prices and the rising costs of administration, there is little scope for deficit financing, unless food production is increased substantially and prices register a downward trend. Secondly, the current surpluses on revenue account will definitely diminish, as several schemes involving revenue expenditure in the second Plan, the various institutions established and services organised will form part of the normal budget in the third Plan period, or, to use the accepted terminology, will become "committed expenditure."

Few will dispute the force of Dr. Mehta's contention. But what every one will ask is this: What exactly are the possibilities of raising "sizable" fresh taxation? The load of taxation heaped on companies and individuals is already sufficiently heavy. Indeed, in several cases, the tax burden has adversely affected the finances of companies, resulting in the operation of the law of diminishing returns. Any further increase in these taxes will only make matters worse and adversely affect the scope for expanding employment in the private sector. Who will have the incentive to save and invest in industry, if there is no assurance of a reasonable rate of return? There is thus hardly any scope for additional direct taxation. On the contrary, the need of the hour is a relief in this taxation.

One alternative is to place greater reliance on indirect taxation. There are some sources, as, for example, the salt duty, which could be usefully tapped. Only the party in power should shed its political sentiment. An energetic effort should also be made to mobilise resources in the rural areas. The rural communities which derive direct benefits from the Plan ought to make contributions commensurate with the benefits derived. Dr. Jivraj Mehta did well to stress this aspect. He observed:

"The estimates of national income show that nearly half the output arises in the agricultural and allied sector. On the other hand, only 13 per cent. of the total tax revenue in the State (of Bombay) comes from land revenue receipts. Vast changes have taken place in land tenures and tenancy laws. Facilities for canal irrigation, soil conservation measures, improved seeds, manures and fertilisers, and measures for improving agriculture, veterinary services and allied activities in the rural sector have been extended. The gradual expansion of the Community Development Programme in the rural areas has helped monetisation of the rural area."

The Finance Minister then went on to add optimistically that the scope for mobilising

rural savings would definitely be greater and gave the following reasons for it:

The entire rural population would be brought under the Community Development Programme. There would be a significant growth of village and small industries. A marked rise in agricultural output is expected following the increased use of water resources that will be made available by the completion of the various irrigation works. Finally, the introduction of co-operatives and *panchayats* would strengthen the saving habits of rural people and help divert their savings into productive channels.

All these reasons are sound on paper but whether they will fructify and, if so, to what extent, are questions to which it is not easy to provide categorical answers. Much will depend on the level of prices, the cost of living and the new consumption habits that are being inculcated among the people. It is obvious that, if prices and cost of living go up further, the purchasing power of the rupee will go down and the margin available for saving will diminish.

The Finance Minister of Bombay referred to the preliminary estimate of the third Plan outlay of Rs. 10,000 crores—Rs. 7,000 crores in the public sector and Rs. 3,000 crores in the private sector. This outlay, it is said, assumes an incremental net output-investment ratio of 1:45 and has been calculated on certain other assumptions: (1) annual rise of 2 per cent. in population in the next ten years; (2) yearly increase of 6 per cent. in *per capita* income, the aggregate national income in 1965-66 being placed at Rs. 17,000 crores (at 1957-58 prices); (3) improvement at the rate of 5 per cent. per year in agricultural output; and (4) absorption in gainful employment of all the additional population seeking employment on entering the working age during the third Plan.

The sum of Rs. 7,000 crores tentatively allocated to the public sector would appear to be unduly large, considering the existing and future capacity of this sector to raise resources. It would certainly be prudent to keep the size of the Plan within manageable limits. To finalise a big Plan unrelated to resources and then to cut it will, as Dr. M. H. Gopal, Professor of Economics, Ford Foundation Unit, University of Madras, has pertinently remarked in the course of an interesting article contributed to *The Pioneer* of Lucknow, spell confusion and imbalance in investment. If, however, the planners still feel that the total outlay of Rs. 10,000 crores should not be revised, they must at least increase the scope for the private sector and raise its share of the total investment. Emphasising this aspect, Dr. Gopal says:

"If the approach to the public and private sectors controversy can be less doctrinaire and more realistic, the size of the total national investment, that is, the Plan, need not be reduced. Only the relative roles of the public and private sectors would be modified. Perhaps, at a later stage, the fourth or the fifth Plan, when the resources the State could raise would be adequate, the public-private sector controversy might be reassessed. But, for the next few years, it would definitely be unrealistic for the State to plan for a large public sector when it cannot raise the resources and deny a larger opportunity for a service to the private sector if and when it can do the job. Such a policy would retard expansion by reducing the aggregate investment and, at the same time, lead to resource difficulties in the public sector."

There is no exaggeration whatever in Dr. Gopal's statement that the private sector can do the job, given the opportunity and a more favourable economic and fiscal climate.

To revert to Dr. Mehta's speech. He considered it to be a fair estimate to assume that the Bombay State would have an "implementing capacity" for a Plan of much more than Rs. 500 crores in the third Plan period. This figure represents a rise of Rs. 150 crores as compared with the second Plan's outlay of Rs. 350.28 crores. Dr. Mehta's assumption is by no means extravagant. If anything, it is quite reasonable, considering that the rate of growth of Plan expenditure in the State has gone up from Rs. 47 crores in 1956-57 to Rs. 90 crores in 1959-60 (budget). The crucial question, however, is whether it will be able to raise the necessary resources. Like most of the State Governments, Bombay has shown a marked reluctance to collect more revenue from the rural areas.

The main recommendations of the Poona Seminar may now be briefly recorded. These are:

Borrowing is perferable to imposing additional taxation on rural areas. But, if borrowing does not yield adequate results, more resources will have to be raised through taxation.

A cess similar to the one on sugarcane may be levied on all other cash crops.

In order to popularise small savings in rural areas, facilities for encashment of national savings certificates should be improved.

Gold hoarded by the people should be made over to the Government on condition that it would be returned to them after 10 years.

The funds belonging to religious institutions should be utilised for financing specific development projects in rural areas.

Labour co-operatives could be tried in order to utilise the under-employed and unemployed labour.

U.N. TECHNICAL ASSISTANCE

The U.N. Technical Assistance Board's claim in its latest annual report that "what started as technical assistance has proved to be technical co-operation on a world-wide scale" is fully justified. Since its authorisation for the first time in 1950, the Technical Assistance Programme of the U.N. and related agencies has been increasingly adapted well to the needs of countries seeking help in the development of their economic and human resources. As many as 140 countries have received aid; 8,000 experts have served on assignments in the field of technical assistance; and 14,000 students and Government officials have been enabled to obtain advanced training abroad. The fields in which aid has been given include industry, handicrafts, agriculture, education, vocational training, health, housing, social development, civil aviation, telecommunications, development of water and other resources, weather services, governmental organisation, statistical services, and (beginning from 1959) atomic energy.

The success of the U.N. Technical Assistance Programme would surely not have been possible but for the voluntary financial support and other measures of assistance given by the Governments of member-countries. The total estimated contribution of 85 Governments as at the end of the current calendar year is put at $235 million. During 1958 alone, the contributions aggregated over $31.30 million. As for 1959, however, the contributions and the carry-over in funds are both expected to be less, so that the Board has felt it prudent to reduce field planning targets for 1960 by 5 per cent. The reduction is, indeed, unfortunate especially in the present context when most of the under-developed countries are experiencing a critical shortage of foreign exchange with which they could secure technical know-how for the implementation of their plans to raise the standard of living of the masses. The economically more prosperous countries of the West, which have gained tremendously from the fall in prices of primary produce, can doubtless afford to step up their contributions. The Board is

ECONOMIC RECOVERY EXCEEDS EXPECTATIONS

WEAKNESS OF DOLLAR REFLECTS THE STRENGTH OF WESTERN EUROPE

From Our Special Correspondent

NEW YORK, *2nd June*

MR. John Foster Dulles, the late Secretary of State of the United States, accomplished a good deal after his demise. The only Foreign Ministers' meeting in recent years which he did not attend, broke up for his funeral at Washington.

The event produced an unscheduled meeting of the "big" Foreign Ministers with President Eisenhower which may have produced more results than any formal conclave held heretofore. The presence of Soviet Foreign Minister Gromyko, a bitter opponent of Mr. Dulles on many occasions, was a great surprise.

There was no agenda at that impromptu meeting at the White House, but Mr. Dulles' spirit was present. President Eisenhower made it plain that, without a workable formula arrived at by the Foreign Ministers, there was no point in a "summit" meeting which appears to be the great goal of Nikita Khrushchev.

It was also surprising to public opinion here that the Foreign Ministers returned to Geneva in the same airplane, a U.S. Army transport plane, at the suggestion of President Eisenhower. The report was they have had a "useful meeting aloft."

Mr. Dulles was not an easy person to know. He was cold, as many attorneys are. He knew his law. He knew human nature. He did not compromise, unless it was necessary. Nobody disputed his courage and his integrity. He was opposed and, even, hated by many when he was alive for risking war and for his many opinions and prejudices. But the way he took his fatal illness and the many discomforts which went with it in the last few years silenced his enemies.

With all his good points and all his faults, Mr. John Foster Dulles was an amazing person. At the age, when other people take it easy and retire, he thought nothing of flying to the Orient at the drop of a hat and go to London two days later. In between, he spent week-ends in a primitive shack "just thinking." So much for Mr. Dulles who was a phenomenon in contemporary American life.

In High Spirits

Mr. Dulles' death has not changed the fact that Berlin remains a grave danger spot. But the average man in the street is really not too much concerned with that at the moment. The spring and summer season have lifted spirits. The recovery from the recession has been much better than expected.

Personal income is above the pre-recession highs. People, again, are going into debt, because they believe the future is secure. The population increase is greater than expected and building and construction are booming.

Manufacturers' sales broke their pre-recession record as well in April, with the largest monthly increase of the recovery period. Sales in April were $30,200 million, as compared with $29,100 million in March. The volume of new orders received also showed a big gain and hit a new peak level of about $31,000 million, up $800 million from March. Orders for both durable and non-durable goods, including automobiles, rose.

Construction contract awards in April 1959 were 31 per cent. higher than in April 1958. A particularly encouraging development was an increase in contracts for schools and factories, two categories of non-residential building which had been lagging previously.

Along with recovery, a certain amount of credit stringency has been developing. Interest rates resumed their upward trend in April and May. The prime loan rate of commercial banks moved up from 4 to 4½ per cent. Also, the Federal Reserve Board approved of an increase from 3 to 3½ per cent. in the discount rates of the various regional central banks.

Pressure on the money supply was particularly strong in the mortgage and retail credit markets. These developments, as usual, were followed and accompanied by some Congressional condemnations of the hard money school and the Federal Reserve System. There were also the usual observations from the academic world. Mr. Milton Friedman, Economist of the University of Chicago, for example, told the Congressional Joint Economic Committee that the ideal policy for the Federal Reserve would be to increase the money supply automatically and mechanically at a constant rate "month in and month out" and "year in and year out"—regardless of business conditions. He said that the history of the U.S. since the Civil War has demonstrated that changes in the money supply were the main cause of both slumps and inflationary booms. Naturally, he criticised the operations of the Federal Reserve System which has ultimate control over the money supply.

Another interesting comment on a timely topic came from Mr. Edward M. Bernstein, a former Research Director of the U.S. Treasury and of the International Monetary Fund. "The time has come," he said, "to correct a persistent deficit in the U.S. balance of payments before the dollar becomes a 'weak' currency."

The "apparent weakness" of the U.S. dollar, Mr. Bernstein said, "does not arise from an impairment of the international economic position of the United States, but from restoration of the naturally strong economic position of other areas, particularly Western Europe." He urged greatly reduced aid and expenditures for Western Europe, larger U.S. and foreign aid for underdeveloped countries, and a moderate growth of reserves for all great trading countries.

Foreign Trade

The U.S. foreign trade picture shapes up as follows:

Exports in April totalled $1,500 million slightly higher than in March, but still 4 per cent. less than in April 1958. The gain between March and April 1959 was due, to a large degree, to a $44-million increase in the shipment of military goods.

Commercial exports in April were still substantially below the comparative figure for April 1958. For the first four months, exports from the U.S. ran 5 per cent. below the level of a year ago.

Imports, on the other hand, are likely to rise. This refers particularly to consumer goods for sale in department and speciality stores. The projected boost over 1958, for the year as a whole, is given at, at least, 10 per cent. This is the consensus of leading retail buying organisations.

More buyers have been sent abroad this year than ever before and, judging by the reported destinations of them, an upsurge of buying activity in Far Eastern markets appears to be in the offing, including, to a certain extent India.

The response to such goods has been quite good. The heart of the consumer market in the U.S. comprises seven out of ten families, with incomes between $3,000 and $15,000 a year. These people are doing well and in good years are spending about 94 per cent. of their income, after taxes, consistently, and are saving about 6 per cent.—*All Rights Reserved.*

The U.S. Government has warned textile importers that mandatory import controls will be imposed if cotton apparel shipments from Hong Kong continue to go up at the present rate. It has asked the importers to diversify and moderate their purchases, in order to prevent over-concentration on certain imports such as shirts, pyjamas and some women's garments.

President Eisenhower has asked the U.S. Congress to enact legislation permitting an increase in the statutory public debt limit, as well as measures to make Government bond issues more attractive to investors by paying higher interest rates. He has recommended that the permanent public debt limit be raised by $13,000 million to $288,000 million so as to provide "a leeway which is essential to protect the Government in case of unforeseen emergencies and to provide necessary flexibility in debt management operations."

LONDON LETTER

OF INTEREST TO PUBLISHERS

(From Our Own Correspondent)

LONDON, *5th June*

LONG ago, the National Press of this country insured itself against printing disputes by being its own printers as well as publishers and having special service agreements with the unions concerned. It thus made certain that the Press would not be at the mercy of another industry which it could not control. Not so the weekly Press, who are publishers only and rely upon printers to get their written word to the public. The country is being forcibly reminded of that since the beginning of this week when the printing workers began a policy of non-co-operation with their employers. The results are being seen in a slowing down of the output of the printing presses, journals are delayed in reaching the public and in another fortnight there is a threat of a complete stoppage in the industry. If the threat is fulfilled, only the National Press will keep going and it is rumoured that even that Press may be in difficulties for its special supplies of ink!

For some time, the printing unions have been claiming a 40-hour week, together with substantial wage increases. The Master Printers would not accept the proposals, nor did they make any counter-offer until a week ago, when they went part-way towards the unions' claim; but even their offer was made subject to agreement within the industry to increase output per head by increasing efficiency. But the unions' retort was that they would not sit down with the Master Printers to consider increasing efficiency until their wage and hour claims had been met.

Therefore, once again, as a result of inefficiency in handling an incipient conflict, an industry is on the verge of stoppage. The first move was taken by the unions, who refused to work overtime and, in short, began their policy of non-co-operation. The Master Printers have decided that this is tantamount to a policy of go-slow and justifies them in imposing a lock-out. At the moment of reporting, it is not, therefore, a strike which is incipient, but a lock-out—to be followed by a struggle of attrition, which, while it endures, will deprive the public of its periodical reading.

A Bloomer!

Not of direct economic significance but of great political significance is this week's other item of publishing news—the disclosure by *The Times*' relatively new Political Correspondent of the thoughts in some quarters of the Government that the Foreign Secretary might be dispensed with. It has been generally put about that the story was a bloomer on the part of *The Times*' Editor, but the manner in which *The Times* came to print the story, the top position being given to it in the Monday edition, confirms the view that *The Times* knew what it was about when it published. It is a bloomer only in the sense that the publication in fact had a boomerang effect and may have confirmed the Foreign Secretary's position rather than weakened it. But the interesting question remains—who launched the attack? Sir Winston Churchill's son has come out with unqualified condemnation of the Home Secretary, who, ever since this Government was formed, has been regarded as representing an opposing party within the Party. In any event, *The Times* has made no reference at all to the Government's denial of any move for the Foreign Secretary, and the Government for its part has made no direct reference at all to *The Times*. Each side has decided not to join battle and there the matter rests for the time being.—*All Rights Reserved.*

A new Anglo-American company, Nuclear Equipment, has been formed with head office at Watford in the U.K., to specialise in the design, manufacture and marketing of remote-controlled nuclear handling apparatus. The formation of the company is the result of an agreement reached between Savage and Parsons (Watford) and General Mills Inc. (Minnesota, U.S.). It will maintain close contact with nuclear establishments throughout the world, barring the U.S. The Company will be concerned with mechanical and powered manipulators, reactor fuel loading and unloading system, reactor maintenance systems, and other types of handling apparatus and ancillary protective equipment. Its major markets are expected to be the countries of the British Commonwealth and Western Europe.

PUBLIC AND PRIVATE SECTORS

CHALLENGE TO BUSINESS MEN

By Henry Ford II

PRESIDENT, FORD MOTOR COMPANY

I BELIEVE in the private-enterprise system. I believe it can go on giving us the great benefits of economic and social progress it has given us in the past. I believe in it not because I think it is divinely ordained, but because it works better than any other system yet devised.

It works because it effectively harnesses aggressive human drives to broadly constructive purposes. It works because it provides incentives that seem to stimulate masses of people to vigorous effort and a constant restless search for greater efficiency.

But I recognise also that the private-enterprise system is not really a system at all. What we have is a loose and tremendously varied array of public and private enterprises, held together by the cohesive force of certain underlying principles—free incentive and a degree of freedom of choice and action established by law and custom. We have three to four million centres of initiative in this country *versus* one in Russia.

Again, I recognise, as all of us must, that, as our society has grown more complex, Government has had to play an ever greater role, direct and indirect, in our economy. Realistically, over the years ahead that trend is not likely to be reversed.

Our problem as business men is not to dig in our heels and resist any and all kinds of governmental activity. Our problem is to try to see to it that Government does the right kind of things, that it avoids those measures that are economically harmful—the subsidies that perpetuate marginal industries and marginal agriculture, or that try to sustain marginal industrial areas, for example—and that it provides more of the services and facilities that promote genuinely worthwhile economic purposes without shackling economic freedom.

In that context, I would like to suggest several general areas of action that I believe hold great potential for a new productive explosion in the American economy.

First, I would suggest an attack by all elements of our society on the existing barriers to increasing productivity in industry, agriculture and services. Let's try harder to get rid of the psychology that locks people into marginal jobs and obsolescent skills.

Second, I would suggest that we make possible greatly increased business-capital investment by permitting business profits to share reasonably in our economic growth, and by wiser taxation, particularly in terms of more realistic and faster depreciation allowances for writing off plant and equipment and encouraging the building of new.

Third, we must try to stimulate greater consumption of goods and services. The way to do this effectively is to intensify sharply our development of new or greatly improved products. Industry must utilise much better the latent creativity of the people it employs, and venture more in introducing new products.

Fourth, we should use the resources of industry and Government more effectively to maintain high and stable levels of employment and income.

I think we would all agree that the one, single factor in the private-enterprise economy that leads to great political pressures toward the welfare State is its cyclical nature and its need for mobility within the work force.

While we can minimise cycles in the free-enterprise economy, there is no way of eliminating them entirely. Buying habits change. Excessive inventories of certain goods accumulate from time to time. Plants shut down and people are laid off from work. At times, whole industries become obsolete, and their employees are forced to find new jobs and learn new skills.

Again, technological advances in industry and agriculture displace people from farms, from factories, from special labour skills.

All of these things create worry, unhappiness and economic problems for the people involved. Ultimately, they turn to the State to solve their problems.

Now, the fact is that a remarkable and wonderful thing has been happening in our country. In the post-war period, there has been a great increase in non-farm and non-industrial employment—in the government, in education and other social services, in recreation and tourism, in business services.

A whole new and greatly varied world of opportunity has opened for millions of Americans. Because of this change in type of employment, most people went right on working through the post-war recessions.

We ought to be concentrating hard on accelerating this trend by increasing greatly the educational opportunities open to our whole populace. We should be upgrading people and skills at the fastest rate possible. We need better-educated people in vast numbers throughout our society.

I am sure many things can be done to help people meet technological and economic change more readily. Today there are many public and private measures that protect people against the excessive economic hardship that was common in an earlier day. But there is a certain inflexibility in many of these measures. They tend sometimes to tie people to skills that are no longer in demand and often to hold them in communities where the jobs they held no longer exist. Business in general has not given the earnest attention it might to the solution of this problem and its own stake in that solution.

I would like to see business and industry give serious and systematic thought to finding ways in which both private and public resources can be used more intelligently to stabilise employment and income in ways consistent with broad, national growth in productive efficiency.

I know that, in American management, there are many men with the broad vision and the sense of social justice needed to break through the barriers that block the fullest development and growth of our society. I think that the talent, the imagination and the sound, practical judgment of business men must be marshalled more effectively to attack these problems.

The American business system has created a great reserve of national wealth, out of which we have already established an unheard-of degree of security and prosperity for the American home. We have shored it up with broad public and private social measures—measures which, in themselves, have strengthened our economy and have contributed to our prosperity.

It follows that we business men should not allow "label thinking" to scare us away from examining fairly and without fear all future means which, consistent with economic and political freedom, will enhance our future prosperity and security as a nation, and to encourage people to accept willingly the marginal uncertainties characteristic of any system where initiative is not centered in the Government.

[*Excerpts from Mr. Ford's address to the students attending the Yale University lecture series.*]

OBSOLESCENCE COSTS MONEY

Not so long ago a poll was made by *Dun's Review and Modern Industry* (U.S.) on the relationship of obsolescence to productivity. It asked and answered two questions:

"When is a machine obsolete?" Answer: When it won't earn its keep, certainly, and perhaps also when a new machine would provide more profit in the long run.

"When is management obsolete?" Answer: When it stands still, or even walks backward in self-justification and refuses to face up to present and future requirements.

The survey covered 367 manufacturing companies in 44 key industrial areas in the U.S. One-fourth of the concerns reported operating at less than 65 per cent. of capacity. For this group, it was indicated that modernisation would reduce costs by 6.5 per cent.

The poll produced new evidence of the importance of constant modernisation in this age of rapid engineering advances, in order to survive. It also showed that, if obsolescence remains unchecked by replacement with modern tools of production, the result is almost inevitably a decline in earnings which, eventually, may lead to the failure of the enterprise.

A broad poll of industry, undertaken by the Economics Department of McGraw Hill, showed that out of a $300 billion capital investment in plant and machinery by all manufacturing concerns in the U.S., about one-third, or $100 billion was considered obsolete by its owners.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-third Annual General Meeting of the Company will be held at the Registered Office at Beach Road, Alleppey, on Monday the 29th of June, 1959, at 11.30 a.m., to transact the ordinary business as set out in the notice attached to the Balance Sheet which is being forwarded to the members.

The Share Transfer Books of the Company will remain closed from 23rd to 29th June 1959 (both days inclusive), during which period no transfer of shares will be registered.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member.

By Order of the Board,
A. V. THOMAS & CO., LTD.,
Managing Agents.

ALLEPPEY, *1st June* 1959.

Note:—The Directors have (1) declared the second half-yearly dividend at 6 per cent. per annum on Preference Shares for 1958 and (2) recommended a dividend of 15 per cent. on Equity Shares for 1958, and the same, if approved by the General Body, will be paid to the respective members registered in the books of the Company on 29th June 1959.

CO-OPERATIVE MOVEMENT IN INDIA

GENERAL PROGRESS MAINTAINED—PROFIT MARGIN NOT ENCOURAGING

THE Co-operative Movement in India is 55 years old, having been started in 1904 mainly for providing credit "to all those who had the skill and will to work but had no means to acquire the wherewithals." Notwithstanding two world wars and one world-wide depression, the co-operatives have not only found a place in the society but have become the idol of the Congress Party. The progress has been significant since independence and this has been well maintained during the year ended 30th June 1958. The number of societies, which had gone up from an average of 159,185 for the five years ended June 1950 to 244,769 in 1956-57, has grown further to 257,824 in the year under review. The membership of primary societies has increased during the year from 19.37 million to 21.46 million, while the average for the five years ended 1949-50 had stood at 10.73 million. The working capital of the co-operative stands at Rs. 696.45 crores as at the end of 1957-58, having risen from Rs. 567.67 crores a year before and the average of Rs. 188.73 crores for the five years to 1949-50.

A very comprehensive picture of the progress of the co-operatives during the year ended 30th June 1958 is provided by the *Statistical Statements Relating to Co-operative Movement in India*, published by the Agricultural Credit Department of the Reserve Bank of India. The data given in the publication show that, at the end of the year under review, the number of co-operative societies per 100,000 inhabitants was 64.69, as against 62.4 a year before, and the number of members of primary societies per 1,000 inhabitants has risen from 49.4 to 53.93. On the basis of a population of 397.37 million (as against 392.27 million at the end of 1956-57) and assuming that an average family comprises five members, it is estimated that about 107.5 million or nearly 27 per cent. of the population was being served by co-operatives, as compared with 25 per cent. at the beginning of the year.

Another test by which the progress of the co-operative movement should be judged is the number of societies which go into liquidation each year. From this point of view also, the picture is a little encouraging, in that the number of societies brought to liquidation during the year shows a decline from 2,258 to 2,081. The accounts of 1,627 societies were finally wound-up, as against 1,670 in 1956-57. The value of assets realised and liabilities paid off during the year amounted to Rs. 38.91 lakhs and Rs. 39.25 lakhs, as against Rs. 64.46 lakhs and Rs. 49.37 lakhs, respectively, in the previous year.

