* National income at factor cost—the aggregate of all incomes earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, October 1958.
† Preliminary estimates (at 1948-49 prices) are based on the fifth issue of the annual paper on national income issued by the Central Statistical Organisation
†† According to budget-speech of Pakistan Finance Minister.

ABBREVIATIONS.
N—Nominal.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
(f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
†† Rate of Interest reduced from 6 to 3 per cent. with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1935.
‡—Interest free to first 12 years. †—Interest free for first 7 years. Z—Ex six instalments but inclusive of accrued interest.
M—At the option of Government after three months' notice. K—On September, 1956, or later at option of Government after three months' notice.

MARKET GOSSIP

(*Concluded from page 139*)

Referring to this aspect, the *Financial Times*, London, makes the following interesting observations:

"The short-term gains of a Soviet agreement to hold tin exports to 13,000 tons could, therefore, be quite small, and it might be a disadvantage, if the whole of the quota was shipped over a short period of time. The present import quotas are fixed on a quarterly basis, so that shipments have to be spread out over the year. The Russians would also be able to bring more direct pressure on to the London market, which is the hub of the Tin Council's operations, if, as presumably will happen, the present U.K. import quota of 750 tons a quarter is removed. The traders here are naturally hoping that this would not happen and are finding some comfort in the possibility that Russia's stocks of tin may now be substantially smaller than this time last year, when exports were running at a high rate. An agreement would at least, in the short- as well as the long-term, remove the fear of Soviet penetration into countries outside the Tin Agreement, Japan and West Germany especially. Four Tokyo firms are reported to be negotiating to buy, between them, 420 tons of tin from Russia, and a larger firm hopes to import 1,000 tons —not large quantities but an ominous trend nevertheless. Shipments to W. Germany have also been rising sharply, though there are no statistics available beyond October."

Viewed thus, the trend of the world tin market in future will be influenced not by Russia agreeing to limit exports of tin but by the Tin Council's export quotas and trade demand. The Buffer Stock has large surplus of tin and there are no signs that these will be sold in the near future. Meanwhile, the chances of the U.S. joining the Council as a producer-member and Germany and Japan as consumer-members would appear to have brightened. All these countries are presently standing out of the Tin Agreement, thereby reducing its utility as a stabilising factor.

• • • •

What is described as a "key test case" is the decision of the U.S. Civil and Defence Mobilisation Agency to reject the $1.45 million tender of the English Electric—the lowest to be offered—for the supply of two hydraulic turbines to the Greer's ferry dam and reservoir project undertaken by the Army Corps of Engineers. This is somewhat surprising, considering that the English Electric's bid was fully in conformity with the Government's stipulation, being 12 per cent. below the lowest U.S. tender of $1.75 million submitted by the Baldwin-Lima-Hamilton Company of Philadelphia. But the Government's decision, it is said, is based on the ground of high unemployment in the Philadelphia area. Before the decision was taken, the American Company had warned the authorities that an acceptance of the British Company's tender would threaten national security. It was alleged that employment of foreign equipment was not conducive to national security, for, in the event of a breakdown, service and spare parts would not be readily available, an argument with which the U.S. heavy electrical industry has been seeking general curbs on imports. British sources consider the U.S. Government's decision as a surrender to pressure from the American electrical heavy industry. It is pointed by them that the decision gives "little" assurance of protection to foreign bidders either under existing Government regulations or any which may be framed in future.

COMMERCE AND INDUSTRY

(*Concluded from page 157*)

technical improvements and by price and income supports, increases steadily against a more slowly rising ceiling of requirements. The increase in the consumption requirements of Western Europe has been met either by raising the production within the country or by importing from other countries by the Western European region. Thus domestic production and to a lesser extent intra-European trade have generally increased.

Thus, while the advanced countries are making strides, the less developed countries are struggling on account of a rapid fall in their exports of food, by the irregular growth of net exports of beverages and tobacco, and the somewhat fluctuating course of trade in agricultural raw materials. Commenting on this situation, the Report observes:

"There are at present no indications of any substantial change in these trends. It seems likely that the pressure of supplies on the markets of the more industrial countries will increase, especially since the initial impact of surplus disposal operations may be diminishing. The growing demand for foodstuffs in the less developed regions may continue to provide some expansion of outlets for surplus production in the more advanced regions, though the absorptive capacity of these new markets is heavily circumscribed by their lack of foreign exchange. To the extent that this difficulty can be overcome, however, the rather widespread policy of establishing national reserve stocks should for some years provide an additional source of demand superimposed upon that already provided by rising populations and incomes."

The Report also dwells upon the measures adopted by the various countries to expand agricultural exports. A review of surplus disposal operations in recent years indicates that some 30-40 per cent. of the United States agricultural exports are currently shipped under special programme, while payments under other Government subsidies amount to some 6-8 per cent. of the total value of United States' agricultural exports outside the special programme. Directly or indirectly subsidised exports of agricultural products from Western Europe are also increasing, but, because of the complexities of the various systems, no estimate, the Report says, can be made of their extent. Other countries also use various methods of expanding agricultural exports, including special credits and multiple exchange rates; again, no estimate of their total extent is possible, but they appear to be, according to the F.A.O., on a smaller scale than those in the United States and Western Europe.

Prices

The slow decline in the general level of agricultural prices in world markets was reversed temporarily in the first half of 1957, but was resumed later in the year and in early 1958. Nevertheless, the F.A.O. index of average export unit values of agricultural products for the year 1957 as a whole (average 1952-53=100) at 95 was three points higher than in the year before. The halt was in a sense illusory, however, since prices of manufactured goods on world markets continued to rise. The average purchasing power of agricultural exports for manufactured goods, therefore, fell for the third year in succession. In comparison with the base period 1952-53, the average purchasing power of agricultural products has fallen by about 10 per cent. of which about one-half represents lower agricultural prices and the other half the increase in average export unit values of manufactures. The average figures naturally conceal considerable differences between commodities. Thus, prices of, for example, cereals and butter tended to fall continuously, while cocoa prices recovered though prices of both coffee and cocoa remain much lower than in the boom year 1954.

Commenting on the prospects for world trade in agricultural commodities, the Report points out that there are no indications of any increase in import demand in the immediate future. It, however, strikes an optimistic note by adding that the recent experience, together with the measures being adopted in some countries for maintaining consumer purchasing power and for the revival of economic activity, suggests that the overall domestic demand, for foodstuffs in the industrialised countries is likely to be maintained.

Notices

BURMAH-SHELL REFINERIES LTD.

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5½ per cent. Debentures 1965-69 will be closed for transfers from 14th February 1959 to 28th February 1959, both days inclusive.

N. A. KRISHNAN,
Offg. Secretary and Treasurer,
State Bank of India,
Agents for Burmah-Shell Refineries Ltd., for the management of the Debentures.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, 31*st January*, 1959.

STATE BANK OF INDIA

NOTICE

THE FOURTH ANNUAL GENERAL MEETing of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Friday, the 27th February 1959, at 4 p.m. (Standard Time), for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1958 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. BHATTACHARYYA,
Chairman.

CALCUTTA, 22*nd January* 1959.

WARMEST CONGRATULATIONS

THIS is a week when the Government of India deserves our warmest congratulations, for, after many trials and errors, two of its gigantic investments in heavy industry have begun to yield results. These are the iron and steel plants at Rourkela and Bhilai, with a capacity of a million tons each in ingot terms. President Dr. Rajendra Prasad formally inaugurated the first blast furnace at Rourkela on Tuesday and at Bhilai on the following day, thereby signifying the commencement of pig iron production, the first step in the manufacture of steel. Although much more remains to be done before these projects could attain their full production potential, there is no doubt that they have now reached a significant stage and that, given the enthusiasm and care shown by all those engaged in the execution of these projects in the last 12 months, the targets set for them will be hit by the time limit, namely, 31st March 1961. It is true that, in the initial stages, there was considerable slackness and the pace of progress was slow, but the vigilance of Parliament and the rapid advance of China in economic development helped engender a new sense of drive among the authorities and the workers concerned. The agreement with West Germany for the establishment of Rourkela plant was concluded as early as in 1953 and the plant should have gone into full production at least a couple of years ago. The delay was the result of defective planning on the part of the Government and many bottlenecks in ports, railways and administration. There were several hold-ups in the execution of Bhilai works also. All this has cost the country heavily and raised the capital expenditure. Even so, the country can draw comfort from the thought that things could have been worse. Indeed, Dr. Rajendra Prasad was modest when he averred that the massive structures in both the new steel towns of India and the chimneys jutting through them should be taken as "the symbol of the nation's faith in its future and its determination to go ahead undaunted by any difficulties."

The story of India's economic development is an essay on fruitful international economic co-operation. Both the free world and the Communist countries have come to its assistance. Rourkela owes its existence to West Germany and Bhilai to Russia. A third steel plant is going up in Durgapur with the help of Britain. The U.S. has helped the Tata Iron and Steel Company to expand at Jamshedpur. All these countries have given India both capital and know-how on reasonable terms. Although economic co-operation of this sort benefits both the giver and the receiver, it cannot be denied that the latter has to be grateful to the former, because the gain to it is greater.

There has also been much mutual co-operation between the public and private sectors in the establishment of steel industry in this country. Ideological predilections of the governing party have, of course, delayed the growth of this key industry, resulting in heavy loss of valuable foreign exchange and a sharp increase in the capital cost of establishing it. If only the Government had allowed the Tata Iron and Steel Company, Ltd. and the Indian Iron and Steel Company, Ltd. to expand their capacity to the extent desired by them in 1948 itself, instead of half a decade later, and if it had not reserved all future expansions in steel industry to the public sector, India would have made by now great strides in this sphere to the benefit of all concerned. Prime Minister Nehru himself has admitted this error in some of his speeches in the past two years. Fortunately for India, the rigidity of the Congress Party's ideology thawed a little in 1953 and the T.I.S.Co. and the I.I.S.Co. were encouraged to expand. For this welcome change in attitude, credit must be given to Mr. T. T. Krishnamachari who was a pragmatic person then. But for this relaxation in ideology, which unfortunately seems to have been a temporary phenomenon of the Congress Party, the stress now being on full socialism, even the modest progress which India is now making in steel industry would not have come to pass.

To return to the subject of co-operation between the two sectors. While the Government has helped the two iron and steel producers in the private sector by giving interest-free loans and enabling them to borrow from the World Bank, the T.I.S.Co. and the I.I.S.Co., on their part, have helped the public sector by providing training facilities for its technicians and skilled workers and by making available the services of their key personnel for consultation and planning, notwithstanding their preoccupation with their own expansion programmes. Another notable feature is the integration of the production plans of both the public and private sector units, taking into account the country's overall needs. It is to be hoped that this co-operation will be sustained in future also, so that wasteful competition can be avoided. While production by 1961 and, perhaps, for a short while thereafter will be shared equally by both the sectors, the public sector's share will sharply increase in the course of the third Plan period and in the subsequent years.

The progress that has already been made by all the three projects in the public sector is substantial enough to expect confidently that, in two or three years from now, India will attain near self-sufficiency in steel, which will lead to a large saving in foreign exchange. We advisedly say near self-sufficiency, because, even after these works are completed and in full production, many varieties of special steels and alloy steels will have to be imported. The need for such steels would be greater then than now, if the third Plan were to include heavy industrial projects for making machines and transport equipment, as is now contemplated. Not long ago, it used to be said, both by officials and non-officials, that India would have a surplus of steel for export by 1961, if not a little earlier. There is not much talk of it now. Whether or not there will be an exportable surplus will depend upon the growth of steel-consuming industries, progress of housing and other construction activity in the country. Again, assuming there will be a surplus, the prospects for its disposal in foreign markets will depend upon world market conditions and the competitive capacity of Indian steel.

Few countries in the world enjoy the great locational advantages which India has for making iron and steel. All the raw materials required for producing steel are found in compact regions and do not have to be hauled over long distances. It is true that India does not have a plentiful supply of coking coal. But modern

technology has advanced sufficiently to enable the use of non-coking coal after proper treatment. This shortcoming cannot, therefore, be a great disadvantage. In any case, India has sufficient reserves of coking coal to last for several years to come, so that this is not an immediate problem. In view of the natural advantages which it thus has and of the fact that it has gone in for up-to-date, modern plants, it should be possible for this country to make steel at competitive prices as compared with the rest of the world. Indeed, it is vitally necessary for India to produce and sell iron and steel at prices well below the world prices, if it is to emerge successfully as an exporter of manufactured goods, which it must do in order to liquidate its growing foreign debts.

Planning and construction of steel plants constitute only one part of the job. Their efficient and profitable management is another, and perhaps more difficult, part of it. The Government of India has invested heavy amounts on these plants. It is estimated that the aggregate cost of these projects will be Rs. 559 crores and it will not be surprising if, by the time they are completed, the total cost comes to Rs. 600 crores, if not more. The Government has, therefore, to take proper steps to see that a satisfactory return is obtained on this huge investment. The question of efficient running of the plants and the marketing of their products is thus of paramount importance. Will the Government be in a position to discharge this function creditably, especially as it will be taking more and more burdens on its shoulders under the third Plan? Should it not consider the advisability of leasing out one or two of the steel plants to the private sector on a competitive basis? We feel that it should, if only to provide a certain element of healthy competition among the three plants for producing good results. We are, of course, not suggesting anything novel. During the war years, the U.S. Government, for instance, constructed several heavy industrial projects and leased them to the private sector after the emergency was over. Even now, there are quite a few aluminium plants which are owned by the Government but are operated by the private sector on the basis of lease which is renewed periodically on competitive lines through tender system. This is not an impractical system for India, for both domestic and foreign private enterprise could join hands and work the steel plants successfully to the satisfaction of both the Government and the consumer.

RUSSIA'S SEVEN-YEAR PLAN

THE new Soviet economic plan continues to provide the main inspiration for Russia's propagandists. It was the main talking point in the twenty-first Soviet Communist Party Congress which met at Moscow last week. Delegates vied with one another in praising the Plan and in extolling Russian economic achievements. With the recent success in the sphere of rocket science, which has attracted world attention, the leaders of the Party can always hope to get a wider audience for preaching their economic philosophy, though no scientific distinction can, by itself, be held up as the product of any particular brand of political theory. The deliberations of the Congress, however, showed that the Soviet Union is more than ever earnest about its new economic programme. Only time will reveal how far actual achievement will match the present, almost wild, enthusiasm for the Plan.

There is, however, no denying the fact that Russia's role in world economy is becoming increasingly important. The vast size of the Soviet Union and its satellites—even if one makes allowance for the many internal divisions and dissensions, ruthlessly held in check by an implacable Party machine—alone invests the Soviet economic offensive with an international significance. Russia covers one-sixth of the land area of the earth, in which live some 200 million people. Together with Communist China and East European countries, the Russian orbit encloses one-fourth of the world's surface and about 900 million people. "When the socialist countries, accounting for 26 per cent. of the world's territory and 35 per cent. of its population, top capitalist production in 1965," averred a party member in the recent Congress, "it will be a victory for socialism that will stagger the whole of the capitalist system." Even when the Communist Party's challenge is shorn of its propagandist elements, there is something in it which must give the free world some food for thought and cause for redoubling its efforts towards achieving high levels of prosperity without sacrificing its democratic ideals. It is obvious, in this context, that the developed countries in the free world must step up their assistance to the underdeveloped countries, even at some sacrifice to themselves.

What is the Soviet new Plan? Although the form in which it has reached, or more properly, has been allowed to reach, the outside world lacks coherence, its broad outlines are reasonably clear. It is a seven-year (1959-65) Plan which calls for massive investments in industry, agriculture and social services. Roughly, it involves an investment of about 3,000,000 million roubles; by way of comparison, it may be mentioned here that the 1958 Soviet budget revealed an income of 643,000 million roubles and an expenditure of 627,000 million roubles. Industrial production is scheduled to go up by some 8.6 per cent. per annum. Much emphasis is placed on consumer goods, though heavy industry still claims a large share of the investment. Gross farm production is expected to go up by 70 per cent. Mechanisation of agriculture and automation in industry have received considerable emphasis. A much-publicised part of the Plan is the addition of 15 million new flats—a boon to a nation which has been afflicted by acute overcrowding due to insufficient houses.

State capital investments—that is, exclusive of investments from non-centralised funds, such as investments by people on housing and by collective farms—will be close to 2,000,000 million roubles. Of this total, industry will claim some 1,488-1,513 thousand million roubles, housing and public facilities 375-380 thousand million roubles, and educational and health facilities 77,000 million roubles. Capital investments in agriculture by the State and the collective farms will amount to about 500,000 million roubles. The allocation (in thousand million roubles) among individual industries includes: iron and steel industry 100; chemical industry 100; oil and gas industry 173; coal 78; electric power plants 129; timber, paper and woodcrushing industries 60; food industry 85 and railway transport 115. In physical terms, the Plan aims at ambitious targets to be reached by 1965. The production of steel will go up to 86-91 million tons and of rolled metal to 65-70 million tons. The output of non-ferrous metals will move up by 180 per cent. and of chemical industry by 200 per cent. The share of oil and gas in total fuel production will increase from 31 per cent. to 51 per cent. The production of oil will be 230-240 million tons by 1965, of gas 150,000 million cubic metres, of coal 596-609 million tons and of electricity 500,000-520,000 million kw.h.

The consumer who has had a lean time all along is expected to get a square deal. He should gain by the larger grain output now planned and the higher production of a wide range of consumer goods. Grain output will be expanded to some 16 million tons, while the output of raw cotton will move up to 5.7-6.1 million tons, of sugar beet to 70-78 million tons and of oilseeds to 5.5 million tons. The Plan also envisages production targets for such consumer goods as cotton fabrics (7,700-8,000 million metres), woollen fabrics (500 million metres), silk fabrics (1,485 million metres) and leather footwear (515 million pairs).

The first thing that strikes an impartial observer of the deliberations of the Communist Party Congress is Russia's passion for publicity, the Party's exultant self-congratulatory mood and its almost amateurish desire to be "first" in the world, in general, and to surpass the U.S., in particular. Above all, the Plan has provided first-class meat for propaganda for communism itself. "In the next 15 years," declared Mr. Khrushchev, "the U.S.S.R. will rise to first place in the world not only in the overall volume of production but also in *per capita* output, and communism's material and technical basis will have been established in our country." He forecast that socialist countries would produce more than half of world industrial output and predicted that, when that happened, the "new balance of forces will be so patently evident that even the most diehard imperialists will clearly see the futility of any attempt to start a war against the socialist camp." Further, he indicated that the increase in Russian production will "signify a great victory for the Soviet Union in peaceful economic competition with the most highly developed capitalist countries." There is, of course, a great deal to be said in favour of a turn of events by which Russian rivalry in relation to the free world is strictly confined to "peaceful economic competition." But communism, as a political philosophy, is so irrevocably wedded to violence that it is difficult to place much credence on the Russian propagandists' protestations of peaceful intentions.

The Russians' blind spot for progress in countries other than their own is becoming proverbial. They are so obsessed with their own achievements, actual as well as those in prospect, that they almost take for granted that the rest of the world will remain static all the time. When they talk about outstripping the U.S.—not that there is anything wrong about the desire—they conveniently ignore that, by 1965, the U.S. too will have made significant progress. Even as it is, there is considerable "catching up" to be accomplished before the U.S.S.R. can match American production levels. Thus Russia hopes to produce 230-240 million tons of oil by 1965, whereas the U.S. production in 1957 was 354 million tons. Again, the U.S.S.R. targets for steel and electric power are respectively set at 86-91 million tons and 500-520 million kw.h., as compared with the U.S. 1957 levels of 102 million tons and 716 kw.h. Again, the *per capita* production of consumer goods in 1965—that is, assuming that the targets will be reached—will be lower than the present U.S. levels. Thus, the *per capita* Russian production of cotton fabrics by 1965 is likely to be 32.8-34.0 metres, as compared with the U.S. 1957 level of 51.1 metres. Surely, catching up with the U.S. is bound to prove a little more arduous than communist propaganda strategy will care to admit.

It is, however, clear that Russia is determined to make a bold bid for world leadership *in agricultural and industrial production*. Agriculture has been the weakest link in Russia's economic chain. Recent reforms have aimed at the restoration of initiative and freedom for collective farms. Nevertheless, it remains to be seen whether collective agriculture will really win the race towards the targets set for it. As regards industrial production, the chief difficulty is the acute labour shortage in Russia. Much store is, of course, set by automation and rationalisation. But the shortage is perhaps too acute to be remedied by such expedients. This consideration alone will make it difficult for Russia to reach out to the 40-hour week by 1962 and to 35-hour week of five working days by 1966-68. Some easing of the man-power situation may take place if the size of the Russian army is reduced, as it well might be in view of the new forms of weapons of war.

There is one main bottleneck to be overcome before the pace of expansion can be speeded up. As the area of Russian centralised economy expands, the problem of co-ordination will grow in size and complexity. An amusing story is told of the discovery by Moscow officials that eight separate teams had been digging stone for eight separate branches of the Soviet Government out of one small quarry; each ministry wanted its own supply. Extension of the area of State control poses intricate problems for those who control and innumerable hardships for those who are controlled. A particularly pernicious effect of State control is the total absence of any respect for cost consideration. Mr. Khrushchev, who inaugurated the Congress, and other members, who participated in its discussion, repeatedly stressed the need for economy in expenditure. "It is first of all necessary," said Mr. Khrushchev, "that our planning and economic bodies approach with particular care and thrift the matter of distributing enterprises among the economic areas, the specialisation of enterprises in construction as well as the expedient co-operation of enterprises going up in one district." In a regimented economy, these principles are more easily stated than observed, though they will present no great difficulty in a free economy where the competitive urge to keep production costs down to a minimum ensures economic operation of enterprises.

In assessing the significance of Russia's economic plan, one cannot ignore the fact that its successful completion will place the country in a stronger position to distribute aid and engage itself in world trade. Quite conceivably, it will use its position for political ends. For, with the communists, trade and politics are inseparable. What it has done with tin, it may be tempted to repeat with other commodities of which it has a surplus. Finally, its economic progress will acquire a new meaning for the underdeveloped countries in two ways. First, it may result in more trade between them and Russia. Second, the political sermon-writers will attempt to present Russia's progress against the background of its backwardness five decades ago. It is, therefore, necessary, in the interests of economic truth, that Russia's achievements are viewed in a global perspective, so that, while they receive credit where it is due, they are allowed to obscure neither the progress made elsewhere in the free world nor the cost paid for such progress by the Russian citizens.

RIFT IN KILLICK INDUSTRIES BOARD?

MONEY AND BANKING—GROUNDNUT—CHINESE COTTON—U.K. STEEL INDUSTRY

THURSDAY, 5 P.M.

EVER since the boiler episode of the Ahmedabad *Electricity Company* Ltd., which led to the resignation of Mr. K. G. Milne and Mr. E. D. Sheppard from the Board of that company (*vide* page 867, *Commerce* of 29th November 1958), things do not seem to be going well with the Board of the Killick Industries Ltd., the managing agency company. There are reports of a serious rift among the Directors of this company (Killick Industries). The annual general meeting of the Company has been postponed. A public notice was issued last week putting off the closure of the Company's transfer books and cancelling the earlier notification which had said that the books would be closed between 9th and 26th February. It was stated that other suitable dates for closing the books would be announced as soon as the revised programme for the holding of the annual general meeting was decided upon.

MARKET GOSSIP

Market circles are wondering as to why the Company, which had been punctual hitherto in holding its meetings and paying dividends, has found it necessary to resort to the aforesaid extraordinary step. According to knowledgeable sources, there is a move to oust Mr. Milne and Mr. Sheppard, the Managing Directors of the Company, from the Board. It is stated that, at a recent Board meeting of the Company, the remaining three directors of the Company resolved that the contracts of Mr. Milne and Mr. Sheppard with the Company which are due to expire in the third week of June 1959 should not be renewed. Apparently, the intention of the majority of directors in deciding to postpone the annual meeting of the Company has something to do with this decision.

Meanwhile, collection of proxies by the friends and supporters of the Managing Directors, as well as by those who are opposed to them, is going on vigorously. It is understood that a section of shareholders, representing more than the statutory minimum of 10 per cent. shareholding, has put in a requisition to the Board of the Company for calling an extraordinary general meeting for passing a resolution reiterating their confidence in Mr. Sheppard and Mr. Milne and for electing another director to the Board. If the Board fails to comply with this request, then the dissenting 10 per cent. shareholders can, under the Company Law, themselves convene an extraordinary general meeting. Some interesting developments are, therefore, in the offing, unless, of course, the rift in the Board of the Company is closed through mutual understanding between the two Managing Directors, on the one hand, and the remaining three directors, on the other.

The other Directors are: Mr. Purshotamdas Thakurdas, Mr. Chunilal V. Mehta, and Mr. Jaisinh Vithaldas.

• • • •

The rumours of a downward revision of the Bank rate in India, referred to in these columns three weeks ago, would appear to have died down. It is these rumours—wishful thinking would be more appropriate—that had led to a perceptible rise in the value of 3 per cent. 1986 Conversion Loan to a high of Rs. 74.30 a fortnight ago. Since then, it has climbed down to Rs. 73.95 (with sellers even at this rate), presumably due to selling by those who had pushed it up, as their hopes have not materialised. Meanwhile, short-term interest rates in the market have been ruling firm since the beginning of the year at 3½ per cent. for inter-bank call money, 3½ to 3¾ per cent. for house money at seven days' notice and 3¾ to 4 per cent. for one to six months' deposits. Despite the fact that deposit resources of banks as a whole are substantially larger than a year ago—the total net deposits of Scheduled banks were Rs. 182 crores more as on 23rd January 1959—banks are finding it difficult to get their day-to-day requirements from the market. Interest rates would have hardened further but for the voluntary ceiling fixed by banks on house money and short-term deposit rates. In fact, the inter-bank call money rate, for which no ceiling has been fixed, is ½ per cent. more than that this time last year. Moreover, the 91-day Treasury Bill rate has been hardening for some weeks past. It stands now at 2.559 per cent., having successively gone up from 2.420 per cent. in the week ended 12th December 1958. That the banks' cash position is strained is indicated by the fact that their cash ratio (ratio of cash on hand and balances with the Reserve Bank to net deposits) as on 23rd January this year was as low as 6.83 per cent., as against 7.93 per cent. on the corresponding date of 1958. No doubt, their investment ratio is much higher at 40.16 per cent. on that date as compared with 31.07 per cent. a year before and their credit ratio is lower at 57.56 per cent., as against 64.14 per cent.

• • • •

While such is the position of the money market in India, the prospect of a further cut in the British bank rate is being widely discussed in the U.K., though it is hardly nine weeks since the last reduction of ½ per cent. to 4 per cent. was made. Between March and November last, the Bank of England reduced its discount rate *five times*, from 7 per cent. to the present level of 4 per cent. It is not this chain of reductions that has given rise to hopes that a further downward revision is due. The discussion centres round the fact whether there is a necessity for doing so and whether Britain can afford it. The arguments in favour of maintaining the present level of Bank rate for some time to come run thus:

The present rate is not very high as compared with the rates which have prevailed during the current decade. Having taken a series of measures in recent months, the authorities may not be in a hurry to make a further lowering of the Bank rate. It is, therefore, held that the Bank rate may stay at this level for some more time. The recent statement by the Bank of England Governor that "we are now comfortably poised at a level from which we can move in either direction as circumstances may require" is interpreted by some as an indication that the authorities are convinced that the downward trend in short-term rates has gone far enough for the time being and that, accordingly, there will be no more alterations in the Bank rate, unless there is a sudden change in the country's economy.

Those in favour of a further cut in the Bank rate say that the re-expansion of British economy is proceeding at such a slow pace that a monetary stimulus such as a reduction in the Bank rate will not prove to be inflationary. From the long-term point of view, they add, there is much to be said in favour of a cut during the present period of economic lull. The Chairman of the National Provincial Bank has expressed the view that the 4 per cent. rate is "perhaps still rather on the high side for a period of recession."

While there is thus a difference of opinion on the necessity for a reduction in the Bank rate on grounds of internal economic conditions, are external circumstances such as to induce a cut in the rate? Here also there are two opinions. The interest rates in many European countries are much lower than those in the U.K. Germany and the Netherlands have recently reduced their Bank rates to 2½ per cent. Belgium has cut it to 3½ per cent. France is expected to bring it down from the present level of 4½ per cent. In Italy and Norway, it is 3½ per cent. Switzerland's rate is 2½ per cent. These lower rates have naturally encouraged a substantial flow of "hot" money to London and this has gathered momentum following the restoration of convertibility of currencies. While the hot money provides a useful prop to sterling and the external reserves, the Bank of England and the Treasury are known to be not in favour of encouraging this trend, as these funds might any day be withdrawn, thus causing a drain on sterling. This, it is felt, is a ground on which the Bank of England may prune its discount rate.

There is, however, another school of thought which argues that there is nothing wrong in Britain taking full advantage of hot money, as long as it can and that, as the Bank of England knows the extent of such money coming into the country, it could earmark sufficient reserves to cover its eventual withdrawal. The handling of hot money, it is pointed out, is not far different from managing deposits by bankers. This school is, therefore, not in favour of a cut in the Bank rate.

In distinct contrast to the trend in Europe, money rates in the U.S. are moving up. The three months' Treasury Bills yield 2.98 per cent. and six months' bills 3.34 per cent., as against 3.11 per cent. in London for three months' bills. A cut of ½ per cent. in Britain's bank rate will bring the London short-term rates below the U.S. rates. It is generally expected in the U.S. that there will be a further increase in the Federal discount rate from the present level of 2½ per cent. If this is done, then the disparity between the London and U.S. rates will widen much more in favour of New York. Normally, this will encourage an outflow of money from London to New York, but, in view of the present "distrust" of the dollar, some observers feel that this may not happen and London can afford this "rare luxury" of cutting the Bank rate further.

Fresh ideas on extending credit facilities to individuals in all possible ways and to as many as those who would like to avail themselves of these facilities are taking shape even in the U.S., where consumer credit is well advanced and highly specialised. The First National City Bank of New York has just taken the lead in augmenting credit facilities which were already being made available. Termed as "Ready Credit," this new facility is being provided to New Yorkers by all the 77 New York City branches and the Head Office in Wall Street. A notable feature of this innovation is that, in order to qualify for this service, one need not be a customer of the Bank.

Designed to supplement other personal credit services, with an individual line of credit, the Ready-Credit plan provides for a mutually agreed upon amount of credit that the customer can draw against with personalised cheques supplied free. Credit lines may be established for amounts ranging from a minimum of $120 to a maximum of $3,000.

The Citibank Ready-Credit plan will enable each customer to purchase what he wants, where he wants, and when he wants it. The balance of the account will be repayable in monthly instalments at the rate of 1/12 of the credit line. Interest will be charged only on the amount of the credit line used and outstanding at the rate of 98/100ths of 1 per cent a month (less than $1 per month per $100) *plus* a few cents for life insurance. The amount available to the customer is continually restored to the extent of his repayment.

The Citibank Ready-Credit is part of a new concept the First National City Bank of New York is making available to the public to assist customers in planning their family budgets intelligently. A booklet, "New Spending Guide for the Budget Minded Family," has been widely circulated by the Bank in recent weeks and are available to Citibank Ready-Credit customers. The plan is described as an ideal way to finance consolidation of bills, vacations, tuition, appliances, furniture and other items that ordinarily are a heavy drain on the family budget. Although it will be useful to all borrowers as an instrument for careful budget planning, the Citibank Ready-Credit will be of particular value to professional people and others whose incomes are subject to seasonal fluctuations.

To arrive at the amount of his credit line, the customer simply decides how much he can afford to repay each month and multiplies this by 12. After the first cheque drawn has been paid by the Bank, monthly statements will be mailed to him showing cheques drawn, monthly payments made, and charges for interest and insurance on the life of the borrower for any unpaid balance outstanding. The monthly statements will also show the amount of the credit line used and the amount of credit available for immediate use.

In providing this new service, the First National City Bank of New York is drawing upon thirty years' experience in the broad field of consumer lending, during which time it has extended more than 9.25 million personal loans amounting to 4½ billion dollars. The Citibank Ready-Credit is a step to broaden the Bank's service to individual borrowers in the same way that it recently expanded its service to small business men by raising monthly payment business loan limits from $25,000 to $50,000.

The principle involved in the aforesaid credit arrangement is similar to the one underlining the system of overdraft followed by the banks in India for financing trade and industry. Here is one more instance to prove that American bankers, who have set many examples in the sphere of personal loans to the rest of the world, do not want to rest on their oars and that they have not yet exhausted the scope for discovering new means of serving the public.

The Forward Markets Commission's move to stem the upward trend in groundnut and groundnut oil prices—details of measures taken by it are referred to in the oilseeds market report, *vide* page 200 of this issue—has served the purpose, at any rate for the present. Groundnut February contract, which had gone up from Rs. 162.12 on 5th January to as high as Rs. 181 on Thursday last, has since receded to Rs. 178.37. Similarly, the May position has declined from Rs. 185.37 on Thursday last to Rs. 184.62 today. Nevertheless, the prices are markedly higher than those prevailing a year before, when February 1958 delivery was quoted at Rs. 152.62 and May 1958 position at Rs. 154.37. The recent steep increase in the prices of groundnuts and groundnut oil is attributed by the Commission to excessive speculation by certain parties. There may be some truth in this, but the fact cannot be disputed that the statistical position of groundnut is quite in favour of the seller. Although the commercial estimate of the current season's crop is placed higher by 100,000 tons at 2.30 million tons (kernels), the extent of improvement is not commensurate with the rising domestic consumption as a result of increase in population and enlarged demand from *vanaspati* producers. This factor, together with the export promotion measures such as grant of export quotas for H.P.S. groundnut and abolition of export duty on seed and oil, has fanned the bullish fervour in the market to a great extent. Further, it is reported that the cultivators are trying their best to hold off supplies from the market in the hope of realising still better prices in the months to come. It is natural for producers and stockists to stick to their holdings in a rising market.

In view of the aforesaid factors, and considering that there are no margins or penalties on ready, specific delivery contracts, the measures now announced by the Forward Markets Commission may not succeed in effectively curbing the bullish fervour. The situation arising from the rise in prices was considered by the Board of the Bombay Oilseeds and Oils Exchange Ltd. on Saturday. The Board is reported to have felt that ceilings should be fixed for hedge as well as delivery contracts in all oilseeds on an all-India basis. It is not known whether this suggestion will find favour with the Forward Markets Commission. A meeting of the representatives of the oilseeds trade and the Commission is expected to be held shortly.

Meanwhile, manufacturers of oils are greatly worried over the rise in prices. Mr. G. V. Swaika of Swaika Oil Mills, Calcutta, for instance, has addressed a telegram to the Government pleading for firm action against unhealthy speculation in this commodity by immediate intervention in the futures market, as the higher prices have completely neutralised the prospects for export of groundnut oil and made the position of domestic consumers miserable. He contends that the Bombay Oilseeds Exchange and the Adoni Exchange in groundnuts have failed to curb unhealthy speculation and that the system of margins adopted by them are ineffective. In his view, the very manner and method of imposing such margins are thoroughly unscientific and illogical, because they are fixed not in the event of the market advancing beyond the prices ruling at the time of imposition

SHARE MARKET DULL

BOMBAY BURMAHS SPURT

(From Our Own Correspondents)

BOMBAY, *5th February*

LETHARGIC conditions prevailed on the Stock Exchange during the week under review. With only three weeks to go for the Central Budget to be presented, operators were in no mood to extend their commitments either way. Trading was, therefore, on a small scale and price movements were narrow. The undertone, however, remained steady, in the absence of any adverse factors. The firm trend in commodity markets also kept sentiment intact. The decline in production of Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd. during January did not have any effect on the market. T.I.S.Co's production of saleable steel aggregated 89,700 tons, as against 90,100 tons in December. While semis accounted for a fall from 39,700 tons to 34,000 tons, finished steel rose from 50,400 tons to 55,700 tons. Production of steel ingots moved up from 91,900 tons to 96,200 tons, but pig iron declined from 98,900 tons to 97,700 tons. There was, however, a sharp fall in production of I.I.S.Co. saleable steel having fallen from 50,697 tons in December to 45,698 tons. Pig iron declined from 92,690 tons to 73,728 tons, while despatches of saleable steel were nearly maintained at the previous month's level, having aggregated 49,646 tons, as compared with 49,772 tons in December.

In the steel section, Tata Ordinaries dropped early in the week from Rs. 175.50 to Rs. 174.50. After a short-lived spurt to Rs. 176.50 on Monday, the shares moved narrowly between Rs. 175.50 and Rs. 175 and closed at Rs. 175.50. The new shares were a fraction better at Rs. 172.25. Indian Irons fluctuated between Rs. 26 and Rs. 26.20 before closing at Rs. 26.15, the gain over the week being no more than 5 nP.

Barring a spurt in Centurys on speculative support, textiles were featureless. After an initial dip from Rs. 434.50 to Rs. 431.75, Centurys moved up to touch Rs. 441 today. On profit-taking at this level, the shares declined to Rs. 438.50 at the close. Bombay Dyeings came up to Rs. 57.50 from last week's closing of Rs. 56.70, but lost part of this gain when the shares closed at Rs. 57.20. Kohinoors were marked down over the week by Rs. 2.25 to Rs. 237.75. Central Indias gathered over the week Re. 1.50 to Rs. 90.50. New Greats were dull at Rs. 218.50. The Company has skipped over the ordinary dividend for the year ended 31st December 1958. This is the second year in succession for which the distribution on ordinary shares is being held over. Morarjee Mills lost Rs. 3 to Rs. 227.50, while Shree Niwas Cottons were unchanged at Rs. 140 and Standards at Rs. 418. *Svadeshis* were a fraction lower at Rs. 209. Swans were steady at Rs. 350.50 and Tata Mills at Rs. 34.50. Ahmedabad Advances were done at Rs. 130, as against the previous rate of Rs. 140. Coorlas had business Rs. 12.50 lower at Rs. 125.

Minor variations were noted in bank shares. Barodas were 50 nP higher at Rs. 121.50 and Centrals 10 nP better at Rs. 58.80. Bank of Indias were unchanged at Rs. 140.25, while their new shares gained 25 nP to Rs. 141.25. Punjab Nationals shed 50 nP to Rs. 59, while United Commercials were unchanged at Rs. 68.

A sharp fall in New Indias was the main feature of trading in the insurance section. Their old shares lost Re. 1.70 to Rs. 52 and the new ones Re. 1.50 to Rs. 52.20. Industrial Prudentials picked up 75 nP to Rs. 30.25.

In the sugar group, Belapurs came to the limelight with a smart rise of Rs. 4 to Rs. 267. Bhopals were quiet at Rs. 25.55 and Phaltans at Rs. 141. Walchandnagars were unchanged over the week at Rs. 266.25. Maharashtra Sugars, however, gained Rs. 4 to Rs. 175.50. Cement shares were listless. Associated Cements moved between Rs. 155.25 and Rs. 153 before closing at Rs. 154.50. Digvijays were done at Rs. 131, as against Rs. 131.50 a week ago. Orissa Cements improved by 40 nP to Rs. 13.04. Ashoka Cements lost 40 nP to Rs. 8.08 and Jaipur Udyogs were done at Rs. 10. Among engineering and mining shares, Alcocks were quiet, dropping Re. 1 over the week to Rs. 266.50. Tata Locomotives were erratic, fluctuating between Rs. 161.75 and Rs. 164.50. The closing was done at Rs. 162.75, as against Rs. 163.50 a week ago. Premier Constructions were marked down by Re. 1.50 to Rs. 235.75. Mukand Irons were dull at Rs. 14, while Larsen and Toubros were a shade better at Rs. 17.16. Brady Engineerings suffered a loss of Re. 1.40 to Rs. 63. Mahindras showed no change at Rs. 18.24. Cooper Engineerings had business Re. 1 lower at Rs. 129. Shivrajpurs were a shade quiet at Rs. 88. Indian Coppers were steady at Rs. 3.60.

Scindias maintained a steady tone at Rs. 21.40. Great Easterns picked up 20 nP to Rs. 24.12. Hindustan Motors recorded a gain of 32 nP to Rs. 7.52 and Premier Automobiles moved up by Re. 1.30 to Rs. 86, despite the discouraging financial results and the Company's announcement that the production of Plymouth and Dodge cars had been stopped.

In the miscellaneous section, Bombay Burmahs provided a feature with a smart rise to Rs. 472 from Rs. 461.50, to which level they had declined earlier in the week from Rs. 464.50. This improvement is said to be due to the favourable view that the operators have taken of the Company's outlook. The Partly-paids were, however, unchanged at Rs. 170. National Rayons were erratic, moving between Rs. 242.25 and Rs. 245.75. The closing was done at Rs. 244. Tata Chemicals were a shade better at Rs. 15.40, while Alembic Chemicals picked up Re. 1.25 to Rs. 157.50. Tata Oils gained 25 nP to Rs. 46. Voltas advanced by Rs. 2 to Rs. 142.25. W. H. Bradys changed hands at Rs. 331.25, as against Rs. 300 at which the last business was done. Indian Dyestuffs were marked up by Rs. 19.75 to Rs. 190.

* * * *

Calcutta Stock Exchange

CALCUTTA, *4th February*

Gains in prices in most sections, notwithstanding the setback in the last two days, and an expansion in the volume of business were the main features of trading on the Calcutta Stock Exchange during the week under review. This measure of increased support followed steadier advices from Bombay and the belief that there would be no major surprises in the Budget. How far this belief would be justified, time alone would reveal, but speculative elements clung to this feeling and purchased the more popular counters in all sections in the hope of making profits; for, if the Budget should not add to the direct taxation burden, the recovery would gain further momentum. Optimism centres round the official declaration at that time that the 1957 Budget evolved a taxation structure for the entire second Plan period. The easing of the labour troubles in Burnpur, which earlier in the week led to a day's sealing of the blast furnaces, drew to Indian Irons speculative support leading to a smart recovery which erased the earlier loss. The improvement in the external reserves and the increasing collaboration which the private sector is able to obtain from foreign manufacturers for setting up industrial units in this part of the country also aided sentiment. Mr. Lal Bahadur Shastri's offer of assistance to export surpluses was interpreted here as an indication of more intrusion by the State Trading Corporation in the export field, and if this week's steadier trend was subsequently tempered by caution, as in the last two days, it was due to the proximity of the West Bengal Budget. For the States have often been maligned in New Delhi as lagging behind in raising adequate resources for the Plan and depending too much on Central loans and grants.

Sectionwise, jutes held a firm ground following strong optimism that mills were doing better in the current accounting period. On Monday and Tuesday, however, quotations were marked down. At Rs. 183, Aucklands put on Rs. 3, while Lansdownes, after being maintained at Rs. 137, rose to Rs. 138. They, however, finished lower at Rs. 135. Anglo-Indias advanced to Rs. 218 from Rs. 216. From Rs. 26.37, Nationals gave way to Rs. 26.25 to close better on balance at Rs. 26.75, but Indias lost ground to Rs. 15.06 from Rs. 15.50. Ganges closed at Rs. 73.50 after having earlier sagged to Rs. 72 from Rs. 77. Megnas changed hands at Rs. 14.44, as against Rs. 14.75 last week, and Barnagores at Rs. 137, as against Rs. 142.

Following the L.I.Cs support, there were a few features in the coal section. Burrakurs reached a high of Rs. 18 before reacting to Rs. 17.50, at which level the shares were higher by 13 nP on balance. Central Indias reached Rs. 7.62 from Rs. 7.19, and Raneegunges continued to forge ahead and finished 44 nP higher at Rs. 15. East Indians were brought to business at Rs. 23.81, as against Rs. 22.87 previously. South Karanpuras advanced to Rs. 13 from Rs. 12.62 before declining to Rs. 12.87. Dhemo Mains, at Rs. 9.50, were fractionally higher. New Beerbhooms rose to Rs. 20.37 from Rs. 19.87, only to close at Rs. 20.12. Equitables had buyers at Rs. 29.75, as against Rs. 29.62 earlier.

A small widening of interest was discernible in textiles, and Basantis met with buyers at Rs. 6.37, as compared with the previous rate of Rs. 6.25. Elgin Mills gained to Rs. 12.25 from Rs. 11.75, and Kesorams to Rs. 12 from Rs. 11.37.

Among minings, Indian Coppers carried a gain for some time to Rs. 3.59, but receded to Rs. 3.56. Karanpura Developments sagged to Rs. 10.75 from Rs. 11.31, while Burma Mines in cheerful trading forged ahead to Re. 1.80 from Re. 1.55.

Engineerings were supported at slightly hardening rates. Indian Irons opened at Rs. 25.80 and soon scored to reach a high of Rs. 26.30 before finishing at Rs. 26.12. Texmacos rose to Rs. 21.20 from Rs. 20.75, but in consonance with the general trend closed lower at Rs. 20.95, while Kumardhubis maintained the upward trend and reached Rs. 8.81 from Rs. 8.56. Guest Keens were steady at Rs. 37.31 and Jessop & Cos. hardened to Rs. 25.19 from Rs. 24.69.

Several features were recorded in miscellaneous industrials. Assam Saws reached a high of Rs. 5.25 from Rs. 4.06 before falling back to Rs. 4.06. Ralhs touched a high of Rs. 52, as against Rs. 47.25 earlier before finishing at Rs. 50. Alkali and Chemicals hardened to Rs. 18.12 from Rs. 17.75. India General Navigations at Rs. 71.50 were higher by Rs. 2.50 with National Pipes reaching a high of Rs. 17.44, at which rate the week's gain was Re. 1.44. Another strong feature was provided by Indian Aluminiums which were pushed to Rs. 17.31 from Rs. 16.69 before closing slightly lower at Rs. 17.06. At Rs. 7.62, Hindustan Motors were keenly chased, and Aluminium Corporations were bid at Rs. 11.12, as against Rs. 10.47 previously. Among the less striking features were National Cables which at Rs. 29.31 were fractionally better, albeit the continuance of the "lock-out" on labour troubles. National Rollings were a fraction better at Rs. 13.31. Orient Papers had support at the improved rate of Rs. 30.85.

More interest was in evidence in tea shares, with Carrons advancing to Rs. 127.50 from Rs. 125. Bishnauths at Rs. 19 were better by 50 nP. Dufflaghurs were done at Rs. 34.75, as against Rs. 32.50 previously. Baghmaris were pushed up to Rs. 19.44 from Rs. 18.62 and Jutlibaris to Rs. 19 from Rs. 18.49. At Rs. 27.50, Grobs "A" added one point, but Birparas declined to Rs. 158.50 from Rs. 161. Sungmas had buyers at the hardened rate of Rs. 16.44.

* * * *

Madras Stock Exchange

MADRAS, *3rd February*

Thanks to pre-budget uncertainties, trading on the Madras Stock Exchange was featureless during the week under review, the trend of prices being generally downward. In the planting section, coffee shares were subjected to renewed selling pressure and suffered losses. In sympathy, tea and rubber shares ruled easy. Textile shares lacked support. The statement of the Union Minister for Commerce and Industry that there would be no further relief in excise duty on cloth disappointed operators. Bank, electric and sugar shares were quiet. Activity in the miscellaneous section was at a low ebb; only certain select scrips evoked some attention and tended to move up.

Among tea shares, Peermades were marked down by Re. 1.42 to Rs. 18.20. United Nilgiris declined by 30 nP to Rs. 16.90. Twyfords retreated by 27 nP to Rs. 15.35 and Devasholas by 25 nP to Rs. 23.87. Chandramalais receded by 10 nP to Rs. 2.75. Kil Kotagiris shed 8 nP to Rs. 6.52. Chembras 6 nP to Rs. 3.39, Coorg Teas 4 nP to Rs. 5 and Parksides 3 nP to Rs. 19.12.

Transactions in coffee shares were put through at reduced rates. Coffee Lands were pushed down by Re. 1.50 to Rs. 21.25. Consolidated Coffees slumped by Re. 1.05 to Rs. 19.50. Kumergodes came down by 35 nP to Rs. 6 and Cowcoodys by 31 nP to Rs. 6.75. Rajendras eased by 20 nP to Rs. 12.50 and Ouchterlonys by 15 nP to Rs. 4.90.

In the rubber group, Rajagiris and Kalpettas declined by 25 nP each to Rs. 16.90 and Rs. 11.50, respectively. Vaikundams were quoted 12 nP lower at Rs. 23. Nellampathys lost 10 nP to Rs. 2.67. Thirumbadis 14 nP to Re. 1.66, Swintons 5 nP to Rs. 2.35 and Puthutotams 3 nP to Rs. 2.95.

Textiles, as stated earlier, lacked support. Coimbatore Cottons, Rayalaseemas and Vijayakumars decline by Rs. 2 each to Rs. 131, Rs. 103 and Rs. 100, respectively. Bucklinghams eased by a rupee to Rs. 174. Madurus dropped 65 nP to Rs. 25.25. Loyals lost 25 nP to Rs. 25 and Cambodias 20 nP to Rs. 7.65.

Among sugar shares, Kirlanpudis slipped down by Re. 1.50 to Rs. 45.50. Deccans gave way by 33 nP to Rs. 9.62. Travancores decreased by 15 nP to Rs. 10.15 and Indias by 5 nP to Rs. 12.20.

In the miscellaneous group, Ralhs provided a bright spot, the quotation spurting by Rs. 5 to Rs. 51. United India Fire hardened by 35 nP to Rs. 7.75 and Vanguard Fire by 25 nP to Rs. 6.25. Sen-Raleighs gained a like amount to Rs. 15.50.

MERCANTILE BANK LTD.

The Directors of the Mercantile Bank Ltd. have declared a second interim dividend of 6¼ per cent. less income-tax on all shares for the year ended 31st December 1958. The dividend is payable on 14th March 1959. They have recommended no further dividend for the year, so that the total distribution comes to 12½ per cent. less income-tax.

Notice

THE AUCKLAND JUTE CO., LTD.

NOTICE OF INTERIM DIVIDENDS

THE BOARD OF DIRECTORS HAS SANCtioned payment of the following Interim Dividends for the year ended 31st March 1959 without deduction of Income Tax paid by the Company.

On Preference Shares at 2.75 per cent.

On Preference Shares Redeemable at 2.25 per cent.

On Ordinary Shares at Rs. 5 per share.

The dividends will be paid on or after 5th March 1959 to those Shareholders (or their mandatees) whose names appear in the Company's books on 27th February 1959.

The Share Transfer Registers of the Company will be closed from 17th February 1959 to 27th February 1959, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,

Managing Agents.

CALCUTTA, *31st January* 1959.

NEWS IN BRIEF

THE Union Government has agreed to purchase from Orissa the entire exportable surplus of rice estimated at 400,000 tons.

The President has given assent to the Rajasthan Warehouses Bill, 1958. The legislation has been promoted to increase warehousing facilities in Rajasthan during the second Five-year Plan period.

The Government of India has decided to allow exports of sugar coated, salted and unsalted groundnuts (fried and roasted) without any maximum limit hitherto imposed, namely, five tons per shipper per steamer.

The Hindustan Machine Tools Factory at Bangalore established a new production record in the month of January by turning out 100 machines, as against 63 machines produced in the previous month. The original monthly target fixed for 1961 was only 33 machines.

The Punjab Electricity Board was inaugurated by Mr. Gian Singh Rarewala, the State's Minister for Power and Irrigation, on the 1st inst. The Board is a statutory body constituted under the Electricity Supply Act 1948. Its annual revenue is expected to be about Rs. 7 crores.

The Central Government has decided that the parties who are able to secure bulk business for the export of manganese ore in excess of their quotas or who are able to negotiate sales on long-term basis for deliveries beyond June 1959 for three years from June 1959 will be considered for allotment of quotas on *ad hoc* basis, subject to certain conditions.

The Air-India International and the British Overseas Airways Corporation are considering the possibility of commercial pooling of their operations between the U.K. and India. In the meantime, the Governments of the two countries have agreed, following talks held at New Delhi last week, to extend the existing pact until a final decision is taken by the two airlines.

A Bill designed to unify the existing enactments for administration of minor ports in all the areas of the new Bombay State and to facilitate levy of charges, which cannot be levied under the Indian Ports Act 1908, for better and more convenient administration of minor ports, has been published by the Bombay Government in its *Gazette* dated 3rd February 1959.

A proposal to have an inter-State grid connecting the power stations in Andhra, Madras, Mysore and Kerala was accepted by the Power Development Committee of the Southern Zonal Council at its meeting held at Munnar on 30th January. The proposed grid will facilitate the transmission of surplus power available in one State to another in the zone which is deficit in power supply.

The West Bengal Government proposes to set up a factory to manufacture X-ray equipment. The factory will be run by a joint-stock company, with an issue capital of Rs. 1 crore, the State Government contributing 51 per cent. To start with, the factory will manufacture X-ray plant without tubes. The tubes are expected to be supplied by an American company which will directly participate in the project at a later stage.

The Cashew and Pepper Export Promotion Council, Cochin, proposes to send a trade delegation to the West European and Far Eastern countries, including Japan, during the coming summer to explore the possibilities of building up markets for cashew and pepper in these countries. It may be recalled that a trade delegation of the Council recently visited the East European countries with the same object in view.

The possibility of establishing a straw board factory in or around Tansa in Thana District has been investigated by the Forest Department of the Government of Bombay. It is said that coarse grasses of suitable varieties are found in abundance in the revenue forest of Tansa and Valtarna Lake catchment areas and they afford a potential supply for establishing a straw board factory of about 10-12 tons daily capacity.

A bilateral agreement for the supply by India of manganese ore of the value to cover United States' exports of 450,000 tons of foodgrains is expected to be signed by the Governments of the two countries shortly. The agreement will be signed by the State Trading Corporation of India on behalf of the Government of India and the Commodity Credit Corporation on behalf of the United States Government—although, in the latter case, trading will be through private channels.

The Central Government has announced the first export allotment of tea for 1958-59 at 494.50 million pounds. This represents 67 per cent. of the crop basis for the year, estimated at 738.10 million maunds. The Tea Board has already allotted export quota at 65 per cent. of the crop basis to all estates. Arrangements are being made by the Board to allot the balance of quota at the rate of 2 per cent. of the crop basis to all estates as early as possible.

An Indian Trade Promotion Organisation is to be set up in West Germany to promote the exports of Indian products to that country. The organisation will have its headquarters at Frankfurt and a branch office at Hamburg. It will study German tastes and preferences in regard to different commodities and undertake market research and surveys to keep Indian exporters informed about the requirements of the German consumers. It will establish contacts with German business houses, import agencies and departmental stores to create awareness among them about Indian products. For this purpose, it will also conduct publicity for Indian goods and arrange participation by Indian firms in German fairs and exhibitions. The organisation will also help to promote and maintain contacts between Indian business men and German traders and act as a general service organisation for Indian business men visiting West Germany.

From Abroad

The British Exports Credits Guarantee Department set up another record in 1958 with its commercial business touching £520.6 million, 7 per cent. higher than in the previous year, although U.K. exports as a whole fell by 3½ per cent.

The next meeting of the United Nations Sub-Committee on lead and zinc is expected to take place some time in April next. It will reconsider the possibility of international action for ensuring stability in the prices of these two metals.

The Dominican Republic Sugar Commission has fixed the sugar production quota for the 1958-59 season at 987,000 metric tons. Of this quota, 655,000 tons will be exported to world market and 68,200 tons to the U.S., the balance being diverted for internal consumption.

The Jordanian Parliament has approved of the setting up of a State Bank for the country, with a capital of 1 million dinars, to be subscribed by the Government. The Bank will issue currency and supervise financial policy, including gold and foreign exchange transactions.

A new unit trust, entitled Europa I, specialising in securities of all the European Common Market countries, has started selling its certificates in West Germany. The trust is associated with the Frankfurt banking house of Hardy and Co. It will shortly extend operations to Italy and the Benelux countries.

A reduction in *ad valorem* taxes on exports of cotton fibre, ranging between 22 per cent. to 10 per cent., has been announced by the Mexican Government. This step is designed to give a temporary relief to compensate for higher production costs, the effect of climatic conditions on the quality of the fibre and lower yields.

Japanese steel manufacturers have set up a committee to investigate the long-term problems of, and prospects for, the utilisation of New Zealand coal. The Committee will presently receive a report from a mission recently sent by the Mitsubishi Mining Company for a fact-finding survey of New Zealand's West Coast Coalfields and transport facilities.

PERSONAL

THE Earl of Home, British Secretary of State for Commonwealth Relations, arrived in New Delhi on Tuesday this week.

Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Industry and Director-General, Foreign Trade, has been appointed Additional Secretary to the same Ministry.

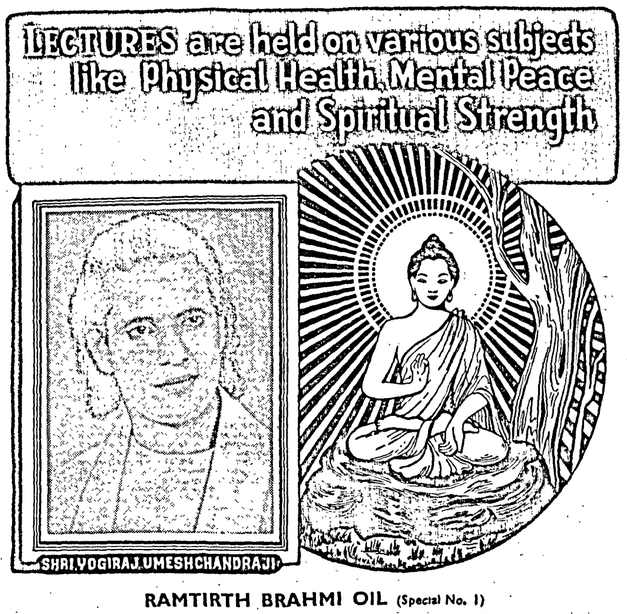
Mr. Bejoy Krishna Acharya, Joint Secretary, Union Ministry of External Affairs, has been appointed Ambassador of India to Czechoslovakia. He is concurrently accredited as Ambassador to Rumania.

Mrs. Sumati Morarjee, Director, the Scindia Steam Navigation Company, Ltd., has been re-elected President of the Indian National Steamship Owners' Association for the third year in succession. Mr. Vikramsingh S. Vallabhdass, Mr. J. M. Kapadia and Mr. K. P. Shah have been elected Vice-President, Honorary Treasurer and Honorary Secretary, respectively.

The price of steel in France is proposed to be raised by 9 per cent. following an agreement reached between the Government and the industry. The increase agreed to by the Government is, however, considered to be less by the industry which estimates the average rise in production cost at no less than 15 per cent., as a result of devaluation, higher wages and other 1959 budget measures.

All those banks and importers in France who had speculated against the franc at the end of last year have been ordered to turn over such profits as they had made to the Exchange Stabilisation Account. The institutions which had bought sterling, dollars or other currencies in December last for delivery in January are required to pay the stabilisation fund the difference between the price they paid and the present rate.

In the U.K., 85 persons were prosecuted for taxation offences, 81 being convicted during 1957-58, the highest figures in the last seven years. The outstandings in unpaid taxes at the end of 1957-58 amounted to £422.9 million. Of this, the recoverable amount is estimated at £210 million. Analysing the taxation by income brackets, the report of the Inland Revenue Commissioners says that 20.9 million people had incomes over the tax exemption limit, while 2.8 million earned insufficient to pay tax. The report also indicates that there were 45 people in Britain with incomes of £100,000 or more before tax and their total annual income aggregated £8.4 million.



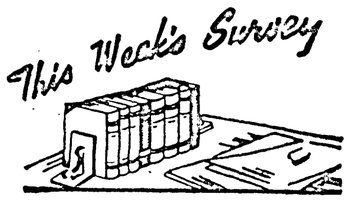
RAMTIRTH BRAHMI OIL (Special No. 1)

Hair and Brain Tonic, and useful for Eyes, Memory, Sound Sleep and Body Massage is being prepared scientifically with precious ingredients at SHRI RAMTIRTH YOGASHRAM. It is useful to every one in all seasons. Available everywhere. *Price: Big bottle Rs. 4/-, Small bottle Rs. 2/-, postage extra.*

YOGASANA MAP (Chart)

To be healthy and to keep fit ask for our attractive Yogasana Chart showing Yogic Asanas, which will be sent on receipt of an M. O. for Rs. 2/50 nP including postage. These Asanas can be easily performed at home.

SHRI RAMTIRTH YOGASHRAM DADAR BOMBAY 28



"DRIVE-IN" BANKS IN BRITAIN

THE extension of banking facilities in Britain has taken another shape, with the inauguration of a "drive-in" bank last week by the Westminster Bank in Liverpool. The first bank to announce its proposal to provide such a facility was Martins Bank. More than two weeks ago, it disclosed that it would open in Leicester towards the close of this month (February) what had hitherto been regarded as Britain's first "drive-in" bank. The Westminster Bank, however, sprang a surprise by actually opening such a bank on 30th January, thus earning the distinction of establishing the first "drive-in" bank of Britain.

The Westminster's "drive-in" bank has two service windows, to which the motorist-customer can drive in his vehicle. On approaching the windows, the motorist's car will pass over a traffic pad in the approach way and this will sound a buzzer for four seconds inside the Bank. There is also a system of indicator lights to warn the cashier that a customer is approaching. Each of the two cashiers will be seated in his own special office, connected by telephone with the main banking hall and the manager's office. The cashier has on his desk a microphone to enable him to speak to his customers. He has also a drawer which he alone can operate in which to pass cash and cheques to and from customers.

The object of the facility is twofold: first, to make it easier for motorist-customers to transact their banking business without the necessity of having to park their cars and walk into the bank to cash their cheques or make remittances; and, secondly, to obviate the danger of pedestrian customers being waylaid while carrying large sums to and from the bank.

The "drive-in" banks is an American innovation and has been in vogue for some years now. The British banks are thus copying another U.S. practice. In the U.S., "drive-in" banking facilities are provided even in small towns. It is popular and serves a real need, because almost everyone in that country has a car. The number of cars in the U.S. exceeds the number of families, as, in many cases, a family owns more than one car. Further, motorists in the U.S. find it difficult to get parking space for their cars and, even if they do, they will have to pay a fee which, in some cities, is not negligible.

COMMONWEALTH PREFERENCES

The British Government deserves to be warmly congratulated on its continued earnestness in preserving the system of Commonwealth preferences throughout the negotiations for a European free trade area. It has sought to impress upon the countries of Western Europe, particularly the six Common Market (C.M.) nations, the fact that Commonwealth preferences have never caused difficulty in the development of the O.E.E.C. (Organisation for European Economic Co-operation); in fact, there has been a very great and welcome extension in recent years of trade between Europe and the Commonwealth. This view has, once again, been reiterated by the Government in a White Paper published last week. The Government did not believe, it says, that, in practice, any risk of disequilibrium in the conditions of competition can arise as a result of Commonwealth preference, as was suggested in the memorandum from the European Economic Community. In this connection, the White Paper recalls the viewpoint expressed by the U.K. Government at the Inter-Government Committee meeting of 13th November and says:

"It was then explained on behalf of Her Majesty's Government that the preferences which United Kingdom exports enjoy in certain parts of the Commonwealth had been negotiated with the Commonwealth Governments concerned and were not, therefore, under the sole control of the U.K. Government. They were part of a balanced system of rights and obligations, and it was wholly misleading to consider the question of Commonwealth preference by calling attention simply to the benefits it confers and ignoring the obligations. The two must be taken together."

The U.K. Government is firmly convinced of the overriding importance for Europe's future in finding "a multilateral solution" which would provide for freedom of trade, including removal of tariffs and quantitative restrictions, among all O.E.E.C. members. Such a task is, of course, beset with many difficulties, but these are not incapable of solution, provided further negotiations are held in an atmosphere of common determination to succeed and agreement reached on the ultimate objective.

Appropriately enough, Britain has stressed that the continuance of the system of Commonwealth preferences will not in any way be an obstacle to expanding world trade. For the greatest beneficiaries of such preferences today are the underdeveloped parts of the Commonwealth and the primary producers in New Zealand and Australia. It will be recalled that, ever since the European Common Market scheme was first mooted, the underdeveloped countries—Commonwealth and non-Commonwealth—have been greatly apprehensive of the effects of the C.M. on their economies.

The possible effects of the C.M. on Asia figured prominently in the discussions at the meeting of the United Nations E.C.A.F.E. Committee on Trade last week. The Asian delegates expressed the fear that the C.M. was likely to hurt their export trade and reduce their foreign exchange earnings and slow down their economic development programmes. They saw in the C.M. certain protectionist elements likely to produce detrimental effects and felt that the associated territories of six members of the C.M. would have a preferential position; all this would discriminate against Asian exports and upset the traditional pattern of world trade. India, Ceylon, Indonesia and Japan took up a somewhat firm stand against the C.M., while Vietnam, Thailand and Malaya were slightly more open-minded. Australia feared agricultural protectionism.

On their part, the European representatives pointed out that the European Economic Community (E.E.C.) would give, in the long run, an impulse to world and Asian trade. In particular, the French and the Netherlands delegates gave the assurance that the C.M. countries were always willing to consult third parties and adjust difficulties, adding that the scheme was designed to expand world trade. It is not known how far this explanation convinced the Asian countries. The Committee, however, agreed that the E.C.A.F.E. Secretariat should continue to keep the E.E.C. under study in consultation with the G.A.T.T., the Economic Commission for Europe, the F.A.O. and the Economic Commission of O.E.E.C. and make a report next year.

Although the details of the Rome Treaty for the establishment of C.M. were published many months ago, it is surprising that the E.C.A.F.E. Secretariat has not so far analysed the implications of the C.M. to Asian trade. Considering this lacuna, it is certainly gratifying to note that the Federation of Indian Chambers of Commerce and Industry has at last made an attempt to study this question.

The Federation feels that exports of goods, particularly manufactured goods, from Asian (and African) countries to the C.M. countries are likely to be adversely affected. This view is based on the ground that the product of other C.M. countries will offer stiff competition, inasmuch as they will, on the one hand, bear lower rates of duties in the transitional period and no duties later on and, on the other, benefit by lower manufacturing costs following economic integration and other measures, as well as the likely setting up of giant enterprises. Even at present, it is said, imports of manufactured goods of the six C.M. nations represent just 16 per cent. of world trade, whereas their exports of manufactured goods account for as much as 36 per cent. of world exports. As an example, mention is made of cotton textiles and jute manufactures. The exports of these commodities from outside countries to the C.M. countries will suffer, since they will have to pay an import duty of about 20 per cent. or more, while the internal tariffs to be levied on the goods of C.M. countries will gradually decline during the transitional period and completely disappear after 12 to 15 years. How the exports of certain other items from Asian and African regions will be affected by the linking of the overseas territories of each of the member-countries with the C.M., as has been brought out by the Federation, is indicated below:

Unmanufactured tobacco: The proposed common tariff is 30 per cent. It will have to face competition with exports from the Belgian Congo and the French colonies.

Vegetable oils: Exports will be subject to a 9 per cent. duty or so. There will be competition from the lower tariff goods of the Belgian Congo and the French possessions.

Coffee: This will be subjected to a 16 per cent. duty, while that of Belgian Congo and French African colonies will get preferential treatment.

Tea: The imposition of a 35 per cent. duty under the common tariff may encourage tea plantation in the overseas territories, since the exports of these territories will ultimately be exempt from import duty.

The Federation has also drawn attention to the special provisions relating to agriculture, including the use of long-term contracts and the system of minimum prices provided for agricultural products which, it says, can lead to the continuation of agricultural protection in the C.M. and, over a period, have a restrictive effect on imports of those from third countries. It is feared that the establishment of the C.M. may lead to monopolistic tendencies and stimulate agreements on prices among exporters of capital goods, etc., thereby making the Asian countries pay higher prices for their requirements. It is further feared that a part of the investment funds available from the C.M. countries for the economic development of the Afro-Asian region may be diverted to other overseas territories.

The Federation has not merely analysed the serious repercussions of the C.M. on the economies of the Asian and African countries, as well as of the other parts of the world, but has also urged the adoption of steps to safeguard the economic interests of these countries. In particular, the Federation has put forward three suggestions. In the first place, the C.M. countries should be persuaded, through the G.A.T.T., to incorporate such provisions in the Rome Treaty as may not have any restrictive effect on the exports of outside countries. Secondly, it is desirable that provisions be incorporated in the Treaty providing for necessary checks against monopolistic tendencies and the special provisions on agriculture be amended suitably. Thirdly, the Afro-Asian countries must devise schemes for promoting trade and economic co-operation among themselves. There can be no two opinions about the relevancy of the first two suggestions. As for the third, it must be stressed that much depends on the extent of co-operation and assistance rendered by the economically more prosperous countries of the West. In conclusion, it would be pertinent to pose the question whether formation of regional economic blocs such as the C.M. is conducive to the setting up of a free and multilateral system of world trade and payments.

ENGINEERING INDUSTRIES

Much commendable progress has been made by India's engineering industries in the last ten years. Although their establishment has meant the use of foreign exchange in considerable amounts, there is no doubt that they have more than repaid such expenditure. Besides creating employment opportunities for thousands of workers, they have disseminated technical know-how among them and also saved immense foreign exchange, which, in their absence, would have been absorbed by importing the goods. These industries are, therefore, fully entitled to some special consideration, particularly in the matter of allotment of raw materials. And yet, Mr. R. M. Agrawal, President of the Engineering Association of India, in the course of his speech at the annual meeting of the Association, held at Calcutta, complained that "unfortunately, the importance of engineering industries has not been sufficiently recognised in India except in theory." His point was that, if the authorities really recognised the importance of these industries, there would have been no serious setback in their production through "acute shortage of raw materials and components." He pointed out how a survey of 263 industrial units showed that, in 1957, the extent of idle capacity varied from 20 per cent. to 80 per cent. The authorities cannot be oblivious of the fact that idle industrial capacity represents a national waste which should be reduced to the minimum. A higher priority for engineering industries in the allocation of raw materials, spare parts and other essential equipment is clearly indicated.

In the light of the admitted scarcity of raw materials and other factors which have led to the emergence of idle capacity, it is of the utmost importance that the Government should not lightly permit additions to existing capacity. What is necessary, as Mr. Agrawal rightly insisted, is efficient utilisation of available resources by industries for serving the market. This criticism is not always borne in mind. In this connection, Mr. Agrawal drew the attention of the Government to two instances of deliberate creation of surplus capacity—the proposal to set up an automobile plant as a Defence Ministry enterprise and the enlargement of the productive activities of the Hindustan Machine Tools Private Ltd. in certain directions. He asked how the Defence Ministry "would be able to manufacture trucks at a cost cheaper than that of the firms in the private sector with a much larger capacity." As regards the H.M.T.'s proposal to manufacture cheaper lathes in technical collaboration with a French firm, he asked whether it was wise to create surplus capacity in lathes. He claimed that there was already sufficient capacity for the production of such lathes. Further, the move was "against assurances given from time to time by the Government that the H.M.T. will supplement the efforts in the private sector and never compete with it."

The Union Minister, Mr. Lal Bahadur Shastri, who inaugurated the meeting, stated, in the course of his reply to these points, that there was no reason why the automobile industry should feel that the Government-sponsored truck enterprise would restrict its market. As regards the production of cheaper lathes by the H.M.T., he said that the Government, in giving the permission, satisfied itself that the demand for such lathes was more than could be met by present production. It is to be hoped that the Minister's confidence will be borne out by events.

Mr. Shastri did well to stress the importance of exports. He said that the most important contribution the engineering industry could make towards the solution of foreign exchange difficulty was to increase exports. The industry can make this contribution, only if it has access to ample supplies of raw materials. Further, it should constantly strive to improve its quality and bring down prices, which alone will enable the industry to market its goods abroad.

U.S. FARM POLICY

In the U.S., the price-support and production-control programme of the Department of Agriculture has come in for much criticism in recent years. The fact that, even if the coming crop were not harvested, the country would still have more than enough for domestic use, export sales, foreign donations and adequate stocks for an entire year is sufficient to show the weakness of the country's agricultural policy. The rigid price-support programme has turned out to be a costly experiment, because of the failure to correct it in good time. Outlays for the current fiscal year ending 30th June 1959 are expected to exceed five billion dollars, which is approximately equal to two-fifths of the net income of all farmers in the entire United States, even though the number of commodities eligible for support is fewer than in previous years. It is estimated that, by the end of the current fiscal year, stocks of surplus farm products with Government will be worth about nine billion dollars. By 1st July next, Government expenditure for storage, interest and handling of its agricultural surplus stocks will reach an annual rate of one billion dollars.

In view of the mounting surpluses, many have of late been wondering how long the Government can continue supporting farm prices at unrealistically high levels. High price supports have had their origin in the exigencies of World War II. Despite the fact that legislation calling for rigid price supports at 90 per cent. of parity expired at the end of 1948, a return to lower, flexible supports was postponed year after year. Rigid supports were not lifted until the Agricultural Act of 1954. The latter provided for flexible supports ranging from 82.5 to 90 per cent. of parity on five major crops in 1955, with the floor, supply and demand conditions warranting, dropping to 75 per cent. of parity beginning in 1956. Supports, however, did not drop to the 75 per cent. level, until last year and, even then, for only two crops, namely, wheat and rice. Even the 75 per cent. level is, as indicated by the mounting crop surpluses, too high to induce the needed adjustments within agriculture.

President Eisenhower, being aware of the need "to flex lower," asked Congress in January 1958 to lower the support floor on basic crops to 60 per cent. of parity and to abolish the escalator clauses that require supports to be raised as surpluses are worked down. The Congress rejected this request in March and enacted, as a so-called anti-recession measure, a Bill freezing price supports for the 1958 crop at the previous year's level. The President vetoed the Bill. The Congress and the Administration, however, agreed on a compromise, embodying the Administration's objective of flexible supports and larger acreage. The President signed it into law in August 1958. The new law was based on the principle that greater flexibility in price supports would lead to expanded markets. This law has two outstanding weaknesses. First, it has left out three basic crops, namely, wheat (in which there is the biggest surplus), tobacco and peanuts. Second, the lowest support levels (65 per cent. for cotton) are not authorised until 1961 and 1962.

Realising that these legislative changes had not gone far enough, the President recommended, in his annual Farm Message to the Congress on 29th January last, measures designed to ensure greater freedom to the farmers in farm management and for markets to reflect the supply and demand conditions. The President asked Congress to approve smaller and more flexible farm subsidies. He made two alternative recommendations:

(1) Prices for the 12 commodities now subject by law to mandatory price supports—including wheat, maize and cotton—be related to a percentage of the average market price during the immediately preceding years. The appropriate percentage of the average market price should be discretionary with the Secretary of Agriculture, at a level not less than 75 per cent. and not more than 90 per cent. of such average in accordance with the general guide lines set forth in the law.

(2) If the Congress still preferred to relate price supports to existing standards, the Secretary of Agriculture should be permitted to establish discretionary, flexible price support for all commodities including the 12 now subject to mandatory controls.

The President also called for continuation of the P.L. 480 scheme for supplying friendly countries with U.S. surplus farm products. He gave the assurance that this scheme would be operated with care to avoid disturbance to the normal pattern of commercial trade.

The President's farm programme is expected to face stiff opposition from the farm bloc in the U.S. Congress. According to Senator Ellunder, Democratic Chairman of the Senate Agriculture Committee, there is not even a "ghost of a chance" that Congress will approve it.

AMERICAN LETTER

WHY DID MIKOYAN IGNORE TRADE UNION LEADERS?

INTEREST RATES STILL MOVING UP

From Our Special Correspondent

NEW YORK, 30th *January*

ANASTAS I. Mikoyan's visit to the United States was a memorable one in many ways. The No. 2 man of the Soviet Union, instead of Nikita Khrushchev himself, travelled some 7,000 miles in this country.

Outstanding in my mind is the fact that, wherever he went, he went out of his way to talk to "big business" leaders. In Detroit, he talked to the Fords. In New York, he was the guest of First National City Bank, for example.

It seemed as though Comrade Mikoyan was believing his own propaganda. Why did he ignore the leaders of outstanding trade unions whose voices are thunder at Washington, as compared with the whispers of so-called "big business"?

Surely, it would have been quite profitable to get the views of such labour giants as Walter and Victor Reuther of the United Automobile Workers, John L. Lewis of the United Mine Workers of America and of Mr. Meany, who presides over the combined American Federation of Labour and the Congress of Industrial Organisations. Was this an intended "snub" on the part of the Soviet hierarchy, or was it ignorance of the most vital forces in the U.S. today?

It is certainly no secret, if one reads the daily papers, that the new Congress is expected to be quite hostile to "big business." At the same time, there are no indications of hostility towards labour, even though some labour-restricting legislation has been introduced. But its fate in the Congress is uncertain. What's more, the trade union position is so well entrenched that such people as spokesmen for United States Steel concede privately that the expiration of the steel workers contracts on 30th June may well be followed by a strike lasting six to eight weeks.

It's a platitude to say that Mr. Mikoyan created a very good impression. Rather, such an impression was created by a very able, suave and personal young interpreter among audiences who were completely unaware what Mikoyan had first said in Russian. This is not to say that the translations may have been incorrect, but the impressions were second hand, not first hand.

Perhaps, the most truthful observation about the visit is that it was useful. Mr. Mikoyan was exposed to much independent American thinking in many fields. He saw American life in many phases unrehearsed and had a chance to form his own opinions. If Mikoyan's chief mission was to make Soviet Russia "respectable" in American eyes, I do not think it was too successful. Too many disappointments preceded him.

Economic Trends

On the U.S. Economic front, the pattern remained unchanged. The stock market continued to hover around its historic highs. There was a further deterioration of bond prices and bond yields are approaching their previous 1957 highs.

The yield curve has disturbing connotations. An example may be the 21-year 4 per cent. issue which the Treasury floated this January at a discount price of 99. In the third week of January, this bond declined in price to 98⅜, or to a yield basis of 4.10 per cent. This is very little less than the statutory cost limit under which Treasury obligations, due in five years or more, can be sold. This limit is 4¼ per cent. It was set during the First World War and there has never been any occasion to change it since.

Another Merger

Following announcements of a proposed merger of Guaranty Trust Co. and J. P. Morgan & Co., Inc., both Bankers Trust Co. and Manufacturers Trust issued statements saying that they, too, were studying merger proposals.

Thus, the trend towards bigness continues. There are indications, however, that both the Federal Government and State supervisory authorities are studying such consolidations to determine whether or not they would stifle competition and create "monopolies." The past economic justification for mergers has been to lower the unit cost of operation, in order to overcome rising expenses and wages. On the debit side, it must be noted that the bigger the organisation, the less personal is the touch with the customer.

Unless some dramatic news development shakes the markets out of their present trends, it seems quite certain that the Federal Reserve system will be compelled to tighten credit again. There may be another tightening of the discount rate.

Employment Lagging Behind

Economic indices continue to point upward, but employment has not caught up with this trend. Despite higher automobile output, the number of unemployed in that industry have remained virtually unchanged.

Steel production has been helped by higher automobile construction and the railroads, too, show better freight loadings. Other encouraging signs include a gain in lumber production, to keep pace with home building, an increase in department store sales and predictions of a boost in 1959 foreign trade, with exports expected to reach $17,000 million, up $800 million from the 1958 figure.

But several clouds on the horizon must be recognised. There is still a widespread public inflation psychology. There is a large excess capacity in the capital goods industries and there is large non-defence as well as defence spending by Washington.

G.N.P.

Observers of contemporary U.S. economics have been harping for a long time on the built-in stabilisers, providing continually rising personal incomes in this country. In my last dispatch, I talked about Gross National Product figures on a constant dollar basis.

Let's have a look this time at personal disposable income (after taxes) on a constant dollar basis. For the third quarter of 1958, such income was given at an annual rate of $314,000 million, or $1,800 *per capita*. On a constant 1950 dollar base, these figures were $260,800 million, or $1,485 *per capita*. Thus, about one-half of the improvement was fictitious, because it was offset by rising prices. The population growth was a considerable factor, too. In fact, about two-thirds of the 8.5 per cent. in real personal purchasing power seems to be attributable to the rising population factor.

The *per capita* standard of living, in terms of 1950 dollars, was no higher than it was three years earlier, in mid-1955. It was, indeed, 3 per cent. lower than the average of 1956. Meanwhile, fixed charges, on the same basis, such as interest charges, debt repayments and similar contractual disbursements are currently noticeably higher than they were in the years prior to 1957. If the same measurements is applied to savings, the result is the same. If a constant 1940 dollar were used, not to mention a 1930 dollar, the outcome would be shocking.

Such comparisons, however, are rarely mentioned in polite society. Sales managers and advertising people have to show ever increasing figures. Otherwise, they get fired. The same applies to leaders of the trade unions, who have to stand on the record of increasing wages. Thus, the cycles goes on and on.—*All Rights Reserved.*

(*Concluded from next column*)

Government ought to have the courage to make the currencies whence the pressure arises inconvertible. The long-term alternative is merely to lose the reserves of the sterling area and possibly be faced by deflation at the end of it.

Muddled Thinking

It is sad to see such muddled thinking about the future of sterling on the Opposition side of the House. We even had the spectacle of the shadow Chancellor of the Exchequer saying that an inflow of hot money was undesirable because the hot money would flow out again. What does it matter? Let the funds flow in and build up the reserves and let the Bank of England, which is well informed on these matters, ear-mark the part of the reserves to deal with a possible future outflow. International banking is no more complicated than joint-stock banking, although it is inclined to be a good deal more volatile. It is all a matter of keeping the right cash reserves for the occasion.—*All Rights Reserved.*

LONDON LETTER

JUSTIFYING CONVERTIBILITY

From Our Own Correspondent

LONDON, 30th *January*

THIS week the House of Commons debated the Government's action in throwing together transferable and dollar account sterling so making equal convertibility. They did this in face of a Labour amendment which criticised the Government's action as making the British economy more vulnerable without going so far as to say that a future Labour Government would attempt to repudiate it.

In fact, Mr. Gaitskell made the specific point that, although he would not have done what the Government did, the thing having been done, in future Labour Government would have to support the action so long as necessary. But he made the further point that the Labour Party would oppose by every means in its power—and implied that a future Labour Government would repudiate—any further action taken to make sterling fully convertible.

Whether a Labour Government in power when sterling was convertible would ever in practice reverse this is another matter. Political Parties, whatever their opinions, are just as obliged as human beings to take notice of the unalterable facts of life. But the Parliamentary debate was interesting as showing the different approaches to this question of convertibility. "Look," said Mr. Amory, "the reserves are now £1,100 million." On top of that, we have got about £265 million which we can draw from the International Monetary Fund. Admittedly, we also have an obligation to repay the International Monetary Fund £260 million—that we must work off but when we have done this our drawing power will be even greater, hence the resources behind sterling will be even greater. Moreover, although the dollar rate is free to move between $2.78 and $2.82 for a little while, the rate has been as high as $2.81 and all the while for a year now America has been losing gold heavily. Moreover, the sterling balances are down (he gave a total of £3,300 million and stated that a very large proportion of this was irreducible working balances). Finally, of course, he repeated the point that, for a long time, this country had been committed to support the free market in transferable sterling, so that that market had *de facto* been convertible.

Labour Party's Argument

Now all Mr. Amory's arguments are correct, but Mr. Gaitskell and the Labour Party want to argue that the wider the measure of convertibility, that is the more types of sterling debts are convertible, the greater the vulnerability of the pound. Both sides are right. Mr. Amory is undoubtedly right in dealing with the situation as it is at the present time, but Mr. Gaitskell is also right, because the non-dollar world, and one could almost say the dollar world as well, is aware that, ever since the war, dollars are normally a very acceptable and rather a rare currency. (In saying this, one is deliberately leaving aside the present atmosphere of beginning to discount the dollar as the currency which is no longer either as rare or as desirable, a feeling which could evaporate the moment that American industrial recovery becomes complete.) Thus, in the normal atmosphere of dollars as a rather separate currency, it is always easier to exchange control to discriminate against a dollar account than it is to discriminate against other currencies and, by the Government's action in throwing all external currencies in with the dollar, he has exposed Britain to the possibility of Balance of Payments difficulties, with the awkward choice between running down a gold reserve to support the whole market in Britain's external non-sterling debts and making a split once again between the dollar debts and the other non-sterling debts. Mr. Gaitskell, by saying that he would not alter the Government's decision if he came back to power, actually means that, come what may, he will support the market in sterling debts. Accordingly, all his arguments become of no practical avail. It will most obviously be the task of any British Government to maintain the overseas position of sterling, so that the country pays its way for everything it buys, but, should the pressure on sterling derive from non-commercial sources as they all too easily might, then a future British

(*Continued in previous column*)

U.S. REMEDY FOR RECESSION SEEDS FEARS OF INFLATION

DETERMINED ATTEMPTS TO COMBAT IT

By Edwin L. Dale, Jr.

MASSIVE Governmental financial moves during 1958 helped cure a serious recession but raised widespread fears of future inflation. By the end of the year, the painful and difficult process of shifting gears was well under way. The big effort was to squeeze out of the economy the inflationary water that had been pumped in to cure the slump. Prospects of success, however, were uncertain.

The men in charge of the Treasury and the Federal Reserve System are the first to concede —privately, of course—that the recession was probably "over-cured." In part, the situation got away from them.

No one dreamed a year ago at this time that the budget would swing from a small surplus to a massive deficit of $12,000 million. There was equally little realisation that the "easy money" policy of the Federal Reserve would in eight months add more than $10,000 million to the total of bank credit.

Ingredients of Inflation

To the financially-minded, such huge additions to the spending stream generally can spell only one thing; inflation. But some economists were not worried on this count. They maintained that the economy at the end of 1958, despite a vigorous recovery, was still seriously underemployed. They argued, therefore, that fears of inflation were unwarranted. Some even advocated more Government spending and a relaxation of money supply curbs.

But to the men in charge of the Government, there seemed only one right thing to do; reverse course. The President imposed a severe budget squeeze, which, with the aid of automatic reductions stemming from the expiration of certain programmes, was expected to enable him to estimate spending in the next fiscal year significantly lower than in the present one. With receipts rising, the budget will be estimated in balance.

The Federal Reserve, moving with unusual speed, began to reverse the easy-money policy as early as August and by year-end had created conditions approaching tightness in the money markets. Interest rates rose sharply and new reserves for the banks were gauged to seasonal needs.

The Treasury, frustrated in its efforts to float extended debt maturities during the last half of 1958 because of a collapse in the Government bond market, was clearly aiming at resuming those efforts as soon as possible, even at the cost of higher interest rates.

Thus, it was plain that the authorities were willing to risk some slowing of the pace of recovery in order to squeeze the inflation out of the system. They were willing to use vigorously each of the three main weapons at their command—budget policy, monetary policy and debt management policy.

Publicly and privately, they insisted that inflation was the major threat to the United States economy—even including a threat to the respect held for the dollar abroad. They meant it when they said that 1959 was the year for a decisive attack on inflation.

Deficit Large

In part, their attitude reflected their own sense of alarm at what had happened to the Government's finances in 1958. The $12,000 million deficit was much the largest in peace-time (the highest during the new deal 1930's was only $4,400 million). How had it happened?

It happened, first, because the recession cut yearly $7,500 million from the original estimate of receipts. Most of that, in turn, was in the corporation tax. Corporate profits nose-dived in 1958.

Second, it happened because a surprising variety of influences—most of them unrelated to the recession—pushed up spending. A partial list follows:

The most important single item was farm price supports, which are estimated to cost some $2,000 million more than had been estimated, when the budget was presented a year ago. This rise came about because of huge crops, not because anyone "willed" it.

Defence spending, reflecting a reaction to the launching of the Soviet's Sputnik, was permitted to rise to $500 million.

The postal deficit soared $600 million, mostly because Congress passed a smaller rate increase and a larger pay increase than the President asked.

Federal pay rose all along the line nearly 880 million more than the President asked.

The Export-Import Bank had to "bail out" a number of Latin American countries to the tune of $200 million in unanticipated loans.

Finally, a pair of anti-recession programmes added about $1,500 million to spending. These were the emergency mortgage purchase programme of the Federal National Mortgage Association and the programme of extended unemployment compensation benefits.

Spending Up

Altogether, spending rose a little more than $5,000 million according to the latest official estimate, and $1,000 million more has been added since. This increase reflects mainly the proposed higher United States contribution to the International Monetary Fund, which is to be included in this year's budget.

Thus, the recession was scarcely the driving force behind the huge upward surge of the budget, but a combination of forces. Fortunately, for the President's objective of reducing spending in the next fiscal year, some of the expenses are non-recurring. He expects to reduce spending from about $80,000 million this year to $77,000 million in the next fiscal year.

But, if the spending upsurge was not in response to the recession, there is little doubt that it had a great deal to do with halting the recession and keeping recovery brisk. Counting increases in non-budget items such as social security and unemployment compensation, Federal outlays (on a gross national product accounting basis) rose from a rate of $80,800 million a year in the fourth quarter of 1957 to $88,700 million by the third quarter of 1958.

This spending helped to maintain demand in the economy, while a typical—though sharp —'inventory cycle' ran its course.

At the same time, the vast expansion of bank loans and investments resulting from the Federal Reserve's easy money policy also contributed something to the spending stream, although most of the increase in bank credit was converted in the first instance into time deposits.

The Government wishes now that it had not acted so massively—or rather that forces beyond its control had not pushed it into acting so massively. But the very alarm of the men in power is the factor behind the speed with which they have tried to change direction.

The next inflation, as it were, is being combated before it begins. The big question is whether the inflationary finance of 1958 was so vast that no feasible reversal of policy can quite offset it.—*Copyright 1959 by the New York Times Company.*

OUTFLOW OF AMERICAN GOLD

A record outflow of gold from the U.S. last year has focused attention on the willingness of the United States to put its fiscal house in order and the ability of its industry to compete in world markets. By no stretch of language could the $2,300 million drop in the United States monetary gold stock be described as a "run on the dollar." Foreign countries failed to liquidate existing dollar holdings as they had briefly during the sharp Korean war inflation. What is more, they continued to add to their short-term dollar assets. During the first nine months of 1958, these were increased more than $400 million.

In addition, the free world outside the United States added an estimated total of $600 million to its monetary reserves from newly mined gold and some shipments from the Soviet Union.

The free world gained strength in part because the United States declined to export its recession. In contrast to previous downturns, imports were held at a level only 3 per cent. below that of 1957, based on data for the first three quarters. Raw materials imports remained large while imports of certain manufactured goods—notably small foreign cars—jumped up substantially.

Exports, on the other hand, fell back from their 1957 heights to their more normal pre-Suez level. The 18 per cent. drop reflected not only the end of emergencies boosting the demand for American petroleum and farm products but a moderate decline in Europe's own economic activity. This appeared to hurt imports from the United States more than proportionately.

Because of the greater decline of exports than imports, the balance of payments surplus accruing to the United States last year from merchandise trade dropped to an annual rate of $3,500 million from $6,300 million in 1957.

The spending of a record number of United States tourists abroad, payments for shipping and insurance charges to concerns overseas, United States economic aid and loans, and a rising outflow of private American capital more than offset this surplus.

In addition, the recovery of British gold and dollar reserves after the Suez crisis and the 1957 'bear raid' on sterling brought back to Western Europe funds that had fled the area to the United States in fear of sterling devaluation.

Two other influences affected the size of the gold outflow from the United States. One was the fact that most of the payments gains were recorded by Western European nations, countries that traditionally maintain more of their reserves in gold than in dollars. During the first nine months of 1958, Western European nations bought $2,000 million of gold from the United States. Britain alone bought $800 million worth. In part, this reflected the improvement in its position with regard to raw material supplying nations. For much of the year, raw material prices declined, while the price of Britain's exports held firm.

Another factor that may have influenced foreign decisions to buy gold rather than dollars was the decline in the yield of short-term United States Government securities during the first half of the year, influenced by the Federal Reserve's policy of credit ease to combat the recessions.

If the gold outflow has reflected increased European strength rather than dollar weakness, it has emphasised to some who may have forgotten the interdependence of all free world currencies.

With the country's gold stock still $20,500 million it amounts to more than half the free world's official gold holdings and exceeds by about $8,000 million the 25 per cent. gold coverage required against the note and deposit liabilities of the Federal Reserve System.

This $8,000 million on "free" gold represented more than 57 per cent. of the $14,000 million of short-term dollar liabilities to foreign countries—about the same amount as held by foreign monetary authorities to meet exchange requirements or to intervene in foreign exchange markets. The remainder ($6,000 million) is held by foreign banks, businesses and individuals largely for financing international transactions.

A leading banker-economist observed recently, however, that the strong technical position of the dollar, like every other currency, depends ultimately on a sound and stable domestic economy. Mr. Roy L. Reierson, Vice-President and chief economist of the Bankers Trust Company, commented:

"Through most of the post-war era, the rebuilding of European economies and the corollary strains on their exchange positions conferred on the United States dollar a key role in international trade almost independently of policies followed at home. This advantage cannot be expected to last indefinitely."

Two hazards, Mr. Reierson suggested, are emphasised by increasing sensitivity of the dollar to world opinion; the hazard to confidence resulting from continued large and uncontrolled Government deficits and the possibility that the United States' producers may price themselves out of world markets.—*Copyright 1959 by the New York Times Company.*

INDIAN BANKS BREAK FRESH GROUND

PERSONAL LOAN SCHEMES SPONSORED

BRITISH banking, on which Indian banking is closely modelled, had for long been known for its conservatism. It was only last year that the British banks broke fresh ground, after the credit restrictions were abolished. In fact, 1958 is described as a year of adventure for British banking. Though for some years past it had been generally felt that there were useful services which the banks could render to those who were not already fully utilising the banking system, particularly persons of small means, no step could be taken in this direction while the credit squeeze was in operation. The new lines of business undertaken by them last year were: (1) participation in hire purchase business, (2) introduction of personal loan scheme and (3) provision of economy bank service.

In keeping with the tradition set by the British system, Indian banks have been treading the conservative lines. The big banks of the country have not so far taken any steps to diversify their activities. A notable feature of the banking system in India is that credit facilities through normal banking channels are not within the reach of low income or fixed income groups. Even the lead given by the Reserve Bank to the co-operatives by prescribing a new definition of creditworthiness has not inspired them to find new customers outside the established mercantile community. In fact, several of them have begun to feel that the accounts of persons of small means are a nuisance and are encouraging them to close their accounts by raising their service charges and through other means. While such is the position in regard to maintenance of deposit accounts, extension of credit facilities to middle class people is considered as an extremely risk affair.

Lack of Saving

It is common knowledge that, despite the progress of the economy under the developmental plans, many of the amenities of life, which are enjoyed by people of much smaller countries in the West, are not within the easy reach of this group. This is because a person within this group is not able to find the lump sum required to buy the things that he needs for a comfortable living in urban areas. In other words, he is unable to make any decent saving, thanks to the persistent inflationary pressure. The common amenities of life, such as a decent place to live, sanitary equipment, fans, cycles or motor cycles, etc., can be made available to him, if only banks provide him with small credit facilities, which he can repay in easy instalments spread over a number of years.

There is, however, room for honest differences of opinion on this subject. There is, in the first place, the question whether consumer credit at this stage will not aggravate inflationary pressures and diversion of resources to non-plan projects. Secondly, the social customs and obligations in India being different from those in Western countries and there being no social security benefits, it is doubtful whether many people will prefer to mortgage their future savings for the advantage of certain immediate comforts. But there may be scope and need for assisting persons who wish to be self-employed or who wish to build houses which are a necessity, or who require conveyance and equipment facilities to further their means of living. In meeting these needs of small persons, banks can certainly render valuable help.

First Bank to Launch

The distinction of coming out first with a scheme for providing such consumer credit or personal loans in this country, goes to the Pandyan Bank Ltd., Madural (Madras State), a small scheduled bank with total working funds of not more than Rs. 3.28 crores (as on 31st December 1957). The scheme is said to have met with good success, as it is bound to be. Taking this lead, another bank from South India—The Indian Overseas Bank Ltd.—has announced a personal loan scheme. The Devkaran Nanjee Banking Company, Ltd. (Dena Bank Ltd.) is also working out a similar scheme.

Under the Indian Overseas Bank's scheme, its customers can own a wide range of durable consumer goods such as cycles, scooters, motor cycles, motor cars, radios, electric fans, electric motors, sewing machines, furniture, sanitary equipment, refrigerators, air-conditioning plants, agricultural equipment and X-ray and other equipment for medical practitioners. The Bank also provides loans for property improvement and small business and for refinance loans to hire purchase agencies.

Only those who have an account with the Bank will be provided with personal loan facilities. Anyone who has the will and capacity to repay is eligible to borrow, not on that frightful term repayable "on demand," but in easy monthly instalments running as long as thirty months. All that he should do is to share, in confidence, with the Bank full information on his steady income and what he has to provide therefrom. The Bank's official discusses the loan requirement and sees what he can do to help the customer. The borrower has then to contact a dependable dealer who can be relied upon to sell the article he requires in good condition. He has to deposit with the Bank a small portion of the cost as may be agreed with the Bank, and the latter will then pay the dealer the full cost of the article and the customer will become the owner of the article.

Saving Made Compulsory

The scheme will be a success only if the customer takes care to save every month at least what he agrees to repay and remit it to the Bank. The customer need not even take the trouble of going to the Bank every month for this purpose. By leaving standing instructions, the Bank recovers the instalment from the customer's account and sends him an advice. In his own interest, the customer is advised not to buy second-hand goods.

The goods purchased under this scheme certainly belong to the customer, but, until he pays the final instalment, he has to give an undertaking that the Bank has interest in the goods. Naturally, the Bank expects the customer to take good care of the goods. So long as this is done and the customer continues to enjoy the use of these goods and fulfill the conditions agreed upon at the time of taking the loan, the customer has unrestricted use of the goods.

The minimum amount that one can borrow under the scheme is Rs. 150. If the customer's regular income permits repayment of good amounts every month, he can even borrow up to a maximum of Rs. 10,000. The rate of interest to be charged on the loan is 6 per cent. per annum and this is payable in advance on the total amount of loan and for the whole period of the loan. In other words, it will be deducted from the loan amount. It saves the customer from the botheration of remitting interest monthly, quarterly or yearly. The following table will give an idea of the monthly payment one has to pay on loans for various periods:

Period	Amount of loan	Discount	Net proceeds	Monthly payment
	Rs.	Rs.	Rs.	Rs.
30 months ..	1,200	180	1,020	40
24 ,, ..	1,200	144	1,056	50
18 ,, ..	1,800	162	1,638	100
12 ,, ..	1,200	72	1,128	100
6 ,, ..	1,200	36	1,164	200

Penalty for Non-payment

Since interest is collected in advance, the effective rate of interest on the aforesaid credit will be more than 6 per cent., varying between 7 and 9 per cent. If, however, the customer likes to save some interest and repays the loan in advance, he will get a rebate of interest. In case he is unable to repay an instalment in time, the Bank may permit him to pay the overdue instalment with a penalty of 1 nP per rupee, provided it is paid before the close of the month in which the instalment is due and provided the Bank is satisfied with the explanation for not paying the instalment in time. The Bank has, of course, the right to seize the concerned goods if the borrower fails to fulfil his part of the contract, but the Bank will do so only when forced to the extreme. In the event of the death of the borrower before all instalments are paid, the burden of repayment will fall on the family. In order to avoid this, the customer has to take out a life insurance policy and assign it to the Bank. Incidentally, the scheme provides a fillip to life insurance business also.

The Dena Bank's scheme, which is yet to be finalised, is more or less similar, but it has other distinct features of its own. The amount of loan is restricted to a maximum of Rs. 5,000. The idea of restricting the amount to this figure is to provide the facility to the really needy and deserving with smaller means. The period of repayment will vary from 6 months to not more than 24 months. The rate of interest will be 5½ per cent. on loans for less than 12 months and 6 per cent. on credit for 12 to 24 months. Another feature of the Dena Bank's scheme is that the personal loan will be a clean one and will not be secured by the goods, as is the case with the Indian Overseas Bank's scheme. In case the borrower dies during the currency of the loan, the burden of repayment will not be cast on the family, and the Bank will write off the loan. In order, however, to cover the loss, the Bank will take out a life policy and get the amount of loan due from the insurer. In this case, the premium will, no doubt, have to be borne by the borrower, but this will be small and included in the amount of discount (at 5½ per cent. or 6 per cent. as the case may be) which will be deducted from the loan amount in advance. If, however, the borrower repays the loan in advance, the Bank will not give him a corresponding rebate on the interest, as is the case with the Indian Overseas Bank's scheme. The scheme will, in the first instance, be tried in the head office of the Dena Bank, but customers from branches will be entitled to the facility from the head office. The delay in implementing the scheme is said to be due to a hitch in concluding an agreement with the Life Insurance Corporation on the insurance cover.

The personal loan scheme, it is claimed, has fourfold advantages. In the first instance, it is a beneficiary loan, helping customers to equip themselves with the ordinary comforts of life or to make a start in business or profession. Secondly, it will lead to an improvement in the standard of life of the borrower. Thirdly, it may help him get a rebate on income-tax. Fourthly, it creates consumer demand for goods which are not within the reach of the fixed income or low income group and thereby assist the industrial development of the country.

TORONTO STOCK EXCHANGE TO DEAL IN GOLD

A novel step to list gold bars for dealings within the ring of a stock exchange was taken by the Toronto Stock Exchange on the 3rd inst. It is stated that this is the first time that trading in gold bars is allowed by any stock exchange in the world. For the present, business will be confined to Canadian kilo bars of about 32 ozs. each. Troy weight and worth about $1,100. It may later on be extended beyond the kilo bar, but this depends upon the success of the new scheme.

The move of the Toronto Stock Exchange is said to be intended to make people interested in owning gold in smaller quantities than the 400 oz. bars which are good delivery in London. The move is also closely linked with the growing distrust of the dollar in both Canada and the U.S. It may be noted here that citizens in the U.S. are not allowed to hold gold bullion in their own country, but are free to buy it for storage in other countries. Canadians, on the other hand, have been permitted to hold gold freely since 1956. In the past few months, rumours of devaluation of the dollar and discussions on dangers of inflation have stimulated fresh interest in gold hoarding among the people of the U.S. Apparently, Canadians are interested in affording opportunities to these people for satisfying their desire to keep a part of their savings in gold as a hedge against a fall in the value of U.S. dollar. In November last, a firm of stock brokers in Toronto announced a scheme for selling gold bars on instalment basis for a down-payment of 3 per cent. of the value of the bars. This was expected to draw a substantial flow of gold from the U.S.

LONG-TERM CREDIT TO SMALL INDUSTRIES IN SWEDEN

A new credit institution to provide long-term loans to small and medium-sized industries has been sponsored by 14 leading Swedish commercial banks. The banks have sought the approval of the Government to set up the institution, which will supplement regular commercial banking activities.

To be known as AB Foretagsfinans, the new institution will have an initial share capital of Kr. 5 million. The working funds will be secured through open market borrowing to an amount not exceeding eight times the share capital. Loans will normally be granted for a period of 10 years for investment in plant, machinery and modernisation schemes. As a rule, loans will be granted against regular bank security, but the new institution will also provide credit facilities under more liberal forms than prescribed by current banking legislation. Such "confidence" credits will be granted to companies which are not able to provide full formal security, but are considered to have satisfactory developmental potentialities.

THE UNITED STATES AND INDIA

PARTNERS IN TRADE

By Ellsworth Bunker
AMERICAN AMBASSADOR TO INDIA

AMERICANS have long taken pride in the fact that theirs is a trading nation whose merchant ships have sailed distant seas almost from the first days of American independence. As recently as last March, President Eisenhower reminded us that, as the foremost trading nation, the U.S. accounts for one fifth of the world's total export trade of $100 billion. Our imports supply American industries with needed raw materials many of which can be obtained only from abroad. Others go directly to the American consumer, enriching his life and adding to his high standard of living. The countries from which we buy are able to use the dollars earned from us to buy the products of our industries and farms; about 4½ million Americans depend on these exports for their livelihood. In the countries which buy from us, additional millions depend on our products to equip their factories and supply them with raw materials, to augment their food production or to lighten the burden of their daily tasks.

To meet the growing needs of men everywhere trade between all nations must flow in *greater volume*. The mutual benefit to the countries which carry on this trade made me choose the expression "Partners in Trade," in this discussion of our commercial relations with India.

Historical Background

Trade between the United States and India is not a new thing. "The Indies" have been a major factor in the commercial life of the Western world for many centuries. It was a shorter and safer trade route to India that Columbus was seeking when he stumbled across the Americas more than four and a half centuries ago. The new nation which grew out of that discovery some 300 years later established trade connections with India almost from its inception. As early as 1787—four years after the close of the Revolutionary War—an American merchantman put into Indian ports. By 1793, there was enough United States trade with India to warrant appointing Benjamin Joy of Massachusetts as American consul in Calcutta, to look after United States' commercial interests.

In the early 19th Century, United States trade with India burgeoned. The United States consul in Calcutta in 1845 reported that three-fourths of the ships that docked in the port that year had been American.

To the American trader of 1958, the cargoes these vessels carried would seem strange. From the northeast ports fast clipper ships sailed to India with ice cut from New England ponds. Other ships putting out from Philadelphia carried Pennsylvania coal. From all of the east coast ports went ships laden with agricultural products, flax, candles, medicines and some manufactured goods.

On the return trip, these American vessels carried the age-old trade goods of India: pepper and other spices; textiles for the luxury trade, sugar, indigo, tea and coffee.

Downward Slide

For a complex of reasons, America's trade with India subsequently declined. The ice trade went out with the advent of the ice-making machine in the 1870's. British coal replaced Pennsylvania's. Latin American sugar production supplanted the supply from India. The Civil War upset American shipping. Political and economic factors intruded, particularly after the British Crown assumed control of India's affairs from the East India Company after the Indian uprising of 1857.

The downward slide was rapid. Consular reports from Calcutta show that 167 United States ships put into the port in 1857; in 1881 the total was but 16.

In 1914, imports of American goods into India amounted to only 2.6 per cent. of total Indian imports, whereas the U.K. supplied 64.8 per cent. Gradually, as the growing U.S. steel industry required manganese, as the American leather industry needed larger supplies of raw hides, as the first manufacturing industries were established in India, and as American automobiles earned a reputation around the world, the movement of goods between India and the United States resumed its earlier proportions and then surpassed it. In 1956, more than 250 American ships called at Indian ports to load or discharge nearly one million tons of cargo. In 1957, delivery of more than 2½ million tons of American foodgrains under the PL-480 Agreement with India doubled the number of American ships visiting Indian ports.

Since attainment of independence by India in 1947, the United States has become India's second-largest customer and second-largest supplier, first place being occupied by the United Kingdom through traditional bonds and the continuing association in the British Commonwealth.

The importance of the U.S. to India as a market for her products, may be seen from the fact that America buys one-third of her jute, two-thirds of her cashews and pepper, about two-thirds of her manganese ore, one-third of her mica and of hides and skins, and seven per cent. of her tea. Together, these commodities, and others of lesser significance accounted for about $260 million worth, or 20 per cent., of India's total exports of about $1,300 million last year.

Two-way Street

That Indo-U.S. trade is a two-way street is illustrated by the fact that the importance of the U.S. as a market for certain Indian goods is almost evenly matched by the importance of India to the U.S. as a supplier of these goods. The dependence of the American economy on Indian products is both quantitative and qualitative. For example, India supplies two-thirds of the mica we need; mica is used as an insulator in electronic devices, from the flight control mechanisms of space missiles to household switches. She supplies three-fourths of the jute we use, mainly for packaging and cushioning. Some 14 million bales of cotton produced in America in a year are packed in burlap made from jute to move them from the farms to textile mills around the world. About one-third of the 2 million tons of manganese imported from abroad in a year comes from India. The U.S. is almost totally dependent on foreign supplies of this essential ingredient of quality steel. American consumers, who have in recent years developed a taste for tea, depend on the tea gardens of Assam and the South Indian peninsula for 38 per cent. of their supply. One-half of the pepper they use to season their food is grown in India.

For nearly the first ten years of India's existence as an independent nation, her trade with the United States was balanced slightly in her favour. The surplus dollars earned helped India offset deficits with other trading partners and keep her overall trade accounts in balance. However, the balance has been disturbed in recent years by India's growing need for imports from America.

India's Needs Grow

The Government of India and, more importantly, the people of India are currently engaged in a determined effort to conquer poverty and hunger. They are striving to develop and put to use the rich natural resources of their land, to provide more jobs in industry and to provide more food through increased agricultural production. Such a programme of economic development requires increased imports of machinery to equip the new factories, fertiliser for the farms and raw materials to feed the new industries. Consequently, Indian import needs have jumped in the past few years, as the development programme has gained momentum. American exporters of capital goods and industrial raw materials, notably in the chemical field, have participated in supplying these increased Indian needs, with the result that, in 1956 and 1957, India's imports from the United States exceeded her exports and reached a level of about $340 million last year.

Considering the prominent position which America occupies as a customer for Indian exports, particularly for such commodities as manganese, jute and spices it is obvious that any pronounced change in the trade pattern between the two countries would have a profound effect on total Indian export earnings and on the well-being of the Indian producer. The U.S. economic recession has, therefore, caused concern in India, where the effect was almost immediately felt through a drop in American orders for manganese ore and in the price level of other exports. It is not enough for India to maintain her dollar earnings; she must increase them through exports because of her increased need for American manufactures and for raw materials to fulfill her plans for economic development.

To some extent the export potential of the major Indian export commodities may be increased by the improvement of production and marketing facilities which will result from the development programme. For example, export shipments of such commodities as manganese ore have in the past been delayed by the lack of adequate transport facilities. These delays have been costly to the exporter or the shipper, and the increased cost is necessarily reflected in the price. New equipment for Indian railways and ports, much of it bought in the United States, will improve these conditions, with consequent benefit to both countries.

Obviously, the entire answer cannot be found in such automatic compensation, and efforts must be made to develop new products for the American market and new uses for traditional commodities. For example, jute cloth or burlap has had to face stiff competition from other packing materials and many things which were formerly packed in burlap are now shipped in paper bags. Recent experiments have shown that burlap is an ideal material for lining irrigation canals, which opens up new possibilities for Indian jute exports.

Promising Fields

The development of jet aircraft engines has greatly increased our need for castor oil, the only lubricant which resists the high temperatures of these engines. India is one of the two principal producers of castor oil and last year supplied about one-half of U.S. imports. Our steadily growing need for this lubricant could mean increased exports by India whose production is capable of expansion.

Another promising field of exports to America is frozen speciality foods. The waters of the west coast of India abound with shrimp and fish. It has been proven feasible and economical to ship quick-frozen shrimp to America to meet the growing demand. What is needed to develop a thriving business is better equipment for deep-sea fishing, freezing plants where the catch can be cleaned, packaged and frozen as soon as it is brought ashore, and refrigerated transport with which to deliver it to ships which will carry it in refrigerated holds to American ports. About 500 tons of Indian frozen shrimp were sent to the United States in 1957 and many more tons could be shipped if adequate facilities existed. Similarly, it seems possible to give Americans an opportunity to enjoy the delicious Indian mangoes and papayas once facilities are developed for processing and transporting frozen foods.

Two American Trade Missions which have visited India, one in the fall of 1955, the other in the spring of 1957, found considerable scope for increasing Indian exports to the United States, particularly in the field of handicrafts in which Indian artisans have produced articles of great beauty and artistic value, which add to gracious living.

Tourist Trade

Enterprising businessmen in both countries will no doubt discover other opportunities. Many such opportunities will be found by American travellers to India. These travellers themselves constitute an item of increasing significance in the total trade picture. Last year, 10 million American tourists spent nearly two billion dollars on travel to other countries. In a report made to the President on 17th April, 1958, Mr. Clarence B. Randall called international travel a form of international trade in which economically less developed countries can readily participate, since they often possess great scenic beauty to attract tourists. Moreover, the commodities sold in the tourist trade, scenery, services and souvenirs, cost little to produce and consume no natural resources. India has many places of scenic beauty, or historical and cultural interest; their attraction for American tourists is evident by the fact that their numbers have grown from 3,500 in 1952 to 16,000 in 1957 and now constitute 20 per cent. of all foreign visitors to India. Some 4,000 visitors from India come to the United States in a year. This exchange of people in the tourist trade brings with it also an exchange of ideas and viewpoints and of information about one another which is sure to promote closer friendship between the people of India and the United States.

I have said much in this article about the need and possibilities for increasing Indian exports to America. But the other side of the coin is equally important. India, with her great

YARN SPINNERS' PRICE AGREEMENT

RESTRICTIVE PRACTICES COURT'S VERDICT EVOKES MUCH RESENTMENT

From a Special Correspondent

MANCHESTER, *27th January*

MANCHESTER LETTER

NOT only millowners but traders connected with all sections of the cotton industry are awaiting developments after the adverse judgment passed on the Yarn Spinners' minimum price agreement by the Restrictive Practices Court. Chief talking point was the proposal to put forward an alternative scheme for submission to the Court next week. No details of the substitute plan are available, but members of the Association took no action on prices until they had official notification from the organisation that the current system of calculating yarn selling rates was to to be abandoned.

Considerable resentment was expressed by employers and trade union officials at the comments made in the judgment. Mr. Wm. T. Winterbottom, Chairman of the Fine Spinners and Doublers Ltd., described the decision as "bitterly disappointing." Only one talking point was discussed on the Boards of the giant trading floor of Manchester Royal Exchange as the news was flashed to the mill towns. Mr. Winterbottom said that the efforts to achieve price management by the Yarn Spinners' Association now seemed to have become a lost cause. "A more realistic approach to our acute problems now becomes more urgent," he added. A determined attempt must now be made to secure a more compact and efficient industry if it is to survive. Forecasting a "painful period ahead," Mr. Winterbottom said: "A lot of firms must think about their position and prospects."

Extraordinary Comment

On the statement made by the Court that more Lancashire mills would be forced to close, Sir Alfred Roberts, Secretary of the Cardroom Amalgamation, said: "It is an extraordinary comment to make. It is none of their business. I think it is deplorable that this sort of comment should be made in giving what one would have regarded as a legal judgment." As a trade union leader, he had been prepared to see modifications to the Yarn Spinners' price agreement to make it conform more closely to the public interest. The Court's decision was not in the interests of Lancashire cotton workers. Sir Alfred added: "It seems to me that what they are saying is that the Agreement is contrary to the public interest and, therefore, that the number of mills existing at the moment is contrary to the public interest and that some mills will have to go."

Business in cotton goods, which has been virtually at a standstill for several weeks pending a decision on the Agreement, is expected to broaden once price stability has been achieved. Stocks of textile goods held by distributors in the home trade are known to be very low and, in the circumstances, there is every likelihood that a substantial offtake will be recorded when business begins to broaden. The general feeling in merchanting quarters was that the decision about the Agreement should bring relief, as the merchants have for long advocated more flexibility in price schedules to bring an expansion in turnover.

Meanwhile, the President of the Yarn Spinners' Association has sent a message to all members. It said:

"I regret to inform you that the Restrictive Practices Court has expressed the opinion that the operating cost prices and the terms and conditions of sale of the Yarn Spinners' Association are against the public interest. The Court has not made an immediate order declaring them void and has adjourned until Monday, 2nd February. Until an order is made by the Court at the adjournment or later, the current operating cost prices and the terms and conditions of sale of the Association remain effective."

Issue Settled

As the weeks went by with no decision on the Agreement, traders began to take the view that the Court was more favourably disposed towards the arrangement than had appeared from the Press reports quoted during the hearing. The fact that the system was not quickly dismissed lent support to the belief that it might be upheld in the final judgment. Such, however, was not to be the case and the announcement effectively settled the issue, although it created profound disappointment in many places —not entirely in the spinning trade alone. Such a momentous and far-reaching decision cannot be easily digested in a matter of hours and few interested parties were ready to comment or take action on a matter of such vital concern to so many different sectors of the industry.

Final judgment on the situation must be withheld until more stability in price levels is reached. Immediate reactions may perhaps be more apprehensive than is justified by the eventual outcome. For the moment, a nervous tone cannot be avoided with spinners wary about the attitude of their neighbours towards future selling rates.

December turns the Scales

Much publicity has been given to the fact that, in 1958, the volume of imports of cotton cloth into this country exceeded the quantity of cloth shipped abroad. December proved the turning point, as arrivals increased and exports failed to record any expansion as compared with recent months. Such a situation was not altogether surprising to traders who have watched the trend of overseas returns but it merely emphasised the unfortunate state of the industry at the moment.

As the table below indicates in no uncertain fashion, the fault does not lie entirely with the volume of imports as they too have declined; the responsibility rests more on the inability of Lancashire shippers to secure more than a meagre share of available export trade. The comparable import-export situation over recen years is as follows:—

(Cloth in thousand sq. yards; Yarn in thousand lbs.)

	Cotton cloth		Rayon, etc., cloth		Cotton yarn	
	Exports	Imports	Exports	Imports	Exports	Imports
1949 ..	903,578	343,800	160,708	51,600	82,061	1,000
1950 ..	822,473	286,920	189,568	55,280	70,986	14,480
1951 ..	864,375	376,640	217,206	99,240	65,481	31,720
1952 ..	710,813	179,680	149,794	29,280	35,722	7,280
1953 ..	709,905	98,640	170,329	44,400	41,920	3,360
1954 ..	637,378	267,167	175,256	67,331	40,431	10,721
1955 ..	594,594	299,470	193,747	65,415	35,663	14,919
1956 ..	474,150	396,173	120,322	74,249	33,822	16,794
1957 ..	455,760	416,252	111,239	73,400	37,036	14,727
1958 ..	334,078	386,703	84,404	47,171	26,797	14,637

The balance swung in favour of imports mainly in the final quarter of the year and it now remains to be seen what effect the voluntary undertaking by Hong Kong and the anticipated arrangements on a similar basis with India and Pakistan will have on future developments.

Most of the major outlets for Lancashire cotton cloth took smaller quantities in 1958, exceptions being New Zealand and the Irish Republic. Leading buyers were (in thousand square yards, with 1957 comparisons):—Australia 64,523 (71,511); South Africa 49,672 (57,254); New Zealand 34,372 (33,937); Nigeria 30,078 (30,545); Rhodesia and Nyasaland 17,886 (25,047); Ghana 17,775 (22,977); Belgian Congo 17,448 (21,619); and Irish Republic 15,143 (13,558).

As regards imports, the major influence has, of course, been the rise in shipments from Hong Kong. Grey cloth arrivals from the Colony have been stepped up from 55,859,000 square yards in 1956 to 71,095,000 square yards in 1957 and to 116,081,000 square yards last year. In contrast, India's share in this trade in 1958 slipped back to slightly below the 1956 level, 120,946,000 square yards being imported, as against 182,094,000 square yards in 1957.

Notwithstanding the quota restrictions introduced on trade with China at the beginning of the year, the sharp rise in shipments from that source early in 1958 enabled a total of 39,306,000 square yards of grey cloth to be imported during the twelve months, as against 27,609,000 square yards in the previous year. Takings from Japan fell from 56,465,000 yards in 1957 to 40,391,000 square yards last year.

Slump in Yarn Shipments

After six years in which exports of cotton yarn had varied between 35 and 42 million lbs., shipments in 1958 slumped to 26,797,390 lbs., the lowest total recorded for a century or more, except in the 1942-46 period, when war-time and post-war influences were predominant. Mainly responsible for this reduction in export trade were the lower takings from India, Nigeria, Canada and several Continental countries. Again New Zealand is one of the few areas which has absorbed more Lancashire-made yarn, accompanied, in this case, by Australia, which retains her place well at the top of the list of buyers with 8,445,000 lbs.

Exports of rayon and synthetic fibre yarns, which in 1957 overtook comparable shipments of cotton yarns, maintained their predominance, despite a reduction of more than 6,000,000 lbs. to 37,910,000 lbs. Shipments of rayon and synthetic fibre piecegoods took a further dive, being

DEARNESS ALLOWANCE FOR TEXTILE WORKERS

MILLS' PLEA FOR CUT RIGHTLY REJECTED

THE Full Bench of the Industrial Court, Bombay, consisting of Mr. M. R. Meher, President, Mr. S. T. Bilgrami and Mr. I. G. Thakore, Members, rejected, on 28th January 1959, the application made by the Millowners' Association, Bombay, seeking permission for a one-third cut in dearness allowance paid to the textile workers in the City. The court held that the Association had not made out a convincing case for reduction in dearness allowance. A cut in dearness allowance, the court maintained, should not be resorted to lightly. In all industrialised countries, it is pointed out, it was recognised that wage cuts lowered the morale of workers and caused much discontent.

The court further held that a cut in wages or dearness allowance should not be resorted to, unless it appeared that economies and other expedients would not bring the industry back to profitable working. While the court did not underrate the difficulties through which the industry had been passing, it did not think that the position was as bad as was sought to be made out by the Association or that there was such a deterioration in the position of the industry as to justify a cut in dearness allowance. The textile industry had survived many difficulties in the past and the court had no doubt that it would emerge from the present crisis which appeared to be temporary. The court went on to observe: "The industry supplies the basic need of the people. The national income has increased and is bound to increase as the various plans of the State materialise. With this the demand for cloth is bound to increase. We are, therefore, not disposed to take a pessimistic view of the industry even in the near future."

Millowners' Submission

The Millowners' Association, in its application, had made the following submissions:

"The financial position of the industry at present is very precarious. The profit-making capacity of the industry has been on the decline since 1956 and the situation has been accentuated by the rates and structure of taxation, and the profits left are insufficient to meet the needs of depreciation, reserves, dividends, etc. The continuous increases in excise duty and sales tax (since converted into additional excise duty), have had disastrous effect on the industry's profits. The position of the mills have been turned from profit-making into loss-incurring and many of the member-mills are left with little or no working capital to carry on the working of the mills. The industry has to meet additional burdens, such as gratuity and increase in provident fund and employees' insurance fund contributions. The industry is not in a position to build up any reserves to fall back upon and has not been able to progress with rehabilitation of machinery which is an urgent need. The industry is in need of immediate relief by reduction in dearness allowance so as to enable the industry to pass through the critical and difficult times, and to avert disastrous consequences to the units of the industry."

Union's Stand

Opposing the application, the *Rashtriya Mill Mazdoor Sangh*, the representative union of the textile workers of Bombay, submitted:

"It is the general capacity of the industry which is to be taken into consideration and not temporary ups and downs. The capacity of the industry has to be seen as a whole and not unitwise by taking into consideration uneconomic and mismanaged mills. Because a few units might be in difficulties, in many cases, of their own creation, it does not follow that the capacity of the industry as a whole has deteriorated. The industry, which has been established for over a century, is financially very stable and sound. From 1942, the industry has been continuously making good profits, building up large reserves and the general picture of the industry is one of steady progress, prosperity and expansion. The industry has developed export markets and has a very bright future. It has capitalised reserves to a great extent and has made rapid progress in rationalisation. It is misleading to say that the profit-making capacity has deteriorated on account of the structure of taxation. It is only after profits are ascertained that the question of taxation arises. The excise duty was increased to mop off surplus profits. In consequence of representations made, relief has been given in the excise duty. The Government appointed the Textile Inquiry Committee which made its report on 15th July 1958. Most of the recommendations of the Committee were accepted by the Government of India. The application of the Millowners' Association asking for a reduction in dearness allowance is made on the same grounds which were pressed before the Government and before the Committee. The recommendations of the Committee will go a long way to solve the problems of the industry. There is no justification for the industry, after having received substantial benefits from Government, to place the same grievances and ask for reduction of the dearness allowance."

The *Sangh* further submitted that the present rate of neutralisation by 99 per cent. of the minimum wage covered hardly 60 per cent. of the rise in the cost of living for the average wage-earner. Any decrease in the dearness allowance at the present time would make living impossible for the workers and cause serious discontentment among them. The principles which should govern the determination of the question of wage reduction, the *Sangh* maintained, were quite different from those which were to be followed for wage fixation or wage increases.

Gandhiji Cited

The court dealt at length with the point raised by Mr. G. D. Ambekar on behalf of the *Sangh*, namely, that the principles which governed the question of reduction of wages were different from those which governed the question of fixation of a wage structure. Mr. Ambekar had relied on the principles enunciated by Mahatma Gandhi in a dispute in 1936 between the Ahmedabad Millowners' Association and the Ahmedabad Textile Labour Association in which the former had asked for a 20 per cent. cut in wages. The judges observed:

"It seems to us that, while the principles enunciated by Gandhiji serve as a useful warning that a wage cut should not be lightly resorted to, it cannot be laid down as an unalterable principle that, under no circumstances should a wage cut be resorted to until reserves are wiped out and mills are obliged to fall back upon their capital for continuing the industry. In a society, so long as profit motive is accepted as legitimate, employers cannot be expected to continue to run an industry for a long time at a loss. If the position of an industry has deteriorated to an extent as to justify a wage cut, it cannot be insisted that the mills must be obliged to fall back on their capital for continuing the industry; since the capital and a considerable portion of the reserves are usually sunk in the block, this argument would mean that no cut can be made till the losses have wiped out not only the reserves but a portion of the capital. It has to be borne in mind that maintenance of employment is an aim that should be kept in view both by the employers and unions. It may be too late to wait till the patient is on the verge of or in a state of collapse."

Is Cut in D.A. Justified?

The court held the view that the question for consideration was whether the Association had shown that there had been such a deterioration in the condition of the industry as to justify a cut in dearness allowance. It did not think that the position was that bad. Dealing at some length with the contention of the Association that the financial position of the industry at present was very precarious, the court observed that the present position of the industry had been examined by the Textile Inquiry Committee appointed by the Government of India in May 1958. All the recommendations of the Committee, except the one regarding the formation of an autonomous corporation for taking over mismanaged mills, had been accepted by the Government. The excise duty was reduced thrice, that is in December 1957, in March 1958 and again in July 1958. The court held that there was considerable force in the argument of the *Sangh* that the application of the Millowners' Association was based on the same grounds and difficulties which were pressed before the Government and the Committee and which have been relieved to a considerable extent by the reduction in, and rationalisation of, the excise duty. The full effects of the reduction in the excise duty, and other measures adopted by the Government for assisting the industry, will be seen when the balance-sheets for 1958 were out.

Considering all the relevant facts, the court came to the conclusion that the millowners had not made out a case for a cut in the dearness allowance.

There is no doubt that the ends of justice would not have been met had the court taken a decision different from the one it did. This is not to deny the financial plight in which the industry finds itself today—the court itself recognised it, albeit in a qualified manner. But that is certainly not a sufficient justification for millowners to seek a solution through a cut in wages, especially at a time when the cost of living is mounting up by leaps and bounds. By doing so, they have only provided a justification to the charge level'ed against business men in this country by Mr. Walter Reuther, a prominent American trade unionist, that they knew only three ways of making profits—cutting wages, increasing prices and reducing quality. If, however, their move was designed to forestall a likely demand for a raise in dearness allowance by workers, it was certainly bad policy, for it could have no other result than the generation of suspicion among workers at a time when mutual understanding of each other's problems was most necessary.

Industry's Problems

What have brought the cotton mill industry to its present plight are mainly the misguided fiscal policy and directional controls of the Government. It is rectification of these defective policies that are more important than a reduction in the dearness allowance of workers. We do not deny that the labour cost of the industry has become rigid. Nor do we deny that at present workers' earnings are not fully related to productivity. There may be several anomalies in the wage structure of industry. But this question is under consideration by the Central Wage Board for textile industry and it is through this body that attempts should be made to rectify these defects. In fact, it would be a healthy principle for both the parties to await the report of the Wage Board before raising fresh disputes. It may be noted here that it was for this very reason that an application filed by the *Sangh* for a modification of certain awards in favour of workers had been stayed by the court.

The main problem of the industry is higher cost of production and lower demand for cloth. Offtake of cloth can be stimulated only by making cloth cheaper and raising its quality. There are two possible alternatives to this remedy—either to improve productivity or to reduce wages. Since the latter is neither possible nor desirable in the context of the present social, political, and economic climate, the former offers the only solution. All impediments in the way of its adoption, whether it be fiscal or those arising from the opposition of labour to, or from the Government's restrictions on, modernisation of industry, should be removed.

Palliatives Won't Help

At the same time, it is necessary to add that the trade unions themselves have contributed not a little to the weakening of the cotton mill industry's economy. They have always tended to look upon their interest as distinct from and opposed to that of the industry. How else could one explain its stern opposition to modernisation of the industry and its blind support to the wrong fiscal policies of the Government that have throttled the expansion of the industry? The chiefs of the I.N.T.U.C. and the A.I.T.U.C. have strongly endorsed the Government's plans for boosting the handlooms and *Ambar Charkas* at the expense of the cotton mill industry, plans which time has shown to be unprofitable. Surely, they cannot have it both ways. Even now it is not too late. If taxation on cloth is reduced further and vigorous steps are initiated to expand production and modernise the equipment, the present difficulties of the industry may prove to be temporary. A cut in dearness allowance or minor readjustments in the basic wage will be no more than palliatives. For the industry's difficulties are more deep-seated than is generally realised. Surely, gangrene cannot be cured with lavender water.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

U.P. SUGARCANE GROWERS' THREAT

MILLOWNERS OPPOSE HIGHER PRICE FOR CANE

IT is, indeed, unfortunate that the sugar industry in Uttar Pradesh is confronted with a crisis of great magnitude when the need for maintaining a high level of output is urgent in the context of rising demand for sugar within the country and fixation of a large export quota (100,000 tons). At the time of writing, the cane growers are reported to have decided to stop supply of cane to sugar factories with effect from the 5th inst. in response to the call of 20th January made by the Praja Socialist Party Sugarcane Sub-Committee. At the same time, the workers of 25 sugar mills out of the 68 units functioning in Uttar Pradesh have served notices on the managements conveying their decision to go on strike if their wage claims are not conceded. As if these disquieting trends are not sufficient, the U.P. sugar industry is seriously threatened by shortage of cane supplies, thanks to a smaller cane crop and the continued competition from *khandsari* manufacturers who enjoyed a distinct tax advantage of Rs. 13.16 per maund.

The latest move for State-wise strike of sugarcane growers has been sponsored as "a united struggle of all opposition parties, as also of Congressmen sympathetic to the cause of cultivators." A similar strike call (with effect from 15th January, it will be recalled, had been issued on 30th December last by the Uttar Pradesh Co-operative Cane Growers Unions' Federation, but was withdrawn following the conciliation talks held with Dr. Sampurnanand, U.P. Chief Minister. It had then been said that the Chief Minister had agreed to convene a tripartite conference of representatives of the Federation, sugar millowners and Government to consider the three demands of cane growers, namely, upward revision in the current statutory minimum price of cane—Re. 1.44 per maund—profit-sharing between cane growers and mill-owners from 1953 onwards, and appointment of a board for fixing the price of cane with suitable representation. The proposed conference was expected to be held after the Nagpur session of the All-India Congress Committee. The Conference has not been held up till now. In fact, one report claims that the Chief Minister of U.P. had never agreed to convene such a conference.

Unjustified and Untimely

Be that as it may, the agitation of U.P. cane growers for an increase in the statutory minimum prices fixed for their product is not only unjustified but also untimely. Since this aspect has been discussed in some detail in these columns four weeks ago (*vide* page 16 of *Commerce* dated 10th January 1959), it is unnecessary to deal with it again. Nevertheless, it is necessary to refer here to some of the remarks made by Mr. Genda Singh, a member of the National Executive of the Praja Socialist Party and the State Vidhan Sabha while supporting the strike call. Addressing a Press conference at Lucknow the other day, Mr. Singh observed:

"We will not wait for the tripartite talks, as the conditions have changed. We have given enough time to the Government and the millowners for an amicable settlement. But the millowners have adopted delaying tactics. If the millowners had been sincere, something should have materialised by now. This is the best year for the cane growers for bargaining and we do not want to miss the opportunity. This is the best year, because there is international commitment for sugar export. Gur prices this year are good and the production of sugar is low. The proposed tripartite conference, if at all held, will not bring in the desired result. What is the legal force of the Chief Minister to compel the industrialists to pay enhanced price?"

S. N. K. SUNDARAM,
Managing Director.

The aforesaid observations of Mr. Genda Singh clearly show that he is out to exploit the present position in his favour. He does not seem to care for the interests of consumers. Nor does he care very much for the huge losses that farmers will suffer by not supplying the cane to mills. He is only trying to bolster himself up politically by misleading the ignorant cane growers. His statement that the plea for higher cane price is fully borne out by the incomes of the sugar industry and the profits of factory owners will not stand the test of impartial scrutiny. As this journal has ere now pointed out, the price of sugarcane is high in all conscience, accounting as it does for as much as 60 per cent. of the cost of producing sugar. The cost of cane per ton of sugar produced is Rs. 405, which represents over 88 per cent. of the total price of sugar realised on exports. Indeed, having regard to the low sucrose content of the cane grown in Uttar Pradesh, the price that is now being paid for it is excessive. If Mr. Genda Singh and his followers are genuinely interested in the welfare of cane growers, they should agitate not for a higher price for relatively poor quality sugarcane, which, if conceded, is bound to hurt the vast mass of consumers, but for proper facilities that will enable the growers to raise better varieties of cane and to increase the per acre yield of sugar. It is only such constructive methods that will help both cane growers and sugar consumers and bring lasting glory to persons who wish to serve the people.

Millowners' Deputation

The series of handicaps that deterred the progress of the sugar industry in U.P. were, it is said, explained by a delegation of millowners when it met the U.P. Chief Minister at Lucknow recently. The delegation was led by Mr. S. S. Kanoria, President of the U.P. branch of the Indian Sugar Mills Association. The daily Press version of the meeting reveals that the delegation alluded in particular to the three main obstacles to the smooth running of sugar mills, namely, low recovery of sugar from cane, near-certainty of a short crushing season, and fixation of an unremunerative ceiling of Rs. 36 per maund (ex-factory). The result was an increase of at least Re. 1 per maund in the cost of sugar production in the current season. It was, therefore, emphasised by the delegation that there was no question of an increase in the price of cane. In fact, even on the basis of the present level of cane price (Re. 1.44 per maund), there was a strong case for an increase in the ex-factory price of sugar.

Apart from the fact that the present ex-factory prices are low, the price fixation has not benefited the consumers in any way, because there is no control on the retail price of sugar anywhere. So, even when the factories release their sugar stocks at the controlled price, the price of sugar in the free market, even in Kanpur, has never been less than Rs. 38 per maund. The consumer buys sugar at a still higher price from the retail market. It is thus evident that the fixation of ex-factory price of sugar has helped only the middlemen. Drawing attention to this aspect, the millowners' representatives are understood to have lodged a protest against Central control on ex-factory price of sugar for North India. It was pointed out that, as there was no such control in Western or Southern India, the U.P. sugar industry had been placed at a disadvantage.

The reactions of the U.P. Chief Minister to the millowners' views are not known. Talking to Press men after the meeting, the Chief Minister, however, said that the views had to be scrutinised before another meeting was held betwen the representatives of the Government and the industry. Commenting on the convening of a tripartite conference as demanded by cane growers, the Chief Minister declared that no purpose would be served by such a conference, unless common ground was found and that the Government would, therefore, examine the data placed before it and try to find the ground on which the cane growers' demand for a price increase could be considered. As for the strike organised by the P.S.P., he had nothing to say. There was little the Government could do, he said, if the P.S.P. wanted to organise protest demonstrations and strikes by cane growers.

By expressing inability on the part of the Government to interfere with the situation caused by the cane growers' strike, the Chief Minister of Uttar Pradesh has left the sugarcane growers and the sugar mills in a quandary. It is an admission of failure on the part of the Congress Party to provide correct leadership in rural areas. The merit of real leadership lies not in stirring up people, a relatively easy job in areas where illiteracy and ignorance are widespread, but in convincing people in economically sound solutions. If only Dr. Sampurnanand, his colleagues in the Government and other members of the Congress had stood firm on the issue of cane prices when it was first mooted in the Legislature, the situation would certainly not have taken such an ugly turn. The blame for all the troubles brewing in and around the sugar industry of Uttar Pradesh rests as much with the leftist parties as with the Congress Party which, deplorably enough, did not oppose a private member's resolution in the U.P. Legislature urging a rise in the cane price from Re. 1.44 to Re. 1.75 per maund and allowed it to be passed unanimously. By doing so, the U.P. Congress Party badly let down the Central Government.

CHITALE SUGAR FACTORY

To the chain of sugar factories functioning in Bombay State, one more will be added during the next sugar season commencing from 1st November 1959. This is the Chitale Sugar Works, the foundation-stone of which was laid at Chitalenagar in Malsiras taluk of Sholapur district on Tuesday last week by Mr. S. K. Patil, Union Minister for Transport and Communications. The project has been sponsored by Messrs. S. D. Chitale and W. D. Chitale who have rich experience in sugar trade and cane culture. The estimated capital outlay on the plant is put at Rs. 45 lakhs. The plant is expected to have an annual crushing capacity of about 120,000 tons of cane, yielding 13,200 tons of sugar valued at Rs. 1.36 crore. The sucrose content of cane is assumed at 11 per cent. It will be interesting to note here that machinery and equipment are being purchased from existing sources in India, thereby avoiding expenditure of precious foreign exchange.

Chitalenagar, where the new sugar factory is being set up, enjoys all the advantages required for sugar manufacture. Special mention may be made of abundant supply of sugarcane. There are vast fertile fields with ample irrigation. Out of the total annual requirements of cane—120,000 tons—one-third will be grown on farms attached to the factory itself and the balance will be purchased from private cultivators.

Laying the foundation-stone of the Chitale Sugar Works, Mr. Patil emphasised the need for stepping up sugar production so as to meet fully the increasing domestic demand for the product and also make available large quantities for export. Complimenting the promoters of the factory, Mr. Patil declared that it was only through pioneering and enterprising spirit of such persons that a healthy expansion and sustained development of sugar industry could be ensured.

WORLD SUGAR

The International Sugar Council, which ended its two-day meeting in London on 29th January, adopted an estimate of the minimum net requirements of the free market for 1959 amounting to 5,405,000 metric tons, raw value. It decided that provisional export quotas to the free market should be the basic export tonnages established under the 1958 Agreement. In arriving at this decision, the Council had regard to present uncertainties in the sugar supply position; to the fact that this allocation of quotas is provisional only and must be followed by final determination at the next session, which will open on 19th March; and that the agreement contains an automatic mechanism and provides for a prompt meeting of the Council if the market situation so requires. The Council deferred until its next session the consideration of the establishment of a special reserve to meet cases of special hardship.

The Union Food and Agriculture Ministry has issued a *corrigenda* in respect of the all-India final estimate of sugarcane crop for the season 1957-58 published on 23rd August 1958. The revised estimate places the aggregate production of cane at 64,142,000 tons, as against 63,954,000 tons forecast earlier, the partially revised estimate for 1956-57 being unchanged at 66,998,000 tons. In terms of *gur*, the output of cane is now put at 6,476,000 tons, as against 6,367,000 tons in the earlier estimate and 6,751,000 tons for 1956-57. There has been no change in the figure for area, namely, 5,021,000 acres, that for the previous season being 5,057,000 acres.

SAFETY IN COAL MINES

DHANBAD CONFERENCE RECOMMENDATIONS

COAL mining is an inherently hazardous industry, in which even an unconscious slip by one engaged in it may not only undo the valuable work of all others but also land the management in serious trouble. The hazards of mining go on increasing with intensive exploitation of the mines. For larger production from a given field one has to go deeper into the mines and for an effective working one has to adopt a greater degree of mechanisation. All these involve a larger number of hazards. Intensive working and increased mechanisation of mines are inevitable if the production targets are to be achieved. This does not mean that production targets should be achieved at the cost of safety of workers. It only underlines the need for greater vigilance on the part of management, the workers and the inspectorate, who are all responsible for maintaining safety in mines. This can be ensured by all the three parties playing their part conscientiously and in full co-operation with each other.

With this end in view, the Conference on safety in mines held at Dhanbad on 29th January 1958, in which the representatives of workers, employers, the Government, technical experts and members of Parliament took part, drew up a comprehensive set of recommendations for a concerted drive to prevent mine accidents. The Conference was presided over by Mr. Abid Ali, Union Deputy Minister of Labour. The measures recommended by the Conference are: safety education and propaganda, cultivation of safety consciousness among the staff and workers and stabilisation of the labour force. The Conference was of the view that a stable and permanent labour force would go a long way towards ensuring safety in mines. For this purpose, it was suggested that the existing methods of recruitment should be improved. A list of workers retrenched or likely to be retrenched for whatever reason should be maintained by the Mines Welfare Organisation or any other suitable agency. Workers on this list should have first claim on future vacancies in the industry. Other things being equal, the Conference recommended, local labour should be given preference over outside labour.

Fatigue and physical fitness of miners are two important factors which have a large bearing on safety. The Conference, therefore, suggested that a body of experts should carry out scientific investigations into the fatigue factor. In this connection, it was suggested that the experts should go into the question of working hours. Since physical fitness of miners helped in reducing accidents, they should be medically examined first at the time of appointment and subsequently every two years.

The other recommendations of the Conference are:

1. A high priority should be given to the question of housing for mine workers and the supply of wholesome drinking water and sanitation in their colonies;

2. A committee should conduct investigations, with a view to making more specific the regulations about the standards of ventilation and lighting;

3. The use of open lights should be prohibited and precautions relating to the use of electricity should be incorporated in the mines regulations, instead of in the Indian Electricity Rules as at present;

4. More attention should be paid to routine analysis of mine air and only specially trained persons should be employed on the job;

5. A technical committee should be set up to consider the problems created by coal dust and to suggest measures to deal with them; and

6. Where heat and humidity is above a specified level, the duration of shift should be reduced or other suitable procedures adopted to meet the conditions.

It is not lack of rules and regulations that has been the cause of accidents in mines. We have rules and regulations and penal provisions for their breach. While they are necessary, they themselves are neither adequate nor effective in ensuring safety, unless the people charged with their observance bring to bear on their work a high sense of duty. Mr. Abid Ali was, therefore, right in emphasising, in his inaugural speech at the Conference, that "maintenance of safety in mines is essentially a matter of conscientious performance of duties by all concerned." The men in charge of safety at every level, he added, must approach their task not in a petty spirit of technical compliance with legal requirements, but with a constant awareness of their great responsibility and of the serious consequences that might follow from a slip on their part.

An important facet of the whole problem is that of inducing safety consciousness among the workers and making them more and more safety-minded. Mr. Abid Ali reminded the workers' organisations of their responsibility in this regard. He said:

"The promotion of safety consciousness is largely a matter of education, training and propaganda. As matters stand today, the workers very often go down the pits without an adequate knowledge of the hazards to which they are exposed. The environment from which they come is so different from the one in which they have to work that it calls for a high degree of psychological readjustment which is not always easy to achieve. This problem may be solved if some initial training is given to the workers before they are actually put on jobs. This will improve their efficiency, acquaint them with the hazards of mining and equip them with the knowledge necessary for fighting them. It may not be feasible to launch upon any elaborate training programme immediately, but it is time we made a beginning, even if it be on a modest scale. The workers' organisations also should address themselves earnestly to this task. They should keep the problem of safety constantly before the workers and bring home to them the imperative necessity of scrupulous observance of the safety rules with utmost care."

It is needless to emphasise the importance of discipline in ensuring safety. The Code of Discipline drawn at the Naini Tal Conference was intended to create a climate of peace in industries, more so in mines. As Mr. Abid Ali pointed out, if the workers and employers observe the Code to which they have agreed, they will help to create conditions in which the observance of safety measures will be relatively easy. To quote the Minister: "It is obvious that, under an emotional stress, a person or a group would be less mindful even of routine precautions." This is very true indeed.

It is distressing to hear that the differences that divide the trade union movement, on account of their political rivalry, have been carried even to the sphere of safety also. Safety is a subject of common interest to all. Surely, those *who refuse to co-operate in ensuring safety* are uncivilised and unfit to hold position of leadership in any society. If any trade union is found guilty of non-co-operation in this vital matter, it deserves to be censured. There may be differences of opinion over the methods to be adopted for ensuring safety, but they have to be thrashed out through friendly discussion. There is, however, no excuse whatever for political rivalry among workers' organisations to interfere with the enforcement of the safety measures.

DESPATCHES OF GUNNIES FROM MILLS

SHARP RISE IN DOMESTIC CONSUMPTION OFFSET BY FALL IN EXPORTS

A brief reference was made in our last issue (*vide* page 152) to the trend of despatches of gunnies from jute mills in India during the calendar year 1958. It was pointed out that the total despatches had suffered a shrinkage of 22,000 tons to 1,021,300 tons in the past year. This was on top of a fall of 11,600 tons in 1957, thus bringing the aggregate decline in the last two years to 33,600 tons.

It may be interesting to note that, in the immediate post-partition year of 1948, the total despatches from Indian mills aggregated a high of 1,063,500 tons. The next two years witnessed a setback in despatches to a low of 793,000 tons, the lowest level for the post-partition period. Thereafter, there was a recovery. Except for a break in 1953, the upward trend was maintained till 1956, when the despatches amounted to no less than 1,054,900 tons, thus nearly making good the fall in 1949 and 1950. This improvement was not sustained in 1957 and 1958. On the contrary, there was a setback during these two years, as pointed out earlier, the fall being more pronounced in 1958 than in 1957.

A variety-wise analysis of despatches during 1958 shows that, whereas hessian accounted for a rise of 8,600 tons to 416,800 tons and miscellaneous varieties for 2,000 tons to 61,400 tons, sacking actually declined from 576,200 tons to 543,000 tons. An interesting feature of the trend of despatches is the marked rise in the offtake of miscellaneous varieties during the last few years, in tune with the rise in the output of these varieties. Thus, while their production rose from 32,700 tons in 1954 to 72,300 tons in 1958, the offtake improved from 23,600 tons to 61,400 tons during the same period.

Exports Fall

The decline in total despatches during 1958 was mainly accounted for by exports which had suffered a shrinkage of 43,800 tons, chiefly in heavy goods and miscellaneous construction. This was the first time since 1950 that a decline in despatches for export purposes has occurred. From a high of 934,800 tons reached in 1948, they fell to 680,700 tons in 1950, but gradually picked up to touch 864,500 tons in 1957. The decline in total despatches from mills would have been more marked but for the rise of 26,200 tons in offtake for internal consumption, which touched a post-partition peak of 205,500 tons.

The following table shows the monthly variations in despatches of gunnies during 1958 and the annual fluctuations from 1954 onwards:

Despatches of Gunnies (In tons)

Period	Export Purpose				Internal Consumption				Total Despatches
	Hessian	Sacking	Others	Total	Hessian	Sacking	Others	Total	
1958									
January ..	28,100	26,200	1,300	55,600	1,900	15,300	2,700	19,900	75,500
February ..	30,800	35,200	1,400	67,400	1,700	14,600	2,100	18,400	85,800
March ..	31,300	32,700	1,500	65,500	2,300	15,800	2,400	20,500	86,000
April ..	32,400	31,500	2,000	65,900	2,000	13,400	2,600	18,000	83,900
May ..	27,800	28,500	5,400	61,700	1,800	13,600	2,400	17,800	79,500
June ..	23,800	19,800	2,400	46,000	1,300	10,200	2,300	13,800	59,800
July ..	45,500	38,000	4,500	88,000	1,300	9,700	3,100	14,100	102,100
August ..	34,900	39,300	3,400	77,600	1,400	8,300	2,000	11,700	89,300
September ..	36,200	42,000	2,400	80,600	1,700	10,400	2,500	14,600	95,200
October ..	30,900	34,000	2,400	67,300	1,400	12,000	2,200	15,600	82,900
November ..	34,600	33,400	2,400	70,400	1,900	14,200	2,700	18,800	89,200
December ..	39,700	27,600	2,400	69,700	2,100	17,300	2,900	22,300	92,100
Total 1958..	396,000	388,200	31,500	815,700	20,800	154,800	29,900	205,500	1,021,300
1957..	385,000	440,800	38,700	864,500	23,200	135,400	20,700	179,300	1,043,300
1956..	397,800	430,700	33,000	861,500	21,900	148,400	23,100	193,400	1,054,900
1955..	376,000	457,000	16,100	849,100	24,900	122,600	21,700	169,200	1,018,300
1954..	372,900	459,000	8,700	840,600	17,000	77,400	15,400	109,800	950,400

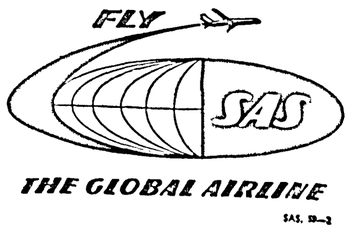
The decline in despatches for export purposes during 1958 is accounted for by sacking, which fell by 52,600 tons to 388,200 tons, and "other varieties" which dropped from 38,700 tons to 31,500 tons. The fall in sacking exports was greater than the rise witnessed in the previous year and has taken the despatches of this variety to the lowest level since 1953. The setback in "other varieties" was in striking contrast to the successive rise—at a very marked pace indeed—in the past few years. Notwithstanding the lower offtake of hessian by the U.S., the despatches of hessian for export show an increase of 11,000 tons to 396,000 tons, thus nearly making good the decline they had suffered in 1957.

The statistics of country-wise exports are available only up to the end of October, that is, for the ten months of last year. These show that the total exports of gunnies aggregated 680,800 tons, as against 720,100 tons in the corresponding period of 1957. Of these, the share of hessian was 345,900 tons (as compared with 331,700 tons during January-October 1957) and sacking 334,900 tons (as against 355,500 tons). Exports of hessian to the U.S. show a small increase from 146,300 tons to 149,200 tons, despite the recession. If, however, the exports of sacking during the ten months of 1958 are also taken into account, the total offtake of gunnies by that country from India will aggregate 154,100 tons; this shows a fall of 1,500 tons, as compared with the corresponding period of 1957. It may be noted, in this connection, that, during the whole of 1957, the U.S. took 183,400 tons of hessian as against 190,500 tons in 1956. The slight improvement during 1958 (upto the end of October) was, therefore, welcome. Exports of hessian to the U.K. also rose from 18,800 tons to 31,200 tons and so also to Canada from 27,700 tons to 32,700 tons. But Argentina, the second largest customer of India for hessian, took only 49,400 tons, as against 59,200 tons in the first ten months of 1957.

Exports of sacking during the first ten months show a decline of 59,300 tons, of which Africa accounted for 14,200 tons (to 74,400 tons), Far East for 36,600 tons (to 40,200 tons), Australia for 12,300 tons (to 59,100 tons) and American countries (other than the U.S., Canada and Argentina) for 3,200 tons (to 58,400 tons).

Internal Market

That there is vast scope for raising internal offtake of gunnies is proved by the sharp rise of 26,200 tons during 1958 in despatches of mills to the domestic market. This can be expected to rise still further with the growing production of cement and agricultural products. Though there is a glut of cement at present, its consumption is expected to expand with the rise in production of steel. The use of paper bag for packing cement can be ruled out for some time to come, on account of the foreign exchange difficulties, so that India has to rely only on gunny bags for packing cement. During 1958 alone, the despatches of sacking from mills for internal consumption rose by 19,400 tons to 154,800 tons, a record since 1945. They were at a low of 77,400 tons in 1954 and have thus doubled themselves in the four years. The offtake of miscellaneous varieties too rose sizably by 9,200 tons to a record level of 29,900 tons, at which level it exceeded that of hessian by as much as 9,100 tons. Despatches of hessian to domestic markets dropped by 2,400 tons to 20,800 tons, the lowest level since 1954.



SAS. 19—2

CEYLON TO CUT EXPORT DUTY ON TEA

BID TO REGAIN MARKETS

THE Government of Ceylon has decided to introduce a new two-tier system of export duty on tea, instead of the existing flat rate system. Under the proposed scheme, all teas will be subject to a fixed duty of 35 cents per lb., collected at the point of export. In addition, an *ad valorem* duty will be collected at the auctions on teas which fetch over Re. 1.85 per lb., the rate of duty being 50 per cent. of the prices realised in excess of Re. 1.85 per lb., subject to a maximum of 70 cents per lb. The duty on teas from plantations owned by the English and Scottish Co-operative Wholesale Society will be fixed at a flat rate or on some equitable system. The existing export duty is a flat rate of 70 cents per lb.

