Locally, tanned skins market is unchanged, but shipment business is small. Semi prime sheep skins is in good demand, but other tannages are easy. The tanned goat market is likely to ease to some extent, as importers' demand is poor.

The National Steel Corporation, the fifth biggest steel producer in the U.S., will set up a large new steel plant on Lake Michigan, east of Chicago. This project is a part of a $300-million programme that envisages the establishment of a new steel strip mill and expansion of 500,000 tons in the annual steel making capacity at National's Detroit Subsidiary—Great Lakes Steel Corporation. This new venture is claimed to be the largest ever undertaken by the steel industry in the U.S., since the $500-million plant was erected in Pennsylvania seven years ago.

Mr. Dave Beck, the former head of the International Brotherhood of Teamsters—the largest U.S. trade union—has been convicted by the U.S. Federal Court for evading income-tax of $240,000 (about Rs. 11,42,800). Mr. Beck, who retired last year with a union pension of $50,000 (about Rs. 2,38,000) a year after appearing before a U.S. Senate investigating committee inquiring into alleged trade union racketeering, faces a maximum penalty of 30 years in prison and a fine of $60,000 (about Rs. 2,85,700).

A new automatic electric domestic ironer has been put on the market in the U.S., which, it is claimed, will enable an American housewife to do a week's ironing in half the usual time. Clothes of any size can be ironed without folding or reversing them. Since the ironer has knee-operated controls, the hands are free to feed and guide the clothing and other items. The 25"-cotton-padded roll rotates seven times a minute and can iron five double-bed size sheets in less than 12 minutes.

Sweden's total output of chemical pulp in 1958 amounted to about 3,200,000 tons, as compared with 3,280,000 tons in 1957 and 3,180,000 tons in 1956. The production of market pulp was 2,280,000 tons, as against 2,360,000 tons in 1957 and 2,330,000 tons in 1956. The overall output of sulphite pulp is estimated at 1,680,000 tons, or 50,000 tons less than in 1957, while production of sulphate pulp dropped by 30,000 tons to 1,520,000 tons.

The Australian Government proposes to intensify its oil exploration drive. Geological surveys have shown that oil can be found in commercial quantities.

Notices

MARTIN BURN LIMITED

NOTICE

THE ANNUAL GENERAL MEETING (BEING the Thirteenth Ordinary General Meeting) of the Shareholders of Martin Burn Limited, will be held on Thursday, 26th March, 1959, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1958, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend and Cash Bonus.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 19th to 26th March, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

A. G. GIDLEY,
Secretary.

CALCUTTA, *28th February*, 1959.

Note:—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 26th April, 1959, to those shareholders so entitled whose names appear in the Company's books on the 26th March, 1959, or to their mandatees. No application for dividend warrants will be necessary.

MARKET GOSSIP

(*Concluded from page* 303)

difficulty, a deal was concluded in July 1957 in England for the supply of a water gas plant of 1 million cubic feet capacity. In March 1958, the necessary import licence was procured. In June last, the plant was shipped from Britain. With the installation of the plant, the Company's capacity would increase by 20 per cent. to 6.7 million c.ft. per day.

Another interesting development is the West Bengal Government's decision to go ahead with the Durgapur coke oven plant, subject to the Union Government's sanction. Speaking on this subject in the West Bengal Assembly last week, Dr. B. C. Roy, Chief Minister, said that preliminary arrangements had been made with the Yugoslav Government to lay a pipeline under a rupee-contract system. Arrangements had also been finalised for the sale of almost all the by-products of the existing plant on a three-year contract basis.

The Oriental Gas Company Ltd. is a sterling company with an issued capital of £300,000 in fully paid stocks of £1 each, of which stocks of the face value of £293,829 are being held by the Calcutta Gas Company Ltd. which is controlled and managed by Messrs. Soorajmull Nagarmull (otherwise known as the House of Jalans). The same House controls the Bombay Gas Company also. It may be mentioned, in passing, that the Government of Bombay was not agreeable to the Bombay Municipal Corporation's desire to take this company and run it as a municipal undertaking.

The reserves and surplus of the Oriental Gas Company as on 30th June 1957 (the latest date for which figures are available) aggregated £320,022. Its total assets as on that date amounted to £1,037,073, of which the net fixed assets alone accounted for £427,383 (the gross value being £569,186). The net profit for the year ended 30th June 1957 was £28,588 (Rs. 3.81 lakhs), having declined from £59.009 (Rs. 7.87 lakhs) for the previous year. It paid a dividend of 15 per cent. (Rs. 2 per stock of £1 each) free of tax, same as for 1955-56. The Calcutta Gas Company's earnings are mainly from the dividend on its investment in the Oriental Gas and from the remuneration as managers of the subsidiary company. Its paid-up capital of Rs. 95 lakhs is made up of 30,000 5½ per cent. (taxable) cumulative preference shares of Rs. 100 each and 650,000 ordinary shares of Rs. 10 each. Besides, it has a 4 per cent. debenture loan of Rs. 30 lakhs secured by a specific charge on the Company's holding in the ordinary stock of the Oriental Gas Company. These holdings (unquoted), at cost, amount to Rs. 1.13 crore. The Company paid a dividend of 5 per cent. on the ordinary shares for the year ended 30th September 1957, as against 6 per cent. for the previous year. The Rs. 10 fully paid-up shares are now being nominally quoted at Rs. 6.50.

A new factory to produce surgical requisites and other products, now nearing completion on a 24-acre site in Mulund, a distant suburb of Bombay, will be inaugurated on 28th March 1959. Set up by the famous American firm of Messrs. Johnson and Johnson in collaboration with Mr. K. M. Premchand, a leading business man and industrialist of India, the factory will manufacture a wide range of products covering sutures and surgical requisites, gynecic therapeutic products, baby and adult powders, baby creams and oils, prickly-heat powders, tooth brushes, orthopedic plaster of Paris bandages and pressure-sensitive tapes. The factory, it is claimed, ranks as one of the world's most modern, well-planned and completely hygienic factories.

The House of Johnson and Johnson needs no introduction, as their products are well known in India. They are the largest manufacturers of surgical dressings in the world, with associate companies operating 35 manufacturing plants all over the world. With the help of many years of research and the rich experience of Messrs. Johnson and Johnson, it can be confidently expected that the products manufactured by the new factory in Bombay will be of the highest quality.

Sugar traders the world over are eagerly awaiting the measures that the International Sugar Council will take to impart stability to the sugar market which continues to rule depressed. A meeting of the Council commenced at London yesterday, that is, four days after the automatic reduction of 2½ per cent. (159,750 tons) in the aggregate basic export tonnages (6,400,000 tons) under the World Sugar Agreement came into effect. The automatic reduction followed, because the average market price of Cuban raw sugar at New York (f.o.b. Cuba) was less than 3.25 cents per lb., the minimum stipulated in the Agreement, for 17 consecutive market days and was actually below it on 12 of these days. As required by the Agreement, the Council has met within seven days after the enforcement of the 2½ per cent. cut.

Will the Sugar Council succeed in arriving at an agreement on a course of action or fail? This is certainly an interesting question. Any failure on the part of the Council to agree on the action to be taken, it may be noted here, will lead to a further automatic cut of 2½ per cent. in export quotas. Such a possibility is, however, ruled out by some sugar traders in London who feel that the Council may effect a drastic cut of 7½ per cent. in quotas now and a further cut later. A specific provision in the Agreement empowers the Council to lower the quotas to a minimum of 80 per cent. of their original size, if the price is below 3.15 cents for 17 consecutive market days or is actually below 3.15 cents for 12 days and averages below this level for 17 days. It is, of course, generally doubted whether the Council will, indeed, reduce the quotas that far. This view is based on the following grounds:

Even if the Council were to cut quotas to the minimum of 80 per cent., it would not succeed in raising prices very much, although it might stop them from falling still lower. This is because the Agreement provides for the quotas to be increased again, as the price passes the minima of 3.15 cents and 3.25 cents. Thus, the Agreement, in effect, establishes a price ceiling at one, or both, of these levels.

Two notable decisions were announced by the International Tin Council at the end of its three-day meeting in London on Friday last. One, the total permissible export limit of the producing members for the three-month control period beginning on 1st April next was fixed higher at 23,000 tons, as against 20,000 tons for the current period, representing a rise of 15 per cent. Two, the authority previously granted to the Buffer Stock Manager to operate within the middle price range of the Tin Agreement, namely, £780 to £830 per ton, was extended until the end of June 1959. The Council's decision to fix enhanced quota for the ensuing quarter was a sequel to the need for arresting the sharp increase in tin prices lately. Cash tin (spot) on the London Metal Exchange had gone up to as high as £775 per ton before the Council's meeting, a rise of £27 as compared with the price prevailing at the end of last year and £45 over the support level of £730.

Despite the increase in tin export quotas, prices continue to rule firm. In fact, there has been a further rise. Spot tin has gone up by £5½ to £780½. Three months metal is now quoted at £763, as against £772 prevailing in late curb dealings immediately after the aforesaid decision was known. In India, too, tin has staged a rise, today's rate being Rs. 152 per quarter, as against Rs. 150 a week ago.

COMMODITY TAXATION AND ECONOMIC DEVELOPMENT

(*Concluded from page* 318)

made, the real income of the nation would be reduced by the cost of making the adjustment; if the adjustment were not made, resources would continue to be wasted in the production of undesired commodities. But, by the use of discriminatory commodity taxation, this problem could be easily tackled, without giving rise to the attendant evils of an income-tax, yielding the same revenue. This, incidentally, shows that the much discussed thesis of the "excess burden" of indirect taxation does not hold good in a developing economy.

All this perhaps brings into clear light the role of commodity taxes in the Soviet economy as an instrument of price policy. To quote Oxenfeldt: "For the most part, the Soviet Union relies on excise taxes, probably because they are highly selective as well as 'indirect' and 'hidden.' If they were to rely primarily upon income-taxes, Soviet planners probably would find that consumer preferences did not conform at all closely with production capabilities, so that big disparities between the supply and demand for individual products would continue to arise."[14]

The year 1868 in Japan not only marks the restoration of the Emperor's power, known as the Meiji restoration, but also an era of economic development. In 1873, a new land tax law was passed which replaced the feudal dues previously borne by the peasant with a money tax based on the assessed value of land. For 25 years, this tax provided the national Government with its chief source of revenue.[15] Until 1882, indeed, it furnished over 80 per cent. And, as is well known, land tax, being a tax *in rem* but not *in persona*, becomes highly regressive. "It was indirect taxes on consumer goods which largely financed the growing requirements of the national budget from 1880 to 1913."[16] They took two forms: (*a*) excise taxes on liquor, sugar, soy, textiles and a few other items, and (*b*) lucrative fiscal monopolies applied in 1898 and 1904 on the sale of two widely used products—tobacco and salt. In 1893, their share was 79 per cent; in 1903, 69 per cent; and in 1913, 63 per cent. All this shows that the common man had to pay through his nose to raise living standards in Japan. Hence Lockwood remarks: "Japan's pre-war fiscal system, like her distribution of wealth and income, was highly undemocratic, judged by the liberal standard of modern times. Yet, just as the well-to-do class contributed aggressively to capital formation, so it was led by a mixture of coercion and consent to provide increasingly for the revenue requirements of the State."[17]

To sum up, commodity taxes are useful, in the context of development, not merely as alternative sources of revenue consistent with maintenance of investment incentives, but also desirable as positive means for fighting inflation and to bring about an "optimum" allocation of resources. There might be one likely objection to such taxes on grounds of equity. But, it must be admitted, inflation and economic backwardness are no less inequitable. In a country like ours, where the income-tax payers constitute only a handful as compared with the total population, the common man has to take the bitter pill of heavier burdens, in order to attain a healthier economy. Progress and justice are costly luxuries, above all in terms of each other. That is why Dr. Gopal remarked: "Equity is of secondary importance in a developing economy, particularly when the major problem is economic growth. The trend of taxation towards equity would definitely retard the rate of growth in a mixed economy and sacrifice long-term benefits for short-term gains." The truth of this statement is amply illustrated by the fiscal history of the U.S.S.R. and Japan and it would not be surprising if history repeats itself in our country.—*All Rights Reserved.*

COMMERCE AND INDUSTRY

(*Concluded from page* 326)

international trade is such that we can hope just to hold the line; in the case of others we can expect an increase, but only of moderate amounts. The great structural weakness of our foreign trade is the large measure of dependence on a few traditional commodities for which demand is relatively inelastic. The urgent need is to diversify our exports. The rapid broadening of the industrial base is leading to an expansion of output of a whole range of manufactured products, including light engineering goods as well as consumer articles. It is in this context that the emphasis I have placed on cost and quality is of particular account, but dynamism in salesmanship, assisted by a vigilant and energetic commercial counsellor corps is no less important."

The stress laid by Mr. Iengar on the ethical standards of exporters was quite pertinent and very necessary, especially in view of the need for diversifying exports through manufactured goods. If the importer in foreign countries can be impressed that he can absolutely rely upon the word of Indian exporters regarding quality, price and delivery, half the battle on the export front will have been won.

Mr. Iengar was candid in his comments on some of the incentives offered by the Government to stimulate exports. He was particularly critical, as this journal has been, of the scheme under which exporters are given special quotas for import of scarce commodities. His views on this subject deserve to be recorded and as such we make no apology for quoting him *in extenso:*

"There is a tendency sometimes to advocate excessive recourse to expedients which may bring quick results from the short-term point of view but are likely in the long run to damage our prospects for exports. A feature of one of these short cuts which has been recently used in some countries is to enlarge artificially the profits of exporters in certain export lines by permitting them to import scarce commodities from abroad which can be sold on the domestic market at abnormal profits. In such schemes, the attention of the exporter is diverted from the need for improving his production technique and sales efficiency to profiteering in terms of permitted imports. From the long-term point of view, any country adopting these methods would not be able to build sound commercial relations or establish a stable trade pattern as they do not rely on increasing productive efficiency and innate competitive strength. They are liable on the contrary, to create a vicious spiral of rising costs and increasing recourse to special incentives.

"Where export capacity is, however, inhibited by shortages of imported raw material and equipment for modernisation and expansion, a link-up of export performance with authorisation to import for the special needs of the industry concerned furnishes a more justifiable basis for the Retention Quota System. Even under a limited system of that type, however, there is scope for malpractice and a distortion of the price structure. However, under suitable safeguards, the system may help in the short run in export promotion but it is essential to recognise that the expedient is a purely temporary measure and that emphasis must continuously remain on promoting healthy and durable growth in the framework of an efficient and competitive cost structure."

As expedients of the type mentioned above are ultimately bound to affect the exchange value of the rupee abroad, Mr. Iengar was perfectly right in frowning on them, in cautioning the Government against the dangers involved and in reminding the beneficiaries of these short-cut techniques of their responsibility to the country. In fact, we would go a step further and suggest that the Government should straightaway withdraw this scheme of dubious value. It must be remembered that the bulk of the foreign exchange which exporters are allowed to retain is being utilised for importing stores and raw materials and not for plant and machinery. Accordingly, it does not have even the saving grace to which Mr. Iengar referred, namely, that it might help the industry to improve its competitive efficiency. What is even more disturbing about this scheme is that it tends to hide the basic defects in the export industries and also in the Government's policy towards them.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVIII. No. 2502 BOMBAY, 7th MARCH 1959 PRICE: Rs. 2

BUDGET WITH ONE REDEEMING FEATURE

IN the budget of a Government, be it State or Central, the revenue proposals, more especially taxation proposals, receive greater attention than all other aspects. It is to the taxation aspect of the Union budget for 1959-60, therefore, that we propose to confine ourselves in this article. Viewed from this angle, the budget evokes mixed reactions. It deserves neither wholesale condemnation nor unqualified compliments. It is in consonance with the socialist pattern of society one hundred per cent.; indeed, it marks the first step towards the establishment of Mr. Nehru's concept of "full socialism" envisaged in the Nagpur resolution. It has given away nothing; on the contrary, it fully reflects the Government's recent policy of taking back more than what is given. But, at the same time, it contains, as we shall presently show, a major concession, albeit in principle. Mr. Morarji Desai has been clever and original, though not necessarily wise. He has done the "camel trick," for it is apparent that the private sector has heaved a sigh of relief. The budget, after all, is not as bad as was feared in recent months.

In his concluding remarks after announcing the tax proposals, Mr. Desai made this striking observation: "The annual budget is now something more than a simple account of Government's house-keeping. Each budget marks a stage in the country's continuous development and has to be judged by the contribution it makes to this development. In a sense, therefore, the stage that has been reached in the implementation of the Plan conditions this budget. ... We have to go forward with the Plan. ... This has been the major factor round which the budget has to be built. In doing so, I have kept continuously in mind the main considerations necessary for the successful implementation of the Plan." These, according to him, are "the maximum mobilisation of resources by taxation and borrowing, firm control over the growth of non-development expenditure and minimum recourse to borrowing from the Central bank for the finance required for development." Taken by themselves, these considerations are unobjectionable, but they must be viewed against the background of what has already been done in this direction, in order to judge to what extent and in what proportion they should be observed in the successive years of the Plan.

It is common knowledge that the resources raised through additional taxation is already twice as much as the target in the original second Plan which was bigger than its revised edition. It is, therefore, difficult to appreciate the Finance Minister's contention that something more has to be found through taxation. His Ministry has enough data to convince him, if he keeps an open mind, that the pace of economic growth has slowed down and that this is due not a little to excessive taxation on initiative, enterprise, efficiency and savings. There is no trace of recognition of this fundamental point in the budget, except in a small way. That the size of even the revised second Plan is far beyond the resources that can be raised without detriment to the economic stability of the country is evident from the fact that, notwithstanding a welcome reduction in defence expenditure, the overall deficit at the existing levels of taxation is as large as Rs. 245 crores, as against the budget estimate of Rs. 200 crores and revised estimate of Rs. 255 crores for the current year. Unfortunately, the Government has found it less easy to levy taxes after taxes than to keep down the non-Plan expenditure. The determination to economise and avoid waste is seen more on paper than in action.

Despite the heavy taxation that has been imposed year after year ever since the first Plan began, the Finance Minister could not resist the temptation to impose further burdens in the name of the Plan. For the coming year, he has chosen to raise additional taxation by Rs. 23.35 crores, a sum which is equivalent to 28.5 per cent. of the estimated revenue deficit and which will increase the resources raised through additional taxation during the second Plan period to Rs. 950 crores, that is, Rs. 500 crores more than the target. And, yet, there are still critics in this country who say that enough has not been done in the sphere of taxation. It gives at least some satisfaction, negative though, to hear from Mr. Morarji Desai that he regards the quantum of additional taxation imposed by him as "substantial." It is to be fervently hoped that he does not have in mind still further taxation when he says that it is his "intention to see how far the deficit could be reduced by appropriate measures during the course of the year."

For our comment on new taxation measures, we would like to take first direct taxation. The object of Mr. Morarji Desai's predecessor, Mr. T. T. Krishnamachari, was to introduce an integrated system of taxation. Mr. Desai has taken simplification of the tax system as his objective, without surrendering any revenue. This objective has undoubtedly more merits than many are prepared to concede on first thoughts. His proposal to abolish the wealth tax on companies and the excess dividends tax is a courageous step for a Minister of a Socialist Government to take. These are pernicious taxes. Even Prof. Kaldor, who gave the idea of an integrated tax system to this country, was against them, though, of late, he seems to have developed some fondness for wealth tax on companies. T. T. K. himself could give no convincing justification for wealth tax on companies, apart from saying that it was warranted because of the peculiar conditions prevailing in this country. Almost everyone who had studied the Indian tax system dispassionately was of the view that wealth tax on companies was a retrograde step and amounted to an annual expropriatory levy on savings put to productive use. It is a bad tax, both in principle and practice, and so is the excess dividends tax.

Mr. Morarji Desai deserves to be congratulated on his decision to give them up.

It is true that, for this concession in principle, Mr. Desai has taken a heavy price from the corporate sector by abolishing the system of "grossing" dividends, details of which are recorded elsewhere in this issue. Some companies and their shareholders may gain a little by his move to simplify the corporate tax system, while many may actually suffer a slight disadvantage. But the price is worth paying and is not too much having regard to the endless mischief the two taxes are capable of. Their continuation would do more harm to joint-stock companies, especially to those which are of a growing nature, than the abolition of the system of "grossing" dividends, a system which has become more and more complicated, very expensive and time-consuming. The whole arrangement boils down to surrendering a privilege which shareholders of companies have been enjoying all these years in order to get rid of two of the reprehensible taxes. It is, therefore, not a bad bargain, assuming, of course, that the Government does not raise the combined rate of income-tax and corporation tax from the proposed readjusted level of 45 per cent., even at which level several companies seem to stand to lose a little.

There are three other proposals in the budget pertaining to corporate taxation. First, the system of compulsory deposit of reserves which was suspended last year is to be removed from the Statute Book. This is a step in the right direction, as there is no need for this control, what with the continuance of the compulsion on companies to earmark specifically to a special reserve the benefit of development rebate. Secondly, the abolition of the concession in the form of double depreciation from the next financial year is premature, because of the continued high cost of plant and machinery and the need for renewals, replacements and extension of capital equipment. The Exchequer does not lose much as a result of this concession, as it is only in the form of a loan to industry, but it is of considerable value to companies, because of shortage of capital in the money market. And, thirdly, the decision to subject to bonus tax capitalisation of share premium accounts in the same way as is done in the case of capitalisation of reserves is unjustifiable and contrary to the Government's view on this subject all along. Hitherto, the Government has recognised the fact that share premium represented capital, pure and simple. Now, what has made the Government to change its view? The Finance Minister has given no reasons, apart from the bare statement of his intention. To tax capitalisation of reserves is to indulge in double taxation, because the reserves are out of taxed profits. It becomes downright expropriation when the tax on it is as high as 30 per cent. Whereas the need of the hour is abolition of this nefarious tax, the Finance Minister actually gives a slap in the face by saying that he would take 30 per cent. of the share premium also, if that premium were to be transferred to the capital account. Apparently, he wants to deny the companies the full benefit of the abolition of excess dividends tax. Whatever may be his intentions, he has killed all chances of well-established companies issuing new shares at a premium, a practice which was not without any meaning. It must, however, be said to the credit of Mr. Morarji Desai that, unlike Mr. T. T. Krishnamachari who raised the tax on bonus shares from 12½ per cent. to 30 per cent. in the middle of an accounting year and thereby gave it retrospective effect, he has been fair enough to announce his decision in advance and say that it would be effective from the assessment year 1960-61. This has saved companies which capitalised

their share premium account in the current accounting year. These include such large companies as the Tata Iron and Steel and the Indian Iron and Steel Companies.

It is when one comes to the changes made in personal taxation that one sees the march towards full socialism gathering momentum. It is true that the Finance Minister has made no change in income-tax and super-tax payable by individuals, but he has stepped up the tax on wealth and drastically reduced the concessions given under the Expenditure Tax Act. The combined effect of these measures is a further attack on wealth, a relentless drive towards the elimination of rich people and a device to win the goodwill of the have-nots. In raising the wealth tax by a straight half per cent. in each slab, Mr. Morarji Desai has been unduly harsh on smaller rich people, the cream of the intelligentsia which makes an immense contribution to the economic, social and political progress of the country. Whereas the increase in the top slab for wealth tax is only 33 1/3 per cent., it is as much as 100 per cent. in the bottom slab and 50 per cent. in the middle slab. Such a steep progression in the first two slabs is not in keeping even with the socialism of the Government. Equity demands a downward revision of the increase in the first two slabs. The right thing to do would, of course, be to abolish both the wealth and expenditure taxes.

While the Finance Minister is right in relying on excises and customs for the major portion of the additional taxation he wished to collect, he has not been judicious in choosing the commodities. As a member of the Rajya Sabha aptly remarked, he has hit road transport below the belt by raising the taxes on diesel oil and motor car tyres. Road transport in India is the most heavily taxed service in the whole world. To make this service costlier still is to add to the handicaps of Indian goods and services and make the cost structure even more rigid. This will also be the effect of increases in the excises on vegetable oils. The Finance Minister ought to have searched for new sources for excises which would not add to the cost of living to any significant extent. Salt is one of them. There is no sense in leaving out salt and taxing to the hilt cloth, sugar, vegetable oils, transport, etc., which are also essentials of life. A duty on salt will bring not less than Rs. 20 crores per annum and yet the incidence of it on the masses will be negligible. The only new commodity to be brought under excise is *khandsari* sugar and there is ample justification for doing so.

ECONOMIC PLANNING

ALTHOUGH the Government is not yet committed to any particular size for the third Five-year Plan, it is known that the authorities are beginning to have their first thoughts on the subject. President Dr. Rajendra Prasad has himself invited all shades of opinion, inside and outside Parliament, to make a "constructive, even if critical" contribution in ideas and approach to the third Plan. From this point of view, the suggestions made by Mr. J. D. K. Brown, President of the Bengal Chamber of Commerce and Industry, at the annual meeting of the Chamber held at Calcutta last week, deserve notice. Mr. Brown rightly pointed out that the lesson to be gained from the working of the second Plan—he recognised that its achievements were "tremendous," and should not be overlooked simply because they did not yet match the needs of the nation—was that the third Plan must be flexible.

Since the difficulties in implementing the second Plan have arisen mainly from the paucity of resources, Mr. Brown rightly insisted that the problem of resources should receive adequate consideration in framing the third Plan. He went on to point out how the physical resources for the third Plan would "depend at least to a marginal extent on the price level and governing all will be the level of agricultural production." He felt it was a "counsel of perfection to suggest that the Plan should contain some built-in adjustment processes which will ensure that necessary modifications are made in good time." But a continuous awareness of the resources position, as Mr. Brown said, would guarantee that the "necessity for periodical modification was fully realised and that adjustments, when they came to be made, would not give rise to such painful reappraisals as have faced the planning authorities during the past year." In other words, the acceptance of the necessity of flexibility in the Plan will enable the authorities to make precisely such adjustments in the Plan as will ensure its successful completion without the confusion of methods and aims, not to mention waste of resources.

It must, however, be clear that no economic plan which does not take fully into account its foreign exchange requirements can be implemented in its entirety. This is yet another important lesson which the second Plan has taught the country. To leap forward in the economic sphere without a steady look at the foreign exchange gap is to court innumerable hardships in the shape of costly revisions of the Plan, abrupt termination of projects and uncertain pace of their implementation. Foreign exchange is unfortunately not so neatly amenable to planning, what with the swift and unpredictable changes in the world economic climate which determines what, and how much, a particular country can sell. If the third Plan is not to flounder on foreign exchange rocks, there is a great deal of hard thinking to be done, preferably in collaboration with friends abroad, for this country cannot expect other nations to respond once again to its call for rescue from any difficult situation, similar to the one it has passed through.

Be that as it may, Mr. Brown's suggestion for funding India's foreign debt deserves the attention of the authorities. He said: "Looking ahead, we see on the one hand that foreign exchange commitments over the next ten years, considered in relation to the likely balance of payments, are distressingly high. On the other hand, the total external debt of the country is, in terms of today's values and having regard to the natural resources we command, a very moderate figure indeed." All this, according to Mr. Brown, points to the "necessity of making arrangements with our creditors abroad for the funding of our foreign debt on a longer-term basis." This, he recognised, was no simple matter, inasmuch as India's foreign exchange liabilities consisted of a variety of obligations. He added: "I believe, however, that we have shown in India what can be done and to that extent have justified in a large measure the assistance—'support' may be a better word—we have received. It is in these circumstances that I consider that India is justified in seeking foreign resources on a longer-term basis than has proved possible till now." Since India's critical foreign exchange position can be traced to imports of capital goods, not all of which can be financed by any country out of its current exchange earnings, a negotiated settlement on the lines suggested by Mr. Brown would certainly ease the difficult situation arising out of the need to compress into a few years the progress which the industrially advanced countries have taken several decades to achieve.

ECONOMIC SURVEY

GOVERNMENT publications have their value and their limitations. They are nearly always bound to be informative, considering that the Government has access to records and data not always available to the public. At the same time, they may often fail to conform to strictest standards of objectivity, because of a certain unconscious desire to vindicate Governmental policies. *The Economic Survey*, published this week by the Government of India along with other Budget papers, however, maintains a high level of objective evaluation of current economic trends. Despite its official origin, the *Survey* is commendably free from any tendency to gloss over difficult and inconvenient facts. Further, when it comes to providing a corrective to economic maladjustments, its emphasis has fallen on the right objectives.

The *Survey* notes that the sharp decline in agricultural production and a slowing down of the pace of industrial production accentuated the pressure on prices during 1958-59. The index number of wholesale prices (Base: 1952-53=100) has risen from 106.6 in the first week of April 1958 to 114.0 in the second week of February 1959. The rise in food prices has been particularly marked. The index of food articles, which stood at 103.9 in April last, has risen to 116.8. Reflecting this increase, the cost of living index has moved up from 110 in March 1958 to 119 in December 1958. Over the three years since the second Plan commenced, the rise in prices has been of the order of 15 per cent. and that in cost of living nearly 11 per cent. The *Survey* points out that, while the "economic trends in the first two years of the Plan were indicative of a growing imbalance in the economy arising mainly out of the step-up in investment activity in pursuance of the Plan, the signs now are of a lessening in this imbalance."

Nevertheless, the *Survey* rightly emphasises the importance of price stability. Thus, it says: "Although it must be recognised that some rise in prices is inevitable in a developing country and the rise that has occurred is in part due to special factors such as the shortfall in agricultural production in 1957-58, relative price stability is vital for orderly development." Appropriately enough, it observes that the answer to the problem of maintenance of prices lies in a "substantial increase in production, especially food production." Both the diagnosis and the prescription are unimpeachable. It must be remembered that production of foodgrains in 1957-58 fell to 62 million tons from 68.7 million tons in 1956-57. This, together with the increase in Governmental expenditure, has served to exercise a great upward pressure on food prices. Nor can it be overlooked that the present rate of growth of population itself adds one million tons per year to the demand for foodgrains in the country. This factor alone is sufficient to show how a steady increase in agricultural production is vital to the maintenance of price level. If allowance is made for this factor, it will be seen that even a production of 70 million tons in 1958-59, as is now estimated, does not leave a sufficient margin between demand and supply to exercise a downward pressure on prices. On the contrary, prices will continue to seek higher levels, if the Government effectively implements its programme for building up a reserve stock of 3 million tons out of current production, for that will seriously affect the marketable surplus.

Analysing the trend of industrial production, the *Survey* records that it has slowed down since 1957. Whereas the index (1951=100) rose from 122.4 in 1955 to 132.6 in 1956 or by 8 per cent., it went up to 137.3 in 1957 or a rise of only 3.5 per cent. In October 1958, it was only 141.2, at which level industrial production reflected a rise of only about 4 per cent. over the 1957 level. The slow rate of increase in industrial production, indicated by the movement of the index number, is attributed to the fall in the output of cloth and yarn. Many industries, however, made notable headway in 1958. They included coal, electricity, diesel engines, electric motors, machine tools, sulphuric acid, bicycles and sewing machines. In the case of some other industries such as automobiles, power transformers, electric lamps, cloth, *vanaspati* and sugar, production fell in 1958. This decline is largely due either to the restrictions on imports of equipment and stores which were imposed or to a "slackening of consumer demand for these commodities." Perhaps, the *Survey* would have done well to examine how the demand for even essential consumer goods came to suffer a setback in a developing economy which should normally indicate a pressure on such goods. An impartial survey of this aspect of India's industrial economy will reveal the deleterious impact of the fiscal burden on industries which, together with a sharp rise in the cost of food, high wages and relatively low productivity, has made Indian industry a high cost one, thereby inhibiting the demand for its products. In other words, this situation is the result of excessive taxation accelerating the vicious circle generated by inflation and fall in food production.

The impact of economic development on imports is illustrated by the increase in imports of capital goods which accounted for Rs. 366.0 crores in 1957-58 and for Rs. 197.8 crores in the first half of 1958-59, as against Rs. 329.2 crores and Rs. 219 crores in 1956-57 and 1955-56, respectively. A notable trend in India's imports is the declining importance of private imports of capital goods. During the years 1955-56, 1956-57, 1957-58 and the first half of 1958-59, private imports of capital goods were Rs. 153.4 crores, Rs. 211.0 crores, Rs. 204.9 crores and Rs. 74.1 crores, respectively, and imports of capital goods on Government account were Rs. 66.4 crores, Rs. 118.2 crores, Rs. 161.1 crores and Rs. 123.7 crores, respectively. This trend reflects the emphasis on State participation in industrial production. The *Survey* draws attention to the fact that "the rise in aggregate investment in the year that is about to close will have been relatively small; while public investment is expected to be more than in the previous year, private investment will probably have been lower." This is, perhaps, the beginning of the trend towards socialist economy in which the public sector, according to the Party in power, has to outgrow the private sector. The same trend is indicated by data relating to the profits of several industries, consents for capital issues and the licences granted for new units and for substantial expansions. All of them show a slackening of investment in the private sector.

OUTLOOK FOR EQUITIES

COMMODITY MARKETS FIRM AGAIN

THURSDAY, 5 P.M.

AFTER moving in an erratic fashion, equities in the share market have regained their poise and the majority of them have recorded modest gains over the levels prevailing before the budget. In fact, some of the scrips, such as Belapurs, Bombay Burmahs, Telcos, Premier Constructions, National Rayons, and Centurys, to mention a few, have registered substantial gains. Late on the budget night and on Monday, the markets displayed a sense of disappointment, with prices dropping appreciably from the high levels seen in the first two hours after the taxation proposals were announced in Parliament. But this was due to a misunderstanding about the implications of the proposed new method of corporate taxation.

MARKET GOSSIP

The initial post-budget rise, which was of a sizable nature, was the result of clumsy dissemination of the new tax proposals from New Delhi by the leading news agency which is the main source of information to the market. It is true that almost every broker's office had a radio set on the budget day, but the A.I.R.'s broadcast was hardly audible, as it was drowned by the din in the trading ring and the excited voices of operators in the brokers' offices.

The first few flashes of the news agency were about the changes in excise and customs duties. Then came a flash which said that the wealth tax on all slabs had been raised by ¼ per cent. It did not specify that this applied only to individuals. The abolition of wealth tax on companies and excess dividends tax came after some time. Another flash referred to the reduction in income-tax and super-tax on companies. The very same flash, of course, did mention that the Finance Minister expected no fall in the tax revenue from corporate taxation. But it contained no reference to the proposed abolition of "grossing" of dividends. Although some wondered as to how the tax revenue from the corporate sector would be the same even after the aforesaid concessions, many took it for granted that the Finance Minister was probably expecting an increase in economic activity. That there were no changes in the rates and structure of personal taxation was contained in another flash that soon followed.

The net effect of all these flashes was bullish. The bears rushed to cover and the bulls were on the offensive. And the post-budget trading session finished with prices of most of the scrips remaining at about the highest levels touched at that session. The message about the abolition of "grossing" of dividends, the main cause of disappointment to the market, reached the brokers' offices only long after the market had closed. It would appear that a few operators had come to know of this a little earlier and that they exploited the situation to their advantage.

If only the news about the abolition of "grossing" of dividends had reached the market in time along with other tax proposals, the reaction of the market during the post-budget session would not have been strongly bullish; nor would there have been the heavy fall that was witnessed subsequently. These erratic fluctuations did not help create the calm atmosphere necessary for a proper understanding of a somewhat complicated tax proposal. Quite a lot of people jumped to the conclusion that, because equities had slumped after staging a handsome rise, the abolition of the "grossing" scheme was a distinctly adverse development to investors.

The new scheme of company taxation, the central point of which is the "grossing" of dividends, is somewhat technical and requires the help of tax specialists for its understanding. It would have been an excellent arrangement, if the Central Board of Revenue had circulated, along with the explanatory memorandum elucidating the provisions in the Finance Bill, a note describing how the new scheme would work in actual practice and giving a few illustrations. Such a note would have received wide publicity in the daily Press and thereby gone a long way towards a better appreciation of the Finance Minister's proposal. It must, however, be acknowledged that, yesterday, the C.B.R. acted quickly, though in an unofficial manner, in countering what it considered were not correct interpretations of the effects of the new scheme. Thanks to this unofficial clarification, second thoughts on the scheme are somewhat cheerful, as is evident from the smart recovery in prices.

* * * *

The contention of official spokesmen that shareholders of companies will not be adversely affected as a result of the proposed new scheme of company taxation has not carried conviction to some in the share market. This is not surprising, because, in order to ensure that a shareholder gets the same net dividend as under the existing system, companies will have to step up the rate of dividend by 40 to 46 per cent. On the face of it, this sounds fantastic and creates a disbelief among certain investors. They are inclined to think that not many companies will raise the dividend rate by such a high percentage.

It is hard to say whether the reliefs given to companies through a reduction in income-tax, super-tax, and abandonment of wealth tax and excess dividends tax will fully offset the disadvantage of giving up "grossing." Elsewhere in this issue, there is an article in which a Chartered Accountant has examined the position. He comes to the conclusion that, generally speaking, most companies will not be able to maintain the net dividend, unless they reduce the allocations to reserves. He feels that the companies will be out of pocket to some extent and, therefore, recommends that the rate of income-tax on companies should be brought down further, from 20 to 18 per cent. This conclusion is based on the average of figures for over 1,000 companies worked out by the Reserve Bank. It may be defective to the extent that average figures do not indicate the exact position of each company. So, it is possible that, while the new system may be a little advantageous to some companies, it may be disadvantageous to others. The position of each company has to be studied individually before one can say how the new system will affect its dividend distribution.

It must, however, be borne in mind that the position of well-managed companies will not be static. Most of them will keep on growing, especially in a developing economy like that of India. They will, therefore, be able to overcome whatever disadvantage there is in the new scheme in a few years. There is no doubt that, in the long run, the shareholders will lose more if the existing system of taxation is continued, for the incidence of wealth tax and excess dividends tax on companies will go on increasing as the companies grow.

It is true that dividends depend, to a considerable extent, on the managements of companies. Some are ultra-conservative, many are moderately conservative, while only a few are liberal. There is a fear that some managements may not pay higher dividends, as a deliberate move to minimise their individual wealth tax liability, the argument here being that bigger dividends enhance the market value of their shareholdings and attract more wealth tax. While thus shareholders think that they will be placed at the mercy of managements to a greater extent than hitherto, there is also the other side of the coin. The managements are afraid that, as a result of the new scheme, they will be under increasing pressure from shareholders to declare higher and higher dividends and that, if they yield to it, the workers, who will look at only the level of gross, and not the net, dividend, will also demand more.

Generally speaking, however, the managements are more powerful than shareholders. The latter will have to agitate hard, if they are to succeed in getting a higher dividend. It may be noted that, under the Company Law, the shareholders have no right to move a resolution seeking to raise the dividend proposed by the directors; they can do so only to reduce the dividend. But the shareholders *versus* managements is not a new issue.

By and large, investors are not worse off than what they were before the budget. It is true that the increase in wealth tax on individuals may lead to some disinvestment, but, as against this, there are several other factors that will tend to keep up the buoyancy of equities. There is the continuous inflationary pressure and the budget for 1959-60 promises another large dose of deficit financing. The proposed abolition of wealth tax and excess dividends tax has increased the value of equities as a hedge against inflation. Secondly, interest rates are gradually going down. Thirdly, the L.I.C. is a steady buyer of equities along with other investments. And, fourthly, the supply of good equities—blue chips as they are called—is not keeping pace with the demand for them, in view of the restricted scope for the private sector in trade and industry and the capital gains tax. All this, however, does not mean that there are no uncertainties at all to contend with. One can list any number of them. One has only to recall the Nagpur resolution of the Congress Party to get frightened of the future. There will be, in the not distant future, General Election jitters.

* * * *

The principal commodity markets, after their recent fall, are currently witnessing a recovery. This is most marked in cotton and oilseeds which have risen to their end-January levels, while, in foodgrains, it is less pronounced. Cotton, which suffered a sharp setback towards the close of last month, has firmed up after the turn of the month and has been ruling fairly firm since then. Budget uncertainties having been cleared, the market attracted fresh mill buying and investment support. Although the expectation that the export duty on cotton would be abolished has failed to materialise, the trade could console itself that no duty on imports of cotton is proposed, as was feared in some quarters. A slackening of new crop arrivals in the ready and upcountry markets and the consequent hardening of spot prices strengthened the hands of the bulls. The progressively declining crop estimate, higher mill consumption in January, as compared with that in the same month last season, and the prospect of higher consumption in the coming months were other helpful factors. Sentiment was also favourably affected by the small volume of tenders issued against the March contract on the first and second notice days, only 500 bales and 50 bales, respectively. I.C.C. Moglai Jarilla March, after having declined from Rs. 668.50 on 31st January to Rs. 653 on the 26th inst., has been slowly moving up to quote at Rs. 665 today.

Oilseeds have recovered from the impact of the stringent measures clamped down by the Forward Markets Commission to curb the rise in prices. The strength of the market seems to be a reflection of normal market forces exerting their influence on the price trend. Paucity of stocks and good demand from crushers and manufacturers, coupled with export inquiries, have induced an upward trend in prices. The market has apparently overlooked the enhancement of excise duty on vegetable products and the abolition of the exemption limit for power-driven units from the payment of excise duty on non-essential oils. *Vanaspati* manufacturers seem to feel that they can shift a part of the incidence of the increased duty on to consumers. The withdrawal of exemption from all power-driven units will have the effect of improving the competitive position of big crushers who have not been enjoying the benefit of exemption. These factors account for the rise in oilseeds prices. Groundnut (May) contract is currently quoted at Rs. 181.37, Castorseed (May) at Rs. 156.25, Linseed (May) at Rs. 32.50 and Cottonseed (May) at Rs. 125.25, as compared with Rs. 178.00, Rs. 155.00, Rs. 32.25 and Rs. 121.25 a week ago, and Rs. 180.37, Rs. 154.25, Rs. 32.75 and Rs. 127.00, respectively, on 31st January last.

The upward trend in foodgrains prices, as noted above, though less marked, is nevertheless perceptible. Slackening of arrivals and seasonal demand would appear to be responsible for pushing up the prices. The prospect of a good crop looms large over the market and is restraining a sharp rise in prices. Wheat at Hapur showed some improvement this week, thanks to shortage of stocks. From Rs. 23.50 last week-end, it has edged higher to Rs. 24.50. This compares with the quotation of Rs. 27 on 31st January. Gram also has made modest gains over the week, though it is still below the level ruling at the end of January. From Rs. 20 last week-end, it improved to Rs. 21.25 yesterday. Rice has followed a steady trend. The latest quotation for rice (*basmati*) is Rs. 33, the same as it was last week-end and a month ago. Barley, in contrast, has shown a steadily declining trend and is currently quoted at Rs. 14.50, as compared with Rs. 15.25 last week-end and Rs. 17.50 a month ago.

* * * *

The reasons for Mr. J. D. K. Brown, President of the Bengal Chamber of Commerce and Industry, choosing for special comments tea, jute and coal industries in his address to the annual meeting of the Chamber held at Calcutta last Friday, are quite obvious. The tea and jute industries are two vital earners of foreign exchange, while the coal industry is the main source of power "on which increased industrialisation under the second and subsequent Five-year Plans must rest." Despite such important role played by these industries in India's economy, the conditions actually obtaining in them continue to be not very encouraging. The problems confronting the three industries and the solutions for their ills were impressively stated by Mr. Brown and deserve to be recorded in these columns for the benefit of the investing public.

Alluding to the coal industry, Mr. Brown referred to the issue of prices and pointed out that, since 1947, all increases in coal prices, with one minor exception, had been to help meet the rise in labour costs only and no account had been taken of the steadily increasing costs in respect of plant and equipment, stores, overheads and the additional equipment required under the new Coal Mines Regulations. Anyone who cares to analyse the balance-sheets of coal companies will fully appreciate the force of this contention. It is common knowledge that the exploitation of coal mines scientifically and economically entail a sizable outlay which cannot be raised without the coal industry being allowed to plough back profits. There is no exaggeration whatever in the statement of Mr. Brown that, unless an adequate margin of profit is allowed by the Government in the selling prices of coal, "there can be little expansion and production must eventually fall." In this connection, the following quotation from Mr. Brown's speech is pertinent:

"I am afraid that, at this stage, an approach based on expediency and recognising only immediate requirements will result in such dearer coal in the future, if the industry is not provided with the necessary finances to enable it to increase production, mechanise and follow sound mining practices. It is because this policy was not followed in the past that the National Coal Board in the United Kingdom has today to spend vast sums of money to modernise its pits to maintain an output little different from that of thirty years ago. Such a position can be avoided in India, if coal prices are now fixed at levels which permit of a reasonable return on the capital invested with a margin for development."

It is to be hoped that, in its report just submitted to the Government of India, the Coal Prices Revision Committee (set up in 1957) has recommended the adoption of a price structure which would not only allow present production to be maintained but also permit a progressive expansion in the future in order to meet the growing needs of industry.

As regards the tea industry, Mr. Brown expressed the hope that the Union Finance Minister had a pleasant surprise up his sleeve for the industry, namely, relief in taxation. Happily, this hope has proved correct. The Finance Minister has reduced the export duty on tea from 26 nP per lb. to 24 nP and readjusted the rates of excise duty so as to benefit growers of tea in certain high altitude areas of Darjeeling and Nilgiris. The changes are expected to result in a reduction of Rs. 93 lakhs in the yield from export duty and an additional revenue of Rs. 58 lakhs under Union excise, so that the net benefit to the industry is put at Rs. 35 lakhs. The cut in export duty on tea, though welcome, is, however, not adequate enough to bring about a perceptible improvement in sales of Indian tea abroad. This is so for two reasons One, competition in the world tea trade is becoming keener and keener, especially from East Africa. Two, many importing countries have imposed duties on Indian tea. If our exports are to be expanded

(Continued on page 395)

EQUITIES BULLISH

MIXED REACTIONS TO BUDGET

(From Our Own Correspondents)

BOMBAY, *5th March*

AFTER remaining steady in the pre-Budget session on Saturday last on expectations of a favourable budget, equities flared up in the special Budget session held on that day, reflecting the market's initial enthusiasm to Mr. Morarji Desai's budget proposals as they were being flashed. There was some nervousness at the commencement of the session, on reports of a large revenue deficit, but this proved short-lived, as there was no fresh direct taxation to cover up the deficit and equities, therefore, reacted bullishly with an all-round jump in prices. The abolition of the wealth tax on companies and excess dividend tax (albeit with effect from 1960-61) was also welcomed. The implications of the simplification of company taxation, under which companies would have to pay a flat rate of 45 per cent. and deduct tax at source on the amount of dividend to be distributed at the prescribed rate of 30 per cent., and the abolition of the system of grossing up dividends were not at first understood by the market. There was, therefore, no bearish reaction in the Budget session to this part of the proposals.

On second thoughts, the new scheme of company taxation induced heavy selling on Monday, as it was feared that the return to the shareholders would be seriously affected and as such it would impede capital formation. There was a sizable setback in equity values on Monday and early on Tuesday and, in many leading counters, the entire gain scored during the Budget session was wiped out. Subsequently, however, a recovery set in and equities gained strength on a fresh interpretation of the new scheme. It was thought that the substantial saving in wealth tax and excess dividend tax could be passed on by companies to shareholders in the form of higher dividends to make good the loss in the return to the shareholders and that many companies, particularly those which have good growth prospects, would be in a position to do so. It is, however, argued by some that the growth prospects and possibility of higher dividends were always there and but for the new scheme the return to the shareholders would have been much higher even at the existing level of corporate taxes. The market, on the whole, did not seem to view the new proposal in this light. The explanation given by a spokesman of the Finance Ministry that the shareholder would benefit from the procedural simplifications introduced in the system of company taxation would also appear to have helped sentiment. There were also hopes that the new tax proposal would be modified before the Finance Bill was passed. The firm trend, which began on Tuesday, was, therefore, well maintained during the rest of the week, though the peak levels touched in the Budget session were not fully regained as opinion was still divided on the effect of the scheme.

Tata Ordinaries touched a peak of Rs. 183 in the Budget session as against the closing of Rs. 172.50 on Thursday last week. After reacting to Rs. 172.50 on Tuesday, the shares picked up to Rs. 178.50 today. On profit-taking at this level, the shares softened to Rs. 176.75 at the close. The new shares gained on balance Rs. 4 to Rs. 175. Indian Irons advanced from Rs. 26.20 to Rs. 28.20 in the Budget session before declining to Rs. 26.40 on Monday. On Tuesday, they were listed *ex*-right at Rs. 22.36, from which level they rose to close today at Rs. 22.56 *ex*-right.

The absence of any further reduction in excise duty on cloth did not affect textile shares, though the increase in duty on rayon yarn and staple fibre by 60 per cent. might affect mills which are consuming these goods. Bombay Dyeings, which touched a high of Rs. 60.20, closed with a gain of 80 nP over the week at Rs. 57.70. Centurys provided a firm feature with a rise of Rs. 11.75 to Rs. 445—the highest level touched in the Budget session was Rs. 459. Kohinoors provided an exception to the general trend with a drop of Rs. 2 to Rs. 233.50. The mill is a large consumer of staple fibre. Central Indias gathered Rs. 2 to Rs. 89, Finlays Rs. 5 to Rs. 268, Standards Rs. 15 to Rs. 431 and Svadeshis Rs. 2.50 to Rs. 205.

The levy of a basic duty of Rs. 5.60 per cwt. and an additional duty of 70 nP in replacement of sales tax on *khandsari* sugar helped sugar shares to strike a bullish note, as the competitive strength of the former *vis-a-vis* the white sugar would be lessened. As a result, Belapurs advanced to a peak of Rs. 294.50 today, which was even higher than the Budget session level of Rs. 287, before closing at Rs. 289 with a gain of Rs. 16.50 over the week. Phaltans rose by Rs. 3.25 to Rs. 150 and Walchandnagars by Rs. 5.50 to Rs. 281.

In the cement group, Associated Cements jumped from Rs. 146 50 to Rs. 150.50, but following the Finance Minister's proposal to subject the bonus issues made out of share premium account also to a tax at 30 per cent., the shares dipped to Rs. 142.50. A.C.C. has a proposal to capitalise its share premium amounting to Rs. 1.27 crore and issue bonus shares in the ratio of one share for 15 shares. Subsequently, however, the shares recovered to close at Rs. 146.25. Digvijays gained over the week Rs. 2.50 to Rs. 132 and Jaipur Udyogs Rs. 1.36 to Rs. 11.56.

Shipping shares were featureless. Scindias were marked up from Rs. 20.56 to Rs. 21.20 before reacting to Rs. 18.76 *ex-div.* (equivalent to a *cum-div.* rate of Rs. 20.01). Great Easterns were dull at Rs. 22.80.

Engineering shares were in the limelight. Alcock Ashdowns spurted from Rs. 256 to Rs. 262 and Premier Constructions from Rs. 226 to Rs. 243. Tata Locomotives staged a sharp rise of Rs. 13.25 to Rs. 181. The Company is reported to have decided not to allot any additional shares out of the new issue. Larsen and Toubros rose by Re. 1.32 to Rs. 18.92. Among minings, Shivrajpurs were conspicuous with a rise of Rs. 8.70 to Rs. 97.50. The Commerce and Industry Minister's assurance to permit import of spare parts to automobile manufacturers gave a push to Premier Automobiles from Rs. 93 to Rs. 98.50. Bombay Burmahs (old) advanced from Rs. 465 to Rs. 488.50 *ex-div.* (final dividend Rs. 15) before closing at Rs. 483.50 *ex-div.*, following the reduction in export and excise duties on tea. Notwithstanding the increase in excise duty on rayon yarn, National Rayons scored a gain of Rs. 17.25 to Rs. 256.75. Tata Chemicals improved by Re. 1.04 to Rs. 16.52 and Tata Oils gained Re. 1.50 to Rs. 46.25. West Coast Papers were active and improved by Rs. 3 to Rs. 116.

• • • •

Calcutta Stock Exchange

CALCUTTA, *4th March*

The Calcutta Stock Exchange reacted enthusiastically to the 1959-60 Budget proposals, but the buoyancy in Saturday's special Budget session was due to the non-realisation of the implications of the changes proposed on company taxation. On Monday, by which time the correct implications of the proposals had been analysed and interpreted in their varied application to the more popular concerns, and when it was realised that for 1959-60 the wealth tax on companies and the excess dividend tax would stay, a sharp reaction followed. However, soon steadier conditions returned and gains spread to all the sections in the last two sessions. For, as anticipated by market men, the Budget did not disclose any unpleasant surprises and the fact that, at a time when Government required more revenues, burdens on industry were not increased was sufficient incentive for long-term buyers to be active. Tax relief was not indeed anticipated, and the absence of any reduction in the burden on industrial concerns was ignored, as it was felt that several manufacturing, mining and engineering units were already doing well. Their profitability had, of course, increased, thanks to the expansion and modernisation, and the gathering of industrial momentum, on the eve of a mighty third Plan, it was thought, would enable the shareholder to get a fairer return and Government larger revenues even at the existing levels of taxation.

A point in the Budget which was noted with particular satisfaction was the attempt at simplification of the tax structure on companies. Shareholders felt they could look for better dividends from 1960-61, in view of the total tax on profits not exceeding 45 per cent., as against 51.5 per cent. at present, and this possibility was thought here to be more than a fair compensation for the termination of the existing system according to which shareholders received tax credit for tax paid on company profits. Buyers of tea shares had an extra ground for enthusiasm in the revision of the export duty, which, although meagre, was thought here would enable the industry to sell more tea overseas. In the special session on Saturday night, Indian Irons (old) were active and rose to Rs. 23.25 from Rs. 22.20—the new ones were lower by Re. 1, as they would not participate in dividend for the current year ending this month, and market men thought the dividend would be maintained at 10 per cent.—but since then the reaction erased the loss partially to Rs. 22.47. Several counters in miscellaneous industrials spurted and steadied around higher levels on expectation of better working results resulting from more production, for which the Budget provided the incentives. Jutes were affected by the poor reports from the goods market, while coals and minings were better.

Teas attracted fair buying interest, and the details of the more important gains are:

	Opening Rs.nP	*Closing* Rs.nP	*Gain* Rs.nP
Bishnath	19.87	20.19	0.32
Dhelakhat ...	23.62	24.00	0.38
Dufflaghur ...	34.50	35.00	0.50
Gohpur	23.50	24.25	0.75
Hantapara ...	124.00	126.00	2.00
Hasimara ...	23.12	23.31	0.19
Methoni	21.00	21.56	0.56
Namburdani ...	14.00	14.25	0.25
Nagaisuree ...	128.00	138.00	10.00
Rajabhat	17.06	18.50	1.44
Ranicherra ...	16.50	17.50	1.00
Sungma	17.75	18.25	0.50

Papers received keen attention. From Rs. 31.25, Orients shot up to Rs. 34.10 at the special session, but since then lost to Rs. 31.80. Subsequently, however, there was again a recovery pushing the rate up to Rs. 32.40. Sirpurs were fully steady at the higher rate of Rs. 14, on rumours that the firm would shortly merge with a silk manufacturing unit. Profit-taking soon followed to push down the rate to Rs. 13.12 at the close, as against the week's opening at Rs. 12.50. Sree Gopals touched Rs. 16.62 at the special session against the week's opening of Rs. 15.56.

Selected counters in miscellaneous industrials recorded handsome gains. Rallis rallied and reached a high of Rs. 60, as against the week's opening of Rs. 52, in view of the Directors' expectation of improved prospects by the end of the year

DEPOSITS OF DENA BANK SWELLS

PROFIT MOVES DOWN

AFTER maintaining an upward trend consistently since 1952, the profit of the Devkaran Nanjee Banking Company, Ltd., has suffered a setback during the year ended 31st December 1958. From Rs. 5.34 lakhs earned in 1952, the Bank's profit grew steadily to touch a peak of Rs. 17.17 lakhs in 1957 before dropping to Rs. 14.22 lakhs in the year under review. The reversal of the trend of profit is not surprising, in the context of the general rise in interest rates on deposits and the substantial expansion in term deposits of banks, coupled with the mounting level of administrative expenses. There was, no doubt, a sizable increase in the Bank's advances portfolio, but this was not on a scale which could yield sufficient return to cover the higher outgo.

Following the fall in profit, the provision for taxation has been reduced from Rs. 8 lakhs to Rs. 5 lakhs. No allocation has been made to investment reserve, which had received Rs. 50,000 last year, while the transfer to the reserve fund has been raised from Rs. 5 lakhs to Rs. 6 lakhs. The dividend has been maintained at 6 per cent. for the third year in succession, to which level it had been stepped up in 1956 from 5 per cent. paid for 1955.

An idea of the Bank's progress in recent years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross Income	1,32.51	1,00.23	81.50	64.30
Interest and discount earned ..	1,07.60	75.53	62.34	49.09
Commission and exchange ..	17.71	18.83	13.23	9.85
Interest paid	68.85	39.10	27.32	20.15
Expenses	49.74	42.42	33.24	31.89
Depreciation	1.70	1.54	1.06	1.15
Profit	14.22	17.17	14.87	11.11
Provision for taxation	5.00	8.00	8.00	6.00
To reserves	6.00	5.50	3.50	2.90
Dividend	3.00	3.00	3.00	2.50
	(6%)	(6%)	(6%)	(5%)
Carry forward	3.02	2.80	2.13	1.79
	As at 31st December,			
	1958	1957	1956	1955
Capital	50.00	50.00	50.00	50.00
Reserves	40.00	40.00	34.50	31.00
Deposits	30,10.16	23,32.12	19,49.73	16,12.36
Borrowings from other banks ..	..	..	50.00	..
Advances	14,04.87	10,52.61	9,15.38	5,59.17
Investments	13,94.82	9,11.15	8,52.35	8,20.61
Cash (including money at call and short notice)	3,52.66	4,85.86	3,39.08	3,44.97
Balance-sheet total	37,38.81	27,08.80	25,07.10	20,10.01
Ratio to deposits of—	%	%	%	%
Advances	46.7	45.1	47.0	34.7
Investments	46.3	39.1	41.2*	50.9
Cash	11.7	20.8	17.4	21.4

* Ratio arrived at after taking into account investments earmarked against borrowings from other banks.

It will be observed that the gross income of the Bank for 1958 has gone up by over Rs. 32 lakhs, the whole of which is accounted for by interest and discount earned. The decline of Rs. 1 lakh in commission and exchange is made good by the large receipts in other income. The rise in gross income is more than offset by the increase of Rs. 28 lakhs in interest paid and of Rs. 7 lakhs in expenses. Of the latter, salaries and allowances alone account for more than Rs. 5 lakhs.

With the addition of Rs. 6 lakhs from the profit for 1958, the Bank's reserves stand considerably strengthened to Rs. 46 lakhs, at which level they fall short of the paid-up capital by only Rs. 4 lakhs. The composition of the Bank's deposits as on 31st December 1958 shows that fixed deposits have grown from Rs. 6.59 crores to Rs. 14.91 crores (that is, a rise of Rs. 8.32 crores) and savings bank deposits from Rs. 5.19 crores to Rs. 6.47 crores, while current deposits have declined from Rs. 11.53 crores to Rs. 8.72 crores. On the assets side, loans, cash credits and overdrafts show a rise of Rs. 3.25 crores at Rs. 11.38 crores and bills purchased and discounted of Rs. 27 lakhs at Rs. 2.66 crores. While the rise in total advances is of the order of only Rs. 3.52 crores (as against an increase of Rs. 6.78 crores in deposits), investments have been raised by Rs. 4.84 crores. Cash balances have, however, shrunk by Rs. 1.33 crore, bringing down the cash coverage to deposits from 20.8 per cent. to 11.7 per cent. Notwithstanding the rise in advances, the Bank's credit ratio is well below the general average.

NEWS IN BRIEF

THE Rajkot Spinning and Weaving Mills has put up notice of closure with effect from 1st April 1959.

India exported 1,680 tons of mica valued at Rs. 93.19 lakhs in January 1959, as against 1,120 tons (Rs. 61.82 lakhs) in the corresponding month last year.

The Government of India is considering a proposal to set up an alloy and special steel plant of about 40,000 tons ingot capacity in the public sector.

With effect from the 2nd inst., forward contracts as well as non-transferable delivery contracts for the sale and purchase of rice and paddy have been banned.

India will supply about one million jute bags and substantial quantity of shellac to North Korea for the first time under a new trade agreement concluded by the State Trading Corporation of India. In return, North Korea will supply about 9,000 tons of ammonium sulphate fertiliser.

A three-member delegation of French textile machinery manufacturers, headed by M. Paul Blondel, Technical Director of a well-known French firm of Ameliorair, is now in India discussing with industrialists questions regarding supply of French textile machinery on acceptable deferred terms of payment.

The Study Group appointed by the Government of Bombay in March last to study problems relating to congestion of traffic, deficiency of open spaces and playing fields, shortage of housing and over-concentration of industry, has completed its work. The report of the Group was signed last week.

The Government of India has set up a National Shipping Board, with Mr. G. L. Mehta, Chairman of the Hindustan Shipyard, as the President. The Board consists of 20 members, including representatives of Parliament, the Government, shipowners, seamen and merchant navy officers and other interests.

The Japanese Overseas Iron Manufacturing Materials Committee, representing the eight leading steel mills, proposes to purchase about eight million tons of iron ore from Bailadila in Madhya Pradesh. A trade mission is expected to visit India shortly to discuss details of the purchase with the Union Government.

The ammonia plant for a fertiliser factory planned in connection with the steel works at Rourkela will be built by the W. German concern Friedrich Udhe, Dortmund, an affiliate of Farbwerke Hoesch. The contract, amounting to £4.25 million, will be signed shortly. The plant will have a productive capacity of about 460 tons of ammonia per day and is expected to commence operation in March 1962.

The number of automobiles manufactured in India in 1958 was lower at 8,113, as against 12,211 in 1957 and 13,666 in 1956. The setback is attributed to shortage of foreign exchange, four months' strike in the Premier Automobile Factory and increased cost of raw materials. Production in 1959, however, is expected to touch the 1956 high level, as a result of the liberal allocation of foreign exchange for imports of car components and raw materials.

With a view to overcoming the scarcity of kerosene, a special additional allotment of Rs. 1.5 crore of foreign exchange was made available to oil companies in the first week of last month for imports from soft currency areas. The oil companies have already stepped up despatches of kerosene oil from the various main port installations by 10 to 30 per cent. over the level when restrictions were in force to restore normalcy to the supply position.

• • • •

From Abroad

The number of persons unemployed in the U.K. as on 8th December 1958 was 531,727, a rise of 196,000 over the year.

With effect from 26th February, the Swiss National Bank's official discount rate has been cut from 2½ per cent. to 2 per cent.

The French Renault Company proposes to set up a subsidiary in Melbourne, Australia, to assemble Renault cars, at a cost of £100,000.

The U.K. Government has given a credit of £10 million to Pakistan under the Export Guarantees Act, to be paid for British goods and services.

The U.K. is expected to buy from Pakistan an additional 50,000 bales of cotton during the remaining months of the current season and one million bales in the next season.

Shell Petroleum has now joined all the other major oil companies operating in the Middle East in lowering its crude prices by 18 cents a barrel, with retrospective effect from 13th February 1959.

B.P. Trading has reduced its marine fuel bunker prices by 7*s.* 6*d.* a ton in India, Pakistan, Burma, Ceylon, East Africa, South Africa, Australia, New Zealand, Persian Gulf, Aden and other Red Sea ports.

The U.S.S.R. is negotiating with a U.K. firm, Elliot Brothers, the purchase of complete automation equipment for the concentration and separation of copper and fine ores. The Russian contract is expected to be worth about £1 million.

A W. German firm, Kloeckner-Humbold-Deutz, has secured an order worth £816,000 for machinery, including furnaces and filter equipments to remove dust from waste gases, for a new cement factory at Lochkov, near Prague, Czechoslovakia.

A new oil well has been struck at El Gassi in the Eastern Sahara, about 500 miles from the Mediterranean coast, by the Societe Nationale des Petroles d'Aquitaine, the French prospecting group. The well is claimed to have a potential output of 300 tons a day.

A new Bill seeking to make it obligatory on the part of the domestic airlines to insure passengers for £A7,500 has been introduced in the Australian Senate. As a result, the liability for Australian airlines operating overseas will be increased from £A3,700 to about £A7,400 per passenger.

Total overseas sterling holdings held by the U.K. in the last quarter of 1958 was higher at £3,969 million, as compared with £3,902 million in the previous quarter and the low level of £3,892 million reached in March 1958. Gold reserves were also higher by £52 million and short-term indebtedness by £67 million.

World rubber consumption went up by 107,500 tons to 1,995,000 long tons in 1958, according to the preliminary estimate of the International Rubber Study Group. The rise was mainly the result of increased imports into the U.S.S.R. and China. Production, however, was lower at 1,855,000 tons, as against 1,902,500 tons in 1957.

The U.K. Government has extended the quota restriction on imports of Chinese cotton and rayon yarns for a further period of one year ending 29th February 1960. There are now in force a home market quota of an annual value of £150,000 and another of £1.5 million for grey cloth for re-export after processing in the U.K.

The U.K. Board of Trade has decided not to extend, beyond the 7th inst. the open general licence for exporting most kinds of iron and steel scrap. The licence of two poor quality scrap, namely, compressed baled iron and steel scrap and iron and steel scrap turnings and borings not exceeding an f.o.b. value of £25 a ton, will, however, be extended up to 6th June next.

West Germany has decided to supply Israel iron, steel and non-ferrous metals valued at £3.7 million during 1959-60, following discussions between the two Governments on the question of reparations agreement last month. Besides, W. Germany will pay £6.4 million towards Israeli purchases of British oil. Israel will receive W. German chemicals worth £3 million.

According to the *Commodity Survey* 1958 released by the United Nations, there was a 10 per cent. decline in the average world export prices of raw materials and crude foodstuffs between mid-1957 and mid-1958, while the average price of manufactures was about 1 per cent. higher. The *Commodity Survey* will serve as a background document for the seventh session of the Commission on International Commodity Trade scheduled to be held at the U.N. headquarters from the 9th to 20th inst.

The United Arab Republic and the U.K. Governments signed on 28th February an agreement settling the financial problems created by the 1956 Suez crisis, following the mediation of Mr. Eugene Black, President of the World Bank. Under the agreement, the net sum of £51.47 million will be released to the U.A.R. from its blocked sterling balances in London. The sum allowed for deduction as compensation for British property nationalised in Egypt is £27.5 million.

PERSONAL

MR. K. M. Wilcox has been elected Vice-President of the Upper India Chamber of Commerce, Kanpur.

Mr. Martin Bolstad, Norwegian Consul-General in Shanghai, has been appointed Consul-General for Norway in Bombay.

Mr. N. Raghavan, India's Ambassador in Argentine, has been appointed Ambassador to France *vice* Mr. K. M. Panikkar.

Mr. J. D. K. Brown and Mr. H. M. L. Williams have been elected President and Vice-President, respectively, of the Bengal Chamber of Commerce and Industry, Calcutta, for the year 1959-60.

Mr. Sankar Nath Maitra, till recently Deputy High Commissioner for India in Dacca and Acting High Commissioner for India in Karachi, has been appointed Ambassador of India to the Philippines.

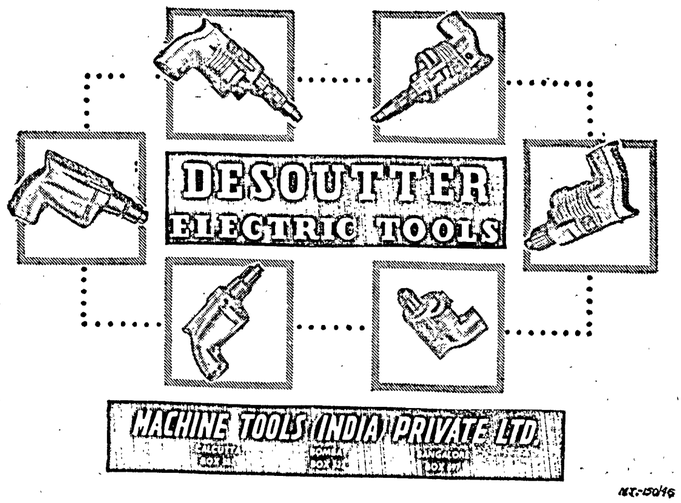
Dr. P. B. Patnaik, Director, Bureau of Economics and Statistics, Andhra Pradesh Government, has been appointed Senior Statistical Officer in the United Nations Technical Mission in the Philippines for a period of one year.

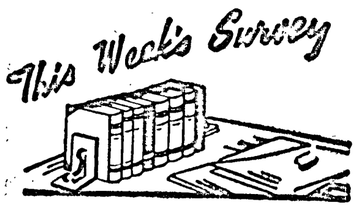
Prof. Henry Phelps Brown, Professor of Labour Economics, London University, has been appointed to the Cohen Council on Prices, Productivity and Incomes, *vice* Sir Dennis Robertson who resigned last year.

Mr. Vallabhdas Vasanji Marivala, Mr. Manekchand Madhavji Gandhi and Mr. Anandji Bhimsi Nagda, have been elected President, Vice-President and Honorary Secretary, respectively, of the Pepper and Ginger Merchants' Association Ltd., Bombay, for the current year.

West German shipbuilders are reported to have decided to ease payment conditions in future to attract orders in the face of stiffer competition in the world market. The Federal Government and the authorities of coastal States have agreed that more favourable terms will have to be offered to shipowners, as German yards are particularly feeling the pinch of competition from Japan. The terms proposed are: 20 per cent. of building costs to be paid on delivery of the ship and the remainder spread over the following three to five years. This new formula, as against the present arrangement which insists on payment of the entire cost of the vessel in instalments before the delivery of the vessel, seems to have been necessitated by the keen competition from Japan.

The General Electric Company, Ltd., of England, has been selected to negotiate a contract for the building of Japan's first nuclear power station at Tokai Mura, 65 miles north-east of Tokyo. The design submitted by G.E.C., in collaboration with Simon-Carves Ltd., has been approved by the Japan Atomic Power Company and will form the basis for the negotiations. The firm expressed the hope that details of the contract, the total value of which would be about £30,000,000, would be finalised later this year. In that event, G.E.C., as the main contractor, will be responsible for the design of the entire project. Certain items, however, would be manufactured by Japanese firms. In this connection, G.E.C. has recently concluded—subject to Japanese Government approval—a long-term licensing agreement with a consortium of 14 leading Japanese companies, known as the First Atomic Power Industrial Group (F.A.P.I.G.). Apart from manufacturing responsibilities, the members of this group would also undertake the site construction work. The power station, designed to have a net electrical output of 150,000 kw., will be powered by a single gas cooled, graphite-moderated reactor of the same basic type as the two reactors at present being built by the group at Hunterston, Scotland. The station will take about four years to build, and is expected to be in operation by mid-1963.





CODE OF INDUSTRIAL EFFICIENCY

As a complement to the code of industrial discipline, already in force, the Union Ministry of Labour has now drawn up a draft code for industrial efficiency which aims at improving production and productivity. The code has been circulated to central organisations of employers and workers for suggestions and comment. Mr. G. L. Nanda, Union Minister for Labour, in a letter addressed to the presidents of these organisations has underlined the need for a suitable wage system which will link payment with production and incentive schemes which, while protecting the health and interest of workers, will help maximise production. He has urged employers to give an assurance to workers that they will have a fair share in the benefits of increased production and productivity.

The draft code lays down that management and trade unions should agree to withdraw cases of labour disputes pending before courts with a view to reaching settlement by mutual negotiation, work out incentive payment and suggestion schemes and set up joint production committees. The code enjoins that proposals made by workers to save wastage and improve output should be carefully considered and suitably rewarded. It requires that joint production committees, wherever possible, should be set up either independently or as sub-committees of joint councils of management. The code calls upon managements to agree to the following points:

(1) Employees should be offered reasonable wages and provision for economic security after retirement; (2) staff policies should be rationalised to afford reasonable prospects of promotion to workers; (3) efforts should be made to provide safe and healthy working conditions, reasonable amenities in the place of work and suitable housing and transport facilities wherever possible; (4) machinery and equipment should be maintained in sound working conditions; (5) adequate provision should be made for the training of workers, supervisors and management personnel; (6) management should be rationalised to avoid wastage and inefficiency.

Trade unions are required to agree to the following points:

(1) they should not resort to methods of protest that might affect production; (2) inter-union rivalry should not be allowed to interfere with efficiency and production; (3) every effort should be made to reduce absenteeism and labour turnover; (4) suitable steps should be taken for educating workers in their rights and responsibilities and on their relation to production; (5) trade unions would make only reasonable demands on industry, keeping in view the need to maintain competitive cost of production and the larger interest of the economy; (6) they will actively support schemes of rationalisation subject to the conditions agreed to at the 15th session of the Indian Labour Conference.

There is no reason to think that either the employers' organisations or trade unions will find any of these provisions unacceptable. But what is required of them is not only a formal acceptance of the code but a genuine desire to see the objectives of the code realised and a reflection of this desire in their day-to-day conduct. While management and trade unions should make every effort to see that the provisions of the code are strictly observed, the Government should ensure that every violation of the code is properly investigated and the conduct of the guilty party brought to the notice of the public.

IMPORT POLICY

Both the industry and the trade have reason to feel gratified at the speech of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, at the meeting of the Import Advisory Council held at New Delhi on Sunday this week. For the speech reflects, in a considerable measure, Mr. Shastri's sense of realistic appreciation of the need for framing an import policy in such a way as would fulfil the triple objectives—to step up industrial development, to promote private trade channels and to safeguard the interests of consumers. Special mention must be made of his statement that he would not like the uncertainty in regard to availability of raw materials and finished components continuing to have a cramping effect on industrial production. Certain new welcome features, it is said, are to be introduced in the licensing of raw materials and components to some important scheduled, as well as small-scale industries, with effect from the ensuing half-year (April-September 1959), so as to help these industries plan their production better and make advance arrangements for the purchase of a portion of their requirements for the succeeding six months.

It is, however, somewhat disconcerting to be told by Mr. Shastri that there is no question of any relaxation in restrictions on imports of capital goods at all at this stage. Because of these restrictions, many industries have not been able to expand their scale of operations and are compelled to subject their machinery and equipment to excessive use. Such intensive working is bound to cause much wear and tear to the equipment. The import policy governing capital goods must be so devised as to enable the industries to undertake schemes of modernisation and expansion expeditiously, taking into account, of course, the availability of equipment within the country.

In the course of his speech, Mr. Shastri said that the possibilities of securing further economies in imports were strictly limited. This in itself is good news. Already, imports have been curtailed to the maximum extent. The total value of imports during 1958 was no more than Rs. 783 crores, as against Rs. 1,026 crores in 1957, or a drop of Rs. 243 crores. A part of the imports last year included orders placed in earlier years, so that, in the current year, imports may be still smaller. While a drastic cut in imports over a wide field has resulted in effective foreign exchange savings, it must be stressed that the sacrifice on the part of industrial consumers, not to speak of ordinary consumers, has been quite heavy.

An interesting suggestion made by Mr. Shastri was that the small-scale industries should group themselves into regional or functional associations to look after the individual *entrepreneurs'* requirements of raw materials. He observed:

"These associations could hold themselves responsible for collecting the necessary data regarding import requirements and for ensuring equitable distribution of what is available. The associations could also assist in purchasing their requirements in bulk at economical prices and marketing the products to the best advantage of the producers. Such associations, if properly organised and managed, can help individual *entrepreneurs* and administrative authorities to overcome the difficulties which are holding up further progress in this sector. I would like these associations to make their own rules and regulations so that they can work efficiently and effectively. Some of the associations which did not do so have created many doubts in the minds of the people as well as of Government. I hope and trust that these new associations will set the ball rolling in the right direction."

During the discussions at the meeting of the Import Advisory Council, much concern was expressed by some members at the way in which the State Trading Corporation (S.T.C.) was expanding its sphere of activities, thereby ousting normal trade channels. Mr. B. P. Singh Roy, President of the Federation of Indian Chambers of Commerce and Industry, declared that the expansion of the S.T.C.'s activities was not good either for industrial expansion or for business expansion, "nor will it encourage people to take to trade or business as their vocations of life." There is no exaggeration whatever in these remarks. It will be recalled that, when the Government established the S.T.C., it was stated that it would confine its trading activities only to the communist countries. But, subsequently, the S.T.C. made considerable encroachment into the trading sphere of the private sector, so that, today, its operations cover a very wide field—direct export and import of several commodities, distribution of goods imported directly by it as well as those imported by private parties, and distribution of cement produced within the country.

While the S.T.C. has come to stay and there can be no quarrel about it, the hardship already caused to established importers, would, as Mr. B. M. Chinai rightly pointed out, be worsened, if the S.T.C. were to take over more items. It is comforting to be told by Mr. Shastri that "there is absolutely no idea to supplant the trade; what we want is to supplement their activities." Reassuring, indeed, is his statement that the S.T.C. would come into the picture only when there is a special situation or a special difficulty in order to help the actual consumer—industrial or common—and that, so far as imports are concerned, the S.T.C. would intervene only when the Government considers it absolutely essential. It is to be hoped that the spirit of this assurance, vague though it is in wording, will govern the future working of the S.T.C.

EXPORT DRIVE

He would, indeed, be a prophet who could correctly forecast at this stage as to what would be the shape of things on the international trade front in the coming years. So fast and swift have been the changes affecting trade—scientific and technological developments, emergence of Communist countries as keen competitors, and persistent attempts at forming regional commercial blocs. All these factors point to the supreme urgency of taking from now alone concrete steps designed to enhance the competitive capacity of Indian goods, and not mere short-term palliatives in the form of such incentive as currency retention scheme. This is the basic issue involved in export promotion task. The Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, certainly struck a note of realism when he declared, while addressing the meeting of the Export Promotion Advisory Council at New Delhi on Monday last, that "the country expects all of us to do our duty in this vital sector (export) and to exert to the limit of our capacity to create the conditions necessary for our success.' Speaking earlier, he observed:

"I need hardly stress the vital role which export earnings will play in determining the tempo of our industrial development. May I then set before you the objective that all industries newly entering the export field should strive to export at best 10 per cent. of their products, while those that are already established in the field should intensify their efforts and bring about a 10 per cent. increase in their existing level of exports. If our industries can make this supreme effort and bring about these increases, they will have gone a long way towards helping to provide the country with the wherewithal for resolving its problems of development."

The way in which Mr. Shastri presented the case for export drive as above was quite impressive. But we wonder whether Mr. Shastri was right in his emphasis on compulsory exports. In the course of his "winding-up" speech after the discussions, he said that an element of compulsion might have to be introduced, if industry and trade did not play the game in stepping up exports, although he qualified his statement by saying that "we may start with a scheme of compulsion for one or two commodities purely as a trial." The introduction of compulsion in any scheme of export promotion, apart from offending the principles of democracy to which this country is wedded, will utterly fail to bring about the desired result. What is worse, such a scheme will only postpone the adoption at the right time of right remedies for the ills of the industries, especially such export industries as cotton textiles, jute manufactures and tea. Most of these export industries are in the grip of a severe cost inflation due partly to the all-round rise in wages and cost of raw materials, etc., and partly to the old and out-of-date machinery and equipment. What is wanted is formulation of energetic measures to ensure speedy modernisation of equipment and rationalisation of production methods. It is the duty of the Government to create conditions favourable to the industries to undertake such schemes. In this respect, the Government has been acting in a half-hearted manner.

To revert to Mr. Lal Bahadur Shastri's speech. He made a fairly exhaustive review of the trends in India's export trade, with particular reference to the staple earners of foreign exchange. The review reveals that the general outlook has tended to improve more recently. During the second half of 1958, India sold abroad goods and commodities worth Rs. 320 crores, as against Rs. 260 crores in the preceding half-year. This improvement should not, however, lead to a sense of complacency. The level of exports should not only not be allowed to fall but be improved. Mr. Shastri did well to emphasise that "we have to give thought for the future" and that "it will be necessary for us to work hard to increase output, improve quality, reduce prices and organise marketing before we can hope to reach the objective we have set for ourselves."

The aforesaid aspect must be specially stressed, in view of the new problems India's exports have to face from the establishment of the European Common Market. The C.M. countries have already lowered duties and eased quota restrictions on their imports from one another, as well as from their dependent overseas territories. As Mr. Shastri said, not only does India not get the advantage of these reductions, but some of these countries apply quota restrictions on our goods though not on similar goods from other countries outside the Community; if these trends continue and if the Community does not adopt liberal policies towards trade with third countries, Indian exports of tea, coffee, cotton fabrics, jute goods and coir products are likely to encounter greater difficulties.

Despite all this, one may still hope that it may be possible to secure, through consultations and as a result of discussions in the G.A.T.T., facilities for larger exports from India. If, however, this hope is belied by events, what will happen? Here is the answer provided by Mr. Shastri: The Government of India may be compelled to consider suitable adjustments in the pattern and structure of foreign trade aimed at achieving a better balance between what is bought from these countries and what can be sold to them.

Winding up the discussion, Mr. Shastri briefly indicated the lines on which the Government would proceed in the matter of promoting exports of three important commodities—cotton textiles, tea and manganese ore. These are given below:

Cotton textiles: The Government will give earnest consideration to any proposal that the textile interests make, but the industry should appreciate that, if modifications and concessions are made every fortnight or a month, it will benefit neither the industry nor the exporter, and there will be constant doubt in the minds of the buyers.

Tea: A proposal for setting up a tea guarantee fund is engaging the serious attention of the Government and the Tea Board, in collaboration with the Reserve Bank. Besides financial assistance, the Government is also considering the question of giving relief in railway freight for transport of fertilisers to the tea gardens.

Manganese ore: The question of freight concession has been referred to the Railway Minister. The Labour Ministry has deferred, at the instance of the Commerce and Industry Ministry, the levy of a welfare cess on manganese ore.

Addressing the meeting, Mr. K. B. Lall, I.C.S., Director-General of Foreign Trade, stated that there was no reason for taking a pessimistic view of India's export performance in 1958. He felt that significant increases in export earnings could be secured by effecting organisational and institutional changes. While it is not known what exactly Mr. Lall meant by these changes, there will be wide agreement on the point he made, namely, that the industries and trades should organise themselves in such a manner as would be able to adjust their production and export programmes and marketing techniques to the shifting situation in the world. On their part, the authorities, too, must follow realistic fiscal and other policies free of ideological considerations.

FOREIGN AID

While none will seriously dispute the need for foreign capital assistance to help backward countries develop themselves, such aspects as the quantum, the duration and the method of administering assistance are matters of controversy. The new approach proposed by Mr. B. K. Nehru, India's Commissioner General for Economic Affairs, for dispensing economic aid to underdeveloped countries, will certainly find both supporters as well as opponents. In his address to the Society for International Development at Washington on 28th February, Mr. Nehru suggested a more pin-pointed programme for foreign aid. At present, he pointed out, both capital assistance and technical help were spread thinly over a wide area, so that their effects tended to get lost in the vast desert of need. He, therefore, suggested that, instead of distributing help on an arbitrary basis, the whole of the foreign assistance programme should be so arranged as to enable economy after economy to be brought to the point of take off into sustained self-growth. This will mean a change in the system of allocation of foreign aid funds, for it involves massive capital assistance to some selected countries which are willing and able to absorb them, within a comparatively short time. Since each underdeveloped country had problems of its own which were not wholly duplicated anywhere else, foreign aid programmes, according to Mr. Nehru, should be "tailor-made, not mass-produced." He stressed that this proposal should not be construed as hampering the growth of any particular group of countries. It was intended only to avoid the misdirection and even wastage of resources that result from failure to distinguish between the different needs of countries at different stages of development.

One advantage of such a changed approach would be that the recipient countries would themselves be in a position to help others, thus adding to the number of countries capable of providing aid. But it is doubtful whether the suggestion will meet with the approval of the less developed among the underdeveloped countries. Those countries, which do not satisfy the conditions required for qualifying themselves for large-scale assistance, but which, nevertheless, receive substantial aid at present, are sure to oppose it. It is true that the channelling of aid to countries ready and able to absorb it immediately will yield the maximum possible benefits out of a given amount of aid. But economics is not always the only consideration which determines the flow and direction of foreign assistance.

A point stressed by Mr. Nehru was that private capital alone could never meet the needs of underdeveloped countries. He pointed out that the conditions in which private capital was willing to work, namely, "absolute security and large profits," were not available in underdeveloped countries. Here, Mr. Nehru was treading on even more controversial ground.

It cannot be denied that private capital by itself cannot meet all the needs of underdeveloped countries. But neither can aid on Government-to-Government level. In the past, private capital investments have played a far more important role in fostering economic developments abroad than Governmental aid. For instance, in 1956, capital expenditure abroad by U.S. investors is said to have been actually of the order of $5 billion. About 35 to 40 per cent. of this was in underdeveloped countries. Private capital expenditures abroad have been expanding rapidly of late and in 1956 were about two and a half times the amount of U.S. economic assistance.

The private investor cannot be said to be exacting in respect of the conditions he demands for making investments in foreign countries. What he expects is not absolute security and large profits, but security and fair return. What he considers fair may sometimes be considered high in recipient countries. But it must be borne in mind that an investor who puts his money in a venture in a foreign country is certainly justified in expecting a return higher than what he is prepared to accept in his own country.

Although the need for foreign assistance to India is fully realised, that realisation has not been matched with concrete action. Mr. Averell Harriman, currently on a visit to India, has expressed the view that in India not enough attention is being given to the creation of the right climate for the flow of private foreign investment, although everybody he met in this country asked why more and more American business men were not investing in India. Surely, for countries like India, which are desperately short of capital, the best way of attracting foreign capital is to ensure that the climate suitable for foreign investments exists.

REVENUE AND EXPENDITURE OF CENTRAL GOVERNMENT

DEFICIT WIDENS, DESPITE LOWER DEFENCE CHARGES

THE first budget of Mr. Morarji Desai, Union Finance Minister, for 1959-60 presented to Parliament on Saturday 28th February 1959, happens to be the 100th budget of the Government of India and, therefore, marks the centenary of budget-making in this country. The first budget covered the year 1860-61 and was presented in February 1860 by Mr. James Wilson, the first Finance Member of the Governor-General's Council. The factual side of the budget for 1959-60 is covered in this issue in three articles. In this article, the revenue budget is briefly recounted. The new tax proposals are covered on the next page. They are followed by an analysis of the capital budget on page 350.

Before referring to the revenue budget, we would like to invite the reader's attention to the two tables on this page containing the statistical picture of the revenue budget.

In Part A of the budget speech, the Finance Minister has made no mention of the year 1957-58 for which actual figures (though still provisional) are available. These, as compared with the revised estimates and budget estimates, make interesting reading. The budgeted total *net* revenue for the past year was Rs. 654.79 crores. This was revised last year to Rs. 653.82 crores. But actuals as shown in the latest budget papers are Rs. 655.96 crores, an increase of a little over Rs. 2 crores over the revised estimate. Total *net* revenue expenditure for that year was budgeted at Rs. 619.05 crores. The revised figure a year ago was much higher at Rs. 648.77 crores, so that the revenue surplus shrank from Rs. 35.74 crores to Rs. 5.05 crores. The latest figure of net revenue expenditure is however lower than even the budget estimate, so that the past year has ended with an actual surplus of as much as Rs. 42.05 crores. The age-old complaint that Finance Ministers invariably overestimate the expenditure and underestimate the revenue to justify imposition of heavier burden of taxes has a ring of truth even today. The year 1957-58, it may be noted, was the tenth successive year after independence to close with a revenue surplus.

1958-59 Revised

The revised estimates for 1958-59 show a sharp fall in the total *net* revenue as compared with the budget estimate, from Rs. 664.99 crores to Rs. 619.81 crores. There has been a fall in the total *net* revenue expenditure also but of a smaller order, from Rs. 693.01 crores to Rs. 679.76 crores. The result is that the deficit has widened from the budgeted figure of Rs. 28.02 crores to Rs. 59.95 crores. The *gross* revenue estimates are Rs. 767.99 crores (budget) and Rs. 728.20 crores (revised), the corresponding figures for revenue expenditure being Rs. 796.01 crores and Rs. 788.15 crores, respectively.

The decline in the revised estimate of revenue as compared with budget estimate is due chiefly to a drop of Rs. 34 crores in customs revenue, reflecting the effect of restrictions on imports and relaxations in export duties. The revenue from Union excises also is now placed at Rs. 3.61 crores less. Similarly, the yield from the Wealth Tax, the Expenditure Tax and the Gift Tax will, together, be Rs. 5.3 crores less than anticipated. A drop of Rs. 13 crores is anticipated in the grants from the U.S. Government under the P.L. 480 programme and of Rs. 1.86 crore in the receipts from Currency and Mint, but these will be more than offset by larger receipts of interest, sale proceeds of evacuee property and an increase of Rs. 3.04 crores in the contribution from the Posts and Telegraphs Department.

The reduction in revenue expenditure has occurred in the defence account where the decrease is as much as Rs. 11.27 crores. Civil expenditure, however, has actually gone up by about Rs. 4 crores.

SUMMARY OF FINAL ESTIMATES

(In lakhs of rupees)

	Budget 1958-59	Revised 1958-59	Budget 1959-60	
REVENUE				
Customs	170,00	136,00	130,00	+2,77
Union Excise Duties	304,76	301,15	307,00	+18,08

Total Expenditure	796,01	788,15	839,18	
Deficit (—)	—28,02	—59,95	—58,32	

* Effect of budget proposals.

The main features of the revenue and expenditure estimates for the coming year are as follows:

Revenue: With the continuing restriction on imports, the downward trend in the revenue from customs is likely to continue and, for next year, credit is taken for a sum of Rs. 130 crores against the current year's revised estimate of Rs. 136 crores. The revenue from Union excise duties next year is likely to show an improvement of Rs. 5.85 crores and the receipts from corporation tax and income-tax an improvement of Rs. 6.50 crores. Under the other principal heads of revenue, the receipts next year will be more or less the same as in the current year. The principal heads as a whole will thus show an improvement of Rs. 7.2 crores. Receipts under other heads next year will in all be Rs. 25.26 crores more than in the current year. This is the result of three major changes. First, the grants under the P.L. 480 Programme are expected to amount to Rs. 15 crores, as against Rs. 1 crore this year. Secondly, the profits from the Reserve Bank next year have been placed at Rs. 40 crores, as against Rs. 30 crores this year. This is a purely temporary arrangement; the stabilised amount that should be paid by the Reserve Bank in subsequent years will be discussed during the course of next year. Thirdly, the profits from the circulation of coin for which credit has been taken next year amount to Rs. 13.15 crores, as against Rs. 2.75 crores this year. The increase is mainly due to the transfer of Rs. 10 crores from out of the accumulated surpluses in the past on the circulation of rupee and small coins which had been kept under suspense.

These increases will be partly balanced by a drop of Rs. 4.41 crores in the receipts from the surplus cement account of the State Trading Corporation and Rs. 3.31 crores in the receipts on account of Steel Equalisation Fund. The contribution from the P. & T. Department will be Rs. 1.18 crore less. The contribution from the Railways creditable to revenue will also be Rs. 42 lakhs less. Next year's dividend from Railways will amount to Rs. 54.41 crores, as against Rs. 50.03 crores this year. Of this, Rs. 48.43 crores will be taken in reduction of expenditure under interest and the balance of Rs. 5.98 crores taken as revenue.

Payments to State Governments on account of their share of income-tax, estate duty and tax on railway passenger fares next year, on the estimates of revenue taken for these taxes, will amount to Rs. 92.22 crores, as against Rs. 89.07 crores in the current year. Provision for the States' share of divisible excises is made in the expenditure estimates.

Expenditure: Civil expenditure next year will amount to Rs. 596 5 crores and expenditure on Defence Services to Rs. 242.68 crores. The main reasons for the increase of Rs. 75.22 crores in civil expenditure may be briefly mentioned. The grants received under the P.L. 480 programme and initially credited to revenue have to be transferred to the Special Development Fund and used through it for subsequent expenditure. The provision for this transfer next year, following the estimates adopted on the revenue side, is Rs. 15 crores, as against Rs. 1 crore in the revised estimates this year. Expenditure on debt services, which rise with the growing public debt, will absorb Rs. 15 82 crores more than in the current year. Expenditure on administrative services, such as on General Administration, Audit Administration of Justice, Jails, Police, External Affairs and so on, is likely to amount to about Rs. 2.50 crores more in all. Under heads covering Development and Social Services, which include substantial provision on Plan outlay, the total expenditure next year is estimated at Rs. 168 crores roundly, against Rs. 145.75 crores this year. The provision for Community Development will also be Rs. 6.17 crores more than in this year. Increased provision has also been included in the budget for grants to States for the welfare of scheduled tribes and areas and backward classes amounting in all to about Rs. 5.50 crores. These increased provisions mainly account for the rise in Civil Expenditure.

The net expenditure on Defence Services in the coming year will be Rs. 24.19 crores less than in the current year. This improvement is the result of a reduction of Rs. 19.55 crores in gross expenditure and an increase of Rs. 4.64 crores in receipts and recoveries.

Budget Year: 1959-60

The *gross* revenue for the next year (1959-60) at the existing level of taxation is Rs. 757.51 crores, while the *gross* revenue expenditure is budgeted at Rs. 839.18 crores, leaving a deficit of Rs. 81.67 crores. The total *net* revenue of the Union Government at existing rates of taxation for 1959-60 is shown at Rs. 647.00 crores and the total *net* expenditure at Rs. 728.67 crores, the deficit being the same, namely Rs. 81.67 crores.

Notes.—Accounts from 1948-49 to 197-58 have not been finally closed and the figures given here are only provisional.

NEW TAXATION PROPOSALS

PROVISIONS OF THE FINANCE BILL EXPLAINED

IT will be seen from the preceding page that, on the basis of existing taxation, the Finance Minister has estimated a revenue deficit of Rs. 81.67 crores. He has proposed to cover about one-fourth of this deficit by raising additional taxation through both direct and indirect taxes. The estimate of additional taxation is Rs. 23.35 crores, made up of Rs. 18.08 crores in Union excise duties, Rs. 2.77 crores in customs duties, and Rs. 2.5 crores in wealth tax. In this article, we propose to outline the changes made in taxation.

Wealth Tax

To take the taxes payable by individuals first. There is no change in the present rates and structure of personal taxation. The wealth tax on individuals and Hindu undivided families, however, has been raised by ½ per cent. at each slab, with effect from 1959-60. The existing rates and the new rates proposed are as follows:

Individuals and Hindu Undivided Families	*Existing rates*	*Proposed rates*
	%	%
On the slab— Upto Rs. 2 lakhs for Individuals / Rs. 4 lakhs for H.U.Fs.	Nil	Nil
Above Rs. 2 lakhs and upto Rs. 12 lakhs for Individuals / Rs. 4 lakhs and upto Rs. 13 lakhs for H.U.Fs.	½	1
Above Rs. 12 lakhs and upto Rs. 22 lakhs for Individuals / Rs. 13 lakhs and upto Rs. 23 lakhs for H.U.Fs.	1	1½
Above Rs. 22 lakhs for Individuals / Rs. 23 lakhs for H.U.Fs.	1½	2

Section 2(m) of the Wealth Tax Act, pertaining to denial of deduction of tax arrears as debts, is also being amended. Ordinarily, debts owing by the assessee have to be deducted in computing his net wealth for purposes of wealth tax. To remove any doubt in regard to the treatment of tax arrears as deductible or otherwise, for this purpose, it is proposed to clarify with retrospective effect that taxes

(i) which are outstanding and are disputed by the assessee in appeals; and

(ii) which are otherwise outstanding for more than one year on the valuation date

will not be regarded as debts owing by the assessee for the purpose of deduction in computing his net wealth. This is only desirable, as otherwise taxpayers will be getting an unjustifiable relief under wealth tax resulting from their own defaults.

Expenditure Tax

The provisions relating to expenditure tax are to be tightened up as follows:

Amendment of definition of 'dependant': At present, the wife and children of an individual are regarded as dependants only if they are wholly or mainly dependent on him for support and maintenance. It is now proposed to dispense with this requirement in their cases. Any other person, who is actually dependent on the assessee for support and maintenance, will also be regarded as a dependant.

Clarification of the scope of charge: Proceedings under the Expenditure Tax Act lie only against a person whose net income after payment of taxes exceeds rupees thirty-six thousand. It is proposed to make it clear that for this purpose all income to which he or his dependants will be beneficially entitled should be taken into account, but the tax liability itself will continue to be determined solely with reference to taxable expenditure.

Expenditure incurred by dependants to be included in assessee's expenditure: Even at present, expenditure incurred by a dependant is included in the assessee's expenditure, if it has been met out of any gift, donation or settlement on trust made or created by the assessee, whether directly or indirectly. Since the basic allowance of rupees thirty thousand is meant for the assessee's family as a whole consisting of himself and his wife and minor children, it is only proper to take into account their aggregate expenditure, without looking into the source from where it has been met. In the case of a Hindu undivided family, expenditure incurred by a member will be treated as the family's expenditure, only if it has been met from the resources of the joint family.

Modification of certain exemptions and deductions: Clause 25 of the Finance Bill curtails some of the exemptions at present admissible under section 5 of the Expenditure Tax Act. The principal change is in respect of expenditure on repairs and maintenance of buildings. Under the Expenditure Tax Act, rent paid by the assessee for a residential house in his personal expenditure as also any monies spent by him on its maintenance or repairs. On the other hand, in the case of an assessee, who resides in his own house, not only is no adjustment made for the saving of rent in the computation of expenditure, but he is also entitled to claim exemption for personal expenditure against repairs and maintenance of the house under the existing Act. To remove this anomaly as between persons who reside in rented premises and others who reside in their own properties, it is proposed to treat expenditure by way of repairs, maintenance, etc., in respect of the owner-occupied property, as personal expenditure.

Expenditure on bullion, precious stones or jewellery is at present completely exempt from expenditure tax, while expenditure on household goods and other articles for personal use is charged to tax with the concession of its being distributed over a period of five years. Since the difference in treatment of the two cases is not justifiable, it is proposed to treat bullion, precious stones and jewellery in the same way as the other articles for personal use.

There is no change in Gifts Tax. Only the definition of "previous year" is being amended in order to clarify the position.

Company Taxation

In the sphere of company taxation, several major changes have been proposed. At present, companies are paying income-tax at the rate of 30 per cent. *plus* a surcharge of 1.5 per cent. and super-tax 20 per cent. on the whole of taxed profits. It is now proposed that the income-tax on Indian companies shall be 20 per cent., there is to be no surcharge; the super-tax (commonly known as Corporation tax) is fixed at 25 per cent., that is, a total of 45 per cent.

The scheme for foreign companies is: 20 per cent. income-tax and 43 per cent. super-tax.

The aforesaid scheme is to prevail from the assessment year 1960-61, in order to synchronise with the bringing into force the abolition of the system of "grossing" dividends now in force. The particulars of this change will be given presently. But the aforesaid rates will be applied for advance payment of tax by companies during the assessment year 1959-60.

It would appear from the Finance Minister's speech on new taxation proposals that the abolition of the wealth tax and excess dividend tax, as well as the readjustments of the income-tax and super-tax, is the result of the decision to give up the existing system of "grossing" dividends. A detailed explanation of this system and how it is sought to be replaced by a new one is given in the following paragraphs:

"Grossing" Dividends

In the memorandum explaining the provisions in the Finance Bill, 1959, the Department of Revenue of the Ministry of Finance has dealt in detail with the reform of the scheme of taxation of company profits and the dividends declared therefrom. Before outlining the features of the new scheme, the Finance Ministry has outlined the existing scheme. Under the latter, in general, an Indian company is required to pay income-tax at 30 per cent. (plus surcharge at 1.5 per cent.) and super-tax at 20 per cent. on the whole of its taxable profits. When the company declares dividends out of the taxed profits, each shareholder is deemed to have himself paid on the dividend he receives a proprotionate amount of income-tax (but not super-tax) through the agency of the Company. In other words, the shareholder is deemed to have received not only the net amount mentioned in the dividend warrant but also a portion of the income-tax paid by the Company. He is credited with the amount of income-tax attributable to the dividend received by him at the time of his assessment. As the tax credit is given at the Company rate of income-tax, which is higher than the personal rates of income-tax applicable to the shareholder, the tax credit always exceeds the income-tax payable on the dividend by the shareholder, and the excess is set off against the other tax liabilities of the shareholder or is refunded to him. The process of increasing the dividend by a notional amount, which is known as "grossing," and giving tax credit to the shareholder involves, according to the memorandum, several complications in actual practice.

These complications arise out of the need to make a determination of two factors which affect the rate at which "grossing" is done. The two factors are: (1) The composition of the profits of the company which have been availed of by it for declaring the dividends, that is, how much of the dividends have come out of the profits subjected to tax and how much out of exempted profits; and (2) the composition of the profits taken to reserves in earlier years, in cases where the company draws upon those past reserves for declaring dividends. Further, as the determination of these factors will be possible only after the completion of the assessment of the company, the shareholder's assessment gets inevitably delayed. *It is therefore proposed to revise the pattern of taxation of companies suitably in a manner which, while obviating the aforesaid complications, will maintain the* status quo *in all material respects with regard to revenue and the liability of the shareholders and the companies taken as a whole.*

New Scheme

The main features of the new scheme and the two stages in which it is proposed to be implemented are then described in the Finance Ministry's memorandum. The following are the main features of the proposed scheme:

(1) The present legal fiction of deeming a portion of the income-tax paid by the company on its profits as having been paid by the shareholder on the dividend he receives, and allowing the amount as tax credit against the shareholder's tax liability will be abolished.

(2) Consequently, the process of grossing the value of the dividends received by the shareholder will become unnecessary and will, therefore, be given up.

(3) As a corollary to these, the tax rates for the companies themselves will be so modified as to produce the same amount of annual net revenue, i.e., the annual gross revenue now obtained from the companies less the annual credit given to the shareholders.

(4) Companies will deduct tax at prescribed flat rates from the dividend payable to the shareholders, by way of advance recovery, and pay it to the Government. When the shareholders' assessments are made, the tax deducted at source from the dividends received by them will be made good to them either by way of a set-off against their tax liability or by way of refund.

The new scheme is proposed to be applied to the profits of companies which will be assessable to tax in 1960-61 and to all dividends declared out of such profits. The profits of companies for the accounting years ending on 31st March 1959 or earlier which will be assessable in 1959-60, and the dividends declared by the companies in respect of such accounting years, will continue to be dealt with under the existing scheme.

Two Stages

In order to ensure its smooth and effective working from the beginning, it is necessary to implement the new scheme in two stages. In the first stage, i.e., during the financial year 1959-60, the provisions relating to deduction of tax at source on dividends will be put into operation. This will, however, relate, as already stated, only to those dividends which are distributed by the companies out of their profits chargeable to tax in the assessment year 1960-61. Thus, in the case of a company closing its accounts on the 30th of June, dividends declared by it for the year ending on 30th June 1959, will be subjected to deduction of tax. In the case of a company closing its accounts for the calendar year, dividends declared by it for the year ended 31st December 1958 will not be subjected to deduction of tax and will continue to be dealt with under the existing scheme. However, if, in such a case, interim or preference dividends are declared after 1st April 1959, for the accounting year ending on 31st December 1959, the new scheme for deduction of tax will apply to those dividends.

In the second stage, i.e., during the financial year 1960-61, all the parts of the scheme will come into operation. In particular, companies will be subjected to the revised rates of income-tax and super-tax, and the process of grossing of dividends in the assessment of the shareholders will be abolished, except in regard to dividends declared by a company for a year the profits of which are assessed in its hands in the assessment year 1959-60. Further, all the dividends declared after 1st April 1960 (which will generally be only in respect of profits for account years relevant to assessment year 1960-61) will bear tax deduction at source.

Foreign Companies

The proposed scheme will not, however, apply to foreign companies as they declare dividends outside India and the question of grossing those dividends does not arise. As mentioned by the Finance Minister in his Budget Speech, as a part of the programme for simplification of company taxation, this occasion is proposed to be availed of for replacing from 1960-61 the existing taxes on excess dividend

(*Continued on page* 379)

CAPITAL OUTLAY IN THE BUDGET

PROVISION MADE FOR SEVERAL SCHEMES OF INDUSTRIAL DEVELOPMENT

WITH the growing emphasis on State participation in India's industrialisation, the capital budget continues to acquire a larger and larger significance year by year. Nothing brings out the increasing importance of the use of budgetary resources for capital formation than the table appended to the *Economic Survey*, published along with the budget papers this year, which gives the net capital assets created out of the Central Government's resources. This table shows that, between 1950-51 and 1955-56, total net capital formation—this includes fixed and other assets directly created by the Government as well as assets created by the financial assistance provided in the shape of loans and grants—increased from Rs. 98.5 crores to Rs. 431.2 crores and still further to Rs. 723.2 crores in 1957-58 (revised estimate) and to Rs. 790.6 crores in 1958-59 (budget estimate). In other words, over a period of nine years—*vide* the table at the bottom of the page—there has been an eightfold increase in annual capital formation which, by any reckoning, is a significantly large index of the Government's role in creation, sustenance and development of capital assets. Whether the same result or even a better result could not have been achieved without the present direct participation of the Government in the country's economic activity is a different question. What is strictly relevant to the point is that the Government, true to its declared aims, is assuming a position of dominating importance in the country's development.

Capital Expenditure

The total capital expenditure, as provided in the budget for 1958-59 (revised) aggregates Rs. 897 crores, made up of capital outlay of Rs. 395 crores, loans to State Governments Rs. 450 crores and debt repayment Rs. 42 crores. This is sought to be met by repayment of loans by State Governments Rs. 95 crores, public borrowings Rs. 227 crores, small savings Rs. 75 crores, foreign assistance Rs. 238 crores and miscellaneous receipts Rs. 57 crores, making in all Rs. 692 crores. Thus, the deficit in the capital budget in 1958-59 is of the order of Rs. 195 crores which together with the revenue deficit of Rs. 60 crores for the year (the excess of Rs. 788 crores in expenditure over the revenue of Rs. 728 crores) makes a total of Rs. 255 crores.

For the coming year, that is, 1959-60, the total capital expenditure is placed at Rs. 1,075 crores (exclusive of interest on loans on river valley projects and short-term loans), made up of capital outlay of Rs. 420 crores, loans to State Governments Rs. 525 crores and debt repayments Rs. 130 crores. This is sought to be covered by repayment of loans by State Governments Rs. 111 crores, public borrowing Rs. 240 crores, small savings Rs. 85 crores, foreign assistance Rs. 337 crores, issue of special securities to meet payment of additional subscription to International Monetary Fund Rs. 95 crores and miscellaneous receipts Rs. 44 crores, thus making in all Rs. 912 crores. Thus, the deficit in capital account works out to Rs. 163 crores. The revenue deficit of Rs. 82 crores (excess of expenditure Rs. 839 crores over revenue Rs. 757 crores) is reduced to Rs. 59 crores through the revenue anticipated by the new tax proposals. Thus, the total deficit for the year will work out to Rs. 222 crores, as against Rs. 255 crores in 1958-59.

Second Plan

Capital expenditure is, of course, mainly undertaken in furtherance of the second Plan's objectives. The Plan outlays in the first three years of the Plan, 1956-57, 1957-58 and 1958-59 according to the *Economic Survey*, are Rs. 639 crores (Centre Rs. 342 crores, and States Rs. 297 crores), Rs. 846 crores (Centre Rs. 500 crores and States Rs. 346 crores), and Rs. 981 crores (Centre Rs. 582 crores and States Rs. 399 crores), respectively, making in all Rs. 2,466 crores. This leaves a balance of Rs. 2,034 crores to make up the total outlay of Rs. 4,500 crores on the second Plan. So far as the year 1959-60 is concerned, the total Plan outlay, by the Centre and States, is placed at Rs. 1,121 crores (inclusive of interest on loans on river valley projects which are added to capital during period of construction and short-term loans). The Central Government's budget for 1959-60 includes a total provision of Rs. 843 crores for implementing the Plan, Rs. 150 crores in the revenue budget and Rs. 693 crores in the capital budget. Out of this amount, Rs. 63 crores from the revenue budget and Rs. 195 crores from the capital budget will be given as assistance to the States. In addition, the Railways will be spending Rs. 39 crores from their own resources and the States Rs. 239 crores. All this makes up a total of Rs. 1,121 crores. This means that the final year of the Plan, namely, 1960-61, will witness a Plan outlay of only Rs. 913 crores.