Profit Position Not Happy

While there was a general improvement in the progress of co-operative societies during 1957-58, the position in regard to the number of societies of various types earning profits and the volume of profits made by them is not happy. As many as 151,309 societies earned a total profit of Rs. 13.30 crores in 1957-58, as against Rs. 12.98 crores earned by 139,994 societies. The number of societies which have suffered a loss has gone up from 40,800 to 56,407, though the extent of loss has declined slightly from Rs. 4.40 crores to Rs. 4.22 crores. The increase in profit has not been uniform as between different types of societies.

Credit societies form the bulk of the co-operative societies and fall into two broad classifications, namely, short-term and long-term. The structure of co-operative credit or banking is composed of (1) primary credit societies—agricultural and non-agricultural, (2) Central co-operative banks and (3) State co-operative banks. These three classes of societies provide short-term and medium-term credits to the whole movement, while the long-term needs are met by Central land mortgage banks and primary land mortgage banks.

To analyse briefly the progress of each of these classes of credit societies. Agricultural credit societies, being the base of the co-operative credit structure, constitute the most important sector of the co-operative movement. At the end of the year under review, there were 166,543 agricultural societies (constituting 64.9 per cent. of the total number of societies) with a membership of 10.22 million, as compared with 161,510 societies with a membership of 9.12 million a year before. A State-wise distribution shows that U.P. had the largest number of agricultural credit societies with 44,060, Bombay and Madhya Pradesh being next in order with 18,354 and 16,750 societies, respectively. The working capital of all agricultural societies shows a rise of Rs. 35.45 crores to Rs. 133.75 crores, of which borrowings from State or Central co-operative banks alone accounted for Rs. 78.42 crores, or for very nearly 60 per cent. Deposits constituted no more than Rs. 8.63 crores or a mere 6 per cent. Loans advanced by these societies have gone up substantially from Rs. 67.33 crores to Rs. 96.08 crores, raising the total outstandings at the end of the year from Rs. 76.82 crores to Rs. 107.10 crores. There has been a slight fall in overdues from 22 per cent. to 21.3 per cent. The rate of interest charged on loans by small agricultural credit societies varied from 4¼ to 12½ per cent. and that by large-sized societies from 3¼ to 12½ per cent.

Non-agricultural Societies

The non-agricultural credit societies, comprising urban banks, employees' credit societies and other special types of credit societies, also showed some progress, with their number rising from 10,150 to 10430 during the year and their membership increasing from 3.24 million to 3.67 million. Their working capital amounted to Rs. 102.53 crores at the end of 1957-58, as against Rs. 100.41 crores a year before. The paid-up capital and reserves (or owned funds) of these societies aggregated Rs. 34.58 crores, representing an increase of Rs. 4.26 crores over the year. Their deposits have, however, declined from Rs. 64.59 crores to Rs. 60.73 crores, Bombay and West Bengal accounting for 58 per cent. of the total deposits. This has been made good to some extent by an increase in borrowings from Rs. 5.50 crores to Rs. 7.21 crores. Loans advanced by them during the year amounted to Rs. 87.34 crores, as against Rs. 82.07 crores in the previous year. Loans outstanding at the end of the year stood at Rs. 79.33 crores, with overdues forming 8.3 per cent. of this amount, the corresponding figures for 1956-57 being Rs. 74.99 crores and 8.2 per cent.

There was a decline in the number of State co-operative banks from 23 to 21. This is in pursuance of the policy of amalgamation of apex banks in some States, so as to reduce their number to one in every State. Their membership also dropped from 33,440 to 32,181. The declining trend in the number of Central co-operative banks and banking unions noted in previous years continued during the year under review also, with a further fall from 451 to 418, on account of the merger of smaller banks with adjacent larger banks. Their membership also dwindled from 311,000 to 293,000.

The following comparative table shows the resources of working capital of State co-operative banks and Central co-operative banks and the disposition of funds during the last two years:

(In crores of rupees)

	State Co-operative Banks		Central Co-operative Banks	
	As on 30-6-1958	As on 30-6-1957	As on 30-6-1958	As on 30-6-1957
Working capital	109.14	79.54	147 00	110.26
Owned funds	11.93	8.78	24.99	18.45
Deposits	45.45	35.39	66.88	68.43
Borrowings from:				
Government	5.80	6.10	3.65	2.85
Reserve Bank	44 08	25.76	45.23	27.54
Other sources	1.82	0.42	6 39	2.94
Advances made during the year	219.09	123.71	159.87	100.80
Loans outstanding	74.73	49 62	100.09	71.90
Overdues	5.50	4.10	11.88	9.34
Ratio of overdues to outstanding	7.4%	8 3%	12%	13%
Investments	25.30	19.06	28.53	29 05
Cash balances	9.26	8.60	17.42	13.12

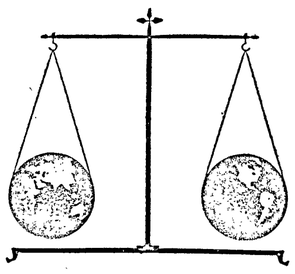
It will be noted that, in the case of State co-operative banks, the owned funds have gone up by 35.9 per cent. and deposits by 18.4 per cent. Of the total advances made during the year, short-term credit amounted to Rs. 217.54 crores. Of the total investments, at the end of the year, as much as Rs. 18.53 crores or over 73 per cent. consisted of Government and other trustee securities. The highest and lowest rates of interest paid by the State co-operative banks on fixed deposits during the year were 4½ per cent. and 1½ per cent., respectively. The rate of interest charged by them on their advances to co-operative societies varied from 1 to 6½ per cent. and that to individuals from 2½ to 9 per cent.

Overdues

The overdues of advances granted by Central co-operative banks were high, the position being worse in Jammu and Kashmir, where the ratio of overdues to outstandings was as high as 75 per cent. The position in Bihar and West Bengal was also not happy, where it was over 45 per cent. at the end of 1957-58. The usual rate of interest charged by the banks to societies on their advances varied from 2½ to 9¼ per cent., the highest being charged in West Bengal on medium-term loans for agricultural and other purposes.

There were 15 Central land mortgage banks at the end of the year under review, with a paid-up capital of Rs. 2.26 crores and reserves of Rs. 72 lakhs. Their working capital, amounting to Rs. 25.88 crores, was mainly provided by debentures floated by them on the guarantee of the respective State Governments, the outstanding amount of such debentures at the end of the year being Rs. 20.48 crores, as against Rs. 16.95 crores a year before. The banks advanced during the year Rs. 4.62 crores, as compared with Rs. 3.80 crores in 1956-57 and the outstandings rose from Rs. 14.94 crores to Rs. 19.82 crores.

A perusal of the statistics relating to assistance given by State Governments to different types of co-operative institutions by way of contribution to their share capital shows that such assistance rose from Rs. 7.74 crores to as much as Rs. 16.49 crores as on 30th June 1958. Of this amount, Rs. 6.05 crores or 36.2 per cent. (as against Rs. 3.28 crores or 4.2 per cent.) were given to primary agricultural societies, Rs. 3.21 crores (Rs. 1.26 crores) to Central co-operative banks and Rs. 4 crores (Rs. 2.20 crores) to State co-operative banks.



In both hemispheres. . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

U.N. SPECIAL FUND

The first operational programme of the U.N. Special Fund covering 13 projects in 10 countries and involving a total expenditure of $7.5 million was unanimously approved by the Governing Council of the Fund at its second session held in Washington last week. The projects are intended to aid the "integrated technical, economic and social development of the less developed countries."

The Fund, it may be recalled, was established last October with Mr. Paul Hoffman as Managing Director. It is designed to accelerate the economic development of the less developed countries and new capital investments of all types by creating conditions which will make such investments either feasible or more effective. The types of projects it will finance include surveys of natural resources, research and training programmes for the development of technological skills and demonstration, including pilot projects.

The Fund received 75 requests for aid from Governments involving finances aggregating $81 million up to 10th April 1959. Out of this, only 13 were selected for inclusion in the first operational programme. Of the 75 requests received, the largest proportion were for water power and irrigation surveys, agricultural, fishing, forestry and soil surveys and technical training. Others included university, higher technological projects, geological and mining surveys and support for research institute. The development projects included in the first operational programme and their cost, given in brackets, are:

Power survey in Argentina ($250,000), Central American Research Institute for Industry ($900,000), survey of Volta River flood plain in Ghana ($303,000), pilot project in groundwater development in Greece ($245,000), general development survey in Guinea ($400,000), industrial instructors' training institute for India ($860,000), pilot project for watershed management in Israel ($200,000), management training programme in Poland ($700,000), investigation of silting in the Bangkok port channel ($600,000), Middle East technical university ($500,000), Pilot tile drainage project in U.A.R. ($300,000), soil survey from aerial photographs in U.A.R. ($265,000) and vocational training in Yugoslavia ($905,000).

For each approved project an "executing agency" is named subject to the conclusion of an agreement with the Managing Director of the Fund. The U.N. will be the executing agency for the Central American research institute and the general development survey in Guinea. The agencies for other projects are: World Bank for the Argentine power study and the Bangkok channel, the International Labour Organisation for the training centre in Poland, instructors' training centre in India and the vocational instructors' training in Yugoslavia, F.A.O. for the soil survey and the pilot project for drainage of land in U.A.R., flood plain survey in Ghana, pilot project in water development in Greece, and the pilot project in watershed management in Israel, and the U.N.E.S.C.O. for the Middle East technical university in Turkey.

It is noteworthy that doubts were expressed when the Fund was established whether it would be easy to find enough useful economic projects in the first year of operation to absorb the $27 million made available to the Fund during the year. This fear has proved to be entirely unfounded. In fact, the problem has turned out to be one of finding necessary funds for all the sound projects for which the Fund is approached for help.

COMMONWEALTH DEVELOPMENT FINANCE COMPANY

The Government of India is reported to have decided to invest a substantial sum in the Commonwealth Development Finance Company, which proposes to double its authorised capital from £15 million to £30 million, by creating 15 million new shares of £1 each. The extent of its subscription is, however, not known, but any large investment by India will prove beneficial to this country, in that it might bring back a substantially larger assistance from that company. It will be recalled, in this connection, that the C.D.F.C. has so far made two loans to India, one for Rs. 30 lakhs to Indian Oxygen Ltd. for its expansion programme and the other for Rs. 19 lakhs to the Industrial Credit and Investment Corporation.

Formed in 1953, with official backing, to provide funds for development of Commonwealth countries, particularly for financing projects of private enterprise, the C.D.F.C. has the support of a number of large industrial and commercial concerns, as well as the Bank of England. At the Commonwealth Conference held at Montreal last year, it was unanimously decided to strengthen the resources of the Company, as it was felt that the C.D.F.C. had a more positive role to play in the development of the underdeveloped areas of the Commonwealth of Nations. Accordingly, in March last, the Company issued invitations to large industrial and commercial companies to become shareholders of the concern. The response to this appeal is said to have been encouraging. As many as 76 large companies have agreed to subscribe for 5.03 million 'A' ordinary shares of £1 each. In addition, 16 of the existing shareholders of 'A' shares have applied for 980,000 shares, making 6.01 million new 'A' shares. The Bank of England, which at present holds 6.75 million 'B' ordinary shares of £1 each, has informed the Company that it would, along with certain subscribers in the Commonwealth countries, apply for 4.99 million new 'B' shares. This will bring the total issued capital of the Company to £26 million.

It is, however, not proposed to call the entire value of the new shares. A sum of 2s. will be called on each new 'A' share and 10s. per 'B' share, which will yield £3.10 million. This will be utilised to reduce the Company's present indebtedness to banks. The uncalled portion of the new issued capital will provide substantial additional cover for borrowings. In addition to the issue of fresh capital, the Company proposes to raise loan capital on a long-term basis. The institution will thus have ample resources at its disposal for increasing the volume of its investments in Commonwealth countries.

DEVELOPMENT SAVINGS BANK

Apropos our comment on the Development Savings Bank (*vide Commerce* dated 2nd May 1959, page 723), Mr. C. Loganathan, author of the plan, in a communication addressed to us, observes, *inter alia*, as follows:

"I wish to refer you to the last paragraph of your comment. The Government will have the following powers. Section 8(iv) provides for the appointment of a Director by the Prime Minister with the power to vote in addition to the Secretary to the Treasury and the Secretary to the Planning Council who will have no power to vote. Section 9 provides that only the nominated Director and such other Directors as shall have been approved previously in writing by the Prime Minister shall be eligible for election as Chairman or Deputy Chairman. Section 48 provides that the appointment of the chief executive of the Development Savings Bank shall not be made without the prior approval of the Prime Minister. Section 55(1) provides that the Prime Minister may, from time to time, appoint the Auditor-General or other auditor as he thinks fit to examine and report to him on the accounts and affairs of the bank and at the cost and expense of the bank. Section 97(i) provides that the investment of moneys in the 'Tax Rebate Fund' shall not be made without the approval of the Minister of Finance. A similar provision is applicable to the 'Public (Taxpayers') Voluntary Savings Fund.' Section 105 under 'Foreign Gifts Capital Fund' provides that the investment of moneys in this fund cannot be dealt with without the approval of the Minister of Finance. There are other provisions which give certain powers to the Prime Minister.

"I am sure that no Government with any intelligence and which is committed to the preservation of a democratic political structure can argue that democracy can function in a country where the State owns fully or substantially the means of production. In other words, any Government which is committed to the preservation of democracy is, *ipso facto*, committed to the preservation of a private sector representative of cross-sections of the people. Such a Government cannot legitimately expect to control the institution which is the subject of my proposal."

We regret the omission in the article of a reference to the provision in the draft Bill for the appointment of a Director by the Prime Minister, with the power to vote, in addition to the Secretary to the Treasury and the Secretary to the Planning Council, who will have no power to vote and the further provision that only the nominated Director and such other Directors as shall have been approved previously in writing by the Prime Minister shall be eligible for election as Chairman or Deputy Chairman. But our conclusion that the scheme is unworkable in practice was arrived at after taking into account these provisions and also others mentioned in the first para quoted above. If the Government were to exercise these powers—and there is little reason and no precedent to suppose that they will only remain in the Statute Book—the Development Savings Bank will in practice turn out to be nothing more than a completely State-owned enterprise. Mr. Loganathan's assertion that the State "cannot legitimately expect to control the institution" is pure wishful thinking. And, if it does, the whole thesis of his plan falls to the ground.—ED.

COTTON TEXTILE EXPORTS TO BRITAIN

TALKS ON "CEILING" PROVE INCONCLUSIVE AGAIN

ONCE again, the talks between the representatives of the Indian and British cotton textile industries about fixing a ceiling on Indian textile exports to the U.K. have proved inconclusive. It would appear that these representatives met in London last week. India was represented at the talks by Mr. Kasturbhai Lalbhai, Chairman of the Indian Cotton Mills Federation, and Mr. Neville N. Wadia, Chairman of the Cotton Textile Export Promotion Council. Lord Rochdale, Chairman of the Cotton Board, and Sir Cuthbert Clegg, the Vice-President of the Cotton Spinners' and Manufacturers' Association, represented the British textile industry. The inconclusive nature of the talks is attributed to divergence of opinion between the two sides. The Indian interests wanted an upward revision in the original export ceiling of 140 million yards in proportion to that given to Hong Kong. But the British interests were not prepared to concede this demand.

Under the "understanding" provisionally reached in June 1958, it will be recalled, the ceiling for India and Pakistan had been fixed at 140 million yards and 35 million yards. This informal understanding was for a period of three years and subject to the condition that a similar arrangement would be made with Hong Kong. At that time, Hong Kong was very vehemently opposed to the whole move. Later, it yielded to pressure from Lancashire. It would appear that, initially, the ceiling negotiated with Hong Kong was for a period of three years, with a progressively rising quota per year. According to British sources, the quota was 150-160 million yards, 165-175 million yards and 175-185 million yards in the first, second and third years of the agreement, respectively. After patient negotiations and with the assistance of the Governments of Britain and Hong Kong, a final agreement was reached with the millowners in this tiny Colony and signed on 30th December 1958. According to the agreement, the ceiling was fixed at 164 million yards, comprising 115 million yards of piecegoods, 3 million yards of yarn dyed-cloth and 46 million yards of made-up goods. This figure was far in excess of India's expectations and it was clear even then that Lancashire's understanding with India would not hold good and that there would have to be fresh negotiations. Hence the talks in London last week. An important point that requires to be noted here is that the ceilings for Hong Kong and Pakistan were well above the actual exports from these countries to Britain during 1957—amounting to 102 million yards from Hong Kong and 6 million yards from Pakistan—while the ceiling for India at 140 million yards was higher by just one million yards.

India's Point of View

It is not known what arguments were put forward by Mr. Kasturbhai Lalbhai and Mr. Neville Wadia. But it is generally presumed that they must have been on the following lines:

The ceiling figure for Hong Kong is much higher than that mentioned during the 'understanding' reached in June 1958. It is also far in excess of the Island's actual exports in the two years preceding 1958. In allocating quotas to India and Hong Kong, no account has been taken of their respective productive capacity. Since the quota for this tiny island with a relatively small capacity is so generously fixed at 164 million yards, there should be a corresponding upward revision in the ceiling on exports of cotton goods from India.

Although the Lancashire textile interests have not accepted India's point of view, they are nevertheless reported to be quite anxious to reach a settlement with it as early as possible. Official circles in Britain also, it is said, are equally desirous of a settlement. Moving the Cotton Industry Bill in the House of Commons for second reading on the 4th inst., Sir David Eccles, President of the Board of Trade, pointed out that the conclusion of an agreed limitation on imports from Hong Kong and the prospect of similar limitation on imports from India and Pakistan created a favourable situation for reorganisation of the industry on a definite basis. In this connection, Sir David said:

"....It is inevitable that the rest of the world should turn to textiles and, as a result of the growing competition from overseas, Lancashire has lost a very large part of its huge export markets. Then, on top of this, recently, textiles produced in other countries of the Commonwealth have entered the British market on a large scale. These imports are admitted free of duty as a part of the Commonwealth policy which has served us so well. But we very fully understand that this policy has brought great trouble on the cotton industry in this country, and we think it right that the Government should see whether it can offer effective help to prevent too violent a dislocation as a result of this overriding Commonwealth policy on duty-free imports.

"The blows have fallen on Lancashire so rapidly and in such continuous succession that it has never seemed possible, as I understand it, to pause and take stock and to face up to all those readjustments which are called for by such drastic changes in the market conditions. But now at last, an opportunity occurs."

Immediately after his return from London to Bombay on Sunday this week, Mr. Kasturbhai Lalbhai is reported to have told Press men at the airport that the talks were inconclusive and would be resumed later. Barring this brief statement, he made no comment nor gave any explanation. For some inexplicable reason, the spokesmen of the Indian cotton mill industry have all along fought shy of taking the public into confidence on this subject. There is, however, no doubt that they are as keen as their confreres in Lancashire to have an understanding, provided it is reasonable to India. As practical business men, they do not want to force the hands of the British Government to take action by refusing to negotiate with their opposite side.

U.K. Cotton Industry Reorganisation

Meanwhile, the British cotton industry has taken up a far-reaching plan for reorganisation, with large-scale Government help. The successful implementation of this plan will doubtless be more than sufficient to ensure adequate protection to it against any undue competition from other countries. The plan, to quote the London *Times*, "is designed to assist in this transformation, to help in making the industry capable of meeting the competition within the Commonwealth where voluntary restraints on imports from low-wage countries are lifted."

The persistent complaint of Lancashire millowners that the difficult conditions in the British cotton industry are due to competition from duty-free imports from Commonwealth countries is a gross exaggeration, as is borne out by the official White Paper on the reorganisation scheme. This document brings out the fact that the British cotton industry is suffering from excess capacity. The full extent of the excess capacity is estimated at as much as 12 million mule equivalent spindles and 70,000 looms. The doublers estimate their excess at about 60 per cent. and the condenser spinners estimate theirs at 10 per cent.

Realistic Approach

The details of the reorganisation plan have been published in some of our earlier issues. It is, therefore, unnecessary to refer to them again. Suffice it to say that the plan is an admirable example showing how the authorities in Britain are realistic in their approach to the problems of the industry. The plan costs the U.K. Government something like £30 million over the next five years, the aggregate outlay on the full-scale re-equipment programme covering all the branches being put at £100 million. The amount will be spent (1) to pay two-thirds of the cost of removing the industry's surplus capacity and (2) to share one-third of the cost of modernising existing machinery and of providing new machinery.

The second reading of the Cotton Industry Bill in the House of Commons took place on the 4th inst. It is significant that it was not opposed by the Labour Party. In his remarks, Sir David Eccles stated that there were encouraging signs of a new confidence in the Lancashire industry and of greatly improved prospects for expansion. Even before the Bill has become an Act, the Government is considering some alterations in the Bill "to match suitable arrangements within the industry." Among these alterations, mention is made of the grouping in sections of the industry for the purpose of dealing with reorganisation, with a view to meeting the particular wishes of the finishers; elimination of tax liability on compensation; and retaining for workers displaced but compensated their entitlement to unemployment benefit.

The U.K. cotton industry reorganisation plan, according to reports in the British Press, has elicited widespread co-operation and support from all sections—the Government, the millowners, the workers and the public. Here is an instance which should provide an object lesson to the cotton mill industry, its workers and the Government in this country. All the three of them must realise that, once the Lancashire mills are reorganised and placed on a sound footing, they will turn out to be formidable competitors not only in their domestic markets but also in export markets.

WORLD FIBRE CONSUMPTION

The free world is now consuming more fibres —cotton, wool and man-made fibres—than it did some years ago. The aggregate consumption during 1958 was 42.8 million bales, which, though it was much less than the 46.1 million bales (of 478 lbs. each) consumed in 1957, compares very favourably with the consumption of 36.7 million bales in 1950. The average rate of increase in consumption during the period 1950 to 1958 comes to 2.78 per cent.; it has exceeded the growth of population—1.64 per cent. every year—but has lagged behind the growth of 4.95 per cent. in industrial production, according to the International Cotton Advisory Committee, Washington. The *per capita* consumption of the principal fibres in 1956-58 was 11.6 lbs., as against 10.7 lbs. in 1950. Over the same period (1950-58), cotton consumption in the Communist bloc countries has gone up by 7.5 million bales to 15.3 million bales and that of wool and man-made fibres by more than a million bales each.

Out of the 42.80 million bales of fibres consumed in the free world during 1958, cotton accounted for 27.99 million bales (or 65.4 per cent.), rayon and acetate for 8.46 million bales (20 per cent.), wool for 4.23 million bales (10 per cent.), and other man-made fibres for 2.12 million bales (5 per cent.). The total consumption of fibres in the Communist bloc during 1958 was 18.7 million bales, representing a rise of 2.2 million bales as compared with the previous year. The major portion—amounting to 15.3 million bales or 82 per cent.—was accounted for by cotton. The percentage share of rayon and acetate was 10, other man-made fibres 1 and wool 7.

Hardly any new capacity for producing rayon yarn is said to be now being added in most countries, barring some additions in Spain, Japan and India, as well as in the U.S.S.R. The rayon industry is generally operating far below existing capacity. Instead, more and more interest is being concentrated on the newer man-made fibres, including nylon, terylene, the acrylic fibres and others. It is estimated that, by the end of 1959, world capacity for producing these fibres will have been increased to 3.4 million bales, as compared with 2.5 million bales in March 1958, with the bulk of the expansion being in the U.S., the U.K. and Japan.

TREND OF TEXTILE WORKERS' EARNINGS

LITTLE FREE TRADE AREA MAY REDUCE PRICES OF MAN-MADE FIBRES

From A Special Correspondent

MANCHESTER, *2nd June*

EARNINGS of workers employed in manufacturing industries throughout the United Kingdom as a whole continue the upward trend which has never been halted since the end of the war. According to the latest figures issued by the Ministry of Labour, average wage rates in October last year were £10 17*s.* 4*d.*, an increase of 3*s.* 2*d.* per week on the corresponding figure in April last and nearly 5*s.* a week above the October 1957 level.

MANCHESTER LETTER

The rate of increase has slackened a little during the past year or so as a result of the amount of short-time being worked in particular industries. Cotton and other allied textile trades were partly responsible for this development and, for the second time in successive six-monthly periods, the average earnings of all cotton operatives have shown a fall.

As the following table indicates, the decline in earnings was far less noticeable in October than six months previously; the latest returns are only a few coppers below the average earlier in 1958:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers

October 1958 ..	235 2	116 2	125 4	93 6	197 11

Once again, the spinning section has been chiefly affected, male workers, in particular, finding their earnings very substantially reduced as compared with the peak of October 1957, when the average almost touched £11 a week. In weaving, the average wage has actually increased to the highest level ever, the predominantly female labour being responsible for this development. The average wage of girls under 18 has, in fact, risen to a level nearly 3*s.* above the previous peak. In textile finishing also, wage rates are now higher than ever before. The average payment to men, at £11 15*s.* 2*d.*, represents a sharp advance over the half-year.

Further curtailment of output brought a shorter working week. The survey showed the average hours worked throughout the cotton industry at 42.6 weekly, as against 43.0 in April 1958. The weaving figure was 43.3 hours, as against 43.4, and spinning 42.1, as against 42.7. Longer hours were worked in textile finishing, the average being 47.2 per week, as against 46.7 in April 1958.

European Free Trade

Fresh negotiations to establish trading communities in Europe on a basis in which the United Kingdom can join have turned the spotlight once more on the effect of the existing Common Market, set up at the beginning of this year between Belgium, Germany, France, Italy, Luxembourg and the Netherlands. Customs duties between these countries are to be gradually reduced over the next decade or so and, eventually, there will be complete free trade within the area.