The object of revising the export duty is, we are told, to regain the foreign markets which Ceylon has lost to India, particularly as a result of the recent cut in Indian export duty. It is further stated that the revision has been decided in response to the representations made by producers and traders who wanted a new system of duty which will be less burdensome than now and which will be related to the prices and the capacity of the industry to pay.

The Ceylon Government and the tea industry of the Island are said to be concerned over the growing popularity of Indian teas in the Middle East countries. An official of the Ministry of Commerce is of the view that the recent reduction of 10 cents per lb. in the export duty on Indian tea is a "bold step aimed primarily at improving the competitive position of common teas in the world markets." By levying a lower export duty and buying goods of tea consuming countries at prices higher than what Ceylon can afford to pay, India has, according to official circles, successfully captured Ceylon's traditional markets in the Middle East. Ceylon is not concerned over the competitive position of India alone. British East African teas, which are not subject to any export duty, offer a much stronger competition to the low priced Ceylon teas.

The following table shows the country-wise exports of tea from Ceylon during the nine months ended September 1958 (the latest available) and in the corresponding period of 1957, as compared with those from India during the same periods:

(In million lbs.)

	Ceylon		India	
	Jan.-Sept.		Jan.-Sept.	
	1958	1957	1958	1957
Britain	127.29	109.56	210.92	208.62
Irish Republic	1.87	1.76	10.30	11.31
Rest of Europe	10.09	10.60	7.26	5.36
U.S.S.R.	2.52	Nil	13.32	0.53
Canada	12.62	14.05	14.15	12.21
U.S.	27.08	32.53	17.89	16.82
South America, Central America and West Indies	4.37	2.30	1.13	0.82
Iran	10.19	8.31	6.83	6.79
Persian Gulf and Iraq ..	16.95	23.05	4.49	4.89
Egypt	3.74	8.91	19.77	10.25
Other Middle East countries ..	10.41	12.84	10.72	3.94
Africa	25.88	29.46	1.28	0.69
Australia	31.02	27.39	6.00	4.73
New Zealand	11.40	11.71	0.82	1.21
Malaya and Straits ..	1.04	1.22	0.14	0.25
Other places	4.03	5.20	3.31	3.53
Total ..	302.61	298.82	337.42	300.77

In order to protect the market for its tea in Iraq, the Ceylon Government has offered a special concession to that country by reducing the import duty on dates imported from that country from Rs. 5.50 to Re. 1 per cwt. and stepping up the import of dates.

The price of Re 1.85 per lb. over which the *ad valorem* export duty will become operative is roughly the average price fetched by all grades of tea during 1957. During 1958, only high grown teas fetched an average price above that rate, while medium and low grown were sold well below that price, so that the average for all varieties was below Re. 1.85 per lb. Thus, in the case of teas fetching Re. 1.85 and below, there is, in effect, a cut of 50 per cent. in export duty, that is from 70 cents to 35 cents per lb. Even those teas which fetch above Re. 1.85 per lb. will be benefited by the new system of export duty. For the maximum *ad valorem* duty, over and above the flat rate of 35 cents, is only 35 cents. This maximum rate will become operative only if the excess price over Re. 1.85 is 70 cents, that is if the price realised in the auction is Rs. 2.50 per lb. Though the system of *ad valorem* levy is a complicated one, it will make Ceylonese tea very much cheaper than now and all the efforts taken by India to expand the market for its common teas will have been in vain, unless this country takes prompt steps to offset the advantage sought to be given by Ceylon for its teas.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter 1853)
(Liability of Stockholders Limited)

Capital (Paid-up) - - - £5,000,000
Reserve Fund - - - £5,500,000

Branches throughout India, Pakistan and the East

Branches of
THE EASTERN BANK LTD.
a wholly owned subsidiary of the Chartered Bank are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.

AFFILIATED BANK IN INDIA:
THE ALLAHABAD BANK LTD.
with over 70 offices in India

The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for fixed period and at short notice are received at rates which may be ascertained on application.

The Bank's London Office undertakes Trusteeships and Executorships.

STEEL INDUSTRY IN PUBLIC SECTOR

BHILAI AND ROURKELA PLANTS COMMENCE PRODUCTION

THE commencement of production of iron in the State-owned Bhilai (Madhya Pradesh) and Rourkela (Orissa) steel plants, formally inaugurated this week by the Union President, Dr. Rajendra Prasad, marks a definite stage in India's industrial progress; the third State-owned steel plant at Durgapur (W. Bengal) is expected to go into production in October next. This is part of the implementation of the steel production programme, designed to produce six million tons of ingots by the end of the second Plan or about 4.5 million tons of saleable steel. The target will be attained through the expansion of production in the existing steel works, namely, Tata Iron and Steel Works (from 0.78 million tons to 1.50 million tons), Indian Iron and Steel Works (from 0.33 million tons to 0.80 million tons) and Mysore Iron and Steel Works (from 0.03 million tons to 0.10 million tons) and new production in the three State-owned steel plants—Rourkela plant (0.72 million tons), Bhilai plant (0.77 million tons) and Durgapur plant (0.80 million tons). In terms of financial investment, the three State-owned steel plants represent the largest enterprises of their kind undertaken by the Government, making in all Rs. 439 crores—Rourkela (Rs. 170 crores), Bhilai (Rs. 131 crores) and Durgapur (Rs. 138 crores). This estimate is exclusive of the cost of townships, ore mines and quarries, power supply facilities, etc., for which a provision of Rs. 120 crores has been made. The total cost of the three steel enterprises is thus estimated at Rs. 559 crores.

The manufacture of iron and steel is an integrated engineering process. Broadly speaking, a steel plant consists of four main sections—coke ovens for converting coal into coke, blast furnace for smelting iron ore into iron, steel melting plant for making alloys of iron with carbon and other metals in order to make steel, and rolling mills for converting steel into saleable products. All the three State-owned steel plants, as will be seen from the figures of output targets given at the outset, have nearly the same capacity, though Durgapur has somewhat larger capacity than either of the two.

At Durgapur, where the steel plant is being set up under an arrangement with a consortium of British steel companies there are three coke oven batteries of 78 ovens each and a by-product plant. There will be three blast furnaces, each with a capacity of 1,250 tons per day, which will produce all the iron required for the steel melting shops and also 350,000 tons of pig iron for sale. The steel making plant consists of 8 basic open hearth furnaces, of which each will be of 200 tons capacity each. The rolling mills consist of a blooming mill, intermediate mill, continuous billet mill, medium and merchant section mills and a sleeper bar plant. They will produce 100,000 tons of forging blooms and billets, 24,000 tons of merchant sections, 200,000 tons of light structurals, 60,000 tons of sleeper bars, 150,000 tons of billets for sale. The wheel and axle plant will make 40,000 tons of wheels and axles.

Bhilai Plant

The plant in Bhilai, which is being set up with the technical and financial co-operation of the U.S.S.R., has a capacity of one million tons of crude steel to be rolled into 770,000 tons of billets, rails and structural sections. The capacity of the plant can be expanded, with a few additions, to 1.25 million tons. The lay-out provides for ultimate expansion to 2.5 million tons. The main plant and equipment worth Rs. 63 crores is supplied on credit repayable in 12 equal annual instalments; interest will be at 2½ per cent. The U.S.S.R. will be responsible for the supply of the main plant and equipment and technical supervision of the construction, erection and commissioning of the plant. The coke ovens in Bhilai consist of three batteries of 65 ovens each. There will be three blast furnaces of 1,135 tons capacity per day. Iron will be converted into steel by the conventional open hearth process in six furnaces, each with a capacity of 250 tons. The rolling mills consist of one blooming mill, one continuous billet mill, one rail and structural mill and one merchant mill. They will convert one million tons of ingots into such products as (1) rails narrow gauge 10,000 tons; (2) rails standard gauge 100,000 tons; (3) railway sleeper bars 90,000 tons; (4) standard and broad-flanged beams, channels, angles and other light and heavy structural sections (beams with section height upto 24") 284,000 tons, (5) rounds (from ¼" to 3" diameter and squares with sides ¾" to 3") 121,000 tons, (6) flats (from 2" to 5" wide) 15,000 tons and (7) billets for re-rolling at outside rolling mills (from 2"×2" to 3"×3" cross-section) 150,000 tons; about 300,000 tons of pig iron will also be produced. The by-products plant will deal with 130 tons of tar per day and produce benzol, creosote, naphthalene and other products. In addition, a fertiliser plant will produce 580,000 tons of nitro-limestone.

Rourkela Plant

The steel plant at Rourkela, which enjoys the technical assistance of the German combine Krupp Demag, has a capacity of one million tons of crude steel to be rolled into 720,000 tons of plates, sheets and strips. The capacity of the plant can be expanded with a few additions to 1.3 million tons. The lay-out provides for ultimate expansion to two million tons. Coal will be "cooked" in three batteries of 70 coke ovens each. There are three blast furnaces which will smelt the iron ore into iron, each of the three producing 1,000 tons a day. The conventional open-hearth process will be employed for producing 250,000 tons of steel and the L.P. process for making 570,000 tons of steel. The blooming and slabbing mill will convert ingots into slabs which will be converted into plates, sheets and strips in three different mills—the plate mill, the continuous strip mill and the cold rolling mill. Actual production will aggregate 720,000 tons, made up of plates (3/16" and above) 200,000 tons, hot-rolled sheets and strips 300,000 ons, cold-rolled sheets and strips 170,000 tons and tin plates 50,000 tons. It will have a by-products plant similar to the one at Bhilai.

Massive quantities of raw materials, as is well known, are needed for producing iron. It has been computed that, in order to produce one million tons of steel, it will be necessary to have about 2 million tons of iron ore, a little less than 2 million tons of coal, 500,000 tons of limestone and an equal quantity of dolomite manganese ore and alloy elements. For the Rourkela steel project, iron ore will be drawn from mines which are being developed in Barsua, about 50 miles away from the site of the plant. The Bhilai plant will be fed with iron ore from Rajhara, at a distance of 60 miles. For Durgapur, iron ore will be obtained from new mines being developed in Bolani in Orissa.

For Rourkela, coal will be drawn from Kargali-Bokaro and Jharia fields. For Bhilai, it is expected that besides Kargali-Bokaro and Jharia, the new fields of Korba which are being developed will also supply coals. As a measure of conservation of the limited resources of metallurgical coal, coals from Kargali-Bokaro will be washed in a washery which has been built in Kargali. To wash the coals from Jharia, a washery is under construction in Dugda near the coalfields. Until this washery is ready, unwashed coals from the Jharia fields will be selected and used for the operation of the Rourkela and Bhilai steel plants. Korba coals will not be washed. For the Durgapur steel plant, metallurgical coals of Jharia will be blended with the high volatile semi-coking coals of Barakar. Jharia coals will be washed in a washery which is being put up as a part of the main steel plant in Durgapur.

Limestone

Limestone for both Rourkela and Durgapur will be obtained from the Birmitrapur-Hathibari areas. A preliminary project report prepared for the opening of quarries in Hathibari (Purnapani) shows that, beyond a certain stage, it might be more economic to look for other sources of limestone even if they were somewhat more distant. The quarry will, therefore, be limited in its size to the requirements, principally of the blast furnaces and, to some extent, of the steel melting shops, for the one million tons stage of Rourkela. For Durgapur, limestone will be drawn partly from this quarry and partly from existing market sources in Birmitrapur next door. For Bhilai, limestone will be drawn from the Nandini deposits about 12 miles from the steel works.

Personnel

A problem which has demanded considerable thought and effort for its solution is the training of the personnel for manning the steel plant. For each plant, some 700 engineer-officers and about 6,300 skilled workers have to be found. Of the latter, 1,000 men must be operatives with experience of steel works. For the training of these 2,100 engineers and 19,000 skilled workers, including 3,000 operatives, the authorities have set up a large training school at Jamshedpur and smaller institutions at Burnpur and Bhadravati. Further, workers, who have had some initial training, are receiving higher practical training in Railway workshops and in several engineering works (about 78 in number) in Calcutta, Bombay and other centres. Through the good offices of the Ford Foundation, the programme of training 900 Indian engineers in steel works in the U.S.A. has made considerable progress. The U.S.S.R. is training 700 engineers for Bhilai, the U.K. 700 engineers for Durgapur and W. Germany about 150 engineers for Rourkela. Australia and Canada have also offered training facilities. Inside the country, the Tatas have rendered notable assistance. Besides making available their own trained men to the three steel plants, they have also undertaken to train technical men for eventual absorption by the steel industry in the public sector.

"SIXTY YEARS OF MOTOR TRANSPORT IN INDIA"

In 1898, when the automobile first appeared in India, there were very few who considered it as more than a noisy or dangerous nuisance. Although there is some debate on the precise date of the first arrival it is known that there were four automobiles registered in Bombay in 1898. Characteristically, Mr. Jamshedji Tata, the pioneer industrialist, was one of the first to own this 'new fangled' vehicle. It is said that when he drove along in Bombay, "great crowds lined the streets and watched the Oldsmobile's progress in wonder and awe as it overtook and outstripped all other vehicles." The early 'horseless carriages' were clumsy in performance and appearance. The book *Sixty Years of Motor Transport in India*, published by the Dunlop Rubber Co. (India) Ltd., to commemorate Dunlop's Diamond Jubilee in India, provides interesting descriptions of the fore-runners of the modern limousine. Breakdowns were frequent and the woes of the early motorists are well reflected in a speech by Mr. Bompas who said, "If one bought a motor car, one was presented a book of 150 pages which explained the reasons why the car stopped. For myself, I have never been able to understand the reason why the car went...." The booklet contains many authentic illustrations, including some with historical interest, such as the first motor car exhibition in Calcutta, the car in which the Prince of Wales toured Hyderabad in 1906, etc.

It is strange to recall the opposition which the automobile had to encounter shortly before and after its arrival. For instance, the Bombay Corporation negatived, in 1898, a proposal to purchase an automobile for the Municipality on the ground that it was "too costly and dangerous." As late as 1910, the Calcutta Corporation debated a proposal to replace pony carts by motor vehicles for carrying the city's refuse and ultimately the pony carts won. The beginnings of commercial motor transport were made in 1912, and, in fact, the early years of the First World War gave a great impetus to the growth of motor transport. There are interesting circumstances attending the origins of bus services in some Indian cities. In Calcutta, for example, when the tramwaymen went on strike in 1921, the Police gave temporary permission to lorries to transport people. Soon a multitude of lorries appeared on the streets of Calcutta with wooden benches and chairs tied on top with bits of rope. This was the beginning and soon, more organised bus services appeared. Even in the 'thirties, we come across the following description of bus services in some parts of the country. "These vehicles were so overcrowded that the conductor's final job was to tie a rope to one of the stanchions and take it right round the passengers and each stanchion in turn so that the rope contained the mass of humanity who would otherwise spill on to the road."

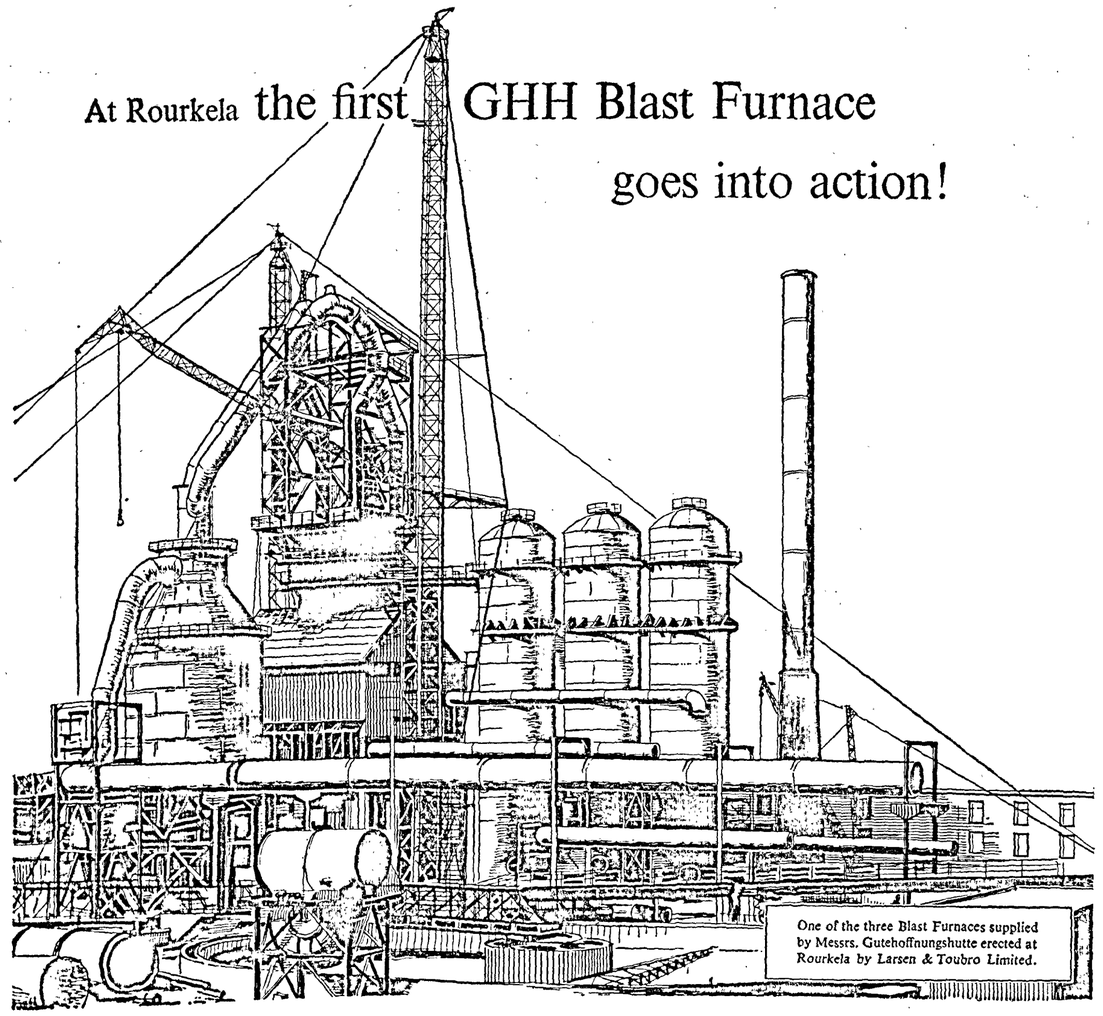
However, by the late thirties, commercial motor transport had spread out to many parts of the country and was handling such a large volume of traffic that the railways complained of this new element of competition. Several committees were appointed, the most important being the Kirkness-Mitchell Committee, the findings of which throw a great deal of light on the state of motor transport at the time. The booklet refers to this in considerable detail.

The problem of road development is touched upon at some length in the booklet which traces the early efforts for the establishment of a Road Fund and a co-ordinated road policy. Motorists in Calcutta today might well echo the sentiments expressed way back in 1921 with reference to roads: "Instead of trying to adapt Calcutta's roads to the needs of motor transport it would perhaps be easier to adapt motor transport to the roads!" The booklet devotes some attention to the taxation of motor vehicles and how it compares with other countries. In 1920-21, we learn, duties on private cars and accessories were 7½ per cent.; by 1949 they were increased to 60 per cent.; duties on commercial vehicles and their accessories rose from 7½ per cent. to 30 per cent. during the same period.

The booklet concludes with an analysis of the present position of road transport in the light of requirements generated by the Five-year Plan, and an account of the automobile industry and the automobile tyre manufacturing industry. The latter is particularly important in view of the substantial increase in the number of motor vehicles

(Continued on page 211)

At Rourkela the first GHH Blast Furnace goes into action!



One of the three Blast Furnaces supplied by Messrs. Gutehoffnungshutte erected at Rourkela by Larsen & Toubro Limited.

...another specialised job by Larsen & Toubro Limited

At Rourkela Steel Plant, which will contribute 1,000,000 tons of steel to the country's annual output, the first of three GHH Blast Furnaces has just been started.

Among the many organisations working round the clock at Rourkela are Larsen & Toubro Limited, with a team of 1400 working to complete, within twenty-four months, the erection of 3 Blast Furnaces, the Rolling Mill Buildings, and a 'Pig' Casting Machine, involving a total of 63,000 tons of steel work.

Specialised services: Heavy construction and erection work of this type is yet another L & T specialised engineering service...proof of the ability of Larsen & Toubro Limited to meet the engineering demands of India's growing heavy industries. Other important jobs include the erection of 10,000 ton Grain Silos at Hapur, the extension of Madras Harbour, and the Water Supply and Treatment Plant at Nangal.

Leading engineering firm: Larsen & Toubro Limited have for many years been one of the leading engineering firms in India, and one of the largest suppliers of heavy earth-moving equipment, drilling and mining machinery, and chemical and industrial installations. Manufacturing activities comprise the production of modern dairy and refrigeration plants, chemical plants, and electrical switchgear and motor starters. The wide scope of Larsen & Toubro Limited's activities; their highly-specialised engineers and technicians; and their belief in service first and foremost...enable them to contribute vitally to the country's progress.

TREND OF CONSUMER PRICES

PURCHASING POWER OF WAGES AND OTHER INCOMES DECLINES

IN his report on developments on the labour front during 1957, Mr. David A. Morse, Director General of the International Labour Organisation, uttered the warning, early last year, that in the year, that is 1958, world labour should be on guard against two grim and relentless enemies, namely, inflation and unemployment. Of these two, the former, it is common knowledge, is the more formidable, because it will affect the employed, the unemployed the self-employed, in fact, every section of the community. Its impact on those having fixed or sluggish incomes is particularly severe, since a rise in consumer price invariably threatens their standard of living and undermines the protection afforded by social security schemes. For instance, though the current wave of world inflation which started in 1955 is mild, as compared with that experienced in war-time, it has reduced the purchasing power of wages, social security benefits and other incomes by 10 to 20 per cent. or more in most countries of the world. In 1957, consumer prices registered their greatest advance for several years. The upward movement of prices, however, definitely abated between 1957 and 1958 but the final picture for 1958 is not clear yet.

A review of consumer prices, which constitute one of the most significant indicators of economic and social conditions, contained in a recent issue of the *International Labour Review*, throws some interesting light on recent trends in the movement of consumer prices. For the purpose of the review, consumer price statistics for some 91 countries and territories in most of the regions of the world were collected. These statistics have, of course, certain limitations. They are very uneven in comprehensiveness and quality. In general, they reflect the prices paid by wage earners and middle income groups. Most of them reflect price movements only in a capital city or other restricted area. Some apply only to prices paid by special groups. But, as a whole, they can be regarded as giving a rough indication of the magnitude of price movements.

Cyclical Movements

From these data, it is possible to discern cyclical price movements which, while obscured in some countries by purely national or regional developments, are of very general significance. Available statistics amply demonstrate the widespread rise in consumer prices during and after the first World War. The depression years of early 1930s witnessed price decreases in all countries. From the relatively prosperous year 1929 to the year of lowest average consumer prices, for instance, the drop in the U.S. was 24 per cent., that in the U.K. 15 per cent., that in Poland 42 per cent. and that in India 27 per cent. After the outbreak of the second World War, prices soared again and, in many countries, substantial increases continued throughout the post-war period. After the spurt in many countries at the time of the Korean war, prices attained remarkable stability in several countries by 1952 and this stability continued in many countries until 1955. But, in 1955, an upturn in prices became generally apparent. Even during 1953 and 1954 prices were rising but only very slowly. The "median" increase—that is, the middle increase about which the larger and smaller increase (and a few decreases) ranged in equal numbers—from 1953 to 1954, based on annual averages, was only 1.2 per cent. This was probably the smallest annual gain since the recession of the 1930s. From 1954 to 1955, however, the median increase was about twice as great and it continued to rise during the following two years.

The modest magnitude of current price rise has caused inflation to be described as "creeping inflation," in contrast to the "galloping inflation" experienced by many countries in war time. The following figures represent the median annual increase in 91 countries from 1951 to 1958:

Year	Median Increase
1952-53	2.1 per cent.
1953-54	1.2 "
1954-55	2.4 "
1955-56	3.5 "
1956-57	4.0 "
1957-58*	2.4 "

*Based on most recent monthly index for each country in 1958 as compared with the index for the same month in 1957; data for earlier years are based on annual averages.

The highest median increase so far attained for any full year will be seen to be 4 per cent. or only about double the increase from 1952 to 1953, generally regarded as a year of considerable price stability. The median figure of 4.0 per cent. was reasonably representative of the general magnitude of price increases from 1956 to 1957. About half (44) the countries reported increases within the range of 2 to 5.9 per cent., while only five reported price decreases, but 12 reported increases of 10 per cent. or more. India was one of them.

Regional Contrasts

The timing and magnitude of the rise in consumer prices have varied considerably by geographic region. The largest increases occurred in South America, a region in which inflation has continued to flourish. Considerable inflation was also apparent in the Far East and the Middle East between 1955 and 1957 but prices in most of these countries have been brought under control during the past year. All these regions showed a modest tendency to inflation after 1954 and all but central America gave evidence of some abatement in 1957-58. The following table gives the annual percentage increases in consumer prices for selected countries:

Annual Percentage Increase in Consumer Prices By Country*—1953 to 1958

	1953-54	Year ended latest month of 1958		Whole period—1953 to latest month 1958

* Isolated decreases are indicated by a minus sign(—)

Recent price rises have been moderate in most countries of Western Europe. From 1953 to mid-1958 increases as high as 25 per cent. were reported only by Finland, Greece, Iceland, the Saar, Spain and Yugoslavia. Increases of less than 10 per cent. during this period were experienced in Belgium, Luxembourg, Portugal and Switzerland.

For the most part, the price rises in Western European countries were of domestic origin. A major economic boom was under way in the mid-1950s, with production mounting rapidly and unemployment at low levels. Special developments, which had a noticeable influence during the period, included devaluation of the drachma in Greece in 1953 and of the French franc in 1957, the abolition or curtailment of food subsidies in Finland and Ireland, and relaxation of rent controls in a number of countries. Rents rose more rapidly during this period than any other component of the cost of living, closely followed by fuel and light. The Suez crisis had only a slight and transitory effect on consumer prices in Europe.

As regards the U.S.S.R. and East European countries, official price indices disclose declining prices from 1953 to 1956, ranging from about 5 per cent. in the U.S.S.R. to 23 per cent. in Bulgaria. Increases in productivity presumably played a significant part in these declines, for it is customary in these countries to distribute a good portion of the benefit from increased productivity in the form of lower prices, rather than through higher wages, which is the predominant formula under free enterprise.

The United States and Canada shared in the world inflationary movement though the price increases experienced in these countries were not very great and seemed disturbing largely because they were seen against a background of unusual stability. Both countries had enjoyed a period of almost stationary prices which began in about 1952 and continued until mid-1956. From 1956 to 1957, consumer prices in both countries rose slightly more than 3 per cent., and, in the 12 months ended August 1958, the increase was slightly above 2 per cent. Rising prices brought wage increases to hundreds of thousands of workers whose employment contracts included "escalator" clauses. The wage increases sometimes contributed to further price rises. It may be noted that consumer prices in both countries continued to rise even under conditions of advancing recession and as unemployment reached its highest levels for many years.

Mexico, which has been enjoying a vigorous economic boom, witnessed increase in prices, amounting to nearly 50 per cent. between 1953 and early 1958. Inflation, however, made little headway in Central America. Lower returns from coffee and cotton exports had unfavourable economic repercussions during the period but the effect on domestic prices was mixed. Unfavourable harvests exerted some upward pressure on food prices. Price increases in most countries between 1953 and early 1958, however, were held around 10 per cent.

South America

South America, as stated at the outset, has been the strong hold of inflation since the end of the war. From 1953 until early 1958, prices doubled or more in five of the eleven reporting countries and showed large increases in three years. A variety of special factors have affected the pattern of inflation in South America, including a drop in foreign exchange from sales of raw materials, currency devaluation or adjustment and failure to maintain food supplies adequate to satisfy rising purchasing power. Ambitious investment programmes have led to much deficit financing. Finally, ineffective or misplaced Government controls have played a large part in price increases in several countries.

Far East

The countries of the Far East provided numerous examples of galloping inflation since the outbreak of the second World War and, ever since 1953, consumer price in South Korea have more than tripled and those in Indonesia (measured in terms of food alone) more than doubled. In most of the countries, however, the price rise has flattened perceptibly in recent years. Economic development programmes have tended to exert powerful upward pressure on consumer prices in the Far East, particularly in view of the difficulty of increasing food supplies. In Burma, India and Pakistan, price decreases around 1954 and 1955 were more than offset by rapidly rising prices during 1956, 1957 and 1958. More recently, however, prices in Burma have again declined.

Price movements in the Middle East have been erratic with occasional declines intermingled with increases. Consumer prices in Africa have risen steadily since 1953. But marked inflation has not appeared. Price increases in Australia, Hawaii and New Zealand have been moderate and quantitatively in line with the European pattern. Both Australia and New Zealand, however, experienced a levelling off of consumer prices since 1956.

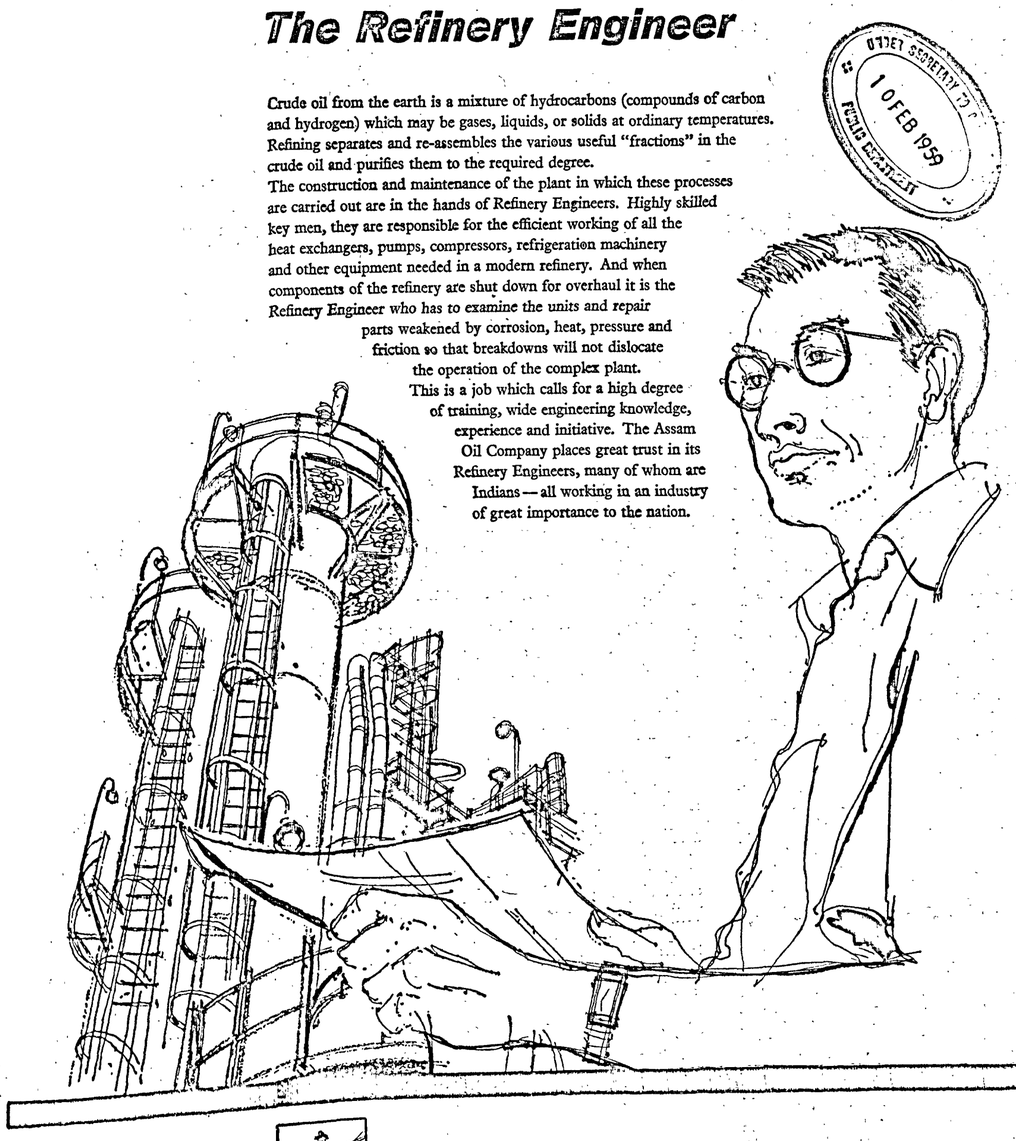
EMPLOYMENT COMMITTEE

The Government of India has constituted a 30-member Central Committee on Employment to advise the Union Ministry of Labour and Employment on matters relating to employment, creation of employment opportunities and the working of the National Employment Service, Mr. Gulzarilal Nanda, Union Minister for Labour, Planning and Employment is the Chairman of the Committee, which consists of representatives of all State Governments and of central trade unions and employers' organisations. The Committee also has four Members of Parliament—Mr. D. C. Sharma and Mrs. Parvathi Krishnan representing the *Lok Sabha*, Mr. R. M. Dave and Mr. S. D. Patil from *Rajya Sabha*. Dr. K. N. Raj of the Delhi University is one of the economist members of the Committee. Besides, the Committee has a representative each of the Small Scale Industries Board and the All-India Khadi and Village Industries Commission. The Director-General of Resettlement and Employment is the Secretary.

There were 94 fresh industrial disputes during November, 1958, bringing the total number of disputes current at any time during the month to 128, including 12 lockouts. In the previous month, there were 92 fresh disputes in 121 disputes current. During November, time-loss due to industrial disputes decreased by 87,583 man-days. The average duration of disputes current at any time during the month was 5.2 days, as against 7.6 days in the preceding month. One hundred disputes terminated during November. Of these, 66 lasted not more than 5 days each and 10 lasted more than 30 days each.

Men and Oil . . . 5

The Refinery Engineer



Crude oil from the earth is a mixture of hydrocarbons (compounds of carbon and hydrogen) which may be gases, liquids, or solids at ordinary temperatures. Refining separates and re-assembles the various useful "fractions" in the crude oil and purifies them to the required degree.
The construction and maintenance of the plant in which these processes are carried out are in the hands of Refinery Engineers. Highly skilled key men, they are responsible for the efficient working of all the heat exchangers, pumps, compressors, refrigeration machinery and other equipment needed in a modern refinery. And when components of the refinery are shut down for overhaul it is the Refinery Engineer who has to examine the units and repair parts weakened by corrosion, heat, pressure and friction so that breakdowns will not dislocate the operation of the complex plant.
This is a job which calls for a high degree of training, wide engineering knowledge, experience and initiative. The Assam Oil Company places great trust in its Refinery Engineers, many of whom are Indians—all working in an industry of great importance to the nation.

TASK OF EXPORT PROMOTION

RESULTS OF FEDERATION'S CONFERENCE

A TWO-DAY conference was held at Calcutta on 29th and 30th January 1959 by the Federation of Indian Chambers of Commerce and Industry, with a view to highlighting the problems pertaining to export promotion. On the eve of this Conference, the Federation had published a brochure of about 140 pages entitled "Our Export Trade—Country-wise Analysis" to provide the background for discussion at the Conference. After these discussions, which were inaugurated by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, the Conference adopted the following 14-point statement:

The question of export promotion has assumed special and urgent significance in the context of India's developmental programmes and the imperative need in this connection to broad-base its foreign trade on increasingly higher levels. There has been considerable discussion both in and outside Parliament on the measures to be adopted in this behalf. The Government has also taken some steps in regard to providing some incentives and facilities to promote exports. Those in charge of industry and trade, too, are fully conscious of the part they have to play in the matter of export promotion.

The Conference, however, feels that there should be a more systematic approach on the part of both the authorities and the industry and trade. It is also the considered opinion of the Conference that a well-thought-out export promotion programme must be implemented, directing it towards apprising the people, generally, and the industrial workers, in particular, of the urgency of export promotion and the implications thereof. This programme must necessarily be initiated, in the first instance, in the various Government Departments, for, unless the various authorities at different levels dedicate themselves to their duties and expedite their work connected with export trade promotion, it will be well-nigh impossible to launch upon an export drive in any effective or sizable manner.

By and large, the main focal points on which efforts for export promotion require to be concentrated in a developing economy like India are known. These are: a sustained increase in the production in all sectors—agricultural, industrial, mining, etc.; an increase in the export of particular commodities both primary and processed; and, in the short run, by a reduction in home consumption. The maintenance of prices at competitive levels, the exploration of new markets and research into new uses for traditional exports are equally important. And, as in the maintenance of prices at competitive levels, labour and other policies of Government have a great influence, these policies should be carefully reviewed.

It is against this background that the Conference has reviewed our export trade, generally, and the major export commodities, in particular. The magnitude of the problem and the peculiar difficulties confronted by specific commodities in specific markets have been brought out in the study of the Federation's Secretariat analysing country-wise the recent trends in export trade. The record of India's exports in 1958 has not been generally good. For example, exports of cotton textiles were far below the target that had been set for India at the Buxton Conference. Our jute manufactures are continuing to experience difficulties from the competition offered by substitutes as also the growing industry in certain other countries. In the export of common tea, competition from East African territories has to be countered. Another principal item of export, namely, manganese ore, has to meet the severe competition from Brazil and other sources of supply which are gradually being built. Even in respect of other traditional items like raw cotton, vegetable oils, tanned hides and skins, etc., it is becoming difficult to effect sales.

Thus, the general features of the international markets which have gained an extra edge with the formation of the European Common Market are increasing competition and reduction in the relative importance of trade between industrial and non-industrial parts of the world. On the domestic front, pressures on costs are continually increasing pressures brought about by imposts by Government on industry and trade at various points of production and distribution and pressures generated by demands for increased wages and additional amenities without a corresponding increase in productivity. Mention may also be made of the fact that high railway freight rates have to be paid for movement of some commodities. Our exports have also to contend against the difficulties presented by non-availability of direct shipping facilities to certain destinations and discriminatory freight rates. The consequent disequilibrium, engendered by factors emanating within and outside the country, must be set right. Inasmuch as the problem has to be met, the Conference would suggest the following measures as part of a comprehensive and concerted drive to assist exports:

1. As indicated earlier, an export climate must be induced. The major problem of export promotion must be looked upon as presenting a challenge to the nation that can be met only by a co-operative approach on the part of the authorities, the public and all those connected with trade and industry in different capacities, whether as employers or employees.

2. All burdens on production must be eased. The movement of commodities has to be facilitated and freight concessions for raw materials which are exported as such and for those which enter into the manufacture of finished goods that are exported, as also for the export of finished goods should be granted. The recently granted transport concessions have proved to be only marginal and extremely limited.

3. The incentive schemes in the field of exports must be liberalised without restrictive qualifications and duly strengthened to be really effective, and they should be extended both to industry and trade who actually export.

4. New fiscal concessions must be thought of, with a view to really encouraging those in industry and trade to take more than ordinary risks.

5. Long delays and procedural difficulties must be eliminated.

6. While export control has been relaxed considerably, it will be useful to reshape the Export Control Order by freeing all items from control and enumerating only the residual items where controls in one form or another may have to be retained.

7. Export duties should be reviewed from time to time and, where they act as impediments to exports, the necessary adjustment should be made promptly.

8. Port facilities should be developed and improved and additional plots and railway sidings made available to all exporters both at interior despatching stations and at the ports, wherever these are required and necessary.

9. Industry and trade also should themselves develop a measure of export consciousness and be prepared to show initiative and enterprise by organising themselves and creating institutions on a voluntary basis so as to be in a position to take and reduce risks, and to ensure maintenance of standards in regard to quality, packing, performance, etc.

10. Inasmuch as personal contacts play an important role in business dealings, those going abroad from India should be encouraged to do so and the release of foreign exchange for business trips should be on a more liberal scale than now. Those who want to establish branches abroad should be given the requisite assistance by Government.

11. Private barter arrangements which will assist export of non-traditional items should be encouraged by Government.

12. The personnel of the commercial section of our Embassies/Legations abroad should be strengthened.

13. The Federation of Indian Chambers of Commerce and Industry should establish closer liaison with the Governmental Departments. The Federation should also examine the feasibility of setting up, in the first instance, two or three Councils dealing with trade with specific countries/regions. These Councils should *inter alia* compile lists of importers and exporters of goods from and to the countries/regions concerned, review from time to time the consumption pattern in foreign countries and the trends of trade with special reference to the impediments in the way of smooth flow of trade, and hold meetings to consider positive measures for promoting exports to foreign markets.

14. Greater thought must be given to the question of augmenting earnings from invisible exports.

The Conference was aware that the foregoing was only a brief outline of the problems and of the kind of action required to be taken. Yet, it hoped that this would assist concentrated thinking by Government on one hand and industries and trades on the other.

INDO-BRITISH TRADE

The total value of India's exports to the U.K. during the eleven months ended November 1958 was lower at £124,752,000, as compared with £144,449,000 during the corresponding period in 1957. Among the major commodities exported from India to the U.K., mention may be made of tea, the earnings of which fell from £75,893,000 to £65,301,000. Similarly, exports of leather and manufactures and dressed furs declined from £12,297,000 to £8,766,000; and those of miscellaneous textile manufactures from £11,342,000 to £10,279,000. There was, however, a slight improvement in exports of tobacco and tobacco manufactures from £7,040,000 to £9,227,000.

The value of India's imports from the U.K. also fell during the period under review from £159,062,000 to £146,628,000. Imports of machinery (other than electric), however, remained more or less steady at £41,346,000, as against £41,747,000, while those of road vehicles and aircraft actually moved up by £8,777,000 to £24,400,000. Imports of electric machinery, apparatus and appliances went down from £20,525,000 to £16,887,000, as also of metal manufactures from £15,299,000 to £13,128,000.

FOREIGN TRADE OF INDIA IN NOVEMBER 1958

India had an adverse balance of trade to the tune of Rs. 19.12 crores during the month of November 1958, according to the provisional figures of foreign trade by all routes—sea, air and land—on private and Government accounts published by the Department of Commercial Intelligence and Statistics, Calcutta. Exports of merchandise (excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan) amounted to Rs. 49.24 crores and re-exports to Rs. 33 lakhs. Imports aggregated Rs. 68.65 crores. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Exports (including re-exports) of currency notes were Rs. 1.53 crore. There were no exports of gold and those of current coins (excluding gold coins) were negligible. Imports of current notes aggregated Rs. 3.61 crores, and those of gold Rs. 4 lakhs. Imports of current coins (excluding gold coins) were negligible.

The Government of India has decided to bring within the scope of the licensing and registration provisions of the Industries (Development and Regulation) Act units engaged in the manufacture of vulcanised fibre sheets, cellulose film and masking tapes also called adhesive tapes. The manufacturers of these products are required to apply before 9th April 1959 for a licence or permission under the Industries Act. The manufacture of these products was so far exempt from the licensing registration provisions of the Act.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) **declare their value in writing at the time of booking, and**

(2) **pay a percentage on the value so declared over and above the normal freight charges,**

failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the I.R.C.A. Coaching Tariff No. 17.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

RESULTS OF BHOPAL SUGAR

PRODUCTION HIGHER, BUT PROFIT LOWER

RECORD production of sugar but a fall in profit. That, in brief, is the main feature of the result of working of the Bhopal Sugar Industries Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay) during the year ended 30th September 1958. Viewed from the angle of production and sales, the Company's performance during 1957-58 shows a distinct improvement over that for 1956-57, which was in itself a year of highly encouraging results for the Company. The quantity of cane crushed, production of sugar and the average recovery of sugar exceeded the previous year's best, thus creating a new record for the Company. Despite these encouraging factors, the Company's profit has declined and, although the dividend to shareholders is proposed to be maintained at 20 per cent. per annum paid for the previous year, such has been possible only after substantially reducing the allocations to the reserves. The fall in profit is attributed by the Directors to the scheme of compulsory exports, sharp rise in the cost of fertilisers and stores and higher wage bill.

The gross profit for the year works out to Rs. 15.75 lakhs, a decline of Rs. 2.71 lakhs or 14.6 per cent. from Rs. 18.46 lakhs for the previous year. It is, however, Rs. 4.79 lakhs better than that (Rs. 10.96 lakhs) for 1955-56 and more than thrice that (Rs. 4.71 lakhs) for 1954-55.

The Company's results for the past four years are summed up in the following table:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale of sugar and molasses	1,04.39	75.25	48.80	25.53
Closing stocks of sugar and molasses	25.98	32.36	19.61	12.13
Manufacturing and other expenses	54.86	50.96	37.60	25.57
Excise duty	28.18	18.04	7.96	4.49
Gross profit	15.75	18.46	10.96	4.71
Managing Agents' commission	1.24	1.60	0.96	0.31
Depreciation	2.57	1.56	1.34	0.51

Recovery .. .. %	9.75	9.70	9.27	9.10

A striking feature brought out by the above table is the sharp rise in excise duty. From Rs. 4.49 lakhs in 1954-55, the amount of excise duty paid by the Company has shot up to Rs. 28.18 lakhs in 1957-58, a rise of Rs. 23.69 lakhs in the course of only three years. Over the year, it has increased by as much as Rs. 9.24 lakhs or 48.7 per cent. The provision for taxation has, of course, been reduced from Rs. 7.55 lakhs to Rs. 6.50 lakhs, but the decline is less than a lakh of rupees and is nothing as compared with the increase in excise duty. Depreciation at Rs. 2.57 lakhs is higher.

The net profit, after the aforesaid provisions, at Rs. 5.44 lakhs does not compare favourably with Rs. 7.75 lakhs for 1956-57. Consequently, the general reserve which had been credited with Rs. 3 lakhs in the previous year has received nothing. The amount transferred to development rebate is lower at Rs. 41,400, as against Rs. 71,400. A sum of Rs. 20,218 has been transferred from unclaimed dividend account and this has been set aside to unclaimed dividend reserve. The dividend, as stated earlier, is proposed to be maintained at 20 per cent. for the previous year, to which level it had been raised from 15 per cent. for 1955-56 and 10 per cent. for 1953-54 and 1954-55.

The Directors say that the working of the factory during 1957-58 was better than that in the previous year. There was no major breakdown during the season and labour relations also continued to be fairly satisfactory. The duration of the season was 134 days, as against 142 days in the previous season. The total quantity of sugarcane crushed increased from 2,693,458 maunds in 1956-57 to 2,715,545 maunds and the output of sugar from 95,491 bags to 97,086 bags. Likewise, the average recovery at 9.75 per cent. was higher, as compared with 9.70 per cent., 9.27 per cent. and 9.10 per cent. in 1956-57, 1955-56 and 1954-55 respectively. There was a marked improvement in the daily rate of crushing and the average for the season worked out to 864 tons, as against 807 tons in the previous season. Due to pith formation and unsatisfactory irrigation conditions, the total overall average yield from the farms declined from 854 maunds per acre to 779 maunds.

Referring to the expansion programme of the Company, the Directors say that the Central Government has refused permission for expanding the crushing capacity of the factory from 750 tons to 1,250 tons per day on the ground that sufficient foreign exchange was not available. Negotiations are, however, going on for securing a foreign exchange loan, but such agreements, it is stated, also require the approval of the Central Government. The Directors are hopeful of obtaining the sanction.

The Government of India promulgated a Sugar Export Ordinance during the year, whereby a scheme of compulsory exports came into existence. According to the Ordinance, 2½ per cent. of each factory's production had to be exported. On this basis, the Company's export quota was 2,439 bags. This sugar was not exported but the Company paid the sugar exporting agency a sum of Rs. 1,09,957, being the estimated loss on its export quota.

A chart in the Directors' report entitled "the Bhopal rupee, where it goes" discloses that, of the Company's earnings during the year, taxes took up 35.5 per cent., raw materials 34 per cent. and salaries, wages, commissions, etc., 14.5 per cent. Of the balance, other costs and expenses constituted 8 per cent., dividend 4 per cent., depreciation 3 per cent., and reserves 1 per cent.

The balance sheet as at 30th September 1958 shows no change in the Company's paid-up capital at Rs. 30 lakhs. This consists of Rs. 17.50 lakhs in ordinary shares of Rs. 10 each and Rs. 12.50 lakhs in 5 per cent. tax-free cumulative preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 14.41 lakhs. The gross block of the value of Rs. 43.17 lakhs stands written down to Rs. 17.70 lakhs. The current liabilities stand at Rs. 35.43 lakhs, inclusive of a provision of Rs. 20.88 lakhs for taxation, against which there are current assets aggregating Rs. 62.19 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 25.05 *cum-div.* On *ex-div.* basis, the yield on the share works out to 8.6 per cent. per annum.

HINDUSTAN ELECTRIC PAYS HIGHER DIVIDEND

GROSS PROFIT SMALLER

DESPITE a substantial rise in sale proceeds, the gross profit of the Hindustan Electric Company Ltd. (Managing Agents: Messrs. Dharmsinh and Company, Bombay) for the year ended 30th April 1958 has suffered a fall of Rs. 7.42 lakhs, or 33 per cent. from Rs. 22.22 lakhs for 1956-57 to Rs. 14.80 lakhs. This is obviously due to higher manufacturing charges and other expenses. The net profit at Rs. 6.52 lakhs, however, is only a shade lower, as compared with Rs. 6.55 lakhs earned a year ago. The smaller decline in net profit is due to cuts in the provisions for both depreciation and taxation. Thus, the provision for depreciation has been more than halved, from Rs. 10.57 lakhs to Rs 5.13 lakhs. The provision for taxation including wealth tax, has been lowered from Rs. 4 lakhs to Rs. 2.11 lakhs.

Explaining these provisions, the Directors observe as under:

"The income-tax assessments of the Company are completed upto 30th April, 1956. Provision for taxation has been accurately worked out and made in consultation with experts and authorities concerned.

"During the year, the Company discontinued acceptance of civil engineering contracts with the object of closing the civil engineering division. The plant and equipment which formed a substantial part of our machinery block were withdrawn from works and were placed for sale and a large number of the equipment was sold. The benefits through use of this machinery and depreciation thereof were not fully available during the year, with the result that depreciation on fixed assets, although fully provided for as permissible, is lower. Depreciation on the fixed assets for Faridabad Works No. III and V has not been provided for, both the works not having gone into production."

The net profit has, however, been strengthened by Rs. 2.45 lakhs, representing provision of credit to P.W.D. for contract work executed, no longer required. Out of the amount available on appropriation, a sum of Rs. 2.40 lakhs has been utilised for writing off goodwill and rights, Rs. 70,073 for commission on shares and Rs. 25,000 for preliminary expenses. Further, the general reserve has been credited with Rs. 1 lakh and development rebate reserve with Rs. 44,243, as against nothing at all in the previous year. The dividend on ordinary shares has been raised slightly to 7 per cent. from 6 per cent. per annum for the preceding three years.

The following comparative table brings out the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1958	1957	1956	1955
Sale proceeds	1,04.85	1,42.87	89.70	1,09.74

Carry forward	0.43	0.25	0.18	4.01

*For the year 1954-55.
†Includes a dividend of 6 per cent. per annum for 1954-55.

The Company's sale proceeds during the year increased by Rs. 51.98 lakhs to Rs. 1.95 crore. At the same time, cost of raw materials consumed rose by Rs. 16.54 lakhs and other expenses by Rs. 13.48 lakhs. Closing stocks of finished goods and work-in-progress were higher at Rs. 28.53 lakhs, as against Rs. 26.70 lakhs in 1956-57.

Referring to the Company's operations during the year under review and the progress made in its expansion schemes, the Directors observe:

"At Howrah works switchgear design and development division was established and substantial progress was made in construction of building, switchgear designs and prototypes. During the year transformer division faced raw materials and labour problems for the first time, both of which have been subsequently settled. Work commenced on additional building for Faridabad Works No. 1. Cables manufactured at Faridabad Works No. I received I.S.I. (Indian Standards Institute) quality certificate mark. Construction of building for rolling mill was taken in hand during the year. Work on design and development of rolling mill machinery and equipment was nearly complete at the end of the year and manufacture of the rolling mill was taken in hand. Attention at Faridabad works No. II was mainly concentrated in consolidating production lines so far established. Electric motors manufactured by Faridabad works No. II were the first and the only recipient of I.S.I. quality mark. As a result of shortage of raw materials during the year, more particularly those of iron, steel and copper, production has been adversely affected.

"During the year under review, construction of buildings for Faridabad works foundry was completed and the plant and equipment were installed and production started. A non-ferrous metal foundry was also established and production commenced. Faridabad works No. III was refitted and was ready to go into production of motor control gear and low tension switchgear. However, production was held up for want of receipts of licences and raw materials/components. Construction of buildings for Faridabad machine tool works was taken in hand during the year and the erection of machinery and equipment commenced towards the end of the year."

The Company has a paid-up capital of Rs. 59.99 lakhs, divided into 40,000 ordinary shares of Rs. 100 each and 20,000 six per cent. tax-free cumulative preference shares of Rs. 100 each. As against this, the reserves, including the surplus, are small, being only Rs. 3.87 lakhs. Secured loans from banks, Industrial Credit and Investment Corporation, Government of India, etc., stand at Rs. 43.38 lakhs and unsecured loans at Rs. 3.46 lakhs. The other current liabilities and provisions amount to Rs. 60.82 lakhs. The gross block of a value of Rs. 69.96 lakhs, including additions during the year of Rs. 6.05 lakhs, has been written down to Rs. 46.26 lakhs. The current assets aggregate Rs. 125.26 lakhs.

On the prospects for the Company, the Directors observe:

"The Company has turned the corner. With large orders in hand, bulk of its production means installed and geared to output, with trained personnel and other manufacturing facilities consolidated, the Company has emerged from its initial difficulties into a period of steady progress. The bulk of the Company's products goes towards meeting vital requirements of the hard core of the second Five-year Plan in the public sector. Quality of products manufactured by the Company is highly valued both by the public and the private sectors. Today with hardly 3 per cent. of the Indian villages electrified, the needs of the people are yet to be met when compared to *per capita* electricity consumption in the developed countries. The Company will have to play a very vital, active, and at times pioneering role."

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 105.50 *cum-div.* and, on *ex-div.* basis, the yield is 7.1 per cent. per annum.

NEW COMPANIES IN NORTHERN REGION

During the last quarter of 1958, 44 companies and an association not for profit, with a total authorised capital of Rs. 16,53,47,000 were registered under the Companies Act, 1956, in the Northern Region. The Region consists of the Punjab and Himachal Pradesh, Uttar Pradesh, Rajasthan and Delhi. Of the 44 companies, two were public and 42 private companies. During the period, 22 companies went into liquidation and names of 109 companies were struck off the register under section 560 of the Companies Act.

In Punjab and Himachal Pradesh, nine companies, all private limited, with an authorised capital of Rs. 92.87 lakhs, were registered and nine companies with paid-up capital of Rs. 13.97 lakhs went into liquidation. Names of 17 companies with paid-up capital of Rs. 9.12 lakhs were struck off the register.

In Delhi during the quarter under review, one public and 26 private companies with an authorised capital of Rs. 5 lakhs and Rs. 15.95 crores, respectively, were registered and six companies with a paid-up capital of Rs. 1.45 lakh went into liquidation. Names of ten companies were struck off the register.

In Uttar Pradesh five companies, all private limited, with an authorised capital of Rs. 15.5 lakhs and one association not for profit were registered and seven companies with paid-up capital of Rs. 5.09 lakhs went into liquidation. Names of 80 companies with a paid-up capital of Rs. 12.80 lakhs were struck off the register.

In Rajasthan two private companies, one limited by guarantee and the other with an authorised capital of Rs. 3 lakhs and one public company with an authorised capital of Rs. 2 lakhs were registered and ten companies with a paid-up capital of Rs. 5.85 lakhs went into liquidation. Names of two companies were struck off the register under section 560 of the Companies Act, 1956 during the same period.

ASHOKA CEMENT LTD.

The results of Ashoka Cement Ltd. (Chairman: Mr. S. P. Jain, Dalmianagar, Bihar) during the year ended 31st March 1958 are encouraging and augur well for the future. The Company's sale proceeds during the year registered a smart rise, from Rs. 15.27 lakhs in 1956-57 to as much as Rs. 98.79 lakhs. The gross profit for the year under review amounts to Rs. 1.22 lakh, as against a mere Rs. 12,928 for the previous year. This should be considered satisfactory considering that there was a strike for a month and that the kiln and cement mill could not function continuously for want of certain key equipment. It is true that the Company has not been able to pay any dividend for 1957-58, but the shareholders will be happy to learn that preliminary expenses and brokerage on shares have been completely written off. Further, the Directors have paid an interim dividend of 30 nP per share (of Rs. 10 each) for the current year, as the results for this year are better.

Out of the year's profit, a sum of Rs. 21,936 has been provided for depreciation. (No depreciation has been provided on machinery, plant and buildings). The Directors have also set aside Rs. 70,508 as provision for bonus and another Rs. 23,620 to development rebate reserve. This leaves a balance of Rs. 6,415 to be carried forward.

The Directors state that, during the year under report, there was a month's strike at the cement works. Further, owing to delay in receipt of clinker conveyor and other auxiliary equipment required for proper working, kiln and cement mill could not run continuously. The kiln was stopped for nearly 45 days towards the close of the year for replacement of clinker conveyor. The machinery suppliers deputed their experts again to examine the plant.

As a result of the recommendation of the Tariff Commission on cement prices, the Government has granted an increase of Rs. 11.50 per ton in the retention price of the Company's cement with effect from 1st July 1958. The Company has also installed a steel furnace for manufacture of steel castings and grinding balls required in cement industry.

The balance-sheet as at 31st March 1958 shows the Company's paid-up capital at Rs. 59.89 lakhs. These are in ordinary shares of Rs. 10 each. Being an infant company, still in a period of active growth, its reserves amount to only Rs. 42,963. It has a debenture liability of Rs. 50 lakhs carrying interest at 6½ per cent. Secured loans from banks against hypothecation of stock of cement, clinker, coal, etc., amount to Rs. 35.11 lakhs. The other current liabilities, including unsecured loans of Rs. 47.30 lakhs, are of the order of Rs. 66.03 lakhs. The gross block of Rs. 157.06 lakhs stands depreciated at Rs. 156.84 lakhs. Machinery under erection is shown at Rs. 9.28 lakhs. Miscellaneous expenditure (debenture issue expenses) amounts to Rs. 83,392. The current assets aggregate Rs. 44.51 lakhs.

GWALINI BROTHERS & CO. (INDIA) PRIVATE LTD. Business: importing, exporting and manufacturing all sorts of merchandise, machineries and goods, particularly electrical and radios etc. Authorised capital: Rs. 5,00,000. Address: Gopal Bhawan, 199, Princess Street, Bombay, 2.

Points From the Chair

Cement Industry

"IT is beyond one's comprehension, that a basic industry which has such an impressive record of progressive performance, which has contributed so much to the country's economic progress and in which the public from all classes has invested so much with such confidence, should be expected to operate under the burden of such exactions. The result is a ridiculous position, in which everybody, with the sole exception of the shareholder, seems to come out on the right side, at any rate in monetary terms. But that is not by any means the end of this dismal story. The final net result of the last year's working of your Company affords ample proof of the serious effect of taxation policy on Corporate Finance. For, apart from depreciation, the net 'plough back' of profits after a whole year's working on a vast scale is only about Rs. 6 lakhs! And it is from this paltry sum that your Company is expected to meet not merely the cost of replacements and renewals at steadily rising prices but also the needs of an expanding business! It is in this context, that the recommendations of the Tariff Commission have to be examined. Your Company had high hopes that the Commission would be alive to the realities of rising costs and increasing taxation and would recommend a fair price, such as would cover *all costs* and leave a fair margin of net profit after tax. Unfortunately, our hopes have been belied and the only substantive outcome has been the award of a totally inadequate increase of Rs. 3.50 per ton in the ex-Works price of our cement. And even here, the Commission's recommendation that this price increase should be retroactive from 1st January 1958 was rejected by Government without assigning any cogent reasons save that it would involve 'administrative and financial complications'."

DHARAMSEY M. KHATAU,
Associated Cement Companies Ltd.

Land Reform Proposals

"Another issue which has been looming large during recent months is the land reform proposals of the various State Governments in South India. That these States are making a doctrinaire approach to this question and that their policies are dictated more by political ideologies and election pledges than the real merits of the issue is obvious from the fact that each Government is grappling at the problem in its own way and opinion is sharply divided even among members of the same political group. Although some of these State Governments have assured us that the land reform proposals will not affect existing plantations, indications are that future extensions and replacements may come under the purview of these reforms and it is feared that this will have serious repercussions and might interfere with future development schemes. We hope the Central Government will intervene and secure complete exemption for plantations from the provisions of the land reforms bills which are expected to come up before the State Legislatures."

A. V. THOMAS,
Neelamalai Tea and Coffee Estates Ltd.

Khasi Sillimanite

"Effective measures taken to maintain the quality of the material and considerable vigilance exercised in selecting and grading the material, have resulted in increased and growing demand for Khasi Sillimanite in newer markets, as also in attracting new customers in the existing markets. Even with the strong competition from Mullite and other such materials being marketed under the trade name of 'Sillimanite' the increased production of 5,495 tons and sale of 5,551 tons this year could not fulfil the market demands. The position is that we are left with pending orders for approximately 4,500 tons, valuing over Rs. 17.00 lakhs, which shall have to be executed in the next year. This situation and demand of nearly 10,000 tons has come about even after our accepting orders with much restrictions and only against confirmed letters of credit from new parties. Our intensive sales campaign in the overseas market is being maintained and consequently Khasi Sillimanite has continued, and would seem to continue to be, a good foreign exchange earner."

S. M. WAHI,
Assam Sillimanite Ltd.

European Economic Community

"On the long view, the most significant developments of the past year have been the entry into force of the Rome Treaty creating the so-called European Economic Community, and the attempt to bring into being, as an adjunct to the common market of the six countries of that Community, a free trade area that would include the United Kingdom and other members of the O.E.E.C. The aim is that in the end the economies of the six nations will be welded into a single economic unit of a great power. And this in an area which in 1957 took about £500 millions of this country's exports and a further £1,000 millions of goods supplied by the overseas sterling countries. It remains to be seen what direction the European Economic Community will take as it develops. It could become either a great area of complete free trade internally, trading liberally with the outside world; or it could become a discriminatory bloc. This is not just an issue between the common market and other industrial countries. The agrarian countries also have much at stake. To mention only a few examples, the countries of the European Economic Community take nearly a third of the exports of Ghana and Kenya, a quarter of the exports of Pakistan, getting on for a quarter of the exports of Australia and Nigeria."

RT. HON. SIR OLIVER FRANKS,
Lloyds Bank Ltd.

NEELAMALAI TEA REPEATS DIVIDEND

PROFIT OF TEXTOOLS DROPS

Neelamalai Tea and Coffee Estates Ltd.

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co. (India) Ltd., Madras) present the audited accounts of the Company for the year ended 30th June 1958.

During September 1958, Doondanery Division of Sutton Estate comprising of—Tea in bearing 41.00 acres, tea immature 26.64 acres and buildings, etc. 4.62 acres has been disposed off. This was a small division away from the main property, presenting certain problems in the matter of supervision, water supply, etc., and the directors, therefore, felt that it was desirable to sell this area.

Tea: The tea crop harvested during the season, together with the costs is given below:—

	Crop harvested 1957-58	Yield per acre 1957-58	Crop secured 1958-57
	Lbs.	Lbs.	Lbs.
Katary and Bhawani	9,88,486	971	8,73,000
Sutton	5,60,000	1,208	4,95,000
Total ..	15,48,486	1,046	13,63,000

With the favourable weather conditions the Estates had, the tea crop has exceeded the estimates by over 2,33,000 lbs. The total f.o.b. cost per pound was as follows: Estate's cost of production Re. 1.40 plus excise duty, export duty and cess Re. 0.13 and additional payments being retrospective wages and bonus, as per agreement, to labour and staff Re. 0.06 making total f.o.b. cost of Re. 1.59 (Re. 1.46).

The bonus disputes in respect of staff and workers for the earlier seasons have been settled during the year and an amount of Rs. 96,768 had been paid in implementing this settlement, which was with retrospective effect. This had put up the cost of production by 6 cents per pound. The estate cost of production has also gone up as this is the first full year when the increased wages agreed last season have been reflected in the accounts.

Tea sales: The average price realised was Rs. 2.02 nP per pound against Rs. 2.15 nP per lb. last year. The depressed market conditions about which reference was made in the last report, continued till March 1958, whereafter there had been some improvement.

Coffee: Crop and cost of production:

	Estimates 1957-58	Crop secured 1957-58	Crop secured 1956-57
	Cwts.	Cwts.	Cwts.
Sutton	30 00	27.96	57.49
Woolligooly	3,600.00	2,658.37	3,480 05
Katary	..	..	14.35
Total ..	3,630 00	2,686.33	3,551.89

There had been a shortfall of about 942 cwts. of coffee crop against the estimate on Wooligooly. The estate did not get sufficient rains for the satisfactory development of coffee berries and this had seriously affected the crop. The entire crop was delivered to Pool and was valued at Rs. 180.24 per cwt.

The profit for the year under review amounted to Rs. 7,05,000 (Rs. 8,30.929) to which is added the balance brought forward from previous year of Rs. 91,273 (Rs. 35,344) making a total of Rs. 7,96,274 (Rs. 8,66.273). Out of this amount, the directors have made the following appropriations:—To transfer to reserve for taxation Rs. 3,50,000 (Rs. 4,15,000) and to payment of a dividend of 5 per cent. on preference shares for 1957-58 Rs. 90.000 (Rs. 90,000) leaving a balance of Rs. 3,56,274 (Rs. 3,61,273) available for distribution, which the directors recommend to be disposed of as under:—

To transfer to investment reserve Rs. 8,000 (*nil*), to payment of a dividend of 7½ (7½) per cent. on equity shares amounting to Rs. 2,70,000 (Rs. 2,70,000) and to carry forward to next year Rs. 78,274 (Rs. 91,273).

Estimates for the season 1958-59:—

	Tea		Coffee	
	Crop lbs.	Cost of production Cts./lb.	Crop cwts.	Cost of production Rs./cwt.
Sutton	4,80,000	134 39	10	105.00
Katary and Bhawani ..	9,00,000	132.10	..	..
Woolligooly	..	..	2,800	131.89
Total ..	13,80,000	132 93	2,810	129.17

With regard to the coffee crop on Wooligooly, the latest reports from the Estate indicate that owing to the heavy showers they had in November, the estimated crop may not be secured and that the actual crop for the season may be about 100 tons.

Development: During the year, 15 30 acres were opened in tea, besides completing the planting of 20 acres opened last year. About 12 acres of coffee were also opened in Wooligooly.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Stores and tools, etc.	1,56,404
		Debts. deposits and advances ...	6,42.054
		Investments	44.934
		Cash ...	5.97,711
Rs.	92,69.437	Rs.	92,69,437

Textool Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balasundaram & Co., Coimbatore) present the audited accounts of the Company for the year ended 30th April 1958.

During the year the Company has earned a net profit of Rs. 4.50.285 (Rs. 16,95,163), after deducting all working expenses and interest and providing Rs. 3,03,144 (Rs. 4,66,931), towards depreciation. Adding to this, Rs. 13,521 (Rs. 70,751), the amount brought forward from last year, the total amount to the credit of profit and loss appropriation account comes to Rs. 4,63,806 (Rs. 17.65,734). Out of this, the directors have paid Rs. 3,634 (Rs. 2,213), by way of charity and donation and have provided Rs. 30,750 (*nil*), towards development rebate on new machinery. A sum of Rs. 680 (*nil*), has been spent in connection with the new issue of shares. After deducting these amounts, the balance of profit is Rs. 4,23,722 (Rs. 12 63,521). The directors recommend that this may be appropriated as follows:—

To pay a tax-free dividend of 12* (20) per cent. for one year on the amounts paid up on the shares upto 30th April 1957 and a tax-free dividend at the rate of 12 per cent. on the amounts paid up on the shares from 1st May 1957 to 30th April 1958 from the date of payment of such amounts till 30th April 1958 to those persons whose names are registered as members of the Company on 30th January 1959. (However no dividend will be paid on the amounts for any period prior to the date of allotment) absorbing Rs. 1,93,384 (Rs. 2,00,000), to provision for taxes Rs. 2,00,000 (Rs. 10.50.000), and to carry forward to next year's account Rs. 30,338 (Rs. 13,521).

It may be observed from the accounts that the profits of the year have fallen considerably. Due to the increase in basic wage structure from 1st May 1957 and the consequent additional amount which the Company had to pay by way of wages, dearness allowance, insurance and provident fund contribution, there is an increase of about Rs. 16,00,000 in the cost of production and the margin of profit is necessarily reduced.

There was also power cut for a long period of 6 months, i.e., May and June, 1957 and January to April, 1958 and to minimise the resulting loss of production the Company had to supplement the power by its own generation arrangements at an additional cost of about Rs. 1.00.000. The prices of raw materials and stores have also increased by about 25 per cent. Sufficient raw materials even for the quota allotted were not available and the Company was forced to pay lay off (non-productive) wages to the workers due to non-availability of raw materials. Here also to minimise the loss in production the Company had to supplement pig iron by using scrap iron. This resulted much in reworking and consequently in increased cost of production. All the above factors have contributed to the steep fall in the profits of the year under consideration.

On the other hand, the Company had to supply its products on the confirmed orders. It had to also keep its schedule of prices in par with those of the competitors and as such was not able to raise the schedule of prices.

During the year under report, the Company started fabrication of the blast furnace for the manufacture of pig iron and the furnace has been commissioned for production in the current year. As soon as the Company obtains the concession to mine iron ore, the directors expect that the raw materials position will improve.

The resources of the Company being insufficient in spite of the new issue of shares, the Company has secured from the Madras Industrial Investment Corporation Ltd., during the current year a loan of Rs. 20.00.000, on the mortgage of the buildings and machinery. The Company will be making borrowings from others as and when necessary by way of fixed deposits, hundies or promissory notes. In order that the borrowing powers of the directors may not exceed the present sanctioned limit, a resolution seeking the approval to increase the limit to the aggregate of five times the paid up capital and free reserves is to be moved at the ensuing annual general meeting.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19 91.950	Gross block	53,61,480
Reserves ...	13,30,750	Less—Depreciation ...	18.69,356
Provision for taxation ...	11,40,766		
Liabilities ...	97,51,045	Net block ...	34.92.124
Profit and loss account ...	30,338	Stock-in-trade	43,72.693
		Stores, etc. ...	31,67,916
		Debts, deposits and advances ...	31,85.317
		Investments ...	16 000
		Cash ...	10,799
Rs.	1,42,44 849	Rs.	1,42,44 849

*The dividend for the year ended 30th April 1958 is 12 per cent. This is on the increased capital of Rs. 19,91.950. In the previous year the dividend was 20 per cent. on a paid-up capital of Rs. 10.00,000.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MANCHESTER LETTER

(*Concluded from page 180*)

well below 100 million yards for the first time for more than a decade.

Spun Rayon Output Revival

The outstanding feature of the Cotton Board's monthly output and employment figures for November was the disclosure that production of man-made and mixture yarns was at its highest level during the past two years. Weekly production was 3,200,000 lbs., whereas output of cotton yarn continued in the doldrums at 9,800,000 lbs., as against 13,000,000 lbs. weekly in the same month last year. Total output of all types of yarn was more than 3,000,000 lbs. weekly below the 1957 level at 15,230,000 lbs.

Cloth production during November was nearly 9,000,000 square yards below the corresponding figures in 1957, weavers turning out 38,910,000 linear yards per week. Of this contraction, cotton cloth accounted for a drop of 7,000,000 yards and man-made and mixture fabrics showed a fall of some 2,000,000 yards weekly.

The rate of reduction in the manpower available for spinning and weaving employers has lately shown some slowing down. After several months in the middle of last year when the labour force was declining by at least 3,000 a month, recent figures indicate a drop of around 1,000. At the end of November, manpower amounted to 211,040, as against 242,490 a year previously.

Fine Spinning Figures

The annual report published by the Bolton Master Cotton Spinners' Association invariably contains a mine of information. Although the membership consisting of 27 companies, owning 136 mills with 8,200,000 spindles, has a specialist flavour, comprising most of the fine spinning industry, the report rewards close inspection.

As a commentary on trade affairs during 1958, the disclosure that 42.1 per cent. of mules were stopped on average during the 12 months to the end of November last in the borough of Bolton underlines the situation, particularly when the previous worst comparison is 35.4 per cent. in 1938. In some weeks last year, the proportion of machinery stopped reached well over 50 per cent., whereas the average in 1957 was 27.2 per cent. and in 1954 only 18.1 per cent.

Another aspect of current trading conditions is revealed by the steady decline in the average count of yarn spun in the areas involved. In 1954, the average in the Leigh district was 40.5 and in Bolton 47.9, but, by last year, the Leigh figure had dropped to 29.8 and Bolton to 42.5.

Commenting on "a disappointing and frustrating year," the report records a decline of 1,000,000 in the number of spindles in membership, a loss of 10.8 per cent. "Never before have our members experienced such a loss during such a limited period," it adds.

The coming influx of school-leavers into industry will present many problems. Already the number is appreciably in excess of those available for employment in recent years, and the rise will continue to a peak in 1962. In Bolton alone, the school-leaving total of 2,000 in 1956 is expected to increase to 2,707 in 1961 and to over 3,000 in the following year, declining thereafter to 2,270 in 1965.—*All Rights Reserved.*

Notice

THE LAWRENCE JUTE CO., LTD.

The Share Transfer Registers of the Company will be closed from 17th February 1959 to 27th February 1959, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 31*st January*, 1959.

FURTHER RISE IN TREASURY BILL RATE

(From Our Own Correspondent)

BOMBAY, 4*th February*

The short-term money market continues to rule tight, with the growing pace of demand for bank credit in the face of an acute shortage of floating funds. The volume of business in the inter-bank section is restricted to the availability of money. Banks have been seeking accommodation from the Reserve Bank and the State Bank of India on an increasing scale. Interest rates, however, remain unchanged, apparently because of the inter-bank agreement fixing ceiling on rates. Inter-bank call money is being done among the Exchange banks and big Indian banks at 3½ per cent. and among the smaller banks at 3½ to 3¾ per cent. House money at seven days' notice is quoted at 3½ to 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to six months, depending on the period.

There has been a further hardening of the Treasury Bill rate this week, from 2.500 per cent. to 2.559 per cent. per annum. As against an invitation for Rs. 2 crores, the amount offered was Rs. 2.10 crores. Tenders for next week are again unchanged at Rs. 2 crores. There were no sales of Intermediate Treasury bills during the week ended 31st January. Nevertheless, they are being continued this week at Rs. 99.376 per cent.

The Reserve Bank of India statement for the week ended 30th January 1959 does not show any worthwhile variations in the Issue Department. Notes in circulation are higher by only Rs. 56 lakhs, while notes held in the Banking Department have declined by Rs. 29 lakhs. While there has been no change in foreign securities, balances held abroad (in the Banking Department) have, after a lapse of many weeks, suffered a drop of Rs. 6.61 crores, thus bringing the total foreign assets down to Rs. 191.42 crores. While there has been a rise of Rs. 2.59 crores in deposits of the Central Government, deposits of other Governments have declined by Rs. 13.44 crores. Deposits of banks have gone up by Rs. 7.57 crores. Loans and advances to Governments are up by Rs. 3 crores and other loans and advances by Rs. 9.16 crores, of which advances to Scheduled banks against usance bills account for only Rs. 27 lakhs.

The Scheduled banks' statement for the week ended 23rd January 1959 shows a substantial rise in banks' deposits, demand deposits having gone up by Rs. 8.26 crores and time deposits by Rs. 3.75 crores. Inter-bank borrowings, too, are higher by Rs. 2.17 crores. While there has been a sizable fall of Rs. 11.30 crores in borrowings from the Reserve Bank, those from the State Bank are up by Rs. 1.04 crore. A small increase of Rs. 2.43 crores is noted in advances and of Rs. 1.58 crore in bills purchased and discounted. Cash balances have shrunk by Rs. 2.74 crores. Money at call and short notice, however, shows an increase of Rs. 3.39 crores.

Barring the State loans, which continue to be in demand, the Gilt-edged market is devoid of any interest. The Central Government loans are mostly on offer. 4 per cent. long-dated issues have, however, attracted some attention. The persistent stringency in the short-term money market is the main factor which restrains activity in this section. 3 per cent. 1986 Conversion Loan has suffered a further drop of 15 nP to Rs. 74.05. 3 per cent. 1970-75 has lost 10 nP to Rs. 90.90 and 3 per cent. 1966-68 5 nP to Rs 93.90. 3 per cent. 1964 is unchanged at Rs. 97, while 3 per cent. 1963-65 has been marked down by 5 nP to Rs. 96.85. 3½ per cent. and 3¾ per cent. loans are all unchanged at last week's rates, while 4 per cent. 1960-70 has gained 5 nP to Rs. 100.80. 4 per cent. 1972 is placed at Rs. 101.35 *ex*-voucher, as against Rs. 101 30 *cum*-voucher a week ago. 4 per cent. 1973 has shot up by 25 nP to Rs. 101.25. Among State loans, Bombay 4¼ per cent. 1971 is being quoted 40 nP higher at Rs. 101 90. Madras 4 per cent. 1968 has hardened by 5 nP to Rs. 100.05. Andhra 4 per cent. 1967 and 1968 has gained 5 nP each to Rs. 100, as also U.P. 1967 and 1968 to Rs 100.05.

There has been a further hardening of the rupee in terms of the U.S. dollar during the week. Banks' selling rate for ready dollars has declined from Rs. 476 50 to Rs. 476 25 per $100. Their buying rate is unchanged over the week at Rs. 473 per $100, although it had touched early in the week Rs. 473.25. In New York, spot sterling has gained further strength from $2.80.15/16-2.81 to $2.81-2.81.1/16. After a decline from $2.80.23/32-2.80¾ to $2.80.19/32-2.80.21/32 three months' forward has improved to $2.80.11/16-2.80¾.

HIDES FIRM

(From Our Own Correspondent)

KANPUR, 1*st February*

During the week under review, the hides and skins market ruled firm. There was keen demand for high grade buff and cow. New arrivals were considerable Thanks to the extreme cold weather, the local butcheries were instrumental in supplying a larger volume of fresh goods. The Madras dealers were keen buyers of high grade goat and sheep. In the sector of buff and cow, the main buyers were the local tanners.

The latest quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 360 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 2 lbs. 1 oz. and 2nd grade 2 lbs. 3 ozs. per rupee; goat 1st grade Rs. 375 and 2nd grade Rs. 350 per 100 pieces; sheep Rs. 350 per 100 pieces.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 2*nd February*

In sympathy with groundnut and mustard, the linseed market has remained steady and a general firm tendency prevails. Little business ahs been reported, with buyers scarce and supplies limited. Some new crop business is reported, but neither buyers nor sellers have been keen. With crop reports fair to good, the price discount is sizable. The oil market is dull, and very little business has been reported, with price levels unchanged.

The latest quotations per maund are: Ready Rs. 27.4; Feb.-March Rs. 25; and April-May Rs. 23-4.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 4*th February*

The buoyant conditions noted in the bullion market last week abated a little during the week under review. In fact, the market presented a distinctly easy appearance. The high level of prices touched by both gold and silver in previous weeks attracted sizable profit-taking. There was also unloading by certain tired bulls, while fresh buying was limited. The yellow metal was subjected to selling by spot houses on rumours of large arrivals of contraband gold in the city. In sympathy with gold and following unloading by Calcutta and Delhi operators, silver too suffered a setback. There would have been a marked fall in prices but for professional buying and covering by bears.

In the silver section, February settlement opened the week by Rs. 197-5, as against Rs. 196-11, last week-end, and moved down gradually to touch Rs. 195-4 today. Towards the close, however, it recovered to Rs. 196-4. March settlement receded from Rs. 197-3 to Rs. 195-13 before finishing at Rs. 196-13. The carry-forward charge against bulls, after narrowing down from As. 8 to As. 7 in the first three sessions of the week, widened yesterday to As. 9 which persisted today too.

Ready silver elicited good buying support on the opening day and hardened from Rs. 196-3 to Rs. 196-12. Subsequently, selling ensued and the price declined to Rs. 195-1 today, although, towards the close, it was firm at Rs. 195-12. The net loss over the week was As. 7. The daily average arrivals and offtake were 17 bars and 12 bars, respectively. The floating stocks of silver are estimated at 1,400 bars.

February settlement in gold encountered persistent selling and fell from Rs. 118-7 on Wednesday last to Rs. 117 today before recovering to Rs. 117-6 at the close. Business in March settlement commenced on Monday at Rs. 118.5. The quotation for this contract today was Rs. 117-8.

Ready gold, which stood at Rs. 118-13 at the close of last week, came down on selling pressure to Rs. 117 today; at the close, it was better by As. 6. The daily average arrivals of gold were 5,000 tolas, while the offtake was 3,500 tolas per day. The floating stocks of gold are reported to be around 25,000 tolas.

Ready and forward silver in London were both unchanged throughout the week at 76⅛d. and 76¾d., respectively. Gold in London, after declining from 249s. 6¾d. to 249s. 6d. on 30th January, recovered to 249s. 6¼d. on the 2nd inst. Yesterday, it again declined to 249s. 5¾d. Silver in New York remained unchanged at 90.375 cents.

The following comparative table shows at a glance the trend of the market during the week under review:

	4-2-59	Highest	Lowest	28-1-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	117 6	118 9	117 0	118 13

* 23rd February settlement. † 24th February settlement.

RUSSIA BUYS RAW GOAT SKIN

(From Our Own Correspondent)

MADRAS, 2*nd February*

Arrivals of E.I. tanned cow hides and calves into the market was on the usual scale during the week. Shippers were slowly buying their requirements, reducing their limits. As U.K. buying was selective and mostly for lower grades, shippers were not keen to meet the buyer's requirements, as upper grades would be left over in their hands. Shipment business, therefore, continued to be difficult for market F.A.Q. marks, though top marks found ready buyers for all grades.

In the buff calf section, tanners were nervous because of their large holdings. They were taking lower prices.

Tanned buff hides and cow calf remained unchanged.

Prices of tanned skins for shipment business were unchanged, but the tone was weak, due to price resistance at the importers' end. Locally, prices were firm.

Raw goat markets were firm, due to heavy purchases for shipment to the U.S.S.R.

In the January tanned skins London public auctions 150.000 tanned sheep skins were sold, as against 350 000 offered. Demand for lower grades was well sustained.

COTTON FUTURES STRONG

(From Our Own Correspondent)

BOMBAY, 4*th February*

The cotton futures market, after a brief spell of easiness early in the week, ruled very firm in subsequent sessions. Speculators lent fresh support to the market on reports of damage to the crop in some areas due to the severe cold. Smaller arrival of new crop, and the improvement in the piece-goods market induced mills to come forward and make purchases. Sentiment was also favourably affected by the expectation that, due to the crop damage and reduction in crop estimate, tenders against the maturing contract would be small. The rise in price would have been more marked but for the imposition of heavy margin on oilseeds and the fear that additional curbs would be clamped down. This acted as a restraining influence on the cotton futures market.

I.C.C. Moglai Jarilla March 1959 opened the the week at Rs. 671.25 and, after rising to Rs. 674 the same day, declined to Rs. 663.25 on Saturday. The contract spurted to Rs. 677 on Monday and further to Rs. 678.25 yesterday. Commencing today's session at Rs. 675 50, the contract strengthened to Rs. 681.50 before closing fractionally lower at Rs. 680.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	4-2-59	*High*	*Low*	28-1-59
I.C.C. Moglai Jarilla (March 1959) ...	680.25	681.50	663.25	670.25

In the spot section, mill activity was on a restricted scale. But prices ruled very firm. Mills were reluctant to make large purchases at the prevailing high price. Needy mills, however, covered their requirements. Some of the main varieties in demand, were Vijay, Berar and Khandesh varieties, CO2, 197/3, etc.

In the export section, a revival of foreign demand, especially from Japan and Hong Kong, was noticed. Shippers bought moderate quantities of 25/32" cotton, C.P. and Berar *Deshi* and Bengal in anticipation of better demand from the U.K. following China's refusal to grant export licences for cotton to the U.K.

The foreign section was quiet. Importers were eagerly awaiting an import allocation.

It is reported that, with a view to persuading Indian mills to buy Egyptian cotton, the Egyptian cotton delegation which recently visited the country has agreed to offer an extra discount of 15 per cent. over and above the 15 per cent. which is presently given to India. It appears that certain leading consumers of Egyptian cotton in this country have reached an understanding on this question.

The period of shipment in respect of imports of 20,000 bales of raw cotton stapling 1-3/16" and above and 10,000 bales of raw cotton stapling 1-3/16" and above and 10,000 bales of raw cotton stapling 1-1/16" and above from soft currency area has been extended from the end of January up to 31st March 1959. The Government it may be recalled allowed the import of these quotas of cotton on 29th October 1958.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 700; Berar Jarilla 750; Khandesh 830; Vijay 945. *Delivery contracts*: Bengal 635; Vijay 240 'ON'.

Cotton futures values in Karachi registered a decline this week. Export inquiries were not encouraging. Domestic spinner demand, which was brisk of late, slackened. N.T.R.G. March contract came under bear pressure and declined from Rs. 62-4-6 last week-end to Rs. 61-9-6. The May contract softened by an anna to Rs. 60-11. The spot market was, however, active. Most varieties were quoted higher. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 63-8; Punjab Deshi 62-8; 4F Punjab Roller 63-4; S.G. 63-4; L.S.S. Punjab Roller 65-4; S.G. 69-4; 289F Punjab Roller 73-8; S.G. 82-12.

Alexandria cotton futures market presented a better appearance during the week under review. Operators extended support to the market. Part of the buying was attributed to the expectation that India might make large purchases of Egyptian cotton following the reported promise of the Egyptian Delegation to India to give an additional discount to Indian buyers. Stiff competition from Sudan, however, discouraged large-scale buying. The latest available quotations—in tallaris per lb. —are given below:

Karnak: March 73.27; May 73.00. *Ashmouni*: February 64.40; April 63.85.

The Sudan Gezira Board has cancelled all previous reserve prices at the cotton auctions. No list of reserve prices will, therefore, be published hence forward. Buyers can place any bids and the Board reserves the right to accept or reject any bid. Whether the introduction of this scheme will stimulate offtake at the auctions is yet to be seen.

Liverpool cotton futures market depicted a mixed trend during the week. While the American cotton contracts ruled fully steady the mixed growth contracts declined. The steadiness of the former was due to buying induced by fears of scarcity of tenderable U.S. cotton. The easiness of the latter was attributed to the emergence of hedge selling by mills against yarn stocks. Sudan cotton contracts were quoted lower following easier advices from Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 23 15; May-June 22.60; July-August 21.00; October-November 20.05. *American cotton*

mixed growths contract: March-April 22.95; May-June 22.40; July-August 20.95; October-November 20.00. *Sudan*: May-June, July-August, September-October 22.25.

Cotton values in New York received a setback early in the week. The announcement of a lower than expected mid-January parity price of 38 cents per lb. as against the mid-December parity of 38.93 cents per lb. adversely affected sentiment. A recovery was in evidence later, thanks to scarcity of offerings and heavy loan impoundings.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-2-59	27-1-59	20-1-59
Spot	35.70	35.75	35.55
March	35.33	35.30	34.35
May	35.39	35.41	34.52
July	33.93	34.67	34.03

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *4th February*

The yarn market put on a dull appearance during the week under review. Operators were not inclined to extend their commitments either way, in view of budget uncertainties. Actual turnover was, therefore, small. Art silk yarns were depressed, thanks to reports of large stocks lying with dealers as well as consumers and pressure of further deliveries in both indigenous and imported yarns. Cotton yarns lacked support in the absence of any encouraging news regarding domestic and overseas offtake. Staple fibre yarns, however, were held firm, due to expectations of large seasonal demand emerging in the next few weeks. It was reported that several local and upcountry spinning mills which had recently received supplies of indigenous fibre would shortly be making large sales of yarn. These reports, as also reports of slackness in demand for staple fibre fabrics and decline in prices, particularly in the Punjab, Surat, Calcutta and Bhagalpur, did not, however, have any effect.

Long liquidation and bear hammering in Cupressa Bamberg art silk yarn (60/1) February delivery brought down the quotation for the delivery from Rs. 1,578 last week to Rs. 1,535 today. In sympathy, spot 60/1 Cupressa fell by 29 nP to Rs. 7.90. Ready 150 Japan dropped 10 nP to Rs. 4.84. 120 Japan receded by 8 nP to Rs. 4.81. 120 Italy and 150 Italy declined by 6 nP each to Rs. 5.19 and Rs. 5.25, respectively. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 9 nP to Rs. 4.28, while 120 bright cones firmed up by 6 nP to Rs. 4.44 on special support.

In the staple fibre yarn section, 40x2 April delivery met with good buying enquiries and strengthened by Rs. 5 to Rs. 622. February delivery was fully maintained at Rs. 611. Spot (40x2) Kohinoors picked up 9 nP to Rs. 3.40. Citys, however, shed 6 nP to Rs. 3.10. Among foreign yarns (80x2), Fujis gathered 6 nP to Rs. 9. Paramounts were firm at Rs. 8.87.

Cotton yarns ruled dull. Ten counts Moderns were unchanged at Rs. 13.25, as also Podars at Rs. 12.19. Twenty counts were done at Rs. 16.25, same as last week. Thirty counts Hinds were favoured well, the quotation rising by 12 nP to Rs. 19.37. Deals in forty counts Minaxis were put through at Rs. 25, which compares favourably with the last week's closing rate of Rs. 24.56. Among 60s, Raghuvamshis were quiet at Rs. 53 and Finlays at Rs. 65. Eighty counts Finlays and Citys were on offer, the former at Rs. 71 and the latter at Rs. 66.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	4-2-59	28-1-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg February (per case of 200 lbs.)	1,535	1,573
60/1 Cupressa Bamberg spot (per lb.)	7.90	8.19
120 Japan (per lb.)	4.81	4.89
150 Japan (per lb.)	4.84	4.94
120 Italy (per lb.)	5.19	5.25
150 Italy (per lb.)	5.25	5.31
Staple fibre yarn—		
40 x 2 February (per case of 200 lbs.)	611.00	611.00
40 x 2 April Do	622.00	617.00
40 x 2 Kohinoor (per lb.)	3.40	3.31
40 x 2 Century (per lb.)	3.22	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
30s Hind	19.37	19.25
40s Minaxi	25.00	24.56
60s Finlay	65.00	65.00

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, *4th February*

The uptrend in prices on the local oilseeds market witnessed during the last one month, seems to have been halted. The market eased perceptibly during the week under review, thanks mainly to stiffer margin on groundnuts and a fresh levy on cottonseeds introduced by the Forward Markets Commission. On Friday, the Forward Markets Commission directed the Bombay Oilseeds and Oils Exchange to raise the rate of margin deposits on open 'long' positions in groundnuts to Rs. 45.00 per candy when the closing rate of the futures contract is above Rs. 185.50 per candy. Till now the rate of margin was Rs. 25.00 per candy when the closing rate exceeded Rs. 175.00 per candy. The Commission has also imposed a new margin of Rs. 15.00 per candy on open 'long' positions in cottonseed when the closing rate of the futures contract is above Rs. 135.00 per candy. The directive further stated that if the price of the groundnuts futures contract ruled above Rs. 185.50 per candy, during the delivery period, the 'longs' would be required to pay a margin deposit equal to one half of the value of the 'long' position held by them.

While taking this action the Commission said that the recent spurt in prices in the oilseeds futures market and "the tendency of certain parties to rig-up prices" had been a source of "serious concern" to the Commission. Such activities distorted the price structure and caused hardship to processors and genuine traders. The Commission's directive also called for daily submission of detailed statements by members of their transactions in regard to their own business as well as the business of their constituents for the purposes of margin. Similar margin deposits are being imposed in the case of cottonseed, groundnut and groundnut oil at the recognised associations at Rajkot, Madras, Adoni, Delhi, Akola, Ahmedabad and Ujjain. The action of the Commission has served to put a brake on unbridled speculation.

The margins and a vulnerable technical position which was developing in the market for some time led to marked setback in the groundnut section. Bull liquidation and absence of fresh support brought down the prices of groundnuts and oil. Groundnut February 1959 contract, which closed last Wednesday at Rs. 179.62, improved overnight on Thursday to Rs. 181.00. Subsequently, the contract moved both ways in a limited range and closed today at Rs. 178.50. Likewise, May 1959 contract moved ahead by one rupee on Thursday to Rs. 185.37. It lost ground later and touched Rs. 180.37 before winding up the week today at Rs. 182.50. Bold ready, which opened the week on a firm note at Rs. 36.12, after fluctuating between Rs. 35.62 and Rs. 36.37, closed today at Rs. 35.75. Oil ex-mill lost 37 nP over the week when it closed at Rs. 18.75 today.

In contrast, castorseed section staged a smart recovery after a fall by the middle of the week. This was assisted by reports of rising prices in the U.K. and unfavourable weather reports from Brazil. The market closed today on a distinctly bullish note, on account of reports that a sizable amount of oil has been purchased by the U.K. Traders entertained hopes that the countries of the Communist bloc and some of the Far Eastern countries would enter the market for castor oil. Castorseed May 1959 contract gained by Rs. 3.62 on Thursday, as compared with previous day's closing rate. It, however, lost considerable ground subsequently and touched Rs. 154.12 on Monday. Once again, on encouraging advices from abroad, the contract rose to close today at Rs. 156.00. Ready Madras, which stood at Rs. 30.50 on last Wednesday, after fluctuating in a narrow groove, closed today at Rs. 30.37. Oil B.S.S. was quoted at Rs. 16.37, as against Rs. 16.75 last week-end.

Large arrivals of new crop and reports of good crop from other producing countries pulled down the prices of linseed and its oil. Linseed May 1959 contract, after moving irregularly between Rs. 33.62 and Rs. 32.62, closed the week at Rs. 32.50 with a net loss of 75 nP. Bold ready sagged from Rs. 35.50 to Rs. 33, today. Linseed oil also declined to Rs. 17.37, as against Rs. 18.00 last week-end. The margin considerations held speculation in the cottonseed section in check. However, there was sustained support, as the present rates are well below the margin level. Cottonseed February and May contracts, which closed last week at Rs. 131.50 and Rs. 127.25 wound up the week at Rs. 133.00, and Rs. 128.25, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	4-2-1959	28-1-1959	21-1-1959
	Rs.	Rs.	Rs.
Groundnut			
February 1959	178.50	179.62	174.25
May 1959	182.50	184.37	178.75
Bold/ready	35.75	36.12	35.25
Coromandel ready	36.25	36.37	35.75
Khandesh quality	36.25	36.50	35.75
Oil ex-mill ready*	18.75	19.12	18.75
Railway receipts*	18.62	18.94	18.62
Castorseed			
May/1959	156.00	154.75	140.75
Ready Madras	30.37	30.50	29.25
Ready Kanpur	29.25	29.50	28.25
Oil/B.S.S.†	16.87	16.75	16.19
Oil/commercial†	15.50	15.50	14.94
Linseed			
May 1959	32.50	33.25	32.50
Bold ready	33.00	35.50	35.62
Oil ready†	17.37	18.00	17.81
Cottonseed			
February 1959	133.00	131.50	125.75
May 1959	128.25	127.25	122.75
Nigerseed	29.00	29 00	28.25
Kardi seed	21.75	21.50	21.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR RISES MARKEDLY

(From Our Own Correspondents)

BOMBAY, *4th February*

There was a sharp rise in sugar prices during the week under review, the ex-mill quotation for Bombay-Deccan sugar itself having gone up by Rs. 2 per bag. There was a strong buying spree induced chiefly by rumours that the excised duty on sugar might be increased in the forthcoming Union Government budget. Expectations of upward revisions in cane prices and ex-mill prices of North Indian sugar, too, imparted strength to the market. Many operators were busy extending their commitments, but offerings were small, thanks to tight stock position and small arrivals on account of transport difficulty. The aggregate arrivals of sugar by rail during the week were just 9,600 bags, as against 12,710 bags in the previous week and 23,360 bags in the week preceding it.

Small grain sugar climbed up by Rs. 3 to Rs. 110-Rs. 111 per bag. Medium grain spurted by a like amount to Rs. 112-Rs. 113.50. Large grain rallied a rupee to Rs. 114-Rs. 118.

Following the steep rise in sugar prices, the Deccan Sugar Factories Association is understood to have suggested to the Union Food Ministry to issue a further release for sale in free market and also to modify the export policy which, it is said, is mainly responsible for the bullish fervour of the market. Some in market circles attribute the recent sudden jump in sugar prices to the cornering of free market stocks of co-operative factories in the Bombay-Deccan region by a group of outsiders who are not genuine traders. The quantity involved in the release orders issued to the co-operative mills, it is said, accounts for as much as 35-40 per cent. of the total for the Bombay-Deccan region. Trade circles feel that the Union Food Ministry should issue a directive to the co-operatives to accept tenders from genuine traders for quantities less than 1,000 bags per tenderer, with a view to permitting as large a number of dealers as possible to participate in sugar trade.

• • • • •

HAPUR, *2nd February*

Sugar prices ruled steady during the week, as stocks with factories were dwindling. The last monthly quota released provided small quantities for factories on this side which was reported to have been nearly exhausted. Crushing in west U.P. is in full swing, as cane supplies are adequate, but the cane supply strike threat from the 5th inst. continues. The Muzaffarnagar sugar market ruled steady, due to good consumer demand. The quotations for mill delivery were in no case below the controlled price, while some factories were reported to be dealing at the higher prices. The latest prevailing prices were: crystal spot delivery Shamli D29 Rs. 36.75; E29 Rs. 36.56; Mansurpur D29 Rs. 37; Rohana D29 Rs. 37.25; Saharanpur D29 Rs. 37.12; Deoband D29 Rs. 37.50; wholesale mill delivery Khatauli A29 Rs. 37.75; D29 Rs. 37.12; Deoband C29 Rs. 36.37; D29 Rs. 36; Iqbalpur A29 Rs. 37.75.

The Kanpur sugar market ruled active. Traders from all consuming areas remained keen buyers, as their stock position was far from satisfactory. Local stocks were very poor and most of which was of moist quality. The latest prevailing prices were: Spot per bag C29 Basti Rs. 104-8; Gola Rs. 103; D29 Gola and Burhwal Rs. 102-4; Waltergunj Rs. 102; Tulsipur and Balrampur Rs. 101-12; Hargaon Rs. 101-8; Lakhimpur Rs. 101-4.

Ready *khandsari* ruled quietly steady, as production was slightly hampered following rains. Good crystal quality is being produced in the *khandsari* unit which is fetching a comparatively better price. Prevailing prices were: *khandsari* dry superior Rs. 30 to Rs. 35; moist Rs. 25 to Rs. 29 per maund.

Ready *gur* registered a further gain of Re. 1 per maund during the week, as arrivals were small due to rains and cloudy weather. The stockists were main supporters. In order to lend support to prices in the future section, the bulls also purchased ready arrivals at higher prices. Prevailing prices on Monday were: *gur pansera* Rs. 16.75 to Rs. 17.12; *balti* Rs. 17.75; *shakker* Rs. 18 per maund.

Future *gur* continued bullish. *Fagun* opened at Rs. 15.64 last Monday, touched the highest of the week and is quoted today at Rs. 16.02.

JUTE GOODS UNSETTLED

(From Our Own Correspondent)

CALCUTTA, *3rd February*

Conditions in the jute goods market during the week under review were unsettled, and prices closed lower on balance. Earlier in the week, sacking recorded a small improvement. This followed a meeting of the Committee of the Indian Jute Mills Association. Although details of discussions were not known, the rumour that the mills would soon seal off 2½ per cent. of sacking looms spread like wild fire. As a result, there was a small improvement in the sacking section. In sympathy, hessian was also better. Then came another rumour that a revision of the minimum prices by the I.J.M.A. was imminent. Thereupon, prices searched lower levels and the earlier improvement was erased in its entirety. What little buying was taking place for export in sacking constructions also stopped. It was a logical conclusion in trade circles that the I.J.M.A. Committee discussed the unreality of the minimum prices being maintained for any length of time. The minimum selling price for B. twills as recommended by the I.J.M.A. is Rs. 100 per 100 bags; but for months now, this has been much below that. Not only that. Foreign buyers consider the minimum prices as being artificial, bearing no relation to the prices of raw fibre, and being used to extract higher prices from abroad. According to them, prices must be left to be determined by the natural forces of supply and demand. It is not surprising, therefore, that foreign buying, especially in sacking, has been declining markedly in recent weeks; January-end stocks with mills must reveal a new high level of sacking goods.

The position has been entirely different in the case of hessian, the 40" 10 oz. of which has been often quoted at or above the minimum price. That there are always large quantities of B. twills available in the market at below the minimum price suggests that the original sellers, that is, the mills, have been selling this construction at a price lower than the minimum price. Indeed, the State Trading Corporation has purchased B. twills at the current market rate. This indicates that the mills are able to make profit in sacking even at the low rates, in view of the heavy decline in fibre prices. This position has awed foreign buyers and it is surprising to trade circles that the I.J.M.A. has not so far revised the minimum price of B. twills. This state of affairs has gone against the demand of mills for fixation of minimum export prices at the official level based on the I.J.M.A. minimum prices. Trade circles here pointed out that the present was hardly the time for fixation of minimum prices for goods. For, in the present circumstances, minimum export prices would only amount to adding to profits of shippers who could buy from the market cheaply and sell to importers overseas at higher rates.

The trade view is that, so long as prices of raw jute do not improve to levels fairer to cultivators, uncertainty in the goods market would continue. During the week, raw jute receded fractionally, despite continuance of support by the S.T.C. However, mills accorded only meagre support, as they had adequate stocks. If, at the present stage, a minimum price was fixed for raw jute, it would not be of much help to cultivators. For most jute has left the cultivators' hands. Nevertheless, the view that, if self-sufficiency is to be maintained, if prices of fibre and goods should have a proper relationship, and if self-sufficiency should not depress fibre prices and discourage cultivators from growing more jute, the Government of India should follow a fixed long-term jute policy even from the very beginning of the next jute season cannot be resisted. If only a minimum price for the cultivator was ensured from the very beginning of the season and if the minimum price could only be supported by the Government and the S.T.C. by adequate purchase power and storage capacity, that would be a beginning towards solution of the many headaches which the fibre and goods markets faced when once the season had developed year after year.

On Tuesday last, ready B. twills at Rs. 93.60 added a small gain following the rumour that the mills were contemplating to reduce sacking output. It would be remembered that, as from 17th September 1956, the I.J.M.A. mills have sealed 12½ per cent. of the looms. The drop in sacking sales during recent months has been such as to raise the proportion of sacking stocks by the end of December to a level far higher than the ratio of output of sacking in relation to other constructions. In sympathy, hessian 40" 10 oz. improved to Rs. 41. This was soon followed by selling pressure in the futures market, which affected the rates for ready goods. B. twills fell to Rs. 93.20 and hessian 40" 10 oz. to Rs. 40.90. This was on Wednesday. On Thursday, there were strong rumours that, the following day, there were the possibility in recognition of reality, there was the possibility of the minimum prices being removed. Soon, B. twills fell to Rs. 92 and hessian 40" 10 oz. to Rs. 40.50. On Friday, the rates declined further to Rs. 40.50. On Friday, the rates declined further to Rs. 91.40 and Rs. 40.20, respectively. On Saturday, B. twills at Rs. 91 were nominal, while there was a small improvement in hessian 40" 10 oz. to Rs. 40.40. Prices were unchanged yesterday, and business passing for genuine export was small. There was very little activity in the futures market. An air of expectancy in relation to the I.J.M.A. prices is persisting and holds up business.

In the raw jute market, there was a decline in business, although sellers refused to discount quotations, in view of the firm conditions in the agencies. Locally, there was a fractional decline in the prices of inferior varieties, but the good quality was firm. The latest quotations for February-March delivery for the different varieties are:

	Middles Rs.	*Bottoms* Rs.

GOOD LIQUORING TEAS IN DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *30th January*

956,522 lbs. were on offer in Sale No. 4 which was held on Tuesday 27th January. Quality showed an all-round improvement and there were some useful teas on offer from all districts. The market was irregular, with rather less demand from internal buyers, and, as a result, low medium brokens and fannings were barely steady on last rates, and in some cases difficult of sale. Exporters continued to show interest in medium and best liquoring teas which were dearer following quality. Whole leaf teas were easier by 5 nP except where quality showed an improvement. Tippy teas sold at easier rates. The quotations were: low medium Re. 1.52 to 1.62; medium Re. 1.80 to 2.00; good medium Rs. 2.20 to 2.50, and quality Rs. 2.40 to 4.10.

Dust Sale 'B':—A quantity of 580,578 lbs. were on offer in Dust Sale 'B' which was held on Thursday, 29th January. The teas showed an all-round improvement both in leaf and liquor. The sale opened to a very strong demand and prices were 10 to 15 nP dearer for all descriptions. The sole exception were high grown dusts which were barely steady. A small selection of C.T.Cs met with strong competition and prices were sometimes up to 20 nP dearer.

London Market:—*Sale of 26th January* 1959.—Best liquoring and teas for price fully firm. Others somewhat irregular and sometimes easier.

Sale of 27th January 1959.—Fair demand slightly irregular.

Colombo Market:—*Sale of 26th January* 1959.—Strong demand. Quality second invoices slightly improved highgrown brokens dearer than last weeks closing. Mediums up 10 to 15c. Lowgrowns about steady.

Sale of 27th January 1959.—Strong demand, particularly liquoring fannings and dusts appreciably dearer. Other offgrades firm to dearer, except stalky kinds.

Export Quota.—The market has remained firm throughout the week, with business going through at 2¾ nP. There has, however, been an easier tendency, and some business has been done at 2½ nP. The latest quotation is Sellers 3 nP, Buyers 2½ nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 5.—875,000 lbs. Good demand, particularly for improved low mediums and best liquoring which are dearer. Plain tea barely steady."

STRONGER DEMAND FOR QUALITY TEAS

(From Our Own Correspondent)

CALCUTTA, *3rd February*

While there was stronger demand for quality teas during yesterday's export sales, common teas during last week's internal auctions eased. It was noted here that the average price realised at last week's sales in Mincing Lane, London, was slightly lower, being 48d. per lb., as against 48.52d. in the previous week.

In the week ended 23rd January, tea stocked in U.K. warehouses rose to 166 million lbs. from 159.39 million lbs. in the previous week. The quantity afloat was 28.75 million lbs., and hence the total of stocks at 194.75 million lbs. reached the highest figure so far during recent years. The decline in price in sales in London is attributed to increase in stocks.

The anticipation that West Bengal and Assam would abolish the entry tax on tea at least on common tea has so far not been fulfilled. The tea industry has made several representations in this regard to New Delhi as well to the Governments of West Bengal and Assam. While the matter is understood to be still under consideration with the authorities concerned, the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, in a speech at Dibrugarh on Sunday last, referred to the possibility of the Government of India providing loans to uneconomic gardens.

Reports from Colombo about the decision of the Government of Ceylon to introduce a new scheme of export duty for tea has caused concern in tea trade circles here. There is no doubt in tea trade circles here that Ceylon is determined to re-capture its lost markets, as more than half the Ceylonese tea output is common teas, which is mostly exported. Unless India is prepared to meet this new challenge from Ceylon with a further reduction in the excise and export duties for common teas, the surplus of such teas may as well become a financial problem to the trade as well as the industry. Further news and auction trends from Colombo will be closely watched and studied here for some time before the tea industry and trade make representations to the Government of India.

Meanwhile, it was noted that, during the last auctions in Colombo, there was strong demand. Medium teas rose by 5 to 10 cents, and low growns and commons were steady. The prices of good quality teas also improved.

During last week's sales for internal consumption here, dusts on offer aggregated 21,273 chests. Although at the opening of the sales demand had declined, as the sale progressed, there was a strengthening of demand. In orthodox teas, the small and powdery teas realised slightly higher prices, while the poorer and medium teas eased by 2 to 4 nP. Legg-cut teas were steady, as were Darjeelings. Among C.T.Cs., the best lots hardened, while the poorer and medium descriptions fell by 15 nP. The quotations exclusive of excise duty, were: best Assam C.T.C. Rs. 2.50 to 3 (nom.); medium Assam C.T.C. Re. 1.95 to 2.15; medium Assam grainy Re. 1.72 to 1.76; and medium Dooars Re. 1.72 to 1.76.

Telephone: 22-4315
Telegrams: "YULINSURE"

Leaf offerings amounting to 2,262 chests met with good demand at increased rates, excepting the small lot of green teas which eased.

During the export sales held on Tuesday last, offerings amounted to 64,927 chests. Conditions were mixed. Stylish whole leaf grades advanced, while Darjeelings, C.T.Cs, and legg-cut teas eased. Prices for plain and medium B.Ps and plain P.Fs improved, while those of medium P.Fs declined.

Export offerings during yesterday aggregating 66,370 chests met with limited demand and better varieties were steady, while prices of others gave way. A strong feature was the steady trend in "teas for price," Plain B.Ps and P.Fs. and medium P.Fs. The smaller fannings recorded a hardening trend, while medium B.Ps receded. In the C.T.C. group, the better liquorings gave way by 10 nP with subsequent withdrawals, and the poorer fibrous kinds eased by 4 to 6 nP. Lower priced O.Fs were about dearer, with no demand for the tippiest lots. Tippy B.O.Ps were sold at easier rates. Orthodox B.O.Ps met with limited support at declining rates. Legg-cut teas were pushed down by 2 to 6 nP. The stylish kinds in whole leaf grades improved, while Darjeelings reacted to a dull market. The quotations—in rupees per lb.—with those of last Tuesday's in brackets are: best Assam C.T.C. fannings Rs. 2.30 (same); clean black pekoe 2.00 to 2.04 (same); best Assam C.T.C. B.P. 2.25 (same); medium fannings 1.74 to 7.78 (same); plain B.P. 1.62 to 1.66 (same); medium B.P. 1.60 to 1.62 (1.60 to 1.64); and plain fannings 1.74 to 1.80 (same).

Yesterday, export quota changed hands at 2½ nP, but, soon, sellers raised the quotation to 2¾ nP.

BLACK PEPPER CLIMBS UP FURTHER

(Messrs. Parekh and Co.)

BOMBAY, *4th February*

The bullish fervour in Malabar black pepper noted last week continued unabated and prices climbed up further. Ready pepper in the local market was traded at Rs. 95 per Bengal maund, as against Rs. 86 on 28th January 1959. Specific delivery for February rallied to Rs. 630. The sudden flare up appears to be paradoxical, as Russia and other East European countries, after buying about 2,200 tons, refused to follow up. The U.S.A. is buying Lampong from Singapore at prices ranging from $0.22 to $0.23 when Malabar is nominally quoting $0.24¼.

Business in delivery contract and A.S.T.A. in Bombay has come to a standstill. The fear of intervention by the Forward Market Commission following the enforced closure of forward business in cloves has unnerved the operators. They have, therefore, decided among themselves to square up all their outstanding at an agreed rate. Though February delivery rose to Rs. 640 and April to Rs. 660 on 30th January 1959, the rate for squaring up the business was fixed at Rs. 615 for February and Rs. 635 for April. Business in A.S.T.A. for February-March shipments was squared up at $0.23¼, as against the ruling price of $0.24¼.

The ready in Bombay and forward at Cochin are reported to be in the grip of bulls from North India who are buying all kinds of spices and other commodities, as the trading in foodgrains is likely to be taken up by the State. Another bolstering factor is the report that the present crop of Malabar black this year will not be more than 22,000 tons, as against the earlier estimate of 27,000 tons. Trade estimates of pepper vary from 20,000 to 23,000 tons. However, it should be noted that all pepper estimates are guess work and one's guess is as good as another's. Even after the recent reduction in freight to the U.S.A., there is competition between the Conference and Non-Conference. It is possible that the Conference may be forced to reduce the freight still further, though nothing is known so far.

Singapore, after remaining steady at Str. $71 for a long time, improved to Str. $74 under pressure of buying by America and Europe who were forced to action by the continuous rise in the prices of Malabar black pepper. Spot in New York, after going down to $0.23¼, improved to $0.24, the stock with the dealers and grinders in U.S.A. being limited. Repurchases of sizable quantity of Malabar black for February-March shipments by Indian exporters have set New York thinking and everybody is inquiring for the reasons for such a sudden change in the trend at this time of the season.

Some of the reasons for the present rise in the market are: (1) Reduction in freight to the U.S.A. with chances of further downward revision in the near future; (2) the statement of the Chief Minister of Kerala at the news conference before his departure for Moscow that he would try to negotiate to sell pepper and coir goods in exchange for machinery; (3) downward revision in the estimate of the present crop of Malabar black pepper; (4) speculative and investment buying of pepper along with other spices and commodities by *moffusil* merchants; (5) sudden and speculative rise in ginger, oilseeds and other commodities; (6) possibility of Russia and other East European countries coming into the market in the near future; and (7) chances of improvement in inland consumption, as prices of pepper are comparatively cheaper than those of allied spices like chillies and cloves.

At the time of writing, ungarbled at Alleppey, after improving to Rs. 687½, is quoted at Rs. 675. Ready garbled at Cochin is quoted at Rs. 113.50, while February and March at Rs. 116 and Rs. 118, respectively.

Arrivals at both Cochin and Alleppey are restricted, owing to the reserved attitude of the

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus prfiots available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

DELHI LETTER

ANNUAL PLANS OF STATES

From Our Special Correspondent

NEW DELHI, *3rd February*

THE Planning Commission has by now approved of the Annual Plans of a number of States—Andhra Pradesh, Assam, Bihar, Bombay, Madras, Punjab, Uttar Pradesh and West Bengal—for the fourth year (1959-60) of the Second Plan. The agreed outlay for Andhra Pradesh will be Rs. 37.6 crores, of which agriculture will account for Rs. 6.1 crores, community development Rs. 3.4 crores, irrigation and power Rs. 15.7 crores, industry and mining Rs. 2.3 crores, transport and communications Rs. 1.8 crore and social services Rs. 7.8 crores.

The outlay under the Assam Plan for 1959-60 will be Rs. 12.3 crores, of which agriculture and community development will account for Rs. 3.2 crores, irrigation and power Rs. 1.3 crore, industry and mining Rs. 1.0 crore, transport Rs. 1.4 crore and social services Rs. 5.1 crores.

The Bihar Plan for the coming year will involve an outlay of Rs. 41.2 crores, of which agriculture and community development will account for Rs. 13.4 crores, irrigation and power Rs. 11.6 crores, industry and mining Rs. 1.8 crore and social services Rs. 11.3 crores.

The 1959-60 outlay under the Bombay Plan will be Rs. 87.7 crores, of which agriculture and community development will account for Rs. 25.0 crores, irrigation and power Rs. 34.1 crores, industry and mining Rs. 2.0 crores, transport Rs. 5.0 crores and social services Rs. 20.2 crores.

The agreed outlay under the Madras Plan will be Rs. 33 6 crores, of which agriculture and community development will account for Rs. 8.8 crores, irrigation and power Rs. 12.5 crores, industry and mining Rs. 2.3 crores, transport Rs. 1.0 crore and social services Rs. 8.8 crores.

The Punjab Plan for the coming year will involve an outlay of Rs. 35.2 crores, of which agriculture and community development will account for Rs. 6.6 crores, irrigation and power Rs. 16.1 crores, industry and mining Rs. 1.3 crore, transport Rs. 1.9 crore and social services Rs. 8.3 crores.

The agreed outlay under the Uttar Pradesh Plan for 1959-60 will be Rs. 50.0 crores, of which agriculture and community development will account for Rs. 16.9 crores, irrigation and power Rs 15.5 crores, industry and mining Rs. 2.8 crores, transport Rs. 3.0 crores and social services Rs. 11.0 crores.

The 1959-60 Plan for West Bengal will involve an outlay of Rs. 37.5 crores, of which agriculture and community development will account for Rs. 7.3 crores, irrigation and power Rs. 7.9 crores, industry and mining Rs. 3.0 crores and social services Rs. 13.1 crores.

The following table brings out the progress of expenditure under the State Plans in the Second Plan period in respect of eight States. The agreed outlays for 1958-59 and 1959-60 would have to be compared, with caution, with the actual outlays in 1956-57. It may be that the actuals for 1957-58, 1958-59 and 1959-60 will ultimately turn out to be considerably less than the figures given in the table:

(In crores of rupees)

State	1956-61 Plan provision	1956-57 Actuals	1957-58 Revised	1958-59 Agreed outlay	1959-60 Agreed outlay
Andhra Pradesh	174.8	25.0	34.6	30.0	37.6
Assam	57.9	9.2	11.6	10.7	12.3
Bihar	190.2	23 7	20.0	30.7	41.2
Bombay	350.2	44 5	61.3	71.5	87.7
Madras	152 3	28 0	32 4	30.5	33.6
Punjab	162.7	24.1	33.9	33.8	35 2
Uttar Pradesh ..	253.1	40.7	47.8	46.7	50.0
West Bengal ..	157.7	22.4	31.6	29.7	37.5

Since writing the above, the Planning Commission has given its approval to Madhya Pradesh's Plan for the coming year. The outlay agreed to is Rs. 34.22 crores, of which irrigation and power alone account for Rs. 12.40 crores. The allocation for agriculture and community development is Rs. 9.61 crores and for social services Rs. 7.09 crores.

Handloom Industry

The Sixth Handloom Week (8th to 15th February 1959) provides an appropriate occasion for taking stock of the progress so far registered in a substantial sector of the country's industrial economy. If progress is to be measured by the liberal financial assistance provided to the handloom sector it should be deemed substantial since 1953. During the period 1953-58, the loans and grants given to the handloom sector have together, amounted to Rs. 21.4 crores. The Statewise figures of such assistance are given in the table below:

(In lakhs of rupees)

State	Loans	Grants	Total
Andhra Pradesh	223	195	418
Assam	14	18	32
Bihar	68	64	132
Bombay	64	135	199
Kerala	36	39	75
Madras	317	320	637
Madhya Pradesh	66	39	105
Mysore	71	48	119
Orissa	34	37	71
Punjab	9	13	22
Rajasthan	18	8	26
West Bengal	60	45	105
Uttar Pradesh	91	100	191
Union Territories	11	5	16
Total ..	1,080	1,066	2,146

A large part of this State aid to the handloom industry appears to have been related to the co-operative organisation of handlooms. Here, too, there has been some striking progress. In Madras, for example, nearly a fifth of all (4.6 lakhs) handlooms have been brought into the co-operative fold; in Punjab, again, a fifth of all (0.6 lakh) handlooms; in Kerala, a little more than 40 per cent. of all (1.0 lakh) handlooms; in Andhra Pradesh, nearly two-thirds of all (4 lakhs) handlooms; and in Bombay, Madhya Pradesh and Mysore, nearly half of all (5.1 lakhs) handlooms. State aid in this regard has taken the form of provision of share capital and working capital.

But it is by no means clear that all this progress in terms of financial assistance and co-operative organisation has been reflected in increased production and in increased export which have been the two proclaimed objectives of the Government's programme for the handloom sector. Figures of exports of handloom cloth from India show that in 1957 and 1958, there has been a steep decline in exports, both in terms of quantity and value. Actually the country exported less handloom cloth in 1957 than in the years prior to the imposition in 1953 of the handloom cess.

THE UNITED STATES AND INDIA

(*Concluded from page* 179)

population, represents a large and expanding field for American exports, potentially the world's largest mass market. But her ability to satisfy her need for the products of American industry will depend on her ability to pay for them with her exports. To assist India to meet her extraordinary requirements for imported food, raw materials and machines for the initial phases of her economic development programme, the United States has given India substantial financial assistance. More will be needed to assure success of India's inspiring effort. But loans are only temporary props ; in the long run, exports must provide the means for paying for needed imports and for repaying the loans.

In a statement issued in Washington last February, at the conclusion of a series of consultations on trade matters, K. B. Lall, Joint Secretary of India's Ministry of Commerce and Industry, and Henry Kearns, Assistant Secretary of Commerce, "expressed their desire to facilitate, develop and expand private trade by every appropriate means" and resolved "to encourage such measures as might be undertaken by the businessmen of their respective countries and by their Governments which would promote trade between India and the United States."

Businessmen interested in establishing trade connections with India may be assured of the assistance and co-operation of the Government of India and of the agencies of the United States Government—the Department of Commerce in Washington, and its field offices in cities across the country, and the commercial sections of our Embassy in New Delhi and our Consulates-General in Bombay, Calcutta and Madras. Our personnel in these offices are devoted to the task of promoting an ever-increasing flow of goods in both directions. They give advice to Indian exporters on trade opportunities and market conditions in the United States and they advise American manufacturers and exporters on trade opportunities in India. They have long followed the principle that trade must flow in both directions, that only by earning dollars through exports to America can India in the long run afford to buy American goods, including the tools and machines so vital to fulfilment of her aspirations for a better future for the Indian people.—The *New York Times* Indian Republic Day Supplement.

ENGINEERING

(*Concluded from page* 188)

envisaged by the second Five-year Plan. Of the two new automobile tyre factories, licence for which has been granted by the Government of India, the Dunlop factory at Ambattur, near Madras, is the first to go into production. It is Dunlop's second factory in India and its opening takes place 60 years after the Company brought the first pneumatic tyres to India. As the foreword to this booklet says, along with the automobile, Dunlop completes sixty years in India—"a fitting occasion to sketch the landmarks on the road which the automobile has traversed since then."

ARTIFICIAL STEEL ISLAND IN GULF OF MEXICO

An island of steel, which will stretch nearly one mile and will be the largest ever made, is being erected over what may be the world's first offshore sulphur mine. The sulphur dome is located on Grand Isle, Louisiana, seven miles from the State of Louisiana coast.

The gigantic steel structure, shaped in the form of the letter "Y," will cost an estimated $30.000.000. Supported by 250-foot tubular steel pilings, the structure rises at least 60 feet above water level with its two well towers soaring 225 feet above the waters of the Gulf of Mexico.

The steel island will house everything needed for a sulphur mine, including a water heating plant, air compressing equipment, three drilling platforms, a heliport for helicopter landings, and living quarters for 250 workers.

At the base of the "Y" will be a processing plant, one of the largest of its kind in existence, which will consume some 13,000,000 cubic feet of natural gas daily in the processing operation.

From each of the two drilling platforms, 36 drilling pipes will run through 50 feet of water, through the gulf floor and into the sulphur dome. Under ground, the pipe will spread out, by directional drilling, to some 108 locations as far as 800 feet horizontally distant from the platform.

Each well will be serviced by three concentric pipes, one inside the other. Hot water forced down the outermost pipe will melt the sulphur, converting it into a brownish-yellow liquid. This liquid will be forced up the middle pipe by compressed air sent down the smallest, or inner, pipe. When in full operation, the plant will force 5,000,000 gallons of hot water daily down into the sulphur dome.

Once on the surface, the liquified mineral will be transferred to huge barges which will carry it to the mainland and thence to industrial plants throughout the United States. This method of conveyance may be changed by the time the island is completed in 1960. Engineers are now working on plans to run an underwater pipeline direct from the "island" to the mainland.

The seagoing miners will have all the comforts of home. They will be housed in two two-storey air-conditioned steel houses containing 60 bedrooms and 30 bathrooms.

Notice

THE JAIPUR UDYOG LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Company will be held at the Registered Office of the Company at Sawai Madhopur on Saturday, the 28th February 1959, at 12.45 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of *Accounts for the year ended 31st March*, 1958.
2. To declare dividend on Preference Shares and final dividend on Ordinary Shares.
3. To elect a Director in place of Shri A. K. Roy, I.A.S., who retires by rotation but, being eligible, offers himself for re-election.
4. To elect a Director in place of Shri S. P. Jain who retires by rotation but, being eligible, offers himself for re-election and, in this connection, to consider as a special business and if thought fit to pass the following Resolution to be proposed as a 'Special Resolution' with or without modification of which special notice as required by Section 261 of the Companies Act, 1956 has been received by the Company.

   "RESOLVED that Shri S. P. Jain, the retiring Director, who is Director and an associate of Messrs. Sahu Jain Limited, the Managing Agents of the Company, be and is hereby re-elected a Director of the Company pursuant to the provisions of Section 261 of the Companies Act, his period of office being subject to retirement by rotation."
5. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. R. D. Joshi & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from Monday, the 23rd February 1959 to Saturday, the 28th February 1959, both days inclusive.

By Order of the Board,
For THE JAIPUR UDYOG LIMITED,
M. L. RATHI,
Secretary.

SAWAI MADHOPUR,
1st February, 1959.

Notes:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Statement under Section 173 *of the Companies Act.*

Item No. 4: Shri S. P. Jain, retiring Director, being also a Director and an associate of Messrs. Sahu Jain Limited, the Managing Agents of the Company, his re-election as Director needs approval of the members of the Company by a Special Resolution under the provisions of Section 261 of the Companies Act.

MARKET GOSSIP

(*Concluded from page 171*)

but mainly on anticipation of much higher prices than those ruling at the time of imposition. Mr. Swaika avers that such ineffective price margins have only given encouragement to the speculators to indulge in rash speculation, thereby rendering futile the very objectives of forward markets.

* * * *

Communist China's decision not to grant licences for export of cotton to the U.K. has come as a great shock, so we are told, to the trade in Manchester, for, it means that several thousand tons of cotton ordered from China by U.K. textile firms will not be delivered. Further, shipments to the Continent will also be affected. This development has aroused considerable interest in cotton and textile trade circles in India. What has been intriguing to the trade is the fact that the Chinese Government, in its unexpected notification to the customers that undelivered balances of cotton have been cancelled, did not assign any reason whatever for doing so. Cancellation of licences, due to special reasons, is not uncommon in commercial transactions between countries. But it is very rarely that such abrogation of contractual obligations is made without even a word of explanation.

It is only natural, therefore, that commercial circles in the U.K. are disturbed at this breach of contract on the part of Chinese Communists. The situation was discussed by the British Cotton Waste Association. According to this body, since imports of cotton and cotton waste from China was resumed after the war, very large contracts have been entered into and all of them have been scrupulously fulfilled. Action like the one now taken by China, it feels, will "undermine all possible confidence in trade relations with a Government to which a firm contract is apparently nothing more than a scrap of paper." There are also allegations in trade circles in London of cancellation of contract and delays in shipment of other goods exported by China, including oilseeds, bristles and wood oil. If Communist China had scrupulously honoured all its trade commitments in the past, why has it chosen to depart from this practice this time?

One is forced to think that there must be something more than meets the eye in this lightning decision. What might have been the reason for it? Probably, scarcity of cotton? But, if the claims regarding cotton production in China were to be believed, a scarcity of cotton is quite unlikely. For instance, China is said to have increased its cotton production eightfold since 1949 and last year Chinese cotton production, at 3.35 million tons (about 15 million bales of 500 lbs.) exceeded the U.S. production by a wide margin. It is claimed that last year from the same area of land Chinese cotton growers doubled their output of cotton, fulfilling the targets laid down in the 12-year National Agricultural Development Programme nine years ahead of schedule. It was only a few weeks ago that the factors behind "this great leap forward" in cotton production was graphically demonstrated at the National Agricultural Exhibition which opened in Peking early in January. A country which claims to be producing 4 million bales of cotton more than the U.S. but having far less number of spindles and looms must certainly have sufficient surplus to honour at least its firm export commitments. If that is the case, why has China scrapped its contracts? There is not the slightest suggestion that the U.K. and the Continental buyers in any way failed to fulfil any of their obligations. One wonders, therefore, whether shortage of cotton is not the real reason behind China's decision! It is just possible that the so-called "great leap forward" is part of a subtle propaganda to mislead the uncommitted free countries like India by claiming for communism more credit than is due in the matter of economic development. If, however, the step was taken with a view to supplying the requirements of other countries of the Communist bloc, it only confirms one's worst fears about Communist Governments that they will not hesitate to repudiate contracts, should it suit their convenience.

* * * *

Will the British steel industry remain in the hands of its present owners or pass under State ownership? This question is once again being hotly discussed in Britain. It has been revived by the pronouncements on renationalisation of steel industry by the spokesmen of the Labour Party. Mr. Morgan Phillips, the Party's Secretary, declared in London the other day that "we are going to return to public ownership essential parts of the steel industry; that policy has not changed one iota." The Party, we are told, has prepared a draft report on renationalisation of steel industry which is expected to be considered by its Executive at a meeting to be held shortly. The contents of the report have not been revealed yet. It is, however, gathered from Mr. Phillips' statement that the report is an "explanatory propagandist pamphlet that will answer some of the attacks of the steel employers."

The latest propaganda of the Labour Party on steel is only to be expected, as the General Elections are expected to be held in May next. Apart from doubts as to whether the Labour Party would be voted to power, many observers in Britain feel that, even in the event of its victory, the Party will find it extremely difficult to fulfil its pledge of renationalising steel industry. For the concensus of opinion among the majority of the electorate, including a substantial minority of Labour Party members, seems to be against nationalisation.

Whether or not this assessment is correct will be borne out by the interim report on a survey of public opinion on nationalisation among voters in 127 marginal constituencies to be published within a month's time. The survey has been commissioned by Messrs. Colin Hurry and Associates, management consultants, and is being conducted by the British Market Research Bureau.

Although the Labour Party has been talking about renationalising the steel industry for a long time, it has still not indicated how exactly it would be effected and how the industry would be controlled after the take-over. Nothing is known about the method and manner in which present shareholders in the steel industry would be compensated. This issue is of considerable importance, especially in view of the conflicting statements made by two prominent members of the Labour Party, Mr. Gaitskell and Mr. Herbert Morrison. The former has said that full compensation would be paid, while the latter has threatened that there would be none. While on these statements, the Party's Secretary merely observed that, if these statements were conflicting, "it is not our fault," adding that compensation would be a matter for the Government to decide.

Whatever may be the final shape of the Labour Party's policy relating to the steel industry, there is a strong feeling in Britain that the case for renationalising the industry is too weak. The industry, it is pointed out, has been endeavouring its best to maintain as high a level of output as possible. Production in 1958 was at an annual rate of 20 million tons, which compares favourably with 17.6 million tons in 1953, when denationalisation of the industry was begun by the Conservative Government. The rise in production has followed an expansion in installed capacity, from 16 million in 1952-53 to 23.5 million tons at present. Even in 1957, when the industry's capital expenditure on expansion exceeded £90 million, there was a margin of capacity approaching 700,000 tons. Nevertheless, the industry has pursued its development programme vigorously. The expenditure actually incurred in 1958 is believed to have been more than £100 million. Further, large-scale expenditure is proposed to be incurred this year; the addition to capacity is put at about 1 million tons.

The Labour Party may point to the alleged defects of the steel industry in its present form of ownership. But this allegation is said to be baseless. A recent analysis of the ownership of twelve of the largest British steel companies shows that the small investor is much more important in these companies than in most of the other British companies for which similar information is available. According to the latest quarterly issue of the *Steel Review* published by the British Iron and Steel Federation, none of the aforesaid twelve companies has fewer than 3,000 shareholders and, in four out of the twelve, the shareholders number more than 25,000. Most of the holdings are quite small; over a third owns fewer than 100 shares and a further half owns from 101 to 500 shares. Moreover, small investors taken together have quite a big share; as much as a third of the capital is owned by shareholders with fewer than 1,000 shares and over half the capital is in the hands of shareholders with fewer than 10,000 shares. In addition, a quarter of the total share capital is held by institutions such as insurance companies, pension funds and investment trusts. As these institutions channel the savings of millions of people of moderate means, the small investors' share in the steel industry is even larger than appears at first sight.

Those who are against nationalisation, therefore, ask: What justification is there for the British Labour Party to harp upon renationalising the steel industry time and again? Can the Party give an assurance that a nationalised Board would achieve results better than the present ownership? It would be worthwhile to refer here to the following observations of *The Financial Times*, London:

"The example of the already nationalised industries is hardly inspiring. Moreover, there is the question of providing the personnel to run a nationalised steel industry. One of the great problems of all the nationalised industries has been to find enough executive personnel of the right calibre. In the case of steel, this will be exceptionally hard, because few, if any, of the leading people in the industry now are likely to be willing to take jobs on a nationalised Board. This was one of the difficulties encountered by the previous Labour Government, and it is likely to be at least as serious next time. In fact, if the Labour Party were sensible, it would interefere as little as possible with the existing structure of the industry."

The persistent cry of the British Labour Party on the renationalisation of the steel industry—and more particularly the threats by Mr. Morrison and other Socialist leaders to renationalise without compensation—have created two serious misgivings. One, the Governments in countries where British assets are there will be inclined to nationalise them without compensation. Two, American and overseas investors wanting to invest in Britain would be frightened away from the country.

MARKET REPORTS

(*Concluded from page 201*)

growers. Calicut is quoting at round about Rs. 740 where arrivals are also not up to the mark.

The future of the commodity at the moment appears uncertain, as foreign inquiries are lacking.

Today's nominal quotation for ready is Rs. 98 per Bengal maund.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *2nd February*

Quiet conditions continue to prevail in the foodgrains markets. The most influencing factor has been very good timely winter rains which have brightened *rabi* crop prospects. The Union Food Minister, Mr. Jain, has said that, with a record production of 30 million tons of rice and bright prospects for bumper *rabi* crop, prices of foodgrains were bound to decline. The Government has no intention to import rice this year except under existing agreements and the Government is going to procure *rabi* grains once the harvest is completed.

Wheat prices at Hapur recorded a further slight fall of about 50 nP per maund during the week to be quoted now at Rs. 26 per maund for average quality and upto Rs. 28 for farm produce. The daily sales through fair-price shops have been increased from 30 to 35 maunds in the town and to 40 maunds in the rural areas and more fair-prices shops are being opened in West U.P.

Rice, however, continued to rule steady, due to restricted supplies. The Government's plan to procure from surplus areas was reported to be progressing satisfactorily. Prevailing prices of rice were: *sela basmati* Rs. 32; *mainpuri* Rs. 22.25; *raimunia* Rs. 27; coarse quality Rs. 18.50 per maund.

Gram touched an all-time high level of prices, due to paucity of local stocks and firm advices from Punjab the only source of supplies to these areas. Barley and *bejhar* ruled quiet in the absence of seasonal consumer demand. The condition of the standing gram, barley and *bejhar* crop is reported to be excellent, following latest rains over a wide area. Maize continued to attract good demand, but prices ruled quiet, as, despite good offtake, arrivals continued from outside the district. Bajra was slightly depressed in view of falling seasonal demand, but *jowar* registered small gains. The prevailing week-end prices (in rupees per maund) were:—gram *punjabi* 23.75; barley 17.75; *bejhar* 18.24; maize 16 to 16.50; *bajra* 16.62; *jowar* white 15.75; *guwar* 15.25.

Arhar touched new heights, as local stocks at about ten *khatties* were in one hand who was selling at higher prices by grinding it into *dal*. Peas stocks were negligible and demand too, was, dormant. Condition of the standing *arhar* and peas crops is fairly good. *Urd* and *moong* recorded gains on good demand and latest prices were: *arhar* Rs. 24; *arhar dal* Rs. 28 to Rs. 30; peas Rs. 21; peas *dal* Rs. 23; *urd* Rs. 19.50; moong Rs. 21.50 to Rs. 24; *massoor* Rs. 18.50 per maund.

BASE METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, *4th February*

With more arrivals from abroad and a decline in consumer buying following the comfortable supply position, prices of the "free" base metals recorded a decline during the week under review. Now that the supply position had considerably improved, consumers thought that prices would tend to decline further. Moreover, with the improvement in foreign exchange position, albeit mostly due to credits from foreign countries, it was expected that the next import policy would be less rigorous than the one now in vogue. Established importers looked forward with hope that they would again be permitted to import virgin metals.

From Rs. 97, electrolytic zinc gave way to Rs. 95; however, it was thought that, with the indication of increasing consumption, the price would improve sooner or later. A decline in price in virgin lead was also in evidence, and, in view of the lower price here, Bombay parties continued to show interest in local offers. Demand for tin was poor. Trade circles considered that, now that the U.S.S.R. agreed to reduce its exports of tin, the world price would not be affected by the Russian surplus as recently. This agreement was interpreted in market circles as being Russia's inclination to offer co-operation with the International Tin Council, although a close watch would be necessary to ensure that the U.S.S.R. did not exceed the agreed export limit, that is, 13,500 tons in this year, in view of the fact that Russia is getting abundant tin supplies from China. The firm trend in copper on the London Metal Exchange was noted here. The price there reached a high of £238 a ton. The rise was attributed to labour troubles in Chile and increase in the U.S. custom smelter's price by ½ cent to 30 cents a lb.

Notice

THE NORTHBROOK JUTE CO., LTD.

NOTICE OF INTERIM DIVIDENDS

THE BOARD OF DIRECTORS HAS SANCtioned payment of the following Interim Dividends for the year ended 31st March 1959 without deduction of Income Tax paid by the Company.

On Preference Shares at 2.75 per cent.

The dividends will be paid on or after 5th March 1959 to those Shareholders (or their mandatees) whose names appear in the Company's books on 27th February 1959.

The Share Transfer Registers of the Company will be closed from 17th February 1959 to 27th February 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 31*st January* 1959.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2499 BOMBAY, 14th FEBRUARY 1959 PRICE: Rs. 2

SOME THOUGHTS ON THIRD PLAN—I

IT is but appropriate that the first official reference to the third Plan should have figured in the President's address to the Budget session of Parliament which began on Monday this week. What the President said on the subject was, of course, brief, but, really speaking, not much could be stated at this stage, as a lot of research and exploration is yet to be made. It is gratifying that he took care not to mention anything about the size of the next Plan, though considerable speculation on it has been going on for some time now. The figure of Rs. 10,000 crores as the ideal capital outlay has been stated by some, particularly by Prof. Mahalanobis in a paper which he is believed to have submitted to the Planning Commission. Dr. J. J. Anjaria, Economic Adviser to the Union Finance Ministry, has been talking of Rs. 9,900 crores. The period of the third Plan assumed by all those who have been talking about it is five years. There is no wisdom in choosing the financial target first and giving wide publicity to it, without caring to see whether it is realistic from the point of view of practicability. That is the first lesson to be learned from the second Plan. Some may think that mentioning a high figure of outlay on the third Plan is politically desirable and will serve to show the ambitious character of planning. But, in actual practice, the reverse is true. To try to impress a vastly ignorant public by dangling before it a gigantic plan, without even ascertaining the availability of resources, is tantamount to indulging in political opportunism. It is also a very risky game, for, when such a plan fails to succeed in full, it will lead to disappointment and despondency, and the political stock of those responsible for them will surely go down both at home and abroad. It will, therefore, be prudent for the party in power not to give currency to the financial, or even the physical, targets of the Plan, until they have been carefully considered from all angles and final decisions are taken on them.

This does not mean that it is wrong to prepare a draft outline of the next Plan and circulate it for discussion. But, when a draft plan is published, it must be made clear that it is subject to amendment. Besides, no attempts should be made to sanctify the targets in the draft plan or to make them an issue of prestige. It is also equally important that those who criticise the draft plan on constructive lines should not be decried or frowned upon by those holding seats of power. In recent years, more especially in recent months, those who have counselled caution, pleaded for planning on practical lines and urged a lower priority to certain socialist ideals, have come in for unwarranted, severe censure at the hands of no less a person than the Prime Minister himself. We, therefore, specially welcome the President's reassuring statement that:

> "Planning is a national undertaking, requiring the efforts of the whole nation and the co-operation of all at every stage. My Government have, therefore, called for and look forward to a constructive, even if critical, approach by all and contribution in ideas from the different shades of opinion in Parliament and outside. To this end, my Prime Minister and the Planning Commission are seeking the co-operation of all parties."

The President gave an outline of the objectives of the third Plan. These are:

> A substantial increase in national income; rapid industrialisation; expansion of employment on a sufficient scale; a reduction in inequalities of income and wealth; continuance of aid and support to small and cottage industries; maintenance and acceleration of the tempo of development already attained.

As broad objectives, there could be no difference of opinion with them. It is only when one comes to details, the scope for controversy and compromise on the basis of what is feasible arises. It should be realised that the objectives, as stated above, are themselves somewhat contradictory. The extent of increase in national income and employment, for instance, will depend upon the nature of industrialisation. If there is too much stress on heavy industries which require enormous sums of capital, the growth of national income and employment in the first few years will be slow. If, however, a higher priority is given to secondary and finishing industries, such as automobiles, machine tools, capital and consumer goods of all kinds, the national wealth and employment will grow faster. This would also help the realisation of the objective of reducing inequalities of income and wealth more easily than would be possible if heavy industries were given too much prominence. For the best way to reduce inequalities is to raise the standards of those who are at the lower end of the scale and not through a levelling down of incomes and wealth. Again, if the provision of millions of jobs were to be accorded the pride of place in the Plan, there could be neither a substantial increase in national income nor rapid industrialisation. Under such a plan, the chances of reducing inequalities will be even more slender than under a heavy industry-oriented plan. It is, therefore, necessary to strike a proper balance between the conflicting objectives by giving priorities to those that lead to a swifter and larger increase in national wealth.

These are no new issues. They were discussed threadbare when the second Plan was formulated. The objectives referred to above have been incorporated in that Plan and given a certain order of priority. If the Government is wise, it will subject the policies underlining the second Plan to a critical and impartial examination, in order to find out to what extent they have been successful in serving its "laudable" objectives. Such an introspection will enable it to avoid repetition of the pitfalls in the second Plan while formulating the third Plan. The Government, for instance, can find out whether the subsidy and protection given to cottage and small industries at the expense of large-scale factories have yielded results proportionate to the investment involved and consider dispassionately whether the same amount would not have led to better employment and larger capital formation if it had been invested in more productive enterprises. Similar tests should be applied to a number of projects and policies pertaining to the second Plan.

It would be a sheer waste of time and energy and lead to an endless verbose controversy of a vexatious nature, if the planners were to concentrate their attention on a discussion of the ideological aspects of the Plan. This country has had far too much of discussion of ideology in the first two Plans. A great British leader, Lord Attlee, said a few weeks ago in his reminiscences that Indians were great talkers. His remark was perfectly justified. But our planners should seek to disprove it at least in the third Plan, by making it compact and businesslike. It is unnecessary to indulge too much in the theoretical exercise of *per capita* incomes, *per capita* savings, *per capita* this and that and in working out how much investment will have to be made if so many millions of people are to be employed within so many years and so on. This kind of theoretical planning has not availed us of anything tangible, except providing points for making speeches by politicians and writing articles by journalists. The large number of economists engaged for this purpose may as well be employed in the colleges where they can render more useful work in educating the growing numbers of youths seeking university education. Instead, the third Plan should be concerned mainly with the practical aspects of expansion of agriculture, industry and transport. The planners should decide the industries to be established, the extent of increase in agricultural production, the size and means of transport, etc., estimate the cost of reaching these goals more precisely than in the second Plan, decide the role of the private and public sectors in taking the country to these goals not on the basis of any ideology but of practicability, and work out the resources that could be found without impairing the incentives for heavy work and maximum production.

If all these tasks are to be performed satisfactorily, the Planning Commission requires to be strengthened. It should consist of energetic, practical-minded persons and not merely theoreticians. Some of the best business men in this country should be associated with the Commission. And there should be on its staff fewer economists but more scientists and engineers. From this point of view, the present composition of the Planning Commission leaves much to be desired. And, what is more, some of its members have far too many irons in the fire. Others are either too old in age or too young in experience. It is true that the Commission now

consists of more like-minded persons than it did when the second Plan was drafted and finalised. But, considering their strong leftist leanings, this is a disadvantage to realistic planning rather than an advantage. There is thus urgent need for reorganisation in the composition of the Commission and its advisers.

LABOUR PROBLEM

IN the past few months, quite a few important labour issues have come to the forefront. But none has caused greater concern than the fact that labour has been compelled to choose between democracy and authoritarianism. Jamshedpur was the scene of a miniature cold war in which one union, pledged to democracy, sobriety and peaceful agitation for better living standards for its members, was pitted against a union ideologically wedded to a philosophy which is inseparably linked to violence and subversion of the existing political, social and economic order. Although the war ended in a victory for sanity, it is undeniable that success did not come without a painful struggle. In many other centres, a similar cold war, at different degrees of political temperature, is being fought. Labour is at the crossways. Sooner than later, it will have to choose between the democratic way to prosperity and the authoritarian way which promises nothing but enslavement for the masses. It is a welcome development that Indian labour, as represented by the Indian National Trade Union Congress (I.N.T.U.C.), has, by and large, been a democratic force. In no uncertain terms, its President, Mr. G. Ramanujam, reaffirmed his faith in democracy when addressing the annual session of the I.N.T.U.C. at Dibrugarh last week.

The Christian maxim, "faith, if it hath not works, is dead, being alone," is applicable to labour's adherence to democracy. No affirmation of one's faith in freedom will be of any avail, if it is not accompanied by sustained work in its cause. The I.N.T.U.C. must face the fact that, wherever it has failed to maintain its contact with the workers, it has paved the way for the emergence of anti-democratic trade unions. It is gratifying to note that it is aware of the need for organisational improvement. Mr. Ramanujam urged the I.N.T.U.C. to prepare itself to meet "the challenge" to its supremacy from communists who use trade unions as "instruments for augmenting discontent to bring about a violent revolution." He pointed out how communists paid only lip-service to the code of discipline, breaking it in actual practice. He warned the I.N.T.U.C. members against any talk of "joint fronts or joint action committees with communists even for a temporary period" and added that ultimate objectives of their movement should not be sacrificed for the sake of temporary gains which might accrue through joint action. Mr. Ramanujam must be congratulated on his sense of idealism which, in fact, lies at the root of democratic progress.

The fact must, however, be faced that no free trade union movement can develop in the absence of organised effort in the cause of labour welfare, publicity and study of labour problems. Till now, it is the Government that has invariably initiated labour legislation and undertaken studies of labour problems. We are far from decrying the value of this effort. Much commendable work has, no doubt, been done by the Union Ministry of Labour and also by some State labour ministries. But this work is apt to suffer—frequently, it does suffer—from being a little too academic, divorced from the realities of the actual labour situation. We would like to see the work of the Government supplemented by that of the free labour unions, so that the workers, may benefit from studies of their problems conducted by those who have an intimate knowledge of them. No organisation is, perhaps, better fitted to undertake this task than the I.N.T.U.C. Besides being free from excessive ideological rancour, it has a historic tradition in working for the welfare of the workers. It must outgrow its agitational stage and, without, of course, abandoning its inherent right to strike, it should acquire and systematise a body of labour knowledge which should enable it to speak with authority on industrial problems. Further, it should develop a social welfare policy, particularly in regard to education, clean and healthy ways of living and housing, which will bring within its scope not merely the active workers but also the rank and file of its membership. Here is a task which calls for bold and far-sighted action. From this point of view, the modest educational programme, which Mr. Ramanujam suggested, deserves all support. He proposed the establishment of more training institutions for selected trade union workers and provision for prompt and effective services to the affiliated unions. If this work is to be enduring, it needs adequate financial assistance and able and trained men to do it.

Greater educational facilities may conceivably lead to an improvement of the system of resolving labour disputes which now prevails in India. This system, as is well known, rests largely on an elaborate legislation with its conciliation and adjudication machinery. It has unfortunately bred much formal legalism. The employer is inclined to disregard what constitutes sound industrial relations, handing over his disputes with the employees to his labour officer or his association, which is followed by protracted court proceedings. The employees, on their part, are seldom willing to negotiate a settlement. Instead, they pin their faith to the industrial courts. They sincerely hope that the courts will give them a little less than what they demand which will still be good enough for them. Broadly speaking, neither side is earnest about resolving a dispute on its merits. It is true that the system has given over a period some semblance of industrial peace. But it has been bought at a heavy price.

Meanwhile, it is disconcerting to be told that the system has thrown up some new problems. Mr. Ramanujam averred that the management-labour relations were getting a "little more strained" after the abolition of the Labour Appellate Tribunal. He said that "indiscriminate resorts to the Supreme Court have resulted in serious delays." He pointed out that the provision in the Industrial Disputes Act that no award or decision of a tribunal could be called in question in any manner was being rendered a dead letter, because of the powers of the High Court and the Supreme Court to entertain writ petitions and appeals against those awards. He, therefore, urged the Government to fix a time limit of 90 days within which all writ petitions and appeals against awards of labour courts and tribunals should be disposed of. We wonder whether this suggestion is practicable. The real solution to this problem lies only in minimising the reference of disputes to industrial courts. But this cannot be done, unless both sides place greater reliance on collective bargaining. The employers, on their part, should know that a court-directed industrial peace is not an enduring settlement. An equally great responsibility lies on the employees and those who seek to represent them. Instances are not wanting where the trade union leaders have been more adamant than the workers themselves. They should not hesitate to modify their demand in the light of the capacity of the industry to pay. Any attachment to prestige considerations and insistence on excessive demands will ruin the chances of building up industrial prosperity which alone can determine the size of labour's share in national income. If labour flies from economic realism, it will be faced with the stark reality of a structure of high industrial costs which must inevitably lead to lower turnover and lower profits and, in the case of marginal units, even to their closure.

Labour movement in this country has yet to give adequate evidence of its having attained maturity in judgment. Little thought has been given by it to the three urgent problems before the country—the foreign exchange deficit, the need to curb rising prices and the provision of wider employment opportunities. Surely, labour has a responsibility to bear and a contribution to make in the solution of these problems. If it exercises some control over its demands, it will enable our export industries to sell more abroad and also help keep under check the rising trend of prices. Mr. Ramanujam did well to point out that the next Plan should provide for an additional 15 million jobs, besides solving unemployment at the existing level. This is a stupendous problem. Labour has a direct responsibility in the creation of employment opportunities. Hitherto, it has given the impression that it is more interested in improving the prospects for those who have jobs than in creating conditions favourable to those who enter the employment market each year. There are two ways in which labour can help in this respect. In the first place, by relaxing its stand on rationalisation, modernisation and re-equipment of industrial plant and machinery, it can give a fillip to a technological movement which is a prelude to a higher level of industrialisation and employment. Secondly, it ought to realise that, just as India is an underdeveloped country in relation to the West, there are regions in this country which are economically backward in comparison with the western and eastern regions. There is no reason why it should not declare that, in the backward areas, it will not queer the pitch of its demands until the new industries, which may be started there, are firmly established. Such declaration will help stimulate the flow of capital, technical know-how and management to those areas and eventually lead to the creation of larger employment opportunities there.

TWO MORE NEW PROJECTS

LAST week, two projects in the public sector, the Bhilai and Rourkela steel plants, commenced production. These have been followed this week by two of the more important projects in the private sector, the Hirakud smelter of the Indian Aluminium Company and the second factory of the Dunlop Rubber Company at Ambattur (Madras). Elsewhere in this issue, we have drawn attention to the significance of the Hirakud smelter to India's economy. The smelter has an initial capacity of 10,000 tons which itself doubles the aluminium capacity in the country. The Company has plans for increasing the capacity of the smelter to 20,000 tons. In the course of his speech at the inauguration of the smelter, the Chief Minister of Orissa, Dr. Harekrushna Mahatab, said that it would be possible soon "to give the green signal to enable the Company to go ahead with its programme of expansion." It is to be hoped that the necessary power and other facilities, on which the fruition of the Company's expansion plans so greatly depends, will be readily available.

