Sale of 2nd June 1959.—Offgrades strong demand. Prices generally advanced full 35c. reduction expired duty. Useful liquoring, fannings and dusts particularly advanced greater amounts.

Calcutta Market: Export.—10,000 chests Darjeeling sale B. Fair but selective demand weakening towards close with some withdrawals.

Internal.—Fair demand 21,236 chests on offer. Market opened up to 4 to 6 nP easier. Medium C.T.C. irregularly 10 nP easier. Best C.T.C. neglected.

Export Quota 1959-60.—The market is quiet with sellers at 4 nP and no buyers.

Special Licence 1958-59.—The Government of India has extended the period of validity of 1958-59 special licence up to 30th June 1959. This news has brought some activity in the market and special licence moved up to 1½ nP and a large quantity of business was transacted at this price. However, at present the market has eased and business has gone through at ¾ nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 22:—1,700,000 lbs. Fair demand, weakening towards the close. Low mediums and mediums 10 to 15 nP easier. Good mediums 15 to 20 nP. Highgrown brokens neglected. All fannings continue in good demand."

POOR DEMAND FOR NEW SEASON'S TEA

(From Our Own Correspondent)

CALCUTTA, 9*th June*

The new season's first regular export sale was held yesterday. Contrary to earlier optimism springing from the fact that the 1958 crop had been exhausted much earlier than usual, fully easy conditions were in evidence. Prices gave way, and in several cases they were so much below valuations, as withdrawals were heavy. The quality of the offerings was poor. Naturally, therefore, buyers on behalf of Great Britain paid only little attention.

Offerings during yesterday's sale No. 1 amounted to 31,703 chests. As stated, demand was poor and prices gave way on a wide front. Legg-cut teas eased by 30 to 40 nP below valuations leading to heavy withdrawals. The few bright liquoring teas from the Cachar and the Dooars received attention of buyers, but prices were 20 to 30 nP below brokers' valuations. Here again, there were withdrawals. Assam teas of orthodox manufacture were extremely quiet, bright liquoring C.T.C. teas sagging by 40 nP. Whole leaf grades had buyers at rates which were 20 to 30 nP lower. Darjeelings also shared in the decline, following a decline in quality. The price in this variety was lower by 30 nP. There were no quotations, as sales were restricted to only very few representative teas.

Transferable special export licence changed hands at ¼ nP. The same price was realised in non-transferable shipping licence. In export rights 1959-60 business was done at 3 nP.

The Government of India has announced the extension till 30th June of the period of validity of special export licences issued during 1959. Note was also taken of the good demand during last week's sales in London, where in a mixed sale of several growth including North Indian, prices were well maintained.

During last week's internal sales held here, dusts on offer amounting to 21,156 chests met with fair demand at easier rates. Best C.T.Cs received no attention, and a portion of medium C.T.Cs was withdrawn even after the price had declined by 10 nP. Orthodox teas eased by 6 nP. The quotations, excluding excise duty, were: medium Assam C.T.C. Re. 1.80 to Rs. 2.05, best Assam C.T.C.—not quoted, medium Assam grainy Re. 1.64 to Re. 1.70, and medium Dooars Re. 1.68 to Re. 1.72.

Business was done in transferable special export licence at 1 nP, while there were no buyers for non-transferable shipping licence which was on offer at ¾ nP. There was no business in 1959-60 export rights, the price of which was firm at 4 nP against the offer of 3 nP by buyers.

About 14,000 chests would be on offer tomorrow in Chittagong during this season's first internal sale in Pakistan.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 9*th June*

There was good business done in hessian and sacking constructions against both export and bazar-covering, and, as a result, steadier conditions were in evidence in the jute goods market during the week under review. In raw jute also, prices, though improved only fractionally, were fully steady, and there was a visible increase in the business done with mills. Reports of good condition of the crop continued to be forthcoming from most jute districts, and there were again widespread rains. The monsoon is now expected to break out in this part of the country within a day or two. These pre-monsoonish showers as experienced in the last two weeks have done immense good to the standing crops, and such abundance of rain in May has been a rare experience in recent years. The monsoon is itself heralding much earlier than last year. These factors have only confirmed earlier expectations of a higher crop, and during this week mills showed greater interest in new crop.

However, not much business could be put through in the new crop, in view of a dispute over the contract form for transferable specific delivery in both raw jute and jute goods introduced from 1st June by the East India Jute and Hessian Exchange. Up to 31st May these contracts had been transacted through the Indian Jute Mills' Association, but from 1st June the E.I.J.H.E. is the only authorised agency through whom these contracts could be done. The new form is practically the form which was in use by the I.J.M.A., but some minor changes have been made. According to the new form, mills can reject the fibre if moisture content is 4 per cent. or more, as against 3 per cent. in the form in use up to 31st May. Most Indian mills have accepted the new form, and have done business in this week. However, mills in the membership of the I.J.M.A. have yet to come to a decision on the clause increasing the moisture content. However, it was noted here that the 4 per cent. is in accord with the contract for *pucca* bales as in vogue with the London Jute Association. In view of this, it is likely that the I.J.M.A. mills will soon resume business under the new contract.

By and large, it was noted that more and more business was developing in the goods section, and figures relating to stock were keenly awaited. Buyers on behalf of the United States made a beginning by entering the market and showed interest in specialities. Subsequently, business was put through and the prices paid were high, in view of shortage in these goods. China was in the market for ready B. twills and some business was reported. Following this, prices of heavy goods registered marked improvement which was, however, checked by profit-taking. There was covering business done in several other sacking constructions. Despite all these, the trade was getting worried at the rate of production, which was more than what could be absorbed. Viewed thus, there was the feeling in trade circles that mills should transfer more sacking looms to hessian.

On Tuesday last, there were reports of a forthcoming tender by the Government. This was soon followed by business with Chinese buyers. There were also overseas enquiries for hessian. In addition, fair activity was reported in the futures market. The cumulative result was the gain in the price of ready B. twills to Rs. 93.55 from Rs. 93.35, and ready hessian 40" 10 oz. to Rs. 41.30 from Rs. 41.20. On Wednesday, B. twills jumped by a rupee to Rs. 94.40 following some interest shown by overseas buyers leading to covering business. In sympathy, hessian 40" 10 oz. hardened to Rs. 41.35. This was soon followed by more business in sacking goods on Thursday. China was a principal buyer in B. twills and Cuban twills. The closing price on that day was Rs. 94.75 for B. twills, but the uptrend had been checked earlier by profit-taking. In fact, by closing time hessian 40" 10 oz. had receded to Rs. 41.35. At this stage, activity in the futures market was bearish, but there was covering business done in Cubans and green heavy Cees. B. twills were unchanged at Rs. 94.75 on Friday with hessian 40" 10 oz. moving down fractionally to Rs. 41.30. Covering business over the week-end was substantial, and nearly most constructions in heavy goods were involved. B. twills gained to Rs. 95.20 and hessian 40" 10 oz. to Rs. 41.35. Earlier yesterday, conditions were steady following the announcement of May-end stock figures of goods with mills. Although hessian increased by 1,800 tons, sacking registered a welcome fall by 6,800 tons. Miscellaneous goods were lower by 1,000 tons. The news of the overall decrease by 6,000 tons did not have full play in quotations, since there were rumours of a move by mills to unseal a portion of looms. With the result, B. twills declined to Rs. 94.80 and hessian 40" 10 oz. to Rs. 41.

The improvement in the gunny market was reflected in fibre prices. Daisee bottoms improved to Rs. 23 from Rs. 22.75, and northern bottoms to Rs. 20.25 from Rs. 20, both old crop for June-July delivery. Response by mills to offers was satisfactory. New crop offers could not be finalised in several instances, in view of dispute over some clauses in the new contract form for forward deliveries. The quotations for the outstanding 1958-59 crop against June-July delivery are as follows:

	Middles	Bottoms
Indian:	Rs.	Rs.
Northern	23.25	20.25
Assam Upper ...	24.00	21.00
Cuttack	25.00	22.00
Desal	22.50	19.50
Murshidabad	21.00	18.50
Jungli	21.00	18.50
Daissee selected ...	25.50	23.00
Uttar Pradesh ...	21.00	18.50
Daissee mesta ...	21.50	19.00
Bimli f.a.q.	Rs. 19.00	

WORLD TIN EXPORT QUOTA RAISED

(From Our Own Correspondent)

CALCUTTA, 9*th June*

The feature of trading in the metal market during the week under review was the modest recovery in electrolytic zinc, following good demand. Tin, however, suffered a setback, thanks to fairly satisfactory stock position. Copper scrap also declined not because of any improvement in the stock position but due to the availability of permits to consumers from the State Trading Corporation. Lead, though unchanged, was firm.

From Rs. 225, utensils scrap eased to Rs. 220, and, at Rs. 235 per cwt., clean wire scrap recorded a similar recession. There was hardly any scrap available, but the decline was the result of considerable improvement in virgin copper stocks with the S.T.C. and quicker release of supplies to permit-holders.

On the London Metal Exchange (L.M.E.), spot copper opened at £240½, and, by Saturday last, gradually declined to £236½. The decline followed reports hinting at the possibility of imminent sales of metals from the U.S. stockpiles, particularly copper. Over the week-end, these reports were denied at Washington. The earlier rumours had also depressed the price in New York. Although these reports were denied by officials at Washington, on the 5th, the price at £236½ on the next day was lower by £2½ per ton as compared with 5th June.

Tin opened at Rs. 565 per cwt. and gradually lost to Rs. 560, while, on the L.M.E., the price improved to £787 per ton from £785½. The later improvement occurred despite the decision of the International Tin Council to increase the producing countries' export quota by 2,000 tons to 25,000 tons in the quarter ending September. The increase in quota is considered insignificant as compared to the rise in industrial activity in consuming countries, and, as a result, the anticipation is that the increase would be absorbed without creating any glut in supplies in importing countries. World consumption of tin has shown an increase and, if this trend continues, it is believed that the spare output capacity in the mines will be put to use. Further, in the event of an undue rise in prices, the Buffer Stock Manager will release periodical quantities from his stocks which stood at 23,000 tons. Note is also taken of the announcement following the meeting of the Council at Copenhagen that the U.K. will be releasing about 2,500 tons from its stockpile through the Buffer Stock Manager. There is also the announcement that the U.S.S.R. has agreed with the Council to regulate its tin sales in the six months to December next.

Electrolytic zinc AZ improved from Rs. 96.25 to Rs. 98 per cwt., owing to good demand. There was a further improvement in the stock position following imports by the S.T.C. On the L.M.E., the price fell to £76¾ from £77¾ per ton. Virgin lead was firm here at Rs. 73 per cwt., although business passing was negligible. Stocks were comfortable. In London, the price fell from £70½ to £69¾ per ton.

WHEAT STEADY, RICE QUIET

(From Our Own Correspondent)

HAPUR, 8*th June*

Steady conditions continued to prevail in the foodgrains market during the week under review. Despite the State Government's persuasion, arrivals of *rabi* grains were meagre and non-arrivals of wheat in markets have created crisis in the different markets of the State and the chances of early arrivals of wheat do not appear to be bright. While the U.P. Government is determined to go forward with its levy scheme for the next one year at controlled prices, the cultivators are reluctant to bring their produce into market, anticipating better prices later. The State Food Minister has claimed that the hostility of the trading community has been overcome through a series of measures taken recently. Till the end of May, the State Government had procured 76,000 tons of rice, 6,000 tons of wheat and about 5,000 tons of coarse grains. The Government aims at purchasing 50,000 tons of coarse grains from open market and, for this purpose, it has recently enhanced the procurement price of gram from Rs. 11.75 to Rs. 12.50 and of barley from Rs. 10 to Rs. 11 a maund, but, as the prevailing prices are still higher, no purchases on Government account have been made here.

Wheat at Hapur continued to rule steady in the open market to be quoted now at Rs. 18.50 to Rs. 20 per maund, as against the Government purchase price of Rs. 13 to Rs. 15 per maund. Wheat is not openly reaching the market, but daily arrivals—at an average of 50 to 100 maunds—are being lifted in private by consumers at prices higher than the Government purchasing prices. The Government purchases were almost *nil*.

Rice ruled quiet during the week, thanks to better supply position. The prevailing prices on Monday were *basmati sela* Rs. 33 to Rs. 36; *mainpuri* Rs. 22.37; *raimunia* Rs. 27; *gadda* Rs. 22.50 per maund.

Gram continued to reach here from the Punjab in fairly heavy quantity and prices ruled quiet, due to slack demand in the face of increasing stocks. Barley and *bejhar* were mostly unchanged, while *guwar* and *jowar* were steady with good demand for seed purposes. The week-end prevailing prices (in rupees per maund) were:—gram 13.62; barley 13; *bejhar* 12.50 to 13.12; *jowar* 13.50 to 15.50; *guwar* white 15.50; black 12; *bajra* 14 to 15.50.

Peas ruled quietly steady during the week. Arrivals averaged 1,000 to 1,500 maunds daily and local stocks aggregated 41 *khatties*. *Arhar* attracted good demand from grinders for *dal* and improved fractionally during the week. Arrivals averaged 500 maunds and local stock was 22 *khatties*. The latest prevailing prices (in rupees per maund) were:—peas *dara* 12.62; farm 13.25 to 14; peas *dal* 14.12; *arhar* 18.37; *arhar dal* 22.50 to 23.50; *urd* 19.25; *moong* 20.50 to 22.50; *massoor* 15.25 to 19.25.

LINSEED DECLINES

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 8*th June*

A reaction appears to have set in the linseed market. Prices have continued to decline during the week, following improved offers from upcountry centres. Crushers on the whole are rather hesitant, showing interest only at lower prices. The daily turnover is fair. The oilcake market is dull and little fresh business has been reported, with £33 offered unsuccessfully for export. There has been a decline of about Re. 1 in the oil market, mainly for early delivery, and prices for forward delivery have also eased slightly. The undertone is quiet, with only meagre local enquiries.

The latest available quotations are: Ready-June Rs. 22.87 and July-August Rs. 23.37 per maund.

COMMERCE AND INDUSTRY

(*Concluded from page* 997)

to come in close contact with the economic and commercial life of Japan and to view its plea in proper light.

The Contracting Parties have decided to convene a tariff conference commencing in 1960. The scope of this conference will be to cover (*a*) negotiations among Contracting Parties for new concessions; (*b*) re-negotiations with the member-States of the European Common Market with regard to adjustments to be made in the Common Tariff to make up for changes in rates bound under the G.A.T.T., (*c*) any re-negotiations of concessions in the existing schedules which Governments intend to undertake before the end of the current three-year period of firm validity and (*d*) negotiations with countries invited to negotiate in order to facilitate their accession to the G.A.T.T. The proposed conference will be held in two phases. The first phase, scheduled to last up to the end of 1960, will be concerned with the negotiations on the first two of the aforesaid items. Negotiations relating to the two other items will be held during the second phase, opening in January 1961. This tariff conference is expected to strengthen and stabilise further the foundations of the G.A.T.T. as an effective instrument for realising the cherished hope of a multilateral trading system.

* National income at factor cost—the aggregate of all income earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, October 1958.
† Preliminary estimates (at 1948-49 prices) are based on the sixth issue of the annual paper on national income issued by the Central Statistical Organisation.
†† According to budget-speech of Pakistan Finance Minister.

**These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.

R.O.—Redeemable at option. N.B.—Non-Redeemable. P—Partipating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months, notice (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stadns for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SURVEY

(*Concluded from page* 979)

confident that, over the next few years, the financial resources of the programme will rise to the level of $50 million a year.

It must be said to the credit of the U.N. and related agencies that they have endeavoured to co-ordinate their technical assistance projects with the aid offered by various Governments or non-Governmental organisations. What is more, there is now a trend away from programming technical assistance in piecemeal fashion, the projects being increasingly fitted into broader long-range national development plans. A notable feature has been the service rendered by the 34 resident representatives with field officers, supplemented by three liaison officers, who are now co-ordinating operations and providing administrative support for well over 90 per cent. of the field programme.

While the contributions made by the U.N. Technical Assistance Programme are quite valuable, the programme has still to go a long way towards the removal of a serious obstacle in the way of economical advancement of underdeveloped countries. Such is the gap in the availability of technical know-how. As the T.A. Board report itself frankly admits, no more than a beginning has been made and a formidable task lies ahead. To quote it: "For years to come, the spectacle of poverty, hunger, disease, ignorance and social misery are likely to remain a challenge to the creative energies of nations and to their capacity for co-operation through international institutions. These evils will not yield readily to the forces which have so far been mobilised against them. This conquest calls for even greater national effort in the developing countries themselves and for an international effort involving a new order of magnitude of financial support."

Viewed thus, it is gratifying that arrangements have been made for practical co-operation between the Technical Assistance Board and the U.N. Special Fund at all levels. The combined financial resources now at the disposal of the Fund and the Board may fall short of what is needed to cover the most urgent, immediate and well-defined requirements in their present fields of activity. Nevertheless, the two agencies, together with the proposed U.N. scheme to supplement activities in the field of public administration, may be expected to respond more vigorously to requests for assistance in all technical fields and, in doing so, "to bring to bear the technical knowledge and experience of almost every part of the world."

COTTON

(*Concluded from page* 986)

textiles have recently been initiated but their effects are difficult to assess in view of the highly competitive state of the textile trade.

Situation in Japan

There has been some improvement in the textile situation in Japan but so far restrictions on yarn and cloth production have met with only limited success in reducing inventories. Hopes for any recovery in textile production in 1959 are based on signs of improved business activity at home and abroad. Much will depend on how successful Japan is in meeting competition, particularly from mainland China, in export markets. There is a general feeling that the bottom of the recession has now been reached but observers are cautious on the question of whether any marked upturn in textile production can be expected in the near future. Apart from cyclical factors, the basic problem of overcapacity in the Japanese textile industry has still to be resolved. The Committee on General Textile Policy, set up last October, is alert to the dangers of unrestricted production and has recommended the scrapping or storage of redundant capacity as a means of achieving structural balance within the textile industry. The textile export picture for 1959 is perhaps more encouraging since Japan is now processing American cotton under triangular arrangements. Also, Japan may now be better organised to meet Chinese competition. Japan tentatively plans to import 2.2 million bales of cotton during the 1959-60 fiscal year which would seem to indicate that little change in cotton consumption is presently expected next season.

Trade prospects for world cotton during the next season are also promising. There appears to be every reason to expect a rise in exports. A part of the requirements of importing countries during the 1958-59 season, over a million bales, came out of stocks. This means that, other things being equal, imports would have to increase by close to this amount to maintain even the reduced rate of consumption in the current season. Any increase over and above this amount, however, will depend on the ending of the textile recession and the achievement of a greater degree of price stability than has been achieved during the last twelve months.

An increase in total trade would be desirable in order to lessen the impact of substantially increased exports from the U.S. on the economies of other producing countries. There is no doubt that the U.S. intends to recover its fair share of the world market next season and remain fully competitive with other growths. At least five million bales is the generally accepted interpretation of what constitutes "a fair share" which would mean almost doubling the present season's exports.

An unpredictable element in the situation, however, is how much cotton the Communist countries will take. This question is of vital importance for any assessment of trade prospects. These countries currently account for an import of over a million bales per year and any significant deviation from this amount could easily alter the view mentioned at the outset of this article.

ENGINEERING

(*Concluded from page* 992)

cutting out "reduplication" and by concentrating on one or two types of aircraft. The agreement between Swissair and the SAS described in the above article will surely provide them with a valuable example to follow. It remains to be seen whether the proposed Little Free Trade Area, in the formation of which Britain is taking the lead, will, when it succeeds, result in a link up between the B.O.A.C., Swissair and the SAS on lines similar to the Air Union. For the present, London has vigorously denied any thought of such an approach.

N.B.—For the convenience of readers, we give below the equivalents of the units that figure in the above article:

1.609344 kilometre=1 mile

1 metre=3.282 feet

1 Swiss franc=0.98 rupee or 98 naye paise

AIR-INDIA INTERNATIONAL

Air-India International has just completed eleven years of international operations. It made its debut in the field of international air transport on 8th June 1948, with its weekly service to London. Today it serves 26 cities in Europe, Asia, Africa and Australia. Nearly 100,000 passengers flew last year over Air-India's network of 24,893 unduplicated route miles aboard its 10 Super-G Constellations.

On 14th August, 1958, Air-India International inaugurated its new service from Delhi to Moscow via Tashkent. This was an event of significance, as it opened up a new route pattern between Europe and the East. A third service to Tokyo was introduced on 7th October 1958 and a second service to Djakarta on 11th October 1958. A new weekly all-cargo service between Bombay and London was another significant development of the past year.

The first intercontinental Boeing 707 jetliner ordered for B.O.A.C.'s trans-Atlantic jet fleet took to the air on its maiden flight last week at Renton municipal airport, U.S.A. Powered by four Rolls Royce Conway by-pass engines, the jetliner was airborne in less than 3,000 feet. The first of a fleet of 15 Boeing Intercontinentals for B.O.A.C., this aircraft will be delivered to the airline later this year following extensive flight tests and crew training.

LABOUR

(*Concluded from page* 996)

assistance, mention may be made of the following:

(1) Expansion of the vocational training programme of the Directorate General of Resettlement and Employment.

(2) Training scheme for apprentices.

(3) Pilot project in Delhi for collecting employment market information.

(4) Scheme of occupational information, vocational guidance, employment counselling and youth employment service.

(5) Training-within-industry. By 1956, about 10,000 industrial supervisors were given T.W.I. training.

(6) The work of I.L.O's productivity missions led to the creation of all-round interest in productivity and the eventual establishment of the National Productivity Centre in 1956 and the National Productivity Council in 1958.

(7) Help in vocational rehabilitation of disabled.

Besides these the I.L.O. also sent a team of experts in 1952 to advise the Government of India on the organisation of the Employees' State Insurance Scheme, provided in 1953 an expert to explore the possibilities of developing alternative employment for plantation workers during slack seasons and participated in an unemployment and underemployment survey now under progress. More recently, it also sent Prof. J. H. Richardson, an expert on industrial relations, to advise the Government on labour-management relations and also supplied much needed equipment to the industrial training centres and the Central Labour Institute.

With a proud record of solid achievement behind it, the I.L.O. looks to the future confident that it will be able to meet the new challenges and opportunities that lie ahead. New industrial and social problems are constantly emerging and their solution calls for fresh approaches. They have been emerging at an increasingly quicker pace, mainly because of technological progress, and, it is certain that they will arise at an even faster rate in the coming years. Realising its responsibility, the I.L.O. is vigorously addressing itself to the problems originating from such technological changes as introduction of automation and atomic energy in industry. In 1957, the Director-General presented a report on the impact of automation and other technological advances on social and labour policy.

Notices

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS

(Railway Board)

Indian Railways' Requirements of Electrical Signalling Equipment

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to obtain from established or prospective and reliable manufacturers supply of Block Instruments, Signalling Cables, Lever Locks and Circuit Controllers, Point Machines and Detectors, Relays, Repeaters, Route Indicators, Colourlight and Shunt Signals, Signal Machines, Reversers and other Electrical Signalling Equipment.

2. The relevant tender documents are obtainable from the Research Design and Standardisation Organisation, Baroda House, Annexe, New Delhi, and the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W. 3, on payment of Rs. 10 each. Drawings and specifications will also be available from the two sources mentioned above on additional payment.

3. Quotations should reach the undersigned:

(i) Not later than 31.7.59 for items as per List No. 10,

(ii) Not later than 17.8.59 for items as per List Nos. 1 and 11,

(iii) Not later than 31.8.59 for items as per List Nos. 2 and 6,

(iv) Not later than 14.9.59 for items as per List Nos. 4 and 5; and

(v) Not later than 30.9.59 for items as per List Nos. 3, 7, 8 and 9.

QURBAN SINGH,
Director, Railway Stores,
Railway Board,
State Entry Road,
New Delhi.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(*Incorporated in England*)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer Books will be closed from the 17th to 30th June, 1959 (both days inclusive), for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent. less Income-tax, payable on the 1st July, 1959, on account of the profits for the year ending 31st December, 1959.

By Order of the Board,

R. W. TURNBULL,
Agent.

P4, MISSION ROW EXTENSION,
CALCUTTA-1, 2nd *June*, 1959.

MANAGEMENT OF STATE UNDERTAKINGS

THE form of management of State-owned commercial undertakings and their relationship with the Government, on the one hand, and Parliament, on the other, are two issues on which there has been endless debate in this country during the past six or seven years, that is, ever since the public sector began to engage itself in industrial and trading ventures on a large scale. It is true that similar problems exist in other countries, especially in the U.K., the parliamentary system of which India has adopted. But, in India, the problems are more complex, as the number and variety of State-owned undertakings even now are greater than in the U.K., with the prospect of further large growth in the coming years. They are made more difficult by the absence of an adequate number of trained and experienced administrators. The nature of the problems is such that there can be no final solution to them satisfactory to all. As the country gains more and more experience, better methods may be evolved. Meanwhile, periodical study of the issues will throw fresh light and point to the directions in which improvements could be effected. It is needless to add that, if this objective is to be served, those who are engaged in each successive enquiry should have an unbiased outlook and be prepared to learn from past experience, even when it does not confirm the soundness of the basic official policies.

It is now generally accepted that it is better to let Government ventures take the form of joint-stock companies, with the President of the Indian Union being the sole shareholder. The stricture made by the former Auditor-General that such companies constitute a fraud on the Constitution has been ignored as an untenable contention. Indeed, even the worst critic of the public sector does not subscribe to this view. Recognising the convenience of this system, special provisions were made in the new Companies Act enacted in 1955-56. Incidentally, for some inexplicable reason, this system has so far been followed only in regard to the enterprises of the Union Government and not in regard to those launched by the State Governments. It would doubtless be advantageous to convert the commercial enterprises of State Governments also into joint-stock companies wholly owned by them.

The question as to how these companies and corporations such as the L.I.C. and the State Bank of India, brought into existence through specific legislation, are to be administered is still one on which there is considerable difference of opinion. Equally unsolved is the question of appropriate form of control over these companies by the Government and Parliament. The issues came to the fore again by the remarks made by the Chagla Commission early in 1958 on the autonomy of the L.I.C. The Congress Party took up the matter and the Prime Minister, as the leader of the Party in Parliament, appointed a sub-committee, with Mr. V. K. Krishna Menon (Defence Minister) as the chairman, to study and report on the question of parliamentary supervision over statutory corporations and other State-owned bodies. It is now stated that this sub-committee has finalised its report. A fairly sizable summary of its recommendations has also found its way into the daily Press, though the report itself has not been made public. From this account it appears to us that the Committee has made a thorough study of the problem and that some of its key proposals differ from the suggestions made by the Estimates Committee four years ago and also from those put forward by the latter this year in regard to the two State-owned shipping companies. The learned American economist, Prof. Galbraith, has also made his contribution to the subject in a report covering several aspects of the public sector, including the question of profit. For the purpose of convenience, we propose to confine ourselves here only to the recommendations of the Krishna Menon Committee, leaving those of Prof. Galbraith to be dealt with in a subsequent issue.

It has been recognised for long that the Estimates and Public Accounts Committees of Parliament would not be able to exercise sufficient and timely check on the working of Government departments as well as that of the State enterprises and that it would be desirable to have another committee for supervising these enterprises. Both Mr. C. D. Deshmukh, a former Finance Minister, and the late Speaker Mr. G. V. Mavlankar, had lent their support to this view. In its sixteenth report (*vide Commerce* dated 8th October 1955, page 685), the Estimates Committee put forward certain suggestions which, when viewed now, do not appear to be wholly satisfactory. It had recommended (*a*) the abolition of the present system of management by a board of directors as unsuitable and their replacement by a full-time managing director or a board of managing directors (of two or three members, with a chairman) depending upon the size and nature of the undertaking, (*b*) direct responsibility of this small board or the managing director to the Minister concerned in the matter of broad questions of policy, and (*c*) the board or the managing director to be assisted by an advisory body consisting of members of Parliament and local legislatures, representatives of consumers and some experienced business men. The last suggestion means a conglomeration of varying, if not conflicting, interests and it is not surprising that this recommendation did not receive the support of either Parliament or the Government.

The recommendations of the Krishna Menon Committee are an improvement over the aforesaid proposals. In the first place, it wants to secure parliamentary control over Government concerns through a third committee made up of only members of Parliament, something very similar to the Estimates Committee and the Public Accounts Committee but with a difference. While taking over the present functions of these two committees in relation to the State-owned concerns only, the Third Committee will not be a fault-finding body or a super-board of management. It will, we are told, perform a more constructive function, but it is not clear in what way. To quote the agency report on this point:

> "The purpose of setting up of a third committee would be defeated, if it is imbued with the idea that it is a fault-finding body or that it is a super-board of management. At the same time, there can be no fettering of the judgment of this committee and the expression of its views in good parliamentary tradition. Being a responsible parliamentary committee, it would bear in mind that any public expressions of views, intended to correct errors or to provide greater incentives in respect of any concern or all of them, are not of such a character as would have the opposite result of lowering the concern in public estimation or affect the credit of the country abroad."

The above quotation casts certain unwarranted aspersions on the two parliamentary committees which have done excellent work. It amounts to saying that they did not know how to expose the faults of Government-owned concerns without discrediting them in the eyes of the public. We do not see, nor does the above report tell us, how exactly this objective could be achieved. If a Government concern is found to have committed faults and if the faults are brought to the notice of the public, it is bound to evoke adverse criticism from the opposition leaders and wide publicity. The only way to stop such publicity is to hide the truth from the public or to whitewash the whole thing. Surely, a responsible parliamentary committee cannot do any such thing. But if this is what the Third Committee will do, it is better *not* to have it, whatever may be the other advantages. In a democracy, no Government concern can be screened from the searching eyes of the public, the Press and Parliament.

The Krishna Menon Committee's suggestions on the board of directors of Government concerns have many new features. The board, it says, should be compact and consist of only full-time salaried directors. Neither business men nor public men, whether they are in Parliament or outside, should be on the board. The chairman and managing director should be whole-time officials of the company and the other directors, including a financial expert, should be drawn from among the senior executives. Wherever possible, a representative of labour should be included in the board, but it is not stated whether he, too, will be only from the company's labour force or a trade union leader who may be an outsider. Membership of boards, the Committee avers, should not be sinecures. "It would not mean," to quote the news agency report, "that a business man, civil servant, or legislator, having considerable experience and genuinely severing his connections with business and other activities and with no encumbrances of any kind, cannot be appointed to such boards. But it would be inadvisable to appoint to boards men with power but without responsibility or of divided loyalties." The chairmanship of a Government concern, the Committee is further reported to have stated, should not be looked upon as a berth for a retiring civil servant nor should others be appointed to this post as a part of reward for any services rendered to a political party.

The Committee should be congratulated on the highly idealistic approach it has made to the problem, but it is doubtful whether the observance of its conditions will be practicable. If the concerns to be owned and managed by the State were only a few, it might be possible to have boards on the lines suggested by it. But the number of Government concerns is quite large and is expected to proliferate in the third

Plan period. From where will the Government find the necessary top personnel free from all the encumbrances and disqualifications prescribed by the Committee? In effect, the Committee's suggestions boil down to this, namely, that the public sector should go slow and restrict the industrial, financial and trading ventures it wishes to have to the availability of managerial personnel of the type defined by the Committee. Will the Congress Party be content with such a prospect?

At one time this journal felt that honest and experienced business men should be actively associated with the Government-owned undertakings, so that these concerns might have the benefit of their advice and grow on sound lines. But events in more recent years have necessitated a revision of this view. After studying the working of the two State-owned shipping corporations managed by a board of directors consisting of only officials, the Estimates Committee came to the conclusion three months ago that it would be advisable to associate non-official business men on the boards of these companies. To us this suggestion is not convincing, for the simple reason that, when business men were associated with these concerns earlier, they showed no better progress. Apparently, a combination of officials and non-officials to run Government-owned concerns is not an ideal one, for it is not conducive to a high sense of responsibility among them. There are, of course, exceptions, as in the case of Air-India International, but one swallow does not make a summer. Further, as the captains of Indian industry have failed to win the admiration of the party-in-power and its chief, there is little point in their being actively associated with the management of State-owned enterprises. And, finally, no business man will volunteer to join the boards of such enterprises, if the condition that he should give up all his business interests is insisted upon.

If the boards of Government companies are to consist of only full-time officials of the respective companies, their complexion will be different. They will be boards of management and not those of directors. And, if the chairman of the board is to be guided not by the majority view, when there is a difference of opinion, but by the final verdict of the Minister concerned and if he is vested with overriding powers in regard to matters of day-to-day administration, the whole show will become, in actual practice, a one-man affair, for the other members of the board, being subordinates of the chairman or the managing director, will hardly bother to assert their views. Much, of course, will depend upon the personality, integrity, and efficiency of the Minister concerned. If the Minister is strong and knowledgeable, he will be the real master of all the companies under him, whatever may be the autonomous character of the corporations. If the Minister is weak and has no idea of commercial business, his adviser and/or the chiefs of the undertakings will be the virtual bosses. Experience of Government concerns so far shows that there will always be room for abuse of power and resources, whether a Minister is strong or weak.

The real question is how to instil a keen sense of responsibility and drive into the persons who are in charge of Government concerns. In the joint-stock companies in the private sector, the top person (or a group of persons) has a real stake of considerable magnitude in the form of his savings. If he were to manage his concerns inefficiently, he would lose not only his income but also his capital. If he were to work hard and show more profit, his income and capital alike would appreciate which in turn would induce him to work harder and produce more. In the case of a person who is in charge of a Government concern, his salary is assured, as also his annual promotion and retirement benefits. He gets nothing more, if he puts in hard work and earns bumper profit, excepting, perhaps, some kind of appreciation on paper or a medal from the President. Only a few will be tempted by these rewards. The vast majority of managers will have no real stake, unless, of course, their salary and other emoluments are fixed at high levels which have some proportion to the size of the responsibility they are asked to undertake. But the Congress Party and the Prime Minister are suggesting that there should be a reduction even in the existing scales of salaries which are none too generous. The only other factor that would make the managers of Government companies to exert their best and show successful results is the fear of severe summary punishment, but a democratic country cannot follow this method.

SWATANTRA PARTY

THE move to form a new political party, known as the Swatantra Party, has rightly attracted country-wide attention. This itself suggests that the Party meets a genuine need in India's political life. Apart from the fact that it will be guided by that elder statesman, Mr. C. Rajagopalachari, who is now a respected institution, besides being a sage political thinker, the Party derives its inspiration from a philosophy which is bound to have a great appeal to all true democrats. And it also starts off without any odium which might attach to a splinter group of an established political party. With an independent philosophy and outlook of its own, based upon freedom, initiative and enterprise, the Swatantra Party may be expected to gather under its banner men of true wisdom and courage, with a sincere desire to serve the country and its people on practical lines. The interest which this move has evoked suggests that it has a future brighter than what its critics might foresee for it.

In several quarters, the new Party has been hailed as a much-needed corrective to the Congress. But it is much more than that. It gives a concrete political shape to the deep-seated aspiration of man—his love of freedom in all its essential manifestations, including intellectual and professional freedom. In one sense, the new Party is in the best traditions of the Congress. It must be remembered that the Congress won its position through its uncompromising opposition to foreign rule, while the new Party is similarly opposed to another form of tyranny, which flows from the deification of the State. Perhaps, the Congress could itself have turned into a party representing what the Swatantra seeks to achieve. But it has failed to do so. After playing its historic role by winning the country's independence, it found itself saddled with the very different task of running the Government. In the last few years, it has ruled well, though not always wisely. Its record, unimpeachable as it is in several respects, particularly in giving the country a stability which India's neighbours have sought in vain, has been marred by policies and programmes which are the result of its conscious desire to model itself on the parties opposed to it and to the economic thinking of a leader based on an alien, outmoded philosophy which he honestly seems to believe is the most progressive in the world. In the process of adjusting itself to the opposition, which is chiefly leftist and to its leader's line of thinking, it has lost something of its original self. The opposition parties, flattered by this sincere imitation, have been largely content to let the Congress play its role. The result is that no genuine ideological difference now separates the Congress from its opposition. Again, while the Congress has been intolerant of rightist opposition, however moderately it might be expressed, its left-wing political rivals have often been surprised, if not shocked, by the speed and vigour with which it has carried out extreme socialist policies such as the nationalisation of life insurance, levy of punitive taxation on the rich and upper middle classes and the move to place a ceiling on incomes.

The Swatantra Party stands for a certain historical continuity in India's political life. As Mr. Jayaprakash Narayan, whose blessings the new party has been able to get, pointed out, in his address at a meeting held in Bombay, Gandhiji believed that a Government which governed the least was the best, but today the trend was in the opposite direction. He added: "The State is taking more and more functions and there is all over the country, more so in rural areas, a state of inertia and people look to the Government for doing things which they could do themselves.... After independence, there has been a decline in voluntary activities and, if the trend continues, people will become an inert mass and that will be an end of democracy in this country. The final guarantee of democracy is the capacity of the people to look after themselves and this capacity can come only through private initiative and enterprise." Mr. M. R. Masani, who has taken considerable initiative in the formation of the Party, observed that there was a spiritual and moral vacuum in Indian politics and the country faced "moral crisis," as a result of ten years of Congress rule. The task before the new Party is not only to convince the people of the existence of the crisis but to make them see how it could be directly traced to excessive reliance on State apparatus for carrying out all economic and welfare activities.

Although the Party has not yet issued its manifesto which will be finalised at its first session, scheduled to be held at Ahmedabad on 1st August next, its spokesmen have made some attempt at defining the Party's objectives. A memorandum, issued by its sponsors from Madras—the Party will at present function from 19, Race Course, Bangalore—emphasises that moral obligation, rather than State action, should form the basis of welfare activity. In agriculture, increased production, it is stated, is best attained through the continuance of the self-employed peasant-proprietor, who stands for initiative and freedom and is interested in obtaining the highest yield from the land. In industry, the Party believes in the "encouragement of the incentive for higher production and expansion which are obtained by competitive enterprise, with adequate safeguards against excessive and unreasonable prices, profits and dividends where the competition itself does not secure these ends." It stands "for the restriction of State enterprise to heavy industries to supplement private enterprise in that field and to such national services as railways and the starting of pioneer industries where private initiative is difficult." It is opposed to "expansion of bureaucratic services which involves the bringing into being a 'state-ism', with a hierarchy of officials made to do work which is best done privately and independently, and an unproductive waste of national resources."

Further light has been thrown on the Party's objectives by Rajaji in his various speeches and by Prof. N. G. Ranga who has chosen to leave the Congress after several decades of devoted service in the cause of the country's peasantry. Rajaji contrasted the philosophy of *swatantra* (freedom and dependence on one's own efforts), for which the Party stood, with the philosophy of *paratantra* (dependence on others), on which was based socialism, with its emphasis on State regulation and control. He warned that there was a threat of confiscation of *swatantra* from citizens by a gradual process. The new Party, he said, claimed that social justice and social welfare could be attained without depriving individuals of *swatantra*. At a Press conference, held in New Delhi, Prof. Ranga averred that the Party favoured the concept of trusteeship in relation to wealth. He stressed that the Party would oppose co-operative farming, as it would turn peasants into wage-earners on their land, but not service co-operatives.

Among the other specific issues it would sponsor is the restoration of the original provisions of the Constitution in respect of freedom of property, trade, employment and compensation for the acquisition of property. It is also against "unlimited borrowings" by the Government and opposed to the way in which internal resources are raised for the Plan, for a continuation of this process would make "section after section of our society to become bankrupt and so frustrated that it will become unproductive and inefficient." It should thus be clear that the Party will oppose State monopoly in all its forms and regimentation of the lives of citizens. It will also help restore rural-urban balance by giving a fillip to agricultural operations. While the value of co-operation is not denied, it will oppose compulsion in any shape or form.

There is, however, no denying the fact that the new Party will have an uphill task in the first few years. For one thing, the other political parties in the field have had the advantage of an early start. Secondly, though the country has learnt to appreciate the value of freedom from foreign rule, it is yet to be taught to shun the measures designed to restrict individual liberty and the evils arising from large-scale extension of State enterprises, and excessive taxation. Thirdly, the business community has been run down in the eyes of the public to such an extent by the Congress and other opposition parties that it is a hard task to popularise an economic philosophy which seems to favour them most. But there are some encouraging signs. There is a widespread feeling that the State cannot always do things well and that, in any case, it cannot do everything. Further, the new Party has the advantage of an appeal which is directed towards something elemental in man—his love of freedom. By persistent educational effort, the Party may still succeed in winning for itself a growing body of adherents, especially the educated young men to whom neither the Congress Party nor the Communists offer any attraction. To the extent it succeeds in spreading the gospel of freedom, initiative and enterprise, it will, besides making an effective contribution to India's political life and shaping its destiny, render a distinct service to the cause of democracy and freedom in the world. The birth of the new Party has thus a significance, far transcending the national frontiers to which its activities have necessarily to be restricted.

SHARE MARKETS DISTINCTLY FIRM

CLIMATE FOR PRIVATE SECTOR—EXPORT CREDIT INSURANCE—WESTERN SHIPPING TALKS

WEDNESDAY, 5 P.M.

THE hesitant tone noted in share markets last week has yielded place to a firm trend. Despite intermittent profit-taking, the speculative counters have regained their poise, though not their steam. The hopes of the bears that, as equities have moved up to unduly high levels, there is bound to be a sharp and sustained reaction, have not fully materialised. On the contrary, to their dismay, several "cash" shares, which had recently retreated from the peak levels established in the first half of last month, have resumed their upward trend. Notable among them are chemical and dye shares and a large number of miscellaneous industrials belonging to the growth variety, such as Dunlop, National Carbon, Indian Aluminium, Indian Oxygen, Alkali Chemical, E.I.D. and Gwalior Rayon. Jute, tea and cotton mill shares have also been moving up on satisfactory reports about the offtake of their manufactures. There is a feeling in market circles that these old industries of India will fare distinctly better in the current year. Exports of jute manufactures and tea are expected to register further improvement in the second half of 1959, thanks to the marked recovery in economic conditions in the U.S. and Western Europe. Exports of Indian cloth, however, are still not encouraging, but the domestic demand is picking up. Stocks of cloth with mills have fallen appreciably, due to good clearance in the second quarter. At the time of writing, the trend of cloth and yarn markets is rather subdued. This is only natural, as the monsoon months constitute the slack season. But, after the rains, the offtake is expected to improve and with that the prices of cloth too. Textile shares have already started discounting this prospect. With the production of steel increasing, the demand for cement also may be expected to improve in the coming months. Consequently, cement shares have got over their sluggishness and are gradually edging forward.

MARKET GOSSIP

The share markets have not taken seriously the discussions at Ooty on the implications of the socialist pattern of society and on the approach to the third Plan. Nor have they paid any attention to the happenings in Kerala, where there has been a mass movement to get the Communists out of office, resulting in a number of police firings and a fair degree of violence and disturbance to peace. In fact, scrips of industries in Kerala, such as Aluminium Industries and Travancore Rayon, have been ruling firm. Evidently, encouraging reports about the working of industries, the continuing inflationary pressure, the commencement of easy money conditions and the anxiety of the authorities to keep interest rates on the low side have all helped the share markets to overlook the developments on the domestic political front and the distressing reports about the food situation in West Bengal, notwithstanding a record (estimated) output of 73 million tons of foodgrains in the current (1958-59) crop year.

• • • •

Reports from New Delhi and inside information about what went on in the closed sessions of the Ooty Seminar clearly suggest that the Congress Party's views on the private sector is hardening. It would appear that certain forces are at work to place even more restrictions on the private sector through the Company Law Amendment Bill now referred to a Joint Select Committee. They are trying to exploit to the maximum extent possible Mr. Nehru's pronounced dislike for concentration of economic power in a few hands. The original object in deciding to amend the Company Law, passed only 39 months ago, was to remove the practical difficulties arising from the defective wording of several sections and excessive controls and regulations. Now advantage is sought to be taken of this opportunity to give effect to some of the new concepts of socialist ideals of the Congress Party, which, as everyone knows, is more leftist at present than they were in 1955-56. If the powers-that-be succeed in their attempts—there is no reason why they should not—joint-stock company management in the private sector will become more complicated than it already is and this in turn will tend to retard the growth of the private sector.

Another report claims that Russia and East European countries are also trying to exploit the socialist policies of the Government of India and the determination of Mr. Nehru to give high priority to the public sector not only for such basic heavy industries as iron and steel and manufacture of power machinery, fertilisers and locomotives, but also for other machine-building industries, metals, fuels, chemicals and drugs. In pursuance of Mr. Khrushchev's clever policy of peaceful economic penetration of underdeveloped countries, Russia and the industrially advanced East European nations have been offering to the Government of India attractive schemes of assistance for establishing these industries. The official delegation to these countries, led by Sardar Swaran Singh, which recently returned from Moscow, has brought with it many proposals. With these offers on hand and with the known predilections of the Government for the public sector, the private sector will probably be at a greater disadvantage in the third Plan than in the second. The Central Government's economic philosophy, policies and programmes are thus greatly helpful to Mr. Khrushchev in implementing his programme for economic penetration. Mr. Nehru must doubtless be aware that the Western world has already taken note of this development in the cold war and that it is anxious to counter it, as witness the various statements made at the recently concluded six-day 14-nation Atlantic Congress held in London to celebrate N.A.T.O.'s first ten years. Almost everyone who spoke at this Congress emphasised the need for stepping up economic aid to the underdeveloped countries and for forming an organisation to co-ordinate the West's economic aid to these regions. Mr. Nehru is undoubtedly in a strong position to have his way in getting aid from the West for expanding the public sector. He has a large number of influential supporters in the U.S. who have already endorsed his policy pertaining to the public sector. There are thus strong indications that the private sector will be allotted only a modest role in the third Plan.

There are some signs, according to observers in New Delhi, that Mr. T. T. Krishnamachari, for whom Mr. Nehru has great admiration, may return to power before the year is out. The only remaining hurdle in his way is the debate in Parliament on the L.I.C-Mundhra episode. The House is expected to take up the issue during the monsoon session and with that this unpleasant incident may go into oblivion. This will happen just at the time the third Plan will begin to take definite shape and the Prime Minister may summon the aid of T.T.K. for this purpose, especially for raising the resources. The chances are that T.T.K. may be appointed as Minister for Planning or Economic Affairs. Much, of course, will depend on T.T.K.'s leanings; at present, he is said to be not very keen on re-entering public life. But he is unlikely to decline the Prime Minister's invitation, if and when it comes.

The inside information on the Ooty Seminar is that Dr. V. K. R. V. Rao, supported by Mr. C. D. Deshmukh, played a prominent part in establishing a strong case for earmarking almost all the major industries for the public sector and for a stricter control over the remaining activities of the private sector engaged in trade and industry. One or two invitees to the Seminar who chose to espouse the cause of the private sector were literally heckled and made to eat humble pie by the exuberant socialist Vice-Chancellor of the Delhi University. The general impression is that, in the preparation of the third Plan, the impress of Dr. Rao will be greater than that of Prof. Mahalanobis in the second Plan.

• • • •

The terms of the two new loans of the Government of India and their timing are in keeping with our expectations. The total amount sought to be raised is, however, less than that anticipated in these columns (refer page 851 *Commerce* dated 23rd May 1959). Thus, only a sum of Rs. 175 crores is proposed to be raised, as against Rs. 200-225 crores expected. There are only two issues, a medium-dated (10 years) loan and a pretty long-dated (20 years) loan. No amount has been specified for each of them, so that it is not possible to measure the response to each in terms, of oversubscription or undersubscription. The Government has reserved to itself the right to retain subscriptions upto 10 per cent. in excess of the sum of Rs. 175 crores. Consequently, if there are over-subscriptions, the total issue could be upto Rs. 192.50 crores. But the chances of this happening are slender.

The details of the two new issues are:

3½ per cent. 1969 at Rs. 98.85, giving a redemption yield of 3.64 per cent. and a running yield of 3.54 per cent. per annum.

4 per cent. 1979 at par, both the redemption and running yield being the same, namely, 4 per cent. per annum.

The terms of the aforesaid loans are more favourable to the Government than those it offered last year. For a ten-year loan, it is offering the same return that it gave for a five-year loan last year; in fact, the redemption yield is a little less, considering that it was 3.78 per cent., as compared with only 3.64 per cent. that can be had now. Again, the ten-year loan issued last year fetched a redemption yield of 3.81 per cent. and a running yield of 3.77 per cent., whereas the corresponding yields on the 10-year loan just announced are 3.64 and 3.54 per cent., respectively. Further, the Government gave 4 per cent. interest for a 15-year loan last year; today, it is offering that rate for a 20-year loan only. Last year, the Government raised (in the first attempt) through all the three issues a sum of Rs. 135 crores, of which conversion facilities covered a sum of about Rs. 21 crores only, the corresponding figures for this year being Rs. 175 crores and Rs. 120 crores, respectively.

These comparisons show to what extent money has become cheaper over the year. The main explanations for this fall in interest rates at a time when the demand for domestic savings is greater than the supply are three: deficit financing, P.L. 480 funds and restraints on investments by the private sector.

Subscriptions to the new loans can be both in cash and conversion of two maturing loans: 3 per cent. Second Victory Loan 1959-61 and 2½ per cent. Hyderabad Loan 1954-59. The amount outstanding against these two loans are Rs. 113 crores and Rs. 7 crores, respectively, so that cash portion covers Rs. 55 crores, that is, only one half of that a year ago. But not all the outstanding amount of 3 per cent. 1959-61 loan is likely to be converted into the new loan, though this may be the case in regard to the Hyderabad State loan for which the Centre assumed responsibility under the States Reorganisation Scheme. The major portion of 1959-61 loan must have already come into the possession of the Reserve Bank, as a result of its open market operations. A part of it may be held by the Exchange banks. As these banks generally do not invest in loans other than the short-dateds, they may not elect to convert their holdings in the 1959-61 loan. They may prefer to reinvest the proceeds of this loan when redeemed in cash in the existing short-dateds that can be had from the market.

One can, of course, safely say that the loans will be fully subscribed, for anything that is left over by the banks, the L.I.C., the provident funds and other investors will be taken up by the Reserve Bank. The response from the banks other than the State Bank is unlikely to be on the same scale as last year, for their surplus funds are not that large. The State Bank will, of course, be the largest investor, because of the P.L. 480 funds deposited with it. The L.I.C. and the provident funds will go in for the high-yielding long-dated loan, but their total contributions may at best be Rs. 30 crores. Naturally, the Reserve Bank will take up the unsubscribed balance and will gradually liquidate it in the open market whenever conditions are favourable.

• • • •

The Hague was this year's venue for the annual conference of the Union of International Credit Insurers, known as the Berne Union. The conference, which lasted from the 5th to 12th inst., coincided with the twenty-fifth anniversary of the Union. It was attended by delegates from Austria, Belgium, Canada, Denmark, France, W. Germany, Israel, Italy, the Netherlands, Norway, Spain, Sweden, Switzerland, the U.K. and the U.S. It is said that delegates from India, Australia and South Africa could not attend. The World Bank and the Italian National Insurance Institute were represented by observers. As was customary, the conference renewed the member organisations' business experience during the past twelve months, discussed common problems of export credit insurance and guarantee techniques, the terms of payment appropriate to particular classes of goods and the economic outlook in the various countries.

It may be recalled that last year's conference at Venice took place at a time when the newly introduced credit insurance facilities in W. Germany was the subject of much adverse comment in certain quarters as tantamount to initiating a credit race. It was found after an exchange of views at the conference that part of the misunderstanding was due to inadequate explanation of the true nature of the operation and the differences in terminology used in Germany and other countries. The misunderstanding was cleared and the W. German delegate gave the assurance that W. Germany had no intention of initiating a race in the field of export credit terms.

The need for avoiding a credit rate war was stressed at this year's conference also. In a statement issued after the meeting, the conference expressed the hope that the pattern of trading conditions could be maintained without the stress and distortions which would result from a credit race. The terms of payment for the various classes of goods eligible for export credit insurance were discussed by the conference. It was agreed that, in conformity with the principle that the terms of payment for insured export transactions should not differ from those usual in the trades concerned, the Union should keep all member organisations currently informed of normal commercial practice by maintaining a system of continuous consultation and exchange of experience. The object of this procedure is to avoid situations in which individual credit insurers could place their exporters in a more favourable competitive position than those in other countries by agreeing to cover abnormal terms of payment. Normal commercial standards were defined as those involving a credit period not exceeding six months for consumer goods, a somewhat longer period for durable consumer goods and light equipment, and not exceeding five years for heavy capital equipment. Reasonable commercial practice, it was emphasised, called for adequate down-payment before shipments in all cases where medium credits were covered.

This decision cannot but have a mixed reception in this country. As exporters, the decision is welcome to countries like India where export credit insurance is still in its infancy and which is not therefore in a position to compete with rich insurers in such developed countries as the U.K. and West Germany by giving the same credit terms to its exporters as are offered by them. But, as importers of capital goods whose needs in this respect are both large and urgent and whose purchasing power is strictly limited, India and other underdeveloped countries cannot be happy over the limitation of the period of coverage on credit for heavy capital goods to five years. Surely, the situation obtaining at present is quite different from the time when this limit was proposed. The conference should have taken into consideration this aspect of the question and allowed a longer period, say, 10 to 12 years, for credits against capital goods. It seems to have been obsessed more by the anxiety to avoid what it calls a "credit race" than by consideration of the needs of underdeveloped regions. It is needless to add that relaxation of this restriction would certainly be in their own long-term interest, what with Russia and East European countries willing to offer 12-year credits.

• • • •

The ten-nation inter-Governmental conference on shipping affairs, referred to in these columns last week, concluded a day earlier than was scheduled—on Thursday the 11th inst., instead of on Friday. No concrete suggestion emerged from the discussions at the conference, barring the agreement on the setting up of a "continuing machinery" to look into mutual problems. This was only to b-

EQUITIES RECOVER

FURTHER RISE IN BURMAHS

(From Our Own Correspondents)

BOMBAY, 17*th June*

THIS week's review of the Bombay Stock Exchange covers only three trading days. On Saturday last, the market remained closed as usual for fortnightly settlement. On Monday, there was no business on account of the death of a member. This issue goes to press a day earlier on account of the public holiday tomorrow for *Bakri-Id*.

During this short week, the market displayed a steady tone with a recovery in prices which was somewhat marked in several counters, such as Bombay Burmahs, National Rayons, Centurys, Kohinoors, Svadeshis, Premier Automobiles, Premier Constructions and Dyestuff companies. Even Tata Ordinaries revived, despite the fact that there was no indication about the Government's reply to the Company's application for issue of right shares at par. The market would appear to have taken it for granted that the issue would only be at par. The report from Calcutta early in the week that one of the two new blast furnaces at Burnpur of the Indian Iron and Steel Company had to be closed, as its cooler plate had burnt out and that it would be two weeks before the furnace started working again, does not seem to have affected the shares. On the contrary, the scrips, which had been subdued for some time past, staged a revival on strong speculative buying engendered by the general firmness of jute and several well-known, popular miscellaneous scrips. Secondly, the heavy load of floating stocks in this counter is reported to have been considerably reduced.

Sectionwise, Tata Ordinaries advanced from Rs. 189 to Rs. 193.25, but towards the close they shaded off to Rs. 191.75. Their new shares staged a gain of Rs. 3.25 to Rs. 190.50. Indian Irons gained ground from Rs. 23.92 to Rs. 24.52 before closing at Rs. 24.36.

Textile shares were taken up at hardening rates. Bombay Dyeings touched a peak of Rs. 65.30 before finishing at Rs. 64.80, representing a rise of Re. 1 over the week. Centurys moved up from Rs. 543 to Rs. 558, but at the close they shed a part of the gain to Rs. 551. Kohinoors were prominent with a rise of Rs. 11 over the week at Rs. 284.50, the highest level touched during the week being Rs. 287. Central Indias put on a rupee to Rs. 99, while Finlays were lower by Rs. 2 at Rs. 264. Khataus moved up by Rs. 5 to Rs. 221.25, but Simplex provided a notable exception with a drop of Rs. 4 to Rs. 173. A marked rise of Rs. 17 to Rs. 518 is noted in Standards and of Rs. 11 to Rs. 243.50 in Svadeshis.

In the engineering and mining group, Alcock Ashdowns attracted attention and gained by Rs. 2 to Rs. 271. Tata Locomotives recovered from Rs. 203 to a high of Rs. 211, but finished lower at Rs. 208. Premier Constructions were prominent with a rise of Rs. 9.50 to Rs. 321. Larsen and Toubros were marked up by 48 nP to Rs. 22.28 and Mahindras by 84 nP to Rs. 20.64. Cooper Engineerings continued to be in the limelight and added Rs. 6 to Rs. 136.50. Their rights were bid Rs. 7 higher at Rs. 19. Voltas made an impressive rise of Rs. 6 to Rs. 176. Shivrajpurs were unchanged over the week at Rs. 84, while Indian Coppers were a shade better at Rs. 4.12.

Interest in Scindias revived, pushing up the scrips from Rs. 17.48 to Rs. 17.96 before profit-taking erased a part of the gain. The closing was done at Rs. 17.72. Great Easterns were, however, a shade lower at Rs. 22.44. Premier Automobiles were in good demand and rose by Rs. 6.50 to Rs. 115.50. Hindustan Motors were taken 16 nP higher at Rs. 8.84.

Bombay Burmahs again made an impressive rally with a sharp jump from Rs. 544 to Rs. 566. The closing was done at Rs. 551. Their new shares too advanced by Rs. 2.50 to Rs. 185. National Rayons rallied from Rs. 317.25 to Rs. 328 before closing at Rs. 325. Gwalior Rayons were placed at Rs. 20.68 *ex-div.* (dividend 50 nP) which on a *cum-div.* basis, represents a rise of 74 nP over the week. Tata Chemicals picked up 28 nP to Rs. 18.72. Proximity of dividend announcement attracted attention in Tata Oils, pushing up the shares by Rs. 5.30 to Rs. 62.80. On the announcement of a rights issue in the ratio of one share for three (subject to Government sanction), Amar Dyes jumped up by Rs. 7.50 to Rs. 178. Indian Dyestuffs soared high from Rs. 762.50 to Rs. 850. West Coast Papers shot up by Rs. 6 to Rs. 145. The Company proposes to issue additional capital to the tune of Rs. 80 lakhs.

* * * *

Calcutta Stock Exchange

CALCUTTA, 15*th June*

Although the volume of business put through on the Calcutta Stock Exchange during the week under review remained low, there was a revival of interest in the more popular counters in all the sections, on interested buying. There were signs of revival of genuine buying, and it is felt that activity would continue to be restricted in view of the new Government loans for Rs. 175 crores. Institutional investors like the L.I.C. were naturally keeping away from the market in view of the Government loans. A temporary setback in sentiment was caused in speculative Indian Irons earlier in the week following the complete damage to the cooler plate of one of the new blast furnaces, thereby restricting production by 1,000 tons per day. However, it was soon known that the furnace would be commissioned within two weeks. The substantial reduction in stocks of jute goods and the gradual uptrend in prices of jute goods imparted a stabilising influence not only to jutes but other sections as well. Corporate results announced this week were so encouraging that there was an expansion in the number of transactions on investment account. However, investors were cautious, and extended only considered support.

Sectionwise, as the week progressed, there was brisk trading in jutes, and details of the more important gains are:

	Week's Opening Rs.	Closing Rs.	Gain Rs.
Anglo-India	238	247	+ 9.00
Bally	208	230	+22.00
Baranagore	143	150	+ 7.00
Kinnison	184	175	+ 9.00
Budge Budge	140.50	148	+ 7.50
Howrah	23.75	24.06	+ 0.31
Auckland	176	181	+ 5.00
Birla	21.06	21.94	+ 0.88
Champadany	126.00	130	+ 4.00
Nuddea	60.75	63.50	+ 2.75
New Central	16.37	16.81	+ 0.44

Coals hardly came in for a few transactions, in the absence of incentives. At Rs. 303, Bengals eased by Re. 1, while Burrakurs were extremely quiet at Rs. 17.31. South Karanpuras receded to Rs. 12.25 from Rs. 12.37, and Equitables to Rs. 31.62 from Rs. 32, while Western Bengals were an exception for the improvement to Rs. 6.12 from Rs. 6.03.

Firm spots were provided in the engineering section. Jay Engineerings, at Rs. 211, added a visible gain. Texmacos forged ahead to Rs. 25.85 from Rs. 25.35. The demand for Indian Galvanizings was unsatisfied and the week's gain at Rs. 20.62 amounted to Re. 1.62. At Rs. 31.25, Jessop & Cos. were fractionally better, while Indian St. Wagons were fractionally better at Rs. 93, as against Rs. 94 previously. Indian Irons closed firm at Rs. 25.25 after opening at Rs. 24.10 and moving down to Rs. 23.95.

Several features were recorded in the miscellaneous section. Indian Oxygens made a smart recovery to Rs. 27.37 from Rs. 26. Indian Aluminiums rose steadily to Rs. 21.75 from Rs. 20.56, while National Carbons, at Rs. 35, made a further addition on unsatisfied demand. Metal Boxes touched a further high of Rs. 42.62, the week's gain being Rs. 2.62. Dunlop Rubbers hardened to Rs. 33.37 from Rs. 32.37, and Indian Cables at Rs. 31.50 from Rs. 30.31. Another strong feature was Titaghur Papers, which on interested buying were lifted to Rs. 43.37 from Rs. 42.12. Orient Papers at Rs. 36 added 25 nP, and earlier in the week Orissa Minerals were better at Rs. 37.50. Balmer Lawries spurted to Rs. 174 from Rs. 164.

* * * *

Madras Stock Exchange

MADRAS, 16*th June*

A steady trend prevailed on the Madras Stock Exchange during the week under review. The steadiness was aided by fresh investment support at lower levels touched by many scrips

(*Continued on page* 1052)

Bonus announcement

The Life Insurance Corporation has pleasure in announcing the results of the First Valuation of its Assets and Liabilities as at 31st December 1957. The valuation covers all policies issued by the Life Insurance Corporation as well as those issued by the erstwhile insurers whose assets and liabilities have vested in the Corporation. These comprise 56,83,414 policies assuring a sum of Rs. 1472,81,31,684 including bonuses and 11,539 annuities for Rs. 72,80,120 per annum. The valuation discloses a gross profit of Rs. 33.04 crores.

The Life Insurance Corporation Act vests the Corporation with the power to classify policies for the purpose of declaring differential bonuses wherever necessary. The Corporation has formulated a provisional scheme of differential bonus and has grouped the policies issued by the different insurers into 7 Groups for the purpose of declaring differential rates of bonus according to the financial strength of the insurer concerned.

PAYMENT OF BONUS : Pending finalisation of the scheme of differential bonuses, bonus at the rates given in the table below would be payable only in respect of policies becoming claim by death or maturity after the date of valuation and before the final scheme of differential bonus is approved by Government The Corporation hopes to work out this final scheme of differential bonus shortly and get Government's approval to the same. As soon as the scheme is finalised and Government's approval is obtained, bonus according to that scheme would vest in the policies. It is expected that the rates of differential bonus finally declared would not differ materially from the rates now declared on policies becoming claims by death or maturity.

The rates of bonus applicable to the various Groups are given in the following table :

GROUP	Rates of Bonus per annum per thousand Sum Assured : Endowment Rs.	Whole Life Rs.
1. Special Group	.. 16.80	21.00
2. Group I	.. 14.00	17.50
3. Group II	.. 11.20	14.00
4. Group III	.. 8.40	10.50
5. Group IV	.. 5.60	7.00
6. Group V	.. Nil	Nil

In addition, there is a Miscellaneous Group of policies which will be dealt with in a special manner in view of the different methods of distribution of profits adopted by the old insurers concerned. Detailed information giving names of the insurers included in each Group will appear in Leading Newspapers on June 20th, 21st and 22nd.

Life Insurance Corporation of India

NEWS IN BRIEF

THE Geological Survey of India has so far discovered an estimated reserve of 430 million tons of iron ore in Andhra Pradesh.

The Small Industries Service Institute, Government of India, has opened in Bombay a foundry sand testing and mechanical testing centre.

The Government of India has entrusted the responsibility for the export of sea salt to the State Trading Corporation of India with effect from the 12th inst.

The Tariff Commission has taken up for consideration the question of continuance of protection to the diesel fuel injection equipment industry after the close of the current calendar year.

The Union Defence Ministry's programme to undertake manufacture of military trucks in ordnance factories, in collaboration with Messrs. M.A.N. of W. Germany, will be formally inaugurated by Prime Minister Nehru at Jabbalpur tomorrow.

In response to the request made by the Government of India, the Japanese Government has decided to send a delegation of experts on small- and medium-scale industries to advise the Government on the ways and means of accelerating the progress of these industries.

The Government of Bombay has rejected the offer of the Life Insurance Corporation of India to give a loan of Rs. 2 crores for housing Government employees, on the score that the rate of interest charged by the Corporation at 5 per cent. per annum is high.

Negotiations for increasing frequency of shipping services between the Indian and Russian ports will be held between the representatives of the two Governments at Moscow shortly. Mr. Nagendra Singh, Director-General of Shipping and Joint Secretary in the Ministry of Transport, is expected to leave for Moscow on the 25th inst.

The Madhya Pradesh Government proposes to fix the ceiling on land holdings between 40 and 50 acres of "standard land." A piece of land will be considered as "standard," if it has irrigation facilities throughout the year. Legislation to this effect will be introduced in the ensuing session of the State Vidhan Sabha.

A high-powered committee to suggest the co-ordinated development of road, rail and inland waterway and coastal traffic is expected to be constituted by the Government of India within a month. Originally, it was intended that such a committee should only consider the ways of ensuring co-ordination between road and rail transport.

The enumeration work for the next Census will begin in February 1961 and end by March. Data to be collected will cover, among other things, land, industry, business, trade, profession, service, agricultural labour and cultivation. Information will also be sought about the marital status of a person, his or her birthplace, mother tongue, education and place of work.

A proposal covering manufacture in India of a people's car priced around Rs. 6,000 to Rs. 7,000 is likely to be put forward to the Government of India on behalf of the Skoda Works, a leading Czechoslovakian engineering enterprise. It is said that Czechoslovakia is prepared to share with India its technical know-how in the field of engineering, but there is little likelihood of it investing capital in India.

One-anna and half-anna coins of nickel-brass composition (yellow in colour) will cease to be legal tender with effect from 1st January 1960. The coins will, however, be accepted from the public till 30th June 1960 at all offices of the Reserve Bank of India, all agency banks of the Reserve Bank conducting Government business and all Government treasuries and sub-treasuries in payment of Government dues as well as for exchange. They will also be accepted at all railway offices and post offices but in payment of dues only.

The total value of minerals (excluding petroleum and minerals prescribed under the Atomic Energy Act) produced in India rose from Rs. 127.3 crores in 1957 to Rs. 131.0 crores in 1958, the quantity index (base 1951=100) moving up from 123.6 to 125.5. The production of coal alone in 1958 accounted for Rs. 86.6 crores, the quantity actually produced being 46.1 million metric tons. The production of other minerals (in terms of metric tons) was: copper ore 411,000; ilmenite 314,000; iron ore 6 million; limestone 10.3 million; manganese ore 1.2 million; mica (crude) 31,802; and salt 4.2 million. The output of gold was 5,288 kilograms.

The Government of Bombay has sanctioned a pilot milk scheme for Rajkot at an estimated cost of Rs. 1.48 lakh for the current year. The milk conservation project, undertaken by the former Saurashtra Government with the assistance of the U.N. International Children's Emergency Fund, envisaged production of milk powder, provision of processed liquid milk for the city of Rajkot, and distribution of low fat fluid milk or skim milk powder to mothers and children. The U.N.I.C.E.F. project will require a large quantity of milk the collection and transport of which will have to be built up. It has, therefore, been considered necessary to implement the pilot milk supply scheme till the above project starts. Simultaneously, an amount of Rs. 3 lakhs has also been sanctioned towards the purchase of milk and milk produce for the scheme.

From Abroad

At no time after 1955 had France enjoyed a favourable balance of trade as it did in May 1959. The balance was to the tune of £10 million, exports aggregating £115 million and imports £105 million.

The Indonesian Government has decreed the nationalisation of six Dutch trading companies in the country. According to Government spokesmen, compensation will be paid in accordance with the Nationalisation Act.

Six associations, representing cotton industry in Hong Kong, have asked for a revision of the existing system of allocating quota for exports to the U.K. The Hong Kong Government proposes to make a detailed re-examination of the quota system.

Population in the U.S. reached 176,665,000 on 1st May last. This was an increase of 25,500,000 —about 16.9 per cent.—since the last decennial census taken in April 1950. It also represents a 3 million increase, or about 1.8 per cent. over 1st May 1958.

The L. M. Ericsson Telephone Company, Stockholm, has entered into an agreement with a Swiss consortium of banks, headed by Schweizerischer Bankverein, for an 18-year, 4½ per cent. bond loan of Swiss Frs. 45 million. The loan was issued on the Swiss market on 5th June.

China and Ceylon have signed a trade protocol for 1959 and contracts for rubber-rice transactions. The protocol envisages an exchange of goods worth Rs. 12.5 crores each way. Under the rubber-rice deal, China will buy 30,000 metric tons of rubber from Ceylon in exchange for 230,000 metric tons of rice.

The Japanese Supreme Council on Export Trade, a body jointly organised by the Government and the export industries, has set the export target for the current financial year ending March 1960 at $3,130 million (payments basis) which represents an increase of 14 per cent., as compared with the actual exports of $2,728 million in 1958-59.

U.S. business expenditures on new plants and equipment are expected to amount to $32.500 million in 1959, as compared with $30.500 million last year, according to the latest U.S. Government survey. This total is somewhat higher than the amount anticipated by business for 1959 in the initial survey reported three months ago.

Last year, the Federal Republic imported 155,000 metric tons of coffee for its 50 million people, the highest post-war coffee import figure and about as much as the former German Reich imported in 1936 for its some 70 million inhabitants. *Per capita* annual consumption of coffee rose from 4.4 lbs. in 1936 to 5.6 lbs. in 1958.

There was a further fall in unemployment in the U.S. during May 1959. The ratio of persons unemployed to the total labour force fell to 4.9 per cent., the lowest for the first time since November 1957. The rate of fall in unemployment was 12 times higher than the normal seasonal change. With this fall, the number of persons employed in May was higher by over a million at 66 million, a record for this time of the year.

A Special Economic Policy Board, with Mr. Dag Hammarskjoeld, U. N. Secretary-General, as Chairman, has been set up to streamline the handling of requests from various Governments for economic and other aids. Mr. C. V. Narasimhan, Under-Secretary for Political Affairs, has been appointed the Executive Member of the Board and to act as the deputy whenever the Chairman is absent.

The Government of Pakistan has approved of a scheme prepared by the Planning Commission to establish a steel plant near Kalabagh in Multan District, where good quality iron ore deposits are reported to have been located. The scheme was recommended by Mr. Lee Austin, consultant to the World Bank, who visited Pakistan three months ago. The proposed plant is expected to have an initial production capacity of 50,000 to 60,000 tons per annum and cost about Rs. 17 crores.

A loan of $5 million to help the expansion of an Egyptian fertiliser company, Societe Egyptienne D'Engrais et D'Industries Chimiques, was signed at the Export-Import Bank of Washington. The First National City Bank of New York is participating in the $5 million credit to the extent of approximately $1.5 million by purchasing the first three maturities for its own account. The Egyptian plant, built at Suez between 1948 and 1950, had been provided with equipment under earlier Export-Import Bank credits of about $7.2 million. The credit has been repaid in full.

The keel-laying ceremony of the *Dreadnought*, the U.K.'s first atom-powered submarine, was performed at the Vickers-Armstrong yard on the 12th inst. Although the nuclear unit and machinery for the *Dreadnought* is supplied by the U.S. Westinghouse Electric Corporation under an agreement between that Company and Rolls-Royce, its hull and armaments will be British. Unofficial estimates put the cost of the submarine at about £20 million. The U.K. proposes to commission for service at least eight nuclear-powered submarines by 1969 at a cost of about £120 million.

West Germany has offered Pakistan financial assistance of 170 million marks for various development projects, including a scheme for a suburban railway in Karachi, according to Lt.-Gen. Azzam Khan, Pakistan's Rehabilitation Minister, who has recently returned from a two-month tour of Germany, Austria, Turkey and Greece. Sweden has agreed to finance the setting up of two technical training institutes in Pakistan. An Austrian delegation of industrialists will visit Pakistan shortly to study the possibility of Austrian investment in that country.

The Belgian Congo's second Ten-year Plan, called the "Productivity Scheme," is scheduled to commence next year and will involve a total outlay of £412 million, as against £350 million in the first Plan, now in its final year. Out of the total outlay, £60 million will be set apart for the development of agriculture, as compared with £22 million in the current Plan. The country seeks to become a large supplier of agricultural products such as fruits, coffee and vegetable oils to the countries of the European Common Market. Provision for transport and communications is put at £157 million.

The United Arab Republic Government has entered into an agreement with two Italian concerns, Montubi and Dalmine, for the construction of a £E1.6 million oil port at Suez, with a total capacity to unload two 65,000-ton tankers simultaneously. A pipeline will link the port with the Suez refinery. Along with the construction of the pipeline, the Italians will dig a canal to carry sea water to refrigerate the Suez refinery. The U.A.R. will meet the cost of the project, partly by supplying cotton worth £E640,000 and partly through payment of cash instalments spread over six years.

Japanese camera makers have introduced a great number of new models during the first three months of this year—30 or an average of one new model every three days. Though much cheaper in price, these new models are equipped with features similar to those found in the costly ones, such as a built-in synchronised rangefinder and a very fast lens. Market research studies have revealed that the average buyer who has 50,000 yen to spare, prefers to buy a TV set or a 8 mm. movie camera, instead of a high-grade camera. Hence the rush to put out cheaper cameras. Japan has an average of one camera for every three families. About 100 firms are engaged in camera manufacture, the total value of their production in 1958 being 9,200 million yen.

The Commonwealth Motoring Conference has now been constituted as a permanent body, with the Duke of Edinburgh as patron. This was in accordance with the decision taken at the meeting of 59 delegates, representing six million motorists from the Commonwealth countries, including India, held at London last week. The main object of the organisation is to ensure reciprocal motoring services throughout the Commonwealth. The Automobile Association and the Royal Automobile Club of Britain, which jointly arranged the Conference, have agreed to maintain a permanent secretariat at London to provide to all accredited motoring organisations information of general interest on such matters as membership services, trends in international touring, road safety, technical and engineering services, and the role of motoring organisations in national road development plans.

PERSONAL

DR. Ajit Mazoomder, I.A.S., Director of Industries, Bihar, has been appointed Jute Commissioner, Government of India.

Mr. U. N. Mahida, Chairman, Bombay State Electricity Board, left for France last week to study the electrical engineering industries there.

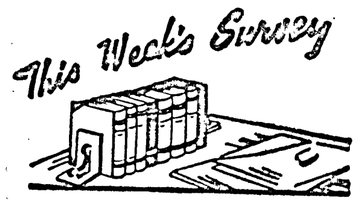
Mr. D. M. Desai, Managing Director, Hindco Lighting Industries Private Ltd., Bombay, left on a business tour of Europe, East Africa and West Asian countries.

Dr. Frans Goffart has been appointed Ambassador Extraordinary and Plenipotentiary of Belgium in India, in place of Count Geoffroy d'Aspermont Lynden.

Mr. Kasturbhai Lalbhai and Mr. Krishnaraj M. D. Thackersey have been re-elected Chairman and Vice-Chairman, respectively, of the Indian Cotton Mills' Federation for the year 1959-60.

Messrs. Parsram Parumal, Sevantilal Menek-lal and Indraji T. Parekh have been elected President, Vice-President and Honorary Secretary, respectively, of the Bombay Sugar Merchants Association for the current year.

Mr. C. V. Mariwala, Chairman of the Bombay Oilseed Crushers' Association, has been nominated by the Government of India on the Indian Central Committee as a representative of the power oilseeds crushing industry for a period of three years commencing from April 1959.



FOODGRAINS OUTPUT

FIGURES of foodgrain production continue to evoke interest. Mr. Nehru told pressmen at New Delhi last week that the output of foodgrains in the 1958-59 crop year had gone up to 73 million tons, as against 62 million tons in 1957-58, a rise of 11 million tons or 18 per cent. This is a large increase, almost too good to be true. It is to be hoped that the figures are not highly inflated. If they reflect better coverage, the previous year's figures too should be suitably corrected. Apparently, a substantial part of the increase in output, shown by the 1958-59 output, is accounted for by cereals, the output of which has increased from 52.88 million tons to 61 million tons. Between 1957-58 and 1958-59, rice output is reported to have gone up from 24.8 million tons to 30 million tons, wheat output from 7.7 million tons to 9.7 million tons and other cereals from 20.3 million tons to 21.3 million tons. On the basis of the total foodgrain production figures for 1958-59, it can be inferred that the output of pulses in the year under review must be of the order of 12 million tons which represents an increase of 2.8 million tons over the 1957-58 figure. Of this increase, gram alone shows a rise of 1.9 million tons, from 4.9 million tons in 1957-58 to 6.8 million tons in 1958-59. By any standard, this is a substantial increase.

It is little comfort to know that foodgrain output has increased so long as the reported increase is not reflected in prices. It is true that prices of some foodgrains have declined in the first four months of the current year. But they are still well above the levels at which they stood early last year. Thus, the index number of foodgrain prices (Base: 1952-53=100) was 113.1 in April 1959, as against 116.0 in January last and 105.2 in April 1958; the corresponding index numbers for cereals are 99.0, 107.0 and 97.2.

The following table shows the trend of wholesale prices of the principal foodgrains:

(Base: 1952-53=100)

	Rice	Wheat	Jowar	Bajra	Gram
April 1959	95	101	108	125	85
January 1959 ..	92	125	107	132	121
April 1958	103	85	94	111	65
Average for					
1958-59	105	105	105	126	96
1957-58	105	88	114	126	68
1956-57	97	88	123	122	71

It may be noted here that, in 1956-57, the production of foodgrains amounted to 68.7 million tons, so that the increase in prices in 1957-58 could be attributed to a fall of 6.7 million tons in production. But, 1958-59, not only has the whole of this fall been made good, but there is, on the Prime Minister's showing, an increase of 4.3 million tons. And yet the price levels in 1958-59, as will be seen from the annual averages for the principal grains, are markedly higher than in 1956-57, particularly in the case of rice, wheat and gram.

These figures suggest that the increase in foodgrain output, even if it is in fact as large as is made out by official figures, has not been sufficiently large to stimulate a fall in prices. Perhaps, the output figures have erred on the high side or the demand is increasing at too fast a rate. Presumably, both factors lie at the basis of the high foodgrain price situation that has continued to confront the country for sometime now.

By no means the least intractable aspect of the problem of foodgrains is its orderly distribution. Zonal arrangements, credit control regulations and curbs on use of cereals in short supply are the methods which have been tried. But these have ensured neither adequate and equitable supply nor reasonable prices. Nor has the Government's proposal to buy up two million tons of rice for reserve stock purposes—it has already bought 1.1 to 1.2 million tons—been of much avail, though one would expect that the knowledge that the Government has reserve stocks would induce traders to keep their prices down. If anything, the Government's purchases have only had the effect of fanning the price rise, as they have resulted in a depletion of marketable surplus.

In view of the fact that increased production has not resulted in any significant fall in prices, it is worth investigating whether farmers are withholding stocks in their possession. In such an event, no State trading scheme can function successfully. If the food situation were to deteriorate further—it is already bad in all conscience—either a completely free market or total procurement and rationing may be the only alternative solutions to rely upon. Both these are desperate remedies. The effective solution lies in stepping up production further. The Government should give up all those policies that act as deterrents to larger production and concentrate its efforts on positive steps.

Meanwhile, the Government will do well to take swift measures to relieve shortages in regions where they appear. From all accounts, W. Bengal is an area of acute shortage. Even if one makes allowance for the political colour which the situation in that State is taking, there is substantial evidence to show that the food supply in that State is inadequate and distribution (in the hands of the State Government) has been ill-organised. The Central Government's representatives and the State's officials are now engaged in a study of the problem with a view to assessing the nature and quantum of assistance the State will need. It is to be hoped that this examination will be completed early enough and appropriate remedies adopted without delay. Clearly, this is not the time to waste ink and paper on working out elaborate long-term schemes. What is needed is prompt action to relieve shortage and effective measures to ensure that the supplies reach the consumers for whom they are obviously meant.

A SWEEPING ALLEGATION

A rather uncharitable and sweeping allegation against the cotton mill industry was made by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, while inaugurating the Delhi Productivity Council last week. The main reason for India's failure to compete with Japan, Hong Kong and other countries in cloth exports, Mr. Shastri declared, was the "wholly unsatisfactory" management in the textile industry and "unsatisfactory" labour relations. Elaborating this contention, he added:

"An investigation into the affairs of certain textile mills has revealed that there should have been no difficulty in running them efficiently but for mismanagement. It is a great discredit to those responsible for their working. I am soon going to institute an inquiry into the affairs of some other mills. The Chartered Accountants should be more careful while auditing the accounts of the mills. They should have more powers than merely looking into the balance-sheets prepared by the managements of the mills. Their services should be properly utilised in having better management and checking frauds."

Neither the occasion nor the time chosen was appropriate for making such a sweeping statement. There may be—in fact, there are—a few "black sheep" among cotton mills which are either utterly inefficient or have been pursuing dubious policies with a view to profiteering at the expense of consumers and shareholders. But to say that "wholly unsatisfactory" management in the industry is one of the main causes for the low level of exports is clearly a gross exaggeration. Any impartial observer of trends in the textile economy the world over will admit that the setback to Indian textile exports in recent years has been brought about by a number of factors, among which the following stand out prominently:

Shrinkage in the volume of world textile trade, due to development of indigenous industry in countries which were formerly importing cloth from outside.

Emergence of Communist countries as suppliers of piecegoods to countries which were normally drawing supplies from the free world.

Competition from cheap rayon goods manufactured in Japan and other countries.

Withdrawal of preferential or privileged treatment hitherto enjoyed by India in certain territories.

Barter arrangements entered into by some of these territories with other countries whereby the latter are assured of fixed quotas which have worked to the detriment of India.

Upward revision in export duties on goods of Indian origin in certain territories.

The aforesaid developments, though they are disquieting from India's point of view, would not have mattered so much if only the powers-that-be in this country had, instead of following a halting and half-hearted textile policy based on ideological considerations, adopted a rational approach to the problem of modernisation and rationalisation of the industry. How else can one explain such policies as those governing labour conditions, installation of automatic looms, continued retention of control—quantitative and qualitative—on production of certain varieties of cloth, and heavy tax burden (direct and indirect)? It is these factors, and not mismanagement, which have largely impaired the competitive capacity of the Indian mill industry. Surely, foreign markets, as the Indian Cotton Mills' Federation rightly points out in its reply to Mr. Shastri's statement, cannot be expected to buy goods of indifferent quality when better ones are so readily available from other competing countries.

The Federation is certainly justified in saying that, besides the disability caused by outmoded equipment in many cotton mills, there has been a sharp increase in the cost of production due to the rise in the price of raw material and labour. The average amount of dearness allowance (for 26 working days in a month) paid to a worker in Bombay City in April this year was Rs. 83.75, as against the average of Rs. 81.58 for the whole of 1958, Rs. 73.99 for 1957, Rs. 68.75 for 1956 and Rs. 64.75 for 1955. Without much regard for mounting costs, the Government, according to the Federation, has saddled the industry with employees' provident fund, State insurance, retrenchment and lay-off compensation, leave with wages, etc. In fact, the lowest paid *mazdoor* in a mill in Bombay or Ahmedabad receives a cash pay of Rs. 110 per month *plus* bonus and other benefits, making a total of over Rs. 135, which is more than what many clerks in Government service receive. Again, during the last two years, the industry has had to face the difficulty arising from a sharp increase in the price of Indian cotton in the face of a substantial decline in the price of foreign cotton available to India's competitors.

Viewed thus, there is no exaggeration whatever in the remark of the Federation that the industry has now reached a stage when its production costs are among the highest in the world. The Minister, as it avers, ought to have known that the main reason for the fall in exports is the large disparity between the cost and selling price of cloth for export which is mainly produced out of Indian cotton. To quote it: "The Committee regret that he (Mr. Shastri) should have chosen instead to attribute the fall in exports to what he has been pleased to call 'unsatisfactory management' in the textile industry. It is quite likely that, as in all other industries both in the public and private sectors, a few of the 511 units in the cotton mill industry suffer from mismanagement. The Committee, however, fail to understand how this has any bearing on the fall in exports and how it can furnish any justification for the Minister's specious generalisation."