An assessment of how this revolutionary idea may affect the cotton trade has lately been given by Mr. Mario Ludwig, Director of the Manchester-based International Cotton Federation, in a contribution to an American journal. Essentially, he says, the purpose of the new Common Market community is to create a larger market. The free trade principle should assist increased productivity, reduce costs of output, promote a diversion of labour among the countries concerned and generally raise the standard of living of the populations.

Currency in the Common Market countries will gradually become fully convertible. Restrictions on raw material supplies will be removed and the cotton mills within the community will be able to buy raw cotton or man-made fibres from wherever they wish. This means that the market will be much more competitive, not only as to price and quality but also in respect of the services rendered by growers and merchants.

The impact of the Common Market, says Mr. Ludwig, is likely to have a pronounced effect on the supply of man-made fibres, as, in four of the member countries, there are strong and efficient industries producing synthetics of all types. So far, not all Continental spinners have had equally easy access to such supplies and the creation of a bigger market may result in a reduction in prices for man-made fibres, thus having an influence on the ratio of fibre consumption within Europe.

American Cotton Price Policy

Like many other observers, Mr. Ludwig believes that the American Government should abolish the two-price scheme for cotton. He urges the United States Administration to keep in step with the evolution in Europe and adopt a realistic and progressive cotton price and export policy.

Nor is this view held only in the centres where cotton as a fibre is spun and woven. A joint statement lately released by the Presidents of the New York and New Orleans Cotton Exchanges made a dramatic appeal to the leaders of the American Cotton Shippers' Association at their annual convention. "You are well aware that current legislation has had such grave effects on our futures markets that the volume of business now being transacted makes the proper functioning of the markets most difficult," they declared.

"As a result, the markets are unable at times to offer the industry the complete services and facilities for which they were intended and which were so readily and constantly available in the past." For this loss of efficiency, raw cotton traders are unanimous in blaming the two-price scheme. The possibility of sudden changes in subsidy rates at the stroke of a pen is a factor which is bound to create uncertainty in any sphere of activity.

The New Orleans Cotton Exchange has recently set aside $15,000 towards a fund to establish more permanent contact between the raw cotton trade and administrators in Washington. The object is to create industry-wide representation in the capital to supersede the individual approach.

More Textile Diversification

Proposals to enable William Pickles Ltd., the big Manchester textile group, to diversify its interests to include the business of canning, packing and preserving were approved by shareholders at a special meeting in Manchester last week. The Directors had already announced that they were contemplating the acquisition of a private company carrying on business as fruit and vegetable canners. Special resolutions altering the memorandum of association of the company were necessary before this new venture could be undertaken.

Mr. William Pickles, the Chairman, answering a shareholder, said that the business in which the Company was interested had from its inception made profits. It was controlled by two fine men and, when absorbed in the group, continuity of management would be maintained.

A Disappointing Feature

One of the disappointing features of recent export trade in cotton fabrics from this country has been the gradual decline in shipments to several Commonwealth areas which have for long been the mainstay of overseas activity, particularly in the post-war period. Although several of these regions still absorb the major quantity of Lancashire exports, there are few territories where rivalry is not increasing, usually to the detriment of British products.

A report has lately been released giving the findings of a delegation specially sent by the Indian Cotton Textiles Export Promotion Council to a number of countries in Africa. Ways and means are suggested in this document for the Indian mills to improve their sales to these markets. The countries involved are in British East Africa, Mauritius, the Belgian Congo, and the Federation of Rhodesia and Nyasaland.

Several of the suggestions put forward have figured in similar reports made both officially and unofficially in respect of British textile exports. The problem of shrinking world markets is one which deeply affects all the leading exporting countries; the only real solution is to raise living standards and encourage higher overall consumption of textiles.—*All Rights Reserved.*

OUTLOOK FOR WORLD COTTON

HIGHER CONSUMPTION AND LARGER EXPORTS IN PROSPECT

THE main developments in world cotton during the current season past drawing to a close, as analysed by the International Cotton Advisory Committee, Washington, were outlined in these columns last week. It would be appropriate to follow up this review with an analysis of the prospects for the new season as assessed by the Secretariat of the Committee. It was noted last week that, despite higher production, the current season was an unfavourable one for world cotton in general, thanks to lower prices, declining consumption and a marked contraction in international trade. The prospects for the new season, however, are regarded as less unfavourable. Although stocks at the beginning of the next season will be approximately at the same level as a year ago and aggregate free world production will, in all probability, be significantly higher, present indications are that consumption will show an improvement and that exports will be higher.

The aggregate level of stocks at the beginning of the next season is not expected to show any change, but there are likely to be significant changes in the distribution of stocks. In view of the reduction in consumption this season and the uncertainty concerning prices, purchases by importing countries have been on a hand-to-mouth basis. Carryover stocks in net importing countries at the end of this season are, therefore, expected to decline by over a million bales to their lowest level for many years. Conversely, stocks in the net exporting countries will rise by an equivalent amount. A part of the increase will be in the U.S. where stocks on 1st August are expected to exceed nine million bales, as compared with 8.7 million bales a year ago. Of this, the C.C.C. holdings are expected to be over 7 million bales and free stocks the smallest for many years. A further increase is in prospect for other producing countries and stocks will be at their highest level since 1953. The surplus is likely to be concentrated in only a few countries, however, and will be largely in the extra-long staple group.

Production and Supply

Production during the next season, as noted earlier, is likely to be higher. The basic acreage allotment for the 1959-60 season in the U.S. is set at 16.3 million acres, but the harvested acreage, after allowing for abandonment, is expected to fall short of 16 million acres, as compared with 11.9 million acres in the present season. As regards yield, more extensive cultivation will tend to lower the yield per acre and also much of the acreage returned to cultivation from the Soil Bank may be in lower yielding areas. It is fairly certain, however, that, with anything like normal yields, the U.S. production potential in 1959-60 is much greater than the 11.5 million bales harvested during the present season. This, together with the increase in end-season carryover, should assure a significant increase in supply in the U.S.

Elsewhere, however, aggregate cotton acreage is expected to be lower next season. In Mexico, Egypt, Greece and probably Central America, it is expected to be substantially lower. In many countries, however, the growth in the relative importance of the domestic market for cotton offers a strong incentive to maintain cotton production irrespective of any adverse developments in the world cotton economy. Also, the opportunities for crop substitution may be more limited than is generally supposed and, in any event, cotton is likely to remain an important source of foreign exchange to many countries. Taking all the factors, therefore, the reduction in acreage outside the U.S. may turn out to be quite limited and, assuming normal yields, production will remain at a relatively high level. Any reduction in production will be offset by larger carryover stocks with the result that no major variation in supplies is in prospect.

Consumption

There are several factors which point to the possibility of an increase in consumption. In the U.S., the general expectation is that the recovery in cotton textile production will continue. The upswing during the present season has been held in check by the prospect of lower cotton prices next season which has led manufacturers to follow a conservative policy with regard to yarn and cloth inventories. There has been some increase in textile prices and mill margins have improved. Lower cotton prices and an increase in rayon prices should improve cotton's competitive position. Important, too, is the improvement in the general economy of late which is a key factor in the outlook for cotton textiles. The inventory situation is encouraging which suggests that the improvement in retail sales recently will be felt more strongly at the mill level than heretofore. All this would indicate the probability of a further increase in cotton consumption next season.

In Western Europe, according to the Secretariat, a key factor in any recovery in cotton consumption is the general economic situation. According to the Economic Commission for Europe, a renewed, although moderate, upturn has already started in many countries. The easing of restrictions on money and credit has been complemented by increased public expenditure while the improvement in most countries' foreign exchange reserves has led to greater liberalisation of trade. Nevertheless, there is need generally for more forceful action in promoting more rapid economic expansion in the future.

As far as the textile industry itself is concerned, it is pointed out, the bugbear of high inventories ought to have been alleviated somewhat by the present reduction in textile production so that the industry may now be better able to profit from any improvement in retail demand. In many countries, there are beginnings of a more determined effort to increase the operating efficiency of the textile industry and Governments have shown a greater disposition to help in any programme of rationalisation.

Stability of Prices

There is little doubt that stability of cotton prices would contribute much to the improvement in textile production in Western Europe and, indeed, in the world in general. Textile producers, who, for the most part, operate on relatively small profit margins, are extremely sensitive to abrupt and arbitrary changes in raw material prices. Much depends on whether recent developments affecting prices will contribute to greater stability. If this can be achieved, the outlook for cotton textiles in Western Europe may be more favourable and there may be room for cautious optimism in the future at least as regards domestic demand. Difficulties are still likely to be experienced in the textile export field, however, due to the competition from the Far East, but intensive measures are being taken to protect the domestic market from the adverse effects of foreign imports.

The maintenance, of a high level of consumption in India in the face of a marked decline in exports, says the review, highlights the importance of domestic demand in any predictions concerning the future. Consumption prospects, therefore, are intimately related to general economic development and here there appears to be some doubt as to whether the present rate of economic growth can be sustained in the immediate future. Consumption is also dependent, to a considerable extent, on indigenous supplies of raw cotton and any increase in production would be favourable to consumption prospects. Export incentive schemes for cotton

CONSUMPTION PATTERN OF DIFFERENT SWEETENING AGENTS

SHIFT IN PREFERENCE FROM "GUR" TO SUGAR

WITH the improvement in the standard of living of the masses following the implementation of Five-year Plans, the spread of urban ideas in rural areas, and the increase in consumption of soft beverages such as tea, coffee and cool drinks, the consumption pattern of the three sweetening agents—sugar, *gur* and *khandsari*—has undergone a distinct change. The change is a continuous shift from *gur* to white sugar. Thus, the *per capita* consumption of *gur* during the season 1957-58 was just 17 lbs., as against nearly 21 lbs. in 1950-51 (the base year of the first Plan), whereas that of white sugar was markedly higher at 11.7 lbs., as against 6.7 lbs. No estimate of the *per capita* consumption of *khandsari* is available. On the basis of the quantity produced in 1957-58, namely, 225,000 tons, and taking the population as 392.94 million, the figure works out to 1.2 lb., that for 1950-51 being 0.8 lb. The improvement must be attributed not to the increase in consumer preference for *khandsari* but to the artificial rise in its production induced by the complete tax exemption hitherto enjoyed by this commodity.

The downward trend in the *per capita* consumption of *gur* in recent years has occurred despite the fact that the prices of *gur* continue to be relatively lower, while those of white sugar have gone up substantially as a result of the imposition of a heavy tax burden. It is a well-known fact now that, on every rupee spent on sugar by a consumer, Central and State Government taxes together account for as much as 33 naye paise, or 33 per cent. of the total price of sugar. But for such an enormous tax burden, the *per capita* consumption of sugar would have definitely increased more appreciably and that of *gur* fallen steeper. The consumers of *gur*, as readers are aware, do not pay any tax at all, nor do those engaged in the manufacture of this commodity.

Trend of Production

In view of the steadily growing preference of consumers for sugar *vis-a-vis gur*, it is not surprising that production of this sugar substitute has generally tended to move down. White sugar and *khandsari* production, however, has shown a tendency to expand. The following table indicates the trend of sugar, *gur* and *khandsari* output since 1950-51:

(In thousand tons)

	Sugar	*Gur*	*Khandsari*
1950-51	1,100	3,132	125
1951-52	1,493	3,109	100
1952-53	1,314	2,877	90
1953-54	1,001	2,402	95
1954-55	1,590	2,714	150
1955-56	1,865	3,154	100
1956-57	2,029	3,262	180
1957-58	1,970	3,056	225
1957-58 (estimate)	1,900	3,130	225
Percentage rise or fall over the eight-year period	+73%	−0.06%	+80%

It will be seen from the above figures that *gur* production suffered a setback during 1957-58, as compared with the previous season, the actual extent of the fall being 206,000 tons or 6.3 per cent. The decline was due to diversion of sugarcane to *khandsari* manufacture, brought about by the high level of *khandsari* prices. The production of *khandsari* during 1957-58 was 225,000 tons (equal to 375,000 tons in terms of *gur*), as against 180,000 tons (equal to 300,000 tons of *gur*). An idea of the production of *gur* and *khandsari* (combined) in the different States during the seasons 1956-57 and 1957-58 can be had from the statement below; break-down figures for the two commodities are not available.

(In tons)

State	1957-58	1956-57
Uttar Pradesh	1,598,636	1,801,398
Punjab	477,412	387,682
Bombay	314,728	282,642
Andhra Pradesh	264,378	294,434
Mysore	211,822	229,566
Madras	206,120	202,868
Madhya Pradesh	73,450	94,522
Assam	72,068	56,148
Orissa	68,838	68,638
West Bengal	65,330	88,746
Rajasthan	44,398	38,484
Other States	33,756	16,799
All-India	3,430,936	3,561,923

The foregoing table shows that Uttar Pradesh accounts for the major portion of the *gur-khandsari* produced in the country, the actual share in the total being nearly 47 per cent. The three other large producing States are the Punjab, Bombay and Andhra Pradesh, the percentage share being 14, 9 and 8, respectively. Although Bihar ranks as the sixth biggest sugarcane growing State in India, the production of *gur-khandsari* is negligible. The estimated output in 1957-58 is placed at no more than 20,000 tons. This is evidently due to the fact that the cultivators find it more profitable to supply their cane to sugar factories than to utilise the same for manufacturing *gur* or *khandsari*.

Gur Exports

No control is exercised on prices and distribution of *gur* and *khandsari*, except for the regulation on forward trading in the two commodities. The Government of India has allowed export of *gur* since 1955. During the calendar year 1958, *gur* exports aggregated 37,942 tons, the total foreign exchange earned being Rs. 153.28 lakhs. The most important customer for Indian *gur* is Ceylon; the actual purchase made by this country in 1958 was 30,597 tons valued at Rs. 128.49 lakhs. The other important customers are Malaya, Singapore and Aden.

The development programme for *gur* and *khandsari* industry drawn up under the second Five-year Plan provides for a total capital outlay of Rs. 7 crores. The details of the programme as mentioned by the Planning Commission are as follows:

Gur: Efforts will be focussed on the technical side, on the introduction of power-driven crushers, and the improvement of pans and furnaces, as well as on the formation of *gur* producers co-operatives, with a view to dealing with the problems of improving the keeping capacity of *gur*, proper storage, packing and standardisation of quality.

Khandsari: Efforts will be directed mainly to research and improvement of technique. The possibility of adopting the vacuum pan process on a decentralised basis for the manufacture of *khandsari* will be investigated.

Although more than three years have elapsed since the second Plan commenced, no indications are available as to the progress made in the implementation of the programme. One would want to know how much money has already been spent and how far the improvement envisaged in the programme has been effected. In conclusion, it must be said that the processes of *gur* and *khandsari* manufacture involve considerable wastage. The yield of marketable sugar in these industries is as much as 25 per cent. less than that in the vacuum from sugar factories. Viewed thus and considering the expanding demand for white sugar, the planners will do well to lay greater stress on the need for augmenting white sugar output than on encouraging *gur* and *khandsari* industries.

CO-OPERATIVE SUGAR FACTORIES

Twenty per cent. of the total production of sugar in the country will be handled by the co-operative sector by the end of the second Five-year Plan, according to an official Press note. During the 1957-58 crushing season, 14 co-operative sugar factories produced nearly 150,000 tons, representing about 7.5 per cent. of the total estimated production of sugar in the country. Since the beginning of the first Plan, 38 co-operative sugar factories have been licensed under the Industries (Development and Regulation) Act of 1951. Of these, 21 have gone into production, seven of them during the current season only. Six factories are under installation. The bulk of the machinery for these factories was imported from abroad involving considerable foreign exchange. Machinery for the remaining units is being fabricated by two consortiums of sugar plant manufacturers, which import the minimum essential components or items which cannot be secured or manufactured locally. According to present arrangements, machinery for four factories is to be delivered by the end of 1960 and to another seven by the end of 1961.

"Pratap, isn't that shirt too big for you?"

"MUMMY says my clothes get torn so fast that this is all I can have."

"Poor lad! Ask your mummy to buy BINNY'S cloth. BINNY'S Quality Control* their production."

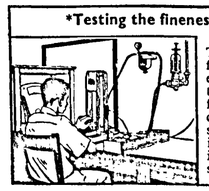
"Quality Control? Can you tell me what that means, uncle?"

"If you go to a textile mill, you will see machines that turn cotton into cloth work at terrific speeds and often small defects which we cannot see with our naked eyes get into the cloth. Cloth that contains these defects gets torn easily. At BINNY'S they have a special department which is continuously looking out for these defects and preventing them from getting into the cloth. That's why their cloth lasts so long."

"Thanks a lot, uncle. I must ask mummy to buy BINNY'S cloth straightaway."

BINNY - a great name in textiles

*Testing the fineness of cotton fibres



This instrument measures the fineness of the cotton fibres and enables the technician to select the right type of cotton suitable for the various qualities of cloth BINNY'S make. Only specially selected cotton goes into BINNY'S fabrics. That is why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs - etc etc

REHABILITATION OF RUBBER PLANTATIONS

POOR RESPONSE TO BOARD'S SCHEME

THE rubber growing industry in India is the youngest of the three major plantation crops. Although it had its beginning at the turn of the present century, no considerable planting had commenced until 1912 and, again, only since 1924, the advantage of its economy by planting with high-yielding strains of rubber plants was recognised. During the war, the acute shortage of raw rubber led to heavy exploitation of the existing stands and the post-war years saw the necessity for undertaking a rehabilitation programme. Various proposals were made for large-scale assisted rehabilitation of the industry, but the fall in rubber prices after the war did not encourage planters to undertake replanting. The result is that production is now lagging considerably behind growing consumption and the widening gap is being filled by imports.

The output of rubber during 1958 aggregated 25,373 tons, while consumption stood at 38,000 tons. The shortage had to be met by importing 15,000 tons of natural and synthetic rubber at a cost of Rs. 8 crores. The acute foreign exchange position also underlines the need for increasing production on a much larger scale and this can be done only by implementing a scheme of rehabilitation. The trend of consumption is forging ahead and rubber goods manufacturers expect the demand to go up to 150,000 tons by 1970 and 350,000 tons by 1980. If this demand is to be met from indigenous production, India will have to put 600,000 acres of land under rubber cultivation, besides replanting 200,000 acres out of the existing 280,000 acres.

Inherent Defects

There are some inherent defects in the rubber planting industry, which have to be taken note of in evolving a scheme of rehabilitation. As much as 59.73 per cent. of the planted acreage (in 1957) represents small holdings and the balance of 40.27 per cent. large holdings, the percentages having varied from 39.46 and 60.54, respectively, in 1950. In other words, there has been a gradual fragmentation of large holdings into smaller ones. Secondly, the yield is very low, the average being about 310 lbs. per acre, but nearly 60 per cent. of the acreage yields are no more than 200 lbs. per acre. Thirdly, there is a wide difference between the productivity per acre of small holdings and that of larger ones. Fourthly, there is a gulf of difference in quality and standards of production between the small grower and large estate owner.

Any plan for rehabilitation and development of rubber plantations should fulfil three essential requirements. The country's rubber shortage should be made up within the shortest possible time, the productive efficiency should rise and the grower should be given sufficient inducement to cut down the existing trees and replace them with high-yielding ones. The replanting scheme now on hand does not seem to have evoked encouraging response from growers. In the circumstances, the United Planters' Association of Southern India has done well in preparing and submitting its own scheme for rehabilitation of rubber plantations for the consideration of the Government of India and the Rubber Board.

Growers' Attitude

The study note, containing the scheme, represents the growers' attitude to the development of rubber and is in two parts. The first part traces the history of replantation in India, gives a brief note on the progress of rehabilitation schemes in Ceylon and Malaya, makes a comparative study of the salient features of the schemes in these two countries, as well as of that in India, and analyses the probable causes for the slow progress of the scheme in this country. Part II gives a detailed account of the U.P.A.S.I.'s own plan. It is proposed to confine this article to Part I of the U.P.A.S.I.'s study note, leaving its plan to be reviewed in the next issue.

Though the history of replantation of rubber can be traced back to 1924, it was mainly individualistic in character, each grower's programme being usually determined by the extent to which he could replant without suffering a marked loss of income and the availability of suitable planting material and other essential supplies. The first concerted effort towards a plan on an industry-wide scale was made in 1948, when the Indian Rubber Board prepared a scheme. The most important suggestions contained in the scheme were incorporated, in a slightly modified form, in the report of the Development Committee for the Rubber Plantation Industry, appointed by the Government of India in June 1950. The main features of the Development Committee's scheme are:

It envisaged replanting or new planting of 6,000 acres per annum beginning with 1952 and 8,000 acres from 1957, completing the programme by 1967, covering a total acreage of 120,000 in 16 years. At Rs. 500 per acre in subsidy, the scheme entailed a cost of Rs. 6 crores. Consequent on the implementation of this scheme, production was estimated to increase from 16,348 tons in 1952 to 25,590 tons by 1967, rising thereafter to 33,090 tons in 1970 and to over 50,000 tons by 1980.

Problem Was Entirely Different

At the time the Development Committee took up the question the problem was not of the same nature as it is now. For, as the U.P.A.S.I. points out, the Committee's attention centred mainly on the low yield per acre and the problem of raising it to an economic level. It was not confronted with the task of raising the production substantially to meet the growing demand which was soon to appear. The replanting scheme was considered by the then Tariff Board in 1951, as also by the Government of India, but the latter did not take any action for five years. In 1956, it approved of a modified scheme which was put into effect as from the beginning of 1957. This scheme provided for the grant of a subsidy at varying rates for the replanting of rubber on 70,000 acres in ten years or at the annual rate of 7,000 acres. It offered a differential rate of assistance to growers. Ten months after it was launched, the response from the growers was found by the Rubber Board Chairman to be not up to expectation. "It was clear," the U.P.A.S.I.'s note says, "that the subsidy offered was not capable of attracting either small or large growers to replant even on the limited scale envisaged under the modified plan." From the experience gained in the last two years, the note concludes that (*a*) the target was wholly inadequate to meet the increasing demand for raw rubber now or in future and (*b*) even this small plan was beyond fulfilment. In view of the poor response from the growers, the scheme was again revised in 1958.

During 1957, subsidy was granted to cover 1,441.58 acres belonging to small growers and 1,330.04 acres of large growers, making a total of 2,771.62 acres and involving an outlay of Rs. 4.60 lakhs. Permits have been issued to replant 5,656.58 acres in 1958 and 3,190.91 acres in 1959. "Assuming that the 1958 and 1959 permits correspond to actual replanting carried out," the U.P.A.S.I.'s note says, "the performance is 50 per cent. of the minimum expectation under the scheme."

Unrealistic Scheme

The trends of actual planting, production, consumption and estimated demand during the last few years, according to the U.P.A.S.I., demonstrate the following facts:

(*a*) the rate of replanting was considerably lower than the modest plan targets;

(*b*) the plan targets were fixed considerably below replacement requirements in terms of age of stands or productivity;

(*c*) the progress of consumption was several times the rate of annual increase in production; and

(*d*) the projected demand, allowing for some exaggeration, is likely to exceed production prospects by about 30,000 tons, even if the present Plan is fully carried out.

"The inescapable conclusion," the note adds, "is that the rehabilitation plan has not been conceived on a scale realistically linked to the unfolding needs of a developing economy."

In this connection, the note draws attention to the progress of rehabilitation in other rubber producing countries, particularly Ceylon and Malaya. The replanting scheme of Ceylon began in 1953 and that of Malaya in 1951, but the implementation of the latter commenced in earnest only in 1953. Up to the end of March last (since the scheme began) 114,000 acres have been replanted in Ceylon, representing 17 per cent. of the total stand of 660,000 acres in that island. The first overall target for small holders in Malaya (with holdings of and below 100 acres) was fixed at 500,000 acres to be completed in seven years from 1953 to 1959. The total planted area in Malaya in 1951 was 3,555,346 acres and small holdings covered 1,571,486 acres (or 44 per cent. of the total). The scheme thus involved the replacement of 31½ per cent. of small holding rubber. During the first five years of the scheme (that is, up to the end of 1957), 454,900 acres were replanted and 94,700 acres were brought under new planting. In 1958, on the recommendation of the Rubber Producers' Council, the Malayan Legislative Council approved of a scheme of planting one million acres on new land.

Main Features of the Schemes

The organisational features of the schemes in Malaya and Ceylon and the details of the financial as well as technical assistance given to planters are as follows:

In both countries, replanting has been placed under an authority separate from the statutory bodies responsible for the collection of cess, research, marketing, statistics, etc. In Ceylon, the rubber replanting subsidy scheme has been set up under Act No. 36 of 1953. The Malayan scheme has been operating under the Rubber Industry (Replanting) Board. The Malayan Scheme is divided into two parts, one being "estate" replanting and the other for "small holders" and the administration of the latter placed under a Chief Replanting Officer after it was directly managed for a time by the Agricultural Department of Federated Malaya. A similar distinction in the organisational set-up has not been made in Ceylon, but the scheme

Are You a Small-scale Industrialist?

This will interest you

To help small-scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

is worked separately for small growers and large growers under the Rubber Controller. The Malayan scheme is supervised by replanting officers in each State or district assisted by field staff for inspection and advisory service. In Ceylon, inspection is carried out through a panel of visiting agents drawn from among senior planters.