During the period of the first Plan, the investment in the economy was stepped up from 5 per cent, to 7 per cent. of the national income. Since then, there has been a progressive increase in investment to a level between 10 and 11 per cent. Examining the role of investment and tax effort in relation to the Plan, the *Economic Survey* observes:

"A substantial tax effort has been made over the last three years. The yield of additional taxation undertaken over the three years at the Centre and in the States is expected to aggregate to about Rs. 900 crores over the five-year period. Market borrowings which suffered a setback in 1957-58 registered a striking improvement in 1958-59 as stated earlier. Small savings have also been doing better. The net collections up to January 1959 were Rs. 47.1 crores, i.e., Rs. 9.3 crores more than for the same period in 1957-58. The amount of external assistance coming into the budget has also gone up year by year. Nevertheless, the budgetary deficit over the three years is estimated at about Rs. 950 crores. The deficit in 1957-58 was exceptionally heavy, and although 1958-59 is expected to show a relative improvement, it is evident that the resources position *vis-a-vis* the requirements of the Plan is difficult. It is true, of course, that the size of the budgetary deficit in any particular year is not necessarily a measure of the inflationary impact of all governmental operations on the economy in that year, especially as there is a time lag between the contractionist effect on the economy of the sales of the commodities thus obtained and the budgetary accounting of the receipts. Nevertheless, it is clear that creation of money incomes ahead of increases in production has to be kept down to the unavoidable minimum especially as the foreign exchange reserves have fallen to a low level. Public revenues have increased significantly over the last three years, partly as a result of the tax measures adopted and partly in consequence of the rise in money incomes. The proportion of public revenues to national income has gone up from 9.1 per cent. in 1956-57 to about 10.1 per cent. but this rise has been absorbed, more or less by the increase in non-development expenditures. In consequence, the reliance on borrowing from the public, from the banking system and from abroad for financing the Plan has tended to increase."

Industrial Programmes

To revert to capital expenditure in 1959-60. A sizable portion of it will be spent on expansion of the Government's industrial programmes. The Atomic Energy Establishment will receive Rs. 4.22 crores, as against Rs. 2.54 crores in 1958-59. Other large investments, with figures in brackets indicating the estimate for 1958-59, include:

Purchase of shares in Nangal Fertilisers and Chemicals Ltd. Rs. 6 crores (Rs. 4.75 crores), purchase of shares in Heavy Electricals (Private) Ltd. Rs. 7 crores (Rs. 5 crores): purchase of shares in Hindustan Heavy Engineering Corporation Rs. 1.35 crore (Rs. 0.6 crore); purchase of shares in Hindustan Steel (Private) Ltd. *nil* (Rs. 144.2 crores); oil exploration scheme Rs. 3.26 crores (Rs. 1.96 crore); investment in Oil India Private Ltd. Rs. 2 crores (Rs. 4 crores); purchase of shares in Neyveli Lignite Corporation Rs. 13.0 crores (Rs. 6.48 crores); Eastern Shipping Corporation Rs. 1.95 crore (Rs. 0.90 crore); Western Shipping Corporation Rs. 1.60 crore (Rs. 2.15 crores); investment in Air India International Rs. 2.88 crores (Rs. 2.83 crores); investment in Indian Airlines Corporation Rs. 0.80 crore (Rs. 3.67 crores).

Besides the provisions noted above, the Government has allocated large sums to be given as loans. Thus, the absence of further investment in Hindustan Steel (Private) Ltd. does not mean that the enterprise will need no sums in 1959-60. Only, since the Company's authorised capital of Rs. 300 crores has been fully subscribed, further requirements of the Company will be provided as loans, of which it will receive Rs. 122 crores, as against Rs. 52.60 crores provided in 1958-59. Other prospective recipients of loans in 1959-60, with figures in brackets representing the loan provision in 1958-59, include:

Rehabilitation Industries Corporation Rs. 2 crores (*nil*); Khadi and Village Industries Commission Rs. 7.33 crores (Rs. 7.12 crores); private shipping companies Rs. 4.83 crores (Rs. 6.68 crores); shipping development fund Rs. 5.06 crores (Rs. 1 crore.; Tata Iron and Steel Co. and Indian Iron and Steel Company Rs. 2 crores (Rs. 10 lakhs); Industrial Finance Corporation Rs. 7.25 crores (Rs. 3.0 crores); National Small Industries Corporation Rs. 1.20 crore (Rs. 1.20 crore); and National Coal Development Corporation Rs. 10 crores (Rs. 5 crores) and National Industrial Development Corporation Rs. 2.90 crores (Rs. 2.0 crores).

Public Debt

The outstanding public debt of the Government of India is expected to amount to Rs. 4,067 at the end of 1958-59 and Rs. 4,821 crores at the end of 1959-60; it was no more than Rs. 950 crores at the end of 1938-39. Out of the total of Rs. 4,821 crores, at the end of 1959-60, the rupee loans will account for Rs. 4,139 crores and foreign loans for Rs. 682 crores; the corresponding figures for the outstanding public debt at the end of 1958-59 are Rs. 4,067 crores, Rs. 3,675 crores and Rs. 392 crores. Foreign loans at the end of 1959-60, with figures in brackets representing the position at the end of 1958-59, will include: Sterling loans Rs. 92.09 crores (Rs. 51.44 crores); U.S. dollar loans Rs. 415.16 crores (Rs. 246 crores); Canadian dollar loans Rs. 15.71 crores (Rs. 15.71 crores); loans from U.S.S.R. Rs. 61.34 crores (Rs. 40.89 crores); loans from W. Germany Rs. 64.66 crores (Rs. 35.71 crores); loans from Japan Rs. 12.79 crores (Rs. 1 crore). The rupee loans at the end of 1959-60 with figures for the loans at the end of 1958-59 in brackets are: current loans Rs. 2,292.2 crores (Rs. 2,183.8 crores); Treasury Bills Rs. 1,535.1 crores (Rs. 1,275.1 crores); special floating loan Rs. 266.2 crores (Rs. 204.4 crores) and expired loans Rs. 15.8 crores (Rs. 12.1 crores). Besides this debt, the Government has, of course, to repay a large variety of balances and funds, such as provident funds, savings deposits, reserve funds of the Railways and certain other deposits such as those relating to income-tax. These balances are estimated to amount Rs. 1,134 crores at the end of 1958-59 and Rs. 1,223 crores at the end of 1959-60. The overall debt position of the Government of India will be:

(Rs. in crores)

	As on 31-3-1959	As on 31-3-1960
Regular loans ...	4,066.82	4,821.21
Other liabilities ...	1,133.97	1,222.61
British war loan ...	—20.62	—20.62
	5,180.17	6,023.20

In terms of the purpose for which the money has been utilised, the public debt can be analysed in the following way:

Capital Assets

(In round crores of rupees)

	As on 31st March, 1959	As on 31st March, 1960
Railways	1,343	1,465
Posts and Telegraphs and Other Commercial Departments (including Damodar Valley Corporation)	187	210
Investments in Commercial Concerns (Industrial Development)	465	519
Loans and advances	1,732	2,119
Amounts recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions	21	20
Subscription to the International Monetary Fund ...	201	206
Purchase of shares of the I.B.R.D.	37	37
Debt due from Pakistan	300	300
Cash and other investments	58	56
Total ...	4,344	5,022

By comparing the total debt with the assets created out of it, it will be seen that the uncovered debt will amount to Rs. 1,001 crores at the end of 1959-60. This amount, it is stated, cannot be entirely regarded as unproductive

(*Continued on next page*)

Net Capital Formation

(Rs. crores)

	1950-51	1951-52	1952-53	1953-54	1954-55	1955-56	1956-57	1957-58 (R.E.)	1958-59 (B.E.)
A. Net capital formation by the Central Government :

C. Total net capital formation out of the budgetary resources of the Central Government (A+B)	98.5	160.3	140.3	202.0	444.6	431.2	510.9	723.2	790.6

Note: Worked out from the budgets of the Central Government.

AMERICAN LETTER

MOVE TO AID INDIA WELL RECEIVED

LABOUR DEMANDS IMPART CAUTION

From Our Special Correspondent

NEW YORK, 24*th February*

SENATORS Kennedy and Cooper have introduced a bi-partisan and widely supported Bill in Congress which would create an international mission to canvass India's needs and to chart a course for long-range economic aid. Their joint resolution calls upon the Senate to go on record as favouring such action.

The Bill is supported editorially by leading newspapers. It is being pointed out quite forcefully that India needs help in her struggle to improve the living standards of 400 million people. If the resolution is passed, it would foreshadow an important change in United States foreign aid programmes.

What has been suggested is to put the Development Loan Fund on a permanent basis, so that help extended to underdeveloped countries is not subject to the annual scrutiny of the Congress. Countries receiving aid are uneasily aware of this condition.

Moreover, none of such countries, including India, can think of financial undertakings except in terms of several years or more, so that the annual requirement is rather unrealistic to begin with. Yet, any and all foreign aid measures entail considerations of momentarily prevailing political moods.

The Senators emphasise India, because India would profit most from the kind of loans made by the Development Loan Fund. They go so far as to say that, in deciding the fate of the Fund this year, Congress will "in large measure be deciding the future of India."

It is recognised here that this is the crucial year in India's current five-year Plan. Even after severe cutbacks, the Indian Government is still short nearly $600 million which must be invested if the Plan is to succeed.

The Plan is felt to be a practical necessity, if India's growing population is to be kept alive at a growing scale of living standards. Unless India receives steady and long-term support from the West, of the kind the Soviet Union has given to Communist China, Senator Kennedy warns, India as a free and democratic state may not survive.

The latest legislative proposal calls for help of a new order, not just a dam in one spot and a railroad in another, or a model farm in the midst of wilderness.

Domestic Economy

The U.S. domestic economy is proceeding along the recovery path. Retailers rolled up their biggest January volume in terms of current dollars. Increases were widespread and, in some instances, quite substantial as consumers stepped up their buying. This applied to such establishments as department stores, automotive dealers to drug stores and supermarkets.

Only one important retail group suffered a setback—furniture and appliance stores. But even in that area, the decline was fractional, amounting to only nine-tenths of one per cent.

The Federal Reserve index of industrial production rose to 143 (1947-49=100) in January, 1959. This compares with a pre-recession peak of 145. Operations in the steel industry were scheduled at 86.1 per cent. of capacity this week, as compared with 83.7 per cent. a week ago. Some of the buying is, no doubt, hoarding for fear of a prolonged steel strike beginning 1st July 1959. But it is difficult to say just how much that accounts for.

Labour on War-path

As a matter of fact, all the three major unions are on the war-path again this year. They will be trying for a 35-hour work week, as compared with 40 hours at the present time. In addition to workers in steel, similar demands will be made by rubber industry and railroad workers also.

The American trade unions today have the same the-public-be-damned attitude that big business and high finance had in the era which ended with the great depression in the early 1930s. That attitude in both instances was and is sparked not by maliciousness, but by sheer stupidity and ignorance of basic facts and economic laws.

It is the old story of the pendulum swinging too far in one direction and then reversing its course in the other direction, going too far. It is just inviting reversal. Labour reform bills, now before Congress, may be one means in that direction. Meanwhile, David Beck, former boss of the teamsters union has been indicted for income-tax evasion and faces a long prison term.

Equities up Again

Stock prices again rose sharply in the second half of February. The Dow Jones averages broke through the 600-index barrier for the first time in history. The last time the market chalked up a new high was on 22nd January 1959.

There was a number of new readings on the economic barometer. Freight car loadings rose. Auto production was up and so were many other readings except unemployment which is still slightly below the 5-million mark. Increased dividends and an equally enticing, if somewhat less meaningful, spate of stock splits helped to bring back buying into the market which had been somewhat stagnant for some time. Once again, institutional buying by investment companies, trust and pension funds, etc., was an important factor.

Personal income rose to a new high annual rate of $362,300 million in January. It was $13.500 million higher than in January, 1958 in terms of current dollars.

Despite the unemployed, average take-home pay of factory workers last month reached a new record for any January, chiefly because of lengthening of the work week. It was the first month to show a new high since the recession began in mid-1957.

Yet, there is no question that caution is the primary motivating factor in business and Government. It is that caution which makes do with the present labour force without addition. It is that caution, coupled with fears of further inflation, because of labour demands, which makes Government, on all levels, seek higher taxes and balanced budgets, however illusory.

Foreign Affairs

Foreign affairs are receiving much public attention these days. The illness of John Foster Dulles, Secretary of State, has focussed attention to this field and so has the visit of the British Prime Minister to Moscow who is expected here in the middle of March.

Both the Berlin question and the Cuban revolution have intensified this preoccupation with foreign affairs. The outcome of the Berlin crisis remains to be seen. The pessimists believe that miscalculations by either side may spark a suicidal war.

After the first violent reactions against the mass-executions in Cuba, the most conservative reporters now say that the new regime of Fidel Castro is honest and intelligent and has prevented a rampage of revenge, murder and plundering which was generally expected after the departure of General Batista and his henchmen. The aid to India proposals now before Congress are part and parcel of these foreign policy considerations at present occupying American public opinion.—*All Rights Reserved.*

CAPITAL OUTLAY IN THE BUDGET

(*Concluded from previous page*)

debt since loans and grants made to State Governments go to increase productive capacity and the investments made in Central Government's property, the value of which is either not shown at all or treated as non-commercial item, are not without value.

Third Plan

Although it is known that massive capital investments are needed in the period of the third Five-year Plan, the Union Finance Minister did not commit himself to any specific figure. He felt that it was "premature to speculate on the size of the Plan." He admitted that "thinking has already started in the third Plan". He averred that the objective of the third Plan should be "to accelerate as much as possible the tempo of development the country would have reached by the end of the second Plan." A similar note has been struck by the *Economic Survey* which has stressed that the mobilisation of resources, both internal and external, will call for continuing effort in the third Plan period and will, in fact, have to be accelerated further if the third Plan is to be, as it should be, a "decisive" step forward towards the goals envisaged.

The Bank transacts banking business of every description.
Current Accounts are opened and Fixed Deposits are received on terms which may be ascertained on application.
Trusteeships and Executorships accepted.
Safe Deposit Lockers available.

52/60, Mahatma Gandhi Road, Bombay. J. R. N. SHIRREFF, *Manager.*

TREND OF WORLD SILVER MARKETS

LARGER CONSUMPTION EXPECTED

THE world silver markets continued to be fairly stable throughout 1958, as in 1957, though the trend of prices was somewhat downward. As in the previous years, the degree of stability varied from country to country, but prices throughout the world were subject to the same basic conditions. The policies of the Bank of Mexico and of the U.S. Treasury have been the dominant influences during the current decade. For eight years, from 1948 to 1958, the price of silver in New York fluctuated within a range of less than 10 cents a troy ounce and, in the last three years, the spread between the high and the low was no more than 3 cents. On balance, the average prices of silver in New York and in London were lower than those in either 1957 or 1956. The Indian silver market, again, provided an exception to the general trend and the average price was somewhat higher than in the previous year.

The generally lower prices were due to an increase in world production of the white metal and a fall in consumption. According to the world-renowned Messrs. Handy and Harman's Forty-third *Annual Review of the Silver Market in* 1958, on which this article is based, the total output of silver in the non-Communist world amounted to about 204.7 million ounces, representing an increase of about 3 per cent. over 1957. The production in the U.S., however, dropped by 4.7 million ounces to 34 million ounces, but this was more than made good by the increase of 2.6 million ounces in Canada, 5.5 million ounces in Peru and 2.6 million ounces in countries outside the Western Hemisphere, as will be seen from the following table, giving the trend of world production from 1954 onwards:

World Silver Production

(In millions of ounces)

Countries	1958	1957	1956	1955	1954
Mexico	47.0	47.2	43.1	48.0	39.9
United States	34.0	38.7	38.7	36.5	35.6
Canada	31.0	28.4	28.4	28.0	31.1
Peru	30.8	25.3	23 0	22.9	20.4
Bolivia	5.4	5.4	7.5	5.9	5.0
Other South and Central American countries ..	6.5	6.6	7.0	6.4	7.8
Total Western Hemisphere.	154.7	151.6	147.7	147.7	139.8
Outside the W. Hemisphere (partial)	50.0	47.4	51.6	50.7	49.4
World Production (partial).	204.7	199.0	199.3	198.4	189.2

It will be observed from the data given above that, notwithstanding the slight setback in 1957, the basic trend of world production of silver has been upward and, in the course of the last four years, it has gone up by 15.5 million ounces or by over 8 per cent.

Messrs. Handy and Harman estimate the consumption of silver in the non-Communist world at 250.5 million ounces during 1958, which represents a decline of about 13 per cent. from the 1957 level. This reverses the upward trend noted since 1954, as the following table of world consumption shows:

World Silver Consumption (partial)

(In millions of ounces)

Countries	1958	1957	1956	1955	1954
Arts and Industries					
United States	85.0	95.0	100.0	100.0	85.0
Canada	3.9	5.2	3.8	4.6	3.9
Mexico	4.4	3.9	2.9	2.5	1.3
Great Britain	13.5	13.5	13.9	14.2	12.6
France	13.0	12.3	15.9	15.7	15.0
Western Germany	31.1	31.5	33.1	28.1	24.2
India	3.3	15.0	17.5	3.0	3.0
Japan	8.2	8.8	8.1	6.3	5.8
Other countries (partial) ..	25.0	25.0	15.0	18.4	10.0
Total (partial) ..	187.4	210.2	210.2	192.8	160.8
Coinage					
United States	36.2	51.4	31.2	8.2	53.1
Canada	4.7	4.7	3.2	2.6	0.9
Mexico	2.2	3.1	4.9	2.3	..
Saudi Arabia	..	..	..	17.2	..
Other countries (partial) ..	20.0	20.0	17.2	22.3	29.4
Total Coinage (partial) ..	63.1	79.2	56.5	52.6	83.4
Total Consumption (partial)	250.5	289.4	266.7	245.4	244.2

The statistics relating to world production and consumption, say Messrs. Handy and Harman, are incomplete for many countries and are particularly scarce for Communist-dominated areas. They are, therefore, limited to non-Communist countries.

The consumption for arts and industries, as well as that for coinage, has declined. Arts and industries took up 187.4 million ounces, the lowest quantity since 1954. In the U.S. alone, the decline in the use of silver by this source is said to have been 10 million ounces and is estimated to have been 11.7 million ounces in India. As for coinage, the bulk of the decline is accounted for by the U.S. which used 15.2 million ounces less for the purpose during 1958. The lower consumption in the U.S. is not surprising, in view of the fact that the past year was one of recession. Well over half of all silver used in that country continues to go into industrial applications, in contrast to the more traditional use in arts. Notwithstanding the large decline of 25.2 million ounces in its total consumption, the U.S. continued to be the largest consumer of the white metal in the world, accounting, as it did in 1958, for nearly 50 per cent. of the total world consumption.

Consumption in India during 1958 is estimated at 3.25 million ounces, which is considerably below that (15 million ounces) in 1957. It is also less than the quantity imported during the year, at about 6 million ounces. "It is believed," Messrs. Handy and Harman observe, "that consumption has been curtailed by the prevailing high prices."

While U.S. consumption declined by 25.2 million ounces, its imports fell by 45.2 million ounces to 160.9 million ounces. As in 1957, so also in 1958, the return of lend-lease silver continued to be the main source of imports into the U.S. Out of the total imports of 160.9 million ounces during 1958, lend-lease silver accounted for 92.4 million ounces, as against 138.3 million ounces in 1957. India alone returned 83 million ounces of lend-lease silver during the past year, Pakistan 4.8 million ounces, and Ethiopia 4.6 million ounces. With this, the total quantity of lend-lease silver returned to the U.S. upto the end of 1958 was 369.3 million ounces, as against the original obligation of 410.8 million ounces, leaving a balance of only 40.5 million ounces. The three countries which have yet to repay fully their obligations are: Pakistan, 18.4 million ounces; Saudi Arabia, 21.3 million ounces and Ethiopia, 0.8 million ounces.

Imports into the U.S., other than returns against lend-lease, amounted to 68.5 million ounces, of which 65.1 million ounces were imported from the Western Hemisphere countries and 3.4 million ounces from countries outside the Western Hemisphere.

During 1958, the U.S. exported 2.9 million ounces of silver, as against 10.3 million ounces in the previous year. The main importer from the U.S. was Mexico, with 1.7 million ounces, as against 1.3 million ounces. W. Germany's imports declined from 2.8 million ounces to 1 million ounces, U.K.'s from 3.9 million ounces to a mere 0.1 million ounces and other countries' from 2.3 million ounces to 0.1 million ounces.

There was no significant change in the sources of supply of silver to the London market. Imports into the U.K. during the first eleven months of 1958 aggregated 19.5 million ounces, as against 17.2 million ounces in the corresponding period of 1957. Australia was the main exporter to London with a shipment of 9 million ounces. During the same period, Britain exported 15.2 million ounces, as compared with 15.6 million ounces (exclusive of 22.5 million ounces of lend-lease silver) in the corresponding period of 1957. France was the largest buyer with 4.6 million ounces. Austria bought 3.1 million ounces and Italy 3.5 million ounces.

The sales of silver by the Bank of England were the major factor in the London market. According to Messrs. Handy and Harman, the Bank sold about 11 million ounces in 1958 to users in Britain, as against 7 million to 8 million ounces in the previous year. This silver was obtained through the withdrawal from circulation of demonetised coins. It is estimated that approximately 12 million ounces were acquired from this source in 1958 and that about 80 million to 90 million ounces of silver are still outstanding in the form of silver coins in the hands of the British public.

Referring to India, Messrs. Handy and Harman say that imports of silver coins from Tibet, on a barter basis, were lower, being about 6 million ounces, as compared with about 16 million to 17 million ounces in 1957. It is stated that towards the end of November last, the Chinese authorities banned further exportation of coins to India. It is, however, not known whether this is a permanent ban or whether exports will ultimately be resumed. They point out that since even the reduced imports during 1958 have been much more than consumption, it is a logical conclusion that deliveries of bullion to the market have been held up due to delays connected with refining.

To revert to the trend of prices. As stated earlier, the average prices in New York and London were below those in 1957. The following table shows the highest, lowest and average prices in the two markets during the last one decade:

Silver Prices

Year	New York (in cents)			London—Spot (in pence)		
	High	Low	Average	High	Low	Average
1958 ..	90.375	88.625	89.044	78.750	74.750	76.211
1957 ..	91.375	89.625	90.820	80.500	77.125	78.927
1956 ..	91.625	90.000	90.826	81.375	78.625	79.132
1955 ..	92.000	85.250	89.099	80.250	73.750	77.507
1954 ..	85.250	85.250	85.250	74.375	72.000	73.482
1953 ..	85.250	83.250	85.188	74.000	72.875	73.945
1952 ..	88.000	82.750	84.941	77.000	72.500	74.360
1951 ..	90.160	80.000	89.368	78.500	70.000	77.856
1950 ..	80.000	71.750	74.169	70.000	63.000	64.796
1949 ..	73.250	70.000	71.930	64.000	42.500	49.243

Messrs. Handy and Harman expect a higher price to prevail in the current year, on account of the increasing and varying use of the white metal in industries. Referring to the outlook, they observe:

"The year 1958 has ended on an optimistic note for business in general. Silver is used in a wide variety of industries and, therefore, its market is directly affected by business conditions. We predict that consumption of silver in the United States in 1959 will exceed the 1958 figure. It is probable that the needs of the market will require a larger portion of domestic silver than in the year just ended, and we expect that 1959 will see the price more frequently above the Treasury buying price for domestic silver than in the recent past. However, if we assume that there will be no change in the policies of the United States Government, then in all probability the story of the silver market in the coming months will be little more than a continuation of what we have seen for the past several years."

One important arena of use of silver, particularly in the U.S., is the consumer durable goods industry. According to Messrs. Handy and Harman, there are definite indications of improvement in this category. Furthermore, a growing number of applications of silver and its alloys in electrical and electronic developments has a long-range prospect for silver. The use of silver in sterling and plated ware has grown in the U.S. by the increasing number of weddings and the predicted increase in the marriage rate over the next few years is expected to enlarge further the consumption of silver.

P.L.480 FUNDS WITH STATE BANK

The appropriateness of depositing the rupee counterpart funds arising from imports of commodities from the U.S. under P.L.480 with the State Bank of India has been the subject of some public comment for some time. It is being alleged, not infrequently, that the deposit of these large funds has placed the State Bank in a more advantageous position *vis-a-vis* the other Scheduled banks, in that its competitive position has been strengthened. Repudiating this at a Press Conference held on Friday last week and at the annual general meeting of the Bank held later on the same day, Mr. P. C. Bhattacharyya, Chairman of the Bank, explained the policy behind the utilisation of these funds. In the first instance, he pointed out that the Bank's deposits had increased during 1958 by over Rs. 111 crores, the bulk of which was accounted for by the counterpart funds under P.L.480. At the same time, there was an increase of over Rs. 101 crores in the Bank's investment portfolio. The expansion in investments, Mr. Bhattacharyya explained, was consequential to the policy of depositing with the Bank the rupee counterpart funds from the U.S. under P.L.480, which in turn are invested in Government securities; these had gone up by over Rs. 98 crores during 1958.

There were two main reasons for this investment decision. First, it was felt that "it was our duty to deal with these funds in a manner consistent with the general economic policy and, in particular, the anti-inflationary policy of the Reserve Bank of India and the Government of India." Secondly, it was felt that "if these substantial amounts were put into the normal channels of commercial credits, there could be a major upset when these deposits would have to be repaid on short notice, as is required to be done."

The following are the main points of information on the P.L.480 funds and on other aspects of the Bank's working that emerged from the questions put at the Press Conference:

1. The total deposits of P.L.480 funds with the Bank aggregate Rs. 175 to 180 crores.

2. The rate of interest paid on these funds is 2½ to 3 per cent.

3. Even if these funds are excluded, the rise in the Bank's deposits would have been in keeping with the general trend of other Scheduled banks, but subject to one difference, namely, that, whereas in the case of other Scheduled banks the rise in time deposits was much more than that in demand deposits, the reverse was the case with the State Bank of India.

4. The rate of interest paid by the Bank on other short-term deposits is not more than 3 per cent. per annum.

5. There has only been a small withdrawal so far from the P.L.480 funds to meet the U.S. Government's expenditure.

6. As the State Bank is providing only the working capital of small-scale industries, there is no likelihood of overlapping, with the other agencies, of financing these industries.

7. The role of the State Bank in the proposed State trading in foodgrains is nothing more than the traditional one of financing ventures that the State undertakes.

BANK OF INDIA'S PROFIT LOWEST SINCE 1955

CREDIT RATIO ABOVE AVERAGE

A FURTHER expansion in deposit resources of banks, without a corresponding expansion in their main revenue-earning asset, namely, commercial advances, thanks to the continued credit restraint, has had the effect of reducing the profits of banks in general during 1958. True to this trend, the deposits of the Bank of India Ltd. also rose last year by Rs. 5.67 crores, but there was actually a slight drop of about Rs. 39 lakhs in their advances. The Bank's profit declined by Rs. 7.70 lakhs to Rs. 85.77 lakhs. This is the first year since 1953 for which the Bank's profit has recorded a setback. From Rs. 76.03 lakhs earned in 1953, the profit had gradually improved to a record level of Rs. 93 47 lakhs in 1957, before receding in the year under review.

After reducing the provision for taxation from Rs. 30 lakhs to Rs. 25 lakhs and enhancing the allocation to bonus to staff from Rs. 15 lakhs to Rs. 16 lakhs, the Directors have maintained the dividend at 16 per cent. per annum on the present capital of Rs. 3 crores for the second year in succession. The payment of this dividend, which requires Rs. 48 lakhs, is to be made by drawing on the previous year's surplus of Rs. 16.02 lakhs to the tune of Rs. 3.23 lakhs.

The Bank's earning from interest and discount has gone up by over Rs. 51 lakhs, but this is more than offset by the fall of Rs. 15 lakhs in commission and exchange earned—reflecting the setback in the Bank's bills business—a rise of Rs. 29 lakhs in interest paid, following the expansion in time deposits and the high rate of interest thereon, and of Rs. 13 lakhs in expenses. Of the rise in expenses, salaries and allowances and provident fund alone account for nearly Rs. 11 lakhs.

The following table shows the Bank's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount	3,86 45	3,35.32	2,72 08	2,18.41

Balance-sheet total	101,98.46	98,47.62	96,41.90	89,23.62
Ratio to deposits of—	%	%	%	%
Advances	66.8	71.9	62.3	68.2
Investments	27.7	23.8	25.9*	27.4*
Cash	11.9	14.5	11.5	14.3

* Ratio arrived at after taking into account the investments earmarked against borrowings from banks.

The rise in the Bank's deposits during 1958 is less conspicuous than that in 1957, as will be seen from the above table. A break-up of the deposits shows that fixed deposits have gone up by Rs. 8.64 crores to Rs. 39.58 crores and savings deposits by Rs. 1.68 crore to Rs. 11.86 crores, while current deposits have declined by Rs. 4.65 crores to Rs. 36.83 crores. On the assets side, there has been a decline of Rs. 39 lakhs to Rs. 58.99 crores in bank credit, mainly due to the fall of Rs. 2.87 crores (to Rs. 6.83 crores) in bills purchased and discounted. Loans, cash credits and overdrafts have, however, risen by Rs. 2.48 crores to Rs. 52.11 crores. The slight decline in bank credit in the face of an expansion in deposits has brought down the credit ratio to 66.8 per cent., which is the lowest year-end ratio for the Bank since 1954, but is well above the general average of 55 per cent. for all banks. In the absence of scope for increasing the advances portfolio, the bulk of the expansion in the Bank's deposits has been utilised to strengthen its investments in Government securities which has consequently raised the investment ratio to 27.7 per cent. The shrinkage of Rs. 1.41 crore in cash balances has brought down the cash ratio from 14.5 per cent. to 11.9 per cent., but the total liquid assets provide a slightly larger cover to the deposits as at the end of the year than at the close of 1957.

MYSORE BANK REPORTS LOWER PROFIT

DEPOSITS RISE BY RS. 4 CRORES

IN consonance with the general trend of bank earnings during 1958, the profit of the Bank of Mysore Ltd. also has suffered a setback from Rs. 24.08 lakhs to Rs. 22.58 lakhs for the year under review. The decline—Rs. 1.50 lakh—is, however, so small that the year's profit is still better than that for any of the years preceding 1957. Following this small setback, the provision for taxation has also been pruned from Rs. 4 lakhs to Rs. 3.50 lakhs. The transfer to the general reserve has been reduced from Rs. 7.95 lakhs to Rs. 4.75 lakhs, but it must be noted that, out of the allocation made last year, a sum of Rs. 3.55 lakhs was in respect of 1956. No allocation has been made for contingency reserves and reserve for depreciation on investments, for which purpose Rs. 2 lakhs and Rs. 3 lakhs, respectively, had been set aside last year. The dividend is unchanged at 16 per cent. per annum, a rate which is being maintained on the present capital from 1947 onwards. The only difference in the distribution pattern before 1957 and in the last two years is that the dividend and bonus parts of it were merged in 1957.

The following comparative table gives an idea of the Bank's progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross income	97.25	82.73	68.74	60.73

Ratio to deposits of—	%	%	%	%
Advances	60.1	76.0	76.6	66.4
Investments	30.8	30.4*	25.8*	36 7
Cash	14.1	8.6	7.6	13.5

* Ratio arrived at after taking into account investments earmarked against borrowings from banks.

The income and expenditure parts of the profit and loss account conform to the general pattern. Interest and discount earned have gone up by Rs. 15 lakhs, while commission and exchange are lower by Rs. 1 lakh. The outgo by way of interest paid shows a rise of more than Rs. 13 lakhs and other expenses an increase of about Rs. 3 lakhs.

The Bank's reserves stand considerably strengthened by Rs. 12.71 lakhs in the last two years to Rs. 96.71 lakhs. Of these reserves, the premium on shares accounts for Rs. 46.71 lakhs. The upward trend in deposits is being maintained, with a further rise of Rs. 3.83 crores to Rs. 16.72 crores in 1958. The composition of the deposits shows that the bulk of this rise—Rs. 3.05 crores to be precise—has occurred in fixed deposits at Rs. 7.67 crores. Thrift and savings bank deposits have risen by a little over Rs. 2 lakhs to Rs. 2.43 crores and current and other accounts by Rs. 76 lakhs to Rs. 6.62 crores.

The increase of Rs. 25 lakhs in total advances of the Bank as at the end of the year is mainly due to the rise of about Rs. 33 lakhs in bills purchased and discounted to Rs. 1.63 crore, while loans, cash credits and overdrafts are lower by a little over Rs. 7 lakhs at Rs. 8.42 crores. In the absence of any corresponding expansion in bank credit as that in deposits, the credit ratio has dropped from 76.0 per cent. to 60.1 per cent., but the additional resources have been utilised to strengthen the investments by Rs. 2.14 crores to Rs. 6.36 crores and cash balances by Rs. 1.27 crore to Rs. 2.37 crores, with the result that the aggregate liquidity ratio has gone up from 39 per cent. to 44.9 per cent.

(Concluded from next column)

stand strengthened by Rs. 1.94 crore, but this is more than offset by the shrinkage of Rs. 2.49 crores in cash balances which has reduced the cash ratio by more than half to 14.1 per cent.

BUSINESS OF UNION BANK GROWS

ADVANCES MOVE UP SHARPLY

A FRACTIONAL improvement in profit, in refreshing contrast to the general trend of bank earnings, is disclosed by the accounts of the Union Bank of India Ltd. for the year ended 31st December 1958. The Bank's profit has risen from Rs. 14.72 lakhs to Rs. 14.75 lakhs, thus not only maintaining the upward trend since 1954 but establishing a fresh record in the Bank's history. No doubt, interest payment and establishment expenses are substantially higher, but the Bank has been able to make good the larger outgo by an expansion in its business, as witness the rise of Rs. 5.38 crores in advances.

The provision for taxation is unchanged at Rs. 4 lakhs, while the transfer to the reserve fund has been raised from Rs. 2.50 lakhs to Rs. 3 lakhs. The allocation to the contingency account has been reduced from Rs. 1.50 lakh to Rs. 50,000 and that to the premises account from Rs. 1 lakh to Rs. 50,000. Bonus to staff absorbs Rs. 65,000 more at Rs. 3.15 lakhs. The dividend is being maintained at 8¾ per cent. per annum on the increased capital raised by the issue of 400,000 new shares of Rs. 5 each during the year under review. The new shares are, however, entitled to a *pro rata* dividend for only three months from 1st October to 31st December 1958.

The main features of the Bank's profit and loss accounts and balance-sheets relating to the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross income	1,32.40	97.82	62 55	40.53

Advances	15,77.96	10,40.37	8,70 52	5,50.26
Investments	6,95.32	5,00.94	3,48.69	2,94.90
Cash (including money at call and short notice)	3,47.38	5,96.93	1,76.66	1,40.42
Balance-sheet total	33,73.66	26,81.56	20,72.36	13,05.01
Ratio to deposits of—	%	%	%	%
Advances	64.1	50.1	65.8	60.4
Investments	25.4†	24.2	26.3	32.4
Cash	14.1	28.8	13.3	15.4

* Includes a *pro rata* dividend of 11 nP per share on the new shares for three months ended 31st December, 1958.
† Ratio arrived at after taking into account the investments earmarked against borrowings.

The Bank's gross income shows an impressive rise of Rs. 34.62 lakhs or 35.3 per cent., thanks to an increase of Rs. 28.28 lakhs in income from interest and discount, of Rs. 2.08 lakhs in commission and exchange and of Rs. 3.21 lakhs in other income, including a profit of Rs. 2.10 lakhs in sale of investments, etc. Interest paid is up by Rs. 20 lakhs and administrative expenses have risen by Rs. 14 lakhs.

The expansion of Rs. 3.89 crores in deposits is shared by fixed and other short-terms deposits, as well as by savings bank deposits which have increased by Rs. 4.23 crores (to Rs. 9.82 crores) and Rs. 33 lakhs (Rs. 1.23 crore), respectively. Current and other accounts have declined by Rs. 67 lakhs to Rs. 13.56 crores. The rise in deposits is supplemented by borrowings from other banks to the tune of Rs. 70 lakhs as at the end of the year. These borrowings have been necessitated by the larger demand for credit, as indicated by the increase of Rs. 5.38 crores in the Bank's advances. Contrary to the general trend, the rise in the Bank's advances is much more than that in deposits. Of the total advances, loans, cash credits and overdrafts show an increase from Rs. 6.78 crores to Rs. 11.46 crores and bills purchased and discounted from Rs. 3.62 crores to Rs. 4.31 crores and these have pushed up the credit ratio from 50.1 per cent. to 64.1 per cent. It is noteworthy that, despite the substantial expansion in resources and the rise in credit in the last two years, the Bank's credit ratio at the end of 1958 is less than that at the close of 1956. Investments

(Continued in previous column)

MODERNISATION OF COTTON MILLS

MR. KANUNGO ON LATEST POSITION

SOME information about modernisation of cotton mills was given by Mr. Nityanand Kanungo, Union Minister for Commerce, in reply to a short-notice question in the Lok Sabha on 23rd February 1959. He claimed that modernisation of cotton mills "has been going apace" with the installation of automatic looms and various other machines like Barber-Coleman winding and warping machines and sizing machines. According to Mr. Kanungo, several mills have modernised their equipment from their own resources, as well as from loans received from the National Industrial Development Corporation. So far, permission has been given for the replacement of 2,306 plain looms by 1,776 automatic looms in eleven mills. This, it may be noted here, is part of the scheme formulated by the Central Government for the installation of 2,500 automatic looms in replacement of plain looms during each calendar year 1959, 1960 and 1961. The basis for allotment of automatic looms is as follows:

Past and potential performance in export trade.

Ability to install automatic looms without retrenchment of workers.

Financial capacity to undertake introduction of these looms.

Distribution on a zonal basis covering the entire country.

Allotments to individual mills normally range from 48 to 144 looms; in exceptional cases, the maximum allotment is 300 looms.

No specific decision has yet been taken by the Government to import all these looms. The imports would be governed, he said, by the import policy announced from time to time. If this is the position and if automatic looms are yet to arrive in this country, it is difficult to agree with the conclusion of Mr. Kanungo that modernisation "has been going apace."

Must Be Welcomed

The recognition by the authorities of the need for cotton mills to modernise their machinery and equipment, though belated, must nevertheless be welcomed. The capacity of the mill sector to produce adequate quantities of quality textiles at a reasonable cost has been reduced markedly in recent times, thanks to the rigid cost structure. The financial position of the industry was so strained last year that as many as 45 mills served notices of closure and 18 units actually went out of production. As a result of these closures, the approximate loss of man-days was 12,500 days, leading to a drop in output to the extent of 200,000 bales (of 1,500 yards each) of cloth and 48,700 bales of yarn (of 400 lbs. each). Reflecting the disquieting situation in cotton mills, the labour force employed has shrunk considerably, as the figures relating to the number of workers at work given below will show:

	First shift	Second shift	Third shift	Total
1958—				
January (1st working day) ..	110,801	76,284	21,898	208,983
February	109,926	73,822	21,558	205,306
1959— r				
January (1st working day) ..	105,703	73,235	18,882	197,820
February	105,153	72,560	18,388	196,101

The curtailment of production in cotton mills during the year 1958 was quite perceptible. The aggregate quantity of cloth actually produced was no more than 4,927 million yards, as against 5,317 million yards in 1957, representing a fall of over 7 per cent. Expressed in terms of money, the loss of production was of the order of Rs. 27 crores. The decline in cloth output followed a sharp decrease in yarn production which in 1958 amounted to 1,685 million lbs., as against 1,780 million lbs. in 1957. The following table gives the trend of yarn and cloth production—month by month—in the past two years:

	Cloth (million yards)		Yarn (million lbs.)	
	1958	1957	1958	1957
January	436.53	483.70	148.70	156.42
February	391.45	435.08	132.86	143.25
March	405.56	463.32	138.48	150.45
April	407.77	464.37	134.07	153.67
May	421.25	453.07	138.70	149.98
June	388.32	419.62	126.05	136.98
July	419.44	458.88	144.90	150.17
August	407.94	420.54	140.36	144.06
September	411.30	443.72	143.50	150.88
October	421.52	415.86	147.89	142.42
November	377.38	431.56	134.25	149.13
December	438.51	438.19	156.03	152.69
Total ..	4,926.97	5,317.42	1,685.33	1,780.10

The decline in cloth production was accounted for by all the varieties—coarse, medium, fine and superfine—as the table below shows:

(In million yards)

	1958	1957	1956
Coarse	969.96	1,163.71	718.64
Medium	3,395.81	3,502.91	3,796.61
Fine	302.96	383.07	444.04
Superfine	258.14	267.73	347.29
Total ..	4,926.87	5,317.42	5,306.58

Despite the appreciable fall in the production of cloth and yarn, the cotton mills were confronted throughout the year with the problem of heavy accumulations of stocks, because of dwindling offtake, domestic and foreign. The average quantities of yarn and cloth held in stock with mills during 1958 was 36.71 million lbs. and 846.69 million yards, as against 25.36 million lbs. and 831.15 million yards, respectively, in 1957.

Foreign Offtake

The foreign offtake of Indian cloth was at a low ebb last year. The quantity actually shipped from Bombay port, through which the bulk of shipments takes place, was just 539.20 million yards, which compares very unfavourably with 788.28 million yards in 1957. The export of yarn, however, was a shade higher at 8.77 million lbs. as against 8.25 million lbs. The month-by-month trend of yarn and cloth shipments from Bombay port during 1958, as compared with 1957, is indicated below:

	Cloth (million yards)	Yarn (bales of 400 lbs.)
January	53.37	1,895
February	51.52	2,456
March	52.45	169
April	42.32	1,743
May	52.79	738
June	18.89	932
July	48.62	1,570
August	34.49	1,572
September	45.42	2,209
October	47.74	2,592
November	39.76	2,317
December	51.83	3,730
Total 1958	539.20	21,923
Total 1957	788.28	20,623

The year-end figures of exports through all the ports in India are not yet available. But provisional estimates place the exports at 625 million yards, as against 828 million yards in the previous year.

The setback to cloth exports was accounted for by all the varieties. It was particularly marked in the case of medium cloth, the total shipments of which (through Bombay port alone) were lower at 336.78 million yards, as against 538.06 million yards. The exports of coarse cloth declined from 218.51 million yards in 1957 to 179.82 million yards in 1958, of fine cloth from 12.08 million yards to 6.06 million yards, and of superfine counts from 19.63 million yards to 16.54 million yards.

EXCISE ON ART SILK

One of the proposals in the field of indirect taxation announced by the Union Finance Minister in the budget statement for 1959-60 relates to excise duty on art silk. The duty on art silk fabrics is being raised from six pies per square yard to 6 nP. Simultaneously, the exemption in the present form in respect of products of the first nine looms will be reduced to four looms. The estimated additional yield is expected to be of the order of Rs. 1 crore per annum. The lowering of exemption limit is also expected to bring in Rs. 20 lakhs by way of additional duties which accrue to the States. Consequent on the increase in basic excise duty, the rates of basic compounded duty on art silk fabrics have been revised as follows:

(In Rs. per loom per month)

	Existing rate	Proposed rate
First shift	27	50
Second shift	18	35
Third shift	10	20

The rates of duty for warp knitting machines will be double the rates for powerlooms. There is, however, no change in the rates of additional excise compounded duty.

The excise duties on art silk yarn and staple fibre have also been raised as indicated below, the total estimated additional annual yield being Rs. 50 lakhs.

(In nP per lb.)

	Existing rate	Proposed rate
Rayon yarn—		
Below 75 deniers	50	80
75-100 deniers	37	60
Above 100 deniers ...	25	40
Staple fibre	12	20

The justification for the increase, it is said, is that the industry "is making excessive profits."

In line with the upward revision in excise duties, similar corresponding changes are being made in customs duties on imports of art silk fabrics, staple fibre and art silk yarn. The existing rate of import duty on staple fibre is 25 per cent. *ad valorem* plus an excise duty of 12 nP per lb. This will henceforth be 25 per cent. *ad valorem* plus an excise duty of 20 nP. The additional revenue expected from changes in customs duty is put at Rs. 40 lakhs per annum.

The above proposals have been criticised by the art silk industry and trade. In the course of a statement issued to the Press, Mr. D. N. Shroff, Chairman, Silk and Art Silk Mills Association, Ltd., Bombay, observes:

"The rayon weaving industry is at present passing through a crisis. At this stage, the heavy burden of increased duties that is proposed to be passed on to the industry by way of taxation both on fabrics as well as on yarn will deal a deathblow to the industry. The increase in revenue by way of these duties to the extent of 8 to 10 per cent. of the total increase in revenue proposed for this year is exorbitant for an industry which consists of small units comprising on an average from 25 to 50 looms."

The President of the Bombay Yarn Merchants' Association and Exchange Ltd., Mr. Sankalchand G. Shah, has also criticised the proposals. He fears that the sharp increase in excise is bound to affect seriously the silk weaving industry, the handlooms and the powerloom sector, all of which are passing through very difficult times at present, as well as the cotton mills using staple fibre.

Mr. Ramnivas Ruia, a leading industrialist of Bombay, has, however, welcomed the imposition of enhanced taxes on art silk yarn and fabrics on the ground that it would mop up a good deal of "illegitimate profiteering." The duties, he says, were not imposed so far in the ostensible interests of the people.

SIZE OF COTTON MILL INDUSTRY

Twelve new units were added to the list of cotton mills in existence during the cotton year ended August 1958, raising the total number to 511, as against 499 a year before and 465 two years before, according to the latest Mill Statement of the Millowners' Association, Bombay. The aggregate paid-up capital of the mills rose by Rs. 4.63 crores, from Rs. 121.95 crores to Rs. 126.58 crores. The extent of the rise in the previous year was much more, being Rs. 6.81 crores. The average number of workers employed (all shifts) was, however, lower at 775,865, as against 798,599. The quantitative progress made by the mill sector in the past three years is indicated by the following table:

	1958	1957	1956
Number of mills ..	511	499	465
Number of mills registered and/or in course of erection ..	23	34	33
Number of mills idle ..	24	20	16
Paid-up Capital (Rs. crores)	126.58	121.95	115.15
Spindles installed ..	13,271,890	12,906,622	12,375,805
Spindles working (first shifts only) ..	11,089,220	11,027,944	10,723,608
Looms installed	205,598	206,126	206,580
Looms working (first shifts only)	183,037	186,976	188,446
Cotton consumption (in bales of 392lbs.) ..	50,51,726	52,05,600	49,79,890
Average number of workers employed (all shifts) ..	775,865	798,599	789,024

The total number of looms installed as at 31st August 1958 is given as 205,598. This figure is somewhat different from the one, namely, 201,280 as on 1st January 1958, given in the monthly statistical bulletin issued by the Office of the Textile Commissioner. In view of the difference in the two sets of figures, the Millowners Association will do well to check up its figures and give a correct estimate of the looms installed in the mills.

Be that as it may, the foregoing table reveals that the expansion in the size of the mill sector during the year ended August 1958 was accounted for solely by the spinning side of the mills, the number of spindles installed rising from 12.91 million to more than 13.27 million. In contrast, the weaving capacity of mills suffered a setback, the number of looms declining from 206,126 to 205,598, or a fall of 528; the fall in the previous two years was 454 looms and 767 looms, respectively. The continued decline in loomage thus reflects the scrapping of looms worn out without being replaced by an equal number. The Government's policy of "no expansion in weaving capacity" may have contributed to this net fall in the number of looms.

The number of spindles actually working (first shift) has registered an improvement, from 11,027,944 to 11,089,220, while that of looms has gone down from 186,976 to 183,037. The extent of actual utilisation of capacity (first shift only) was less as compared with that in the previous year, being 83.5 per cent. for spindles and 89.0 per cent. for looms, as against 85.5 per cent. and 90.7 per cent., respectively.

The Annual Mill Statement of the Millowners Association also gives an idea of the position of the cotton mill industry in Pakistan as at 31st May 1958. The number of mills in existence was 90, with a total of 1,877,376 spindles and 27,829 looms. The number of spindles and looms actually working (first shift) was 1,759,251 and 26,196, respectively.

BANKING IN IRAN

THE CHARTERED BANK

and

THE EASTERN BANK LTD.

have pleasure in announcing that their associated Bank

THE IRANO BRITISH BANK

will open for business at

AVENUE SAADI, TEHRAN, IRAN

on Tuesday, 10th March 1959, under the general management of Mr. James H. Fenwick. Enquiries concerning the banking services available and the facilities for financing trade with Iran afforded by the new Bank will be welcomed by the Indian branches of

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER 1958

To

THE MEMBERS OF

DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet as on 31st December 1958 and the Profit and Loss Account for the year ended 31st December 1958. The Auditors' Report is also annexed.

2. The Bank has, during the year, made good progress generally. The bank's deposits, at the end of the year, went over Rs. 30 Crores, the total working funds over Rs. 37 Crores, and the number of accounts over 1,50,000. Six branches at Gol Deval, Goregaon and Kurla in Greater Bombay, Burra Bazar in Calcutta, and Padra and Damnagar were opened, bringing the total number of bank's offices to 75 at the end of 1958. A Safe Deposit Vault was opened at Malad Branch, bringing the total number of Safe Deposit Vaults to 16. Attention was also concentrated on the existing units with a view to expand them.

3. The Bank has made a net profit of Rs. 16,01,695.23, which, together with the sum of Rs. 2,80,319.54 brought forward from last year's account, amounts to Rs. 18,82,014.77. Out of this, your Directors have made the following appropriations:

	Rs. nP
To An Ad-Interim Dividend for the half-year ended 30th June 1958 at the rate of 5 per cent. per annum, i.e. Rs. 1.25 per share (free of income-tax) on 1,00,000 shares	1,25,000.00
To Amount Provided for Bonus to Staff	1,80,000.00
To Reserve Fund under Section 17 of the Banking Companies Act	6,00,000.00
To Provision for Taxation	5,00,000.00
To Pay a Final Dividend for the half-year ended 31st December 1958 at the rate of 7 per cent. per annum, i.e. Rs. 1.75 per share (free of income-tax) on 1,00,000 shares (making in all 6 per cent. for the whole year)	1,75,000.00
To Carry Forward	3,02,014.77
TOTAL	18,82,014.77

4. Shri Dhirendra Nanjibhai Mehta was appointed an additional Director on the Board of Directors and, in accordance with Article 95 of the Articles of Association, he ceases to hold office as a director at the Annual General Meeting but being eligible offers himself for re-appointment. In accordance with Article 100 of the Articles of Association, Shri Lalitchandra C. D. Nanjee, Prince Udaybhan of Porbandar and Shri Natvarlal S. Choksey retire from the Board of Directors by rotation but being eligible offer themselves for re-appointment.

5. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

BOMBAY, *29th January*, 1959.

MORE ON REORGANISATION PLANS

COTTON PRICES—PRODUCTION TRENDS PROMOTIONAL EFFORTS

From A Special Correspondent

MANCHESTER, *24th February*

MANCHESTER LETTER

BIT by bit, information about the likely moves to reorganise the Lancashire cotton industry on a more rational basis to suit existing demand is seeping through. From Parliamentary statements to the disclosure of letters between the Chairman of the Cotton Board and the President of the Board of Trade, it is possible to secure some idea of the measures which may be adopted.

Probably the most important feature of the project is that no comprehensive plan is contemplated. From the available statements, it seems that individual sections are preparing their own programmes for discussion and early action. Already substantial progress is reported in certain quarters, leading to the belief that, if approved, some schemes at least can be put into operation before the end of the year.

Such a development seems the only logical outcome of the need for speed. An overall reconstruction programme, however loosely linked between the different sections, would involve so much discussion, and very probably interference between one branch and another, that talks could drag on and on. There will undoubtedly be enough controversy within the particular sections before any schemes are put through, but they stand a better chance of early adoption if they relate only to the particular branches involved.

It so happens that previous experience of this kind has given the sectional leaders a pattern on which to work. It is by no means certain that similar systems will be suggested to those which have gone before, but in spinning, dyeing and printing at least, there have been efforts to deal with surplus plant which could well provide the nucleus of a programme for the 1960s.

In the manufacturing branch, the establishment of Weaving Reorganisation Ltd. last year offers a basis for a scheme of orderly contraction. The original conception of this idea was disturbed by the implications of last year's Finance Act, so that many firms which might have contemplated withdrawal from the trade under its sponsorship were deterred or found their own way out.

Pressure on Prices

At a time when the yarn market needed all the strength it possesses to bolster up weak sellers against the downward pressure exerted by customers anxious to secure business at the most remunerative levels, values for the raw material have shown a marked decline. To some extent the movement is related to the freeing of yarn prices, as increased hedging operations in the Liverpool futures market have played their part in depressing quotations for the distant positions.

Spot rates have been lowered substantially since the beginning of the month and the downward movement has gathered momentum on persistent fears over future legislative measures in the United States. The continued evidence of broadening production and dwindling consumption have raised much speculation over a revival of the burdensome surplus which so disturbed the market a few seasons ago.

The marked decline in prices of both futures and spot cotton in Liverpool in the past eight months is illustrated in the table below:

(In *d.* per lb.)

	Liverpool Futures		Liverpool Spot Rates		
	American Mar./Apr.	Mixed Mar./Apr.	American Omo-inch	Sudan Sakel C6	Sudan Lambert 6
1958

Oct. 1..	23.98	24.48	25.25	31.50	30.35
,, 15..	24.00	24.40	25.25	30.50	30.25
Nov. 3..	23.85	23.50	25.00	30.50	30.00
,, 17..	23.10	23.40	24.95	30.50	29.25
Dec. 1..	22.80	23.00	24.60	28.00	27.90
,, 15..	22.80	22.45	24.25	28.00	27.25
1959					
Jan. 2..	22.10	21.80	23.65	27.50	27.00
,, 16..	22.25	22.75	23.80	27.50	27.00
Feb. 2..	23.05	22.95	23.70	25.75	25.00
,, 16..	22.10	22.25	23.20	24.75	23.00
,, 20..	21.50	21.95	22.70	24.75	23.00

Not only has the fall in values accelerated since the beginning of this year but various changes have taken place in the relationship between different growths. At one time, the cost of Sudan Lambert 6 variety was below the comparable prices of one-inch American cotton, whereas in the middle of last year it was at a premium of over 5*d.* per lb.

In the futures market, the forward positions are now at a discount of up to 3*d.* per lb. as compared with the current month, representing the weakness of new crop deliveries. As recently as December last, some forward contracts were at a premium. From the viewpoint of yarn and cloth business, the sagging prices for the raw material have reacted against any revival in demand. Customers are disinclined to operate, when they fear that values will move against them during the period of manufacture, recognising the limited hedging facilities now available.

Output and Exports

Production returns for 1958, now available, merely underline the reduced rate of machine activity in a disappointing year; overseas trade figures for the first month of 1959 are equally disturbing. Total yarn output last year at 783 million lb. was 110 million lb. lower than in 1957. The loss was entirely accounted for by the fall in cotton yarn production. In woven fabrics, there was a drop of 300 million yards as compared with the previous year, aggregate output being 2,030 million yards. Both cotton and man-made fibre cloth production suffered setbacks.

Overseas trade in January provided a new peak in the excess of imports over exports. Arrivals of 44,173,000 square yards compared with shipments of 28,143,000 yards. Exports in January, 1958, were 40,032,000 square yards. Main suppliers of grey cloth were India with 15,597,000 square yards, and Hong Kong with 12,781,000 square yards.

The number of operatives on employers' books in December fell by a further 3,000, bringing the labour force at the year-end to 207,990, as compared with 241,160 twelve months previously. During 1958, manpower in the weaving branch was reduced by nearly 16,000 and in single spinning by nearly 13,000. The doubling section sustained a loss of 4,300 operatives, a fall of over 20 per cent. on the year.

Selling Britain's Cottons

Firms throughout the Lancashire cotton trade have received a review of the promotional activities organised by the Cotton Board in the home market from April last until the end of 1958. A wide range of ventures is illustrated by numerous reprints of advertising by poster, Press and pamphlet.

During the period, large-scale promotion for cotton textiles was carried out in co-operation with leading London and provincial stores, including the Marks and Spencer group, which alone has 238 branches in all parts of the country. Purchasers of individual cotton garments from Marks and Spencer received leaflets, of which over 2 million were provided by the Board.

In the field of fashion, some of the distinguished journals carried special features, boosting the advantages of Britain's cottons, while the American "Maid of Cotton" visited Britain last year in a further publicity drive to encourage the use of the fibre.

Over 5,800 teaching aids on cotton have been distributed to schools during the period with wall charts, film strips and boxes of cotton samples. The Cotton Board has continued to show its cotton films to women's organisations, all over the country to total audiences of 62,000.—*All Rights Reserved.*

Applicants for imports of chemicals, dye, gum, etc., against exports of cotton textiles by mills and processors under the incentive scheme must furnish, along with their applications, a declaration to the effect that exports/export sales have been effected by them, in respect of which they are claiming licences for imports, according to the trade notice issued by the Joint Chief Controller of Imports. The export of cloth and yarn to Nepal will, however, not be taken into account for import licences entitlement.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the unaudited returns from all the Branches in India not visited by us for the purposes of this Report.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of accounts as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

SUGAR INDUSTRY PLAYS VITAL ROLE

CENSUS OF MANUFACTURE ANALYSED

EVERY teaspoonful of white sugar one consumes contains 18 calories (calorie means unit of quantity of heat). No other food satisfies the appetite so fast with so few calories as sugar. The industry which produces such an essential article of food, besides providing the means of living to an army of workers in mills and cane growers and contributing crores of rupees as taxes and levies to the Governments as well as to local bodies, has naturally carved for itself a prominent place on the economic map of India. The vital role played by the white sugar industry is vividly brought out in the latest official census of the industry, that relating to the year 1956.

The table below gives the salient features of the census of sugar industry. It will be seen therefrom that the total value added by sugar manufacture during 1956 was Rs. 27.96 crores; this is arrived at after deducting the value at factory of materials, fuels, etc., consumed and amount paid to other concerns for work done for the factories which together aggregated Rs. 94.20 crores, as well as depreciation (Rs. 2.48 crores), from the ex-factory value (Rs. 124.64 crores) of products manufactured, by-products derived and work done for customers. The figure of Rs. 27.96 crores compares unfavourably with Rs. 29.64 crores for the year 1955, although the number of factories from which returns were received was higher at 158, as against 153, and so also the value of output at Rs. 125.67 crores, as against Rs. 118.73 crores. This is due to the rigid cost structure of the sugar industry, thanks largely to the continued high level of cane prices. Out of the Rs. 125.67 crores worth of sugar and other by-products produced, sugarcane alone accounted for as much as 61.6 per cent., the actual value of cane consumed by factories being Rs. 77.37 crores (the quantity involved was 18,476 674 tons), including the price of cane grown on farms owned by several mills.

Value added by manufacture* ..	27.96	4.06	2.04	1.80	13.99	3.74	0.84	0.19	1.30

Note :—Excepting number of factories, days worked and persons employed, the figures are in crores of rupees.
* Calculated on the basis described in the article.

Besides the payment of large sums of money for cane and the distribution of heavy salaries and wages to workers, the 158 sugar factories together paid in 1956 about Rs. 2.61 crores for packing; more than 1.81 million gunny bags were used. They also paid a large sum of money—Rs. 1.87 crore—for fuels comprising coal Rs. 31.53 lakhs (89,037 tons); electricity Rs. 21.83 lakhs (19,893,425 kw.h.); lubricating oils Rs. 38.31 lakhs (751 680 gallons); and "others" Rs. 95.58 lakhs. The value of other goods and commodities consumed by sugar mills was Rs. 5.55 crores. The cost of transport of material, fuel, etc., to factories, commission to purchasing agents, etc., where these are not included in the reported value was Rs. 6.28 crores.

Although the aforesaid statistical data relating to the sugar industry pertains to a year which is more than two years old, that is, 1956, they nevertheless give an impressive idea of the valuable contribution the sugar industry makes to national wealth. The data for subsequent years, when published, will make even more impressive reading, for, in 1957 as well as in 1958, the production and consumption of sugar was higher than in the year under review. Indeed, the white sugar industry could make much greater contribution, if only the Government removed the various restraints imposed on it.

Cane Prices Must Be Lowered

It is thus obvious that, if the cost of sugar production is to be reduced to a reasonable level, the heavy incidence of cane price must be reduced. There are two ways of bringing about such a reduction. One, the sucrose content of the cane should be improved. And, two, the burden of cess on cane crushed for producing sugar—amounting to 15 per cent. of the minimum price fixed for cane—must be lowered.

The need for reducing the incidence of cane cost is all the greater in the States of Bihar and Uttar Pradesh. The percentage proportion of cane in the total value of sugar mills' output in the two States is much higher than the all-India average of 61.6—nearly 69.5 for Bihar and 63 for Uttar Pradesh. And it is these two States which account for the bulk of sugar produced in India every year. The share of Uttar Pradesh and Bihar in the total sugar output of 1,805,715 tons during 1956 was 57.2 per cent. and 16.6 per cent., respectively, the quantity actually produced being 1,034,546 tons and 300,534 tons.

The value of sugar production in the 158 factories during the year 1956 amounted to Rs. 123.05 crores, while that of other products was Rs. 2.65 crores. Out of this, Uttar Pradesh alone accounted for Rs. 69.20 crores. The share of other important States was: Bihar Rs. 20.49 crores; Bombay Rs. 13.39 crores; Andhra Rs. 6.25 crores and Madras Rs. 4.63 crores.

The 158 sugar factories together employed a fairly large productive capital of Rs. 100.22 crores in 1956. The major portion of this—Rs. 67.33 crores—was accounted for by working capital, the balance of Rs. 32.89 crores representing the share of fixed capital. Of the working capital, stocks of finished products and by-products alone were valued at Rs. 52.17 crores, stocks of raw materials at Rs. 12.15 crores, semi-finished products in stock or in process at Rs. 34.73 lakhs, and cash (in hand and at the banks) at Rs. 2.66 crores. The fixed capital of Rs. 32.89 crores consisted of plant and machinery, Rs. 20.89 crores; buildings, Rs. 8.09 crores; land Rs. 58.04 lakhs; and other fixed assets, Rs. 3.33 crores.

Workers' Earnings

The total number of persons employed in the 158 sugar mills from returns for 1956 was 123,303, representing 4.23 per cent. of the entire labour force of 2,885,504 in factories (subject to the Factories Act) in 1956. The sugar industry is one of the biggest paymasters, the aggregate salaries and wages paid as well as other benefits conferred during 1956 having been Rs. 11.89 crores. The average annual income per employee in the sugar industry thus works out to Rs. 964; the *per capita* income (at 1948-49 prices) in India in 1956-57, it may be noted here, was Rs. 284. The sum of Rs. 11.89 crores included Rs. 8.07 crores paid to workers, Rs. 3.07 crores paid to persons other than workers and Rs. 74.63 lakhs representing the money value of benefits and privileges.

HIGHER WAGES FOR SUGAR WORKERS

All those workers in sugar industry who are drawing up to Rs. 500 per month as consolidated wages will get an increase in wages with effect from 1st January 1959. This is the result of interim recommendations made by the Wage Board for Sugar Industry, a statement of which was presented in the Lok Sabha on 28th February by Mr. Abid Ali, Deputy Minister for Labour. The actual increase varies according to the range of wages now being earned, as is indicated below:

Wage group	*Net rise per cent.*	*Subject to a minimum*
		Rs.
Up to Rs. 100	5	3
Rs. 101-200	4	5
Rs. 201-300	3	8
Rs. 301-500	2	9

The U.P. Government has decided to make it obligatory on the part of power crushers and *bels* to take out a licence. For this purpose, *bel* would mean a *rab* manufacturing unit capable of handling juice from 250 maunds of cane per day or to which seven or more bullock-driven crushers supply juice. The licensing fee for licence in form 'A' power crushers with a capacity of 250 maunds a day would be Rs. 300, with a daily capacity of 250 to 500 maunds Rs. 450, and with a capacity of over 501 maunds a day, Rs. 600. The fee for licence in form 'B' would be Rs. 300 per *bel*. The Sugar Commissioner would be the licensing authority for purposes of the proposed order which would be enforced from the current season.

No person shall use sugarcane for the manufacture of *gur* (*jaggery*) within the radius of ten miles of any sugar mill in the State of Punjab, in accordance with the Punjab Sugarcane (Prohibition of Use for Manufacture of Gur) Order 1959, issued by the Central Government. The restriction has been imposed, it is said, in order to check the large-scale diversion of cane for the manufacture of *gur*.

COAL PRODUCTION IN EUROPE FALLS

HIGH AUTHORITY STILL UNDECIDED OVER "CRISIS"

PRODUCTION of hard coal in Europe (excluding U.S.S.R.) suffered a setback during 1958, in contrast to the successive increases in the previous two years. The provisional statistics of coal compiled by the Secretariat of the U.N. Economic Commission for Europe (E.C.E.) indicate that the total European output amounted to 616.3 million metric tons, as against 622.6 million tons in 1957, representing a fall of 6.3 million tons or 1 per cent. In 1955, production had aggregated 614.9 million tons, from which level it had risen to 622.6 million tons in 1957. In refreshing contrast to the trend of coal production in other European countries, Soviet Russia's production of hard coal and lignite in 1958 recorded an increase of 33 million tons to 496 million tons, or a rise of 7.1 per cent. Since 1955, when it was 391 million tons, the Russian output has gone up by 105 million tons or 26.8 per cent. In 1937, Russian output was no more than 128 million tons, that is, 22 per cent. of the production (579.5 million tons) in other European countries.

The fall in European production of coal is accounted for by Belgium (2.1 million tons), U.K. (7.8 million tons) and Saar and West Germany (0.7 million tons). Though short-term working was resorted to in both Belgium and West Germany, in view of slackening demand, the fall in output in the latter country was negligible. This was due to improvements in productivity. In the U.K., a number of measures were taken to bring production more in line with demand. There was an expansion in output in Czechoslovakia (by 1.4 million tons), Poland (1 million tons) and France (0.9 million tons). The largest increase, both absolutely and relatively, took place in Czechoslovakia, as will be seen from the following table:

(In million metric tons)

Country	1937	1956	1957	1958	Change in 1958 compared with 1957 — %
Belgium	29.9	29.6	29.2	27.1	—7.2
Czechoslovakia ..	16.8	23.4	24.2	25.6	+5.8
France	44.3	55.1	56.8	57.7	+1.6
Saar	13.4	17.1	16.5	16.4	—0.6
West Germany ..	137.6	134.4	133.2	132.6	—0.4
Netherlands	14.8	12.0	11.7	12.2	+4.3
Poland	66.0	95.6	94.1	95.1	+1.1
U.K.	244.3	225.6	227.0	219.2	—3.4
Other European countries (except U.S.S.R.).	12.9	28.6	29.9	30.4	+1.7
Total Europe (except U.S.S.R.)	579.5	621.4	622.6	616.3	—1.0
U.S.S.R.	128.0	429.2	463.0	496.0	+7.1

Notwithstanding the decline in production, the stocks of unsold coal at pitheads continued to rise throughout the year. In West Europe, they rose from 16 million tons at the beginning of 1958 to 45 million tons at the end of the year. The break-up figures are (in million tons): Belgium—6.9, France—7.6, Netherlands—0.8, West Germany—8.6, the Saar—0.9, and the U.K. —20. In Poland and the U.S.S.R., the stocks were at the normal level of 650,000 tons and 7.5 million tons, respectively.

The provisional figures of the E.C.E. show that there was a sharp decline in imports of hard coal by the West European countries (from within and outside West Europe) from 89 million tons in 1957 to 69 million tons. Imports from Poland and the U.S.S.R., however, were not affected. Imports from the U.S. alone show a fall from 45 million tons to 31 million tons. The following table shows the trend of imports from and by various countries during the last two years:

(In million metric tons)

	Imports from		*Imports by*	
	1958	1957	1958	1957
U.S.	31.0	45.0	..	..
Belgium	3.0	4.6	5.3	5.1
France	1.3	1.8	15.0	18.0
W. Germany	11.5	13.3	16.0	21.0
U.K.	3.9	6.8	0.7	2.9
Poland	7.0	5.9	..	..
U.S.S.R.	3.1	1.7	..	..
Italy	..	..	9.0	12.0
Netherlands	..	..	7.3	8.7
Austria	..	..	3.8	4.6

The largest importer of U.S. coal during 1958 was West Germany which took 11.6 million tons, as against 15.6 million tons in 1957. Italy absorbed 6.5 million tons (8.2 million tons), Netherlands 3.5 million tons (4.5 million tons), France 2.8 million tons (6.9 million tons), Belgium 1.8 million tons (2.1 million tons) and Austria 1.4 million tons (2.0 million tons).

As was pointed out in our issue dated 14th February 1959, the rise in pithead stocks, due to fall in demand and competition from other forms of energy, as also to large imports from the U.S. under long-term contracts, has led Belgium to ask the European Coal and Steel Authority to declare a State of "manifest crisis" and West Germany to restrict imports and impose a tariff levy. The Belgian proposal has met with so much opposition from many quarters that the E.C.S.C. High Authority has not so far been able to take a decision on it. It has, however, reserved a decision on Belgium's plea until the other member-Governments are consulted.

The High Authority has, however, made no secret of its view that Belgium's trouble was of its own making. It has taken firm measures to force the Government to face the problem of colliery reorganisation. Accordingly, it has reduced the authorisation to subsidise coal production in the Mons district to 2.1 million tons per annum. This will mean a cut of about a third in output, which has already been reduced by nearly a quarter under a scheme adopted in 1955. In view of the fact that the Belgian Government and the colliery owners have neglected the programme of reorganisation, the E.C.S.C. High Authority's power to aid in financing the cost of resettling and retraining displaced workers will end on 10th February 1960. Meanwhile, the Belgian Parliament has approved of the Government's proposal to cut coal production by at least 5 million tons under the colliery reorganisation plan. The cut will affect all the Belgian coalfields except the new Limbourg mines.

West Germany does not seem to be in favour of declaring a state of crisis in the E.C.S.C. coal industry. The Bonn Government has preferred a restriction on imports by a prohibitive tariff to production quotas as a means to overcome the "crisis." Under the E.C.S.C. rules, if either Germany or France, the two largest producers of coal within the community, opposes, the E.C.S.C. High Authority cannot declare a state of emergency. France, too, is not in favour of declaring a state of "crisis." It has little sympathy for the difficulties of the Belgian and German collieries. It is argued that, if the Governments of both these countries had not committed themselves to heavy imports on long-term basis and if the High Authority had acted earlier with greater firmness to restrict imports and control uneconomic Belgian production, the "crisis" would not have arisen. The declaration of a "manifest crisis" now would mean, the argument goes on, importing unemployment into France. It might provide a palliative to Belgium and Germany, but it would amount to "punishing the wise to help the foolish." The position of French coal industry is said to be satisfactory, thanks to the conservative import policy and to the re-adaptation and closure of uneconomic mines.

If the High Authority does not declare a state of crisis, Belgium can do so on its own accord. The only difference between the two is that, whereas the proposal by the former requires only a majority vote by the Council of Ministers, an individual member's proposal requires a unanimous vote by the Council. With Germany and France opposed to the Belgian proposal, it is doubtful if any "crisis" would be declared at all.

WASHERY AT KORBA IN THIRD PLAN

The Minister for Steel, Mines and Fuel, Sardar Swaran Singh, told the Lok Sabha a few days ago, during question hour, that the target of production of the Korba coalfields in the public sector (Madhya Pradesh) in the Second Plan period had been slightly altered. But its production would be stepped up during the Third Plan period, when it was proposed to be further developed with the help of the Soviet credit of 600 million roubles. The present plan was to reach a target of 1.6 million tons per annum by the end of the Second Plan period and to raise another 2.5 million tons per annum in the Third Plan with the help of the Soviet credit. Answering supplementaries, the Minister said that the Government proposed to utilise the Soviet credit for the setting up of a coal washery at Korba. The washery would not be ready by the end of the Second Plan period.

Men and Oil . . . 6

The Installation Engineer

A vital point in oil's long journey from the well to the consumer is the petroleum installation. From here the finished products of the oil industry are distributed to distant depots and markets by road, rail and river.

A main installation (such as that at Tinsukia, in Upper Assam) comprises storage tanks, pumps and pipe lines, machinery for making and filling tins and drums, and equipment for the bulk loading of road and rail tank vehicles. The Installation Engineer is responsible for the setting up, operation and maintenance of the plant (excluding the tin factory, which has its own engineering staff) from which the products go to agencies, dealers and consumers.

Oil is nearly always on the move, and an Installation Engineer's skill helps to ensure that it makes only a brief halt at the installation before being despatched to places where it is needed by the public.

Indian engineers have taken over many vital roles in the Assam Oil Company. And they are fulfilling them well.

APOLLO STREET, FORT, BOMBAY 1

THIRTY-NINTH REPORT

GENTLEMEN,

The Directors beg to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

	Rs.	nP
The net profit for the year, including the sum of Rs. 1,50,331.79 brought forward from last year's account, amounts to	16,25,551	87
The following amounts have been appropriated for the under-mentioned purposes :—		
Amount transferred to Reserve Fund Account under Section 17 of the Banking Companies Act, 1949	3,00,000	00
Amount transferred to Contingency Account	50,000	00
Amount written off Premises Account	50,000	00
Amount set apart towards payment of Taxation	4,00,000	00
Amount provided for Bonus to Staff	3,15,000	00
	11,15,000	00
The balance of Rs. 5,10,551.87, the Directors propose to dispose of as follows :—		
To pay a dividend of 44 nP per share, or 8¾ per cent. per annum (free of Income-tax) on 8,00,000 old shares and at the same rate, i.e., 11 nP per share on 4,00,000 new shares for 3 months from 1st October 1958 to 31st December 1958	3,96,000	00
To carry forward to next year's account	1,14,551	87
Rs.	16,25,551	87

The business of the Bank during the year under review continued to show satisfactory progress. The Bank opened three local branches in Greater Bombay, two in Delhi, one each in Ahmedabad and Calcutta and other branches at Thana, Dhoraji, Kanpur and Madurai.

As stated in the Directors' Report submitted to the Shareholders last year, the Paid-up Capital of the Bank has been increased from Rs. 40,00,000 to Rs. 60,00,000 by the issue at par of 4,00,000 new shares of the face value of Rs. 5 each fully paid-up, which are now fully subscribed.

The Directors are glad to report that the deposits which stood at Rs. 20,73,00,000 as at the end of December 1957 rose to over Rs. 24,60,00,000 at the end of December 1958. Advances also increased from Rs. 10,40,00,000 as at the end of December 1957 to Rs. 15,78,00,000 at the end of December 1958.

The Directors report with deep regret the death of their esteemed Chairman and colleague, Mr. Lachhmandas H. Daga on 19th June 1958, after serving on the Board of the Bank for 39 years, since its very inception. He rendered great services to the Bank during the term of his office and by his death the Directors have lost a valuable colleague whose vast business experience was of great assistance to them in directing the affairs of the Bank.

Under the provisions of Section 256 of the Companies Act, 1956, two of the Directors of the Company, Mr. Devji Rattansey and Mr. Ratilal Nathalal, retire by rotation, but being eligible for re-election, offer themselves accordingly.

During the year Mr. Pallonji Shapoorji Mistry, at the invitation of the Directors, accepted a seat on the Board. Under the provisions of Section 260 of the Companies Act, 1956, he will hold office up to the date of the next Annual General Meeting, namely 24th March 1959. He stands for election in the manner provided by the Act.

You will be required to appoint Auditors for the ensuing year and fix their remuneration.

By Order of the Board,
K. R. P. SHROFF,
Chairman.

BOMBAY, 16th *February*, 1959.

BALANCE SHEET AS AT 31st DECEMBER, 1958.

FORTHCOMING ENGINEERING EXHIBITION IN U.K.

SEVERAL NEW INVENTIONS TO BE DISPLAYED

THE Engineering, Marine, Welding and Nuclear Energy Exhibition which is scheduled to be held in London between 16th and 30th April 1959, bids fair to be the best of its kind held in that country. Sponsored principally by the British Engineers' Association, the Exhibition will provide ample opportunities for visitors to see what Britain's advanced engineering knowledge and skill can offer by way of plant, machinery, equipment and tools. The Honorary President of this year's Exhibition is Sir Edward Thompson, Chairman and Joint-Managing Director of John Thompson Ltd. and President of the British Engineers' Association.

Among the well-known British engineering companies which will participate in the Exhibition, mention must be made of the Associated Electrical Industries Ltd. which is now trading through Divisions, the first two to be formed being the Heavy Plant and the Turbine Generator Divisions. The Heavy Plant Division handles all large electrical machines (except those of turbo type), gears, centrifugal blowers and compressors, turbo-electric and diesel electric marine propulsion units and power rectifiers of all types. The Turbine Generator Division is responsible for steam and gas turbines, turbo-type generators, turbo-type synchronous motors and condensers, axial-flow compressors, all types of heat exchange plant and geared marine propulsion machinery.

Dry Cooling Tower

Also participating in the Exhibition is the English Electric Company, Ltd., which is now building the first Heller Cooler in Britain for the Central Electricity Generating Board. This "dry cooling tower," it is stated, may revolutionise world economic planning by making it possible to site power stations in arid areas where large volumes of cooling water are not available. The Heller Cooler works by the injection of pure water into the turbine steam, the resultant mixture being cooled in large heat exchangers. Since this is a closed cycle system, the initial supply of water can be used again and again; it is also free of impurities, thus avoiding internal corrosion of the plant which is made entirely of aluminium.

The Pegasus electronic computor, which is exhibited by the United Steel Structural Company, is capable of completing design calculations for a power station floor in two hours. The same calculations done by conventional method would take a designer several weeks to complete. The computor gives not only the required dimensions for each beam but also the section modulus involved and the dimensions of an alternative choice should this be wanted. In addition, it scans neighbouring regions of the floor to determine how much of the distributed load must be allocated to the various beams and amends the results accordingly. Because of the high speed at which the computor works, more elaborate calculations than usual can be undertaken and several alternative schemes of construction considered before making the final choice. It thus releases skilled men for other work and also facilitates refinements and economies in construction. The Wembley Research Laboratories of the General Electric Company, Ltd., have developed a new radiation pyrometer for monitoring the surface temperature in an induction hardening process. The instrument consits of a thermopile, designed to give an electrical output substantially independent of ambient temperature over a wide range of source temperatures.

Port Equipment

Radar equipment will be exhibited by the Decca Radar Ltd. which will have fitted by the end of this year complete harbour radar system in the ports of Southampton, Hamburg and Liverpool, as well as London, where Decca Harbour Type 33 (a high definition X-band assembly, using 6-foot span aerial) will be installed. The Consolidated Pneumatic Tool Company, Ltd. which manufactures pneumatic tools, will participate in the Exhibition. Its tool, the 610 RP impact wrenches, supplied to the Italian shipyard, has reduced construction time. The Myford Engineering Company, Ltd., will be showing their new Myford Mini-Kop lathe which is the only one of its kind specially designed for handling work pieces. It will be of special interest to manufacturers of electrical and optical instruments. A new Ultrasonic flaw detector, which will be on show, is the Mark II flaw detector produced by the Ultrasonoscope Company (London) Ltd. Flaw detection by ultrasonic means is generally carried out by two basic methods. The contact probe technique, in which the scanning probe is used manually with a thin layer of oil between the probe and the surface to be examined, facilitates inspection of components in large assemblies. The immersion method in which scanning is done mechanically, may be used on small compact objects that can be conveniently immersed in a fluid. The Mark II flaw detector has the merit of being equally effective in the contact or the immersion method.

An interesting sidelight on the exhibition is the work of the Production Engineering Research Association (P.E.R.A.) of Great Britain. The P.E.R.A. is an independent, non-profit-making organisation, set up by industry and the Government in 1946 to help firms in Britain and the Commonwealth to cut production costs and increase output. At the end of 1946, it had a membership of just over 50 firms; today more than 700 firms use the Association's services, and a great many of the technical developments seen at Olympia in April will have originated in the P.E.R.A. laboratories at Melton Mowbray in Leicestershire. To evaluate precisely the benefits of research work is always difficult. It is known, however, that one company, after adopting an improved technique advised by the P.E.R.A., has already saved £40,000 on the production of a single part; another well-known firm is currently saving £30,000 annually by impact extruding an electrical component instead of machining it; a third is now producing, in one operation, parts which formerly required eleven separate processes.

Ceramics

Modern industrial ceramics, especially those prepared from aluminium oxide, have a remarkable range of applications. For example, Sintox, a ceramic material, produced by Lodge Plugs Ltd. of Rugby, combines exceptional hardness and toughness with high resistivity and conductivity. It is, therefore, unsurpassed as an insulator even at elevated temperatures, its resistivity at 300°C being about one million times that of porcelain. It also conducts heat twenty times better than porcelain and almost as well as steel. In addition, it is exceptionally strong, with a hardness equivalent to that of sapphire and good resistance to chemical corrosion. These qualities make Sintox, suitable for a wide variety of uses —from components for electronic valves to fair-leads and bushes in wire-rope making machinery. A special grade of Sintox, with a low neutron capture cross-section and compatibility with most materials used in a reactor, has been developed for the nuclear engineering industry. Sintox cutting tool tips are producing a minor revolution in machine tool operation, giving higher cutting speeds and better finishes with less wear, while also being cheaper than tools made of conventional materials.

Irradiation Service

A new irradiation laboratory has been opened at the Barton Works, Manchester, of the Metropolitan-Vickers Electrical Company, Ltd. Its purpose is to provide an irradiation service available to other firms and organisations interested in the possibilities of electron irradiation as an industrial process. The laboratory will undertake experiments in the disinfestation of grain, the preservation of foodstuffs, the sterilisation of medical and phamaceutical materials, the curing of rubber, the polymerisation of plastics and many other irradiation processes which would otherwise involve interested parties in the provision of costly equipment and trained personnel.

The main item of the new laboratory's equipment is a 4-MeV linear accelerator, fitted with a beam scanner which has an output window of pure aluminium foil, allowing the beam to scan an area of 12" x 3" at the window. Greater areas can be covered, either by adjusting the position of the scanner (with some loss of intensity) or by passing the material through the beam several times, presenting a fresh area to the beam at each pass.

NEW OIL ENGINE

For the first time at the forthcoming U.K.'s Engineering, Marine, Welding and Nuclear Energy Exhibition, Rolls-Royce Ltd. will be showing the renowned 8-cylinder marine engine in the turbo-charged version, which is now available for all types of craft. This new engine is capable of pro-

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Ltd., as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of Kalbadevi, Abdul Rehman Street, Mandvi, Bhat Bazar, Princess Street, Zaveri Bazar and Opera House Branches and the unaudited Returns from 27 other Branches, not visited by us for the purposes of this Report.

In accordance with the Provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-sections (5) of sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be, and are not, drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REVISION OF CO-OPERATIVE LAW

SOME CONTENTIONS ON THE PROPOSED POWERS TO REGISTRAR EXAMINED

By B. V. Rao

THE Indian Co-operative Union, New Delhi, has found "giants" where only "windmills" exist. The amusing way it has tried to "tilt" at them neither does much credit to the Union nor advances the cause of Co-operation even by an inch. The various powers given to the Registrar of Co-operative Societies under the Model Co-operative Societies' Bill drafted by the Committee on Co-operative Law are not expected to be exercised in a vacuum; their importance and significance should be examined in the context of a combination of economic and political factors. This is where the Co-operative Union seems to have erred; otherwise, it is hard to see how the provisions incorporated in the Model Bill can undermine democratic institutions or kill individual initiative.

This is the impression that one gains on a close study of the provisions of the Model Bill, and of the criticism made by the Union, against the background of present circumstances and requirements. This background has three aspects: (i) The Co-operative Development Programme under the Plan, largely based on the recommendations of the Rural Credit Survey, which seeks to accomplish through co-operatives in five years, in physical and financial terms, what had not been attained during the past fifty years. (ii) The co-operative laws now in force in various States, some of the substantive provisions of which differed widely from State to State, but which were based mainly on the 1912 Act which was designed to govern the growth of a Movement the scope and aims of which were limited; and (iii) the need for evolving a uniform co-operative law that ensures, at the same time, a fairly rapid growth, but essentially on sound lines, of Co-operative Movement in various fields of economic activity, and efficient and purposeful functioning of the societies. It is necessary to underline the importance of this context here, because the mode of functioning of the societies, which constitute the basic agency through which the national policies are sought to be implemented, is primarily a matter of Government's concern and secondarily that of the financing agencies and the members, unlike in the case of an ordinary business concern registered under the Companies' Act.

Registration

One of the main characteristics of a co-operative society, which should be clearly distinguished from those of a company registered under the Companies Act, is that, under the Act of 1912 and other State Acts now in force, a co-operative society can be registered relatively easily. For the prospective members (the minimum number of whom in the first instance is ten) of a society might not be guided by a true spirit of Co-operation, the prospects of the society from the strict business point of view might not be bright, and it might not conform to the principles of social justice, but, still, it could be registered, if it complied with the Act and the Rules thereunder and satisfied the criterion that its object was to promote some economic interests of its members.

Even as far back as 1915, the Maclagan Committee had sounded a note of warning against hasty registration of societies, when it emphasised that a Registrar should only register a society after he was satisfied that its prospective members fully understood co-operative principles and duties and were prepared to act up to them and that there was reasonable probability that they would do so. It was found, however, that the application of these principles in practice was by no means easy, in the absence of definite provisions in the Act. This is hardly surprising, having regard to the fact that, in the first place, there was no definite way of knowing whether the first ten or more signatories to the application were inspired by a true spirit of Co-operation and had knowledge of co-operative principles, and whether such spirit would continue to exist even when the membership increased. Secondly, a society, though started with an economic object, could, nevertheless, be unsound from the business point of view; in other words, its ability to command the financial resources, membership, area of operations and managerial personnel appropriate to the type of business contemplated might be limited. (That a society should be basically a sound business unit is a fact that cannot be got away from, considering that it is an association of individuals of small means formed with a common economic object. It would, therefore, be idle to ask why a co-operative should only be a business unit.)

This crucial test of soundness was, however, not provided for in the 1912 Act. It would appear that this omission has not a little to do with the growth of a large number of uneconomic units in the past. Available figures go to show that, speaking of primary credit societies alone, of the 133,000 and odd small societies existing as at the end of 1956-57, as many as 30,000 were running at a loss, while no less than 40,000 did not make any loans to members. Moreover, the same inadequacy seems to account, in a great measure, for the large number of primary societies that have been taken under liquidation every year. In Bombay State, for example, the number of societies liquidated was 418 in 1955-56 and 295 in 1956-57. The total number of such societies as at the end of 1956-57 was 3,182. In Madras, again, the number of such societies was no less than 1,057 in 1952-53 and 709 during the year ended 30th June 1956.

Thirdly, a society might satisfy the tests in regard to its object and soundness but it might not satisfy those of "social justice" and "co-operative character." For example, according to the Report of the Himachal Pradesh Co-operative Enquiry Committee (1958), many co-operative societies which should have been registered under the Companies Act, have been registered under the Co-operative Societies' Act. These societies have been "created for an activity in which the members are interested only in the sense that they can earn some middlemen's profit by doing so" (p. 44). Moreover, many co-operatives have entered into agreements with traders to carry on their business on a commission basis. "In other words," the Report notes, "what the co-operatives really did was to barter to a trader for agreed payment its name, including the rights under any licences, permits, privileges, etc., granted by the Government to the institution as a co-operative" (p. 42). Besides, the co-operatives even advanced goods and money to the agents which in effect meant Government capital being used to finance private trade to compete with co-operatives and stifle them (p. 43). These activities of the societies, needless to add, conform to neither the requirements of "social justice" nor "co-operative character."

When the climate in the country is particularly favourable to the growth of spurious co-operatives, it is all the more necessary that adequate safeguards should be provided for in the law to prevent an unhealthy growth of the Movement. It is, therefore, the duty of the Registrar to decide whether a co-operative adequately satisfies the test of sound business and whether it meets the requirements of "social justice" considerations which are influenced by local factors to no small degree and, therefore, do not admit of any precise definition. A State which seeks to prepare co-operatives to play a vital role in the economy can ill afford to leave this vital issue to be decided by the members themselves. The suggestion of the Indian Co-operative Union, therefore, that an attempt is being made to "subvert" the "sovereignty" of the people has little force. It is more so, in view of the provision made in the Bill for appeal against the decision of the Registrar to refuse to register a society.

Supersession

The powers of supersession given to the Registrar under the Model Bill should be examined in a dispassionate manner, and not against abstract considerations. The majority of the members that compose a primary co-operative society are semi-educated or even uneducated; the possibility of political and other factions in the village creating deadlocks and paralysing the functioning of a society is indeed great; and the chances of a few educated office-bearers falling prey to temptations, which the handling of money involves, and of mismanaging the affairs of a society to the discredit of the Movement and to the detriment of the members, are very great.

This position may be contrasted with that of a company whose shareholders are vigilant, where profit motive exists, and where politics have little play. Even apart from the interest evinced by shareholders in the affairs of a company, the Indian Companies Act, 1956 has, it may be noted, given wide powers to the Government to interfere in the affairs of the company when it is mismanaged. Under Sections 397, 398 and Sections 537-544, the Central Government and the Court have been given wide powers to prevent oppression of the minority members and the mismanagement of the affairs of the company. Under Sections 408 and 409, the Government has power to appoint two nominees of its own on the Board of Directors of a company for three years, if it thinks that the company is being mismanaged.

It would thus appear that there is nothing extraordinary in the powers of supersession given to the Registrar, which can be resorted to only in extreme cases of mismanagement or deadlocks created by local factions and the like. Moreover, this provision is by no means new, for several State Acts—for example, the Madras Act—have provided for it. (In fact, the concerned clause in the Bill has been more or less copied from the Madras Act.) Its importance lies in that the very presence of this provision has been found to have considerable deterrent influence on the managing committees. From past experience, it can be said that these powers have been sparingly used with the main object of providing an opportunity to the society to improve its position. In Madras, for instance, the committees of 78 primary societies of all types were under supersession at the end of 1952-53, and the corresponding figure for 1955-56 was 27. Thus viewed, the fears expressed by the Indian Co-operative Union that the powers of supersession vested in the Registrar under the Model Bill would undermine the autonomy of co-operatives are clearly exaggerated.

Inspection of Affairs

In stating that "the very use of the word 'inspection' in relation to co-operative societies is highly questionable" the Indian Co-operative Union has attributed to societies qualities that would not be applicable to any business organisation run by human beings. It is, however, difficult to believe that the Union is oblivious of the existence of fifth in a large number of primary societies today. Even the Indian Companies Act, 1956,—*vide* Sections 235 and 237—provides for the investigation of companies' affairs. Under the latter section, the Central Government is bound to exercise the power of ordering investigation of a company's affairs through inspectors, if in its opinion there are circumstances to suggest that (*a*) the company's business is conducted with a view to defrauding creditors or (*b*) the management is guilty of fraud, misfeasance, etc., or other misconduct towards the company or any members. The inspectors are given wide powers, including investigation of the affairs of the holding or subsidiary companies, if any, of the main company, or any other corporate body having the same managers or secretaries, examination of witnesses on oath, calling for all the relevant information, etc.

A co-operative society, which has neither a vigilant general body, nor an efficient management of the type a joint-stock company has, cannot escape enquiry into its affairs, when there are valid grounds for suspicion that the affairs are mismanaged. For, as remarked by Calvert (*The Law and Principles of Co-operation*, p. 163), it is very important that there should be ensured to the members some method of ascertaining how their committee is carrying on business: "This right to an enquiry is important for the principle of equitable association. It gives a minority of the members the right to learn what is being done by the committee elected by the majority." This explains the reason for the provision of similar wide powers of enquiry in the Co-operative Acts of certain foreign countries, including Japan and England. Section 35 of the Act of 1912 itself provides for enquiry. But the powers given to the Enquiry Officer under the Madras Act are more in tune with the needs of the situation. All that, therefore, the Law Committee has done is to reproduce Section 38 of the Madras Act, with the modification that a meeting called by the Registrar or any authorised person under him in connection with the enquiry shall not be governed by quorum. The object of the modification is obviously to ensure that the managing committee will not thwart the pro-

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-third Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 12th day of March, 1959, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1958

The Directors submit to the Shareholders the Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1958. The Auditors' Report is also annexed.

	Rs.	nP
The transactions for the past year, including the balance brought forward from the previous year, Rs. 16,02,381·34, have resulted in a profit of	1,01,79,476	54
An interim dividend was paid for the half-year ended 30th June, 1958, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 3,00,00,000, which absorbed	18,00,000	00
Provision made for Income-tax and Super-tax for the year	25,00,000	00
Bonus to Staff	16,00,000	00
The Directors now propose :—		
To pay a final dividend for the half-year ended 31st December, 1958, at the rate of 10 per cent. free of Income-tax, making 16 per cent. for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb	30,00,000	00
To carry forward to the next account	12,79,476	54
Total .. Rs.	1,01,79,476	54

The Company's business continued to function satisfactorily.

The Bank Rate remained stationary at 4 per cent.

Branches were opened during the year at Churchgate, Fort and Sion in Bombay, at Navrangpura in Ahmedabad and at Baroda, Kanpur and Visakhapatnam.

The Directors report with deep regret the death on 1st October, 1958, of their esteemed colleague, Sir Joseph Kay, K.B.E., who was a Director of the Company for over 37 years; they desire to place on record their high appreciation of the valuable services rendered by him to the Company.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. Ambalal Sarabhai,
Mr. Bhagvandas C. Mehta,
Mr. A. D. Shroff.

During the year Mr. Jugmohan Prasad Goenka, at the invitation of the Board of Directors, accepted a seat on the Board. Under the provisions of Section 260 of the Companies Act, 1956, and of Article 85 of the Company's Articles of Association he will hold office up to the date of the Annual General Meeting, namely, up to 12th March, 1959. He stands for election in the manner provided by the Act and the Articles of Association.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*

REVISION OF CO-OPERATIVE LAW

(*Continued from page 364*)

ceedings of the meeting by preventing the members from attending it.

When more and more societies begin to deal in increasing amounts of resources, it is necessary that adequate safeguards should be provided for to prevent people from falling a prey to temptations. The Union's objection to the provision obviously stems from its conception of the "autonomy" of a society. But it may be pointed out that many co-operators do not share this conception.

Audit

Audit is one of the important safeguards referred to above and plays a special role in promoting the soundness of co-operative institutions. Calvert wrote (in the book referred to earlier): "A joint-stock company cannot be described as unsuccessful if the shareholders lose no money by it. A co-operative society can be described as unsuccessful, if the members lose no money by it, yet fail to gain any advantage from it. It is hardly an exaggeration to say that proper audit is more important in a co-operative society than in a joint-stock company." It may also be recalled that the Maclagan Committee emphasised that "to ensure successful management, nothing is more important than constant and vigilant scrutiny of accounts and examinations of the general management through the agency of both the Registrars' staff and the co-operative institutions themselves."

It has been realised, however, that efficient audit could be done only by those who have practical experience of co-operative work and enthusiasm for its objects and who have means of ensuring that the defects noticed by them are rectified promptly by the societies. Besides, audit to be efficient, and not to cause inconvenience to the societies, should be carried out on the spot. These considerations can be satisfied only by the departmental auditors. Another reason advanced by the Maclagan Committee for keeping the audit under Government control is to assure the Government that co-operatives were developing on sound lines. The aforesaid Committee felt that it was primarily the duty of the Registrar.

All these reasons hold good today with, perhaps, added force. But the procedure that is at present in force in different States is not uniform. The need, therefore, for bringing audit under the purview of the Registrar has been emphasised by the All-India Rural Credit Survey, State Ministers' Conference (1955) and also the Standing Advisory Committee on Agricultural Credit. These Committees, it should be noted, have also recommended that supervision, which is a continual process, should be done by the financing agencies. In consequence, the present Model Bill does not provide for supervision being done by the Department. In these circumstances, the contention of the Indian Co-operative Union that it would lead to inefficiency if the functions of audit and supervision are merged in the Registrar is not clear. Again, it is misleading to suggest that the Department, in auditing the societies, audits its own affairs, for the Department does not manage the affairs of the societies; it only ensures that they manage their affairs on sound lines.

That the Registrar is not at present adequately armed with powers to ensure that the defects noted during audit are carried out promptly is revealed, to take one example, by the overdues position of the societies. At the end of 1956-57, as many as 35 per cent. of the primary credit societies had overdues exceeding 50 per cent. of their outstandings; and a similar number of them had overdues between 25 and 50 per cent. of their outstandings. Consequently, the power of issuing directives, whenever necessary, to the societies to ensure that the defects are rectified becomes inseparable from the responsibilities of the Registrar.

State Partnership

The chapter on State Aid to Co-operatives incorporated in the Model Bill is intended to give effect to the principle of State partnership advocated by the All-India Rural Credit Survey and accepted by the Government, Planning Commission and an overwhelming body of co-operative leadership. The main features of the clauses are that they provide for the States' contribution to the share capital of the apex, central, district and primary societies, either directly or indirectly. In the case of indirect partnership, the funds will pass from the State through the banks at the apex and the central or district level, or at apex level alone, depending on whether the recipient of the contribution is a primary society or a central or district bank. To facilitate this process, two kinds of Funds will be created, the "Principal State Partnership Fund" at the apex level, and the "Subsidiary State Partnership Fund" at the district or central level, which will handle the moneys received, thereby keeping such amounts separate from their "owned funds." A noteworthy feature is that the shares will be purchased not in the name of the Government, but in the name of the institution through the agency of which they will have come. Further, in order to ensure that the State is a partner in the true sense of the term, and not a creditor, in the institutions to which money is given, the Government will be entitled to only that amount of dividend which is declared by the society. The Government is also made responsible for the losses, if any, experienced by the society. Besides, the State is also allowed to guarantee the debentures issued by, or repayment of loans advanced to, a society.

The question whether or not State partnership in co-operatives constitutes violation of co-operative principles has been discussed at length before it was accepted. Although the Prime Minister has made certain remarks about the Co-operative Movement being pushed in the wrong direction because of State's financial assistance, it would appear that, basically, the principle has come to stay, though the extent of its application may undergo some change. Where the principle of the State becoming a full-fledged partner in any society, whether primary or other, is accepted, there is little logic in the view that the presence of no more than three, or one-third of the Board's members, whichever is less as the State's nominees, amounts to violation of co-operative principles or militates against the development of a sense of responsi-

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The Bank of India Limited as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

BOMBAY, 5th *February*, 1959.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1958, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Limited, a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Limited shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1958.

The Directors submit the Balance-Sheet for the year ended 31st December, 1958. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1958, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1958.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi by the Manager, Pakistan Branches and by Branch Agents which Returns have been incorporated in the above Balance Sheet and Accounts and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi, and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs Ray and Ray.

11th February, 1959.

SRI. P. C. SOOD, Reserve Bank of India Nominee.

REPORT OF THE DIRECTORS TO BE PRESENTED TO THE SHAREHOLDERS AT THE FORTY-SIXTH ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December, 1958.

The result of the Bank's working for the year ended 31st December, 1958, is a surplus of Rs. 22,58,074.98 which sum, together with Rs. 1,87,156.62 brought forward from 31st December, 1957, aggregates to Rs. 24,45,231.60.

The following appropriations have been made:—

	Rs.	nP.
Transferred to General Reserve Fund for the half-year ended 30th June 1958	2,75,000.00	
An Interim Dividend at the rate of 15 per cent. per annum free of Income-tax, was paid for the half-year ended 30th June, 1958, which absorbed	4,00,000.00	
Transferred to Reserve for Income-Tax and Super-Tax	3,50,000.00	
The Directors now propose:		
To transfer to General Reserve Fund for the half-year ended 31st December 1958 ..	2,00,000.00	
To pay a final Dividend at the rate of 16 per cent. per annum for the year ended 31st December, 1958, free of Income-Tax, which will absorb	4,00,000.00	
To pay a Bonus to Staff of three months' salary about	3,50,000.00	
To carry forward to next account	4,70,231.60	
Total .. Rs.	24,45,231.60	

The Central and Head Office accounts, as at 30th June and 31st December, 1958, have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. B. K. Ramadhyani and Co., Chartered Accountants, Brahmayya and Co., Chartered Accountants, Santhappa and Co., Chartered Accountants and Sri. S. R. Mandre, Chartered Accountant. Sri. S. P. Nanjundappa, Deputy Controller, has examined the accounts for the year on behalf of the Government of Mysore.

Under Section 256 of the Companies Act, Sri A. R. Badrinarayan, Sri D. M. Shankarappa and Sri S. M. Ramakrishna Rao are the Directors due to retire on this occasion. They are eligible for re-election and offer themselves accordingly.

The Auditors, Messrs. Fraser and Ross, B. K. Ramadhyani and Co., Brahmayya and Co., Santhappa and Co., and Sri. S. R. Mandre, also retire and are eligible for re-appointment.

The Dividend, when sanctioned, will be payable on and after 23rd March, 1959, to those Shareholders whose names stand in the share registers of the Bank as on 16th March, 1959.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY,
10th February, 1959.

By Order of the Board,
A. KRISHNA MURTHI,
General Manager.

BALANCE SHEET AS AT 31st DECEMBER, 1958.

(*Continued on next page*)

NATIONALISATION OF INDUSTRIES
NEW LIGHT ON THE BRITISH EXAMPLE

By R. P. Aiyer

THE problems posed by Indian economic development in recent years have, on the lines of the Toyanbean concept of "challenge and response," provoked thinking minds in the country to evaluate age-old beliefs, in an endeavour to adapt them to suit the changing needs of the time. The Industrial Policy Resolution of 1948 spoke of specific responsibilities of the State for development of certain industries and the later resolution of 1956 re-stated some of the earlier concepts. In the meantime, the scope of State activity in the industrial sphere had enlarged considerably.

The Indian Constitution vouchsafes, among other things, to the people of India "liberty of thought, expression, belief, faith and worship" and the trend of the State to play the role of godmother must be assessed in the context of the fundamental rights enshrined in the Constitution. There can be no two opinions that these fundamental rights, with their accent on liberty, by themselves should guarantee that the primary aim of all State regulation of the economic life of the community should be not to supplant enterprise on the part of the citizens, but to make it more potent.

Opinions Strongly Held

All doctrines tend to be based on opinions strongly held. So we have economists who swear by *laissez faire* individualism, whose stand is that one should be left free to create and to be left alone. Against this, there are many others who believe in the ability of Government to set things right. In communities where the latter concept has a momentum, as in India, nationalisation—meaning publicly owned industrial monopoly divorced from some of the disciplines of market control—as a concept has tended to assume the nature of a dogma.

The nationalisation policy of post-World War II Labour Governments in the United Kingdom is a classic example of such trend. How far such a policy has justified itself has recently been the subject of a study* which offers valuable findings, especially to such economies as India, now set on the road of rapid industrial development.

The fundamental Socialist case for nationalisation in the United Kingdom is that such process by itself redounds to the national good; that public ownership is a pre-destined form of organisation, and, once an industry comes under national ownership, the whole of the outlook of those engaged in the industry would be changed. This oversimplification presupposes that human nature can be changed by Parliamentary enactment.

The concept of State ownership of the means of production is based on the classical Labour theory of value, and it is to the Fabians of the 1880s one owes the development of the doctrine of public ownership. The earlier hope that the Trade Union movement would usher in an industrial democracy was belied before long and the "Gas and Water Socialism" propounded by the Webbs had its limitations. Webbs' *Socialism in England* in 1890 also forestalled Gaitskell's later idea of backdoor nationalisation by the replacement of the private by the public shareholder, and the two world wars gave great impetus to Socialist thought. Nevertheless, it was the Webbs' pamphlet in early 1918—*Labour and the new Social Order*—which formed the basis of the Policy Resolution adopted by the Labour Party Conference in June 1918. The policy which has sustained Labour thought these many years advocated:

"The progressive elimination from industry of the private capitalist, individual or the joint stock; and the setting free of all who work, whether by hand or brain for the service of the community, and of the community only; and Labour refused absolutely to believe that the British people will permanently tolerate any of the waste and insufficiency involved in the abandonment of British industry to a jostling crowd of separate employers with their minds bent, not on service to the community, but by the very law of their being only on the utmost possible profiteering.... What the Labour Party looks to is a general scientific reorganisation of the nation's industry on the basis of the common ownership of the means of production."

These thoughts and trends have been the propelling forces for the various U.K. Parliamentary enactments nationalising coal, electricity and gas industries and transport services. These measures to be successful postulated on the part of those engaged in the industries the need for a new discipline, a fully co-operative effort, the joint pursuit of agreed and clearly understood objectives—"objectives so clearly accepted, so fully understood that they attain the fervour of a crusade."

These qualities, more easily propounded than achieved, were watered down considerably in the face of the nationalised industries' galloping expansion in the wake of their being bestowed with much larger volume of capital investment in too easy a fashion. This accelerated pace of growth of the industries concerned had another offshot: to wit, dampening the development of *esprit de corps* which would be easier when growth is more orderly. Nevertheless, the protagonists for nationalisation have continued to rely on human nature being able to rise above friction, and this approach has been sustained by the hope that independent and disinterested experts will arise from somewhere to keep focussing the searchlight on the industries and by that process bring public opinion to bear.

One important aspect of U.K. nationalisation measures is the emergence of the public corporation, as a quasi-autonomous statutory body to manage the nationalised industries. This development has been the outcome of the endeavour to find a solution to the problem of how to combine the best points of private enterprise and efficient commercial management with the stricter degree of public control and accountability required in the case of large-scale public services of a monopolistic or quasi-monopolistic character. A review of the working of these statutory corporations is a study by itself and one need only indicate here that management of industries by such corporations has yet to stand the test of time before any reliable conclusions could be drawn. An interim view, however, is available, in that Professor Keeton, in his study *Passing of Parliament*, has indicated that the Board of a nationalised industry is "not a corporation at all, except that it has a legal personality, so that it can sue or be sued as a unit. It is, in fact, an emanation of the Ministry which, by a pleasant trick of nomenclature well known to Government Departments, has been called something else to make it more palatable to the public at large."

The idea of statutory corporation has been grafted into the Indian scene, and we have the giant Damodar Valley Corporation, the various State Electricity Boards and State Transport Corporations and the State-owned companies manning the industrial projects in the public sector. These manifestations in India is even more new and opinions as to the success or otherwise of these institutions must be suspended until these bodies have functioned for a few more years.

Reverting to the picture in the United Kingdom, indications are that, in the case of quasi-autonomous corporations, created to run the nationalised industries, the end result has been something different. To quote Prof. Keeton again—

"The Departments having to an important and increasing degree emancipated themselves from the control of Parliament and the Courts, now enjoy a stranglehold upon the economic life of the country, operating through dummy monopolies whose officials are appointed by them and are responsible to them, and whose objects are subject to control and supervision by the Departments on all questions of broad policy."

May be, the picture is somewhat overdrawn, but the tendencies inherent are dangers which the authorities in India might do well to ponder.

Pricing Policy

The pricing policies pursued by the Statutory Boards operating the nationalised industries in the U.K. offer interesting commentary which the respective authorities in India could usefully study. The process of nationalisation having gained momentum on the theory that public ownership connotes "cheapness," the authorities charged with the responsibility of running them have inherited a legacy which has proved embarrassing. Consequently, to quote Mr. Kelf-Cohen:

"The prices of their products have consistently been too low in the sense that they have not adequately paid for the resources required to make these products. Political pressure has consistently resisted increases in prices and the

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED.