Considering that competition in world textile trade is becoming keener and keener every day, there is supreme urgency for adopting energetic steps designed to enable the mill industry to compete on equal terms with its rivals in foreign markets. The Federation has done well to reiterate the industry's long-neglected appeal to Government to help it in modernising its equipment and reducing its costs. It is only such help and encouragement that would bring definite results and not "cavalier criticism" as the one made by Mr. Shastri.

Incidentally, a point which is often conveniently ignored by Ministers and officials is that the existence of some badly managed mills is the result of inefficiency and serious lapses on the part of the Government. It is common knowledge that the Government has enormous powers under various Acts to eliminate the black sheep and to throw out those who are mismanaging the mills. Why has it not exercised these powers promptly and thoroughly? It has conducted several investigations and enquiries, but how many black sheep have been brought to book and how many bad managements asked to quit? Again, who helped Mr. Mundhra in his nefarious game of building up an industrial empire, including quite a few cotton mills? Why was so much leniency shown to him, until the game was called off by a member of Parliament?

OIL EXPLORATION

The search for oil in this country has so far been more vigorous than fruitful. Nor is this entirely unexpected, for the risk element in oil exploration is known to be high. This should serve to emphasise the need for intensifying the drive for the search for that elusive commodity. The chief economic justification for an intensified exploration is that India has to import nearly 90 per cent. of its oil requirements, estimated at some six million tons. With the increase in living standards and progress of industrialisation, oil requirements will go up. They are now going up at 7 per cent. each year and, by 1965, they could swell to 10 million tons. And, if the gap between supply and demand is to be bridged, more oil should be found, the only alternative being heavy foreign exchange expenditure on imported oil.

Apart from the oilfields in Assam, the only region where encouraging evidence of oil has been found is Cambay. But it is still to be established that the oil in the region is commercially profitable. Besides Cambay, the Government is carrying on its search in several other centres. In the private sector, the Standard-Vacuum Oil Company (Stanvac) is engaged in the search for oil in the Bengal basin. Clearly, more effort is needed and more extensive search operations conducted before oil is located and exploited. In this connection, Mr. O. R. Underhill, Manager, Standard-Vacuum Oil Company, Calcutta, rightly suggested that, if large quantities of oil were to be found in a short time, exploration must be carried out intensively and by many separate and independent organisations fully equipped with funds, experience and knowledge. Addressing the Rotary Club at Calcutta, he said that there were now two organisations actively searching for oil in India: Stanvac and the Union Government. The Assam Oil Company, as far as he knew, was no longer searching for new fields. This was perhaps due to the fact that it had not been given the required licences. Mr. Underhill averred that, if the terms were made more attractive, "many internationally known private organisations would join in the search for oil in India to help close the existing gap and simultaneously to save the country a large amount of foreign exchange." He rightly held that the terms must be made sufficiently attractive to make the "tremendous gamble" worthwhile. Surely, the search for oil is economically too important to be sacrificed at the altar of ultra-nationalism or ideological considerations which can often be traced to vague fears of foreign capital. These fears are unworthy of a country of India's international status.

TOURISM

It is not known what precisely were the compulsions behind the drawing up of a programme by the Tourist Development Council, the highest advisory body on tourism, at its three-day session at Mount Abu which, it is said, would give "a new orientation" to tourism in this country. It is also not clear as to what exactly had happened to make the principles followed in formulating schemes under the second Plan "outdated and invalid." If what was meant was only greater emphasis on the development of home tourism, which the Council recommended, it was merely indulging in rhetoric. The recommendations of the Council on the principles to guide and plan for tourism in the third Five-year Plan are said to be directed to the creation of an integrated programme in which the promotion of tourism could be part of an overall development of the national economy. Does this mean that tourism, about whose potentialities as foreign exchange earners the authorities have been waxing eloquent all these years, was till now looked upon as something to be dealt with outside the framework of the Plan?

Be that as it may, what is required is not rhetorical flourishes nor built-in radicalism in policies, but earnest and vigorous effort to implement programmes and schemes already adopted. These observations are certainly not intended to discourage fresh thinking on ways of promoting tourism; nor should they be taken as adverse reflections on the recommendations of the Tourist Development Council many of which are sound in principle. They are only meant to underline the need for concrete action.

The Council has done well in stressing the need for adequate prerequisites for stimulating the flow of tourist traffic. For instance, there is the problem of finding suitable accommodation for the large number of foreigners, especially of the middle-income group, who may visit this country consequent on the advent of the jet age. It is a mistake to think that foreign tourists are all millionaires or that they are rich enough to be able to afford expensive luxuries. The growing trend in world tourist traffic is that more and more people of the middle-income group want to spend their holiday abroad. An indication of this is probably to be found in the increase in the number of tourists and the income from them. For instance, while the number of tourists visiting India has increased six-fold in the past eight years, the foreign exchange earned has increased hardly three-fold. This may be due to the fact that the *per capita* spending of tourists has been less and less year after year.

The Council's recommendations regarding financial investment in hotel industry deserve consideration. It welcomed the decision of the Union Ministry of Finance and the Planning Commission to give priority to the scheme to enable the hotel industry to obtain loans from the Industrial Finance Corporation and urged that steps should also be taken to enable those hotels which were not public limited companies and the requirements of which were limited and which, therefore, could not go to the I.F.C. for loans to get loans from State Financial Corporations.

The Council also made certain recommendations regarding the steps to be taken to safeguard tourists against anti-social traders, who, by their dishonest practices, brought a bad name to the country. It was decided that a list of approved shops should be prepared on the basis of contracts involving deposit of security and providing for penalty in cash for breach of conditions on which approval was given. One of these conditions should be, it was suggested, that shops should display price tags on all goods. It was also suggested that, for the time being, the scheme should be started on an experimental basis and should apply to shops dealing in certain selected categories of goods.

The Council has rightly emphasised the need for removing unnecessary difficulties in the way of foreign tourists getting liquor permits. Its suggestions that Indian missions and tourist offices abroad should be allowed to issue permits to intending tourists and that permits issued by one State Government should be made valid in another State on a reciprocal basis are worth serious consideration. Surely, we should not allow our welfare fads to irritate and inconvenience foreign tourists who visit this country not to undergo a practical course in personal morals but to enjoy their holiday.

The emphasis laid by the Council on the development of home tourism is appropriate. As it points out, home tourism will not merely foster better sense of unity among the people of different regions of the country but also stimulate the development of the internal economy. Even more important is its indirect assistance to foreign tourism. Inadequacy of internal transport service, as the Council recognised, is a great impediment to home tourism. The Council, therefore, felt that an integrated plan should be prepared not only for tourist publicity but also for the development of tourist facilities, especially expansion of tourist accommodation facilities and internal transport service. It suggested that the railway, civil aviation and road transport authorities should take into account the requirements of the tourist industry in their plans. Expansion of railways and civil aviation capacity and removal of curbs on road transport, the Council felt, were essential elements in the development of tourism. Of the suggestions made by the Council in this regard, the most important is that a single-point tax should replace the multi-point tax on motor vehicles.

PRODUCTIVITY

Dr. P. S. Lokanathan, Director-General of the National Productivity Council, was surely not making an apology for the vigorous publicity campaign now being undertaken to promote productivity consciousness in this country, when he observed that the lack of proper attitude was the basic factor that hampered productivity in India. Inaugurating a two-day symposium on productivity the other day at Bangalore, Dr. Lokanathan pointed out that, if there were the proper climate and the urge towards higher productivity, there would be no difficulty in finding out the techniques for achieving it.

Apart from underlining the importance of higher productivity for reaching the social and economic goals set before the country, some of Dr. Lokanathan's observations should also serve to dispel the suspicion and distrust with which the attempts for ensuring higher productivity is looked upon. The fear among the workers that increased productivity meant unemployment, he pointed out, was groundless, especially in the context of the large Plan investments.

The learned Doctor was right in maintaining that the responsibility for increasing productivity rested, to a large extent, on the management, for, only when the management was sound would labour productivity increase. Co-operation of labour, as he pointed out, is essential for increasing productivity. In order to ensure this, it is important that workers should be convinced that they would have a fair share in the benefits of productivity. They should also be assured that higher productivity would not involve bigger workloads for them, without commensurate increase in benefits.

Incentives have an important role to play in increasing productivity and Dr. Lokanathan did well to point out the relationship between the two and the role played by incentives in obtaining high productivity in the U.S.A. and the U.S.S.R. Increases as a result of incentives to productivity, he added, were due to motivations, desires and feelings on the part of workers and others. In the Soviet Union, with a communist economy, strong motivations such as more benefits for those who worked harder and fulfilled more than the targets laid for them were in operation. In the U.S.A., too, where there was a free enterprise economy, the fact that workers could increase their earnings by putting in more efforts was a strong motivating force.

In India, the absence of such strong motives and the tussle between the private and public sectors seem to have vitiated the entire picture. Dr. Lokanathan, therefore, warned that the sooner the distinction between the private and public sectors was abolished the better it would be in the interests of providing incentives for higher productivity. He did not rule out the role of non-monetary incentives in increasing productivity. On the other hand, according to him, good industrial relations, association of labour in management, etc., contributed to higher productivity by fostering a sense of belonging and partnership in workers.

OIL PIPELINE

The Commonwealth Relations Office in London has announced that the British Government will make available a sum of £3 million (Rs. 4 crores) to help finance the construction of a pipeline to transport crude oil from the Nahorkatya oilfields in Assam State to the two refineries to be set up in the public sector—one at Gauhati in Assam and the other at Barauni in Bihar. The payment of this sum will be in the form of a loan made by the U.K. Export Credit Guarantee Department, bearing a rate of interest equal to that at which the British Government borrows *plus* a management charge of ¼ per cent. The loan will supplement the credit of £20 million (about Rs. 26.7 crores) provided by the Burmah Oil Company Ltd., under the Oil India Limited Promotion Agreement. The total amount will be repayable over 15 years.

Although the U.K. Government's participation in providing the finance for the oil pipeline is limited to just £3 million, it is nevertheless considered to be quite significant. It is pointed out, for instance, that the participation will help Burmah Oil to raise the necessary funds. An additional advantage referred to is that at least £3 million worth of the pipes and other equipment needed will be purchased in Britain.

Oil India Limited, it will be recalled, was incorporated as a rupee company on 18th February 1959 in accordance with the agreement executed on 14th January 1958 by the Government of India with the Burmah Oil and its subsidiary, the Assam Oil Company, Ltd. The object of the Company is to undertake "the exploration and production of petroleum and crude oil (including natural gas) and for arranging for the construction in two stages and operation of a pipeline and other related facilities as the Company may consider necessary for the transport of the crude oil from the oilfields to the two refineries." The Government of India's participation in this joint venture is to the extent of 33⅓ per cent., the initial authorised capital of the Company being Rs. 50 crores.

Of the two refineries, the capacity of the Barauni refinery (Bihar) will be a crude throughput of about 2 million tons per annum and that of Gauhati refinery (Assam) is 750 000 tons. The Rumanian Government has offered a long-term credit of Rs. 5.2 crores, being the total value (estimated) of the supplies to be made and technical and other services to be rendered by it for the Barauni refinery. The Gauhati refinery will be set up with Soviet aid. The two refineries are expected to be completed not until 1961 and 1962-63, respectively. The powers to control and manage the refineries vest with the India Refineries Limited, a wholly Government-owned and managed Company, set up with an authorised capital of Rs. 30 crores.

OUTLOOK FOR TEA INDUSTRY

MAIN HOPE LIES IN RAISING HOME DEMAND

THE marketing season 1959-60 for North-east Indian tea has begun on a subdued note. The demand has been only moderate. There have been heavy withdrawals and prices of all grades are below valuations. Though it is too early to say anything worthwhile on the probable trend of prices during the rest of the season, it is significant to note that, contrary to general expectations, the production in North-east India during the first two months of the season (April and May) has dropped below that in the corresponding period of 1958, that is, from 55.1 million lbs. to 53.9 million lbs. This is solely accounted for by the output in May, when it declined from 38.7 million lbs. to 34.1 million lbs., thus more than offsetting the rise of 3.4 million lbs. noted in April. This setback in North-east Indian output is attributed to unfavourable weather conditions. This has also affected the quality of the tea. Latest reports from growing areas, however, indicate that the prospects have improved. It is quite possible that this shortfall in production may be made good in the current month.

The decline in production is not confined to North-east India alone. It is stated that the output of the major tea producing countries up to the end of May has fallen by 18.2 million lbs. below that in the corresponding period of 1958. This is in contrast to the small surplus of 1.9 million lbs. disclosed at the end of April. The drought conditions in Ceylon and South India are said to be largely responsible for checking the supply position. In April (the latest month for which break-up figures for these two producing areas are available), Ceylon produced no more than 39.4 million lbs., as against 47 million lbs. in the corresponding month of 1958, bringing the aggregate production in the first four months of the year to 139.6 million lbs., representing a fall of 10 million lbs. over the year. South Indian output up to the end of April shows a drastic decline from 53.15 million lbs. to 39.13 million lbs. The production in British East Africa in the first three months of the year is, however, up by 4.6 million lbs., at 24.7 million lbs.

While the actual production figures of major producers of tea so far indicate a setback, the U.S. Department of Agriculture has forecast an excess of 14 million lbs. in output during the current year over that for 1958. World Production last year, according to it, was 1,654 million lbs., an increase of 4.5 per cent. over that in 1957. As already stated, it is too early to foresee the outlook for the industry during the current year, as the output of tea is not the only factor which shapes the fortunes of the industry. There are so many other factors, such as quality of output, prices fetched at auctions, which in turn depend on production as well as quality, the gap between the cost of production and prices realised at auctions, the trend of consumption, competition from other producing countries and from other beverages, etc.

It is gratifying to note from Messrs. J. Thomas and Co.'s annual report on the Calcutta Tea Market for the season 1958-59 that India, as a whole, is now producing better manufactured tea than ever before. However, the prices Indian tea is able to command in the world markets, especially for the commoner descriptions, in competition with other producing countries, are, in many cases, too low to cover even the cost of production. Thus, Messrs. Thomas and Co. observe:

"Whereas, only as recently as in 1953, many estates in the Dooars and Cachar, and probably in some parts of Assam Valley, were able to land their tea in Calcutta at about Re. 1 per lb., today any tea selling below Re. 1.55 or Re. 1.60 is almost certainly incurring a loss. Although the heavy taxation imposed on Indian tea, which has been largely responsible for increasing the production costs so substantially, may bring ample revenue to the Central and State Governments, there is a very real danger that these taxes may be strangling the country's consumption on which the whole future of the Indian tea industry must depend."

A price of less than Re. 1.50 per lb. for common tea, no doubt, offers an incentive for increased internal consumption. If the price stays at that level for long, the internal consumption will go up markedly. Experience has proved that during the years when the price of common tea ruled below Re. 1.50, the consumption has risen by 20 to 30 million lbs. In fact, tea drinking in the countries of production continues to rise and in India alone the consumption is said to have expanded by nearly 50 million lbs. over the past three years. In Pakistan, too, the internal demand for tea is rising and, if this trend is maintained in the years to come, it will go a long way towards absorbing the increase in production. The long-term outlook for tea, therefore, depends to a large extent on the internal consumption of producing countries, particularly India. In this respect, India has the greatest advantage over its rival producers, with the exception, perhaps, of Africa and China. It is, therefore, necessary to foster and encourage by all possible means internal consumption. Emphasising this point, Messrs. Thomas and Co. say:

"To increase consumption, a greater amount of good quality teas at reasonable prices must be made available, but this can only be done at present at a loss to the producers. It is the ability to afford good tea that increases the public's desire to drink more and a strict control of the quality of goods sold *ex*-factory in the same manner as in the Calcutta market must, therefore, be ensured. Inferior and residual tea sold *ex*-garden through unreliable agents only too often finds its way by the back door to the Indian consumer, sometimes in an adulterated condition, which takes potential demand away from the well-made, though more expensive, teas."

Although the results of the 1958 season have brought little profit to producers of plain tea, prices have on the whole been fairly stable. All the old season's tea is said to have been absorbed and there are no stocks of tea left unsold, at any rate, on the Calcutta market. Another encouraging trend is the steady decline in the stocks in the U.K. While a few weeks ago, no one was able to foresee whether tea prices would even be maintained at the current levels during the 1959 season, a sense of optimism would appear to have come to prevail and traders anticipate "a good demand in the coming months for all teas at reasonably satisfactory prices to the producers."

In assessing the long-term prospects for Indian tea, the main bearish factor which has to be taken into account is the increasing competition from other countries. Exports from East Africa continue to rise, the shipments to Britain having gone up from 49.6 million lbs. in 1957 to 51.9 million lbs. in 1958. It is also stated that the expansion of area under tea in East Africa has been rising at the rate of 4,000 acres per annum, bringing the total area at the end of 1958 to 100,000 acres. It is estimated that Kenya and Tanganyika between them may outpace South India in a few years' time as the planted acres come into bearing. The African

India is the giant among the countries manufacturing jute products. With a capital of about Rs. 100 crores and employing more than 3,50,000 workers, our jute industry accounts for over 50% of the world's total production. This 'golden fibre'—our best dollar earner—brings in annually Rs. 125 crores in foreign exchange. Playing a significant part in the development of this major industry is Texmaco, pioneers in many fields of engineering in India. Aided by the world's best know-how of its technical collaborators, Fairbairn Lawson Combe Barbour Ltd., of England, Texmaco, today, is equipped to manufacture and supply the complete range of jute mill machinery, made to international standards.

TURNING THE CORNER?

(From Our Own Correspondent)

LONDON, 12*th June*

THE Federation of British Industries has just published the results of their four-monthly questionnaire to about 700 industrial firms typical of the whole range of British industry. This is the questionnaire which was evolved at the beginning of last year to get a direct impression from business men of how they were doing, in the belief that such an impression would more accurately convey the true state of the pattern than an attempt to do figure sums on unreliable data.

LONDON LETTER

Thus, the leading question is as simple as "Do you feel more or less optimistic about the general business situation than you did four months ago?" Now, four months ago, half the firms said that they felt exactly the same about things as previously, about a third said they felt better about things, and 15 per cent. said they did not feel as good. This time only about a third of the firms registered no change and practically 60 per cent. feel more optimistic and only 4 per cent. less optimistic than four months ago. This feeling of optimism is too broadly based, too positive, to do other than indicate a very real trend in the progress of the economy.

And, when it comes to output, 46 per cent. record their output *up* on what it was in February and only 12 per cent. record it down. Similarly, half as many firms again report that their order books are lengthening as those reporting that they are shortening, and as many as half of all the firms say that new orders coming in are higher than they were in February. Equally on export orders, the ratio of firms reporting that export orders are higher is half as many again as those reporting that they are lower.

Work in progress is up and stocks of raw materials are down, while stocks of finished goods overall show little change. All these figures show not only a substantial improvement, but a change in *trend* as compared with four months ago, when, for instance, firms reporting improved export orders were fewer than those reporting a decline. We can expect that, as these trends continue, so the pressure on raw material stocks will increase and the repercussions on industrial recovery will become widespread.

On the labour side, a quarter of the firms report that their operatives are working more hours per week than four months ago and only 10 per cent. that they are working less. A similar sort of improvement is shown in the numbers employed. On the other hand, costs per unit of output are rising for more firms than they are falling for others, and, at the same time, selling prices are rising for only 9 per cent. of the firms and falling for 26 per cent. It is thus not surprising to find that profit margins are rising for only 11 per cent. of the firms and falling for four times as many. In short, business is improving but profits are declining.

The City Press appears to assume that the decline in profits is an unfortunate result of the rise in costs and the fall in selling prices, but is it not truer to assume that it is the cut in prices and in profit margins which has materially contributed to the improvement in business? The disquieting feature remains of costs per unit of output tending to rise. One must, nevertheless, note on this point that those close to industry are not too seriously concerned about that type of answer, on the same principle that farmers are never heard to say that the weather is good or that they are doing well. It is, perhaps, too much to hope that, at a time when pressure from unions to shorter hours and raise wages is either there or just round the corner, business firms should admit that their costs are going down or their profit margins are going up!

More reliable and more significant is the data on utilisation of capacity. Sixty per cent. of the firms questioned report that their level of output is below capacity, but that is a better proportion than the 79 per cent. that so reported in February. Moreover, of all the firms working below capacity, more reported that the unused capacity was going down than those that feared that it was going up. All in all, the picture is a good one and the main question mark overhanging business is whether this upward trend could be continuously maintained.—*All Rights Reserved.*

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1969. ISSUE PRICE Rs. 98·85 PER Rs. 100 (NOMINAL). REPAYABLE ON 1st JULY 1969

4 PER CENT. LOAN 1979. ISSUE PRICE Rs. 100 PER Rs. 100 (NOMINAL). REPAYABLE ON 1st JULY 1979

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 175 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 3 per cent. Second Victory Loan 1959-61 or 2½ per cent. Hyderabad Loan 1954-59, which will be accepted for conversion at the following rates :—

3 per cent. Second Victory Loan 1959-61	**Rs. 100 for Rs. 100 (Nominal).**
2½ per cent. Hyderabad Loan 1954-59	**Rs. 85·50 for Rs. 85·71 or O.S. Rs. 100 (Nominal).**

Interest will be paid on the 3 per cent. Second Victory Loan 1959-61 and 2½ per cent. Hyderabad Loan 1954-59 tendered for conversion upto 30th June 1959 inclusive.

The new bonds and loan will bear interest from 1st July 1959. Interest will be payable half-yearly on 1st January and 1st July.

Subscription lists will open on 1st July 1959 and close on 3rd July 1959 or earlier without notice.

Applications for the bonds and loan will be received at :—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(b) Branches of the State Bank of India at other places in India, except at the places mentioned in (c) and (d) below;

(c) Branches of the State Bank of Hyderabad conducting Government business and those at Nagarjunasagar and Sailu; and

(d) Branches of the Bank of Mysore Ltd., in the State of Mysore except at Bangalore.

For full particulars apply to any of these offices or branches or treasuries.

SOME THOUGHTS ON INDUSTRIAL BANKING

By J. M. Lobo Prabhu, I.C.S. (Retired)

[Publication of contributed articles does not necessarily mean that the Editor agrees with, or holds himself responsible for, the views expressed by the authors. In the case of this article, in particular, we wish to make it clear that we do not agree with some of the author's suggestions, especially with his views on Government loans. We, however, endorse his conclusion on the Government's economic policies.—ED.]

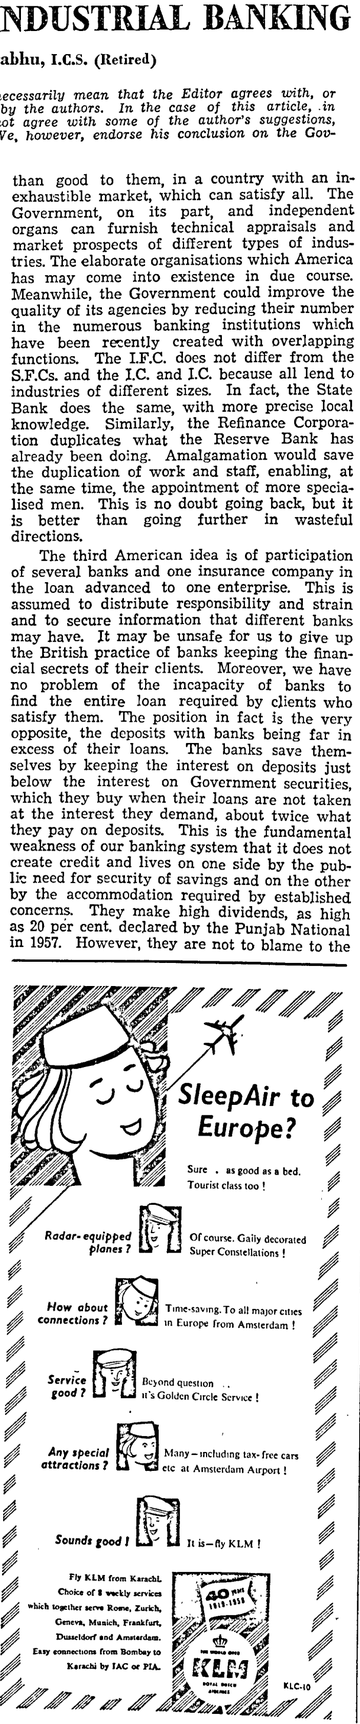
THE recent seminar on Industrial Banking, at which sixteen Indian banking experts who had toured the U.S.A. last year to study the American system participated, has contributed little to change the stagnant condition of cur industry and banking. From the sixteen papers read, four ideas emerged. First, banks should buy bonds and shares of first class companies. There is nothing in law to prevent them from doing this except the proportion of Government securities and cash to total deposits fixed by the Reserve Bank of India Act. If shares are allowed to replace securities, investment in Government loans will be seriously affected. This development may not be unwelcome, if Government can obtain credit, not through securities which bear interest but through printed money which does not. This is a large question which may require immediate examination, as the Public Debt of the Government of India is past the Rs. 4,300-crore mark and that of the States, the Rs. 1,800-crore mark. The Reserve Bank and the State Bank hold about one-fourth of these securities and the rest are held by Scheduled banks, the Life Insurance Corporation and individuals to whom printed currency can represent the same security. The idea of loans was to absorb new currency and hold down inflation. A new and better curb on inflation has just been created in the power to acquire stocks of grain, which by holding the food line, eliminates what has been the most inflationary factor. This is an opportunity to reduce public debt on the one hand and to stimulate investment, on the other. There are two possible courses. The first is for the Government to purchase its own securities with printed money, which the public must either save, in which case Government gets credit without interest or must invest in industries, or spend on consumer goods, which will increase capital and employment on the one hand and consumption and welfare, on the other. This may appear like over-simplification but cannot be controverted in essentials. The process of liquidation, of course, has to be gradual to avoid pyschological reactions. The other course is to offer investment to the public in nationalised industries, in at least half of the total of Rs. 4,000 crores of interest yielding assets. This will not only secure money for the third Plan but by introducing private interest make the nationalised enterprises contribute more than the Rs. 37 crores they contributed in 1958-59. Thus, fundamental changes are possible in the public finance of India and these have to be considered before the small question of allowing banks to invest in industrial securities.

The second American idea discussed was of relating bank advances to the prospects and not the assets of an enterprise. In discussion, it was found that there was no difference between our banks and the American banks in respect of the security sought, because a loan everywhere for industrial purposes creates assets which furnish the collateral necessary. The real difference which was missed was that, on the basis of these assets, American banks are prepared to back new processes, while our banks stick to tried lines. The speculative element accepted by American banks is verified by an elaborate structure of institutions and procedures, which we do not have. An American banker was described as "about one-fifth accountant, two-fifths lawyer, three-fifths political economist and four-fifths gentleman and scholar—total ten-fifths—double size; any smaller person may be a pawn-broker or promoter, not a banker." The question is whether we have either the men or the industries for such enterprise banking. Barring a few exceptions, our bankers are never better than accountants and our industries are only enterprising if they are backed by Government or foreign associates. Bankers in Government-owned banks are mere cogs in a giant wheel, while those in private banks are at the mercy of their Directors and shareholders. The problem is of enlarging their responsibilities, on the one hand, and of changing the perspectives of their employers, on the other. It is the task of industries, individually or jointly, to establish their own prospects. The secrecy which is maintained by most enterprises does more harm than good to them, in a country with an inexhaustible market, which can satisfy all. The Government, on its part, and independent organs can furnish technical appraisals and market prospects of different types of industries. The elaborate organisations which America has may come into existence in due course. Meanwhile, the Government could improve the quality of its agencies by reducing their number in the numerous banking institutions which have been recently created with overlapping functions. The I.F.C. does not differ from the S.F.Cs. and the I.C. and I.C. because all lend to industries of different sizes. In fact, the State Bank does the same, with more precise local knowledge. Similarly, the Refinance Corporation duplicates what the Reserve Bank has already been doing. Amalgamation would save the duplication of work and staff, enabling, at the same time, the appointment of more specialised men. This is no doubt going back, but it is better than going further in wasteful directions.

The third American idea is of participation of several banks and one insurance company in the loan advanced to one enterprise. This is assumed to distribute responsibility and strain and to secure information that different banks may have. It may be unsafe for us to give up the British practice of banks keeping the financial secrets of their clients. Moreover, we have no problem of the incapacity of banks to find the entire loan required by clients who satisfy them. The position in fact is the very opposite, the deposits with banks being far in excess of their loans. The banks save themselves by keeping the interest on deposits just below the interest on Government securities, which they buy when their loans are not taken at the interest they demand, about twice what they pay on deposits. This is the fundamental weakness of our banking system that it does not create credit and lives on one side by the public need for security of savings and on the other by the accommodation required by established concerns. They make high dividends, as high as 20 per cent. declared by the Punjab National in 1957. However, they are not to blame to the extent the Government itself has destroyed the industrial potential by labour legislation, taxation and nationalisation and State trading. The Government has to retrace its policies by relating wages to productivity and taxation to the expansion of industry. Nationalisation disengages capital and labour and places a burden on the Government, which it can discharge only with more taxation which causes further regression. The Reserve Bank and the Tariff Commission have in the circumstances the responsibility to make the Government conscious of the attritive effect of their policies on the economy, in general, and on banking, in particular.

The fourth idea that was discussed was that Government should underwrite loans, in order to give banks more confidence in new enterprises. This seems unnecessary, when Government institutions have themselves funds which are not being taken. In any case, the underwriting will add delay, to save which loans are sought from banks and not from the Government.

Our bankers have not much to learn from the U.S.A. but our Government has to learn a great deal. Banking is a reflection of trade and industry, which depend on the purchasing power of the people. Taxes and loans impound purchasing power in consequence of which, production is priced down and reduced. Since 1953, the revenue of the Central Government has been raised from Rs. 394 crores to Rs. 720 crores, while the National Income has only gone up from Rs. 10,030 crores to Rs. 10,830 crores. During the same period, the Public Debt in India has risen from Rs. 2 899 crores to Rs. 4,800 crores. This is apart from the taxes and loans of the States which have also risen. There is no doubt that the Government has taken from the public far more than the increase in earnings, which is inevitably at the cost of industry and trade. To the extent that the increased taxes and loans have been applied to the nationalisation of trade and industry, Government has also taken away employment of both labour and private capital. The return on nationalised industries, barely one per cent., cannot compare with that on private enterprise, nor is it self-generative. The fall in revenues, already evident in customs and income taxes and railway earnings, will necessitate increased taxation, thus starting a vicious circle, the end of which can only be economic collapse. The Government has, therefore, to defreeze its socialistic ideas, if the people are not to lose even what little they have. There should be a complete let up on loans, excessive taxation and nationalisation, a beginning being made to reintroduce private partnership in State enterprises. The communists may not like this, but is it not true that no one wants the country to be run by them? To the extent to which industry and trade are warmed back to life, banking will play a more progressive part.



LOWERING OF BANK CREDIT

The Governor of the Reserve Bank, Mr. H. V. R. Iengar, has called on banks in the country to bring about a "significant reduction" of credit during the current slack season. In a communication to all Scheduled banks issued on Monday this week, he says that, on a review of the relevant figures and taking into account the need for some net expansion to cater to the requirements of an expanding economy, he considers that during the current slack season a contraction "at least of Rs. 100 crores" will be desirable. The reduction in the last slack season was Rs. 118 crores. The communication draws attention to the fact that the net expansion of bank credit in the 1958-59 busy season has been "the highest on record," despite the Reserve Bank Governor's communication to banks last February in which he drew their attention to the abnormally high rate of credit expansion this season. Thus, the credit expansion in the busy season (November-April) for the last four years were: 1955-56 (Rs. 165 crores); 1956-57 (Rs. 148 crores); 1957-58 (Rs. 89 crores) and 1958-59 (Rs. 182 crores).

It adds that the expansion of credit has to be considered, in particular, against the trend in commodity prices. "Notwithstanding the substantial increase in food production in the year 1958-59, foodgrain prices, after going down for some time, have shown a tendency to rise again. The wholesale index of food prices now is about 8 per cent. higher than at this time last year and the general wholesale index some 5½ per cent. higher." To the extent credit has been expanded for industrial production (including maintenance of stocks of raw material at reasonable levels) it is fully justified. But it does not appear from such information as is available to the Reserve Bank that the expansion that has taken place can be fully justified on these grounds. The Governor considers that the contraction of Rs. 100 crores in bank credit should be feasible, without any particular strain, either on the banks or their constituents. This, according to him, still leaves the level of Scheduled bank credit at the end of the slack season more than ten per cent. above the level a year earlier. "This reduction", he adds, "would enable banks to meet their credit requirements of the next busy season without much strain and without large-scale resort to the Reserve Bank."

The Field Engineer

Long before the oil drillers move in to start a new well, the Field Engineer is on the scene. One of his first tasks is to build roads and bridges to the new location so that the mass of drilling equipment and machinery can be brought safely to the site. He surveys the land for a suitable plot to take the derrick foundations, marks the route for pipe lines, and arranges water supplies, electricity and housing for the workers and the drilling operations. After his bulldozers and excavators have finally rolled away (perhaps to start all over again at a new location), he supervises the erection of the drilling engines, pumps, tankage and piping, and maintains them in first-class operating order during the period of drilling. For the Field Engineer is concerned with all engineering aspects of the oil search outside the drilling operation itself.
The men who do this work possess a great deal of varied engineering experience, not only in oilfields but in general practice too. It is a long-established policy of the Assam Oil Company to select and train Indian men for specialised work of this nature; a policy that works well—for the men, for the company and for India.

MARKETING PLANS FOR COTTON

U.S. AND MEXICO JOINTLY TO SPONSOR STUDY GROUP

A BRIEF reference was made in one of our previous issues (*vide Commerce* dated 6th June 1959, page 935) to the statement of Mr. Marvin McClain, U.S. Assistant Secretary for Agriculture, that his Government was anxious to implement its cotton policies in such a manner as to avoid injury to the traditional competitive position of friendly countries and to avoid disruption of world market prices. Reference was also made to his assurance that the U.S. would consult, from time to time, individual exporting countries on general policy governing its future export programmes which could affect their economies. Commenting on these we held that these assurances should be taken as sufficient guarantee that the U.S. would not take any measures which would disrupt world markets and endanger the economic stability of other cotton exporting countries. It is, indeed, heartening to hear now that the U.S. has agreed to join Mexico in sponsoring a new cotton study group comprising twelve countries to exchange information about marketing plans. The other members of the group are Brazil, El Salvador, Greece, Guatemala, Nicaragua, Pakistan, Peru, Sudan, Turkey and the U.A.R. It will be seen that almost all the important cctton exporting countries in the free world have been included in the group. India's omission will no doubt be noted with regret in this country, but, as its exports are small, there is no reason for complaint.

Mexico deserves credit not only for inducing the U.S. to co-operate with it in sponsoring the study group but also for vigorously advocating measures to ensure stability in cotton prices. It was largely due to the initiative of cotton circles in Mexico that the Inter-American Cotton Federation (F.I.D.A.) was established in March last in Mexico City, with the object of finding out, on a regional basis, the best ways of ensuring stable prices for cotton in international markets. The founding members of this Federation are: Columbia, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, Nicaragua and Peru. Other Latin American countries are also expected to join it.

At the second meeting of the Board of Directors of the F.I.D.A. held in Mexico City in April last under the chairmanship of Mr. Julian Rodriguez Adame, Mexican Secretary of Agriculture, the delegates of the eight Latin American countries unanimously agreed to join their efforts in defence of the interest of cotton farmers in their respective countries, the economy of which had been "seriously endangered by the instability of international cotton prices." In the opinion of these delegates, both producing and consuming countries would benefit from the elimination of the "disorder reigning since 1957 in the cotton trade." The continuation of the present conditions, according to them, constituted "a grave danger for many Latin American countries facing a possibility of further sizable decline in their revenues from cotton exports."

International Price Agreement

In the aforesaid meeting, it was agreed in principle that the Inter-American Cotton Federation should press for negotiating an international cotton stabilisation agreement based on export quotas and minimum prices following the general lines of the International Sugar Agreement. The Federation held that minimum export prices should be set at such levels as would protect the production cost of Latin American cotton growers and guarantee reasonable profits commensurate with their efforts.

The Federation cited the conclusions of a study of world cotton prospects recently made by the U.N. Economic Commission for Latin America entitled *"Recent Tendencies and Probable Evolution of the World Cotton Market, 1946-1965"* to strengthen the argument of Latin American cotton circles for an international cotton agreement. The study revealed that the present supply-demand disequilibrium in cotton markets is due both to the expansion of cotton output in the less developed regions of the world in the post-war period and to the relative stagnation of cotton consumption in the more developed countries as a consequence partly of substitution of artificial fibres for cotton. The study estimates that, during the coming decade, world supply and demand for cotton will grow at a rate between 2.25 and 2.75 per cent. annually. It makes it clear that no stability in world cotton markets can be achieved without joint action on the part of producing and consuming nations. In case such co-operation were to be successfully established, cotton prices during the next decade would fluctuate between 24 and 30 cents per lb. Otherwise, the study maintains, a further serious fall in cotton prices would occur to the detriment of all producing countries.

Institute To Study Cotton Problems

It is gratifying to note that the Federation is not satisfied with taking a negative attitude towards the cotton problems of its member countries. It does not rest content with criticising U.S. cotton policies or fighting for stability in prices but is itself initiating measures to solve the problems on a regional basis. It has, for instance, decided to establish without delay an Inter-American Cotton Institute which will devote itself to the task of improving cotton cultivation techniques in the region and of extending technical assistance to member countries.

The charter of the Federation provides for co-operation in all the aspects of cotton production and processing, especially in the elaboration of programmes aimed at increasing domestic consumption of that commodity in the member countries. The F.I.D.A. will provide the interested Governments and producer organisations with information and statistics on world cotton output and distribution, will study and encourage the opening of new international markets for cotton produced by the member countries, will investigate problems related to production costs, processing and manufacturing, storage, transport and cotton insurance systems in the region, will analyse marketing systems and techniques in use in international trade, import regulations, tariffs and other taxes restricting cotton trade.

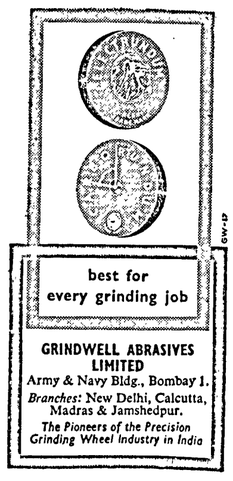
It has also been agreed to appoint a group of experts in Washington as a liaison body between the Federation and the U.S. Government and the International Cotton Advisory Committee.

COTTON INDUSTRY IN PAKISTAN

Judging from the trend of consumption of cotton by mills in Pakistan, the cotton textile industry in that country would appear to be growing rapidly. In the past ten years, cotton consumption by Pakistan mills has increased tremendously. In 1949, for instance, mills in Pakistan consumed approximately 70,967 bales (of 400 lbs). The rate of consumption has been steadily advancing from year to year since then. Total consumption aggregated 146,534 bales in 1951, 184,000 bales in 1952, 323,444 bales in 1953. It almost doubled in 1954 to 601,391 bales, as compared with the previous year, rising still higher to 861,679 bales in 1955 and further to 941,938 bales in 1957.

During the current season, namely 1958-59, mill purchases of cotton are estimated at no less than 1.1 million bales. It is noteworthy that while the industry in this country is languishing, and many units are closing down, Pakistan mills are working to their full capacity, thanks to encouraging domestic and foreign demand. Many mills concluded transactions for large quantities of yarn and cloth mostly with Far Eastern countries and also to some extent, with Western countries. The textile export incentive scheme was another helpful factor. Since the introduction of this scheme, roughly Rs. 8 crores worth of yarn and cloth have been sold abroad.

This growth in mill consumption of cotton, which is a reflection of the progress of the mill industry, has considerably changed the distribution pattern of Pakistan cotton. The total supply in 1958-59 is estimated at 1,655,000 bales comprising a crop of 1,475,000 bales and a carryover of 180,000 bales. Of this, mill purchases are expected to be 1,100,000 bales, export sales registered with the State Bank of Pakistan upto 15th May were 359,000 bales. These exclude 77,000 bales sold but not shipped at the beginning of the season. This leaves 119,000 bales available for export till 31st August 1959. As compared with this, the pattern in 1950 was: out of a total production of 1,290,000 bales, hardly 100,000 bales were consumed within the country the rest being exported. Thus, the dependence of Pakistan on export markets has been greatly minimised.



SOVIET COTTONS

A new variety of cotton is said to have been developed by Uzbek plant breeders for the Ferghana Valley, which is often subject to strong winds. It resists drought, develops well on salinated soils, and its fibre is 20 per cent. longer than the fibre of old varieties. Over the recent period the Uzbek plant breeders have created, it is claimed, more than 20 valuable varieties of cotton, the yields of which exceed those of the old ones and ripen one or two weeks earlier.

According to estimates by specialists, thanks to the application of new varieties and advanced agricultural methods, in 1964 Uzbekistan will produce 3.8 million tons of raw cotton—as much as the whole of the Soviet Union did in 1950.

Another report from U.S.S.R. says that Soviet scientists have succeeded in breeding several varieties of colour cotton, bearing different colours—green, light and dark blue, yellow and brown.

To obtain colour cotton it is possible to try and improve the wild-growing varieties, some of which have a weak colour. But as that will take too much time, Soviet scientists decided to obtain colour cotton from the ordinary cultivated varieties. It is noticed that pale coloured bolls appear sometimes on cotton bushes. Taking the plants which bore such bolls as initial material for their experiments Uzbek and Turkmen scientists carefully picked out the plants and crossed them in the course of many years. Within a few generations the colour of the fibre, barely noticeable at first, became stronger, and, ultimately, the results exceeded all expectations.

Recently the first fabrics were made of the new cotton varieties, which are said to have drawn favourable comments from experts.

ALLOCATION OF IMPORT QUOTA FOR WOOL

A new formula for the allocation of import quotas for wool tops, in place of the existing system based on consumption of imported raw material in different units during the year 1956-57, has been suggested by the Federation of Woollen Manufacturers of India. The formula lays down that 50 per cent. of the total ceiling for imported raw materials for the woollen industry should be distributed between worsted and woollen spindles in the ratio of 4:3. In working out the quota for woollen spindles, it is suggested that 25 per cent. of the installed capacity be reduced, because they are said to be fed on indigenous wool or shoddy, the other half of the ceiling being distributed on the basis of past certified consumption of imported raw materials in value as submitted by the industry, after due verification. The Federation has also pointed out that these allocations must be separate from import licences issued as export promotion incentives.

In view of the keen interest in Sudan cotton by the mills in India, the following table indicating the supply and distribution position of Sudan cotton for the current (1958-59) season is of topical importance:

(In bales of 420 lbs.)

	Supply	Offtake	Balance
Sakels:			
Old crop carryover—			
S.G.B.	60,517	60,517	..
Gash	6,823	6,823	..

PARLIAMENT DEBATES COTTON BILL

CONCERN OVER REGULATION ON PURCHASES OF JAPANESE CLOTH FOR RESHIPMENT

From A Special Correspondent

MANCHESTER, *9th June*

PARLIAMENTARY passions were not allowed to interfere unduly with the second reading of the Cotton Bill, which aims at providing legislation to cover the forthcoming reorganisation plans for the Lancashire cotton industry. Although the representatives of the opposing parties aired their customary objections to each other's policies, it was apparent that the general opinion was held that some chance must be given to the trade to adapt itself to changing conditions.

MANCHESTER LETTER

The debate did not provide the long-awaited information about the extent of compensation to be offered for redundant plant, but a remark by the President of the Board of Trade had a vital significance. "There are two technical points on compensation," he said. "We see no reason why these payments should attract income-tax. Among the matters which the two parties are considering is whether their agreement can be framed in such a way so as not to prejudice the entitlement to unemployment benefit of those concerned."

This comment apparently related to the compensation for displaced workers, but it equally may have an important bearing on the question of tax in relation to the compensation for redundant machinery. Upon the decision of the Treasury in this connection much depends, as sufficient incentive must be offered to ensure that enough machinery is scrapped to make the scheme effective.

It was also made perfectly clear during the debate that any plant registered as surplus under the proposals would be broken up as soon as possible. One speaker went so far as to suggest a clause being inserted in the Bill to the effect that any disused cotton mill which was not put to alternative industrial use within a brief and specified time should be demolished, the site cleared, and a new factory built.

Cotton Growing Trends

The effect of technical changes in demand on the growth of particular types of cotton fibre is mentioned in the Annual Report of the Empire Cotton Growing Corporation, commenting on the progressively narrowing differentials between output of short, long and extra-long staples. To some extent, the report says, this has been due to the price support given to American type cotton by the United States Government, but the introduction of drip-dry garments has also played a notable part.

Some of the territories formerly specialising in the production of fine long-stapled cotton, which provided the basis for the doubled yarn used in top quality shirtings, have now reconsidered their growing policy. The switch to American type cotton, now in greater demand, has made the Sudan and Aden, for example, look to the advisability of producing, at least on part of the area under cultivation, shorter staple types giving a higher yield.

In common with other crops, as quality improves yields tend to fall and the various Departments of Agriculture in Commonwealth countries which decide on the types to be grown must balance price and yield in making their decision. The report adds: "They are in the unenviable position of having to make their choice not on prices now being paid but on what they expect price levels to be in the future, as it takes many years to introduce new varieties over large areas."

New Crop Prospects

In general, Commonwealth cotton crops during the 1958-59 season are likely to show an increase on the previous twelve months. In Uganda, the acreage of 2,000,000 was the largest ever planted to cotton and the production estimate of 410,000 bales compares with a crop of 351,000 bales last season. Early indications in Tanganyika point to yet another record crop and seed issues in parts of Nyasaland were slightly higher than last season. In contrast, growing conditions in Nigeria affected the yield and the total export crop is unlikely to exceed 170,000 bales, a drop of 70,000 bales on the previous season's record.

Output of cotton in the Sudan suffered a severe setback in 1957-58. but, in the new season, prospects are considered much more favourable. The report indicates a good chance of setting up a fresh record. A smaller acreage, however, has been planted in Aden and a considerable reduction has occurred in the area under cultivation to cotton in the West Indies.

Price Rise

Terylene yarn prices have been raised by up to 9d. per lb.—the first change since October 1955. Users were notified by Imperial Chemical Industries Ltd. that 50 denier yarn was 6d. per lb. dearer at 150*d*. A rise of 9*d*. per lb. took place in 75 denier yarn at 136*d*. and 100 denier yarn was advanced 5*d*. to 140*d*. Recent strong demand for Terylene yarn has caused considerable difficulty in obtaining the finer deniers.

Japanese Cloth Imports

Lancashire importers of Japanese cloth are somewhat concerned at the regulations covering the purchase of such goods for reshipment abroad. The arrangements governing the use of Japanese cotton and rayon grey cloth for re-export after processing in the United Kingdom have been discussed by the Council of the Cotton and Rayon Merchants' Association.

At the meeting, it was stated that conditions had changed since the system was originally adopted when supplies in Lancashire were below the requirements of customers. The view was expressed that British exporters were being unduly handicapped by the restriction on the markets to which the finished cloth could be shipped. The Council decided to re-examine the whole question of "permitted markets" and that a report should be considered at a later date.

Faulty Cloth Complaints

Wide variations in the quality of grey cloth being delivered by some Lancashire manufacturers were reported at several recent meetings of the Grey Cloth Executive of the Cotton and Rayon Merchants' Association. It was stated that faulty fabrics had been received even in cases where the cloth was manufactured to clearly defined quality standards. The variations, it was felt, arose mainly from defects in the control of the process of weaving and to a lesser extent from inconsistency in cloth inspection.

During the discussions, the efforts of the Cotton Board's Productivity Centre were widely praised and it was felt that some manufacturers could gain appreciably from using the facilities offered by the Centre. Specialised operative training schemes for weaving mills had been introduced, enabling firms to train their labour force in the use of the most effective working methods. Considerable work had also been done in connection with the control of cloth quality including the systematic control of the inspection process.

Busy Share Market

During the past six months, there have been sharp and irregular movements in the prices quoted for a number of cotton textile shares on the Stock Exchanges. The general buoyancy of share markets has had its due effect on the value of such equities, but there have been individual instances where special circumstances have been at work.

The number of actual bids for control of public companies devoted to spinning, weaving and textile merchanting has been relatively few. but there have been constant rumours about such projects. This has led to sustained activity in the shares of some of the concerns quoted in the comparative list of prices shown below:

Company	1958	1959			1959	
	31st Dec.	High		Low	4th June	
	s. d.	*s.*	*d.*	*s. d.*	*s.*	*d.*
Tootal (£1)	25	35	6	24 6	31	6
Joshua Hoyle (2s.)	1	3	1¼	5½	3	1¼
Lancs. Cotton Corpn. (£1) ..	39	48	3	35	44	00

REHABILITATION OF RUBBER PLANTATIONS

U.P.A.S.I. SUBMITS A SCHEME

LAST week, a detailed reference was made to the rehabilitation plans of the rubber plantation industry and the progress of the one under implementation. It was pointed out therein that the Rubber Board's scheme has had poor response from the planters. A brief analysis was also made of the drawbacks of the scheme. As was stated last week, the U.P.A.S.I. has submitted a study note on the subject to the Government of India, in which it has given a detailed account of its own scheme for the consideration of the Government and the Rubber Board. The U.P.A.S.I. has also suggested some organisational and administrative changes in the management of the replanting scheme. It is now proposed to refer to these aspects of the U.P.A.S.I.'s note.

In drawing up a plan for replanting, two basic considerations are to be borne in mind. They are: (1) the country's rubber shortage should be made up within the shortest possible time; and (2) the productive efficiency of the industry should rise. In this connection, the U.P.A.S.I. points out that, both in volume and speed, the development programme should match that of the manufacturing industry. It, however, adds that "too prolonged a programme will defeat its own purpose; so will a volume of replacement too small for the purpose in view." The rate of demand growth is so far ahead of the rate of production that the 1957 replanting scheme of the Rubber Board is wholly inadequate. "Assuming that the target is achieved by 1967," the U.P.A.S.I. adds, "the replacement rate will fall short of needed replacement by at least 5,000 acres, assuming that only the least productive, and not the whole stand of unselected rubber, should be replaced."

It is estimated that, at the beginning of 1960, there would be about 220,000 acres of unselected seedling rubber, of which slightly below 56,000 acres belong to the 40-year and over group. At the rate of replanting 17,000 acres per annum, the entire 56,000 acres belonging to the 40-year old group would have been replanted by 1966, leaving over 100,000 acres of ordinary unselected stand. The U.P.A.S.I. has, therefore, suggested that a scheme of replanting at the rate of 17,000 acres per annum should be undertaken over a period of seven years 1960 to 1966. In short, the U.P.A.S.I. scheme compresses the replanting period to seven years by increasing the annual rate of replantation from 7,000 to 17,000 acres. It also envisages a programme of new planting at the rate of 10,000 acres per annum. The following table provides an estimate of the total tappable acreage, the area cut down for replanting each year and the total production from the remaining acreage on the basis of an estimated yield:

Year	Total tappable acreage	Area to be replanted: Progressive total	Actual tappable acreage	Yield per acre lbs.	Production (in tons)
1960 ..	173,600	17,000	156,600	350	24,469
1961 ..	176,650	34,000	148,969	370	24,607
1962 ..	207,250	51,000	151,967	390	26,459
1963 ..	234,350	68,000	158,350	410	28,984
1964 ..	262,000	85,000	159,184	430	30,558
1965 ..	280,000	102,000	167,184	450	33,586
1966 ..	300,000	119,000	175,184	480	37,539
1967 ..	310,000	..	192,184	520	44,614
1968 ..	320,000	..	209,184	560	52,296
1969 ..	330,000	..	226,184	600	60,585
1970 ..	340,000	..	243,184	700	73,995

The U.P.A.S.I. has included another table in its note giving an estimate of yield after 1966, when new planted and replanted acreage of the plan period comes into bearing, and yield on that basis up to 1970, in order to provide a prospective view of rubber output in India:

Year	New planting each year	New planting tappable acreage	Yield per acre lbs.	Production (in tons)	Production from old and new planted area (in tons)
1960 ..	10,000	..	..	..	..
1961 ..	10,000	..	..	..	..
1962 ..	10,000	..	..	..	..
1963 ..	10,000	..	..	..	..
1964 ..	10,000	..	..	..	..
1965 ..	10,000	..	..	..	..
1966 ..	10,000	..	..	..	..
1967 ..	..	10,000	520	2,321	46,935
1968 ..	..	10,000	560	5,000	57,296
1969 ..	..	10,000	600	8,036	68,621
1970 ..	..	10,000	700	12,500	88,495

It will thus be seen that, under the U.P.A.S.I. scheme, the output of rubber will increase by more than 50 per cent. from 24,469 tons in 1960 to 37,539 tons in 1966 when replanting is undertaken at the rate of 17,000 acres per annum and, with the coming into bearing of 10,000 acres of new planted area after 1966, the production in 1970 will be more than 3.5 times that in 1960.

The U.P.A.S.I. note emphasises that it is an essential part of its suggested scheme that replanting should be dealt with in an integrated manner with clear and precise arrangement governing resources, programme, administration and responsibility. In this connection, it observes:

"Section 98(2) of the Rubber Act provides for a Pool Fund which is to finance exclusively the rehabilitation of small growers. This distinction has not helped the small growers in any manner and goes against the purpose of wholesale replanting the whole industry is called upon to undertake. While the small grower's effort should be supported in every possible way, from the point of view of efficient administration, a single replanting fund should be created from the proceeds of the cess and the income from the difference in the price of imported rubber and internal controlled price. This scheme should contain two additional safeguards in the interest of achieving the fulfilment of the Plan and providing adequate weightage to the small grower. They are: (1) a ratio should be adopted in favour of small growers in the matter of apportioning the total permissible replanting acreage in the Plan, and (2) the scheme should have a time limit and the unutilised replanting permits should be redistributed among those who are willing to fulfil the extra quota in the year following the one for which permits were issued."

The following table gives the estimated income from the cess of Rs. 6.25 per 100 lbs. and the probable earning into the pool fund from imports at an average difference in price of Rs. 25 per 100 lbs:

Year	Crop Tons	Cess Lakhs of Rs.	Import Tons	Pool income Lakhs of Rs.
1960	24,469	34.26	25,000	1,40.00
1961	24,607	34.45	28,000	1,56.80
1962	26,459	37.04	32,000	1,79.20
1963	28,984	40.58	35,000	1,96.00
1964	30,558	42.78	38,000	2,12.80
1965	33,586	47.02	42,000	2,35.20
1966	37,539	52.55	45,000	2,52.00
		2,88.68		13,72 00

The total income from these two sources, without taking into account the unexpended balance in the pool fund and cess as on 1st January 1960, thus comes to Rs. 16.61 crores. The probable accumulation on the basis of estimated imports and production trends besides actuals up to 1960 is over Rs. 3 crores. The total foreseeable income from known and determinable sources is, therefore, Rs. 19.6 crores during the Rubber Plan period. In order to maintain the resources, application and identity clear, the U.P.A.S.I. suggests that the proceeds from the cess and imported rubber should be directly deposited into a replanting fund.

Having found the resources, the next question is: What is the quantum and method of assistance to be given to the growers, so as to evoke sufficient response from them to cut down their trees and wait for eight years for an income? Discussing this problem, the U.P.A.S.I. makes the following suggestion:

"From the experience of Malaya and Ceylon it is clear that, while the quantum of subsidy should be in favour of the small grower, the balance of advantage should not be so pronounced as to result in the fragmentation of otherwise economically viable estates. Secondly, since 60 per cent. of the low yielding acreage fall under small holdings, the replanting acreage allotted to the two categories of growers should provide some weightage to small growers. Thirdly, the organisation of extension service should be pronouncedly oriented towards the small grower problems.

"The financial assistance scheme envisages three categories of holdings and a differential scale sufficient to reduce the loss entailed by replanting but not enough to cause any violent movement from one category to another. The most reasonable rates within the means visible are:

Replanting Subsidy per acre

Instalments	*Growers with holdings of* *Upto 10 acres*	*Above 10 acres and below 100 acres*	*100 acres and above*
	Rs.	Rs.	Rs.
1st	400	400	400
2nd	200	200	200
3rd	100	75	50
4th	100	75	50
5th	100	75	50
6th	100	75	50
Total ..	1,000	900	800

"In 1957, about 36 per cent. of the total rubber acreage was in holdings of 10 acres and under. All investigations have pointed to the fact that a large proportion of this acreage is unsuitable for planting and should never have been placed under rubber. It is, however, in the best interests of the country and the industry that, where the rubber stands on unsuitable land and the grower is recommended to cut out the rubber and put that land under any other suitable crop, a subsidy to assist him to do so should be provided, as in Malaya and in Ceylon. For this purpose a subsidy of Rs. 500 per acre may be offered to any grower and the category that needs it most are the growers of holdings below 10 acres.

"The small growers of rubber in both Malaya and Ceylon are those with holdings of less than 100 acres but above 10 acres. The same qualification should be adopted in India. In that case, this class of holdings occupies at present 24 per cent. of the rubber acreage. Those owning 10 acres and less form 36 per cent. The remaining 40 per cent. is in holdings of 100 acres and above. The proportion of the three categories for the purpose of subsidy should be 4 : 2.5 : 3.5 for petty holdings (upto 10 acres), small holdings and estates, respectively. When the total applications are processed for assistance this ratio should be adopted. On a 17,000-acre replanting, it would mean:

6,800 acres	For petty holdings.
4,450 ,, ...	For small holdings.
5,750 ,, ...	For estates.
17,000 acres	

"The same ratio should apply in the case of assisted new planting. On the above basis, the financial outlay on replanting subsidy would be Rs. 10.78 crores or Rs. 1.54 crore per annum. It might be lower if unsuitable land now under rubber can be weeded out and growers induced to plant substitute crops at the rate of subsidy proposed for the purpose."

The United Planters' Association also suggests that subsidy should be given, though at a lower rate, for new planting. Its reasons are as follows:

"Licences for planting over 50,000 acres were issued during 1958 and from this it would appear that new planting would require no assistance. The utilisation of unsuitable land or planting material and the adoption of sub-standard cultivation cannot be prevented so long as the Board's role is confined to that of a licence-issuing authority. Growers planting newly must be helped in as many ways as possible to use high yielding planting material and to resort to sound cultivation and management. It would be a national waste by allowing the small cultivators to put their land under poor yielders which will sooner or later have to be uprooted and replanted, presumably under a subsidy scheme. Such waste can be avoided at a much smaller cost by providing a lower rate of subsidy for new planting. A small subsidy to growers using high yielding clones and saturation publicity to let all growers recognise the waste of putting land under poor yielders is, therefore, to be recommended. A rate of subsidy at Rs. 500 per acre in six instalments of Rs. 200, Rs. 100, and Rs. 50 for four years thereafter may be paid to those who seek to plant newly. Subsidy shall be paid only when the replanting authority is satisfied that the standards prescribed in the selection of planting material, land, and cultivation and management are followed."

It will be observed from the foregoing that the total subsidy to be given for replanting will come to Rs. 10.58 crores and that for new planting at the rate of 10 000 acres per annum for seven years Rs. 3.50 crores, making a total cost of Rs. 14.08 crores, as against a probable income of Rs. 19.5 crores to the rehabilitation fund.

For implementing a vigorous rehabilitation programme, the U.P.A.S.I. advocates a more powerful organisation, capable of acting with energy and determination until the task is fulfilled. This organisation, it adds, should be capable of carrying out its work without constant reference to other authorities on matters falling within its sphere and it should be fully in control of the entire development programme and its fund. In other words, it is of the view that the present Board is unsuited for carrying through a rapid development programme. It is, therefore, suggested that a separate development board, on the lines of that in Malaya and Ceylon, or in the alternative a development directorate, should be set up. The object of entrusting development programme to an almost independent department is to relieve the Rubber Board of its responsibility for conducting a campaign which is outside its principal preoccupation and competence. The main functions of the directorate outlined by the U.P.A.S.I. are:

(*a*) To provide direction and control to the effort; (*b*) to bring technical knowledge to the grower to the point of replanting and thereafter; (*c*) to speed his application for grants and other assistance to the point of action; (*d*) to maintain a careful check on the progress of work in the field and in the processing of application; (*e*) to collect full data on development for measurement of progress and public information; (*f*) to bring critical supplies more easily available to the grower; (*g*) to help and advise the grower and keep him informed of the total progress; and (*h*) to undertake a well-directed and organised publicity to keep the need for replanting in public view.

It is further suggested that the Development Directorate should function in an area of direct and constant interest to rubber growers.

BUSINESS OBJECTIVES AND SURVIVAL NEEDS—I

AIM AT MINIMUM PROFIT AND MAXIMUM PUBLIC SATISFACTION

By Peter F. Drucker*

THE literature of business management, confined to a few "how to do" books only fifty years ago, has grown beyond any one man's capacity even to catalogue it. Professional education for business has become the largest and most rapidly growing field of professional education in this country (the U.S.) and is growing rapidly in all other countries in the free world. It also has created in the advanced post-graduate education for experienced, mature, and successful executives—perhaps first undertaken in systematic form at the University of Chicago—the only really new educational concept in a hundred and fifty years.

Yet so far we have little in the way of a "discipline" of business enterprise, little in the way of an organised, systematic body of knowledge, with its own theory, its own concepts, and its own methodology of hypothesis, analysis and verification.

The absence of an adequate theory of business enterprise is not just an "academic" concern; on the contrary, it underlies four major problems central to business as well as to a free-enterprise society.

One is the obvious inability of the layman to understand modern business enterprise and its behaviour. What goes on, and why, "at the top" or "on the fourteenth floor" of the large corporation—the central economic and one of the central social institutions of modern industrial society—is as much of a mystery to the "outsider" as the magician's sleight of hand is to the small boy in the audience. And the "outsiders" include not only those truly outside business enterprise. They include workers and shareholders; they include many professionally trained men in the business—the engineers or chemists, for instance—indeed, they include a good many management people themselves: supervisors, junior executives, functional managers. They may accept what "top management" does, but they accept on faith rather than by reason of knowledge and understanding. Yet such understanding is needed for the success of the individual business as well as for the survival of industrial society and of the free-enterprise system.

A Real Threat

One of the real threats is the all-but-universal resistance to profit in such a system, the all-but-universal (but totally fallacious) belief that socialism—or any other ism—can operate an industrial economy without the "rake-off" of profit, and the all-but-universal concern lest profit be too high. That the danger in a dynamic, industrial economy is that profit may be too low to permit the risks of innovation, growth, and expansion—that, indeed, there may be no such thing as "profit" but only provision for the costs of the future—very few people understand.

This ignorance has resisted all attempt at education; this resistance to profits has proved impervious to all propaganda or appeals, even to the attempts at "profit sharing."

The only thing capable of creating understanding of the essential and necessary function of profit in an expanding, risk-taking, industrial economy is an understanding of business enterprise. And that for all without personal, immediate experience in the general management of a business can come only through a general "model" of business enterprise, that is, through the general theory of a systematic discipline.

The second problem is the lack of any bridge of understanding between the "macro-economics" of an economy and the "micro-economics" of the most important actor in this economy, the business enterprise. The only "micro-economic" concept to be found in economic theory today is that of "profit maximisation." To make it fit the actual, observable behaviour of business enterprise, however, economists have had to bend, stretch, and qualify it until it has lost all meaning and all usefulness. It has become as complicated as the "epicycles" with which pre-Copernican astronomers tried to save the geocentric view of the universe: "profit maximisation" may mean shortrun, immediate revenue or long-range basic profitability of wealth-producing resources; it may have to be qualified by a host of unpredictables such as managerial power drives, union pressures, technology, etc.; and it completely fails even then to account for business behaviour in a growing economy. It does not enable the economist to predict business reaction to public policy any more; to the governmental policy-maker business reaction is as "irrational" as Government policy, by and large, seems to the business man.

But, in modern industrial society, we must be able to "translate" easily from public policy to business behaviour and back again. The policy-maker must be able to assess the impact of public policy on business behaviour; and the business man—especially in the large enterprise—must be able to assess the impact of his decisions and actions on the "macro-economy." "Profit-maximisation" does not enable us to do either, as this paper intends to show, primarily because it fails to understand the role and function of profit.

A Specialised Profession

The third area in which the absence of a genuine theory of business enterprise creates very real problems is that of the internal integration of the organisation. The management literature is full of discussions of the "problem of the specialist" who sees only his own functional area or of the "problem of the scientist in business" who resents the demand that he subordinate his knowledge to business ends. Yet we will be getting ever more specialised; we will, of necessity, employ more and more highly trained "professionals." Each of those must be dedicated to his specialty; yet each must share a common vision and common goals and must voluntarily engage in a common effort. To bring this about is already the most time- and energy-consuming job of management, certainly in our big businesses, and no one I know claims to be able to do it successfully.

Twenty years ago, it was still possible to see a business as a mechanical assemblage of "functions." Today we know that, when we talk of a "business," the "functions" simply do not exist. There is only business profit, business risk, business product, business investment, and business customer. The functions are irrelevant to any one of them. And yet it is equally obvious, if we look at the business, that the work has to be done by people who specialise, because nobody can know enough even to know all there is to be known about one of the major functions today—they are growing too fast. It is already asking a great deal of a good man to be a good functional man, and, in some areas, it is rapidly becoming almost too much to ask of a man. How, then, do we transmute functional knowledge and functional contribution into general direction and general results? The ability of big business—but even of many small ones—to survive depends on our ability to solve this problem.

The final problem—also a symptom both of the lack of discipline and of the need for it—is of course the business man's own attitude toward "theory." When he says, "this is theoretical," he, by and large, still means: "this is irrelevant." Whether managing a business enterprise could or should be a "science" (and one's answer to this question depends primarily on how one defines the word "science"), we need to be able to consider theory the foundation for good practice. We would have no modern doctors, unless medicine (without itself being a "science" in any strict sense of the word) considered the life-sciences and their theories the foundation of good practice. Without such a foundation in a discipline of business enterprise, we cannot make valid general statements, cannot therefore predict the outcome of actions or decisions, and can judge them only by hindsight and by their results—when it is too late to do anything. All we can have at the time of decision would be "hunches," "hopes," and "opinions," and, considering the dependence of modern society on business enterprise and the impact of managerial decisions, this is not good enough.

Without such a discipline we could also neither teach nor learn, let alone work systematically on the improvement of our knowledge and of our performance as managers of a business. Yet the need both for managers and for constant improvement of their knowledge and performance is so tremendous, quantitatively as well as qualitatively, that we simply cannot depend on the "natural selection" of a handful of "geniuses."

The need for a systematic discipline of business enterprise is particularly pressing in the underdeveloped growth countries of the world. Their ability to develop themselves will depend, above all, on their ability rapidly to develop men capable of managing business enterprise, that is, on the availability of a discipline that can be taught and can be learned. If all that is available to them is development through experience, they will almost inevitably be pushed toward some form of collectivism. For, however wasteful all collectivism is of economic resources, however destructive it is of freedom, dignity, and happiness, it economises the managerial resource through its concentration of entrepreneurial and managerial decisions in the hands of a few "planners" at the top.

Discipline of Business Enterprise

We are still a long way from a genuine "discipline" of business enterprise. But there is emerging today a foundation of knowledge and understanding. It is being created in some of our large companies and in some of our universities. In some places, the starting point is economics, in some marketing, in some the administrative process, in others such new methodologies as operations research and synthesis or long-range planning. But what all these approaches, regardless of starting point or terminology, have in common is that they start out with the question: What are the survival needs of business enterprise? What, in other words, does it have to be, to do, to achieve—to exist at all? For each of these "needs" there has, then, to be an "objective."

It may be said that this approach goes back to the pioneering work on business objectives that was done at the Bell Telephone System under the presidency of Theodore Vail a full forty years ago. Certainly, that was the first time the management of a large business enterprise refused to accept the old, glib statement, "The objective of a business is to make a profit," and asked instead, "On what will our survival as a privately owned business depend?" The practical effectiveness of the seemingly so obvious and simple approach is proved by the survival, unique in developed countries, of privately-owned telecommunications in the United States and Canada. A main reason for this was certainly the "survival objective" Vail set for the Bell System: "Public satisfaction with our service." Yet, though proved in practice, this remained, until recently, an isolated example. And it probably had to remain such until, within the last generation, the biologists developed the approach to understanding of "systems" by means of defining "essential survival functions."

General Objectives

"Survival objectives" are general; they must be the same in general for each and every business. Yet they are also specific; different performance and different results would be needed in each objective area for any particular business. And every individual business will also need its own specific balance between them at any given time.

The concept of survival objectives thus fulfils the first requirement of a genuine "theory"—that it be both formal and yet concretely applicable, that is, "practical." Survival objectives are also "objective" both as to their nature and as to the specific requirements in a given situation. They do not depend on "opinion" or "hunch." Yet—and that is essential—they do not "determine" entrepreneurial or managerial decisions; they are not (as is so much of traditional economics or of contemporary be-

*Mr. Drucker is a management consultant, a frequent writer on business, and Professor of Management in the Graduate Business School of New York University. He contributed this article first to the *Journal of Business* of the University of Chicago.

haviour al science) an attempt to substitute formulas for risk-taking decision or responsible judgment. They attempt rather to establish the foundation for decision and judgment, to make what is the specific task of *entrepreneur* and manager possible, effective, and rational, and to make it understandable and understood.

We have reached the stage where we know the "functions" of a business enterprise, with "function" being used the way the biologist talks about "procreation" as a "function" essential for the perpetuation of a living species.

There are *five such "survival functions"* of business enterprise. Together they define the areas in which each business, to survive, has to reach a standard of performance and produce results above a minimum level. They are also the areas affected by every business decision and, in turn, affecting every business result. Together these five areas of "survival objectives" describe therefore (operationally) the "nature of business enterprise."

1. The enterprise needs, first, a *human organisation designed for joint performance* and capable of perpetuating itself.

It is an assemblage not of brick and mortar but of people. These people must work as individuals; they cannot work any other way. Yet they must voluntarily work for a common result and must, therefore, be organised for joint performance. The first requirement of business is, therefore, that there be an effective human organisation.

Human Attitude

But business must also be capable of perpetuating itself as a human organisation, if only because all the things we decide every day—if, indeed, we are managers—take for their operation more time than the good Lord has allotted us. We are not making a single decision the end of which we are likely to see while still working. How many managerial decisions will be liquidated within twenty years, will have disappeared, unless they are totally foolish decisions? Most of the decisions we make take five years before they even begin to have an impact; this is the short range of a decision. And then they take ten or fifteen years before (at the very earliest) they are liquidated, have ceased to be effective, and, therefore, have ceased to have to be reasonably right.

This means that the enterprise as a human organisation has to be able to perpetuate itself. It has to be able to survive the life-span of any one man.

2. The second survival objective arises from the fact that the enterprise exists in *society and economy*. In business schools and business thinking, we often tend to assume that the business enterprise exists by itself in a vacuum. We look at it from the inside. But the business enterprise is a creature of society and economy. If there is one thing we do know, it is that society and/or economy can put any business out of existence overnight—nothing is simpler. The enterprise exists on sufferance and exists only as long as society and economy believe that it does a job and a necessary, a useful, and a productive one.

I am not talking here of "public relations"; they are only one means. I am not talking of something that concerns only the giants. And I am not talking of "socialism." Even if the free-enterprise system survives, individual businesses and industries within it may be—and of course often have been—restricted, penalised, or even put out of business very fast by social or political action such as taxes or zoning laws, municipal ordinances or federal regulation, and so forth. Anticipation of social climate and economic policy, on the one hand, and organised behaviour to create what business needs to survive in respect to both are therefore genuine survival needs of each business at all times. They have to be considered in every action and have to be "factored" into every business decision.

Equally, the business is a creature of the economy and at the mercy of changes in it—in population and income, ways of life and spending patterns, expectations and values. Again here is need for objectives which anticipate so as to enable the business to adapt and which at the same time aim at creating the most favourable conditions.

3. Then, of course, there is the area of the specific purpose of business, of its contribution. The purpose is certainly to *supply an economic good and service*. This is the only reason why business exists. We would not suffer this complicated, difficult, and controversial institution, except for the fact that we have not found any better way of supplying economic goods and services productively, economically, and efficiently. So, as far as we know, no better way exists. But that is its only justification, its only purpose.

4. There is another purpose characteristic which I would, so to speak, call the nature of the beast; namely, that this all happens in a *changing* economy and a *changing* technology. Indeed, in the business enterprise we have the first institution which is designed to produce change. All human institutions since the dawn of prehistory or earlier had always been designed to prevent change—all of them: family, government, church, army. Change has always been a catastrophic threat to human security. But, in the business enterprise, we have an institution that is designed to create change. This is a very novel thing. Incidentally, it is one of the basic reasons for the complexity and difficulty of the institution.

This means not only that business must be able to adapt to change—that would be nothing very new. It means that every business, to survive, must strive to *innovate*. And innovation, that is, purposeful, organised action to bring about the new, is as important in the social field—the ways, methods, and organisation of business, its marketing and market, its financial and personnel management, and so on—as it is in the technological areas of product and process.

Research

In the U.S., industrial research expenditures have risen from a scant one-tenth of 1 per cent. of national income to 1½ or 2 per cent. in less than thirty years. The bulk of this increase has come in the last ten years; this means that the impact in the form of major technological changes is still ahead of us. The speed of change in non-technological innovation, for instance, in distribution channels, has been equally great. Yet many businesses are still not even geared to adaptation to change; and only a mere handful are geared to innovation—and then primarily in the technological areas. Here lies therefore a great need for a valid theory of business enterprise but also a great opportunity for contribution.

5. Finally, there is an absolute requirement of survival, namely, that of *profitability*, for the very simple reason that everything I have said so far spells out *risk*. Everything I have said so far says that it is the purpose, the nature, and the necessity of this institution to take risks, to create risks. *And risks are genuine costs.* They are as genuine a cost as any the accountant can put his finger on. The only difference is that, until the future has become past, we do not know how big a cost; but they *are* costs. Unless we provide for costs, we are going to destroy capital. Unless we provide for loss, which is another way of saying for future cost, we are going to destroy wealth. Unless we provide for risk, we are going to destroy capacity to produce. And, therefore, a minimum profitability, adequate to the risks which we, by necessity, assume and create, is an absolute condition of survival not only for the enterprise but for society.

This says three things. First, the need for profitability is objective. It is of the nature of business enterprise and as such is independent of the motives of the business man or of the structure of the "system." If we had archangels running businesses (who, by definition, are deeply disinterested in the profit motive), they would have to make a profit and would have to watch profitability just as eagerly, just as assiduously, just as faithfully, just as responsibly, as the most greedy wheeler-dealer or as the most convincedly Marxist commissar in Russia.

Second, profit is not the *"entrepreneur's* share" and the "reward" to one "factor of production." It does not rank on a par with the other "shares," such as that of "labour," for instance, but above them. It is not a claim *against* the enterprise but the claim *of* the enterprise—without which it cannot survive. How the profits are distributed and to whom is of great political importance; but, for the undertaking of the needs and behaviour of a business, it is largely irrelevant.

Profit

Finally, "profit maximisation" is the wrong concept, whether it be interpreted to mean short-range or long-range profits or a balance of the two. The relevant question is, "What minimum does the business need?" not "What maximum can it make?" This "survival minimum" will, incidentally, be found to exceed present "maxima" in many cases. This, at least, has been my experience in most companies where a conscious attempt to think through the risks of the business has been attempted.

Here are five dimensions; and each of these five is a genuine view of the whole business enterprise. It is a human organisation, and we can look upon it only in that aspect, as does our human relations literature. We can look at it from its existence in society and economy, which is what the economist does. This is a perfectly valid, but it is a one-sided view.

We can, similarly, look at the enterprise only from the point of view of its goods and services. Innovation and change are yet another dimension, and profitability is yet another. These are all genuine true aspects of the same being. But only if we have all five of them in front of us do we have a theory of business enterprise on which practice can be built.

For managing a business enterprise means making decisions, every one of which depends on both needs and opportunities in each of these five areas and, in turn, affects performance and results in each.

(To be concluded)

SMALL SCALE INDUSTRIALISTS

THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

ANNUAL MEETING OF ATUL PRODUCTS LTD.

MR. KASTURBHAI LALBHAI'S SPEECH

EXTENSION OF ACTIVITIES UNDER DISCUSSION

THE Directors of Atul Products Ltd. are discussing with foreign collaborators some schemes for extension of the Company's activities and have also presented to the Government of India an integrated scheme for the manufacture of a wide range of intermediates, both for pharmaceuticals and dyes. Disclosing this at the Eleventh Annual General Meeting of the Company held in Ahmedabad on 8th June 1959, Mr. Kasturbhai Lalbhai, Chairman, cautioned the shareholders that it would be a long time before the schemes were ready for implementation.

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

"GENTLEMEN,

"The Directors' report, the statement of account and other papers relating to the working of the Company during the year 1958 have been circulated to you and they have been in your hands for some time. So, if you will kindly agree, we will take them as read for the purpose of this meeting.

"You will please see from the statement of accounts that the Company has maintained its progress. The sales for this year are Rs. 2,89,51,998, as against the sales of the last year and are higher by Rs. 17,65,662. The profits for the year also show a corresponding increase, the profit subject to depreciation being Rs. 53,29,143, as against a similar figure of Rs. 51,27,924 for the last year. Out of this amount a provision of Rs. 17,82,943 has been made for depreciation for the year. Also a provision of Rs. 7,00,000 for development rebate reserve and a provision of Rs. 1,25,000 for wealth tax for the year 1958 have been made. So, this leaves a disposable income in the hands of the Company of Rs. 27,21,200. If you will please refer to the Directors' report, you will find the recommendations made by them in respect of this amount.

Selling Prices Unchanged

"As stated last year, the Company had maintained an unchanged level of sales prices for its products throughout the year 1957. The same policy was continued in the year 1958 and the Company charged all throughout the year the same prices that were prevalent in 1957. The Company took this course, in spite of the fact that the market prices for several dyes offered by the Company registered wide upward fluctuations during the year as a reflection of the foreign exchange situation and increasing import restrictions. I am satisfied that, on the whole, the course that we followed was a wise one and has been of considerable help in maintaining a basic stability in the dyes market. I should add that the production of the Company was going up, and even with the controlled prices, the Company would have had better profits than shown in the accounts of the year. But, as you know, there was a strike in the Company's factory from the month of May 1958. It is perhaps no use now to discuss the impropriety of the strike or the course that it took; it is sufficient to say that due to it, the Company had to forgo a part of the planned increase in production. Besides this, on account of the difficulties connected with the foreign exchange, the position in respect of the supply of raw materials was also not happy during the year.

Import Policy

"The Government was not in a position to help us to increase the production and also there were so many delays in securing import licences that it was difficult even to maintain a proper level of production. Many other concerns also had similar experience during the year, and the difficulties experienced by established manufacturers on this account have already been brought to the attention of the Government. So, I will not dilate on this point, but only say that, so far as established manufacturers are concerned, there should be some stable and definite policy governing the import of raw materials. As it is, all the time there is a feeling of uncertainty about the quantities of raw materials that would be permitted to be imported and, consequently, the quantities of goods that will be manufactured. During periods of inflation, markets become even otherwise unstable. But such uncertainty, however, aggravates these conditions still further.

"You will be glad to know that the work of construction and erection of Atic Scheme II is now completed and the plant has started working from the month of April 1959. This plant will be manufacturing 315,000 lbs. per month of the blues, blacks, browns and other shades of vat dyes and now Atic Industries Private Limited will be able to offer to the market a fairly complete range of vat dyes and some solubilised vats. Phosphorus Trichloride plant of the Company has also started working; this plant has been installed primarily to supply our own requirements and it will be some time before we will be able to find a market for the excess production. Part of the equipment for a sulphuric acid plant is on site and the plant will go into production before the end of this year. Negotiations for the purchase of a caustic soda plant are still going on; I expect that everything connected with this plant will be finalised within a couple of months and it may be that the plant will get into production by the third quarter of the year 1960. We have also arranged for a loan from the Industrial Credit and Investment Corporation of India Limited for the purchase of a plant to manufacture an important raw material used in the manufacture of Naphthols. It is expected that this plant will get into production by the first quarter of 1961.

Expansion Schemes

"Some of you would perhaps like to see a more rapid expansion of the activities of the Company. Your Board is also of a similar mind and is already discussing some further schemes of expansion. It is the intention of the Board to have a joint company with Ciba and undertake the manufacture of a new line of production. The Board has also persuaded the American Cyanamid Company to expand their present activities in this country and allow us to participate in the same. The Board has once again presented to the Government an integrated scheme for the manufacture of a wide range of intermediates, both for pharmaceuticals and dyes. So, altogether, the Board has been striving for an extensive and ambitious programme of expansion.

"It should, however, be appreciated that a number of steps have to be taken before a project can be ready for implementation and these steps involve both delays and uncertainties. This is particularly so in our case because, although conjointly they go to complete a pattern, the plants that we propose are independent units and require more prolonged and careful consideration on our parts as well as on the Government's part. Besides this difficulty, there is also the difficulty of the availability of foreign exchange. As I mentioned earlier, we have in the case of one project secured foreign exchange loan from the Industrial Credit and Investment Corporation of India Limited. We have also secured foreign exchange from the Import-Export Bank Loan for another project. But in these cases the amount of foreign exchange involved was comparatively small. We will be requiring, however, a much larger amount for the projects I have just mentioned. On the other hand, the implementation of these projects is essential for us and useful for the economy of the country, and I hope we will be able to persuade the Government to give us the necessary foreign exchange. As you can appreciate, however, this is also a cause for a certain amount of delay in implementing the projects.

Preliminary Work

"I believe, I should also bring to your notice certain other things that we will have to do before or with the major programme of expansion that we undertake in the future. We will have to increase our supplies of water, power and steam. For the first we will have to construct another dam and steps for the same are already being taken. For the other two, we are negotiating with the Bombay State Electricity Board for purchasing some power from them and also negotiating with the Government to permit us to put up another power plant of our own.

"We will also be needing to enlarge the residential colony. We have a large piece of property which is fairly well developed with roads, lights and water supplies. We have by now constructed nearly 200 well designed houses for the staff. But we do not have any extensive arrangement of housing for the workers. Now, in view of our growing activities and those of Atic and Lederle, it is proposed to build about 250 detached cottage type houses for the workmen.

Labour Amenities

"We have also to increase the amenities that go with the industrial township. The Company has a large open-air theatre and playfields. But we have to provide club houses both for the workers and the staff. We have at present one primary school where free tuition and uniforms are given to the children. It is felt that consideration will have to be given to the provision for secondary education. The Company has encouraged the establishment of an arts and science college at Bulsar and would like to see that some of the chemists of the factory take benefit thereof for higher studies.

"We have at present basic facilities for medical service and relief. There are two qualified medical officers and the necessary subordinate staff who treat workers and their families. Periodical screening and examination of the workers have also been introduced. Regarding indoor medical facilities, at present there is an arrangement made with a private hospital. But it is the intention of the Board to have a hospital on the site itself where all these services could be provided. All this again is a fairly extensive programme. But, the Board hopes to complete it along with the programme of expansion."

The Label

'SANFORIZED' REGD TD MK

is stamped on the selvedge of every yard of cotton cloth which meets the rigorous anti-shrinkage standards set by the owners of the trade mark: Cluett, Peabody & Co. Inc., New York.

Now almost every variety of cotton fabric, drills, twills, tussores, coatings, shirtings, gaberdines, suitings, flannelettes, including poplins, dyed and printed are labelled 'SANFORIZED'. When you buy cloth marked 'SANFORIZED', the fabric will not shrink out of fit.

The following mills are the Registered users, and they manufacture different types of cotton cloth which is stamped with the label:

'SANFORIZED'

INVESTMENT IN EQUITIES

BRITISH INSURANCE COMPANY'S NOVEL SCHEME

IN his report to the 1959 session of the International Labour Conference, Mr. David A. Morse, Director-General of the I.L.O., quotes a "prominent banker" who remarked: "We seem to have reached the economist's hell on earth: inflation and unemployment." This statement sums up the current paradox existing in most part of the world where there is growing unemployment in the midst of inflationary pressures. Of the two evils, namely, inflation and unemployment, the former is, doubtless, the more pernicious in its effects. For inflation, like pregnancy, is difficult to control after a certain stage and, unlike unemployment, it leaves no section of the community unaffected, engulfing employed, unemployed, pensioners, all in its sweep. But no one is harmed more by inflation than the small man with fixed or sluggish income, whether in business or in service. These people form the majority in the world.