Apart from financial assistance, technical help is rendered by the Rubber Research Institutes in both countries and by the field staff in Malaya and inspecting staff in Ceylon. A large number of stores and supplies of a critical nature are made available at cost and concession to small holders in Malaya and Ceylon.

The rates of subsidy offered to growers in India, Malaya and Ceylon are:

Categories of holdings	*India**	*Malaya*	*Ceylon*
	Rs.	Rs.	Rs.
Below 10 acres	400	960	1,000
100 acres and below ...	350	870	900
Above 100 acres ...	275	625	700

* Figures are only approximate as rates are worked on a slab system.

The Malayan scheme is financed under the Rubber Industry (Replanting) Fund Ordinance 1952. The Ceylon scheme is financed from a fund created out of the surplus price realised from the Rubber Commissioner's trading with China, from a cess and from a special annual grant of Rs. 15 million offered by China for Rubber Rehabilitation. The Indian scheme is financed by a cess and the difference between the landed cost of imported rubber and the controlled internal price.

Causes for Slow Progress

The U.P.A.S.I. note then goes on to analyse the causes adversely affecting the progress of the Indian scheme. The most important of these are: administrative and organisational defects, absence of research assistance and paucity of financial assistance. Referring to the last mentioned factor, the U.P.A.S.I. says:

"The financial assistance offered for replanting was the lowest in India. For the average small planter the total outlay on replanting is considerably in excess of the assistance he might obtain even allowing that he is prepared to lose his current income from the standing trees. The cost of replanting has increased very substantially since 1951 when the Tariff Board estimated it to be Rs. 1,200 per acre. The Plantation Inquiry Commission estimated the replanting cost to be Rs. 1,400 excluding the cost of land (*vide* P.I.C. Report Chapter XI, para 26). Taking the more favourably placed holding as the sample, the present-day cost of replanting is upward of Rs. 1,500."

The table below provides comparative figures of loss which a 50-acre grower would suffer on his replanting account.

	1959
	Rs.
Cost of replanting 10½ acres in 7-year period at Rs. 1,500 per acre	15,750
Realisation from subsidy at Rs. 300 per acre	3,150
Loss from replanting	12,600

The rehabilitation is financed out of the proceeds of (1) the rehabilitation allowance of Rs. 4.44 (Rs. 6.82 *minus* tax Rs. 2.38) per 100 lbs. incorporated in the price structure, (2) the cess of Rs. 6.25 per 100 lbs. collected by the Rubber Board and (3) the receipts from manufacturers on their imports of rubber when the price of imported rubber is lower than the internal controlled price. While fixing the rehabilitation allowance at Rs. 6.82 per 100 lbs., the Tariff Board provided an element of Rs. 2.38 for tax in Travancore-Cochin State. Since then, the rate of tax is said to have increased, leaving a much smaller allowance for actual rehabilitation.

Sources of Funds in Malaya and Ceylon

The resources for rehabilitation in Malaya and Ceylon are provided by:

**Malaya.*—(*a*) Grant from F.M. Government; (*b*) Rehabilitation cess on exported rubber; (*c*) Special replanting cess on exports; and (*d*) Contribution to administrative expenditure from Government.

Ceylon.—(*a*) Appropriation from the Rubber Commission's trading profits; (b) Replanting cess; (c) Special China grant; and (d) Government grant.

The Malayan Rubber Replanting Fund accumulation exceeded $100 million at the end of 1957. The annual replanting budget has averaged $20 million in the last three years and the total estimated cost of replanting programme is approximately Rs. 45 crores.

Income into the Ceylon Rubber Subsidy Fund was Rs. 2,63,21,492.99 in 1956 and Rs. 2,06,85,015.18 in 1957, the expenditure being an average of Rs. 1.99 crore per annum for the two years.

The main defects of the method of financing rehabilitation adopted in India, according to the U.P.A.S.I., are:

1. There is no clear-cut replanting fund and, therefore, the intention in the utilisation of the cess is liable to be confused.

2. The financial sanction required in thousands of individual replanting projects over a vast area cannot be satisfactorily handled by an official responsible for the administration of a statutory board charged with several other functions.

3. The control exercised by the Central Government is not defined or clear in the matter of replanting finance. In view of its overriding powers over the Board, the manner in which allocations for replanting are made and the control exercised over replanting finance is not known.

4. The need to secure properly grants and loans in a manner conforming with normal Government practices is slowing down the processing of applications from the time they are submitted to the time they are disposed of.

5. Placing the responsibility on the administrative head of the Board for all financial sanctions involved in a large development programme is defective unless by background and training he has the necessary experience of and self-assurance in handling such funds.

Another important factor which stands in the way of replanting is the inadequate price paid to rubber growers. The Indian controlled price is, no doubt, currently above the world price by about Rs. 25 per 100 lbs. and the manufacturers of rubber goods carry a part of the burden of the protected price. The U.P.A.S.I. note, however, points out that the price of rubber cannot be judged in isolation from that of other commodities in India. While the general index number of wholesale prices (base August 1939=100) has gone up to 437 for the week ended 24th January 1959, that of rubber has risen to no more than 359.

There are 50,000 growers scattered over a wide area and the rehabilitation of an industry involving such a large number of growers requires vigorous leadership and a live-line contact with the producers. The experience of the past three years has forced the U.P.A.S.I. to conclude that such a leadership does not appear to have come from the Rubber Board.

*Malayan "Rubber Fund" is a separate fund created from levying 1 ct. per lb. of rubber exported and is used for financing (*a*) the Rubber Research Institute, (*b*) the British Rubber Producers' Research Association, and (c) the British Rubber Development Board.

Good for you.

Not so good for the producer.

Fields too far from a road.

Any road.

Too much food in one area.

Not enough in another.

Movement is the answer.

Movement from the fields
to the village market.

From village markets to the
neighbouring towns and cities.

Cheap transport.

Quick transport.

Efficient transport.

And for that you need roads.

That's why roads must have topmost priority.

That's why everything to do
with roads is so important.

Bitumen, for example.

One of the better
road-building materials.

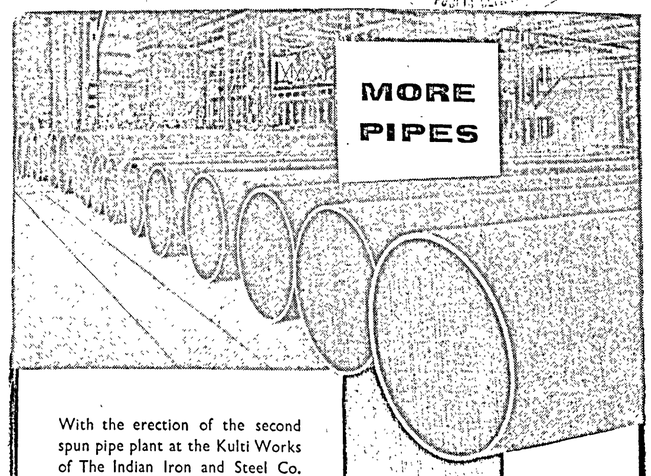
Current Deposit Accounts are opened and Fixed Deposits received on terms which may be ascertained on application.
The Bank issues Letters of Credit and Travellers' Cheques and it offers every facility for the conduct of all classes of Banking and Exchange business with the principal commercial centres throughout the world.
The Bank's Head Office undertakes to act as Executor and Trustee in approved cases.
Savings Bank Accounts are opened.

Bombay Offices: Main Office: 90, Mahatma Gandhi Road, Fort, Bombay 1.
Mint Road Branch: Corner of Mint Road and Sir P. M. Road, Bombay 1.



With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

PROBLEMS OF JET AVIATION

SWITZERLAND AND SCANDINAVIA JOIN HANDS

THE jet aircraft have firmly established their place in the field of civil aviation. It is now just a little over six months since the Pan American World Airways introduced Boeing 707, the biggest jet plane so far, in the transcontinental routes. The B.O.A.C. quickly followed the Pan American by putting Comet 4, a slightly smaller jet, suitable for medium distance, into its world-wide service. Then came Air France with a similar jet plane known as Caravelle. The T.W.A. (Transworld Airlines) has already introduced medium-distance jet aircraft for its domestic services. Air-India International is scheduled to receive and put into service Boeing 707 early next year. Reports on the working of the jet aircraft that are already under operation are highly satisfactory and encouraging. Aviation experts confidently assert that the memory of the disaster that overtook the first three Comets. the first jet planes to be tried on a commercial scale, need not cause any misgivings among the public and that the present-day jets are safer than any other aircraft so far produced. The jet aircraft are, however, very expensive and raise several problems. An idea of these can be had from the following extract from the *Business News Survey* of the Swiss Bank Corporation. It will also be noted from this article how small countries such as Switzerland, Sweden, Norway and Denmark are tackling the problems in a co-operative spirit:

"1959 is destined to mark the advent of a revolutionary transformation in commercial aviation whereby highspeed jet planes will put all other existing types of aircraft out of service, because none but jets will be able to compete. Jet planes are not only nearly twice as fast as the swiftest of all other types now in service. They are also safer, if only because free from the ceaseless vibration that impairs the reliability of the highly sensitive instruments of navigation.

Everyone Wants Jet

This momentous changeover from the age of piston-engined to that of jet planes will involve the investment of capital on a scale so vast that, at first, it seemed as though few small countries would be able to finance the purchase of new commercial air fleets, the installation of new ground equipment, the maintenance of repair shops and stocks of spares at many crucial points and the training of far more pilots and personnel, unless the transition could be spread over a very long period.

But all hopes of that suddenly vanished in October 1955, when Pan American Airways abruptly announced that orders had been placed for no fewer than 45 large jet planes of the Boeing 707 and DC-8 types at a total cost of more than 250 million dollars, for delivery in 1959 and 1960.

All at once, everybody in the U.S.A. wanted to "fly jet." Demand for jet travel now far exceeds anything expected. Only those lines able to offer travel by jet-planes will be able to attract passengers, especially if—as seems possible—fares by jet planes will not be higher than by others. At all events, Pan American Airways will be providing such service for at least a whole year before most of the competing lines.

At the time Pan American Airways made its amazing announcement, the most efficient airplane type in long-distance passenger service was: DC-7 compound motor 13,600 h.p. machine, speed 530 km/h. of 9.2 tons useful load, range about 5,900 kms., costing each about 11 million Swiss francs, a type most competent experts believed incapable of further technical improvement. Whereas the new DC-8 jet 24,000 h.p. has a speed of 900 km/h. a useful load of 13.7 tons—enough for carrying up to 150 passengers—range, when fully loaded, 6,800 kms., able to cross the Atlantic from Zurich to New York non-stop in 8-9 hours and from New York to Zurich in 7-8 hours, weather conditions in this direction being much more favourable. This machine costs about 35 million Swiss francs.

So great are the advantages of the new machines that all other airways in the world felt impelled to place orders immediately for equally efficient jet planes. That meant that, within a period of four years, a total of about 500 jets and 400 turbo-propeller planes costing altogether about 2,800 million dollars would have to be put into service. Even at this gigantic figure, the carrying capacity of the airlines of the world would only be about the same as now, although the number of machines would be less, because the velocity of the jets would be higher and their individual carrying capacity greater. But, if the popularity of air travel goes on increasing, still more jets would have to be provided.

Demand for investment capital on such a scale in such a short space of time, needed to transform only one single sector of the economy, would tax the capital markets of the world to the utmost, especially in small countries.

Swissair made a start by ordering three long-distance DC-8 jets for transatlantic passenger service at a total cost of 100 million Swiss francs, delivery 1960. The significance of this step for a small country like Switzerland becomes evident from the fact that, in 1955, the entire nominal capital of Swissair was only 14 million francs. Early in 1956, the capital was raised to 42 million francs by the issue of new shares, that is, an increase of capital by an amount only slightly more than a single DC-8 long-distance jet costs now.

To modernise its air fleet, Swissair raised another 30 million francs late in 1956 by the issue of bonds. Early in 1958, Swissair raised its capital a second time to a total of 63 million francs. So that in 2½ years, the total demands of Swissair on the Swiss capital market aggregated 79 million francs. The aim now is to raise the capital of Swissair in the near future to a total of 105 million francs and to supplement that by new bond issues amounting altogether to 117 million Swiss francs.

Perhaps these expectations are optimistic. Undeniably, the demands of Swissair would put a strain on the Swiss capital market. If successful, the total capital then at the disposal of Swissair would seem still barely enough when it is considered that the three DC-8 jets now on order will cost alone more than 100 million Swiss francs. To meet the unknown demands for capital in the uncertain future, draconic economy in the use of investment capital is an imperative necessity.

Air Travel Outstrips Sea

Problems of exactly the same kind will have to be solved by all other European countries determined to keep a share in the business of providing world-wide air travel. Beyond all doubt, the expansion of air travel and air transport will continue. In 1958, for the first time, more passengers crossed the Atlantic by air than by sea. To meet increasing demand for air travel all over the world, all airlines will have to provide more ground organisation equipment, more repair shops, larger stocks of spares, more pilots, more trained personnel and more air terminals.

Very naturally, the question was asked whether substantial economies might not be achieved if the airlines of some of the smaller countries worked together, co-ordinating their activities without, however, relinquishing all their independence or surrendering their individuality. How to do that was the problem.

In Zurich, on 6th October 1958, Swissair and the Scandinavian Airlines System—SAS—signed an Agreement, unique of its kind, for technical co-operation whereby both Airlines would be able to acquire "complete" jet-plane fleets, coordinate certain ground organisation activities, economise investment capital, split maintenance work and cut running costs. By the mutual exchange of experience, air fleets and equipment would be more efficiently utilised. By training personnel jointly, efficiency would be brought to a peak. By installing the same cockpit and kitchen equipment, the same planes could be used by both lines.

This agreement was possible because friendly discussions of common problems had been going on for a number of years and because technically both Swissair and SAS were at the same peak level of achievement. With the advent of the age of the jet-plane, both airlines felt impelled to co-operate. One reason for that was that experience had shown that, to provide competitive service on a world-wide scale, commercial air fleets must consist of three types of jets, namely:

1. Immense planes carrying up to 150 passengers for transatlantic and other very long-distance flights, where large numbers of passengers are travelling continuously.

2. Medium-sized jets carrying about 85 passengers with range of about 5,000 kms., suitable for services to South America, the Far East and South Africa where the demand for passenger service is still not so great as to the U.S.A., and

3. Smaller planes carrying about 70 passengers with a range of about 2,400 miles for certain European and Middle East services.

Before the proposal to co-operate had taken definite shape, Swissair and SAS had decided independently that the most suitable type for transatlantic service was the Douglas DC-8, carrying 150 passengers with a range of 6,800 kms. when fully loaded and a useful load of 15.7 tons. This is the type favoured by Pan American Airways. Both companies had placed orders for DC-8s for delivery in 1960. For medium-distance flights, SAS has decided for the Caravelle type of jet, made by the Societe Nationale de Constructions Aeronautiques Sud-Aviation at Toulouse, considered best for short journeys up to 2.350 kms., having a useful load of 8.3 tons, a maximum speed of 900 km/h and carrying about 70 passengers. This is believed to be the machine best suited for certain European and Middle East lines. SAS had ordered 16 Caravelles and obtained an option on another 9, but still needed a suitable type of jet for its services to South America, the Far East and South Africa. For these, the DC-8s are too large and the Caravelles too small to be economic.

Lease to SAS

For its short-range European services, Swissair has hitherto used chiefly 2-motor Convair 440s. For services up to 5,000 kms., Swissair decided to install Convair 880 4-jet machines, now being developed in San Diego for the General Dynamics Corporation. These jets have a range up to 6,000 kms., fly at an average altitude of 9,000 m., develop a speed of 950 km/h like the DC-8s, carry a useful load of 11.2 tons. Considering that this would be the ideal machine for its services to South America, the Far East and South Africa, Swissair ordered five machines for delivery in 1960.

To provide Swissair with the jets needed for its short-distance services and SAS with the jets needed for its medium-distance services, without either airline having to invest more capital, was the main purpose of the Agreement of 6th October 1958. Swissair is to lease to SAS, for a period of four years, two of the five Convair 880s to be delivered in 1960 while SAS is to lease to Swissair for a period four years four of the 16 Caravelles received in 1960.

Moreover, Swissair will provide maintenance in Switzerland for the Convair 880s rented by SAS and SAS will provide maintenance in Sweden for the four Caravelles rented by Swissair. Besides that, SAS will provide maintenance for the three DC-8s ordered by Swissair for delivery in 1960. Swissair and SAS have agreed that the jets now on order will all be identically equipped—so as to be interchangeable—and to split the work of maintenance.

By this arrangement, both Swissair and SAS will save a substantial amount of investment capital, both will be able to use their maintenance equipment to the maximum advantage, both Swissair and SAS will be fully competitive in the new jet age opening in 1960, both have DC-8s for very long-distance lines. Both have Convair 880s for other long-distance services, both have Caravelles for medium and short-distance runs."

Air Union

It would be interesting to record here, by way of a footnote to the aforesaid article, the latest developments in Western Europe. Following the advent of the Common Market, efforts are being made to form an organisation called "Air Union" by the airlines of the six countries, with a view to sharing the traffic and effecting economies. Full details of the scheme are not available, but it would appear that the traffic with the overseas territories are to be outside the share-out. This understanding, however, has induced the K.L.M. to withdraw from the pool, as it has no lucrative internal traffic. Nevertheless, the value of the agreement is regarded as quite substantial, as it is expected to yield sizable economy in the replacement of the airlines' fleets which will invariably be with jet aircraft. It is felt that the members of the Air Union will find scope for big savings by

PLANS FOR DEVELOPING DRUG INDUSTRY

AGREEMENT WITH RUSSIA MARKS A SIGNIFICANT STEP

THE latest Indo-Soviet Agreement covering an 80-million rouble credit for the building of State establishments to manufacture a variety of medicines and surgical instruments should go a long way towards developing this country's pharmaceutical industry. This is to be expected in the context of the present unsatisfactory state of this industry. Although the indigenous production of pharmaceuticals in India is estimated to exceed Rs. 35 crores a year, the industry is still dependent on the import of diverse basic drugs and basic and intermediate chemicals. The fact that, in most instances, only the final stages of processing have been undertaken in India means that the Indian pharmaceutical industry does not secure adequate saving of foreign exchange. From the point of view of prices to consumers also, the cost of imported intermediates becomes a major factor. With a view, therefore, to establishing these industries on a sound footing, arrangements have already been ensured to recover the full quantities of benzene, toluene, naphthalene, etc., at each of the coke ovens attached to the steel plants, as these form the most basic raw materials of the drugs and dyes industries and the lack of which had prevented their development so long. Steps have also been taken to foster the setting up of increasingly larger and more economic units for the basic heavy chemicals like sulphuric acid, caustic soda, chlorine, ammonia, etc., as their prices also contribute to determine the economics of the drugs and dyes industries.

In the field of pharmaceuticals, based on an assessment of the demand for drugs prepared independently by different agencies from time to time, such as the Pharmaceutical Enquiry Committee, the Development Council for Drugs and Pharmaceuticals, the Planning Commission, the team of Russian experts which was invited for this purpose in 1956 and the Indian team deputed to the U.S.S.R. for a study of their pharmaceutical industry, a tentative programme capable of being implemented in the most effective manner by 1960-61 was prepared by a Study Group of representatives of the different Ministries of the Government of India especially set up for this purpose. The targets recommended by the Russian experts are given alongside the targets suggested by the Study Group in the statement accompanying this article. The Study Group has accepted, in most cases, the overall need for larger production recommended by the Russian experts; but taking into consideration the several limitations in regard to financing of schemes for setting up production as well as for the subsequent distribution of the same to the needy, during the Second Plan period and immediately thereafter, the Study Group has recommended that the Russian targets could be reached over a slightly longer period of time.

The U.S.S.R. team in their report recommended the expansion of antibiotics production at Pimpri, besides the establishment of three new plants, namely, (*a*) an antibiotics plant, (*b*) a chemical pharmaceuticals plant for synthetic drugs and vitamins, and (*c*) a special plant for the manufacture of intermediates. In addition, they recommended the desirability of establishing (i) indigenous manufacture of medical instruments and appliances, (ii) the establishment of facilities to produce endocrines at a slaughter house, and (iii) the development of Indian production of alkaloids and other plant products along with facilities for research and investigations on them. Estimates of capital cost were given for expansion of Pimpri as well as for (*a*), (*b*) and (*c*) but not for (i), (ii) and (iii); these were Rs. 3.5 crores, Rs. 8.5 crores, Rs. 11 crores and Rs. 11.5 crores, respectively. The experts recommended that there should be a first stage in the case of (*c*) at which production would be roughly two-thirds of the full capacity and this step would reduce the capital cost to Rs. 8.5 crores. The report did not state the foreign exchange element in each of these figures; it was suggested that much of the equipment might be fabricated in India, provided this branch of the engineering industry was developed in the meantime.

The recommendations of the Soviet Experts were examined in detail in consultation with the Planning Commission and the approval of the Cabinet was obtained in January 1958 to an approach being made to the U.S.S.R. Government through the Indian Ambassador in Moscow for (i) financial aid for the drug projects on the same pattern as had been negotiated for the heavy machinery and other plants, and (ii) sending out a team of Soviet Experts to prepare preliminary project reports and to discuss other details. The U.S.S.R. Government agreed to provide technical and financial assistance upto 80 million roubles for the development of these projects and sent a second team of Soviet Experts in the latter half of 1958. This Soviet team submitted its recommendations to the Government on 14th October 1958. According to its recommendations, the following projects have been proposed to be established:

1. A very large antibiotics plant to produce not only a large quantity of penicillin but also streptomycin, tetracyclin and new antibiotics.

2. A synthetic drugs plant to produce a large number of sulpha drugs, anti-tubercular drugs, analgesics and antipyretics and a number of vitamins, and equipped also to produce special intermediates required for their manufacture.

3. A medicinal plants laboratory and factory to produce a large number of important drugs from medicinal plants.

4. A unit for the manufacture of glandular products, such as insulin, A.C.T.H., pituitrin.

5. A workshop for the manufacture of most of the important types of surgical instruments required in large numbers.

The total capital investment, excluding the investment on land, township and working capital, on the five drug units mentioned above have been indicated to be about Rs. 28.7 crores. The details of the cost of plant and machinery imported from abroad or to be fabricated locally from local as well as imported materials of construction and the cost of buildings and other facilities are still to be worked out.

A committee has been set up under the Planning Commission to examine the question of location of the different drug units recommended in the report of the U.S.S.R. Drug Team and formulate their proposals for the consideration of Government. This Committee will submit its report after about three months. It is also stated that negotiations are in hand to produce items like sulpha drugs, P.A.S. (Anti-T.B.), salicylic acid, aspirin, sodium salicylate, phenacetin and a number of vitamins in collaboration with Bayer, Merck Sharp and Dohme, etc. These are besides the proposal to set up a plant for intermediates with Bayer/A.C.N.A. and a unit for setting up manufacture of synthetic hormones in collaboration with Merck Sharp and Dohme of the United States.

Drug Targets

S. No.	Name of the drugs	Unit	Target fixed by Russian Experts	Target set by Study Group 1960-61	Capacity achieved or already approved

NEW PRODUCTS AND PROCESSES

Robot Lawn-mower

BEFORE long, it may be possible to sit back in the shade and let a robot mow the lawn. A British firm (Messrs. H. C. Webb & Co. Ltd., Tame Road, Witton, Birmingham 6) has developed and produced the first radio-controlled lawn-mower shown to the public for the first time at the Chelsea Flower Show at the end of May. The chief task was to make a lawn-mower chassis that could turn by its own effort. By using an entirely new concept of lawn-mower design, the firm produced a machine which can wheel and turn like a circus horse. The mower, an experimental model not yet available to the public, travels at nearly 2 m.p.h., has a 14 in. cutting width, and makes 60 clips to the yard. Effective range of the radio control is up to a mile.

Sulphur from Oil Products

A £2,000,000 hydrodesulphurizer plant for the removal of sulphur from petroleum products is being built at Shell Haven, in the Thames estuary, by Shell International Petroleum Company Ltd., No. 1 Kingsway, London, W. C. 2. Gas oil to be desulphurized is contacted with hydrogen and made to trickle over a special catalyst. The hydrogen, which will be drawn from a "platformer unit" at Shell Haven, converts the sulphur compounds into hydrogen sulphide, which will be processed to make some 20 tons of pure liquid sulphur a day.

New Potato Harvester

A new and ingenious potato harvester which will work in the wettest conditions is now in production by Messrs. Massey-Ferguson, Coventry, Warwickshire, England. It is a trailer unit, developed from an idea originally evolved at the National Institute of Agricultural Engineering. Fast-wearing parts such as conveyor chains are eliminated completely, and the harvester is silent in operation. The operating staff is small—one to tie the bags and two to four for sorting—yet the machine can harvest between one-and-a-half and three acres a day, according to conditions. The harvester can be used behind almost any tractor. It handles the crop with extreme gentleness, and once the protective soil covering is removed the potatoes are protected from damage by the use of rubber parts. Specially designed cleaning devices enable the machine to work even in the most improbable conditions. Few adjustments are necessary, and the machine absorbs only about 5 h.p. when in work. An indicator connected to the nearside wheel enables the operator to keep an accurate check on the digging depth. The wheels can be latched in the "raised" position during transport.