Dunlop is no new-comer to India. It has for long been associated in the public mind with tyres for which many still think Dunlop is a synonym. Having come to this country as far back as 1898, the Dunlop organisation is celebrating its golden jubilee this year. Perhaps, there can be no more appropriate way of celebrating the event than the inauguration of a second factory. Dunlop's first factory at Sahaganj, established in 1936, already ranks as Asia's largest rubber manufacturing enterprise, turning out every type of tyre, besides other products such as fan and vee belts, hose, cycle rims and Dunlopillo. The equipment in the Rs. 2.5-crore Ambattur factory, according to Mr. John Luckham, the Company's Managing Director, is "of the most modern design and has been specially chosen for its suitability for Indian conditions." It will produce tyres for trucks, buses and bicycles and retread rubber, principally for the needs of the South Indian market.

There is a feature common to the two private sector projects which went into production this week. Both have benefited from their collaboration with their principal foreign associates. Canadian collaboration has made the Hirakud smelter possible. As regards the Dunlop factory, the Dunlop Rubber Company (India) Ltd. continues to draw upon the rich research experience of the parent British company. As Mr. G. E. Beharrell, Chairman of the Dunlop Rubber Company, Ltd., Britain, pointed out, in his speech at the inauguration of the Ambattur factory, the Indian Company derives no small benefit from its association with other Dunlop companies, in general, and the Dunlop Research Centre in the U.K., in particular. Referring to the research centre, he said: "From this realm of ideas springs the future prosperity of this group." He added: "This factory, with every other Dunlop factory, will share the fruits of that research, and it will share in the development, which is going on unceasingly throughout the group of new methods, new equipment and the use of new materials." Nor is this the only benefit of foreign collaboration. For a no less important benefit is the dissemination of technical know-how. It is significant that, whereas the Sahagunj factory had to be built with the help of a large team of British experts, the Ambattur factory could be established with the services mostly of Indian technical personnel from Sahaganj.

The Dunlop enterprise plays an important role in the country's transport economy. It has been estimated that the volume of road traffic will increase from 20-25 million tons at the beginning of the second Plan to 60-70 million tons by 1960-61. This ought to give a measure of the traffic which motor transport will be called upon to handle. The Dunlop organisation produces a vital equipment needed by motor transport, namely, its tyres. Further, the growth of the rubber goods manufacturing industry has had its impact on the agricultural sector. The demand for raw rubber, which was about 25,000 tons in 1951, is likely to exceed 60,000 tons by 1962. Here is, therefore, an industry which literally sets the wheels of road transport in motion, besides lending support to India's agricultural economy.

MARKETS TENSELY AWAITING BUDGET

U.S. COTTON SUBSIDY—CANE GROWERS' STRIKE—U.K. BANK RATE

THURSDAY, 5 P.M.

LISTLESS conditions are prevailing in share markets. Turnover is small and price variations are negligible. Everyone is tensely waiting for the Central Budget for 1959-60. So far, no rumours about the Budget are current. Two State Governments—Bihar and Bengal—have presented their budgets. Although the estimated revenues of both the States have fallen short of their expenditure, neither of them has chosen to impose any fresh taxes. But this fact seems to have been ignored by the markets. Nevertheless, the absence of selling pressure is significant. It suggests two things. First, those who fear sizable additional taxation have already sold out or hedged their holdings. Second, many are now confidently hoping that the Budget will not contain any fresh imposts. The tenor of gossip in the market about the post-budget trend is still the same as it was three weeks ago. It is that equities will jump up and go forward if the Budget contains no heavy taxation. They will, however, sustain a heavy fall if the Budget turns out to be a bad one. The hope of getting any appreciable relief in taxation has practically died down. It will, therefore, be a pleasant surprise to share markets if the Finance Minister concedes some of the suggestions that have been made to him from time to time by the business community, both in India and abroad.

MARKET GOSSIP

* * * *

Among the commodity markets, cotton and oilseeds, which were displaying a strong bullish trend ever since the commencement of this year, are somewhat subdued now, thanks to the action taken by the Forward Markets Commission and the Reserve Bank of India to restrain speculation. But the current prices are still well above those at the end of 1958, as will be seen from the following figures:

--	Latest available	A week ago	Highest levels in the past fortnight	End of 1958
	Rs.	Rs.	Rs.	Rs.
Cotton I.C.C. March ..	672.50	683.25	688.00	641.25
Groundnut Feb. contract ..	173.80	178.87	181.00	162.12
Castorseed May contract ..	154.87	157.87	158.00	137.62
Linseed May contract ..	32.62	32.62	33.00	30.81
Cottonseed Feb. contract ..	130.75	133.50	134.00	115.25

N.B.—Cotton touched the highest levels mentioned above on 6th February 1959 and oilseeds towards the close of January 1959.

The measures taken by the Forward Markets Commission and the Reserve Bank to check speculation in oilseeds are referred to elsewhere in this issue. In so far as cotton is concerned, the Reserve Bank has not taken any step, while the F.M.C. has only issued a warning. But their action against oilseeds has had a sympathetic effect on speculation in cotton and, to a lesser extent, on other commodities, as also bullion. Since the futures contract in cotton is still below even the notional ceiling of Rs. 700—not to mention the official ceiling which is as high as Rs. 820—there has really been no justification for any intervention by the F.M.C. in futures trading in cotton or for imposition of selective credit control by the Reserve Bank on this commodity. The consensus of opinion in regard to oilseeds, however, is that both the bodies should have acted earlier.

While unhealthy speculation deserves to be effectively curbed, it is a moot point whether such control by itself can make any perceptible or sustained impression on price levels, if the supply is not adequate to meet the demand. The fact that, in the case of some oilseeds, particularly groundnut, the ready position has begun to command a premium over the futures, suggests that the supply position is tight. It is, of course, too early to be dogmatic on this point. Nevertheless, it would appear that trade estimates of the crop made at the commencement of the season have erred rather too much on the high side. This is true of cotton too. The latest trade estimates place the 1958-59 crop at no more than 4.9 million bales, as against 5.4 million bales shortly after the monsoon and 5.2 million bales in December 1958. Since exports were allowed on the basis of earlier crop estimates, the supply available for domestic consumption has turned out to be smaller than expected. Thus, the extremely difficult foreign exchange position, which forced the authorities to liberalise exports of key raw materials, has indirectly contributed to the rise in cost of living.

* * * *

The announcement by the U.S. Department of Agriculture on the 4th inst. of a revised cotton export programme for the next season which is aimed at making U.S. surplus cotton more competitive abroad has created a flutter in trade circles in the main cotton exporting countries of the world. The move, it is apprehended, will spark a virtual "price war" in cotton, as other exporting countries, to which cotton is the principal, and to some the only, foreign exchange earner, will be forced to cut their prices too in a bid to retain their markets.

The terms and conditions of the new export programme of the U.S. have yet to be worked out fully. The three major changes effected in the programme for the marketing year beginning on 1st August next are the following:

(1) The payment-in-kind export programme, which has been in effect since the start of the current marketing year, will be continued. Under this programme, an exporter who exports commercial stocks (free) acquired from normal trade sources at internal market price will earn a subsidy in kind. The subsidy will consist of C.C.C.-owned cotton which, in turn, will also have to be exported.

(2) The initial rate of subsidy under the payment-in-kind programme will be 8 cents per lb. for cotton shipped after 1st August 1959. This rate will be subject to change without prior announcement or notice. The current rate of subsidy, it may be noted, is 6.5 cents per lb. The 8 cents per lb. rate may be adjusted from time to time to keep in step with developing conditions. The effective payment rate will be under constant study and it will be reviewed fully at least once a month.

(3) The "direct sales" programme, which has been in effect since 1956 and under which the C.C.C.-owned cotton is offered for export sale at competitive-bid prices, will, however, be discontinued from the next marketing year onwards. Cotton will be drawn from C.C.C. stocks for exports, under the payment-in-kind programme, for barter, for credit sales, for donations and for any emergency operations.

The U.S. Department of Agriculture believes that the expanded payment-in-kind programme will allow greater participation in the merchandising of cotton by the various segments of the cotton industry, "from the country merchants to futures exchanges." It also expects that the new scheme will lessen Government control over the marketing of cotton and serve to concentrate export demand on commercial or free market stocks.

The initial export subsidy rate of 8 cents per lb. works out to about $40 per bale of 500 lbs., as compared with the current rate of $32½ per bale. But, in actual practice, the effect of the new rate for making U.S. cotton competitive in world markets, it is expected, will be increased by a greater amount than indicated by the dollars-and-cents difference from this year's rate, since the domestic price at which exporters will be able to buy cotton from commercial stocks is likely to be materially lower than this year.

The new export programme is meant to enable the U.S. to recapture its former share in the world market. *Import circles point out* that the provision to make readjustments in the effective payment rate from time to time will cause much uncertainties in the market, as it will induce buyers to live on a hand-to-mouth basis and postpone purchases in anticipation of further enhancement of the subsidy rate. It will also upset the cloth and yarn markets, as mills will find it difficult to make forward sales.

The effect of the new export programme for U.S. cotton on India is not expected to be much, as India exports only a very negligible quantity of cotton in terms of the world trade in this commodity. Exports of cotton of staple length ¾" and above may, however, be adversely affected to some extent.

The new export programme of the U.S. has led a section of the trade in India to demand that the Government of India, taking a lesson from the U.S., should also take vigorous steps to promote cotton exports. They point out that some incentives should be given for its export. Barter deals and special payments arrangements are mentioned as measures that will help exports.

The problem in India and that in the U.S.A. is, however, entirely different. In the U.S., the problem is huge surplus of cotton. In India, barring rare seasons when the crop turns out to be good, there is hardly any sizable surplus of cotton. It is true that, due to acute foreign exchange shortage, it has been decided to spare a sizable part of the limited supplies for export. But even for this quantity, buyers are lacking. The main reason is that prices of Indian cotton are above world parity, chiefly due to certain special causes. The progressively declining estimates of the new crop and damage to the quality of some varieties, delay in the movement of crop and the improved holding power of the farmer, assisted by cheap finance provided by the co-operatives, are the principal reasons for the current high price of cotton. The restrictive import policy, which has rendered it difficult for mills to get adequate supplies of foreign cotton, is another factor responsible for keeping up the prices of Indian cotton above world parity, in that it has forced the mills to rely more and more on domestic cotton. In fact, the severe curtailment of imports have virtually sheltered internal cotton prices from the impact of the downward trend in world cotton prices and the world-wide recession in cotton textiles. Yet another factor that has induced the mills to rely more and more on Indian cotton is the defective fiscal policy in regard to cloth. These special circumstances, which have reduced the ability of Indian cotton to compete effectively in world markets, have to be borne in mind in any discussion of the ways and means of making it more attractive to foreigners.

* * * *

The widely held fear that the Communist-backed Praja Socialist Party's call for a strike by sugarcane growers in Uttar Pradesh would have serious effect on sugar production has been set at rest by the statement of Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the Lok Sabha yesterday in reply to a calling-attention motion by several members. It is comforting to hear from the Minister that the strike has fizzled out. After the strike started on the 5th inst., five sugar mills out of the 66 units working had to stop work and 18 other mills were partially affected. By the 7th or 8th inst., however, all the mills, except one at Bulandshahr, resumed practically normal working.

The failure of the cane growers' strike, despite all the disquieting tactics of the leftist politicians, is not surprising. Evidently, the cultivators must have realised that it is they, and not those who organise strikes, who would sustain heavy losses, losses which they can ill-afford. It is common knowledge that sugarcane is a quickly perishable crop. It drys up soon after it is harvested. Nor can it be left standing in the field for a long period after it is ripe, for its quality will then deteriorate. So sugarcane has to be cut as soon as it is ripe and crushed quickly if maximum yield of sugar is to be obtained. Even delays occurring in the transport of cane from fields to factories entail much hardship to cultivators who are financially poor. By ensuring continued supplies of cane to the mills, the growers have only saved themselves from financial ruin and falling a prey to the tactics of power-hungry politicians.

The Union Food Minister must be congratulated on his firm stand on the issue of sugarcane prices. Describing the cane growers' strike as ill-advised, Mr. Jain reiterated yesterday that, if the price of cane was increased, it would not only be against the interests of consumers or the peasantry in general but also affect a large section of the cane growers themselves. No one who has cared to make a comparative study of the economics of the sugar industry in India and in other parts of the world will dispute the force of this contention.

While the fizzling out of the U.P. cane growers' strike is a matter for considerable satisfaction, it must be emphasised that frequent threats and agitation for higher cane prices are not conducive to the maintenance of high level of sugar production. Indeed, the existing statutory minimum price of cane, namely, Re. 1.44 per maund, itself is quite high, bearing no relation whatever to the sugar it contains. Far too long has uncertainty regarding the fixation of reasonable price for cane persisted, so that it is time that some permanent arrangement for determining prices was made. It is to be hoped that this aspect will receive due recognition at the two-day meeting of the Development Council for Sugar Industry commencing in New Delhi tomorrow. The Council has before it a heavy agenda which includes, among others, the review of the following important subjects:

1. Progress of the sugarcane quality payment scheme.

2. Work done by the Joint Committee set up to consider the question of levy of cess on sugarcane and its utilisation for development work.

3. Position regarding the grant of licences to the sugar industry.

4. Report of the Committee on standardisation of costing methods used in sugar factories and the recommendations made by the Standing Advisory Committee on Sugar Standards.

5. Question of increasing productivity in the industry through the programme sponsored by the National Productivity Council.

* * * *

Hopes of a cut in the British Bank rate have gained fresh strength during the last few days, following the reduction of ½ per cent. to 4½ per cent. in the French Bank rate on the 5th inst. and the sharp fall in the British Treasury Bill rate from £3 2s. 1.68d. to £3 0s. 0.22d. on the following day. With the present cut, the gap between the French and British Bank rates has narrowed down from ½ per cent. to ¼ per cent. This represents the second break in the tight money policy pursued by the French Government and the Bank of France since August 1957, when the Bank rate was stepped up from 4 per cent. to 5 per cent. In October last, however, it was reduced to 4½ per cent. and the latest cut of ½ per cent. shows that the French Government is cautious in making credit cheaper in an effort to check recession by encouraging industrial expansion.

With last week's fall, the British Treasury Bill rate has declined to the lowest level since mid-February 1955. The gap between this Bill rate and the Bank rate has widened markedly to as much as one per cent. Nevertheless, the Bank of England has not so far followed it up with any reduction in its discount rate from 4 per cent., at which level it has stood unchanged for nearly three months now. Commenting on this situation, Sir Oscar Hobson, the Financial Editor of the *News Chronicle*, says: "Possibly the Old Lady deemed that, coming on top of abolition of the new issue controls, a reduction to 3½ per cent. would have been too heady a wine for the economy. Her restraint, at any rate, attests her 'unflappability' and that is always a desirable quality in a central bank."

Meanwhile, the Chancellor of the Exchequer has struck a cautiously optimistic note on the British economy. Addressing a meeting of the National Production Advisory Council on Industry on Friday last, Mr. Amory said that Britain had started 1959 on a sound basis for the safe resumption of expansion. He added that there were small, but distinct, signs of an upturn in Britain's economy. The four "bull points" to which the Chancellor drew attention were: (1) production is beginning to rise—but not by much yet; (2) retail sales improved in the fourth quarter of 1958 under the stimulus of increased hire-purchase facilities; (3) the trend in exports during the last quarter of last year was encouraging, particularly, the increase of a third in sales to the U.S., and (4) the prospect for investment looks brighter now than before.

EQUITIES LISTLESS

BUSINESS SHRINKS

(From Our Own Correspondents)

BOMBAY, 12th *February*

THE share market passed through another spell of extreme dullness during the week under review. Barring sporadic buying activity in some of the counters in the forward section, as well as the cash section, business was extremely limited. Though there was an inclination to buy at the current attractive levels, in view of the growth prospects of industries in general, operators were a bit cautious and preferred to await the budget. Further, some of the operators, who had gone short in commodity markets, were badly caught there and they were, therefore, obliged to restrict their activities in the share market. The undertone, however, remained fairly steady, on expectations that the Budget would not present any jitters to industries.

In the steel section, Tata Ordinaries dipped from Rs. 175.50 to Rs. 173.75 and, after recovering to Rs. 175, closed at Rs. 174.25. The new shares finished with a loss of Re. 1 at Rs. 171.25. Indian Irons fluctuated between Rs. 26.30 and Rs. 26.05 before closing at Rs. 26.10.

Textiles were lethargic and fluctuations were extremely narrow. Bombay Dyeings moved down from Rs. 57.20 to Rs. 56.80, but soon regained to Rs. 57.20. Towards, the close, they softened to Rs. 56.90. Centurys, which had attracted some speculative activity in the past few weeks, were dull this week. They drifted lower from Rs. 438.50 to Rs. 434 in the earlier half of the week, but subsequently gained ground to Rs. 439.50. The closing was again lower at Rs. 438. Kohinoors moved between Rs. 238.50 and Rs. 236, before closing at Rs. 237.50. Central Indias lost over the week Re. 1 to Rs. 89.50 and Finlays Rs. 2 to Rs. 259, while Gokaks gathered Re. 1.50 to Rs. 134. Indu Ordinaries were unchanged at Rs. 8.84. A drop of Rs. 10 to Rs. 162.50 is noted in Model Mills, while Morarjees gained Rs. 6 to Rs. 233.50. Following the Directors' decision to skip over the dividend for 1958, New Greats were marked down by Rs. 5 to Rs. 213.50. New Citys, for which also no dividend has been recommended, shed Re. 1 to Rs. 92. Osmanshahis, however, gained Re. 1 to Rs. 43. Simplex shaded off from Rs. 167.50 to Rs. 167 before improving to Rs. 168. Standards lost Rs. 2 to Rs. 416, Svadeshis Re. 1 to Rs. 208 and Tata Mills 50 nP to Rs. 34.

Bank shares ruled steady with minor gains over the week. Barodas put on 50 nP to Rs. 122 and their new shares 30 nP to Rs. 57. Centrals were 20 nP better at Rs. 59. Bank of Indias rose by 25 nP to Rs. 140.50 and their new shares by a like amount to Rs. 141.50. Punjab Nationals, the Rs. 25 paid-up shares of which have been split up into Rs. 10 each, were done at Rs. 24, which on the basis of the old face value represents a rise of Re. 1 over the week. State Bank of India shares, which were admitted on the Stock Exchange list recently, changed hands at Rs. 382.50, as against Rs. 360 a week ago. Union Banks were a fraction better at Rs. 7.72 and United Commercials 50 nP higher at Rs. 68.50.

In the insurance section, New Indias were picked up 90 nP higher at Rs. 52.90 and their new shares 80 nP higher at Rs. 53. Orientals were marked up by Rs. 190 to Rs. 4,200. Jupiters were done at Rs. 6.08, as against the previous rate of Rs. 7.12.

Very little activity was noted in electricity shares. Ahmedabad Electrics, however, advanced by 40 nP to Rs. 95.40. Bombay Suburbans gained 25 nP to Rs. 110, as also Surat Electrics to Rs. 113.75. Tata Hydros were unchanged at Rs. 119.50, while Tata Powers moved up by Rs. 2.50 to Rs. 1,197.50 and Andhra Valleys by a similar extent to Rs. 1,172.50.

Sugar shares ruled quiet, with an all-round drop in prices. Belapurs dipped from Rs. 267 to Rs. 265 and Phaltans shed Re. 1 to Rs. 140. Walchandnagars were a fraction lower at Rs. 266. Maharashtra Sugars lost 50 nP to Rs. 175 and Ravalgaon Sugars Rs. 2 to Rs. 133. Cement shares were listless. After a rise from Rs. 154.50 to Rs. 156.25 Associated Cements receded to Rs. 155. Digvijays lost 50 nP to Rs. 130.50, while Orissa Cements were unchanged at Rs. 13.04. Dalmia Cements gained 12 nP to Rs. 9.76. Jaipur Udyogs and Ashokas shed 4 nP each to Rs. 9.96 and Rs. 8.04, respectively.

In the engineering and mining group, Alcock Ashdowns suffered a fall of Rs. 4.50 to Rs. 262. Tata Locomotives were a bit erratic, moving between Rs. 163 and Rs. 160.25. The closing was, however, done at Rs. 161.25, a loss of Re. 1.50 over the week. Premier Constructions drifted from Rs. 235.75 to Rs. 230.25. Larsen and Toubros were a steady feature at Rs. 17.24. Cooper Engineerings were quiet at Rs. 128.50, while Mahindras were maintained at Rs. 18.24. Kamani Engineerings dropped 20 nP to Rs. 6.72. Shivrajpurs picked up a rupee to Rs. 89, while Indian Coppers were quiet at Rs. 3.56 and B.B. Petrols at Re. 1.76.

After an initial rise from Rs. 21.40 to Rs. 21.44, Scindias reacted to Rs. 21.28, but closed at Rs. 21.32. Great Easterns were 16 nP lower on balance at Rs. 23.96. Bharat Lines lost 28 nP to Rs. 12.12. Premier Automobiles were a shade higher at Rs. 86.50, while Hindustan Motors were unchanged at Rs. 7.52.

In the miscellaneous group, Bombay Burmahs (old) moved erratically downwards from Rs. 472 to Rs. 467. Their coupons were unchanged at Rs. 117.50. National Rayons were featureless at Rs. 243.25, while Gwalior Rayons advanced by Re. 1.24 to Rs. 15. Tata Chemicals were dull at Rs. 15.32, while their new shares were steady at Rs. 14.32. Alembic Chemicals staged a spurt from Rs. 157.50 to Rs. 163. Dhrangadhra Chemicals were unchanged at Rs. 89. Amar Dyes came to the limelight with a spurt of Rs. 17.25 to Rs. 117.25. Hindustan Levers were a shade quiet at Rs. 27.75, while Indian Dyestuffs gained further to Rs. 192. Jyoti (old) advanced by Rs. 13.10 to Rs. 150 and their new shares by Rs. 5.75 to Rs. 143. West Coast Papers changed hands at Rs. 111.50. Tata Oils shed 75 nP to Rs. 45.25 and Voltas Re. 1.75 to Rs. 140.50. Killick Industries shot up by Rs. 6 to Rs. 160, while Wimcos were unchanged at Rs. 187.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11*th February*

Trading in the last three sessions of the week under review, on the Calcutta Stock Exchange, was marked by pre-budget caution and part of the gains recorded in selective counters earlier in the week was erased. The business volume also shrunk. The selective buying earlier in the week followed good corporate news. In some cases, proximity of dividend provided the incentive. Opinion in market circles is gaining ground that the budget will not add to direct taxes, and thus the present levels of equity prices are considered attractive for long-term commitments. However, buying was selective and operators preferred to take risks only in the minimum. Sectionwise, jutes shed a part of the gains following the slump in jute goods. The interim dividends of the Bird-Heilgers mills, announced in this week, were noted encouragingly, and the recession in prices of goods did not alarm the more prudent holders. Coals were marked higher earlier, following reports of good despatches from collieries, while sugars were dull following reports of concern over cane supplies. Teas were held steady, and the improved auction trend assisted sentiment. Shares of paper mills were on demand as prospects for this industry were bright, inasmuch as demand for paper continued unsatisfied and expectations of benefit from Tariff Commission's recommendations were entertained.

Coals responded to selective buying. Equitables put on 62 nP to Rs. 30.37 before closing at Rs. 30.19. Bengals closed firm at Rs. 282 after having recovered to Rs. 285 from Rs. 280. Burrakurs touched a high of Rs. 17.81, but soon lost to Rs. 17.61. Central Indias at Rs. 7.50 closed a few nP higher on balance. Pench Valleys improved to Rs. 24.25 from Rs. 23.94. South Karanpuras were marked down to Rs. 12.31, while Western Bengals encountered support at the unchanged rate of Rs. 6.

Empires, in jutes, were a prominent feature with a rise to Rs. 20.81 from Rs. 19.69, while Lansdownes fell to Rs. 133 from Rs. 133 and Alliances to Rs. 118 from Rs. 123. At Rs. 163, Kamarhatties lost Rs. 14. Aucklands were pushed back to Rs. 173 from Rs. 181. Howrahs were lower at Rs. 18.94. New Centrals were unchanged at Rs. 13.44, but Nationals were marked down to Rs. 26.50.

Profit-taking took down Burmas, in minings, to Re. 1.50 from Re. 1.80. Indian Coppers hovered around Rs. 3.53.

In engineerings, Indian Irons, after moving up to Rs. 26.26 from Rs. 26.08, closed at Rs. 26.07. Texmacos were for a time better at Rs. 21.30 to return to Rs. 20.95. Guest Keens were fractionally lower at Rs. 37.12, as were Jessop & Cos. at Rs. 25.50.

Tea shares were fully steady before being neglected. Bormahjans gained one rupee at Rs. 16.50 and Carrons rose to Rs. 127.50 from Rs. 125. Banarhats, at Rs. 272, added a few points, while Brooke Bonds were unchanged at Rs. 16.75. Hattikhiras were quiet and unchanged at Rs. 11.75, while Methonis receded to Rs. 20.12 from Rs. 20.19.

Among miscellaneous industrials, Orient Papers, after moving up to Rs. 31.70 from Rs. 30.85, closed at Rs. 31.55. At Rs. 42.62, Titaghurs recorded a small rise and were fully steady. Sree Gopals were also better at Rs. 15.62. India General Navigations were subjected to profit-taking to move down to Rs. 68.50 from Rs. 71, while Indian Oxygens were fully steady at Rs. 24.06 due to proximity of dividend. National Cables were better at Rs. 30.50, but Raills were marked down to Rs. 49, as were Indian Aluminiums at Rs. 16.81. National Pipes lost to Rs. 16.37 from Rs. 17.44, but rallied around to close steady at Rs. 16.56. National Carbons were fractionally higher at Rs. 27.75, while National Rollings reacted to Rs. 13.06 from Rs. 13.31.

Madras Stock Exchange

MADRAS, 10th *February*

The Madras Stock Exchange depicted a steady trend during the week under review. There was enlarged demand for plantation scrips. Rubber shares in particular were well favoured, thanks to rumours of an upward revision in rubber prices. Coffee shares attracted fresh investment support and staged a smart rally. In sympathy, several tea shares tended to move up. Textiles were generally firm on reports of better offtake of cloth, internal and overseas. Bank, electricity and sugar shares were steady, as also miscellaneous industrials.

Among tea shares in the planting section, Kurchermalas recorded a rise of Re. 1 to Rs. 7. Kil Kotagiris firmed up by 33 nP to Rs. 6.85. Nonsuch Teas improved by 25 nP to Rs. 25 and T.R. & Ts. by 20 nP to Rs. 7.80. Twyfords advanced by 15 nP to Rs. 15.50, Chembras by 11 nP to Rs. 3.50 and Woodcotes by 10 nP to Rs. 1.60. Emerald Valleys put on a like amount to Rs. 6.75. Periakaramalais and Parksides gathered 8 nP each to Rs. 3.94 and Rs. 19.20, respectively. Waterfalls rose by 9 nP to Rs. 3.94.

Deals in coffee shares were put through at higher rates. Bababudins spurted by 75 nP to Rs. 13.50 *cum-div.*, reflecting operators' satisfaction over the performance of the Company in the past year. The directors of the Company have maintained the dividend at 25 per cent. for the year ended 30th June 1958. Coffee Lands rallied 37 nP to Rs. 21.62. Consolidated Coffees strengthened by 30 nP to Rs. 19.80 and Amalgamateds by 25 nP to Rs. 13.50. Ouchterlonys put on 5 nP to Rs. 4.95.

In the rubber group, Midlands provided a bright spot, the quotation rising by 50 nP to Rs. 11.40. Cochin Malabars were marked up by 27 nP to Rs. 5.80. Nilamburs were quoted 25 nP higher at Rs. 15.25. Kalpettas hardened by 20 nP to Rs. 11.70. Rajagiris gained a like amount to Rs. 17.10. Kailas gathered 7 nP to Rs. 4.75, Pullangodes 5 nP to Rs. 1.65 and Nelllampathys 3 nP to Rs. 2.70. Thirumbadis were better by 11 nP at Rs. 1.77 *cum-div.*

In the textile section, Lakshmis climbed up by Rs. 3.50 to Rs. 98.50. Metturs and Cannanores rose by a rupee each to Rs. 329 and Rs. 136, respectively. Adonis gathered 18 nP to Rs. 7.30. Bangalore Woollens were firm at Rs. 160, Cambodias at Rs. 7.65, Janardhanas at Rs. 68.50, Maduras at Rs. 25.25, Pankajas at Rs. 38.50 and Radhakrishnas at Rs. 135. Rayalaseems, however, came in for selling and fell by Rs. 3 to Rs. 100. Vijayakumars and Coimbatore Cottons lost a rupee each, the former to Rs. 99 and the latter to Rs. 120. Buckinghams receded by 50 nP to Rs. 173.50 and Kotharis by 40 nP to Rs. 9.50. Loyals shed 20 nP to Rs. 24.80 and Travancore Rayons 10 nP to Rs. 16.80.

Among sugar shares, United Breweries were in the limelight, the quotation forging ahead by Rs. 20 to Rs. 280. Cauverys hardened by a rupee to Rs. 106. Deccans rose by 8 nP to Rs. 9.70. Kirlampadis, on the other hand, declined by 50 nP to Rs. 45. E.I.Ds softened by 10 nP to Rs. 30.40 and Indias by 5 nP to Rs. 12.15.

Among miscellaneous industrials, Orissa Cements were lifted up by 34 nP to Rs. 13. A. V. Thomas advanced by 25 nP to Rs. 15.75 and Aluminium Industries by 20 nP to Rs. 18.35. F.A.C.Ts hardened by a like sum to Rs. 7.50. Sen-Raleighs increased by 18 nP to Rs. 15.68, Mysore Stones by 10 nP to Rs. 13.10 and Forest Industries by 5 nP to Rs. 2.98. Rallis, however, dropped Rs. 2.25 to Rs. 48.75 for want of support.

POOLING OF AIRLINES IN EUROPEAN COMMON MARKET

The various airlines operating in the six Common Market (C.M.) countries are taking the initiative to form themselves into a combine to be known as "Europe-Air." Preliminary negotiations between the airlines at the Chairman level have already been held in Brussel and Paris. These discussions, valuable as they have been, have brought to light the fact that the airlines do not see eye to eye on many issues and that it will take a long time before these companies accept a formula for full merger. What is conceived at present is, therefore, a modest plan. It is proposed that, at the first instance, they should work some scheme of co-operative effort, say, on the lines of the Scandinavian Airlines System. This will call for the creation of a joint subsidiary with its own flag to which the services would be transferred as soon as pooling terms could be arranged. Under this scheme, each airline will preserve much of its own individuality.

Under the Rome Treaty, the C.M. is empowered to compel the constituent airlines within its jurisdiction to follow a common policy at the option of the Council of Ministers. This provision is likely to be invoked in due course. The present move, undertaken in advance by the companies themselves, is designed primarily to ensure that their co-operation is based on their own terms.

Be that as it may, the first step, it is suggested, might be the pooling of the transatlantic services. Co-operation, however, will not be confined to flight services. The proposed combine is bound to result in substantial economies by pooling repair and maintenance work on terms enabling each airport to specialise in specific aircraft types. Besides, attention has been drawn to the need for using the same type of aircraft for similar duties. Sabena airlines and K.L.M. have already experimented this policy with the Convair Metropolitans used in the European services.

The proposal to pool the flight services presents certain difficulties. A solution is yet to be found for the differences regarding the monopoly services, particularly the Air France and Sabena services to and in Africa—an issue not included in the Rome Treaty. The services in Africa are said to be useful for the employment of superannuated aircraft in the absence of any possible competition. It is also stated that the African communications could be greatly improved by the intake of aircraft from all the six C.M. countries, together with a modification of the principle of mutual exclusiveness of the French and Belgian systems. A standing settlement on the issue will not, however, be possible, until the position of the French services is clarified in relation to the new political status of the African territories concerned.

BRITISH BANK OF THE MIDDLE EAST

Indian merchants trading with the Persian Gulf will be interested to note that a branch of the British Bank of the Middle East was opened at Abu Dhabi (Persian Gulf) on the 10th inst. This has brought the total number of offices of the Bank in the Persian Gulf sheikhdoms to eight.

NEWS IN BRIEF

WITH effect from the 9th inst., the selling price of imported soda ash has been fixed at Rs. 19 per cwt., instead of at Rs. 19.50 per cwt. as hitherto.

The Neyyar Irrigation Project, a joint venture of the two States of Kerala and Madras, was formally inaugurated by the Governor of Madras on the 9th inst.

A new Rs. two-crore distillery, now being erected at Chitali, Shrirampur, to manufacture spirit and alcohol from molasses, is expected to commence operation in April next.

Established exporters seeking import licences under the Export Promotion Scheme on the basis of their past exports have now been exempted from the condition regarding the execution of a bond.

With a view to providing vocational guidance to the physically handicapped in the State, the Government of Bombay has set up a special employment exchange under the Director of Employment.

The Government of India has released for export 5,000 tons of linseed oil cake from Bombay to all permissible destinations, excluding the Portuguese possessions in India, upto the end of March or till the ceiling is reached, whichever is earlier.

The Metals Committee of the Council of Scientific and Industrial Research has decided to set up four foundry research stations in the country, one each in Bombay, Howrah, Madras and Batala (the Punjab).

A modern fishing trawler specially designed for deep sea fishing has been presented by the U.S. Technical Co-operation Mission to the Government of India's Deep Sea Fishing Station in Bombay. The trawler, costing $58,000 (Rs. 2,76,000), is one of the 16 fishing crafts presented by the U.S.

The number of diesel engines to drive agricultural pumps produced in India in 1958 was over 27,000 (valued at Rs. 5.43 crores), exceeding the target set for the year in the second Plan by about 7,000. There are at present 17 units manufacturing such diesel engines in the country.

The output of sulphuric acid in India rose from 165.215 tons in 1956 to 227,000 tons in 1958. This is expected to be doubled by 1961. The increase will be achieved by the implementation of 12 schemes for which the foreign exchange required for the import of machinery has already been secured.

The production of the 800th locomotive at the State-owned Chittaranjan Locomotive Works was completed last month. It is expected to turn out the 1,000th locomotive by the beginning of 1960. The Chittaranjan is now producing one complete locomotive every alternate day, or an average of 14 per month.

The Geological Survey of India has sent a six-man team to the northern-most hilly district of Doda in Jammu province for an extensive exploratory survey of the area. The district is said to possess sapphire mines, iron, copper and lead ores. Indeed, it is considered to be the richest mineral belt in North India.

The Digboi oil refinery of the Assam Oil Company had a record production of 114¼ million gallons of oil in 1958—one million gallons more than that in 1957. This brings the total output for the past eleven years to 919,600,000 gallons of oil. Digboi is still the only producer of mineral oil in India making use of crude indigenous petroleum.

A Central Engineering Research Institute has been established by the Government of Bombay under the administrative control of the Director of Engineering Research. The Institute will deal with problems of engineering research and testing connected with the State Public Works Department. It will have its headquarters at Nasik and a branch office at Baroda.

The first flood forecasting unit in India now being set up at Tajewala along the river Jamuna is expected to begin functioning effectively before the next monsoon breaks. The unit will make a detailed study of the river's discharge and rainfall in the catchment area, so that it could warn Delhi and other areas of the impending flood nearly five days in advance.

A draft agreement for the avoidance of double taxation of income between India and Norway has been initialled at New Delhi, following talks between a two-member Norwegian delegation and the officials of the Central Board of Revenue. After its ratification by the Governments of the two countries, the agreement will become effective in India for and from the assessment year commencing on 1st April 1959.

The twenty-sixth annual general meeting of the Indian Sugar Mills Association will be held at New Delhi on 9th March, 1959. Mr. P. Hadfield, President of the Association, will preside over the meeting and Mr. Ajit Prasad Jain, Minister for Food and Agriculture, Government of India, will inaugurate it. Apart from reviewing the various important developments in the sugar industry during the outgoing year, certain important resolutions having a vital bearing on the sugar industry will also be taken up for discussion at the meeting.

The Central Government has decided to allow exports of manganese dioxide, peroxide, chrome and kyanite ore on a quota basis during 1959. The quotas will be allotted to shippers and mineowners equal to the quotas allotted to them in 1958. The Government has also decided to allow exports to be made by the State Trading Corporation on an *ad hoc* basis against contracts concluded by it. Further requests for allotment of a supplementary quota on an *ad hoc* basis will be considered favourably against firm commitments, if an individual's quota is exhausted.

* * * *

From Abroad

Canada had an adverse balance of trade to the extent of $276 million in 1958, as against $689 million in 1957.

The U.S. railroads plan to raise the expenditure on new construction projects in 1959 to about $325 million, as compared with $300 million in 1958.

According to a report from Dacca, the Overseas Shipping Companies have decided to reduce freight charges on shipments of jute cuttings to continental ports by £2 to £7 per ton.

The U.S. steel production has been steadily rising. Last week, it was 80 per cent. of capacity. The trend is still upward. The U.S. steel industry's annual capacity has grown from 128,363,000 tons in 1956 to a 1959 total of 147,633,670.

The Demag of West Germany is supplying a steel works and rolling mills to Argentina. The plant, with an annual crude steel capacity of 150,000 tons, is expected to cost about £13 million. The steel works will use charcoal for fuel, produced from eucalyptus wood.

For the first time since the end of the Second World War, the Bank of Japan has bought gold worth $50 million from a U.S. Federal Reserve Bank, with a view to raising its gold reserves. With this purchase, Japan's gold reserves have risen to about $73 million.

Czechoslovakia and the United Arab Republic have signed a three-year trade agreement for the exchange of goods worth 30 million Egyptian pounds (£29,250,000 sterling). The U.A.R. will import factory and other industrial equipment and Czechoslovakia cotton and other goods.

The first fully mechanised post office in the U.S. will be built at Rhode Island at an estimated cost of $20 million. It will be constructed by Intelex Systems, Inc., for the U.S. Post Office Department and will feature complete mechanisation of mail handling. The building will be ready for use in September 1960.

The U.S. Steel Corporation paid more than $375,000 to its employees during 1958 for submitting suggestions which resulted in reduction of operating costs, more than twice the amount paid by the firm in the preceding year. The winning employees are paid a percentage of the money saved through adoption of their suggestions.

A new agreement for co-operation in nuclear research has been signed between the Netherlands and Norway. The agreement contains provisions for the co-ordination of research in the two countries, and for the exchange of data and information, as well as regulations governing the ownership of inventions arising from the joint research work.

The Swiss watch industry suffered a serious setback in 1958, on account of lower exports to the U.S., its principal customer, and closing up of certain foreign markets, particularly India. The industry exports 97 per cent. of its total production. The value of its watch exports in 1958 fell by 14 per cent. to Swiss Frs. 1,118 million (£91.7 million), the number of watches exported declining by 17 per cent. to 24.5 million.

The total value of textiles exported from Norway during 1958 were higher by 20 per cent. at Kr. 60 million (£3 million), establishing an all-time record. There was a spectacular rise in exports to W. Germany, thanks mainly to a campaign launched there by the Norwegian textile industry last year. Similar campaigns have previously been conducted in the U.S. and Canada.

A draft international convention seeking to obtain protection for private capital abroad has been prepared by Sir Hartley Shawcross and a group of British lawyers. The proposed convention lays down that, in case of any dispute between two countries, the issue should be submitted to the International Court. It is stated that, if a multilateral treaty can be negotiated between a group of States, such as the 17 members of the O.E.E.C., the experiment may be followed in other parts of the world as well.

Sweden's total output of cars and commercial vehicles during 1958 amounted to about 90,000 units. Of this, about 40,000 units were exported. According to preliminary figures, Volvo's output in 1958 was about 71,900 units. Some 33,000 units were exported at a value of approximately Kr. 310,000,000. Passenger cars, numbering 28,000 units, constituted the bulk of exports. Of these, 15,500 cars went to the United States. For 1959, the production is estimated at 82,700 units, including about 40,500 for export.

Tax concessions and other incentives to industry in Pakistan catering to the export trade have been recommended by Mr. Wilhelm Vocke, the West German financial expert, in his report submitted to the Pakistan Government following his recent study tour of the country. He has warned against any control on industries earning foreign exchange for the country. He has also suggested that, in future, preference should be given to the expansion of those industries the raw materials for which are available in the country.

A report to a recent meeting of the Pacific Area Travel Association at Singapore points out that the average American who travels abroad is not wealthy. In the first six months of 1958, 24,049 stenographers and office workers applied for passports, while executives applying numbered only 11,125. More nurses got passports than did bankers. More women are travelling now than was the case 10 years ago. American women accounted for 37 per cent. of the passports issued in 1948 and 55 per cent. during the first six months of 1958.

The Imperial Chemical Industry and Farbenfabrik Bayer have bought licences and patent-rights from the Norwegian firm *Sunde Fabrikker*, Spjelkavik, for 500,000 kroner (£25,000) each. The deal is for a new process for manufacturing foam plastic insulation of water pipes which is claimed to have extraordinary qualities—heat, oil and acid resisting and stopping air and condensation. The contract also comprises royalties and manufacturing machinery, which will give the *Sunde Fabrikker* an income of several times the original amount.

There are indications of growing American interest for investments in South Africa. The Chase Manhattan Bank of New York has decided to open a branch in Johannesburg this month, the second bank to open a branch office there within two months. These followed closely the establishment of the American-South African Investment Trust. The U.S. investments in South Africa amounts to £170.6 million, representing 12.2 per cent. of foreign capital invested. The British investments aggregate £864 million, or 62 per cent. of the total overseas investments in S. Africa.

The American Iron and Steel Institute has published what it calls a "rare comparison" of free world steel making capacity and that of the Soviet Union and satellites. The Institute says the comparison is unusual, because few nations make regular estimates of steel capacity. From 1955 to last year, the free world's capacity rose by 53,800,000 tons to 285,727,000 tons, showing a marked gain over the Communist world. About half the total represented U.S. capacity. Russia and its satellites added 19,800,000 tons in the same period to bring the 1958 capacity to 86,751,000 tons.

The U.S. Atomic Energy Commission (A.E.C.) is at present negotiating with a private manufacturer, the Martin Company of Baltimore, Maryland, for the design, development and installation of a portable, prefabricated nuclear power plant to produce heat, light and power for remote areas. The plant will have a pressurised water reactor, cooled and moderated by light water. It will be fuelled with enriched uranium, and will generate 1,000 kilowatts of electricity and about 2,000 kilowatts of heat. Costing about $6 million, the plant will consist of factory-assembled units which can be air-transported to remote sites and rapidly put together. It could also be dismantled, flown to another site, and reassembled.

PERSONAL

MR. Madanmohan R. Ruia, a well-known industrialist of Bombay, has been elected President of the Federation of Indian Chambers of Commerce and Industry for 1959-60.

Mr. A. S. Mehta, India's Consul General-designate to Geneva and India's Permanent Representative (European Division), U.N.O., left Bombay on Saturday last for Geneva.

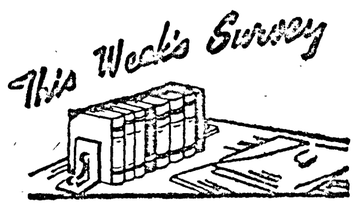
Mr. R. N. Philips, Director-designate of the proposed Export Promotion Organisation for European Trade, left Bombay for Frankfurt, West Germany, on the 7th inst.

Mr. Naranji L. Kara and Mr. Chinoobhai C. Jhaveri have been elected President and Vice-President, respectively, of the All-India Exporters' Association, Bombay.

Mr. Jai Kumar Atal, Joint Secretary, Union Ministry of External Affairs, has been appointed Ambassador of India to Turkey. He is expected to take over his new assignment next autumn.

Sir Evelyn Wrench will be the first President of the Commonwealth Union of Trade, London, recently founded by him with a view to promoting the cause of inter-Commonwealth trade. The Duke of Bedford and Admiral Sir Alan Scott-Moncreiff, C.-in-C., Far East Station in 1955-57, will be the Vice-Presidents of the Union.

Dr. Laurence de Rycke, Chairman of the Department of Economics at Occidental College, Los Angeles (U.S.A.), and Dr. Solomon J. Flink, Professor and Chairman of the Economics Department of the School of Business Administration of Rutgers University in Newark, are now on a lecture-tour of India sponsored under the U.S. Government's exchange-of-persons programme.



ATOMIC POWER

NUCLEAR technology, though its birth can be traced only to the early years of the post-war period, has advanced so rapidly that there are few leading countries which do not look forward to deriving benefit from it. Many of them, notably the U.K., the U.S., the U.S.S.R. and Canada have already set up nuclear power plants. Nuclear power has thus virtually ceased to be regarded as a mere scientific curiosity. Among the underdeveloped countries, India has made notable advances in nuclear research, thanks to a band of energetic research workers, headed by Dr. H. J. Bhabha. In the course of his address to Parliament, President Dr. Rajendra Prasad made the point that "considerable advance and expansion in the field of atomic energy, and exclusively for peaceful purposes has been made and continues satisfactorily." He stated that the Government had decided to install nuclear-powered plants of a minimum capacity of 250,000 kilowatts. He revealed that the construction of uranium metal plant had been completed and had undergone trial runs successfully; the first ingot of uranium of atomic purity was produced on 30th January 1959.

It should thus be clear that efforts are being made to put India on the world nuclear map. It is true that India's hydro-electric potential is large. This is estimated at 40 million kw. Of this, by the end of the current Plan period, India will have tapped only 6 million kw. But it must be remembered that hydro-electric potential is not evenly distributed throughout the country. This is even more true of reserves of coal, which is the basis of thermal power stations. Further, power consumption will increase at the rate of 100 per cent. every five years. Indeed, the increase has to be even more rapid, if the country is to attain soon the high levels of consumption in the West. The *per capita* consumption of electricity is only 34 kw.h. in India, as against 2,000 kw.h. in the U.K., 4.180 kw.h. in the U.S., 5,450 kw.h. in Canada, 850 kw.h. in Japan; the world average is about 670 kw.h. Power is required not merely for further advances in industrial and agricultural spheres but for raising the living standards in the rural areas, to large parts of which electricity has yet to be carried.

All this serves to emphasise the need for undertaking preparations for producing nuclear power. The question of comparative costs of nuclear and conventional power stations has to be viewed against the background of the rapid improvements which are taking place in nuclear technology. Referring to this problem, Dr. Bhabha, in the course of his speech at Bangalore, observed that the "economics of nuclear power were already such as to make it competitive with coal power in most parts of India." He predicted that, with the reserves of thorium available in India, any additional investment in nuclear power in the first ten years would repay itself within the following ten years. He said that even if one took into account only present technology, nuclear power would become cheaper than conventional thermal power stations in terms of capital investment and the cost of nuclear power would tend to be lower than thermal power in most parts of India within ten years. The rapid rate of advance of nuclear technology made it probable that nuclear power costs would go down.

Dr. Bhabha made it clear that a total reserve of 30,000 tons of uranium would not enable the installation of more than about four million kilowatts of installed capacity. Additional reserves would have to be located before further planning was undertaken. He said that the plutonium produced by the first generation of power stations could be used in a second generation of power stations designed to produce electric power and convert thorium into uranium 233, or depleted uranium into more plutonium with a breeding gain. The second generation of power stations might be regarded as an intermediate step intended to convert plutonium into uranium 233 for the breeder stations of the third generation.

Discussing the capital investments in a nuclear power programme, Dr. Bhabha said that an investment of Rs. 250 crores would be required for the first million kilowatts and a further investment of Rs. 50 crores for the next 250,000 kilowatts; the total investment for obtaining similar capacity from thermal power stations would not be less than Rs. 200 crores. The additional investment of about Rs. 100 crores for nuclear power in the first ten years would be cancelled by the saving in capital investment in the following ten years, by which time, five million kilowatts of electric power in the third generation reactors could be installed. Clearly, the prospect for nuclear power is bright. Indeed, time may reveal even brighter possibilities.

ROAD TRANSPORT

Road transport, after a long period of neglect, is coming into its own. In pre-war years, a major problem was road-rail competition. Transport policies were vitiated by the consideration that road transport was an unhealthy rival to the railways. Much has been done in recent years to set road transport on its feet. The Motor Vehicles Act has been amended, with a view to giving impetus to road transport development. The Inter-State Transport Commission has been set up. The Road Transport Reorganisation Committee (Chairman: Mr. M. R. Masani) is now engaged in recommending a model administrative set-up for motor transport; it is expected to submit its report by the end of this month. Despite the adoption of these measures, there are misgivings in the minds of road transport operators that they are being discriminated against. As Rajkumari Amrit Kaur pointed out, in the course of her presidential address at the All-India Conference of Road Transport Operators, held under the auspices of the All-India Motor Unions' Congress, which met at Bangalore last week, the road transport industry is of the opinion that the time has come for adopting a policy of positive encouragement in contrast to that of "mere tolerance." She rightly stressed that in India, which suffered from grave inadequacy, both of rail and road transport, there should be no waste or duplication of resources. There is room for both road and rail transport. It would be unwise to treat them as rivals. What is needed is a policy of co-ordination and development of these two modes of transport.

Of the problems of road transport, high taxation and threat of nationalisation are the greatest deterrents to its progress. The Union Minister for Transport and Communications, Mr. S. K. Patil, who inaugurated the conference, stressed the need for uniform taxation in regard to motor vehicles in all the States. Uniformity is an important, though not the only, aspect of taxation. What is particularly important is that the burden must be suitably reduced. The other problem is threat of nationalisation. On this issue, Mr. Patil's assurance was encouraging. He stated that the Government did not intend to nationalise goods transport in the next seven years. He added that, if the road transport operators did their job well, they would not be disturbed even after the next seven-year period for which immunity from nationalisation had been given. This assurance should encourage the operators to plan ahead and give efficient service to the public.

The formation of viable motor transport units will go a long way towards increasing their capacity to render the services the public expects from them. From this point of view, the suggestions which were made by Mr. T. S. Santhanam, Chairman of the Reception Committee, deserve notice. He said that better roads and the use of heavier trucks and truck-trailers would bring down the cost of operation and make road transport cheap, rapid and efficient. He urged the early removal of the restrictions on loads. If these suggestions, together with suitable relief in taxation, were implemented, it would enable the road transport industry to make an effective contribution to India's transport economy. The development of the industry will also mean wider employment opportunities, considering that, inclusive of manufacture, service, maintenance and other trades, the industry, according to Mr. Santhanam, already employs some three million men.

Among the resolutions adopted by the conference was the one which cried halt to the tendency in some States to rush through schemes of nationalisation of motor transport. The conference was of the view that there was ample room for the expansion of the nationalised sector in underdeveloped areas and on all new roads. Rationalisation of road tax structure and consolidation of different taxes into a single tax were the suggestions made in another resolution. Other suggestions made by the conference were simplification of administrative procedure in relation to road transport and need for extending larger credit facilities to operators and for allocation of larger resources for development of roads and road transport.

FOOD SITUATION

It looks as though the food situation, which was gloomy until recently, has lately turned out to be encouraging. This at any rate is the impression one gets from the statements made by the spokesmen of the Government. Opening Parliament's budget session on Monday the 9th inst., President Dr. Rajendra Prasad, for instance, declared that the outlook for food crops was promising and that it was intended to build up considerable stocks and to widen the scope of State trading. The Prime Minister and the Union Food Minister have also struck a note of optimism regarding the food position. The former observed in his latest Press conference that the food prospect was better now than it had been for many years; the rice crop was very good; there was prospect of good wheat crop; and efforts to raise food production were yielding results. In his speech at the fifth annual conference of the All-India Women's Central Food Council at Calcutta on 29th January, the Food Minister, Mr. A. P. Jain, stated that, as far as the food situation was concerned, the worst was over. He went even to the extent of saying that India could export foodgrains if certain measures were taken immediately such as improved agricultural methods, proper storage arrangements, change of people's food habits and elimination of wastage.

While the statements regarding improvement in food situation are certainly reassuring,

the trend of foodgrains prices continues to be high, as will be seen from the following table:

(In Rs. per maund)

	Latest available	A month ago	3 months ago	A year ago
Wheat ..	27.00	27.50	22.75	16.06
Rice ..	32.50	30.00	32.50	28.50
Barley ..	17.00	17.50	17.13	8.75
Bajra ..	16.75	16.50	15.75	10.87
Maize ..	16.00	16.00	14.88	10.62
Jowar ..	15.25	14.50	14.00	9.38

The persistent firmness of foodgrains, as noted above, points to the need for taking corrective measures to hold prices in check simultaneously with the launching of a more intensive drive to augment production. This aspect requires to be specially stressed, lest the seemingly good prospects for food crops should lead to a sense of complacency in the minds of Government departments, the farmers and the politicians. What is urgently needed is proper advance planning, prompt and adequate provision of facilities for intensive cultivation and co-operation, between merchants, producers and officials. This aspect was forcefully brought out by Mr. Jain, while inaugurating the two-day conference of State Agriculture Ministers at New Delhi last week-end. Mr. Jain did well to draw special attention to the rapid rate of increase in population—2 per cent. per annum at present, as against 1.25 per cent. estimated at the last census—and aver that, since the control of population, desirable as it was, did not offer itself as a major factor in the solution of the food problem, "we must look for the solution through increased yield per acre; it was in this context that our production drive assumes special importance." Incidentally, he reiterated the Government of India's aim to double the country's food poduction by the end of the third Five-year Plan.

It is, indeed, gratifying to be told by Mr. Jain that he has already requested the States to prepare for the guidance of their workers a *kharif* campaign guide more or less on the model furnished by the Centre. The guide should indicate the different operations to be undertaken and the time schedule by which each of the operations should be completed. It must also taken into account the available resources and man-power. It may be noted here that the major crops included in the *kharif* campaign are paddy, *jowar*, maize, *bajra* and *ragi*; paddy is, of course, the principal crop which accounts for about half the total production of foodgrains. Special attention has, therefore, to be paid to raising rice output.

The continuing need for increasing the production of food crops (and other agricultural commodities) imparts supreme urgency to the adoption of measures designed to reorganise the State Agricultural Departments. A clear idea of what these measures are is provided in that illuminating report of the Agricultural Administration Committee (Chairman: Raja Surendra Singh, Adviser, Agricultural Production, Union Ministry of Food and Agriculture). Commenting on the report in the course of an editorial (*vide* page 794 of *Commerce* dated 15th November 1958), we observed that resolute and prompt action on the lines suggested by the Committee would help improve Indian agricultural administration to a level of competence which would do justice to the country's major occupation. We are glad that both the Centre and the State Governments have recognised the importance of such action and measures are accordingly being taken in this direction.

In the group discussions held in New Delhi during the past few months to discuss the State Plans for 1959-60, every State made a token provision in the budget for expenditure relating to the implementation of the report. Welcoming this step, Mr. Jain told the conference of State Agricultural Ministers that the recommendations could be quickly implemented if additional funds were reappropriated to augment the token provisions. He revealed, in this connection, that the Centre had already made a preliminary study of the recommendations and classified them under different categories which had been communicated to the State Governments in order to facilitate examination at their end. Broadly, these recommendations fall under the following two groups:

Recommendations which involve no financial implications and, therefore, can be implemented without any delay, provided they are otherwise sound and acceptable; these relate mainly to procedural matters, delegation of powers to officers at different levels, simplification of budgetary procedures and expenditure sanction, framing of rules for different posts, revision of service rules, direct recruitment of officers in order to inject fresh blood, promotions based on merit, and co-ordination of action between irrigation development and agricultural departments.

Recommendations involving financial implications which require a little more consideration, particularly in regard to the sources from which the expenditure could be met; these relate, among others, to the building up of key personnel, removal of deadwood in departments, need for better service conditions, provision of more opportunities for the staff of agricultural departments, departmental tests with necessary incentives for the staff to be in a state of continuous preparation for better work, institution of training facilities for staff, proper programme planning, and separation of what are called the "trading functions" from scientific and educational work related to farming.

All these are surely very valuable suggestions which, if given effect to earnestly and vigorously, will go a long way towards toning up the agricultural departments of State Governments, thereby contributing significantly to the improvement in production. As Mr. Jain very aptly put it, there is need to concentrate more on the man behind the plough than on paper, and this is the time for the administration and the staff to be thoroughly reoriented to give first priority to an action programme for higher production.

At their New Delhi conference, the State Agricultural Ministers put forward three suggestions. First, a country-wide drive for higher food production should be launched during the forthcoming *kharif* season. Secondly, the Centre must make every effort to meet the growing need for fertilisers by direct purchase, barter or other arrangements from abroad until such time as fertilisers are produced within the country in adequate quantities. Thirdly, the Centre should take adequate steps to ensure a fair price to the producer after taking into account all aspects of the problems. As regards the first mentioned suggestion, the Government of India has agreed to allot an additional iron and steel quota of 100 per cent. over and above the normal allocation for agricultural purposes in each State. It has also agreed to make available an amount likely to exceed Rs. 4 crores for the provision of short-term loans to farmers, besides supplying the required quantities of insecticides and pesticides. With these measures, one may expect better results during the next *kharif* season.

INDUSTRIALIST WITH A SECRET

Mr. X can easily withstand the nervous strain and rush of every busy day, because he replenishes his reserves of vitality through deep, sound restful *sleep*—in the soothing coolness of his 'Crystal' conditioned bedroom.

Keep Cool with a

Crystal trimline

ROOM AIR CONDITIONER

Only the 'Crystal' gives you all these advantages:
- Over one ton cooling capacity
- Protrusion of less than three inches into the room
- Universally adjustable air-flow
- Voltas' unrivalled after-sale service that never lets you down

PUBLIC EXPENDITURE

Two important considerations point to the need for a proper scrutiny of the expenditure in the public sector. First, public concerns are in charge of officials who have no financial stake. Secondly, the promotion of and prospects for the officials do not depend on the degree of efficiency with which they administer the units. Apart from the fact that public enterprises should be, like Cæser's wife, above suspicion, they should be run strictly on business lines like any other enterprise in the private sector. In other words, public enterprises must take special care to see that they spend money wisely and get the best advantage in return. How is this objective to be achieved? Some thought to this question was paid by Mr. A. K. Chanda, Comptroller and Auditor-General of India, when he addressed the Commonwealth Parliamentary Association (Madras Branch) at Madras on Friday last week. He commended the Canadian procedure which preserves the autonomy of corporations while making them accountable to Parliament. Mr. Chanda's thesis may be summed up thus:

1. Public enterprises, by reason of their public investment and operations in a monopolistic field, must depend upon popular support for their growth and expansion. Again, very large investments have been made in these nationalised industries and, hence, it is difficult to envisage a situation in which Parliamentary control over the activities of these enterprises would be abrogated. It must be accepted that these public enterprises must be accountable to Parliament.

2. Parliament should keep a watchful eye over the activities of the corporations; it should apply the same "rigidity" in the case of corporations as it does in the case of departmental expenditure.

3. Where a unit serves the purpose of a department like the Chittaranjan Locomotive Factory or the Perambur Coach Factory in Madras, there is no need to organise corporations. In Canada, financial statements are presented to the House which has also to approve of their capital budgets and the same body also decides how their reserves must be regulated and so on. A solution on similar lines should be found in India.

4. There is a feeling not only in India but also elsewhere that Ministers try to evade responsibility by not issuing directives. The mere existence of this power to issue directives is enough for them to be able to influence the policies and deliberations of State enterprises. Some way has to be found by which the Ministers' accountability can be more strictly enforced.

Here are a few valid points which provide much food for thought. The field of State activities has expanded vastly in recent years and indications are that the expansion would be more marked in the coming years. The investments in the three steel plants alone, for instance, will be Rs. 600 crores. Parliament's responsibility to see that these huge investments pay without squeezing consumers too much is, therefore, great.

MADRAS SALES TAX BILL

The Madras General Sales Tax Bill, 1958, has emerged from the Select Committee's unusually long scrutiny almost unscathed. Barring a few changes such as the raising of the exemption limit from Rs. 5,000 to Rs. 10,000 and certain marginal adjustments in the rate of levy on certain commodities and some additions to and deletions from the different schedule of goods, the Bill retains most of the original provisions.

The Bill, it may be recalled, seeks to consolidate and amend the law relating to the levy of a general tax on the sale or purchase of goods and, when passed, will replace the present Act of 1939. It was brought in to enable the Government to give effect to its decisions on the recommendations of Dr. Lokanathan for the simplification and improvement of sales tax system in Madras. It was referred to the Select Committee in March last year. Some of the important changes recommended by the Select Committee are: (1) the exemption limit should be raised from an annual turnover of Rs. 5,000 to Rs. 10,000, (2) rice and rice products, wheat and wheat products, which were subject to two

GROWTH OF GOVERNMENT SPENDING IN UNITED STATES

WILL KHRUSHCHEV BE RIGHT?

EVEN in the U.S., as in India, the public sector *versus* the private sector controversy is there. But it is of a slightly different nature. There are serious apprehensions in that country that, if the present trend of growing Governmental expenditure to ensure employment and higher living standards were to continue, it would gravely undermine the system of free enterprise and make the people slaves of the State. These fears have gathered fresh momentum, following the majority won by the Democrats in the Congress in the last November elections. Alluding to these apprehensions and striking a note of warning, the February issue of *Monthly Bank Letter* of the First National City Bank of New York observes as follows:

There is increasing interest, in and out of the U.S. Congress, in ways to spur the economy to greater productive achievement and keep up with the Russians. Two paths are open. One, commended by the President, is to work toward tax reforms and stimulate the individual enterprise that gave us world-wide economic supremacy. The other way, advocated by the Democratic Advisory Committee, is to use enlarged government expenditures as a stimulant. The sequels of oppressive taxes and controls to hold back private activities then become such an impediment that Government finds it "necessary" to shoulder still more responsibilities and do still more subsidising.

More Dependents

Uncontrolled rise in Government spending naturally encroaches upon the areas of individual responsibility; indeed, it breeds a race of dependents. But advocates of more and more Government spending deny this obvious consequence: rather they would have us believe that private enterprise will be so powerfully stimulated that ever-rising Government expenditures will make up a smaller percentage of the national production.

This curious theory bears an unwholesome resemblance to Karl Marx' thesis that, under communism, Government will gradually wither away. But setting up new departments to pass out "federal funds for free" is no act of withering away; quite the reverse.

Nevertheless, spending more public funds has a strong appeal as a way out of our national dilemma. If economic progress can be legislated in the halls of Congress by the passage of a few more appropriation bills, then higher standards of living and an unmatched defence capability are easily realised. On the other hand, if national strength demands something *real*—like longer hours of harder work by enterprising people and more effective use of time in the nation's schools—it might be better to stop the easy talk of spending so many more billions.

Nothing, except talk, is cheaper than printed money. All we may get from undisciplined public expenditure is greater inflationary pressure, dislocation of the economy, and—in the end—still higher taxes and bureaucratic control of prices and production. As Senate Majority Leader Lyndon Johnson has said, in noting the variety of proposals for countering inflation: "We cannot afford to 'go broke' in tinkering with our economic system merely because an idea is appealing or attractive. The idea must be tested in the market place of ideas."

An Exploded Theory

The fact is that the idea of stimulating enterprise by more public spending has already been tested, not only in the market place of ideas but in the stern school of experience.

The U.S. Government under the Constitution represented a new start after the financial fiasco under the Articles of Confederation and Perpetual Union ratified 1778-81. The paper money of the Continental Congress had become practically worthless. Since 1789, Government spending—Federal, State and Local—has been growing with the development of the nation.

Since 1913, the G.N.P. has risen a little more than eleven times—from an estimated $39 5 billion to above $450 billion at present. Total Government expenditures have risen near fifty times, from $3.0 billion in 1913 and now pushing toward $145 billion.

These figures for total government expenditures are designed so far as possible to include expenditures outside regular budgets (as from trust funds), but adjusted to eliminate double counting of grants-in-aid from one governmental level to another. They are derived from tabulations of the Tax Foundation with fiscal '60 projected on the basis of the federal "cash" budget and the established uptrend of state and local outlays. Estimates of state and local spending involve many problems for statisticians. The President's Council of Economic Advisers compiles data for recent years on total cash payments of Government in the national income accounts. These are running about $12 billion lower than the longer Tax Foundation compilations. But they show the same disproportionate rise. By any valid test, Government is figuring more and more largely in the American economy.

On the record, we must look with suspicion upon the argument that more public spending can stimulate private enterprise. Right now, the radically increased Government spending is stimulating the private economy. But we have not yet paid the bill. Sooner or later, higher taxes will act to curb the area of discretionary spending for the people and limit growth of the markets for the private sector of the economy.

It is argued that a dollar of increased federal spending will produce a multiplied growth in private spending and in the G.N.P. But the final result is encroachment, rather than stimulation. On the basis of the Tax Foundation figures, we had $13 of G.N.P. for every $1 of Government outlays in 1913. Now we have between $3 and $4 of G.N.P. for every $1 of Government outlays.

A Prophecy

Premier Khrushchev predicted a year or two ago that our grandchildren would live under socialism. If we let Government keep crowding in with more programmes, more handouts and more controls, he will be right.

More and more thoughtful people are pondering where we are headed and what kind of society we want. We can treat the individual as dignified and self-reliant. Or we can reduce him to self-pity and dependence on the labours of others for support. Then, as production falters, the whip of compulsion must supplant the spirit of enterprising advancement. This is Hayek's *Road to Serfdom*, Orwell's 1984.

A thoughtful recent visitor to Russia and Czechoslovakia was led to comment: "While the Soviets are widening their use of incentives and devoting most of their increased production to capital formation, the Welfare states of the West, through inflation, taxation, and cradle-to-grave security, are reducing the incentives to work and to save. One cannot help but fear the outcome under such conditions."

The Issue Joined

The issue is joined in the debate on the President's 1960 budget proposals. The President turns attention to the desirability of retrenchment in federal expenditure and working toward tax reforms. The opposite view is that of the Democratic Advisory Committee which complains that, while the President says we need to do more, "his budget proposes to do less." Here stands naked the seductive presumption that it is only Government, and Government money, that can accomplish anything useful.

While college textbooks speak of the U.S. as a "mixed economy," we ought to guard against becoming a "mixed up economy," one without clear purpose or guiding principle. Few people openly espouse socialism. But, if we want to rely on the enterprise of the individual to get us ahead we must buttress his incentives, nourish self-reliance, control the greed of the tax-collector, and give the private, tax-paying sector of the economy room in which to grow and prosper.

GOLD RESERVES STILL RISING

MORE FREEDOM FOR RAISING CAPITAL

(From Our Own Correspondent)

LONDON, *6th February*

WHAT a different picture do the gold and sterling reserves present this winter from the crisis level of eighteen months ago. The rise has been continuous but has been not less impressive, since, from their low point of £660 million in September 1957, the reserves surpassed the £1,000 million mark in the spring of last year. For it is one thing to get back money which went out in a hurry and another to keep on steadily adding to the reserves, thus the rise of another £15 million in January bringing the reserves up to £1,111 million is encouraging. It is also encouraging that the month of December, although nominally showing a decrease purely as a result of the interest and capital payments on North American loans, had shown a rise on trade and commercial account.

LONDON LETTER

As an exercise in confidence, there is no doubt that the amalgamation of the transferable and dollar account sterling has worked. Behind this confidence, there are also the benefits which trade recession in the wider sense has continued to bring, that is, the gain through lower prices of imported goods over the value obtained for British exports. But the margins of increase in the reserves under discussion amount to something like 5 per cent. of the month's import trade. They could thus easily be washed away by a slight revival in internal activity resulting in an expanded import bill. Sterling at the moment is the popular currency, but this position could change overnight and there might be a run out of sterling into dollars. A fall in the reserves would then not reflect at all the worsening of Britain's Balance of Payments; it might reflect a substantial rise in productive activity. But the world would only see it in a black light.

Capital Market

The Government has belatedly recognised that the rise in reserves is not enough to keep butter on British bread, and it has now removed the last hindrance to increase capital investment by permitting industry to raise money freely in the City. Whether this move is in time to do any good is very doubtful—there are some issues amounting to little more than conversions waiting to come forward—but what matters from an industrial point of view is whether money is going to be put into new factories and new plants. In other words, whether the productive capacity of the country is going to be increased. At least, it is a good thing that there is no artificial barrier to this and thus the last of the obstacles raised against industrial borrowing for twenty years has now fallen. Oddly enough, local authorities are not given the benefit of this same freedom, though they might be some of the larger spenders on housing and other public works. But the Chancellor has assured us that the purpose of not exempting them is merely to keep an eye on what they are doing and is not intended to prevent them from borrowing money for "sound" purposes. The Chancellor will undoubtedly remain the Guardian of what is "sound". The other known exempt class of borrowers are not so oddly foreigners, since a completely free capital market could knock a large hole in the sterling defences.

Influencing Voters

One final point of interest in the City this week has been the furore over the Government's back-handed attempt to the iron and steel industry to weight the marginal constituencies in the country against the Opposition. The steel industry is spending about £½ million on a biased questionnaire to all voters in these marginal constituencies, asking various questions about nationalisation in relation to steel, all intended to get them to say that they do not want any more nationalisation and so to get them to vote for Government at the next election. The sponsors of the questionnaire, indeed, make no bones about the purpose of their activities, but they seem to have put their foot wrong, as a good deal of resentment is being generally aroused by this rather too open attempt to use industry as a political factor.—*All Rights Reserved.*

SURVEY

(Continued from page 219)

per cent. multi-point tax, should be taxed at one per cent., like other foodgrains.

The Committee has also recommended that certain items from the first schedule of the Bill, which mentions the goods in respect of which single-point tax is leviable, should be omitted on the ground that a low multi-point levy would be convenient to the trade and that, in certain cases, a single-point levy might result in diversion of trade. Two new items, namely, sugarcane and potatoes, have been added to this schedule. Three new items, namely, sugar, including jaggery and *gur*, handspun yarn and handloom cloth have been added to schedule III which enumerates goods exempted from tax according to section 8.

Schedule I of the Bill included some finished goods as well as components and parts. According to the provisions of the Bill, such goods are subject to tax at 7 per cent. single point. If a 7 per cent. single-point levy is made on components and parts, then another 7 per cent. on the finished goods out of these materials has to be paid. If the manufacturers obtained the components and parts from other States, they have to pay only one per cent. Central sales tax. The Committee felt that this would affect the sale of local products, resulting in the diversion of business to other States. It has, therefore, suggested suitable changes in the provisions so as to avoid such a contingency. It has provided for one per cent. tax on the components and parts of goods mentioned in schedule I. It also feels that, though a particular item has been taxed under this Act, it should also be liable for inter-State sales tax. A new clause has been added to this effect.

In respect of goods which would be newly brought under single-point levy at a higher rate of tax at the point of first sale or first purchase on the date of commencement of the new Act, there is no provision in the Bill for levying the single-point tax on the stocks held by record on the date. The Committee feels that, if provision is not made for taxing the sales of such stocks from that date, the second and subsequent dealers will purchase and hoard large stocks before the date to get the benefit of lower rate of tax and the Government will lose revenue. It has decided to add a new clause providing for the levy of tax on the sale of these stocks also.

It would appear that considerations of revenue, which had prompted the Government to depart from the recommendations of Dr. Lokanathan, have influenced the Select Committee also in its decisions. This explains why even the rates the incidence of which on consumers is bound to be heavy have been retained. For instance, the general multi-point tax has been maintained at two per cent., although this is double the rate recommended by Dr. Lokanathan. The levy on rice and rice products, wheat and wheat products have been reduced to one per cent. which is the same as the levy on other foodgrains. Even so, the latter rate is double that proposed by Dr. Lokanathan, who had suggested that it should not exceed half per cent. The Select Committee, has, however, raised the exemption limit for dealers in perishable products from Rs. 25,000, as recommended by Dr. Lokanathan, to Rs. 30,000. The levy of five per cent. on cement and half per cent. on spices also need revision.

The plea for compounding the tax leviable on dealers having a turnover above Rs. 25,000 but below Rs. 50,000 has, obviously, not found favour with the Committee. It had been represented before the Committee that such compounding would simplify the procedure and facilitate easier collection of tax. The reason given was that the bulk of the sales tax was collected from less than 20 per cent. of dealers whose annual turnover exceeded Rs. 50,000 while hardly 15 per cent. of the collections came from those having a turnover below Rs. 50,000. There seems to be considerable force in this contention and the question may be reconsidered when the Bill again comes up before the Assembly

---

The British European Airways proposes to cut drastically its international fares during the coming summer season starting on 1st April. The reduction will be subject to the ratification by the International Air Transport Association (I.A.T.A.) and the U.K. Government. It will take the form of cheap night tourist rates, which, in some cases, will be 30 per cent. below the standard day tourist return rates.

RESOURCES OF WORLD BANK AND I.M.F.

DIRECTORS' PROPOSALS APPROVED

THE Governors of the International Bank for Reconstruction and Development and the International Monetary Fund have approved of the proposals submitted by the respective Executive Directors of the two institutions for increasing their resources through an enhancement in quotas of member-countries. It will be recalled that, at the annual meetings of the Bank and the Fund held in New Delhi in October last, the Governors themselves expressed a desire to raise the resources of the two institutions through this means and requested the Executive Directors to consider whether increases in the resources were necessary, and if so, to decide the extent of such increases and put forward suitable proposals. The Executive Directors' suggestions were accordingly submitted by the end of December 1958. These proposals have now been approved by the Governors of the Bank and the Fund by votes without calling a special meeting for the purpose. This means that India also has agreed to subscribe its full additional quota to the capital of the Bank and the I.M.F.

Payment of Gold Tranche

It may be noted here that the Fund's Directors recommended that 25 per cent. of the proposed increase in quotas to the Fund is payable in gold and the balance in member-countries' currencies by all members including those who in accordance with the Articles of Agreement, were not required to pay their original subscriptions. It was, however, felt that some of the members might not be in a position to make the payment of the full gold tranche immediately. In order, therefore, to facilitate such members, the Executive Directors had recommended that they could make the payment on a deferred term basis and, in any case, the full payment must be made within a period of four years. Since India has been having balance of payments difficulties, it, too, can avail itself of this facility, but it is not known what the Government of India is going to do in this matter. The question to be considered here is whether, without paying the gold part of the additional subscription in full, India will be able to hold its seat on the Executive Board of the Fund. It seems to us that it will be prudent to meet this liability in one stroke rather than in deferred instalments, in order to avoid possible complications and embarrassment.

It now rests with each member-country to ratify the increase in quotas offered to it by getting the approval of its Parliament. The increases will become effective only if countries having 75 per cent. of the present quotas do so. Members are required to notify the acceptance of the increases in their quotas by 15th September 1959. There should be no difficulty in going through these formalities within the prescribed time limit. In the U.S., President Eisenhower has already sought the consent of the Congress. The U.K. has just introduced a Bill for this purpose in the House of Commons. India, too, will be following suit shortly.

Exceptions

Under the proposals finalised by the Executive Directors and approved by the Governors, there will be a general increase of 100 per cent. in members' subscriptions to the capital of the World Bank and 50 per cent. in members' quotas in the I.M.F. In the case of Canada, West Germany and Japan, an exception has been made, in that they are required to pay more, as will be seen from the following table:

(In million U.S. dollars)

	Bank's capital		Fund's capital	
	Present quota	New quota	Present quota	New quota
Canada	325	750	300	550
W. Germany	330	1,050	330	787½
Japan	250	666	250	500

Thus, Canada's quota to the Bank's capital has been raised by 130.1/13 per cent. and to the Fund by 83⅓ per cent. In the case of Germany, the increases are 218.3/11 per cent. and 136.7/11 per cent., respectively, and for Japan they are 166.2/5 per cent. and 100 per cent., respectively. India's subscription to the World Bank's capital now amounts to $400 million, and an equal sum to the Fund. This will be raised to $800 million and $600 million respectively.

As has been pointed out in an earlier issue of this journal and unlike in the case of the Fund, the increase in the World Bank's capital does not involve any cash payment by the member countries. The object in raising its capital is to raise its contingency reserve in the form of uncalled capital, so that its capacity to raise funds through issue of bonds can be enhanced.

I.F.C. TO INVEST IN INDIA

A notable feature of several of the new private enterprises started in India in recent years is their collaboration with foreign *entrepreneurs* in the form of capital and technical know-how. Ventures like Ceat Tyres, South India Viscose, Hindustan Aluminium and Associated Cements-Vickers-Babcock and Willcox are only a few instances of such foreign private collaboration. Some Indian enterprises have met their requirements of capital from the Export-Import Banks of the U.S. and Japan. But these are all established companies. Hitherto, no private enterprise in this country has availed itself of the facilities provided by the International Finance Corporation, an affiliate of the World Bank. One of the main reasons for this was the impression among company managements that its terms were not attractive to them. Actually, Tata Chemicals, which had secured a line of credit from the Corporation, did not use it, preferring to go to the U.S. Export-Import Bank. It would, however, appear that the I.F.C's facilities are beginning to be appreciated better in this country.

When Mr. Robert L. Garner, President of the I.F.C., visited India in October last, negotiations were held with him by several industrialists of this country for the promotion of new ventures with the aid of I.F.C. Mr. Garner also had discussions with the representatives of the Government of India in order to straighten out the differences of opinion that existed between the Corporation and the Government. Following the discussions, this journal stated in October last that the prospects of the I.F.C. concluding a few deals in India during 1959 were bright.

Accordingly, we note with gratification that the I.F.C. has just completed arrangements for its first investment in India. According to a Press note issued in Washington on Monday, the I.F.C. is investing $1.5 million (equivalent to about Rs. 75 lakhs) in a new company called the Republic Forge Company Ltd., for the construction and operation of a steel forging plant. The Company is entirely owned by a group of Indian business men, with Nawab Zain Yar Jung, Trustee, Nizam of Hyderabad's Trust, as Chairman of the Board of Directors.

The forging plant, to be located near Hyderabad, is designed for two phases of growth starting at 5,000 tons of annual production increasing to 12,000 tons by 1964. Present forging capacity in India is far below the domestic need for quality steel forgings. Imports of forgings are heavy and a number of basic Indian industries are severely handicapped by an almost complete dependence on imports. Republic's productions will serve industries manufacturing trucks, internal combustion engines, automobiles, railway equipment and a variety of other engineering products. It will effect substantial foreign exchange savings.

Republic Forge has had the assistance of Bayles and Associates, management consultants of Pittsburgh, in planning the enterprise and has entered into a technical assistance agreement with the Steel Improvement and Forge Company of Cleveland, Ohio. This company will supervise the plant layout and equipment, train employees from Republic Forge, recruit supervisory personnel, as well as provide technical assistance and know-how after the plant goes into production.

The I.F.C.'s investment of $1,500,000, together with an investment of the Company, will be in dollar notes bearing interest at 7 per cent. The notes will mature between 1966 and 1971 and may be redeemed at any time. In addition, after four years, the I.F.C. will receive contingent interest payable in Indian rupees depending on the amount of earnings. The I.F.C. will also have an option to subscribe at par to ordinary shares of Republic Forge. The I.F.C. commitment is subject to completion of the necessary legal formalities.

CURB ON BANK CREDIT AGAINST GROUNDNUTS

The Reserve Bank of India has issued a directive to all Scheduled banks asking them to maintain a minimum margin of 45 per cent. of the value of stocks, in respect of advances against groundnuts. This step has been taken, with a view to correcting the "unhealthy speculative activity" in groundnuts. According to the Bank, the forward and ready prices of groundnuts have, in recent weeks, shown sharp and contra-seasonal rise, despite estimates of higher production this year. It has also been found that bank advances against groundnuts rose steeply during January 1959 and were at the highest level for many years. It would appear that speculative sentiment in the domestic market, aided, to some extent, by bank finance, has been responsible for the spurt in prices.

In order, however, that the curb on bank advances may not affect exports of groundnuts or the legitimate requirements of *vanaspati* manufacturers, the Reserve Bank has exempted from its control order credits to *vanaspati* manufacturers of those holding licences for export of groundnuts.

The margin requirement is applicable not only to fresh credits granted after the date of the directive (9th February 1959) but also to the existing advances. This means that, on the old credits, banks will have to raise the existing margins to 45 per cent. Banks have also been directed to maintain each month, commencing from March 1959, an average aggregate level of credit against groundnuts not exceeding such level of credit maintained in the corresponding month of 1957 or 1958, whichever is higher.

In the case of composite advances, the Reserve Bank has asked banks to segregate the advances against groundnuts together with the relevant credit limits from other advances and apply the above restrictions to such segregated advances. The Reserve Bank has also drawn the attention of banks that, for the effective implementation of the provisions of the directive, the parties affected by it should not be allowed facilities, which would either directly or indirectly defeat its purpose, for example, by grant of clean advances, discounting of bills, etc.

U.K.'S OVERSEA CAPITAL ISSUES

The amounts raised during 1958 in the London capital market for oversea borrowers were, as in previous post-war years, almost entirely for Commonwealth and Empire countries, according to the *Midland Bank Review* for February 1959. Within this category, the Commonwealth Governments increased their borrowing sharply, with large issues by New Zealand (nearly £20 million), Australia (about £14.75 million), the Federation of Rhodesia and Nyasaland (just over £9.5 million), and Jamaica (nearly £4 million).

This trend may be continued, the *Review* suggests, as a result of the suggestion by the Chancellor of the Exchequer in September last that development boards and other authorities in the Commonwealth and Empire be allowed direct access to the London capital market.

The percentage of all capital issues (domestic and foreign) going to Commonwealth and Empire countries has shown a steady growth, being 7 per cent. in 1955, 10.6 per cent. in 1956, 15.9 per cent. in 1957, and 19 per cent. in 1958.

PUNJAB NATIONAL BANK LTD.

In consonance with the general trend of bank profits for 1958, the Punjab National Bank Ltd. has earned a lower profit of Rs. 106.64 lakhs, as compared with Rs. 111.07 lakhs in 1957, thus reversing the upward trend noted since 1952, when the profit stood at a low of Rs. 34.12 lakhs. The provision for taxation has been reduced from Rs. 50 lakhs to Rs. 33.50 lakhs. The addition to the reserve fund has been cut from Rs. 22.50 lakhs to Rs. 17 lakhs, while the provision for bonus to staff has been stepped up from Rs. 18 lakhs to Rs. 30.75 lakhs. The interim dividend at Rs. 2.50 per share (of Rs. 25 each), same as for the previous year, had absorbed a larger sum of Rs. 12.50 lakhs, as against Rs. 8.75 lakhs. This was due to the increase in capital by the capitalisation during 1957 of Rs. 37.50 lakhs, standing to the credit of the share premium account. The Directors have now recommended a final dividend of Re. 1 per share of Rs. 10 each. The shares of the Bank of Rs. 25 each were split up during the year under review into shares of Rs. 10 each. The final dividend for 1958 is, therefore, equal to that of Rs. 2.50 per share with the face value of Rs. 25 each paid for 1957. In other words, the total distribution for the year is unchanged at 20 per cent., albeit on a higher capital. After making the final distribution, the balance left to be carried forward will be Rs. 4.91 lakhs, as against Rs. 4.52 lakhs brought in from 1957.

INDIAN OVERSEAS BANK LTD.

The net profit of the Indian Overseas Bank Ltd. for 1958 has also suffered a setback, having dropped from Rs. 32.49 lakhs to Rs. 28.60 lakhs. It is even a fraction lower than that (Rs. 28.63 lakhs) earned in 1956. The Directors have reduced the provision for taxation from Rs. 16 lakhs to Rs. 12.50 lakhs and the transfer to the reserve fund from Rs. 7.32 lakhs to Rs. 6 lakhs. The provision for bonus is higher at Rs. 4.50 lakhs, as against Rs. 3.75 lakhs. The dividend is proposed to be maintained at 10 per cent., which will absorb Rs. 5.88 lakhs, leaving to be carried forward Rs. 2.03 lakhs; the corresponding figure for 1957 was Rs. 2.32 lakhs.

AUGMENTING EXPORTS OF TEXTILES

COTTON MILLS' FEDERATION'S CALL TO THE INDUSTRY

THE Committee of the Indian Cotton Mills' Federation has called upon member-associations and, through them, individual mills, to make a supreme effort to increase exports of cotton textiles even if it involves sacrifices on their part. Some of the adverse factors affecting exports, the Committee says, still persist, but they should be regarded as constituting a challenge to the industry to put forward its best effort. In its opinion, as the second largest producer of textiles in the world, it is not beyond the capacity of the industry to meet the challenge. The Committee of the Federation has particularly appealed to the producers of fine and superfine fabrics to make every endeavour to popularise their goods in foreign countries and export them in ever-increasing quantities.

The call for a determined effort on the part of every cotton mill to maximise exports of piecegoods even at a sacrifice is not only quite timely but also pertinent. The export trade in cotton textiles has suffered a distinct setback in the past year or so. The aggregate quantity of cloth actually shipped during 1958 was no more than 600 million yards, which represents a drop of as much as 24 per cent. as compared with the shipment of 788.28 million yards in 1957. The disquieting trend is expected to persist in the current and coming years unless energetic steps designed to enhance the competitive capacity of the mills are taken in right earnest. The volume of world textile trade continues to shrink, thanks to development of indigenous industry in countries which were formerly importing cloth from outside. The competition for world markets is also becoming keener; communist countries, particularly China, have emerged as suppliers of piecegoods to countries which were normally drawing supplies from the free world. China, it is said, is underselling by 10 to 15 per cent., besides offering the inducement of deferred payment terms to importing countries. With a view to capturing the cloth markets of South East Asia, "China is reported to have offered to supply whatever qualities of piecegoods the importing countries desire at prices 10 per cent. cheaper than those quoted by other suppliers, provided orders are placed for half a million yards to be shipped in a period of six months. There is also the competition from cheap rayon goods manufactured in Japan and other countries.

Apart from these factors, some of the traditional customers of Indian textiles have taken measures to restrict imports, necessitated by balance of payments considerations. Mention may be made of the trebling of import duty on textiles by East Africa and withdrawal of cloth from open general licence by Sudan.

In view of the aforesaid developments, the question naturally arises as to how India can retain the markets already held by it and acquire new ones. This aspect has been stressed by Mr. Krishnaraj M. D. Thackersey, Vice-Chairman of the Federation, in the course of an interesting article contributed to the *Hindustan Times*. Mr. Krishnaraj points out that, in all probability, India will be able to realise the desired goal, provided the competitive power of the industry is strengthened; it is well known that production of cloth on worn-out equipment is neither efficient nor economical. He has warned that, unless India acquires the same competitive ability as its rivals and is, in fact, a leap ahead of them, it must be prepared to face the grim prospect of declining exports and diminishing external earnings.

In this connection, he observes: "The cause of export promotion will be served best by improving the competitive power of the industry. That aim can be realised only by a judicious scaling down of the cost of production. Today, the bulk of our exports consists of coarse and medium varieties of piecegoods largely because the home-grown cotton is available to the industry at relatively cheaper prices." According to Mr. Krishnaraj, it is for serious consideration whether this advantage should be frittered away by exporting cotton to textile-producing countries and thus give them an opportunity to compete with our piecegoods in the world market. "It is high time," to quote him, "a decision was taken on the question whether the national interests would not be better served by exporting the articles manufactured from cotton instead of sending out the raw material itself. Cotton accounts for about 50 to 55 per cent. of the total cost of cloth. Its prices have remained more or less steady and there is no possibility of effecting any major economies on this account. Reduction should, therefore, be attempted in the other elements of costs. Owing to restrictions on foreign exchange, the cost of stores has increased considerably."

Mr. Krishnaraj has drawn attention to the fact that, owing to the sharp increase in the cost of living, the industry is called upon to pay a heavy wage bill in the shape of an ever-increasing dearness allowance. Besides, the non-wage element consisting, among others, of provident fund, the Employees' State Insurance Scheme, leave with wages and gratuity, amounts to well over Rs. 25 per month per worker. Thus, the wage bill constitutes as much as 30 to 32 per cent. of the manufacturing charges. While on this, he says:

"It is nobody's intention that labour should be mulcted of its gains, but the incidence of the wage cost should be reduced by relating wages to productivity and by encouraging mills to go all out to equip themselves with up-to-date machinery. Rationalisation and modernisation thus offer an effective solution to the problem of costs as well as of exports. I have no doubt with the aid of modern machinery the industry will be able to hold its own in the world market and, in the years to come, achieve the export target prescribed for it by the Planning Commission."

This is certainly a very correct assessment of the whole position concerning the cotton textile industry. While the benefits accruing from modernisation are of long-term nature, the immediate task is how to augment exports to certain "conventional" buying countries such as Sudan which cannot purchase the same due to the import policies of the respective countries and not due to price and quality considerations. In such circumstances naturally, whatever incentives are granted to exporters are of no avail. Exports to these destinations could be augmented, as is rightly stressed by some traders, if the Government of India enters into agreements with such countries and makes arrangements for the exchange facility beneficial to both the countries. It may be noted here that a few communist countries have signed barter agreements with Sudan under which they export textiles in exchange for cotton. The U.K. and France are also taking initiative in a similar way.

NOVEL TEXTILE SPINNING FRAME

The Whitin Machine Works of Massachusetts, U.S.A., have developed what is claimed to be a revolutionary new type of spinning frame. Called the Piedmont spinning frame, the new streamlined machine incorporates the first basic change in spinning frame drive mechanisms in 100 years. For the past 100 years, spinning frames have been driven by long tapes or ropes actuated by 6-inch to 10-inch diameter drums running the length of the machines. The Piedmont spinning frame has neither tapes nor drums. Hidden shafts run along either side of the machine, and power is transmitted by individual driving belts. It is said that the new drive will drastically reduce costly shut-down time for tape repairs. The frame is expected to set the pace for spinning for many years. The frame, the inventors claim, "offers higher product of better quality yarn, either cotton or synthetic fibres, at lower cost with important mill space savings." It is almost 50 feet long but only 27 inches wide. Its slim silhouette results in a saving of 25 to 35 per cent. in floor space over conventional spinning frames. The Piedmont is available up to 312 individual spinning spindles. With all spindles filled, the machine holds as much as 3,400 miles of yarn ready for weaving or knitting.

China is now probably the world's largest importer of wool tops with an increase of 12,178,000 lbs. within the last two years, according to the latest figures in *Wool Intelligence*. China's receipts of raw wool also rose very sharply from 2,668,000 lbs. in 1956 to 32,750,000 lbs. in 1958. Until 1957, China's imports consisted almost entirely of scoured wool, chiefly from Australia, but, in 1958, apparent receipts of greasy wool, mainly from New Zealand, almost equalled those of scoured wool. Imports of wool cloth are extremely small, but much larger quantities are exported from China to the Soviet Union. China's production of wool cloth rose sharply in the past six years, from 4.63 million linear yards in 1952 to 25.80 million linear yards (provisional) in 1958.

The importance of sending study teams to foreign countries to investigate markets for Indian wool products was stressed by the Export Sub-Committee of the Wool Development Council when it met at Jaipur on the 3rd inst. The Committee urged that the representatives of the hosiery and organised mill sector should visit Poland and other East European countries, as well as W. Germany and the Middle East, and that the carpet makers should investigate markets in Europe, Russia, Canada and the U.S. It recommended four steps to encourage exports. These cover supply of raw materials such as dyes and chemicals; study of foreign markets; publicity work; and appointment of publicity agents outside India.

"FREE" TRADING IN COTTON YARNS

SPINNERS CUT SELLING RATES

From A Special Correspondent

MANCHESTER, *3rd February*

MANCHESTER LETTER

AFTER months of speculation concerning the outcome of the enquiry into the system of establishing minimum prices for cotton yarn in Lancashire, the scheme officially came to an end this week after operating for nearly ten years. The decision followed the formal declaration of its dissolution by the Restrictive Practices Court, which had already described it as "contrary to the public interest." Few millowners awaited this formal verdict before taking action to adjust their price levels in line with the first "free" trading day in cotton yarns for more than 20 years. Prior to the now abandoned scheme, wartime control had been in operation and, before that, "gentlemen's agreements" had been the first methods adopted to curb internal price competition in the mid-1930's.

Developments which succeeded the freeing of cotton yarn prices were largely as had been expected within the industry. The first repercussions were reductions in selling rates ranging from a minimum of about 2d. per lb. to larger concessions in the finer qualities, with some exceptionally cut rates when individual spinners felt the need for securing orders at all costs.

Signs of weakness were not lacking in certain directions and, after the years in which solidarity in the spinning section had for so long been a watchword, it was disappointing to note that a few mills were so keen to regain an order list that they almost went begging to their customers for business. In some cases also, it was reported that firms were ready to accept the lower level of values for their current contracts, thus further undercutting the market.

Discussions on Prices

Discussions took place at the end of last week between leading groups in the industry to establish at least a preliminary basis on which to assess prices. There were, however, instances when some of the smaller firms took the law into their own hands and made sharp cuts in quotations in order to secure business. One Oldham company, which has for several months been running on short-time with a very depleted order book, immediately notified customers that prices of coarse and medium yarns were being cut by from 2d. to 4½d. per lb. The same firm indicated its ability to supply yarn from stock and offered a reduced number of qualities.

Over the industry as a whole, price levels tended to be chaotic, as salesmen endeavoured to discover the range of quotations being offered by their competitors. Buyers in the meantime tested prices on a free scale, the urgency of the situation being emphasised by the fact that many distributors in the home trade are now distinctly short of stocks, having avoided commitments for many months past awaiting this day. They are now anxious to replenish their shelves but equally determined to secure goods at the best possible price.

Spinners and manufacturers meanwhile with stocks of processed goods at hand and short order lists are in no position to do much bargaining. The possibility that prices may ease further as rivalry for orders increases cannot be ruled out.

1958 Prices

At the present moment when the attention of virtually all traders in the market is centred on price trends, it is worth considering the movement of values during the past twelve months when falling prices had their usual adverse effect on the turnover, in 1957, trading in cotton goods was aided by a general stability in the level of selling rates which was lacking last year. Declining values, ever a discouraging factor when buyers want to look ahead, were chiefly responsible for the slow rate of demand, irrespective of the uncertainty arising from foreign imports and the future of yarn pricing arrangements.

The official Board of Trade index, on which comparative price levels can be gauged, is now based on 1954 averages. The following table shows the movement in values last year, calculated on 100 being the 1954 level:

	Cotton yarn			Spun rayon yarn	Cotton cloth	Rayon fabric
	All types	American type	Egyptian type			
1958						
January ..	98.0	98.5	97.1	101.2	98.3	100.6
February ..	97.2	97.2	97.1	101.2	97.5	100.6
March ..	95.9	95.7	96.8	100.7	96.5	100.6
April ..	94.2	94.9	92.9	100.7	96.0	100.6
May ..	94.3	95.1	92.8	100.7	95.6	100.6
June ..	94.2	95.2	92.4	100.7	95.5	100.6
July ..	94.4	95.6	92.3	100.7	95.1	100.6
August ..	93.4	94.8	90.8	96.5	94.7	100.6
September ..	92.2	93.8	89.2	94.4	93.8	100.6
October ..	91.8	93.1	89.3	94.4	93.5	100.6
November ..	90.9	92.7	87.7	94.4	93.0	100.6
December ..	89.3	91.9	84.7	94.4	92.5	100.6

Weakness in cotton yarn prices persisted, especially in the finer qualities, and a further drop has occurred since the turn of the year. Internal competition between rayon spinners was intensified after the abandonment of the recommended price scheme last July and is portrayed in the lowering of the index after a long period of stability. Rayon fabric prices are based on filament yarn so that the absence of movement in this section is a notable feature.

Financial Affairs

Twelve months ago, it was noted that the number of bankruptcies, deeds of arrangement, liquidations and receiverships affecting cotton textile firms had declined perceptibly to 57 during 1957, as compared with around 100 cases which had been reported in the three previous years. Despite the adverse circumstances which affected the industry last year, the number of such difficulties was only 54. As compared with 1957, however, there were three bankruptcies last year and three deeds of arrangement, whereas, in the previous twelve months, no cases of this kind were recorded. Firms of merchants and agents were involved in all instances in 1958. One receiver was appointed, affecting a manufacturing firm, as compared with two receiverships concerning merchants and agents in 1957 and five in 1956. Compulsory liquidations last year numbered two, affecting one merchant and agent firm and one miscellaneous trader; nine instances were reported of creditors' voluntary liquidations, involving one manufacturing firm, one finisher, five merchants and agents and two miscellaneous traders.

The number of members' voluntary liquidations declined to 36, as against 50 in 1957 and 69 in 1956. This decision, which is usually taken after declarations of solvency and foreshadows reconstruction, amalgamation or the intention to give up business, all creditors being paid in full, was taken on behalf of four spinning firms, seven manufacturers, two spinners and weavers, two finishers, 15 merchants and agents and six miscellaneous traders.

The number of new companies registered in cotton textiles showed a sharp increase at 124, as compared with 80 in 1957 and 85 in 1956. The nominal capital involved was £1,083,602, as against £870,800 in the previous year and £498,900 in 1956. Again merchants and agents accounted for most of the registrations, numbering 87. The rest included two spinning firms, 11 manufacturers, two spinners and manufacturers, one doubler, six finishers and 15 miscellaneous traders.

Plant Exports Drop

Although the decline in shipments of textile machinery from the United Kingdom last year was not as substantial as that which occurred in exports of cotton goods, the quantity sent abroad dwindled to a volume lower than in most peace-time years over the past half-century. The shipments of 56,239 tons valued at £39,604,666 compared with 69,808 tons worth £43,146,921 in the previous year.

Mainly responsible for the drop in exports were the much smaller takings from India which, during the past three years, have declined from 403,974 cwt. in 1956 to 266,652 cwt. in 1957 and to 123,221 cwt. last year. Among those countries which took larger supplies were Poland with 41,432 cwt. and Egypt with 46,471 cwt. A revival in business with the South American Republics was also recorded, Chile taking 21,217 cwt., Brazil 30,631 cwt. and the Argentine 16,632 cwt. Other large consumers included Australia 93,552 cwt., Western Germany 50,636 cwt. and France 44,597 cwt.

Shipments of all varieties of textile plant were reduced as compared with 1957, the quantity used for making synthetic fibres being halved at 10,490 cwt. Machines for preparatory processes accounted for 117,573 cwt., as against 184,427 cwt. and those for spinning 92,350 cwt., as against 121,644 cwt. Shipments of looms and other weaving machinery aggregated 170,769 cwt., as against 218,994 cwt.

New Plan for Cotton

The attitude of the cotton trade unions towards a document on the possible future development of the Lancashire cotton industry, drawn up by the Development Committee of the Cotton Board, has been examined in Manchester by a special meeting of the Legislative Council of the United Textile Factory Workers' Association. Other organisations in the industry will also be discussing it shortly.

The Legislative Council, representing 210,000 Lancashire mill workers, spent two hours examining the document. Afterwards, they announced that "certain decisions" defining their attitude towards the document had been reached and these would be communicated to the Cotton Board. Details of the decisions, like the document itself, will not be disclosed for the present.

The document is said to be mainly statistical. Discussions on it were arranged before the Restrictive Practices Court's ruling on the Yarn Spinners' price agreement became known.

Compensation Plea

Owners of Lancashire's 400 cotton spinning and weaving mills and leaders of the industry's 210,000 operatives will appear this week before the Industrial Disputes Tribunal, in London, presenting their arguments for and against compensation payments. The employers have twice rejected applications by the trade unions for the setting up of a compensation scheme in the industry. Unions have suggested that millowners should pay a sum equal to one quarter of one per cent. of the industry's wages bill—equivalent to about £250,000 a year—into a central pool from which compensation could be paid to workers who lose their jobs when mills close. Payment would be according to length of service.

Sudan Cotton Talks

A two-man Lancashire textile delegation which will fly to the Sudan later this month for talks on raw cotton marketing methods and the possibility of bringing prices of Sudan raw cotton more into line with comparable types, met industry leaders at Cotton Board headquarters in Manchester last week. Together they examined the industry's attitude towards Sudanese raw cotton values and the recent move by the Sudan Gezira Board to scrap present reserve prices and introduce new arrangements.

The Lancashire delegation will consist of Mr. H. Tonge, a Director of the Lancashire Cotton Corporation, and Mr. E. R. Orme, President of the Liverpool Cotton Association. They expect to arrive in the Sudan around 20th February.

The visit is being made at the invitation of the Sudan Government and follows recent talks in Manchester and Liverpool with representatives of the Sudan Gezira Board when the Sudan's attitude towards barter deals was among the subjects discussed.—*All Rights Reserved.*

A "wool bank" to provide samples for research work is to be established by the South African Wool Textile Research Institute at Grahamstown. Several projects now being undertaken at the Institute emphasise an old problem for wool scientists—that of obtaining wool samples of known type and characteristics—and it has been decided to build up supplies of whole fleeces weighing at least four pounds. The wool, it is said, will be kept in nitrogen-rich air in sealed tins in order to avoid changes. In addition to a full range of normal wools, special efforts will be made to obtain deviating wools which are frequently of even greater value in research work. For each sample, it is hoped to have general details on such aspects as age and sex of the animal, environment during the growing period, fibre, length and diameter, crimps per inch, and the quantity and properties of the grease. Analytical results obtained during the course of a study in which such wools are used will be added gradually, so that complete "case history" will exist for each sample.

LIBERALISING COTTON IMPORTS

CONSULTATIVE BOARD'S RECOMMENDATIONS

SOME of the more pressing problems of the cotton trade and industry were reviewed and remedies suggested by the Cotton Textiles Consultative Board at its meeting held in Bombay on the 5th inst. A question that received special attention at the meeting was that of liberalising imports.

Due to the restricted import policy, mills in this country have of late been finding it difficult to procure adequate supplies of long-staple cotton. So far in the season, import allocation for only 320,000 bales (of 392 lbs. each) comprising 75,000 bales of stapling 1.3/16" and above and 245,000 bales of staple length 1.1/16" and above, have been issued. Actual arrivals, as the following table indicates, which include quantity licensed in the previous season, were lower at 104,828 bales, as against 143,731 bales in the same period last season.

Imports of cotton into India

(In bales of 392 lbs.)

(From 1st September to 24th January)

	1958–59	1957–58
U.S.A.	5,345	43,185
Sudan	23,363	28,369
Egyptians	27,664	35,558
East-African	47,385	36,619
Pakistan	6	..
Others	1,065	..
Total ..	104,828	143,731

Stocks of foreign cotton with mills at the end of November 1958 were as low as 97,953 bales, as compared with 190,170 bales at the end of November 1957.

This tight supply position of foreign cotton seems to have influenced the Board in its decisions. It has recommended liberalisation of imports, with a view to making available larger supplies and bringing down the price of staple varieties of Indian cotton. Since imports of 320,000 bales, as noted above, have already been permitted, this means that the Board favours imports of a larger quantity.

Exports

While such is the position in regard to imports, the export front continues to present a discouraging picture. Progress of cotton exports has been very slow. Despite the release of a large quota of as much as 500,000 bales, exports from 1st September 1958 to 24th January 1959 were no higher than 159,442 bales. Japan topped the list of buyers, accounting for 101,281 bales, followed by Hong Kong, the Continent of Europe and the U.K., accounting for 28,909 bales, 13,751 bales and 5,557 bales, respectively. The following table gives the destination-wise breakdown of exports:

Exports of cotton from India

(In bales of 392 lbs.)

(From 1st September to 24th January)

	1958–59	1957–58
U.K.	5,557	2,354
Western Europe	13,791	1,963
Hong Kong	28,909	2,185
China	6,886	..
Japan	101,281	24,915
U.S.A.	1,366	1,875
Others	1,652	871
Total ..	159,442	34,163

It is common knowledge that, the world textile recession, the currency difficulties of importing countries, keen competition from countries such as Pakistan, are the main factors impeding exports.

It is difficult to see how the conclusion of barter deals, as is suggested by some, can help promote exports. That will, at best, help countries having foreign exchange difficulties to make more purchases of Indian cotton. But India itself badly needs foreign exchange and cannot afford to export its production on credit or for goods which it can do without. Nor is the surplus of cotton in India is so burdensome as to make such desperate efforts to reduce it. If India has decided to export 500,000 bales, it is mainly because of its urgent need of foreign exchange. Any suggestion which does not serve this need is, therefore, not worth consideration.

Apart from the hard times through which cotton textile industry has been passing throughout the world for nearly two years now, price-wise, Indian cotton is not competitive at present. The ruling price of exportable varieties of our cotton are well above those for comparable Pakistan styles. Till this price disparity disappears, no amount of sales campaign or sending of delegations abroad to sell Indian cotton will be of much help.

The cancellation of the unutilised balances of cotton export licence to the U.K. by China is expected to make British buyers turn to alternative markets for covering their requirements. But relative cheapness of prices will be an important consideration which will influence in the choice of the market.

COTTON ANNUAL

The problems of the cotton trade and industry are discussed by leading experts in the field in the well got-up publication entitled *Cotton and Textile Annual* 1958 (Editor: R. V. Murthy, published by Cotton and Textile Publications, Kermani Building, Sir P. M. Road, Bombay 1. Pages 109. Price: Rs. 8). The annual comprises two sections, one dealing with cotton and the other with textiles. In the former, there are some interesting articles covering the various aspects of raw cotton trade. Particular mention may be made of an article entitled "Are Futures Markets Necessary" by Mr. William K. Love, Jr., President of the New York Cotton Exchange. Mr. Madanmohan Ruia, President of the East India Cotton Association, points out the benefits of futures market and makes out a convincing case for its continuance. Some constructive suggestions for improving the hedge contract have been made by Mr. R. S. Mani. The progress made in cotton production is highlighted by Dr. M. S. Randhawa, President, Indian Central Cotton Committee. Mr. Suresh Kilachand underlines the need for a dynamic cotton export policy and Mr. Manilal Patel urges measures to ensure adequate supplies of foreign cotton to mills. An interesting article on international sales promotion for cotton by Mr. Ed Lipscomb, Director, Sales Promotion Division, National Cotton Council of America, details, the working of sales promotion programmes adopted in the U.S. and elsewhere.

The textile section contains contributions from such prominent industrialists as Ramnath Podar, G. D. Somani, and Radhakrishna Ruia. The textile situation in the U.S.A. is reviewed by Mr. Halbert Jones, President of the American Cotton Manufacturers' Institute. The textile industry in China is the subject of an interesting article by Mr. Chen Wei-Chi. There are also a few articles of general commercial interest such as the one on Indo-American economic relations and another on Indo-Egyptian trade relations. The annual has a statistical section which gives cotton and textile statistics separately. A unique feature of the publication is that it contains a number of humorous cartoons, which, while caricaturing the plight of the cotton trade and industry, throw some interesting sidelights on several aspects of trade in cotton and textiles.

NEW TYPE OF COTTON GIN

A new "flight-bar" roller gin stand that separates cotton seed from lint faster than conventional roller or saw gins, and does not damage the fibre, has been developed by the engineers of the U.S. Department of Agriculture. In tests, which have been carried out, the new gin has turned out, it is claimed, *nearly 20 pounds of lint cotton per inch of* roller per hour with extra long-staple cotton. This compares with present commercial roller gin production which average about 2½ pounds. The capacity of the new gin on the relatively shorter-staple upland cotton approximated 13 pounds per inch of roller per hour. This compares with barely more than 2 pounds capacity for this cotton in a commercial roller gin and about 9 to 10 pounds capacity in a modern saw gin. The new principle used in the machine—on which a public patent has been applied for—is a flight-bar attachment which replaces the vibrating knife used in conventional roller gins. Two endless chains to which square steel bars as long as the ginning roller are fastened, slat-like at 2-inch intervals, comprise the flight-bar attachment. As seed cotton is fed on to the gin from above, the lint, or fibre, adheres to the ginning roller, which is of conventional design. A stationary knife set close and parallel to the roller holds back the seeds as the lint is pulled by the roller. The chains, operated by sprockets, pull the flight bars across the stationary knife, thereby removing the seed as the fibre is pulled between the knife and the roller. This action serves, as does the conventional but less efficient vibrating knife, as a means of removing seeds from the lint. Doffing the lint from the roller, by rotary brush, or by a blast of air or steam, completes the ginning operation.

INTERNATIONAL SUGAR SITUATION

EMERGENCE OF A MORE BURDENSOME SURPLUS LIKELY

THE International Sugar Council has fixed, as was stated briefly in these columns last week, the minimum net requirements of free sugar market for 1959 at 5,405,000 metric tons (raw value). The basis on which the estimate is made is not revealed in the *communique* issued by the Council in London at the end of its two-day meeting on 29th January. Whether or not the estimate is reasonable is difficult to say, for the world sugar supply position as it stands at present is uncertain; the Council itself admits this point. At any rate, the estimate of 5,405,000 tons is markedly lower as compared with not only the Council's revised (on 22nd April 1958) estimate of 5,610,000 tons for 1958 but also the estimate of 5,760,000 tons for that year prepared by the Statistical and Technical Committee of the United Nations Sugar Conference held in Geneva on 22nd September 1958.

The adoption of the above estimate and the Council's decision to fix the provisional export quotas to the free market at the level of the basic export tonnages established under the 1958 Agreement would appear to have imparted further weakness to the world sugar markets. Spot Cuban raw sugar at New York has come down from 3.21 cents per lb. before the decisions were announced to 3.12 cents at the time of writing; the rate prevailing a month ago was 3.67 cents. Similarly, the price of sugar in London has receded from £29¾ per ton to £28½; the quotation a month ago was £32⅞. Now that the New York market price stands at such a level, it would be worthwhile watching the action of the Sugar Council. Under the new Sugar Agreement, the Council is required immediately to reduce the basic export tonnages of member-countries by 2½ per cent. if the price averages less than 3.25 cents for 17 consecutive market days and is actually below it on 12 of these days. Thereafter, the Council must meet within seven days. Any failure on the part of the Council to agree on the action to be taken will lead to a cut in quotas by a total of 5 per cent., provided they are not less than 90 per cent. of this basic figure, unless the prevailing price is below 3.15 cents, in which case a further reduction in quotas may be made within the limits prescribed by Article 23.

Viewed thus, the trend of world sugar prices in future will be influenced, to a great extent, by the size of quota releases made by the Council and the degree of balance the market believes will result. It is needless to mention here that the health of the world sugar markets depends largely on the measure of realism which is brought to the estimates of outlets. This aspect has been well stressed by Messrs. C. Czarnikow Ltd., London, a reputed international firm in sugar trade, in the course of a review giving the trends in the world sugar trade during 1958 and prospects for 1959.

According to the review in past years, the available export surplus of a number of countries not party to the Sugar Agreement formed quite a substantial part of the world open market supply. While the trade made its own estimates of this tonnage, it was not the invariable practice of the Council to include such an estimate in its published findings. Export quotas were fixed and the gap between Agreement supplies and estimated outlets *plus*, of course, a reasonable margin of slack was assumed to be the measure of non-member sugar available and capable of being placed to final destinations. Now that Peru has ratified the Agreement and Brazil and Denmark have notified their intention of joining the estimate of overall supplies should be a much more simple matter. Last year, the three new members together accounted for something in the nature of 1.3 million tons of free market supply.

There are three countries outside the Sugar Agreement which are exporters—India, East Germany and Argentina. The Government of India has permitted 100,000 tons of sugar for export. It is highly doubtful whether this quota will, in fact, be utilised, what with the wide disparity between Indian and world prices. Argentina is expected to export about 100,000 tons during 1959.

Although, in the appraisal of the sugar position, the political situation in Cuba no longer seems to be an imponderable factor, there still appears to be a division of opinion as to what sugar tonnage will be produced this year. Alluding to this, Messrs. C. Czarnikow Ltd. observe:

"Prior to the overthrow of the old regime, the decreed crop was 5.9 million Spanish tons, with the period within which crop operations must start set at 2nd January-15th February. There are some people with close Cuban connections who believe that the output will be one million tons short of that total; others are equally confident that the full quantity will be made. At the moment, the market is showing no concern about Cuba's ability to make an adequate crop and, in any case, it is thought too early to form any close ideas."

The world sugar production in the current year is expected to be higher than in 1958. The preliminary estimate places the total output at 50.6 million tons (raw value), representing a rise of over 3.0 million tons as compared with 1958. The addition is likely to be mainly centred in the European Continent and Brazil. The following table gives the estimates of the 1958-59 sugar crop in some of the most important producing countries as compared with the partially revised estimate for 1957-58 and the actual for 1956-57 and 1955-56:

(In thousand metric tons—raw value)

Countries	1958-59 (estimated)	1957-58 (partly estimated)	1956-57	1955-56
Cane sugar—				
India	6,050*	6,471	6,861	6,079
Brazil	2,853	2,621	2,213	2,079
Australia	1,345	1,253	1,187	1,135
Mexico	1,250	1,232	1,138	803
Philippines ..	1,151	1,207	1,020	1,088
Puerto Rico ..	1,027	834	884	1,028
South Africa ..	992	857	758	838
Taiwan (Formosa) ..	855	951	889	805
Indonesia	800	852	920	832
Mauritius	530	550	562	525
Hawaii	504	477	501	512
Beet sugar—				
U.S.S.R.	5,400	4,820	4,700	3,720
U.S.	1,964	1,955	1,757	1,544
West Germany ..	1,658	1,581	1,139	1,277
France	1,520	1,670	1,380	1,506
Poland	1,100	1,159	848	1,072
Italy	995	853	990	1,183
East Germany ..	785	850	553	702
Czechoslovakia ..	785	866	649	718
United Kingdom ..	700	606	750	674

* Based on the all-India first estimate of sugarcane.

The current year's *anticipated* world sugar production as already stated, is higher by 3.0 million tons at 50.6 million tons. The percentage increase comes to nearly 6. It is probable that a continued elevation of living standards may be witnessed in the so-called "under-consumption" countries but it may as Messrs. Czarnikow Ltd. say, be open to question whether the recent rate of increase in *per capita* sugar consumption in the more developed areas will be maintained. Assuming that the advance in world consumption continues to be at the average annual rate maintained in the past few years, namely, 5 per cent., it looks as though the world will be faced with the problem of disposing of a more burdensome sugar surplus than in previous years.

EUROPEAN COAL CRISIS

WEST GERMANY TO IMPOSE TARIFF RESTRICTIONS

THE coal industry in Western Europe is passing through a difficult time. The Council of Ministers of the European Coal and Steel Community (E.C.S.C.) met in Luxemburg on the 5th inst. to consider the growing pressure on the High Authority to declare a "State of manifest crisis" in the industry, but its decision on the subject is not known up to the time of writing. There is, however, a widespread feeling that the crisis-issue should no longer be side-tracked. An indication of the extent of crisis is provided by West Germany's decision to levy an import duty at the rate of DM. 20 (about £1.14s.) per ton on coal imported from outside the E.C.S.C., with a view to discouraging its imports of coal, particularly from the U.S., the largest supplier of coal to West Germany. This duty is, however, not applicable to certain quantities of coal to be imported this year to the details of which we shall refer presently. Belgium has gone a step further to propose a closure of its frontier to a fellow member-country of the E.C.S.C., namely, West Germany, which has been underselling local coal in Belgian markets.

The present state of affairs in the West European coal industry is due to a fall in demand, consequent on the slackening in industrial activity, the increased use of other forms of energy including oil and large stocks with consumers, large imports contracted for on a long-term basis from the U.S.—these imports are estimated at 31 million tons during 1958—and a stabilisation of coal output. The combination of these factors has led to a rapid rise in pithead stocks; these were estimated at 42 million tons at the end of October last—Belgium: 6.6 million tons; France: 7.6 million tons; Federal Republic of Germany: 8.3 million tons; Netherlands: 850,000 tons; Saar: 900,000 tons and the U.K. 17.7 million tons. They are said to have risen in the subsequent months of 1958 and are expected to rise further in the first quarter of 1959. About 80 to 90 per cent. of the stocks consist of steam raising qualities. About half of the coal imported from the U.S. are of special qualities used for coke-faction.

The imposition of an import duty of DM. 20 per ton on coal coming from outside the E.C.S.C., by West German Government, as mentioned at the outset, will be applicable for 1959 in the first instance. It was, however, first decided to exempt 4.25 million tons of imported coal from this levy. This quantity represents half the average annual coal imports of West Germany from each country concerned during the period 1950-58. This would mean a duty-free import of 411,000 tons from Britain during the current year—twice as much as was imported in 1958. The U.S., from which more than 11 million tons were imported last year and 16 million tons in 1957, would get a duty-free allowance of 3.5 million tons. Britain no doubt gets a larger import quota, in view of the heavy imports from that country during 1953 to 1956. The question is, however, being discussed, whether Britain's treaty of association with the E.C.S.C. permits Germany to place a tariff on U.K. coal, because this treaty exempted Britain from the ban on the issue of further licences imposed in last.

The U.S., however, lodged a protest against the West German proposal, as it would be the most affected by the step. However, as Bonn had chosen to levy a tariff rather than an embargo on imports of U.S. coal, the Americans cannot take any legal action against Germany under the G.A.T.T. rules. Following the American protest and on the advice of the coal and Steel High Authority, the duty-free import quota was subsequently raised from 4.25 million tons to 5 million tons. The basis of calculation of duty-free quotas was also revised from 50 per cent. to 36 per cent. of the average annual imports during 1956-58. This will mean a duty-free quota for the U.S. of 4.6 million tons and for Britain of a little over 200,000 tons, that is, more than half of that fixed under the original proposal. The High Authority of the E.C.S.C. would appear to have approved of West German proposal to include Britain also in the list of countries which have to pay the specified import duty. The President of the High Authority for Coal and Steel is said to have cautioned about making any discrimination against the U.S., as the latter is an important market for European steel and reprisals would be a severe blow to the export trade in steel and steel products from the E.C.S.C.

(*Continued on page* 252)

NEW MEASURES TO STABILISE GUNNY MARKET

PART OF LOOMS SEALED—FLOOR PRICES REMOVED

ALL speculation about the possible measures to restore stability to the gunny market and to give further support to raw jute has been set at rest with the announcement on the 6th inst. by the Indian Jute Mills' Association of its decision to reduce production by sealing a part of the member-mills' looms and to ask mills to increase further their purchases of the fibre. The I.J.M.A. has also withdrawn the minimum prices for jute goods fixed by it a year ago. These decisions were taken after a series of meetings of the Association and also between the representatives of the I.J.M.A. and the Government of India.

The I.J.M.A.'s decision to withdraw the minimum prices on jute goods took immediate effect. These prices were fixed on 26th February 1958 at Rs. 100 per 100 bags for B. twills, Rs. 39.50 per 100 yards for 40 in. x 10 oz. hessian and Rs. 29.75 per 100 yards for 40 in. x 7½ oz. The impelling reason which had led to the fixation of the "floor" prices were that, for several weeks preceding this step, gunny prices had been falling heavily, that, in the week immediately preceding, the fall had been greatly accelerated and that the decline was quite unwarranted by either the prevailing conditions or the statistical position of jute goods. The slump in prices had been attributed to speculative activity in the *fatka* market. How far this step was effective in stabilising the gunny market, let alone in bringing about a recovery in prices, is so obvious now that it does not need any recounting; suffice it to say that the I.J.M.A. decision was honoured more in breach than in observance. Mills had been selling gunnies at below these prices and the Government of India, which gave its approval to the decision to fix "floor" prices, itself had been buying at prices below the minimum. Notwithstanding this, the I.J.M.A. has been reiterating its decision to maintain the minimum prices. Its latest decision to remove the "floors" and allow prices to take their natural course influenced by the demand and supply position shows that, at long last, it must have realised that it was futile to stick to an untenable position.

The second decision of the I.J.M.A. to seal a further 1½ per cent. of the looms of its member-mills, thus increasing the proportion of the sealed looms to 14 per cent. of the total complement, will come into force on 2nd March 1959. It is stated that a further proportion of 1 per cent. of the looms would be sealed later, should the situation warrant it. This limited regulation of production is designed to restore stability to the gunny market by reducing the excessive stocks of heavy goods. Accordingly, the cut in production implicit in the closure of a part of the looms will be confined to sacking. It may be noted that the statistical position of hessian is healthier and that hessian has been fetching good prices, above the erstwhile minimum prices.

The closure of 1½ per cent. of the looms amounts to a cut of 1,500 tons in the monthly output of mills (on the basis of the monthly average production during 1958). In view of the fact that stocks of heavy goods at the end of December last aggregated 80,400 tons, as against 38,400 tons a year before, the proposed restriction on output will not make any significant contribution to relieving the industry of this burdensome surplus, unless there is simultaneously an expansion in demand on a sizable scale. The I.J.M.A. is also said to have decided to "freeze" the balance of accumulated loom hours of jute mills under the working time agreement, with effect from the 14th inst., as an additional measure to correct the present depressed conditions in the trade and industry. It is, however, not known to what extent this helps improve the position. In any case, it is only a negative factor.

The last occasion, when the experiment of unsealing and sealing the jute industry's loomage to correct the production trends was tried, was in 1956. In January of that year, the I.J.M.A. unsealed 2½ per cent. of the loomage. This was followed by a further release of 5 per cent. in February 1956, thus reducing the sealed complement to 5 per cent. In the months that followed, the Industry's stocks of finished goods showed a substantial and progressive increase and it became evident that the prevailing level of production was in excess of the immediate world demand. In the circumstances, the I.J.M.A. was obliged to reverse its earlier step and in July 1956 2½ per cent. of the looms was resealed. This did not prove effective to arrest the upward trend in mills' stocks of gunnies. The situation was also aggregated by a shortage of raw jute supplies, due to transport difficulties. It was, therefore, thought prudent to reseal another 5 per cent. of the looms, thus restoring the complement of the sealed looms back to 12½ per cent. which had earlier been considered as norm. This was done in September 1956.

The third measure taken by the I.J.M.A. is to recommend to its members to increase further their purchases of raw jute to five months' consumption. At present, mills have stocks equivalent to four months' requirements. Till a few months ago, mills used to keep a stock of 6 weeks' or at the most two months' requirements of raw jute. In September last, however, they were advised to raise this quantity to three months' consumption, with a view to arresting the rapid decline in raw jute prices. Four months later, that is, in January 1959, the I.J.M.A. asked the member-mills to step up their purchases to four months' requirements. A further increase to five months' stocks, as has been suggested now, would mean a strain on the mills' finances, which are already locked up to a large extent in stocks of gunnies. It is stated that the necessary funds will be made available by the Government of India for this purpose, but the terms on which the Government will provide funds are not known. It is also reported that mills have agreed to comply with this request on the understanding that there will be no obligation on their part to keep these stocks when the price of Assam Bottoms, delivered at mills exceeded Rs. 23.50 per maund and that the position in respect of raw jute will be reviewed again at the end of April next. The latest price of Assam Bottom is Rs. 20.75 per maund and the chances of this rate rising to Rs. 23.50 per maund appear to be remote.

The removal of "floor" prices for jute goods by the I.J.M.A. was followed by the withdrawal of the margin system imposed on futures contract in jute goods and raw jute by the East India Jute and Hessian Exchange, under the auspices of which futures trading is being conducted. This, however, took effect from the 13th inst. only, that is, only a week after the abolition of minimum prices on jute goods. The margin system was first imposed by the Exchange on 29th September 1958 and the margins were subsequently enhanced on 20th December and again on 30th December. The Board of the E.I.J.H. Exchange is of the view that the situation which necessitated the imposition of margins no longer exists.

The immediate reaction of the gunny and raw jute markets to the aforesaid measures was a further slump in prices of jute goods, as will be seen from the following table:

	Latest 9-2-1959	*As on* 4-2-1959
	Rs.	Rs.
B. Twills (per 100 bags) ...	88.90	91.40
Hessian 40" x 10 oz. (per 100 yards)	39.35	40.30
Assam Bottoms	20.75	20.75

Expressing concern over the present situation in raw jute trade the Jute Balers' Association, Calcutta, says, in the course of a statement that the State Trading Corporation, through which the Government intends to export raw jute, has restricted itself to allowing export sales of £88 for export firsts, £77 for export lightnings and £63 for export hearts, all per ton c.i.f., for Continental ports, but business is not possible at these prices. It considers that the I.J.M.A.'s decision to close 1½ per cent. of the looms and to withdraw the minimum prices for jute goods, which has resulted in a deterioration in raw jute prices will jeopardise the interests of jute growers. It adds that mills have been making only limited purchases of raw jute and these may decrease further. In the circumstances, the only remedy, in the opinion of the Jute Balers' Association, lies in allowing free export of raw jute immediately through normal trade channels. Meanwhile, the Union Commerce and Industry Minister, Mr. Lal Bahadur Shastri, has assured the Bihar jute growers that the Government of India will announce its jute policy next week.

SPICES IN S.-E. ASIA

E.C.A.F.E. URGES INCREASE IN PRODUCTION

THE South-east Asian countries and India have long had a virtual monopoly in spices. Cambodia, Ceylon, Federation of Malaya, Hongkong, India, Indonesia, Sarawak, Singapore and Thailand are some of the countries, in the foreign trade of which the major items of spices occupy an important position. This monopolistic position, however, has come to be assailed by synthetics and, with continued research on this subject, the threat from synthetics and substitutes may increase. Viewed against this background, it is unfortunate that production and marketing methods of spices still remain backward. It is not surprising, therefore, that the trade in spices and spice products of these countries came in for discussion, for the first time, at a meeting of the Committee on Trade of the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.) held at Bangkok from 23rd January to 2nd February 1959.

For this discussion, the secretariat of the E.C.A.F.E. had prepared a report on marketing and trade in spices in countries of the E.C.A.F.E. region. This report was prepared on the recommendation of the Committee at its first session held at Hongkong in January 1955. The authors of the study have recommended certain steps for solving the problems of the Asian spice industry, in order to enable it to realise its true potential. The E.C.A.F.E. report, according to a summary of it recently released, says that, except for pepper, it is difficult to estimate world production of spices. According to a Japanese estimate, the world production of spices in 1953 amounted to over 250,000 tons, valued at about $116.7 million. The spices referred to in the report and which are considered to be the main commercial spices of the region are: pepper, cardamom, cinnamon, turmeric, ginger, nutmeg and mace.

Dealing with the general aspects of the spice industry, the report discloses that the world consumes more pepper than any other spice. Pepper consumption, in fact, accounts for about 55 per cent. of the total of all "true" spices. India, Indonesia and Sarawak, together account for about 98 per cent. of the world pepper production. India today is the largest single producer in the world. In the season 1957-58, it may be noted, the Indian black pepper production amounted to 26,000 tons, as against 27,000 tons in the previous season. The main producing countries of cardamom are Cambodia, Ceylon and India. India is also the largest producer of ginger and turmeric; most of the cinnamon comes from Ceylon. The principal source of nutmeg and mace is Indonesia. The report adds that most of the "true" spices form a valuable source of foreign exchange for several countries of the E.C.A.F.E. region. So far as India is concerned, the value of spices exported during 1957 was Rs. 8.42 crores, out of a total export trade of Rs. 637.74 crores. In the first ten months of 1958, the foreign exchange earning from this source was Rs. 7.37 crores, as against Rs. 7.22 crores in the corresponding period of 1957; of this, pepper accounted for Rs. 3.15 crores (same as in the first ten months of 1957), cardamom for Rs. 2.87 crores (Rs. 2.01 crores) and ginger for Rs. 47.79 lakhs (Rs. 1.12 crores).

Despite the fact that spices are in good demand throughout the world, the report finds that the acreage under cultivation has not increased substantially in recent years. The report goes on to suggest that there are many ways in which production can be increased. Its suggestions are:

"Regional research stations could be set up in the main producing areas. In order to minimise their expenditure, they could be used for research relating to other allied crops. Mobile training courses could be organised for planters and smallholders on the spot, to provide information on new and better methods of cultivation. Poor and uneconomic trees and vines must be replaced by improved strains within the next few years. There is need too, for a more extensive use of fertilisers and modern agricultural implements. As most growers are smallholders, the organisation of producers' co-operatives would be desirable to encourage them to grow more spices and to use improved agricultural methods."

On the question of marketing, the report urges the need for the principal spice-growing countries to develop their own well-organised processing and packing industries to meet competition in the world markets. At present, all spices, with few exceptions, are exported in their whole state and ground or powdered by manufacturers in the principal importing

An iron for every casting

IISCO STANDARD FOUNDRY MACHINE CAST PIG IRON
The basic requirement for the production of any good casting is the supply of controlled quality pig iron. The Indian Iron and Steel Company Limited, in order to ensure consistent quality of the various grades of pig iron manufactured, maintain a well-equipped laboratory where qualified personnel conduct sample analyses throughout the 24-hour production period. Available in 40/45 lbs. single notch pigs, IISCO Standard Foundry Machine Cast Pig Iron comes in many grades to give you an iron for all types of castings.

SPENCER AND COMPANY LIMITED

OUTLOOK FOR CURRENT FINANCIAL YEAR SATISFACTORY

CHAIRMAN, MR. Z. R. IRANI'S REVIEW

ADDRESSING the shareholders of Messrs. Spencer and Company Ltd. at their Sixty-first Annual General Meeting held at Madras on 5th February 1959, Mr. Z. R. Irani, Chairman of the Company, struck an optimistic note in respect of the current year's trading results and hoped to be able to present a satisfactory report on the new business ventures the Company had entered into and the new investments it had made this year.

The following is the full text of Mr. Irani's speech:

"GENTLEMEN,

"I welcome you to the Sixty-first annual general meeting of the Company and it is a pleasure to see familiar faces once again and obtain the benefit of your suggestions and comments.

"The accounts for the year ended 30th June 1958 have been with you for some time. They represent the results of a critical year. There have been previous financial years with results that do not show up so well, but none of those have had to bear the incidence of a severely changed economic pattern requiring considerable endeavour on the part of your Board to meet the challenge to maintain income and ensure the future.

"Our financial year 1957-58 has been a critical one, because it bore the first impact of curtailed imports of consumer goods with little supplementation by new earnings. To enable a smooth flow of goods to our customers we have scoured the markets and at times have bought at prices higher than known landed costs. This has given rise to some inflation of selling prices, but the cause has been our costs and not our margins of profits. We have a reputation for maintaining fair prices calculated on a business-like basis and we shall not deviate from this traditional policy.

Trading Pattern

"The pattern of our trading at the present time is indicated by the following figures showing what contribution each of our various activities has made to the whole: wholesale and retail trade 32 per cent., drugs and pharmaceuticals 25 per cent., hotels and catering 16 per cent., house furnishing 6 per cent., aerated waters 4 per cent., cigars 1 per cent., tea 5 per cent., refrigeration and air-conditioning 6 per cent. and sundries 5 per cent. I do not anticipate much change next year save a larger contribution from air-conditioning.

"You will observe the decrease in turnover compared with that of the previous financial year, which, in turn, is reflected by the lower net profit. Economies in various directions have assisted, but we have had to contend with the rising cost of labour. You will be interested to know that, for a salary and wage bill of Rs. 43 lakhs in the year ended 30th June 1957, the Company's net profit subject to taxation was Rs. 25½ lakhs, whereas in the year under review the corresponding figures are Rs. 48 lakhs and Rs. 20¼ lakhs, respectively. The increase in the salary and wage bill is obviously out of all proportion and the only way to meet it is by increasing selling prices or increasing turnover or retrenchment or a combination of the three. There is a limit to the extent to which prices can be increased, because, apart from the danger of being priced out of the market, one does not, in the consumer's interest, want to add to a spiral of inflation and so endanger our whole economy.

"The second method, namely, retrenchment, is naturally not looked on with favour by our unions. When a department is shut down, such as was railway catering a few years ago, no objection can possibly be raised, but when dwindling trade demands a review of our staff position, some of our unions take up a very strange attitude and a labour dispute automatically comes into being. It has even been suggested that the drop in earnings and profits should first manifest themselves to justify retrenchment or, in other words, that the conduct of business should be inconsistent with the very principles of business prudence. I liken it to coming across a well on a walk through the country and, instead of avoiding it, to fall purposefully right in and then try to extricate oneself without assistance from any side! In the private sector, there is no one to fall back on. When you are up you are socked and when you are down you are out.

Conflicting Ideas

"On the one hand, our Prime Minister has exhorted us, and quite rightly so, to emulate the industrial feats of W. Germany, Japan and China and it follows that there must be the will to work; on the other hand, I see there has been a labour award whereby, in addition to the many holidays and other forms of leave made compulsory by law, there has been granted an annual one month's leave without pay. Comment is superfluous and I ask how the one can be reconciled with the other.

"When I last addressed you, there were only some four months to go for the closure of our then current financial year. I have made it a point to confine myself strictly to matters pertaining to the financial year being reviewed at each of our meetings. The road to development and new business has been arduous and quite a bit of progress has been achieved since 30th June last. I am glad to be able to strike an optimistic note, therefore, as regards our trading results for the current year and hope to be able to present, when we next meet, a satisfactory report on the new business ventures we have entered into and the new investments we have made this year. I should, however, like to make one observation: when a project has to receive Government sanction and approval, the whole matter receives profound scrutiny before Government gives it sanction. That is as it should be, but there are always secondary sanctions required which are attendant to, but already within the framework of the approved project. Much delay is experienced in securing these minor sanctions and I submit that they can be avoided and should be, in the country's interests, of achieving speedy industrialisation.

"The foreign financing of the second Five-year Plan is almost entirely for the public sector. All the activities of this sector, but for one or two instances, at least so far, which are the exceptions which prove the rule, do not produce the financial return, accumulations of which will go towards repayment of the foreign assistance. Money for this can only be secured by taxation, the greater part of which will necessarily be borne by the private sector. I maintain that such activities which are expected to produce a return should be left to be started and managed by the private sector with the direct aid of foreign investment and with such Governmental controls as may be deemed fit to prevent the operations of undesirable speculators. In this way, Government will be absolved of the foreign commitment whilst maintaining control of the activity, yet leaving management in the hands best fitted to produce profits. Such a pattern may afford argument from many angles, but whatever they be, the fact remains!

Foreign Assistance

"Foreign assistance can be in two forms, the one from political motives and the other on purely commercial grounds. I will not touch on the former as being outside our sphere as a commercial organisation; the latter, however, is a fit subject on which to enlarge. Foreign capital should be permitted freely into the country and, likewise, there should be no restriction on its repatriation, for repatriation is only the taking out of money that otherwise would never have come in, and, if repatriation is the result of a take-over by Indian interests, then the objective of having a national industry is achieved. When restrictions are placed on the movement of foreign capital, it will be found that the foreign investor will withdraw income to the hilt, but, when there are no such restrictions, the foreign investor is only too ready to plough back his income and by doing so support an expanding economy. Such a state of affairs cannot but promote the export motive which the foreign investor confident of his foothold and security, will support to the fullest extent, particularly to surrounding countries which can be considered the economic area. One has only to look at the effect of the foregoing principles established in two countries so apart in economic thought as the U.K. and Italy to appreciate that their application to India would be worthwhile. Governmental policy is veering in this direction, but foreign assistance will continue to be shy until the principles are put into full play.

"There is no one who doubts the necessity and value of planning, but there are many who are not in agreement with the conceptions that have been applied and the theories behind them. This is purely a matter of opinion. Theory is the evaluation of a fund of experiences; so it must be remembered that experience comes first and theory afterwards. It stands to reason then that theories cannot be applied to fast-changing patterns of experience and the solution is to move with such patterns and not attempt to persist in the application of old theories to new experiences.

Depreciation in Value of Money

"Unbalanced planning must necessarily bring about an imbalance in the country's economy. To stifle the production of consumer goods—and I maintain that consumer goods not only cover essentials for life but also the necessities for civilised living—undoubtedly brings about inflationary trends. Inflation can only be combated by permitting a greater flow of consumer goods and by checking mounting labour costs. The former is dependent on the quantum of imports of raw material or finished goods and is, because of the emphasis on other forms of development, subordinated to those needs. The latter is a highly controversial subject which can only be solved by determination and courage since it is fraught with political implications. In short, it is a fallacy to consider that there is economic betterment, if that, as happens to be the case at the present stage, is coupled with inflation on the upward trend. By this means, the stable value of money is destroyed and with it the liberty of the individual in planning his own life. Depreciation in monetary values impairs incentives to save and the danger to insurances, provident funds and other provisions for the future becomes all too apparent. I have no doubt that our planners have realised this danger already and, I am sure, are taking steps to avert what can turn into a crisis.

"Before I close, I should like, on behalf of us, to thank all loyal and hard-working personnel for their continued devotion towards the Company's well-being and progress."

The balance-sheet as at 30th June 1958 was unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax, on the ordinary shares as recommended by the Directors was declared, making in all a total dividend of 15 per cent., free of income-tax for the year.

Note.—This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

COMPANY TAXATION IN INDIA—I

STRUCTURE, RATIONALE AND IMPLICATIONS

By Professor Russi Jal Taraporevala

[Company taxation in India has undergone vast and sweeping changes in the past five years. A number of different direct taxes has been levied on companies. These taxes are calculated on various bases. The burden of direct taxes levied on companies has been increased so sharply that, today, it is the heaviest prevailing in the free world. There is conflict and even confusion in the aims of, and the principles underlying, the direct taxes imposed on companies. This article presents a comprehensive view of the entire structure of direct taxes levied on companies in India. The legal provisions relating to the various direct taxes are explained and analysed. The rationale and justification, if any, of the taxes are discussed. The economic implications of the taxes are outlined. Proposals for the rationalisation and reform of he structure of company taxation are made. A second article will deal with the general economic effects of company taxation in our country.—ED.]

THE Indian Income Tax Act provides for the taxation of the income or profits made by joint stock companies in the country. Under this Act, income-tax and super-tax are levied annually on the assessed profits of companies. The profits which are subjected to the tax are not the same as the profits shown in the accounts of the companies, because the Act provides for disallowing a number of expenses charged against the income of companies in their accounts and also for granting certain deductions in an arbitrary manner prescribed by it which will be discussed later.

Income-tax

The assessed profits of companies in India are first subject annually to income-tax at the rate of 30 per cent. and to a surcharge at the rate of 1.5 per cent. Thus, the income-tax takes away 31.5 per cent. of the assessed profits of companies. The income-tax paid by companies is, however, refundable to the shareholders. When companies declare dividends out of their taxed profits, their shareholders receive credit in their personal income-tax assessments for the income-tax paid by the companies. Unfortunately, these tax credits are calculated in such a way that the shareholders do not get a refund or tax credit in their personal assessments equal to the full amount of income-tax paid by the companies. Under the formula used for grossing up tax-free dividends received by shareholders, for every Rs. 100 of income or profits Rs. 31.50 is paid by companies as income-tax. but the maximum refund or tax credit which a shareholder can get on the dividends declared by the companies is only Rs. 22.30, assuming that the full amount of profits left after paying only income-tax and super-tax is distributed as dividends to shareholders. Hence, it is incorrect to state, as is done by many writers in the field of taxation in India, that the income-tax paid by companies is a type of tax payment made on behalf of the shareholders who will get full credit for the amount of tax paid. Moreover, the income-tax paid by companies on profits which are not distributed as dividends is not refundable either to the companies or to their shareholders. The income-tax must, therefore, be considered as a direct tax on the profits of companies.

Super-tax

Next, the profits of companies are annually subject to super-tax under the provisions of the Indian Income Tax Act. Super-tax is not refundable to the companies or to their shareholders. Its burden, therefore, falls directly and fully on the companies. The law regarding the levy of super-tax on companies is extraordinarily complicated and, indeed, most puzzling to the layman. The net or total rate of super-tax payable is linked to different criteria. In order to simplify the analysis, the various components of the law regarding super-tax will be classified according to the criteria to which the tax is linked. Hence, the Corporation Tax, the Excess Dividends Tax, the Bonus Tax and the Penal Super-tax for non-distribution of profits will be discussed in that order. These form distinct sets of provisions under the law, the sum total of which determines the net super-tax payable by companies.

Corporation Tax

The minimum rate of super-tax payable by companies with annual profits in excess of Rs. 25,000 is 20 per cent. of their profits. This basic rate of super-tax is called the Corporation Tax. The Corporation Tax imposes a direct burden on the companies, as it is not refundable to individual shareholders or to the companies under ordinary circumstances. Partial rebates and even full exemption from the Corporation Tax are, however, given to companies on dividends received by them on shares held as investments in other companies. Thus, a rebate of half the basic rate of Corporation Tax is given on dividends received by companies from their Indian subsidiary companies. This rebate is given, in order to prevent excessive double taxation of inter-corporate dividends. Under the provisions of Section 56A of the Indian Income Tax Act, dividends received by companies from other companies are totally exempt from the Corporation Tax, if the paying companies are engaged in certain specified industries covered by the Industries Development and Regulation Act. This exemption aims at encouraging corporate investment in certain important industries and also prevents double taxation of inter-corporate dividends.

Excess Dividends Tax

Companies have to pay super-tax at various penalty rates on their dividends which exceed 6 per cent. of their paid-up capital. This tax is known as the Excess Dividends Tax. The rates of this additional super-tax are 10 per cent. on dividends amounting to between 6 per cent. and 10 per cent. of the paid-up capital of the companies, 20 per cent. on dividends between 10 per cent. and 18 per cent. of the paid-up capital and 30 per cent. on dividends in excess of 18 per cent. of the paid-up capital. The Excess Dividends Tax was introduced in 1956 by Mr. C. D. Deshmukh, who was the Finance Minister of the Government of India at that time. Mr. Deshmukh failed to give any detailed arguments in justification of this tax when introducing it. A tax on dividend distributions was not recommended either by the Taxation Enquiry Commission of our country or by the Royal Commission on the Taxation of Profits and Income of Great Britain. Apart from the fact that the tax yields some revenue to the Government, there is absolutely no justification for this tax. It has been claimed that the object of the Excess Dividends Tax is to encourage companies to plough back their profits into the business. It is thus hoped to limit capital gains which can be made by shareholders on the value of their shares which is largely determined by the amount of dividends distributed by the companies. This crude way of limiting capital gains may have had some feeble justification in 1956, when the law did not provide for the taxation of capital gains. But it cannot be justified now that a capital gains tax has been introduced in the country.

Premium on Inefficiency

The provisions for levying the Excess Dividends Tax constitute a most haphazard and crude piece of tax legislation which gives rise to some extremely undesirable and inequitable effects. The tax penalises the more efficient and, therefore, the more prosperous and successful companies which earn a high rate of profit and, consequently, distribute a high rate of dividend. It is ironical that, at a time when our political leaders are continuously exhorting industry to produce more and to improve its efficiency, they continue to keep on the statute book a law which directly discriminates against corporate efficiency and high dividend distributions. Thus, a famous member of Parliament, Mr. Tulsidas Kilachand, criticising this tax, said: "This sort of taxation on dividends will be a premium on inefficiency, because inefficient people will not have to pay this tax."

The Excess Dividends Tax is levied on dividends calculated as a percentage of the paid-up capital and not as a percentage of the total capital employed in the business. Hence the tax discriminates against companies which followed prudent and conservative financial policies in the past, ploughed back a substantial portion of their profits into the business and did not capitalise their reserves or accumulated profits. Such large reserves invested in the business increase the earning power of the companies and their dividend distributions, bringing the companies into the ambit of the Excess Dividends Tax. A recent report, prepared by the National Council of Applied Economic Research, has adversely criticised the Excess Dividends Tax and pointed out that, as a result of it, "old companies may well feel deterred from reinvesting further profits, and newer companies may also consider the rewards unduly small, when viewing the total tax burden involved." The tax, therefore, actually "deters reinvestment of profits specifically. Having regard to the fact that reinvestment of profit is the most important single source of finance for industrial expansion, in all parts of the world and for both domestic and foreign investment, this factor assumes considerable significance." On the other hand, the Excess Dividends Tax actually favours companies, which, in the past, followed imprudent financial policies, did not reinvest much of their profits in the business and capitalised all their reserves. Strangely enough such companies do not pay the tax!

Glaring Inequity

The glaring inequity of the tax, its discrimination in favour of recklessly financed companies and its penal effects on well-run and prudently financed companies can be brought home best by a simple example. Let us assume that two companies, A Ltd. and B Ltd., were started in 1946, each with a capital of Rs. 1,00,00,000. Between the years 1946 and 1956, each of these companies earned Rs. 1,00,00,000 altogether as net profits. A Ltd. followed a prudent financial policy. It distributed only Rs. 20,00,000 or 2 per cent. per annum as dividends to its shareholders during the ten years and put by Rs. 80,00,000 to its reserves. Thus, in 1956, A Ltd. had a capital of Rs. 1,00,00,000 and reserves of Rs. 80,00,000, making the total capital invested in the business Rs. 1,80,00,000. Assuming a 6 per cent. rate of earnings on invested capital (after paying income-tax and corporation tax) for the year 1956, A Ltd. would have earned, in that year, net profits amounting to Rs. 10,80,000. If it had distributed this profit to its shareholders as dividends, it would have had to pay the Excess Dividends Tax, because the dividends would have exceeded 6 per cent. of its paid-up capital. On the other hand, the second company, B Ltd., followed a rather imprudent financial policy during the ten years 1946-56. It distributed Rs. 80,00,000 or 8 per cent. per annum as dividends to its shareholders in these years and put by only Rs. 20,00,000 to its reserves. Moreover, it capitalised its entire reserves by issuing bonus shares to its shareholders. Thus, in 1956, B Ltd. had a paid-up capital of Rs. 1,20,00,000 and absolutely no reserves. Assuming a 6 per cent. rate of earnings on invested capital for the year 1956, B Ltd. would have earned, in that year, a net profit of Rs. 7,20,000. If it had distributed this profit to its shareholders as dividends it would not have had to pay the Excess Dividends Tax, because the dividends would not have exceeded 6 per cent. of its paid-up capital.

Must Be on Total Capital Employed

The present levy of the Excess Dividends Tax on the basis of the paid-up capital imposes the tax burden in an entirely arbitrary fashion as between companies having the same total capital invested in the business but different ratios of paid-up capital to reserves. If the tax must be levied, it should be on the basis of the total capital employed in the business, that is the paid-up capital plus reserves. Government should introduce this change in the next budget, if it wishes to retain this tax. But the Finance Minister would do well to consider the idea of abolishing this tax altogether, in view of its inequitable and adverse effects on the growth of joint-stock companies in the country.

Bonus Tax

Companies have to pay a penal super-tax of 30 per cent. of the face value of bonus shares issued by them. This is known as the Bonus Tax. Bonus shares are issued by companies, in order to capitalise their reserves or accumulated profits. They result in the balance-sheet reflecting more accurately the total capital invested in the business. The issue of bonus shares involves a mere accounting entry and a purely paper transaction. It does not change the total capital invested in the business. Nor does it increase the earning power of the business. The issue of bonus shares merely increases the paid-up capital of a company and to that extent reduces its reserves. Moreover, shareholders do not derive any benefit from the issue of bonus shares because the total assets and the earning power of the companies are not affected by bonus shares. In view of these factors, our Taxation Enquiry Commission and the Royal Commission on the Taxation of Profits and Income of Great Britain recommended that a tax on bonus shares should not be levied.

Nevertheless, the Bonus Tax was introduced by Mr. C. D. Deshmukh in his budget in 1956. It was justified as being necessary, in order to prevent companies from evading the Excess Dividends Tax by increasing their paid-up capital through the capitalisation of their reserves by issuing bonus shares. In criticising the Bonus Tax and this justification for its imposition, the National Council of Applied Economic Research has pointed out that:

"This defence of the tax can stand so long as dividend distributions are calculated for the purpose of taxation on the basis of paid-up capital. Actually, as we have argued at length... this basis is inequitable and without any justification. In the productive employment of capital, there is no distinction between paid-up capital, or reserves, or capital obtained through loans. It is employment of total capital which yields a return and not just the paid-up capital. It is also idle to argue that returns on capital should be calculated on the basis of the original investment by the shareholders. Shares change hands continuously and many holders are likely to have paid prices far above the original prices of the shares.... The dividend rate should be calculated on the basis of the total capital employed rather than the paid-up capital. If this recommended change is adopted, very little remains to be said in favour of the retention of the tax on bonus shares."

Moreover, it is interesting to note the basic conflict in the principles underlying the Excess Dividends Tax and the Bonus Tax. The Excess Dividends Tax was expected to penalise the distribution of high dividends and aim at encouraging the reinvestment of profits in the business. But the Bonus Tax discourages the ploughing back of profits into the business and the building up of large reserves. It tends thus to encourage higher dividend distributions by the companies. Commenting on this, the National Council of Applied Economic Research has aptly pointed out that "a tax which hinders the process of ploughing back of earnings is a hindrance to economic growth." The Finance Minister should, therefore, abolish the Bonus Tax, because the tax is inequitable and unjustified and it hampers the growth of companies and hence the economic progress of the nation.

Penal Super-tax

Under the provisions of Section 23A of the Indian Income Tax Act, a penal super-tax is imposed on certain types of companies for non-distribution of the minimum statutory percentages of profits. This section applies to all private limited companies and to many public companies which are closely controlled. Such companies are required to distribute at least 45 per cent. of their annual profits, if they are industrial companies, and 100 per cent. of their profits, if they are investment companies. Moreover, closely controlled companies, in which the accumulated profits or reserves (including capitalised reserves) exceed the subscribed capital or the cost of the fixed assets whichever is greater, are required to distribute at least 90 per cent. of their annual profits. Failure to distribute these statutory percentages of profits attracts a severe penalty super-tax at the rate of 50 per cent. in the case of investment companies and at the rate of 37 per cent. in the case of industrial or manufacturing companies which are covered by the provisions of this section. Moreover, the tax is imposed harshly on the entire undistributed profits for the year. Hence, the provisions of Section 23A aim at virtually compelling companies to distribute the statutory percentages of their annual profits, because failure to do so incurs a most drastic tax penalty.

The original aim of the provisions of Section 23A was to prevent avoidance of personal super-tax by individuals. Since the rate of super-tax applicable to companies was lower than the higher rates of super-tax payable by individuals, it was possible to avoid paying the personal super-tax by transferring personal assets to companies which did not declare dividends and thus accumulated the income as reserves. The section was introduced, in order to foil such attempts to avoid personal super-tax. Unfortunately, today, to quote a report of the National Council of Applied Economic Research, "a very wide range of companies engaged in production and manufacture which fall under the present provisions of Section 23A certainly cannot be deemed to fall within the category of companies intent upon aiding or abetting tax evasion for the personal benefit of their shareholders or any such purpose." The section has become applicable to many companies which are indiscriminately brought within its provisions and which should not be covered by it for achieving its objects.

The technique of avoidance of personal super-tax by transferring one's assets to a company which accumulates the income as reserves is known in most countries of the world. Many countries have adopted measures in their tax laws to prevent this type of tax avoidance. But their laws are more reasonable than the provisions of Section 23A of the Indian Income Tax Act and they do not apply indiscriminately to companies which do not attempt tax avoidance for their shareholders.

Before 1957, the Indian Income Tax Act gave discretion to the Commissioner of Income-tax to reduce the minimum statutory distribution under Section 23A in the case of companies which needed to plough back a greater proportion of their profits, having regard to the current requirements of the companies' business or such other requirements as may have been necessary or advisable for the maintenance or development of the business. But this power was withdrawn by an amendment contained in the Finance Act of 1957. Today, companies covered by Section 23A can be exempted from the penalty super-tax prescribed by it only on the grounds of past losses or inadequacy of profits. All reasonable current and future needs of the business are totally ignored for the applicability of Section 23A, making it thus a most harsh, inequitable, unreasonable and crude tax provision.

Many Adverse Effects

The adverse economic effects of the provisions of Section 23A on the growth of companies are many. These provisions limit the amount of profits which private and closely controlled companies can plough back into their business. They thus retard the growth of such companies. Moreover, they even place a virtual ceiling on the growth of such companies, since the companies are compelled to distribute almost their entire annual profits, after their accumulated profits or reserves exceed their subscribed capital or the cost of their fixed assets, whichever is greater. In India, where capital is scarce and shy, it is almost impossible for small and medium-sized companies to raise capital through public subscription. Their borrowing power is limited at best to a proportion of the capital invested in the business. The ploughing back of profits into the business is essential for the steady growth of most enterprises in India, as in most parts of the world. The provisions of Section 23A heavily discriminate against small and medium-sized companies, which are usually private companies or closely controlled public companies. Indeed, these provisions of our tax law confer a most unjustified advantage on giant public companies, which fall outside their scope, and so are free to plough back most of their profits into the business. The provisions of Section 23A are likely to promote greater concentration of business and industry in large public companies at the cost and expense of their smaller rivals, which have to pay the penal super-tax prescribed by Section 23A.