The search for hedges against inflation is now more vigorous in most industrialised countries of the West by reason of the growing feeling that, with the mounting volume of unproductive Government expenditure, inflation has come to stay as a permanent feature of modern economy. Investment in equities has for long been considered an effective hedge against inflation. This is because the value of industrial assets, which the equities represent rises with increases in prices. Consequently, their earning power and dividends too go up along with the price of the products. In most countries, equities are now rated better investments than Government bonds.

Unit Investment Trusts

Investment knowledge and advice are, however, highly technical subjects and selection of sound investments is something for which laymen are not ordinarily competent. In order to provide investment advice and help to the small investors, what are known as Unit Investment Trusts have been established in many Western countries. For instance, a couple of months ago, several European banks joined together to form a European Unit Trust called "Eurunion."

The broad principles on which the Unit Investment Trusts work have been described by Mr. B. T. Thakur, the former General Manager of the United Commercial Bank, in an article to *The Banker*. To quote him:

"A few respectable and honest investors and industrialists combine together and decide upon pooling together some of their diversified investments. They prepare a list of shares specifying their names and respective numbers. All these shares are collectively called a unit of investment. A number of these units are created in the first instance, each unit having the same composition of shares and their respective numbers. Suppose such a unit is made up of 20 of A shares, 10 of B shares, 5 of C shares and so on, and the market value of all these shares comprising the unit is, say, Rs. 50,000. As this unit, is too big for investment by ordinary people, it is divided into, say, 5,000 sub-units and offered for sale to small investors at, say, Rs. 10 per sub-unit. Anyone undertaking this type of investment service naturally arranges through participation, option and arrangement to have a large number of such units to be divided into thousands of sub-units before interesting the general public in group investments. Some of these sub-units will be taken by those who have agreed to give their shares in a pool. Others will be sold to the public. From the proceeds of sale will be made payment to those who have sold their shares to the pool. To meet expenses of pooling, placing and administration, there is a small difference between the price at which shares are bought for the pool and that taken into account in determining the price at which the units or sub-units are offered for sale.

"To give a sense of liquidity and security to the holders of these sub-units of investment, each purchaser gets a certificate showing the number of sub-units he holds and the composition of the unit of investment. He has interest in all the shares comprising the unit to the extent of the number of sub-units he holds. These certificates can be sold at any time the investor wants to convert them into cash. For temporary needs, they can be pledged to banks and money borrowed on their security. And for the safety of the assets a trust deed is registered, under which all the shares comprised in the units floated are kept with a respectable bank as a Trustee. The holder of the certificate should thus feel safe from possible fraudulent acts of individual custodians tampering with investments behind his savings.

"The people who start Investment Trusts usually form a joint-stock company whose business will be to manage the trust. The capital of the company need not be large. The shares are not left with such managing company but only with the trustee bank. For the role of such a trustee one of the topmost banks is selected. The managing company's main function is to carry on ordinary administrative work and to work as a jobber in buying and selling the certificates of the trust, so that the holder has fullest liquidity in converting them into cash. Expenses for the work done by such a company comes from the small difference between the buying and selling prices of the sub-units in the Investment Trust."

The main advantage of this scheme is that, since the management of the investments is in the hands of good and honest experts and the safety of the investments is guaranteed by the trustee bank, the dangers in equity investment to which an ordinary person is generally exposed are eliminated. No good bank will agree to be a trustee unless it is satisfied that there is nothing fraudulent in it. Added to this there are the advantages of liquidity and marketability. These together go to make the scheme attractive to small investors.

Buying Shares with Insurance Policy

A new and ingenious scheme, somewhat akin to the one described above, has been invented by two London insurance brokers in conjunction with the London and Manchester Assurance Company. This scheme enables those with an income of £1,500 or more a year to buy shares on a loan repayable by means of an endowment policy. Its salient features, as outlined in the *Financial Times*, London, are as follows:

"The applicant takes out an endowment policy payable after a certain number of years or on previous death and the amount assured is immediately advanced by the life office for investment in eligible securities. These securities must be chosen from a list comprising 160 investment trusts, eight unit trusts and Government stock with a maximum life of less than ten years; the list is subject to revision.

"A cash sum equal to one-third of the loan must be deposited with the life office, and this too will be available for investment in eligible securities. In the case of applicants already owning securities, these may be deposited in place of cash if they are of a calibre acceptable to the life office.

"The maximum loan which may be made is £10,000 or one year's income of the applicant, whichever is smaller. The endowment policy must be for a maximum of 20 years and must, in any case, run out before the applicant reaches the age of 65, unless he can show that his income will continue beyond that date. The life office will have the right to insist on a medical examination, but this may not always be necessary in the case of applicants under 55 when a sum of less than £2,000 is involved.

"Dividends on his investments will be paid to the policyholder from the outset, but the investments themselves will be registered in the name of the life office jointly with his own and will be held as security by the life office with a blank transfer form. Change of investments will be possible only with the permission of the life office and must involve no change in its security and no cost to it. The advance may be paid off at any time on payment of a redemption charge of six months' interest.

"The interest charged on the loan will be at a fixed rate of 6 per cent. This can be offset against income-tax and surtax like any other interest payment, and the premium paid will rank for ordinary life assurance relief against income-tax—2/5ths of the premium at 7*s.* 9*d.* subject to a statutory limit. When the policy matures or in case of previous death, all the securities are released."

In fine, the aforesaid scheme is akin to taking a loan from an insurer for building or buying a house.

The prudent man has been always eager to safeguard the value of his savings. Hoarding of gold and silver is still a popular method. If the vast majority of people in this country with limited means but from whose small savings should come the bulk of the necessary funds for the country's development should shake off their old habit and come forward to put their money to productive purpose, they should not only be taught the value of investments in their own interest and that of the country but also be shown the way of doing so. Schemes like those described above have much scope in India for harnessing the savings of the large number of small savers and channelling them into productive investments.

INSURANCE AND THE ST. LAWRENCE SEAWAY

The building of the St. Lawrence Seaway which will eventually enable ships of up to 10,000 tons to travel from the Atlantic to the heart of the American and Canadian Middle West has involved insurers in numerous novel problems. Commenting on the British insurers' role in insuring risks connected with the Seaway, the *Review* of London observes:

"The British insurance market has already played an important part in providing the insurance all-risks covers needed by the contractors who built the dams and canals and other installations which make up the £160-millions channel. Some substantial sums of money were paid out under those covers. The Seaway will be operated jointly by Canadian and United States Government Agencies who will carry their own risks.

"The British marine insurance market has been concerned with the assessment of the risks involved in the 200-mile sea voyage 'west of Montreal' into the Great Lakes. These risks necessitate an additional premium and a scale of additional premiums is now in operation.

"Existing British marine insurance business on the Lakes has come mainly from two classes of ships—the lake steamers known as 'lakers' which up to now have been confined by their size to sailing on the Great Lakes, and the much smaller canal boats called 'canallers' which have been using the old 14-ft.-deep canal between Montreal and the Lakes.

"The Seaway now replaces that 14-ft. canal with a dredged channel 27 ft. deep and the 21 existing locks have been replaced by seven new ones nearly three times their length and twice their breadth. This means that lakers can now travel from the Lakes down to Montreal and may in time take away all the business from the canallers.

"The British market regards the Seaway as a novel risk, involving inland hazards which are not met on the Panama and Suez canals. The Seaway runs from Montreal to Lake Ontario through a complicated narrow channel, and underwriters hope that every ship using it will carry radar. There is also the risk of collision to be considered —particularly the danger of fog in the St. Lawrence Gulf and the Lakes. The difference in height between the two ends of the Seaway is 225 ft. and this means that there will be locks to cope with. The question of pilotage is now being considered by the Canadian and United States authorities and agreement has not yet been reached. But it is likely that pilotage will be compulsory for all non-Canadian and non-United States vessels.

"The first year of operation of the Seaway will be something of an experiment for no one knows how many ocean-going ships will take their own cargoes straight through the Seaway into the Lakes and how many will find it more economic to transfer their cargoes into lakers at Montreal. It is thought that ships carrying packaged freight may prefer to make the voyage themselves while ships carrying bulk cargoes like grain, ore and coal which can be easily handled with modern equipment will make use of the lakers. One thing is certain—that Montreal will expand considerably as a port. A five-year development plan is now under way there and other ports on the St. Lawrence Gulf will be enlarged, creating fresh demands for warehouses and the services of private utility companies."

CHEAPER EXPORT CREDIT INSURANCE

Export credit insurance in Britain is much cheaper today than it was three years ago. Disclosing this, Mr. R. A. Dickson, Director of the General Division of the British Export Credit Guarantee Department (E.C.G.D.), told a recent meeting of the London Chamber of Commerce that, over the past three years, premium rate for a fuller form of cover had been reduced by around 20 per cent. From 1st May this year, policyholders of three years' standing have been offered, on renewal of their policies, a further 5 per cent. rebate on premiums if they took out a new three-year policy in the place of the existing 12-month policy. The new three-year policy would relieve both the exporter and the Department of considerable paper work on the renewal of policies.

Referring to a proposed new scheme under which branch managers would be able to underwrite limits on individual buyers without the present need to refer to E.C.G.D.'s central records, Mr. Dickson said that the new system was being introduced progressively from June next, starting with 31,000 names covering E.C.G.D.'s ten largest markets. Cover on the individual buyer, he pointed out, was a fundamental and recurring operation in the short-term type of business and it was a most important step forward to bring this facility to the exporters' doorstep.

The E.C.G.D.'s local offices in London handled business worth £264 million in 1958-59, which is about 48 per cent. of all U.K. insured business, as compared with 40 per cent. a year ago. In the last financial year, the Department paid over £5 million in claims to London policyholders.

NEW PRODUCTS AND PROCESSES

Polyethylene Yarn for Rope-making

A NEW high-tenacity polyethylene yarn for manufacturing rope and cordage is now in full production at the Coventry works of British Celanese. Known as Courlene X3, the new yarn spun from Rigidex high-density polyethylene supplied by British Resin Products. Courlene X3 yarn is claimed to have several important advantages over conventional materials used in rope manufacture. It has a low specific gravity and ropes made from it are very light in weight. Ropes made from Courlene X3 are said to be very strong and to have good abrasion resistance, these characteristics being maintained over temperatures ranging from minus 70 degrees C. to plus 100 degrees C. The ropes do not absorb moisture, are unaffected by chemicals, oils and greases and are available in a range of colours. Because of the low density of the yarn, ropes made from it for marine use are buoyant and float in both fresh and salt water. They are thus more easily retrieved from the water and are less likely to foul propellers. Rope made from Courlene X3 is available from the Gourock Ropework Company and Lancashire Hill Rope and Twine Company.

Transistorised Buoy

The flashing lights on navigation buoys in harbours can be controlled by means of a vibrator system with no moving parts and very small power requirements by means of a new system which has been developed in the U.K. by the National Research Development Corporation. The operation of the system depends on the use of special free-running multi-vibrators and bi-stable multivibrators linked to a series of switches and amplifiers. The new system, for which a British patent application has been made, was developed by Trinity House in collaboration with the National Research Development Corporation. It uses considerably less power to operate than the conventional motor-driven flashers at present in use and could be adapted, it is claimed, for controlling other navigational aids which are intermittently operated, such as main lights in lighthouses and light vessels, and for fog signals.

Pill for Sunburn Sufferers

University of Pennsylvania medical researchers have announced the discovery of a new compound called Triamcinalone which has had a high degree of effectiveness in tests in relieving the pain accompanying severe sunburn. The university medical specialists said that in tests involving 14 persons with severe sunburn the compound, which is taken as a pill, brought most of the group complete relief from pain, chills and fever within 24 hours. The new compound is related to cortisone, the drug used in the treatment of arthritis and other inflammatory diseases.

Drug to Dissolve Blood Clots

The Ortho Pharmaceutical Corporation reports of the U.S. that it has developed a new drug called Actase for use in dissolving blood clots. The firm, a subsidiary of Johnson and Johnson, Company, says that the new drug may be used to dissolve clots blocking blood vessels leading to the arms and legs, a condition which can lead to gangrene, and also clots which have suddenly blocked arteries leading to the lung, a condition known as pulmonary embolism, which can be fatal.

Enzyme for Eye Cataract

An enzyme compound substance that loosens cataracts of the eye so that they may be lifted out without risk of damaging the eye has been reported by the Armour Pharmaceutical Company, U.S. Cataracts are cloudy growths which cover the lens of the eye, impairing or blocking out vision. The Company said its new compound, called Alpha Chymar, safely softens and weakens the bands which hold the eye lens in place. The lens then disengages itself from a membrane, allowing the cataract to be lifted out.

Porous Plastic

A porous plastic material said to have many possible uses is now being manufactured by Pritchett & Gold and E.P.S. Company, Dagenite Works, Dagenham Dock, Essex, U.K. Produced from high-density polyethylene, the material, called Vyon, is said to have already been found suitable for applications in air and liquid filtration and air "fluidised" powder conveying. Although Vyon is tough and flexible, it is also light and can be machined, welded and drilled. It is available in sheets up to 32 inches by 32 inches and from 0.03 inch to 0.2 inch in thickness and, say the makers, because of the ease with which it can be formed and welded these sheets can be used to fabricate items of a wide variety of shapes including tubes from ½ inch diameter. The permeability of Vyon is varied in manufacture to suit the particular application. Maximum permeability obtainable is said to be of the order of 50 cubic feet per minute per square foot with air at 0.25 lb. per square inch for a sheet ¼ inch thick.

New Radiator

A heating radiator of new design has been announced by Ideal Boilers and Radiators, Ideal House, Great Marlborough Street, London, W. 1. Called the Neoline, it consists of cast iron sections which can be made up to any length required. No matter how long, the radiator presents an unbroken line, top and bottom, and its appearance is of a single panel. The surface is fluted, forming vertical waterways of a simple and regular pattern and giving a wide angle of radiation. The radiator is available in three heights—18, 24 and 30 inches, the width of each section being 16 inches.

TRENDS IN MANGANESE TRADE

S.T.C. HAS BROUGHT NO NET GAIN—COMPETITION FROM BRAZIL AND RUSSIA KEEN

THE drastic fall in the export of manganese ore in 1958 has been the central theme of three recent important pronouncements from the public and private sectors of our economy, that is, by the S.T.C. in its second annual report, by Mr. G. L. Bansal, Secretary-General to the Federation of Chambers of Commerce and Industry, in his letter to Mr. K. B. Lall, and, finally, by Mr. A. N. Haksar at the annual meeting of the shareholders of Shivrajpur Syndicate. At the beginning of 1958, it appeared that manganese trade was in for a crisis and, in the next few months that followed, the overseas markets, on which India depends for the sale of manganese, were hardly showing any interest in the offers made to them. The trade figures reveal a sharp fall in India's exports of manganese from 1.72 million tons in 1957 to 0.96 million tons in 1958, that is, a decline of nearly 50 per cent. This fall in offtake has forced a large number of mines to close down, while making others to curtail their output. As many as 127 mines, according to an official Press note, ceased operations in 1958-59.

A certain amount of fluctuation in India's production of manganese is inevitable, as the fortunes of the industry depend on world demand which itself varies from year to year. During the boom period in 1927, India's production of manganese was over one million tons and, in the depression that followed, it slumped to 250,000 tons. With the recovery of world trade, production increased to 750,000 tons in 1935-36 and to a million tons in 1937. During the war years, production fell year by year to a mere 200,000 tons in 1945, but, subsequently, with post-war reconstruction of Europe and the expansion of the American economy, it began to climb up to 1.5 million tons in 1951, round about which level it stayed put till 1957. But it fell sharply to 1.2 million tons in 1958.

There are several causes for the recent decline in manganese exports. They are quite complex and interwoven, but it is possible to isolate the chief ones, as Mr. Haksar has done. Broadly speaking, the decline in exports is due to three factors: (1) recent cyclical developments in the economies of Western countries, (2) Government's policy, and (3) fundamental changes which have taken place in world production and trade of manganese ore.

Dominant Influence of the U.S.

In order to appreciate the impact of cyclical forces, it should be borne in mind that manganese is essentially an export commodity, and internal consumption still constitutes only a small fraction of production. Though there has been a sizable growth in domestic offtake from about 50,000 tons in the pre-war years to a little above 200,000 tons in recent times, the major part of the output is still exported. Of this portion, the largest share is taken by the U.S., followed by Japan and other European countries including the U.K. The following statement gives the area-wise destination of India's exports of manganese ore to some of the important consumers over the past eight years:

(In '000 tons)

Year	U.S.A.	Japan	U.K.	France	W. Germany
1951 ..	480.6	168.9	101.8	31.6	139.0
1952 ..	930.6	30.7	139.5	45.5	148.1
1953 ..	1,099.9	104.9	158.6	66.0	96.0
1954 ..	642.4	87.8	150.0	66.2	54.6
1955 ..	612.9	95.5	108.4	149.7	29.3
1956 ..	598.0	201.5	112.6	129.1	47.2
1957 ..	791.8	103.5	126.2	212.3	73.1
1958 ..	378.9	113.3	79.6	110.1	46.2

It is, therefore, quite logical that changes in American economy should influence our manganese trade, especially when such changes affect the steel industry where manganese is used as a vital raw material. This is what precisely happened during the recent American recession, which affected the steel mills by early 1958. As a result of this, the U.S. steel industry reduced its intake of manganese ore and dug into its inventories, which had been built up for a higher production schedule. The U.S. monthly import figure of manganese from all countries given below shows the impact of the recession during January to October 1958, as compared with the average import of 258,000 tons for 1957:

U.S. imports, Manganese 35% and above

(In thousand tons)

Monthly average for 1957	258
January	326
February	225
March	254
April	224
May	204
June	187
July	200
August	145
September	210
October	158

Although recession in the U.S. was of a short duration, it was enough to weaken the market. The c.i.f. price of manganese 46/48 per cent., which disclosed a nominal range between $1.1 to $1.12 per long ton at the beginning of 1957, fell to $0.915 to $0.965 per long ton in late 1958. Steel production is now about 95 per cent. of capacity and, with this upturn, it can hopefully be expected the demand for manganese ore would revive, after the old stocks are exhausted, though it must be pointed out that, if the steel strike comes off this month on the expiry of the three-year wage contract, steel recovery would take a longer time to influence the manganese market.

Position in the U.K.

In the U.K., the impact of the recession was much less severe than in the U.S. In fact, it took the form of a de-stocking crisis, emanating from apprehensions of a very serious depression. Throughout 1957, the U.K.'s steel production was on the average well above 95 per cent. capacity. In 1958, when the decline set in, output fell from 93 per cent. of capacity in the first quarter to 75 per cent. in the last. Its impact on prices of manganese is shown below:

Manganese 46/48% per long ton c.i.f.

27-1-1958	108*d.*—113*d.*
3-3-1958	106*d.*—112*d.*
12-4-1958	100*d.*—112*d.*
26-5-1958	95*d.*—88*d.*
17-9-1958	84*d.*— 88*d.*
2-1-1959	77*d.**
10-3-1959	75*d.**
28-3-1959	70*d.**

* After abolition of export duty.

Government's Policy

As regards Government policy, it is very difficult to understand some of the important measures which have been taken in recent years, for, on the face of it, they are glaringly at variance with the basic objective of earning maximum foreign exchange to finance our Plans. Logically, in consonance with this aim, one would have expected the Government to initiate such steps as would lead to an expansion in their exports. But the enforcement of the new measures has acted as disincentives to trade.

First in the order of importance is the introduction of export control on minerals in 1956 through a system of quotas. These quotas were given to mine-owners, previous exporters and the S.T.C. Quotas for mine-owners were given on the annual average of the quantities of ores on which royalty was actually paid, excluding supplies to domestic consumption, during the calendar years 1953, 1954 and 1955. Mine-owners who had not renewed their leases after 31st December 1955, were disqualified, but they could, if they wished, export their material through quota-holders or through the S.T.C. The other category comprised the exporters who were given quotas on the annual average of the quantities of ores shipped by them in the basic period, i.e., 1953, 1954 and 1955. The effect of this rule was to wipe out newcomers to the field, however good their overseas connections and trading prospects were, and in their place was substituted the S.T.C., apparently on the theory that what the newcomers could do, the S.T.C. could do better.

The Government's decision to subject manganese ore exports to quota system suffers from a fundamental defect. The system of quotas belongs to the species of such measures as tariffs and exchange controls which are restrictive rather than expansive in character. They are resorted to by countries for protecting their industries, with the full realisation that, though undesirable, they are necessary at least so long as circumstances do not permit a return to free trade or near free trade conditions. But in India the quota system was introduced primarily to bring the S.T.C. into the scene and for giving it a good start. But, in doing so, the Government upset the chances of India getting a fair share in the world consumption of manganese which exporters free from controls would have striven to do. The Government thus ignored the need for earning as much foreign exchange as possible, in order to implement an ideological programme, namely, to bring the public sector into export business.

S.T.C.'s Achievements

It is not very clear what has been the *net* advantage in projecting the S.T.C. into the mineral trade, especially into the manganese trade, if "net" is taken to mean traditional exports *plus* what the trade could have exported without quota restrictions. The exports made by the S.T.C. have been based on sales arrangements with regular exporters such as the Central Provinces Manganese Ore, Shivrajpur and Sandur. If these sales *plus* those routed through the S.T.C. are deducted from its export figures, the net tonnage attributable to the S.T.C.'s own efforts is certainly not impressive. While it is true that the S.T.C. has concluded certain barter deals, it cannot be said that these have made any significant impression on our export trade. The overall performance during 1958 certainly does not bear this out. On the other hand, the operations of the S.T.C. may well be said to have had no encouraging results. To cite one example, mention may be made of the Sales Promotion Committee which it sponsored last year. The Committee settled the floor price of manganese ore for different grades, below which sales were not to be made. The floor prices on the average were higher than offerings from competitors. In fixing the floor prices, the S.T.C. apparently proceeded on two assumptions: first, that the demand for manganese ore is inelastic and, second, it is possible to influence production through the operation of the price mechanism. There can be no other explanation for pegging prices higher in a buyers' market. Unfortunately, facts do not support either of these assumptions.

Export Duty

Another Governmental measure that weakened the position of Indian manganese in the overseas markets was the imposition of export duty on manganese ore in August 1956 at the following rates:

Manganese 38/40%	Rs. 10.00 per ton.
Manganese 40/44%	Rs. 20.00 "
Manganese 44% and above ..	Rs. 30.00 "

The deleterious effect of the duty was at once seen in foreign markets, where it represented an impost of 45 shillings or $6.30 per ton of high grade material. It is said that the duty had the positive side of contributing Rs. 8 crores revenue to the Exchequer, but it must not be forgotten that it has helped India's competitors to strengthen their foothold in its traditional markets. It is true that the duty was

Eighth Edition of

LAW OF INCOME-TAX IN INDIA

(*With the Indian Finance Act of* 1959)

By V. S. SUNDARAM

(Late of I.A. & A.S.)

The 8th Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-Tax Act."—*Bombay Law Reporter.*

Orders for this book will be registered in advance and executed in the strict order of priority of receipt of such orders.

Price Rs. 40/- Carriage Extra.

abolished on 25th November 1958, but much damage had been done by then.

The third measure that adversely affected Indian manganese was the enhancement of railway freight from 1st October 1958. Here is a cross section of increases from some of the important mining centres to Bombay.

	Increase	
Nagpur to Bombay	40%	to Rs. 33.75 per ton.
Dolad to Bombay	35%	to Rs. 23.95 ,,
Londa to Bombay	31%	to Rs. 26.95 ,,

Incidentally, there has been lack of co-ordination between the Railway Ministry and the Commerce and Industry Ministry. Thus, while the latter Ministry had exempted manganese ore of low grade (below 38 per cent. content) from export duty, in order to encourage exports of low grade, the aforesaid increase in railway freights was made applicable to all types of ores. Thus, the encouragement given to low grade ore was nullified by the enhancement of freight rate. So long as the enhanced freight rates remain, it is worthwhile for producers and shippers to handle only high grade material rather than the low grade ore for the freight on both is the same.

If the setback in India's exports of manganese was due only to the recession in world trade and defects in Government policy, there would not be cause for undue pessimism. For both the factors are capable of improvement. Economic conditions in the U.S. and Western Europe have already tended to improve. Even the Government has, of late, been inclined to modify its policy. Thus, the Government has set up a Sales Promotion Council to advise it on stepping up production and exports of manganese ore. It has permitted mine-owners and shippers to enter into long-term contracts extending over a period of three years and has assured them that, in the event of a change in policy, they would not be deprived of their export and movement quotas. These steps, together with the abolition of the export duty in November last, suggest that the Government is prepared to learn from experience, though it is unwilling to change its basic policy of having its finger in the pie and of monopolising the major portion of it for itself.

Fundamental Changes

What gives rise to serious concern among the producers and shippers of manganese is the emergence of a new situation, developments of a more fundamental nature in the world trade of manganese. It would be best to set out the main facts, if only to bring the problem to its true focus.

America was and still is India's largest consumer of manganese ore, though India had not been its chief supplier before the war. This position was held by Russia, which emerged as a large-scale exporter of manganese ore in 1929, supplanting India from its leading position. From then on till the Second World War, it was the largest supplier to the U.S. There was disruption of Russia's trade during the war years, but, in 1947, it again became the leading supplier. The estrangement of political relations between the U.S. and the U.S.S.R., consequent on the cold war, however, altered that position. One result of this was the embargo placed by the U.S. on the export of strategic and critical materials to the U.S.S.R. which was followed by retaliatory measures by the latter. In 1948, the U.S.S.R. informed the U.S. that future shipments of manganese ore would be reduced to token quantities.

The Russian notification came at a time when stocks of manganese ore were at a very low level with the steel industry in the U.S. and the sudden stoppage posed a very serious problem both to the industry and the rearmament programme. Action was taken at a very high level, when, at the direction of President Truman, a high level inter-departmental Manganese Co-ordination Committee was set up and Mr. Jame Boyd, Director of the Bureau of Mines, became the Chairman of the Committee. The Committee inaugurated a world-wide programme to increase the supplies of this highly strategic commodity for consumption as well as stockpiling.

Brazil Comes Up

In consonance with this programme, the U.S. steel producers and the U.S. Government turned their attention to Brazil, which, during previous years, had been one of the important suppliers of manganese to the U.S., though its supplies were smaller in quantity as compared with India or the U.S.S.R. During these years, production of manganese in Brazil was largely confined to the deposits in Morro de Mira and Minas Gerias or in Bahia. But large reserves were located in remote areas in the State of Mato Gresso, near the Bolivian border, containing high grade manganese ore, and in Serra de Neview district in Amapa, estimated at more than 10 million tons. Investment by the Bethlehem Steel Corporation, supplemented by credits from the World Bank and Export-Import Bank, together with purchase arrangements with the General Service Administration, enabled the Amapa mines to come into production in 1957. Amapa has already produced nearly a million tons of high grade ore.

Following the example of the Bethlehem Steel, the U.S. Steel Corporation also began to explore the possibilities of developing manganese mines in Brazil. Negotiations from the Export-Import Bank for a 30 million dollar credit to assist in this development did not mature, due to the Brazilian Government withholding the approval of the project, but, subsequently, arrangements were made in 1957 "with the Brazilian holder of the mining concession in cooperation with the Bank of Brazil." Production in this area was scheduled to begin early in 1958 at the rate of 50,000 tons per year.

It may be mentioned here that the new Brazilian ores enjoy certain advantages over the Indian ores. First, these ores are of an unusually high quality. The Urucum deposits, for instance, are estimated to contain on the average Mn 45.6 per cent. and Fe 11.1 per cent, and Amapa Mn 36-48 per cent. and Fe 5.96 per cent. As compared with these, the Indian manganese has higher Fe content, which impurity reduces its quality. Secondly, Brazilian ores enjoy an advantage on freight, which, so far as India is concerned, is the Achilles' heel of the manganese trade. During the Suez crisis, the high freight rate had very severe repercussions and it is doubtful whether India could tide over another maritime crisis of the Suez magnitude.

Brazil has now established itself as a serious competitor to India in manganese trade, and threatens to outpace it, at least in the American market. It will be significant to note that, recently, the Brazilian Government announced a subsidy of 10 per cent. on manganese exports. India is precluded from taking any such action under the G.A.T.T. agreement. The effect of Brazilian competition on India's share in the U.S. market is shown below:

1958	*Imports into the U.S.* Short tons	*Share of* Brazil %	India %
January	326,064	24	39
February	224,980	29	34
April	224,045	24	17
May	204,944	31	27
June	187,523	20	11
August	145,500	28	29
September	210,411	16	17
October	157,609	30	10

Besides the emergence of Brazil as a rival to India, there has been a significant shift in Russian exports to the European and Japanese markets during the last few years, as a result of which India's sales to these areas have diminished. This is the result of the determined efforts made by the U.S.S.R. to push the sale of manganese ore through various arrangements in these markets ranging from trade agreements to barter deals.

The cold war can, therefore, be said to have given rise to the emergence of Brazilian competition in the U.S. market and the Russian competition in Europe and Japan. A series of trade agreements were concluded in 1958 between Russia, West Germany, France and Sweden, Italy and Japan. It is true that India has also concluded trade agreements with some of these countries, but the distinguishing factor is the preformance made or expected to be made with great certainty by Russia as compared with India.

Thrusts by Russia

In concrete terms, the thrusts made by the U.S.S.R. in some European countries are of great interest to Indian manganese trade. The U.K., for instance, has been one of India's traditional markets, to which substantial quantities are annually exported, ranging in the inter-war period from 150,000 tons to 250,000 tons. After the setback during the war years, India's exports to the U.K. revived and continued to increase from 1951 till the emergence of Russian competition in 1954 and from then on there has been a steady decline, except for a small increase (but smaller as compared with the U.S.S.R.) in 1957. The following table compared India's exports to the U.K. with those of the U.S.S.R. and Ghana:

(In thousand tons)

Year	*U.S.S.R.*	*India*	*Ghana*
1951	..	105	217
1952	..	140	204
1953	..	157	198
1954	126	130	139
1955	118	108	122
1956	146	113	136
1957	179	121	..

Russian competition has been even more effective in other European countries in which till recently India held a stronger position. This is particularly so in regard to West Germany, France and Norway.

It will also be interesting to note in this connection that both India and Russia have been competing in barters. Recently, a wheat-manganese ore barter deal was signed between the S.T.C. and the Commodity Credit Corporation of the U.S. involving 150,000 tons of manganese. Again, in a barter deal with France, 10,000 tons of manganese are to be exchanged for stainless steel. The Russians have concluded a barter deal with Japan for exchanging 9,000 tons of manganese ore with 1,300 silicon sheets and another 9,000 tons manganese against Japanese wire ropes.

Some structural changes have taken place in European trade and industry, with the formation of the European Common Market as a logical development of the European Coal and Steel Community. The repercussions of the merger of the Six—France, Belgium, West Germany, Italy, Luxembourg and Holland—on Indian manganese are not clear, though there is a possibility of some discrimination against Indian manganese ore in favour of ores from Belgian Congo and Morocco, both of which will enjoy a preferential tariff, being associated to the European Common Market as overseas territories.

A consideration of the immediate, as well as long-term, factors in world trade of manganese ore point to a gloomy picture for Indian manganese ore. This at any rate is the general feeling in trade circles today. More evidence of tangible results than a mere revival of economic activity in the western world is required to enable the traders to take a cheerful view of the future.

Long-term Outlook

There is, however, no cause for any undue pessimism. Going down to fundamentals, India has the largest reserves of manganese ore next to Russia and, uptil now, no adequate substitute has been found to displace manganese as a vital raw material for the steel industry. There is then the heartening prospect of steel output in Western countries and India going up further. It is Mr. Haksar's assumption that, if steel production reaches the targets forecast for 1970, the demand for manganese ore from the Western world will rise to 9.3 million tons from 6 million tons in 1957. But, in order to take advantage of this prospective increase in demand, it is pre-eminently desirable to put our house in order. During the representations made by the trade to the Government at various levels, the officials have pointed out that the trade and industry, aside from insisting on reduction of royalties and railway freight, have not come forward with constructive suggestions. This is surely too much to ask. The onus is on the Government now, since it has already occupied the "commanding heights" in the ore trade. If leadership is to come, it has, therefore, to be from the Government. The latter has to realise that it has taken on its shoulders the burden of developing the export trade in manganese ore. If it fails in discharging this heavy responsibility, it cannot blame the trade, in particular, and the private sector, in general.

The International Atomic Energy has issued a directory of power reactors now in operation or under construction in the various parts of the world. Directories of other types of reactors are being prepared. The directory presents important details of various power projects to help those interested in the peaceful uses of atomic energy either at the technical or management level. It includes 36 power reactor projects, 15 in the U.S., eight in the U.K., four each in France, and the Soviet Union, and one each in Belgium, Canada, Czechoslovakia, German Federal Republic and Sweden. All information in the directory is provided or reviewed by authorities in the countries concerned, and can, therefore, be considered as the best available today. It is planned to issue periodical supplements to keep the directory up-to-date.

DIVIDEND OF INDIAN WOOD PRODUCTS CUT AGAIN

FINANCES SOUND—OUTLOOK LESS PROMISING

FOR the second year in succession, the Directors of the Indian Wood Products Company Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) have recommended a cut in dividend by a lowering of the final distribution, the latest year for which this is to be done is the one ended 30th September 1958. Last year, the distribution was pruned from 30 per cent. paid in respect of each of the years 1954-55 and 1955-56 to 27½ per cent. by a reduction in the final from 20 per cent. to 17½ per cent. They have now recommended a further cut in the final dividend for 1957-58 to 15 per cent., thus making a total distribution of 25 per cent. for the year. This brings the dividend level back to that paid for 1952-53, on the present capital raised in March 1953 by the capitalisation of Rs. 5 lakhs from the reserves.

The lowering of the dividend for the year under review, however, is not in keeping with the trend of profit of the Company. For the gross profit is a shade higher at Rs. 16.66 lakhs, as compared with that of Rs. 16.45 lakhs earned in 1956-57 and of Rs. 16.48 lakhs in 1955-56. Similarly, the net profit, too, is a shade better at Rs. 5.35 lakhs, as against Rs. 4.84 lakhs for the preceding year. It will be interesting to note here that, despite the setback in the gross profit for 1955-56 from that for the preceding year, and a larger decline in net profit, the Directors had maintained the dividend at 30 per cent. for that year. This they did by drawing a small sum from the previous year's surplus. Subsequently, however, there has been no further recession in either gross profit or net profit of the Company. On the contrary, the net profit for either 1956-57, at Rs. 4.84 lakhs, or for 1957-58, at Rs. 5.35 lakhs, is better than that for 1955-56. If, however, the Directors have chosen to be on the cautious side and pruned the dividend for each of the last two years, it must be because of the heavy burden of super-tax on excess dividends. Secondly, the net profits for these years do not fully cover a 30 per cent. dividend. Thirdly, the outlook for the Company, at least for the current year, does not appear to be encouraging.

The distribution for the year under review is being done without any addition to the reserves, except for a small allocation of Rs. 7,325 to the development rebate reserve. In fact, no addition has been made to the general reserve for the last three years, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	49.58	46.16	41.81	41.81
Cost of manufacturing ..	30.36	27.29	22.88	20.39
Other expenses	2.81	2.95	2.52	1.33
Gross profit	16.66	16.45	16.48	20.24
Managing Agents' remuneration	1.63	1.58	1.07	2.13
Provision for—				
Depreciation	0.93	0.80	0.73	0.82
Taxation	8.75	9.23	9.99	7.31
Net profit	5.35	4.84	4.68	9.97
To reserves	0.07	..	..	3.00
Dividend..	5.00 (25%)	5.50 (27½%)	6.00 (30%)	6.00 (30%)
Carry forward	1.00	0.78	1.45	2.77

The sales show an improvement, thanks to the steady demand for the Company's products. But the rise in sales has been nearly offset by the increase in cost of manufacturing, solely due to the rise in extraction expenses in respect of khairwood from Rs. 16.28 lakhs to Rs. 21.81 lakhs.

The Company's latest balance-sheet shows a sound financial position. The paid-up capital of Rs. 20 lakhs, of which Rs. 8 lakhs has been raised by way of capitalisation of reserves, is supplemented by reserves and surplus aggregating Rs. 21.56 lakhs. The gross value of the block account is Rs. 21.45 lakhs, while its book value is no more than Rs. 4.75 lakhs, the total depreciation provided so far being Rs. 16.70 lakhs. The current assets amounting to Rs. 54.06 lakhs, including stocks of khairwood and manufactured goods of the value of Rs. 40.37 lakhs, are more than four times the current liabilities and provisions at Rs. 17.25 lakhs.

The outlook for the Company for the current year does not appear to be encouraging, as will be seen from the following extract from the Directors' report for the year under review:

"Recently, however, several new katha factories have gone into production and competition in this product has become more intense. Also, since the close of the year under review, there has been a noticeable decline in our cutch exports to the United Kingdom and the Continent, partly due to increased competition from the Far East and partly to less consumer demand from the fishing industry for cutch as a preservative. These factors, coupled with the fact that the price of khair trees is continually being raised by the State Government concerned, lead us to take a cautious view of the prospects for the ensuing year."

In view of the excellent financial position of the Company, its Rs. 10 paid-up shares command a substantial premium, the current market value being Rs. 40.62 *cum-div* (final). On an *ex-div.* basis and at the current rate of dividend, the yield on the shares works out to 6.4 per cent. per annum, free of income-tax.

SIRPUR PAPER TO ACQUIRE SIRSILK

The Directors of the Sirpur Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd.) have decided, subject to the sanction of the Controller of Capital Issues and the approval of the shareholders, to acquire Sirsilk Ltd., a Company under the same management, by purchasing the existing issued equity shares of the latter in consideration for the equity shares of the Sirpur Paper Mills to be issued out of the latter's unissued capital. In pursuance of this decision, they have offered to issue 628,492 equity shares of Rs. 10 each of Sirpur Paper in the ratio of two shares for every three equity shares of Sirsilk held as on 31st July 1959. The new shares will rank for dividend that may be declared for the year ending June 1960 and onwards. The Directors consider that it is in the best interest of both the Companies that Sirsilk should become the subsidiary of Sirpur Paper.

The authorised capital of Sirpur Paper as on 30th June 1958 is Rs. 8.85 crores, made up of 5.85 million ordinary shares of Rs. 10 each and 300,000 preference shares of Rs. 100 each. The issued capital is Rs. 2.91 crores, consisting of 2.20 million ordinary shares of Rs. 10 each and 70,926 6 per cent. preference shares. Out of the 1.2 million ordinary shares of Rs. 10 each issued by Sirsilk Ltd., 942,726 shares have been subscribed and paid-up. With the acquisition of these shares, the issued ordinary capital of Sirpur Paper will go up to Rs. 2.83 crores and the paid-up ordinary capital to Rs. 2.81 crores.

METAL BOX TO OFFER RIGHT SHARES

The Directors of the Metal Box Company of India Ltd. have decided to issue, with the sanction of the Controller of Capital Issues, which has been received, new ordinary shares to the existing shareholders in the ratio of two shares for every five now held by them. The rights issue, which will be made at par, will bring an additional capital of Rs. 46 lakhs. This will be used partly to finance the Company's modernisation and expansion programme and partly to reduce its borrowings. The Calcutta factory is being modernised and the old equipment, it is stated, will be used for producing diversified industrial components. A new factory will be set up in Delhi.

(Concluded from next column)

nary share. This is supplemented by reserves and surplus aggregating Rs. 36.84 lakhs. The outstanding secured loans, amounting to Rs. 22.03 lakhs as at the end of 1957, have all been wiped out, except a small sum of Rs. 90,180, while unsecured loans have gone up over the year from Rs. 16.94 lakhs to Rs. 18.91 lakhs. The other current liabilities and provisions stand reduced from Rs. 16.68 lakhs to Rs. 13.80 lakhs. The gross block, at Rs. 87.72 lakhs, has been written down to a book value of Rs. 32.69 lakhs. The current assets amounting to Rs. 63.27 lakhs cover the current liabilities and provisions by a large margin.

The Company has subscribed to the capital of the South India Viscose Ltd. to the extent of 3,000 shares of Rs. 100 each, on which a sum of Rs. 40 per share has been called and paid up. The Directors feel that this investment is in the general interests of the Company, as it will ensure the steady supply of a good measure of the Company's requirements of staple fibre at reasonable prices.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 210 *ex-div.*, at which rate and at the current rate of dividend, the yield works out to 5.7 per cent. per annum, free of income-tax.

VASANTA MILLS' PROFIT DOWN

DIVIDEND, HOWEVER, MAINTAINED

A FALL of Rs. 4.16 lakhs to Rs. 8.09 lakhs in gross profit is disclosed by the audited accounts of the Vasanta Mills Ltd. (Managing Agents: Messrs. R. K. Shanmukham Chetty and Bros., Coimbatore) for the year ended 31st December 1958. This is on top of a decline of Rs. 11.84 lakhs suffered in 1957, thus bringing the gross profit to nearly a third of that (Rs. 24.09 lakhs) earned in 1956 and to the lowest level since 1947. The setback in profit for the second year in succession is not surprising and only bears out the fears expressed by the Directors last year that the impact of several deterrent factors on the textile industry, in general, had tended to make the outlook uncertain.

The factors that have cumulatively contributed to the adverse results of the year under review are: (1) the decline in cloth prices to uneconomic levels; (2) prolonged labour trouble in the works of the Company's processors at Mettupalayam, accentuating the accumulations of grey cloth stocks and thus resulting in the blocking up of a sizable portion of useful working capital; (3) the high prices of Indian cotton and difficulties of obtaining them at ceiling prices having rendered the maintenance of a reasonable profit margin almost impossible; (4) a rise in operational cost due to addition to wage bill; and (5) a severe cut in power supply impeding the Company's efforts to obtain capacity production.

The decline in gross profit has resulted in a cut in Managing Agents' remuneration and provisions for depreciation and taxation. The net profit, after making these essential provisions, at Rs. 1.67 lakh, is less than 50 per cent. of that (Rs. 3.98 lakhs) for 1957. The Directors have set aside a small sum of Rs. 31,000 to the development rebate reserve, which had received Rs. 1.37 lakh out of the profit for 1957. This latter sum has now been transferred to the dividend equalisation reserve, as it was found that the creation of the development rebate reserve during the previous year was not statutorily necessary for the Company's claim of depreciation for that year. The balance of profit for 1958 available for appropriation is not enough, after paying the preference dividend, to cover even half the ordinary dividend paid for 1957. Nevertheless, the Directors have maintained the distribution at 12 per cent. per annum, to which level it had been reduced last year from 20 per cent. paid for each of the years 1955 and 1956. The shortfall in the amount required to repeat this dividend, after taking into account the small surplus from 1957, is made good by drawing Rs. 1.33 lakh from the dividend equalisation reserve. Probably, this is the first time in many years that the Directors have had to draw on the reserves to maintain the distribution to shareholders.

The progress of the Company's working in recent years is fully borne out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	1,71.52	1,73.81	1,73.99	1,61.59
Closing stocks	20.41	30.23	18.97	12.93
Cotton, staple fibre and yarn consumed	1,06.26	1,20.40	1,09.55	1,02.15
Other expenses	49.56	52.82	46.80	40.62
Gross profit	8.09	12.25	24.09	18.53
Managing Agents' commission..	0.50	0.86	2.22	1.60
Provision for—				
Depreciation	3.57	4.70	7.00	4.63
Taxation	2.35	2.72	6.50	5.00
Net profit	1.67	3.98	8.37	7.25
To reserves	0.31	1.37	4.00	2.50
Transfer from reserves ..	1.33	..	..	..
Dividends—				
Preference	0.28	0.28	0.28	0.28
Ordinary	2.52 (12%)	2.52 (12%)	4.20 (20%)	4.20 (20%)
Carry forward	..	0.12	0.44	0.56

The trend of cost of cotton, staple fibre and yarn consumed and other expenses indicates that the Company's output must have been substantially lower. Sales, however, show only a small decline; this must have been due to the reduction in closing stocks of manufactured goods.

The Company's financial position, as seen from the latest balance-sheet, is quite satisfactory. The paid-up capital, at Rs. 25.50 lakhs, has remained unchanged since 1947, when it was raised from Rs. 11.50 lakhs by the capitalisation of Rs. 14 lakhs and the issue of bonus ordinary shares in the ratio of two shares for one ordi-

(Continued in previous column)

Points From the Chair

Outlook for Jute Industry

"ANOTHER factor of importance is that India, for the first time since partition, produced as much jute as she consumed and, from the financial point of view, market conditions were more favourable to the mills than they have been for a number of years. I am optimistic that the industry has turned the corner and that we can look forward to a continuance of these more favourable conditions. The Department of Agriculture of the Government of India and the Departments of Agriculture in the jute growing States are to be warmly congratulated on the results of their perseverance and constructive efforts to increase the weight of the jute crop. I understand that endeavours will now be made to improve the quality of the fibre."

—SIR JAMES JONES,
James Finlay & Co., Ltd.

International Tea Agreement

"There are only two means by which matters can be rectified at short notice and they are the renewal of the International Tea Agreement with the fixation of export ceilings for each country of production and the complete removal of all export duties. Both require Government action, and quite apart from the fact that the Governments concerned are unlikely to be willing to forgo the revenue involved in the latter expedient, it is by no means certain that even the entire elimination of duties would be sufficient to bridge the gap between costs and receipts in some cases. It would certainly not be a permanent remedy as it would provide no safeguard against a further falling away in the market. Regulation of exports, on the other hand, has all the virtues as, by this means, the industry can, without pain to the national exchequers of the countries concerned, be nursed through the period required to introduce the long-term cure, an appreciable increase of world consumption, an increase sufficient not only to absorb the further increase in production which can be expected in the coming years."

SIR JAMES JONES,
Consolidated Tea and Lands Co., Ltd.

International Tin Agreement

"It has become apparent that the provisions of the Agreement relating to the operations of the Buffer Stock Manager are far too rigid, in that they have obliged him to offer to buy tin at a publicised floor price thus rendering him vulnerable in his market operations. But what is of more importance is that the past year has shown a serious weakness in the Agreement, in so far as producing countries who are not participating in the Agreement have been maintained by the substantial financial support, and by the very severe curtailment of the exports of the producing countries who are parties to the Agreement. It has been demonstrated that, without the unequivocal adherence of Russia and the People's Republic of China, the present or any similar scheme cannot be anything but dangerous to the highest degree. Further, if these countries did purport to join in an International Tin Agreement, it is conjectural whether they would afford the necessary facilities for any international check designed to establish whether or not the provisions of the Agreement were being carried out."

E. D. SHEARN,
Malayan Chamber of Mines, London.

Prospects for Manganese Ore

"So far as we are concerned, I do not think that it can be anticipated that the demand for manganese ore will increase very much until stocks at consumers' works have been reduced and this will probably take some considerable time. Since the war the manganese ore industry has been in a fortunate position—steel production has steadily increased whilst there has been a shortage of manganese ore. This shortage was accentuated in our own particular case by the non-availability of sufficient railway wagons to move our ore to ports. During the past year this situation has changed, steel production has fallen; new deposits are now in operation and, consequently, there has been ample supply of manganese ore. I think the above summarises the present situation and sounds rather doleful, but all businesses have their ups and downs and I am confident that steel production will, over the years, continue to expand and that there will be a full demand for our ore, which has a world-wide reputation. The Company has adequate financial resources for its requirements, our mines are in good shape, and we are working in close collaboration with the authorities in India. They and we are most anxious to increase the export of ore and I have no doubt that, although deliveries so far this year have been rather moderate, these will gradually pick up as the steel industry recovers. It will, however, I think, require a little patience."

MAJOR A. C. HERRING,
Central Provinces Manganese Ore Co., Ltd.

Incoming orders of the Federal German Republic's industry continue rising. From March to April this year, the total order book index went up by 11 per cent., as against an average seasonal setback of 4 per cent. in the five preceding years. From April last year to the same month this year, orders hiked by 26 per cent. The leader in this trend was the consumer goods industry (up 43 per cent.), followed by the investment goods industry (up 23 per cent.) and basic materials (up 21 per cent). Orders from abroad were 22 per cent. above the April 1958 level.

COMPANY MEETINGS AND DIVIDENDS

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share. Transfer books remain closed from 19th to 29th June 1959, both days inclusive.

A. V. THOMAS & CO., LTD. Annual General Meeting, Alleppey, 29th June 1959. Dividend: 25 per cent. Transfer books will remain closed from 23rd to 29th June 1959, both days inclusive.

KALIGHAT-FALTA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: Transfer books remain closed from 15th to 29th June 1959, both days inclusive.

SAMASTIPUR CENTRAL SUGAR CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

GANGANAGAR SUGAR MILLS LTD. Annual General Meeting, Jaipur, 29th June 1959. Transfer books will remain closed from 26th June to 14th July 1959, both days inclusive.

TUNGABHADRA INDUSTRIES LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: *Nil.*

ORIENT ENGINEERING AND COMMERCIAL CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Transfer books remain closed from 20th to 29th June 1959, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: *Nil.* Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

DUNBAR MILLS LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: *Nil.* Transfer books will remain closed from 22nd to 29th June 1959, both days inclusive.

ELGIN MILLS LTD. Annual General Meeting, Kanpur, U.P., 29th June 1959. Dividend: Re. 0.75 per share. Transfer books remain closed from 13th to 29th June 1959, both days inclusive.

TRAVANCORE CEMENTS LTD. Annual General Meeting, Nattakam, Kottayam, 10th July 1959. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books remain closed from 20th June to 10th July 1959, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 10th July 1959. Dividend: Rs. 18.00 per share (includes bonus), payable on and after 11th July 1959. Transfer books will remain closed from 23rd June to 10th July 1959, both days inclusive.

HERCULES INSURANCE COMPANY, LTD. Annual General Meeting, Calcutta, 10th July 1959. Transfer books will remain closed from 1st to 10th July 1959, both days inclusive.

SHREE SHAKTI MILLS LTD. Annual General Meeting, Bombay, 11th July 1959. Dividend: Rs. 6.00 per share (includes interim dividend of Rs. 5.00 per share). The final dividend is payable on or after the 13th July 1959. Transfer books will remain closed from 23rd June to 11th July 1959, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 16th July 1959. Dividend: 17½ per cent. free of tax (includes interim dividend 6¼ per cent.).

MANAR ESTATES LTD. Dividend of 5 per cent. or Re. 0.10 per share, for the year ended 31st March 1959. Transfer books will remain closed from 26th June to 5th July 1959, both days inclusive.

BALANOOR TEA AND RUBBER COMPANY, LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st March 1959. Transfer books will remain closed from 30th June to 6th July 1959, both days inclusive.

DEVON TEA AND PRODUCE CO., LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 31st March 1959. Transfer books will remain closed from 30th June to 6th July 1959, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Dividend of 5 per cent. for the year ended 31st March 1959.

DECCAN SUGAR AND ABKHARI CO., LTD. Interim dividend of 7½ per cent. or Re. 0.37 per share, on the ordinary shares, for the year ended 31st May 1959. Transfer books will remain closed from 23rd June to 1st July 1959, both days inclusive.

RADHAKRISHNA MILLS LTD. Dividend of Rs. 6.00 per share, on ordinary shares of Rs. 100 each, dividend of Rs. 3.00 per share, on 'B' ordinary shares and Re. 1.50 per share, on 'C' ordinary shares, for the year ended 31st December 1958. Transfer books will remain closed from 21st July to 6th August 1959, both days inclusive.

COMPANY REGISTRATIONS

SPRIAX MARSHAL PRIVATE LTD. (First Director: Mr. J. N. Marshall.) Business: Iron founders, steam, mechanical and electrical engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Bombay-Poona, opposite Milestone No. 106, near Pimpri, Poona.

CHANDAN METAL PRODUCTS PRIVATE LTD. (First Director: Mr. C. M. Patel.) Business: Furniture makers, products of all kinds made of metal, wood, etc. Authorised capital: Rs. 25,00,000. Private company. Registered office of the Company will be situated in the State of Bombay.

DIXIE PRODUCTS PRIVATE LTD. (First Director: Mr. D. C. Chinai.) Business: Manufacture of flash welded chains, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 5A, Vulcan Insurance Building, Veer Nariman Road, Bombay-1.

NOTES FROM WEST GERMANY

COMPROMISE AT G.A.T.T. MEETING

(From A Correspondent)

COLOGNE, *12th June*

THE solution found by this year's Fourteenth G.A.T.T. Conference in Geneva for the problem of further liberalisation of W. German imports is a realistic compromise. It takes into account both the principles of G.A.T.T. and the fact that the Federal Republic has already a good and clean record of sizable import concessions granted unilaterally to its trading partners in the world. To achieve this compromise, the Federal Republic has made a very substantial contribution by conceding further liberalisation of its imports. Though, in the industrial field, present W. German import restrictions already are of relatively very small size and range, the number of industrial positions not yet fully liberalised will be further reduced from some 330 now to 166 by the end of a three years' standstill period agreed upon in Geneva. ("Protected" agricultural positions will be down from some 400 to 177.)

Undoubtedly, the new liberalisation moves, of which a large part will become effective on 1st July 1959, already put a heavy burden on the W. German industries affected, especially on those which have suffered from war destructions and post-war dismantling. Industries not yet under the full impact of 100 per cent. liberalisation *vis-a-vis* all G.A.T.T. partners include some parts of the textile, ceramics, optical and toys industries. In these fields, the question of whether and how import liberalisations already in force *vis-a-vis* O.E.E.C. partners should be extended to the other G.A.T.T. partners will be dealt with in bilateral talks between the Federal Republic and the interested countries.

When putting the just agreed compromise into proper perspective, three points should not be overlooked:

First, for G.A.T.T., the problem of the Federal Republic's import liberalisation was a problem of paramount importance: for the first time during the duration of the G.A.T.T. agreement one of its members heavily engaged in world trade could no longer avail itself of the only argument the G.A.T.T. Treaty provides for justifying the maintenance of import-quotas: a deficit in the balance of payments. The Federal Republic, in fact, through sound economic and monetary policies, has no such deficit. Only the United States has once been in a comparable position: when entering G.A.T.T., the U.S. had no balance of payments difficulties. Even so, the U.S. later managed to be granted an indefinite waiver for a large part of its agricultural imports.

Second, the Federal Republic already is a low-tariff country with little or no protection against unfair competition. It has lowered its import duties unilaterally and has generously opened its import doors to goods from abroad. During the last four years, for instance, overall W. German imports have increased by some two-thirds, while imports of final manufactured products increased a full two and a half times. It looks as if these important steps in the interest of free international trade have not always and everywhere been fully noticed abroad.

Third, free trade should be fair and mutual trade. While the Federal Republic has made very generous concessions in recent years, its exports partially encounter prohibitive import duties and trade barriers as high as ever. Here again, it looks as if the principle of mutuality which should govern international tariff and liberalisation policies has not always been honoured.

Wages in West Germany have risen faster than productivity. Production per man (wage and salary workers) increased by 41 per cent. from 1950 to 1958, while gross pay per man rose by 69.5 per cent. In recent years, there was a marked slow-down of productivity rises. Rates of increase were down to 2.1 per cent. in 1956-57 and picked up only slightly to 2.7 per cent. in 1957-58. Gross pay per man, however, rose 4.3 per cent. (1956-57) and 6.2 per cent. (1957-58).

West Germany's chemical industry spent 10 million DM in 1958 to promote science and research. Company research and development programmes, as well as specially earmarked funds for research projects, are not included in this sum. One-third of the total expenditure went into the assistance fund of the chemical industry promoting better schooling and university education as well as chemical scientific publications.

SYNOPSES OF COMPANY REPORTS

Jyoti Ltd.

THE directors of the above Company (Chairman: Mr. Nanu B. Amin, Baroda) submit the audited accounts of the Company for the year ended 31st December 1958.

The net profit for the year after providing for Rs. 2,51,216 (Rs. 1,67,311) by way of depreciation and also after charging Rs. 1,62,852 (Rs. 57,528) by way of development rebate is Rs. 11,68,288 (Rs. 10,82,670) from which a provision for taxation of Rs. 6,30,000 (Rs. 6,00,000) has been made. The balance left is Rs. 5,38,288 (Rs. 4,82,670) to which should be added a sum of Rs. 31,105 (Rs. 23,870) being the balance brought forward from last year making a total of Rs. 5,69,393 (Rs. 5,06,540) which the directors recommend should be dealt with as follows:—

To transfer to general reserve Rs. 1,42,472 (Rs. 46,818), to transfer to gratuity fund Rs. 50,000 (Rs. 50,000), to payment of dividend for the year ended 31st December 1958 at the rate of 12 (12 per cent. on old capital) per annum, free of income-tax absorbing Rs. 3,03,535 (Rs. 2,28,617), to transfer to rehabilitation reserve Rs. 50,000 (Rs. 1,50,000) and to reserve for doubtful debts Rs. 20,000 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 3,386 (Rs. 31,105).

With the transfer of Rs. 50,000 to the gratuity reserve this year the total reserve comes to Rs. 1,75,000; it is proposed to continue making allocations annually to build up the necessary fund for the purpose.

The sales of the Company's products crossed 1 crore mark, increasing from Rs. 91.67 lakhs in 1957 to Rs. 110.58 lakhs in the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Gross block	43,60,233
Reserves ...	14,31,527	*Less*—Depreciation ...	15,31,953

Liabilities ...	37,81,608	Net block	
Profit ...	3,386	*Plus* net appreciation on revaluation	7,48,675
			35,76,955
		Stock-in-trade	34,95,433
		Stores ...	96,548
		Debts, deposits and advances ...	21,38,383
		Investments	1,54,793
		Cash ...	9,779
Rs.	94,71,896	Rs.	94,71,896

Elgin Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th September 1958.

The results for the year, after making the usual provisions for depreciation and taxation, show a profit of Rs. 8,21,081 (Rs. 19,35,777), to which has been added the amount brought forward from the previous year of Rs. 75,531 (Rs. 78,754) making a total of Rs. 8,96,612 (Rs. 20,14,531). From this amount has been deducted the following amount:—To rehabilitation reserve [including reserve for development rebate Rs. 2,14,000 (Rs. 2,52,217)] Rs. 2,50,000 (Rs. 3,00,000) leaving at credit of profit and loss account Rs. 6,46,612 (Rs. 8,14,531 after transferring Rs. 9,00,000 to general reserve). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum for the year ended 30th September 1958 absorbing Rs. 88,000 (Rs. 88,000), in payment of a dividend on the 'B' preference shares of 5 per cent. per annum, free of income-tax, for the year ended 30th September 1958 absorbing Rs. 21,000 (Rs. 21,000) and in payment of a dividend at the rate of Re. 0.75 (Re. 1.00) per share for the year ended 30th September 1958, on the vendors and ordinary shares absorbing Rs. 4,72,500 (Rs. 6,30,000) leaving to be carried forward to next account Rs. 65,112 (Rs. 75,531).

The results for the year under review reflect the extremely difficult trading conditions in which the entire Indian cotton textiles industry has been working, and in the circumstances may be considered not unsatisfactory. Since the close of the financial year under review, trading conditions have somewhat improved. Measures have also been taken by Government to encourage exports by the industry. It remains to be seen whether they are adequate to achieve the desired results, but as a substantial part of the Company's production is exported, the trading results for the current year are expected to show an improvement on those for the year ended 30th September 1958.

A sum of Rs. 2,50,000 out of the profits for the year under review has been transferred to rehabilitation reserve in pursuance of the Board's policy as stated in last year's report to conserve the Company's resources for maintaining the Company's plant and machinery in a high state of efficiency. A sum of Rs. 5 lakhs has been transferred from rehabilitation reserve to capital reserve in respect of expenditure incurred during the year. It will be observed that the present commitments of the Company on account of capital expenditure are estimated at Rs. 2 lakhs. In view of the need to maintain the Company's competitive power at a high level in market conditions which require increasing diversification of production, the directors have under constant review the purchase of new plant and machinery. A provision of Rs. 3,50,000 has been made in the accounts for gratuity to workers.

As reported to the shareholders last year, the trading results of the Company's subsidiaries in Bombay were adversely affected by the abnormally unfavourable trading conditions which developed into a crisis for the cotton textiles industry following the heavy increases in excise duty enforced from 1st September 1956. The provision of fresh capital for those Companies of which Shri Haridas Mundhra continued to be the chairman, represented by the calling-up of uncalled share capital aggregating Rs. 20 lakhs (referred to in last year's report), did not suffice to restore their financial stability. The directors sought offers for the Company's shareholdings in the subsidiaries, but no acceptable offer was received. The Company accordingly raised no objection to the sale by Calico Processors Ltd. of the block assets of that Company, and they were disposed of during the year. The Company has in consequence recovered the loan of Rs. 10 lakhs previously advanced to it. There being no prospect of improvement in the affairs of Shree Madhav Mills Ltd., the Company has submitted an application, which is before the Bombay High Court, for the liquidation of Shree Madhav Mills Ltd.

The directors estimate that a heavy loss will be sustained by the Company on the investments in the Bombay subsidiaries, which had been made at the instance of Shri H. D. Mundhra. In view of the expected heavy loss the directors have deemed it prudent to create a reserve of Rs. 85 lakhs by transfers from capital reserve and general reserve to investment reserve. In the meantime they continue, in consultation with solicitors, to take all possible action to minimise the loss which may ultimately fall on the Company.

The sum of Rs. 1,00,000 included in the item of Rs. 3,83,513 shown under loans and advances and considered as doubtful refers to an advance made under suspicious circumstances. The whole matter is sub judice being the subject matter of a pending criminal case. Full recovery of the secured loan of Rs. 20 lakhs from a subsidiary is dependent on realisation of sufficient funds and sale of the security.

Accounts in brief are as under:—

Dunbar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show, without providing for depreciation a profit of Rs. 2,74,958 (loss of Rs. 5,65,158) to which has to be added the amount transferred from general reserve Rs. 80,000 (*nil*), making a total of Rs. 3,54,958 (debit of Rs. 5,65,158). From this amount has to be deducted the debit balance brought forward from previous account of Rs. 1,86,409 (credit of Rs. 3,50,335), provision for development rebate reserve fund Rs. 82,700 (*nil*) and workers bonus for the year 1955 Rs. 74,014 leaving a credit balance of Rs. 11,835 (debit of Rs. 1,86,241 after transferring Rs. 28,581 from reserve for taxation), which the directors recommend should be carried forward to the next account.

The period under review has been very difficult for cotton textile industry in general and the mills of West Bengal in particular. The duty on consumption of electricity imposed by the Government of West Bengal has brought an additional liability on the Company of over rupees one lakh per annum.

Further, the findings of the Tribunal appointed by the Government of West Bengal to review the case of the cotton textile industry as a whole, came into effect from 10th July 1958 according to which, there has been an increase of Rs. 8 in the basic wage and Rs. 2.50 in dearness allowance per worker without any corresponding increase, in the productivity.

During the period under review a sum of Rs. 20,48,464 which is 22.16 per cent. of the total sale value of the mills' cloth for the year, was paid by the Company as excise duty.

Since the close of the financial year the quantum of offtake of cloth in the country has shown some improvement and it is hoped that the situation in the industry will further improve in the near future.

Depreciation for the year as well as in respect of the previous years could not be provided because of inadequacy of profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,00,000	Gross block	1,42,94,130

Bowreah Cotton Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show after incorporating the loss of Rs. 1,84,835 on sale of fixed assets and without providing for depreciation a loss of Rs. 1,52,652 (profit of Rs. 1,16,501) from which has to be reduced the credit balance brought forward from the last account of Rs. 1,17,244 (Rs. 743) leaving a debit balance of Rs. 35,408 (credit of Rs. 1,17,244) which the directors recommend should be carried forward to the next account.

The period under review has been very difficult for cotton textile industry in general and the mills of West Bengal in particular. The duty on consumption of electricity imposed by the Government of West Bengal has brought an additional liability on the Company of over Rs. 1 lakh per annum.

During the period under review a sum of Rs. 37,38,570 which is 24.87 per cent. of the total sale value of the mills' cloth for the year, was paid by the Company as excise duty.

In order to meet the increasing cost of production it has been proposed to modernise the spinning and preparatory departments by the installation of new machinery and by conversion of some of the existing machinery to high draft systems, for which orders have been placed.

Depreciation for the year as well as in respect of the previous years could not be provided because of inadequacy of profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,00,000	Gross block	1,20,17,488
Reserves*	1,14,529	*Less*—Depreciation ...	47,02,846
Liabilities ...	1,43,27,608		
		Net block	73,14,642
		Stock-in-trade	70,53,137
		Stores, etc.	16,62,707
		Debts, deposits and advances ...	17,69,927
		Investments	52,603
		Cash ...	1,66,309
		Debenture issue expenses	22,812
Rs.	1,80,42,137	Rs.	1,80,42,137

*Reserves are shown after deducting a sum of Rs. 35,408, being the debit balance in the profit and loss account.

Basanti Cotton Mills Ltd.

The directors of the above Company (Managing Agents: The Calcutta Agency Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The total sales inclusive of excise duty during the year had been for Rs. 83,34,246, against Rs. 74,18,365 of the previous year. The Company, however, could earn gross profit of only Rs. 3,54,099 against Rs. 7,12,525 of the previous year.

The working result of this year has been much affected due to imposition of heavy excise duty towards the end of the previous year which could not be fully recovered from the market, and payment of increased wages as per award of the Second Tribunal since July 1958. As a result of the imposition of such high excise duty and payment of increased wages the profit of this year has been affected adversely. The directors in the circumstances have to be very cautious and to conserve cash resources of the Company to meet future emergencies.

The net profit for the year together with the profit brought forward from the previous year and refund of taxes on account of excess provision made for the year 1955, 1956 and 1957 aggregate Rs. 1,87,868 (Rs. 4,73,605). Out of this amount the development rebate of Rs. 12,586 (*nil*) and provisions made for wealth-tax Rs. 12,500 (Rs. 12,500) and income-tax Rs. 15,000 (Rs. 2,10,000) being deducted, the balance available amounts to Rs. 1,47,782 (Rs. 2,51,105). The directors recommend that this amount be utilised as follows: To payment of dividend at 5 (6) per cent. [50 (60) nP per share] tax-free on 1,50,000 ordinary shares absorbing Rs. 75,000 (Rs. 90,000) and to payment of dividend at 6¼ (6¼) per cent. [62.5 (62.5) nP per share] tax-free on 50,000 cumulative preference shares absorbing Rs. 31,250 (Rs. 31,250) leaving a balance to be carried forward of Rs. 41,532 (Rs. 1,14,855 after transferring Rs. 15,000 to general reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Gross block	39,15,585
Debentures	7,00,000	*Less*—Depreciation ...	25,08,902

Provision for taxation ...	15,000	Net block	14,06,683
Provision for wealth tax	12,493	Stock-in-trade	22,26,322
Liabilities ...	23,02,543	Stores, etc.	3,66,728
Profit ...	41,532	Other assets	3,040
		Debts, deposits and advances ...	1,24,256
		Investments	11,60,244
		Cash ...	99,297
Rs.	53,86,570	Rs.	53,86,570

Runglee Rungliot Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit of Rs. 98,364 (Rs. 31,512). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 18,653 (*nil*) from depreciation reserve and a transfer of Rs. 18,000 (*nil*) to building and machinery reserve, there is a balance at the credit of the profit and loss account amounting to Rs. 65,523 (Rs. 45,362). The directors recommend that a dividend of 30 (25) per cent. be declared at the annual general meeting, leaving Rs. 23,523 (Rs. 10,362) to be carried forward.

Tea crop was 1,96,080 lbs. as compared with 1,56,960 lbs. in 1957. The average selling price realised was Rs. 3.45 per lb. as against Rs. 3.49 per lb. in the previous year. Planted area remains at 341 acres. Estimates for 1959 provide for a crop of 1,76,000 lbs. at an outlay of Rs. 5,51,760, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,40,000	Gross block ...	4,43,690
Reserves ...	5,01,000	*Less*—Depreciation ...	2,07,285
Provision for taxation ...	1,61,389		
Liabilities ...	1,03,774	Net block ...	2,36,405
Profit ...	23,522	Stock-in-trade	1,64,659
		Stores and supplies ...	45,615
		Debts, deposits and advances	53,512
		Investments ...	2,25,146
		Cash	2,04,349
Rs.	9,29,686	Rs.	9,29,686

Okayti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts disclose a working profit of Rs. 2,44,534 (Rs. 1,930). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 35,147 (*nil*) from depreciation reserve, there is a balance at credit of that account amounting to Rs. 1,95,044 (Rs. 11,973) of which the directors have transferred Rs. 37,500 (*nil*) to hail reserve, Rs. 50,000 (Rs. 10,000) to revenue reserve, Rs. 50,000 (*nil*) to buildings and machinery reserve and Rs. 1,500 (*nil*) to development rebate reserve. The directors recommend that dividends on preference shares at 7 per cent. for seasons 1956, 1957 and 1958 and a dividend of 32½ (*nil*) per cent. on ordinary shares for season 1958 be declared at the annual general meeting, leaving Rs. 13,044 (Rs. 1,973) to be carried forward.

Tea crop was 1,79,694 lbs. as compared with 1,49,376 lbs. in 1957. Unfavourable climatic conditions, hail damage and the ravages of pests and blights are estimated to have resulted in the loss of 8,000 lbs., 9,000 lbs. and 12,000 lbs. made tea respectively. The average selling price was Rs. 4.80 per lb. as against Rs. 3.90 per lb. in the previous year. Planted area remains at 505 acres.

Estimates for 1959 provide for a crop of 1,80,000 lbs. at an outlay of Rs. 6,32,244 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Gross block ...	4,70,736
Reserves ...	2,11,500	*Less*—Depreciation ...	2,49,237

DUNLOP RUBBER COMPANY LIMITED

RECORD TURNOVER—CHAIRMAN'S REVIEW

THE Sixtieth Annual General Meeting of the Dunlop Rubber Company, Ltd., was held in London on 8th June 1959.

Mr. G. E. Beharrell, Chairman, in the course of his speech, said: "In 1958, the volume of goods sold by the Group increased by about 7 per cent. and turnover by 5 per cent. to a record total of £243 million. Profit margins, however, were adversely affected by price reductions and wage increases which were only partly offset by lower commodity prices. Our earnings also suffered quite a considerable reduction in terms of sterling by the depreciation of local currencies in France and Brazil: otherwise, our profit figures would have established a record. On the other hand, a small reduction in our profit before tax has been more than offset by the substantially lower taxation charge under various heads which are referred to in the Directors' report. The Group profit after tax is the highest so far achieved.

"Following the more realistic profits tax basis introduced in 1958 your Board welcomes the relief given by the Chancellor this year in reducing the standard rate of income-tax and reintroducing investment allowances. The latter, of course, are of benefit only in the future. We appreciate these taxation reliefs, not only because they help your Company but also because we hope they mark the beginning of the end of high taxation following the last war and will lead to further expansion of the country's economy.

Operations in United Kingdom

"Although our turnover in the United Kingdom has shown a satisfactory increase of 7 per cent., the actual profit from the United Kingdom section of our activities was lower than in 1957. This may have surprised many of you in view of the high level of activity of the British motor car industry. Perhaps, I might clarify what effect this has on your Company. Our sales of car tyres to the British vehicle manufacturers are of great importance to us. Original equipment business, however, in general is highly competitive and margins are low, so the direct contribution to profit, even with the industry itself active, is relatively small. We have established the productive capacity with corresponding overheads to cater for the greater part of this business in the United Kingdom, and so, whilst profits in times of great activity are not large, losses in times of reduced activity can be serious, as was the case in the year 1956.

"It is also appropriate, in connection with 1958, to mention that whilst the motor car industry was buoyant the commercial vehicle and cycle industries were passing through a period of reduced activity. Consequently, on balance there was little change in our total original equipment business in comparison with 1957.

"Before leaving our United Kingdom affairs, and in particular our profit position, there is one further matter to which I would like to refer, namely, the technical and development work which the United Kingdom organisation carries out on behalf of the Group. Naturally, we receive useful contributions from our overseas subsidiary companies for this work, but these contributions fall far short of the actual cost to the parent Company. Last year, the Group spent almost £2½ million under the heading of research and development. In addition, there were heavy initial production costs in connection with new products, all of which were borne by the home side of the business.

"I have already made reference to the effect of changes in exchange rates on profits expressed in sterling, but even allowing for this the overall picture of our overseas activities for the year was most encouraging. Turnover and profit were both higher and a greater proportion of the Group profit was contributed from this source.

Capital Expenditure

"Group capital expenditure during 1958 totalled £13 million, £4 million of which was in the United Kingdom and £9 million overseas. The new factories in France, India and Rhodesia largely account for the increased overseas expenditure compared with 1957. The capital expenditure of £4 million in the United Kingdom is still high and it must not be stinted for the sake of overseas interests. It is vital for us to modernise plant and equipment if we are to remain competitive.

"I should like, on your behalf, to express appreciation and thanks to all employees—management, staff and operatives—whose combined efforts have contributed so much to the success of the Company during the past year. The accumulated knowledge and experience of all these employees is of inestimable value to the Company.

"The Company takes pride in its reputation for good employee relations and for considering each employee as an individual person. This is an intangible asset we all work to safeguard. It has been built up over many years and has in some measure been due to the adoption of joint consultation at all levels as a necessary part of management in a highly competitive business."

The report and accounts were adopted.

The total tea crop of 12,71,700 lbs. harvested during the year against 11,30,000 lbs. estimated is satisfactory which, in comparison with last year's crop is more by 60,700 lbs. The f.o.b. cost for the year was Re. 1.28 per lb. as against the estimated figure of Re. 1.22 and the all-in-cost was Re. 1.54 per lb. as against last year's figure of Re. 1.42. The net average sale price realised was Re. 1.83 per lb. as against Re. 1.72 for last year. The increase in cost is due to the increase in wages, staff emoluments, etc., and the better prices realised have to some extent compensated for the increase in costs of production.

Cardamom.—The quantity of cardamom harvested during the year amounted to 11,146 lbs. as against 8,121 lbs. in the previous year. The cost of production for the year was maintained at the previous year's figure of Rs. 5.11 per lb. and the average sale price realised was Rs. 7.43 per lb. as against Rs. 8.43 for 1957.

The net profit for the year amounted to Rs. 2,60,875 (Rs. 1,64,438) after providing for depreciation on buildings, machinery, etc., and after reserving a sum of Rs. 3,500 (*nil*) towards development rebate and a sum of Rs. 2,30,000 (Rs. 2,45,000) for income-tax. This profit, together with the amount brought forward from previous year of Rs. 48,584 (Rs. 37,146) makes a total of Rs. 3,09,458 (Rs. 2,01,584). Out of this, a sum of Rs. 9,000 (Rs. 9,000) towards first half-yearly preference dividend for 1958 has already been paid, and a sum of Rs. 9,000 (Rs. 9,000) has been provided for payment of second half-yearly preference dividend for 1958, leaving a balance of Rs. 2,91,458 (Rs. 1,83,584) available for distribution which the directors recommend be disposed of as under:—

To payment of a dividend of 15 (7½) per cent. for 1958 on equity shares absorbing Rs. 2,70,000 (Rs. 1,35,000) and to carry forward Rs. 21,458 (Rs. 48,584).

Estimates for 1959 provide for a tea crop of 11,30,000 pounds (4,50,000 pounds from Pasuparai Estates and 6,80,000 pounds from Carady Goody Estates) and 11,000 pounds of cardamom from Carady Goody Estates.

General.—The prices fetched by the Company's teas in auctions at Cochin have been better than what they were last year. As quality teas fetch better prices at present, special attention is being paid in turning out improved quality of tea at the factories. This accounts partially for the improved prices obtained for the Company's teas during the year. The estates of the Company have been regularly visited and are reported to be in excellent order and condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Notices

STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF the 6th May 1959 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Member of the Local Board at Bombay in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Jehangir P. Patel, a Member of the Local Board, whose term of office will expire on the 30th June 1959, NOTICE IS HEREBY GIVEN that I have accepted as valid the nomination proposing the name of Shri Jehangir P. Patel of 6 Veer Nariman Road, Fort, Bombay, as a candidate for election as a Member of the Local Board of the State Bank of India at Bombay. The said nomination being the only valid nomination received, Shri Jehangir P. Patel shall be deemed to be elected a Member of the Local Board of the Bank at the said Local Meeting of the shareholders proposed to be held on the 24th June 1959, which Meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

N. A. KRISHNAN,
Secretary and Treasurer,
State Bank of India,
Bombay.

BOMBAY, 10*th June*, 1959.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta, on Thursday the 16th day of July 1959, at 12.30 p.m., for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1959 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.

   Special Notice of intention to propose the re-election of Mr. K. C. Mahindra, who is 65 years of age, has been received.

CENTRAL LOAN ANNOUNCED

(From Our Own Correspondent)

BOMBAY, 17*th June*

The outstanding development of the week under review is the announcement of the terms of the Central Government's borrowing programme. The Government proposes to issue two loans, one a medium-dated—3½ per cent. 1969—and the other a long-dated—4 per cent. 1979—for an aggregate sum of Rs. 175 crores. The issue price of the former is Rs. 98.85, while the latter will be issued at par. Subscriptions to the loans, the list for which will open on 1st July, may be in the form of cash or of securities of 3 per cent. 1959-61 or 2½ per cent. Hyderabad loan 1954-59. These securities will be accepted at Rs. 100 per Rs. 100 (nominal) of the securities tendered in the case of 3 per cent. 1959-61 and at Rs. 85.50 per Rs. 85.71 or O.S. Rs. 100 (nominal) in the case of 2½ per cent. Hyderabad loan. The outstanding amounts of the two loans offered for conversion are Rs. 113.65 crores and Rs. 7 crores, respectively. The Government retains the right to accept subscriptions up to 10 per cent. in excess of Rs. 175 crores. If the total subscriptions exceed Rs. 192.50 crores, partial allotment will be made to subscribers in cash.

Both the issues are expected to have a good reception, now that the conditions in the short-term money market have perceptibly eased, indicating that the slack season is on. There are few borrowers in the market and inter-bank call money rate has declined further. There are lenders at 3 per cent. among the Exchange banks and big Indian banks and at 3¼ to 3½ per cent. among the smaller banks. House money at seven days' notice is, however, unchanged at 3⅞ per cent. and short-term deposits at 3½ to 4 per cent. for one to six months.

The Treasury Bill rate, too, has declined, after a lapse of two weeks, from 2.780 per cent. to 2.764 per cent. per annum. The amount offered at this week's sale was Rs. 2.56 crores, as against Rs. 2.37 crores last week. Tenders at Rs. 99.310 were accepted in full and those at Rs. 99.305 were allotted about 42 per cent. Tenders for next week are unchanged at Rs. 2 crores. After a pretty long interval Intermediate Treasury Bills met with some response during the week ended 13th June when their sales amounted to Rs. 7 lakhs at Rs. 99.321 per cent. These bills will be sold this week at Rs. 99.326 per cent.

The Reserve Bank of India statement for the week ended 12th June 1959 discloses a small contraction of Rs. 1.64 crores in notes in circulation. Notes held in the Banking Department are higher by Rs. 1.94 crores. There is no change in foreign securities, but balances held abroad continue to fall, the drop during the week under review being Rs. 1.90 crores, bringing the total foreign assets down to Rs. 196.02 crores. Deposits of the Central Government are only a shade lower, while those of other Governments and banks show a fall of Rs. 3.24 crores and Rs. 1.34 crores, respectively. Loans and advances other than to Governments have declined by Rs. 3.44 crores, of which advances to Scheduled banks account for no more than Rs. 31 lakhs.

A fall of Rs. 7.85 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 5th June 1959. Time deposits have, however, gone up by Rs. 1.28 crores. Inter-bank borrowings are lower by Rs. 1.95 crores, borrowings from the Reserve Bank by Rs. 1 crore and those from the State Bank by Rs. 1.35 crores. There has been a further reduction in bank credit, advances having fallen by Rs. 2.73 crores and bills purchased and discounted by Rs. 2.69 crores. Cash balances are a shade higher, but money at call and short notice have declined by Rs. 1.08 crores.

The Gilt-edged market is ruling firm with an all-round improvement in prices, ranging from 5 nP to 20 nP. The announcement of the new loan terms, which are more favourable than the yields available on comparable issues in the existing list, has not, however, disturbed the market. Banks are keen buyers of short- and medium-dated issues, but sellers are reserved. The scarcity of stocks is also accentuating the upward trend in prices. 3 per cent.1936 Conversion Loan is a shade quiet at Rs. 73.70, while 3 per cent. 1970-75 has picked up 10 nP to Rs. 91.60. 3 per cent. 1966-68 has gone up by 20 nP to Rs. 94.30, 3 per cent. 1964 by 10 nP to Rs. 97.10 after payment of interest and 3 per cent. 1963-65 by 5 nP to Rs. 96.95. 2¾ per cent. 1962 has gathered 15 nP to Rs. 97.15 and 2½ per cent. 1961 10 nP to Rs. 97.60. 3½ per cent. 1961 and 1963 are each up by 5 nP to Rs. 100.20 and Rs. 100.05, respectively. 3½ per cent. 1964 has shot up by 15 nP to Rs. 100, 3½ per cent. 1965 by 10 nP to Rs. 99.80, 3½ per cent. 1967 by 15 nP to Rs. 99.35 and 3½ per cent. 1968 by 10 nP to Rs. 99.20. 3¾ per cent. 1974 has hardened by 10 nP to Rs. 99. 4 per cent. loans are stagnant. Among State loans, 4½ per cent. issues are in demand, but very little business is being done. However 4½ per cent. 1970 West Bengal has improved by 20 nP to Rs. 101.90, Madras by 10 nP to Rs. 101.80. Andhra by 10 nP to Rs. 101.60 and U.P. by 20 nP to Rs. 101.80.

There has been a slight hardening of the rupee in terms of the dollar, in consonance with the trend of sterling abroad. Banks' selling rate for U.S. ready dollar has dropped from Rs. 476 to Rs. 475.75 per $100 and their buying rate from Rs. 472.75 to Rs. 472.50 per $100. In New York, spot sterling has gained from 281.15-281.18 to 281.23-281.26 cents. Three months' forward has, however, shaded off from 281.07-281.10 to 281-281.04 cents.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 17*th June*

Firm conditions prevailed in the bullion market during the major part of the week under review. Both gold and silver revoked good enquiries from speculators as well as spot houses, while fresh offerings were on a small scale. Bull operators from Calcutta were reported to have been consistent buyers in silver. There would have been a more marked rise in gold but for reports of inflow of some contraband metal.

In the gold section, June settlement was exceptionally firm, reflecting the determination of the bull group to ask for actual delivery when the settlement runs out on Monday next. It opened at Rs. 118-15, as against Rs. 119, and forged ahead in the course of the week to Rs. 121-10 today before finishing at Rs. 121-2-6. July settlement rallied from Rs. 117-4 to Rs. 118-6-6, the highest level touched being Rs. 118-10. The backwardation rate (*budli* in favour of bulls) for June settlement widened from Re. 1-12 at the close of last week to Rs. 2-6 yesterday, notwithstanding the continuance of the margin of Rs. 25 per tola which the bulls had to pay. Business in August settlement commenced at Rs. 117-13 today. After receding to Rs. 117-9, it recovered to Rs. 117-11-6 at the close.

Ready gold met with good support and advanced from Rs. 120-4 to Rs. 121-4 today. Subsequently, however, there was some selling which brought down the quotation to Rs. 121-0-6. The daily average arrivals and offtake of gold were 4,400 tolas and 3,300 tolas, respectively. The floating stocks are estimated at 20,000 tolas.

June settlement in silver, which stood at Rs. 192-14 last week, gradually moved up to touch a high of Rs. 195-12 yesterday. At this level, profit-taking set in and the rate declined to Rs. 195 today. The net gain over the week was Rs. 2-2-0. July settlement spurted from Rs. 191-15 to Rs. 194-14 yesterday. Today, however, it receded to Rs. 194-1. The backwardation rate for June settlement increased from As. 15 to Re. 1-3 on Saturday, so that the bulls in this settlement were required to pay a margin at the rate of Rs. 1,000 per bar. In the subsequent sessions, however, the backwardation rate slided back and stood at As. 15 today. August settlement was quoted at Rs. 193-4 today, as against Rs. 194-5 at which business in this contract commenced yesterday.

Ready silver improved from Rs. 193-14 last week to Rs. 196-1 on Saturday. After declining to Rs. 194-5 on Monday, it recovered to Rs. 195-14 yesterday. Opening at Rs. 195-3 to-day, it finished lower at Rs. 195-1. The daily average arrivals of silver were 18 bars, while the offtake was 14 bars. The floating stocks are reported to be around 400 bars.