Plant for Man-made Timber

A new £250,000 plant for producing man-made timber has been opened at Weybridge, Surrey (Britain). The new factory will make wood-chip board, which is produced from processed industrial wood waste—wood shavings and chips or forest thinnings—bound together with a synthetic resin under heat and pressure. The new plant has one press capable of curing 10 boards at a time. It is completely automatic and specially constructed for chipboard manufacture. The finished product is used in the building, furniture, and other wood-consuming industries. The manufacturers, Messrs. Airscrew Company and Jicwood Ltd., Weybridge, Surrey, say that wood-chip board's advantages over natural timber include negligible shrinkage and swelling, freedom from Knots and other defects, improved resistance to flame spread, and higher resistance to vermin and fungoid growth.

High-speed Teleprinter

A new teleprinter, claimed to be smaller, lighter, and simpler than any comparable machine in commercial production anywhere in the world, has been developed by a British firm, Messrs. Creed & Co., Ltd., Telegraph House, Croydon, Surrey. It is capable of sustained operation at 100 words a minute—a 50 per cent. advance over the present international standard. It will also function at 60 words a minute (standard U.S. speed) and 66 words a minute (standard European and international speed). As it is unaffected by vibration and tilting, it can also operate in ships or aircraft.

Machine for Testing Tablets

A machine which can be used, it is claimed, to test three basic factors of pharmaceutical tablet performance has been developed in Germany. The machine can determine the disintegration period of tablets, and of granulates in tablet form and also pills, according to its makers. At the same time it can test the time required to dissolve soluble tablets and test their abrasion resistance, or friability. It can also be used to produce experimental coatings for tablets and pills. The operation of the machine depends on a geared motor with a condenser, a timer, a special push-button switch and a "gallows" to which the detachable testing units are attached. These detachable units include an immersion bath capable of holding a testing fluid, a fixture with four test tubes and special units for determining the dissolving period of tablets formulated to make clear solutions, and two systems for testing abrasion resistance.

ANNUAL MEETING OF ASHOK LEYLAND LTD.

INCREASED DEMAND FOR COMMERCIAL VEHICLES OFFERS A BRIGHT FUTURE

DR. A. RAMASWAMI MUDALIAR'S REVIEW

THE Tenth Annual General Meeting of Ashok Leyland Ltd. was held at Madras on 22nd May 1959. Addressing the shareholders on the occasion, Dr. A. Ramaswami Mudaliar, Chairman, said that the greatly increased demand for commercial vehicles, in general, and for the 'Comet,' in particular, offered a bright future, if the Company could continue to make satisfactory progress with its manufacturing programmes and make its output of chassis equal to the demand for them.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the tenth annual general meeting of your Company.

"The Directors' report, audited balance-sheet and profit and loss account for the year ended 31st December 1958 have been circulated to you and, with your permission, I shall take them as read.

Progress in 1958

"During the year we continued to make steady progress in our twin objectives of continuously increasing the Indian content of the commercial vehicle chassis we produce and, at the same time, so improving the sale of our products that our revenue shall keep pace with expenditure. The latter must necessarily increase as buildings continue to be constructed, plant and machinery is installed in them and labour to operate the machines recruited. Your Directors were pleased to find that the financial result of these endeavours during 1958 justified their recommending the payment of a dividend at the rate of 6 per cent. per annum, free of income-tax.

Further Expansion

"I have referred to the continuous expenditure on buildings, plant and machinery. The phased manufacturing programmes in which we are engaged require that your factory shall continue to expand for some considerable time. We have to provide not only for a substantial increase in the output of 'Comet' chassis but also for the addition of other models to our range of products. We, therefore, applied in 1957 for Government's approval to the inclusion of the Leyland 'Tiger' and 'Titan' chassis in our manufacturing activities; and we received a licence to do so in March 1958. During the year we applied for a licence to produce the industrial versions of the three Leyland diesel engines which are now included in our manufacturing range.

"Part of the 1958 achievement was the completion of practically all of the first phase of our building construction. It is, therefore, appropriate to review the financial implication of this work. When the manufacturing programme was commenced in 1956, it was immediately obvious that buildings then in existence, which covered about three acres, would be inadequate. Plans were made to add a total of 125,000 square feet as the first phase of a long-term building programme. This first phase has been completed at a total cost of Rs. 29.03 lakhs; and of this amount Rs. 21.22 lakhs was spent in 1958. During the year plant and machinery to a total value of Rs. 46.55 lakhs were installed, bringing the total for the three years 1956 to 1958 inclusive to Rs. 101.5 lakhs.

"The completion of the first phase of a building programme and the installation of plant and machinery as workshops became available to house it, does not mean that we can slacken in our endeavours. On the contrary, we must redouble our efforts to ensure that by the end of 1960 we achieve our objective of making the 'Comet' chassis including its engine and also the '600' and '680' type engines, which are alternative power units in the 'Titan' and 'Tiger' chassis, not less than 75 per cent. Indian in content. This remains a formidable task in relation to the amount of foreign exchange available for allotment to the automobile industry.

"It is unfortunate that at the time when the demand for our products has increased so greatly that we ought to increase our output of chassis threefold, the foreign exchange made available to us for the import of raw materials and components made it impossible to do so. Nevertheless, as the figures in the Directors' report indicate, a substantial improvement in the sales volume took place. It must be our constant endeavour in the future so to progress with manufacture that we shall be able to meet the full demand for our products, making output from the factory keep pace with our sales, so that all those who desire to operate Leyland vehicles may be satisfied. I am certain that there is increasing recognition by the Government of India that if the country's urgent need for road transport vehicles is to be met, automobile manufacturers should be allotted adequate foreign exchange for such raw materials, components and finished materials as must be imported at this stage of the country's development. There is a practical limit at this stage to the increase in production which can be secured by reduction of foreign content per chassis produced, with a given amount of foreign exchange. Beyond that limit the only solution to meeting a rapidly increasing demand for motor vehicles is to increase the foreign exchange allotments to manufacturers.

Engine Production

"Another important development in 1958 was the beginning of engine production in your factory. It will probably be the end of 1959 before the 'Comet' engine can be considered made in India, but 1958 saw the installation of all the plant and equipment needed for the manufacture of the cylinder head and most of that required for the cylinder block. Recruitment of labour and supervisory staff to provide for the efficient operation of the machine tools and other equipment has presented some difficulties. Men competent to do such highly skilled work are not readily available. It has, therefore, been necessary to augment training schemes and to take other steps to ensure a supply of skilled workmen. We hope the results of these actions will bear fruit in 1959 and onwards.

High Quality Castings

"Reference to the beginning of engine manufacture brings to mind the very important issue of the production of the high quality iron castings for the cylinder blocks and heads. If these were to be machined only, the castings being imported indefinitely, the nett saving in foreign exchange would not be appreciable. Your Directors, therefore, decided to request Messrs. Leyland Motors, who include in their group the West Yorkshire Foundries, well-known specialists in the production of high quality castings for the automobile and other industries, to advise them on this important question. In December 1958 Mr. W. West, Chairman of West Yorkshire Foundries and Vice-Chairman of Leyland Motors, visited India and, as a result of this visit a proposal has been submitted to the Government for the erection at Ennore of a modern foundry capable of producing all types of quality castings required by the automobile industry. We confidently expect that the Government will be pleased to approve this scheme.

Axle Weight the Basis

"Last year, I referred to difficulties experienced by your Company on account of restrictions on the gross laden weights of motor vehicles. Some States have removed restrictions which hamper the sale of 'Comet' goods vehicles, which are designed for twelve tons gross vehicle weight. But there are still a majority of States in which this vehicle cannot be utilised with its full load capacity as a carrier of goods. Moreover, the habit continues of making restrictions on gross weights instead of on axle weights, although the latter, being a more scientific basis, was proposed by the Indian Roads Congress long ago. We shall continue our efforts to secure the removal of these difficulties.

"Looking forward, much remains to be done, but we shall strive to achieve our goals. The greatly increased demand for commercial vehicles, in general, and for the 'Comet,' in particular, offers a bright future if we can continue to make satisfactory progress with our manufacturing programmes, and make our output of chassis equal to the demand for them. This involves the courage to continue with our rapid capital development in regard to buildings and equipment, confident that we can increase our resources to meet the inevitable and continuous rise in expenditure.

Thanks

"Once again I must express our gratitude to Messrs. Leyland Motors who have assisted us to the maximum possible extent. I am sure it will be your wish that I shall convey to Sir Henry Spurrier, Mr. W. West and Mr. D. G. Stokes our thanks for their personal help and guidance. I should also like to compliment the executives and staff and all the employees of the Company for their good work and loyal service throughout the year."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

A new direct-reduction process, said to produce steel from iron ore in a single step, has been developed in the U.S. Although few details have been released, the process is said to employ a special alloying compound which, when mixed with iron ore in a furnace, turns out a finished steel ingot in an hour. It is claimed that the direct reduction system recovers 80 per cent. or more of available iron in an ore without use of scrap and coke, at a saving of about $20 per ton over usual processes, and produces a steel with high tensile strength, good ductility, and good resistance to high temperatures, corrosion and oxidation.

Eighth Edition of

LAW OF INCOME-TAX IN INDIA

(*With the Indian Finance Act of* 1959)

By V. S. SUNDARAM

(Late of I.A. & A.S.)

The 8th Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-Tax Act."—*Bombay Law Reporter.*

Orders for this book will be registered in advance and executed in the strict order of priority of receipt of such orders.

I.L.O. COMPLETES FORTY YEARS

INDIA'S ASSOCIATION WITH IT HAS BEEN FRUITFUL

THIS month, the International Labour Organisation is celebrating its fortieth anniversary. This world-wide organisation of workers, employers and Governments has not only outlived its parent body, the League of Nations, but has also during the past forty eventful years, so grown in stature, scope and influence that it is today the most successful specialised agency of the U.N., having as many as eighty countries as members. Its powerful voice is exerting influence in all international discussions of social and economic questions. Its conventions and recommendations are highly respected by almost all its member-countries. It is an instrument for formulating international labour legislation and a living organism sworn to further social justice throughout the world.

The one name that stands out from all others as one looks back upon the chequered history of the I.L.O. is that of Mr. Albert Thomas, its first Director, but for whose foresight and creative leadership the story of the I.L.O. would perhaps have been a different one. Even as early as the beginning of this century, he sensed the stirrings of a new age in a troubled world, although it took a pretty long time for his view to prevail, namely, that the I.L.O., with its uniquely representational character, could offer the prospect for securing effective progress towards it.

Five months after the Peace Conference gave approval to the provision written into the Versailles Treaty for the creation of an institution entrusted with the task of formulating and supervising the application of international labour legislation in April 1919, the I.L.O. held its first conference in Washington. In selecting Mr. Albert Thomas as the first Director, the Governing Body made a choice which was to have profound influence on the future of the I.L.O. For, he took upon himself as though it was his personal mission to see that the I.L.O. proved a success and made its mark on the social and economic order. He boldly insisted that the I.L.O. had rights that must be respected. He claimed that it was entitled to intervene in all international discussions which might have social repercussions.

From 1920-32, the formative period, the I.L.O. pressed with vigour the task of elaborating international labour legislation with such energy that the body of decisions adopted by the Conference began to take on the dimensions of a comprehensive international code. And the conviction steadily grew in strength among member-countries that the I.L.O.'s activities were of direct interest to each one of them, however special or isolated its own particular problems might appear. Organised labour too, which at the beginning was sceptical about the value of the I.L.O. and had insisted that the Peace Conference should itself lay down labour standards, began to revise its opinion and co-operate with it.

A Vision Realised

As Mr. Edward Phelan, a former Director-General of the I.L.O., observes, when Mr. Albert Thomas died in 1932, the vision of what the I.L.O. might become was well on the way to realisation. For, to quote his own words:

"It succeeded in setting up standards for conditions in agriculture where trade unions were weak and, indeed, often non-existent, through its representation on the Mandates Commission, it secured active consideration for labour conditions in the mandated territories, it incited greatly increased activity concerning labour problems in colonies and possessions, it made its voice heard in international discussions on economic issues, its existence led to the formation of trade unions for the first time in some countries, while, in others, it secured for them recognition and a status not hitherto accorded. As the possibilities inherent in such achievement began to be understood, organised labour gave the I.L.O. its wholehearted support."

The I.L.O. faced one of the most trying periods in its history when World War II broke out. The war affected every country on the globe and Governments everywhere were faced with the problems arising out of the dislocation of world trade. Consequently, they could not give any great attention to the I.L.O. But it kept itself alive, carrying on a kind of information service and reminding member Governments that it still existed. But, as the War came to a close and the question of laying lasting foundations for peace came to the fore, the I.L.O. found itself not only coming into its own, but taking on an added significance and importance. To quote Mr. Phelan again:

"A wave of opinion began to sweep throughout the free world. Voices were heard on every side not only from workers' organisations but from heads of Governments, religious authorities of all creeds and political leaders of all parties demanding that, in the construction of the post-war world, social objectives must be given a predominant place. Here, coming to the surface with striking unanimity, was the movement for social justice the first stirrings of which Albert Thomas had sensed twenty years before. It was evident that the practical attainment of such objectives would require both national and international action. The I.L.O. was admirably constituted to co-ordinate the one and promote the other. Not only was it equipped with the necessary technical knowledge but it was the only international organisation of a general character of which the U.S. was a member. Would it be used? Weakened as it was, could it muster the will and the strength to claim its place. The answer was given, when on 27th October 1941, some two hundred delegates and advisers from thirty-five of its member-States assembled in New York. The final sitting was held in the White House, in Washington, where President Roosevelt gave his approval to its decision and the assurance of his support. Thus revitalised and encouraged, the Organisation was able to overcome the material difficulties created by the war conditions and hold a series of representative meetings which culminated in the conference held in Philadelphia in 1944. The Conference formulated in clear terms the social principles that should guide post-war policy and asserted the right of the I.L.O. to examine and draw attention to the social repercussions of any action taken by other international institutions. These decisions were embodied in the Declaration of Philadelphia, a document which President Roosevelt enthusiastically hailed as *summing up the aspirations of an epoch.*"

New Problems and Challenges

In 1946, by an agreement, the I.L.O. became one of the specialised agencies of the U.N. The agreement recognised that the sphere of action of the I.L.O. was the one defined in its revised constitution. Thus, with increased strength and with a deeper sense than ever of the importance of its mission, the I.L.O. has had to consider how best that mission could be carried on. But, in the post-war period, the I.L.O. found itself having to work in an entirely different socio-economic setting. The birth of new industries and the introduction of new processes in industries previously existing required revision and extension of the International Labour Code. The I.L.O. could certainly draw on its past experience to meet the new situation, but there were other changes in the world of a more profound character that presented new problems and challenges and offered new fields of opportunity. An indication of the role the I.L.O. has to play in the changed and changing world can be had from the following words of Mr. David A. Morse, I.L.O.'s present Director-General.

"The problem is not merely to draft laws but to deal with the manifold process of change within a society itself. Economic development is, indeed, inseparable from social change. Social measures are needed to make economic development effective, to stimulate the aptitudes and to provide the security needed for any effort dependent upon human co-operation; and economic change generates social consequences which may take the destructive forms of disorder and violence unless they are anticipated and properly prepared for. Action, to be effective, must grow out of the complex realities of each country; and the I.L.O. whose responsibility it is to keep these social and human factors to the forefront of concern in public policy, must, therefore, endeavour to bring its action ever closer to these national realities.

"The social problems of the industrial countries also arise today in more complex forms. Economic and political interdependence has become embodied in a variety of new institutions. Economic co-operation requires a corresponding growth of co-operation in social matters. The social problems are specific ones: to harmonise social changes between different countries, to co-ordinate social security for workers migrating between countries, to certify recognised skills of the workers concerned, to provide for co-operation between national employment services and so forth. These specific problems can only be effectively solved through an understanding of the individual features of the situation in which they arise.

"Since the problems with which the I.L.O. deals have thus become more varied, its methods of action for dealing with them are, in consequence, more varied than they were during the early years when most of the Organisation's work was conceived as leading to the formulation of international standards for working conditions.

"Practical methods of solving manpower problems, establishing efficient labour and social security administration, raising productivity in industry and handicrafts, promoting labour-management co-operation, workers' education and management training now account for an important part of the I.L.O.'s programme.

"No one method of action or combination of methods will suffice. The problems are too various and the situations too dissimilar. The I.L.O. must dispose of a wide range of methods and must ever be ready to try out new ones, so that its work may always be adapted to current needs in the continuing process of development and change in society and its institutions."

How the I.L.O. has responded to these challenges and adapted itself to the new situations is too recent to be termed history. It has, according to Mr. Phelan, achieved three things. It has (1) created a common social consciousness, (2) exerted a profound influence on political structure and development and (3) contributed to a new social order.

"Charter of Liberty"

The conventions and recommendations of the I.L.O. have had a profound effect on the life and destiny of the working class. The I.L.O. has adopted 111 conventions and a like number of recommendations which together is known as the International Labour Code. The Code is a "Charter of Liberty" for Labour and sets out minimum standards that should prevail throughout the world. It covers a wide field of social and labour policy: freedom of association and the right to organise, protection of wages, equal pay for work of equal value; hours of work, rest periods, industrial health, safety and welfare, protection of women and young workers, etc. Out of the 111 conventions, 92 have received sufficient number of ratifications to bring them into force.

Technical assistance has never been an unimportant part of the activities of the I.L.O., nor is it of recent origin. It has been a regular and important part of its activities from its early days. But it was after the Expanded Programme of Technical Assistance (E.P.T.A.) of the U.N. and the Specialised Agencies was launched in 1950 that the movement for technical assistance gained the magnitude, depth and variety that it has come to possess now. As a participant in this programme, the scope of I.L.O.'s activities, roughly speaking, extends over the fields of man-power, including employment organisation, vocational training and migration, co-operation and handicrafts, productivity, labour standards and their application, wages, industrial relations social security, labour statistics and problems relating to special categories of workers such as indigenous labour and maritime workers. In 1958 an expenditure of $3.4 million was incurred by the I.L.O. under the E.P.T.A. There were 174 experts working at the end of the year. The number of fellowships, worker-trainee grants and study grants awarded for advanced study was 288. Besides, equipment worth $368,575 was also supplied to underdeveloped countries. Since 1950, the I.L.O. sent 750 experts on technical assistance missions to more than 50 countries. Since 1953, nearly 1,200 received training abroad.

India—An Active Member

As one of the founder-members, India has a record of forty years of active association with the I.L.O. Whether in the sphere of following international standards faithfully, participating in the work of the International Labour Conference, Industrial Committees or Seminars and Working Parties or international give-and-take in the sphere of technical assistance, India has been one of the most active members of the I.L.O., taking keen interest in the work of the Organisation. It is, therefore, in the fitness of things that the Government has decided to issue a special postage stamp to commemorate the fortieth anniversary of the I.L.O. Equally appropriate is the selection of the famous sculpture "Triumph of Labour" by D. P. Roy Chowdhury as the main motif of the stamp's design. It may be noted here that this is the first time that India has issued a stamp to honour an international organisation.

India's association with the I.L.O. has been a fruitful one, for it has considerably benefited from the I.L.O.'s world-wide technical assistance programme. It has received technical assistance from the I.L.O. ever since the Expanded Programme of Technical Assistance was inaugurated in 1950. In 1951, the I.L.O. concluded a basic agreement with the Government of India for the provision of technical assistance which had been followed by an annual series of technical assistance projects. Among the projects for which the I.L.O. offered

FOURTEENTH SESSION OF G.A.T.T.

U.S. PLEA FOR ABOLITION OF DISCRIMINATORY IMPORT RESTRICTIONS

THE free flow of world trade had been hampered during the inter-war years by a medley of tariff barriers and import restrictions. The General Agreements on Tariffs and Trade (G.A.T.T.), ever since its inception about a decade ago, has consistently been endeavouring to eliminate this intricate pattern of widespread trade discrimination and usher in an era of multilateral trading system. Its pace of progress might be slow. Nevertheless, it has proved beyond doubt that it is sufficiently dynamic to deal with the problem of reducing the impediments to world trade. It has seen to it that the nations competing for a share in world markets do not resort to the restrictive practices that were in vogue in the thirties. Small wonder then that an increasing number of nations is anxious to be members of the G.A.T.T. Thus, the fourteenth session of the Contracting Parties of the G.A.T.T. which commenced at Geneva on 11th May 1959 examined the requests for accession to the Agreement from Israel and Poland. Yugoslavia has also expressed its desire to associate itself with the proceedings of the G.A.T.T. Apart from its growing appeal, the G.A.T.T. Secretariat has reason to feel gratified with the revival of the upward trend in world trade after the 1957-58 recession. Another welcome development is the restoration of external convertibility to a number of West European currencies at the beginning of the year. This development, to quote Mr. Fernando Garcia-Oldini, Chairman of the Contracting Parties, "provides both a reason and an opportunity for further progress in the elimination of import restrictions and, in particular, of their discriminatory application."

In fact, since the statement of Mr. Fernando Garcia-Oldini, Britain, France and Italy have relaxed their restrictions on imports from the dollar area. These developments are bound to strengthen the bond of international co-operation in the field of commercial policies, as envisaged by the G.A.T.T. There is, however, hardly any room for complacency as far as the work of the G.A.T.T. is concerned. The formation of regional trade blocs, such as the Common Market of the Six in W. Europe, now in force, and the proposed one for Latin America, is bound to affect the course and progress of international trade. The objectives of these moves for regional collaboration and co-operation are, of course, claimed to be progressive and in consonance with the need for expanding world trade. But there is no doubt that a large number of countries is apprehensive that these may ultimately turn out to be another form of restrictive trade practice, inconsistent with the ideals of the G.A.T.T. Negotiations, however, have already been initiated between the Contracting Parties and the representatives of the C. M. to iron out the differences. Extensive consultations have also been held between W. Germany and a number of Contracting Parties affected by import restrictions imposed by that country. The G.A.T.T. Chairman was optimistic about the outcome of these talks. Much ground has been covered in clearing complaints from member-countries on such technical questions as subsidies, State trading and dumping during the inter-sessional period. This form of quiet consultation between the members concerned has been useful, though the achievements have been unspectacular.

Major Problem

The major structural problem that confronts the Contracting Parties continues to be the deterioration in the terms of trade of the primary producing countries. Referring to this question, the Chairman observed, in the course of his opening address to the plenary session, as follows:

"The repercussions of the decline in the prices of primary commodities will still be felt for some time in some underdeveloped countries which once again have suffered a decline in their meagre currency resources and serious balance-of-payments difficulties. At the same time, industrial countries have benefited from this fall in prices and, as a result, the effects of the recession were not felt so severely and their balance-of-payments position has improved. However, it does not seem that the resulting advantages for industrialised countries have as yet been reflected in any appreciable increase in their foreign investments in underdeveloped countries such as could contribute to a restoration of a balance in their economies which had been jeopardised by the unfavourable evolution of world economic conditions, and could promote their industrialisation and assist them in their difficult fight against inflation."

Although the investments of industrialised countries in the underdeveloped countries have not been sufficient to make good the setback suffered by the latter, the measures taken by many West European countries to establish convertibility of their currencies have made, according to spokesmen of Western countries, a significant contribution to the expansion of world trade. The currencies used to finance world trade are now generally convertible into one another for non-residents at official rates of exchange. The convertibility measures have been applied to current transactions, including trade and, in some cases, extended to the capital sector also. Mr. W. T. M. Beale, Chairman of the U.S. delegation to the plenary session, gave a brief account of the benefits that accrued to world trade from the introduction of convertibility. "Inconvertibility and the trade restrictions that accompany it are," he said, "costly obstacles to the economic allocation of resources, both nationally and internationally, and hence to economic growth and standards of living." Giving a few practical illustrations of the significance of convertibility of W. European currencies, Mr. Beale observed:

"Today, any country that earns sterling, for instance, is free to use it for financing its imports from any supplier in the world. Today, countries include in their published accounts of gold and convertible currency holdings their balances in the newly-convertible currencies, such as the French franc and the deutsche mark. Today, a merchant in South America, Asia, or Africa who buys goods, whether in Europe or elsewhere, for Belgian francs, Italian lire, or Austrian schillings pays in currency, that is, in fact, as usable as dollar currency.

"In the new situation, the effect on Chile's or Norway's balance-of-payments position and monetary reserves of a given amount of foreign exchange expenditure is the same, whether the money is spent in Canada or Denmark. Similarly, the effect of a given amount of foreign exchange income is the same, whether it is received from the Dominican Republic or India. Thus, we note that Brazil no longer has separate exchange auctions for the dollar and the so-called ACL currencies but has a combined auction where dollars and the European convertible currencies are traded on the same basis. In short, the broad establishment of external convertibility has generally removed the substantive distinction that existed for two decades between the currencies of the dollar countries and the currencies of other countries and thus has ended the relevance of this distinction to trade policy and to the appraisal of balance-of-payments and exchange reserve positions."

Western World Strong

Mr. Beale then went on to give some data to show how strong the Western world outside the U.S. has become. In the nine years from 1950 to 1958, the rest of the free world had increased its gold and dollar balances by almost $14 billion, or an average of about $1.5 billion per annum through transactions with the U.S. alone. Other transactions, including new gold production, had brought another $4 billion, raising the total to $18 billion.