No Consistency

The lack of consistency in the aims and principles underlying the various provisions of company taxation is shown by the fact that the provisions of Section 23A are in conflict with the provisions of the Excess Dividends Tax. Thus, companies covered by Section 23A have a most peculiar and unpleasant choice. If they fail to distribute the minimum statutory percentages of their annual profits, as required by Section 23A, they incur the drastic penalty super-tax for non-distribution of their profits. If, on the other hand, they distribute their profits in accordance with the provisions of Section 23A, they have to distribute, in most cases, dividends in excess of 6 per cent. of their paid-up capital and thus have to pay the Excess Dividends Tax.

A recent report prepared by the National Council of Applied Economic Research has severely criticised the provisions of Section 23A as hampering the growth of corporate enterprise in the country. It is really strange at the present time that our political leaders keep on the statute book a law which handicaps the growth of small businesses in the country, whilst they continue to applaud the virtues of small enterprise in their speeches. If the Government wants to encourage small and enterprising businessmen to promote and develop industries and if it wants to prevent the industrial sector of the country from being dominated by large monopoly capitalists, it should immediately reconsider and amend the provisions of Section 23A, in order to make them reasonable and equitable.

Exemptions and Deductions

In order to assess the real burden of income-tax and super-tax, it is necessary to take into account the exemptions and deductions allowed under the Indian Income Tax Act. The exemptions and deductions can reduce the burden of tax by either exempting companies from paying tax on their profits or by reducing the profits assessable for tax purposes.

New Industrial Undertakings

Under Section 15C of the Indian Income Tax Act, profits or gains derived from new industrial undertakings are exempt from income-tax and corporation tax upto 6 per cent. of the total capital employed in the business. This exemption is available for five years, after the undertakings commence their manufacturing activities. Shareholders receiving dividends from companies covered by the provisions of this section do not pay income-tax or super-tax in their personal assessments on such dividends. This appears to be a very substantial exemption. Unfortunately, in actual practice, the relief in taxation given by this exemption has been insignificant, because, in the vast majority of cases, there are hardly any assessable profits made by industrial undertakings during the first five years of their working. Most companies make losses or insufficient profits in the first five years. Moreover, even if profits are made, the deductions from them by way of accelerated depreciation allowances and the development rebate, which will be discussed later, reduce the assessable profits subject to taxation to *nil* or at best a very nominal figure. Hence, the provisions of Section 15C have been largely ineffective so far.

The idea underlying the provisions of this section is, however, a good one. With proper modifications, these provisions could afford real relief from tax and, therefore, act as an important incentive to the promotion and growth of new industrial companies in India. In order to make the section effective, it should be provided that it would apply either for five years after the undertaking begins to make assessable profits or, alternatively, during a period extending, say, from the seventh to the twelfth years of its working. Or no time limit may be prescribed but it could be provided that income tax and corporation tax would not be payable on the initial assessable profits of a new industrial undertaking equal to a total of 30 per cent. of its invested capital.

Depreciation Allowances

Companies are allowed to deduct depreciation on their plant and machinery, and buildings and furniture from their assessable profits for tax purposes. Depreciation measures the wear and tear or the diminution in value due to use of the assets by a business. The full real cost of depreciation must be deducted from the income of a business, in order to ascertain its real net profits. Depreciation allowances should provide the business with sufficient funds to enable it to replace its assets at the end of their useful life.

The depreciation allowed as a deduction from gross profits under the Indian Income Tax Act is based on the historical or original cost of the assets. It is calculated as a fixed percentage of their annual written down value. The last twenty years have witnessed a continuous rise in the prices of various assets used by companies. The prices of most assets have risen to more than three times their pre-war value. In these conditions, depreciation allowances, calculated on original costs, do not measure the real loss in the value of the assets, due to their use in an inflationary period, when the value of money has fallen. The total amount allowed by way of depreciation for tax purposes is insufficient to replace the assets at the end of their working life, because inflation increases their replacement cost to many times their original cost. The allowance of depreciation on original costs artificially increases the assessable profits of companies in an inflationary period and thus enhances their tax liability in a most inequitable fashion.

A simple example can be given to explain the implications of the faulty practice of calculating depreciation on original costs for tax purposes in an inflationary period. Let us assume that a textile company installed in 1938 machinery costing Rs. 10,00,000. It was allowed to provide for depreciation, amounting to Rs. 7,71,000, for tax purposes upto the year 1953-54. In 1954, it sold the machinery and realised its book value, that is, Rs. 2,29,000 for it. Thus, depreciation and the final realised price provided Rs. 10,00,000. But it cost the company Rs. 30,00,000 to replace the same machinery in 1954. Thus, it had to find no less than Rs. 20,00,000 from its free reserves, in order to merely maintain its real capital invested in machinery. In

order to set aside free reserves amounting to Rs. 20,00,000 in sixteen years, the company would have had to earn Rs. 53,50,000, out of which Rs. 33,50,000 would have been paid by way of income-tax and super-tax. Thus, altogether, the company would have had to earn Rs. 63,50,000 or about six times the original value of the assets, merely to keep its real capital without even paying any dividends or providing for funds for its expansion. During the sixteen years 1938—1954, its assessable profits have been artificially increased to the extent of Rs. 20,00,000, which ought to have been allowed as a deduction in order to enable it to replace its assets but which was disallowed under the present faulty practice of calculating depreciation on the basis of original costs.

Erosion of Capital

The present system of deduction of depreciation, on the basis of historical costs for tax purposes, implies that a company has to earn six times the value of its pre-war assets, in order merely to replace them at the current prices which are more than three times the pre-war levels. Most industries have been unable to earn such a high rate of profit and so most industrial companies have been faced with the embarrassing problem of being unable to replace their assets in the post-war years. It has been proved that, in a number of important industries, the faulty practice of allowing depreciation to be calculated only on the original costs of the assets has resulted in an erosion, of the real capital of these industries. The magnitude of the problem can be gauged from the fact that it has been estimated that, between 1937 and 1954, only the steel, paper, cement and sugar industries suffered capital erosion amounting to no less than Rs. 50 crores approximately. This is a truly staggering loss, of which most shareholders of companies in the country are probably unaware.

Two Palliatives

The Government of India has been unwilling to allow industries to deduct the replacement costs of their assets for depreciation for tax purposes, because that would involve a loss in the tax revenue. But it could not ignore the problem altogether. It, therefore, introduced two palliative measures, namely, accelerated depreciation allowances and the development rebate which we will discuss later. These measures were at best poor concessions which did little to solve the problem of helping industry to replace its assets. Thus, many important industries found it absolutely impossible to replace even partially their assets after the war. The Government could not allow these industries to collapse and so it gave them subsidies and help in the form of loans, etc., to replace their assets. In effect, then, the Government first depleted the real capital, as measured by pre-war values of these industries, by levying tax on profits computed in a fashion which did not provide for the replacement of the assets. It then gave these industries loans to carry on their operations in the post-war era. Here was a most subtle technique for confiscating real capital through the taxation of profits and then in effect partially nationalising the industries by giving them loans carrying many onerous conditions, including, in many cases, active interference in their management—a technique of backdoor nationalisation which the Government has used with great success in the past few years and which appears to have gone almost unnoticed by the shareholders of most companies in the country.

The palliative measures adopted by the Government to help industry to finance the replacement of assets in the post-war era can now be dealt with. The first measure was the allowance of accelerated depreciation for tax purposes. Companies are allowed to write off from the original costs of their assets the normal depreciation *plus* additional depreciation which is equal to the normal depreciation allowed for tax purposes during the first five years of the life of the assets. But these allowances have failed to solve the problem of replacement of assets, because they are still calculated on the original costs of the assets and so the total depreciation allowed can never exceed the original cost of the assets. At best, the accelerated depreciation allowances can be looked upon as interest-free loans given by the Government to the companies, especially because the accelerated depreciation allowances merely decrease the assessable profits in the first five years of the life of the assets, but, to that extent, increase the profits liable to tax in the later years. The grant of accelerated depreciation allowances has been usually welcomed by industry as affording short-run financial relief from the burden of taxation. It is not widely appreciated that such depreciation allowances may actually be disadvantageous. If the rates of company taxation rise over the years as has happened in the last few years in India, the advantages of accelerated depreciation may actually be nullified. Indeed, under such conditions, accelerated depreciation allowances may actually increase the tax burden over a period of years. This would happen, because the relief from taxation, due to depreciation allowances, would occur, in earlier years, when taxes were low, and a corresponding increase in the assessable profits would result in later years, when taxes would have risen!

Development Rebate

Another palliative measure to help industry finance the replacement of its assets is the development rebate introduced in 1956. Companies are allowed to deduct from their assessable profits an amount equal to 25 per cent. of the actual cost of new plant and machinery installed by them for computing profits for tax purposes. This concession is called the development rebate and is available only for the first or initial year in which the plant and machinery is installed. The development rebate is not a part of the depreciation allowances. It is allowed over and above the full recoupment of the original costs by way of depreciation allowances.

In the last budget of the Government of India, a number of onerous conditions were introduced which have to be fulfilled by companies, in order to get the benefit of the development rebate. Some of these conditions are unreasonable and inequitable. They have reduced the advantages and the attractiveness of the development rebate for giving relief from the burden of taxation. Moreover, the development rebate is given only in the initial year, so that it is at best a measure providing very little and short-run relief from taxation. In the long run it is not applicable and has no significance.

It can, therefore, be concluded that the exemptions and deductions allowed under the Indian Income Tax Act are not only minor but also totally inadequate for giving any real relief from taxation.

Total Burden of Income-tax and Super-tax

It has been shown that companies pay tax on their profits at various rates, depending upon various criteria which we have discussed. The minimum rate of tax is 51.5 per cent. of the assessed profits—31.5 per cent. on account of income-tax and 20 per cent. on account of corporation tax. The maximum amount which can be charged on account of the corporation tax, the excess dividends tax and the bonus tax is limited to 50 per cent. of the assessable profits of the year. Thus, the maximum burden of tax may be equal to 81.5 per cent. of the profits in any one year. This, of course, does not take into account the provisions of Section 23A. If this section is violated in respect of dividend distributions, the companies have to pay a further penal tax. This is surely an excessive burden of tax, especially because the exemption and deductions allowed are inadequate and do nothing to provide any substantial relief from taxation.

Capital Gains Tax

Companies have to pay tax at the flat rate of 31.5 per cent. on all capital gains made by them. The tax applies to capital gains actually realised. It can be paid on two alternative bases at the option of the companies. The tax can be paid on the excess of the sale price of an asset over its original cost or on the excess of the sale price over its estimated value as on 1st January 1954.

The Capital Gains Tax imposes flagrant double taxation on the companies and their shareholders. Companies have to pay the tax when they make capital gains on the sale of their assets. Thereafter, the shareholders have to, again pay the Capital Gains Tax when they realise a gain on the sale of their shares the value of which is increased by the capital gains

RISING DEMAND FOR ALUMINIUM

NEW SMELTER SET UP AT HIRAKUD

A SIGNIFICANT development in the sphere of non-ferrous metals is the increase in the demand for aluminium. It was originally believed that the demand for aluminium in India would go up to 30,000 tons by 1960-61. Actually, the demand in 1958 alone is said to have been 35,000 tons. The Tariff Commission in its latest report (*vide Commerce*, dated 29th November 1958 page 866) has estimated that the demand would go up to 44,000 tons by 1961. The Commission, in arriving at this estimate, has taken into account the decline in the demand for aluminium utensils. Only, it feels that this decline will be more than offset by the increased requirements of aluminium for industrial uses in the coming years. There is, according to the Tariff Commission, a large potential for increased offtake in several industries, particularly, in the manufacture of A.C.S.R. and A.A.C. for use in electrical industries, aluminium sheets for transport industries, aluminium structurals for engineering and building industries and aluminium foils for use in packings. Against this encouraging background of the demand prospects for aluminium, it will be readily appreciated that the total production in the country needs to be raised, particularly because the total current capacity is no more than 7,700 tons, made up of 2,200 tons of the Aluminium Corporation of India and 5,500 tons of the Indian Aluminium Co., Ltd. It is, therefore, gratifying to note that the Indian Aluminium Co., Ltd. has set up a new smelter at Hirakud which, with its annual capacity of 10,000 tons, has served to increase existing capacity in the country by more than 100 per cent. It is further gratifying to note that the Company is actively pursuing plans to expand the Hirakud smelter to 20,000 tons.

First Producer

At the time of the inauguration of the new smelter, which took place this week, Mr. K. C. Mahindra, Chairman of the Indian Aluminium Co., Ltd. made a brief review of the progress of the Company. He recalled how the Company established a rolling mill at Belur (near Calcutta) in 1941 and set up a smelter at Alupuram (Kerala) in 1943, thereby producing aluminium for the first time in India. In 1948, the Company commenced mining operations near Lahardaga and alumina production at Muri in Bihar. Fabrication activities were extended by the aluminium powder and paste production at Kalwa near Bombay in 1951 and establishment of an extrusion plant at Alupuram in 1955. By far the largest project in the Company's manufacturing operations is the Hirakud smelter, inaugurated this week. Explaining the significance of aluminium to India's metal economy, Mr. Mahindra said:

"The resources in India for the production of copper, lead and zinc are limited, whereas there are, in several parts of the country, extensive deposits of bauxite, the mineral ore from which aluminium is produced. This circumstance, together with the versatility of aluminium as a metal which can replace to advantage both ferrous and non-ferrous metals in many applications, creates for this industry a place of fundamental importance in the economic life of the country. Hitherto, the development of the aluminium industry had been hampered by the lack of electric power in quantities and at a cost favourable for smelting operations. Aluminium has aptly been defined as "packaged power" because of the high rate of consumption of electricity to produce a pound of this metal. The promise of an adequate supply of power at an economic price from the Hirakud development project on the Mahanadi river, which would be able to meet the requirements of an aluminium smelter, with an initial capacity of 10,000 tons ingot per annum as well as its subsequent expansion to 20,000 tons capacity, permitted the expansion of the industry and led to the decision of the Company to establish the smelter at Hirakud."

A notable feature of the project is the assistance the Company has received from its Canadian associates and shareholder, the Aluminium Ltd. In the course of his well-deserved tribute to the Canadian company, Mr. Mahindra said: "To them our corporate thanks are due for the ability and proficiency with which they have carried out their assignments. The assistance we have received from these persons and from their colleagues in Aluminium Laboratories Ltd., Canada, in the engineering and start-up of our smelter has emphasised the advantages we derive in many ways from the participation of our Canadian shareholder, Aluminium Ltd., in our Company." It would appear that, as a source of foreign exchange, the Aluminium Ltd.'s contribution in the early months of 1957, when the foreign exchange position was very difficult, was of crucial importance. Its technical assistance was no less important in that it provided training facilities for the Indian Aluminium Company's staff and also sent its own engineers to this country. Indeed, it is a tribute to the efficiency with which such technical assistance has been rendered that, in the course of the next few weeks, the Hirakud smelter will be "managed and operated entirely by Indian personnel."

Further, the Canadian shareholder, Aluminium Ltd. has signified its willingness to provide foreign exchange resources to the tune of six million dollars required to expand the capacity of the Hirakud smelter to 20,000 tons. Mr. Mahindra pointed out that the urgency of such expansion in the national interest was obvious; it would reduce imports and thereby save Rs. 2½ crores in foreign exchange. He added: "We on our part set our sights beyond the immediate possibility of 20,000 tons annual production from the Hirakud smelter to the time when the vast power potential from the Mahanadi and its tributaries will have been harnessed to enable us to produce 50,000 tons per annum or more, of aluminium." Such expansion will depend upon large availability of power at low rates, for the aluminium industry, as is well known, is a large consumer of electricity. It is to be hoped that the power facilities in the region will be steadily augmented and that the necessary power will be made available to the Company at economic rates.

INDIA'S STEEL REQUIREMENTS

The continuing shortage of steel is among the most difficult problems which Indian planners have had to face. Industrial production, particularly production in engineering industries, has been adversely affected by the inadequate supplies of steel. The setting up of the State-owned steel plants and expansion of production by the two steel plants in the private sector will no doubt go a long way towards easing the difficulties caused by the absence of adequate and regular flow of iron and steel to the consuming industries. Even so, it is necessary to assess future requirements of steel, in order to avoid the repetition of the conditions of steel shortage, now being witnessed, on the one hand, and to see that there is no exaggerated emphasis on steel which is a capital-intensive industry, on the other.

There is no point in running from scarcity to plenty and thereby create a whole set of new problems in disposal of the excess supplies of steel. From this point of view, it is gratifying to note that the Council of Scientific and Industrial Research has set up a "study and survey" team to assess the country's iron and steel requirements in the next 10 or 15 years and gear up the industry to meet the demand for steel. This was revealed by Prof. M. S. Thacker, Director-General of Scientific and Industrial Research, who inaugurated the symposium on iron and steel industry, organised by the National Metallurgical Laboratory, at Jamshedpur. He called attention to the problem of organising iron and steel industry on a small-scale basis, as it was being done in China. He added that Dr. Nijhawan, Director of National Metallurgical Laboratory, who would be going to China next month, would study this problem. It remains to be seen whether the Chinese experiment, for which many claims have been made, has been really successful, and, if so, whether it can be repeated in Indian conditions.

Welcoming the delegates, Dr. Nijhawan said that the National Metallurgical Laboratory, recognising the urgency of tackling problems of iron and steel technology had done systematic work on the subject, such as beneficiation and sintering of iron ores and production of L. D. steel. He recalled that the Russian Central Scientific Research Institute for ferrous metals was spending Rs. 7 crores per year. He emphasised the need for multiplying India's research efforts so as to put the country on the iron and steel map of the world.

In the course of his address, Mr. Jehangir Ghandy said that the growing demand for iron and steel had led metallurgists and engineers to the question of increasing and improving the design features of iron blast furnaces and ancillaries such as hot blast stoves and turbo-blowers. The trend was towards charging "prepared" raw materials and use of self-fluxing high sinter burden in blast furnaces. Good progress had been made in several other fields of iron and steel metallurgy such as the oxygen convertor process for steel making, continuous casting and general automation of plant equipment. Finally, he paid a tribute to the valuable work done by the National Metallurgical Laboratory in different branches of iron and steel technology.

ENGINEERING EDUCATION

A well-deserved tribute to the work of Indian engineers was paid by Mr. S. K. Patil, in the course of his address at the annual meeting of the Institution of Engineers, held at Madras, last week. Mr. Patil said that the engineers had discharged their tasks allotted to them under the first and the second Five-year Plan, with a "skill and tact of which any nation could be proud." He, however, urged engineers and scientists to face the problem of the new age which had commenced with the discovery of the nuclear science. He rightly emphasised that just as the last 150 or 200 years, following the Industrial Revolution, witnessed greater advancement than had been possible in the earlier centuries, the progress in the next 25 years or so would perhaps be much more rapid than in the past. Clearly, the new age calls for a wider outlook and more theoretical and practical knowledge on the part of engineers.

In his presidential address, Dr. K. L. Rao stressed the importance of technological education and research. He urged the need for well-equipped colleges. He said that future development in India called for the development of the system of consulting engineers as a guarantee against continued dependence on foreign technical talent. In the beginning till a proper cadre of consulting engineers came into being, the Government should encourage consultation work by establishing a convention of seeking advice from Indian consulting engineers in all cases, whether a foreign consultant was employed or not. Dr. Rao suggested that, in a few special branches, like design of river valley structures, which might not attract consulting engineers freely, semi-autonomous bodies might be set up; such bodies should be developed into national design organisations. He called attention to such recent advances in engineering as prestressed concrete and framed structures and said they had been the result of intensive thinking and research work on the part of thousands of far-sighted engineers and technicians in a competitive international effort. Finally, he urged the Institution of Engineers to become the "spearhead for achieving economic and technological independence of the country."

TIN PLATES AND STEEL SHEETS

A revised scheme for the supply of tin plates and steel sheets to exporters of certain commodities exported in containers of steel and tin has been brought into force. The scheme, which is devised as an Export Promotion measure, envisages the supply of tin plates and steel sheets both against future and past exports. It will apply to the exports of the following products for the purpose of supply of tin plates:

Vanaspati, fruit products, biscuits, confectionery, tinned fish, paints, varnish and enamels, essential oils, drugs and pharmaceuticals including medicinal castor oil and fish oil, toilet articles like face powder, tooth paste, hair oil, etc., cardamom seeds, curry powder, sweetmeats, roasted and ground coffee and fresh coffee, instant coffee, tinned tea, dyestuffs and allied products, chemicals and chemical products (including boot polish), pearl barley, rolled oats barley and oat products and cashew kernels.

For supply of steel sheets, the exports of the following commodities will qualify under the scheme:

Paints, varnishes and enamels, chemicals and chemical products, vegetable edible oils, dyestuffs and allied products and medicinal castor oil in drums.

NEW PRODUCTS AND PROCESSES

New Process for Precasting Doubly Curved Shell

DOUBLY curved shells are known to be eminently suitable as roofing materials, but these have not been extensively used because of problems connected with their casting. The process in current use for casting doubly curved shells involves the use of extensive moulds, if precast, and complicated shuttering if cast in situ. Moreover, shifting the shuttering from place to place is also cumbersome and difficult. With a view to facilitating the precasting of doubly curved shell elements, a method for precasting such shells has been devised at the Central Building Research Institute, Roorkee. The process enables the use of hessian as a flexible mould for casting doubly curved shell unit. The body of the shell does not contain any reinforcement and its shape is such that the stresses under loads are purely compressive and do not require any reinforcements; only the four edge beams being of reinforced concrete. In this process it is also possible to substitute lime-surkhi-concrete in place of cement concrete resulting in economising cement. The size of the unit has been restricted to 4' x 4' to permit easy manual handling. The unit, one inch thick and weighing about 275 lbs. can be easily handled by four men. Bigger units upto 10' x 10' can also be conveniently made. The units are mainly meant for use for roofs but with little modifications could be used for floors and panel-walls also. Individual units tested for static and shock loads are stated to have withstood on an average a static load of 350 lbs. per square foot and impact load of 90 lbs. upto a height of 6 feet. Similar results were achieved on full scale roofs. The shell elements give ample factors of safety against static, sustained and shock loads. The roofs made from these shell elements are economical. Compared with traditional R.C.C. slabs, a saving in cement upto 49 per cent. and in steel upto 46 per cent. is stated to be possible. The turnover is quick and no skilled labour is necessary for their casting. The elements are suitable for roofs for low-cost housing projects.

New Technique for Pipe-welding

New techniques have been developed in the U.K. to speed up "double-ending" welding of pipelines and make this technique on site a more practical proposition. The development has been carried out by Quasi Arc, of Bilston, Staffordshire, to meet the need for increased speeds of pipeline welding by the oil and chemical industries. In "double-ending" welding the pipe lengths are first automatically welded in pairs before being laid. This reduces the amount of manual welding on site by almost half. A new manipulator has now been designed for improved handling of the pipe lengths. Driving rolls are used along the complete length of pipe, whereas the previous "double-ending" machine used only main driving rolls, with idler rolls along the rest of its length. The new machine will handle, it is claimed, pipes up to 40 feet long in pairs, and accommodate different diameters. At the same time, the welding head is fully adjustable on the vertical column. When the machine is in operation the manipulators accept pairs of pipes on a cradle fitted with rollers, which, in much the same way as the roller beds used for large vessels, rotate the component while the welding equipment remains stationary. The handling of pipe lengths on and off the roller bed is carried out by hydraulic means.

New Birth Control Methods

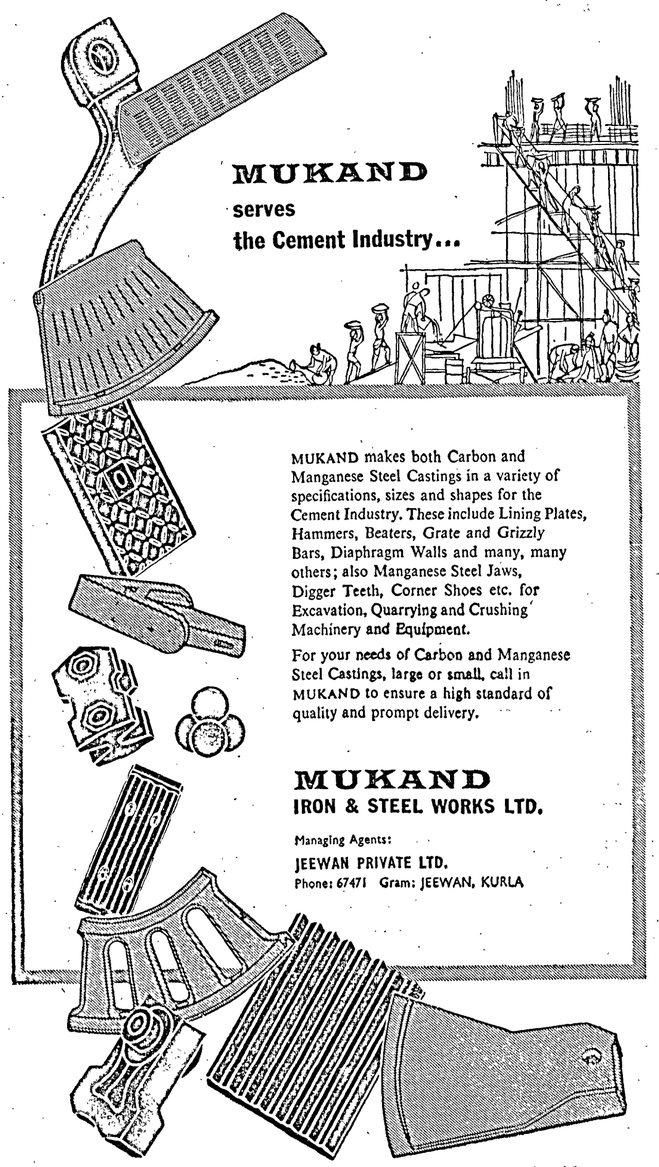
Sperm-killing methods, which have been a subject of long experimentation at the Zoophysiological Institute, at Upsala, Sweden, will be presented to researchers from the entire world taking part in the meeting of the International Planned Parenthood Federation at New Delhi from 14th to 21st inst. Professor Eric Lindahl, who has been in charge of the experiments, will deliver lectures on his findings including the expected possibilities of administering fertility-controlling preparations orally. The international organisation is composed of members from 22 countries, representing voluntary associations for planned parenthood. It was largely formed on Swedish initiative just after the war, when it became clear that the work could not be undertaken by the U.N. on account of strong resistance from Catholic bodies. Professor Lindahl started his studies on animals but believes that a solution of the birth control problem in humans is close at hand.

New Portable Hand Pump

A new portable hand pump, called the Bihar Hand Pump, has been devised by the Department of Agriculture, Bihar, for lifting water for irrigation. The pump can directly be used in three-inch tube-wells and for lifting water from such sources of water as roadside ditches, reservoirs, ponds, rivulets and wells, where the suction lift does not exceed 20 feet. It works best when the lift is not above 12 feet. With the pump, an average discharge of 1,500 gallons per hour can be had at a suction of 10 to 12 feet. Where the lift is only about four feet, about 3,000 gallons is the discharge per hour.

Acid-resistant Cement

A cement, now being marketed, is claimed to withstand the chemical action of both acids and alkalis. Called Alcuma and manufactured by J. H. Sankey and Son, Refractories Works, Ilford Essex, it is said to be composed of polyester resins, combined with high-quality inert fillers. It is supplied to the user in the form of a separate powder and solution and it is stated to be suitable for jointing or pointing tiles and bricks and for the construction of acid- and alkali-resisting floors and tanks. It can also be used for jointing and sealing pipes carrying acids and alkalis.



THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

NEW PUBLICATIONS

Co-operation in Foreign Lands. By C. B. Mamoria and R. D. Saxena. Published by Messrs. Kitab Mahal, Publishers, Allahabad. Pages: 293. Price: Rs. 5.

IN the context of the growing interest in co-operation, the book under review is bound to have a wide appeal. It is a comprehensive book in that it gives a rapid survey of the development of co-operation in many countries including England, Denmark, Germany, Italy, France, Russia and China; there is a good account of the theory of co-operation in the first chapter in the book. Since co-operation in China is generally held up as a model for this country to follow, it is interesting to note what authors have to say on the success of co-operation in that country. They observe:

"Self-sacrificing and disciplined leadership is another contributory factor towards their success. They have succeeded in persuading the people to accept a new way of life in organised agriculture which not only has paid immediate dividends but appears to be the only solution for small uneconomic farmers. The peasantry class of China has tremendous confidence in the leadership of the Government and the Communist Party and this is one of the most significant factors which is largely responsible for this development.... Thus, the Party has indeed played a dominant part in the whole socialist transformation in the agrarian sector, and this is a fact of great significance in determining how far Chinese experience can be useful elsewhere. It is the backbone on which the whole structure of the Chinese Government and the whole development of the Chinese people rests."

It will thus be clear that co-operation in China is the fruit of the efforts of a party which is imbued with a great sense of discipline. It remains to be seen whether similar conditions can be created in a democratic country like India.

A History of Technology: Vol. IV: The Industrial Revolution. Edited by Messrs. Charles Singer, E. J. Holmyard, A. R. Hall and Trevor Williams. Published by the Oxford University Press, London. Pages: 728. Price: £8. 8s.

The book under notice, which is the last but one in the five-volume *History of Technology* conceived by the authors, maintains the high standards of the earlier publications. The first three volumes covered the period beginning from the Old Stone Age up to the industrial revolution. The present one covers the period of the industrial revolution, that is, from A.D. 1750 to A.D. 1850, a century of exceptional importance in the history of technology. The hundred years from 1750 to 1850 saw technological developments which profoundly affected the whole pattern of civilisation, first in Britain, then in Continental Europe and in North America and, finally, in the rest of the world. During this period, man's relationship to nature underwent a profound change. The application of science to technology played an effective part. Science did not, however, become a major force in industry as a whole until after the middle of the 19th century, although it had become significant even in the seventeenth century. Nevertheless, the transition from craft-mystery to science, as a basis of technology, was becoming increasingly evident. While many branches of technology were virtually unaffected by the ferment of new scientific ideas, some were particularly receptive to them.

The story of these remarkable changes and of the complex factors that made them possible is unfolded in these seven hundred and odd pages. To compress the spectacular technological developments of the century into the short compass of a book of 728 pages is certainly an up-hill task The difficulties are not merely those of selection but of presentation as well. In the authors' own words: "The tremendous increase in the pace of discovery and application has presented great problems of selection. The first volume covered the whole of technological history before 500 B.C., the second, the following two millennia. In the third volume, the principal technological events of no more than two and a half centuries could be recounted and, for the present one, the span is virtually but a hundred years. Even so, the limitation of space has obliged us to omit altogether or to discuss but briefly many interesting topics.... A further difficulty lies in the rapidly increasing complexity of the subject. As long as ideas and machines remain relatively simple—springing from common experience and fertile imagination rather than from specialised knowledge—the nature of new inventions is relatively easily expounded. We have, however, entered a period in which there is an acceleration of the complexity of the machines and in the use of processes depending upon less familiar principles and concepts. Detailed explanation is not often feasible without interrupting the discourse and occupying space essential for discussion of other topics."

The course followed by the editors is the only sensible one in the circumstances. They have endeavoured to follow the main lines of evolution and to avoid the by-ways and blind alleys, however tempting their exploration may be.

The editors have taken care to ensure simplicity in language, with few specialist terms, so that even laymen, with a minimum of technical or scientific training, could benefit from reading the book. They have also utilised every opportunity to convey information graphically, by maps, charts and tables. This invaluable publication is indeed a "must" for every reference library.

Fundamentals of Business Organisation and Management. By Dr. B. V. Narayanaswamy Naidu and Prof. H. K. Datta. Published by M. Seshachalam & Co., 7, Sunkurama Chetty Street, Madras-1. 4th Edition. Pages: 620. Price: Rs. 12.

With the growth of large-scale production under the modern factory system, the individual size of the productive and the commercial units has increased. Large-scale, mass production needs good organisation and management. The aim of the publication under review is to explain, as the title of the book itself implies, the fundamentals of the business organisation and management, and also to give some ideas of the modern business methods. This book is in its fourth edition. All the chapters have been carefully revised, thus making the book more up-to-date and informative as compared with the third edition. The latest legislative enactments, including the Companies Act, 1956, and Industrial (Development and Regulations) Act, 1951 (as modified upto 1956). and comments thereon have been added as appendices to the book which will thus serve as a useful reference book and guide. The topics dealt with in the book include joint stock companies, industrial location, co-operative institutions, public utilities, industrial finance, scientific management, industrial efficiency and exporting and importing. The chapter on "Exporting and Importing" which discusses the implications and methods of the export/import trade in some detail, will be found particularly useful.

Modern Theory of Money. By V. Y. Kolhatkar. Published by Good Companions, Baroda. Pages: 242. Price: Rs. 9.

In its second edition, this book emerges as an entirely new one except in name. It reflects the ideas and conceptions of its author concerning the theory of money which, as he points out in the preface, have undergone a radical change. The kernel of the book is a critical examination of the current theory of output. He differs from the basic tenets of Keynes' *General Theory*, pointing out that his theory of wages is illogical, his theory of employment multiplier erroneous and that his savings investment parity is based on insufficient appreciation of the classical position. In fact, the author attempts to work in the direction of an "ideological restoration" of the classical position, though, as he himself concedes, only in respect of its contents and not methodology. He finds himself in agreement with Mr. Kaleck's theory of profit *in toto*, some of the consequences of which he tries to figure out.

This is a book meant not for the layman but addressed to serious students of economics. While many will find it hard to agree with the author's views or accept his arguments, they will find the pages of this book highly stimulating.

The Reserve Bank of India—Functions and Working. Published by the Reserve Bank of India, Bombay. Pages: 170. Price: Inland Re. 1.25 (postage extra).

This small book, within its 170 pages, tells us the story of the growth and functions of the Reserve Bank of India as the central banking organisation in the country. During the eventful period of about quarter of a century of its existence, it has given a good account of itself. Apart from its traditional functions as the bankers' bank, as banker to the Government and as the exchange control authority in the country, the Reserve Bank has, of late, been called upon to play an increasingly positive role in the sphere of industrial and rural credit. This has roused in the general public a growing desire to get adequately acquainted with the nature and scope of this institution. The book under review caters to this need—and pretty well. Written in a language which is simple and non-technical, the book will be read with interest both by students of economics and laymen.

All-India Rural Credit Survey District Monograph —Burdwan. Published by the Reserve Bank of India, Bombay. Pages: 130. Price: Rs. 6.50.

In connection with the preparation of the All-India Rural Credit Survey Report (1951-52), the Committee of Direction, appointed by the Reserve Bank of India, made a detailed study of 75 districts all over the country and prepared preliminary monographs on each of the selected districts. The book under review on the district, Burdwan, in W. Bengal, is one of these studies, conducted on the basis of stratified random sample survey, which threw a flood of light into the structure and pattern of the rural economy of India. Although the treatment of subject-matter in the All-India Report and the monographs is fundamentally the same, the latter serves to bring into sharp relief the specific problems in the district concerned, besides furnishing details regarding the supply of, and demand for, credit.

Gift Tax. By V. Ramachandra. Published by C. Sitaram & Co., 33, Royapettah High Road, Madras-14. Pages: 195. Price: Rs. 7.

This book is a concise commentary on the Gift Tax Act, 1958. The author, who is an advocate of the Madras High Court, has succeeded in lucidly elucidating the principles and working of the enactment. Several of the problems that are likely to arise in the taxation of gifts are dealt with and several court decisions from different countries cited. The Death Duties Act 1921 (Gift Duty) of New Zealand and Chapter IV of the Internal Revenue Code of U.S. (Gift Tax), both similar to the Indian enactment, are appended to the text. This publication is a practical guide not only to practitioners and assessees but to tax collectors too.

E.C.A.F.E. COUNTRIES' FOREIGN TRADE

SIGNS OF IMPROVEMENT SEEN

THE deliberations of the Trade Committee of the United Natjons' Economic Commission for Asia and the Far East which met at Bangkok from 23rd January to 2nd February merit some attention. No doubt, the meeting, as was only to be expected, did not suggest any new solutions to the problems of trade confronting the countries of the region. Nevertheless, the meeting was not without any significance, in that it reflected a growing realisation on the part of these countries of the need for collective endeavour for solving their trade problems. Indeed, the intra-regional trade talks and the meeting on customs administration, which were held earlier under the auspices of the E.C.A.F.E. at Bangkok, were also suggestive of this spirit for joint effort. It is worth noting that this meeting was held in an improved world economic atmosphere, following the recovery of the U.S. from its recession.

The discussions of the Committee on current trade and trade policies revealed that the countries of the region, mostly exporters of primary products, have recovered partially from the adverse effects of the 1957-58 recession. The verdict on the experience of the region in 1958 was that it was a year of mixed performance. In the first half of 1958, Mr. U. Nyun, the E.C.A.F.E.'s Acting Executive Secretary, pointed out, export earnings of the region tended to accrue at a somewhat lower rate, as compared with the corresponding half of the previous year. This is understandable, because, it was during that period the U.S. recession touched the nadir, whereas in the first half of 1957 the world economy was still passing through inflationary phase that had gained momentum after the Suez incident. The impact of recession on commodity prices was aggravated by the higher levels of exports of some of these commodities from the countries of the communist bloc.

Financial Assistance

The condition of these countries would have become much worse but for the financial assistance rendered by foreign countries, particularly by the U.S. It is gratifying to find that the representatives of developed countries, including those of the U.S., the U.K. and the U.S.S.R., who also participated in the trade meeting, expressed their readiness to extend their co-operation in solving the trade problems of the region. Mr. Henry Kearns, the U.S. Assistant Secretary of Commerce, went so far as to invite the countries of the E.C.A.F.E. region to enter the "large, profitable and expanding markets" in the U.S. He also called upon the Asian countries to pay most attention to attract tourists from his country. These earnings, he said, would significantly supplement their foreign exchange earnings. Again, though he recognised the element of protectionist feeling prevailing in the U.S., he said that the Government imposed restrictions only where irretrievable harm was being done to the domestic industry.

The Russian representative, Mr. N. P. Shiriajev, made some interesting points. He took exception to the view held by the E.C.A.F.E. Secretariat that the Soviet tin exports were one of the factors that contributed to the steep fall in tin prices last year. The "true reason" for this, he declared, was the recession in the U.S. and other countries. He added that these countries, while paying lower prices for the goods bought by them from the underdeveloped countries, took care to maintain higher prices for the goods exported by them. He claimed that the Soviet purchase of raw materials from the E.C.A.F.E. region had, in fact, braked the adverse impact of the recession in Western countries. There is, it must be conceded, some truth in these points.

E.C.A.F.E. Studies

Some of the studies prepared by the E.C.A.F.E. Secretariat on the various aspects of the region's foreign trade provided the background for the discussions at the aforesaid meeting. Although they generally relate to the trends in 1957, it is worthwhile giving here a synopsis of these studies, for purposes of record.

In 1957, the total value of export earnings of the countries of the E.C.A.F.E. region were roughly $9,400 million which compared favourably with $8,900 million, representing a rate of increase of 6 per cent. a year. It should be noted, however, that the whole increase from 1955 to 1956, and almost two-thirds of the increase from 1956 to 1957, was accounted for by Japan. In the other countries of the region, export earnings increased slightly with some improvements in those of Cambodia, China (Taiwan), India, Indonesia, Thailand and South Viet-Nam, those in others remaining more or less the same or declining slightly.

There was a substantial increase in the total value of imports. They touched $12,800 million in 1957, as against $10,900 million in the previous year, an increase of 12 per cent. a year. It is estimated that Japan accounted for 60 per cent. of this increase, and India for 18 per cent., and, in each case, it reflected import needs arising from their investment and development activities. Another feature of the trade in this region was the phenomenal increase in the imports of capital goods. Such imports went up by 100 per cent. between 1953 and 1957. This increase was shared by almost all countries, though in varying degrees. In India, 46 per cent. of its total imports constituted capital goods, as against 23 per cent. for the region as a whole.

The adverse balance of trade, in these circumstances, was higher at $3,400 million in 1957, as compared with $2,000 million in 1956. The total gold and foreign exchange assets of eleven E.C.A.F.E. countries declined by 23 per cent. to $3,800 million by the end of 1957. According to the E.C.A.F.E. study, there were sharp decreases in the case of India, Indonesia and the Philippines. Taiwan, however, steadily increased its gold and foreign exchange assets over the three years ended 1957 and there was some recovery in the reserve position of Burma and South Viet-Nam. Over three-quarters of the total external aid to Asian countries and about four-fifths of the bilateral aid came from the United States which also contributed a large share of the multilateral aid made available by various international agencies.

Commercial Policies

Discussing the commercial policies pursued by the respective Governments, the E.C.A.F.E. study notes an intensified and restrictive application of import and exchange controls. In Japan's case, the resolute anti-inflationary measures taken to restrain the level of economic activity largely served to bring about a severe contraction of imports during the first half of 1958. The E.C.A.F.E. paper goes on to take note of certain export controls "exercised or contemplated by some countries" on some of their exports "in order to forestall protective action" against such exports in the purchasing countries. A case in point are Japanese textiles exported to the United States. The study also mentions the arrangements between the British, Hong Kong, Indian and Pakistani cotton interests to impose ceilings on imports of duty-free cotton cloth into the United Kingdom.

The report also draws attention to the recent trend towards increased imports into the countries of the region from Mainland China. A wide range of consumer goods make up the bulk of these imports, cotton manufactures being the predominant item. Exports of cotton manufactures from India and Japan to the importing countries of the region, the study says, encountered increasing competition, as a result of the increasing volume of (Mainland) Chinese exports. Mainland China's exports in the region have been helped by various incentives including bilateral agreements, price discounts and credit facilities.

Commenting on the complaints received in the past regarding discrimination in the matter of shipping rates against cargo coming from or bound for Asian ports, the E.C.A.F.E., in a separate study on this subject, notes with satisfaction the decline in ocean freight rates that took place in 1957 and 1958. The report has stressed the fact that, since most of the countries of the region will continue to depend on external shipping, fair and equitable freight rates are of vital and continuing importance to the trade of the region.

Another E.C.A.F.A. study on trade in minerals points out that iron reserves in the region are enormous and are concentrated mainly in India and Mainland China. It says that India has 21,000 million tons of high quality iron ores, that is a quarter of the world's total of known reserves. Mainland China is said to have 4,600 million tons of proved reserves and over 10,000 million tons of possible reserves as known at the end of 1957. Mainland China became the largest coal producer in Asia in 1958 and the fifth largest producer in the world. Referring to ocean transport difficulties in the trade in iron ores, the report notes that Japan is beginning the construction of a fleet of ore-carrying vessels. It also discloses that Japanese shipping interests are planning to construct a so-called "mammoth ore carrier" propelled by atomic energy.

COMMON MARKET COUNTRIES

Reports from Western Europe suggest that the Common Market (C.M.) countries are at present considering a new proposal designed to reconcile the trade interests of third countries with their own. M. Jean Ray, the member of the Common Market Commission specially responsible for external relations, has concluded a series of consultations with the Governments of the "Six." He is expected to submit a general document covering the new proposals put forward by these various Governments by the end of this month. Its contents are not yet known. At any rate, it is only reasonable to assume, on the basis of a series of internal documents prepared by the Common Market countries, assessing the impact of their policies on other countries, that a fresh approach towards the Free Trade Area problem is in the offing. These documents have sought to emphasise that the problems for Great Britain, for example, are less crucial than those for Austria, where there are political complications and that those of the Organisation for European Economic Co-operation (O.E.E.C.) countries as a group to be no more severe than those of Latin America or some of the countries in North Africa. It would, thus, appear that C.M. countries favour a country-wise world-wide solution rather than restricting its scope to the members of the O.E.E.C. in particular.

It may be recalled, in this connection, that the C.M. countries have already reduced their tariffs on goods from all the G.A.T.T. countries. They have also granted quota concessions to O.E.E.C. countries on bilateral terms which call for acceptance and negotiation. These measures are interpreted to have foreshadowed the pattern of the impending proposal for a European Economic Association, as distinct from a full Free Trade Area. The proposed association will necessitate reduction of tariffs and enhancement of quotas. The tariff cuts would imply reduction in the eventual Common Market external tariffs also. Some of the details will, however, be left to be negotiated through the existing machinery. Thus, it is stated that the O.E.E.C. will be concerned with quotas and G.A.T.T. with tariffs. Provision is also made for the creation of institutions for the proposed association. The association, however, will avoid committing the signatories to complete free trade, unless machinery has been created for the harmonisation of commercial and labour policies.

In the meantime, talks have been held at Paris between the U.K. and France regarding "discrimination" against the 11 O.E.E.C. countries resulting from the Common Market quota and tariff cuts. No agreement has, however, been worked out yet. A suggestion has been made by the Dutch Government urging the U.K. to apply for membership of the European Common Market. France is unwilling to accept unlimited competition in a wider partnership—as was envisaged in the proposal for a Free Trade Area—unless this leads to the creation of new partnership of a near political type. This is opposed to the British stand.

It would appear that the Common Market countries are now beginning to be more "outward looking" than they were inclined to be earlier. "They are," we are told, "determined to be liberal in their commercial policies towards the outside world" and to do what they can to mitigate the adverse repercussions of their community on the outside world. At the recent meeting of the E.C.A.F.E. Trade Committee, the representatives of the Common Market countries gave an assurance that the interests of the third countries would be adequately safeguarded. The Trade Committee has expressed the hope that the products of Asian countries would be given "fair and reasonable access" to the countries of the Common Market.

SWISS INDUSTRIES FAIR

The forty-third Swiss Industries Annual Fair will be held in Basle from 11th to 21st April 1959. One of the oldest industrial fairs in Europe, the Swiss Fair has earned a great reputation for tasteful presentation of a wide range of exhibits. Displaying in the Fair are 17 trade groups in 21 halls. Among the consumer goods groups at the Fair, mention may be made of a special feature on textile and clothing industry with emphasis on their export activities. A special exhibit, "Creation," will illustrate the development of the piecegoods industry. Another exhibit "Madame-Monsieur" seeks to throw into sharp relief the high creative level of Switzerland's fashion goods industry.

Prominence will be given to electrical industry and heavy machinery. Experts in the electrical line will be able to get a comprehensive impression of the most important manufacturers of plant for the production of thermal and hydraulic power. Some of the other industries that will be represented in the exhibition are: watch fair; furniture; sports goods; camping equipment; toys and musical instruments; chemical and cosmetic products; domestic appliances; general engineering; boilers; wood-working machinery, machinery for the foodstuffs industries; hotels and institutes; industrial requisites with the subsidiary groups welding equipment air-conditioning, foundry products, aluminium and non-ferrous metals, plastics, medicinal and dental equipment, transport, with a special exhibit showing equipment for rational mechanical handling.

SHARP FALL IN NEW CENTRAL JUTE'S PROFIT

DIVIDEND PRUNED—INSTALLATION OF CHEMICAL PLANT DELAYED

THE fifteen months ended 31st March 1958 proved to be a disappointing period for the New Central Jute Mills Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta). Although the Company's accounts cover an additional period of three months and in spite of the fact that sales of gunnies have more than doubled, the profit for the period under review has suffered a sharp decline as compared with that for either of the years ended 31st December 1956 and 1955, thanks to the higher outgo on interest on money invested in the Sahu Chemicals project under erection.

The gross profit at Rs. 31.37 lakhs has fallen by Rs. 10.08 lakhs, or 24.3 per cent., from Rs. 41.45 lakhs earned in 1956. It is again Rs. 23.43 lakhs lower than that (Rs. 54.80 lakhs) for 1955. Managing Agents' remuneration takes up only Rs. 1.35 lakh, as against Rs. 3.17 lakhs in 1956. A sum of Rs. 4.25 lakhs (as against Rs. 3.25 lakhs) has been set aside as provision for taxation (including wealth tax and arrears). It must, however, be noted that the Company's profit for the period under review is not liable to income-tax. The provision for depreciation has been raised from Rs. 10.25 lakhs to Rs. 13.39 lakhs. The net profit after the above provisions works out to Rs. 12.38 lakhs, at which level it is less than half of Rs. 24.78 lakhs for 1956. It is also appreciably lower than that of Rs. 33.54 lakhs for 1955.

The Directors have written back Rs. 15.71 lakhs from general reserve No. 1, to which a sum of Rs. 15 lakhs was added from the profit for 1956, and Rs. 99,686 from provision for contingent liability and have created a general reserve No. 2 with a sum of Rs. 15.51 lakhs being the estimated deferred tax liability in respect of the period under review. They have also created a development rebate reserve with a sum of Rs. 1.20 lakh. A dividend of 15 per cent. has been declared on the ordinary shares for the period under review. This works out to 12 per cent. per annum, as against 15 per cent. paid for each of the previous two years. The Directors propose to pay the dividends for the period under review out of general reserve No. 1. This would enable the shareholders to get the benefit of the income-tax paid by the Company on such profits.

The comparative table given hereunder brings out the progress of the Company during the past three years:

(In lakhs of rupees)

	For 15 months ended 31st March, 1958	For the year ended 31st December 1956	1955
Gunny sales	15,95.83	7,22.36	4,54.17
Closing stock of finished products	51.27	46.70	29.48
Gunny purchases	9,87.01	3,05.47	62.24
Cost of raw materials consumed	3,75.29	2,58.60	2,11.43
Manufacturing and other expenses	2,11.58	1,45.06	1,30.91
Gross profit	31.37	41.45	54.80
Managing Agents' remuneration	1.35	3.17	5.76
Depreciation	13.39	10.25	2.50
Taxation	4.25	3.25	13.00
Net profit	12.38	24.78	33.54
Transfer from reserves	16.71	..	..
Compensation to ex-Managing Agents	..	..	2.90
Transfer to reserves	16.71	15.00	11.18
Dividends—			
7% cum. preference	2.89	2.31	1.27
Ordinary	12.82	12.82	12.82
	(12% p.a.)	(15% p.a.)	(15% p.a.)
Carry forward	0.03	3.36	8.71

It will be seen from the above that the Company's earnings from sale of gunnies have more than doubled from Rs. 7.22 crores in 1956 to as much as Rs. 15.96 crores. At the same time, purchases of gunnies have shot up from Rs. 3.05 crores to Rs. 9.87 crores and the cost of raw materials consumed from Rs. 2.59 crores to Rs. 3.75 crores. Manufacturing and other expenses have also risen by Rs. 66.52 lakhs to Rs. 2.12 crores. Of this, salaries, wages and other staff welfare expenses alone have increased from Rs 84.09 lakhs to Rs. 114.07 lakhs. The cost of interest on fixed and other loans, to which a reference was made earlier, has more than doubled itself from Rs. 8.60 lakhs to Rs. 17.61 lakhs.

The Directors report that the installation of the Sahu Chemicals plant has not been completed due to delay in the receipt of machinery. Trials are expected to commence in about three months' time. Towards the close of the period under report, the Company's jute mill at Ghusuri was closed down. The loom hours are being utilised at the Company's other two mills at Budge Budge. This is expected to effect economies in production costs. Since the close of the period under report, production and offtake of carpet backing cloth have shown steady progress.

During the current year, 427,500 ordinary shares of Rs. 10 each were issued at par against cash to the existing shareholders and fully subscribed. These carry the right to dividend from the current financial year onwards.

The Company's balance-sheet as at 31st March 1958 shows that its paid-up capital of Rs. 118.50 lakhs, made up of 855,000 ordinary shares of Rs. 10 each and 33,000 seven per cent. cumulative preference shares of Rs. 100 each, is supplemented by reserves and surplus aggregating Rs. 212.86 lakhs, of which the capital reserve accounts for Rs. 95.60 lakhs and general reserve No. 1 (after transferring Rs. 15.71 lakhs to the profit and loss account) for Rs. 99.29 lakhs. Secured loans from banks against hypothecation of jute including process and finished goods and stocks of machinery and materials amount to Rs. 149.69 lakhs. The loan from the Government of Uttar Pradesh stands at Rs. 145 lakhs. The other current liabilities amount to Rs. 185.05 lakhs, inclusive of Rs. 20.21 lakhs as provision for taxation. The gross block to which additions to the tune of Rs. 248.81 lakhs were made during the period under review, stands at Rs. 633.25 lakhs. Of this, the assets at Calcutta amount to Rs. 409.13 lakhs and those of Sahu Chemicals at Sahupuri Rs. 224.12 lakhs. The depreciation provided so far aggregates Rs. 119.62 lakhs, so that the net value of the fixed assets is Rs. 513.63 lakhs. The current assets aggregate Rs 297.47 lakhs, of which stores and spare parts, raw materials and stock-in-trade alone account for Rs. 181.74 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 13.37 *cum-div.* and on *ex-div.* basis, the yield is 10.1 per cent. per annum, free of income-tax.

WORKING OF THE COMPANIES ACT, 1956

During the quarter ended 31st December 1958, 55 companies with an authorised capital of Rs. 158.29 lakhs have been registered in the Southern Region, comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. Out of these, 3 are public limited companies with an authorised capital of Rs. 27.50 lakhs. The transport services, which form the largest group, account for 12 companies, while chit business and motion picture production and distribution account for 6 and 4 companies, respectively. The total investment by way of increase of paid-up capital of companies during the period comes to Rs. 563.98 lakhs of which Rs. 377 lakhs is accounted for by the Neyveli Lignite Corporation Private Limited, a Government of India undertaking.

During the period under review, 44 companies went into liquidation and the total paid-up capital of the companies concerned was Rs. 28.93 lakhs. 79 companies, including 2 Associations not for profit and one banking company, were struck off the Register of Companies as defunct, the paid-up capital involved being Rs. 15.54 lakhs.

(Concluded from next column)

The balance-sheet as at 30th June 1958 shows that the Company's paid-up capital is unchanged at Rs. 20 lakhs, of which Rs. 15 lakhs are in ordinary shares of Rs. 10 each and the balance in 5 per cent. taxable cumulative preference shares of Rs. 100 each. Against this, there are reserves and surplus aggregating Rs. 13.13 lakhs. The gross block of Rs. 22.66 lakhs stands well written down at Rs. 8.77 lakhs. The current liabilities amount to Rs. 25.24 lakhs, against which there are current assets aggregating Rs. 49.60 lakhs. Of the current assets, the stock-in-trade alone, valued at Rs. 24.11 lakhs, provides a good cover to the current liabilities, including the provision for taxation.

The Rs. 10 fully paid-up ordinary shares are nominally quoted at Rs. 13.50 *cum-div.* and on *ex-div.* basis, the yield is 8 per cent. per annum.

BHARAT SUGAR'S PROFIT DECLINES

DIVIDEND ALSO LOWER

DISAPPOINTING results are disclosed by the Bharat Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) for the year ended 30th June 1958, in sharp contrast to the encouraging performance noted in the previous year. Both sale proceeds and profit have suffered a setback. Indeed, the profit is so low that the dividend to shareholders has had to be cut to 10 per cent. from 15 per cent. at which level it had been maintained for a long period. Further, even for paying this attenuated dividend, the Directors have had to rely on the dividend equalisation reserve to some extent. It is true the Company had to draw from the dividend equalisation reserve in 1955-56 also, but then it was for maintaining the dividend at the enhanced rate of 15 per cent. The Directors attribute the setback in the Company's results to non-availability of adequate supplies of sugarcane, the crop having been severely affected by drought and red rot disease, and to the low selling price for sugar fixed by the Central Government under the Control Order, irrespective of the cost of production which adversely affected the profits.

The gross profit at Rs. 4.16 lakhs shows a fall of Rs. 1.34 lakh from Rs 5.50 lakhs for 1956-57, to which level it had risen from Rs. 3.02 lakhs for 1955-56 The provision for taxation has, however, been raised from Rs. 1.60 lakh to Rs. 2.10 lakhs, but that for depreciation has been reduced from Rs. 94,400 to Rs. 48,600. The net profit too is lower at Rs. 1.20 lakh, as compared with Rs. 2.47 lakhs for the previous year. It is also less than Rs. 1.83 lakh earned two years ago. No wonder, therefore, that even to pay a dividend of 10 per cent. for the year under review, as against 15 per cent. for the past few years, the Directors have had to draw a sum of Rs. 50,000 from the dividend equalisation reserve. A sum of Rs. 7,400 has been transferred to development rebate, as against *nil* in the previous year.

The following comparative table shows at a glance the Company's progress in the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	64.07	73.32	60.29	25.86

Carry forward	0.04	0.08	0.02	0.15

* Approximate.

During the year under review, the Company's factory worked for 110 days, as against 158 days in the preceding year. The quantity of sugarcane crushed at 1,596,830 maunds was also lower, as compared with 2,256,545 maunds in the previous year. A welcome feature, however, was that the recovery was better at 10.29 per cent., as against 9.63 per cent. a year ago. The yield from the Company's farms dropped to 40,500 maunds of sugarcane from 48,000 maunds in the previous year. This was due to severe drought conditions and prevalence of red rot disease. The crushing during the current year is expected to be about 1.7 million maunds of sugarcane.

Referring to the Government of India's sugar export promotion policy, the Directors state thus:

"With a view to earning foreign exchange to meet the serious shortage of foreign exchange faced by the country, the Government of India promulgated an ordinance, namely, Sugar Export Promotion Ordinance 1958 on 27th June 1958. Subsequently, the Sugar Export Promotion Act, 1958 was passed by the Parliament, thereby placing the law permanently on the statute book. Pursuant to the provisions of the said law, the Government of India allotted to the factory an export quota of 1,514 bags of sugar against production of the season 1957-58, which is expected to fetch a price of about Rs. 12 only per maund considering the very low price of sugar in the international markets."

(Continued in previous column)

COMPANY MEETINGS AND DIVIDENDS

KHARDAH CO., LTD. Annual General Meeting, Calcutta, 19th February 1959. Dividend: Rs. 8.00 per share. Transfer books remain closed from 3rd to 19th February 1959, both days inclusive.

BRITISH BURMAH PETROLEUM CO., LTD. Annual General Meeting, Bombay, 23rd February 1959.

BHARAT SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends payable on and after 10th March 1959. Transfer books will remain closed from 16th February to 27th February 1959, both days inclusive.

NEW INDIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends payable on or after 10th March 1959. Transfer books will remain closed from 16th February to 27th February 1959, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 27th February 1959. Transfer books will remain closed from 14th February to 27th February 1959, both days inclusive.

KELVIN JUTE CO., LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends are payable on or after 12th March 1959. Transfer books will remain closed from 14th February to 27th February 1959, both days inclusive.

JAIPUR UDYOG LTD. Annual General Meeting, Sawai Madhopur, 28th February 1959. Transfer books will remain closed from 23rd February to 28th February 1959, both days inclusive.

AUCKLAND JUTE CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. Dividends are payable on or after 5th March 1959. Transfer books will remain closed from 17th February to 27th February 1959, both days inclusive.

UPPER GANGES SUGAR MILLS LTD. Annual General Meeting, Calcutta, 2nd March 1959. Dividends on shares payable on or after the 10th March 1959. Transfer books will remain closed from 23rd February to 2nd March 1959, both days inclusive.

KINNISON JUTE MILLS CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. The share transfer registers will remain closed from 17th February to 27th February 1959, both days inclusive.

STANDARD JUTE CO., LTD. Interim dividend of Rs. 2.50 per share on ordinary shares for the year ended 31st March 1959. Transfer books of the Company will remain closed from 17th February to 27th February 1959, both days inclusive.

UNION JUTE CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. Transfer books will remain closed from 17th February to 27th February 1959, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of 4 per cent. on ordinary shares, for the year ending 31st March 1959. Transfer books remain closed from 4th to 11th February 1959, both days inclusive.

Notice

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England)

Liability of Members Limited

DIVIDEND

THE FOLLOWING INTERIM DIVIDEND HAS been declared payable on the 18th March, 1959:—

On the Preference Shares at 5 per cent. for each of the years ended 31st March, 1957 and 31st March, 1958 (Ten Shillings per share) less U.K. Income Tax of eight shillings and six pence in the £ Sterling.

Payment of the Dividend declared will be made only to those Members whose names are registered in the Books of the Company on the 4th March, 1959 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Preference Share Transfer Books will be closed from the 19th February, 1959, to 4th March, 1959, both days inclusive.

RANEEGUNGE COAL'S PROFIT HIGHER

SHEVEROY ESTATES MAINTAIN DIVIDEND

Raneegunge Coal Association, Ltd.

THE directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

The Company's profit for the year ended 31st March 1958 after inclusion of Rs. 29,060 (Rs. 23,188) brought forward is Rs. 11,06,950 (Rs. 9,33,634). After making provision for taxation of Rs. 5,50,000 (Rs. 1,60,000) there remains a balance of Rs. 5,56,950 (Rs. 7,59,022). From this balance the directors have placed to machinery replacement and development reserve Rs. 1,70,000 (Rs. 5,50,000), development rebate reserve Rs. 1,43,197 (*nil*) and recommend the payment of a dividend at Re. 1 (Re. 0.75) per share absorbing Rs. 2,39,950 (Rs. 1,79,963) leaving a balance to be carried forward of Rs. 3,803 (Rs. 29,060 after adjustment of Rs. 14,612 relating to the previous year).

Coal raisings, despatches and stocks:

	Year ended 31st March		
	1956	1957	1958
	Tons	Tons	Tons
Raisings ...	3,49,758	4,31,402	4,53,767
Despatches ...	3,81,924	4,09,316	4,10,888
Stocks ...	21,041	43,127	86,006

Raisings increased by 22,365 tons. Despatches were not according to the Company's expectation due to pilot capacity not having been increased and kept in line with the increased production. The Company manufactured during the year under review 6,774 tons of hard coke. 6,181 tons were despatched and 1,155 tons remained in stock.

Development in all sections of the collieries is progressing favourably. Relationship between the management and labour has been very satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,99,500	Block ...	46,82,156
Reserves ...	28,79,558	Coal stock ...	13,86,741

Profit and loss account ...	3,803	Investments	17,642
		Cash ...	96,942
Rs.	98,72,492	Rs.	98,72,492

Sheveroy Estates, Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co. (India), Ltd., Madras) submitted the annual report, together with the audited accounts of the Company for the year ended 30th June 1958.

After providing for depreciation and all expenses, except the taxation liability, the accounts show a profit of Rs. 2,83,686 (Rs. 1,96,169). This together with the balance brought forward from last year of Rs. 2.849 (Rs. 4,805) makes a total of Rs. 2.86,535 (Rs. 2,00,974). Out of this the directors have appropriated for provision for taxation Rs. 1,30,000 (Rs. 95,000) and for donation paid Rs. 1,500 (Rs. 1,875), leaving a balance of Rs. 1,55.035 (Rs. 1,04,099) available for distribution, which they recommend to dispose of as under:—

In payment of 7½ (7¼) per cent. dividend for 1957-58 absorbing Rs. 1.01,250 (Rs. 1,01,250) and to carry forward Rs. 53,785 (Rs. 2,849).

Particulars of acreage are as under:—

	Vanguard Estate	*Hawthorne Estate*	*Total*
Coffee—	Rs.	Rs.	Rs.
Bearing	447.00	373.50	820 50
Immature	42.00	2.50	44.50
Reserve	132.60	59.86	192.46
Total ..	621.60	435.86	1,057.46

Coffee crop:—Crop secured during the season amounted to cwts. 4.372-2-23 at a cost of Rs. 113.78 per cwt., against the estimate of cwts. 4,200. The entire crop has been delivered to the Coffee Pool, as usual, and the stock has been valued at Rs. 171.00 per cwt. for accounting purposes.

Taxation:—All appeals relating to coffee assessment by the Central Income-tax Authorities have now been disposed of, holding that no part of coffee income is taxable to Central Income-tax and necessary refunds for tax payments partly made in the earlier assessment years are awaited.

Estimates for 1958-59:—Coffee crop estimated on the blossom was 2,800 cwts. to cost Rs. 152.45 per cwt. The weather has been extremely dry during the months of June and July, as a result of which the development of berries has been very much retarded. This has been generally the case throughout the Sheveroys and reports indicate that most of the planters are heavily dropping on their blossom estimates. The Company also anticipates a short-fall of about 600 cwts. over the original estimate.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Angelo Bros., Ltd.

The directors of the above Company (Managing Agents: Messrs. Turner Morrison & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August 1958.

The profit for the year, after providing for depreciation, directors' fees and taxation amounts to Rs. 3,36,567 (Rs. 5.65,415) to which is added the balance brought forward from last year of Rs. 3,61,289 (Rs. 3,35,874) making a total of Rs. 6,97,856 (Rs. 9,01,289). From this amount, after transferring to development rebate reserve Rs. 8,484 (*Nil*) the directors recommend payment of a dividend of 12½ (12½) per cent. and a bonus of 2½ (5½) per cent. absorbing Rs. 4,50,000 (Rs. 5,40,000) leaving a balance to be carried forward of Rs. 2.39,372 (Rs. 3,61,289).

Throughout the season the shellac market was essentially a buyers' market. Consequently, trading conditions were more difficult than those experienced for many years.

In common with many other similarly placed, the Company's business suffered by reason of the trade recession in U.S.A. and the tightness of money in the U.K. The rapidly increasing popularity of long- and extended-playing gramophone records at the expense of shellac-based ones, which represented a substantial usage of the Company's products, resulted in diminished demand for the grades concerned, but strong efforts on the part of all involved in finding and meeting other demands met with considerable success, so that a satisfactory volume of production resulted.

TN was quoted at Rs. 88 at the season's opening and at Rs. 65 by its close, having been so low as Rs. 57 in April 1958. The prevalence of unfavourable conditions on the Calcutta market led to the formation in June of The Indian Lac Exporters Association which, with Central Government's backing, thereafter enforced the imposition of minimum export selling prices, basis Rs. 70 for TN.

At all times there were ample supplies of Indian Lac to counter-balance in the international trade the very poor crop garnered in Thailand, but the eventual return of competition from that quarter is to be anticipated. Even stiffer competition from synthetic resins seems inevitable, but the directors have every reason to feel confident that the Company is fitter to survive profitably than any other unit in the industry and trade.

The factory plant was maintained to a high level of efficiency and economy and the policy of smoothing production lines was successfully continued.

Accounts in brief are as under:—

Eastern Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit and loss account, after providing for all charges and making provision of Rs. 7,34,214 (Rs. 6,53,393) for taxation and after paying an interim dividend on the cumulative preference shares at 2½ (2½) per cent. per annum, less tax, amounting to Rs. 42.813 (Rs. 42.812) shows a profit of Rs. 5.87,351 (Rs. 4,18,509). To this is added the balance brought forward from the previous year of Rs. 2,42,272 (Rs. 3.27,916), leaving a total available balance of Rs. 8.29,623 (Rs. 7,46.425) which the directors propose to dispose of as under:—

In payment of a final dividend of 2½ (2½) per cent. per annum, making the total dividend at 5 per cent. for the year, on the 25.000 issued preference shares less income-tax at 30 per cent. plus 5 per cent. surcharge on income-tax of Rs. 42,812 (Rs. 42,813) and a dividend at the rate of 9 (9) per cent. per annum on the 51,260 issued ordinary shares without any deduction for income-tax paid by the Company of Rs. 4,61,340 (Rs. 4,61,340) and to carry forward Rs. 3,25,471 (Rs. 2,42.272).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 78.168 for which no quotations are available. The total of the market value of the investments for which quotations are available together with unquoted investments as valued by the directors, exceeds the book value at 31st December 1958, by Rs. 58,72,215.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76.26.000	Investments	1,62,31,196
Reserves ...	56,67,666	Debts, deposits and advances ...	74,591
Provision for taxation ...	1,74.916		
Liabilities ...	25,11,734		
Profit and loss account ...	3.25.471		
Rs.	1,63,05,787	Rs.	1,63,05,787

Loyal Textile Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Thiagaraja Chetty & Sons Private Ltd., Kovilpatti) submit the audited accounts of the Company for the year ended 30th June 1958.

The year's working has resulted in a loss of Rs. 4,00,558 (profit of Rs. 8,57,168), after providing Rs. 4,25,434 (Rs. 2,37,710) for normal and shift depreciation. For the year ended 30th June 1957 the total dividend paid was 5 per cent. on the preference shares and 5 per cent. on the equity shares.

The heavy excise duty amounting to Rs. 8,93,463 has been the last straw breaking the camel's back, while adverse trade conditions have forced the Company to work in loss.

The directors regret, therefore, that they are unable to declare any dividend, except interim dividend of 2½ (2½) per cent. on cumulative preference shares already paid in the month of February 1958 in anticipation of profits. But as the year's working has resulted in a loss, the dividend already declared is met out of previous year's profits and out of development reserve account.

The B mills is now working with 6,300 spindles; and the full complement of 12,000 spindles is expected to work by March 1959. The delay is due to the indigenous maker's inability to keep up deliveries to schedule. An application dated 27th November 1957 to Industrial Finance Corporation of India for an additional loan of Rs. 10 lakhs (over Rs. 18 lakhs already received) is now awaiting Government sanction.

All the machinery in the A mill are old dating back to 1891-92-93 and obsolete requiring replacement. Therefore the Company applied to the National Industrial Development Corporation Private Ltd., for a loan of Rs. 65 lakhs on 16th August 1957. This figure was first reduced to Rs. 53.8 lakhs, again reduced to Rs. 32.18 lakhs, with conditions that the Company should find one-third of the amount; and finally when the loan was sanctioned after repeated considerations and discussions, the actual amount available was Rs. 8.73 lakhs only, provided again that one-third of this amount was found by the Company. Thus the problem of rehabilitation has become more arduous. However, the directors look forward to further aid from N.I.D.C.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,51,250	Gross block	86,56,208
Reserves ...	2,55,104	*Less*—Depreciation ...	31,33,541
Provision for taxation ...	4,54,075	Net block	55,22,667
Liabilities ...	40,93,173	Stock-in-trade	23,84,345
		Stores and spares, etc.	7,34,437
		Cotton in transit ...	8,643
		Debts, deposits and advances ...	5,43,798
		Investments	24.015
		Cash ...	35,139
		Profit and loss account ...	4,00,558
Rs.	96,53,602	Rs.	96.53.602

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notice

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December 1958, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 20th February, 1959 to 27th February, 1959, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *28th January*, 1959.

Notes: (*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 7th March, 1959, to those Shareholders so entitled whose names appear in the Company's books on the 27th February, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

16 FEB 1959

Notices

THE EMPIRE DYEING AND MANUFACTURING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Annual General Meeting of the Shareholders of The Empire Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Monday the 16th March, 1959, at 11-30 a.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1958.
2. To sanction payment of Dividend.
3. To appoint a Director in place of Mr. Kantilal Nahalchand who retires by rotation in accordance with the Articles of Association of the Company and, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. Nanabhoy B. Jeejeebhoy who retires by rotation and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956 has been received by the Company:

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Nanabhoy B. Jeejeebhoy, an Associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED that this Company is hereby authorised to enter into contracts with Messrs. Morris & Brady Private Ltd., an associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, for the purchase and the erection of lifting and carrying machinery, etc., on terms of ready or forward delivery either for cash or on credit provided that (1) the prices or amounts charged are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and (2) the payments of the prices or amounts are made within one month after the Company has received delivery of machinery, etc."

7. To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED (*a*) that as from the 1st April, 1959, Messrs. W. H. Brady & Co. Ltd., be appointed as Buying Agents for this Company for a further period of three years in respect of Machinery and Stores to be purchased by the Company outside India. It being known that the Manchester Branch of Messrs. W. H. Brady & Co. Ltd. is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company, and (*b*) that Messrs. W. H. Brady & Co. Ltd. be reimbursed in respect of buying expenses incurred by them on all such purchases made on behalf of this Company. The buying expenses to be calculated at a rate not exceeding 2½ per cent. of the total cost of purchases made, by reference to the ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co. Ltd. (Manchester Branch), in the year in which the purchases were made."

8. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

   "RESOLVED that the Managing Agents, Messrs. W. H. Brady & Co. Ltd., and their associates, Messrs. Morris & Brady Private Ltd., be authorised to retain all commissions or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts are hereinafter to be entered into between this Company and the said Morris & Brady Private Ltd., provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."

9. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:

   "RESOLVED that pursuant to Section 360 and other applicable sections (if any), of the Companies Act, 1956, this Company hereby approves of, confirms and consents to the arrangement for letting on a monthly tenancy at a rent of Rs. 1,200 per month inclusive of the present rates and taxes a godown situate at Tulsi Pipe Line Road, Lower Parel, Bombay, belonging to the Company to The Brady Engineering Company, Limited, an associate of the Managing Agents."

By Order of the Board,

Per pro W. H. BRADY & CO. LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

BRADY HOUSE,
12-14, VEER NARIMAN ROAD,
BOMBAY 1, *5th February* 1959.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy and, where that is allowed, one or more proxies to attend and vote instead of himself. A proxy need not be a member.

2. The notice under Section 190 referred to in Resolution No. 4 mentioned in the notice is available for inspection of the members at the Registered Office of the Company between the hours of 11 a.m. and 1-30 p.m. on any working day except Saturday and between the hours of 11 a.m. and 1 p.m. on Saturdays except Sundays and Holidays when the books and registers are closed under provisions of the Companies Act, 1956 or the Articles of Association of the Company.

3. The Transfer Books of the Company will be closed from Friday the 27th February, to Friday the 20th March, 1959, both days inclusive.

4. The Dividend when declared will be made payable at the Registered Office of the Company on and after Monday the 30th March, 1959. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 20th March 1959.

EXPLANATORY STATEMENT ANNEXED TO THE NOTICE

Item No. 4.—Mr. Nanabhoy B. Jeejeebhoy who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, who are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board, retires by rotation, in accordance with Section 261 of the Companies Act. Mr. Nanabhoy B. Jeejeebhoy cannot be appointed a Director of the Company liable to retire by rotation except by a Special Resolution and in respect of whom a Special Notice under Section 190 of the said Act shall have been received by the Company. Such a notice has been received by the Company.

Item No. 6.—Since Messrs. Morris & Brady Private Ltd. are an Associate of your Managing Agents a Special Resolution set out under this item is necessary under Section 360 of the Companies Act, 1956.

Your Directors, Messrs. J. Symon and F. Edwards, are interested as Directors and Mr. Kantilal Nahalchand as a member.

Item No. 7.—Your Managing Agents have been the Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interest of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration by way of commission. This Special Resolution provides for appointing the Managing Agents the Buying Agents of your Company for a further period of three years in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purposes of transacting business on behalf of your Company only. The Special Resolution set out under this item provides for such expenses to be calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) in the year in which the purchases were made. The Special Resolution passed by the Company in 1956, pursuant to Section 358 of the Companies Act, 1956, expires at the end of March, 1959 and hence this authority is being renewed.

Your Directors, Messrs. Kishore M. Premchand and Nanabhoy B. Jeejeebhoy, are interested as Directors, and Mr. F. Edwards and Mr. J. Symon as members of Messrs. W. H. Brady & Co. Ltd.

Item No. 8.—This Resolution authorises your Managing Agents and their associate, Messrs. Morris & Brady Private Ltd., to retain the commissions and other remuneration which they may earn in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts are to be entered into between the Company and the associate of your Managing Agents, Messrs. Morris & Brady Private Ltd. This resolution is necessary so as to comply with Section 359 of the Companies Act, 1956.

Your Directors, Messrs. Kishore M. Premchand and Nanabhoy B. Jeejeebhoy, are interested as Directors of Messrs. W. H. Brady & Co. Ltd., and Mr. F. Edwards and Mr. J. Symon as members of W. H. Brady & Co. Ltd.

Item No. 9.—The Brady Engineering Company Limited requires additional godown space and the Company, namely The Empire Dyeing and Manufacturing Company Ltd. is able to rent a godown in its Mill Premises at Tulsi Pipe Line Road, Lower Parel, Bombay, on a monthly tenancy at a monthly rent of Rs. 1,200 inclusive of the present rates and taxes. The basis of such rent has been calculated by reference to godowns of similar dimensions in the locality. The Company has given the said godown on rent from 1st February, 1959. A Special Resolution is required as the Brady Engineering Company Ltd. is an associate of your Managing Agents.

Your Directors, Messrs. Kantilal Nahalchand, Kishore M. Premchand, Nanabhoy B. Jeejeebhoy and Mr J. Symon are also Directors of the Brady Engineering Company Ltd., and as such are interested in the rents to be received by the Company from the said Brady Engineering Company Limited.

By Order of the Board,

Per pro W. H. BRADY & CO. LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

BOMBAY, *5th February* 1959.

G. CLARIDGE AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRTY-NINTH Annual General Meeting of the Shareholders of G. Claridge & Company Limited, will be held at the Company's Registered Office, "Brady House," 12/14 Veer Nariman Road, Fort, Bombay, on Monday the 16th March, 1959, at 12.00 Noon, to transact the following business:—

1. To adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1958.
2. To sanction payment of Dividend.
3. To appoint a Director in place of Mr. Jehangir P. Patel who retires by rotation and being eligible offers himself for re-

election and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956 has been received by the Company:—

"RESOLVED that pursuant to Section 261 and other applicable provisions, if any, of the Companies Act 1956, Mr. Jehangir P. Patel who retires by rotation and who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two persons as Directors to the Board), be and he is hereby re-appointed a Director of the Company."

4. To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation and being eligible offers himself for re-election and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956 has been received by the Company:—

"RESOLVED that pursuant to Section 261 and other applicable provisions, if any, of the Companies Act 1956, Mr. Kishore M. Premchand who retires by rotation and who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two persons as Directors to the Board), be and he is hereby re-appointed a Director of the Company."

5. To appoint Auditors for the current year and to fix their remuneration.

6. To consider and if thought fit to pass the following Resolution as a Special Resolution under Section 360 of the Companies Act 1956:—

"RESOLVED that this Company is hereby authorised to enter into contracts with Messrs. Morris & Brady Private Ltd., an associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, for the purchase and the erection of lifting and carrying machinery, etc., and for the sale of printing, stationery, etc., on terms of ready or forward delivery either for cash or on credit provided that (1) the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and (2) the payments of the prices or amounts are made or received within one month from the date of the purchase or sale as the case may be."

7. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:—

"RESOLVED that the Managing Agents, Messrs. W. H. Brady & Co. Ltd., and their associates, Messrs. Morris & Brady Private Ltd., be authorised to retain all commissions or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which Contracts are hereinafter to be entered into between this Company and the said Morris & Brady Private Ltd., provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."

8. To consider and if thought fit to pass the following Resolution as a Special Resolution under Section 358 of the Companies Act 1956:—

"RESOLVED (a) that as from 1st April 1959, Messrs. W. H. Brady & Co. Ltd., be appointed as Buying Agents for this Company for a further period of three years in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co. Ltd., is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

(b) That Messrs. W. H. Brady & Co. Ltd. be reimbursed in respect of buying expenses incurred by them on all such purchases made on behalf of this Company. The buying expenses to be calculated at a rate not exceeding 2½ per cent. of the total cost of purchase made, by reference to the ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co. Ltd. (Manchester Branch), in the year in which the purchases were made."

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
Per pro W. H. BRADY & COMPANY, LIMITED,
F. EDWARDS,
Technical Adviser,
Managing Agents.

BRADY HOUSE,
12-14 VEER NARIMAN ROAD,
BOMBAY, 1.
BOMBAY, *6th February*, 1959.

Note:—The notices under Section 190 and referred to in Resolutions Nos. 3 and 4 mentioned in the notice are also available for inspection of the members at the Registered Office of the Company between the hours of 11 a.m. to 1.30 p.m. on any working day except Saturdays and between the hours of 11 a.m. to 1 p.m. on Saturdays except Sundays and holidays and when the books and registers are closed under the provisions of the Companies Act 1956 or the Articles of Association of the Company.

2. The Transfer Books of the Company will be closed from Friday the 27th February to Friday the 20th March, 1959, both days inclusive.

3. The Dividend when declared will be made payable at the Registered Office of the Company on and after Monday the 30th day of March, 1959. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 20th day of March, 1959.

EXPLANATORY STATEMENT ANNEXED TO THE NOTICE

Item No. 3.—Mr. Jehangir P. Patel who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who are authorised by the Articles of Association and the Managing Agency Agreement to appoint two persons as Directors to the Board), retires by rotation. In accordance with Section 261 of the Companies Act, he cannot be appointed a Director of the Company except by Special Resolution and in respect of which appointment a Special Notice shall have been received by the Company from members intimating their intention to propose Mr. Jehangir P. Patel as a Director in terms of the Resolution mentioned in the said item. Such a Special Notice has been received by the Company.

Item No. 4.—Mr. Kishore M. Premchand who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who are authorised by the Articles of Association and the Managing Agency Agreement to appoint two persons as Directors to the Board), retires by rotation. In accordance with Section 261 of the Companies Act, he cannot be appointed as a Director of the Company except by Special Resolution and in respect of which appointment a Special Notice shall have been received by the Company from members intimating their intention to propose Mr. Kishore M. Premchand as a Director in terms of the Resolution mentioned in the said item. Such a Special Notice has been received by the Company.

Item No. 6.—Since Messrs. Morris & Brady Private Ltd. are an Associate of your Managing Agents a Special Resolution set out under this item is necessary under the Companies Act, 1956.

Your Director Mr. F. Edwards is interested in the said Morris & Brady Private Ltd., as a Director and your Director Mr. Kantilal Nahalchand as a Shareholder.

Item No. 7.—This Resolution authorises your Managing Agents and their associate, Messrs. Morris & Brady Private Ltd., to retain the commissions and other remuneration which they may earn in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts are to be entered into between the Company and the associate of your Managing Agents, Messrs. Morris & Brady Private Ltd. This resolution is necessary so as to comply with Section 359 of the Companies Act 1956.

Your Directors Mr. Jehangir P. Patel and Mr. Kishore M. Premchand are interested as Directors of Messrs. W. H. Brady & Co. Ltd., and also as Shareholders and your Director Mr. F. Edwards as a Shareholder. Your Director Mr. F. Edwards is interested in Messrs. Morris & Brady Private Ltd., as a Director and your Director Mr. Kantilal Nahalchand as a Shareholder.

Item No. 8.—Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interest of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration by way of commission. This special resolution provides for appointing the Managing Agents the Buying Agents of your Company for a further period of three years in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company. The Special Resolution set out under this item provides for such expenses to be calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) in the year in which the purchases were made. The Special Resolution passed by the Company in April 1956 expires at the end of March, 1959 and hence this authority is being renewed.

By Order of the Board,

F. EDWARDS,
Technical Adviser,
Managing Agents.

BOMBAY, *6th February*, 1959.

THE BRADY ENGINEERING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirteenth Annual General Meeting of the Shareholders of The Brady Engineering Company, Limited, will be held at the Company's Registered Office, "Brady House," 12-14 Veer Nariman Road, Fort, Bombay, on Monday the 16th day of March 1959, at 2-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

(2) To sanction the payment of Dividend.

(3) To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation in accordance with Article 156 of the Articles of Association of the Company and being eligible, offers himself for re-election and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Kishore M. Premchand, an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

(4) To appoint a Director in place of Mr. Bhagvandas C. Mehta who retires by rotation in accordance with Article 156 of the Articles of Association of the Company and being eligible, offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

(6) To consider and, if thought fit, to pass the following Resolution as a Special Resolution:

"RESOLVED that pursuant to Section 360 and other applicable sections (if any), of the Companies Act, 1956, this Company hereby approves of, confirms and consents to the arrangement for taking on a monthly tenancy at a rent of Rs. 1,200 per month inclusive of the present rates and taxes a godown situate at Tulsi Pipe Line Road, Lower Parel, Bombay, belonging to the Empire Dyeing and Manufacturing Company Limited, an associate of the Managing Agents."

(7) To consider and if thought fit to pass the following Resolution as a Special Resolution:

(a) "RESOLVED that pursuant to Section 360 and all other relevant sections of the Companies Act, 1956, the Company hereby approves the Agreement dated 21st day of January 1959, made between Messrs. Morris & Brady Private Limited and this Company (a duplicate whereof is for the purpose of identification endorsed by the signature of the Chairman) for the manufacture, sale and servicing of lifting and carrying machinery and devices and components thereof and the current articles therein mentioned on the terms, conditions and stipulations therein contained.

(b) RESOLVED FURTHER that the Directors be and they are hereby empowered to alter any of the terms and conditions contained in the said Agreement dated 21st January, 1959, as may from time to time be deemed necessary or proper.

(c) RESOLVED FURTHER that the Company be empowered to receive payment, in advance, 50 per cent. of the Invoice prices along with each order that may be placed with the Company from time to time under the said Agreement dated 21st January, 1959.

(d) RESOLVED FURTHER that this Company is hereby authorised to enter into contracts with Messrs. Morris & Brady Private Limited, an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, for the purchase and the erection of lifting and carrying machinery, etc., on terms of ready or forward delivery either for cash or on credit provided that (1) the prices or amounts charged are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and (2) the payments of the prices or amounts are made within one month after the Company has received delivery of machinery, etc."

(8) To consider and if thought fit to pass the following Resolution as a Special Resolution:

(a) "RESOLVED that as from the 1st April, 1959, Messrs. W. H. Brady & Company Limited, be appointed as Buying Agents for this Company for a further period of three years in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Company Limited is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company.

(b) RESOLVED FURTHER that Messrs. W. H. Brady & Company Limited be reimbursed in respect of buying expenses incurred by them on all such purchases made on behalf of this Company. The buying expenses to be calculated at a rate not exceeding 2½ per cent. of the total cost of purchases made, by reference to the ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Company Limited (Manchester Branch), in the year in which the purchases were made."

(9) To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

"RESOLVED that the Managing Agents, Messrs. W. H. Brady & Company Limited, and their associates, Messrs. Morris & Brady Private Limited, be authorised to retain all commissions or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts are hereinafter to be entered into between this Company and the said Messrs. Morris & Brady Private Limited, provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."

(10) To consider and if thought fit to pass the following Resolution as an Ordinary Resolution.

"RESOLVED that subject to the approval of the Central Government Messrs. W. H. Brady & Company Limited be and they are hereby appointed the Managing Agents of the Company for a further period of ten years from the 15th day of August 1960 at the remuneration and upon the terms provisions and conditions contained in the draft agreement proposed to be entered into between the Company of the one part and Messrs. W. H. Brady & Company Limited of the other part, with such modification thereto as may be directed by the Central Government and which draft agreement is for the purpose of identification signed by the Chairman of the Meeting and that the Directors be and they are hereby authorised to cause the said Agreement now approved and so modified to be executed on behalf of the Company upon the approval of of the Central Government being granted."

By Order of the Board of Directors,
Per pro W. H. BRADY & COMPANY LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

BOMBAY, *5th February*, 1959.

THE NEW CITY OF BOMBAY MANUFACTURING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 54th Annual General Meeting of the Shareholders of The New City of Bombay Manufacturing Company Limited, will be held at the Company's Registered Office, "Brady House" 12-14, Veer Nariman Road, Fort, Bombay, on Monday, 16th March 1959, at 3-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1958.

2. To appoint a Director in place of Mr. Shantilal Choonilal, who retires by rotation, in accordance with the Articles of Association of the Company, and, being eligible, offers himself for re-election.

3. To appoint a Director in place of Mr. Kishore M. Premchand, who retires by rotation and, being eligible, offers himself for re-election, and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956, has been received by the Company:

"RESOLVED that pursuant to Section 261 of the Companies Act 1956, Mr. Kishore M. Premchand, an associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and is hereby re-appointed a Director of the Company liable to retire by rotation."

4. To appoint Auditors for the current year and fix their remuneration.

5. To consider and if thought fit to pass the following Resolution as a Special Resolution:

"RESOLVED that this Company is hereby authorised to enter into contracts with Messrs. Morris & Brady Private Ltd., an associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, for the purchase and the erection of lifting and carrying machinery, etc., on terms of ready or forward delivery either for cash or on credit provided that (1) the prices or amounts charged are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and (2) the payments of the prices or amounts are made within one month after the Company has received delivery of machinery, etc."

6. To consider and if thought fit to pass the following Resolution as a Special Resolution:

"RESOLVED that (a) as from the 1st April 1959, Messrs. W. H. Brady & Co. Ltd., be appointed as Buying Agents for this Company for a further period of three years in respect of Machinery and Stores to be purchased by the Company outside India, it being known that the Manchester Branch of Messrs. W. H. Brady & Co. Ltd. is not maintained for the purpose of transacting business on behalf of this Company only, but also its own business not connected with the business of the Company, and (b) that Messrs. W. H. Brady & Co. Ltd. be reimbursed in respect of buying expenses incurred by them on all such purchases made on behalf of this Company. The buying expenses to be calculated at a rate not exceeding 2½ per cent. of the total cost of purchases made, by reference to the ratio which the actual overall expenses bear to actual overall purchases made by Messrs. W. H. Brady & Co. Ltd. (Manchester Branch), in the year in which the purchases were made."

7. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

"RESOLVED that the Managing Agents, Messrs. W. H. Brady & Co. Ltd., and their associates, Messrs. Morris & Brady Private Ltd., be authorised to retain all commissions or other remuneration earned or to be earned by them in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which Contracts are hereinafter to be entered into between this Company and the said Morris & Brady Private Ltd., provided the prices or amounts

charged to or received by the Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."

By Order of the Board,
Per pro W. H. BRADY & Co., LTD.,
F. EDWARDS,
Technical Adviser,
Managing Agents.

BOMBAY, 6*th February* 1959.

Notes:—1. A member entitled to attend and vote is entitled to appoint a proxy and, where that is allowed, one or more proxies to attend and vote instead of himself. A proxy need not be a member.

2. The Notice under Section 190 and referred to in Resolution No. 3 mentioned in the Notice is also available for inspection of the members at the Registered Office of the Company on any working day between 11 a.m. and 1 p.m.

3. The Transfer Books of the Company will be closed from Friday, the 27th February 1959, to Friday, the 20th March 1959, both days inclusive.

EXPLANATORY STATEMENTS ANNEXED TO THE NOTICE

Item No. 3.—Mr. Kishore M. Premchand who is a Director of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company, who are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board, retires by rotation. In accordance with Section 261 of the Companies Act, Mr. Kishore M. Premchand cannot be appointed a Director of the Company liable to retire by rotation except by a Special Resolution and in respect of whom a Special Notice under Section 190 of the said Act shall have been received by the Company. Such Notice hase been received.

Item No. 5.—Since Messrs. Morris & Brady Private Ltd., are an Associate of your Managing Agents, a Special Resolution set out under this item is necessary under Section 360 of the Companies Act 1956.

Item No. 6.—Your Managing Agents have been Buying Agents of your Company in respect of Machinery and Stores purchased outside India through their Manchester Branch. In the interest of your Company, it is advisable to continue this practice. The section requires that at the option of the Company the Managing Agents may be paid in respect of such purchases either such part of the expenses of such foreign office as may be reasonably attributable to the purchases made on behalf of your Company or remuneration by way of commission. This special resolution provides for appointing the Managing Agents the Buying Agents of your Company for a further period of three years in respect of Machinery and Stores to be purchased outside India through their Manchester Branch and for the expenses to be reimbursed to them. The Manchester Branch of the Managing Agents is not maintained for the purpose of transacting business on behalf of your Company only. The Special Resolution set out under this item provides for such expenses to be calculated by reference to the ratio which the actual overall expenses of the Manchester Branch of your Managing Agents bear to actual overall purchases made by that Branch (including purchases for your Company) in the year in which the purchases were made. The Special Resolution passed by the Company in 1956, pursuant to Section 358 of the Companies Act 1956, expires at the end of March 1959, and hence this authority is being renewed.

Your Directors, Messrs. Kishore M. Premchand and Nanabhoy B. Jeejeebhoy, are interested as Directors, and Mr. F. Edwards as a member of Messrs. W. H. Brady & Co. Ltd.

Item No. 7.—This Resolution authorises your Managing Agents and their associate, Messrs. Morris & Brady Private Ltd., to retain the commmissions and other remuneration which they may earn in respect of goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which contracts are to be entered into between the Company and the associate of your Managing Agents, Messrs. Morris & Brady Private Ltd. This resolution is necessary so as to comply with Section 359 of the Companies Act 1956.

Your Directors, Messrs. Kishore M. Premchand and Nanabhoy B. Jeejeebhoy, are interested as Directors of Messrs. W. H. Brady & Co. Ltd., and Mr. F. Edwards as a member of W. H. Brady & Co. Ltd.

By Order of the Board,

BOMBAY, 5*th February* 1959.

TREASURY BILL RATE DECLINES

(From Our Own Correspondent)

BOMBAY, 11*th February*

There has been no notable change in the state of the short-term money market reported in these columns last week. If anything, the position is somewhat more stringent, thanks to a further expansion in demand for bank credit. Banks' requirements are, therefore, not adequately met, except through borrowing from the Reserve Bank and by drawing down their balances with it. Very little business is passing in inter-bank call money, the interest rate on which is unchanged at 3½ per cent. among the Exchange banks and big Indian banks and at 3½ to 3¾ per cent. among the smaller banks. House money at seven days' notice continues to be quoted at 3½ to 3¾ per cent. and short-term deposits at 3¾ to 4 per cent. for one to six months.

Notwithstanding the continued stringency, this week's sale of 91-day Treasury Bills had a better response, the amount tendered, at Rs. 4.19 crores, being more than double that invited and very nearly double the amount offered, namely, Rs. 2.10 crores, last week. In consonance with such large offerings, the average discount rate dropped from 2.559 per cent. to 2.530 per cent. per annum. Tenders for next week are, however, kept unchanged at Rs. 2 crores. Besides such response, the market absorbed (during the week ended 7th February) Intermediate Treasury Bills amounting to Rs. 50 lakhs at Rs. 99.376 per cent. This works out to a discount rate of 2.496 per cent. per annum. This is the first time after six weeks that the authorities have been successful in effecting sales of these bills. Further sales of these bills are being held this week at Rs. 99.381 per cent.

A substantial expansion of Rs. 33.66 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 6th February 1959. Notes held in the Banking Department are lower by Rs. 1.50 crore, so that the rise in total notes issued is of the order of Rs. 32.26 crores. This is covered by an increase of Rs. 34.99 crores in rupee securities and a contraction of Rs. 2.73 crores in rupee coin. There is no change in foreign securities, but balances held abroad are again lower, albeit by a small sum of Rs. 74 lakhs. Central Government's deposits have declined by Rs. 7.38 crores and those of other Governments by Rs. 6.76 crores. Deposits of banks, too, have fallen by Rs. 7.80 crores. A small rise of Rs. 96 lakhs is seen in loans and advances to Governments and a decline of Rs. 3.55 crores in other loans and advances. There has been a decrease of Rs. 15.14 crores in investments.

The Scheduled banks' statement for the week ended 30th January 1959 shows a fall of Rs. 5.06 crores in demand deposits, but this is more than made good by the rise of Rs. 10.59 crores in time deposits, so that the total net deposits are Rs. 5.53 crores higher over the week. Inter-bank borrowings are lower by Rs. 3.56 crores, while borrowings from the Reserve Bank show an increase of Rs. 9.59 crores. There has been a rise of Rs. 8.77 crores in bank advances and of Rs. 2.53 crores in bills purchased and discounted. Investments have gone up by Rs. 1.04 crore and cash balances by Rs. 4.01 crores.

A spurt in prices of 4 per cent. and 4½ per cent. State loans has been the main feature of the Gilt-edged market. The extent of rise in these loans varies from 5 nP to 20 nP. The Central Government securities are devoid of any interest, except in long-dated. National Plan loans are all on offer and Conversion Loan rules weak dropping over the week 20 nP to Rs. 73.85. 3 per cent. 1970-75 has shed 5 nP to Rs. 90.85 and 3 per cent. 1966-68 a like amount to Rs. 93.85. 3 per cent. 1963-65 is marked down by 5 nP to Rs. 96.80. 3½ per cent. 1964 is lower by 5 nP at Rs. 99.75. Other National Plan issues are, however, unchanged. 3½ per cent. 1974 has picked up 10 nP to Rs. 98.65 and 4 per cent. 1973 5 nP to Rs. 101.30. In the State loans section, Bombay 4 per cent. 1970 has gathered 10 nP to Rs. 100.10, 4½ per cent. 1969 a like amount to Rs. 101.90. 4½ per cent. 1970 has put on 5 nP to Rs. 101.85 and 1971 10 nP to Rs. 102. West Bengal 4 per cent. 1967 and 1968 have gained 10 nP each to 100.10 and 4½ per cent. 1970 is 20 nP higher at Rs. 101.20. Madras 4 per cent. 1967 and 1968 are up by 5 nP each to Rs. 100.10 and 4½ per cent. 1970 by 20 nP to Rs. 101.20. U.P. 4 per cent. 1967 and 1968 have also looked up by 5 nP each to Rs. 100.10 and 4½ per cent. 1970 by 15 nP to Rs. 101.10.

There has been a slight weakening of the rupee in terms of the U.S. dollar, but this is reflected as in the banks' selling rate for ready dollars which has gone up from Rs. 476.25 to Rs. 476.50 per $100. Their buying rate is unchanged at Rs. 473 per $100. In New York, spot sterling has been somewhat erratic, but, over the week, it has suffered a fall of 7/32c to $2.80.25/32-2.80.27/32. Three months' forward has declined from $2.80.11/16-2.80⅜ to $2.80⅜-2.80.21/32.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 9*th February*

Quiet conditions were witnessed in the foodgrains market during the week under review with expectations of bumper *rabi* crop following timely winter rains, stockists were reported to be anxious to sell their stocks before the advent of new crop by the end of March. Although the Central Government is anxious to go ahead with its scheme of State trading in foodgrains, it is understood that the U.P. Government wants some changes to be incorporated so as to make the scheme more effective and less radical. The State Government wants to build up sizable stocks while allowing the normal trade to function.

BULLION RECOVERS AFTER RULING EASY

(From Our Own Correspondent)

BOMBAY, 11*th February*

The bullion market opened the week on a steady note and, after presenting a distinctly easy trend in the subsequent three sessions, staged yesterday a recovery which gathered further momentum today. The initial steadiness was due to support lent by some Delhi operators. Subsequently, the tone of the market was adversely affected by weakness of commodity markets following the Forward Markets Commission's stern warning against speculative rigging up of price. Gold encountered some selling, thanks to reports of large arrivals of contraband metal. Silver reacted to news regarding payment of heavy import duty on Tibetan coins. A recovery, however, was in evidence yesterday and today, owing to short-covering and scattered replacement buying. But it was not marked enough to make up for the earlier losses, so that today's closing rates were lower than those at the end of last week.

February settlement in silver was well supported on the opening day at Rs. 196-12, as against Rs. 196-4. It was subjected to selling pressure and gradually receded to touch a low of Rs. 193-4 on Monday. Thereafter, it recovered to Rs. 195-1 today. The net loss over the week was Re. 1-3-0. March settlement declined from Rs. 197-2 on the opening day to Rs. 193-15 on Monday, but improved subsequently to Rs. 195-12 today. The carry forward charge was against the bulls at As. 11 throughout the week, as against As. 9 last week-end.

Ready silver opened the week at Rs. 196-4, as against Rs. 195-12, and, after moving down to Rs. 192-14, recovered to Rs. 194-11. The daily average arrivals and offtake were 15 bars and 13 bars, respectively. The floating stocks of silver are estimated at 1,400 bars.

In the gold section, February settlement came in for selling and fell from Rs. 117-6 to Rs. 115-4 on the 9th inst. It, however, recovered to Rs. 117-1 today. March settlement, after fluctuating between Rs. 117-11 and Rs. 115-7, wound up the week at Rs. 117-0. The carry forward charge, which was As. 2 against the bulls on Wednesday last, turned in their favour to the extent of an anna.

Ready gold eased from Rs. 117-6 to Rs. 115-3 on Monday. In the subsequent sessions, it recovered, today's closing rate being Rs. 117-3. The daily average arrivals of gold were 4,800 tolas, while the offtake was 4,000 tolas per day. The floating stocks of gold are reported to be around 25,000 tolas.

Ready and forward silver in London registered a slight improvement, the former from 76⅝d. to 76⅞d. and the latter from 76⅞d. to 76¾d. Gold in London also registered a rise from 249s. 5½d. to 249s. 7½d. Silver in New York was unchanged at 90.375 cents.

The following comparative table shows at a glance the trend of the market during the week under review:

	11-2-59	Highest	Lowest	4-2-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	117 3	117 7½	115 3	117 6
Forward*	117 1	117 10	115 4	117 6
Sovereign	73 12	74 4	73 12	74 8
SILVER				
Ready (.996 fine Mint) ..	194 11	196 4	192 14	195 12
Forward†	195 1	196 14	193 4	196 4
London Silver Ready ..	76⅞d.	76⅞d.	76⅝d.	76⅞d.
London Forward	76¾d.	76¾d.	76⅝d.	76¾d.
London Gold	249s. 7½d.	249s. 7½d.	249s. 5½d.	249s. 5½d.
New York Silver	90.375 c.	—	—	90.375 c.

* 23rd February settlement. † 24th February settlement.

Wheat at Hapur was almost unchanged during the week to be quoted at Rs. 26.25 per maund for average quality and Rs. 27.25 to Rs. 28 for farm quality. The retail price was Rs. 28.25. Demand at the prevailing high prices was slack. Daily arrivals from producing areas were small and, occasionally, wheat reached here from outside by road and rail. Sales through fair-price shops has been increased and more shops are being opened.

Rice ruled quietly steady with restricted supplies in the local market, due to imposition of a ban on exports from surplus districts where the Government is procuring rice. Prevailing prices were:—*basmati sela* Rs. 32.50; *mainpuri* Rs. 22; *gainda* Rs. 23; raimunia Rs. 27 per maund.

Gram continued to rule steady to firm, as local stocks left were small. It is not possible to bring gram from Punjab, the main source of supply, as prices there have spurted to new heights. Barley and *bejhar*, however, eased fractionally during the week, as the condition of the standing *rabi* crop was excellent following timely rains. Maize was attracting main consumer demand, but prices were lower than last week, due to comfortable stocks and fresh arrivals from outside. Bajra was quiet and *guwar* and *juar* drifted lower. The week-end prices (in rupees per maund) were:— gram Punjabi 23.50; barley 17; *bejhar* 17.12; maize 15.75 to 16; *bajra* 16.25; *guwar* 15.50; *juar* 15.25.

Pulses continued to record a firm trend, due to poor local stocks in the face of good demand. *Arhar dal* touched new heights, while *urd* and *moong* recorded an advance of Re. 1 to Rs. 2 per maund. Peas stocks were almost nil and standing peas and arhar crops were reported fairly good. Week-end prices were:—Peas Rs. 22 to Rs. 23; peas *dal* Rs. 25; *arhar* Rs. 25; *arhar dal* Rs. 29 to Rs. 31; *urd* Rs. 19.75; *moong* Rs. 23 to Rs. 25; *massoor* Rs. 20 per maund.

COTTON FUTURES STEADY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 11*th February*

The cotton futures market, which ruled distinctly firm during the first two sessions of the week on extensive short-covering and fresh buying inspired by reports of damage to the crop and quality deterioration, turned easy on Saturday. The easiness developed into a virtual reaction in prices on Monday following the stern warning issued by the Forward Markets Commission against any excessive rise in price. The F.M.C. reminded traders that it had extensive powers over the market such as the power to alter margin rate with retrospective effect, and even to close current contracts at such rates as it might consider appropriate. The fear that the F.M.C. would not hesitate to take drastic steps, should it deem them necessary, prompted heavy liquidation. Prices came down precipitously. Yesterday, however, a recovery set in, thanks to renewed buying attracted by the low levels. Smaller arrival of new crop, downward revision of crop estimate, and news of record mill consumption of cotton in December 1958, aided sentiment. The trend gathered further momentum today and the market closed on a steady note.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 683.25 and, after advancing to Rs. 688 the next day, slumped to Rs. 673 on Monday. The contract, however, improved to Rs. 674.75 yesterday. Commencing today's session at Rs. 676.50, it gained Rs. 2.75 before closing lower at Rs. 678.50.

Trading in I.C.C. Moglai Jarilla May 1959 commenced on the 5th inst. The opening quotation for the contract was Rs. 676.50. It improved to Rs. 680.50 the next day but receded to Rs. 668.50 on Monday. The contract moved up to Rs. 670.50 yesterday. Opening at Rs. 672.50 today, it improved, on good support, to Rs. 677 and finished the session at that rate.

The trend of price of the contracts during the week is indicated below:

(In rupees per candy of 784 lbs.)

	11-2-59	*High*	*Low*	4-2-59
I.C.C. Moglai Jarilla March 1959 ...	678.50	688	673	680.25
I.C.C. Moglai Jarilla May 1959 ...	677	688.50	665	*676.50

*On 5-2-1959.

In the spot section, there was moderate activity. Prices tended to look down. Since most mills had covered their requirements, they were not eager to make purchases at the prevailing high prices. There was also fear of deterioration in quality of crop. Prices of long-staple varieties tended to ease in anticipation of a large import quota for 1.1/16" and longer-staple cotton, following the recommendation of the Cotton Textile Consultative Board for the liberalisation of import.

In the export section, there was good demand for Bengal *Deshi* from shippers. Scarcity of superfine Bengals was increasingly felt. Enquiries were also noted for Berar, C.P. *Deshi* and ¾" cotton, and yellow pickings. Exporters feared that the revised export programme and the enhancement of cotton export subsidy in the U.S. might adversely affect export of ¾" cotton from India.

The foreign section was devoid of much activity. Importers welcomed the Cotton Textile Consultative Board's recommendation for liberalising imports. An import quota was eagerly awaited.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are as follows:

Bengal *Deshi* 710; Berar Jarilla 745; Khandesh 820; Vijay 950.

The Karachi cotton futures market ruled easy during the week under review. The announcement by the U.S. Department of Agriculture of a revised export programme which will reduce the price of U.S. cotton sold abroad after 1st August next and the raising of the subsidy rate under the payment-in-kind export programme from the present rate of 6.5 cents per lb. to 8 cents per lb., adversely affected the sentiment of operators in Karachi. It was feared that exports from Pakistan would be affected by the enlarged U.S. subsidy since it would make U.S. cotton available at much cheaper price. This consideration induced heavy selling. N.T.R.G. March receded from Rs. 61-9-6 last week-end to Rs. 60-10. The May contract dropped 13 annas to Rs. 59-14. In the spot section, barring the *Deshi* styles which met with good buying, most other varieties declined. Sind *Deshi* was quoted at Rs. 72 and Punjab *Deshi* at Rs. 64-8, as compared with Rs. 63-8 and Rs. 62-8 last week-end. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's closing rates:

4F Punjab Roller 62-10 (63-4); S.G. 67-10 (68-4); L.S.S. Punjab Roller 64-2 (65-4); S.G. 68-10 (69-4); 289F Punjab Roller 73-2 (73-8); S.G. 82-2 (82-12).

The Alexandria cotton futures market depicted a mixed trend during the week. While the long-staple Karnak contracts were fully steady on short-covering and some trade buying, the medium-staple Ashmouni contracts tended to ease due to hedge pressure. Shipments of Egyptian cotton from 1st September 1958 till 21st January 1959 aggregated 359,097 bales (of 720 lbs.), as compared with 277,330 bales shipped during the corresponding period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 73.35; May 73.75. *Ashmouni*: February 64.35; April 63.70.

Cotton futures values in Liverpool ruled barely steady during the week. The revised U.S. export programme gave rise to the hope that U.S. cotton will be available in future at cheaper prices. This

prompted speculative selling which was absorbed by mill covering and hedging operations. Values, consequently, ruled almost unchanged. The latest quotations—in pence per lb.—from Liverpool are as follows:—

American cotton one inch staple contract: March-April 23.10; May-June 22.60; July-August 21.00; October-November 20.00. *American cotton mixed growth contract*: March-April 23.00; May-June 22.45; July-August 20.90; October-November 19.90. *Sudan*: May-June, July-August, September-October 22.25.

The selling witnessed last week in the New York cotton futures market, which was a sequel to the announcement of lower mid-January parity price, abated during the week under review. Values moved up on good support prompted by the announcement of the revised export programme and the raising of the subsidy rate. Better mill demand and spot house support was also forthcoming. The nearby March contract met with selling.

The Department of Agriculture has announced that the support price of upland cotton, based on the mid-January parity of 38.93 cents, would be 30.40 cents per lb. for Middling ⅞" cotton at average location for growers (A) who are not planting in excess of the official acreage allotted to them. For those (B) who opt for an increased acreage of 40 per cent. the support price would be 24.70 cents per pound. A support rate of 30.40 cents per lb. for Middling ⅞", indicates a rate of 34.15 cents per lb. for Middling one inch cotton at average location. This would be the Government purchase price for 'A' producers; the relative support rate for 'B' producers would be 28.45 cents per lb.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-2-59	3-2-59	27-1-59
Spot	35.70	35.70	35.75
March	35.29	35.33	35.30
May	35.43	35.39	35.41
July	34.27	33.93	34.67

LOW TURNOVER IN YARNS

(From Our Own Correspondent)

BOMBAY, 11*th February*

The yarn market is thick with rumours regarding budget proposals. Some expect imposition of excise duty on staple fibre yarn, art silk yarn and other synthetic yarns, while others anticipate an upward revision in import duty, particularly on art silk yarn. There are some others who feel that the excise duties on art silk cloth may be raised. In view of these rumours, it is not surprising that the yarn market should continue to rule dull with low turnover and narrow fluctuations in prices, the general tendency being slightly upward. The traders are watching the trend of offtake in art silk yarn from consuming centres in the Punjab and West Bengal. The latest reports indicate signs of revival of enquiries. Nylon yarns have shown a hardening tendency in prices.

Spot 120 Italy met with good buying support and rose by 6 nP to Rs. 5.25. 120 Japan and 150 Japan gained 3 nP each to Rs. 4.84 and Rs. 4.87, respectively. 150 Italy was fully maintained at Rs. 5.25. Among indigenous yarns, National Rayons 120 bright cones first grade strengthened by 6 nP to Rs. 4.50. 150 bright cones first grade gathered 3 nP to Rs. 4.31. The Cupressa Bamberg art silk yarn (60/1) moved up from Rs. 7.90 to Rs. 7.94. February delivery, however, was subjected to sell and came down by Rs. 3 to Rs. 1,532. April delivery was quoted at Rs. 1,500 today.

In the staple fibre yarn section, 40×2 Citys advanced by 6 nP to Rs. 3.16. Kohinoors were firm at Rs. 3.40, as also Centurys at Rs. 3.22. Forward deliveries, however, encountered selling. February delivery declined by Rs. 2 to Rs. 609. April delivery dropped Rs. 3 to Rs. 619.

Among cotton yarns, ten counts Moderns met with buying enquiries and registered a rise of 12 nP to Rs. 13.37. Podars were fully steady at Rs. 12.19. Twenty counts Moderns were done at Rs. 16.25, same as last week. Thirty counts Hinds were quoted at Rs. 15.87 and Sexarias at Rs. 15.50. Forty counts elicited enlarged buying support. Minaxis and Moderns rising by 25 nP each to Rs. 25.25 and Rs. 25.50, respectively. Sixty counts were steady; Raghuvamshis were quoted at Rs. 53 and Finlays at Rs. 65. Eighty counts Citys were done at Rs. 66, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	11-2-59	4-2-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg February (per case of 200 lbs.)	1,532	1,535
60/1 Cupressa Bamberg spot (per lb.)	7.94	7.90
120 Japan (per lb.)	4.84	4.81
150 Japan (per lb.)	4.87	4.84
120 Italy (per lb.)	5.25	5.19
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn—		
40×2 February (per case of 200 lbs.)	609.00	611.00
40×2 April .. (— Do —)	619.00	622.00
40×2 Kohinoor (per lb.)	3.40	3.40
40×2 Century (per lb.)	3.22	3.22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
40s Minaxi	25.25	25.00
60s Finlay	65.00	65.00
80s City	66.00	66.00

CREDIT FOR GROUNDNUT RESTRICTED

(From Our Own Correspondent)

BOMBAY, 11*th February*

The week under review has been an eventful one for the oilseeds market. On top of a series of steps taken by the Forward Markets Commission to curb the speculative rise in prices, came the directive issued by the Reserve Bank of India restricting advances of bank credit against groundnuts. On Monday, the Reserve Bank directed all scheduled banks to maintain a margin of not less than 45 per cent. of the value of stocks in respect of advances against the security of groundnuts. The new margin requirement is made applicable also to existing advances against groundnuts, but does not apply to credit limits in favour of *vanaspati* manufacturers and those holding licences for export of groundnuts. The directive also requires that the banks shall maintain each month commencing from March 1959 an average aggregate level of credit against the security of groundnuts, which shall not exceed such level of credit maintained in the corresponding month of 1957 or 1958, whichever is higher. Banks are also urged that the parties affected should not be allowed other facilities, which would either directly or indirectly defeat its purpose, for example, by grant of clean advances, discounting of bills, etc.

The directive has obviously been a sequel to rapid increase in the advances made by scheduled banks against security of groundnuts, which stood around Rs. 16 crores at the end of last month as against Rs. 6.03 crores about the middle of December last and Rs. 3.23 crores at the end of November. Although it is difficult to assess how far these advances contributed to the recent buoyancy in the groundnut section, the measure is believed to have made some impression in the market in checking unscrupulous manœuvres.

The week began with another significant development. The F.M.C. imposed a special margin on outstanding 'long' positions in transferable specific delivery contracts in groundnuts. The rate of margin which is applicable for February-March 1959 and April-May 1959 deliveries will be at the rate of Rs. 3 per cwt. when the price rises above Rs. 33 per cwt. When the price is above Rs. 35 the margin will be at the rate of Rs. 5 and when it is above Rs. 37.10 the rate will be Rs. 9. The directive further stated that if the price remained above Rs. 37.10 during the delivery period, the special margin would be at the rate of Rs. 18.50. The Commission said that the step was being taken to "check the growing diversion of speculative trading from hedge contracts to transferable specific delivery contracts."

Apparently not satisfied with the reaction of the market, the F.M.C. went so far as to issue a warning, reminding the traders that the Commission has wide powers to deal with any situation that might arise, including powers to alter the margin deposits on current contracts with retrospective effect and to close existing contracts at such rates as it might consider appropriate irrespective of the actual rates ruling in the market. The Commission appealed to the associations concerned to regulate forward trading to extend their co-operation by immediately adopting all necessary measures to restrain unhealthy speculative activity and manipulation of prices and taking disciplinary action against unscrupulous operators.

These factors, no doubt, unnerved the bulls in the groundnut section. Their impact, however, would have been more pronounced, but for the continued tight supply position in the spot market coupled with good support from *vanaspati* manufacturers and crushers. Groundnut February contract, which stood at Rs. 178.50 last Wednesday, improved by Rs. 2 on Friday, but later gave way and closed today at Rs. 174.75. May contract lost Rs. 4.13 over the week to finish at Rs. 178.37. Bold ready slightly eased from Rs. 35.75 to Rs. 35.50, but advanced to Rs. 36.87 on Friday. Oil ex-mill hardened from Rs. 18.75 to Rs. 19.00 only to sag subsequently to close today at Rs. 18.62.

The castorseed section experienced wide fluctuations. Speculators from other sections, subjected to heavy margin, seem to have turned their attention to castor. Increasing arrivals from Hyderabad, the main producing centre, however, have pushed down the values. Traders continue to entertain hopes of good export demand in the months to come. Castorseed May 1959 contract, which closed last week at Rs. 156.00 on a firm note, after fluctuating between Rs. 160.00 and Rs. 154.50, recovered to wind up the week today at Rs. 155.37. Ready Madras gained 13 nP over the week when it closed today at Rs. 30.50. Oil B.S.S. moved both ways between Rs. 16.37 and Rs. 16.94 and gained about 25 nP over the week and finished today at Rs. 16.62.

The week began with good prospects for the linseed section. On Saturday, the Government of India released for export 5,000 tons of linseed oil cake from Bombay to all permissible destinations excluding the Portuguese possessions in India, upto the end of March or till the ceiling is reached. This aided the sentiment in the linseed section to some extent. Besides, there was good buying support. Linseed May 1959 contract, which stood at Rs. 32.50 last week-end, after fluctuating between Rs. 32.37 and Rs. 33.31, closed today on a steady note at Rs. 32.69. Bold ready, after moving within a narrow groove, closed today at Rs. 33.00, the same level at which it wound up last week. Oil prices, however, fell by 12 nP over the week to close today at Rs. 17.25. Cottonseed moved more or less in sympathy with the other markets. It, however, seems to have responded to the F.M.C.'s warnings. Cottonseed February and May contracts, which closed last week at Rs. 133.00 and Rs. 123.25, after experiencing minor fluctuations, wound up the week at Rs. 132.25 and Rs. 126.25, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	11-2-1959	4-2-1959	28-1-1959
	Rs.	Rs.	Rs.
Groundnut			
February 1959	174.75	178.50	179 62
May 1959 ..	178.37	182 50	184 37
Bold ready	35.50	35.75	36 12
Coromandel ready	36 00	36.25	36 37
Khandesh quality	36 00	36.25	36 50
Oil ex-mill ready*	18 62	18.75	19.12
Railway receipts*	18.44	18.62	18.94
Castorseed			
May 1959 ..	155.37	156.00	154.75
Ready Madras	30 50	30.37	30 50
Ready Kanpur	29.50	29.25	29.50
Oil B.S.S.†	16.62	16 37	16.75
Oil commercial†	15.62	15.50	15.50
Linseed			
May 1959 ..	32.69	32.50	33.25
Bold ready ..	33 00	33.00	33.50
Oil ready† ..	17.25	17.37	18.00
Cottonseed			
February 1959	132 25	133.00	131.50
May 1959 ..	126.25	128.25	127.25
Niger seed ..	29.00	29.00	29.00
Kardi seed ..	21.50	21.75	21.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM AGAIN

(From Our Own Correspondents)

BOMBAY, 11*th February*

The firm trend noted in the sugar market last week continued unabated during the week under review also, with prices moving up further. This was due to fears of a fall in sugar production on reports of closure of a few mills in Uttar Pradesh consequent on cane growers' strike. There were, besides, renewed rumours of an upward revision in excise duty on sugar. The substantial rise in arrivals of sugar by rail into the city has, therefore, had no effect; the arrivals aggregated 28,235 bags, as against 12,710 bags in the previous week.

It is reported that the Bombay-Deccan mills which have railway siding facilities have already sold out, and largely delivered, all sugar released to them. The only free market sugar available at the currently ruling high prices is that of the co-operatives. Although these too have sold out the released quantities, the first buyers are said to be sitting tight on their stocks. In view of these circumstances, the newly amalgamated trade body of the Bombay Sugar Merchants' Association has requested the Union Food Ministry to issue a sufficiently large supplementary quota of sugar to the Bombay mills.

Small grain sugar has gone up by a rupee to Rs. 110-Rs. 112 per bag. Medium grain has risen by 50 nP to Rs. 112-Rs. 114. Large grain is fully maintained at Rs. 114-Rs. 116.

* * * *

HAPUR, 9*th February*

Sugar prices ruled steady to firm during the week, as saleable stocks with factories were small, while there was renewed buying enquiry from consuming areas. Production in West U.P. was reported to be going on satisfactorily. The P.S.P.-sponsored cane supply strike would appear to have had no effect on cane supply position in this area. Prices for some quality were quoted higher than the control fixed by the Government.

Sugar prices also registered a hardening trend in the Muzaffarnagar market where the latest prevailing prices on Monday were:—crystal spot delivery New Shamli D29 Rs. 36.75; E29 Rs. 36.56; wholesale mill delivery controlled A29 Rs. 37.75; C29 Rs. 36.37; D29 Rs. 36. The market quotations for F.O.R. mill stations were:—Mansurpur C29 Rs. 38; Deoband C29 Rs. 38; Bijnore D29 Rs. 37; Amroha D29 Rs. 37.75; Seohara D29 Rs. 37.25; Meerut D29 Rs. 37.44; Saharanpur D29 Rs. 37.25.

Sugar prices ruled firm at Kanpur on renewed buying from consuming areas. The latest prevailing prices were:—Ex-mill controlled Rs. 36 per maund; spot per bag C29 Basti Rs. 105; Gola Rs. 103-8; D29 Gola and Burhwal Rs. 103-4; Waltergunj Rs. 103; Tulsipur, Balrampur and Hargaon Rs. 102-8; Lakhimpur Rs. 102-4.

Khandsari registered a sharp gain of about Rs. 2 per maund during the week due to good demand and firmness of ready *gur*. The stockists were reported to be buying *khandsari* along with *gur*. The prevailing prices were:—superior dry Rs. 32 to Rs. 36; inferior Rs. 29 to Rs. 31 per maund.

Ready *gur* touched new heights during the week, following brisk demand from stockists and poor arrivals following continued cloudy weather and rains during the major part of the week. As weather cleared up, ready *gur* arrivals were gradually mounting. The latest prevailing prices were:—*pansera* Rs. 17.75 to Rs. 18.25; *balti* Rs. 18.25 to Rs. 18.50; *shakker* Rs. 18.50 per maund.

Gur prices also improved in the Muzaffarnagar market as arrivals there were small and demand by stockists was brisk. The prevailing prices there were:—*Chaku* Rs. 19 to Rs. 20.25; *pansera* Rs. 18.75 to Rs. 19; *ladu* Rs. 19; *khandsari* Rs. 33 to Rs. 35.50; inferior Rs. 30 to Rs. 32.50.

Gur futures ruled bullish during the week on continued bull support from Agra. Fagun opened at Rs. 15.96 last Monday, touched the highest of the session at Rs. 16.46 on Wednesday and was quoted today at Rs. 16.30.

JUTE GOODS DEPRESSED

(From Our Own Correspondent)

CALCUTTA, 10*th February*

Three outstanding steps, namely, the decision of the I.J.M.A. to withdraw the minimum prices and to reduce output by sealing 1½ per cent. of the looms, and the cancellation of the additional margin deposits in futures, high-lighted the jute markets during the week under review. Prices of jute goods, both hessian and sacking, but more sharply in the case of the latter, moved down, following the withdrawal by the Indian Jute Mills Association of its year-old recommendation to member-mills not to sell jute goods below the minimum prices which the Association had specified. This withdrawal was only a recognition of existing market conditions, as, in view of the heavy fall in fibre prices and the high stock position of goods with mills, it was long before the minimum prices had ceased to operate.

Jute goods opened the week on an extremely quiet note, and there was an expectancy resulting from the rumours relating to sealing of looms and the removal of minimum prices. On Tuesday last, ready B. twills were priced at Rs. 91 and hessian 40" 10 oz. at Rs. 40.40. On the following day, B. twills recovered to quote Rs. 91.40, while hessian 40" 10 oz., despite some covering demand, sagged to Rs. 40.30. The I.J.M.A. decisions above referred to soon followed and B. twills fell on Thursday to Rs. 89.35, while hessian 40" 10 oz. was steady at Rs. 40.20, in view of the difficulty to obtain goods for immediate delivery. The raw jute market did not follow the goods, and fibre prices were steady. This caused a recovery in B. twills by the week-end when they stood at Rs. 89.55. On the other hand, hessian 40" 10 oz. was lower at Rs. 39.85. Yesterday, a completely depressed trend prevailed, following the announcement of increased stocks of goods with mills. At the end of January mills possessed 113,700 tons, as against 109,700 tons at the end of December. Hessian rose by 1,000 tons, sacking by 2,800 tons and others by 200 tons. The rise in sacking stock should be attributed to lower domestic purchases, as shipping instructions were satisfactory. The price of B. twills fell to Rs. 88.75 and that of hessian 40" 10 oz. to Rs. 39.40 yesterday. In the futures market, B. twills fell to Rs. 88.80 from Rs. 91.20, hessian 40" 10 oz. to Rs. 39 from Rs. 39.50, both February contract, and Assam Bottoms to Rs. 21.38 from Rs. 21.72 (March contract). Reflecting the steadiness in the fibre market, Assam Bottoms (March) recovered to Rs. 21.42.

Raw jute prices were firm. Mills, as well as the S.T.C. showed some interest. Another reason was the recommendation of the I.J.M.A. to mills to increase the fibre purchases. Mills would purchase an extra months' requirements from funds to be made available by the Government. Expectation followed the indication given by Mr. Lal Bahadur Shastri to a deputation of Bihar Jute Growers in Muzaffarpur that the Government of India would announce its jute policy within two weeks. In what way the Government would further re-orientate its jute policy remains to be seen; but it will not be a surprise if the S.T.C. increased its purchases, especially in Bihar. The fears that Pakistan might as well ban raw jute exports to India, in view of India having entered in the export field, also contributed to the steadiness. Pakistan has announced revised export prices for cuttings. The latest quotations for February-March delivery are:

	Middles	*Bottoms*
	Rs.	Rs.
Pakistan:		
District	29.50	26.50
Northern	29.50	26.50
Indian:

Pucca bales 1st marks ... Rs. 155.00 ready per bale.

TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 5*th February*

Sale No. 5 which was held on Tuesday, 3rd February comprised of 874,880 lbs. Quality again showed an all-round improvement, with a number of very useful teas on offer. Exporters showed renewed interest in the improved offerings, but internal buyers were again very quiet. The sale opened to a good demand, particularly for the improved low medium and best liquoring teas which were dearer. Medium and good mediums advanced by 10 nP per pound, and best liquoring high growns showed advances of up to 50 nP, but plainer types were barely steady. Whole leaf teas met with some competition and these were firm to dearer. The few tippy teas on offer generally sold at dearer rates. The quotations were: Low medium Re. 1.55 to Re. 1.70; medium Re. 1.80 to Rs. 2.10; good medium Rs. 2.30 to Rs. 2.60 and quality Rs. 2.65 to Rs. 4.27.

The average price realised in Sale No. 5 was Rs. 2.21 per lb., as against Rs. 2.17 in the previous sale and Rs. 2.30 per lb., in the corresponding sale of 1958.

London Market: *Sale of 2nd February 1959.*—Very strong and active demand with prices tending dearer for all descriptions, except isolated cases of light liquoring teas.

Sale of 3rd February 1959.—Except for light liquoring brokens, which were irregular, market strong to dearer all descriptions.

Colombo Market.—Active demand. Improved quality Dimbula Dickoya B.O.Ps advanced 40 to 80c. Other highgrown B.O.Ps, including Uvas, up 20c. corresponding B.O.P.Fs 20 to 30c. dearer, medium B.O.Ps 10c. dearer. Plainer medium B.O.P.Fs easier. Lowgrowns steady. Offgrades strong demand. Good liquoring fannings and dusts dearer. Other sorts firm.

Calcutta Market: *Export.*—67,000 chests export. Good, but less general, demand. Plain B.P., plain fannings, and medium fannings about last rates. Smaller fannings strongest. Medium B.P. generally easier. Better enquiry medium fannings which were sometimes dearer. C.T.C. fair support. Poorer types 4 to 6 nP easier. Better types 10 nP easier. Best C.T.C. well supported. Tippy teas only fair demand at easier rates. Darjeelings irregular.

Internal.—21,000 dusts. Good demand. Orthodox from 2 to 4 nP easier. Smallest steady. Fair demand C.T.C. poorer sorts 5 to 10 nP easier sometimes more. Best irregular.

Export Quota.—On 1st February, the Government announced a final release of quota for 1958-59 of 2 per cent. of the best crop basis, making a total release of 67 per cent. or a total of 494.5 million lbs., as compared with 63.4 per cent. (460.1 million lbs.) the previous year. There was no reaction in the market and the quotation has remained firm at 2½ nP, at which rate business has been transacted. However, during the last two days there has been an easier tendency and business has been done at 2 nP, at which there are buyers but sellers are scarce.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale Six*:—900,000 lbs. Useful demand, particularly for improved highgrowns, which are dearer. Low medium and medium firm, except fannings which are weak. Leaf easier."

GOOD DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 10*th February*

In the export auctions held yesterday there was good demand, while in the internal sales prices eased.

With the estimated output in South India for December being 8 million lbs. against an actual of 10.7 million lbs. in December 1957, the total protion in South India during 1958 comes to 156 million lbs. representing an increase of 6.3 million lbs. over 1957. The North-east Indian output for 1958, at 551.1 million lbs., shows an increase of 22.7 million lbs. The rise in total Indian output is, therefore, by 29 million lbs.

Reports of continued buoyancy in Mincing Lane sales were received. This was so, despite an increase in offerings. Warehouse and about-to-be-landed stocks in the United Kingdom fell by 1 million to 198 million lbs. in the week ended 30th January. The keen bids were attributed to fears of "a possible interruption in supplies" and also to relaxation in credit restrictions. The easier tendency in yesterday's sales in London was attributed to heavy bids in earlier weeks.

Mr. Lal Bahadur Shastri's recent discussions with the Assam Chief Minister have raised expectations in regard to Government aid for uneconomic gardens. Measures under consideration in New Delhi would appear to centre round the advance of funds to these gardens by banks and other financial institutions with guarantee by the Tea Board, in the absence of crop hypothecation, and the grant of a subsidy towards the cost of tea transport from Assam.

Yesterday's export offerings amounting to 64,871 chests met with strong demand, and prices improved. The best liquorings in C.T.C. teas met with good demand at improved rates. The plain liquoring mediums of this manufacture eased in an irregular trend, while the poorest fibrous lots were supported at dearer rates. Selective buying was done in orthodox B.O.Ps and O.Fs, while the plainer sorts met with a weak market resulting in withdrawals. Keen competition was offered to the poorer orthodox B.Ps and P.Fs, the prices of which added by 8 nP. Plain and medium B.Ps rose by 2 to 6 nP and plain fannings by 2 to 4 nP. The better medium fannings were firm. Legg-cut teas, however, eased by 4 nP. Whole leaf grades possessing a well-twisted style hardened on keener inquiry. Darjeelings were firm. The quotations exclusive of the new zonal excise duty were: best Assam C.T.C. fannings Rs. 2.30 to Rs. 2.40 (nominal), best Assam C.T.C. B.P. Rs. 2.20 to Rs. 2.30, clean black pekoe Rs. 2 to Rs. 2.08, plain fannings Re. 1.74 to Re. 1.82, medium fannings Re. 1.74 to Re. 1.78, and medium B.P. Re. 1.64 to Re. 1.68.

Export quota changed hands at 2 and 1½ nP; subsequently buyers offered 1½ nP with sellers demanding 2 nP.

Dusts on offer in the internal auctions held here last week amounted to 20,065 chests. There was good demand at falling rates. In C.T.Cs, the best sorts eased, while the smaller types hardened. The poorer and medium types of this manufacture lost by 5 to 10 nP. Grainy orthodox teas eased by 2 to 4 nP, but the powdery types were firm. Legg-cut teas met with good demand at lower rates. Darjeelings were, however, better. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.40 to Rs. 2.85 (nominal), medium Assam C.T.C. Re. 1.90 to Rs. 2.05, medium Doars Re. 1.72 to Re. 1.76, and medium Assam grainy Re. 1.72 to Re. 1.74.

Leaf offerings amounting to 3,004 chests met with good demand at firm to dearer rates.

A strong feature in Chittagong's tea sales held on 4th February, when offerings aggregated 9,062 chests leaf and 2,208 chests dust, in addition to a supplement of 195 chests, was the rise in the better liquoring brokens by As. 2 to As. 4. The legg-cut teas met with support at invoiced rates. All other kinds eased, and a quantity of green teas had to be taken back. The quotations were: B.O.P. Rs. 2-12-0. O.F. Rs. Rs. 2-11-6. B.P.S. Rs. 2-10-6, B.P. Rs. 2-9-6, O.P. Rs. 2-9-6 (nominal), P.F. Rs. 2-9, and Pekoe Rs. 2-6-6 (nominal).

Dusts were fully steady in good demand with the Sylhets being quoted at Rs. 2-9-6 to Rs. 2-10-0.

Leaf amounting to 13,000 chests and dusts to 4,000 chests will be offered in the next sales that will take place in Chittagong on 25th February.

BLACK PEPPER SPURTS

(Messrs. Parekh and Co.)

BOMBAY, 11*th February*

After the closing of business in specific deliveries and A.S.T.A. at Bombay, commission houses and bull speculators diverted their attention to ready pepper. They bought almost daily sizable quantity of spot and afloat at advancing limit, the highest price paid being Rs. 115 per Bengal maund ex-godown. Ungarbled at Calicut advanced to Rs. 900. Alleppey and Cochin rallied to Rs. 775 with few sellers. In the meantime, stern warning by the Forward Markets Commission against unbridled speculation and boosting of prices in commodities had a chastening effect on run-away prices. Pepper also came down, in sympathy with other commodities following liquidation by bulls. Ready garbled climbed down from Rs. 130 to Rs. 120, February delivery in the Forward Ring at Cochin from Rs. 130 to Rs. 121 and March from Rs. 132 to Rs. 123. There was a move on the part of some merchants at Cochin to enforce margin for forward contracts for checkmating unhealthy speculation, but nothing came out, as majority of members were against the margin system. The present improvement in pepper was considered to have been brought about, in view of smaller estimate of production. Pepper being an unedible commodity, no immediate action was feared from the Government. However, big operators at Cochin seemed to be in a chastened mood. Hence, the movement of the forward ring at the moment was narrow.

Singapore improved from Str.$74 to Str.$75 for Sarawak black and from Str.$139 to Str.$142 for white. Lampong at Singapore also rallied to Str.$85. Exporters of Lampong are now said to be presenting a firmer front and are quoting higher, as stock of Lampong at Singapore and at Indonesia are reported to be in the vicinity of 4,000 tons and 2,000 tons, respectively. Improvement in white is more pronounced, as enquiries from Europe is slowly but steadily developing.

At the time of writing, Ready in Bombay is quoted at Rs. 112 and white ready ungarbled at Alleppey at Rs. 762½. Growers are reported to be not anxious to sell unless at an advanced price.

Spot in New York improved from $0.24 to $0.26, with some enquiries from grinders. Grinders in the U.S.A. as a rule never buy in a declining market. They only come out to buy after the market has stabilised at some higher level. If grinders decide to come out to buy in the present mood of the supplying markets, the world pepper prices are likely to advance in the near future. A.S.T.A. parity for Malabar pepper being at $0.27½, business with New York is far from practicable.

Today's nominal quotation for ready delivery is Rs. 112 per Bengal maund.

LOWER KIP STOCKS FEARED

(From Our Own Correspondent)

MADRAS, 9*th February*

There was no significant change in the kip market during the week. U.K. buying was selective and local demand for lower grades prevented export trading. Importers were not able to buy at reduced prices appreciably, because sellers were outstanding orders to ship and did not come forward to take lower prices, as it was feared that the availability of stocks during March-May might be poorer than at present.

Demand for medium tannage sheep skins was small, while prime classes maintained full prices. Tanned goat skins ruled steady, but the tone was weak.

Shipments during January 1959 were: to the U.K.; 2,474 bales tanned cow hides, 235 tanned cow calf, 20 tanned buff hides, 486 tanned buff calf, 577 tanned goat and 682 bales tanned sheep skins; to the Continent: 6 bales tanned cow calf, 10 tanned buff calf, 438 tanned goat and 232 bales tanned sheep skins; to the U.S.A. ports: 21 bales tanned cow calf, 162 tanned buff hides, 173 tanned buff calf and 128 bales tanned goat skins; to Japan: 3 bales tanned goat and 72 bales tanned sheep skins.

METALS LOWER

(From Our Own Correspondent)

CALCUTTA, 10*th February*

Fair business was done in the metal market during the week under review, although prices moved downwards, in view of the comfortable stock position and expectations of relaxation in import policy. Some recovery, however, emerged when prices touched the lowest levels. Nevertheless, the week's closing quotations were lower on balance.

Tin opened at Rs. 598, after having closed at Rs. 588 in the previous week. In transactions, the improvement took the rate up to Rs. 601. At this stage, there was profit-taking, which brought in its wake selling pressure. Further, fresh arrivals were reported, while consumer demand was insignificant. These factors forced down the quotation

(*Continued in next page*)

Notice

THE BANK OF INDIA LIMITED

NOTICE

THE FIFTY-THIRD ANNUAL GENERAL Meeting of the Shareholders of The Bank of India Limited will be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 12th day of March, 1959, at 4 o'clock in the afternoon, to transact the following business:—

1. To receive the Report of the Directors and the audited Balance-sheet and Profit and Loss Account for the year ended 31st December, 1958.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. Ambalal Sarabhai, who retires by rotation, is eligible and offers himself for re-election and for that purpose to consider and if thought fit to pass the following resolution as an ordinary resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   RESOLVED that Mr. Ambalal Sarabhai, who has attained the age of 69 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.
4. To elect a Director in the place of Mr. Bhagvandas C. Mehta, who retires by rotation, is eligible and offers himself for re-election.
5. To elect a Director in the place of Mr. A. D. Shroff, who retires by rotation, is eligible and offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit to pass, with or without amendment, the following resolutions as ordinary or special resolutions as specified below:—

Ordinary Resolutions

I. RESOLVED that pursuant to the relevant provisions of the Companies Act, 1956, including Sections 257 and 258, Mr. Jugmohan Prasad Goenka be and he is hereby elected and appointed a Director of the Company.

II. RESOLVED that:

(a) The Auditors of the Company be and they are hereby authorised to restrict their audit to the accounts of the Company at its Head Office and not to audit the accounts at the Branches either within or outside India;

(b) Notwithstanding the authority aforesaid, the Auditors shall be entitled at such times as may be agreed upon between themselves to visit for any one of them, at least once in every financial year, every Branch in India for test inspection and that a report on such test inspection shall be submitted to the General Manager of the Company and that for such work the Auditors shall be paid all out-of-pocket expenses that they may incur for travelling, board and lodging and otherwise and that such payment shall be in addition to the remuneration fixed for the said Auditors.

Special Resolution

RESOLVED that Articles 65 and 101 of the Company's Articles of Association be and they are hereby deleted and in their place and stead the following Articles be and they are hereby substituted as Articles 65 and 101 respectively:—

"65. The Chairman and, in his absence, the Vice-Chairman of the Directors shall preside as Chairman at every general meeting of the Company or if there is no such Chairman or Vice-Chairman or if either shall not be present within fifteen minutes after the time appointed for the holding of the meeting or if both of them are unwilling to act the Directors present shall elect one of their number to be Chairman of the meeting."

"101. The Directors may elect a Chairman and a Vice-Chairman of their meetings and determine the period for which they are respectively to hold office; but if no such Chairman or Vice-Chairman is elected or if at any meeting the Chairman and the Vice-Chairman are not present within five minutes after the time appointed for holding the same the Directors present may choose one of their number to be Chairman of the meeting."

By Order of the Board of Directors,

T. R. LALWANI,
General Manager,
The Bank of India Limited.

BOMBAY, 5*th February*, 1959.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER. The instrument appointing a proxy and the Power of Attorney, if any, under which it is signed, should be deposited at the Registered Office of the Company not less than forty-eight hours before the time for holding the aforesaid Meeting, as provided by Article 79 of the Company's Articles of Association.

Note:—(a) The Transfer Books of the Company will be closed from Monday, the 23rd February, 1959, to Saturday, the 14th March, 1959, both days inclusive.

(b) The Dividend, when sanctioned, will be payable on and from Thursday, the 19th March, 1959, to those Shareholders whose names are on the Register of Members on 14th March, 1959.

(c) Dividend Warrants will be posted to Shareholders at their registered addresses. Early intimation should be given to the Company of any change of address.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956

In conformity with the Companies Act, 1956, the following Explanatory Statement, as required by Section 173 of the said Act, sets out material facts relating to items Nos. 3 and 7 mentioned in the accompanying Notice dated 5th February, 1959.

Item No. 3.—Mr. Ambalal Sarabhai, who retires by rotation and is otherwise eligible for re-election, was born on 25th February, 1890, and will have attained the age of 69 years prior to the date of this Annual General Meeting and hence he cannot be appointed a Director except by a resolution of which a special notice has been given in accordance with the requirements of Section 281 of the Companies Act, 1956. The Company has received such special notice from some Members of the Company.

Mr. Ambalal Sarabhai has been a Director of the Company since the year 1919. As a businessman of wide and varied experience closely associated for a long period with the Company, he has rendered very valuable services to the Company and it is in the interest of the Company that it should continue to receive the benefit of his services. Notice is given to the Members of the said resolution which is commended for acceptance.

Item No. 7.—This item is in respect of two ordinary resolutions and one special resolution.

Ordinary Resolution No. I.—Mr. Jugmohan Prasad Goenka was appointed an additional Director by the Board in September, 1958. Under the provisions of Section 260 of the Companies Act, 1956, and of Article 85 of the Company's Articles of Association, he will hold office only up to the date of the next Annual General Meeting, namely, 12th March, 1959. The Board consider it desirable that the Company should continue to avail itself of his services. The ordinary resolution No. I is commended for acceptance.

Notices regarding the above ordinary resolution proposing Mr. Jugmohan Prasad Goenka for appointment to the office of Director at the ensuing Annual General Meeting have been given to the Company as provided by Section 257 of the Companies Act, 1956.

Ordinary Resolution No. II.—This resolution is on the same lines as the ordinary resolution passed at the Fifty-second Annual General Meeting of the Company held on 12th March, 1958. This resolution is proposed in order to meet the requirements of the Companies Act, 1956. The Board consider it desirable to place this matter again before the shareholders.

Special Resolution.—The special resolution in item No. 7 is proposed to enable the Board formally to appoint a Vice-Chairman and to vest in such Vice-Chairman the powers of the Chairman during the absence of the latter at General Meetings and Board Meetings. It is desirable to have express provisions in the Articles of Association for making the appointment of a Vice-Chairman.

By Order of the Board of Directors,

T. R. LALWANI,
General Manager,
The Bank of India Limited.

BOMBAY, 5*th February*, 1959.

MARKET REPORTS

(*Concluded from previous page*)

to Rs. 595 progressively, although, towards the close, it was higher at Rs. 596. The Bombay rate continued to be far higher than the Calcutta quotation. In contrast to the local trend, prices in both Singapore and on the London Metal Exchange were rising and, in New York, also a similar trend was reported. There was good demand on London on behalf of Continental and North American buyers. Following the recent understanding between the U.S.S.R. and the International Tin Council, by which the former has agreed to limit tin exports this year to 13,500 tons, the restrictions on tin imports from the U.S.S.R. have been withdrawn by the British Government. This has been followed by similar action by other European Powers.

From Rs. 94, electrolytic zinc recovered to Rs. 99 at one time, but soon fell to Rs. 96, as fresh supplies on account of both consumers and the Government were on the high seas. There was good demand from the Government. When the week came to a close, the price recovered to Rs. 97, which was Rs. 2 lower than the week's highest level but Rs. 3 higher than the week's lowest.

Virgin lead fell to Rs. 72.50 from Rs. 76 before closing lower at Rs. 73. Commercial demand was little, but there was a Government tender for pig lead.

In copper, scrap was keenly chased, while the price on the L.M.E. receded to £230, after reaching £237 earlier. Market circles were worried about the rumours which anticipated the imposition of a duty on imports of virgin metals.

LINSEED FIRM

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 9*th February*

Although the general undertone of the linseed market has remained firm, prices have shown little change for near positions. With good reports of new crop, April-May positions have been traded at lower prices, with sellers slightly more in evidence than buyers. Mills are still working on a limited scale and ready oilcakes in short supply are quoted at around Rs. 16 per maund, whilst April-May delivery has been traded at Rs. 13 with sellers over. There has been some local trading in the oil market, owing to the prevailing firmness in groundnut and mustard oils; ready business is done at Rs. 56.50, whilst buyers for May delivery indicate Rs. 52.50.

The latest quotations are: Ready Rs. 27.25; Feb-March Rs. 25.25; and April-May Rs. 23.00 per maund.

HIDES FIRM

(*From Our Own Correspondent*)

KANPUR, 9*th February*

Firm conditions prevailed in the hides and skins market during the week under review, despite considerable arrivals. The tendency of prices in the cow sector was upward. There was heavy demand for upper grade goat from Madras dealers. The main purchasers were the local tanners.

The latest quotations are: wet salted cow 1st grade Rs. 425, 2nd grade Rs. 395 and 3rd grade Rs. 350 per score; wet salted buff 1st grade 2 lb. 1 oz. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 400 and 2nd grade Rs. 375 per 100 pieces; sheep Rs. 360 per 100 pieces.

Exports from the sterling area countries as a whole fell by £380 million or 8 per cent. in the first nine months of 1958, as compared with the corresponding period of last year. There were, however, signs of an improvement in the final quarter. During the first three quarters of 1958, exports from the U.K. fell by 3 per cent. and those of other countries by 12 per cent. While the decline in the U.K. exports was due to lower volume rather than lower prices, the bulk of the fall in the latter case is attributed to lower prices. Out of the total decrease of £380 million in exports from the overseas sterling area, wool accounted for £163 million, rubber for £26 million and tin, copper, wheat, rice, sugar and cotton piecegoods for amounts varying from £12 to £17 million each.

COAL

(*Concluded from page 227*)

When the proposal was first discussed between the representatives of West German coal industry and the Government, the former undertook to meet the cost of cancelling import contracts in excess of the duty-free quotas. This meant that the imports would not exceed the duty-free quotas. About 15 to 16 million tons of U.S. coal are said to have been firmly contracted for over the next three or four years. The cost of cancelling these contracts is estimated at £1 14s. per ton.

Some provinces of West Germany, especially the coastal provinces, have a grievance against their Government's decision. They are said to be of the view that the quantity of duty-free coal should be higher, because they rely largely on the U.S. coal. The shipowners, too, have complained bitterly that the cut in imports of coal from the U.S. will cost them much business, the original estimated loss on which was £8 million. This loss will now be less, in view of the larger quota allotted to the U.S. The increase in the duty-free quota is, however, a blow to the coal industry, as it is estimated that, for every 400,000 tons imported, every miner in the Ruhr will have to be asked to stay away from work for one day. It may be noted, in passing, that coal mining occupies a crucial place in the economy of West Germany. Coal production in 1957, for instance, was 133.1 million tons or 53 per cent. of the entire hard coal output in the E.C.S.C., and the industry has plans to raise its production to 180 million tons during the next 20 years. In West Germany, coal still supplies 86 per cent. of its energy needs.

The pressure on the High Authority to declare a crisis is mainly from Belgium, as it is the worst affected by the present difficulties. The High Authority has not so far yielded to the pressure on two grounds: (1) Belgium has to blame itself for the present state of affairs, as it has not taken any steps to close down uneconomic units; and (2) stock accumulations form a valuable reserve against future shortages and avoid displacement of labour. The situation can be corrected by co-ordinating the import policies of member-countries and financing pithead stocks. The High Authority has not so far been able to persuade the Council of Ministers to take the first step. The aid authorised for financing stocks is not enough to keep the collieries on an even keel. The High Authority is, no doubt, authorised under Article 74 of the Schuman treaty to take all measures, compatible with the treaty, if any product imported from outside the Community implies a threat to production in the six countries of the Community. It must, however, in the first instance, declare a state of crisis under Article 58. If it does not do so, the Council of Ministers by a unanimous vote can force the High Authority into that action. The High Authority has not so far declared a crisis and the decision of the Council of Ministers which met on the 5th inst. is, therefore, awaited with keen interest.

PLANTING

(*Concluded from page 228*)

countries. "If processing, packing and labelling are done on the spot, the final price and the producers' share in it would be much greater." Another handicap to which the report draws attention is the failure to protect spices at storage places, thus leading to contamination by various animal, bird and insect pests, as well as mould formation and loss in weight through evaporation of moisture.

The absence of any official standards of quality, apart from the usual grades recognised in markets, is said to have caused great inconvenience to traders in world spice trade. This increases the risks for buyers and sellers and causes disputes and generally weakens the marketing system. The report, therefore, urges the need for widely accepted standards of quality, subject to periodical revision, to be established for the main commercial spices. These can then be included in the trade contract terms. Along with the standardisation of the quality of products, it is also necessary to standardise the packing methods in the export trade, as also of weights and measures which vary greatly in Asian markets.

The report recommends, among others, that the Governments of producing countries should consider the possibility of establishing export promotion machinery for spices and it notes with satisfaction that the Government of India has already set an example with its Export Promotion Council for pepper and cashewnuts.

COMPANY TAXATION IN INDIA—I

(*Concluded from page 234*)

made by the companies and on which tax has already been paid. This is surely most inequitable.

The Capital Gains Tax imposes a heavy burden on the finances of companies. It takes away funds which are required by the companies for the replacement of their assets—especially in an inflationary period when the capital gains calculated in money terms often do not represent any real appreciation in the value of the capital. Government imposed this tax, in spite of the fact that its levy was not recommended by our Taxation Enquiry Commission. It should, therefore, abolish the tax or at least make it refundable to the shareholders, in respect of the capital gains realised by them, on the value of their shares in various companies which have already paid the tax.

Wealth Tax

A Wealth Tax is levied annually on companies at the flat rate of ½ per cent. of their net wealth in excess of Rs. 5,00,000. New industrial companies are exempt from this tax. Inter-corporate investments are also exempt from the tax to avoid double or triple taxation of inter-corporate wealth. Banking, insurance, shipping and certain other types of companies are exempted from the tax. Companies making losses or very small profits and not declaring dividends are given full and partial exemption respectively from the tax.

The Wealth Tax was introduced in 1957 by Mr. T. T. Krishnamachari, the then Finance Minister of the Government of India. Mr. Krishnamachari was unable to give a single proper justification for the introduction of this tax on companies. He merely said, when introducing the tax, that "in the peculiar economic structure of India, I consider it advisable not to exclude companies from the purview of this tax." Later, he tried to justify the tax merely on revenue considerations. The Wealth Tax on companies was not recommended by our Taxation Enquiry Commission or even by Mr. Nicholas Kaldor. It has been universally condemned as an inequitable and undesirable tax.

The Wealth Tax imposes double taxation on the assets of the companies, because the tax is not refundable to shareholders. Thus, the assets of companies are taxed or confiscated twice in the same year—first by the Wealth Tax on the companies and again by the Wealth Tax payable by shareholders on the value of their shares which merely represent ownership rights in the assets of the companies. Moreover, in the case of poor shareholders, who do not pay Wealth Tax on their personal wealth, the Wealth Tax on companies implies the confiscation of their savings invested in companies, for which there can be no justification whatever. Thus, criticising the Wealth Tax on companies, the famous industrialist Mr. J. R. D. Tata said that "the subjection of companies to Wealth Tax will ... hit a large section of the middle class, will result in the shareholders being taxed twice on the same assets and will act as a powerful disincentive to save and invest."

The Wealth Tax imposes a heavy financial burden on companies in the country. The rate of this tax is 'only' ½ per cent. of the net wealth. But, if companies pay the tax out of their profits, as most of them have been doing in the past year, the Wealth Tax can absorb from 4 per cent. upto even 100 per cent. of the annual net profits left after paying income-tax and super-tax. Moreover, the Wealth Tax confiscates a larger proportion of the profits of companies earning a low rate of profit on their invested capital as compared with the proportion of profits which it absorbs of their more prosperous rivals. The tax is, therefore, likely to aggravate the financial difficulties of companies making low profits. This is most inequitable and unfair.

The Government should abolish the Wealth Tax on companies or make it refundable to shareholders in their personal wealth tax assessments.

Gift Tax

Under the Gift Tax Act passed this year, private companies and closely controlled companies will have to pay a tax on the value of gifts made by them. The definition of gifts under the Act is so wide and the discretionary powers granted to the tax officials are so sweeping that many normal business transactions which do not constitute gifts in the ordinary sense of the term may be considered as being within the scope of the Act. They may, therefore, be taxed as gifts at rates ranging from 4 per cent. to 40 per cent. of their estimated value. Many companies may thus have to pay this tax and its burden may be rather heavy.