We have audited the Balance Sheet of The Bank of Mysore, Limited, as at 31st December, 1958, and also the Profit and Loss Account of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

ABOLITION OF "GROSSING" DIVIDENDS

ITS IMPLICATIONS TO SHAREHOLDERS

By S. Srinivasan, B.A. F.C.A.

*[Elsewhere in this issue, details of the new scheme of company taxation proposed by the Finance Minister in his budget speech and incorporated in the 1959 Finance Bill are published. In this article, the author examines how the new scheme affects companies and shareholders. It will be seen therefrom that both will be losers, the Government being the chief beneficiary.—*ED.]

COMPANIES will deduct from the dividend payable to shareholders income-tax and surcharge at prescribed flat rates while paying the dividend to shareholders and such deducted taxes are to be paid to the Government. Then the companies will give certificates in the prescribed form to shareholders, on the production of which the shareholders will get credit in their assessment for the tax deducted at source and paid on their behalf to the Government. In other words, the procedure will be the same as is prevalent today with regard to interest on Government securities.

The new scheme of taxation of dividends in the hands of shareholders will work as under:

(*a*) First, one has to find out whether the profits of the company, out of which the dividend is declared, are taxable in the assessment year 1960-61 or in earlier assessments, in the company's hands. If the profits are taxable in 1960-61 assessment year, any dividend declared out of these profits will not be subjected to the present process of grossing, but will be subjected to the modified scheme of deduction of tax at source. If, on the other hand, the profits are taxable in assessments earlier than 1960-61, then, any dividends declared out of these profits will get the present benefit of grossing and the consequent tax credit.

Clause 19(4) of the Finance Bill specifically keeps in force, the machinery of grossing in relation to dividends declared or payable by companies *in respect of* any accounting year relevant to the assessment year 1959-60 or earlier years. The crucial words are "*in respect of.*" The date of declaration or payment of dividend is immaterial. So long as the dividends declared are in respect of an accounting year relevant to the assessment year 1959-60 or earlier years of a company, the entire machinery of grossing and the grant of consequent tax credit will be available, as at present. Supposing a company declares in 1961 a dividend in respect of its accounting year relevant to the assessment year 1959-60; in that case, according to clause 19(4) of the Finance Bill, the machinery of grossing and the consequent tax credit will be available as at present. If the dividend declared is in respect of an accounting year relevant to the assessment year 1960-61 or subsequent years of the company, but out of the accumulated taxed profits of earlier accounting years (when the scheme of grossing was in force), then, notwithstanding the fact that the fund out of which the dividends are declared relate to the earlier accounting years when the scheme of grossing was in force, such dividends will not be grossed up, because those dividends are not declared *in respect of* an accounting year relevant to 1959-60 assessment or earlier years.

Legal Fiction

Under the present scheme, the legal fiction by which a portion of the income-tax paid by the company is given credit in the hands of the shareholder, involves a certain loss of revenue to the Exchequer. On the other hand, in the proposed modified scheme, there will be no such loss to the Exchequer. Therefore, the Finance Minister has proposed to modify the rates of income-tax and super-tax of companies to produce the same amount of annual net revenue as at present, that is, annual gross revenue now obtained from the companies *less* annual credit given to shareholders. While introducing this modification in rates, it has also been proposed to simplify the company taxation by abolishing the existing tax on excess dividend distribution and the wealth tax on companies and, consequently, making suitable increase in the rates of company super-tax.

The modified rates of income-tax and super-tax for companies will come into effect from the assessment year 1960-61 onwards.

It appears that for assessment year 1960-61, the rates of income-tax and super-tax on Indian companies will be 20 per cent. and 25 per cent. respectively, because the Finance Bill provides that Indian companies should pay advance tax during the year, 1st April 1959 to 31st March 1960 income-tax and super-tax at these rates. Further, Part III of the First Schedule, which prescribes the rates at which taxes should be deducted at source on dividends, states that, in the case of a person other than a company, income-tax should be deducted at 25 per cent. of the income and income-tax surcharge at 5 per cent. of the income, that is, 30 per cent. in the aggregate (no super-tax is deductible for non-company assessees), and, in the case of Indian companies, income-tax and super-tax at 20 per cent. and 25 per cent. respectively. Consequently, in income-tax, a reduction of 11.5 per cent., and in super-tax an increase of 5 per cent. will be made for Indian companies. One fails to understand, why for Indian companies super-tax is also required to be deducted. The super-tax rate is increased by 5 per cent. in order to compensate the loss that would result to the Exchequer due to the abolition of wealth-tax and excess dividend tax on companies.

Increase in Super-tax

The increase in super-tax for companies from 20 to 25 per cent. on the latter ground seems to be all right for public companies, because from the statistics given for about 1,001 public limited companies by the Reserve Bank in its *Bulletin* for October 1958 and for about 74 public limited companies in the *Bulletin* for January 1959, the wealth tax and excess dividend tax on public companies work out to about 5 per cent. of their income (before taxation). The figures are as under:

	October 1958 *Bulletin* 1,001 companies	January 1959 *Bulletin* 74 companies
Wealth tax as a percentage of income ..	3.18	3.38
Excess dividend tax as a percentage of income	1.06	0.95
Total ..	4.24	4.33

As regards private companies, the increase of 5 per cent. in super-tax is not sufficient to compensate the loss to the Treasury due to the abolition of wealth tax and excess dividend tax on them. This is because the excess dividend tax payable now by this category of companies is much more than 5 per cent. of their income. In the absence of data, the exact percentage cannot be stated, but, from the fact that their profits are generally much more than their paid-up capital, this inference can be safely drawn.

Coming next to the reduction of 11.5 per cent. in the rate of income-tax of Indian companies, it has to be seen whether the saving on this account by companies would be sufficient for them to declare higher dividends to shareholders, in order to compensate the loss to shareholders consequent on the abolition of the grossing system of dividends. From the Reserve Bank statistics mentioned above, it is seen that public companies distribute about 30 per cent. of their income (before taxation), as dividend on their equity capital and about 3.25 per cent. of their income (before taxation) as preference dividend. On this basis, if a company's income is Rs. 100, then the equity dividend is Rs. 30. On this dividend, the shareholder under the existing scheme will be taxed on Rs. 43.80 and tax credit of Rs. 13.80 will be given in his assessment. If the grossing scheme is abolished, the shareholder will be assessed on Rs. 30 only, but he loses the tax credit of Rs. 13.80. This is a substantial loss to him, even after making allowance for his saving in tax owing to the fall of Rs. 13.80 in his income.

The effect of the abolition of the system of grossing in the assessment of shareholders is considered below:

(*a*) If the shareholder is an Indian company, not liable to wealth tax, it saves a tax of Rs 9.06 but loses Rs. 13.80. The net loss to it will be Rs. 4.74. Since the parent company, of which it is a shareholder, will get a saving in income-tax of Rs. 11.5, that company can increase the dividend declaration from Rs. 30 to Rs. 33.61, so that the shareholder company can be compensated for the loss.

(*b*) If the shareholder is an Indian company liable to wealth tax also, then the saving is Rs. 9.06 in income-tax and super-tax, and Rs. 1.42 in wealth tax. The net loss of Rs. 3.32 will be compensated, only if the parent company increases the dividend from Rs. 30 to Rs. 36.04.

(*c*) If the shareholder is a person other than a company, then, whatever may be his total income, it is found that consequent to the abolition of the system of grossing dividends, the net loss that will be suffered by him can be compensated only if the dividend distribution is Rs. 43.80 instead of Rs. 30. But the dividend paying company has a saving of Rs. 11.50 only. It has, therefore, to draw a further sum of Rs. 2.30 from the profits which it would otherwise retain for ploughing back in the business.

Preference Dividends

The problem arises as to how the changes proposed will affect the preference sharholders who took the preference shares at the terms of issue that they would get a fixed rate of dividend, or a fixed rate of dividend free of income-tax. For this purpose the Finance Bill by clause 9(iv) has introduced a new section called 18(3E) in the Income-tax Act. According to this clause, where any share held by a shareholder carries as respects dividend, a preferential right to be paid a fixed amount or an amount calculated at a fixed rate free of tax, then, notwithstanding such preferential right, tax shall be deductible under section 18(3D) as would be done in the case of other dividends. The section further defines as to what is the amount to be taken as dividend payable to the shareholder for calculating the deduction. It states that the fixed rate should be grossed up first to such a figure as would, after deducting therefrom 30 per cent., be equal to the fixed rate of dividend.

From that notional figure of dividend, the tax should be deducted at the prescribed rate of 30 per cent., as would be done in the case of other dividends. Consequently, the shareholder will get the fixed rate of dividend and further the Company will pay on his behalf to the Treasury the tax which would be deducted on the basis of the above calculation. Supposing the preference share carries a fixed rate of dividend of Rs. 6, free of tax. Under this section, this amount would be grossed up to Rs. 8.57 as notional dividend for the purpose of deducting tax at source by the company. At the prescribed rate of 30 per cent., the tax to be deducted on Rs. 8.57 works out to Rs. 2.57. The company pays this sum of Rs. 2.57 to the Treasury on behalf of the shareholder and pays to the shareholder the fixed dividend of 6 per cent. According to the provisions of Section 18(4) of the Income-tax Act, all sums deducted in accordance with the provisions of Section 18, on behalf of the shareholder, shall for the purpose of computing his income, be deemed to be income received by him; so Rs. 2.57 will also be added to the shareholder's income for the purposes of assessment. In other words, the shareholder will be assessed on Rs. 8.57 and the tax credit of Rs. 2.57 will be available to him under Section 18(5).

Taxing Twice

It is, therefore, clear that, so far as the dividend in respect of preference shares are concerned, the Finance Minister has retained the system of grossing in an indirect form and, to the extent to which the Exchequer has to give credit on the preference dividend to the shareholder, the companies are asked to pay to the Government from their funds. This is tantamount to taxing the amount of preference dividend in the hands of the company itself twice, in order to give one portion of it as credit to the shareholder in his assessment. In other words, companies will have to withdraw 1.39 per cent. of their income, out of the amount which they will otherwise plough back in their business, for meeting this liability. The cumulative effect in such cases is that the rate of income-tax is not 20 per cent. but 21.39 per cent.

The foregoing discussion shows as to how the proposals in the Finance Bill will not bring out the desired effect of the Finance Minister without subjecting companies and shareholders to a loss. The minimum that the Finance Minister should be persuaded to do is to reduce the rate of income-tax for companies from 20 per cent. to 16.31 per cent., that is, 20—(2.3+1.39), or, say, 16.3 per cent. from the assessment year 1960-61 onwards. Further, companies should increase their present rate of distribution to equity shareholders by 46 per cent., so that shareholders will not suffer any loss pursuant to the abolition of the system of grossing in the Income-tax Act.

VEGETABLE AND FRUIT PRESERVATION INDUSTRY

MR. M. SHAH'S PLEA TO STEP UP EXPORTS

THE vegetable and fruit preservation industry has an important part to play in the economic development of the country. Besides providing protective foods, the industry serves to bring about a diversified pattern of agriculture. What is more, it can be, in course of time, a valuable source of the much-needed foreign exchange. It is, therefore, gratifying to note that production of preserved fruits and vegetables has made rapid progress in recent years, having gone up from about 14,000 tons in 1953 (valued at Rs. 1.6 crore) to about 45,000 tons (Rs. 4.5 crores) in 1958. The target fixed in the second Plan at 50,000 tons is expected to be fulfilled, if not exceeded, within a couple of years. Exports of these products have, however, failed to keep pace with the rate of increase in production. Exports of different types of fruits and vegetables, including chutney and pickles, were to the tune of 2,500 tons (valued at about Rs. 47 lakhs) which, no doubt, compares favourably with 1,000 tons in 1956. Nevertheless, this improvement in exports can by no means be considered substantial, when viewed in relation to their targets for exports set in the second Plan at 11,000 tons.

Although exports have not made a good showing, as was expected, the vegetable and fruit preservation industry has no reason to be pessimistic on that account. For India has yet to make a determined drive to exploit the potential sources of fruits and vegetables and channelise them into world markets. As much as 15 to 20 per cent. of fresh fruits and vegetables produced in the country go to waste for one reason or another, and no more than 0.2 per cent. is utilised by the industry for canning and preservation. At any rate, as Mr. Manubhai Shah, Union Minister for Industry, pointed out in the course of his inaugural address at the fifteenth annual session of All-India Food Preservers' Association at Bombay, on 21st February, there is immense scope for the development of fruit preservation industry, particularly in the fruit-growing areas like Assam, Kerala, M.P. and Mysore. He said that some of the Indian fruits and vegetables, particularly mangoes, guavas, litchies, papayas, Nagpur type of oranges, etc., were not only known but greatly appreciated all over the world. He disclosed, in this connection, that the Government of India was considering a proposal to send a delegation to the Middle East and other countries. This body is expected to make a fact-finding survey of these markets. There are, it is believed, good prospects for the export of Indian vegetables and fruits abroad, particularly in the Middle East and Africa, the U.S.S.R. and East European countries. The delegation, when constituted, will do well to make a comprehensive study of these markets with particular reference to the nature of consumer preferences.

In this context, it may be noted that the Government has already taken a series of measures to encourage exports of fruits and vegetables. Of these, mention may be made of the rebate of excise duty on sugar contained in the exported food products, the drawback of Rs. 60 per ton of tinplate used in the exported products, besides a replenishment quota of 13⅓ per cent. on the quantity of tinplate consumed in the exports of preserved fruits and vegetables. The Government is considering the feasibility of the proposal to ensure the supply of sugar at export prices to the food preserves catering to exports. We are also told that the Government has decided to extend the scope of the subsidy on tinplate, now being granted to food and vegetable preservation industry, to fish, meat and certain other industries. Mr. Shah, on his part, gave the assurance that the Government of India would always be prepared to consider suggestions for fresh assistance in order to step up exports and also to develop internal production.

Needless to say that, in the ultimate analysis, the quality of the products is the prime determinant of the competitive capacity of any industry. The quality of indigenous preserved fruits and vegetables, according to Mr. Shah, has been steadily improving during the last few years. Nevertheless, he stressed that whatever was exported should conform to stipulated standards, with a view to building India's export trade on a proper footing.

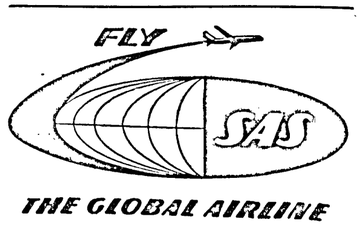
Alluding to the industry's problems regarding transport of its raw materials and finished products, Mr. Shah stated that the Government of India would always be prepared to take up specific cases of transport bottlenecks with the railway authorities. Referring to the difficulties of the industry regarding the supply of fruit and vegetable products to Defence Services, he suggested that representations might be made to the ministries concerned. He, however, made it clear that the Government was very keen to develop this industry and meet the entire requirements of Defence Services from indigenous sources. Mr. Shah also noted with satisfaction the development of research and technological investigations taking place in the country in respect of fruit and vegetable products. It may be noted here that an *ad hoc* committee, appointed by the Central Government for investigating the problems of the industry and examining the scope for its development in the country, has already submitted its report to the Government. It is to be hoped that this report will throw fresh light on the problems of the industry and suggest ways and means of ensuring steady expansion of exports of preserved fruits and vegetables. An early publication of this report will enable the public to understand the industry's drawbacks, of which there are many, and the value of various demands made by the food preservers for stimulating domestic demand and enlarging the exports.

GOVERNMENT'S ECONOMY DRIVE

The Government of India has taken a series of measures to promote efficiency and economy in administrative processes. These include abandonment or reduction in scope of projects and schemes, restrictions on creation and filling of posts, including a ban on the filling of certain class III and class IV posts, economy in contingent and other expenditure such as purchase of stores, travelling allowances, etc. These steps are estimated to have resulted in a saving of about Rs. 24 crores during the financial year 1957-58 and a further economy of Rs. 2.61 crores during the six months of the current financial year.

With a view to eliminating delays in administrative matters, the system of internal financial advisers was introduced on 20th August 1958. Subsequently, the Ministry of Finance has delegated large financial powers to other Ministries under the Delegation of Financial Powers Rules, 1958. The Ministries have in turn delegated additional powers to their attached and subordinate organisations. Similarly, action has been taken to delegate administrative authority to officers at all levels, while administrative procedures are kept constantly under review by the Organisation and Methods Division. Thus, it has been decided that, ordinarily, a case should not be dealt with by more than two officers above the level of Section Officer in a department. Again, a system of reorganised sections in which initial consideration of a paper is done at the level of an Under-Secretary is being tried in the Ministry of External Affairs.

"Factory Efficiency" will be the theme of this year's Factory Equipment Exhibition in London at Earls Court, from 7th to 17th April. The exhibition will comprise the largest display of factory equipment and plant ever assembled. It is designed to be of interest to factory executives from all over the world, and invitations have already been sent to many countries, including India. Last year they came from over 60 different countries in all parts of the five continents. Many completely new items of industrial equipment will be shown for the first time, and the range of products will cover plant and systems applicable in every type of industry. Greater efficiency in factory operation will be the keynote in a wide variety of materials-handling, storage, heating and steam-raising, ventilation and air-conditioning, product finishing, instrumentation, drawing office, packing, and workshop equipment. There will also be sections dealing with factory building materials and systems, production and stock control, cleaning and maintenance, and safety and welfare, and a complete exhibition on heat and sound insulation.



SAS. 39—2

INDO-BRITISH TRADE

MARKED DECLINE IN 1958

THE total value of mutual trade between India and the U.K. was lower at £298 million in 1958, as compared with £333 million in 1957 and £309 million in 1956. India's export trade to the U.K. suffered a severe setback from £157.48 million in 1957 to £139.45 million in 1958. Its imports from the U.K. also declined from £176.41 million to £159.37 million. They accounted for 4.9 per cent. of U.K.'s total exports, as against 5.2 per cent. in the previous year. The U.K.'s imports from India amounted to 3.6 per cent. of its total imports, as compared with 3.8 per cent.

India was the sixth largest supplier of the U.K.'s imports in 1958, whereas it had held the fifth position in 1957. Shipments of tea, valued at £74 million, though 12 per cent. below those of the previous year, still accounted for 53 per cent. of India's total exports to the U.K. The exports of tobacco and tobacco manufactures, however, went up by £2 million to £9 million. All other principal items registered decreases of varying degrees, as the following table shows:

(Value in thousands of £s)

	1957	1958
Total of All India's Exports to the U.K. ..	157,480	139,456
Of which :—		
Tea	84,344	74,120
Leather, leather manufactures and dressed furs	13,343	9,675
Tobacco and tobacco manufactures ..	7,141	9,296
Wool and other animal hair and tops ..	4,564	2,598
Cotton	2,261	1,462
Crude fertilisers and crude minerals, excluding fuels	2,237	1,016
Metalliferous ores and metal scrap ..	4,523	2,970
Miscellaneous animal and vegetable crude materials	4,368	3,097
Animal and vegetable oils, fats, greases and derivatives	3,733	2,480
Cotton yarns and woven fabrics	9,994	7,585
Miscellaneous textile manufactures ..	12,102	11,432

India stood fifth as a market for the U.K.'s exports in 1958, whereas in the preceding year it ranked fourth. The major item of India's imports from the U.K. was machinery (all types) valued at about £64 million, representing 40 per cent. of total British exports to this country. A substantial increase was recorded in road vehicles and aircraft, which rose from £21 million in 1957 to £27 million in 1958. All other principal items of India's imports from the U.K., however, shared the general decline. The following table provides the value of the principal imports of British goods into India in 1958, as against that in the previous year:

(Value in thousands of £s)

	1957	1958
Total of All India's Imports from the U.K. ..	176,414	159,372
Of which :—		
Machinery other than electric	45,429	45,042
Electric machinery, apparatus and appliances	21,055	18,709
Wood and other animal hair and tops ..	6,088	5,060
Petroleum and petroleum products ..	2,206	1,971
Chemicals	10,561	12,288
Paper, paperboard and manufactures thereof	1,660	1,367
Iron and steel	13,261	10,543
Non-ferrous base metals	3,060	2,419
Manufactures of metals	17,404	14,006
Railway vehicles	6,581	3,222
Road vehicles and aircraft	21,024	27,003
Scientific instruments; photographic and optical goods; watches and clocks ..	2,850	2,107

India continues to depend on the U.K. for a sizable proportion of its need for capital goods and equipments, necessitated by its growing investments under the second Plan. It was the second largest market for U.K. machinery (other than electric) and the third for its electric machinery. It accounted for about 8 per cent., of total U.K. exports of non-electric machinery, as against 9.6 per cent. in the previous year. The value of some of the major items of machinery imported from the U.K. in 1958 is given in the following table:

(Value in thousands of £s)

	1957	1958
Total Machinery imported by India from the U.K.	67,384	63,751
Of which :—		
Boilers and boiler-house plant	2,752	3,003
Internal combustion engines	2,386	1,324
Agricultural and track-laying tractors ..	1,354	622
Office machinery	892	343
Machine tools (excluding portable power tools)	3,353	4,026
Pumps	836	680
Industrial and works trucks and tractor and mechanical handling equipment ..	3,187	3,071
Excavating and earth-moving machinery and road rollers	1,866	1,350
Mining and well drilling machinery ..	649	893
Printing and bookbinding machinery and printing type	780	673
Textile machinery	6,945	3,548
Generating sets, generators and motors ..	3,801	3,821
Converting machinery, transformers, switch gear and switchboards	6,416	4,877
Electronic valves, and radio, television, radar and sound reproducing apparatus ..	1,647	1,464
Telegraph and telephone equipment and line apparatus	503	363
Electric cables, wires, strips and strands, insulated	5,413	3,055

It may be noted here that the general decline in India's imports was mainly the result of the restricted import policy pursued by the Government of India, with a view to conserving its foreign exchange reserves. The fall in India's exports is due largely to the sharp fall in commodity prices, occasioned by economic recession in the U.S. and Western Europe.

The
Travancore Rayons Ltd.
announce plans
for doubling the production of
Transparent Cellulose Film

•

We have finalised plans for doubling the production of transparent cellulose film and have entered into an agreement with a Swiss firm for this expansion. The necessary permission has been obtained from the Government and the new equipment is expected to arrive at the factory site by the end of the year.

By early 1960 when this scheme will be completed an additional quantity of 2,000 tons of transparent cellulose film will be available in the market. In addition, a small surplus will be exported to Middle East and Far Eastern countries.

VOLTAS EARN SLIGHTLY HIGHER PROFIT

MANUFACTURING VENTURES MAKING SATISFACTORY PROGRESS

IN spite of additional drastic cut in imports, which is reflected in a fall of almost about Rs. 1 crore in the proceeds of sales and services, the trading result of Voltas Ltd. (Managing Director and General Manager: Mr. S. K. Handoo, Bombay) for the year ended 31st August 1958 has turned out to be a shade better than that for the previous year. Thus, the gross profit for the year amounts to Rs. 83.27 lakhs, as against Rs. 82.65 lakhs earned in 1956-57. This was the result of a shift from large orders at low margins to more remunerative business. It is also heartening to note that the demand for all categories of goods imported and distributed by the Company was sustained throughout the year, although it could not be met in full due to shortage of stocks.

The rise in the net profit, however, is much more than that in the gross profit. Thus, at Rs. 31.12 lakhs, it is Rs. 3.17 lakhs more than that (Rs. 27.95 lakhs) earned a year ago. This is due to the small cut in the provision for taxation from Rs. 50 lakhs to Rs. 46.50 lakhs. The latter amount includes a sum of Rs. 2 lakhs for wealth tax, the corresponding provision for 1956-57 being Rs. 2.65 lakhs. The provision for depreciation, however, has been increased from Rs. 4.70 lakhs to Rs. 5.65 lakhs. The improvement in the net profit has enabled the Directors to maintain the dividend at the rate of 9 per cent. paid for 1956-57 and 1955-56, including the shares of the second issue which have now become entitled to full dividend. It may be remembered that, in order to meet its additional financial requirements, the Company had raised fresh capital by the issue of 105,000 shares of Rs. 100 each at par in December 1956. These shares which were fuly subscribed were entitled to a *pro rata* dividend of only Rs. 6 per share in respect of 1956-57, since the allotment became effective from 1st January 1957 only. The amount allocated to reserves and provisions at Rs. 13.41 lakhs is higher, as compared with Rs. 11.46 lakhs in the previous year. These consist of Rs. 3.75 lakhs (Rs. 3.25 lakhs) transferred to general reserve, *nil* (Rs. 17,000) to development reserve, Rs. 85,208 (*nil*) to development rebate reserve, Rs. 8.08 lakhs (Rs. 6.76 lakhs) to provision for retiring gratuity, Rs. 69.598 (Rs. 1.24 lakh) to provision for doubtful debts and Rs. 3.357 (Rs. 4,214) to capital reserve. The last item represents the surplus on sale of fixed assets. The figures in brackets are in respect of the previous year.

The progress of the Company's working during the past four years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st August			
	1958	1957	1956	1955
Proceeds of sales and services	19,66.40	20,60.40	14,52.86	9,01.20
Other income	3.45	5.32	2.51	1.03
Closing stocks	7,82.95	7,59.90	7,07.18	3,85.36
Cost of sales and services	16,22.32	17,31.65	12,01.85	8,15.03
Selling expenditure	45.92	54.48	40.94	23.13
Other expenses	2,15.43	1,97.54	1,64.73	1,26.27
Gross profit	83.27	82.65	47.85	28.71
Depreciation	5.65	4.70	3.57	2.83
Taxation	46.50	50.00	20.10	11.41
Net profit	31.12	27.95	24.18	14.47
Transfer from provisions	4.94	3.60	0.99	...
To reserves and provisions	13.41	11.46	10.75	14.29
Dividends	22.95	19.80*	13.50	8.25
	(9%)	(9%)	(9%)	(5.5%)
Carry forward	1.09	1.39	1.10	0.17

* Includes a *pro rata* dividend of Rs. 6 per share on the additional capital, raised by the issue of 105,000 shares of Rs. 100 each in December, 1956.

It will be seen from the above that the cost of sales and services and selling expenditure have both declined substantially, indicating the large savings effected as a result of the Company's shift in the nature of business referred to earlier. The saving on these two accounts has more than made good the loss in sales and services. There has, no doubt, been a rise of nearly Rs. 18 lakhs in other expenses, mainly accounted for by staff expenditure which has gone up by about Rs. 16 lakhs and general administrative expenditure by nearly Rs. 2.50 lakhs.

Referring to the Company's activities, the Directors state that satisfactory progress was made in its local manufacturing ventures. The Crystal air conditioners, as well as the Tushar water coolers, have been further improved and developed and continued to find an excellent market. In addition, the Company has, in collaboration with manufacturers of repute in India, made arrangements for production of diesel engines, air compressors, air-line couplings, earth rammers, pumps, bullock-drawn implements, electric motors, tools and the manufacture of chemicals, pharmaceuticals, etc.

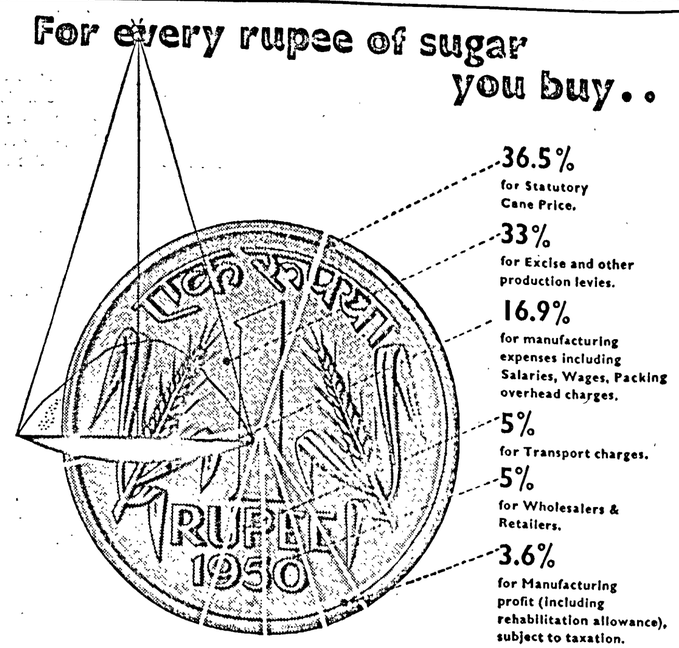
The pilot plant for the manufacture of Vitamin A being set up by Roche Products Private Ltd., in which this Company holds shares, is progressing satisfactorily. The Directors add that the value of indigenous products sold rose from 9 per cent. in the previous year to 16 per cent. of total billings during the year under review.

The Company has a paid-up capital of Rs. 255 lakhs, all in ordinary shares of Rs. 100 each. As against this, its reserves and surplus are very small and aggregate only Rs. 25.88 lakhs. The gross block of the value of Rs. 76.50 lakhs has been written down to Rs. 60.06 lakhs. Capital work-in-progress at cost amounts to Rs. 24,822. The current liabilities, including secured loans from a bank amounting to Rs. 294.55 lakhs, are of the order of Rs. 926.80 lakhs. Against this, there are current assets aggregating Rs. 11.47 crores. Of these, stocks account for Rs. 5.38 crores, sundry debtors for Rs. 2.70 crores, loans and advances for Rs. 3.09 crores and cash balances for Rs. 24.86 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 148 50 *cum-div.* On an *ex-div.* basis, the yield works out to 6.45 per cent. per annum, free of income-tax.

INVESTMENT CORPORATION OF INDIA LTD.

The Directors of the Investment Corporation of India Ltd. have declared an interim dividend at the rate of 4½ per cent., less tax, on the preference shares and an interim dividend of Rs. 4.50 per share, free of tax, on the ordinary shares for the year ended 30th June 1958. This dividend will be paid to those shareholders of the Corporation whose names appear on the register of members as on 30th March 1959. In terms of the scheme of amalgamation of the Oriental Government Security Life Assurance Company, Ltd., with the Investment Corporation of India Ltd., those shareholders of the Oriental Company who will have exercised their option on or before 26th March 1959, in favour of the new ordinary shares of the Investment Corporation, will also be entitled to this interim dividend on the new ordinary shares to be issued to them.



Sugar is plentiful. The Indian Sugar Industry has made that possible, by doubling the production from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. Yet when you buy sugar, you probably feel you are being overcharged for the producer's benefit. Actual facts, however, prove this impression to be groundless. From the cost structure given above, you will see that the profit margin allowed to the Industry is low indeed, and is shrinking further. However, nearly 33 per cent of what you pay is for taxes and levies on sugar, which form your contribution to the Second Five Year Plan—an investment in the country's future.

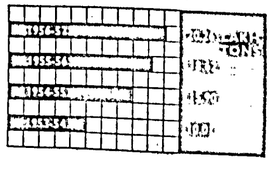
Today the Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.16 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian sugar ...

vital to

India's national economy



THE INDIAN SUGAR MILLS ASSOCIATION

ISMA—1/59

BRADY ENGINEERING REPEATS DIVIDEND

PROFIT NEARLY MAINTAINED

FAIRLY satisfactory progress is indicated by the financial results of the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) for the year ended 31st December 1958. The proceeds from engineering work and the gross profit are no doubt a shade lower as compared with those for the previous year, but the decline is only fractional. In fact, this modest recession was only due to lack of sufficient raw materials over which the Company had obviously no control.

The gross profit for the year under review amounts to Rs. 3.20 lakhs, as compared with Rs. 3.34 lakhs for 1957 and Rs. 2.61 lakhs for 1956. Despite the slight recession, the profit for 1958 is about thrice that (Rs. 1.10 lakh) for 1954. Although the gross profit is lower, the net profit has increased from Rs. 77,065 earned in 1957 to Rs. 1.07 lakh. The provision for taxation has been reduced from Rs. 1.34 lakh to Rs. 1.20 lakh (including Rs. 7,300 for wealth tax). Likewise, the provision for depreciation has been pruned from Rs. 94,787 to Rs. 66,881. In view of the improvement in the net profit, the allocations to the reserves are higher. Thus, a sum of Rs. 22,708 has been transferred to development rebate reserve, as against *nil* in the previous year. The amount set aside to general reserve, however, has been halved from Rs. 20,000 to Rs. 10,000. A dividend of 5 per cent. has been declared, which is the same as that paid for the preceding three years, to which level it had been raised from 2½ per cent. paid for 1954.

The following comparative table brings out some of the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Proceeds of engineering work	10.04	10.38	8.92	7.53
Closing work-in-process	0.71	0.52	0.40	0.29
Expenses	7.19	7.31	6.52	5.53
Gross profit	3.20	3.34	2.61	2.29
Managing Agents' commission	0.20	0.28	0.19	0.17
Depreciation	0.67	0.95	0.96	0.85
Taxation	1.20	1.84	0.33	0.05
Net profit	1.07	0.77	1.13	1.19
To reserves	0.33	0.20	0.25	0.40
Dividend	0.75	0.75	0.75	0.75
	(5%)	(5%)	(5%)	(5%)
Carry forward	0.03	0.04	0.22	0.09

The Directors say that the nature of work carried out by the Company has been undergoing a change during the last several months, from general engineering to work of a more specialised nature. They, however, add that progress was considerably retarded due to want of raw materials. In the manufacture of pulley blocks, for instance, there was difficulty in obtaining import licences for parts not obtainable within the country.

The Company has entered into an agreement with Messrs. Morris and Brady Private Ltd. for the manufacture of lifting equipment, in addition to pulley blocks. Another agreement has been entered into with Messrs. Baker Perkins (Export) Ltd. for the manufacture of bread-making plant and ancillary equipment. Some expansion of the works is now in progress and further expansion is under consideration to meet the anticipated increase in production.

The balance-sheet of the Company as at 31st December 1958 shows a satisfactory financial position. The paid-up capital is unchanged at Rs. 15 lakhs in 25,000 ordinary shares of Rs. 100 each, of which only Rs. 60 per share has been called up. Being a small company, still in a period of active growth, its reserves and surplus are very small and aggregate only Rs. 2.71 lakhs. The gross block of a value of Rs. 16.61 lakhs stands well written down to Rs. 10.23 lakhs. Reflecting the Company's expansion work now in progress is the addition of Rs. 1.19 lakh to plant and machinery during the year. The current liabilities and provisions amount to Rs. 2.82 lakhs. The current assets aggregate Rs. 10.30 lakhs, of which cash balances alone of the order of Rs. 4.16 lakhs more than adequately cover the current liabilities and the provision for taxation.

The Rs. 60 paid-up shares of the Company are currently quoted at Rs. 60.50 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.2 per cent. per annum, free of income-tax.

CROMPTON PARKINSON

NEW FACTORY OPENED AT KANJUR

WITH the inauguration of its new factory at Kanjur, near Bombay, by Mr. Y. B. Chavan, Chief Minister, on 28th February, the Crompton Parkinson (Works) Private Ltd., the well-known electrical engineering firm, is now in a better position to help the country's plans for electric power development. Crompton Parkinson, which has its main factory at Worli, Bombay, has been in the field in India for over 20 years. It was the first firm to manufacture motors and transformers in India and its contribution to date to the total indigenous output of these two items has been the highest among all the units in the country. Formerly, it is well known, it was a wholly owned subsidiary of Crompton Parkinson Ltd., England. In keeping with the Government of India's policy, the Company has encouraged greater participation of Indian capital in the undertaking and half of its capital is now held by Messrs. Greaves Cotton & Co., Ltd., a wholly Indian-owned public limited company.

The Worli factory has expanded considerably in recent years in all its departments of production and a good number of products such as industrial motors, transformers, motor control gear, F.H.P. motors, switchgear and exhaust fans have been added to the range of manufactures. The limit of expansion of the factory at Worli having been reached, an additional site, covering an area of 35 acres, has been developed at Kanjur to accommodate the expanded transformer, switchgear and motor control gear departments. Most of the plant and machinery needed for expansion have already been erected and commissioned. A notable feature of the expansion project is that import of the necessary plant and machinery, valued at more than Rs. 30 lakhs, has not occasioned any drain on the country's foreign exchange holdings. This was possible because of the willingness of the U.K. shareholders of the Company to undertake additional investment to cover the foreign exchange element. Already, considerable economies in foreign exchange spending are effected by the progressive utilisation of indigenous materials. Indigenous supplies on the existing manufacturing ranges generally account for over 90 per cent. of the total material cost. In the case of fans, motors and low tension switch and motor control gear, the percentage is even higher at 97 to 99. The firm obtains a large percentage of the components and assemblies required from small-scale industries, thereby contributing to their growth too. The space released at the Worli factory by the removal of the three departments is now being used for the expansion of the fan and motor departments, the capacities and manufacturing ranges of which have been considerably expanded lately. The Kanjur factory has 386 workmen and a staff of 85 strong and that at Worli 834 workmen and a staff of 97 strong.

The installed capacity of the Kanjur factory per annum, on a single-shift basis, is: transformers, 275,000 KVA, switchgear 1,000 units, and motor control gear 13,500 units, while that of the factory at Worli is: motors 27,000, F.H.P. motors 12,000, ceiling and exhaust fans 84,000. The present production plans of the Kanjur factory include a wide range of products such as transformers upto 5 MVA and 66 KV; instrument transformers, current and potential, upto 11 KV; switchgear low tension: up to 660 volts 1,200 amps. 30 MVA, high tension: up to 11 KVA 400 amps. 250 MVA; motor control gear; air break and oil immersed types, Star-Delta starters, Auto-Transformer starters, Stator and Rotor starters.

The Company is conscious of the need for training its staff and workmen. Already, it has several training schemes in operation. Under these, training both within the organisation as trade and engineering apprentice and outside in foremanship and business management are imparted. Technical and managerial personnel are also deputed from time to time for advanced training in the parent company's factories in the U.K.

Crompton Parkinson's experience in the field of industrial relations has always been encouraging. As part of its progressive labour policies, several bipartite committees, consisting of representatives of employers and employees, which provide ample opportunities for mutual consultation on a variety of problems, are being successfully operated. The Company has a number of well-run welfare activities which include a heavily subsidised canteen, a co-operative credit society, a literacy class scheme and a well equipped dispensary at both Worli and Kanjur. There is also a generous, non-contributory gratuity scheme and a provident fund scheme.

The Company has bright prospects. Since high priority is given in the second and subsequent Plans on electric power development, demand for the products of electrical equipment industries is bound to increase. Crompton Parkinson can look back with justifiable pride on its contribution to the industrial progress of the country and face the future with full confidence of being able to discharge its increasing responsibilities.

COMPANY MEETINGS AND DIVIDENDS

KESAR SUGAR WORKS LTD. Annual General Meeting, Bombay, 18th March 1959. Dividend: Rs. 4 per share without deduction of tax on ordinary shares, for the year ended 31st July 1958. Transfer books will remain closed from 4th to 18th March 1959, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay 19th March 1959. Dividends payable on and after 24th March 1959.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 19th March 1959. Transfer books remain closed from 6th to 18th March 1959, both days inclusive.

JUBILEE MILLS LTD. Annual General Meeting, Bombay, 19th March 1959. Transfer books remain closed from 6th to 19th March 1959, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 20th March 1959. Dividend of 5 per cent., making a total of 8½ per cent., without any deduction for Income-tax, on ordinary shares, for the year ended 30th June 1958, which are payable on or after 27th March 1959. Transfer books will remain closed from 8th to 20th March 1959, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 20th March 1959. Dividends payable on 20th March 1959. Transfer books remain closed from 1st to 20th March 1959, both days inclusive.

MCLEOD AND COMPANY, LTD. Annual General Meeting, Calcutta, 20th March, 1959. An interim dividend of Rs. 12.50 per share on ordinary shares for the year ended 31st December 1957.

MADURA MILLS CO., LTD. Annual General Meeting, Madural, 23rd March 1959. Transfer books will remain closed from 13th to 23rd March 1959, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 23rd March 1959. Dividends payable on and after 30th March 1959. Transfer books remain closed from 6th to 27th March 1959, both days inclusive.

T. STANES & CO., LTD. Annual General Meeting, Coimbatore, 25th March 1959. Final dividend of 13 per cent. on ordinary shares for the period ended 30th September 1958. Transfer books will remain closed from 19th to 26th March, 1959, both days inclusive.

CHEMICAL, INDUSTRIAL AND PHARMACEUTICAL LABORATORIES LTD. Annual General Meeting, Bombay, 26th March 1959. Dividends payable on and after 26th March 1959. Transfer books will remain closed from 9th to 26th March 1959, both days inclusive.

MYSORE CHROME TANNING CO., LTD. Annual General Meeting, Bangalore, 28th March 1959. Share transfer books will remain closed from 16th to 30th March 1959, both days inclusive.

GOUREPORE CO., LTD. An interim dividend of 7½ per cent. on the ordinary shares, for the year ended 31st March, 1959. Dividends payable on and after 30th March 1959. Transfer books will remain closed from 16th to 30th March, both days inclusive.

NUDDEA MILLS CO., LTD. An interim dividend of 2 per cent. on the ordinary shares, for the year ended 31st March, 1959. Dividends payable on and after 30th March, 1959. Transfer books will remain closed from 16th to 30th March, 1959, both days inclusive.

JAY SHREE TEA GARDENS LTD. A dividend of Re. 1 per share, free of income-tax, on ordinary shares, for the year ended 31st December, 1958.

INDUSTRIAL INVESTMENT TRUST LTD. A dividend of Rs. 6 per share, free of income-tax, on ordinary shares, for the year ended 31st December, 1958.

BENGAL COAL CO., LTD. A dividend of Rs. 10 per share on the ordinary shares, without deduction of income-tax for the year ended 31st October, 1958.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. Dividend of 4 per cent., free of tax, on the ordinary shares, for the year ended 31st December, 1958.

CENTRAL INDIA SUFFERS HEAVY LOSS

CLARIDGES REPORTS BETTER PROFIT

Central India Spinning, Weaving and Manufacturing Co., Ltd.

THE directors of the above Company (Managing Agents: Tata Industries Private Ltd., Bombay) present the annual audited statement of accounts for the year ended 30th June 1958.

The loss for the year amounted to Rs. 46,77,597 (Rs. 20,79,433) against which Rs. 4,16,626 (Rs. 20,66,218 transferred from general reserve and Rs. 13,215 surplus from the previous year's account) being surplus on sale of fixed assets for previous as well as current years, has been set of in the appropriation account and the balance of Rs. 42,60,971 (*nil*) carried forward.

The directors regret to report the very unsatisfactory working of the Company during the year under review. The principal reasons accounting for the very heavy loss are, the considerable dislocation of normal working caused by the large scale renovation programme, which is now in its final stage of completion, the continued disruption in the cloth trade and the rise in the cost of production, especially due to substantial increase in the prices of fuel, colours, chemicals and other items of stores and raw materials, without any compensating increase in the value of the manufactured goods, and a continued rise in the rate of dearness allowance paid to workers and clerical staff. The directors state that they have not been able to recommend any dividend on the ordinary or preference shares of the Company for the year ended 30th June 1958. In view of the loss, the managing agents have also forgone their minimum commission of Rs. 50,000, to which they were entitled.

Towards the close of the period under report, all the nine textile mills in the Vidarbha region, including the Company's mills, were passing through very critical times. Every mill was losing very heavily and it was certain that a small relief in the excise duty would not save the situation. The problem of the day was rationalisation and disposal of surplus labour. The directors met at a special meeting to decide on the steps to be taken in the prevailing circumstances. In conformity with the decision of the Textile Mills Association, Nagpur, the mills put up a notice of closure on 9th July. The notice was, however, withdrawn on 9th August on the advice of Government and their assurance that an arbitration would be arranged for considering the working difficulties of the mills. In July 1957, the directors considered whether the renovation scheme should be modified or delayed, in part, with a view to reducing the capital outlay by about Rs. 50 lakhs as a remedial measure to ease the acute financial stringency that was being faced by the Company. After considerable deliberations at Nagpur and in Bombay, it was decided that the original plan, without any curtailment, should be proceeded with.

The inauguration ceremony of the new unit was performed by the Chairman on 23rd April 1958, with 98 ring spinning frames, a Barber-Colman unit, a sizing machine and 350 looms. Implementation of the scheme for the renovation of the mills is now in its final stage of completion. The new unit on the site of old mill No. 1 has been completed with lighting and humidification, and houses 47,856 spindles and 416 looms. Three ring frames comprising of 1,416 spindles, and also 66 looms are in the course of erection in the new unit. Old mill No. 2 has now been demolished and construction is proceeding on that site in further extension of the new unit. Delivery programme of the remaining 222 new looms will be synchronised with the progress of the new construction on the site of old mill No. 2. All the three Barber-Colman units have been received and erected, the 3 Zell sizing machines and the size-cookers have also been received and erected. A major portion of humidification, lighting and sprinklering work has been completed. It is expected that the entire scheme will have been implemented before the middle of 1959.

It was mentioned in the directors' report for the year ended 30th June 1957 that although the Company had applied to the National Industrial Development Corporation Private Limited for a loan of Rs. 1,50,00,000 for financing the plan for the rehabilitation and renovation of the mills, the actual amount of the loan to be granted would be substantially reduced. The Cotton Textiles Loan Advisory Committee informed the Company that against its application made in August 1956, for a loan of Rs. 1,50,00,000 the Corporation would be prepared to consider the grant of a loan of Rs. 1,21,00,000 only and the difference of Rs. 29,00,000, representing the cost of building construction, under the scheme approved by the Corporation, should be financed by the Company out of its own resources. Suitable representations were made to the authorities to reconsider their decision, as new leak-proof vibration-less and well-floored building construction was as much essential as new plant and equipment for the successful implementation of the scheme. The Company's point of view was, however, not conceded. The loan to be sanctioned to the Company was further reduced, subsequently, to Rs. 75 lakhs, which sum was received by the Company on 14th June 1958, on executing a mortgage deed in favour of the Corporation, covering all the existing as well as future assets of the Company. Interest is charged at 5 per cent. per annum and the capital sum is repayable in 15 equal annual instalments. The loan is guaranteed by Messrs. Tata Industries Private Ltd. Other terms and conditions of the loan have been detailed in the Chairman's speech delivered at the annual general meeting of the shareholders of the Company held on 24th December 1956. One of the conditions of the loan was that the Company would raise a like sum of Rs. 75 lakhs by the issue of debentures, ranking for the purposes of security on the assets of the Company *pari passu* with the N.I.D.C. loan. A representative of the Corporation would have to be nominated as one of the debenture trustees. The necessary consent of the Controller of Capital Issues has been received for the proposed debenture issue and the draft debenture trust deed is now before the Corporation for their approval. The main terms of the proposed issue are: (i) the issue would be private —for the value of debentures taken up by brokers they would be entitled to a brokerage of ½ per cent., (ii) denomination—stock certificates of Rs. 1,000 each, (iii) interest at 6½ per cent. taxable per annum, payable half-yearly, and (iv) period of redemption 15 years or earlier, but not before 5 years.

The supplies of Indian cottons during the year were sufficient, but prices were comparatively higher and the quality poorer than in the previous year. The supplies of all foreign cottons were insufficient, because of restricted imports on a quota basis, owing to the acute shortage of foreign exchange. The value of new plant and equipment installed during the year under report amounted to Rs. 85,00,000 and new construction work completed has cost Rs. 32,00,000.

The present installed capacity of the mills is 1,15,084 spindles and 1,652 looms. It is the directors' intention to restore the installed capacity to the pre-implementation level of 1,15,188 spindles and 2,062 looms in the near future, as the renovation programme is now in its final stage of completion.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	96,87,500	Block ...	2,03,58,159
Reserves ...	10,87,622	Work under construction and machinery awaiting installation ...	64,93,998
Provision for taxation ...	10,658	Stores, spares, loose tools, etc. ...	30,05,581
Liabilities ...	3,79,79,844	Stock-in-trade	1,10,16,872
		Debts, deposits and advances ...	12,87,928
		Investments	33,08,840
		Cash ...	4,41,003
		Miscellaneous expenditure and losses	28,54,243
Rs.	4,87,65,624	Rs.	4,87,65,624

G. Claridge and Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) submit the audited statement of accounts for the year ended 31st December 1958, which after charging Rs. 48,277 (Rs. 75,000) for depreciation, and providing Rs. 1,24,000 (*nil*) for taxation and after creating a development rebate reserve of Rs. 41,000 (*nil*) shows a net profit of Rs. 1,04,735 (Rs. 69,372) which, together with the balance of Rs. 18,751 (Rs. 29,379) brought forward from last year's profit and loss account makes a total of Rs. 1,23,486 (Rs. 1,88,751, after adding the surplus of Rs. 90,000 from provision for taxation). This amount the directors propose to dispose of as follows:

In payment of a dividend of Rs. 15 (Rs. 15) per share on 8,000 shares of the Company, free of income-tax, absorbing Rs. 1,20,000 (Rs. 1,20,000) leaving a balance to be carried forward to next year's account of Rs. 3,486 (Rs. 18,751, after transferring Rs. 50,000 to provision for gratuity and welfare).

The increased turnover shown by the accounts is partly due to rises in overhead expenses and manufacturing costs necessitating higher charges to customers and partly to the installation of further modern high speed machines. All departments of the press have worked fully during the year and the volume of work in hand indicates that this satisfactory state of affairs should continue.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Empire Dyeing and Mgf. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) submit the audited statement of accounts for the year ended 31st December 1958, which after writing off depreciation of Rs. 42,135 (Rs. 37,433) on machinery and plant, etc., setting aside Rs. 2,50,000 (Rs. 1,06,000) for taxation and Rs. 16,132 (*nil*) for development rebate reserve and charging the Managing Agents' commission amounting to Rs. 37,274 (Rs. 30,419) shows a net profit of Rs. 76,900 (Rs. 1,73,734), which after crediting Rs. 664 (Rs. 6,930) brought forward from last year's account and transferring Rs. 1,10,000 (*nil*) from general reserve, shows a balance of Rs. 1,87,564 (Rs. 1,80,664) which the directors propose to dispose of as follows:—

In payment of a dividend of Rs. 3 (Rs. 3) per share on 60,000 shares of the Company, free of income-tax, absorbing Rs. 1,80,000 (Rs. 1,80,000) leaving a balance to be carried forward to next year's account of Rs. 7,564 (Rs. 664).

The total production from the works during the year was greater than in 1957 and most of the departments have continued to be fully occupied. Despite the rise in costs of dyes and chemicals, and a steep increase in dearness allowance paid to workers, the net profit has been more or less maintained. The present state of the works order book indicates that this satisfactory state of affairs should continue well into the current year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	5,57,476
Reserves ...	7,56,132	Stores and spare gear	1,35,739

Profit and loss account ...	7,564	Investments	2,20,429
		Cash ...	11,30,388
Rs.	26,73,495	Rs.	26,73,495

Birds Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Lovelock and Lewes, Calcutta) submit the audited accounts of the Company for the year ended 30th September 1958.

The profit for the year shows an increase of Rs. 67,348 as compared with the results of the previous year, which, in the opinion of the directors, is to be considered satisfactory. Dividends from all sections showed a considerable improvement with the exception of jute, tea, sugar, mining other than collieries and Ceylon companies. It is hoped, however, that the income from jute companies during the current year will be satisfactory. The profit and loss account shows a credit balance of Rs. 2,34,742 (Rs. 1,67,394) to which is added the balance brought forward from the previous year of Rs. 14,532 (Rs. 37,612) and the profit, less loss, on sale of investments and loss on shares held in a Company in liquidation Rs. 1,01,429 (Rs. 14,733) making a total of Rs. 3,50,703 (Rs. 2,92,739). From this amount is to be deducted further provision for income-tax and super-tax in respect of previous year Rs. 2,734 (Rs. 34,454) and provision for wealth tax Rs. 1,200 (Rs. 33,600) leaving an available balance of Rs. 3,46,769 (Rs. 2,19,685) which it is proposed to be dealt with as follows:—

In transferring to capital reserve Rs. 1,01,429 (Rs. 14,733), in paying a dividend of 5½ per cent. per annum, less income-tax, on the preference shares for the year to 30th September 1958 Rs. 90,420 (Rs. 90,420), in paying a dividend of 7 (5) per cent. on the ordinary shares for the year to 30th September 1958, without deduction of income-tax Rs. 1,40,000 (Rs. 1,00,000) and in carrying forward Rs. 14,920 (Rs. 14,532).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges with the exception of certain shares costing Rs. 7,40,371 for which no quotations are available. The total of the market value of the investments for which quotations are available, together with the unquoted investments as valued by the directors, exceeds the book value at 30th September 1958, by Rs. 16,37,209.

The following statement shows the distribution of the Company's portfolio:—

	Per cent.
Jute mills	42.11
Electricity	0.73
Iron, steel and engineering	5.01
Collieries	16 33
Paper mills	6.09
Investment companies	7.94

NEW TAXATION PROPOSALS

(*Concluded from page 349*)

distributions and on the wealth of companies, by a suitable increase in the rates of company super-tax.

The following table will exemplify the position:

Account year of company (1)	Relevant assessment year for the company (2)	Date of declaration of dividend by the company for that accounting year in column (1) (3)	Whether the dividends will be "grossed" or not in shareholder's assessments (4)
Year ended			
30- 9-1958 ..	1959-60	1- 5-1959	Will be grossed.
31-12-1958 ..	1959-60	1- 6-1959	Do.
31- 3-1959 ..	1959-60	1- 9-1959	Do.
30- 6-1959 ..	1960-61	1-12-1959	Will not be grossed.
31-12-1959 ..	1960-61	(Interim or half-yearly Preference dividend) 1- 7-1959	Do.

The following procedure is to be followed for deduction of tax at source on dividends:

The provisions of Section 18 of the Income-tax Act at present provide for deduction of tax at source from all payments in respect of interest on securities and only from payments to non-residents in respect of dividends and other sums chargeable to tax. Consistently with the new scheme, it is now proposed to enlarge these provisions so as to provide for the following:

(i) deduction of tax at source by Indian companies on all dividends declared by them, and payment of the tax so deducted to Government, and

(ii) issue of tax deduction certificate by the company to the shareholder to enable him to claim refund or obtain the necessary adjustment against his tax liability at the time of his assessment. The tax deduction is to be made by the principal officer of the company, before the cheque or warrant for payment of dividend is issued to the shareholder. It is also proposed, for the sake of convenience of reference, to specify separately in the First Schedule to the Bill the rates for deduction of income-tax and super-tax under Section 18, on interest on securities, dividends, etc., during the financial year 1959-60.

The rate provided in the Schedule is 25 per cent. income-tax and 5 per cent. surcharge or a total 30 per cent. for individuals. For companies, the rates are somewhat different. [See the special article on this subject on page 372.—ED.]

At present, under Section 20 of the Income-tax Act, companies are required to furnish certificates of payment of tax by them, in order to enable the shareholders to get their dividends grossed and obtain tax credit. Under the proposed scheme, there will be no need for the issue of such certificates and so Section 20 is proposed to be deleted. Certificates for deduction of tax from dividends will now be covered by Section 18(9) of the Act.

Regarding the clauses in the Finance Bill relating to taxation of companies, the Finance Ministry's memorandum explains, *inter alia*, that, at present, capital gains of companies are liable to income-tax (at 31.5 per cent.) but not to super-tax and that, under the new scheme, the incidence of capital gains tax is proposed to be maintained at about the same level, namely, 30 per cent. (20 per cent. of income-tax and 10 per cent. of super-tax). The present total exemption of capital gains of companies from super-tax is accordingly to be substituted by a levy of a reduced rate of super-tax.

As for dividend distribution by Section 23A companies, it is explained that, at present, these companies in which the public are not substantially interested are required, in order to avoid the penal provisions of that section, to distribute at least 45 per cent. of industrial profits and 60 per cent. of the non-industrial profits remaining after payment of tax. It is now proposed to raise these percentages to 50 and 65, respectively, with a view to ensuring that the profits retained by these companies after the introduction of the new scheme, without being subjected to the penal tax, remain at the same level as before its introduction.

Other Changes

Several other interesting changes also have been made in the system of income taxation. The most important of these are:

(*a*) The much criticised compulsory deposit scheme on companies which was in operation during 1957-58 but was suspended during 1958-59 is to be abolished, by deleting the relevant section of the Income-tax Act.

(*b*) Under the existing law, income which accrues or arises outside India but is not remitted to India in the same year is exempt upto a maximum of Rs. 4,500. In the present context of the economic development of our country, this concession is unnecessary and is, therefore, proposed to be deleted.

(*c*) Under the existing law, a person who is not resident in India is not taxed on the income which arises outside India. So Government servants who are posted abroad and become technically non-residents after some time are not liable to tax on the salaries drawn by them abroad. It is proposed that such salaries paid out of the public revenues of India (exclusive of all allowances and perquisites granted to meet the cost of having to stay abroad) be subjected to tax, irrespective of the period of the Government employee's stay abroad.

(*d*) At present, the income-tax law specifically exempts from tax the remuneration received by Consuls, Vice-Consuls, Trade Commissioners and similar official representatives of foreign Governments in India, Ambassadors and accredited Ministers of foreign Governments enjoy similar exemption on account of their diplomatic privileges recognised by international convention. It is now proposed to rewrite the provisions of the income-tax law, so as to cover all such exemptions in one place and to clarify that the exemptions are intended only for full-time official representatives and the members of their staff who are citizens of the foreign State concerned and not for persons who are working only in an honorary capacity.

(*e*) The Government has entered into an agreement with an oil company for the purposes of prospecting for, extraction and production of mineral oil in India in association with it. This agreement provides for certain special allowances to be granted on account of exploration expenses, intangible capital expenses and depletion. It is now proposed to obtain the necessary legislative sanction in the Income-tax Act itself, enabling Government to give effect to the agreement and grant these special allowances.

(*f*) It is proposed to clarify the Government's intention underlying the five-year tax holiday for new industrial undertakings, that the exemption will not be available to undertakings which are formed by the transfer to such undertakings of assets previously used in any other business.

All the aforesaid six amendments to the Income-tax Act will come into force on 1st April 1959.

In the sphere of indirect taxation, excise duties on 14 items have been readjusted, the readjustment leading to a straight increase in the burden of taxation in the case of 13 items and practically no change in the case of one item, namely, tea. The import duties have been readjusted to match the changes made in excises. The details of readjustments in excise duties and the reasons for effecting them are given below, excepting those relating to art silk fabrics, rayon and staple fibre yarns which are referred to separately on page 354.

Khandsari Sugar

With the doubling of the excise duty on crystal sugar in May 1957 and imposition of additional excise duty in December 1957, the margin in favour of the *khandsari* industry went up by an additional Rs. 8.93 per cwt. It is now proposed to reduce this margin, by imposing a basic excise duty at Rs. 5.60 per cwt. and an additional excise duty at 70 nP per cwt. The former, which is expected to yield Rs. 1.82 crore, will go to the Centre and the latter, yielding (estimated) Rs. 25 lakhs, will go to the States as it is in lieu of sales tax.

Unmanufactured Tobacco and Cigarettes

The specifications in respect of granule (*rawa*) of tobacco have been tightened up. This has been necessitated by the persistent attempts which are being made by certain sections of the trade to use granule of tobacco assessable at the lower rate of 47 nP per lb. in increasing quantities, in the manufacture of *biris*, the tobacco for which is normally assessable at Re. 1 per lb. The other amendment provides for assessment, at the higher rate, of notified varieties of tobacco, otherwise assessable at the lower rate, when actually used for the manufacture of *biris*.

There has been a shift in production from the higher to the lower categories to the disadvantage of revenue. With a view to arresting such a tendency and to improving the revenue from this commodity, the rates of the last three categories are increased. Simultaneously, by notification, the effective rates of duty on the first six categories (i.e., costlier varieties) are also raised. The estimated total additional yield will be Rs. 1.50 crore.

(Per thousand)

	Existing	*Proposed*
Rate of duty	Rs. 2.75	Rs. 3.15
	Rs. 1.50	Rs. 2.00
	Rs. 1.00	Rs. 1.20

Estimated revenue: Rs. 10.50 crores, as against Rs. 9.00 crores at present.

Others

The duty on motor vehicles tyres is being raised from 30 per cent. *ad valorem* to 40 per cent. *ad valorem*. There will be no change in the rate of duty on cycle tyres. The additional revenue is estimated at Rs. 1.75 crore, raising the total to Rs. 7.75 crores.

An increase is also being made in the duty on "vegetable product" which will increase from Rs. 7 per cwt. to Rs. 8.75 per cwt., with a corresponding adjustment in the exemptions in favour of the small producers. The additional revenue will be Rs. 95 lakhs, raising the total to Rs. 4.91 crores.

Vegetable non-essential oils were first subjected to excise in 1956, but some preference to medium and small-scale producers was given by exempting production up to 125 tons per annum on a slab basis. In 1957, the free slab was brought down to 75 tons and a lower rate of duty levied on production between 75 tons and 125 tons. These concessions have been reviewed and it is now proposed to withdraw the exemption from all power-driven units and limit the concessional levy to only the first 75 tons of production. These changes, which will be made by notification and will not affect village *ghanis* in any way, are expected to yield Rs. 4.4 crores, raising the total revenue from this source to Rs. 13.20 crores.

The incidence of excise and export duties on tea has been under continuous review. It has been decided to readjust the rate of excise duties on the teas grown in certain areas of the country and to reduce, at the same time, the effective rate of export duties from 26 nP per lb. to 24 nP per lb. These changes will result in an additional revenue of Rs. 58 lakhs under Union excise and a reduction of Rs. 93 lakhs in the yield from the export duty. In the net, the industry will benefit to the extent of Rs. 35 lakhs.

The duty on refined diesel oils and vapourising oil is being raised from 40 nP per imperial gallon to 80 nP. There is at present a price advantage in favour of diesel oil of which India has to import substantial quantities. Both as a measure of increasing revenue and conserving foreign exchange, the proposed increase is sought to be justified. As a consequential adjustment, the rate of duty on low-speed diesel oil is also being increased from Rs. 40 per ton to Rs. 50 per ton. The additional revenue from these two measures will be Rs. 7.85 crores a year, raising the total revenue from these sources to Rs. 16.90 crores.

Summing up the results of the aforesaid readjustments, the Finance Minister observed as follows:

"The total additional revenue from the various measures I have just mentioned will amount to Rs. 20.35 crores from the basic duties and Rs. 45 lakhs from the additional duties in replacement of sales taxes which accrue to the States. The basic duties on tobacco, vegetable product, tea, sugar and vegetable non-essential oils are shared with the States in accordance with the award of the last Finance Commission. Twenty-five per cent. of the net additional revenue from these commodities will have to be distributed to the States, after deducting the cost of collection. This payment will be of the order of Rs. 2.27 crores. Allowing for this and for the additional duties to be paid to them, I am taking the net additional revenue from changes in Union excise duties at Rs. 18.08 crores.

"I propose to make no major change in regard to customs duties. But there will be a countervailing increase in the import duties on the commodities on which excise duties are being increased and this by itself will bring in an additional revenue of Rs. 3.65 crores...."

INDIA EXCHANGE,
CALCUTTA, 21*st February*, 1959.

Note:—1. A member entitled to attend and vote at the meeting may appoint a proxy in place of himself and that the proxy need not be a member.

The explanatory statement as required in pursuance of Sub-section 2 of Section 173 of the Companies Act 1956 in respect of Item No. 5 is given below.

Under Section 261 of the Companies Act 1956 it is necessary to obtain the approval of the shareholders by special resolution for appointment of any person as Director whose case falls within any of the clauses of sub-section (1) of Section 261. Shri T. Bhaskara Rao, I.C.S. (Retd.), for whose appointment the Company has received special notice from a member notifying his intention to move the resolution set out in the item, is an Officer of a Company under the management of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, and his case therefore falls under clause (*g*) of Sub-section (1) of the aforesaid section. Shri T. Bhaskara Rao, a retired member of the Indian Civil Service, had been a member of the Board of Directors of the Company from 1947 to the middle of 1957. He has also vast experience in varied spheres and it is in the interest of the Company to appoint him as a Director of the Company to avail of his valuable guidance.

MADURA MILLS COMPANY LIMITED

(*b*) The Dividend when sanctioned will be payable on and from Monday the 30th March, 1959.

(*c*) Shareholders are requested to intimate the Bank their change of address, if any, immediately.

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-eighth Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Monday, the 30th day of March, 1959, at 4 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Report of the Directors and the Audited Accounts for the period ended 31st December, 1958.
2. To declare a Dividend.
3. To appoint a Director in place of Sir Homi Mody who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

   "RESOLVED that Sir Homi Mody who has attained the age of 77 years and who retires by rotation, be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint a Director in place of Mr. C. P. Wadia who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

   "RESOLVED that Mr. C. P. Wadia who has attained the age of 78 years and who retires by rotation, be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
5. To appoint a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
6. To appoint Auditors and to fix their remuneration.
7. To consider and, if thought fit, to pass the following resolutions as special business:—

   (*a*) "THAT the 338 Ordinary Shares represented by the 676 fractional certificates issued by the Company in 1923 to Shareholders of the Tata Industrial Bank, Ltd. (in liquidation) which have not yet been presented to the Company for conversion into shares be allotted by the Directors to such person or persons and on such terms as the Directors may think fit, and that the sum of Rs.25/- representing the paid-up capital on each of the said 338 Ordinary Shares having been received by the Company otherwise than in cash, by reason of transfer of assets of the Tata Industrial Bank in 1923, the sum to be received as consideration for allotment of each of the said 338 Ordinary Shares be treated as premium and be transferred in accordance with Section 78 of the Companies Act to an account to be called 'the Share Premium Account'."

   (*b*) "THAT it is hereby confirmed that the Directors have power to dispose of the 1,525 Ordinary Shares forming part of the capital issued by the Company in 1944 and which still remain unallotted, as the Directors may think fit, and that out of the sum to be received as consideration on such disposal of each of the said 1,525 Ordinary Shares the sum of Rs. 25/- be credited as partly paid thereon to the Company's Capital Account and the balance of the sum be treated as premium and be transferred to 'the Share Premium Account'."

   (*c*) "THAT it is hereby confirmed that the Board of Directors have power to dispose of the 29 Ordinary Shares represented by the 58 coupons issued in 1944 and which have not yet been presented to be converted into shares, as the Directors may think fit, and that the sum of Rs. 25/- having been paid on each of the said 58 coupons to the Company at the time of issue thereof, the whole amount to be received as consideration on such disposal be treated as premium and be credited to 'the Share Premium Account'."

   (*d*) "THAT the 774 Ordinary 'A' Bonus Shares of the face value of Rs. 25/- each that have remained unallotted out of the 2,10,000 Ordinary 'A' Shares issued as fully paid-up shares in 1947 be allotted by the Directors to such person or persons and on such terms as the Directors may think fit, and that the amount to be received as consideration on allotment of the said 774 Ordinary 'A' Shares be treated as premium and be transferred to 'the Share Premium Account'."

The Resolutions numbered 7 (*a*) to (*d*) above being special business, an Explanatory Statement with regard to them is annexed hereto.

By Order of the Board,
N. K. KARANJIA,
General Manager.

BOMBAY, 28*th February*, 1959.

Note:—A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*a*) The Transfer Books of the Bank will be closed from Monday, the 9th day of March, 1959, to Monday, the 30th day of March, 1959, (both days inclusive).

(*b*) Dividend Warrants for the half-year ended 31st December, 1958, will be posted to the Shareholders at their registered address on and after the 31st day of March, 1959. Shareholders are requested to intimate to the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,
THE SHAREHOLDERS OF
THE CENTRAL BANK OF INDIA, LTD.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to Item Nos. 3, 4 and 7 mentioned in the accompanying Notice dated the 28th February, 1959.

2. In respect of Item No. 3, it is notified that Sir Homi Mody who retires by rotation and is eligible for re-appointment, has attained the age of 77 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 3. Sir Homi Mody joined the Board of Directors of the Company in 1927. He is a banker, industrialist and businessman of considerable experience and has played a notable part in public and civic life. During the long period of his association with the Company, he has rendered very valuable services to the Company. It is considered in the interest of the Company that he be re-appointed a Director.

3. In respect of Item No. 4, it is notified that Mr. C. P. Wadia who retires by rotation and is eligible for re-appointment, has attained the age of 78 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 4. Mr. Wadia has been a Director on the Board of this Company since 1949. As a businessman of wide experience, he has proved himself very useful on the Board and it is in the interest of the Company that the Board should continue to receive the benefit of his services.

Re: *Item No.* 7 (*a*) to (*d*).

(1) When the assets of the Tata Industrial Bank, Ltd. (in liquidation) were transferred to the Company in 1923, the Company agreed as part of the consideration for the transfer to allot to Shareholders of the Tata Bank one partly paid-up share of the Company for every two shares of the said Tata Bank held by them and to issue to each shareholder of the said Tata Bank who became entitled to a half share in the Company a fractional certificate, the presentation of two such certificates by any person to the Company entitling him to receive one share of the Company. Out of the certificates issued by the Company, 676 certificates, representing 338 shares, have not yet been presented to the Company for conversion into shares, and Counsel has advised the Company to allot the 338 Ordinary Shares to persons other than the holders of the said 676 certificates and that the holders having failed for over 35 years to present the certificates for conversion into shares, they would not now be entitled to claim allotment of the shares. Counsel has further advised that allotment of the said 338 Ordinary Shares to persons other than the holders of the 676 certificates will amount to an issue of new shares within the meaning of Section 81 of the Companies Act so that the 338 Ordinary Shares in question must be offered to the existing shareholders of the Company in proportion to the shares held by them, unless the Company in General Meeting gives directions to the contrary. As the Company's Subscribed Capital consists of more than 12,55,000 shares, it would be quite impracticable to offer such 338 Ordinary Shares to the existing shareholders in proportion to the shares held by them, and the Directors, therefore, seek a direction from the General Meeting that these 338 Ordinary Shares be allotted to such person or persons and on such terms as the Directors think fit. The paid-up capital of Rs. 25/- per share in respect of such 338 Ordinary Shares having been received by the Company in the shape of assets of the said Tata Bank, the consideration to be received on such allotment of the 338 Ordinary Shares will have to be treated as premium and transferred to the Share Premium Account, as required by Section 78 of the Companies Act.

2. Pursuant to the Resolutions passed at the Extraordinary General Meeting of the Company held on 29th March, 1944, 3,36,264 new shares of the Company were offered to the then existing shareholders in the proportion of one new share for every two existing shares and a coupon was issued to each shareholder who became entitled to one half of a share, the presentation of two coupons entitling the person presenting them to one new share. Persons entitled to receive 1,525 of the new shares have not yet applied for their allotment or paid the sum of Rs. 25/- per share which was payable on account of capital on each of these shares, or the further sum of Rs. 25/- which was payable as premium on each new share. Counsel has advised that under the resolutions passed on 29th March, 1944 the Directors have now the power to allot the said 1,525 Ordinary Shares

to any persons and the proposed Resolution number (b) confirms that the Directors have the power to dispose of such 1,525 Ordinary Shares as they may think fit, as had been provided in the aforesaid Resolutions of 29th March, 1944. Out of the amount to be received as consideration for allotment of the said 1,525 Ordinary Shares, Rs. 25/- per share will be received on account of the paid-up capital of the shares and the balance as premium, which will be credited to the Share Premium Account in accordance with Section 78.

3. Of the coupons issued in 1944, 58 representing 29 Ordinary Shares have not yet been presented to the Company for conversion into shares. One of the resolutions passed at the aforesaid Meeting of 29th March, 1944 provided that in case any sets of coupons required to be presented to the Company for the allotment of full shares were not presented by 15th October, 1944, the Directors should have the right to dispose of such shares representing such coupons in any manner they might think fit. The Directors in exercise of this power propose to dispose of the said 29 Ordinary Shares represented by the 58 coupons as they think fit and the proposed Resolution number (c) confirms that the Directors have such power. The sum of Rs. 25/- payable on account of the capital value of each of the said 29 Ordinary Shares was received by the Company at the time of issue of the said coupons, since each coupon was issued on payment of Rs. 12-8-0 on account of capital and Rs. 12-8-0 on account of premium. Hence the whole amount now to be received on such disposal of the 29 Ordinary Shares will be treated as premium and credited in the Share Premium Account.

4. By the Resolutions passed by the Company in General Meeting on 31st March, 1947, 2,10,000 Ordinary 'A' Shares of Rs. 25/- each were resolved to be allotted as fully paid-up shares free of cost to the Company's shareholders in the proportion of one new share to five existing shares and one coupon was directed to be issued to any member becoming entitled to one-fifth of a share on the footing that five coupons would be convertible into one Ordinary 'A' Share. The sum of Rs. 52,50,000 representing the capital amount of the 2,10,000 shares was directed to be transferred from the Reserve Fund to the Capital Account, which was done. The 2,10,000 Ordinary 'A' Shares were issued on the assumption that the persons entitled to the aforesaid 338 Ordinary Shares of the 1923 issue and the aforesaid 29 Ordinary Shares of the 1944 issue, the paid-up capital in respect of which had been received by the Company, would take them up and on doing so would be entitled to receive one coupon for each Ordinary Share and that the persons entitled to take up the aforesaid 1,525 Ordinary Shares of the 1944 issue, the paid-up capital and premium in respect of which have not yet been received by the Company, would also pay for these shares and then become entitled to 305 Ordinary 'A' Shares. Of the coupons issued in 1947 to shareholders who did not hold shares in multiples of five, 2,345 coupons representing 469 Ordinary 'A' Shares have not yet been submitted to the Company for conversion into shares and hence 469 Ordinary 'A' Shares remain unallotted in addition to the 305 Ordinary 'A' Shares mentioned above.

5. Counsel has advised that the said 305 and 469 Ordinary 'A' Shares amounting in all to 774 Ordinary 'A' Shares should now be allotted to persons other than those to whom they were originally intended to be allotted and that as their allotment will amount to an issue of new shares within the meaning of Section 81 and as it would not be practicable to offer them to the existing shareholders, in view of the smallness of the number of shares involved, the Directors should obtain the Shareholders' sanction for allotting the shares for a consideration. The Directors seek power to allot them to such person or persons and on such terms as they think fit. The whole consideration to be received on allotment of the said 774 Ordinary 'A' Shares will have to be treated as premium and be credited to the Share Premium Account.

By Order of the Board,

N. K. KARANJIA,
General Manager.

BOMBAY, *28th February*, 1959.

BHARAT COLLIERIES LIMITED

NOTICE

THE FOURTEENTH ANNUAL GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Tuesday the 31st March 1959, at 12 noon, to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June 1958.

(2) To declare dividends on Preference and Ordinary Shares.

(3) To elect a Director in place of the retiring Director, Shri B. P. Jain, who being eligible offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

As Special Business:

To consider and, if thought fit, pass with or without modification the following resolutions, which would be proposed as ordinary Resolutions and for which special notice has been received by the Company:

"Resolved and declared that the age limit shall not apply to Shri Balabux Poddar, a Director of the Company.

"Further resolved that the appointment of Shri Balabux Poddar as a Director of the Company be and is hereby approved."

Explanatory Note:

Shri Balabux Poddar, who has attained the age of 65 on 29th December 1958, and who has been associated with the Company as its Director for a number of years and prior to the commencement of the Companies Act 1956, and his continuous and valuable services and guidance to the Company is in the interest of the Shareholders. Requisite consent as required under Section 281 of the Companies Act 1956, is therefore solicited from the shareholders. Neither the Managing Agents nor any of the other Directors of the Company have any interest in the said resolutions.

The Share Transfer Books of the Company will be closed from 23rd March 1959 to 31st March 1959, both days inclusive.

By Order of the Board of Directors,

FOR SAHU JAIN LTD.,

A. K. JAIN,
Managing Director,
Managing Agents.

DALMIANAGAR, *28th February* 1959.

N.B.—A member entitled to attend and vote, is entitled to appoint a proxy to attend and vote instead of himself. Such a proxy, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2½ per cent. less Income-tax thereon, will be paid to the Registered holders as on the 6th April, 1959, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1959.

The Share Transfer Books of the Preference Shares will be closed from 30th March to 6th April, 1959, both days inclusive.

By Order of the Board,

D. FORDWOOD,
Secretary.

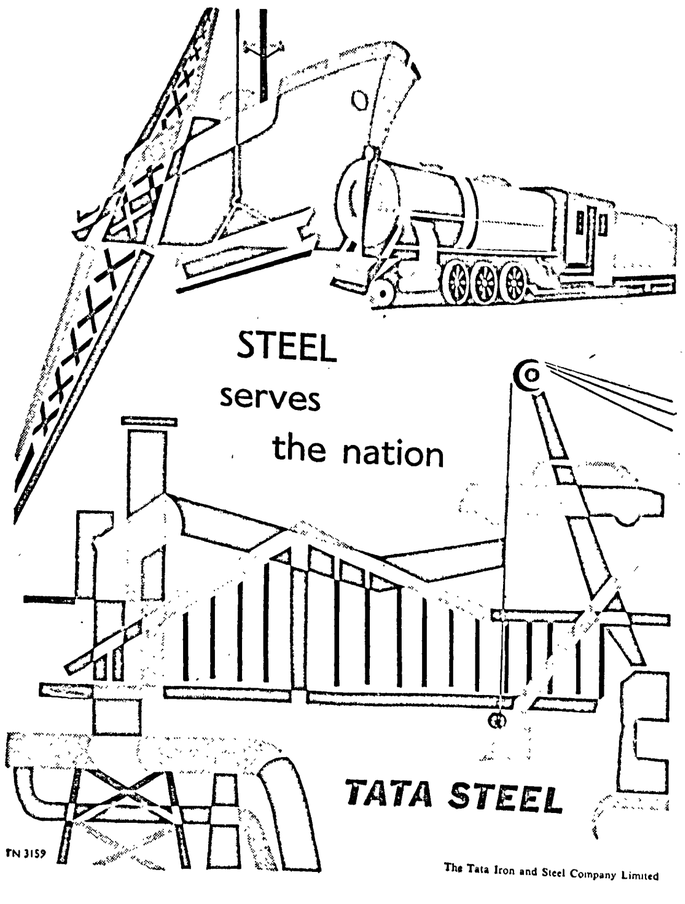
CALCUTTA-1, *26th February*, 1959.



BANK DEPOSITS EXCEED RS. 1-600 CRORES

(From Our Own Correspondent)

BOMBAY, *4th March*

There has been no slackening of demand for funds in the short-term money market this week. Though the resources of banks appear to have increased, as witness the expansion of nearly Rs. 15 crores in their net deposits during the week ended 20th February, conditions have not eased to any extent. The expansion in deposits has been utilised to reduce the banks' borrowings from the Reserve Bank, as also to meet the additional demand for credit. Banks, however, continue to be borrowers in the market. Interest rates are unchanged, inter-bank call money being done at 3½ per cent. among the Exchange banks and big Indian banks and at 3¼ to 3½ per cent. among the smaller banks. House money at seven days' notice is fetching 3½ per cent. and short-term deposits 3¼ to 4 per cent. for one to six months.

There has been a further hardening of the Treasury Bill rate this week to 2.625 per cent. per annum from last week's rate of 2.592 per cent. The amount offered is lower at Rs. 2.10 crores, as compared with Rs. 2.40 crores last week, against an invitation for Rs. 2 crores. Tenders for next week are unchanged at Rs. 2 crores.

A shrinkage of Rs. 4.85 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 27th February 1959. Notes held in the Banking Department are higher by Rs. 5.22 crores. There is no change in either rupee securities or foreign securities, but balances held abroad are lower by Rs. 52 lakhs. The Central Government's deposits show a decline of Rs. 4.66 crores, while other Governments' deposits have increased by Rs. 5.11 crores and deposits of banks by Rs. 5.13 crores. A rise of Rs. 59 lakhs is noted in loans and advances to Governments and of Rs. 1.75 crore in other loans and advances.

A notable feature of the Scheduled banks' statement for the week ended 20th February 1959 is the increase of Rs. 10.63 crores in demand deposits and of Rs. 4.17 crores in time deposits. With this expansion, the total (net) deposits have crossed, for the first time, the Rs. 1,600-crore mark to stand at Rs. 1,606.94 crores, made up of Rs. 901.17 crores in time deposits and Rs. 705.77 crores in demand deposits. Inter-bank borrowings are higher by Rs. 2.17 crores, while borrowings from the Reserve Bank stand reduced by Rs. 13.70 crores. Advances are higher by Rs. 4.04 crores and bills purchased and discounted by Rs. 2.15 crores. Investments have declined by Rs. 2.55 crores and cash balances by Rs. 1.24 crore, while money at call and short notice is up by Rs. 1.13 crore.

The Gilt-edged market is ruling dull, but the undertone is fairly steady. The National Plan issues are on offer, but business is scanty and quotations are unchanged. Demand for long-dated issues and 4½ per cent. State loans continues unabated. The Investment Committee of the Life Insurance Corporation is said to have decided, at its meeting held yesterday, to purchase securities worth about Rs. 2 crores. The Union Finance Minister has announced that the open market borrowing in the ycar 1959-60 will be of the order of Rs. 225 crores, while repayment of 3 per cent. 1959-61 loan will amount to Rs. 110 crores.

To revert to the trend of prices. 3 per cent. 1986 Conversion Loan, after moving up further from Rs. 74.10 to Rs. 74.25, has reacted to Rs. 74.15, at which level, it is still on offer. 3 per cent. 1970-75 is unchanged at Rs. 90.95, and 3 per cent. 1966-68 at Rs. 93.85. 3 per cent. 1963-65 has sellers at Rs. 96.75. 3½ per cent. 1964, 3½ per cent. 1965, 3½ per cent. 1967 and 3½ per cent. 1968 are all on offer at the quoted rates. 3¾ per cent. 1967 and 1968 are unchanged at Rs. 100.80 and Rs. 100.60, respectively. Following the increase of 10 nP in the selling price of 3¾ per cent. 1974, by the Reserve Bank, 4 per cent. 1972 has been done 5 nP higher at Rs. 101.60, as also 4 per cent. 1973 at Rs. 101.55. Among State issues, 4 per cent. and 4¼ per cent. loans have well maintained their ground. In some cases, prices have hardened further. U.P. 4¼ per cent. 1970, for instance, has gained 15 nP to Rs. 101.40 and M.P. and Bihar 4¼ per cent. 1970 15 nP each to Rs. 101.25.

The rupee has been ruling steady, in consonance with the improvement in sterling abroad. Banks' selling rate of ready U.S. dollars is unchanged at Rs. 476.25 per $100, while their buying rate has come down from Rs. 473 to Rs. 472.75 per $100. In New York, spot sterling has gained ground from $2.81-2.81.1/16 to $2.81.3/32-2.81.5/32 and three months' forward from $2.80.11/16-2.80¾ to $2.80¾-2.80.15/16.

METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, *3rd March*

Fears that the 1959-60 Budget proposals would include the imposition of a duty on metal imports were belied when the Finance Minister presented his maiden Budget on Saturday last. Earlier in the week under review, prices of base metals gained, following good consumer demand and covering. The Commerce and Industry Minister, Mr. Lal Bahadur Shastri's announcement at the meeting of the Import Advisory Council on Sunday last was noted with particular enthusiasm, inasmuch as it was believed that the raw materials, for the import of which the validity of the licences would be raised to one year from the present six months, would include base metals. No indication was, however, given by Mr. Shastri whether the present system of importing virgin metals would be liberalised to again permit established importers to import these or whether the costly experiment of control on copper would be ended. Grave anxiety has been entertained in the market at the existing shortage in copper, and it is a pity that this shortage is pushing up the price of copper scrap—clean wire scrap at Rs. 236 scored more than ten points during this week—especially when huge quantities are lying in warehouses awaiting allocation by the Government. Meanwhile, on the London Metal Exchange, the spot metal rose to £240 from £236, following the raising of the price by custom smelters to 31 cents a lb. in the United States. Tin opened here at Rs. 597 and, following consumer buying, gained to close at Rs. 610. There were tenders from Government Departments amounting to 135 tons for tin and 122 tons for lead. Commercial demand for lead was fair, the price improving to Rs. 73.50 from Rs. 72. Electrolytic zinc hardened to Rs. 96 from Rs. 95.50.

MARGIN IN GOLD

(From Our Own Correspondent)

BOMBAY, *4th March*

The bullion market firmed up, notwithstanding the announcement of the Union Finance Minister's proposal to extend the coverage of expenditure tax to include the amount spent on bullion, jewellery, and precious stones which were hitherto enjoying exemption. This was probably due to the fear that there would be more inflation in the coming year. Besides, there was a marked rise in demand from upcountry centres. In the gold section, spot houses were keen buyers in March settlement and there was also some short-covering. On Monday, bulls in this settlement were required to deposit margin at the rate of Rs. 10 per tola in accordance with by-law 33(D) (1), as backwardation charge exceeded As. 8 and stood at As. 9; today, it was half an anna lower at As. 8½. The settlement opened the week firm at Rs. 117-8, as against Rs. 117-4, and moved up gradually to touch Rs. 118-7 today. It, however, finished lower at Rs. 118-2-6. The net gain over the week was As. 14-6. Business in April settlement commenced at Rs. 116-15-6 on Monday. The settlement improved to Rs. 117-13-6 today before closing at Rs. 117-10.

Ready gold firmed up from Rs. 118-0-6 last week-end to Rs. 119-10 today. It was As. 4-6 lower towards the close. The daily average arrivals of gold were 3,500 tolas, while offtake was 4,000 tolas per day. The floating stocks of gold are reported to be around 25,000 tolas.

March settlement in silver strengthened from Rs. 195-1 on Wednesday last week to Rs. 195-10 before finishing at Rs. 195-9. April settlement recorded a gain of As. 4 over the week, today's rate being Rs. 195-8; at one time yesterday, it was quoted at Rs. 195-13. The carry-forward charge, which was As. 3 against bulls last week, turned in their favour to the extent of an anna today.

Ready silver advanced from Rs. 194-4 to Rs. 195-7 today before finishing lower at Rs. 195-6. The daily average arrivals and offtake of silver were 12 bars and 15 bars, respectively. The floating stocks of silver are estimated at 1,200 bars.

The upward trend in ready and forward silver in London continued during the week. Both were quoted yesterday at 78¾*d.*, as against 78*d.* last week. Gold in London, however, eased from 249*s.* 9¾*d.* to 249*s.* 5¾*d.* Silver in New York, which remained unchanged at 90.375 cents for several weeks, rallied to 91.125 cents yesterday.

The following comparative table shows at a glance the trend of the market during the week under review:

	4-3-59	Highest	Lowest	25-2-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

* 23rd March settlement. † 24th March settlement.

TANNED HIDES FIRM

(From Our Own Correspondent)

MADRAS, *2nd March*

Arrivals of E.I. tanned hides and calves were of the usual volume. Clearance was good. Prices locally ruled firm, except for buff calf. Shipment business was selective, as the U.K. demand was mostly for lower grades. Importers, by keeping out of the market for other grades, have been able to buy kips at lower levels. Demand for buff hides, was good for shipment to U.K.-U.S.A.

Tanned goat skins market was steadier, due to good enquiries for all average weights. Tanned sheep skins market was unchanged and there was good clearance of middle class sheep skins from the market.

LINSEED DECLINES

(Messrs. A. Bradley & Co.)

CALCUTTA, *2nd March*

With improved offerings from the centres and new crop movements expected to commence during the next few weeks, ready prices of linseed have declined. Forward quotations have also eased and buyers have shown little interest. The oil market has been dull. There have been few enquiries and there has been a downward trend in prices, with losses recorded in both ready and forward positions. The latest quotations are as follows: Ready Rs. 26.00; March Rs. 24.50; April Rs. 23.00; and May Rs. 22.75 per maund.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *4th March*

The cotton futures market depicted a firm trend during the major part of the week under review. After commencing the week on an easy note, the market attracted support and ruled fairly firm during the pre-budget session on the 28th inst. The support was based on the anticipation of some relief in excise duty on cloth, abolition of the export duty on raw cotton and imposition of import duty on cotton. The budget proposals belied these hopes. The disappointment of the trade was reflected in the setback to values in the budget session. In the budget session, the March contract declined by Rs. 4.50 and the May contract by Rs. 3.50 from the opening quotations although towards the end, there was a partial recovery. The session closed with a net loss of Re. 1.50 in March and 50 nP in May. The market ruled subdued on Monday also, but firmed up again yesterday on sustained all-round support induced by the firmness of the spot market. The small volume of tenders issued against the March contract on Monday, the first notice day, also favourably influenced sentiment. Reports from upcountry centres indicated that arrivals of Vijay and Digvijay cotton slackened and that prices consequently hardened. This imparted further strength to the market. Futures quotations registered an impressive rise. The gains were extended further today and the market closed near the best levels of the day.

I.C.C. Moglai Jarilla March 1959 opened the week at Rs. 654.50 and, after having improved to Rs. 657 on Saturday, declined to Rs. 652 on Monday. It again rose to Rs. 661 yesterday. Commencing today's session at Rs. 662, the contract improved to Rs. 663.50 before finishing at Rs. 662.50. Tenders against the contract on the 2nd inst. were as small as 500 bales of Buri American.

I.C.C. Moglai Jarilla May 1959 commenced at Rs. 653. After improving to Rs. 657.50 on Saturday, the contract receded to Rs. 653 on Monday. It again firmed up to Rs. 664.75 yesterday. Opening at Rs. 665.50, the contract gathered Rs. 4.50 before finishing at Rs. 668.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	4-3-59	*High*	*Low*	25-2-59
I.C.C. Moglai Jarilla March 1959 ...	662.50	663.50	652	654.75
Budget session ...	657	657	652.50	655.50*
I.C.C. Moglai Jarilla May 1959 ...	668	669	653	653.25
Budget session ...	658	658.50	654.50	657.50*

* Budget session closing.

The spot market, after an initial slackness, turned active later. Mills made heavy purchases of staple varieties following reports of small arrivals of new crop and firm upcountry advices. Surti, Digvijay, Kalyan, Vijay and other staple styles met with sustained buying. Values consequently hardened.

In the export section, there was renewed interest in Bengals. Shippers also made purchases of old crop against previous commitments with foreign buyers. The failure of the expectation of export duty reduction to materialise disheartened shippers.

In the foreign section, demand was noted for East African and Sudan cotton. A sizable business in B.P. 52 was done at Rs. 1,050 per candy. Sudan and U.S. styles were neglected.

Sudan is reported to have rejected India's offer of a special rupee payments agreement for cotton. Sudan's refusal is believed to be mainly on account of the fact that its cotton is at present the cheapest in the world and should be normally purchased by overseas buyers including India without any special arrangement. Sudan has already abolished the reserve price system and a sharp fall in prices was witnessed in the recent auctions.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 690; Berar Jarilla 750; Khandesh 815; Vijay 935. *Delivery contracts*: Bengal 655; Wagad 675.

The Karachi cotton futures market ruled distinctly easy during the week under review. Large arrival of new crop and weakness of foreign demand exerted a downward pressure on prices. Even the news that the U.K. will buy 50,000 bales of cotton during the remaining six months of the current season and another 100,000 bales next year as a result of the recent visit of the U.K. cotton delegation to Pakistan failed to enthuse the market. N.T.R.G. March declined from Rs. 57-4 last week-end to Rs. 55. The May contract also eased but only slightly by As. 6-6 to Rs. 55-15-6. The spot section also ruled easy. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi.

Sind *Deshi* 75; Punjab *Deshi* 65-8; 4F Punjab Roller 58; S.G. 63; L.S.S. Punjab Roller 59; S.G. 63-12; N.T.R.G. 63-8; S.G. 70-4.

Cotton futures values in Alexandria declined, reflecting the slackness of export demand. Favourable weather news, competition from Sudan, increased pressure of new crop and weaker spot advices adversely affected the price trend. The latest available quotations—in tallaris per lb.—from Alexandria are as follows, the figures in bracket being last week's closing rates:

Karnak: March 71.00 (72.63); May 71.25 (73.17). *Ashmouni*: April 61.70 (63.71); June 61.75 (63.40).

Quiet conditions prevailed in Liverpool during the week. After the recent fall, prices generally

tended to rule steady. The distant position attracted some trade buying and mill fixation. Values moved up slightly. There was also some switching over from the near to distant positions. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 21.40; May-June 21.45; July-August 20.18; October-November 19.40. *American cotton mixed growth contract*: March-April 22.40; May-June 21.80; July-August 20.15; October-November 19.25. *Sudan*: May-June 22.00; July-August 22.00; September-October 22.00.

Cotton values in New York suffered a setback during the week. There was a fair volume of hedging and liquidation which were only partly absorbed by mill buying and short-covering. Lower levels, however, met with resistance and prevented a further decline in prices.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-3-59	24-2-59	17-2-59
Spot	35.75	35.60	35.65
March	35.59	35.68	35.49
May	35.59	35.71	35.63
July	34.72	34.69	34.52

ENHANCED TAX IMPOSTS ON ART SILK

(From Our Own Correspondent)

BOMBAY, *4th March*

The fears of yarn traders about enhanced tax imposts have proved correct. The Union Finance Minister has raised the excise duty on art silk yarn by 60 per cent., on staple fibre by 66⅔ per cent. and on art silk fabrics by 100 per cent., with countervailing changes in import duties on these items. The increases are considered to be very steep, affecting seriously the silk weaving sector, the handlooms and the powerlooms. Reflecting the disappointment of traders over the above increases, the yarn market is ruling distinctly easy. Today's quotations for art silk yarns which are inclusive of enhanced excise duties are lower than those prevailing last week when the old rates were applicable.

The Collector of Customs, Bombay, has notified that the excise duty on synthetic yarns like nylon which was being collected hitherto at 50 nP per lb. was not correct and as such, it will be collected at the rate of Re. 1.50 per lb. henceforth. Accordingly, in the case of transactions of c.i.f. shipment and of steamer's name, the buyer shall be bound to pay the increased excise duty, if the seller produces the bill of such additional excise duty.

Cupressa Bamberg art silk yarn (60×1) April delivery, after spurting from Rs. 1,527 last week to Rs. 1,540 on Monday, dropped to Rs. 1,524 today. Spot yarn (60×1) receded from Rs. 8.19 on Monday to Rs. 8 today. National Rayons 150 bright cones first grade declined by 3 nP to Rs. 4.28. 120 bright cones first grade eased by 7 nP to Rs. 4.45. Among foreign yarns, spot 120 Japan rose by 10 nP to Rs. 4.91 before closing at Rs. 4.87 today. In the earlier sessions, 150 Japan moved up from Rs. 4.90 to Rs. 4.97. Today, however, it receded to Rs. 4.94. 120 Italy, after rising from Rs. 5 to Rs. 5.06. eased to Rs. 5. 150 Italy shed 6 nP to Rs. 5.25.

Staple fibre yarns (40×2) April delivery was done at Rs. 626. Spot 40×2 Citys were quoted at Rs. 3.19 and Centurys at Rs. 3.22. Among foreign yarns, Fujis shed 3 nP to Rs. 8.25. Paramounts put on 5 nP to Rs. 7.87.

Cotton yarns were dull. Ten counts Moderns were quiet at Rs. 13.37 and Podars at Rs. 12.19. Among twenty counts, Hinds were unchanged at Rs. 16. as also Seksarias at Rs. 15.50. Forty counts Moderns changed hands at Rs. 26, same as last week, while Minaxis came down by 25 nP to Rs. 25.31. Among sixty counts, Raghuvamshis were stagnant at Rs. 55, as also Finlays at Rs. 65. Eighty counts Finlays were dull at Rs. 81. Citys were on offer at Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	4-3-59	25-2-59
Art silk yarn—		
60/1 Cupressa Bamberg February }	Rs.	Rs.
" April }	—	1,580
(per case of 200 lbs.)	1,524	1,527
60/1 Cupressa Bamberg spot (per lb.)	8 00	8.06
120 Japan (per lb.)	4.87	4.81
150 Japan (per lb.)	4.94	4 90
120 Italy (per lb.)	5 00	5 00
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn—		
40×2 February (per case of 200 lbs.)		604 00
40×2 April.. (— Do —		617 00
40×2 Kohinoor (per lb.)	—	3.32
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12 19	12.19
20s Moderns	16 25	16 25
40s Minaxi	25 31	25 56
60s Finlay	65 00	65 00
80s City	67 00	67 00

N. B.—Today's closing rates for art silk and staple fibre yarns are on the basis of revised rates of excise duty.

OILSEEDS QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, *4th March*

Barring cottonseed futures, the oilseeds market witnessed quietly steady conditions, with price movements restricted to a narrow range. The spectacular rally in cottonseed was induced by the operations of Akola and Ahmedabad interests and the strength in the cotton market. All other seeds managed to hold the ground, primarily on account of the paucity of stocks and good domestic demand. Export advices too were by no means discouraging. Groundnut and Cotton February 1959 contracts, it may be noted, went off the board at the close of the month.

The Central budget and the meeting of the Export Promotion Advisory Council provided the two important developments during the week under review. The latter did not indicate any specific measures of promotion of exports of vegetable oils. The budget, however, caught the attention of the traders, and prices tended to react slightly; but this impact was short-lived. The budget proposals stipulated an increase in the excise duty levied on the vegetable product from Rs. 7 per cwt. to Rs. 8.75 (with corresponding adjustment in the exemptions in favour of small producers), and the withdrawal of the concession which had been granted on all power-driven units producing vegetable non-essential products. The increase in excise duty is expected to yield Rs. 95 lakhs. Vegetable non-essential oils were first subjected to excise in 1956, but some preference to medium and small-scale producers was given by exemption of production up to 125 tons per annum on a slab basis. In 1957, the free slab was brought down to 75 tons and lower rate of duty levied on production between 75 tons and 125 tons. These concessions have been reviewed and it is now proposed to withdraw the exemption from all power-driven units and limit the concessional levy to only the first 75 tons of production. These changes, which will be made by notification and will not affect village *ghanis* in any way, are expected to yield Rs. 4.4 crores. The budget proposals had virtually little effect on the market.

The groundnut section, though it was subdued slightly in the immediate post-budget session, made a gradual recovery, thanks to sustained support given by crushers and *vanaspathi* manufacturers. Their stocks, it is believed, are fast getting exhausted. They were reluctant to replenish their stocks for some time past when prices ruled unduly high. The paucity of stocks and the tight supply position in the ready section also acted as bullish factors. Groundnut May 1959 contract, which closed at Rs. 178.00 last week-end on a quietly steady note, moved irregularly with a bearish undertone till Monday when it touched Rs. 178.50 on lack of selling and some support. The contract improved further to close today at Rs. 179.87. Bold ready, which stood at Rs. 35.75 last Wednesday, moved down by 25 nP on the following day but gained strength subsequently to wind up the week at Rs. 36.12. Oil ex-mill improved from Rs. 18.62 to Rs. 18.69 over the week.

Trading in castorseed was also featureless. The pressure of arrivals in Hyderabad and crop movement in Gujerat during the early part of the week pushed down the values. But before long, it found itself well supported by speculators, thanks to reports of business deal in castor oil with the countries of the communist block. Castorseed May 1959 contract sagged from Rs. 155.25 to Rs. 154.12 on Saturday only to improve later and finished today's session at Rs. 155.37. Ready Madras, after fluctuating between Rs. 30.25 and Rs. 29.81, closed with a loss of 6 nP over the week at Rs. 30.19. Oil B.S.S. too lost 6 nP over the week when it wound up the week at Rs. 16.37.

The linseed section witnessed listless conditions. There were rumours of some business having been done with Australia. Excepting this, there was hardly any helpful development. Linseed May 1959 closed today at the same level as on last Wednesday at Rs. 32.31. Bold ready moved down by 12 nP over the week to Rs. 32.50. Oil too sagged from Rs. 16.75 to Rs. 16.19. The cotton market, in contrast, was characterised by distinctly buoyant conditions. The increase was mainly due to speculative support. Cottonseed May 1959 steadily improved from Rs. 119.75 to Rs. 126.50. It, however, drifted lower today to Rs. 126.00.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	4-3-1959	25-2-1959	18-2-1959
Groundnut	Rs.	Rs.	Rs.
May 1959	179.87	178 00	178.75
Bold ready	36.12	35.75	35 50
Coromandel ready	36 50	36.12	36 00
Khandesh quality	36 25	36 12	36 00
Oil ex-mill ready*	18 69	18 62	18 37
Railway receipts*	18 62	18.44	18.31
Castorseed			
May 1959	155.37	155.25	156 50
Ready Madras	30 19	30 25	30 12
Ready Kanpur	29 00	29 25	29 00
Oil B.S.S.†	16 37	16.44	16 25
Oil commercial†	15.37	15.50	15.31
Linseed			
May 1959	32 31	32 31	32 69
Bold ready	32 50	32 62	33 50
Oil ready†	16.19	16 75	16.62
May 1959	126.00	119.75	123.00
Cottonseed			
Niger seed	23.50	23.75	23.50
Kardi seed	21.75	21.75	21.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR RECOVERS

(From Our Own Correspondent)

BOMBAY, *4th March*

Welcome news to the sugar market this week was the absence of upward revision in excise duty on sugar in the Central Government budget for 1959-60. Since the market had risen earlier on rumours of such an upward revision, the immediate reaction to the budget on Monday the 2nd inst. was a drop of about a rupee per bag in both spot and *ex*-mill quotations. Subsequently, however, the market firmed up, following reports from Kanpur and Muzaffarnagar that the premium over the controlled *ex*-factory prices of E and D grade sugar had risen from 50 nP to Re. 1 per maund, as a result of better demand, owing to the imposition of excise duty on *khandsari*. The recovery, however, was not marked enough to make up for the earlier losses, so that today's rates are lower than those prevailing a week ago.

Arrivals of sugar by rail during the week were quite appreciable; they aggregated 33,120 bags, as against 10,820 bags in the previous week.

Large grain sugar dropped a rupee to Rs. 114-Rs. 117 per bag. Medium grain declined by 50 nP to Rs. 112-Rs. 113.5. Small grain was unchanged at Rs. 110-Rs. 111.50.

PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, *4th March*

The initial shock as a result of the enforcement of the margin system on the forward ring at Cochin having been absorbed, Malabar black pepper showed reviving tendency. Ready ungarbled at Cochin improved from Rs. 712.50 to Rs. 737.50 and garbled spot rallied to Rs. 125. March and May delivery also rose to Rs. 126. Calicut, on the other hand, softened to Rs. 775 for want of demand. At lower level, however, some of the exporters came out to buy, as Tellicherry pepper commanded premium over Alleppey both in Italy and the U.S.A. Tellicherry spot in New York is being quoted at $0.28, as against Alleppey at $0.26.

Sarawak white at Singapore rose to a new high level of Str.$159, and black to Str.$84, despite the advance of freight rate from Singapore to New York from $60 to $70. Lampong at Djakarta was quoted at Rupias 1,250. News of a tough line adopted by the British Prime Minister on the question of the peace treaty with Germany on Berlin during his talks with Mr. Khrushchev proved a supporting factor to pepper markets the world over, pepper being a very sensitive commodity.

Spot Malabar in New York improved to $0.26½ as Singapore withdrew its lower offers for Lampong and became reserved seller.

Looking to the statistical position of Malabar pepper all over the world, the fixing of lower rates of Malabar by the Forward Markets Commission for the sake of enforcing margin at Cochin is said to be unwarranted and is detrimental to the growers, inasmuch as pepper for inland consumption is a luxury. Some of the analysts opine that pepper should be allowed free play according to the laws of supply and demand. The following is today's nominal quotation:—

Ready delivery Rs. 103 per Bengal maund.

DEMAND FOR TEA DUSTS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, *3rd March*

Tea trade circles have welcomed the reduction in the excise duty by 4 nP per lb. for teas grown in certain parts of Darjeeling and the Nilgiris, but, after adjustment to the duties in Zones III-A and III-B the effect of the changes will be additional excise revenue to the tune of Rs. 58 lakhs. These changes would lower the export duty, and the net effect of the changes in the excise and export duties will be a revenue loss of Rs. 35 lakhs to Government. Spread over the entire industry, the benefit is so small to have any effect.

It was regretfully noted that the Finance Minister had not been sympathetic to the industry's plea, particularly from the Assam area, and that the budget proposals were silent on the question of further relief to common teas, especially in the background of increased production. However, it was hoped that the duties on tea would be reviewed by the Government of India.

The question of according further relief to tea would no doubt depend on the findings of the Committee, headed by Mr. Satish Chandra, the Deputy Minister of Commerce, recently formed to look into the industry's working *vis-a-vis* exports. This Committee would also examine the recent demand put forward here to reorganise the system of tea warehousing, with a view to reducing foreign influence on the same. The Assam Government is naturally worried about the threatened closure of some gardens for economic reasons. The Committee would study the Assam Government's desire to take over such gardens. When working of uneconomic gardens is a problem to commercial houses, it is not seen here as to how Government machinery would be able to work such commercially uneconomic gardens without loss to the nation, and without reduction of tax burdens on such gardens.

The demand in London sales has not abated, although this cannot be said as regards common teas. The average price fetched last week was 50.22d. per lb., as against 49.6d. in the previous week. Stocks in London during the week ended 20th February were higher at 171 million lbs., as against 170 million lbs. in the week previous. The weaker trend in last week's Colombo auctions was attributed here to the publication of the 1958 tea output figure, which at 413 million lbs. touched an all-time high, and compared with 398 million lbs. for 1957. In 1958 Ceylon exported to the U.K. 161 million lbs., said to be the highest in the last decade and a half.

The strong feature during last week's internal sales was Darjeelings, which advanced notably above valuations. Excepting for this feature, demand was irregular and rates eased. Dusts offered amounted to 20,784 chests. In the C.T.C. group, the good and best liquoring sorts were firm and occasionally realised higher rates, while the poorer and medium C.T.Cs eased by 10 nP. By the time sales ended, the balance of C.T.C. on offer had to be withdrawn, there being no demand. Orthodox teas in powdery form were subjected to competition, but the remainder of this manufacture fell by 4 nP. Legg-cut Dooars recorded a decline of 4 to 6 nP. The quotations, exclusive of excise duty, per lb. were: best Assam C.T.C. Rs. 2.20 to Rs. 2.90 (nom.), medium Assam C.T.C. Re. 1.85 to Rs. 2, medium Assam grainy Re. 1.74 to Re. 1.78, and medium Dooars Re. 1.80.

Leaf grades on offer amounting to 2,089 chests met with an easier tendency, though demand was fair.

Export quota changed hands at 1½ nP before rising to 1¾ nP.

Sales at Chittagong for the current season came to an end with the sale No. 18 held on 25th February, when offerings amounted to 16,138 chests leaf and 5.540 chests dusts besides a supplement of 551 chests. Prices of all teas were lower, but those of the inferior varieties fell more markedly than those of the quality teas. In the leaf market, prices of broken grades and fannings gave way to lower levels, although earlier during the sale, demand for both these varieties was strong. There were some withdrawals of the commonest and poorly-made whole leaf grades which were difficult to find bidders even after the price had lost by As. 5 to As. 6. Among green teas on offer amounting to 834 chests, the unpolished grades rose by ¼ anna to As. 3, but the polished lots eased by an anna to As. 2. The quotations in lb. were: B.P.S. Rs. 2-10-6. O.P. Rs. 2-10 to Rs. 2-10-6, B.P. Rs. 2-9. P.F. Rs. 2-8-6, O.P. Rs. 2-4-6, and Pekoe Rs. 2-3.

In dusts, plain Sylhets could be quoted at Rs. 2-9 per lb. With the progress of the sale, there was more demand, and a good portion of the earlier loss, amounting to As. 5 per lb., was erased.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *26th February*

The offerings in Sale No. 8, which was held on Tuesday, 24th February amounted to 636,954 lbs. High grown teas again showed a very useful seasonal improvement in quality, with a number of very flavoury teas on offer. The sale opened to a strong general demand particularly for the best liquoring high growns which advanced in price following quality. Others were fully firm and occasionally up to 5 nP dearer, although plain teas were fairly steady. Whole leaf teas were the weakest feature of the sale, and were difficult to sell. A few lines of tippy teas sold at easier rates. The quotations are: Low medium Re. 1.60 to Re. 1.70; medium Re. 1.85 to Rs. 2.25; good medium Rs. 2.40 to Rs. 2.80 and quality Rs. 3.20 to Rs. 5.45.