The most important point made by Mr. Beale was that the time had come for the rest of the free world to free their restrictions on imports of dollar goods. Tracing the circumstances in which Article XIV of G.A.T.T., permitting a Contracting Party to deviate from the rule of non-discrimination in regard to imports, came to be incorporated, he observed:

"The character of the rules in the General Agreement governing the discriminatory application of quantitative restrictions reflects the extraordinary balance-of-payments problems and shortages of monetary reserves that many countries experienced after the war. Few currencies were convertible when the General Agreement was negotiated; and, of course, supplies of convertible means of payment were short. In these circumstances, had the General Agreement required absolute adherence to the rule of non-discrimination, many countries might have found it necessary to limit their imports according to standards dictated by the availability of their least plentiful means of payment. In other words, Article XIV was written to take account of peculiar balance-of-payment situations arising out of the inconvertibility of currencies and to allow for discriminatory import policies based on the proposition that, in the circumstances, increased imports from some suppliers would not endanger slender monetary reserves to the extent that imports from others might. The various formulas found in the Article were all designed with this end in mind."

Mr. Beale, however, maintained that "the advent of convertibility has refuted whatever financial logic may have been found in trade discrimination." He made a fervent plea to the industrially developed countries to abolish all kinds of discriminatory import restrictions. Elaborating this point further, he said:

"Convertibility should mean the rapid removal of the inequalities that have proved costly both to the countries whose export interests have felt the sharper edge of import restrictions and to the countries which have considered it necessary to apply import restrictions in a discriminatory way. May I repeat what the United States delegations to the meetings of the Contracting Parties have said many times; all import restrictions carry some economic cost, but discriminatory import restrictions are likely to be especially costly since they tend to divert from cheap sources to expensive ones the purchase of whatever volume of imports is permitted. Countries with the greatest need for foreign exchange—including the less developed countries, a number of which continue to have overall balance-of-payments difficulties—are least able to afford the extra costs that discriminatory import restrictions entail."

He was, of course, quite aware of the quick action taken by some of the countries to reduce restrictions on import of dollar goods. His plea, therefore, pertained to the abolition of the remaining restrictions. As already stated, Britain, France and Italy have made further relaxations which only go to show that Mr. Beale's plea was perfectly justified.

It may be mentioned, in passing, that, under the Articles of G.A.T.T., underdeveloped countries have certain privileges in regard to application of quantitative restrictions on imports. They can use this control not only on balance of payments considerations but also on the ground of protecting their nascent industries. Mr. Beale's reference applied only to the developed countries.

Japanese Grievance

A feature of G.A.T.T. has been the tardy treatment accorded to Japan. Some Western countries, headed by Britain, have been refusing to extend to Japan the full privileges that are extended by one Contracting Party to another. This is due to their distrust of Japanese business practices born of their pre-war unhappy experience of price-cutting and dumping by Japan. As many as thirteen countries have not yet withdrawn the application of Article XXXV against Japan. There is some truth in the statement of Mr. Ichiro Kawasaki, leader of the Japanese delegation, that "the fact that my country, alone of all other Contracting Parties, is still subject to the discriminatory treatment, clearly runs counter to the generally expressed desire for liberalisation of trade." It may be noted here that India waived the application of Article XXXV in respect of Japan last year and extended to it most-favoured-nation treatment. This was undoubtedly the right thing to do and we have no doubts that the Japanese appreciated this gesture of friendliness.

Japan has now arranged bilateral talks with some Governments such as Austria and Haiti. These talks, we are told, have made satisfactory progress. In this connection, an objective study of Japan's position recently made by Mr. Roy Harrod, the famous British economist, strengthens the Japanese claim for equal treatment. To quote Mr. Harrod:

"The first tendency of other industrial countries is to regard Japan as a rival, even a dangerous one. This is particularly so since her wage structure may allow her to do severe price undercutting. But more and more it becomes plain that it is incumbent upon us to look at the problems of each separate country in relation to the whole world's economy. Within this world picture, we should favour the continued expansion of Japan. If the European increase is less great in the coming period this will be because her need to that extent is satisfied. But the increase of imports that Japan needs will continue to be very great. Thus, Japan could make a substantial contribution to sustaining the growth of underdeveloped countries. The corollary of this is that we should favour an expansion of Japanese exports. In an expanding world, there is probably room for a rising level of exports from all the mature countries, reckoning Japan as one of them."

There is really no justification to deny Japan the privileges of full membership. Misgivings based on past experience under a situation which does not exist do not constitute sufficient reason for doing so. In any case, they are not conducive to building up international co-operation. The Contracting Parties have now agreed to meet in Tokyo this autumn and this will provide them with an opportunity

(*Continued on page* 1005)

FURTHER DROP IN PROFIT OF INDIAN STANDARD WAGON

SHORTAGE OF STEEL AFFECTS PRODUCTION

A DROP of Rs. 5.34 lakhs to Rs. 59.34 lakhs in gross profit is disclosed by the accounts of the Indian Standard Wagon Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 31st March 1959. This is on top of a decline, for the first time since 1949-50, of Rs. 6.04 lakhs (from Rs. 70.72 lakhs to Rs. 64.68 lakhs) suffered in the previous year. The further setback in the earnings of the Company was due to a fall in turnover, caused by "enforced restriction of work during the year under review, owing to shortage of steel for wagon building, as well as delay on the part of the Railway Board in finalising and releasing the design of BOBS wagons." There has no doubt been a saving for the Company in the incentive bonus payable on the lower output, but the management would not have certainly wished for it, for the restriction of work was beyond its control and it "caused grave dissatisfaction to the workers and led to a deterioration in labour relations."

The provision for depreciation has been slightly raised from Rs. 3.18 lakhs to Rs. 3.38 lakhs, while that for taxation has been reduced from Rs. 26 lakhs to Rs. 24.64 lakhs. After making these essential provisions and setting aside Rs. 4.98 lakhs (as against Rs. 5.55 lakhs for 1957-58) for managing agency commission, the net profit at Rs. 26.34 lakhs shows a decline of Rs. 3.61 lakhs. Notwithstanding the lower profit, the allocations to shareholders' reserves have been raised from Rs. 7.58 lakhs to Rs. 10.61 lakhs. This sum is made up of Rs. 3.38 lakhs (Rs. 75,000) to general development reserve, Rs. 1.23 lakh (Rs. 9,528) to development rebate reserve, Rs. 5 lakhs (Rs. 5.74 lakhs) to plant replacement reserve and Rs. 1 lakh (same as in the previous year) to general reserve. The provisions for labour welfare have, however, been reduced from Rs. 11.99 lakhs to Rs. 6.61 lakhs. The distribution to ordinary shareholders is unchanged at 20 per cent. on the present capital, raised in December 1957 by the capitalisation of Rs. 19.49 lakhs.

The following table compares the salient features of the Company's profit and loss accounts for the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	5,80.41	6,31.67	3,82.56	4,49.37

Carry forward	0.37	0.43	0.24	0.24

The decline in the Company's output during the year under review is reflected in the drop of Rs. 51.26 lakhs in sales, Rs. 1.27 crore in work-in-progress and of Rs. 1.01 crore in raw materials, stores and spares consumed. There has, however, been a rise of Rs. 5.64 lakhs in other expenses, despite a decline of Rs. 1.73 lakh in salaries, wages and bonus.

The Company's balance-sheet as on 31st March 1959 discloses a highly satisfactory financial position. The Company has been making substantial capital expenditures during the last few years. In keeping with this policy of gradual expansion of its capacity as well as modernisation of the existing plant and machinery, the Company has spent a sum of Rs. 11.32 lakhs during the year under review and further capital work-in-progress of the value of Rs. 9.34 lakhs was on hand at the close of the year. The gross value of the block capital at the end of March last (other than capital work-in-progress) is Rs. 111.72 lakhs, which has been written down to a book value of Rs. 43.38 lakhs. The current assets amount to Rs. 544.81 lakhs, as against which current liabilities and provisions aggregate Rs. 487.74 lakhs. The total net assets of the value of Rs. 109.79 lakhs are represented by a paid-up capital of Rs. 59.34 lakhs and reserves and surplus aggregating Rs. 50.45 lakhs.

The Company has been depending mainly on imported steel for its wagon-building activities, and the supply position in this regard is far from satisfactory due to foreign exchange difficulties. The Directors point out, in their latest report, that "the planning of imports of steel to produce, with indigenous supplies, the matched stocks which must be available to carry out a wagon building programme is the responsibility of the Government and is accordingly a matter entirely outside the control of the Company." They regretfully advise the shareholders that "the steel position continues to be unsatisfactory and to be the cause of concern, as to its possible adverse effect on output during the current year." The long-term outlook for the Company should, however, be regarded as bright, for the indigenous steel supplies are expected to improve both variety-wise and quantity-wise, when the steel plants in the public sector come into production and the full effects of the expansion programmes of the two producers in the private sector are felt.

The Rs. 25 fully paid-up shares of the Company are being currently quoted at Rs. 94 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 5.6 per cent. per annum, free of income-tax. A year ago they were standing at Rs. 98.

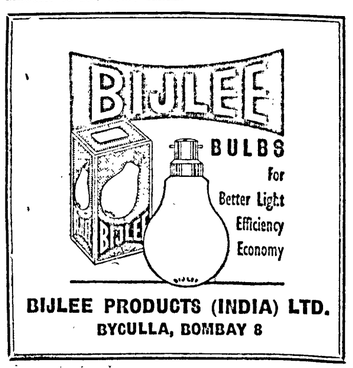
JEEWANLAL (1929) LTD.

The sharp rise in raw material prices accompanied by an increase in wage bill without a corresponding increase in selling prices of finished products, keen competition from other manufacturers and the basic change in the Government's import policy owing to foreign exchange difficulties, have all cumulatively affected the earnings of Jeewanlal (1929) Ltd. (Managing Director: Mr. Himchand K. Shah, Calcutta) for the year ended 31st December 1958. The gross profit has declined from Rs. 9.01 lakhs (in 1957) to Rs. 5.43 lakhs, thus more than offsetting the improvement noted last year, when the profit had gone up from Rs. 6.86 lakhs to Rs. 9.01 lakhs. The provision for depreciation has, however, been raised from Rs. 1.31 lakh to Rs. 1.47 lakh, as also that for taxation (after adjustment in respect of previous years) from Rs. 40,892 to Rs. 44,987. These leave a net profit of Rs. 3.52 lakhs, as against Rs. 7.29 lakhs for 1957.

In view of the lower profit, the Directors have not been able to set aside anything to the reserve for replacement of fixed capital assets or towards reserve prescribed by the Controller of Capital Issues in 1951 as a condition precedent to payment of dividends to shareholders. The Directors have, however, utilised the net profit to reduce further the accumulated losses, leaving a deficit of only Rs. 1.70 lakh still to be wiped out. In the circumstances, the distribution to the shareholders has had to be skipped over again, for the seventh year in succession.

The sales of the Company show a slight increase from Rs. 225.54 lakhs to Rs. 228.70 lakhs, but this has been more than offset by the rise in cost of sales from Rs. 202.71 lakhs to Rs. 209.89 lakhs. Other expenses are, however, a shade lower at Rs. 14.93 lakhs, as compared with Rs. 15.49 lakhs in 1957.

The balance-sheet of the Company as on 31st December 1958 shows that the reserves of the Company are at a low level, being no more than Rs. 6.30 lakhs, due to the persistent losses suffered by it, while the paid-up capital stands at Rs. 72 lakhs, half of which represents bonus issue. The gross block of the value of Rs. 38.88 lakhs has been written down to Rs. 12.56 lakhs. The current assets aggregate Rs. 132.61 lakhs, including book debts to the extent of Rs. 40.04 lakhs, as against which current liabilities and provisions amount to Rs. 66.87 lakhs.



BHARTIA ELECTRIC STEEL EARNS LESS

NEW SCHEME OF ARRANGEMENT PROPOSED

RECURRENT shortages of billets, with its consequent adverse effect on production and sales, have been mainly responsible for the setback in the earnings of the Bhartia Electric Steel Company, Ltd. (Managing Agents: Messrs. Bhartia Company, Ltd., Calcutta), for the year ended 31st December 1958. The Company's gross profit has dropped from the record level of Rs. 43.72 lakhs in 1957 to Rs. 35.54 lakhs. This is the first time since 1953 that the profit has suffered a reversal, after having gone up successively from Rs. 19.74 lakhs in 1953 to Rs. 43.72 lakhs in 1957.

The Company has two works, one at Khardah and the other at Ballygunge. The shortage of billets affected the production at the Khardah works, as also the overall output and sales of the Company. The Company's output of liquid steel declined from 16,260 tons to 15,063 tons, steel castings from 5,562 tons to 4,847 tons and rods and bars from 22,263 tons to 17,625 tons. The fall in production of wagons and coaches during 1958, as a result of the very critical supply position of steel, affected the demand for steel castings. Consequently, the aggregate sales of the Company (in terms of value) dropped by nearly Rs. 14 lakhs to Rs. 192.45 lakhs.

The net profit is, however, better at Rs. 12.64 lakhs, as compared with that of Rs. 10.25 lakhs for the previous year, consequent on the lower provisions for Managing Agents' commission, depreciation and taxation. The provision for depreciation, in particular, has been reduced substantially from Rs. 15 lakhs to Rs. 6 lakhs, in view of the fact that additional depreciation would not be available from the year under review onwards. The provision for taxation has been reduced by Rs. 1 lakh to Rs. 14 lakhs. Out of the net profit of Rs. 12.64 lakhs, the Directors have transferred to the general reserve Rs. 5 lakhs, as against Rs. 4 lakhs added last year, and have created a development rebate reserve with Rs. 1.82 lakhs. The distribution to the shareholders is unchanged at 12½ per cent. for the fourth year in succession, after having been raised to that level in 1955 from 10 per cent. paid for 1954 and 7½ per cent. for each of the two preceding years, all on the present capital of Rs. 50 lakhs, to which level it was raised in April 1952 by the capitalisation of Rs. 12.50 lakhs.

The following comparative table shows the progress of the Company since 1955:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	1,92.45	2,06.23	1,84.28	1,29.46
Closing stocks of finished goods and work-in-progress ..	30.70	31.86	16.59	23.47
Raw materials consumed ..	62.63	87.86	58.58	35.90
Other expenses	93.59	90.65	84.21	73.15
Gross profit	35.54	43.72	35.13	23.36
Managing Agents' commission..	2.90	3.48	6.86	4.69
Provision for—				
Depreciation	6.00	15.00	15.00	7.00
Taxation	14.00	15.00	10.00	3.50
Net profit	12.64	10.25	3.27	8.17
To reserves	6.82	4.00	..	..
Dividend	6 25 (12½%)	6.25 (12½%)	6 25 (12½%)	6.25 (12½%)
Carry forward	0.54	0.07	0.08	3.00

Out of the issued and paid-up capital of Rs. 50 lakhs, as much as Rs. 30 lakhs have been found from internal resources by the capitalisation of reserves. Even after such a large transfer to the capital, the reserves and surplus as at the end of 1958 stand at Rs. 39.15 lakhs. The Company has been making substantial capital expenditure during the last few years, the expenditure in 1957 and 1958 being Rs. 15.02 lakhs and Rs. 18.17 lakhs, respectively, bringing the gross value of the block account to Rs. 133.20 lakhs. The depreciation provided so far is Rs. 85.27 lakhs, so that the net value of the block account stands at Rs. 52.93 lakhs. The current assets, amounting to Rs. 111.49 lakhs, exceed the current liabilities and provisions, at Rs. 80.80 lakhs, by no less than Rs. 30.69 lakhs.

The Company was formed in 1928, for the purpose of taking over the business of Hukumchand Electrical Steel Works. Until 1941, the Company was known as Hukumchand Electric Steel Company, Ltd. In the same year, another company, by name British India Iron and Steel Company, was amalgamated with the Bhartia Electric Steel Company, Ltd. Since then, the latter has grown substantially, particularly during the last few years. As already stated, the Company has two works, one at Ballygunge and the other at Khardah, but the two are engaged in production of totally different types of articles. The first produces steel ingots and steel castings, while the other is purely a re-rolling plant and, apart from the very meagre supply of steel ingots from Ballygunge, the Khardah factory has to depend mostly on supplies of billets from outside sources. Except for the supply of nearly 400 tons of ingots per month from Ballygunge to Khardah which may also, in course of time, cease as the production of steel castings increases, the activities of the two works are entirely independent of each other.

The changes in the design and types of wagons proposed by the Railway Board, which will replace the currently used buffers by centre buffer couplers, and the use of roller bearing axle boxes on the Indian railways necessitate a change in the type of steel castings manufactured by the Company at its Ballygunge works. The Company has entered into provisional technical collaboration and patent right licensing agreements with two American firms of repute for the manufacture of centre buffer couplers. The manufacture of new types of steel castings requires large investment in new plant, equipment and facilities.

The Khardah factory is capable of re-rolling about 10,000 tons per month of rods and bars. This capacity has not so far been utilised fully on account of shortage of billets. The supply position of billets has, however, now improved and with better prospect of the supplies increasing in the years to come, the Directors feel that a greater percentage of capacity will be utilised. This will necessarily call for a larger working capital even after providing for reasonable bank credit. The Company has obtained permission for raising debenture capital to the tune of Rs. 25 lakhs. It has, however, now come out with a comprehensive scheme of arrangement involving issue of capital and the running of the two works under different companies. In view of the diverse nature of the activities of the works, the Directors find that the running of these two separate plants under the same Company creates difficulties and the Company as a whole has to suffer. The scheme of arrangement is as follows:

1. Additional finance of the order of Rs. 50 lakhs by the issue of equity shares will be raised as early as possible.

2. The two works will function under different companies.

3. If another company is formed, it will be for taking over the rolling mill works at Khardah and the capital to be raised, as referred to earlier, will be raised by the said new company.

4. The offer of capital of the proposed new rolling mill company will, in the first instance, be made to the shareholders of this company at par and in proportion to their holdings in this company with liberty to renounce their right in favour of any other person.

5. The fixed assets of the Khardah works will be sold to the new company at their written down book value and the stocks of stores, raw materials and finished goods will be transferred at the purchase price or controlled price whichever is higher.

6. All the contractual obligations of the Company regarding Khardah works in respect of stores, machinery, plant, raw materials and finished products will be transferred to the new company.

Following arbitration by the Government of West Bengal on the demands of workers for higher wages, more amenities, etc., the Company's wage bill has gone up by Rs. 4 lakhs per annum, with effect from 6th December 1958. The result of this increase on profit will be felt in the current year.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 17.62 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 7.6 per cent. per annum.

COOPER ENGINEERING LTD.

The Directors of Cooper Engineering Limited have decided to increase the Company's paid-up capital by the issue of 20,000 ordinary shares of Rs. 100 each. Announcing this in the course of a circular, the Company says that the additional capital is for the purpose of financing the further expansion schemes in hand. In addition to increasing the production of diesel engines, it is proposed to convert all the present models into the new Ricardo combustion system which reduces operation costs for the customer due to its higher efficiency.

The Company has been engaged in the manufacture of various types of machine tools for a long time. Since recently, however, greater attention has been paid to increasing the production of shaping machines. Furthermore, the Machine Tools Directorate of the Government of India has advised the Company to take up the manufacture of planing and slotting machines for which the Company has received the necessary licences. Arrangements have been concluded with the Industrial Credit and Investment Corporation of India, Ltd., for the underwriting of this issue.

KAMANI ENGINEERING CORPORATION LTD.

MR. R. H. KAMANI OPTIMISTIC ABOUT OUTLOOK

SPEAKING to the shareholders at the Thirteenth Annual General Meeting of Kamani Engineering Corporation Ltd, held at Bombay on 11th June 1959, Mr. R. H. Kamani, Chairman, observed as follows:

"GENTLEMEN,

"I have great pleasure in welcoming you all on behalf of my fellow Directors to this thirteenth annual general meeting of the Company. Before I proceed further with my speech, I would ask you to join me in paying our humble and respectful tribute to the memory of the late Shri M. G. Purohit, Director of the Company.

"The Directors' report and the audited profit and loss account and the balance-sheet for the year ended 30th September 1958 have been in your hands for some time and, with your permission, I shall take them as read. I do not think that the essential fact revealed from the accounts will be lost sight of by you—that our working for the year under review has resulted in a profit four and a half times higher than the previous year. Each activity of the Company has shown improvements, in spite of a number of difficulties, such as shortage of steel supplies, or import restrictions due to foreign exchange stringency.

"You will agree with me that the working of the Company has been satisfactory during the year under review. This has been largely possible, because of the increased turnover of our two principal activities, viz., manufacture and erection of transmission line towers and other structurals, as well as the sale of the agency products. In May 1958, a record level of production of 1,000 tons per month has been achieved. This production is maintained on an average and there is a fair possibility that this would still rise.

"In spite of the limitation of the foreign exchange and the curtailment of the second Five-year Plan, our agency activity has also continued to improve.

"We had many important projects on hand, specially the transmission line connecting Korba power station to Bhilai steel plant. The bulk of the work was carried out during the year and some of the projects have since been completed; most of them ahead of the scheduled dates. Work is in progress on the other important projects like Koyna. During the year, we have received more orders for supply and erection of transmission lines.

"One of the important factors which has been responsible for the improved working and for better possibilities in the future, is that the Government policy, to which reference was made in my last year's speech, under which fabricated transmission line tower material was being imported, has since been revised, for which I am grateful to the Government. While the Government policy is now more helpful to the indigenous transmission line tower manufacturing industry, yet the continued difficulty of foreign exchange restricts the import of steel, which is the basic raw material for your Company, as well as all the engineering industry. The difficulty with regard to steel is likely to ease in view of the improved import of steel from abroad as well as the likely start of the indigenous steel plants. In view of this, we can look to the future with confidence.

"While already there is surplus capacity, I have noted with regret that further capacity is being licensed and certain proposals are being considered for putting up a plant in the private and public sectors. This fact has been brought to the notice of the concerned authorities and I hope that due consideration will be given to this matter.

"In order to contribute our humble share in the earning of foreign exchange, the Company has set up an export department to explore the possibility of export.

"The achievement of the Company speaks for the good effort put in by the workers and the staff of the Company. The long tradition of cordial relationship has been maintained and their efforts are continuing to improve. I sincerely thank one and all for their sincerity and loyalty to the Company."

COMPANY MEETINGS AND DIVIDENDS

BENGAL POTTERIES LTD. Annual General Meeting, Calcutta, 23rd June 1959. Transfer books will remain closed from 15th June to 11th July 1959, both days inclusive.

SEEBPORE COAL CO., LTD. Annual General Meeting, Calcutta, 25th June 1959. Dividend: Re. 1.75 per share. Transfer books will remain closed from 15th to 25th June 1959, both days inclusive.

AHMADPUR KATWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 26th June 1959. Transfer books remain closed from 12th to 26th June 1959, both days inclusive.

BURDWAN-CUTWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 26th June 1959. Transfer books remain closed from 12th to 26th June 1959, both days inclusive.

BANKURA DAMODAR RIVER RAILWAY CO., LTD. Annual General Meeting, Calcutta, 26th June 1959. Transfer books remain closed from 12th to 26th June 1959, both days inclusive.

INDIAN STANDARD WAGON CO., LTD. Annual General Meeting, Calcutta, 26th June 1959. Transfer books will remain closed from 17th to 26th June 1959, both days inclusive.

ALCOCK, ASHDOWN & CO., LTD. Annual General Meeting, Bombay, 26th June 1959. Dividend: Rs. 12.50 per share, payable on and after 3rd July 1959. Transfer books remain closed from 2nd to 16th June 1959, both days inclusive.

SHREE GOPAL PAPER MILLS LTD. Annual General Meeting, Calcutta, 27th June 1959. Transfer books will remain closed from 17th to 27th June 1959, both days inclusive.

CALCUTTA GAS CO. (PROPRIETARY) LTD. Annual General Meeting, Calcutta, 29th June 1959. Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books will remain closed from 15th to 29th June 1959, both days inclusive.

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala State, 29th June 1959. Dividend: 15 per cent. or Re. 1.50 per share. Transfer books will remain closed from 23rd to 29th June 1959, both days inclusive.

DUNBAR MILLS LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: *Nil*. Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

ELGIN MILLS LTD. Annual General Meeting, Kanpur, U.P., 29th June 1959. Dividend: Re. 0.75 per share. Transfer books will remain closed from 13th to 29th June 1959, both days inclusive.

JYOTI LTD. Annual General Meeting, Baroda, 29th June 1959. Dividend: 12 per cent. or Rs. 12.00 per share, payable on or after 16th July 1959. Transfer books will remain closed from 19th to 29th June 1959, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: *Nil*. Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

HARINAGAR SUGAR MILLS LTD. Annual General Meeting, Bombay, 30th June 1959. Transfer books will remain closed from 23rd June to 7th July 1959, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 3rd July 1959. Dividend: *Nil*. Transfer books will remain closed from 24th June to 3rd July 1959, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 7th July 1959. Dividend: Re. 1.25 per share. Transfer books will remain closed from 23rd June to 7th July 1959, both days inclusive.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Transfer books will remain closed from 1st to 10th July 1959, both days inclusive.

KANKNARRAH CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: *Nil*. Transfer books will remain closed from 6th to 10th July 1959, both days inclusive.

RADIO AND ELECTRICALS LTD. Annual General Meeting, Madras, 10th July 1959. Dividend: 7½ per cent. Transfer books will remain closed from 27th June to 10th July 1959, both days inclusive.

NEW GREAT INSURANCE CO. OF INDIA LTD. Annual General Meeting, Baroda, 11th July 1959. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 25th June to 11th July 1959, both days inclusive.

BISRA STONE LIME CO., LTD. Interim dividend of 87 nP per ordinary share, for the year ended 31st March 1959. Transfer books will remain closed from 15th to 29th June 1959, both days inclusive.