(*To be continued*)

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2500 BOMBAY, 21st FEBRUARY 1959 PRICE: Rs. 2

RAILWAY BUDGET

RAILWAY finance continues to be in good shape. The budget, presented this week by the Union Railway Minister, Mr. Jagjivan Ram, reveals, of course, a few grey spots. Thus, neither the passenger nor the goods earnings for the current year (1958-59) are likely to come up to earlier expectations. But this does not warrant any pessimistic conclusions. Against the general background of a certain slowing down in the economy, witnessed in 1958-59, the anticipated fall in earnings should not cause any alarm. It is only a passing phase. In any case, the fall is notional. The revised estimates for 1958-59 are lower than the earlier budget estimates. But—and this is perhaps more to the point—the revised estimates of earnings in 1958-59, as the table accompanying this article will bear out, are considerably higher than the actuals for 1957-58. It is likely that the budget estimate erred on the high side which makes the revised version appear somewhat disappointing. However, we are told by the Minister himself that the falling trend in earnings, which became evident in 1958, has now been reversed.

The budget for 1959-60 has obviously been prepared in the light of this evidence of an up-trend in passenger and goods earnings. Gross traffic receipts for 1959-60 are placed at Rs. 422.03 crores, as against Rs. 394.38 crores, the revised estimate for 1958-59. Passenger earnings are placed at Rs. 118.30 crores for 1959-60, as against Rs. 116.30 crores for 1958-59 and goods earnings at Rs. 272.58 crores, as against Rs. 245.83 crores. The increase in the estimate of goods earnings for 1959-60 reflects the expectations of larger traffic which must flow from the commencement of production by the State-owned steel projects, increase in coal raisings, and the opening of the Mokameh bridge over the Ganga which links Assam, North Bihar and East U.P. with the rest of India. Coming to the expenditure side for 1959-60, the ordinary working expenses are placed at Rs. 283.71 crores, as against the revised estimate of Rs. 274.22 crores for the current year; the increase reflects the normal provision for annual increments as well as cost of additional staff required to move increased traffic. After providing for appropriation to the Depreciation Reserve Fund and making other adjustments, a sizable surplus of Rs. 21.19 crores is forecast for 1959-60, as against Rs. 13.0 crores for 1958-59, an increase of about 70 per cent.

In the light of the admitted improvement in passenger and goods traffic, which has taken place in recent months, thereby reversing the falling trends witnessed during the major part of 1958, and the confident expectations of a rise in goods traffic which must follow from the fruition of the development programmes under the second Five-year Plan, it is difficult to appreciate the concern which the authorities have expressed over the diversion of traffic to road transport. Mr. Jagjivan Ram said that the issues arising from the diversion of "high-rated traffic to road transport on routes parallel to the Railways, where Railways have enough capacity to move additional traffic," were engaging the attention of the Government. It is to be hoped that such a review of the problem will not lead to any fresh curbs on road transport which will be a deplorable reversal of the recent changes in Government's transport policy, based on modest recognition of the importance of motor vehicle transport. In any case, some healthy competition between the Railways and road transport is to be welcomed in that it will lead to improved efficiency and better service to consumers. So far as the Railways are concerned, there has in general been a continuous increase in goods traffic. From 114 million tons at the end of the first Five-year Plan period, goods traffic improved to 124 million tons in 1956-57, to 132 million tons in 1957-58 and to 137 million tons in 1958-59; it is expected to go up to 151 million tons in 1959-60. Thus, the Railways have not done badly. Indeed, it is now believed that the estimate of 162 million tons at the end of the second Five-year Plan (1960-61) will be reached. The Railways will do well to prepare themselves to lift this traffic. Their concern over competition from road transport is bound to prove baseless, as the overall traffic grows with the expansion of the country's economy.

It is encouraging to hear that the programmes under the Rs. 1,121-crore second Five-year Plan for the Railways are being implemented expeditiously. The third year of the Plan, according to Mr. Jagjivan Ram, witnessed the "peak of constructional activity on the railways." Out of the total of 1,848 miles of new lines and doublings under execution, 423 miles (173 miles of new lines and 250 miles of doublings) have been opened to traffic; construction of 525 miles of new lines and 900 miles of doublings is in progress. The improved supply position of rails and sleepers has made speedier implementation of track renewal programme possible. The development plans have received generous assistance from abroad—two loans of $90 million and $85 million from the World Bank and two loans of $40 million and $35 million from the U.S. Development Loan Fund and a loan of $20 million from the U.S. and $8 million from Japan (for Orissa iron ore project). These loans have been of considerable assistance in carrying out the Railways' modernisation and expansion programme.

Railway transport, as is well known, has lent a massive impetus to India's industrial expansion. It has assisted the growth of industries manufacturing railway equipment like locomotives and wagons and signalling equipment. There is a host of industries which supply many vitally needed components for Railways. It is heartening to note that "steady" progress has been made towards the objective of self-sufficiency in the manufacture of steam locomotives, carriages, underframes and wagons. Proposals for the progressive manufacture of mechanical components of electric locomotives have been taken up; the electric components for the indigenously manufactured electric locomotives may have to be imported in the initial stages, until these can be supplied by the Heavy Electricals Plant, Bhopal. The development of indigenous capacity for the manufacture of diesel locomotives has also been taken up. There has been, according to Mr. Jagjivan Ram, "significant" increase in the domestic production of items like thermic syphons, pressure castings, signal glasses, vacuum and steam pressure gauges. In most cases, it is stated, imports have been "completely eliminated." The Railway Testing and Research Centre has carried out research in profitable utilisation of coal ash (of which steam locomotives produce annually one million tons), the development of concrete sleepers, softening components, and preparation of paints and bituminous emulsions. Thus, the Railways, both on their own and by the fillip they give to private manufacturers, are making a commendable contribution to India's industrial progress.

No less important are the welfare functions of the Railways. Being the single largest public enterprise, with a country-wide organisation, the Railways have found themselves in an important role as a welfare and educational agency. During the first three years of the second Plan, they will have built some 36,000 quarters for railway staff; another 9,000 are to be added next year. Perhaps, the Railways will do well to bear in mind the importance of providing the necessary water and light facilities to quarters, whether old or newly built, for there is a valid complaint that, except in large towns, the Railway quarters are woefully deficient in the facilities which go to make a comfortable home for tenants. A notable feature of the Railways' welfare measures is the schools and hostels they run for the children of their staff. This activity, together with the technical training which they impart to apprentices, form a valuable service in the cause of Indian education. The staff, as the direct beneficiaries of the Railways' welfare and educational programme, owe a special responsibility to their employers as well as the general public to step up productivity and thereby demonstrate that they give adequate value for the wages and several indirect benefits they receive.

SOME THOUGHTS ON THIRD PLAN—II

IF there is one subject on which there is a large measure of agreement among all the interests in India, it is agriculture. Every one is agreed that, in the third Plan, agriculture should be given greater importance than it has received so far, as industrialisation of the country can succeed only if its agricultural base is strong and sound. The foreign friends of India who have paid some thought to its economic problems are also of the same view. Unlike some of the countries in Europe, India

is ideally suited for development of agriculture. Nearly three-fourths of its population is dependent upon agriculture for its living and a little over half of its national income is derived from this occupation. While it is necessary to reduce the predominant dependence on agriculture, this is not to be done by lowering the investment on it. Since it will take several years for industrialisation to draw off the surplus labour from land and since population is rapidly increasing, it is necessary to keep agriculture in a buoyant state, so that employment opportunities in rural areas may be maintained at the maximum level. What is suggested here is not high level of prices, but more production through both intensive and extensive cultivation. Agriculturists should, of course, get a good return on their produce, but, at the same time, the price levels should be such as to enable the vast mass of landless workers to get the necessities of life at prices they can afford. Prosperity does not mean high level of prices, but contentment, the first requisite for which is a full stomach. Consequently, those who talk of creating enthusiasm among the masses for the Plan should think not in terms of a massive outlay of Rs. 10,000 crores in five years or in terms of propaganda and publicity, but in terms of food, clothing and housing. The first objective of our planners should be to provide for the living of the present generation and not of the next generation. In a poor country, appeals to the effect that the present generation should tighten its belt so that one's children, grandchildren and great-grandchildren may have a comfortable life cannot but have a limited response.

Since all are agreed that agriculture should come first, it is obvious that, in any plan for industrialisation, a high priority must be given to those industries which are essential for aiding agriculture. The primary needs of agriculture are implements, irrigation, fertilisers, power, transport and finance. After deciding the targets of agricultural production, the planners should think of the requisites for reaching the targets expeditiously and economically and provide for them in full. As the country is assured of adequate supply of steel for plough-shares, thanks to the high priority given to it in the second Plan, it can afford to be a little less ambitious about steel and give more prominence to fertilisers and other needs of agriculture. In stressing this point, our object is not to minimise the importance of either steel or heavy industry, but only to make sure that what appears obvious is not ignored, as it was in the second Plan. It will be remembered that a considerable proportion of irrigation facilities already established is not being utilised, resulting in wastages which the country cannot afford. This is due partly to defective planning, partly to administrative delays and partly to lack of incentives and resources for farmers. Care must be taken to see that such lapses do not occur in the third Plan.

The second consideration in the Plan for industrialisation should be for capital formation. Priority should be offered to those industries and services where profits could be obtained fairly quickly and the rate of savings can be sizable. Among them, prominence could be given to those industries for which the bulk of the resources is available within the country and which can go a long way towards meeting the basic requirements of the people. This will serve the twin objective of providing employment and a visible improvement in living standards within a shorter time than through heavy industries requiring enormous sums of capital. Most of these industries are better suited to the private sector than to the public sector. Accordingly, the private sector should be allotted a bigger role than the one contemplated by the planners.

The aforesaid consideration is strengthened further by the foreign exchange situation, present and prospective alike. It is common knowledge that the third Plan will not have the same quantum of foreign exchange reserves which the second Plan had. On the contrary, during the third Plan period, substantial foreign exchange liability falls due for payment. The industrial projects chosen for this period should, therefore, be such as would not require much foreign exchange or be able to attract foreign capital easily and on terms that will not aggravate the balance of payments situation. Private capital answers this test better than Government-sponsored loans. Governments in the free world have themselves begun to emphasise this point and the indications are that they are less inclined than before to provide massive loans. The deciding factor here is, of course, political. One cannot, therefore, be quite dogmatic about it. Nevertheless, there is no doubt about the order of their preference and their readiness to encourage the flow of private capital for investment in underdeveloped countries. It would be wise on the part of the authorities of this country to seize this opportunity by drawing their plans for development suitably and by readjusting their economic policies and thinking. An early move in this direction is desirable, so that the private sector may have the necessary time and incentive to draw up its plans for being incorporated in the third Plan and for initiating negotiations with its foreign counterparts. It is true that, in the past one year, the Government has been pragmatic in interpreting its industrial policy, in that it has allowed the private sector to enter spheres which, one thought, it had reserved for itself. It has, for instance, given permission to the private sector to put up more aluminium plants and to manufacture pulp for rayon and staple fibre, synthetic rubber, and fertilisers. But it would be even more helpful and conducive to rapid development, if the declared policy of the Government is modified suitably. The instances just mentioned lose much of their significance in the light of the Nagpur resolution of the Congress Party and the repeated statements of its top leaders that the public sector has to grow not only in extent but also in importance. The atmosphere for the private sector has been vitiated by these statements and requires to be greatly improved. It will, of course, be necessary for the public sector to establish some heavy industries. Even here, it should explore the possibility of working in partnership with the private sector, both domestic and foreign, as this would be conducive to better and speedier results. There are already a few instances of this nature, but there could be many more of them.

The third Plan should undoubtedly be bigger than the second Plan. A larger outlay is justified by the increasing pressure of population and the urgency of providing more employment opportunities. But the projects chosen for implementation should conform to the broad considerations outlined in this, as well as in our last, article. If the Plan is drawn up on realistic lines, there is every prospect of getting the required foreign assistance. The leaders of the free world seem to be aware of the necessity for helping India to go forward economically in the interests of democracy. We are laying stress on the free world, because, among the Communist countries, it is only Russia that is in a position to render assistance and what it can do for this country is not, and cannot in any case be, large, what with its commitments to China, Eastern Europe and to the cause of international communism. It is only the developed countries of the free world that can assist India to a significant extent in its fight against poverty. Accordingly, it is only but fair that, before finalising the third Plan, it should consult them and ascertain the extent of help that can be had from them. Although India's foreign exchange reserves today are but a fraction of what they were when it launched its second Plan, the goodwill and understanding it has today in the free world are many times greater than they were three years ago. If only the leaders in power are tactful, this goodwill can be harnessed to serve a bigger plan than the second Plan. While, therefore, every effort must be made to get foreign assistance, the country should not make the mistake of committing itself to a bigger plan without ensuring the necessary resources. It is easier to expand the Plan later, but terribly expensive to cut it.

BUILDING COSTS

THE resources available for construction in India are dwarfed by the magnitude of the housing problem. For, as long as one can foresee, this country can never have too many houses. In the urban sphere, the population is expected to increase by 33 per cent. or 20.6 million in the decade ending 1961, resulting in a need for 8.9 million houses, inclusive of a shortage of 2.5 million houses at the beginning of the decade. During this ten-year period, it is expected that only 3 million units will be built. This means that the housing shortage in 1961 will be twice as acute as in 1951. In the rural sphere, the number of houses in 1951 was placed at 54 million. About 50 million units in this sphere will have to be improved substantially or completely rebuilt. This would cost, on a rough estimate, some Rs. 2,500 crores. These data should be sufficient to show that available resources will enable the country only to touch the fringe of the rural housing problem.

It will be readily appreciated that the pace of progress in construction, tardy as it is, can be quickened through continuous attention to building costs, that is, if the country cannot afford to spend more on housing than it does now, it is at least reasonable to demand that the available resources are made to go further than they do now. "More houses for the same or less money" may well be the motto for the country on the subject of housing. It has been estimated that, in the second Five-year Plan, the construction programmes will absorb Rs. 1,000 crores, of which the Centre will account for Rs. 700 crores and the States for Rs. 300 crores. The Union Minister for Planning, Mr. Gulzarilal Nanda, stated last year that his own assessment was that about 20 per cent. of this expenditure could be saved through the pursuit of suitable economies. But it is not clear whether this estimate includes the savings that would arise through outright abandonment of unnecessary construction. Presumably, it does. Maybe, a further probe will reveal new possibilities in savings on construction. In any case, a far more important long-term problem is the pursuit of economy in actual construction costs. The Union Minister for Works, Housing and Supply, Mr. K. C. Reddy, in the course of his address to the National Building Council, which met last week at New Delhi, rightly stressed that every Government department had a "great responsibility to see that building costs are kept as low as possible in their specialities by the adoption and evaluation of means and methods advocated and tested by expert research and experiment."

The need for bringing down building costs also arises from the fact that housing is not among the most productive investments today. Houses are costly to build and to maintain. If construction and repair costs were brought down, it would be possible to attract more capital to housing. Further, it would be a great relief to tenants, for a reduction in construction costs would be reflected in reduced rents. It must be remembered that, whereas 50 per cent. of the urban residents in India are estimated to have a monthly income of less than Rs. 100, the economic rent even for a single-room tenement works out to Rs. 30 per month. The search for a solution to the problem of high building costs deserves to be given top priority.

A notable effort in the cause of research in construction is the setting up of the National Buildings Organisation (N.B.O). Established in 1954, the Organisation is charged with the responsibility for developing new building techniques, designs, practices and materials and of serving as a clearing house of research information. It has concentrated its study and activities on such critical building materials as cement and steel. It has undertaken a survey of the production of building materials like brick, lime and timber. It has also developed plans for the manufacture of perforated bricks, gypsum boards and hollow-tiles and the treatment and preservation of secondary species of timber. At the symposium organised by the N.B.O., it was revealed that the design and construction of shell structure would result in considerable saving of steel and other expenses.

There is a great deal to be said in favour of research in economical and utility construction. Mr. Reddy indicated how the use of prefabricated concrete could lead to saving in costs of construction. The Selected Buildings Projects Team, which submitted its report recently, has made many constructive suggestions. After examining the construction of several building projects in the public sector, the Team observed that "there was very little evidence of a rational programming of work." It also found that "obvious economies had been neglected." In some cases, the cost of foundations was comparatively "too high." The Team urged the need for consulting foundation experts before undertaking large construction works. It found that sufficient attention was not being paid to site organisation. Other concrete suggestions it made for bringing down construction costs, included: (1) elimination of steel structures as far as possible, (2) judicious choice of spans and spacing of frames and filler materials in R.C.C. structures, and (3) adoption of prestressed concrete. Study and research should reveal further scope for economy in construction costs. The N.B.O.'s efforts in initiating and conducting constructional research and in stimulating the wider adoption of the results of its research will certainly be rewarding, if they are efficient and expeditious.

U.S. EXPORT-IMPORT BANK COMPLETES TWENTY-FIVE YEARS

AIR FARES—OIL PRICES—COMMON MARKET

THURSDAY, 5 P.M.

THERE have been no new developments in share markets. On Friday last, there was a sizable fall in equities. This was due chiefly to liquidation by some brokers who had bought on account of the speculator who had boosted the commodity futures and was believed to have been caught badly on account of the drastic steps taken by the Government to curb speculation in *gur* and the somewhat less drastic measures in oilseeds. Apparently, the brokers wanted to safeguard their position against the possibility of default by this operator. But soon the market recovered its poise and has been irregularly steady to firm since Monday. Although the net changes in values over the week are small and vary widely from scrip to scrip, the closing rates today are well above the lowest levels seen earlier in the week. There are as yet no rumours about the Central budget, but some seem to believe that there will be a few refinements in favour of investors in the taxes on dividend and bonus shares. There have been so many representations from both foreign and Indian investors against these taxes that it would be a great disappointment to them if the Government were to pay no attention to them.

MARKET GOSSIP

The general mood of the market at the time of writing is one of confidence that the Central budget would contain no serious additions to the already heavy tax burden. It is true that Prof. Kaldor, who was in New Delhi recently on an advisory mission, has put forward a number of suggestions for improving the effectiveness of the integrated system of taxation now in vogue in this country. The implementation of these suggestions would constitute a major reform. It is doubtful whether the Government is ready for such a reform, but it would not be a bad thing for genuine investors and honest taxpayers if Kaldor's integrated scheme were taken as a whole and the existing system scrapped.

The Railway budget presented to Parliament yesterday leaves the freights and fares unchanged. The Bombay State budget published today also contains no fresh imposts. The widely held fear that the Bombay Government would introduce agricultural income-tax has not materialised, with the result that scrips of Deccan Sugar companies, which had remained depressed on that score, have staged a smart recovery. With Bombay, four major States have now presented their budgets and none of them has imposed any new taxation. This fact, together with the *status quo* in railway freights and fares, has strengthened the hope that the Centre, too, will spare the people from additional taxation. There are, however, some who are inclined to feel that these are precisely the reasons why the Centre will not do so. The end of this month, now only 10 days ahead, will show which of these two surmises turns out to be correct.

• • • •

Bankers in this country will be interested to know that the virtual end of the control on capital issues in Britain has opened the way for the banks in that country to go ahead with their programmes for raising fresh capital. The Midland Bank, the application of which to make a rights issue of £4 million—2,019,464 shares of £1 each at 40s. per share—had been rejected by the Capital Issues Committee last year, has now decided to proceed with the issue. The Directors of Lloyds Bank are also considering a proposal to make further issue of capital. The proposal will be finalised in the course of the next two or three months. If it were decided to raise more capital, it would be in the form of a rights issue and the price will be related to the market price of the shares. The amount to be raised will be "reasonable and appropriate," having regard to the existing capital.

The Midland Bank's new issue will be made in the ratio of one share for every eight held as on 5th January last. The new scrip offer will be made along with the proposed one-for-three free scrip issue which has already been announced, but the entitlement will be on the number of shares held before the bonus issue. After the issue of bonus and rights shares, the Bank's paid-up capital will stand raised from £16.16 million to £23.56 million. The published reserves, from which the bonus issue will be made, will be replenished by a corresponding transfer from inner reserve.

In addition to the issue of new shares to the shareholders, the Directors of the Midland Bank have also decided to issue 600,000 shares of £1 each, at a price to be determined by the Board, to the members of the staff who have put in five years of service and more. The minimum number of shares to be offered per member is 10 and the maximum 75. This offer to the staff will apparently be at a concessional rate and is in keeping with the policy of British company managements to induce their workers, too, to be shareholders.

The Midland Bank's object in raising its capital is to strengthen the ratio of its paid-up capital and reserves to deposits. There has generally been a decline in this ratio of all banks from 5—6 per cent. before the war to 2—3½ per cent. and the Midland Bank's ratio has been the lowest among the "Big Five." The Bank's Directors have already indicated their intention to recommend a dividend of 15 per cent. for the current year. The market value of the Bank's shares at the time of the announcement stood at 91s. 6d. which was equivalent to 66s. 3d. *ex*-rights, at which rate and on the basis of the proposed dividend of 15 per cent., the yield works out to 4.5 per cent., which is slightly higher than the yields on the shares of the rest of the "Big Five." This is not surprising, as the other banks also are expected to raise their capital sooner or later.

• • • •

The distinction of being the first public agency, either national or international, to arrange credit for large-scale economic development throughout the world goes to the Export-Import Bank of Washington. It is, therefore, the oldest institution of its kind and has just completed (on this day last week) 25 years of its useful operations. In general, the Bank extends credits and guarantees credits extended by private banking organisations for overseas purchases of U.S. produced goods. Founded in 1934 with a capital of $11 million, the Bank is now authorised to have outstanding, at any one time, loans and guarantees to the tune of $7,000 million. It was established with the object of (1) providing finance and facilitating exports and imports and exchange of commodities between the U.S. and other countries; (2) supplementing and encouraging and not competing with private capital; and (3) making loans that will, in the judgment of the Directors, offer reasonable assurance of repayment.

True to these basic concepts, the U.S. Export-Import Bank has, throughout the 25 years of its operation, maintained a flexible lending policy designed to meet changing conditions in the world trade and has extended credits to nations in every region of the free world. It made its first credit for economic development abroad in the late 1930's. Since then, its field of activity has extended to countries in Africa, Asia, Europe, latin America and Oceania, where it has assisted the development of such wide variety of industries and public works as steel mills, iron, copper, nitrate, manganese and uranium mining, electric power installations, cement mills, fertiliser plants, large-scale irrigation projects, highways, ports and other public works. The fact that most of the various programmes of development have followed, in general, the path pioneered originally by the Export-Import Bank bears testimony to the creditors' faith in the soundness of the Bank's advice.

Besides providing credit for overseas buyers of U.S. goods or guaranteeing such credits granted by private banks, the U.S. Export-Import Bank has also been actively encouraging new private investments abroad. Since 1952, the earliest year for which complete statistics are available, credits by the Bank have resulted in concurrent loans and participations and equity investments by U.S. private interests aggregating over $880 million without guarantee from the Bank. An idea of the magnitude of the Bank's operations since 1934 is provided by the following data:

1. Its total authorisations exceed $10,000 million covering about 1,600 individual credits.

2. It has disbursed over $6,600 million and an additional $1,600 million is committed for disbursement.

3. Repayments of credits aggregate $3,300 million.

4. It has written off losses amounting to $2.9 million.

5. It has encouraged more than $1,000 million in private investment abroad.

The success of the U.S. Export-Import Bank has prompted many other countries to enter the field of financing exports and imports by establishing a similar institution. Japan, for instance, has an export-import bank on the U.S. model. In the U.K., though there is no separate institution, the Export Credit Guarantee Department of the Board of Trade serves a similar purpose. The E.C.G.D. is now becoming more than an organisation intended to provide only an insurance cover to British exporters against default by importers in foreign countries. The £28.5 million credit granted by Britain to this country, for instance, is under Section 3 of the Export Guarantee Act, 1949. There is also a growing tendency in the U.K. for earmarking parts of its credits to other countries to cover purchases of British goods. A portion of the aforesaid loan to India, for instance, is to be utilised for buying textile machinery. In West Germany, too, there is no export-import bank, but there are two other institutions, namely, Export Credit A.G. and the Credit Association for Reconstruction, through which medium and long-term credits are being granted to finance the country's exports.

There is a move in Canada to establish an export credit institution. A petition has been made to the Canadian Parliament by a group of manufacturers and exporters for the incorporation of a publicly financed company. The company, which will be known as the Export Finance Corporation of Canada, will have an authorised capital of $50 million and will enter all aspects of export-import financing, including financing of long-term export credits. It is envisaged that the Corporation could lend up to ten times its outstanding capital stocks, with funds required to be obtained from temporary bank borrowings and sale of secured notes, debentures or shares of the Corporation to an investing institution and the public.

Among the Communist countries, Russia and China are offering direct long-term credits at attractively low rates of interest. Indeed, China is said to have offered last year seven-year deferred payment facilities to importers of even consumer goods such as cotton textiles.

What about India? The question is not irrelevant, for this country is finding it necessary to develop its exports. Increasing stress is being laid on exports of manufactured goods, especially those of engineering industry. We have only an insurance corporation to cover the risks of exporters. But this by itself is not sufficient. Exporters of engineering goods, in particular, have been pleading for special arrangements for providing credit facilities. In view of its urgent need for foreign exchange, India, of course, cannot now afford to offer any sizable credits to finance its exports. Nevertheless, a beginning has to be made in this direction. How else could our manufacturers compete for markets in the world? This reminds us of the suggestion made by Mr. K. K. Birla in his speech at the last annual meeting of the Textile Machinery Corporation Ltd. Mr. Birla suggested that the Reserve Bank Act should be amended, so that it could rediscount through member-banks export bills of longer usance than three months. It would be interesting to know as to what the authorities have done about this suggestion.

As the current agreement on air fares expires on 31st March 1959, world airlines are faced with the task of drawing up a new schedule of air fares for the year beginning 1st April next. This problem, which in normal course should not present any special difficulties, has been rendered intractable by the advent of the jet age. Since both jet aircraft and the older and slower piston and turbo-prop-engined planes will be operated side by side in 1959, the question of devising a differential fare scheme has become a live issue. Airlines which are not operating jets insist on differential fares or a surcharge on every jet ticket sold, while those having big jet airliners are strongly opposed to what they call a penalty for being ahead of others.

The rate-fixing machinery of the International Air Transport Association (I.A.T.A.) failed twice during the last six months to evolve a compromise solution. The adamant attitude of the contending parties was responsible for the breakdown of the fare talks in Cannes last autumn. At the Conference of the I.A.T.A. held at New Delhi last October, no solution could be found, as the representatives of the various airlines were evenly divided on the issue. Fare talks scheduled to be held in January this year were postponed.

Representatives of world airlines are again meeting in Paris this week to resume their discussions under the chairmanship of Mr. Philip Lawton, Commercial Director of British European Airways. Over 80 airlines, all members of I.A.T.A., are participating in this conference. There is reason to believe that the issue will be settled this time, especially as there is not much time for deferring it further. It is true that neither of the opposing groups has substantially modified its stand to make a solution easy, but the very fear that, if they fail again, an open rate war could emerge from 1st April may prompt them to arrive at some compromise.

The fear of airlines not operating jet aircraft is that these bigger, faster and more comfortable aircrafts will attract traffic away from the conventional planes. They, therefore, plead for a differential fare scheme which will make jet travel a little more costly. Three methods are suggested for this purpose. They are: (1) to raise jet fares and leave others unchanged; (2) to leave jet fares unchanged but lower the others; (3) to levy a direct surcharge on every jet ticket sold.

The proponents of differential rates, which include the British European Airways, Trans World Airlines of the U.S. and Alitalia of Italy, recognise that any such scheme should only be temporary, as they too are going to switch over to jets in due course. But they insist that, for the interim period, there should be differential rates. The B.O.A.C. and Pan American Airways, which have been the first to introduce jets in their fleet, are strongly opposed to this suggestion. They argue that it will amount to penalising the airlines that are ahead of others in giving quicker and more efficient service. Jet service, they point out, is only a logical step in improving world air transport.

Fixation of cargo rates, too, is said to present another difficult problem. Seaboard and Western Airlines, the only North Atlantic scheduled all-cargo airline, will, it is learned, urge for a 10 per cent. cut in cargo rates.

The cut of upto 10 per cent. in crude oil prices, announced by British Petroleum on the 12th inst., reflects the downward trend of the world crude oil market which had of late been under pressure of plentiful supplies. The reduction is said to have been effected to make B.P.'s crude oil competitive with that of the U.S. and Venezuela. Early this year, almost all the main oil companies operating in Western Texas, whose crude oil is comparable to the Middle East oil, reduced their crude oil prices, the reduction ranging from 7 cents a barrel for 40° gravity to 27 cents for 20° gravity. It was only a few days ago, on the 6th inst. to be precise, that almost the whole range of Venezuelan light to medium heavy crude oil prices were cut to the tune of 15 cents a barrel for light crudes, 10 cents for medium and 5 cents for the medium heavy. Naturally some reduction in Middle East prices was, therefore, anticipated. But the cut, which ranges from just over seven per cent. in the East Mediterranean to 10 per cent. in the Persian Gulf, is more than the optimistic expectations. B.P. crude oil prices are now as low as

EQUITIES RECOVER AFTER SHAKE OUT

SUGAR SHARES SPURT

(From Our Own Correspondents)

BOMBAY, *19th February*

THE share market staged a recovery in the new account which opened on Monday last, after a heavy shake out on the last day of the previous settlement. The pronounced weakness on Friday last was attributed to heavy liquidation on end-of-account considerations, and also reflected the operators' anxiety to keep their commitments as light as possible. This sudden change in their attitude was somewhat unexpected, for till then they were inclined to take the view that there might not be any new jitters in the Central Budget. The setback in the commodity markets, following the series of official measures to arrest the boom in prices, also affected sentiment.

The new account, however, opened on a somewhat bright note and there was a recovery in prices on replacement buying attracted by the low levels. The improvement was sustained during the rest of the week. The absence of any fresh taxation in the State Budgets presented so far and of any increase in the rail fares and freight rates in the Railway Budget presented yesterday would appear to have encouraged the operators to expect that the General Budget would be equally helpful. As a result of the recovery in prices which followed, the earlier losses were nearly made good in some cases; in others there were small gains over the week.

In the steel section, Tata Ordinaries fell on Friday last from Rs. 174.25 to Rs. 170.50. After a recovery on Monday this week to Rs. 172.25 the shares shaded off to Rs. 171.25 for a short while, but gained fresh ground to touch Rs. 174 today. The closing was done at Rs. 173.75. The new shares shed on balance 50 nP. to Rs. 170.75. After an earlier dip from Rs. 26.10 to Rs. 25.60, Indian Irons crept up to Rs. 26.15 and closed at Rs. 26.10.

In the textile section, Bombay Dyeings came down from Rs. 56.90 to Rs. 56.10 early in the week, but staged a rally to Rs. 57.10 at the close today. Centurys moved a bit erratically between Rs. 429.50 and Rs. 437.50 before closing at the latter level. Kohinoors lost over the week Rs. 2.50 to Rs. 235. Central Indias were lower by Re. 1.50 at Rs. 83, while Finlays gained Rs. 3 to Rs. 262. Gokaks lost Rs. 3 to Rs. 131 and Indu Ordinaries 4 nP to Rs. 8.80. Models were done Rs. 8.75 lower at Rs. 153.75 and Morarjees Rs. 2 down at Rs. 231.50. Mysore Spinnings were unchanged at Rs. 79, while New Greats gave way from Rs. 213.50 to Rs. 209. Simplex were unchanged on balance at Rs. 168 and Shree Niwas were a shade better at Rs. 139.50. Standards advanced by Rs. 4 to Rs. 420, while Svadeshis were marked down by Rs. 3.25 to Rs. 204.75. Tatas were unchanged at Rs. 34.

Bank shares were generally steady, but Barodas provided one of the exceptions with a decline of Rs. 2.50 to Rs. 119.50. Central Banks gained 30 nP to Rs. 59.30 and Bank of Indias 50 nP to Rs. 141. Bank of Bikaners were done Re. 1 higher at Rs. 26, as also Dena Banks at Rs. 52. Jaipur Banks, too, were picked Re. 1 higher at Rs. 45. State Banks were quiet at Rs. 381.25. Union Banks were maintained at Rs. 7.72.

In the insurance group, business was very much restricted. New Indias were put through Rs. 2.40 lower at Rs. 50.50 and their new shares Re. 1.30 down at Rs. 51.70.

Among electricity shares, Ahmedabad Electrics changed hands at Rs. 96.50, as against Rs. 95.40 a week ago. Bombay Suburbans were done at Rs. 108 *ex-div.*, as against Rs. 110 *cum-div.* Surat Electrics gained 75 nP to Rs. 114.50 and Tata Hydros Re. 1 to Rs. 120.50. Tata Powers moved up by Rs. 5 to Rs. 1,202.50 and Andhra Valleys by a like amount to Rs. 1,177.50.

Sugar shares of the Deccan group provided a feature today with a sudden spurt, on news that there was no imposition of agricultural income-tax in the Bombay Budget. Belapurs dipped earlier in the week from Rs. 265 to Rs. 260 before improving to Rs. 265.50 yesterday. Today, there was a further sudden rise to Rs. 272 at the close. Phaltans too staged a sharp rise of Rs. 8 to Rs. 148 and Walchandnagars moved up by Rs. 9 to Rs. 275. Hindustan Sugars were placed at Rs. 230 *ex-div.*, which on a *cum-div.* basis showed a rise of Rs. 7.50. Maharashtra Sugars picked up Rs. 3.25 to Rs. 178.25. In the cement group, Associated Cements were dull at Rs. 147 *ex-div.*, as against Rs. 155 *cum-div.* (div. Rs. 8.50). Digvijays shed a rupee to Rs. 129.50 Orissas were a shade quiet at Rs. 13, while Ashoka Cements looked up by 20 nP to Rs. 8.24.

Among engineerings and minings, Alcocks maintained their downward trend with a further fall of Rs. 5 to Rs. 257. Tata Locomotives hardened by Rs. 3.25 to Rs. 164.50, while Premier Constructions were marked down by Rs. 4.25 to Rs. 226.25. Larsen and Toubros were unchanged at Rs. 17.24 while Mahindras shed 16 nP to Rs. 18.08. Texmacos were steady at Rs. 21.03. Shivrajpurs were dull at Rs. 88.50 and Indian Coppers at Rs. 3.56.

Scindias were marked down from Rs. 21.32 to Rs. 20.76 on selling pressure induced by the none too encouraging picture of the outlook for the current year drawn by the Chairman at the annual general meeting held yesterday. Great Eastern were quiet at Rs. 23.72. Bharat Lines declined by 52 nP to Rs. 11.60. Premier Automobiles improved by Re. 1.50 to Rs. 88, while Hindustan Motors were quiet at Rs. 7.44.

In the miscellaneous industrial group, Bombay Burmahs (old) moved erratically between Rs. 467 and Rs. 462 before closing at Rs. 466. National Rayons declined from Rs. 243.25 to Rs. 238 before gaining ground to Rs. 242. Tata Chemicals were steady at Rs. 15.40, while Dhrangadhra Chemicals lost Re. 1.80 to Rs. 87.20. Hindustan Levers gained 25 nP to Rs. 28, following the increase of 10 nP to Re. 1.50 in the dividend for the year 1958. Tata Oils were lower by 50 nP at Rs. 44.75. Indian Dyestuffs hardened further by Rs. 6 to Rs. 193. Ceats were done at Rs. 85.50. Killick Industries shed Rs. 3.50 to Rs. 156.50 and Wimcos Re. 1.50 to Rs. 186.

* * * *

Calcutta Stock Exchange

CALCUTTA, *18th February*

The Calcutta Stock Exchange developed the traditional pre-budget caution during the week under review, and, with a fall in the number of transactions in all sections, trading was lethargic. There was a wave of nervous selling by the weak holders, but at the same time, since the present levels were considered attractive, buyers were readily located for the more popular scrips on offer. The absence of any new taxation measure in the West Bengal Budget pleased operators, who were looking forward to a similar pleasant surprise in the Central Budget on 28th inst. This anticipation followed reports that Prof. Kaldor, the taxation adviser, had recommended a limit, lower than the present, on the combined rate of income and super tax on personal incomes. The extreme among the optimists were prepared to bank their hopes on abolition of the taxes on bonus shares and dividend and some sort of intelligent reorientation of the wealth tax on companies. These were all anticipations, and few in the market were prepared to enter into long-term commitments hoping that these expectations, at least some of them, would materialise. That explained the week's dullness, and conditions can not ordinarily be expected to improve until the Budget is presented. Sectionwise, jutes jerked and shaded, as it was feared that the large stocks of heavy goods would continue to be a strain to mills for some time to come. Coals cooled down to lower levels on profit-taking, and Government's decision on the recommendations of the Price Revision Committee was awaited. Engineerings encountered limited support, in view of the general dullness, while teas toned up to steadiness on selective support. Miscellaneous industrials moved around firm levels on good corporate news, such as the inauguration of Dunlop's second factory and Indian Aluminium's new smelter.

In jutes, Kamarhattis were pulled down to Rs. 155 from Rs. 163, while New Centrals were unchanged at Rs. 13.37. At Rs. 26, Nationals suffered a fractional decline and Unions changed hands at Rs. 214, as against Rs. 217.50 previously. Megnas, on continued offers, gave way to Rs. 13.94 from Rs. 14.50.

Burrakurs, among coals, were a feature with a rise to Rs. 17.87 from Rs. 17.50, but fell to close at Rs. 17.44. Amalgamateds sagged to Rs. 21.69 from Rs. 22.75. East Indias recovered to Rs. 24.06 from Rs. 23.69, while Bengals, after being higher at Rs. 284 from Rs. 282, closed at Rs. 283. Pench Valleys after being lower at Rs. 23.94 against Rs. 24.25 previously, recorded a partial recovery to close at Rs. 24. Dhemo Mains were unchanged but quiet at Rs. 9.25.

In the mining group, Indian Coppers at Rs. 3.51 were lower by 5 nP before recovering to Rs. 3.54. From Re. 1.71, Burma Mines moved down to Re. 1.65.

Engineerings were lower on fewer buyers. Indian Irons opened at Rs. 26.10 to recede to Rs. 25.80. Texmacos were at one time as low as Rs. 20.65, but recovered to close 10 nP lower on balance for the week. Burn & Cos. were about steady at Rs. 365 as were Guest Keens at Rs. 37.50, while Kumardhubis at Rs. 8.75 were fractionally lower.

Among miscellaneous industrials, Orient Papers met with support at Rs. 31.65, but closed at Rs. 31.25. India Steamships were steadier at Rs. 14.19. At Rs. 31, Metal Boxes, though unchanged, were fully firm. At Rs. 24.31, Indian Oxygens touched a new high, but closed lower at Rs. 23.81. National Cables sagged to Rs. 30.06 from Rs. 30.25. Indian Aluminiums at Rs. 17 were fractionally higher. At Rs. 18.37, Alkali and Chemicals added 12 nP.

But for the general dullness, teas would have accounted for a greater number of features. Brooke Bonds were unchanged, but firm at Rs. 16.75, while Hasimaras improved to Rs. 21.75 from Rs. 21.31. At Rs. 104, New Cinnatoolians hardened by Rs. 4 and Jayshrees were better at Rs. 12.25. Dibrugarhs advanced to Rs. 27.62 from Rs. 27.

* * * *

Madras Stock Exchange

MADRAS, *17th February*

Steady conditions prevailed on the Madras Stock Exchange during the week under review also. Rubber shares attracted good attention of operators, thanks to renewed rumours of an upward revision in raw rubber prices. Tea shares met with enlarged buying inquiries induced by persistent firmness of tea prices. Coffee shares ruled dull, thanks to uncertain outlook for the industry. Activity in the textile section was restricted, buyers' attention being focussed on a few selected counters. Operators were not inclined to enter into fresh commitments either way in the absence of a clear picture regarding trend of domestic consumption and export business. Electrics, banks, and miscellaneous industrials were generally well maintained.

Under the impetus of expectations regarding rise in rubber prices, Anandams registered a handsome rise of 73 nP to Rs. 15.50. Vaikundams were bid 50 nP higher at Rs. 23.50. Midlands climbed up by 35 nP to Rs. 11.75 and Mercaras by 30 nP to Rs. 8. Teekoys strengthened by 25 nP to Rs. 7.10. Kalpettas were done at Rs. 12, as against Rs. 11.70 last week. Kailas gathered 10 nP to Rs. 4.85.

Among tea shares, Halleyburias hardened by 40 nP to Rs. 17. Kalasas picked up 20 nP to Rs. 3.55. Parksides put on 30 nP to Rs. 19.50. Twyfords met with excellent buying support and forged ahead by 62 nP to Rs. 16.12. United Nilgiris firmed up by 45 nP to Rs. 17.25 *cum-div.*

Among coffee shares Coffee Lands encountered selling and receded by 12 nP to Rs. 21.50. Consolidated Coffees declined by 10 nP to Rs. 19.70. Kadurs were dull at Rs. 2.95, as also Mysore Coffees at Rs. 3.65 and Rajendras at Rs. 12.40. Kumergodes, however, evoked special inquiries and moved up by 15 nP to Rs. 5.65 cum-div.

In the textile section, Coimbatore Pioneers picked up Rs. 3 to Rs. 266. Rajalakshmis improved by Rs. 2 to Rs. 64. Bangalore Woollens advanced by a rupee to Rs. 161. Cambodias increased by 85 nP to Rs. 8.50, Balasubramaniams by 50 nP to Rs. 51, Adonis by 40 nP to Rs. 7.70, and Venkateses by 25 nP to Rs. 116.25. Dhanalakshmis were bid at Rs. 172 *cum-div.*, as against Rs. 170 last week. Ranga Vilas, however, were subjected to selling and dropped Re. 1 to Rs. 48. Kotharis eased by 38 nP to Rs. 9.12, Loyals by 30 nP to Rs. 24.50. Maduras lost 25 nP to Rs. 25, reflecting the disappointment of operators over the Directors' decision to pass over dividend for the year ended December 1958. It may be recalled here that, for the previous year, the dividend of 15 per cent. had been given.

A rise of Rs. 5 to Rs. 285 in the quotation for United Breweries characterised the trading in the sugar section this week. Andhra Sugars came in for business Re. 1.50 higher at Rs. 20. Deccans were fully maintained at Rs. 9.70, Indias at Rs. 12.15, Jeypores at Rs. 15, K.C.Ps at Rs. 120 and Mysores at Rs. 43.25. Kirlampudis, on the other hand, moved down owing to lack of support from Rs. 45 to Rs. 42.50.

Among miscellaneous industrials, Textools provided a bright spot; today's quotation stood at Rs. 164.50, as against Rs. 162 last week-end. Standard Motors rallied 15 nP to Rs. 11.25. Vanguard Fires spurted by 50 nP to Rs. 6.75 and United India Fires by 10 nP to Rs. 7.85. Ashok Leylands gathered 8 nP to Rs. 6.18. Bruntons, Dalmia Cements and India Cements gained 5 nP each to Rs. 4.70, Rs. 9.75 and Rs. 5.30, respectively.

HINDUSTAN LEVER DOES WELL

The Directors of Hindustan Lever Limited have recommended a dividend of Re. 1.50 per share, free of income-tax, for the year ended 31st December 1958, as against Re. 1.40 per share.

The Company has done exceedingly well during the year. The net profit for the year is Rs. 1.29 crore after providing Rs. 1.78 crore for taxation at current rates, as against Rs. 1.00 crore, after providing Rs. 1.23 crore for taxation, earned in 1957.

NEWS IN BRIEF

THE first co-operative sugar factory in U.P. was inaugurated by the Prime Minister, Mr. Jawaharlal Nehru, at Bazpur, in Nainital district on the 16th inst.

The final round of negotiations between India and the U.S. on the question of relief from double taxation is expected to be commenced next month.

The annual general meeting of members of the Indian Jute Mills Association will be held at the Royal Exchange, Calcutta, on Friday, 20th March 1959.

The next meetings of the Import Advisory Council and the Export Promotion Advisory Council will be held at New Delhi on 1st and 2nd March 1959, respectively.

The Madras Legislative Assembly has passed the 61-clause Bill, with three schedules, embodying a new sales tax structure for the State. The Bill is expected to come into force from 1st April 1959.

The Chief Industrial Adviser to the Government of India, Dr. Nagaraja Rao, is now on his way to Bonn to discuss plans for the establishment of a chemical plant with W. German aid. The final contract for the new plant is expected to be signed shortly either in New Delhi or in Bonn.

The first oil refinery in the public sector will be located in the Gauhati-Amingaon area in Assam. The location has been decided in accordance with the recommendations made by a special committee assisted by the Rumanian experts. The refinery is expected to go on stream by 1961.

The second oil refinery in the public sector to be located at Barauni in North Bihar with Soviet technical and financial assistance is estimated to cost Rs. 40 crores. The refinery will have a capacity of about 1.75 million to 2.00 million tons.

For the guidance of industrialists in India, the Railway Equipment Committee has published a pamphlet containing rough estimates of the future requirements of imported railway equipment and important indigenous railway stores in short supply. The pamphlet, priced at Rs. 2, is the revised edition of a similar pamphlet published in 1955.

The Union Government has appointed a special officer, Mr. S. D. Khungar, a retired General Manager, Bhakra-Nangal Project, to assess the extent of the surplus capital machinery and spare parts available with the irrigation and power projects as well as to suggest how best the surplus machinery could be transferred to other Plan projects.

The Forward Markets Commission has decided to publish a monthly journal, entitled the *Forward Markets Bulletin*, from next month onwards. The bulletin will be concerned with the regulation and working of the forward markets set up under the Forward Contracts (Regulation) Act, 1952, and contain valuable data on the trend of markets coming within its sphere.

A group of coal experts, consisting of officials and non-officials, is proceeding shortly to the U.S.S.R., in order to ascertain the possibility of manufacturing coal-mining machinery in India with the help of Russian experts. The equipments proposed to be produced indigenously include coal-cutters, electric drills, loading machinery, scraper chain conveyors, shuttle cars and pumps, all of which are being imported at present.

The managements of 17 textile mills in central Gujerat have given notice of prospective cuts in the dearness allowances of their workers. It is understood that accumulation of stocks is the principal reason for the cut. The I.N.T.U.C. representatives, while condeming that the glut of stocks posed an acute problem, said that they were negotiating with the managements to revoke the notices, failing which they would take the issue to an industrial court.

The Government of India has under consideration twelve proposals for the manufacture of watches in India. The proposals have been put forward by manufacturers not only in Switzerland but also in Germany, Japan and the U.K. The Swiss manufacturers have offered to grant 20 scholarships to Indian students for training in the manufacture of watches and to assist in the setting up of an institute in India to train 250 students every year.

Several animal husbandry and horticulture schemes are proposed to be implemented in the 30,000-acre mechanised farm of the Central Government at Suratgarh, Rajasthan. These schemes have already been approved by the Planning Commission, and will be taken up on a pilot level initially which will be developed into large-scale programmes during the third Plan. It is also proposed to set up a model agronomic centre and a meteorological observatory in the farm.

The International Training Centre in Fisheries Statistics was inaugurated on the 13th inst. at Bombay by Mr. S. G. Kazi, the State's Minister for Civil Supplies and Fisheries. It is organised jointly by the U.N. Food and Agriculture Organisation and the Government of India in co-operation with the Indo-Pacific Fisheries Council and the Governments of this region. The centre will impart training to about 25 participants from various countries of the Indo-Pacific region on the latest developments in the application of modern fisheries statistical techniques in advanced countries. The programme will last for eleven weeks.

The value of chemical and pharmaceutical machinery produced in India during 1958 was of the order of Rs. 54 lakhs. The items manufactured include crystallisers, pressure vessels, heat exchangers, water treatment plants, deodorisers and evaporators. During 1957, machinery of this type worth Rs. 2.82 crores was imported. There are schemes at present to enhance substantially the capacity of production of some of the machinery, especially pressure vessels and distillation equipment. When these schemes are put into action, the total production capacity of the industry in terms of value is expected to rise to Rs. 3.5 crores per annum.

The Integral Coach Factory at Perambur, Madras, which has so far been producing third class coaches only, has begun the production of third class-*cum*-luggage vans. The Factory will also produce postal vans and first class coaches. The first third class-*cum*-luggage van has already been produced. The design of first class coaches is in hand, and it is expected that the Factory will embark on construction of this type also during the current Plan period. It is proposed that the Factory should also undertake the construction of prototype all-welded bogie wagons. The Factory has so far turned out over 700 coaches, and the present production averages more than one coach every six working hours.

* * * *

From Abroad

U.S. exports, including military shipments, in 1958 aggregated $17,857.9 million, 14 per cent. lower than the all-time record of $20,850.3 million in 1957.

*The Argentine Railways have given a $60-mil*lion contract for the supply of 280 diesel electric locomotives to an Italian Consortium established for the purpose.

The number of unemployed in the U.K. rose between mid-December and mid-January by 88,000 to 620,000, which represents about 2.8 per cent. of the total working population.

The British Petroleum Company has reduced by 10 per cent. its crude oil prices in the Middle East. The cut affects Persian Gulf exports from Kuwait, Iraq, Iran and Qatar and East Mediterranean exports from Iraq.

The total British exports to W. Germany amounted to £116 million in 1958, or 20 per cent. more than in 1957—a new post-war record. The increase was achieved, despite the fall of 2 per cent. in the value of W. Germany's total imports.

Two big Japanese firms, offshoots of the pre-war *Mitsui Zaibatsu*, have merged into a new unit, called the *Mitsui Bushan Kaisha*, which is claimed to be the largest trading concern in the world. The annual business turnover of the combined unit is expected to be of the order of £500 million.

The United States Development Loan Fund proposes to grant a six-million dollar credit for harbour rehabilitation in Indonesia. The loan would be used for ports engaged in both inter-island and international trade. The interest rate and repayment terms are not likely to be announced until the loan agreement is signed.

Three shipping conferences have announced cuts in freight rates for pepper exports from Singapore to the U.S. to sixty dollars a ton. The reduction follows complaints from Singapore exporters that the exporter in India was in an advantageous position, as the rate from India had been fixed at 50 dollars a ton in two stages from 80 dollars a ton. The three shipping conferences which have announced the cuts are: Straits/New York, Straits/Pacific and British Malaya/East Canada.

Australia expects to have an exportable wheat surplus of 130 million bushels in the current year. Disclosing this, the Australian Minister for Primary Industry told the Agricultural Council recently that, with a glutted world market and strong competition from other countries, the Wheat Board would face much difficulty in disposing of its stocks in a reasonable time.

Increased highway safety is expected to result from the use of a new truck brake which reportedly enables heavy tractor-trailer trucks to stop nearly as fast as passenger cars. Designed by General Motors Corporation, the modulated brake adjusts braking at the rear wheels of the tractor proportionally to the load. The stability thus added is expected to give the driver better control of the vehicle.

PERSONAL

SIR Owain T. Jenkins, Managing Director of Messrs. Balmer Lawrie and Co., Ltd., Calcutta, has retired from India and gone to his home in the U.K.

Mr. Finn Gundelach, Head of Danish Permanent Mission to the European Office of the United Nations, has been appointed Director of the Trade Policy Division of the G.A.T.T.

Mr. H. N. Trivedi has been nominated by the Government of India as a member representing workers on the Central Wage Board for Cement Industry, *vice* the late Mr. S. P. Dave, M.P.

Mr. V. V. Dev, of the Union Ministry of Commerce and Industry, has been appointed India's Trade Commissioner for East Africa with headquarters at Mombasa.

Mr. B. K. Kaul, a former Indian Ambassador to Belgium and now working in the External Affairs Ministry, has been appointed Resident Representative of the U.N. Technical Assistance Board in Jordan.

Mr. B. B. Ghosh, Food Secretary, Government of India, left for Geneva on Monday last to attend the International Wheat Conference, currently holding its session there, as the leader of the Government delegation.

Mr. C. H. Campbell, a Director of the Finlay group of mill companies, has been elected Vice-President of the Bombay Chamber of Commerce and Industry for the year 1959-60. He will assume office after the annual general meeting scheduled to be held on 16th March 1959.

Mr. J. T. Hughes, O.B.E., who has been Counsellor (Information) in the United Kingdom High Commission and Director, British Information Services since October 1953, will leave India in April on completion of his tour of duty. He is to take charge of the Information Services Section in the Information Division of the Commonwealth Relations Office in London. Mr. Hughes' successor is Mr. D. F. Kerr, at present Director of the United Kingdom Information Office in Canada, who will arrive in India in July. Between Mr. Hughes' departure from India and Mr. Kerr's arrival, Mr. A. C. Hall, Deputy Director, will be in charge of the British Information Services.

THE CENTRAL BANK OF INDIA, LIMITED

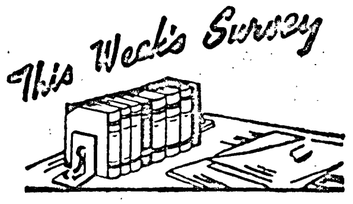
N. K. KARANJIA, *General Manager.*



ECONOMIC POLICY

IN his presidential address to the Indian Merchants Chamber this week, Mr. G. P. Kapadia raised quite a few issues of major public interest. Addressing the Chamber's annual meeting, Mr. Kapadia covered wide ground, referring, in the course of his speech, to planning, trade and industrial problems and the role of the public and private sectors. He averred that the time had come for each sector of the community to make a "balanced and rational" approach to the country's problems. He insisted that "it will be necessary to give the fullest scope to private enterprise, which can produce the maximum at the lowest cost under the most trying and competitive conditions." There is no doubt that, given the encouragement which it fully deserves by reason of its past performance and future possibilities, private enterprise can make a most effective contribution to the country's economic development.

A point to which Mr. Kapadia rightly drew pointed attention is the progress the country made in the early years of the post-war period and the slackness in the pace of progress in more recent years. It is true that considerable progress has been made in the establishment of new industries. But one cannot fail to notice the lack of the same enthusiasm that one saw among many of those who are engaged in the country's economic activities, from 1945 to 1948, and, again, from 1953 to 1956. Much of what has been accomplished in the past decade is the result of plans and projects drawn up by the private sector during these periods. The relatively low degree of enthusiasm prevailing at present may be traced partly to the stresses and strains of a developing economy which create alternate moods of elation and depression. But, essentially it is due to the imposition of heavy burdens on the private sector and the distrust with which it is often treated.

The vague, undefined phrase, "socialistic pattern of society," guides the economic policy in the country. It sets a limit to what could and should be done and diverts the energy of the authorities and the resources of the nation to several channels for handling which the Government is unfit. As Mr. Kapadia pointed out, "if rigidity inspired by a doctrinaire approach were to obtain in our country, the wheels of progress would be completely tied up and a predetermined fixed pattern would result in fundamentally affecting the very idea of a democratic process." Although Mr. Kapadia was not averse to attempts being made to reduce inequalities in income and wealth, he rightly insisted that they should be made without impairing productive resources. The Government's present economic and taxation policy, however, is not calculated to conserve and develop such resources. Actually, it inhibits their growth. In this connection, it is difficult not to agree with Mr. Kapadia's assessment of the effect of the tax system on the economy. He said that the "cumulative impact of the tax structure in the country on savings and capital formation with reference to its efforts on industry and commerce indicate that the recent increases in the rates of taxes on income, personal and corporate, and additional levies such as taxes on bonus issues, capital gains, taxes on registered firms and increase in the penal taxation of Section 23A companies have acted, beyond doubt, as deterrent to savings in the private sector and, therefore, of capital formation." It is necessary, as Mr. Kapadia himself pointed out, to see that the capacity of private enterprise is not crippled by draining away the resources available for expansion and development through heavy taxation.

Making a strong plea for a revision of the Government's attitude to trade and industry, Mr. Kapadia stated that the recent unsatisfactory trends in the industrial sector emphasised the need for more realistic re-appraisal of the entire approach to economic policy. In particular, he urged the need for an objective evaluation of the Industries (Development and Regulation) Act. He said it was necessary to examine whether the actual working of the Act had helped or hindered the larger objectives of industrial policy. As regards resources for development, he averred that, irrespective of "whether it is a capitalist or socialist economy, the principle of accumulation must operate in the same manner, so that the surplus of receipts over costs results in maximisation of returns so as to assist the principle of capital formation." And yet, as is well known, whereas there is no compelling urgency for public enterprises to keep down their production costs, the private undertakings, if they must exist under competitive conditions, have to maintain a continuous watch over production costs and selling prices and also make sufficient profit for purposes of capital formation. High taxation weakens the ability of these enterprises to generate or attract capital. Mr. Kapadia deplored that while profits are justified in the case of the public sector, the same in the private sector are sought to be controlled. The logic of the situation demands, as Mr. Kapadia pointed out, that conditions should be created for the "maximum development and for the fullest productivity." Clearly, this involves the abandonment by the Government of its doctrinaire economic policies.

The fact is the Government seldom likes to be told that its policies are not calculated to advance the country's economic interests. While it is no doubt appreciative of some constructive criticism, it is unwilling to budge on major policy issues. Nor does it favour the emergence of an opposition with predominantly rightist sympathies. Addressing the Chamber's annual meeting, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, averred that "any kind of centrist or conservative party or group will not cut much ice, as they will never get the requisite public following." Perhaps, he is right, considering how long leftist parties, in which the Congress must be included, have held the field and acquired considerable political prestige. But it is nothing short of intellectual cowardice on the part of rightist elements to go down without making a sincere attempt at convincing the public that they too have a role to play in the country's development. Mr. Shastri's assurance that the Government is "eager" to do all it can to help the private sector to play its "rightful role in the future" will no doubt be widely appreciated. But it is time the authorities matched their words with deeds.

Again, a somewhat strange attitude on the part of the ruling party is that, whereas it is intolerant of even the mildest expression of well-reasoned rightist criticism, it is all solicitude for political parties which not only oppose it tooth and nail but, unlike rightist elements, are pledged to the eventual overthrow of political, social and economic order. Sanity and reason are frowned upon, but the creed of violence and strife is silently endured, if not directly encouraged. Is this not a serious misconception of what constitutes public interest? Have not rightist elements reason for entertaining feelings of righteous indignation at the ruling party's attitude towards them? In any case, the provision of facilities for public expression of divergent views and the recognition of the right to cause political conversion through peaceful, persuasive methods are the essence of democratic life.

FAMILY PLANNING

The population problem in India has become so formidable that the need for checking the surging tide of population growth is no longer a matter for debate. Sir Julian Huxley, the noted British scientist, was certainly not indulging in rhetoric when he warned, in the course of his address to the Sixth International Conference on Planned Parenthood at New Delhi, that failure to solve the problem would mean a political and social disaster to the country. India's population at its present rate of increase will double itself in 45 years, that is, during the lifetime of the present generation. This explosive increase, if not checked, will certainly thwart all attempts to improve the standard of living and may even render the maintenance of the present deplorably low standard extremely difficult.

The urgency of family planning as a method of controlling population growth is not in doubt and it should be given top priority in any scheme of planning for the economic well-being of the country. For, as Sir Julian rightly pointed out, even from a purely economic point of view, expenditure on population control measures would be one of the most profitable forms of investment for India.

It is heartening to note that the Government is fully aware of the urgency of the problem. In fact, the credit for being the only Government in the world having a well defined policy for population control through family planning, goes to the Government of India. The work in the field has been of a twofold character: (1) a well directed educative effort to make every man and woman in the country intensely conscious of the urgent and immediate need of measures for planned parenthood, (2) creation of facilities for advice and help in the actual practice of methods of family limitation.

It is true that a measure of success has been achieved in creating family planning consciousness among a section of the people, especially the educated sections in the urban areas, but the illiterate section in urban areas still remain ignorant of the need and the facilities available for practising family limitation. In villages, which present the crux of the problem of overpopulation, family planning consciousness has yet to take root.

Apart from Government and social service organisations, there is a lot that private employers can do in popularising the idea of family planning among their workers. Hitherto, barring a few, they have not shown much interest in the programme. Private employers would be doing a real service not only to their workers but also to the country, if they take more interest in the subject. The trade unions, too, can do a lot in this direction.

Progress in setting up family planning clinics has not been satisfactory. Speaking at the Conference, Mr. D. P. Karmarkar, Union Minister for Health, admitted that, as against a target of 2,300 clinics in the second Five-year Plan period, only 675 clinics, that is only slightly more than 25 per cent., have been set up during the first three years. To make good this deficiency, it would be desirable if, in addition to clinics devoted exclusively for providing advice and facilities for birth control, measures are taken to equip every hospital and health unit in the country with the necessary medical and surgical facilities.

The provision made in both the first and second Plans for implementing family limitation programmes is far too inadequate, considering the magnitude of the problem. It is a pity that even this meagre provision has not been utilised fully. For instance, out of the second Plan provision of Rs. 4 crores for the Centre, the anticipated Central expenditure upto March 1959 is only Rs. 79.60 lakhs; Rs. 320.40 lakhs is still available. This indicates that, although there is much talk about the need for family planning, it is not matched by vigorous efforts.

In making provision for family planning in the third Plan, the planners should bear in mind the need for what Huxley called "balancing death control by birth control." In the first and second Plans, the provision for health services, which help to reduce the death rate, is many times more than that provided for family planning. If a proportionate amount is not set apart for controlling birth rate, the net effect would be a further fillip to pace of increase in population.

PAPER TRADERS GET TOGETHER

Of late, middlemen and merchants engaged in the various branches of distributive trade have shown a tendency to form separate associations of their own, though there is no dearth of chambers of commerce. With the State Trading Corporation steadily spreading its tentacles, with imports of many essential goods restricted owing to paucity of foreign exchange and with domestic production of a large variety of goods falling short of demand, the hardships of traders and their grievances against the Government have begun to multiply. The complicated rules and regulations pertaining to Sales Tax have only served to aggravate their difficulties. It is presumably this atmosphere of uncertainty and strain that has led the different sections of distributors to get together, in order to secure a platform for voicing their special difficulties. Apparently, the existing chambers of commerce have not been found sufficient for this purpose. Indeed, even where there are regional associations representing a specific trade, the trend is to form an apex body for these associations, so that they may more effectively draw the attention of the authorities to their problems. The latest instance of this trend is the formation of the Federation of Paper Traders' Associations of India, representing the dealers in all types of paper all over the country. The first conference of this body was inaugurated on Monday this week by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry. It is said that about 20 major paper traders' associations from all parts of India, representing the interests of approximately 125,000 people dependent on the distribution trade, are represented by the Federation. It is to be hoped that the Federation, while striving to safeguard the collective interests of its members, will also pay adequate attention to the question of ensuring a fair deal to consumers. It is gratifying to find this is also one of the primary objectives of the Federation. As Mr. Shastri pointed out, in view of the present shortage and difficulties in getting paper at reasonable prices, there is ample opportunity for the Federation to serve the consumer.

Naturally, on an occasion of the aforesaid nature, the position and problems of the paper industry and trade were highlighted in the addresses of the principal speakers, Mr. Chimanlal P. Shah, Chairman of the Reception Committee, Mr. J. T. Lalvani, President of the Federation, and Mr. Lal Bahadur Shastri. The Federation also brought out an attractive souvenir containing authoritative articles on the subject, including one by Mr. Manubhai Shah, Union Minister of Industry. The present production of paper and paperboards (excluding newsprint) is estimated at 270,000 tons. This falls short of demand by no less than 60,000 tons. It is computed that demand is going up by 14 per cent. per annum. The rate of growth of demand is bound to increase in the years to come, in the face of rapid industrial development, gradual improvement in literacy and rise in population. Even the second Plan targets of 350,000 tons of production and 450,000 tons of installed capacity, therefore, seem to be very modest. According to Mr. Manubhai Shah, production is proposed to be raised by 100 per cent. during the third Plan period, that is, to 700,000 tons. Even if this ambition were realised, India's *per capita* consumption would go up from 2 lbs. at present to no more than 5 lbs., which is negligible as compared with 418 lbs. in the U.S., 200 lbs. in Sweden and 187 lbs. in the U.K. The position in regard to newsprint is this: present requirements are 80,000 tons and are expected to be 120,000 tons by 1960-61. There is only one newsprint factory, namely, the "Nepa," the production of which is 20,000 tons and prospects of any substantial increase in the near future are not bright.

The shortage of paper has led to a sharp rise in prices paid by consumers. The Government is of the view that much of the increase is due to profiteering by merchants. The paper manufacturers have indeed been complaining that the ex-mill fair prices agreed to under a "gentleman's agreement" are unremunerative and have been pressing for an increase in these prices. The Government has referred this matter to the Tariff Commission. Mr. Shastri told the paper traders that the Commission's verdict will be known in about three months.

Even if it is possible to regulate wholesale prices, it is doubtful whether the prices charged by the large network of wholesalers and retailers, spread throughout the length and breadth of the country, can be controlled effectively. In our opinion, such price control will be extremely difficult to be enforced, as paper is an article of necessity and the consumer in most places is at the mercy of retailers. This, however, does not mean that efforts should not be made to keep consumers informed of fair prices. If the industry and trade, as also printers of textbooks, note-books and stationery, make a sincere endeavour in this direction and in a manner intelligible to the public, the consumers' difficulty could be mitigated to a considerable extent. A permanent solution of the problem, of course, lies in ensuring adequate supply of paper. Supply can be raised through more domestic production and larger imports. A few new units will shortly go into production and most of the existing mills are expanding their capacity. Mr. Shastri gave a brief picture of the prospects of increase in production. According to him, a mill has been set up for manufacture of grease-proof and butter paper and it is anticipated that, very shortly, when it attains full production, it will be able to cope with the country's full requirements of this paper. Regarding tissue paper, Messrs. Tribeni Tissues, in addition to cigarette paper, will manufacture tissue paper. Another mill for the manufacture of tissue paper will come into production this year. The Government has given permission to the plans of two units for the manufacture of coloured tissue paper. Mr. Shastri further disclosed that a committee had already been set up to examine schemes for the manufacture of paper which had been held up on account of foreign exchange difficulties.

While these efforts will eventually raise the domestic production of paper, the shortage is bound to continue for some years to come. Imports of paper are restricted at present, in view of the necessity to conserve foreign exchange. The Government, however, is presently watching the situation and will probably reconsider its import policy on the basis of this observation. Nevertheless, it is unwise to depend too much on imports of paper. For, as Mr. Shastri rightly opined, even if the foreign exchange position improved, it might be desirable to import more machinery for setting up new plants, rather than import paper for direct consumption.

THREE STATE BUDGETS

The Finance Ministers of the three largest States of North and East India, namely, Uttar Pradesh, Bihar and West Bengal, have presented their budgets for the coming year, that is, 1959-60. Of the three, the Bihar budget discloses a sizable revenue surplus of Rs. 5.54 crores, while that of U.P. and W. Bengal show revenue deficits, amounting to Rs. 1.86 crore and Rs. 3.63 crores, respectively. There is one striking common feature in these budgets—absence of any new tax proposals. The U.P. Finance Minister has, in fact, announced exemption of industrial consumers from payment of electricity duty. U.P. and West Bengal propose to borrow heavily from the open market, the provisions made being Rs. 8 crores by the former and Rs. 7 crores by the latter. The daily Press version of the Bihar budget contains no indication of that State's borrowing programme.

The revenue and expenditure estimates of the aforesaid Governments for 1959-60 are as follows:

(In crores of rupees)

	Uttar Pradesh	*Bihar*	*W. Bengal*
Revenue ..	119.61	71.87	79.04
Expenditure ..	121.47	66.33	82.67
Net position ..	—1.86	+5.54	—3.63

The revenue surplus of Rs. 5.54 crores in the Bihar budget is proposed to be utilised to meet a substantial part of the deficit of Rs. 7.58 crores on capital account, the estimate of receipts being Rs. 50.78 crores and of expenditure Rs. 58.36 crores. The overall position is thus a deficit of Rs. 2.04 crores. The deficit will be wiped out, according to Dr. S. K. Sinha, the State's Chief Minister, by intensifying the small savings campaign, continuing the special loan collection drive and adopting "other measures." Efforts will be made, it is said, to augment the revenue receipts of the Government in the coming year through (1) imposition of education

PROF. KALDOR'S PLEA FOR CLOSING LOOPHOLES IN TAXATION

FINANCE MINISTRY ON BONUS TAX

From Our Special Correspondent

NEW DELHI, *17th February*

DELHI LETTER

PARLIAMENT'S Informal Consultative Committee on Finance has just been told by the Ministry concerned that, if the maximum rate of income-tax is pitched at 45 per cent. (as recommended by Prof. Kaldor) at the level of income of Rs. 40,000 at which it is reached at present, the loss of revenue from taxpayers having incomes higher than Rs. 40,000 will be approximately Rs. 17 crores. It may be mentioned, says the Finance Ministry's note, that what Prof. Kaldor had said was that the closing of the existing loopholes in the various taxes and effective prevention of tax evasion would involve the taxpayers in additional taxation amounting to several times the present sum, and that, if this is done, the maximum rate of income-tax could be brought down to 45 per cent. He has recently stated:

"I fully maintain the view that, with a system of direct taxation of the kind I suggested, the maximum rate of income-tax should not exceed 45 per cent. It should be evident, however, that this system has by no means been fully adopted; nothing has been done to tighten up business taxation, while the new taxes, owing to the truncated form in which they have been adopted, will only produce a fraction of yield which they would have produced otherwise. In their present form, and with the present administrative techniques, the new taxes will hardly yield Rs. 20 crores.

"In the absence of these gaps in legislation and with an efficient system of administration, they should produce at least Rs. 50 crores more, quite apart from the gain in income-tax revenue resulting from lower tax evasion, and the disallowance of certain classes of business expenses. As against that, the loss of revenue resulting from the reduction of income-tax to the ceiling rate of 45 per cent. would only amount to Rs. 18 crores. I doubt whether the interests which agitate for the latter would willingly exchange the present high rates of surtax for these further legislative and administrative changes which would involve them in additional taxation amounting to several times this sum."

The Net Gain

According to Prof. Kaldor's figures, the net gain from the plugging of loopholes in the new taxes (apparently he is referring to the Wealth, Expenditure and Gift taxes) will be Rs. 30 crores, as against a loss of Rs. 18 crores resulting from the lowering of *personal* tax rates to a ceiling of 45 per cent. In the absence of any reliable data, it is not possible to verify the estimate of Prof. Kaldor or to give a counter-estimate for additional revenues from the new taxes. As regards the lowering of personal tax rate, an attempt has been made to find out the approximate loss to revenue on this account on the basis of the latest statistics (for 1957-58).

The Ministry of Finance has also provided the Consultative Committee with figures of demand and collection in respect of Estate Duty, Wealth Tax and Expenditure Tax for the calendar years 1957 and 1958. The figures are given below.

	1957 Rs.	1958 Rs.
Estate Duty—		
Assessed	2,47,17,000	5,09,27,000
Collected	1,99,82,000	2,85,11,000
Wealth Tax—		
Assessed	56,98,000	11,02,89,000
Collected	5,27,000	10,46,67,000
Expenditure Tax—		
Assessed	..Not applicable*	37,95,000
Collected	Do.	5,56,000

* Act came into force only from 1st April, 1958.

Since the Departmental records concerning these taxes are maintained and verified according to the financial year, the figures according to the calendar year are only approximate. The Wealth Tax Act received the assent of the President in September 1957 and the actual assessment work commenced only in December 1957. As the Expenditure Tax Act came into force only on 1st April 1958, there was no assessments during 1957.

In another note to the Consultative Committee, the Finance Ministry has dealt with the effects of taxation policy on bonus shares. It may be recalled that the levy of a special supertax on bonus shares issued by companies was introduced through the 1956 Finance Act, as part of an integrated scheme of corporate taxation. The taxation of bonus shares in the form it is provided under the Income-tax Act does not result in bonus shares being taxed as dividends in the hands of the shareholders, but it constitutes a tax on the company itself. The advantages to the company, according to the Finance Ministry, consist in the expansion of capital, apparent reduction in the profits percentage, greater marketability of the shares, and also warding off of demands for lower prices from the general public or better conditions of employment from the workers. With the levy of a tax on excess dividends measured with reference to the paid-up capital, the tax on bonus issues became necessary as a corollary to that tax. The rate of the extra super-tax on bonus shares for the financial year 1956-57 when it was introduced was 12½ per cent. This was raised to 30 per cent. from the financial year 1957-58 correspondingly with the increase in the rates of excess dividends tax. The Ministry has argued that, in spite of this increase (which was consequential to the increase in the rates of excess dividend tax from 1957-58), the tax has not created any real difficulty for industry. It has quoted the following figures of consents given by the Controller of Capital Issues for issue of bonus shares in support of its contention:

(In lakhs of rupees)

	1955-56	1956-57	1957-58
Amount of consents granted (out of free reserves)	759	648	947
Bonus shares actually issued during 1955-56 and taxable in the assessment year 1956-57	257	..	..
Bonus shares actually issued during 1956-57 and taxable in the assessment year 1957-58	673	..	..
Bonus shares actually issued during 1957-58 and taxable in the assessment year 1958-59	150	..	..

There is also no indication, continues the Ministry's note, that the taxation of bonus shares issued by companies has, in any way, inhibited (i) the borrowings of companies generally from banks and others, or (ii) the dividend policy of companies in general, or (iii) the quantum of retained profits and the growth of capital formation.

INDIAN TOBACCO

INDUSTRY ASKS ITSELF

LATEST F.B.I. SURVEY

From Our Own Correspondent

LONDON, *14th February*

LONDON LETTER

WITH the unemployment figure up to two-thirds of a million and the Government's popularity poll indicating the electorates fear of a massive work drop, the current survey of industry by the Federation of British Industries is of more than usual interest. Nearly 80 per cent. of the six hundred and seventy-five firms, whose opinions have been obtained, reported that their present level of output was below capacity. Only one-fifth of industrial firms appear to be working at capacity. Such then is the background.

Business men tend to be optimistic, unless conditions become extreme. But half of the firms asked said they felt neither more or less optimistic than they did four months ago. On the other hand, one-third felt *more* optimistic than before which is an improvement on the autumn survey and indicates that, somewhere (though not in the order books), industry feels that a change for the better is coming.

Of course, industry finds it easier to get labour than formerly, and only 3 per cent. of firms find labour more difficult. One wonders what these 3 per cent. are doing—the survey does not say! Anyway, while one-quarter of all firms have been employing *less* labour over the past four months, as many as 18 per cent. are employing *more* men and women; perhaps another straw in the wind of optimism to which can be added the fact that *new* orders are coming in slightly faster than formerly. This at least is true of domestic orders, but it is a very significant fact that the flow of export orders is still diminishing and, indeed, the length of all order books is shortening.

Thus, the work ahead of industry continues to diminish, even though there is that little trickle of hope in the stepped up flow of domestic orders. It is rather like as if a bath has been running away for some time, but, at last, the tap, labelled "home trade," has begun to run a little faster. This is, of course, the result of relaxation of hire-purchase restrictions and the tap will have to run much faster if it is to catch up on the bath outflow. Moreover, unless the tap labelled "export trade" also begins to run faster, the balance of payments (which is not expected to show as good a result as last year) will be adversely affected.

Over one-third of the firms report their costs per unit are up and over half that their profit margins are *down*. Nearly one-third have been obliged to reduce selling prices.

In the light of the order books and the profit and loss accounts, it is not surprising that there is no pressure to spend more on capital. Indeed, 42 per cent. of firms expect to authorise *less* building than they did four months ago and 36 per cent. to buy *less* plant and machinery. It is surprising that, as many as one-fifth of firms expect to build *more* than they did in the autumn and that over one-quarter expect to buy *more* plant and machinery than they previously did.

This then is the outlook as industry sees it, with a few more hopeful signs than there were four months ago. These signs must be multiplied before the present recession is reversed, but at least a beginning may have been made.

Meanwhile, the City still looks for a further cheapening of money and does *not* expect much use to be made of the easier conditions for raising fresh capital.—*All Rights Reserved.*

The U.K. had an adverse balance of trade to the extent of £49 million in January. This was £28 million less than in December but £4 million more than the monthly average in the fourth quarter of 1958. The value of exports from the U.K. in January amounted to £270 million, £4.5 million more than in December last and almost the same as the monthly rate in the fourth quarter of 1958. Re-exports were unchanged at £9.3 million. Imports aggregated £328.7 million over £23 million less than in December but unchanged from the monthly rate in the fourth quarter of 1958.

Under a new agreement signed between British European Airways and Air France, the two services will be integrated with effect from 1st April next so that passengers with tickets for either airline can travel by any aircraft of either company. The companies are contemplating to reduce air fares between the two countries by 15 to 20 per cent. next year.

AMERICAN LETTER

NEW DEVELOPMENTS IN TEXTILES

WILL INFLATION BE KEPT UNDER CONTROL?

From Our Special Correspondent

NEW YORK, *14th February*

THE upturn in business is now a well-established fact. But it is quite selective. Business leaders addressing a meeting of the National Industrial Conference Board in New York mostly forecast further economic recovery.

Executives representing widely varied lines, such as home construction, textiles, metals, autos, consumer credit and retail trade, said they expected substantial growth in terms of production and sales this year.

However, little or no change was foreseen for some segments of industry, notably those depending on sales of military aircraft to the Government.

How many of these forecasts will turn out to be accurate is hard to say. In textiles, for example, an upturn has been predicted for years. So far it has not materialised. The last season of New York's garment industry when buyers from all over the country were shown spring styles, was not very successful.

One reason is, perhaps, that Easter this year is quite early at the end of March. Another may be the unusually cold and severe winter which has driven many people to the South where they use resort wear rather than spring clothing.

Shuttleless Loom

Another development in the textile industry is the development of a new shuttleless loom which will be unveiled to the public and the press probably this month. Several other new textile machines have been developed which will make existing machinery obsolete—a process which has been going on rapidly in this technological age not only in textiles but in many other lines.

Wool has been hit hardest, of course, by the impact of synthetic fibres and their continual improvements. Cotton has not fared quite as badly. Recently, Deering Milliken & Co., one of this country's leading textile firms, announced a "revolutionary" new process for finishing cotton.

It is called the most important technological "breakthrough" in the industry in many a year. Chemical and mechanical techniques developed by laboratories actually change the molecular structure of the fibre. It makes a resistant to creasing even when wet.

This achievement will enable the housewife to wash such items as cotton dresses, draperies and sheets and use them without ironing. It will also make it possible for cotton to compete more effectively with the synthetics. Thus, there is some hope for improvement in some segments of the textile business.

New Type of Cloth

More than a thousand U.S. mills are engaged in processing cotton. The leading firms combine three major functions. They are: grey goods processors who spin the fibre into the basic cloth, the finishers who dye and bleach the grey cloth, and the converters, who cut, style and merchandise it for specific markets.

In 1958, the whole industry turned out some 9,000 million linear yards of cotton fibres worth about $3,500 million, off 7 per cent. from 1957 and down 13 per cent. from 1956, the peak peacetime year. The apparel field took more than half. Household goods, such as sheets, towels and draperies took about 30 per cent., while the remainder went into industrial uses, ranging from automobile upholstery to commercial filters. Expectations are that 1959 production will better 1958 by 5 to 7 per cent.

On the wider national scene, administration thinking is reflected in the establishment of an anti-inflation agency. In effect, it will be an inter-agency Government committee. Its aim would be to see that Washington's own activities do not add to inflationary pressures.

Blueprint for Inflation

While the executive branch of the Government is against the "inflation-sin" with a somewhat pious obsession, Congress is drafting a blue-print for inflation. The annual profusion of housing bills which makes its appearance regularly is more copious than ever this year. A vast omnibus bill would speed up construction on a broad front.

It would authorise additional $8,000 million of mortgage insurance; also, $300 million of public funds for direct Government loans to veterans as well as a six-year $2,200 million programme of U.S. grants for slum clearance and urban renewal.

Other legislators have added embellishments of their own. There are bills for subsidised mortgage credit and a vastly expanded programme of public housing. Other legislators are pushing a provision which, in effect, would bar the Federal Housing Administration from foreclosing on delinquent borrowers.

The expectation is that, if such bills should be voted out by Congress, the President would make use of his veto powers. Whether they could be repassed over his veto remains to be seen.

Most of the bills which are introduced are filed with the one intent to satisfy constituents back home. Once they are printed, they are being distributed to show those who elected the lawmaker that he has done as he said he would. Pushing the issue or issues beyond that is quite rare. This procedure is reserved for true statesmen of whom there are few, as against the average run of the mill politician who has nothing else in mind but to get re-elected.

Savings Rise

Cash savings continue to rise. The latest compilation comes from the Federal Home Loan Board. It covers deposits in savings banks, commercial banks, savings and loan shares, Government savings bonds and life insurance.

Such savings for the first nine months of 1958 were larger than those for any full year since the end of the last war. The figure for the third quarter alone was $3,900 million, up sharply from the $2,500 million for the same 1957 period.

But not all is rosy. Some of the country's major production centres do not expect that unemployment will decrease materially. The figure is 4.1 million now, as against 3.4 million a year ago. Indeed, they are haunted by the prospects of permanent pools of jobless workers as a carry-over from the recession.

That is, of course, a strain on State unemployment insurance treasuries and there are demands in Congress that unemployment benefits be widened to strengthen the "built-in stabilisers" against a depression.

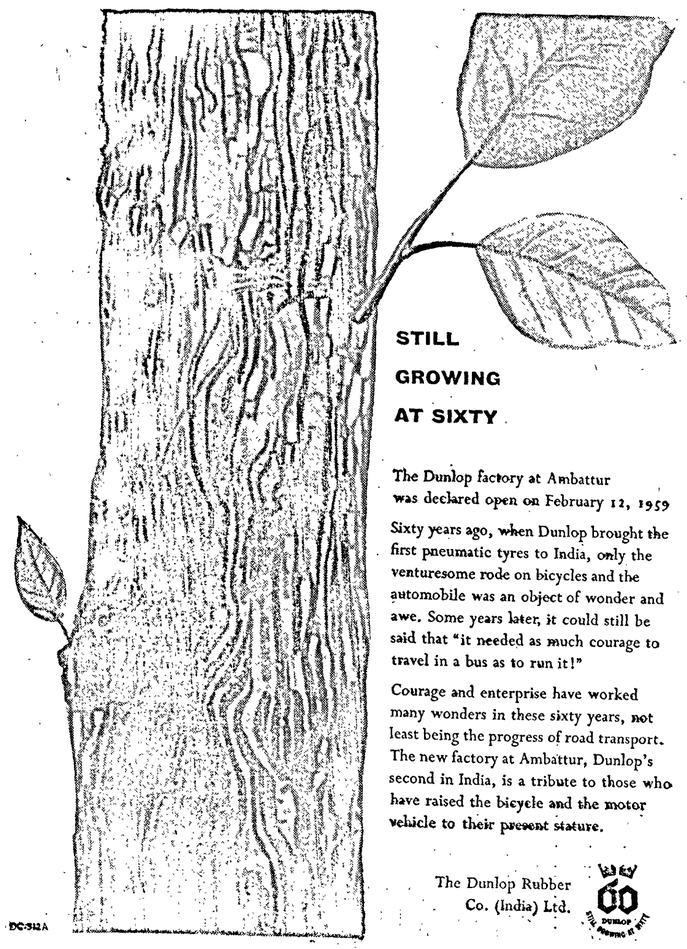
A survey of 16 big industrial cities last week showed widespread doubt that any foreseeable improvement in business this year would reduce unemployment to pre-recession levels. Detroit has one-eighth of its work force idle at a time when the output of 1959 cars is climbing.

Pittsburgh (steel) has twice as many jobless as it had in the recession month of January a year ago. In New York City, one worker in every 13 is still unemployed. The national average is one in 16. Technological advances is one reason. Savings rather than spending constitute another.—*All Rights Reserved.*

U.S. PRESIDENT ON UNEMPLOYMENT

Commenting on statistics for January showing 62.7 million Americans were at work while unemployment rose to 4.7 million, President Eisenhower said he looked for economic gains as the year progressed. Employment in December, 1958 totalled 64 million, and unemployment was 4.1 million. The President told his press conference that he was not pleased by the unemployment ratio, and noted that the nation's business recovery still was not solid in some areas. He described as "sort of characteristic of recoveries."

The joint Labour-Commerce Departments report for January shows a slight drop in the average factory work-week, to 39.9 hours. Average weekly earnings for a factory worker during the month was $87.38, an 88-cent decrease from the previous month, because of the reduction in working hours.



STILL GROWING AT SIXTY

The Dunlop factory at Ambattur was declared open on February 12, 1959

Sixty years ago, when Dunlop brought the first pneumatic tyres to India, only the venturesome rode on bicycles and the automobile was an object of wonder and awe. Some years later, it could still be said that "it needed as much courage to travel in a bus as to run it!"

Courage and enterprise have worked many wonders in these sixty years, not least being the progress of road transport. The new factory at Ambattur, Dunlop's second in India, is a tribute to those who have raised the bicycle and the motor vehicle to their present stature.

BUSINESS OF FOREIGN BANKS

YEAR-END DATA INDICATE A DECLINE

THE statistics relating to the business of foreign banks in India during 1958, as compared with those for the previous year, indicate a setback in the volume of their business and, in many respects, they show a divergence from the general trend of business of Indian Scheduled banks in India. Thus, whereas deposits of Indian banks recorded a substantial rise over the year, those of foreign banks suffered a drop. There was an increase in general bank credit, albeit at a much smaller pace than that in deposits, but, in the case of foreign banks, there was a sizable drop in advances. What is more, the decline in advances was greater than that in deposits. The main reasons for the setback would appear to be: the contraction in India's foreign trade, a good part of which is financed by the Exchange banks—as compared with 1957, India's imports during the first eleven months of 1958 fell to Rs. 697.05 crores from Rs. 912.64 crores in the corresponding period of 1957 and exports to Rs. 530.91 crores from Rs. 601.22 crores; the recession in the fortunes of India's export industries such as tea, jute and cotton textiles; the declining share of foreign firms in India's foreign trade; the entry of the State Trading Corporation into foreign trade; and the increasing competition from Indian banks for the available foreign exchange business.

Another important reason is the fact that foreign banks are not participating, to any significant extent, in the expanding domestic banking business. Whereas the Indian banks have been opening more and more branches in the interior, the share of foreign banks in branch banking is stationary. As at the end of March, 1952, the total number of offices of foreign banks in India was 65. It was only 67 by the end of November 1958. During this period, the State Bank's offices rose from 398 to 644 and those of other Indian Scheduled banks from 2,226 to 2,680.

The total (net) deposits of Indian Scheduled banks rose during 1958 by nearly Rs. 216 crores to about Rs. 1,376 crores, in contrast to which the deposits (net) of foreign banks shrunk by Rs. 9.80 crores to Rs. 197.16 crores. There was a decline in the number of reporting banks from 17 to 16. It is common knowledge that a great bulk of the expansion in deposits of Indian Scheduled banks is accounted for by the counterpart funds from the sale of U.S. foodgrains under P.L.480 deposited with the State Bank of India. The foreign banks, however, have no such fortuitous advantage.

A month-wise analysis of the deposits of foreign banks shows that they rose from Rs. 206.96 crores at the end of December 1957 to a high of Rs. 214.26 crores at the end of April 1958. Subsequently, there was an almost continuous decline to Rs. 197.16 crores at the close of the year.

Unlike in the case of Indian Scheduled banks, where time deposits exceeded demand deposits, the foreign banks' demand deposits continued to form the bulk of their total deposits, though their proportion to the total shrank, because of a decline in demand deposits and an expansion in time deposits. As will be seen from the table published at the foot of this column, demand deposits dropped by Rs. 18.17 crores to Rs. 110.09 crores, the lowest year-end figure for some years past. Time deposits, which had gone up by Rs. 14.14 crores in 1957, rose further by Rs. 8.37 crores in the following year to a high of Rs. 87.07 crores. It will be noted with interest that the demand deposits, which formed 65.6 per cent. at the end of 1955, constituted only 55.8 per cent. at the close of 1958. The ratio of time deposits to the total, however, rose from 34.4 per cent. to 44.2 per cent. during this period. In the case of Indian Scheduled banks the share of demand deposits fell from 58 per cent. to 42.4 per cent., while that of time deposits advanced from 42 per cent. to 57.6 per cent.

Progress of Foreign Banks

(In crores of rupees)

	As on last Friday of December			
	1958	1957	1956	1955
Demand deposits (net)	110 09	128.26	122 61	128.36
Time deposits (net)	87 07	78.70	64.56	67.27
Total net deposits	197.16	206 96	187.17	195.63
Inter-bank borrowings	29.15	36.67	11.12	8.83
Borrowings from the Reserve Bank	2.46	21.07	35.24	9.78
Of which borrowings against Usance bills	1.72	21.07	33.01	9.35
Other securities	0 74	-	2.23	0.43
Borrowings from State Bank	0.88	0.72	0.62	0.30
Advances	137.81	149 50	163 51	135.67
Bills purchased and discounted	26.25	48 24	40.22	30.86
Total advances	164.06	197.74	203.73	166 53
Investments	45.77	40.22	40.24	47.05
Cash balances (including money at call and short notice)	28.68	33.16	20 08	23.18
Ratio to deposits of—	%	%	%	%
Advances	83.2	95.5	108.8	85.1
Investments	23.2	19.4	21.5	24.1
Cash	14.5	16.0	10.7	11.8

It may be interesting to note here that the foreign banks have been availing themselves of the facilities under the usance bill market scheme to a greater extent than the Indian banks, as will be seen from the following data showing the monthly average outstanding borrowings from the Reserve Bank against usance bills during the past two years:

(In crores of rupees)

	Foreign Banks		Indian Banks	
	1958	1957	1958	1957
January	23 35	33.16	2.93	25.26
February	23.91	34.01	0.70	27.13
March	23.40	37.22	1.19	26.32
April	19.49	36.55	0.09	20 45
May	17.22	34.08	2.09	26 59
June	13.15	32.35	1.09	21.52
July	10 73	28.90	0.16	10.78
August	3.87	30.81	0 05	9.99
September	2.61	27.33	0 08	2 54
October	0.96	25.41	0.03	3.48
November	0.83	18.13	..	0.40
December	0 94	16.71	0.06	0.20
Average for the year	11.63	29.56	0.70	14.56

N.B.:—The average for 1956 was Rs. 18.10 crores in the case of foreign banks, as against Rs. 16.14 crores in regard to Indian banks.

The financing of imports from and exports to foreign countries constitutes the bulk of the foreign banks' business. The drastic cut in imports and slackness in exports naturally reduced the demand for credit from these banks. This, coupled with the credit restrictions imposed during the year, brought down the total advances of foreign banks by Rs. 33.68 crores to Rs. 164.06 crores. This is on top of a fall of Rs. 6 crores in 1957. Of these, loans, cash credits and overdrafts, which had declined from Rs. 163.51 crores (in 1956) to Rs. 149.50 crores in 1957, moved down further to Rs. 137.81 crores, bringing the aggregate fall in two years to Rs. 25.70 crores. Bills purchased and discounted, too, have fallen by Rs. 22 crores, in contrast to the rise of Rs. 8.02 crores in 1957 and of Rs. 9.36 crores in 1956. The level of total advances moved up from Rs. 197.74 crores (at the end of 1957) to no more than Rs. 199.42 crores in March 1958—the corresponding peak in 1957 was Rs. 214.52 crores—but declined subsequently to Rs. 164.06 crores at the end of the year. The corresponding low level touched in 1957 was Rs. 196.13 crores. The fall in advances (much more than that in deposits) has brought down the credit ratio to 83.2 per cent. from 95.5 per cent. at the end of 1957 and 108.8 per cent. at the close of 1956. The credit ratio for Indian Scheduled banks at the end of 1958 was only 51 per cent., as against 56.8 per cent. a year before and 64 per cent. at the end of 1956.

The pattern of secured advances of banks, for which figures are available only up to the week ended 12th December 1958, show that the total secured advances of foreign banks amounted to Rs. 121.25 crores, having declined from Rs. 145.91 crores as on 13th December 1957, the corresponding figures relating to Indian Scheduled banks being Rs. 563.17 crores and Rs. 535.66 crores, respectively. The main groups of securities (collateral) and the amount of advances against them by foreign banks were as follows:

(In crores of rupees)

Securities	*As on*	
	13-12-58	13-12-57
Food articles	0 08	0.20
Industrial raw materials	12.00	19.79
Plantation products	20.28	19.16
Manufactures and minerals	55.33	66.00
Other securities	33.58	40.76
	121.25	145.91

In the industrial raw materials group, advances against ginned cotton and *kapas* (seed cotton) amounted to Rs. 7.41 crores, against Rs. 14.00 crores a year before and against raw jute Rs. 1.92 crore, as compared with Rs. 3.07 crores. Among the plantation products advances against tea accounted for Rs. 19.77 crores, having risen from Rs. 18.13 crores. Cotton textiles —Rs. 10.56 crores (as against Rs. 12.26 crores a year before), jute goods—Rs. 6.73 crores (Rs. 6.52 crores), iron, steel and engineering products—Rs. 18.22 crores (Rs. 23.13 crores), chemicals, dyes, paints and pharmaceuticals—Rs. 7.05 crores (Rs. 8.72 crores), coal, manganese, mica and other minerals—Rs. 3.54 crores (Rs. 4.11 crores) and non-ferrous metals and metal products—Rs. 3.79 crores (Rs. 3.81 crores) constitute the main items. In the last mentioned group advances against shares and debentures show a decline from Rs. 12.48 crores to Rs. 9.88 crores and those against assets of industrial concerns from Rs. 6.13 crores to Rs. 4.11 crores. Other secured advances (not included under any particular category) dropped from Rs. 12.89 crores to Rs. 11.07 crores and composite advances from Rs. 5.48 crores to Rs. 5.12 crores.

Notwithstanding the substantial decline in advances, the investments of the foreign banks were higher by only Rs. 5.55 crores at Rs. 45.77 crores, while cash balances (including money at call and short notice) were lower by Rs. 4.48 crores, at Rs. 28.68 crores. The explanation for this lies in the fact that their resources were markedly less. While the ratio of investments to deposits was substantially lower (at 23.2 per cent.) than the average (43 per cent.) for Indian Scheduled banks, the cash coverage to deposits, at 14.5 per cent., compares favourably with that (10.7 per cent.) relating to Indian banks.

WORLD BANK LOAN TO COSTA RICA

The International Bank for Reconstruction and Development granted last week (11th inst.) a loan of $3.5 million to the Central Bank of Costa Rica to assist a programme which has been operating for several years to promote the development of agriculture and light industry. Eight private American banks are participating in the loan, without the World Bank's guarantee, for an aggregate sum of $1.51 million, representing the first four maturities and parts of the next three maturities, which fall due between October 1960 and October 1963. The loan is for a term of six years and bears interest at 5¼ per cent., including the usual commission of 1 per cent. It is guaranteed by the Government of Costa Rica.

Loans will be given to individuals and private enterprises by Costa Rica's commercial banks, which in turn will receive credits from the Central Bank. Costa Rica's programme for development of agriculture and light industry began in 1952 and there has been a significant increase in agricultural output both for export and for domestic markets, as also in the development of light industries. In September 1956, the World Bank gave a loan of $3 million to the Central Bank to cover the foreign exchange requirements of the programme over a period of two years. The latest loan will assist in the continuation of the programme until about September 1960. The first loan, which matures between 1958 and 1963, carries interest at 4¾ per cent. per annum (including the commission of 1 per cent.).

ECONOMIC RELATIONS BETWEEN INDIA AND UNITED STATES

MUTUAL UNDERSTANDING STEADILY GROWING

By George Curran

VICE-PRESIDENT, BANK OF AMERICA N.T. AND S.A., SAN FRANCISCO

THIS year, India enters the tenth year of her existence as a Republic and the thirteenth year of her independence. The people of the United States have a feeling of affinity for the people of India. Both nations are sovereign republics, practising democratic principles. Both nations are unions of States, and the Constitutions of both countries are buttressed by solemn Bills of Rights.

During the years since independence, citizens of India and the United States have increased their knowledge of and acquaintance with each other through travel in each other's country, through the exchange of students and skills, and through mutually beneficial trade. It is important to each nation and to the maintenance of democracy in the world that this warm relationship and mutual understanding continue to grow.

From time to time, it is fitting and useful that the development of our relations be reviewed, and the writer welcomes the opportunity accorded by the editors to comment briefly on one aspect, namely, the economic relations of India with the United States.

In the area of trade, the United States has advanced as a market for the products of India. Imports which were $33 million in 1932 increased to over $276 million in 1957. But available evidence indicates this should be only a beginning.

It is gratifying to see our partnership in trade becoming stronger. While, in 1954, the United States and Canada absorbed 18 per cent. of India's total exports, in 1957, they furnished a market for 23 per cent. of India's products sold overseas. The United Kingdom remains India's most important market and supplier and, while the United Kingdom's share was reduced from 32 per cent. to 25 per cent. in this period, the decrease is in part attributable to augmented trade with other trading partners and therefore relative rather than absolute. The Latin American market remained constant, taking 3 per cent. to 4 per cent. of India's exports while Continental Western Europe took around 10 per cent. of the total.

Imports From India

The United States depends upon India for a great variety of important products. Purchases of jute and jute products approach $75 million a year. Ferro-alloys and ores account for some $25 million. Nuts, tea, spices, and other products enriching the American dinner table total in the neighbourhood of $45 million a year. Other chief commodities exported to the United States include great quantities of hides, skins, and other animal products; vegetable oils and waxes; wool and wool products; non-metallic minerals and stones; and naval stores, gums and resins.

The market for India's products in the United States should be capable of considerable expansion in volume and variety. There is a field for enlightening the American buyer with regard to the products of India. This will come about, as Indian trade exhibits and sales promotion activities in the United States increase.

More extensive research studies of the American market would be valuable. These would probably call for area analysis and examination of buying habits. The United States is not just one big market, but a complex of many markets, which often vary from one part of the country to another, from one city to another, and from one economic group to another. American retail buyers are very susceptible to the manner in which a product is presented through advertising and packaging.

India is itself a gigantic potential market. The vastness of this market is attracting increasing attention throughout the world. The share enjoyed of India's total imports has expanded in the case of the United States and Canada from 13 per cent. in 1954 to 18 per cent. in 1957. The continental E.P.U. countries of Western Europe increased their share of sales to India from 19 per cent. to 26 per cent. of India's total imports in this period. The share of the sterling area and the United Kingdom in this period declined, percentage-wise, from 52 per cent. and 25 per cent., respectively, to 36 per cent. and 23 per cent. The Latin American area is yet to emerge as a major supplier to India. But the countries of the rest of the world increased their share of India's imports from 14 per cent. to 20 per cent. of the total.

As India's strong efforts to increase the standard of living of the people bear fruit, the home market for India's own products will increase vastly and competition among foreign countries to export to India will become ever more lively.

Grain, grain products, and raw cotton are among the chief U.S. exports to India. Large and important are the U.S. exports related to India's industrialisation: for example, electrical, industrial, construction, and textile machinery, railway equipment, automotive equipment and tractors, chemical specialities and petroleum products, and tobacco. As India's industrialisation progresses, she may become less dependent on overseas suppliers for these imports, and may become instead a supplier of some of these goods to foreign markets. However, technological progress being very rapid nowadays, and a wide variety of imported materials being required in all modern industrialised societies, it would seem that India will continue to be a large market for a variety of materials, even though she will in many respects become increasingly self-sufficient.

Trade Exhibition

Much interest in the United States has been generated by the first solo overseas trade fair of the United States which opened last December in New Delhi. Articles have appeared describing the four pavilions and the 20 small-scale industries in operation on the Ferogshas Kotla grounds. Interest has been evidenced in India in producing such equipment in India under licensing arrangements.

The related Trade Mission visited with over 2,000 businessmen and officials of 15 cities and towns in northern India. Their tour ranged from manufacturing plants, industrial power sites and business offices to handicraft workshops.

This U.S. exhibit is keyed to India's second Five-year Plan for more industrialisation. It emphasises the importance of small industry in the development of an industrial economy. Over 100 American companies placed machinery, products and technicians at the disposal of this Government-sponsored effort.

Among the sections making up the exhibit is an industrial area showing an automotive repair section of six shops, a welding shop, a sheet metal shop, an ultrasonic sound grinder shop, a machine shop, a woodworking shop for furniture, a shopsmith for toy making; and shops for gold plating, metal spinning, and heat treating.

An extensive agricultural section shows a complete milk recombining unit in production of milk and ice cream from dried milk and butterfat, a wheat exhibit showing uses of wheat products, and an exhibit of soybean and soybean oils.

Another section shows a dry-cleaning shop displaying the washer-extractor unit, and a shirt-making shop equipped with sewing machines for home or mass production.

One section houses the Trade Information Centre and a business library with some 1,000 books and publications for businessmen's reference, and a special display of children's clothes, toys, and play equipment.

The exhibit will be shown in other principal cities of India for a two-year period.

In the contact work of the Trade Mission and the Trade Information Centre inquiries from 130 U.S. businesses seeking connections with Indian firms are discussed. These inquiries cover a wide range from farm machinery to clothing, as well as such commodities as saws, electrical equipment, gasoline engines, and many other products.

On another economic front, the working of India's Community Development Programme has developed much interest and discussion in the United States. The policy of the Union Ministry of Community Development in inviting foreign experts to visit the projects and study the Programme has produced reports that have brought considerable attention to the movement. This interest will be heightened by the anticipated report of the United Nations Mission in March.

As our two nations become better acquainted, we acquire more understanding of each other. We hear less talk in India today about American "capitalism." We hear less comment in the United States today about Indian "socialism."

The increasingly greater receptivity toward foreign investments in India is welcomed by Americans who look upon private investments as partnerships in enterprise and progress. The $357 million growth in total foreign investments in the last three years is a striking advance, but there is room for even greater strides in expediting India's development.

Helpful Attitude

Particular interest in America has been stimulated by the functioning of the Industrial Credit and Investment Corporation of India Limited and the Re-finance Corporation for Industry Private Limited. The former has extended financing to various industrial undertakings in India, and accelerated development of its industrial financing activities is expected. The latter organisation, organised in June of 1958, is expected to provide valuable assistance in financing industry through its rediscounting of industrial loans by Indian banks.

Measures that will assure private investors of the opportunities open to them within the framework of India's general development programme should encourage the increasing flow of private foreign funds. One example is to be found in the Indian Government giving encouragement to foreign capital participation in collaboration with Indian capital in all cases where development is desirable.

Helpful, too, is the convertibility agreement with the United States Government providing that the U.S. is enabled to guarantee to the American investor in India the reconvertibility into dollars of his investment in qualified projects and to draw his income from such projects.

It is to be noted, too, that Indian companies are encouraged to obtain the services of experts or consultants whenever desirable.

Double Taxation

A boon, of course, to stimulating foreign investments further would be a treaty between the two countries for the avoidance of double taxation. Progress in this direction has been made. Double taxation agreements, it is noted, have been signed with West Germany and Sweden, and are being discussed with a number of other countries. The United States and India have agreed to commence negotiations at the earliest practicable date.

We watch with interest the progress India is making in its development. As President Eisenhower stated in his welcoming remarks to Ambassador Chagla, "We in America admire the courageous manner in which independent India is solving the problems it faces in its economic and political development."

We look to ever closer relationships between the businessmen of our two countries, and to an increased sharing of each other's goods in trade. The report on exports made recently to the Lok Sabha by the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, is encouraging and it is hoped that the favourable trend will continue.

The success of India in its great undertaking is important to the United States and to all the Free World. In Ambassador Chagla's words, it is a "gigantic task of harnessing the human and material resources of our country in a fight against the poverty, hunger and disease that have afflicted the great mass of our people for generations." America and the Free World are proud that India is "doing this, without surrendering any of its cherished democratic freedoms."—*All Rights Reserved.*

PLIGHT OF COTTON MILL INDUSTRY

MEASURES FOR REDUCING PRODUCTION COSTS SUGGESTED

THE Sub-committee of the Indian Cotton Mills' Federation (Chairman: Mr. Ramnath A. Podar) has assessed, in a realistic way, the present situation in the industry with special reference to the cost of production. This Committee, it will be recalled, was constituted by the Federation at the latter's meeting on 29th October 1958 to consider the various factors responsible for the disquieting problems confronting the textile industry and to suggest remedies whereby the manufacturing costs could be effectively reduced. The Committee submitted its report on 15th December 1958. It was considered by the Federation on 15th January 1959 and was adopted with a few amendments. The report reviewed here is the one as finally adopted by the Committee of the Federation.

At the very outset, the Committee has drawn attention to the growing competition offered by the handloom sector in the internal market, on account of the great advantage in the price that is being enjoyed by handloom cloth over mill cloth, following the increases in excise duty and the conversion of sales tax into additional excise duty. As a result of this conversion, handloom cloth was entirely freed from sales tax. The price differential is of the following magnitude:

(In nP per square yard)

Category of cloth	Excise duty	Handloom cess	Additional excise duty	Total
Coarse	4	1.56	3	8.56
Lower medium ..	5	1.56	4	10.56
Higher medium ..	6	1.56	4	11.56
Fine	18.5	1.56	8	28.06
Superfine	24.5	1.56	13	39.06

Note.—The disparity between mill cloth and handloom cloth is further widened by ½ nP in respect of bleached cloth and 1½ nP for dyed and printed cloth. Over and above this, certain varieties of handloom cloth enjoy a rebate of 6 to 12 nP per rupee.

The extent of protection enjoyed by the handloom cloth through excise duties alone may be gauged from the following instances:

On a coarse grey drill, the mill price of which is 58 nP per sq. yard, the duties at 8.56 nP per sq. yard amount to 15 per cent. On a lower medium grey longcloth costing 40 nP per sq. yard, the duties come to 26 per cent. A higher medium grey *sari* selling at 45 nP per sq. yard has to bear a duty of about 26 per cent. The protection to handloom cloth becomes even wider in the case of fine and superfine varieties. A fine grey *dhoti* with a mill price of 55 nP per sq. yard bears a duty of 51 per cent., whereas a superfine grey *dhoti* selling at 63 nP per sq. yard has to pay a duty of 63 per cent. A bleached higher medium *dhoti* with a mill price of 45 nP per sq. yard has to pay a duty of 12.06 nP per sq. yard which works out to 27 per cent. A dyed superfine voile sold by the mills at 70 nP per sq. yard bears a duty of 40.56 nP which is over 58 per cent.

Diversion of Demand

The high differential price, coupled with reservation of qualities in better demand for the non-mill sector, has placed the mill cloth in an uneviable position and resulted in the diversion of demand from mill cloth to handloom and powerloom cloth. It is not, therefore, surprising that the production of handloom and powerloom cloth has gone up substantially—from 1,509 million yards and 278 million yards in 1956 to 1,765 million yards and 325 million yards, respectively, in 1958—while that of mill cloth has dropped from 5,306 million yards to 4,900 million yards. The drop in mill output would have been steeper but for the provision for payment of heavy compensation to labour which compelled many units to continue operations despite losses.

The Podar Committee has emphasised, and rightly so, that, having regard to the increase in wages that has occurred in recent years, the disparity in prices of mill and handloom cloth considerably exceeds the advantages of lower production cost and better facilities of marketing supposed to be available to mill cloth. Furthermore, the reservation of certain popular sorts for the non-mill sector has resulted in restricting the mobility of mills to adopt their production programmes to changes in consumer demand and has forced them to produce qualities not so much in demand. The handloom sector, on the other hand, has made heavy encroachment in the field traditionally dominated by the mill sector.

The solution suggested by the Podar Committee (and approved by the Federation) for rectifying the undue advantage enjoyed by handlooms over the mills is as follows:

"We think that, having regard to the considerable widening of differentials that has occurred between the prices of mill cloth and handloom cloth, there is an urgent necessity for (*a*) abolishing the handloom cess imposed on mill cloth and (*b*) cancelling most, if not all, of the reservations of varieties of cloth for the handloom sector. The protection in the shape of exemption from excise duty and additional excise duty would provide more than adequate safeguard for cloth produced in the handloom sector."

The demand for the abolition of handloom cess is a modest one, but it is doubtful whether that will help the mill industry to any appreciable extent. A straight substantial reduction in excise duties would seem to be a better solution, assuming that the Government would accept the thesis of the industry that consumption of mill cloth should be stimulated. The plea for the abolition of reservations of market for certain varieties of cloth in favour of handlooms has economic justification, but is politically impossible. It is inconceivable that the present Government will have the political courage to concede this plea.

Raw Cotton

The Podar Committee has indicated the ways and means by which cost of production can be lowered. Although raw cotton accounts for the major portion of the cost of manufacturing textiles, the Committee has not complained that cotton prices are high or that they should be brought down. What the Committee has stressed is that, as the cloth produced out of cotton bears heavy taxation, cotton should be exempted from payment of sales tax. It has also urged every mill to see that its cotton department is staffed by experts who would be capable of making not only judicious choice of qualities but also deciding upon the proper time at which to make purchases. It further urges use of cotton in the most economical manner by spinning it to the highest count, consistent with maintenance of quality; this would be possible by the replacement of old and obsolete machines by modern machines.

Turning to labour, the Committee has shown how the cost has been inflated in a twofold manner: (1) increase in wage rates by tribunals in relation to the industry's capacity to pay as judged by them at the time when the awards were made, and (2) abnormal rise in cost of living and the consequent advance in dearness allowance. In the considered opinion of the Committee, it is high time that the wage policy was reoriented in the following directions:

(*a*) A much greater weight must be attached to the factor of productivity than has been done hithertofore. Where the workloads are subnormal, they must be allowed to rise to a normal level without any change in wages. The industry should not, however, deny payment of higher wages where the workloads justify them.

(*b*) The wage cost in the Indian textile industry should be made comparable to the wage cost in those countries which compete with us in foreign markets.

(*c*) The textile wages should be in harmony with the wages of other industries in the same region.

(*d*) The factor of the capacity to pay must be considered *de novo* in relation to the trends that have now become apparent. Furthermore, the prior charges must include, apart from full depreciation, development rebate, return on paid-up capital and on reserves, and taxation, adequate amount by way of reserves, having regard to the industry's financial needs for rehabilitation and modernisation.

The last-mentioned point is of special significance in the present context when the world trade in cotton textiles is becoming more and more competitive. The competitive capacity of Indian textiles cannot be enhanced, unless production cost is lowered and quality improved. Hence it is urgent that the mills should be permitted to modernise their equipment without any hindrance. Emphasising this aspect, the Podar Committee says: "Installation of automatic looms, Barber Colman type of winding and warping machines, etc., are a must, if we are to increase our exports." The Committee regards the proposal to replace ordinary looms by automatic looms at the rate of 2,500 per year as being far too slow. It feels that the mills must be given complete freedom to effect modernisation. According to the Committee, neither the Government nor the labour needs have any fear of large-scale unemployment resulting from such freedom, inasmuch as the replacement of ordinary looms by automatic looms will be limited by the availability of finance and the necessity to follow the principles laid down at the fifteenth Indian Labour Conference. In fact, the unemployment that is likely to be caused by closures of shifts and mills in the absence of modernisation will far exceed the unemployment likely to result from complete freedom to modernise, subject to the stipulations of the aforesaid Conference.

Rationalisation

In this connection, the Podar Committee alludes to the decisions in regard to rationalisation taken at the Conference. It is quite right when it states that the principles laid down at the Conference do not leave any incentive to the cotton industry to undertake a programme of large-scale capital expenditure for rehabilitation for the reason that the mills, after being committed to heavy payment of interest and depreciation charges on new machinery, will no longer be able to carry on their musters surplus labour until it withers away by the process of natural separation. It is precisely this inability to reduce surplus labour immediately on a changeover to modern machinery that has been greatly responsible for retarding the pace of rehabilitation. Elucidating the point, the Committee observes:

"Modernisation will bring no relief, unless labour wholeheartedly co-operates in a smooth transition to lower labour complements required with the new machines. If, in spite of modernisation, mills are forced to continue emphasising surplus labour (as has actually happened in some cases), modernisation with its high capital cost will actually be a liability rather than relief!"

There is no exaggeration whatever in these remarks of the Committee. Rationalisation is the only effective short-term solution for bringing down cost of production, while, at the same time, increasing the labour's *per capita* earning. In its report submitted to the Government in July 1958, the Cotton Textile Enquiry Committee (Chairman: Mr. D. S. Joshi, I.C.S.) specially recommended the setting up of Rationalisation Sub-committees at the Central and regional levels. Although many months have elapsed since then, the Government has still not taken steps to implement it.

The Podar Committee has also indicated a few other ways in which the cost of textile production can be reduced. These include the following:

Power: Economics in electricity cost so as to lower the rate for the consumer to 6 nP per unit; Government's permission to mills to install a power plant of their own if they find it advantageous; abolition of electricity duty; drastic cut in coal freight charges; abolition of excise duty on furnace oil and downward revision in prices by companies.

Stores: Economics in consumption of stores; the mills must ascertain whether, in relation to the twin factors of price and durability, their purchasing policies are the most economical.

Other expenses: Close scrutiny of expenses like those on staff, selling and commission with a view to effecting economies.

Research: Intensification of the drive for enrolment of mills as members of research bodies by adequate publicity to the aims and objects of these bodies.

Finance: Permission to mills to defer at the time of clearing stocks payment of excise duties up to a period of 30 days on their giving to Government bank guarantees for the amount due.

Here are a few pertinent suggestions put forward by the Podar Committee which must be carefully examined by the interests concerned—the millowners, the workers and the Governments, Central and State. Unless energetic steps are taken on the lines mentioned above, there is no hope of the cotton industry meeting satisfactorily the expanding domestic requirements of cloth and competing effectively in world markets.

IMPORTS OF U.K. TEXTILE MACHINERY

A part of the £28¾ million loan to India has been earmarked for covering imports of British textile machinery. Following this development, there has been a relaxation in the terms of payment for imports of these machinery. The Textile Commissioner has just issued a notification inviting parties that want to avail themselves of the new facilities to submit their applications on or before 14th March next. Applications must contain details of deferred payment terms, if any, and indicate the justification and urgency for the item applied for. Those who have already applied for imports of machinery from the U.K. during the current licensing period and who wish to have it considered under their scheme should re-apply or address a letter to the Textile Commissioner, giving particulars of deferred payment terms, if any, and requesting consideration of their pending applications under the scheme. It is specifically stated that the applications should invariably mention whether any application for the import of the same item of machinery from any other country under either deferred payment terms or cash licensing has been made by them during the current period.

Meanwhile, the last date for submitting applications for textile machinery import entitlement under the Cotton Textiles Export Promotion Incentive Scheme has been extended from the 15th to the 28th inst.

REORGANISING TEXTILE INDUSTRY

COTTON BOARD SETS UP DEVELOPMENT COMMITTEE

From A Special Correspondent

MANCHESTER, 10*th February*

NOT for long, it seems, can Lancashire's cotton industry stay out of the headlines. After providing a test case before the Restrictive Practices Court, with results which have shaken its foundations, traders woke up one morning last week to find on the front pages: "Government Help For Cotton?" A reorganisation plan has been promised, with the full support and apparent approval of the Government, but, to many, the moves which are now taking place seem mysterious. Even some of those who should be "in the know" profess ignorance of any definite scheme.

MANCHESTER LETTER

One thing at least is clear—a Development Committee has been set up by the Cotton Board, charged with the fearsome tasks of launching a programme to reconstruct the trade in the light of present-day conditions. Statistics have been worked out showing the current situation as regards plant, manpower and prospective demand. These figures are now being considered by individual trade organisations among employers and trade unions. Before the month is out, a conference of all sections is likely, from which point draft proposals may be considered.

On all sides, it is assumed that the major objective will be to formulate some kind of redundancy scheme to dispose of large quantities of obsolete and inefficient plant. The strictures of the Restrictive Practices Court, however ill-timed, were no stronger than the comments which have frequently been made by traders within the industry. Some opposition to an organised system of consolidation is known to exist, but should be outweighed by the strong body of opinion which favours an orderly contraction.

No less a personage than the Prime Minister himself has already pledged that he is anxious to discuss the industry's proposals as soon as they are available and to hear whether direct Government help is asked for. After years of procrastination, it now seems that the Government has suddenly become alive to the problems involved, which have certainly not been eased by the hearing before the Restrictive Practices Court and the subsequent verdict on the Yarn Spinners' Agreement.

Post-Y.S.A. Trading

Conditions since the abandonment of the price maintenance schemes organised by the Yarn Spinners' and Cotton Yarn Doublers' Associations have inevitably been irregular. The early description of them as "chaotic" is perhaps an exaggeration, but the disparity in quotations given out by spinners and manufacturers has created uneasiness among customers and in total has not brought the quantity of business which had been anticipated when the revisions first took place. Quite a number of orders have been put on the books, but no substantial weight of turnover has ensued.

Some people believe that buyers have grown so accustomed to purchasing from hand to mouth that even the sharp decline in values which has occurred is insufficient to spur them to further action. As invariably happens in a falling market, however, there is a tendency to react cautiously, operating when suitable opportunities arise and hoping for a further drop in prices.

For the most part, producers have held out for the rates originally quoted, with a minimum decline of 2*d*. in the price of the lower qualities of yarn. Occasional reports have been received of sellers gaining business by making further concessions, but this attitude has not been adopted on a broad scale. It is significant that, in spite of the rather disappointing response from customers, the spinning trade has not panicked.

One interesting outcome of the new selling arrangements has been the more competitive position of the independent spinner and weaver as compared with the integrated spinner-weaver set-up. During the operation of the Yarn Spinners' Agreement, buyers often found that those firms combining the two processes were able to offer more attractive terms for cloth, but, since the abandonment of the scheme, prices for goods woven by independent manufacturers are now roughly in line with their former rivals.

Redundancy Plans

All sections of the Lancashire textile industry have been invited to prepare schemes to deal with their own redundancy problems. This further light on the developments now taking place within the industry was provided by the Cotton and Rayon Merchants' Association in a report this week. The Association said that the work of the Development Committee, which has been set up by the Cotton Board, was to examine matters affecting the structure and organisation of the industry and their relation to Government fiscal and financial policy. Several meetings had been held and much statistical and factual information had been examined.

The Development Committee is expected to hold a meeting later this month to discuss the proposals of the various sections of the industry. A report will be made to Mr. Macmillan, the Prime Minister, who announced in Parliament that he would shortly announce a plan for reorganising the cotton industry.

No Retail Fall?

Meanwhile, shoppers have been warned by a Lancashire millowner not to expect cheaper shirts and dresses—despite the reductions in the price of cotton yarn. Mr. Philip Lees, Chairman of A. and A. Crompton Ltd., spinners, of Shaw, Oldham, and a Vice-President of the Master Spinners' Federation, said in his annual statement: "Yarn passes through so many processes and hands between the spinner and the ultimate user that a reduction of pence a pound in the price of yarn would make no difference, or at most a minute percentage, to the price of the finished article."

Following the abandonment of the spinners' minimum price scheme last Monday, after being declared void by the Restrictive Practices Court, yarn selling rates dropped by more than 5 per cent. in the first "free" market for more than 20 years.

In a wide survey of cotton trade affairs and a statement on the national economy, Mr. Cyril E. Harrison, President of the Manchester Chamber of Commerce, referred at the annual meeting to the duties of the Government and also gave his views on what the industry must do to save itself. He said:

"The Government must face up to the overall problem of imports from low-cost countries. Any thinking person agrees that the under-privileged countries must be given substantial help to raise their living standards, and part of this help must taken the form of the acceptance of some portion of their production by the wealthier countries.

"At the same time, if the declarations at Montreal are to be given real meaning and are to be more than political utterances, serious thought will have to be applied to deciding how this obligation can be spread among the western nations and the various industries that are likely to be affected. One cannot view with complacency the damage to particular industries in the United Kingdom, if the policy of unlimited imports is to be confined to this country and to a limited range of products. A way must be found of reconciling the desire and the need to accept the products of these communities with the equally-important and, to us, more immediate problem of preventing these imports from having two damaging an impact on home industries and on the morale of the people engaged in them.

"In the case of Hong Kong, one cannot help but feel that past and present Governments were illogical and unwise in permitting vast numbers of so-called refugees to enter a U.K.-administered Colony, whilst, at the same time, imposing strict limits to the influx of refugees into the United Kingdom itself."

"For the industry," he continued, "there must be a sense of urgency in bringing about a more compact and efficient structure. Current talk of redundancy and re-equipment concerned two relatively minor aspects of the problems to be solved." Proceeding, he observed:

"We want new outlooks as well as new machines. We must review and, if necessary, amend the structure of the industry. We have to try new methods of sale and distribution as well as of production. We are saddled with trade organisations, both for employees and employers, which were built up when the trade was four times its present size. The duty of these organisations is to protect sectional interests and this duty may, at times, conflict with the true interests of the industry as a whole. Anyone who has had to reduce the size of an industrial operation knows that the reduction of existing management and service structures is one of the most difficult tasks of all, but it is necessary if one is to survive and progress in a competitive world."

"Redundancy," continued Mr. Harrison, "was mostly in machines and organisations. Under present methods, there was no serious redundancy of personnel. Long-term we must, and can, make do with a smaller labour force than at present, but it will take some years to achieve throughout the industry the efficiency of the best mills. With the high average age and the wastage experienced in textile industry, there is no likelihood of any serious long-term under-employment of competent workers. I will go so far as to say that, in the short-term, indeed possibly in 1959, production will be limited not by orders available, but by a shortage of suitable personnel."—*All Rights Reserved.*

INTERNATIONAL TRADE IN COTTON

APPRECIABLE SHRINKAGE LIKELY

THE recent enhancement of the cotton export subsidy rate by the United States and the changes brought about in the method of exports of cotton, as was indicated in our last issue (*vide* page 215), are designed to achieve the Agricultural Department's objective of regaining to the U.S. its former share in the world trade in raw cotton. This programme, which will come into effect from the next marketing year, is expected to lead to a substantial improvement in exports during the 1959-60 season. The prospects for exports of U.S. cotton during the current season ending 31st July 1959 are, however, not promising.

World trade in cotton is expected to contract substantially this season. Aggregate free world exports last season, including exports of 1.5 million bales to the communist countries, were 12.6 million bales of 478 lbs. each. During the current season, taking into account trends in cotton consumption and stock utilisation in the net importing countries and assuming no change in exports to the communist countries, aggregate free world exports are to range between 11 and 11.5 million bales. The U.S. is likely to bear the brunt of the contraction in cotton trade. At a recent conference on the outlook for cotton, U.S. exports during the current season were estimated to reach 4 million bales. This compares with 5.7 million bales exported last season and 7.6 million bales shipped in 1956-57.

The fall in exports is attributed to the general easing of demand, and increased competition in foreign markets. But trade quarters doubt whether exports will be as high as 4 million bales. They point out that exports so far during the season have been only half the volume exported during the same period last season, and that unless action is taken to alter the present price discrepancy between U.S. cotton and foreign growths, the U.S. will emerge as a residual exporter and exports could fall to round 3 million bales. According to the International Cotton Advisory Committee (I.C.A.C.), Washington, quality factors and particularly the fact that much of the increase in aggregate production outside the U.S. is in the extra-long staples might mean that exports will be higher than 3 million bales. A reasonable estimate, according to it, would be between 3 and 3.5 million bales.

The U.S. Department of Agriculture estimates that U.S. exports during the season would drop by 2.2 million bales. Despite substantial fall in prices of foreign growths, world trade in cotton this season, according to it, will decline by about one million bales. Leading the decline will be the U.S. exports which will be 3.5 million bales, as compared with last season's of 5.7 million bales. The Department, in a recent pamphlet entitled *Prospects for Foreign Trade in Cotton*, noted that favourable factors influencing American exports had been reversed. But there were indications, according to it, that export demand may improve later in the season.

Supply outside the U.S. this season is expected to set a new record and, consequently, there will be a marked increase in the volume of cotton available for export. It is estimated by the I.C.A.C. that export availabilities this season will be over 9 million bales or about 1.5 million bales higher than in 1957-58. As long as prices in these countries remain under comparable U.S. quotations, aggregate exports outside the United States will probably increase this season despite the reduction in the free world total. These countries are obviously determined to maintain and even expand cotton exports. Cotton is a major component in foreign exchange earnings and most countries do not have the resources to finance a heavy carryover. Under these circumstances, price concessions have been made and trade agreements involving cotton have become major instruments of cotton trade policy.

The U.S. Department of Agriculture forecasts that during the 1958-59 season some reversal will take place in world cotton supply and demand relationship. World production, after moderate decreases during the past two years, is resuming the strong post-war upward trend. Because of this upturn in output and frequent declines in world consumption, production this season will exceed requirements for the first time in the last three years. The Department predicts that prices will, therefore, weaken, trade will be smaller, and carryover stocks will increase.

For another year or so at least cotton production in foreign countries is expected to increase, but probably at more moderate rates. The production of cotton has assumed increasing importance in many foreign countries as a cash crop and as an important earner of foreign exchange. Supplies in exporting countries are, therefore, expected to be at fairly high levels in the years immediately ahead.

While the short-term outlook is thus discouraging, the long-term outlook is more promising. Over a longer period, according to the Department, the increases in population, improved economic conditions, lower and more stable cotton prices and plentiful cotton supplies foreshadow increased trade and consumption. To achieve a closer balance between supply and disappearance, according to the Department, some cutback in plans for increasing production may be found to be necessary in countries that cannot maintain production incentives and large stocks of cotton. Improvement in cotton fabric finishes, development of new products and promotional programmes will help maintain cotton's dominant position in world markets for apparel, household and industrial fibre products. The total demand for cotton and cotton's competitive position with man-made fibres will be improved by increased research, more effective market development, promotional programmes, technical assistance and programmes and improvements in cotton quality and merchandising. As a leader in all these activities, and as the world's largest producer, consumer and exporter of cotton, the U.S., the Department adds, will participate to a major extent in world trade in cotton.

EGYPTIAN COTTON

Egypt is reported to have raised the discount rate for cotton sales to India to a total of 27½ per cent. from the present rate of 15 per cent. The enhancement is said to be the result of the negotiations between the representatives of the cotton textile industry in this country and the Egyptian Trade Mission which recently visited India.

Exports of cotton from Egypt to foreign countries so far in the current season have been running at a higher rate, as compared with the corresponding period of the previous season. Preliminary estimates place shipments from 1st September 1958 till 4th February 1959 at 411,338 bales (of 720 lbs. each), as compared with 286,373 bales in the same period last season. The following table gives the destination-wise breakdown of exports:

(In bales of 720 lbs.)

Countries	1st Sept.-4th February	
	1958-59	1957-58
Russia	113,446	67,663
Czechoslovakia	60,441	40,030
England	47,648	..
China	38,175	19,703
Poland	22,028	18,811
Spain	19,800	5,600
Italy	17,824	10,809
India	16,455	5,393
Japan	14,676	21,093
Yugoslavia	11,150	9,840
East Germany	10,980	13,279
Hungary	8,539	3,972
France	8,511	5,283
Austria	8,004	9,110
Switzerland	3,685	13,617
Mexico	2,545	160
West Germany	2,539	1,857
Bulgaria	1,850	3,850
Pakistan	1,050	..
U.S.A.	595	26,638
Other countries	2,407	6,039
Total ..	411,338	286,373

As will be seen from the above table, Russia and other Communist countries accounted for the major share of exports. India's share increased almost three times. Another notable feature is the resumption of purchases by the United Kingdom.

Meanwhile the Egyptian Ministry of Agriculture, in its third cotton estimate for the current season, has placed the crop at 9,837,640 cantars, including Scarto. This compares with the second estimate of 9,879,000 cantars and the first estimate of 9,021,000 cantars. The fourth and final estimate is expected to be published in April.

It is reported that a Government decree limiting the acreage for the next season (1959-60) and the areas where long-staple cotton can be cultivated has been issued.

MILL CONSUMPTION OF COTTON

Figures relating to raw cotton consumption compiled by the office of the Textile Commissioner indicate that mill consumption of Indian raw cotton during December 1958 aggregated 419,814 bales (of 392 lbs.), as against 363,650 bales in the previous month and 391,490 bales in the corresponding month of last season. The December consumption is the highest for the current season.

Consumption of foreign cotton during the month was 39,301 bales. This, although higher than the previous month's, is well below the consumption during the same month last season. Total consumption of cotton, Indian and foreign, aggregated 459,115 bales, as compared with 399,294 bales in the previous month and 443,348 in December 1957.

DEVELOPMENT COUNCIL FOR SUGAR INDUSTRY MEETS

PROGRESS OF EXPANSION SCHEMES REVIEWED

THE speech of Mr. M. Lal, I.C.S., Chairman of the Development Council for Sugar Industry, delivered at the Council's ninth meeting held at New Delhi last week-end, was colourless, in that it did not contain any reference to such important current issues as upward revision in cane and sugar prices, outlook for exports, taxation, and progress of cane cultivation. This is not surprising considering that Mr. Lal took over charge as Chairman only two months ago from his predecessor, Mr. T. C. Puri, I.C.S., who guided the deliberations of the Council in the past three years. Evidently, Mr. Lal has not had sufficient time to master the details of the matters that required the Council's immediate attention. Or it is possible that, since most of these subjects are controversial and involve policy decisions, he preferred not to tread on issues which are, properly speaking, the prerogatives of his Minister. In any case, the Minister concerned will have an opportunity to expatiate on them in the near future, namely, at the forthcoming annual meeting of the Indian Sugar Mills Association. Mr. Lal, therefore, confined himself to a general review of the productive performance of the sugar industry in the past season (1957-58) and an outline of the progress made in the implementation of expansion schemes. Mr. Lal no doubt touched on the issue relating to the diversion of cane from sugar mills to *khandsari* manufacture. But all that he said was non-committal. He observed that the Central Government was actively considering the recommendations of the Fact Finding Committee, that it had an open mind in the matter and that it was trying to find an equitable solution which would be in the interest of both the sugar and *khandsari* industries. It may be that the Centre will do something about this question in the Budget for 1959-60 due to be presented at the end of this month. But, by that time, the greater part of the current crushing season will have been over.

Mr. Lal's review of the progress made in establishing new capacity in the sugar industry reveals that 23 new mills, with a total annual production capacity of about 261,000 tons, went into production by January 1959. Six more units, with a capacity of 72,000 tons, are expected to commence operation later in the current season, seven other units with equal capacity in 1959-60 and the rest in subsequent years. As regards progress in expansion, 23 existing units, with an additional annual production of 104,000 tons, completed their programmes by 1957-58. About eight more units, accounting for an additional capacity of 60,000 tons are expected to complete the schemes in 1958-59 and an equal number involving equal capacity in 1959-60. Some of the factories have also made partial expansion of their plants covering an additional production of 50,000 tons. The remaining factories will complete the expansion in subsequent years.

Grant of Licences

A brief reference to the position regarding grant of licences in the sugar industry may be made here. Up to the end of 1958, licences had been granted for the setting up of 55 new mills, with an aggregate daily cane-crushing capacity of 53,600 tons and expansion of 68 existing units involving an additional cane-crushing capacity of 35,356 tons per day. The State-wise distribution of capacity so far licensed is indicated below:

	Expansion of existing units		Setting up of new units			
			No. of units			
	No. of mills	Additional capacity licensed (tons of cane per day)	Private or Joint-stock	Co-operatives	Total	Total capacity (tons of cane per day)
Bombay ..	7	3,525	2	16	18	17,600
Andhra Pradesh ..	7	4,400	4	5	9	7,750
Bihar	7	2,255	..	1	1	800
U.P. ..	35	18,746	3	3	6	7,200
Madhya Pradesh ..	2	800	..	..	..	..
Madras	1	200	4	3	7	6,500
Mysore	3	1,180	1	3	4	3,850
Orissa	1	350	..	1	1	1,200
Punjab	2	2,600	2	5	7	7,300
Rajasthan ..	2	900	..	..	..	..
W. Bengal ..	1	400	1	..	1	600
Assam	..	..	..	1	1	800
Total ..	68	35,356	17	38	55	53,600

During the discussions on the review of the progress of sugar industry at the Development Council meeting, it was felt that the statistical account of the progress as was available was inadequate and incomplete. It was decided that the Government should furnish State-wise and unit-wise performance and particulars of the way in which the development programme was being implemented.

The pace of expansion of new capacity in the sugar industry has suffered a setback on account of deterioration in foreign exchange position. Alluding to this development, Mr. Lal revealed that the Central Government had decided not to grant licences for import of sugar machinery for any more new factories against free resources or even against rupee payment. The implication of this decision is that the new sugar mills should be established by fabricating, as far as practicable, the required machinery in India by using such minimum essential imported component parts as are necessary for fabrication of complete plant and machinery. It will be recalled that six firms have been licensed to fabricate complete sugar plants in collaboration with foreign manufacturers of repute. It is gratifying that the Government has agreed to release foreign exchange for (a) equipping the workshops of these firms and (b) imports of component parts required for fabricating machinery to be supplied to 12 undertakings for which machinery has still to be arranged.

Speedy Implementation

As a result of the above policy, the foreign exchange requirements per factory are said to have been reduced from Rs. 75-80 lakhs to just Rs. 20 lakhs. The existing factories which have still to implement the expansion programmes have been advised to contract the said firms for getting the required machinery fabricated indigenously. The total production (in terms of value) of sugar machinery during 1959 is estimated at Rs. 320 lakhs, which compares favourably with Rs. 200 lakhs in 1958, Rs. 162 lakhs in 1957, Rs. 32 lakhs in 1956 and Rs. 19 lakhs in 1955. Surely, this development will, as Mr. Lal said, go a long way towards the steady implementation of the sugar industry's expansion programmes under the third Five-year Plan.

After Mr. Lal's address, the Development Council for Sugar Industry considered the recommendations made by the Standing Advisory Committee on Sugar Standards. Mainly, the recommendations are:

There is no necessity for the present to introduce "30" colour grade and "AA" grain size series of standards, since the production of sugar conforming to these standards is still low.

The price differentials for different grades of sugar for use during 1958-59 must be on the basis of the following table:

(In nP per maund)

Grain size	Colour 29	Colour 28	Colour 27
A	+175	+137	+100
B	+112	+ 75	+ 37
C	+ 37	..	— 25
D	..	— 31	— 56
E (Basic grade)	— 19	— 50	— 75

The sugar produced in a particular season should always be graded in terms of Indian sugar standards for that particular year.

The aforesaid chart of price differentials has been accepted and adopted by the Government of India. This decision, we understand, was criticised by the representatives of sugar industry. They urged that the Government should adopt the following price differentials, which are the same as those recommended by the old Development Council in July 1957:

(In nP per maund)

Grain size	Colour 29	Colour 28	Colour 27
A	+250	+225	+187
B	+187	+162	+112
C	+112	+ 75	+ 50
D	+ 75	+ 50	+ 19
E	+ 56	+ 31	..

The plea of sugar millowners was, however, stoutly opposed by some members who felt that the acceptance of the plea would mean an upward revision in the price of sugar of same quality. They contended that the consumer of sugar should not be made to pay enhanced prices and that the sugar industry must endeavour to improve the quality of sugar produced by it. Since there was a wide divergence of opinion, the Council constituted a subcommittee to examine and submit before the end of this month its report on the question. The Committee consists of Messrs. S. N. Gundu Rao (Director, National Sugar Institute), Hansraj Hariram, Ganga Shanker Pandey, Gulabchand Hirachand and D. D. Puri.

Other Decisions

The Council then considered the report of the Committee on Standardisation of Costing Methods used in factories. The new forms suggested by the Committee were accepted. The Council also considered the progress of the Joint Committee set up to examine the question of levy of cess on sugarcane and its utilisation. It was decided that the Indian Sugar Mills Association should submit to the Central Government a consolidated picture of the conditions obtaining in the factory areas in Uttar Pradesh and Bihar and indicate measures for improving such facilities as construction of tube-wells, irrigation and roads.

Six other important decisions were taken by the Council. First, fair trial should be given to the sugarcane quality payment scheme. The Director of the National Sugar Institute was asked to submit an interim report, giving his views on the results obtained and the feasibility of operating the scheme in various parts of the country. Secondly, a sub-committee should be appointed to formulate a development programme for the sugar industry under the third Plan. Thirdly, due attention must be paid to the aspect relating to the uses of sugarcane wax. Fourthly, the Sugar Technologists Association of India, Kanpur, should be given a grant up to Rs. 5,000 for meeting the cost of its publications. Fifthly, the Indian Sugar Mills Association must prepare a report on the possibilities of increasing productivity in the sugar industry through the programme sponsored by the National Productivity Council and the report should be considered in detail by a special subcommittee of the Development Council. Sixthly, as regards standardisation of markings on sugar bags, the existing trade marks rights should not be infringed by the statutory markings and, consistent with the lay-out and principles of statutory markings, any suggestion for modifications made by the Indian Sugar Mills Association would be considered by the Government.

EUROPEAN COAL CRISIS CONTINUES

BELGIUM THREATENS TO BREAK AWAY FROM E.C.S.C.

THE West European coal "crisis," to which a reference was made in these columns last week, has taken a serious turn, in that the German proposal to cut imports of coal from outside the E.C.S.C. and to levy a duty of DM 20 per ton on them has brought forth protests from Britain, the Netherlands and from a section of the coal consumers in West Germany itself. The two Houses of W. German Parliament themselves are not unanimous in their approval of the proposal. For, while the Lower House has approved of the tariff on coal, the Upper House has voted against it, though it has no power to veto the Lower House's decision. What is more, as Belgium's proposal for a ban on imports from member countries of the E.C.S.C. themselves, in order to help its own coal industry, has not been approved by the High Authority, it has threatened to withdraw from the membership of the Community and take its own measures. The U.S., as was pointed out last week, had already lodged its protest to W. Germany against the import duty.

The Economic Minister at the British Embassy in Bonn has conveyed to the W. German Foreign Minister, Britain's view that the latter's treaty of association with the E.C.S.C. rules out a German tariff on import of coal from Britain and also requires previous notification of any new restriction. Britain's protest has also been conveyed to the High Authority. The change in the basis of fixing import quota has also evoked Britain's protest. It will be recalled that, originally, the duty-free import quota was fixed at 50 per cent. of the average annual imports during the period 1950-53. On this basis the U.S.'s quota worked out to 4.25 million tons and Britain's to 411,000 tons. Subsequently, the quota was revised to 36 per cent. of the average annual imports during 1956-58, as a result of which the U.S.'s quota rose to 5 million tons, while that of the U.K. dropped to 200,000 tons. The British view is that the change in the basic period from 1950-58 to 1956-58 amounts to a discrimination. It is argued that, whereas German imports of U.S. coal is of a recent origin, dating back to only 1956, Britain's trade with Hamburg and Bremen is a traditional one, the imports of coal amounting to about 4 million tons per annum between the wars. Since the war, supplies of coal from Britain are said to have been kept up at the request of Germany, albeit on a smaller scale. Even in 1956, when Britain was faced with a shortage of coal, exports to Germany amounted to 1 million tons. In that year, there was a sharp rise in German imports from countries outside the E.C.S.C., supplies from the U.S. alone amounting to 11.5 million tons, as against 7 million tons in 1955 and less than 2 million tons in 1954.

The British protest is said to have not been considered by the Council of Ministers of the E.C.S.C., when it met at Luxemburg on the 5th inst. At this meeting, the Netherlands Government was strongly critical of the German tariff levy, on the ground that large quantities of coal imported by Germany pass through Holland and the Dutch transport firms have made large investments to avoid transport and transit bottlenecks at points of entry. The Council's verdict on the German measures as such are not known, nor on the Belgian demand for declaring a state of crisis, but it decided, following the Dutch protest, that the High Authority should supervise the application of the import duties and the duty-free quota to see that surplus tonnage were not left in the Dutch market.

Following the meeting of the Council of Ministers of the E.C.S.C. on the 5th inst., the Belgian Minister for Economic Affairs announced that, if Belgium were not helped by the Community, it would have to take steps to help itself. According to him, the pithead stocks in Belgium have gone up during January by an equivalent of 1.3 days' production. Had it not been for the winding stoppages, the surplus would have been equal to six days' production. If no positive measures were taken on a Community basis, the Minister said, he was free to isolate the Belgian coal market from the other member countries. Such a step implies a ban on Belgian imports of German, Dutch and French coal. The Belgian threat suggests that the Council of Ministers has not been able to find a solution yet to the European coal problem.

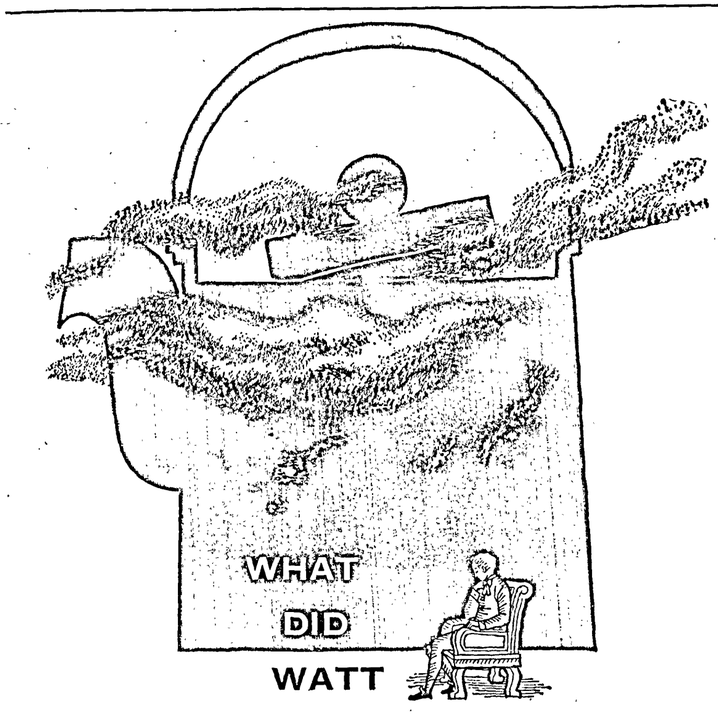
In the circumstances, the High Authority has two courses of action open to it after declaring a state of crisis: (1) to restrict output of member-countries on a quota basis; and (2) to recommend to each country to restrict its imports from outside sources. In fact, Belgium has been asking for the first course, as it would be a way of spreading the output cut among the other four producing countries. The other course will be resisted by Italy which relies mainly on imported coal and is at present buying little, other than American coal, because its price and freight structure make it very cheap. The High Authority can, however, avoid using its Treaty powers and negotiate an alternative solution, but the present members have no mandate for doing so.

USES OF COAL

It is generally believed that, with the increasing competition from fuel oil and with the growth of atomic power, coal will lose its importance as the main source of energy in course of time. This may be true in places which are not well supplied with coal but in areas such as the Damodar Valley where coal supply is plentiful, coal, it is believed, will be a cheap source of power for a long time to come. Even in areas where other sources of energy will replace coal, one cannot bypass the latter, because of its various other uses in the progress of mankind. This was the view expressed by Prof. B. C. Guha, Head of the Department of Applied Chemistry, University College of Science and Technology, Calcutta, in his inaugural address at the three-day symposium on the "Nature of Coal" held last week at Dhanbad under the auspices of the Central Fuel Research Institute.

Coal was the mother of all carbon compounds and as such it would, said Prof. Guha, always be a valuable mineral. It provided the base for various dyes. Various drugs, plastics and explosives for peaceful purposes were derived from it. Speaking on the mystery of coal, Prof. Guha said that, if one knew more about the constitution of coal and its nature, one could predict, in a more precise manner, the applications to which these different varieties of coal would be susceptible.

In his address at the symposium, Dr. A. Lahiri, Director of the Central Fuel Research Institute, pointed out that, as a result of hundred years of research on the structure of coal, it had been found that there were other things in coal than the "benzene ring." It was on the disordered carbon in coal that most of the properties of coal depended. Today, it was possible to convert coal into a cation and an anion exchange material, to fix nitrogen in coal, to modify the structure of coal at least in the laboratory, to convert a non-coking coal into a coking coal. The technological steps would come later. Dr. Lahiri went on to add that a multitude of reactions in inorganic chemistry that were known to take place with other polynuclear molecules could also be brought about. It was possible to make directly a synthesis of dyes from coal, but it would be a long battle before these could be put into practice and used technologically for industrial development.



SEE ?

Nearly two hundred years ago, an English boy, James Watt, seeing a kettle lid rise and fall as the water boiled, sat fascinated. He had discovered the power of steam. In India today, more than 50% of the power produced is derived from steam. Texmaco, the first to build a Lancashire boiler, has considerably expanded its range of production to include another first—the fabrication of water-tube boilers in India, to the designs and specifications of the world renowned Combustion Engineering Inc. of U.S.A. In collaboration with the world's best technical know-how, Texmaco is now equipped to manufacture and supply a wide range of industrial Fire Tube, Water Tube and Locomotive boilers.

TXC-46 A

JUTE GOODS PRODUCTION SHRINKS

STOCKS, HOWEVER, RECORD FURTHER RISE

JUDGED from the statistical point of view, the decision of the I.J.M.A. to seal 1½ per cent. of the looms of its member-mills, with effect from the 2nd ult., seems to be justified, though its corrective effect is expected to be no more than marginal. The statistics of jute goods relating to the month of January 1959 show that, despite a fall in production during the month, the stocks of gunnies at the close of the month have gone up further. This is due to a slight decline in shipments during the month under review. Thus, while the total output has declined by 4,400 tons to 92,100 tons, stocks have risen by 4,000 tons to 113,700 tons.

The decline in production of jute goods during January reverses the upward trend noted in the previous two months when the output rose from 81,800 tons in October 1958 to 96,500 tons in December 1958. As compared with January 1958, the production during the month under review represents a decrease of 6,200 tons. Of the fall of 4,400 tons last month, sacking accounts for the bulk, having declined from 49,200 tons (in December 1958) to 45,200 tons. The output of hessian, too, has dropped, albeit by a fraction to 40,000 tons, in contrast to the rise of 4,300 tons in December and of 2,000 tons in November. Over the year, it shows an increase of 5,600 tons. The production of "other varieties" has shrunk from the peak level of 7,200 tons to 6,900 tons, but this decline is not sufficient enough to offset the increase of 900 tons in December and 800 tons in November last. As compared with January 1958, however, it shows a rise of 300 tons, as will be seen from the following comparative table:

Production of Jute Goods

(In tons)

	January, 1959	December, 1958	November, 1958	January, 1958
Hessian	40,000	40,100	35,800	34,400
Sacking	45,200	49,200	44,900	57,300
Others	6,900	7,200	6,300	6,600
Total ..	92,100	96,500	87,000	98,300

The decline in output during January this year is due to the fall in the number of hours worked from 217.5 to 206.0. It may be noted that, while the proportion of hessian to total production has risen over the year from 35 to 43.4 per cent., that of sacking has declined from 58.3 per cent. to 49.1 per cent.

The stocks of jute goods as on 31st January 1959, at 113,700 tons, show a rise of 4,000 tons as compared with the previous month, thus maintaining the upward trend for the second month in succession. With the aggregate increase of 8,300 tons in the last two months, the stocks have gone up to the highest level since August last. It will be recalled that the stocks of gunnies with mills were reduced successively from the peak of 134,000 tons, as at the end of June last to 105,400 tons at the close of November, but they have since then been showing an upward trend. They now amount to a little less than five weeks' production, whereas at the end of June last they represented 6½ weeks' output and a year ago less than a month's production. A break-up of the stocks of gunnies variety-wise is shown in the following table:

Stocks of Jute Goods

(In tons)

	As on 31st Jan., 1959	As on 31st Dec., 1958	As on 30th Nov., 1958	As on 31st Jan., 1958
Hessian	16,800	15,800	17,300	29,700
Sacking	83,000	89,200	78,500	53,700
Others	13,900	13,700	12,600	13,200
Total ..	113,700	109,700	105,400	96,600

All the three main groups of jute goods have shared the rise in stocks at the end of last month, hessian accounting for 1,000 tons, sacking for 2,800 tons and "other manufactures" for 200 tons. Barring end-of-December position, hessian stocks are at the lowest level since November 1950. As compared with January 1958, the stocks of hessian are lower by 12,900 tons. At 16,800 tons, hessian stocks represent 14.8 per cent. of the total, as against 30.7 per cent. a year ago. The stocks of sacking stand at the highest level since August last and represent an increase of 29,300 tons over the year. They form 73 per cent. of the total stocks, while a year ago they constituted only 55.6 per cent. The stocks of "other manufactures" have maintained their upward trend for the fourth month in succession.

The total shipments of jute goods during the month under review aggregated about 64,600 tons, as compared with 63,800 tons in December 1958 and 47,400 tons in January 1958. (These are gross figures based on shipping bills and include coastal shipments also). The details are as follows:

(In tons)

	Bags	Cloth	Total
Hessian:			
January 1959	2,910	23,780	36,690
December 1958	2,370	39,180	41,550
January 1958	1,540	22,100	23,640
Sacking:			
January 1959	26,740	1,160	27,900
December 1958	21,930	270	22,200
January 1958	23,340	440	23,780

Shipments of hessian have fallen by about 4,900 tons to 36,700 tons, while those of sacking have gone up by 5,500 tons to 27,900 tons.

EXPORT OF RAW JUTE

The State Trading Corporation of India has made the necessary arrangements to export raw jute. This follows the recent decision of the Government of India to promote export of the golden fibre in limited quantities through the State Trading Corporation, as a measure to arrest the slump in raw jute prices. Explaining the Government policy in this regard, a Press note issued by the Corporation says:

"Only those grades and markings of raw jute which are well known to the London and Continental markets will be exported through established balers who enter into an agreement with the S.T.C. to export jute on its behalf. The size of the exports will be determined from time to time, having regard to the requirements of the Indian jute mills for manufactures of hessian and sackings for overseas markets as well as internal consumption.

"No official floor prices for export of raw jute have been fixed by the Government of India. Prices at which export will be permitted will be reviewed from time to time by a committee set up by the S.T.C. in Calcutta. Export offers will be accepted subject to these prices."

It remains to be seen how far Indian raw jute will attract foreign buyers, even though price-wise it compares favourably with the corresponding variety of Pakistani jute, even after making allowance for the latest reduction in the minimum prices of jute cuttings for export to India, the U.K. and the Continent. The main difficulty in exporting Indian raw jute arises from the fact that it is making its appearance after an interval of several years and foreign manufacturers are not able to switch over to it easily.

PAKISTAN REVISES EXPORT PRICES

The Pakistan Government has revised the minimum prices of jute cuttings for export to the U.K. and the Continent, with effect from the 8th inst., following the reduction of freight rate by £2 per ton on jute cuttings from Pakistan by Conference Lines. With a view to avoiding complications, the Government has taken the opportunity to fix a uniform price for N.C., M.C. and T.C. varieties. The minimum export prices per ton for jute cuttings c.i.f. U.K.-Continent are: C £50; S.N.C. £39; N.C. £29; M.C. £29; cut ropes £42; T.C. £29; D.T.C. £39.

The minimum export prices of N.C., M.C., and T.C. for India has also been revised to Rs. 60 per bale c.i.f. Calcutta.

The revised prices have made Pakistani cuttings cheaper in overseas markets, but, in view of the fact that there are ample supplies of fibre in the U.K. at present, Dundee manufacturers may not be interested in adding to their stocks. So far as India is concerned, the reduction in prices is of little interest, as imports from Pakistan are banned except those of superior grades which are not available in India.

EXPORT OF JUTE

The export raw jute was the subject matter of an interpellation in the Lok Sabha on the 13th inst. Referring to the accumulation of raw jute in Calcutta port, Mr. Rameshar Tantia observed: "Certain export sales of jute were made on a clear assurance by the Jute Commissioner that no export duty would be charged. But no instructions to this effect had yet reached the Customs authorities in Calcutta with the result that the jute sold was lying in Calcutta unexported. Further sales of jute are also likely to be affected. Therefore, may I know what steps the Commerce and Industry Ministry is taking to expedite this important step without which the whole scheme of exports will fail."