The average price realised in Sale No. 8 was Rs. 2.65 per lb., as against Rs. 2.48 in the previous sale and Rs. 2.35 in the corresponding sale of 1958.

Dust Sale 'D'.—The quantity on offer in this sale which was held on Thursday, 26th February was 608,491 lbs. The slightly larger sale opened to a good general demand. The quality and appearance generally showed an all-round improvement. In spite of this, all teas were sold irregularly 5 to 10 nP lower on last rates, the sole exception being the better liquoring teas which were steady.

London Market: Sale of 23rd February 1959.—Strong demand and generally dearer for everything, except some plainer fannings.

Sale of 24th February 1959.—Firm to dearer.

Colombo Market.—Quality irregular. Rather less demand. High grown brokens decline 30 to 50c., mediums down 10 to 20c. and low growns about 5c. lower.

Sale of 24th February 1959.—Active demand. Useful liquoring sorts with improved quality appreciably dearer. All others firm.

Calcutta Market: Export.—62,700 export. Good, but less general demand. Teas for price about steady. Plain brokens and fannings showed easier tendency and were generally 2 to 4 nP easier. Medium fannings were 4 to 6 nP easier. Orthodox B.O.Ps were easier, except brightest. Any good C.T.C. dearer, but poorer C.T.Cs up to 10 nP down. Whole leaf often easier.

Internal.—21,000 dust. Good general demand at easier rates. Orthodox about 4 nP easier, except small powdery types which were steady. Poor C.T.C. up to 10 nP easier. Good and best C.T.C. irregular and sometimes dearer. Darjeelings strongly supported.

Export Quota.—The market has remained steady throughout the week, but business has been transacted at 1¾-1¾ nP. There are buyers at 1¾ nP and sellers at 1¾ nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 9.—700,000 lbs. Quieter market, less demand, particularly for low medium and medium sorts, which are easier. Best Liquoring about steady."

JUTE GOODS PICK UP

(From Our Own Correspondent)

CALCUTTA, *3rd March*

The absence of any proposal in the budget for 1959-60 to reduce the export duty on raw jute or abolish it was a great disappointment to the market Earlier in the week, business in raw jute became livelier in anticipation of rumours in this regard, and, although there was no price variation, sellers refused to enter into commitments. The rumour did not, however, materialise, and since Saturday last the market ruled quiet. These were merely rumours, circulated by interested quarters. That these lacked foundation was clear to the more prudent in the market, because it was only a couple of weeks ago that the Minister for Commerce had stated in Parliament that the Government had no proposal to abolish the duty and, that, if the balers selected by the State Trading Corporation failed to export, the Government would as well take care of the matter. In the meantime, it was announced here that, with effect from 26th February up to 30th June, the rate of freight for jute cuttings and butts stands reduced to 122.6d. per 40 c.ft. net Calcutta/East Coast Canada, and to $(U.S.) 18.50 per 40 c.ft. net Calcutta/the United States. In view of the rumours on export duty, shippers showed no interest, and, although the uncertainty has now been removed, it is thought that the duty will prevent expansion of business. This is especially so because of stiff competition from Pakistan.

Earlier in the week, mills continued to show interest in mesta varieties, and traders thought that, in view of this year's keen demand for mesta, albeit at low prices, the cultivation of mesta would be extended. Also mesta plants need less care than the superior varieties. However, mills had earlier complained that retting of mesta in this season had been far from satisfactory and pointed out that a little more care at retting time would be insisted upon in order that the fibre would be cleaner in future.

In jute goods, during the week under review, there was good amount of covering for ready positions, and fair business was done in ready hessian by buyers on behalf of the United States and the United Kingdom. The earlier steadiness in hessian followed when the details of the U.S. burlap consumption in 1958 were received. In January, consumption was as high as 75 million yards, which was 1 million yards and 4 million yards higher, respectively, compared to December 1958 and January 1958. Subsequently, reports from New York indicated dullness, following consumer reluctance to enter into new commitments in the absence of price-stabilisation in the primary markets. There were forward deals done with foreign buyers, mainly Australian and Egyptian, in sacking goods. Meanwhile, the report of the State Trading Corporation having entered into a barter deal with North Korea for supplying it 1 million jute bags was cheerfully noted. Covering in ready goods soon followed.

The week commenced on a steady note, following good covering demand. Ready B. twills spurted to Rs. 88.70 on Tuesday last from Rs. 88.15 in the previous day. The gain in 40" 10 oz. hessian was more marked at Rs. 39, as against Rs. 37.75 the day previous. Subsequently, mills also put through deals in the forward position. However, there was a slowing-down of interest in the futures market, reflecting which ready B. twills gave way to Rs. 88.30 on Wednesday, while hessian 40" 10 oz. was unchanged, but steady, at Rs. 39. On the following day, prices were affected following reports from New York that buyers there were marking time. Hessian 40" 10 oz. sagged to Rs. 38.65 and B. twills to Rs. 88.10. The lower levels attracted short covering and B. twills made a partial recovery on Friday to Rs. 88.35. The recovery in hessian 40" 10 oz. at Rs. 38.80 was more impressive. At this stage, the budget was keenly awaited, in view of rumours about the abolition of the export duty on fibre. A hardening tendency in prices of goods followed and over the week-end hessian 40" 10 oz. was better at Rs. 38.90 and B. twills at Rs. 88.50. There was soon good amount of covering business in the forward positions, and yesterday there was an improvement in prices, with hessian 40" 10 oz. quoting at Rs. 39.20 and B. twills at Rs. 88.90.

The futures market was featureless. May hessian 40" 10 oz. closed lower on balance at Rs. 37.66, as against the week's opening at Rs. 37.68. At one time the quotation reached a low of Rs. 37.48. May B. twills opened at Rs. 89.15 and soon sagged to Rs. 89 to close higher at Rs. 89.70. March Assam bottoms were earlier quoted at Rs. 20.18. After slipping down to Rs. 19.94 they closed at Rs. 20.14.

Earlier, the fibre market was dull and uninteresting, but rumours regarding the duty imparted some steadiness. However, mills showed little interest, and there was no news from New Delhi regarding Government's decision in advancing funds to mills to enable the latter to increase their raw jute purchases. Over the week, Bimli f.a.q. scored to Rs. 18.25 from Rs. 17.75 and Daissee mesta to Rs. 18 from Rs. 17.25. Jungli was unchanged at Rs. 17.50, as was Daissee at Rs. 21.75, and Assam bottoms at Rs. 20. The latest quotations for the different varieties in March-April delivery positions are:

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *2nd March*

During the week under review the condition of the local hides and skins market was steady. Fresh supplies were ample and the main purchasers were the local tanners and Madras dealers. With the end of the extreme cold weather the volume of goods from butcheries has started falling a bit. The Madras dealers, usually interested in very light cows, goat and sheep, were not as active during the week, as during the week previous. The latest quotations are as follows:—

Wet salted cow 1st grade at Rs. 415, 2nd grade at Rs. 390 and 3rd grade at Rs. 350 per score; wet salted buff 1st grade at 2 lbs. 1 oz. and 2nd grade at 2 lbs. 3 ozs. per rupee; goat 1st grade at Rs. 400 and 2nd grade at Rs. 375 per 100 pieces; sheep 1st grade at Rs. 350 and sheep 2nd grade at Rs. 300 per 100 pieces.

REVISION OF CO-OPERATIVE LAW

(Concluded from page 367)

bility and individual initiative in the co-operatives. It is suggested that the State Government should quietly sit back when the moneys invested by it with a definite purpose in view are spent by the co-operatives in the way they liked?

The powers given to the Registrar under the Model Bill to settle disputes pertaining to co-operatives constitute another important target of criticism by the Indian Co-operative Union. Co-operative societies being associations of poor farmers, artisans and the like, the view is widely accepted that any disputes arising as between the members or as between the members and the society should be disposed of in an inexpensive and expeditious manner. Any person who has knowledge of the inconvenience, expense and delay that litigation in Civil Courts involves would shudder to think of dragging the co-operatives to Civil Courts for purposes of settling their disputes.

It will be recalled that the Rules under the Act of 1912 themselves have provided for arbitration by the Registrar in any dispute touching the business of any society. The Madras Act, for example, has provided for compulsory arbitration in the substantial part of the Act, and has completely banned the jurisdiction of civil courts in disputes pertaining to the co-operatives. As Calvert has stated, this was very much like the English Law. The Friendly Societies Act, for example, "directs that disputes *shall* be decided in the manner directed by the rules of the society and the decision so given shall be binding on all parties without appeal and shall not be removable into any court of law or restrainable by injunction." Thus, what the Model Bill has provided by way of barring the jurisdiction of Civil Courts to disputes in the business of co-operatives is nothing new. The case for such powers is further strengthened by the number of disputes submitted for arbitration every year. In Bombay, for example, the total number of arbitration cases filed during the year 1955-56 was 22,727. The Annual Administration Report notes that, while the number of cases outstanding was on the decline, the amount involved thereunder showed an increase of Rs. 28 lakhs to Rs. 150 lakhs, as compared with the previous year. During the year 1956-57, again, the number of such cases filed was 11,207.

The Administration Report of Madras for the year ending 30th June 1953 noted that 61,103 arbitration references were entertained by the Deputy Registrars during the year. Further, disputes between the societies and their committees or office-bearers, past or present, numbered 1,291 during the same year. The number of arbitration cases entertained during 1955-56 was, again, 40,258, while those pending at the beginning of the year were 20,000. These figures themselves speak of the magnitude of the problem of disposing of disputes arising from the co-operatives, and emphasises the need for their quick but just disposal.

In fine, the powers that are sought to be vested in the Registrar by the Model Bill drawn up by the Committee on Co-operative Law are no more than what are necessary to enable him to carry out his responsibilities efficiently in the present context. To say that the proposed provisions would "subvert the sovereignty of the people" "bestowed" by the Constitution is to condemn several enactments now in force, including certain Articles of the Constitution, as being contrary to democratic principles. Furthermore, in advocating complete freedom to co-operatives, the Union seems to be unwittingly speaking for the managements of co-operatives and for the political and other factions that seek to make use of co-operatives, for their own benefit, and not for the millions of members. Members are among the last people to favour a free hand being given to the managements of co-operatives. The Union will do well to reconsider its position *vis-a-vis* the Model Bill prepared by the Committee on Co-operative Law, in the light of a more comprehensive appraisal of the present conditions and requirements.—*All Rights Reserved.*

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—From July 1954. H—Outstandings in respect of items in column 9 marked 'E' are not included.

RAW COTTON STATISTICS

Particulars	Details of Period	Quantity (Bales of 400 lbs.)
Bombay Island—		
Cotton Receipts ..	Week ended 26th Feb., 1959 ..	44,000(J)
	Corresponding week, 1958 ..	38,311(J)
	1st Sept. 1958 to 26th Feb., 1959 ..	759,840*
	Corresponding period, 1957-58 ..	815,384*
Cotton Exports ..	Week ended 9th Feb., 1959 ..	556‡
	Corresponding week, 1958 ..	4,882‡
	1st Sept. to 9th Feb., 1959 ..	183,331
	Corresponding period, 1958 ..	90,194
Mill Consumption (Estimated) ..	1st Sept. 1958 to 26th Feb., 1959.	624,469
	Corresponding period, 1957-58 ..	647,932
Stock (with exporters, dealers and mills) in Bombay (Estimated.)	On 26th Feb., 1959	470,213
	Corresponding date, 1958 ..	638,807
Consumption of Cotton—		
Indian	December, 1958	419,814
Foreign	December, 1958	39,301
Indian	Four months ended Dec. 1958	1,560,521
Foreign	Four months ended Dec. 1958	158,802
Indian	Same Period 1957	1,554,180
Foreign	Same Period 1957	200,614
Stocks (Mills and Elsewhere)—		
Indian	As on 31st December, 1958 ..	772,114
Foreign	As on 31st December, 1958 ..	87,830
Indian	As on 31st December, 1957 ..	825,350
Foreign	As on 31st December, 1957 ..	171,663

Particulars	From 1st Sept., to 7th Feb., 1958-59 Bales	From 1st Sept., to 7th Feb., 1957-58 Bales
From Bombay Cotton Shipments to—		
United Kingdom ..	6,386	1,530
Continent	12,700	3,002
Hongkong	29,463	2,385
China	6,886	—
Japan	101,849	30,637
U.S.A.	1,622	2,578
Other Countries ..	1,752	691
Total to all foreign countries	160,658	40,823
Coastal Ports	22,463(a)	44,549(b)
Total	183,121	85,372

Particulars	Period	Quantity
Cotton Exports from Bombay (by sea)		Bales of 392 lbs.
	During December, 1958	30,947
	During December, 1957	8,229§
	1st Sept., to 30th Dec., 1958 ..	115,683
	1st Sept., to 30th Dec., 1957 ..	17,497
Cotton Pressed in India† (In running bales) ..	Week ended 13th Feb., 1959 ..	—
	Corresponding week, 1958 ..	180,302
	1st Sept., to 13th Feb., 1958-59 ..	805,640
	Corresponding period, 1957-58 ..	2,303,522
Karachi (Pakistan)—		Bales
Receipts	1st Sept., to 12th Feb., 1958-59 ..	764,991
	Corresponding period, 1957-58 ..	825,175
Exports	1st Sept., to 12th Feb., 1958-59 ..	373,540
	Corresponding period, 1957-58 ..	260,612

(J) By Rail and Sea. † Incomplete. * By Rail, Sea and Road. (a) Upto 31st Dec., 1958. § Includes Zoda and yellow pickings, etc.
— Not Received. ‡ From 5th to 9th February A—Adjusted. (b) Upto 31st Jan., 1958.

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

T—Taxable. C—Cumulative. R—Redeemable. T.F.—Tax-free
R.O.—Redeemable at option. N.B.—Non-Redeemable. P.—Participating.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares received 6 per cent. dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital.
K—Fort William Jute Co., has sub-divided ordinary shares of Rs 100 into shares of Rs. 10 each Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co., Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

MARKET GOSSIP

(*Concluded from page* 343)

substantially, the Government of India should, as Mr. Brown, rightly said, embark on a vigorous drive at diplomatic level to secure a sizable reduction in taxes on tea in the industrialised countries of the West.

The Bengal Chamber President had some plain words to say about the jute industry. He drew special attention to the compulsory reduction in the output of jute goods due to excessive stocks of sacking qualities. While hoping that this would prove to be only a temporary necessity, Mr. Brown warned that "it would be foolish not to recognise the unfortunate effects which further curtailment of production in the near future would have on next year's jute crop, to the ultimate disadvantage of mills and sellers." He, however, struck a note of optimism and observed that the general level of efficiency in the jute industry today compared favourably with that in most industries in the country. Assuring the country that the industry would put its full weight in the battle for exports, he concluded by saying: "Given an adequacy of raw material, the industry can reasonably expect to earn profits on a scale which will permit of an orderly reduction in its indebtedness incurred in connection with the modernisation of the mills." A refreshing feature of his reference to this industry is that he made no demands on the Government.

ROUND THE EXCHANGES

(*Concluded from page* 344)

as a result of the firm's interest in industrial undertakings. National Pipes touched a new high of Rs. 17.56. Indian Oxygens advanced further to Rs. 24.62 on a 10 per cent. dividend and a good working report. B. I. Corporations, on interested buying, advanced to Rs. 5.90 from Rs. 4.69. Balmer Lawries gained to Rs. 155 from Rs. 145 previously. Indian Aluminiums had buyers at Rs. 18, as against Rs. 16.87 earlier, but recovered to Rs. 17.19. Hindustan Levers were favoured at the higher rate of Rs. 28.37 before closing at Rs. 28. At Rs. 19.37, Rohtas Industries added 62 nP. National Rollings touched a high of Rs. 13.56, and the subsequent reaction to Rs. 13.31 was short-lived (the lockout has now entered the seventh week). Alkali and Chemicals hardened by a few nP to Rs. 19. At Rs. 14.25, India Steamships added 6 nP.

Among minings, Indian Coppers at Rs. 3.80 gained 16 nP at the special session, but since then moved down to close at Rs. 3.69 which, compared to the week's opening, carried a gain of 12 nP. Karanpura Developments were traded at Rs. 12.44, as against Rs. 12.06 previously. Metal Corporations scored a few nP to Rs. 9.19.

The new account in Indian Irons opened at Rs. 22.09 *ex*-rights (old) and at Rs. 21.10 (new)—the last quotation for *cum*-rights was Rs. 26.02. The Olds touched a high of Rs. 23.43 before closing at Rs. 22.47. Kumardhubis at Rs. 9.19 recorded an addition of 32 nP and Texmacos closed 25 nP higher on balance at Rs. 21.10 after being higher at Rs. 21.90 at the special session.

Coals gathered strength. Equitables advanced to Rs. 30.37 from Rs. 30.19 and Pench Valleys to Rs. 24.50 from Rs. 24.25. Karanpura Collieries were keenly sought to improve to Rs. 115 from Rs. 104. In the special session, Burrakurs touched a high of Rs. 17.87, but toppled to close at Rs. 17.37, at which the net gain for the week was 12 nP. Amalgamated and Khatras Jherriahs were fractionally higher at Rs. 22.25 and Rs. 67, respectively. South Karanpuras were taken up to Rs. 12.62 from Rs. 12.25.

Madras Stock Exchange

MADRAS, *3rd March*

The Madras Stock Exchange ruled firm during the week under review, reflecting the satisfaction of operators over the abolition of wealth tax on companies and excess dividends tax in the Central Budget, as well as absence of any fresh tax imposts in the Madras Government Budget. Tea shares were particularly buoyant, thanks to the reduction of export duty on tea from 26 nP to 24 nP per lb., and also to Mr. Lal Bahadur Shastri's statements at the meeting of the Exprt Promotion Advisory Council regarding the setting up of a tea export guarantee fund and relief in railway freight for transport of fertilisers for tea gardens. In sympathy, coffee and rubber shares also attracted good attention. Textiles, sugar and miscellaneous industrials, too, were active, with prices moving up. The electricity and bank sections presented a fully steady trend.

Among tea shares, Haileyburias evoked enlarged buying support and jumped up by Re. 1.75 to Rs. 18.75. Parksides spurted by Re. 1.50 to Rs. 21 and Twyfords by Re. 1.25 to Rs. 17.50. Devasholas hardened by a like amount to Rs. 25.50 *cum-div.* Coonoors and Nonsuch Teas rallied 75 nP each to Rs. 26.50 *cum-div.* and Rs. 26, respectively. Emerald Valleys strengthened by 55 nP to Rs. 7.30, Kil Kotagiris by 45 nP to Rs. 7.65 *cum-div.*, Balanoors by 38 nP to Rs. 18 and Blue Mountains by 25 nP to Rs. 3.60. Lucky Valleys were done at Rs. 12, as against Rs. 11.75.

Deals in coffee shares were put through at higher prices. Consolidated Coffees advanced by a rupee to Rs. 20.85. Coffee Lands improved by 63 nP to Rs. 22.25, Anaparais by 30 nP to Rs. 4.55 and Savamalais by 14 nP to Rs. 3.54.

In the rubber group, Vaikundams provided a bright spot, the quotation rising by Re. 1.25 to Rs. 25. Peninsulars picked up 70 nP to Rs. 19.50. Kalpettas increased by 25 nP to Rs. 12.50. Cochin Malabars put on 21 nP to Rs. 5.97, Highlands 12 nP to Rs. 11.37 and Nelliampathys 10 nP to Rs. 2.90. Mercaras gathered 25 nP to Rs. 8.25 and Kailas 5 nP to Rs. 5.

Among textile scrips, Dhanalakshmis were sought at Rs. 177, as against Rs. 175. Rajalakshmis firmed up by Re. 1.75 to Rs. 62.75. Lakshmis were better by Re. 1.50 at Rs. 100. Cambodias advanced by 70 nP to Rs. 9.50, Bangalore Woollens by 50 nP to Rs. 162, Travancore Rayons by 42 nP to Rs. 17 and Hemalathas by 35 nP to Rs. 8.45. Adonis gathered 30 nP to Rs. 8.20 and Anglo-French 25 nP to Rs. 70.75.

In the sugar group, United Breweries were in the limelight, strengthening by Rs. 5 to Rs. 290. E.I.Ds were pushed up by Rs. 3.50 to Rs. 34 *cum-div.* Mysores hardened by 75 nP to Rs. 44, Deccans by 52 nP to Rs. 10.20 and Travancores by 30 nP to Rs. 10.40.

Among miscellaneous industrials, Rallis spurted by Rs. 3 to Rs. 51.50. Hindustan Levers rallied Re. 1.25 to Rs. 29. Textools strengthened by 75 nP to Rs. 163.50. Spencers rose by 50 nP to Rs. 19.25. Orissa Cements were better by 76 nP at Rs. 14. Dalmia Cements gathered 30 nP to Rs. 10.10. Singarenis gained 25 nP to Rs. 16.50.

ENGINEERING

(*Concluded from page* 363)

ducing 350 b.h.p. (gross) and a further development is the coupled unit which develops 700 b.h.p. (gross). The coupled 8-cylinder model will be able to power a recently designed 60-foot personnel craft operating at 30 knots, to meet the greater speeds and greater distances over which the high speed personnel launches have to travel to off-shore drilling rigs. At the Exhibition, the 4-cylinder marine engine, developing 113 b.h.p. at 1,800 r.p.m. will also be shown, as well as the C6. NFLM which is typical of engines used by the Portuguese fishing industry. A recent interesting application of the C6. NFLM is the fisheries investigation craft built in Holland to be operated by the Marine Biological Laboratory of Helsigor University. This order, paid for by the Rockefeller Foundation, was secured in face of strong foreign competition.

The versatility of the Rolls-Royce range of oil engines is to be seen at the Kariba Dam project on the Zambesi River in Rhodesia where a number of the Consolidated Pneumatic Tool Company's compressors, powered by Rolls-Royce C6. NFL and C4. NFL engines, as well as a fleet of Euclid 15-ton dumpers with C6. NFLM engines are at work. In addition, Rolls-Royce 8-cylinder supercharged diesels will be powering standby generating sets when the dam is finally constructed. Further south, on the Triangle Sugar Estate, a bank of 6- and 8-cylinder engines is supplying the power for overhead crop spraying, a comparatively new form of irrigation.

NEW COMETS HAVE FLOWN 13,000,000 MILES

The Comet jet airliners now flying have covered 13,000,000 miles and exceeded 29,000 hours in the air—a majority of them in passenger-carrying service.

The first seven Comet 4 airliners in service with British Overseas Airways Corporation on two North Atlantic routes have so far logged about 3,500 flying hours—a figure which will go up rapidly when B.O.A.C. starts its London-to-Tokyo services on 1st April. During the past month alone, B.O.A.C. Comet 4's have visited 21 countries and territories.

Comets owned by Aerolineas Argentinas will be adding to the volume of Comet flying with their passenger services between South America and New York, and across the South Atlantic.

NATIONALISATION OF INDUSTRIES

(*Concluded from page* 371)

public have taken the view that these statutory monopolies could absorb much of increased costs by increased efficiency. The result of this pressure is that the Boards tend to operate their concerns on the very margin of a surplus and only a slight accident... can turn a surplus into a deficit."

Was sufficient attention paid to the personnel factor before the nationalisation concept was set on its onward march? It was, perhaps, thought that, once an industry was transferred from corporate to public ownership, a complete change would come over the outlook of all those engaged in the industry. Here Mr. Kelf-Cohen is trenchant. To quote him, it was thought:

> "Their attitude would become one of devotion to the public good; sordid motives would disappear with the disappearance of the capitalist. A selfless race of managers would appear, whose object would be to manage the industry for the benefit of the nation. The nationalised industries in their morale and outlook on life would provide a startling contrast to private enterprise, dominated by greed and the profit motive."

But what in actual practice has resulted is that, except in the case of a few who, in any situation, would tend to be creative even under the cloak of anonymity, "national interest"—the mystic phrase—has operated synonymously with the interest of the pressure group.

With such a crop even in a more advanced industrial society, the theoretical Socialist thinker in India must be wary in applying time-worn cliches to conditions in this country, especially when one has to give due regard to the glacial slowness of the people to change.

The working of nationalisation policies in relation to specific industries in the U.K. has in no way tended to settle problems which the units inherited from the previous regime. This has led Mr. Kelf-Cohen to say:

> "To the Socialists, nationalisation was a cure-all and a substitute for painful hard thought; ten years later, it is more than ever necessary to embark on hard thinking free from all dogmas..."

These remarks apply with equal force to the authors of the socialist pattern of society in India also.

VOL. XCVIII. No. 2503 BOMBAY, 14th MARCH 1959 PRICE: Rs. 2

FEDERATION'S ANNUAL MEETING

THE dominant note in the proceedings of the annual meeting of the Federation of Indian Chambers of Commerce and Industry, held at New Delhi last week, was one of responsive co-operation with the Government in its efforts to raise the living standards of the people. But it is clear from the various resolutions adopted at the meeting that the Federation has vital differences with the Government in regard to the method and manner of achieving this cherished goal. The Federation's retiring President, Mr. B. P. Singh Roy, however, put across his point of view in a manner which readily won the approval of Mr. Nehru who, in the course of his address to the annual meeting, assured the business community that, in the formulation of the third Five-year Plan, the Government would welcome full consultation with business men. There is certainly a great deal to be said in favour of co-operation between the Government and the business community at levels, both higher and broader, than those at which consultations take place at present.

It is, however, well to remember that neither the Government could expect, nor the business men should deem it their unalterable function to provide, complete identity of views. The Government should learn the wisdom of the adage that he is not a true friend who is always a pleasant companion. Mutual respect, if it is to be enduring, should be based on mutual recognition of the right to hold and express divergent opinions. Occasionally, one does hear of some representatives of business men being described as more responsive to the Government's policy and another section being dubbed as being a somewhat more critical body. However, neither in principle nor in actual practice, nor in regard to specific issues, does there seem to be any difference of opinion between the large body of trade and industry, represented by the Federation, and that growing body of opinion which is beginning to be more sharply critical of the Government's economic policy.

If the criticism of the Government has no substance, it is bound to lose its appeal sooner than later. On the other hand, if it is valid, it would, to put it mildly, be wrong in the country's interest to stifle, or even to ignore the criticism, let alone the relevant legal, constitutional or democratic issues involved. Nevertheless, many spokesmen of the Government are developing an allergy to criticism, despite the fact that they, from the Prime Minister to the party chiefs, invite the public to make a critical evaluation of their policies. This invitation is to be regarded as mere lip service to objectivity, if it is not backed by a tolerance for different views and a readiness to accept constructive suggestions. That country is not really free where people have infinite freedom only to toe the Government's line. Again, those who, whether out of a lack of faith in their cause or out of a feeling that silence is greatly to be preferred to ineffectual criticism, are prepared to slur over the Government's defects are doing no service to the cause of dispassionate examination of Governmental policies. The essence of democracy lies in recognition of a minority's right to convert the majority to its view, so long as that minority is prepared to abide by the law of the land.

With his characteristic historical thought, Mr. Nehru declared that capitalism was changing everywhere. Many capitalist countries have now voluntarily accepted the "welfare" concept which inspires much of their social and economic legislation. What Mr. Nehru would perhaps have done well to recognise also is that socialism too is changing fast. No longer do socialists insist on complete State ownership of industries. There has also been a welcome recognition, among socialists, of what enlightened private initiative, working under welfare laws, can do to stimulate economic progress without sacrificing the "human" touch, thereby making it possible for a country to have the best of both worlds—capitalist enterprise and social welfare. Again, Mr. Nehru was not right in his criticism that the Indian business community does not change, if by that, he means adjustment to new conditions and new "welfare" ideas. In the first place, many of the social experiments, now adopted in Government-owned enterprises, were first initiated in private factories. Secondly, many foreign observers have been amazed at the complexity and the slow-moving nature of the Governmental regulations in India with which Indian business men have to deal every day of their lives. Thirdly, from ancient times, the Indian business community has done pioneering work in foreign lands. In many of these countries, it is respected for its capacity to adjust itself to new situations. Indeed, the criticism by its unsuccessful rivals is that the community adjusts itself a little too well. For sagacity and wisdom as well as capacity for moving with the times, the best elements in the Indian business community—there are black sheep everywhere—have few equals in many parts of the world. Given the necessary economic climate and a watchful eye by the Government, Mr. Nehru may trust his country's commercial and industrial interests to deliver the goods far more efficiently than he, in his less charitable moments, is prepared to admit.

Mr. Roy was no doubt conciliatory in his approach to the Government's economic policy. But that did not prevent him from emphasising the obvious importance of promoting private initiative and effort. He rightly declared that "in the ultimate analysis, it is the people's effort on a massive scale that can build up the country's economy." He pointed out how Indian organised industry had made a notable contribution to the country's economic progress. Impartial studies had demonstrated that "whether judged by reference to meeting the needs of the consumers or building up the industrial potential or as providers of finance to the State, the part played by Indian industry and trade has not been inconsiderable." He declared that Indian business men were prepared to shoulder their share of the burden of carrying out the programme of economic development. He added: "All that we ask for is that we must be given sufficient opportunities and adequate facilities to contribute our best." He felt that both private and public sectors could co-exist. He said: "We feel that our economic planning, more especially because it is democratic, is not inconsistent with the continued existence of the private sector nor is the extension of the public sector at certain points incompatible with the health of the private sector."

It is not clear whether the Government really accepts this view which is indistinguishable from the principle of "mixed economy" adopted in the early post-independence years. This principle has now been very nearly replaced by the more ideological doctrine of "socialist pattern" in which the public sector is expected to grow not only faster than the private sector but also at its expense. Mr. Roy drew much comfort from Mr. Nehru's statement made last month in Parliament, to the effect that the private sector had a "great domain to work in the country" and "just to push it out will be utterly wrong and injurious to this country *at the present moment and for a considerable time to come*." (Italics ours). Into Mr. Nehru's statement, welcome as far as it goes, can be read the meaning that the private sector will be tolerated as a matter of political and economic expediency until the time alternative arrangements can be made for its elimination. A little reflection on the quotation with particular reference to the portion italicised by us will confirm this inference. This observation of Mr. Nehru can by no means be a source of genuine comfort for the private sector. In any case, in the absence of faith in, and facilities for the growth of, private initiative and effort, the Government's verbal recognition of the place of private enterprise can lead to no enduring results.

The two main resolutions adopted by the Federation related to economic development and tax structure; it also adopted a resolution favouring special effort designed to ameliorate the conditions of the middle classes. The resolution on economic development welcomed the Government's proposals for a larger outlay on the third Plan. The Federation, however, stressed that the economy of the country would support larger investments only if priority were given to projects yielding the highest return per unit of capital and the expenditure on unproductive and non-developmental items was cut to the minimum. It is noteworthy that Dr. Ramaswami Mudaliar urged that the Plan should be framed not on the authority of economists and statisticians but on that of those who were responsible to the Government and who had knowledge of the economic life of the country. From this point of view, it would be better for the business community to accept Mr. H. P. Mody's advice that the Federation should send a delegation to meet the Government for a preliminary discussion on the Plan rather than wait till it received an invitation from the Government or the Planning Commission. The Federation will be better able to make its influence felt at the time the draft Plan is being drawn up than after the draft is finalised. This, of course, implies that the Federation must go well prepared and that, if it is to be effective,

it must do some hard thinking on this subject right from now.

The resolution on legislation affecting trade and industry invited the attention of the Central and State Governments and also the local bodies to "the mass of laws, regulations and procedures which industry, trade and commerce have to comply with" and asked for the simplification of the relevant regulations and procedures. It urged the Central Government to set up an inter-State trade and commerce commission to ensure that the "various State regulations may not impede the free flow of goods and services as between the States." Multiplicity of legislative measures, the resolution said, was not necessarily conducive to the rapid growth of business activity. Excessive reliance on legislation not only impeded growth of business but also resulted in all-round dissipation of effort and energies in unproductive, time-consuming work. Accordingly, it urged the authorities to arrange for a review of all legislation relating to industry, trade and commerce, with the object of reducing the number of separate pieces of legislation by co-ordinating or curtailing them, and to set up small committess with a view to simplifying various procedures under different Acts. We commend this resolution to the Central and State Governments, particularly the Union Law Ministry, for legislative enactments have grown so rapidly in recent years that they baffle even professional legal advisers, not to speak of their impact on the average trader and industrialist to whom they are a veritable nightmare.

SUGAR INDUSTRY

THE Chief Minister of Uttar Pradesh, Dr. Sampurnanand, is of the view that the claims of his State for the establishment of new industries are being ignored by the Centre. This view seems to be widely shared by the members of the State Legislative Assembly and members of Parliament representing that State, as witness the recent convention of these members in which dissatisfaction with the Government of India's attitude came in for severe criticism. This was rather an unusual procedure. But dissatisfaction of this type is not confined solely to Uttar Pradesh. Almost all the States feel that way, not excluding Bombay and West Bengal, both of which are more developed than the others. While this sort of complaint is natural, the method chosen by legislators of and from U.P. to ventilate it is likely to lead to undesirable results such as new stimulus to parochialism and ill-feeling between State and State, and between States and the Centre. Instead of resorting to agitational methods, if the legislators and the Government of each State take a diligent interest in the industries that are already established in their respective States and study their problems, the results will be more rewarding to the States and the Indian Union as a whole. If the existing industries are allowed to thrive and make their maximum contribution to the economic growth of the country, there will undoubtedly be far more prosperity than there is at present. Unfortunately, not only is this not done but the State Governments and legislatures blindly accept policies and programmes initiated by the Centre, without caring to see to what extent they affect the fortunes of established industries and the quantum of employment provided by them. Again, the States themselves often adopt measures that impede the growth of these industries. And it is no exaggeration to say that, when existing industries languish, the climate for establishing new ones also gets fouled.

The depression in the cotton textile industry, for which the Government's defective policies are chiefly responsible, has severely hit employment in the States of Bombay and Uttar Pradesh. This is true of the jute industry in West Bengal. Similarly, the difficulties of the sugar industry have adversely affected the economic climate in Uttar Pradesh and Bihar. Some of these difficulties are due more to their own faults than those of the Central Government. If only the Government of Uttar Pradesh had firmly dealt with the leaders of trade unions and canegrowers who were stirring up their followers by making uneconomic demands on the sugar and cotton mill industries, there would have been less unemployment in that State. We do not say that all employers in U.P. are free from blame. Some of them have, in their attempts to build up industrial empires, converted prosperous concerns into losers. These misdemeanours could have been minimised had the authorities exercised the powers, which they possess in abundance, effectively and in time. The price which the country has so far paid as a result of these omissions and commissions on the part of Governments, trade union leaders and a section of industrialists will not have gone in vain if the lessons of the past are borne in mind and the warnings from experienced industrial leaders are heeded. There is a lot in the presidential speech of Mr. P. Hadfield, delivered at the annual meeting of the Indian Sugar Mills' Association, held at New Delhi this week, that can be noted with profit by the Governments at the Centre and in the States, particularly those in U.P. and Bihar. These two States, as readers are aware, today account for the great bulk of sugar consumed in this country. But they will suffer greatly in the years to come if their Governments do not bestir themselves now and take energetic measures for improving the competitive position of sugar factories in their jurisdiction. The situation for these factories is still not so desperate as that for the cotton mills in the Kanpur area, but it may well be so in the not distant future, unless the authorities wake up and implement the constructive proposals that have been put forward from time to time for strengthening the economic position of the white sugar industry.

It would be a grave mistake to treat this suggestion as a plea for curtailing the return to either canegrowers or workers in sugar factories. No enlightened employer would put forward or endorse such a suggestion, for he knows that he can find an expanding market for his products only when agriculturists and industrial workers are prosperous. It is, however, commonsense that a higher return to sugarcane growers should be sought to be obtained by enabling them to grow better varieties of cane that will give more sugar. The return to workers in sugar factories will itself depend on the success achieved in this direction, apart from an increase in their productivity. The State Governments have a lot more to do than they have done so far in the sphere of cane development. They have also to educate the canegrowers on this issue along right lines. Here, the U.P. and Bihar Governments are actually guilty of misleading canegrowers and trying to be in their good books by lending support to the ill-conceived demand for an increase in the price of sugarcane, irrespective of its quality. The U.P. Government, in particular, has done nothing to curb production of *khandsari*, which is admittedly a wasteful way of utilising sugarcane. The Central Government deserves to be complimented on taking a firm stand on these issues. Mr. A. P. Jain was right in claiming, as he did at the I.S.M.A. annual meeting, credit for stalling the demand for an increase in the price of sugarcane and for reducing the excessive advantage which *khandsari* has been having over white sugar. He has thereby done a great service to U.P., in the economy of which white sugar plays a significant part.

It is rather premature to say, as Mr. Hadfield pointed out, whether the excise duty of Rs. 6.30 per cwt. now imposed on *khandsari* is adequate for effectively preventing diversion of sugarcane in the factory areas from mills to *kohlus*, for *khandsari* still enjoys an advantage of Rs. 11.31 per cwt. in the indirect taxation which white sugar has to bear, apart from other direct taxes. This margin is as much as 4½ times the advantage which *khandsari* had over white sugar in 1952, when it was relieved of the small excise burden of As. 8 per cwt. on the recommendation of the Tariff Board. That *khandsari* production jumps up when white sugar becomes expensive or is difficult to be had is evident not only from the data given by Mr. Hadfield—*vide* page 411—but also from the last Tariff Board report. Between 1930-31 and 1932-33, when white sugar industry had not been firmly established, the output of *khandsari* rose from 200,000 tons to 275.000 tons. Thereafter, it steadily lost ground and stood at 92,150 tons in 1938-39. During the war years, when sugar was rationed and could not be easily obtained, it rose again, touching a peak of 195,870 tons in 1942-43. It was only after independence that it returned to the pre-war level of less than 100,000 tons. It is now estimated that, during the current year (1958-59), *khandsari* production is not less than 375,000 tons, but possibly as high as 450,000 tons.

Such a large increase in the production of *khandsari* is a clear proof of the abnormal advantage it has been enjoying over white sugar. The loss of sugar in crushing the cane in *kohlus* is nearly 25 per cent., the recovery per cent. in *khandsari* manufacture being no more than 7.5 or 8, as against 10 to 10.5 in the case of white sugar. If the excess quantity of sugarcane that was diverted to *khandsari* had been crushed in the mills, the output of white sugar this year would have been up by some 400,000 tons to 2,250,000 tons, instead of declining by 125,000 tons to 1,850,000 tons. It is not as widely realised as it must be that none gains by the loss of sugar suffered in the manufacture of *khandsari*. The loss is by no means negligible, being as much as 30 to 33⅓ per cent. In fact, the proper solution to this problem would be a complete ban on the manufacture of *khandsari*, except in those areas where there are no sugar mills and where the land cannot be put to any other agricultural crop which the country badly needs, and with the further safeguard that, where its manufacture is allowed, it should be subjected to a heavier excise duty than the one levied now.

Mr. Hadfield's analysis of the implications of sugar co-operatives to joint-stock sugar companies sounds a little far-fetched, in that he is attributing to co-operatives a degree of efficiency which is far higher than can be expected. It is not, therefore, surprising that the Union Food Minister did not share his fear. But, on the issue whether or not sugar co-operatives should be subjected to income-tax and super-tax, we entirely agree with Mr. Hadfield that they should be. Indeed, we would go a step forward and suggest that, for purposes of taxation, they should be treated in the same way as joint-stock companies. This is necessary as much from the point of view of the resources needed by the Government as in the interest of efficiency. Too much of spoon-feeding will lead to complacency and carelessness in the management of co-operatives. Further, sugar co-operatives are not, strictly speaking, co-operatives in the real sense of that term. In actual practice, they are State enterprises and should be treated as State-owned commercial ventures.

Export of sugar is another subject to which Mr. Hadfield referred in his speech. He described his Association's policy on this subject as follows:

"In an expanding economy, supply and demand can hardly keep exactly in line; when there is surplus, export it; do not hoard it. Earn the exchange needed to buy other commodities. We do not have surplus sugar at the moment, but, since the general view is that there will be considerable surplus for disposal in a year or two or three, give us the advantage of keeping Indian sugar on world markets, so that it is known and can be sold when it must. It is in respect of the necessity to cover the losses on export by slightly increasing the internal price that *khandsari* represents a serious problem. At the current rate of development, there will be so much *khandsari* in the future years that it, rather than white sugar, may well control internal prices and make it impossible to recover the losses made on export from sales within the country."

This is a very ingenious way of arguing the case for exporting sugar, but it is neither convincing nor logical. The *khandsari's* claim for growth stands self-condemned and there is no need to drag it for sustaining the case for export. In an expanding economy with a leaping population, the demand for sugar will also grow and it is doubtful whether there will be sufficient increase in the production of white sugar to take care of this demand at a reasonable price. Secondly, while it is not necessary to hoard sugar, it is essential to keep a buffer sock, in order to take care of shortfalls in production which are not unlikely in an industry based on agriculture. Thirdly, the price which the country has to pay for keeping Indian sugar on world markets will be too heavy and it is a moot point whether the country should incur it, knowing full well that it cannot export sugar at a profit except when there is a boom in world markets; such booms are rare and, when they occur, no special effort will be needed to sell Indian sugar, as was the case at the time of the Suez incident. There is plenty of scope for white sugar within the country itself. The objective of the I.S.M.A. should be to serve the domestic consumer by supplying his needs in full at much lower prices than they are today and not to try to push them up further by invoking the country's plight of foreign exchange. There are other products which are more suitable for export on profitable lines than sugar. It is regrettable that, in his whole speech of several thousand words, Mr. Hadfield has not devoted even a few words to the plight of the domestic consumer, who has paid through his nose all these years for the survival and growth of the sugar industry.

COMMUNISTS OPPOSE U.S. INVESTMENT

WORLD WHEAT AGREEMENT—COMMODITY MARKETS

THURSDAY, 5 P.M.

TO a certain section of political opinion in the country, any trade, commercial or industrial, contact which India may establish with the free countries represents a capitalist conspiracy, full of dangerous import and malevolent significance. However, it is all praise for any agreement which India may conclude with the Russian bloc, which, in its eyes, constitutes the only progressive force in an otherwise reactionary world. This represents an attitude of mind which is far from scientific and critical, for it may lead one to take up positions which neither facts nor reason can justify. A sorry exhibition of this mental attitude was the one which was witnessed in the short Parliamentary debate last week over the Central Government's agreement with the world-famous American firm, Mercks, for the manufacture of streptomycin in the factory of the Government-owned Hindustan Antibiotics (Private) Ltd. Now Mercks suffer from the disadvantage of being an American firm. And, to a certain school of political thought, all science took its birth and reached its perfection within the Russian orbit and the rest of the world—if it is not dead, it is better dead than alive—is incapable of any good at any time anywhere.

MARKET GOSSIP

The agreement was the target of attack on three grounds. First, it would entail a drain on India's foreign exchange to the tune of Rs. 1.50 crore over a period of 10 years. Second, it had been preferred to a Russian offer which was more comprehensive in scope. Third, a clause in the agreement provided for excessive control by the foreign firm over the staff to be employed by the Indian factory in the manufacture of streptomycin. The Union Minister for Industries, Mr. Manubhai Shah, whose strong point has always been his amazing grasp of facts, had no difficulty in demolishing the case built up by the opposition. He said that the royalty on the basis of 2½ per cent. of the value of yearly production would amount to Rs. 30 to Rs. 40 lakhs over a ten-year period, and not Rs. 1.50 crore. Further, he stated, in effect, that the Government was not averse to Russian offers of help and that it had, in fact, decided to set up five more drug manufacturing units in the public sector with Russian assistance. Finally, he said that the insistence on the maintenance of secrecy in manufacturing operations was not a reprehensible American trait, for the Russians too had insisted on a similar condition before agreeing to collaborate in projects, such as the heavy machine building plant. No wonder, the opposition resolution on the agreement was lost, for, after the Minister's reply, it had lost whatever pretence to meaning and significance it might have had earlier. The moral of the episode is that it may occasionally pay even the omniscient Communist Party to remember that there may well be two sides to a question, and that its own side need not necessarily possess the monopoly of logic and reason.

The Indian Communist Party's designs are now becoming increasingly clear. It is out to take this country into the Russian orbit. Shortly after his return from Russia a few days ago, Mr. E. M. S. Namboodiripad, Chief Minister of Kerala, declared that his party was keen on nationalising the foreign-owned plantations in his State and was considering the ways and means of achieving its objective. He knew very well that the subject was not within the jurisdiction of his Government and that the Central Government had made it very clear shortly after he came to power in Kerala that it had no intention of nationalising plantations, whether owned by Indians or by foreigners. And yet Mr. Namboodiripad reiterated his party's determination. What was his object in doing so? Apparently to frighten foreign private capital from seeking investment in India. The Communists know very well that, if more foreign private capital comes to India, it would make their task of winning power and ultimately joining this country with the Communist bloc more and more difficult. With the object of scaring away foreign capital from this country, they have been making wild claims and forecasts for foreign consumption. They have been saying, for instance, that the chances of greater victory in the next elections are improving day by day and that, in the summer of 1962, if not earlier, they will be wielding power not only in Kerala but in Andhra and West Bengal also. Some of the policies and practices of the Central Government as, for instance, the proposed land reforms, extension of State trading to foodgrains and seeking the assistance of Russia for establishing heavy industries and developing the mineral wealth, are proving a great source of comfort and encouragement to them. No wonder, they have boldly come forward to co-operate with Mr. Nehru in the implementation of the Nagpur resolution. Some business men are actually of the opinion that to oppose Mr. Nehru on the Nagpur resolution would be to push him into the arms of Communists. Many, however, feel that this fear is unwarranted. On the contrary, they are of the view that it is urgently necessary to form a rightist party in order to restrain the Congress Party from excessive leftist leanings.

• • • •

The U.N. Conference of exporters and importers of wheat, which was held at Geneva under the shadow of growing surplus of wheat in the new hemisphere, has produced a new draft International Wheat Agreement to replace the one expiring on 31st July 1959. The Conference, which lasted for some 6½ weeks, was attended by 44 delegations. It has now succeeded in producing a draft document which will be open for signature from 6th to 24th April 1959. Although the details of the agreement are not available at the time of writing, it is known that the maximum and minimum prices under it have been fixed at $1.90 and $1.50 per bushel, respectively. The mechanism of maximum and minimum prices works on the principle that, if the free market price rises above the maximum, the importing member-countries can call upon the exporting members to sell at the maximum price, and, if the free market prices fall below the minimum price, the importing countries are under an obligation to buy at the minimum price from the exporting member-countries.

It may be recalled that, under the current agreement, which is the third in the series of International Wheat Agreements, the maximum and minimum prices are $2.0 and $1.50, respectively. In other words, under the draft agreement, the minimum price remains unchanged, while the maximum price has been reduced by 10 cents. This is only as it should be, having regard to the continued overproduction in the U.S. and Canada. But, as we pointed out in a leading article on the subject in our issue dated 31st January 1958, at no time during the period covered by these agreements did the minimum price operate, the market rate having ruled well above it. The maximum level, however, was effective only during the first agreement when wheat was relatively scarce. During the second and third agreements, the market rate was well below the maximum. It remains to be seen whether either of the two limits will operate at any time in the next three-year period (1959-62) which the agreement will cover once it is ratified by the participating Governments.

The difference in price range is not the only feature which distinguishes the new agreement from the earlier one. In the new text, the previous concept of guaranteed qualities has been abandoned. Obligations are generally on a global basis, so that trade can flow more freely. Again, on the importing side, consuming countries undertake to purchase a percentage of their total commercial imports from exporting members. The list of exporting countries, which formerly consisted of Argentina, Australia, Canada, France, Sweden and the U.S., has been enlarged by the addition of Italy, Mexico and Spain. These countries have undertaken to supply commercial needs of the importing countries. Finally, a notable development is that the U.K. plans to rejoin the international wheat pact, after being out of it for a prolonged period. Britain, which accounts for some one-fifth of world import trade in wheat, refused to enter the last two agreements, the earlier one (1953-56) on the ground that minimum price was not reduced and the third agreement (1956-59) on the additional ground that the exporting countries did not take measures for solving wheat surpluses. Apparently, it is now convinced that the new draft agreement is an improvement on the earlier wheat pacts, though the minimum price remains unchanged. Or it may be that the international political situation has compelled it to be more responsive and less rigid.

• • • •

Prices of principal commodities have gone up further since last week. In fact, virtual buoyancy prevails in both cotton and oilseeds. Jarilla May touched a high of Rs. 684 today, as compared with Rs. 670.75 a week ago. The expiring March contract, too, firmed up to Rs. 683 today, which is the highest level to be seen during the last one month and only Rs. 5 below the record level reached on 6th February. The buoyancy of cotton is the result of heavy speculative buying and investment support sparked off by firm advices from the spot market where, following reports of damage to Laxmi-Jayadhar and Southern crop and the consequent brisk mill buying of existing quality lots, values have hardened. The sharply reduced crop estimate, which currently places the crop at no more than 4.8 million bales, better news from the export front, small volume of tenders against the March contract and encouraging news from the piecegoods market have all fanned the bullish fervour. Although a mild reaction set in yesterday, it has proved short-lived. The market has firmed up again today, due mainly to the fact that not a single bale of cotton was tendered today, the fourth notice day. The Jarilla March contract spurted today to Rs. 683.25 and May to Rs. 684 from yesterday's closing rate of Rs. 675.50 for both the contracts.

The firm trend in oilseeds has virtually flared up into a boom again. On hectic purchases, prices have shot up. The rise is particularly marked in groundnut. The May contract of this oilseed, which struck a note of hesitancy around Rs. 184.50, because a rise of a rupee more from this level would have required the payment of a margin of Rs. 45 per candy, pierced this level today and shot up to Rs. 188.75. Bulls were prepared to pay the margin rather than let go their lead. Shortage of supplies, reduced arrivals owing to the high prices prevailing at the terminal markets, good demand from crushers and manufacturers of vegetable products and the high rate of consumption have emboldened them to push up prices. Rumours of large business with Communist countries have strengthened castorseed, with linseed and cottonseed moving up in sympathy. Castorseed May has rallied from Rs. 156.25 last week-end to Rs. 160.62, linseed May from Rs. 32.50 to Rs. 33.44 and cottonseed May from Rs. 125.25 to Rs. 129.75. Thus, the efforts made by the Forward Markets Commission

(*Continued on next page*)

LONDON LETTER

MOSCOW AND MARKETS

From Our Own Correspondent

LONDON, 6*th March*

FLEET Street faithfully portrayed the ups, downs and ups of Mr. Macmillan's visit to Moscow and the City followed Fleet Street. Usually, the political barometers need careful reading but the Russian barometer as Fleet Street saw it was clear as a speaking clock. The excitement of the first few days caused a positive note of exhilaration in the Press accounts, an exhilaration that created an altogether exaggerated downward plunge when it seemed that the British Premier was being snubbed. The upswing was naturally more cautious but the relief that it was there was undoubted. By the middle of this week, opinions generally were unanimous that the visit had been worthwhile.

The stock markets were equally depressed at the end of last week, the political factor being accentuated by a firming up of money rates and some liquidity selling by the joint-stock banks. By the middle of this week, the market in gilts was recovering, although credit has continued to remain relatively tight with a consequent abandonment of hope for any further reduction in Bank rate.

Mr. Macmillan's visit has been accompanied by a good deal of speculation as to the possibility of increasing trade with Russia, but the very nature of the talks has prevented any reflection of these sentiments in the business world. Obviously, the less tension there is, the greater the likelihood of expanding trade, and British businessmen have, in any case, got all the incentive necessary for selling more to Russia, or to anywhere else for that matter, if the opportunity occurs.

And the Treasury is certainly hoping that exports will strengthen, for the latest rise in the gold reserves of £16 million looks low, as against the January increase of £46 million. No doubt, the fact that at this time of year the gold flow is the result of seasonal sales of raw materials from the sterling area, is biased by the fact that raw material prices are as low as ever. The wiseacres in the City point out that $200 million has to be repaid in a couple of months' time to the International Monetary Fund and that, in consequence, it is too much to expect any further net increase in the gold reserves before about June.

Fortunately, at home, the economic factors by getting no worse appear to improve! The index of industrial production, which in November last year was a point down on the year before, by December was a point up and in January was holding its own. Similarly, unemployment, which has been steadily rising for many months past, has now flattened out. It is obviously better to stop still than to go back and the Minister of Labour is sticking to his forecast that, by April, the trend will have definitely improved.

Footnote: British banking has started a new line which, though familiar to the United States, is novel to the respect which the business community here has towards banking techniques. This is no less than the opening by the Westminster in Liverpool and Martins in Leicester of "drive-in" banks. This is no doubt a manœuvre to help the motorist who finds it impossible to park his car in a busy street when he wants to pay in or draw out money. So the bank pushes the road through its premises like a garage entrance, the car stops alongside the cashier's window, business is transacted from the car window to the bank window and the motorist drives off into the traffic. It looks as if the traffic congestion in this country may well force the other banks to follow suit and, whether these two Provincial experiments are regarded as successful or not, they will be tried in London where structural conditions allow.—*All Rights Reserved.*

LARSEN AND TOUBRO

Messrs. Larsen and Toubro Limited, Bombay, have secured the contract for erecting a water supply and treatment plant in the Nangal Fertilisers and Chemicals Factory. The plant will have a capacity of 55.000 Imperial gallons of water per minute and is expected to be completed in about 15 months. The aggregate outlay of the plant, including cost of equipment, erection and all civil engineering works, is put at Rs. 70 lakhs.

SHARE MARKET BULLISH

FURTHER GAIN IN VALUES

(From Our Own Correspondents)

BOMBAY, *12th March*

THE share market continued to rule bullish during the week under review. The bullish fervour was fanned principally by the Union Finance Minister's assurance in the Rajya Sabha on Tuesday that he would examine the proposed new scheme of company taxation for removing anomalies of double taxation. Earlier, the market derived much strength from the explanation of the Central Board of Revenue supported by illustrations that the overall tax position of the corporate sector would be substantially maintained in all respects. It ignored the contention of some unofficial experts that they did not agree with the explanation and that most companies would be adversely affected by the proposed scheme of corporate taxation. There were unconfirmed reports that the L.I.C. would buy Rs. 1.5 crore worth of shares in about 40 companies. Another factor that strengthened the hands of bulls was the Government's estimate that deficit financing in 1959-60 would be of the order of Rs. 225 crores. Towards the close, end-of-account considerations induced some profit-taking and the leading scrips finished at levels well below the best.

The trend of Calcutta and Madras share markets also was firm. There was very good investment demand in these markets, which coupled with scarcity of scrips, led to a sizable rise in values. Plantations in Madras were particularly cheerful, following the absence of any new taxation in Kerala.

Tata Ordinaries opened the week firm at Rs. 177, as against Rs. 176.75 on Thursday last, and advanced steadily to touch Rs. 181.75 today. Towards the close, however, they were easy at Rs. 180.75. The increase over the week was thus Rs. 4. Under the impetus of higher production figures, Indian Irons moved up from Rs. 22.56 to Rs. 23.68 before finishing at Rs. 23.52.

Textile shares met with good support, thanks to reports of encouraging offtake of piecegoods, domestic and overseas. Swans and Kohinoors were particularly fancied, the former climbing up by Rs. 24.50 to Rs. 372.50 and the latter by Rs. 19.50 to Rs. 253. Centurys staged a net rise of Rs. 16 to Rs. 461, after being higher at Rs. 467.50 earlier today. Standards strengthened by Rs. 11.50 to Rs. 442.50, Khataus by Rs. 11.25 to Rs. 166.25, Swadeshis by Rs. 7 to Rs. 212 and Sreenivas by Rs. 5 to Rs. 146. Simplex and Minervas recorded a gain of Re. 1.50 each to Rs. 168 and Rs. 60.50, respectively. Bombay Dyeings gathered a rupee to Rs. 58.70. At one time yesterday, they stood higher at Rs. 59.10. The Directors of the Company (Bombay Dyeing) have decided to maintain the final dividend for the year 1958 at Re. 1.75, thus making a total of Rs. 2.50, same as that for the previous year. Models, however, were subjected to selling pressure following notice of indefinite closure from the 16th inst., and slumped by Rs. 20 to Rs. 141.25. Edward Textiles dropped Rs. 5.50 to Rs. 210. Finlays lost a rupee to Rs. 267, reflecting the disappointment of operators over the cut in dividend to Rs. 16 for 1958, as against Rs. 20 for 1957. Swans and Gold Mohurs, however, have maintained their dividends at Rs. 25 and Rs. 15 per share, respectively.

Among sugar shares, Belapurs evoked scattered buying and spurted from Rs. 289 to Rs. 294.50 yesterday on account of scarcity of sellers. They, however, finished lower today at Rs. 292. Phaltans registered an improvement of Rs. 4.50 over the week, today's closing rate being Rs. 154.50. Walchandnagars strengthened by Rs. 10.25 to Rs. 291.25.

Cement shares showed a hardening tendency. Digvijays firmed up by Rs. 7.50 to Rs. 139.50. A.C.Cs rose from Rs. 146.25 to Rs. 147.75 today. But, towards the close, it was lower at Rs. 146.50. Jaipur Udyogs put on Re. 1.44 to Rs. 11.64.

Engineering shares continued to be in the limelight, with further additions to values. Alcock Ashdowns jumped up by Rs. 13 to Rs. 275. Premier Constructions were marked up from Rs. 243 to Rs. 251.50, thanks to the enhancement in dividend to Rs. 11 for the year 1958 from Rs. 10 for 1957 and Rs. 8.50 for 1956. Tata Locomotives gathered Re. 1.50 to Rs. 182.50. Larsen and Toubros increased by 80 nP to Rs. 19.72 on news that the Company had secured a large contract from the Nangal Fertilisers and Chemicals Ltd. and on rumours that the Company would be issuing new shares at par.

Mining shares also evoked persistent buying orders. Shivrajpurs hardened by Rs. 2 to Rs. 99.50. Indian Coppers strengthened from Rs. 3.78 to Rs. 3.94; at one time, they were as high as Rs. 4.02.

Among automobile shares, Premier Automobiles were well fancied moving up from Rs. 98.50 to Rs. 104. Hindustan Motors also were better by 16 nP at Rs. 8.04.

In the miscellaneous section, Bombay-Burmahs provided a bright spot. They advanced from Rs. 483.50 to Rs. 498 yesterday but receded to Rs. 492 today. The net gain over the week was Rs. 8.50. Tata Oils were pushed up by Rs. 4.75 to Rs. 51. National Rayons spurted by Rs. 8 to Rs. 264.75. West Coast Papers strengthened by Rs. 12.50 to Rs. 128.50, Radio Lamps by Rs. 7.75 to Rs. 121.75, Ceat Tyres by Rs. 4.25 to Rs. 102.25, Investment Trusts by Rs. 3 to Rs. 88.50, Texmacos by Re. 1.28 to Rs. 22.40 and Hindustan Levers by Re. 1.05 to Rs. 29.50. Killick Industries were done higher at Rs. 150, as against Rs. 147. Wimcos rose by Rs. 4 to Rs. 194. There was a drop of 48 nP in Gwalior Rayons to Rs. 14.68 on some stray liquidation.

MARKET GOSSIP

(Concluded from previous page)

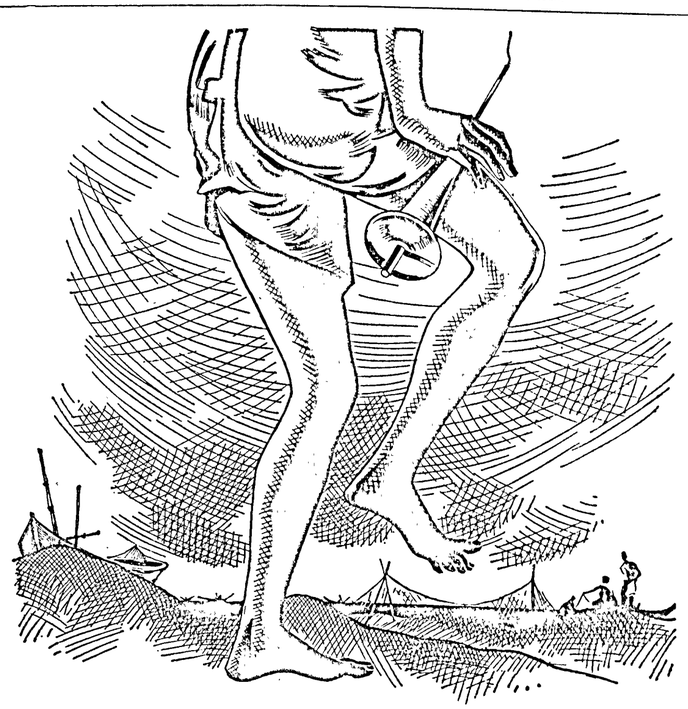
and the Reserve Bank of India to curb the upward trend in these major commodities have had only a temporary effect and the inexorable economic law of supply and demand has taken the situation in hand.

• • • •

What was until recently hailed as a scheme with the double objective of boosting exports of art silk fabrics and meeting a part of the yarn requirements of weaving units without any fresh commitment of foreign exchange now stands suspended. Announcing the suspension, an Import Trade Control public notice says that the Government of India is considering modifications in the scheme. It will be remembered that, under the scheme, the exporters of rayon fabrics were given import licences for 100 per cent. of f.o.b. value of goods exported, except in the case of *saris* where the percentage was lower at 66⅔. Details regarding the nature of these modifications or the time when a final decision will be made known are not available. It is, however, gathered that the scheme may be framed in such a way that the total value of art silk yarn imported against exports of fabrics will not be more than Rs. 4 crores per annum. Meanwhile, the applications for import licences for art silk yarn already submitted but still pending with the port licensing authorities will be subjected to strict scrutiny by a special committee to be appointed shortly.

The aforesaid move of New Delhi has apparently been prompted by the need to put an end to the several malpractices indulged in by a section of art silk industry and trade ever since the scheme was initiated. The malpractices include, it is alleged, preparation of invoices of fabrics exported at a level much higher than the actual value of exports, with a view to securing larger import licences for yarn; sale of yarn so imported in the open market at high prices, instead of being consumed by the mills for weaving fabrics; selling of import licences at a high premium of 25 to 50 per cent.; and forward dealings in prospective licences. Even the measures taken by the Silk and Rayon Textiles Export Promotion Council to check these malpractices, it is said, have not proved a success, so that the misuse of concessions has continued unabated. Considering that such undesirable practices will prove detrimental to the export trade in rayon goods and the domestic producers of rayon and staple fibre yarns, the Central Government was right in intervening as it has done.

Despite the malpractices as noted above, the scheme as such, it must be admitted, has succeeded in giving a boost to the export trade in rayon fabrics. The total foreign exchange actually earned from fabrics sold abroad during the year 1958 was as much as Rs. 9.77 crores, which compares very favourably with the average annual figure of Rs. 50 lakhs before the scheme was introduced. The scheme will certainly continue to serve the purpose well, provided it is modified suitably. Two such modifications may be mentioned. First, the scheme should be confined only to weaving mills and established traders. Secondly, auctioning of import licences must be strictly prohibited through imposition of proper checks and severe penalties for offences.



a timeless craft

A common sight on many a sandy beach and village is this rustic man spinning yarn from a ball of cotton. He uses a simple implement, the 'thakli'. A flick of the fingers and round spins the 'thakli' while a practised hand gently draws out the fine thread. Flourishing together with this fine but primitive cottage craft, in India, is the giant modern textile industry. Today, there are more than 420 textile mills, in our country, with about 12 million running spindles. Texmaco, the manufacturer of the first ring spinning frame in India, accounts for nearly two million of these spindles. Aided by the world's best technical know-how, Texmaco is today equipped to manufacture and supply the entire range of spinning machinery for cotton and staple fibre.

TEXMACO

serves India's basic industries

TXC-51

NEWS IN BRIEF

THE Central Government has agreed to render financial assistance to the agricultural university proposed to be set up by the U.P. Government at Rudrapur.

The United Nations International Children's Fund (U.N.I.C.E.F.) has approved of a grant of $1 million to the Bombay Government for the establishment of a new dairy project at Worli.

The Government of India has decided to set up a State-owned limited company with a capital of Rs. 75 lakhs to run the Janpath Hotel at New Delhi, which is at present managed departmentally.

The Government of India has under consideration a proposal from an Indian firm to import 19,000 tons of kerosene and 6,000 tons of high speed diesel oil from Rumania this year.

The income-tax arrears outstanding as on 31st March 1958 amounted to Rs. 287.32 crores, as against Rs. 267.33 crores and Rs. 233.59 crores at the end of the two preceding financial years, respectively.

The Scindia Steam Navigation Company Ltd., is understood to have secured a loan of about Rs. 70 lakhs in foreign currency from the Industrial Credit and Investment Corporation of India. The Company will utilise the amount for the purchase of ocean-going vessels.

A team of nine Japanese experts is currently investigating the suitability of Ootacamund, Madras, for the establishment of a rayon pulp mill. The experts, who have come to India at the request of the Central Government, will explore the facilities available there such as raw materials, electric power, water and transport.

At the suggestion of the Central Government, the Government of Madras has constituted an Advisory Committee for implementing the Plantations Labour Act 1951. The Committee is headed by the Commissioner and consists of the Chief Inspector of Plantations, Director of Medical Services and the Director of Public Health and representatives of employers and employees.

The Government of India has made compulsory the payment of additional price to cane growers by sugar mills under the Expert Committee's formula or under the I.S.M.A. formula. Disclosing this in the Lok Sabha, Mr. A. P. Jain, Minister for Food and Agriculture, stated that the additional price has become part of the original price under law.

Licences have been issued by the Central Government for the setting up of two small blast furnaces to produce pig iron, one in Madras and the other in Orissa. The total production of pig iron during 1959-60 is expected to be 970,000 tons, as against the internal demand for 700,000 tons. Efforts are being made to export the surplus to various countries.

The Central Government is reported to be considering a proposal put forward by the National Buildings Organisation to establish a Rs. 20-lakh plant for the manufacture of asphaltic roofing material. On the basis of the availability of transport facilities and raw materials such as bitumen, a petroleum by-product and hessian, the Organisation has suggested three sites for locating the plant, namely, Bombay, Calcutta and Visakhapatnam.

The Rs. 1.5-crore co-operative sugar factory, the first of its kind in the Saurashtra area, will be opened at Kodinar by Dr. Jivraj Mehta, the Finance Minister of Bombay, on the 16th inst. The factory is expected to crush 1,000 tons of cane a day. The Industrial Finance Corporation has given a loan of Rs. 25 lakhs towards the construction of the factory and sanctioned an additional loan of Rs. 60 lakhs. The State Government has invested Rs. 10 lakhs in the project.

A Demographic Advisory Committee has been set up by the Government of India, with Dr. V. K. R. V. Rao, Vice-Chancellor of Delhi University, as Chairman. The function of the Committee is to correlate studies in demographic research in the country. The members of the Committee are Prof. P. C. Mahalanobis, Mr. P. J. Thomas, M.P., Mr. Ashok Mitra, Registrar General of Census Operations, and Col. B. L. Raina, Director of Family Planning in the Directorate-General of Health.

The Geological Survey of India has discovered coal deposits in about 13 sq. miles in Barjora thana in Bankura District, adjacent to Durgapur barrage. The region, it is estimated, contains about 11 million tons of inferior quality coal in four seams. Coal deposits have also been located near Ondal, Burdwan District. This is considered to be an extension of the Raniganj coal belt which is believed to run eastward under alluvial soil.

Production of penicillin by the Hindustan Antibiotics factory at Pimpri touched an all-time monthly record of 2.85 million mega units in February. From June onwards, the factory proposes to increase its annual production to 40 million mega units. The prices of some of its products have been reduced by 20 per cent. since November last. A further reduction of 10 per cent. in the prices of streptomycin and dihydro-streptomycin is contemplated. It is expected that, by the end of the second Plan, saving of foreign exchange will be of the order of Rs. 4 crores annually as a result of increase in the domestic output of penicillin.

The Government of India has decided to set up six regional research-*cum*-training centres to train personnel for the State rural housing cells and other engineering field staff employed in the Community Development blocks, with a view to promoting the use of local building materials, improvement of construction techniques, and planning and execution of projects. These centres will be established under the Village Housing Projects Scheme of the Ministry of Works, Housing and Supply. The centres will be attached as separate wings to some of the existing engineering institutions in the country where most of the staff and equipment is available. This scheme is estimated to cost about Rs. 4.50 lakhs. The Ford Foundation will give a grant of $94,500.

• • • •

From Abroad

The U.S. Custom smelters have raised the price of copper by half per cent. a pound to 32.00 cents, with effect from the 4th inst.

Substantial deposits of copper pyrites have been discovered in Turkey near Tirebolu on the Black Sea coast by the Turkish Mineral Research Institute.

The nominal value of public money still invested in the denationalised steel companies in the U.K. is equivalent to about 40 per cent. of their total nominal share and loan capital.

The Government of Pakistan proposes to constitute a Cotton Commission to suggest ways and means of increasing domestic production of long-staple cotton and promoting its exports.

The Chrysler Corporation of the U.S. has developed a new type of lightweight all-aluminium truck. It has the cross-country versatility of a tank and yet can be safely parachuted from the air.

The U.S. has agreed to accept 2,250 tons of tin from Thailand in exchange for American tobacco. The International Tin Council has agreed to let the barter deal go through outside Thailand's normal tin export quota.

Production quotas for coal and a six-nation plan for curtailing coal imports from countries outside the European Coal and Steel Community have been recommended by the High Authority with a view to tiding over the present difficulties of the coal industry.

The Anglo-American oil combine, comprising Shell, Caltex, B.P. and Standard-Vacuum, has renewed its offer to set up an oil refinery in Ceylon with a capital outlay of Rs. 155 million. It has asked the Government of Ceylon for guarantee against nationalisation for at least 25 years.

The International Monetary Fund has entered into a six-month $90-million stand-by agreement with the Government of Mexico. This will provide the Mexican Government with a secondary line of reserves in support of the national currency, which is maintained on a freely convertible basis, during a period when the authorities are taking steps to strengthen the country's gold and foreign exchange position. Mexico maintains a $75 million stabilisation agreement with the U.S. also.

PERSONAL

MR. Perala Ratnam, at present Joint Secretary in the Ministry of External Affairs, has been appointed India's Ambassador to Laos.

Mr. N. Subramanyan, Joint Secretary, the Union Ministry of Commerce and Industry, has been appointed Chairman of the Coffee Board *vice* Mr. K. Srinivasan.

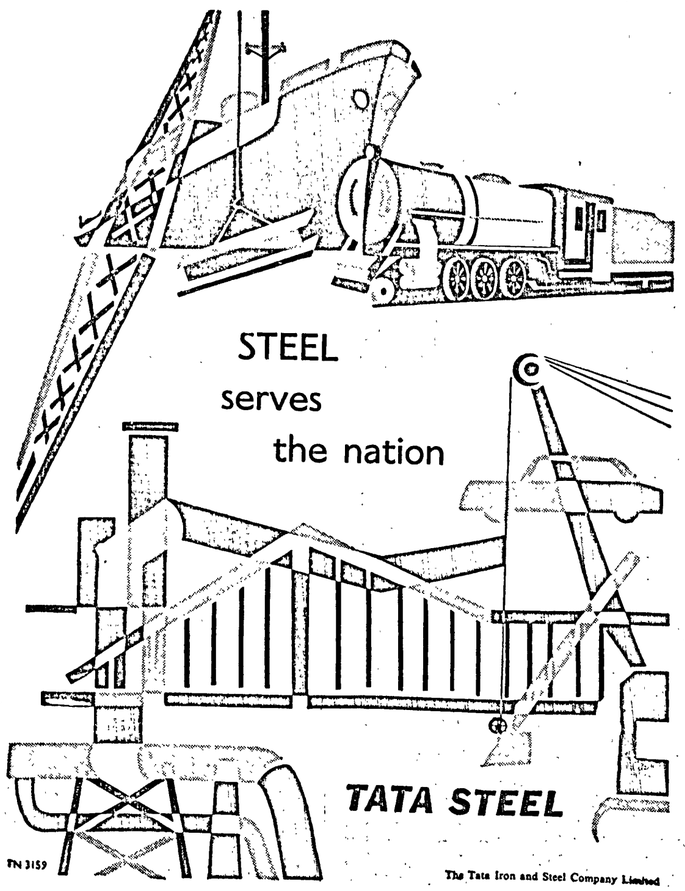
Mr. Frederick Merion D'Mello-Kamath, at present Trade Commissioner for India in British East and Central Africa, has been appointed Commissioner for the Government of India at Hong Kong.

Mr. M. J. Buch, Manager, Shipping Conference Department, Scindia Steamship Navigation Company, took over charge as Chairman of the Karmahom Conference, Bombay, on the 1st inst.

Mr. Shyam Dhar Misra, M.P., has been appointed Parliamentary Secretary in the Union Ministry of Community Development and Co-operation *vice* Mr. B. S. Murthy, who has now assumed charge as Deputy Minister in the same Ministry.

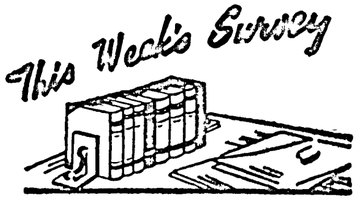
U Nyun of Burma has been appointed Executive Secretary of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.) *vice* Mr. C. V. Narasimhan who has been appointed Under-Secretary (for Special Political Affairs) to the U.N. Secretary-General.

Mr. A. Murugappa Chettiar, a leading business man of Madras, has been elected Vice-President of the Federation of Indian Chambers of Commerce and Industry, New Delhi, for 1959-60. As already notified, Mr. Madanmohan R. Ruia is the President for the new year.



TN 3159

The Tata Iron and Steel Company Limited



A. I. M. O.

AS was only to be expected, industrial problems figured prominently in the annual deliberations of the All-India Manufacturers' Organisation (A.I.M.O.) which were held this week in Bombay. Appropriately enough, the A.I.M.O. has, as its motto, "prosperity through industry." Emphasis on industry should be both specific and general, for prosperity is to be attained not only through industrialisation but also, as the A.I.M.O's Founder-President, Dr. M. Visvesvaraya has never been tired of reiterating, through the development of industrious spirit by the community. Although India could be justifiably proud of some of its recent achievements in the industrial sphere, it is now well recognised that the country has to go a long way before its industrial production reaches levels which would be regarded as appropriate for a country of India's continental size and population. Since these achievements have been shared by the public and the private sector, the A.I.M.O's President, Mr. N. D. Sahukar, rightly prefaced his address with a tribute to these two sectors. Mr. Nehru who inaugurated the meeting stressed the importance of agricultural production and of building up the basic industries, like machine-building industries. He agreed with Mr. Sahukar's plea for giving special attention to geological survey and exploration and technical education.

Among the specific issues raised by Mr. Sahukar, those relating to steel industry, capital needs of medium-scale industries, provision of the right climate for foreign capital and promotion of export trade deserve notice. Mr. Sahukar was optimistic about India's capacity to consume the steel which would be produced in the country. If the U.S. with a population of 164 million could consume 112 million tons of steel, Japan with a population of 90 million consume 9.4 million tons and Belgium with a population of 9 million use 7 million tons, there was no reason why India with a population of 370 million should not be able to consume 4.6 million tons of finished steel. He, therefore, welcomed the Government's move towards setting up a fourth steel plant. He, however, advised some caution in the matter of copying the steel production methods employed by China's small-scale units, for the "quality of steel produced in China leaves very much to be desired." He also stressed the need for setting up a complete plant for producing tool and alloy steels and for giving top priority to the production of machine tools.

Discussing the requirements of capital by industries, Mr. Sahukar felt that, while the Government was solicitous about the capital needs of large-scale and small-scale industries, no attention had been given to the medium-scale industrial units which he defined as those with a capital of between Rs. 5 lakhs and Rs. 50 lakhs and with less than 1,000 workers. If this complaint is correct, the authorities in charge of the industrial finance institutions in the country should give serious thought to it. Since the availability of capital is strictly limited in relation to India's requirements, Mr. Sahukar did well to stress the importance of inviting foreign aid in the shape of foreign participation in equity capital. He added: "However, to obtain the participation of foreign capital in our industrial development, we have got to make an all-out effort to create in this country a proper climate." In this connection, he suggested the need for concluding trade treaties with countries with surplus capital and for arrangements for avoiding double taxation.

Although foreign capital can ease the difficulties of capital shortage in the country, it cannot eliminate the need for continuous effort designed to promote exports which will be needed for purposes of paying for India's growing volume of imports and its maturing obligations arising from its foreign borrowings. Mr. Sahukar's suggestions for export promotion included the establishment of export houses in collaboration with foreign merchant houses, extension of the export credit guarantee scheme to cover pre-shipment, post-shipment and fabrication risks, reduction in premium rates for credit insurance, allocation of larger foreign exchange for foreign publicity for Indian goods and establishment of free trade zones in a few major ports. There is no doubt that, if these suggestions are implemented, India's export trade will receive the fillip which it needs so badly. It cannot, however, be too strongly stressed that no export promotion measure is an adequate substitute for continuous watch over quality and production costs which alone determine a country's export trade.

STATES' FINANCES

The Government of India budget estimates for the coming year (1959-60) provide for an aggregate transfer of Rs. 655.95 crores of resources from the Centre to the States, as against the revised estimate of Rs. 638.77 crores for 1958-59, that is, an increase of Rs. 17.18 crores. This transfer is partly in the form of loans and partly in grants. The loan portion actually shows a fall of Rs. 13.82 crores to Rs. 312.69 crores. The provision for grants met from revenue has been stepped up considerably by Rs. 23.63 crores to Rs. 156.54 crores. The provisions under grants met from capital and share of divisible taxes are also placed higher, the former by Rs. 4.82 crores at Rs. 22.10 crores and the latter by Rs. 2.56 crores at Rs. 164.62 crores. Thanks largely to this liberal scale of Central assistance rendered possible by the Santhanam Commission's recommendations, as also to the upward trend in revenues following the all-round rise in economic activity, the financial position of the State Governments today is much better than what it was a couple of years ago. It is not surprising, therefore, that all the State budgets disclose either surpluses or only small deficits, in contrast to the substantial deficits shown in the past two years.

INDUSTRIALIST WITH A SECRET. For him the wider vision, the weighty decisions. And still, despite the tension and pace, he's always alert and active—with a secret store of vitality.

For the Secret of the successful Industrialist

Please see announcement opposite

A review of the Bombay, U.P., Bihar and West Bengal budgets has been made in our previous issues—*vide* pages 259 and 302 of *Commerce* dated 21st and 28th February. Of the budgets of the remaining nine States, namely, Madras, Andhra Pradesh, Madhya Pradesh, Mysore, Punjab, Rajasthan, Kerala, Assam and Orissa which have since been published, five show surpluses and the rest deficits. The revenue and expenditure estimates of these State Governments for 1959-60 are as follows:

In crores of Rupees.

States	Revenue	Expenditure	Net position
Madras	73.08	71.69	+1.39
Andhra Pradesh	71.29	71.66	—0.37
Madhya Pradesh	59.37	58.44	+0.93
Mysore	55.69	55.21	+0.48
Punjab	52.88	53.20	—0.32
Rajasthan	38.69	39.14	—0.45
Kerala	38.47	39.25	—0.78
Assam	33.95	30.54	+3.41
Orissa	30.64	30.58	+0.06

Three striking features are descernible in most of the State budgets. First, there are no fresh tax proposals, except in the case of the Punjab and Rajasthan. Secondly, sizable sums of money are proposed to be borrowed from the open market. The provisions made by some Governments are: Madras Rs. 6.00 crores; Andhra Pradesh Rs. 6.00 crores; Mysore Rs. 5.50 crores; Kerala Rs. 4 crores; Madhya Pradesh Rs. 3.00 crores. The daily Press versions of the Punjab, Rajasthan, Assam and Orissa budgets do not give any indication of the States' borrowing programmes. Thirdly, all the State Governments contemplate to spend considerably large sums of money on Plan schemes. The provisions— in crores of rupees—made in the different budgets are: Madras, 34.64; Andhra Pradesh, 24.91; Madhya Pradesh, 15.99; Mysore, 35.00; Punjab, 35.19; Rajasthan, not known; Kerala, 22.00; Assam, 12.25 (provisional); Orissa, 19.32.

The only two State budgets which contain fresh tax proposals are, as already said, Punjab and Rajasthan. The Punjab Finance Minister has announced measures for increasing the tax on road transport fares and freights—from one-sixth of their value to one-fourth—and enhancement of tax on sale of motor spirit—from 25 nP to 31 nP per gallon—which together are expected to yield an additional revenue of Rs. 72 lakhs, thus converting the revenue deficit of Rs. 32 lakhs into a surplus of Rs. 40 lakhs. The taxation measures included in the Rajasthan budget are: an increase in irrigation rate, imposition of betterment levy on works other than the Bhakra, and levy of a new tax on passengers carried and goods transported by motor vehicles at a rate not exceeding one-sixth of the volume of the fare or freight. All these measures, we are told, will bring in an additional revenue of Rs. 58 lakhs. Taking into account this amount, the coming year will end with a revenue surplus of Rs. 13 lakhs, as against the deficit of Rs. 45 lakhs shown in the budget.

The Assam budget discloses a very large revenue surplus, amounting to Rs. 3.41 crores. The surplus is based on the current rates of taxation and the realisation of accumulated arrears. The performance of the Assam Finance Minister in presenting a budget with a large surplus is certainly creditable, considering the enormous strain on the economy of the State, caused by Pakistan aggression on the Assam-East Bengal border and the Naga raids. Alluding to this strain, the Finance Minister has assured the sanction of necessary funds and the following of this principle even though it may sometimes involve postponement and even curtailment of expenditure on Plan schemes.

The estimated revenue surplus of Rs. 1.39 crore in the Madras budget for 1959-60 will be wiped off completely by the recently announced increase in dearness allowance to the non-gazetted officers and teachers which is expected to cost Rs. 1.81 crore in a full year. In other words, 1959-60 will close with a revenue deficit of Rs. 42 lakhs. The Finance Minister of Andhra Pradesh hopes to convert the revenue deficit of Rs. 37 lakhs into a surplus of Rs. 37.97 lakhs, as a result of an anticipated additional income of about Rs. 75 lakhs from the changes proposed in the rate structure of taxes on passengers and public carrier vehicles covered by the legislation passed by the State Assembly recently. Despite the deficit of Rs. 78 lakhs revealed in the Kerala budget, no fresh measures of taxation designed to cover it are proposed. Only, the exemption from sales tax enjoyed by toddy is to be withdrawn; this measure is estimated to yield Rs. 6 lakhs per annum. The remaining gap is to be covered by a more vigorous collection of tax arrears placed at Rs. 2.81 crores.

The Orissa budget provides for a total capital expenditure of Rs. 55.47 crores which is less than the estimated receipts aggregating Rs. 55.58 crores. The surplus on capital account is Rs. 11 lakhs. This, together with the revenue surplus of Rs. 6 lakhs, raises the overall surplus to Rs. 17 lakhs. Nevertheless, the year 1959-60 is expected to close with a debit balance of Rs. 69.52 lakhs; the opening balance for the year is expected to be minus Rs. 86.58 lakhs. Discussing the measures taken for improving revenues, Dr. Hare Krushna Mahtab, Chief Minister of Orissa, said: "Credit has been taken for a sum of Rs. 50 lakhs under land revenue on account of standardisation of rent and assessment of unassessed lands, a sum of Rs. 15 lakhs on account of water rates, a sum of Rs. 24 lakhs on account of taxation of goods carried on roads and inland waterways, and Rs. 2 lakhs on account of sugarcane cess. Bills regarding these measures are remaining pending for consideration of the Assembly. Apart from these measures, credit has also been taken for better collection of arrears, particularly under land revenue and sales tax."

The details regarding transactions outside the revenue account given in the Andhra Pradesh budget reveal that the total of anticipated receipts during 1959-60 are put lower at Rs. 41.87 crores, as against the revised estimate of Rs. 45.08 crores for 1958-59, while disbursements are placed higher at Rs. 48.60 crores, as against Rs. 46.60 crores. The deficit outside revenue account thus comes to Rs. 6.73 crores. Deducting the converted revenue surplus of Rs. 38 lakhs, the overall surplus comes to Rs. 6.35 crores. As a consequence, the opening balance of Rs. 4.91 crores for the coming year will be converted into a minus balance of Rs. 1.44 crore. This would actually be higher at Rs. 3.50 crores, if the credit taken for the balance of the former Hyderabad Government lying with the Westminster Bank and now under dispute is omitted.

In conclusion, mention may be made of the increasing debt charges incurred by the State Governments. In the case of Mysore, for instance, debt services are expected to cost as much as Rs. 5.88 crores in 1959-60, as against Rs. 4.97 crores in 1957-58 (revised). The large interest charges and the repayment of loan instalments to the Central Government naturally impose much strain on the finances of the States. While there is a case for special consideration of the difficulties involved, it must be stressed that the State Governments should take all possible measures to effect economy in expenditure to the maximum extent possible.

INDUSTRIAL HOUSING

Mr. K. C. Reddy, Union Minister for Housing, is reported to have suggested that, should the subsidised industrial housing scheme prove a failure, he would not hesitate to substitute the carrot with the stick. Mr. Reddy disclosed, while speaking at the Annual Day celebrations of a textile mill colony in Madurai, Madras State, on the 7th inst., that, if employers did not fully respond to the subsidised industrial housing scheme, the Government might be forced to yield to the pressure from Parliament to bring forward legislation to compel employers to build housing colonies for labour.

Mr. Reddy referred to the magnitude of the housing problem. So far as rural areas were concerned, he pointed out, there were 550,000 villages with about 50 million houses, most of which were in need of considerable improvement. Most of the houses could hardly be termed houses fit for human habitation. To rebuild these with all the amenities would necessitate a financial outlay of roughly five to six thousand crores of rupees. The problem of housing in urban areas was no less acute. If the housing programmes were to proceed at the current rate, the Minister observed, a considerable time would have to elapse before adequate housing could be constructed. According to one estimate, under the industrial housing scheme, about 1.3 million houses had been built by Government and private agencies. Under the second Plan, about 2 million houses were expected to be built through these agencies. Even assuming that the Plan target will be realised, housing needs at the end of the Plan period will be much more than what they were at the end of the first Plan. It has been computed that, even if 3 million houses were built under the third Plan, there would still be a shortage of 8 million houses at the end of the third Plan period. In view of this situation, the Government, according to Mr. Reddy, was having under consideration a new scheme which was expected to be finalised shortly. It envisaged (1) provision of Rs. 15 crores during the second Plan period for acquisition of land, (2) floating of loans and debentures guaranteed by the Central or State Governments for financing individual housing projects and (3) issuing of brochures suggesting 20 to 30 cheap designs of houses for the various income groups in the country.

Mr. Reddy added that, fortunately, the cement position was now easy and steel would also be available in the next nine months. The Minister referred to the middle income group housing scheme which was recently announced by the Government. The scheme is intended to assist people with an income between Rs. 6,000 and Rs. 12,000 per annum to build houses for themselves. A similar scheme is in force for people in the low-income groups, namely, those whose annual incomes are below Rs. 6,000 per annum.

The middle-income group housing scheme will be financed by the Life Insurance Corporation which will advance loans at 5 per cent. to State Governments repayable over a period of 20 years. The State Governments will, consequently, have to recover the amounts advanced by them to individuals during the same period. The amount of loan to be given to individuals by State Governments will be determined on the following basis: (*a*) 80 per cent. of the estimated cost of construction, excluding land, subject to a maximum of Rs. 16,000 and (*b*) 80 per cent. of the cost of developed land, subject to the condition that (i) the total of (*a*) and (*b*) does not exceed Rs. 20,000, (ii) the total cost of construction, excluding land, is not more than 25,000, and (iii) no assistance for land will be given to those who already possess a developed plot.

While the need for building more houses is very urgent, the wisdom of making it compulsory on employers to construct houses for their workmen is open to doubt. If, in spite of the existence of the subsidised industrial housing scheme, under which 50 per cent. of the approved cost could be obtained as loans from Government, the employers have not come forward in sufficient numbers to take advantage of it, it only reflects the financial plight in which they find themselves. With heavy taxation, high cost of labour and raw materials, industrial establishments hardly find it possible to raise the resources necessary for the long overdue and more urgently required replacement and modernisation of plant and machinery, let alone building houses for workers. The position is even more difficult for new industrial units. Compulsion would certainly not help them to find more funds. It would only retard the progress of industrialisation. The Bombay Government tried it once, but had to give it up, as it acted as a great deterrent to the establishment of new industrial units in the State. Further, the policy of requiring each employer to provide housing to his employees is not a desirable one. Housing is best left to local authorities, as is the practice in advanced countries of the West. The Government should give adequate loans to these bodies. Not that the employers should be completely absolved from the responsibility of building houses for their workmen. On the other hand, to the extent their resources permit, they should be induced to contribute to the housing funds of the local authorities. But to make them solely and entirely responsible for housing is to put the responsibility for social welfare on one section of society only.

INDUSTRIALIST WITH A SECRET

WORLD POPULATION

The problem of overtaking a high rate of population growth with greater expansion of production has presented most underdeveloped countries with a challenge such as no country in the world has had to face before. Progressively lower death rates in these countries have resulted in exceptionally high rates of population growth. The diffusion of modern medicine and health measures have continued to reduce mortality, while birth rates have generally not declined.

There is a wide gap in population growth between the advanced and the underdeveloped countries. The poorer countries experience far greater proportional increase than the wealthier countries. Regardless of the uncertainties to which all forecasts are subject, it is evident that the population of the world is passing through a phase of unprecedented expansion which probably has not reached its peak.

The population of the world since the beginning of this century has increased at a rate unparalleled in history. According to the report entitled *The Future Growth of World Population*, published by the U.N. Bureau of Social Affairs last summer, annual increments of more than two per cent. have persisted in most underdeveloped countries and, in a number of these countries, the population is increasing by about 3 per cent. or more each year, a rate "probably outside the experience of any nation before the last ten-year period." It is estimated that the population of the world has risen by about 90 million during the past two years, a figure equivalent to the population of Japan or twice the population of France. In the next two years, according to the report, there will probably be a further increase of 100 million.

The population of the world reached 1,000 million during the first half of the nineteenth century. About 1930, it was 2,000 million and now about 2,800 million. The world will have 3,000 million inhabitants by 1962, 4,000 million by 1977, 5,000 million by 1990 and 6,900 million by A.D. 2000.

The implications of this staggering growth in population are serious. Apart from the economic consequence, it is certain to spark grave political and social reactions. In the words of Mr. Aldous Huxley: "Overpopulation leads to insecurity and social unrest. Unrest and insecurity lead to more control by Central Governments and an increase in their power. In the absence of a constitutional tradition, this increased power will probably be exercised in a dictatorial fashion. Even if Communism had never been invented, this would be likely to happen. But Communism has been invented. Given this fact, the probability of overpopulation leading through unrest to dictatorship becomes a virtual certainty. It is a pretty safe guess that 20 years from now, all the world's overpopulated and underdeveloped countries will be under some form of totalitarian rule."

INVESTMENTS IN GOVERNMENT-OWNED COMPANIES

FINANCE MINISTRY'S CLARIFICATION

From Our Special Correspondent

NEW DELHI, 10*th March*

THE resolution on economic development, just passed at the annual session of the Federation of Indian Chambers of Commerce and Industry, has urged, among other things, that the public sector should function in the same conditions as the private sector. If the industrial undertakings in the public sector alone are taken into account, the identical conditions of working that are being urged for them as for the ones in the private sector would, in the main, be in respect of control, profit-making capacity and treatment of labour. As far as control over the public sector undertakings are concerned, the Ministry of Finance has recently clarified the present position.

DELHI LETTER

The Articles of Association of Government companies, the Finance Ministry's note says, usually provide for (i) the appointment of Directors, Managing Directors and Chairmen by the President; (ii) the appointment of senior executives on pay exceeding a certain limit (usually, Rs. 2,000 p.m.) with the prior approval of the President or the Central Government; (iii) the incurring of capital expenditure beyond a prescribed limit (usually, Rs. 10 lakhs, Rs. 20 lakhs or Rs. 40 lakhs, according to the size of the Company) with the prior approval of the President; and (iv) the audit of the accounts in accordance with the provisions of Section 619 of the Companies Act.

In regard to item (i) above where the financial interest of Government is substantial, the Finance Ministry nominates one of its own officers as a Director of the company. In other cases, representatives of the administrative Ministries concerned are appointed to watch the financial interests of Government. In the latter cases, the officers so appointed are requested to keep the Finance Ministry informed of important developments having a financial bearing. In regard to (ii) and (iii) above, the Ministry of Finance is generally consulted by the administrative Ministries, when proposals in that regard are received from the autonomous organisations.

In addition to the powers mentioned above, the President also generally has a right to issue directives in regard to the finances, conduct of business and affairs of the companies, etc., the companies are required to give immediate effect to the directives so issued. In the case of some of the Government companies, there is provision in the Articles of Association that the Chairman of the Board of Directors may reserve for the consideration of the President any proposals or decisions of the Board which raise, in his opinion, an important issue and which are, on that account, fit to be reserved for the decision of the President. The Finance Ministry is consulted by the administrative Ministries on such issues, if they have financial implications.

The Finance Ministry has also requested the administrative Ministries to observe the following procedure in respect of Government undertakings:

(1) The appointment of the Financial Adviser/Chief Accounting officer of the undertakings should be made by the President and that the Finance Ministry should be consulted in that regard. The appointment should also be subject to review by the Finance Ministry. (2) Periodical reports on the financial aspects of the working of undertakings should be submitted to the Government of India. Such reports may be submitted through the Boards of Directors where that is considered necessary. (3) Each undertaking should prepare a self-contained financial handbook including its historical background, capital investment, turnover, financial procedures, etc. Copies of the handbooks are to be supplied to the Finance Ministry also. (4) The undertakings should be inspected periodically and that such inspection should cover, among others, financial matters. For that purpose, the administrative Ministries have been requested to initiate action for the appointment of inspection teams at suitable intervals in consultation with the Ministry of Finance.

In addition to the above, the Auditor-General has the right to audit the accounts of Government companies.

A point has been made, says the Finance Ministry, that inasmuch as the President is the sole shareholder in many of the Government companies, Government could reserve more powers under the Articles of Association for the purpose of exercising greater financial control over them. Section 36(1) of the Companies Act lays down that the Memorandum and Articles of Association shall, when registered, bind the company and the members thereof. No doubt, alterations can be made in the Memorandum subject to the provisions of Sections 16, 17, 18 and 40 of the Companies Act and in the Articles of Association subject to the provisions of Section 31 of the Act. But it has to be kept in view that the company form of management has been adopted only in those cases where some autonomy in financial management was necessary and where the management could work according to business principles and commercial practices, unrestricted by departmental rules and regulations. In making suggestions for stricter control by the Finance Ministry by means of altering the Memorandum and Articles of Association of Government companies, this aspect of the matter has to be kept prominently in view. Such alterations have to be in consonance with the basic principles underlying corporate management and in accord with the best corporate practice. The Finance Ministry, in other words, is not in favour of more stringent financial control of Government companies.

Along with the detailed demands for grants, for the year 1959-60, of the Ministry concerned, the balance-sheets of the Government companies under it are now published, though rather belatedly. The Explanatory Memorandum of the Budget this year has also provided a statement intended to show at one place the revenue accruing to Government as a result of investments made in industrial undertakings. This statement includes only those undertakings which are either wholly owned by Government or in which the Government has a controlling interest. Of these autonomous bodies and Government companies, the largest number (13) are under the Ministry of Commerce and Industry. The total investments that will have been made by Government upto 1959-60 in these 13 concerns along with the figures of profits being earned from them are given below.

Name	Investment to end of 1959-60 (in Rs. lakhs)	Profits (in Rs. lakhs)		
		During 1957-58	Revised estimate 1958-59	Budget estimate 1959-60
State Trading Corporation ..	2,00	6	6	12

N.B.—n.p.b. means "no-profit-basis." N.A. means "Not available."

Under the Ministry of Defence, there are two companies, Hindustan Aircraft (P) Ltd., and Bharat Electronics (P) Ltd. The total investment that will have been made by Government in the former to the end of 1959-60 comes to Rs. 1420 lakhs; figures of profit earned from this company are not available. The latter company—Bharat Electronics—will have accounted for a total investment, to the end of 1959-60, of Rs. 531 lakhs; there is no indication that any profit is being earned from this company.

Under the Ministry of Education there is an autonomous body called "National Research Development Corporation." Government investment in this body will be, as at the end of 1959-60, just Rs. 10 lakhs. No profits have been or will be earned from this Corporation.

Under the Ministry of Finance, Government investment in the International Finance Cor-

THE STATUS OF STERLING

CHALLENGE TO ZURICH

From Our Own Correspondent

LONDON, 27*th February*

FIGURES have just been published showing the recovery in the sterling balance since the marked decline began two years ago. The old-time peak was in the middle of 1955 but, at the beginning of this year, that level had been surpassed with the total of sterling holdings reaching just short of £4,000 million. Nowadays, substantial and relatively inflexible holdings of sterling are in the hands of international organisations and, at present, these account for rather more than £600 million. So that what may be termed mercantile sterling balances amount to about £3,350 million. For some time, the figures have been creeping upwards and over the autumn of last year the rise was some £80 million, of which approximately half was accounted for by sterling holders and half by non-sterling holders.

LONDON LETTER

The increase in the balances of the sterling holders suggests that the latter are also improving their international position and have got some money to put away into the bank. Of the non-sterling holders, the O.E.E.C. countries accounted for about half and dollar countries for about a quarter. It is generally supposed the dollar balances have gone on rising and of course it is some time since European balances have been as high. All this reflects the marked improvement which has taken place in the status of sterling over recent months.

Parallel to this increase in the sterling balances has been an increase in the volume of acceptance credits drawn on London on foreign account. Figures just published show that, over the last quarter of last year, the latter rose from £103 million to £119 million. It is being argued that Bank rate should be cut again from the present level of 4 per cent. since, although this might have little effect on domestic money rates, it would give a further back-handed fillip to sterling. Other things being equal, a cut in Bank rate should make the London market less attractive to additional sterling balances but the latter are as susceptible to the confidence factor as to the rate factor and one argument is that a lower Bank rate would put the hallmark on the new pre-eminence of sterling as the most wanted major world currency. But this can only be a matter of opinion and the argument on the other side of the more cautiously inclined is: What is the point of bringing such marginal money into the City? If foreign centres are going to deposit money in London simply because Bank rate is cut by another ½ per cent., that is they would deposit money here to get less interest than they could at present because that little extra cut has pushed up their confidence that little bit more, then such money is highly volatile and the tiniest little upset to confidence would send it scurrying away again with a consequent drop in gold reserves. It is obvious that the worst reason for cutting Bank rate further at the present time would be to drag in a little more confidence money because the worst blow to confidence in sterling would be to have the upward trend of the gold and dollar reserves reversed on account of an outflow of balances.

Incidentally, the London foreign exchange market has, as a result of the strength of sterling, been allowed to deal freely in foreign bank notes, that is, of both sterling and non-sterling areas. The market, of course, can only deal in the notes which it gets and many European countries in particular restrict the quantity of notes which can be taken out of the country by any individual. Nevertheless, London is now challenging Zurich as an international centre in which all kinds of foreign money can be bought and sold.—*All Rights Reserved.*

STERLING AREA RESERVES

The central gold and convertible currency reserves of the Sterling Area rose by £16 million in February and stood at £1,127 million on 28th February, it was announced by the Treasury in London on the 3rd inst. This compares with the rise of £15 million in the previous month after payment of £31 million to the E.P.U. and with that of £48 million in February 1958.

Vickers-Armstrongs (Engineers), U.K., have secured a contract worth £2.25 million from the U.S.S.R. for the supply of a chemical industrial plant. Vickers, it is learnt, will associate themselves with another British firm, namely, High Polymer and Petrochemical Engineers, designers and consultants, for this purpose.

FINANCING DEVELOPMENT OF COMMONWEALTH

C.D.F.C. TO INCREASE ITS CAPITAL

THERE are many international financial institutions devoted to the development of underdeveloped countries. One of these is the Commonwealth Development Finance Company (C.D.F.C.) of Britain, but its membership and field of activity is limited. The ownership of the Company is confined—not by intent—to Britain and one or two Commonwealth countries. The Company provides finance for the development of Commonwealth countries only with special emphasis on development undertaken by private enterprise.

The C.D.F.C. made its debut six years ago, having been established in 1953, when it was thought that the then existing arrangements for keeping Commonwealth countries well supplied with capital funds were inadequate. There was the difficulty of obtaining from Britain and other capital exporting countries adequate money for feeding the development projects, particularly those undertaken by private enterprise. The C.D.F.C. was brought into existence to meet this difficulty to some extent. Its capital was provided by 91 concerns in private industry, commerce and finance which subscribed 8,250,000 'A' shares of £1 each—2*s*. paid-up per share and by the Bank of England, which took up 6,750,000 'B' shares of £1 each—10*s*. paid-up. Thus, the Bank of England holds 45 per cent. of the Company's share capital.

During the last six years of its existence, the Company has done some useful but not very impressive work. It has made 15 investments—four in South Africa, two each in Pakistan, Rhodesia and New Zealand and one each in Canada, India, Ceylon, Malaya and Swaziland (also in South Africa). They cover a wide field of development projects, such as electricity, natural gas, sugar, uranium, pulp and paper, timber, cellulose and fertilisers. Its total commitments up to the end of March 1958, the date of the last balance-sheet, aggregate £14.5 million. Its main resources so far are its paid-up capital of £4.2 million and bank borrowings to the tune of £5.6 million (as on 31st March 1958).

The Company undertakes to finance only a part of the cost of the project. The total cost of the projects, in which the Company has invested, amounts to £300 to £400 million. The Company thus acts as a catalyst which attracts more money from other sources. It is even said that, but for the marginal money it has lent, the various projects involving an outlay of £300 to £400 million would have been held up. Judged from this angle, the Company's performance can be considered satisfactory.

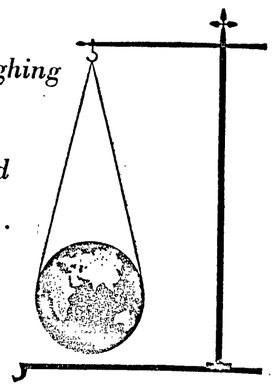
As a commercial venture, the Company cannot be said to have fared well. For it has not so far paid any dividend to its shareholders and is not expected to do so for sometime to come. The Company's interest charges depend on what it has to pay on its borrowings, as well as on the projects concerned. They are said to be lower than those charged by the International Finance Corporation, an affiliate of the World Bank. Even so, it has not been able to attract any large volume of business. But this is due, in part, to the credit squeeze in Britain and the high interest rate which it has had to pay on its own borrowings. Indeed, it is even said that some of the loans offered by the Company have been turned down by intending Commonwealth borrowers, on the ground that they were expensive. Happily, conditions have during the last few months, changed for the better, thanks to the improvement in Britain's economy and the easing of money rates. The Company has, consequently, made arrangements for financing during the current financial year two or three new projects involving £2 million or so. It has also under consideration half a dozen more projects. All these require additional resources. The Company has, therefore, planned to strengthen the resources at its disposal, first by raising fresh capital and later on by borrowing long-term capital. The proposal to raise additional resources is also a sequel to the Montreal Conference of Commonwealth countries, in which the problem of financing Commonwealth countries through various official and non-official sources, including the C.D.F.C., figured prominently.

The Company has now invited a number of large British industrial and commercial companies to become its shareholders and to take up the 'A' shares. The Bank of England, while remaining a minority shareholder, is willing to take up further 'B' shares. In other words, even after the increase in capital, the Bank of England's holdings will not be more than 45 per cent. The exact increase in share capital and details thereof will be announced at the time of the Company's annual meeting to be held in June.

As an institution, which is not likely to start servicing its capital for some time to come, it is not in a position to borrow from the capital market. The increase in capital will, on the contrary, not only provide additional resources directly but also increase its borrowing capacity. The appeal for additional capital is expected to meet with good response. For it will provide an opportunity for business concerns in Britain to take an interest in the development of Commonwealth countries and to do things they would not have been able to do alone.

There is often a criticism that the C.D.F.C. has not been able to persuade the Commonwealth countries which receive benefits from the Company to associate themselves with its work. In fact, this issue was raised at the last Commonwealth Conference held at Montreal. While taking note of the encouragement given to industrial expansion in the Commonwealth by the C.D.F.C., the Conference considered that it would be of greater value if foreign capital was encouraged to join in investing in the Commonwealth. The U.K. delegation announced at the conference that the Bank of England was prepared to consider the provision of further resources to the C.D.F.C. Certain other Commonwealth countries also indicated that they were prepared to make additional capital available to the company. But so far these other Commonwealth countries have not shown any interest in participating in the share capital of the Company. The idea of all Commonwealth countries participating in the capital of the C.D.F.C. is that it would strengthen the Company and make it more useful. Some in London are even pessimistic about the success of the Company's venture in providing more development capital, unless the countries requiring its facilities are also persuaded to associate themselves with the Company by taking up a part of its shares.

Weighing the world up...



....even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

SHARP FALL IN PROFIT OF INDORE BANK

DIVIDEND REDUCED

A SIZABLE setback in profit is disclosed by the accounts of the Bank of Indore Ltd. for the year ended 31st December 1958. The year's profit, at Rs. 4.95 lakhs, has been arrived at before providing for taxation, for which purpose a sum of Rs. 1.15 lakh is set aside out of the profit for the year under review. If, as in the previous years, the profit is worked out after making provision for taxation, it would amount to no more than Rs. 3.80 lakhs, as against Rs. 6.70 lakhs. This is the lowest profit earned by the Bank since the year ended 30th September 1944. (The Bank's financial year-end was changed from September to December in 1949).

Consequent on the sharp fall in profit, the Directors have not transferred anything to either the reserve fund or the contingency fund, which had received Rs. 1 lakh each last year. The provision for bonus to staff has been reduced from Rs. 2.09 lakhs to Rs. 1.10 lakh and the distribution to the shareholders, too, has been pruned to 16 per cent. from 17 per cent., to which level it had been raised successively from 12 per cent. for 1954.

Interest and discount earned have gone up by Rs. 6.40 lakhs to Rs. 44.22 lakhs and commission and exchange by Rs. 0.94 lakh to Rs. 5.65 lakhs. On the expenditure side, interest paid has increased by Rs. 4.97 lakhs and expenses by Rs. 4.13 lakhs. As in the case of other banks, the bulk of the rise in expenses is accounted for by salaries and allowances which have risen by Rs. 2.75 lakhs. The other expenses include a sum of Rs. 2.51 lakhs, being the short provision for income-tax relating to previous years. But for this short-provision now made good, the Bank's profit would have been more satisfactory.