COMPANY REGISTRATIONS

PIARELAL AND SONS PRIVATE LTD. (First Director: Mr. Piarelal Talwar.) Business: Importers, exporters and stockists of all kinds of irons, steel products etc. Authorised capital: Rs. 50,00,000. Private company. Address: 6, Mirza Street, Bombay.

STEEL GUILD PRIVATE LTD. (First Director: Mr. B. O. Valia.) Business: Iron founders, mechanical engineers, etc. Authorised capital: Rs 50,00,000. Private company. Registered office of the company will be situated in the State of Bombay.

SUMANI PRIVATE LTD. (First Director: Shrimati Manibai Lalitkumar Khatau.) Business: Importers, exporters, manufacturers and dealers in merchandise goods etc. Authorised capital: Rs. 5,00,000. Private company. Address: 6, Laxmi Buildings, Ballard Road, Bombay.

SYNOPSES OF COMPANY REPORTS

Arvind Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Narottam Lalbhai and Co., Ahmedabad) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year after providing Rs. 17,61,276 (Rs. 18,54,118) for depreciation and development rebate and Rs. 47,00,000 (Rs. 33.60,000) for tax provision amounts to Rs. 18,61,954 (Rs. 14.89,807). The interim dividend at Rs. 12.50 (Rs. 12.50) on 60,000 (40,000) ordinary shares for the year 1958 absorbed Rs. 7,50,000 (Rs. 5,00,000) leaving a balance of Rs. 11,11,954 (Rs. 9.89,807). Adding thereto the balance brought forward from the previous year's account of Rs. 28.706 (Rs. 21.163 including Rs. 6,339 being surplus of preference share dividend account of 1956) there is a total amount of Rs. 11,40,660 (Rs. 10,11,420). From this amount the directors recommend payment of dividends as follows:

To the payment of the final dividend of Rs. 15.50 (Rs. 22.50 including a bonus of Rs. 10.00 per share) per ordinary share, income-tax free, on 60,000 (40,000) ordinary shares for the year ended 31st December 1958 absorbing Rs. 9,30.000 (Rs. 9,00,000); to the payment of a dividend on 5,250 5 per cent. cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 17,981 (Rs. 17,981); to the payment of a dividend on 10,500 4½ per cent. cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 32,367 (Rs. 32,367); to the payment of a dividend on 5,250 4½ per cent. 'B' class redeemable cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 16,183 (Rs. 16,183) and to the payment of a dividend on 5,250 4½ per cent. 'C' class redeemable cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 16,183 (Rs. 16,183) leaving to be carried forward to next year's account Rs. 1,27,946 (Rs. 28,706).

During the year under review, the one factor which has contributed for satisfactory results is cheaper cotton. If this factor had not so operated, the results would not have been as favourable because of a steep rise in the wages and the prices of stores and chemicals.

The Government revised the scale of excise duties three times during the year and it was hoped that these measures would help the revival of the demand and the industry would be able to turn the corner. Unfortunately, owing to rising food prices, these expectations have failed to materialise. The burden of the excise duties, however, is much higher than the levels of 1955-56 though the cloth prices have dropped to pre-1955 levels.

The country has been passing through difficult times particularly in reference to the availability of the foreign exchange, with the result that foreign cotton has been scarce and the Company was forced to rely on Indian Cotton in order to keep the mills working.

The Company had ordered the Spinning and Weaving Machinery for which the Government of India had given the licence last year. Orders have been placed for the machinery and it is expected that the additional plant will go into production sometime by the middle of 1960.

Further progress was made on the mills' reorganisation and renovation programme during the year. A sum of Rs. 15,41,552 was spent on extension of buildings and installation of new machinery and equipment.

The installed capacity of the mills is 62,448 ring spindles, 3,964 doubling spindles and 1,216 looms with complete dyeing, bleaching and printing plants.

Accounts in brief are as under:—

Binod Mills Co., Ltd.

The directors of the above Company (President: Mr. Lalchand B. Sethi, Indore) present the audited accounts of the Company for the year ended 31st December 1958.

The profit before charging depreciation and bonus (if any) amounts to Rs. 9,11,806 (Rs. 8,19,095). To this is added the net credits relating to previous years of Rs. 17.987 (*nil*) making a total of Rs. 9.29,793 (Rs. 8.19.095). The provision for depreciation amounts to Rs. 7.97.266 (Rs. 6.84,352) leaving a balance of Rs. 1,32,527 (Rs. 1,34,743). Adding to this the balance brought forward from the previous year of Rs. 82.676 (Rs. 1,07.933) there is left an amount of Rs. 2,15,203 (Rs. 2,42,676). To this is added the amount transferred from general reserve of.

This amount is part of Rs. 6.00,000 provided for taxation from out of the taxed undistributed profits for 1956, and transferred to general reserve in 1957 on being found surplus to requirements Rs. 4.00,000 (Rs. 3,00,000 transferred from dividend equalisation fund) making a total of Rs. 6,15,203 (Rs. 4,42,676 after transferring to investment reserve Rs. 1,00,000). The directors have transferred to development rebate reserve Rs. 2,31,272 (*nil*) leaving an available balance for disposal of Rs. 3,83,931 (Rs. 4,42,676). Out of this sum, the directors recommend the declaration of a dividend at Rs. 6 (Rs. 6) per share, free of income-tax, absorbing Rs. 3,60,000 (Rs. 3,60,000) leaving to be carried forward Rs. 23,931 (Rs. 82,676).

Taxation: Income-tax assessments have been completed for the Company's accounting years upto and including 1953. Appeals against some of the completed assessments have not yet been heard. The provision for taxation as at 31st December 1958 stands at Rs. 4.69,415. The Company has made advance payments under Sections 18A and 23 (b) amounting to Rs. 6,75,277. The Company is liable to wealth tax for the accounting years 1956, 1957 and 1958, this liability being estimated at approximately Rs. 1,60,000. Looking to the carryover of losses and unabsorbed depreciation of past years, the directors are of the opinion that even after meeting the liability in respect of wealth tax, the balance on the provision for taxation account will be adequate to meet the Company's income-tax liabilities in respect of all accounting periods upto the balance-sheet date.

As reported last year, the Cotton Textile Loan Advisory Committee has now recommended the grant of a loan of Rs. 13,38,029 to the Company by the National Industrial Development Corporation on the security of the fixed assets of the Binod Mills Unit. The matter is under consideration.

Working Results: As reported last year, the unfavourable conditions in the cloth market prevailed throughout the year and the Mills were unable to liquidate the huge stocks of cloth bales continuously held in stock. The Company experienced financial stringency with the result that it could not take advantage of the lower rates of cotton in the beginning of the season. However when compared with the working results of the previous year, the Company's working during the year under report was satisfactory.

Home Markets: The cloth market continued to be in a depressed state during the year. The demand for coarse and medium cloth in particular was very slack, and it resulted in huge accumulation of stocks. The directors feel that amongst other reasons, the most important one responsible for the slack demand, has been the changing tastes of consumers. Now-a-days there is greater demand for more processed and better finished goods. The directors have under consideration a plan to install machinery to meet the requirements of the time.

Export Markets: During the year under report, 31,55,113 yds., of cloth was sold in export market by the Company of the total value of Rs. 15.17,688. As reported last year, in spite of best efforts, export sales could not be increased. However, due to the recent introduction of some Cotton Textile Export Promotion Incentives Schemes, the Company have so far sold in 1959 31,00,000 yds. in export, and further efforts are being made to increase export sales, the benefit of which would be derived in the form of import of cotton, dyes and chemicals, and machinery.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,30,000	Gross block	1,31,55,296

Rajalakshmi Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. B. Rangaswamy Naidu and Co., Uppilipalayam) present the audited accounts of the Company for the year ended 31st December 1958.

After deducting all working expenses and interest and providing Rs. 4,84,626 (Rs. 3,60,992) as depreciation, the year's working has ended in a net loss of Rs. 1,12,878 (profit of Rs. 1,88,328). Out of the income-tax paid for the year 1955, a refund of Rs. 9,354 was received in the year and credited to the profit and loss account. The following further expenses have been incurred in the year of account: Donations and charities Rs. 7,724 (Rs. 2,043), Wealth tax for the years 1956 and 1957 Rs. 47,316 and bonus paid for the year 1956 in excess of the provision made for that purpose Rs. 31,647. After taking into account the said receipt and disbursements, there is a sum of Rs. 1,89,711 (credit of Rs. 1,91,355 including the balance of Rs. 5,070 brought forward from 1956. From this dividend absorbed Rs. 1,49,141 and transfer to machinery replacement reserve Rs. 41,914) to the debit of the profit and loss account. The directors recommend to carry forward the said loss to next year. The directors are recommending the declaration of a tax-free dividend of 6¼ (6¼) per cent. from profits to the preference shareholders, and a tax-free dividend of 6 (9) per cent. from profits to the equity shareholders. An amount of Rs. 1,77,433, the sum required for the payment of such dividends has been appropriated from the dividend equalisation reserve.

Power cut for an appreciable long period, high prices of cotton, low prices of yarn, non-availability in sufficient quantities of foreign cotton and non-availability of staple fibre in sufficient quantities have all contributed to the poor results of the year of account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	60,00,000	Gross block	1,88,91,451

Vijaya Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Haridas Achratlal & Co., Ltd., Ahmedabad) present the audited accounts of the Company for the year ended 31st December 1958.

During the year under report, the Company has made a gross profit of Rs. 15,77,315 (Rs. 12,12,567). Deducting therefrom managing agents' remuneration of Rs. 81,612 (Rs. 72,585), provision for depreciation on machinery and buildings Rs. 4.83,307 (Rs. 7,10.304), development rebate Rs. 1,65,358 (Rs. 2,00,824), taxation provision (including provision for wealth tax) Rs. 4,71,000 (Rs. 1,50,000) and donations Rs. 31,928 (Rs. 27,417) there remains a balance of Rs. 3,44,110 (Rs. 78.854). To this is added last year's balance brought forward of Rs. 23,300 (Rs. 59,446) making a total of Rs. 3,67,410 (Rs. 1,38,300). The directors recommend to appropriate above sum as under:—

To dividend (income-tax free) for the year, on 3,500 2nd cumulative preference shares of Rs. 100 each at 4 per cent. absorbing Rs. 14.000 (Rs. 14,000 by transfer from general reserve), to dividend (subject to income-tax) for the year, on 2,800, 3rd redeemable cumulative preference shares of Rs. 100 each at 4½ per cent. absorbing Rs. 12,600 (Rs. 12.600 by transfer from general reserve), to dividend (income-tax free) for the year, on 7,000 ordinary shares of Rs. 500 each at Rs. 35 (Rs. 35) +Rs. 5 (Rs. 5) as bonus totalling Rs. 40 (Rs. 40) per share, absorbing Rs. 2,80,000 (Rs. 2.80,000 by transfer from general reserve), to gratuity reserve Rs. 25,000 (*nil*) and to charity account Rs. 10,000, leaving a balance of Rs. 25,810 (Rs. 23,300 after placing Rs. 1,00,000 to general reserve fund Rs. 5,000 to doubtful debt reserve fund and Rs. 10,000 to charity account. The dividends for 1957 were paid out of a sum of Rs. 3,06,600 transferred from the general reserve fund) to be carried forward to next year's account. It will be observed that a sum of Rs. 1,24,019 equal to 75 per cent. of the total development rebate of Rs. 1,65,358 has been transferred to development rebate reserve as per the provisions of the Income-tax Act and balance of Rs. 41,339 equal to 25 per cent. of the total sum, has been transferred to development and rehabilitation reserve account as per past practice. No provision for additional depreciation has been made in the total depreciation provided for the year under report as the period for allowing the same has not been extended by the Finance Act, 1959.

The Company has made the provision of bonus for the year 1958 in the expenditure, according to the past practice, even though there is no bonus pact in existence.

During the year under report the cost of production had gone up due to increase in dearness allowance and prices of colours and chemicals used in the manufacture and also of fuel, whereas the prices realised in the sales of cloth were low in view of the depressing conditions of the market during June to December 1958, in comparison with the cost of production. Due to these factors the working of the Company was adversely affected.

During the year there is an addition of Rs. 8,42,697 in the fixed capital expenditure of the Company. This expenditure includes mainly the cost of 81 *Texmaco* plain looms, chainless cloth mercerising machine, caustic recovery plant and *Cezoma* rewinding machine, etc.

The mill has worked for 2 shifts during the year. There are, in the mills, 41,056 ring spindles and 780 looms along with necessary processing machinery.

Accounts in brief are as under:—

Tide Water Oil Co. (India), Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1958.

The accounts show a profit after charging all expenses, of Rs. 2,17,272 (Rs. 2,76,256) of which provision for taxation requires Rs. 1,23,000 (Rs. 1,70,000) leaving a balance of Rs. 94,272 (Rs. 1,06,256). With the balance brought forward from last year of Rs. 68,892 (Rs. 57,636) there is a total amount available for appropriation of Rs. 1,63,164 (Rs. 1,63,892). The directors have transferred to development rebate reserve Rs. 2,504 (*nil*) and paid an interim dividend of 50 (50) naye Paise per share absorbing Rs. 30,000 (Rs. 30.000). The directors now recommend payment of a final dividend of Re. 1.00 (Re. 0.75) per share amounting to Rs. 60,000 (Rs. 45,000) leaving a balance to be carried forward of Rs. 70,660 (Rs. 68,892 after providing Rs. 20,000 for bad and doubtful debts) Rs. 8,060 (Rs. 11.500) has been provided for wealth tax by a transfer of this amount from special reserve.

The Company has had a satisfactory year in spite of the present restrictions on the issue of import licences for lubricating oils and greases. With India's present shortage of foreign exchange, it is not possible to obtain licences for all requirements, and the Company's prospects mainly depend on the Government's future licensing policy.

Accounts in brief are as under:—

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts, after charging all expenses and writing back provision against sales tax in respect of previous years show a profit of Rs. 6,29,414 (Rs. 59,388) of which provision for taxation including Rs. 18,500 in respect of previous years requires Rs. 58.000 (*nil*) leaving a net profit of Rs. 5,71,414 (Rs. 59.388). From this amount the directors have transferred to general reserve Rs. 3,00,000 (*nil*) and to development rebate reserve Rs. 2.285 (*nil*) leaving a balance of Rs. 2,69,129 (Rs. 59,388). The balance brought forward from the last year was Rs. 6,111 (Rs. 1,330) making a total available for distribution of Rs. 2,75,240 (Rs. 1,25,111) including Rs. 64,393 being provision against anticipated loss on jute for the previous year written back). An interim dividend was declared on 1st December 1958, on ordinary shares at Rs. 2.50 (*nil*) per share which absorbed Rs. 70,000 (*nil*). The directors now recommend payment of final dividends on preference shares at Rs. 7.00 (Rs. 7.00) per share absorbing Rs. 49.000 (Rs. 49,000) and on ordinary shares at Rs. 5.00 (Rs. 2.50) per share absorbing Rs. 1,40,000 (Rs. 70,000) leaving a balance to be carried forward of Rs. 16,240 (Rs. 6,111). Wealth tax for the year is estimated to amount to Rs. 31,000 (Rs. 29,000) and this has been provided for by transfer of this sum from general reserve.

In accordance with the working time agreement of the Indian Jute Mills Association the mill worked 48 hours per week with 12½ per cent. of the total looms sealed during the period to which the accounts pertain. From the 2nd March 1959, a further 1½ per cent. of the looms have been sealed.

Accounts in brief are as under:—

Indo-Burma Petroleum Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Steel Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year, after charging items relating to previous years and providing for depreciation, was Rs. 50,39,616 (Rs. 53,50,967) to which must be added the balance of Rs. 1,06,640 (Rs. 67,682) brought forward from 1957 and a sum of Rs. 15,92.379 (*nil*) which has been transferred from taxation provision account. This past provision has been freed as a result of the completion during the year of a considerable number of outstanding assessments in India and Pakistan dating back to the year 1948-49 and of the successful conclusion of substantial taxation appeals. The resulting total Rs. 67,38.635 (Rs. 55,07,213 including Rs. 88,564 being provision for legal expenses written back) is reduced to Rs. 25,68,489 (Rs. 23,55,578) by the following:—To provision for the current year's taxation Rs. 31,26,862 (Rs. 30.43,054), to provision for terminal gratuities to local staff Rs. 5,00,000 (*nil*), to net transfer to development rebate reserve Rs. 43.294 (Rs. 1,08,581) and to transfer to general reserve Rs. 5,00,000 (*nil*). The usual dividends on preference shares have absorbed Rs. 2,39,750 (Rs. 2,48,938) (net), while the Interim dividend of Re. 1 (Re. 1) per share which was paid on the ordinary share capital on 28th November 1958. accounted for a further Rs. 10,00,000 (Rs. 10,00,000). The directors recommend payment of a final dividend of Re. 1 (Re. 1) per share on the ordinary share capital which will absorb Rs. 10,00,000 (Rs. 10,00,000) and that the sum of Rs. 3,28,739 (Rs. 1,06,640) be carried forward to 1959.

Sales of products in India and Pakistan showed a small decline as compared with 1957, but improved in Burma. Restrictions on the sale of kerosene in India were unavoidably imposed by Government during the second half of 1958, but these restrictions have since been relaxed.

The margin of profit on sales in India was lower as a result of The Mineral Oils (Additional Duties of Excise and Customs) Act 1958.

The test well being drilled in Lancashire to which reference was made in last years report has still to reach the estimated completion depth.

Accounts in brief are as under:—

SHREE GOPAL PAPER MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Next Annual General Meeting of the Shareholders of the Company will be held at its registered office at 12, India Exchange Place, Calcutta on 27th June 1959, at 11 a.m., to transact the following business. Your presence in the meeting is requested.

AGENDA

1. To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st December, 1958.
2. To declare Dividends.
3. To elect Directors in place of those who retire.

   Messrs. H. P. Poddar and R. P. Agrawal, Directors of the Company being longest in office, retire by rotation, and being eligible offer themselves for re-election. S. B. Mohan Singh and Shri R. S. Khemka who were co-opted on the Board of Directors of the Company on 14th August 1958 also retire under Section 260 of the Companies Act and being eligible offer themselves for election.
4. To appoint Auditors and to fix their remuneration.

   The present Auditors, Messrs. Price, Waterhouse, Peat & Co., retire and are eligible for re-appointment.
5. *Special Business*:—

   To consider and if thought fit to pass the following resolutions with or without modification as Special Resolutions:—

   (*a*) "That pursuant to Section 314 of the Companies Act 1956 the Company hereby consents to Dewan Dina Nath who is proposed to be nominated on the Board of the Company by the Managing Agents, continuing to hold an Office of Profit as a Director of the Company."

   (*b*) "That the Directors of the Company be and they are hereby authorised to take on rent such portion or portions of premises No. 25, Brabourne Road, Calcutta, belonging to Messrs. Indian City Properties Ltd. as may be necessary for the purposes of the Company either exclusively or in common with one or more of their allied companies on the terms and conditions as to rent and air-conditioning levy as set out in the explanatory notes hereto according to the areas occupied exclusively and in case of areas occupied in common as above, such proportion of rents and air-conditioning levy payable for the area so occupied as the Directors of the Company may agree with the said other companies from time to time."

   (*c*) "That the contracts between the Company and the Managing Agents for the purchase and sale of the following shares at the rates noted against their names be and are hereby approved and confirmed:—

PURCHASES

Name of the Share	*No. of shares*	*Purchase rate*	*Date of purchase*
Karamchand Thapar and Bros. (Coal Sales) Ltd.	1,000	Rs. 106	31st January, 1958.

SALES

Name of the Share	*No. of Shares*	*Sale rate*	*Date of sale*
United Collieries Ltd...	8,000	Rs. 10	18th March, 1958."

6. To transact any other business that under the Articles may be transacted at the Annual General Meeting.

Note: (i) The Share Transfer Books of the Company will be closed from the 17th to 27th June, 1959, both days inclusive.

(ii) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy who need not be a member to attend and vote instead of himself.

(iii) The Explanatory notes of the above resolutions have been sent to the shareholders along with the notice of the Meeting. It can be inspected at the Registered Office of the Company at 12, India Exchange Place, Calcutta, during usual office hours on any working day.

By Order of the Board,
KARAMCHAND THAPAR & BROS. PRIVATE LTD.,
Managing Agents.

CALCUTTA, *2nd June*, 1959.

THE KALIGHAT-FALTA RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Members of the Kalighat-Falta Railway Co., Ltd., will be held at 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 29th June 1959, at 4-00 p.m. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. T. K. Basu, the Director retiring by rotation at the Meeting.
3. To appoint Auditors and fix their remuneration.

   AS SPECIAL BUSINESS
4. To consider and, if thought fit, to pass the following resolution:—

   "That Mr. C. Hockley be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 15th June 1959 to 29th June 1959, both days inclusive.

By Order of the Board,
THE KALIGHAT-FALTA RAILWAY CO., LTD.,
J. R. HOLLANDER,
Director.

3, NETAJI SUBHAS ROAD,
CALCUTTA-1, *3rd June* 1959.

Note:—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

EXPLANATORY STATEMENT

Mr. C. Hockley who was appointed by the Board as an Additional Director in November, 1958, vacates office at this Annual General Meeting under Article 113 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution set out in item No. 4 of the above Notice is intended to effect the appointment of Mr. Hockley as a Director of the Company liable to retirement by rotation.

HERCULES INSURANCE COMPANY LIMITED

(*Incorporated in India*)

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FOURTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta, on Friday the 10th July 1959, at 4 p.m., for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1958.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring. And, in this connection, notice is hereby given that Special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following resolutions at the meeting.

   "That Sir Badridas Goenka, the Chairman of the Company, who has attained the age of 75 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

   "That Rai Bahadur Moongtu Lall Tapuriah, a Director who has attained the age of 72 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. Appointing Auditors and fixing their remuneration.

   AS SPECIAL BUSINESS
5. Sanctioning the payment of Rs. 32,150 to the Directors as their fees for services rendered during the year ended 31st December, 1958.

The Share Transfer Books will be closed from the 1st July to the 10th July 1959, inclusive.

By Order of the Board,
E. K. SRINIVASAN,
Managing Director.

CALCUTTA, *5th June*, 1959.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 10th July 1959.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

Item 3.—Sir Badridas Goenka has been connected with the Company almost from its inception, first as a Director then as Chairman and your Directors recommend that the Company should continue to have the benefit of Sir Badridas' long experience and guidance which have been of great value to the Company by his re-appointment as a Director.

No other Director is interested in this resolution.

Rai Bahadur Moongtu Lall Tapuriah has been a Director of the Company since 1938. His long experience has been of great value and the Directors recommend that the Company should continue to have the benefit of his advice by his re-appointment as a Director.

No other Director is interested in this resolution.

Item 5.—Under Section 309(1) of the Companies Act, 1956, shareholders' sanction is necessary for payment of fees to the Directors. The sum of Rs. 32,150 is computed on the same scale as in previous years, namely:

	Rs.
At Rs. 200 p.m. per Director for 12 Directors of whom Mr. Lokumal Kishinchand was up to 24th April, 1958	27,150
Extra for the Chairman and Deputy Chairman at Rs. 2,000 each per annum	4,000
Extra for Investment Committee constituted by the Chairman and Deputy Chairman at Rs. 500 each per annum	1,000
Total ...	32,150

The Directors are interested only to the extent of the fees receivable by each.

Preference Share Transfer Books will be closed from 26th June to 30th June 1959, both days inclusive.

By Order of the Board,
ASPINWALL & Co. (TRAVANCORE) LTD.,
V. C. THOMAS,
Managing Agents.

ALLEPPEY, *6th June* 1959.

GILT-EDGED FIRM

(*From Our Own Correspondent*)

BOMBAY, *10th June*

Conditions in the short-term money market have become still more comfortable than a week ago, thanks to the gradual falling off in demand for bank credit and the return of funds that had been lent by them. Banks are, therefore, less keen on borrowing fresh money from the market. In the inter-bank section, lenders continue to predominate, with business in call money going on at the lower rate of 3½ per cent. among the Exchange banks and big Indian banks. Some banks are, however, unwilling to lend at less than 3½ per cent. The rate among the smaller Indian banks has declined from 3½-3¾ per cent. to 3½ per cent. House money at seven days' notice is being quoted at the self-same rate of 3¾ per cent. and short-term deposits for one to six months at 3½ to 4 per cent.

The response to Treasury Bill sales, however, continues to be lukewarm, the amount offered this week being no more than Rs. 2.37 crores, as against Rs. 2 crores called for. Tenders at Rs. 99.305 were allotted about 84 per cent. Lower tenders were rejected. The average rate of accepted tenders was unchanged at 2.780 per cent. per annum, to which level it had declined last week from 2.790 per cent. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate Bills during the week ended 6th June. But they will be offered this week at the same rate of 99.321 per cent. as in the previous week.

After a break of three weeks, the Reserve Bank of India statement for the week ended 5th June 1959 shows an expansion of Rs. 16.78 crores in notes in circulation. Notes held in the Banking Department are lower by Rs. 18.93 crores, the resulting drop of Rs. 2.15 crores in total notes issued is covered by a corresponding fall in rupee coin. Foreign securities are again unchanged, but there has been a further drain of Rs. 1.09 crore in balances held abroad, bringing the total foreign exchange reserves down to Rs. 197.92 crores. Deposits of the Central Government have declined by Rs. 18.70 crores and those of other Governments by Rs 2.78 crores. Loans and advances to Governments are also lower by Rs. 1.87 crore, while other loans and advances show a rise of Rs. 2.06 crores. Investments have been enlarged by Rs. 9.62 crores, but Government Treasury Bills purchased have declined by Rs. 9.55 crores.