In his reply, Mr. Nityanand Kanungo said: "At no time the Government gave any assurance about abolition of duties. If, as the member has stated, certain exporters are not able to market their jute, the Government knows how to take care of it."

Year by year expansion of Firestone-India keeps in step with nation's requirements

It was in 1939 that the original Firestone Plant in Bombay went into operation. But from the commencement, plans were envisaged for a series of expansions, and staff training programmes were prepared in order to meet the production needs of the years to come.

Through the critical war period, and the years that followed, the Firestone plant continued to expand, and introduced the first balloon tyre; the first double white sidewall tyre, the first earthmover tyre and the first Nylon tyre manufactured in India.

And now the Firestone plant reaches the final stages of the original expansion programme. With a proud record of producing over five and half million tyres in India, Firestone aims to keep the wheels of transportation moving, still retaining the original policy which is now a tradition—"Best Today—Still Better Tomorrow"

CHEMICALS
THAT HELP INDUSTRY TO BRING
A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

CHEMICALS FOR EVERY INDUSTRY

WORKING OF RAILWAYS IN 1957-58

NEW RECORDS SET IN EARNINGS AND OPERATIONS

IMPRESSIVE records in all aspects of working are revealed by the Report on Indian Railways for 1957-58, issued by the Indian Railway Board. The Report, which is more comprehensive, analytical and interesting than its predecessors, shows that there has been sizable improvement in the number of passengers carried, the passenger-miles, freight-tons and ton-miles, all of which touched new records. Reflecting these increases, the total earnings have also gone up. The improvement in earnings is particularly noteworthy, in view of the fact that the "stresses and strains" in the economic activity in the country adversely affected the operation of the Railways, more especially in the last quarter of the year under review.

Gross earnings of Indian Railways (including non-Government railways) increased from Rs. 350.55 crores in 1956-57 to Rs. 382.99 crores and total working expenses from Rs. 280.13 crores to Rs. 311.16 crores. The number of passenger-miles rose from 42,194 million to 43,332 million and freight-ton miles from 40,224 million to 44,897 million. The following table gives the results of the working of the Indian Government Railways only during the years 1956-57 and 1957-58.

Items	1957-58	1956-57
Capital at charge (Rs. in crores)	1,160.13	1,033.02
Route mileage (as on 31st March)	34,461.88	34,290.81
Gross earnings (Rs. in crores)	381.42	348.89
Total working expenses (Rs. in crores) ..	309.76	278.76
Operating ratio (per cent.)	81.21	79.90
Number of passengers originating (in millions)	1,410.18	1,359.68
Passenger miles (in millions)	43,042.93	41,878.33
Earnings from carriage of passengers (Rs. in crores)	119.10	116.33
Average earnings per passenger mile (in pies).	5.31	5.33
Freight tons originating (in millions).. ..	132.08	124.07
Freight ton miles (millions)	44,861.39	40,185.78
Earnings from carriage of goods (Rs. in crores).	225.29	200.58
Average earnings per freight ton mile (in pies).	11.40	11.30
Total train miles (in millions)	224.76	215.52
Gross earnings per train mile (in Rs.) ..	18.10	17.10
Working expenses per train mile (in Rs.) ..	14.90	13.80
Net earnings per train mile (in Rs.)	3.21	3.26
Net earnings per mean mile worked (in Rs.)..	20,848.00	20,414.00

Gross Receipts

The gross receipts of the Government Railways including the worked lines for the year 1957-58 amounted to Rs. 379.78 crores as compared with Rs. 347.57 crores in 1956-57. Gross receipts in 1957-58 with figures in brackets indicating the position in 1956-57 included: passenger earnings Rs. 119.10 crores (Rs. 116.33 crores) and goods earnings Rs. 229.68 crores (Rs. 203.96 crores). The ordinary working expenses aggregated Rs. 264.18 crores, as against Rs. 233.94 crores. The operating ratio (that is, the ratio of working expenses, including transfer to Depreciation Reserve Fund, to gross earnings) was 81.21 per cent., as compared with 79.90 per cent. in 1956-57. The payment of dividend to General Reserves absorbed Rs. 44.40 crores, as against Rs. 38.16 crores in 1956-57, leaving a surplus of Rs. 13.38 crores, as against Rs. 20.22 crores.

Generally speaking, there was a rise in the earnings from the principal commodities carried by the Railways, the only important exception being rice. Traffic receipts from different commodities in 1957-58 with figures in brackets giving the receipts in the previous year are:

(Rs. in lakhs)

Coal 30,10 (26,05); rice and paddy 5,68 (5,86); grain and pulses 7,19 (5,65); wheat and wheat flour 6.61 (4,65); oilseeds 4,62 (3,98); raw cotton 4,00 (3,78); salt 4,6 (3.59); mineral ores 9,71 (7,01); fuel oils including kerosene and petrol 13,85 (12,89); sugar 6,21 (4.83); *cotton manufactures* 3,74 (3,45); vegetable oils 3,35 (2,72); cement 7,99 (6,30); iron and steel 19,19 (15,13); tea 2,12 (1,51); raw jute 2,06 (1,73) and jute manufactures 1,57 (1,28).

Among some of the most difficult problems of the Railways are loss arising from ticketless travel and loss from claims arising from loss or damage to parcels and goods. It was revealed from checks that the extent of ticketless travel over the Railways was about 4 per cent. and the consequent loss in revenue was of the order of Rs. 4.5 crores. During the year under review, 489,115 claims were settled by the Railways as against 492,962 in the previous year. The number of claims outstanding at the close of the year was 44,837. The net amount paid by the Railways on account of goods or parcels lost or damaged was Rs. 3.27 crores as against Rs. 3.33 crores in 1956-57. Apart from maintaining vigilance over various aspects of claims prevention, the special measures adopted by the authorities include: (1) provision of dunnage for wagon load consignment of grains and pulses to prevent pilferage through door crevices of wagons; (2) use of private locks by public in respect of consignments in wagon loads as a measure of additional safety, (3) provision of armed escorts for goods trains carrying valuable goods through unsafe areas and (4) publication of a pamphlet containing rules and procedures for the preferment and disposal of claims for compensation and refund.

Rolling Stock

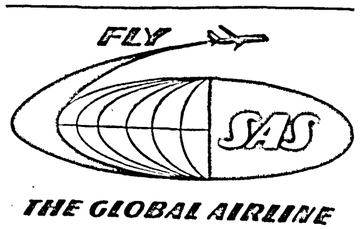
Renewals and additions to rolling stock during the year under review included 603 locomotives, made up of 225 B.G. locomotives and 378 M.G. locomotives. Further, 915 B.G., 424 M.G. and 69 N.G. coaching vehicles were placed on line, the respective figures of goods wagons being 19,894, 9,674 and 66. The Chittaranjan Locomotive Works maintained a monthly rate of 14 locomotives. The Tata Locomotive turned out 85 M.G. locomotives in 1957-58, as against 67 in the previous year. The Railway Workshops overhauled 2,470 locomotives during the year, as against 2,312 in the previous year. The percentage of overage stock to total stock was, in respect of locomotives, 29.18 B.G., 19.39 M.G. and 25.73 N.G., in respect of coaching stock 36.46 B.G., 29.62 M.G. and 56.68 N.G. and in respect of wagons, 13.03 B.G., 13.78 M.G. and 52.06 N.G.

A new level in total purchases made by the Railways was touched in 1957-58 when they aggregated Rs. 221 crores, or 29 per cent. more than in 1956-57. Of this, the total payment made for equipment of Indian manufacture was Rs. 158.48 crores in 1957-58, as compared with Rs. 125.82 crores in the previous year. The value of products of cottage and small-scale industries, purchased in 1957-58, was Rs. 3.58 crores, as against Rs. 3.77 crores in 1956-57; the corresponding figures for *khadi* were Rs. 61.67 lakhs and Rs. 53.98 lakhs.

Staff

The Railways, as is well known, are the single largest employer in the country. The total number of employees on all the Railways (including the Raiway Board and other offices) was 1,103,529 at the end of 1957-58, as compared with 1,056,779 at the end of 1956-57. On Government Railways, the number of staff at the end of 1957-58 was 1,102,673 (3,766 class I and II employees and 1,098,907 class III and IV employees), as compared with 1,050,471 at the end of the previous year (3,441 class I and II employees and 1,047,030 class III and IV employees). The cost of staff during the year 1957-58 was Rs. 172.93 crores (Rs. 4.34 crores for class I and II employees and Rs. 168.59 crores for class III and IV employees), as compared with Rs. 156.31 crores in 1956-57 (Rs. 3.83 crores for class I and II employees and Rs. 152.48 crores for class III and IV employees.

Being a large employer, the Railways have necessarily to devote their attention to welfare and educational activities. It is gratifying to note that this aspect continues to receive adequate priority. During the year under review, the capacity of the Railway Staff College, Baroda, was increased from 30 to 110. There are now 50 specialised training institutions. Some are Traffic Training Schools, which train station masters, signallers, guards and parcel and booking clerks. There are schools for training loco running staff and permanentway staff and the staff of the Railway Protection Force. Further, the Railways have continued to maintain training schools for imparting theoretical training to their apprentices in the mechanical, electrical and signal and telecommunication departments. A scheme is in operation for training apprentices in such trades as fitting, carpentry, millwright, boilermaking, tin and coppersmithy, welding, pattern making, painting, polishing, trimming and electrical wiring. These institutions, together with the schools and hostels run by the Railways, constitute a distinct contribution to India's educational and industrial progress.



HIGH LEVEL COMMITTEE ON FLOODS

In a written reply to a question in the Lok Sabha, the Union Deputy Minister for Irrigation and Power, Mr. Jaisukhlal Hathi placed on the table a summary of the recommendations contained in volume II of the report of the High Level Committee on Floods. The Committee was appointed by the Government of India in April 1957 and in the first volume of its report, submitted in December 1957, the Committee presented a general assessment of the flood problems in the country and dealt with the principles and policies to be followed in tackling them. In the present volume, the Committee has laid emphasis on the necessity for preparation of outline-master plans for the various river basins and has suggested the important points to be included in such plans. The flood problems, the measures adopted in the past, and the general lines on which flood control work should be done in future have been indicated in the case of each major river basin. The data so far collected with regard to rain gauge, river gauge, discharge, silt observation, and surveys have also been reviewed, and the lines for future investigations indicated. In developed countries, the trend is to have "one plan for one river" in order to exploit the available water resources to the maximum extent. Such co-ordinated and balanced plan of basin development, it is pointed out, has not yet been prepared for any river in this country, except to some extent by the Damodar Valley Corporation.

Analysing the main features and flood problems of the Brahmaputra basin and the measures undertaken so far by the Government of Assam in the Brahmaputra Valley, the report suggests the lines on which action should be taken to prevent bank erosion and to improve land drainage. In the opinion of the Committee, immediate steps should be taken to ensure that the catchment areas of the various rivers do not deteriorate further through faulty land use and indiscriminate destruction of forests. The catchment areas should be improved by undertaking soil conservation measures. The various tributaries should be watched for any tendency to change their courses and timely action taken to discourage such tendency wherever noticed. The low-lying areas may be reclaimed by regulated siltation. For the Ganga basin, the lines suggested for future planning generally relate to improvement of drainage conditions by removing obstructions, desilting and increasing the waterways under bridges and culverts, wherever found inadequate.

The flood problem of Delhi area, it is stated, would be considerably solved if and when the dams proposed on the river Yamuna and/or its tributaries upstream of Tajewala are constructed. The report observes that the schemes carried out by Uttar Pradesh in the basins of Yamuna, Ghagra, Ganga and other rivers should prove quite beneficial. The measure of shifting villages outside the flood courses of rivers is also recommended.

As regards improvement of the Bhagirathi-Hooghly system, the measures suggested by the West Bengal Government, namely, training of the river and dredging of bars in the lower Hooghly, controlling the silt of the principal tributaries of the river and introducing sufficient quantity of controlled upland waters from the Ganga into the Bhagirathi by the construction of a barrage across the Ganga above its offtake, have been generally considered suitable by the Committee.

The suggestions for drawing up the flood control programme for the north-western river basins include improvement and resuscitation of waterways of minor rivers like the Ghaggar and its tributaries. In the case of river basins of Central India, construction of embankments for preventing floods by river spills is considered a suitable remedy. The report also observes that there are no serious flood problems in States like Madhya Pradesh, Madras, Mysore and Kerala.

As regards surveys and investigations for flood control the report states that the present number of reporting, self-recording and non-reporting rain gauge stations—numbering 3,580; 84 and about 1,580, respectively—are inadequate for the size of the country, and has suggested that there should be an increase in the number of such stations.

The *Indian Journal of Power and River Valley Development* (Editor: K. K. Sinha, 6/2, Madan Street, Calcutta 13), which has maintained high standards in technical journalism, has published a special number (Price Rs. 7.50), giving 16 original contributions prepared for the symposium on power development, held recently in Delhi, under the auspices of the Indian Science Congress. The number carries many interesting and informative articles on power development. Mention may be made of power development in India by Mr. M. Hayath and Mr. S. Swayambu, power requirements and resources by Mr. S. S. Kunwar and Mr. A. Shankaran and prospects of power development by Mr. J. L. D'Sa. Other notable articles deal with super-grid system in India, power system design, 220 k.v. transmission line and design of axial flow units and high pressure thermal station. The special number, which also carries articles on power development in several States, is bound to be read with interest by those who could not attend the symposium and, therefore, had no access to the papers read there.

NEW PRODUCTS AND PROCESSES

New Finish for Stainless Steel

STAINLESS steel can be given a frosted appearance by a new U.S. process employing what is described as a "semi-blasting" technique. The finish, which does not penetrate the metal, is achieved by forming tiny mounds on the surface which diffuse light rays. It is applied after the stainless steel part is formed and all kinds of patterns, lettering, bossed, deposed, flat or contoured surfaces can be handled by the new process, it is claimed. Currently, the process is being used on automobile trim sections. It is expected by the developers to find applications in the home appliance, architectural, furniture, toy and other fields. Neither heat nor cold is said to have any effect on the surface, treatment and accelerated field tests indicate that weathering may have no effect. The developers report that they also are working on colouring with the new process.

New Cash Register

A relatively low-cost electromechanical computer system, developed in the U.S. for use in conjunction with cash registers, can, it is claimed, simplify retailing and eliminate a bottleneck. The system is designed to permit customers to pay for all purchases made throughout a self-service store at one checkout point instead of having to make payments at several cash registers set up by departments or groups of departments.

The unit can keep separate tallies on sales from up to 500 departments. As a sale is rung up on the cash register, an electric impulse automatically activates switches that store information in the unit. At the end of the day, a mobile read-out device is attached to each unit and the day's sales information is transferred. Without further processing, the read-out unit delivers the data on printed tape, broken down by department or classification, providing a check for inventory.

A register unit, capable of handling 50 departments or classifications, will cost $2,100. Other units, with up to 500 classifications, will range in price up to $15,000. The read-out units, depending upon capacity, will cost from $2,500 to $7,800.

New Weft Bobbin

A spinning bobbin factory of Holland has developed a weft bobbin which has many advantages over wooden weft bobbins. The new bobbin consists of two parts, namely, the shank of the bobbin which is wound of 100 per cent. cellulose paper and then impregnated on a synthetic resin basis and the foot of the bobbin on which the metal rings are mounted which is made of wear-resistant plastic. The great advantage of this design is that the shank is exchangeable and the plastic foot can be used again. This exchange ability is possible because the conic shape of the paper body of the shank can be pressed to fit into the conic hole of the plastic foot. Another important point is the stability of this bobbin. It does not splinter or crack and does not warp when subjected to intensive moistening and drying. The bobbin has a permanent perfect fit and a true vibration-free rotation.

Safe New Tyre

The United States Rubber Company has developed a new automobile tyre, which is claimed to be the safest tyre on the road that has been manufactured to date. The tyre is oval in cross-section, rather than round. This means that it will flex less as it rolls than conventional tyres and will be cooler at high speeds. The oval shape also provides more resistance to sideways push. The tread of the tyre is completely different from those of most present-day tyres. Instead of having a series of ribs separated by grooves, it is made up of cylindrical pads. These so-called "traction toes" provide "surface-biting edges" in all directions. To provide added strength, the new tyre is made of improved rubber compounds. According to the manufacturers, the tyre will give 60 per cent. more mileage than present original tyre equipment on new cars. It will cost 80 per cent. more, but will provide "a far safer ride, greater stability on curves, and more resistance to punctures and blow-outs than any other passenger car tyre now available." While the new tyre is high in cost, it is said that its basic principles can be adapted to lower-priced tyres.

New Heat-to-Electricity Converters

A new and promising method of converting heat directly into electricity by the use of ceramic-type materials is being developed by the Westinghouse Research Laboratories in the United States. According to Dr. Clarence Zener, director of the laboratories, when these special materials are heated by a flame or some other source of high temperature, they create an electrical current that can be harnessed for useful work. The materials could be used, Dr. Zener says, in small electrical power generators that do not have any moving parts or require bulky storage batteries. The ceramic-like materials are said to overcome disadvantages of some earlier methods of converting heat directly into electricity. They are, for example, made of compounds of common materials such as nickel and manganese. In addition, they do not require ultra-high-purity refining, operations that must be carried out in a vacuum, or complex electronic apparatus.

MYSORE KIRLOSKAR LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

THE Seventeenth Annual General Meeting of the Mysore Kirloskar Ltd. was held at Harihar on 31st January 1959. Addressing the shareholders on the occasion, Mr. M. D. Shivananjappa, I.A.S., Chairman of the Company, disclosed that the development of new lines, namely, the capstans and turrets, in collaboration with Messrs. Alfred Herberts of Coventry, England, would be taken up in all earnestness.

The following is the full text of Mr. Shivananjappa's speech:

"It is my proud privilege and pleasure today to extend to you all a most hearty and cordial welcome to the seventeenth annual general meeting of your Company.

"The balance-sheet as at 30th June 1958 and the profit and loss account for the year ended 30th June 1958, together with your Directors' report and the auditors' report, have been already sent to you separately. With your permission, I take them as read.

"The statements of accounts show the financial position of your Company and the business done by your Company during the last two years and with the help of these figures, you will have a comparative idea of the business done by your Company during the last two years. In the previous year, that is, the year ended 30th June 1957, the factory worked for only ten months, while during the year under report, the factory worked throughout the year. So while comparing the work done in the last two years, the total working periods for the respective years will have to be taken into account.

"The turnover during the year under report as represented by sales amounted to Rs. 86.62 lakhs, as against Rs. 54.43 lakhs in the previous year.

"It will be of some interest to you to know the percentage allocation of revenue receipts during the year under report; raw materials and stores accounted for 42 per cent.; wages accounted for 27 per cent.; indirect working expenses accounted for 10 per cent.; fuel and power for 3 per cent., statutory depreciation for 11 per cent.; taxes to Government, including income-tax and wealth tax, 4 per cent., as against the surplus of 3 per cent.

Capital Expenditure

"During the year under report, we have made additions by way of capital expenditure to the various assets of your Company to the extent of Rs. 20.22 lakhs, as against Rs. 6.92 lakhs in the previous year.

"The business of the Company was generally quite satisfactory to enable the Company to provide for development rebate to the full extent to which it was permissible under the Income-tax Act.

"You may be aware that your Company has embarked on a plan for expansion of its existing activities. This objective is already achieved by the Company and the development of new lines, namely, the capstans and turrets under the Herbert-Kirloskar collaboration agreement will now be taken up in all earnestness. I am glad to tell you that the negotiations for technical collaboration with Messrs. Alfred Herberts of Coventry, England, were successfully concluded during the year under report and the agreement was formally signed on 1st August 1958.

"For purposes of concentrated efforts and efficient production, it is proposed to open a separate establishment for the manufacture of capstans and turrets under the Herbert-Kirloskar collaboration agreement.

"You must have read from the Directors' report to you that your Company has so far availed of Rs. 21 lakhs out of the sanctioned loan of Rs. 25 lakhs from the Industrial Finance Corporation of India, New Delhi. The balance of Rs. 4 lakhs will be received in due course.

"You are already aware that your Company has decided to raise further equity share capital of Rs. 15 lakhs divided into 15,000 shares of Rs. 100 each to be issued for cash at par. As shareholders of the Company, you must have also received circular notices offering the shares to you in the first instance. The shares remaining unsubscribed by the existing shareholders are also offered to the public by issuing a prospectus and the whole of the issue is underwritten by Messrs. R. R. Nabar & Co., share and stock brokers of Bombay. The response received so far in regard to this new issue is quite encouraging.

"You will thus see that your Company has fortified its financial position in several ways and has equipped itself well to meet the growing demands for its products in our country.

"I am glad to tell you that the labour relations in the factory during the year under report were generally happy and the workmen by and large have shown a tendency to co-operate fully with the management in better work and increased rate of production. I take this opportunity to congratulate them, one and all, for this co-operation. I would like to add, however, that there is still great scope for further improvement in the rate of production. I am sure, the workmen will take to this in all sincerity and do their very best in the years to come and it is only by raising the productivity that they can ensure better conditions for themselves.

"Though the working results of your Company have been generally satisfactory during the year under report, its working was by no means very smooth. It had to face several difficulties, some of them very serious also. My predecessor in office has already referred to some of these difficulties in his speech at the time of the last general meeting of your Company. These were in regard to the difficult position of raw materials, transport and tax burden. Though the position of transport was comparatively better during the year under report, still there is great scope for improvement. The position of raw materials like special steel and hard coke continues to create very anxious situations and still continues to defy a satisfactory solution. Some of the tax burdens continue to be very high and unrelated to the earnings of the Company.

"The wealth tax continues to apply to companies in this country, though even in the industrially advanced countries of the West such a tax does not apply to the companies. The welfare activities of the Company include buildings like the club building, the canteen and the housing of its employees. These are shown as assets and are consequently regarded as wealth and wealth tax is calculated on such assets. The wealth tax is thus required to be paid even on such welfare activities.

Small Workshops

"Your Company has been encouraging the establishment of several small workshops to act as feeder workshops for the main factory. The small workshops will in due course be developed into sizable units all working independently. We have been doing our very best in helping them, giving them work and technical advice and in helping them in various other ways. These small workshops are now suffering due to inadequate power supply and improper working place. It was very kind of the Government of Mysore to select Harihar as one of the places for development of industrial estate. A time has now come when these small workshops are finding it very difficult to expand their activities for want of adequate and proper place of working. The need for an industrial estate is, therefore, all the more urgent and I, therefore, take this opportunity to request the authorities concerned to give their immediate and earnest consideration to the speedy establishment of the industrial estate at Harihar.

"Recently, the Mysore Housing Board has built about 112 quarters for employees in industrial establishments at Harihar. Your Company has fully co-operated with the Housing Board in managing its portion of the colony. The Housing Board has also assured us of 100 more tenements for the employees of your Company and I take this opportunity of expressing our sincere gratitude for all the help that is given and assured by the Housing Board.

"Ladies and gentlemen, during the year under report, the management and the members of the organisation, including workmen and the staff, had to exert their very best in raising the production and I take this opportunity of sincerely thanking them and congratulating them on your behalf for their efforts.

"Ladies and gentlemen, I now thank you for the very patient hearing that you have given me.

"I now propose that the balance-sheet and the profit and loss account and the Directors' report be adopted."

N.B.—This does not purport to be a report of the proceedings of the general meeting.

EXPORT INCENTIVES FOR MILL-MADE CLOTH

SOME SUGGESTIONS FOR IMPROVING THEIR VALUE

By K. P. Singhania

INDIA has been exporting her cloth on a large scale to her traditional markets of the countries of the Indian Ocean as also to Australia, the U.K., and Canada. The framers of the first Five-year Plan had laid down 1,000 million yards as the target for export of Indian cloth every year. This figure was exceeded in 1950 when the export amounted to 1,072 million yards. In 1954, the export was to the tune of 804 million yards. Thereafter, however, there has been a gradual fall in the export of cloth from India as will be seen from the following figures:—

	(In millions of yards)
1955	692
1956	683
1957	839
1958 (Jan. to Oct.)	492

The reasons for this shrinkage in our export trade have been the competition from Japan and Hong Kong and emergence of new exporters like China and Pakistan. What with rising costs of manufacture, owing to higher incidence of Jabour cost, higher prices of raw materials and stores and several restrictive measures adopted by many countries who have been normally importing cloth from India, the Indian textile mills have been finding it difficult to sell their products at remunerative prices in the overseas markets. The result has been the gradual fall in the export of cloth, month by month, the year 1958 showing the lowest figure of export in the last nine years.

Success Eluding

The reduction in exports of cloth resulted in accumulation of cloth in the internal markets and with the mills, and, in order to remedy this situation, the Government of India thought of devising ways and means, so that the export of cotton cloth can be stepped up. However, in spite of all the measures taken by Government such as the establishment of the Cotton Textiles Export Promotion Council with branches at all important trade centres in the overseas markets, sending of trade delegations, holding of exhibitions showing the variety and types of Indian cloth available for export, standardisation of contract forms, pre-inspection of goods, survey and arbitration machinery, the cotton cloth exports have been dwindling. Not only is this having a deleterious effect on the internal markets for cloth, but also on our foreign exchange earnings, as export of cotton cloth has been one of our major foreign exchange earners. It is out of the foreign exchange earned by the export of cloth that several important items of daily consumption like long-staple raw cotton, dyes and chemicals, machinery and spares required by the 400 and odd textile mills in India are being imported. Since the price factor in the overseas markets has been against the Indian Mills, they are finding it difficult to compete with Japan, Hong Kong, China and Pakistan. Obviously, it is a case, where the textile mills who are exporting cloth and earning vital foreign exchange should be given sufficient incentive, so that they will be in a position to export larger quantities of cloth and maintain the foreign exchange earnings for meeting the outlay on raw cotton, dyes and chemicals and machinery.

The Textile Enquiry Committee appointed by the Government of India deliberated, among other things, on this important aspect of cotton cloth export promotion and recommended incentives to the exporting mills in the form of grant of import licences for dyes and chemicals, as also for raw cotton, and plant and machinery and spare parts.

It was originally laid down that the import of coal-tar dyes and chemicals will be granted to the exporting mills on the basis of 4 per cent. and 6 per cent. of their exports of grey and processed cloths, respectively. It has, however, been announced that this basis has now been modified by Government to a flat 3 per cent. on all exports of cloth to destinations other than America and Europe. In the case of exports to America and Europe, the value of import licence would be based on 5 per cent. of the amount of cloth exported.

It is understood that this overall reduction in the quantum of value of import licences has been made to accommodate the Exporting Houses who are now to be given import licences for coal-tar dyes and dyes and chemicals to the extent of 1 per cent. of the exports effected by them. The original idea behind the incentive for the export promotion of cotton textiles was to make it worthwhile for the exporting mills to sell their cloth in overseas markets in competition with other nations whose cost of production is lower. The import of dyes and chemicals, cotton, plant, and machinery, was to be allowed to mills actually exporting cloth, so that, out of the foreign exchange earned, they may be able to get their requirements of these essential articles at reasonable prices. The grant of 1 per cent. import licences to the Exporting Houses is at best a windfall, because no incentive was needed, as they are doing business on a certain percentage of margin. Not only the incentive given to mills has been reduced, but an unnecessary advantage is being allowed to Export Houses, which do not require any incentive for exporting mill cloth to overseas markets.

Fine and Superfine Mills Benefit

It has been laid down that the exporting mills will be issued import entitlements for raw cotton based on their average export performances in the basic years 1954, 1955 and 1956 to the extent of 66.2/3 per cent. of the excess over 50 per cent. of the average exports. Unfortunately, the exporting mills will be allowed to keep for themselves only 15 per cent. of their import entitlement of cotton, the remaining 85 per cent. being surrendered to the Textile Commissioner for distribution to other mills needing this cotton on such terms and conditions as he may prescribe. It is understood that the Textile Commissioner has laid down a condition for the disposal of this 85 per cent. to other needy mills, on the basis of a 10 per cent. profit margin. How this 10 per cent. profit margin has been arrived at is not known. However, one thing is certain that, by having to surrender the 85 per cent. of their entitlement at a meagre 10 per cent. margin of profit to other mills, the exporting mills will be put to a great disadvantage. The latter, which are mostly coarse and medium units, will have to buy Indian cotton at the very high prices ruling in India and utilise this for making cloth for export. But whatever they earn by way of import entitlement has to be given to other mills which are fine and superfine units at a mere 10 per cent. margin of profit. The equivalent varieties of Indian cotton are priced anywhere from 50 per cent. to 60 per cent. higher than the imported cotton. As a result of this, the fine and superfine mills will have a further advantage, in that they will be assured of foreign cotton at considerably lower prices, namely, today's import level of prices *plus* 10 per cent. They will not be required to make any exports of their cloth and will not, therefore, be required to purchase Indian cotton and pay today's high prices.

Whereas the prices of East African cottons like Jinja, Busoga and BP-52 range between Rs. 1,000 and Rs. 1,100 per candy, the prices of top quality Indian CO2, the staple length of which is less than the East African varieties, are as high as Rs. 1,600 to Rs. 1,675 per candy. It is a well-known fact that our medium and coarse mills are passing through a crisis today, owing to uneconomic working. Their costs of raw material, stores, dyes and chemicals are very high. They have also to pay a high wage bill, whereas the realisation of their cloth is so low that they cannot make both ends meet. The average cost of Indian cotton used in mixing, out of which 24s warp can be spun, is Rs. 975 per candy. The realisation of cloth made out of this mixing is about Rs. 2-12-0 per lb. As against this, the imported varieties of East African cotton, the average price of which is Rs. 1,050 per candy, can spin 40s warp and the realisation of cloth made out of this cotton is about Rs. 4-4-0 per lb. It will be seen that the consumers of Indian cotton are at a distinct disadvantage, as compared with the consumers of foreign cotton. The consumers of Indian cotton which happen to be the medium and coarse mills are also the main exporters of cloth and earners of valuable foreign exchange. On the other hand, the consumers of foreign cotton which are the fine and superfine mills, get their raw materials at comparatively much lower prices and their realisation for cloth is much higher. It is for this reason and for the marked shift in the consumption patterns of the Indian consumer that the fine and superfine units in the industry are doing well. They had, however, not been exporting their cloth and, therefore, had not been earning any foreign exchange. All the same, they are to be supplied with imported cotton which is purchased out of the earnings of the coarse and medium mills!

In regard to the import of plant, machinery and spare parts, the licences will be granted to the exporting mills on the basis of the value of their exports in excess of 75 per cent. of the average of their past performance in the three basic years. Import will be allowed only of specified textile machinery for modernisation and/or rehabilitation.

Inadequate

Thus, the incentive given under the mill-made Cotton Cloth Export Promotion Scheme is not at all adequate for the exporting mills. Having paid high prices for Indian cotton and realising low prices for the cloth made therefrom, both in the local market as also in export, their position has become precarious. This is amply proved by the fact that there is a tendency towards curtailment of production. Many mills have closed their third shift and several others have curtailed their production even in the first and second shifts. Whereas in 1956 and 1957, the production of Indian mill-made cloth was of the order of 5,306 million yards and 5,317 million yards, respectively, the production in the year 1958 will hardly be 4,920 million yards, showing a drop of over 400 million yards. In spite of this, the stock position with the mills is at a high figure of 580,000 bales. January to April are the best months for the offtake of cotton cloth from the mills; but this year the demand from up-country centres is not encouraging at all. This shows that the Indian consumer is not in a position to purchase his requirements of cloth due to the existing prices of foodgrains which are going up every day in spite of a bumper crop we had this season. Whatever purchasing power he has, is utilised in the purchase of foodgrains, leaving very little with which he could buy his requirements of cloth.

It is, therefore, imperative that the Indian cloth should be exported on a larger-scale. In other words, the export of Indian cloth must be stepped up by giving adequate incentives to the mills. There are only a few mills, which may be able to export a substantial portion of their production, but the majority of them with

Men and Oil ... 5

The Refinery Engineer

Crude oil from the earth is a mixture of hydrocarbons (compounds of carbon and hydrogen) which may be gases, liquids, or solids at ordinary temperatures. Refining separates and re-assembles the various useful "fractions" in the crude oil and purifies them to the required degree.
The construction and maintenance of the plant in which these processes are carried out are in the hands of Refinery Engineers. Highly skilled key men, they are responsible for the efficient working of all the heat exchangers, pumps, compressors, refrigeration machinery and other equipment needed in a modern refinery. And when components of the refinery are shut down for overhaul it is the Refinery Engineer who has to examine the units and repair parts weakened by corrosion, heat, pressure and friction so that breakdowns will not dislocate the operation of the complex plant.
This is a job which calls for a high degree of training, wide engineering knowledge, experience and initiative. The Assam Oil Company places great trust in its Refinery Engineers, many of whom are Indians — all working in an industry of great importance to the nation.

COMPANY TAXATION IN INDIA—II

NEED FOR RATIONALISING STRUCTURE AND REDUCING THE BURDEN

By Professor Russi Jal Taraporevala

IN order to discuss the economic effects and implications of company taxation in India, it is necessary first to evaluate the total burden of all the direct taxes imposed on companies. It has been pointed out that the minimum burden of income-tax and super-tax on companies amounts to 51.5 per cent. of their annual assessed profits. The minimum burden of the wealth tax on companies absorbs about 4 per cent. of their annual profits. Thus, at the lower extreme, direct taxation takes away around 55 per cent. of the profits made by companies every year. At the other extreme, the total of all direct taxes may amount to 100 per cent. and, in a few cases, even exceed 100 per cent. of the annual profits made by companies. Thus, it is interesting to note that, when the Wealth Tax Bill was introduced in 1957, it was realised by Parliament that the total of all direct taxes on companies may exceed 100 per cent. of their profits. The Bill was, therefore, amended to provide that, for the purposes of the Wealth Tax, where the profits made by a company in any year are less than the Wealth Tax due for that assessment year and the company has not declared dividends, the Wealth Tax payable is limited to the amount of the profits. This means that, in such cases, the total of direct taxes takes away 100 per cent. of the profits made by companies!

In practice, most companies pay tax at a rate which falls between the two extremes of 55 per cent. and 100 per cent. of their annual profits, depending upon the various criteria which have been discussed. Today, companies in India are burdened with a rate of direct taxation, which is higher than the rate of corporate taxation prevailing in any other country of the free world.

The adverse effects of the present structure of taxation on the growth, working and financial policies of companies in India are many. The various direct taxes take away most of the annual profits made by companies in the country. Taxation makes it difficult, if not impossible, for most companies to expand by ploughing back their profits into the business. In the past, the growth of companies in India, as in all other parts of the world, was financed mainly by profits reinvested in the business. The result of the steep rise in the rates of corporate taxation in the last three years has been that most companies, after paying all their taxes and modest dividends to their shareholders, have hardly any funds left to save and reinvest in the business. Company taxation in India today severely hampers and retards the growth of corporate savings and investment.

In the past, I had repeatedly warned the Government of India, its Finance Ministers and the public of India of the grim adverse economic repercussions which taxation was likely to have on the growth of savings and investment in the country. Now at last authoritative statistics are becoming available to show that the role of corporate savings for financing the expansion or growth of companies has been drastically reduced. The Reserve Bank of India has made two surveys of the finances of joint-stock companies which reveal interesting trends. In 1957, the bank published a statistical survey of the finances of 750 companies during the period 1950 to 1955. Recently, it has published an enlarged study of 1,001 large public limited companies in the country which covers about 52 per cent. of the entire corporate business in the private sector, excluding financial institutions. These two studies reveal interesting data which should provide the Government with a stern warning of the adverse effects of its wrong taxation policies on the growth of companies.

The first study of the Reserve Bank of India showed that, for the period 1950 to 1955, internal sources or savings made by companies accounted for nearly 60 per cent., whilst external sources accounted for only 40 per cent. of the funds required by the 750 companies studied by the Bank for their growth or expansion during the five years. The new survey of the Bank shows how radically the role of savings for financing the growth of companies has undergone a change within the years 1955 and 1956. In 1955, internal sources of funds or savings made by companies accounted for 56 per cent. of the funds required for their expansion—by 1956 this percentage had slumped to only 37. On the other hand, external sources of funds had provided only 44 per cent. of the funds used for the growth of companies in 1955, but, by 1956, they accounted for 63 per cent. of the finance used for corporate growth. Under external sources, bank credit was by far the most important source in 1956 accounting for as much as 28 per cent. of the total funds as compared with only 6 per cent. for the year 1955. Trade and other current liabilities came next in importance, accounting for 17 per cent. of the total funds in 1956. The capital market played a relatively limited role in providing finance to the companies. New capital issues contributed 9 per cent. of the total funds in 1956, as compared with 8 per cent. in 1955.

Thus, the Reserve Bank of India aptly notes that "the outstanding feature in 1956 was the significant shift from internal sources to external sources" for providing the finance required by the companies. Whilst a number of causes may have contributed to this result, it can be claimed, with great justification, that the most important single cause for the drastic decline in the relative role of corporate savings for financing industrial growth of the companies has been the steep rise in the level of taxation in the last three years. Thus, the Reserve Bank of India's surveys show that, whereas, for the period 1950-55, direct taxation absorbed about 40 per cent. of the gross profits of companies, in 1956, it took away 46 per cent. of their gross profits. Since then, the rates of company taxation have been further increased, by the budget of May 1957, to a level of more than 55 per cent. of the gross profits. This is likely to further accentuate the adverse effects of taxation on the growth of company savings and investment.

The new rates of taxation almost prohibit most companies from raising fresh capital for their expansion and growth. At the present levels of taxation, a company has to earn about 14 per cent. gross profits before tax on its invested capital, if it is to pay a 6 per cent. dividend to its shareholders, without ploughing back any of the profits into the business. Very few companies can earn a rate of profit equal to or in excess of 14 per cent. on the total capital invested. The latest survey of the Reserve Bank of India shows that for even the largest companies in the country the rate of profits was around 9 per cent. of the total capital invested in the business. The profitability of most small and medium sized companies is less than this percentage and probably around 7 per cent. or 8 per cent. In these circumstances, most companies cannot possibly raise fresh capital, as they are not in a position to pay even 6 per

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Habib Bank, Limited, Indian Union Branch, as at 31st December 1958 and also the above Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provises to Sub-sections (1) and (2) of Section 211 and Sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1958 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

cent. dividends on such capital after paying all the direct taxes. Hence companies find that the only way to finance their growth or expansion is through borrowing from banks and incurring other debts on which they have to pay interest at around 6 per cent., but which interest is deductible from profits for tax purposes. The present structure of taxation literally forces companies to rely excessively on borrowed finance for financing their growth. The dangers of such financing are well known. It makes companies more vulnerable to financial collapse, bankruptcy and liquidation in times of depression or bad trading conditions. Moreover, many companies, especially the smaller and medium-sized companies, cannot borrow funds in India easily, so that the present structure severely retards and, in many cases, prohibits their growth.

The administration of taxation is not satisfactory. The tax officers have been given the most sweeping and dangerous discretionary powers. There is an unfortunate tendency on the part of some officers to soak the financially large or prosperous companies by arbitrarily increasing their tax assessments. Thus, many companies, including some of the best managed and honestly run companies, are involved in lengthy tax litigation. In a number of cases, tax assessments and tax appeals are kept pending and not completed for years after the accounts of the companies have been closed and tax returns filed. This causes uncertainty about the tax liability, which is often a source of considerable embarrassment to company managements, especially when facing their shareholders at annual meetings and when planning the future financial requirements of the business. Today, a disproportionate amount of the time and effort of company managements are being wastefully consumed in attending to tax matters. The Government of India is aware of the unsatisfactory state of tax administration and has recently appointed a committee to investigate it.

Recent changes in the structure of company taxation and its excessive rates have had many adverse effects on the interests of shareholders of various companies in the country. The interests of shareholders are intimately connected with the growth and prosperity of their companies. The ultimate burden of company taxation falls on the shareholders who are the owners of companies. In recent years, shareholders of companies have suffered severely, as a result of the introduction of new and undesirable tax legislation. The market values of their shares have crashed. Thus, in September 1956, the all-India index number of variable dividend industrial securities, having as its basis 1949-50 price equal to 100, stood at 126.9. At the end of December 1957, this index had slumped to 98. In a little over a year, investors suffered a most catastrophic decline in the value of their investments in shares of industrial companies. It has been estimated that investors lost no less than Rs. 200,00,00,000 in the value of their investments, as a result of this great decline in share prices. There can be no doubt about the fact that this severe decline in the values of shares was caused by the successive adverse budgets introduced by Mr. T. T. Krishnamachari.

Such severe losses are surely a poor and unfair reward to investors for trying to promote the industrial progress of the country by investing their hard-earned savings in the equity capital of companies. The dividends received by shareholders have been extremely modest and they have averaged around 8 per cent. of the paid-up capital in the past few years. Today, the Government of India is taking away a far greater proportion of the earnings of companies by way of excise duties and taxes than can be justified. The recent study of 1,001 companies by the Reserve Bank of India shows dramatically the excessive amounts taken by the Government of India out of their profits. In 1955, these companies earned gross profits, before paying excise duties and taxes, amounting to Rs. 166 crores. Out of this, they had to pay Rs. 49 crores as excise duties and Rs. 50 crores as taxes, thus giving the Government altogether Rs. 99 crores. The shareholders got only Rs. 39 crores as their dividends. In 1956, the gross profits of these companies, before paying excise duties and taxes, amounted to Rs. 186 crores. Government took away Rs. 58 crores as excise duties and Rs. 58 crores as taxes, making its share altogether Rs. 116 crores. The shareholders of these companies only received Rs. 42 crores as dividends.

The excessive burden of company taxation adversely affects the shareholders of companies most of whom, contrary to the popularly-held beliefs, come from the middle and poorer classes of the community. Thus, a survey of the ownership of shares and securities in Bombay City carried out by the Department of Research and Statistics of the Reserve Bank of India in 1955 showed that 60 per cent. of the shareholders were persons having a monthly income of less than Rs. 666. Company taxation adversely affects the interests of the middle and poorer classes who are least equipped to bear its burden.

It is hardly necessary to stress the importance of companies in the national economy. Companies account for most of the industrial and commercial sector of the economy. The industrial progress of the nation is largely dependent on the growth and prosperity of companies.

In conclusion, it can be claimed that companies and their shareholders have been poorly treated by the Government of India during the past three years, especially in respect of taxation. If, in spite of this, they have persevered and continued to strive for the progress of the country, it is surely a definite proof of the great nationalism and the patriotic zeal of companies which form the backbone of free enterprise in India and of their shareholders who come from the ranks of the common man. If the Government of India wants the nation to progress and to industrialise rapidly, it must give a fair deal to the companies and to their shareholders. The time has surely come to rationalise the structure of company taxation and to reduce its burden.

(Concluded)

PLACE OF BIG BUSINESS IN NATIONAL ECONOMIES

NEED FOR FRESH THINKING BY CRITICS

By Dr. Hermann Winkhaus

[The author of this article, Dr. Ing. Hermann Winkhaus is a Mannesmann executive since 1935, when he entered the Company's Board of Management, after taking a mining engineer degree in Berlin and after several years of management activities in collieries. In 1957, he was appointed Chairman of the Board of Management of the refounded Mannesmann A. G. He also belongs to the German Atomic Energy Commission and the Association of the Iron and Steel Industry; he is a member of the World Power Conference and Managing Director of the affiliated Mannesmann plants in Canada and Brazil. His Company was the first to live up to his proposal that all stock companies in industry should grant 1 per cent. of annual dividends for the promotion of science and research in Germany.]

PRESENTLY, big business and concentration in industry are the targets of much adverse propaganda in many countries. Critics allege that big business is getting bigger every day, thus progressively eliminating competition, that basic industries penetrate into the processing and manufacturing field, taking over middle-size enterprises and replacing independent small business; that capital wealth is being concentrated in the hands of a few big shareholders. In my capacity as Chairman of the Managing Board of a steel- and tube-making company, I feel that these critics seem to overlook some essential factors.

Along with the progressing integration of the world's economy, international competition is constantly getting stronger. We, therefore, have to reach the optimum size for the enterprises of any industry. This optimum has to be measured by international, not by national standards. Once, an output of one million tons a year was thought to be the optimum capacity for a steel company. Today, however, leading European experts think the optimum is two or three million tons a year, while both in the U.S. and Russia companies producing some five to seven million tons are already considered to be the optimum production unit from an economical as well as technical point of view.

Moreover, the size of an enterprise should be measured only by the share it holds in the international market. While Mannesmann, for instance, is the Federal Republic's (West Germany) fifth largest steel company, producing 8.1 per cent. of the national steel output, its share in the European Coal and Steel Community (E.C.S.C.) and world steel output is but 3.3 and 0.7 per cent. respectively. Critics of big business should, therefore, realise that the growth of big business is paralleled and/or countervailed by stronger world-wide competition which does not tolerate monopolies.

Free enterprise does not permit a rigid demarcation line to be drawn between big business, on the one hand, and small and middle business, on the other. Middle-size establishments are superior to big business wherever and whenever evolutionary trends are not yet consolidated, production has to be adjusted to a rapidly changing demand, large-scale production is unprofitable for other reasons, and specialised supplies for large enterprises have to be produced. Products of middle-size companies very often are developed to the point where large-scale production could start. Such projects have then to be financed and operated by big business. Thus, the demarcation line just mentioned is continuously crossed and this transition from small to big business decisively increases national productivity. Moreover, the building up of basic industries in overseas development countries forces our own basic industries to enter the processing and manufacturing field, because stiffening competition and increasing export difficulties make an expansion of our basic industries unprofitable.

There is no reason to fear the concentration of capital in the hands of a few shareholders. Progressive income and inheritance taxes increasingly prevent big shareholders and traditional investors from meeting the enormous capital needs of industry. Therefore, new groups of investors have to be mobilised. Mannesmann has attempted to do this for quite some time. It has no single big shareholder, but about 80,000 to 85,000 small share owners holding some 7,000 DM. on the average. No private person holds more than 1 per cent. of the Company's capital, and no other company more than 2 per cent.

To sum up. Big business does not jeopardise free enterprise, but increases its efficiency. We have constantly to regroup and revise our industrial pattern in order to achieve maximum productivity. The Federal Republic (West Germany) heavily depends on exports, since 23 per cent. of its G.N.P. come from exports, as against 5.6 per cent. in the U.S. For us, it is of vital importance whether—by international standards—we will be able to catch up with international technical and organisational developments.

U.S. SCIENTISTS ON OCEAN SECRETS

The United States scientists have recommended that the Government should immediately launch a 10-year research and survey programme of the earth's oceans, so that the knowledge can be used to help safeguard the peace, yield new sources of food for the world's rapidly expanding populations and solve mysteries about the planet and the origin of life on it. The Committee on Oceanography of the National Academy of Sciences-National Research Council, in recommending the long-range programme costing a minimum of $651.4 million, warned that, if the present rate of basic research in the marine sciences is not doubled, the United States will face "serious" economic, political and military hazards.

Besides its plea for greater "ocean-wide, ocean-deep" surveys, the Committee urged:

1. Strengthening of international co-operation in the marine sciences; 2. expansion of education in oceanography to produce more experts in this field; 3. expansion of the nation's ocean-going fleet of ships for research, surveying and development from its present size of 45 to 85 vessels; 4. construction of more land-based facilities to aid in oceanographic studies; 5. development and construction of surface research platforms as well as manned submersibles that can operate down to and on the bottom of most of the ocean seven miles below sea level; 6. studies to determine the effects of radioactive contamination caused by bumping of nuclear wastes upon the oceans and marine organisms; and 7. studies to learn how the oceans can be economically harvested to yield food, particularly animal protein for the growing numbers of the world's underfed people.

In emphasising the need for increasing studies of oceans and the "myriad of wonders" concealed beneath their surface, the Committee said:

"We know less about many regions of the oceans today than we know about the lunar surface. From a purely scientific point of view, the study of the oceans' depths can be fully as rewarding as the study of the moon.... The problems to be solved concerning the oceans are clearly more urgent than those of space."

The Committee said scientists already know that ocean depths, shrouded in darkness, have trenches as deep as seven miles below sea-level; mountains as high as Mt. Everest; sediments that contain detailed records of the ancient history of earth and its human habitation.

ALIND KER-AL-LITE

For all house and factory wiring applications, use ALIND KER-AL-LITE ... the new polythene-insulated, polyvinyl chloride (PVC) sheathed building wire.

ALIND KER-AL-LITE is manufactured to BS 2791: 1956 for aluminium conductors and BS 1557: 1954 for polythene insulation and PVC sheathing.

Approved by the Directorate General of Supplies and Disposals, also by Kerala, Madras, Andhra and Orissa States and project authorities and electricity undertakings in various States.

EXPORTS OF ENGINEERING GOODS

MACHINERY INDUSTRY TO BE DEVELOPED

INDIA'S exports of engineering goods, though they are not significant at present in relation to the country's traditional export lines, are bound to go up in the years to come. The progress of engineering industries in the country is greatly hampered by the continued dependence on foreign countries for their basic raw materials, namely, iron and steel. Now that considerable progress is being made in the development of iron and steel industry in the country, there is no doubt that the engineering industries will receive a new impetus. This will enable India eventually to emerge as an exporter of engineering goods. Indeed, India has already made a modest beginning in the matter of exports of such miscellaneous hardwares as bolts and nuts, trunks and buckets and such light engineering goods as sewing machines, electric fans and durable goods like diesel engines and lathes.

The basis of the light engineering industry is heavy machinery and capital goods industry, without which the former can make no enduring progress. In this context, it is encouraging to learn from Mr. Manubhai Shah, the Union Minister for Industry, that the Government of India has planned to make the country more or less self-sufficient in all the machinery, capital goods and equipment by 1966, that is, by the end of the Third Plan. He also hopes to set apart a small margin for exports as well. Mr. Shah, in the course of his speech inaugurating the annual general meeting of the Engineering Export Promotion Council held recently at New Delhi, stressed that India could not afford to continue to depend on imports for its basic requirements of plant and machinery. He revealed that India, during the remaining two years of the second Plan, would start concentrating on the manufacture of machinery for engineering industry as well as for other industries.

Rise in Production

A notable feature of engineering industry is that production has been steadily increasing. Its production was worth about Rs. 270 crores (less than 10 per cent. being foreign components), as against Rs. 31 crores (50 per cent. of foreign components) in 1948. The index of their production (Base 1951=100) rose to 260 in 1958, which compares favourably with the index of general industrial production at 155. By the end of the third Plan, the industry is expected to meet fully the domestic requirements estimated at about Rs. 350-400 crores.

Again, plans relating to the manufacture of machines have reached a fairly advanced stage in many instances. Mr. Shah disclosed that the six sugar machinery firms, which had formed themselves into a consortium, would produce, within the next two years, twelve sugar plants every year. The existing cement manufacturing plants, according to him, would be able to deliver within two or three years two cement plants annually. Besides, there were some schemes for the expansion of textile machineries designed to secure self-sufficiency in this sphere during the next three years. The Heavy Engineering Corporation in the public sector, he added, would be able to manufacture a steel plant every two years within about the next six years. The proposed plant for manufacturing mining equipment would meet the country's requirements fully. The Corporation would undertake manufacture of drills and rigs also.

Alluding to exports, Mr. Shah called for export drive at individual level also, apart from organised efforts. He did well to emphasise the need for maintenance of quality and after-sale service. He assured the industry that the Government would consider further incentives to it, if it produced an integrated plan for export promotion, as against the piecemeal attention given to it hitherto.

Mr. S. L. Kirloskar, Chairman of the Council, urged the Government to adopt a bold export promotion policy of which the main elements should be a bonus scheme in the form of retention of 40 per cent. of the foreign exchange earned; income tax relief proportionate to the export sale proceeds to be given to exporters showing export performance of Rs. 10,000 or more, lowering of the Reserve Bank rate for rediscounting export bills so that the cost of extended credit and insurance in no case exceeded five per cent. and grant of sufficient accommodation to commercial banks to finance fabrication and export credit; and provision of Rs. 5 crores in the Central Budget to finance prospecting of markets, travels and publicity on a 50-50 basis.

Referring to the decline in exports of certain engineering goods, Mr. Kirloskar said that items showing appreciable fall were those in which the raw material content was the predominating factor in the cost of production. These items were steel trunks, builders' hardware including locks and padlocks; G.I. buckets and bath tubs; oil mill machinery, hurricane lanterns, bolts, nuts, rivets and washers, and agricultural implements. On the other hand, the export of iron and steel furniture, water fittings, diesel engines, pumping sets and pumps, electric fans and parts, electric dry batteries, sewing machines and parts, and sugar mill machinery had risen. He also pointed out that it was not possible to derive full benefit from the existing concessions because of procedural and other difficulties.

The Engineering Export Promotion Council deserves to be complimented on the concerted efforts it is making to raise the export of engineering goods. The Council, it may be recalled, sent a trade delegation in August-September 1957 to certain West Asian countries covering Afghanistan, Iran, Kuwait, Bahrain, Iraq, Lebanon, Jordan and Egypt. Besides, market surveys were conducted for engineering goods in respect of many countries, including Iran, Ethiopia, Thailand, Syria, Egypt, Lebanon, Kuwait and Bahrain.

Report on W. Europe

A three-member delegation of the Council which toured Western Europe and the U.K. in September last, has now submitted its report. Its findings are particularly significant, in view of the growing anxiety among the Asian countries over the establishment of the Common Market. This development in Europe, according to the delegation, is likely to create problems for India. It has stressed that it is necessary that further developments should be watched with care and caution. The impact of the Common Market on India, we are told, is likely to be far-reaching in the years to come. A sizable portion of the exports and imports of eastern countries of Asia and Africa is to and from the countries of the Common Market. The tariffs fixed for the countries outside this area are, according to the delegation, bound to be such as to put countries like India at a disadvantage. India's exports to any of these Six countries are likely to be adversely affected, because of increased competition from the products of the five other Common Market countries. The linking of the overseas territories of the member-countries like Belgium and France to the Common Market will lead to further difficulties in the way of India's exports of raw materials to the Common Market and of manufactured goods to the African territories of the Common Market. The preferential treatment enjoyed by these territories is limited to the Metropolitan countries at present, but this will be extended to the other countries of the Area as well. This, the delegation has stressed, will lead to increasing competition for India's exports to these territories and even in some of the other African countries. It is further pointed out that India's trade would suffer seriously, if a common price agreement were to come about among the C.M. countries.

The delegation has drawn attention to the excellent trade promotion efforts of West European countries. The foreign trade departments of these countries are very well organised, have adequate resources and help exporters in an expeditious and useful manner, all of which greatly contribute to the development of foreign trade.

The formation of the Common Market has, of course, only an indirect significance for India's engineering industry. Generally speaking, the industry cannot hope to see an expanding market for its goods in the Common Market countries, considering that they all have highly organised engineering industries. But the gain in competitive ability, which may accrue to them through the Common Market arrangements, will enable them to compete more effectively for export markets abroad. This should make India's export promotion a particularly difficult task. In the absence of a high degree of cost-consciousness and special export promotion measures, the engineering industry would find it difficult to make headway in foreign markets.

SHIPPING FREIGHTS

COMPLAINTS OF ASIAN COUNTRIES

THE E.C.A.F.E. Committee on Trade which met at Bangkok recently provided a forum for a detailed discussion of the problem of "high and discriminatory" shipping freights charged from the Asian countries—a brief reference to which was made in these columns last week. Most of these countries, except perhaps Japan, do not have a well-developed national merchant marine. Therefore, they depend upon foreign vessels, which are said to have been following arbitrary freight rates, for the transportation of their exports and imports. The problem is more important than ever before, in view of the determined drive launched by the Asian countries to promote their exports and the growing volume of their imports consequent upon their plans for development. It is only natural that they should express considerable concern over the existing "excessive" freight rates. Such high rates, they maintained, would have a detrimental effect on their trade and put them at a severe disadvantage in the markets of the world. The representatives of the U.K., the U.S. and Japan, the principal maritime countries in the free world, held that the rates charged by the shipping companies reflect costs, particularly those arising from the inadequacy of port facilities and installation in the countries of this region. They also strongly opposed Government intervention in the matter.

These explanations, however, seemed to have failed to carry conviction to the countries of the region. The representatives of Thailand, Pakistan, India, China, Viet Nam, Ceylon, Korea, the Federation of Malaya and Indonesia, unanimously pleaded for national and international action to rationalise freight rates charged on goods shipped to and from the countries of the region. They were dissatisfied with the present situation by which the shipping conferences determine freight rates. They alleged that these rates tended to be arbitrary and were fixed without consulting their views. Freight rates, they added, did not always reflect costs and that higher rates were charged on some commodities than on others. Cases were cited where Asian exports could not meet competition in world markets allegedly because of the high and discriminatory freight charges levied on them. There was also unfair discrimination, they said, in the rate charged to certain ports in the region.

They, however, recognised the fact that, of late, freight rates had tended to decline. Nevertheless, they were of the opinion that the present levels continued to be unduly high and gave instances of countries and commodities in the region which had not shared in their decline. While these countries realised the importance of improving their port facilities—and measures taken in the various countries in this direction were enumerated—they felt that it would be in the interests of each country to develop its own national shipping. This was a long term remedy. For the time being, they hoped that the maritime nations would do their best to fix shipping rates at levels which were fair and non-discriminatory.

The representatives of maritime nations did not fully share these feelings. The Japanese representative, for instance, did not want to disturb the present system of fixing rates at the freight conferences. He contended that port facilities in most parts of South-east Asia were inadequate and that shipping operators had to levy surcharges where necessary, especially during the rainy season when the conditions in ports were worse. The U.K. and the U.S. were the other maritime countries that participated in the debate. The U.K. held that freight rates charged from the region reflect higher costs, and it emphasised the factor of delays and slow turn-round of vessels because of inadequate installations or labour unrest at some of the Asian ports. The U.K. and Japan both pointed out that, while regular shipping lines fixed their rates at the freight conference, tramps levied rates based on the factors of demand and supply. The U.K. added that the shipping lines were, however, becoming more conscious of the needs of the region, though they have their difficulties. The U.S. was opposed to government control of ocean freight rates; such control, it held, would be "inimical to the best interests of international commerce."

The Russian delegate, it would appear, took a diplomatic attitude. He did not, on this occasion, oppose the points of view of the maritime powers of the free world. This is not surprising, for Russia, too, is emerging as a

18/VSK/58

UPPER GANGES' PROFIT DECLINES

DIVIDEND, HOWEVER, MAINTAINED

A FALL in the quantity of cane crushed, lower recovery and consequently lower output of sugar, coupled with 100 per cent. increase in excise duty and the loss on sugar exports, have depressed the profit of the Upper Ganges Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) for the year ended 30th June 1958. The Company's sale proceeds showed a further smart rise over those in the preceding years, but this was of no avail, as the rise in the value of turnover was more than nullified by the steep increase in excise duty paid from Rs. 46.28 lakhs in 1956-57 to as much as Rs. 95.90 lakhs. The gross profit for the year at Rs. 40.30 lakhs represents a drop of Rs. 4.96 lakhs or 10.9 per cent. from Rs. 45.26 lakhs for the previous year, at which level it was more than twice that (Rs. 22.18 lakhs) for 1954-55. It is also lower as compared with Rs. 41.56 lakhs for 1953-54.

The Company's progress during the past four years is indicated in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds	3,75.17	3,59.09	2,73.14	1,85.41
Closing stocks	1,13.06	1,31.90	1,55.43	1,12.24
Other income	2.99	2.76	3.43	6.24
Manufacturing and other expenses	2,23.12	2,46.73	2,46 84	2,08.25
Excise duty	95.90	46.28	42.72	20 60
Gross profit	40.30	45 26	29 83	22.18
Managing Agents' remuneration	3.40	3.84	6.26	5.44
Provision for—				
Depreciation	8.90	12.54	10.54	6.50
Taxation	19.50	18.50	7.90	5.75
Net profit	8.50	10.38	5.13	4.49
To reserves	3.24	5.50	2.08	1.00
Dividends—				
5 per cent. cum. preference	1.11	1.11	1.15	1.15
Ordinary	4 00 (50%)	4.00 (50%)	2.40 (30%)	2 00 (25%)
Carry forward	0.25	0.10	0.33	0.83

The spiralling rise in the excise duty can be easily seen from the above table. It will be seen that, from Rs. 20.60 lakhs in 1954-55, the excise duty has shot up by Rs. 75.30 lakhs or as much as 365.5 per cent. to Rs. 95.90 lakhs in 1957-58. Besides, the provision for taxation has also gone up from Rs. 18.50 lakhs to Rs. 19.50 lakhs. Although this represents a rise of only Rs. 1 lakh, what is to be noted is that the tax provision claims almost about half of the gross profit. The amount set apart for depreciation at Rs. 8.90 lakhs is, however, lower as against Rs. 12.54 lakhs. After these essential provisions, the net profit has declined from Rs. 10.38 lakhs to Rs. 8.50 lakhs. Consequently, the amount allocated to reserves is also lower at Rs. 3.24 lakhs, as against Rs. 5.50 lakhs. A breakdown of this allocation reveals that Rs. 2.75 lakhs has been taken up by development rebate, Rs. 24,530 by provision for bad and doubtful debts and Rs. 25,000 by *reserve for contingencies*.

The shareholders may feel gratified that, despite the setback in the results as narrated above, the dividend is proposed to be maintained at 50 per cent. per annum for the second year in succession and compares with 30 per cent. for 1955-56 and 25 per cent. for 1954-55.

A dividend of 50 per cent. may seem spectacular, but it takes up only Rs. 4 lakhs, out of a turnover of about Rs. 3.80 crores. The preference dividend (at 5 per cent.) requires Rs. 1.11 lakh. Out of a share capital of Rs. 35 lahks, the ordinary capital is only Rs. 8 lakhs, the balance being in preference shares. Further, the Company has not capitalised any of its reserves. If the Company had kept the major part of its share capital in ordinary shares and also capitalised its reserves from time to time, the rate of dividend would not be as high as it is at present.

During the year under review, the Company's sugar mills worked for 156 days, as against 209 days in the previous year. The quantity of cane crushed fell from 10,832,726 maunds in the previous season to 9,547,293 maunds. The recovery at 10.14 per cent. was also lower, as compared with 10.38 per cent. in the previous year, which was a new record in the Company's history. It is, however, encouraging to know that the year's recovery is the second best and better than an earlier record of 10.01 per cent. in the 1946-47 season. The lower recovery during the year under review is attributed to sugarcane having been affected by red rot disease. In the current year, the mills are expected to crush only about 8,000,000 maunds of sugarcane due to poor crop resulting from drought in the area. This means that in the current year sugar output will be less than in 1957-58.

The Government of India allotted to the mills an export quota of 8,916 bags of sugar in the past season. This is expected to fetch a price of about only Rs. 12 per maund.

The results of the Company's chemical department were adversely affected during the year under review. The Directors state that, while the cost of production continued to rise owing to increases in the price of chemicals, raw materials and other working expenses, the selling prices could not be correspondingly increased by reason of keen competition. The erection of the plant and machinery for the distillery is progressing satisfactorily and the distillery is expected to start working during the current year. A subsidiary company, namely, Alco-Chem Ltd., was registered during the year. It is proposed to run the distillery by the said subsidiary company and the buildings, plant and machinery for the distillery will be leased out to the subsidiary company.

The Company's reserves and surplus aggregate Rs. 37.93 lakhs, as against a paid-up capital of Rs. 35 lakhs. The current liabilities stand at Rs. 170.96 lakhs, of which secured loans from a bank account for Rs. 108.73 lakhs (having been reduced from Rs. 119.14 lakhs at the end of 1956-57) and unsecured loans for Rs. 6.77 lakhs. The gross block of the value of Rs. 165.08 lakhs stands written down at Rs. 75.21 lakhs. Additions during the year were of the order of Rs. 39.61 lakhs. The current assets aggregate Rs. 168.72 lakhs and fall short of the current liabilities and the provision for taxation by Rs. 2.24 lakhs.

RESULTS OF KELVIN JUTE ENCOURAGING

It is ratifying to find that the Kelvin Jute Company Ltd. (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) has fared better during the year ended 31st May 1958. Sales of gunnies have improved and profits have gone up substantially, even after making allowance for the fact that the previous accounting period related only to eleven months ended 31st May 1957. Improvement in profits has enabled the Company to strengthen the reserves and raise the dividend to ordinary shareholders.

Sales of gunnies during the year under review fetched Rs. 180.95 lakhs, as against Rs. 157.76 lakhs in the previous eleven-month period. The gross profit has more than doubled from Rs. 9.01 lakhs to Rs. 18.33 lakhs. So has the net profit, from Rs. 2.49 lakhs to Rs. 5.09 lakhs. It is significant that the rise in the net profit is after substantially increasing the provisions for both depreciation and taxation. Thus, the former, that is, depreciation, has received Rs. 5.10 lakhs, as against Rs. 3.58 lakhs. The provision for taxation has been stepped up from Rs. 2.40 lakhs (including Rs. 80,000 as provision for wealth tax), to Rs. 6.67 lakhs, of which Rs. 42,000 are for wealth tax.

The net profit has been strengthened by Rs. 15,767, representing dividends forfeited and Rs. 40,482 by West Bengal sales tax receivable from Government in respect of previous years. After utilising Rs. 1,300 for paying off dividends previously forfeited, the Directors have transferred Rs. 1 lakh to general reserve and Rs. 1 lakh to development rebate reserve, as against nothing in the previous period. The dividend on ordinary shares has been raised to 12½ per cent. per annum from 9 per cent. paid for the eleven months ended 31st May 1957. The increase, it is needless to add, is more than proportionate; at 9 per cent. for 11 months, the annual rate is only 9.9/11 per cent. The dividend for 1957-58 consists of an interim payment of Rs. 5 already paid and the proposed final of Rs. 7.50 per share of Rs. 100 each. It absorbs Rs. 2.62 lakhs. The 7 per cent. cumulative preference shares take up Rs. 70 000, leaving a balance of Rs. 1.19 lakh to be carried forward, as against Rs. 86,701 brought in.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills continued to work 48 hours per week throughout the year, with 12½ per cent. of the looms sealed. The Directors state that, during the year under review, trading conditions were fair, though raw material prices tended to be on the high side in comparison with prices of manufactured goods.

The financial position of the Company, as disclosed by its balance-sheet as at 31st May 1958, is quite strong. The paid-up capital of Rs. 31 lakhs is supplemented by reserves and surplus aggregating Rs. 56.19 lakhs, of which the general reserve alone accounts for Rs. 44.50 lakhs. The gross block of the value of Rs. 141.36 lakhs (including Rs. 5.91 lakhs of new additions) stands well written down at Rs. 47.48 lakhs. Machinery in transit is shown at Rs. 32,500. The current assets aggregate Rs. 74.05 lakhs, of which cash and bank balances alone account for Rs. 6.45 lakhs, and cover the current liabilities and the provision for taxation amounting to Rs. 34.67 lakhs by a very wide margin.

The Rs. 100 fully paid-up ordinary shares are currently quoted at Rs. 240 *ex-div.* at which rate, and on the basis of the dividend for the year, the yield is 5.2 per cent. per annum.

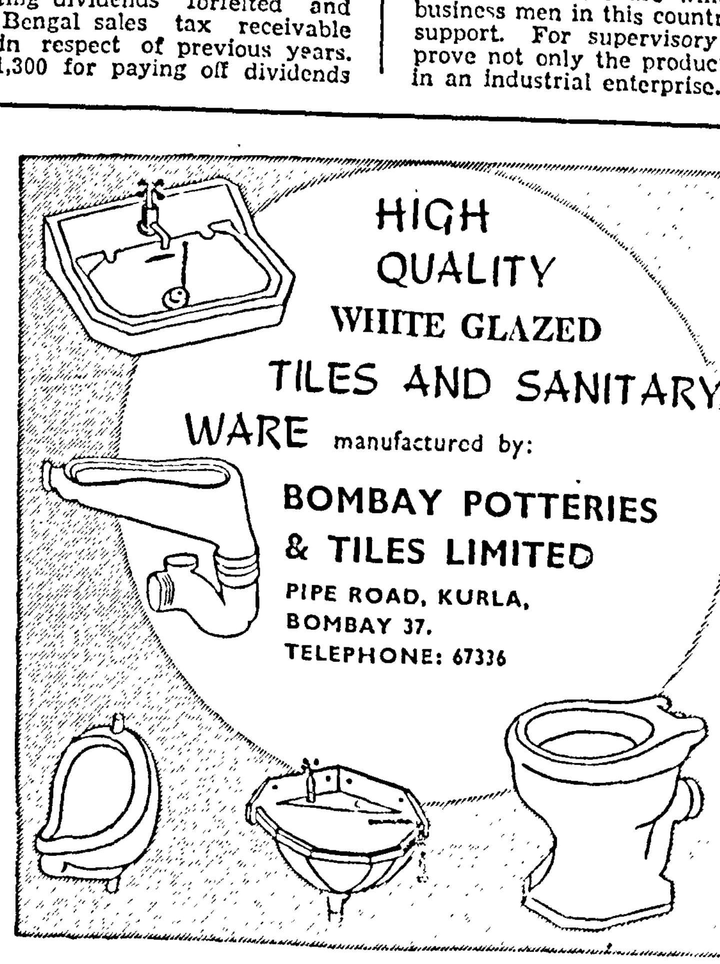
SUPERVISORY TRAINING

Supervisory training is now established and accepted as an important function of management in all progressive concerns. Such training helps to bridge the gulf between the qualifications which a supervisor possesses and the actual requirement of the work he is engaged in. It is an effective aid to the management of industry, business and other institutions and organisations in improving production, productivity and labour relations. The Institute of Supervisory Training was founded in 1956, with a view to promoting the cause of supervisory training in this country. Its object is to bring together all those who are interested in supervisory training and to provide a forum to discuss and help solve the problems faced by members in the application of various training techniques and methods, to help the members in handling problems connected with the conduct of training groups and general use of T.W. 1 and other forms of training and to promote and popularise visual aids and the publication of books, pamphlets and periodicals.

The need to provide adequate supervisory training for executives and operatives of industrial and commercial concerns was underlined by Mr. N. Dandekar, President of the Bombay Management Association in the course of his address to the Supervisory Training Conference held under the auspices of the Indian Institute of Supervisory Training in Bombay on the 14th inst. He appealed to industrial management in the country to devote more attention to supervisory training.

Stressing the importance of training as an integral function of management, Mr. Kali Mody, President of the Institute, pointed out that the success of supervisory training in any organisation could be achieved only if senior and top management co-operated with it.

Here is a cause which all industrialists and business men in this country should wholeheartedly support. For supervisory training will help improve not only the production but also the morale in an industrial enterprise.



23 FEB 1959

NEW INDIA SUGAR

GROSS PROFIT SHRINKS

A SHRINKAGE in gross profit from Rs. 16.22 lakhs in 1956-57 to Rs. 15.26 lakhs is the feature of working of the New India Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) during the year ended 30th June 1958. This has happened despite the modest rise in sale proceeds from Rs. 147.49 lakhs a year before to Rs. 148.27 lakhs. It is, however, gratifying to know that the gross profit for 1957-58 is still substantially higher than that (Rs. 9.68 lakhs) for 1955-56. As against the gross profit, the net profit at Rs. 4.65 lakhs stands higher, as compared with Rs. 3.15 lakhs for 1956-57. This is due to the cut in the provision for depreciation from Rs. 4.59 lakhs in the previous year to Rs. 1.98 lakh. The provision for taxation at Rs. 7.30 lakhs is, however, higher by Rs. 20,000 as compared with that for the preceding year.

Out of the net profit, the Directors have transferred Rs. 2.87 lakhs, that is, more than 50 per cent. to the various reserves, as against nothing at all in the previous year. Of this appropriation, Rs. 2.50 lakhs go to general reserve, Rs. 25,000 to reserve for contingencies and Rs. 11,789 to development rebate. An ordinary dividend of 25 per cent. has been proposed, a rate which the Company has consistently maintained since 1950-51.

The following comparative table, presenting the salient features of the Company's working during the past three years, will provide an idea of progress:

(In lakhs of rupees)

	For the year ended 30th June		
	1958	1957	1956
Sale proceeds	148.27	147.49	104.08
Closing stock	41.70	58 83	61.09
Excise duty	34.45	23.19	15.00
Manufacturing and other expenses	82.77	109.57	97.22
Gross profit	15.26	16.22	9.68
Managing Agents' remuneration	1.33	1.88	1.72
Depreciation	1.98	4.59	2.95
Taxation	7.30	7.10	2.56
Net profit	4.65	3.15	2.45
Gain on sale of investment	..	..	0.29
Transfer to reserves	2.87	..	0.29
Dividends—			
7½% cum. preference	0.04	0.04	0.04
5½% cum. red. preference	0.38	0.38	0.41
Ordinary	1.97 (25%)	1.97 (25%)	1.97 (25%)
Carry forward	0.18	0.79	0.04

During the year under review, the Company's factory, which is in North Bihar, worked for 135 days, as against 190 days in the previous year. The sugarcane crushed at 3,698,341 maunds was also lower, as compared with 5,153,581 maunds in the previous season. The recovery, however, was much better at 10.09 per cent., as against 9.17 per cent. in the preceding year. In the current year, a crushing of only about 3,000,000 maunds of sugarcane is expected, as the standing cane crop has been damaged by drought in the area.

The Government of India allotted to the Company an export quota of 3,438 bags of sugar against production of the season 1957-58, which is said to have fetched a price of about only Rs. 12 per maund, due to the very low price of sugar in the international markets.

The outstanding feature of the Company's finances is its strong reserve position. Its reserves and surplus aggregate Rs. 25.55 lakhs, of which the general reserve alone accounts for Rs. 19 lakhs. As against this, its paid-up capital stands at Rs. 18.55 lakhs. This consists of 78,910 ordinary shares of Rs. 10 each, 10,000 5½ per cent. taxable redeemable cumulative preference share of Rs. 100 each and 486 7½ per cent. cumulative preference shares of Rs. 100 each. Secured loans from a bank is shown at Rs. 31.16 lakhs and unsecured loans at Rs. 2.61 lakhs. The other current liabilities and provisions amount to Rs. 25.23 lakhs, inclusive of Rs. 13.56 lakhs as provision for taxation. The total of current liabilities thus comes to Rs. 59 lakhs. It is matched by current assets aggregating Rs. 81.66 lakhs. The gross block of Rs 50.24 lakhs stands written down to Rs. 21.43 lakhs. Of the current assets, investments amount to Rs. 16.84 lakhs; of these quoted investments are only Rs. 11,234, their market value being Rs. 7,821. Of the balance, represented by unquoted investments, the major items consist of National Engineering Industries Ltd. (Rs. 10.05 lakhs) and the Behar Journals Ltd. (Rs. 5.50 lakhs).

The Rs. 10 fully paid up ordinary shares are quoted at Rs. 28 *cum-div.* On the basis of *ex-div.*, the yield works out to 9.8 per cent.

COMPANY MEETINGS AND DIVIDENDS

BHARAT SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends payable on and after 10th March 1959. Transfer books will remain closed from 16th February to 27th February 1959, both days inclusive.

NEW INDIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends payable on or after 10th March 1959. Transfer books will remain closed from 16th February to 27th February 1959, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 27th February 1959. Transfer books will remain closed from 14th February to 27th February 1959, both days inclusive.

KELVIN JUTE CO., LTD. Annual General Meeting, Calcutta, 27th February 1959. Dividends are payable on or after 12th March 1959. Transfer books will remain closed from 14th February to 27th February 1959, both days inclusive.

JAIPUR UDYOG LTD. Annual General Meeting, Sawai Madhopur, 28th February 1959. Transfer books will remain closed from 23rd February to 28th February 1959, both days inclusive.

UPPER GANGES SUGAR MILLS LTD. Annual General Meeting, Calcutta, 2nd March 1959. Dividends on shares payable on or after the 10th March 1959. Transfer books will remain closed from 23rd February to 2nd March 1959, both days inclusive.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 16th March 1959. Dividend payable after 26th March 1959. Transfer books will remain closed from 9th March to 23rd March 1959, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 16th March 1959. Transfer books will remain closed from 27th February to 16th March 1959, both days inclusive.

EMPIRE DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 16th March 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 27th February to 20th March 1959, both days inclusive.

G. CLARIDGE AND CO., LTD. Annual General Meeting, Bombay, 16th March, 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 27th February to 20th March 1959, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 16th March 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 27th February to 20th March 1959, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 16th March 1959. Transfer books will remain closed from 27th February to 20th March 1959, both days inclusive.

NEW GREAT EASTERN SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 17th March 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 27th February to 20th March 1959, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 19th March 1959. Transfer books will remain closed from 9th March to 19th March 1959, both days inclusive.

T. STANES AND CO., LTD. Annual General Meeting, Coimbatore, 25th March 1959. Transfer books will remain closed from 11th March to 25th March 1959, both days inclusive.

DHANALAKSHMI MILLS LTD. Annual General Meeting, Tirupur, 28th March 1959. Transfer books will remain closed from 15th March to 28th March 1959, both days inclusive.

AUCKLAND JUTE CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. Dividends are payable on or after 5th March 1959. Transfer books will remain closed from 17th February to 27th February 1959, both days inclusive.

KINNISON JUTE MILLS CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. The share transfer registers will remain closed from 17th February to 27th February 1959, both days inclusive.

STANDARD JUTE CO., LTD. Interim dividend of Rs. 2.50 per share on ordinary shares for the year ended 31st March 1959. Transfer books of the Company will remain closed from 17th February to 27th February 1959, both days inclusive.

UNION JUTE CO., LTD. Interim dividend of Rs. 5 per share on ordinary shares for the year ended 31st March 1959. Transfer books will remain closed from 17th February to 27th February 1959, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of £3½ per cent. nett on ordinary stocks, for the year ended 31st March 1959.

CENTRAL HYDRAULIC PRESS CO., LTD., CALCUTTA. Dividend of Rs. 6 per share for the year ended 30th June 1958.

KILLICK INDUSTRIES LTD. Final dividend of Rs. 5 per share (making Rs. 13 for the period) on the shares of the Company, free of income-tax and proportionate on the shares of the new issue, for the 17 months ended 30th November 1958. Transfer books will remain closed from 3rd March to 20th March 1959, both days inclusive.

COMMERCE AND INDUSTRY

(Concluded from page 280)

maritime power, participating to a very considerable extent in the trade between South-east Asia and itself. Obviously, the way in which the British, American and Japanese shipping lines fix freight rates suits Russia and enables it to make good profits. All that the Russian delegate did was to endorse the passionate desire of Asian countries to develop their own mercantile marine. Expression of such sentiments does not cost Russia anything. Nor is it Russia's monopoly. The developed countries of the free world have not opposed the plans of Asian countries to develop their merchant navy. In fact, they have helped these countries in augmenting their fleet, even though their shipowners have tried to discourage them from doing so.

The discussion of this problem was finally summed up by Mr. U. Nyun, Acting Secretary of the E.C.A.F.E. He advised the Governments of Asian countries to contact the shipping lines directly and to consider making greater use of tramp shipping. While he promised that his Secretariat would keep the matter in review, he wanted the countries concerned to keep the Secretariat informed of their continuing experience in the matter.

INDUSTRIAL PRODUCTION IN FRANCE

The following is a brief review of the trend of industrial production in France during the year 1958:

Coal: Production came to 60.2 million tons, which is 1.8 per cent. more than in 1957. This is even more remarkable, in that consumption clearly decreased (74.2 million tons, as compared with 81.6 million tons in 1957) and considering that there was a general coal crisis in the European countries. Pithead stocks quadrupled in one year, and now aggregate 2 million tons.

Electricity: Production came to 63 milliard kilowatt-hours in 1958, which is 7.5 per cent. more than in 1957. Thermal energy made up 46.5 per cent. of this total, and hydraulic energy accounted for 53.5 per cent. Budget economies reduced the investment credits for this industry in 1958.

Gas: Production rose by 6.7 per cent. from 1957 to 1958. The building of the distribution network for the gas from Lacq, which will soon be finished, will greatly stimulate consumption of natural gas (at present 1 milliard cubic metres).

Oil: Production was 2,390,000 tons in 1958, a million tons of which came from overseas (400,000 tons were shipped from the Sahara). This is an increase of 42 per cent. as compared with 1957. However, the oil wells are far from nearing their *maximum capacity, the means* of transport still being inadequate. The laying of the pipeline should be completed in 1959. Refineries treated 30 million tons, which is an increase of 20 per cent. as compared with 1957 (the Suez crisis) and of 6.9 per cent. as compared with 1956. Domestic consumption was 19.5 million tons, as against 17.6 million tons in 1957.

Steel: France is the only Western country to have increased its steel production in 1958. Production aggregated 14,590,000 tons which is 3.5 per cent. more than in 1957. Despite the international recession, exports remained large.

Automobiles: Production was again excellent in 1958, despite a fall in the rate of orders. For the first time, more than a million vehicles were produced, and perhaps as many as 1,100,000 units, which would be a rise of 18 per cent. as compared with 1957. This increase was made possible by the export drive (345,000 vehicles, as compared with 251,920 in 1957, which is an increase of 36.8 per cent.).

Chemical industries: The rate of increase scarcely slackened in this industry, where it was already very high. This is particularly true of the development of plastics and fertilizers.

Engineering industries: Output in certain branches has definitely levelled off (electrical apparatus, machine tools, television), which is not true of other branches (heavy electrical equipment, railway material, hardware electric household appliances, farm machinery, motor cycles, general machinery, telegraph and telephone equipment and shipbuilding). The branches most affected were those which depend on Government orders, which were drastically reduced as a result of budget economies, and those of durable consumer goods, the purchasing of which is always postponed during periods when purchasing power is low.

Textile industries: The crisis in these industries is due to reasons which have been described before: a poor market coupled with a structural crisis (shrinking export markets and aging plant). The same situation applies to leather, shoes, and clothing in general.

Building and public works: The situation in 1958 was not very good in these industries, which depend very much on Government credit. It is estimated that 280.000 lodgings had been completed in 1958, which is about the same number as in 1957. The number of new lodgings begun (300,000) was less than last year.

BOMBAY POTTERIES' PROFIT HIGHER

CALCUTTA HYDRAULIC PRESS TO WIND UP

Bombay Potteries and Tiles Ltd.

THE directors of the above Company (Chairman: Mr. Motichand G. Shah) submit the audited accounts of the Company for the year ended 30th September 1958.

The year's working after meeting all expenses of operation and management and after providing for depreciation (normal and shift), development rebate, and taxation, shows a profit of Rs. 2,32,417 (Rs. 2,33,155). To this has been added the excess provision for doubtful debts, Rs. 1,744 (Rs. 8 890), refund of income-tax Rs. 875 (*nil*), bad debts written off realised Rs. 346 (*nil*) and the balance brought forward from last year's account of Rs. 2,341 (Rs. 4.820), making a total of Rs. 2,37,723 (Rs. 2.51,122 after adding reimburse from managing agents on bad debts and contingent liability of the previous years amounting to Rs. 4,257). Out of this, the directors have appropriated to plant rehabilitation reserves Rs. 20,000 (Rs. 75,000) and general reserve Rs. 25 000 (*nil*). This leaves a balance of Rs. 1,92,723 (Rs. 1 76,122), from which the directors recommend payment of dividend on 1st cumulative preference shares at 6½ (6½) per cent. (less income-tax) for the year 1957-58 of Rs. 7,358 (Rs. 7,358), dividend on 2nd cumulative preference shares at 4½ (4½) per cent. (free of income-tax) for the year 1957-58 Rs. 38,821 (Rs. 38,821) and dividend on ordinary shares at 9 (9) per cent. plus 1 per cent. as jubilee dividend (free of income-tax) for the year 1957-58 absorbing Rs 1,41,780 (Rs. 1,27,602), leaving a balance of Rs. 4,764 (Rs. 2 341) to be carried forward to next year's account.

The year under report marks the completion of 25 years of ceramic manufacture by the Company in Bombay. The Company has maintained steady progress. As there is a heavy demand for the goods manufactured, the directors are seriously considering expansion of the factory. With this end in view, Mr. C. P. Shah, the Company's technical adviser was asked to visit Europe and America to study the latest development in the manufacturing process and also to discuss with manufacturers of machinery and furnaces about deferred payment. Mr. Shah has recently returned to this country and has submitted his report which is receiving serious consideration by the board of directors.

During the year under report, there was complete peace and harmony between the Company and its labour. Due, however, to the increase in the *living index, the daily-rated* workmen have put up a demand for increased dearness allowance on the same rate as obtainable in the textile industry, which demand has since been placed before conciliation. The properties, stock-in-trade and other assets of the Company have been adequately insured for Rs. 29,96,500.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,53,650	Block ...	14,15,466
Reserves ...	4,29,295	Raw materials, stores, saggars, loose tools, etc. ...	4,28,918
Provision for taxation ...	4,02,442	Stock-in-trade	1,36,936
Liabilities ...	5,14,974	Debts, deposits and advances ...	2,14,500
Profit and loss account ...	4,764	Investments	10,441
		Cash ...	15,98,864
	Rs. 38,05,125		Rs. 38,05,125

Calcutta Hydraulic Press Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The accounts show a profit of Rs. 63,108 (Rs. 44 838) to which has to be added the profit on realisation of investments Rs. 837 (*nil*), making a total of Rs. 63.945 (Rs. 44 838). After deducting taxation amounting to Rs. 37,000 (Rs. 13,500), the balance is Rs. 26,945 (Rs. 31,338). The balance brought forward from last year was Rs. 23,272 (Rs. 20,934) and there has been transferred from unclaimed dividends Rs. 8.808 (*nil*), taxation reserve Rs. 5.000 (*nil*), reserve for depreciation of investments Rs. 94,207 (*nil*) and reserve Rs. 1,75,000 (*nil*) aggregating in all Rs. 3 38,252 (Rs. 52.272). From this is deducted under-provision for taxation in previous years Rs. 42.000 (*nil*) and amount written off investments Rs. 2,52.029 (*nil*) leaving a balance available for appropriation Rs. 44.203 (Rs. 52 272). The directors recommend that a dividend of Rs. 5 (Rs. 3) per share be paid, absorbing Rs. 40,000 (Rs. 24 000) leaving a balance to be carried forward of Rs. 4.203 (Rs. 28.272).

The provision for tax under-provided in previous years has become necessary because, in the assessments for these years which have now been completed, the Income-tax authorities have assessed to tax the surplus which arose from the sale of the Company's plant and machinery.

Having regard to the value of the Company's assets in relation to the amount of its income which is available for distribution after charging all expenses and providing for taxes, the Board considers that it is in the best interests of the members of the Company that the Company be wound up and its assets distributed to its members. Notices will, therefore, shortly be issued calling an extraordinary general meeting of the members of the Company for the purpose of considering a special resolution to wind up the Company by means of a members' voluntary liquidation. In view of this, the Company's balance-sheet as at 30th June 1958, has been framed to show its quoted investments at their market value on that date.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	1
Reserves ...	52,365	Debts, deposits and advances ...	1,288
Provision for taxation ...	37,879	Investments	8,94,514
Liabilities ...	40,663	Cash ...	39,307
Profit and loss account ...	4,203		
	Rs. 9,35,110		Rs. 9,35,110

Waverley Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: *Messrs. McLeod* & Co., Ltd., Calcutta) submit the audited statement of accounts for the year ended 31st May 1958.

The profit for the year after providing for depreciation Rs. 1,24,630 (Rs. 1,37.000) and taxation Rs. 21,000 (*nil*) amounts to Rs. 2.86,627 (loss of Rs. 4,25,950). To this is added the transfer from general reserve Rs. 1,15.000 (*nil*), dividends forfeited Rs. 1,670 (*nil*), doubtful debts written back Rs. 3 (*nil*), West Bengal Sales Tax receivable from Government in respect of previous period Rs. 40,595 (*nil*) and refund of managing agents' commission Rs. 17,500 (*nil*) making a total of Rs. 4.61,395 (loss of Rs. 4,26,612 after paying forfeited dividends amounting to Rs. 662). From this is to be deducted the debit balance brought forward from the previous period of Rs. 4,15.285 (credit balance of Rs. 11,327) leaving an available balance of Rs. 46,110 (loss of Rs. 4 15,285). This the directors recommend should be distributed as follows:—

In payment of dividend on 15,000 preference shares at 5 per cent. per annum for the eleven months ended 31st May 1957 amounting to Rs. 34,375 (*nil*) leaving a balance to be carried forward of Rs. 11,735 (debit of Rs. 4,15,285).

The mills closed down on 17th June 1957, but the working loom hours during the year have been sold to other mills within the McLeod Group which has enabled the Company to show a profit.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	12,02,089
Reserves ...	5,20,000	Stores and spare parts	4,21,450
Provision for taxation ...	21,000	Debts, deposits and advances ...	6,09,902
Liabilities ...	11,00,378	Investments	60.000
Profit and loss account ...	11,735	Cash ...	3,59.672
	Rs. 26,53,113		Rs. 26,53,113

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

With the sum of Rs. 18,786 (Rs. 29,690) brought forward from last year and after providing Rs. 3.85.410 (Rs. 2,60,357) for depreciation, Rs. 1.06.650 (*nil*) for wealth tax for assessment years 1957-58 and 1958-59, there is a balance of Rs. 2.81.782 (Rs 2,38,786). After transferring Rs. 20,000 (*nil*) to development rebate reserve and Rs. 25 000 (*nil*) to general reserve, there remains a sum of Rs. 2,36,782 (Rs. 2.38.786) from which the directors recommend payments as follows:—

To payment of dividend on 10,000 preference shares at 7 per cent. per annum without deduction of income-tax Rs. 70,000 (Rs. 70,000), to payment of dividend on 6,00,000 ordinary shares at 2½ (2½) per cent. per annum without deduction of income-tax Rs. 1.50,000 (Rs. 1.50,000) and to carry forward to the next year Rs. 16,782 (Rs. 18,786).

Trading conditions continued to be difficult throughout the year. During the earlier part of 1958, prices of finished goods touched very low levels and resulted in the fixation of minimum prices by the members of the Indian Jute Mills Association below which sales are not transacted.

In view of growing competition at home and abroad, the directors have decided to strengthen the competitive position of the Company by fully modernising the mills upto the spinning stage with the latest equipment. The Government of India are assisting the jute industry for modernisation by granting loans through the National Industrial Development Corporation Private Ltd. The Company has applied to the N.I.D.C. for the necessary loan to the extent of Rs. 20.5 lakhs, and orders for the new machinery have already been placed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	72,00,286
Reserves ...	44,70,000	Capital work in progress	22,135
Provision for taxation ...	5.75.451	Stores and spares ...	9,50 425
Liabilities ...	66,01,432	Stock-in-trade	62,55,040
Profit and loss account ...	16,782	Debts, deposits and advances ...	37,06 942
		Investments	4 08.759
		Cash ...	1,20.078
	Rs. 1,86 63.665		Rs. 1,86.63.665

Sri Palamalai Ranganathar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. S. K. Rangaswamy Naidu & Co., Periaiaickenpalayam) submitted the audited statement of accounts for the year ended 31st March 1958 and make the following report on the working of the Company during the said year.

The directors state that the year's working after deducting all working expenses and interest and before providing depreciation has resulted in a net loss of Rs. 2.01,879 (profit of Rs. 1,48,216). Deducting from this, Rs. 1,339 (*nil*) the balance of profits of last year and refund of income-tax amounting to Rs. 2,471 (*nil*), the total amount to the debit of profit and loss account on 31st March 1958 was Rs. 1,98,069 (credit of profit and loss account was Rs. 1.68,673, after transferring Rs. 45,153 from general reserve Rs. 35,000 from machinery replacement reserve and Rs. 6.008 from provision for taxes). The directors have paid Rs. 468 (Rs. 591) by way of charity and donation. After adding this amount, the balance of loss on 31st March 1958 is Rs. 1,98,537 (balance of profit was Rs. 22,082, after writing off Rs. 1.46,000 as short provision for depreciation in previous years). The directors recommend that this may be carried forward to next year's account to be set off against future profits.

In view of the heavy loss sustained by the Company this year, the Managing Agents have forgone the minimum remuneration of Rs. 10,000 due to them. During the year of account, the directors have installed 360 spindles and the total installed capacity of the mills at the end of the year was 11,096 spindles. The result of the year is very disappointing. This is due to high price of raw materials, increase in wage structure and steep fall in yarn prices. The textile industry in India has been passing through a crisis. This Company is one of the many which had been severely hit by the crisis.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,49.050	Block ...	10,26,502
Liabilities ...	16,30,212	Stock-in-trade	5,57.960
		Stock of stores, spares and canteen provisions ...	53.598
		Debts, deposits and advances ...	1,26,178
		Investments	10.150
		Cash ...	6,337
		Profit and loss account ...	1.98.537
	Rs. 19,79.262		Rs. 19,79.262

Hukumchand Jute Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Ramdutt Ramkissendas, Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1958.

After providing Rs. 2.00.109 (Rs. 1.00.347) for depreciation, Rs. 10,25,000 (Rs. 8.00.000) for taxation, Rs. 1,45,000 (*nil*) for development rebate reserve and Rs. 50,000 (Rs. 1,50.000) for investment reserve the revenue account shows a profit of Rs. 13,25,066 (Rs. 13,25,461) to which is to be added the credit balance of Rs. 1,14,396 (Rs. 1,18.935) brought forward from last year, making a total of Rs. 14.39,462 (Rs. 14,44.396). Out of this amount an interim dividend of Rs. 1.40,000 (Rs. 1,40,000) on preference shares at Rs. 3.50 free of income-tax was declared on 27th February 1958, leaving a balance of Rs. 12,99,462 (Rs. 13,04,396) which the directors recommend should be dealt with as follows:—

To pay a final dividend on preference shares at Rs. 3.50 per share [making a total payment of 7 per cent. per annum] for the year ended 31st March 1958 absorbing Rs. 1,40,000 (Rs. 1,40,000), to pay a dividend on equity shares at Re. 1.50 (Re. 1.50) per share for the year ended 31st March 1958 absorbing Rs. 10,50,000 (Rs. 10,50,000) and leaving a net balance of Rs. 1,09,462 (Rs. 1,14,396) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the Mills worked on the basis of 48 hours a week with 12½ per cent. looms sealed throughout the year under review.

Trading conditions continued to remain difficult and prices of finished goods dropped to very low levels during the earlier part of 1958. This has led the members of The Indian Jute Mills Association to fix the minimum prices of finished goods below which sales are not transacted. Prospects for the current jute crop in India are very bright and the directors are of the opinion that there should be an ample supply of raw jute to meet the Industry's requirements.

SCINDIA STEAM NAVIGATION CO. LTD.

MR. DHARAMSEY M. KHATAU'S REVIEW

SUGGESTIONS FOR EXPANSION OF INDIAN SHIPPING

THE Thirty-ninth Annual General Meeting of the shareholders of the Scindia Steam Navigation Company, Ltd., was held at Scindia House, Ballard Estate, Bombay, on Wednesday, 18th February 1959, at 4 p.m. As Mr. Dharamsey M. Khatau, Chairman of the Company, could not be present at the meeting, owing to a sudden bereavement in his family, Shrimati Sumati Morarjee, a director of the Company, presided over the meeting and read out the Chairman's address. The following is the official summary of Mr. Khatau's address:

After welcoming the shareholders to the annual general meeting, the Chairman explained how the net profit for the year ended 30th June 1958 was lower by Rs. 14 lakhs, even though the gross earnings were higher. The 'reserves and surplus' account was increased by Rs. 1.92 crore during the year, making a total in this account of Rs. 10.95 crores. Rs. 21.51 lakhs were credited to fleet reserve, Rs. 13.05 lakhs to *sinking fund* and Rs. 20 lakhs to the dividend equalisation reserve.

The coastal and adjacent trades showed lower freight earning, due to the rate of freight being lower by Rs. 17 than the previous year on the carriage of rice from Burma. Even though the Rail-Sea Co-ordination Committee had recommended that bulk cargoes like coal, salt, foodgrains and fertilisers should move by the sea route, so that sufficient employment was available to keep the coastal tonnage fully utilised, the railway authorities were placing more and more wagons for such cargoes with the result that ships on the coast were feeling the dearth of cargo availabilities.

The Chairman explained that the Company's overseas services had done well during the year, but even here the effects of reduced and uneconomic freight rates had begun to be felt and the prospects for the year ending 30th June 1959 appeared to be discouraging and poor.

Company's Fleet

The Company's total fleet stood at 48 ships aggregating 255,572 g.r.t. and further two ships on order in Germany would be delivered in 1959 and in 1960. The Government had allotted to the Company a portion of the three million yen credit loan and a provisional contract had been signed with a Japanese yard for building a fast vessel to be delivered in 1960.

After referring to the Merchant Shipping Act and the constitution of the National Shipping Board and the Shipping Development Fund thereunder which is likely to benefit Indian shipowners, Mr. Dharamsey Khatau referred to the heavy drain on the available financial resources of shipowners by the application of the Capital Gains Tax and Section 10(2) (vii) of the Indian Income-tax Act and suggested that shipping should be exempted from the imposition of these two taxes.

Speaking of world-wide depression and the laid-up tonnage abroad, Mr. Dharamsey said:

"Since the last twelve months or more, there has been a gradual, but serious, depression in shipping all over the world. More and more tonnage has been laid up abroad and is a matter of great concern to shipowners. Freight rates have had to be cut down drastically in many cases to uneconomic levels, in order to meet the competition from tramp shipowners. Several foreign shipping lines are seeking pastures anew, with a view to finding a footing in Indian trades in order to cut their losses. This is likely to result in further keen competition in the existing trade routes of Indian shipping companies which have not yet found the opportunity to stabilise and strengthen their own resources to withstand depressions or severe competitions.

"Our ships are sailing today with empty space in the overseas trades and even on the coast our vessels are feeling the pinch, due to increased carryings by road transport and the railways. Under the present circumstances, it has become a vital necessity both for the Government and for the shipping companies to work in closer co-operation to mutual advantage. With this in mind, I feel that the following suggestions will have to be carefully considered by the Government to support and expand Indian shipping in various directions:

(1) The Government should allot as much as possible of the cargo imported and exported on its own account and on account of various projects to Indian ships.

(2) The rates of freight which the Government should sanction for the carriage of such cargoes should be reasonable and economic and should not be compared with the prevailing tramp rates.

(3) There should be cautious planned expansion based on the availabilities of cargo after a careful study of the prospective employment of such newly acquired ships in the routes in which they would operate.

(4) Improvement in the port conditions and port equipments, so that ships based on India get quicker turnround at least in their home ports.

"In regard to the first two points mentioned above, which I shall deal together, I may say that the State Trading Corporation of the Government could assist Indian shipping considerably by contracting for exports on a c.i.f. basis and imports on a f.o.b. basis and thus utilise Indian tonnage to the fullest extent possible. The present policy of the State Trading Corporation, however, appears to be to choose the cheapest carrier available and thus encourage foreign tramp ships at the expense of Indian liner tonnage which is ready to offer regular service at steady rates of freight throughout the year. If Indian shipping is to expand and stabilise itself, the Government should ask the State Trading Corporation to follow a broad-based and a long-term policy and assign its cargoes to Indian ships at economic rates, so that out of such earnings there is sufficient scope to create resources for the purchase of newly constructed or near-new secondhand ships.

"The Shipping Co-ordination Committee established by the Government to co-ordinate and co-relate Governments' shipping space requirements also does not seem to have achieved much to support the cause of Indian shipping as such. The United States of America, the foremost maritime nation in the world today, has decreed that at least 50 per cent. of its aided cargoes would be reserved for American ships. This is an example for the Government of India to emulate, with a view to supporting Indian shipping. Unfortunately, the powers-that-be are in no mood to support Indian shipping, unless freight space is available at rates suitable to them and which may be even a little lower than the world market rates under one pretext or another.

Financing Long-term Schemes

"As regards the third point mentioned by me above, I would say that, with a view to financing several long-term schemes under our five-year plans, the Government is very keen on promoting the export drive of indigenous products either in the raw state or in the semi-manufactured or manufactured state and thereby earn foreign exchange. The Government is also very keen that the shipowners should take a prominent part in supporting such export promotion schemes by placing ships in the various routes, so that our exports could find adequate shipping space as and when required. In this we need not assure the Government of our wholehearted co-operation, but we certainly expect that the Government, whilst sanctioning entry of newcomers into the overseas trade, would see that there is a sufficient and suitable spread of ships in all the overseas trades of the country. This should be done without encouraging concentration of ships in one particular trade and thereby creating unnecessary and wasteful competition amongst the Indian shipowners. It will, therefore, be necessary for the Government to study the expansion programme of each shipping company, so that there is no idle tonnage or no tonnage not fully utilised remaining with the shipping companies, which they would be tempted to place in trades which presently appear to be fully catered for by the Indian ships. Before the proposal for purchase of any new tonnage is sanctioned by Government, the route on which such a vessel would operate should be specified. Such sanction should only be given after the Government has satisfied itself that such addition is necessary in the route concerned, thereby avoiding wastage and utilising to the best advantage our limited available resources. Acquisition of additional tonnage may be warranted by India's maritime trade which is large enough to support expansion to enable Indian ships to carry their legitimate share. From experience, however, we have found that under the present state of affairs, our trade is still largely carried by other lines. The availability of cargo for Indian lines is limited. The real issue, therefore, is not so much the question of acquisition of additional tonnage, but that of availability of our own cargo for our own ships.

Development of Ports

"Lastly, the Government should also pay serious attention to the development not only of the major ports but also quite a few of the minor ports, so that ships would get a quicker turnround. The port of Calcutta, which handles a heavy volume of traffic both inwards and outwards, has deteriorated due to falling drafts, and the resultant inefficiency of that port is a source of constant worry to shipowners. Apart from affecting navigation depths, the reduction in head water supplied has led to accumulation of silt and a gradual deterioration of the river conditions, not to mention the increase in the intensity of the tidal bores so frequently experienced, of late. This situation will have to be remedied and it may be necessary to locate an ancillary port down the river to be used as an anchorage port for discharge of bulk cargoes like foodgrains and fertilisers thereby reducing the heavy strain on the Calcutta Port.

"Even in Bombay there is considerable siltation in the harbour, particularly in the approach channel. Two out of three docks in Bombay, namely, the Prince's and Victoria Docks, appear to be outmoded and not suitable even to accommodate some of the ships operating in the coastal trades. There has been considerable delay in taking a decision regarding the implementation of the 'minimum' scheme which appears to be essential in itself for rehabilitation of the two most important assets of the Bombay dock system.

"The cargo handling and stacking equipment at many Indian ports are both outmoded and insufficient and are not commensurate with the requirements of the ships calling at such ports. Unless such modern handling equipment is purchased and pressed into service early, I am afraid, in a moment of crisis our ports are again likely to be the insurmountable bottlenecks, resulting in delay not only to ships and shipping but also to the development programmes under our economic plans."

Referring to the results of the subsidiaries, Scindia Workshop Private Ltd., Jalanath Insurance Ltd., and the Kamal Shipping Company Private Ltd., which were satisfactory, Mr. Dharamsey Khatau explained the unsatisfactory state of affairs in the B.S.N. Company (1953) Private Ltd., and said:

"As will have been observed from a study of the statement of accounts with you, this Company has again made a loss of Rs. 7.43 lakhs, in spite of the best efforts to exercise as much effective control on expenditure as possible. These continuous losses which have accumulated to Rs. 16.52 lakhs are constantly before us and we are exploring all possible avenues to reduce the losses. This, however, is not likely to bring about satisfactory results, in view of the heavy repair and survey expenses that the Company has to incur on four of its very old vessels, apart from the fact that about 85 per cent. of the Company's annual expenditure is of such a nature as to provide little or no effective scope for economy. This unsatisfactory state of affairs has been brought to the notice of the Government on several occasions and even if the Company is not allowed to make profits, it should certainly be allowed to make both ends meet and be left with sufficient margin to wipe off its previous losses. For this purpose, it is very necessary that a high power committee should immediately be instituted by the Government to go into the question without much delay, so that some satisfactory solution is found in the interest of about 8/10 lakhs of passengers working in industrial undertakings in the State and utilising these transport services."

Notices

W. H. BRADY AND CO., LTD.

NOTICE

To

The Shareholders of
W. H. BRADY & CO., LTD.

NOTICE IS HEREBY GIVEN THAT THE Forty-sixth Annual General Meeting of the Company will be held on Monday the 23rd day of March 1959 at 11-00 a.m. at the Registered Office of the Company, "Brady House," 12/14, Veer Nariman Road, Bombay, to transact the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1958.
2. To sanction the payment of Dividend.
3. To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation in accordance with Article 156 and, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. Vasant S. Velinker who retires by rotation in accordance with Article 156 and, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,

V. MATHALONE,
Secretary.

BOMBAY, 11*th February*, 1959.

Note: (1) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY, OR WHERE THAT IS ALLOWED, ONE OR MORE PROXIES, TO ATTEND AND VOTE INSTEAD OF HIMSELF. A PROXY NEED NOT BE A MEMBER.

(2) The Transfer Books of the Company will be closed from Friday the 6th day of March to Friday the 27th day of March 1959, both days inclusive.

(3) The dividend when declared will be made payable on and after the 30th March 1959. The Dividend Warrants will be posted to those shareholders whose names stand on the Register of Members on the 27th March 1959.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA LTD.

NOTICE TO MEMBERS

THE TWENTY-SECOND ORDINARY GENERAL Meeting of the Members will be held on the 16th March 1959 at 2-30 p.m., at the registered office, 34 Chowringhee, Calcutta, 16.

Notice of the Meeting has already been posted to the shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 27th February to the 16th March 1959, both the days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL INDUSTRIES
(INDIA) PRIVATE LTD.,
Secretaries.

CALCUTTA, 14*th February* 1959.

RALLIS INDIA LIMITED

CLOSURE OF TRANSFER BOOKS

NOTICE IS HEREBY GIVEN THAT THE transfer books of the Company will be closed from 9th March 1959 to 19th March 1959, both days inclusive.

By Order of the Board,

KENNETH SHEPPARD,
Secretary.

16, HARE STREET, CALCUTTA,
14*th February* 1959.

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE posts of Research Officers in the Bank's Department of Research and Statistics at Bombay.

Scale of Pay: Rs. 375-55-815 E.B. 55-925-60-1,045. In addition to pay, the selected candidates will be eligible to draw Local Pay, House Allowance and Dearness Allowance at the rates prescribed by the Bank from time to time.

Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

Appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Candidates should not ordinarily be over 30 years of age as on 1st March 1959. The age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or research experience of value to the Bank.

Qualifications: (i) First or high second class M.A./M.Sc. in Statistics/Mathematics of an Indian or foreign university or an equivalent qualification. (ii) Experience in the application of statistical methods to economic problems. (iii) Research experience in one or more branches of applied statistics like sampling, econometrics, etc. A doctorate in statistics, experience in handling of official statistics, etc., will be considered as additional qualifications.

Applications should be in a special form obtainable from any office of the Reserve Bank of India. All the applications should be accompanied by copies of certificates regarding age and educational qualifications and two testimonials (originals should not be sent, the Bank does *NOT* accept responsibility for returning the originals if sent through oversight) and should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box 406, Bombay, so as to reach him on or before Saturday the 14th March 1959. *Candidates already in service must submit their applications through their employers.* Candidates belonging to the Scheduled Castes/Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

Applicants must remit along with their applications an application fee of Rs. 7.50 (Rs. 1.75 in the case of Scheduled Castes/Scheduled Tribes candidates) by Postal Order, *Cheque or Bank Draft on a Scheduled Bank payable at Bombay.* The application fee is in no case refundable. Bonafide *unemployed* Refugee candidates applying through any of the Government Employment Exchanges are exempted from payment of the application fee.

Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

Canvassing in any form will be regarded as a disqualification.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 16th day of March to Thursday the 2nd day of April 1959, both days inclusive.

By Order of the Board,

S. T. SADASIVAN,
General Manager.

CALCUTTA, 6*th February* 1959.

EXPORT INCENTIVES FOR MILL-MADE CLOTH

(*Concluded from page 274*)

average capacity and equipment will not be able to export goods worth more than Rs. 3 to Rs. 4 lakhs per month. Thus, at best, a unit of 1,000 to 1,200 looms can hope to export cloth worth Rs. 50 lakhs only a year. On this basis, the export incentives of 3 per cent. of import licences for dyes and chemicals, as also the half-hearted import entitlements for foreign cotton, will not at all be sufficient. After having paid higher prices for Indian cotton, the exporting mills will be out of pocket even after taking into account the incentives given.

It is reported that the incentives in the form of foreign cotton entitlement is likely to be taken away and the imported cotton distributed on the basis of past consumption only. If this is true, it clearly means that the fine and superfine mills, which have been consuming imported cotton in the past, will continue to get this cotton at a very cheap price and will secure all the advantages, without having to export any cloth.

Thus, these mills will benefit out of the foreign exchange earnings of the medium and coarse mills which are at a double disadvantage, in that they have to buy Indian cotton at high prices and export cloth at low prices, the gap between their cost of production and the actual export prices realised not being met by the so-called incentives given to them.

The general criticism that is levelled against coarse and medium mills is that they have not changed their patterns of production and it is for this reason that they are suffering now, as there is a marked preference by the Indian consumer for fine fancy processed goods. At the same time, these mills are being denied the essential raw material in the form of imported cotton without which fine fancy goods cannot be produced.

In fairness to the exporting mills, their total import entitlement of foreign cotton should be allowed to be retained by them for their own use. If they do not have the equipment to use this cotton, then they should be allowed to sell it at the open market rate. This will be a real incentive, in that the exporting mills will be able to reduce their prices to the overseas buyer and make larger efforts in stepping up exports. The scheme of linking up import entitlement with export performance in the basic years has no valid basis. This means putting premium on new-comers. Those mills which exported without any expectation of a future reward are being put to a disadvantage, in that their import entitlement will be lower if they had exported larger quantities in the basic years. Import entitlement should be based on current performance only without taking the past exports into account. It is only when the exporting mill has no equipment to process the foreign cotton that such a mill may be allowed to sell the same in the open market at current prices.

It is understood that from the current quarter there is likely to be a change in the method of grant of import entitlement to exporting mills. Instead of linking the value of import licences with the exports in the basic years, this will be fixed at 70 per cent. of the current exports, as in the case of dyes and chemicals. Out of the import entitlement thus granted, only 10 per cent. will be allowed to be utilised by the exporting mills. The remaining 90 per cent. will have to be surrendered for disposal to fine and superfine mills at a margin of 10 per cent. It is feared that this modification is not going to work in the interest of the coarse and medium mills which are the traditional exporters of Indian cloth.

It is reiterated that, unless the exporting mills are allowed to retain for themselves the entire import entitlement for their own use if they have the necessary equipment, or are allowed to dispose of their surplus in the open market, the purpose of giving incentive will be defeated. It is sincerely hoped that Government will give their earnest consideration to the issues involved, so that the decline in cloth exports is arrested and once again India recaptures her place in the international markets.

MARKED RISE IN FOREIGN RESERVES

(*From Our Own Correspondent*)

BOMBAY, 18*th February*

Conditions in the short-term money market continue to be stringent. While the pressure of demand for bank credit shows no signs of relaxation, the floating funds in the market have been depleted further, with the result that the banks' dependence on short-term accommodation from the Reserve Bank and the State Bank has increased. Inter-bank business has, therefore, thinned down. There is no change in interest rates. Inter-bank call money is being quoted at 3½ per cent. among the Exchange banks and big Indian banks and at 3¾ to 3¾ per cent. among the smaller Indian banks. House money at seven days' notice stays put at 3¼ to 3½ per cent. and so also short-term deposits at 3¾ to 4 per cent. for one to six months.

The stringency in the money market is fully reflected in the results of this week's Treasury Bill sales. The invitation for Rs. 2 crores (same as last week) brought an offer of no more than Rs. 2.30 crores, as against Rs. 4.19 crores in the previous week. The average rate of accepted tenders, which had declined from 2.559 per cent. to 2.530 per cent. per annum, rose again this week to 2.559 per cent. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate Treasury Bills in the week ended 14th February, but they are being continued this week at Rs. 99.376 per cent.

A further rise of Rs. 10.05 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 13th February 1959, thus bringing the aggregate expansion in the last two weeks to Rs. 43.71 crores. Notes held in the Banking Department are lower by Rs. 46 lakhs, so that the total notes issued show an increase of Rs. 9.59 crores. The most significant feature of the assets side of the Issue Department is the rise of Rs. 13.33 crores in foreign securities. There has been a fall of Rs. 3.33 crores in rupee securities and of Rs. 41 lakhs in rupee coin. The increase of Rs. 13.33 crores in foreign securities is accompanied by a rise of Rs. 2.11 crores in balances held abroad (in the Banking Department), so that the aggregate increase in foreign assets is of the order of Rs. 15.44 crores, bringing them up to Rs. 206.13 crores. This accretion must have been due to materialisation of some of the credit negotiated with foreign countries in the free world. Central Government's deposits have gone up by Rs. 5.38 crores and those of other Governments by Rs. 19 lakhs. Deposits of banks too have moved up by Rs. 4.49 crores. Loans and advances other than to Governments are higher by Rs. 6.51 crores and investments by Rs. 6.22 crores.

The most notable feature of the Scheduled banks' statement for the week ended 6th February 1959 is the rise of Rs. 9.07 crores in time deposits of banks, raising them to Rs. 895.47 crores, which is less than Rs. 5 crores short of the Rs. 900-crore level. Demand deposits have, however, declined by Rs. 6.52 crores to Rs. 692.03 crores. Inter-bank borrowings are also lower by Rs. 2.59 crores and borrowings from the Reserve Bank by Rs. 4.34 crores, while those from the State Bank have risen by Rs. 2.68 crores. A sharp rise of Rs. 16.07 crores is noted in advances and of Rs. 1.69 crore in bills purchased and discounted, bringing the total advances to Rs. 938.77 crores. Investments have declined by Rs. 1.99 crore and cash balances by Rs. 4.70 crores.

State loans, particularly the 4½ per cent. issues, continue to attract attention in the Gilt-edged market, which is, otherwise, dull and featureless. The long-dated issues of the Central Government are ruling steady, while medium-dateds are all on offer. 3 per cent. 1986 *Conversion Loan* has fallen further by 20 nP to Rs. 73.65. 3 per cent. 1970-75 is unchanged at Rs. 90.85 and 3 per cent. 1966-68 at Rs. 93.85. 3 per cent. 1963-65 has shed 5 nP to Rs. 96.75. 3½ per cent. 1964 has put on 5 nP to Rs. 99.80, while 3½ per cent. 1965 is stagnant at Rs. 99.60. 3½ per cent. 1967 and 1968 are steady at Rs. 99.10 and Rs. 98.95, respectively. 3½ per cent. 1967 shows no change at Rs. 100.80, as also 3½ per cent. 1968 at Rs. 100.60. As regards 3½ per cent. 1974, the Reserve Bank's selling price, which was raised by 10 nP to Rs. 98.65 last week, is being maintained at that level. Following this increase, 4 per cent. 1972 has gained 10 nP to Rs. 101.45 and 4 per cent. 1973 a like amount to Rs. 101.40. Among State loans, Bombay 4½ per cent. 1971 has gone up by 10 nP to Rs. 102.10, 4½ per cent. 1970 by 25 nP to Rs. 102.10 and 4½ per cent. 1969 by 20 nP to Rs. 102.10. West Bengal 4½ per cent. 1970 has hardened by 15 nP to Rs. 102.35, Madras 4½ per cent. 1970 by 5 nP to Rs. 101.25 and U.P. 4½ per cent. 1970 10 nP to Rs. 101.20.

In the foreign exchange section, the rupee rules steady in terms of the U.S. dollar, though there has been a slight rise in banks' buying rate for ready dollars from Rs. 473 to Rs. 473.25 per $100. Their selling rate, too, rose during the week from Rs. 476.50 to Rs. 476.75, but has again declined to Rs. 476.50 per $100. In New York, spot sterling displays some strength having risen from $2.80.25/32-2.80.27/32 to $2.80.27/32-2.80.29/32. Three months' forward has changed a little from $2.80⅜-2.80.21/32 to $2.80⅜-2.80.11/16.

BASE METALS EASY

(*From Our Own Correspondent*)

CALCUTTA, 17*th February*

The feature in the metal market during the week under review was the good demand from Bombay for copper wire, and the price improved to Rs. 2.31 per pound from Rs. 2.28 or nearabouts a week ago. The difficulty to locate ready wire added to the buoyancy of demand. Other base metals, however, ruled easy, as demand was only of a routine character.

On the London Metal Exchange, the recession earlier in the week in copper to £230 from £233 was attributed to a fall in demand from Europe. However, the rate picked up to £234¾ soon, as conditions in the U.S. picked up to full steadiness.

Locally, tin opened at Rs. 596 and, after declining to Rs. 590, recovered to the opening rate. Demand was little, but Government was in the market for a good quantity. Electrolytic zinc opened at Rs. 96.25 and gave way to close at Rs. 95. There were more arrivals, and very soon the State Trading Corporation would be getting substantial quantities from abroad. With all these supplies in the market, the supply position would further get eased. Lead closed at Rs. 72, after opening at Rs. 72.50.

BULLION STEADY

(*From Our Own Correspondent*)

BOMBAY, 18*th February*

A fully steady trend was displayed by the bullion market during the week under review, except for a sharp fall in values on Friday, owing to unloading by some North Indian bull operators. Gold met with good support on reports of dwindling smuggling activity. There was sizable replacement buying by spot houses yesterday. The statistical position was in favour of bulls, with ready gold commanding a premium of As. 7 over the first settlement yesterday, as against As. 2 a week ago. Today, however, the premium declined to As. 4. The white metal, which was subdued on the 13th inst., recovered sizably in subsequent sessions, thanks to speculative buying and bear covering. Ready silver, too, was quoted at a premium of one anna over the first settlement today, in marked contrast to a discount of As. 6 on Wednesday last week.

In the silver section, February settlement came in for selling in the first two sessions and receded from Rs. 195-1 to Rs. 193-11. Thereafter, it improved to touch Rs. 194-13 today before finishing As. 2 lower. March settlement, after declining from Rs. 195-12 to Rs. 194-5, recovered to Rs. 195-6, although, towards the close, it was a shade lower at Rs. 195-4. The carry forward charge against bulls, which had gone up from As. 9 to As. 11 last week, returned to the previous level today.

Ready silver eased from Rs. 194-11 to Rs. 193-8-6 on Friday, but recovered gradually later to touch Rs. 194-13 yesterday. It was maintained at Rs. 194-12 throughout today. The daily average arrivals of silver were 23 bars, while offtake was 15 bars per day. The floating stocks of silver are reported to be around 1,200 bars.

February settlement in gold, after moving down from Rs. 117-1 to Rs. 116-3 on Friday, advanced to Rs. 117-10-6 on Monday. It receded to Rs. 116-13-6 today, but firmed up to Rs. 117-1 towards the close. March settlement opened the week at Rs. 117-2, as against Rs. 117. After declining to Rs. 116-0-6, it recovered to Rs. 117-4 on the 16th inst. The settlement opened at Rs. 116-11 today and finished at Rs. 116-14. The carry forward charge in favour of bulls widened from one anna last week-end to As. 6 on the 14th inst., but narrowed down to As. 5 yesterday and As. 3 today.

Ready gold was subjected to selling on Friday, the rate dropping from Rs. 117-6 to Rs. 116-6-6. Subsequently, it recovered to Rs. 118 before finishing today at Rs. 117-5. The daily arrivals and offtake were 3,500 tolas and 3,000 tolas, respectively. The floating stocks of gold are estimated at 30,000 tolas.

The upward trend in ready and forward silver in London noted last week continued during the week under review also, yesterday's quotations being 77¼d. and 77d., as against 76¾d. and 76½d. respectively. Gold in London also rose further, from 249s. 7½d. to 249s. 8¼d. Silver in New York was unchanged at 90.375 cents.

The following comparative table shows at a glance the trend of the market during the week under review:

	18-2-59	Highest	Lowest	11-2-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	117 5	118 0	116 6½	117 3

* 23rd February settlement. † 24th February settlement.

HIDES OFFTAKE RESTRICTED

(*From Our Own Correspondent*)

MADRAS, 16*th February*

Arrivals of E.I. tanned cow hides were on the usual scale during the week. Offtake by shippers was restricted, because Madras prices were unworkable for exporters. Shipment business with the U.K. was selective. The importers' requirements were mostly for lower ends for which inland demand was brisk at higher prices.

Arrivals of cow calf and buff hides met with ready clearance. Buff calf was weak, due to larger arrivals and lack of demand for shipment.

In the tanned skins section, arrivals were moderate. Prime goat skins were a shade easier, as also medium class sheep skins.

Raw skins were firm, due to shortage in their availability to E.I. tanners in centres other than South India.

COTTON FUTURES LOOK UP

(*From Our Own Correspondent*)

BOMBAY, 18*th February*

Barring a brief spell of firmness on Saturday, the cotton futures market ruled distinctly easy during most part of the week under review. Government's stern measures to check the rise in prices of *gur* and oilseeds led to fears of intervention in the cotton futures market too. The announcement permitting import of 133,000 bales of cotton out of the 145,000 bales earmarked for import under the textile export incentive scheme on Saturday and easier advices from the spot market, following large arrival of new crop from Saurashtra region, imparted further weakness to the market. Saturday's firmness was due to the emergence of fresh support following the subsidence of the fear of Government intervention. Share market operators turned their attention to cotton and spot houses also extended support. Cotton futures firmed up as a consequence. But the strength was short-lived and the market succumbed to heavy selling on Monday. The downward trend gathered momentum yesterday. Today, however, a recovery was witnessed and the market closed fully steady.

A notable feature of trading during the week was the increased switchover of purchases to the new settlement, namely, I.C.C. Jarilla may which consequently was quoted at a premium over the current contract, I.C.C. Jarilla March, although towards the close of the week it moved to parity with the latter.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 677, as against the previous close of Rs. 678.50, and after moving down further to Rs. 666, improved to Rs. 671.50 on Saturday. It again eased to Rs. 661.75 yesterday. Commencing today's session at Rs. 664, the contract gathered Rs. 5.50 and finished at that rate.

I.C.C. Moglai Jarilla May showed a similar trend. Commencing the week at Rs. 675.75, the contract declined to Rs. 665.50 on the 13th inst. After improving to Rs. 671.50 the next day, it dropped to Rs. 665 on Monday and further to Rs. 663.50 yesterday. Opening at Rs. 667.50 today, the contract improved to Rs. 699.50 at which rate it finished the session. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	18-2-59	*High*	*Low*	11-2-59
I.C.C. Moglai Jarilla March 1959 ...	669.50	672.50	661.75	678.50
I.C.C. Moglai Jarilla May 1959 ...	669.50	673.50	663.50	677.00

In the spot section, mill activity was restricted. Prices generally declined. Mills were reluctant to augment their supplies of raw cotton, thanks to the announcement of the import allocation. Reports of large arrivals of new crop from Western India also induced mills to keep off the market in anticipation of a fall in prices. Interest was mostly confined to staple varieties. But towards the close of the week, spot values tended to look up. Some of the principal varieties which attracted attention were Vijay, Digvijay, CO2, Khandesh, Rajapalayam, Punjab 320F and 216F. Sustained demand was noted for Bengals. Zoda and yellow pickings also evoked attention.

In the foreign section, inquiries were noted for U.S. and East African cotton. Californian good Middling 1-5/32" staple was done at Rs. 1,310, subject to availability of import licence while B.P. 52 came in for business at Rs. 1,040. Sudans were neglected in anticipation of a further fall in prices.

The announcement permitting import of 133,000 bales of cotton (48,000 bales American, 60,000 bales of cotton stapling 1-1/16" and above but below 1-3/16" and 25,000 bales of cotton stapling 1-3/16" and above) has been welcomed by both the trade and the industry. The 60,000 bales of cotton stapling 1-1/16" and above but below 1-3/16" and 25,000 bales of cotton stapling 1-3/16" and above will be distributed under the textile export incentive scheme. The allotment covering 60,000 bales of cotton stapling 1-1/16" and above but below 1-3/16" and 25,000 bales of cotton stapling 1-3/16", it is learnt, will be issued to mills shortly. Allotment letters covering 48,000 bales of American cotton are to be issued on quota basis as in the past.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 700; Berar Jarilla 760; Khandesh 825; Vijay 940. *Delivery contracts*: Bengal 660; Wagad 680; Vijay 246 ON.

The easy trend noted last week in the Karachi cotton futures market gathered momentum during the week under review. Support from mills was lacking while speculators sold heavily. Export demand was weak. N.T.R.G. March declined from Rs. 60-10 last week-end to Rs. 56-10 and the March contract shed Rs. Rs. 3-11 to Rs. 56-3. Spot values also were easy.

Cotton futures values in Alexandria suffered losses during the week. Despite inquiries from Russia and China for Karnak, the market attracted little support. Increasing competition from Sudan and slow demand from the traditional customers discouraged buying. Profit-taking and hedge selling led to a fall in prices.

The Ministry of Agriculture, in its third estimate of cotton production for the current season, has placed the crop at 9,837,640 kantars, including Scarto as against the second estimate of 9,879 000 cantars, and the first estimate of 9,021,000 kantars. The fourth and final estimate is expected to be published in April.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 72.75; May 73.05. *Ashmouni*: February 62.45; April 63.19.

Dull conditions prevailed in Liverpool during the week. Prices tended to weaken under hedge pressure and Commission House liquidation. Operators were concerned at the prospect of continual changes in the U.S. export subsidy. They were, therefore, reluctant to enter into larger commitments. Caution was the keynote of trading. Sudan contracts sagged due to hedge pressure and weaker advices from Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end quotations:

American cotton one inch staple contract: March-April 22.00 (23.10); May-June 21.60 (22.60); July-August 20.05 (21.00); October-November 19.10 (20.00). *American cotton mixed growth contract*: March-April 22.90 (23.00); May-June 21.65 (22.45); July-August 20.00 (20.90); October-November 19.05 (19.90). *Sudan*: May-June, July-August, September-October 22.00 (22.25).

Cotton futures values in New York registered handsome gains during the week. There was a fair volume of trade and Commission House buying which was based mainly on loan considerations. Mill buying against sale of textiles and yarns was also noticed. Speculative support influenced by the possibility of a tight supply position developing later in the season and the expectation of increased exports next season imparted firmness to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-2-59	10-2-59	3-2-59
Spot	35.65	35.70	35.70
March	35.49	35.29	35.33
May	35.63	35.43	35.39
July	34.52	34.27	33.93

MARGIN IN BLACK PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 18*th February*

Malabar black pepper ruled soft during the week under pressure of liquidation by bulls prompted through fear of an early enforcement of margin system for the forward trading. Weakness in other markets proved a disheartening factor. It was decided to levy a margin of Rs. 10 from buyers when at any time in future, the market rose above Rs. 125. The margin of Rs. 15 was decided upon if the market crossed over Rs. 135. An extra margin of Rs. 15 was to be enforced at an every advance of Rs. 10 in the prices thereafter. The liquidation of bulls having been finished, the market steadied up with sellers resisting any downward curve. March delivery at Cochin, after touching Rs. 123, improved to Rs. 132. Ungarbled at Alleppey and Cochin rallied from Rs. 725 to Rs. 775. Calicut quoted for Tellicherry pepper at Rs. 875, with sellers reserved. Spot in Bombay, after climbing down to Rs. 105, was now quoted at Rs. 110. Commission houses were watching the market and were likely to start buying for investment as soon as the prices are stabilised.

The present crop of Malabar black being less, the growers do not show any anxiety to press sales. The report of reduction in freight from $70 to $60 from Singapore to New York had an adverse effect on the spot in the U.S.A. which was now being quoted at $0.25½, the highest being $0.26.

Sarawak black in Singapore rose to Str.$78, in view of paucity of stock. Lampong was moving round about Str.$84. New York is said to be haggling for lower offers for Lampong, in view of the recent reduction in the freight, but, if Singapore exporters remain firm, New York may soon be forced to pay full price demanded by the sellers, as India is unwilling sellers at the present prices.

Russia and the East European Countries are reported to be inquiring, but nothing is known as to the extent of their fresh purchases.

The future of the market appears constructive, in view of the good inland demand, coupled with the prospect of fair-sized buying by Russia and the Continent, despite poor New York buying.

Today's nominal quotation for ready delivery is Rs. 110 per Bengal maund.

S.T.C. TO IMPORT ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 18*th February*

Both the art silk manufacturers and the yarn traders are greatly intrigued at the reported move of the Central Government to import yarn on State Trading Corporation's account. The exact details of the decision are still not available. It is, however, gathered that the art silk mills have been instructed by the Government to utilise at least 24 per cent. of the value of their import licences for the current period for obtaining supplies from rupee payment countries through the S.T.C. The traders are very doubtful about the success of the new move. Some say that the S.T.C. will not be able to secure adequate supplies of the required types of yarn at a reasonable price.

The above decision imparted considerable strength to the art silk yarn section and several deniers registered handsome improvement in values. There was a buying spree in Cupressa Bamberg art silk yarn (60/1) February delivery which forged ahead from Rs. 1,532 to Rs. 1,582. April position climbed up by Rs. 32 to Rs. 1,532. Spot yarn (60 x 1) spurted by 21 nP to Rs. 8.15. Spot 120 Italy and 150 Italy both advanced by 6 nP to Rs. 5.31. 120 Japan gained 3 nP to Rs. 4.87. 150 Japan was firm at Rs. 4.87. Among indigenous yarns, National Rayons 120 bright cones first grade gathered 3 nP to Rs. 4.53. 150 bright cones first grade rose by a like amount to Rs. 4.34.

Despite firmness of art silk yarn, the staple fibre yarn section ruled dull. This was due to uncertainties regarding the forthcoming Central Government budget and reports of shortage of some well-known qualities. Consequently, turnover was restricted and values moved narrowly. 40 x 2 February delivery was quiet at Rs. 621, while April contract gained Rs. 2 to Rs. 621. Spot 40 x 2 Kohinoors encountered selling and declined by 5 nP to Rs. 3.35. Citys lost a naya paisa to Rs. 3.15. Centurys were quiet at Rs. 3.22. Among foreign yarns (80 x 2), Paramounts were done at Rs. 7.87 and Fujis at Rs. 8.37.

Cotton yarns presented a distinctly firm trend. Advices from upcountry centres were quite encouraging. It was reported that some mills had already raised prices for a few counts. Ten counts Moderns and Podars were fully maintained at Rs. 13.37 and Rs. 12.19, respectively. Twenty counts Hinds met with good buying enquiries and put on 13 nP to Rs. 16. Moderns were fully steady at Rs. 16.25, as also Seksarias at Rs. 15.50. Thirty counts Hinds were done at Rs. 19.75. Among forty counts, Moderns advanced by 50 nP to Rs. 26. Minaxis were unchanged at Rs. 25.25. Sixty counts Raghuvamshis firmed up from Rs. 53 to Rs. 53.50. Eighty counts Citys spurted by a rupee to Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	18-2-59	11-2-59
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bamberg February	1,582	1,532
" " April (per case of 200 lbs.)	1,532	1,500
60/1 Cupressa Bamberg spot (per lb.)	8.15	7.94
120 Japan (per lb.)	4.87	4.84
150 Japan (per lb.)	4.87	4.87
120 Italy (per lb.)	5.31	5.25
150 Italy (per lb.)	5.31	5.25
Staple fibre yarn—		
40 x 2 February (per case of 200 lbs.)	600.00	600.00
40 x 2 April " (— Do —)	621.00	619.00
40 x 2 Kohinoor (per lb.)	3.35	3.40
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19
20s Modern	16.25	16.25
40s Minaxi	25.25	25.25
60s Finlay	65.00	65.00
80s City	67.00	66.00

PLEA FOR CEILING PRICES IN SEEDS

(From Our Own Correspondent)

BOMBAY, 18*th February*

The Bombay Oilseeds and Oils Exchange, at its meeting held on the 12th inst., decided to urge the Forward Markets Commission to fix ceiling prices for four oilseeds, namely, groundnuts, castorseed, linseed, and cottonseed on an all-India basis. The Exchange has also requested that if it is found difficult to introduce ceilings for the country as a whole, they should be fixed for the local futures market. The question of fixing the suitable rate is left to the discretion of the F.M.C. It is held by the Exchange that the margin itself will not be a sufficient safeguard against unscrupulous speculation; for there are, it is said, certain sections of the trade, which will not hesitate to rig up prices even at the risk of paying the margin. The F.M.C., however, has not taken any final decision yet on this vital question.

In the meantime, there are reports that the F.M.C. has permitted the Calcutta Wheat and Seeds Association to commence, some time about the end of this month, futures trading in linseed. This is the second futures market in the country, the first being in Bombay. Both these centres, it may be noted, represent the premier terminal markets for linseed. While Bombay deals in bold linseed, Calcutta will trade in the small variety.

According to a trade notice issued by the Joint Chief Controller of Exports on the 13th inst., established shippers of groundnut oil who exported it against quotas issued in terms of the announcement dated 21st July 1958 prior to 7th January 1959 will also be granted quotas of groundnut oilcake (expeller variety). This concession will be available up to the end of this month.

The various regulatory measures imposed by the F.M.C. and the restriction of credit advances against groundnuts by the Reserve Bank last week set off a selling pressure in the initial sessions during the week under review. The market, however, made a smart recovery by the close of the week, thanks to continued tight supply position and good buying support from bulls and shippers. Bear covering also pushed up the prices. Groundnut February contract which closed last Wednesday at Rs. 174.75 on a steady note, lost ground subsequently to touch Rs. 171.50 on Friday. It again improved to close today on a firm note at Rs. 175.00. May contract fell from Rs. 178.37 to Rs. 175.37 on Friday but recouped later and closed today at Rs. 175.00. Bold ready which stood at Rs. 35.50, after declining to Rs. 35.25, advanced to Rs. 35.62 yesterday. It, however, sagged to Rs. 35.50. Oil ex-mill lost about 25 nP over the week to close at Rs. 18.37.

The castorseed section, despite the fears that a margin might be imposed by the F.M.C., ruled distinctly firm on encouraging advices from abroad. The U.K. and the U.S.S.R., it is stated, have made enquiries for castor oil. Castorseed May 1959 contract, which stood at Rs. 153.37 last week-end, fell to Rs. 152.50 on Friday but later recovered to finish today at Rs. 156.50. Ready Madras, however, lost about 38 nP over the week and closed today at Rs. 30.12. Oil B.S.S. also sagged a setback, it having fallen from Rs. 16.52 to Rs. 16.25 today.

Irregular trends were evident in the linseed section, with the undertone remaining subdued for the most part of the week. There were fears that a margin might be introduced in linseed also. It, however, toed the line of other sections of the market. Linseed May 1959 contract which closed last week at Rs. 32.69, after fluctuating both ways in a narrow groove, recovered to this level again when it closed today. Bold ready, in contrast, gained by about 50 nP over the week to close at Rs. 33.50. Linseed oil, however, fell from Rs. 17.25 to Rs. 16.62. Cottonseed encountered selling pressure in the initial sessions, on lack of fresh support and some upcountry selling. The reaction in the cotton market also unnerved the bulls. Cottonseed February and May contracts which were quoted last week at Rs. 132.25 and Rs. 126.25, respectively, lost considerable ground and wound-up the week today at Rs. 129.50 and Rs. 123.00.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	18-2-1959	11-2-1959	4-2-1959
Groundnut	Rs.	Rs.	Rs.
February 1959	175.00	174.75	178.50
May 1959	178.75	178.37	182.50
Bold ready	35.50	35.50	35.75
Coromandel ready	36.00	36.00	36.25
Khandesh quality	36.00	36.00	36.25
Oil ex-mill ready*	18.37	18.62	18.75
Railway receipts*	18.31	18.44	18.62
Castorseed			
May 1959	156.50	155.37	156.00
Ready Madras	30.12	30.50	30.37
Ready Kanpur	29.00	29.50	29.25
Oil B.S.S.†	16.25	16.62	16.37
Oil commercial†	15.31	15.62	15.50
Linseed			
May 1959	32.69	32.69	32.50
Bold ready	33.50	33.00	33.00
Oil ready†	16.62	17.25	17.37
Cottonseed			
February 1959	129.50	132.25	133.00
May 1959	123.00	126.25	128.25
Niger seed	28.50	29.00	29.00
Kardi seed	21.50	21.50	21.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM

(From Our Own Correspondents)

BOMBAY, 18*th February*

The sugar market continued to rule firm during the week under review too, thanks to bullish advices from North Indian markets, expectations of lower sugar output in the current season and renewed pre-budget rumours about excise duty on sugar. The persistent firmness of *gur* and *khandsari* also imparted strength to the market. Further, arrivals of sugar by rail were small, being just 10,820 bags, as against as much as 28,235 bags in the previous week.

Large grain sugar advanced by a rupee to Rs. 115-Rs. 118 per bag. Medium grain was fully maintained at Rs. 112-Rs. 114 and small grain at Rs. 110-Rs. 111.50.

With effect from the 12th inst., the Government of India has brought the forward contracts for sale or purchase of *gur* within the purview of the regulatory provisions of the Forward Contracts (Regulation) Act, 1952. A notification applying Section 15 of the Forward Contracts (Regulation) Act to *gur* throughout the country has been issued in the *Gazette of India Extraordinary* dated 11th February 1959. The outstanding contracts entered into on or before the 11th inst. and remaining to be performed after that date have been closed out at the average of the rates prevailing in the forward markets during the period of three months immediately preceding the date of the notification. The Government has decided to establish, in due course, regulated futures markets at Hapur, Meerut, Agra, Muzaffarnagar and Delhi. Suitable associations at these centres will be granted recognition by Government on the recommendation of the Forward Markets Commission.

The aforesaid decision of the Government was a sequel to representations that speculation in the forward markets had been pushing up *gur* prices.

* * * *

HAPUR, 16*th February*

Sugar prices continued to rule steady to firm during the week, as demand was much higher than what the quota released by the Government could meet. This enlarged demand is due to marriage season and pre-budget purchases. Most of the factories have already sold out their released quota and the rates of other factories which still have some stocks left are daily increasing. Production of sugar in West U.P. is in full swing, as cane supplies to factories are reported to be satisfactory and the strike has fizzled out.

Sugar prices in the Muzaffarnagar market firmed up during the week, due to paucity of stocks. Some mills were quoting prices at a premium of Re. 1.50 to Rs. 2 per maund over D29 quality as compared with the control price of Rs. 36 per maund fixed by the Government. The last release of 165,000 tons by the Government failed to meet the demand and the sugar market was bullish. The latest prevailing prices in the Muzaffarnagar market were: Sugar crystal spot delivery old Sakoti B29 Rs. 37.25; New Deoband D29 Rs. 38.25; wholesale mill delivery controlled A29 Rs. 37.75; B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36. Mill station rates: Lhaksar B29 Rs. 39.19; C29 Rs. 38.44; Dhampur C29 Rs. 38.12; Amroha D29 Rs. 37.44; Bijnore D29 Rs. 37.37; Meerut D29 Rs. 38.

Sugar prices also registered good gains in the Kanpur market, due to renewed buying enquiry in the face of poor stocks.

Khandsari registered sharp gains in sympathy with crystal sugar. The *khandsari* producers are also manufacturing crystal *khandsari*. In some areas, cane supplied to crushers is fetching prices higher than those fixed by the Government for mills. The prevailing prices were: Dry superior Rs. 34 to Rs. 37, moist Rs. 30 to Rs. 33 per maund.

Following the Union Government's decision to curb forward trading in *gur*, which has been brought under the purview of the Forward Markets Commission, ready *gur* pansera quality went down from the highest level of Rs. 18.37 per maund to Rs. 16.75. Arrivals during the week improved to an average of 4,000 maunds daily, following clear weather, and local stocks swelled to 52,000 maunds. The total arrivals during the current season were put at 4.65 lakh maunds, as against the corresponding figure of 3.25 lakh maunds last year.

Ready *gur* eased by about Re. 1.75 to Rs. 2 per maund in the Muzaffarnagar market, following Government restrictions on future and, with increased arrivals, demand from consuming areas declined. Arrivals during the week aggregated about 65,000 maunds.

Forward trading in all centres has been suspended with effect from the 12th inst. The order asking all outstanding transactions to be squared up at the average rates during the past three months has created confusion in trade circles. Closing rates for *gur fagun* on the 11th inst. were Rs. 16.27, while the average for the last three months comes to Rs. 14.73. Both bulls and bears are pressing their views and the local Chamber has not yet decided on the squaring up of rates.

QUALITY TEAS IN DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 12*th February*

The catalogues comprised 835,190 lbs. in Sale No. 6 which was held on Tuesday 10th February. Quality again showed an all-round improvement with a number of flavoury invoices on offer particularly from the Nilgiris. Exporters continued to show interest in the improved quality teas. The sale opened to an useful demand, particularly for the improved high growns, which showed advances of up to 50 nP. Low medium and medium brokens were firm, but equivalent fannings were the weakest feature of the sale. Whole leaf teas met with less competition and were generally 5 to 10 nP easier. The quotations were: Low medium Re. 1.55 to Re. 1.70; medium Re. 1.85 to Rs. 2.15; good medium Rs. 2.35 to Rs. 2.70 and quality Rs. 3.00 to Rs. 4.85.

The average price realised in Sale No. 10 was Rs. 2.41 per lb., as against Rs. 2.21 per lb. in the previous sale and Rs. 2.30 in the corresponding sale of 1958.

Offerings totalled 584,267 lbs. in Dust Sale 'C' which was held on Thursday, 12th February. All teas showed an improvement both in leaf appearance and also in liquor. The sale opened to a good general demand which was maintained throughout the sale. Prices for the better types were about steady, but milled dusts were occasionally easier. High grown dusts were irregular and medium types sometimes declined by 5 nP per lb.

London Market: Sale of 9th February 1959.—Assams coloury Dooars and sweet plain teas fully firm; others irregular and sometimes easier.

Sale of 10th February 1959.—Better liquoring and tea for price tended dearer; others irregular and sometimes easier.

Colombo Market: Sale of 9th February 1959.—One-third sale consists offgrades. Active demand. Smaller selection. Highgrown brokens, particularly improved quality Dimulas, advanced 30c. Uva advanced 30 to 60c., better mediums up 10 to 15c., plain sorts 5c. lower. Good demand lowgrown barely steady, except showy Persian Gulf types slightly dearer.

Sale of 10th February 1959.—Useful liquoring dusts appreciably dearer. Other offgrades good demand about 5 to 10c. lower.

Calcutta Market: Export.—65,000 packages. Export strong general demand. Poorer orthodox B.P. and P.F. keen enquiry up to 6 nP dearer. Plain and medium B.P. 2 to 6 nP dearer. Plain fannings 2 to 4 nP dearer. Better medium brokens only steady. Medium Assam B.O.P. and O.F. irregular with some withdrawals. Best C.T.Cs improved enquiry. Mediums irregular.

Internal.—21,000 dust. Strong and general demand. Black orthodox 4 to 8 nP dearer and sometimes more. Darjeeling firm to dearer. Poorer C.T.C. irregularly 10 nP dearer. Best C.T.C. about firm, except small powdery which were appreciably dearer.

Export Quota.—During the week the market has shown a slightly easier tendency, with a fair quantity of business being transacted at 1¾ nP. The latest quotation is sellers 2 nP, buyers 1¾ nP.

Forthcoming Auctions.—Sale No. 7 will be held on Tuesday 17th February.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"Sale 7:—700,000 lbs. Good demand, particularly for improved best liquoring, which are dearer. Good medium brokens 5 to 10 nP dearer, but similar fannings difficult to sell. Low medium and medium about steady."

GOOD DEMAND FOR QUALITY TEAS

(From Our Own Correspondent)

CALCUTTA, 17*th February*

There was strong demand for quality teas during yesterday's export sales, while prices of inferior quality teas declined on poorer demand. However, in the internal sales of last week prices for all teas recorded gains.

In the U.K., warehouse stocks declined to 160 million lbs. in the week ended 6th February from 165.73 million lbs. This aided sentiment here. It was also noted that in the auctions in Colombo on 9th February demand was active with Australia being a keen buyer.

Another factor which was noted with satisfaction was the increased exports last year. At 156 million lbs., the South Indian output in 1958 was higher by 6.3 million lbs. South India not only exported the entire increase in output over last year but went beyond by 2.7 million lbs. For, exports at 96 million lbs. were higher by 9 million lbs. compared to 1957. Of the increase of 9 million lbs., the U.K. alone accounted for 6 million lbs., since exports to that country were 53 million lbs., as against 47 million lbs. At 7.9 million lbs., shipments to the United States carried a nominal improvement of 900,000 lbs.

However, these encouraging figures from S. India, when added to the figures relating to N. Indian tea, the impressiveness of the picture is diminished. The all-India total output in 1958 comes to 707.1 million lbs., representing an increase of 29 million lbs. over 1957. Against the increase of 29 million lbs., all-India shipments for 11 months to November 1958 increased only by 10.6 million lbs. to 454 million lbs., as against 443.4 million lbs. in the corresponding period of 1957. No doubt, it is believed here that internal consumption has also increased, and that of the remainder of 18 million lbs. a good portion may be taken up internally. Figures relating to December are awaited. The following table gives the country-wise exports during the first 11 months of 1958 and 1957:

(In million lbs.)

	1958	1957	*Plus or minus*
U.K.	292.90	275.80	+17.10
U.S.A.	22.70	20.99	+ 1.71
U.S.S.R.	21.20	15.95	+ 5.25
Other Countries ...	117.20	130.66	−13.46
Total ...	454.00	443.40	+10.60

On export offerings held yesterday, there were 65,670 packages. The good demand having been met in the opening hours, idle conditions were in evidence towards the close. In keen competition, best C.T.Cs, particularly fannings, advanced. The lower-priced varieties were also in good demand, although irregularly higher. Orthodox O.Fs were about steady with the poorer varieties recording some addition, but the B.O.Ps in the orthodox group hardly interested buyers. The interesting section of the sales was "Teas for price," the prices of which rose by 4 to 6 nP. Plain and medium brokens advanced by 2 to 4 nP. The cleaner fannings met with competition to improve by 4 to 10 nP. Other varieties in this group were also steady and rose by 2 to 6 nP. Legg-cut teas eased by 2 to 4 nP, while Darjeelings met with good support at declining rates. The quotations per lb. were: best Assam C.T.C. fannings Rs. 2.40 to 2.60 (nom.), best Assam C.T.C. B.P. Rs. 2.20 to 2.30 (nom.), clean black pekoe Rs. 2 to 2.08, medium fannings Re. 1.80 to 1.84, plain B.P. Re. 1.72 to 1.76, plain fannings Re. 1.80 to 1.88, and medium B.P. Re. 1.68 to 1.72.

Export quota was bought at 1¾ nP. Soon, buyers pushed down their offers to 1½ nP, sellers insisting on 2 nP.

In the internal sales held here on 11th February, dusts on offer amounted to 21,117 packages. The strong and active demand in evidence at the opening enlarged as the sales progressed. The prices of the poorer and medium C.T.C. teas rose by 5 to 10 nP. The best sorts of this category were firm, but the lots of powdery kinds were much sought. Black leaf orthodox teas added 5 nP and legg-cut teas 8 to 10 nP. Darjeelings were fully steady. The quotations per lb. exclusive of excise duty, were: best Assam C.T.C. Rs. 2.40 to 2.90 (nom.), medium Assam C.T.C. Rs. 2 to 2.15, medium Dooars Re. 1.82 to 1.84, and medium Assam grainy Re. 1.78 to 1.80.

Leaf on offer totalling 2,031 chests rose by 10 nP.

RAW JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, 17*th February*

A feature of the trading in the jute market during the week under review was that, while raw jute prices, following support by mills and the State Trading Corporation, improved by about 25 nP per maund, prices of jute goods, owing to selling pressure in the futures market, receded further. There was, however, a recovery yesterday in hessian on short covering, in anticipation of good Russian demand and higher burlap consumption figure in the United States in January. It has since been announced by the S.T.C. that established balers would be permitted to export, on the Corporation's behalf, raw jute in grades and markings well known in London and the Continental markets. No export quota or floor prices for export have been fixed, but it is believed here such quantities as will not "hurt" mills in India will be permitted to be exported. The S.T.C. has a committee here to review, from time to time, the price-pattern for export. India's entry into the raw jute export field has naturally caused anxiety in Pakistan. For, if Pakistan desires to increase exports, it will have sooner than later to revise the minimum export prices. It would be remembered that in recent months the manufacturing industry in Dundee had been so disappointed by the Pakistani price policy that it urged New Delhi to enter into the export field, even if it meant that India could afford to export in token quantities only. Of course the Government of India's decision to export raw jute was not aimed at obliging the manufacturers in Dundee and the Continent, but was a natural outcome of the bumper crop. It had only been due to the shortsighted jute policy pursued by Pakistan that, India was forced to grow more jute and shake off altogether its dependence on Pakistan. No wonder, Pakistan output of jute has, in view of declining demand, gone down to about 50 lakh bales from 85 lakh bales a decade ago.

In the meantime, reports from Pakistan markets continue to be dull and featureless, and the recent reduction in the export price to India of Pakistan cuttings to Rs. 60 per bale c.i.f. for N.C., M.C. and T.C. qualities, trade circles asserted here, was due to the poor market for these cuttings. India was the chief buyer of cuttings from Pakistan, but it is about a year since India is managing with very little imports from Pakistan. When compared to Pakistan internal price, even the present revised price of Rs. 60 per bale is about 200 per cent. higher. Foreign buyers are reported to be withholding attention from Pakistan offers, although the Pakistan Jute Board was opposed to any marked revision in prices. In the seven months to January, exports of Pakistan jute amounted to 3.2 million bales which was about the same in the corresponding previous jute season. However, with India now in export markets, Pakistan shipments would be affected unless the price policy was changed. Trade circles here noted the statement of Mr. Sakhawant Hussain, President of the Dacca Chamber of Commerce, that the present search for substitutes and the increase in Indian cultivation received a great impetus from Pakistan's ill-advised policy of maintaining high prices for raw jute by gradual reduction in production. Meanwhile, trade circles here looked for an early decision in New Delhi in regard to advance of funds by Government to mills to enable the latter to purchase an extra month's fibre requirements. The Union Commerce Minister, Mr. N. Kanungo, said in Parliament that a decision would soon be taken.

On Tuesday last, there was a fractional improvement in the price of hessian 40" 10 oz. at Rs. 39.45 following steady fibre prices, while B. twills were marked lower to Rs. 88.75, as offers were not meeting with response. At this stage, a rumour that the Government of India would shortly invite tenders for heavy goods developed, and ready B. twills put on 60 nP to Rs. 89.35 on Wednesday. Hessian 40" 10 oz. improved further to Rs. 39.60. Another reason for the gain was the publication of shipment figures for January, according to which sacking shipped, at 27,000 tons, was higher by 5,000 tons, while hessian fell to 36,600 tons from 41,500 tons. Despite higher shipments, stocks of heavy goods with mills as at the end of January increased by 2,800 tons to 83,000 tons. Hence, trade circles concluded that purchases for internal consumption must have dropped in January. Naturally, there was the anticipation that in this month when prices are lower, there would be more purchases of heavy goods against domestic needs, and the rumour of an anticipated Government tender made the market athinking. With the result, on Friday (the market was closed on Thursday on account of *Saraswati Pooja*) B. twills improved to Rs. 89.40 and hessian 40" 10 oz. to Rs. 39.85. Over the week-end, there was selling pressure in futures, and this caused a sharp reaction in the ready market. B. twills declined to Rs. 88.60 and hessian 40" 10 oz. to Rs. 39.65. The recovery in the latter to Rs. 40.05 yesterday was aided by anticipated Russian interest. In sympathy, B. twills looked up at Rs. 89. In futures, February 40" 10 oz. hessian opened at Rs. 39 and declined to Rs. 38.92 to recover to Rs. 39.58. February B. twills rose to Rs. 88.55 from Rs. 88.25, while March Assam bottoms declined to Rs. 21.22 from Rs. 21.46.