The following comparative table presents the salient features of the Bank's profit and loss account and balance-sheet in respect of the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned	44.22	37.82	31.14	27.11
Commission and exchange	5.65	4.71	3.78	3.02
Interest paid	25.30	20.33	15.20	12.78
Expenses	19.79	15.66	13.81	12.32
Depreciation	0.34	0.30	0.28	0.32
Profit	4.95	6.70	0.05	5.07
Provision for taxation	1.15	..	..	..
To reserves	..	2.00	2.04	2.00
,, gratuity fund	0.30	0.15	0.70	0.25
,, bonus to staff	1.10	2.09	0.70	0.71
Dividend	2.45	2.60	2.45	2.14
	(16%)	(17%)	(16%)	(14%)
Carry forward	0.47	0.52	0.07	0.61

	As on 31st December			
	1958	1957	1956	1955
Paid-up capital	15.30	15.30	15.30	15.30
Reserves	29.00	29.00	28.00	27.00
Deposits	8,41.77	7,08.13	7,38.81	6,72.87
Borrowings from banks	..	20.00	..	..
Advances	5,48.98	5,87.94	4,81.91	3,75.54
Investments	2,45.42	2,21.00	2,50.05	2,65.29
Cash (including money at call)	1,03.93	65.52	56.56	75.43
Balance-sheet total	9,57.66	9,41.27	8,48.87	7,66.19
Ratio to deposits of—	%	%	%	%
Advances	65.2	73.7	65.2	55.8
Investments	29.1	25.2	33.8	39.4
Cash	12.3	8.2	7.6	11.2

In keeping with the general trend, the Bank's deposits have increased by Rs. 44 lakhs. While fixed deposits have gone up by Rs. 59 lakhs to Rs. 5.61 crores and savings bank deposits by Rs. 2 lakhs to Rs. 97 lakhs, current and other accounts have, however, declined by Rs. 18 lakhs to Rs. 1.84 crore. On the assets side, advances have suffered a decline of Rs. 39 lakhs to Rs. 5.49 crores, thus reversing the upward trend noted in the previous years. While loans, cash credits and overdrafts have dropped from Rs. 5.50 crores to Rs. 4.89 crores, bills purchased and discounted show an improvement from Rs. 38 lakhs to Rs. 60 lakhs. The decline in total advances, in the face of an expansion in deposits, has brought down the credit ratio from 73.7 per cent. to 65.2 per cent. Investments (shown at or below market value) have been strengthened by Rs. 24 lakhs to Rs. 2.45 crores. Since the rise in investments is less than that in deposits, the ratio of investments to deposits has dropped further from 25.2 per cent. to 19.1 per cent., which is less than half of that at the end of 1955. Cash balances have enlarged by Rs. 38 lakhs to Rs. 1.04 crore, at which level the cash coverage to deposits is 12.3 per cent., as against 8.2 per cent. a year before.

PERSONAL TAXATION UNDER THE BUDGET FOR 1959-60

By Professor Russi Jal Taraporevala

ON the face of it, the budget of the Government of India for 1959-60 seems to contain few and almost marginal changes in the direct taxes levied on individuals. The analysis contained in this article shows that such an impression is quite erroneous and that the budget presented by the Finance Minister, Mr. Morarji Desai, will result in a fairly substantial increase in the burden of direct taxation on individuals.

A survey of the evolution of the integrated structure of personal taxation after 1957 is essential, in order to present the analysis of the latest budget proposals in its correct perspective. This article contains a comparative analysis of the budget proposals and the taxes levied on individuals in the past three years.

Upto 1956-57, the income of individuals was subject to income-tax and super-tax. These taxes were levied on a progressive scale and on lines similar to the provisions for the taxation of income prevailing in other parts of the world. No other direct taxes were levied on individuals in India. In 1956, Mr. Nicholas Kaldor recommended to the Government of India the introduction of an integrated system of taxation consisting of an income-tax, a wealth tax, a capital gains tax, an expenditure tax and a gift tax (in his *Indian Tax Reform*, popularly known in India as the Kaldor Report). Between 1957 and 1959, all the taxes recommended in the Kaldor Report were introduced in India. However, a number of recommendations of the Kaldor Report for keeping the total burden of direct personal taxation within tolerable or reasonable limits were ignored by the Government of India during the process of introducing the new structure of taxation. The result was that the total burden of direct taxation in India far exceeded the recommendations of the Kaldor Report and became the highest tax burden prevailing in any free country of the world. It was hoped that the Government would make some changes in the rates of the various taxes, especially of the income-tax and super-tax, in order to make the burden of personal taxation reasonable and somewhat approximating the level recommended by Mr. Kaldor. The latest budget has left all such hopes unfulfilled!

Income-tax

The budget contains some small alterations to be made in the provisions of the law relating to income-tax and super-tax. Thus, the exemption for income which accrues or arises outside India but is not remitted to the country upto a maximum of Rs. 4500 is to be abolished. The budget provides for the taxation of the salaries paid to non-resident Government servants, thus plugging an important loophole which was being used to avoid income-tax and super-tax by our civil servants posted abroad. The budget contains proposals for taxing honorary consuls and certain officers of foreign missions in India. All these changes in the taxation of personal incomes have hardly any significance in relation to the general structure of personal taxation and do not require any detailed analysis.

Perhaps, the most disappointing aspect of the budget is the Finance Minister's declaration in his budget speech that he proposes "to make no change in the present rates and structure of personal income-tax." A reduction in the rates of tax applicable to personal incomes has been long overdue. Moreover, it is necessary in order to give any rationale or meaning to the new integrated system of personal taxation.

The fundamental idea underlying the integrated system of taxation as recommended by Mr. Kaldor is the substitution of income-tax levied on a narrow base at very high rates by taxes levied at moderate rates on a broader base, i.e., on income, wealth, capital gains, expenditure, and gifts. In such a system of taxation, the income-tax becomes merely one part of the tax structure. It should, therefore, be imposed at moderate rates—and not at the same high rates which prevailed when income-tax was the only direct personal tax. The main justification for the wealth tax and the expenditure tax according to the Kaldor Report stems from a recognition of the defects and deficiencies of the income-tax. The integrated system of personal taxation should involve a substitution—at least partially—of the higher slabs of income-tax and super-tax by the introduction of the wealth tax and the expenditure tax. In India, today, the wealth tax and the expenditure tax are levied not as partial substitutes for the high taxation of incomes but in addition to it—which is most inequitable and unjustifiable.

The Kaldor Report had recommended that, if an integrated structure of personal taxation were introduced, the maximum total rate of income-tax and super-tax ought not to exceed 45 per cent. When the wealth tax and the expenditure tax were introduced in the budget of May 1957 by the then Finance Minister, Mr. T. T. Krishnamachari, the need for the reduction in the rates of income-tax and super-tax was recognised. Thus, reductions in the rates of income-tax and super-tax were introduced by Mr. Krishnamachari, but, unfortunately, these concessions gave at best very insignificant or token relief from the burden of these taxes—the relief in tax amounted to between ½ per cent. and 3 per cent. of the previously prevailing level of these taxes! The maximum rates of income-tax and super-tax were kept as high as 77 per cent. for earned incomes and 84 per cent. for unearned incomes—as compared with the maximum of 45 per cent. recommended by the Kaldor Report. It was hoped that, after the initial introduction of the integrated system of personal taxation, the Government would gradually reduce the rates of income-tax and super-tax over a period of time. But this hope has remained unfulfilled to date. The budget for 1958-59 maintained the *status quo* for the rates of income-tax and super-tax. The budget for 1959-60 has done nothing to reduce these rates of tax.

The need for reducing the rates of income-tax and super-tax is all the greater this year, in view of the fact that the budget proposes increases in the rates of wealth tax, especially since the wealth tax has been justified as being a desirable substitute for the higher rates of income-tax and super-tax. Thus, the greatest drawback in the budget is the default in reducing the rates of income-tax and super-tax. The continuation of excessively high rates of income-tax and super-tax distorts the integrated structure of direct personal taxation, robs it of the justification and rationale adduced in its favour in the Kaldor Report and makes its burden unconscionably heavy and extortionate. If the new structure of taxation is to continue, the most pressing and important reform which must be introduced is the reduction in the rates of taxation on personal income. The Finance Minister should boldly face this task and not shirk it, because of possible unpopular, though totally unjustified, political repercussions.

Wealth Tax

The budget proposes an increase in the wealth tax payable by individuals by ½ per cent. of net wealth for each slab of wealth. The wealth tax was introduced in 1957 by Mr. Krishnamachari, the then Finance Minister in the Government of India. The rates of wealth tax have been the same for the years 1957-58 and 1958-59. Wealth between Rs. 2 lakhs and Rs. 12 lakhs was subjected to tax at the rate of ½ per cent. Under the budget proposals, the rate for this slab is to be increased to 1 per cent.—an increase of 100 per cent. in the rate of tax as compared with the previously prevailing rate of tax. In the previous two years, wealth between Rs. 12 lakhs and Rs. 22 lakhs was taxed at the rate of 1 per cent. Under the budget proposals, this rate is to be increased to 1½ per cent.—an increase of 50 per cent. in the rate of tax over its previously prevailing level. In the past, wealth in excess of Rs. 22 lakhs was taxed at the rate of 1½ per cent. Under the budget proposals, the rate of tax for this slab is to be increased to 2 per cent.—an increase of only 33⅓ per cent. over the previous rate of tax. Thus, the rates of tax remain progressive and increase with each slab of wealth. But the increase in the tax as per the budget proposals is sharply regressive. The proportionate increase in the tax as compared with its previously prevailing level is much greater for the lower slabs and to that extent much lower for the top slabs.

No Justification

On the grounds of equity, there can be absolutely no justification for increasing the rates of wealth tax in this regressive fashion. Increases in the wealth tax to the extent of 100 per cent., 50 per cent. and 33⅓ per cent. of the previous level of the tax for each respective slab and in a regressive fashion constitutes a most flagrant case of denial of justice in personal taxation. The Finance Minister should consider giving some relief to assessees in the lowest slabs from the burden of tax proposed in the budget. An increase in the rates of wealth tax so that they become ¾ per cent., 1¾ per cent. and 2¾ per cent. for the respective slabs giving increases in tax on a progressive scale of 50 per cent., 75 per cent. and 83 per cent., respectively, over the previously prevailing level of this tax would be more equitable and fair than the rates proposed in the budget—if substantial increases in the rates of this tax are considered necessary by the Finance Minister!

The rates of wealth tax proposed in the budget, it may be further noted, are substantially higher than the rates of tax recommended in the Kaldor Report which ranged from 0.33 per cent. to 1.5 per cent. of net wealth.

An assessment of the burden of direct personal taxation in India must start with a calculation of the total incidence of the income-tax, super-tax and wealth tax. These are taxes which have to be paid every year by individuals and indicate the *minimum* burden of direct taxes annually payable by them. For the purpose of this analysis, gross income calculated at 6 per cent. per annum of total wealth is assumed. Similar calculations can be made assuming different rates of yield on total wealth. Such other calculations will lead to results similar to those got in this article. Hence the assumption of a yield of 6 per cent. per annum on total wealth will not detract from the general validity of the conclusions arrived at here.

Table A shows the total income-tax, super-tax and wealth tax payable by different individuals possessing different amounts of gross income and wealth. The total tax payable for 1956-57, that is before the integrated system of taxation was introduced in the country, is shown in column 3. The total tax payable for each of the years 1957-58 and 1958-59 as per the rates of tax introduced by Mr. T. T. Krishnamachari in his budget of May 1957 is shown in column 4. The tax payable under the recent budget proposals is shown in column 5. Finally the percentage

TABLE A

Total Burden of Income-tax, Super-tax and Wealth Tax on Individuals and the rate of Increase in it from 1956-57 to date

Total Wealth	Gross Income at 6 per cent. of total wealth per annum	Tax Payable			Percentage Increase in the Tax Payable		
		1956-57 (that is the income-tax and super-tax)	1957-58 and 1958-59 (that is the income-tax, super-tax and wealth tax) (Mr. Krishnamachari's Budget)	1959-60 (that is income-tax, super-tax and wealth tax) (Mr. Morarji Desai's recent budget)	1957-58 (or 1958-59) as compared with 1956-57 (that is column 4 compared with column 3)	1959-60 as compared with 1957-58 (or 1958-59) (that is column 5 compared with column 4)	1959-60 as compared with 1956-57 (that is column 5 compared with column 3)

40,00,000	2,40,000	1,81,355	2,18,424	2,37,424	20.4	8.7	30.9
50,00,000	3,00,000	2,36,480	2,83,824	3,07,824	20.0	8.5	30.2
60,00,000	3,60,000	2,91,605	3,49,224	3,78,224	19.8	8.3	29.7
70,00,000	4,20,000	3,46,730	4,14,624	4,48,624	19.6	8.2	29.4
80,00,000	4,80,000	4,01,855	4,80,024	5,19,024	19.0	8.1	29.0
90,00,000	5,40,000	4,56,978	5,45,424	5,89,424	19.0	8.1	29.0
1,00,00,000	6,00,000	5,12,100	6,10,824	6,59,824	19.0	8.0	28.8
2,00,00,000	12,00,000	10,63,320	12,64,824	13,63,824	18.9	7.8	28.3

increase in the tax payable during the entire three-year period is shown on three comparative bases in the remaining columns of the table.

It will be seen that, as a result of Mr. T. T. Krishnamachari's budget of May 1957, the burden of tax for the years 1957-58 and 1958-59 increased by between 14.1 per cent. and 24.8 per cent. over the previously prevailing levels, as shown in column 6. Moreover, the rate of increase in tax was regressive in so far as it was much higher proportionately on the lower slabs on income and wealth and lower on the higher slabs of wealth and income.

The recent budget proposals may now be compared with the taxation of the previous year. Column 7 of the table shows that, as a result of the budget proposals, the burden of tax will increase by between 7.8 per cent. and 18.7 per cent. over last year's levels. This is a fairly substantial increase in direct taxation within a year. Also the rate of increase in tax under the budget proposals is most sharply regressive, as compared with the previous level of tax. The percentage increase in the burden of tax is more than twice in the lowest slab of income and wealth as compared with the highest slab of income and wealth (18.7 per cent. as compared with 7.8 per cent.).

Finally, the burden of the taxes under the latest budget proposals can be compared with that prevailing in 1956-57, that is, before the new structure of taxation was introduced. Column 8 shows that there will be an increase of between 28.3 per cent. and 39.9 per cent. in the burden of tax, as a result of the budget proposals as compared with the tax burden of three years ago. The rate of increase in the tax burden is again regressive. The lower slabs of wealth and income suffer from much greater percentage increases in the burden of taxation over this period, as compared with the higher slabs of wealth and income.

Burden Regressive

A most distressing trend which appears from this table is that, though the total rates of tax remain progressive, there has been a definite tendency in the past three years to make the increases in the tax burden regressive. Thus, the maximum proportional increase in the burden of tax during the past three years has been heaped on the lower slabs of income and wealth. The higher slabs of wealth and income have suffered proportionately less in respect of the increases in direct taxes as compared with the lower slabs. This is most inequitable. What is the explanation for this chronic tendency on the part of Finance Ministers to soak the lower slabs of wealth and income more than proportionately as compared with the higher slabs? Probably, the main reason for this most unfortunate tendency is to be found in revenue considerations. The maximum amount of tax can be gathered by sharply increasing the tax burdens on the slabs between Rs. 5 lakhs and Rs. 20 lakhs wealth, because a very substantial amount of wealth and income is in the hands of persons in these slabs. But this does not mitigate the injustice and inequity of such tax measures. Surely, the minimum grounds of justice and equity in taxation demand that the increases in tax should be progressive and should not be heaped indiscriminately on the poorer assessees merely for revenue considerations.

An important indication of the burden of direct personal taxation in India today is the amount left in the hands of various assessees out of their gross incomes after paying the income-tax, super-tax and wealth tax. Such residual amounts have a direct influence on the incentives to spend, to save, to invest and to take risks for various assessees. Table B shows the net residual amounts retained by individual assessees out of their gross incomes after paying income-tax, super-tax and wealth tax at the rates in force for the past three years and at the rates recommended in the Kaldor Report. The table shows clearly that the amounts left in the hands of assessees out of their gross incomes after paying only these direct taxes have been most drastically reduced in the last three years. Upto 1956-57, the tax rates were steeply progressive but they did enable individuals to retain slightly larger amounts out of their incomes after paying these taxes with every increase in wealth and income. The tax structure then preserved, at least to some extent, the incentives to work, to save and to take entrepreneurial risks.

As a result of Mr. Krishnamachari's budget, the rates of tax for the years 1957-58 and 1958-59 reduced the amounts retained by individual assessees out of their gross incomes to the point that the absolute maximum amount which could be retained by any assessee was around Rs. 31,000 per year which occurred around the slabs of Rs. 10 lakhs to Rs. 20 lakhs total wealth. Beyond these slabs, every increase in total wealth and gross income was accompanied by sharp reductions in the amounts left in the hands of various assessees after paying the taxes. Indeed, a point was reached around the slab of Rs. 80 lakhs wealth, when the taxes absorbed the entire income of the assessee. Beyond this point, every increase in wealth and income was accompanied not only by the total confiscation of the entire gross incomes but also confiscation of increasing portions of capital or wealth. Thus, the budget of Mr. Krishnamachari fixed the maximum total reward for capital after tax at around Rs. 31,000 and imposed a recurrent capital levy on the top slabs of wealth and income.

More Confiscation

As a result of the increase in tax proposed in the recent budget, the confiscatory pattern of direct taxation will be made more severe as shown in column 5 of Table B. The maximum amount which can be retained by any assessee under the new tax rates is around Rs. 26,000 per annum. Increases in wealth and income beyond the slab of Rs. 15 lakhs wealth are accompanied by sharp reductions in the net amounts retained by assessees after paying the taxes. Around a wealth of Rs. 42 lakhs, the taxes absorb the entire income of the assessee. Thereafter, every increase in wealth and income is rewarded by the entire confiscation of the gross incomes and increasing portions of capital or wealth annually.

The adverse economic effects of such a structure of direct taxation have been analysed and pointed out by me and others in the past. The present budget will merely accelerate the operation of these adverse economic tendencies. Our system of direct personal taxation will now fix the maximum possible rewards of work and effort at around Rs. 26,000 per year. It will decrease the total net rewards of entrepreneurial activity with every increase in wealth and income. A recurrent capital levy payable annually will be rewards of the highly successful assessees in our country. Such a structure of taxation can have only the most adverse effects on the incentives to work, to save, to take risks and to pioneer new industries in the country—which incentives are most needed today, in order to speed up the economic development and progress of the nation. No other country of the free world has been rash enough to adopt such a heavy burden of direct personal taxation. India is the only country in the world in which the rewards of work and effort are fixed at an incredibly low absolute level and where the more enterprising and successful individuals have to pay an annual capital levy.

Column 6 of Table B shows the residual amounts left in the hands of individuals after paying income-tax, super-tax and wealth tax at the rates recommended in the Kaldor Report. The income-tax and super-tax rates as proposed in the Kaldor Report are taken as being identical with the rates of tax prevailing in India today upto Rs. 25,000 annual gross income. Thereafter, a flat maximum rate of tax of 45 per cent. is used as recommended by Mr. Kaldor. The tremendous difference between the tax burden recommended in the Kaldor Report and the tax burden now imposed in the country is clearly revealed in this table. According to the rates recommended by Mr. Kaldor, the tax burden is kept at a reasonable level, so that every increase in wealth and income is accompanied by an increasing amount left in the hands of assessees after paying the taxes. The Kaldor Report had clearly stressed that the wealth tax should be "well within the total accrual from property" and should "take into account the other taxes on accruals, in particular, the income-tax." The Kaldor Report had never envisaged a possible capital levy being imposed annually as a result of the new integrated system of direct taxation which it had recommended.

Expenditure Tax

The budget contains certain changes for making the burden of the expenditure tax heavier than it was in the past year. The expenditure tax was introduced by Mr. T. T. Krishnamachari for the year 1958-59. Under the provisions of the Expenditure Tax Act, an exemption of Rs. 30,000 was allowed for individual assessees and their family members consisting of dependants. The tax had to be paid on the excess expenditure incurred by an assessee beyond the exempted limit (of Rs. 30,000), *irrespective of the size of the assessee's family*. Thus, the tax discriminated against larger families and was regressive in this respect. These provisions of the Expenditure Tax Act ran counter to the recommendations of the Kaldor Report. Mr. Kaldor has stressed that "the burden of an expenditure tax should vary with the standard of living and that the standard of living is more a matter of expenditure *per head* than of expenditure *per household*." The Kaldor Report recommended the adoption of the "quotient system" under which the expenditure "of all members of the family is first aggregated and then divided into a number of parts, depending on the number of persons in each family, and the tax is charged separately on each part. Children may count as one-half unit each ... Apart from wife and children, it may be permitted to add other family members living in a joint household to the conception of the 'family'". Unfortunately, these recommendations of the Kaldor Report were ignored by the Government.

Under the original Act, the wife and children of an assessee were not treated as dependants if they had separate incomes, in which case they were entitled to separate exemption allowances for the purposes of the expenditure tax. Under the latest budget proposals, husband, wife and all minor children are to be treated as one unit for the granting of the exemption limit of Rs. 30,000 in the matter of non-taxable expenditure and not as separate assessees even if they possess income in their own right. This provision will make the burden of the expenditure tax heavier by depriving members of a family of separate exemption allowances if they possess separate incomes. There may be some justification for including the minor children within the unit for granting the allowance of the exempted Rs. 30,000 non-taxable expenditure, especially as any incomes which they may have would be unearned incomes. But there is no justification for denying a wife a separate exemption allowance for the purposes of the expenditure tax, especially if she works and has an earned income. If a woman works and earns income, it is surely necessary that she should have equal treatment with men in respect of the exemption allowance for non-taxable expenditure incurred by her out of her earned income. Is there any justice or equity in depriving a woman who earns an income of the right to spend it upto the exempted

(*Continued on page 431*)

TABLE B

Net Residual Amounts Retained by Individual Assessees out of their Gross Incomes after paying Income-tax, Super-tax and Wealth Tax

JUDGMENT ON RESTRICTIVE PRACTICES STILL BEING COMMENTED UPON

NO REVIVAL OF DEMAND YET

From A Special Correspondent

MANCHESTER, *3rd March*

"UNPROFITABLE prosperity" was the expression used by Mr. W. T. Winterbottom, Chairman of the Fine Spinners and Doublers, to describe the phase of trading in spun rayon yarns, following the breakdown in the voluntary price scheme which occurred last July, when he addressed the annual meeting of the Rayon Staple Spinners' and Doublers' Association. Since the failure of this system, there had been poor returns, he added, which was particularly disappointing when the high degree of re-equipment in this section of the trade was taken into account.

MANCHESTER LETTER

There are already indications that a similar state of affairs can be anticipated in the cotton industry, following the abandonment of the similar method of regulating selling rates. If the reduction in cotton yarn prices had had the effect of bringing out a substantial and previously suppressed demand, all sections would clearly have benefited, but, so far, such has not been the case.

Mr. Winterbottom then went on record with the statement that, if Government help for re-equipment can be obtained, coupled with a drastic programme for scrapping obsolete machinery, it should be possible to secure a reasonably balanced industry within three to five years. Although the cotton industry had contracted severely since 1950, he added, a further contraction of a similar order of magnitude would be needed before it was adequately matched to the expected level of demand.

Mr. Winterbottom referred to the decision of the Restrictive Practices Court against price agreements for cotton yarns and said: "If it is based, as it appears to be, on principles of economic idealism, then steps should also be taken to ensure that the so-called advantages of unbridled freedom in one section of our industry are passed on to the consumer and are not negatived by unscrutinised costs arising in monopoly and nationalised organisations." The Association, he said, had to consider carefully in the near future whether it could continue to support the import duty on rayon staple in the free conditions in which they now had to operate. With the more intense competition which must now arise from cotton yarns, the handicap of being effectively shut off from imported supplies of both new and competing staple became more serious. "It tends to hinder the development of new lines in the home market and, although the duty also applies to yarn and helps us to that extent, it is impossible," Mr. Winterbottom went on to add, "to ignore that it reduced our competitive strength in export markets. With the establishment of the European Common Market, this handicap will become more severe."

Results of spinning firms up to the period immediately prior to the termination of the minimum price pacts are now coming to hand. From Mr. Sidney Monks, Chairman of the Cromer Ring Mill, Middleton, comes the comment: "The scheme has been abandoned, with the result that prices have fallen to a level that will tax the ingenuity of everyone if losses are to be avoided."

"The Court expects redundancy to be speeded up to make the industry more compact and efficient," he continued. "We all look forward to this time, but, in the meantime, the going will be very hard and we shall have to slow down our capital expenditure, until we are sure that it can be justified under these new conditions of trade."

No Precedent, But...

Although the repercussions after the abandonment of the Yarn Spinners' Agreement, in the shape of widely varying price levels, have not yet died down, it is now, perhaps, possible to assess the judgment given by the Restrictive Practices Court without creating fresh animosity. The economist's view of the decision has lately been given by Professor Ely Devons in a series devoted to the Court's activities.

As he points out, the Court insisted that its judgment on the yarn spinners' scheme did not represent a precedent for dealing with other minimum price arrangements. At the same time, the adverse verdict can hardly have encouraged other trades with similar systems in force to believe that their pleas will succeed where the spinners have failed.

Professor Devons deals at length with the Court's attitude to the spinners' case that their Agreement was a "stop-loss" scheme. This contention was rejected on the grounds that actual prices were only lifted off the minimum for short periods, that the minimum price appeared to insure a reasonable return all the time to the majority of spinners, thus keeping prices higher on average since 1951 than they would otherwise have been; and that a substantial excess of capacity existed in the industry over and above the reserve needed to meet any sudden increase in demand.

The Agreement would have been viewed less unfavourably by the Court, suggests Professor Devons, had it been confined to fixing a true "stop-loss" floor to prices which operated only for short periods of abnormal recession. Another aspect of the defence put up by the Yarn Spinners' Association was that, without an agreement, the large firms would drive the small and medium-sized ones out of business. This belief was also rejected by the Court, which stated that, even if the industry were reduced to the five large combines, "it would not necessarily diminish competition."

Nor were the members of the Court impressed by the claim that the trade needed the support of regulated prices to maintain it in the event of an emergency. They regarded the future of national defence as so uncertain that it was difficult to assess what policy would be adopted in relation to imports of cotton cloth and raw cotton during a war.

On the Court's comments in relation to unemployment, Professor Devons admits himself perplexed. The closing of mills following the abrogation of the scheme would have a serious adverse effect on the general level of employment in the areas concerned and that effect would be persistent, the Court declared. To an economist, anticipating lower prices when such a scheme is abandoned, the natural consequence would appear to be higher production and sales. The Court, in particular, blamed the Agreement for frustrating export business, not only in yarn but also in cloth.

There is not yet enough evidence to gauge the true effect of developments during the past few weeks, but, if the failure of business to broaden is a token of things to come, the Court's predictions of wider unemployment in the cotton mill area are likely to be proved up to the hilt.

Guide From Supplies

At the end of each year, it is possible to assess, on a broad scale, the quantity of cotton and rayon cloth available after overseas markets have accepted their now declining share of goods. Some observers contend that this table offers a guide to the future trend of trade by emphasising the cycle of ups and downs which have always been a feature of activity in Lancashire.

From the latest figures available, it is clear that, in recent years, the tendency has been for the cloth available for home trade to reach a peak and then precipitate a phase of difficult and often highly uneconomic trading. The variations which have taken place in supplies and distribution are set out in the following table:

(In million yards)

Year	*Output (a)*	*Imports (b)*	*Total (a) and (b)*	*Exports*	*Balance for home trade*
1937 ..	4,122	75	4,197	2,001	2,196
1949 ..	2,593	400	2,992	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	478	3,438	1,105	2,331
1952 ..	2,192	210	2,402	871	1,531
1953 ..	2,682	143	2,775	895	1,880
1954 ..	2,775	335	3,110	812	2,298
1955 ..	2,479	365	2,844	688	2,156
1956 ..	2,314	380	2,694	595	2,099
1957 ..	2,287	490	2,777	567	2,210
1958 ..	2,030	434	2,474	468	2,006

No sign of the hoped-for recovery in pressure for supplies has yet been noted, following the dissolution of the Yarn Spinners' Agreement a month ago. Salesmen have been unpleasantly surprised at the lack of workable demand at a time when they anticipated the release of pent-up orders.

Most distributing houses have lately discovered that they can afford to operate with distinctly lower stocks than were formerly regarded as the seasonal minimum. The importance of the purchasing policy adopted by the major chain stores cannot be overemphasised. There are many reasons for withholding contracts for the time being. First and foremost are the widespread doubts over the future trend of raw cotton prices. But quite a number of mills are now distinctly short of orders and time for them is running out.—*All Rights Reserved.*

COTTON TEXTILE INDUSTRY IN JAPAN

EXPORT TARGET FOR NEXT FINANCIAL YEAR FIXED AT 1,390 MILLION YARDS

IT looks as though Indian cotton textiles will have to face keener competition from Japan in world markets in the coming months. The Japanese spinning industry and trade have set the target for exports of cotton piecegoods at 1,390 million square yards for the fiscal year beginning on 1st April next. The target, which will be submitted for approval to the Textile Export Council, represents an increase of 10 per cent., as compared with the estimated total shipment of 1,264 million square yards in the current fiscal year (1958-59). The Japan Cotton Yarn and Cloth Exporters' Association is quite confident that the target will be fulfilled. Its confidence is based on two important grounds. First, the industry may secure additional orders for processing American surplus cotton for Burma. Secondly, a similar formula will be applied to American cotton supplied to Indonesia. A general improvement in international economic situation is also expected to have beneficial effects on Japanese textile exports.

Since the cloth export target for 1959-60 is fixed at a fairly high level, the machinery and equipment in the Japanese cotton mills will naturally be geared to more intensive utilisation than in the past year. It may be noted here that the cotton industry in Japan has recently passed through a period of widespread depression. The total quantity of cloth actually shipped from Japan during 1958 was no more than 1,264.00 million square yards, which compared very unfavourably with 1,468.37 million square yards in 1957. Similarly, exports of yarn were lower at 26.49 million lbs., as against 32.19 million lbs. The fall in overseas sales of Japanese cotton textiles was due largely to the export offensive by China.

Setback To Production

The disquieting performance on the export front was responsible to a great extent for the marked setback to the production of cotton yarn and cloth. The quantity of cloth that actually came off the looms of Japanese mills in 1958 was about 3,183.6 million square yards, as against 3,841.3 million square yards in 1957. The decline in cloth output followed an appreciable contraction in the production of yarn, from 1,139.95 million lbs. in 1957 to as low as 964.54 million lbs. in 1958.

In view of the unsatisfactory experience gained from the textile depression, efforts are being made to reorganise the Japanese textile industry as a whole on a rational basis. The General Textile Policy Committee is reported to have submitted to the Minister for International Trade and Industry several recommendations designed to improve the conditions in the textile economy. The Committee, it will be recalled, was set up in September last at the suggestion of the Government. It comprised members representing the various sectors of the textile industry. The recommendations of the Committee cover, among others, extension of the scope of the Textile Equipment Adjustment Law to include the chemical and synthetic fibre industries, continuation of production control, rationalisation of enterprises and promotion of exports.

Two Major Problems

There are two major problems confronting the Japanese cotton industry, namely, uncertainty regarding trend of cotton prices and Communist China's export drive. It is desired that cotton prices should be stabilised at a reasonable level as quickly as possible, so that the competitive power of cotton goods *vis-a-vis* other fibre products may be strengthened. As for competition from China, the Japanese textile interests are endeavouring to grasp the actual position. With a view to promoting orderly export marketing, the traders are said to be "taking every precaution to avoid unreasonable competition and the disturbance of the markets caused by sudden inroads from China."

This brief account should serve as a pointer to India which has suffered a big loss in the cotton textile export trade. The foreign exchange earned from cotton piecegoods during 1958 was just Rs. 46.9 crores, as compared with Rs. 65.1 crores in 1957. In terms of quantity, the exports of cloth aggregated 646 million yards, as against 878 million yards. The drop was shared by both mill cloth and handloom goods. The shipments of mill cloth were lower at 625 million yards, as against 828 million yards, and those of handloom cloth were 21 million yards, as against 50 million yards. The fall in cloth exports to the U.K. was of the order of 40 per cent., while shipments to Sudan, British West Africa and Aden declined by 25 per cent.

The Government of India has no doubt announced the export incentive scheme of linking the cotton industry's import requirements of raw material, dyes and chemicals to its export earnings. But the scheme does not appear to have provided much incentive to mills. To quote a report: "The response has been very cold and indications are that about 145,000 bales of cotton imports reserved for allotments against cloth export performance are likely to be allotted to mills in the usual quota way." On their part, the exporters complain that the benefit of incentive import licences is confined only to exporting mills and they are aggrieved at this because they book about 80 per cent. of export orders.

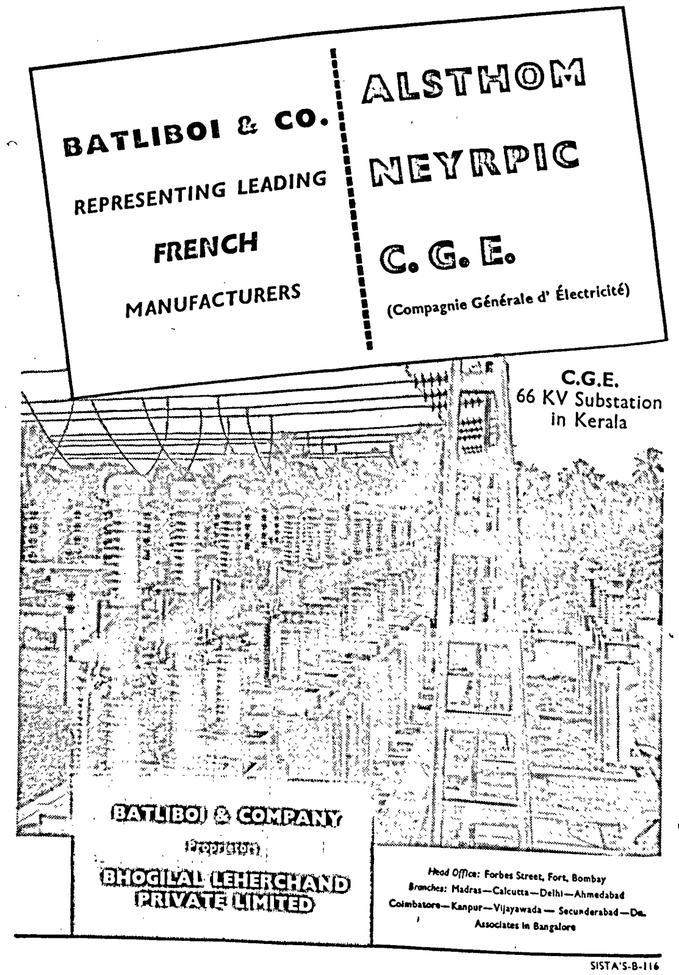
NO FURTHER RESTRICTION ON CLOTH PRODUCTION

A categorical assurance that the Government of India does not intend to restrict further the production of cotton piecegoods, mill-made or handloom, is given in the statement placed by Mr. Satish Chandra, Deputy Minister for Commerce and Industry, in the Lok Sabha on the 3rd inst. The statement was in reply to a question by a member who had asked whether the Madras Government had suggested the pegging of mill cloth output at 4,800 million yards per annum. Mr. Satish Chandra admitted that the suggestion had been made. The Madras Government, he said, had expressed its disagreement with the observation of the Textile Enquiry Committee (Chairman: Mr. D. S. Joshi, I.C.S.) that the allocation to the handloom sector, which was to produce the entire additional requirement for the second Five-year Plan, might have to be pruned to reach only 2,100 million yards, as against the original allocation of 2,500 million yards. The State Government had further stated that, if any reduction in allocation had to be made, it must be initially the mill sector that should accept a cut and suggested that the ceiling of 5,300 million yards for this sector might be reduced to 92 per cent. of its rated capacity. Mr. Satish Chandra added:

"Presumably, the Madras Government's suggestion is based on a misapprehension that a restriction on the handloom sector might be envisaged. At the same time and in accordance with their views stated in the resolution on the subject, the Government of India considers that there is no need to think of effecting a cut in the production of mill cloth which is already restricted to the rated capacity."

The foresaid decision of the Central Government is, indeed, commendable. Any move to peg the mill output of cloth is bound to have serious repercussions. If anything, there is an urgent need for expanding the weaving capacity of mills through modernisation of machines and equipment, as well as adoption of rationalised production methods. The rise in population—an addition of five to six million every year—improvement in living standards which is the goal of the Plans, and the fresh purchasing power created as a result of larger doses of deficit financing will all enlarge the domestic demand for cloth. Unless the mills are allowed to modernise and to expand their capacities from now alone, there will be, in the next two or three years, an acute shortage of cloth supplies accompanied by soaring prices.

The aggregate production of mill cloth during the month of January 1959 is provisionally estimated at 429 million yards, as against 435 million yards in the previous month and 437 million yards in the same month last year. The production of yarn is put at 149 million lbs. which represents a fall of 5 million lbs. as compared with December 1958. The figure for January 1958 was the same.



PROBLEMS OF SUGAR INDUSTRY

SOME THOUGHT-PROVOKING OBSERVATIONS BY MR. HADFIELD AT I.S.M.A. ANNUAL MEETING

SOME of the problems confronting the white sugar industry and their implications to the future of the country's economy were highlighted in an impressive manner by Mr. P. Hadfield in his presidential address at the twenty-sixth annual general meeting of the Indian Sugar Mills' Association held at New Delhi on 9th March 1959. These included the threat of competition from *khandsari* and the co-operatives, the importance of exports and cane development and the need for ensuring a reasonable profit that will leave sufficient margin for covering renewals, replacement and the higher working capital. Mr. Hadfield's observations on these subjects are reproduced below:

"The best way of creating the warmer atmosphere in which even a cold war cannot thrive, must surely be freedom from controls and interferences in the widest sense possible. Control came to this industry or rather to those units thereof situated in the U.P., Punjab, and North Bihar, in July last. Its introduction has, unfortunately, become linked with the idea of sugar exports and both attract to themselves unpopularity from the other. I, for one, do not believe that the announcement of Government's intention to export 50,000 tons of sugar could have had any appreciable effect on prices. On the contrary, I believe that a higher figure was anticipated, so that the results of the announcement should have been to depress prices. Control was introduced following a voluntary agreement which failed to have the desired effects during a period when markets were upset by international events. It followed the upheavals in Iraq. Sugar prices in India rose, but so did the prices in London and New York, and to greater measure, but, there they were allowed to find their own levels. It followed that delay in the usual monthly release which the market had expected during the first few days of July, which would have been in consonance with the previous pattern. The reasons for the delay of that release in July are not known to me, but the delay, coupled with other factors, profoundly affected the price of sugar.

Control Was Hasty

"Control was introduced in the sugar industry when prices had risen from Rs. 37.07 at the time of our agreement to Rs. 37.41 in the third week of July. By 30th July—the day when control was introduced—these prices had gone down considerably and were round about the agreed levels. Even wider fluctuations in the *vanaspati* industry did not occasion control, and yet the similarity between the pattern of the two industries is apparent. The control as introduced suffers from a very serious defect. It fixes a maximum price on factories. It guarantees them no minimum price. It fixes the maximum price at which factories can sell, but it does little to ensure that the price to the public, to the consumer, is allied to these factory prices.

"Whatever may be said about the control prices fixed in July, and in due course the Tariff Commission will say it, there is the fact that, due to the shorter duration of the present season and the lower recovery, the cost of manufacture in West U.P. is Rs. 2 per maund higher than was the case last year. Control was brought in hastily, and why it should not be adjusted with equal despatch in order to relieve an apparent and damaging hardship, is something I do not understand.

Production Downward

"Earlier, I mentioned progress, but it is with regret that I have to report a reverse in the output trend of sugar production. As compared with 20.26 lakh tons in 1956-57, the industry achieved only 19.75 lakh tons in 1957-58, despite the commissioning of additional capacity to the extent of 1,40,000 tons due to the completion of expansion in certain established units and the setting up of ten new factories. Increases were recorded in Bombay, Mysore, and the Punjab, but these were more than offset by decreases of 1,31,000 tons in West U.P. and 37,000 tons in Bihar. Production in the new units amounted to 72,000 tons, which means that the drop in production in those factories which were working in 1956-57 season was from 20.26 lakhs to 19.03 lakhs. This is a significant and worrying drop. As regards this year's production, though the season has not finally closed, the latest estimates available with the Association show that production is likely to come down further to about 18.5 lakh tons, and I must deal with the reasons which caused this at some length.

"An industry dependent directly on an agricultural produce for its raw material must expect fluctuations from year to year. They are relatively unimportant so long as the general trend is towards development. Unfortunately, the setback in 1957-58 cannot be attributed solely to any such fluctuation. But for the loss of cane from reserve areas to *khandsaris*, the 1956-57 figure would have been equalled, if not exceeded. Few of us who heard Shri Balmokand Shah Sawhney's address last year could have realised how right he was to sound a note of warning. Our friends in the Press have accused us of complaining too early and too much. Here, surely, is rather a case of too little, too late.

"Let us examine this development. During the six-year period between 1951-52 and 1956-57, the estimated production (there are no reliable figures) was under 1,00,000 tons. During the 1957-58 season, its production rose to something of the order of 2,50,000 tons, and this year in the U.P. the number of crushers are estimated at 50 per cent. more than last year. Not less than 3,75,000 tons and possibly 4,50,000 tons will be the final figure of its output for 1958-59.

"Khandsari" Threat

"At this level, *khandsari* presents a two-pronged threat to the sugar industry. It takes away cane and reduces the amount of white sugar made. It offers a substitute product to white sugar, and, in a year of surplus production, could seriously affect prices obtainable in the home market. Government and the Association may well have divergent views on the pros and cons of such a situation, but it is a matter to which I shall revert when I speak about exports later. The difficulties encountered by the textile industry as a result of the favourable circumstances artificially created for handloom products are well known. A similar situation must inevitably develop in the case of the sugar industry if timely and appropriate steps are not taken. I have said the industry is not opposed to the expansion of *khandsari*, provided it leaves cane in the factory areas alone. I now say that we have no objection to the expansion of *khandsari* if it is to be purely a cottage industry. True it is, however, that the tax exemption in the last two years has given rise to the open pan manufacture of sugar in a manner that could not be classified as a cottage industry. I quote Shri C. V. Subba Rao, Director, *Gur* and *Khandsari*, Khadi and Village Industries Commission, who drew attention to this development in the following words: 'But, in this context, it will not be out of place to mention that private businessmen have set up a number of baby mills in order to obtain the advantage of exemption from excise duty which *khandsari* enjoys today. Adequate attention is to be paid to this aspect of the problem.'

Welcome Step

"It is against this background that members of this Association view the new tax imposed on *khandsari*. In that it is what we have been pressing for, I welcome it unfeignedly, but whether it goes far enough is something that has yet to be seen.

"Rather less than two years ago when excise duty on sugar was Rs. 4-2 per maund, the differential was Rs. 4-2, for there was no duty on *khandsari*. Today, the difference is Rs. 6.07, nearly 50 per cent. more than was the case. I repeat that we are very grateful for this step that has been taken and we shall watch the future confident that our further recommendations, if made of necessity, will be received with sympathy. I believe that what has happened to the sugar industry *vis-a-vis khandsari* will serve as a note of warning to State Governments, particularly to those of Uttar Pradesh and Bihar, where the sugar industry was built up to serve the needs of the whole country. There was a time when it could be regimented and taxed without any particular ill effects. Today, its traditional markets in Bombay and South India are themselves self-sufficient, and, with the bringing into being of the twelve new factories—eleven of them in the co-operative sector, which will be manufactured by two sugar consortiums for delivery during the next two or three years—will become surplus. Where, then, will these States sell the surplus sugar?

"The adverse effects of *khandsari* and *gur* manufacture on sugar production are not the only matters that require attention, if we are to obtain the maximum production of sugar so necessary to the country's growing needs for home consumption and for export.

"It is, however, the ever-recurring problem of cane development which bedevils the attainment of the planned programme. The annual target fixed under the second Plan is 7.8 crores tons, against which production last year was only 6.4 crores tons. The estimates for 1958-59 are not yet available, but can we expect much improvement so long as the tonnage per acre or the recovery in North India and the recovery in the Southern States remain so low? The position has not shown any substantial change over the last six years, and the yield throughout the country in terms of *gur* per acre has, in fact, dropped from 1.28 tons in 1953-54 to 1.26 tons in 1956-57. The position in the East U.P. and Bihar is particularly serious. Sixty-one factories, against the all-India figure of 158, with an installed capacity of 60,800 tons, against the all-India figure of 1,72,000 tons, crushed 6 million tons of cane; not much better than 60 per cent. of their capacity.

Co-operatives

"Of the last 24 new units that have been commissioned in this country, not less than 16 have been co-operatives. In criticising co-operatives in any way I realise that I am on very dangerous ground, but I would be failing in my duty to joint-stock operators in the sugar industry, who represent 94 per cent. of the membership of this Association, if I failed to draw attention to the inequalities that exist. A co-operative which can be brought into existence by the collection of as small a sum as Rs. 10 lakhs, the balance of the finance needed being available from the Industrial Finance Corporation, State Bank and Government loans, enjoys complete exemption from income-tax and other corporate taxation. In this manner, they enjoy 100 per cent. of the profits they earn, whereas a joint-stock company faces 51.5 per cent. income-tax and super-tax, and a further sum which may well exceed 5 per cent. of any year's income goes to meet the demands of wealth tax and dividend tax. Here, I would like to mention that, in the United Kingdom, the home of co-operation, co-operative societies are exempt from tax only on that portion of the profits which they distribute as discount to their constituents. I submit for consideration that this is a fair method of assessment, and the prosperity of co-operatives in the United Kingdom is evidence of the fact that it does not restrict them.

"So long as co-operative factories are repaying the loan capital that has been raised, they do not constitute any particular threat to the other units, but what will be the position in five or six years' time, when these loans have been repaid? Are the co-operatives going to accumulate 10 to 12 per cent. of their profits each year as reserves? If this goes on, they will have enormous sums at their command. Are they going to sell on equal terms with joint-stock-owned factories, or are they going to undersell them, leaving them with an inadequate margin of profit to serve as their capital? Last year, our President warned us of what to expect from competition from *khandsaris* and, as I have mentioned elsewhere, we now see how right he was. This year, I warn members and I warn Government that the continued development of co-operatives must ultimately create similar problems, leaving the joint-stock companies with inadequate margins and the Government without the tax which they contribute out of normal profits. Bear in mind that the consortium of manufacturers of sugar plant is expected to produce as many as eight new units a year. I believe that the future programme of the consortium, once it has executed orders for units currently licensed, will be more and more devoted to the fabrication of plant for co-operative ventures, but, even without this, the capacity of co-operatives will represent 15 per cent. of the whole when the present programme is completed.

"This time last year we were completing a programme of profitable exports which earned

TAX CONCESSIONS TO TEA WELCOMED

PLEA FOR SIMPLIFYING MULTIPLICITY OF LEVIES

THE reductions in the excise duty on teas grown in certain areas and in the export duty on tea proposed in the Union Budget for 1959-60 have been welcomed by tea growers as a measure of the Government's appreciation of the tea industry's difficulties. Though the Government of India acknowledged during the past year the need for providing relief for common teas, there was some difficulty in implementing the same for two reasons. First, no suitable definition of "common tea" could be found. Secondly, no agreed solution could be formulated over the means of granting relief. All that the Government could do was to take the price as the criterion and provide relief to those teas which were "least successful in the sale room," that is, those which fetched the lowest price.

This method was, to some extent, good, but this did not take into consideration the yield or the cost of production. As a result, teas produced in Darjeeling and in the Nilgiris found itself paying a higher rate of excise duty than before. This anomaly has now been set right by the creation of additional excise zones, that is, dividing the Zone III into two, III-A having to pay an excise duty of 8 nP per lb., and III-B 12 nP per lb., as against a uniform rate of 10 nP earlier for Zone III as a whole. This change will benefit gardens which are situated in certain high altitude areas and which were adversely affected by the old rate of duty because of their high cost of production. Along with this readjustment in excise duty, the Government has also reduced the export duty from 26 nP to 24 nP per lb., as a measure of relief to "common" teas and to improve the competitive position of Indian teas in foreign markets.

Legacy of Prosperity

The various tax burdens on the tea industry are a legacy of those prosperous days in 1954. Though the prosperity proved to be a transient one, the legacy was left behind with the industry. The tax burdens have not merely eaten up the profits of gardens for that year, but have driven the less fortunate estates towards bankruptcy. Even the more fortunate ones have been compelled to abandon the agricultural and manufacturing standards of the past. According to Mr. L. T. Carmichael, Chairman of the Indian Tea Association, in Cachar, 19 out of the 27 member companies have made a loss in the 1957-58 season; some will make losses for three years running. Speaking at the annual meeting of the Association in Calcutta on Friday last week, Mr. Carmichael disclosed some disturbing features of the tea industry's present position. He said:

"It is true that new-comers may, by the exploitation of natural resources like standing timber, and by short-term economies, turn losses into a temporary profit, but they merely postpone the inevitable. Already, in Darjeeling, a 2,000-acre garden has been abandoned by its proprietors, and the workers are all on State relief, while a second property of 5,000 acres in the same district is in the hands of receivers, its timber, its houses and even its factory having been sold in an effort to provide finance. Other estates, notably in Cachar, are moving in the same direction."

In the meantime, the world output of tea has been mounting up and is at present more than 100 million lbs. in excess of consumption and this surplus is expected to be half as much again by the end of the current year. Despite the relief granted to the tea industry during 1958 and in the latest budget, the industry suffers from a multiplicity of taxes. A pound of tea, we are told, is still taxed five times in the hands of the producer-exporter and the planters have consistently held the view that the simplification of the system is long overdue. In fact, they have often pleaded that, even if the total quantum of tax paid by the industry cannot be reduced, they can be spared from the multitude of competing tax gatherers. Yet, Mr. Carmichael graciously acknowledged on behalf of the industry, the gesture shown by the Government of India in reducing the burden, to some extent, on tea growers.

While seeking tax relief from the Government, the industry itself has been making attempts to help itself. The most important is the endeavour to revive the International Tea Agreement to regulate production and exports. In Octobr 1958, India and Ceylon held talks and expressed the desirability of renewing the Agreement and of preparing—not necessarily for immediate utilisation—the machinery which would keep exports in tune with the demand. It is hoped that all other producing countries will eventually join the Agreement. Even if none else joined immediately, Mr. Carmichael said, India and Ceylon, which now controlled 60 per cent. of the world export trade, excluding China, could between themselves do a great deal to maintain the balance of supply and demand. It may be that regulation of exports by India and Ceylon may benefit other countries. But should the two countries reject the Agreement on that score? Alluding to this question, the I.T.A. President observed:

"That improved prices and a present immunity from taxation and from labour troubles will combine to induce investors to lay out new tea areas in other countries is true: that such additional acreage must produce additional crop which may depress the markets is axiomatic; but I am very doubtful whether anyone would be so foolish as to lay out new areas—which will produce no marketable tea for five years—merely because Ceylon and India decided to regulate, shall we say for the year 1960."

Regulation of Exports

The object of regulating exports, Mr. Carmichael explained, is not to create artificial shortages or to "secure a profiteer's haul from defenceless overseas' customers." The objects, as he put it, are: (1) to cover the costs of production, (2) to make a modest profit for the shareholders, (3) to ensure that the customer has as much tea as he wants at a fair price, and (4) to help, by giving steady employment and by paying taxes regularly, in the building of the new India.

The proposals to regulate exports, which are being examined, are not new. They have been in operation for over a quarter of a century and most of the established tea producing countries already have their legislation, whereby planting and exports can be controlled by the Governments concerned.

It may pertinently be asked whether the advantages of an international agreement, in the absence of one, cannot be secured through crop regulation by India. Answering this poser, Mr. Carmichael disclosed that this had been considered—indeed, "it is under constant review." In 1958, however, no specific proposals were made on the subject for a number of reasons. They are, in the words of Mr. Carmichael:

"First, we were hoping that we might receive tax relief of sufficient magnitude to enable the less fortunate gardens to sell enough of their tea at prices which would ensure an overall profit. Secondly, while one is considering an International Agreement, one prefers not to regulate on one's own. Thirdly, since a number of companies continue to do well, the chances of a general and voluntary agreement within the country are slight, nor would Government happily impose a statutory scheme in the knowledge that it would relate to India only and would probably occasion a great deal of opposition from estates in the South, from the lower yielding gardens in Darjeeling and Cachar, and from the prosperous areas in Assam, where man's wisdom has produced some of the finest tea estates in the world. If yield per acre is already small, is it just to curtail it further? If teas can be sold profitably abroad, why should their export be limited?"

Measures to Improve Quality

It is often said that reliance on an international tea agreement and regulation of crop represent a negative approach to the problems of tea and that the industry should try to improve its sales by improving the quality of tea. Mr. Carmichael averred that the industry had spared no pains to achieve these objectives. He said:

"Apart from the effort to insist upon better standards of plucking and of manufacture, apart from the strictest possible control over expenditure, and apart from an endeavour to concentrate on higher yielding areas—an endeavour which has on occasions extended to the sale of gardens in order that, with the proceeds, the balance of the property may be preserved—we have been engaged upon experiments intended to improve the machinery which we use in the manufacture of our teas."

The first process, by which the industry is said to have been improving the quality of tea, is withering, in order to secure a "controlled wither." For this purpose, a continuous withering machine has been devised which enables the planters to do, in two and a half hours, in a relatively small space and with greater accuracy, what it took more than a day. The teas produced on this machine—known as McTear Rotorvane—are said to be as good as those made in the traditional way and often significantly better. The machine is now in commercial production, with a number of purchasers on the waiting list. The industry has also under trial a continuous roller which is particularly suitable for teas of orthodox manufacture and is working on other machines designed to complete the "continuous process."

The problem is not one of inventing machines to produce quality teas but that of developing the inventions fast enough to arrest the decline in prosperity of large sections of the industry. Another problem is: Will the companies in greatest distress be able to afford them? Mr. Carmichael was doubtful of such a prospect. He had his own reasons for this. He observed:

"There has been too great a decline in certain properties for them to revive. There has been too great an increase in overseas competition for people to embark on the gamble of investing more money in those areas which are depressed. Since it has been made abundantly clear that the rewards of risk capital will always be limited, risk capital will stay away. British capital show no signs of running away from India; on the contrary, I understand that 82 per cent. of foreign capital in India is British, and that new British investments in this country since the war amount to £120 million. What is worrying us is that British capital is running away from tea, because we know how greatly it helps us in the sales of tea to our best customer to have the double connection of buyer and of investor. Destroy that link, and the special place which Indian tea has in British markets will be endangered: there are too many other places in the world where tea can be grown, where capital is wanted, and where developments are possible. Remittances of profits to shareholders in the United Kingdom which were naturally good as a result of the prosperity of 1954 are falling off badly and, though in recent years there have been satisfactory payments to overseas investors, such payments have been largely on account of previous seasons, and do not represent the present economic position."

Outlook

Mr. Carmichael is not, however, pessimistic about the outlook for tea. No doubt, world production is now more than 100 million lbs. in excess of consumption and buyers hold substantial stocks which give them a commanding position. Yet, the I.T.A. President is not worried over the accumulation of stocks. For the present stocks in London, at 170 million lbs., are, according to him, only 60 per cent. of what they were at peak periods before the war. Secondly, he believes that stocks with buyers, rather than with growers, do not provide an incubus but a safeguard against broken communications, whether in the producing countries, *en route* to the U.K. or in the London docks themselves. He also seems to share the view that stable prices depend on the holdings in London and not upon the stocks in gardens. He is, however, of the view that the building up of stocks cannot continue indefinitely, but it gives the industry a breathing space, while the International Tea Agreement is considered and while promotion campaigns get under way.

Another factor on which Mr. Carmichael bases his optimism is the vast scope for increasing internal consumption. Domestic consumption is, no doubt, rising at the rate of 10 to 15 million lbs. a year, but even so, the average *per capita* consumption is only "one cup for every three days," whereas in Britain it is eight cups per day. "If only we could double India's consumption, or if we could induce each citizen to drink one cup of tea a day," the I.T.A. President said, "our present difficulties would be over." He dismissed, as unfounded, the fear that, if more tea was sold in India, there would be less tea to sell abroad and that this would impair our foreign exchange earnings. He believed that India's ability to earn foreign exchange would be strengthened, if there were a bigger internal market and if taxation were based on profits, instead of upon the quality of tea produced.

The two other factors which give hopes of an encouraging future are the success of the engineering section of the industry in inventing new machines, as stated above, and the expectations of a revival of the International Tea Agreement which will give some stability to prices in world markets. With the latest concessions in taxation, the industry, it is to be hoped, will be able to see better days in the coming years.

THE BANK OF MAHARASHTRA LIMITED

COMPETITION AMONG BANKS FOR ATTRACTING DEPOSITS DEPRECATED

CHAIRMAN, MR. V. P. VARDE'S REVIEW

SPEAKING at the Annual Meeting of the Bank of Maharashtra Ltd. held in Bombay on 5th March 1959, Mr. V. P. Varde, Chairman, deprecated the unfair competition among banks for attracting deposits by offering disproportionately higher interest rates. He was of the view that depositors were not attracted only by interest rates, as they were interested in the safety of funds, the use to which they were put and the quality of service.

The following are extracts from his speech:

"GENTLEMEN,

"I have great pleasure in welcoming you most cordially to the annual meeting today. The twenty-third report of the Directors and the audited statements of accounts for the year ended 31st December 1958, have been in your hands for a fairly long time and, with your permission, I shall take them as read.

"The growing imbalance in our economy associated with the progress of the second five-year Plan presented itself in its worst form during the year under review and the banking system could not escape from its impact. The fall in agricultural production was accompanied by the slowing down of the pace of expansion of industrial production and the development programme was punctured by the foreign exchange crisis. Corrective measures for arresting inflationary pressures, to which I had made a detailed reference last year, resulted in levelling off the investment activity in the private sector; but the expansionary forces released by a rising tempo of the development expenditure in the public sector outwitted the effort to curb inflation and the wholesale commodity price index moved up by one per cent. and the living cost in Bombay by 4 per cent. As usual, this set in motion the wage-cost spiral and rendered the cost structure more rigid, thereby pricing us out of the export market. Roughly 10.2 per cent. of the national income was absorbed by the State and consequently every citizen was obliged to tighten his belt further. It is this factor, superimposed on the recovery of overseas commodity markets and a substantial increase in the volume of foreign assistance, which enabled us to extricate ourselves from economic morass during the past three months.

Money Supply and Credit Expansion

"Over the year under review, the money supply with the public rose only by Rs. 74.9 crores, compared to Rs. 96.3 crores in 1957. In the preceding year, the major contractionist influence was the heavy payments deficit; but this year it was of less significance, inasmuch as the foreign assets of the Reserve Bank of India declined in 1958 by only Rs. 109 crores, compared to a fall of Rs. 327 crores in 1957. On the other hand, the rise in Government's indebtedness dropped from Rs. 478 crores to Rs. 414 crores and in bank credit to the private sector from Rs. 79 crores to Rs. 22 crores. The expansion of deposits of Scheduled banks was smaller at Rs. 206 crores, as against Rs. 267 crores in the preceding year. Nevertheless, it was substantial and had a significance in the context of a rise of Rs. 214 crores, compared to Rs. 58 crores in 1957, in time deposits. The bank credit, however, rose by only Rs. 8.5 crores and consequently the credit-deposits ratio declined by 7.7 per cent. to 55.00 per cent. and the surplus funds had to be employed in adding Rs. 203.8 crores to the investment portfolio.

Competition for Deposits

"This change is no doubt to be welcomed. First, it has imparted the much needed liquidity by stepping up the proportion of cash in hand and with the Reserve Bank and investment in Government securities to deposits from 39.55 to 48.07. Secondly, it has demonstrated that the competition for attracting deposits by quoting disproportionately high interest rates is unrealistic. The working results of the banks for 1958 have shown that profits are squeezed when higher rates are offered for luring the deposits, even though the additional funds cannot be employed successfully in banking business. With this conviction, some of the major banks have voluntarily agreed to impose a ceiling on deposit rates, whether the ceilings are at a reasonable level or not is a matter of opinion; but from the experience of this Bank, I am prompted to say that depositors are not attracted only by interest rates. They are more interested in the safety of funds, the use to which they are put and the quality of service. Indeed, the fact that even the Government is not able to make a substantial headway with the small savings drive backed up by higher interest rates and an elaborate organisation underlines the value of banking service which the public appreciates most.

"Viewed against this background, the results presented by your Board of Directors for 1958 should be considered as highly satisfactory. The Bank's deposits rose during the year from Rs. 7.86 crores to Rs. 10.56 crores. The gain of a little over a third, on the top of a rise of 25 per cent. in 1957 and 23 per cent. in 1956, is significant both in the context of the growing confidence of the public in the Bank and in relation to the growth of deposit resources of the banking system during the year, a part of the increase could be attributed to the programme of branch expansion. During the year under review, the Bank opened three pay offices in Poona and two in Bombay and one branch in Marathwada, raising the number of branches to 44. I am glad to inform you that all the branches are working satisfactorily. Out of a total deposit resources of Rs. 10.56 crores, cash in hand and with banks and investments absorbed Rs. 6.80 crores, that is, 64 per cent., compared to 55 per cent. at the end of 1957, while loans and advances represented hardly 40 per cent. of the deposits. Need I repeat this year also that this policy is all the more necessary in the interest of the depositor and has been designed to ensure growing strength for this Bank.

Bank's Capital

"You might have noticed from the balance-sheet that the paid-up capital of the Bank rose during the year by Rs. 6.15 lakhs to Rs. 25.22 lakhs on account of the calls made on you. With the two calls payable in the current year, the capital would be raised to a fair level. Your Board has also been ploughing back, with your approval, a portion of the annual profits and the reserves now stand at Rs. 13 lakhs. I am sure that this policy will be continued in future so that the Bank is fully equipped for the task which its name signifies.

"Let me now turn to the profit and loss account. The rise in deposits was accompanied by an increase of Rs. 6 56 lakhs in interest paid thereon, while the expansion of the Bank, together with normal increments, added Rs. 2.71 lakhs to the cost of establishment. There is hardly any major change in other items. Against an increase of Rs. 10.97 lakhs in the expenditure might be set off an increase of Rs. 9.51 lakhs in interest earned after making the necessary provision, while the increase in earnings from commission and discounting of bills, etc., during the year is of the order of Rs. 1.39 lakhs. The progress made in tapping the latter source of business is indeed gratifying. You will also note that, although the cost of acquiring funds has steadily moved up from 1.6 per cent. in 1956 to 2.1 per cent. in 1958, mainly on account of the fact that the bulk of the deposits is time deposits, your Board has been making a judicious use of the resources. This is as much reflected in the comparatively high percentage of liquidity as in the higher profit which amounts to Rs. 5.56 lakhs in 1958, compared to Rs. 4.69 lakhs in the preceding year.

"Throughout its career, the Bank has been conservative in the distribution of profits and has always believed in giving a priority to the strengthening of reserves over dividend. Consistent with this policy and in conformity with the rise in profit, your Board has been trying to secure a fair reward for your capital. The same considerations have now prompted your Board to recommend a higher dividend of 6½ per cent., compared to 6 per cent. in the preceding two years, so that you can participate in the growing prosperity of this institution which you have nursed in the past by sacrificing your legitimate share in the profit.

"You will naturally expect me to deal with staffing problems. The Bank has moved from 'C' to 'B' class and your Board had thought that the transition in respect of terms of employment would be smooth, if the steps had been spread over two years. With this object, it had examined last year the possibility of effecting partially adjustment in advance. It, however, desisted from taking the step in this direction, owing to a complicated legal position. As you are aware, in these days. the terms of employment have to be determined by a third party and the employer has hardly any choice. The period of the Bank Award has expired and the future pattern is awaited. My Board appreciates the splendid work which the staff of the Bank has put in and is conscious of the need for improving its lot. At the same time, for reasons explained earlier, I earnestly request it to have a little more patience.

Staff Training

"The expansion of the Bank pre-supposes the adequacy of qualified, trained and experienced personnel well versed in the Board's policy. It is, therefore, the Board's practice to train the staff and officers from within. The Bank has been deputing every year two officers for training to the Bankers' Training College run by the Reserve Bank and has also made special arrangements for the training of officers at the head office. The training, however, would take time and to cope with the immediate programme, your Board was obliged to effect direct recruitment of a few officers. Considering the pace of growth, this need not prove a damper for those who have stood well with the Bank in the past.

"The budget for 1959-60 has once again raised the problem of resources for the Plan. During the first three years, Rs. 2,450 crores have been expended on the Plan, and the budgetary deficits have totalled Rs. 950 crores. For 1959-60, an overall deficit of Rs. 245 crores is feared after taking credit for Rs. 23.36 crores on account of fresh taxation, Rs. 325 crores on account of borrowings, including small savings, internally and Rs. 337 crores by way of foreign aid. This means that, although the inflationary pressures have abated, they cannot be mastered. The Finance Minister has admitted that the comfortable revenue position and shortfalls in expenditure would no more operate and he has to concentrate on improving the administrative machinery, simplifying the existing procedures and plugging the loopholes. His proposals are designed primarily towards integration of the scheme of direct taxation and strengthening corporate savings. The budget has to be welcomed also from the point of his determination to maximise borrowings from the public and abroad, cut down non-development expenditure and minimise the reliance on deficit financing. It remains to be seen how far he succeeds in these directions; but the intentions are good.

Consumer Credit

"Be that as it may, the budget is a reminder to all of us that the economic development can be achieved at a price. As citizens we have to pay it willingly by tightening our belts and promoting savings. I do not, therefore, like the move of some of the banks to provide consumer credit for stimulating the economy which is already inflated. Secondly, the emphasis of development has necessarily to be in the decentralised sector. The schemes provided for are designed to promote and strengthen small industries. It is in this field that your Bank has, during the past two decades, made a notable contribution. Maharashtra offers a positive scope for industrial development, particularly in view of the power supply from the Koyna and the provision of Rs. 1 crore for the development of Konkan. A banker's job is not only to provide credit but also to advise its clients on fresh channels of enterprise. In view of the dynamic role of your Bank in Maharashtra, it is necessary to explore the possibility of establishing a statistical and information unit which can provide the requisite background to any *entrepreneur*. The Board will, of course, consider the proposition with due regard to the financial capacity of the Bank and the scope for expansion of banking business which follows any development programme."

The
Travancore Rayons Ltd.
announce plans
for doubling the production of
Transparent Cellulose Film

•

We have finalised plans for doubling the production of transparent cellulose film and have entered into an agreement with a Swiss firm for this expansion. The necessary permission has been obtained from the Government and the new equipment is expected to arrive at the factory site by the end of the year.

By early 1960 when this scheme will be completed an additional quantity of 2,000 tons of transparent cellulose film will be available in the market. In addition, a small surplus will be exported to Middle East and Far Eastern countries.

MUKAND makes both Carbon and Manganese Steel Castings in a variety of specifications, sizes and shapes for the Cement Industry. These include Lining Plates, Hammers, Beaters, Grate and Grizzly Bars, Diaphragm Walls and many, many others; also Manganese Steel Jaws, Digger Teeth, Corner Shoes etc. for Excavation, Quarrying and Crushing Machinery and Equipment.

For your needs of Carbon and Manganese Steel Castings, large or small, call in MUKAND to ensure a high standard of quality and prompt delivery.

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1920)

REPORT OF THE DIRECTORS TO BE SUBMITTED TO THE SHAREHOLDERS AT THE THIRTY-NINTH ANNUAL ORDINARY GENERAL MEETING.

GENTLEMEN,

Your Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1958, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	nP.
The Net Profit for the year including the sum of Rs. 52,269.51 brought forward, amounts to ..	5,47,614	30
An ad-interim Dividend was paid for the half-year ended 30th June, 1958, at the rate of 16 per cent. per annum on 61,215 shares absorbing ..	1,22,430	00
Amount provided for Taxation	1,15,000	00
Bonus paid to the Bank's Staff	1,10,101	25
	3,47,531	25
Your Directors now recommend :—		
To pay a Final Dividend at the rate of 16 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1958, amounting to	1,22,430	00
To transfer to Gratuity Fund	30,000	00
To donate to the Indian Red Cross Society, Madhya Pradesh Branch	500	00
To carry forward to the next account	47,153	05
Rs.	5,47,614	30

The Directors hope that you will find the progress of the Bank satisfactory.

THE BANK OF INDORE, LTD.,
INDORE CITY, 13th February, 1959.

K. A. CHITALE,
Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1958

Previous Year Rs.	CAPITAL AND LIABILITIES	Rs.	nP.	Rs.	nP.

POWERLOOMS: WHAT ABOUT THEM?

By A Special Correspondent

A STRIKING example of the handicaps which the planners of India have to contend with, on account of the inadequacy and the unreliability of the available statistics, is provided by the cotton textile industry. Leaving the organised sector, the activities of the other two branches of the industry have, so far, defied a comprehensive and accurate assessment. Such vital information as the number of handlooms that are in actual operation in the country is derived entirely from sample surveys, on the tenuous basis of which impressive, but not very correct, conclusions are drawn. None of the expert bodies investigating the problems of the textile industry has found it possible to adopt a more dependable mode of survey.

This, without doubt, is an unsatisfactory state of affairs, for there is the ever-present risk that all calculations pertaining to the production and consumption of cloth are apt to go wrong, since they are largely based on guesswork. The wide dispersal of the handloom sector and the vastness of the area to be covered can, however, be urged as an extenuating circumstance for the inability of the authorities to compile more reliable statistics about it, but no such plea can be put forward for the deplorable lack of authentic and up-to-date information about the powerlooms, although their number is much smaller than that of the handlooms.

Compelling Need

There is a compelling need for dispelling the present ignorance about the powerlooms whose rapid growth poses serious problems both to the handloom and the mill sectors. It is also necessary that the policy of the Government towards this sector should be made clear. The Kanungo Committee, which reported in September 1954, envisaged a day when the handlooms would be virtually eliminated, their place being taken by the cottage powerlooms. To quote the Committee's Report: "The ultimate idea is that at the end of 15 to 20 years, barring, say, 50,000 handlooms of the throw-shuttle or fly-shuttle type manufacturing special fabrics with an intricate body design, the entire handloom sector will have been converted into the improved (semi-automatic) handloom or the decentralised powerloom industry. By planning in this manner for the general conversion of the entire handloom sector, the Committee feels that we shall have achieved the twin objectives of maintaining employment over the short-term and securing the best possible efficiency in the long run."

The Government of India has not given its decision on this aspect of the Committee's recommendations, presumably because it seriously affects the future of the handlooms which are among the major sources of employment in the country. In any case, the handloom interests have been most emphatic in their opposition to any reform that would adversely affect their claim for preferential treatment. From 1951, till the lifting of controls on textiles in 1953, the installation and the working of the powerlooms was strictly regulated, in order to ensure "the maximum possible share to the handloom industry from out of the meagre available supplies of yarn." Perhaps, in order to prevent the growth of small powerloom units into chaotic exuberance, the Government directed in 1956 that the owners of powerlooms should compulsorily register them and obtain a registration certificate. As on 31st December 1958, the total number of powerlooms working on cotton yarn was 27,129.

There is a possibility that a large number of small units have not yet responded to the Government's call for registration. Such a state of affairs should not be permitted for an indefinite period, for, taking advantage of the various concessions granted to them, the owners of small powerlooms have been rapidly expanding their activities, much to the disadvantage of the other two sectors.

The following table shows the annual production of cloth in the three branches of the industry during the last five years:

(Production in million yards)

Year	Mills	Hand-looms	Power-looms
1954	4,998	1,318	243
1955	5,004	1,480	273
1956	5,306	1,540	278
1957	5,317	1,678	303
1958	4,923	1,772	323

(*Source*: Textile Commissioner, Bombay.)

While mill production in 1958 remained almost the same as in 1954, the output of the handlooms rose by 34.44 per cent. and that of powerlooms by 32.92 per cent. Since the compilation of the production statistics in the non-mill sector is by the rule-of-thumb method, the actual output of the powerlooms is likely to be much more than is indicated by the above figures.

During the last half century, powerlooms have been introduced in many centres and have been making steady inroads into the other two sectors. This development was noticed by the Fact Finding Committee (Handloom and Mills), which stated in its Report of 1942: "Although the looms are generally old ones discarded by mills, these small units have been able to cut down production costs and have proved a serious rival not only to handlooms but to mills also."

The Committee proceeds to correct the general impression by pointing out that it is from the small powerloom units and not from the mills that the handloom sector should fear the most formidable competition: "This rival," it says, "combines in itself, owing to its medium-scale production, the advantages of both mills and handlooms. It can utilise cheap electrical power and avail itself of the modern appliances in weaving." Again, the powerlooms "are not subject to any irksome restrictions such as the Factories Act or special taxes. As such, they are a source of competition in important lines to the mills as well. The cost of production in powerlooms is comparatively low, owing to small overhead charges and economies of mechanical production. Thus, the contest has now become a three-cornered one."

Barking up the Wrong Tree

So much for the Fact Finding Committee's observations on the threat posed by the small powerloom units to the mill and the handloom sectors. The Kanungo Committee mentions a number of centres where the handlooms have been virtually ousted by their powerful rivals, the powerlooms. "Practically, in each of these places," observes the Committee, "the powerloom industry was a growth from the handloom industry, representing the attempt of the *entrepreneur* to get a higher return by increasing the productivity of the tool." The Committee holds that the smaller powerloom units are "almost invariably a step in the evolution of the industry from a predominance of the handloom to one of the powerloom." One cannot help feeling that, by directing all their criticism at the mill sector, the champions of the handlooms have been barking up the wrong tree.

The encroachments of the cottage powerlooms into the mill sector are no less devastating. Their cost of production compared to that of mills and of bigger powerloom factories is almost negligible. They are bound by no factory laws nor are they required to pay standardised wages. Since most of the domestic powerlooms are operated by members of the household, the statutory regulation of hours of work does not apply to them. Even hired labour cannot claim this amenity. Again, while the bigger powerloom factories and the mill sector are required to pay a heavy excise duty, powerloom units having four looms and below are exempt from this impost. It is true that they are somewhat at a disadvantage in purchasing yarn and in marketing their products, but the extra cost involved is negligible as compared with the heavy calls that are made on the resources of the bigger powerloom factories and the mill sector, as a result of the higher wage bill, Central, State and Local taxation, labour legislation, etc. The bigger producers have also to reckon with the fact that, on account of the smallness of the domestic powerlooms, they are not easily traceable, so that their capacity to

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF INDORE, LIMITED.

We have audited the foregoing Balance Sheet of The Bank of Indore, Limited, as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

FRESH WATER FROM THE SEA

U.S. TO SET UP PILOT PLANTS

THE U.S. Government's announcement that a plant will soon be set up for conducting large-scale experiments in conversion of saline water into fresh water will be widely welcomed for the promise it may come to hold for the success of similar experiments elsewhere in the world. Sooner or later, most countries have to face the problem of shortage of water-supply for purposes of human consumption and irrigation of land, what with the growing population of the world and the need to press into service every available source of water-supply. The demonstration plant, now sought to be set up in the U.S., is expected to be able to convert sea water into fresh water at the rate of one million gallons a day. Announcing this, the U.S. Secretary of the Interior, Mr. Seaton, expressed the hope that the plant would be able to produce fresh water from the sea for less than $1 per thousand gallons. This rate, according to Mr. Seaton, represents a reduction of about 50 per cent. over the cost of conversion of sea water into fresh water in the most efficient commercial conversion plant in the world today. It would appear that the U.S. intends to build three plants for the conversion of sea water into fresh water, to be located generally on the East, West and Gulf Coasts. In addition, two plants will be built for the treatment of brackish water—one in the arid south-west of the U.S. and the other in the Northern Great Plains.

Sea Water

The U.S. proposal, noted above, serves to bring into bold relief the fact that desaltation of sea and brackish water is no longer a laboratory phenomenon but is of growing practical importance. From this point of view, the study of the subject, entitled *Fresh Water from the Sea*, published by the Bureau of Business and Economic Research, the University of Maryland (U.S.), is of more than academic interest. The study brings together a great deal of interesting data on the conversion of sea water into fresh water, discusses the processes involved and describes the economics of such conversion processes. It notes that desalted water is currently much more expensive than natural water. This, it is stated, should not be surprising since desaltation is a complex manufacturing process, whereas natural fresh water delivered to the consumer is one of the cheapest of all commodities. However, costs vary widely as between different areas. In some cases, it is already cheaper to provide water through desaltation than by any other method. Desaltation of brackish water is said to be particularly encouraging.

Conversion of salt water into fresh water has been an ancient dream of mankind. It is true that the earth is at present fairly well supplied with water. The earth's surface is covered approximately seven-tenths by water and three-tenths by land. Although by far the major percentage of this water is too salty for human or agricultural use, there is abundant fresh water on earth. The earth and its atmospheric system act as a "gigantic distillation apparatus which continually extracts fresh water from the oceans and deposits rain upon the land, making water available for human use before it flows into rivers back to the sea."

Nevertheless, there are growing water shortages in many areas. Further, even areas with abundant water-supply may witness in the foreseeable future drastic shortages, thanks to excessive use and unwise management. The solutions suggested for this problem include increased supply of water through weather control, storage of water, recycling and more efficient use of water and prevention of pollution. It is against the background of increasing demand for water and the several alternative methods for increasing its supply that one must view the "exciting prospect" of desalting ocean and brackish water.

Salt Content

Since under some processes, the cost of desalting water rises with the amount of salt to be removed, costs are reduced if the water to be desalted has low salt content or if a certain amount of salt can be tolerated in the final product. Typical ocean water contains 35,000 parts of dissolved salt per million parts of water (p.p.m.). Brackish water may contain 1,000 to 35,000 p.p.m., water for irrigation may contain 1,200 p.p.m. while drinking water should contain less than 500 p.p.m. For some industrial purposes in which water is used under corrosive high pressure and high temperature conditions such as in boilers, salt content must be limited to three p.p.m.

The science of distillation of salt water is old and is now well advanced. Sir Richard Hawkins successfully operated distillation apparatus as early as 1593. A large solar distillation plant was constructed in Chile as early as 1872 and provided water for industry for 35 years. Ocean-going ships have, of course, used desalting apparatus for many years, and the number of land-based large-scale installations is growing rapidly. It has been computed that the minimum electrical energy for desaltation of salt water with a completely efficient apparatus would be 2.89 kw.h. of electricity per 1,000 gallons of water. Because of efficiency losses, the minimum heat equivalent is about 8.4 kw.h. per 1,000 gallons.

Thermal Distillation

The most widely used distillation process at present is that of thermal distillation. Water is heated and the distillate is condensed into pure water. A promising method is solar distillation. Basically this involves exposure of salt water under glass cover to sunlight. The heat of the sun causes water to evaporate and pure distillation condenses on the underside of the glass. The fresh water collects in troughs and is withdrawn, the residual brine flowing out as waste. The electrolysis method is of considerable interest in desalting brackish water, since potential economies may be achieved in this process. Another well-known process is that of osmosis where certain membranes are used which permit the flow of water while blocking the flow of salts. Again, synthetic liquids have been developed which will absorb large quantities of pure water from salt water, leaving behind a concentrated salt solution. Saline water is mixed with the solvent, producing a more concentrated salt solution and the extract is heated and the fresh water is removed. Finally, since salt water freezes at a lower temperature than does pure water, it is possible to freeze sea water and discard the brine. The major technical problem in this process is the difficulty of separating the salt water and brine which tend to cling together. Efforts are being made to improve the process by washing the ice, separation by compression and freezing in zones.

The cost of producing fresh water from sea water must compare favourably with the cost of supply of natural water if the former is to become more popular. For a typical community in the U.S., the current cost of pure water delivered under pressure at the site required is about five cents per ton. Even though the capital costs of providing reservoirs, treatment plants and pipelines are initially high, these installations serve for long periods, thus achieving low per-unit costs. This means that desaltation of sea and brackish water must be very efficient, before it can become competitive *vis-a-vis* natural water. Some cost estimates (per 1,000 gallons) of demineralising water include: simple solar evaporation $2.38; vacuum distillation $1.62; vapour condensation distillation $1.32; vapour compression distillation $0.35; electrolytic membrane $0.012 to $0.123.

Brackish Water

In conclusion, the survey notes that desaltation of sea water is proceeding rapidly both in basic knowledge and in application. Desaltation of brackish water, as stated at the outset, is already competitive with conventional sources. As growing population and industrial pressures force up the demand for water and as technological processes lower the cost of processes, direct desaltation of sea water will be expanded. The costs include capital, fuel and maintenance. Much of the interest in construction of large pilot plants is based upon the assumption that capital costs per unit of water can be reduced, if total output becomes very large.

Assuming current dietary standards, rates of population increase, withdrawal of fertile farm lands for roads, dam sites, airfields, and residential and urban development, agricultural shortages, it is pointed out, will replace present surpluses in the foreseeable future. Although the estimated amount of new land required depends upon various assumptions, such as rates of continued technological progress in agriculture, it is likely that millions of acres of additional farm land will have to be brought into production within 15 years. Even after irrigation by conventional methods of newly cultivated lands, there will remain the necessity of irrigation by desalted water.

Within the next few generations, the significance of desalting sea water is likely to be far more important to the future of arid lands in the underdeveloped countries than in the United States. It is significant that many of the lands which were previously fertile centres of ancient civilisations in Egypt, Iraq, India, Pakistan, Ceylon, and Algeria are now desperate for water. Needs are pressing in other parts of North Africa, South Africa, the Middle East, Central Australia, and in Latin America. Countries also affected include Greece, Italy, and Spain. The United States, according to the survey, has a vital interest in achieving the goodwill and understanding of these and other undeveloped countries. It avers that in the global struggle for scientific achievement, pure water may become more important in the daily lives of these people than conquest of outer space.

LUBRICATOR FOR DIESEL ENGINES

The new "Ionic" mechanical lubricator produced by Loxhams Engineering Works Ltd., of Blackburn, Lancashire, uses a two-diameter plunger to give very low pressure metering, and final high pressure delivery. The larger diameter has a spill-scroll to give very fine control of the oil passing to the delivery valve, which is visible and has a tell-tale to indicate correct functioning of the metering section of the pump. The oil pumped is visible as a series of falling drops feeding a small well, which, in turn, gravity feeds to the pressure section of the pump. Oil in this well never rises above the level of the feed port, so that the pressure pump delivery is also visible, since the only exit from the well is into the pump and to the lubrication pipe. Control is so accurate that the unit can run at higher speed than is usual and still deliver small amounts of oil. This reduces the need for reduction gear, ratchet drives etc. Due to the very sensitive delivery valves, which are designed to handle air, the unit is completely self priming. Air locks are impossible, so that "bleeding" is never necessary, even after refilling a container allowed to run empty. The small diameter or pressure pump section of the plunger is made in a nylon which has unique abrasion resistance and low surface friction as well as toughness; furthermore, any end pressure on it deforms the plunger and causes a slight diameter increase, which gives an automatic decrease in plunger clearance without any increase in the pipe pressure. This enables the unit to generate very high pressures rapidly. The "Ionic" is made in a complete range from 2 to 28 plungers per unit. The plungers are arranged in a double row when over 12 are required, thus a single 10-plunger unit can, without increase in length of the container, be built as an 18-plunger unit.

DOLLAR LOAN FOR KOYNA PROJECT

A delegation of Indian officers and engineers has left for the U.S.A. to negotiate with the International Bank for Reconstruction and Development for a dollar loan for the Koyna Hydro-Electric Project in Bombay. The formal negotiations with the Bank commenced at Washington on 5th March. The first stage of the project will involve approximately Rs. 12.67 crores of foreign exchange expenditure. In the second stage and in the construction of the Koyna-Sholapur transmission lines, the foreign exchange requirements have been estimated at Rs. 6.18 crores. The delegation will negotiate with the International Bank for a loan to cover the foreign exchange required for the project during both stages of construction. Informal negotiations for this purpose have been going on for some time, and the International Bank's technical experts had visited the project works in 1954, 1956 and 1958, to study the design, construction schedule and financial statements relating to it. The delegation, led by Mr. S. C. Barve, Secretary, Public Works Department, Government of Bombay, consists of Messrs. R. R. Bahl, Joint Secretary, Union Ministry of Irrigation and Power, N. G. K. Murti, Chief Engineer, Koyna, and V. R. Valdya, Chief Electrical Engineer, Koyna.

BORING SQUARE HOLES

A stock joke in the engineering trade is to tell a new apprentice to bore a square hole. If he were apprenticed to Thomas Chatwin & Co., of Birmingham (a member of the Brockhouse Organisation) he would, in fact, be able to do it: for Chatwins are regularly boring not only square holes but a variety of polygon shapes on their lathes—by means of the Polygon Tool Box, a revolutionary lathe attachment perfected by the Company. This tool, which is to be shown on the Brockhouse stand at the U.K.'s Engineering, Marine, Welding and Nuclear Energy Exhibition, can be mounted on a variety of capstan and turret lathes. It will produce hexagonal, octagonal, or regular shapes from round stock, drilling and finishing any one portion ready for parting from the bar. These shapes are produced in a very much shorter time than by milling, with a better finish and a complete absence of fraze. The tool can bore holes to afford perfect mating for the shapes produced; it can also produce internal and external taper components with considerable savings in time and money.

NEW PRODUCTS AND PROCESSES

High Speed Paper Cutting Machine

THE efforts of the heavy industries to produce goods more and more by automatic control have engaged the designers of the graphic machinery beyond measure. Automatic multi-colour printing machines, mechanic processes for making blocks, paper cutting machines with automatic paper feed and complicated electronic equipment for the automatic control of the work are used in increasing measure with big graphic works. If these machines are not economical for the other workshops since they cannot be fully engaged, this development yet has had the advantage to make use of the experiences for the smaller machinery. Such a small high capacity machine is Tempo, designed by Wilhelm Thumecke of Hamburg. The designers have used for this machine latest experiences like a safe and simple hydraulic clamping, the drive without any clutches, no idling and unnecessary consumption of current of the motors during the standstill of the machine etc. The Tempo is a modern high-speed paper cutting machine with self-acting *hydraulic* clamping. Its construction is easy to survey. Highest security against accidents by approved both-hand push-button operation, without clutches. The machine will be delivered with fast movement of the back gauge by hand or motor. Further advantages: simple operation of the hydraulic cut finder by treadle, micro adjustment of the back gauge with locking device, magnifier with illumination of the measuring scale, inbuilt lamp for the cutting line, no power consumption by racing of motors, 4 side angles, simple adjustment of knife-beam for obliquely edged knives.

New Oil Heater

A new oil heater which lights at the press of a button was shown for the first time at the fifth International Hardware Exhibition in London. According to L. J. Hydleman & Co., Ltd., Grove Park, Camberwell, London, the manufacturers, it is the first heater to be ignited in this way. The button has a safety device to avoid the danger of flare-up, and took nearly a year to perfect. The heater will burn for 25 hours without refuelling and has a heat output equivalent to 2½ kw. Ignition is achieved by the use of a standard inexpensive battery, and the button avoids the necessity of removing the guard to get at the burner, which is the conventional way of lighting oil heaters.

Better Textiles

Cellulosic fibres recently developed by three leading U.S. rayon producers are claimed not to stretch as much as standard rayon when they become wet and not to shrink as much when they dry. They are expected to find applications in "wash-and-wear" clothing. A non-resinous process has also been developed and is said to transform cellulosic cloth into a fabric with improved properties, including better recovery from wrinkles when wet, a soft handle and permanently improved dimensional stability. The process also is said to substantially improve the compatibility of fabrics for resin treatment. Another new chemical process is said to eliminate amine and formaldehyde odours from resin treated cottons and synthetics. Such odours, according to the developer of the process, sometimes become noticeable on hot, humid days.

CentraSteel

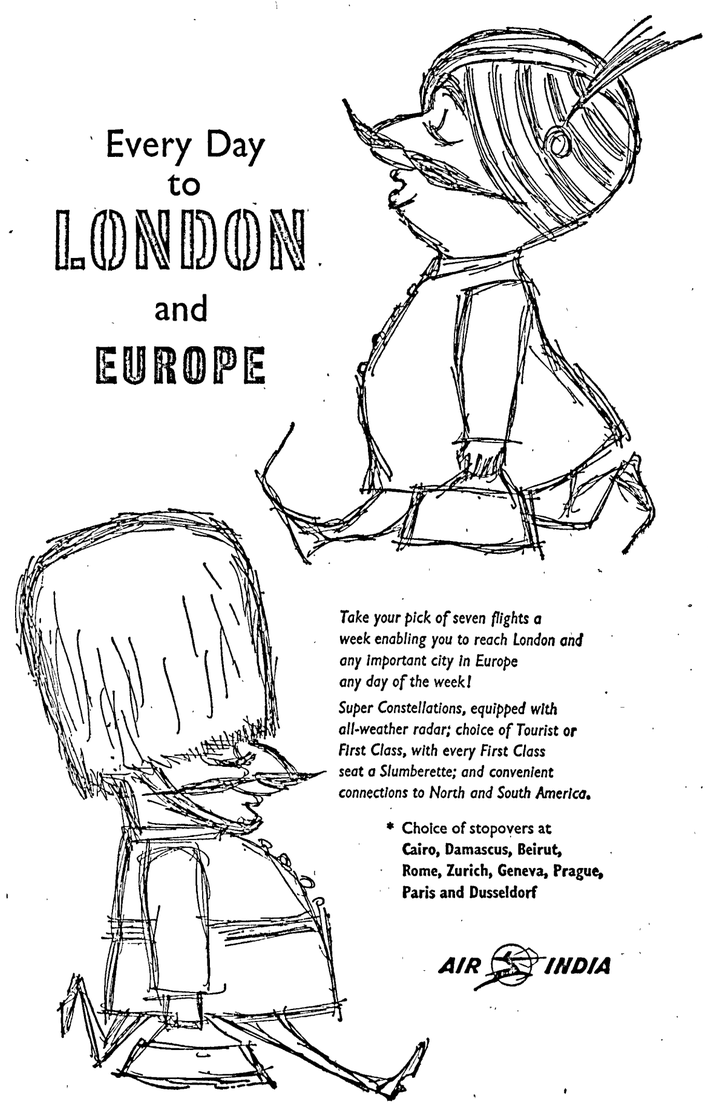
A novel experimental material similar to steel which might possibly be used in place of plain steel forgings and permit greater design flexibility in making castings has been developed. Called CentraSteel, it is said to have the equivalent strength of steel and better machinability while for casting, the characteristics appear to be superior to steel. CentraSteel introduces new concepts of foundry technology, it is claimed, because it does not require extensive heat treatment, costly addition agents, injection apparatus or low maximum sulphur content. For high volume production some foundry problems remain to be solved and work on them is under way. CentraSteel resulted from a research programme for a means of producing as-cast malleable iron, and its outstanding characteristic is the presence in the as-cast condition of a compacted type of graphite similar to the temper carbon of malleable iron.

Nylon-faced Hammer

A British engineering company, Thor Hammer Company, Highlands Road, Shirley, Birmingham, is offering a free sample of a new nylon-faced hammer to the first 1,000 factory buyers or works managers anywhere in the world who ask for it. The sample hammer is 1½ inches in diameter. It is one of a range of sizes from 1½ to 2 inches in diameter. The toughness and durability of nylon gives the hammer shock-absorbing qualities which enable repeated blows to be given without damaging the work. Tested on flat and curved surfaces, and on sharp edges, the hammer did its job without a trace of damage.

Machine To "Dry Clean" Eggs

A new machine which will "dry-clean" eggs has been developed by a British firm, Tungum Company, Ltd., The White House, Arle, Cheltenham, Gloucestershire, England. The machine, which won a silver medal at the National Poultry Show, "dry-cleans" 1,500 eggs an hour, removing all dirt from the shells and slightly polishing them without affecting the natural protective coating. The manufacturers claim that the machine will be a boon in countries where washing to clean eggs is forbidden, and where dirty eggs result in a "penalty" being placed on the egg producer. It saves tedious hand cleaning, and the resultant speeding-up of the process will save costs.



Take your pick of seven flights a week enabling you to reach London and any important city in Europe any day of the week!

Super Constellations, equipped with all-weather radar; choice of Tourist or First Class, with every First Class seat a Slumberette; and convenient connections to North and South America.

MARINE INSURANCE

REALISTIC RATING URGED

THE world-wide trade recession, the fall in both ship and commodity values, the inflation in repair costs and intense competition for a dwindling total volume of business have forced on marine insurers the need for a closer examination of premium rates and conditions. In the past few years. there were clear indications that marine insurance was moving into a difficult situation. But the full extent of the deterioration was not fully reflected in the accounts which, by the inclusion of the profit brought forward from past years, presented a picture different from the actual. The results of the 1956 and 1957 underwriting, as Mr. Harold Hopwood, Chairman of the Institute of London Underwriters pointed out, "clearly indicated that marine insurers were indeed reaping a bad harvest."

In contrast to the comparative freedom from major casualties which insurers were experiencing in recent years, the last two years showed a marked change in the cost of marine casualties. There were several costly major casualties and the cumulative effect of continuing inflation had increased the value of settlement claims. The margin of apparent reasonable profit disappeared substantially and it became clear that underwriting was being conducted at and even below cost. Realising the plight, marine insurers took some steps to restore business to a sound basis at least in certain branches of the business, particularly hull insurance. The effect of these correctives in bringing premium rates in line with claims cost has yet to be seen.

Viewed against this background, it is easy to see the logic and justness of Mr. E. E. Griffith's appeal to marine underwriters for realistic rating. Speaking at the annual meeting of the Liverpool Underwriters' Association as its retiring Chairman, Mr. Griffith disclosed recently that total and partial losses in 1958 were slightly fewer in number than in the previous year but that settlements in respect of serious losses might well show an increase. Statistics compiled by the Association showed that, in the five years ended 1958. slightly over three in ten vessels of 500 tons gross and over were involved each year in some form of casualty. While many casualties were relatively slight, some might almost run to total loss. Last year, in addition, there were more fires and explosions in ships posted in the loss book than in the two previous years. The Association recorded 87 total losses in 1958.

Mr. Griffith pointed out that shipowners were taking advantage of the depression to get up to date with their repairs and underwriters were now feeling in no uncertain manner the impact of the continually rising repair costs during recent years. Although it was slowing down, the rise, according to him, might not have reached the peak. These factors, he observed, would continue to be reflected in the accounts and would have an adverse effect on underwriting experience until the level of premium had been adjusted to meet the cost of these claims." If we are to improve this position, he added. "we shall have to make up our minds to underwrite our business on its merits and resist any pressure to grant concessions which are not warranted by the results."

Mr. Griffith felt that there would be a contraction in hull and cargo premium income, thanks to the current world shipping situation. There were at present over 8 million tons laid up with little prospect of their being brought back into employment in the immediate future while at least 1 million tons on order would never reach the water.

The situation in respect of cargo business remained one of too much pressure in a highly competitive and crowded international market. And there was no sign of improvement either. In fact, indications were that the situation might well deteriorate because of the recession with less cargo on the move. In the face of competition rates were generally lower than ever and additional cover is so often granted without appropriate additional premium being charged, thereby aggravating the overall claims already sufficiently unsatisfactory.

But this dark cloud is not without a silver lining to it. Mr. Griffith noted three encouraging features in the situation. First, among hull underwriters there had been a hardening in new tonnage rates. Second, hull settlements were probably more up-to-date than for some time past and with a paucity of new orders there should be a gradual return to more competitive tendering for repairs and less overtime working. Thirdly, there might also be an improved average quality of risks if the poorer type of tonnage continued to be laid up or scrapped.

Referring to nuclear energy, Mr. Griffith said that the setting up in London of the Joint Marine Atomic Energy Committee to consider all aspects of atomic risks as they affected marine underwriters was a big step forward. One of its first tasks would be to review the development of nuclear power and all the hazards it involved. At present, insurance of isotopes and fissionable material in transit did not give cause for anxiety but the increasing movement of nuclear materials indicated the need for much research into the susceptibilities of normal cargo to radiation damage. The question of third party liability introduced a new factor into the insurance of cargo in transit. The amount of cover required was likely to be of considerable magnitude. The matter, according to Mr. Griffith, consequently called for close study.

NEW LIFE BUSINESS IN THE U.K.

Ordinary branch new business in Britain showed a sharp increase during 1958 and industrial branch business a much more modest increase. The overall picture is one of an increase that more than offset any inflationary pressure during the year and that represented a considerable real increase in the volume of assurance held in the country. In the ordinary branch, the total new premiums received during the year by the 72 offices, i.e., annual and single premiums and annuity considerations for assurances and annuities, was £100 million during 1958, as compared with £89 million in 1957, the increase in the new premiums during 1958 being £11 million or some 11 per cent. The benefits secured by this new premium income aggregated £1,623 million, as compared with £1,390 million in 1957, an increase of £233 million during the year or approximately 17 per cent. and annuities aggregating £101 million as compared with £98 million, an increase of £3 million. In the industrial (home service) branch, the total new premium income was £23.4 million, as compared with new premium income of £22 million secured in 1957, an increase of £1.4 million or 6 per cent. The aggregate sums assured by the new premiums in this branch was £354 million in 1958 as compared with £338 million in 1957, an increase of £16 million or 4 per cent.

1958 was thus a year of substantial progress. Only two offices had a record of decreased new business in the ordinary branch (and one of these, an industrial/ordinary office, recorded a small increase in the industrial branch). All the other offices recorded an increase in new business in the ordinary branch and, in some cases, very substantial increases. In the industrial branch, all offices recorded an increase in total new sums assured.

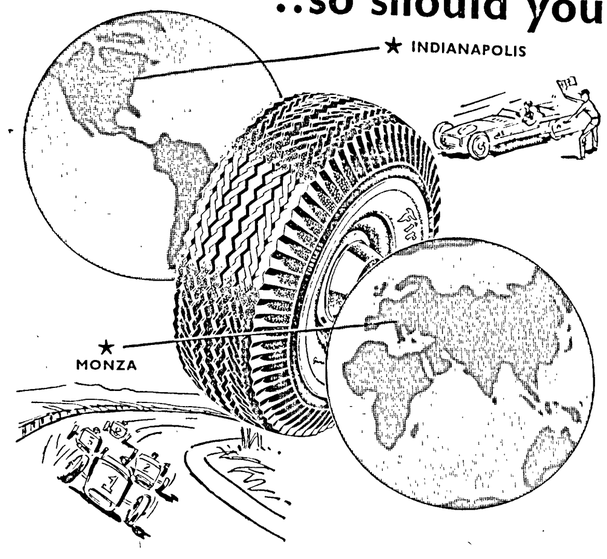
The British Nuclear Installations (Licensing and Insurance) Bill lays down that operators of atomic reactors, however small, must provide insurance cover to meet absolute liability. Explaining the provisions of the Bill, Mr. Maudling, Paymaster-General, said recently in the House of Commons that they had been worked out in the light of the "possibilities of the insurance market." It was not practical, he pointed out, for an operator to provide insurance beyond £5 million or for a claim arising after ten years. For that reason, it had been fixed that such claims, and also those arising up to 30 years after an accident, would be referred to Parliament for settlement by the State. Safety would be the supreme consideration in the granting of licences. Atomic-propelled ships outside harbour would not come within the scope of the Bill. as it is not possible to legislate for ships on the high seas without reference to other countries.

A private Bill seeking to codify the law relating to marine insurance was introduced in the *Rajya Sabha* by a Congress member, Mr. M. P. Bhargava, on the 20th February. The statement of objects and reasons of the Bill says that Indian navy and Indian shipping has undergone considerable expansion since Independence. But, as there is no Indian legislation governing marine insurance, Indian marine insurance continues to be governed by the British Marine Insurance Act of 1906. The insurance policy form used in India is the English form and the wordings of marine insurance policy are, to a great extent, based on mercantile customs and business conventions which at times appear to be in conflict with the provisions of the Indian Contract Act, 1872, resulting in the courts putting their own interpretations. The Bill, therefore, seeks to codify the law relating to marine insurance.

World Champions choose..

Firestone

..so should you



In major racing events around the world, Firestone tyres prove their safety year after year. Again, last year, in the Indianapolis and the Monza 500 mile races, where tyres are subjected to terrific punishment, Firestone tyres carried the winners safely to victory without a single tyre failure.
You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by Performance.

WORLD LABOUR SCORED LIMITED GAINS LAST YEAR

CONCLUSIONS OF AN I.L.O. SURVEY

WHILE 1957 was a favourable year for workers throughout the world, 1958 was a year of only limited gains. In the former year, higher employment, slightly increased purchasing power and extended social security schemes offset the ill-effects of the spurt in consumer prices and increased unemployment. In 1958, world labour scored advances in some areas, but they were 'spotty' and fell considerably short, on the average, of those of the mid-fifties. Employment increases, where in evidence, were not always sufficient to absorb the additions to labour force. Most of the countries which maintain statistics had more unemployment in late 1958 than they had a year earlier. Gains in productivity were somewhat below the post-war average. On the favourable side, however, real wages crept slowly upward and the progressive extension and liberalisation of social security continued. The upward rush of consumer prices was curbed. Man-days lost through industrial disputes were held at a moderate level. These are the conclusions of a survey of world labour in 1958 made by the I.L.O. and released by Mr. David A. Morse, the Director General. The survey is based on statistical reports by the member-countries, supplemented by statistical and non-statistical data from other sources. In general, statistics for the most recent months of 1958 have been compared with data for the same month of 1957, thus measuring the change over a 12-month period.

Employment

The employment situation at the end of the year, according to the survey, while providing no basis for despondency, was somewhat less favourable than it had been a year earlier. Among 28 countries for which recent employment information is available, exactly half reported a net decline, while half showed higher levels than a year ago. In several of the latter group of countries, the gains were insufficient to accommodate the increasing number of persons seeking jobs. Among the countries with the largest increases in employment were Yugoslavia (8 per cent.) and the Federal Republic of Germany (3.2 per cent.). Denmark, Ireland, Israel, Hungary and Rumania supplied information only for manufacturing and, in each case, substantial increases were registered. Employment declined by 0.7 per cent. in the U.S. in the 12 months ended December 1958 and by one per cent. in the United Kingdom during the 12 months ended November 1958. In each case, the decline was primarily due to reduced employment in manufacturing industries. In Belgium, employment in all activities other than agriculture was lower by 7.1 per cent. in September 1958 than a year earlier. Non-agricultural employment in France dropped slightly by 0.2 per cent. Employment in manufacturing declined in Argentine, Finland, the Netherlands, Norway, Sweden and Switzerland, the fall ranging up to 6 per cent.

Trend in Manufacturing Employment

Of special interest is the trend in manufacturing employment in the U.S., because this sector has borne the brunt of the economic recession which is nearing its end. The latest available data show that 15.71 million wage and salary earners were on the pay rolls in manufacturing industries in December 1958, 587,000 less than in December 1957 and 1,427,000 less than in December 1956. Recovery in the manufacturing sector has been very slow and still has a long way to go. By contrast, in non-agricultural pursuits outside manufacturing, there were almost as many persons on the pay rolls in December last (36.1 million) as compared with a year earlier (36.30 million) or two years ago (36.2 million).

The composite index of manufacturing employment in 26 countries computed by the I.L.O. indicates that, during the fourth quarter of 1958, such employment was about 2 per cent. lower than a year earlier. As compared with 1957, there had been a slight decline in Europe (excluding Eastern European countries but including Yugoslavia) and a small rise in Oceania. North America had shown a decline of about 5 per cent.

The following table indicates the trend of employment in manufacturing industries:

(1953 = 100)

Region	1956	1957	4th Quarter 1957	4th Quarter 1958
North America	99	98	97	92
Western Europe	109	112	112	111
Oceania	111	111	111	112
Other countries	107	109	109	107

Among the 29 countries for which recent unemployment data are available, 22 showed higher unemployment levels towards the end of 1958 than a year earlier. In about half of them, the 12-month rise in unemployment was relatively small. On the other hand, some of the countries were already burdened by appreciable unemployment in 1957, so that even a small increase was viewed with apprehension. The following table indicates the extent of unemployment in 1958 as compared with 1957.

(In '000)

Countries	Month of reference	1957 No. unemployed	1957 Percentage	1958 No. unemployed	1958 Percentage
Canada	Dec.	422	7.0	467	7.6
United States	Dec.	3,374	5.0	4,108	6.0
Puerto Rico	Oct.	82	13.1	104	16.6
Japan	Nov.	430	1.0	490	1.1
Austria	Nov.	92	3.9	105	4.5
Belgium	Dec.	199	9.0	253	12.0
Germany (F.R.)	Dec.	1,213	6.3	931	4.7
Netherlands	Dec.	97	2.9	105	3.2
Norway	Oct.	10	1.0	19	1.9
Switzerland	Dec.	5	—	6	—
United Kingdom	Dec.	372	1.7	571	2.6
Yugoslavia	Aug.	83	—	104	—
Hawaii	Dec.	8	3.6	6	3.1
New Zealand	Dec.	—	—	1	—
India	Nov.	886	—	1,159	—
Pakistan	Dec.	132	—	149	—
Burma	Oct.	2	—	1	—
Ceylon	Sep.	98	—	115	—
Australia	Nov.	20	—	22	—

As will be seen from the above table, countries reporting the highest rate of unemployment (3 per cent. or more) late in 1958 were: Austria (4.5), Belgium (12.0), Canada (7.6), Denmark (17.4), West Germany (4.7), Hawaii (3.1), Ireland (8.3), Italy (8.5), Netherlands (3.2), Puerto Rico (16.6), Sweden (3.3) and U.S. (6.0).

Trend of Consumer Prices

The inflationary upsurge, which was in evidence at the end of 1957, was checked in 1958. Consumer prices did not attain complete stability but the increases in the various countries were smaller, on the average, than for several years. Among the 87 countries which supplied information on consumer prices, most of it referring to the 12-month period ended December 1958, the median increase was 2.1 per cent., the smallest for any year since 1953-54. The median increase was 4 per cent. in 1956-57, 3.5 per cent. in 1955-56, 2.4 per cent. in 1954-55, 1.2 per cent. in 1953-54 and 2.1 per cent. in 1952-53.

1958 was a normally prosperous year for workers who had jobs. There was an increase in money wages in the 12-month period ended December 1958, the increase ranging from less than 2 per cent. to nearly 70 per cent. with a median increase of 5.7 per cent. A good part of this gain was, however, nullified by price increases in the same countries so that the median increase in real wages was only 2.4 per cent. This was in line with the experience in the decade 1948-57, when the typical annual increase in real wages in manufacturing averaged 2 per cent. or more.

About half of the reporting countries showed changes in wages clustering about the median, that is, real wage increases of less than 3 per cent. or small decreases. Among the countries in this group were the U.S. (2.6 per cent.), Canada (0.9 per cent.), Japan (2.4 per cent.), the U.K. (1.6 per cent.) and Australia (0.3 per cent.). Five countries reported real wage increase in excess of 5 per cent. The greatest increase (24.8 per cent.) was in Argentina. Other substantial increases were registered in the Dominican Republic (20.1 per cent.), Austria (6.8 per cent.), Puerto Rico (5.7 per cent.) and the Philippines (5.2 per cent.). Decreases in real wages were reported by seven countries but were negligible in most cases.

In Colombia, however, there was an increase of 4.7 per cent. In the field of social security, the major developments in 1958 followed the pattern in 1957. The keynote was consolidation. The number of persons covered rose in many countries, protection was liberalised and benefit payments increased substantially.

Man-days lost through industrial disputes in 1958 maintained a moderate level. The total for 28 reporting countries is expected to have been roughly 60 million which is about the same as that for 1957 and compares with 75 million in 1956, 58 million in 1955, 49 million in 1954, 61 million in 1953, 52 million in 1951 and 96 million in 1949.

Man-days lost in the U.S. are expected to have aggregated roughly 23.5 million, as compared with 16.5 million in 1957. Losses in the U.S. were thus far greater than in any other country.

In Canada, for the first time since 1952, the number of man-days lost through industrial disputes is expected to have exceeded 2 million. In the U.K., 1958 was a relatively calm year. The total time lost in 1958 through industrial disputes amounted to some 3.4 million man-days or less than half of those lost in 1957 (8.4 million). Both in France and Belgium, time lost through industrial disputes decreased in 1958 and dropped to the lowest level registered since World War II. In India, the total time lost through industrial disputes during the first six months of 1958 was nearly twice that in the same period of 1957.