The Scheduled Banks' statement for the week ended 29th May 1959 discloses a fall of Rs. 1.67 crore in demand deposits and an increase of Rs. 6.38 crores in time deposits. Inter-bank borrowings, too, have gone up by Rs. 4.38 crores, while borrowings from the Reserve Bank are lower by Rs. 7.47 crores. There has been a further drop of Rs. 5.20 crores in advances and of Rs. 2.42 crores in bills purchased and discounted. The recent improvement in Gilt-edged securities, thanks to institutional support, is reflected in the rise of Rs. 10.19 crores in banks' investments. There has been a contraction of Rs. 5.58 crores in cash balances and an increase of Rs. 3.63 crores in money at call and short notice.

With only a fortnight to go for the announcement of the terms of the new Central Government loans, the Reserve Bank has started grooming the market. Today, it stopped sales of four loans, namely, 3½ per cent. 1967, 3½ per cent. 1968, 3½ per cent. 1974 and 4 per cent. 1972. This, together with the institutional demand for short and medium dated loans, has pushed up prices of securities all-round, the extent of rise ranging from 5 nP to 10 nP. The volume of business done is not commensurate with the demand, in view of scarcity of stocks and paucity of sellers. 4 per cent. and 4½ per cent. State loans are also in demand, but business is small.

3 per cent. 1986 Conversion Loan is being maintained at Rs. 73.75, while 3 per cent. 1970-75 has hardened by 10 nP to Rs. 91.50. A similar rise is noted in 3 per cent. 1966-68 at Rs. 94.10, in 3 per cent. 1963-65 at Rs. 96.90 and in 3 per cent. 1959-61 at Rs. 99.90. 2½ per cent. 1960 is marked up by 5 nP to Rs. 99.20 and 2½ per cent. 1961 by 10 nP to Rs. 97.50. 3½ per cent. 1962 has gathered 10 nP to Rs. 99.25 and 3½ per cent. 1961 5 nP to Rs. 100.15. 3¼ per cent. 1963 and 1964 have each risen by 5 nP to Rs. 100 and Rs. 99.85, respectively. 3¼ per cent. 1965 has advanced by 10 nP to Rs. 99.70. Following the stopping of sales by the Reserve Bank, 3½ per cent. 1967 has shot up today by 10 nP to Rs. 99.20 and 3½ per cent. 1968 to Rs 99.10. 3½ per cent. 1974 is up by 5 nP at Rs. 98.90 and 4 per cent. 1973 by 5 nP at Rs. 101.60.

There has been a slight weakening of the rupee in terms of the U.S. dollar, in consonance with the trend of sterling abroad. Banks' selling rate of ready dollars has gone up from Rs. 475.75 to Rs. 476 per $100 and their buying rate from Rs. 472.50 to Rs. 472.75 per $100. In New York, spot sterling has declined from 281.22-281.25 cents to 281.15-281.18 cents and three months' forward after an earlier improvement from 281.06-281.09 cents to 281.18-281.22 cents, has dipped to 281.07-281.10 cents.

OFFTAKE OF HIDES SLOW

(*From Our Own Correspondent*)

MADRAS, *8th June*

There was no change in the hides and skins market during the week under review. Owing to staggered inquiries for shipment business, prices were slightly weak. Sellers were making offers on a liberal scale which was not conducive to keep the market steady. Arrivals were small and offtake by shippers slow on account of the local prices being higher than those ruling for shipment. There were several bales of inferior fifths cow at low prices to the U.K.

The tanned goat skins ruled quiet and middle class sheep skins weak.

Shipments during May 1959 were: To the U.K.: 3166 bales tanned cow hides, 355 tanned cow calf, 22 tanned buff hides, 306 tanned buff calf, 491 tanned goat and 492 tanned sheep skins; to the Continent: 23 bales tanned cow hides, 53 tanned cow calf, 146 tanned buff calf, 608 tanned goat and 321 tanned sheep skins; to the U.S.A.: 69 bales tanned cow hides, 9 tanned cow calf skins, 134 tanned buff hides, 344 tanned buff calf, 162 tanned goat and 4 tanned sheep skins; to Japan: 2 bales tanned goat skins and 245 tanned sheep skins.

BULLION QUIETLY STEADY

(*From Our Own Correspondent*)

BOMBAY, *10th June*

The bullion market depicted a distinctly easy trend during the first three sessions of the week under review, but picked up strength on Monday which persisted yesterday and today also, except that there was a slight reaction towards the close. The earlier easiness was due to rumours that imports of silver coins from Tibet would be resumed, reports of large arrivals of contraband gold, and unhelpful advices from Delhi and Calcutta. Consequently, selling ensued and both the metals suffered a setback. The second half of the week witnessed a distinct recovery induced by bull support and short-covering. The market opened today on a firm note, but developed a sagging tendency later. As compared with last week's closing rates, forward settlements in both gold and silver, as well as spot gold were higher as at the close today, while spot silver was lower by As. 12. The undertone of the market at the time of writing is quietly steady.

One of the suggestions made at the third Five-year Plan seminar of professors associated with planning forums in colleges and universities of Bombay State held at Poona this week related to gold hoarded by people. The opinion expressed was that gold hoards should be deposited with the Government on condition that it would be returned to them after ten years. This suggestion, however, did not have any effect on the market.

June settlement in gold encountered selling and moved down from Rs. 118-6-6 to Rs. 117-2 on Monday. Thereafter, it recovered to touch Rs. 119-3 today before finishing at Rs. 119. July settlement, after declining from Rs. 117-0-6 to Rs. 115-14, rose to Rs. 117-7, but closed easy at Rs. 117-4. Throughout the week, bulls in the June settlement continued to pay a margin of Rs. 25 per tola, since the backwardation rate (*budli* in favour of bulls) for this settlement was more than a rupee; it stood at Re. 1-12 today, as against Re. 1-6 last week.

Ready gold receded from Rs. 119-13-6 to Rs. 118-2 on the 8th inst. After recovering subsequently to Rs. 120-7, it finished lower at Rs. 120-4 today. The daily average arrivals of gold were 3,800 tolas, while the offtake was 3,000 tolas. The floating stocks are reported to be around 15,000 tolas.

In the silver section, June settlement opened the week at Rs. 192-3, as against Rs. 192-10, and declined to Rs. 191-0 on Saturday. It gradually recovered thereafter to touch Rs. 193-5 early today, but sagged to Rs. 192-14 towards the close. July settlement, which stood at Rs. 191-15 at the close of last week, eased in the first three sessions to Rs. 190-3. It, however, moved up in the later sessions and saw Rs. 192-7 today before finishing at Rs. 191-15. The backwardation rate for June settlement, which had narrowed down from Re. 1 to As. 11 last week, widened again this week and stood at As. 15 today.

Ready silver came in for selling and retreated from Rs. 194-10 to Rs. 192 on the 6th inst. It recovered subsequently to Rs. 194-5 today, but finished easy at Rs. 193-14. The daily average arrivals and offtake of silver were 15 bars and 11 bars, respectively. The floating stocks are estimated at 400 bars.

Ready and forward silver in the London bullion market were both unchanged throughout the week, at 78½d. and 78¾d. per ounce, respectively. Silver in New York was also unaltered at 91.375 cents per ounce. Ready gold hardened from 249s. 8½d. to 249s. 9½d. per ounce, owing to continued easier trend of the pound sterling *vis-a-vis* the dollar. The latest available dollar rate for gold in London is $35.11-$35.13, as against $35.09½-$35.11½ a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	10-6-59	Highest	Lowest	3-6-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	120 4	120 7	118 2	119 13½

* 22nd June settlement. † 23rd June settlement.

COTTON FUTURES TURN BEARISH

(*From Our Own Correspondent*)

BOMBAY, *10th June*

The downward trend in cotton futures noted towards the close of last week gathered further momentum during the week under review. In fact, there was a thorough change in the market sentiment which turned distinctly bearish. This was market, favourable rain in the growing regions mainly due to a pronounced easiness in the spot and sharp break in cotton values in Ahmedabad. These factors touched off a wave of bull liquidation. Leading spot houses and Akola and Ahmedabad operators also sold heavily. Values consequently suffered a sharp setback. News from the piecegoods market indicating a slackening of business, thanks to the start of the rainy season and the prospects of larger imports of cotton, following the recent liberal quota, imparted further weakness to the market. Even the tight supply position of cotton and considerations of delay, which is inevitable in importing cotton, failed to have any effect on the market. Cotton futures succumbed to heavy selling and lost as much as Rs. 17 per candy over the week.

I.C.C. Jarilla August opened the week on Thursday at Rs. 701.75, as against the previous close of Rs. 704.50 and reacted to Rs. 692.75 towards the close of the day. It steadily declined in subsequent sessions to touch the level of Rs. 688.75 yesterday. Commencing today's session at Rs. 688 the contract improved fractionally to Rs. 688.50 before receding to finish at Rs. 687.25.

In the spot section, mills, having covered a good part of their requirements, were keeping off the market. Obviously none will take the risk of buying in a declining market. The sharp break in prices towards the tail end of the season unnerved mills, especially those which had purchased cotton at higher prices in the past few weeks. Nevertheless, they comforted themselves that this was a passing phase and that the tight supply position would soon assert itself. Most of the buyers adopted a wait-and-watch attitude. Needy mills, however, took advantage of the fall in prices and purchased such popular varieties as Laxmi, Jaydhar, Vijay, Berar and Kalyan.

Export demand for cotton was less keen than in the previous week and prices generally came down. Top quality Bengals continued to be in short supply and available lots commanded handsome premium. Other exportable varieties were neglected.

There was a revival of interest in Sudan cotton and substantial quantities were booked by many prominent Bombay and Ahmedabad mill groups. Sudan XG45 was done at Rs. 1,330 for June-July shipment and XG25 at Rs. 1,380. Some Ahmedabad mills were interested in U.S. growths and business was put through in California G.M.1 5/32" at prices ranging from Rs. 1,150-1,165. East African and Tanganyikan cotton also attracted attention. B.P. 52 was done at Rs 1,320-1,335. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 715; Berar Jarilla 700; Khandesh 850; Laxmi 990; Jaydhar 900.

Conditions in the Karachi cotton market remained practically unchanged from last week. In the absence of any new development trading interest was low. Transactions were few and far between. Prices remained virtually unchanged at last week's levels.

The final estimate of Pakistan's cotton for the present season puts the crop at 1,540,000 bales (of 392 lbs.), as against 1,666,000 bales last season. The acreage under cotton this season declined by about 7 per cent. as compared with last season. Inadequate and irregular supplies of canal waters at the time of sowing in West Pakistan were said to be the main reason for the drop in production.

Firm conditions prevailed in the Alexandria cotton futures market during the week. Nearby and distant positions of both the long-staple Karnak and medium-staple Ashmouni advanced. The strength of the market is attributed to the raising of the export price discount on old crop to 35 per cent. Spot values also hardened. Foreign demand, consequently, tended to fall off. The following are the latest available quotation—in tallaris per lb.—from Alexandria, the figures in brackets being last weeks closings:

Karnak: July 75.30 (73.95) November 74.45 (73.70). *Ashmouni*: June 68.75 (67.55) August 67.45 (67.00). New crop is reported to be developing satisfactorily although in lower Egypt, it is a bit late. Irrigation water is said to be adequate and weather favourable.

A divergent trend was witnessed in the Liverpool cotton futures market during the week. While the old crop months were a shade easy, on mill hedging, and lower New York advices, new crop attracted speculative support from the commission houses. Sudan cotton contracts in Liverpool were weak, thanks to lower Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July-August 23.30; October-November 21.45; December-January 21.30; March-April 21.25.

American cotton mixed growth contract: July-August 23.30; October-November 22.05; December-January 21.55; March-April 21.55.

Sudan: July-August, September-October; November-December 27.50.

In quiet and featureless trading cotton futures showed a sagging tendency in New York. Traders were generally inclined to await Washington developments on farm legislation seeking to put a ceiling on price support loans. Old crop July

managed to attract some buying, thanks to the steady decrease in certified cotton stocks and the higher price realised on exports sales by the C.C.C. Scattered trade support for nearby October and December was not sufficient to absorb hedge selling in these positions.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	9-6-59	2-6-59	26-5-59
Spot	36.20	36.25	36.25
July	34.84	34.65	34.67
October	32.48	32.61	32.58
December	32.52	32.59	32.55

SUGAR BEARISH

(From Our Own Correspondents)

BOMBAY, 10*th June*

The sugar market ruled bearish during the week under review, with prices moving downward. Traders were inclined to believe that there would not be any undue rise in sugar values in Bombay City during the coming festival days. In fact, some feel that prices may actually be lower than at present. This view is based on unconfirmed rumours that the Central Government has almost finalised a scheme for ensuring an equitable distribution of sugar to consumers in Greater Bombay and the scheme is expected to come into force sometime next week. It will be recalled that, last week, Mr. B. B. Ghosh, Secretary to the Union Food Ministry, and Mr. K. B. Jain, another top official in the Ministry, were in the City to study the sugar situation. The salient features of the scheme are:

The Union Food Ministry will ask the Government of Bombay to ban exports of sugar from the municipal limits of Greater Bombay.

The co-operative factories in the State will be directed to despatch to the City about 3,200 tons of sugar which will be distributed by the Government to over 5,000 Grain Dealers' Federation and co-operative consumers' societies in the City for being sold at a price not exceeding Re. 1.05 per *seer* (2 lbs.).

The joint-stock company sugar mills will be made to despatch to the City every month at least 3 per cent. of their annual output; they will be specially asked to see that the sugar reaches the consumer at Re. 1.05 per *seer*.

Arrivals of sugar by rail into the City during the week were quite large. They aggregated 14,120 bags, as against 5,900 bags in the previous week.

Over the week, large grain sugar fell by Rs. 3 to Rs. 119-124 per bag. Medium grain dropped Rs. 2 to Rs. 116-118. Small grain was done at Rs. 115, as against Rs. 115-117.

• • • •

HAPUR, 8*th June*

After bullish activity in the past several weeks, sugar prices eased slightly during the week under review, thanks to revision in the official sugar policy under which the entire production of sugar is at Government's disposal for direct allotment. Sentiment was also affected by larger free sale quota. Wholesale sugar trade here is being licensed and arrangements are being made to sell sugar at controlled prices. Sugar eased here by about Rs. 3 per bag to Rs. 112 per bag but were still higher than the controlled prices.

Steady to firm conditions were witnessed in the Muzaffarnagar sugar markets, due to good demand from consuming centres. Business was done for Punjab and Rajasthan and only few mills were sellers in the market and the prices there were still at a premium of Rs. 3.75 to Rs. 5 a maund over the controlled prices fixed by the Government. The latest prevailing prices there were:—Bijnore D29 Rs. 39-12; Lhaksar B29 Rs. 41-10; Mansurpur C29 Rs. 41-6; Dhampur D29 Rs. 40; Rohana B29 Rs. 41-10; Sakoti D29 Rs. 40-12.

Sugar hardened further in the Kanpur market on renewed demand. The prevailing prices, ex-mill, were Rs. 38 to Rs. 41 per maund and spot prices Rs. 114-8 per bag.

Khandsari ruled quiet, as demand slackened slightly. The prevailing prices were: *khandsari* superior Rs. 37 to Rs. 40; inferior Rs. 35 to Rs. 37.

Ready *gur* ruled quiet during the week. Arrivals out of stocks retained by producers are still very heavy at an average of 500 maunds, which are being readily lifted for outside despatch and local stocks of *kotha* dry-wet quality are also fast dwindling and are now put at 68,000 maunds, the corresponding figure last year being 130.000 maunds. The condition of the cane crop is reported to be fair, but much would depend on the coming rainy season. The prevailing prices were: *pansera* Rs. 21 to Rs. 21.37, *shakker* Rs 22.50 a maund.

Gur improved towards the week-end in the Muzaffarnagar market on Gujerat support. Daily arrivals still averaged about 1,000 maunds and local stock was put at 300,000 maunds, as against only 80.000 maunds a year before. Total arrivals of *gur* and *shakker* in the Muzaffarnagar market during the season were about 1,550,000 maunds this year, as against 940,000 maunds last year. The latest prevailing prices were:—*Chaku* Rs. 22.50 to Rs. 23; *kotha* wet-dry Rs. 21.50 to Rs. 22; *ladu* Rs. 21.50 to Rs. 22; *rusket khurpapar* Rs. 14.50 to Rs. 15; *ladu* Rs. 15 to Rs. 16; *shakker dara* Rs. 21 to Rs. 23; *masala* Rs. 25 to Rs. 27.

Forward trading in *gur* will be resumed at Hapur and Agra in the near future.

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 10*th June*

Easy conditions continued to prevail in the yarn market during the week under review. Art silk yarns came in for some selling induced by renewed fears of heavy arrivals of imported yarn in the next few weeks against past purchases made under the old export promotion scheme for art silk fabrics. Traders are disappointed at the delay in the Government of India announcing the modified scheme, although more than a fortnight has elapsed since the Union Minister for Commerce and Industry revealed at Bangalore that the Government "is preparing a modified scheme; this is almost ready and it will not take a long time." In sympathy with art silk yans and owing to unsatisfactory reports from consuming centres, staple fibre yarns also encountered selling. Cotton yarns ruled dull in the absence of any encouraging development. Some scarcity was, however, felt in counts such as 26s and 32s due to the continuation of strike in the Madura Mills in South India, with the result that the prices of these counts tended to look up.

Imports of art silk yarn into Bombay Port during the month of May 1959 aggregated over 3.80 million lbs. Imports of synthetic yarn were 246,233 lbs. and staple fibre yarn 82,384 lbs. During the same month, exports of cotton yarn from Bombay Port amounted to 518,675 lbs.

Cupressa Bamberg yarn (60 x 1) June contract receded from Rs. 1,416 to Rs. 1,412 per bale of 200 lbs. August contract (new packing of 100 kilograms (220 lbs.)) dropped Rs. 6 to Rs. 1,582. Spot Cupressa eased by 6 nP to Rs. 7.03. 150 Japan declined by 5 nP to Rs. 4.65. 120 Japan was a shade better at Rs. 4.71. 120 Italy was well supported and hardened by 6 nP to Rs. 4.81. 150 Italy gathered 3 nP to Rs. 4.59. Among indigenous yarns, National Rayons 150 bright cones 1st grade shed 3 nP to Rs. 4.22, while 120 bright cones 1st grade moved up from Rs. 4.42 to Rs. 4.58.

Staple fibre yarn (40 x 2) June contract suffered a loss of Rs. 3 to Rs. 598. August contract was quiet at Rs. 598. Spot Citys eased by 2 nP to Rs. 3.07 and Centurys by 1 nP to Rs. 3.13. Foreign yarns (80 x 2) Paramounts were unchanged at Rs. 6.94, as also Fujis at Rs. 7.25.

In the cotton yarn section, Podars were dull at Rs. 12.12. Moderns, however, elicited special buying enquiries and picked up 25 nP to Rs. 13.75. Twenty counts Moderns were unchanged at Rs. 16.50. Thirty counts Moderns were keenly bid at Rs. 20.50. Forty counts Moderns dropped 25 nP to Rs. 26.75, but Minaxis spurted by 38 nP to Rs. 25.75. Sixty counts were unchanged, Raghuvamshis being quoted at Rs. 57.50 and Finlays at Rs. 64. Among 80s, Mahendras and Finlays stood at Rs. 71.50 and Rs. 81, respectively, same as last week. Citys met with some support and gained 50 nP to Rs. 66.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before:

	10-6-59	3-6-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg June (200 lbs.) ..	1,412	1,418
60/1 Cupressa Bamberg August (100 Kg.) ..	1,582	1,588
60/1 Cupressa Bamberg spot (per lb.) ..	7.03	7.09
120 Japan (per lb.)	4 71	4.70
150 Japan (per lb.)	4.65	4.70
120 Italy (per lb.)	4.81	4.75
150 Italy (per lb.)	4.59	4.56
Staple fibre yarn—		
40 x 2 June (per case of 200 lbs.)	583.00	591.00
40 x 2 August (,,)	598.00	598.00
40 x 2 Century (per lb.)	3.13	3.14
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 12	12 12
20s Modern	16.50	16.50
40s Minaxi	25.75	25.37
60s Raghuvamshi	64.00	57.50
80s Finlay	81.00	81.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 10*th June*

Barring groundnut, which ruled more or less steady, the oilseeds market presented a distinctly easy trend during the week under review. Towards the close, the market, however, showed a tendency to recover from the initial setback suffered during the beginning of the week. Indeed, all the sections put up a cheerful appearance yesterday, though they reacted once again today. Groundnut, at any rate, was able to maintain a firm trend, mainly because of the tight supply position in the spot section. The *vanaspati* manufacturers and crushers lent good support even at higher levels. Export demand, too, was fairly good. Castor, in contrast to groundnut, gave way. Shippers turned hesitant, as the U.S. is said to be not interested in commercial oil at prices higher than 14 cents. Substantial arrivals of castorseeds from Gujerat, Kanpur and Bihar further aggravated the decline. Linseed and cottonseed were featureless.

The tight statistical position and report of enquiries for oil from the communist countries enabled the groundnut section to hold its own. The values would have gone higher but for the fear that large-scale hoarding might take place following the early onset of monsoon. Groundnut August contract, which wound up last week at Rs. 199.25, rallied to Rs. 201.25 yesterday, after an initial fall. It, however, closed lower at Rs. 200 today. Bold ready improved from Rs. 42.75 to Rs. 43. Oil ex-mill closed today higher at Rs. 22.00, as compared with Rs. 21.75 a week ago.

As already said, the castorseed section toed a different line. September contract, which closed at Rs. 166.12 last week, fluctuated between Rs. 163.00 and Rs. 165.87, with a bearish undertone, and closed today at Rs. 164.50. Ready Madras lost 38 nP to finish at Rs. 31.62. Oil B.S.S. dropped 12 nP to touch Rs. 17.12.

Linseed lacked support. There were no signs of overseas enquiries for oil. The September contract, which had closed last week at Rs. 34.25, finished today on a quiet note at Rs. 34.06, after moving both ways within a narrow groove during the week under review. Bold ready receded by 38 nP to Rs. 32.87 and oil by 6 nP to Rs. 15.69.

Similarly, the cottonseed section was also dull. The sharp setback in the cotton market did not have any perceptible effect on this section. September contract sagged from Rs. 134 to Rs. 131.50 on Friday. Subsequently, it improved a little to close today at Rs. 133.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	10-6-1959	3-6-1959	27-5-1959
	Rs.	Rs.	Rs.
Groundnut			
August 1959	200 00	199 25	198.00
Bold ready	43 00	42 75	41.50
Coromandel ready	43.25	43 00	41.75
Khandesh quality	43 25	43 00	41.75
Oil ex-mill ready*	22.00	21.75	22 00
Railway receipts*	21.87	21.62	21.75
Castorseed			
September 1959	164.50	166 12	169 75
Ready Madras	31 62	32 00	32.75
Ready Kanpur	30 44	30 50	31.37
Oil B.S.S.†	17.12	17.25	17.56
Oil commercial†	16.31	16.50	16.75
Linseed			
September 1959	34 06	34 25	34.44
Bold ready	32 87	33 25	33.50
Oil ready†	15 69	15.75	16 25
Cotton seed			
September 1959	133.75	134 00	137.25
Niger seed	31.75	32 00	32.25
Kardi seed	24.25	24.50	24.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SETBACK IN TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 5*th June*

A larger quantity of 1.25 million pounds was offered in Sale No. 21, which was held on 2nd inst. Teas offered in this sale showed a further seasonal decline, particularly amongst the low grown teas. Most of the high grown teas were light in cup and lacking quality. The market opened to a fair demand, but weakened as the sale progressed. Prices were generally easier for all descriptions. Low medium and mediums were easier by 10 to 15 nP. Good mediums met with only a fair enquiry and sold at 15 to 20 nP below last rates. Fannings grades, however, met with better support than broken grades. There was a useful enquiry for clean black fannings which were firm. High grown teas continued to meet with poor support and were much easier—in particular broken grades under this category were difficult to sell and there were heavy withdrawals. A small quantity of tippy teas sold well at dearer rates. The quotations were: low medium Re. 1.65 to Re. 1.80; medium Re. 1.75 to Re. 1.90; good medium Rs. 2.00 to Rs. 2.15 and quality Rs. 2.10 to Rs. 2.70.

Dust Sale 'M':—450,000 lbs. were offered in this sale which was held on 4th inst. There was a good demand for all descriptions at easier rates. Medium dusts met with a useful enquiry and sold at 5 nP below last rates. Low medium and better descriptions were easier by 5 to 10 nP. There was a renewal of demand for black export-able types, but these shared in the market drop. C.T.C. dusts met a better enquiry at slightly lower rates.

London Market: Sale of 1st June 1959.—Quiet opening, fully firm later.

Sale of 2nd June 1959.—Good demand. Best irregular.

Colombo Market: Sale of 1st June 1959.—Opened good demand, weakened progressively thereafter, consequently full benefit of 35c. reduction in export duty largely discounted by quality decline and weaker demand. Highgrown and medium prices up 10 to 15c. Lowgrowns 20 to 25c. dearer.