Both ready and forward silver in the London bullion market suffered a setback during the week; the former receded from 78½*d.* to 78⅛*d.* per ounce and the latter from 78⅛*d.* to 77¾*d.* Silver in New York was unchanged this week too at 91.375 cents per ounce. Ready gold in London, after rising from 249*s.* 9½*d.* to 249*s.* 10*d.* early in the week, eased to 249*s.* 8¾*d.* yesterday. The decline was due to firmness of the forward sterling *vis-a-vis* the dollar. The latest available dollar rate for gold in London is $35.11-$35.13, same as last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	17-6-59	Highest	Lowest	10-6-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

NOSTTIK OVERSEAS ENTERPRISES

P. O. Box 233

EBUTE — METTA — NIGERIA

Are interested to represent manufacturers and/or sole exporters of all kinds of textiles, crockeries, cutleries, iron goods, leather goods, sports goods, cement, household goods, office equipments, ornamental goods, rain equipments, grocery goods, beverage, alcoholic drinks and children's toys. We are also importers of those products as enumerated above, and free valid samples for effective showroom display should accompany all offers to us. Also looking for Commission Agents in any country to cater for our interests by negotiating on our behalf.

COTTON FUTURES DOWN

(From Our Own Correspondent)

BOMBAY, 17*th June*

Barring a brief spell of firmness, which persisted for hardly two days, namely, Saturday and Monday, the cotton futures market continued to rule depressed. It is true that selling pressure was less intense than in the previous week but the market was still in the grip of bears. The prospect of much larger import of foreign cotton, and the likelihood of a fall in demand for cloth in the rainy season, a slackening of mill activity seemed to have encouraged bears to tighten their grip. Upcountry operators, in particular, were mentioned as persistent sellers. The firmness witnessed on Saturday and Monday was induced by the delay in the onset of the monsoon and better spot advices. But it proved short-lived. Cotton futures succumbed to heavy selling yesterday. Today, after an initial firmness, the contract again met with selling with the Jarilla contract dropping to the lowest level of its career, namely, Rs. 682.

I.C.C. Moglai Jarilla August opened the week at Rs. 687, as against the previous close of Rs. 687.25 and, after declining to Rs. 684.50 on Friday, improved to Rs. 689.75 on Monday. The contract reacted to Rs. 683.25 yesterday. Commencing today's session at Rs. 684.25, the contract gathered Rs. 2.50 before receding to Rs. 682.25 at close.

The spot market at Sewri seemed to have ignored, to some extent, the developments in futures. It put on a better appearance than the futures. Although there was a slackness of mill demand due to the drop in futures values, needy mills were covering their immediate requirements. Spinner interest was noted for Vijay, Digvijay, Wagad, Kala, Kalyan Co.2. Southern mills were particularly interested in 197/3 and Wagad.

Export demands are none too encouraging. Prices, however, ruled steady. Bengals continued to evoke moderate inquiries. The U.K., the Continent and Hong Kong were interested in yellow pickings.

Demand for Sudan cotton was brisk early in the week-end. Substantial business was done mainly in medium to higher S. grades. The uncertainty regarding the discount rate prompted mills to keep off from Egyptian varieties. According to earlier reports, the Government of India was not willing to allow payment for Egyptian cotton in transferable currencies under 'B' account while Egypt was prepared to give a discount of 35 per cent. only if payment was made under this account. It was therefore thought that business in Egyptian cotton was possible only in terms of the special Indo-Egyptian rupee payment agreement under which only 15 per cent. discount was available. Indian mill buyers considered this unattractive *vis-a-vis* cheaper Sudan cotton. The uncertainty was, however, over on news that Egypt was prepared to offer 35 per cent. discount on cotton sold against payment in rupees. Mill buying in Egyptian cotton consequently revived with a corresponding fall in interest in Sudan.

Contrary to earlier reports, it is now understood that U.S. cotton is also eligible for import under the recent import quota covering 40,000 bales of stapling 1-1/16" and above but below 1-3/16".

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 700; Berar Jarilla 700; Khandesh 840; Laxmi 980; Jaydhar 900.

The Karachi cotton futures market continued to remain closed. In the spot section, values ruled fully steady. Spinner demand was moderate and export interest normal. Exports of cotton from Karachi from the beginning of this season till 28th May aggregated 571,662 bales, as against 533,598 bales in the same period last season. Japan accounted for the bulk of this quantity, as much as 241,293 bales, as against 183,615 bales in the same period.

The Alexandria cotton futures market depicted a mixed trend during the week. While the long-staple Karnak contracts scored handsome gains on good support influenced by firm spot advices and export demand, the medium-staple Ashmouni contracts eased, thanks to lack of outside interest. In the spot market, longer staple cotton prices were firm and offerings by shippers limited, reflecting scarcity of stocks. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: July 76.70 (73 30); November 75.95 (74.45). *Ashmouni*: June 68.46 (68.75); August 67.60 (67.45).

Sudan cotton prices in Khartoum hardened further. More recent biddings are said to have tended to reflect a scramble for cotton, thanks to Indian mill interest following the recent quota release. The Sudan Exporters' Association is reported to have proposed to the Gezira Board that the number of auctions held weekly be reduced from four to two. It would appear that the restricted rate of additions to the auction list due to the time taken in sampling has prompted this proposal.

Cotton futures in Liverpool moved erratically during the week in slow dealings characterised by inter-month switchings with small trade buying offsetting Commission House liquidation. Values moved either way with a larger number of positions showing losses, over the week, than gains. Sudan contracts, however, were firm on higher Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: July-August 23.25; October-November 21.60; December-January 21.30; March-April 21.10.

American cotton mixed growth contract: July-August 23.25; October-November 22.00; December-January 21.50; March-April 21.20.

Sudan: July-August, September-October, November-December 28.00.

Cotton futures in New York eased during the week, presumably reflecting the reaction of the market to the Senate's approval of legislation which includes, among other things, provision for fixing a limit on price support loans to any individual farmer or farm at $50,000. Differences with the measure passed by the House of Representatives, the lower house, it is said, will be worked out at a conference. This limitation on price support loans will be effective from the 1960-61 season.

The Commodity Credit Corporation has sold a further quantity of 28,155 bales under the current export sales programme C-11, making the total figure for the season thus far 2,332,025 bales. The average price accepted for Middling one inch cotton at average location was 28.50 cents per lb. which is 9 points higher than that realised at the previous sale. Total registrations under the payment-in-kind programme for the current season thus far aggregate 305,844 bales.

It is reported that the Department of Agriculture has reduced their estimate of exports this season to 2.8 million bales from the previous prediction of 3 million bales. The estimate of domestic consumption has been increased from 8.5 million bales to 8.7 million bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	16-6-59	9-6-59	2-6-59
Spot	36.10	36.20	36.25
July	34.78	34.84	34.65
October	32.35	32.48	32.61
December	32.42	32.52	32.59

S.T.C. TO IMPORT ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 17*th June*

Both the art silk weaving mills and the yarn traders are greatly intrigued at the report that the State Trading Corporation has made arrangements for the supply of viscose rayon yarn from East Germany, Hungary and Egypt. The Corporation has appointed three authorised agents to facilitate purchases according to the requirements of importers—Artex Agencies, 354, Kalbadevi Road, Bombay 2, for East Germany; Hugo Wachsmann (India) Ltd., Fern House, Colaba, Bombay 1, for Hungary; and Central Supply Company, Bharucha Building, Bombay 2, for Egypt. The prospective importers are required to get in touch with the authorised agents and book orders for their requirements against 24 per cent. of their quota licence with them direct. The payment terms in the contract thus entered into should specify that the payment for the art silk yarn, whether through letter of-credit, payment against shipping documents or otherwise, will be made in Indian rupees in the special rupee account. For imports from East Germany, payment will be made in rupees in accordance with the existing trade agreement; for imports from Hungary, payment will be made in rupees in the special Account 'A' maintined by the Hungarian Chamber of Commerce with the State Bank of India, New Delhi, while for imports from Egypt, payments will be made in rupees into the special Account 'H' of the National Bank of Egypt maintained by the S.T.C. with the State Bank of India, New Delhi.

The aforesaid news has greatly disappointed the yarn dealers who fear that the move "is nothing but a beginning to hand over the entire imports of art silk yarns to the S.T.C. in course of time." The Bombay Yarn Merchants Association and Exchange Ltd. is understood to have made a strong protest to the Government of India.

Despite the S.T.C's arrangements as mentioned above, art silk yarns ruled distinctly firm with a handsome rise in prices. The firmness was engendered by the feeling that the prices of yarn supplied by East Germany, Hungary and Egypt would be higher than those currently prevailing in the country. In sympathy with art silk, staple fibre yarns also ruled firm. The reports that a few South Indian mills had sold some quantities at lower prices had no effect. Cotton yarns were dull with irregular fluctuations in prices.

Cupressa Bamberg yarn (60 x 2) June contract rallied from Rs. 1,412 to Rs. 1,439 per case of 200 lbs. August contract (new packing of 100 kilograms or 220 lbs.) jumped up by Rs. 36 to Rs. 1,618. Spot Cupressa spurted by 22 nP to Rs. 7.25. 120 Italy hardened by 9 nP to Rs. 4.90. 150 Japan gathered 2 nP to Rs. 4.67. 120 Japan gained a naya paisa to Rs. 4.72. 15 Italy, however, declined by 3 nP to Rs. 4.56. Among indigenous yarns, National Rayons 120 bright cones 1st grade strengthened by 4 nP to Rs. 4.62. 150 bright cones 1st grade rose by 2 nP to Rs. 4.24.

Staple fibre yarn (40 x 2) June contract advanced by Rs. 10 to Rs. 598. August contract picked up Rs. 11 to Rs. 609. Spot Kohinoors improved by 9 nP to Rs. 3.34. Citys put on 3 nP to Rs. 3.10. Among imported yarns (80 x 2), Paramounts increased by 6 nP to Rs. 7, but Fujis lost 3 nP to Rs. 7.22.

In the cotton yarn section, ten counts Moderns were quiet at Rs. 13.75 and Podars at Rs. 12.12. Twenty counts Moderns rose by 25 nP to Rs. 16.75 and thirty counts Maduras by 62 nP to Rs. 21.12. Among 40s, Minaxis dropped 38 nP to Rs. 25.37, while Moderns gathered 25 nP to Rs. 26. Sixty counts were dull, Raghuvamshis being quoted at Rs. 57.50 and Finlays at Rs. 64. Eighty counts Mahendras were unchanged at Rs. 71.50, as also Finlays at Rs. 81 and Citys at Rs. 66.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before:

	17-6-59	10-6-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg June (200 lbs.) ..	1,439	1,412
60/1 Cupressa Bamberg August (100 Kg.) ..	1,618	1,582
60/1 Cupressa Bamberg spot (per lb.) ..	7.25	7.03
120 Japan (per lb.)	4.72	4 71
150 Japan (per lb.)	4.67	4.65
120 Italy (per lb.)	4.90	4.81
150 Italy (per lb.)	4.56	4.59
Staple fibre yarn—		
40 x 2 June (per case of 200 lbs.)	598.00	588.00
40 x 2 August ( )	609.00	598.00
40 x 2 Kohinoor (per lb.)	3.34	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 12	12 12
20s Modern	16.75	16.50
40s Minaxi	25.37	25.75
60s Raghuvamshi	64.00	64.00
80s Finlay	81.00	81.00

OILSEEDS LOWER

(From Our Own Correspondent)

BOMBAY, 17*th June*

Easy conditions continued to prevail in the oilseeds market during the week under review, thanks mainly to comfortable supply position and lack of overseas enquiries for oils and seeds. The volume of business transacted during the week was relatively small. After an initial setback, the market staged a notable recovery by the middle of the week. It, however, lost ground once again today, on nervous bull liquidation and profit-taking.

The groundnut section, which had put up a cheerful appearance for sometime past on persistent paucity of ready material, gave way during this week. On reports of favourable weather in one of the major producing areas, namely, Hyderabad, some of the leading dealers are said to have been dishoarding their stocks of seeds. This has gone a long way to make good the lower arrivals of seeds from upcountry centres. Moreover, traders tended to be cautious in view of the opening of the new contract in the near future. In these conditions, groundnut August contract, which wound up last week at Rs. 200, closed today lower at Rs. 199.50, after fluctuating between Rs. 199 and Rs. 200.75. Bold ready touched the closing level of last week at Rs. 43.00, after remaining subdued for the major part of the week. Oil ex-mill was unchanged at Rs. 22.00.

A sharp reaction was witnessed in the castor-seed section. This was mainly due to the absence of foreign advices for castor oil. The prospective U.S. buyer prefer to wait and watch the situation. Enquiries for oil from Communist countries and the U.K. were also discouraging. Large inflow of castorseeds from the major producing centres aggravated the fall in values. September contract, which stood at Rs. 164.50 last week-end, lost ground subsequently to finish at Rs. 162.37. Ready Madras lost 37 nP at Rs. 31.25. Oil B.S.S. receded from Rs. 17.12 to Rs. 16.87.

Linseed moved in sympathy with other sections. It was featureless and lacked fresh support. Linseed September contract closed today at Rs. 33.81, as against Rs. 34.06 last Wednesday. Bold ready, however, improved by 12 nP to Rs. 33 and oil by 6 nP to Rs. 15.75. Cottonseed was dull, mainly on account of the setback suffered by cotton, September contract, which closed last week at Rs. 133.75, eased to Rs. 133, after moving within a narrow range.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	17-6-1959	10-6-1959	3-6-1959
Groundnut	Rs.	Rs.	Rs.
August 1959	199 50	200 00	199.25
Bold ready	43.50	43.00	42 75
Coromandel ready	43 25	43 25	43.00
Khandesh quality	43.25	43.25	43.00
Oil ex-mill ready*	22 00	22.00	21.75
Railway receipts*	21.81	21.87	21.62
Castorseed			
September 1959	162.37	164.50	166.12
Ready Madras	31.25	31.62	32 00
Ready Kanpur	30 00	30.44	30.50
Oil B.S.S.†	16.87	17.12	17.25
Oil commercial†	16.12	16.31	16.50
Linseed			
September 1959	33.81	34.06	34.25
Bold ready	33 00	32.87	33 25
Oil ready†	15.75	15.69	15.75
Cotton seed			
September 1959	133 00	133.75	134.00
Niger seed	31.75	31 75	32.00
Kardi seed	24.25	24.25	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR RALLIES

(From Our Own Correspondents)

BOMBAY, 17*th June*

There was a good rally in the sugar market during the week under review. This followed the sizable pre-monsoon demand for sugar from Saurashtra, Gujerat and the Southern areas. At the same time, the floating free sale stocks of sugar in the State were reported to be limited. Arrivals of sugar by rail into the city were meagre, being no more than 5,912 bags, as against 14,120 bags in the previous week.

Large grain sugar firmed up by Rs. 4 to Rs. 122—128 per bag. Medium grain advanced by Rs. 3 to Rs. 119—121. Small grain spurted by a like amount to Rs. 118.

The Government of Bombay is reported to have requested the Union Food Ministry to inform it about the arrangements which the Ministry proposes to make for supplying sugar to different areas in the State where the sugar mills with their limited free stocks are not able to meet the demand. It is understood that a full-fledged scheme prepared by the Ministry will be announced along with the next free sale release not later than the 27th of this month. Meanwhile, the representatives of the Deccan Sugar Factories Association, the co-operative factories in the State and the trade met the State's Civil Supplies Minister, Mr. Kazi, separately this week. Enquiries made in sugar circles reveal that the Association has agreed to sell D-29 grade sugar at Rs. 105 per bag ex-mill with corresponding price differentials for other grades as laid down in the I.S.S. Price Differential Chart. On their part, the co-operative sugar mills have given the assurance that they would supply their sugar for distribution to consumers through the Grain Dealers' Federation and the co-operative consumer societies. The sugar dealers have expressed their willingness to take up the work of distribution at a very small margin of profit.

* * * *

HAPUR, 15*th June*

After an early slight fall following the change in Government's sugar policy, sugar has recorded a firm trend and touched new high levels for some qualities in mill delivery section. Wholesale trade in sugar is to be licensed, but the delay in the issue of sugar licences under the State Government's Sugar Licensing Orders has also imparted strength to the market. Arrangements, however, have been made at some places to supply sugar at controlled prices, but the uptrend is perfectly bullish.

Sugar spurted by Rs. 2 to Rs. 2.50 per maund in the Muzaffarnagar market during the week and were quoted at Rs. 5.62 to Rs. 7.50 per maund higher than the controlled prices fixed by the Government. There was good bull support from Punjab and Rajasthan. The latest prevailing prices were:—crystal spot delivery Shamli D29 Rs. 36.75; Deoband D29 Rs. 38.25; wholesale mill delivery controlled B29 Rs. 37.12; C29 Rs. 36.37; D29 Rs. 36; market quotations f.o.r. mill stations Meerut D29 Rs. 42.75; Lhaksar B29 Rs. 43.62; Dhampur D29 Rs. 42; Amroha D29 Rs. 41.62; Bijnore D29 Rs. 41.62; Saharanpur D29 Rs. 43.25; Mansurpur C29 Rs. 43 87; Dauarala C29 Rs. 43.37.

Sugar in the Kanpur market also recorded a hardening trend during the week, as supplies were restricted.

Khandsari ruled quietly steady to be quoted now at:—superior Rs. 37 to Rs. 39.50 and inferior Rs. 35 to Rs. 37 a maund.

Ready *gur* ruled quietly steady. Daily arrivals continued at an average of 500 maunds, as producers who had retained their stocks uptill now for better prices were rushing their supplies to the market before the onset of the monsoon. Total arrivals of *gur* during the season were above 650.000 maunds, as against about 400,000 maunds last year and local stock was put at 65,000 maunds. Condition of the new cane crop was reported to be fair, but much would depend on the coming rainy season. The prevailing prices were:—*pansera* Rs. 21 to Rs. 21.27; *shakker* Rs. 22.50 per maund.

Ready *gur* was quiet in the Muzaffarnagar market, due to want of outside support. Local stock was about 300,000 maunds. *Shakker* prices improved slightly, due to good demand from Rajasthan and Gujerat.

Future trading in *gur* has been sanctioned here by the Central Government and will soon start under new regulations laid down by the Forward Markets Commission.

MORE JUTE LOOMS UNSEALED

(From Our Own Correspondent)

CALCUTTA, 16*th June*

Following good buying support, active conditions were in evidence in the jute markets during the week under review. Prices of both jute goods and fibre added gains. Two outstanding events of the week which influenced the market were the decision by the Indian Jute Mills Association to unseal 1½ per cent. of the total loomage with effect from the 22nd inst. and the shipping of 1,350 tons of raw jute to the U.S.S.R., for the first time in one decade, by the State Trading Corporation. In recent months, hessian stocks have been progressively decreasing, and it is becoming clear that unless production of this construction is increased, an acute shortage would develop. For the Argentine is expected to show greater interest and accelerate purchases which would total 70.000 tons within the next few months. There have been indications of an increase in American interest too. Argentina has had a good farm output this year, and trade circles have no doubt that that country will purchase a greater quantity of hessian this year than last year. No doubt, burlap stocks in the United States are high at about 287 million yards, equivalent to about 3½ months' consumption. However, there are sufficient indications of American interest for imminent purchases against replenishment of stocks.

At the end of May, hessian stocks, although increased by 1,800 tons to 21.400 tons, following the transfer of more sacking looms to hessian manufacture in the month, represented only half a month's production. Trade circles are naturally worried about shortage, if the expected orders from Argentina and the United States materialise. The unsealing of looms by 1½ per cent. is only expected to increase production by 1,500 tons a month. That this is considered paltry and insignificant by market circles is evident from the fact that, despite the move to raise production, prices have hardened this week. In recent weeks, the position of sacking has shown a progressive improvement, and the transfer of looms, coupled with increased buying for foreign consumption, has reduced stocks with mills to a reasonable level. At the end of May, stocks of sacking declined by 6,800 tons to 61,400 tons, which was about six weeks' production. Gradually, more and more orders are being received for sacking goods, and opinion in trade circles suggests that the method of increasing hessian production at the cost of sacking can no longer be adopted. This is the background against which mills have decided to unseal 1½ per cent. of the looms, bringing the percentage of looms that would remain yet closed to 12½, the position which existed prior to 1st March. Trade circles thought that the increase in production by 1,500 tons would not leave any mark on stocks, and that it was imperative that more looms should be unsealed. Evidently, the step of the I.J.M.A. is a guarded one, and it is anxious to avoid any sharp reaction in the market. In this view, trade circles expect a further announcement of unsealing of looms after the position is considered anew on publication of the June-end stocks.

The other development, namely, shipment of raw jute to the Soviet Union, was noted with interest. A further shipment would follow soon. This development is important inasmuch as India wants to increase its exports of raw jute in view of the domestic surplus. Reports from jute districts in Assam and Bengal indicated alternate rains and sunshine this week, and these have done immense good to the plants. Fibre prices this week hardened in sympathy with the goods market. Business passing was restricted, as the bigger group of mills, who are members of the Indian Jute Mills Association, would not accept the new transferable specific delivery contract form as introduced by the East Indian Jute and Hessian Exchange from 1st June. These mills insist, as already reported in these columns, the moisture content clause in the form should be 3 per cent. instead of 4 per cent. It transpires that when the new form was being drawn up, the objection of the I.J.M.A. was not accepted by the contract sub-committee.

Ready B. twills remained unchanged but steady at Rs. 94.80 on Tuesday last, while ready hessian 40" 10 oz. hardened to Rs. 41.05 from Rs. 41. There was some buying in cornsacks for export to Australia. The next day, the I.J.M.A. decision to unseal 1½ per cent. of the looms was announced. This did not have any bearish effect, as the trade was expecting a higher percentage. Thereafter, B. twills spurted to Rs. 95.50 and hessian 40" 10 oz. to Rs. 41.20. Covering business in sacking goods was moderate. There was also keen activity in the futures market. On Thursday, there was profit-taking but soon after B. twills regained to Rs. 95.50. Hessian 40" 10 oz. was steady at Rs. 41.20. Covering business soon followed to take B. twills up to Rs. 95.70 on Friday. Hessian 40" 10 oz. was depressed at Rs. 41.15, following the news of lower consumption of burlap in the United States in the month of April. When the actual figures were, however, analysed, the market was prepared to shake off the earlier disappointment. For, U.S. consumption in May, although at 70.5 million yards, was lower by 3.8 million yards compared to April, were higher by 5.5 million yards compared to May 1958. Stocks at the end of May, however, increased to 287.2 million yards from 279.7 million yards. This news was soon followed by the report that May shipments of hessian to Argentina would be effected soon, as permission had been received. Over the week-end, therefore, there was no surprise when hessian 40" 10 oz. gained to Rs. 41.40. B. twills were shown covering interest, and the price rose to Rs. 96.25. Fully steady conditions were in evidence yesterday. Keener enthusiasm followed the news of higher production in May, despite which May-end stocks showed a substantial decline. B. twills jumped up to Rs. 96.85 and hessian 40" 10 oz. to Rs. 41.45.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 17*th June*

Malabar black pepper ruled quiet with narrow fluctuations during the fortnight under review. Alleppey spot moved between Rs. 631½ and Rs. 643½. Business at Cochin proved thin, owing to political trouble in Kerala. Turnover on the forward ring was also very much restricted. July delivery fluctuated between Rs. 113 and Rs. 115, and August between Rs. 114 and Rs. 116, with both buyers and sellers reserved. Calicut was fairly steady at Rs. 690.

New York is firm buyer at $0.24½, but India is reserved seller, as arrivals on all the terminal markets are small. Dealers in the U.S. are replenishing their stock off and on for the seasonal period, but their tempo of buying is not so as to excite the market. They are buying hand to mouth.

Singapore is reported to be offering New York Lampong pepper at a competitive price. But the quantity offered is restricted, as holders there are expecting higher price after a month or so when the crop position of Lampong will be clearer. Black pepper in Singapore is firmly held, while white is quiet but steady, as growers are unwilling to press sales. The traders in general are eagerly awaiting the first estimate of new crop from Lampong which, according to the present indication from knowledgeable source, is likely to be small.

Some development of demand in ready is seen both in Malabar and at Bombay. The local prices for ready improved by about Rs. 5, owing to better inquiries. Stock in Bombay is reported to be not more than 3,500 bags.

The steep fall in the value of Indonesian rupiahs and the policy of the Government to squeeze the Chinese traders out of business have resulted in panic, as most of the Chinese merchants are liquidating their holding and acquiring foreign exchange, notably Malayan dollars, at any price in order to transfer their assets to Singapore or Hong Kong. Pepper growers in Indonesia, therefore, are likely to keep their money in produce rather than in paper currency.

Ready pepper in Bombay is quoted at Rs. 89 per Bengal maund.

POOR DEMAND FOR TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 12*th June*

Offerings in Sale No. 22, which was held on 9th June 1959, totalled approximately 1.7 million pounds. Quality showed a further decline and a large weight of rush teas were on offer. The market opened to a fair demand, but eased towards the close of the sale. Prices were irregularly easier for all descriptions—in particular, broken grades suffered more than fannings grades. Low mediums and mediums met with a fair enquiry and sold at a decline of 10 to 15 nP. There was only a selective demand for good mediums which were easier by 15 to 20 nP. High grown brokens were neglected by the buyers and there were heavy withdrawals under this category. However, similar fannings met with a better support and are quoted about steady. The quotations were: low medium Re. 1.50 to 1.70; medium Re. 1.65 to 1.80; good medium Re. 1.85 to Rs. 2.05 and quality Re. 1.90 to Rs. 2.60.

Dust Sale 'N'.—700,000 lbs. were offered in this sale which was held on 11th June 1959. There was a good demand for most descriptions at irregularly easier rates. A number of rush production dusts of poor appearance were on offer. Low mediums and medium types declined by 15 to 20 nP according to quality. Milled dusts and poorer sorts met with only a fair demand and sold at considerably easier rates. There was a useful support for black grainy types which were firm. C.T.C. dusts sold well at slightly easier rates.

London Market: Sale of 8th June 1959.—Little irregular, but generally firm.

Sale of 9th June 1959.—Best firm, plain tending lower.

Colombo Market: Sale of 8th June 1959.—Quality generally plain. Good demand. Small selection. Best available quality firm, other high-grown substantially lower, following quality. Medium brokens declined 15 to 20c; plain fannings down 30 to 40c; lowgrown Gulf types 5c. dearer; others 5c. lower.

Sale of 9th June 1959.—Powdery dusts and stalky broken mixeds lower. Others strong demand, particularly useful liquorings, fannings, and dusts fully firm to dearer.

Calcutta Market: Export.—31.500 chests. First sale new season poor demand. Some bright liquoring first flush teas Dooars Cachar sold at considerable drop. Buyers appear hesitant to establish 1959 market. Calcutta, consequently heavy withdrawals.

Internal.—16,200 chests only. Fair demand at easier rates. Orthodox 4 to 6 nP easier with poorest up to 10 nP easier. Medium C.T.C. irregular. Few best C.T.Cs good demand.

Export Quota 1959-60.—The market remains quiet with last business done at 3 nP and the quotation remains unchanged.

As we go to press Messrs Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale No.* 23.—2 million lbs. Useful demand at lower rates. Low medium and medium teas 5 to 10 nP easier with some withdrawals. Good mediums 5 nP lower. Best liquoring irregularly easier."

TEA DULL

(From Our Own Correspondent)

CALCUTTA, 16*th June*

Dull conditions prevailed during last week's internal sales. It was felt that quality must improve for a change in demand. A similar trend was also in evidence in yesterday's sales held in Mincing Lane, where North India offerings amounted to about 16,000 packages and the good liquorings met with a good market and the poorer qualities eased. The report of lower North Indian production in May following unfavourable weather had little effect in sentiment here.

Dusts on offer in last week's internal sales amounted to 18,106 chests. Prices registered a further recession, although there was a fair general demand. The best liquoring teas among C.T.Cs gave way, and at one time were as low as 10 nP below last rates. The better liquorings also declined, while medium C.T.Cs were irregular. Orthodox teas had buyers at rates which were 4 to 6 nP below last rates, while the poor kinds in this variety eased by 10 nP. An irregular trend was recorded in legg-cut Dooars, with prices on the decline. A similar trend was in evidence in Darjeelings. The quotations, exclusive of excise duty, were: best Assam C.T.C.—unquotable, medium Assam C.T.C. Re. 1.80 to Rs. 2.05, medium Assam grainy Re. 1.60 to Re. 1.64 and medium Dooars Re. 1.62 to Re. 1.68.

Leaf on offer was only 98 chests.

Export rights for 1958-59 changed hands at 3 nP, and special export transferable licence at ¼ nP. Non-transferable shipping licence was available at ½ nP, but there were no buyers.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 15*th June*

Quiet conditions prevailed in the foodgrains market during the week under review. Arrivals of *rabi* grains are still meagre, but the U.P. State Government has tightened its wheat procurement operations by extending the Wheat Levy Order to commission agents also who will now be required to sell 50 per cent. of the wheat stocks coming into their possession in any manner to the Government at fixed prices.

Wheat at Hapur ruled unchanged at Rs. 18 to Rs. 20 per maund in the open market, as against the Government purchase price at Rs. 13 to Rs. 15 a maund. Wheat was not openly reaching the market here and daily arrivals at an average of 50 to 100 maunds were being lifted in private by consumers at fancy prices.

Rice continued to rule steady. The U.P. Government has decided to make rice available at fair-price shops in the urban areas of eleven more districts. The Central Government's procurement plans for rice are working satisfactorily and about 1.2 million tons of rice and paddy have already been obtained, as against the target of 2.0 million tons. The latest prevailing prices of rice are:—*sela basmati* Rs. 33 to Rs. 36; *mainpuri* Rs. 22.50; *raimunia* Rs. 27; *gadda* Rs. 22.50 a maund.

Gram registered a fractional fall during the week, thanks to heavy arrivals from Punjab and a bumper crop in the country. Gram production in 1958-59 has touched a new height of 6.826,000 tons, representing an increase of 37.1 per cent. over last year and 27.1 per cent. over the average production of last five years. Barley production in the country in 1958-59 was also heavy at 2,640,000 tons, an increase of 18 per cent. over last year. Barley and *bejhar* sought lower levels, while *jowar* and *guwar* were unchanged, as demand was reported to be fair for seed purposes. The week-end prevailing prices (in rupees per maund) were:—gram 13.25; barley 12.75; *bejhar* 12.25 to 12.87; *jowar* 13.75 to 16; *guwar* black 12, white 15.37.

Good demand from O.T.R. destinations, coupled with easy loading facilities, accounted for quietly steady conditions in peas during the week. Local arrivals were at an average of 750 to 1,000 maunds daily and local stock was put at 42 *khatties*, as against 193 *khatties* a year before. The week-end prices (in rupees per maund) were:—Peas *dara* 12.87; farm white quality 13.40 to 14.50; peas *dal* 14.37; *arhar* 17.25 to 17.50; *arhar dal* 22 to 23; *urd* 19.25; *moong* 20.50 to 22.50; *massoor* 15 to 19.25.

The sowings of *kharif* maize crop has begun in some areas, while large-scale sowings will commence with the onset of monsoon, which is expected here in the first week of July.

COPPER POLICY CHANGED

(From Our Own Correspondent)

CALCUTTA, 16*th June*

Easier conditions were in evidence in the metal market during the week under review, following a seasonal decline in interest shown by consumers. Market circles expressed dissatisfaction at the change in the official copper policy to the effect that the Government would deduct quantities permitted to scheduled industries from the stocks held by the State Trading Corporation. These stocks were originally meant for non-scheduled industries and, in view of the delay in the issue of import licences to scheduled industries, the Government diverted a portion of the S.T.C. stocks to the scheduled industries. The market and trade circles asked whether the delay in the issue of import licences to scheduled industries aimed at the extension of the activities of the S.T.C. in the import trade! Meanwhile, the S.T.C. continued to release copper to small consumers. Consequently, copper wire clean scrap declined by Rs. 3 to Rs. 232. On the London Metal Exchange, copper opened at £237 and eased to £236½, as the possibility of an imminent release from the American stockpile receded. Towards the week-end, the rate toppled down further to £232½ per ton. In New York, the price for July declined from 31.15 cents to 30.06 cents per lb. The movement was irregular.

Tin opened here at Rs. 559 and, after declining to Rs. 558.50, moved up to Rs. 560 before closing at Rs. 559. Consumers were not interested to enter into any big commitments, in view of good stock position with them as well as in the market and the possibility of a decline in the price. On the L.M.E., spot metal recovered to £788, after falling from £787½ to £785¼. In the Far Eastern markets, a definite uptrend was in evidence. The price for July in New York rose gradually to 102.50 cents per lb. from 101.00 cents.

Electrolytic zinc improved fractionally from Rs. 98 to Rs. 98.25, following weakening stock position. The demand was mostly speculative since the S.T.C. had enough metal to distribute to consumers through the permit system. In London, zinc opened at £77½ and improved to £77¾. After declining to £77, it closed better at £77⅜. There was also a fractional improvement in the price at New York.

Lead declined from Rs. 73 to Rs. 72, in view of higher stocks. Apart from an official enquiry, there was nothing else worthwhile mentioning. In London, the closing price at £69 per ton registered a loss of 10s., while, in New York, in an irregular movement, a fractional rise was reported.

HIDES ARRIVALS LARGE

(From Our Own Correspondent)

MADRAS, 15*th June*

Arrivals of E.I. tanned cow hides and buff hides were somewhat larger than in previous week, while those of cow calf and buff calf were small. U.K. buying seemed to be on a hand-to-mouth basis, as the importers' intake was only selective. Top class goods were in good demand at unchanged levels. Other marks, however, were wanted only at lower prices. Inquiries for cow hides all weights from the East European countries were in the air, and these firmed up the market to some extent, despite the fact that no business was actually booked.

Tanned goats, as well as semi-prime and medium sheep, were steady. Inquiries for shipment were small.

MARKET GOSSIP

(*Concluded from page 1019*)

expected, considering the divergence of opinion between the U.S., on the one side, and the nine West European countries (the U.K., Belgium, Denmark, France, West Germany, Italy, the Netherlands, Norway and Sweden), on the other, over the three U.S. practices complained of, namely, flag discrimination, subsidisation and tax-free flags of convenience. Although the U.S. Government representatives gave a "very sympathetic" hearing to the West European allegation that the aforesaid practices had been harmful to the interests of traditional maritime nations, they were reported to have pointed out that these practices were essential to give protection (or give a privileged position) to U.S. shipping. This argument was based on three grounds. First, the greater part of U.S. shipping is non-competitive, owing to high wage rates. Secondly, international shipping freight rates have slumped the world over. Thirdly, there is a growing surplus of international shipping.

The conflict of interest between the U.S. and the West European nations is thus "straightforward and largely irreconcilable." It will be interesting to know how the "continuing machinery" proposed to be set up will bring about a solution acceptable to both sides. Some in Britain are inclined to feel that the U.S. Administration might ultimately be persuaded to modify its attitude towards flags of convenience which, it is said, are just as much unfair competition to U.S. flag carriers as to anyone else. But it is considered highly doubtful if the Administration would agree to give up protection and support to its shipping, for it is American shipping that is suffering most from the impact of world shipping recession.

Meanwhile, a section of shipping quarters in the U.S. has bitterly criticised Britain and the Continental countries as having launched an "out-and-out attack" aimed at destroying the American merchant marine. This criticism has evoked regret in European shipping circles. Sir Nicholas Cayzer, President of the Chamber of Shipping, United Kingdom, declares, for instance, that the aforesaid criticism is absolutely incorrect. The European representatives, he observes, had made it clear that they had asked for talks not because of the current shipping depression but because of the long-term defects of policies under discussion. Sir Nicholas has also disputed the U.S. contention that the Anglo-Soviet trade agreement contains discriminatory provisions for U.K. and Soviet shipping by quoting the relevant paragraph in the agreement which says: "The U.K. Government and the Government of the Soviet Union agree to continue to allow ships of both countries to participate in the trade between the two countries and to follow the principle of free and fair competition in international shipping." Sir Nicholas argues that there could be no scope for discrimination where there is a clear provision for free and fair competition.

ROUND THE EXCHANGES

(*Concluded from page 1020*)

in the past fortnight. In the planting section, rubber shares were well favoured on hopes of a reasonable upward revision in the price of rubber. Buying enquiries in the tea group were selective, such being confined to high-grown tea companies' scrips. In sympathy with rubber and teas, coffee shares were generally held firm. Business put through in the textile section was restricted, with values moving narrowly, thanks to absence of encouraging reports regarding domestic and overseas offtake in piecegoods and yarn. Trading in the miscellaneous section was characterised by good support to cement shares which tended to move up.

In the sugar section, EIDs improved from Rs. 37 to Rs. 37.50. Travancores were higher by 5 nP at Rs. 12.00. Cauverys were firm at Rs. 107, as also Indias at Rs. 12 and Mysores at Rs. 12.00. Deccans, however, shed 8 nP to Rs. 12.22 for want of follow-up support.

Among tea shares, United Nilgiris advanced by 20 nP to Rs. 20.45. Chembras gained 3 nP to Rs. 4.30. Haileyburias were fully maintained at Rs. 19.60, Kil Kotagiris at Rs. 8 20 and Nonsuch Teas at Rs. 26.75. Balanoors, however, encountered selling and eased by 50 nP to Rs. 20.50. Twyfords shed 12 nP to Rs. 17.00. In the coffee group, Consolidated Coffees evoked enlarged enquiries and hardened by 65 nP to Rs. 22.50. Coffee Lands picked up 25 nP to Rs. 24.00. Anapara's changed hands at Rs. 4.70, same as last week. Among rubbers, Malankaras attracted good attention of operators, the quotation spurting by 25 nP to Rs. 19.25. Midlands strengthened by 10 nP to Rs. 12.05. Rajagiris gathered 5 nP to Rs. 17.50. Thirumbadis gained 2 nP to Re. 1.94. Vaikundams, however, declined by 10 nP to Rs. 26.40.

In the textile section, Radhakrishnas dropped Rs. 5 to Rs. 122. Virudhunagars receded by 25 nP to Rs. 39. Several other scrips were dull, with no variation in prices.

Among miscellaneous industrials, Orissa Cements improved by 30 nP to Rs. 15.15, Mettur Chemicals and F.A.C.Ts gained 10 nP each to Rs. 12 60 and Rs. 8.95, respectively. India Cements moved up from Rs. 6.05 to Rs. 6.12. Andhra Cements were fully steady at Rs. 10.20, Dalmia Cements at Rs. 10 60, Mysore Chemicals at Rs. 10.55. Mysore Papers at Rs. 20.25, Spencers at Rs. 20.25 and Travancore Cements at Rs. 9 85. But Western India Plywoods came in for selling and lost 50 nP to Rs. 170. Standard Motors receded by 10 nP to Rs. 14.75 and Indian Steel Rollings by 9 nP to Rs. 15.25. Ashok Leylands shed 5 nP to Rs. 6.95.

OUTLOOK FOR TEA INDUSTRY

(*Concluded from page 1024*)

production rose from 73 million lbs. to over 80 million lbs. in 1958 and the average price realised last year in London auctions was 2d. per lb. more than that in 1957.

The next country of importance is China, which has announced a three-year plan to step up its exports to 200 million lbs. by 1962. Production and shipments from Ceylon show no signs of flagging, while Pakistan has fixed a minimum export allotment of 20 million lbs. per annum. The effect of increased competition may, according to Messrs. Thomas and Co., be offset, to a certain extent, by the increasing internal consumption and the expanding trade which India has developed with Communist countries. It is, however, not clear to what extent one can rely on these countries, because they are bound to give preference to China which, as already stated, wants to sell more tea. Another encouraging factor is the ability of the U.K. to maintain larger stocks than in recent years. This augurs well for the future and "this alone should be a stabilising influence on the market for the coming months."

Discussing the outlook for the current season, Messrs. Thomas and Co. observe:

"We consider the prospects for the opening sales in Calcutta to be bright and early teas, especially those with useful quality from all districts, should meet with a strong market. Fine plucking and careful manufacture by any method must pay a handsome dividend and the best teas may well **realise prices comparable** with some of the highest in recent years. However, when the bulk of plain teas are being offered, the finance available to the buyers may control the prices more noticeably than heretofore. After a strong start, **the minimum price on the Calcutta** market may be eventually pegged in the region of Re. 1.55-Re. 1.60 as in 1958. The internal operators are unlikely to allow the market to fall below this level, which, although uneconomic, does at any rate give a target for common tea producers to aim at when endeavouring to lower their costs."

A more long-term outlook depends, among others, on the assistance which the Government gives not only to the plain tea producer but also to all producers in India, so as to make Indian tea more competitive in the world markets. It is only on the basis of a reduced cost that India can, in the face of increasing competition, expect to hold on to its present export trade.

There are, however, two basic *malaise* from which producers of tea not only in India but in other countries as well are suffering, namely, (1) the excess of supply over demand, despite the rising trend of consumption, and (2) the gap between costs and prices realised. According to Sir James Jones, Chairman of James Finlay and Co., Ltd. and Consolidated Tea and Lands Company Ltd., there are only two means by which matters can be rectified at short notice. They are: (1) the renewal of International Tea Agreement with fixation of export ceilings for each country of production and (2) the complete removal of export duties. Both these steps, he says, require action by Governments and, quite apart from the fact that the Governments are unlikely to be willing to forgo the revenue involved in the latter expedient, it is by no means certain whether the entire elimination of duties would be sufficient to bridge the gap between costs and receipts in some cases. Sir James does not, however, consider this step as a permanent remedy, as it does not provide a safeguard against a further fall in prices. The only other solution is the regulation of exports. Commending this step, Sir James says:

"Regulation of exports, on the other hand, has all the virtues as, by this means, the industry can, without pain to the national exchequers of the countries concerned, be nursed through the period required to introduce the long-term cure, an appreciable increase of world consumption, an increase sufficient not only to absorb present production but to absorb the further increases in production which can be expected in the coming years. I am at a loss to understand the reluctance of the Governments concerned to renew an agreement which has been effective in the past, requires the introduction of no new unfamiliar machinery and which, with reasonable goodwill, can quickly do all that is needed to restore equilibrium and a degree of confidence for all concerned."

The majority of newcomers are not enthusiastic about international control. This is understandable, because they do not face any difficulty as India, Pakistan or Ceylon does. Naturally any mechanism which hampers the unfettered growth of their production and exports is looked upon with scepticism.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 17th June, 1959.

	Closing quotations 11-6-1959	High	Low	Closing quotations 17-6-1959

MANCHESTER LETTER

(*Concluded from page 1029*)

fication for the rises, but speculative interest has certainly forced up other quotations from time to time. Among those companies which have been subject to rumours of one sort and another are Horrockses, Crewdson & Co. Ltd., Joshua Hoyle & Sons Ltd., and Tootal Ltd. Bursts of activity in the shares of such groups have surprised and bewildered the management and have caused concern in the board rooms.

In considering the figures quoted in the table it should be mentioned that (*a*) the capital of J. F. and H. Roberts Ltd. has been doubled since the end of last year and the 1958 price has been adjusted accordingly; (*b*) the directors of Royton Textile Corporation Ltd. have received an offer of 3*s.* 6*d.* per 4*s.* share from the Franco-British and General Trust, which was not recommended, but have indicated that an approach from a firm of investment bankers may eventually result in a further offer exceeding 4*s.* per share; and (*c*) a bid made by Henry Ansbacher & Co., on behalf of undisclosed clients, of 52*s.* 6*d.* per £1 share in J. and N. Philips & Co. Ltd., has been made unconditional.—*All Rights Reserved.*

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2518 BOMBAY, 27th JUNE 1959 PRICE: Rs. 2

CAN GOVERNMENT CONCERNS REALLY BE AUTONOMOUS?

IN our last issue, we examined some aspects of the recommendations of the Krishna Menon Committee on management of State undertakings. We propose to continue the discussion of this subject in two more articles, as there are at least three more aspects of it to be covered. One of them pertains to the relationship between the management of State undertakings and the Government. We shall deal with this aspect this week, reserving the other two aspects, namely, public participation in State undertakings and their pricing policy for the final article. The relationship between the Government and its concerns is a much talked of subject at present and the question posed is to what extent a Government concern should be autonomous, that is, free from ministerial interference. An allied question is the status of the chief of such concerns *vis-a-vis* the Secretary of the ministry concerned. Both are very pertinent, in the light of happenings in the Life Insurance Corporation leading to its investment in the shares of Mundhra concerns.

The Krishna Menon Committee (K.M.C., for short), it must be said to its credit, has faced these two issues squarely. The chairman of a Government company, as it rightly points out, should be treated by the Minister concerned on a par with the Secretary of his ministry. In actual practice, the Secretary may be handling everything himself and advising the Minister. But the chairman of each Government concern must be answerable to the Minister. He must have direct access to the Minister and discuss with him all the important issues. This will necessarily mean that the Minister must be experienced, knowledgeable, and capable of taking correct decisions. He will, of course, seek and receive the advice of his Secretaries on the proposals put forward by the chairmen of Government companies under his charge, but he should be able to sift the good from the bad. At every stage of discussions on all important issues, the chairmen of companies should be asked to participate. All this means that, if the public sector in trade and industry is to grow and function efficiently and if the bureaucrats are not to become all-powerful, the calibre of Ministers must be of an extraordinarily high order. Further, the Minister himself should take an active interest in what goes on in his companies.

It is misleading to talk in terms of autonomy for Government concerns, because, in practice, there can be no autonomy for such concerns. The policy of autonomy has been tried in some cases, as, for instance, the Damodar Valley Corporation, but has been found wanting. The Government invests money in these concerns and is answerable to Parliament. It has to show good results to the public, if it is to be returned to power. In a democracy, no party can hope to be in charge of Government for all time, except by its good deeds. The Government is, therefore, bound to interfere, in the good sense of the term, with the working of its concerns. What is, however, really important is the type of interference. If the Minister-in-charge interferes in regard to too many details and with the day-to-day working of companies, he will unnecessarily be cold-douching the enthusiasm of the officials of companies to do things on their own initiative. But this is true of any concern, whether it is in the private or the public sector. After selecting the right type of persons to manage the concerns, the chief must give them sufficient freedom to work and show results according to their own light. All that the chief has to do is to see that his executives are carrying out the broad policies laid down by him, that the assets of his concerns are being maintained in good condition, that his workers are treated fairly and humanly, that his managers do not bring a bad name to his concerns and that his investments yield satisfactory returns according to norms decided after a careful consideration of all the aspects. He need interfere only when something or other goes wrong.

These are elementary principles of good management and one may be surprised, when one comes to think of it, that there should be so much discussion on the subject. The necessity has arisen because of mistakes made in the administration of some Government concerns, particularly the L.I.C. When crores of rupees are involved, the responsibility on the officers managing these corporations for a salary of two or three thousand rupees per month is, indeed, onerous. And it is the duty of the Ministers concerned to lighten their task and burden by assuming full responsibility and by giving them proper guidance. This they cannot do, unless the Ministers themselves take an active interest in the affairs of concerns under their charge.

Having thus outlined the appropriate conditions of relationship between the Minister and the managements of concerns under his control, let us see what the K.M.C. has to say on this subject. Here is the relevant quotation:

"A Minister has an overall responsibility to Parliament, even in respect of the companies, and he cannot divest himself of it. The relationship between a Minister and the chairman cannot be formalised and must develop when one gains the confidence of the other. It is open to a Minister to issue 'directives', directions, suggestions or warnings or make any other intervention or give guidance that he in his competence and estimation of his public duties feels he has to. No specific issues can be laid down on which a Minister may not give guidance. Only Government, in the exercise of its responsibility, can make such a decision and lay down a procedure. The fact that a Minister can give guidance does not mean that there can be day-to-day interference. But on all matters of importance, and where the chairman acts according to the guidance he receives, he would be well advised to reduce communications to writing and inform the Minister of his understanding of the guidance.

"While the Minister's view or directions can be communicated by his secretariat to a company, the civil servant should be precluded from issuing orders to the chairman or managing director on their own or in the implementation of ministerial policy. The Minister's orders should be invariably taken and it should not be made into a mere formality."

It is needless to add that the K.M.C.'s observations are broadly in line with our views. To talk of autonomy for Government concerns is meaningless. The politicians who form the Government must assume full responsibility for the results of Government concerns; credit or discredit goes to them. No attempt should be made to split hairs, as is being done by the Prime Minister in regard to Mr. T. T. Krishnamachari's responsibility in the case of L.I.C.'s investments in Mundhra concerns. The distinction that is sought to be made between constitutional responsibility and direct responsibility is fictitious and unwarranted. If it is maintained, it will lead to demoralisation among the officials which in turn will tell on the progress and efficiency of State undertakings.

CONSUMER GOODS

IN the welter of confusion caused by the somewhat ideological discussions on planning which took place at the dizzy heights of Ootacamund, one is apt to miss some of the fundamental features of the Indian economic situation. This may seem trite to say. But the chief justification for saying it is that similar mistakes have been committed in the past. Thus, the modest increase in agricultural production which took place in the first Five-year Plan induced much complacency in the minds of legislators and planners who felt that, in the second Plan, greater importance must be attached to industry than to agriculture. But the shortage of food in the last three years has compelled the authorities to put first things first, to recognise that India's predominant occupation, agriculture, must continue to receive high priority. Although the manner in which agriculture is sought to be reorganised has justly come in for criticism, there is no doubt that the re-discovery of the importance of agriculture is a commendable feature of the current economic thinking in this country.

It would be an equally grave error to ignore another important aspect of the country's economy, the production of consumer goods. And yet, there is a danger that, in the understandable emphasis on capital goods, heavy machinery and machinery-making plants, the significance of consumer goods may get out of the economic focus. It cannot be too strongly reiterated that, in an underdeveloped country like India, the manufacture of consumer goods is not merely a substantial source of employment but also a potentially effective weapon in all anti-inflationary battles. If the swift increase in national income, now envisaged in the third Plan, is not to result in inflationary pressures, it is necessary that the country's markets are well stocked with consumer

goods which should help absorb the increasingly higher levels of purchasing power with the people. It is not inconceivable that the implementation of the Rs. 10,000-crore third Plan will inject large doses of purchasing power into the country. Recent statistics show that manufacturing enterprises continue to make an important contribution to national income. Between 1948-49 and 1957-58, the net national output at 1948-49 prices rose from Rs. 86.5 abja (abja=Rs. 100 crores) to Rs. 108.3 abja, while the share of the mining, manufacturing and small enterprises rose from Rs. 14.8 abja to Rs. 18.8 abja. What is necessary is that the rate of increase in the output of enterprises manufacturing consumer goods should be not only maintained but considerably expanded. Further, it should not be deemed a sufficiently satisfactory development if the capital goods and heavy industries alone are allowed to be developed. At the present stage of India's development, capital goods manufacture carries greater dangers of surplus production than the manufacture of consumer goods. While the former is certainly essential for laying the basis of the country's economy, the latter cannot be neglected if there is to be a balanced economic growth. The W. German Minister, Dr. Erhard, rightly emphasised, when he was in India last year, that purchasing power must first be created in the country and goods must be produced which people want. It is only in a totalitarian country that consumers can be starved of the goods they need, in order to make the State produce the goods which it feels must have the first priority. Democratic planning implies much greater consideration for popular demands for goods and services.

It is, therefore, gratifying to note that attempts are being made in some quarters to assess the pattern of demand for consumer goods. Some five years ago, the National Sample Survey initiated what is perhaps the first authoritative investigation into average overall household expenditure. Some light on the pattern of demand for consumer goods was thrown by this survey. A few leading advertising agencies have, in response to the requests from their clients, also made some *ad hoc* investigations, but no great statistical validity can be attached to many of these investigations. Further, the benefits of such research are not available to the entire country. From this point of view, a statistically satisfying document is the report entitled, *Demand Forecasts for Consumer Goods**, published by the National Council of Applied Economic Research (Director-General: Dr. P. S. Lokanathan). The report embodies the findings of a research project, sponsored by Messrs. Hindustan Lever Ltd., on the prospects of India's demand for toilet soap, washing soap, milk, ghee, butter, *vanaspati* and other milk products over the next five years or so. The aim of the report, it is stated, has been mainly to try to determine a certain range of magnitudes for the possible increases in the consumption of the commodities, the demand pattern of which has been investigated. Since consumption of a commodity over a period of time is affected by changes in tastes and habits, trend coefficient has also been taken into account. On the assumption that price elasticities and trend coefficient remain stable, an attempt has been made to estimate the probable variation in the consumption of a commodity in the light of a given shift in the level of income.

The broad conclusions of the survey in respect of soap and *vanaspati* are easily summarised. The income elasticity of demand for washing soap has maintained a range between 2 and 4; it cannot possibly drop below 2.5 in the next five or ten years. For toilet soap, the income elasticity of demand, it is stated, will probably remain in the range of 1 to 2. If it is assumed that the national income of India in 1961 will be about 20 per cent. higher than the 1956 level, it is then likely that the increase in washing soap consumption will be in the range of 50 to 60 per cent. above the 1956 figures, bringing the total consumption to between 310,000 tons and 331,000 tons. If the increase in national income is of the order of 25 per cent., the increase in the consumption of washing soap should be 60 to 70 per cent., bringing the total consumption to between 331,000 tons and 351,000 tons. A 30-per cent. increase in national income will raise the consumption of washing soap to 372,000 tons or 80 per cent. In the case of toilet soap, if the national income increases by 25 per cent., its consumption will go up by 40 to 50 per cent. to between 47,000 tons and 50,000 tons by 1961. A 30-per cent. increase in national income will result in toilet soap consumption going up by 50 to 60 per cent. to about 53,000 tons.

As regards *vanaspati*, the Planning Commission envisages an increase in production from 270,000 tons to 400,000 tons over the second Plan period; domestic consumption is expected to go up from 255,000 tons to 375,000 tons. The report, however, feels that it is likely that the overall increase will be of the order of 60 per cent. to 70 per cent. in the consumption of *vanaspati* during the second Plan period, amounting to between 409,000 tons and 434,000 tons. This estimate, which is subject to a 20 per cent. margin of error either way, is based on a consideration of three factors: (1) "induced" increase in consumption because of a rise in national income, (2) "transferred" increase in consumption because of a spill-over of demand from milk and milk products, and (3) "autonomous" increase resulting from secular changes in people's tastes and habits. Broadly speaking, as a result of the first factor, a 25 per cent. increase in national income will result in a similar increase in the consumption of *vanaspati*; the second factor will add 15 to 20 per cent. to the base-year consumption and the third factor about 20 per cent., making in all some 60 to 70 per cent. increase in consumption of *vanaspati*.

The value of the report lies in its attempt to evolve a suitable method for forecasting demand for consumer goods. The authors confess that no precise degree of accuracy can be attached to the present estimate. They add: "Even in a stable economy, where variations in consumer taste and behaviour over a period are generally expected to conform to some predictable patterns, attempts at forecasting demand are often vitiated by statistical difficulties." They go on to point out how in India, where basic data are crude and sketchy and current developments in income growth, rise in consumption and changes in people's tastes and habits represent a sharp break with the immediate past, the possibility of wide margins of error is still greater. Dr. Lokanathan, in his preface to the report, expresses the same sentiment. He observes that, "owing to lack of sufficiently reliable data and the changing consumption patterns in a developing economy like ours, it is quite possible that demand forecasts prepared with the application of available techniques, which have been evolved to suit situations in developed industrial economies, may not yield highly precise and firm results." Nevertheless, it is to be hoped that the publication of the report, which is a pioneering effort in the field, will help stimulate methodological research in the sphere of forecasting trends in demand for consumer goods which are of vital significance to the progress of Indian economy.

WEST BENGAL'S FOOD CRISIS

IN no other part of the country has the food situation been worse than in West Bengal. The prices of rice, the staple diet of the people, have soared high and the Government has been compelled to withdraw its price control order. The hope has been expressed that the freedom now accorded to the foodgrain markets will result in freer flow of stocks and eventually result in lower prices. Meanwhile, those consumers who cannot afford to buy from the open market will continue to receive their requirements of rice from fair price shops. While this latest decision is certainly based on a realistic appraisal of trends, there is no doubt that much external assistance will be needed before the situation corrects itself under the impact of normal forces of supply and demand. In other words, much will depend on how much, and how soon will the Central Government give the State by way of rice stocks.

Although the State Government will be—and is being—criticised for its inept handling of the food situation and inadequate appreciation of the problem of shortage, it is difficult not to agree that the Government could not have foreseen the present deterioration in the food position. Among the measures it has taken so far, one is most commendable. It has placed 10 million people under the modified rationing system, as against 4.2 million covered this time last year. In the Calcutta industrial areas alone, nearly 4.2 million have been brought under the system. Despite these measures, the State has been caught in a crisis which threatens to create an explosive political situation. While nobody can have any sympathy for people who wish to make political capital out of an admittedly difficult food position, it is not clear how the Government could have allowed the situation to deteriorate for so long without realising the consequences of this dangerous drift.

It would appear that, since the price control order was issued at the beginning of the current year, there has been a steadily increasing pressure on the available supplies. Although between January and May this year, the Government distributed, through its modified rationing system, 180,000 tons of rice, as against 53,000 tons in the corresponding period last year—increased distribution was made possible because of liberal assistance from the Centre—the prices in the open market in the last few weeks have risen to levels beyond the purchasing power of the middle- and low-income groups. In the open market, the prices of rice are in the neighbourhood of Rs. 28 to 32 per maund, and certain finer varieties of rice are ruling at between Rs. 35 and 40 per maund. No wonder, some starvation deaths and much suffering from semi-starvation conditions continue to be reported from the interior. Clearly, the situation brooks no delay. And it is of the utmost importance that, even before the situation is studied in all its entirety and satisfactory solution is found, rice stocks are rushed to the deficit pockets in West Bengal.

No long-term solution to Bengal's rice problem can be found by ignoring a few of the more important features of the State's food situation. In the first place, it must be recognised that the State is deficit in food supply. Although the present situation can be partly attributed to the failure of the crop in certain districts, the fact remains that the State has necessarily to depend upon external supply for feeding its growing population. Efforts must be made to arrive at a fairly reliable estimate of the State's food deficit. In the absence of such an estimate, the Central Government would find it extremely difficult to respond to sudden calls for assistance. No distinction can, of course, be made as between those who consume finer varieties and those who consume the coarser varieties. The fact is that rice, unlike several other foodgrains, consists of a large number of varieties. And, in a period of shortage, it is virtually impossible to assure qualitative satisfaction to all consumers.

Secondly, some serious re-thinking is called for in respect of such controls as zonal arrangements and purchases by State Governments for stockpiling. It has been argued that zonal restrictions have been chiefly responsible for the emergence of deficit pockets. Assuming that this is an exaggerated allegation and that zonal arrangements cannot be dispensed with, the authorities will do well to find out how best the zones can be reorganised or linked together, so that each zone is reasonably self-sufficient in food supply. Further, in predominantly deficit States, it is particularly necessary that great care should be taken to see that price control, procurement and rationing, if they should be maintained at all, are so organised that they do not interfere with production and distribution.

W. Bengal's Chief Minister, Dr. B. C. Roy, has confessed that "it has not been possible to sustain the price level fixed by the Government and the efforts to enforce the price control have not been successful, resulting in stocks going underground." Even if one makes allowance for defective administration, it should be clear that no price control measure is a good substitute for increased supplies which could be ensured only through larger production, supplemented by liberal imports to make up the deficit. It must not be forgotten that, when the excess of supply over demand is not sufficient to cover the normal stocking requirements, State intervention only serves to aggravate the position, for it leads to a scare among consumers and consequent hoarding by them. It is when consumers start hoarding that black markets of the worst type not easily amenable to Government control flourish. In such a situation, the supply required to restore normalcy will probably have to be twice as much as consumption. Governments must, therefore, think carefully before deciding to interfere with the market mechanism in an essential article like foodgrains. If this lesson learnt during the post-war years of rationing and controls has faded away, the latest events in West Bengal should serve to refresh the memory of the powers-that-be.

RESOLUTION ON T.I.S.CO.'S NEW CAPITAL DEFERRED

BANKS' LENDING POLICY—WORLD SUGAR COUNCIL

THURSDAY, 5 P.M.

ALTHOUGH there has been no appreciable rise in the value of speculative counters, the bulls on the Stock Exchanges are holding out with optimism. They do not seem to be increasing their commitments to any significant extent, but, at the same time, they are not yielding any ground to the bears. As mentioned in these columns last week, the talk of "full socialism" by the policy-makers of the Congress Party has not frightened the bulls or the investors. They all feel that the socialist flood is still far away. The formation of the Swatantra Party and the country-wide, if not world-wide, recognition it has received have engendered a feeling in the minds of some operators that the Congress Party will go slow in implementing its extremist measures of expropriatory nature. This may be nothing more than a hope, with slender chances of materialisation. Considering the continued emphasis on co-operative farming by the Prime Minister, this seems to be not a hope but wishful thinking.

MARKET GOSSIP

Be that as it may, shrewd operators are of the view that the Congress Party may not introduce any drastic economic reforms until after the general elections in 1962, though it may keep harping on them. Accordingly, it will be premature, they contend, for one to take a pessimistic view of the outlook for equities. It is, of course, true that the share markets began to slump six months before the last general elections in 1957. To the question whether a similar trend will not take place even a year in advance of the next elections, their answer is on these lines: In 1957, the Congress Party had no opposition from the right and a voter, who disliked the Congress because of its leftist policies and dubious ideologies, had really no choice. He had only two alternatives, either to keep quiet, without exercising his franchise, or to vote for the Communists, which would be still worse. In either case, the Communists benefited. But, in the next elections, if the Swatantra Party is well organised and puts up good candidates, he will have a real choice. The next elections are, therefore, likely to be lively and encourage a larger number of people to participate in voting than on the previous occasion. This realisation by the Congress Party may induce it to be at least tactful and less provocative to business men and the middle class.

It remains to be seen to what extent the aforesaid reading will be borne out by events.

Some indication may be had from the forthcoming meeting of the representatives of the Federation of Chambers of Commerce and Industry with the Prime Minister. At this meeting, attempts will be made to ascertain the place that will be allotted to the private sector in the next Plan and get elucidation on some of the views expressed at the Ooty seminar. But we would not be surprised if the Prime Minister were to say nothing more than a few sweet words in favour of the private sector which, in practical terms, might mean nothing. The Prime Minister has a knack of being delightfully vague.

* * * *

Attempts made by several shareholders of the Tata Iron and Steel Company, Ltd., at their extraordinary general meeting held today, to know how the Government's mind was working on the Company's application to the Controller of Capital Issues for permission to raise additional capital failed to yield any tangible results. Mr. J. D. Choksi, who presided over the meeting, parried all the questioners on this vital question. He merely read out the Government's formal reply which said, in effect, that the Company's application was receiving consideration and that the Government would give its reply by about the end of August. The shareholders already knew about this reply, as it had found a place in the commercial section of this morning papers. Luckily for Mr. Choksi, the questioners were not sharp. None of them asked him whether the Company had found it necessary to submit its case to the Government against the issue of equity shares at a premium and, if so, what it was. Any way, the consensus of opinion is that there is some hitch between the Government and the Company on the terms of new issue and that the main point of dispute must be on the question whether the Company should be allowed to issue the ordinary shares at par.

It is obvious from the postponement of the consideration of all the resolutions relating to the proposed issue of new capital to the date of the annual general meeting of the Company, fixed for Wednesday, 2nd September 1959, that the Board of Directors (and, of course, the shareholders also) do not want to raise ordinary capital at other than par. When some shareholders asked as to what the Directors would do if the Government insisted on the issue being offered at a premium as on the previous occasion, Mr. Choksi promptly replied that the present scheme would be dropped and other ways and means of finding the finance required by the Company would be explored. Time alone can tell whether he was wise in taking such a categorical stand, for, in these days of comprehensive controls, the Government has the final say. This is more so in the case of such large companies as the T.I.S.Co.

Some shareholders appear to be under the impression that the Government is delaying its permission to the T.I.S.Co.'s new issue, with a view to facilitating its own borrowing programme and that of the State Governments. This impression is incorrect, for the Central Government must be aware that the Company's own programme is such that it would materialise only long after all the borrowings of the public sector are over and that, in any case, these borrowings would not be upset by the T.I.S.Co.'s plan for additional capital. The real cause, according to our information, is the difference of opinion between the Government and the Company on the terms of the issue. Other secondary causes must be the preoccupation of the Finance Minister with more urgent affairs and inadequate time allowed by the Company for receiving the Government's permission. Mr. Choksi disclosed that the Company had sent its application to the Government on 16th May 1959. Surely, less than 40 days are hardly sufficient for the Government to dispose of an application involving a large issue such as this.

* * * *

There has been a sudden influx of funds in the short-term money market. Inter-bank call money has slumped from 3-3½ per cent. to 1½-1¾ per cent. Although money is being accumulated by the various types of institutional investors for subscribing to the Central Government's new loans and will be withdrawn on 1st July when the list opens, money market observers feel that the banks will still be left with large surplus funds. They are, therefore, of the opinion that the response to the new loans from the banks will be greater than was anticipated last week.

The increase that is now taking place in the resources of banks, coupled with the Reserve Bank's directive to member-banks last week that they should strive to bring down their loans and advances and bills purchased and discounted by at least Rs. 100 crores during the current slack season, are likely to give a fresh impetus to the desire of banks to lower the ceiling on interest rates on deposits under the inter-bank agreement. It will be recalled that the sub-committee of the Indian Banks' Association in charge of this arrangement decided in April last to take up this subject for consideration in July.

* * * *

Till recently, British banking has been known for its conservative practices, approximating more closely to the text-book concept of banking than to the systems prevailing across the Channel or the Atlantic. When their confreres elsewhere were venturing into fresh fields and pastures new, the banks of Lombard Street, under the watchful eyes of the Old Lady of Threadneedle Street, refrained from such "unorthodox" practices. But times have changed and British banks too with it. And the change has been rather rapid in the last twelve months. Traditional lending maxims no longer command the implicit respect they used to receive. It is an old maxim of banking wisdom that bank funds, by their very nature, could only be lent for short-term. Some of the more recent refinements in lending practices such as medium-term export finance, hire-purchase loans, etc., are outside the functions of banking as described in the standard British text-books so far.

Honouring tradition as they do in all other walks of life, British bankers seem to prefer to have new practices in the old garb. But there are some among them who want the spade to be called and known as a spade. Mr. W. R. Ballantyne, General Manager of the Royal Bank of Scotland, seems to be one such. When he suggested, in his presidential address to the Institute of Bankers of Scotland last week, that the British banking system should formalise its "surreptitious" entry into the long-term lending business, he was in fact calling for recognition of a system which already existed in practice. It is well known that British banks have already departed to an important extent from their traditional practice of short-term lending. Mr. Ballantyne called for a formal recognition of this deviation so that banks could derive the maximum benefit out of it.

All banks, according to him, now knew that there were overdrafts in their books which would be needed for more than a year and would be automatically renewed, unless there was a drastic deterioration in the borrower's position. It was normal, Mr. Ballantyne pointed out, for the cost of a loan to bear some relation to its term but, at present, it was possible for a borrower to obtain what was virtually a medium-term loan from a bank at short-term rates. Surely, he emphasised, when overdrafts were offered as substitutes for more permanent forms of finance, it was a mistake to call all overdrafts as essentially short-term by nature, although technically they might be so. The text-book theory, he said, was a reflection of banking practice at a time when the growth and nature of savings were such as to encourage banks to confine themselves only to the provision of working capital for industry. Conditions now had changed and so too the practice of lending. Accordingly, he suggested that the banks should carry the process a step further and offer openly, as was commonly done abroad, to lend for terms longer than had been usual in the past. Such a step, he averred, need not offend the canons of liquidity. He, however, advised the banks to take to the new practice only gradually. It would also be necessary to confine such long-term lending to a definite and not too large proportion of deposits. The seeking of deposits on a fixed-term basis, he then went on to say, could be more readily considered once a market in term loans had been established.

The foregoing observations of Mr. Ballantyne apply to banks in India too, as they are still steeped in British practices and traditions. So long as banks do not recognise this deviation in their lending practice and formalise it, they themselves stand to lose on two counts. First, many industrial concerns, when they take overdrafts or short-term loans, actually borrow for a longer period, since they invariably renew these arrangements or at least the bulk of them. If only these loans were indicated as term loans, the banks could charge a higher rate of interest. Second, banks are losing a certain amount of business which would otherwise have come to them had they made it known that they too lend for long terms.

The reactions of Mr. Ballantyne's colleagues in the British banking fraternity to his suggestion are not known. But, commenting on it, "Lombard," the well-known columnist of the *Financial Times*, London, observes that, provided certain conditions are satisfied, there is a great deal to be said for formalising the entry of banks into long-term lending both from the viewpoint of banks themselves and that of the public in general. To quote him:

"The banks, for their part, can probably earn rather more on their long-term lendings if such operations are designated as such. Long-term rates are usually a little higher than short-term ones even in these flexible monetary policy days. And more long-term lending business would clearly come the banking system's way if it were known that it would extend it a warm welcome. From the borrower's viewpoint, the additional expense of borrowing 'long' would often be regarded as a price well worth paying for the greater sense of security that a formal arrangement would provide."

The proposal, however, has certain disadvantages too. Drawing attention to these, "Lombard" says:

"Wider formal participation by the banks in the work of providing permanent capital could have adverse effect on their other customers. For it clearly cannot be assumed that the banks will always have unlimited resources at their disposal. And the necessity to enforce a credit squeeze would mean pressing very heavily on the ordinary borrower, if they had a substantial proportion of their money tied up in advances that could not be recalled. If they are going to do their best by the 'borrowing public' as a whole, therefore, the banks ought to aim at restricting their long-term lending to projects that cannot be as easily financed in other ways—and some of the long-term loans supplied by banks to industrial enterprises during the past year or two could have been obtained with no great difficulty from other sources."

Discussing the implications of term-lending to deposits from the point of view of liquidity, "Lombard" observes that, though public confidence in banks is high and it will not bother overmuch by a slight reduction in liquidity, it would be advisable for them to build up a "term deposits" system also.

* * * *

The outcome of the three-day session of the International Sugar Council, which ended at London on Thursday the 18th inst., is along the lines anticipated. The Council merely decided to cut the 1959 export quotas of the principal exporting members of the Sugar Agreement to 80 per cent. of the basic tonnages allotted early this year. The effective reduction is, however, only 2½ per cent., since the quotas had already been cut to 92½ per cent. in February and a further 10 per cent. was being withheld under a voluntary retention plan also instituted in the same month. The quota of other members with export tonnages below 50,000 tons has been lowered to 90 per cent. The total cuts now announced are the maximum allowed under the Sugar Agreement.

The effective reduction of 2½ per cent. in the basic sugar export tonnages of the principal member-countries represents just 150,000 tons. This is considered to be too small to make any significant difference to sugar prices. In fact, there has been a further fall in prices in world markets, after the Council's decisions were made known. Cuban raw sugar at New York now stands at 2.78 cents per lb. (f.o.b. Cuba), as against 2.87 cents before the Council commenced its session. Spot sugar in London has gone down from £26¾ (Rs. 352) per ton to £25¾ (Rs. 343).

The decline in prices is actually due to the continued uncertainty over the future behaviour of the revolutionary Government of Cuba which, it is said, can at any time abandon the Sugar Agreement and release its surplus stocks on to the world market. The total of the stocks is reported to be quite considerable. Cuban sugar sales to date are one million tons behind last year's at the same time. The current season's sugar output is estimated at 5 8 million tons and there are at least 600,000 tons surplus from last year.

The uncertainty about the future Cuban sugar policy has not been removed by the deliberations of the Sugar Council. Consequently, the mere 2½ per cent. cut in world market supply may not improve the demand for sugar "which," to quote a latest report from London, "has been on a hand-to-mouth basis for sometime." The Sugar Council would have shown its effectiveness if it had accepted the suggestion put forward by some sugar interests for obtaining the unanimous consent of members to a further drastic cut in export tonnages outside the terms of the Agreement. But the Council feels that the supplies available in 1959 to the free market and the market's requirements

(*Continued on next page*)

SHARE MARKET QUIETLY STEADY

SELECTIVE BUYING IN TEXTILES AND SUGARS

(From Our Own Correspondents)

BOMBAY, *25th June*

THE share market ruled quietly steady during the major part of the week under review. The operators were generally hesitant to make fresh purchases, as they preferred to await the emergence of a clearer picture of the approach to the third Five-year Plan. Early in the week, the sentiment of the market was shaken by reports suggesting possibilities of enhanced taxes and more controls being imposed on companies in the light of proposals put forward by some economists with a socialist bent of mind. The Prime Minister's statement while inaugurating the Defence Ministry's truck-manufacturing project at Jabalpur on Sunday that the public sector would certainly grow and that the private sector should learn efficiency from it only confirmed the misgivings of the share market about the socialism of the Congress Party. Uncertainty about the terms of the new issue of the Tata Iron and Steel Company, Ltd. was another factor restraining the bulls. There was, however, some selective buying in textiles, automobiles, sugar and a few miscellaneous counters. Just before the close the market showed a distinctly steadier trend, presumably due to bear covering and some bull support. Even the news that the Government had delayed its decision on the terms of the T.I.S.Co.'s new issue had no pronounced adverse effect on the trend of the market.

In the steel section, Tata Ordinaries encountered selling on rumuors of lower dividend and premium on new issue and declined from Rs. 191.75 to Rs. 187.25 on Tuesday. Thereafter, they improved and touched Rs. 190.75 today before finishing at Rs. 190. The net loss over the week is Re. 1.75. New shares were quoted today at Rs. 188.50, as against Rs. 190.50 a week ago. The Controller of Capital Issues has informed the management of the Company that the Government's decision with regard to the sanction for the proposed issue of capital by the Company will be communicated by about the end of August. This news has had no effect on the market. Indian Irons eased from Rs. 24.36 to Rs. 24.04 on the 23rd inst., but recovered subsequently to Rs. 24.32 today. Towards the close, they were quiet at Rs. 24.24. The net loss over the week is 12 nP.

Textiles ruled steady, thanks to reports of a further reduction in stocks lying with mills following good domestic offtake. Central Indias met with good support and rallied from Rs. 99 to Rs. 105. Svadeshis and Tata Mills spurted by Rs. 5.50 each to Rs. 249 and Rs. 40, respectively. New Greats advanced by Rs. 4 to Rs. 176. Indores gathered a like amount to Rs. 92. Elphinstones, Morarjis and Podars rose by a rupee each to Rs. 36, Rs. 256 and Rs. 173, respectively. Bombay Dyeings improved from Rs. 64.80 to Rs. 66 today before closing at Rs. 65.70. Centurys first declined from Rs. 553 to Rs. 541.50, but quickly recovered to close at Rs. 551.50, after touching a high of Rs. 554. It was reported that the Company's scheme to raise the productive capacity of the rayon plant from 12 to 18 tons per day had been sanctioned by the Government. Kohinoors fluctuated between Rs. 280 and Rs. 287 and closed at Rs. 285. Edwards were fully maintained at Rs. 219.20, as also Gokaks at Rs. 147, India Uniteds at Rs. 7.60 and Osmans at Rs. 38. Khataus, however, were subjected to selling pressure and fell by Rs. 25 to Rs. 246.25. Swans dropped Rs. 10 to Rs. 370. Standards receded by Rs. 6 to Rs. 512, Finlays by Rs. 4 to Rs. 260 and Simplex by Rs. 2 to Rs. 171. Shree Niwas were quiet at Rs. 175, notwithstanding the Chairman's statement at the annual meeting held on Monday that the modernisation programme had enabled the Company to diversify its production and go in for better and finer varieties of textiles progressively.

Among sugar shares, Walchandnagars evoked excellent demand and jumped up by Rs. 33.75 to Rs. 327.50. Belapurs, which had gone down early in the week from Rs. 295 to Rs. 290.50, hardened to Rs. 303.50 today. Bhopals gained 80 nP to Rs. 24. Changdeos, however, fell by Rs. 2.50 to Rs. 27.50. Phaltans eased by 75 nP to Rs. 160.

In the cement group, Associated Cements receded from Rs. 154 to Rs. 151.75. Dalmias shed 4 nP to Rs. 10.56. But Digvijays picked up Re. 1.50 to Rs. 154.50. Orissas gathered 16 nP to Rs. 15.52.

Bank shares encountered selling and drifted lower. Bank of Indias declined by a rupee to Rs. 129.50, 'A' shares being quoted at Rs. 132, as against Rs. 133. Centrals and Jaipurs lost 80 nP each to Rs. 55 and Rs. 42.50, respectively. Punjab Nationals shed 24 nP to Rs. 22.24 and Unions 20 nP to Rs. 6.68. Barodas were quiet at Rs. 102.75. United Commercials, however, gained 30 nP to Rs. 61.80.

In the electricity group, Andhra Valleys lost Rs. 2.50 to Re. 1,130. Tata Hydros eased by 50 nP to Rs. 117 and Ahmedabad Electrics by 20 nP to Rs. 92. Tata Powers, however, picked up Rs. 5 to Rs. 1,177.50. Bombay Suburbans gathered 25 nP to Rs. 104.

Engineering shares attracted the good attention of operators. Premier Constructions firmed up by Rs. 15.50 to Rs. 336.50. Voltas strengthened by Rs. 6 to Rs. 182 and Coopers by Rs. 5 to Rs. 141.50. Mahindras were in keen demand and rose by Re. 1.68 to Rs. 22.32. Larsen and Toubros put on 44 nP to Rs. 22.72. Alcock Ashdowns declined by a rupee to Rs. 270 for lack of follow-up support. Mining shares ruled easy. Shivrajpurs dropped a rupee to Rs. 83. Indian Coppers shed 2 nP to Rs. 4.10.

Automobile shares were well favoured. Premiers rising by Rs. 2 to Rs. 117.50 and Hindustan Motors by 62 nP to Rs. 9.52. Tata Locomotives moved irregularly between Rs. 208 and Rs. 204.50 in the initial days of the week, remained steady at about Rs. 209 later and finally jumped up to finish at Rs. 211.50. Among shipping shares, Great Easterns improved by 16 nP to Rs. 22.60, while Scindias declined by 12 nP to Rs. 17.60.

A sharp rise of Rs. 65 to Rs. 915 in Indian Dyestuffs characterised the trading in the miscellaneous section. W. H. Bradys spurted by Rs. 33.75 to Rs. 360. National Rayons strengthened by Rs. 7 to Rs. 332. Tata Oils hardened by Rs. 2.70 to Rs. 65.50. West Coast Papers, however, came in for selling and fell by Rs. 15 to Rs. 130. Bombay Burmahs dropped Rs. 10.50 to Rs. 550.50. Amar Dyes declined by Rs. 4 to Rs. 174, Wimcos by Rs. 2.25 to Rs. 204, Hindustan Levers by 40 nP to Rs. 29.60 and B.I.Cs by 30 nP to Rs. 4.40. Gwalior Rayons were done at Rs. 20.16, as against Rs. 19.64 a week ago. At one time, they had gone up to Rs. 20.50 *ex-div.* Killicks eased by Re. 1 to Rs. 138.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, *23rd June*

Greater support at lower levels led to steadier conditions on the Calcutta Stock Exchange during the week under review, equities recorded a handsome recovery on a broad front. The recent shake-out had reduced prices to more reasonable levels so as to make investment buying attractive, measured by the yardstick of yield consideration. First class equities met with unsatisfied demand and, here and there, shortage of scrips was felt, in view of large parcels having found their way to the hands of institutional investors, who, unlike ordinary investors, were not inclined to book profits for lack of any alternative scope for investment. During the week, there was again encouraging corporate news, which earlier led to conditions akin to buoyancy. Profit-taking soon followed and, despite narrow movements at one time, the week's closing levels were higher on balance. The cash subscription to the Central loans being well within the capacity of the capital market, the diversion of funds from shares, if any, would prove only temporary. The good state of the share market suggested that there would be no shortage of funds for the forthcoming issues. It was, however, felt that the Reserve Bank's directive to Scheduled banks to curb credit expansion would affect the flow of funds for speculative purposes.

Sectionwise, jutes boomed with activity, following improved statistical position of goods, increased business for export, and encouraging crop reports. Textile received more attention and the impetus was given by the gradual decline in cloth stocks with mills. On the other hand, coals, after being fully steady earlier, moved behind the front line on New Delhi report which apprehended further delay in the Government coming to a decision in regard to increasing coal prices. Teas also plod on infirm grounds, as, so far, tea auctions have been far from encouraging, and nothing is being heard about West Bengal and Assam Governments abolishing the entry tax on tea. Miscellaneous shares accounted for several features following investment support.

Jutes maintained the upward trend on expectations of improved working results in the current accounting period, springing from good overseas enquiries for goods. From Rs. 185, Deltas jumped up to Rs. 192. Baranagores rose to Rs. 156 from Rs. 144 to close at Rs. 153. Howrahs were fractionally higher at Rs. 24.37, as were Agarparas at Rs. 13.12. New Centrals touched Rs. 17, as against Rs. 16.81 earlier. Nellimarlas met with good demand and, at Rs. 14.87, were higher by more than one point. Champdanies were higher at Rs. 137 before closing at Rs. 132.50, while Fort Glosters (New) were dealt with at Rs. 244, as against Rs. 247 earlier. Nationals closed at Rs. 23.50 after being higher at Rs. 24, as against the opening of Rs. 23. The shares that receded included Ballys at Rs. 221, Anglo-Indias at Rs. 248, Ganges at Rs. 84 and Indias at Rs. 15.94.

Among engineerings, Kumardhubis were lifted up from Rs. 8.62 to Rs. 9.31 following news of the forthcoming issue of ordinary rights in the proportion of one to two existing shares. Profit-taking intervened to take the scrip down to Rs. 8.25. Texmacos at one time hardened to Rs. 25.87 from Rs. 25.80 to close at Rs. 25.65. At Rs. 22.50, Indian Galvanizings touched a new high. Indian Irons closed lower at Rs. 24.25, after opening at Rs. 24.34 and rising to Rs. 24.87.

Trading in miscellaneous industrials was cheerful. National Carbons were raised to as high as Rs. 37.50 to close at Rs. 35. National Cables met with good support to improve to Rs. 34.62 from Rs. 33.50. Hindustan Motors were pushed up to Rs. 9.40 from Rs. 8.75. National Pipes at Rs. 18.37 gained one point to close at Rs. 18.19. Britannia Biscuits had buyers at the fractionally improved rate of Rs. 21.87. Philips at Rs. 23.56 were for some time better but closed at Rs. 23.31. Balmer Lawries at Rs. 184 added one point, following increased dividend of 15 per cent. for 1958, as against 12½ per cent. for 1957. Rohtas Industries closed higher at Rs. 22.87, while India Steamships were quiet at Rs. 14.12. Indian Coppers after being higher at Rs. 4.16, closed at Rs. 4.10. Carew & Cos. continued to advance and touched a high of Rs. 11.25. Orient Papers closed at Rs. 36.80, after advancing from Rs. 36.05 to Rs. 37.55.

* * * *

Madras Stock Exchange

MADRAS, *24th June*

The steady trend noted on the Madras Stock Exchange last week gathered further momentum during the week under review. The sugar section was particularly active, thanks to good investment buying. Textiles were well supported on reports of an appreciable fall in stocks of cloth and yarn with mills. Trading in the tea group was characterised by firmness of shares of high-grown tea estates. There would have been a more marked rise in prices but for the continued easiness of tea prices due to the inflow of rush crop. Coffee shares moved narrowly in the earlier sessions but picked up strength towards the close. Rubber shares ruled steady. In the miscellaneous section, buying enquiry was selective.

Among sugars, United Breweries attracted excellent attention of operators and forged ahead from Rs. 417 to Rs. 435. E.I.Ds rallied 75 nP to Rs. 38.25. Travancores and Deccans gained 5 nP each to Rs. 12.05 and Rs. 12.27, respectively.

In the tea group, Haileyburias improved by 30 nP to Rs. 19.90. Kalasas picked up 8 nP to Rs. 3.90. Kil Kotagiris rose by 3 nP to Rs. 8.23. Chembras gained 2 nP to Rs. 4.28. Balanoors were firm at Rs. 20.50 and Nonsuch Teas at Rs. 26.75. United Nilgiris, however, shed 15 nP to Rs. 20.30. Twyfords eased by 10 nP to Rs. 16.90. Among coffees, Consolidated Coffees met with good demand and hardened by 35 np. to Rs. 22.15. Cowcoodys strengthened by 5 nP to Rs. 6.80. Anaparais put on 2 nP to Rs. 4.72. Coffee Lands were steady at Rs. 24. Among rubbers Rajagiris recorded a rise of 25 nP to Rs. 17.75. Malankaras were unchanged at Rs. 19.25, Thirumbadis at Re. 1.94 and Vaikundams at Rs. 26.40.