Productivity

Productivity, as measured by output per man in manufacturing enterprises, faltered in 1958, but there was little uniformity in the experience of the various countries. The prevailing picture was one of modest gains somewhat below those of recent years. A few countries, however, experienced substantial gains.

Among 14 West European countries combined, manufacturing production in the first nine months of 1958 was about 1 per cent. greater than in the corresponding period of 1957, while manufacturing employment declined very slightly. Output per man consequently increased by approximately 1.5 per cent., as compared with an increase of 3.5 per cent. from 1956 to 1957. Among individual countries, France showed a gain of roughly 7 per cent. while gains of 2 or 3 per cent. were registered by several countries. Small decreases in output per man were registered in Belgium, Finland and Norway, in all of which production in the first nine months of the year declined. Output per man in the United Kingdom showed little change.

Production

Manufacturing production in the first nine months declined both in the United States and in Canada, by 9 per cent. in the former and by 5 per cent. in the latter, but employment declined very slightly more. The result was an increase in output per man amounting to 1 per cent. or less. The picture for the United States, however, is more favourable, if production is compared with man-hours worked, which, over the nine-month period as a whole, declined by some 13 per cent.

Gains in output per worker in the neighbourhood of 5 per cent. were made in Argentina and Israel from 1957 to 1958. In Japan, after record gains in other recent years, output per man seems to have dropped rather sharply. The reduced level of productivity attained in 1958, however, appears nevertheless to have equalled that of 1956.

In all the countries of Eastern Europe, industrial production increased appreciably while industrial employment also increased but at a more moderate rate. In Czechoslovakia, Poland and U.S.S.R. industrial production rose by 10 to 12 per cent., whereas industrial employment rose by only 4 to 5 per cent. In Hungary, a 15 per cent. increase in industrial production was accomplished with only a 5 per cent. rise in employment. Output per man in Yugoslavia rose by approximately 3 per cent., with Rumania and Bulgaria reporting gains of 6 to 7 per cent.

EARNINGS AND HOURS OF WORK IN W. GERMANY

Actually worked man-hours of industrial and construction workers in the Federal Republic of Germany have receded from a weekly average of 41.5 to 40.6 hours from August 1957 to August 1958, official statistics disclose. In spite of short-time working in coal mining, steel and textiles, the number of paid man-hours per week remained almost unchanged at 46.4. Simultaneously, gross hourly earnings increased by 5.9 per cent. for male workers and by 8.8 per cent. for female workers.

DEVELOPMENT OF SMALL-SCALE INDUSTRIES

ROLE OF INDUSTRIAL ESTATES

THE programme for Industrial Estates has assumed an important place in the development of small-scale industries. The role of these industries is that of an efficient and decentralised sector of the economy. Accordingly, they must concentrate on pursuits complementary to larger industries. This does not mean that there is no scope for small industries producing consumer goods. Indeed, there is plenty of scope in this direction, provided modern methods of production are adopted. Where small industries are encouraged to produce components, spare parts, etc., required by the larger industries, care must be taken to see that the quality of products is of a high order, for substandard goods will ruin the market for the products of large-scale industries. This, however, is easier said than done. It will take a long time before this unorganised sector is modernised and brought within the compass of an integrated system of industries. These small industrial units suffer from many handicaps such as lack of finance, absence of proper marketing facilities, want of technical assistance and inadequacy of factory accommodation. The object of establishing industrial estates is to help small industries to get over these weaknesses and place them on a sound footing.

The industrial estates are designed primarily to provide the small units with conditions conducive to better working efficiency through economic utilisation of equipment and materials and maintenance of uniform standards of production. By providing built-in factory accommodation in a planned site, the estate makes available to these small units common services and other facilities such as supply of electricity, water, gas, steam, compressed air, railway sidings and watch and ward. Besides, provision is made for houses, schools and social amenities for workers which will not only promote efficiency of labour but avoid slums.

It is also claimed that this set-up will pave the way for healthy employer-employee relationship. The National Small Industries Corporation is making efforts to secure the co-operation of larger industries for building up small units as ancillaries for the production of components and parts required by them. In addition, the Corporation has been making satisfactory progress in ensuring markets for the products of these units in many foreign countries.

The scheme for establishing industrial estates was first approved in 1955 by the Small-scale Industries Board. In the second Plan a sum of Rs. 10 crores was first set apart for the scheme. This was subsequently raised to Rs. 15 crores. The Government of India seems to have been so impressed with the potentialities of the programme that it has decided to start at least two estates in each State. Plans are already under way to set up over 100 estates in various parts of the country.

Guindy Estate

Barring two estates at Okla, Delhi, and Naini, Allahabad, which are run by the National Small Industries Corporation, all the other estates are being established by the State Governments concerned. Most of these estates are making steady progress. Last month, Mr. Lal Bahadur Shastri performed the opening ceremony of 26 additional blocks in the Madras Government's industrial estate at Guindy. It may be recalled that this industrial estate, with 52 factory units, was inaugurated by the Prime Minister a year ago. It is proposed to expand further the facilities in the estate so as to put up a total of 97 factory units planned in an area of 70 acres by the middle of this year. A feature of the Guindy Estate is that new units are being established within its precincts, whereas in other estates in the country shops and factories from the cities have been bodily shifted to the new site. It is stated that there is still a great demand for setting up new factories in this estate and that, therefore, the State Government proposes to acquire about 150 acres of additional land.

A wide range of products, mainly ancillaries to large industries, are being manufactured in this estate. They include H.T. accessories, electric motors, railway parts requiring Orgon arc welding, bolts and nuts, wire mesh, drop forgings, machine screws, copper conductors, P.V.C. wires and cables, lampshades, thin walled engine bearings, typewriter parts and diesel engine parts. With a view to giving service and further assistance, the Government has located in the estate some of the common facility training production units. For instance, the Government's pressure die-casting unit has been built up at a cost of about Rs. 10 lakhs. This serves as a model, besides catering to the requirements of industry and trade. Die-casting is being adopted for the production in bulk of small and medium size parts where accuracy and uniformity are essential. Then there is what is known as common lease shop. This is intended to offer facilities for leasing out highly specialised machines to the needy small industrialists in the estate for short periods, in order to encourage them in certain specialised lines. The machines in the common lease shop include tool room machines, foundry equipment, general purpose machines and special heavy machines suitable for making railway parts, etc. It may be noted here that the U.S. Technical Co-operation Mission has made a gift of about 36 modern and costly machines which are included in the common lease shop. In addition to these facilities, a forging shop is also nearing completion. In order to provide sufficient residential quarters for workers, plans are under way to construct 160 tentements at a cost of Rs. 5.60 lakhs.

Shortage of Raw Materials

The progress of small industries, not only in Guindy but elsewhere, is greatly handicapped by the shortage of raw materials, particularly steel. This handicap will, however, prove to be a passing phase. Production of steel and pig iron is rapidly increasing with the coming into existence of additional capacity in the T.I.S.Co. and the I.I.S.Co. When all the three steel plants in the public sector go into production, the position will improve further. There is, therefore, no need to despair on this score.

Another difficulty in the way of developing small industrial units is the insufficiency of facilities for technical training. This is a major lacuna in the structural pattern of small industries in India. Efforts are being made to improve the position in this respect. It may be noted here that a two-man team of French experts is currently touring India to make a technical survey for setting up a centre for training Indian technicians in the manufacture of precision instruments required for industrial development and for production of prototypes for small industries. The French experts are visiting Ludhiana, Guindy Industrial Estate, Madras, Coimbatore, Bangalore and Madurai. On the conclusion of their tour they will make an assessment of the present capacity of small units and their requirements of trained technicians, and suggest measures for improving the manufacturing techniques.

The proposed project for prototype instruments is part of a country-wide programme to set up one such specialised centre in each State where training facilities for technicians for small industries will be provided and production of prototypes of machines, machine tools and instruments will be undertaken. Already a prototype-*cum*-training centre is being set up in the Okla Industrial Estate in New Delhi in collaboration with West Germany. Another centre is coming up in Rajkot in Bombay State, with the help of the Technical Co-operation Mission of the United States. A scheme for establishing a centre on the same lines in Howrah in West Bengal has been drawn up in consultation with a Japanese Technical Mission. The French centre on instruments are proposed to be located in the Guindy Estate at Madras and the Ludhiana Industrial Estate in the Punjab. It is expected that one specialised centre will be established in each of the States by the end of the second Plan with necessary foreign technical collaboration. With the Small Industries Service Institutes which the Government of India has set up, one in each State, these prototype-*cum*-training specialised centres are expected to meet the long-felt need for technical guidance, training and extension service to small industries.

The industrial estates are still in their infancy in the country. There are, however, good reasons to feel that these estates will go a long way towards strengthening small industries. The industrial estates or trade estates established in the U.K. before the Second World War proved to be very useful in promoting economic development in what were called "depressed" and "distressed" areas where high unemployment existed. There is no reason why an experiment on similar lines should not succeed in India too, provided the authorities in charge of the programme work hard and encourage the right type of *entrepreneurs* to make use of the facilities available in the estates.

G.A.T.T. REPORT ON MARKS OF ORIGIN

The G.A.T.T. Secretariat has brought out a leaflet entitled *The Recommendations on Marks of Origin* adopted at the thirteenth session of the Contracting Parties at Geneva. Laws and Regulations in some countries restrict the import of certain foreign goods if they do not bear marks of origin. This requirement causes some difficulties and problems to the trading world. Recognising this inconvenience, the G.A.T.T. made special provisions dealing with marks of origin. In order to implement these provisions, the G.A.T.T. made several recommendations to the member countries. These proposals were brought together in a set of "Guiding Principles" which were adopted by the International Chamber of Commerce at their fifteenth congress at Tokyo in 1955 and submitted to the Contracting Parties. The latest recommendations—the subject matter of the present leaflet —owe their origin to these principles.

Of the various recommendations contained in this leaflet, reference may be made to the few important ones. Countries should scrutinise carefully their existing laws and regulations with a view to reducing, as far as possible, the number of cases in which marks of origin are required and to limit the requirement of marks of origin to cases where such marks are indispensable for the information of the ultimate buyer. Marks of origin should not be insisted in a way which leads to a general application to all imported goods, but should be limited to the cases where such a marking is considered necessary. National provisions concerning marks of origin should not contain any other obligation than that to indicate the origin of the imported product.

These recommendations are based on certain basic principles: (*a*) The general aim is towards a considerable liberalisation of existing national rules and regulations on marks of origin; the recommendations are, therefore, addressed not only to contracting parties but to all trading nations. (*b*) Producers should have a reasonable assurance that a product marked in the recommended way would be accepted by all importing countries as being satisfactorily marked, so as to avoid the need for different markings to comply with the marking provisions of different countries. (*c*) The recognition by importing countries of a uniform type of marking should in no way be understood to justify any attempt to limit or cancel more liberal marking provisions. The Recommendation should, in fact, be accepted as an elaboration of the liberal principles already laid down in the terms of the General Agreement. (*d*) The right of countries to protect the accuracy of marks should be respected.

TRADE FAIR IN CZECHOSLOVAKIA

The Corporation for the Organisation of International Trade Fairs and Exhibitions in Brno, Czechoslovakia, has decided to organise its first fair from 6th to 20th September 1959. The International Fairs in Brno, we are told, seek to follow the tradition of the Prague Sample Fairs and are a continuation of the three famous Czechoslovak Engineering Exhibitions. The exhibits in this year's Fair will be products of engineering and metallurgical industries, raw materials and semi-products related to these industries and some consumer goods of the engineering industry. The Fair Administration will enable the exhibitors to arrange their expositions both individually (according to the groups of exhibits) and collectively.

The renewal of international fairs in Czechoslovakia, it is claimed, will represent a further contribution to the development of international trade and will be an important event to commercial and technical circles for establishing advantageous business contacts.

INDO-U.S. BARTER AGREEMENT

India and the U.S. signed their first barter agreement on the 3rd inst., under which the latter will supply about 450,000 tons of wheat and other foodgrains valued at about $31.5 million (about Rs. 15 crores) in return for such strategic materials as manganese and ferro-manganese. The agreement was signed at the U.S. State Department, Washington, by Mr. Donald Kennedy, a senior official of the Bureau of South Asian Affairs, and Mr. S. G. Ramachandran, First Secretary of the Indian Embassy. Mr. Kennedy felt that the deal was mutually advantageous. He said that this undertaking was evidence of understanding by the U.S. of some of India's problems in the field of food and was a continuing indication of its desire to help India. Mr. Ramachandran expressed the fervent hope that many more barters would follow in future. He said that the barter agreement would help the flow of trade between the two countries.

JAY SHREE TEA FARES WELL

SHAREHOLDERS GET THE SAME RETURN

THANKS to a slight increase in the prices of tea and to some improvement in the offtake, the Jay Shree Tea Gardens Ltd. (Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta) has been able to report better profits for the year ended 31st December 1958, as compared with those for the previous year. Although the pace of rise in sale proceeds during the year shows a marked decline from those noted in the earlier years, expenses have increased only modestly and this, in part, accounts for the satisfactory results achieved. The gross profit, at Rs. 33.88 lakhs, represents an advance of Rs. 4.67 lakhs or 15.9 per cent. from Rs. 29.21 lakhs for the previous year, to which level it had declined from Rs. 31.69 lakhs for 1956. Nevertheless, it is still substantially short of the record profit of Rs. 49.05 lakhs for 1954.

As the provisions for both depreciation and taxation have been substantially raised, the former from Rs. 8.72 lakhs to Rs. 9.67 lakhs and the latter from Rs. 9 lakhs to Rs. 11.75 lakhs, the net profit at Rs. 9.71 lakhs is only fractionally higher, as compared with Rs. 9.23 lakhs for 1957. This, however, has been strengthened by the addition of Rs. 1.75 lakh, representing provisions no longer required and written back to the profit and loss account. Out of the sum available for distribution, the Directors have transferred Rs. 5 lakhs to general reserve, as against Rs. 3 lakhs allocated a year ago and Rs. 50,000 to development rebate reserve, as against Rs. 1.70 lakh. The dividend to ordinary shareholders is proposed to be repeated at the modest rate of 10 per cent. per annum for the fifth year in succession. It will thus be seen that, in appropriating the profit, the Directors have pursued a policy of caution and steady dividend.

The following comparative table reflects the Company's progress in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	1,87.30	1,78.95	1,62.24	1,07.66
Stocks	21.59	30.38	35.96	32.82
Other income	2.96	1.85	1.46	1.09
Expenses	1,47.59	1,49.01	1,32.76	91.46
Gross profit	33.88	29.21	31.69	24.87
Managing Agents' commission	2.75	2.26	2.27	1.58
Depreciation	9.67	8.72	7.88	7.90
Taxation	11.75	9.00	9.00	6.50
Net profit	9.71	9.23	12.54	8.89
Transfer from reserves and provisions written back	1.75	1.33	2.75	
To reserves	5.50	4.70	8.50	2.50
To dividends—				
6% cum. Red. preference	0.12	0 07	..	..
Ordinary	5 86 (10%)	5.86 (10%)	5.86 (10%)	5.86 (10%)
Carry forward	0.91	0.93	0.99	0.73

It will be noted that the rise in sale proceeds during the year under review was of the order of Rs. 8 35 lakhs. This is very much below the increase of Rs. 16.71 lakhs witnessed in 1957 and of Rs. 54.58 lakhs in 1956. Expenses during 1958 have, however, increased by only Rs. 1.58 lakh, as against Rs. 13.25 lakhs in 1957 and Rs. 41.30 lakhs in 1956. It would seem from these figures that yields and expenses have tended to obtain a large measure of stability.

Referring to tea production, tea prices and taxes and the prospects for the industry, the Directors observe thus:

"The world tea crop in the year 1958 was running about 50 million lbs. ahead as compared with last year. India's contribution to this increase was of the order of 30 million lbs.

"The prices of tea in North Indian auctions during 1958 have shown slight increase for all tea-producing areas, except Assam. In South India also, the prices realised are on the whole better than the previous season. Average prices on London auctions, however, show a slight decline. As compared with last year, there was less demand for C.T.C. type of teas. The demand for orthodox teas, on the other hand, showed an upward tendency. The decline in prices of C.T.C. teas is mainly attributable to a very heavy increase in the manufacture of this type of teas.

"Excise duty on tea underwent many changes during the year. Up to the end of May, it continued at Rs. 6.25 nP, when it was reduced to Rs. 3.125 per lb. Simultaneously, export cess was also reduced to half, namely, from Rs. 4 per 100 lbs. to Rs. 2 per 100 lbs. Further changes were made in September in both excise and export duties. The export duty was reduced from 38 nP to 26 nP. The excise duty was fixed at 2 nP, 4 nP, and 10 nP, varying from area to area. The duty applicable to your gardens is 10 nP for the North Indian gardens, 4 nP for Madras and 2 nP for the Kerala gardens. Another unsatisfactory feature of this change is that the excise duty has now become a part of the cost of production, as it is no longer refundable at the point of shipment. It is doubtful if the benefit of the lower export duty will be passed on to the producers.

"The market trends in tea are mainly governed by the quantum of tea crop. The present trend is towards an increase in production all over the world. This is bound to affect our exports adversely. The demand for tea within India is, however, increasing. It is doubtful whether the internal demand is increasing at the same rate as production. Competition in the tea markets is, therefore, bound to exist in the coming years. Prospects for the industry as a whole continue to be uncertain. Hence, it is essential to lower the cost of production of Indian teas and to maintain a very high standard of manufacture."

The Directors state that, during the year under review, the Company installed more C.T.C. machines at Sholayar and Kallyar tea estates in Madras State. They claim that the Company's gardens are the only gardens at present manufacturing C.T.C. teas in South India and add that the response to the South Indian C.T.C. teas has been, on the whole, encouraging. The Company's programme for renovation and modernisation of machineries and buildings, as well as for construction of additional staff and labour quarters in all the estates, continued to be implemented during the year under review also. The standard of teas manufactured by the gardens is reported to be very satisfactory and the Company's teas, it is said, continue to enjoy a very good reputation for their quality.

Dealing with the Company's other activities, the Directors state:

"The import licences for the superphosphate plant have still not been received by the Company, in spite of all efforts. The matter is being further pursued. The Company has acquired a plywood factory situated in Calcutta, with effect from 1st January 1959. The factory is licensed for manufacture of 172,000 tea chests per annum. The factory, which was lying idle at the time of purchase, has already been put into production. The Company has made an application for installation of a hard board factory and the application is pending consideration with the Government of India. The Directors are considering further expansion of the Company's activities specially in lines allied to timber and plywood. The Company is also examining a scheme for going into the production of packet teas."

The paid-up capital of the Company as at 31st December 1958 stands at Rs. 60.90 lakhs, in which the share of the ordinary capital is Rs. 58.57 lakhs. (During the year under review, the Company's issue of preference shares was further subscribed for a face value of Rs. 1.50 lakh, on which Rs. 50 per share has been called up.) This is supplemented by reserves and surplus aggregating Rs. 54.77 lakhs. The gross block of the value of Rs. 163.70 lakhs stands depreciated at Rs. 109 lakhs. The current liabilities are of the order of Rs. 59.79 lakhs and include a provision for taxation at Rs. 17.49 lakhs. To cover these, there are current assets aggregating Rs. 66.43 lakhs. The latter include, among others, stores and spares at Rs. 14.78 lakhs, stock-in-trade Rs. 21.59 lakhs, loan and advances Rs. 16.35 lakhs, book debts Rs. 4 lakhs, investments Rs. 7.98 lakhs (of which unquoted investments are Rs. 7.88 lakhs), and cash no more than Rs. 1.45 lakh. While the overall financial position of the Company is thus satisfactory, the liquidity of its current assets is not of a high order.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 13.37 *cum-div* On *ex-div.* basis, the shares provide a yield of 8.08 per cent. per annum, free of income-tax.

(*Concluded from next column*)

lakhs to Rs. 106.24 lakhs, by the issue of shares as aforesaid. Against this, the reserves and surplus aggregate Rs. 29 43 lakhs. The current liabilities amount to Rs. 100.19 lakhs and include secured loans from banks for Rs. 64.18 lakhs. The gross block of the value of Rs. 45.50 lakhs stands written down at Rs. 31.05 lakhs. Capital work-in-progress is shown at Rs. 4.58 lakhs. The current assets aggregate Rs. 200.22 lakhs, of which investments (at cost) alone amount to Rs. 165.23 lakhs. Of the latter, quoted investments for a value of Rs. 141.96 lakhs have a market value of only Rs. 127.46 lakhs, thus showing a depreciation of Rs. 14.50 lakhs.

The Rs. 100 fully paid-up shares are currently quoted at Rs. 148.50 *cum-div.* (final dividend Rs. 5). On an *ex-div.* basis, the yield is 6.2 per cent. per annum, free of income-tax.

KILLICK INDUSTRIES EARN LESS

DEVELOPMENT PROGRESS RETARDED

THE audited statement of accounts of Killick Industries Ltd. (Managing Director and Chairman: Mr. E. D. Sheppard, Bombay) for the seventeen months ended 30th November 1958 disclose that the Company has earned a gross profit of Rs. 31.40 lakhs, as against Rs. 27.94 lakhs for the previous twelve months and Rs. 26.27 lakhs for 1955-56. On the basis of twelve months' working, the year's profit represents a recession in the Company's profit, for it works out to only Rs. 21.68 lakhs—a fall of Rs. 6.26 lakhs from that for 1956-57. A sum of Rs. 18.20 lakhs (including Rs. 2.96 lakhs for previous years and wealth tax amounting to Rs. 26,462) has been provided for taxation, as against Rs. 15.73 lakhs in 1956-57. The provision for depreciation takes up Rs. 3.35 lakhs, as against Rs. 3.23 lakhs. The net profit, after the above essential allocations, amounts to Rs. 9.86 lakhs, as against Rs. 8.98 lakhs for 1956-57. It is also substantially lower, as compared with Rs. 10.98 lakhs and Rs. 14.73 lakhs for 1955-56 and 1954-55 respectively.

The fall in profit has necessitated the withdrawal of Rs. 2 lakhs from the dividend equalisation reserve and an additional Rs. 2.50 lakhs from general reserve, as against only Rs. 2 lakhs transferred from the former reserve in the previous accounting period. With the net profit thus strengthened, the Directors have declared a dividend of Rs. 13 per share for the seventeen months, or 9.3/17 per cent. per annum, as against 11 per cent. per annum paid for the preceding four years, after having been stepped up from 10 per cent. per annum paid for 1952-53. The dividend is on a higher capital of Rs. 106.24 lakhs, raised by an issue of 25,000 new shares of Rs. 100 each at a premium of Rs. 20 per share in May 1958 on which Rs. 25 per share only has been called up, so that the final dividend on the new shares is proportionate to the amounts called up.

The following comparative table provides an idea of the Company's working during the seventeen months ended 30th November 1958, against the background of those for the preceding three years:

(In lakhs of rupees)

	For 17 months ended Nov. 30, 1958	For the year ended 30th June		
		1957	1956	1955
Gross income	73.69	50.99	51.51	48.41

Referring to the Company's industrial development, the Directors state that, in connection with the plant ordered for the proposed manufacture of nuts and bolts, dog spikes and coach screws at the Company's industrial estate at Chandivali, a substantial portion of the plant has now been shipped. They, however, add that, unforeseen difficulties with import licences, both as regards machinery and raw materials, have arisen, but hope that these will be overcome. The project to manufacture Dixon slotted angle at Chandivali has had to be abandoned, at least for a period of two years, as Dixon Ltd. informed the Company in July last year that, owing to the tighter credit policy in Great Britain and more difficult trading conditions, they wished to reconsider the formation of a joint manufacturing company in India. Further progress was made in the formation of the company to manufacture the well-known "Snowcem" brand of cement paint. A factory at the Chandivali estate is under erection. As regards the venture with Messrs. John Baker and Sons, the Directors say that, early in 1958 a substantial revision of sales policy was undertaken, as a result of which sales were temporarily dislocated. The revision of policy has, however, resulted in an improvement, and sales for November were very satisfactory. Negotiations with the Government in respect of the Korba coalfield are still continuing.

The paid-up capital of the Company as at 30th November 1958 stands raised from Rs. 100

(*Continued in previous column*)

MARTIN BURN'S PROFIT SLIGHTLY BETTER

DIVIDEND MAINTAINED

BETTER results, as compared with the previous year, are disclosed by the working of Martin Burn Ltd. (Governing Director and Chairman: Mr. T. Leslie Martin, Calcutta) during the year ended 30th September 1958. The Company's sale proceeds have staged a sharp rise over those for 1956-57, thus more than making good the fall noted in that year. The income from "other sources," which had similarly suffered a setback, has also gone up appreciably, chiefly under miscellaneous accounts and income from trade investments. Simultaneously with this and reflecting the larger turnover, expenses, too, have increased considerably, so that the resultant gross profit is only slightly higher than that in the preceding year.

The gross profit for the year under review at Rs. 102.27 lakhs is Rs. 1.07 lakh better than that (Rs. 101.20 lakhs) for 1956-57. Despite this, it is still substantially lower than Rs. 110.44 lakhs earned in 1955-56, the year in which the Company's profit exceeded the Rs. 1-crore mark for the first time. A redeeming feature is that the gross profit for the year under review is the second best in the Company's history. The provision for taxation has been provided higher at Rs. 53 lakhs, as against Rs. 50.50 lakhs in 1956-57 but that for depreciation has been lowered from Rs. 2.04 lakhs to Rs. 1.36 lakh. After the above allocations, the net profit at Rs. 40.08 lakhs shows practically no change as compared with Rs. 40.07 lakhs earned in the previous year, though it is very much lower than that (Rs. 46.60 lakhs) for 1955-56.

The Directors have written back Rs. 23.16 lakhs, representing provisions made in previous years no longer required. After adding this amount to the net profit, they have transferred Rs. 29.29 lakhs to the reserves, as against Rs. 6.63 lakhs allocated in the previous year. If the readjustments of past allocations are excluded, the amount conserved out of the net profit for 1957-58 is only Rs. 6.13 lakhs. The current allocations consist of Rs. 28.50 lakhs to general reserve and Rs. 78,934 to provision for doubtful debts. The dividend is proposed to be maintained at 21¼ per cent. per annum, the same as that paid in each of the previous two years. The mode of payment, however, is different in that while the dividend part has been raised from 15 per cent. to 17½ per cent. the bonus part has been reduced from 6¼ per cent. to 3¾ per cent.

The following table shows the trend of the Company's progress in 1957-58 against the background of its results for the three preceding years.

(In lakhs of rupees)

	For the year ended 30th September			
	1958	1957	1956	1955
Sale proceeds	9,04.49	7,67.36	8,23.40	5,72.17
Closing stocks and work-in-progress	1,26.77	2,34.15	2,11.00	2,07.09
Other income	1,06.79	98.59	1,09.38	99.26
Expenses including materials consumed	9,09.01	7,64.75	8,22.34	5,83.74
Gross profit	1,02.27	1,01.50	1,10.44	87.69
Directors' remuneration	7.83	8.59	10.01	9.92
Provision for—				
Depreciation	1.36	2.04	2.33	2.49
Taxation	53.00	50.50	51.50	37.75
Net profit	40.08	40.07	46.60	37.53
Provisions not required written back	23.16	..	0.33	..
To reserves	29.29	6.63	14.17	11.60
Dividends—				
5 per cent. preference	3.00	3.00*	1.50	1.50
Ordinary	30.86 (D. 17½% +B. 3¾%)	30.79 (D. 15% +B. 6¼%)	30.59 (D. 15% +B. 6¼%)	24.03 (D. 15% +B. 3¾%)
Carry forward	2.45	2.35	2.70	2.03

* On the increased capital, raised by a further issue of 30,000 five per cent. redeemable preference shares of Rs. 100 each.

It will be seen from the above table that sale proceeds have made a sizable rise of Rs. 137.13 lakhs, that is, from Rs. 7.67 crores to Rs. 9.04 crores. This, as stated earlier, is in refreshing contrast to the marked fall of Rs. 56.04 lakhs noted in the previous year. The rise in sale proceeds has been supplemented by a rise of Rs. 8.20 lakhs in other income. The decline in the closing stocks from Rs. 2.34 crores to Rs. 1.27 crore indicates that the Company's products have been moving well in the market. The expansion in activity is reflected in the expenses which have shot up from Rs. 7.65 crores to Rs. 9.09 crores.

The Directors state that, during 1956-57, holders of Rs. 63,500 convertible notes exercised their option to convert their holdings into ordinary shares, resulting in an increase in the ordinary share capital of the Company by 3,175 shares and a reduction of Rs. 63.500 in the outstanding convertible notes. Thus, the total ordinary shares subscribed as at 1st October 1957 was 1,455,525 and the amount of convertible notes outstanding as at that date was Rs. 8,89,500, the total reserve arising from surplus on conversion being Rs. 15.55 lakhs. As a result, paid-up capital of the Company as at 30th September 1958 stands raised from Rs. 205.23 lakhs to Rs. 205.55 lakhs. As against this, there are reserves and surplus aggregating Rs. 110.36 lakhs. In view of the substantial surplus of the market value of the Company's investments over the book value, the Directors consider that it is no longer necessary to maintain anything but a nominal amount in the investment reserve. Accordingly, they have transferred Rs. 20 lakhs from investment reserve to general reserve. The current liabilities are of the order of Rs. 476.91 lakhs and include a provision of Rs. 216.62 lakhs for taxation. The gross block of the value of Rs. 54.35 lakhs, including an addition of Rs. 4.27 lakhs during the year, has been written down to a net book value of Rs. 38.57 lakhs. This is inclusive of goodwill at cost of Rs. 25.18 lakhs. The current assets amount to Rs. 754.26 lakhs and cover the current liabilities and provision for taxation by a very wide margin. Of the current assets, it is significant that investments in shares of companies shown at a book value of Rs. 185.37 lakhs have a market value of Rs. 264.59 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 29.93 *cum-div.* On an *ex-div.* basis, the yield is 7.6 per cent. per annum, free of income-tax.

SUGAR

(*Concluded from page* 411)

the country about 12 crores of foreign exchange. The gilt, even then, was off the gingerbread, and world prices had dropped to near the pre-Suez level. Indian sugar could only be sold abroad at a loss of approximately Rs. 270 per ton. In June last, the Association was asked to export sugar. Our advice was that 50,000 tons could be exported safely and without danger to the country's needs. 1,00,000 tons was a possible target but anything over 1,00,000 tons could be exported only if the country would submit to rationing. I am glad to say that the 50,000 tons target was accepted and fellow members will share in the satisfaction I feel in the fact that it has been shipped. For 1959 we are asked to ship 1,00,000 tons, out of which 50,000 tons has been released.

"The Association's views on exports are clear; in an expanding economy, supply and demand can hardly keep exactly in line; when there is surplus, export it, do not hoard it. Earn the exchange needed to buy other commodities. We do not have surplus sugar at the moment, but, since the general view is that there will be considerable surplus for disposal in a year or two or three, give us the advantage of keeping Indian sugar on world markets, so that it is known and can be sold when it must. It is in respect of the necessity to cover the losses on export by slightly increasing the internal price that *khandsari* represents a serious problem. At the current rate of development, there will be so much *khandsari* in the future years that it, rather than white sugar, may well control internal prices and make it impossible to recover the losses made on export from sales within the country. *Khandsari* prices cannot be controlled by an Order, as can sugar prices.

"I believe that no one at all can benefit from such indulgences as cane strikes. Let us remember that, firstly, Government has fixed and factories have paid a price, which has, over the years, resulted in more and more cane being grown; secondly, with effect from 1st November 1958, Government declared its intention that growers should be given a share in sugar realisation. Details of this formula are not available, but the question has been referred to the Tariff Commission. Let me add only that the industry asks for a margin that will permit of the payment of a 6¼ per cent. dividend and to have funds to set a sum equal to two-thirds of the dividend aside for general reserves as also to make provision for a special fund from which may be found the cash to provide for the very necessary rehabilitation of plant and machinery. Surely, these are not exorbitant demands.

"Mention of reserves brings me to the industry's pressing need, namely, the modernisation of plant and machinery, for much of that in use today is not only past its prime—it is almost past praying for. It has been written down or depreciated, but, having written off a plant costing Rs. 18,00,000 only is nowhere near having available the resources to replace it at today's costs. Added to that, there is the highly inflated requirement of working capital. Twenty-eight years ago, sugar cost about Rs. 8 per maund, banks demanded 25 per cent. margin which required only Rs. 2 per maund. A factory of an average capacity then could reasonably work with a working capital of Rs. 3 lakhs as calculated by the Tariff Board in 1931. Again, in 1938, the average working capital was calculated by the Tariff Board at Rs. 4.50 lakhs. At present, sugar costs Rs. 25 per maund, a margin of 25 per cent. is demanded, i.e., Rs. 6.25 per maund; factories are required to carry minimum stock of 25 per cent. of the production. The working capital required is nowadays Rs. 50 lakhs for a factory of 1,000 tons capacity, which represents an increase of 1,000 per cent. over 1938 figures. Scheduled banks could help by reducing the margin money. I hope this is a plea that will not fall on deaf ears.

"Regardless of this important relief, sugar factories, in common with all industrial units in the country, must have funds to put aside as reserves if the industry as a whole is to thrive, and let me remind you that a thriving industry is the only industry that can attract capital from outside.

"The Nagpur Resolution of the A.I.C.C. on the question of land ceilings has caused us some concern, and we hope that Parliament will bear in mind the value of well integrated farms run by industrial undertakings for the purpose of supply of raw material which serve as models of correct methods of husbandry to the large mass of cane growers. To lose what little has been achieved in this direction, to stifle all future possible developments on these lines, would be a great tragedy."

COMPANY MEETINGS AND DIVIDENDS

KILLICK INDUSTRIES LTD. Annual General Meeting, Bombay, 16th March 1959. Dividend: Rs. 13.00 per share, for the period 17 months ended 30th November 1958, payable on and after 20th March 1959. Transfer books remain closed from 3rd to 20th March 1959, both days inclusive.

SHREE CHANGDEO SUGAR MILLS LTD. Annual General Meeting, Bombay, 24th March 1959. Dividend: Rs. 2.25 per share, payable on and after 1st April 1959. Transfer books remain closed from 10th to 24th March 1959, both days inclusive.

K.C.P. LTD. Annual General Meeting, Madras, 30th March 1959. Dividend: Rs. 7.50 per ordinary share and Re. 1.50 per deferred share. (The dividend on deferred shares is subject to the sanction of the Industrial Finance Corporation of India.)

BRAITHWAITE & Co. (INDIA) LTD. Annual General Meeting, Calcutta, 30th March 1959. Dividend: Re. 1.25 per share. Transfer books will remain closed from 16th to 30th March 1959, both days inclusive.

CAREW & Co., LTD. Annual General Meeting, Calcutta, 31st March 1959. Transfer books will remain closed from 16th to 31st March 1959, both days inclusive.

BHARAT COLLIERIES LTD. Annual General Meeting, Dalmianagar, 31st March 1959. Transfer books will remain closed from 23rd to 31st March 1959, both days inclusive.

INDUSTRIAL INVESTMENT TRUST LTD. Annual General Meeting, Bombay, 7th April 1959. Dividend: Rs. 6.00 per share, payable on and after 14th April 1959. Transfer books will remain closed from 23rd March to 7th April 1959, both days inclusive.

JAY SHREE TEXTILES LTD. Annual General Meeting, Rishra, Dist. Hooghly (West Bengal), 7th April 1959. Dividend: Re. 0.65 per share. Transfer books will remain closed from 16th March to 7th April 1959, both days inclusive.

JAY SHREE TEA GARDENS LTD. Annual General Meeting, Calcutta, 9th April 1959. Dividend: Re. 1.00 per share, free of income-tax. Transfer books remain closed from 9th March to 9th April 1959, both days inclusive.

NATIONAL CARBON CO. (INDIA) LTD. Annual General Meeting, Calcutta, 15th May 1959. Dividend: Re. 0.75 per share (final). Transfer books will remain closed from 1st to 15th May 1959, both days inclusive.

COCHIN MALABAR ESTATES LTD. Interim dividend of 5 per cent. on ordinary shares, for the year ending 31st March 1959. Transfer books will remain closed from 24th to 31st March 1959, both days inclusive.

COIMBATORE COTTON MILLS LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st December 1958. Transfer books remain closed from 14th to 28th March 1959, both days inclusive.

BURRAKUR COAL RAISES DIVIDEND

PROFIT OF MCLEOD AND CO. HIGHER

Burrakur Coal Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th June 1958.

Raisings and Despatches.—10,37,484 tons of coal were raised and 10,19,418 tons were despatched compared with raisings of 9,49,985 tons and despatches of 9,63,347 tons during the previous period. The sand transported over the Company's Loyabad Ropeway system was 7,02,246 tons compared with 6,99,846 tons during the previous period.

The directors regret having to report that the replacement of sand in the Damodar River has been very poor indeed and currently the Ropeway has only been worked two shifts per day to conserve supplies. An import licence for a sand pump has now been received and the necessary order has been placed on the manufacturers.

Despite all the representations made to the Government for an increase in sand stowing subsidy, this matter has still not been settled even to the extent of compensating stowing collieries for the additional payments made to labour on account of the L.A.T. Award.

Loyabad Coke Plant.—The production of metallurgical coke during this period was 1,11,280 tons compared with 1,13,804 tons during the previous year. The relative despatches were 1,11,040 tons compared with 1,13,610 tons during the previous period.

Second Five-year Plan.—The Company proposes increasing its annual raisings to 19,50,000 tons by the end of the Plan period. This will however involve capital expenditure of about 1¼ crores and the success of this programme is therefore largely dependent on increases in the price of coal and in the sand stowing subsidy being approved by the Government of India, thus permitting the Company to retain from its profits adequate sums to cater for the capital expenditure mentioned above.

Transport.—The transport position was satisfactory during this period and was able to handle the extra raisings from your collieries.

The profit and loss account after providing for all charges and making provisions of Rs. 15,72,427 (Rs. 12,81,353) for taxation, Rs. 1,47,000 (Rs. 2,80,000) for wealth tax and Rs. 10,51,808 (Rs. 11,07,742) for depreciation shows a profit of Rs. 13,05,277 (Rs. 12,49,535) to which is added the balance brought forward from previous year of Rs. 95,339 (Rs. 32,422) making a total of Rs. 14.00,616 (Rs. 12,81,957). From this there has been transferred to debenture redemption reserve Rs. 50,000 (Rs. 50,000), to development rebate reserve Rs. 44,400 (Rs. 83,000), to statutory development rebate reserve Rs. 1,32,000 (Rs. 1,22,200 for tax contingency reserve) and to general reserve Rs. 1,00,000 (Rs. 70,000 to reserve for aerial rope) leaving a balance of Rs. 10,74,216 (Rs. 9,56,757). The interim dividends on 1st preference shares of 7 per cent. per annum without any deduction for income-tax payable by the Company absorbed Rs. 80,493, on 2nd preference shares of 6 per cent. per annum after deduction of Income-tax payable by the Company absorbed Rs. 9,248 and on ordinary shares at 3¾ (*nil*) per cent. without any deduction of income-tax payable by the Company absorbed Rs. 3,40,968 (*nil*) leaving a balance available of Rs. 6,43,507 (Rs. 9,56,757). The directors propose to dispose of this as follows:—

By payment of a final dividend on the 1st preference shares at the rate of 7 per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 80,493 (Rs. 1,60,986), by payment of a final dividend on the 2nd preference shares at the rate of 6 per cent. per annum after deduction of income-tax payable by the Company absorbing Rs. 9,248 (Rs. 18,496) by payment of final dividend on the ordinary shares at the rate of 5 (7½) per cent. without any deduction for income-tax payable by the Company absorbing Rs. 4,54,624 (Rs. 6,81,936) and by carrying forward Rs. 99,142 (Rs. 95,339).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,18,42,280	Gross block	4,41,78,128

Rs.	4,24,83,585	Rs.	4,24,83,585

McLeod and Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1957.

The profit for the year amounts to Rs. 22.37,825 (Rs. 18,34,046) to which must be added dividends forfeited Rs. 553 (Rs. 2,388) and the balance brought forward from 1956 of Rs. 2,57,153 (Rs. 2,57,234) making a total of Rs. 24,95,531 (Rs. 20,98,198 including Rs. 4.530 being profit on sales of investments). From this amount must be deducted forfeited dividends paid of Rs. 50 (Rs. 350) and loss on sales of investments Rs. 13,240 (Rs. 55,695) leaving a balance of Rs. 24,82,241 (Rs. 20,42,153). Out of this sum there has been provided for taxation Rs. 9,30,000 (Rs. 10,00,000) and the amount written off goodwill comes to Rs. 5,00,000 (*nil*) leaving an available balance of Rs. 10,52,241 (Rs. 10,42,153). The interim dividends for the year ended 31st December 1957 on 10,000 5 per cent. cumulative first preference shares subject to deduction of tax (gross) absorbed Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax absorbed Rs. 1,00,000 (Rs. 1,00,000). The second interim dividends for the year on 10,000 5 per cent. cumulative first preference shares, subject to deduction of tax (gross) absorbed Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax absorbed Rs. 1,00,000 (Rs. 1,00,000). From the balance of Rs. 8,02,241 (Rs. 7,92,153) the directors have paid an interim dividend at 12½ (8) per cent. per annum or Rs. 12.50 (Rs. 8.00) per share on 40,000 ordinary shares for the year ended 31st December 1957 absorbing Rs. 5,00,000 (Rs. 3,20,000) and an interim dividend at 7½ (3) per cent. per annum or 75 (30) nP per share on 50,000 deferred ordinary shares for the year ended 31st December 1957 absorbing Rs. 37,500 (Rs. 15,000) leaving to be carried forward Rs. 2,64,741 (Rs. 2,57,153 after transferring Rs. 2,00,000 to convertible notes redemption reserve). The directors do not recommend the payment of any further dividends in respect of the year ended 31st December 1957.

Baghmari Tea Co., Ltd., and Tyroon Tea Co., Ltd., ceased to be subsidiaries of the Company during the year under review.

Trading.—The profit for the year shows a satisfactory increase over that for 1956, due chiefly to higher dividend income and considerably improved results from the Agency department which may be largely attributed to the steel imports that were handled by them on behalf of the Government of India. Revenue from the Tea department was adversely affected by the revised managing agency arrangements with the tea companies consequent upon the coming into force of the Companies Act, 1956, together with the recession in world prices of common and medium tea which prevailed throughout 1957. Income from the Jute, Insurance and Engineering departments showed little variation when compared with that of the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	95,00,000	Gross block	29,31,775

Kesar Sugar Works Ltd.

The directors of the Company (Chairman: Mr. Tulsidas Kilachand, Bombay) present the audited accounts of the Company for the year ended 31st July 1958.

The working of the year, after charging the amount of Rs. 59,58,261 (Rs. 48,99,292) for excise duty, and Rs. 8,84,556 (Rs. 12.02,838) for cane cess, shows a gross profit of Rs. 8,54,911 (Rs. 19,91,473). After providing for depreciation Rs. 2,49,177 (Rs. 2,46,329) for development rebate Rs. 50,000 (*nil*) and for taxation Rs. 3,50,000 (Rs. 9,75,000) there remains a net profit of Rs. 2,05,734 (Rs. 7,70,144). After adding the amount brought forward from the previous year of Rs. 1,05,664 (Rs. 7,033) the amount available for disposal comes to Rs. 3,11,398 (Rs. 7,77,177). This amount the directors recommend should be disposed as under:—

To payment of a dividend at 5½ per cent. on preference shares (less: income-tax) Rs. 56,513 (Rs. 56.513) and to payment of a dividend at Rs. 4 (Rs. 7) per share without deduction of tax on ordinary shares of Rs. 50 each Rs. 1,80,000 (Rs. 3,15,000) leaving a balance to be carried forward to next year's account of Rs. 74,885 (Rs. 1,05,664 after transferring Rs. 3,00,000 to general reserve fund).

The Company's factory started operations from the 15th November 1957. The quantity of cane crushed was 47,17,631 maunds during 176 days of crushing as compared with 64,14,886 maunds crushed during 232 days in the previous season. The sugar produced during the year under report was 4,67,384 maunds as against 6,17,238 maunds during the previous season, the recovery being 9.89 per cent. as against 9.62 per cent. during the previous season. The quantity of cane received by the factory was thus considerably less than the previous year on account of reduction in cane acreage and also due to lower yield of cane owing to adverse weather conditions. This has resulted in less production of sugar and consequently the cost of production has gone considerably high and the working result has not been as satisfactory.

Crushing for the current season has been commenced from the 1st December 1958. The crop has been adversely affected owing to drought conditions prevailing in the earlier period and floods thereafter. This is likely to result in lesser supply of sugarcane this year. Movement of sugar during the year under report was on the whole satisfactory.

The Government of India fixed statutorily with effect from 30th July 1958 ceiling prices for sugar in case of factories in U.P., Punjab and North Bihar only and this has also been continued for the current season's production. This action of the Government has placed the sugar factories in these regions at considerable disadvantage as compared to factories in other parts of the country. As the industry has demanded higher prices, the Tariff Commission, at the instance of the Government of India, is presently engaged in making a fresh examination of the cost structure of sugar and will submit a report as to the fair price payable to the industry. Its findings and report are awaited eagerly by the industry.

During the year the Government of India instituted a scheme of compulsory export of sugar, allocating a quota to every factory on the basis of production. The Company's factory was allocated a quota of 4,306 bags. The loss on export is expected to be of about Rs. 35 per bag and it has been reflected in the accounts. The Government has recently announced the export target of one lakh tons from the 1958-59 season's production.

The year under report will be noted for a phenomenal growth of *khandsari* sugar industry in U.P. This industry besides being free from the obligation to pay minimum cane prices to growers is also exempted from the payment of excise duty which is as high as Rs. 10.69 per maund. The expansion of *khandsari* production has been mostly at the cost of organised sugar industry and suitable measures should be taken by the Government to ensure that the organised sugar industry does not suffer. The Indian Sugar Mills Association has also taken up this question.

During the year the production of the distillery suffered on account of closure of the plant due to poor offtake and the Company's efforts with the authorities concerned to increase the allotments of power alcohol have not so far succeeded. The efforts are still being continued. Further the All India Distillers' Association is making effort to arrange for the export of alcohol in appreciable quantity to foreign countries. The Company has obtained a licence under Industries (Development and Regulation) Act to double the capacity of the distillery and the expansion is expected to be completed during the year 1959-60.

The Company's chemical factory has been able to increase its production and sales. Production of chromic acid is steadily going up and it is well received in the market.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Gross block	82,23,561
Reserves ...	13,01,626	*Less*—Depreciation ...	52,13,596

N.B.—Figures within brackets relate to the corresponding period of the previous year.

POWERLOOMS: WHAT ABOUT THEM?

(*Concluded from page 417*)

hurt the other sectors and to upset the production and consumption programmes goes unassessed.

Even on the single item of the excise duty, the small-scale powerlooms score heavily over the mills. They enjoy an advantage that varies in the case of a typical fine variety from 28 to 31 nP per square yard. As regards the superfine variety, the concession varies from 39 to 42 nP per square yard. Surely, there cannot be much justification for favouring the small powerloom operators in such a generous manner as to cause deep injury to the other branches of the industry. The blow is particularly heavy at this juncture when the mill sector is struggling with the problem of sluggish sales, accumulation of large stocks, fall in production and increasing mill closures.

Nobody suggests that the small powerloom sector should perish. No such dire fate need overtake it in a country where a growing population and a rising standard of living make the problem of co-existence in the cotton textile industry less intractable, but the concessions granted to the weaker partners should not be such as to impair the stability of the stronger member. Today the small powerloom operators are without doubt inflicting a grave injury on both the mills and the handlooms, besides causing loss of revenue to the Government due to a good number of them working surreptitiously.

Notices

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-sixth Annual General Meeting of Industrial Investment Trust Ltd. will be held at the Registered Office of the Company, 61, Apollo Street, Fort, Bombay, on Tuesday the 7th April, 1959, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1958.

(2) To declare a Dividend.

(3) To appoint a Director in place of Mr. Arvind N. Mafatlal who retires by rotation, in accordance with the Articles of Association of the Company, and being eligible offers himself for re-election.

(4) To appoint a Director in place of Mr. D. G. Moore who retires by rotation, in accordance with the Articles of Association of the Company, and being eligible offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from Monday the 23rd March, 1959 to Tuesday the 7th April, 1959, both days inclusive.

By Order of the Board,

PREMCHAND ROYCHAND & SONS,
Secretaries & Treasurers.

BOMBAY, *4th March*, 1959.

Notes.—(*a*) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(*b*) The dividend when declared will be made payable at the Bank of India Ltd., Bombay, on and after the 14th day of April, 1959. The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 7th day of April 1959.

(*c*) Change of address, if any, should be notified to the Company immediately.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 30th March 1959 (additional to the Interim Dividend of 2% free of income-tax, declared on 6th August 1958) in respect of the Company's financial year ending 31st March 1959, of 2%, free of income-tax, payable on or after 14th April 1959 to registered shareholders whose names appear in the Register on 30th March 1959 or to their mandatees.

Transfers received at the Company's Registered Office before close of business on 25th March 1959 will, if in order, be registered in time for the transferees to receive the Dividend.

Although the final results for the year to 31st March 1959, will not be known for some time, it is clear from the information at present available that the profit for the year will be lower than for the year to 31st March 1958, and in these circumstances the Directors are unlikely to be able to recommend a Final Dividend in excess of 2%.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA,
11th March 1959.

N.B.—Shareholders should inform the Registrar of any changes in their registered addresses.

15, SHIB THAKUR LANE,
CALCUTTA-7, *3rd March*, 1959.

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company at No. 15, Shib Thakur Lane, Calcutta-7, on Thursday the 26th day of March, 1959, at 11-15 a.m., to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

As a Special Resolution:

(1) RESOLVED that the regulations contained in the printed document submitted to this meeting, and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of all the existing Articles of Association thereof.

As Ordinary Resolutions:

(1) RESOLVED that upon the approval of the Central Government being obtained to such appointment, Shri K. C. Bhagat be appointed the Director-in-Charge of the Company for a term of ten years on and from the date the sanction of the Central Government is obtained to his such appointment on the terms and conditions contained in the draft agreement submitted to this meeting and for the purpose of identification signed by the Chairman thereof and that accordingly the Directors be and they are hereby authorised to enter into an agreement with the said Shri K. C. Bhagat in terms of the said draft agreement subject to any modifications thereof that may be agreed between the Company and the said Director-in-Charge for the purpose of complying with any condition imposed by the Central Government in giving its consent as aforesaid.

(2) RESOLVED that subject to the approval of the Central Government being obtained, the remuneration of each Director of the Company for his services for attending a meeting of the Board of Directors be increased from Rs. 50/- to a sum not exceeding Rs. 100/-.

By Order of the Board,
G. D. BHAGAT,
Director.

CALCUTTA, *3rd day of March*, 1959.

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a member.

EXPLANATORY STATEMENT
as required by Section 173 of the Companies Act, 1956

Special Resolution No. 1:

The existing Articles of Association of the Company are proposed to be altered in order to bring them in conformity with the provisions of the Companies Act, 1956, and also to effect such changes as are deemed necessary and expedient. Several of the changes which came into force as a result of the new Act affect, and are in conflict with, some of the existing Articles of Association of the Company which consequently require amendment to bring them into line with the provisions of the Companies Act, 1956, and certain new provisions in the Act for the regulation of the Company need be incorporated in the Articles for the guidance of members and directors. Certain Articles have been incorporated in the new Articles which are either necessary or desirable in view of the provisions of the Electricity (Supply) Act, 1948 and the Electricity (Supply) Amendment Act, 1956 and the subsequent modifications thereof.

The new Articles of Association is in substitution for and to the exclusion of the existing Articles of Association of the Company. The proposed alterations fall into the following categories:

(1) Alterations for making provision for the appointment of Shri K. C. Bhagat, one of the Directors as the Director-in-Charge of the Company and for his powers, duties and remuneration as such Director-in-Charge in accordance with the provisions of the Electricity (Supply) Act, 1948, and the modifications thereof, as also with the provisions of the Companies Act, 1956; for which approval of the Central Government will be necessary as provided by Section 326 of the Companies Act, 1956;

(2) Alterations for making provision for increase of remuneration of each Director for his services for attending a meeting of the Board of Directors from Rs. 50 to a sum not exceeding Rs. 100, for which approval of the Central Government will be necessary as provided under Section 310 of the Companies Act, 1956;

(3) Alterations made to comply with the provisions of the Electricity (Supply) Act, as amended up-to-date and the Companies Act, 1956, where the present Articles are in conflict with such provisions;

(4) Alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the Companies Act, 1956, have been considered desirable as a result of such provisions;

(5) Alterations resulting in either improvement of language used or made with a view to bringing the existing Articles into line with modern practice;

(6) Alterations which relate to the position of Directors regarding their rights and obligations under the Companies Act, 1956 and their remuneration;

(7) Deletion of obsolete Articles;

(8) A few alterations not falling under any of the above categories but considered desirable.

The Directors have no interest in any of the amended Articles except in so far as they relate in case of all the Directors, to the increase in the sitting fees of each Director for attending a meeting of the Board of Directors, and in case of Shri K. C. Bhagat to his appointment, remuneration and period of office as the Director-in-Charge of the Company specified in the Articles of the Company as provided by the Companies Act, 1956.

Copies of the draft of the proposed new Articles of Association and of the existing Articles of Association of the Company may be inspected by any Shareholder at the Registered Office at No. 15, Shib Thakur Lane, Calcutta, during office hours on any working day before the date of the meeting. A member will also be entitled to take a copy of the proposed new Articles of Association for his inspection.

Ordinary Resolution No. 1.

Shri K. C. Bhagat, a Director who has been devoting most of his time in the management of the affairs of the Company, has been proposed to be appointed, subject to the approval of the Central Government to his such appointment as required by Section 326 of the Companies Act, 1956, as the Director-in-Charge of the Company for a period of ten years on and from the date such sanction of the Central Government is obtained, on the remuneration specified in the Sixth Schedule to the Electricity (Supply) Act, 1948, as amended up-to-date, and on such other terms and conditions contained in a draft of the agreement to be entered into between him and the Company. The said Shri K. C. Bhagat has agreed to act as the Director-in-Charge of the Company and the Company is entitled by law to appoint him as such Director-in-Charge subject as aforesaid. The appointment is subject to the consent of the Central Government for which application is being made. This resolution authorises the Directors to enter into the necessary agreement with the said Director-in-Charge as soon as Central Government's consent has been obtained, and the resolution is so framed as to permit the Directors to agree with the said Director-in-Charge to any modification of the draft agreement for the purpose of complying with any condition which the Central Government may impose.

Ordinary Resolution No. 2.

This resolution seeks to increase the remuneration of each Director from Rs. 50 to a sum not exceeding Rs. 100 for his services for each meeting of the Board of Directors attended by him. The Directors have to devote a good deal of time for attending to the affairs of the Company at their meetings or otherwise and the present figure of Rs. 50 was low when fixed with regard to the Company's position at the time, but is considered wholly inadequate in present circumstances. Moreover, the responsibility of the Directors has considerably increased under the new Companies Act. In view thereof, it has been proposed that the remuneration of the Directors for sitting fees be increased as stated above.

This resolution shall not have any effect unless it is approved by the Central Government as required by Section 310 of the Companies Act, 1956.

Shri K. C. Bhagat is interested in Ordinary Resolution No. 1 which seeks to appoint him as the Director-in-Charge of the Company on the terms and remuneration specified in the draft agreement above referred to. The Directors are also interested in Ordinary Resolution No. 2 which seeks to increase their remuneration by way of sitting fees as stated therein.

The copy of the draft agreement proposed to be entered into by and between the Company and the said Director-in-Charge above referred to can be inspected on any working day during business hours at the Registered Office at No. 15, Shib Thakur Lane, Calcutta.

By Order of the Board,
G. D. BHAGAT,
Director.

CALCUTTA,
Dated the 3rd March, 1959.

HINDUSTAN LEVER LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the Members of HINDUSTAN LEVER LIMITED will be held at the INDIAN MERCHANTS' CHAMBER HALL, Lalji Naranji Memorial Building, 76 Veer Nariman Road, Bombay-1, on Monday, 6th April 1959, at 4 p.m., for the following purposes, namely:

Ordinary Business

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To declare a Dividend for the year 1958.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration for the year ending 31st December 1959.

The Company has received Special Notice under Section 225 of the Companies Act, 1956, nominating Shri R. Venkataraman, F.C.A., Chartered Accountant, Thoppul Pilliar Koil Street, Tanjore, to be auditor of the Company for auditing the accounts of the Company for the ensuing year.

The Company has sent a copy of the Special Notice to the retiring Auditors, Messrs. A. F. Ferguson & Co., Bombay, who are eligible and have offered themselves for reappointment.

A Member of the Company entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a Member.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

RAMPOORIA COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 147, Cotton Street, Calcutta, on Tuesday the 31st March, 1959, at 1 p.m.

(a) To receive and pass the Directors' Report and Audited Accounts for the year ended 30th June, 1958.

(b) To declare dividend on Ordinary Shares only.

(c) To elect Directors.

(d) To appoint Auditors of the Company and to fix their remuneration.

(e) To transact any other business that may be brought forward.

The Share Transfer Register will be closed from 16th March to 31st March, 1959, both days inclusive.

By Order of the Board of Directors,
JAICHANDLAL RAMPURIA,
Director.

147, COTTON STREET,
CALCUTTA, *2nd March*, 1959.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ending 31st March, 1959. The Preference Share Registers will be closed from the 1st April to the 16th April, 1959, both days inclusive. Payment will be made on or after 16th April, 1959, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1959, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY,
Secretary.

12, MISSION ROW,
CALCUTTA-1, *10th March*, 1959.

SURVEY

(*Concluded from page 403*)

The Population Commission of the U.N. at its tenth session held in Geneva from 9th to 20th February, has drawn the attention of the U.N. Economic and Social Council to this situation. The Commission, which is a subsidiary of the Economic and Social Council, reviewed the progress of the United Nations' activities directed towards better understanding of the problems of population in underdeveloped countries and their relations to economic and social development. It may be noted that it is not the Commission's task to suggest the policies that any member-government should pursue. Its interest lies in contributing to the knowledge of population trends and their interrelations with economic and social developments. The Commission has pointed out that it is worried not about the increase in the rate of population growth but about the social and economic conditions prevailing in the underdeveloped countries. In view of the uninterrupted accentuation of the population trend, the Commission feels that it should shift the emphasis of its activities and concentrate more on helping countries to study the interrelations between population growth, on the one hand, and economic and social development, on the other.

The Commission considered that both the U.N. and the national services needed demographic data and forecasts to permit practical decisions in the field of economic and social development. It suggested that the U.N. Secretariat should carry out a continuous assessment of population trend accompanied by a parallel assessment of economic growth.

Realising the shortage of qualified personnel in the demographic field, the Commission expressed the view that increasing the number of specialists was one of the most important tasks of the U.N. in the demographic field. It considered that the regional demographic research and training centres set up by the U.N. in Santiago, in Chile, and Chembur, near Bombay, should continue their work. It also felt that universities in underdeveloped regions should concern themselves with the training of specialised personnel.

The Commission submitted to the Economic and Social Council a draft resolution requesting the Secretary-General to make available to underdeveloped countries, on their request, the co-operation of the United Nations in carrying out, over the next few years, a limited number of demographic pilot studies or other projects calculated to demonstrate the value of utilising demographic data, and especially the results of censuses, in preparing and implementing development programmes.

The Commission also decided to submit a draft resolution to the Economic and Social Council on the subject of rural-urban migration, requesting the Secretary-General to offer the assistance of the United Nations to less developed countries in the process of industrialisation which wish to undertake studies of the magnitude and characteristics of internal migration, especially between rural and urban areas. Another recommendation was that seminars should be organised on the uses of demographic statistics for purposes of economic and social policy. Such a seminar was already held at Athens in 1958. It was proposed that a world-wide population conference, similar in scope to the world population conference held at Rome in 1954, should be organised under the auspices of the U.N. in 1964. Yet another suggestion was that, in order to give wider publicity to the work of the Commission, one of its sessions should be held, if feasible, in one of the regions where population growth is most rapid and the problems of economic and social development most acute. The Commission has proposed that its next session in 1961 or 1962 should be held somewhere in the E.C.A.F.E. region.

DELHI LETTER

(*Concluded from page 404*)

poration, as at the end of 1959-60, will be Rs. 211 lakhs and in the Life Insurance Corporation of India, Rs. 500 lakhs. There is no mention of profit in either case.

Under the Ministry of Irrigation and Power there is the National Projects Construction Corporation in which the total investment by Government will have come to Rs. 50 lakhs by the end of 1959-60. The profit earned by Government from this Corporation was Rs. 1 lakh in 1957-58; the estimated profit in 1958-59 and 1959-60 is Rs. 2 lakhs each.

Under the Ministry of Rehabilitation, the Rehabilitation Housing Corporation, Delhi, accounts for a total investment of Rs. 5 lakhs to the end of 1959-60. No profit has been earned from it in 1957-58; there is also no indication that any profit will be earned from it in 1958-59 or 1959-60.

Under the Ministry of Steel, Mines and Fuel, there are seven Government companies and autonomous bodies in all. Figures of Government investment in them to the end of 1959-60 are given below in lakhs of rupees:

Hindustan Steel (P.) Ltd.	300,00
National Coal Development Corporation (P.) Ltd. ..	11,40
Neyveli Lignite Corporation (P.) Ltd.	28,68
Bolani Ores (P.) Ltd.	35
Singareni Collieries (P.) Ltd.	1,20
Mysore Iron and Steel Corporation	1
Orissa Mining Corporation	5
Total ..	341,69

There is no mention of any profits being earned from the first six undertakings listed above. The Orissa Mining Corporation is stated to have yielded some profit to Government in 1957-58, but the relevant figure is not available.

Under the Ministry of Transport and Communications there are four undertakings. Figures of Government investment in them to the end of 1959-60 are given below in lakhs of rupees:

Eastern Shipping Corporation	8,35
Western Shipping Corporation	7,25
Indian Telephone Industries (P.) Ltd.	3,59
Hindustan Shipyards	4,66
Total ..	23,85

The two Shipping Corporations are stated to have yielded some profits in 1957-58, but the relevant figures are not available. Government have earned a profit of Rs. 7 lakhs from the Indian Telephone Industries in 1957-58; the estimate of profit for this undertaking in 1958-59 is also Rs. 7 lakhs, but no estimate is available for 1959-60. As for the Hindustan Shipyards, there is no indication that any profit has been or will be earned by the Government in the near future.

Under the Ministry of Works, Housing and Supply, the Hindustan Housing Factory (Private) Ltd. will have accounted for a total Government investment, to the end of 1959-60, of Rs. 41 lakhs and the Ashoka Hotel (Private) Ltd. for Rs. 134 lakhs. The former undertaking is stated to have yielded some profit in 1957-58 but the relevant figure is not yet available. There is no indication that the Ashoka Hotel has made or will be yielding any profit in the near future, although there are unofficial reports that the Hotel has turned the corner.

The Department of Atomic Energy has under it two Government companies—Indian Rare Earths Ltd., and Travancore Minerals (Private) Ltd. The total investment in the former will come to Rs. 64 lakhs and in the latter to Rs. 25 lakhs. There is no indication that the former company has made or will be yielding any profit; the latter company is stated to be yielding some profit but the relevant figures for the years concerned are not yet available. The Department of Atomic Energy also runs directly an undertaking called the Thorium Uranium Plant. The total Government investment in this will have come to Rs. 105 lakhs at the end of 1959-60; there is no indication that this departmentally-run undertaking will be yielding any profit at all.

The grand total of Government investments in all the undertakings mentioned in the previous paragraphs will have come to Rs. 428.9 crores as at the end of 1959-60. This figure is exclusive of large loans given to the companies, the terms of which are not clear. For instance, it is not known whether the loan of Rs. 2.35 crores given to the Hindustan Machine Tools (Private) Ltd., in addition to a capital of Rs. 3.90 crores, is free of interest or subject to interest. If the loans given to various enterprises are taken into account, the total investment will be very much more. Unfortunately, consolidated total of these loans is not readily available. Be that as it may, the total profits, such as are being earned by Government, are placed at Rs. 1.33 crore for 1957-58, Rs. 1.04 crore for 1958-59 (revised estimate) and Rs. 1.28 crore for 1959-60 (budget estimate). Of course, the net profits earned by many of the Government companies should be much more. To give some examples: The net profit of the Hindustan Antibiotics carried to the profit and loss appropriation account for 1957-58 was Rs. 33.4 lakhs; in the case of the Hindustan Machine Tools the net profit for that year was Rs. 30.7 lakhs; the Sindri Fertilisers and Chemicals made a net profit of Rs. 143 lakhs for the same year.

Since, in all these three cases, there is no provision for income-tax (including super-tax) as in the case of non-Government companies, it would be difficult to say whether conditions in respect of profit-making are comparable as between Government and non-Government companies. It is, therefore, difficult to say whether net profits in relation to capital investment in Government companies compare more favourably or less favourably than in the case of non-Government companies. Again, in the matter of wages and labour conditions, there are two conflicting opinions on Government companies —one that they are better and the other that they are worse than in non-Government companies. It would thus be difficult to find a uniform yardstick for comparing conditions in Government companies with those in non-Government companies. Obviously, the issue raised by the F.I.C.C.I. would require more detailed and careful examination.

Notices

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 31st day of March, 1959, at 3-15 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st May, 1958, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To appoint a Director in place of Mr. G. L. Bangur, the Director retiring by rotation at the Meeting.
3. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 17th to 31st March, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *27th February*, 1959.

KAMARHATTY COMPANY, LIMITED

THE DIRECTORS, AT THEIR MEETING held today, have declared the dividends payable on the 6 per cent. Cumulative Preference Shares for the years ended 31st December, 1956 and 31st December, 1957. Such dividends will be paid without any deduction for Income-tax to those shareholders whose names are registered in the books of the Company on the 30th March, 1959.

The Transfer Books of the Preference Shares of the Company will be closed from the 23rd March to the 30th March, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

CALCUTTA-1, *27th February*, 1959.

PERSONAL TAXATION UNDER THE BUDGET FOR 1959-60

(*Concluded from page 408*)

limit without paying expenditure tax, merely because she is married, whilst continuing to give the unmarried woman the right and privilege of such spending without paying tax? This is, indeed, a harsh and unfair tax penalty on the working woman who gets married! The Finance Minister should amend his budget proposals so as to treat the woman who works and earns as a separate unit distinct from her husband for granting the exemption allowance under the expenditure tax law's provisions.

The budget also contains two changes which are connected with the proposal for treating the wife, husband and all minor children as a unit for the purposes of the expenditure tax. The expenditure tax is payable only by a person whose net income after payment of taxes exceeds Rs. 36,000 per year. It is now proposed to include the income of the wife and the minor children in the husband's income for calculating the total income of Rs. 36,000 (after tax) for determining the applicability of the expenditure tax to an assessee. For reasons outlined already, it is unfair to add a wife's earned income to the husband's and children's incomes to determine the applicability of the Expenditure Tax Act to the husband.

Another proposal contained in the budget is to tax all expenditure incurred by the wife, husband and children treated as one unit in excess of the exempted limit, irrespective of the source of income from which such expenditure is incurred. Here again, the wife should have the separate and distinct right to incur expenditure out of her earned income and to be taxed as a separate assessee for expenditure incurred by her out of her earned income.

A Fantastic Error

The official memorandum explaining the provisions in the Finance Bill, 1959, observes thus: "Under the Expenditure Tax Act, rent paid by the assessee for a residential house is his personal expenditure as also any monies spent by him on its maintenance or repairs. On the other hand, in the case of an assessee who resides in his own house, not only is no adjustment made for the saving of rent in the computation of expenditure, but he is also entitled to claim exemption for personal expenditure against repairs and maintenance of the house under the existing Act. To remove this anomaly, as between persons who reside in rented premises and others who reside in their own properties, it is proposed to treat expenditure by way of repairs, maintenance, etc., in respect of owner-occupied property, as personal expenditure." The notes to the clauses of the Finance Bill make a similar claim. Yet a careful examination of the actual clause in the Finance Bill reveals a fantastic error of drafting, which, if allowed to pass unnoticed, will result in vast hardships to millions of tenants and landlords in the country.

According to clause (e) of Section 5 of the Expenditure Tax Act, "any expenditure incurred by the assessee in connection with the acquisition of any immovable property or in the construction, repair, maintenance or improvement of any immovable property belonging to him" is exempted from the expenditure tax. Now according to clause 25 of the new Finance Bill "in Section 5 of the Expenditure Tax Act—in clause (e), for the words "or in the construction, repair, maintenance or improvement of any immovable property belonging to him," the words "or in the construction of any building" shall be substituted." *There is no mention of owner-occupied properties in the actual clause.* The result is that, as the clause stands, all expenditure incurred by a landlord on repairs, maintenance or improvement of buildings in which he does not reside but are occupied by tenants will be included in his personal expenditure and will be taxed. If the clause is allowed to pass in its present form, it will make landlords absolutely unwilling to maintain or repair properties in which tenants are staying, as they will have to pay the expenditure tax on the outlays for such repairs and maintenance—which by no concept of logic or equity can be really included in the personal consumption expenditure which the expenditure tax is supposed to curb and tax. The drafting of the present clause 25 is a glaring instance of the extreme lack of care in drafting tax legislation which has crept into the government machinery during the past few years. It is to be hoped that this error of drafting will be amended before the Finance Bill is passed, in order to restrict the application of the clause to owner-occupied premises only, as was intended by the Government according to the memorandum explaining the provisions in the Finance Bill and according to the notes to the various clauses of the Bill.

Under the original Expenditure Tax Bill, 1957, it was proposed to include within personal expenditure outlays on bullion, precious stones and jewellery. Thereafter, it was realised that these outlays were of a capital nature and so expenditure on bullion, precious stones and jewellery was exempted from the provisions of the expenditure tax. The life of these items often extends to centuries and they cannot be treated as consumer goods. It is because of this that such items have been included in the total computation of wealth for the purposes of the wealth tax. Now the budget proposes to include spending on bullion, jewellery and precious stones in taxable expenditure for the purposes of the Expenditure Tax Act. This is most unfair. Government should decide whether these items are capital goods or consumer goods. Then they should be subjected to either the wealth tax or the expenditure tax. But it is obviously contradictory and unfair to claim first that bullion, jewellery and precious stones constitute capital goods and should therefore be included in the total wealth for the purposes of the wealth tax and then to claim that these same items constitute consumer goods which should therefore be subject to the expenditure tax in the same year.

Under the budget proposals, the expenditure tax means a further and heavier burden of tax in addition to the other direct taxes levied on individuals in India. It will deal fresh and heavy blows to the incentives to work, saving, risk-bearing and economic progress of the nation.

The budget does not propose any changes in the capital gains tax, the gift tax and the estate duty which have all been levied at heavy rates in the past few years. These taxes will continue as parts of a structure of direct personal taxation which imposes crushing, intolerable and inequitable burdens of tax on individuals and acts as the main factor adversely affecting incentives to progress in the country.

Conclusions

It may finally be asked: Are these hardships necessary? The answer must be emphatically in the negative. The new taxes have failed to yield revenues which had been originally anticipated from these new tax measures. Indeed, the revenue yielded by the new taxes in the past two years has been so disappointing that it is doubtful if it exceeds even the administrative costs and effort in collecting these taxes.

When the Wealth Tax Bill was introduced by Mr. T. T. Krishnamachari in 1957, it was expected to bring in Rs. 15 crores in revenue. After the Bill was amended according to the recommendations of the Select Committee of Parliament which studied the new tax measure, it was expected to yield Rs. 12.50 crores. The revised estimates of tax yields for the first year of the wealth tax, 1957-58, put the total revenue from the tax at only Rs. 9 crores. For the budget of 1958-59 the wealth tax was estimated to yield Rs. 12 crores; the revised estimates put the yield from the tax in the year at only Rs. 10 crores. As a result of the increase in the rates of wealth tax proposed in the recent budget, the yield from it is expected to be Rs. 13 crores for 1959-60. These figures include the wealth tax payable by companies which accounts for almost half the total of wealth tax realised in the country.

The expenditure tax was estimated to yield Rs. 3 crores in the first year of its operation, 1958-59. This tax was introduced by Mr. Krishnamachari for use as "a potent instrument for restraining ostentatious expenditure." It was recommended by Mr. Kaldor for this purpose, because he believed that the richer classes were not only spending their entire incomes but also portions of their capital. This belief of Mr. Kaldor has been now proved completely false. In August 1957, I had challenged this wrong assumption about the spending habits of the rich in our country. In two public lectures delivered in that month in Bombay and Poona, I had claimed: "Persons familiar with Indian conditions will readily realise that this claim about the spendthrift habits of the rich .... in the Kaldor Report is grossly exaggerated and false. If statistics were available, they would probably show that, as compared with the wealthy classes in other countries, the wealthy classes in India are made up not only of the thrifty but, in many cases, the most miserly people in the world! This will probably be borne out by the returns of the expenditure tax in the years to come... The yield from the expenditure tax to the revenue will be negligible." My original estimates have now been proved correct. The revised estimates for 1958-59 put the yield from the expenditure tax at merely Rs. 1 crore or *only one-third of what the tax was first estimated to yield.* Even after the recent budget proposals, the yield from the tax for the coming year, 1959-60, is estimated at only Rs. 1 crore. Official figures show that for the calendar year 1958 expenditure tax was altogether assessed in the country to the extent of about Rs. 38 lakhs, out of which only about Rs. 6 lakhs were actually collected. Mr. Morarji Desai has frankly admitted in his budget speech that "the revenue from the expenditure tax has been quite disappointing this year." If he had computed accurately the administrative cost of collecting the tax, he would most probably have found that it exceeded the revenue collected from this direct tax. And it is possible that even his present estimate of the tax yielding Rs. 1 crore in the year may prove to be on the optimistic side when the figures of actual assessments and collections become available. Mr. Kaldor's optimistic assumption that the tax would yield many crores in revenue have been proved completely false. Perhaps, grounds of sheer practicality and efficiency in tax collection will soon dictate the abolition of this odd tax which had been rejected by all countries of the world, excepting India, and which is no more than an ingenious but highly defective theoretical brain-child of a clever but erratic and unsound economist, Mr. Kaldor.

The Gift Tax introduced last year was estimated to yield Rs. 2 crores in the first year of its operation, 1958-59. But the revised estimates place its yield at only Rs. 1.20 crore for that year. For the coming year, 1959-60, the tax is expected to yield only Rs. 1.20 crore.

Thus the new taxes have involved tremendous administrative problems. They have led to severe harrassment of assessees. They have had severe, psychologically adverse effects on the incentives to work, to save and to take entrepreneurial risks on the part of individuals in the country. The yield of the new taxes has also been most disappointing, making their levy not worth the bother and sacrifices involved. As compared with the traditional forms of direct taxation, like the income-tax which, in the past year, yielded no less than Rs. 87 crores, the revenue from the new taxes has been negligible and has fallen far below the initial expectations and estimates of Mr. Krishnamachari and Mr. Kaldor. The disadvantages of these taxes are many: adverse effects on incentives in the economy, harrassment of taxpayers, substantial administrative cost for collection, etc. The advantages of these taxes in terms of revenue are few—almost non-existent. The past record should dictate the abolition of the new direct taxes imposed on individuals. The Kaldorian monster of the new system of direct taxation should be rejected with the contempt it deserves and swept away into the limbo of oblivion.—*All Rights Reserved.*

CALCUTTA, *10th March*, 1959.

TREASURY BILL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, 11*th March*

There has been no change in the conditions of short-term money market since our last report. With the progress of the busy season, the demand for bank credit continues unabated and the volume of floating funds in the market has considerably shrunk, with the result that banks are compelled to draw on their balances with the Reserve Bank and seek short-term accommodation from it. They have also been selling their holdings of Government securities. During the four weeks ended 27th February, Scheduled banks' investments have fallen by Rs. 22 crores of which Rs. 11.14 crores are represented by Treasury Bills. It may be noted here that, as against Rs. 19.64 crores of maturities during February, the outflow by way of new Treasury Bills was of the order of only Rs. 8.50 crores including intermediates.

Interest rates are held firm at the previous week's levels. Inter-bank call money is being bid at 3½ per cent. among the Exchange banks and big Indian banks and at 3½ to 3¾ per cent. among the smaller banks. House money at seven days' notice is fetching 3¾ per cent. and short-term deposits 3¾ to 4 per cent. for one to six months.

The upward trend in Treasury Bill discount rate persists. This week, it is 2.680 per cent. per annum, as against 2.625 per cent. last week and 2.592 per cent. two weeks ago. The amount offered was no more than that invited, namely, Rs. 2 crores. Tenders for next week also are unchanged at Rs. 2 crores. No sale of intermediate bills took place this week also. Nevertheless, the authorities continue to offer them to the market.

An expansion of Rs. 33.95 crores in notes in circulation is the main feature of the Reserve Bank of India statement for the week ended 6th March 1959. This raises the active notes to a peak of Rs. 1,688.58 crores. Notes held in the Banking Department are lower by Rs. 16.90 crores. The increase of Rs. 17.04 crores in total notes issued is covered by a rise of Rs. 20 crores in rupee securities and a decline of Rs. 2.95 crores in rupee coin. There has been no change in either foreign securities or balances held abroad. Deposits of the Central Government have declined by Rs. 4.74 crores and of other Governments by Rs. 6.10 crores. Deposits of banks, too, have fallen by Rs. 10.96 crores. Loans and advances other than to Governments are higher by Rs. 3.93 crores, while investments have declined by Rs. 5.65 crores.

The Scheduled banks' statement for the week ended 27th February 1959 shows a fall of Rs. 3.24 crores from the peak level of Rs. 901.17 crores, but this has been more than made good by a rise of Rs. 6.32 crores in demand deposits, so that the total net deposits show an increase of Rs. 3.08 crores to stand at Rs. 1,610.03 crores. Borrowings from the Reserve Bank have risen by Rs. 2.66 crores. Advances are higher by Rs. 7.14 crores, while bills purchased and discounted have declined by Rs. 1.67 crore. There has been a fall of Rs. 1.47 crore in investments. While cash balances have gone up by Rs. 2.51 crores, money at call and short notice has shrunk by Rs. 1.79 crore.

Barring persistent enquiries for 4 and 4½ per cent. State loans and the long-term issues of the Central Government, which have resulted in a further hardening of prices, the Gilt-edged market has been lethargic, with very little business passing. The acute stringency in short-term money market is the main adverse factor. 3 per cent. 1986 Conversion Loan is ruling quiet with a drop of 5 nP over the week to Rs. 74.10. 3 per cent. 1970-75 has buyers 5 nP higher at Rs. 91, while 3 per cent. 1966-68 is unchanged at Rs. 93.85. 3 per cent. 1964 and 1963-65 are maintained at Rs. 97 and Rs. 96.75, respectively. 3½ per cent. National Plan issues continue to be on offer at quoted rates. 3¾ per cent. 1974 is quoted 10 nP higher at Rs. 98.85, following the increase in the official selling price. This pushed up 4 per cent, 1973 also by 5 nP to Rs. 101.60. Among State loans, Bombay 4 per cent. 1970 has hardened by 10 nP to Rs. 100.25 and 4½ per cent. 1969, 1970 and 1971 loans by 15 nP each to Rs. 102.50. West Bengal, U.P. and Madras 4½ per cent. 1970 each has picked up 20 nP to Rs. 101.60. Andhra 4½ per cent. 1970 has gained 30 nP to Rs. 101.55.

Sterling has been a little erratic, but the undertone is still firm, as witness the slight rise in spot rates in New York. Over the week, spot sterling has gained 1/32c to $2.81½-2 81.3/16, while three months' forward is unchanged at $2.80¾-2.80.15/16. In consonance with this trend, rupee also rules steady in terms of the U.S. dollar. Banks' selling rate for ready dollars after dropping from Rs. 476.25 to Rs. 476 per $100, has returned to Rs. 476.25, while their buying rate has remained unchanged at Rs. 472.75 per $100.

SHEEP SKINS IN GOOD DEMAND

(From Our Own Correspondent)

MADRAS, 9*th March*

There was no appreciable change in the kip market, except buff calf which recorded a slight increase in price, due to good overseas inquiries. U.K. trading was small, as inquiries centred mostly round lower grades for which there was brisk inland demand at higher prices. Top marks in cow hides, cow calf and buff calf skins found good outlet; but sellers were not keen to book further business, as they had plenty of orders in their books.

Tanned sheep skins—middle class—were in good demand and prices advanced by 10 nP. There were large inquiries for tanned goat skins

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 11*th March*

The firm trend noted in the bullion market last week continued unabated during the major part of the week under review, with prices moving up further. Both silver and gold evoked sustained buying on expectations of brisk seasonal demand in the near future. Renewed purchases by option dealers and firmness of commodities also imparted strength to the market. Yesterday and today, however, the yellow metal suffered a setback brought about by profit-taking. Nevertheless, today's closing rates for forward deliveries were higher than those at the end of last week, though spot gold was lower.

March settlement in silver met with excellent support and forged ahead from Rs. 195-9 to Rs. 197-14 today. April settlement picked up Re. 1-13 to Rs. 197-5. The carry-forward charge in favour of bulls widened considerably, from an anna on Wednesday to As. 9 today.

Ready silver, which was quoted at a discount of As. 3 under the March settlement last week, was at par today, the closing rate being Rs. 197-14. The daily average arrivals of silver were 14 bars, while offtake was 12 bars per day. The floating stocks of silver are reported to be around 1,100 bars.

In the gold section, March settlement opened the week at Rs. 117-12-6, as against Rs. 118-2-6, and, after spurting to Rs. 118-14 on Monday, receded to Rs. 118-3 today before finishing at Rs. 118-4. April settlement strengthened from Rs. 117-10 last week-end to Rs. 118-4 on Monday. Subsequently, it eased to touch Rs. 117-13 today. Towards the close, it was an anna and a half better at Rs. 117-14-6. The carry-forward charge in favour of bulls narrowed down from As. 8½ last week-end to As. 5½ today, after being higher at As. 10 on Monday.

Ready gold opened the week easy at Rs. 118-4, as against Rs. 119-5-6. It rallied to Rs. 119-12 on the 9th inst., but drifted lower in the subsequent sessions to touch Rs. 118-10. At the close, it was better at Rs. 118-11. The daily average arrivals and offtake of gold were 5,000 tolas and 3,500 tolas, respectively. The floating stocks of gold are estimated at 25,000 tolas.

Ready and forward silver provided a bright spot in the London bullion market this week, the quotation for both spurting from 78½d. to 79¾d. per fine ounce on the 9th inst., the highest touched since 12th May 1957 for ready and 1st May 1957 for forward. Forward silver was, however, a shade easy at 79¼d. yesterday. The handsome rise was due partly to the notable improvement in New York price and partly to pressure of demand on a market not too well off with supplies. It was stated that France was a buyer for coinage purposes. France, we are told, is going to recoin the franc. The London price was virtually at parity with New York where silver stood yesterday at 91.375 cents, as against 91.125 cents a week before. Gold in London, after receding from 249s. 5½d. to 249s. 4¾d. recovered to 249s. 5d. Yesterday, it was a shade easy at 249s. 4¾d.

The following comparative table shows at a glance the trend of the market during the week under review:

	11-3-59	Highest	Lowest	4-3-59

BLACK PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 11*th March*

Malabar black pepper softened during the week for want of demand, foreign and inland. Ungarbled at Cochin sagged down to Rs. 668.75, while garbled to Rs. 116. March delivery came under pressure of liquidation by longs and moved around Rs. 119. Calicut went down to Rs. 700 to attract business but so far without result.

Spot at New York was shaded to $0.25½. Singapore receded to Str.$79 for Lampong, despite higher advice from Djakarta. Sarawak white, after, improving to Str.$159, turned weak and was quoted at Str.$157.

The future of Malabar black pepper now depends upon the demand either from the U.S. or from the U.S.S.R. which is likely to develop in the near future. Stock of Lampong and Muntok are now low and in strong Chinese hands at Singapore.

Ready Malabar black in Bombay is quoted between Rs. 96 and Rs. 105 according to quality.

light weights all grades and 11/12 lbs. lower grades and the market was firm.

Shipments during February 1959 were: To the U.K.: 2,269 bales cow hides, 247 cow calf, 416 buff calf, 685 tanned goat and 639 bales tanned sheep; to the Continent: 4 bales tanned cow calf, 22 tanned buff calf, 375 tanned goat and 214 tanned sheep; to U.S. ports: 1 cow, 6 tanned cow calf, 149 tanned buffs, 319 tanned buff calf, 152 tanned goat and 3 bales tanned sheep; to Japan: 129 bales tanned sheep skins.

COTTON FUTURES EASE TOWARDS CLOSE

(From Our Own Correspondent)

BOMBAY, 11*th March*

Buoyant conditions prevailed in the cotton futures market during the major part of the week under review. Heavy speculative buying and large scale investment support led to a sharp spurt in prices. The buoyancy was attributed to the following factors: (1) Firm spot advices reflecting the reduced crop estimate and brisk mill buying. (2) The small volume of tenders against the expiring March contract. On the third notice day, that is 9th inst., only 100 bales were tendered, bringing the total tendered to 650 bales. Out of the 350 bales that came in for appeal, only 150 bales were passed. This, it was thought, would discourage larger tenders on succeeding tender days and would lead to further strengthening of the market. The report that the Laxmi-Jaydhar and Southern crop suffered severe damage both quantity-wise and quality-wise, fanned the bullish fervour. Better news from the export front imparted further strength to the market. Cotton futures consequently spurted, the March contract to Rs. 680.50 and May to Rs. 681.50 yesterday. These high levels led to fear of official intervention. This provoked some nervous liquidation with the result that prices sagged. A further fall in prices was recorded today and the market closed on an easy note. The closing rates were, however, well above last week-end quotations.

I.C.C. Moglai Jarilla March opened the week at Rs. 664.50, as against the previous closing of Rs. 662.50, and steadily advanced to Rs. 680.50 yesterday but declined to Rs. 677 at close. Commencing at Rs. 677 today, the market gathered Rs. 3 before easing to Rs. 675.50 at which rate the session was wound up. I.C.C. Moglai Jarilla May commenced the week at Rs. 669 and firmed up to Rs. 681.50 yesterday, before dropping to Rs. 678.75. Opening at Rs. 678 today, the contract advanced to Rs. 681.50 before reacting to Rs. 675.50 at the close. The market was closed on Saturday. The trend of prices of contract during the week is indicated below:

(In rupees per candy of 784 lbs.)

	11-3-59	*High*	*Low*	4-3-59
I.C.C. Moglai Jarilla March 1959 ...	675.50	680.50	662.00	662.50
I.C.C. Moglai Jarilla May 1959 ...	675.50	681.50	666.50	668

In the spot section, there was brisk mill activity. Persistent demand was noted for staple varieties and rates hardened. Vijay and Kalyan were the centre of attraction. Bulk buying was reported in both these varieties. CO2 and Surti were also very well favoured. Southern mills were especially interested in Kalyan.

On the export front, steady demand was reported from Japan for Bengals. Some business was also put through in Kala and Wagad.

In the foreign section, Sudan and East Africans evoked attention. B.P. 52 was done at Rs. 1,060 —Rs. 1,065 and Busoga at Rs. 1,020 to Rs. 1,025.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 695; Berar Jarilla 760; Khandesh 825; Vijay 950; Jaydhar 945.

In the Karachi cotton futures market, increased switch over of purchases from the maturing March contract to May resulted in a sharp fall in the quotation for the former while the latter ruled firm on buying support. The March contract declined from Rs. 55 last week-end to Rs. 53-8 while May improved from Rs. 55-15-6 to Rs. 56-4. Spot values ruled fully steady. *Deshi* styles showed a modest improvement over the week. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 75-8; Punjab *Deshi* 66; 4F Punjab Roller 58; S.G. 63; L.S.S. Punjab Roller 59-7; S.G. 63-12; N.T.R.G. 63-4; S.G. 69-7; 289F Punjab Roller 67-7; S.G. 76-4.

Quiet conditions prevailed in the Alexandria cotton futures market during the week under review. In the absence of any new development, trading interest was low and turnover limited. Values moved in a narrow range, with only minor net change over the week. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end closings:

Karnak: March 71.00 (71.00); May 71.30 (71.25). *Ashmouni*: April 61.60 (61.70); May 61.65 (61.75).

The Liverpool cotton futures market depicted a mixed trend during the week. While the near deliveries ruled firm on good support the distant contracts met with selling and declined. Sudan contracts lacked buyers but values remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 22.10; May-June 21.55; July-August 20.10; October-November 19.30. *American cotton mixed growth contract*: March-April 22.55; May-June 21.90; July-August 20.15; October-November 19.15. *Sudan*: May-June, July-August, September-October 22.00.

After a sharp reaction in prices early in the week on heavy liquidation and hedge pressure, the New York cotton futures market witnessed a gradual recovery in later sessions, thanks to Commission House buying and trade support. The demand was attributed to increased activity in the allied

markets. Expectations of good demand for early new crop cotton also imparted strength to the market. The closing rates were, nevertheless, below last week-end quotation.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-3-59	3-3-59	24-2-59
Spot	35.70	35.75	35.60
March	35.41	35.59	35.68
May	35.41	35.59	35.71
July	34.63	34.72	34.69

ART SILK YARN IMPORT SCHEME SUSPENDED

(From Our Own Correspondent)

BOMBAY, 11*th March*

The yarn market exhibited a firm trend during the week under review. Rayon yarns were particularly strong on fears of shortage of supplies in the coming weeks, in view of the latest decision of the Central Government to suspend the operation of the export promotion scheme under which licences for import of art silk yarns are issued. The suspension, it is said, is a sequel to the need for some modification of the scheme considered necessary by the Government. So far as applications for import licences already submitted but still pending with the import licensing authorities are concerned, a special committee, we are told, will be appointed to help these authorities to scrutinise the applications. Traders noted the decline in imports of art silk yarns into the Bombay port during the month of February. The imports aggregated 3,214,197 lbs., as against 3,411,947 lbs. in the preceding month. In sympathy with rayon yarns, staple fibre yarns also tended to move up. Cotton yarns were fully steady.

Cupressa Bamberg art silk yarn (60×1) April delivery forged ahead from Rs. 1,524 to Rs. 1,553. June delivery was firm at Rs. 1,572. Spot yarns hardened by 12 nP to Rs. 8.12. National Rayons 120 bright cones first grade strengthened by 11 nP to Rs. 4.56. 150 bright cones first grade gathered 4 nP to Rs. 4.32. Among foreign yarns, 120 Italy picked up 6 nP to Rs. 5.06. 120 Japan and 150 Japan rose by 3 nP each to Rs. 4.90 and Rs. 4.97, respectively. 150 Italy was fully maintained at Rs. 5.25.

In the staple fibre yarn section 40×2 April delivery met with excellent buying support and rallied Rs. 3 to Rs. 629. June delivery was fully maintained at Rs. 636. Spot Citys put on 3 nP to Rs. 3.22. Centurys gained a like amount to Rs. 3.25. Among foreign yarns, 80×2 Fujis increased by 9 nP to Rs. 8.34. Paramounts were firm at Rs. 7.87.

Deals put through in cotton yarns were restricted, with values moving narrowly. Ten counts Moderns were unchanged at Rs. 13.37, as also Podars at Rs. 12.19. Twenty counts Hinds, Moderns and Sexarias were done at Rs. 16, Rs. 16.25 and Rs. 15.50, respectively. Forty counts Moderns were fully steady at Rs. 26, while Meenaxis gave way from Rs. 25.31 to Rs. 25.25. Sixty counts were maintained at the last week's level. Raghuvamshis were quoted at Rs. 55 and Finlays at Rs. 65. Among eighty counts, Citys hardened by 50 nP to Rs. 67.50. Finlays were quoted at Rs. 81, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	11-3-59	4-3-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg April / June	1,572 / 1,553	1,524 / —
" (per case of 200 lbs.) / 60/1 Cupressa Bamberg spot (per lb.)	8.12	8.00
120 Japan (per lb.)	4.90	4.87
150 Japan (per lb.)	4.97	4.94
120 Italy (per lb.)	5.06	5.00
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn—

80s City	67.50	67.00

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 11*th March*

Distinctly buoyant conditions prevailed in the oilseeds market during the week under review. Under the leadership of groundnuts, oilseeds made a strident recovery, almost reaching the highest levels reached last month before the imposition of margin by the Forward Markets Commission. The paucity of stocks, poor inflow of new crop and limited offerings aided the sentiment. The spot section was particularly buoyant, thanks to sustained offtake by crushers and other consumers. The statistical position too was favourable to the bulls. The market was thick with rumours of encouraging export advices, particularly in castor oil.

The spectacular rally in the groundnut section was induced by the tight supply position in the spot section. Lack of encouraging advices from abroad and a lurking fear of intervention by the Forward Markets Commission could not bring about a reaction in the face of strong support from crushers and *vanaspati* manufacturers. Groundnut May 1959 which stood at Rs. 179.87 last Wednesday, after experiencing minor fluctuations, with a bullish undertone, closed today at Rs. 184.25. Bold ready improved from Rs. 36.12 to Rs. 37.50 today. Oil ex-mill, similarly, hardened from Rs. 18.69 to Rs. 19.62.

Although the export demand for castor oil was more or less subdued, there were rumours that the Communist countries would become buyers in the not too distant future. It was also reported that the U.S. purchases of Brazilian castor oil have tapered off lately and that it would turn its attention to India. These reports, however, remain unconfirmed. A reaction would have set in in the castorseed section, owing to steady inflow of new crop from Hyderabad and Gujerat, but for the strong support given by the North Indian operators. May 1959 contract moved up from Rs. 155.37 to Rs. 159.26 on Monday. It, however, fell to Rs. 158.37 when it wound up today. Ready Madras, after fluctuating between Rs. 30.19 and Rs. 30.87, closed today at Rs. 30.75 with a gain of 50 nP over the week. Oil B.S.S. too, after moving in a narrow range, finished today at Rs. 16.62.

Presumably in sympathy with the other seeds, linseed made considerable headway. It received good support at the hands of North Indian interests. Foreign inquiries were, however, not encouraging. Linseed May 1959 contract moved up from Rs. 32.31 to Rs. 32.94 on Monday. It subsequently suffered a slight setback to close the week at Rs. 32.81. Bold ready which closed last week at Rs. 32.50 moved both ways within a narrow range before it wound up the week today at Rs. 32.62. Linseed oil gained by about 19 nP over the week and closed today at Rs. 16.37. The buoyancy in the cotton market was a source of strength to cottonseed futures. There was good speculative support as well. Cotton May 1959, although it declined from Rs. 126.00 to Rs. 125.25 on Thursday, made considerable gains in the later sessions. The contract closed today on a steady note at Rs. 128.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	11-3-1959	4-3-1959	25-2-1959
Groundnut	Rs.	Rs.	Rs.
May 1959	184 25	179 87	178.00
Bold ready	37 50	36 12	35.75
Coromandel ready	37.75	36 50	36.12
Khandesh quality	37 75	36 25	36.12
Oil ex-mill ready*	19 62	18 69	18.62
Railway receipts*	19.25	18.62	18.44
Castorseed			
May 1959	155.37	155.37	155.25
Ready Madras	30 75	30 19	30.25
Ready Kanpur	29 75	29 00	29.25
Oil B.S.S.†	16 62	16 37	16.44
Oil commercial†	15.56	15.37	15.50
Linseed			
May 1959	32 81	32 31	32.31
Bold ready	32 62	32 50	32.62
Oil ready†	16 37	16.19	16.75
Cotton seed May 1959	128.25	126.00	119.75
Niger seed	28.75	28.50	28.75
Kardi seed	23.00	21.75	21.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

SUGAR DECLINES SHARPLY

(From Our Own Correspondents)

BOMBAY, 11*th March*

There was a further sharp decline in spot and ex-mill sugar prices during the week under review. The decline followed selling pressure induced by the Union Food Minister's warning against any tendency for rigging up prices. Addressing the annual general meeting of the Indian Sugar Mills' Association at New Delhi on Monday, the Minister stated that the Government would take serious notice of such mills as were found to be selling sugar at a premium over the controlled ex-mill rates. The decline would have been more marked but for very poor arrivals by rail; the quantity that actually arrived was no more than 6,430 bags, as against as much as 33,120 bags in the previous week.

Large grain fell by Rs. 2 to Rs. 112-Rs. 117 per bag. Medium grain receded from Rs. 112-Rs. 113.50 to Rs. 110.50-Rs. 111.50. Small grain was quoted at Rs. 110, as gainst Rs. 110-Rs. 111.50 last week.

* * * *

HAPUR, 9*th March*

The sugar market continued to rule steady to firm during the week, due to good outside demand and expectation of early termination of the crushing season. There are reports that about a dozen factories have already ceased crushing and that those still running are likely to go out of production at an early date owing to shortage of cane supplies. The overall sugar production is expected to be lower than last year at 19.72 lakh tons and much of the shortfall is expected in U.P. where there has been paucity of sugarcane supplies in the mills due to increase in the number of crushers. Most of the factories are effecting sales in private at prices higher than those fixed by the Government. The latest prevailing prices (f.o.r. mill stations) in the Muzaffarnagar market were: Laksar C29 Rs. 38.37; Saharanpur E29 Rs. 37.87; Iqbalpur C29 Rs. 38.54; Khatauli B29 Rs. 38.75; Amroha D29 Rs. 37.69; Bijnore D29 Rs. 37.50; Seohara D29 Rs. 37.50; E29 Rs. 37.31; Mansurpur C29 Rs. 38.56; D29 Rs. 38.19.

Ex-mill delivery prices in the Kanpur market recorded a buoyant tendency during the week, thanks to good outside demand. Another factor that cheered the trading sentiment was curtailment of competition from *khandsari* sugar now subjected to excise duty.

Khandsari ruled steady, following the imposition of excise duty, but most of the crushers have begun manufacturing *gur* after the levy. The producing interests have protested against the imposition. The prevailing prices were:—superior dry Rs. 33 to Rs. 36.25; inferior moist Rs. 29 to Rs. 32.50 per maund.

Ready *gur* registered a modest fall towards the week-end, as outside demand was slack and arrivals were at an average of 4,000 to 5,000 maunds. Local stock swelled to 70,000 maunds. Crushers are mostly manufacturing *gur* and are purchasing cane upto Re. 1.50 per maund which is higher than the price paid by factories. The prevailing prices here were:—*gur pansera* Rs. 16.94 to Rs. 17.12; *balti* Rs. 17.25 to Rs. 17.50; *shakker* Rs. 17.50 per maund.

Gur also ruled quiet in the Muzaffarnagar market where arrivals were at an average of 10,000 maunds daily. The latest prevailing prices were:—*chaku* Rs. 19 to Rs. 20.25; *ladu* Rs. 19 to Rs. 19.50; *pansera* Rs. 18 to Rs. 18.50; *rusker khurpapar* Rs. 12 to Rs. 13; *rusker ladu* Rs. 13 to Rs. 15; *shakker dara* Rs. 19.50 to Rs. 21.50; *masala* Rs. 22 to Rs. 23 per maund.

The sowings of cane for the next season has begun and, as prices of *gur* and cane throughout the season have been very favourable to cultivators, it is expected that acreage under cane will increase further in the next season.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 9*th March*

During last week's tea export and internal sales, good demand was in evidence at easier rates.

Trade circles consider that the adjustment in excise and export duties is too insignificant a benefit. The total loss of revenue to the Government is Rs. 35 lakhs which, when spread over the industry, is invisible to have any effect. There was, therefore, surprise when the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, told the Export Advisory Council, that this adjustment would result in increased exports. It is true that the industry and trade have exported as much as to earn for the country foreign exchange worth Rs. 90 crores in the July-December period. That explained Mr. Shastri's admission that the recovery in the country's exports was mainly due to tea. However, with increased output and greater competition from other producing countries, particularly from Ceylon and Africa, it is difficult to maintain the good record without a greater reduction in the export duty. It is common knowledge that the gardens producing common teas alone are facing an economic crisis, and some of them, especially in Assam, are threatened with self-effacement.

Export offerings aggregated 65,574 chests. They met with good demand last week, but, as soon as bidders took a fair quantity, demand became slow and prices declined. A strong feature of the sales was the useful liquoring C.T.C.'s selling at notably higher rates. However, the poorer C.T.C.'s, after an irregular trend, gave way. Legg-cut teas lost by 6 nP, but the best lots were fully steady. "Teas for price" eased by 6 to 10 nP, and low and medium brokens and fannings by 4 to 10 nP. There were some withdrawals in B.O.P., while the few bright liquoring orthodox B.O.P.s and O.F.s had good demand. Stylish whole leaf grades were in fair demand, but other sorts lost by 10 nP. In Darjeelings, the few lots possessing autumnal flavour were favoured by buyers, while the other lots fell in an irregular trend.

The quotations—in rupees per lb. without adding the zonal excise duty—were: Best Assam C.T.C. fannings 2.60 to 2.80; best Assam C.T.C. B.P. 2.30 to 2.40; clean black pekoe 1.92 to 1.96; plain fannings 1.70 to 1.76, medium fannings 1.68 to 1.74; plain B.P. 1.60 to 1.66; and medium B.P. 1.58 to 1.62.

Buyers offered 1½ nP for export quota, although, earlier, business had been done at 1¾ nP.

In an otherwise easier internal market of last week depsite good demand, a strong feature was the lots in grainy legg-cut teas having powdery and small leaf rising above valuation. All other legg-cut grainy teas, however, eased by 4 nP. C.T.C.s showing an improvement in cup quality met with keen competition to realise prices higher than valuations, but poorer and medium kinds of this manufacture irregularly eased by 10 nP. The best liquorings were steady, and there were occasions when prices crossed those in the invoices. Orthodox descriptions declined by 2 nP, but the powdery teas attracted a premium. Darjeelings were irregular, the prices varying in accordance with quality. The quotations—in Rs. per lb. exclusive of excise duty—were: Best Assam C.T.C. 2.40 to 2.90; medium Assam C.T.C. 1.85 to 2.00; medium Dooars 1.78 to 1.80; and medium Assam grainy 1.74 to 1.76.

TEAS A SHADE EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 4*th March*

Approximately 700,000 lbs. were catalogued in Sale No. 9 held on Tuesday, 3rd March. Quality remained unchanged and there were a number of flavoury high growns on offer. The sale opened to a quieter tone and, in particular, there was less enquiry for low medium and medium teas and prices were irregularly easier. There was a good demand for best liquoring high grown brokens, but prices were barely steady. Similar fannings sold at easier rates. Whole leaf teas met with slightly better support and prices were occasionally dearer. The quotations are: low medium Re. 1.55 to 1.70; medium Re. 1.80 to 2.25; good medium Rs. 2.35 to 2.80; and quality Rs. 3.00 to 5.05.

London Market: *Sale of 2nd March* 1959.—Best liquoring and teas of good appearance generally dearer. Others steady, except for occasional thin liquoring types, which were easier.

Sale of 3rd March 1959.—Irregular and generally lower, except for improved quality.

Colombo Market: *Sale of 2nd March* 1959.—High and medium market opened weaker, at considerably lower prices, later demand strengthened, prices firmed and closed irregular, following quality.

Sale of 3rd March 1959.—Useful quality fannings and dusts dearer. Other sorts good demand slightly lower, particularly stalky kinds.

Export Quota.—The market has been quiet and business has been done at 1½ nP.

Export Duty.—The Budget announcements included the reduction of the export duty from 26 nP to 24 nP. There are also to be certain adjustments in the zonal excise duty under zone 3. It is understood that, instead of a flat rate of 10 nP for the zone, certain estates will now pay 12 nP, whilst others will only pay 8 nP. No announcement of estates affected has yet been made.

Forthcoming Auctions.—Sale No. 10 will be held on Tuesday, 10th March and Dust Sale 'E' on Thursday, 12th March.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 10.—650,000 lbs. Good, but irregular, demand. Low medium and medium 5 to 10 nP easier. Good medium and best liquoring brokens fully firm, but similar fannings difficult to sell."

JUTE GOODS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 10*th March*

The feature in the jute markets during the week under review was a rise in fibre prices consequent on fair business generally and in mesta varieties particularly. This steadied jute goods, prices of which also recorded an improvement. There were also more foreign inquiries in jute goods and a greater amount of genuine business was done than last week. As decided earlier by the Indian Jute Mills' Association, the mills sealed 1½ per cent. of the looms on the 2nd inst., and this factor was also a cause for the better trend in the goods market.

With the present sealing, the percentage of the sealed looms has now been raised to 14. There is every possibility that a further 1 per cent. will also be sealed. The mills will probably like to study the effect of the present sealing on stocks at the end of this month, and, if stocks continue to rise, that will hasten the day for sealing another 1 per cent. of the looms. The trade has, however, felt that the loss of about 1,300 to 1,500 tons a month in output of sacking goods is insignificant. In January alone, stocks of sacking goods increased by 2,800 tons and at the end of the month sacking at 83,000 tons formed 73 per cent. of total stocks. Hessian stocks were only 14.7 per cent. of the total, and the trade wondered why production of hessian could not be increased for a few months at the cost of heavy goods. The trend of demand in recent months has clearly shown that a more balanced output is essential, and it is since some time that there exists a shortage for hessian in the ready position. At a time when mills and cultivators are facing a crisis, it has been a surprise that the West Bengal Labour Minister, Mr. Abdus Sattar, has stated in the Assembly that the time has come for fixation of minimum wages in the jute industry.

Trade circles have noted with keen enthusiasm the detailed report which has been issued by the recent I.J.M.A.-sponsored mission to Australia, South-East Asia, and New Zealand, all of which consume relatively more sacking goods than hessian, and are India's largest markets for the former. In the light of the mission's report, trade circles are optimistic that exports of sacking goods can be increased, in which event the mills' problems arising from mounting stocks of heavy goods would prove a passing affair only. However, in order to introduce the necessary demand factor in a market, which is groaning under the surplus availability, market circles considered that it would be prudent for mills to curtail production of heavy goods to the extent possible, if not needed. Meanwhile, the latest bulletin of the Indian Central Jute Committee says that, with increasing farm output, Egypt's demand for packing materials is also increasing. At present, that country needs about 35,000 tons of jute goods a year and looks to India for meeting most of the same. Egypt has only one jute factory, producing about 6,000 tons.

On Tuesday last, the market was featureless, as business passing was insignificant. Ready B. twills fell to Rs. 88 85 from Rs. 88.90 and hessian 40" 10 oz. to Rs. 39.10 from Rs. 39.20. However, soon there was a recovery, as raw jute prices improved and demand at lower levels was fair. On Wednesday, therefore, hessian 40" 10 oz. moved up to Rs. 39.50 and B. twills to Rs. 89.75. Conditions on Thursday were fully steady. There was good covering business in ready delivery positions. Some genuine business was also done. Hessian 40" 10 oz. improved to Rs. 39.55 and B. twills to Rs. 90. There was also good demand for forward delivery positions in both heavy goods and hessian, and mills were able to book moderate business. B. twills for April-June were pushed up to Rs. 90.70 from Rs. 89.90, and July-September to Rs. 91.75 from Rs. 91. At Rs. 38.30, July-September hessian 40" 10 oz. put on 20 nP. In the futures market, there was fair activity and B. twills May were better at Rs. 90.40, as were May hessian 40" 10 oz. at Rs. 37.88. Assam Bottoms March also moved up to quote higher at Rs. 20.36, as against Rs. 20.08 in the beginning of the week. The prices rose further today, hessians being quoted at Rs. 39.45 and B. twills at Rs. 91.90. In the ready market, the improvement in hessian was mainly in sympathy with sacking goods, and would have been more marked had it not been for dull reports from New York. In New York, consumers were disinclined to go in for forward goods, in view of the weakness in primary market. It was believed that shippers on behalf of Argentina would soon show interest in hessian. Thanks to foreign exchange shortage, Argentina was reported to be anxious that shippers should find their own foreign exchange to finance shipments. To consider this matter, the representatives of Argentina would meet the local shippers in the course of the month.