Fair support was accorded to raw jute. Mesta prices rose by 25 nP to one rupee, Behar mesta quoting at Rs. 18.50 and Desal at Rs. 19.75. Most other qualities added 25 nP per maund while the superior qualities were unchanged. Mills were keen to purchase the mesta variety, and they had, in fact, lifted such quantities as there were no offers pending. The latest quotations of the different varieties for February-March delivery in rupees per maund are:—

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	23.50	20.50

Pucca bales 1st marks	Rs. 155.00 per bale ready.	

FOODGRAINS QUIETLY EASY

(From Our Own Correspondent)

HAPUR, 16*th February*

Quietly easy conditions were witnessed in the foodgrains markets during the week, thanks to very good *rabi* crop prospects. The Union Food and Agriculture Minister, Mr. Jain, told the Lok Sabha that reports from the States indicated prospects of good *rabi* crops and there should be a substantial improvement in the food situation after the next harvest. He said that there has been a very good rice crop this year and the price of rice had recorded a substantial fall. The harvesting *rabi* crop has already started in Bombay and other *rabi jowar* producing areas. As regards wheat, after the failure of *rabi* crops in April last, the prices started rising. The Government has been trying to avoid distress to the people by judiciously utilising the available resources and taking necessary regulatory measures. Over 3,600,000 tons of goodgrains were distributed from Central stocks during 1958 through a net work of fair-price shops and, even today over 48,000 fair-price shops are functioning in the country.

Wheat at Hapur eased fractionally during the week. Although supply position is still tight, good crop expectations were the main influencing factor,

State Bank of Pakistan

Statement of Affairs for the week ended 6th Feb., 1959

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	3,00,00,000
Reserve Fund	3,00,00,000
Deposits:—	
(a) Central Government	85,65,59,000
(b) Provincial Governments	50,70,000
(c) Banks	14,99,50,000
(d) Others	6,01,95,000
Bills Payable	18,53,000
Other Liabilities	12,56,35,000
Rupees	125,92,62,000

ASSETS	Rs.
Notes	8,13,41,000
Rupee Coin	58,000
Subsidiary Coin	35,000
Bills Purchased and Discounted:—	
(a) Internal	....
(b) External	....
(c) Government Treasury Bills	3,36,000
Balances held outside Pakistan*	17,97,43,000
Loans and Advances to Governments	3,19,00,000
Provincial Governments' Debtor Balances	8,48,75 000
Other Loans and Advances	16,90,00,000
Investments	62,26,68,000
Other Assets	8,93,01,000
Rupees	125,92,62,000

* Includes Cash and Short-term Securities.

ISSUE DEPARTMENT

LIABILITIES	Rs.	Rs.
Notes held in the Banking Department	8,13,41,000	
Notes in circulation	848,62,08,000	
Total Notes issued	....	856,75,49,000
Total Liabilities	....	856,75,49,000

ASSETS	Rs.	Rs.
I. A. Gold Coin and Bullion	23,07,35,000	
Silver Bullion	....	
Approved Foreign Exchange	51,43,69,000	
India Notes representing assets receivable from the Reserve Bank of India	43,02,28,000	117,53,32,000
B. Rupee Coin	4,22,30,000	
Government of Pakistan Securities	229,09,81,000	
Internal bills of exchange and other commercial paper	....	233,32,11,000
II. Held with the Reserve Bank of India pending transfer to Pakistan:—		
Gold Coin and Bullion	19,02,000	
Sterling Securities	4,40,63,000	
Government of India Securities	1,00,90,000	
Rupee Coin	29,51,000	5,90,06,000
Total Assets	....	856,75,49,000

Ratio of Gold Coin and Bullion, Silver Bullion and approved Foreign Exchange to total notes issued: 34.52 per cent.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—From July 1954. H—Outstandings in respect of items in column 9 marked 'E' are not included.

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive in non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.R.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page* 255)

they were early in 1953. The immediate effect of the cut is to widen the margin between the prices of crude oil and the refined products. The latter have of late been firm, thanks to seasonal demand. The pressure on the profits of refining companies will thus be lessened.

Although the immediate reason for British Petroleum reducing its rates is the need to maintain its prices at competitive levels, a fuller explanation is provided by the present over-supply of oil in all the producing areas. In the Middle East, output of crude oil reached a record total of 215,000 tons last year and it is expected to continue rising in the next few years. As. B. P. has cut its prices, other companies operating in the region are expected to follow suit. They seem to regard the changes in price effected by British Petroleum as more than necessary in the present market conditions. Nevertheless, they are studying the changes and, if they also cut their prices, a new level of crude oil prices will be established throughout the region. As this region is the main source of oil supply for India, the latest price trends there will naturally induce expectations of a reduction in oil prices in this country too.

• • • •

Ten days from now—by 1st March, to be precise—the European Common Market Commission will be submitting its plan for associating the rest of Western Europe with the Market, as required by the C. M. Council of Ministers early in December. The Commission, it is reported, has already completed discussions with the member-Governments, as well as with officials in Britain, and is currently busy finalising its draft plan. On Monday this week, Prof. Hallstein, President of the Commission, accompanied by three other members, held talks in London with the British Government representatives on the future trading relationship between the six C.M. countries and the eleven other W. European nations. Details of the talks are not available. All that is known is that the talks were conducted in very general terms, with neither side willing to commit itself in any way. A London despatch avers that, at two meetings with Mr. Reginald Maudling and Sir David Eccles, President of the Board of Trade, the C.M. Commission members sought to ascertain the views of Britain on the following two basic lines of approach which have recently received detailed consideration in the Commission's headquarters at Brussels:

The first is a suggestion that any tariff reductions by the six C.M. countries must be on a world-wide scale and be negotiated in the General Agreement on Tariffs and Trade (G.A.T.T.).

The alternative is the creation of some sort of preferential area in Western Europe, comprising all the O.E.E.C. countries. This, too, would call for negotiations in the G.A.T.T., since the exchange of new preferences is prohibited by Article 29 of the G.A.T.T., the only thing recognised as an exception being the establishment of either a customs union or a free trade area.

Whatever may be the nature of the plan which the C.M. Commission will formulate in the light of the latest discussions with the official spokesmen in Britain, there are no possibilities of a marked deviation from the U.K.'s stand on the European free trade area. A clear indication of this is provided by Mr. Maudling's categorical declaration in the House of Commons last week that the U.K. Government would stand by the principles it had all along pursued against trade discrimination and that Britain's way would ultimately be recognised "as the only way worth taking to a wider trade system accompanying the Rome Treaty." In this connection, he emphasised, once again, that Commonwealth preference was no more a barrier to the development of a free trade area than it had been a barrier to the development of the liberalisation policies of the O.E.E.C. Reiterating that the U.K. could not contemplate any system of work with Europe which was at the expense of its ties with the Commonwealth, Mr. Maudling declared: "It would be bad for us—it would be bad for the Commonwealth, I think it would be a bad thing for the whole free world, if Britain were ever forced to choose between the Commonwealth and Europe."

The continued earnestness with which the British Government is seeking to preserve the Commonwealth preference is certainly commendable. It is to be hoped that Britain's viewpoint would receive due recognition at the hands of the C.M. Commission while preparing its plan for the future of Europe. Given such a recognition, the seventeen West European nations will, there is no doubt, succeed in arriving at a *modus vivendi*, resulting in an agreement acceptable to all parties.

Meanwhile, the report of the G.A.T.T. Working Party on the problems which the association of overseas territories with the European Economic Community raised for the trade of G.A.T.T. members outside the Common Market has been released. Although the report is a bulky one, running into some 281 pages, it does not offer any solution to the issues involved such as the effects of new tariff regime on production, matters of trade, and world markets. The report contains merely a summary of the opinions expressed by most members of the Working Party, on the one hand, and by the C.M. representatives, on the other, without reaching any definite conclusions or making any recommendations. The report is, however, useful, particularly to India, in that it includes a detailed review of the trade in twelve commodities regarded as being of particular concern to G.A.T.T. members, namely, tea, coffee, cocoa, sugar, tobacco, oilseeds, cotton, hard fibres, bananas, wood, aluminium and lead.

The G.A.T.T. Working Party's report is useful for another reason also and that is that it focusses attention on the overall effect of the association of overseas territories with the C.M. as brought out by ten of the Party's twelve non-C.M. representatives. In brief, the effect is three-fold: One, some of the trade of third countries within the C.M. in the aforesaid commodities is likely to be lost in the transitional period, while, over the long-term, a substantial part of it would be jeopardised by actions of the C.M. countries permitted under the Rome Treaty. Two, several countries in Asia, Central and South America, and the Caribbean fear substantial damage to their export trade. Three, the creation of a new preferential area, resulting from the association of overseas territories with the C.M., may cause substantial damage to the economic, social and cultural development of other territories with living standards similar to those of the associated overseas territories and producing similar primary products; in fact, it would produce a diversion of trade.

There is no exaggeration whatever in the fears expressed above. It cannot be too strongly emphasised that the world markets for primary products on which the underdeveloped countries solely depend should not only be maintained but also continue to grow and that international trade must be progressively freed from restrictions. The majority of the G.A.T.T. Working Party members have, therefore, done well to lay special stress on this aspect.

SURVEY

(*Concluded from page* 259)

cess, multi-point sales tax and betterment levy, all of which were decided upon earlier in the current year, and (2) speedy recovery of large amounts outstanding on account of the cost of public and private irrigation works, as well as arrears in water rates payment. The Bihar Government's expenditure programme for 1959-60 stands as follows:

(In crores of rupees)

	Non-plan	*Plan*	*Total*
Revenue	46.88	19.46	66.34
Capital	11.76	19.06	30.82
Loans and advances	1.52	7.02	8.54
Loan repayments	18.99	..	18.99
Total	79.15	45.54	124.69

The major heads of expenditure—in crores of rupees—are: Education 11.51; medical and public health 7.35; irrigation 7.81; agriculture 4.90; police 4.72; co-operation 3.48; industries and supplies 2.64. The gross second Plan budget for the coming year is put at Rs. 45.54 crores.

The U.P. Finance Minister, Mr. Syed Ali Zaheer, has not indicated how he proposes to cover the revenue deficit of Rs. 1.86 crore. Perhaps, he expects that the deficit may actually be wiped out as a result of the revenue receipts exceeding the budgeted figure and the expenditure being lower than what is now estimated. It is pointed out, in this connection, that the 1957-58 budget, which had revealed a revenue deficit of Rs. 11.67 crores, eventually turned into a surplus of Rs. 5.52 crores and the revised estimates for 1958-59 show a much smaller deficit of Rs. 37 lakhs, as against Rs. 4.54 crores originally anticipated. The net capital expenditure for 1959-60 is estimated at Rs. 32.14 crores, as against the original budget estimate of Rs. 32.85 crores for 1958-59.

The U.P. budget, as stated earlier, does not contain any fresh taxation measures. Account is, of course, taken for minor increases in stamp duty, court fees and motor vehicles tax, but these have already come into force through the recent amendments to the relevant Acts. Apart from exempting industrial consumers from payment of electricity duty—the loss of revenue involved is put at Rs. 50 lakhs annually—the U.P. Finance Minister has announced relief to the hard-hit low-paid Government employees, as well as to school and college teachers of aided institutions, partly in the form of enhanced dearness allowances. He has also announced direct tax relief to foodgrain dealers.

The revenue deficit of Rs. 3.63 crores revealed in the West Bengal budget for 1959-60 is in contrast to the surplus, albeit small, of Rs. 81 lakhs for 1958-59 (revised). This is due to the contraction of Rs. 2.54 crores—from Rs. 81.58 crores to Rs. 79.04 crores—in revenue receipts, on the one hand, and a rise of Rs. 1.90 crore—from Rs. 80.77 crores to Rs. 82.67 crores—in expenditure, on the other. Despite the huge revenue deficit, the overall position is shown as a surplus of Rs. 48 lakhs, after taking into consideration the surplus of Rs. 4.11 crores outside the revenue account. The latter surplus has been arrived at as follows:

(In crores of rupees)

Receipts from debt heads:	
Loans	53.14
Contingency fund and public accounts	94.30
Total	147.44
Expenditure:	
Capital expenditure	26.77
Loans	23.26
Contingency fund and public accounts	93.30
Total	143.33
Net position	+4.11

Presenting the budget of the W. Bengal Government, Dr. B. C. Roy, the State's Chief Minister, pointed out that improvement in revenue during the current year (1958-59) had enabled the Government to contribute from the revenue account a much larger amount than was originally expected towards the second Plan, the sum actually utilised being Rs. 17.6 crores, as against Rs. 8.1 crores. This, he said, was possible notwithstanding increases in non-Plan and normal expenditure, because resources from additional taxation had developed remarkably; the revised estimate of such taxation is placed at Rs. 53 crores for the five-year period, as against the Planning Commission's original estimate of Rs. 14 crores.

The provision for loans from the Union Government for 1959-60 is Rs. 32.29 crores, as against Rs. 33.23 crores for 1958-59 (revised). The loans include Rs. 6.00 crores as the State's share of small savings, Rs. 5.54 crores for refugee relief and rehabilitation, and Rs. 4.10 crores for the Damodar Valley Corporation. The money to be available from the Centre also includes Rs. 11.50 crores to be given as assistance for Plan schemes.

MARKET REPORTS

(*Concluded from page* 289)

as stockists were reported to be anxious to sell before the advent of new crop in the market which would begin arriving by the end of March.

Rice continued to rule quietly steady, as supplies in the local market were restricted, due to ban on exports from surplus districts. The latest prevailing prices were: wheat average quality Rs. 26; farm Rs. 27; retail Rs. 27.50; rice *basmati sela* Rs. 33; mainpuri Rs. 21.87; *raimunia* Rs. 27 per maund.

Gram eased by about 50 nP per maund during the week on expectations of good crop following timely winter rains. Barley and *bejhar* also drifted lower, as demand was slack and bumper crop was expected. Maize stockists were now reported to be anxious to liquidate their stocks and, despite good consumers demand, prices eased fractionally during the week. *Bajra* was losing the seasonal demand and price trend was easy. *Jowar* also eased by about 50 nP per maund and week-end prices (in rupees per maund) were: gram punjabi 23.25; barley 16; *bejhar* 16.62; maize 15.25 to 15.50; *bajra* 15.62; *jowar* 14.75 and *guwar* 15.62.

Pulses, however, continued steady, due to poor stocks with the trade, while new peas arrivals would begin by the end of March and *arhar* new would not be available in the markets before May.

LINSEED QUIET

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 16*th February*

The general tone of the linseed market is quiet and prices have receded slightly, with buyers in rather a hesitant mood. Offers of new crop seeds are on a larger scale than hitherto, but only small quantities have been traded for March and April delivery at prices about 50 nP below the last week's levels.

Activity in the linseed oil section has been negligible. Local demand has declined in sympathy with the recession in groundnut and mustard oils. Sellers' indications for April-May delivery are around Rs. 52.50, while buyers' ideas are lower.

The latest available quotations per maund are Ready Rs. 27.12; Feb/March Rs. 24.75; and April/May Rs. 23.00.

STRONG DEMAND FOR HIDES

(*From Our Own Correspondent*)

KANPUR, 16*th February*

During the week under review, the hides and skins market ruled firm, despite plentiful supply of goods prepared from hides of dead cattle and heavy offers of fresh goods from local butcheries. The demand for all categories, were strong. Madras dealers were very prominent in the goat and sheep sector.

The latest available quotations are: Wet salted cow, 1st grade Rs. 410, 2nd grade Rs. 395 and 3rd grade Rs. 360 per score; wet salted buff. 1st grade 2 lb. 1 oz. and 2nd grade 2 lb. 3 ozs. per rupee; goat, 1st grade Rs. 400 and 2nd grade Rs. 375 per 100 pieces; and sheep, Rs. 360 per 100 pieces.

FAIR WIND FROM ABROAD

FOREIGN opinion about India is becoming more and more understanding and sympathetic. All available indications are that India's third Plan could be bigger than the second one. This must undoubtedly be a cheerful development for our planners. It is only to be hoped that it will not act as heady-wine but encourage them to prepare their plans in a manner which will facilitate quick economic progress and visible improvement in the living standards of the people without impairing their democratic way of life. While all foreigners—we are having in mind only the developed countries of the free world—want India to go forward, there are two schools of thought on the pace which India should choose for its progress. There is one school, represented by hard-headed business men, financiers and bankers, which feels that India should not try to go too fast, lest it should hurt itself in the process. It would like to see a sustained growth, each stage to be followed by another after proper consolidation of the efforts made in that stage. Obviously, it believes in the old adage that "slow and steady wins the race." It appreciates the necessity for speed, but it does not believe in hurry-scurry efforts which result in waste and lower efficiency. There is another school, consisting mostly of politicians and academicians, which wants India to move as fast as it can, on the ground that a slower rate of economic growth is likely to result in political upheavals which will undermine democratic forces not only in India but also elsewhere in Asia. This school of thought is worried by the implications to the free world of the rapid progress that is being made by totalitarian China and is anxious that India should be helped by the developed countries of the free world to show to the uncommitted underdeveloped countries that rapid economic progress could be achieved through democratic methods at a smaller cost than through communist methods. The last few days have thrown up some signs to show that the latter school of thought is in the ascendancy in the U.S. and, to some extent, in the U.K. too.

For the second time in less than a year, Senators John Kennedy and John Sherman Cooper, whose continued interest in India's plans for economic development are well known, are endeavouring to rouse the U.S. Congress in favour of larger economic aid to India. They have introduced a resolution in the Senate urging that, as "the continued vitality and success of the Republic of India is a matter of common interest to the free world, the U.S. Government should invite other friendly and democratic nations to join in a mission to consult with India regarding detailed possibilities for joint action to assure the fulfilment of India's second Plan and the effective design of its third Plan." The attempts made by these two Senators last year to get from the Congress a large lumpsum appropriation for India's second Plan did not fructify. They only resulted in an expression by the Congress of a vague, non-committal sort of support to India, though it did strengthen the hands of the Administration to give a loan of $225 million and a fresh allocation of wheat and raw materials under P.L.480. But last year was a year of Congressional elections and one of economic recession which kept the U.S. Congress very much preoccupied with domestic economic affairs. The position now is different. The Democrats now command a clear majority in both the Houses of Congress. A full term of four years lies ahead for the present Congress. The economic recession is over and a steady and sustained recovery has been in progress during the last five or six months. The Administration, too, appears to be more appreciative of India's economic needs than before. Public opinion also is better disposed towards India than a year ago. If, therefore, Senators Kennedy and Cooper try hard, as we believe they will, they may succeed this time.

The aforesaid resolution, it must be noted, does not call for any specific financial commitment by the U.S. It is only asking the U.S. Government to collaborate with other friendly democratic countries to discover ways and means of helping India in its economic efforts on a long-term basis. In other words, the resolution, as it stands, favours concerted attempts by the developed countries in the West as distinct from help by the U.S. alone. This may not mean very much. But the speech of Senator Kennedy clearly brings out the authors' intentions and their keenness to see India helped in a big way. He stated that aid to India should be on a long-term basis and not on an annual basis, dependent upon domestic budgetary and political needs. Pleading for more resources and more continuity for the U.S. Government's Development Loan Fund, under which soft loans repayable in local currency are made available to underdeveloped countries, he observed:

"One nation, in particular, stands out as the primary example of which I am urging—one nation of particular importance to the free world, and in particular need of long-term development capital. That nation is India—the hinge of fate in Asia. This is the critical year for India. This is the year when the second Five-year Plan will prove to be either fruitful or futile. This is the year, in short, when India must appraise her future and her relations with the rest of the world.

"I do not say that India could not tread water for a few more years before going under. But this is the year when Indians need confidence that they can plan major efforts for long-range progress with some assurance of substantial long-term assistance from the Western world. More short-term credit cannot do the job. As long as our efforts are aimed only at assuring short-term solvency, they only leave plans for an effective Indian development programme suspended in mid-air."

From the point of view of both eloquence and reasoning, it is difficult to excel Senator Kennedy. He has highlighted the importance of India to the free world and also ably argued why it is necessary to help this country on a long-term basis. Earlier portions of his speech show that he is very much in agreement with Mr. Jawaharlal Nehru, India's Prime Minister. For instance, he drew the pointed attention of U.S. Congress men to the ever-widening gap in living standards, income and hope for the future between the developed and underdeveloped worlds and remarked that it was this gap which was "altering the face of the globe, our strategy, our security and our alliances, more than any military challenge."

He was sorry that the U.S. had responded to the economic challenge "most sporadically, most timidly and most inadequately" and that, "as the richest nation on earth, it has not given the poorer nations new hope." He admitted it "as an unfortunate fact that the Soviet Union and particularly China have attracted the attention of the underdeveloped world to another, and seemingly quicker, route to closing the gap." He, therefore, wanted the U.S. Congress "to enact a programme that will do the job." This is forceful plea, indeed, and if it goes home to the U.S. Congress and Administration, it will undoubtedly give new hope to the 380 million people of this country and strengthen their conviction in democracy.

While the U.S. Government's vision is still not as large as that of Senator Kennedy, there is no doubt that it is following a helpful policy towards India. Shortly after Senator Kennedy's speech, Mr. C. Douglas Dillon, the U.S. Under-Secretary of State for Economic Affairs, told the House of Representatives that, in his opinion, "the pushing of economic development in India is probably the most important economic project we have anywhere in the world." He was also of the view that, in this field, India was doing better than Pakistan. He conceded that "India is further advanced on the path. They have individuals able to organise, plan and operate. They need capital and they have a tremendous country with 400 million people. As they go, all of Asia and Africa will go." These remarks, in effect, endorse the observations of Senator Kennedy and encourage us to hope that, very soon, the U.S. Government's approach will be identical to that of the Senator and his Republican colleague Sherman Cooper.

It would appear that even some non-Communists in this country do not like the anti-communist grounds on which India's friends in the U.S. and elsewhere in the free world are seeking assistance for its Five-year Plans. Surely, there is no point in this resentment. India has, after all, chosen democracy as its way of life. And it is common knowledge that democracy in this country will be in serious danger, if the standard of living of its people is not raised as quickly as possible, for, with adult franchise, with literacy not more than 16 per cent., and with population increasing at the rate of six million a year, the Indian Communists can easily exploit the masses to their advantage by holding up the achievements of Russia and China and promising heaven on earth. Indeed, they are already doing so, as witness the recent statements of the Communist leaders who have just returned from Moscow after attending the much advertised twenty-first Soviet Communist Party Congress. Those foreign friends of India who are trying to secure more help for it on the ground of keeping communism away from it are, therefore, only speaking the truth.

BOMBAY BUDGET

THE Bombay budget, presented to the State Legislature last week by the Finance Minister, Dr. Jivraj Mehta, reflects the generally satisfactory conditions in the Bombay State's economy. It is true that some sections of the economy are in a bad shape. Thus, the State's textile industry, which holds a unique position in India's national economy, has been adversely affected by recent unfavourable trends in domestic and foreign offtake and, even more, by heavy taxation. Notwithstanding the setback in this and in a few other sectors, the overall economic conditions in the State have been sufficiently comfortable to permit a healthy expansion in the State's revenues. It is also noteworthy that the current expenditure in terms of the second Five-year Plan has been steadily stepped up year after year.

The buoyancy in the State's revenues is reflected in the successive improvement in estimates of revenue receipts. For 1957-58, the actuals of revenue are placed at Rs. 128.35 crores, as against the revised estimate of Rs. 117.34 crores. The budget estimate of revenue for 1958-59 was Rs. 123.0 crores and it has now been revised upwards to Rs. 132.02 crores, the estimate for 1959-60 being higher at Rs. 136.74 crores. It will thus be seen that, between 1957-58 (revised estimate) and 1959-60 (budget estimate), the improvement in revenue has been of the order of Rs. 19 crores. But it is somewhat disconcerting to note that revenue expenditure has also grown steeply. Actual expenditure in 1957-58 amounted to Rs. 116.27 crores, as against the revised estimate of Rs. 111.77 crores. Again, the budget estimate for 1958-59 placed the expenditure at Rs. 122.76 crores, whereas the recent trends suggest that it will be of the order of Rs. 131.58 crores. The budget estimate for 1959-60 envisages expenditure at a higher level of Rs. 137.7 crores. In other words, whereas the year 1957-58 revealed a surplus of Rs. 12.08 crores, the revised estimate for 1958-59 shows only a nominal surplus of Rs. 44 lakhs and the budget estimate for 1959-60 an actual deficit of Rs. 98 lakhs.

A review of these figures would seem to suggest that the authorities could never be too careful in the pursuit of economy in expenditure for which the scope, despite the understandable reasons for its increase given by the Finance Minister, is not inconsiderable. It is not without significance that the Planning Commission, in its reappraisal of the second Plan, has placed considerable emphasis on economy in expenditure at the States' level in the last two years of the Plan from which the Commission feels that about Rs. 30 crores could be gained for development purposes.

Now that the State Government has overcome many of the difficulties arising from the reorganisation of the States, it has been found possible to step up the outlay on the Plan. From Rs. 47 crores in 1956-57, the outlay in the second Five-year Plan moved up to Rs. 51.5 crores in 1957-58 and still further to Rs. 78 crores in the current year; in 1959-60, it is proposed to spend Rs. 90 crores. During the four years ending 1959-60, the State will have spent Rs. 266.5 crores or nearly 76 per cent. of the total outlay of Rs. 350.3 crores. In this connection, we wish to reiterate the point we have often made, namely, that it would be a healthy practice for the States to furnish information about the physical achievements under the Plan instead of merely giving the financial expenditure incurred under it. After all, what really matters is the new wealth that has been created, financial outlay being only a means to that end. The speech of Bombay's Finance Minister, excellent as an overall review of the State's finances as it was, lacked the details of actual accomplishment under the State's Plan which would have encouraged the Government's supporters and satisfied, if not silenced, its critics.

To revert to expenditure under the Plan. Agriculture, irrigation and power claim the major portion of the total outlay on the Plan; the share of these sectors works out to 63.7 per cent. In the agricultural sphere, the programme for the construction of 35,000 new wells and repairs to 28,000 old wells has been pursued with vigour. Under the soil conservation programme, some 1.1 million acres of land have been contour-bunded. Further, 240 seed farms have started functioning, the target being 323 seed farms.

Since India continues to depend largely on monsoon for irrigation purposes, a permanent solution to the country's food problem, as Dr. Jivraj Mehta pointed out, can be found only through the development of major, medium and minor irrigation works. Several hydro-electric projects, taken over from the first Plan period, have been completed. The major and medium irrigation works have together added 138,000 acres to the irrigated area. In this connection, a commendable measure has been the stimulus given to the utilisation of the water potential created by irrigation works. Water is made available at concessional rate in the first three years. The administrative procedure for the supply of water has also been simplified. The major difficulty in the utilisation of irrigation water, as is well known, is the farmer's inability to construct field channels. In order to eliminate this difficulty, the "Government has recently fixed criteria according to which no field will be more than one mile away from a Government outlet and cultivators will have to dig channels only below 1 cusec level." The Government has done well to set up a separate body—the Bombay State Irrigation Board—to consider and recommend measures for extending irrigation facilities. The largest of the power projects in the State is the Koyna project, the first stage of which envisages the installation of four units, each generating 60,000 kw. power. The first generating set is expected to be commissioned by April 1961, the remaining three sets at intervals of six months each thereafter.

Being a premier industrial State, Bombay has necessarily to give considerable attention to maintain and improve its industries. It is gratifying to be told that a Master Plan for industrialisation of the State is expected to be ready soon. The Finance Minister did not throw much light on this blue-print for the State's industrialisation. It is to be hoped that the Plan will include a realistic appraisal of the State's resources and its implementation will be speeded up. In view of the growing unemployment in the State, the authorities cannot afford to go slow with industrial schemes. Nor can they rest on their oars. They should continually encourage the establishment of new enterprises. It is not uncommon in other countries with a federal constitution for the States to advertise their resources and facilities for industrial progress and invite capital and technical know-how. Fortunately, Bombay has sufficient capital and technical and managerial personnel. Through the provision of suitable incentives, they can be supplemented by resources from foreign countries. In any case, the Government should not relax its efforts to accelerate the pace of the State's industrial progress.

The Government is presumably engaged in the study of the programmes to be included in the third Five-year Plan. Clearly, this Plan will have to be significantly larger than the second, considering that the State is much larger than when the second Plan was in the blueprint stage. Assuming that the State's administrative frontiers will remain intact, the authorities have necessarily to think in terms of a plan which will reconcile the just regional claims with what is economically feasible and correct. The Plan will need larger resources than what the State has had to find in the past. Generally speaking, it should not be difficult for the State to gather the resources it will need. But the Government will do well to tighten up the tax-collecting machinery, so that it will not have to divert its energy to new sources of income without tapping in full the existing sources of revenue. A plentiful source of revenue has been the sales tax. It is expected to yield some Rs. 30.1 crores in each of the two years, 1958-59 and 1959-60, as against the budget estimate of Rs. 24.4 crores for 1958-59.

The Finance Minister estimated that the implementation of the Sales Tax Committee's recommendations, which were designed to ensure simplification of the sales tax collection and uniformity in rates and systems of sales tax in different regions of the State, would yield an additional Rs. 1 crore in revenue. There is no doubt that the revenue from this source is bound to expand in the coming years with the anticipated increase in agricultural and industrial production. Even so, it should be possible for the State to ensure that leakages in revenue, which are known to occur in this sphere, are effectively closed. Fiscal administration need not necessarily be costly in order to be efficient. Much depends upon the choice and training of personnel and efficient supervision of the work of subordinate officers.

A promising source is small savings scheme which, from all accounts, is being ably implemented in the State. With an annual net target of Rs. 26 crores, the scheme is already an important item in the capital budget. Through several incentives, not the least important of which is the facility for adjusting interest on small savings certificates towards land revenue, the scheme is sought to be popularised. In its present form, the scheme, as the Finance Minister himself pointed out, will serve the twin objectives of wider coverage—it will bring agricultural population within its purview—and inculcation of the thrift habit among the people.

AUTOMATION

MR. Krishna Menon's bold advocacy of a policy of progressive modernisation of all existing industries for raising the production potential of the country should dispel the mist of confused thinking which has grown round this issue of late. There is a tendency to look at the question of modernisation in the light of a supposed conflict of interest between workers and management and to argue that those advocating it ignore the human problems it gives rise to. Trade unions' opposition to modernisation more often than not springs not so much from ignorance of its advantages in the long run as from a refusal to face the immediate discomfiture. Mr. Menon did well to emphasise, in the course of his address at the centenary meeting of the workers of the Government Harness and Saddlery Factory at Kanpur, that only modernisation and automation could open the way for larger consumption and the establishment of new industries. "If we want to build a socialist society," he pleaded, "let it be a society sharing plenty and not poverty." It was taking a narrow view of automation, he pointed out, to oppose it merely because of the fear of unemployment. Automation should not be resisted on the ground that it was anti-labour or anti-progress. On the other hand, he asserted, automation alone could provide workers higher reward for their labour.

Automation, as the next stage in industrial progress, is bound to come into vogue throughout the world, whether one wills it or not. It may not be an issue of immediate importance to this country, since India has to go a long way before it can introduce automation. But, for its very survival as an industrial nation, modernisation of equipment and machinery is of urgent importance. It is not merely short-sighted but suicidal to allow industries to continue operating with obsolete machinery when China and all other Asian countries are making an all-out bid to catch up with the industrial West.

It is true that introduction of modern machinery will result in some measure of unemployment. But this will only be a temporary phenomenon. It should be possible to absorb the displaced persons when wider markets and larger consumption make expansion in production possible. It should not also be difficult to find, to put impossible conditions but to ensure that it causes a minimum of hardship to workers. The correct approach to the question of modernisation is, therefore, not to oppose it outright, nor to put impossible conditions, but to ensure that it causes a minimum of hardship to workers. The transition can be made as smooth as possible, provided there is sufficient co-operation among workers, employers and the Government.

The attitude of British trade unions to automation and technological changes should serve as an example to others. They realise that Britain's capacity to make both ends meet as a nation depends on its industrial efficiency. They understand that, if their industries were to be lacking in up-to-date techniques, they would fail in a sternly competitive world. In fact, at a special conference called by the British Trade Union Congress in 1957 to review automation developments at home and overseas, Mr. William Carron, leader of 900,000 engineering workers, averred that "there seemed to be more to fear from too little automation than from too much." British trade unions, however, maintain that technological changes should be introduced in the right way, after thorough consultation with workers and that labour should get a fair share of the benefits. The U.S. trade unions, too, according to Mr. David Lasser, Research Director of U.S. International Union of Electrical Radio and Machine Workers, take a similar view of automation. But, as is natural, trade unions in both the countries insist, and justly so on retraining of workers displaced by automation, raising of unemployment benefits and compensation or severance pay. Surely, it is time the trade unions in this country learned to look beyond their nose.

PRIVATE SECTOR LIFE-BLOOD OF DEMOCRACY, SAYS TYAGI

LIFE INSURANCE A RECORD—CALCUTTA GAS TO BE NATIONALISED

THURSDAY, 5 P.M.

MARKET GOSSIP

ABOUT the middle of March 1959, the six good friends of India in the free world—the U.S., the U.K., West Germany, Canada, Japan, and the World Bank—will meet in Washington to decide the details of help they have promised to give for seeing India's second Plan through. The latest estimate of India's requirements of foreign exchange is $700 million, that is, $100 million more than the estimates current at the time of the Fund-Bank meetings at New Delhi. Advices from abroad suggest that there would be no difficulty in getting this amount and that the climate of opinion is quite favourable to India. The climate can certainly be improved further, if Mr. Morarji Desai presents a realistic budget. With only 48 hours more for the budget to be out, it is useless to say as to what the budget should be like, except to add that the whole free world is waiting to see whether India will give more scope and freedom to private enterprise or take further steps towards State capitalism.

Although the mere fact that India is striving hard to establish a democratic, as opposed to communist, society seems to be the main inducement for the Western world coming to the help of this country, it remains to be seen whether Mr. Morarji Desai and his Cabinet colleagues have been wise enough to realise that it is in the interest of this country itself that a vigorous private sector is an essential prerequisite for a steady and sustained growth of democracy. Although Mr. Nehru had stated, apparently in a mood of anger, that the private sector was not necessary for a democratic society and that it actually came in the way of the functioning of the democratic apparatus, even he would, on calm reflection, grant that that view is not correct. In this connection, we would like to bring to the notice of the Government the views of Mr. Mahavir Tyagi, a veteran Congress Member of Parliament and a former Cabinet colleague of Mr. Nehru. Addressing a gathering of business men at Patna last Sunday, Mr. Tyagi described the private sector as the "life-blood of democracy" and urged the Government to give a lead in creating a congenial climate for mutual confidence and understanding. He felt that only under such a climate would the collection of taxes be easier and averred that acrimonious slogans and vilifications would not make business men to disclose their wealth or induce them to give up tax evasion. He emphasised that the private sector must be allowed to prosper in the interest of democracy and warned that, if democracy failed in India, the unity of the country would be gone. He was kind enough to recall the patriotism and sacrifice of the business community during the struggle for independence and to exclaim: "How can the same business men, who financed our freedom fight during the British regime, turn traitors, tax-dodgers and thieves after independence!" Not many Congress men speak in this vein nowadays. Accordingly, Mr. Tyagi's words make refreshing reading. Let us wait and see to what extent the budget will signify a welcome change in the Government's attitude towards the private sector.

* * * *

In our first leading article this week, we have drawn attention to the observations of the U.S. Senator John Kennedy on the need for helping India economically and to the resolution which he has moved in the American Senate in co-operation with Senator Sherman Cooper. It will be useful to record here the reactions of others to their move. Before doing so, it must be added that Senator Kennedy has suggested that a mission representing the U.S., Canada, Great Britain, West Germany and Japan should undertake a frank and realistic exchange and survey of India's future needs. He is of the view that such a mission would be uniquely effective in providing a fresh approach. This suggestion has had a good reception in both the U.S. and the U.K. It has been endorsed by Mr. Averell Harriman and Mr. John D. Rockefeller, both of whom are prominent leaders in the U.S. and have just paid a visit to India. The *New York Herald-Tribune* in the U.S. and the independent Sunday paper, the *Observer* in Britain, have also welcomed the Kennedy-Cooper proposal. The *Observer* has, in fact, come to the conclusion that Indians may not plan on ambitious lines, unless they are positively encouraged to do so by the West. "The trouble," according to it, "is that the chastening experience of carrying a begging bowl round among their friends is making the Indians themselves excessively cautious about the further stages in their development programme." This view may appear to be somewhat exaggerated, but there is a lot of truth in it. While, of course, some are talking in terms of an investment of Rs. 10,000 crores under the third Plan, what is likely to happen, if India is not assured of sufficient foreign exchange resources, is that the stress on internal resources would be pitched at a higher level. This would mean an unbearable strain on the people of this country. Already, the tendency amongst a section of advisers to the Congress Party is that the next Plan, while being bigger than the second Plan, should not depend too much on external resources. Such an attitude is, of course, unrealistic, especially if the stress is going to be on heavy industries. But this only goes to prove the point the *Observer* has made. Be that as it may, the circumstances are now favourable to India for drawing up a third Plan bolder than the second one and for trying to obtain sufficient help from the developed countries in the West. The final shape of the Plan should, however, be realistically adjusted on the basis of a realistic appraisal of resources available within the country and promises abroad.

* * * *

The record new business of Rs. 344.68 crores under about a million policies written by the Life Insurance Corporation of India in 1958 is an indication that the initial teething troubles and the organisational and administrative problems have almost been solved and that the Corporation is now well set on the road to expansion of business. The 1958 business figure is the highest ever attained in this country and represents an increase of about Rs. 62 crores (22 per cent.) over the previous year's figure of Rs. 283.07 crores. It comprised Rs. 5.62 crores written outside India and Rs. 339.06 crores within the country, including Rs. 1.60 crore under the *Janata* Insurance Scheme. This compares favourably with the previous year's overseas business of Rs. 5.40 crores and business within the country of Rs. 277.67 crores (including Rs. 1.17 crore under the *Janata* Scheme). It will be noted that the increase in business was mostly confined to business done within the country. Foreign business, which constitutes only a small percentage of the total, showed only a very small rise, while *Janata* Insurance, a new innovation, recorded fairly good progress. In terms of percentage to the total business, the share of *Janata* is still negligible. The total number of all policies issued during the year aggregated over 960,000, as against 800,000 in 1957.

An analysis of the zonal-wise distribution of business indicates some interesting trends. The largest percentage increase in new business was in the Western and Northern zones, the rise having been as much as 27 per cent. in both these zones. The Central zone recorded an increase of 23 per cent., Southern zone 22 per cent. and Eastern zone 16 per cent., being the lowest. Breakdown figures of new business are: Northern zone: Rs. 43 crores, Central zone: Rs. 44 crores, Eastern zone: Rs. 79 crores, Southern zone: Rs. 90 crores and Western zone: Rs. 83 crores. It will be seen that the Southern zone is head and shoulders above the other zones. This indicates that, though the Southern zone is by no means as rich as the rest of India, people in this area appreciate the value of insurance better than those in others and are generally keen on saving for the future. Considerable disparity was also noticed in the value of the average policy sold in the different zones. Thus, in the Northern zone, the average policy was for over Rs. 4,600. In the Central and Western zones, it was a little over Rs. 4,000, in the Eastern zone Rs. 3,600 and in the Southern zone Rs. 2,700. The last mentioned figure confirms the point just made about the Southern zone. The average policy sold outside India was over Rs. 10,000.

The investments of the Corporation as on 31st December 1958 stood at Rs. 414.02 crores, as against Rs. 381.46 crores on 31st December 1957. Of this, Rs. 201 crores were in Government of India securities, over Rs. 55 crores in State Government securities, Rs. 39 crores in other approved securities, Rs. 75 crores in debentures, preference shares and ordinary shares of companies, Rs. 13 crores in loans on mortgage of property, and over Rs. 21 crores in land and house properties owned by the Corporation.

The increase of 22 per cent. in new business in 1958 is no doubt encouraging. But turnover figures alone cannot give an exact indication of the improvement in real business. Much more than quantity, it is the quality of business, indicated by the percentage of lapses, that counts in the long run. It is heartening to hear that the lapse ratio, after having risen to a peak of 11.1 per cent. in 1956, has since shown a downward trend and was only 8.4 per cent. in 1957. Comparative figures for some of the previous years are: 9.1 per cent. for 1955, 8.5 per cent. for 1954 and 8.9 per cent. for 1953.

It is needless to add that initial successes should induce no complacency. The scope and need for expansion of life insurance in India, both as a method of mobilising the savings of the people and as cover against risks, are vast. The ratio of life insurance in force in India to the national income is indeed one of the lowest in the world. Thus, as against only 11 per cent. in India in 1956, the percentage ratio is as high as 132 in Canada, 112 in the U.S., 83 in New Zealand, 58 in the U.K., 55 in Austria, 53 in Sweden and 50 in Switzerland. Further, for resources for implementing the second and third Plans, the Government is banking on life insurance to a considerable extent. It will be recalled that a specific reference to this effect is made in the Nagpur resolution of the Congress Party.

The Corporation is aware of this great task ahead. Its Chairman, Mr. P. A. Gopalakrishnan, disclosed yesterday at a Press Conference in Bombay that the Corporation has drawn up a tentative five-year plan for raising the level of national savings through life insurance. Under this plan, which has yet to be considered and finalised, a new business of Rs. 1,000 crores has been fixed as the target in the fifth year of the plan.

The Corporation is intensifying its efforts to spread the message of insurance. In 1958, it took four steps to achieve this objective. (1) As many as 74 new offices were opened in places where there were no offices of any insurers before. (2) Organised attempts were made for the first time in the history of life insurance to secure business from rural areas. (3) Permanent training centres were opened at the headquarters of all the five zones to train development personnel on the professional aspects of sales and servicing. (4) Intensified work was done to promote special schemes of insurance such as salary saving scheme, group insurance and superannuation scheme.

A contented staff, the Corporation realises, is one of the prerequisites for efficiency and expansion. It has, therefore, decided to give its employees the benefit of a free term insurance, in addition to one month's basic salary as bonus for the year 1957. As readers are already aware, about Rs. 12 crores have also been set apart for housing schemes for the staff which will be spread over a period of five years.

It will not be surprising if the existing old policyholders are impatient about the bonus due to them. Information elicited at the Press Conference shows that actuarial valuation of assets for the purpose of declaring a bonus to policyholders, is progressing. If the work proceeds according to schedule, the bonus will be declared in three to four months' time. It is necessary to add that early declaration of bonus will be a good selling point for new business. It will be more so, if the bonus is declared on a liberal scale, for it will strengthen the confidence of those investors who had been shocked by the sudden and unprovoked act of nationalisation.

The State Bank of India's offer to take over, as subsidiaries, the banks which were either sponsored by the former princely States or associated with them in some capacity or other, does not seem to have received unanimous response from these banks. The Bank of Baroda had already decided not to opt to become a subsidiary and had been allowed to maintain its *status quo*. The latest bank to follow suit is the Bank of Rajasthan Ltd. This Bank has not agreed to the proposal on the ground that it was not established as a State-sponsored bank for handling the State Government's business, like the other State-associated banks. Neither the Mewar State, wherein it was established, nor the United States of Rajasthan, which came into being later, has a share in the capital of the Bank. The Bank is also not enjoying any facility or concession of financial importance from the State Government. It is thus a purely private commercial bank. No doubt, the Government of the United States of Rajasthan appointed the Bank as its banker and treasurer in 1949, but the State's business has, in fact, proved to be unremunerative to the Rajasthan Bank. It has already made a representation to the State Government for fixation of a remuneration.

The management of the Bank seems to feel that the Bank can serve the trade and industry of the area, to which its activities are confined at present, better as an independent private institution than as a nationalised subsidiary. It is also opposed to the principle of the State Bank of India taking over other banks as subsidiaries, when the Banking Companies Act prohibits commercial banks from having subsidiaries. If the State Bank of India Act can be amended to take over subsidiaries, it is contended, there is no reason why other Scheduled banks should not be allowed to do so by an amendment to the Banking Companies Act.

* * * *

It is not known how the investors in the Calcutta Gas Company (Proprietory) Ltd. have received the news that the West Bengal Government has prepared a Bill to take over the Oriental Gas Company, Calcutta, a wholly-owned subsidiary of their Company, under Article 31(A) of the Constitution. Since the shares are quoted at a substantial discount, they would probably be delighted at the news. Much, however, will depend upon the quantum of compensation that will be paid by the Government.

It may be noted here that the West Bengal Government had appointed last year a committee to inquire into the working of the Oriental Gas. The Committee's recommendations are not known, nor is it known whether the present move to take over the Company is a sequel to any recommendation by the Committee.

The decision will doubtless come as a disappointment to the Company's management, because it was only recently that it had decided to go ahead with its expansion programme and secured the import licence for the necessary plant and machinery. The Company had planned its expansion programme a few years ago, but this was met with various inhibitions and delay. From 1952 onwards, there were reports that the State Government had under consideration a scheme to set up a second coke oven plant at Durgapur to meet the gas requirements of Calcutta. In 1954, it was reported that the Government had invited global tenders for laying a pipeline to bring gas from Durgapur to Calcutta. In view of this situation, where even the survival of the Company was in doubt, there was no incentive for it to go ahead with its expansion programme involving heavy capital outlay.

It was not, however, until March 1957 that the Company had definite information that, on account of foreign exchange shortage, the Durgapur gas project would be subject to very great delay. The Company, therefore, immediately drew up a Rs. 35-lakh expansion programme. With great

SHARE MARKET DULL

TATA LOCOMOTIVES SPURT

(From Our Own Correspondents)

BOMBAY, 26*th February*

SWAYED by hopes and fears about Mr. Morarji Desai's maiden Budget to be presented on the 28th inst., the share market presented listless conditions during the week under review. The trend of prices was somewhat irregular within a narrow range, but the undertone remained fairly steady practically throughout the week. Though the consensus of opinion was that there might not be any new burdens in the budget, some anxiety was evident towards the close of the week, which led to some liquidation. On balance, however, equities disclosed only minor changes.

In the steel section, Tata Ordinaries improved earlier in the week from Rs. 173.75 to Rs. 174.50, before retreating to Rs. 172.50 on Tuesday this week. Thereafter, there was again a recovery to Rs. 174 this morning, but at the close they dipped to Rs. 172.50. The new shares were steady with a fractional gain to Rs. 171. Indian Irons gave way from Rs. 26.10 to Rs. 25.95, before regaining to Rs. 26.35. The closing was, however, lower at Rs. 26.20. Mukund Irons recorded a rise of 68 nP over the week to Rs. 14.76.

Textile shares were generally quiet and the volume of business also dwindled considerably. Centurys provided a feature with a drop of Rs. 4.25, that is, from Rs. 437.50 to Rs. 433.25. Bombay Dyeings moved between Rs. 57.40 and Rs. 56.90, before closing at the latter level with a loss of 20 nP over the week. Kohinoors jumped earlier in the week from Rs. 235 to Rs. 239.50, but later slided down to Rs. 234.50. After an advance to Rs. 238.25, the shares declined again to Rs. 235.50 at the close. Central Indias were marked down by a rupee to Rs. 87, while Khataus gathered Rs. 2 to Rs. 156.25 and New Greats Re. 1 to Rs. 210. Minervas declined by Rs. 5 to Rs. 59, Simplex by Re. 1.50 to Rs. 166.50 and Standards by Rs. 4 to Rs. 416. Svadeshis shed Rs. 2.25 to Rs. 202.50 and Tata Mills 25 nP to Rs. 33.75.

Sugar shares were dull, though the rise in prices recorded last week was fairly well maintained. Belapurs advanced early in the week from Rs. 272 to Rs. 275.50, before receding to Rs. 270. After a rise again to Rs. 274.50, the shares closed at Rs. 272. Bhopals were steady at Rs. 25.50 and Walchandnagars at Rs. 275.50. Phaltans, however, declined by Re. 1.25 to Rs. 146.75 and Maharashtras by Rs. 3.25 to Rs. 175. Ravalgaons were a feature with a rise of Rs. 7 to Rs. 140. Cement shares were unimpressive. Associated Cements were done a fraction lower at Rs. 146.50, while Digvijays were unchanged at Rs. 129.50. Orissa Cements, however, improved by 76 nP to Rs. 13.76. In the engineering group, Tata Locomotives provided an exception and, on keen buying, advanced from Rs. 164.50 to Rs. 169, before closing at Rs. 167.75. Alcocks were done Re. 1 lower at Rs. 256. Premier Constructions were steady at Rs. 226. Larsen & Toubros displayed some strength with a rise of 36 nP to Rs. 17.60, as also Mahindras with a gain of 20 nP to Rs. 18.28. Among mining shares, Shivrajpurs gathered 30 nP to Rs. 88.80, while Indian Coppers were steady at Rs. 3.58.

Scindias were on balance 20 nP lower at Rs. 20.56, while Great Eastern Shippings gained 24 nP to Rs. 22.96. Premier Automobiles met with interested support and rose by Rs. 5 to Rs. 93. Hindustan Motors were steady at Rs. 7.84. Bombay Burmahs (old) fluctuated between Rs. 468 and Rs. 464.50 before closing at Rs. 465. National Rayons closed at Rs. 239.50, after gaining from Rs. 242.50 to Rs. 243.25. Tata Chemicals were steady at Rs. 15.48, as were Tata Oils at Rs. 44.75. Killick Industries were marked down by Rs. 5 to Rs. 151.50 and Wimcos by Rs. 2.50 to Rs. 188.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 25*th February*

The absence of any increase in railway fares and freights was the sole cause for the slightly improved trend on the Calcutta Stock Exchange during the week under review. This is not to say that there was an impressive expansion in the volume of business. There was, however, an abatement of nervous selling, a feature of last week's trading, as the view that the Central Budget, which would be presented on Saturday next, would not contain any increase in direct taxation was gaining ground among operators and investors. In the event of the Union Budget proving to be a routine affair, a boom in equities can be expected, and the more prudent among operators believed that holding would prove profitable. However, if the rumour that Government would no longer permit the blank transfer system in order to check tax evasion, materialised, and if every transaction should be registered with the office of the Company concerned, business in the market is bound to fall. For those who purchased shares for a quick and timely turnover would find the incentive lacking. Sentiment was also assisted by good corporate news, such as the announcement of a 15 per cent. dividend by Hindustan Levers, the maintenance of dividend of 8 per cent. by Alkali and Chemicals, and a series of satisfactory dividend announcements by tea companies. Factors that restricted activity included the Reserve Bank's direction to Scheduled banks to exercise restraint on credit expansion and the action by the Forward Markets Commission to check rise in commodity prices.

Sectionwise, coals came up for more attention, following reports of good raisings from collieries, although business did not expand. Pench Valleys at Rs. 24.37 added 37 nP, and Equitables advanced to Rs. 30.37 from Rs. 30.19. Burrakurs after being higher at Rs. 17.56 sagged to Rs. 17.25, while Khatras Jherriahs were steady at Rs. 66.75. Western Bengals recovered to Rs. 5.97 from Rs. 5.87, while Bengals were lower at Rs. 281. Central Indias were in demand at Rs. 7.44, against 7.37 earlier.

Interest in jute shares was limited and barring some features on selective buying most counters were lower on balance. Aucklands were a strong feature with a rise to Rs. 175 from Rs. 173. At Rs. 13.69, New Centrals added a small advance, while Budge Budges gave way to Rs. 130 from Rs. 136. Howrahs hardened to Rs. 19.19 from Rs. 18.94, but subsequently lost the gain. At Rs. 72.50, Ganges eased by one point, but Champdanies were unchanged at Rs. 117.

Indian Irons, in engineerings, were earlier as low as Rs. 25.77 on renewed offerings by holders who needed cash to meet losses in commodities, but recovered to Rs. 26.02. Texmacos at Rs. 20.88 were fractionally better, as were Guest Keen Williams at Rs. 37.56. Braithwaites were supported at Rs. 32.37, as against Rs. 31.94 earlier, while Jessop & Cos. were quiet at Rs. 25.31.

Paper shares received some support on expectations of a favourable report by the Tariff Commission on prices. Orients at Rs. 31.40 added a few nP, while Bengals were unchanged at Rs. 87.50. Sirpurs, after being higher at Rs. 13.81, sagged to Rs. 12.50.

Interest in teas broadened with Sungmas, following the announcement of 10 per cent. interim dividend, forging ahead to Rs. 17.75 from Rs. 17.12. At Rs. 23.87, Betjans gained Re. 1.87 and Anandabags spurted to Rs. 21.44 from Rs. 18 previously. Methonis moved upto Rs. 21.50 from Rs. 20. Interested buying pushed up Dufflaghurs to Rs. 34.50 from Rs. 33.25, and Tezpores hardened to Rs. 15.94 from Rs. 15. Brooke Bonds had buyers at Rs. 16.87, as against Rs. 16.62 earlier, and Dhelakhats at Rs. 23.62, as against Rs. 23.37. Dibrugarhs rose to Rs. 29 from Rs. 27.75 encouraged by the announcement of an interim dividend of Re. 1.

Among miscellaneous industrials, Martin Burns were brought to business at Rs. 30.12, as against Rs. 29 earlier. National Pipes were fully steady at Rs. 17.25, on dividend hopes. Rallis India recovered to Rs. 49 from Rs. 47. Angelo Bros. were slightly better at Rs. 19.20. On good interest, B.I. Corporations were fully steady at the improved rate of Rs. 4.69. Rohtas Industries sagged to Rs. 18.75 from Rs. 18.81.

* * * *

Madras Stock Exchange

MADRAS, 24*th February*

Steady conditions prevailed on the Madras Stock Exchange during the week under review. The steadiness was induced by absence of any increase in passenger fares and freight rates in the Railway Budget and of any fresh tax imposts in the few State Budgets presented so far. Operators were somewhat inclined to feel that the Central Government Budget to be presented by Mr. Morarji Desai in Parliament on Saturday next, might not contain any fresh tax proposals, barring minor adjustments here and there. Tea shares received good investment support, thanks to favourable prices fetched by low-medium and medium varieties at the recent Cochin auctions. Coffee shares were also active. Operators noted the statement of the Union Minister for Commerce and Industry at Bangalore that the Minister for Finance would consider the proposals to replace the various sales taxes now in force by an additional excise duty. In particular, his reference to the satisfactory exports during 1957-58 was well received. Rubber shares, too, attracted attention. Buying enquiry in the textile section was selective. Banks and miscellaneous industrials followed the general trend.

Among tea shares, United Nilgiris were in the limelight, the quotation forging ahead by 75 nP to Rs. 18 *cum-div.* Devasholas firmed up by 38 nP to Rs. 24.25 and Kil Kotagiris by 35 nP to Rs. 7.20. Nonsuch Teas recorded a gain of 25 nP to Rs. 25.25. In the coffee group, Bababudins hardened by 25 nP to Rs. 14 *cum-div.* Consolidated Coffees strengthened by 15 nP to Rs. 19.85 and Coffee Lands by 12 nP to Rs. 21.62. Among rubber shares, Vaikundams and Kalpettas moved up by 25 nP each to Rs. 23.75 and Rs. 12.25, respectively. Pullangodes rallied 15 nP to Re. 1.90. Tropicals rose by 10 nP to Rs. 21.85, Kailas gathered a like amount to Rs. 4.95. In the textile section, Dhanalakshmis went up by Rs. 3 to Rs. 175 *cum-div.* Virudhunagars increased by Re. 1.25 to Rs. 32. Venkatesas put on 75 nP to Rs. 117. A rise of 42 nP to Rs. 6.60 in Ashok Leylands, of 32 nP to Rs. 16 in Sen-Raleighs and of 31 nP to Rs. 13.24 in Orissa Cements characterised trading in the miscellaneous section. Textools, however, dropped Re. 1.75 to Rs. 162.75. Among sugar shares, E.I.Ds gained 20 nP to Rs. 30.50, while Cauverys were subjected to selling pressure and slumped by Rs. 3 to Rs. 102.

BRUSSELS VIEWPOINT

From Our Own Correspondent

LONDON, 20*th February*

YOUR correspondent has just examined for himself how the Common Market appears to be working in practice and the study was salutary. This study was made in both France and Belgium, concluding with the latter since there is the capital of the new Europe. And a new capital it indeed is, with its modern building in glass and steel, housing the European Commission for the Administration of the Common Market, its "six countries" civil servants and its exciting and excited examination of trade problems, relevant and irrelevant to the immediate present.

LONDON LETTER

The first relief to the traveller is the absence of passport control—the barriers are still there but they are no longer concerned with people or money, but with goods. Presumably, the police are the only sufferers from this new liberty, although, of course, a control can be put in *ad hoc* anywhere if a wanted person is around. Goods, however, are a different matter. Your correspondent travelled with a wine merchant from Burgundy to Brussels in a private car followed by a lorry containing barrels of wine. It was customary for this merchant to leave his lorry parked by the side of the road overnight on the French side of the frontier and then have it collected in the morning by a clerk who would complete the necessary declarations and take the lorry across the frontier. The lorry being parked and the Customs officials showing a complete lack of interest in raising the road barrier, the merchant decided to implement the Common Market himself by raising the road barrier. But he had reckoned without the power of officialdom! The Customs officers poured into the road in a body and told the merchant what they thought about him. When he invoked the Common Market in protest and said he was doing no more than he had always done as far as the goods were concerned, he was told that everything was now different. All the forms were different (all the six frontiers have to have the same which will be excellent in the long run but is apt to be confusing at first) and they all had to be completed as soon as the goods arrived at the frontier—*not* the next day! So the merchant had to complete the declaration himself then and there in the cold dank fog that has hung over those parts more than a week, and, after that, just to teach him a lesson about how far it is wise to go in assuming that the Common Market and freedom to raise barriers are the same thing, the officers searched all his personal goods to make sure he was not smuggling any bottles of wine in his car!

Growing Pains

These are no doubt examples of growing pains; the fact the rest of the world must accept is that, slowly, the Six are knitting themselves together and trade discrimination against the rest of the world is a fact and will become more and more obvious as such. Although the British Government still publicly believes there is no practicable alternative to a "free trade area," so far as Brussels is concerned the idea is stone cold dead. It is being replaced by a new idea, as a result of the Parliamentary debate earlier this month: that the practicability of the U.K. *joining* the Common Market is worthy of exploration. In Brussels, the special problems of the Commonwealth are recognised—but the question being asked is: "Are these problems insurmountable?" And the belief is growing that arrangements could be made, given British goodwill, to provide for the relations of the U.K. with her special external markets. It is rather foolish for a British Minister to affirm that the public here are not yet ready for the idea of joining the Six: the public in France and Belgium and no doubt in the other countries, were not and are not yet ready for the Common Market, but they are getting it all the same.

The great coalminers' strike in Belgium and the sabotage which is accompanying it show that, productionwise, the Common Market cannot eliminate hard economic facts. Not only is the whole European Coal and Steel Community suffering from overproduction of coal, but Belgium is a high cost producer and the decision, which precipitated the strikes, has been to cut out one-sixth of uneconomic output. The Market cannot be blamed for the resulting unemployment, but neither can it do anything to avoid it.—*All Rights Reserved.*

NEWS IN BRIEF

THE cost of the second general election in India is estimated at Rs. 2.25 per voter, as against Rs. 4.50 in the first election.

The World Bank has agreed to consider the grant of a loan to India for the completion of the Koyna Project. Negotiations for the loan are expected to take place shortly.

The various Ministries and Departments of the Government of India have effected a saving of Rs. 2,60,60,368 during 1958-59 by undertaking economy measures, according to Prime Minister Nehru.

The U.S. private capital investments in India as on 31st December 1956 aggregated Rs. 46.84 crores, as against Rs. 39.76 crores a year before, Rs. 30.00 crores at the end of 1953 and Rs. 11.17 crores on 30th June 1948.

A new air service to and from India will be operated in the first week of March by Alitalia, Italian Airlines. Alitalia will be the eighteenth foreign airline to operate with traffic rights in India.

The Central Government has finally decided to procure the entire rice surplus from Orissa, reversing its earlier decision to allow the W. Bengal Government also to purchase directly from this State 250,000 tons of rice.

The *Khadi* and Village Industries Commission has finalised programmes involving an aggregate expenditure in the current year of nearly Rs. 6 crores. Madras leads in the State-wise allocation with Rs. 1,70,26,659, while Bombay comes second with Rs. 85,33,960.

The proposal for exempting certain goods from sales tax with a view to promoting their exports has been dropped by the Central Government, because some of the State Governments concerned have insisted on payment of compensation for loss of revenue.

A simplified framework for the presentation of company accounts so as to make them intelligible and more meaningful to the shareholders as well as the general public, is outlined in a pamphlet brought out by the Department of Company Law Administration.

With a view to providing relief to the hosiery industry in U.P., the State Government has decided to reduce, with effect from 1st April next, the sales tax on hosiery goods from 6 nP per rupee (single point) to 2 nP per rupee (multiple point). It has also decided to abolish sales tax on country spirit and to raise, instead, the existing excise duty on it by 10 per cent.

The Central Government proposes to set up, probably at Rourkela, a pipe fabrication mill to manufacture oil pipelines. The Government is currently negotiating with a number of foreign firms for this purpose. The mill is estimated to cost about Rs. 2-3 crores. A part of the pipelines will be utilised for the two refineries at Gauhati and Barauni. The total length of the pipeline from the oilfields in upper Assam to Barauni is 750 miles and that to Gauhati 280 miles.

About 55 per cent. of the cases of non-implementation of labour enactments, awards and agreements in the coal industry which have been referred to the Evaluation and Implementation Division of the Union Labour Ministry have been settled. Other cases are at different stages of investigation. The Division has also examined about 27 cases of infringement of the code of discipline in the coal industry. Through its intervention, in about 40 per cent. of these cases, infringement has already been rectified.

The Rihand Dam project in South-eastern U.P. will be completed in 1961. Disclosing this, Mr. Hathi, Deputy Minister for Irrigation, stated in the Lok Sabha the other day that there was no delay in the work on the project on account of foreign exchange difficulties. He added that the increase of a little over Rs. 10 crores in the revised cost of the project was due to the adoption of higher unit rates based on actual cost, rise in the cost of cement and steel and cost of compensation for the lands acquired.

The production of lead and zinc ores in India in 1958 was 119,556 tons, as against 95,462 tons in 1957, representing an increase of about 25 per cent. The entire production was reported from the Zawar mines of Udaipur district, Rajasthan. The recovery of lead and zinc concentrates during 1958 amounted to 5,257 tons and 7,245 tons, as compared with 4,850 tons and 7,469 tons, respectively, during 1957. The lead concentrates are sent to the smelting plant at Tundoo in Bihar. In the absence of a zinc smelter in India, zinc concentrates are sent to Japan for smelting.

The wheat harvest in the 1958-59 crop year is expected to be at the record level of 10 million tons. The first estimate of area shows an increase of 1.2 million acres during the current year, as compared with that in the previous year. The increase in the area of cultivation has taken place mainly in the Punjab, Rajasthan, Madhya Pradesh and Bihar. In the Punjab, wheat acreage is expected to be of the order of 5.2 million, as compared with 4.9 million last year. The figures for Madhya Pradesh are 6.9 million this year, as against 6.7 million last year. For the whole of India, the acreage is estimated at 29.8 million, according to the first estimate, as against 29.1 million last year.

The Government of India has informed the Estimates Committee of the Lok Sabha that it will not be possible to consider the question of merging the Indian Airlines Corporation and Air-India International, as suggested by the Committee, till 1965, in view of certain assurances given by Air-India International to the U.S. commercial banks from whom it had negotiated a substantial loan. The Government has explained to the Committee that it had approved the Boeing project of the Corporation, subject to the condition that the Corporation raised a loan to cover not less than 67 per cent. of the total cost of the project. The Corporation, therefore, negotiated a loan of $16.8 million from the World Bank and five U.S. commercial banks with an assurance that it would not consolidate or merge with any other corporation, a condition which formed part of all loan agreements between various U.S. airlines and lending banks in that country.

* * * *

From Abroad

The number of persons unemployed in the U.S. in January was 4,724,000—the highest for this month since 1942.

Production of tea in Ceylon touched an all-time record of 413.15 million lbs. in 1958, as compared with 397.77 million lbs. in 1957.

West Germany had a favourable balance of trade to the tune of £18 million in January 1959, with exports aggregating £234 million and imports £216 million.

The Malaya Government has decided to extend tax relief to 10 more industries and 57 more products, including beer, vitamins, cattle fodder, lipstick, tooth paste and bicycles.

A Ford Foundation grant of $249,000 has been announced for the University of Chicago to be used for the stepping up of its South Asian study programme. The grant will enable the University of Chicago's Committee on South Asian Studies to broaden the scope of its training and research.

Exports of plastic raw materials from the U.K. touched new records in both volume and value during 1958. The quantity actually shipped was over 122,600 tons, valued at more than £32 million, as against 112,600 tons valued at £29.75 million in 1957. The main items exported were moulding powder, resins, sheet, rod, tube, film and foil.

A new synthetic lubricating oil for jet engines, capable of withstanding higher degrees of heat than oils now in use, has been developed by the U.S. Air Force, in association with the Celanese Corporation of America. The new oil, it is claimed, removes one of the major obstacles in the development of supersonic high performance aircraft.

The International Tin Research Council has discovered some new applications for tin. They relate to manufacture of agricultural fungicides from chemical compounds of tin, a new motor-car bearing made of aluminium and tin, and application of tin alloy coatings to steel and other base metals for resistance to rust and for ornamental purpose.

The Swedish Cellulose Company has decided to implement a large investment programme at an estimated cost of Kr. 115 million (£7.93 million). The expansion scheme includes, the building of a mill for manufacturing kraft linen with a productive capacity of 100,000 tons per annum entailing an outlay of about Kr. 75 million.

The U.S. Government is expected to ask the Congress to raise the 4¼ per cent. interest rate ceiling on Government bonds if interest rates continue to increase. President Eisenhower is of the view that, in a free economy, Government bonds should be marketable, according to demand, as, otherwise, the country will run into difficulties.

A large Swedish steel and forest products group, Stora Kopparberg, has started manufacturing a new quality pulp called "Stora 59" for paper-making. This is a bleached sulphite pulp made from pine wood. It is claimed that the pulp is suitable for the production of different kinds of paper including printings, writings, wrappings, tissues, grease-proof, etc.

Holland has relaxed hire-purchase regulations in the country. The maximum payment period fixed at two years has been abolished and deposits on motor cycles and scooters reduced from 25 per cent. to 15 per cent. Deposits for others, however, remain unchanged. These are 25 per cent. for cars and 15 per cent. for motorised cycles, radios and television sets and washing machines.

The U.S. company, E. I. du Pont de Nemours proposes to shift its European office from London to Geneva. A new Swiss Corporation has been established, which will help plan and implement European sales programmes for products such as textile fibres and elastomers, to be produced by du Pont's subsidiaries in Europe and for many items manufactured in the U.S.

With a view to attracting foreign capital for the setting up of heavy industries, the Pakistan Government has removed restrictions on remittance of profits and participation of domesic capital in foreign investments. The other concessions announced include capital repatriation facilities and relief from double taxation to both industries and foreign technicians employed by them.

A $100-million, 55-storey building, described by its architects as the largest commercial office building in the world, will be built adjoining Grand Central Railroad Terminal at New York. The building, to be completed in 1962, will contain 2,400,000 square feet of space. The R.C.A. building at New York with 2,300,000 square feet of space, is now the largest commercial office building.

The Brussels cartel, Belgium, has agreed to reduce its prices for rolled steel products exported to the U.S. and other countries outside the European Coal and Steel Community. Revised prices per ton for the U.S., the figures in brackets giving prices for other countries, are: reinforced concrete rounds $88.50 ($80); rods $90.50 ($86); sections $91.50 ($83); wire rod $91 ($89); thick and medium plate and universals $90 ($86).

A five-member delegation representing the U.K. Cotton Board and the Lancashire-Pakistan Cotton Committee, headed by Col. Whitehead, arrived in Karachi on the 21st inst. It is currently holding discussions with the Karachi Cotton Association on the possibilities of stepping up exports of Pakistan cotton to the U.K. The exports have suffered a distinct setback of late, the quantity actually shipped in 1958 being no more than 24,000 bales, as against 145,000 bales in 1953.

PERSONAL

DR. Rajendra Prasad, President of India, will be visiting Cambodia from 15th to 18th March, 1959.

Mr. G. D. Birla, a leading industrialist of India, has been appointed Chairman of the Rehabilitation Industries Corporation.

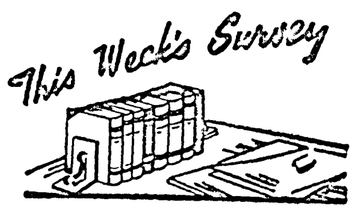
Prime Minister Nehru will inaugurate the nineteenth annual conference of the All-India Manufacturers' Organisation in Bombay on 11th March, 1959.

Mr. Ernest Krogh Hansen, till recently Norwegian Ambassador in Peking, has assumed charge of the Indo-Norwegian fishery project at Neendakara, Kerala State.

Mr. Mangaldas M. Pakvasa, a former Governor of Madhya Pradesh, has been appointed Vice-Chairman of the Central Board of Directors, State Bank of India, for two years, with effect from the date on which he takes charge of his office.

Mr. V. Lakshmi Pathy, until recently Assistant Divisional Manager, State Trading Corporation, left for Mombasa to take over charge as the Foreign Officer of the Engineering Export Promotion Council.

Mr. R. H. Schuepp, Managing Director and General Manager of Voltas Ltd., has relinquished his office with effect from 28th February, 1959. He is succeeded by Mr. S. K. Handoo, Joint Managing Director and Joint General Manager hitherto.



INDUSTRIAL PROGRESS

ADDRESSING the Standing Committee of the Central Advisory Council of Industries, which met last week at New Delhi, the Union Minister for Industry, Mr. Manubhai Shah, reviewed recent industrial trends in India and showed how several industries had achieved higher rates of production and also attained considerable independence from foreign materials and equipment. He pointed out that there was an "encouraging" increase in industrial production in the last eight years. The index of industrial production (1951=100) rose to 132.6 in 1956 and still further to 137.1 in 1957; in the first nine months of 1958, it was as high as 142.8. If cotton textiles and sugar industry, which did not fare so well, were excluded, the index would work out to 156 in the first nine months of 1958, as compared with 147 in the corresponding period of 1957. It must be remembered that these indices, which have been constructed on 1951 as base year, do not take into account some of the recently established industries like antibiotics, dyestuffs, drugs and chemicals and industrial machinery. Among the industries included in the indices, those which have recorded an increase in production include coal, cement, and several engineering and electrical units.

Among the administrative measures adopted by the Government to help industrial progress, mention must be made of the establishment of Development Councils, of which there are now 15, and the simplification of the procedure relating to the disposal of applications under the Industries (Development and Regulation) Act. By far the most difficult administrative problem has been the allocation of scarce raw materials and semi-manufactures among industrial consumers. In this connection, Mr. Manubhai Shah said: "Government attach the greatest importance to providing an adequate supply of raw materials and semi-finished goods for industry." He admitted that it had not been possible to meet the industry's requirements of raw material in full. But it was gratifying to note that, on the whole, industrial production had not suffered a setback. He rightly insisted that, although Government would endeavour to release as large an amount of foreign exchange as possible for importing raw materials, there was "no alternative to greater use of indigenous substitutes." He expressed the hope that increased exports to countries with which special payment arrangements had been concluded would make possible additional imports of raw materials for the use of industry.

The Government's general import policy and bilateral trade agreements are no doubt helpful in overcoming the difficulties in procuring raw materials. But the real solution must lie partly in finding adequate substitutes, for which all research and development effort should be devoted, and partly in improving efforts to a level which will permit larger imports of equipment and raw materials. It is encouraging to hear from Mr. Shah that the proportion of indigenous content in many lines of manufacture is increasing year after year. It has already reached 100 per cent. in certain manufactured goods, such as steel tubes and pipes, railway and signalling equipment, electric transmission towers, several items of tea machinery, electrical equipment like motors, fans and cables and sewing machines. Further progress in this direction is expected to be made by the end of the second Five-year Plan. For instance, between 1958 and 1960, the proportion of indigenous equipment in water tube boilers will increase from 40 per cent. to 80 per cent., in some items of tea machinery from 40 per cent. to 98 per cent. and in passenger cars from 40 per cent. to 80 per cent. Some of the items, in which indigenous content will form 90 to 100 per cent. of the product by 1960, include petrol pumps, water meters, typewriters, malleable hardware, radial drills and plastic extrusion presses.

An important problem which has engaged the attention of the Government is the creation of machinery-manufacturing capacity. So long as India is dependent upon foreign countries for all its plant and machinery, it cannot really be industrially self-reliant. The value of capital goods and equipment produced in India at present is placed at Rs. 80 crores a year, but the current annual rate of imports is Rs. 110-120 crores. By the end of the second Five-year Plan, the demand for industrial machinery is expected to go up to Rs. 200 crores and by the end of the third Plan to Rs. 350-380 crores. Mr. Shah said that the country must eventually become self-sufficient in the sphere of plant and machinery and the "immediate" objective should be the production of at least 80 per cent. of machinery requirements. With this end in view, the Government has decided to set up six standing committees for the manufacture of machinery for (1) engineering industries, (2) non-ferrous metals and metallurgical industries, (3) chemicals, fertilisers, pharmaceuticals and plastic industries, (4) machine tool, transport and communication industries, (5) textile and synthetic fibre industries (including cotton, wool, silk and jute), and (6) other consumer goods industries. It is to be hoped that these committees, on which a heavy responsibility rests, will bring to their task courage and imagination.

A point which they will do well to remember is that since, in the initial stages, the demand for machinery may not always be sufficiently large to permit economic production, they must ensure that there is at least no duplication of effort and creation of surplus capacity. Existing manufacturing facilities in the private and public sectors must be carefully surveyed and a programme of phased manufacture undertaken which will take the country steadily towards the goal of self-reliance in plant and machinery. At the same time, they have to make sure that absence of competition does not lead to complacency among the manufacturers, high cost of production and poor quality. Machinery manufacture is a highly skilled job. The quality of machines must be of a high order. There must be proper arrangements for getting the benefits of technological advances in the rest of the world and for changing the design and pattern of machines in keeping with these advances. It is needless to add that, unless plant and machinery are of up-to-date nature and compare favourably with foreign countries in regard to price and productivity, the goods manufactured on them will not be able to compete effectively in the world markets. It will also be necessary for India to develop technical research in designing and manufacturing machines. All these aspects will have to be borne in mind by the Standing Committees and the Minister for Industry. The attainment of self-sufficiency in plant and machinery is not an easy job. It is only a means to an end, the end being production of goods required for raising the living standards of the people at reasonable prices.

ROAD-RAIL COMPETITION

The bogey of road-rail competition, which one thought was dead, has now been revived. The Railway Board officials maintained, at a Press conference in New Delhi last week, that much concern had been caused by the diversion to road transport of goods traffic on trunk routes and emphasised the need for a proper co-ordination between road and rail transport. The Union Minister for Railways, Mr. Jagjivan Ram, in the course of a brief reference to this subject in his Railway Budget speech, disclosed that the Government was considering the problem arising out of the diversion of "high-rated traffic to road transport on routes parallel to the railways." Referring to this aspect of the Minister's speech, we stated last week that it was to be hoped that the Government's review of the position would not lead to any fresh curbs on road transport which would be a deplorable reversal of the recent changes in transport policy, based on a modest recognition of the importance of motor vehicle transport.

In the course of the debate on the Railway Budget in the Rajya Sabha this week, many members expressed the view that road-rail competition should not be made an excuse for placing obstacles in the way of development of road transport. Rajkumari Amrit Kaur urged that, since road transport, which helped the country's development, was already facing a number of difficulties, its problems required sympathetic consideration. She pointed out that the railways were represented on all transport bodies, such as the Inter-State Transport Commission, and the Road Transport Advisory Committee; so they seemed to be amply protected. She rightly felt that inasmuch as both road and rail transport would benefit through the anticipated growth in traffic, fear of a possible conflict between the two modes of transport was not well founded.

Appropriately enough, the President of the Indian Roads and Transport Development Association, Mr. Chinubhai Kilachand, has issued a closely-reasoned statement to the Press, explaining how the fears of the Railway authorities are baseless. He points out that the provisions of the Motor Vehicles Act were liberalised with effect only from February 1957 and their actual implementation could not have taken place till about September or October 1957. Since this was followed by a slowing down in the rate of increase in domestic production of trucks—the increase was only 979 in 1957, as against 4,463 in 1956—it cannot be held that road transport has turned out to be a serious competitor to the railways. Accordingly, Mr. Kilachand argues that the "allegation of diversion of traffic to roads in any appreciable quantities is obviously exaggerated."

A more fundamental question is whether there is any economic justice in preventing healthy competition between road and rail transport. Is it right that the consignor should be prevented from choosing an appropriate means of transport for his goods? The question should be settled in the light of the two principles enunciated by the International Chamber of Commerce and supported by the International Union of Railways and the International Road Transport Union, namely, (1) freedom of choice to the user and (2) freedom to use his own transport. If these principles are accepted, it will ensure the development of economical modes of transport on which depend the entire industrial progress of a country. Road transport, as Mr. Kilachand points out, is preferred by the public, because it is speedier than railway transport, can make door-to-door deliveries and there is virtually no pilferage as in railways. The average distance covered per day by a truck is 150 miles, as against 48 miles by a wagon. These advantages determine the average consignor's preference for road transport. To deny him these advantages through a policy of discrimination against goods trucks is to invite the criticism that the Railways do not want even a fair measure of competition in the matter of transporting goods. But this is not to suggest that there should be no regulation of road transport whatever. Co-ordination between road and rail transport is necessary and desirable. Only, it should be possible to achieve such co-ordination without sacrificing the principles of economical and speedy transport of goods.

HIGHER WAGES FOR T.I.S. CO. WORKERS

The management of the Tata Iron and Steel Company, true to its long tradition of giving the workers a fair deal, has entered into an agreement with the Tata Workers Union (on the 19th inst.), establishing a new wage structure for its employees. The agreement, which provides for a substantial increase in the wages and other emoluments effective from 1st April 1959, marked the culmination of intricate and detailed negotiations between the management of the T.I.S.Co. and the Union which were in progress since October last. It was finalised at the conciliation proceedings initiated by the Government of Bihar at the request of the two parties to find a formula satisfactory to both.

According to the agreement, T.I.S.Co. workers will receive increases in emoluments amounting to Rs. 1.80 crore in the first year commencing 1st April 1959, rising to Rs. 2.26 crores in the fifth year. The increase of Rs. 1.80 crore in the first year is in addition to the *ad-interim* increase of nearly Rs. 50 lakhs granted during the past 15 months, pending the finalisation of the new wage structure, thus making a total increase of about Rs. 2.30 crores over the level of wages obtaining before November 1957. This represents a rise of nearly 23 per cent. over the total wages and emoluments received last year by the employees covered by the agreement. The rise is in fulfilment of the assurance contained in the previous agreement signed in 1956 offering an appreciable upward revision of wages on completion of the Company's two-million-ton expansion programme.

The main features of the new agreement are:

(a) An increase ranging from 33 per cent. of the current basic wages for the lowest paid to 8 per cent for the highest paid employees covered by the agreement; (b) merger of production, maintenance or service bonuses at 63.1 per cent., 53.1 per cent. and 17.7 per cent., respectively, with the basic wages of the corresponding categories of employees which represents a significant increase over current bonus earnings; (c) raising of the minimum consolidated dearness allowance from Rs. 37 to Rs. 45 with consequential adjustments for higher income slabs; and (d) introduction of graded scales of pay for the weekly-paid employees and others at the lowest level who are at present on fixed rates of pay.

The agreement also provides for the merger of good attendance bonus paid at the rate of 10 per cent., or 20 per cent. to some categories of workers, with their basic wages, and an *ad hoc* payment of Rs. 8 per month from 1st November 1958 to 31st March 1959, in order to provide immediate relief to employees. Provision is also made for more housing and hospital facilities.

It is noteworthy that the Company has agreed to this heavy commitment, despite its difficult financial position. It is at present carrying a heavy burden of debts amounting to Rs. 80 crores on which interest charges alone amount to Rs. 4 crores. In addition, the Company has to meet heavy depreciation charges on its investment of Rs. 138 crores on modernisation and expansion. It has also to commence repayment of the World Bank loans of over Rs. 51 crores from December 1959.

The management and the Union were both agreed that the gap between the highest and the lowest paid workers should be narrowed. Accordingly, the quantum of increase at the lowest level was fixed at as much as 33 per cent. in basic wages, as against 8 per cent. at the highest level. In actual terms, the lowest paid worker in T.I.S.Co. would now receive Rs. 1.81 per day as basic wage in the first year, rising to Rs. 2.09 in the fifth year, while the corresponding total monthly emoluments, including dearness allowance, would be Rs. 92 and Rs. 99.3 respectively, as against the previous total of Rs. 74. These figures are exclusive of the deferred benefits like provident fund and gratuity.

A notable feature of the agreement is the acceptance of the Union's demand to merge the plant-wide production bonus with the basic wage at the level of 63.1 per cent. and the related maintenance and service bonus to other categories of workers at 53.1 per cent. and 17.7 per cent., respectively. The cost of the merger alone is placed at Rs. 46.80 lakhs in a full year. This merger has also meant that deferred earnings like provident fund, gratuity, etc., which are proportionate to the basic wage, will substantially increase.

The workers had demanded an increase in dearness allowance to compensate for the rise in cost of living. The Company maintained that there was no case for an increase. During the conciliation proceedings, however, both the parties agreed that the different elements constituting the dearness allowance should be consolidated into a single allowance and paid as a fixed sum corresponding to different income slabs.

Since the Company has agreed to these generous terms, it is now upto the workers to cooperate with the management to see that the optimistic anticipations of production and earnings, which the management has presumed in these negotiations, are fulfilled. No effort should be spared to ensure that the plant reaches, in the least possible time, the production rate of 120,000 tons of finished steel per month which is equivalent to the annual target of 2 million ingot tons.

Here is an instance of difficult and complicated issues settled across the table by mutual negotiation and sympathetic understanding of each other's point of view. It should serve as an inspiring example to the diehards among employers and trade unionists who still consider militancy the surest means of settling disputes.

SUGAR INDUSTRY

It was, indeed, a very pertinent point which Mr. M. H. Hasham Premji, Chairman of the Bhopal Sugar Industries Ltd., made while addressing the Company's recent annual meeting, that, so long as the present system of paying cane growers at a flat rate continued, the cultivator simply would not care, nor would he have any incentive, to make improvements in the quality of cane. This point has unfortunately been overlooked by the politicians, not excluding those representing Congress, in their anxiety to better the lot of cane growers with the sole intention of securing votes for getting elected to Parliament or State legislatures. How else can one explain the move of these politicians to organise time and again cane growers' strikes, *hartals* and demonstrations? As it is, the prices of sugar are sufficiently high and any upward revision in cane cost will push up sugar prices still further. Surely, the politicians, as Mr. Premji rightly said, would do better to devote their thoughts and actions to the more important task ahead of them, namely, of improving the yield of sugar per acre.

Alluding, in particular, to the persistently high level of sugar prices, Mr. Premji declared that the Government must take its full share of responsibility for this problem. There is truth in this statement. Despite the possibility of a setback to sugar production in the current season and ignoring the rising trend of domestic demand for sugar, the Government has announced an export quota of 100,000 tons. No one will underrate the importance of earning foreign exchange, but what one fails to understand is as to why the sugar mills should be made to bear the loss on exports which is quite heavy. The estimated loss to Bhopal Sugar for the year ended September 1958 on account of the compulsory scheme of exports, we are told, was as much as Rs. 1.10 lakh.

In the course of his speech, Mr. Hasham Premji regretted that the Government had so far turned a deaf year to the sugar industry's plea that, in due fairness and equity, an excise duty on *khandsari* production equivalent to that on white sugar should be levied. Referring to the Tariff Commission's inquiry into the cost structure of sugar industry and the fair price payable to it, he hoped that the Commission would examine all aspects of the matter before making its final recommendations to the Government. In this connection, he recalled the sugar industry's plea for a higher allowance for rehabilitation of plant and machinery, as well as for full compensation for the losses sustained under the export scheme.

It is somewhat surprising to be told by Mr. Hasham Premji that his factory is the only one in the State of Madhya Pradesh which has been made to pay an agricultural income-tax. Although the reasons behind the Government's decision are not known, to single out one factory alone for paying a certain tax is, to say the least, unfair in the extreme, in that it places that factory at a serious disadvantage *vis-a-vis* other sugar factories in the State. The Government will do well to remove forthwith this inequitable discrimination and see to it that the conditions under which all units functioning in the State are as far as possible uniform.

INDIAN LAC INDUSTRY

It is somewhat disappointing to note that the Indian Lac Cess Committee, which met at Ranchi last week, should have failed to offer any constructive proposal to help solve the current problems of lac industry and trade. The Committee has, however, decided to fix a tentative production target of 1.7 million maunds of lac to be achieved by the end of the third Plan. It is estimated that production of the four lac crops in 1958 was lower at 900,000 maunds, as against the average of 1,070,000 maunds for the ten years preceding 1957. Lac exports also suffered a perceptible setback, having fallen to about 498,600 maunds valued at Rs. 4 crores during the nine months from April to the end of December 1958, as against an average of 570,359 maunds valued at about Rs. 7 crores in the preceding five years. The causes for this setback in exports cannot, however, be attributed solely to the decline in production. It is, therefore, doubtful whether an increase in production will be the panacea for the problems currently confronting the lac industry.

The lac industry and trade have been passing through a difficult period. Lac prices, although they have slightly recovered of late, are ruling at a considerably low level, as compared with those in the past few years. Till recently, India had a virtual monopoly of lac in world markets. But Thailand has recently emerged as a powerful competitor in this field. At the same time, world demand for lac is lagging behind, presumably because of fast growing substitutes. For instance, the introduction by the gramophone companies of long-playing records (with no shellac in them) has restricted the scope for India's exports of shellac. On top of this came the recession last year in some of the developed countries which hit hard the domestic industry.

The most important problem facing the industry is the instability in prices. In order to solve this problem, the Government of India set up the Indian Lac Exporters Association in June last. It has imposed a minimum price of Rs. 70 per maund for shellac TN. As the present trends show, this measure has failed to achieve its objective. It may be noted, in this connection, that the Shellac Utilisation Officer of the Indian Lac Research Institute has submitted a report regarding the difficulties of manufacturers and consumers of lac in India. He has suggested that shellac prices should be stabilised at Rs. 85-100 at Calcutta. This suggestion is designed to ensure fair prices to producers and also avert wide fluctuations in the market. Dr. Uppal, Chairman of the Committee, urged the promotion of co-operative marketing, credit and warehousing facilities, which, he believed, would go a long way towards ensuring fair prices for lac.

The Committee has stressed the need for research work, in order to develop the industry and location of new markets for lac. A seven-man sub-committee has been set up to prepare a blue print of research and development projects for lac for inclusion in the third Plan. Again, the Committee has approved of a production unit for the manufacture of bleached shellac, photo mounting tissue paper and autoclave shellac. It has also been decided to set up three publicity units in the country with a view to stepping up internal consumption of lac, besides establishing a museum of lac and lac products at the Indian Lac Research Institute. While this is a move in the right direction, it is essential to ensure an expanding market in foreign countries, in view of India's need for foreign exchange. This is a difficult task no doubt, because of the substantial increase in production of lac in Thailand and the extended use of substitutes. But that is precisely the reason why determined efforts must be made in this direction.

TOURISM

Even before the dawn of history, the palm-fringed shores of India had lured travellers from all lands. Its fabulous treasures, silks and spices, its religion and philosophies and colourful costumes and varied cultures have been a great attraction for the world traveller. Today, the fact that it has risen to the position of one of the world's largest democracies has added to its attractions. The scope for developing tourism is, indeed, vast. The Government of India and the entire travel trade of the country seem to be aware of this. The formation of the Indian Travel and Tourist Industry's Council, in which the entire travel trade in India, namely, the leading international and domestic carriers, hoteliers and travel agents, automobile associations, and the Tourist Department of the Government of India are represented, has been a major step in the promotion of tourism in the country. The functions of the Council are to organise cultural festivals and exhibitions, coordinate efforts of the travel trade, advise the Government on problems of the travel trade, collect statistical data relating to tourism and initiate studies on facilitations like customs, police visa, etc., assist in the establishment of transport facilities and manage rest houses on international standards.

The Council has been doing much useful work in promoting tourism. It has now introduced a new concept into its programme of work, namely, festival planning. Under this, the Council will sponsor cultural programmes at the time of festivals like *Holi*, *Dassera* and *Diwali* in the major cities of India. This will enable the foreign tourist to have a glimpse of the cultural heritage of India. A unique feature of this programme is that a foreign tourist can reserve seats for these programmes months in advance through his travel agent in his own country. An attractive calendar of festival events has been distributed all over the world which gives the date and time of the programmes and significance of the festival. Already, such a programme was arranged to coincide with Republic Day and *Diwali* in Delhi. In Bombay, the Festival Week is from 26th February to 5th March, 1959. It is so timed as to coincide with the arrival of two luxury liners with tourists. A similar programme is to be held in Calcutta in December next.

The Council also plans to observe 1961 as a "Visit India Year." A grand programme of exhibitions, fairs and entertainments will be arranged. Plans are being drawn up to give advance publicity all over the world and every attempt will be made to attract foreign tourists on a large scale.

MACHINERY MANUFACTURING INDUSTRY

RECENT PROGRESS AND LATEST PLANS

From Our Special Correspondent

NEW DELHI, *25th February*

AMONG the informative papers prepared by the Commerce and Industry Ministry for the third meeting, held here last week, of the Standing Committee of the Central Advisory Council of Industries, there is a statement of indigenous content in 65 industries. This statement gives, in percentage terms, figures of indigenous content achieved by the end of 1958 and to be achieved by the end of 1960. It shows that hundred per cent. indigenous content has already been achieved in respect of steel tubes and pipes, railway equipment and signalling equipment, electric transmission towers, some items of tea machinery (tea rollers, tea breakers, stalk extractors, tea sorters, tea cutters, tea sifters, tea packers and tea dust machines), electric motors, electric fans, electric lamps, P.V.C. and V.I.R. cables, batteries, switches, conductors A.C.S.R. and others, heavy cables, sewing machines (for 90 per cent. of production), clocks, hardware, and razor blades. It will be further seen that 100 per cent. indigenous content will be achieved by the end of 1960 in respect of cycles and cycle parts, zip fasteners, snap fasteners, malleable hardware, and carding engines for the cotton textile industry. But it is worthy of note that the indigenous content expected to be achieved by 1960 will be 90 per cent. and more in respect of most other industries. The Commerce and Industry Ministry's up-to-date account is, thus, an eloquent index of the rapidly decreasing dependence, by a variety of new industries developed in the country, on imported parts and components.

DELHI LETTER

In another paper, prepared by the Commerce and Industry Ministry for the Standing Committee, there is a comprehensive review of the machinery manufacturing industry including machine tools. Taking the last item, namely, machine tools, first, it may be noted that the Hindustan Machine Tools in the public sector now accounts for 50 per cent. of the total production of machine tools in the country. As of 1958, production of machine tools including accessories in the country is valued at Rs. 3.9 crores, as against Rs. 44 lakhs in 1953. So far, capacity for the manufacture of lathes, milling machines, shaping machines, drilling machines, radial drilling machines, surface grinders and sheet metal working machines has been established. However, the varieties of different categories so far produced do not cater in full to the indigenous demand, and special types have still to be imported.

During the last three years, more and more foreign firms have offered to collaborate in the manufacture of machine tools in India. For such manufacture in collaboration, most of the firms reach about 90 per cent. indigenous content after about three to five years. Import of 5 to 10 per cent. is inevitable, as certain proprietory items are not manufactured in India at the moment. The Hindustan Machine Tools, Mysore Kirloskar, Investa Machine Tools and Machine Tool Prototype Factory have all achieved 95 per cent. indigenous content in respect of their manufacture of lathes; Cooper Engineering Ltd. has achieved 92 per cent. indigenous content in respect of shapers; and Atlas Works Ltd. has achieved 95 per cent. indigenous content in respect of sheet metal machines. As for other types of machine tools, Hindustan Machine Tools has so far achieved 40 per cent. indigenous content in respect of milling machines; Ralliwolf 40 per cent. indigenous content in respect of portable electric tools; and Indian Oxygen 20 per cent. indigenous content in respect of gas welding equipment. No indigenous content has, however, been achieved, as of 1958, by the Hindustan Machine Tools in respect of radial drills, by Mysore Kirloskar in respect of capstans and turrets and by Consolidated Pneumatic Tool Company in respect of pneumatic tools.

The licensed capacity of all the existing firms manufacturing machine tools is Rs. 5.7 crores per annum; in addition, 27 firms have also been approved with a capacity of the order of Rs. 5 crores. Besides these firms in the large-scale organised sector, there are many small units which, in Northern India, produce simple types of machine tools valued at Rs. 1.3 crore as of 1957. As the majority of firms in the large-scale sector are engaged in other activities as well, it is not possible to give separate figures for capital investment and employment in the manufacture of machine tools only.

In a review, running to 23 pages, the Commerce and Industry Ministry has given an up-to-date account of progress registered in a variety of machinery manufacturing industries other than machine tools. In the following table are brought together such figures of production as are given in the review:

Industries	Production in 1958		Second Plan target (Numbers)
	Numbers	Value in Rs. lakhs	
Diesel engines for agriculture ..	27,165	543	20,500
Ancillaries to diesel engines ..	..	480	..
Power-driven pumps	75,000	..	86,000
Sugar machinery	..	172	..
Jute machinery (capacity) ..	1,272	..	..
Cement machinery	..	65	..
Tea machinery	..	67	..
Chemical and pharmaceutical machinery	..	54	..
Oil mill machinery	..	30	..
Rice, dal and flour mill machinery	..	23	..
Weighing machines	..	37	..
Agricultural machinery ..	..	81	..
Constructional machinery	..	35	..

Some notable recent developments in respect of the machinery manufacturing industries are briefly narrated below:

Diesel engines for automobiles are now manufactured in the country by four units; the number of such diesel power units expected to be manufactured by 1960-61 is 30,000. Capacity for the manufacture of 400 diesel road rollers per annum by 1960-61 is now established. The Government has licensed a capacity of 5,000 diesel-powered agricultural tractors per annum. Capacities for diesel-powered concrete mixers, stone crushers, air compressors, etc., are also being established. Plans are already afoot for mechanising fishing industry calling for marine versions of diesel engines. Proposals for the manufacture of earthmoving machinery like crawler tractors, scrapers, dumpers, shovels, etc., have been approved and these call for additional capacity for diesel engines. Proposals for the manufacture of diesel engines for railways and shipping industry are already under consideration.

Besides the manufacture of ordinary centrifugal pumps for handling water only, the manufacture of self-priming pumps for contractors' work, submersible pumps, pumps for handling petroleum products, pumps required in sugar factories, pumps required in paper mills, kerb-side petrol pumps and pumps for fire-fighting purposes has also been taken up by several firms. One or two firms are also taking up the manufacture of pumps for special chemical duties.

Six firms, namely, Walchandnagar Industries, Texmaco, Indian Sugar and General Engineering Corporation, Binny Engineering Company, New India Development Corporation and K.C.P. Ltd., are now manufacturing complete sugar plants in collaboration with six foreign firms, two of the U.K., one of Holland, one of Germany, one of France and one of Czechoslovakia. The six Indian firms have now constituted themselves into two consortiums to supply complete sugar plants for 11 co-operative sugar factories licensed during the second Plan and for an additional 2,000-ton capacity unit.

Three units—Britannia Engineering Company, Titaghur, in collaboration with an Italian firm, Lagan Jute Machinery Company, Ltd., Calcutta (floated by James Mackie and Sons, Ltd., Belfast) and Texmaco, Calcutta, in collaboration with a British firm—have recently started or are starting the manufacture of modern types of jute machinery. It is stated that the bulk of jute mill machinery required for the modernisation of jute industry that has to be completed within the second Plan period will be made by the indigenous manufacturers.

There is now need for about Rs. 20 crores worth of machinery for the setting up of large-scale paper-making units already licensed and for Rs. 1 crore worth for the small-scale units; there will also be need for Rs. 3 crores worth of spare parts for paper machinery alone per annum when the full production capacity for paper is established. One Indian firm is likely to start production, shortly, of small-scale plants of 4-7 tons capacity per day in collaboration with a British firm. The proposal of another Indian firm for the manufacture of large-scale paper mill machinery in collaboration with a Swedish firm is now under Government's consideration. Two other Indian firms are now negotiating with foreign firms for setting up capacity for the manufacture of large-scale paper units in the country.

In the printing machinery industry, there are now two firms—Maya Engineering Works, Calcutta, and India Machinery Company, Howrah—producing mainly platen press against orders. Ramakrishna Industrials, Coimbatore, have completed manufacture of a stereo rotary press for experimental purposes. A Calcutta engineering firm is now collaborating with a British printing machinery manufacturer in the manufacture of flat bed machines; in the phased manufacturing programme of this firm, 50 per cent. indigenous content is expected to be achieved in the first year and 90 per cent. in the fourth year. A new undertaking in Madras is shortly going to manufacture platen presses, flat bed machines, rotary presses and other ancillary equipment. It is stated that, in view of the present demand for Rs. 3 crores worth of printing machinery per year, there is room for another unit or units for manufacturing platen presses.

In the cement machinery industry, Messrs. K.C.P. Ltd., which has been licensed for the manufacture of complete plants in collaboration with a German firm, has just started production of a few items. The A.C.C's big scheme in collaboration with Vickers, Armstrong and Babcocks is expected to get under way with the manufacture of cement machinery on a large scale from 1961 onwards.

In the tea machinery industry, there are already four firms—Britannia Engineering Company, Ltd., Titaghur; British India Electric Construction Co., Calcutta; Steelworths Ltd., Assam; and Port Engineering, Calcutta—manufacturing a number of items. Government have recently approved the manufacture of practically the entire range of tea processing machinery of the "Sirrocco" brand by Davidson Ltd., Calcutta; this unit is expected to go into production in the next two or three months. The aggregate capacity, present and projected, would be sufficient to meet the entire needs of the country in respect of tea machinery and provide a small surplus for export.

As for mining machinery, the public sector unit that is being set up at Durgapur will produce 30,000 tons of coal mining machinery items per year during the third Plan period. Under the A.C.C.'s scheme for the manufacture of cement machinery, a fair amount of coal mining machinery is also proposed to be manufactured.

Although industrial boilers to the value of about Rs. 8 crores per year are being imported, only one firm—Texmaco—has been engaged in their manufacture. Now, Larsen and Toubro, Bombay, and A.C.C., Vickers and Babcock have also been licensed for the manufacture of vertical boilers and water tube boilers, respectively. With the implementation of these two new projects, an aggregate capacity for production of industrial boilers to the tune of Rs. 5 crores per year will have been created.

As regards chemical and pharmaceutical machinery, three schemes are expected to materialise in the very near future. They are the scheme of manufacture of pressure vessels to the extent of 12,000 tons per year by Telco, Jamshedpur, the scheme of Vasant Engineering Company, for manufacture of complete distillation equipment in collaboration with a French firm, and the scheme of Sakti Engineering Company, for the manufacture of pharmaceutical machinery. Although the present and prospective capacity would be to the extent of Rs. 3½ crores worth of machinery per year, it is stated there is further scope for more capacity for this machinery industry, in view of the rapid growth of the chemical industry.

The oil mill machinery industry at present not only caters to the needs of the country but also exports some products. There is, however, no capacity now for the manufacture of machinery in an allied field, namely, continuous type of solvent extraction. This is a virgin field in which it may be worthwhile for Indian *entrepreneurs* to tie up with some foreign manufacturers for the design and drawing.

The rice, *dal* and flour mill machinery industry also caters fully to the needs of the rice mills and for domestic type of flour mills. There is, however, no capacity so far in respect of industrial type of flour mill machinery or roller flour mills. A factory in Bombay has, therefore, been recently licensed to manufacture the complete range of industrial flour mill machinery in collaboration with an Italian firm.

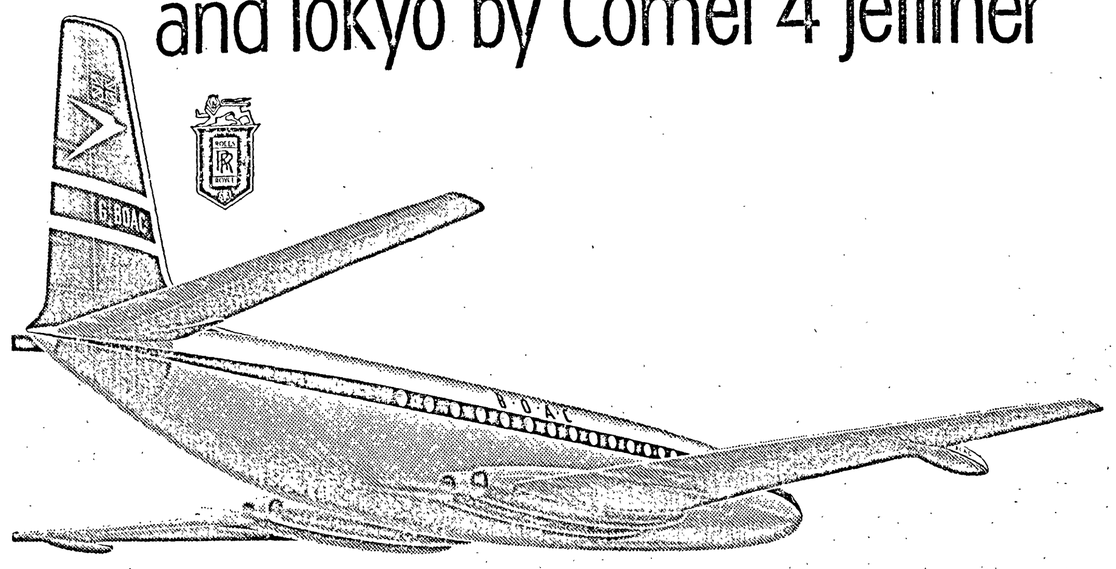
As for weighing machines, there are now five firms manufacturing five types. It is, however, necessary to create more capacity, in view of the fact that imports of weighing machines have been valued at Rs. 0.5 crore per annum in recent years.

In the constructional machinery industry, new capacity recently licensed for the manufacture of tar boilers, concrete vibrators, concrete mixers, etc., would come to about Rs. 1½ crores per year. It is stated that there is good scope for creating further capacity in this field, because the country has still to import about Rs. 1 crore worth of such machinery.

As regards dairy machinery, the A.P.V. Engineering Company, Calcutta, has now undertaken to produce dairy equipment of a fairly large range. In addition, Larsen and Toubro have also been licensed to produce practically the complete range of dairy machinery. The latter firm has already taken up the manufacture in hand. These two firms together are expected to produce Rs. 30 lakhs worth of machinery per year. There is, however, still scope for additional capacity for manufacturing automatic type of washing and filling equipment, milk drying equipment and milk cans of special aluminium alloy.

As for gas cylinders, capacity is just being created. Messrs. Gannon Dunkerley have started producing, since last month, low pressure gas cylinders. There are also proposals from other *entrepreneurs* for the manufacture of low as well as high pressure gas cylinders. When these proposals are also approved, the country will have an installed capacity of 100,000 low pressure cylinders and 60,000 high pressure cylinders per year on a single-shift basis, to an aggregate value of Rs. 1.25 crore.

Fly from India to Hong Kong and Tokyo by Comet 4 jetliner



...and across the Pacific by jet-prop Britannia

BOOK NOW. From April you can fly to Hong Kong and Tokyo by the fabulous BOAC *Comet 4* jetliner... then on to San Francisco by jet-prop *Britannia*. Wherever you plan to fly, BOAC jetliners are going your way today. Now by BOAC alone, it's possible to make a jetliner journey *to every continent on the globe.*

For finest jetliners, finest service, fly BOAC. Consult your local BOAC Appointed Travel Agent or BOAC at Bombay, Calcutta, Delhi and Madras.

DEVELOPMENTAL ACTIVITIES OF STATE BANK

MORE CREDIT FACILITIES TO CO-OPERATIVES AND SMALL-SCALE INDUSTRIES

THE latest annual report of the State Bank of India (for the year ended 31st December 1958) discloses that the Bank has made good progress in its developmental activities, the purpose for which it was constituted by taking over the Imperial Bank of India. Thus, the Bank expanded its branch banking sizably by opening more than 100 branches during 1958, the special facilities to co-operative institutions were extended further, the schemes relating to the financing of co-operative marketing and processing and granting of advances against warehouse receipts finalised towards the close of 1957 were implemented during the year and the 'pilot' scheme for financing small-scale industries was enlarged to cover more centres and a large number of industries.

The Bank's statute has laid down a programme of branch expansion, with a view to stimulating the development of banking, particularly in the rural and semi-urban areas and providing remittance facilities on a large scale to co-operative and other banks. A target of 400 branches was accordingly fixed to be opened during the five years commencing from 1st July 1955, the date on which the State Bank came into existence. In the first six months of its existence, that is, July to December 1955, the Bank opened 20 branches. An addition of 46 branches was made in the following year and 91 in 1957. The pace of expansion gathered momentum in 1958, when 105 branches were added. The Directors report that "most of the difficulties experienced initially in the implementation of the programme have now been overcome, but the shortage of suitable accommodation continues to be a serious problem." With the opening of 105 branches during the past year, the total number of branches opened since 1st July 1955 (up to 31st December 1958) comes to 262, disbursed among the four circles as follows:

Circle	No. of centres in the programme	No. of branches opened in 1958	No. of branches opened since 1st July 1955	Balance on 31-12-1958
Bengal	131	32	76	55
Bombay	127	30	85	42
Madras	91	25	66	25
Delhi	64	18	35	29
Total ..	413	105	262	151

This leaves 138 branches to be opened by the Bank during the next one and a half years to discharge its statutory obligation. If the rate of expansion recorded in 1958 were to be maintained it would not be a difficult task to reach the target.

Facilities to Co-operatives

In implementation of the Rural Credit Survey Committee's recommendation, the State Bank has been extending from 1956 onwards special facilities to co-operative institutions in the matter of remittances, advances against Government securities, advances against the pledge of goods and the purchase and collection of cheques and bills. These facilities were continued during 1958 also. The remittance facilities granted by the Bank, under the Remittance Facilities Scheme of the Reserve Bank of India, amounted to Rs. 54.4 crores during the year ended 30th June 1958 and those (in the reverse direction) extended by the Bank, on its own, aggregated Rs. 29.9 crores during the same period. The Bank's advances to co-operative banks against various types of securities increased further during 1958 and limits in this behalf stood at Rs. 14 crores on 30th November 1958, as against Rs. 10 crores on 31st December 1957. In pursuance of its policy of lending support to the debentures issued by co-operative central land mortgage banks and of improving their marketability by subscribing to them and by granting advances against them, the Bank increased its holdings of debentures of co-operative central land mortgage banks by Rs. 21.3 lakhs to Rs. 62.3 lakhs during 1958 and the total credit granted to co-operative banks against them stood at Rs. 32 lakhs as on 30th November last.

Under the scheme of granting advances to co-operative marketing and processing societies, implemented for the first time during the year, the Bank sanctioned credit limits up to Rs. 37.3 lakhs to 43 marketing co-operatives as on 20th December 1958. Among the processing societies, sugar factories continued to account for the bulk of the Bank's assistance. Thus, as on 30th September last, seven co-operative sugar factories availed themselves of the credit facilities from the Bank to an aggregate sum of Rs. 2.5 crores. In addition, the Bank established letters of credit for Rs. 3.2 crores on behalf of 15 co-operative sugar factories covering import of machinery and gave the requisite deferred payments guarantees for Rs. 4 crores on behalf of 13 factories in respect of such imports.

Realising the importance of the support of the banking system for the success of the warehousing scheme, the Bank took a lead in evolving an appropriate procedure for granting advances against warehouse receipts and up to 20th December 1958 had granted 140 such advances for an aggregate sum of Rs. 14.9 lakhs at seven centres having warehouses of the Central Warehousing Corporation.

Credit to Small-scale Industries

The next important aspect of the State Bank's activities is the provision of credit facilities to small-scale industries, for which purpose a pilot scheme was initiated in April 1956. To begin with, it was put into operation in nine selected centres. In 1957, it was extended to 27 more centres and in the following year to another 17 centres, bringing the total number of centres to 53. Under the scheme, credit facilities are extended to small units with a capital of less than Rs. 5 lakhs and employing less than 50 workers, if power is used, or less than 100 workers, if power is not used. Advances are made for working capital against pledge of raw materials and/or finished or semi-finished goods. The total credit limits sanctioned by the Bank to these small industries increased during the year from Rs. 80.27 lakhs to Rs. 2.37 crores. The number of industrial units which have taken advantage of the credit facilities rose from 189 to 696. These units are engaged in more than 50 different lines of manufacture. The credit limits sanctioned to small-scale industries up to the end of 1958 represent only 1.4 per cent. of the total advances outstanding as at the close of the year. They work out to an average of a little over Rs. 3,400 per unit. Industry-wise, they amount to Rs. 4.75 lakhs per industry.

Wide Range of Industries

The Directors' report does not give the circle-wise or industry-wise details of the loans granted to small-scale industries. A Press note issued by the Government of India subsequently, however, provides some details. It says:

"The range of industries to which the loan facilities have been extended is very wide and covers practically all items of everyday use as well as machinery and machine parts. From units manufacturing aluminium utensils and umbrella ribs to those making chemical plants and electrical furnaces are covered by the scheme. There are also manufacturers of cardboard boxes, bread and biscuits, preserved foods, soap, matches, boot polish, textile articles and carpets.

"Circle-wise, 252 units engaged in 36 different types of industries were advanced Rs. 83.1 lakhs in the Delhi circle. In the Madras circle, 238 units covering 25 different industries received nearly Rs. 68 lakhs. In the Bombay circle, 105 units spread over 17 different industries or group of industries were advanced Rs. 55,85,400. In the Bengal circle, 101 units received Rs. 30.44 lakhs and the industries covered were 33.

"The largest single group of industries which have taken advantage of this scheme are machinery and engineering units. In the Madras circle of the State Bank of India, 82 minor engineering units have availed themselves of this facility. In the Bombay circle, 36 engineering, cutlery and automobile units were benefited by this scheme, while 26 units making hand-tools and machines and machinery parts took advantage of the scheme in the Bengal circle. As many as 60 foundry and engineering works in the Delhi circle have benefited."

An important step taken during the year under review was the undertaking of an evaluation of the 'pilot' scheme. With a view to making the scheme more effective, certain recommendations based on the Evaluation Report were made by the Central Co-ordination Committee and these have been accepted by the Bank. The following are some of the important features of the decisions and actions taken thereon:

(i) The scheme has been extended to all the branches of the Bank. At certain important centres, the scheme will be worked on an "intensive basis" so as to ensure the maximum co-ordination with the activities of Governmental and other agencies in this field;

(ii) the rate of interest on advances granted to small-scale industries has been fixed as an all-inclusive rate, not exceeding 6 per cent. The actual rate of interest chargeable in each case is dependent upon the type of advance sanctioned;

(iii) in appropriate cases, medium-term advances for periods not exceeding seven years will be granted to the Bank's constituents, for purposes of modernisation, expansion, replacement, etc.;

(iv) arrangements have been made to enlarge the list of commodities against which advances may be granted by the Bank;

(v) the Bank is taking appropriate steps to impart the requisite training to the staff and to encourage all initiative in them so as to promote the growth of institutional finance to small-scale industries; and

(vi) arrangements are being made to give greater publicity to the Bank's scheme of advances to small-scale industries.

During the year under review, the National Small Industries Corporation entered into an agreement with the Bank in respect of its guarantee applicable to that portion of the Bank's advances against raw materials, which is in excess of the advances normally granted by the Bank. This has been done with a view to facilitating execution of orders from Governments and others secured through the Corporation and placed with the small-scale industries. The Bank also signed an agreement with the West Bengal State Financial Corporation on the lines of that entered into with the Bombay State Financial Corporation. Under these agreements, the Bank acts, chiefly at 'pilot' centres, as the Corporation's agent in their dealings with small industrialists.

U.S. FOREIGN ECONOMIC POLICY

The objectives of U.S. foreign economic policy were broadly outlined by Mr. C. Douglas Dillon, Under-Secretary of State for Economic Affairs, speaking before a group of retired U.S. diplomatic and consular officers at Washington. As there is inadequate appreciation of these objectives, Mr. Dillon's analysis deserves to be quoted here. He described them thus:

1. *Promotion of U.S. economic strength.*—The United States seeks to "take reasonable advantage of the economies which flow from specialisation in production throughout the world." Also, the U.S. Government "encourages improvement of conditions for its citizens to invest and do business abroad."

2. *Promotion of the economic strength of the free world.*—"This objective has become one of major importance since World War II. We recognise, of course, that a prosperous world brings economic advantage to our own country. But even more important, foreign economic growth is necessary for the establishment and maintenance of stable, peaceful and friendly societies abroad."

3. *The Building and maintenance of cohesion in the free world.*—"For most countries, it is vital to have easy access to foreign markets and foreign sources of basic materials and capital. The jobs and well-being of their people are at stake. This is especially important for the development of countries of Asia, Africa and Latin America, which are heavily dependent upon the sale of a few basic commodities. By working together with other free world countries for their economic advancement and for the building of a durable and just international economic order, we can do much to achieve our broad aspirations as a nation."

In order to achieve the aforesaid objectives, the following basic economic policies are being followed by the U.S. Government:

1. The expansion of trade, through the gradual and reciprocal reduction of Governmental barriers.

2. The promotion of private American investment abroad.

3. The extension, jointly with other industrialised nations, of financial support to newly developing areas.

4. The provision of economic and technical assistance through the mutual security programme.

Surely, no country in the world has been so liberal as the U.S. in discharging its responsibilities as the leader of the free world, a position which it came to occupy by a historical accident, namely, the Second World War. It is no exaggeration to say that but for the immense contributions of the U.S. for sustaining the democratic forces in Europe and Asia, the Communists would have had an easy walk over.

West German industry's new investments abroad aggregated DM. 564.6 million (£48 million) in 1958, as against DM. 482.8 million (£41.2 million) in 1957 and DM. 356.3 million (£30.4 million) in 1955. The total of investments as at the end of 1958 was DM. 2,227 million (£190 million).

STERLING USANCE CREDITS TO FINANCE WORLD TRADE

BRITAIN RESTORES FREEDOM

YET another step in the restoration of economic freedom in Britain was taken on Thursday last week, when the Bank of England removed one of the restrictions imposed in September 1957 on sterling financing of international trade. The commercial banks in the U.K. were informed by the Bank of England that usance credits to finance trade between third countries were again permitted.

The financing of trade between third countries, it may be noted, had been a traditional function of British banks. These "third party credits," in fact, used to be the very bread and butter of the City of London bankers. They created the "Bill on London," which was the standard means of financing international trade. The length of the usance credits drawn on London for this purpose used to be governed by Exchange Control regulations and, until the autumn of 1957, credits up to 120 days were permitted. But in September 1957, when the pound sterling faced a serious crisis, a severe restriction was imposed on this form of credit.

It was feared at that time that the continuance of usance credits to finance international trade might be taken advantage of by foreigners to build up speculative positions against sterling. It was, therefore, decided on 7th September 1957, when the Bank rate was stepped up to the peak level of 7 per cent., that the usance credits to finance trade between third countries would be permitted only if they were payable at sight. Apart from the fear just mentioned, this decision was a logical sequel to the high level of Bank rate, because with short-term credit in London costing 8 per cent. not many countries could have afforded to use the London money market for financing their foreign trade.

The latest step follows a series of measures taken in the last few months to restore economic freedom in Britain, the first of them being the relaxation of credit restrictions on banks in July last, when the ceiling on total bank advances was lifted. The second change in the British Government's credit policy was the modification of the capital issues control through an amendment of the Control on Borrowing Order. Towards the close of September, a wide range of restrictions on dollar imports was removed. Three months later, this was followed by the establishment of external convertibility of non-resident sterling. This meant a return of full freedom to all international commodity markets in London. In other words, all commodities could be bought for external sterling or specified currencies—broadly, all currencies in which international trade is financed.

Early this month, the Treasury control on domestic borrowing through capital issues, except through redeemable bonus issues, was suspended, on the ground that it was no longer necessary to keep in force this restriction, as refusals by the Capital Issues Committee had become increasingly infrequent for some time past and the great majority of borrowers had been able to satisfy their needs or the greater part of them, without much difficulty. It may, however, be noted in parenthesis that one of the last acts of the C.I.C. was to reject the Midland Bank's application to make a "rights" issue.

Close on the heels of suspension of control on capital issues, the British Government removed from the embargo list of exports a wide range of dollar-costing goods, as a result of which many strategic commodities can now be exported without a licence. The reason given for this step is that the greater convertibility of European currencies makes the control unnecessary. European countries would no longer be tempted to solve their problem of dollar shortage by purchasing commodities of U.S. and Canadian origin from the U.K.

As a logical sequence to the restoration of convertibility of non-resident sterling, the British Government granted last week two concessions in exchange control to non-residents. The first one is the removal of all restrictions on the transfer of legacies from the U.K. to beneficiaries in Canada and the former American account area. This freedom applies to any legacies remaining in block accounts since 1951 and still in the hands of their original owners. Since 1949, such remittances to dollar countries have been restricted to £500 of each legacy. The second concession is the increase in the "settling in" allowance for emigrants to the U.S. and Canada from £2,000 per family to £5,000, a limit which has been applied to all other non-sterling countries. These two concessions would not involve any significant strain on the exchange, for the emigrants or legatees, whose assets were in excess of the limits previously prescribed, were able to export their capital from the U.K. by selling it at the rate for security sterling in the open market. The rate for security sterling in the free markets is now almost on par with the official rate and transfer of the blocked sterling at this rate does not, therefore, involve any great loss.

There are, however, a few other controls which remain to be unclamped. The most important of these is the exchange control as it applies to the people of Britain. They are not allowed to remit money abroad without a permit or to spend more than £100 per annum on holidays abroad. Britons are also not allowed to hold good. When a British merchant earns foreign currency, he is still compelled to remit home the dollars or whatever currency he earns. There appears to be little prospect of any substantial easing of these controls at present, though financial circles expect an increase in the travel allowance, as a result of the convertibility of European currencies. Then there are still some restrictions on certain imports, particularly those of consumer goods from the dollar countries. Some of these can, it is stated, be removed without any loss at all to the U.K.

ADVANCES BY SCHEDULED BANKS

The Reserve Bank of India views with some concern the tendency of bank credit being utilised for building up highly speculative positions, more particularly in certain commodities. This anxiety is expressed by the Governor of the Bank, Mr. H. V. R. Iengar, in the course of a circular to Scheduled banks, in which he has requested them to exercise restraint on further expansion of credit during the current busy season.

The Governor's circular points out that, during the current busy season, bank credit has been expanding at a faster rate than in the corresponding period of the last three years. This has happened, it says, in spite of factors which should normally have slowed down the pace of expansion. It will be noted, in this connection, that between the end of October (which usually marks the beginning of the busy season) 1958 and the week ended 13th February 1959, Scheduled banks' total advances have gone up by Rs. 107.59 crores to stand at Rs. 946.44 crores, as against a rise of Rs. 68.72 crores (to Rs. 923.73 crores) in the corresponding period of 1957-58 and of Rs. 92.53 crores (to Rs. 861.47 crores) in 1956-57.

The factors which should have normally slowed down expansion of credit and to which the Governor has drawn attention of banks are: (1) private imports, which were at an unusually high level, have slowed down considerably; (2) the rate of industrial expansion has also slowed down; and (3) in spite of larger production of rice this year and anticipation of a larger production of wheat, strict control over advances against foodgrains has been imposed by directives issued by the Reserve Bank.

(*Concluded from next column*)

lower level of advances, the Bank's borrowings, as at the end of the year, show an increase of Rs. 4.35 crores at Rs. 20.85 crores.

The small decline in advances is accounted for by bills purchased and discounted, which have fallen from Rs. 18.87 crores to Rs. 13.50 crores. Loans, cash credits and overdrafts have, however, risen from Rs. 154.61 crores to Rs. 158.56 crores. The decline in advances—albeit small—coupled with the substantial expansion in deposits, has brought down the credit ratio as at the end of the year to a low of 36 per cent., as against the general average of 55 per cent. for all Scheduled banks. The peak level of credit ratio touched by the State Bank during the year was 49.8 per cent., which is much lower than the corresponding level of 63.6 per cent. in 1957. The peak level of this ratio for Scheduled banks as a whole in 1958 was 66.4 per cent., as against 76.8 per cent. in 1957.

In view of the restricted demand for commercial loans and advances, the Bank had no alternative but to invest in Government securities. Over the year, its portfolio of Gilt-edged investments has shot up from Rs. 181.38 crores to Rs. 280.79 crores. Other investments, too, have been enlarged from Rs. 2.05 crores to Rs. 3.76 crores, thus raising the total investment ratio from 50 per cent. to 59.5 per cent. Cash reserves have also been strengthened by Rs. 16.06 crores to Rs. 57.58 crores, at which level, the cash coverage to deposits works out to 12.1 per cent., as against 11.3 per cent. at the end of 1957.

PROFIT OF STATE BANK A SHADE HIGHER

SHARP FALL IN CREDIT RATIO

THE effects of slackening in the tempo of economic activity and the selective credit controls imposed by the Reserve Bank of India during 1958 are fully reflected in the accounts of the State Bank of India for the year ended 31st December 1958. Thus, whereas the deposits of the Bank have grown by over Rs. 111 crores, as against Rs. 124 crores in the previous year, its advances are lower by Rs. 1.41 crore, in contrast to the increase of Rs. 33.31 crores in 1957. While these trends have helped the Bank to strengthen its liquidity, they have not contributed to any significant extent to an improvement in the earnings. On the contrary, the expansion in deposit resources has, as in the case of other private Scheduled banks, proved to be a burden on the Bank, in that the profit margin has shrunk considerably. The profit for the year, at Rs. 190.14 lakhs, is, no doubt, Rs. 2.69 lakhs more than that earned in the previous year and a record, but this rise is insignificant as compared with that (Rs. 31.27 lakhs) recorded in the previous year. At Rs. 190.14 lakhs, the profit for 1958 represents just 12 per cent. of the gross income, the corresponding ratio for 1957 and 1956 being 16 per cent. and 18 per cent., respectively.

As was pointed out in our issue dated 31st January 1959 and as will be seen from the following comparative table, the Directors have transferred larger sums to the various funds, except staff welfare fund, and have maintained the dividend at 16 per cent. per annum.

(In lakhs of rupees)

N.A.—Not available.

It will be noted that the Bank's income from interest and discount has gone up by Rs. 3.96 crores to Rs. 12.21 crores, while that from commission and discount has nearly been maintained at the previous year's level. The general assumption in market circles is that the Bank enjoyed the use of P.L.480 rupee counterpart funds at a more favourable rate of interest than that commonly paid by Scheduled banks on short-term deposits. The Directors' report neither confirms nor denies this assumption. The profit and loss account, however, shows that the outgo by way of interest paid has risen by Rs. 2.85 crores to Rs. 6.25 crores. Other expenses, too, are higher by Rs. 1.07 crore at Rs. 7.46 crores.

As stated earlier, the Bank's deposits have grown during the year under review by Rs. 111.34 crores to Rs. 477.86 crores, on top of an expansion of Rs. 124.39 crores in the previous year. The Directors observe in their latest report that "the receipt of rupee counterpart funds in respect of imports of commodities from the U.S. under P.L.480 continued to contribute to this growth in deposits." They have not, however, disclosed the share of the P.L.480 funds in the Bank's deposits. This is not understandable, particularly when it is well known that the P.L.480 funds are deposited with the State Bank of India and that the total amount of these deposits are given in an official publication up to 31st March 1958. According to it, these deposits were Rs. 140 crores.

As in the previous year, fixed deposits account for the bulk of the expansion in total deposits and even exceed the current deposits. Thus, fixed deposits, which had risen from Rs. 37.16 crores to Rs. 139.36 crores in 1957, have increased further to Rs. 223.88 crores in the year under review. Current deposits have gone up to Rs. 219.47 crores from Rs. 194.20 crores, to which level they had advanced from Rs. 173.92 crores as at the end of 1956. Savings deposits show a meagre increase of Rs. 1.54 crore, at Rs. 34.50 crores, as against Rs. 1.91 crore in 1957. Notwithstanding the substantial expansion in deposit resources and the

(*Continued in previous column*)

POSITION OF WOOL AS TEXTILE FIBRE

RESEARCH, PRICE STABILITY AND SALES PROMOTION URGENT

WOOL growers and woollen manufacturers throughout the world are greatly apprehensive about the outlook for wool, the golden fleece that has enjoyed for centuries together an unrivalled reputation as a clothing fibre of warmth, comfort and elegance for colder climates. The wool growers are worried mainly because of the continuing low level of prices for their produce, while the worry of manufacturers of woollen goods springs from the growing challenge from synthetic fibres. The latter factor should be a source of concern to the wool grower also, for, to the extent it replaces natural wool, it is bound to affect his prospects adversely. Since August 1953, the price of wool (fine graded territory wool, scoured basis at Boston—64's *quality*) has come down from about 172 cents per lb. to a little over 110 cents. Similarly, nylon (3 and 6 deniers) has declined from 170 cents to 128 cents, orlon (3 deniers) from 180 cents to 127 cents and dacron (13, 4½ and 6 deniers) from 180 cents to 141 cents. The chairmen of several leading textile manufacturing organisations have recently pointed out that wool is at a serious disadvantage in its competition with synthetics resulting in heavy financial loss to the wool processor.

An idea of the trend of consumption of wool *vis-a-vis* that of other main textile fibres in the world and the U.S. in recent years as compared with 1938 can be had from the following table:

Per Capita *Consumption of main Textile Fibres*

(In lbs.)

	1958*	1957	1955†	1950†	1938†
World †					
Cotton	N.A.	6.7*	6.6	6.0	6.3
Wool	N.A.	1.1*	0.9	1.0	1.9
Rayon	N.A.	2.1*	1.8	1.4	0.9
Other synthetic fibres	N.A.	0.3*	0.2	..	..
United States ..					
Cotton	20.1	20.4	23.2	26.8	19.5
Wool	2.2	2.6	2.9	4.4	2.2
Rayon	5.1	6.3	8.0	8.3	2.5
Other synthetic fibres	3.0	3.1	2.3	0.9	..

* Estimates. † Figures for 1938, 1950 and 1955 have been calculated using a three-year moving average centred on the years shown.

It will be evident from the above figures that, recently, man-made fibres have been growing rapidly in importance. Certainly, their progress, as the latest Australia and New Zealand Bank's *Quarterly Survey* (January 1959 issue) observes, constitutes a warning that a more virile policy is needed for wool. "It is *imperative*," it says, "that the dangers be recognised before the position deteriorates too far and that *immediate* action be taken to arrest any threatening deterioration in the strong position of wool as a textile fibre." In the opinion of the *Survey*, the problem of restoring wool to its pre-eminent position and maintaining it there can be attacked on three fronts—research, maintenance of price stability, and sales production.

There has been a great deal of research into the production of wool, particularly in Australia. The scope of research covers a wide range, from improvement of sheep breeds and the cut of wool per head to the increase of carrying capacity by vastly improved pastures. This work should be continued, so that the rise in available wool supplies will keep pace with the expanding world population. There is, of course, the need for a change in emphasis in research, more special attention being devoted to the processing of the fibre from the sheep's back to the consumer, without slackening efforts to enlarge sheep population and improve wool yields. Much valuable research is proceeding in the wool textiles institutes in Australia, New Zealand, South Africa, the U.K., and the U.S. But the scale of this research, it is said, does not match that carried out by the large industrial enterprises producing the major synthetic fibres.

The *Survey* alludes to the great deal of outstanding important work already done, and being done, in the wool textile research laboratories of the world, particularly by the Commonwealth Industrial and Scientific Research Organisation in Australia. Some of the most successful developments of recent nature in the field of research cover moth-proofing, shrink-proofing, permanent creasing and drip drying which have made outstanding progress in pure wool fabrics. In addition, solvent degreasing and the solution of the problem of branding fluids persisting through the various scouring and dyeing processes have been great contributions on the processing side of the industry. Notwithstanding all these, the *Survey* feels that the speed and magnitude of research should be increased and that the fruits of research carried rapidly right into industrial processes. Elucidating this view, it observes:

"The recent announcement by the Australian Wool Bureau that more personnel are to be appointed for this purpose is most important. It is necessary, however, to extend the service not only in Australia but also in all other wool manufacturing countries. More funds will undoubtedly be needed to achieve the desired objectives. These funds should be made available unsparingly, all available resources and to the full, and new resources added whenever necessary. By this means, it should be possible to ensure that the vital work of research will be accelerated and driven home with the utmost rapidity throughout the wool industry in all major textile producing countries."

As regards the price factor, the *Survey* alludes to the major advantage enjoyed by synthetics over wool, namely, that the prices of these synthetics are quoted firm by the manufacturers for delivery at a stipulated date. In its opinion, the stable prices of synthetic fibres would appear to constitute their greatest threat to wool. It, therefore, emphasises that the wool interests should make every endeavour to reduce, to the smallest extent possible, the disability imposed by price fluctuations. In this connection, it makes the following interesting suggestions:

The auction system is a highly efficient method of marketing. The auctions should be improved, in order to make them more attractive to the manufacturer and to reduce costs in the industry.

Bulk classing of the clip in brokers' stores, if it were extended within practical limits to provide large lines of uniform types of wool, can go some way towards matching the advantage of uniformity possessed by synthetic fibres; it would provide lines more acceptable to buyers and remove some of their problems caused by a variety of types in smaller lots.

Forward covering by manufacturers can do much to offset the risk of financial loss arising from price fluctuations in raw wool; the universal adoption of futures trading by manufacturers can be encouraged for this purpose.

Of greater importance than research and maintenance of price stability is the need for "virile, hard-hitting, widespread promotion on a large-scale." The objective of such promotion should be twofold: (1) to drive home wool's many undoubted qualities to the buying public and to retailers throughout the world; and (2) to aid manufacturers in adopting the harvest processing techniques and in using wool for some purposes in combination with synthetic fibres, where the latter can bring advantages to wool and carry it into new fields. Pointing to these objectives, the *Survey* says:

"It is important for wool promotion to embrace retail outlets and be associated with identifiable woollen goods for sale to the public.

"There is urgent need for the wise expenditure of large sums on effective promotion of wool. The appropriate bodies to organise such promotion are, undoubtedly, the Wool Bureaux in Australia, New Zealand and other wool producing countries and the International Wool Secretariat. In view of the wide field to be covered and the important promotion work to be done by the Wool Bureau, consideration might with advantage be given to broadening its membership to include representatives of buyers, brokers, manufacturers, retailers and research interests, as well as growers.

"The present problem appears fundamentally to be one of promotion. Wool is still by far the best of all textiles fibres. Its many advantages, and the rapid strides being made in the wool textile laboratories of the world in overcoming its disabilities and improving its competitive position against the synthetic fibres, need to be emphasised to the buying public and retailers in textile consuming countries and in those Eastern countries which constitute large potential markets."

The programme of work relating to research, price stability and promotion indicated above is, indeed, a vast one and its implementation on a systematic and well-organised basis entails large expenditure. The *Survey* urges that the burden of meeting the expenditure must fall mainly on Australia and New Zealand. These two countries, it may be noted here, are the world's biggest producers of wool, as will be seen from the following table showing wool production in 1957-58:

In million lbs. (greasy state)

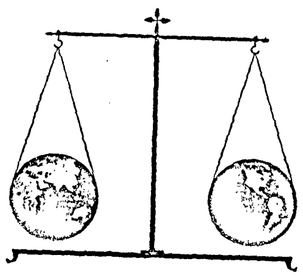
Australia	1,426
New Zealand	406
Argentina	409
South Africa	320
U.S.A.	292
Uruguay	200
U.K.	112
Turkey	88
Spain	81
India	72
Brazil	66
France	55
Other countries	547
Other countries	547
Total free world	4,163
Soviet Union, China and Eastern Europe	857
World total	5,020

Wool plays a vital part in the national economies of both Australia and New Zealand. The average annual earnings of foreign exchange in the past ten years come to as much as £A360 million for Australia and £NZ84 million for New Zealand. These figures are exclusive of the value of local sales of wool and receipts from ancillary products.

TEXTILE ADVISORY COMMITTEE

The first meeting of the Textile Advisory Committee, recently constituted by the Central Government to advise the Textile Commissioner on problems relating to the industry, was held in Bombay on Saturday last. It was inaugurated by Mr. S. Ranganathan, I.C.S., Secretary to the Union Ministry of Commerce and Industry. At this meeting, the Committee decided to set up a working group to go into the procedural details for the import of capital goods required by the industry. This decision followed a review of the present position in respect of textile machinery and stores imports. The review revealed that about 70 per cent. of the total machinery requirements of the industry was being met by indigenous manufacturers. It was felt that domestic production could be augmented substantially, if adequate supplies of imported steel and spare parts were assured. Agreement was reached on the provision of special facilities for research in machinery manufacture with a view to keeping abreast with developments abroad.

Another decision taken by the Committee relates to arrangements for the distribution of textile dyes and chemicals. Although the existing arrangements were considered to be reasonably satisfactory, the Committee urged the Chairman to approach the Government for allowing more imports of dyes and chemicals. On the question of relaxation of restrictions imposed on printing by mills, the Committee asked the mills to make specific suggestions which would help them, without affecting the interests of the handprinters. The other matters discussed by the Committee included financing of textile trade, continuance of the existing system of issuing transport permits by the Textile Commissioner for movement of cloth and yarn from Bombay and Ahmedabad, and its extension to other textile producing centres. The conclusions arrived at on these issues are, however, not known.



In both hemispheres...

... there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

PLAN FOR COTTON INDUSTRY

SWIFT DECISION ON REDUNDANCY URGED

From A Special Correspondent

MANCHESTER, *17th February*

MANCHESTER LETTER

OPTIMISTIC estimates are already being made as to the length of time likely to elapse before the Cotton Board's Development Committee will come forward with its plan for the industry. The House of Commons has been told that proposals will be ready "within the next few weeks." Speed in preparing such an important project is rare indeed, but it is clear that Government sources are instrumental in urging quick decisions.

Few traders intimately connected with the local industry would quibble for one moment at the comments made on the present position by Mr. Roger Lee, Chairman of the Lancashire Cotton Corporation, at the annual meeting. His supplementary remarks brought his earlier statement up to date, covering a period of intense activity and considerable transition.

Sharp and to the point were his criticisms of Government policy and his appeal for a swift decision on the redundancy problem. Mr. Lee spoke for the industry in general when he urged that a policy statement indicating whether an organised plan was to be put forward should be made within a matter of weeks. Delay can only mean further dislocation in the market and cause the waverers to stay in business longer than necessary. "The decision as to whether there is to be a redundancy scheme or not is a matter of the greatest urgency to the industry," he told the annual meeting. "It may help to expedite the contraction, if it could be achieved by a very smooth and speedy procedure, but any cumbersome scheme in my opinion would be a disaster."

Clear Pronouncement

If no scheme was to be put forward there must be a clear pronouncement to this effect in terms which could not be misunderstood, Mr. Lee continued. On the other hand, if there was to be one, it must be put into effect without delay and without bureaucratic procrastination or formalities. In the meantime, Mr. Lee added, there was no doubt that wholly uneconomic prices for yarn would prevail. As order books filled up and mills which did not want to spend money on re-equipment decided to go out, he hoped that prices might once again be re-established on a realistic basis. Although excess capacity in the spinning industry was admitted, Mr. Lee declared: "It seems to have been entirely ignored that there has been a very marked contraction in the industry and, since the end of 1953, the number of spindles in running mills has fallen by over 20 per cent. I do not consider that a contraction of 20 per cent. in five years has been insignificant."

The closing down of mills involved owners in the sacrifice of capital assets. Throughout the period, the whole industry had been reluctant to believe that the Government would stand aside with indifference and watch the invasion of Britain's home market by people who maintained heavy tariffs against our textile exporters and were also able to launch attacks on our export trade based on secure and protected home markets aided by low Asian wage standards.

Dealing with the voluntary undertaking by Hong Kong millowners to impose a ceiling on exports of cotton goods to the United Kingdom for the next three years, Mr. Lee said: "I am sure that the whole of the cotton industry in this country would agree with me when I say that the figures which have been announced are so high that we cannot but be disappointed at the outcome of all the negotiations."

Similar Views

Similar views were also expressed in the annual statement issued by Mr. C. H. Fish, Chairman of J. F. and H. Roberts Ltd., the Manchester textile manufacturing and merchant firm. He described the agreement as "the most one-sided document I have ever read." It in no way altered the very real threat to the profitable operation of a large section of the cloth and garment manufacturing firms in this country.

Mr. Fish warned that many other old-established industries in Britain would eventually be seriously affected by Commonwealth-manufactured articles. The Government had assured Hong Kong that approaches by other industries to limit exports from the Colony would be vigorously opposed. "What a state of affairs that Britain should be unwilling to look after its own industries and yet be prepared to tell other countries how they should conduct their affairs," he commented.

Supplementing this view, Mr. Lee said: "This type of problem is likely to arise again and again. It will not be confined to the cotton industry and some other way of reaching a speedy solution will have to be devised."

Mills Take Less

Not surprisingly, in view of the limited off-take in finished goods during recent months, the quantity of raw cotton imported during the first half of the current season was the lowest for some years past. Barely 500,000 bales arrived, emphasising the reluctance of spinners to assess their future needs and the slow movement of supplies to the mills.

During the past two seasons the tendency has been for consumers to build up stocks, in view of the advantageous terms offered by the American Government in an effort to shift the accumulation of supplies. As a result, shipments of United States staple have been extensive until the current season, as is indicated in the table in the next column.

The difference between the quantity of raw cotton imported in the first half of the current season and the same period last year is almost entirely made up by the reduction in arrivals from the United States. Other sources have continued to offer fair quantities of cotton, but there have been no major changes. Supplies procured from Nigeria have shown a marked increase and some improvement has occurred in shipments from India and Pakistan, but purchases from the Sudan have continued their declining trend.

Raw Cotton Imports

(In bales)

	1st half 1958-59	1st half 1957-58	1st half 1956-57	Total 1957-58

Sudan Cotton Supplies

After the first impact has been overcome, Lancashire cotton leaders are hoping that the recent decision of the Gezira Board to remove the reserve price from all their cottons should do much to create more stable values—not only for Sudan cotton but also for other growths. Mr. H. C. Owtram, Chairman of the Bolton Master Cotton Spinners' Association, expressed this hope in his annual report to members. He added: "It is imperative that cotton prices of all producing countries should be stabilised at the lowest possible level, if the severe competition of man-made fibres is to be met."

Mr. Owtram said that, although spinners had little difficulty in securing cotton suitable for their requirements, if was likely that the draft financial settlement reached with Egypt would make available acceptable cottons at competitive prices. "The price of Sudan cotton has, until now, been maintained at an artificially high level, which, coupled with the manipulated price of the American crop, has had an unsettling influence on the yarn and cloth market. The lack of any adequate futures market in which to cover purchases creates a further problem for spinners particularly."

On the import cloth question, Mr. Owtram warned that it was only a matter of time before it was the turn of other industries—unless the Government took action. "Lancashire has had the misfortune to be one of the first major industries to be seriously affected," he said. "In my view, others will be involved as time goes on unless steps are taken to regularise the position. Even now, the leather and cutlery industries are suffering severely from imports of cheap Oriental products."

Meanwhile, said Mr. Owtram, multiple stores and shops—"with a few notable exceptions to whom we take off our hats"—were filled with Hong Kong produced textile goods. The question was being asked—how far would this sort of thing spread as other Commonwealth countries developed their industries? "It seems to me the Government should do some rethinking and take steps to safeguard the livelihood of our people and the products of home industry used in the home market."—*All Rights Reserved.*

LINKING SUGARCANE PRICE TO QUALITY

WORK DONE UNDER THE SCHEME SO FAR

A NOTABLE recommendation made by the Development Council for Sugar Industry at its last meeting held at New Delhi recently—the deliberations of the meeting were referred to in some detail in these columns last week—is that the experimental scheme pertaining to the linking of the price for sugarcane to its sugar content be continued. The Council's Standing Advisory Committee—and not the Director of the National Sugar Institute, as was mentioned by us last week through inadvertence—has been asked to give further consideration to the scheme and make a report on the feasibility of introducing it on a uniform basis throughout the country. Surely, this decision of the Council indicates the sense of importance attached to the scheme. Although the scheme was accepted in principle by the Government quite a long time ago, when the late Mr. Rafi Ahmed Kidwai was the Union Food and Agriculture Minister, it is unfortunate that no concrete steps, barring the experiments in a few factories, have been taken to give full effect to the scheme. Even at the risk of repetition, we wish to emphasise that, unless the present defective system of paying for cane on the basis of weight alone is replaced by that based on both weight and quality, there is absolutely no hope of improving the productivity of sugar per acre.

Now that the Development Council for Sugar Industry has again urged the necessity for a nation-wide adoption of the scheme for payment of cane on quality basis, it would be worthwhile reviewing here the results of the scheme's working as an experimental measure so far. Work under the scheme, it will be recalled, was started from the 1956-57 sugar season under the guidance and control of the Director, National Sugar Institute. The report on the work done in that season was analysed in *Commerce* dated 31st August 1957 (*vide* page 392) and 7th September 1957 (*vide* page 436). It is proposed to review now the work done during the 1957-58 season and the future programme.

During the 1957-58 season, the scheme worked in five factories, namely, the Deccan Sugar and Abhkari Co., Ltd., Pugalur; the Kirlampudi Sugar Mills Ltd., Pithapuram; the North Bihar Sugar Mills Ltd., Bagaha; the Raza Sugar Factory, Rampur and the Daurala Sugar Works, Daurala (Meerut). The work was carried out more or less on the same lines as in the first season but with better experience and insight, with the result that the difficulties faced were less and it was found that more systematic work could be done with better results. Almost 100 per cent. cane supply, it is said, could be tested under the individual grower category in the Pugalur factory. Next came Pithapuram, the percentage under individual category being 89.52 and that under two or three growers group 8.43.

Pre-harvest Survey

As the staff appointed under the scheme had been disbanded after the close of the 1956-57 season, difficulty was experienced in the recruitment of staff in 1957-58, causing considerable delay and dislocation. The services of the staff were, therefore, continued even after the close of the 1957-58 season and, during this period, the staff carried out pre-harvest maturity survey of the standing cane crop.

Apart from the testing work done in factories by the scheme staff, the Instrument Section of the Institute designed and constructed an electronic-cum-mechanical device for continuous classification of cane lots and automatic collection of corresponding juice samples. A trial of this device was taken in one of the factories where the cane price scheme worked, and it was found that the instrument worked quite satisfactorily, but needed some modifications which have now been made. The instrument is being tried again in the current season.

The work of the scheme is now being continued for the third season in the Pugalur and Pithapuram factories and for the second season in the Rampur, Daurala and Bagaha factories. One more factory—the Burhwal Sugar Factory—has been taken this year for running the scheme, though at a later stage. The programme of work carried out under the scheme during the current season covers continuance of work in the aforesaid six factories; study of the reorganisation of cane supply zones of U.P. and Bihar factories, with a view to maximising the percentage of gate supply; conducting trial of modified automatic sampling device evolved at the Institute; and pre-harvest maturity survey of the standing cane crop for the next season.

If the quantity of sugarcane crushed in a season amounts to 150,000 tons, the incidence of cost for arranging cane supplies and testing it for the purpose of paying on quality basis according to the system evolved works out to about 25 nP per ton or slightly less than a naya paisa per maund of cane.

Many Difficulties

Many difficulties, it is said, were experienced in working the scheme during the 1957-58 season. These are indicated below:

1. The scheme was started in the factories very late. Cane supply calendars of cane unions had been prepared long before and the secretaries of the unions did not agree to change the calendars.

2. There were no proper marshalling yards in some factories or the yards were too small.

3. Cane carrier *coolies* sometimes did not unload the cane of the carts or trucks in the manner desired for testing of cane under the cane price scheme.

4. Cart cane was required to supplement the feed of the cane from wagons, particularly when the latter reached the bottom layers. This disturbed not only groupwise testing of carts but also testing of cane samples of wagon cane.

5. Weighment of gate cane during restricted hours necessitated stacking of cane in the yard. This disturbed the regular testing of cane of other scheduled supplies.

6. Towards the end of the season, cane supplies became irregular and testing of cane could not be carried out below village or centre level.

7. Frequent breakdowns in machinery caused congestion of cane growers in the yard outside the factory gate. When this happened, it was difficult to stick to scheduled testing.

8. Emergency indents, which became necessary due to unexpected breakdowns, were issued without information to the unit officers. This disturbed the groupwise indenting of cane supply for 3-4 days.

9. Cultivators often complained of late supply of *purzies* due to which they could not harvest and bring their cane to the factory at the specified time.

10. The units could not be supplied with polariscopes, calculating machines and typewriters. Due to this, the work of the scheme was greatly handicapped.

The working of the scheme so far has brought out the following facts:

Payment of cane price on quality basis can be made in those factories where the entire supply is at the gate and cane feeding is done by mechanical means. All the details required for the practical implementation of the system have been worked out and can be put into effect. No solution has so far been found for testing outstation cane, particularly that received by wagons. Conversion of out centres into road centres wherever possible and intensive cultivation in gate areas so as to make the factory self-sufficient in gate supplies appears to be the only solution. Maturity harvesting side by side with the cane price scheme work has yielded immediate results by way of increased recovery. The cane growers have greatly appreciated the considerable reduction in the detention time of their carts at the factory gate, which has come down from 24 hours or more to barely 3-4 hours. Contrary to expectations, the growers bring their cane to the factory gate punctually to the specified time schedule. Grouping of growers can be done to a large extent, provided the system of equitable distribution of *purzies* is modified to suit the requirements of the scheme. Necessary modifications can be effected without any dislocation provided the *purzies* are issued systematically and impartially. The question of enabling the grower to share the benefits accruing out of the scheme has to be solved immediately, if the scheme work has to make further headway. Being a fundamental problem necessitating changes in an age-old system, continued efforts will have to be made over a long period before the scheme can meet with complete success in its objectives.

It is gratifying to hear that the Cane Departments of both the States have fully appreciated the need for implementing the scheme and are affording full co-operation. The Departments, however, are not justified in asking the Central Government to do something by which the cane growers can also share the profits accruing from increased recovery due to the working of the scheme. For stress should be laid not on the sharing of profits but on the growers getting a higher price corresponding to the improvement in the quality of cane supplied. This view holds good in the case of cane growers also who, it is said, while appreciating the need for improving the quality of cane, are willing to co-operate wholeheartedly only if a share of profits is given to them.

OUTPUT OF COAL

PACE OF EXPANSION SLOWS DOWN

THE statistics relating to the coal industry's performance during 1958 show that the upward trend in production and despatches noted in previous years has been maintained during the year under review as well. The output, for instance, has gone up by 1.81 million tons to 45.32 million tons. With this rise, coal production has risen by 13.02 million tons since 1950, that is, since the beginning of the first Five-year Plan and by 7.09 million tons since the commencement of the second Five-year Plan.

Of the total production in 1958, the Singareni Collieries (which form part of the public sector of the industry) accounted for 2.12 million tons, having gone up from 1.92 million tons in 1957. The balance of 43.20 million tons is accounted for by the private collieries and the collieries of the National Coal Development Corporation in the pubic sector. The separate figures for the two sectors are not yet available. In 1957, however, private collieries accounted for nearly 88 per cent. of the total production, N.C.D.C. for about 8 per cent. and Singareni Collieries for a little over 4 per cent. Assuming that these proportions were maintained in 1958 also, the production by private collieries would have amounted to 39.5 million tons and that of the collieries of the N.C.D.C. to 3.7 million tons.

While the upward trend in production has been maintained in 1958, the pace of increase over the year has considerably slowed down. Thus, the rise in output during 1958 at 1.81 million tons does not compare well with that of 4.07 million tons recorded in 1957. This shows that the effect of the restriction on private collieries in the matter of opening of new mines, inadequacy of transport, siding and loading accommodation, shortage of machinery and equipment and short supply of iron and steel, etc., must have told on the expansion of production by collieries in the private sector. If these handicaps were to continue, it is doubtful whether the private collieries would be able to achieve their target of 45 million tons per annum within the remaining two years of the second Plan period.

The despatches of coal during 1958 amounted to 39.98 million tons, as against 37.68 million tons. The increase of 2.30 million tons in despatches does not also compare favourably with that of 2.73 million tons in 1957, despite the fact that wagon loadings were better than in the previous year. The daily average loadings from West Bengal and Bihar coalfields, for instance, were at a record high of 3,910 wagons, as compared with 3,667 wagons in 1957.

The following comparative table shows the monthly trend of raisings and despatches during 1958 and 1957:

(In tons)

	Raisings		Despatches	
	1958	1957	1958	1957
January	3,047,427	3,627,151	3,325,642	3,136,528
February	3,712,113	3,518,681	3,062,660	2,850,781
March	3,700,000	3,652,777	3,353,038	3,218,809
April	3,801,057	3,729,106	3,229,887	3,194,079
May	3,883,822	3,704,092	3,373,611	3,187,466
June	3,554,419	3,330,400	3,106,367	2,915,343
July	3,749,030	3,296,150	3,367,971	3,044,875
August	3,538,072	3,376,701	3,477,605	3,230,380
September	3,703,000	3,347,255	3,347,000	3,227,150
October	3,746,001	3,555,099	3,473,875	3,323,019
November	3,797,407	3,929,735	3,375,326	3,154,723
December	4,092,605	4,050,924	3,480,331	3,163,747
Total ..	45,318,043	43,504,071	39,982,913	37,685,995

The total shipments of coal (coastal and foreign) during the year under review were somewhat disappointing, having declined from 1.97 million tons to 1.83 million tons. Of these, coastal shipments accounted for 1.04 million tons and foreign for 0.79 million tons during 1958, as against 1.03 million tons and 0.94 million tons, respectively, in 1957. Exports of coal to Pakistan show a rise of 232,263 tons, that is, from 988,991 tons in 1957 to 1,221,264 tons, thus more than making good the decline of 186,700 tons in exports to that country in 1957. It will be of interest to note that exports of coal to this neighbouring country during the last eight years have been fluctuating widely, as will be seen from the following table:

Year	*Quantity* (Tons)	*Year*	*Quantity* (Tons)
1951	946,916	1955	977,393
1952	1,143,378	1956	1,175,691
1953	762,218	1957	988,991
1954	834,870	1958	1,221,264

The bulk of the despatches to Pakistan is by rail, the quantity sent through this route during 1958 being 1,186,637 tons, as against 977,637 tons in the previous year.

NEW PUBLICATIONS

Japan's Economic Recovery. By G. C. Allen. Published by Oxford University Press, London. Pages: 215. Price: 25s.

THE book under review is a remarkable survey of Japan's post-war resurgence in industry, trade, agriculture and finance. Japan's economy which the war left in ruins has now been restored and after a long period of hesitancy, progress has been resumed. Japan has been and still continues to be a model for underdeveloped countries, indicating how a will to be an industrialised country without disturbing the balance between various sectors could be achieved. In twelve chapters, supplemented by useful statistical appendices, Mr. Allen describes and explains the course of recovery in industrial production, foreign trade, agriculture and finance and compares and contrasts Japan's present, and its pre-war, economy. The treatment is particularly authoritative since the author has been a student of the Japanese economy for over 30 years and the conclusions are based on his own investigations.