In the textile section, Coimbatore Pioneers provided a bright spot, the quotation climbing up by Rs. 5 to Rs. 275. Venkatesas gathered Rs. 2 to Rs. 119. Premiers were higher by Re. 1.50 at Rs. 165.50. Virudhunagars and Cannanores hardened by a rupee each to Rs. 40 and Rs. 151, respectively. Maduras rose by 30 nP to Rs. 27.60. Bangalore Woollens were unchanged at Rs. 177, Buckinghams at Rs. 186 and Coimbatore Cottons at Rs. 142. Dhanalakshmis were done at Rs. 197.50, Radhakrishnas at Rs. 122, Trichinopolys at Rs. 11.05 and Vasantas at Rs. 210. These rates were the same as those prevailing a week ago. Metturs, however, sagged from Rs. 402 to Rs. 400 *cum-div.*, notwithstanding the declaration of a higher dividend of 25 per cent. for the year 1958, as against 20 per cent. for 1957.

In the miscellaneous section, Western India Plywoods spurted by Rs. 2.50 to Rs. 172.50. Standard Motors were marked up by 50 nP to Rs. 15.25. Orissa Cements hardened by 40 nP to Rs. 15.55. Mysore Papers were higher by 20 nP at Rs. 20.45. Mettur Chemicals increased by 10 nP to Rs. 12.70. India Cements gathered 8 nP to Rs. 6.20. Andhra Cements and Travancore Cements were steady, the former at Rs. 10.20 and the latter at Rs. 9.85.

(Concluded from previous page)

would now be roughly in balance. The estimate of supply is placed at 5.6 million tons (including sugar from countries which are not members of the Agreement), while the demand is put at about 5.46 million tons (this is said to be the minimum). Stating that the Sugar Council does not share the alarmist view of the sugar situation presented by the U.K. Press, Mr. Eric Roll, the Council's Executive Director, observes:

"The Agreement has been in force for only six months and, during this period, it has had to contend with exceptional circumstances. One obstacle had been that the effective participation of a number of countries had not been certain. The world sugar market has become demoralised and, once it is in such a state, it takes time to recover confidence. The statistical situation is much more favourable than market values suggest."

It is difficult to say whether the expectation of the Sugar Council will prove correct. This much, however, can be said: The effectiveness of the role which the Council plays in regulating the world sugar market is limited by the small quantity under its control, namely, about 6.0 million tons, as against the estimated aggregate world output of 50.61 million tons (raw value) in 1958-59. The quantity of sugar that is left out of the Council's purview thus comes to as much as 45 million tons, the whole of which consists of (1) sugar produced under tariff protection for consumption within the countries themselves and (2) sugar purchased under bilateral agreements between closely associated countries such as the Commonwealth Sugar Agreement. Under this Agreement, it will be recalled, Britain buys sugar from Australia, British Guinea and other Commonwealth countries at prices well above the world market level.

There is, therefore, no exaggeration whatever in the statement of the *Financial Times*, London, that the weakness of the Sugar Agreement is "fundamental." As it rightly avers, because the world market is really no more than a marginal market, demand and, therefore, prices on it are highly sensitive even to relatively small increases in supplies under special arrangements.

NEWS IN BRIEF

THE question of continuing protection to the P.F. moulding powder and buttons sector of the plastics industry beyond 31st December 1959 has been taken up for consideration by the Tariff Commission.

A coal-bearing region extending over an area of 13 sq. miles in Bankura District, W. Bengal, has been located by the Geological Survey of India. So far, four seams of coal have been established in this area. A new deposit of coal, estimated at over 5.26 million tons, has also been located near Ondal.

The first building of the proposed steel plant at Bokaro was formally inaugurated on the 20th inst. It will be used to store tools and equipment. The Bokaro plant, which will be India's fourth steel plant, is expected to be manufactured mostly by the Hatia (Ranchi) heavy machinery plant, yet to be established.

The Central Government has decided, in consultation with the Coal Mines Provident Fund Board of Trustees, to maintain the rate of interest on accumulations during the year 1959-60 at the previous year's level of 3½ per cent. The total of accumulations as at the end of March 1959 stood at Rs. 16.64 crores, the number of colliery workers subscribing to the fund being 344,000.

The Government of India has approved of a scheme to establish a Rs. 1.35-crore sugar factory at Aska in Orissa State. The Industrial Finance Corporation has been requested to sanction a loan of Rs. 75 lakhs. The State Government proposes to invest Rs. 25 lakhs. The State Bank has also been requested to contribute Rs. 20 lakhs.

The Geological Survey of India has recorded occurrence of limestone in the various parts of Madras State. The total of the reserves assessed amounts to 2.0 million tons in the coral reefs of Ramanathapuram and Tirunelveli coast, over 4.63 million tons in Sattur and Arupukottai taluks in Ramanathapuram district, 5 million tons and 2 million tons in Rameswaram island and in the South Arcot district, respectively.

Work on the establishment of the Rs. 4.38-crore Dugda Coal Washery, designed to supply washed Jharia coal to Bhilai and Rourkela, has been commenced. The washery is expected to be commissioned towards the end of 1960. It is being put up by a U.S. firm in accordance with an agreement entered into with the Government of India. The foreign exchange component of the total cost amounting to Rs. 2.7 crores will be met from the credit extended by the U.S. Export-Import Bank.

The management of the Dhunraj Mills, a private-owned textile mill in Bombay, which has stopped working for the last one year, is proposed to be taken over by the State Government as an unemployment relief measure. As a result of the closure of the mills, about 2,000 workers had been thrown out of jobs. This is the third textile mill in the State to be taken over by the Government, the other two being the Narsinghgirji Mills and Seksaria Mills.

A scheme to set up a wrist watch plant either in Poona or in Bangalore by a Bombay firm has been approved by the Government of India. A group of French firms will provide the technical know-how and participate in the equity capital of the Indian company, on a 50-50 basis, which will cover the entire foreign exchange cost of the plant. The proposal plant is expected to produce about 300,000 to 350,000 watches per annum on a single-shift basis.

The number of family planning clinics established in different States upto the end of April 1959 is 811, of which 550 are in the rural areas and 261 in the urban areas. So far, about 4.1 million persons have been educated in family planning methods and 874,000 have been given advice. The number of sterilisation operations conducted was 5,815 in 1956, 11,244 in 1957, 18,559 in 1958 and 1,460 during January-April 1959. About 2,359 persons were trained in family planning upto the end of April 1959 at different training centres.

Enterprising private milk processors and distributors, who will collect milk from small producers and process and distribute it to consumers at places where Government milk schemes are not operating, will be given financial assistance by the Government of Bombay for technical staff, equipment and apparatus. The maximum amount of loan that can be sanctioned to a particular party is Rs. 5,000. The loan will carry interest at 6 per cent. per annum and will be recovered in five annual instalments.

The Small Industries Service Institutes at Bombay, New Delhi, Calcutta and Madras have so far conducted about seventy market surveys. These surveys cover a wide range of products, such as plastics, surgery instruments, builders' hardware, electric transformers, fruit and vegetable products, cutlery and cosmetics. The main objects of the surveys are to determine the potential markets for goods produced in small units and to enable the producers to establish contacts with important wholesale and retail dealers.

The Kerala Government has decided to set up a State Trading Corporation to import raw cashewnuts from Africa and other countries and to distribute the same equitably among the cashew factories, besides providing them with credit facilities against adequate security for purchasing raw nuts and marketing processed kernels. The Corporation will be a private limited concern, with an authorised capital of Rs. 1 crore. The paid-up capital is put at Rs. 30 lakhs, of which 51 per cent. will be held by the State Government and the remaining 49 per cent. by the cashew factory owners.

Many schemes for setting up ancillary units under the National Small Industries Corporation have reached a fairly advanced stage. Four units are to be set up at Kalyani in West Bengal as ancillaries to Sen-Raleigh Industries for the manufacture of lugs, cranks, handle-bar-grips and rear light covers. India Cycles Ltd., Calcutta, has entered into an arrangement with a small unit for purchasing their requirements of cycle handlebar knobs. Three small-scale units are to be developed as ancillaries for the needs of Hindustan Machine Tools at Bangalore. An ancillary unit to supply motor-car radiators to Premier Automobiles of Bombay is also being established.

The Union Ministry of Works, Housing and Supply has sanctioned 126 slum clearance projects, since the inception of the slump clearance scheme up to the end of May 1959. The schemes involve construction of 19,653 tenements and provision of 11,731 open developed plots. The total cost of all the schemes is estimated at Rs. 953.42 lakhs. Of the schemes sanctioned, 1,158 tenements were completed and 1,484 open developed plots of land provided up to the end of March this year, and another 4,818 tenements were under construction and 602 plots in the process of being developed. A sum of Rs. 219.11 lakhs was distributed to the State Governments for the implementation of the schemes up to the end of March 1959.

A co-operative society with young men as members is being set up by the West Bengal Government to run the road transport services between Calcutta and industrial areas, including Asansol, in order to relieve educated unemployment in the State. To begin with, the proposed society will run 10 lorries. The scheme, if it is found successful, is proposed to be extended to other parts of the State. Each society will consist of 50 young men, who will invest Rs. 1,000 each to be paid in instalments. The Central Government will grant a loan of Rs. 3 lakhs to each society. The members will work as drivers, mechanics and clerks. The State Transport Directorate has made arrangements to provide technical training for the members, who will receive stipends for the period of their training. The Union Government has already suggested the adoption of similar schemes in Delhi, Bombay, Madras and Kerala.

From Abroad

Iraq has ceased to be a member of the sterling area with effect from the 23rd inst.

The U.S. Senate has passed a Bill seeking to freeze support prices for U.S. tobacco for the next five years.

A Japanese trade delegation has arrived in Australia to conduct talks in connection with the revision of the Trade Treaty between the two countries.

The U.S.S.R. is considering a proposal to re-enter the Australian wool market. A Russian trade representative is expected to be stationed in Australia for this purpose.

The number of motor vehicles produced in West Germany during the first five months of 1959 was higher at 678,846, as against 619,459 in the corresponding period last year.

The Dutch Government has asked its Social Economic Council, an official tripartite advisory body, to report on the possibility of instituting a statutory minimum wage throughout the country.

The Government of West Germany proposes to change the State-owned Volkswagen automobiles plant into a private corporation and to bring in legislation to permit the sale of "People's shares" in the corporation.

World production and consumption of wheat and coarse grains in 1958-59 are being maintained at record levels, according to the F.A.O. Committee on Commodity Problems. The carryover stocks are also expected to be of record dimensions.

Pakistan will revise its custom tariff structure from the next financial year beginning from 1st July. The new rates will be on the lines of the Brussels Customs Co-operation Council, of which Pakistan is a member. It is also proposed to rationalise tariff duties.

The Japanese steel industry has planned to raise its total imports of iron ore from 7.58 million tons in 1958-59 to 10.3 million tons in 1959-60. This move, it is said, will enable the steel mills to expand their output of pig iron from 6.96 million tons to 8.6 million tons.

The U.S. spent a record $2,140 million on foreign travel in 1958, or 10 per cent. more than in 1957. Another record in the number of U.S. tourists going overseas and their expenditures is expected this year. Rising personal incomes in the U.S. were credited for making more money available for recreational travel.

Industrial production in the U.S. during May 1959 was 4 per cent. above the early 1957 pre-recession peak. The production index (base 1947-49=100) for May stood at 152, as against 150 (revised) for April. Since the end of 1958, the index has gained 10 points, representing an advance of 7 per cent.

The liability limits of the British Export Credits Guarantee Department is proposed to be raised by £400 million to £1,400 million, according to a new Government Bill. Actual and contingent liabilities taken together are now approaching the current limits and the Bill follows the past practice of the Department to seek increases as and when necessary.

A U.K. consortium, Rustyfa, has won a £7.5-million contract for the design and supply of machinery and equipment for a large tyre factory in Rumania. The proposed factory will produce annually one million tyres and tubes for trucks, buses and passenger cars, 500,000 tyres and tubes for motor cycles and scooters, and 1.5 million tyres and tubes for bicycles.

The aggregate world requirements of petroleum products rose by 6 per cent. during 1958, as compared with the previous year, while actual output expanded by no more than 3 per cent. The increase in reserves, although it was much greater than that in output, was less than in recent years. The Middle East and Caribbean areas between them accounted for about 85 per cent. of the total world exports of oil.

The largest Italian financial institution for medium and long-term industrial credit, *the Instituto Mobilaire Italiano*, has been granted a loan of $25 million by three U.S. banks, namely, Bankers Trust Company, Chemical Corn Exchange Bank and the Hanover Bank. The loan will be used for financing the expansion programmes of the Italian Line, a shipping concern, and *Societa Finanziaria sider urgica* (Finsider), a large Italian steel group.

The pay cheques of the U.S. factory workers and the dollar purchasing power of their earnings hit new all-time highs in May, despite a 0.1 per cent. increase in the consumer price index (base 1947-49=100) to 124, a new high. The consumer price index reflects the cost of housing, apparel, medical and personal service. Spendable weekly earnings—after deduction of federal income and social security taxes—averaged $81.03 for factory workers with three dependents and $73.49 for single workers.

Malaya imported from China goods worth $(M)37 million in the first quarter of 1959, as compared with $(M)44 million in the previous quarter and $(M)43 million in the corresponding quarter last year. The imports included foodstuffs, sundry goods, bicycles and sewing machines. The fall in imports is attributed to suspension of Chinese credit facilities granted to Malayan importers, upward revision in the prices of several exportable items effected by the Government of China and reduction in the surplus available for export.

The view that solicitors are a "better accident risk" than the ordinary rank and file was expressed recently by Sir Thomas Lund, Secretary of the British Law Society, while commenting on the Society's motor insurance scheme, which provides for premiums about 20-25 per cent. below those offered by the ordinary tariff companies. This scheme is being worked through a Lloyd's motor syndicate. He gave four reasons for this favoured treatment: solicitors use cars less frequently than others, they are cautious drivers; they automatically get names of witnesses when they are in an accident; and there is a sporting chance that they put in a strictly accurate claim.

PERSONAL

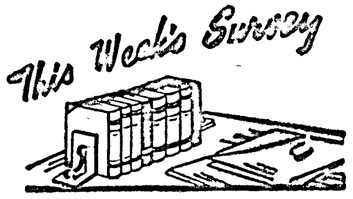
MR. K. L. Dalal, First Secretary to the Indian Embassy at Washington, arrived in Bombay last week-end. His next assignment is expected to be at Rangoon.

Mr. D. N. Gadi, till recently Bombay District Manager of Caltex, left for New York on the 23rd inst., to undergo the Caltex Special Management Training which will last for a year.

Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, who had been to Western Europe first and then to the U.S. to negotiate a 10-million dollar loan from the World Bank, returned to Bombay on Monday the 22nd inst.

Mr. M. Mallaraj Urs, Director of Agriculture, Government of Mysore, has been appointed Chairman and Managing Director of the Mysore Tobacco Company Ltd., Bangalore, *vice* Mr. Malleshayya, I.A.S., who has been appointed State Commissioner for Transport.

Mr. K. B. Mathur, Member (Transportation), Railway Board, left New Delhi for Washington on the 17th inst., for negotiations with the World Bank regarding further loan assistance for the Indian railways. On his way back, he is expected to visit the U.K., France and W. Germany, in connection with the development of the Heavy Electrical Industries, Bhopal, of which he is the Chairman.



DEFENCE VEHICLES

IN pursuance of its well-known decision to make its own automobiles, the Union Defence Ministry is utilising its Gun Carriage Factory, Jabalpur, to turn out three-ton military vehicles, the first of which rolled out of the assembly line this week. The new project, which is being undertaken in technical collaboration with the German manufacturers, M.A.N., envisages the manufacture of trucks with a multi-fuel engine. At present, the new trucks will be fitted with 30 per cent. indigenous components and this proportion is expected to increase to 90 per cent. in the fifth year of production. The surplus capacity in the Government-owned factories will be pressed into service for the project. Thus, the Machine Tool Prototype Factory at Ambarnath will produce transfer cases and thereby make a significant contribution to the manufacture of indigenous components. Road springs for the vehicle will be made by the Ordnance Factory at Kanpur. Plans, it is stated, have also been taken in hand for the manufacture of components of the multi-fuel engine. It is proposed to establish the engine assembly line at Kanpur; the casting will be done at the ordnance factory at Muradnagar. By the middle of 1960, substantial progress is expected to be made in the manufacture of axle components which is also being initiated at present.

Two features of the project deserve notice. In the first place, though no firm figure has been mentioned so far, it is claimed that the trucks produced by the ordnance factories will cost less than those manufactured in the private sector and result in a considerable saving to the defence budget. It is not known how this will be accomplished, considering that, at least in the early years, production will necessarily be low, so that costs will inevitably be high. Secondly, the new type of trucks cannot possibly command country-wide spares service which is bound to restrict their capacity for quick manœuvre. This may well be an additional and, in times of emergency, a very heavy price which the Ministry has to pay, in order to earn the dubious distinction of manufacturing its own vehicles. All is fair in love and war. And in the ideological war, in which the Ministry has joined, nothing need be regarded as unfair.

MARKET RESEARCH FOR COTTON TEXTILES

Goods cannot command the favour of consumers for long, unless they are so fashioned as to suit the changing tastes and preferences of consumers. The method generally employed to ascertain the likes, habits and tastes of consumers is market research. It involves collection of data which reveal present trends and indicates the probable future pattern of demand. In most progressive manufacturing concerns, decisions regarding the improvement of existing products, the development of new ones, adoption of new selling methods and the application of new advertising techniques, are not taken on impulse nor haphazardly, but in the light of intimate knowledge of market conditions provided by market research.

In the case of goods which have effective substitutes to compete for the consumer's purse, market research, together with effective sales promotion, are particularly essential. How important these twin sales methods are for an industry like the cotton textile industry is illustrated by the recent trends in world textile manufacture. In countries like the U.S., the U.K. and West Germany, the position of cotton textiles as the leading clothing material of the world is being effectively challenged by fabrics made of man-made fibres. The latter, aided by the modern developments in textile technology and the refinements in sales promotion, have succeeded in carving out a sizable market for themselves at the cost of cotton. The fact that they continue to oust cotton is reflected in the latter's declining share in world fibre consumption which in 1958 was only 65 per cent. of the total.

Cotton manufacturers seem to have realised the gravity and implications of this threat. In many countries, programmes for market research, sales promotion and publicity for cotton have been already initiated. In the U.S., the National Cotton Council spends $1.4 million annually to stimulate demand for cotton. In addition to this, the cotton textile industry and the Department of Agriculture jointly supply another one million dollars through the Cotton Council International to cotton industry organisations in Europe and Japan. These amounts, large in themselves, are not heavy in relation to the expenditure incurred by manufacturers of other competing fibres which is five to ten times more.

In India, although it is one of the biggest producers of cotton textiles, few attempts would appear to have been made, either on an industry level or individual unit level, to study scientifically the shifts and trends in consumer preferences. Probably, the need for market research is not as acutely felt in this country as in others, since the competing fibres have not yet developed to a stage when they pose a serious challenge to cotton. It is unwise, however, to think that this position will continue unchanged for long. Moreover, market research will enable manufacturers to plan their production policies and programmes to suit market conditions. The criticism that the problem of unsold stocks would not have assumed the serious proportion it did recently had the mills in this country patterned their production in the light of consumer preference is not without substance.

Viewed in this light, the agreement concluded recently between the Cotton Textile Fund Committee of India and the Cotton Council International of U.S.A. for conducting market research for cotton textiles in India is a step in the right direction. The object of the agreement is to maintain and develop market outlets for cotton textiles through a programme of economic and market research. Under the agreement, which will remain in force till March 1961, the Cotton Council International will train such personnel of the Committee as may be designated by it in techniques of market research and will also bear 50 per cent. of the cost of the research programmes which include, among other things, studies of elasticity of demand for textile products in general and cotton textiles in particular and also shifts in patterns of demand for different varieties on the basis of income and area.

While welcoming this agreement, we would like to suggest that market research should be made a permanent feature of the sales promotion activities of mills in this country. This could be done by the individual mills as also on an industry basis, with all the units comprising the industry joining together to sponsor collective programmes. At first, the market surveys could be confined to urban areas and, in due course, their scope could be extended to cover rural areas as well.

CHINESE AGRICULTURE

The much-publicised claims for Chinese agriculture have apparently availed the people of China nothing. Food shortages have been officially admitted. Agricultural policy has come in for re-examination and criticism. The official Communist Party newspaper, *People's Daily*, has warned that, under existing conditions, China's agricultural output would remain uneven. It has called for extension of the area under such crops as rice, fodder and oilseeds. It wants the rest of the world to believe that the official plans for reducing sown areas as acreage yields increased—widely publicised last year—were a long-term project.

Although the new Chinese Government is known to have improved its statistical administration, it is not clear how far statistics in a country of China's size, population and educational and economic backwardness are reliable. In 1958, the authorities claimed that they had virtually doubled the foodgrain crop to 375 million tons and that the target set for the current year was even higher at 525 million tons. Presumably, the figures were inflated and meant for propaganda abroad, for a strident increase in production cannot be accompanied by acute shortages. It is true that China has reported bad weather conditions in several wheat growing areas which must have adversely affected production this year. But bad weather cannot possibly explain all the shortage. In any case, it only serves to show that good weather, rather than any wise agricultural policy, was responsible for bumper crops in the recent past.

Another possible explanation for agricultural shortages is that China is diverting a good part of its agricultural produce in barter deals with foreign countries, including the Soviet bloc, in an effort to meet its import requirements for both defence and economic development. Very little authentic information is available about the price China is paying for getting equipment, know-how and industrial raw materials from Russia and Eastern Europe. The official party can never be expected to undertake an objective examination of its agricultural policy which is an ill-assorted mixture of enforced co-operative agriculture, collectivised cultivation and communes-dominated farming. That country must continue to suffer from all the disadvantages of an agricultural policy which is directed and enforced by a few men at the top.

All this is not to suggest that Chinese Agriculture can have no lessons for other Asian countries. Only, they need not be sought in Chinese co-operativisation or in their communes. There are elements in Chinese agriculture which deserve emulation. But they are to be found chiefly in the application of science to agriculture and in the average Chinese peasants' devotion to the soil. The Indian team (Chairman: Mr. Mahavir Prasad, Irrigation Adviser to the Union Ministry of Food and Agriculture), which visited China recently, has pointed out, in its report, how China has made good progress in the expansion of irrigation through the maximum utilisation of local resources. Chinese cultivators, it is stated, are alive to the "fertility of the silt" that is carried by the rivers and take great pains to carry the silt from the rivers and ponds to their farms. The delegation was also impressed with the tempo of soil conservation work in China. Further, the shortage of technical personnel has been made good by introducing a short-period training in all middle schools.

China claims that it has achieved considerable progress because of its agricultural charter, consisting of an eight-point programme—irrigation, use of manures and fertilisers, deep ploughing and improvement of soil, seed selection and seed breeding, close planting, plant protection and control of plant diseases and pests, reform of tools and farm management. Clearly, none of these points is new to agricultural experts in India. Nor does the implementation of the programme call for reorganisation of Indian agriculture on co-operative lines. It should be possible to carry out a similar programme in India through education and propaganda, supported by enlightened agricultural extension services and adequate credit facilities.

ADMINISTRATIVE ECONOMY

One of the essential prerequisites for the successful implementation of a country's economic development plan is public co-operation. Such co-operation will be forthcoming in abundant measure only if the people are assured that the resources raised by the Government will be utilised with economy and efficiency and that there will be no wastage. The experience of the last few years of planning in India has revealed the existence of considerable wastage of public funds, due partly to inefficiency and partly to the adoption of wrong economic policies and priorities. This is reflected, to some extent, in the rising trend of expenditure on civil administration. The percentage share of this item in the total revenue expenditure of the Union Government (1959-60 budget estimate) is as high as 26.56, as against 20.27 in 1955-56 and 13.90 in 1950-51 (revised estimate). The rise has been particularly marked since 1955-56 as is evident from the following figures:

(In crores of rupees)

	1959-60 (*Budget*)	1955-56 (*Actual*)	1950-51 (*Revised*)
Total expenditure	839.18	403.87	379.28
Of which Civil administration	222.73	94.07	52.75

Although a large part of the rise in civil administration expenditure has been due to the enlarged outlay on developmental and social services, the increase in the number of persons employed—from 450,000 in 1955 to 495,000 in November 1958—and the annual accrual of increments to employees, there is nevertheless no denying that the rise in expenditure is "out of proportion to the increase in the tempo of development" and "tends to outstrip the actual implementation of Plan projects and certainly outstrips their fruition." The trend is rather disquieting and must be checked at the earliest, so that public money is not misapplied and maximum results are obtained from the money spent. There is need for firm action by all the Central Ministries. This is precisely what is reported to have been urged by the Central Economy Board of the Government of India (Chairman: Mr. Vishnu Sahay, I.C.S., Secretary to the Cabinet).

The Board has rightly urged all Ministries to take up a detailed examination of their specific departmental activities, in order to find out better methods of work that would lead to fresh economies. Evidently, the Board has been prompted by the insufficient attention paid to such kind of examination; the internal economy committees of the different Ministries have so far devoted themselves largely to the task of screening demands for additional staff or for other items of expenditure. According to it, improvements in work methods lead to a reduction in staff strength or at least avoid further addition to the staff. The studies undertaken by the special reorganisation unit of the Finance Ministry have shown that, in the departments examined by the unit, economies to the extent of 15 to 20 per cent. of the existing expenditure can be achieved through adoption of better methods of work. The Board has asked this unit to complete the examination of the Ministries and their principal administrative offices within the next two or three years.

Meanwhile, the Board has suggested that the Ministries may themselves undertake a programme of studies in such selected sectors of their organisations as are likely to yield quick results. This is a valuable suggestion. Instead of waiting till the Finance Ministry's special reorganisation unit completes its examination and submits recommendations, each Ministry can make suitable arrangements to review the activities of the various operational agencies, in order to find out where exactly the scope for economy in expenditure lies and how it can be enforced. For this purpose, the internal economy committee of each Ministry should, as the Board has suggested, prepare, in the first instance, a programme of work for about three months beginning from 1st July 1959 and the results of such studies, as also the economies achieved, can be communicated, from time to time, to the Board. Indeed, the whole administrative set-up at the Centre and in the States should participate in the movement for economy. Every department must formulate and adopt, on a uniform basis, methods of organisation, procedure and programming for spending money. In particular, it should introduce an appropriate system of cost control and internal efficiency audit. It is only by such measures that the enormous funds raised as taxes and levies year after year by Governments can be spent wisely and efficiently, with least amount of wastage.

SHARING INDUS WATERS

It looks as though the efforts of the President and other officials of the World Bank to bring about an amicable settlement of that long-drawn-out Indo-Pakistan dispute, namely, sharing of Indus Basin waters, will succeed, though the chances of failure have not yet completely disappeared. Speaking at a seminar of financial journalists at Washington last week, Mr. Eugene R. Black, the World Bank President, stated that the Bank's plan had been accepted, in general principle, and added: "I found nothing but goodwill. There are controversial details in the scheme, of course, but I am confident these can be worked out." In this connection, Mr. Black gave some details of the progress made so far, and these are summarised below:

Britain, the U.S., Australia and Canada have agreed in principle to provide a part of the funds required for implementing the developmental project estimated to cost $1,000 million (Rs. 476 crores); legislative action is, however, still necessary to supply the money.

There is a possibility that New Zealand will also meet a part of the expenditure.

The World Bank expects to set up and administer an Indus Valley Fund into which all contributions will be made. The Bank will also participate, but, at this stage, it is not possible to say to what extent.

The next step is a meeting in London in August 1959 between Indian and Pakistan representatives and the World Bank. At this meeting, an attempt will be made to draw up a water treaty. "We feel," to quote Mr. Black, "we can get agreement on this." As soon as a water treaty is signed, the work will be started.

It will be evident from the foregoing account that the signing of a water treaty between India and Pakistan will be the first major concrete step in the implementation of the Indus Basin development programme. The basis for working out the treaty will naturally be the World Bank plan. Although details of the plan have still not been officially announced, it is known to envisage a division of waters, so that supplies from the three western-most rivers—the Indus, Jhelum and Chenab—will go to Pakistan and India will get the other tributaries—Ravi, Beas and Sutlej. While the upper reaches of most of the rivers lie in Indian territory, they flow through Pakistan and empty into the Arabian sea near Karachi. The Bank's plan involves substantial development projects for irrigation, water storage and power.

An important question which has to be finally settled, apart from the proposed water treaty, relates to the contribution that India has to make towards the cost of replacement works in Pakistan, consisting of a reservoir and a network of canals to replace the ten million acre-feet of water which India has been supplying to Pakistan in the past. In the course of a *communique* issued on the 9th inst., the Union Ministry of Irrigation and Power disclosed that the World Bank had reached an agreement in principle with the Government of India on the amount of financial contribution to be made by India. The *communique*, however, did not specify the actual amount. Whatever may be the amount, India must insist on the linking of its financial commitment at least partly to debt adjustments with Pakistan. Although twelve years have elapsed since the partition, Pakistan has not cared to pay anything towards the debt of Rs. 300 crores it owes India or even the interest charges. Taking the average rate of interest as 3½ per cent. per annum, the amount due from Pakistan by way of interest alone will work out to be sufficiently large, so large, indeed, as to cover the whole of India's contribution to the Indus Basin development programme.

When Pakistan has been consistently adopting an intransigent attitude on every aspect of Indo-Pakistan relations, it is rather surprising to hear from Mr. Nehru (*vide* his Press conference at New Delhi on the 10th inst.) that India's contribution to the cost of replacement canals in Pakistan could not be linked to debt adjustments, since the financial terms about the canal waters issue were "quite separate." The Government of India should at least see that the contribution it is asked to make will not impose a heavy strain on the financial, particularly foreign exchange, resources which are none too plentiful and will continue to be so in the next few years. A heavy strain on India could be avoided to some extent at least, if India were to insist on two things. First, a large part of the contribution should be in the form of supply of construction materials such as steel and cement, as well as provision of technical personnel for the construction work. Secondly, India should not be asked to undertake commitments which involves expenditure in foreign exchange.

DEVELOPMENT OF ROADS

As production expands both in agriculture and industry, the pressure on all types of transport system is bound to increase. In a vast country such as India, the development of all means of transport, in general, and road transport, in particular, is all the more essential not only to meet the increasing traffic in goods and passengers, but to provide a link between the rural and urban areas. The different systems of transport are, however, complementary rather than competitive. What is needed is a co-ordinated expansion of rail, road, inland waterways and coastal shipping. With this object in view, the Central Government proposes to set up a high-powered advisory committee of experts. Whatever the findings of this expert body, it is certain that the development of roads will continue to occupy an important place in any programme designed to ensure expansion of transport and communications. The signal contribution of macadamised roads to the industrial development of Western countries is an instance in point.

The new development scheme for roads drawn up by the Government of India, seeking to raise the total length of roads from 379,000 miles to 675,000 miles in twenty years from the commencement of the third Plan, is, therefore, welcome. The broad outlines of the scheme were disclosed by Mr. S. K. Patil, Union Minister for Transport and Communications, in a recent broadcast over All-India Radio, on the subject of the development of roads in the second Plan. The broad objectives of the Plan, Mr. Patil observed, would be to bring every village in a "developed" area within four miles of a metalled road and one and a half miles of non-metalled road. The villages in semi-developed areas will have access to a metalled road within a distance of less than eight miles and to any road within three miles. The Plan envisaging the extension of roads annually by about 33,700 miles cannot be termed too ambitious, in view of the growing demands on this mode of transport, but one has doubts about its practicability, having regard to the current rate of progress in this sphere. While the construction of new roads deserves serious consideration, one is appalled at the miserable condition of the many existing roads in the country. Equal emphasis should, therefore, be laid on the upkeep of these roads, as also on the provision of missing links and bridges.

The development of roads has received some momentum under the first and second Plans. At the beginning of the first Plan, India had 97,546 miles of metalled roads and about 151,000 miles of unmetalled roads. During the first Plan, about 24,000 miles of new surface roads and about 44,000 miles of low type roads were added. The original outlay on roads envisaged in the Plan was subsequently raised by 23 per cent. to Rs. 135 crores. The total allotment in the second Plan is higher at Rs. 246 crores, in addition to Rs. 25 crores provided from the Central Road Fund.

Reviewing the progress of development of roads during the two years of the second Plan, Mr. Patil pointed out that work was completed on the construction of about 300 miles of missing links, by-passes and diversions, 19 major bridges, improvement and asphalting of 1,700 miles and widening of 550 miles to two-lane carriageway. By the end of the second Plan, it is expected, work will be completed in respect of the construction of further 400 miles of missing links, by-passes and diversions, 21 major bridges and the improvement of 1,800 miles of roads.

Efforts are also being made under the Plan to increase the number of motor vehicles with the object of expanding motor transport. The results achieved so far have, however, fallen short of the original targets. The average annual production of commercial vehicles during the three years of the second Plan was lower at 15,000 units, as against the original target of 30,000. According to Mr. Patil, acute shortage of foreign exchange is one of the major factors that accounted for this shortfall. Although the original target has not been realised, the number of goods vehicles now plying in the country has gone up to about 130,000, an increase of 50 per cent. as compared with 1956. During the same period, the load carried by these vehicles has gone up by about 150 per cent. This has come about, Mr. Patil said, by better utilisation and greater loading capacity of the newly produced vehicles. Although he advocated the further development of road transport, he rightly stressed that it must be planned and fully co-ordinated with that of rail transport. Apart from these functional adjustments, appropriate co-ordination of administration and organisation is essential among the various agencies associated with the development of road transport in the country, namely, the Central Government, State Governments, district boards and local authorities.

EXPLORATION FOR SULPHUR

The Base Metal Unit of the Geological Survey of India has decided to undertake a detailed exploration for sulphur in Bihar and Mysore States. This follows the encouraging results obtained in the course of a preliminary survey already completed. At present, production of sulphur in India is negligible. No deposits of native sulphur have yet been discovered in this country, but the ores of base metals—copper, zinc and lead—are found mostly in the form of sulphides and large amounts of sulphur is released as a by-product in their treatment in metallurgical works, which could be collected. When the development of base metals gathers momentum, the production of sulphur is, therefore, expected to go up.

The consumption of sulphur is regarded as a barometer of economic progress, since it has a wide range of industrial uses. In the form of sulphuric acid, it is used in the manufacture of fertilisers, petroleum refining, iron and steel, non-ferrous industries, chemical industries, paints and pigments, rayons and cellulose films, explosives and textiles. As sulphur dioxide, it has a vital use in paper industry. Sulphur is also needed for vulcanising rubber goods, in acid-proof cements and as an important insecticide. Small wonder then that India's imports of sulphur rose to Rs. 3.03 crores in 1957, from Rs. 1.21 crore in 1951. Last year its imports were, however, lower at about Rs. 2 crores. This was due to a deliberate policy of restriction, necessitated by shortage of foreign exchange. With an increasing tempo of development, the industrial demand for sulphur is bound to increase. A detailed survey and exploration of domestic sources of sulphur is, therefore, worth all the trouble and expense.

UTILISATION OF IDLE MANPOWER

ADOPTION OF "UNORTHODOX" METHODS INEVITABLE

From Our Special Correspondent

NEW DELHI, 24*th June*

DELHI LETTER

MANPOWER is one of the most valuable assets of any country. But in India the waste of manpower resources through unemployment and underemployment is colossal. Consider in monetary terms the waste involved in millions of able-bodied people remaining idle and the magnitude of the waste becomes obvious. It might appear a strange paradox that manpower, our largest economic asset, when viewed in terms of power, is also our largest liability, for a vast army of people with no work to do has to be fed, clothed and housed. This state of affair spells danger to the stability of any society.

Now that ways and means of raising resources for the third Plan are being carefully considered, the question of the rational utilisation of the manpower resources has naturally attracted the attention of planners. It is certain that the third Plan, however ambitious it may be, cannot create an additional 21 million jobs which will be required to absorb the number of unemployed at the beginning of the third Plan and the new entrants to the labour field during the Plan period. Employment policy would, therefore, appear to have been forced to be on the defensive, that is, it will be aimed at preventing the situation from deteriorating further.

Addressing the first meeting of the Central Committee on Employment held last month in New Delhi, Mr. G. L. Nanda, Union Minister for Labour, Planning and Employment, observed that, considering the magnitude of the problem and the virtual impossibility of absorbing the unemployed in the normal pattern of employment opportunities through Plan investments, there was need for exploring 'unorthodox' ways of enlarging the scope for productive employment in the country. Some of the suggestions being put forward to the Planning Commission in connection with the preparation of the third Plan belong perhaps to this class of 'unorthodox' methods. One such suggestion is for utilisation of an estimated 20 million rural unemployed and underemployed labour force for productive work in villages on wages below market levels but sufficient to cover the basic minimum needs. This suggestion is based on the view that the resources for the third Plan should be mobilised not merely in financial terms but also in terms of human material which is at present either not utilised at all or, at best, underutilised.

Full utilisation of manpower in rural areas, it is suggested, should be achieved by the following ways:

(1) Primarily through expansion of normal employment opportunities in rural areas, ensuring that the investment pattern provides a proper balance between capital-intensive and labour-intensive schemes of development; (2) useful work for the local community which is mainly of a productive character but is partly also capable of providing urgently needed amenities; (3) special arrangements for the output of goods and services the people need but which are not marketable in the ordinary way; and (4) organised voluntary service.

The second method, it is maintained, provides the largest scope for expansion of employment, for, under it come a variety of programmes such as irrigation, reclamation of waste land, afforestation, work on community lands and other projects all of which might add to production and incomes directly. To pay normal wages for such work, it is stated, is impossible. It is also recognised that, if wages are not sufficient to cover at least the minimum requirements, adequate labour would not be forthcoming. Assuming a daily wage of twelve annas per day for 300 days, the annual wage bill for the estimated 20 million rural unemployed and underemployed, it is estimated, will be Rs. 450 crores. Together with the expenses of organisation, employment and training, the total amount involved will be about Rs. 500 crores.

The local village community should be able to meet the whole of this cost, if effective use is made of its labour for productive purposes. Payments, it is suggested, could be made in kind by taking collections from families which would benefit from such work. It is also suggested that, of the Plan investment projects, those essentially local in character, benefiting mainly local people, should be given priority and that estimates should be made of the extent to which these projects could make productive use of local labour. It is maintained that, while this labour content might not form a major portion of the investment outlay, it would be a significant figure. One estimate puts such labour contribution at Rs. 1,000 crores during the third Plan period.

The suggestion to utilise unemployed labour for productive purposes at a wage below normal but sufficient to cover minimum requirements, has a threefold advantage. First, it will help cut down the financial cost of the Plan and reduce directly the pressure on monetary resources. Secondly, it will provide some work for those who are unemployed and enable those who are underemployed to earn an extra income. Thirdly, and most important, it will help build up the much-needed social overheads of production at a considerably lower cost than would otherwise be possible.

What is, however, required for the implementation of the programme is the right type of leadership in villages and proper guidance and financial help. The Government's role should be to stimulate local enthusiasm and initiative and, once this is achieved, it should gradually withdraw itself from the scene, leaving it to develop into a people's movement for a better life. These fine principles embodied in the Community Development Programmes have, however, not been effectively put into practice. Unfortunately, they have not met with the success one would wish it had. The defect lies not in the principles but in the methods adopted. Voluntary labour for such purposes, if forthcoming in adequate quantities, is all to the good. If not, we do not find anything wrong in using even an element of compulsion to set local labour to work on socially useful projects, provided, of course, it does not amount to "forced labour."

TRADE FIGURES HIGHLY ENCOURAGING

TERMS OF TRADE STILL FAVOURABLE

(From Our Own Correspondent)

LONDON, 20*th June*

LONDON LETTER

"A HANDSOME surplus"—in these words the British Board of Trade describes the outcome of the country's overseas trading in May, taking invisible items into account. It is, indeed, a remarkable performance, for, on the straight balance of imports *c.i.f.* and exports *f.o.b.*, the adverse balance is only just over £1 million.

But what is interesting is that the good results for May are not haphazard—they are the development and perhaps the culmination of a trade picture extending back to the beginning of the year and represent success in the export field with a reluctance to build up imported stocks. For the first quarter of the year, imports averaged £313 million per month. When the April figure went to £349 million, there was a natural fear that recovery in Britain was bringing with it import expansion. The fear was premature, for May imports were back again to £311 million, the two months together being 7 per cent. up on 1958. The five months average now becomes £319 million—only 4 per cent. up on 1958. For a year of recovery, this is not bad—especially as the volume of imports has risen considerably more and the country is still benefiting from falling import prices. April import prices (the latest available) were 3 per cent. below those at the end of 1958. These domestically advantageous conditions cannot be expected to last, but they have given this country a longer spell of substantially active balance than it had reason to expect a few months ago.

Imports represent only half the picture. Exports have stood up far better than was anticipated (Britain's competitive power has, perhaps, been underestimated) and—without the handicap of falling prices—have improved, thanks to the demand of the North American market for British cars. Who would have anticipated a few years ago that British vehicle exports to the U.S.A. would prove a major prop of the balance of payments!

For the first three months, exports averaged £263½ million *plus* £10½ million of re-exports—a total of £274 million, giving an adverse balance of £39 million. In April, exports, without re-exports, soared to £296 million (*f.o.b.*, of course) and in May they increased to a new record of over £299 million. For the two months together, the average is 9 per cent. over that for a year ago and the average for the nine months has been brought up to £277 million, or 2 per cent. over last year's figures. Allowing again for re-exports at a steady £10½ million, the adverse balance for the five months January-May is just about £31 million which represents no more than £8½ million on the record favourable figures of last year. In short, with nearly half of 1959 flowing away, the adverse visible balance is only running some 2½ per cent. worse than in the previous year which saw a record overall balance and substantial gold inflow. These figures are an adequate explanation of the strength of sterling.

Looking ahead, it is obvious that imports must go up as domestic stocking requirements rise, but the terms of trade are as favourable as ever and this country has got a flying start in the "recovery race" one of whose notable features is so usually a boom in home demand and a slump in the balance of payments.

One of the results of this strength of trade may be to help the "Outer Seven" negotiations. Britain is able (at least before the Government meet the farmers) to look more kindly on a freedom which will ultimately increase the competitive power of European agricultural products (notably from Denmark) in the home market. This was the rock which originally punctured the British Common Market talks and, by now, time and the trade balance will have eroded it. The latest reports of the negotiations in Stockholm are favourable.—*All Rights Reserved.*

AMERICAN LETTER

IMPLICATIONS OF PROPOSED STEEL STRIKE

NEW BOOM IN THE OFFING—IMPORTS FROM EAST MAY RISE

From Our Special Correspondent

NEW YORK, 18*th June*

WHILE economic recovery from the recession has been rapid in the United States, setbacks are to be expected in the second half of the year. A strike has been voted by the United Steel Workers to begin on 1st July. The strike is likely to be long and bitter. The final outcome in steel will influence settlements in other industries. Few steel users will be hurt for a month. But many consumers will be in trouble after six weeks. An eight-week walkout, which is a distinct possibility, would probably force mass shutdowns in many industries.

This time-table represents current steel industry projections. By 30th June, steel consumers will have 21 million tons in stock. But this pile would be four million tons less than on the eve of the 1956 strike. Boom sales for immediate use have reduced the expected inventory build-up.

Steel production has been abnormally high. Lately, it has been running at better than 94 per cent. of capacity. If there is no strike, it may easily drop to between 60 and 70 per cent. of capacity.

Granted that a walkout would result in wage boosts, the implications are inflationary. As John Virden, Chairman of Eaton Manufacturing Company, put it, "higher wages are invariably passed on to the consumer in the form of higher prices."

Another implication may be gathered from a statement by Continental Oil Company, which has a big expansion programme under way. It said that any substantial boost in steel prices "would cause us to reappraise our plans."

Aluminium Too?

Meanwhile, the Reynolds Metal Company, the second largest aluminium producer in the U.S., has boosted its output to 100 per cent. of capacity, against 89 per cent. in May. The labour contracts of the major aluminium concerns expire on 31st July and there is hedge buying against a possible strike in that industry, too.

Railroad labour-management contracts also run out this year. Managements are proposing pay-cuts to get the carriers back on their feet, while the unions are demanding raises, naturally. What is characteristic this year is the stiffening of management attitude in the fight against inflation.

Labour negotiations this year are the most bitter since the end of the war. The name-calling has reached a new low. One factor which is arousing management to a stiffer attitude is the constant loss of foreign markets.

Recent foreign trade patterns have both happy and unhappy connections. Happy, because there is no longer a serious dollar and gold shortage outside of the U.S. Unhappy, because the U.S. is losing gradually some of its world markets to newly built and rebuilt highly industrialised nations. Imports to the U.S. are rising.

U.S. exports are falling. Shipments of coal and petroleum products to Western Europe and Latin America have slumped badly. Sales of metals and metal manufactures declined and exports of raw cotton were sharply lower. U.S. 1958 exports of $17,858 million compare with $20,850 million in 1957.

New Boom

Meanwhile, the U.S. is running into a new boom. Construction activity, for example, is at the highest ever. Consumers have been spending freely. Retail sales, at $18,000 million in April, were up 9 per cent. from 1958.

New private home starts are now running at an annual rate of 1,435,000. This compares with a 1955-57 high of 1,414,000 and a 1957-58 low of 967,000. The unexpectedly growing population and high city rents are the main supporting factors in this area.

On the other hand, prices have shown remarkable stability. For the past ten months, the consumer price index has held within a range of 0.2 per cent. This has been the longest period of stability since the index was started in 1913.

There were several other major developments on the financial scene. In a special message to Congress, President Eisenhower asked for a removal of the 4¼ per cent. interest rate ceiling on Treasury bonds maturing in more than five years and of the 3¼ per cent. ceiling on savings bonds.

An additional White House request was to increase the Federal debt ceiling to $295,000 million until 30th June 1960 and to establish a permanent limit of $288,000 million. These proposals will be debated for a long time, no doubt.

Proponents of these measures say that their enactment is necessary to put the financial house of the U.S. in order. This school of thought also holds that the above three legislative limits have been made obsolete by the economic expansion and strains of the post-war era.

In the opposing camp are some politicians, including members of Congress, who view the trend towards higher ceilings with alarm. Out of ignorance and otherwise, they suggest that this can be of benefit only to the "money-lenders" and Wall Street in its broadest connotation. After all the shouting is over, the views of the President are likely to prevail.

Consumer Demand

A rather interesting survey was made the other day by *The Journal of Commerce*. It found that imports of consumer goods for sale in U.S. department and speciality stores are likely to rise at least 10 per cent. over 1958.

This was the consensus of leading retail buying organisations. More buyers have been sent abroad this year than ever before. Judging by the reported destinations of these buyers, an upsurge of buying activity in Far Eastern markets seems to be in the offing. It should benefit Indian exporters as well.

The core of the American consumer market is comprised of seven out of ten American families with incomes between $3,000 and $15,000 a year. These people mean high sales to retailers and industry.

Statistics show that, for this group, the relationship between income and expenditures has been remarkably stable. They spend about 94 per cent. of their earnings, after taxes, and they save about 6 per cent.

Finally, it may be of interest to readers in India that the next few weeks will see an intensified secrutiny of the U.S. foreign aid programme. The protectionist group maintains, as before, that much damage is being done to American industry by foreign aid which has built up other countries. These are now competing quite successfully with the U.S. all over the world.

There are also advocates of more flexible foreign lending. One of them is Senator Fulbright, Chairman of the Senate Foreign Relations Committee. He is asking President Eisenhower to back a drive which would put the Development Loan Fund on a five-year basis and enable it to draw its funds directly from the Treasury. This would mean by-passing Congressional Appropriations Committees.—*All Rights Reserved.*

NEW USES FOR NYLON IN INDUSTRY

Recent developments in nylon overalls and protective clothing have just been made known. Following the widespread success of four-ounce plain weave continuous filament nylon fabric, introduced by British Nylon Spinners Ltd., new and promising nylon fabrics are beginning to appear, including garments made from lightweight proofed nylon fabrics. Proofed nylon is claimed to have many advantages for protective clothing. It is tremendously tough and durable and has an amazingly high tear strength but is light in weight, so that made-up garments are relatively easy and comfortable to wear.

The scope of nylon for this type of clothing has been greatly increased by the recent introduction of 70 and 140 denier high tenacity yarns. Hitherto the finest high tenacity nylon has been 210 denier; the finer yarns made it possible to produce proofed cloths which are even lighter in weight.

Nylon industrial gloves, already widely used for product protection—a growing need in modern industry—are being adopted more extensively for wearer protection. They have an exceedingly long life, as a result of nylon's resistance to abrasion. Many are thinner and lighter in weight as well as tougher, so that they are easier to wear; the stability of nylon makes it possible to use knitted fabrics more extensively and thus to improve design, fit and comfort.

Another new all-nylon glove is knitted from spun nylon, instead of being wrought from nylon fabric. This is excellent for outdoor workers, since it provides good protection against cold as well as against rough or sharp articles.

New ideas in gloves designed for product protection include an ultra-light weight style made from polyurethane-proofed nylon, designed for use by workers handling articles which are excessively sensitive to finger marking or corrosion by sweat such as transistors and cathode ray tubes.

A NEW ECONOMIC ERA FOR THE U.S.

DOLLAR SHORTAGE ENDS—WHY GOLD OUTFLOW?—WHAT ARE THE REMEDIES?

By George S. Moore

EXECUTIVE VICE-PRESIDENT, FIRST NATIONAL CITY BANK OF NEW YORK

[The continuing outflow of gold from the U.S. and the fall in the U.S. gold reserves to a little over $20,000 million—the lowest level to be seen since 1940—mark the beginning of a new phase in the economic situation in the free world. It has far-reaching implications for the United States as well as for other countries. India is deeply interested in the basic economic trends in the U.S., for a strong and healthy United States is a vital necessity for its own economic progress on democratic lines. We must, therefore, have a correct understanding of what is happening in that country, which has helped us in the last eight years through loans and grants to the tune of Rs. 700 crores and from which further large-scale aid is expected. The article on this page is very valuable for such an understanding, for it provides a vivid picture of the state of affairs in the U.S. We have adapted it from a recent address of the author, Mr. George S. Moore, at the World Trade Dinner at Milwaukee, Wisconsin. It will be seen therefrom that, though the U.S. has a surplus on trade account, its balance of payments position is adverse and that this is solely due to the large-scale military and economic assistance to the rest of the free world. The remedies suggested by Mr. Moore reveal that he is a highly enlightened banker, conscious of the international obligations of the U.S. They show that, while the U.S. itself has to adopt certain self-disciplinary measures, the developed countries in the West and Japan in the East, which have regained and redoubled their strength with the help of the U.S., have certain duties to perform and obligations to fulfil. Mr. Moore is opposed to revival of protectionism in the U.S. as a means to safeguard the dollar, and to any restrictions on imports into his country. He does not advocate any reduction in the help to underdeveloped countries, a point which will be highly appreciated in this country.—ED.]

THE United States of America has come to the end of an era. I shall call it the dollar shortage era. During that period, American policies were designed to reconstruct the Western world and build the kind of world trade and financial structure in which we want to live. I think the U.S. can take great satisfaction from its part in building this world. We began the job after the war with such programmes as U.N.R.R.A. and the Marshall Plan and have continued right down to the present day with other forms of foreign aid. There has also been an increased flow of private American capital and tourist expenditures. In the trade field, we have continued the Reciprocal Trade Programme, with its steady reduction of our tariffs and the consequent stimulus to our imports. These and other factors have supplied the world with a growing volume of dollars. In fact, many people do not realise it, but the fact remains that, year after year in this decade, with only one or two exceptions, the U.S. has been running a substantial deficit in its balance of payments. It has in this way made a great contribution to restoration of more normal international trade and financial relations. Western Europe and Japan have been rebuilt and their productive capacity has been restored. The most important signal of success was the restoration of convertibility of the principal European currencies at the end of 1958.

Reserves Adequate

The end of the dollar shortage era really means that the principal countries of Western Europe, *plus* Japan, have now had their desire for international liquidity satisfied. By and large, these countries feel that their reserves today are adequate. Even the British, whose need for reserves is greater than that of some other countries because they must run a world currency also, feel more comfortable and have not been deterred by a shortage of reserves from taking a number of expansionary measures to combat their recent recession.

As for the dollar shortage of the developing countries, I submit that their desire for liquidity can never really be satisfied, at least not in our generation. Their needs and their urge to develop are so strong that they will tend to use any dollars with which they are supplied.

The ending of the dollar shortage era in 1958 came with unusually dramatic swiftness. During that era, American exports had it all their own way, principally because we were often the only source of supply for many goods. This was brought out in a striking fashion as recently as 1957, when U.S. exports soared to the record-breaking level of $19.5 billion, largely because the Suez Canal was closed and there were major crop failures in some of the countries of Western Europe, all in a period of boom. In 1958, however, U.S. exports steadily declined as the situation returned to normal, so the export figure for the year as a whole was only $16.3 billion. We began to feel acutely the competition of Europe and Japan in a world situation that in several respects could hardly have been more favourable for our competitors. First, their productive capacity, due to the combination of our aid and their own remarkably vigorous and well directed efforts, had been more than fully restored. Second, the boom in Europe was tapering off during that year, so that more and more of Europe's capacity could be diverted from domestic needs to export. Third, a tapering off of the European boom resulted in a decline of inventories, so that the volume of Europe's imports, including imports from the United States, tended to fall. And, finally, world commodity prices fell, so that Europe and Japan were able to get the reduced volume of imported materials at considerably cheaper prices. In fact, as export prices were maintained in the face of falling import prices, the terms of trade, (that is, the spread between these) of many of the countries of Western Europe improved on the order of 10 to 12 per cent.

Financial Position Improves

The net result of these factors was a marked improvement in the international financial position of Western Europe and Japan. Western Europe alone gained a total of about 3.6 billion in dollar and gold reserves during the year and thus absorbed practically the whole of the dollars that the U.S. supplied the world during that year. The primary producing countries, plagued by lower prices and reduced export volume, were not able to add to their reserves at all. The Western European countries converted a large part of their increased dollar reserves into gold—$2.3 billion of it in fact. It was not so much that these countries had lost confidence in the dollar; it was simply that most of them were gold holding countries by tradition, so that, as their reserves grew, they automatically converted their newly acquired dollars into gold. To some extent this development is continuing in 1959, so the U.S. is still suffering gold losses to Europe and Japan, though at a markedly reduced rate.

The finishing touches are in the process of being put on the international structure that the U.S. has been trying to build by the increase of 50 per cent. in the quotas in the International Monetary Fund and the International Bank for Reconstruction and Development. This increase in quotas will help all countries, developed and underdeveloped alike, but they also represent, in effect, an additional line of credit on the resources of the United States.

One final point about the competitiveness of Europe: 1959 has brought the Common Market. The six nations of this market have about the same population as the United States, although their gross national product is only about 40 per cent. of ours. It has been growing twice as fast and is likely to continue to grow at a relatively faster pace than in the U.S., at least for a time. Over the years immediately ahead, the Common Market will not only become a great free trade area corresponding roughly to the United States, but there are good prospects that the rest of the countries of Europe as well will be tied into this area in some way or other. These reduced barriers to trade will strengthen Western Europe immeasurably and thereby the whole of the free world. These peoples are striving for many things Americans already have. They are able, resourceful and hard-working. There is no good reason why they cannot have what they are striving for, nor will this be a bad thing. It is creating a strong social and economic unit to work side by side with the U.S. in the struggle for freedom and peace. Europe has now reached the point in its recovery and strength when it can and should assume a greater share of the burdens that the U.S. has carried so largely by itself since the end of the war.

What do these developments in Europe mean for the American exporter? They mean increased competition in contrast to the era of the dollar shortage, when many of our exports were virtually alone in the field. More and more, we, Americans, shall have to face stiff competition from the factories of Europe and Japan. This is the kind of world that we have tried to build. We must now learn to live with it. Not only do we have to adjust to the new situation, the Europeans, too, must adjust to it. Most of them still discriminate against American goods, in spite of the fact that the coming of convertibility has removed the financial basis for such discrimination. This means that traders who come into possession of convertible currencies may nevertheless be prevented from buying in the United States by direct import restrictions or quotas imposed upon United States goods by the country of their residence. Some of the European countries have relaxed their quantitative restrictions but others, in particular the United Kingdom and France, have lagged behind.

And so we must face the fact that European developments in the last year and a half have not given much help to our direct trade with Europe. Many American companies are meeting the situation with manufacturing facilities already located in Europe or within the Common Market area. Many others are exploring the possibilities. While the basic concept is to substitute local manufacture for exports from this country, this is not always the case. Often the productive facilities provide only partial manufacture and assembly and include the use of component parts to be exported from the United States. Also, the resident company often facilitates our export sale of other products not included in the foreign manufacturing programme.

I should like to have you think for a moment of the significance, for American industry and labour, of this movement of American capital to Europe. As long as our capital can move freely to foreign countries—and it would clearly be a denial of the system for which we stand and of the key role of the dollar in the world to place any impediments against it—it can be used to employ resources abroad rather than at home. In other words, while it is entirely consistent with our world position to be an exporter of capital, we cannot let our costs at home get so far out of line that our capital exports are simply resulting in the employment of foreign rather than American labour. This is an aspect of the competitiveness of our costs that many able leaders both in business and in labour may sometimes forget.

It is still not entirely clear as to how fundamentally the competitive position of our exports has been affected. In manufactured goods, our exports are still more than double our imports and we continue to be far and away the world's largest exporter of manufactures. But there has been slippage. In 1958, our exports of manufactured goods were only 2.4 times our imports, as against 3.2 times in 1956 and 3.4 times in 1954. The decline last year in our exports of manufactured goods is all the more significant, because industry was seeking foreign orders to compensate for slackened sales at home. But Western Europe and Japan were more successful than we were in maintaining the exports of manufactures. I need only cite automobiles as a case in point.

Exports

During the second half of 1958, the U.S. exported 10 per cent. less manufactured goods than during the first half of 1957, a period during which world trade in manufactures reached an all-time peak. At the same time, according to preliminary data, Germany increased its exports of manufactures by 14 per cent. and Japan by 6 per cent.; the United Kingdom's exports dropped 4 per cent. and France, on the whole, maintained its position. Italy and the Netherlands increased their exports of manufactures, Belgium, Luxembourg and Canada lost ground, while Sweden and Switzerland more or less held their positions. The net result was that the reduction in world total exports of manufactures was accounted for principally by the fall in U.S. sales. Thus, our share in total world exports of manufactures slipped to 24 per cent. in the second half of 1958 from 26 per cent. during the first half of 1957. Germany, on the other hand, displaced the United Kingdom last year as the world's second largest exporter; its share rose from 17 to 19 per cent. The share of the United Kingdom remains steady at 18 per

PROGRESS OF AUSTRIA'S EXPERIMENT IN "PEOPLE'S SHARES"

RESULTS SO FAR ENCOURAGING

TO many Austrians, the expression "people's shares" at first meant little more than any other of the numerous political and economic catch-phrases current during the immediate post-war years; and, if there were not too many enquiries as to the precise meaning of this newly coined phrase, it was because things like shares, dividends, and stock exchange prices seemed so very remote from the everyday problems of the years of post-war reconstruction.

Gradually, however, the expression "people's shares" began to gain currency; every year the sponsors of the scheme went ahead with their plans for putting their ideas into practice, and the public really started to take notice when announcements of new issues began to be followed within a few hours by notifications that the issue was already oversubscribed. After all, they thought, there must be something worth looking into about a scheme which produces such a widespread response. And so the expression "people's shares" gradually became a household word in Austria, and other countries began to take an interest in the idea as well: early in 1959, Western Germany decided to follow Austria's example and introduce people's shares.

A Link Between Capital and the Working Man

What, technically speaking, are people's shares? Theoretically, they are an issue of ordinary shares in accordance with the Austrian Share-Capital Act; but to many of the issues (up to the present at any rate) far-reaching privileges have been attached. Yet, when one considers the social and economic significance of this experimental scheme which has been entirely built up within the framework of a social system based on the freedom of the individual, these privileges are seen to be completely justified; for the aim of people's shares is nothing less than to constitute a bridge between the working classes, on the one hand, and the means of production, that is, capital, whether private or State-owned, on the other.

Although the proportion of investors among the middle income-groups is much smaller in Austria than in other Western Europe or North American countries, in no other country has it been possible to make shareholding available to such wide sections of the community as the issue of people's shares has done, and is increasingly doing, in Austria. The workers and employees in any undertaking are now in a position to supplement their regular wages by a share in the increased profits, or in the expansion of the means of production, on which their livelihood depends.

Two aims had constantly to be kept in view, if this experiment in national economy were to be a success. First, every effort had to be made to reach those sections of the community who had not hitherto had an opportunity of sampling the working of the capitalist system; and, secondly, those responsible for the issue of people's shares had to take pains to ensure that the available shares were distributed as widely as possible among the sections of the population subscribing to them.

Between State Control and Private Enterprise

The realisation of this scheme was bound to involve two distinct economic fields, the authority of the State, which would constitute a guarantee that the realisation of the scheme would not mean any deviation from the basic ideals, and private enterprise, which is subject to no control save that of ordinary market practice, and which would have to bear the whole brunt of opening up new possibilities of free investment.

Nationalisation, in the Austrian version, has already established certain principles for successful co-operation between State control and private enterprise. For more than ten years, a number of industrial concerns and financial establishments have been going their own individual ways, on the lines of private enterprise, even though, in actual fact, their sole shareholder is the Austrian State. Shares in banks and firms which have become State property, either under the Nationalisation Act or as part of the properties returned by the Allies after the Second World War, have been handed over to one of the big banks already under State control, with instructions that they be put on the market in the form of people's shares. The particular Ministry concerned with people's shares does no more than provide the bank in charge of the issue with a basic plan on which the quota allocations and price quotations of the shares are to be based; apart from this, the banks have a completely free hand to co-operate with private financial organisations in issuing the shares on private enterprise lines.

The next stage is for financial organisations in all parts of Austria to submit their lists of subscribers to the big bank in charge of the issue, which then apportions the allocations in accordance with the basic plan provided by the Ministry. As far as the actual procedure of subscription is concerned, the local banks, savings banks, etc., are given a completely free hand; the Ministry merely recommends that the principle of the widest distribution possible, down to the smallest country parish, be constantly kept in view.

The first issue of people's shares in Austria was the 1957 issue of the private shares of the two principal Austrian banks which had become State property under the Nationalisation Act of 1946. The next issues consisted entirely of issues made by firms which had been included in the list of former German property and were now reverting to private ownership. (By "former German property" is meant assets or property of the former German "Reich" which were taken over by the Allies at the end of the war and handed back to Austria, after the conclusion of the State Treaty in return for an appropriate payment by Austria.)

A Typical People's Shares Issue

The issue of people's shares to effect the return to private enterprise of business classified as former German property followed a definite pattern which may be taken as typical of an Austrian people's share issue. About 20 per cent. of the total capital (on an average about 20 million schillings) was apportioned to an issue of people's shares, the remainder being taken up by one or more large private shareholders. The people's shares were allocated as follows: ten to twenty per cent. were reserved for the staff of the firm in question, while the remainder were open to public subscription (including in some cases a definite quota specifically reserved for one of the Austrian provinces). The people's shares were offered at 1,100 to 1,200 schillings for a nominal value of 1,000 schillings (less frequently at 110 schillings for a nominal value of 100 schillings). They were

YIELDING PLACE TO NEW

Ancient as the history of our vast land, this primitive machinery for extracting juice from sugar-cane, is still a common feature of rustic India. Picturesque and leisurely, this method of cane crushing served its purpose well and now it must yield—yield to the speed of modern sugar mill machinery.

The mechanised sugar factories of our time rely on a wide range of precision built equipment, not only for our daily needs but also to earn valuable foreign exchange.

Texmaco, pioneer in many fields of engineering, now manufactures and supplies in technical collaboration with the world renowned Stork Werkspoor of Holland, the complete range of sugar mill machinery.

DEVELOPMENT OF HANDLOOM INDUSTRY

MECHANISATION, THE REAL SOLUTION

MR. Lal Bahadur Shastri, Union Minister for Commerce and Industry, certainly struck a note of realism when he declared at the thirteenth meeting of the All-India Handloom Board, held in the City last week-end, that, if the handloom industry was gradually made to stand on its own feet, it would be a red-letter day for it and for the textile industry as a whole. The Handloom Board and the handloom industry, he said, were now in a stage where they could take some risk. And Mr. Shastri made it clear that no progress was possible unless some risk was taken.

No other sector of India's industrial economy has received from the State so many artificial props as the handloom industry. The props include not merely complete exemption from payment of any tax, rebate on sales of handloom cloth, albeit when sold only through the co-operatives, liberal loans and grants amounting to several crores of rupees, and assurance of adequate and regular supplies of yarn but also the exclusive production monopoly in certain types of manufactures *vis-a-vis* the mills. It is true that all these props have led to a perceptible improvement in handloom cloth production—from an annual output rate of 1,200 million yards in 1953 to nearly 1,900 million yards at present—but they have not solved the basic problems of the industry, namely, low manufacturing efficiency and high production cost. If anything, they have only helped to cover the economic weaknesses of the handlooms. The average production per handloom is now being maintained at just a little over 800 yards per annum or less than three yards per day. Mr. Shastri did well to draw special attention to this low output per loom and observed:

"It (the production per loom) is no doubt on the increase, but, clearly, there is scope for increasing it still further, and it is only then that a weaver will be able to get an appreciable return from his handloom. Hard and efficient work is the key to the situation and the handloom weavers, who, I know, already work hard, will have to work harder still. The higher the production, the greater would be the resources of the handloom industry, and it can thus widen its scope and make further development in different directions."

Use of Power

We wish Mr. Shastri had gone a step further and explained how production per weaver could be raised. Surely, he does not expect the handloom weaver to work longer hours than he does now. If that is what he means, he is condemning the weaver to hard labour and drudgery. It is common knowledge that hard work by handloom weaver, while it is of great value, cannot by itself bring about higher output of cloth. For the capacity of the weaver to produce is limited to a large extent by the muscle power which he has to use for operating the loom. What is urgently required, in addition to conscientious work by weavers, is mechanisation of weaving operations through the introduction of power. It is here that the power-that-be are at fault. They have not done all that lies in their power to modernise the handlooms and to equip such looms with electric energy.

Three Things Must Be Done

Some attempts have been made in a few States to encourage such mechanisation, but the progress actually achieved has been very halting, thanks to the pressure exercised by certain groups which have been actively opposing introduction of powerlooms. The public needs to be reminded, in this connection, that certain State Governments have actually refused to implement the Union Government's scheme for modernisation of handlooms. The Handloom Board itself has done nothing to discourage this unhealthy trend. On the contrary, the Government of India, which fathered this Board, has nominated to the Board certain persons who are interested in seeing that the handloom weaver does not enjoy the benefits of mechanisation and in perpetuating the use of nothing but muscle power for the operation of looms. These self-styled leaders of handloom industry, who are not weavers themselves but only middlemen, are simply exploiting the ignorance of weavers by presenting an exaggerated picture of the evils of mechanisation. It is, therefore, needless to add that, if the Government of India is earnest about making the handloom industry stand on its own feet, it must do three things. One, the grant of loans and grants should be linked, except in special cases, to the use of power for running the looms. Two, a time limit must be fixed after which the handloom industry should no longer enjoy the aforesaid artificial props. Three, the fixed and working capital requirements of the industry must be provided strictly on business considerations and not in the form of cheap loans never to be returned.

It is gratifying that Mr. Shastri would appear to have been in broad agreement with the second step. At any rate, he was convinced that the present rebate system would not really strengthen the handloom industry, so long as the Government continued to help it through external assistance. Mr. Shastri said:

"There is a difference of opinion over priority being given to rebate or to assistance for developmental purposes. It has been represented by some that they will be prepared to give up grant or loans for developmental needs and would prefer getting as much as they can towards rebate. However, one must consider if we should not gradually reduce the payment of rebate. Once we reduce gradually and ultimately abolish it, the importance of developmental activities in the handloom sector will automatically become so apparent and obvious. However, it is time that we thought of reducing the present quantum of rebate. Government have decided to reduce the special rebate from 6 nP to 4 nP, and the period for which this special rebate will be given has also been reduced to the Handloom Week and one additional week only. If there is a uniform reduction, it will be beneficial for the handloom industry. Different rates in different States might perhaps create complications. I hope the Handloom Board will give serious thought to this matter. Government have also been considering reducing the rebate that is being given at the wholesalers' level. There has been a suggestion that it should be abolished. In any case, Government have now decided to reduce it from 6 nP to 3 nP."

The handloom interests may not like the reduction in rebate now announced. But it must be stressed that such a reduction and eventual abolition will compel the weavers to pay more attention to the need for augmenting production of better quality cloth at lower prices.

An Important Issue

An important issue on which Mr. Shastri touched was whether the State Governments should be allowed to spend beyond the quota that is allotted to them out of the cess funds. He told these Governments in clear-cut terms that it would not be possible for the Centre to provide additional funds for this purpose from its revenues, although he revealed that he would not come in the way of their spending a larger sum if they could find it from their own resources. He, of course, emphasised that "this matter should really be considered fully when we know what our scope of expansion and target would be in the context of the third Five-year Plan."

Mr. Shastri also touched on co-operation in the handloom industry. What he said on this subject is revealing and should be quoted in full:

"You know very well that only half the industry is in the co-operative sector. I am surprised to see that the weaver who is not in the co-operative sector is able to compete easily with you and has almost monopolised the export trade of handloom fabrics. And mind you, they do not get any financial assistance for development purposes nor do they get any rebate. We have recently given certain facilities for import of dyes and chemicals, etc., to them. I would no doubt like it very much that they should all come under the umbrella of the co-operative system. However, there can be no cumpulsion."

We commend the frankness of Mr. Shastri in admitting that the handloom co-operatives have not done so well as those who are outside the co-operative field. We hope that he will bring this point to the notice of the Prime Minister and other members of the Planning Commission who are swearing by co-operation as a panacea for all the economic ills of the country.

It is thus apparent that handloom weavers, if they are left free, can definitely put in their best to improve their trade. On their part, the authorities can give them greater facilities for import of dyes, chemicals, etc., required by them. This does not mean that there is no need for service co-operatives and provision of credit facilities on reasonable terms. These are necessary and have undoubtedly kept down the evils of middlemen. The Handloom Board can also assist the weavers more actively than at present. It is encouraging to hear that the Board's Weavers' Service Centre (formerly called Design Centre) has done very useful work and that the Board has drawn up schemes covering all aspects of organisation, finance, productivity efficiency and marketing. And Mr. Shastri did well in giving an appreciative pat on the backs of all those who are responsible for this type of positive assistance to handloom weavers, for it will encourage them to work even more enthusiastically than they have done so far.

CLOTH AND YARN PRODUCTION

The production of cotton mill piecegoods during the month of May 1959 aggregated 404 million yards (provisional), as against 407 million yards in the previous month and 421 million yards in May 1958. The total quantity of cloth woven in the first five months of 1959 was 2,038 million yards, which compares a little unfavourably with the 2,063 million yards produced in the corresponding period of 1958 and 2,290 million yards in that of 1957.

Cotton yarn output during May 1959 was also lower at 136 million lbs., as against 140 million lbs. in April 1959 and 139 million lbs. in May 1958. The total production in the five months ended May 1959 was, of course, higher at 705 million lbs., that in the same period of 1958 being 693 million lbs.

The following table gives the month-by-month trend of cloth and yarn output during the first five months of 1959 and 1958:

	Cloth (million yards)		Yarn (million lbs.)	
	1959	1958	1959	1958
January	430.09	436.53	150.55	148.70
February	391.75	391.45	136.66	132.80
March	405.78	405.56	141.46	138.48
April	406.86	407.77	139.86	134.07
May	404.00*	421.25	136.00*	133.70
Total ..	2,038.48	2,062.56	704.53	692.81

* Provisional estimates only.

Owing to the downward trend in the production of cloth thus and due to higher offtake for domestic consumption, there has been a distinct improvement in stock position. The total quantity of cloth with mills at the end of May 1959 was 567 million yards, the lowest since October 1956, as against over 873 million yards and 757 million yards at the end of 1958 and May 1958, respectively. The reduction in stocks is accounted for by both unsold stocks and stocks sold but not taken delivery of. The unsold stocks at the end of May aggregated 299 million yards, as against 494 million yards and 462 million yards at the end of the aforesaid periods, respectively. Similarly, stocks sold and not taken delivery of stood lower at 268 million yards, as against 379 million yards and 295 million yards.

ANNUAL REPORT OF MILLOWNERS' ASSOCIATION, BOMBAY

Like its predecessors, the latest Annual Report of the Millowners' Association, Bombay, that covering the calendar year 1958, is a very useful document. It gives an exhaustive account of the recent developments on the textile front and the views of the Association on the wide and varied problems that confronted the industry. Part I of the Report contains an interesting foreword in which are highlighted the main trends in the mill sector. In particular, attention has been drawn to the prolonged crisis in the mill industry, the nation's premier organised enterprise, resulting in a fall in production, large accumulation of stocks and an increase in the number of idle mills. The Association urges that effective measures should be taken to help the industry to recover its normal stability. "Great progress," it says, "can be made towards overcoming the difficulties of the industry by giving full weight to the recommendations which the Board (Cotton Textile Consultative Board) might make from time to time pertaining to the industry."

Part II of the Report covers the proceedings of the Association's annual meeting held on 16th April 1959 and reproduces the budget speech of the Union Finance Minister. There are also several tables—numbering 32 in all—depicting the position regarding the spindles and looms in India, the U.S., the U.K., W. Germany, Japan and China; the progress of the mill sector in India; raw cotton consumption and prices; trend of yarn and cloth output; exports of textiles; direct and indirect taxes paid by the mills. Three separate tables are included to show the progress of Japanese cotton mills during the last 22 years. Also incorporated in this part are rules and regulations governing sales of textiles for domestic consumption and export.

RAYON PLANT AT VERAVAL

The foundation-stone of the new rayon plant of the Indian Rayon Corporation at Veraval, about 200 miles west of Bombay, was laid on Sunday this week by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry. Speaking on the occasion, Mr. Shastri pointed out that India could not import rayon yarn for long and emphasised the need for producing within the country its raw material, namely, rayon pulp. He disclosed, in this connection, that the Government of India would be granting a licence for the establishment of a rayon plant in Baroda and permitting another factory to double its production capacity.

The Veraval rayon factory is being set up at a total cost of Rs. 3·50 crores in collaboration with the well-known firms of the U.S., Messrs. Von Kohorn International Corporation and the Financial and Development Fund, Inc. In the beginning, the factory will have a productive capacity of five tons per day which will be augmented to 10 tons per day in the second stage. Trial production is expected to commence by September 1960 and full production by the end of 1960. The number of persons to be employed direct is put at 1,000.

A PERIOD OF DECISION FOR TEXTILE INDUSTRY

IMPORTANCE OF "FULL MODERNISATION"

From A Special Correspondent

MANCHESTER, *16th June*

MANCHESTER LETTER

A DRASTIC programme of concentration of production in the mills of Crosses and Heatons Ltd., the Bolton spinning combine, was outlined at the annual meeting. Mr. George Hargreaves, the Chairman, told shareholders that, provided the Government redundancy compensation was sufficiently attractive, the group would concentrate output in three or four units among the eleven mills now in operation. The combine owns 14 factories, of which two are already closed and another is to be shut when current orders are completed.

"The future policy of the Company will be to take the fullest advantage of the redundancy scheme," Mr. Hargreaves said. "Our aim is to run full-time in the remaining units after our concentration has been completed."

Shareholders were critical of the group's trading loss of £316,486, as against a profit in the previous year of £133,643. Mr. Hargreaves said that stock had been valued at the bottom of the market and that an improvement had occurred since the end of the financial year on 31st March. Stock losses amounted to £250,000, due to causes absolutely beyond the control of the Directors. "So long as the futures markets cannot function satisfactorily and so long as Governments continue to interfere in raw cotton price levels, we cannot cover our yarn contracts," he explained.

In all branches making the finer qualities of yarn, business had very definitely improved since the end of March, he assured the meeting. One of the major causes of the recession had been the change-over to drip-dry garments. The mills of the group had been adapted to the spinning of yarns of 60's counts and above, but the average in Bolton was now 42⅛'s counts and in Leigh 30's.

Indian Cloth Exports

Comment on the length of the negotiations, now taking place between British and Indian cotton textile interests to establish a basis for future shipments of cloth to the United Kingdom, was made at the annual meeting of the Cotton and Rayon Merchants' Association. Mr. J. S. T. Hawke, the Chairman, described the negotiations which had gone on between British and Hong Kong textile leaders last year resulting in the agreement to limit arrivals of Hong Kong cloth over the next three years. "India is not very inclined now towards their earlier figure agreed at 140 million square yards," he continued, "and it is taking a long time to get any new figure settled. That an arrangement will eventually be come to and also with Pakistan I have no doubt, as, without some reasonable guarantee in this field, it is difficult to see how the proposed reorganisation scheme in Lancashire can go forward with the necessary confidence."

The position in Hong Kong had changed enormously since February when the agreement formally started, Mr. Hawke pointed out. The best mills in the Colony had long order books with the United States and the local finishing works were working to capacity. Although the present agreement was only operative for three years, many things could happen during that period, including the probability of the Hong Kong industry increasing in size still further which might make the next voluntary agreement on the present basis difficult to renew.

"Jungle Warfare" A Mistake?

The leaders of the merchant converters were among those who were most critical of the price regulation arrangements in the spinning and doubling section, but even they now appear a little surprised by the ruthlessness of the Restrictive Practices Court. "Some of us would have liked a less sweeping decision, such as a stop-loss floor level in the spinning industry," commented Mr. Hawke. Looking ahead, however, he visualised a time when all the spinners would be in a few groups, following the steady consolidation of the mills, which would eventually have the same effect as already applies in the man-made fibres branch.

Second thoughts on this very controversial topic made the merchants' Chairman comment: "It is all very well to lay down that jungle warfare is a splendid thing in trade, but, if conditions are not made reasonably propitious, where is the risk money coming from to forge ahead with the modern machinery and techniques which are essential if the industry is to survive?" Mr. Hawke stressed that prosperous workers are prosperous consumers; the more of them there are in the country the better for all—producers, finishers and distributors.

Keep Patents Secret

Optimistic views on export prospects are rarely found nowadays. Shipments of cotton and rayon piecegoods have declined by 20 per cent. in the past two years. Assessing the outlook, Mr. Hawke said: "The less Imperial Preference we have, the greater demand there is going to be by our exporters for cheap foreign grey cloth as a raw material for their converting activities. There will always be specialities in which Lancashire can lead the world, but let us hope that, when we patent something better than the existing resin finishes in the future, this secret will be kept for the benefit of our people until the patents run out."

On the potentiality of the Chinese textile industry, Mr. Hawke said that the outlook was "truly alarming." The shortage of raw cotton had reduced output in recent years, but a producing industry already as big as Japan's could raise very substantially the amount of cotton goods available for export. In the past two years, over 400 million square yards of Chinese cloth had been shipped to Indonesia, Hong Kong and Malaya alone.

A warning that the textile industry of the future will not be a comfortable place for firms which have not fully modernised their mills has been given by the Rayon Weaving Association. In its annual report, the Association, commenting on the reorganisation plan for the industry, said that the next few months would be a period of decision—"and probably a fairly short period"—for firms either to take their compensation and close down or to stay. "If they decide to stay, it will be in an industry which may not be a comfortable one for firms which have not thoroughly re-equipped, and there will be no further chance of compensation for those who cannot stay the pace."

On the other hand, the report added, prospects were distinctly encouraging for those firms that had re-equipped or were prepared to modernise and could operate at a high level of efficiency. "There is every chance of the industry getting on to a sound and stable basis at last," the Association declared. According to the report, 77 firms engaged in rayon weaving have closed down in the past four years, putting more than 10,000 looms out of action.

Cotton Conference

Raw cotton experts from overseas are to attend a conference sponsored by the Liverpool Cotton Association at which the textile mills' raw material needs in the future will be assessed. Mr. James Littlewood, Chairman of the Empire Cotton Growing Corporation, said at the annual meeting at Manchester that the conference would be held in July between representatives of producers and consumers to discuss the probable future demand for different growths. All the Corporation's plant breeders who would be home on leave at the time would attend.

"It is hoped that the conference will result in even closer co-operation than before between the grower and the spinners," said Mr. Littlewood. Raw cotton production in the eight territories in which the Corporation is interested fell sharply in the year 1957-58 to 1,096,310 bales—a reduction of 340,000 bales. This was the lowest crop for five years and was due entirely to the exceptionally unfavourable season in the Sudan. The annual report commented: "Preliminary indications are that the recession in 1957-58 will prove only temporary and that the crops for 1958-59 from the eight territories will reach 1½ million bales. This, if achieved, will prove a new record."

Lord Derby the President, told the meeting of his visit to Africa earlier this year to see at firsthand the Corporation's work in Uganda. Discussing the setting up ten years ago of the research station at Namulonge, he said. "It is not just a conglomeration of laboratories and field plots, but a research farm with the emphasis on good farming as well as pure research. I am sure that it will continue to be indispensable not only to Uganda but also to cotton growing in general for many years to come."

Lancashire "Ginger Group"

The setting up of a Central Textile Action Committee was decided on by representatives of millowners and trade unions from 19 Lancashire cotton districts at a meeting at Manchester Town Hall last week. An agreed statement issued afterwards by Mr. R. W. Hill, Assistant Secretary of the Rochdale Weavers' Association, said: "We are of opinion that the Government scheme for the industry is merely a starting point. We propose to go into further details regarding organisation and action at our next meeting."

The meeting was called on the initiative of the Rochdale Cotton Crisis Action Committee, which has been pressing for a central body. Trade leaders took the view that the new Central Action Committee intended to operate as a "ginger group." A Cotton Board spokesman said that the Committee had no official links with the Board.—*All Rights Reserved.*

(*Concluded from page* 1063)

bearer shares, whereas the shares taken up by the large shareholders were registered shares.

In order to ensure the widest possible distribution of people's shares, the banks responsible for their issue were recommended to limit each subscriber to one share only. In recent years, many of the firms issuing people's shares have had to set a limit to the period during which the subscription lists can remain open, as, within a few days, there have sometimes been five times as many applicants as shares.

In order to enable employees in the lower income-groups to secure people's shares in the firms with which they are employed, special concessions have been introduced for subscribers to the quota of people's shares reserved for the staff. Employees of the Voith Engineering Works at St. Poelten, for instance, can spread payment over a period of three years; the instalments they pay depend on what they can afford, and they lose none of the dividends or voting rights to which they are entitled. Most of the issues of people's shares by firms which have reverted to private enterprise carry considerable concessions, such as a substantially reduced purchase price and a preference dividend of 5 to 6 per cent. with full voting rights. The chief shareholder in one of the first firms to introduce the people's shares scheme, with a view to giving applicants a guarantee of security, offered to buy them back at any time at their purchase price; an offer which as it happened was never taken up, for, by the end of the year, not a single people's share of the 1,400 issued already by this firm had been offered for sale.

Between March 1958 and April 1959, six firms from the list of those classified as former German property switched over to private enterprise by means of issues of people's shares to a total of 36.1 million schillings. One of them, the chocolate and confectionery firm of Tivoli in Vienna (formerly the Vienna branch of Stollwerck Bros.), made a capital issue of 10 million schillings, entirely in the form of people's shares; 26 per cent. for the staff quota, 20 per cent. for public subscription through the banks and other financial organisations.

In the near future, two more firms are due to switch over to private enterprise by this means, thus bringing the total amount of capital issued in the form of people's shares up to 43 million schillings. This represents approximately one quarter of the 173 million schillings total capital of the eight firms from the list of former German property which have so far made issues of people's shares.

What happens to people's shares once they have been taken up by the applicant is at present not easy to determine. Various indications, however, point to the conclusion that, owing to the small number of shares permitted to any one single individual, they will be regarded not as a speculative investment but as a long-term investment for savings.

INDIA'S FOREIGN TRADE IN COTTON

EXPORTS HIGHER, IMPORTS DECLINE

FIGURES relating to exports of cotton during the first nine months of the current season, that is, from 1st September 1958 to end of May 1959, indicate that, although exports are none too encouraging, they are running at a rate higher than in the same period last season. Thus, exports during the nine-month period aggregated 288,771 bales (of 392 lbs.), as against 174,978 bales shipped in the same period last season. This is in contrast to the world trend. Free world exports during the present season have shrunk considerably and are expected to reach a low point for the last decade, namely, 10.5 million bales, as compared with 12.6 million bales in the 1957-58 season and 14.3 million bales in 1956-57.