Raw jute improved following keener buying interest shown by mills, more especially for inferior mesta varieties. Northern bottoms improved to Rs. 20 from Rs. 19.75. It now transpires that the Government of India did not promise lending money to mills for the purchase of an additional month's requirement of raw jute. The news of such a promise had been contained in the recent I.J.M.A. resolution directing mills to step up purchases from four to five months' needs. Fibre stocks in the market are heavy, and, according to trade circles, it would appear that the mills have not yet even purchased four months' requirements. Unless the mills step up purchases and abandon the present "rationed" support to the market in an attempt to push down prices, chances of the producer getting a fair price can be written off at least as far as this season is concerned. Such a state of affairs will have its repercussions on the size of the 1959-60 crop. The latest quotations for 1958-59 jute March-April delivery are:

COARSE GRAINS DRIFT LOWER

(From Our Own Correspondent)

HAPUR, 9*th March*

A divergent trend was exhibited by the foodgrains market during the week. While wheat and gram registered modest gains, other coarse grain prices drifted lower. Arrivals of new coarse grains is increasing in east U.P. and is now meeting local demand, harvesting of peas has also begun, and new grain arrivals have commenced in some markets. As a further step to check the rising trend of grain prices, the Government of India has banned forward as well as non-transferable specific delivery contracts for the sale or purchase of rice or paddy.

Wheat here improved fractionally during the week, due to paucity of stocks left with trade on account of the fag end of the season which is always a lean period. Harvesting of new crop will start in about a month's time. Sales through fair-price shops are being continued, but the quality offered is reported to be poor. Supply position of wheat is tight. The latest prevailing prices are: *Dara* quality Rs. 22.50; farm Rs. 24 to Rs. 25 and inferior quality at Rs. 21 per maund. Strong westerly winds during most part of the week has adversely affected the standing crops.

Rice continued to rule steady and, on Monday, was quoted at:—*basmati sela* Rs. 33; *mainpuri* Rs. 22.37; *raimunia* Rs. 27; *gadda* Rs. 22.75 per maund.

Gram registered an advance of about Re. 1 per maund, due to firm advices from Calcutta and Madras side. Arrivals of new crop grain have begun in Madhya Pradesh and some other producing areas of the South. Barley and *bejhar* were depressed, due to poor outside demand, as new crop arrivals are increasing in east U.P. Harvesting here will begin after about ten days' time. Maize is still attracting good consumer demand and prices have stayed steady due to dwindling local stocks. *Bajra* eased with the fall in seasonal demand. *Jowar* and *guwar* also drifted lower on quiet advices from the South. Week-end prevailing prices (in rupees per maund) were:—gram *punjabi* 22.25; barley 14.50; *bejhar* 14.62; maize 15 25 to 15.75; *bajra* 13 to 15; *jowar* 13.50 to 14.25; *guwar* white 15.

Harvesting of early sown peas is in full swing in west U.P. now and new peas arrivals have begun in some mofussil areas. *Arhar* stocks left with trade are nominal and prices continue to be steady. *Urd* and *moong* ruled quiet and week-end prices were:—peas new Rs. 14.50 to Rs. 16; peas *dal* Rs. 22; *arhar* Rs. 22; *arhar dal* Rs. 25 to Rs 27; *urd* Rs. 19; *moong* Rs. 21 to Rs. 24; *massor* Rs. 19 per maund. Strong westerly winds during the week adversely affected the standing *rabi* crops, mainly peas and gram.

LINSEED RECOVERS AT CLOSE

(Messrs. A. Bradley and Co.)

CALCUTTA, 9*th March*

After a quiet opening, linseed declined further to Rs. 22.50 for May and to Rs. 24 for March delivery. The tendency was, however, arrested by the middle of the week, with the reappearance of crusher-buyers, and prices began to harden. Forward business was rather restricted, with sellers reserved at lower levels. Activity in the oil market was fairly keen, and the lowest levels were reached last week when April was done at Rs. 52 and May buyers quoted Rs. 50.50. The rates prevailing today are Rs. 53.50 and Rs. 53, respectively.

The latest available quotations are: Ready Rs. 26.00, March Rs. 24.75, April Rs. 23.75 and May Rs. 22.75 per maund.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, 9*th March*

During the week under review, the hides and skins market was confident. New arrivals were not as plentiful as during the earlier week. Demand for upper grade cow and buff was particularly strong. The most important area from which supplies came during the week was North Uttar Pradesh. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow 1st grade Rs. 425, 2nd grade Rs. 395 and 3rd grade Rs. 360 per score; wet salted buff 1st grade 2 lb. 1 oz. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 400 and 2nd grade Rs. 375 per 100 pieces; sheep 1st grade Rs. 360 and 2nd grade Rs. 300 per 100 pieces.

The French Government has decided to declare six selected Departments of Metropolitan France as special development areas to combat local pockets of unemployment. These areas have been hit by the recession in the shipbuilding and textile industries and also by a reduction in local building work. The Government will now give those firms setting up new factories or expanding existing ones in these areas special credit facilities, favourable terms for amortisation and, possibly, fiscal concessions. It is also planned to encourage diversification of industry by State aid for factory conversion. Besides, unemployed workmen will be given training in new trades at factories in the course of conversion.

The West German Government is allowing the public to subscribe to the capital of a wholly State-owned Corporation, the Preussag, engaged in mining, oil boring and petrol retailing. This, it proposes to do, by offering 300,000 people's shares of DM100 each. As a result, the capital of the Corporation will go up from DM 75 million to DM 105 million. It is said that shares will be sold only to the employees of Preussag or of its associated companies or to persons with an annual income of not more than DM 16,000 (DM 87½ are equal to Rs. 100). No person will be permitted to buy more than five shares.

Forty-two employees representing eight establishments of the Metal Box Company of India in Calcutta, Bombay, Madras, Mangalore and Delhi, met the Company's all-India management to sign a renewed three-year agreement covering payment of bonus. The delegates saw the Maithon Dam, Chittaranjan Locomotive Works, Durgapur, and Government projects in West Bengal.

The Government of South Africa has announced that legislation will shortly be submitted to Parliament for the introduction of a new decimal monetary unit to be known as *rand*. It will be a 10*s*. unit divided into 100 cents.

The value of U.S. exports of merchandise in January stood at $1,381 million, 9 per cent. less than in the preceding month and about 8 per cent. below that in January 1958.

Notice

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

REQUIREMENT OF ROLLER BEARINGS WITH AXLEBOXES AND WHEELSETS

THE RAILWAY BOARD, GOVERNMENT OF India (Ministry of Railways), propose to obtain from established and reliable manufacturers 8,800 Nos. of roller bearings complete with axleboxes, and 4,400 Nos. Wheelsets for Bogie Open Wagons type BOX Mark '0'.

2. The relevant tender documents are obtainable from the Research Design and Standardization Organization, Baroda House Annexe, New Delhi, and the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W. 3, on payment of Rs. 2 each. Drawings and specifications will also be available from the two sources mentioned above on additional payment.

3. Quotations should reach the undersigned:

(i) not later than 11 *a.m. on 20th April* 1959 for Roller Bearing Axleboxes;

(ii) not later than 11 *a.m. on 21st April* 1959 for Wheelsets.

G. P. BHALLA,
Director, Railway Stores, Railway Board, State Entry Road, New Delhi-2.

"GROSSING" OF DIVIDENDS

WHY NOT FOLLOW MATTHAI COMMISSION'S METHOD?

By S. Srinivasan, B.A., F.C.A.

ONE is surprised to read reports in the Press that official sources have given an opinion that the position of company shareholders will not be substantially altered by the abolition of the system of "grossing" of dividends. A comparison of the present position and the position that will be obtaining in future will prove that that opinion is not wholly correct.

At present, a company is charged to income-tax at 31.5 per cent. of its income. After paying this, the balance left with a company is 68.5 per cent. (Let us not bring the super-tax question into the picture, as it is not to be considered in the matter of companies *qua* shareholders.) If a company distributes dividend, it can do so, out of the balance of 68.5 per cent. When a shareholder receives dividend, it is net, in the sense that income-tax thereon has been collected by Government from the company itself. In law, a company and a shareholder pay taxes separately on their respective income. A company does not pay income-tax as an agent of its shareholders. Nevertheless, in the larger sense, dividend is a division of the profits of a company to its shareholders. It can be called, in a loose sense, the share of profit of a shareholder from a company. Government, appreciating this point, is refunding the tax collected on dividends to shareholders in their assessments. For a dividend of Rs. 68.5, Government is refunding Rs. 31.5 to a shareholder. That refund works out to 45.99 per cent. of the dividend. To illustrate, if a shareholder receives a dividend of Rs. 100, Government is refunding Rs. 45.99 to him. In all, he gets a yield of Rs. 145.99. He is not grudging to pay tax on Rs. 145.99, because he actually gets that income. If Government collects less than 45.99 per cent. of the dividend as income-tax from a company, then, it is refunding to the shareholders of that company only that amount which it has collected.

If the system of grossing dividends is abolished, then, what will happen is this. Government will not refund anything to shareholders. Whatever dividends the shareholders receive will be taxable as such in their hands. Shareholders will, therefore, suffer a loss of 45.99 per cent. of their dividends.

The Finance Minister's argument for abolishing the grossing system is that the present method involves many complications in actual practice. What he has done is this. The net collection of revenue (that is, after deducting from what is collected from companies the refunds given to shareholders by Government) is worked out on the income of companies as a percentage. It is stated to work out to 20 per cent. So what is proposed is that companies should pay 20 per cent. instead of 31.5 per cent., of their income, as income-tax to Government. Government will not refund any amount to shareholders on dividends, as is being done hitherto. By this measure, Government will not lose or gain anything in revenue. This is a rough and ready method.

The problem to be considered is how the loss of 45.99 per cent. of dividends can be compensated to shareholders. Government might say that, since the rate of income-tax on companies will be reduced, they will save some amount of income-tax and companies can as well utilise that saving for increasing the rate of distribution of dividend to shareholders. In the first place, it is doubtful whether all companies will take it into their heads to increase the rate of distribution of dividend to their shareholders. All along, Government has been following a policy of discouraging companies from declaring higher dividends. Government has been following a fiscal policy directed to that end. Overnight, it wants to change its policy and leave it to companies to increase the rate of distribution of dividends. Will all companies toe the line of Government and change their dividend policy?

Many companies will say, rightly or wrongly, that they need more funds to be ploughed back in the expansion of business and, consequently, may follow a conservative dividend policy as has been done by them hitherto. Just because Government changes its fiscal policy overnight, it is not necessary for all companies nor is it correct for them to do the same thing as Government has done.

Secondly, assuming that companies will change their dividend policies and distribute more dividends, the question still arises as to whether the income-tax savings in their hands will be sufficient to compensate their shareholders, the loss, to the extent of 45.99 per cent. of the dividend hitherto distributed. Consequent to the reduction in income-tax rates, companies will have a tax saving of 11.5 per cent. of their *total income*, taking into account the abolition of wealth tax and excess dividends tax. *As to what percentage this saving will work out on the dividends hitherto distributed, will differ from company to company.* Supposing, a company has been distributing 30 per cent. of its income before taxation as dividend; the saving of 11.5 per cent. of its income will work out to a saving of 38.33 per cent. of the dividend. But this 38.33 per cent. is not sufficient to compensate the shareholder who has lost 45.99 per cent. If the company wants to compensate the shareholder to the fullest extent, then it has to draw an amount equal to 7.66 per cent. of the dividend hitherto distributed, from out of the profits which it would otherwise plough back in its business. The following table gives an idea about the extent to which amounts have to be drawn by companies from their ploughed back profits, in addition to the savings in income-tax, for compensating the loss to their shareholders under the new scheme:

Present dividend as a percentage of profits before taxation	Income-tax savings under the new scheme as a percentage of present dividends	Further amount to be drawn from ploughed back profits, as a percentage of present dividends
45	25.56	20.43
40	28.75	17.24
35	32.86	13.13
30	38.33	7.66
25	46.00	*Nil*
24	47.92	*Nil*
23	50.00	*Nil*
20	57.50	*Nil*

It will be seen from the above table that those companies who have hitherto been distributing 25 per cent., or less, of their profits, before taxation, as dividends, will find it possible to compensate the loss to their shareholders, without touching their ploughed back profits.

The Reserve Bank of India has given in their October 1958 bulletin statistics of about 1,001 public limited companies; it is noticed from it that *on an average* those companies have distributed about 30 per cent. of their income before taxation, as dividends. If the changes proposed in the Finance Bill are not carried out, they would plough back about 14 per cent. of their total income before taxation, in their business. If the changes are given effect to, then, from out of 14 per cent of the ploughed back income, an amount equal to 7.66 per cent. of the dividend hitherto distributed, has to be withdrawn for further distribution to their shareholders in order to compensate the loss to the latter. It is, therefore, clear that the budget proposal will affect either companies or shareholders and there is every reason to believe that, in the long run, it will cripple the corporate system of the private sector. Even the Taxation Enquiry Commission, after mature consideration, had to concede that, if the grossing system is stopped, "it would not only adversely affect the interests of a large number of persons, including many in the low income groups, but may also act as a disincentive to the holding or purchasing of equity investment in general."

In fact, the Taxation Enquiry Commission, equally motivated as the Finance Minister is, by the need for removing the administrative and other difficulties, as also the anomalies in the present system of taxation of dividends, recommended modifications in the system of grossing. It is not understood why the Finance Minister should feel shy of following the said recommendations. Those proposals, if accepted, will not only simplify the present system but will also not cause any injustice either to shareholders or to companies. The Commission recommended as follows:

"When a company declares dividends, it will deduct income-tax at the maximum rate from the gross dividends, distribute the net amount to the shareholders and pay the tax to the credit of Government. Adjustments are then made, in the course of the company's income-tax assessment, so that the total amount which it has to pay out by way of taxes and dividends is the same as under the present law.

"No change will be involved in the method of calculating the corporation tax payable by the company. The income-tax payable will be calculated on its total income as reduced by the gross dividends (on which it has already deducted and paid income-tax)."

In other words, companies must first deposit with Government the required amount of income-tax, on the dividends which they declare. Shareholders will get credit in their assessment at uniform rates without any difficulty. In the assessment of companies, necessary credit will be given for the income-tax which they have already paid.

The Taxation Enquiry Commission has also given examples covering all types of cases where practical difficulties would arise and how it will not be difficult to solve them. If the Finance Minister accepts the Commission's recommendations, instead of going ahead with what he has proposed in the Finance Bill, companies and shareholders would be grateful to him.

Let us hope that our Members of Parliament will persuade the Finance Minister in this matter and ensure that justice is done to shareholders, most of whom belong to the middle class. It may be added here that, by following the method suggested by the Taxation Enquiry Commission, there will be no loss of revenue to the Exchequer, especially as the effective rate of super-tax is proposed to be increased from 20 to 25 per cent., for compensating the loss due to abolition of wealth tax and excess dividends tax on companies.

NO INFLATION IN INDIA!

A SUBJECT which evoked considerable interest in both the Houses of Parliament during the general debate on the Budget for 1959-60 was deficit financing. The majority of Members who spoke on it were critical of the Government's policy, though there were some supporters, a pattern similar to that prevailing outside the House. But what was surprising was the Finance Minister's attempt to minimise the impact of deficit financing on prices and cost of living hitherto and in the near future. In the Rajya Sabha, where Pandit Kunzru strongly criticised the large-scale deficit financing resorted to by Government, Mr. Morarji Desai, while agreeing that "deficit financing should not be such as to lead to inflation," asserted that "there has been no inflation on account of the Government's policies. If food prices had risen," he went on to add, "it had no relation to deficit financing at all but only to less production." When Pandit Kunzru pertinently asked whether the two did not go together, Mr. Desai naively reiterated that the increase in currency in circulation following deficit financing had no relation to the rise in food prices at all. He took an almost identical stand in the Lok Sabha also, where Acharya Kripalani, among others, highlighted the dangers of excessive deficit financing. While admitting that one ought to be careful with deficit financing, he pointed out that deficit financing was bad only when it did not lead to greater production and ushered in inflation, instead. He observed that efforts were being made to see that it did not result in inflation and actually claimed that "resort to this technique has not led to any appreciable inflation in the country. Except in respect of foodgrains, there has been no sign of inflationary trend."

This type of argument about the effects of deficit financing on price levels is something similar to trying to differentiate between tweedledum and tweedledee. Mr. R. R. Morarka, a Congress member and a business man, supported the Finance Minister when he justified the deficit financing on the present scale and observed that the safety limit had not been exceeded. But, even if his own criterion were applied, his contention would fall to the ground. He said that resources raised through deficit financing had been invested in productive resources, *though they did not ensure immediate returns.* The portion in italics constitutes the crucial point. It is difficult to say to what extent deficit financing has led to the creation of productive resources, for, while the industrial and agricultural bases have been strengthened and their production has moved up, there has at the same time been a tremendous increase in unproductive, non-Plan expenditure also. If deficit financing leads to a quick increase in production and the supply of goods rises in consonance with the growth of money in circulation, there will be no harm. But, in actual practice, this does not happen, for there is a considerable time lag, when the increase in money supply causes a lot of damage to price levels and cost of living. And, in this country, the position is made worse by a good part of the created money being utilised for non-development expenditure too. Even in the case of development expenditure incurred by the public sector, the return is not only unduly delayed but also inadequate. The data available on the latter aspect are incomplete and as such it is not even possible to estimate the return on Government's commercial and industrial investments. But, according to Mr. Asoka Mehta, the income derived from public undertakings, in which already Rs. 400 crores had been invested, is only Rs. 1.25 crore, equivalent to a return of As. 4 per cent. per annum. Lest some should wonder as to what connection there is between deficit financing and inflation, on the one hand, and return on the investments of the public sector, on the other, it must be added that the result of savings invested in undertakings which yield little or nothing is as inflationary as those diverted to consumption expenditure.

It is common knowledge that deficit financing leads to unpleasant results when the supply of goods fails to keep pace with the demand. The argument that deficit financing cannot be blamed, if production fails to rise is, therefore, meaningless. It only amounts to explaining away the difficulty. Mr. Desai was at great pains to show to both the Houses of Parliament that, if only foodgrain production had not fallen as sharply as it did in 1957-58, prices would not have gone up. But was not the shortfall made good, to a considerable extent, by imports? Food imports in 1957 were as large as 3.58 million tons costing Rs. 162.2 crores, as against 1.42 million tons (Rs. 56.3 crores) in 1956 and only 700,000 tons in 1955. In 1958, these imports were 3.17 million tons, costing about Rs. 120.5 crores. If the total of food production and imports in the last two years is taken and averaged, it will be seen that the supply was nearly 69 million tons per year. Again, what was the position in 1956-57, when production of foodgrains was higher by 3 million tons at 68.75 million tons as compared with 1955-56 and was the same as that in 1953-54? The index number of food prices (1952-53=100) went up from 82.1 in 1954-55 (which reflected the effects of increased production in the crop year 1953-54) to 94.6 in 1955-56 and still further to 101.7 in 1956-57. This was, of course, due mainly to deficit financing amounting to Rs. 238 crores in 1956-57 and Rs. 464 crores in 1957-58, or a total of Rs. 702 crores in both the years. The Finance Minister may contend that he did take into account the heavy drop in food production during 1957-58 in resorting to deficit financing in 1958-59, for which year it is now estimated at Rs. 255 crores. This, too, is a misleading argument. In the first place, the deficit financing in 1958-59 has exceeded the limit intended by him by Rs. 40 crores. And, secondly, the argument ignores the fact that, for all practical purposes, borrowings from commercial banks are not materially different from borrowings from the central banking institution through the issue of Treasury Bills. It may be noted here that the loans raised from the market during 1958-59 by both the Centre and the States amounted to Rs. 227 crores, as against only Rs. 71 crores in 1957-58, and that the major portion of them was taken up by commercial banks. If this factor is taken into account, it will be seen that the real deficit financing was over Rs. 400 crores, not very far from that resorted to in 1957-58.

The fact that, over the past year (1958), the prices of manufactured goods have remained practically unchanged and that those of industrial raw materials have actually declined has been quoted by Mr. Morarji Desai to support his contention that deficit financing has not led to inflation. This argument, too, belongs to the variety of splitting hairs, for the fact remains that, ever since the commencement of the second Plan, price levels have gone up by 15 per cent. and cost of living by 21 per cent. The net effect of these increases on the common man's purse is by no means so negligible as to warrant the cavalier fashion in which the Finance Minister dismissed the criticisms against deficit financing. The economic hardship which the vast majority of people are suffering at the end of the third year of the Plan is severer than at its commencement and is not fully reflected in the indices of prices and cost of living. None can deny that, as compared with March 1956, the rupee today buys much less of almost everything that one needs—food, clothing, housing, books, education and travel. If the prices of manufactured goods have been static, despite the increase in money supply, it does not necessarily mean that there is no inflation in the country. Really speaking, it is a phenomenon of impoverishment of the masses and the middle class both of whom have been hard hit by heavy taxation on top of high food prices. The Finance Minister's contention that there is no inflation in India is, therefore, fallacious. This will be evident further from the fact that India's exports are not sufficiently competitive and that, of late, several of its manufactures and raw materials have had to be given special props, in order to enable them to find export markets.

It is against this background that one has to view the proposal to incur an overall deficit of Rs. 222 crores in 1959-60, the coming fiscal year. The prospect of prices coming down in the face of this additional dose of deficit financing is by no means promising. Much store is laid by the encouraging performance on the food front, where production is estimated to have gone up to 70 million tons in the 1958-59 crop year. But actual developments may belie this hope. For one thing, imports are expected to be at a lower level. For another, the plan for building up a buffer stock of 3 million tons out of the current year's production is being implemented, thereby reducing the marketable surplus. Thirdly, the threat of State trading has led to hoarding at the lower levels of trade as well as by growers. And, fourthly, there are more mouths to be fed this year than in the past year. Prices of commercial crops also have staged a sharp rise. They are already well above those a year ago and look like going up further. And, above all, the import surplus in the coming year will not be as large as in the first three years of the Plan, nor will its composition be such as to have a restraining effect on the domestic prices of those goods that go to determine the cost of living. It is undoubtedly true that India's friends in the Western world have agreed to provide additional foreign exchange of the order of Rs. 170 crores, but these funds are to be used for financing imports of plant and machinery, technical skill, durable goods and certain amount of essential raw materials. The remaining months of the current calendar year, if not the whole of the 1959-60 fiscal year, are, therefore, going to be pretty difficult for the people of this country. It must not be forgotten that the total expenditure on the Plan in 1959-60 is scheduled to be Rs. 1,121 crores, as against Rs. 981 crores in 1958-59 and Rs. 846 crores in 1957-58; and that, of this, a larger proportion than in the past two years will be within this country. The inflationary potential of such a large expenditure is obvious. And yet the monetary authorities are pursuing a policy of gradually bringing down interest rates.

STATE TRADING IN FOODGRAINS

THE stage is being set for the inauguration of State trading in foodgrains. The Union Deputy Minister for Food, Mr. A. M. Thomas, revealed in the Lok Sabha last week that final touches were being given to the scheme, which, after its approval by the Cabinet, would be placed before Parliament. Since there is no question of its being turned down by the present Parliament, it is a foregone conclusion that State trading in foodgrains will soon be an accomplished fact. Informed public opinion and the interests concerned have no doubt protested against the incursion of the State into foodgrains trade and the displacement of private business men and their time-honoured association with foodgrains trade. But the Government is determined to implement its scheme. In course of time, one may expect to see the gradual return of all the vexatious war-time food regulations, including foodgrains price control, and possibly rationing too. That so momentous a change should be brought about without an expert probe preceding it is regrettable. But it is not surprising, considering that State trading is the chief article of the Government's political and economic faith.

The Government has not disclosed the details of its State trading scheme for foodgrains. Pressed for information, the Union Deputy Minister for Food counselled patience. Beyond admitting that the scheme would be worked on a "no-loss-no-profit" principle, he did not throw any light on the scheme. However, early this month, Mr. K. C. George, Kerala's Minister for Food, disclosed that the essential features of the Central Government's scheme for State trading in foodgrains were socialisation of the wholesale trade in foodgrains which would be ultimately taken over by the State through elimination of private dealers, entrusting of the trade to marketing co-operatives which would be linked with village co-operative societies and the fixation, at the wholesale stage, of a ceiling price for foodgrains. He further stated that it had been suggested that, since the total elimination of private dealers from the field was not possible immediately, the change-over should be effected gradually and that, during the period of transition, the private dealers should be licensed by the State Governments which should retain for themselves the powers to requisition a portion of stocks held by licensed dealers in cases of emergency; the licensed dealers would be asked to submit to the Government periodical stock returns and accounts, which would be checked and verified by the authorities.

It should thus be clear that, irrespective of the form which the Government's foodgrain trading scheme may take in the immediate future, the ultimate aim is socialisation of this trade. No convincing argument has been put forward for this major innovation. It is true that the prices of foodgrains have risen steeply in recent months. But this is scarcely to be wondered at in a country where population is increasing at a rate faster than food production. The rise in prices can be easily explained in the context of the rising demand for foodgrains which has outstripped supplies and inflationary forces released by the Plan. In these circumstances, as Mr. M. R. Masani pointed out, in the course of his address at the first conference of the All-India Foodgrain Dealers at Delhi, "to put the blame for the rise in prices on the distributive trade is to shut one's eyes to the operation of the laws of economics and to look for a 'scapegoat'." Mr. Masani rightly said that, if the State wanted to come in as just another dealer in foodgrains, along with other private dealers, it was perfectly entitled to do so. He added: "If the State feels that it can give better service at more economical rates to the consumer, then it is up to the State to set an example. But, like any other, the State must be prepared to subject itself to the competition of others in the field." But this certainly is not the aim of the Government's State trading scheme. It will have the monopoly of trading in foodgrains, though, in the immediate future, it may possibly take the assistance of wholesale dealers. In the long run, this policy is bound to throw out of employment dealers in foodgrains whose place will be taken by Government nominees or Government servants. It is not clear what great cause is being served by the Government's foodgrains policy. Mere tinkering with the distributive channel will not solve the problem which is one of scarcity. It will only lead to a vicious circle of controls, higher prices, black marketing, larger imports, and more and more harassment to the consumer.

Apparently, the Government feels that it can serve the consumer better than the private trade can. As Mr. Masani pointed out, "the consumer today is able to buy from the dealer, who will give him foodgrains of satisfactory quality at the cheapest price." Hereafter, he will have to buy his requirements from the State which, in the context of freedom from competition, can dictate its prices to him. Further, the average consumer now enjoys some credit with the dealers. This facility is likely to disappear, when the State emerges as the chief dealer. Again, since the State cannot be expected to master the intricate art of maintaining the quality of cereals, it is unlikely that it will be able to offer adequate value for the money the consumer pays.

What about the producer? He will be entirely at the mercy of the State. Surely, his interests cannot be served better by a monopolistic buyer than by a whole group of merchants, competing among themselves, for buying his produce. Already, the forward markets in several foodgrains have been suspended. With the inauguration of State trading, even ready markets are not likely to function properly, so that it will be anybody's guess as to what is the correct price that the producer should get. The disruption of market mechanism, which State trading implies, will lead to discontentment among producers, especially as between producers in one State and another. Visualising the position of the producer under State dispensation, Mr. Masani said that, if the price appeared to him too low and uneconomic, he could either submit and sell his crop or refuse to do so. In the latter event, the Government could force the peasants to sell their produce to it. Such a situation is not calculated to lead to increased food production.

The Government will do well to bear in mind certain fundamental considerations, before it finalises the scheme which will condemn the producer and consumer of foodgrains to slavery to the State. In the first place, even countries, which are predominantly dependent on imported food, have not resorted to State trading in foodgrains. The Government is taking upon itself too heavy a responsibility. Secondly, the Government's administrative apparatus, particularly the apparatus of agricultural administration, is creaky, moribund and antiquated. This defect is a serious obstacle to the Government in reaching its goal of complete State trading. Thirdly, in a poor country like India, where food absorbs the major portion of a man's income, any administrative deficiency or miscalculation which distorts either prices or supply will lead to considerable bitterness and discontentment. Fourthly, it is bound to deflect administrative talent and energy from application of methods to increasing foodgrain production to the preservation of the State trading machine in a state of good repair. Finally, the disruption of price mechanism will pave the way for the emergence of centrifugal regional loyalties, each region claiming favourable treatment in the matter of fixation of prices. In other words, fissiparous tendencies in the country will get a new fillip. Is State trading in foodgrains really worth all these risks?

DURGAPUR COKE OVEN PROJECT

THE inauguration of the coke oven project at Durgapur, which took place last week-end, adds another chapter to India's industrial history. The coke oven plant, which is a part of the West Bengal Government's wider project of utilising the resources of the Durgapur region, is a notable addition to that new town's industrial enterprises, now at various stages of planning and execution. Some of these are: the State-owned steel works, the Russian mining machinery and ophthalmic glass plants and boiler, electrical and cement machinery plants of Babcock and Wilcox. Vickers and the Associated Cement Company. The coke oven plant is not so much an isolated project as a preliminary phase of what may eventually turn out to be a whole new series of manufacturing enterprises of great value and significance to India's industrial economy.

Coal, of which West Bengal and Bihar have large deposits, is the source of immense industrial wealth. Besides being a valuable fuel, coal, when it is subject to "destructive" distillation, is the basis of chemical industries, capable of producing a wide range of products like dyestuffs, ammonia, plastics, explosives, fertilisers and drugs. No wonder, coal is often regarded as the foundation of modern industrial civilisation. The West Bengal Government must be congratulated on its having carried through the preliminary phase of the utilisation of coal and thereby paved the way for the birth of a large number of new industries. Realising the potentialities of the Durgapur area, the West Bengal Government set up in 1955 the Durgapur Industrial Board, which is charged with the responsibility for the development and administration of industries to be established in that region. The industrial schemes, now envisaged, include two batteries of coke ovens and a by-products plant for the manufacture of 900 to 1,000 tons of hard coke per day through the carbonisation of 1,300 to 1,400 tons of dry coal, recovery of by-products such as ammonia, coal tar, sulphur, crude benzol and its rectified products like benzene and toluene, a coal-tar distillation plant with a throughput capacity of 50-100 tons of coal tar per day, a 60,000 kw. thermal power station and a gas grid system in the Durgapur-Asansol-Calcutta industrial areas for the supply of gas for domestic as well as industrial purposes. It is said that, at Durgapur, emphasis has been laid on the quality of products and utilisation of by-products.

There are a few features which give the Durgapur coke oven enterprise a distinctive character. In the first place, it will not use all coking coal for making hard coke. Since the reserves of such coal are limited and the demand for it from the metallurgical industry is growing, the plant has been so designed as to use blended coal in which the proportion of coking coal will be no more than 20 per cent. In deciding upon the manufacturing process, the authorities have pressed into service the research work at the Fuel Research Institute, where it has been demonstrated how good quality hard coke can be produced from blends of certain types of coal, none of which can individually give good hard coke. Secondly, the plant will recover sulphur from coal. This process, according to Mr. A. B. Ganguli, Administrator, Durgapur project, is being attempted for the first time in this country. India, as is well known, is deficient in sulphur, so that the manufacture of sulphuric acid is based on imported sulphur. The Durgapur project is so designed as to recover sulphur from coal, which, in its turn, will be used for the manufacture of sulphuric acid. Thirdly, in the Durgapur plant, a worthy aim is optimum recovery of benzol and ammonia. Although all coke oven plants do recover benzol and ammonia, there is considerable wastage in recovery, thanks to the country's hot climate. In Durgapur, a refrigeration unit has been installed which facilitates optimum recovery of these by-products.

The industrial importance of the Durgapur coke oven plant will become clear, when it is realised that the three principal products—hard coke, volatile gases and coal-tar products—are themselves the raw materials for a large number of chemical industries. The demand for hard coke is growing in India, for it finds extensive use in foundries and manufacture of chemicals like calcium carbide and soda ash. The gas which comes off the coke ovens will first be purified and then used for industrial and domestic purposes. About half the quantity of the gas, it is stated, will be required for heating the coke ovens themselves, while the other half wil be available for other uses. In the first instance, it will be used in the proposed 60,000 kw. thermal power plant. Later, it will be available for use in the manufacture of chemicals and fertilisers. In the immediate future, it will be diverted to Calcutta where the supply of domestic gas is insufficient to meet the city's growing needs. As for coal-tar products, it has been decided to establish a 100-ton tar distillation factory, of which about 50 tons will be obtained from Durgapur and the balance from Sindri. Among these products, benzene is the basis for synthetic chemicals and germicides, gamaxane toluene and phenol for drugs and explosives, anthracene for dyestuffs, tar acids for plastics, creosote for wash oil, anthracene for carbon black. It will thus be clear that the Durgapur region has all the potential for being developed into a counterpart of the German Ruhr, justly famous for its wide range of highly technical coal-based industries.

ERRATUM

In our leading article of 7th March, 1959, entitled "Budget with one redeeming feature," it was stated in the last sentence of para three thus:

"Unfortunately, the Government has found it less easy to levy taxes after taxes than to keep down the non-Plan expenditure."

The word "less" in the aforesaid sentence had crept in inadvertently. The correct word there should be "more." The sentence should read as follows:

"Unfortunately, the Government has found it more easy to levy taxes after taxes than to keep down the non-Plan expenditure."

MEANING OF NEW COMPANY TAX SYSTEM

KILLICK INDUSTRIES—WHEAT AGREEMENT

THURSDAY, 5 P.M.

ALTHOUGH further thought bestowed on the proposed new scheme of company taxation shows that it will be distinctly disadvantageous to the shareholders of most companies, the share markets have continued to rule firm, with equities registering sizable fresh gains. Almost all the leading counters have kept up the advance, with the comparatively new ones, such as Indian Oxygen, Dunlop Rubber, Philips India and Guest Keen Williams, in the forefront. During the last two or three days, there has been some profit-taking by speculators, but it has been quickly absorbed. As is always the case, in a rising market, the desire to sell and book profit is at a low ebb, for only the most seasoned and courageous investors cash their profit or cut their loss at the appropriate time.

MARKET GOSSIP

If the new scheme of company taxation is not favourable to investors, why are equities moving up? This question was briefly answered in these columns a fortnight ago. An additional point to be made is that, other things remaining the same, the yields on equities will be deflated all round and there is not much choice for investors to switch from equities to other portfolios. With interest rates going down, the yields on Government securities also are seeking lower levels. Further, all fixed-yielding investments offer no protection against the falling value of the rupee. Again, there are hopes that the Finance Minister will make suitable modifications in the new system wherever it acts harshly.

* * * *

Analysing the implications of the new tax system to investors at some length, Messrs. Place, Siddons and Gough, Calcutta, come to the conclusion, in the latest issue of their fortnightly publication, *Share Market Report*, that "it seems a fair inference that, in the majority of cases, even if companies transferred to shareholders the whole of the tax savings through abolition of wealth tax and excess dividends tax and the reduced rate of taxation of profits, they would not be able, at least out of current taxable profits, to compensate shareholders for the loss through withdrawal of grossing." Explaining one of the disadvantages of the new scheme to companies and shareholders alike, they say:

"Even where a company is in a position to compensate shareholders fully, the rise in the rate of dividend may create a false impression of high profitability and such an illusion may set off fresh demands from labour or from raw material growers (in the case of sugarcane, for instance). Current notions of high and low dividends are largely conventional and make no distinction between dividends gross and net of taxation. It would be difficult to convince labour leaders and cultivators that, under the new system of company taxation, nominal dividend rates must rise about 46 per cent., if shareholders are not to suffer a loss of income. If bonus awards are linked with dividend rates, it will have to be specifically declared that the rates referred to are net of tax, not gross. In the prevailing socialist economic climate, where dividend incomes are looked upon with suspicion as 'unearned,' any rise in dividend rates, even if they leave shareholders on balance worse off, will be certain to provoke an outcry and raise demands for a curb on profits. If popular thinking comes to regard, say, 6 per cent. as a fair return on capital, a convention will grow up and it will be hard to convince public opinion that 6 per cent. under the old system is the same as about 9 per cent. now."

The advice of Place, Siddons and Gough is that "investors will henceforth have to be far more discriminating than in the past in choosing which shares to buy. The extent to which the abolition of grossing will affect shareholders will vary from company to company, but, by and large, it would be correct to say that the smaller companies, particularly if they did not have to pay wealth tax and excess dividends tax, would be the worst affected. In such cases, the saving through reduction of tax on profits from 51.5 per cent. to 45 per cent. would not, in most cases, be enough to compensate shareholders the loss of 46 per cent. of their income due to the withdrawal of grossing. It is likely that the companies most able to do this will be the very biggest ones, whose tax saving through removal of wealth tax and excess dividends tax would be the greatest."

Under the new scheme, companies with a large block of tax-free preference shares will surely be adversely affected. Elucidating this point, this leading firm of Calcutta share brokers observes thus:

"Ordinary shareholders in companies having preference shares carrying a right to a fixed amount or a fixed rate of dividend free of income-tax will be at a special disadvantage. Under the new system, the fixed rate will be grossed up to such a figure that, after a 30 per cent. tax had been deducted from this grossed up figure, what was left would enable the preference shareholder to be paid his fixed rate of dividend. In other words, the shareholder would get his fixed preference dividend net of tax and the company will pay on his behalf the tax due at the rate of 30 per cent. on the grossed up dividend. For example, a 6 per cent. preference dividend will be grossed to Rs. 8.57 and the company will pay Rs. 2.57 to the Government as tax on behalf of the preference shareholder and pay him the preference dividend of Rs. 6. The shareholder will be regarded, for income purposes, as having received Rs. 8.57 and he will get a tax credit of Rs. 2.57, to set off against his tax liability. This means that, in the case of tax-free preference dividends, a larger amount will have to be declared to place the shareholder in the same position as before. Companies with a large block of tax-free preference shares, will thus have to set aside a larger sum to make payment of the dividend on these shares."

While agreeing that it is difficult to generalise about the overall effect of the new system of corporate taxation, Place, Siddons and Gough observe: "It looks as if most companies, and consequently their shareholders, will be adversely affected, in that, if the provisional 45 per cent. rate of non-refundable tax is confirmed, they will not be in a position to make up to shareholders the loss incurred through withdrawal of grossing."

The final conclusion of Place, Siddons and Gough is, however, on a note of optimism. Thus, they say:

"With all its defects, most investors would probably prefer the new system of company taxation to the old. The removal of the wealth tax on companies and the excess dividends tax is a major concession to investors, the effect of which will not be entirely nullified, even if the overall incidence of corporate taxation is not reduced thereby. It is good that the company's liability to tax is to depend only on its profits, instead of partly on profits, partly on net assets and partly on dividend rates. The burden of the wealth tax and excess dividends tax is particularly heavy on growing companies and their removal will increase the capacity of equities to serve as a hedge against inflation. Though the rate of industrial expansion has slackened off, the economy is developing, deficit financing will pump new money into stock exchange investment, interest rates are tending to decline, and the L.I.C. may be relied on to see that share prices do not fall unduly. The uncertainties about the full implications of the proposed changes in company taxation should not obscure the fact that the long-term investment outlook is still quite reasonably attractive."

These views, it may be noted, concur with those expressed by us a fortnight back.

* * * *

As the rift in the Board of Directors of Killick Industries Ltd. had been repaired through a compromise brought about by Mr. Dharamsey M. Khatau a few days before the annual meeting of shareholders, the meeting which was held on Monday went off smoothly, though there were some heated exchanges between the spokesmen of the contending groups and shoutings of inconsequential nature. A few shareholders tried to rake up the controversial issue pertaining to the boiler orders of the Ahmedabad Electricity Company, but Mr. Chunilal V. Mehta, who presided over the meeting, requested them to drop the subject. Mr. E. D. Sheppard, Managing Director and Chairman of the Company, was not present at the meeting.

Several shareholders wanted to know the terms of compromise, but Mr. Mehta would not give the full information, though he did say that Mr. Sheppard and Mr. Milne were definitely leaving the Company when their present contract expires in the last week of June this year. So the question as to who will take their place remained unanswered.

Mr. Mehta did not also oblige the shareholders who wanted to know the result of proxies collected by the two contending groups. Finally, a shareholder decided to exercise his right to inspect the proxy register and the Chairman did not object to it. After examining it, the shareholder commented that the proxy register had not been properly written up on this occasion, in that the totals had been entered in pencil and not in ink and that the Chairman had not attested them by putting his initials. He also announced the results of the proxies. He said that 59,719 proxies were in favour of Mr. Sheppard and 41,195 in favour of Mr. Purshotamdas Thakurdas. Thus, Mr. Sheppard had won an overwhelming majority and the news was received with great acclamation.

Why did Mr. Sheppard choose to retire from the Company, despite such a large majority of shareholders' exercising their vote in his favour? Our enquiries go to show that he finally decided not to prolong the controversy and wished to allow the business of this 100-year-old company to be carried on in peace.

The meeting adopted two resolutions entered in the agenda as "special business" at the instance of the group of shareholders who chose to collect proxies against Mr. Purshotamdas Thakurdas, Mr. Chunilal V. Mehta and Jaisinh Vithaldas. One resolution pertained to the election of Mr. M. N. Cama as a director, subject to the approval of the Government. The other resolution was as follows:

"That this meeting views with deep regret the hasty and derogatory remarks made against Messrs. E. D. Sheppard and K. G. Milne, the Managing Directors of this Company, by some shareholders of the Ahmedabad Electricity Co., Ltd., at its last annual general meeting and declares its full confidence in the said two gentlemen."

The aforesaid resolution was adopted with an amendment which sought to convey the shareholders' best wishes to Mr. Sheppard and Mr. Milne in view of their impending retirement.

According to our information, the terms of the compromise provide for the appointment of Mr. A. N. Haksar, a senior Indian official of Killick Industries Ltd., as the Chairman and Managing Director when Mr. Sheppard retires from the Company. Mr. P. D. C. R. Clark is expected to take the place of Mr. K. G. Milne as the Managing Director.

* * * *

A brief reference was made in these columns last week to the new International Wheat Agreement, to be effective from 1st August next. Since then, more information on this new pact has become available. It shows that Britain has definitely agreed to be a party to it. To rope in this major wheat importing country, which has stayed away from the Agreement for the past six years, some substantial modifications had to be made in the Agreement now in force and due to expire on 31st July. Two of the most notable changes effected are: (1) The obligation on the part of importing members to buy fixed quantities of wheat has been scrapped and, in its place, it has been laid down that the importing countries should buy from exporting members, as long as the market price is within the specified range, a given percentage of their commercial imports. (2) The Wheat Council will review the world wheat situation, production and pricing policies and the question of disposal of surpluses.

These two major modifications would appear to have been made to meet the British viewpoint. Britain had refused to join the Agreement now in force on the ground that it did not cover the question of surpluses at all, while the obligations under it to buy fixed quantities of wheat at $1.50 per bushel, if called upon to do so, could, it was contended, involve imposing restrictions on the free flow of trade. It is true that, under the new Agreement, Britain has agreed to purchase 80 per cent. of its total imports from exporting member-countries. But, considering that, at present, Britain buys as much as 97 per cent. of its supplies from these very countries, this commitment is not considered burdensome. Nor is the undertaking to purchase wheat at prices ranging between the new floor and ceilings of $1.50 and $1.90 regarded as onerous. Since the international wheat situation is characterised by enormous surplus, albeit in the hands of financially strong producers, it is unlikely that prices will move out of this range. Thus, while the obligations of membership in the pact do not involve any additional burdens, the goodwill which Britain can earn by joining it is considerable.

The Agreement will be in force for three years and will expire on 31st July 1962. Its objectives have been broadened considerably to include (1) promotion of expanded trade, (2) securing of the freest possible flow of trade in the interest of all member-countries, (3) overcoming the effects of burdensome surpluses and critical shortage, (4) encouragement of the use and consumption of wheat, and (5) the furtherance of international co-operation generally concerning wheat problems. The previous concept of individual guaranteed quantities, as noted above, has been abandoned. The procedure of "put" and "call" has also been rejected. Instead, obligations have been made on a global basis with a view to enabling trade to flow more freely.

Under the proposed Agreement, members retain full liberty to determine their internal production and pricing policies. But, for disposing of surpluses, it has been laid down that member-countries should comply with three principles: (a) wherever possible, surpluses should be disposed of by efforts to increase consumption; (b) disposals should be made in an orderly manner; and (c) concessional sales should not harm normal patterns of production and international commercial trade.

A feature of the Agreement, which is of particular interest to countries like India, is that the obligations of exporting and importing countries will relate only to transactions conducted on a commercial scale. Transactions, which, as a result of Government intervention, include features which do not conform with usual commercial practice, will be excluded. These "special transactions," as they are called, are defined as those which, though possibly falling within the price range of the Agreement, include features generally introduced by the Governments of the countries concerned relating, for example, to the period of credit, rate of interest or convertibility of the currency of payment. Such transactions should, however, be reported and recorded with the Wheat Council, so as to enable it to watch the entire international movement of wheat.

The new Agreement, which marks a departure from the existing system and is more in line with the actual market conditions, is said to be an improvement on its predecessor in the following respects: (1) The Wheat Council has been given wider functions; (2) the mechanism has been simplified; (3) there is greater room for flexibility in prices; (4) there is provision for annual review of the world situation; (5) the Council could undertake studies on ways of promoting consumption of wheat; and (6) a new and more realistic price range has been fixed.

By its very nature, however, the Agreement has certain limitations. As the *Financial Times*, London, puts it: "It has little to do with the real factors which govern the wheat market. The wheat price depends more than anything else upon the actions of the U.S. Government and the support prices paid to the American farmer. If American policy were to change, of which there is absolutely no sign, then nothing this Agreement could do would prevent such a change being expressed in the price of wheat. Indeed, it is not clear what the Council would do, if the minimum prices were broken. Under the Agreement, it would have to consider the matter and take what measures it could devise. In fact, it could only effect minor market movements; this is a price stabilisation agreement which can only work if there is price stability." Obviously, an agreement, which gives member-countries complete freedom for domestic production and pricing policies, cannot do anything more when the price of wheat depends so much on the actions of one country.

FIRMNESS OF EQUITIES PERSISTS

ENGINEERINGS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, 19*th March*

THE firm trend of the share market witnessed in the previous fortnight continued unabated during the week under review and further additions to values were recorded. Investment support was quite sustained, while offerings, especially of popular counters, were poor. The operators generally would appear to be optimistic about the outlook for industries in the light of the abolition of wealth tax and excess dividends tax on companies, the Finance Minister's assurance regarding removal of double taxation anomalies, and the latest move of the Centre to relax the licensing system for imports of raw materials and components. The sentiment of the market was also influenced favourably by expectations of enlarged money flow into share investment in the next two or three years, following the large-scale deficit financing contemplated. On the last of the previous accounting period, that is, Friday, several scrips recorded handsome gains on persistent buying. The new account period commenced on Monday on a buoyant note and the upward trend in values continued. In the subsequent two sessions also, the share market displayed a firm undertone. Today, however, there was a technical setback owing to profit-taking at bulges. Nevertheless, the closing rates of most counters were higher than those at the end of last week.

A special feature of trading during the week was the good absorption of engineering company shares. This was due to anticipations of a notable improvement in output in the current year as a result of the advance allotment of import licences for the ensuing six months. Many industries were expected to be benefited from the concession.

Under the impetus of good buying orders, Tata Ordinaries moved up from Rs. 180.75 to touch a high of Rs. 184.25 yesterday. At this level, profit-taking set in and the shares receded to Rs. 183.25 before finishing today at Rs. 183. The net gain over the week was Rs. 2.25. New shares registered a rise of Rs. 2 over the week, today's rate being Rs. 180.25. Indian Irons opened at Rs. 23.40 as against Rs. 23.52, and, after rallying to Rs. 24.16, closed at Rs. 23.96. The net increase was 44 nP.

Buying enquiries in textiles, though selective, were quite pronounced. Centurys provided the brightest spot, climbing up from Rs. 461 to Rs. 474.50, after being higher at Rs. 477.50 yesterday. Kohinoors spurted by Rs. 7 to Rs. 260. Finlays advanced by Rs. 4 to Rs. 271 and Shree Niwas by Rs. 2 to Rs. 148. Standards gathered Re. 1.50 to Rs. 444. The Directors of this Company have declared a dividend of Rs. 20 per share, including a bonus of Rs. 2, on increased capital. Khataus gained Re. 1.25 to Rs. 167.50. Bombay Dyeings were quiet at Rs. 58.70, reflecting the disappointment of operators over the maintenance of dividend for 1958 at the previous year's level of Rs. 2.50, by recommending the final dividend of Re. 1.75. Models encountered persistent selling pressure following notice of closure and fell by Rs. 11.25 to Rs. 130. New Greats declined by Rs. 3 to Rs. 207, Morarjees by Rs. 2 to Rs. 228 and Central Indias by Re. 1 to Rs. 88.

In the sugar group, Phaltans evoked support and advanced by Rs. 2.50 to Rs. 157. Walchandnagars were firm at Rs. 291.25. Belapurs, however, gave way from Rs. 292 to Rs. 290.50. Bhopals shed 10 nP to Rs. 26.

Among cement shares, Digvijays were well fancied, hardening by Rs. 3.50 to Rs. 143. Jaipur Udyogs put on 24 nP to Rs. 11.84. Orissa Cements rose by 16 nP to Rs. 14.04. A.C.Cs on the other hand, lacked adequate support and eased by Re. 1.75 to Rs. 144.75, after being higher at Rs. 147.50 on Monday.

Engineering shares, as already stated, met with enlarged buying enquiries. Premier Constructions and Structurals were specially favoured, the former climbing up by Rs. 16.25 to Rs. 267.75 and the latter by Rs. 20 to Rs. 250. Larsen and Toubros strengthened by Rs. 11.50 to Rs. 276.25. Cooper Engineerings hardened by Rs. 7.75 to Rs. 141.75. Voltas spurted by Rs. 5.25 to Rs. 157.25, following the statement of the Chairman that the Company had plans to expand its activities to a great extent. Alcock Ashdowns picked up Rs. 3 to Rs. 278. Tata Locomotives were done Rs. 2.75 higher at Rs. 185.25.

Mining shares were also well favoured. Shivrajpurs were marked up from Rs. 99.50 to Rs. 102. Indian Coppers gathered 4 nP to Rs. 3.93. Among automobiles, Premier Automobiles encountered excellent support and jumped up by Rs. 9 to Rs. 113. Hindustan Motors improved by 80 nP to Rs. 8.84.

Business put through in miscellaneous industrials was quite large. Bombay Burmahs opened the week firm at Rs. 492 and forged ahead to touch Rs. 514 at one time yesterday. Commencing lower at Rs. 509 today, they declined to Rs. 506 but recovered to Rs. 505.50 towards the close. The net rise over the week was Rs. 17.50. National Rayons rallied from Rs. 264.75 to Rs. 280 before finishing at Rs. 276.25. Investment Corporations spurted by Rs. 11 to Rs. 111. Hindustan Levers registered a rise of Re. 1.50 to Rs. 31. Hind Cycles strengthened by Rs. 3.50 to Rs. 108. Gwalior Rayons put on 32 nP to Rs. 15. Killick Industries, however, dropped Rs. 3 to Rs. 147. Wimcos lost 50 nP to Rs. 193.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 17*th March*

Led by jutes, equities on the Calcutta Stock Exchange registered handsome gains during the week under review. Jute shares received strength from the distinct firmness of jute goods following lower output figures for February. A fair volume of business was put through in these shares at markedly higher prices. Coals met with good buying support on hopes of an upward revision in prices in the light of the recommendations made by the Coal Prices Revision Committee. Tea shares were also well supported, thanks to encouraging news from the recent tea auctions. Engineering, mining and other miscellaneous industrials reacted bullishly to expectations of better working results of companies. The expectations were based on the latest decisions of the Union Government, announced this week, to liberalise the procedure governing issue of licences for importing raw materials and components. The new procedure, which will be applicable to 45 scheduled industries borne on the books of the Development Wing with effect from 1st April next, it is felt, would ensure continuity of raw materials supplies to industries, thereby enabling them to plan their production better and to purchase some of their requirements for the succeeding half-year.

U.S. DEVELOPMENT LOAN FUND

In less than two years since it was established on 30th June 1957, the U.S. Development Loan Fund has made or approved no less than 71 loans aggregating $631,756,000 to public and private borrowers in 33 countries. There is a notion in certain circles in this country that the D.L.F. was brought into existence by President Eisenhower mainly to help India, as the U.S. Congress was extremely critical of any specific legislation for giving large-scale economic aid to this country, because of its policy of non-alignment. This seems to be true, but only in part. The fact that India is the single largest recipient of loans from the Fund so far supports that belief. Out of the total loans mentioned above, India's share is $175 million, the number of loans being seven. But it must be noted that Pakistan, which is only a third in size as compared with India and has been receiving enormous military and economic assistance in other ways too, as, for instance, under the Mutual Security Act, holds the second place among the countries which have been given loans by the D.L.F., with seven loans for an aggregate sum of $70.20 million. Another neighbour of India to get a loan is Ceylon: it has had three loans for $3.25 million in all. Again, $28.84 million in seven loans has been sanctioned to five countries in Africa and nine loans covering $112.20 million have been given to five "near Eastern countries," including one to Greece. Most of the other loans have been made to borrowers in Latin America and the Far East. Formosa ranks third among the borrowers from the D.L.F., having taken eight loans for $58.24 million.

We give below, for purposes of record, project-wise details of the seven loans from the D.F.L. to India:

Railways ($40,000,000).—To finance the importation of structural steel and steel products to be used by private manufacturers and Government-owned facilities in making 20,000 freight cars, 300 steam locomotives, 600 coaches, and 2,500 underframes. This undertaking is part of India's programme for increasing the capacity of its overloaded railway system.

Roads, Cement and Jute ($35,000,000).—This loan consists of three parts: (1) $25,000,000 for importing bus, truck, and jeep components for assembly by private firms in India, (2) $5,000,000 for equipment to expand India's privately-owned cement industry, and (3) $5,000,000 for equipment to modernise and expand the privately-owned jute industry.

Steel Imports for Public Projects ($18,000,000).—To import structural and other types of steel for use in about 30 public projects, including four water-supply and irrigation enterprises, four port-improvement projects, and about 20 power projects.

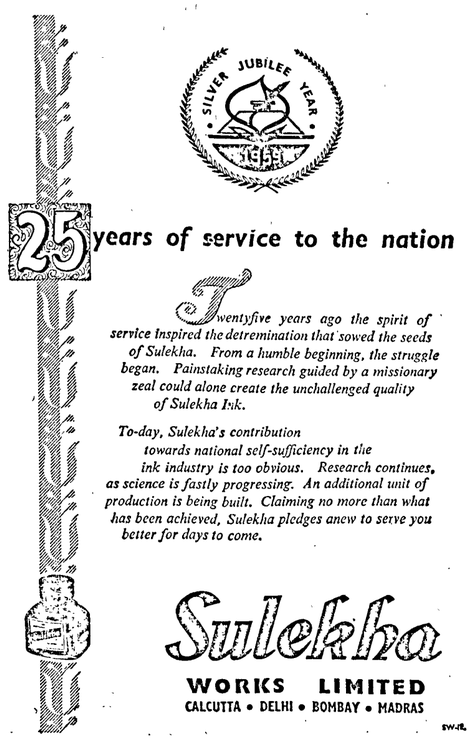
Steel Imports for Private Projects ($22,000,000).—To import steel and tools to be used in private industries, including fertiliser, automobile, tool-machine, ball-bearing, and locomotive plants.

Second Railways Loan ($35,000,000).—To import materials and equipment to be used in connection with an integrated plan for improving railways by electrifying about 1,400 miles and doubling about 1,300 miles of line, building more than 800 miles of new line, building, rebuilding, or remodelling yards providing signal equipment, etc.

Public Power Development ($10,000,000).—To procure equipment for use in a variety of projects aimed at doubling India's installed generating capacity within the next five years.

Capital Equipment for Private Industries ($15,000,000).—To help import capital goods needed in modernising or establishing private industries, including metallurgical, mineral, chemical, cement, machinery-manufacturing, engineering, textile, sugar, and paper industries.

At the moment, the D.L.F. has not sufficient balance in its account to render any further sizable assistance. The U.S. President requested the Congress for a supplementary allocation of $225 million to the Fund for the current year, but the Congress has agreed to allot only $100 million; at one time, it was prepared to give no more than $50 million. The State Department is, however, still pressing the Congress to sanction the President's request in full. It remains to be seen whether the Congress will concede the demand. The extent to which the U.S. Government can help India and others will thus depend upon the Congress.



NEWS IN BRIEF

IMPORTS of liquor into India have declined from over 1.4 million gallons in 1954 to 166,219 gallons in 1958.

The total repayment in foreign currencies of foreign loans by India during 1959-60 is put at Rs. 24.71 crores, of which principal accounts for Rs. 9.57 crores and interest for Rs. 15.14 crores.

The report of the Tariff Commission on fair prices for paper is expected to be submitted to the Union Government by May next, according to Mr. Manubhai Shah, Minister for Industry.

A delegation from East Germany will shortly visit India to assess India's requirements in the development of small-scale industries. The delegation will visit Bombay, West Bengal, Madras, Delhi, Kerala, Orissa and Assam.

A sum of Rs. 2.06 crores has been provided in the Central budget for 1959-60 for aid to be given by India to foreign countries under the Colombo Plan. This includes economic assistance to Nepal to the tune of Rs. 1.90 crore.

A Sheep and Wool Development Board for Rajasthan, with Mr. Nathuram Mirdha, the State Minister for Agriculture, as Chairman, has been constituted to advise the State Government on matters relating to wool production and trade.

A Swiss tax delegation has completed preliminary discussions with the officers of the Central Board of Revenue at New Delhi for the conclusion of an agreement between the two countries for avoidance of double taxation of income. The discussions are expected to be resumed at a future date.

Two schemes for the manufacture of agricultural tractors, with a total capacity of 2,500 units per annum, have been approved by the Central Government. The range of tractors to be produced is between 12-18 and 20-30 D.B.H.P. Licences will be issued for these units after the terms of foreign collaboration are finalised.

The production of manganese ore in India during the year 1958 is estimated at 1,230,000 metric tons. Orissa State was the leading producer of manganese ore during the year, with an output of 360,000 metric tons, followed by Bombay State with 311,000 metric tons, Madhya Pradesh with 283,000 metric tons and Mysore with 240,000 metric tons.

The State Trading Corporation is currently negotiating with Czechoslovakia for the export of one million tons of iron ore from this country. It is also exploring possibilities of exporting iron ore to Italy, West Germany and the U.K. negotiations are in progress with Japan for additional exports of iron ore to that country over and above the quantity covered by the existing five-year contract.

The Tiruchirapalli area in Madras State has been described as a place of "medium oil possibilities" by the West German experts, who recently toured the various parts of India to study the oil potential in the country. Disclosing this in the Lok Sabha the other day, Mr. K. D. Malaviya, Minister for Mines and Oil, said that the Oil and Natural Gas Commission was making necessary investigations in this area at present.

A new 20,000-kw. steam carbo-generating set was formally commissioned at the power plant of the Indian Iron and Steel Company, Burnpur, by its Governing Director Mr. Biren Mookerjee, on the 13th inst. This unit will raise the installed capacity of the power plant from 40,000 kw. to 60,000 kw., enabling the Company to increase its existing capacity by half a million to one million steel ingots per annum.

The final round of talks for the conclusion of a double taxation avoidance agreement between India and the U.S.A. commenced at New Delhi on the 16th inst. The U.S. delegation is headed by Professor Dan Throp Smith, Deputy to the U.S. Secretary of the Treasury. The talks, which are expected to last for about a week, are a follow-up of the discussions held by the Indian delegation with the U.S. Government in Washington last December.

Draft rules detailing the procedure for allowing rebate of customs and general excise duties paid on imported and excisable material used in the manufacture of textile machinery exported have been published in the *Gazette of India*. The rate of rebate will be calculated on the basis of the particulars furnished by the manufacturers of such machinery who may be interested in this rebate.

The Government of India has decided to acquire majority shares in the Praga Tools Ltd., Hyderabad. The Andhra Pradesh Government now holds shares worth Rs. 47.57 lakhs in the Company and the public Rs. 18.35 lakhs. The Centre proposes to raise its capital by investing Rs. 70 lakhs in it. The present shareholders are understood to have agreed to this arrangement. The factory produced tools worth Rs. 60 lakhs in 1958, as against Rs. 23 lakhs in 1956. The value of production is expected to go up to Rs. 90 lakhs in the current year.

As a measure of export promotion, the Government of India has decided to allow drawback on customs duty paid on imported materials used in the manufacture of multi-wall sacks of paper, hand inflators and furniture made of stainless steel tubes. Rebate of customs and Central excise duties paid on imported and excisable materials used in the manufacture of galvanised steel socketed tubes has also been allowed. Certain changes have been made in the existing schemes of drawback for steel products, bicycles, sewing machines and jute manufactures.

The Government of India has decided to introduce a new procedure under which licences for import of raw materials and components are proposed to be issued to 45 scheduled industries, borne on the books of the Development Wing, in addition to their normal allotment for the next licensing period, beginning from 1st April 1959 (April-September). The object is to ensure continuity of supply of raw materials to enable industries to plan their production better and to make advance arrangements for the purchase of some of their requirements of raw materials for the next half-year.

A conference of licensed salt manufacturers of India representing all the regions of salt production in the country met at Bombay on the 17th inst. under the chairmanship of Mr. P. A. Narielwala, a Director of Tata Industries Private Limited, and Vice-Chairman of the Indian Salt Manufacturers' Association. The present critical position in the salt industry and trade was reviewed and concrete proposals for the formation of a Federation of All-India Salt Manufacturers' Associations were unanimously adopted at the meeting. It was also resolved to submit a representation and to meet the Hon'ble Minister for Commerce and Industry, Government of India, and appeal to him for immediate relief to the industry.

The Union Minister for Industry, Mr. Manubhai Shah, declared in the Lok Sabha that the location of heavy industries such as steel plants would be determined purely on the basis of economic considerations and that the projects would not be used as a "primary prop" for removing the regional backwardness of a particular State. Mr. Shah further pointed out that, in regard to the licensing of new industrial units in the States, preference was given to areas where such industries did not exist. He suggested four measures for adoption by the States to promote development, namely, techno-economic survey of the State, strengthening of industries directorates, a more liberal approach to grant of loans and provision of electric power for industrialisation.

From Abroad

Ceylon produced a record tea crop of 413 million lbs. in 1958. Of this, it exported 161 million lbs. to the U.K., the highest level reached in the last 15 years.

The Government of Pakistan proposes to raise the area under tea from 75,000 acres to 100,000 acres in order to raise production to 80 million lbs., as against the current output of 54 million lbs.

The *per capita* consumption of fish in Norway in 1958 was about 82 lbs., the total consumption in the whole of that country being 130,000 tons, an increase of 3 per cent. over the year.

The U.S. Government has agreed to support the establishment of an Inter-American bank with an initial capital of $1,000 million. Earlier, the U.S. had favoured only a capital of $850 million for this institution.

A sum of £620,500 will be provided by the U.K. Government this year to enable Commonwealth and Colonial students to study in Britain. The funds will be available for further education or training at any suitable centre in the U.K.

The Indonesian Government has decided to nationalise 227 more Dutch-owned estates in the country. Of this, 177 are understood to be tea and rubber estates. Last month, the Government nationalised 38 Dutch tobacco estates.

The Ford Motor Company in the U.S. has decided to manufacture small cars during the 1960-model year. The proposed car, it is said, will be in competition with other economy cars, including those manufactured by U.S. manufacturers.

The U.S. Government has imposed compulsory controls on imports of crude oil, residual oil and refined oil products, including petrol and jet fuels, with a view to helping domestic petroleum industry in the interests of national security.

Japan is likely to place an order with the U.S. General Electric Company for the supply of a 10,000 kw. demonstration power reactor costing about $8 million. The reactor, the second to be imported by Japan, will be installed near Tokyo by the end of 1961.

The number of households in the U.S. has increased from about 16 million in 1900 to about 50 million in 1958. While non-farm households have been increasing over the years, farm households have declined by about 2 million since 1940 when there were about 7.2 million of such households.

An assurance that the U.K. Government will sympathetically consider the question of arranging Commonwealth talks on tea, if the tea-producing countries so desired, was given in the British Parliament by the President of the Board of Trade, Mr. David Eccles, this week.

PERSONAL

PRESIDENT Dr. Rajendra Prasad left India last week-end on a 12-day visit to Cambodia, South Viet Nam, North Viet Nam and Laos.

Mr. Bishambardas Kapur and Mr. M. G. Vohra have been elected President and Vice-President, respectively, of the Cycle Manufacturers Association of India.

Mr. E. A. Jenkins, Anchor Line Ltd. and Mr. C. W. Couch, Standard-Vacuum Refining Company of India Ltd., have been elected representatives of the Bombay Chamber of Commerce and Industry to serve on the Board of Trustees of the Port of Bombay for a period of two years with effect from 1st April 1959.

President Eisenhower will join Queen Elizabeth at Montreal in June next to open the St. Lawrence Seaway in Canada. At the Queen's suggestion, the names of all workmen who built the Seaway and who contributed to its construction will be recorded in a special book as a mark of recognition.

The U.S. General Electric Company is reported to have reached a fairly advanced stage in developing an efficient method of converting heat directly into electricity. The simplified power producer will be particularly useful for satellites, where compactness, lightness and long life of the power supply are the key factors.

The Labour Party in the U.K. has advocated a 12-point plan for creating new jobs for the unemployed, numbering 621,000 in January, the highest figure to be witnessed in 10 years. The plan covers, among others, construction of Government-financed factory buildings in the officially designated development areas, considered to be places where unemployment is a recurring problem.

With a view to simplifying trading in gold in the Toronto Stock Exchange, the Canadian Copper Refiners have started issuing new gold bars with a fineness of 9,999 per 10,000 with effect from the 15th inst. The new bar will have an exact weight of 32 ounces. Hitherto, Canadian bars marketed through the Exchange weighed approximately 32 ounces with a fineness of 999 per 1,000.

A new Bill approved by the Japanese House of Representatives seeks to prevent domestic manufacturers from copying foreign commercial designs. Its provisions will be applied in the beginning to fountain pens, pencils, fishing gear, furniture and salad bowls, but will later be extended to other products including cameras and toys. The textile and potteries industries (not included in the Bill) have already taken measures voluntarily to prevent copying.

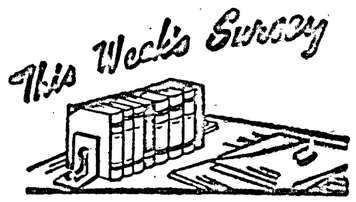
East Germany will undertake the execution of seven projects in U.A.R. costing £E5.27 million. The contracts were signed at Cairo recently. They are part of the £E18 million agreement signed between the two countries. The contracts include construction of a knitting factory at Port Said, establishment of two units for dyeing and finishing textiles and expansion and renovation of Misr Film Studios, for enabling it to process colour films.

The U.S. Government has refused to permit the export of $2,500,000 (about Rs. 119 lakhs) worth of steel pipe to the U.S.S.R. This is the third time that the U.S. Commerce Department has turned down the request of an unnamed American company for an export licence to ship 12,227 tons of 28-inch and 30-inch carbon-welded line pipe to the U.S.S.R. The rejection is on the ground that it will not be in the national interest to permit shipment of this item to Russia.

A new drug for treatment of the mentally ill, which, it is claimed, will eliminate many of the undesirable side-effects of electric shock treatments, has been announced by a scientist of the University of Maryland, in the U.S.A. Dr. John C. Krantz, Pharmacology Professor at the school, who helped develop the chemical "Indoklon," described recently the reaction of 2,000 patients to the drug at a meeting of scientists at the Army Medical Centre at Edgewood, Maryland.

The U.K. Government has decided to lend upto £60 million to Richard Thomas and Baldwins Company towards the cost of a £100-million steel strip mill, with an annual capacity of 1 million tons of ingot steel, proposed to be set up at New Port, Wales. The factory is expected to go into production in 1963 and reach full production in one or two years thereafter. The plant will manufacture annually 600,000 tons of finished strip mill products, mainly sheet steel for the automobile and consumer durable industries.

The aggregate world rubber-producing capacity (both natural and synthetic) is at present estimated at 4 million tons, whereas the anticipated consumption in 1959 is placed lower than 3.4 million tons, according to the Economist Intelligence Unit. The shift in the trend of consumption from natural to synthetic rubber, it is said, has reached a limit in the U.S. The West European countries propose to expand their production of synthetic rubber which in turn will restrict the scope for imports from the U.S. It is, therefore, pointed out that 30 per cent. of the U.S. synthetic production capacity may remain unused, while natural rubber may continue in balance.



PLANNING AND RESOURCES

THE third Five-year Plan is very much in the air. It is true that, with two more years to go, the second Plan has not yet run its course. But experience in working the second Plan has pointed to the necessity of more careful preparation for the third. It is now increasingly realised that there is no point in drawing up a big Plan and then leaving it to the resourcefulness of the Finance Ministers to find the resources for it. As Mr. L. D. Mudie, Vice-President of the Bombay Chamber of Commerce and Industry, pointed out, in his speech at the annual general meeting of the Chamber, held at Bombay this week, "while some degree of flexibility in planning is inevitable and desirable, it must surely be understood from past experience that adequate resources (available or assured) are a vital factor in the tailoring of any expenditure programme."

Whenever the "resources" problem crops up, there is a tendency to look at it only from the point of view of the Exchequer. Although this is important, it by no means determines entirely the progress of an economic plan. A related problem is the resources at the command of the private sector, which, despite all the attempts made to restrict its scope, is still left with a preponderant share of the responsibility for economic progress. Fears have been expressed both in official and non-official circles that, in the second Plan period, private investment may not come up to levels originally anticipated. It is of the utmost importance that this deficiency is made good in the period of the third Plan. And efforts should be made to supplement domestic private investment by foreign investment. Mr. Mudie rightly emphasised the "necessity to prepare the way for larger contributions to the economy from private foreign investors." He added: "We live in a capital-hungry world, but, in the queue to attract investment, India starts with the well-known and clear advantage of a market offering an immense potential. By itself, however, this is an insufficient inducement to condition the mind of the foreign investor, whose approach to the placing of his available capital, while sympathetic, is inevitably influenced by commercial considerations."

The incentives which a foreign investor appreciates most is, of course, security of his investment. In addition, he also wants facilities for transfer of profits and repatriation of capital. Mr. Mudie said that the prospect for the former was good and the record in the case of the latter in this country was admirable. But he rightly suggested that the foreign investor could be deterred by "an uncertain policy for private industry, the expansion of State trading, the complexities of labour and company legislation and a high level of taxation." And, to the extent that such measures have been adopted by the Government, the incentive for the flow of foreign investment has been reduced. It is time this policy was reversed and the ground prepared for the larger flow of foreign private investment.

Nothing is more calculated to deter the investor, whether foreign or domestic, than the abandonment of reason and commonsense in deciding economic issues. What is necessary is a realistic, rather than a doctrinaire, approach to these issues. Nowhere is this more particularly needed than in the settlement of the public *versus* private sector controversy. On this question, Mr. N. Dandekar, President-elect of the Chamber, made some notable observations. He said that any discussion of this subject must be confined to two types of cases—(1) those in which, despite the heavy initial investment involved and the prospect of little or no returns in the earlier years, private investment, whether Indian or foreign, is prepared to come forward and develop a new basic industry at private risk; (2) those concerned with internal and foreign trading, road and sea transport, banking and insurance, general manufacture and the manufacture of even such basic things as motor vehicles and cement, in all of which private investment has already contributed so significantly to the country's development but where the State is often tempted to step in because of illusory prospects of doing the job better or, quite simply, of making quick profits. Mr. Dandekar suggested that the proposal for State participation in these fields should be examined on the merits of the cases concerned, free from doctrinal prejudice. In deciding these questions, he urged the importance of bearing in mind three considerations:

1. What are the objectives to be achieved? Is it practicable that they will be achieved in either sector from the resources of money, manpower and raw materials available?

2. If private enterprise is already engaged in the activity under consideration, is the intrusion of the public sector really necessary? Will it add to, or reduce, costs? Will it waste valuable and limited management resources? Has the State such resources of manpower and experience to contribute to the enterprise, or will the State merely take advantage of knowledge and organisation already there?

3. Can it, in sum, be demonstrated that it is truly in the best interest for the State to broaden the scope of its industrial and commercial activity, or to participate in those activities which have already been developed over the years by private enterprise?

These are valid considerations, which, in any democratic country, would be regarded as axiomatic economic truth. And yet, in India, politics has such a pernicious tendency to vitiate economic decisions that these considerations are ignored, the result being avoidable waste, misdirection of the all too limited quantum of physical resources and administrative talent and a rate of growth which is well below the optimum which this country could easily have, thanks to the abundance of natural resources, entrepreneurial skill and industrial traditions.

BICYCLE INDUSTRY

One out of every eighty persons in India uses a bicycle and the ratio is expected to be as high as one bicycle for every fifty-eight persons in 1960, if the Tariff Commission's estimate of the rise in the total number of this vehicle on roads from 5 million to 7 million were to prove correct. Appropriately enough, Mr. Manubhai Shah, Union Minister for Industry, described the bicycle as the common man's transport, while inaugurating the annual meeting of the Cycle Manufacturers Association of India at Madras on Sunday this week. Considerable importance has been attached by the authorities to the development of this industry. It was, for instance, one of the industries included in the first schedule of the Industries (Development and Regulation) Act 1951 when it was enacted for the first time. Again, the Development Council for this industry was one of the first three constituted under the Act of 1953. What is more, this is one of the industries which has been afforded tariff protection for quite a long time now, since 1946, to be precise.

On its part, the bicycle industry has endeavoured not only to maximise output but also to maintain a high quality of production. The number of bicycles actually manufactured in 1958 was as much as 1.05 million valued at over Rs. 13.8 crores, as against just 49,000 valued at Rs. 60 lakhs in 1947, the first post-protection year. With this trend in production, it can safely be asserted, as Mr. A. M. M. Murugappa Chettiar, the retiring President of the Association did, that the industry has already practically fulfilled the target set for it under the second Five-year Plan; the target is 1.25 million. Significant progress has been made in the sphere of components manufacture too. While in 1947 and the following years, bicycles were mostly assembled with imported parts, today, the percentage of these parts varies only from 2 to 5 in value.

It will be interesting to note here that the aggregate annual capacity of the bicycle industry at present is 1.72 million, of which the 20 large-scale units together account for 1.37 million (single-shift basis) and the small-scale sector for 350,000. The latter capacity is expected to rise to 500,000 in course of time. The Central Government has already approved of 19 schemes (during 1958-59) for the setting up of small-scale factories to produce 84,500 bicycles per annum. As against the aggregate anticipated capacity of 1.87 million in 1960-61, the demand is expected to be around 2 million, and not 1.5 million as estimated by the Development Council. Mr. Murugappa Chettiar felt that it would not be difficult to achieve the two-million mark, provided, of course, the handicaps facing the industry were removed. The chief handicaps, we are told, are three, as follows:

1. There are inordinate delays in the issue of import licences. The operation of the present import licensing system often retards the smooth operation of individual units, as the licences for different items are issued in an unbalanced manner.

2. The industry is finding it difficult to secure adequate supplies of requisite machinery and raw materials

3. Although the need for feeding the existing capacity to the full extent before new capacity is created has been repeatedly stressed, it has not been followed in practice and licences for the establishment of new units have been freely issued.

Mr. Murugappa Chettiar not merely drew attention to these difficulties but also indicated the ways in which they could be overcome. An important suggestion made by him related to the adoption of a system of import licensing whereby the total ceiling of foreign exchange for import of steel forgings and castings and plating materials could be divided among producers on the basis of each unit's performance and the manufacturers be allowed to import and balance out permissible items within this overall ceiling, without recourse to a large number of import licence applications and the processing thereof separately. This single licence could within its body also indicate the ceiling for any particular type of import, that is, components, consumable stores, castings and forgings or raw materials, as well as stipulate any specific cover item-wise (but not quantitatively) so as to obviate any chance of imports of items which are not allowed at all, but, at the same time, allow the factories to balance out quantitatively on permissible items.

Referring to this suggestion, Mr. Manubhai Shah pointed out that foreign exchange was being allotted on the basis of the performance of each unit and that, in the case of components, the manufacturers were already being allowed the flexibility of importing any part within the total ceiling and without any quantitative restriction. In this connection, he disclosed that, from the next licensing period, most of the existing formalities for import of the bicycle industry's requirements of both raw materials and components would be straightened out and simplified; as far as possible, the system would be so worked that "it will be an *ad hoc* allocation rather than item-wise allotments." As for electroplating chemicals, the Minister advised the bicycle industry to get its requirements from indigenous sources as was being done by the sewing machine and other light engineering industries with full satisfaction.

The bicycle manufacturers must have felt gratified at the aforesaid statement of Mr. Shah regarding import licensing, as also at his assurance that, normally, preference would be given to the expansion of existing units, though there were other considerations like regional distribution and encouragement of small-scale industries which had to be taken into account as well. Nobody would grudge new *entrepreneurs* entering the field, but there is, as Mr. Murugappa Chettiar stated, the problem of raw material supply becoming more acute with new entrants, since the overall ceiling of foreign exchange for the bicycle industry as a whole is not elastic.

On the question of component supplies such as chains, free-wheels, spokes and rims, Mr. Murugappa Chettiar pleaded for permission to bicycle manufacturers to produce all the parts for their own use. The Minister, however, urged the manufacturers to buy as many parts as possible from other units, especially those in the small-scale sector. While the anxiety to foster the development of small-scale industries is to be appreciated, it is rather doubtful whether these industries will be able to produce the components more economically than the industry itself and to maintain high standards of quality. Mr. Shah was, however, right when he stressed that some of the leading manufacturers of cycles should make an immediate beginning to establish factories to fabricate machinery and equipment. In particular, his suggestion for three or four units concentrating their attention on manufacturing standard types of machinery required by all sections of the industry deserves support.

INCENTIVES TO WORKERS

It used to be generally believed that an industrial worker's chief need was wages. Modern research has shown that money, though important, is not everything. It is true that monetary incentives have a signal role to play in improving productivity and increasing production. But they alone, as recent experience in some of the Western countries indicates, are not sufficient to induce workers to give of their best. Something more subtle, more personal and hence more difficult than the lure of money is required.

Earl Verulam, Chairman of the British Institute of Management, had, perhaps, this in mind, when he told the Newcastle and District branch of the Institute that British management must find new types of incentives to replace the declining tendency of money incentives. Television sets and washing machines, he asserted, were not the incentives for which most of Britain's workers were prepared to work harder. Even the desire for social security, he pointed out, began to fail when there was too much of it.

If the power of money to stimulate enthusiasm for work is declining, then it follows that the potency of piece rate, bonuses, desire for promotion and the rest are bound to decline with it. There are already indications that their influence is waning in some Western countries. For instance, the system of payment by results is gradually getting into disfavour in British industry. Several big firms have recently switched back to time rates. Those that have done so report better industrial relations with little or no fall in output. The trend in the U.S. has been a more marked swing in favour of time rates.

Those incentives that evoke the most sympathetic responses are mingled with all the elusive qualities of good human relationship: sense of responsibility, disinterested leadership, pride in the co-ordinated skills of hand and mind, pleasure in the job well done, an unflagging team loyalty against a background of frequent change and sustained challenge. At a time when efforts are made to provide in India more and more incentives for higher production, it is well to bear these considerations in mind.

PUNJAB AGITATION

It is a pity that the Communists, who spearhead the agitation against the imposition of the betterment levy in the Punjab, should have considered the public street a better venue for the fight than the august *Vidhan Sabha* of the State. The agitation of the kind witnessed in the Punjab, which led to mass arrests, *lathi* charge and firing by police resulting in loss of life to some and injury to many, cannot advance the cause the agitators seek to further even by an inch. If the opposition to the levy springs from the conviction that it is unsound in principle or heavy in incidence, there may be justification for seeking to get it withdrawn or modified. But to incite the peasants into violent agitation, thereby rendering a dispassionate consideration of the question difficult, cannot be justified and deserves to be severely condemned. It is doubtful whether Mr. A. K. Gopalan's offer to withdraw the agitation if the Government modified the Betterment Levy Bill before introduction in the State Assembly on 21st March is inspired by genuine desire for settling the issue peacefully. If it were so, he could have placed the demand before the Government even before resorting to the agitation. In any case, it is threat which is unconstitutional.

Now that the situation has deteriorated to the extent it has, the Government is justified in insisting on the suspension of the agitation and restoration of normalcy as a condition for considering the issue. If the Communists do not agree to this, it only confirms the fear that their motive is, purely, to reap political gains out of the situation. The *Akali Dal*, which recently expressed support for the agitation, has perhaps not realised that it is playing into the hands of the Communists.

Be that as it may, it is pertinent to ask whether the opposition to the levy can be justified on economic grounds. The levy is in the nature of a special charge for special services rendered and is, therefore, unexceptionable in principle. The only question is whether the levy imposes an unbearable burden and whether it is properly timed. According to the Revenue Minister, Mr. Rao Birendra Singh, the levy does not involve too heavy a burden on the beneficiaries of the irrigation provided by the Bhakra Canals, because it will be realised only in respect of the matured crops, the additional income accruing from which to the peasants will be several-fold more than the tax imposed. The levy, according to him, could no longer be postponed because it had been held in abeyance for the past six years and also because of the need for paying back the loan taken from the Central Government for the execution of the project without any further delay. There can, therefore, be no going back on the decision to commence realisation of the levy.

BUDGET OF BOMBAY PORT TRUST

The Bombay Port Trust has just published its budget estimates for 1959-60 along with the revised estimates for the year now coming to a close. It would appear that the restrictive import policy pursued by the Government and the setback in exports in 1958-59 have had an adverse impact on the quantum of traffic handled by this port. Thus, the revised estimate of total traffic is placed lower at 11.1 million tons (imports of 7.8 million tons and exports of 3.3 million tons), as against the original estimate of 11.6 million tons (imports of 8.2 million tons and exports of 3.4 million tons). Many uncertainties in India's foreign trade still continue. The budget for the next financial year is, therefore, estimated on a more conservative basis, with the trade expected to pass through the port being no more than 11.1 million tons—the same as the revised estimate of the current year. Although the spectre of shortage of foreign exchange still looms large, it is to be hoped that the emphasis now given in the country to the promotion of exports and the gradual improvement witnessed in the international economic climate will lead to a further expansion of India's trade with other countries.

It may be noted, in this context, that the only dependable data for the next year are those of mineral oils and foodgrains on Government account. It is expected that imports of mineral oil will be of the order of four million tons in 1959-60 and those of foodgrains at 1.2 million tons. On this basis, the total imports are estimated at 7.6 million tons. The exports of mineral oils are expected to be of the order of 1.8 million tons, the estimates having been framed on the assumption that there will hardly be any variation in traffic from that of the current year. The aggregate exports have thus been placed at 3.5 million tons.

On the basis of these assumptions, the total revenue on General Account for 1959-60 is estimated at Rs. 10.37 crores, representing an increase of Rs. 38 lakhs, as compared with that (revised) for the current year. The total expenditure for the next year is estimated at Rs. 9.60 crores, more or less equal to the revised

ECONOMIC CLASSIFICATION OF CENTRAL BUDGET

SHARP RISE IN EXPENDITURE

From Our Special Correspondent

NEW DELHI, 16*th March*

THE economic classification of the Central Government Budget as by now become a settled feature. The latest one, that of the Budget for 1959-60, has just been issued by the Economic Division of the Ministry of Finance. This classification, like the two earlier ones, brings out the impacts of the budgeted operations of the Central Government on the Indian economy. It conceives of the Indian economy as composed of two sectors—the Central Government and the rest of the economy. The Central Government sector, in its turn, is classified into two—Government administration which is an administrative entity, and Departmental commercial undertakings which are entities run on business lines. The rest of the economy, in its turn, includes the State Governments, the local bodies, and the Central and the State Government undertakings which are run as autonomous corporations or companies. The classification pertains to the operations of only a part of the public sector and brings out only the implications of the budgetary transactions of the Central Government.

DELHI LETTER

With the present economic classification of the Budget for 1959-60, it is now possible to present a consolidated picture covering the major part of the second Plan period and compare it with the position in the last year (1955-56) of the first Plan. In this picture, the current operations of Government as an administrative entity are of immediate relevance in the context of public criticism of the vastly increased cost of administration. On the revenue side, the current account of Government administration is given in Table I at the bottom.

On the expenditure side, the current account of Government administration is presented in Table II.

In the above table, it may be noted, all current expenditures on goods and services of Government administration constitute final outlays. But similar current expenditures on goods and services of departmental commercial undertakings are not final outlays. The current account of such departmental undertakings as railways, posts and telegraphs, etc., in respect of expenditure is given in Table III.

Another account presents, in a nutshell, capital transactions in commodities and services and capital transfers by both Government administration and departmental commercial undertakings. It is seen from the receipts side of this account that gross savings (savings on current account of Government administration, retained profits of departmental commercial undertakings and depreciation provision) account for only Rs. 33.6 crores in 1959-60 (budget), as against Rs. 38.7 crores in 1958-59 (revised), Rs. 145.7 crores in 1957-58 (accounts), Rs. 174 crores in 1956-57 (accounts), and Rs. 122.9 crores in 1955-56 (accounts). Again, on the receipts side, capital transfers (of which foreign grants form the major component) account for Rs. 33.2 crores in 1959-60 (budget), as against Rs. 22.9 crores in 1958-59 (revised), Rs. 27.4 crores in 1957-58, Rs. 26.4 crores in 1956-57 and Rs. 44.7 crores in 1955-56. And the deficit, in the receipts side, on all transactions in commodities and services accounts for Rs. 335.8 crores in 1959-60 (budget), as against Rs. 338.7 crores in 1958-59 (revised), Rs. 214.7 crores in 1957-58, Rs. 109.3 crores in 1956-57 and Rs. 45.1 crores in 1955-56.

In the aforesaid account, on the disbursements side, gross fixed capital formation by way of new outlay and renewals and replacements on account of buildings and other construction, and machinery and equipment account for Rs. 344.6 crores in 1959-60 (budget), as against Rs. 318.2 crores in 1958-59 (revised), Rs. 268.0 crores in 1957-58, Rs. 234.0 crores in 1956-57 and Rs. 176.7 crores in 1955-56. The increase in inventories (works stores, stocks of food, steel, etc.) accounts for Rs. 28.6 crores in 1959-60 (budget), as against Rs. 43.6 crores in 1958-59 (revised), Rs. 89.0 crores in 1957-58, Rs. 27.7 crores in 1956-57 and Rs. —10 crores in 1955-56. The third item, namely, capital transfers by way of grants for capital formation to States, departmental commercial undertakings and others account for Rs. 34.4 crores in 1959-60 (budget), as against Rs. 33.5 crores in 1958-59 (revised), Rs. 30.8 crores in 1957-58, Rs. 48.0 crores in 1956-57 and Rs. 46.0 crores in 1955-56. Such other items as gratuities and commuted value of pensions and compensation paid to displaced persons account for Rs. 6.4 crores in 1959-60 (budget), as against Rs. 8.6 crores in 1958-59 (revised), Rs. 12.0 crores in 1957-58, Rs. 17.4 crores in 1956-57 and Rs. 13.1 crores in 1955-56.

Two other accounts covering changes in financial assets and financial liabilities are concerned with financial transactions which affect the net claims of Government on the rest of the economy. Without covering the details of these two accounts here, reference may be made to the final reconciliation statement showing the net effect of all transactions on Government's cash balance. It is seen from this cash and capital reconciliation account of Government administration and departmental commercial undertakings that, on the incomings side, the net increase in financial liabilities in 1959-60 (budget) is Rs. 891.8 crores, as against Rs. 833.6 crores in 1958-59 (revised), Rs. 654.8 crores in 1957-58, Rs. 431.0 crores in 1956-57 and Rs. 270.6 crores in 1955-56. And the decrease in cash balance is Rs. 1.7 crore in 1958-59 (revised) and Rs. 36.5 crores in 1955-56. On the outgoings side, besides the deficit on all transactions in commodities and services in Account 3, the net increase in financial assets is Rs. 555.4 crores in 1959-60 (budget). Rs. 496.6 crores in 1958-59 (revised), Rs. 439.2 crores in 1957-58, Rs. 266.0 crores in 1956-57 and Rs. 262.0 crores in 1955-56. And the increase in cash balance is Rs. 0.6 crore in 1959-60 (budget), Rs. 0.9 crore in 1957-58 and Rs. 5.7 crores in 1956-57.

To provide a full measure of the deficit denoting total requirement of finance, the Economic Division has further clarified the position. According to this explanation, the "income deficit" of the Central Government, as measured by the excess of net investment over net savings by the Central Government, works out to Rs. 341 crores in 1959-60 (budget), Rs. 329 crores in 1958-59, Rs. 211 crores in 1957-58 and Rs. 89 crores in 1956-57. This deficit represents the net expansionary impact of Government operations on the economy. It is also a measure of the gap to be filled up by the Central Government's draft on private savings at home and on savings of the rest of the world. If to this are added the finance required for capital transfers and the increase in financial assets, it gives yet another measure of deficit. This deficit denoting total requirement of finance is derived by adding two items, namely, the deficit on all transactions in commodities and services and transfers of Government administration and departmental commercial undertakings and the net increase in financial assets. The total deficit so derived comes to Rs. 891 crores in 1959-60 (budget) as against Rs. 836 crores in 1958-59 (revised) Rs. 654 crores in 1957-58 and Rs. 375 crores in 1956-57. The financing of this total deficit in the first four years of the second Plan is indicated below:

(In crores of rupees)

Sources	1956-57 Actuals	1957-58 Actuals	1958-59 Revised	1959-60 Budget
Net borrowings:				
(a) Market loans	75	69	181	110
(b) External loans	8	25	231	200
(c) Small savings	59	69	75	85
(d) Unfunded debt	19	20	17	21

Deficit financing	189	463	262	226
Total	375	652	836	891

The magnitude of deficit financing shown in the above table indicates roughly the expansionary impact of the budgetary transactions of the Central Government on money supply. A more precise measure of this impact, it is stated, would require an analysis of other data such as pertain to changes in the holdings of the Central Government securities by the banking system, the State Governments and local bodies and by others. But the Economic Division of the Ministry of Finance has concluded this by saying that this type of analysis cannot, obviously, be undertaken in the present context.

U.K.'s IMPORTS OF INDIAN TOBACCO

Despite a drop of 2,000,000 lbs. in total imports of tobacco from all sources during 1958, Britain last year purchased 9,097,000 lbs. more tobacco from India than in the previous year. India's total tobacco sales to Britain, as recorded in the latest report of the Commonwealth Economic Committee published in London, reached 44,683,00 lbs. last year. The total was 35,586,000 lbs. in 1957, 40,017,000 lbs. in 1956, and 36,404,000 lbs. in 1955.

The report shows that India's total export shipments of unmanufactured tobacco in the first nine months of last year reached 96,700,000 lbs.—26,300,000 lbs. more than in the same period a year earlier. Consignments of flue-cured tobacco alone rose to 84,100,000 lbs., or 87 per cent. of the total. India's increased exports were obtained, notwithstanding the fact that she was the only one of the main Commonwealth producing countries which failed to increase production during the year under review.

Although Britain's imports dropped by some 2,000,000 lbs.—the imports totalled 316,000,000 lbs. —supplies from Commonwealth countries showed a small increase in 1958, being 145,000,000 lbs., or 2,000,000 lbs. more than in the previous year. The chief supplier was the Federation of Rhodesia and Nyasaland. India was the second largest supplier, and Canada third.

U.S. TRADE MISSION

Proposals by Assam businessmen for joint Indo-American ventures in chemicals, coal mining and other industries will be formally publicised in the United States by the U.S. Trade Mission for Eastern India, according to Mr. Paul H. Brent, leader of the Mission, which is now touring East India. Mr. Brent revealed in Gauhati (Assam) that tea plantation interests in Dibrugarh and Tinsukia had approached the Mission with requests for American machinery to be purchased on a deferred payment system. He said the Mission felt that an almost unlimited market could be developed in the United States for Indian handicrafts, provided quality control and continuity of delivery were maintained. Referring to India's principal exports to the United States—tea, lac, jute and minerals—Mr. Brent stressed that it was essential that Indian prices should be competitive with those of other countries.

AMERICAN LETTER

INFLATION THREAT LOOMS LARGE

YET LABOUR IS PITCHING UP ITS DEMANDS

From Our Special Correspondent

NEW YORK, 12*th March*

THE outlook is for a continuation of the selective recovery which has been going on in the United States for some time. But there is a number of roadblocs. One of these is unemployment which remains a problem. It is expected to rise slightly until mid-summer. The latest count was that about 6 per cent., or about 4.7 million people, of the labour force was idle, while 62.7 million are employed. This is a heavy drain on State unemployment insurance coffers. Yet, there has been a substantial recovery in industrial activity and in profits. This, as mentioned in previous dispatches, has been accomplished by lengthening the work week in many plants back to 40 hours and by the installation of new machinery and by automation.

This state of affairs has led to demands by trade union leaders for a 35-hour work week. The issue has been raised just before three trade unions are to begin bargaining sessions for new contracts with managements—steel, railroads and aluminium. As I see it, it would be a miracle if the trade unions failed to win some concessions in either wages, hours or other fringe benefits. This would, naturally, lead to price increases, as has been stated already by steel spokesmen, and it would spark the inflationary spiral again.

Unemployment has led to other demands to deal "with the human problem." Three important proposals are being pushed. The first one would be an extension of last year's anti-recession programme of temporary unemployment compensation which is scheduled to expire on 1st April 1959. Another one is the very controversial recommendation to make a basic liberalisation of the unemployment compensation system by establishing Federal standards for the amount and duration of State benefits. A third proposal would provide, for the first time, Federal funds for unemployment benefits. It would thus establish some degree of Federal standards for general relief of the unemployed. This seems to be a very difficult project, since the relief requirements of an unemployed industrial worker in New York are quite different from those of a laid-off textile mill worker in a small town in the South.

There is much "pointing with pride" over the improvement in corporate earnings. They were nearly 2 per cent. higher in the final quarter of 1958 than in the corresponding three months' period of the preceding year. The trend is still upward. But these comparisons, it may be observed, are with the worst showings of the last recession.

The best comparative statistics of 1958, based on 2,219 corporate reports, so far this year, has just been published by the First National City Bank. For all companies put together, the drop in net income was 12 per cent. as compared with 1957. The two groups which were hit worst were amusements, off 49 per cent., and automobiles and parts, off 42 per cent. The biggest gain was 21 per cent.; this was registered by tobacco companies.

Agriculture fared better than industry last year. The average farmer made more money last year than any year since 1951. The net income per person on farms rose 10 per cent. in 1958 to a record of $1,068. Realised net farm income, which is funds left over after production expenses, was $13,100 million last year, up 21 per cent. from 1957. But the aggregate net was somewhat smaller than in 1951 because of higher costs.

The recent boost in the discount rate by Federal Reserve Banks, from 2½ to 3 per cent., have led to widespread attacks against the policy of the central banking system. Chairman MacChesney Martin, judging from many public utterances, is imbued with anti-inflation fight. Labour and liberal legislators blame the Board for tightening money rates in the face of unemployment. Even though I have disagreed with Mr. Martin on many occasions, I think the Federal Reserve Board, in its decision, was swayed more by the forthcoming large-scale Treasury operations rather than by its anti-inflation phœbia.

The Ides of March are corporate income-tax date for the Treasury. Normally, large revenues should be rolling in. But a large amount of tax anticipation notes has been sold and they will have to be redeemed at the same time. The reasoning may have been that slightly tighter money would relieve the Treasury position somewhat *vis-a-vis* the market.

Current predictions are that the new Federal Budget, after all has been said and done, will see a deficit of $3,000 million after expenditures of about $80,000 million and revenues of approximately $77,000 million. This is not exactly anti-inflationary, but it probably cannot be helped, owing to the continued world tensions.

The inflationary problem is now under study by three groups. The Cabinet Committee on Price Stability for Economic Growth, headed by Vice-President Richard Nixon. Then, there is the Joint Economic Committee, presided over by Senator Douglas. Also, Raymond J. Saulnier of the Council of Economic Advisers will seek sources of inflationary pressures which might come from Washington's own actions.

Another aspect of the inflationary problem concerns world trade. Statistics show that in some fields, the United States is gradually pricing itself out of world markets. Despite the mighty automobile industry which it possesses, the U.S. is now fifth among importers of motor vehicles. It ranks after West Germany, Britain, France and Italy. Every wage demand here increases the disadvantage of American manufacturers so far as costs of operations and competitive pricing are concerned. Apparently, the captains of labour cannot see that far. They only see the one argument that higher paid employees are better consumers which helps the economy. One of the most cheerful aspects of the business scene here and likely to remain so, is construction. Building activity in the first two months set a record of more than $7,100 million. A 39 per cent. pick-up in spending on new homes and apartments helped increase private outlays for construction to more than $5,000 million this year. Much progress has been made recently in procedures which enable the continuation of building and construction activities even during very severe cold weather.

PROFIT OF CENTRAL BANK SHRINKS

PACE OF DEPOSIT GROWTH SLOWS DOWN

THE accumulation of high interest-bearing time deposits, thanks to keen competition among banks for attracting funds from the public, coupled with restrictions on credit by the Reserve Bank, had a crippling effect on the profit-margins of banks even in 1957. Nevertheless, many banks were able to maintain their profit levels or even show a slightly higher profit for that year. These trends persisted in 1958 also. It is true that, last year, the credit restraint was less severe than in 1957, but this was more than neutralised by a marked setback in the economic activity of the private sector and the resultant fall in the demand for bank credit. While, therefore, deposits expanded, the most profitable outlet for them failed to keep pace with them. At the same time, administrative expenses, too, kept up their upward trend. As a result of all this, the shrinkage in profit-margins of banks was somewhat more pronounced in that year than in 1957. The results of the Central Bank of India Ltd., the largest commercial bank in the private sector, for 1958 fully reflect these trends. Its profit, which had gone up by Rs. 4.44 lakhs to Rs. 109.76 lakhs in 1957, suffered a drop of Rs. 7.26 lakhs to Rs. 102.50 lakhs in the year under review, thus more than offsetting the improvement witnessed in 1947.

With this decline, the upward trend in the Bank's profit noted since 1953, when it amounted to no more than Rs. 77.37 lakhs, has been reversed. The profit for 1958 represents only 12 per cent. of the gross income earned in that year, the ratio having dropped from 14.1 per cent. in 1957 and 16.1 per cent. in 1956. In 1951, the ratio of profit to gross income was as high as 24.6 per cent.

Despite the fall in profit, the Directors have found it necessary to step up the provision for taxation from Rs. 13 lakhs to Rs. 16.50 lakhs. No allocation has been made for investment account, which had received Rs. 15 lakhs in each of the previous four years and for which provision there is still some need. The bonus to staff has been raised further by Rs. 2 lakhs to Rs. 32 lakhs. The staff gratuity fund, too, has received Rs. 3.50 lakhs more at Rs. 10 lakhs. The dividend is unchanged at 14 per cent. per annum, to which level it had been stepped up in 1956 from 12 per cent.

An idea of the Bank's progress in recent years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross income	8,51.27	7,80.12	6,55.15	5,69.44
Interest and discount earned	7,05.83	6,41.33	5,32.64	4,52.42
Commission and exchange	1,30.42	1,30.14	1,13.61	93.59
Interest paid	3,83.34	3,25.01	2,29.63	1,69.52
Expenses	3,77.02	3,42.28	3,20.25	3,18.38
Depreciation	3.41	3.07	2.89	2.87
Profit	1,02.50	1,09.76	1,05.32	78.87
Provision for taxation	16.50	13.00	13.00	5.50
To sinking fund on property	1.08	1.02	0.96	0.91
„ investment account	..	15.00	15.00	15.00
„ bonus to staff	32.00	30.00	27.50	15.50
„ staff gratuity fund	10.00	6.50	5.00	5.50
Dividend	44.04	44.04	44.04	37.74
	(14%)	(14%)	(14%)	(12%)
Carry forward	17.33	13.44	18.23	13.40

	As on 31st December			
	1958	1957	1956	1955
Capital	3,14.55	3,14.55	3,14.55	3,14.55
Reserves	4,04.69	4,03.61	4,02.77	4,01.81
Deposits	161,97.67	154,86.73	134,72.15	129,66.32
Borrowings from other banks	1,43.21	1,98.02	9,21.55	4,54.23
Advances	99,87.36	101,49.39	90,76.28	72,20.70
Investments	52,92.53	49,48.97	52,97.99	56,71.98
Cash (including money at call)	23,52.80	18,39.27	16,81.29	15,59.77
Balance-sheet total	199,06.39	191,90.56	180,59.70	158,09.31
Ratio to deposits of—	%	%	%	%
Advances	61.6	65.5	67.4	56.1
Investments	32.7	31.9	39.2	44.1
Cash	14.5	11.9	12.1	12.1

As will be seen from the table, the gross income of the Bank has gone up during the year by Rs. 71 lakhs, but this increase does not compare well with that of Rs. 1.25 crore in 1957. Of this rise, the income from interest and discount accounts for Rs. 64 lakhs and other income for Rs. 6.37 lakhs, thanks to a net profit of Rs. 6 lakhs on sale of investments, etc. Commission and exchange earned do not show any worthwhile increase. The bulk of the increase in income has been offset by the rise of Rs. 43 lakhs in interest paid amounting to Rs. 3.68 crores, at which level it is more than double that paid in 1955. Administrative and other expenses have gone up by Rs. 35 lakhs.

An analysis of the balance-sheet shows that the pace of expansion in total deposits has slowed down; the rise in 1958 was only Rs. 7 crores, as against Rs. 16 crores in 1957 and Rs. 10 crores in 1956. This, however, is not true of individual classes of deposits. In fact, the fixed deposits of the Bank have gone up to a larger extent than in the previous year, the exact rise being Rs. 17.81 crores (to a peak of Rs. 75.33 crores), as compared with Rs. 15.18 crores in 1957 and only Rs. 2.35 crores in 1956. Savings bank deposits at Rs. 30.15 crores, show an increase of Rs. 1.56 crore, while current and other accounts have actually dropped by Rs. 12.26 crores to Rs. 56.50 crores, as compared with a rise of Rs. 1.05 crore in the previous year.

While in 1957 the Bank's advances recorded a net rise of Rs. 10.73 crores, during the year under review, they witnessed a small shrinkage of Rs. 1.62 crore to Rs. 99.87 crores. A variety-wise break-up of the advances shows that loans, cash credits and overdrafts have enlarged by Rs. 81 lakhs to Rs. 85.30 crores, while bills purchased and discounted have declined by Rs. 2.43 crores to Rs. 14.58 crores. The overall decline in advances in the face of a rise in deposits has brought down the credit ratio from 65.5 per cent. to 61.6 per cent. However, the liquid assets stand strengthened, as witness the increase of Rs. 3.46 crores in investments and of Rs. 5.13 crores in cash balances. The investments at Rs. 52.92 crores are shown at book value, the market value of the same (other than the Treasury Bill holdings amounting to Rs. 1 crore) being Rs. 51.14 crores. The difference, however, is not large, being only Rs. 78 lakhs. Three years earlier, it was as large as Rs. 164 lakhs.

PANDYAN BANK DOES WELL

The accounts of the Pandyan Bank Ltd. (Managing Director: Mr. S. N. K. Sundaram, Madurai) for the year ended 31st December 1958, as compared with those for the previous year, disclose all-round progress. The Bank's total resources have swelled from Rs. 3.28 crores to Rs. 4.51 crores, of which deposits at Rs. 3.89 crores account for an increase of Rs. 1.15 crore. There has been an enlargement in the credit portfolio, too, from Rs. 1.72 crore to Rs. 1.94 crores. At the same time, the Bank's liquid assets have been strengthened, its investments rising from Rs. 69.56 lakhs to Rs. 95.53 lakhs and cash balances from Rs. 53.08 lakhs to Rs. 1.22 crore.

In refreshing contrast to the general trend of bank earnings, the profit of the Bank has risen from Rs. 3.50 lakhs to Rs. 4.19 lakhs, thus maintaining the upward trend since 1952. In consonance with this encouraging performance, the Directors have stepped up the dividend to shareholders to 10 per cent. per annum from 7½ per cent. paid for each of the previous three years. This has been done after providing Rs. 2.22 lakhs for taxation (as against Rs. 2.40 lakhs including an additional provision of Rs. 52,000 in respect of 1956), transferring Rs. 25,000 (*nil*) to the general reserve and raising the amount set aside to the contingency account from Rs. 25,000 to Rs. 75,000. The dividend absorbs Rs. 1 lakh (as against Rs. 75,000), leaving to be carried forward Rs. 30,428, as against Rs. 33,503 brought in.

The Bank's progress in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	1958	1957	1956	1955
Capital	10.00	10.00	10.00	9.99
Reserves	10.50	10.25	10.25	9.50

The Bank proposes to issue additional capital to the extent of Rs. 5 lakhs and this will be offered, in the first instance, to the existing shareholders at par. The sanction of the Controller of Capital Issues has been obtained for the purpose.

Though the Bank is small in its resources, it serves a number of small towns in the South and has got many firsts to its credit. It is the first bank in India to introduce (in January 1953) instalment credit service and the first to introduce savings prize scheme. It is claimed to be the first in the world to establish all-women's branch bank; first in this country to introduce (in 1956) employee participation in share capital; first to hold a cover under bankers blanket bond policy; first to use coin counting machines in daily operation and the first to build a fully air-conditioned seven-storeyed modern bank building south of Madras.

PROGRESS OF BANK OF BARODA

BUSINESS EXPANDS BUT PROFIT DECLINES

THE steady upward trend in the profit of the Bank of Baroda Ltd. (General Manager: Mr. N. M. Chokshi) noted since 1954 abated during the year ended December 1958. In fact, there was a marked setback, the actual profit before taxation for 1958 being Rs. 27.43 lakhs, as against Rs. 43.85 lakhs and Rs. 39.90 lakhs for 1957 and 1956, respectively. The drop over 1958 is as much as 37.4 per cent. and has occurred despite the notable expansion of Rs. 43.61 lakhs to Rs. 328.89 lakhs in the Bank's gross income. This is due, as in the case of banks in general, to the steep rise in the cost of acquiring funds, as well as in that of establishment. Thus, the total interest paid by the Bank during 1958 went up by Rs. 45.40 lakhs to Rs. 185.45 lakhs. Thus, this one item of expenditure alone has more than outweighed the growth in gross income. On top of this, other expenses were higher by Rs. 13.49 lakhs at Rs. 112.96 lakhs; the whole of the increase is accounted for by salaries and allowances which amounted to Rs. 85.11 lakhs, as against Rs. 71.41 lakhs in the preceding year. A part of the increase must be attributed to the expansion in the Bank's sphere of activities. The Bank opened as many as ten branches and increased the strength of its staff from 2,464 to 3,037. The number of its deposit accounts rose from 169,941 to 206,007. It would have fared better but for the lack of remunerative investments caused by the general slowing down in the activities of the private sector in the past year. The severe import restrictions adversely affected the foreign exchange business, a field which the Bank had entered only a few years ago and made a promising start.

Thanks to the sharp fall in profit, the dividend to shareholders has been cut to 12 per cent. per annum from 14 per cent. per annum for 1956 and 1957. The dividend is, of course, on the increased capital, namely, Rs. 125 lakhs. During the year, the Bank issued 100,000 'B' ordinary shares with Rs. 25 credited as paid-up on each share to the shareholders of the Hind Bank Ltd., the entire business of which was taken over with effect from 1st August 1958. In keeping with the fall in profit, there is a sizable reduction of Rs. 15.50 lakhs to Rs. 5.50 lakhs in the provision for taxation. No allocation has been made to any reserves for the fifth year in succession. In fact, the sum left to be carried forward is down from Rs. 4.11 lakhs to Rs. 3.04 lakhs. This suggests that even the attenuated dividend has not been fully earned.