The three conditions that made possible the emergence of Japan as a modern State in Meiji times and its subsequent achievements are: (1) a political and social system that presented opportunities for the exercise of leadership to persons whose interest lay in promoting economic change, (2) inheritance of organising capacity and skill, and (3) institutional arrangements conducive to the rapid accumulation of capital. The war ruined its economy. But, by 1955-56, it had made good its post-war collapse, had restored financial stability, rebuilt a large part of its industrial and commercial organisation, increased manufacturing production to more than twice that of the middle 1930s and increased *per capita* income. The resilience of the economy has been particularly displayed in the extension of the range of commodities and products. Its industrial activities are now centred upon metal, engineering and chemical industries. It has joined the company of the few great countries that are responsible for the bulk of the output of these industries. In the course of its recovery, Japan was certainly assisted by certain fortuitous circumstances, such as the Korean War accompanied by the special procurement demand, the world investment borne in the middle of 1950s and the Suez crisis which conferred considerable advantages on Japan in its competition with Western producers in Asian markets.

Against the picture of the rapid advance towards industrialisation is peasant agriculture, though far more efficient than elsewhere in Asia, still overstocked with labour. There has been a revolution in agricultural life and the main differences with the pre-war situation are: (1) a 20 per cent. increase in the size of the agricultural population; (2) a conversion of tenants to peasant proprietors, without their incurring any substantial financial liability for this change in tenure; (3) the improvement in the economic position of the working farmer, in spite of the increase in the agricultural population, through land reform, higher agricultural prices and new opportunities for non-agricultural employment; (4) diversification of agriculture through the development of livestock, fruit and vegetable farming; (5) an increased application of chemical fertilisers and of materials for the control of pests and diseases; (6) a greater use of machinery, although the structure of Japanese agriculture still prevents the efficient use of many types of agricultural machines and (7) the destruction of the landlord class and the reduction of many of its members to the status of working farmers.

As regards Japan's small-scale sector, the author points out that it is commonly asserted that it is characterised by disguised unemployment or under-employment. He feels that these terms may be misleading, for they imply that the conditions can best be relieved by an increase in effective demand brought about by an appropriate monetary policy. He adds:

"In fact, short-run measures of that kind can hardly provide a complete and satisfactory remedy, for the dichotomy in the Japanese economy is derived from an insufficiency and a biased distribution of capital in a society in which the labour supply is rapidly increasing. Throughout the modern era a high proportion of new fixed investment has been directed into a relatively narrow range of industries, notably certain industries turning out capital and intermediate goods where for technical reasons factor proportions are rigid. The result is that agriculture and most of the consumption-goods industries and service trades, where the factor proportions are elastic, have attracted comparatively little investment and have been left to absorb in low-productivity occupations a large share of the increasing labour supply. Such a distribution of capital is probably justified in a period when rapid development depends on the establishment of basic industries, especially those concerned with power and transport."

In conclusion, the author comes to the fundamental question whether future progress can be regarded as reasonably well assured. This is a difficult question to answer for Japan cannot be easily summed up; in fact, no nation can be. The author discusses the strains in present development. He notes that the war destroyed the powerful sections of the oligarchy, chiefly the military clique and the rural landlords. It would, however, appear that the leadership of the official and business oligarchies has not been seriously disturbed. The author says:

"Labour organisations have arisen, but since their economic foundations are weak, it may be doubted whether they will be capable for many years of wresting power from the established groups of leaders. On the other hand, the mood of the people has changed.... Yet the extent of the change must not be exaggerated. Japan is still far from possessing a society of the Western type, and in the most recent period she has even retraced some of the steps taken in the hey-day of reform. The fiscal system still permits a high rate of private capital accumulation; the labour market remains highly competitive; and welfare and labour legislation covers effectively only a part of the industrial community. Japan is moving along the path that Western industrial societies have travelled, but she is still some distance from the goal they have reached."

Being a foreigner, the author hesitates to hazard an opinion on the question whether and how far the deeper springs of Japan's national life have been affected by recent events. Perhaps Japan today lacks the patriotic urge which made it great in the years following the Meiji era. Broadly speaking, few will disagree with the author's verdict that, without a unifying purpose, an emotional people such as the Japanese may find it difficult to resist corrosive influences from without and to maintain social unity unimpaired.

The Economics of Underdevelopment. Edited by Messrs. A. N. Agarwala and S. P. Singh. Published by Oxford University Press, Apollo Bunder, Bombay-1. Pages: 510. Price: Rs. 17.50.

During the last two decades, there has been an amazingly rapid increase in the output of literature on the economics of underdeveloped countries. Not all of it can be said to represent a real advancement of knowledge. But quite a few of the works on the subject are of basic significance and have certainly pushed back the horizon of knowledge in the field.

Most of the contributions of basic and far-reaching significance are to be found only in technical journals and periodicals which are not easily available. Students of the subject in India, therefore, remain unaware of the more important contributions and their worth and significance.

Messrs. A. N. Agarwala and S. P. Singh, therefore, deserve to be congratulated on bringing together in a handy, reasonably priced volume, some of the important recent contributions on the subject.

The volume contains 21 articles, classified into six sections. The first section, approaches to the problem of underdevelopment, carries five contributions. It is designed to acquaint the reader with the criteria that can be adopted in defining underdevelopment, the causes and factors contributing to the phenomenon of underdevelopment and the different methods of analysing and finding solutions to the problem of underdevelopment. The second section, which contains two papers, examines the problem of underdevelopment in a historical context. The third section includes three papers which analyse the problem of underdevelopment in the light of the theories of Schumpeter, Keynes and of some present-day economists like Harrod and Joan Robinson. The fourth section deals with the problems of external economies and balanced growth. The fifth section contains two papers, one each on the problem of underemployment and factor proportions in underdeveloped areas. The last section presents four models of economic development of underdeveloped countries. The list of contributors includes such well-known economists as Colin Clark, Arthur Lewis, W. W. Rostow, Ragnar Nurkse, Rosenstein-Rodan, Simon Kuznets, Jacob Viner, to mention only a few.

COMMODITY TAXATION AND ECONOMIC DEVELOPMENT

NEED FOR LOWERING BURDEN OF DIRECT TAXES

By Khetra Mohan Patnaik, M.A., A.M. (Stanford)
LECTURER IN ECONOMICS, RAVENSHAW COLLEGE, CUTTACK

IN his presidential address at the Lucknow session of the Indian Economic Conference in December 1958, Dr. M. H. Gopal remarked that, in India, in the context of economic development, "no increase in direct taxes was advisable now and revenues must hereafter come from consumption taxes only .... the Central Excises are the real inspiration for further revenues." This suggestion, though significant, may, perhaps, have an unfavourable reception in many quarters. This is evident from his confession that it is "against the current trend of opinion typified by the Planning Commission's affirmation that no further tax increase was possible, by the assertion of the Union Government of its socialistic pattern objective, and by protestations from the Press and the people that taxation is already too heavy to bear and is inequitable." Even the U.N. Experts point out that "in general, indirect taxes tend to have an adverse effect on industrial development, at least in so far as they are levied on locally produced goods and services, for not only are they likely to raise the price of domestic manufactures, but they are usually regressive, bearing relatively more heavily on the lower income groups and thereby tending to restrict the local market."[1] Again, it may apparently look paradoxical that commodity taxes should be emphasised in the context of planning through the market mechanism which involves the danger of inflation. This leads us to a consideration of the role of commodity taxation in the context of economic development of underdeveloped countries, with special reference to our country.

Objectives of Tax Policy

The achievement of increased investment on public and private account is accepted as the crux of the problem of economic development. Investment depends on saving and the actual diversion of this economic surplus in the direction of expansion of productive facilities. Hence the tax system must promote not only the growth of savings, but also give incentives for the utilisation of this saving to bring about an increase in investment. Certain additional considerations should be kept in mind while tailoring a tax structure suited for development in an underdeveloped country. In such countries, it is imperative on the part of the State to undertake more development responsibilities than is usual in an advanced country, where the private sector is highly developed. This considerably increases the need of Governments in these countries for tax revenues. But the problem becomes complicated and the position of the Government becomes precarious as such countries encounter considerable difficulty in borrowing, either at home or abroad, and inflexible internal conditions arising out of factors like low educational standards, the existence of a large non-monetary subsistence sector, and the political influence of large agricultural interests. These factors more often limit the range and aggravate the complexity of the tax structure.

Again, avoidance of inflation becomes an immediate objective of taxation in a developing country, since inflationary pressure is likely to be very high where the development programme is large relatively to the size of the economy, and voluntary saving negligible. Hence the prime necessity in such an economy, as Mr. W. A. Lewis points out, is that the tax structure should be so geared that marginal rates of tax are always higher than average. If this condition is realised, then the Government would be in a position to check the inflationary pressure generated by the process of development. This leads Ursula K. Hicks[2] to suggest:

"In principle, the simplest type of tax which statisfies this condition is a general progressive income-tax, but, in primitive conditions, this is not easy to achieve, and recourse must be had to outlay taxes which has some of the same effects. Thus, expenditure taxes have an important part to play in curbing inflation in primitive conditions, but, to be effective, they must be assessed on things of which people buy more as they get richer, and must cover the purchases of as large a section of the population as possible."

All these considerations point out that the best tax structure suited to the exigencies of economic development appears to be one which, having regard to the development programme and the resources required for it, would increase the resources for investment available to the public sector with as small a diminution as practicable of investment in the private sector, and which, therefore, is accompanied by the largest practicable restraint on consumption by all classes.

Planning Implies More Taxes

The foregoing discussion leads to the conclusion that the prime objectives of taxation in the context of development ought to be promotion of savings, incentives to investments in the private sector, availability of resources for the growing public sector, and avoidance of inflation. There is no question here of decreasing taxes as long as we stick to the policy of raising *per capita* real income through planned economic development. Planning presupposes austerity and the main instrument for enforcing it is the taxation policy of the State. A planned economy necessitates an increasing flow of resources. It is thus almost axiomatic that the level of taxation should be very high in a planned economy like that of ours, which aims at raising living standards. High taxation seems to be the price which people have to pay to realise what the poet says:

"Ah Love! Could thou and I with Fate conspire
To grasp this sorry scheme of things entire,
Would not we shatter it to bits—and then
Remould it nearer to the Heart's desire."

It cannot be argued that we have already reached the limits of our taxable capacity, since the Indian tax revenues amount only to a little more than 7 per cent. of the national income, and this proportion is lower than in many other countries, including some in South-East Asia. We have also in this connection the authoritative opinion of the Taxation Enquiry Commission that "there is a presumptive case for holding that, in India, taxation on the basis of its existing structure and rates has not fully tapped the taxable resources of the country."[3]

Prof. Kaldor also points out that, in our country, "the tax revenue does not exhibit that natural buoyancy—i.e., the automatic rise in yields with the increase in national production and income—which is a common feature of the tax systems of Western countries."[4] Hence, instead of hoping for a lowering of the tax level in the near future, we must be prepared for further tax burdens. This does not imply that there is no scope for readjustment in the existing tax structure. But the question is: Is it desirable, in the interest of planning in our country to raise living standards, to reshape our existing tax system in such a way as to add to the burdens of the small group of direct taxpayers? Should we place greater reliance in the near future on direct taxes so as to conform to the outlines of tax structure described above?

Relief to High-Income Groups

The answer to our above queries has been provided by economists like Dr. M. H. Gopal and Prof. Kaldor. Dr. Gopal is of the opinion that a new realistic tax policy for India during the next seven years should be based on a reduction of the burden of direct taxes, lowering of the incidence of taxation on companies from the present 56 per cent. to 50 per cent., and an overall increase of 10 per cent. in the basic rate of indirect taxation. He joins hands with Prof. Kaldor who points out that "the present system of direct taxation in India is both inefficient and inequitable." Hence Prof. Kaldor suggests that the maximum rate of tax on income should not exceed 45 per cent. (as against the present 92 per cent.) and steps should be taken to prevent large-scale evasion through concealment or under-statement of profits and property income. Thus Dr. Gopal's suggestions are in line with the Kaldor plan so far as lowering the burden on the broadest shoulders is concerned.

This recommendation is put forward with a view to leaving incentives for investment unaffected and hence is in keeping with one of the objectives of taxation mentioned above. High income and profit taxes, whose revenue is so necessary to finance public works, will deter the industrial development which is so urgently desired. Direct taxes like income-tax not only take away a considerable portion of the funds that might be used for purposes of investment but lessen the net return from investments and thus may weaken the incentives of persons to undertake them. Since such taxes fall upon the higher income groups, these would probably be paid almost entirely from income that would have been saved. Thus, direct taxes have a tendency to reduce capital supply to the private sector, not only by encouraging spending from accumulated saving but also by reducing the further accumulation of savings. Hence, concluding his discussion on the effect of income taxation on capital supply, Prof. John F. Due points out:[5] "Thus, the substitution effect will tend to reduce the supply of money capital available on an equity basis and will interfere with economic development and the maintenance of full employment."

Empirical study of the problem made under the auspices of the Harvard University Graduate School of Business has substantially supported the conclusions arrived at on the basis of analytical study. The results of this empirical study were published in 1953.

Even as an anti-inflationary weapon, income-tax does not show any superiority over commodity taxes in an underdeveloped country like ours where the income-tax payers constitute such a microscopic minority, as less than 1 per cent. of the total population. Since current income is the principal source of spendable funds, the effectiveness of a tax as an anti-inflationary measure lies in the extent to which it is able to reach income. Hence, there may be some ground for preferring income-tax on this score in a highly developed country like the United States, where "persons subject to the income-tax account for roughly three-fourths of the total expenditures."[6] That is why in such countries greater reliance on income-tax was advocated during the war-time. "In view of the fact that the exempt part of income does not, in most cases, materially exceed a necessary minimum, the persons reached by the income-tax must be considered the source of virtually all the 'excess' expenditure, over and above necessities, which can safely be cut when inflation danger compels a contraction."[7] Conditions in underdeveloped countries are just the opposite and hence considerations of inflation control would necessitate greater use of such taxes as will reach all income, thereby mopping up excess expenditures.

Role of Commodity Taxation

If the desirability of giving tax relief to the higher income groups to realise our objectives is accepted, then it might apparently look that our reliance on indirect taxation is a matter of Hobson's choice, in order to guarantee an increasing flow of resources to the growing public sector. But, as a matter of fact, it is not so. As will be pointed out presently, the choice of commodity taxation in the context of development rests on other solid grounds also.

In the Indian context, Dr. M. H. Gopal expressed the view that the Central Excises "are the real inspiration for further revenues." Customs duties showed little promise, because reduction of duties on imports of capital goods might be necessary to help development and on consumer goods to reduce inflationary pressures, while the drive for larger exports required reduction and even abolition of some of the export duties. An overall increase of 10 per cent. in the basic rate in indirect taxation, according to him, would yield about Rs. 60 crores a year. Again, he pleaded for a thorough overhaul of the general sales tax through its "centralisation," in order to bring about uniformity in tax law and to reduce collection costs. "It should be emphasised that the suggested increases, numerous and enormous as they appear, are really not very burdensome, as they would reduce the *per capita* income by a little more than one half of one per cent. For they are essentially in the nature of a surcharge, being on the basis of the current duties. *They would, however, serve the revenue purpose.*" (Italics mine.)

A perusal of the above statements gives one an impression that commodity taxation has been advocated on the ground that it appears to be the only silver lining amidst the dark clouds

gathering around the tax horizon in India. Not that the importance of suggestions which would enable a harassed Finance Minister to heave a sigh of relief is belittled. But the more important aspects of commodity taxation in a developing economy have to be emphasised. Perhaps, the greatest merit of such taxation in the context of development lies not in providing a harmless alternative method of tapping an increasing flow of resources to the public sector but in its positive role for controlling inflation and promoting saving. Let us consider these aspects one by one.

Anti-inflationary Potentialities

Planning for growth entails inflation even if a deliberate policy of inflation is discarded to accelerate the pace of development. For our purpose here, inflation is defined as a steady rise in the general level of prices, resulting from an expansion of money income relative to the available supply of goods and services. Assume for a moment a closed economy and an increase of investment for the creation of new capital goods. Incomes are generated in the capital goods sector and the price level will shoot up if the elasticity of supply of different goods does not match with the income elasticity of demand. Here, we can note the difference between the Keynesian situation and that of the underdeveloped countries. In the industrially advanced countries of the West, at the bottom of a slump, there are factories running below capacity and labour idle. When investment is increased, unemployed labour is absorbed; the people thus employed spend part of their incomes on buying consumption goods. This stimulates the producers of consumer goods to expand their output by giving more employment. Thus, in the advanced countries, so long as there is unemployment and perfectly elastic supply of all factors of production, an increase of effective demand will be followed by a proportionate increase in output, so that prices would tend to remain constant. The picture is different in the less developed countries. The latter have no factories full of useful capital equipment standing idle and the supply of agricultural goods by nature is relatively inelastic. Under these conditions, if extra money were put into circulation via increased investment, it would expand a little the output of agriculture and of handicraft industries; but, very soon, these would be working to the limits of their capacity, and further increases of money income would serve only to raise prices rather than to increase the output of consumer goods.

In order to correct this pro-inflationary bias of development in the newly developing countries, what is needed is consumption taxes (like sales tax, excise duties and the like) which have a greater effect in reducing consumption expenditure per rupee of tax revenue than that produced by income-tax. Since the need to encourage saving and discourage spending is particularly strong during inflation, some form of tax which penalises spending is, therefore, particularly justifiable. Such taxes are not only likely to induce personal savings through postponement of consumption but also, in the case of commodities with inelastic demand, mop up the excess purchasing power by driving a wedge between prices paid by consumers and the receipts of producers. That is why commodity taxation is generally considered to be one of the most deflationary forms of taxation. As Allen and Brownlee point out:

"Other things—the level of Government expenditure, the volume of bank credit and liquidity preference schedules, for example—being unchanged, *a given amount* of tax revenue collected from the taxation of commodities is likely to reduce people's expenditures for goods and services by more than would the *same amount* of taxes collected by a personal-income-tax. This would be the case if the personal-income-tax were a flat percentage tax upon income. The differences would be even greater if the personal-income-tax had personal exemptions and if the rate structure were progressive. ... This relatively greater deflationary impact of commodity taxation follows from (1) the encouragement to hold cash balances or securities that are not taxed, and (2) the heavier proportionate taxation of low-income receivers. People in the lower-income groups spend a larger proportion of their incomes upon goods and services that would be taxed than do people in the higher-income groups. Low-income consumers have less opportunity to maintain their purchases of commodities for they have little savings. ... The anti-inflationary impact of *a given amount* of taxes collected from personal income taxation can also be accomplished by *a smaller amount* of taxes collected from commodity taxation."[8]

Now the question is—what will happen if the higher price of the commodity taxed leads to a diversion of demand through the substitution effect. If the demand for the taxed commodity is elastic, a tax on it will shift the demand to untaxed articles. Since such demand-shifting type of commodity taxes cannot mop up excess purchasing power, their anti-inflationary potential can be questioned. However, even this type of commodity tax will help fight inflation if the article on which the tax is imposed is in short supply, whose production cannot be immediately stepped up and the substitutes are relatively abundant or are in elastic supply. It was this consideration that prompted the levy of differential excises on some mill-made products during the second Five-year Plan period in India. This is evident from the report of the Karve Committee. It points out that the excise duty may be said to have three objectives: first, the raising of funds from the consumers of a product for rehabilitating a section of the producers of that product; the second is that of draining away from *entrepreneurs* in the advanced section the extra profit that will accrue to them from national policy; the third objective or rather result of the levy of excise would be the creation of price differentials in favour of small-scale and village industry.

On the whole, the direct anti-inflationary effect of a commodity tax is probably greater than that of an income-tax increase.

Effects Upon Resource Allocation

Suppose that an excise tax is levied upon shoes. The price which the consumer will have to pay for shoes is likely to increase and this will lead to a decline in demand for this commodity. The total receipts from sales of this commodity will decrease, assuming the demand to be elastic. Consequently, the amounts which shoe producers can afford to pay for resources are likely to fall. Some resources will be displaced out of shoe production and absorbed in alternative lines. Specific excise taxes may thus tend to alter the production pattern. The resulting production pattern may thus be brought into line with the targets and scheme chalked out by the planners. In so far as this is the case, such commodity taxes become the chief instruments in the hands of the Planning Authority to shape the existing production pattern into a more desirable one and thus bring about an allocation of resources promoting the maximum social good. The importance of this device cannot be over-emphasised in democratic planning, which is essentially planning through the market mechanism.

The above result can be brought about only on the assumption that the free market mechanism does not bring about an optimum allocation of resources—an assumption which is the very genesis of a planned economy. Marshall and Pigou have shown how, even under perfect competition, the interaction of the free forces of demand and supply does not always lead to an allocation of resources maximising the sum-total of economic welfare.[9] Marshall, through his technique of consumers' surplus, and Pigou, with the help of the concepts of marginal private net product and marginal social net product, have shattered the complacent assumption of the classical model that each individual knows what is best for himself and hence, if each individual tries to promote his self-interest, the maximum good of the society would be attained. They have shown that State intervention in the shape of positive and negative taxes, assuming conditions of perfect competition, is imperative, in order to assure an allocation of resources consistent with maximum economic welfare. Later writers like Mrs. Joan Robinson and Prof. Chamberlain have disproved the existence of perfect competition and have shown how competition brings about a misallocation of resources. Hence, assuming a world where maladjustment of resources is the rule rather than the exception, it becomes incumbent upon the modern Welfare State to correct this state of affairs. And this can be done only through specific commodity taxes under a democratic set-up, since direct taxes like income-tax are not discriminatory as between occupations.

Our arguments so far have shown that commodity taxation is an effective instrument in the hands of a Planning Authority to realise its ends. Hence, in the context of development, its importance lies not as a revenue-raiser but in other spheres mentioned above. This has been the role of indirect taxation historically in countries which have passed through a process of planned economic development. The striking examples of such countries are the U.S.S.R. and Japan. Let us take up the case of the former first.

Case of Russia

It is well known that the most important tax in Soviet Russia is the turnover tax, the equivalent of a retail excise tax. Since 1930, commodity taxes in Russia have provided the bulk of the national revenues. In 1943, taxes on income brought in roughly three-tenths of the receipts from commodity taxation in comparison with the pre-war ratio of less than one-tenth.[10] This tax provides nearly 50 per cent. of the total national budget and 90 per cent. of the revenue from turnover taxes is derived from food and other consumption goods. Turnover tax rates vary substantially from product to product; on most consumers' goods they are extremely high. For example, before the war, the rate of tax on the retail price of shoes was 26 to 40 per cent; on vodka it was 84 per cent; butter bore a tax of between 60 and 66 per cent.[11]

It may be argued that, in a country where private ownership in means of production is abolished, it is natural that direct taxes would contribute but little to the national revenues. Hence, in the U.S.S.R., revenue considerations in the context of wholesale abolition of private property would dictate emphasis on commodity taxes. But the principal reliance on the turnover tax arises, not out of revenue considerations but out of a realisation that such a tax will "prevent inflation by absorbing excess consumer purchasing power."[12] It is interesting as well as instructive to see how the turnover tax is used in the U.S.S.R. as an anti-inflationary measure.[13]

The high rates of turnover tax in the U.S.S.R. point up the essential framework of the economy. They reflect, primarily, the fact that the people want to spend a far larger proportion of income on consumers' goods than the proportion of resources that the Government want to devote to the production of such goods. Consequently, there is a conflict between the objectives of the top officials who decide what proportion of all economic resources should be devoted to the production of consumers' goods and what the population desires when making individual decisions about how to spend personal incomes. This conflict is reconciled by the turnover taxes.

The use of income-tax as the fiscal instrument to zip the gap between demand and supply has no doubt the merit that it interferes least with consumer choice as distinguished from consumer sovereignty. But the planners would probably fail to equate the preference pattern of consumers with their own preference system on the basis of which goods are offered and their prices set. This would give rise to misallocation of resources, since there would be overproduction of some goods and underproduction in other cases. Consequently, the entire adjustment has to be made physically—by shifts in the allocation of factors of production—which amounts to a surrender of the superior wisdom of the planners to consumer sovereignty. If the adjustment were

Good News!

Here's a strong new Oil Company with bright prospects for India's future

Every oil discovery is news, and making bold headlines in India today is the powerful new oil partnership between the Government of India and the full-scale petroleum industry of Assam.

Full of confidence in its great task, this new company is already producing oil in Assam and will go on exploring for more oil to meet the nation's growing needs.

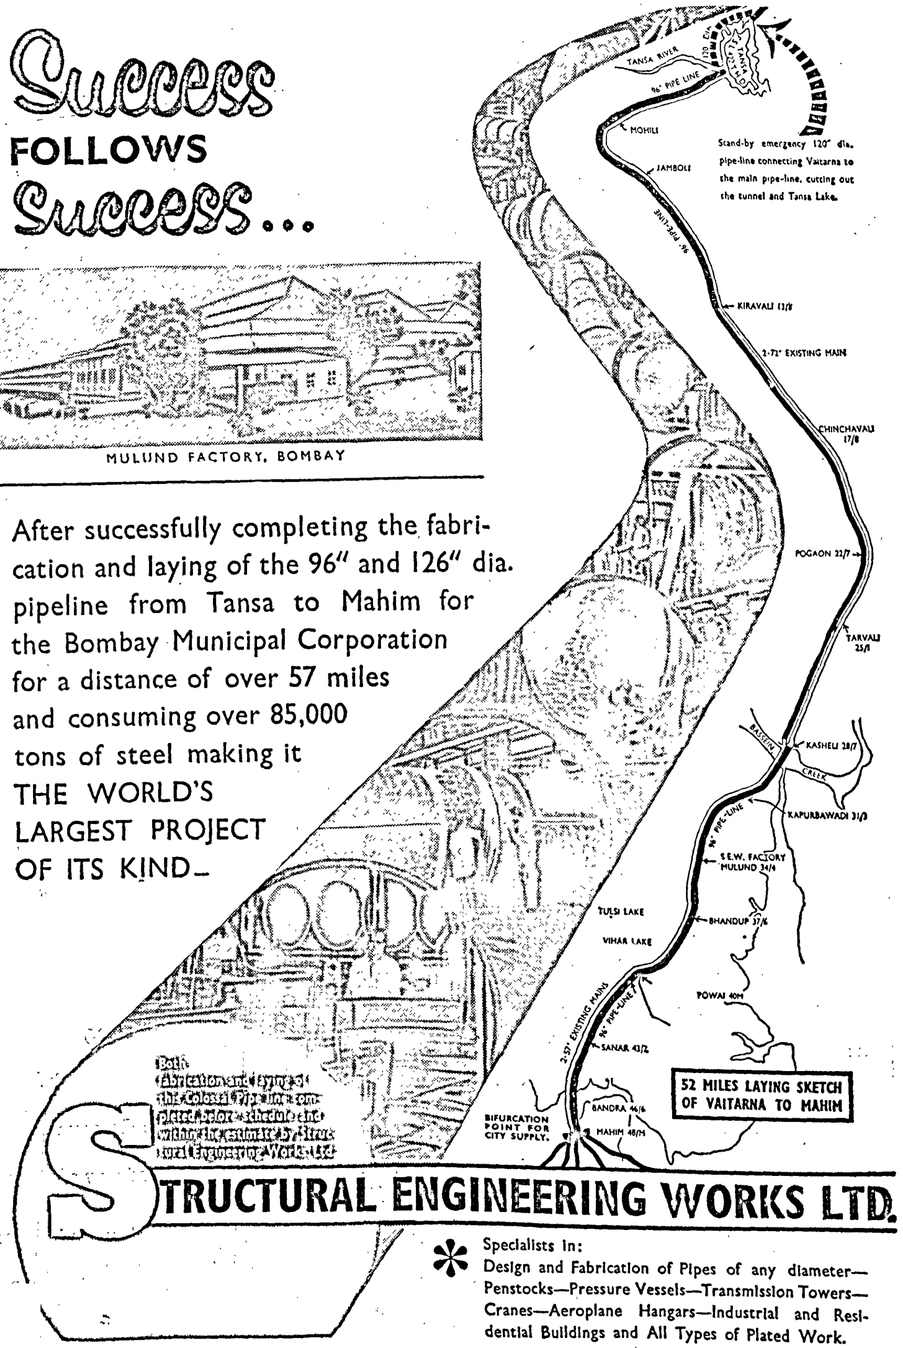
OIL INDIA LIMITED

(Inserted by Oil India Private Ltd.)

Success FOLLOWS Success...

MULUND FACTORY, BOMBAY

After successfully completing the fabrication and laying of the 96" and 126" dia. pipeline from Tansa to Mahim for the Bombay Municipal Corporation for a distance of over 57 miles and consuming over 85,000 tons of steel making it THE WORLD'S LARGEST PROJECT OF ITS KIND—

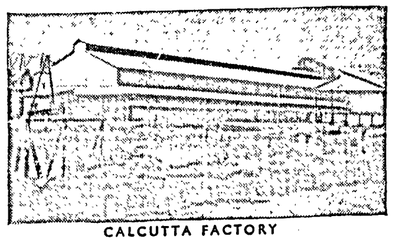


STRUCTURAL ENGINEERING WORKS LTD.

✻ Specialists in:
Design and Fabrication of Pipes of any diameter—Penstocks—Pressure Vessels—Transmission Towers—Cranes—Aeroplane Hangars—Industrial and Residential Buildings and All Types of Plated Work.

We are today undertaking

a new enterprise in
THE PULTA-TALLA (72" dia.) PIPELINE SCHEME FOR THE CALCUTTA CORPORATION WATER SUPPLY SYSTEM WITH SUCH PLANNING AS WILL TAKE IT TO ANOTHER RESOUNDING SUCCESS. THIS SCHEME WILL INCLUDE THE MOST MODERN METHOD OF RUST PREVENTION KNOWN AS 'CATHODIC PROTECTION'.



CALCUTTA FACTORY

✻ **'Deserve Success and You Shall Command Success' is a proverb the truth of which we have proved in every way !**

EXPLOITATION OF OIL RESERVES IN ASSAM

RUPEE COMPANY FORMED

THE incorporation of Oil India Private Ltd., a partnership between the Government of India and the Burmah Oil Company, which took place last week, marks one more stage in the exploitation of oil reserves in Assam. Now that new oil resources have been located in Assam, the formation of the Company paves the way for the development of the State's mineral wealth. In the new company, the Government of India owns one-third of the total share capital and the balance is held by the Burmah Oil Company-Assam Oil Company. Mr. W. P. G. Maclachlan of the Assam Oil Company will be the Chairman of the Board of Directors. The other members are: Mr. K. K. Sahni, Joint Secretary, Ministry of Steel, Mines and Fuel; Rana K. D. N. Singh, Mr. K. B. Kanuga, Mr. R. W. Wachter and Mr. G. N. S. Robertson.

Under the agreement reached between the Government of India and the Burmah Oil Company, the new company will produce oil and deliver it to the refinery terminals. It is proposed to build two refineries which will process the crude oil produced by the new company. Of the two refineries, both of which will be Government-owned, one will be located in Assam and the other at Barauni, Bihar. The new company will operate at Nahorkatiya, Hugrijan and Moran in Upper Assam where the Assam Oil Company has drilled 48 wells. The proved and probable reserves of Nahorkatiya and Moran, it is stated, are sufficient to produce 2.5 million tons of oil per year after the completion of the pipeline and the refinery facilities.

It is not as if Nahorkatiya proved a lucky strike all at once. Indeed, the early steps which led to the discovery of oil in this region date back to 1925 when the first gravity survey for sub-alluvial oil prospects in India was carried out by the Assam Oil Company—that is, long before oilfields had been discovered by such methods anywhere in the world. It was found, as a result of the survey, that wells deeper than 10,000 feet would have to be drilled. But drilling technique was not sufficiently advanced in those days. The seismic surveys, undertaken in 1938-39, in order to locate the site for drilling the first well, were interrupted by the outbreak of the Second World War. The search for oil took the Assam Oil Company's explorers to different parts of the State like Balijan, Namchik, Boragolai, Dhekiajuli and Tiru hills, but, in each case, the party had to return to headquarters after drilling several unsuccessful test wells. Outside Digboi, more than 200 wells, all unproductive, were drilled before the discovery of oil at Nahorkatiya. The oilfield at Badarpur lasted only 18 years and the field at Masimpur proved so difficult to operate that it had to be abandoned.

It was in 1951 that preparations for the first Nahorkatiya well commenced, with the movement to the location of equipment and oilfield stores from depots at Digboi, Calcutta and Masimpur. A sizable camp soon grew up around the location, and, in early 1952, the construction engineers were joined by skilled drilling crews, many of them experienced in other "outside tests" in Assam such as Tiru Hills (1949), Barsilla (1950) and Nichuguard (1951). Drilling began on 26th May 1952. In February 1953, the well was 9,740 feet deep—600 feet deeper than any well previously drilled in India. Drilling continued, and the first major event of interest occurred when a test of sandstone rocks encountered at 9,700 feet yielded slight signs of oil. Still going ahead with drilling, the well was continued to a final depth of 11,715 feet. Soon afterwards, the well gave promise of being a satisfactory producer from around 10,000 feet. The well is at present shut in for observation of pressure behaviour.

Nahorkatiya's proof of oil was the key which opened the way for a new and intensive programme of geophysical surveys over the entire alluvial area of Upper Assam. The test well at Moran, drilled to 13,739 feet, after much additional geophysical survey, struck oil in September 1956. Of the 37 wells drilled so far at Nahorkatiya, five produced no oil and two are mainly gas producers. Although the average depth of the wells is about 10 614 feet, the deepest in the area (well No. 12) reached a depth of 12,060 feet. Another feature of the drilling operations was the speed with which they were carried out. Thus, well No. 38, which has a depth of 10,337 feet, was completed in 18 days. Wells in Moran area are deeper than those at Nahorkatiya; the deepest (well No. 1) is 13,739 feet, that is, more than 2½ miles.

NEW RADAR SYSTEM

Preliminary research conducted at Ohio State University is paving the way for a new type radar system which can "see" in all directions at once and may help reduce the number of airplane accidents. Called "radarvision," it was developed at the University's College of Engineering Antenna Laboratory by Mr. William C. Davis, Associate Professor of Electrical Engineering, and Mr. R. W. Masters, now with the Boeing Airplane Company at Seattle, Washington. Research on the 12-month project was carried out for the U.S. Air Force Air Research and Development Command. Mr. Davis said radarvision could help cut down on air-to-air accidents because it would give a pilot a continuous picture of all aircraft, not only immediately ahead, but also in the vicinity of the plane. He said the new type radar also could increase safety in airport traffic control, give anti-aircraft units greater surveillance, and prove highly effective in fast-moving military planes.

The elementary radarvision system developed at the Antenna Laboratory, however, demonstrated the feasibility of instantaneously-scanning radar. Signals from all objects within range of the system are gathered and displayed simultaneously on an oscilloscope screen. Radarvision sends out pulses from a wide-beam horn. They bounce back from objects within range, are picked up by detectors, passed through a synthetic plastic globe known as a Luneberg Lens, and then are channelled into an oscilloscope to form a "chart" of the area under observation. Although the system is capable of "seeing" in all directions at once, the area under observation can be limited by the number of detectors used. Each detector has a horizontal and vertical range of about four and a half degrees.

The principal advantages of radarvision over conventional radar systems are the increased amount of information that can be gathered simultaneously, no moving parts and a weight probably less than the mechanical sweep radar. Radarvision would be more dependable than currently-used radar systems because if one of the detectors fails, the remainder of the channels still would continue to function.

S.A.S. "HUSH-HUSH" HANGAR

A novel type of jet airliner anti-noise hangar is at present being erected by Scandinavian Airlines System at the Stockholm-Bromma airport. It is being built by Rostfria Andersson, large Stockholm manufacturers of stainless steel products, on the principles laid down by the Gothenburg engineer and acoustics expert Stig Ingemansson. Popularly known as the "hush-hush house," the hangar is primarily intended for the Caravelle jet liner. It is claimed that the new device will make it possible to bring down the noise level in test-running the aircraft's engines from 140-160 decibels to some 30 decibels.

The hangar, a steel and concrete structure, is equipped with two intake silencers, two exhaust silencers and two secondary air inlets. When the engines are to be test-run, the aircraft is winched into the hangar, tail first. Two electrically operated 20-ton sliding gates with pneumatic rubber lining—each gate with a semi-circular recess to fit the shape of the fuselage—are then closed, leaving the wings and the front part of the fuselage outside the hangar.

The silencers are of the screw type. Inside the silencer cylinders there are two helicoids, which have a "meat-mincing" effect on the air flow passing through the cylinder. The secondary air is used to cool down the exhaust gases, which have an outlet temperature of 600 deg. C., before they enter the two-stage exhaust silencers. The first stage is a double-walled tube for low-frequency dampening, while the second is of the same screw type as that of the intake and secondary air silencers.

The "hush-hush house" has been designed in close collaboration with Sud-Aviation, the French makers of the Caravelle jet liner, and with Rolls-Royce. Though specially intended for this type of aircraft, the hangar is in principle suitable for all aircraft with the jet engines mounted on the fuselage. The hangar is reported to cost about Kr. 1,000.000 (£69 000) and is scheduled for completion early in March.

MACHINE TOOL INDUSTRY

PROGRESS MADE IMPRESSIVE

THE rapid progress made by the Indian machine tool industry in recent years is a tribute to the efficiency of the various units in the industry and also an evidence of the general growth of India's industrial economy. The value of Indian production of machine tools moved up from a mere Rs. 47 lakhs in 1951 to Rs. 2.35 crores in 1957, and, last year, it was estimated at as high as Rs. 4 crores. The Indian Machine Tool Manufacturers' Association is rightly convinced that the industry has a bright future. Thus, the Executive Committee of the Association, in its annual report for 1957-58, observes: "Although our industry remains among the few major basic industries which have yet to achieve optimum use of available production capacity, there is every reason to believe that, with the growing acceptance of machine tools as the very basis of modern industrialisation, the industry will continue its progressive march forward in the years to come."

The increase in machine tool production is particularly noteworthy, because it has been achieved in the face of difficulties in obtaining supplies of essential raw materials like steel and foundry coke. In this connection, the Report points out that "although Government are taking steps to improve the supply position and assist manufacturers by trying their best to meet these requirements, there is considerable delay in the scrutiny of applications and issue of import licences, with the result that machine tool manufacturers find it difficult to obtain their raw material requirements regularly and in time." The Association admits that it has received considerable benefit through the Government's policy of restricting imports. This restriction, coupled with the increase in the demand for machine tools in the country, has created a favourable climate for the industry. "It is encouraging," the Association observes, "to note that indigenous manufacturers responded courageously by gearing up their production programmes to meet the rapidly growing demand for machine tools created by the rapid industrialisation of the country under the second Plan." Several new lines of advanced manufacture of machine tools, it is stated, have been undertaken by the members of the Association.

Despite these improvements, the fact remains that the imports of machine tools have moved up year after year. From Rs. 8.4 crores in 1956, the value of imports had gone up to Rs. 14.6 crores in 1957 and was Rs. 10.35 crores in the eleven months ended November 1958. This suggests that the machine tool manufacturers have continually to expand and improve their output. In his speech at the annual meeting of the Indian Machine Tool Manufacturers Association, held last week in Bombay, the President, Mr. S. L. Kirloskar, rightly emphasised that the producers could not rest on their oars, inasmuch as "the country has not yet achieved self-sufficiency in regard to its needs for machine tools, as will be seen from the mounting figures of imports." He estimated that, by the end of the second Five-year Plan, India would need machine tools valued at Rs. 20 crores.

As regards the vexed question of the competition between the Government-owned Hindustan Machine Tools (H.M.T) factory and private producers of machine tools, Mr. Kirloskar said that they were "perturbed" because the H.M.T.'s manufacture of cheaper tools, in technical collaboration with the French manufacturers, would "unfairly compete with the small-scale industries in particular." He recalled the Government's assurance to the effect that the H.M.T. was being established to supplement, not to compete with, the private manufacturers. His point was that the Government after wasting foreign exchange in a fruitless effort at producing superior quality lathes for which there was no great demand in the country, was now turning to the production of cheaper lathes and "jeopardising" the interests of small-scale producers. He felt that the State factory, with its specialised equipment, could certainly produce new and complicated types of machine tools which the country so badly required today. In conclusion, he said, "I implore the Government that it is not yet too late to revise their programme and drop manufacture of cheaper lathes, as that will give considerable relief to private industry."

NEW PRODUCTS AND PROCESSES

New Diesel Engines

DAVY Paxman & Co., of Colchester, U.K., has announced that it is to put two new classes of diesel engine on the market. The first engine is the Vega, which will be available in the power range 200-466 b.h.p. at speeds up to 2,100 r.p.m. A feature of the engines in this range is that they are air-cooled and they are believed to be the biggest of their type for industrial applications. The range consists of eight-cylinder and 12-cylinder "vee-form" engines and an "in line" six-cylinder engine. Wide use has been made of interchangeable components and cylinder heads, barrels, pistons, connecting rods and bearings are common to the whole range. Prototypes and pilot production engines are now being "proved" in the field and the first models are expected to come off the production line shortly. The Ventura range consists of 12- and 16-cylinder water-cooled engines with powers ranging from 1,100 to 1,735 h.p., which, the manufacturer says, is its answer to the number of engines now being produced for British Railways by non-U.K. firms. These engines are also designed as power units for the oil industry and as propulsion units for marine craft.

New Portable Pumping System

A new packaged portable vacuum pumping system for use in laboratories and pilot plants has been produced by the Consolidated Electrodynamics Corporation, California, U.S.A. It is designed for investigation and development of new applications of high vacuum techniques in the processing of metals, and the processing and production of electronic components. The complete pumping system measures 40 inches by 36 inches by 33 inches and weighs about 530 lbs. It consists basically of a diffusion pump, a mechanical pump and three valves for continuous cycling. The metal cabinet which encloses the unit has removable panels in order to facilitate ready access to the pumps. The unit is being made in two models, one of which will reach a pressure of 3.2×10^{-6} mm. of mercury in 12 minutes and the other a pressure of 3.0×10^{-5} mm. in six minutes.

Cloth Marking Ink

In textile mills, each length of cloth, before it is sent for finishing, is marked with its length, quality, loom number and instructions for bleaching, dyeing, mercerising and other treatments for its finishing. These markings serve as guides to distinguish each length of cloth after finishing. Such markings are all the more essential because each textile mill produces a large number of cloth qualities. The common practice at present is to use metal stamps and tar compounds for marking. These metal stampings are, however, inadequate for a complete record on the cloth and have to be very often replaced after every change in quality of cloth and processing instructions.

A recent development in this direction is the use of ball point pens using quick drying inks. This offers a quick, convenient and efficient method of marking the cloth after weaving in the mills. Because of its advantages, this method of marking is rapidly replacing the stamping method.

It is estimated that on an average each textile mill consumes about 100-150 lbs. of cloth marking ink every year. On this basis, the 521 textile mills alone can use about 60,000 lbs. every year. Besides, the ink may also be useful for the rayon and woollen textile industry. Such inks are not so far produced in India and the requirements are met from imports.

A suitable cloth marking ink for use in ball point pens has been developed at the Shri Ram Institute for Industrial Research, Delhi. This ink is said to have been found satisfactory in all respects and compares well with the imported inks. A leading textile mill, where the ink has been tested, has reported that the performance was satisfactory. The ink also conforms to the Indian Standard Specification for black cloth marking ink. It flows freely from the ball point pen and gives permanent black impressions on the cloth which are quite stable to dyeing, bleaching and laundering operations. The ink does not have any adverse effects on the fibres of the fabric. The process of manufacture is simple. The usual mixing and homogenising equipments are used for complete processing. Apart from its main use in the textile mills the ink can also be used by launderers for marking the cloth.

New Refueller for Aircraft

A new type of aircraft refueller, specially designed and fabricated for underwing refuelling of Viscount aircraft, has been built for the first time in India. A special feature of the new refueller is its "stepdown" design which enables the placing of the tank parallel to the ground, thereby lowering the centre of gravity and ensuring easier and safer driving. The piping system has been so designed as to enable the fuel to be pumped from an underground tank to the refueller tank through the truck pump. In so doing, the product is filtered, dehydrated and metered at the same time. Control of pressure and rate of flow during refuelling are achieved by an automatic valve which combines pressure reducing and surge shut-off features, maintaining a relatively constant pre-set downstream pressure regardless of changes in the flow rate. The total cost of the unit is Rs. 90,000, roughly 35 per cent. of the cost of a similar imported unit.

PARTICIPATION OF LIFE INSURANCE COMPANIES IN CAPITAL MARKETS

POST-WAR TRENDS IN THE U.S.

LIFE insurance companies in the U.S. are playing an increasingly important role in stimulating savings and diverting them to productive investment. In fact, during the period of over a decade since 1945, they have played a strategic role in the capital markets, mobilising nearly one half of the savings channelled through savings institutions. During the twelve-year-period, 1945-57, life insurance companies supplied $70 billion of long-term funds to consumers, private businesses and State and local Governments. About four-fifths of this represented new savings, as reflected in the net increase in total assets of these institutions, and the remainder was obtained primarily by selling U.S. Government securities which, during the war, had risen to almost half of the total assets of insurance companies.

According to a review of the pattern of life insurance companies' participation in the capital markets in the U.S. in the post-war period, contained in the *Monthly Review* for September 1958 of the Federal Reserve Bank of New York, apart from the substantial increase in total assets, the most striking feature of life insurance companies' investment activities in the post-war period is the shift from Government securities to private and, especially corporate, securities. Between 1945 and 1957, these institutions absorbed more than two-thirds of the increase in long-term corporate debt. Among corporate bond issues, which accounted in 1957 for about two-fifths of their total assets, as compared with less than one quarter in 1945, bonds of industrial and commercial enterprises, excluding railroads and public utilities, have become the most important single type of investment held by life companies. This growth, according to the *Review*, reflects in part the vast expansion of long-term corporate debt and a large share of it has been accomplished through direct negotiation between life insurance companies and corporations, thus bypassing the machinery of the public capital market. By the end of 1957, more than four-fifths of life companies' industrial and miscellaneous portfolios had been acquired through direct negotiation.

Non-farm real estate mortgages, the main type of assets owned in the 1920s, have recovered some of the ground lost during the depression of the 1930s and, between 1945 and 1957, life insurance companies acquired one quarter of the rise in non-farm mortgages outstanding. These assets currently constitute one-third of life companies' total investments. However, reflecting the changed structure of the mortgage market, a substantial part of their mortgage holdings consist of Federally underwritten real estate loans in contrast to those of the conventional type.

In the post-war period, the ebb and flow of investment opportunities in the corporate bond market, as reflected in the rise and decline of corporate bond prices, have mainly determined the availability of life insurance funds to other borrowers. Because corporate borrowers, to a greater extent than mortgage borrowers, can adjust quickly to rising interest rates and are willing to tailor their new issues to the needs of lenders, many life insurance companies have generally concentrated on corporate securities when they are available at attractive rates, although they have, of course, simultaneously purchased other assets too.

Portfolio Practices

Considerable variation exists in the portfolio practices of individual life insurance companies but, in the aggregate, they have usually acquired mortgages on a large scale when new corporate bonds were scarce and rates relatively low. Fluctuations in the total volume of life insurance funds channelled into the private capital market as a whole have thus reflected changes in the supply and composition of new long-term debt rather than variation in the flow of savings to these institutions. In fact, when the flow of savings to life insurance companies was insufficient to meet the acceptable requests for funds, life insurance companies sold Government securities and reinvested the proceeds in private obligations, though the pace of selling was, as a rule, dampened during periods of declining bond prices. The following table indicates the pattern of investment of life insurance funds in the U.S.:

Assets of Life Insurance Companies in U.S. End of 1945 and 1957

(In millions of dollars)

Type of asset	1945		1957	
	Amount	Percentage of total	Amount	Percentage of total
Cash	780	1.7	1,292	1.3
U.S. Government securities	20,583	45.9	7,029	6.9
State and Local Government securities	1,047	2.3	3,163	3.1
Corporate bonds:				
Total	10,060	22.5	40,832	40.3
Railroad	2,948	6.6	3,863	3.8
Public utility	5,212	11.6	15,252	15.1
Industrial and miscellaneous	1,900	4.3	21,717	21.4
Non-farm mortgages:				
Total	5,860	13.1	32,652	32.2
Federal Housing Administration	1,394	3.1	6,964	6.9
Veterans Administration	...	...	7,721	7.6
Conventional	4,466	10.0	17,967	17.7
Preferred and common stocks:				
Total	999	2.2	3,391	3.3

Common	180	0.4	1,867	1.8
Other assets	5,468	12.3	12,950	12.8
Total assets	44,797	100.0	101,309	100.0

The participation of life insurance companies in the capital markets since World War II has passed through three broad phases: the early post-war years, 1946-49; the Korean War period, 1950-53, which ended with the 1954 recession; and the subsequent years of record peacetime financing.

Swing To Private Securities

At the end of 1945, the $20.6 billion of Federal Government securities owned by life insurance companies constituted nearly one-half of their total assets. The bulk of their holdings was a legacy of the war years, but a part had also been accumulated in the preceding depression decade. The concentration on Government securities, as well as the general decline in interest rates, had led to a progressive fall in the return on invested reserves, which meant an increase in the net cost of insurance—either through reduced dividends on existing policies or higher premium on new policies. By 1945, the earnings rate had fallen to 3.11 per cent., as compared with the record 5.18 per cent. earned in 1923 and 3.45 per cent. in 1940. Thus, one of the main post-war objectives of life insurance companies was to diversify their investment portfolios by replacing Government securities with higher-yielding private securities.

The swing of life companies from Government to private securities did not begin on a large-scale until 1947, when the flow of life insurance funds into the private capital market rose sharply; in 1948, the flow increased further and exceeded $7 billion, a record which still stands. Approximately one-third of the 1947 flow was obtained through net sales of Government issues and the proportion jumped to nearly one-half in 1948.

Real Estate Mortgages

Real estate mortgages absorbed about one-quarter of life insurance companies' funds in the early post-war years. Their acquisitions centred in Veterans' Administration-guaranteed real estate loans which accounted for more than one-quarter of the rise in their non-farm mortgage holdings between 1945 and 1948. Federally underwritten mortgages had attracted few life companies when the Federal Housing Administration initiated its insurance programme in the mid-1930s.

During the recession of 1948-49, the volume of funds supplied to the private capital market by life insurance companies decreased, the reduction being centred in corporate bonds. Although life companies' net mortgage acquisitions also declined slightly during the recession, they greatly increased their forward commitments to buy mortgages as the 1949-50 housing boom enormously expanded the demand for real estate loans.

On balance, however, the lessened demand for long-term funds in 1949 reduced the opportunities of life companies to switch from Government securities into private obligations, and net liquidation was less than one-half as large as in the year earlier. New savings continued to grow during the recession and provided almost three-quarters of the total funds life companies supplied to the capital market, as compared with just over one half in 1948.

The first effect of the Korean War on life insurance companies was to accelerate the accumulation of forward commitments to acquire real estate mortgages which had been rising rapidly since mid-1949. Commitments were further built up when the advent of hostilities gave rise to expectations that Federal controls over the terms of mortgage lending would restrict real estate financing. The enormous backlog of commitments had to be met after controls were introduced in July and October 1950. Because life insurance companies' assets increased more slowly as consumers rushed to buy durable goods, Government securities were liquidated on a massive scale in 1950 and 1951. In each of these two years, their non-farm mortgage holdings rose by $3 billion. Veterans' Administration-guaranteed mortgages accounted for over one-quarter of the rise in 1950 and for nearly two-fifths in the next year.

During 1952-53, however, life insurance companies sharply reduced their participation in the Federally underwritten sector of the mortgage market. The reduction in mortgage lending was partly the result of Federal controls over mortgage terms which reduced the demand for Federally underwritten credit. It was also in keeping with life insurance companies' participation in the voluntary credit restraint programme which sought to divert funds to the most essential uses. Life insurance companies thus financed a substantial part of the defence plants and defence supporting facilities built by corporations during the Korean War.

Corporate Lending

The onset of recession in mid-1953 reduced the corporate demand for funds and, in conjunction with increased availability of credit, led to a rapid decline in corporate yields. Just before the recession began the maximum interest rates on Federally underwritten mortgages had been raised, thus providing a sizable yield differential which made the extension of real estate loans more attractive. Life insurance companies, therefore, curtailed their corporate lending and returned to the mortgage market on a large-scale in 1954. Simultaneously, they made substantial forward commitments to buy non-farm mortgages and subsequently added $3.3 billion of these assets to their portfolios both in 1955 and 1956. Veteran Administration (V.A.) mortgages accounted for between one-third and one-half of the increase in life companies' farm mortgage holding in 1954, 1955 and 1956. With the sharp rise in bond yields and the strong corporate demands for funds in 1957, however, life companies again reduced their participation in the mortgage market with most of the decline centreing in V.A. mortgages.

In 1954, life insurance companies stepped up the sale of Government securities, prices of which had recovered strongly from the 1952-53 declines. Although their net sales of Government securities declined in 1955, in the following year, they rose sharply to over $1 billion. Life companies' new resources did not show a year-to-year increase in 1956 for the first time since 1951 so that sales were induced by the increased corporate demands for funds and rising corporate bond yields. Further, some companies probably sold Government securities, because of the need to meet a large backlog of commitments. Although the slackening in the growth of new savings persisted throughout 1957, life insurance companies sold Government bonds at a much slower rate in that year, partly because their mortgage commitments had been considerably reduced and partly because prices of Government bonds were severely depressed until the closing months of the year.

Trend in 1958

During the first half of 1958, life insurance companies' assets increased somewhat faster than in the comparable period of the previous year and thus reversed the year-to-year decline in the rate of growth evident since 1956. Indeed, in the most recent period, the inflow of new savings has been the main source of life companies. However, they have sold Government securities at a much slower pace than in the January-June months of 1957. Thus, on balance, the volume of funds supplied to the capital market in the six months ended June 1958 was slightly less, at $2.6 billion, than a year earlier.

Participation of life insurance companies in the mortgage market in the first half of 1958 has been the smallest for any comparable period since 1953. In contrast, life companies' net acquisition of corporate bonds increased during the first half of 1958, with virtually all the rise concentrated in industrial and commercial bonds. This, of course, reflected the fulfilment of forward commitments made in 1957 as well as the strong corporate demand for funds in 1958.

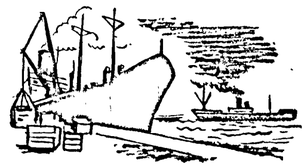
TWO Great BENEFITS

The change-over to the Metric System of Weights and Measures will benefit us in two important ways. At home, there will be an end to the confusion and loss arising from innumerable systems.



We will at the same time have the system which has been internationally well established. The Metric System is recognised the world-over.

The first step in achieving this two-fold objective is the use of Metric Weights already introduced in selected areas of the States and industries.

INDIA'S EXPORT DRIVE

RESERVE BANK GOVERNOR'S FRANK APPRAISAL

NOTWITHSTANDING the much-publicised export promotion drive launched by the Government of India and the many efforts made by the business community, India's performance on the export front continues to be none too satisfactory. Its exports actually suffered a sizable setback last year. For the 11 months ended November 1958—figures for December are not yet available—the total earnings from exports aggregated Rs. 527.42 crores, a decline of about Rs. 69.10 crores, or 11.6 per cent., as compared with the corresponding period in 1957. There was, however, a distinct improvement in the balance of trade position, in that the adverse balance for the eleven-month period declined from Rs. 310.85 crores to Rs. 177.09 crores. This surely is not a matter for congratulation as this was due to a sharp reduction in imports from Rs. 912.11 crores (for January-November 1957 period) to Rs. 711.87 crores. The compelling need of the hour, therefore, continues to be that of boosting exports to sustain the large volume of imports essential to ensure the rapid economic growth the country wishes to have. This point was effectively brought out by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, in his well-reasoned address to the third quarterly meeting of the Indian Council of Foreign Trade, Bombay, on the 19th inst. He emphasised the irrefutable fact that "what counts in the final analysis in foreign trade is a reputation for quality and competitiveness." It is gratifying to find that Mr. Iengar applied this test for judging the merits of some of the export promotion measures adopted during the past year and did not mince matters, as we shall presently show.

There is no doubt that the trend of India's exports is conditioned to a great extent by the economic vicissitudes of other countries. This is borne out by the experience of last year, which witnessed a slackening of economic activity in the U.S. and Western Europe. Giving an account of these adverse influences, Mr. Iengar said:

"The fall (in exports) was largely accounted for by the decline in the exports of jute manufactures, cotton manufactures and manganese ore; the largest decline occurred in the export of cotton manufactures, while the fall in the export of manganese ore was also substantial. One explanation of the decline is the recent slowing down of economic activity in Europe and the earlier recession in the United States. For example, about 20 per cent. of our exports of jute manufactures to the United States are for industrial uses and thus depend on the level of industrial activity in that country. Our exports of manganese ore also fluctuate with the state of economic activity, and particularly of the steel industry, in the U.S.A., Japan and Western Europe. The slowing down of economic activity in Europe and the United States also reduced their demand for primary commodities and thus affected the export incomes of countries like Malaya Indonesia, Cuba, Brazil and Australia which depend in their export trade on a few commodities, mostly industrial raw materials; they were very much more severely affected than we. The fall in the export incomes of some of the South-East Asian and African countries reduced their capacity to buy from us; and these are the countries which normally provide a good market for our cotton textiles."

While recessionary trends abroad did affect our exports adversely, this alone does not offer a sufficient explanation for the setback in India's export trade, for there are some structural weaknesses in Indian economy. Recognising this point, Mr. Iengar remarked:

"Responsibility also lies nearer home—in our efficiency of production including, in that expression, both quality as well as economy of unit cost, and also in our standards of salesmanship and service. Let us take, for instance, the case of cotton textiles. Here was a field in which after the war, because of the collapse of Japan, we had a dominant foothold in various markets. We have been gradually losing this foothold. A principal reason for this has been the strong competition from Japan, which has staged a remarkable economic recovery after the war. More recently, there has also been competition from China in the South-East Asian markets but leaving this aside, the fundamental factor limiting the ability to export has been our increasing lack of competitiveness. If Japan has been able to outbid us, that is basically due to the fact that in terms of quality, price and salesmanship, her performance has been better than ours. This simple fact has tended to get obscured in our country by a whole complex of somewhat conflicting interests, the urgent need, on the one hand, for modernisation of plant and equipment and, on the other, the effect of modernisation on employment potential and the attitude of labour, the plight of handloom weavers, on the one hand, and the effect of protective measures taken on their behalf on organised industry, on the other."

While Mr. Iengar has correctly stated the causes for the inability of cotton textiles to make headway in overseas markets, he has refrained from pointing out as to who has been responsible for these weaknesses and to what extent. That, of course, is a very controversial issue and Mr. Iengar's desire not to get involved in them is understandable. He was satisfied that the real nature of the problem was being realised and that the interests concerned were getting together in an attempt to deal with it. This conclusion is somewhat premature. It is, however, to be hoped that events in the coming months would not belie his optimism.

Quoting sugar as another instance of the defect inherent in our economy, Mr. Iengar observed:

"We cannot blame the recession in other countries for our incapacity to sell sugar abroad; we cannot sell because our price structure is too high. Here again there are complex domestic factors, such as the productivity of the sugarcane crop in terms of yield and sugar content, the cost price of sugarcane and the efficiency of our factories, managerial and mechanical, including labour. Sugar is an instance of a commodity where the possibility of some surplus for exports has only arisen recently, and illustrates the character of the problems that are brought into focus when an industry makes its debut in the world markets, emerging from the warmth of domestic protection to face the chill breezes of international competition. This point of transition invests industry in our country with a new importance and responsibility which has implications for the role of all parties, of management and labour and Government, directed toward this new responsibility."

Another point that was highlighted by Mr. Iengar was the need for diversifying India's exports. Driving home this point, he stated:

"Our exports are dominated by three principal traditional commodities; tea, jute manufactures and cotton manufactures between them account for 50 per cent. of our exports. Another nine or ten commodities account for 20 per cent. more of the exports; these are iron and manganese ore, mica, cashew kernels, raw cotton, tobacco, vegetable oils, spices and leather and leather goods. In the case of some of these, the pattern of developments in

ALKALI AND CHEMICAL'S OUTPUT AND SALES HIGHER

PROFIT, HOWEVER, SUBSTANTIALLY LOWER

HIGHER cost of raw materials, a new duty on electricity and an increase in wage rates without a corresponding increase in the selling price, all these have caused a slight reduction in the profit of the Alkali and Chemical Corporation of India Ltd. (Secretaries: Imperial Chemical Industries (India) Private Ltd., Calcutta) for the year ended 30th September 1958. This has happened, despite the rise of Rs. 37.64 lakhs or 17 per cent. in sale proceeds, that is, from Rs. 225.46 lakhs in 1956-57 to Rs. 263.10 lakhs. The Directors state that, in keeping with the Government's policy and notwithstanding the additional burdens mentioned above, the Company had to maintain its selling prices at their former levels. Minor price increases were, of course, made in some cases towards the end of the year, but this was not of much help in arresting the fall in profit.

The gross profit at Rs. 47.62 lakhs has shrunk by about Rs. 84,000 only from Rs. 48.46 lakhs for 1956-57 which was a record in the history of the Company. But this is misleading, for the gross profit as worked out by us is before providing for depreciation and taxation. The net profit, which is after these essential provisions, has sizably declined from Rs. 17.98 lakhs to Rs. 13.28 lakhs. The provision for taxation which took up only Rs. 18.30 lakhs for the previous year, has taken up as much as Rs. 22.35 lakhs for the year under review. Of the latter amount, Rs. 1.35 lakh is on account of wealth tax (including Rs. 10,000 in respect of the previous year). Although wealth tax on companies is only at the innocuous-looking rate of ½ per cent., it actually works out, in the case of this Company, to about 4 per cent. of the profit before providing for taxation. The provision for depreciation has been reduced slightly from Rs. 12.18 lakhs to Rs. 11.99 lakhs.

Despite the fall in the net profit, the dividend to shareholders is proposed to be maintained at 8 per cent. per annum paid for the fourth year in succession. There is, however, one difference. This is the first time a dividend of 8 per cent. per annum is being paid on a capital enhanced by as many as four times that for the preceding dividend. Consequently, the amount required for maintaining the dividend is higher at Rs. 24.80 lakhs, as against Rs. 4.96 lakhs a year ago. It may be remembered that, in order to finance the erection of the new polythene plant, the Company had issued 2,480,000 'A' ordinary shares of Rs. 10 each at par to the ordinary shareholders of the Company in the proportion of four shares for every one share held. Although this plant has not so far contributed to profits, the shares have qualified for the dividend requiring an additional Rs. 19.84 lakhs. To meet this liability, the Directors have transferred Rs. 11 lakhs from the dividend equalisation reserve which had been built up specifically for this purpose. They have also withdrawn Rs. 2.70 lakhs from reserve for deferred income-tax liability due to initial allowance. Consequently, the amount ploughed back now is a mere Rs. 75,000 (in the form of development rebate), as against Rs. 13.84 lakhs and Rs. 18.89 lakhs conserved in 1956-57 and 1955-56 respectively.

The important point to be noted in the appropriation policy of the Company is the foresight displayed by the Board for maintaining a steady rate of dividend. In the previous years, the Board could have declared a bigger dividend, but it did not do so, for it had planned for further capital expansion and preferred to provide for remunerating the increased capital even before it started earning at the same rate at which the old shares were getting a return. That this policy has won the confidence of investors is evident from the sizable appreciation in the market value of the Company's ordinary shares from about Rs. 12.75 a year ago to Rs. 19 at the time of writing.

The Company's manufacturing activities made further progress during the year under review. This is reflected partly in the smart rise in sale proceeds. The rise of Rs. 18.34 lakhs in stocks of finished products and those in process, Rs. 48.34 lakhs in manufacturing expenses and Rs. 1.99 lakh in other expenses are also evidence of the Company's growth.

There were again record outputs of chlorine and caustic soda production and sales of hydrochloric acid were higher than in the previous year. A very substantial increase in the production of "Gammexane" Technical BHC was achieved. Output and sales of all types of "Gammexane" formulations, dusts, dispersible powders and liquid formulations also exceeded those for the previous year. There was a marked rise in the output of the Company's well-known paints "Duco," "Dulux," as well as of ancillaries, in spite of considerable difficulties in obtaining sufficient supplies of imported raw materials. The Company's technical staff are developing the use of indigenous raw materials to take the place of those no longer available from abroad. The demand for metal pretreatment products also continued to increase and output was substantially higher than that a year ago.

As regards the polythene project, the Directors state that construction has proceeded according to schedule and the plant is expected to go into production early in the second quarter of 1959.

An agreement has been entered into with Imperial Chemical Industries Ltd. for the manufacture in India of "Alfloc" powders and briquettes, which are used for water treatment purposes. Construction of the plant is in progress at Rishra and manufacture is expected to start this year. Approval to extend the capacity of the chlorine and caustic soda plant has been received from the Government and construction work has started.

The table below brings out the salient features of the Company's working during the year under review, against the background of those for the preceding three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	2,63.10	2,25.46	1,88.31	1,55.10
Stocks	66.30	47.96	38.77	33.29
Manufacturing expenses	1,72.77	1,24.43	99.34	81.62
Other expenses	66.60	64.61	54.61	44.30
Loss on exchange				3.20
Gross profit	47.62	48.46	40.21	28.89
Provision for—				
Depreciation	11.99	12.18	10.41	9.49
Taxation	22.35	18.30	4.67	..
Net profit	13.28	17.98	25.13	19.40
Transfer from reserves	13.70	2.65*	..	2.40
To reserves	0.75	13.84	18.89	15.23
Dividends—				
5 per cent. preference	1.55	1.55	1.55	1.55
Ordinary	24.80	4.96	4.96	4.90
	(8%)†	(8%)	(8%)	(8%)
Carry forward	1.09	1.20	0.92	1.19

* Tax refund and provision no longer required.
† On the increased capital of Rs. 3,09.97 lakhs.

The total assets of the Company, as disclosed by its balance-sheet as at 30th September 1958, aggregate Rs. 639 lakhs, of which the net block (that is, after depreciation) accounts for Rs. 423.95 lakhs (inclusive of Rs. 259.87 lakhs, representing assets and capital work in progress in connection with the polythene project). The depreciation provided up to the end of the year of review on the block account amounts to Rs. 72.78 lakhs. The current assets amount to Rs. 215.05 lakhs, against which the current liabilities and provision for taxation stand at Rs. 206.60 lakhs. The excess of assets over current liabilities and provision for taxation, that is, the net assets, amounts to Rs. 432.40 lakhs. This is represented by paid-up capital amounting to Rs. 340.97 lakhs and reserves and surplus Rs. 91.43 lakhs.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 19 *cum-div.* On *ex-div.* basis, the yield is 4.4 per cent. per annum. This relatively low yield reflects the investors' confidence in the outlook for the Company and expectations of better dividends in the coming years. It may also be noted that, since the publication of the Directors' report, the market value of the Company's shares has appreciated by nearly a rupee. This suggests that the investors have received the report with great satisfaction.

(*Concluded from next column*)

cover the current liabilities and the provision for taxation by a comfortable margin.

The Rs. 2 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 5.65 *cum-div.* On an *ex-div.* basis, and on the basis of the dividend for the year, the yield works out to 7.6 per cent. per annum.

KUMARGODE'S PROFIT SMALLER

COFFEE OUTPUT A RECORD

A SLIGHT recession in profit, despite a record coffee crop and consequent higher sale proceeds, is the feature of working of the Kumargode Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Mangalore) during the year ended 31st October 1958. The setback in financial results, albeit small, is obviously due partly to the lower price fetched by coffee, as compared with the preceding two years, and partly to the rise in estate and other expenditure.

The coffee crop for the year at 3,753 cwts. is higher than the previous best of 3,163 cwts. harvested in 1956-57 and compares well with 3,021 cwts. secured in 1954-55. The value realised was, however, lower at Rs. 2.25 per point, as against Rs. 2.50 per point for 1956-57 and 1955-56. Consequently, even a sharp rise in sale proceeds from Rs. 5.50 lakhs to Rs. 7.42 lakhs could not neutralise the higher cost of production.

The gross profit at Rs. 2.71 lakhs is a shade lower than the previous year's peak of Rs. 2.99 lakhs. It is, however, better than Rs. 2.29 lakhs for 1954-55 and is about thrice that (Rs. 95,347) for 1955-56. The net profit has declined from Rs. 1.88 lakh to Rs. 1.59 lakh. The fall in profits has had its adverse effect on the allocation to reserves and on the rate of dividend to shareholders. Thus, the amount transferred to general reserve has been pruned from Rs. 1 lakh to Rs. 80,000 and the debenture redemption reserve, which had been credited with Rs. 30,000 a year ago, has received nothing now. The dividend has been reduced to 20 per cent. from 25 per cent. last year. But it is the same as that for 1955-56 and 1954-55. It must, however, be added that the year's dividend is on a higher capital of Rs. 4 lakhs, doubled by the capitalisation of Rs. 2 lakhs from the amounts standing to the credit of the general reserve during the year under review. Consequently, the proposed dividend of 20 per cent. takes up Rs. 80,000, as against only Rs. 50,000 that was required to pay the 25 per cent. dividend last year.

The following comparative table shows at a glance the Company's progress during the last four years:

(Value in rupees)

	For the year ended 31st October			
	1958	1957	1956	1955
Proceeds of coffee crop	7,42,302	5,50,558	4,88,387	5,70,218
Proceeds of other crop	5,053	3,865	2,749	2,523
Expenses	4,35,270	3,75,288	3,13,928	3,45,406
Gross profit	2,70,808	2,99,126	95,347	2,29,305
Managing Agents' remuneration	19,045	21,790	7,109	13,817
Depreciation	29,587	21,176	22,412	20,862
Taxation	63,500	67,873	19,809	33,705
Net profit	1,58,676	1,88,287	45,796	1,62,011
To reserves	80,000	1,30,000	30,000	1,30,000
Dividend	80,000	50,000	40,000	40,000
	(20%)*	(25%)	(20%)	(20%)
Carry forward	44,346	45,670	37,383	61,687
Coffee crop (in cwts.)	3,753	3,163	1,943	3,021
Value of coffee per point (Rs.)	2.25	2.50	2.50	2.25

* On a higher capital of Rs. 4 lakhs.

The Company's estate, which is situated in Mysore State, has a total area of 782.62 acres. Of this, 608 acres are under mature coffee (arabica 498 acres and robusta 110 acres). The area in reserve is 81.60 acres. The balance is taken up by cardamoms (2.06 acres), oranges (4.94 acres), paddy (59.02 acres) and sites, roads, tank, etc. (27 acres). The Directors state that the immature coffee area of 38.26 acres as at the end of the previous year was brought into the mature area during the year under report.

The current (1958-59) season's crop is estimated at 3,400 cwts. to be harvested at a cost of Rs. 106.58 per cwt. The visiting agent's report indicates that the estate is being maintained in good order.

The paid-up capital of the Company as at 31st October 1958 is Rs. 4 lakhs. Even after the capitalisation and issue of bonus shares during the year under review, the reserves, including the surplus, stand at as much as Rs. 2.64 lakhs, including the debenture redemption reserve of Rs. 90,000 now transferred to general reserve. The 7½ per cent. 1955-64 debenture liability has been reduced by Rs. 83,000 to Rs. 1.27 lakh. The current liabilities stand at Rs. 2.89 lakhs, inclusive of Rs. 1.47 lakh by way of provision for taxation. The gross block of Rs. 8.64 lakhs, including additions during the year of Rs. 1.07 lakh, stands written down at Rs. 7.53 lakhs. The current assets at Rs. 3.28 lakhs, of which cash balances alone account for Rs. 1.58 lakh.

(*Continued in previous column*)

COMPANY MEETINGS AND DIVIDENDS

KUMERGODE ESTATES LTD. Annual General Meeting, Mangalore, 11th March 1959. Dividend of 20 per cent. on ordinary shares of the Company, for the period ended 31st October 1958. Transfer books will remain closed from 4th to 11th March 1959, both days inclusive.

CHEMICAL AND ALKALI DISTRIBUTORS LTD. Annual General Meeting, Bombay, 14th March 1959. Dividends payable on and after 15th April 1959. Transfer books remain closed from 21st February to 14th March, both days inclusive.

KILLICK INDUSTRIES LTD. Annual General Meeting, Bombay, 16th March 1959. Dividend: Final dividend of Rs 5 per share (making Rs. 13 for the seventeen months ended 30th November 1959,) free of income-tax, and proportionate on the shares of the new issue, for the 17th months ended 30th November 1958. Transfer books will remain closed from 3rd to 20th March 1959, both days inclusive.

VOLTAS LTD. Annual General Meeting, Bombay, 17th March 1959. Dividend: 9 per cent. on ordinary shares for the year ended 31st August 1958. Transfer books remain closed from 7th to 28th February, 1959, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 19th March 1959. Transfer books will remain closed from 6th to 18th March 1959, both days inclusive.

JUBILEE MILLS LTD. Annual General Meeting, Bombay, 19th March 1959. Transfer books will remain closed from 6th to 19th March 1959, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 20th March 1959. Dividend of 5 per cent., making a total of 8½ per cent., without any deduction for Income-tax, on ordinary shares, for the year ended 30th June 1958, which are payable on or after 27th March 1959. Transfer books will remain closed from 8th to 20th March 1959, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 20th March 1959. Dividends payable on 20th March 1959. Transfer books will remain closed from 1st to 20th March 1959, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 23rd March 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 6th to 27th March 1959, both days inclusive.

T. STANES & CO., LTD. Annual General Meeting, Coimbatore, 25th March 1959. Final dividend of 13 per cent. on ordinary shares for the period ended 30th September 1958. Transfer books will remain closed from 11th to 25th March 1959, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 26th March 1959. Dividend: Re. 1.75 and a cash bonus of 37 nP per share, both without deduction of income-tax, on ordinary shares for the year ended 30th September 1958. Transfer books will remain closed from 19th to 26th March, 1959, both days inclusive.

DHANALAKSHMI MILLS LTD. Annual General Meeting, Tirupur, 28th March 1959. Dividend of 10 per cent. on ordinary shares, for the year ended 31st December 1958. Transfer books will remain closed from 15th to 28th March 1959, both days inclusive.

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 6th April 1959. Dividends payable on and after 7th April 1959. Transfer books will remain closed from 9th to 13th March 1959 and again from 31st March to 6th April 1959, both days inclusive.

UNITED NILGIRI TEA ESTATES LTD. Interim dividend of 7½ per cent. on ordinary shares for the year ended 31st March 1959. Transfer books remain closed from 16th to 28th February, 1959, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Interim dividend of 62 nP per share, on ordinary shares for the year ended 31st March 1959. Transfer books will remain closed from 13th to 26th March 1959, both days inclusive.

COMPANY REGISTRATIONS

QUALITY LABORATORIES PRIVATE LTD. (First Director: Mr. Achyut Gangadhar Desai.) Business: Proprietors and managers of studios, theatres, cinematograph, etc. Authorised capital: Rs. 5,00,000. Address: 119, Main Road, Dadar, Bombay-14.

SWATI INDUSTRIES PRIVATE LTD. (First Director: Mr. Shah Chhanalal Vadilal.) Business: Financiers, promoters, agents, etc. Authorised capital: Rs. 5,00,000. A new company. Address: 60-5, Morbag Cross Road, Dadar, Bombay-14.

ENGINEER ESTATES PRIVATE LTD. (First Director: Mr. Edulji K. Vaid.) Business: Construction and dealers in land, buildings and other immovable properties. Authorised capital: Rs. 5,00,000. A new company. Address: Fair View, Ridge Road, Bombay-6.

MEHTA SILK MILLS PRIVATE LTD. (First Director: Mr. Shantilal Maneklal Mehta.) Business: Silk mills. Authorised capital: Rs. 5,00,000. Address: Bangla Falia, Billimora, Surat District (W. Rly.).

RALLI FAN PRIVATE LTD. (First Director: Mr. Michael Philip Augustus Paspathi.) Business: Electrical and mechanical engineers. Authorised capital: Rs. 50,00,000. Address: Ralli House, 21, Ravelin Street, Fort, Bombay-1.

JAIPUR UDYOG'S PROFIT ENCOURAGING

BABABUDIN COFFEE MAINTAINS DIVIDEND

Jaipur Udyog Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts for the year ended 31st March 1958.

The year's working subject to outgoing of interest, etc. shows a surplus of Rs. 78,76,772 (Rs. 48,90,107) from which are deducted interest Rs. 19,20,381 (Rs. 7,53,936), debenture issue expenses Rs. 1,20,098 (*nil*), sundry write offs, etc. Rs. 17,253 (Rs. 7,722), managing agents' commission Rs. 1 22,174 (Rs. 47,647), provision for depreciation Rs. 35,00,000 (Rs. 20,00,000) and development rebate reserve Rs. 40,000 (*nil*) leaving a balance of Rs. 21,56,866 (Rs. 20,80,802). To this is added the balance brought forward from last year of Rs. 21,36,410 (Rs. 55,609) making available for appropriation a total of Rs. 42,93,276 (Rs. 21,36,411). Out of this, the directors have already paid an interim dividend on ordinary shares at Rs. 2 per share (representing 12½ per cent. for the year ended March 1957 and 7½ per cent. for the year ended March 1958) absorbing Rs. 30,00,000 and on preference shares at 3 per cent. (representing for the year ended 31st March 1957) equal to Rs. 2,25,000, leaving a balance of Rs. 10,68,276. By the time requisite consent of the Controller of Capital Issues was received for capitalisation of Rs. 30 lakhs as referred to in the last directors' report, the directors decided to pay the aforesaid interim dividends in cash. They now recommend payment of the following final dividends for the year ended March 1958 on 75,000 cum. preference shares at Rs. 3 per share equal to Rs. 2,25,000 and on 15,00,000 ordinary shares (as on 31st March 1958) at 50 nP per share amounting to Rs. 7,50,000, leaving a balance of Rs. 93,276 (Rs. 21,36,411) to be carried forward.

Provision of Rs. 2,55,000 for wealth tax for the year under report and the preceding year has been made from general reserve.

During the current year 5,00,000 ordinary shares of Rs. 10 each were issued at par against cash to the existing shareholders and were fully subscribed. The same carry the right to dividend from the results of the current financial year.

Production during the year increased on full utilisation of the capacity of the second cement kiln with the availability of additional supply of power from August 1957 and commissioning to operation of the third cement kiln in November 1957. Installation of the fourth cement plant of 750 tons per day capacity has since been completed. This raises the annual installed capacity of the cement works to 8 lakh tons of cement. Sawai-Madhopur is now the largest cement producing centre in the country.

During the current year, however, there has been slackening of demand for cement in the country owing to which the Company also had to curtail production. The position, however, is likely to improve in the months to come. Reduction in the tax burden on the commodity (which is more than 40 per cent. of the ex-works price of naked cement) might help the manufacturers' effort to improve the offtake.

As a result of the recommendation of the Tariff Commission on cement industry, the Central Government has allowed an increase of Rs. 3.50 per ton in the retention price of the Company's cement with effect from 1st July 1958.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,25,00,000	Block	5,48,22,284
Reserves	1,85,000	Stock-in-trade	47,63,035
Liabilities	5,10,36,191	Coal, packing, consumable materials etc.	56,69,661
Profit and loss account	93,276	Stores, spares and loose tools	9,73,605
		Debts, deposits and advances	72,97,066
		Investments	59,016
		Cash	2,29,800
Rs.	7,38,14,467	Rs.	7,38,14,467

Bababudin Coffee and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., (Mysore) Private Ltd., Bangalore) submit the fourteenth annual report of the Company for the year ended 30th June 1958.

The net profit for the season under review, after providing for depreciation, remuneration to managing agents and taxation is Rs. 84,083 (Rs. 1,67,152). This, together with the balance brought forward of Rs. 6,735 (Rs. 2,583) will amount to Rs. 90,818 (Rs. 1 69,735). After deducting the dividend of Rs. 18 000 (Rs. 18,000) paid on preference shares, the balance available for distribution is Rs. 72,818 (Rs. 1,51,735) which the directors propose to apportion as follows:—

In payment of a dividend of 25 (25) per cent. on equity shares absorbing Rs. 50,000 (Rs. 50,000) and to transfer to general reserve Rs. 20,000 (Rs 75,000) leaving a surplus to be carried over to next season of Rs. 2,818 (Rs. 6,735, after setting aside Rs. 10,000 each to dividend equalisation reserve and staff gratuity and pension reserve).

Acreage:—The acreage of the estate is as follows:—

	Acres
Coffee in bearing	538.75
Cardamom in bearing	11.25
	550.00
Uncultivated lands	766.00
Total	1,316.00

The crop was delivered to the Coffee Pool and dividends were regularly received. For the purpose of accounting, the crop was valued at Rs. 2.37 per point.

Taxation:—The appeal preferred by the Central Income-tax Department with a view to assess a portion of the income on coffee to income-tax, was finally disposed of in favour of the coffee planters, as it has been held by the Mysore High Court that coffee income was purely agricultural and therefore not liable to Central Income-tax. Consequently, the Central Income-tax Department have withdrawn their earlier demands.

Estimates for season 1958-59 *are*: Coffee: 2,800 cwts. at Rs. 125.45 per cwt. The estate is well maintained.

Bonus Shares:—The directors have, at a recent Board Meeting, decided to make an application to the Central Government seeking their sanction for the issue of bonus shares in the proportion of one bonus share for every equity share now held by the shareholders and necessary action will be taken in this connection.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	5,00,000	Block	6,11,192
Reserves	4,55,748	Stores and spare parts	1,08,008
Provision for taxation	1,29,267	Nurseries	2,613
Liabilities	1,29,204	Stock-in-trade	2,61,816
Profit and loss account	2,818	Debts, deposits and advances	10,374
		Cash	2,23,034
Rs.	12,17,037	Rs.	12,17,037

Gobind Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1958.

The profit and loss account shows a profit of Rs. 5,58,413 (Rs. 10,75,563). Out of this provision has been made for depreciation Rs. 1,58 000 (Rs. 2,67,000), development rebate reserve Rs. 32,000 (Rs. 1,13,000) and taxation Rs. 3,37,454 (Rs. 88,500) leaving a sum of Rs. 30,959 (Rs. 6,07,063). To this is added the balance brought forward from the previous year of Rs. 8,578 (*nil*), making a total balance available for disposal of Rs. 39,537 (Rs. 6,07,063). The directors now recommend payment of dividend on 100,000 c.r. preference shares of Rs. 10 each at 5 per cent. less tax absorbing Rs. 34,250 (Rs. 34,250) leaving a balance to be carried forward of Rs. 5,287 (Rs. 8,578, after writing off the previous year's debit balance of Rs. 5,39,235 and transferring Rs. 25,000 to renovation and renewals reserve).

During the year under review, the factory worked for 98 days, having crushed 1,880,420 maunds of sugarcane against 180 days with a crush of 3,350,981 maunds in the previous year. The lower crush was due to failure of sugarcane crop consequent to severe drought conditions during the year. The average recovery was, however, better at 10.50 per cent. as against 10.05 per cent. in the previous year. It is expected that in the current year about about 25 lakh maunds of sugarcane will be crushed.

With a view to earn foreign exchange to meet the serious shortage of foreign exchange faced by the country, the Government of India promulgated an Ordinance, namely, the Sugar Export Promotion Ordinance, 1958 on 27th June 1958. Subsequently, Sugar Export Promotion Act, 1958 was passed by the Parliament, thereby placing the said law permanently on the statute book. Pursuant to the provisions of the said law, the Government of India allotted to the factory an export quota of 1,819 bags of sugar against production of the season 1957-58 which is expected to fetch a price of about Rs. 12 only per maund considering the very low price of sugar in the international markets.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	15,00,000	Block	16,70,993
Reserves	2,17,000	Stores, chemicals and spare parts	5 39,539
Provision for taxation	4 22,545	Stock-in-trade	21,25,367
Liabilities	23,69,688	Debts, deposits and advances	1,22,232
Profit and loss account	5,287	Investments	25,329
		Cash	31,060
Rs.	45,14,520	Rs.	45,14,520

N.B.—Figures within brackets relate to the corresponding period of the previous year.

THE BHOPAL SUGAR INDUSTRIES LIMITED

SPEECH OF MR. HASHAM PREMJI AT THE ANNUAL MEETING

OUTLOOK FOR SUGAR INDUSTRY THIS YEAR NOT VERY ENCOURAGING

THE view that the outlook for sugar industry during the current year "is, to say the least, not very encouraging" was expressed by Mr. M. H. Hasham Premji, Chairman of the Bhopal Sugar Industries Limited, in his speech at the Fifteenth Annual General Meeting of the Company held at Sehore on Saturday, 21st February 1959. In support of this view, Mr. Hasham Premji pointed to the possibility of an overall setback to production, loss to sugar mills on account of compulsory export scheme, cane growers' agitation for higher prices and unhelpful attitude of labour. Criticising, in particular, the export quota of 100,000 tons of sugar, he declared that the Government acted hastily and perhaps unwisely in announcing the quota before feeling the pulse of the industry and ascertaining as to how it was likely to fare during the current season.

The following is the full text of Mr. Hasham Premji's speech at the Annual Meeting:

"LADIES AND GENTLEMEN,

"I have much pleasure in welcoming you all on behalf of my Fellow-Directors to this fifteenth annual general meeting of the Company. Before I start my speech, I would ask you to join me in paying our humble and respectful tributes to the memory of the late Shri M. M. Amersey who was a Director of your Company since 1947 and Chairman from the year 1953. This sad event in the history of the Company has been referred to by the Directors in their report to you, and I am sure you will join me in praying to the Almighty that his soul may rest in peace.

"The Directors' report and the audited profit and loss account and balance-sheet for the year ended 30th September 1958 have been in your hands for some time and, with your permission, I shall take them as read. However, before I deal with the results achieved by your Company during the year, I would like to take this opportunity of briefly surveying some of the important aspects of the sugar industry.

Production and Export of Sugar

"The circumstances under which the industry had to operate during the 1957-58 season were not as favourable as those of the previous year. The total production of white sugar in the country was lower at 1,976,000 tons, as against 2,026,000 tons of the year before, particularly as the supply of sugarcane to factories suffered a setback due to diversion of cane to the manufacture of *gur* and *khandsari*. One important reason for this was that prices of *gur* remained high throughout the season by about 30 per cent. and the units manufacturing *khandsari* enjoyed considerable tax advantage, being exempt from payment of cane cess and excise duty of approximately Rs. 13 per maund. Sugar mills had, therefore, perforce to crush less, the results of which have ultimately been reflected in the overall production figures. The Government has so far turned a deaf ear to the pleas of the industry that, in due fairness and equity, an excise duty on *khandsari* production equivalent to that on sugar should be levied.

"The outstanding event, however, during the year was the announcement by the Government of India of their decision to export 50,000 tons of sugar through the agency of the Indian Sugar Mills' Association. The share of your Company for export was fixed at 2,439 bags; in actual fact, our allotment was not exported but was sold in the open market on behalf of the Export Agency Division of the Association. The difference between what was realised by the Association and the market rate at which it was sold was utilised by the Association to purchase and subsidise sugar from those factories from which it was advantageous to export taking into consideration freight advantage and other matters from the point of view of export of sugar.

"Export is effected by this country at a loss which works out on an average to Rs. 350 per ton under compulsion by the Government. This loss of Rs. 350 per ton of sugar exported has perforce been passed on the consumer by way of loading on the prices of sugar sold in the country. I am sure you must have observed from the Directors' report that the estimated loss of your Company on account of this compulsory scheme of exports is approximately Rs. 1,09,957 and this loss has been adjusted in the accounts under review. Though it is a moot point whether the Government is doing the right thing in asking the industry to continue to effect exports at a loss, it does appear that the Government acted hastily and perhaps unwisely, if I am justified in using that expression, in announcing an export quota of 100,000 tons for the current season before feeling the pulse of the industry and ascertaining as to how it is likely to fare during the current season.

"The reasons which have prompted the Government to take this premature decision are difficult to appreciate and understand, as the outlook for the industry during the current year is, to say the least, not very encouraging. According to available indications, production this year may suffer an overall setback. Statistics go to show that there is a great demand in the country for sugar than ever before, thanks to the ever continuous growth of population and change in the dietary habits of the public. This, coupled with the fact that the Government, has announced their intention to export prematurely, has given a firm trend to the market and the price of this essential commodity is soaring upwards. To aggravate the situation, cane cultivators in Uttar Pradesh and Bihar are constantly and persistently demanding a higher price for sugarcane. Recently, these cultivators went on a strike for a few days and refused to supply cane to the factories. To my mind, the strike has done neither good to them nor to anyone else in the country; on the contrary, production has been retarded and it remains to be seen where this agitation for higher prices will lead the industry to. It is a matter of gratification that the Prime Minister and the Food Minister have very wisely turned down these attempts on the part of interested political parties to make capital out of the situation and exploit the uneducated masses. The Prime Minister himself has very strong views on the subject and it is gratifying to learn that Government realises that, unless the production cost of sugar is lowered, there will be no prospect of India ever competing in world sugar trade.

Cane Prices

"The tendency on the part of the agriculturist to switch over more and more to cash crops like sugarcane is to be deplored and Government should at least refrain from taking any steps whereby land is diverted from cultivation of foodgrains to that of sugarcane. However, taking an overall assessment of the present situation, it appears that the consumer will have to pay more and more for his requirement of sugar in the coming months for no fault of the industry. The Government must take its full share of responsibility for this policy which is creating this situation of high prices of sugar. I only hope that, in the end, wiser counsels will prevail amongst all sections concerned with this vital industry to see that, in the ultimate solution of the problem, the industry and the country should on no account suffer. Politicians would do better to channelise thoughts and action of the cane growers on the more important task ahead of them, namely, of improving the yield per acre rather than cultivating a larger acreage and obtaining lower yields and agitating for higher prices of cane. So long as the present system of paying cane growers at a flat rate continues, the cultivator simply does not care nor does he have any incentive to make improvements in the quality of the sugarcane.

"Consequent on the industry's protests against the unilateral and arbitrary decision of the Government to impose controls in Uttar Pradesh, North Bihar and Punjab, a reference has been made by the Central Government to the Tariff Commission for a fresh examination of the cost of sugar and the fair price payable to the industry. In the meantime, however, the Supreme Court has dismissed the appeal filed by some of the sugar factories in Uttar Pradesh challenging the validity of the order served by the Government.

"In its memorandum to the Tariff Commission, the industry has asked for a higher allowance on account of rehabilitation of plant and machinery, as the current rehabilitation allowance is not adequate, and have also pleaded for full compensation for the losses sustained under the export scheme of Government. The recommendations and findings of the Tariff Commission are awaited with interest and anxiety, and I am sure the Commission will examine all aspects of the matter before making their final recommendations to the Government.

Wage Board for Sugar Industry

"A very important announcement made by the Government during the year was of the setting up of a Central Wage Board for the sugar industry with a personnel which inspires confidence. The problems for their consideration, however, are very great, particularly as the economics of the industry differs from region to region. I trust the Board would tackle the problem before them with fairness and courage and lay down a wage structure giving due consideration to the finances of the industry to ensure that they are not stretched to breaking point. I understand that the Board has also suggested to the industry that, pending their final recommendations, some sort of interim relief be given to the workmen.

"The Wage Board has also been entrusted with the onerous task of formulating a formula of distributing bonus to the workers. This would be for the first time that such a Wage Board will be evolving a bonus formula for any industry. I may say, however, that it is a step in the right direction, as the present bonus formula is a rigid one and does not take into account the needs of a seasonal industry like sugar. I trust the Wage Board will not overlook this important question which is peculiar to the sugar industry.

Problems in Madhya Pradesh

"Time and again, we have placed before the Madhya Pradesh Government the difficulties which face the sugar industry in that State. Though we have not been always successful in focussing the attention of the authorities to our various grievances, I am glad to say that the Government has given the industry an assurance that the Act recently passed by the Legislature, which provides, amongst other things, for a levy or cess on sugarcane, will not be acted upon. I, however, regret that our repeated requests to the Madhya Pradesh Government to remove from the statute book the agricultural income-tax which is only being paid by our factory, have so far not received the sympathy of Government. To single out this factory alone for paying this tax is unfair in the extreme and I would respectfully submit to the Madhya Pradesh Government that it is the duty of the Government to see that your unit is not placed at this serious disadvantage *vis-a-vis* other sugar factories in the State. Similarly, the *octroi* duty, which the Municipality of Sehore levies on sugarcane at the rate of 3 pies per maund, is twice as high as that levied by any other municipality in the State. If all this was not enough, the Municipal authorities recently have proposed to increase the *octroi* rate to 5 nP, instead of bringing us in line with the other sugar factories. I would most particularly urge and submit to Government that such an inequitable step should not be sanctioned. May I implore the Madhya Pradesh Government, even at the risk of being accused of repetition, that they should be fair to this factory and see to it that the conditions under which all units function in their State are as far as possible uniform? This discrimination against our factory is highly inequitable.

"Another important point to which I would like to refer is that, under the Industrial Disputes Act, the sugar industry as such is not a public utility service. A lightning strike, therefore, though unjustified, cannot be termed as an illegal strike. In all other factories situated in the present Madhya Pradesh State, the Madhya Bharat Industrial Relations Act still applies under the provisions of which a strike without conciliation proceedings is always illegal. This aspect of the matter was repeatedly brought to the attention of the authorities concerned with a plea that your factory should be declared a public utility service, but the Government did not pay any heed to our representations. The workers recently went on a lightning strike during this season for 24 hours, as their excessive demand for bonus was not met by the management. It was only after the strike did the Government realise the force behind our request and though belated, declared the sugar industry to be a public utility service throughout the State for a period of six months. May I request Government to take steps to do so each year before the beginning of the season, particularly as, this being a seasonal industry, losses on account of such abrupt stoppages prove very costly and wasteful to the nation's economy?

Company's Results During the Year

"Before I propose the resolution for the adoption of the accounts of the Company for the year under review, I would like to make a few points in connection with the expansion plans of your Company.

"The present crushing capacity of your factory is 750 tons of sugarcane per day and, if our plans go through as contemplated, we would very much like to see our factory crushing 1,250 tons of sugarcane per day.

"As there is no other sugar factory within a radius of 150 miles of yours, we are very well placed as regards availability of sugarcane. Our thanks are due to the Madhya Pradesh Government for taking concrete measures to develop the sugarcane area of your factory zone by providing improved variety of cane seeds and giving financial assistance to the cultivators. They realise that Madhya Pradesh is a deficit State in sugar with the production varying between 30,000 and 40,000 tons, as against the estimated consumption of about 250,000 tons.

"It is obvious to us that, to meet and crush the increased cane supplies anticipated in future, we must expand soon. It is equally obvious that the speed with which we can do so depends solely on the Government of India, to whom we have applied for their necessary licences. We have assured the Government that we would arrange ourselves for a foreign exchange loan to meet our requirements of foreign exchange and, in fact, have successfully concluded negotiations for the same, but, as repayment would have to be made at one time or the other, the sanction of the Government to the arrangement made is essential. I would request the Government of India to consider our scheme and grant us a licence to expand our activities. I am glad to say that the Madhya Pradesh Government is fully behind us in our plans.

Output and Sales

"The working of the factory was better during the year under review than in the last year from the angle of production and sales. The total quantity of sugarcane crushed, sugar produced and recovery were the highest in the annals of the Company. Despite this, the results of the year show a lower net profit of Rs. 11,53,015.26, as compared to Rs. 14,58,567.67 in the previous year, due to several factors. A loss of approximately Rs. 1,10,000 was suffered by the Company on account of the scheme of compulsory exports to which I have already referred in my speech. The costs of cultivating and manufacturing have arisen quite sharply during the year. Fertilisers themselves account largely for the increase in production costs and their prices were very much higher than at any time during the last 3 or 4 years. Costs of stores have also risen sharply. There has been the usual increase in wages and dearness and other allowances and depreciation and development rate is also higher at Rs. 2,98,369.93, as against Rs. 2,27,808.68 provided last year.

"After providing Managing Agents' commission at Rs. 1,23,759.97 and adding an amount of Rs. 30,827 brought from the previous year and an amount of Rs. 20,218.09 transferred from unclaimed dividend account, the amount available for appropriation amounts to Rs. 12,04,060.75 nP. Your Directors, after careful consideration of the profit figures, decided to maintain the dividend at Rs. 2 per equity share and they are of the opinion that, as far as it is possible and feasible, dividends may be maintained. Provision for taxation is at Rs. 6,50,000 and dividends absorb Rs. 4,12,500. An amount of Rs. 20,218.09 has been transferred to the unclaimed dividend reserve and Rs. 1,21,342.66 have been carried over to next year's account. Your attention is particularly drawn to the very sharp rise in the excise duty which has been paid by your Company, namely, Rs. 28.18 lakhs, as compared to Rs. 18.94 lakhs of the previous year.

"Labour relations on the whole continued to be cordial and satisfactory during the year 1957-58. Though differences in outlook towards a particular problem may be inevitable between labour and management, a strike in a seasonal industry like ours with continuous production and large stocks in the process of manufacture is always to be deplored. Questions where there are disagreements can always be settled across the table and labour should realise that, by going on strikes, negotiations are only complicated and relations strained. Our workmen went on a strike for 24 hours during the current season demanding that four months bonus be paid to them. A meeting between the Labour Commissioner, the management and the workers was scheduled to be held only a few days before the strike and, surely, there would have been nothing lost, if the workers had waited for a week or so before taking any precipitate action. Such tendencies on the part of labour will be deplored by all sober elements.

"As a result of mutual negotiations, however, this year, we shall be paying bonus equivalent to 52 days basic wages to the workers for the year 1957-58. The total amount to be disbursed would be in the neighbourhood of Rs. 95,000. In our factory, both the seasonal workers and permanent workers are paid bonus on the same basis, as a result of which the seasonal worker is always at an advantage. Our efforts to bring about some sort of uniformity and a more equitable method of distribution have so far been unsuccessful.

A Suggestion

"Our suggestion is that, as both the categories of workers contribute equally towards earning profits, the basis of payment should be the annual earnings of the worker divided by twelve. According to the present system of payment, the seasonal worker is paid bonus on his seasonal earnings. In other words, though he works only for a very short period as compared to his counterpart, the permanent worker, he gets bonus on the same basis. The available surplus, if any, for distribution as bonus to workers in any year is always more or less a fixed amount and the permanent worker therefore is always at a disadvantage.

"It is correct to say that the present mode of payment is based on the practice prevailing in Uttar Pradesh. The workers, however, conveniently forget that, there, bonus is paid on production and, if that system is also to be followed here, they would be only entitled in all to about Rs. 40,000, as against Rs. 95,000 which we would be distributing for the 1957-58 season. If the permanent and seasonal workers are paid on the equitable basis suggested by us, 52 days' basic wages would amount to Rs. 60,000. It is unfair that the workers should insist on having the best of all the methods and, if they do not agree to our suggestions, we would seriously have to consider referring the dispute to adjudication by the Tribunal, after giving due notice of change to the workers.

Current Season

"The cane crop in our area was quite satisfactory this year, due to a favourable monsoon. However, as *gur* prices continued to rise as soon as we started our crushing operations, an appreciable quantity of cultivators' cane is being converted to the production of *gur*. We, therefore, expect to have a shorter crushing season this year as compared to the last two years.

"Before I conclude, I would like to express my sincere appreciation for the co-operation of our staff, both at the factory and our office in Bombay and also to the Government of Madhya Pradesh for their helpful attitude during the year.

"May I now request you to adopt the Directors' report and audited accounts of the Company for the year ended 30th September 1958."

Notices

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on Thursday the 19th March, 1959, at 4-30 p.m. (S.T.), for the purposes of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1958.
2. To declare Dividends on Preference, Ordinary and Deferred Shares.
3. To appoint a Director in place of Shri Ratanchand Hirachand who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company :—

   "RESOLVED that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Ratanchand Hirachand who retires by rotation and who is an Officer and Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."
4. To appoint a Director in place of Shri Valchand Deochand who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   "RESOLVED that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, Shri Valchand Deochand, who has attained the age of 65 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him."
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and, if thought fit, to pass the following resolution as an ordinary resolution :—

   "RESOLVED that subject to the consent of the Central Government Messrs. Walchand & Co. Private Ltd., be and are hereby re-appointed the Managing Agents of the Company for a period of 10 years from 15th August 1960 upon the terms and conditions contained in the draft Managing Agency Agreement submitted to this Meeting and for the purpose of identification signed by the Chairman thereof and that accordingly the Directors be and are hereby authorised to enter into an Agreement with Messrs Walchand & Co. Private Ltd., in terms of the said draft subject to any modifications thereof that may be agreed upon between the Company and the said Managing Agents for the purpose of complying with any conditions imposed by the Central Government in giving its approval as aforesaid."
7. To consider and, if thought fit, to pass the following resolution as a Special Resolution :—

   "That the Article No. 122 of the Articles of Association of the Company be altered in the manner following :—

   "Substitute the figure '200/-' in place of the figure '75/-.'"

The Transfer Books of the Company will remain closed as from Monday the 23rd February, 1959, to Thursday the 19th March, 1959 (both days inclusive).

By Order of the Board,
R. K. JOSHI,
Acting Secretary.

CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY, 10*th February*, 1959.

Note:—(1) A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the proxy need not be a Member.

(2) The Dividends, if sanctioned, will be paid at Devkaran Nanjee Banking Co. Ltd., Fort, Bombay, on and from Tuesday the 24th March, 1959, to those Members whose names stand on the Company's Register as on Thursday the 19th March 1959.

The Explanatory Statement as required under Section 173 has been posted to the shareholders separately.

THE BURRAKUR COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE BURRAKUR COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 20th March, 1959, at 10.30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th June, 1958, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of the retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 8th March, 1959, to the 20th March, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 16*th February*, 1959.

Note:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 27th March, 1959, to those members so entitled, whose names appear in the Company's books on the 20th March, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

THE BURRAKUR COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAVE recommended payment of the following final dividends for the year ended 30th June 1958:—

1st Preference Shares—At 3½ per cent. making a total of 7 per cent. per annum without any deduction for Income-tax payable by the Company.

2nd Preference Shares—At 3 per cent. making a total of 6 per cent. per annum after deduction of Income-tax payable by the Company.

Ordinary Shares—At 5 per cent. making a total of 8½ per cent. per annum without any deduction for Income-tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 16*th February*, 1959.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
2, India Exchange Place, CALCUTTA—1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Thursday, the 2nd day of April, 1959, at 4 p.m., to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1958, and Profit and Loss Account for the year ended 31st December, 1958;
2. To declare a Dividend;
3. To appoint two Directors in place of Mr. T. S. Rajam and Mr. G. L. Bangur who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "RESOLVED that Mr. M. L. Dahanukar, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him";
5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "RESOLVED that Mr. P. D. Himatsingka, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him"; and
6. To appoint Auditors for the current year and to fix their remuneration.

Note:—1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member.

2. (*a*) The transfer books of the Bank will be closed from Monday, the 16th day of March, 1959 to Thursday, the 2nd day of April, 1959, both days inclusive.

(*b*) The dividend, if sanctioned, will be payable on and after the 3rd April, 1959, to those shareholders whose names appear in the Register of Members on Thursday, the 2nd day of April, 1959.

(*c*) Dividend Warrants will be posted to Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 6*th February*, 1959.

THE CENTRAL INDIA SPINNING, WEAVING & MANUFACTURING CO. LD.

NOTICE

THE EIGHTY-FOURTH ANNUAL GENERAL MEETING of THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Thursday, the 19th March, 1959, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June, 1958, and the audited Balance Sheet as at 30th June, 1958.
2. To appoint a Director in the place of Mr. N. H. Tata, who retires by rotation, and is eligible for re-appointment, and to consider, and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. N. H. Tata who retires by rotation and is eligible for re-appointment, and who is a director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board), be and is hereby re-appointed a Director of the Company."

   The reasons which make this resolution necessary, are more fully set out in paragraph 2 of the Explanatory Statements referred to in Note (*a*) below and which paragraph 2 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.

   To appoint a Director in the place of Mr. D. R. D. Tata, who retires by rotation, and is eligible for re-appointment, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. D. R. D. Tata who retires by rotation and is eligible for re-appointment, and who is a director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board), be and is hereby re-appointed a Director of the Company."

   The reasons which make this resolution necessary, are more fully set out in paragraph 3 of the Explanatory Statements referred to in Note (*a*) below and which paragraph 3 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.

   To approve, pursuant to Section 281 of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., as Special Director made by Tata Industries Private Limited, the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency Agreement, and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the said Act has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., who has attained the age of 69 years, as a Special Director by Tata Industries Private Limited, the Managing Agents of the Company, as authorised by the Company's Articles of Association and the Managing Agency Agreement, be and is hereby approved and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
5. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and The Associated Building Company Private Limited (associates of the Managing Agents, Tata Industries Private Limited) for letting to the Company, on a monthly tenancy, office space and storage space in Bombay House, 24, Bruce Street, Fort, Bombay, owned by the Associated Building Company Private Limited, and for facilities of air-conditioning, Board and Conference rooms and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of about Rs. 430 per month, plus a varying charge for air-conditioning facilities not exceeding Rs. 8,000 per annum, with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that subject to approval of the Central Government under the provisions of the Companies Act, 1956, the Company hereby re-appoints Tata Industries Private Limited as the Managing Agents of the Company as from the 16th day of August, 1960, for the period, at the remuneration and upon the terms, provisions and conditions set out in the draft Agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Limited of the second part and Tata Sons Private Limited (as guarantors for the observance and performance of the terms and conditions of the said Agreement by Tata Industries Private Limited as Managing Agents) of the third part and which draft Agreement is placed before this meeting and for the purpose of indentification subscribed by the Chairman thereof with power to the Directors of the Company to vary or alter such of the terms provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."
7. To consider and, if thought fit, to pass the following Resolution:—

   "RESOLVED that pursuant to the provisions of Section 294 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves and consents to the appointment of Messrs. Patel Ghanshyamdas & Co. and Messrs. Nathuram Ramnarayan Private Ltd. as the Company's Sole Selling Agents for the Company's products for a period of 3 years from the 1st day of January 1959 for the whole of India except (i) the State of Mysore, (ii) Bezwada, Tadpatri, Belary, Hindupur, Ranebennur, Hubli, Belgaum, Salem, Coimbatore, Trichinopoly, and Madura, and (iii) places covered by the lines Miraj to Harihar, Hubli to Guntakal, Jalarpet to Ooty, and Erode to Madura, at a remuneration of ¾ per cent. on all sales (inland as well as export) made by the Selling Agents and ¾ per cent. on all other sales made direct by the Company in India.

   RESOLVED further that the Company hereby ratifies and confirms the action of the Directors and Managing Agents in entrusting Messrs. Patel Ghanshyamdas & Co. and Messrs. Nathuram Ramnarayan Private Ltd. with the selling of the Company's cloth during the trial period, from 1st January 1958 to 31st December 1958, and in paying them commission on such sales."
8. To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 2 to 7 set out above, are being posted to all Shareholders.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The transfer books of the Company will remain closed from Friday, the 6th March, 1959 to Wednesday, the 18th March, 1959, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.
BOMBAY, 18*th February*, 1959.

MARTIN BURN LIMITED

NOTICE

AT A MEETING OF THE BOARD OF Directors of Martin Burn Ltd., held on the 20th February, 1959, the Directors have recommended the payment of a dividend at the rate of Rs. 1.75 nP and a cash bonus of 37 nP per share both without deduction of Income Tax payable by the Company, on the Ordinary Shares of the Company ranking for dividend for the year ended 30th September, 1958. These recommendations await sanction by the shareholders at the Annual General Meeting of the Company to be held on Thursday, the 26th March, 1959.

The Ordinary Share Register of the Company will be closed from the 19th to 26th March, 1959, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 20th April, 1959.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary.
12, MISSION ROW,
CALCUTTA, 20*th February*, 1959.

KILLICK INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956, (being the Eleventh Ordinary General Meeting) of KILLICK INDUSTRIES LIMITED, will be held on Monday, the 16th March, 1959, at 4-15 p.m., at Lalji Naranji Memorial, Indian Merchants' Chamber Building, 76, Veer Nariman Road, Churchgate, Fort, Bombay, to transact the following business:

1. To adopt the Directors' Report and Audited Statement of Accounts made up to 30th November, 1958.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. Jaisinh Vithaldas who retires by rotation but who offers himself for re-appointment.
4. To appoint a Director in place of Mr. K. G. Milne who retires by rotation but who offers himself for re-appointment.
5. To appoint Auditors until the conclusion of the next Annual General Meeting of the Company and to fix their remuneration.
6. *Special Business*: To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution, of which notice has been received by the Company:—

   "THAT Shri Muncherji Nusserwanji Cama whose address is Cosy Corner, Dongersy Road, Malabar Hill, Bombay 6, be appointed a Director of this Company in place of Dinsha K. Daji—deceased."

7. *Special Business*: To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution of which notice has been received by the Company:—

   "THAT this meeting views with deep regret the hasty and derogatory remarks made against Messrs. E. D. Sheppard and K. G. Milne, the Managing Directors of this Company, by some shareholders of the Ahmedabad Electricity Co., Ltd., at its last Annual General Meeting and declares its full confidence in the said two gentlemen."

Explanatory Statement under Section 173(2) of the Companies Act, 1956

The following Explanatory Statement as required by Section 173(2) of the Companies Act, 1956, sets out all material facts concerning the two items of special business:—

The special business mentioned in items Nos. 6 and 7 has been included in pursuance of a requisition in writing under Section 188 of the Companies Act, 1956 received by the Company from certain shareholders. The statements received from the said shareholders are given below as required by law.

The Board of Directors have considered the said Resolutions. They have also seen a statement prepared by three of the Directors, namely, Sir Purshotamdas Thakurdas, Sir Chunilal V. Mehta and Shri Jaisinh Vithaldas, setting out the factual position leading up to the aforesaid Resolutions so that the shareholders may know both sides of the issue. The Board of Directors have (with the dissent of Mr. Sheppard) approved of the last mentioned statement as containing a correct factual account of the events that have happened. The said three Directors have themselves sent their statement to all the shareholders of this Company.

As regards the Resolution set out in item 6, the statement of the said three Directors of the Company refers to the fact that it ignores Section 346 of the Companies Act, 1956.

As regards the Resolution set out in item 7, neither that Resolution nor the statement of certain shareholders wishing to propose that Resolution which has been sent to the Company sets out the relevant facts. It is not stated what are "the hasty and derogatory remarks" which are said to have been made by some of the shareholders of the Ahmedabad Electricity Co., Ltd., at the last Annual General Meeting of that Company. The said meeting of the shareholders of that Company was dealing with the Report of its Directors which it was entitled to do. Further, the assumption that Mr. Sheppard and Mr. Milne might be inclined to refuse to hold office as Managing Directors of this Company is incorrect as they have already applied for renewal of their respective terms of office which application has been declined by the Board.

After considering all the facts the Board (Mr. Sheppard dissenting) have come to the conclusion that they cannot recommend to the members the passing of the aforesaid two Resolutions as being proper or in the interests of the Company.

The statements received from Shareholders under Section 188 of the Companies Act, 1956, and referred to above, pertaining to items 6 and 7 of the Notice covening the meeting, are given hereunder:

(a) "The Directors of the Company have not thought fit to fill in the vacancy in the Board of Directors caused by the death of Dinsha K. Daji in July 1957 although a year and a half have elapsed since then. It is felt by the requisitionists that the interests of the shareholders would be served better, if an independent person is appointed as a Director in the place of late Dinsha K. Daji. The requisitionists believe Shri Muncherji Nusserwanji Cama to be a fit and proper person to hold the office of a Director of this Company and, therefore, suggest that the shareholders would be pleased to pass the Resolution proposed to be moved by the requisitionists."

(b) "It is believed by the requisitionists that, due to certain hasty and derogatory remarks made against Messrs. E. D. Sheppard and K. G. Milne by about six shareholders of the Ahmedabad Electricity Co., Ltd., under the managing agency of this Company at the recent Annual General Meeting of the said Company, the said two gentlemen might be inclined to refuse to hold the offices as Managing Directors of this Company which, in the opinion of the requisitionists, would be most detrimental to the interests of the Company. It is, therefore, proposed by means of the aforementioned Resolution to reassure Messrs. E. D. Sheppard and K. G. Milne of the implicit and full confidence the shareholders have in their management and high respect in which they are held by the general body of shareholders of this Company so that they may continue in the offices held by them at present."

By Order of the Board,

KILLICK INDUSTRIES LIMITED,

H. J. MACQUEEN,
Secretary.

BOMBAY, *17th February*, 1959.

N.B.—(a) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the Meeting at which the person named in the instrument proposes to vote and in default the instrument of proxy shall not be treated as valid.

(b) The Transfer Books of the Company will be closed from Tuesday, 3rd March, 1959 to Friday, 20th March, 1959, both days inclusive.

(c) The Dividend when declared, will be made payable at the Chartered Bank, Bombay, on and after the 24th March, 1959, to those shareholders whose names stand on the Register on Friday, 20th March, 1959, to whom Dividend Warrants will be posted.

VOLTAS LIMITED

NOTICE

THE FOURTH ANNUAL GENERAL MEETING of VOLTAS LIMITED will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay, on Tuesday, the 17th March, 1959, at 4.30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st August 1958.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in place of Mr. R. F. S. Talyarkhan who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. J. D. Choksi who retires by rotation and is eligible for re-appointment.
5. To consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

   "RESOLVED that subject to the approval of the Central Government, Mr. R. F. S. Talyarkhan, who is at present the Joint General Manager of the Company, be and is hereby appointed with effect from 1st April 1959, as Joint Managing Director and Joint General Manager for the period and at the remuneration and with the benefits and upon the terms contained in the draft Agreement submitted to this Meeting and for identification signed by the Chairman thereof, which Agreement is hereby specifically sanctioned with liberty to the Directors to alter and vary the terms and conditions of the said appointment and/or Agreement without increasing the remuneration mentioned therein in such manner as may be agreed to between the Central Government and the Directors."

6. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:

   "RESOLVED that the Articles of Association of the Company be altered in the manner following:—

   (a) The existing Article 132 be deleted.

   (b) In Article 130 the words and figures 'Article 132 and' and the figure '261' be deleted.

   (c) In Article 131 the words and figures 'Article 132 and' and the figure '261' be deleted.

   (d) In Article 151 the words and figures 'provisions of Section 261 and other' be deleted."

7. To appoint auditors for the current year and to fix their remuneration.

Notes: (a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 5 and 6 set out above is annexed to the Notice of the Annual General Meeting posted to the shareholders individually.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER. THE PROXY SHOULD HOWEVER BE DEPOSITED AT THE REGISTERED OFFICE OF THE COMPANY NOT LATER THAN FORTY-EIGHT HOURS BEFORE THE COMMENCEMENT OF THE MEETING.

(c) The Transfer Books of the Company will be closed from 7th February, 1959 to 28th February, 1959, both days inclusive.

(d) If dividends on shares as recommended by the Directors are passed at the Meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 28th February 1959. The payments will be made on and after the 20th March, 1959.

By Order of the Board of Directors,

R. H. SCHUEPP,
Managing Director.

FURTHER RISE IN TREASURY BILL RATE

(From Our Own Correspondent)

BOMBAY, *25th February*

Thanks to the increasing pace of demand for bank credit to finance crop movement and the shortage of floating funds, conditions in the short-term money market continue to be stringent. Though it is generally expected that, in view of the larger crops, the pressure of demand for credit will continue for some time to come, it remains to be seen how far the latest circular of the Reserve Bank Governor calling on banks to exercise credit restraint will have the effect of curbing the demand. Meanwhile, interest rates remain unchanged, inter-bank call money being done at the self-same rate of 3½ per cent. among the Exchange banks and big Indian banks and at 3½-3¾ per cent. among the smaller Indian banks. House money at seven days' notice is fetching 3¾ per cent. and short-term deposits 3¾ to 4 per cent. for one to six months.

The persistent stringency in the short-term money market is again reflected in this week's Treasury Bill borrowings for which the Government of India has had to pay a still higher rate of 2.592 per cent. per annum, as against 2.559 per cent. last week and 2.530 per cent. two weeks ago. Total borrowings amounted to Rs. 2 crores. The amount tendered aggregated Rs. 2.40 crores, as against Rs. 2.30 crores in the previous week. Tenders for next week are unchanged at Rs. 2 crores.

After a lapse of three weeks, notes in circulation have once again declined (during the week ended 20th February 1959) by Rs. 8.65 crores. The Reserve Bank of India statement for that week shows that the notes held in the Banking Department are higher by Rs. 9.17 crores. There have been no variations in rupee securities and foreign securities, but there has been a further increase of Rs. 5.34 crores in balances held abroad, thus raising the total foreign reserves to Rs. 211.47 crores. The Central Government's deposits have declined by Rs. 4.37 crores, other Government deposits by Rs. 2.67 crores and those of banks by Rs. 1.01 crore. Loans and advances to Governments are lower by Rs. 5.89 crores and other loans and advances by Rs. 12.44 crores.

The Scheduled banks' statement for the week ended 13th February 1959 shows that the upward trend in bank deposits is being maintained. There was a further rise of Rs. 3.11 crores in demand deposits and of Rs. 1.53 crore in time deposits during the week under review. Inter-bank borrowings were lower by Rs. 2.04 crores, while those from the Reserve Bank rose by Rs. 7.05 crores. Advances were up by no less than Rs. 11.47 crores, while bills purchased and discounted declined by Rs. 3.14 crores. Investments were lower by Rs. 5.97 crores, but cash balances were larger by Rs. 5.21 crores. Money at call and short notice declined by Rs. 2.47 crores.

A quietly steady tone prevails in the Gilt-edged market. In the Central Government securities, enquiries are confined to select long-dated issues, while most of the other loans are on offer. In the State loans section, 4½ per cent. issues are the favourites and have moved up further by 5 to 25 nP.

On revival of demand, 3 per cent. 1986 Conversion loan has gained by 45 nP to Rs. 74.10. 3 per cent. 1970-75 has also risen by 10 nP to Rs. 90.95. Both 4 per cent. 1972 and 1973 have appreciated by 10 nP to Rs. 101.55 and Rs. 101.50, respectively. 3½ per cent. 1974 is unchanged at Rs. 98.65, while 2½ per cent. 1976 has shed 5 nP to Rs. 83.25. 3½ per cent. 1967 is marked down by 5 nP to Rs. 99.05, as also 3½ per cent. 1963 to Rs. 99.95. 2½ per cent. 1962 is 5 nP lower at Rs. 96.90 and 2½ per cent. 1961 by a similar extent at Rs. 97.20.

Among the State loans, Bombay 4½ per cent. 1971, 1970 and 1969 have all put on 25 nP each to Rs. 102.35 and 4 per cent. 1970 has gained 5 nP to Rs. 100.15. West Bengal 4½ per cent. 1970 is better by 5 nP at Rs. 101.40. 4 per cent. 1967 and 1968 have each put on 5 nP to Rs. 100.15. Madras 4½ per cent. 1970 has hardened by 15 nP to Rs. 101.40. Andhra 4½ per cent. 1970 by 15 nP to Rs. 101.25 and U.P. 4½ per cent. 1970 by 5 nP to Rs. 101.25.

In tune with the further improvement in sterling abroad, the rupee also has gained some strength, banks' selling rate for ready dollars being Rs. 476.25 per $100, as against Rs. 476.50 a week ago, and their buying rate Rs. 473, as against Rs. 473.25 per $100. In New York, spot sterling has gained ground from $2.80.27/32-2.80.29/32 to $2.81-2.81.1/13, while three months' forward has declined from $2.80½-2.80.15/16 to $2.80.11/16-2.80½.

BASE METALS ADVANCE

(From Our Own Correspondent)

CALCUTTA, *24th February*

"Free" base metals firmed up during the week under review, following increased demand. Electrolytic zinc improved from Rs. 95 to Rs. 96. Demand was sharp, and this was mostly from the galvanizing industry which desired to procure some supplies on fears of delay in the distribution of supplies by the State Trading Corporation. The Government was also in the market for a small quantity. Prices in both New York and London advanced fractionally, and this was also a factor for improved sentiment here. Copper scrap was in good demand, and the utensiles scrap advanced by Rs. 2 to Rs. 214. The price in Bombay earlier was Rs. 208 but picked up to the Calcutta level. New copper wire continued to be in keen

BULLION RECEDES

(From Our Own Correspondent)

BOMBAY, *25th February*

After ruling distinctly firm in the first two sessions of the week under review, the bullion market developed on Saturday a sagging tendency which persisted practically till the close today. The initial firmness was due to keen buying in both gold and silver by local as well as upcountry interests. Offtake in silver at Delhi was reported to be quite good. Consequently, prices registered a handsome improvement. The market, however, turned easy on Saturday, thanks to heavy offerings from Calcutta operators and the reactionary trend in commodity prices. Although there was no selling pressure yesterday and today, recovery in prices was not marked, since fresh buying was limited. The closing rates today were, therefore, lower than the high levels touched early in the week, though a shade higher than the lowest levels.

February settlement in silver met with good buying support early in the week and spurted from Rs. 194-11 to Rs. 196-3 on Friday. Thereafter, it slided down to Rs. 194-0-6 on Monday. After recovering to Rs. 194-13 subsequently, the settlement ran out lower at Rs. 194-6 yesterday. March settlement began the week on a firm note at Rs. 195-10, as against Rs. 195-4 last week-end and, after advancing to Rs. 196-11, declined gradually to Rs. 194-15 today; towards the close, it was a shade better at Rs. 195-1. The carry-forward charge against bulls widened from As. 7 on the opening day (as against As. 9 on Wednesday last) to Rs. 14 yesterday. Business in April settlement commenced today at Rs. 195-5. It fluctuated between Rs. 195-2 and Rs. 195-9 before finishing at Rs. 195-4.

Ready silver moved up from Rs. 194-12 to Rs. 196-3 on the 20th inst. In the following sessions, it declined, the rate at one time today being Rs. 194-2. At the close, it was better by As. 2. The daily average arrivals and offtake of silver were 11 bars and 12 bars, respectively. The floating stocks of silver are estimated at 1,200 bars.

In the gold section, February settlement improved from Rs. 117-1 to Rs. 117-12 on Friday, but eased subsequently to Rs. 117 at one time on the 23rd inst. It, however, ran out As. 2 higher on the same day. March settlement, which stood at Rs. 116-14 on Wednesday last, evoked good support and hardened to Rs. 117-9 on Friday. After receding to Rs. 116-12, it recovered to Rs. 117-5 today before closing at Rs. 117-3-6.

Ready gold opened the week at Rs. 117-10-6, as against Rs. 117-5, and strengthened on bull support to Rs. 118-1 on the following day. It, however, declined in subsequent sessions to Rs. 117-3 on Monday. At lower levels, there was some support and the metal was taken up to Rs. 118-2 today before finishing at Rs. 118-0-6. The daily average arrivals of gold were 4,000 tolas, while offtake was 3,000 tolas per day. The floating stocks of gold are reported to be around 30,000 tolas.

Ready and forward silver in London registered a handsome gain during the week. Both were quoted on par at 78*d.* whereas, last week forward was quoted at a discount of ¼*d.* under ready which stood at 77¼*d.* Gold in London, however, eased from 249s. 8½*d.* to 249s. 6*d.* on Monday, but recovered to 249s. 6¾*d.* yesterday. Silver in New York was unchanged at 90.375 cents this week too.

The following comparative table shows at a glance the trend of the market during the week under review:

	25-2-59	Highest	Lowest	18-2-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES SUPPLIES SATISFACTORY

(From Our Own Correspondent)

KANPUR, *23rd February*

During the week under review, the hides and skins market ruled quiet. The supply position was satisfactory. Bulk of the supplies came from Bihar, Western U.P. and Punjab. The main purchasers were the local tanners and Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 400, 2nd grade Rs. 395 and 3rd grade Rs. 350 per score; wet salted buff 1st grade 2 lb. 1 oz. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 400 and 2nd grade Rs. 375 per 100 pieces; sheep 1st grade Rs. 360 per 100 pieces.

demand and at Rs. 2.34 added 3 nP. At the higher level, Bombay parties declined to take any interest.

The price in New York and on the London Metal Exchange was unchanged but firm at 30.50 cents per lb. and £237 per ton, respectively. Trade circles thought that the ban on export of copper to the U.S.S.R. and its East European satellites imposed by the United States was of no consequence to the countries affected, as these countries could procure any amount of supplies from Great Britain.

There was the report that the S.T.C. would distribute virgin metals to sheet-rollers, based on 1956 consumption. From Rs. 596, tin lost to Rs. 588, at which level demand was good. The price, as a result, soon recovered to close firm at Rs. 599. Virgin lead was firm at Rs. 72.50.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *25th February*

The cotton futures market ruled distinctly easy during the week under review. Support was generally lacking, as the majority of operators were inclined to await the tendering differences on Jarilla March contract which was fixed yesterday. At the same time, there was fairly heavy selling from some quarters. This was prompted by weaker advices from the spot market, where, following heavy arrival of crop from Saurashtra and North Gujerat regions, prices suffered a sharp break. Credit stringency and the improved prospect of the import of large volume of foreign cotton following the recent import allocation, adversely affected sentiment. The tendering differences fixed yesterday by a special committee constituted under By-law 55 of the E.I.C.A., were considered normal. The reaction of the market to the rates was a rise in prices early in the session today. Values, however, declined towards the close on renewed selling pressure.

I.C.C. Moglai Jarilla March 1959 contract opened the week at Rs. 668.50 and, after a slight improvement, which proved short-lived, declined to Rs. 658.50 yesterday. Commencing today's session higher at Rs. 662, the contract reacted to Rs. 653.50 before finishing at Rs. 654.75.

I.C.C. Moglai Jarilla May 1959 contract commenced the week at Rs. 669 and succumbed to selling with the quotation dropping to Rs. 656 yesterday. Opening at Rs. 659 today, the contract improved fractionally before winding up at Rs. 653.25.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	25-2-59	*High*	*Low*	18-2-59
I.C.C. Moglai Jarilla March 1959 ...	654.75	673.50	653.50	669.50
I.C.C. Moglai Jarilla May 1959 ...	653.25	671.50	652	669.50

Spot prices declined sharply. The reluctance of mills to augment purchases in the wake of heavy new crop arrivals from Gujerat and Saurashtra regions, resulted in a reaction. The volume of business declined considerably. Budget uncertainties also acted as a damper. The varieties which attracted attention were Khandesh, Vijay, Berar, etc.

In the export section, inquiries were noted for Bengals and almost all varieties of *Deshi* cotton. But business put through was not very considerable as the foreign buyers' price ideas were lower than Indian offers. The scarcity of superfine Bengals was increasingly felt. Stray inquiries were noted for zoda and yellow pickings.

Following last week's import allocation, inquiries for foreign cotton, especially U.S. styles, widened. A sizable quantity of U.S. cotton 1.5/32" stapling was booked at prices ranging from Rs. 1,290 to Rs. 1,380. East African cotton also met with demand and some business was put through. There was not much interest in Sudan and Egyptian cotton since mills were expecting further fall in prices of these varieties.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are as follows, the figures in brackets being last week-end closings:

Bengal *Deshi* 675 (700); Berar Jarilla 740 (760); Khandesh 800 (825); Vijay 915 (940). *Delivery contracts*: Bengal 655 (660); Wagad 680 (650); Viay 233 (246) ON.

Cotton futures at Karachi made modest gains during the week. The prevailing low level of prices attracted buying. Slackness of export demand and pressure of new crop arrivals, however, discouraged follow-up support. N.T.R.G. March improved from Rs. 56-10 last week-end to Rs. 57-4. The May contract gained As. 3 to Rs. 56-6.

A mixed trend was witnessed in the Alexandria cotton futures market. The long-staple Karnak contracts encountered selling, while medium-staple Ashmouni received some support. There were rumours in the market that the present export duty of 3.45 *d.* per lb. on Karnak and Menoufi and 2.05*d.* per lb. on other growths might be reduced or even abolished, so as to meet competition from Sudan cotton. The latest available quotations—in tallaris per lb.—from Alexandria are:

Karnak: March 72.63; May 73.17. *Ashmouni*: February 63.71; April 63.40.

Easy conditions prevailed in the Liverpool cotton market during the week, thanks to heavy hedge pressure and liquidation induced by bearish outlook for raw cotton and lower prices quoted by U.S. shippers. Both the American and American type contracts declined. Sudan contracts were neglected and values remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 21.60; May-June 21.50; July-August 20.05; October-November 19.05. *American cotton mixed growth contract*: March-April 22.20; May-June 21.80; July-August 20.00; October-November 19.00. *Sudan*: May-June, July-August, September-October 22.00.

The New York cotton futures market ruled fully steady during the week. Trade and Commission House buying was good. Spot House also lent support. The main influencing factors were expectations of larger exports in the next season and prospects of a tightening of free supplies later in the current season. Spot cotton, however, was a shade easy.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

May	35.71	35.63	35.43
July	34.69	34.52	34.27

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *25th February*

The yarn market ruled easy during the week under review, barring the cotton yarn section which presented a steady trend. Art silk yarns encountered selling, despite encouraging advices from Punjab and other important consuming centres. It was feared that offtake of yarn by weaving mills would decline in the coming weeks. The fears were based partly on rumours of increase in excise and import duties on yarn and partly on grant of enhanced rebate of import duty on nylon yarn against exports of nylon cloth. The revised rebate is Rs. 8.75 per lb. on nylon yarn or less than 20 deniers and Rs. 5.30 in the case of above 20 deniers but below 75 deniers, as against the flat rate of Rs. 2 per lb. hitherto in force. Art silk yarns would indeed have suffered a sharp setback but for reports regarding efforts of foreign suppliers to raise their quotations by 6 to 7 per cent. Staple fibre yarns also came in for selling, thanks to decline in offtake of staple fibre fabrics. Even rumours regarding imposition of an excise duty on staple fibre yarns in the forthcoming Central Government budget failed to have any effect. There were reports that some mills had sold staple fibre yarns, particularly 2/40s and single counts, at current market prices. The dealers who made purchases were hoping to make a profit if excise duty was imposed. Cotton yarns, however, were steady, in view of seasonal demand all over the country. It was stated that a few upcountry mills had raised prices of coarse counts.

The art silk weaving interests and traders are still awaiting clear details about the latest move of the Central Government to import yarn on State Trading Corporation's account to the extent of 24 per cent. of licences granted to mills during the current half-year. It is said that the Silk and Art Silk Mills Association has requested the Government to clarify the whole position. Pending the clarification, it has allowed the member-mills to indent goods against 76 per cent. of their licences only.

Cupressa Bamberg art silk yarn (60 x 1) February delivery dropped Rs. 2 to Rs. 1,580. April delivery fell by Rs. 5 to Rs. 1,527. Spot yarn (60 x 1) eased by 9 nP to Rs. 8.06. Spot 120 Italy was marked down by 31 nP to Rs. 5. 120 Japan receded by 6 nP to Rs. 4.81. 150 Italy lost a like amount to Rs. 5.25. 150 Japan, however, gained 3 nP to Rs. 4.90. Among indigenous yarns, National Rayons 150 bright cones first grade shed 3 nP to Rs. 4.31. 120 bright cones first grade were a naya paisa lower at Rs. 4.52.

Staple fibre yarn (40 x 2) February delivery encountered selling and climbed down by Rs. 5 to Rs. 604. April delivery was Rs. 4 lower at Rs. 617. Spot 40 x 2 Kohinoors eased 3 nP to Rs. 3.32 and Citys by 1 nP to Rs. 3.14. Centurys were neglected at Rs. 3.22. Among foreign yarns, Fujis eased by 9 nP to Rs. 8.28 and Paramounts by 5 nP to Rs. 7.82.

In the cotton yarn section, ten counts Podars were firm at Rs. 12.19, as also Moderns at Rs. 13.37. Twenty counts were unchanged at last week's level, Hind being quoted at Rs. 16, Moderns at Rs. 16.25 and Seksarias at Rs. 15.50. Among forty counts, Minaxis rallied 31 nP to Rs. 25.56. Moderns changed hands at Rs. 26, same as last week. Sixty counts Raghuvamshis spurted by Re. 1.50 to Rs. 55. Finlays were done at Rs. 65. Among eighty counts, Finlays were steady at Rs. 81 and Citys at Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	25-2-59	18-2-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg February	1,580	1,582

80s City	67.00	67.00

OILSEEDS DRIFT LOWER

(From Our Own Correspondent)

BOMBAY, *25th February*

The oilseeds market witnessed easier conditions during the week under review. An undercurrent of anxiety regarding the likely intervention of the Forward Markets Commission to check further rapid rise in prices and the technical conditions in the market combined to bring about a reaction in values. Perhaps the only bright spot during the week was the business concluded with Australia for about 1,000 tons of linseed oil. Australian orders took the traders by surprise, in view of the prevailing prices in India which are out of parity with world prices.

The groundnut section was featureless. The imposition of margin seems to have made marked impression on the market. Issuance of substantial tenders also pushed down the values. There was, however, good support from *vanaspati* manufacturers and crushers. This acted as sustaining factor. Groundnut February 1959, which stood at Rs. 175.00 last Wednesday, sagged to Rs. 173.00 on Monday, owing to some bull liquidation and larger arrivals from Saurashtra. It, however, recovered subsequently to close at Rs. 173.50 today. May contract, after experiencing minor fluctuations, closed today at Rs. 178.00, as against Rs. 178.75 last-week-end. Bold ready improved from Rs. 35.50 to Rs. 35.75 today, but not before sagging to Rs. 35.37 on Monday. Oil ex-mill, which wound up last week at Rs. 18.31, after moving within a narrow range, closed today at Rs. 18.44.

Castorseed too was bearish, despite encouraging advices from abroad. The fear that a margin is likely to be imposed on castorseed futures if it goes above Rs. 155 acted as a damper. This set off heavy offerings. In these circumstances, castorseed May 1959 lost Re. 1.25 over the week when it closed today at Rs. 155.25. Ready Madras, which closed last week at Rs. 30.12, after fluctuating within a narrow range, wound up the week at Rs. 155.25. Oil B.S.S., on account of good demand, improved from Rs. 16.25 to Rs. 16.44 on Saturday; but lost ground subsequently. It, however, recovered today to close at Rs. 16.44.

During the major portion of the week, linseed remained subdued. Arrivals were large and it lacked strength in the absence of fresh support. It, however, made a smart recovery yesterday, thanks to some support from crushers and operators. Linseed May 1959 fell from Rs. 32.69 to Rs. 32.37 on Monday; but recouped yesterday and closed at Rs. 32.44. It, once again, sagged today to Rs. 32.31. Bold ready lost by 88 nP to close the week today at Rs. 32.62. Linseed oil, however, was well supported and gained about 12 nP over the week and closed today at Rs. 16.75. There was a sharp reaction in the cottonseed section, presumably in sympathy with the easy trends in the cotton market. Cottonseed February and May contracts, which were quoted last week at Rs. 129.50 and Rs. 123.00, after moving both ways in a limited range, closed today at Rs. 126.75 and Rs. 119.75, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	25-2-1959	18-2-1959	11-2-1959
	Rs.	Rs.	Rs.
Groundnut			
February 1959	173.50	175.00	174.75
May 1959	178.00	178.75	178.37
Bold ready	35.75	35.50	35.50
Coromandel ready	36.12	36.00	36.00
Khandesh quality	36.12	36.00	36.00
Oil ex-mill ready*	18.62	18.37	18.62
Railway receipts*	18.44	18.31	18.44
Castorseed			
May 1959	155.25	156.50	155.37
Ready Madras	30.25	30.12	30.50
Ready Kanpur	29.25	29.00	29.50
Oil B.S.S.†	16.44	16.25	16.62
Oil commercial†	15.50	15.31	15.62
Linseed			
May 1959	32.31	32.69	32.69
Bold ready	32.62	33.50	33.00
Oil ready†	16.75	16.62	17.25
Cottonseed			
February 1959	126.75	129.50	132.25
May 1959	119.75	123.00	126.25
Niger seed	28.75	28.50	29.00
Kardi seed	21.75	21.50	21.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR GIVES WAY

(From Our Own Correspondents)

BOMBAY, *25th February*

The sugar market presented a distinctly easy trend during the week under review, with a perceptible fall in prices. On the 20th inst., the Union Food Ministry announced the release of 165,000 tons for sale in free market. The Ministry also stated that the sugar mills in Uttar Pradesh, North Bihar and the Punjab should effect sales at prices not higher than the controlled ex-factory prices. Immediately after the announcement, traders who were sitting tight on their ex-mill stocks came out to sell, with the result that the ex-mill quotations in Bombay-Deccan slided down by Re. 1.50 per bag. There would have been a more appreciable drop in prices but for the excellent demand from Malabar side. More than 15,000 bags were reported to have been purchased by commission houses for shipment to Malabar. A small parcel of 100 tons was bought by the Export Division of the Indian Sugar Mills' Association from the spot stocks in the city at open prices for shipment to the Middle East on 2nd March next.

Arrivals of sugar by rail into the city during the week were higher than those in the previous week. They aggregated 20,854 bags, as against 10,820 bags.

Small grain sugar fell from Rs. 110-Rs. 111.50 to Rs. 110. Medium grain dropped Re. 1.50 to Rs. 110.50-Rs. 112.50. Large grain lost Rs. 2 to Rs. 113-Rs. 118.

• • • •

HAPUR, *23rd February*

Ruling firm during the major part of the week, the sugar market turned quiet towards the week-end, following the release of a further quantity of 1.65 lakh tons for sale in the free market, although, in the case of the factories in U.P., North Bihar and Punjab, the sales are to be effected at prices not higher than those fixed by the Government. During the week, factories sold their stocks at far higher rates than the controlled prices and it is understood that the delay in the release of this quota was the consideration by the Government of the advisability of imposing full control on sugar prices. Five factories in east U.P. have stopped crushing for the season, owing to insufficient cane supplies and a few more in west U.P. will do likewise by the end of this month.

Sugar in the Muzaffarnagar market declined by 25 nP per maund towards the week-end. Nevertheless, the prices were still at a premium of Re. 1 to Re. 1.50 a maund over the controlled prices. The latest prevailing prices were: Crystal mill delivery controlled B29 Rs. 37.12; C Rs. 36.37; D29 Rs. 36; market quotations: Lhaskar B29 Rs. 38.50; Amroha D29 Rs. 37.12; Bijnore D29 Rs. 36.87; spot delivery Khatauli D29 Rs. 38.50.

Sugar ruled quiet in the Kanpur market, due to withdrawal of buying interest from consuming centres and acceptance by the Government of a large number of tenders. The bullish tendency seems to have been checked and prevailing prices were: Controlled Rs. 36 a maund; spot per bag C29 Basti Rs. 106; Gola Rs. 105; Hargaon and Waltergunj Rs. 103-8; Balrampur Rs. 103-4.

Ready *gur*, which had eased last week-end following Government's restrictions on futures trading, made up most of the losses during the week due to brisk outside demand. The week's arrivals aggregated 25,000 maunds, most of which went to outside destinations, and local stocks slightly improved to 55,000 maunds. Stoppage of crushing by some sugar factories in east U.P. due to shortage of cane also acted as a bullish factor. Prevailing prices were: *Gur pansera* Rs. 17.75; *balti* Rs. 17.75; *shakker* Rs. 18 per maund.

Ready *gur* also improved in the Muzaffarnagar market by about Re. 1 per maund on good demand from Gujerat, Madhya Pradesh and Rajasthan. Prevailing prices were: *Chaku* Rs. 18.50 to Rs.19.50; *pansera* Rs. 17.50 to Rs. 18; *ladu* Rs. 18 to Rs. 18.75; *shakker* Rs. 22 to Rs. 23.

The stalemate regarding the settlement of outstanding transactions following the ban on *gur* futures trading by the Government of India on the 12th inst. still continues at Hapur. Although the Chamber authorities have fixed Rs. 15.48 as the rate at which the transactions are to be settled, some merchants have not yet sent their daily reports. However, the matter is likely to be decided soon.

GOOD DEMAND FOR QUALITY TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *19th February*

Approximately 700,000 lbs. were on offer in export auction No. 7, which was held on Tuesday, 17th February. Quality again showed an improvement, particularly from the Nilgiris district and some useful flavoury teas were on offer. Internal buyers were again quiet, but exporters continued to compete strongly for the improved teas. The sale opened to a good demand, particularly for improved best liquoring which are dearer. Good medium brokens were 5 to 10 nP dearer, but similar fannings were again the weakest feature of the sale, and were difficult to sell. Low mediums were about steady, but bright liquoring medium teas were slightly dearer on last week's rates. Whole leaf teas were rather irregular, but improved types sold well. The quotations are: Low medium Re. 1.55 to Re. 1.70; medium Re. 1.80 to Rs. 2.18; good medium Rs. 2.35 to Rs. 2.75; and quality Rs. 3.10 to Rs. 4.70.

The average price realised in sale No. 7 was Rs. 2.48 per lb., as against Rs. 2.41 in the previous sale and Rs. 2.35 in the corresponding sale of 1958.

London Market: Sale of 16th February 1959.—Market strengthened, as sale progressed and finished generally dearer. Black leafed Assams 1*d.* to 3*d.* higher.

Sale of 17th February 1959.—Firm to dearer.

Colombo Market: Sale of 16th February 1959.—Larger selection. Improved quality. Highgrown brokens strong demand. Dearer following quality, especially Dimbula Dickoyas. Medium brokens 5 to 10c. dearer. Lowgrowns firm to dearer.

Sale of 17 February 1959.—Strong demand liquoring fannings and dusts dearer. Other offgrades fully firm.

Export Quota.—The export quota market has remained firm throughout the week, and business has been transacted at 1⅞ nP.

Forthcoming Auctions.—Sale No. 8 will be held on Tuesday, 24th February and Dust Sale 'C' on Thursday, 26th February.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 8:—650.000 lbs. Strong general demand, particularly for best liquoring. Highgrown which have advanced, following quality. Others fully firm to dearer. Whole leaf weakest feature."

EXPORT TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, *24th February*

With less demand from overseas buyers, easy conditions were in evidence during the export sales held here yesterday. There was fair demand in the internal sales of last week, although as regards prices a mixed trend developed.

During yesterday's auctions in Mincing Lane, offerings, amounting to 28.545 packages, most of which was from North India, were readily absorbed at unchanged prices for most varieties, but

at improved rates for all good liquorings. At last week's sales in London also, keener demand prevailed, despite the higher quantity on offer totalling 79,000 packages, with better liquorings and black leaf teas advancing impressively. Now that the higher trend in sales here has abated at least as far as this week is concerned and a break in prices developed yesterday, it remains to be seen if, despite weakness here, prices in Mincing Lane would go on firming up. Naturally, the next sales in London are looked forward to with interest.

With prices declining during yesterday's sales, especially towards the close, medium teas gave way by 4 to 6 nP and plain brokens and fannings by 2 to 4 nP. Offerings amounted to 62,426 chests. Teas for price were about steady. Legg-cut teas fell by 4 nP, although demand was good. The poorer C.T.Cs were about firm, though often irregular, while the useful liquorings in this category advanced. O.Fs also were readily absorbed. While orthodox B.O.Ps with bright liquors were steady, other kinds of this manufacture eased by 10 nP with consequent withdrawals. In line with the general trend, whole leaf grades declined, and in Darjeelings the lots possessing autumnal flavour met with keener demand with other lots easing. The quotations per lb. were: best Assam C.T.C. fannings Rs. 2.50 to Rs. 2.70 (nom.), best Assam C.T.C. B.P. Rs. 2.30 (nom.), medium fannings Re. 1.74 to Re. 1.80, clean black pekoe Re. 1.96 to Rs. 2.04, medium B.P. Re. 1.64 to Re. 1.84, plain B.P. Re 1.68 to Re. 1.72 and plain fannings Re. 1.78 to Re. 1.84.

There was business in export quota at 1¾ nP before the price sagged to 1½ nP.

The feature of last week's internal sales, when dusts on offer amounted to 21,035 packages, was the firmness in orthodox teas, although prices for other varieties were irregular. Medium and poorer C.T.C. teas eased up to 10 nP, although when the sales began these kinds were about steady. The best C.T.Cs also eased, and there were withdrawals. Legg-cut teas were quiet, while Darjeelings realised higher prices. The quotations per lb. exclusive of excise duty were: best Assam C.T.C. Rs. 2.30 to Rs. 2.90, medium Assam C.T.C. Re. 1.95 to Rs. 2.10, medium Dooars Re. 1.82 to Re. 1.84, and medium Assam grainy Re. 1.78 to Re. 1.82.

Leaf on offer totalled 2,270 chests. The C.T.Cs eased, while the orthodox teas were firm.

JUTE GOODS DEPRESSED

(From Our Own Correspondent)

CALCUTTA, *24th February*

A feature of the trading in the jute markets during the week under review was the placing of a tender for 42,000 bales of B. twills for delivery in the three months to April by the Government of India; however, this did not give life to the market as the tender had been anticipated for several weeks now and discounted already. In fact, prices of heavy goods declined, as the tender was for a small quantity compared to the huge stocks with mills. In recent weeks, in anticipation of this tender, speculators had been active, but since this quantity could be easily met without recourse to the stock built up in the bazar, the tender failed to create a bullish sentiment. It was this line of thought in the market that prompted weak holders in the bazar to attempt selling. Absorption was slow, and the price gave way. Earlier in the week, hessian was fully steady, encouraged by steadier reports from the New York market, and higher burlap consumption in the United States in the month of January. Further, the total consumption of burlap in the U.S. during 1958 was 835 million yards or 4 million yards more than in 1957. Despite these favourable reports, hessian sagged towards the later part of the week in view of weakness in heavy goods. Opinion in market circles is that, with such a huge stock of sacking as 83,000 tons, the sacking section would continue to be a drag on the market as a whole.

Ready B. twills declined to Rs. 88 60 on Tuesday from Rs. 89, as it was felt that the Government tender for 42,000 bales of B. twills on that day was too small to help the market. Earlier, speculative purchases had followed on rumours of the tender. Ready hessian 40" 10 oz. was, however, unchanged at Rs. 40.05, but on the following day fell to Rs. 39.60 on selling pressure in the futures market. Overseas interest was for nibbling quantities, which were no relief for earlier heavy purchases of sacking by bazar dealers. As a result, B. twills gave way to Rs. 88.20. At the lower level, there was an increase in buying interest, and soon the undertone of the market improved. B. twills, on Thursday, gathered strength to improve to Rs. 88.45, while hessian 40" 10 oz. was lower at Rs. 39.20 on selling pressure in futures. There was bear-covering in B. twills in futures trading, and Government purchased some quantity of the tender for ready and forward deliveries. These were, however, passing features only and on Friday B twills were pulled down to Rs 88.25 and hessian 40" 10 oz. to Rs. 38.80. Over the week-end, listless conditions prevailed, and B. twills were lower at Rs 88, but hessian 40" 10 oz. was unchanged at Rs. 38.80. With overseas buyers showing only limited interest, hessian 40" 10 oz. sagged further to Rs. 37.75 yesterday. However, there was some covering demand in B. twills and the price was fractionally better at Rs. 88.15. In the futures market, February B. twills opened at Rs. 88.65 and at one time declined to Rs 87.65 to close better at Rs. 88. February 40" 10 oz. hessian closed at Rs. 38.64, while earlier the quotation was higher at Rs. 39.58. March Assam bottoms opened at Rs. 21.22 to close lower at Rs. 20.20.

Following a decline in interest shown by mills, raw jute prices eased. Recently, mills had purchased substantial quantities and, therefore, wanted time to take stock of the situation before entering into further commitments. Also, the continued weakness in the jute goods market was a factor against any hasty commitments. The latest quotations for the different varieties against February-March delivery are:

	Middles	Bottoms
Pakistan:	Rs.	Rs.
District	29.50	26.50
Northern	29.50	26.50
Indian:		
Northern	29.50	26.50
Assam	23.00	20.00
Orissa	24.50	21.50
Desal	21.50	19.00
Murshidabad ...	20.25	17.75
Jungli	20.00	17.50
Daissee	24.25	21.75
Uttar Pradesh ...	20.00	17.50
Daissee mesta ...	19.75	17.25
Bimli f.a.q.		Rs. 17.75

Pucca bales 1st marks ... Rs. 155.00 per bale ready.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *23rd February*

All-round easy conditions continued in the foodgrains market during the week, due to selling pressure by stockists, in view of good crop prospects. Wheat lost about Rs. 2 per maund to be quoted on Monday at Rs. 23 for average quality and Rs. 25 to Rs. 26 for farm produce. Supply position was slightly better, following some arrivals by road, but the main influencing factor was bumper crop expectations. It is understood that, in the light of experience gained in the procurement of rice, the U.P. State Government will also purchase wheat with the beginning of arrivals of new crop in the market through traders.

Rice, however, ruled quietly steady with restricted supply position following export ban from surplus districts of the State. The week-end prevailing prices were: *sela basmati* Rs. 33; *mainpuri* Rs. 22.62; *raimunia* Rs. 27, *gadda* Rs. 23 per maund.

Gram eased appreciably by about Rs. 2 per maund during the week under review in line with the fall in prices in Delhi and Punjab on bumper crop ideas. Demand, too, dwindled, as new crop arrivals in the South abated inquiries from Madras and some quantity also reached here from Madhya Pradesh. Barley and *bejhar* suffered a setback, due to slack demand and reported good standing crop conditions. Maize drifted lower, as, despite good consumer demand, stockists were anxious to liquidate their holdings before the new coarse grains begin to flow in the market in a month's time. *Bajra* sagged, due to fall in seasonal demand, while *jowar* eased on lower advices from the South. The week-end prevailing prices were: gram punjabi Rs. 20.50; barley Rs. 15.50; *bejhar* Rs. 15.50; maize Rs. 14.50 to Rs. 15; *bajra* Rs. 15.50; *jowar* Rs. 13.25 to Rs. 14.50; *guwar* Rs. 14.75 per maund.

Pulses also recorded an easy trend like other cereals, although stocks left were very poor. The condition of the standing peas and *arhar* crop was reported to be satisfactory and new peas arrivals were expected in some centres after a fortnight. *Arhar* arrivals would begin in May. New *urd* and *moong* stayed steady with good demand and prevailing prices were: Peas Rs. 21 to Rs. 22; peas *dal* Rs. 24; *arhar* Rs. 23; *arhar dal* Rs. 26 to Rs. 28; *urd* Rs. 19.50; *moong* Rs. 21.75 to Rs. 24.50; *massor* Rs. 20 per maund.

READY LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, *23rd February*

The linseed market showed little change during the week. Whilst ready prices remained firm, forward delivery prices eased slightly. Crushers did not show much interest, owing to poor demand for oil. Oilcake was maintained mainly because of shortage with very little milling taking place at present. This position is likely to alter appreciably next month when local crushers resume on a larger scale.

The linseed oil market was inactive. Prices remained unchanged, business being confined to small local sales.

The latest available quotations are: Ready/Feb. Rs. 27.12; March Rs. 24.75; April Rs. 23.25 and May Rs. 22.87 per maund.

TANNED GOAT DECLINES

(From Our Own Correspondent)

MADRAS, *23rd February*

There has been no change in the kip market. Importers are adamant at their prices and business has been done where sellers follow buyers' levels. Top marks light weight cow is in good demand, as also lower ends in all weights. Cow calf and buff hides ruled steady, while buff calf was easy but seems scraping **bottom.**