The following table gives the destination-wise break-down of exports of cotton from India:

Exports of Indian Cotton

(From 1st September 1958 to 30th May 1959)

(In bales of 392 lbs.)

Countries	1958-59	1957-58
Japan	199,135	130,121
Hong Kong	40,276	4,129
Continent	25,686	20,291
United Kingdom	8,131	9,842
China	6,886	..
United States	6,045	10,072
Other countries	2,612	921
Total ..	288,771	174,978

As will be seen from the above table, Japan accounted for the lion's share of exports, its purchases amounting to as much as 199,135 bales, as against 130,121 bales in the same period last year. Hong Kong ranked as the second largest buyer, its share aggregating 40,276 bales, as against a mere 4,129 bales in the same period last season.

Although foreign demand was slack and buying slow in the early part of the season, there was brisk demand from Japan for Bengals since the turn of the year and a virtual scramble for superior Bengals last month, supplies of which were limited. Inferior Bengal *Deshi*, Yellow pickings and Zoda cotton were also in moderate demand.

Export quotas for cotton released so far in the season aggregate 500,000 bales, comprising cotton stapling ¾" and 50,000 bales of below 250,000 bales of Bengal *Deshi*, 200,000 bales of ¾". Of this, the earlier quota for 250,000 bales has been completely used up. Out of the last quota for 250,000 bales released in November last, comprising 100,000 bales of Bengals, 100,000 bales of cotton stapling ¾" and 50,000 bales of below ¾", sales licensed or registered upto the end of May aggregated 54,929 bales consisting of 39,487 bales of Bengals, 12,008 bales of cotton stapling ¾" and 3,434 bales of below ¾" cotton. Of the quotas reserved for co-operatives only 250 bales of Bengal have so far been utilised.

Considering the progress of shipments so far, it is unlikely that the entire quota of 500,000 bales will be utilised this season. Exports during the entire season are estimated to aggregate no more than 350,000 bales. This compares with 291,800 bales exported during the whole of last season. Higher exports during the season were due to early commencement of quotas, reduction in export duty from Rs. 50 to Rs. 25 per bale and better export demand as compared with last season. Exports would have been better still had it not been for the higher prices of Indian cotton *vis-a-vis* comparable foreign growths and the sluggishness of world trade in cotton piecegoods.

Imports of cotton, in contrast, have been running at a rate slightly lower than in the past season. Thus, actual imports of foreign cotton from 1st September 1958 till end of May 1959 amounted to 306,446 bales, as against 311,869 bales during the same period last season. Total quantity allowed for imports for the entire season, including the quota for 240,000 bales released in May last, aggregate 600,000 bales. Of this, actual arrivals till the end of May were only a little more than 50 per cent. of the quota. Since the announcement of the last quota, there has been a brisk demand from Indian mill buyers for foreign cotton. Nevertheless, it remains to be seen whether the entire quota will be utilised before the season runs out. The following table gives the country-wise break-down:

Imports of Foreign Cotton

(From 1st September 1958 to 30th May 1959)

(In bales of 329 lbs.)

Description	1958-59	1957-58
East African	149,136	82,990
Sudan	58,848	60,952
American	48,830	129,299
Egypt	45,369	38,318
Pakistan	6	..
Other varieties	4,257	10
Total ..	306,446	311,569

It is clear from the above table that East African cotton represents the largest share in our imports, with Sudan and American cotton occupying the second and third places. It is noteworthy that, whereas import of East African cotton is only slightly less than twice the quantity imported during the same period last season, import of U.S. cotton has declined to almost one-third.

COTTON CALIBRATION STANDARDS EXPANDED

A proposed expansion of the cotton calibration standards was approved by the International Cotton Calibration Standards Committee at its meeting in Washington held on 28th and 29th May 1959. The expansion would add two calibration standards of fine cotton and one of very coarse fibres. The present programme includes three American upland cottons for calibrating test instruments—one of which is Micronaire, which tests for fineness, and the other is the Pressley test for fibre strength.

The Committee accepted a bale of Barbadense-type cotton, which has long, fine fibre, and recommended that the Cotton Division of the Agricultural Marketing Service, U.S. Department of Agriculture, U.S.D.A., obtain a bale of immature Barbadense-type cotton and also a bale of very coarse Asiatic type cotton. These finer and coarser cottons added to the calibration standards of upland cottons now used will provide six calibration standards which will cover the full range of the Micronaire scale.

The Committee will also make available, through U.S.D.A., special check test cottons to be used by the American Cotton Shippers and the International Federation of Cotton and Allied Textile Industries for determining accuracy of the testing of laboratories desiring to be designated as arbitration laboratories in international trade.

Since this programme was started in 1956 a total of 1,751 calibration cotton samples have been distributed to 320 laboratories throughout the world. The number of laboratories taking part in the Micronaire Check Test Programme has increased from 110 to 187. Participation in the Pressley Strength Testing Programme has increased similarly.

In the check testing programme samples are sent to participating laboratories twice each year. The laboratories are asked to test the samples and report their results to the U.S. Department of Agriculture which compares their results with those obtained in five laboratories designated by the sponsoring organisations. These organisations are the International Federation of Cotton and Allied Textile Industries, the American Cotton Manufacturers' Institute, the American Cotton Shippers' Association, the National Cotton Council, and the United States Department of Agriculture.

Agreement was also reached by the Committee on a proposal by its Chairman, Dr. Burt Johnson, to adopt the International Standards Organisation's test methods as soon as they are approved. The test methods now used are those recommended by the American Society of Testing Materials.

The International Cotton Calibration Standards Committee was formed in 1956 to furnish standard calibration cotton and to promote uniformity of testing methods for cotton fibre testing instruments used in commercial practice in cotton laboratories throughout the world. The programme is operated by the Cotton Division, Agricultural Marketing Service, U.S. Department of Agriculture, under policies established by the International Cotton Calibration Standards Committee.

ALL-INDIA FOURTH ESTIMATE OF COTTON

The all-India fourth estimate of cotton for the 1958-59 season puts the area under cotton at 19,350,000 acres as against 19,426,000 acres in the corresponding estimate of the previous season and the final estimate of 20,158,000 acres. The area under cotton during the current season thus shows a decline of 76,000 acres or 0.4 per cent. This estimate relates generally to the period upto the end of January 1959. Till then, the condition of the crop was reported to be, on the whole, satisfactory. The following table gives the variety-wise and staplelength-wise distribution of the acreage.

	1958-59	1957-58
Area (in thousand acres)	19,350	19,426
By trade description :		
Bengals	1,153	1,004
Americans	3,325	3,338
Jarilla (including Virnar and 197/3) ..	3,493	3,392
H. 420 (including Verum 91 and others)	701	702
Oomras	1,389	1,597
Hyderabad Gaorani	1,088	1,071
Malvi	1,115	1,085
Broach Vijay	1,461	1,386
Surti-Suyog	774	781
Dholleras	2,184	2,135
Southerns	2,617	2,827
Comillas	62	63
Total ..	19,350	19,426
Staple length-wise :		
Long staple	6,781	6,812
Medium staple	9,392	9,311
Short staple	3,177	3,303
Total ..	19,350	19,426

State-wise break-down of the area under cotton shows that the decrease in cotton acreage in the current season is confined mainly to Andhra Pradesh, Mysore and the Punjab. This is attributed to unfavourable weather conditions at the sowing time. The decrease in area in these States has, however, been considerably offset by the increase recorded in Bombay, Madhya Pradesh and Rajasthan. Variety-wise, the decline in acreage has occurred mainly in respect of Oomras and Southern varieties, whereas increases have occurred in the medium-staple varieties.

This estimate does not cover the entire area under the crop during the 1958-59 season. Past experience has shown that the area at the fourth estimate forms roughly 95 per cent. of the acreage finally reported.

DE LAVAL **OIL SEPARATORS**...Keep oil clean and engines running smoothly

Even the highest grade of fuel oil contains large quantities of fine dirt, a considerable portion of which is of a very abrasive character and naturally causes excessive wear on fuel pumps and injection nozzles. If the oil contains water, this causes incomplete combustion and accumulation of soot on the exhaust valves.

The centrifugal separator is an ideal instrument for purification of oil as by means of centrifugal force, without affecting the composition of the oil it removes all free water and all impurities bigger than 2-3 microns and which are of such size that they can be harmful for the engines.

Centrifugal separation of oil is as a matter of fact so efficient that it is possible to use boiler oil as fuel for diesel engines if the oil is properly purified in the De Laval Separator, giving a high saving of fuel cost.

For steam turbines which for continuous operation and ultimate life, entirely depend upon the efficiency of the lubricating system, De Laval Turbine Oil Purifier Units will maintain lubricating oil in perpetual first-class condition, so that it can be used indefinitely.

Also in diesel engines a continuous separation of the lubricating oil enables the use of the oil for a very long time without affecting the detergents in the oil and the separator installation is paid off in a very short time.

A complete range of spares for all types of De Laval Units are readily available from stocks in India.

U.P. SUGAR TRIPARTITE CONFERENCE

BONUS QUESTION TO BE REFERRED TO A SPECIAL COMMITTEE

AN amicable arrangement has been reached between the Uttar Pradesh sugar millowners, the workers and the State Government representatives in regard to the bonus to be paid to the workers for the 1958-59 season, following discussions at the U.P. Sugar Tripartite Conference held at Ranikhet recently. The Conference covered the various problems of sugar industry and the talks, it is reported, were marked by a spirit of accommodation, the representatives of both the millowners and the workers appreciating each other's points of view. Due credit must be given to Dr. Sampurnanand, Chief Minister of Uttar Pradesh and President of the Conference, who it was that tried his best throughout the deliberations to drive home the fact that the need for maintaining industrial peace in the State's sugar economy was of vital urgency.

One of the important decisions taken at the Conference related to the question of bonus to sugar factory workers for the crushing season 1958-59. It was unanimously agreed to set up, as had been done in previous years, a special committee consisting of the spokesmen of both management and labour to formulate an interim basis for payment till the final decision was taken by the Wage Board for Sugar Industry. A seventeen-man committee with the Labour Commissioner as Chairman, it will be recalled, was set up in August 1958 to find out an agreed basis for fixing the quantum of bonus for the season 1957-58. On the basis of the recommendations put forward by the Committee, the U.P. Government issued an order asking the vacuum-pan sugar mills in the State to pay bonus to all employees who drew their salaries and wages during the season in proportion to their earnings, subject to a maximum of three months' total wages. The order provided for an adjustment of any interim or advance bonus paid to a workman by any amount if that was in excess of the amount payable under the order. It, of course, accorded to factories the right of representation to seek exemption from the payment of their share of bonus on account of loss or meagre profit margin; the representations were required to be made before 15th February 1959 to a sub-committee set up under the chairmanship of the Labour Commissioner.

There are at present 56,000 workers employed in the 68 sugar mills in Uttar Pradesh. Assuming that the special committee to be appointed to go into the question of bonus will adopt the same basis for calculation of bonus as that adopted by the previous committee, the aggregate amount of bonus to be disbursed for the 1958-59 season will be of the order of Rs. 56 lakhs.

Interim Relief

Although the U.P. Government issued the sugar bonus order in February last, some mills have still not paid the bonus, even after their grounds for exemption have been thoroughly examined. A few units have also not yet implemented the recommendation of the Wage Board to give an interim relief to workers. Dr. Sampurnanand did well to urge the factories to pay the bonus and to implement the Wage Board's recommendation of their own accord without waiting for the Government to step into the matter; this, he said, should be done before the start of the next season (1959-60). The Conference agreed to have a necessary directive issued by the State Government under Section 3 of the U.P. Industrial Disputes Act to those mills which had not yet given the interim relief. In his concluding remarks, Dr. Sampurnanand announced that such a directive would be issued.

In the course of his speech, the U.P. Chief Minister called upon the sugar millowners not to go in appeal to higher judicial courts against the decisions of industrial tribunals and labour courts, unless some major principles were involved. He advised them to form a strong committee of their own to select such cases. While this is a sound piece of advice, it must be emphasised that much depends on the attitude of labour. If the workers develop a rational, co-operative outlook instead of allowing themselves to be swayed hither and thither by politicians, harmonious labour-management relations can certainly be ensured in the sugar industry.

The sugar mill workers must realise the aforesaid fact and also recognise that, if their earnings are to improve, it is imperative that their productivity should go up. The average quantity of sugar produced per worker in India is very low, being just 11 tons, as against as much as 144 tons in Australia. The number of persons employed in sugar factories is much larger than in other countries and thus the total labour cost is markedly higher than elsewhere. The cost is especially high in Uttar Pradesh and Bihar. The number of leave days and holidays allowed to sugar factory workers in U.P. is larger than in other parts of the world, as well as in other States of India.

Other Topics Discussed

During the discussions at the Ranikhet Tripartite Conference, the representatives of millowners pleaded for the removal of control on sugar prices and imposition of restrictions on *khandsari* manufacture. The main causes for the soaring prices of sugar, they said, were lower sugar output following diversion of cane supplies to production of *khandsari*, low recovery per cent. of sugar in cane and Central Government's sugar policy. Further, the representatives emphasised the need for taking into consideration the financial position of individual mills for fixing their bonus quantum, welcomed the Chief Minister's suggestion for minimising litigation and promised liberal help towards the construction of a holiday home for sugar mill workers at Ranikhet. The labour spokesmen, on their part, pointed out that, for industrial peace, it was essential for millowners to abide by the decisions of the bonus committee, tribunals and labour courts. They also wanted uniformity of wages for workers employed in sugar distilleries.

In his speech, Dr. Sampurnanand merely stressed the necessity for checking unholy competition between the *khandsari* and sugar industries, especially in the areas reserved for mills. But he did not indicate what concrete measures his Government would take in this direction. Unless such measures are taken, the *khandsari* producers will continue to enjoy undue advantages over the sugar mills for the available supplies of cane. For they enjoy a distinct tax advantage over the sugar mills, the advantage of excise duty alone being to the extent of Rs. 5.67 per cwt. in respect of *khandsari* produced with the aid of sulphitation plant and Rs. 4.41 per cwt. in the case of that produced without such aid.

CO-OPERATIVE SUGAR MILL IN U.P.

The Central Government has granted a licence for the establishment of a co-operative sugar factory at Sarsawa in the Saharanpur District of Uttar Pradesh. The total estimated cost of erecting the factory is put at Rs. 1.20 crore, of which plant and machinery account for Rs. 95 lakhs, the balance being the share of land (Rs. 50,000), building (Rs. 21.50 lakhs) and stores (Rs. 3.00 lakhs). About 25 per cent. of the cost—Rs. 30 lakhs, to be precise—is expected to be raised from cane growers. The State Government and the co-operative institutions will contribute Rs. 15 lakhs each. The remaining amount of Rs. 60 lakhs will be received as loan from the Industrial Finance Corporation of India.

In view of the difficulties of foreign exchange, imports, etc., the sponsors of the factory proposed to purchase a good second-hand plant from a firm in West Bengal, but the deal could not be put through. The Central Government has since intimated that plant for the factory will be supplied by the Sugar Plant Manufacturing Consortium which will fabricate the machinery by importing the minimum essential items of equipment and component parts. Efforts are being made to get the plant as early as possible.

Saharanpur in U.P. occupies an important place in the sugar economy of the State. About 175,000 acres of land are under cane cultivation, with an aggregate annual yield of 55 million maunds. Half of this quantity is supplied to sugar mills and the rest is diverted to production of *gur* and *khandsari*. The factory now being set up is said to cover 400 villages, with a cane area of 15,000 acres.

MORE JUTE LOOMS UNSEALED

MOVE TO MEET PROSPECTIVE EXPANSION IN OVERSEAS DEMAND

FROM Monday this week, that is the 22nd inst., all member-mills of the Indian Jute Mills Association have been working with only 12½ per cent. of their looms sealed, as against 14 per cent. till the end of last week. This follows the latest decision of the I.J.M.A. to unseal 1½ per cent. of the total loomage, apparently because of the improvement in the statistical position of manufactured goods. This is the first change in the proportion of sealed looms since 2nd March, when the I.J.M.A. sealed 1½ per cent. of the looms, raising the idle loomage to 14 per cent. of the total complement. This step was on top of the I.J.M.A.'s action on 14th February, freezing the accumulated loom-hours of the jute mills under the Working Time Agreement. Also, the Association had withdrawn the minimum prices of jute goods fixed by it in February. These steps were intended to restore stability to the gunny market by reducing the excessive stocks of heavy goods. The Association has now restored the cut in the proportion of working looms made in March last.

During the last three months, since the I.J.M.A. sealed 1½ per cent. of the looms, the statistical position of mills has, no doubt, improved, with a sizable reduction in stocks of gunnies. But this improvement does not seem to be the result of the sealing of looms which was intended to reduce production. Instead of declining, the output has been going up, having risen from 83,600 tons in February to 86,800 tons in May. The effect of the increase in the idle looms has been offset by the increase in the number of hours worked. Thus, in February last the working hours were 192 and they rose to 206 in May. At the same time, the stocks with mills have dwindled successively from 113,800 tons at the end of January last to 99,400 tons, despite the increase in output of mills. It will thus be seen that the improvement in the statistical position of mills has been mainly due to larger offtake. If the I.J.M.A. has released more looms, despite the increase in output, it is because the stocks of both hessian and sacking are considered to be too low to meet any sudden increase in foreign demand without upsetting price stability. On the basis of the output of mills last month, the unsealing of 1½ per cent. of the looms will mean an increase in production of 1,500 tons per month.

Prices Steady

Be that as it may, the decision to reduce the number of idle looms, announced on the 10th inst., has not been greeted by the jute goods market bearishly. The firm trend in prices which set in with the announcement of lower stock figures has been maintained, as the consensus of opinion in the market is that the proportion of unsealing is too meagre to make any significant difference. It is even considered likely by some that a further unsealing of looms will be announced next month. This view is based on expectations that the recent trend of orders from overseas, which have been of a substantial nature, would be maintained. The price of B. twills (for the nearest delivery) stands now at Rs. 97.05 per 100 bags, as compared with Rs. 94.80 just before the announcement of the stock figures, and hessian 40" x 10 oz at Rs. 42.75 per 100 yards, having risen from Rs. 41.05 on the 8th inst.

Stocks

The stocks of gunnies with mills have declined during the month of May by 6,000 tons to 99,400 tons, thus maintaining the downward trend for the fourth month in succession. The aggregate decline in the past four months is 14,400 tons. The decline in May has been mainly due to the fall of 6,800 tons in sacking and of 1,000 tons in miscellaneous varieties. Hessian stocks have, in contrast, risen by 1,800 tons, as will be seen from the following table:

(In tons)

	As on 31st May, 1959	As on 30th April, 1959	As on 31st Mar., 1959	As on 31st May, 1958
Hessian	21,400	19,600	17,000	25,000
Sacking	61,400	68,200	72,600	71,800
Others	16,600	17,600	17,200	15,300
Total ..	99,400	105,400	106,800	112,100

With the rise of 1,800 tons in May, hessian stocks have gone up by 5,900 tons in the last three months, that is, from 15,500 tons at the end of February last to 21,400 tons at the close of last month. This is due to the rising trend of production, as a result of the switch-over of some looms from sacking to hessian production. Consequently, the proportion of hessian to total stocks has risen from 14.8 per cent. at the end of January this year to 21.5 per cent. last month, while that of sacking has declined from 72.7 per cent. to 61.8 per cent. in the same period. Notwithstanding the accumulation of 5,900 tons in the past three months, the present hessian stocks represent only a little more than half a month's production and are considered too low to meet the possible expansion in offtake from Argentina, on account of the bigger agricultural crop in that country. Though the stocks of burlap in the U.S. are high at 287 million yards and may adversely affect to some extent the offtake from that country, it is expected to buy regularly from India for the purpose of replenishing its stocks. Over the year, as will be seen from the table above, the hessian stocks are lower by 3,600 tons.

The stocks of sacking have successfully declined from 82,700 tons at the end of January to 61,400 tons. They are now equivalent to over six weeks' output and are considered to be no more a source of concern.

For the first time since August 1958, the stocks of miscellaneous goods have shown a decline.

Production

The production of gunnies during May has gone up by 2,400 tons to 86,800 tons, the highest level since January last. This increase is shared by hessian which has risen by 1,600 tons (to 39,700 tons) and miscellaneous goods which account for 800 tons (at 9,200 tons). The output of sacking is unchanged at 37,900 tons, as the following comparative table shows:

(In tons)

	May, 1959	April, 1959	March, 1959	May, 1958
Hessian	39,700	38,100	38,100	34,200
Sacking	37,900	37,900	37,200	53,700
Others	9,200	8,400	8,000	7,000
Total ..	86,800	84,400	83,300	94,900

For the third month in succession, the production of hessian has exceeded that of sacking and the gap between the two has considerably widened during the month under review. Over the year, the total production of jute goods shows a decline of 8,100 tons.

Despatches of gunnies from mills during the first four months of 1959 make encouraging reading, having gone up to 345,100 tons from 331,200 tons in the corresponding period of 1958. It must, however, be noted that the bulk of this rise is accounted for by internal consumption which has improved from 76,800 tons to 87,000 tons. Despatches for export purpose have risen from 254,400 tons to 258,100 tons only.

STALEMATE IN RAW JUTE T.S.D. CONTRACT

It is now over three weeks since the regulation of trading in transferable specific delivery contracts in raw jute and jute goods under the auspices of the East India Jute and Hessian Exchange Ltd. came into force, but not much business is being done, in view of the dispute over the new contract form introduced for this purpose with effect from 1st June. Though the new form is claimed to be more or less the same as was in use till the end of May under the auspices of the Indian Jute Mills Association, some minor changes are said to have been introduced. One of such changes is in respect of the moisture content of the fibre. Under the old form, the moisture content was limited to 3 per cent. and mills could reject the fibre if the moisture exceeded this limit. The new contract form has, however, raised this limit to 4 per cent. It is stated that the 4 per cent. limit is in accordance with the contract for *pucca* bales in vogue with the London Jute Association. Some of the mills in India are said to have accepted the new contract form, but the member-mills of the I.J.M.A. are opposed to any change in the limit of moisture content. Efforts to bring about a settlement of the dispute have so far (up to the time of writing) proved fruitless.

The grounds on which the I.J.M.A. has based its objection to the increase in moisture allowance are:

(1) "Such an attempt to relax standards of quality is contrary to the best interests of the jute industry and of the whole country. It comes at a time when the Government of India with the full support of the I.J.M.A. is endeavouring to improve the quality of Indian jute and of the manufactured article. These ends will not be served by a measure which allows jute sellers greater latitude in their standards.

(2) "It is a fundamental requirement of the trade in raw jute that the goods shall be in sound, dry, storing condition and the moisture allowance of 3 per cent. which has been in force for very many years is the most that the fibre can bear and still remains storable without losing its spinning properties. This 3 per cent. by long experience has been found to be the limit up to which experts in the trade can judge a parcel of jute to be of acceptable moisture content; at that limit there begins a marginal area of doubt as to the storability of the fibres, and excessive moisture becomes increasingly evident with each addition to the percentage. This aspect of the matter is of particular importance under present-day conditions, as the mills are being compelled to carry large stocks of jute in order to maintain jute prices. The growers' interests are, therefore, affected also."

It is stated that the sellers' associations were prepared to stick to the original moisture allowance of 3 per cent., provided the mills agreed to the introduction of "invoicing back" at the market price. This proposal was made even when the new contract form was being drafted, but was rejected by both the I.J.M.A. and the East India Jute and Hessian Exchange. It was only after this suggestion was rejected that the sellers asked for a higher moisture allowance, as a sort of compensation. Some of the mills are said to be willing to buy raw jute under the old I.J.M.A. contract on C.O.D. terms under non-transferable documents. This arrangement does not infringe the new regulations. Others have accepted the new contract on condition that any changes that are later on made would be deemed to have been incorporated in the contract. While the latter may be acceptable to sellers, very few are prepared to do business under the former terms, as this will involve heavy financial burden when the weight of the new crop comes on in the next few months.

VERSATILITY OF JUTE

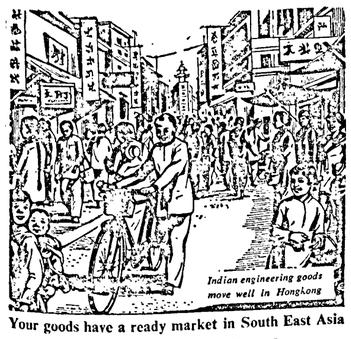
It is over a hundred years since the Scottish jute-makers gave the world a new industry when they pioneered machine-spinning of the Bengal-grown fibre and they are still maintaining their ingenuity and enterprise. In the city of Dundee—site of one of the most close-packed industries in the world—the jute-makers continue to reach new peaks of efficiency and quality production to keep their old-established industry in the forefront of textile progress. This has been possible because of a modernisation plan in which the installation of new machinery and the use of modern management methods and scientific research have all played a part.

The results have been dramatic. The output per worker has soared well above the average rate of increase for manufacturing industry in the United Kingdom during the past 10 years. A new wage structure based on scientific work-measurement has been evolved with the help of the trade unions. Research activities have resulted in new and better ways of processing jute and extending the range of its end-uses. Other novel features include schemes of inter-firm comparisons on productivity and accident-frequency rates. These schemes act as a stimulus to both management and employees.

Something of this progress will be reflected in the exhibit of Jute Industries Ltd. at the Scottish Industries Exhibition to be held at Kelvin Hall, Glasgow, from 3rd to 19th September. This Company is the largest jute concern in Britain, and has made a big contribution to the progress of the industry. Jute Industries Ltd. will take the floor at the exhibition in more senses than one, for more than half the company's output is taken up by floor-covering industries at home and overseas.

Jute serves these industries as the all-purpose base and stabiliser of carpets, linoleum, and underlays. Also on view will be stainless yarns and fabric, so important with the increasing use of man-made fibres for surfacing tufted and woven carpets on a jute base. Another section will show rugs, squares, and stair-carpeting made entirely of jute, in striking designs and styling.

Of particular interest to oversea visitors will be a model of the Company's Douglasfield Mill, claimed to be the most up-to-date jute-spinning plant in the world. From this mill alone, enough jute yarn is spun every year to go round the earth nearly 600 times. It is one of the Company's 12 factories in and around Dundee. Interest in the Jute Industries Ltd. exhibit will be heightened by the versatility of jute, whose other end-uses are legion. As a tough and rugged textile, it is needed by other manufacturers to do many jobs at low cost. Not only is it made into the well-known sack for carrying a wide range of commodities but it is a semi-raw material used by the mining, building, upholstery, cordage, cable, tailoring, chemical, motor car, and agricultural industries. Jute can also be blended with other fibres for use in the furnishing field, and examples of attractive mixed fabrics will be shown. Research and development work on the combining of jute with plastics offers new possibilities for the future.



Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need — jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

UTILISATION OF SOLAR ENERGY

RECENT EXPERIMENTAL RESEARCH SURVEYED

MAN'S search for new sources of energy, almost as old as human civilisation, is a continuing process. Since the last war, however, it has gained considerable momentum. For it is now widely recognised that world resources of petroleum and coal which now provide some of the chief sources of energy, are not inexhaustible. In fact, at the current and prospective rates of their utilisation, they might be either exhausted sooner than feared formerly or become insufficient to meet the growing demand for energy. It is estimated that at present for every calorie obtained from food in the U.S., a little more than a calorie from fossil fuel is put into the production of food. Such is the effect of mechanisation of farms in recent decades. This has led to an intensified search for newer sources of energy, particularly to renewable, as distinguished from exhaustible, sources of energy. Among the attempts made to press into man's service new sources of energy, mention must be made of the utilisation of solar energy and atomic energy. Experimental research in this field has been comprehensively surveyed in the pamphlet, *Solar and Atomic Energy*, published by the Bureau of Business and Economic Research, University of Maryland (U.S.). Of these two new sources of energy, the facts relating to the development and utilisation of atomic energy are sufficiently well known. But what is relatively less well known is that attempts are being made, though at present with less spectacular results, to utilise solar energy for human needs.

Quantity

The basic characteristics of solar energy include its enormous quantity, low concentration at the earth's surface, and variability at a given location. The intensity of solar radiation outside the earth's atmosphere at mean solar distance, it is stated, is 7.15 British thermal units per square foot per minute or seven-tenths of a ton of bituminous coal per acre per hour. The report of the U.S. President's Materials Policy Commission of 1952 estimates that the sun's input to the U.S. energy system in 1947 was the equivalent of 1,300 million tons of bituminous coal and suggests that the supply of solar energy is about 1,500 times the 1950 energy requirements. It may be mentioned here that the earth's atmosphere absorbs about 20 per cent. of the sun's radiation, leaving 80 per cent. of it to reach the earth's surface. The quantum of solar energy also varies with the rotation of the earth (which brings changes of day and night), movement of the earth around the sun (which brings changes in the distance between the earth and the sun) and changes in the weather causing differences in the filtration and absorption of solar radiation.

Surveying the contemporary investigations in the sphere of application of solar radiation, the pamphlet points out that in agriculture, there are frost-prevention and ground-warming activities as well as the employment of solar energy to irrigate fields with demineralised water. Closely related are significant research efforts in photosynthesis covering the biological and chemical aspects of the production of foods, drugs and synthetic materials for human consumption. In housing developments are heating, cooling, natural lighting, heat conductivity, insulation, and control of other effects. Equipment and methods are available for direct cooking. For desaltation of saline water, evaporators and stills are functioning in various parts of the world. Costs of production, as experience is gained, may become competitive with standard water-supply procedures in certain American localities, including the processing of brackish water. Evaporation by the sun's heat for the production of salt is an ancient accomplishment. The reverse process of preventing evaporation, particularly of water from land surfaces and from inland bodies of water, is under study. The whole field of weather control and amelioration is related to meteorology and microclimatology, and the nature of human shelter and activities, including deleterious effects of sunlight. In the field of optics are many problems of light transmission, emission, absorption, and reflection. Engineers and manufacturers are devising evaporators, stills, furnaces, heaters, pumps, storage facilities, batteries, and other devices for using solar energy, and many important inventions are now recorded.

At present, solar hot-water heaters, the heat pump and solar-heating and air-conditioning systems are in production and use. It may be recalled here that India has made some contribution towards the research in this field, in that it has devised a solar cooker of about one square metre which reflects enough heat on a sunny day to cook a meal. But its application on a commercial scale has so far not succeeded. It therefore still remains an invention in the experimental stage. In other countries, a heat pump has been designed to collect heat at a low temperature from the earth, well water or the air, and to deliver at higher temperature. It may be used in winter for heating and in summer for air-conditioning.

A solar heating installation has been found serviceable technically for entire structures. In prospect are economical long-term heat storage facilities which may carry over from summers to winters, if present efforts are productive. Efficiency is measured in the relation of the solar energy units striking the collector and the quantity of energy the collector passes into the house. The efficiency of a solar collector for space heating is high when the collector temperature is low; the efficiency is high also if the solar radiation is high. Experiments continue with new materials and equipment. Two general devices are basic to experiments in heat storage, one relying upon specific heat effects, the other upon a chemical-physical change of state. In the former procedure, water or other substances having thermal capacity absorb energy as the temperature rises and release the energy as the temperature falls. The latter procedure makes use of the heat absorbed and released when solids are melted, and then reversely when this liquid is solidified.

Sun-heated House

Among the practical achievements in the application of solar energy, mention may be made of a sun-heated house which has been completed in Lexington, Massachusetts, by a team of engineers of the Massachusetts Institute of Technology, after 20 years of solar energy research. Solar houses have been the objective of research in several other centres in the U.S. The Edison Institute of New York has developed heat storage elements and containers for storage media. The U.S. Army is operating a large solar furnace capable of producing temperatures up to 5000° F. at Natick, Massachusetts. At Princeton, the Curriss-Wright Corporation and New York University have established a joint research programme as well as separate projects.

The New York University is also building its "Sun Court and Solar Laboratory" which will offer solar research facilities. The Sun Court includes a solar-heated house swimming pool, solar furnaces, batteries, stills, driers, cooking equipment, radios and food processing equipment. Westinghouse engineers, according to the U.S. President's Materials Policy Commission, look to the day when much of our lighting will come from special phosphor powders in paints and wall papers; phosphors are substances that can absorb radiant energy and re-radiate it after a lapse of time. The Commission observes: "If we could develop a phosphor that would radiate at night from 1 to 5 per cent. of the light it received by day, our lighting load, which amounts to about 5 per cent. of the total energy system, could be carried directly by the sun." Other possibilities, which the Commission says are still in the early stages of development, are: (1) solar power from photo-voltaic cells, (2) production of energy in oxidation-reduction systems (3) photo-chemical decomposition of water, (4) storage of heat in crystal lattices, and (5) non-biological photosynthesis.

The chief advantages of solar energy, as compared with atomic energy, are that the former has no critical mass, no health hazards (except sunburn) and no waste products to dispose of. Large areas of solar collectors, involving machinery, glass and concrete, are, of course, required for the utilisation of solar energy. And the costs are high. But experiments with new plastics are stated to be encouraging. As with all new discoveries and their applications, experience in the utilisation of solar energy may well bring with it simplification of equipment and reduction in costs.

WORLD STEEL OUTPUT

SLIGHT DECLINE IN 1958

THE year 1958 proved to be a year of recession for world steel industry. Output fell in many of the steel producing countries of the free world. The net result of the fall in various countries was that world steel production declined from 287 million tons in 1957 to 268 million tons in 1958. The decline in output took place entirely in the free world, where production fell from 216 million tons to 187 million tons. In the Soviet bloc, however, there was a slight improvement from 71 million tons to 81 million tons.

The following table gives the production of steel in the chief producing countries in 1958 and 1957:

	(In million tons) 1958	1957
U.S.	76	101
U.K.	20	22
E.C.S.C.	57	59
Other W. Europe	8	8
Japan	12	12
Commonwealth (excluding U.K.)	10	11
Latin America, etc.	4	3
Free world	187	216
Soviet bloc	81	71
World	268	287

Commenting on the fall in output of steel, the *Steel Review*, published by the British Iron and Steel Federation, points out that the "immediate causes of the fall in output lay in the decline or stagnation of industrial activity in the U.S. and W. Europe, aggravated by the widespread reduction of consumers' stocks of steel." It adds: "In the United States, for example, it is estimated that half the drastic decline in the steel industry's operating rate was attributable to the run-down of the consumers' steel stocks." The continued upward surge of output in 1958 in the Soviet bloc, it is stated, "stands out in contrast to the declines registered elsewhere and this group of countries increased its share of world output from 25 to 30 per cent."

A notable feature of the world steel situation is that the *per capita* steel consumption in the U.S. continues to be very high. In 1957, it was as high as 1,244 lbs., as against 896 lbs. in W. Germany, 828 lbs. in the U.K., 658 lbs. in Belgium-Luxemburg, 507 lbs. in France and the Saar, 307 lbs. in Italy and 317 lbs. in Japan. The *per capita* steel consumption in the U.S.S.R. is, however, only less than 50 per cent. of that in the U.S., it was only 543 lbs. in 1957. Czechoslovakia has a higher level of *per capita* steel consumption than the U.S.S.R.; in 1957, it was no less than 792 lbs.

The U.S.S.R. is determined to overtake the American level of consumption in many fields. In view of the fact that its present level of consumption is only less than one-half of that in the U.S., the achievement of Russia's objective will certainly imply a very rapid improvement in production. But the rate of expansion of steel output in the U.S.S.R., according to the *Steel Review*, is likely to be slower in the next seven years than it has been over the past decade. The Russian target of 86 to 91 million tons of steel by 1965 involves an annual rate of increase of 6½ to 7½ per cent., as compared with 11 per cent. in the period 1948 to 1958. Output in the European satellite countries is similarly likely to increase at a lower rate. China, however, is aiming at a considerable rise in steel output. Summarising the outlook for steel in communist countries, the journal observes that, while the steel output in the Soviet bloc has shown greater rates of increase, it is possible that, like the free world, the Soviet bloc is entering a period of consolidation, with expansion rates below the level of the past decade.

EUROPEAN STEEL PRODUCTION

During the first quarter of 1959, steel production continued at a lower level than a year ago in Western Europe, but there was a spectacular recovery of the U.S., says the latest issue of the *Quarterly Bulletin of Steel Statistics for Europe*, published by the Secretariat of the U.N. Economic Commission for Europe (E.C.E.). In Western Europe, steel output in the first three months of 1959 at 21.2 million tons remained 2 million tons or 8.6 per cent. below the corresponding period in 1958, the report states. Steel output in the E.C.S.C. countries as a whole decreased in the first quarter of 1959 by 1.2 million tons or 8 per cent. as compared with the first quarter of 1958. In the individual community countries the production falls were: Western Germany, 14 per cent., Belgium and Italy 7 per cent., France 5 per cent. and Saar 2 per cent. During the same period steel production continued to increase in the case

NEW PRODUCTS AND PROCESSES

Fire-Resistant Plastic

A WAY to build fire-resistant characteristics into plastics was recently described by Mr. W. A. Skinner, an organic chemist at Stanford Research Institute, California, in a paper delivered before the American Chemical Society. Mr. Skinner's paper reported on the successful synthesis of a highly-chlorinated monomer, which in turn was polymerized into the plastic material, polytrichloropropene—a material that will not burn and that has a high melting point. Perhaps more significant than the development of a new plastic, however, is the fact that the monomer can be structured into common plastics such as polyethylene and polyvinylacetate, adding to these polymers the property of flame-resistance.

Chemists see possible first uses for the monomer in building flame-resistant characteristics into water-based paints. They see other applications for defence purposes, particularly in airframe manufacture. The possibility exists that the monomer may co-polymerise with many other synthetic materials. If it will combine with butadiene, for instance, a flame-resistant rubber could be made for tyres or electric wire coatings. Fabrics, drapery materials, and wrapping materials may also be made flame-resistant.

The combustion resistance of materials containing the chlorinated monomer will be permanent. Other fire-proofing methods often require a coating or some other additive to the object's surface. These can be chipped away, worn away, washed away, or otherwise lost. But the new method of co-polymerising makes the flame-proof molecules an integral part of the polymer chain.

Quick Floor Repairing Compound

Inconvenience arising from closed factory entrances, exits, trucking aisles, loading yards, and banks, while floors are being repaired is a feature of most manufacturing establishments. A compound, called Rockbound Instanto, is claimed by its distributors, J. H. Sankey and Son, of Britain, to reduce the time taken to repair a floor because it can be applied immediately to potholes and ruts in concrete, cobbles, stones, or wood flooring and will effect a permanent repair. Traffic can pass over the damaged spot as soon as the material has been laid. First, loose dirt or concrete is removed from the pothole and any traces of oil or grease are washed away with a cleansing compound. Sides of the hole should then be chipped down by roughly 0.5 in. to provide a firm vertical edge against which the repairing material can lie and the hole is then primed with one coat of Rockbound primer. Allowing a few minutes for the primer coating to become tacky the material is then tipped from the bag into the hole and rammed firmly down until it is compressed to about 50 per cent. of its original volume. The repair is then complete and the patch can be used immediately. For floors that are badly damaged Rockbound can be used as a carpet laid to a minimum thickness of 0.5 in. After initial ramming it is recommended that the floor be consolidated with a heavy roller, which will also remove any ramming marks. The bottom of an extensive pothole may be filled with small pieces of brick or hardcore to within 1.5 in. of the top. Before filling in with Rockbound Instanto all loose pieces of hardcore should be primed with Rockbound primer.

Automatic Desk Calculator

An advanced type of desk calculating machine is shortly to be placed on the market by the firm of Sumlock of the United Kingdom, a subsidiary of Control Systems. It is a development of the key-driven type of machine and is equipped with direct registration, storage registration for addition and subtraction, and a multiplication register. The multiplier unit is said to be the outstanding feature, reducing the number of "digitations" or key depressions which the operator would have to make on a conventional machine. By means of the multiplier control, decimal or sterling multiplication may be made in a remarkably short time by a trained operator. Sumlock has 22 training centres in the British Isles, where clerical staff may receive instruction in the use of Sumlock calculators, including the new model, which is known as the Sumlomatic.

Easy-to-dye Textile Fibre

A modified form of nytril fibre, known as Darvan, which is easier to dye, has been developed, in the U.S. The fibre is being used in deep pile coats, sweaters and men's suits. The modified form is claimed to be a considerable technical improvement and is expected to stimulate use of the fibre by fashion designers to produce luxury fabric creations in deeper, darker hues than previously possible.

A new type of nylon fabric made from textured filament yarns has been developed and is said to provide opacity without weight, improved handling quality and a softness hitherto not attained in tricot fabrics. The fabric also is said to take up body moisture through evaporation, eliminating the clammy feeling often associated with tricot.

Apparatus for Treatment of Heart Diseases

A biostimulator of cardiac activity has been designed at the Moscow Research Institute of Experimental Surgical Apparatuses and Instruments. This apparatus is based on the use of biocurrents of the sound heart for stimulating the lowered activity of the heart of another organism or even for restoring it if it has just stopped beating. Experiments with the first model of the apparatus have established that a dog's heart can be made to beat in the rhythm of the human heart, that is, a set rhythm had been "imposed" upon the heart of the experimental animal. Experiments have also shown that biocurrents amplified by means of special facilities can also be tape-recorded (after amplification) for future use. According to Prof. Mikhail Ananyev, the Institute's Director, biostimulators will be applied together with other means for the treatment of some acute cardiac diseases. Prof. Ananyev expressed confidence that the design of the biostimulator of cardiac activity was only a first step. Since biocurrents could be taken from many internal organs it is quite possible that in the near future biocurrents of the brain, the stomach, the intestine and other organs will be tape-recorded.

Rubber "Sandwiches" to Counter Road Shock

Rubber "sandwiches" between slabs of concrete are to be installed on an experimental stretch of the Baltimore-Harrisburg Expressway now under construction. The installation will mark the first highway use of a new 13-inch-wide rubber expansion joint developed to eliminate the "rhythmic road shock" that motorists encounter on many highways. Its accordion-like structure is designed so that the top of the joint is said to remain level with the road surface regardless of temperature-caused expansion and contraction of the concrete. Five sets of the joints are to be tried. Each set will extend completely across each lane of the dual highway, and will be mechanically anchored in the concrete for a watertight seal. A bridge also will be cushioned at both ends by the joints.

Drilling Equipment for Foundation Work

A British-designed-and-built machine which can burrow 80 ft. into the ground in a few hours to create foundations able to carry loads of up to 2,000 tons was demonstrated at a construction site in central London recently. The equipment utilises a conventional mobile excavator as a "prime mover" or power source. Attached to the excavator is a boom which supports the auger—a cork-screw-like device used to draw earth from the ground as a cork is drawn from a bottle. Speeds of more than 20 ft. per hour can be achieved by the machine when sinking shafts in clay—and no linings are necessary. The new drilling equipment has been built after study in the field of oil-drilling methods and civil-engineering construction throughout the world.

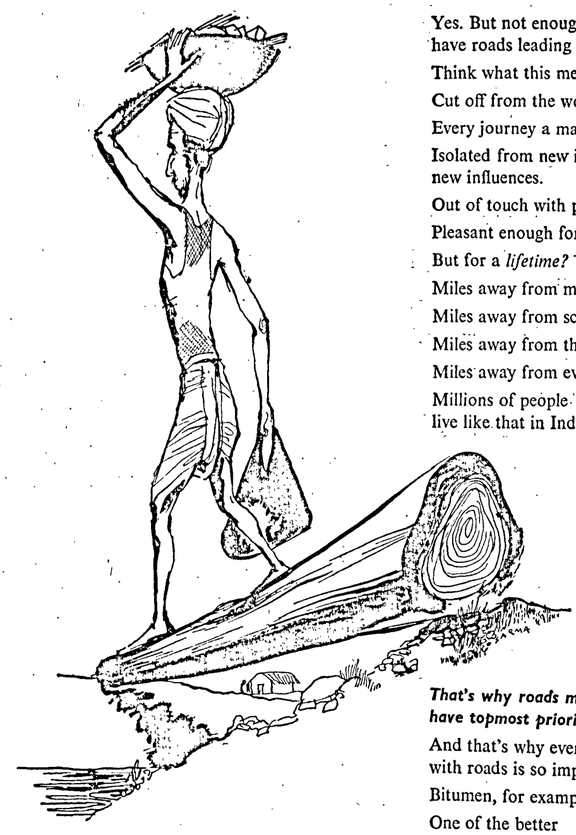
Porous Plastic for Industry and Surgery

A new porous plastic material with many possible uses is being manufactured by a British firm, Pritchett and Gold and E.P.S. Co. Ltd. Produced from high-density polyethylene, the new material, Vyon, has already found applications in air and liquid filtrations and air fluidized powder conveying. As it is naturally water-repellent, it is an excellent material for use as an aeration pad, its non-absorbency making it difficult to clog. The advantages in using Vyon for filtering are that it is light and strong and, therefore, easy to transport and manipulate. The material is easily fabricated, is machineable and can be welded and drilled; it is also easily engineered and fitted into plant and equipment. Important uses have been found for Vyon in surgery—as flail arms for paralysed patients, and as orthopædic splints. While providing a firm yet flexible support for the limb, it allows air to reach the skin. The material is inexpensive and has chemical resistance to a wide range of aqueous solutions. Vyon is being shown at the International Plastics Exhibition in London.

Adhesive for Foam Rubber

A new adhesive for the bonding of natural and synthetic foam, suitable for use in the upholstering of railway carriages, coaches, and aircraft as well as the manufacture of mattresses, cushions, and pillows is now being produced by Dunlop Rubber Company, Chester Road, Birmingham. It is a white adhesive comprising plasticized synthetic rubbers in a blend of non-toxic solvents, and gives a particularly strong and flexible bond.

All roads lead to home



Yes. But not enough homes
have roads leading to *them.*
Think what this means.
Cut off from the world outside.
Every journey a major undertaking.
Isolated from new ideas...
new influences.
Out of touch with progress.
Pleasant enough for a holiday.
But for a *lifetime?*
Miles away from medical aid.
Miles away from school.
Miles away from the nearest market.
Miles away from everywhere.
Millions of people
live like that in India. Today.

That's why roads must have topmost priority

And that's why everything to do
with roads is so important.
Bitumen, for example.
One of the better
road-building materials.
Inexpensive. Easy to handle.
Long-lasting. Hard-wearing.
Supplied by Burmah-Shell.

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads.

BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS IMPORTANT DEVELOPMENT, PIONEERED BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

BURMAH-SHELL
BITUMEN
FOR BETTER ROADS

THE TRAVANCORE RAYONS LIMITED

EXPANSION PROGRAMMES BEING IMPLEMENTED ACCORDING TO SCHEDULE

MR. AR. RAMANATHAN URGES EXPEDITIOUS ISSUE OF LICENCES

A PLEA to the Government to expedite issue of import licences for spare parts and raw materials so as to ensure elimination of idle productive capacity in the rayon industry was put forward by Mr. AR. Ramanathan, Chairman of the Travancore Rayons Ltd., in the course of his speech at the Company's Thirteenth Annual General Meeting held at Rayonpuram, Kerala, on Wednesday, 24th June 1959. Mr. Ramanathan pointed out that the expansion programmes of the Company were being implemented according to schedule. He disclosed that orders for a third cellulose film plant and a second moisture-proofing plant had already been placed on suitable long-term deferred payments credit basis. He also disclosed that the Company was installing a sulphuric acid plant—this has almost been erected—and was planning to raise the installed capacity of the rayon yarn manufacturing plant to 13.6 tons a day.

The following is the full text of Mr. Ramanathan's speech at the Annual Meeting:

"DEAR SHAREHOLDERS,

"I am very happy to extend to you all a cordial welcome at this thirteenth ordinary annual general meeting of your Company. The report and accounts having been circulated to you well in advance, I hope I have your kind permission to take them as read.

"The working for the year 1958 has yielded a gross profit of about rupees one crore. After paying excise duty of Rs. 14,70,358 and providing Rs. 37,39,462 for depreciation, Rs. 5,80,000 for development rebate reserve, Rs. 6,50,000 for bonus for 1958, the net profit has amounted to Rs. 46,19,675. With the sum of Rs. 1,78,215 brought forward from the previous year, the total net profit amounts to Rs. 47,97,891. Your Directors have recommended distribution of this amount as follows:

		Rs.
Transfer to general reserve ...	...	30,00,000
Do. gratuity reserves	...	1,00,000
Dividend on preference shares	...	2,50,000
Do. equity shares ..	...	12,50,000
Total ...	Rs.	46,00,000

"The balance of Rs. 1,97,891 is to be carried forward.

Financial Position

"For the first time since its inception, the Company's profits have become taxable. The various additional and initial depreciation allowances, which your Company was granted in accordance with the provisions of the Income-tax Act, were, all along, absorbing our profits, leaving no taxable profit so far. However, in the year under review, the unabsorbed depreciation allowances have been wiped off completely. It is proposed to meet the taxation under reference from the deferred taxation reserve of Rs. 30,00,000, already provided for. With a view to strengthening the position of the Company further, your Directors have also thought it prudent to transfer from the profits of the year a substantial amount of Rs. 30 lakhs (as against Rs. 10 lakhs last year) to the general reserve, raising the same to Rs. 60,00,000.

"We have received a few representations from the shareholders stating that the increase of dividend to 12½ per cent. is not proportionate to the increase in the profits of the Company and requesting that enhanced dividend should be given. Although your Directors also felt that the dividend should be increased to 15 per cent., which you richly deserve, yet, in view of the fact that heavy taxation liability, which has arisen this year, has to be met from the available funds of the Company, a cautious policy in payment of dividend has been followed. Further, with the expansion schemes we have now on hand in the year 1959, a fairly large portion as cash payment has to be met. However, I hope that, in the coming years, your patience will bear fruit.

"It is a matter for gratification that your Company's production, sales and profit have all gone up sizably, touching new levels. The output of rayon and cellulose film reached a peak of 9.24 million pounds. This has been enabled by continuous and steady production throughout the year and by the fact that the capacity for rayon yarn was stepped up by 1.8 tons a day with the addition of six more spinning machines. The sales of both the articles were also keeping pace with the increased production. The increasing tempo of economic activity all round, the resultant higher standard of living and the restrictions on imports, imposed by the acute shortage of foreign exchange—all these helped the Company with a ready market. The sale proceeds show an increase of Rs. 73 lakhs, equivalent to about 28 per cent. over the previous year. The full effects of the Company's expansion programmes, completed earlier, were reflected only during the year under review.

"As your Directors have stated in their report, your Company endeavoured its utmost to meet the consumer demands in every way, maintaining, at the same time, stable price levels. In order to prevent any possible profiteering by speculators, the ruling prices were publicised off and on, and the consumers were requested to contact the Company direct in case of any difficulty. I am glad that the Government have been watching the situation vigilantly and laying down from time to time procedures for equitable distribution of the products. It is regrettable that, in spite of all these, there are forces at work which indulge in unsocial activities by cornering stocks and extracting exorbitant prices from the consumers. Such appears to be the case in regard to our cellulose film. We have taken care strictly to instruct all our distributors not only to adhere uniformly to the selling rates fixed by the Company but also to do their best to curb effectively profiteering by dealers and others whenever it comes to their notice. I hope that such an unhealthy situation will soon cease.

Expansion Programmes

"The expansion programmes of your Company are going on according to schedule. Permission from the Central Government has been received for setting up a third cellulose film plant, with a capacity of about 2,000 tons per year. Orders for machinery have been placed already. This plant is expected to go into production by the middle of 1960. When this plant goes into production, our output of cellulose film will be doubled and it would not only be possible to meet the increasing internal needs of the country but also cater to the export markets of the East to some extent. We would then be able to serve the country in yet another way, namely, by earning for it some of the much needed foreign exchange through exports. The demand for our moisture-proof cellulose film is quite encouraging and the improvements we have been able to achieve in the quality of this variety of film has increased its popularity. To meet the developing demand, a second moisture-proofing plant has been ordered. This plant is expected to be commissioned by the end of this year. I am glad to tell you that suitable long-term deferred-payments-credit has been obtained in accordance with the policy laid down by the Government.

"With a view to lessening, as far as possible, our dependence on outside sources for our essential raw materials, your Directors have thought it worthwhile to put up our own sulphuric acid plant. This plant, with the minimum economic capacity of 50 tons a day, has already been almost erected and production is likely to start by the end of August. Any surplus after meeting our needs will be available for meeting the needs of other industries who may require it. Regarding rayon yarn also, we are in correspondence regarding suitable financing terms and when these are obtained, orders will be placed for spinning machines of capacity 5 tons a day, increasing the installed capacity for rayon to 13.6 tons a day. We also propose installing a plant for manufacturing rayon grade pulp from cotton linters. Licence is awaited from the Government.

"I am glad to acknowledge that the policy of the State and Central Governments continue to be helpful. As I have already stated, the imports of rayon yarn and cellulose film have perforce been stricty restricted, owing to the acute shortage of foreign exchange. Despite such difficult foreign exchange position, the Government of India have been good enough to grant us the necessary licence for imports of spare parts and raw materials to keep the industry going smoothly. I would only plead for some expedition in the issue of licences to enable elimination of idle capacity and maintenance of maximum production.

Labour

"Now I turn to our relationship with labour. Although the year under review passed off without any undue interruption in production, there has been a number of minor disputes by individual sections in the factory. The original dispute, which was referred to adjudication in 1957, was settled by mutual negotiation, and an agreement was reached covering a period upto the end of 1961. But, in spite of all the generous benefits extended to the employees of the Company and in spite of the Code of Conduct and Discipline agreed upon after a good deal of discussions and deliberations, and in spite of the Central and State Governments' pronounced sympathy for labour, I am sorry to say that, in some instances, the attitude of labour is somewhat irresponsible, with the result that both the quality and the quantity of our production are not up to standards and expectations. For the last two or three months, the attitude of labour has been very distressing. Every difference or dispute is sought to be got settled by forthright stay-in-strikes. These are resorted to with great impunity and utter disregard of all canons of industrial law.

"Unless the Central and State Governments make it clear that no quarter whatever will be given to those indulging in illegal and unfair strikes and intimidation, the consequences are likely to be disastrous. I would commend, once again, for the kind attention of the Central and State Governments, the four points which I indicated in my speech last year, namely, abolition of strikes and favouring only arbitration and adjudication, building up of non-political trade unions from among the industrial workers themselves, recognition of only one union for each industrial unit, and inclusion of continuous-process-industries under 'public utility' concerns under the Industrial Disputes Act. While I will go all out for protecting the legitimate interests of labour and for improving their lot in every way, I would strongly urge that there should be no compromise on the issue of discipline, because indiscipline in industry, as in other walks of life, can only lead to inefficiency and loss of production and, ultimately, to economic and national degradation. I am sorry if I have expressed myself a bit too strongly on this matter, but I would hardly have been true to my feelings had I not done so.

"I now take pleasure in moving that the Directors' report, balance-sheet and profit and loss account for 1958 be approved and adopted."

NOTE: *This does not purport to be a report of the proceedings of the annual general meeting.*

NEW SCHEME FOR ART SILK EXPORT

Addressing the All-India Handloom Board meeting in Bombay on Saturday last, the Union Minister for Commerce and Industry announced that the Government had prepared a revised scheme which was just being introduced. The salient features of the scheme are as follows:

Every consignment of rayon fabrics will be inspected by the Textile Commissioner's organisation at the principal ports, the composition of the consignment will be examined and the value thereof will be assessed by the inspecting agencies, and each variety of fabric shall be subject to a ceiling f.o.b. value. On the value estimated of the total consignment, a licence for the import of rayon yarn will be given at 100 per cent. of such value. The benefits of the scheme will be confined only to the manufacturers of rayon fabrics and neither the licences nor the yarn imported thereon will be transferable. It is intended that the manufacturer should get this benefit only for running additional shifts of his own looms. The idea is that, while encouraging exports, the scheme should work in such a way that it enables the industry to run its normal number of shifts.

The import policy for art silk yarn for the current half year will be the same as that for the last half year.

Notices

THE ALEMBIC CHEMICAL WORKS COMPANY, LIMITED, BARODA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-second Ordinary General Meeting of the shareholders of the Alembic Chemical Works Company Ltd. will be held at the Office of the Company at Baroda (Alembic Road, Industrial Area) on Thursday the 30th July 1959, at 3-30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1958.
2. To declare Dividends.
3. To elect a Director in place of Dr. Indubhai B. Amin who retires by rotation but offers himself for re-election and to consider and, if thought fit to pass the following Special Resolution of which special notice as required by Section 261 of the Companies Act 1956 has been received by the Company:—

   "Resolved that Dr. Indubhai B. Amin, an Associate of the Managing Agents of the Company who retires by rotation, be and is hereby re-elected a Director of the Company."

   Explanatory Note: Dr. Indubhai B. Amin who retires by rotation from Office as a Director of the Company is an associate of Messrs. Bhailal Amin and Sons (Private) Ltd., the Managing Agents of the Company, and accordingly to comply with the requirements of Section 261 of the Companies Act, 1956 it is necessary to have Special Resolution for his re-election.
4. To elect a Director in place of Dr. K. T. Gajjar who has attained the age of 67 years and who retires from Office by rotation but offers himself for re-election. For his re-election passing of the following resolution will be also necessary of which special notice under Section 281 of the Companies Act 1956 has been received by the Company:

   "Resolved that pursuant to the provisions of Section 281 and other relevant provisions, if any, of the Companies Act 1956, Dr. K. T. Gajjar who has attained the age of 67 years and who retires from Office by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit prescribed for Directors under Section 280 of the said Act shall not apply to him."

   Explanatory Note: Dr. K. T. Gajjar, who has attained the age of 67 years, retires by rotation but is eligible for re-appointment and he offers himself for re-election. A special notice under Section 281 of the Companies Act 1956 has been received by the Company from a shareholder of his intention to move the above resolution for his re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

Special Business

6. To pass the following resolution with or without modifications as an Ordinary Resolution:—

   "Resolved that the finished goods, stores, electric power supplied and charges for services rendered by the Company to the Alembic Glass Industries Ltd. and sale of land to the said Company during the year ended 31st December 1958 as detailed below be and are hereby confirmed:—

	Rs.	nP
Stores, etc.	1,06,530	72
Finished goods ...	11,811	21
Services rendered ...	1,08,296	30
Electric power and distribution charges, gas, etc.	6,67,454	56
Work of capital nature and repairs and moulds	33,275	66
Land 7A. 20G. 108 Sq. yds. under S. Nos. 989/1, 989/2 भ, 988, 986/1, 1083, 1081, 1079, 1076/2, 1070/1, 999, 993/1 अ, 993/2 अ and 994/1	38,435	00

   Further resolved that the finished goods and stores supplied to the Company by the Alembic Glass Industries Ltd., and purchase of land from the said Company during the year ended 31st December 1958 as detailed below be and are hereby confirmed:

	Rs.	nP
Finished goods	18,35,106	97
Stores	18,325	56
Land 2A. 17G. 83 Sq. yds. under S. Nos. 1071, 1072 and 989	12,685	00

   Explanatory Note: Mr. R. B. Amin, Dr. I. B. Amin and Dr. M. J. Shah, Directors of this Company, are Directors of the Alembic Glass Industries Ltd., and Dr. K. T. Gajjar, Mr. N. B. Amin and Mr. D. B. Amin, Directors of this Company, are members of the Alembic Glass Industries Ltd., and therefore all the Directors of this Company being interested the above transactions require confirmation of the shareholders at their Ordinary General Meeting.

Note: Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Transfer Books of the Company will remain closed for the purpose of payment of Dividends from Friday the 24th July 1959 to Thursday the 30th July 1959 (both days inclusive).

By Order of the Board,

FOR BHAILAL AMIN & SONS (PRIVATE) LTD.,
Managing Agents,
RAMAN B. AMIN,
Director.

BARODA, *17th June* 1959.

Note: The Dividends when sanctioned will be made payable at the Bank of Baroda Ltd., on or after the 14th August 1959 to those shareholders whose names stand on the Register of the Company on the 30th July 1959 and to whom the Dividend Warrants will be posted.

Shareholders are requested to notify, at once, any change of address.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the Shareholders will be held at 11 a.m., on Monday the 20th July 1959 at the Registered Office of the Company at Fort Cochin to transact the following business.

1. To receive and adopt the audited accounts and Balance Sheet for the year ended 31st March 1959 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

   Note: (a) As Mr. D. A. French is an employee of the Managing Agents, Messrs. Aspinwall & Co. Ltd., a Special Resolution of the Company is necessary for his re-election. Special Notice of the following Special Resolution for his re-election as required by Section 261 is hereby given:

   "Resolved that Mr. D. A. French, an employee of Messrs. Aspinwall & Co. Ltd., Managing Agents of this Company be and is hereby re-elected as a Director of the Company."

   (b) Mr. R. M. Saywell, the other retiring Director, is now 70 years of age. Special Notice has been received and is given of the following resolution proposed to be moved:—

   "Resolved that Mr. R. M. Saywell, who has attained the age of 70 years and who retires by rotation be and is hereby reappointed a Director of this Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."
4. To appoint Auditors.
5. To transact the following Special business, namely:—

   To consider and if thought fit to pass the following Resolution with or without modification:

   "Resolved that subject to the approval of the Central Government, Messrs. Aspinwall & Co. Ltd. be and are hereby re-appointed Managing Agents of the Company for a further period of 10 years as from 1st April 1959, on the following revised remuneration, namely, a commission of 10 (ten) per cent. of the Annual nett profits of the Company with a minimum commission of Rs. 15,000 per annum and upon the terms and conditions mentioned in the draft Managing Agency Agreement produced before this Meeting and signed by the Chairman for identification, which is hereby approved, and that the Directors be and are hereby authorised to execute the agreement on behalf of the Company with the Managing Agents in terms of the said draft agreement, but with such modifications if any as may be suggested by the Central Government."

The relative Explanatory Statements pursuant to Section 173 of the Companies Act 1956, in respect of the Special business under Items 3 and 5 set out above are being posted to all Members.

The Transfer Books and Register of Members of the Company will remain closed from 4th July 1959 to 22nd July 1959 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,

THE PULLANGODE RUBBER & PRODUCE CO., LTD.,
Per Pro. ASPINWALL & CO., LTD.,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, *20th June*, 1959.

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED AN Interim Dividend of 3 per cent. less Income Tax, on the Company's Preference Shares in respect of the year 1959, payable to Members whose names appear in the Preference Share Register on the 15th July 1959. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July 1959, both days inclusive.

By Order of the Board,

SHAW WALLACE & COMPANY LIMITED,
D. A. HOUGHTON,
Calcutta Director & Secretary.

4, BANKSHALL STREET,
CALCUTTA, *16th June*, 1959.

BURN AND COMPANY LIMITED

NOTICE

THE BOARD OF DIRECTORS HAS SANCtioned payment of dividends on the 6 per cent. and 7 per cent. Tax-free Preference Shares in the Company for the half-year from 1st January, 1959 to 30th June, 1959, in accordance with the provisions of Section 9(iv) of the Finance Act 1959. Payment will be made after deduction of tax at the prescribed rates on or after the 10th July 1959, to those Preference Shareholders who are registered as such on the 30th June, 1959, or in accordance with their instructions.

By Order of the Board,

MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, *24th June*, 1959.

NATIONAL RUBBER MANUFACTURERS LIMITED

CHAIRMAN, MR. K. N. MOOKERJEE'S SPEECH

PLEA FOR VIGOROUS EXPORT DRIVE

ADDRESSING the Thirteenth Annual General Meeting of the National Rubber Manufacturers Limited, held in Calcutta on 26th June 1959, Mr. K. N. Mookerjee, Chairman, observed that the Company had already embarked upon a programme of exports. The response received so far appeared to be quite encouraging. The Company also proposed to export substantial quantities of cycle tyres. While pleading for a vigorous export drive by all rubber goods manufacturers. Mr. Mookerjee requested the Government to provide certain facilities, such as drawback of customs duty and rebate of excise duty on raw materials and components used in the manufacture of export commodities.

The following is the full text of Mr. Mookerjee's speech:

"GENTLEMEN,

"I extend to you all a hearty welcome to the thirteenth annual general meeting of your Company. The Directors' report and the audited accounts for the year ended 31st December, 1958 have been in your hands for some time now and, with your permission, I take them as read.

Accounts

"The accounts for 1958 indicate that the steadily rising trend of sales over the past few years has been maintained, reaching the level of Rs. 1,63,45,653 in 1958. The net margin of profit, however, is lower for reasons stated in the Directors' report. For an expanding and developing Company like yours this is not an unusual phenomenon. When the resources of an organisation are fully harnessed and substantially concentrated in executing major expansion of its activities, normal working is to a large extent handicapped, so that the expected results are difficult to be achieved. In this context, the actual results for the year under review must be regarded as quite encouraging. It is anticipated that an appreciable increase in sales and a rise in net profits will be achieved in the coming years.

Progress of Expansion

"Road and rail transport have been expanding considerably in recent years with a consequent rise in the demand for certain products of your Company, like cycle tyres and tubes and rubber fittings for railways and automobiles. Besides, the overall progress of industrialisation, particularly the expansion of major industries like steel, coal, etc., has substantially enlarged the scope for the production of conveyor and transmission belting, V-belts and other mechanical rubber products in which your Company specialises.

"You have noticed from the Directors' report that the Company made satisfactory progress in the matter of implementation of its expansion schemes so planned as to fit in with the general trend of industrialisation indicated above. The latest model automatic cycle tyre making unit installed by the Company will go into production shortly and will turn out cycle tyres of an entirely new design.

"Manufacture of cycle tubes has also commenced and is likely to increase considerably during this year. It gives me great pleasure to inform you that your Company is now the largest single producer of hoses and beltings in India and that further expansion in these lines is contemplated. Another belt press has been ordered to meet the rapidly growing demand for belting, particularly conveyor belting. Production by this unit is likely to commence by the end of 1959.

"Your Company has made outstanding progress over the last ten years, as will be evident from the fact that sales increased by more than 400 per cent. from Rs. 31.75 lakhs in 1948 to Rs. 163.45 lakhs in 1958. Taking raw rubber consumption as an index of progress of the rubber manufacturing industry as a whole in India, the percentage of increase was slightly more than 92 per cent., as raw rubber consumption has risen from 19,719 tons in 1948 to 38,052 tons in 1958. The achievement of your Company is, therefore, specially encouraging against the background of overall progress of the rubber manufacturing industry as a whole.

Loan from I.F.C.

"The Industrial Finance Corporation of India has sanctioned a loan of Rs. 35 lakhs to your Company to finance the capital expenditure envisaged under its expansion programme. Out of this, the earlier loan from the West Bengal Financial Corporation has been repaid. I hope, you will join me in acknowledging our sincere thanks to both the Corporations for the valuable help they have extended to your Company.

Capacity and Demand

"At present, practically all the items made of rubber are produced in this country which is self-sufficient in respect of most of these products. Rather, the manufacturing capacity for certain items is likely to be appreciably higher than the potential demand for many years ahead. To take an instance, while the demand for cycle tyres and tubes in 1960 is estimated at 160 lakhs Nos. each, the total manufacturing capacity already existing and/or licensed at the end of 1958 was 180.60 and 188.50 lakhs Nos., respectively. Evidently, capacity licensed by the Government is such as to enable the manufacturing units to meet the country's full requirement at any stage. Actual production in 1958 was appreciably lower than the installed capacity, and it now appears that the demand will not reach even the estimated figure of 160 lakhs in 1960, so that a substantial portion of manufacturing capacity is likely to remain idle unless a determined export drive is undertaken by the manufacturers with all possible help from the Government. This is also true of many other items.

"In view of the large expansion in the production capacity for cycle tyres as already implemented by your Company and other manufacturing units in this country, the attention of the Government has been drawn to the necessity of enforcing rigid control on the import of cycle tyres. At this stage, when the manufacturing units have already set a production programme commensurate with rising internal demand, import of cycle tyres cannot but seriously affect the indigenous industry with resultant adverse effects on economy of the country, in general, and employment potential, in particular. Besides, such imports would be inconsistent with the present policy of maximum conservation and earning of foreign exchange resources.

Export Promotion

"Every expanding industry in India, like the one represented by your Company, should seriously think of export of its products, after meeting internal demand with the object of making full use of its installed capacity as well as earning valuable foreign exchange. It is, however, unfortunate that the value of export of Indian rubber products which reached the level of Rs. 176.20 lakhs in 1953-54 steadily declined thereafter and was worth only about Rs. 14.55 lakhs in 1957 and Rs. 15.71 lakhs in 1958. Evidently, the rubber industry has the potential to enhance its exports and to become a large foreign exchange earner. The Rubber Panel of the Chemicals and Allied Products Export Promotion Council has tentatively suggested a target of Rs. 156.59 lakhs for export of Indian rubber products in 1959-60 including, *inter alia*, some important items manufactured by your Company, which has already embarked upon a programme of exports. The response received so far appears to be quite encouraging, as your Company has been able to export some new items to neighbouring countries for the first time. In particular, your Company has already indicated to the Government, through the Chemicals and Allied Products Export Promotion Council, its intention to export substantial, quantities of cycle tyres. It is expected that an all-out effort will be made in developing the export market in the coming years.

"The main difficulties standing in the way of export of Indian rubber products, as analysed by the aforesaid Rubber Panel, are irregular supply of some raw materials and inadequate import licences for others, uneconomic shipping freight, higher cost of indigenous rubber and unfavourable competition in export markets. It is high time that all rubber manufacturers launched a vigorous export drive in collaboration with the Export Promotion Council and the Government. It is also necessary to extend to rubber products the facilities of drawback of custom duty and rebate of excise duty on raw materials/components used in the manufacture of export commodities.

Raw Materials

"Although the supply position with regard to raw materials was generally satisfactory during 1958, there was an increase in the cost of materials and stores. Besides, the position of raw rubber has been steadily deteriorating. While consumption by the manufacturing industry increased, indigenous production of rubber lagged behind with the result that the gap between offtake by the industry and output of the plantations has been widening. The actual deficit in 1958 was of the order of 13,722 tons, representing about 37 per cent. of the total rubber consumption of that year, while the gap is reported to have been more than 50 per cent. of consumption during the first quarter of 1959. Selling prices for Indian rubber are controlled by the Government of India, the statutory prices were enhanced five times between March 1951 and August 1955, the net increase in price since 1950 being about 72 per cent. These prices include a cess for raising funds for rehabilitation, replanting and development of rubber plantations and also for securing higher yield per acre, with a view to raising production in order to meet the ever-growing demand for rubber. Besides, consumers of rubber are obliged to pay to the Rubber Board large sums of money, covering the difference between the high Indian controlled rates and lower prices of imported rubber. It is indeed regrettable that the substantial amounts collected from rubber manufacturers every year have not yet been utilised for the purpose intended, to any great extent. During the first two years of the adoption of a replanting scheme, that is, 1957 and 1958, only 6,520 acres were replanted against the target of 14,000 acres; the yield per acre is also very poor, being only 270 lbs. In this context, it is rather deplorable that there is a fresh move by planters for a further increase in the controlled prices of rubber; this question has already been referred to the Tariff Commission, although the Government have admitted that 'the rehabilitation element which was included in the prices fixed for raw rubber has not been utilised adequately by the producers.' There seems to be no limit to the tendency of increasing raw rubber prices, although the plantation industry failed to expand rubber production sufficiently, in spite of Government protection enjoyed since 1947, at the cost of the manufacturing industry. It is interesting to note that possibilities of extension of rubber cultivation in the Andaman and Nicobar Islands are being examined by the Government. In my opinion, every effort should be made to encourage rubber cultivation in these islands in order to meet the acute shortage of the commodity in the country and to help the speedy rehabilitation and economy of the islands.

Synthetic Rubber Plant

"The proposed scheme for the manufacture of synthetic rubber in India to meet the deficit of indigenous rubber production, though planned some years ago, has so far made little progress due, *inter alia*, to paucity of foreign exchange. Meanwhile, the country has been incurring heavy foreign exchange commitments on account of imports of natural and synthetic rubber which amounted to 11,878 tons and 3,523 tons, respectively, in 1958, valued at more than Rs. 4 crores. The situation is thus paradoxical. It is, however, gratifying to learn that the Government of India have approved the scheme for setting up in the public sector the proposed synthetic rubber plant at Bareilly, in Uttar Pradesh, with a very large capacity at an estimated cost of Rs. 30 crores and that its construction is likely to commence during the remaining period of the second Five-year Plan. This project should be given topmost priority.

"Equally vital is the question of manufacture in India of certain important compounding ingredients for rubber thereby effecting substantial saving of foreign exchange on account

THE WEST COAST PAPER MILLS LTD. | **A SUPPLEMENT TO COMMERCE**

THE INAUGURATION

MAY 16, 1959, was a red-letter day in the history of the Paper Mills. The Union Finance Minister, Hon'ble Shri Morarji Desai, took a special plane from Bombay *en route* to Dandeli. Accompanying him were Shri G. D. Somani, M.P., a Director of the Company, prominent members of the Indian Parliament and leading industrialists from Bombay. Shri Desai and the party were met at Belgaum airport amongst others by Shri N. D. Bangur and Shri B. D. Somani.

The auspicious ceremony was held in a specially erected *shamiana*. Speaking on the occasion, Shri Desai exhorted Indian industrialists to manufacture machinery and spare parts of the industries within the country itself. India could never find a place amongst the foremost nations unless she was self-sufficient in the manufacture of heavy machineries. He was happy that the establishment of this project would bring prosperity to the people of the area. He hoped that the Mills would enlarge itself and help to curtail the imports of paper in India. He briefly narrated the inception of the Company and hoped that many more such units will be established in the country.

Earlier, welcoming the chief guest and other distinguished invitees, Shri N. D. Bangur traced the history of the Company, which incidentally was the only completely new project during the Second Five-year Plan of the country. Shri Bangur drew the attention of the authorities to the question of improvement of roads commensurate with the growing needs of the area, provision for adequate housing facilities for the workers and implementation of the township scheme. He hoped that the progressive State of Mysore would continue to assist and bless the Company.

Hon'ble Shri K. F. Patil, Mysore's Minister for Forests and Agriculture, said that Dandeli had become an important industrial centre of the State. He was happy that the bamboo of the area, considered hithertofore a "nuisance," has now been utilised to give the much needed commodity—Paper. Shri Patil dwelt at length upon the various advantages of Dandeli as a site and described the measures undertaken to develop the area including the Government housing scheme for industrial labour. He wished the Paper Factory and the region all prosperity and good luck.

Shri G. D. Somani, M.P., who has been associated with the venture since the inception, delivered the thanksgiving speech. He was grateful that such prominent people, apart from Hon'ble Shri Desai, had made it possible to attend the function in so remote a place. Shri Somani was confident that the new industry would bring about progress and prosperity in the area.

Shri Joachim Alva, Member of Parliament, said it was the most up-to-date and modern Paper Factory in the East and compares very favourably with such units in Europe.

The invitees which included Shri R. R. Diwakar; Mysore's Deputy Finance Minister, Shri Shamsuddin; Secretary, Agriculture and Forest Department, Shri Beerappa; the Conservator of Forests and the D.F.O.; Shri H. C. Dasappa, M.P., Chairman, Estimates Committee of Parliament; Dr. A. Krishnaswamy, M.P.; Shri S. R. Damani, M.P.; Shri C. R. Basappa, M.P.; Swami Sambudhanand, Chairman, Ramkrishna Mission, Bombay; Shri N. D. Sahukar, Chairman of the All-India Manufacturers' Organisation; members of contemporary Dandeli industries and other important personalities of the area, were later conducted round the factory. They were very much impressed by the latest design of the plant and the modern layout of the factory.

The messages from various people were read out by Shri B. D. Somani earlier. They included a special message from Shri Lal Bahadur Shastri, Union Minister for Commerce and Industry.

WEST COAST PAPER MILLS GOES INTO PRODUCTION

Mr. N. D. Bangur's Welcome Speech at Inaugural Function

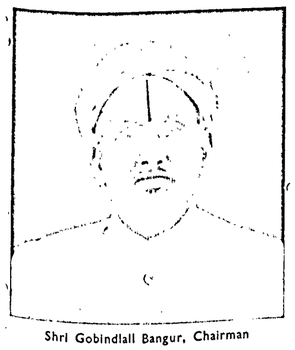
Inadequate Railway Facilities Still a Handicap

THE West Coast Paper Mills Limited at Dandeli was formally inaugurated by Mr. Morarji Desai, Union Finance Minister. Welcoming the Minister and other guests on the occasion, Mr. N. D. Bangur, Director of the Company, observed as follows:

"HON'BLE SHRI MORARJIBHAI AND FRIENDS,

"I have great pleasure in offering, on behalf of our Chairman, Shri G. L. Bangur, and other Directors of the Company and also on my own behalf, a very hearty and cordial welcome to the chief guest, Shri Morarji Desai, Finance Minister, Government of India, who has been kind enough to accept our invitation to perform the opening ceremony of this new paper project established by the West Coast Paper Mills, Limited. It is, indeed, a matter of great privilege to us that you, sir, should have agreed to come to such an out-of-the-way place, in spite of the heavy pressure of your multifarious engagements, and I cannot express in words our feelings of joy and encouragement on this happy occasion. I have no doubt that your visit for this function has been and will always remain a source of great inspiration to us all.

"I take this opportunity of also welcoming in our midst Shri K. F. Patil, Minister for Food



Shri Gobindlall Bangur, Chairman

and Agriculture, and Shri Shamsuddin, Deputy Minister for Finance, Government of Mysore, Shri R. R. Diwakar, Chairman, Gandhi Smarak Nidhi, Hon'ble Members of Parliament and all other guests who have been kind enough to respond to our invitation and have graced the occasion by their presence.

"Although certain sections of this giant project had begun trial operations by the end of last year, all the sections of the unit have been completed only recently and, indeed, the trials on the two important sections, viz., bleached pulp and soda recovery sections, have been made just a week ago and hence all the departments of the factory will be in commission and regular production only today after the formal inauguration.

First Conceived in 1950

"This paper mill, as a matter of fact, was first conceived by the Government of Bombay inviting *entrepreneurs* in 1950 to exploit the rich treasure house of bamboo and timber at Dandeli. The proximity of Kali-Nadi and power from Jog Karnatak Grid and some other favourable features and potentialities of this area decided the issue of the mills being located here, in spite of several other difficulties. When the agreement was sent to the Bombay Government for ratification, there was some unexpected difficulty, and but for the prompt and favourable decision given by the Government of Bombay, of which you, sir, at that time, were the Chief Minister, the scheme could not have materialised. We have, therefore, all the more reason to be gratified that the project which took shape directly as a result of your kind support and patronage, should now be formally inaugurated by your goodself.

"Dandeli, which used to be just a dot on the industrial map of India till recently, has now, with this new paper mill and the factories for ferro-manganese and plywood manufacture, secured the pride of third largest industrial town in the State of Mysore.

"At the very outset, I should like to emphasise that the establishment of this paper mill is the result of hard and sincere work of thousands of persons working ceaselessly under trying conditions of health and habitation. The question of adequate housing for a large number of officers, technicians and workers engaged in the task of constructing this project was the first serious handicap under which the management had to start the construction work of the factory and then to increase the tempo of the work progressively. As a matter of fact, the actual work of construction began only about the end of 1956, but priority had to be given to providing at least the minimum accommodation to our staff and workers.

Railway Facilities

"The lack of adequate railway facilities has continued to cause us great hardship. This small strip of Alnaver-Dandeli section still belongs to the Forest Department of the Government of Mysore and, although representations have been made from time to time, the Railway Board have still not seen their way to take up this line, which alone can ensure proper transport facilities. While the Railway Board, as I have said earlier, have yet to take over the Alnaver-Dandeli line, I must acknowledge the full co-operation and the valuable assistance that they have given in meeting the special transport requirements of numerous packages of plant and machinery from the ports of Bombay and Madras.

"Another difficulty that I would like to mention is the poor condition of roads and, in view of the very heavy monsoon which continues, generally, for four to five months in the year, it has really been an uphill task for the

Shri G. D. Somani, M.P., Director

management to keep the tempo of work going under the trying conditions with continuous downpour of rain throughout the day and night, making the surrounding roads completely impassable.

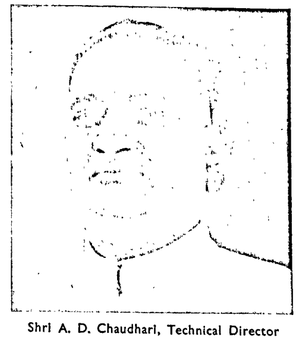
Rising Cost of Project

"The estimated cost of the mill is as high as Rs. 5 crores as a result of spiralling expenses due to the rise in the cost of man and material and increase in respect of duties and in the price of imported machineries which were beyond the control of the management.

"We are very much thankful to the two credit institutions, that is, the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation, for the very valuable assistance that they have given to this Company.

Task Ahead

"We are very much obliged to the Government of Bombay who gave us this opportunity to implement this project and since the reorganisation of States, for the very valuable assistance and support which the Government of Mysore have given us from time to time. There are, of course, a number of problems still to be solved, if the full potentialities of this developing area are to be exploited to increase the wealth of the country, and I have full confidence that the progressive State of Mysore will continue to give such assistance and facilities in various directions which will lead to a rapid development of the resources of this area. I may draw attention, particularly,



Shri A. D. Chaudhari, Technical Director

to the question of improvement of roads commensurate with the growing needs, implementation of the township scheme as recommended by the Dandeli Township Committee and the

ADDITIONAL CAPITAL BEING OFFERED

The present capital structure of the Company is 1,00,000 *Ordinary Shares of Rs.* 100 *each and* 60,000 6 *per cent. (free-of-tax) Cumulative Preference Shares of Rs.* 100 *each. The Company has decided to raise fresh capital to the tune of Rs.* 80,00,000 *divided into* 50,000 *Ordinary Shares of Rs.* 100 *each and* 30,000 6 *per cent. (free-of-tax) Cumulative Preference Shares of Rs.* 100 *each. The new issue has been offered at par to the existing shareholders of each category in the proportion of one new share for every two existing shares of each category.*

The new capital is being raised meet with the commitments of def payment liability in 1959 *and ter bank borrowings which were ar meet the increased capital c Project.*

adequate supply of power for the growing industrial units.

Fruitful Role of Mysore Government

"The progressive Government of Mysore has played no mean a role in bringing up the new project at Dandeli. The Company acknowledges the goodwill and co-operation of the Government from time to time in dealing with the multifarious problems attendant upon a rapidly increasing industrial activity.

"Dandeli has been fortunate to find a place in the itinerary of the Mysore Governor, past Chief Ministers, Forest and Agriculture Minister, Shri K. F. Patil; Minister for Law, Labour and Local Self-Government, Shri T. Subramanya; Chairman, Housing Board, and Secretaries, beside other prominent personalities of the area.

"The Government's scheme for Industrial Housing Colony is well in hand. Work is proceeding to build about 400 quarters for the labour which will obviate the accommodation difficulties to a considerable extent.

"Dandeli has the pride of becoming the third largest industrial centre in the whole State and hopes to receive the continued support of the Mysore Government. The Hon'ble Shri B. D. Jatti is himself keenly seized of the various problems facing the industries and the area is thus assured of progress and prosperity.

"No epitome of the affairs would be complete without recording the valuable assistance rendered by the Forest and Agriculture Departments, the Chief Conservator of Forest's Office at Bangalore, the Conservator's Office at Belgaum, District Forest Officer's Office at Dharwar and the Forest Department at Dandeli.

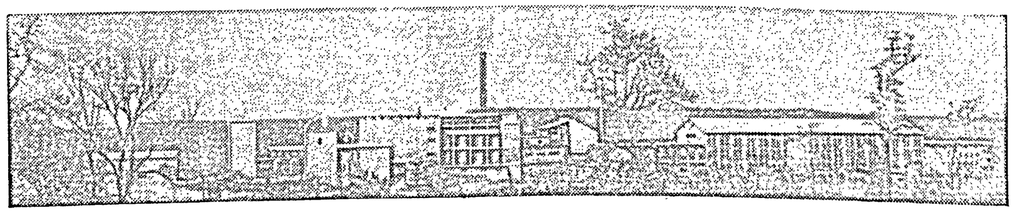
"Now, as I close, sir, I thank you again for your kind visit to the mill and request you to declare it open."

A WELL-PLANNED PLANT IN IDEAL SURROUNDINGS . . .

"I am very glad to mention here that this a beautiful well-planned factory in ideal surroundings with raw materials, water, power and all other facilities on the site. I hope the factory quadruples itself soon, adds pulp plant and also manufactures rayon grade pulp so much needed for our country. I am sure, with the vigour and drive of Messrs. Bangurs and Somanis for establishing such a huge project in this remote forest, the North Kanara District as a whole will greatly benefit by easing the acute unemployment position and will also assist our country to a very great extent by earning foreign exchange."

(Extract from remarks of Shri Manubhai Shah during his visit to the factory on 30-31st December 1958.)

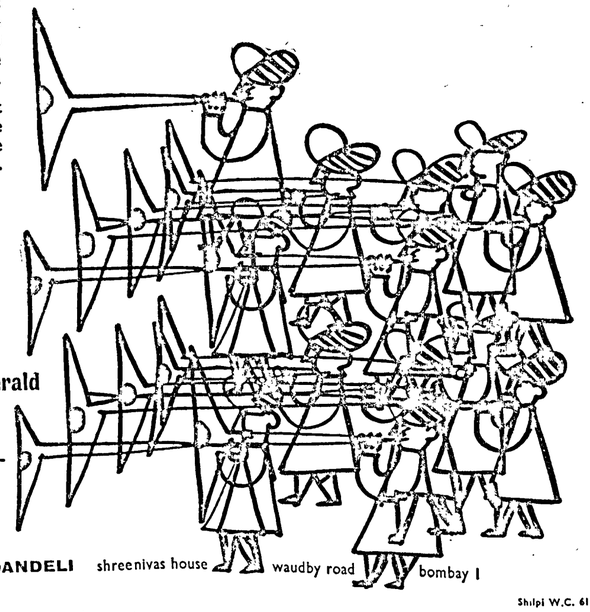
Shri Morarji Desai opening the main gate of the factory during the inaugural ceremony.



The West Coast Paper Mills are pleased to announce the inauguration of their up-to-date factory at Dandeli by Shri Morarji Desai, the Hon'ble Finance Minister of India.

The factory with its modern plant and many automatic devices marks the beginning of another chapter in the industrial development of Mysore State.

this clarion call comes to herald good news for you—



is the keynote of

'EST COAST PAPER MILLS LTD., DANDELI shreenivas house waudby road bombay 1

Shilpi W.C. 613

The West Coast Paper Mills

Despite Heavy Odds, Start Is Made In Record Time

THE West Coast Paper Mills Ltd., situated at Dandeli, is the only completely new integrated unit for the manufacture of pulp and paper that has come up in the Second Five-year Plan period. Since his return from West Germany where he studied Paper Technology, it was Shri Achyut Choudhari's dream to start a paper mill at Dandeli. Almost 30 years later, this dream became a reality. The project was conceived in 1955, orders were placed in 1956. Construction work was started towards the end of November 1957, and the erection work taken on hand in January 1958.

Dandeli was chosen as a mill site for several important reasons. The most important of these, of course, is the availability of raw material. The North Kanara districts abound in a most luxuriant growth of bamboo, which is used in the manufacture of pulp.

Experts agree that bamboo equivalent to 60,000 tons of finished paper per annum can be drawn from these forests.

Apart from this fact, Dandeli has a good water supply from the Kali River, and motive power-supply from the Jog Karnatak Electric Grid Supply. Situated on the boundary of two of the most industrialised States of India—Bombay and Mysore—Dandeli is fortunately placed and this is expected to facilitate a comprehensive marketing system.

The policy of the West Coast Paper Mills Ltd. was to install the most modern machinery available and to import only such machinery as was not available or could not be indigenously manufactured in India.

In simple words, this is how the mill operates: bamboo, stacked in a 70-acre yard, is brought to the mill, where it is first washed in water tanks. The washed bamboo is then crushed or chipped in multi-knife chippers and sieved to separate the oversize chips and dust. Oversize chips are then reduced to smaller size. The sieved chips are taken to the digester, where they are "cooked" with a solution containing caustic soda and sodium sulphide. The resultant pulp is then taken out of the digester. After washing and further screening, the unbleached pulp is ready for use.

The cooking of the chips is done in four 80 cu.m. capacity digesters by the well-known sulphate process. Instrumentation in this section permits of ease of operation and maintenance of the efficiency and uniform quality of the pulp. In addition, the cooking section is supplemented with the latest heat recovery system to enable the recovery of heat escaping in the form of steam and to produce hot water to be used in the pulp mill itself.

The unbleached pulp is not white—it is used for the manufacture of kraft paper and wrapping paper. The unbleached pulp is bleached when writing and printing papers are to be manufactured.

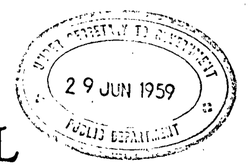
The bleached pulp is beaten on a Hollander beater to make the fibres suitable for bonding on the paper machine. The modern trend is to use some type of refiners where this becomes a continuous process. When the pulp is beaten to the desired degree, addition of the required chemicals is made.

The mill has installed two high-speed paper machines of the latest design for a production of 60/65 tons per 24 hours. The paper which comes out from these, is slit in width on two reeling and slitting machines which are operated by electrical and pneumatic controls. It is finished by hand by skilled finishers and then reamed and packed for despatch.

There are several varieties of paper, like rag paper, drawing paper, ledger paper, bank-note paper, filter paper, tissue-paper, wrapping-paper, blotting-paper, writing and printing paper, cheque paper, kraft-paper, art-paper and newsprint. But these can be grouped under four heads:

1. Writing and printing paper.
2. Newsprint.
3. Kraft and wrapping papers.
4. Speciality papers.

At the West Coast Paper Mills Ltd.



the PULP MILL designed, built and erected by

Messrs. J. M. VOITH G.m.b.H.

produces 60 tons of bleached bamboo pulp every day

The Pulp Mill of the West Coast Paper Mills, designed, built and erected by VOITH, has been supplied through Larsen & Toubro Limited. This modern pulp mill will produce 60 tons of bleached bamboo pulp every day.

VOITH plants for the pulp and paper making industry, famous the world over, range from machines for the treatment or processing of raw materials to the making of the finished product.

IN SERVICE LIES SUCCESS

For full particulars, contact:

LARSEN & TOUBRO LIMITED

Bombay P.O. Box 278 • Calcutta P.O. Box 619 • Madras P.O. Box 5247
Delhi P.O. Box 323 • Bangalore P.O. Box 98 • Cochin P.O. Box 53

LT. 9169

The West Coast Paper Mills Ltd. will mainly manufacture writing and printing papers and kraft paper, including Manila. It is expected that speciality paper such as parchment will be manufactured later.

Dandeli today presents a varied picture. Its population is as mixed as in any industrial city in India—Punjabis, Rajasthanis, Mahrattas, Kannadigas, Malayalis and Andhras work happily together at the mill site.

On the Company's fleet, directly or indirectly there are nearly 6,000 officers and men, of whom, 4,500 are employed in felling the bamboo and transplanting it.

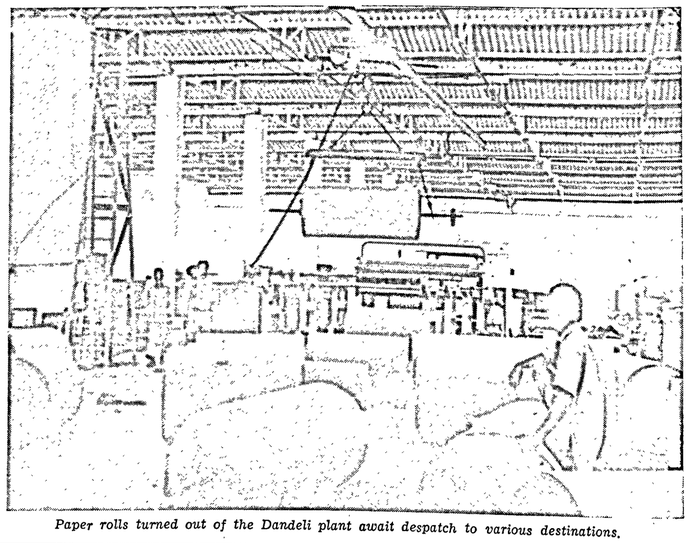
Into the construction work itself, has gone 15,000 tons of cement, 3,500 tons of steel and an as yet uncomputed amount of timber. Today, 150 cartmen can be seen driving their bullock carts along the ankle deep dusty roads with their loads of cut bamboo every day. Factory hands are awakened by the factory whistle which blows several times during the day and night, as men change shifts. And as the sun sets on a Kanara horizon, myriads of lights dazzle the darkening night, as the yelling of the wild jackal comes to be heard from far away.

No account of the West Coast Paper Mills would be complete without an expression of thanks and appreciation to Mr. H. K. Collinge without whose valuable assistance the specification of the plant and the modern layout of the factory would have been impossible.

Again, the valuable contribution of the Government of Bombay, especially that of Shri Morarji Desai, Shri Jivraj Mehta, Shri Y. B. Chavan and the contribution of the Government of Mysore are gratefully appreciated.

Finally, a word in explanation of the increase in capital outlay. There are several reasons for this huge increase. First, the layout was changed so as to have easy expansion from 60 to 90 tons per day. The quotations were submitted in 1955 and the orders were finalised in 1956. By this time the prices had already risen because of increase in cost of labour and material. Again, there was an increase in import duties and the excise duties of cement and steel in the 1957 budget, the machinery suppliers had also increased their prices according to the escalator clause. Above all, the delay of about six months in the completion of the project resulted in an enormous addition to the capital outlay.

The West Coast Paper Mills, Dandeli, should help not only in the production of paper, but also in providing employment and raising the standards of living in this district apart from saving valuable foreign exchange.



Paper rolls turned out of the Dandeli plant await despatch to various destinations.

"Evidence of Enterprise and Initiative"

"I am glad to visit this Factory, whose conception and construction are evidence of the enterprise and initiative of Shri G. D. Somani and his colleagues. The industry seems to be eminently suitable for this area; it will utilize the raw materials available, create new avenues of employment, help the development of several trades and small industries and open up the country. I desire to convey my best wishes for the efficient and progressive working of this Factory."

(Extract from remarks of Shri G. L. Mehta, Chairman, the Industrial Credit and Investment Corporation of India, Ltd., made during his visit to Dandeli on 30/31st December, 1958.)

M/S. LANGLEY, LONDON, LIMITED

Suppliers of Acid and Alkali Resistant Hoganas Tiles which have been used throughout the Towers and Chests at the West Coast Paper Mills Ltd. at Dandeli.

COMPANY LAW AMENDMENT BILL, 1959

DRAFTING IMPERFECT—SASTRI COMMITTEE NOT FOLLOWED IN FULL

By F. R. Ginwalla, B.A., LL.B.

THE world cannot exist peaceably with great wealth and great poverty side by side. Social control and regulation of human conduct and behaviour are as much an essential precondition of stable and progressive growth and development in the corporate sector as any other sphere of social life. The Companies Act 1956 is a landmark in the history of company legislation in our country, inasmuch as it was enacted keeping in view the social and economic needs of the country. Soon after, as a result of the experience of the working of the companies in accordance with the present legislation, many of its shortcomings were brought to light and with a view to remedying them, the Government of India constituted on 15th May 1957, the Companies Act Amendment Committee, under the chairmanship of a former judge of the Madras High Court. The report of this Committee, popularly known as the Sastri Committee, was placed before both Houses of Parliament in December 1957. The Bill for amending the Act was introduced in the Lok Sabha on 1st May 1959, and is now before the Joint Select Committee of both the Houses of Parliament. The Joint Select Committee consists of 45 members, thirty from the Lower House, the Lok Sabha and fifteen from the Upper House, the Rajya Sabha.

The Bill, as it stands, has created a feeling that many of its provisions are in such abstract and emotional language that they become operationally meaningless, if they could at all be put to practice. Its obscurities and ambiguous draftsmanship have attracted wide notice, because the hasty nature of some of our legislative output in the post-independence era has not taken long to become known. The first touch of practical application was sufficient to expose the defects. It is a tragic fact that the existing Act, which is the outcome of a prolonged and detailed consideration both inside and outside Parliament, has been proposed to be amended after it has been in force only for about a year. Company Law in India has come to a stage where every thinking man is bound to feel that it would be disastrous for the nation, if the Act, which is an instrument of the economic policy, failed to achieve its objectives.

Basic Confusion

I think it is necessary to warn the reader at the outset about certain basic confusion that appears to prevail in the proposed legislation. To start with, there are numerous inconsistencies between the proposed amendments as included in the Bill and the notes on clauses of the Bill purporting to explain briefly the reasons for the proposed amendments. The plain reading of the Bill, in the context of the notes on its clauses, indicates that the notes on the clauses do not give the true and fair picture of the proposed amendments. My own view is that the notes on clauses are likely to cause confusion in the minds of the legislators rather than assist them in having a clear understanding of the social and economic forces the Bill seeks to regulate. It will be relevant to mention that notes on clauses give reference to various paragraphs of the Sastri Committee's Report, but do not tell the reader which particular clause in the Bill is wholly or partially based on the recommendation of the Sastri Committee or which particular recommendation of the Sastri Committee has been entirely dropped or modified partly in the light of the experience of the working of the Act gained since the submission of the Committee's Report and partly by the views expressed on the Committee's Report by chambers of commerce, other bodies and individuals. It may be argued that notes on clauses are intended to explain briefly the reasons for the proposed amendments and therefore they need not be worded in a language which is too technical or too detailed. Since it is the province of the politicians to discuss and determine what is best for the public good, and of the legislature to provide for it by proper enactments, it is the duty of the draftsman to see that the notes on clauses of the Bill are prepared in a manner which give a true and fair picture of the proposed amendments.

But the deficiencies of human language are such that, even if all written instruments were prepared carefully by persons skilled in the use of words, one would still find their meaning often liable to be questioned or encountering difficulties in their practical application. It is true that the legislature is not always expected to foresee every possible result that may ensue from unguarded use of some words, but, surely, the legislature cannot be excused, if it does not indicate its intention with reasonable certainty and clarity. It ought to be more careful in choosing the words of its enactment by which it desires to bring about a change in the society.

The Court of Justice cannot aid the legislature's defective phrasing of the statute; it has nothing to do with the reasonableness or unreasonableness of a provision of a statute, except so far as it may help it in interpreting what the legislature has said. It is not concerned with the question whether the policy which the Statute embodies is wise or unwise, or whether it leads to consequences just or unjust, beneficial or mischievous.

Lord Halsbury was right, when he opined more than a quarter of a century ago, that the worst person to construe a Statute is the person who is responsible for its drafting. The success of any legislative measure depends largely upon the skill of the draftsman. It would be a serious matter, if the Statute were reduced to a nullity by the draftsman's unskilfulness or ignorance of law.

A draftsman has to keep his vigilant eye on the track of public policy enunciated by the State. The policy might be right or wrong. It is his duty to choose such words as would not make the policy underlying the Statute meaningless.

The expression "public policy" is vague and unsatisfactory and we are aware of the warnings that have been repeatedly uttered by eminent judges that it is a ground much too unstable upon which to rest the judgment of the Court in the interpretation of Statutes.

Testing Points

One would like to ask how the proposed legislative measure overcomes the defects and deficiencies in the existing Act and creates a favourable climate so indispensable to the growth of corporate enterprise in the country. The answer to this lies yet in the womb of time and one cannot anticipate the verdict of history. Nevertheless, a reader who desires to study the Companies (Amendment) Bill, 1959 dispassionately for himself will have to consider it from the following points:

(1) Whether the Bill is largely based on the recommendations of the Sastri Committee?

(2) Whether the Bill departs from the recommendation of the Sastri Committee? If so, to what extent?

(3) Whether the Bill makes a satisfactory approach to the recommendations of the Sastri Committee?

(4) Whether the case-law developed in England after the enactment of the Companies Act 1948 has been taken into consideration while drafting the Bill?

(5) Whether the case-law on the Companies Act, 1956 has been taken into consideration while drafting the Bill?

(6) How far the Bill attempts to bring certain provisions of the existing Act in line with other enactments?

(7) Whether the clauses of the Bill as worded

(a) overcome practical difficulties experienced in the course of the working of the existing Act?

(b) clarify or remove drafting defects and obscurities?

(c) ensure the better fulfilment of the purposes underlying the existing Act and remove lacunæ in its provisions?

(8) Whether any attempt has been made in the Bill to realise that, as in other matters of life so also in law, a happy compromise is better than an extreme attitude?

(9) Whether the Bill, to some extent, reflects the trends of prevalent public opinion?

Sastri Committee

Points (1) and (2) may be conveniently discussed together. The Report of the Sastri Committee is divided into 209 paragraphs. Out of these, 170 paragraphs discuss the amendments to the Companies Act 1956. If the recommendations of the Sastri Committee listed in Appendix II to its Report are compared with the amendments as suggested in the Bill, it will be seen that the Bill has dropped the recommendations contained in nearly 42 paragraphs of the Report. Thus, approximately, 25 per cent. of the Sastri Committee's recommendations has been ignored. The recommendations contained in the remaining 128 paragraphs of the Report seem to have been accepted wholly or partially and at times with substantial modifications. Apart from this, the Bill seeks to introduce several new provisions of a far-reaching effect like those contained in Sections 43A, 197A, and 372. Thus, the Bill gives us a different picture of the shape of law to come. And we shall have to wait anxiously till it goes through the Joint Select Committee and finally Parliament.

It is relevant to mention here that the recommendations of the Sastri Committee being strictly within the terms of reference, any reassessment of considerations of general, economic or social policy underlying the Act was outside the ambit of the enquiry. As against this, it may be argued that the State has always the power to recommend changes in the Bill on matters of major policy. But it is to be remembered that corporate enterprise and democracy are interdependent and that it is the function of the State that plays a major role in the country's economic development to adjust the law in a manner which would induce the corporate enterprise to work with greater zeal for the industrial and economic progress of the country than it has done so far.

Need for Careful Check

Now I will deal with point (3). I have very carefully studied the provisions of the existing Companies Act in the context of the draft amendments suggested by the Sastri Committee. It has to be remembered that the Sastri Committee recommended changes as far as possible in the form of draft of new sections or amendments to the existing ones, in the hope that they might be of some assistance to Parliamentary draftsmen. A careful study of the Bill in the context of the Sastri Committee's Report will reveal that only in a few cases the changes suggested by the Sastri Committee have been accepted without modification and that, in a large number of cases, the changes suggested by the Committee in the form of drafts have been wholly or partially modified or substituted by new ones. The shortcomings of the Sastri Committee's Report have been discussed threadbare after its publication and no serious attempt appears to have been made to overcome these shortcomings. Even where an effort is made to improve upon the drafts suggested by the Sastri Committee, many drafting errors have crept in and they will remain until such time as a judicial interpretation leads to their detection. It is, therefore, imperative that clauses of the Bill should be thoroughly checked.

English Law

Now to take up points (4) and (5). There are approximately 345 sections in the Act which have a direct bearing on the English Companies Act 1948. Although the decisions of Courts in England are not binding on Indian Courts, they demand great weight and respectful consideration in construing analogous provisions in the existing Indian Act. In England, the Company law has reached its culminating point and, had the framers of the existing Act kept in mind the trend of the English case-law, many pitfalls might have been avoided. Even now, no attempt has been made by the framers of the Bill to avail themselves of the benefit of the English case-law. We have followed in the footsteps of the English Act but we have miserably failed in appreciating the continuous growth of case-law in England.

Case-laws Ignored

In India, the Company Law, which has as its background the cautious experimentation of Parliament, has to be nursed by case-law. The case-law does not represent an oasis which emerged overnight out of an arid desert by the waving of a magic wand. It represents a consistent and continuous growth. Much ground is, therefore, still unexplored and will remain so until the Courts have had an opportunity of deciding the doubtful and disputed issues. The Bill, to some extent, attempts to clarify the existing law in accordance with the judgments of several High Courts and at the same time it seeks to take away the effect of some of the judicial pronouncements made after 1st April, 1956 when the Act came into force. But anyone who has his eye on the development of case-law under the existing Act will find that the whole of the case-law under the Act has not been sufficiently explored. By way of an illustration, I may refer here to a case reported in A.I.R. 1958 Madras on page 34. In that case, Section 470 of the Companies Act came up for consideration before the Madras High Court and it was held that it had no power to make an order for payment against a contributory in respect of moneys due for calls made prior to the winding up. This was on account of an anomaly in the drafting of Section 469(1). The Sastri Committee has discussed this case on page 101 of the Report. The case appeared in Law Reports after the publication of the Sastri Committee's Report. In order to remove an obvious anomaly, the Committee suggested an amendment of Section 469(1) by substituting the words "made in pursuance of Section 470 of this Act" for the words "in pursuance of this Act." I understand that the decision of the Madras High Court has been followed by other High Courts as well. It is the province of the judge to expound the law and his judgment takes precedence over text writers, even though they may be of acknowledged authority. I have illustrated this case with a view to pointing out that there is a great need to explore thoroughly the case-law on the present Act before finalising the Bill.

Now I will come to point (6) which will be of some interest to legislators, too. Here it may be said that due weight has been given to the recommendations of the Sastri Committee. For instance, it was suggested by the Sastri Committee that, while Sections 531 and 533 provide for cases of fraudulent preference, there is no provision in the existing Act in respect of voluntary transfers dealt with under Section 55 of the Presidency-towns Insolvency Act and Section 53 of the Provincial Insolvency Act. The Bill introduces a new Section 531A and supplies the omission. The language of the proposed section as compared with the draft suggested by the Sastri Committee shows that the draftsman of the Bill has carefully applied his mind while modifying the draft suggested by the Sastri Committee. Similarly, upon the recommendation of the Sastri Committee, the Bill seeks to widen the scope of Section 477 on the lines of Section 36 of the Presidency-towns insolvency Act, so that the Court may also direct the persons who on examination may admit their indebtedness to the company to pay to the liquidator such amounts as the court may think fit.

Opportunity has been taken to suggest an amendment to Section 530 which relates to preferential payment. The proposed amendment is desirable, as it provides that compensation that may be due to workmen under the provisions of Chapter VA of the Industrial Disputes Act, 1947, should be included within the scope of the term "wages" for purposes of Section 530(1)(b). It may be observed here that this omission had escaped the notice of the Sastri Committee.

Drafting Error

The proposed proviso to Section 154(1), pertaining to closure of register of members, is not happily worded. The amendment was suggested by the Sastri Committee, so as to bring Section 154 in line with Section 27 of the Securities Contracts (Regulation) Act, 1956, which requires a transferee to lodge the security and other documents with the Company within 15 days of the date on which the dividend becomes due. The draftsman is obviously in error in using the words "dividends are declared" which occur at the end of the proviso. Section 27 of the Securities Contracts (Regulation) Act, 1956 refers to the date on which dividend becomes "due." The note on clause 38 of the Bill, however, correctly indicates the effect of the proposed amendment. This is a typical example to show how the provisions in the Bill are at variance with the notes on clauses.

Section 632 relates to powers of a Court to require a limited company to give security for costs, if there are reasons to believe that the plaintiff company will be unable to pay the costs of the defendant, if he is successful in his defence. It is open to a defendant to apply to the Court under this section or under Order XXV, Rule 1 of the Code of Civil Procedure, 1908, as amended by Act No. LXVI of 1956, which provides, *inter alia*, that the Court shall make an order for security of costs when it appears that a plaintiff is residing out of India and does not possess any sufficient immovable property within India other than the property in suit. A practical difficulty might arise in this way. Suppose company X incorporated in New Zealand has established a place of business in India in 1959 but has no sufficient immovable property in India. The company X sues Y for a breach of contract. It is open to the defendant to make an application for an order as to security for costs either under Section 632 of the existing Act or under Order XXV, Rule 1 of the Code of Civil Procedure. Under the same set of circumstances, the powers under the Companies Act are discretionary, whereas they are obligatory under the Civil Procedure Code. This inconsistency should have been removed.

Point (7) involves some controversial questions. As already stated, the Bill has dropped nearly 25 per cent. of the Sastri Committee's recommendations and has accepted the remainder with or without modifications. Opportunity has been taken to introduce new provisions having far-reaching implications and involving questions of interpretation. Thus, the problem is made more poignant. Those who are concerned with the task of divising the Companies Act as the best means of building India's economy will have to ponder seriously the Company Law Reform with a clear understanding of the social and economic forces which the Act seeks to regulate.

I shall now attempt to show some of the shortcomings in the Bill, in order to distil from them whatever lessons they may teach. I think it is reasonable to expect that these lessons might serve as guide-posts in our attempt to assess the Bill.

Section 433 relates to circumstances in which a Company may be wound-up. A Court may pass a winding-up order, if it is proved to its satisfaction that a company is unable to pay its debts. Section 434 requires that a company must be indebted in a sum exceeding Rs. 500. A creditor has a remedy to apply to a court for winding-up a company and his remedy by way of a suit is not barred. I venture to suggest that this pecuniary limit is too low. This limit was originally laid down in the 1913 Act and was not revised when the 1956 Act was enacted after about 43 years. It has perhaps not been realised that the existing pecuniary limit has been the cause of vexatious litigation. I would like to stress the need of a suitable provision on lines of Section 37 of the Banking Companies Act which is intended to assist a banking company which is temporarily in financial difficulties. Now, it might be argued that the question of a banking company is altogether on a different footing and that nowhere in the world a company other than a banking company has been given such a concession. What I wish to emphasise is that this suggestion should be examined in the context of the conditions prevailing in the country and a solution, with proper safeguards, should be evolved.

Foreign Company

There is another section in the Act which puts a foreign company to considerable hardship. This is Section 599. This section confers a civil disability upon a foreign company not complying with the provisions of Part XI of the Act and prevents it from bringing any suit, claiming any set-off, making any counter-claim or instituting any legal proceeding in respect of any contract, dealing or transaction entered into by it, until it complies with the provisions of Part XI of the Act. In some respects this section is analogous to Section 69 of the Indian Partnership Act. Legal opinion is sharply divided on the point whether the compliance with the provisions of Part XI of the Companies Act 1956 is a condition precedent to the institution of any legal proceedings by a foreign company. The difficulty with Section 599 begins while meeting the contention of the defendant that a foreign company has not complied with the requirements of Part XI. Under this Part, a foreign company is required to file the documents both with the Registrar of Companies in whose jurisdiction it carries on business and the Registrar of Companies having jurisdiction over New Delhi. It may happen that neither of these Registrars is in a position to certify that a foreign company in question has carried out the requirements of Part XI. It may also happen that, by the time the requisite certificate as aforesaid is obtained, the money claimed may get time-barred. The hardship created by this section should be viewed in the context of the present participation of foreign investments in India and the imperative need for such investments. The attention of the Sastri Committee was pointedly drawn to this hardship but it seems that it has left this point to judicial interpretation in due course.

The statement that the amendments to the Companies Act as proposed in the Bill include those of a clarificatory nature, designed to remove drafting defects and obscurities which have caused difficulty in the interpretation of the Statute, cannot be wholly substantiated. Time and experience alone will tell us to what extent this claim can be substantiated. It is a matter of common knowledge that the provisions of the existing Act which seem to hamper the functioning of joint-stock enterprises and the growth of industries in the country are looked with disfavour and criticised vehemently by the spokesmen of the private sector. On the other hand, the modifications and changes brought in by the new enactment in the Indian Company Law with a view to putting down the abuses noticed in the 1913 Act and promoting the development of the Indian companies on sound, healthy and progressive lines have been generally welcomed. The experience in the actual working of the Act created a feeling in the business community that it sadly lacked in creating a favourable climate so indispensible for the growth and development of joint-stock companies in India. The critics of the existing enactment had voiced their feelings before the Sastri Committee. The latter has, to some extent, attempted to furnish solutions to several problems mainly relating to the interpretation of obscure and ambiguous provisions of the Act.

Hardships Will Continue

There are, of course, shortcomings in the Committee's Report, but this is understandable as the time allowed to the Committee was too short for a complete overhaul. We have in our country no particular authority, either administrative or legal, to give us any precise and unambiguous directions on complicated and at times equivocal provisions of the Act and those who run the management of companies have to work under the constant threat of being brought within the mischief of nearly 164 penal provisions of the Act. It cannot, however, be denied that the Bill will mitigate to some extent the hardships and annoyance at present being felt by *enterpreneurs* and those in charge of company managements. But I have a feeling that, even after the Act is amended and the provisions modified, difficulties of another type might arise. Let me give you a few illustrations.

The Bill suggests a new clause (11) for the existing clause in Section 2 and includes the court of a Presidency Magistrate as having jurisdiction to try an offence against the Act. The reference to a court of a Presidency Magistrate has been omitted in the proposed Section 234A which relates to seizure of documents by Registrar and also in similar Section 240A which relates to seizure of documents by inspector. One fails to understand why jurisdiction under the foregoing sections has been given to criminal courts. These sections are no less serious in nature than Section 627 which gives exclusive jurisdiction to the High Court to make an order for production and inspection of books where offence is suspected to have been committed. There is yet another point which seems to have escaped the notice of the draftsman. In proceedings under Section 234A or 240A it cannot be said that the officer concerned has a personal knowledge of the facts relating to a case. In my view the words "has reason to believe" occurring in the proposed Sections 234A and 240A should be substituted by the words "has reasonable grounds to believe."

Definition of "Relative"

A new Section 6 has been proposed in place of the existing section which defines the meaning of the term "relative." It provides that "Two persons shall be deemed to be 'relatives' if, and only if:—

(a) they are members of a Hindu undivided family; or

(b) they are husband and wife; or

(c) they are related to each other in the manner indicated in Schedule IA."

The Schedule IA under the proposed Section 6(c) enumerates 59 persons, as against 81 persons standing in different degrees of relationship under the existing Section 6. Now, if one carefully scrutinises the list of persons referred to in the Schedule, he will find that there is a possibility of further curtailing the number. It does not stand to reason why husband's father and wife's father are separately enumerated in the schedule. The husband's father and wife's father should have been put together under one heading, namely, "Husband's father or wife's father." Thus it is possible to include items 29

o 34, as well as item 36, in items 22 to 28 and educe the total number of persons as relatives rom 59 to 52.

Issue of Duplicates

Section 84 relates to certificate of shares. The Bill suggests amendment of this section so as to prevent fraudulent issue of duplicate shares. The proposed amendment provides that no duplicate of a certificate shall be issued to any member, unless the original certificate issued to him is (1) proved to the satisfaction of the company to have been lost or destroyed, or (2) is defaced and surrendered to the company. The contravention of the section as proposed to be amended is made an offence punishable with fine which may extend to Rs. 1,000. This amendment may cause undue hardship to shareholders who are in real need of a duplicate having lost the original. For in view of the penal provision, a company may hesitate to say that it is satisfied with the explanation given by the shareholder. On the other hand, it may not be possible for a member to satisfy a company beyond certain reasonable limit. The proposed amendment should lay down the procedure as is done in several sections of the Act and should exempt a company and its officers if the prescribed procedure is correctly followed.

Again, it may be pointed out that the word "Company" occurring in the proposed sub-section 2(*a*) of Section 84 may be construed to mean that no duplicate certificate shall be issued, unless it is proved to the satisfaction of the Company at its ordinary general meeting that the original has been lost or destroyed. This is not the idea underlying the proposed section. In order to give a clear meaning to the section the draftsman should have used the words "board of directors" for the word "company" so as to bring out the meaning that the loss or destruction of the original certificate should be proved to the satisfaction of the board of directors.

One would like to pause and think about the utility of the proposed Section 197A on the Statute Book. It is true that the object of the section is to avoid needless expenses. The principle underlying the section is good. But the question remains as to how it will reconcile with the managerial efficiency of the corporate form of enterprise in the country. It is difficult to attempt to answer this.

Opinion is divided on the legal effect of Section 197A. One view is that the application of this section could be avoided by naming a manager as a commercial manager. The other view is that this is not possible under the section if it is read in the context of Section 2(24) which defines the expression "manager." The meaning of the section would have been more clear if the draftsman had added the words "by whatever name called" after the word "manager."

There is no penal cause attached to this section probably on account of the proposed Section 629A which provides penalty where no specific penalty is provided elsewhere in the Act.

Advisory Commission

Section 411 of the existing Act provides that it shall be the duty of the Advisory Commission to enquire into and advise the Central Government on all applications made to it under the sections specified in clause (*b*). Clause (*b*) of the foregoing section includes applications under Sections 408 and 409. The Bill seeks to amend Section 411, so as to take away Sections 408 and 409 from the purview of the Advisory Commission and enable Government to dispose of applications received by it under the sections without referring them as a matter of routine to the Advisory Commission. The note on this clause, which is not very happily worded, states that the proposed amendment seeks to enable Government to dispose of frivolous applications received under Sections 408 and 409 and makes it clear that it is not necessary to consult the Commission even before the issue of interim orders. Logically, it would be difficult to accept an argument justifying the proposed amendment which reduces the scope of the work of the Statutory Commission, whose object is to maintain flexibility in administration and effective regulation of company's affairs.

The proposed Section 624A states, *inter alia*, that company prosecutors appointed under the Act shall have all the powers and privileges of public prosecutors appointed by State Governments under Section 492 of the Code of Criminal Procedure, 1898. One would do well to read this section in the context of Financial Memorandum on page 123 of the Bill which states that "A decision in this regard is without prejudice to the right to use the State prosecution machinery in bigger company law cases or where offences under the criminal law are involved and does not detract from the constitutional liability of the State in handling criminal cases." The proposed section implements the recommendation of the Sastri Committee. It has to be realised that public prosecutors are appointed by the State from eminent and experienced members of the Bar. Company prosecutors, therefore, cannot be placed on the same footing as that of public prosecutors appointed under the Code. The powers and privileges of public prosecutors include power under Section 494 to withdraw prosecution. It is desirable that Company prosecutors should not be permitted to exercise this power without reference to the Central Government or the Regional Director concerned. As against this, it is said that, as a matter of convention, public prosecutors do not exercise their power to withdraw prosecutions without reference to the State Government and that this convention will continue to be followed by company prosecutors. Nevertheless, I see no reason why the powers of company prosecutors should not be precisely defined in the Act.

Now to take up the remaining points, (8) and (9). It has to be realised that, as in matters of life so also in law, a happy compromise is better than an extreme attitude. It is evident from the Sastri Committee's Report that it has attempted to observe this principle so far as it could within the narrow limits of the terms of reference. The Bill seems to have gone a little further in this direction by modifying several recommendations of the Sastri Committee in the light of the views expressed by chambers of commerce and others. It is to be hoped that the Joint Select Committee will make a further attempt in this direction. Even if business men are puzzled and irritated by the letter of the law, they respect its spirit.

Loopholes

It is truism to say that the Bill reflects, to an appreciable extent, the prevalent trends of public opinion and attempts to ensure efficient and honest management of companies and check unfair business methods and anti-social activities. It is in consonance with the trend of public opinion in that an attempt has been made in the Bill to tighten up the penal provisions of the Act and make the offenders feel that, by courting punishment, they are not absolved from the performance of their statutory duties.

It may be easy to be cynically amused at the process of amending this complicated piece of legislation. Loopholes may be plugged but others will come up; and multiply repeatedly. Law may be tightened, yet experts would tell business men how to get around it. This reminds me of what Kahlil Gibran, the noted poet and philosopher, said:

"Then a lawyer said; but what of our Laws, Master?

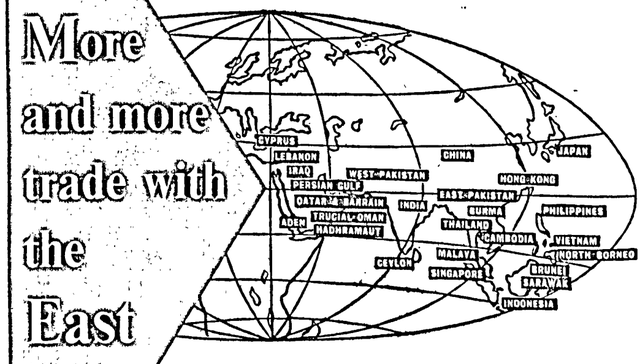
And he answered: You delight in laying down laws, yet you delight more in breaking them, like children playing by the ocean, who build sand-towers with constancy and then destroy them with laughter."

In the modern world, both life and business have become complicated and therefore laws are bound to be complicated. But laws must be intelligible to citizens. Parliament cannot be unmindful of the real state of law.

It is to be hoped that the Joint Select Committee will perform its formidable task after careful consideration of the oral evidence and written memoranda submitted by various organisations and individuals. A few sittings of the Joint Select Committee at places like Bombay, Calcutta and Madras will be welcome to those who desire to give oral evidence.*

* The Joint Select Committee has power to summon witnesses. In England, the Committee cannot meet outside the precincts of Parliament. The same practice is being followed in India, but the Committee may hold its sittings elsewhere with the permission of the Speaker.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The three associated banks, The Chartered Bank, The Eastern Bank Ltd. and Allahabad Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.



Let your worry be our pleasure

THE CHARTERED BANK
THE EASTERN BANK LTD.
ALLAHABAD BANK LTD.

which together have over 80 branches in India and a complete branch service in The East extending from Cyprus to Japan.

BUSINESS OBJECTIVES AND SURVIVAL NEEDS—II

PRECISE CONCEPT OF THESE IS VITAL TO ENSURE CONTINUED EXISTENCE

By Peter F. Drucker

MANAGING a business enterprise means making decisions, every one of which depends on both needs and opportunities in each of the five areas described in these columns last week and, in turn, affects performance and results in each.

The first conclusion from this is that every business needs objectives—explicit or not—in each of these five areas, for malfunction in any one of these endangers the entire business. And failure in any one area destroys the entire business—no matter how well it does in the other four areas. Yet these are not interdependent but autonomous areas.

Here, then, is the first task of a discipline of business enterprise: to develop clear concepts and usable measurements to set objectives and to measure performance in each of these five areas.

The job is certainly a big one—and a long one. There is no area as yet where we can really define the objectives, let alone measure results. Even in respect to profitability, we have, despite great recent advances in managerial economics, figures for the past rather than measurements that relate current or expected profitability to the specific future risks and needs. In the other areas, we do not even have that, by and large. And in some—the effectiveness of the human organisation, the public standing in economy and society, or the area of innovation—we may, for a long time to come, perhaps forever, have to be content with qualitative appraisal making possible judgment. Even this would be tremendous progress.

A second conclusion is hardly less important: *no one simple objective is "the" objective of a business; no one single yardstick "the" measure of performances, prospects, and results of a business; no one single area "the" most important area.*

Dangerous Oversimplification

Indeed, the most dangerous oversimplification of business enterprise may well be that of the "one yardstick," whether "return on investment," "market standing," "product leadership," or what have you. At their best, these measure performance in one genuine survival area. But malfunction or failure in any one area is not counterbalanced by performance in any other area, just as a sturdy respiratory or circulatory system will not save an animal if its digestive or nervous system collapses. Success, like failure, in business enterprise is *multidimensional*.

This, however, brings out another important need: a rational and systematic approach to the *selection and balance among objectives* so as best to provide for survival and growth of the enterprise. These can be called the "ethics" of business enterprise, in so far as ethics is the discipline that deals with rational value choices among means to ends. It can also be the "strategy" of entrepreneurship. Neither "ethics" nor "strategy" is capable of being absolutely determined, yet neither can be absolutely arbitrary. We need a discipline here that encompasses both the "typical" decision which adapts to circumstances and "plays" the averages of statistical probability, and the innovating, "unique event" of entrepreneurial vision and courage breaking with precedent and trends and creating new ones—and there are already some first beginnings of such a discipline of entrepreneurship. But such a discipline can never be more than theory of composition is to the musical composer or theory of strategy to the military leader: a safeguard against oversight, an appraisal of risks, and, above all, a stimulant to independence and innovation.

Almost by definition the demands of different survival objectives pull in different directions at least for any one time period. And it is axiomatic that the resources even of the wealthiest business, or even of the richest country, never cover in full all demands in all areas; there is never so much that there has to be no allocation. Higher profitability can thus be achieved only by taking a risk in market standing, in product leadership, or in tomorrow's human organisation, and *vice versa*. Which of these risks the enterprise can take, which it cannot take, and what it cannot afford not to take—these risk-taking, value-decisions between goals in one area *versus* goals in others, and between goals in one area today *versus* goals in others tomorrow, is a specific job of the *entrepreneur*. This decision itself will remain a "judgment," that is, a matter of human values, appraisal of the situation, weighing of alternatives, and balancing of risks. But an understanding of survival objectives and their requirements can supply both the rational foundation for the decision itself and the rational criteria for the analysis and appraisal of entrepreneurial performance.

Budgeting Process

The final conclusion is that we need a new approach to the process in which we make our value decisions between different objective areas—the budgeting process. And in particular do we need a real understanding of that part of the budget that deals with the expenses that express these decisions, that is, the "managed" and "capital" expenditure.

Commonly today, budgeting is conceived as a "financial" process. But it is only the notation that is financial; the decisions are entrepreneurial. Commonly today, "managed" expenditures and "capital" expenditures are considered quite separate. But the distinction is an accounting (and tax) fiction and misleading; both commit scarce resources to an uncertain future; both are, economically speaking, "capital" expenditures. And they, too, have to express the same basic decisions on survival objectives to be viable. Finally, today, most of our attention in the "operating budget" is given, as a rule, to other than the "managed" expenses, especially to the "variable" expenses, for that is where, historically, most money was spent. But, no matter how large or small the sums, it is in our decisions on the "managed" expenses that we decide on the future of the enterprise.

Indeed, we have little control over what the accountant calls "variable" expenses—the expenses which relate directly to units of production and are fixed by a certain way of doing things. We can change them, but not fast. We can change a relationship between units of production and labour costs (which we, with a certain irony, still consider "variable expenses" despite the fringe benefits). But, within any time period, these expenses can only be kept at a norm and cannot be changed. This is, of course, even more true for the expenses in respect to the decisions of the past, our "fixed" expenses. We cannot make them undone at all, whether these are capital expenses or taxes or what-have-you. They are beyond our control.

In the middle, however, are the expenses for the future which express our risk-taking value choices: the "capital expenses" and the "managed expenses." Here are the expenses on facilities and equipment, on research and merchandising, on product development and people development, on management and organisation. This managed expense budget is the area in which we really make our decisions on our objectives. (That, incidentally, is why I dislike accounting ratios in that area so very much, because they try to substitute the history of the dead past for the making of the prosperous future.)

We make decisions in this process in two respects. First, what do we allocate people for? For the money in the budget is really people. What do we allocate people, and energy, and efforts to? To what objectives? We have to make choices, as we cannot do everything.

And, second, what is the time scale? How do we, in other words, *balance* expenditures for long-term permanent efforts against any decision with immediate impact? The one shows results only in the remote future, if at all. The development of people (a fifteen-year job), the effectiveness of which is untested and unmeasurable, is, for instance, a decision on faith over the long range. The other may show results immediately. To slight the one, however, might, in the long range, debilitate the business and weaken it. And, yet, there are certain real short-term needs that have to be met in the business—in the present as well as in the future.

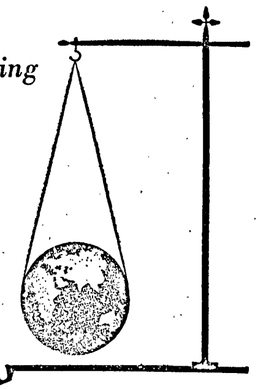
Discipline of Business

Until we develop a clear understanding of basic survival objectives and some yardsticks for the decisions and choices in each area, budgeting will not become a rational exercise of responsible judgment; it will retain some of the "hunch" character that it now has. But our experience has shown that the concept of survival objectives alone can greatly improve both the quality and effectiveness of the process and the understanding of what is being decided. Indeed, it gives us, we are learning, an effective tool for the integration of functional work and specialised efforts and especially for creating a common understanding throughout the organisation and common measurements of contribution and performance.

The approach to a discipline of business enterprise through an analysis of survival objectives is still a very new and a very crude one. Yet it is already proving itself a unifying concept, simply because it is the first *general* theory of the business enterprise we have had so far. It is not yet a very refined, a very elegant, let alone a very *precise*, theory. Any physicist or mathematician would say: This is not a theory; this is still only rhetoric. But at least, while maybe only in rhetoric, we are talking about something real. For the first time, we are no longer in the situation in which theory is irrelevant, if not an impediment, and in which practice has to be untheoretical, which means cannot be taught, cannot be learned, and cannot be conveyed, as one can only convey the general.

This should thus be one of the "breakthrough" areas; and twenty years hence this might well have become the *central* concept around which we can organise the mixture of knowledge, ignorance, and experience, of prejudices, insights, and skills, which we call "management" today.

Weighing the world up . . .



. . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

FIRST VALUATION REPORT OF L.I.C.

OVER RS. 27 CRORES RESERVED AS BONUS FOR POLICYHOLDERS

THE results of the first actuarial investigation into the financial condition of the business of the Life Insurance Corporation of India, including a valuation of the liabilities of the Corporation as at 31st December 1957, in accordance with the provisions of Section 26 of the Life Insurance Corporation Act 1956, have been published. The valuation discloses a profit of Rs. 33.04 crores. Out of this, after making provision for income-tax, a sum of Rs. 27.56 crores, amounting to 95 per cent. of the net profits, has been reserved for distribution among policyholders and the balance of Rs. 1.45 crore, representing five per cent. of the net profits, has been allocated to the Government of India in conformity with the provisions of the L.I.C. Act.

The valuation is in respect of the policies issued by 245 insurers the controlled business of which was taken over by the Corporation and the policies issued by the Corporation since the Appointed Day, that is, 1st September 1956, which were in force on 31st December 1957. These consisted of 5,683,414 policies, assuring a sum of Rs. 1,472.8 crores, including bonuses, and 11,539 annuities for Rs. 72.80 lakhs per annum.

Income and Outgo

The consolidated statement of the income and outgo of (1) the insurers for the periods from the respective dates of their last valuation to 31st August 1956 and (2) the Corporation for the sixteen-month period ended 31st December 1957 reveals the following picture:

(In crores of rupees)

Income:	
Premium (first year's)	37.59
Premiums (renewal)	164.73
Single premium and consideration for annuities	1.14
Interest, dividends and rent	44.13
Other receipts	1.00
Contribution from Central Government in respect of Insolvent companies	0.70
Total	249.34
Outgo:	
Claims by death	18.21
Claims by maturity	45.00
Annuities	1.11
Surrenders	11.85
Expenses of management	62.00
Depreciation of investment and transfer to investment reserve	9.47
Miscellaneous	4.29
Transfer to shareholders' reserve and dividend	0.59
Divestment of assets and compensation (as per section 35 (2) and (3) and sections 7 and 8 of the Life Insurance Act)	11.89
Total	164.44
Increase in Life Fund (excess of income over outgo)]	84.90

The valuation report points out that, since full and accurate data are not available, it has not been possible to make an investigation into the mortality experience during the inter-valuation period. However, the Indian Life Assurance Offices Association had, for the purpose of a combined mortality investigation, collected data covering the experience of 34 insurers which, among themselves, accounted for about 80 per cent. of the total business. An investigation into this experience, which relates to the years 1953 and 1954, showed that, during that period, the actual deaths were about 45 per cent. of those expected on the basis of the Oriental (1925-35) Ultimate Mortality Table. An inquiry was also made into the mortality experience for the year 1957 of a few of the big units which had contributed data for the proposed combined mortality investigation. A comparison between the experience for the years 1953 and 1954, on the one hand, and that for the year 1957, on the other, indicates a further improvement in mortality.

The gross rate of interest earned on investments during the period 1st January 1956 to 31st August 1956 was 4.13 per cent., while that earned during the period 1st September 1956 to 31st December 1957 was 4.58 per cent. The net rates of interest earned during the periods were 3.75 per cent. and 3.74 per cent., respectively. The renewal expense ratio during the period 1st January 1956 to 31st August 1956 was 20.90 per cent. which declined to 15.89 per cent. during the period 1st September 1956 to 31st December 1957.

Basis of Valuation

The basis adopted for the valuation is: for mortality, Oriental (1925-36) Ultimate Mortality Table and rate of interest at 3½ per cent. Provision for expenses and profits has been calculated at 20 per cent. of the office premium in case of with-profits policies and 16 per cent. of office premium in the case of without-profits policies. Additional reserve for expenses and profits: in respect of limited payment and paid-up policies an additional provision for expenses and profits after cessation of premiums at the rate of Rs. 5 per thousand sum assured per annum on with-profits policies and Re. 1 per thousand sum assured per annum on without-profits policies.

Commenting on the basis adopted for valuation, the report makes three observations. First, the adoption of the Oriental (1925-35) Ultimate Mortality Table provides a substantial margin which constitutes a source of sizable profits in future. Secondly, the net rate of interest earned during each of the periods, namely, 1st January 1956 to 31st August 1956 and 1st September 1956 to 31st December 1957, is practically unchanged at 3¾ per cent. The adoption of a rate of interest of 3½ per cent. in the valuation is, therefore, an adequate margin for future profits. Thirdly, the renewal expense ratios during the periods 1st January 1956 to 31st August 1956 and 1st September 1956 to 31st December 1957 were 20.90 per cent. and 15.89 per cent. respectively. These figures by themselves do not serve as a measure of probable future experience, in view of the fact that, during the formative stages, the entire cost structure of the Corporation was in a state of flux. The Corporation is, we are told, taking steps to bring down the expense ratio and a provision for expenses at 16 per cent. of the office premium is considered more than adequate. The specific provision for future profits of 4 per cent. of the office premium in the case of with-profits policies together with the margins in mortality and interest bases, should, it is maintained, provide an adequate overall margin for future profits.

The valuation shows a surplus of Rs. 27.04 crores arrived at by deducting the liability of Rs. 383.37 crores from the Life Fund of Rs. 410.41 crores. This surplus, the actuary is satisfied, represents a fair measure of the trading profits during the inter-valuation period. To this has been added Rs. 6 crores being the credit for a portion of the tax deducted at source, making a total gross profit of Rs. 33.04 crores. Tax liability on this is estimated at Rs. 4.03 crores. The net profit, therefore, works out to Rs. 29.01 crores.

Allocation of Surplus

Section 28 of the Life Insurance Corporation Act 1956 requires that not less than 95 per cent. of the surplus has to be allocated to or reserved for policyholders and the remainder may be utilised for such purposes and in such manner as the Central Government may determine. Accordingly, the minimum amount that has to be allocated to policyholders and, in consequence, the maximum amount that can be allocated to Government would be Rs. 27.56 crores and Rs. 1.45 crore, respectively. The policyholders' share of Rs. 27.56 crores is sufficient to declare a reversionary bonus at the rates of (1) Rs. 14 per sum assured per annum on with-profits Endowment Assurance policies and (2) Rs. 17.50 per thousand sum assured per annum on with-profits Whole Life Assurances on policies issued by the Corporation and by its predecessors (insurers) after 19th January 1956 and at proportionate rates on the insurance policies issued on or before this date.

Differential Bonus

The profits allocated to policyholders, as a result of an actuarial valuation, represent the share in the profits of the holders of with-profits policies *as a whole*. The question naturally arises as to how these profits should be distributed amongst *individual* policyholders. A system of distribution of profits amongst individual policyholders can lay claim to being a good system if it is equitable and also practicable. The system of uniform reversionary bonuses generally adopted by insurers in this country in the past answered well the requirements of a good system of distribution of profits. Allocation of profits amongst individual policyholders, therefore, did not present for the various insurers a complicated problem. For the Corporation, however, the problem bristles with complications. That with-profits policies issued by a particular insurer prior to the date on which Government took over the controlled business of insurers as a first step towards nationalisation should *inter se* qualify for a uniform rate of bonus is easy to see; that all with-profits policies issued, whether by the insurers during the interim period Government was in management, or since the Corporation was established should, as a group, be entitled to bonus at a uniform rate should also be evident. But, as between policies taken over from one insurer and those taken over from another insurer or those issued by the Corporation, equity demands that the rates of bonus applicable to the various groups should reflect their respective contributions to the profits disclosed at the valuation or, in other words, their respective financial strength. This is the principle which has found recognition in Section 49(2)(k) of the Life Insurance Corporation Act which provides that the Corporation may make regulations for the classification of policies for the purpose of declaring differential bonuses, that is, bonuses at different rates on policies of different insurers. The Corporation has been engaged for a long time in evolving a scheme of differential bonuses which would ensure an equitable distribution of the profits amongst policyholders. A final scheme is yet to be evolved but a tentative scheme has been prepared.

Bonus Indices

In accordance with that scheme, the Corporation has classified the policies taken over from the insurers and those issued by the Corporation into six groups. The first group is a Special Group covering most of the foreign insurers and some Indian insurers, with exceptionally strong financial reserves. The next group is Group I which includes policies by the Corporation and policies issued by all insurers between 19th January 1956 and 1st September 1956. Each group has been allotted what is called a bonus index. The bonus indices for the six groups are 1.2, 1.0, 0.8, 0.6, 0.4 and *nil*. These indices give the relative proportions of the rates of bonus which policies in the respective group would qualify for. In addition, there is a miscellaneous group which would be dealt with in a special manner, in view of the different methods of distribution of profits adopted by units comprising this group.

On the basis of the tentative scheme of differential bonuses, the policyholders' share of profit of Rs. 27.56 crores would be adequate to provide reversionary bonuses at the rates mentioned in the table which follows. The table also gives for each group the percentage of the total policies included in that group:

	Rates of bonus per annum per thousand of sum assured		Percentage of policies in the group to total policies
	Whole life	Endowment	
	Rs.	Rs.	
Special Group	21.0	16.8	32
Group I	17.5	14.0	49
Group II	14.0	11.2	9
Group III	10.5	8.4	4
Group IV	7.0	5.6	3
Group V	*Nil*	*Nil*	3
			100

In constructing the bonus indices, the premium rate and the financial position of the companies were taken into consideration. The special group, with the highest bonus, comprises policies issued by such companies as Oriental, Sun Life, Commercial Union, Gresham, Norwich Union, Pearl and Mysore State Insurance Department. Group I comprises policies issued by the Corporation and policies issued by such companies as New India, Bombay Mutual, Empire of India, Hindustan Co-operative, Indian Mercantile, Lakshmi, United India. A comparison of the bonus on the endowment policies of private insurers declared at their last valuation with that payable as per the Corporation's first valuation shows that the latter is higher in respect of policies of 67 insurers, less in respect of policies of 75 insurers, same in respect of policies of 89 insurers. It may be noted here that with-profit endowment policies account for as much as 80 per cent. of the total business. The figures in respect of 14 insurers are not comparable.

The following table illustrates the position:

Group	Number of Insurers			
	More than at the last valuation	Less than at last valuation	Equal to last valuation	Not comparable
Special	4	7	*Nil*	4
I	8	20	2	1
II	19	15	*Nil*	1
III	15	11	*Nil*	1
IV	21	15	*Nil*	*Nil*
V	..	7	84	7
	67	75	86+3*	14

* Miscellaneous.

ECONOMIC DEVELOPMENT IN TURKEY

NEW STABILISATION PROGRAMME AIMS AT REMOVING INFLATIONARY PRESSURE

TURKEY is one of the seventeen members of the Organisation for European Economic Co-operation (O.E.E.C.). Unlike most of its confreres in the Western European community, it is industrially backward. Probably, this difference in the level of economic development is one of the important reasons why Turkey has been excluded from the intra-regional trade blocs in W. Europe, namely, the Common Market of the Six and the proposed Little Free Trade Area of the Seven. Turkey, which covers an area of 296,500 sq. miles and has a population of about 26 million, has agriculture as its predominant industry. It accounts for about 44 per cent. of the gross national product and for 80 per cent. of exports. About 70 per cent. of the population depend on land for their livelihood.

The post-war years have witnessed in Turkey, as in the case of other less developed countries all over the world, intense efforts to fight poverty and secure a higher standard of living for its people. The rapidly increasing investments led to severe stresses and strains in the economy. The cost of living rose by about 14 per cent. in 1957 and by 8 per cent. in the first half of 1958, thanks to growing pressures of domestic demand. The Government resorted to strict measures of price controls to check inflationary pressure, but in vain. By the compulsory application of "cost plus profit" formula, the Government tried to exert complete control of profit margins. The controlled prices were well below the level necessary to stimulate production. Some of the industrial goods, such as textiles, produced by State enterprises, and some foodstuffs by the Government Meat and Fish Agency, were sold below cost at prices involving considerable operational losses. These factors led to a distortion of price patterns, which affected adversely not only internal prices but those of exports and imports. The cost of living, instead of falling, continued to go up, despite strict official control.

The New Scheme

The Government seems to have at last been convinced that the root of inflation lies deeper and that price controls would create more problems than those sought to be solved by these measures. Thus, the Turkish Government introduced in August 1958 a new economic stabilisation programme after close consultations with the O.E.E.C. and the I.M.F. This programme, according to the latest annual survey of economic conditions in Turkey (1958), prepared by the Secretariat of the O.E.E.C., seeks to re-establish internal and external equilibrium and to lay the basis of sound future expansion, "by establishing a more realistic rate of exchange and a freer system of trade by allowing the price mechanism to play its role in drawing resources into the right direction and by eliminating inflationary pressures from the economy." Under the new scheme, price controls on all except a few agricultural products have been abolished. The remaining restrictions are proposed to be eliminated in due course. Besides, the effective rate of exchange of the Turkish lira has been reduced considerably.

The inflationary pressure in Turkey's economy, obviously, has been generated by the increasing tempo of development. The country's national income increased at an annual average rate of 7.8 per cent. between 1950-57; this rate, however, had been subject to wide fluctuations from year to year, thanks to the dependence of the economy on agriculture and on imports. During the seven-year period under reference, real income *per capita*, however, increased by only 25.4 per cent., or 3.63 per cent. per annum. Turkey still remains one of the member-countries of the O.E.E.C. with the lowest *per capita* income.

As already pointed out, agriculture is the principal source of national income, being directly responsible for the income of about three-quarters of the population. The index of production of agricultural products—cereals, pulses, tobacco, cotton lint and other agricultural crops—stood higher at 188 in 1957 (base 1950 =100), as against 151 in 1952. Their exports aggregated TL.813.5 million in 1957, as against TL.674.3 million in 1952. Agricultural production improved to higher levels in 1957. The production, particularly of cereals and cotton, increased rapidly in 1958, but that of tobacco declined appreciably. Although Turkey imported U.S. wheat during the last four years, it is expected that, in the current year, substantial exports would be possible. In the beginning of this year, exportable stocks of wheat amounted to 416,000 tons and those of tobacco, the major export commodity, to 67,000 tons. That there is good scope for promoting agricultural production through adoption of better techniques is borne out by the fact that the average wheat yields from the well-managed State farms are about 28 per cent. above the national average. Besides extending price support for agricultural products by paying subsidies to farmers, the Government supports agricultural development by special grants of credit for mechanisation and the purchase of fertilisers and through the expansion of cultivated area by the introduction of controlled irrigation.

Mining, although its share in the total production is small, accounts for about 12 per cent. of total exports. Output of mines more than doubled between 1950 and 1958. Coal, lignite and iron ore are the bases for a number of domestic industries, whereas chrome ore and copper constitute the more important export products. It may be noted that, in order to attract foreign capital into mining, a law was passed in 1957 permitting some foreign investment and providing for the repayment of the invested capital from export proceeds.

Industries

Production in the industrial sector rose by about 50 per cent. between 1950 and 1956. The development of such industries as sugar, textiles, cement, rubber products as well as iron and steel, was particularly spectacular. The cement, sugar, and cotton textile industries are now capable of meeting the entire domestic demand. About half of total industrial production comes from Government-controlled plants. These are generally better equipped and more modern than private establishments. The development of industries has been much hampered, particularly since 1957, by the shortage of imported raw materials and spare parts. The shortage of raw materials and equipment is indicated by the fact that imports of industrial raw materials fell from $153 million in 1952 to $99 million in 1956, and remained at about this level in 1957 and 1958; imports of machinery and equipment in 1957 and 1958 were 30 per cent. below the 1956 level.

The Government-controlled industrial enterprises account for about 60 per cent. of total investments in the country. These enterprises cover a wide range of industries, especially textiles and sugar, and mining. They have contributed towards excess pressures of demand by running operational deficits of the order of TL.245 million in 1956 and TL.203 million in 1957. Under the stabilisation programme, the State-controlled enterprises have raised the selling prices of their products in order to meet current expenditures exclusively from current receipts. In passing, it may be noted that the stabilisation programme has also provided for the establishment of an Economic Co-ordination Board, with a dependent investment committee which co-ordinates the investment activity of the public and private sectors and assigns appropriate priorities to the various projects. The Committee is also empowered to decide the total level of investments that could be financed from non-inflationary domestic and foreign sources.

Monetary Controls

Other appropriate measures are also being devised, under the new stabilisation programme, to remove inflationary pressures by ensuring monetary controls and budgetary balance. Internal credit restrictions, together with the gradual abolition of price controls, have led to some useful changes in the pattern of prices. There has been a sizable expansion of credits both from the Central Bank and the commercial banks—by about 20 to 28 per cent. during the last three years. Out of the expansion of credit in 1957 and the first half of 1958, about 70 per cent. consisted of advances to State enterprises, a considerable part of which was used to finance investment, especially in mining and construction. The total money supply increased by 25 per cent. to TL.5,613 million in 1956 and further by 32 per cent. to TL.7,397 million in 1957. The rate of increase remained at this level in the first half of 1958; but since the implementation of the stabilisation programme, between June and October 1958, the money supply has been reduced by 2.4 per cent. Absolute credit ceilings have been imposed under the new scheme, which restricts new loans from the Central Bank to the public sector to TL.400 million. The maximum permissible credit expansion in commercial banks has also been limited to TL.200 million above the level on 1st July 1958.

The inflationary pressures were aggravated by the foreign exchange difficulties. Imports had to be severely restricted to reduce a continuing trade deficit against the background of increasing shortage of foreign exchange. The U.S. as well as private and official foreign loans did not cover deficits. As the O.E.E.C. Survey points out, the failure of Turkey's exports to increase in step with the increase in national product has been one of the reasons for Turkey's external difficulties. Agricultural products account for about 80 per cent. of Turkey's exports. Bad weather conditions successively in 1954, 1955 and 1956, thus, meant sharp fluctuations in export earnings. Besides, the growing population and increase in *per capita* income have reduced the exportable surplus, particularly of cereals and cotton. The declining commodity prices and fall in foreign demand for mining products also led to serious foreign exchange difficulties. The obligation to pay heavy foreign commercial debts already committed still continues to baffle the Government. At any rate, the foreign exchange crisis is expected to be eased by the introduction last year of an effective devaluation and simplification of the previous trade and payments system under the new stabilisation programme. In its Survey, the O.E.E.C. advocates a vigorous export drive to boost foreign exchange earnings. It also strikes a note of warning that a gradual return to the liberalisation of trade should, as far as possible, follow any improvement in the balance of payments.

LITTLE FREE TRADE AREA

What is described as a "package plan" for the formation of an "Outer Seven Free Trade Area"—another name for the Little Free Trade Area—has been worked out by the working party of officials from Britain and six other non-Common Market countries (Austria, Denmark, Norway, Portugal, Sweden and Switzerland) which met at Stockholm from the 1st to 13th inst. The details of the plan are kept confidential, but a rough idea of it is available from a Stockholm report.

As a first step, the industrial tariff of the "Seven" will be reduced by 20 per cent. on 1st July 1960, to catch up the six-nation Common Market lead; subsequently, the tariffs will be lowered and eventually eliminated over a ten-year period, the abolition being approximately parallel to, but somewhat faster than in the case of, the Six.

Quantitative restrictions on industrial products will be done away with, and rules will be laid down to ensure fair competition and to identify the origin of goods.

There will be a special agreement on agriculture, following bilateral talks between interested countries.

Fish and other marine products are to be treated separately from agriculture and proposals for a special agreement on them have been made.

The trading association will have no supra-national authority, but there will be a steering board and a small secretariat.

The plan has already been submitted to the Governments of the seven countries concerned. A ministerial meeting will be held at Stockholm by about the middle of next month to consider the report and decide on it. Whatever may be the final shape of the plan, renewed hopes are expressed—the plan itself clearly emphasises it—that the formation of the "Outer Seven Free Trade Area" will help promote negotiations for a wider European settlement within the O.E.E.C. framework. It is for the Common Market countries now to come forward with positive alternative proposals for such a settlement. This aspect was stressed by Mr. Reginald Maudling, the U.K. Paymaster-General at The Hague the other day. He said: "While there have been no dramatic developments, it is clear that the present situation throws a considerable strain on the O.E.E.C. and on European economic unity. There is a widespread feeling in the United Kingdom that our trade with our friends in the Netherlands and in the other countries of the Six is now seriously threatened. This is a development which must give cause for concern to all of us who believe in the cause of European unity."

Incidentally, Mr. Maudling alluded to the suggestion for negotiation between the U.K. and the Commonwealth and the C.M. He did admit that the Commonwealth had a great interest in trade with Europe and reiterated that the U.K. was hoping to see this trade develop and that the Commonwealth Governments were kept in close touch with all the negotiations. Nevertheless, he felt that the suggestion did not present any practical solution. In support of this view, Mr. Maudling said:

"The Commonwealth is a group of indepen-

TEXMACO MAINTAINS GOOD PROGRESS

OUTPUT AND SALES REACH NEW HIGH LEVELS

THE year ended 31st December 1958 has proved to be another period of expansion in production and sales for the Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Belgharia, 24-Paraganas, West Bengal). In terms of value, the Company's output rose by over Rs. 1 crore to cross, for the first time in its history, the Rs. 6-crore mark and its sales grew by Rs. 1.3 crore to a peak of Rs. 5.84 crores, thus maintaining the upward trend noted for some years past. The gross profit is over Rs. 1 crore for the second year in succession, to stand at Rs. 109.34 lakhs, which, however, is a shade lower than the record level of Rs. 110.61 lakhs touched in 1957. The drop in profit is, no doubt, insignificant, but it is in distinct contrast to the sustained increase noted in the past few years and is due to the sharp rise in the cost of raw materials and stores and spares consumed, as well as in other expenses.

The provision for depreciation has been reduced from Rs. 36.28 lakhs to Rs. 24.50 lakhs, but the saving on this account has been nearly offset by the increase in the provision for taxation from Rs. 30.51 lakhs to Rs. 41 lakhs (including a sum of Rs. 3 lakhs for wealth tax), so that the net profit, at Rs. 35.41 lakhs, is more or less the same as that for the previous year. There has been a slight cut in the addition to the reserves from Rs. 12 lakhs to Rs. 11.40 lakhs. While the transfer to the general reserve has been raised from Rs. 5 lakhs to Rs. 6 lakhs, the allocation to the development reserve is reduced from Rs. 7 lakhs to Rs. 4.90 lakhs. The dividend on ordinary shares is to be maintained at 15 per cent., to which level it had been stepped up last year from 12½ per cent. paid for 1956 and 10 per cent. for each of the two preceding years.

The salient features of the Company's financial results for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	5,83 84	4,53 36	3,68.47	2,34.27
Other income	6.65	10.77	7.92	3.14
Closing stocks	1,15 99	82.22	56 54	47.00
Raw materials consumed ..	1,94.78	1,35 48	96 53	66.41
Stores and spares consumed ..	1,76 41	1,23.19	1,17.02	77.95
Other expenses	1,43.74	1,20 53	93 87	63.72
Gross profit	1,09 34	1,10 61	78 97	68 21
Managing Agents' remuneration	8.43	8 09	6.58	4.55
Provision for—				
Depreciation	24.50	36 28	21.21	20 00
Taxation	41.00	30.51	20 00	11 00
Net profit	35.41	35.73	31.18	22 66
To reserves and provisions ..	11.40	12.00	11.00	15.14
Dividends—				
Preference	1.68	1.68	1.68	1.77
Ordinary	22 50 (15%)	22.50 (15%)	18.75 (12½%)	6 00 (10%)
Carry forward	0.37	0.54	0.99	1.23

As stated earlier, the rise of Rs. 1.30 crore in sale proceeds has been offset by an increase of over Rs. 59 lakhs in raw materials consumed, Rs. 53 lakhs in stores and spares consumed and of Rs. 23 lakhs in other expenses. The main items which have contributed to the rise in "other expenses" and the extent of their contributions are: (1) power and fuel, Rs. 2.22 lakhs; (2) salaries, wages and bonus, Rs. 8.94 lakhs; and (3) selling expenses, Rs. 4.39 lakhs.

The Company's activities vary from manufacture of textile machinery to production of railway wagons, sugar mill plant, water-tube boilers and loco boilers; besides, it has a steel foundry. Referring to the activities of these branches during the year under review and the prospects they hold for the future, the Directors observe:

"The cotton textile industry, which is finding it difficult to solve the problem of rehabilitation for shortage of funds, has a strong case for assistance from the N.I.D.C. in the form of credit facilities on an adequate scale. It is heartening to note that the Government has recently indicated that the N.I.D.C. has streamlined its procedure for extending credit facilities to needy industries. Besides, foreign manufacturers too have recently started extending facilities of deferred payment terms for purchase of machinery to most of the industries. In line with this trend, the Company has also decided to offer these facilities to cotton mills. Some of the leading banks have agreed to finance this deferred credit facility and we have been able to book a large number of orders for ring frames and carding engines on this basis during the latter part of the year under review. It is confidently hoped that this division will show improved results during the current year. Efforts to diversify production of cotton textile machinery have been actively pursued. The Company has completed a prototype each of the U.D. ring frame and drawing frame, while completion of a prototype of the Simplex frame is well under way. It is hoped that mass production of these machines would commence during the current year.

"The collaboration agreement with Messrs. H. W. Ward & Co., Ltd., for manufacture of Capstan lathes has been approved by the Government of India. We have already taken up the planning work in hand and expect to start manufacture of the indigenous components during this year.

"Wagon production was maintained at a satisfactory level. Production of metre-gauge coaching underframes has also commenced and is progressing satisfactorily. The Railway Board has placed an order for new BOX type wagons. Planning for this is already in an advanced stage and we expect to start production against this order by the latter part of this year. The manufacture of radial crest gates for the Panchet Hill Dam Project of the Damodar Valley Corporation has been completed and erection work at site is nearing completion. Work on the production of a complete sugar mill plant for Andhra Pradesh was maintained at a satisfactory level and this job too is nearing completion.

"Your Company has joined a sugar consortium consisting, besides itself, of Messrs. Walchandnagar Industries Ltd. and Indian Sugar and General Engineering Corporation Ltd. The consortium was sponsored at the suggestion of the Government of India for manufacture of complete sugar plants for co-operative sugar mills to be set up in various States. Negotiations for booking orders for the complete sugar mill plants are progressing and we hope to get a substantial share of such orders for our sugar mill machinery division. Execution of the order from the Bhilai steel project has been maintained at a satisfactory level and the order is nearing completion. Work on the water-tube boilers and YP.YG loco boilers has been taken up in hand and we hope to achieve a satisfactory level of production this year. A chronic difficulty which the industry has been facing is the overall shortage of steel in the country and this is affecting the timely execution of the various orders.

"The steel foundry division continued to maintain its output. The levy of the heavy electricity duty by the West Bengal Government has increased the cost of production to a considerable extent. It is to be hoped that the West Bengal Government would see its way to modify the levy for the benefit of steel furnaces.

"We have secured an order for 48 jute spinning frames from a leading jute mill. Supplies have already commenced and we hope to complete the order within this year."

The paid-up capital of the Company at Rs. 190 lakhs is supplemented by reserves and surplus amounting to Rs. 51.21 lakhs. In addition to the debenture loan of Rs. 40 lakhs (redeemable at the end of 1960), the borrowings from banks and other sources come to Rs. 68.33 lakhs. The Company has made substantial additions to the block account in the last few years. In consonance with this trend, it has added Rs. 36.91 lakhs to this account during the year under review, bringing the gross value of the block account to Rs. 390.33 lakhs. The depreciation provided so far is Rs. 171.91 lakhs, so that the net value stands at Rs. 218.42 lakhs. The current assets aggregate Rs. 531.80 lakhs, which more than adequately cover the current liabilities and provisions at Rs. 469.01 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 26 *cum-div.*, having risen from Rs. 22.12 at the beginning of the year and Rs. 18.80 a year ago. On the *ex-div.* basis, they give a yield of 6.1 per cent. per annum, free of income-tax.

(Concluded from next column)

including the implementation of various new manufacturing schemes. Stocks of imported goods-in-trade were maintained at an almost unchanged level. Replacement of these stocks is difficult, but the Company's future sales will comprise an increasing element of indigenously manufactured goods and the Directors are hopeful of the Company's ability to maintain sales at a satisfactory level."

The Directors have decided to increase the Company's paid-up capital further to Rs. 95 lakhs by an issue of 200,000 equity shares of Rs. 10 each at par. The new shares will be offered to the existing shareholders in the ratio of one share for every three shares. Consent for this issue has already been obtained from the Controller of Capital Issues. It is expected that the notice of offer of right shares to the existing shareholders will be sent out early in August this year.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 22.60 *cum-div.* *ex-right*, as against Rs. 16.40 at the beginning of the year and Rs. 16.56 a year ago. On an *ex-div.* basis they offer a yield of 5.85 per cent. per annum, free of income-tax.

LARSEN AND TOUBRO FARES WELL

RECORD PROFIT REPORTED

NOTWITHSTANDING a substantial fall in sales of imported machinery due to foreign exchange difficulties, the profit of Larsen and Toubro Limited (Managing Agents: L. & T. Management Private Ltd., Bombay) for the year ended 31st March 1959 has recorded an impressive rise. The gross profit has gone up from Rs. 27.98 lakhs earned in 1957-58 to a fresh record high of Rs. 36.06 lakhs. This has been due to larger income from the Company's manufacturing and servicing activities and the substantial saving on purchases of imported goods. With this rise, the Company's gross profit has nearly doubled itself within a short period of three years, that is, from Rs. 18.48 lakhs in 1955-56 to Rs. 36.06 lakhs.

The net profit, too, has improved from Rs. 9.83 lakhs to Rs. 11.26 lakhs, but the rise is much less than that noted in the previous year. This is explained by the larger statutory provisions for depreciation and taxation, the former having been stepped up from Rs. 3.73 lakhs to Rs. 5.10 lakhs and the latter from Rs. 12 lakhs to Rs. 16.60 lakhs. It will be interesting to note here that, while the gross profit of the Company has increased by a little over 95 per cent. in three years, the provision for tax liability has gone up by 150 per cent. After writing back Rs. 36,764 being the excess provision for taxes made in previous years, the Directors have maintained the transfer to dividend equalisation reserve at Rs. 1 lakh and that to the general reserve at Rs. 2 lakhs. They have also added Rs. 97,780 to the development rebate, as against Rs. 68,511 a year ago and have set aside Rs. 32,093 (*nil*) to the bad and doubtful debts reserve. The dividend on ordinary shares is being maintained at 12½ per cent., to which level it had been raised last year from 10 per cent. It is, however, on a higher capital raised in December 1958 by a rights issue of 100,000 shares of Rs. 10 each. The new shares are entitled to the dividend for a period of four months ended March 1959.

The following comparative table shows the Company's progress since 1956:

(In lakhs of rupees)

	For the year ended 31st March			
	1959	1958	1957	1956
Proceeds of sales, servicing, etc.	2,78.25	3,03.29	3,27.14	2,79.96
Other income	13 33	12.81	13.45	11.63
Gross profit	2,55.53	3,78.12	4,04.73	3,15.64
Managing Agents' commission	36.06	27.98	19.80	18.48
Provision for—	3.10	2.42	1.80	1.62
Depreciation	5.10	3.73	2.58	2.25
Taxation	16.60	12.00	9 40	6.03
Net profit	11.26	9 83	5.99	7.98
Excess provisions written back	0.57	2.20	1.12	1.50
Expenses of the previous years written off	..	1.83	0.07	1.07
To reserves	4.30	3.68	1.58	4.00
Dividends—				
5 per cent. preference ..	0.75	0 75	0.75	0 75
Ordinary	6 67 (12½%)	5.78 (12½%)	4.12 (10%)	3 62 (10%)
Carry forward	0.37	0.29	0.27	0.29

The Company's sales have dwindled from the record level of Rs. 376.03 lakhs to Rs. 261.37 lakhs and contract charges from Rs. 11.15 lakhs to Rs. 3.90 lakhs, while servicing and service charges have more than doubled themselves from Rs. 6.11 lakhs to Rs. 12.98 lakhs. Purchases of trading goods show a fall from Rs. 201.32 lakhs to Rs. 150.92 lakhs.

With the issue of right shares in December last, the Company's paid-up capital stands raised to Rs. 75 lakhs. This is supplemented by reserves and surplus aggregating Rs. 19.36 lakhs. There has been an addition of Rs. 13.82 lakhs to the gross block during the year. This is on top of a capital expenditure of Rs. 12.10 lakhs in 1957-58 and of Rs. 8.11 lakhs in 1956-57, bringing the aggregate value upto the end of the year under review to Rs. 56.44 lakhs. This has been written down to Rs. 32.03 lakhs. The current assets amounting to Rs. 238.51 lakhs exceed the current liabilities and provisions by a large margin of Rs. 62.15 lakhs.

Though the Company's business in imported goods has been affected by foreign exchange difficulties, it is gratifying to note from the Directors' latest report that the output from the Company's workshops at Powai is steadily increasing. The workshops, according to them, have substantial orders under execution and are being worked to full capacity. They add: "Further expansion of the manufacturing facilities at Powai is in progress, so as to take care of the increasing demands on the workshops,

(Continued in previous column)

PROFIT OF SEN-RALEIGH DWINDLES

COMPANY TO BORROW MORE FROM I.F.C.

THE serious foreign exchange shortage has affected many an industry dependent upon imported raw materials or spare parts. The cycle manufacturing industry is one of them. A typical example is provided by the Sen-Raleigh Industries of India Ltd., Calcutta. During the year ended 30th September 1958, the Company's production was of an intermittent nature, owing to irregular and inadequate supply of raw materials. This, coupled with the higher labour and overheads due to sporadic working and the cost of heavy borrowings to finance the expansion plans on hand, has meant lower earnings, the gross profit having fallen from the record high of Rs. 23.17 lakhs earned in 1956-57 to Rs. 19.57 lakhs in the year under review. This is the first time after the Company commenced its manufacturing activity that the profit has taken a downward trend.

The net profit, too, has suffered a setback from Rs. 15.28 lakhs to Rs. 10.66 lakhs, the lowest level since 1953-54, after raising the provision for depreciation from Rs. 7.26 lakhs to Rs. 8.29 lakhs. No provision has been made for income-tax, such being not considered necessary as yet. As in the previous two years, the wealth tax liability has been provided for. The transfer to reserves for repayment of loan has been raised from Rs. 2 lakhs to Rs. 2.75 lakhs. The dividend on ordinary shares is being maintained at 6 per cent. per annum, free of income-tax.

The progress of the Company's working since 1954-55 is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	2,12.85	1,96.58	1,65.77	1,13.60
Closing stocks	34.41	30.12	23.62	17.45
Raw materials consumed ..	1,10.23	1,10.49	1,02.73	81.03
Other expenses	70.12	61.16	50.52	28.09
Gross profit	19.57	23.17	21.12	16.75

5 per cent. preference ..	1.50	1.46	1.27	1.15
Ordinary	4 20 (6%)	4.06 (6%)	3.45 (6%)	3.13 (4%)
Carry forward	0.43	0.06	0.29	0.21

The demand for the Company's products is said to continue unabated. The slight increase in sales is again mainly accounted for by component parts, which, however, "left practically no margin to the Company in this period, as the component prices were rationalised only towards the close of the year." Explaining the difficulty which the Company had to undergo due to shortage of raw materials and its plans to overcome it, the Directors observe in their latest report:

"When the raw material problem arose during the year, plans for the expansion had already reached the stage where it was not possible to defer them and, as part of the scheme was to replace import of components by production of new items, your Directors considered it advisable to arrange finance for the expansion through further borrowing in the expectation that the difficulty was temporary and would be overcome in the near future. An application has already been preferred to the Industrial Finance Corporation for a further loan of Rs. 30 lakhs.

"To recover its position, the Company would need to concentrate on added bicycle production using indigenous raw materials wherever possible and on an increase in its production of friction parts, as the Government policy for import licensing in the bicycle industry now allows imports of raw materials to feed the plant at the level of 1957 production for all products and, only in the case of friction parts, is material released for full installed capacity.

"Steps have already been taken by the Company to locate indigenous sources for supply of suitable steel and other materials to augment imports and whilst deliveries are long and not always steady, these supplies are now helping to record some increases in production. The ancillary industries sponsored by the Company also began deliveries in 1938 and all but one are now regular suppliers. All these arrangements have allowed the Company to bring its component import down to below Rs. 2.00 per bicycle."

The Company has, according to the Directors, not yet fully overcome the effects of disruption in production. In fact, there are still periodic failures in supply. Production is, however, showing a "healthy upward trend in all sections of the factory and, if the raw material position improves, the Company is well set to implement the expansion fully."

The Company's balance-sheet as on 30th September 1958 shows that it is somewhat heavily indebted to banks and the I.F.C. and that its current expansion programme is being financed mainly by borrowings. During the year under review, the Company had made an additional capital expenditure to the tune of Rs. 76.89 lakhs. This is on top of a sum of Rs. 29.24 lakhs spent in 1956-57. In addition to increasing its borrowings (all secured) from Rs. 93.70 lakhs to Rs. 114.41 lakhs, the Company has, as stated already, applied for a loan of Rs. 30 lakhs from the I.F.C. The gross value of the block account is Rs. 233.89 lakhs and the book value Rs. 191.23 lakhs, the depreciation provided being no more than Rs. 42.66 lakhs. The current assets aggregate Rs. 144.95 lakhs, as against which the total current liabilities and provisions (including secured loans mentioned above) amount to Rs. 212.66 lakhs. The paid-up capital is unchanged at Rs. 1 crore and is supplemented by reserves and surplus amounting to Rs. 23.52 lakhs.

The Company's Rs. 10 fully paid-up shares have long been stagnant at Rs. 17.48, but this price includes now a dividend of 60 nP for the year 1957-58. On an *ex-div.* basis, the yield on the shares works out to 3.5 per cent. per annum, free of income-tax.

TRAVANCORE OGALE GLASS MANUFACTURING COMPANY, LTD.

SPEECH OF MR. S. C. KARAYALAR

THE Annual General Meeting of the Travancore Ogale Glass Manufacturing Company, Ltd., was held at Manjummel, Alwaye, on 12th June 1959. In the absence of Mr. S. Chattanatha Karayalar, M.P., Chairman of the Company, his speech was read by Mr. K. V. Mathew, Director, who presided over the meeting. The following are extracts from Mr. Chattanatha Karayalar's speech:

"For private enterprises such as ours, it is the profits we make and the dividends the shareholders receive which determine whether or not the Company's working is successful and attract capital so very necessary for the development and expansion of the industry.

"There is ever rising demand for capital all over. Demand for capital arises not only on account of the basic expenditure but also for the ancillary expenditure, such as the provision for labour welfare, safety and hygiene, transport, elaborate office machinery to cope with the increasing controls, regulations and taxes by the Government that is taking a larger and larger share of the total expenditure.

"In the Welfare State today, much emphasis is being placed on security for the individual, for his sickness, old age, even idleness, but for those who invest, there is no security and the return on the capital invested is hardly attractive. The industries have to depend more and more on institutional finance which is claiming its full share of high interest rate. If private investment is to be encouraged and the flow of risk capital increased, I think it worthwhile repeating my suggestion made last year that it is time that a minimum dividend is assured and allowed as a revenue expenditure before arriving at the distributable profit.

"In these days of scarcity and high prices of essential materials, it is of utmost importance that maximum good use is made of the available resources and no wastage is tolerated in any form. In other words, every effort should be made to maintain productivity at the highest level. It is a national duty. I am glad to observe that there are signs of awareness on the part of labour that production is important and their prosperity is linked with that of industry.

"I wish to reiterate that it is the national economic policy to improve the standard of living of the people steadily and this can be achieved only by maximising production of goods, particularly industrial production. This should be the endeavour of the nation as a whole and the major burden falls on the industrial workers who have to put their shoulders to the wheel and strain every nerve to achieve positive results. I am happy that there is growing awareness of this responsibility on all sides and that this will be reflected in all-round production in the coming years."

COMPANY MEETINGS AND DIVIDENDS

SAMASTIPUR CENTRAL SUGAR CO., LTD. Annual General Meeting, Calcutta, 29th June 1959. Dividend: Re. 0.25 per share. Transfer books remain closed from 22nd to 29th June 1959, both days inclusive.

BENGAL-NAGPUR COAL COMPANY, LTD. Annual General Meeting, Calcutta, 2nd July 1959. Dividend: *Nil*. Transfer books remain closed from 22nd June to 2nd July 1959, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 3rd July 1959. Dividend: *Nil*. Transfer books remain closed from 24th June to 3rd July 1959, both days inclusive.

BENGAL ASSAM STEAMSHIP COMPANY, LTD. Annual General Meeting, Calcutta, 7th July 1959. Dividend: Rs. 6.00 per share. Transfer books remain closed from 24th June to 7th July 1959, both days inclusive.

RADIO AND ELECTRICALS LTD. Annual General Meeting, Madras, 10th July 1959. Dividend: 7½ per cent. or Re. 0.37½ per share. Transfer books remain closed from 27th June to 10th July 1959, both days inclusive.

TRAVANCORE CEMENTS LTD. Annual General Meeting, Kottayam, Kerala State, 10th July 1959. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books remain closed from 20th June to 10th July 1959, both days inclusive.

JAGATJIT COTTON TEXTILES LTD. Annual General Meeting, Calcutta, 10th July 1959. Transfer books will remain closed from 29th June to 10th July 1959, both days inclusive.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: Rs. 5.00 per ordinary share and Rs. 5.00 per "B" ordinary share. Transfer books will remain closed from 1st to 10th July 1959, both days inclusive.

KANKNARRAH CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: *Nil*. Transfer books will remain closed from 6th to 10th July 1959, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 10th July 1959. Dividend: Rs. 18.00 per share (includes bonus), payable on and after 11th July 1959. Transfer books remain closed from 23rd June to 10th July 1959, both days inclusive.

HERCULES INSURANCE COMPANY, LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: Rs. 2.00 per share. Transfer books will remain closed from 1st to 10th July 1959, both days inclusive.

SHREE SHAKTI MILLS LTD. Annual General Meeting, Bombay, 11th July 1959. Dividend: Rs. 6.00 per share (includes interim dividend of Rs. 5.00 per share). The final dividend is payable on or after the 13th July 1959. Transfer books remain closed from 23rd June to 11th July 1959, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 16th July 1959. Dividend: 17½ per cent. free of tax (includes interim dividend 6¼ per cent.). Transfer books will remain closed from 1st to 16th July 1959, both days inclusive.

AMAR DYE-CHEM LTD. Annual General Meeting, Bombay, 16th July 1959. Dividend: *Nil*. Transfer books will remain closed from 1st to 16th July 1959, both days inclusive.

SRI RAMAKRISHNA MILLS (COIMBATORE) LTD. Annual General Meeting, Ganapathy, Coimbatore, 16th July 1959. Dividend: 16 per cent. or Rs. 16.00 per share. Transfer books will remain closed from 3rd to 16th July 1959, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 20th July 1959. Dividend: Re. 1.25 per share, payable on or after 27th July 1959. Transfer books remain closed from 19th June to 16th July 1959, both days inclusive.

TESTEELS LTD. Annual General Meeting, Bombay, 20th July 1959. Transfer books will remain closed from 10th to 30th July 1959, both days inclusive.

EAGLE ROLLING MILLS LTD. Annual General Meeting, Calcutta, 25th July 1959. Transfer books will remain closed from 14th to 25th July 1959, both days inclusive.

COORG TEA CO., LTD. Dividend of 20 per cent. or Re. 0.40 per share, for the year ended 31st March 1959. Transfer books will remain closed from 15th to 25th July 1959, both days inclusive.

METTUR INDUSTRIES LTD. Dividend of 25 per cent. or Rs. 25.00 per share, for the year ended 31st March 1959. Transfer books remain closed from 27th June to 15th July 1959, both days inclusive.

BENGAL JUTE MILLS CO., LTD. Dividend of Re. 0.50 per share, for the year ended 30th June 1958.

RELIANCE FIREBRICK AND POTTERY COMPANY, LTD. Dividend of Rs. 4.00 per share, for the year ended 28th February 1958.

COMPANY REGISTRATIONS

TRADE FIELD PRIVATE LTD. (First Director: Mr. B. A. Bachooalli). Business: Common agents and indentors. Authorised capital: Rs. 5,00 000. Private company. Address: 125, Kalyan Building, Sardar Vallabhbhai Patel Road, Bombay.

JAYA KRISHNA PRIVATE LTD. (First Director: Shrimati Jayabhai Laxmidas Khatau.) Business: Importers and exporters. Authorised capital: Rs. 5,00.000. Private company. Address: 6, Laxmi Buildings, Ballard Road, Bombay.

SYNOPSES OF COMPANY REPORTS

Radio and Electricals Ltd.

THE directors of the above Company (Managing Director: Mr. A. V. Raghava Rao, Madras) present the audited accounts of the Company for the year ended 31st December 1958.

The working of the Company for the year after providing a sum of Rs. 59,641 (Rs. 67,458) towards depreciation and Rs. 16,000 (Rs. 30,000) for bonus to employees and after setting aside a sum of Rs. 76,405 (Rs. 96,426) towards taxation, resulted in a net profit of Rs. 84,896 (Rs. 1,42,426) to which has been added a sum of Rs. 13,768 (Rs. 27,840) brought forward from 1957 which sum includes of Rs. 3,499 (Rs. 5,695) being excess provision of bonus for 1957 making a total of Rs. 98,664 (Rs. 1,70,266). The directors propose to transfer a sum of Rs. 25,000 (*nil*) from the general reserve to the profit and loss accounts and make the following appropriations:

To reserve for development rebate Rs. 8,606 (Rs. 25,000 to general reserve), to pay a dividend of 7½ (9) per cent. free of income-tax absorbing Rs. 1,12,500 (Rs. 1,34,997) and to carry forward the balance of Rs. 2,558 (Rs. 10,269).

During the year under review there has been a fall in the total sales of transformers and air break switches. This is mainly due to the large number of manufacturers in the field and the resulting keen competition. For want of firm orders and due to paucity of raw materials, the directors have been forced to close down the air break switch department with effect from 1st May 1959.

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1958.

The accounts, after charging all expenses, show a profit of Rs. 4,73,540 (Rs. 47,367), of which taxation provision requires Rs. 2,80,000 (*nil*). The balance brought forward from last year was Rs. 36,387 (Rs. 1,10,020), making a total available for distribution of Rs. 2,29,927 (Rs. 1,57,387). The directors now recommend payment of dividends on preference shares at 7 per cent. per annum absorbing Rs. 21,000 (Rs. 21,000) and on ordinary shares at Rs. 6 (Rs. 5) per share absorbing Rs. 1,20,000 (Rs. 1,00,000) leaving a balance to be carried forward of Rs. 88,927 (Rs. 36,387).

The amount of jute exported to India from Pakistan was again less than in previous years, and the Company's income from this source suffered accordingly. During the year 67,068 tons of coal were carried from Calcutta to East Pakistan, a tonnage slightly less than that carried in 1957. For the first time in the history of the Company, however, freight income was supplemented by earnings on cargo carried to and from Assam with the result that gross freight receipts were higher than in 1957.

At the time of the directors' report last year, the first flotilla was loading cargo for Assam. Since then a number of flotillas have travelled to Assam and back; the venture has been successful and the Company's entry into the Assam trade is established. For operational purposes the Company is acting in conjunction with the Indian Shipping Co., Ltd., so far as Assam is concerned; by this combined operation, it is possible for both Companies to provide shippers with a better service than would otherwise be the case. Assam traffic will become the main business of the Company, but it is necessary to comment that the lower river levels in Assam affect the rate of turn round of the fleet. The next few years are bound to be difficult for the Company as the Assam trade route is highly competitive.

Accounts in brief are as under:—

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit, after charging all expenses, of Rs. 33,306. The debit balance brought forward from the previous year was Rs. 1,39,041 leaving a debit balance to be carried forward of Rs. 1,05,735.

Raisings from the 15 seam quarry during the year amounted to 5,592 tons and despatches totalled 5,329 tons. Raisings from this quarry have increased since the period under review. Preparations for stowing in No. 10 seam are continuing, although there has been some difficulty in obtaining *import licences for the limited items of plant* which have to be imported.

Permission having been received to work 5, 6 and 7 seams in the rise area of the Bhuggutdih property, a start has been made with this project and it is hoped that raisings will be at a material level by the end of the current year.

Accounts in brief are as under:—

*Reserves are shown after deducting *Rs. 1,05,735 being* the debit balance in the profit and loss account.

Travancore Cements Ltd.

The directors of the above Company (Managing Agents: Essel Private Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts for the year 1958 show a profit of Rs. 5,83,192 (Rs. 5,18,136) to which has to be added the amount brought forward from 1957 of Rs. 3,24,681 (Rs. 7,08,101) making a total of Rs. 9,07,873 (Rs. 12,26,237). From this amount the directors have transferred to reserve for taxation Rs. 3,00,000 (Rs. 6,01,556) and to reserve for contingencies Rs. 40,000 (*nil*) leaving an available balance of Rs. 5,67,873 (Rs. 6,24,681). The directors now recommend the payment of a dividend at 6 (6) per cent. per annum (free of income-tax) for the year 1958 which will absorb Rs. 3,00,000 (Rs. 3,00,000) leaving to be carried forward to next year Rs. 2,67,873 (Rs. 3,24,681).

In their last report the directors had stated that the matter of fixing fair price of cement was before the Tariff Commission appointed by the Government of India. The directors are glad to inform that on the recommendations of the Tariff Commission, the Government of India have fixed the ex-works price as Rs. 80.50 per ton loose with *effect from 1st July 1958*, which is Rs. 7.50 per ton more than the previous rate. This new rate will be in force for three years.

White Cement Scheme.—All the erection works of the white cement plant have been completed and trial runs have been started on 5th May 1959. The regular commercial production of white cement will be started within about a fortnight.

Accounts in brief are as under:—

Shree Shakti Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year [after providing for bonus Rs. 2,50,000, managing agents' commission Rs. 54,613 (Rs. 6,223) and depreciation Rs. 10,00,000 (Rs. 4,00,000)] amounts to Rs. 1,89,473 (Rs. 3,91,710) to which is added the balance brought forward from last year of Rs. 4,548 (Rs. 7,256), making a total of Rs. 1,94,021 (Rs. 3,98,966). Deducting therefrom the amount transferred to development rebate reserve of Rs. 40,000 (*nil*), provision for wealth tax Rs. 15,000 *(nil) and shortfall in additional amount* paid to preference shareholders for the year 1956 Rs. 6,144 (Rs. 27,591) there is a balance to be carried forward to next year of Rs. 1,32,877 (Rs. 4,548 after transferring Rs. 2,16,827 to investment reserve fund and after paying a dividend of Rs. 6.00 per ordinary share absorbing Rs. 90,000 and Rs. 60,000 as dividend on preference shares). A sum of Rs. 75,000 (free of income-tax) has been paid as interim dividend for the year 1958 on ordinary shares, and a sum of Rs. 30,000 has been paid as interim dividend on 6 per cent. (free of income-tax) redeemable cumulative preference shares out of taxed profits of the past years by drawing a sum of Rs. 1,05,000 from the reserve fund. The directors recommend payment of the following dividends for the year ended 31st December 1958, out of the taxed profits of the past years credited to reserve fund.

Final dividend on 10,000 6 per cent. (free of income-tax) redeemable cumulative preference shares at Rs. 3 per share, free of income-tax absorbing Rs. 30,000 and final dividend on 15,000 ordinary shares at Re. 1 per share [making a total of Rs. 6 (Rs. 6) per share for the year] free of income-tax absorbing Rs. 15,000.

The directors have transferred a sum of Rs. 50,000 from the dividend equalisation fund and *a sum of Rs. 40,000* from provision for taxation to the preference shares dividend equalisation fund, which makes a total of Rs. 1,20,000 to the credit of the *preference shares dividend equalisation* fund.

Considering the trend of the working results of the art silk industry in general, the directors consider the working of the Company during the year under review as satisfactory.

Calcutta Gas Co., (Proprietary) Ltd.

The directors of the above Company (Secretaries: Messrs. Soorajmull Nagarmull, Calcutta) submit the audited accounts of the Company for the year ended the 30th September 1958.

The accounts show a profit of Rs. 8,71,003 (Rs. 8,11,251) which together with a sum of Rs. 36,656 (Rs. 33,430) brought forward from the last year gives a profit of Rs. 9,07,659 (Rs. 8,44,681). A sum of Rs. 5,87,658 being the dividend pertaining to the Company from the subsidiary Company for the year ending 30th June 1957 (free of tax) on the holding of shares has been taken credit of in the accounts of the Company. A sum of Rs. 3,18,000 (Rs. 3,59,000) for taxation and Rs. 6,000 (Rs. 11,000) for wealth tax have been provided in the accounts leaving a profit of Rs. 5,83,660 (Rs. 4,74,681) which the directors recommend to be disbursed as follows:—

To payment of a dividend on 30,000 (taxable) redeemable preference shares for the year ended 30th September 1958 at 5½ per cent. (less income-tax) absorbing Rs. 1,13,025 (Rs. 1,13,025), to payment of a dividend at 5 (5) per cent. on 6,50,000 "A" and "B" ordinary shares for the year ended 30th September 1958 (free of tax) absorbing Rs. 3,25,000 (Rs. 3,25,000), to write off brokerage and commission *Rs. 50,000 (nil)* and to carry forward Rs. 95,635 (Rs. 36,656).

Accounts in brief are as under:—

Coimbatore Pioneer Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. T. R. Narayanaswamy Naidu & Co., Coimbatore) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working has resulted in a profit of Rs. 10,88,679 (Rs. 7,64,785) after providing Rs. 1,41,775 (Rs. 1,28,450) for development rebate on the new machineries erected and commissioned to work during the year, and writing off the normal and shift depreciation at income-tax rates amounting to Rs. 5,05,293 (Rs. 8,78,869). During the year under report the company has paid the balance of four months bonus payable to employees as per the award of the Industrial Tribunal for the year 1956, and also five months bonus to the employees for the year 1957. The aggregate of bonuses paid during the year amounts to Rs. 3,93,207. Adding to the net profit, the balance of Rs. 599 (Rs. 13,314) brought forward from the previous year a sum of Rs. 10,89,279 (Rs. 10,98,099 after including Rs. 3,20,000 transferred from contingency reserve) is available for disposal which the directors recommend to be disposed of as under:

To proposed provision for taxes Rs. 6,75,000 *(Rs. 5,76,000)*, 6½ per cent. (tax free) dividend on cumulative preference shares Rs. 6,500 *(Rs. 6,500)*, proposed dividend on equity shares tax free at 20 (20) per cent. Rs. 4,00,000 (Rs. 4,00,000) and balance to be carried forward to the next year Rs. 7,779 (Rs. 599 after providing Rs. 1,00,000 to contingency reserve and Rs. 15,000 for donation to political party fund).

The mill at Peelamedu has worked in multiple shifts for 304 days with an installed capacity of 27,226 ring spindles spinning 40s, 60s, 80s, and 100s yarn. The existing old spindles are being changed over with A-500 casablancas High Draft System.

The 'B' Mills at Perianaickenpalayam has worked in double shift for 304 days with an installed capacity of 11,880 ring spindles spinning 20s and 26s cotton and staple fibre yarn. The construction of reeling shed—*Creche—Canteen—Compound* wall is to be taken up during this year.

During the year under report, there was power-cut between the months January 1958 to end of June 1958 ranging from 25 per cent. to 75 per cent. The generators installed in the mills were fully used during the said period to supplement hydro-current.

There were fluctuations in the cotton and yarn markets during the year, and the Company had also its share of difficulties in the movement of yarn. Due to introduction of allotment system for the import of foreign cotton, required quantity of foreign cotton was not allotted by the Government and as such the Company had to purchase Indian cotton for spinning 40s and 60s counts of yarn at Peelamedu Mills.

The directors are glad to report that in the circumstances, the profit earned by the Company have been satisfactory. The relations with the labour have been very cordial throughout the year.

Accounts in brief are as under:—

Ahmadpur-Katwa Railway Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1958.

Capital.—The total capital outlay on final heads remains the same as at the close of the previous year, viz., Rs. 20,64,730. The capital subscribed by the shareholders, amounts to Rs. 17,24,000 and the gross capital outlay, inclusive of suspense heads to Rs. 20,65,116, the balance being met by means of temporary loans from the Government of India and also from revenue account.

Revenue.—The gross earnings for the year amounted to Rs. 5,73,995 while the working expenses totalled Rs. 6,27,739 as compared with Rs. 5,52,308 and Rs. 5,20,877 respectively for the previous year. The net loss of Rs. 53,744 have been carried to net revenue account. Under this account after including shares transfer fees and allowing interest payable on the loan from Government and other charges there is a deficit of Rs. 64,479 which together with the amount required for guaranteed interest at 3½ per cent. per annum on share capital calls for a total subsidy of Rs. 1,24,819 in terms of the Agreement with the Government of India. Thus after meeting the deficit from the Government subsidy the net profit comes to Rs. 60,340, but after providing Rs. 35,575 for taxation (which includes wealth tax of Rs. 4,500) a balance of Rs. 24,765 only is available. The directors therefore recommend payment of a dividend at the rate of Rs. 2.25 nP per cent. per annum (less income-tax) which will require Rs. 26,571 the deficit of Rs. 1,806 being met from reserve.

Working Expenses.—Compared with the previous year the total working expense show a net increase of Rs. 1,06,862 which is *mainly* due to repairs to flood damaged bridges, increased cost of stores, renewal of sleepers, higher cost and consumption of coal, as also loss on foodstuff.

Coaching.—The receipts under this head amounted to Rs. 4,55,567 for the carriage of 10,41,647 passengers as compared with Rs. 4,30,081 and 9,65,598 passengers for the previous year.

Goods.—Earnings form this source totalled Rs. 1,13,828 for 9,33,828 maunds of goods as against Rs. 1,01,948 for 8,42,066 maunds for the previous year.

Accounts in brief are as under:—

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit, after charging all expenses, of Rs. 3,40,607 (Rs. 3,15,988) of which taxation provision requires Rs. 2,10,000 (Rs. 2,10,000) leaving a balance of Rs. 1,30,607 (Rs. 1,05,988). With the balance brought forward from last year of Rs. 48,188 (Rs. 52,200) there is a total amount available for appropriation of Rs. 1,78,795 (Rs. 1,58,188). The directors have transferred to *development rebate reserve* Rs. 2,526 *(nil)*, to capital reserve Rs. 12,318 (nil) and to general reserve Rs. 30,000 (Rs. 20,000) leaving a balance of Rs. 1,33,951 (Rs. 1,38,188). The following interim dividends were paid on 24th November 1958: At Rs. 2.50 per preference share absorbing Rs. 10,000 (Rs. 10,000) and at Re. 0.75 (Re. 0.75) per ordinary share absorbing Rs. 30,000 (Rs. 30,000). The directors now recommend payment of final dividends at Rs. 2.50 per preference share absorbing Rs. 10,000 (Rs. 10,000) and at Re. 1.00 (Re. 1.00) per ordinary share absorbing Rs. 40,000 (Rs. 40,000) leaving a balance to be carried forward of Rs. 43,951 (Rs. 48,188).

Wealth tax in respect of the year ended 31st December 1958, is estimated to amount to Rs. 6,500, and this has been provided for by transfer from capital reserve.

Raisings for the year were 77,909 tons as compared with 78,937 tons in the previous year, whilst despatches totalled 80,894 tons as against 76,326 tons.

Raipur Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Lalbhai Dalpatbhai & Co., Ahmedabad) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year [after providing Rs. 8,74,910 (Rs. 7,87,018) for depreciation and statutory development rebate reserve and Rs. 12,00,000 (Rs. *9,26,000*) for tax provision] amounts to Rs. 96,394 (Rs. 30,910).

To this is added last year's balance brought forward of Rs. 105 (Rs. 1,77,073) and amount transferred from reserve fund of Rs. 6,84,825 (Rs. 2,90,584) making a total of Rs. 7,81,324 (Rs. 7,30,930 including Rs. 1,30,000 transferred from dividend equalisation fund; Rs. 1,00,000 transferred from contingency fund and Rs. 2,363 being surplus from preference dividend account). The interim dividend on the 30,000 (20,000) ordinary shares for the year 1958 at Rs. 12.50 (Rs. 12.50) absorbed Rs. 3,75,000 (Rs. 2,50,000) leaving a balance of Rs. 4,06,324 (Rs. 4,80,930). The directors recommend the payment of a final dividend of Rs. 12.50 (Rs. 22.50 including bonus of Rs. 10.00 per share) per ordinary share, income-tax free, on 30,000 *(20,000)* ordinary shares for the year ended 31st December 1958 absorbing Rs. 3,75,000 (Rs. 4,50,000), to the payment of a dividend on 5,000 4½ per cent. cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 15,412 (Rs. 15,412) and to the payment of a dividend on 5,000 4½ per cent. 'B' class redeemable cumulative preference shares for the year ended 31st December 1958 (less income-tax) absorbing Rs. 15,413 (Rs. 15,413) leaving to be carried forward to next year's account Rs. 499 (Rs. 105).

During the year under review, the one factor which has contributed for satisfactory results is cheaper cotton. If this factor had not so operated, *the results would not have been as favourable* because of a steep rise in the wages and the prices of stores and chemicals.

The country has been passing through difficult times particularly in reference to the availability of the foreign exchange, with the result that foreign cotton has been scarce and the Company was forced to rely on Indian cotton in order to keep the mills working.

The installed capacity of the mills is 31,120 ring spindles, 1,708 doubling spindles and 640 looms with complete dyeing and bleaching plants.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	1,21,92,433
Reserves ...	96,05,783	*Less*—Depreciation ...	71,71,030
Provision for taxation ...	34,54,258		
Liabilities ...	59,00,524	Net block ...	50,21,403
Profit and loss account ...	499	Stock-in-trade	62,95,357
		Stores, etc. ...	11,31,342
		Debts, deposits and advances ...	54,20,291
		Investments	49,51,115
		Cash ...	1,41,556
Rs.	2,29,61,064	Rs.	2,29,61,064

N.B.—Figures within brackets relate to the corresponding period of the previous year.

PUBLIC AUCTION

THE MACHINERY OF THE PATIALA Banaspati and Allied Products Company Limited (In Liquidation) will be auctioned on the 13th August 1959 at 10 a.m. at Doraha. The Terms and Conditions are as follows:

1. Reserve Price Rs. 2 lacs.
2. Sale will be subject to the confirmation of the High Court.
3. 25 per cent. of the bid will have to be deposited immediately on the fall of the hammer and the balance of 75 per cent. will have to be paid within one month of the communication of the sanction by the High Court. On failure to pay the balance amount within the time prescribed the deposit of 25 per cent. will be forfeited.
4. The purchaser shall remove the machinery, etc., within the three months of the confirmation of the sale by the High Court at his own cost. In default the purchaser shall have to pay Rs. 300 per mensem on account of rent and other expenses for the period he does not remove the machinery.

The machinery can be inspected by the intending purchasers at Doraha at their own expense.

BANK OF PATIALA,
Official Liquidators of the Patiala Banaspati & Allied Products Company Limited (In Liquidation), Patiala.

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 13th July, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th June, 1959 to 13th July, 1959, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *17th June*, 1959.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE MYSORE SPINNING AND MANUFACTURING COMPANY LIMITED

NOTICE

THE TRANSFER BOOK OF THE ABOVE Company will remain closed from Saturday the 18th July 1959 to Friday the 24th July 1959 (both days inclusive), in connection with the issue of 9,934 Ordinary Shares of Rs. 50 each at par to those Shareholders whose names stand on the Register of Members of the Company on the 18th July 1959 in the proportion of one such Ordinary Share for every five Ordinary Shares held by them as on that date.

By Order of the Board,
N. SIRUR & Co. PRIVATE LTD.,
Managing Agents,
N. D. SIRUR,
Managing Director.

TEMPLE BAR BUILDING,
70, FORBES STREET, FORT,
BOMBAY, *16th June* 1959.

NATIONAL RAYON CORPORATION LIMITED

TWELFTH ANNUAL GENERAL MEETING

SPEECH OF THE CHAIRMAN, MR. KASTURBHAI LALBHAI

THE view that there is considerable scope for expansion of rayon industry and that this can be achieved in the shortest possible time by permitting the existing plants to expand was expressed by Mr. Kasturbhai Lalbhai, Chairman of the National Rayon Corporation Ltd., while addressing the Twelfth Annual General Meeting of the Company held at Bombay on Thursday, 25th June, 1959. In support of this view, the Chairman pointed to the continuing increase in the demand for rayon yarn, as a result of curtailment of imports and improvement in *per capita* consumption of rayon fabrics following the rise in population. He felt that the domestic demand for rayon yarn would be substantially higher by the end of the third Five-year Plan.

The full text of the Chairman's speech is reproduced below.

"GENTLEMEN,

"I have great pleasure in welcoming you this afternoon and presenting to you for adoption the twelfth Directors' report and the audited statements of accounts for the year ended 31st December 1958. I do not think you would wish these read as they have been in your hands for quite some time now.

"The amount of Rs. 44,63,247 stated as available for appropriation in the Directors' report has to be increased by a sum of Rs. 5,70,901 as already explained to you in the circular letter dated 22nd May 1959. The circumstances under which this additional sum has become available for appropriation have also been explained and I do not think I need cover the ground again. I believe the amended recommendations will also have your approval.

Larger Production

"The total turnover for the accounting year was higher by about a crore of rupees than the corresponding figure of the preceding year. The higher production of rayon yarn, sulphuric acid and carbon disulphide, a slightly better return for the rayon yarn sold and the additional availability for sale of the by-products, such as hydrochloric acid and chlorine, of the caustic soda chlorine plant, were principally responsible for this higher turnover. On the expenses side, the total cost of raw materials stands at a figure considerably lower than that of last year, which apparently looks anomalous in the light of the higher production. This, as explained by the auditors in their note, is due to the expenses for manufacturing of caustic soda and other chemicals being debited to the respective heads and not to the raw materials account. Consequently, the corresponding figures of the previous year are not comparable. The caustic soda manufactured at the Company's plant constituted a major portion of the total consumption of this chemical in the main rayon plant, but only the cost of salt used in the manufacture of the said caustic soda, which is negligible, has gone to the debit of the raw materials account. The cost of fuel, power, labour, etc., has been debited to the respective heads. This aspect, together with the lower cost of some of the other raw materials and greater efficiency, mainly accounts for the lower figure.

Expenses

"The amount of salaries, wages and bonus paid for the year is up by about 30 per cent. This increase is principally due to the extra staff and labour engaged for operating the additional capacity of the rayon, sulphuric and carbon disulphide plants and also payment to the staff and labour employed on the caustic soda plant, together with half a month's extra bonus paid to all the employees of the Company for the year 1958, as compared to the year 1957.

"The distribution expenses in the accounts appear to have increased by more than 100 per cent., which, however, is not a fact. There has been some increase in the expenses due to larger sales and also to the additional expenses the Company had to incur for forwarding chlorine, hydrochloric acid and other by-products of the caustic soda plant. However, a major portion of the increase is because of the changed mode of charging and invoicing the sales of rayon yarn and the Company's other products outside Bombay. Till October, all the selling prices of the Company were fixed on f.o.r. Bombay basis, and forwarding charges incurred were recovered from the upcountry customers. Since October, however, the Company started charging the upcountry customers on f.o.r. destination basis, correspondingly increasing the price of yarn and other products to the extent of the forwarding charges. The additional amount thus received is reflected in the sales turnover, whereas the forwarding charges incurred for such upcountry customers have gone to inflate the distributing expenses.

Outlook for Rayon Yarn

"The market for rayon yarn continues to be good and it appears the position is likely to continue for quite a few years to come as a result of the curtailment of imports for conserving foreign exchange. On the other hand, the demand for rayon yarn is increasing day by day, possibly due to higher *per capita* consumption of rayon fabrics and to the increase in the population of the country. I believe that by the end of the third five-year Plan, that is, by the end of 1966, the country's demand for rayon yarn is likely to increase substantially. In my opinion, therefore, there is considerable scope for expansion of the rayon industry and this can be achieved in the shortest possible time by permitting the existing plants to expand.

"You must be aware of the new proposals contained in the Finance Act whereby from next year the shareholders will not be entitled to get credit for the income-tax paid by the Company to the Government. The additional amount required for giving equivalent benefits to the equity shareholders is almost equal to the reduction in income-tax and corporation tax, as also the savings due to the abolition of excess dividend tax and wealth tax. As far as our Company is concerned, therefore, the change in the system of corporate taxation does not very much affect us. As far as the new tax measures are concerned, I wish the Government had followed the good lead and abolished the tax on issue of bonus shares also which was placed on the statute as a corollary to the excess dividend tax, which now stands cancelled.

"As already referred to in the Directors' report, the tyre cord scheme of the Company was held up for quite some time due to certain difficulties beyond our control. It has been possible for the Company to have this matter straightened out and I am glad to inform you that we are going ahead with our project to implement this tyre cord scheme. Our top technicians would shortly proceed to U.S.A. to confer with the consultants over there for finalising the bills of materials, etc., and it is expected that, if everything goes according to schedule, we will be in production on the proposed tyre cord plant sometime in 1961. The total cost of the plant is expected to be in the neighbourhood of Rs. 3 crores, out of which an amount of about Rs. 1.2 crores would be available by way of credit under deferred terms payment.

"A few months back, workers in one of the rayon factories were reported to have struck work without giving notice, completely paralysing the operation of the plant. Such lightning strikes affect the working of chemical plants and much more so of plants which have a continuous and uninterrupted working. In a rayon plant, especially a lightning strike, not only involves loss of production for the period the workers abstain from working, but creates problems if some persons are not available for draining off of certain chemicals which, if allowed to remain in the system, would choke up the pipes, valves, etc., clearance of which alone would take considerably long periods. Representations have, therefore, been made to the Government to amend suitably the Industrial Disputes Act and make it compulsory for the workers in chemical industry like ours to give sufficient notice before they go on strike. We hope the Government would accede to our request.

Housing for Labour

"You will also be pleased to note that, while we are engaged in the expansion of our productive capacity year by year, we have been equally conscious of the requirements of our labour and staff also. The number of houses provided for the workers and staff as on date is 673. We have also recently sanctioned a scheme for constructing 377 tenements at a total cost of about Rs. 30 lakhs. The township at the plant is equipped with amenities such as continuous water-supply, underground drainage, electricity and enough open space and other facilities for outdoor and indoor games.

"I take this opportunity of expressing my appreciation of the very good work done by the workers and the staff, technical and non-technical alike, whose efficiency, loyalty and co-operation have contributed in no small measure to the satisfactory working of the Company.

"With these few words, I commend the report and the statements of accounts for adoption and propose the following resolution:—

Resolution

'The Twelfth Annual Report and the Statements of Accounts for the year ended the 31st December 1958, be and they are hereby adopted.'

"Thank you, gentlemen."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

(*Concluded from page 1072*)

of the Netherlands while steel output in Luxembourg remained practically unchanged. In the U.K., steel output in the first quarter of 1959 with 4.7 million tons was over 850 thousand tons or 15 per cent. below the corresponding production in 1958. However, there has been a marked upward trend in recent weeks. In fact, the improvement in U.K. steel production began in March 1959 and continued during April, when the weekly average output was only 5 per cent. below that of April 1958. According to the Iron and Steel Board, the steel furnace capacity used in April 1959, which was approaching 82 per cent., increased by about 6 per cent. as compared with the previous month. In Eastern Europe steel output continued to increase during the first three months of 1959, the report says. In U.S.S.R., there was an increase of 1.2 million tons or 9 per cent. as compared with the first quarter of 1958. Production increases during the same period in Poland and Czechoslovakia amounted to 10 per cent.

During the first quarter of 1959, the U.S. steel output with 27.7 million tons was over 10 million tons higher as compared with the corresponding period of 1958 and represents an annual rate of production of over 110 million tons. This would be 5 million tons more as at present existing record steel production attained in 1955.

MONEY PLENTIFUL

(From Our Own Correspondent)

BOMBAY, 24th *June*

Extremely easy conditions prevails in the short-term money market. There has been a precipitous fall in the inter-bank call money rate, followed by a modest recession in term money rates also. The return of funds that usually takes place during the slack season has been heavier than expected, with the result that the banks are confronted with a large surplus of funds with no immediate outlet for them. In the inter-bank section, there are hardly any borrowers and the rate has slumped to 2 per cent. for renewals and 1½ per cent. for fresh money. Some business was reported today even at 1½ per cent. The rate offered by the small banks, however, is higher by ¼ per cent., as usual. These rates compare with 3 per cent. a week ago and 3½ per cent. to 3¾ per cent. a month ago.

In the term money section, house money at seven days' notice fetches no more than 3¼ to 3½ per cent., with banks being very reluctant to accept these deposits. The rate quoted is mostly for renewal of funds held by their esteemed clients. One to six months deposits are norminally quoted at 3½ to 4 per cent.

The response to Treasury Bills offered this week, however, does not reflect the extremely easy money conditions described above. This is not surprising, because, with the list for the new loans of the Government of India due to open on 1st July, institutional investors must be conserving their funds for the new loans. The amount offered was no more than Rs. 2 crores, the same as that invited. This suggests that the offer must have come from special sources, in order to keep the Treasury Bill market going. The average rate of accepted tenders is, however, a shade lower at 2.760 per cent., as compared with 2.764 per cent. per annum a week ago. The sales of these bills are being continued next week also, the amount invited being unchanged at Rs. 2 crores. For the second week in succession, i.e., between 17th June and 20th June 1959, Rs. 7 lakhs worth of intermediate Treasury Bills were sold. This amount also is the same as that in the previous week. Naturally these bills also are being offered in the coming week, i.e., from 24th June 1959 to 4th July 1959, the rate being at 99.326 per cent.

The Reserve Bank's statement for the week ended 19th June 1959 reveals a fall of Rs. 16 crores in notes in circulation and a rise of Rs. 16.86 crores in the notes held in the Banking Department. Consequently, the total notes issued is up by only Rs. 86 lakhs. There is no change in foreign securities, but balances held abroad have fallen by Rs. 2.39 crores, so that the total foreign exchange reserves of India have shrunk to Rs. 193.61 crores. The Central Government deposits are lower by Rs. 2.74 crores at Rs. 49.89 crores, while those of other Governments are higher by Rs. 8.36 crores at Rs. 18.29 crores. Reflecting the growth in the resources of banks, their deposits with the Reserve Bank have improved by Rs. 7.21 crores to very nearly Rs. 80 crores and their borrowings from the Bank are slightly lower. There are no other significant changes in the statement under analysis.

The latest available statement of the Scheduled banks is that for the week ended 12th June 1959, which, as compared with that for the previous week, discloses an all-round rise in deposits, the share of demand and time deposits being Rs. 9.13 crores and Rs. 2.89 crores, respectively. Borrowings from the Reserve Bank have fallen from Rs. 9.52 crores to Rs. 4.95 crores. Advances are practically unchanged at Rs. 861 crores, but bills purchased and discounted have declined by Rs. 3.25 crores to Rs. 105.71 crores. Investments reveal a negligible rise, while total cash balances are down by Rs. 2 crores. Money at call and short notice, however, has gone up by Rs. 1.73 crore.

The gilt-edged market was firm, with values moving up by 5 to 20 nP during the week under review. The turnover, however, was small, as sellers were reserved. While the Reserve Bank was not a seller in any of the loans, it was prepared to buy short-dated loans, with maturity from 1959-61 to 1962. As the rates offered by the Bank for these loans were, however, a few naye paise below those quoted in the market, no worthwhile business was done with the Bank in these securities. So for all practical purposes the Reserve Bank was out of the market.

Among Central Government loans, a gain of 20 nP has taken place in 2½ per cent. 1961 and 2½ per cent. 1960, as these loans were in demand from those institutional investors which are unlikely to convert their 3 per cent. 1959-61 into the new loans. Another loan to register a significant rise was 3¾ per cent. 1974, the rise over the week being 15 nP. This apparently is the effect of the terms for the new long-dated loan which are relatively more in favour of the borrower. While the loans maturing eight to nine years from now are unchanged, those of a shorter duration have recorded a gain of 5 nP.

Some activity was noted in the 4½ per cent. 1970 loans of Madras, Andhra, Uttar Pradesh, Madhya Pradesh, Bihar, Orissa, Mysore and Rajasthan; as a result, their values have gone up by 5 to 10 nP.

In the foreign exchange section, there has hardly been any change over the week in the rupee-dollar rate. The banks' selling rate for ready T.T. is Rs. 475.75 for $100 and their buying rate Rs. 472.50. Canadian dollars appreciated by Re. 1.50, from Rs. 497.50 to Rs. 499.00 per $100 for banks' selling and from Rs. 490.00 to Rs. 491.50 for banks' buying. Sterling was a shade higher in New York at 281.29-281.32 cents per £ for spot and at 281.10-281.13 cents for three months' forward.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 24th *June*

The firm trend noted in the bullion market last week abated during the week under review. In fact, the market ruled distinctly easy throughout the week, except yesterday when there was a slight recovery. Arrivals of both gold and silver were quite large, while offtake was not much. Early in the week, the white metal encountered selling induced by reports of import duty having been paid on Tibetan coins. Yesterday, silver showed a hardening tendency, owing to speculative demand from Calcutta. In sympathy with this metal and on Press reports from London speculating on the prospects of a devaluation of the U.S. dollar, gold also evoked fresh buying. Today, again, the metal was easy, as follow-up support was not forthcoming.

The only outstanding feature of the week was the strong grip the bulls had over the maturing settlement. They mulcted the bears to the extent of Rs. 2-15 per tola for carrying forward their sales.

June settlement in gold went off the board on Monday the 22nd inst. when it stood at Rs. 120-8, as against Rs. 121-2-6 at the close of last week. Business in this contract had commenced on 27th March at Rs. 117-4-6. July contract moved down from Rs. 118-6-6 to Rs. 117-6 on Monday and, after recovering to Rs. 118-4-6 today, sagged to close at Rs. 117-7-6. The backwardation rate (*budli* in favour of bulls) for June settlement widened considerably from As. 15 on Wednesday last to Rs. 2-15 on Monday this week. August contract receded in the course of the week from Rs. 117-11-6 to Rs. 116-14-6.

Ready gold came in for selling and declined from Rs. 121-0-6 to Rs. 119-12 on the 20th inst. Thereafter, it improved and touched Rs. 120.12 yesterday. Today, however, it fell to Rs. 119-10 before recovering to Rs. 119-10-6. The daily average arrivals of gold were 4,200 tolas, while the offtake was 2,400 tolas. The floating stocks of gold are reported to be around 20,000 tolas.

In the silver section, June settlement ran out yesterday at Rs. 194-1, as against Rs. 195 last week-end and Rs. 198-15 at which business in this settlement commenced on 26th March. July settlement retreated from Rs. 194-1 to Rs. 193-2 on Monday, but recovered subsequently to Rs. 194-4 today before finishing at Rs. 194. The backwardation rate for June settlement was just As. 2 yesterday, that a week ago being Rs. 15. August settlement, after declining from Rs. 193-4 to Rs. 192-12, improved to Rs. 193-10 today. Towards the close, it was easy at Rs. 193-5.

Ready silver slided back from Rs. 195-1 to Rs. 193-2 on Monday. After recovering to Rs. 194-4 today, it finished lower at Rs. 194. The daily average arrivals and offtake of silver were 13 bars and 9 bars, respectively. The floating stocks of silver are estimated at 500 bars.

Ready and forward silver in the London bullion market were both unchanged during the week, the former at 78¼*d.* per ounce and the latter at 77¾*d.* Silver in New York, too, was unaltered at 91.375 cents per ounce. Ready gold in London, after easing from 249*s.* 8¾*d.* to 249*s.* 8¼*d.*, recovered to 249*s.* 8¾*d.* The latest available dollar rate for gold in London is $35.11½-$35.13½, as against $35.11-$35.13 a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	24-6-59	Highest	Lowest	17-6-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	119 10½	121 0	119 10	121 0½

TRADING IN KIPS RESTRICTED

(From Our Own Correspondent)

MADRAS, 23rd *June*

Trading in the kip market was restricted, due to *Bakri Id* holidays. Inquiries from U.K. were small—mostly for low grades ordinary marks at less money or all grades top qualities at unchanged prices. There was no buying of kips from East European countries and sellers were likely to quote more workable prices shortly to enable a steady flow in U.K. buying. It was reported that U.K. buyers had recognised that leather would have to be sold at higher prices.

The tanned sheep skins market ruled quiet. There were more inquiries for lightweight goat, but poor demand for heavies. Mediums were moving steadily.

In the June London public auctions which commence on the 29th inst., 40,000 pieces of tanned goat skins and 220,000 sheep skins will be available for sale. It is likely that prices of goat skins will rule firm.

NEW CROP FUTURES TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 24th *June*

A notable development of the week is the commencement of trading in new crop cotton futures contract, I.C.C. Moglai Jarilla March 1960, on the 22nd inst. The new hedge contract is similar in all respects to the existing one except that the minimum tolerance for cotton tenderable under it has been raised from 23/32" to 24/32". This, it is felt, will induce traders to tender better quality cotton which will indirectly influence farmers to grow longer staple cotton. The change in the hedge contract has been generally welcomed by the trade.

The first deal in the new contract was struck on the 22nd inst. at Rs. 672.25, Rs. 11.25 below the quotation for the Jarilla August contract. The contract attracted good support initially and improved to Rs. 674.50 but declined at close to Rs. 673.75. Its subsequent course was downward, in keeping with the trend of movement of the Jarilla August contract. It finished at Rs. 663.25 today which is Rs. 10.50 below the opening day's closing quotation.

The August contract, as noted, continued to rule depressed. On persistent liquidation and upcountry selling, values suffered a further sharp setback. The slowing down of activity in the spot section and the pre-monsoon slackness in the piecegoods market accelerated the downward trend of prices. Even reports that the current season's crop will not be much in excess of actual mill consumption and the possibility of smaller aggregate stocks with mills at the end of the season failed to impart strength to the market.

I.C.C. Moglai Jarilla opened the week on Friday at Rs. 681.50, as against the previous close of Rs. 682.25, and after fluctuating to either side of this level, declined to Rs. 677.00 yesterday. Commencing today higher at Rs. 678, the contract spurted to Rs. 686 but again slumped to Rs. 675, but closed fractionally higher at Rs. 675.25. The net loss over the week was Rs. 7. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	24-6-59	*High*	*Low*	17-6-59
Jarilla				
August 1959 ...	675.25	688.25	675	682.25
March 1959 ...	663.25	674	663	673.75*

* On 22-6-59.

Activity in the spot market was restricted. Trading interest was low and turnover small. Needy mills covered immediate requirement which helped prices to remain more or less steady. Some of the varieties which attracted attention of mills were Kalyan, Co2, Jaydhar, Kala, etc.

Export demand from Japan for Bengals was well maintained. But volume of business reported was small due, probably, to paucity of stocks. Kala and Wagad also evoked inquiries.

Interest in foreign cotton was only moderate. Some business was reported in Sudan G5S and XG2S, XG4S, etc. BP.52 was traded at Rs. 1,340 c.i.f. for July shipment. Californian G.M.1-5/32" was also in demand. Business in Egyptian cotton is at a standstill in view of the uncertainty regarding the discount rates. Egypt is understood to have agreed to offer India also the export price discount of 35 per cent. for current crop and 30 per cent. for new crop for payment in rupees. Brisk demand for Egyptian cotton is expected as soon as announcement to this effect is made from this end and the uncertainty removed.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 695; Berar Jarilla 700; Khandesh 830; Vijay 965; Laxmi 970; Jaydhar 900.

Quietly steady conditions prevailed in the Karachi cotton market during the week. The futures section continued to remain closed. The spot market reported moderate activity. Prices ruled practically unchanged at last week's levels. Export inquiries were few and far between. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton at Karachi: Sind *Deshi* 82-8; Punjab *Deshi* 71-8; 4F Punjab Roller 70-8; S.G. 72-8; L.S.S. Punjab Roller 73-8; S.G. 74-8; N.T. Roller 73; S.G. 78; 289F Punjab Roller 73; S.G. 78-8.

Easy conditions prevailed in the Alexandria cotton futures market during the week. The easiness was attributed to uncertainties regarding the discount rate which are said to have affected export demand from countries like India. The news that a new tax of 0.2 per cent. will be levied on all exports (including cotton) and imports into U.A.R. would also appear to have adversely affected the market.

Export sales from the beginning of the present season till the end of May aggregated 938,029 bales (of 720 lbs.) while actual shipments till 10th May aggregated 779,537 bales.

The following are the latest available quotations—in tallaries per lb.—from Alexandria:

Karnak: July 76.50; November 76.10. *Ashmouni*: June 69.95; August 68.75.

Cotton futures values in Liverpool declined during the week. Trading was slow throughout most part of the week. Values drifted lower on scattered liquidation and small mill hedging. Sudan contracts were quiet in the absence of any new development in Khartoum but values ruled steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contracts: July-August 23.20; October-November 21.55; December-January 21.15; March-April 21.10.

American cotton mixed growth contracts: July-August 23.10; October-November 22.00; December-January 21.50; March-April 21.15.

Sudan: July-August, September-October, November-December 28.00.

Quiet conditions prevailed in the New York cotton futures market during the week, reflecting the sluggishness characteristic of the fag end of the season. Uncertainty as to how the new export subsidy will work when it becomes effective from 1st August next and doubts about possible Washington moves on cotton legislation induced hesitancy among operators. Values showed a sagging tendency.

The Department of Agriculture has announced that U.S. farmers who planted cotton in excess of their 1959 marketing quotas would have to pay penalty rates on marketing from their extra plantings. These penalty rates would be 19.1 cents per pound on upland cotton and 40.9 cents per pound on long-staple cotton.

A further sale of 18,839 bales of U.S. Government-owned cotton at 29.49 cents per lb. basis middling inch cotton, has been announced. At the previous sale of this cotton on 3rd June 28,155 bales of upland cotton were sold for export at 28.50 cents per lb.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	23-6-59	16-6-59	9-6-59
Spot	36.00	36.10	36.20
July	34.64	34.78	34.84
October	32.39	32.35	32.48
December	32.44	32.42	32.52

EXPORT PROMOTION SCHEME FOR ART SILK FABRICS

(From Our Own Correspondent)

BOMBAY, 24th June

Two important decisions of import to the art silk textile interests have been announced by the Government of India this week. These relate to the revised export promotion scheme for art silk fabrics and the policy governing yarn imports during the current half year (April-September 1959). The details of the two decisions are given below:

Export promotion scheme: With effect from 1st July 1959, the manufacturers of art silk fabrics and *saris* will be granted licences for import of art silk yarn upto 100 per cent. of the value of such fabrics and *saris* exported as assessed by the office of the Textile Commissioner. There will be compulsory pre-shipment examination of such goods meant for export by the office of the Textile Commissioner at Bombay, Calcutta and Madras ports. A schedule of minimum standards of the goods will be prepared by the office of the Textile Commissioner to which all exports should conform. Exporters, including manufacturer-exporters of art silk fabrics and *saris* and processors of art silk yarn, will be granted import licences for permissible types of coal-tar dyes and textile chemicals to the extent of 2 per cent. of the value of exports assessed. The Government has also accepted the recommendations of the Development Council for the Art Silk Industry for the formation of a corporation to promote exports of art silk fabrics.

Import policy: The policy is the same as that followed in the previous licensing period. Accordingly, artificial silk yarn and thread will be licensed to established importers on a quota of five per cent. Application from actual users will also be entertained *ad hoc* against a ceiling. The last date for submission of applications for licences by both actual users and established importers will be 7th August 1959. The established importers should apply to the licensing authorities at the ports, while applications from actual users will be entertained only by the Joint Chief Controller of Imports, Bombay.

The revised export promotion scheme for art silk fabrics was expected to result in enlarged demand for yarn from weaving units. Consequently, some fresh buying ensued and art silk yarn prices registered a handsome improvement. Staple fibre yarns also met with good support on reports from consuming centres, especially Surat, Bhagalpur and Ludhiana that offtake was quite encouraging. Cotton yarns ruled steady. Coarse counts were specially favoured.

Cupressa Bamberg yarn (60 x 2) August contract forged ahead from Rs. 1,618 to Rs. 1,651 (new packing of 100 kilograms or 220 lbs.). June contract spurted by Rs. 21 to Rs. 1,460 per case of 200 lbs. Spot Cupressa firmed up by 12 nP to Rs. 7.37 per lb. 120 Italy advanced by 10 nP to Rs. 5. 150 Italy gathered 6 nP to Rs. 4.62. 150 Japan hardened by 9 nP to Rs. 4.76 and 120 Japan by 6 nP to Rs. 4.78. Among indegenous yarns, National Rayons 150 bright cones 1st grade put on 10 nP to Rs 4.34. 120 bright cones 1st grade rose by 8 nP to Rs. 4.70.

Staple fibre yarn (40 x 2) June contract climbed up by Rs. 22 to Rs. 620. August contract rallied from Rs. 609 to Rs. 629. Spot Citys strengthened by 24 nP to Rs. 3.34. Kohinoors recorded a rise of 16 nP to Rs. 3.50. Centurys were firm at Rs. 3.44. Deals in imported yarns (80 x 2) were put through at higher levels, Fujis advancing by 28 nP to Rs. 7.50 and Paramounts by 25 nP to Rs. 7.25.

In the cotton yarn section, Podars picked up 50 nP to Rs. 12.62. Moderns were fully maintained at Rs. 13.75. Twenty counts Hinds and Moderns were unchanged at Rs. 16.62 and Rs. 16.75, respectively. Thirty counts Maduras, eased by 12 nP to Rs. 21. Among 40s, Moderns were fully steady at Rs. 26, as also Minaxis at Rs. 25.37. Sixty counts Raghuvamshis and Finlays were unaltered, the former at Rs. 57.50 and the latter at Rs. 64. Eighty counts Mahendras improved by 50 nP to Rs. 72. Finlays were firm at Rs. 81. Citys, however, shed 50 nP to Rs. 66.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before:

	24-6-59	17-6-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg June (200 lbs.) ..	1,460	1,439
60/1 Cupressa Bamberg August (100 Kg.) ..	1,651	1,618
60/1 Cupressa Bamberg spot (per lb.) ..	7.37	7.25
120 Japan (per lb.)	4.78	4.72
150 Japan (per lb.)	4.76	4.67
120 Italy (per lb.)	5.00	4.90
150 Italy (per lb.)	4.62	4.56
Staple fibre yarn—		
40 x 2 June (per case of 200 lbs.)	620.00	598.00
40 x 2 August (.. ..	629.00	609.00
40 x 2 Kohinoor (per lb.)	3.50	3.34
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.62	12.12
20s Modern	16.75	16.75
30 Madura	21.00	21.12
40s Minaxi	25.37	25.37
60s Raghuvamshi	57.50	57.50
80s Finlay	81.00	81.00

* * * *

The Government of India has accepted the recommendation of the Tariff Commission regarding the prices of acetate rayon yarn produced by Sirsilk Mills Ltd., Sirpur, Andhra Pradesh. Accordingly, the fair selling prices of acetate coned and hanked yarn ("A" grade) range from Rs. 4.51 to Rs. 4.67 per lb. for 300 deniers, from Rs. 4.82 to Rs. 4.95 per lb. for 150 deniers and from Rs. 5.07 to Rs. 5.19 for 120 deniers. These prices are f.o.r. Bombay and include excise duty and selling commission. The two other recommendations of the Commission accepted by the Government are: (1) The Andhra Pradesh Government may be requested to consider sympathetically the representation made by the Company for the reduction in the price of power alcohol and to reconsider the policy regarding payment of gallonage fee on alcohol consumed by the Company; (2) the Company should be allowed to use acetate yarn from its own production for working 480 looms on a two-shift basis. A number of steps has also been suggested for the reconstruction of the capital structure of the Company and the Commission has expressed the view that, after this is done, a review of the case may be undertaken to ascertain what further assistance is required to ensure the smooth working of the Company

OILSEEDS GIVE WAY

(From Our Own Correspondent)

BOMBAY, 24th June

The oilseeds market remained subdued during the week under review. With the monsoon fast approaching, bulls turned nervous. The prices of oils and seeds in general drifted to lower levels, except perhaps cottonseeds. There was a notable setback in the volume of business done. The groundnut section was particularly dull in the absence of any sizable fresh support at higher levels. The spot groundnuts, however, were quietly steady on account of the limited offerings coupled with fairly good demand. The castorseed section continued to be weak, as the export front gave no room for optimism. Besides, there was mounting pressure of arrivals. Linseed, in sympathy, lost ground. In contrast, cottonseed depicted a cheerful appearance, its pace being mainly dictated by the Akola and Ahmedabad trading interests.

Selling pressure was in evidence in the groundnut section from the very beginning of the week. This would have been much more pronounced but for the support lent by crushers and *vanaspathi* manufacturers. Heavy bull liquidations and profit-taking at the close of the week pushed down the values considerably. August contract, which wound up last week at Rs. 199.50, eased to Rs. 196.50 today, after fluctuating in a narrow groove with a bearish undertone. Bold ready fell from Rs. 43.00 to Rs. 41.87 yesterday. It however, improved to last week's closing level today. Oil ex-mill was steady at Rs. 22.00.

Dull conditions prevailed in the castorseed section. In the face of lower foreign prices of castor oil, local shippers became cautious buyers. Export advices from the U.S.A., the Continent and the countries of the Communist bloc continued to be unsatisfactory. Substantial offerings of ready material acted as a damper. September contract which closed last week at Rs. 162.37 reacted to finish today at Rs. 160.12. Ready Madras and Oil B.S.S. closed today at the last week's level of Rs. 31.25 and Rs. 16.87, respectively.

Linseed, in sympathy with other seeds, depicted easy trends. It lacked fresh support. There was hardly any encouraging advices from abroad. Traders, however, have not ruled out the possibility of foreign advices for oil from Australia and some communist countries. September contract which stood at Rs. 33.81 last week-end, gave way and closed today on a weak note at Rs. 33.31. Bold ready closed today lower at Rs. 32.75, as against Rs. 33.00 last Wednesday. Oil lost 12 nP when it finished today at Rs. 15.62.

Cottonseed, unlike other seeds, presented cheerful conditions. Although the cotton market depicted depressed conditions, cottonseed improved to higher levels. This was mainly the result of good speculative support it received at the hands of leading trading interests. September contract improved from Rs. 133.00 last Wednesday to Rs. 134.75 on the following day and, after remaining steady for some time, reacted to Rs. 133.75 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	24-6-1959	17-6-1959	10-6-1959
	Rs.	Rs.	Rs.
Groundnut			
August 1959	196.50	199.50	200.00
Bold ready	43.00	43.50	43.00
Coromandel ready	43.00	43.25	43.25
Khandesh quality	43.00	43.25	43.25
Oil ex-mill ready*	22.00	22.00	22.00
Railway receipts*	21.56	21.81	21.87
Castorseed			
September 1959	160.12	162.37	164.50
Ready Madras	31.25	31.25	31.62
Ready Kanpur	30.00	30.00	30.44
Oil B.S.S.†	16.87	16.87	17.12
Oil commercial†	16.10	16.12	16.31
Linseed			
September 1959	33.31	33.81	34.06
Bold ready	32.75	33.00	32.87
Oil ready†	15.62	15.75	15.69
Cotton seed			
September 1959	133.75	133.00	133.75
Niger seed	31.75	31.75	31.75
Kardi seed	25.50	24.25	24.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR FIRM AGAIN

(From Our Own Correspondents)

BOMBAY, 24th June

The sugar market continued to rule distinctly firm during the week under review and prices showed a further hardening tendency. Demand for ready sugar was persistent and the increased arrivals by rail were readily absorbed. The total of these arrivals during the week was 17,379 bags, as against just 5,912 bags last week. Even reports that the Food Ministry had issued the normal monthly release of 165,000 tons had no effect.

Large grain sugar rose by a rupee to Rs. 122-129 per bag. Small grain gained 50 nP to Rs. 118.50. Medium grain was fully maintained at Rs. 119-121.

It is understood that the State Governments are being informed by the Union Food Ministry of the steps they should take to ensure adequate supplies of sugar at reasonable prices. The Punjab Government, according to Press reports, has already announced its decision to take over the distribution of sugar throughout the State with immediate effect. Trade circles fear that the other State Governments also will announce similar decisions shortly.

Sugar production during the month of May 1959 was 32,000 tons, bringing the total production so far to 1,904,000 tons, as against 52,000 tons in May 1958 and 1,963,000 tons upto 31st May 1958 for the season 1957-58. Offtake of sugar from factories during May 1959 was 183,000 tons as against 182,000 tons in May 1958. The total despatches from factories during the first seven months of the season 1958-59 were 1,229,000 tons, those in the corresponding period last season being 1,174,000 tons. The total closing stocks of sugar with factories as on 31st May 1959 amounted to 1,003,000 tons, as against 1,212,000 tons on the same date last season.

* * * *

HAPUR, 22nd June

Steady to firm conditions prevailed in the sugar market during the week under review. Supply position was so weak that crystal sugar was not available in the market even at Re. 1.25 per maund. Wholesale mill delivery prices registered a sharp advance of about Rs. 10 per bag to be quoted now at Rs. 125 per bag. The Union Government issued an additional quota of 5,000 tons for U.P. which would be sold in urban areas at controlled prices.

Sugar continued to rule steady to firm in the Muzaffarnagar market, owing to brisk demand from Punjab. Prices spurted further by Rs. 3 per maund, the week-end quotations showing a premium of Rs. 7.25 to Rs. 8.50 per maund above the controlled prices. The latest prevailing prices were: Crystal spot delivery New Shamli D29 Rs. 36.75; Khatauli C29 Rs. 38.87; retail D29 94 nP a *seer*; wholesale mill delivery controlled D29 Rs. 36, E29 Rs. 35.81; market quotations: Bijnore D29 Rs. 43.75; Sharanpur D29 Rs. 46.50; Amroha D29 Rs. 44.25; Simbhauli E29 Rs. 45.81.

Sugar hardened further on increased demand in the Kanpur market. The latest prevailing prices were; Rs. 113-8 to Rs. 114 per bag; ex-mill per maund Rs. 39 to Rs. 43.

Khandsari also registered an advance of about Re. 1.50 per maund during the week in line with the bullish trend of crystal sugar and good demand. The prevailing prices were: superior Rs. 38 to Rs. 41; inferior Rs. 36 to Rs. 38 per maund.

Ready *gur* ruled quietly steady during the week, due to good outside demand for dry quality. Arrivals from rural areas dropped to an average of 200 maunds daily which were lifted for outside destinations. Dry-wet *kotha* stock was also running down and was now put at 60,000 maunds. The condition of the standing cane crop was said to be good, but rains were badly needed. Prevailing prices were: *gur pansera* Rs. 21 to Rs. 21.50; *shakker* Rs. 22.50 a maund.

Gur also improved slightly in the Muzaffarnagar market where arrivals were at an average of 500 maunds. Prevailing prices were: *Chaku* Rs. 23.25 to Rs. 23.75; *kotha* mixed dry-wet Rs. 21.50; *rusket khurpa* Rs. 14 to Rs. 14.50; *ladu* Rs. 14 to Rs. 14.50; *shakker dara* Rs. 22 to Rs. 23.50; *masala* Rs. 25 to Rs. 27 per maund.

TEAS IRREGULARLY EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 19th June

Sale No. 23, was held on the 16th inst. when quantity of tea offered was two million lbs. The bulk of teas offered comprised rush production and, consequently, were plain and disappointing. There was useful demand, but prices were irregularly easier for all descriptions. Low mediums and mediums declined by 5 to 10 nP. However, these types were well supported by internal buyers at lower rates. Good mediums met with useful enquiry and sold at slightly easier rates than last. Fannings grades continued to meet with better enquiry, due mainly to export demand. Highgrowns were sold at easier rates following quality. Whole leaf grades were firm and well-made types under this category met with good competition and were dearer. Tippy teas sold well but only at much easier rates.

The quotations were: Low medium Re. 1.45 to 1.55; medium Re. 1.59 to 1.70; good medium Rs. 1.80 to 2.05; and quality Rs. 1.80 to 2.57.

A total quantity of 700,000 pounds were offered in dust sale "O" held yesterday. Offerings included a high proportion of rush production teas, which were rather disappointing. There was good demand, but prices were easier for everything with the exception of highgrowns which were firm. Low medium and medium types were easier by 10 to 15 nP. There was better enquiry for milled dusts, though these were sold at lower rates than last. C.T.C. dusts were sold at about last week's rate. Black exportable dusts were barely steady.

London Market: *Sale of 15th June* 1959.—firm on last week except for lighter liquorings which tended easier.

Sale of 16th June 1959.—Irregular, slightly easier.

Colombo Market: *Sale of 15th June* 1959.—Quality plain market opened. Dimbula Dickoya sorts irregularly lower, following quality. Later, demand improved for best available broken which closed dearer, particularly B.O.P.F. Medium brokens and plain B.O.P.F. declined by 10-15 cents. Useful liquoring B.O.P.F. up by 20-30 cents. All lowgrowns dearer by 3-5 cents.

Sale of 16th June 1959.—Good demand. Useful liquoring fannings and dusts fully firm. Other sorts slightly lower following quality.

Calcutta Market.—There was no sale.

Export Quota 1959-60.—The market has continued to remain quiet with our last business being done at 3 nP. At the time of writing, there are sellers at 3 nP, with probable buyers at this price.

Special Licence 1958-59.—The market has been very quiet and practically no business has gone through. However, there is a nominal quotation of 3-4 nP seller with no buyers.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, 22nd June

Dull conditions prevailed in the linseed market during the week. Although prices showed some weakness, trading was limited. Local seeds transactions were virtually at a standstill, owing to the introduction of an amended contract form by the East India Oil Millers' Association, certain clauses of which were unacceptable to the seeds merchants. With an improvement in U.K. oilcake prices to £34, local prices improved slightly and fair business was reported. The oil market was inactive and the tone remained quiet. Very little business was reported, with buyers showing little interest.

The latest available quotations are: Ready-June Rs. 22.75 and July-August Rs. 23.12 per maund.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 22nd June

Quiet conditions were witnessed in the foodgrains market during the week. The supply position of *rabi* grains was reported to be slightly better. As a step further to increase supplies in the market, the U.P. Government has decided that roller mills in the State would be prohibited from buying wheat in the open market and would be supplied the imported stuff instead. The flour from that imported wheat would be brought by Government for distribution through fair-price shops. Although wheat arrivals here were still meagre, but the State Government was said to have purchased 15,000 tons of wheat and the Government hoped that agriculturists would have to bring their produce in the market soon or later.

Wheat at Hapur recorded a modest decline to be quoted towards the week-end at Rs. 17.75 to Rs. 19.25 per maund. Although arrivals in the open market were small, wheat was reaching at an average of 100 maunds daily which was being lifted by consumers.

Rice continued to rule steady. The week-end rates were: *sela basmati* Rs. 33 to Rs. 36; *mainpuri* Rs. 23; *raimunia* Rs. 27; *gadda* Rs. 22.50 per maund.

Gram ruled quiet during the week. Gram was reaching here from Punjab, but gram *dal* was being moved to various destinations in Madhya Pradesh. Barley and *bejhar* were quiet, despite small arrivals. For reports of bumper crop in the country had a dampening effect. *Jowar* and *guwar* were steady, in view of good demand. Maize sowings are in full swing, but good maize seed is not available in the market even at higher prices. Quotations (in rupees per maund) towards the week-end were: gram 13.37; barley 12.62; *bejhar* 12.37 to 12.75; *jowar* 14 to 16; *guwar* white 15.25; black 12; maize seed Rs. 25 a maund.

Peas was attracting good demand from Bihar and other O.T.R. destinations and prices improved fractionally during the week. Arrivals were poor, the average being 300 to 400 maunds and local stock was put at 42 *khatties*. Demand for *arhar* was slack and stockists alone were purchasers in the market. Daily arrivals averaged 150 to 200 maunds and local stock was 27 *khatties*. Other pulses stayed quietly steady. The week-end prices (in rupees per maund) were: peas *dara* 13.25; peas *dal* 14.25; peas farm quality 13.75 to 14.25; *arhar* 17.25; *arhar dal* 21.50 to 22.50; *urd* 19.25; *moong* 21 to 23; *massor* small 14.75 and bold 19.

COMMERCE AND INDUSTRY

(Concluded from page 1083)

dent countries. They can only negotiate satisfactorily as a group if they have a common interest and, in these problems, I do not think there is such a common interest. In so far as there is one, it does not make for agreement between the Commonwealth and the community—rather to the contrary. A European free trade area could be founded on the common desire of the community and the United Kingdom to have freedom of trade in industrial products while continuing some protection for their agriculture. But the countries of the Commonwealth are really interested in the opposite. They wish to protect their growing industries and to have the maximum freedom of trade for their agricultural products. Finally, I do not believe that anyone can produce within the framework of the General Agreement on Tariffs and Trade, which is of such importance to all trading nations, an association between the Commonwealth and the community of the type that is often discussed. The problem is a fundamental one of European economic relations and must be treated as such. We have, therefore, rejected these two suggestions. We are pursuing the possibility of a free trade area among seven European countries. The reasons are simple. We still believe that, in the long run, something akin to a free trade area is the right solution for Western Europe. We wish to see a multilateral, non-discriminatory association between the six and the rest."

How far and to what extent the hopes expressed by Mr. Maudling, and believed to have been shared by the other six countries, will be fulfilled, time alone can show. Meanwhile, there are doubts whether the Little Free Trade Area will materialise as is now conceived. Already Denmark has expressed a desire to be excused. It is said that, mainly on account of the importance of its agricultural exports to West Germany, Denmark is not very enthusiastic about the plan. It fears that the plan involves the risk of a trade war in Europe. The Danish Prime Minister, Mr. H. C. Hansen, stated at London during his recent visit that "I think we should avoid that risk. Denmark would not like to find herself in a trade war between European countries which, in every other respect, worked together." Unless these fears are removed, there would appear to be no chance of Denmark joining the "Outer Seven Free Trade Area."

The greater part of British industry is definitely in favour of the plan for the creation of a Free Trade Area of the Seven. This is indicated in the statement issued by the Grand Council of the Federation of the British Industries after its meeting held at London on the 17th inst. According to the statement, only a few industries oppose the project outright "because of the consequences they foresee for themselves." These industries include: Paper and board; timber, wood-wool and wood-working machine tools; cotton spinning; jute; hard fibre cordage; mats and matting; hand tools; and china clay. Industry as a whole, the statement says, is anxious to avoid the division into Europe into two unfriendly camps. The search for a European-wide solution must be pursued. A majority of British industry is either actively in favour or prepared to acquiesce in the Little Free Trade Area plan, because it believes that it will facilitate ultimate agreement with the Common Market. Quite apart from this general consideration, a substantial section of this majority sees merit in the free trade scheme on strictly economic grounds. The Grand Council, therefore, will "support H.M. Government in a policy of seeking to conclude a Free Trade Area with the others of the Outer Seven, on the basis that every effort should be made to give it a form which will as far as possible assist the negotiation of an acceptable association with the Six."

For this reason also, the industry supports the plan for tariff reductions at more or less the same speed as inside the Common Market drawn up at Stockholm. Failing an agreement with the Six, a majority would probably want to see trade barriers eliminated at a faster rate.

The Grand Council points out that the final attitude of quite a number of industries will depend on the detailed provisions of any agreement which is reached among the Seven, particularly in regard to rules of origin, export subsidies, restrictive practices, access to raw materials and dumping. The interests of "restrictive" industries will have to be taken into account. Hence the need for the Government to consult with individual industries and trade associations is stressed. And the responsibility of the Government to ensure that British industry should not be at a disadvantage because of taxation or general domestic policies is emphasised.

Finally, the Grand Council expresses both its view that the continuation of the Imperial preference system is of vital importance and its expectation that the Government's policy is based on this premise.

Notices

BRIDGE AND ROOF COMPANY, (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the seventy-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 13th July, 1959, at 11.45 a.m., to consider the Accounts of the Company for the year ended 31st December, 1958, and to transact other ordinary business and the under-noted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Company, Ltd., an Associate (as defined by Section 2(4) of the Companies Act, 1956) of Balmer Lawrie & Co. Ltd., the Company's Managing Agents, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:

for sales of such goods and services in connection with fabrication and erection of structural steelwork and buildings and other services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

it being a term of the above contract that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

**These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free.

R.O.—Redeemable at option. N.B.—Non-Redeemable. P—Partipating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months, notice (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate *dividend for that period*. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

NATIONAL RUBBER MANUFACTURERS LTD.

(*Concluded from page* 1076)

of imports of these items at present. The value of imports of certain important rubber chemicals including carbon black, tyre cord, rubber chemicals, etc., amounted to about Rs. 4.5 crores in 1958. The current estimated consumption of carbon black is approximately 10,000 tons and of accelerators and anti-oxidants 600/700 tons annually. These figures are likely to increase considerably in coming years with the rise in rubber consumption. It is encouraging to note that certain schemes are under consideration in this respect. Apart from the interest shown by an American firm in establishing a carbon black plant in India under the auspices of the National Industrial Development Corporation, a team of Rumanian experts visited this country in 1958 for a fresh project survey and their recommendations are awaited. A few proposals for the manufacture of rubber chemicals in the private sector are also reported to have been approved. Active steps should be taken to finalise and implement these projects.

Import Policy

"Import licensing policy for raw materials has been somewhat liberalised during the current period, that is, April to September, 1959. Besides, a new system of licensing on a long-term basis in respect of raw materials/components for certain specific industries has been introduced; this is expected to facilitate better production planning and is likely to result in a larger level of output in future years. So far as the rubber industry is concerned, only the tyre section has been included in the long-term licensing scheme. I feel that this benefit should be extended to other sectors of the rubber products industry with immediate effect.

Research

"The Indian Rubber Manufacturers' Research Association, referred to in my last year's speech, has made considerable progress during the past year in finalising its organisational and administrative set-up and is expected to commence research work in collaboration with the National Chemical Laboratory, Poona, at the earliest possible opportunity. The services to be rendered by the Association are likely to be significant for the rubber industry, in general, and smaller units, in particular, as they are unable to maintain their own research establishments.

Labour Relations

"I am glad to say that labour relations were very satisfactory throughout 1958 and full co-operation of all categories of employees was extended to the management in achieving higher levels of production envisaged by the Company's expansion plans. In fact, the productivity agreement with the workers' Union mentioned by me last year worked very well.

Thanks

"Before I come to the formal business of this meeting I sincerely thank all of you who have taken the trouble of coming here today and other shareholders, the officers, staff and workers and also the dealers and customers of the Company for their valuable co-operation and active support readily extended. I also take this opportunity of expressing our sincereest thanks to Messrs. Goodyear Tyre and Rubber Company of India Private Limited for the ungrudging help and co-operation extended to your Company during 1958."

INSURANCE

(*Concluded from page* 1082)

The policyholders of some of the first class Indian and foreign insurers get only lower bonus. Thus, the Oriental declared a simple reversionary bonus of Rs. 22½ per rupees thousand sum assured on Whole Life and Rs. 18 per rupees thousand sum assured on Endowment Assurance, whereas, as per the Corporation's valuation, its policyholders get only Rs. 21 on Whole Life and Rs. 16.8 on Endowment Assurances. This is also the case in regard to the policyholders of such foreign companies as Norwich Union. While policyholders of Norwich got Rs. 23 and Rs. 18 on Whole Life and Endowment Assurances, respectively, in 1955, they are now entitled only to Rs. 21 and Rs. 16.8 as per the Corporation's valuation. At the same time, policyholders of 22 companies, which had not declared any bonus at last valuation, will get bonus as per the Corporation's valuation.

While the profits made are sufficient to declare reversionary bonuses at the above rates, the Corporation cannot, the report points out, at this stage make a final declaration of reversionary bonuses, since the scheme of differential bonuses evolved by the Corporation is, as mentioned earlier, a tentative scheme. However, with a view to avoiding hardship in the case of policies which become claims by death or maturity, the Corporation has decided to pay on such policies bonuses at the above rates. As soon as the scheme of differential bonuses is finalised and approved by the Government, the Corporation will proceed to allocate bonuses to all the with-profits policyholders and send intimation to each of the policyholders. It is, however, expected that the final classification of differential bonuses would not materially differ from the one tentatively adopted. In other words, the rates of reversionary bonuses finally declared for the different groups would not vary materially from the above rates.

EXPORT CREDIT INSURANCE

A Bill to increase by £400 million the liability limits of the British Government's Export Credits Guarantee Department (E.C.G.D.) has been introduced in the House of Commons by Sir David Eccles, the President of the Board of Trade. The need to increase in this way the limit of export credits guarantee liability reflects the expansion in the business of the Guarantee Department. It does not arise from any big expected increase in any one market, nor is it in any way connected with the recent Anglo-Soviet trade agreement. Actual and contingent liabilities of the E.C.G.D. taken together, are now approaching the current limits, and the Bill follows the past practice of the department in seeking increases as and when necessary. Previous increases authorised were in 1952 and 1957.

The present limit on "commercial" business insuring British exporters against bad debts is £750 million. On this sum, the department has already assumed liabilities of the order of £719 million.

The present limit on "national interest" business consisting mainly of loans to intending exporters, as well as special credit insurance guarantees is £250 million. Here, outstanding liabilities already amount to about £172 million.

The new Bill provides for the limit on "commercial" business to be raised to £1,000 million and the limit of "national interest" business to be raised to £400 million.

BANKING

(*Concluded from page* 1062)

cent., after having fallen continuously during preceding years.

The U.S. still has the biggest stake in manufacturing goods for export. Its competitive power has been based on heavy capital investment, the efficiencies of large-scale production, a highly skilled labour force, and technical leadership, so that its goods have been able to compete abroad, despite the highest wage costs in the world. Hourly wages in manufacturing in the U.S. are three times as high as in the United Kingdom and almost four times as high as in Germany. It is true that wages have been rising abroad as well as here, but the significant fact is that, with our help, Western Europe and Japan have reconstructed their industries and installed the most modern labour-saving equipment. As they have expanded their markets, they too have been able to take advantage of the economies of large-scale production, so that they have steadily whittled away the U.S. advantage. During the dollar shortage era, lower productivity and insufficient capacity abroad, together with the faster pace of inflation in some countries, made it possible for us to maintain our prices without it affecting our exports. But this is a matter of the past.

Now that we have come to the end of the dollar shortage era, what are the consequences for the foreign trade of the U.S.?

Until quite recently, U.S. merchandise exports were running well ahead of merchandise imports. In 1958, our exports were almost $16.3 billion, with imports at about $13 billion, leaving a comfortable export surplus of $3.3 billion. On the other hand, we had a $4½ billion export surplus in 1956, and, for reasons that I have already mentioned, a whopping $6 billion export surplus in 1957.

The trade figures for the first quarter of 1959 are disturbing. On the basis of figures for the first quarter, with March figures estimated, it looks as though our exports for 1959 will only be $15 billion, as against the $16.3 billion of 1958. Instead of increasing as many had expected, merchandise exports for the first quarter of 1959 will probably run about $400 million less than for the fourth quarter of 1958 which would be about equal to the figure for the smallest quarter last year.

On the other hand, merchandise imports, estimated at $3 billion for the first quarter of this year, are up $100 million from those of the previous quarter and up $500 million from those of the first quarter of 1958. While our exports seem to have lost their buoyancy, our imports are characteristically rising once again, as business improvement has continued during recent months. The rise in industrial production which is one of the most significant indices of our recovery, may be expected to continue, supported as it is by the growing volume of unfilled orders and general confidence in the business outlook. Under these conditions, imports are likely to increase and, on an annual basis, may well reach $14 billion or about $1 billion over 1958.

If our exports and imports do in fact follow the trend indicated by these first quarter figures, our export surplus this year will shrink to only about $1 billion.

The steady surpluses in the balance of trade of the U.S. lead many people to the comfortable conclusion that its balance of payments also is in surplus. As I have already pointed out, this is not true. Our invisibles, including foreign aid, capital exports on both Government and private account, tourist expenditures, and payments for other services such as shipping and insurance, have been far larger than foreigners needed to cover the excess of their purchases of goods and services from the United States, as well as their other payments in the U.S. Last year alone, the cash deficit in our balance of payments was of the order of $3.4 billion. In other words, we provided foreigners with many more dollars than they used here. During this decade of the '50s, we have been net suppliers of dollars to foreigners at the rate of almost $2 billion a year. From 1950 through 1958, they were, therefore, able to add to their gold and dollar holdings $13.7 billion, as a result of their transactions with the United States. Unless the present trends are reversed, they could acquire as much as $3 billion additional this year.

I did not intend to be a prophet of gloom. I have abundant faith in the resilience and dynamism of the American economy and in the resourcefulness of our business leaders. We are still far ahead. It is just that we Americans have to get used to some new competitors. There are already indications in the figures that, while our competitors are doing well against some of our older products, we are expanding our exports of newer products. Technologically, we have a good lead in many fields. Our friends abroad must still come to us for many things. This means that the character of our exports, "our export mix," may well gradually change. Some industries and firms will be hurt, but others will be able to make strong gains in export markets.

Greater Strain on Resources

In addition, as I pointed out earlier, conditions over the past year or so could hardly have been more favourable for Western Europe and Japan. But many of these factors are changing. Certainly, Europe's terms of trade can no longer be expected to improve and they may well worsen, as recovery all over the world strengthens commodity prices. The United States' position should be helped as Europe swings from a period of inventory liquidation to one of accumulation. As the European and Japanese economies resume their expansion, there will be a greater strain on their resources, with a consequent weakening of their export capabilities. The productivity of American industry has surged forward rapidly since the beginning of our recession. And our competitive position will be helped, of course, as discrimination is removed against American goods.

In other words, some of the temporary factors that brought the end of the dollar shortage era to us with such a shock may now tend to change or disappear. On the other hand, some underlying factors still remain, so that we have entered a new era, one of competition among countries with convertible currencies. This should be gratifying. This is what we have wanted all along; but it brings with it the need for disciplines to which the Americans have not been accustomed.

I should like to point out that our principal competitors have accepted those disciplines. You all know about the striking cases of Germany, Italy, Austria and Japan—countries that have rebuilt their productive capacity and raised their standards of living rapidly in this post-war period, while following sound monetary and fiscal policies. I can add many other countries to the list, including Switzerland, Belgium and the Netherlands, for example. The United Kingdom was slower to accept these disciplines, but the

MacMillan Government made the great decision when it took the Thorneycroft measures of September 1957. And it is significant that sterling has been growing stronger ever since. At the end of 1958, the French finally did it under General deGaulle, with the result that the French franc, after decades of almost steady depreciation, has once again become a sound currency. France has gained reserves steadily and rapidly this year and the French authorities are so confident that they have decided to introduce the so-called "heavy" franc, a franc that is intended to be stable.

The question that now arises is this: Are the Americans ready to accept these disciplines themselves? As I read the speeches and writings of some of our creeping inflationists, I begin to wonder. Creeping inflationists, I find, are very fuzzy and evasive about the effects of their policies on the international position of the dollar. For myself, I do not see how anyone—after taking a look at the American trade and balance of payments picture as I have tried to present it here—can conclude that a policy of creeping inflation is good for the United States, much less for the world as a whole.

We Americans have to face the fact that there has been a basic change. Never before in this post-war period, have we had to look so closely at our balance of payments position nor take it into account as a major factor determining our domestic monetary and fiscal policies. Our competitors are quite accustomed to this and they have now learned to react swiftly and sharply, when they have balance of payments difficulties. Our reactions, on the other hand, have tended to be slow, because the American people have not yet awakened to the full implications of our balance of payments deficits. This is not consistent with our responsibility for a currency that has become the world's principal standard of value and the largest repository of its foreign exchange reserves.

Conclusions

What are the implications for the U.S. of this new era of competition among convertible currencies? The answers are not easy, but when we recognise the urgency of the problem, we are at least on the road to a solution.

First. We must militantly fight for economic stability at home, simply because our vital self-interest demands this stability. There is no other way. It would be foolhardy on our part, having done so much to build progress and stability abroad, to throw it all away, because we do not have the self-discipline to live in the kind of world we have helped create. This is the reason we must support President Eisenhower and Secretary Anderson in their fight for a balanced budget, and a surplus budget, if possible, and the Federal Reserve System in its courageous moves to maintain stability. There is no question but that a budget deficit in present circumstances lowers our resistance to inflationary trends.

Let not the Americans forget that the world has its eye on the dollar more than on any other currency. I took a round-the-world trip last fall. Everywhere I went, there were questions about the position of the dollar. And no wonder. Foreigners held some $15 billion in official short-term balances with us. This is the measure of the world's confidence in the stability and value of our dollar. We have increasingly become the banker for the world. We must merit that confidence.

For this reason, we cannot afford to be too complacent about the gold outflow. The outflow has resumed recently and is certain to continue this year, partly because of the underlying international payments situation and partly because of the gold payments that will have to be made to the International Monetary Fund later in the year in connection with the 50 per cent. increase in Fund quotas. The United States alone will have to make a payment of $344 million in gold. The extent to which other countries will use their dollars to buy gold from us to make their payments to the Fund is unknown. It is well for all of us to know and anticipate these facts about the gold outflow, so that we can put it into proper perspective. While we should not be complacent, I do not want to be an alarmist either. I was impressed recently by what a world authority on this subject had to say at the American Bankers Association Monetary Conference in London. Mr. Per Jacobsson, Managing Director of the International Monetary Fund, stated that the gold outflow "represents a warning about the trend of costs and prices" in the United States but he stated further: "I do not think the U.S. gold outflow represents any real threat to the dollar. With the U.S.A. possessing more than half the world gold stock, it would be absurd to say this." I am hopeful about the reaction of the American people. I am told that recent reports from the grass roots areas of our country have been encouraging, that people are worried about inflation and writing to their Congressmen.

Second. We shall have to take a close look at the international financial burdens that we have carried so largely alone since the war. These burdens are broadly of two kinds: defence, and aid and economic assistance to developing foreign countries. These programmes must go on. It is essential for our security that we continue our military establishments abroad and our military assistance to our allies. Some of this aid is in the form of military hardware that by going to friendly countries actually reduces our defence burden at home. Another part of the aid goes to strengthen the economies of our allies and still another part helps us to dispose of our surplus farm products. While these programmes are necessary, we must be increasingly careful that every defence dollar and every aid dollar is well spent. At the same time, the growing strength of Western Europe and even of Japan indicates clearly that it is time for our allies to begin to shoulder a larger share of these burdens. I feel we are also right in our insistence that the developing countries too should demonstrate that, along with our aid, they are at the same time ready and willing to help themselves. This is a long-term job—far far longer than the reconstruction of Western Europe—but it is a job that must be done.

Third. We must not be tempted to solve our balance of payments problem by a reversion to a highly protectionist policy. To do so would make it impossible for us to press our European allies to liberalise further their restrictions against imports from the United States. Fortunately, the main lines of our trade policy were pretty well resolved when Congress last year renewed the Reciprocal Trade Programme until 1961. Any reversal of this policy would only bring retaliation and start a movement away from the more liberal trade policies that have done so much to stimulate the growth of world trade in the last few years.

Actually, it would be difficult for us to reduce our imports substantially even if we tried. Two-fifths are for raw materials not available domestically or needed to supplement inadequate domestic supplies. Of the remainder, a large part consists of foodstuffs most of which cannot be grown domestically.

Fourth. We should encourage Congress to pass the pending legislation embodied in the Boggs Bill, which provides incentives for American private investment abroad. This investment is the urgent need of many of the developing countries. In the long run, it should help take some of these problems off the back of our Government. This will not only help the budget, but each dollar of foreign private investment accompanied by our know-how is often worth several dollars of aid or credit to the recipient countries. For that reason a sound increase in our private foreign investment would not necessarily worsen the balance of payments problem that is foremost in my mind. Often our capital contribution is made in the form of machinery or other exports, anyway. Furthermore, in the long run, these investments should earn a good return and experience has shown that our industrialised friends usually become better customers, because their higher standard of living increases the demands for the things we have for sale.

Fifth and finally. We can help by explaining these cold facts of our changed world economic position to our friends, neighbours, employees, to all with whom we come into contact.

Economic achievements in Europe and elsewhere place new obligations on American economic statesmanship. The world is still largely dependent on the maintenance of the economic soundness and strength of the United States. The challenge to us is to keep our goods competitive price-wise in international markets and to bring our foreign payments into balance. Government, industry, and labour have equal responsibilities in meeting this cost challenge. The U.S. leadership in the world depends on the success of its endeavours to secure economic growth and stability. The whole world would regard any weakness in the dollar as a signal that America is losing the cold war.

[*N.B.*—Since this article was prepared by the author, Britain and France have relaxed the restrictions on imports of U.S. goods, including some consumer goods.—ED.]

WEEK'S STOCK EXCHANGE TREND