The following comparative table shows at a glance the Bank's progress in recent years and the salient features of its balance-sheet:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Gross income	3,28.89	2,85.28	2,29 65	1,80.04
Of which:				
Interest and discount earned	2,78.19	2,33.40	1,86.83	1,49.27
Commission, exchange	49.97	51.15	42.40	30.14
Interest paid	1,85.45	1,40 05	1,02.53	76.86
Expenses	1,12 96	99.47	85.12	71.05
Depreciation	3.05	1.91	2.10	1.58
Profit	27.43	43.85	39.90	29.65
Provision for:				
Taxation	5.50	21.00	15.75	9.00
Bonus to staff	8.00	9.50	8.75	8.00
Dividend	15 00	14 00	14.00	12.00
	*(12%)	(14%)	(14%)	(14%)
Carry forward	3 04	4.11	4.78	3.36

	As on 31st December			
	1958	1957	1956	1955
Capital	1,25 00	1,00.00	1,00.00	1,00 00
Reserves	1,59 50	1,28.00	1,28.00	1,28.00
Deposits	67,10.39	52,82.81	45,13.85	40,51.62
Borrowings from banks	2,44.79	0.63	4,16.21	4,03.45
Advances (including bills purchased and discounted)	40,11.24	34,99.62	35,86.57	30,41.56
Investments	26,72.75	11,87.32	11,80.33	12,29.79
Cash (including money at call)	6,51.68	8,71.49	4,52.33	4,76.61
Balance-sheet total	84,66.52	64,32.58	63,08.59	56,29.03
Ratio to deposits of—	%	%	%	%
Advances	59.8	66 2	79.4	75.0
Investments	39.8	22.5	26.1	30.4
Cash	9.7	16.5	10.0	11.8

* On the increased capital.
The Bank has paid a final dividend of Rs. 3.00 per ordinary share and Rs. 1.50 per 'B' ordinary share.

It may be noted that the expansion in gross income noted earlier is the result of banking profit, pure and simple. The entire increase was accounted for by larger receipts by way of interest and discount earned, with income from commission and exchange having fallen a little.

The total deposits of the Bank have gone up by Rs. 14.28 crores or 27 per cent. The increase is accounted for largely by fixed deposits which have risen from Rs. 31.56 crores to Rs. 41.38

(*Continued on page 487*)

WORLD HUNGER FOR CAPITAL

PRIVATE FUNDS WILL CONTINUE TO PLAY GREAT PART

[An interesting analysis of international capital movements is provided by the Information Division of the U.K. Treasury in the February issue of its publication entitled Bulletin for Industry. This article is of topical interest to India, as its capital needs are large and almost insatiable. We are accordingly reproducing the article on this page. It will be seen therefrom that it is advantageous to get private capital rather than public capital and that, if India is to get such capital in sizable quantity, it will have to offer terms that will compare favourably with other countries.—ED.]

ONE of the most urgent demands of the post-war world has been for long-term international capital. The rapid political evolution of the underdeveloped countries has been accompanied by an increasing awareness of the need for more rapid economic development; and, unable to find sufficient investment funds at home, they have looked for it abroad, particularly in the more advanced countries. These, however, have had abnormal investment needs themselves. There was first the need to repair the ravages of war, not least in Western Europe. Secondly, there were the new scientific discoveries and developments, some dating from the war years, calling for new investment in the developed countries, e.g., in atomic energy and other modernisation of basic industries, in automation and other new techniques in manufacturing industry.

Private international investment funds have latterly revived and there have in addition been large flows of public funds. On both counts, the United Kingdom has played a leading part, particularly in the overseas sterling area: its capital exports, though smaller than those of the U.S.A., have represented a larger share of national income. The need for capital is, however, still immense. The extent to which it is met will depend upon how much the advanced countries are able to save and make available, over and above what they need for their own development. This article gives some account of the ground already covered.

Private Capital

Before the First World War, the chief capital exporting nations were the United Kingdom, France and Germany. At the outbreak, their accumulated foreign long-term investments were three-quarters of all international investments:

($000 million, 1913-14)

U.K.	18.0
France	9.0
Germany	5.8
Other countries	11.2
Total	44.0

Europe and North America were the main recipients of private investment from abroad. These were areas of industrial progress, with further scope for development, where foreign funds could be put to good economic purposes and often led to the "breeding" of more capital. Thus, the countries that at first attracted capital tended to go on receiving a considerable share. In 1914, the aggregate amounts invested were, by destination, as follows:

($000 million)

Europe	12.0
North America	10.5
Latin America	8.5
Asia	6.0
Africa	4.7
Oceania	2.3
Total	44.0

After the first war, the flow was resumed, but, again, the underdeveloped countries received less than those which had already made substantial economic progress. Loan capital for heavily populated and very poor countries, like China and India, was particularly scarce. In the late 'twenties and in the 'thirties, the total greatly diminished: in particular, advanced countries were discouraged from exporting funds by international instability.

After the Second World War, the flow of private funds was slow to recover, and, at first the massive reconstruction of the war-damaged economies of Western Europe absorbed a large part of the funds available. The United Kingdom has been a recipient of considerable funds from abroad, but has quite separately been a heavy exporter of private funds, and the net outflow has been large. These funds and those from the U.S.A. have been the main private sources. Up to 1952, the total international flow of private capital was around $2 billion a year, in money terms about the same as in the mid-twenties, in purchasing power about half as much. Since 1952, there has been some increase: the net export of long-term capital from the U.S.A. and the U.K. has been in the neighbourhood of $2.3 billion a year, to which must be added the net figure for all other countries. 1956 was probably a record year, and there were further sharp increases in 1957 by some of the main capital exporting nations:

($ million)

	1956 Gross	1956 Net	1957 Gross	1957 Net
U.S.A. (new funds)	2,446	1,904	2,736	2,896
U.K.	—	632	—	784
Netherlands	59	21	128	—45
W. Germany	94	—	193	38

Continental Western Europe and Japan are net importers of capital; so, on a vast scale, is Canada, now by far the world's largest. The other main importers of private capital are in Latin America and the overseas sterling area. In the flow from industrialised countries to the rest, a good deal has been ploughing-back by the oil industry, and funds for manufacturing industry have favoured countries already developed or semi-developed. A report for the G.A.T.T. has made the following estimate of the way net private long-term capital investment by industrial countries is divided among the others:

($ million)

	1954	1955	1956
To Oil exporting countries	39	58	421
Semi-industrialised countries	465	478	601
Non-industrialised countries	437	449	503

Private capital has played, and must continue to play, an important part—indeed, might be expected to play by far the greater part. Hence the need to make conditions attractive in the recipient countries. Private funds are, and will continue to be, supplemented by Government capital; but, in the long run, the country importing capital will have—and want—to stand on its own feet: and that means attracting private capital.

Public Capital

In countries both underdeveloped and basically poor, investment is likely to be slow and on a small scale, unless there are public programmes. Private capital, however, is not always attracted to Government schemes bearing fixed interest. It has, therefore, been augmented—indeed outstripped—since the war by public funds, which tend to meet the needs of the recipient more closely and are generally subject to his direction. They can be either direct from Governments or channelled through international agencies; up to 1952, they were chiefly direct, but the International Bank for Reconstruction and Development has been assuming a growing importance.

In the early post-war years Europe absorbed the lion's share, but, by the early fifties, the balance was beginning to shift towards the underdeveloped countries:

($000 million, annual averages)

	By countries 1946–50	By countries 1951–52	By international organisations 1946–50	By international organisations 1951–52	% of total grants & loans 1946–50	% of total grants & loans 1951–52
Western Europe	0.4	3.3	0.6	*	58	47
Underdeveloped countries	1.8	1.6	0.2	0.4	17	25

* Too small to show.

Moreover, Western Europe—and particularly France—was to some extent acting as a channel for the movement of public funds from North America to the underdeveloped countries. In the two years 1951-52, Europe received $4.6 billion from the U.S. but in turn paid out $1.5 billion to other areas. According to estimates based on about two-thirds of international economic aid to non-industrial countries in 1956-57, 8 per cent. went to oil-exporting countries, 4 per cent. to semi-industrialised countries, and 88 per cent. to other non-industrial countries. Two-thirds of public economic assistance (net) in 1956-57 went to countries with a *per capita* income less than 100 dollars:

Per capita income	1956-57 Pop. million	1956-57 Net aid ($ million)	1956-57 *Per capita* ($)	1953-54/1955-56 *Per capita* ($)
Less than $100	740	1,004	1.4	1.0
$100-200	204	464	2.3	1.9
Over $200	61	72	1.2	1.1
All	1,005	1,540	1.5	1.2

There was considerable variation inside each group, some countries receiving considerably more, others considerably less than the average.

Over the past three years, the rate of lending of the I.B.R.D. has been rising. In 1955-56, it agreed loans of about $400 million; in 1957-58 this had risen to over $700 million; and the proposed doubling of the capital stock of the Bank will enable it to maintain or increase this rate of lending in the future.

Throughout the post-war period, the U.K. has been an important source both of private capital and of Government grants and loans. In addition, certain underdeveloped countries—e.g., India and Pakistan—ended the war with extra large holdings of sterling reserves, which they have drawn upon as an important source of development finance. Colonial balances have risen, and the savings they have made are an important fund they will be able to draw upon in the future.

Private capital movements to the overseas sterling area are not restricted by exchange controls. Policy on investment outside the area is generally to allow outward movements of capital for approved direct investment projects, but not for portfolio investment. The net outflow of private capital was probably on a rising trend over recent years, with an annual average of about £200 million between 1955-57. This is also the average for the sterling area separately, the outflow to the rest of the world being almost offset by the inward movement.

Grants and loans (including aid in kind and cancelled claims) totalled nearly £2,000 million between the end of the war and 31st March, 1958. About one-third was in the form of loans. The U.K. has a special responsibility to the colonies, which has been discharged in the main in the form of grants. More recently Government-to-Government loans to independent territories, especially India and Pakistan, have been negotiated. At Montreal, it was announced that new Exchequer loans would be made available for the colonies.

Measured against competing claims for funds at home, or against what has been done by other advanced countries during this period, the U.K. has made an impressive contribution to the development needs of other countries.

There has been a very strong demand for capital for domestic use in the advanced countries, and the international flow of private funds has been on a smaller scale than in some past periods. The less advanced countries, however, have benefited—and to an increasing extent—from a big expansion of public international capital. For some of them, the terms of trade in the early post-war years were better than pre-war, and this strengthened their overseas earnings. Moreover, some of them ended the war with an accumulation of large sterling balances which they have been able to use for development purposes.

Nevertheless, it has long been recognised that there are wide disparities between living standards in the underdeveloped countries and in the West, and, as communications bring the world community closer, the realisation grows that this is a challenge to the advanced nations. The main burden in carrying forward development programmes is being shouldered by the underdeveloped countries themselves. But they must continue to look for help to friendly countries and international institutions. A growing volume of world trade, by increasing their export earnings, will help. But some of the investment funds that are needed can only come—directly or indirectly—from the advanced countries.

Some of the abnormal short-term calls on the U.K.'s savings have diminished; and, although there are still big and growing demands for capital at home, it is in our interest to support the efforts that are being made in Asia and Africa. For to the humanitarian motive is added the economic advantage of expanding wealth and the political advantage of a stronger free world. The funds can only be generated by savings, however, and on a sufficient scale to provide for foreign investment after domestic investment needs have been met.

REDUCED SUPPLY OF RAW COTTON

CONSUMPTION, TOO, LOWER

DESPITE the estimated increase in production during the current season, that is 1958-59, by as much as 1.2 million bales of 478 lbs. each, aggregate world supply will still be roughly three-fourths of a million bales lower than in the last season. According to the estimates of the International Cotton Advisory Commitee, Washington, total supply this season will be of the order of 47.4 million bales, as against 48.2 million bales in 1957-58. Carryover at the beginning of the season was only 18.4 million bales, as against 20.4 million bales at the start of last season. The increase in production was thus offset by the fall in stocks, so that the aggregate supply is down by 800,000 bales.

The following table indicates the supply and distribution of cotton in the 1957-58 and 1958-59 seasons:

(In million bales)

Item	1957-58	1958-59
United States—		
Stocks	11.4	8.7
Production	11.0	11.5
Total	22.4	20.2
Other free world—		
Stock:		
Net importers	6.0	6.0
Net exporters	3.0	3.7
Production	16.8	17.5
Total	25.8	27.2
Total free world—		
Stocks	20.4	18.4
Production	27.8	29.0
Total	48.2	47.4
Consumption—		
U.S.A.	8.0	8.0
W. Europe	7.5	6.9
India	4.4	4.3
Japan	2.5	2.3
Others	6.1	6.3
Total free world	28.5	27.8
Net export to Communist Countries	1.3	1.3

Production estimates in many countries of the free world outside the U.S. have been reduced, so that the prospective increase in aggregate free world production outside the U.S. is only 700,000 bales, as against the earlier expectation of one million bales. Significantly large crops are reported only in a few countries, such as Mexico, the Central American countries, Egypt, the Sudan and Uganda, while production is expected to show some decline in Syria, Pakistan, Brazil and Argentina.

Statistics covering the first three or four months of the season show that aggregate free world consumption is running significantly under that a year ago. Reviewing the cotton situation, the Committee says that, in interpreting these data with a view to projecting consumption for the whole season, account should be taken of the fact that consumption in many countries, while lower than a year ago, shows some increase, as compared with the end of last season. Also, even if consumption continues at its present reduced rate, comparisons late in the season, according to the Committee, may not be so unfavourable, because textile activity during the last half of the 1957-58 season was already curtailed in many countries.

United States

In the U.S., according to a report by the Department of Commerce, the textile situation, particularly in apparel and other fabric consuming industries, has improved and there is optimism about prospects for 1959. The recovery in the textile industry is, however, lagging behind the general rise in economic activity, but cotton mills, it is stated, would benefit from any substantial upturn in business. Domestic demand is expected to increase, but no reversal of the downtrend in cotton textile exports is anticipated. The recovery in rayon and acetate production in the U.S. was already under way in 1958 and a substantial increase in man-made fibres as a whole during the present year is in prospect.

Reflecting the improved conditions, cotton consumption in the U.S. has moved ahead of late and the daily rate during the final quarter of 1958 was higher than the corresponding period in 1957. Aggregate cotton consumption during the first five months of the present season was fully equal to the corresponding period of the preceding season. It is held in some quarters that consumption for the full season will show some increase over last season's 8 million bales. But this depends, to a large extent, on how mills react to the lower cotton prices expected to prevail in 1959-60.

In Canada, possibilities are for an improvement in the textile situation during the coming months. An improved price trend has been reported in recent weeks and business in certain sectors is substantially better than a year ago. Raw cotton consumption during the first five months of the season was, however, still running slightly under the comparable period in 1957-58, but may be higher during the remainder of the season.

Consumption in the U.K. during the first three months of the current season was nearly 20 per cent. lower. Cotton yarn output in November 1958 was 17 per cent. less than a year ago. Short-time working is quite widespread and many mills took extended holidays at Christmas. The relevant factors are declining retail sales, a continued downtrend in cotton textile exports while imports remain at a high level, and uncertainty surrounding prices generally. The verdict of the Restrictive Trade Practices Court was that the minimum price agreement of the Yarn Spinners Association was contrary to the public interest. For the eleven months ended November 1958, cotton yarn and cloth exports were lower by 27 per cent. and 15 per cent. respectively. Imports of cotton cloth actually exceeded exports in 1958.

Continent

Summing up the situation on the Continent, the U.K. Cotton Board says: "There have been few signs of any significant improvement in the reduced level of activity experienced by the Continental cotton industries. Cotton yarn output in these countries taken as a whole during the third quarter of 1958 was about 5 per cent. below the level of the third quarter of 1957."

In France, the majority of mills have been working less than 40 hours a week and consumption shows a marked decline of 11 per cent. during the first three months. Rising imports and a marked contraction in exports have adversely affected the textile industry in the Federal Republic of Germany. In the weaving sector, the volume of new orders has declined and there has been some accumulation in cloth stocks. In an effort to counter increased production costs and in the interest of greater efficiency, the Government has offered substantial financial assistance for re-equipment of the textile industry. Cotton consumption in August and September last was about 3 per cent. lower than the corresponding rate a year ago. Consumption in many of the other textile industries in Western Europe such as Switzerland, Sweden, Finland, Italy, Belgium is lower than a year ago. Portugal and Spain seem to be exceptions to the general trend, the former shows an increase over the first quarter and the latter expects consumption to continue at record levels.

Although the textile industry in most West European countries is presently operating at a level much under a year ago, there are factors which mitigate undue pessimism regarding the future. As compared with the closing months of the 1957-58 season, consumption has risen in a number of countries and, at the present rate, may be more favourable in future.

The reduction in textile demand in West Europe and in other manufacturing centres has been aggravated by the price situation, particularly with respect to raw cotton, and there is no doubt that greater stability and a clearer indication of the price trend will do much to improve the textile outlook.

Japan

Consumption in Japan during the first quarter of the season was down by 9 per cent., as compared with a year previous. Cotton yarn production in November was unchanged from the October level. The present curtailment programme in this country will continue in effect at least until the end of this month. Actually, despite the production cutbacks, liquidation of surplus stocks of cotton yarn and cloth has been slow and, in recent months, the Government has been obliged to employ supplementary measures to reduce stocks, such as the freezing of 50 million square yards of cotton fabrics, buffer stock operations of the Cotton Textiles Export Promotion Association designed to stabilise prices and maintain orderly distribution of exports, and the setting up in October of the Committee for Overall Textile Measures to deal with the longer-term problems for the textile industry, generally.

(*Continued on page 487*)

COTTON MILLS IN BOMBAY

MR. SHANTILAL SHAH ON MISMANAGED UNITS

THE labour situation in the cotton mills of Bombay figured prominently in the course of discussions on budget demands in the State Legislative Assembly on Friday the 13th inst. Strong criticisms of labour policy were hurled at the Government by some Opposition members. It was alleged that the Government extended favoured treatment to managements and unions affiliated to the I.N.T.U.C. Attention was drawn to the illegal acts with regard to sickness insurance, provident fund and dues to workers' co-operatives committed by certain mills and the Government was urged that it should take over the textile mills not being managed properly.

In his reply, Mr. Shantilal Shah, Minister for Labour, admitted that certain mills were guilty of the illegal acts mentioned above. Surely, such acts are distressing and deserve to be condemned. Since these acts bring discredit to the whole industry, those who are in charge of the industry will do well to take disciplinary action against them. It is true that the Government is there to deal with the erring mills, but the industry's spokesmen need not wait for Government action alone. The Millowners' Associations, for instance, could pull up the mills that are not playing the game and, if they refuse to fall in line, they should be expelled from the Association. If this system is to function effectively, it is, of course, necessary that the labour unions should bring to the notice of the Association the defaults of mills, giving it reasonable time to investigate into their complaints.

Workable Suggestion

The opposition members of the State Legislative Assembly, on their part, should, instead of complaining again and again against illegalities of mills, evolve a workable suggestion for dealing with illegalities. It is gratifying to be assured by Mr. Shah that he would be prepared to consider any such suggestion. This is the proper approach, and not taking over of mills by the State Government, as demanded by the Opposition. Such a taking over, Mr. Shah said, presented a peculiar problem to the Government, apart from several other difficulties. He observed:

"Such a step means the creation of the public sector, even if it be temporarily, while it is surrounded by the private sector. It being the policy of the Union Government to place the textile industry in the private sector—and within the limitations it improves—the Government is doing all that it can for the industry and those employed in it.

"Employment in the textile industry has gone down. It is also true that some of the mills in the Vidarbha region are in difficulties. Where the managements have been at fault, it may be possible for the Government to take over the mills in certain circumstances and under certain conditions. One of the ways open to the Government to take over a textile mill is when it goes into liquidation. But there is always a time lag of about six months after obtaining the necessary permission from the High Court and restarting the mill."

Mr. Shah was right when he stated that, will all the difficulties which the textile industry in India was now facing, unemployment in this sector was much less in Bombay State than anywhere else in the country. He recognised that the entire blame for the difficulties of the cotton industry could not be placed at the door of the employers. "The problems of the textile industry," to quote him, "are so complex that it would not be right to blame the owners of the textile mills for all the troubles of the industry." In support of this view, he mentioned three adverse factors. First, the price of Indian cotton "is very much higher" than that of foreign cotton. It will not be possible for cloth manufacturers in this country to import sufficient cotton from other countries, because of foreign exchange difficulties. Indian manufacturers are, therefore, not in a position to compete with others in the foreign markets. Secondly, with the changing tastes of the people, coarse and medium cloth produced by many mills in this country is having much less demand than before. Thirdly, the mills are not in a position to install machinery right now for the manufacture of finer counts of yarn and cloth, as this too has a bearing on the foreign exchange position. Mr. Shah's sense of understanding of the problems confronting the cotton mill industry thus is, indeed, fair and objective.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CHAIRMAN, THE HON. MICHAEL W. TURNER'S SPEECH

THE Annual General Meeting of The Hongkong and Shanghai Banking Corporation was held in Hong Kong on Friday, 13th March, 1959.

The Hon. Michael W. Turner, C.B.E., Chairman, addressed the meeting as follows:

"LADIES AND GENTLEMEN,

"As you will see from the accounts before you, the profit for the year amounts to $23,466,050 which is an increase of $2,400,000 over last year's figure. In accordance with our normal practice, this profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for all known doubtful debts and contingencies.

"It is proposed that a sum of $4,000,000 should again be written off Bank premises and, after allowing for this transfer and the interim dividend of £1.2.6 per share, the Directors recommend the payment of a final dividend of £1.17.6 per share, leaving a balance of $2,085,000 to be carried forward to next year.

"Turning to the balance-sheet, the total shows an increase of $43,000,000 over the figure for 1957. Hong Kong currency notes in circulation show an increase of $16,000,000, due to a rise in the excess note issue and this increase is reflected on the other side of the balance-sheet by a similar increase in Hong Kong Government Certificates of Indebtedness. Current, deposit and other accounts show a rise of $31,000,000, while acceptances on behalf of customers show a decrease of $5,400,000.

"When we turn to the assets side of the balance-sheet, we find advances fell by $90,000,000, as did trade bills discounted which decreased by $53,000,000. Money at call and short notice and investments showed rises of $101,000,000 and $67,000,000, respectively, while smaller increases are to be seen in cash in hand and British and other Government Treasury Bills. The ratio of readily realisable assets to the total liabilities has risen by about 2 per cent. to 50.57 per cent.

"The manner in which our funds were utilised at the end of the year shows only too clearly the trend of reduced economic activity which has affected most of the territories in this area. As has been seen, the total of both trade bills and advances is reduced which is due to lower commodity prices and the restrictions on imports which have been such a noticeable feature during the past year. Fortunately, as forecast by my predecessor last year, the trend of British Government securities was upwards, if perhaps at a slower pace than we had hoped to see, and, as a result, it was not necessary to allocate any further sums for the purpose of writing down the value of our holdings.

"The extraordinary general meeting of shareholders held last month approved the increase of the authorised capital of the Bank from $50,000,000 to $100,000,000 to enable the necessary shares to be issued to the shareholders of Mercantile Bank Limited who accepted our offer. The expiry date of our offer was extended to 6th March and, at that date, we held altogether 97.5 per cent. of the total issued capital of Mercantile Bank Limited. It may be remembered that this offer included a cash alternative and of the 2,380,681 shares of Mercantile Bank Limited, which were not at that time held by us, acceptances for cash numbered 406,142 and for shares 1,902,020. This will necessitate our issuing 95,101 of our own shares which will increase the paid-up capital of the Bank to $61,887,625. The outstanding balance we will take steps to acquire under the procedure laid down in the United Kingdom Companies Act and the paid-up capital will be subject to a small increase as a result of the issue of shares in respect of late acceptances and of allotments made in the pursuance of proceedings under Section 209 of the United Kingdom Companies Act.

"During the year, we opened a new office in Kuching and at the beginning of 1959 an office in the Tanglin district of Singapore which has already had the effect of relieving the pressure on our Orchard Road office.

"Finally, I should like to take this opportunity to express our thanks to the Branch Managers and the staff of all nationalities for their continued loyalty and efficient service to the Bank.

"Ladies and gentlemen,

"The Report and Statement of Accounts having been in your hands for the required period, I will now formally propose their adoption as presented."

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act 1948 in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1958, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

HONG KONG, *27th February*, 1959.

STATEMENT IN CONNECTION WITH SUBSIDIARY COMPANIES

1. The Investments in Subsidiary Companies appearing in the annexed Balance Sheet represent 14,975 Shares of the Capital Stock of The Hongkong and Shanghai Banking Corporation of California and the whole of the Issued Share Capital of three Trustee Companies and four Nominee Companies. The Balance Sheet of The Hongkong and Shanghai Banking Corporation of California at 31st December, 1958, is annexed. The Accounts of the three Trustee Companies and the four Nominee Companies have not been submitted as the Directors are of the opinion that such Accounts would be of no real value to the Members of the Bank.

2. No part of the profits earned by the Subsidiary Companies has been dealt with in the Accounts of the Bank. The net aggregate amounts of the Subsidiaries' profits, after deducting the Subsidiaries' losses, so far as they concern the Bank, are as follows:—

	Hong Kong Dollars
(I) For the year ended 31st December, 1958	$162,232
(II) For previous financial years	472,309
	$634,541

MANAGEMENT-LABOUR VIEWS ON COTTON INDUSTRY PROBLEMS

MUCH SIMILARITY NOTED

From a Special Correspondent

MANCHESTER, *10th March*

MANCHESTER LETTER

COINCIDENCE brought out two documents on the same day last week—the annual report of the Master Spinners' Federation and the quarterly survey issued by the Operative Spinners' Amalgamation. They showed how much in line are employers' and union views on major topics now being discussed within the industry. Here is what the two bodies say on the Hong Kong pact:

Master Spinners' Federation: "It is particularly regrettable that yarn has not been covered, as the dangers of increasing yarn imports are obvious. The Federation has continually pressed this point at the highest level."

Operative Spinners' Amalgamation: "The terms also allow free importation of cotton yarn to any amount, as well as certain goods made from yarn, such as knitted underwear and outerwear. This latter will certainly require constant watchfulness and, should these yarn imports become excessive, a solution to the problem thus created will have to come much quicker than has been the case with cloth." Mr. Charles Schofield, Secretary of the Union, adds: "It is very probable that, with the expansion of the Hong Kong industry, the 165,000,000-yard figure will be an extremely good starting point for the next round of negotiations, prior to the expiration of the three-year period, with the possible result that, by this method, they will keep ahead of current imports."

The views of the aforesaid bodies on the rejection of the Yarn Spinners' Agreement by the Restrictive Practices Court are as follows:

Master Spinners' Federation: "While the Federation has not been directly concerned with the marginal cost maintenance scheme for cotton yarns, it has always held the view that some form of marginal cost scheme is necessary in an industry where potential productive capacity in the form of machinery in place greatly exceeds potential offtake."

Operative Spinners' Amalgamation: "This system of prices has served the industry and the work-people well by enabling the industry to set aside reserves for ultimate re-equipment and modernisation on a scale never before possible and it has been the means, in large measure, of providing better working conditions, as there have been very few 'bad spinning' complaints."

Expanding this point, Mr. Schofield refers to pre-war days, when yarn customers "mercilessly beat down the prices of yarns, and, to meet the lower price, the spinning firm purchased lower and lower qualities of raw cotton." He fears the debasement of quality standards by the re-establishment of a buyers' market in the industry, pointing out that, in the 1930's, the result was the use of cheaper and cheaper cottons and wage reductions.

As an interpolation here, the latest bulletin issued by the Manchester Cotton Association backs up this argument. Reports received so far since the abandonment of the Yarn Agreement, it comments, suggest that spinners are being compelled to produce yarn at prices dictated by buyers, with a consequent adverse effect on quality. "This state of affairs," the Association adds, "has resulted in increased demand for the cheapest raw cottons. The odd outcome has been that, whereas good quality cottons are cheaper than for many years, the price of other types, some of which have been frankly referred to as 'rubbish,' has held firm."

Only on the vexed issue of compensation for workers displaced under redundancy schemes do the two sides differ in view. The employers' attitude is firmly stated: "It would be undesirable for the industry to accept the proposal in principle, as the claim was essentially for the payment of a supplement to unemployment benefit, which is a national responsibility." Mr. Schofield replies: "No thought is given to the men who in most cases have spent the whole of their working lives at one mill, representing up to 50 or more years' service."

Shift-work Talks

During a year when production has consistently exceeded the offtake of the mills, it is strange that proposals have been contemplated to introduce night shift-working in spinning firms. Yet, if the projects now afoot to reduce the size of the trade are carried to their logical conclusion, the day may come when three-shifts are a regular feature of the industry, if it is to be truly competitive.

The Cardroom Association has indicated its readiness to consider applications from mills for night shift-working by men on a partial basis, subject to various points, including the standard of re-equipment, the spacing of machinery, amenities, hours of work, the wages and premium to be paid, security offered and trade union membership. Despite joint meetings, little progress towards a central agreement is reported, but individual arrangements can be made at mill level with the approval of local associations.

Proposals for night shift-working in mule spinning mills have been submitted to the Operative Spinners' Amalgamation and careful consideration will be given to individual applications. The Federation observes that, although such arrangements are unlikely to be introduced in the immediate future, it believes facilities should be available without having to consider each case as it arises.

Compensation Plea

The Industrial Disputes Tribunal has refused to make a decision on the application by nine trade unions for compensation payments to Lancashire cotton workers who are made redundant by the closing down of mills. Mr. Iain McLeod, Minister of Labour, gave this news in a letter to the trade unions and employers' organisations. The view of the Disputes Tribunal, under the chairmanship of Lord Terrington, was that the question should be considered along with the general problem of the reorganisation of the cotton industry. "No doubt the views of the Tribunal will be taken into account in the present discussions on the future of the cotton industry," Mr. McLeod said.

These discussions are now in progress within the various sections of the industry and the Cotton Board is expected to report to the Government at an early date on how it is proposed to deal with the need for contraction.

In his letter to the Minister, Lord Terrington said: "We are not aware of any cases where awards have been made to compel an industry as a whole to set up machinery to deal with redundancy payments, or, indeed, where a scheme has been adopted for a whole industry."

Mr. Charles Schofield, General Secretary of the Operative Spinners' Amalgamation, said that the trade unions would press forward with their longstanding campaign for compensation for redundant workers. Mills had continued to close down, while the issue of compensation had dragged on over a lengthy period. In any agreement linked with the reorganisation of the industry, the unions would ask for compensation to apply from a retrospective date.

More Shipping Handled

The Port of Manchester handled almost 18,000,000 tons of traffic last year, an increase of over 1,000,000 tons on 1957. Sir Leslie Roberts, Chairman of the Manchester Ship Canal Company—the port authority—told the annual meeting recently, that, although the seaborne tonnage rose, largely as a result of the recovery in the oil trade, following the Suez crisis, there was a marked reduction in the quantity of general traffic passing through the port.

Sir Leslie spoke of two major financial problems continuously affecting all ports in the United Kingdom, particularly the larger ones. The ever-growing importance of equipment which had to be renewed at regular intervals and the costs involved bore no relation to the original expenditure.

"The margins permitted by the level of port charges over the years has not allowed for reserves of anything like adequate proportions. There has been an endeavour on the part of the ports to keep their charges at a low level and they have thus helped to reduce inflationary tendencies. But, surely, there must be a limit to this, if ports and their equipment are to be kept in proper shape." Sir Leslie said a second problem arose from costly schemes of new works made necessary by developments in shipping services and the use of larger ships.—*All Rights Reserved.*

SAFEGUARDING INTERESTS OF SUGAR CONSUMERS

UNION FOOD MINISTER'S ASSURANCE

THE keynote of the speech of Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, at the annual general meeting of the Indian Sugar Mills' Association held at New Delhi last week, was his concern for consumers of sugar. The Government, Mr. Jain declared, was keeping a close watch on the situation in respect of sugar supplies in the country and its prices and it would not hesitate to take any further measures wihch might become necessary to protect the consumers' interests. He recounted the various steps taken recently to stabilise sugar prices such as the handling of strikes by cane growers. suspension of forward trading in *gur*, licensing of *khandsari* units and imposition of an excise duty on *khandsari*. He hoped that the bullish trends in the sugar markets would soon subside and appealed to the industry and trade to play their parts "squarely at the present juncture and not to force the hands of the Government to tighten controls further." Proceeding, Mr. Jain observed:

"The Government are anxious that the export of sugar should become a permanent feature, but they do not want the internal prices to rise unduly on this account. The expectations that prices would come down after the promulgation of the Sugar Export Promotion Ordinance in June 1958 were not fulfilled and, actually, prices rose further. The Government, therefore, had to intervene again and fix maximum ex-factory prices in the surplus areas of Uttar Pradesh, North Bihar and the Punjab. Sugar prices have returned to reasonable levels as a result of these measures, and a number of factories are themselves requesting the Government to requisition their free sale quotas, as they are unable to sell them at controlled prices in the free market."

Mr. Jain must certainly be congratulated for the way in which he espoused the cause of sugar consumers. The mere expression of sympathy for a cause, however, will not be of any avail, unless it is translated into concrete action. Despite the adoption of all the measures listed by Mr. Jain, the domestic consumer of sugar continues to pay unconscionably heavy price. What is this due to? It may be that a section of sugar millowners and traders often indulge in undesirable practices with a view to creating artificial scarcity and rigging up prices. But to dub the whole industry and trade as not playing the game squarely is to make a highly uncharitable remark. In fact, the spokesmen of the sugar industry have been most co-operative with the Government and have even consented to some of the ill-advised decisions of the Government, so that they may not be accused of non-co-operation.

High Prices—Why?

It is our contention that the Government is responsible for the present high level of sugar prices to a far greater extent than even the anti-social elements in sugar trade and industry. So, Mr. Jain's plea for consumers' interest sounds a little too thin to be convincing. How has the Centre been responsible for the high level of sugar prices? Here is our answer. The present controlled ex-factory price of I.S.S. E.27 grade sugar is Rs. 35.25 per maund (75 nP less than the price of Rs. 36 for the basic grade, namely, I.S.S. D.29), as against the former Tariff Board's fair ex-factory estimate (made in January 1950) of Rs. 24.75. This rise of Rs. 10.50 per maund or 43 per cent. over the nine years since 1950-51 is explained in the following table:

Items	1950-51		1958-59	
	Rs. per maund	Percentage share	Rs. per maund	Percentage share
Sugarcane cost	14.37	58.2	14.37	40.8
Manufacturing and other expenses, including profit and credit for molasses	5.76	23.1	8.56	24.3
Central excise duty and State cane cess	4.62	18.7	12.32	34.9
Fair ex-factory price	24.75	100.0	35.25	100.0

It will be clear from the above figures that (*a*) the percentage share of cane cost in the total ex-factory price of sugar has gone down from 58.2 in 1950-51 to 40.8 in 1958-59 (as a result of sugarcane price remaining unchanged against a rise in the ex-factory price); (*b*) the share of manufacturing and other expenses has risen slightly from 23.1 to 24.3 per cent. (*c*) the share of taxes has jumped up from 18.7 to 34.9 per cent. Even here, whereas the cess on cane levied by the State Governments has continued unchanged at 19 nP per maund which works out approximately to Re. 1.87 per ton of sugar produced, the total excise levy (including the additional excise of Rs. 2.27 per maund in replacement of States' sales tax) has been stepped up from Rs. 2.75 to Rs. 10.45 per maund of sugar, representing an increase of as much as 280 per cent. To take the more recent trend. Prices of white sugar over the year are up by only 1½ to 2 per cent., whereas those of *gur* are higher by no less than 20 per cent. This shows that, when there is no increase in taxation on white sugar, there is no rise in the price as well and that, by and large, the manufacturers and wholesalers have behaved well. It is thus obvious that, if the price of sugar is to be brought down, taxation on it has to be reduced. If, however, the Government does not want to give up its revenue from sugar because of the exigencies of the Plan, then it is a different issue altogether.

Tax Impost Heavy

The existing proportion of taxes in the total price of sugar—nearly 36 per cent.—is unduly heavy. The former Tariff Board had considered 18.7 per cent. (Rs. 4.62 per maund) as "a high rate for commodity tax, particularly for an article of food." The excise duty was previously levied mainly to compensate the Central Government for the loss of customs revenue which amounted to about Rs. 8 crores on an average during the five years ended March 1932, But the total receipts now being obtained by the Centre are at an annual rate of Rs. 46.00 crores, excluding the additional excise receipts of Rs. 12.86 crores, (1959-60 budget). The original objective of imposing excise duty has, of course, now changed. The objective today is to find funds for the Plan. The same is true of cane cess collected by the States. The Plan is no doubt important and money for it has to be found somehow. But would it not be a better proposition to encourage consumption of more sugar through a lower level of taxation and collect a larger sum through increased turnover? If this could be achieved—we feel it could be—it has the additional merit of improving employment opportunities.

To revert to Mr. Jain's speech. He said that the Government's objective is to promote export of sugar without causing an increase in the price for the domestic consumer. We welcome this assurance, which is in refreshing contrast to the attitude of the sugar industry which wants the loss on exports to be recouped from the consumer. Alluding to the future prospects for sugar industry, Mr. Jain said that the Government would give prompt attention to the report of the Tariff Commission on issues like reasonable profits, allowances for rehabilitation of plant and machinery, and share of cane growers in the profit earned by mills from sales of sugar. The Government, he added, had an open mind on all these points. While this statement is reassuring, it must be stressed that the Government's sugar policy should be so formulated as to fulfil six primary considerations. First, the sugar mills must be completely free to produce and sell sugar. There is no need for controlling ex-factory prices or for regulating releases. Secondly, the white sugar industry must be encouraged to grow and there should be no undue restriction either on the expansion of existing units or on the establishment of new sugar mills on joint-stock company lines. Thirdly, the price of sugarcane should be fixed on the basis of its sucrose content. Fourthly, more liberal depreciation allowances should be granted to mills so as to enable them to expand and to rehabilitate the old and worn-out crushing plants and to attract new entrants to the field. Fifthly, *khandsari* production must be strictly regulated, so that sugarcane may be more profitably utilised. Sixthly, there should not be any discrimination between joint-stock sugar companies and co-operative enterprises either in taxation or in marketing of sugar, or in the supply of stores, machinery and raw materials.

SUGARCANE PRICES

The Central Government, as was briefly mentioned in our issue last week, has made it compulsory for the sugar mills to pay, with effect from the current year, an additional price to cane growers under either the Expert Committee's formula or the S.I.S.M.A. formula. This was disclosed by Mr. A. P. Jain in the Lok Sabha on the 9th inst., while replying to questions by some members. The details of Mr. Jain's reply are as follows:

The additional price has become part of the original price under law. Therefore, in future, cases of non-payment of additional price may not be expected to arise. In the past, payment of additional price to cane growers under both the formulæ had been on a voluntary basis. The Government had received representations from growers complaining of non-payment of extra price by a few mills. It has taken up the matter with the State Governments concerned and their replies are awaited. The payment of extra price for cane by two mills has not been finalised. They are the Nizam Sugar Factory in Andhra Pradesh in respect of the sugar season 1954-55 and the Ramnuggar Cane and Sugar Company, Ltd., Plassey, in West Bengal, in regard to 1954-55 and 1955-56. Locally, the sugar mills are not committed to paying the extra price, though they are morally committed, as they have accepted the formula for payment of extra price on a voluntary basis. The Centre is exercising all its influence through the State Governments concerned to see that the claims of cane growers are settled as early as possible.

The payment of additional price to cane growers, it may be noted here, does not, however, apply to the sugar industry in Bombay State. For the cane prices in this region are fixed every year by the State Government in consultation with the Deccan Sugar Factories' Association (D.S.F.A.). The price of cane delivered at the factory site fixed for the current season (1958-59), which has now been approved by the Centre, is Rs. 47 per ton (Re. 1.72 per maund). The revised price is higher by a rupee per ton as compared with that applicable for the 1957-58 season. It is also higher than the all-India minimum price of Rs. 37.29 (Re. 1.37 per maund). The price of Rs. 47 is the minimum which every factory has agreed to pay and does not affect any contracts for higher price, if any, made by the factories with sugarcane growers. The Bombay Government's regulation is as follows:

1. The factory owners shall not engage the services of any agent other than co-operative societies for securing the supply of cane grown within 12 miles of the factory site. They may, however, utilise the services of agents for purchase of cane grown beyond 12 miles of the factory site.

2. Fifty per cent. of the price of cane should be paid within 15 days of delivery, the balance being paid within one month preferably, but in no case later than six weeks. Ten per cent. of the price may, however, be paid after the contract for supply of cane for the season by the grower is fulfilled.

3. The factories agree to purchase as much cane as possible consistent with their crushing capacities and the optimum season for which the factories in different areas work.

4. The factories will not deduct any weight from the weight of cane supplied by the agriculturists beyond the limit laid down by the Government of India for deduction in weight on account of binding material.

Men and Oil . . . 6

The Installation Engineer

A vital point in oil's long journey from the well to the consumer is the petroleum installation. From here the finished products of the oil industry are distributed to distant depots and markets by road, rail and river.

A main installation (such as that at Tinsukia, in Upper Assam) comprises storage tanks, pumps and pipe lines, machinery for making and filling tins and drums, and equipment for the bulk loading of road and rail tank vehicles. The Installation Engineer is responsible for the setting up, operation and maintenance of the plant (excluding the tin factory, which has its own engineering staff) from which the products go to agencies, dealers and consumers.

Oil is nearly always on the move, and an Installation Engineer's skill helps to ensure that it makes only a brief halt at the installation before being despatched to places where it is needed by the public.

Indian engineers have taken over many vital roles in the Assam Oil Company.

And they are fulfilling them well.

RUBBER CONSUMPTION FORGES AHEAD

PRODUCTION NOT ENCOURAGING

NATURAL rubber is one of those important industrial raw materials, the consumption of which offers immense scope in a developing economy such as India. But unfortunately, in India the natural rubber industry has not received the attention it deserves. The trend of production of new rubber and consumption thereof during the last few years amply bears out this contention. No doubt, the Rubber Board, with the blessing of the Government of India, drew out and started implementing in 1957, a scheme of replanting 70,000 acres with new, high yielding material at the rate of 7,000 acres per annum spread over a period of ten years. Though the benefit of the replanting scheme will take some years to realise, the progress of replantation itself has been tardy. Meanwhile, the yield per acre from the existing areas has been going down, with the result that the pace of increase in total production has considerably slowed down. Consequently, the gap between output and consumption has been widening. The yawning gap is being plugged by raising imports.

During 1958, production of natural rubber amounted to 24,338 tons, as compared with 23,767 tons in the previous year and 23,444 tons in 1956. The consumption aggregated 34,756 tons, having risen from 31,765 tons in 1957 and 28,966 tons in 1956. Looking at the trend of production and consumption over a period of years, say, since 1952, when consumption lagged a little behind production, the output of natural rubber has gone up by no more than 2,475 tons, or very much less than 500 tons per annum on an average, whereas consumption has risen, during this period, by as much as 13,695 tons or about 2,300 tons per annum. During these six years, the gap between production and consumption has widened from a small surplus of 800 tons to a deficit of over 10,400 tons. To meet the growing shortage of supplies, imports have been stepped up from 3,851 tons in 1952 to 11,878 tons in 1958, as will be seen from the following table:

(In tons)

Year	Production	Consumption	Imports
1951	17,148	22,427	6,921
1952	21,863	21,061	3,851
1953	21,136	22,373	272
1954	21,493	25,487	3,371
1955	22,482	27,543	3,839
1956	23,444	28,966	6,463
1957	23,767	31,735	9,677
1958	24,338	34,756	11,878

It may be noted, in this connection, that the value of rubber (natural and synthetic) imports during 1957 was of the order of Rs. 4.20 crores. The foreign exchange drain on this account during 1958 must have been larger (the value of imports during the first eleven months was Rs. 4.03 crores) for two reasons. First, imports were higher by about 23 per cent. and, secondly, world prices of raw rubber showed an upward tendency, thanks to the keen buying by U.S.S.R. and China. The price of spot R.S.S. natural rubber in London rose from a low of 21*d.* to 26⅝*d.* and is currently quoted at 25⅝*d.* per lb.

In India, the demand for natural rubber is expected to reach 60,000 tons by 1960-61 and 75,000 tons by 1975, because of the extensive expansion programmes that have been taken on hand by the existing units and the setting up of new units. The problem is, therefore, one of raising the production of raw rubber and this in turn depends as much on the success of the replanting schemes as on the statutory price paid to the growers, which is found to be wholly inadequate.

As pointed out earlier, the world price of natural rubber has shown an upward trend and the present price of 25⅝*d.* per lb. for R.S.S. is much higher than the price of S.-type synthetic fixed in the U.S. at the equivalent of 21*d.* per lb. The higher price fetched by natural rubber over synthetic is due to the fact that its world consumption is in excess of the output. In 1958, the world output was placed at 1.96 million tons, while consumption stood at 1.99 million tons. Consumption too shows a rising trend, having gone up in 1958 from 1.91 million tons to 1.99 million tons. A break-up of the consumption figures during the last two years shows that, while the offtake by the U.S. declined from 539,300 tons to 485,000 tons and that of Western Europe from 650,000 tons to 640,000 tons, that by the Soviet bloc and China rose from 290,000 to 430,000 tons. On the assumption that the Communist countries' purchases will be maintained at the 1958 levels, the world demand for natural rubber during the current year is expected to go up to 2 million tons.

As compared with 1957, consumption of synthetic rubber shows a slight decline in 1958, from 1,255,000 tons to 1,225,000 tons. Synthetic output, outside the Communist countries, is reported to have been 1,250,000 tons and the production capacity during the current year is expected to go up to 1,550,000 tons. The move to increase the production capacity of synthetic rubber shows that a drive is in the offing to increase consumption of the synthetic product.

This does not mean that synthetic rubber will replace the natural one in the next few years. There are two reasons for this: first, there are technical difficulties in switching over from one to the other, and, secondly, the demand for natural rubber is expected to be well maintained. It is even believed by some that the world will require all the natural rubber which is likely to be produced as far ahead as one can see. In fact, many countries are expected to step up their output of natural rubber in the next few years. The production in Malaya which was 390,000 tons in 1958, is likely to go up to over 500,000 tons by 1965, thanks to the post-war replanting scheme coming into bearing rapidly. Though Ceylon also has undertaken a replanting programme on a substantial scale since the war, the climate has been somewhat unfavourable, so that the contribution of Ceylon to new rubber production will be proportionately less than that in Malaya. Not much of an increase in production from the existing areas in Indonesia is expected in the next few years. In the long run, however, the new areas and replanted areas of high yielding rubber can be expected to be competitive with the synthetic.

Though the Russian purchases during the last two years have taken up a large quantity of raw rubber off the market, there has been a slight change in the pattern of offtake by the various consuming countries during the current year so far. Russia has switched over its purchases from R.S.S.I. to lower grade rubber. If these are continued, the prices of top grade may decline. However, the purchases from the Western countries have been encouraging. The U.S., which is expected to lead any revival of purchases in the West, consumed 50,350 tons of natural rubber during January, as compared with 42,597 tons in the corresponding month of 1958.

SYNTHETIC RUBBER COMPETITIVE WITH NATURAL PRODUCT

Polyisoprene rubber, the man-made duplicate of tree-grown rubber, is going into commercial production and use for the first time. The United States Rubber Company has begun the production of truck tyres made of Polyisoprene rubber which is manufactured by Shell Chemical Corporation for sale at a price which is competitive with that of the natural product. The announcement, which was made jointly at a Press conference by Mr. John W. McGovern, President of U.S. Rubber Corporation, and Mr. Richard C. McCurdy, President of Shell Chemical, is regarded as highly significant for the rubber industry and vital from a strategic standpoint, in view of the traditional dependence on sources of natural rubber. Until now, they pointed out, it had been necessary to use natural rubber in all large tyres for both

STATE-OWNED STEEL PLANTS

ESTIMATES COMMITTEE'S SUGGESTIONS

THE three State-owned steel factories (at Rourkela, Bhilai and Durgapur) are the the single largest industrial enterprises undertaken by the Government of India. Appropriately enough, they have received considerable notice at the hands of the Estimates Committee which, in its report entitled *Ministry of Steel, Mines and Fuel*, has made a detailed study of the planning and execution of these steel projects. The Committee has also made many valuable recommendations, some of which are worthy of general application to all Government-owned industrial enterprises. It has particularly criticised the Government for its inadequate planning in respect of the steel factories and also some of the agreements and contracts entered into by the Government in relation to these projects. It has suggested the appointment of committees for further inquiry into various "doubtful features and defects" which it noticed in the course of its inquiry.

Steel Economy

The importance of the three steel projects in India's steel economy will become clear when it is realised that they will form a substantial portion of the steel production by 1960. The target for steel production to be reached by 1960 is placed at 4.68 million tons, consisting of steel output by the T.I.S.Co. 1.5 million tons, I.I.S.Co. 800,000 tons, Mysore Iron and Steel Works 100,000 tons, Bhilai plant 770,000 tons, Durgapur plant 790,000 tons and the Rourkela plant 720,000 tons. All the three State-owned steel enterprises are under the charge of Hindustan Steel Ltd., which was formed in April 1957.

The Board of Directors of the Company consists of ten members, including two non-officials. The Committee suggests that there should be some arrangement in the Government for examination of matters, which come up from the Company for its consideration, by officers different from those on the Board. Regarding the arrangement under which the Board has set up a committee for disposal of business which may come up between the meetings of the Board, the Estimates Committee "consider it strange that the Board of Directors should set up a committee with such wide powers." The Committee also finds it "strange that the administration of the Rs. 560-crore project rests largely with two or three officials or erstwhile officials of the Government who have had no previous experience of steel industry or of any industry for that matter." The Estimates Committee has urged the constitution of different committees for specific purposes and a local board of management for each project.

The three steel projects, as is well known, work in terms of agreements with foreign technical interests. For the Rourkela steel project, the Government entered into an agreement with Krupp-Demag. The Committee finds that, against the total value of Rs. 100 crores for the plant and machinery of the project, the value of contracts for the supply of plant and machinery by Krupp-Demag and its associates, who are the consultants, is about Rs. 28.5 crores. The Committee feels that the arrangement under which consultants are also suppliers of equipment is not satisfactory, since there is a possibility that the advice given by the consultants might not be objective. For the Bhilai plant, the agreement entered into with the Government of the U.S.S.R. is for services usually rendered by technical consultants as well as for the supply of plant and equipment and of detailed working drawings. It would appear that the Committee did not hear any criticism of the agreement or its working with respect to the consultative service for the project.

The International Construction Company are the consultants for the Durgapur Steel project. In December 1955, the Company was appointed consulting engineers to the Government for a period of six years. The agreement was signed when much of the preparatory work had been completed in respect of all the projects. The Committee feels that the appointment of consultants for general advice would have been understandable had they been appointed at a sufficiently early stage. Considering that they were appointed after separate consultants for each project had already been appointed, the Committee feels that the utility of the general consultants would be limited. Further, the view was expressed before the Committee that full advantage had not been taken of the opportunity to gain the technical know-how from the consultants. The Committee also feels that attention has not been devoted to the association of Indians in planning and designing work. It observes that Indian consulting organisations should be developed and encouraged, since the "country cannot afford to pay large fees to foreign consultants and to depend on them indefinitely for future projects."

Contracts

The contracts given by the Hindustan Steel Ltd. to Messrs. Uttam Singh Duggal & Co. and Hochtief Gammon & Co. have come in for criticism, the former on the ground that, since the contractors were inexperienced, the work fell in arrears and the latter for the reason that it involved much avoidable expenditure. Further, it would appear that the antecedents of the two contractors were not taken into account. The contract with Hochtief Gammon & Co. provided for the hire of certain constructional plant and equipment estimated to be of the value of Rs. 60 lakhs. The Committee observes that the hire charges would "amount to (Rs. 75 lakhs), more than the value of the equipment itself (Rs. 60 lakhs)." In this connection, the Committee enquired whether the feasibility of purchasing the equipment instead of hiring it was considered and was told that it was not possible to do so, since the little effort that was made to purchase the equipment in the country was not successful and there was no time to purchase it from other sources. The Committee feels that these difficulties arose because of "inadequate planning and insufficient forethought in an important matter like civil engineering work of the rolling mills."

In the chapter entitled "Production Programme", the Committee has discussed the schedule of commissioning the various plants and the problem of disposal of products manufactured in the State-owned factories. It notes that the Rourkela plant is scheduled to go into production in the latter half of 1960 or seven years after the memorandum of Indo-German association for the project was signed, the Bhilai plant on 31st December 1959 or four years after the acceptance of the project report by the Government and the Durgapur plant on 31st July 1961 or nearly six years after the submission of the report of the Coates Mission which visited India. It observes that, in view of the fact that the Bhilai plant is expected to be completed within four years, "it might have been possible with better co-ordination to complete the other projects also within the same period.

L.D. Process

At the Rourkela project, a new process known as the L.D. process is proposed to be used for making steel. The Committee understands that the International Construction Company has advised that India, which is yet in the initial stages of development of the industry, might have been conservative in the matter of adopting the L.D. process. The consulting engineers are stated to have pointed out two difficulties with regard to the use of the new process. First, the pig iron produced in India would not be suitable for the process, because of its high silicon content, and secondly, the limestone which would be available near the plant would not be suitable for the process. They also advised that the layout of the steel-making shop be planned in such a way that, should the L.D. process prove unsuitable, the plant could be converted, with relatively minor modifications, to use the open hearth or the Duplex process. The Committee understands that, in order to meet the difficulties pointed out by the International Construction Company, a desiliconising plant would be put up to reduce the silicon content of the iron and that limestone of better quality which would be suitable for the process, would be obtained from another source at a distance of over five hundred miles. These would entail extra expenditure of nearly Rs. 30 lakhs annually on transport alone. However, the Secretary of the Ministry appeared to be of the opinion that the extra cost would be much lower that the saving which would arise in the cost of production of steel under the process. It has been stated that, while works cost of crude steel under the conventional process in Rourkela would be Rs. 117 per ton, the works cost of such steel under the L.D. process would be Rs. 93 only. The Committee hopes that the anticipated benefit of the process would be realised, but feels that this is a matter which needs further examination at expert level.

By-products

The three steel plants at Rourkela, Bhilai and Durgapur will produce a number of valuable by-products in the course of their conversion of coal into coke. Besides nitrogen, which will be used to produce 580,000 tons of fertiliser-nitro-limestone, the Rourkela plant will produce benzole, toluol, zylonol, carbolic oil, naphthalene oil, anthracene oil and pitch; the by-products plant in Rourkela is estimated to cost Rs. 8 crores. The Bhilai plant will produce ammonia sulphate, benzole, toluene, xylene, solvent-naphtha, phenol oil, naphthalene oil, anthracene oil, naphthalene, crude anthracene, crude phenols and pitch; the by-products plant in Bhilai is estimated to cost about Rs. 3 crores. The Durgapur plant will produce ammonia sulphate, benzene, toluene, xylene, solvent naphtha, naphthalene, road tars, wood preserving creosote and sulphuric acid; the by-products plant is estimated to cost Rs. 6.4 crores.

The Committee notes that the estimated cost of the by-product plant is highest in the case of Rourkela, being Rs. 8 crores, as against Rs. 3 crores in the case of Bhilai and about Rs. 6.4 crores in the case of Durgapur. The by-products which are to be processed in the various plants are also different. The Committee suggests that the economic aspect of the selection and production of the by-products at the various plants might be got examined with particular reference to the difference in the estimated cost of the by-product plants as also their estimated working cost in the three projects. As regards the slag which will be released during the production of pig iron and might not be found suitable for cement making, the Committee would suggest that the feasibility of putting it to alternative use, such as construction of roads might be examined.

Finally, the Committee feels that no thought has yet been given to the question of setting up an organisation for the purpose of selling the various products which will be manufactured at the three steel plants. It suggests that this question should be taken up at an early date.

An examination of the capital and cost structure of the three steel plants forms the subject of a separate chapter in the Committee's report. The authorised capital of Hindustan Steel Ltd. is Rs. 300 crores. The paid-up capital at present is Rs. 198.7 crores—Rourkela plant Rs. 87 crores, Bhilai plant Rs. 70 crores and Durgapur plant Rs. 40 crores. The Committee was informed that it was the Government's intention that the capital expenditure of each of the three Government plants would be limited to Rs. 100 crores and the balance of the expenditure treated as a loan from Government to Hindustan Steel Ltd. Considering that the total cost of the three Government plants is expected to be over Rs. 560 crores, the Committee doubts whether Hindustan Steel Ltd. would be in a position to repay a loan of over Rs. 260 crores in the foreseeable future.

Estimates

Examining the difference between the original and final estimates, the Committee notes that the original estimates (Rs. in crores) for the three plants with foreign exchange components in brackets were: Rourkela 128 (89); Bhilai 110 (67.5); Durgapur 115 (72)—total 353 (228.5), whereas the present estimates are: Rourkela 170 (122); Bhilai 131 (78); Durgapur 138 (92)—total 439 (292). Other estimated costs (Rs. in crores) not included in these estimates are: three townships 42.0; two iron ore mines, two limestone quarries and one dolomite quarry 13.5; fees to consultants 9.25; water-supply 4.5; training schemes 1.5; cost of Soviet staff 4.5, other expenditure on prospecting, electrical works, etc. 45.0—total 120.25.

The Committee is unable to appreciate why estimates of important items like townships, iron ore mines and quarries, electrical works, railway works, etc., were not originally indicated to Parliament. It is particularly surprised to find that even the fees of consultants were not included in the original estimates. It was explained to the Committee that it was difficult to estimate the expenditure in all these cases. Even if that were so, the estimates on some broad lines could have been indicated, or the items could have been mentioned with a note that charges on their account would add to the estimates finally, to enable the Parliament to have a complete picture. The Committee suggests that a comprehensive statement showing the estimates of all the items of expenditure connected with the projects should be prepared and placed before Parliament at an early date.

Uniform Basis

Further, the Committee suggests that the estimates of the costs of the three plants should be presented on a uniform basis for purposes of comparison. It feels that, in view of the expansion of the iron and steel plants in the private sector in the country, it would facilitate an assessment of the cost of the public sector projects, if the expenditure incurred on the former, especially on similar and comparable units, could be ascertained and included in the analysis of costs.

The Committee makes the notable point that the practice of first presenting partial and approximate estimates to Parliament for initial sanction and then asking for supplementary funds on a substantial scale gives a false picture of the cost of the work proposed to be undertaken, since it does not enable Parliament to appreciate the economic aspect of the investment which it is called upon to make for that project. Besides, in such cases, the subsequent increases have often to be agreed to almost helplessly, in view of the investment that has already been made. It, therefore, urges that Government should, before approaching Parliament for approval of a project, prepare and indicate realistic and firm estimates of all financial requirements which might not vary much, except for unforeseen changes in general economic conditions.

The Committee notes that the private sector has to submit several details of its projects before it gets the necessary permission for the issue of capital. Thus, it must submit details regarding the complete estimate of capital cost, the breakdown of the estimate, the manner in which funds are to be raised, the estimated value of production, and the margin of profit. It is evident, according to the Committee, that the information which is required to be furnished initially in the case of private sector plants, was not worked out in the case of the Government steel projects. The Committee is of the opinion that, in future, it should be ensured, before a new industrial or commercial venture is undertaken in the public sector, that it fulfils all the conditions which would have to be fulfilled had it been undertaken in the private sector and that the proposals therefor should be subjected to the same degree of critical scrutiny from various aspects as is applied to the proposals of a private undertaking.

As regards the future development of the industry, the Committee feels that the question of production of raw steel and its utilisation should be considered in a more realistic manner. It emphasises the need for the creation of capacity for fabricating steel and for a survey of the requirements of steel in the future. It suggests that the Government might consider at the appropriate time whether reduction in excise duty on steel (raised from Rs. 4 to Rs. 40 per ton) would result in better export market for Indian steel.

The Committee was informed that no decision had yet been taken on the proposal to set up an additional steel plant at Bokaro. In deciding the question of further expansion of steel industry, it urges the Government to take into account the need for uniform development of the different regions in the country. It suggests that, in the interest of the decentralisation of the iron and steel industry, the Government "might consider, within the framework of the Industrial Policy Resolution, the desirability of granting more licences to the private sector for small plants for production of pig iron as well as similar other items." After pointing out the absence of adequate capacity for the production of special types of steel and steel alloys, the Committee urges the Government to consider the feasibility of entrusting the production of stainless steel to the Mysore Iron and Steel Works.

Transport

In conclusion, the Committee has emphasised the importance of transport. The completion of the steel plants in the public and private sectors, it is stated, will involve the carriage of 5.46 million tons of finished products and 26.4 million tons of raw materials, consisting of 11.1 million tons of iron ore, 11.2 million tons of coal, 3.2 million tons of limestone, 0.58 million tons of dolomite and 0.31 million tons of manganese. The S.E. Railway has to carry a heavy burden because all the five steel plants are located in the region served by it. Further, the Railway has to cater to the traffic requirements of other industries, like coal, paper, cement, fertilisers and aluminium. Again, the load on the Railway is likely to increase further with the location of new industries in that region on the completion of the Hirakud Dam. Accordingly, the Committee suggests that, with a view to relieving the pressure on the S.E. Railway, the possibility of developing minor ports and/or inland waterways to handle part of the iron and steel traffic might be explored.

EXPORT OF ISOTOPES

So great is the demand for radioisotopes produced in Britain—India is among the many oversea buyers—that the United Kingdom Atomic Energy Authority is reorganising its production and marketing organisations. Britain is already the world's largest exporter of radioisotopes—an offshoot of the production of nuclear energy. The Authority states that plans are being carried out immediately for the reorganisation of its isotope production and marketing units, which up to now have been shared between the Isotope Division of the Atomic Energy Research Establishment at Harwell, Berkshire, and the Radiochemical Centre at Amersham, Buckinghamshire. The scope of the Radiochemical Centre will be widened to form a single comprehensive organisation for the production and marketing of all isotopes. At the moment, it has its headquarters and laboratories at Amersham, but it is also to have irradiation facilities at Harwell and other centres.

Research into the properties of isotopes and new applications of them and their radiations will be continued by the Isotope Research Division at Harwell and at the Wantage (Berkshire) Radiation Laboratories. It was at the Atoms-for-Peace Exhibition in Geneva last September that Britain disclosed the tremendous strides that had been made in isotope production and how isotopes were saving industrialists many millions of pounds yearly and giving mankind greater hope in the sphere of medicine. Britain's annual sales of radioisotopes (produced either at Harwell or Amersham) have now reached the £650,000 mark; and of these sales, about two-thirds are to oversea countries.

HINDUSTAN STEEL LTD.

The Hindustan Steel Private Ltd. the Government of India undertaking which is managing the three steel plants in the public sector, has now been renamed as Hindustan Steel Ltd. The Prime Minister had recently pointed out the incongruity of the use of the word 'Private' in the names of undertakings in the public sector. The word has now been dropped with the permission of the Registrar of Companies who has incorporated the Company under the new name. With the authorised capital of Rs. 300 crores, Hindustan Steel Ltd. was originally set up in January 1954 to construct and manage the Rourkela steel plant. The Board of Directors of the Company was reconstituted in April 1957 when the Bhilai and Durgapur projects were transferred under its control. The shares of the Company are owned wholly by the Central Government and the Directors are appointed by the President. Mr. G. Pande is the Chairman of the present Board of Directors. Other members of the Board are: Messrs. N. Padmanabha Ayyar, K. C. Mahindra, S. S. Khera, N. C. Deb, Michael John, K. Sen, M. Ganapati, N. C. Shrivastava and A. Nagaraja Rao.

NEW PRODUCTS AND PROCESSES

New Device for Inspecting Engineering Components

A NOVEL device for automatically inspecting engineering components has been developed in the U.K. The device will respond, it is claimed, accurately and continuously, to variations in the size of components, or the position of their surfaces, or of the whole component in both the horizontal and vertical planes. It can be used to compare one finished piece with another, or to compare each article made with a master model of the component. It can also be used, it is claimed, to inspect the surface of an article for scores and other similar defects and to give an exact measure of surface finish. The device is designed, moreover, so that it can be harnessed to virtually any type of machine control system—for example, a machine tool controlled by magnetic tape—which will give continuous readings throughout its complete predetermined programme of operations.

Push-button Coffee-server

W. M. Still and Sons, 29, Greville Street, London, E.C. 1, has developed a coffee dispensing unit designed to stand on a counter in public houses, offices or cafes. The machine serves a freshly made cup of coffee in a pre-set measured quantity at the touch of a button. It delivers a measure of coffee and the requisite amount of hot water into the cup and cream or milk is then added by hand. When fully charged the unit will hold the equivalent of 125 six-ounce cups of coffee. It has a mechanism which registers the number of cups supplied.

Anti-Oxidant For Rubber

The inclusion of a new blended anti-oxidant developed by Monsanto Chemicals of the U.K. is said to confer improved resistance to the combined effects of heat ageing and flex cracking. Indeed, experiments carried out with the new compound are stated to have shown that it gives markedly better performance than that which results when the two compounds which form its basic components are added to the rubber in unblended form. The new compound is also said to inhibit the harmful effect of copper, or manganese in a rubber compound. Called Santoflex HP, the compound can be used as an effective anti-oxidant with both natural and synthetic rubbers. With natural rubber experiments are said to have shown that the use of Santoflex ensured the retention of physical properties in the rubber to a high degree, even after it had been exposed to the very severe oxidising conditions obtaining inside a bomb containing oxygen at a pressure of 300 lbs. per square inch at 70 degrees Centigrade for 14 days.

Dual-purpose Lorry Crane

Drivers of open vehicles can unload, single-handed, goods up to half a ton in weight, it is claimed, with the aid of the Bradshaw combined bolster and jib crane made by the Lichfield Engineering Company of the U.K. The tubular bolster is secured to the vehicle at the front end and serves to support long-length materials, but it can be converted into a jib crane by a removable swinging arm which fits into the left or right upright of the bolster and enables any standard make of chain or rope block to be used for lifting and lowering goods. The manufacturer says that the fitment can be obtained in a suitable size for fitting to any open goods-carrying vehicle and a carefully compiled table has been worked out to show safe working loads in relation to vehicle tracks. The combined bolster and crane is said to cost under £30.

Electronic Fuel Consumption Tester

New fuel consumption test equipment has been installed in a number of factories of Leyland Motors Ltd., to facilitate research in the design of fuel systems. Previously, it was difficult to measure accurately the increased or decreased efficiency of fuel systems when minor modifications had been made, but with the new equipment the result of a minor modification can be measured with an accuracy of 1 per cent. The new equipment not only achieves greater accuracy in test-bed work, but reduces the number of personnel required for a particular test, releasing operators for other research work. Developed by Farnell Instruments Ltd., the electronic equipment incorporates a burette with two level marks and a series of photo-electric cells. When the fuel reaches the first level of the burette at the start of the test, the first photocell brings into circuit a time interval meter and a revolution counter, thus ensuring that the exact engine revolutions are counted and are not an assumed average. These continue operating until the fuel level reaches the second mark on the burette, when the second photocell automatically brings the test to an end. To prevent unnecessary stops of the engine when fuel tests are carried out, the fuel consumption tester has been designed to allow the incoming fuel to fill the burette and to feed the engine under test at any time. When the fuel test is required, an electrically-operated valve in the fuel input line closes. Before the fuel has been completely run out of the burette the photocell operates and opens the incoming fuel supply line, thus preventing any break in fuel supply to the engine. Test accuracy is of the order of 1 per cent., and the time taken varies according to the speed of the engine and the size of burette used. With the models installed at the Leyland factories, fuel consumption tests average less than 60 seconds.

THE BANK OF INDIA LIMITED

"SATISFACTORY MEASURE OF SUCCESS IN 1958 BUT IN A LOWER KEY"

SIR COWASJEE JEHANGIR URGES WISE SPENDING AND INVESTMENT

A NOTE of subdued optimism was struck by Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., Chairman of the Bank of India Ltd., in his speech at the Fifty-third Annual General Meeting of the shareholders of the Bank held at Bombay on Thursday, 12th March 1959. Drawing attention to the improvement in agricultural production and the timely assistance which India has received from foreign countries, he observed: "The outlook is not entirely dark.... When additional factories in course of erection start production, the supply of basic materials, such as steel and cement, can be counted to increase substantially." Sir Cowasjee advised the authorities in this country to see that the crores of rupees which had been borrowed were wisely spent and that India got full value for its money.

The following are extracts from the speech of Sir Cowasjee Jehangir:

"LADIES AND GENTLEMEN,

"With your permission the balance-sheet may be taken as read.

"At the time of our annual general meeting in 1958, the currency in circulation was Rs. 1,546 crores, whilst at the corresponding date in 1957 it was Rs. 1,515 crores. This year it is Rs. 1,659 crores. The increase on last year's figure is Rs. 113 crores. This increase is not surprising, having regard to the progress and magnitude of the second Five-year Plan.

"The year 1958 has been a year of some adventure for commerce and industry. Many of the events of the year have caused considerable anxiety, but the year has not been one of unrelieved gloom. For many countries, it has been a year of economic recession, the impact of which could not be avoided in this country. Indeed, our share of the recession has been comparatively greater than that of some other countries. We are industrially underdeveloped and have been affected in two opposite directions. Our exports have earned less and the high cost of imports has continued, so that our foreign assets have been reduced. Our plans for economic development have had to be pruned. To a great extent this has been unavoidable. We could not have escaped some of the ill-effects of a recession affecting a large part of the world. Nature, too, has been unkind regarding foodgrains and the food position and food prices at the moment cause anxiety. The country has been assisted by timely help from outside. The outlook is not entirely dark. Agricultural production has, latterly, shown improvement and the food situation is expected to get better in coming months. When additional factories in course of erection start production, the supply of basic materials, such as steel and cement, can be counted upon to increase substantially.

Taxation

"The year has seen enhancement in the burden of taxation. The Expenditure-tax Act, 1957, and the Gift-tax Act, 1958, have brought additional levies into force from 1st April 1958. These two enactments chiefly affect the well-to-do classes. The Finance Act, 1958, brought no material tax relief to any section of the community. It substantially continued the levies enacted by the Finance (No. 2) Act, 1957, which had increased taxation, particularly in the case of companies, to an onerous degree. I think the high level of personal and corporate taxation affects capability or, at least, willingness to work, save and invest. High taxation can be conducive to extravagance in business. The collection by the Government of the various additional direct taxes with which we have lately been saddled cannot, I think, be other than costly.

"For the few who pay direct taxes, India continues to be the heaviest taxed country in the world, which results in people having to live on their capital while millions of the population continue to pay very little or have no capacity to pay any direct taxes at all. When we are already the heaviest taxed country in the world, the proposals in the Central Government budget just presented seek to impose an additional burden by increasing by ½ per cent. the levy on every slab of wealth subject to tax under the Wealth-tax Act. This will mean a further drain on the already attenuated resources left in the hands of the private sector and cannot but prove a serious disincentive to further enterprise in the country. This is the result of the Government having followed the advice of so-called experts who are not well known in their own country and whose advice, when given, has been rejected. It is most regrettable that the Government could not find better advisers when there are so many well-known economists in foreign countries, if they did not wish to take the advice of real economists in their own country.

Foreign Exchange

"The year 1958 has been a period of concern over the foreign exchange situation. The pronounced restrictions on imports continue. The conditions upon which licences for imports are granted upon a deferred payment basis have become tighter. To carry through deferred payment schemes of any size the assistance of banks abroad is usually necessary. Such banks have not always taken an optimistic view of the foreign exchange future of the country and it has, generally, not been easy to put through schemes providing for the deferred payment of large sums. The country's securities and balances held abroad have continued to fall during 1958, although the rate of reduction slowed up towards the end of the year. Accretion to our exchange resources must be brought about by additional export earnings. The cases of Japan, West Germany and the United Kingdom are examples of how a determined national effort to export can build up the economy of a country. The will to export must come. This should be induced by incentives. The Union Minister for Commerce and Industry is reported to have pointed out since the end of the year that resort may be had to compulsory exports. Foreign aid is being given to this country to meet the foreign exchange needs of the second Five-year Plan. I do not know if we fully realise our future liabilities for interest and repayment instalments on the loan portion of the aid we receive. In any event, foreign aid and the artificial restriction of imports are negative measures. What we need so badly is an early and significant increase in our exports.

"The Reserve Bank of India rate, which had been raised from 3½ per cent. to 4 per cent. on 16th May 1957, continued at 4 per cent. throughout 1958. The tightness of money of recent years was apparent at the beginning of 1958, but the situation changed during the year. By July 1958, money with banks had become decidedly easy. The curtailment of imports left substantial unemployed funds in the hands of traders. During the year, the total deposits with scheduled banks rose steadily and appreciably. There was a material rise in the investments of scheduled banks in Government securities from about half-way through the year. The total advances of scheduled banks increased up to about April 1958, and then fell off during the remainder of the year.

Pattern of Deposits

"The pattern of bank deposits has changed during recent years by a pronounced shift from current deposits at small interest to time deposits bearing high rates of interest. The keen competition amongst banks for deposits in tight money conditions has raised the rates of interest on time deposits, increasing materially the cost to banks of money lodged. Banks must keep a working margin between their deposit rates and their lending rates. Higher deposit rates ordinarily mean higher lending rates. These increase the cost of borrowing for trade and industry and this, in turn, must tend to lead to higher prices for goods and services. Much thought has been given to means to reduce the intense competition between banks. The result is an inter-bank agreement on maximum rates of interest on deposits on an all-India basis. The Agreement, which came into force from 1st October 1958, lays down regulations and stipulates maximum rates of interest for deposits. It is expected to eliminate undesirable competition amongst the larger banks for deposits.

"The Bank's business has functioned during 1958 with a satisfactory measure of success but in a lower key than in the previous two years. We are not, I think, alone in this experience. Banks these days do not find it easy to earn an adequate net profit. Establishment charges and operating expenses continue on their upward way. Our profits for 1958 have been affected by paying high rates of interest for money lodged without receiving correspondingly increased interest on money lent. The heavy taxation on companies is a pronounced difficulty. It adds to the magnitude of our task of keeping up the profit after tax. We need to obtain more deposits and we have, in 1958, adopted measures to bring this about. From 1st July 1958 we introduced a system of withdrawals by cheques from savings bank accounts at all our branches in India and at some overseas branches. From the same date, we began to issue three-year and five-year cash certificates. The response to these measures has been satisfactory.

New Branches

"We have opened new branches during 1958. Three branches have been opened within Greater Bombay and four branches at other places in India, namely, at Navrangpura in Ahmedabad and at Baroda, Kanpur and Visakhapatnam. Since the year ended, we have opened a branch at Santa Cruz on 31st January 1959. New branches mean laying out funds. They do not bring added profits immediately. We have to bear the appreciable expenses inseparable from their establishment and it is usually some considerable time before they become self-supporting. When that stage is reached, with the acquisition of increasing deposits, we look to new branches to become satisfactory revenue-earning units in our organisation.

"I would now refer you, ladies and gentlemen, to the balance-sheet and accounts.

"The total at foot of the balance-sheet is almost Rs. 102 crores. This is an increase approaching Rs. 4 crores over the figure of Rs. 98 crores of the previous year.

"The profit figure for 1958 at over Rs. 85½ lakhs shows a decrease of about Rs. 8 lakhs as compared with the previous year's profit of about Rs. 93½ lakhs. The decrease, though appreciable, is not surprising in the face of rising costs and for a year of difficult trading. Before the profit figure has been arrived at, usual appropriate and prudent provisions have been made.

"The provision for taxation absorbs Rs. 25 lakhs, as against Rs. 30 lakhs for the previous year.

"A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 30 lakhs. This, with the interim dividend of 6 per cent. paid last August, makes the total distribution 16 per cent. per annum, or Rs. 48 lakhs for the year, free of income-tax. The proposed carry forward is nearly Rs. 13 lakhs against Rs. 16 lakhs the previous year.

Full Value For Money Must Be Got

"I will now touch upon a topic which I consider is most important for all classes of people in this country. In the course of the Azad Memorial Lectures, the Prime Minister is reported to have said, 'It is only power with wisdom that is good.' I may respectfully point out that this is most important when applied to the administration by the Central Government of this country. The country is borrowing hundreds of crores of rupees from foreign countries, but I have not read anything in the speeches of the Prime Minister which suggests that measures are being taken to see that the country gets full value for money spent. We only hear of schemes running into crores of rupees where the estimates in many cases are exceeded by large percentages but I do not read about any steps being taken to see that the country gets value for the crores spent on beneficial objects. The only way that the Five-year

INDUSTRIAL CREDIT AND INVESTMENT CORP. OF INDIA LTD.

TOTAL FINANCIAL ASSISTANCE EXCEEDS RS. 13 CRORES

EIGHTEEN NEW ENTERPRISES HELPED

STATEMENT OF CHAIRMAN, MR. G. L. MEHTA

THE Annual General Meeting of the Shareholders of The Industrial Credit and Investment Corporation of India Limited will be held at the Registered Office of the Corporation, Union Bank Building, Apollo Street, Fort, Bombay 1, on 13th April 1959, at 4 p.m.

The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the shareholders with the Directors' report and accounts for the year ended 31st December 1958:

"Before I turn to the Directors' report, I should mention that I assumed chairmanship of this Corporation just when 1958 was coming to a close. For almost the whole of that year, Sir Ramaswami Mudaliar was the Chairman, which office he has held with rare distinction since the inception of your Company. I wish to take this opportunity of paying our tribute to Sir Ramaswami for the invaluable part he has played in the formation of this Corporation and in piloting its affairs till the time of his retirement as Chairman. I am, however, glad that he has graciously agreed to remain on the Board of Directors and continue to give to the Board the benefit of his wide experience and his keen understanding of financial and industrial problems.

"It will be seen from the Directors' report that, by the end of 1958, your Company had agreed to give total financial assistance for Rs. 1,337 lakhs, excluding applications sanctioned but subsequently withdrawn by the applicants. Of this amount, rupee assistance amounted to Rs. 1,021 lakhs for 37 projects and foreign currency loans to Rs. 316 lakhs for nine projects. Out of the total of 44 companies, 18 were new enterprises.

"The results for 1958 show that operating profits subject to taxation were Rs. 51 lakhs, as compared to Rs. 48 lakhs in the previous year. Tax liability will, however, be correspondingly higher with the result that disposable profits will be Rs. 25 lakhs. This makes it necessary to maintain the same rate of dividend of 4 per cent. as was paid last year.

Reserves

"What is, moreover, a matter of concern is our inability to build up adequate reserves, due to present taxation, which are vital to strengthen this Corporation, in order that it may be able to undertake greater risks in the future. Sir Ramaswami Mudaliar, my predecessor, referred at length in his Chairman's statement last year to this aspect and I do not propose to go over the same ground, except to stress the importance of this matter for the development of this Corporation.

"It will be apparent from the information given in the Directors' report that the pattern of total assistance sanctioned continued to be similar to that of last year. Financial assistance was provided more or less equally as between loan operations in rupees and foreign exchange, on the one hand, and underwriting operations and investment in shares or debentures, on the other. It is of interest to note that, in regard to loan operations, rupee loans have not recorded progress but foreign currency loans continue to make satisfactory advance. To a certain extent, such a pattern is explicable, in view of the existence in the country of several institutional agencies which specialise in the grant of rupee loans.

Credit From World Bank

"Your Company, being the only institution which is in a position to disburse foreign currency loans in view of its close association with the World Bank, has made progress in this direction. Consequently, the present line of credit of U.S. dollars 10 million from the World Bank is likely to be exhausted soon. Negotiations for a new line of credit have been initiated with the World Bank and I am glad to state that the attitude of the Bank is encouraging and helpful.

"In the direction of providing risk capital, your Company continues to make satisfactory progress which is indicated by the fact that till date, we have completed 16 underwriting operations amounting to Rs. 500 lakhs. This includes issues of equity as well as preference capital and debentures, some of which were public issues by means of prospectus and others "rights" issues to Company's shareholders or their nominees. It is a matter for some satisfaction that your Company is able to play a significant role in this field, because equity capital particularly for new ventures is difficult to raise and it constitutes the bedrock on which the financial structure of an industrial undertaking is based.

Underwriting Results

"The results of completed underwriting operations show that your Company was required to take up Rs. 178 lakhs in shares and debentures against the total underwriting liability of Rs. 500 lakhs, the balance having been subscribed by the investing public. In judging the activity of your Company, therefore, not only the size of investments made, as disclosed in the balance-sheet, should be considered, but it should also be recognised that, in its operations, substantial amount of capital is publicly subscribed, so that it is unnecessary for your Company to make investment to that extent. By this means, we are able to achieve the objective of making capital available for development without having to invest the entire amount. I should also make it clear that our underwriting activity takes into account the fact that the investment market in India is often unable initially to fully take up capital which is publicly offered; and the object of this Corporation is to fill the gap by absorbing the unsubscribed capital. Operations are undertaken with the full knowledge of the possible results, so that there is no question of the Corporation being compelled to take up unwanted capital. Through the policy of gradually and prudently selling its investments, the Corporation will be able to help in the process of broadening the investment market and co-operate in the building up of an active stock market which ultimately promote the growth of a capital market.

"In line with our efforts to raise funds in foreign currency through the World Bank, we are endeavouring to increase our rupee resources since our existing funds may prove adequate only till the end of the current year. We have requested the Government of India to make available to this Corporation an additional rupee advance which may carry us through the next two or three years. This may be made possible through rupee funds accumulated out of sale of U.S. surplus agricultural commodities and made available with the concurrence of the U.S. Government. I am glad to state that both the Government of India and the U.S. authorities view our needs with sympathy and understanding and I hope that we shall be able shortly to conclude the necessary formalities.

"I wish, however, to make it clear that it is not our intention to depend indefinitely on Government for additional funds as and when required. You will, no doubt, appreciate that your Company is not even five years old and it is not yet possible for it to borrow in the open market in adequate volume or at a reasonable rate of interest nor is it practicable at this stage to raise additional equity capital.

Informal Approach

"Our efforts to obtain new resources assume particular importance, because we foresee increasing demands upon us. In this connection, I would like to state that we invite and welcome discussions concerning the promotion of new industries and the expansion of existing ones. While we do not wish to expend our energies on speculative or ill-conceived schemes, our doors are always open to any *entrepreneur* who has a considered proposal, worked out sufficiently to permit detailed technical and financial discussion. It is not necessary to present a formal application. On the contrary, we would welcome informal discussions with responsible *entrepreneurs* and industrialists before formal submissions; so that we can give such advice and assistance as we usefully can at an early stage, thereby saving time and effort both for our clients and ourselves and avoiding delays in subsequent consideration of investment proposals.

"I should also like to emphasise that we desire to work closely with other institutions in financing industrial enterprises. We have already joined other financial institutions in underwriting operations and in the granting of loans and we propose discussing the possibilities of further combined operations with finance corporations, credit institutions and the Life Insurance Corporation, as well as with foreign institutions such as the International Finance Corporation and the Commonwealth Development Finance Company. We can visualise various forms of co-operation in the financing of enterprises, large or small, involving rupee assistance or foreign currency, whether for loans or for equity, and are prepared to join any or all such institutions in exploring fresh avenues of co-operation. The private sector is sufficiently large and is growing rapidly enough to require this kind of collective effort if the country is to make the most of its still meagre resources.

"I would now draw the attention of the shareholders to one encouraging development of 1958 which has a bearing on the activities of your Company. The climate for investment took a turn for the better during the year as is evident from improved conditions in the stock market and a welcome revival in the capital market.

Investment Market

"The investment market is not so unfavourable for raising of new capital in reasonable amounts as is sometimes contended. This, of course, does not mean that there is no room for further improvement. Stock prices have moved significantly upward during the year and there is a distinct revival in investors' confidence. It is noteworthy that stock markets all over the world were buoyant during 1958 which is reflected in a marked rise in stock prices both in London and New York. In India, improved conditions have been evident both in the gilt-edge market and in the share market resulting in a significant decline in yields of Government securities, debentures, preference and ordinary shares.

"While it is not possible to examine at length the factors responsible for this improvement, I may refer to some salient features. In the field of economic and financial policy, the year witnessed a certain measure of stability which has imparted a sense of confidence even under the ruling conditions of high corporate taxation. Moreover, easy money conditions prevailed during the year consequent on a substantial rise in money supply at a time when demand for credit had declined owing to severe restrictions on imports. Thirdly, several of the principal industries such as jute, coal, steel, engineering, chemicals, pharmaceuticals, paper, sugar, etc., have been able to increase production and attain higher profitability, which have conduced to strengthening investors' confidence in the prospects of industrial development. I realise that against this should be set the unsatisfactory working in several other important industries such as cotton textiles and cement as well as several disincentives which impede capital accumulation. But, by and large, it would be true to say that, while the prevailing acute shortage of foreign exchange is making difficult the establishment of new industries or expansion of existing ones, it also affords a measure of indirect protection to a number of industrial concerns.

Road Transport

"In this context, I would like to stress that the activities of your Company are inextricably related not only to the general environment for investment but also to Government policy which is itself an important determinant of that environment. Let me cite an example. Transport lays an important part in the development of this country and at one time, it was apprehended that the progress of the second Five-year Plan might be impeded by inadequacy of transport facilities. It is a measure of the progress of the Plan that the shortages have not been as acute as was feared and it is significant that an unexpectedly important contribution in this respect has been made by highway transport which, in turn, has contributed to relieving the burden on the railway system. The automobile industry while still in an incipient stage has been developed to an appreciable extent in many parts of the country and is carrying an increasingly larger proportion of goods and passengers.

"I am glad to say that, recognising the significance of the automobile industry, your Company is playing an important part in its development. It has made substantial investments in seven enterprises for the production of vehicles, components and accessories. Those operations amount to Rs. 216 lakhs, more than 16 per cent. of the total commitments of your Company. This sum has been a catalyst for bringing to productive work a much larger amount of capital. We expect to do more in this field, despite the fact that the development of this industry is now hampered by severe restrictions on import of components which cannot yet be manufactured in India.

"I have made a mention of the transport industry, because it is essential to recognise that your Company desires to make a specific contribution to national development. It is no less important that we make available to those responsible for determining such plans, the results of our experience which, with that of similar other institutions, could be taken into consideration in such revision of governmental policies as might become necessary owing to changing conditions both at home and abroad. The private sector has a large and important part to play in a 'mixed' and planned economy and I trust that this Corporation will assist it in doing so in an increasing manner."

U.K.'s LOANS TO OTHER GOVERNMENTS

Government-to-Government loans by the United Kingdom have aggregated £50,000,000 since the Commonwealth Economic Conference in Montreal last September. Giving particulars of this total, Mr. F. J. Erroll, Economic Secretary to the Treasury, said in the House of Commons on 9th March, that negotiations for the following Government-to-Government loans had been completed since the Montreal Conference:

(1) A loan of £28,500,000 to the Government of India; (2) £10,000,000 to the Government of Pakistan; (3) £3,000,000 to the Government of Yugoslavia; (4) £5,000,000 to the Government of the Sudan; and (5) as part of a joint O.E.E.C. operation, a loan of £3,500,000 to Turkey.

THE CENTRAL BANK OF INDIA, LIMITED.

SIXTY-FOURTH REPORT OF THE BOARD OF DIRECTORS

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.

The Net Profit for the year, including the sum of Rs. 18,44,046·05 brought forward from the previous year's account, amounts to	Rs.	1,19,86,110 29
The following appropriations have been made :—		
An ad-interim Dividend was paid for the half-year ended 30th June, 1958, at the rate of 6 per cent. free of income-tax, i.e., Rs. 1·50 per share on 12,58,170 shares	Rs.	18,87,255 00
Amount provided for Taxation	,,	16,50,000 00
Amount transferred to Staff Gratuity Fund	,,	10,00,000 00
Amount provided for Bonus to Staff	,,	32,00,000 00
	Rs.	77,37,255 00
The balance of Rs. 42,48,855·29 the Directors propose to recommend to the Shareholders to dispose of as follows :—		
To pay a final Dividend for the half-year ended 31st December, 1958, at the rate of 8 per cent. free of income-tax, i.e., Rs. 2·00 per share on 12,58,170 shares (making in all 14 per cent. per annum for the whole year)	Rs.	25,16,340 00
To carry forward to next year's account	,,	17,32,515 29
	Rs.	1,19,86,110 29

The Bank's business during the year under review showed satisfactory progress. During the year, a Branch was opened at Kidderpore (Calcutta) and seven Sub-Branches and eight Pay Offices were opened at other centres. During the same period, three Pay Offices had to be closed down as they were found to be unremunerative.

The Directors record with deep regret the death which took place on the 31st October, 1958, of their colleague, Mr. Manmohandas M. Amersey. They desire to place on record their appreciation of the very valuable services he rendered to the Bank.

Three of your Directors, Sir Homi Mody, Mr. C. P. Wadia and Sir Jamsetjee Jejeebhoy, Bart., retire under Article 92 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

BOMBAY, 28th *February*, 1959.

H. P. MODY,
Chairman.

Statement pursuant to Section 212 of the Companies Act, 1956.

(*a*) The Bank's interest in its Subsidiary, The Central Bank Executor and Trustee Company Private Limited as at 31st December, 1958, comprised 1,998 shares of the face value of Rs. 1,000 on each of which Rs. 500/- per share has been paid up.

(*b*) The profits of the Subsidiary Company for the year ended 31st December, 1957, have been included in the item "By interest, etc.," in the Bank's Profit and Loss Account as at 31st December, 1958, to the extent of the dividends amounting to Rs. 39,960 declared and paid by the Subsidiary for the year ended 31st December, 1957, in respect of the Bank's share-holding. The undistributed balance of profit of the Subsidiary amounting to Rs. 23,612·58 has been carried forward in the accounts of the Subsidiary.

(*c*) The net aggregate amount of Rs. 11,36,362·50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

H. P. MODY, *Chairman.*
C. H. BHABHA, *Vice-Chairman.*
DINSHAW D. ROMER, D. M. KHATAU, C. P. WADIA, CHIMANLAL B. PARIKH, *Directors.* F. J. GUZDAR, JAMSETJEE JEJEEBHOY, J. M. SCINDIA,
N. K. KARANJIA, *General Manager.*

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other Auditors and the unaudited returns from 102 other branches and 124 Pay Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(*c*) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(*d*) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

THE BANK OF BARODA, LIMITED

(ESTABLISHED: 20th July, 1908)

FIFTIETH ANNUAL REPORT OF THE DIRECTORS.

To be presented to the Shareholders at the Ordinary General Meeting to be held at the Registered Office of the Bank at Mandvi, Baroda, on Saturday, the 28th day of March, 1959, at 11-30 A.M.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account of the Bank duly audited for the year ended 31st December, 1958.

	Rs.	nP.
The net profit for the year 1958, including Rs. 4,10,730.69 nP. brought forward and after taking Rs. 3,00,000.03 nP. towards depreciation on buildings and furniture amounts to	31,53,522	16
An ad-interim dividend at the rate of 12 per cent. per annum, free of income-tax, was paid for the half-year ended 30th June, 1958, which absorbed	7,50,000	00
Provision made for taxation	5,50,000	00
Bonus to Staff	8,00,000	00
	Rs. 21,00,000	00
The Directors now recommend to pay a final dividend at the rate of Rs. 3 per ordinary share and Rs. 1.50 nP. per 'B' ordinary share, free of income-tax, for the half-year ended 31st December, 1958, making 12 per cent. for the year, amounting to	7,50,000	00
To carry forward to next account	3,03,522	16
	Rs. 31,53,522	16

The business of the Bank during the year under review was satisfactory. The profits are, however, down due to the prevalence of high rates of interest on deposits during the major part of the year, fall in foreign exchange business due to restrictions on imports and lack of remunerative investments.

It will be noticed that Investments have now been shown at or below market rate in the Balance Sheet.

The shareholders will remember that the entire business of the Hind Bank, Ltd., was taken over by the Bank from 1st August 1958, in terms of the Scheme of Amalgamation approved by the shareholders of both the Banks on the 10th May, 1958. This has entailed the issue of 1,00,000 'B' Ordinary Shares, with Rs. 25 credited as paid-up on each share, to the shareholders of the Hind Bank, Ltd.

The Reserve Fund shown in the Balance Sheet of the former Hind Bank, Ltd., under Section 17 of the Banking Companies Act, has been amalgamated with our Reserve Fund under the same Section of the Act. As a result, our total Reserve Fund under Section 17 now stands at Rs. 1,27,75,000. Similarly, the share premium amount of Rs. 3,75,000 on the issue of shares of the former Hind Bank, Ltd., has been amalgamated with our Share Premium Account which now stands at Rs. 31,75,000.

During the year the Bank celebrated its Golden Jubilee. To mark the event the Directors propose to increase the Paid-up Capital of the Bank from Rs. 1,25,00,000 to Rs. 1,50,00,000 by capitalising a sum of Rs. 25,00,000 out of the Share Premium Account (Balance) utilising it in payment of a bonus issue to the shareholders of 50,000 'C' fully paid-up shares of Rs. 50 each. The necessary application to the Central Government for permission to issue bonus shares as proposed has already been made and as soon as the necessary permission is received, a meeting of the Shareholders of the Bank to consider the proposal will be called, notice of which will be given to the Shareholders in due course.

The Bank has opened branches during the year at Vijayawada, Wadala (Bombay), Manmagar, Sabarmati and Relief Road in Ahmedabad, Ambattur (near Madras), Karol Bagh (New Delhi), Nadiad, Andheri (Bombay) and Raopura (Baroda).

In accordance with the Article 145 (1), three Directors, Shri Chinubhai Chimanbhai, Shri Arvind N. Mafatlal and H. H. The Maharaja Fatehsinh Gaekwad of Baroda retire by rotation and being eligible, offer themselves for re-appointment.

Under provisions of Article 149 of the Bank's Memorandum and Articles of Association, Shri Keshav Prasad Goenka and Shri Narsing Dass Bangur who have been appointed as additional Directors during the year will hold office upto the date of the Annual General Meeting. They, being eligible, offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,
TULSIDAS KILACHAND,
Chairman.

BOMBAY, *12th February, 1959.*

BALANCE SHEET AS AT 31st DECEMBER, 1958.

INCREASE IN URBAN LABOUR FORCE

OVER SIX MILLION MORE DURING THE THIRD PLAN PERIOD

DATA relating to growth of population, changes in sex and age composition, number and percentage of persons entering or leaving the total labour force, movement of population as between different regions, etc., are very essential for perspective planning. They enable the plans to be tailored to suit the actual economic requirements. The rate of population growth is a measure of the food, clothing, housing and other such basic requirements that will be additionally required. Annual additions to the total labour force will indicate the number of jobs that will have to be created each year.

The dearth of adequate and reliable information regarding these aspects is a very real limitation on planning in this country. For much of the relevant information regarding manpower, one has to depend upon the 1951 census figures which cannot give a correct picture of the situation obtaining at present. Even for the assessment of the extent of unemployment and underemployment, which must precede any attempt at employment planning, the data available are very meagre. The inquiries conducted by the National Sample Survey had yielded valuable data for estimating urban unemployment, but even they, together with the employment exchange figures, give only a rough idea of the extent of urban unemployment. In the case of rural areas, the position is even worse, the only sources of information being the Report of the Agricultural Labour Enquiry Committee and some rural surveys.

In the absence of adequate data, it is difficult to assess precisely the trends of employment and unemployment in the economy as a whole. According to the Economic Survey for 1958-59 published along with the budget papers, the indications are that, in 1958, the employment situation worsened in some sectors of the economy. Employment exchange data confirm this conclusion. The number of applicants on the live registers of the employment exchanges rose from 920,000 at the end of 1957 to 1.18 million by the end of 1958, thus registering an increase of 260,000 as compared with 160,000 in the previous year. The vacancies notified went up from 297,000 in 1957 to 365,000 in 1958 and placements showed an increase from 193,000 in 1957 to 233,000 in 1958. A part of the increase in numbers on the live registers was due to the opening of new exchanges and the increasing use of the existing ones by those seeking jobs. Some of those registered with the exchanges were not unemployed but were only on the look out for better jobs.

To this backlog of unemployment will be added the persons coming into the labour force during the rest of the second Plan period. The third Plan, currently under consideration, will, therefore, have to take into account the unemployment obtaining at the beginning of 1961 as well as the additions to the labour force during the third Plan. According to a study based on the employment exchange statistics and data obtained through the National Sample Survey undertaken by the National Employment Service of the Ministry of Labour and Employment, the addition to the urban labour force during the third Plan period will be of the order of 6.1 million persons. Of this, 1.7 million will be educated persons, that is, matriculates and others having higher qualifications.

The study shows that, as a result of the continuous process of migration of people from rural to urban areas, there has been a rapid growth of labour force in towns and cities. It is estimated that the labour force in urban areas will increase from 26.4 million to 31.5 million during the current Plan period and from 31.5 million to 37.6 million, during the third Plan period. Similarly, there will be an increase of educated persons in the labour force from 2.8 million to 4.2 million, during the second Plan period and an increase of 1.7 million to 5.9 million during the third Plan period.

It will, therefore, be necessary that the third Plan should aim at creating 6.1 million jobs including 1.7 million for the educated, in order to avoid any increase in the backlog of unemployment which may remain at the end of the second Plan.

The study has revealed that the rapid growth of the labour force in towns and cities has naturally resulted in an increase in the number of unemployed persons in urban areas. The proportion of the unemployed is high in cities as compared with towns and is the highest in big cities.

An analysis of the factors responsible for the migration of people from rural to urban areas has shown that there is an incentive on the part of the rural population to migrate to towns and cities in their desire to shift from the cultivation of land to manufacturing and services, from household occupations to non-agricultural and service occupations and from intermittent or seasonal work to regular employment. The process of rural migration, according to the Study, has been rather slow but, when industrial development gains momentum, a higher tempo of migration should be expected. Besides, according to it, there is already so much overcrowding in agriculture and such chronic underemployment in villages that the ever-increasing educated rural population has no other alternative but to migrate in large numbers. This is supported by an analysis of the data available with employment exchanges which indicate that an increasing number of persons who were hitherto deriving their income from agriculture are now seeking non-agricultural and urban employment.

The study, it must be borne in mind, leaves out of account the rural labour force and the probable rise in its size. It is common knowledge that unemployment and underemployment are as acute a problem in the rural areas as in the urban. If the third Plan is to make any impression on the employment situation its employment potential needs to be large enough to absorb a large portion of the additional labour force and also of the unemployed remaining at the end of the second Plan.

WELFARE ACTIVITIES OF LEYLAND MOTORS

Leyland Motors Ltd. of Lancashire has an illustrious record of good labour-management relations. This is due not a little to the scrupulous attention the Company pays to the welfare of its employees. In a few weeks' time, 12,000 employees of the Lancashire factories of Leyland will decide for themselves through the ballot box the venue for their annual outing. As in previous years, they will receive ballot papers in their wage packets containing the query as to where they would like to go on holiday. The venue receiving the highest number of votes will be selected.

If the Continent of Europe is chosen, it will not be for the first time that Leyland workmen will have their holiday there. Many of them still cherish happy memories of their visit to Ostend (Belgium) in 1929 and Paris in 1930. When 3,000 Leyland employees visited the French capital in 1930, the total cost, including five meals, two coach tours around the city as well as guides and gratuities, was only £2 10s. each.

The opening of a library for the employees of Leyland Motors Ltd. at the Company's Day Continuation School is an indication of the diverse character of its welfare programme. To start with, the library will have 4,000 books on a variety of subjects, ranging from bird watching to space travel. New books will be added every year out of a yearly grant of £100.

MANAGEMENT EXPERTS' TOUR

A 10-member Management Educationists' Team under the leadership of Mr. Y. A. Fazalbhoy, Managing Director, General Radio and Appliances (Private) Ltd. Bombay, left New Delhi on the 12th inst., for the United States of America for a nine-week tour of that country. The visit of the team has been sponsored by the Ford Foundation in India. The team will visit important universities, technical institutions and other educational centres in the States which conduct various management courses. It will study the present developments in management studies in the U.S. institutions in all their aspects. The team will also consider how far and in what manner the experience of U.S. institutions and the results achieved by them may be utilised in the development of management studies in India. The team is expected to discuss with the heads of U.S. institutions the nature and extent of U.S. assistance that might be sought in the development of management studies in this country.

GUINEA JOINS I.L.O.

Guinea has become the 80th member of the International Labour Organisation. In a letter addressed to Mr. David A. Morse, Director-General of I.L.O., the President of the Republic of Guinea and Minister for Foreign Affairs, Mr. Sekou Toure, declares that his country accepts the obligations in the Constitution of the I.L.O. Such a declaration, it may be noted is the only formality which has to be complied with by member countries of the United Nations to join the I.L.O.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Bank of Baroda, Limited, as at 31st December, 1958, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 26 Branches audited by us, 9 Branches audited by other Auditors and the unaudited returns from other Branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required, for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

ANOTHER RECORD YEAR OF OPERATIONS

CHAIRMAN, MR. J. M. LALL ON COST AND PRODUCTIVITY RELATIONSHIP

PRESIDING over the Twenty-second Annual General Meeting of the Alkali and Chemical Corporation of India, Ltd., held at Calcutta on Monday, 16th March 1959, Mr. J. M. Lall, Chairman of the Corporation, emphasised that, in the context of the present acute shortage of capital, India's prosperity depended upon making the maximum use of available capital, plant and equipment. The optimum use of plant and machinery, he said, would, in addition to increasing production, bring down the unit cost of such production and make the country's manufactures more competitive in the export market.

The following is the text of Mr. Lall's speech:

"GENTLEMEN,

"The audited accounts and Directors' reports have been in your hands for some time and, with your permission, I shall take them as read.

"On the whole your Company has had a good year. Sales were 17 per cent. higher than in the previous year but the higher cost of raw materials and wages has resulted in a lower net profit.

"You will have seen from the Directors' report that we had to transfer from the dividend equalisation reserve only Rs. 11 lakhs of the Rs. 24.8 lakhs required for an 8 per cent. dividend on the ordinary capital, including the last issue of Rs. 248 lakhs for the polythene project, which has not yet begun to earn any profits. This is very satisfactory.

Production

"Once again, we had a record year. Every unit registered an increase. The only factor limiting our production was the shortage of certain essential raw materials which could not be imported. This was felt particularly in the manufacture of our paints products.

"Production of metal pre-treatment products for which there was a growing demand increased greatly.

"In the insecticidal field, our output of all types of 'Gammexane' formulations was higher than in the previous year, and we were able to meet the growing demands of Government and of other users. Competition in these products is increasing but your selling agents are maintaining their position in the market.

"Our chlorine/caustic plant again registered a record output for which we found a ready market. Our output of hydrochloric acid was higher than in the previous year and was disposed of without difficulty.

"A public enquiry into the caustic/chlorine industry was held by the Tariff Commission and the Company's works were visited by the Commission's staff. The Company provided extremely detailed data which took our staff several months to prepare. I am glad to say that the Government have agreed to continue the existing rate of protective duty on caustic soda. The Commission's report on 'fair prices' for locally produced caustic soda/chlorine and hydrochloric acid has not yet been made available.

Expansion Programmes

"An increase in our licensed capacity for benzene hexachloride was approved by Government. Work on the extensions to our chlorine/caustic soda plant has commenced, and is expected to be completed during the current year.

"Construction of the plant for the manufacture of 'Alfloc' water treatment products is now well advanced and the plant will go into production shortly.

"The new factory for making polythene is now complete and trials have commenced. We hope to have a formal opening at the beginning of May. We had our share of difficulties and setbacks in the construction of this plant but, with the help of our technical consultants, Imperial Chemical Industries Limited, London, and our construction contractors, we have been able to keep to the schedule.

"The chemical and plastic industry in India is yet in its infancy and the field which is open for development is vast. Your Board and their technical advisers, Imperial Chemical Industries Ltd., are fully alive to this and are investigating new lines of manufacture.

"Chemical projects usually involve high capital cost and a complete and thorough investigation is necessary before any recommendations can be made. I am not in a position to say whether any new schemes will mature in the current year.

Productivity and Labour Relations

"Looking at the economic trends in the country and the acute shortage of capital one is led to the inescapable conclusion that our prosperity depends upon making the maximum use of the capital, plant and equipment at our disposal. It has been amply demonstrated that this can be achieved through rationalisation in industry, changes in layout of machinery, reorganisation of work by application of work study techniques and so on. This optimum use of plant and machinery will, in addition to increasing production, bring down the unit cost of such production and make the country's manufactures more competitive in the export market. Experience in other countries has shown that higher productivity has gone hand in hand with higher levels of employment and that wages are highest where productivity is greatest.

"I would like to emphasise the importance to our country of a consciousness in labour of the responsibilities which their jobs carry. A great deal is heard about the rights of labour, the rising cost of living and the need for additional amenities such as housing. I am sure that all progressive employers accept that wages and amenities cannot remain static in a developing economy; but rising wages without a corresponding rise in productivity can only result in inflationary pressures with serious consequences to our economy.

"According to a recent study, there has been a doubling of receipts in average salaries and wages, and the value of fringe benefits over all the industries has multiplied a little over three times between 1946 and 1956, while productivity has not risen by more than 10 to 12 per cent.

"I appeal to our workmen and the labour leaders, who guide them, to bear in mind the needs of the country and to put their best into the jobs they are doing. Trade unionism has every thing to commend it provided it does not allow political influences to deflect it from its basic objective of advancing the well-being of the worker and of the industry in which he works. The success of all our Five-year Plans depends on every member of the society doing his bit in increasing the country's production. We cannot afford destructive trade unionism resulting in 'go-slow' movements, stoppage of work, and indiscipline in industry.

Labour Relations

"I am glad to say that our relations with labour and staff have been good throughout. Any differences, and differences there must be in any large family, have been discussed in a spirit of co-operation and keenness to understand each other's point of view.

"The work study section, to which reference was made last year, continues to provide a valuable service to management. It has been working on a wide range of problems during the past year and has contributed to savings in capital expenditure and running costs.

"Management is at present discussing with the unions concerned the introduction of 'work reward schemes' based on work study data. The purpose of these schemes is to enable the participants to earn greater rewards for greater effort and thereby further to encourage worker's co-operation in the Company's objectives.

"We attach the greatest importance to the efficient recruitment and training of our young engineers and technicians. Your Directors have recruited a considerable number of young Indian technicians, many of whom have been sent to the U.K. and Australia for practical training in I.C.I. factories.

"I would like again to pay a tribute to your selling agents, Imperial Chemical Industries (India) Private Limited, for the excellent services, both commercial and technical, that they have given us.

"I would like to refer to the special business included in the agenda. Sir Bijoy needs no introduction to you. He has been a Director of your Company for 10 years, and is a well-known figure in the business community of this country. Only recently, he relinquished the Presidentship of the Federation of Indian Chambers of Commerce and Industry. He has been a very valuable colleague to me and to my predecessors and I commend to you the resolution exempting him from the age limit prescribed by the Companies Act.

"The other items of special business are adequately explained in the note.

"The Directors retiring by rotation are: Dr. S. B. Cormack, Dr. E. C. Fairhead and Mr. F. G. Lamont, and they are recommended for re-election.

"Messrs. Lovelock and Lewis, the Auditors, seek re-election and have asked us to increase their fee from Rs. 7,500 to Rs. 10,000. During the year they will be called upon to do additional work in connection with the polythene plant, and in the opinion of the Board the increase is reasonable and justified.

"Before I close my address and invite questions from members, I want to thank all of you who have found time to attend this meeting."

(This does not purport to be a record of the proceedings.)

SCIENCE AND POPULATION PROBLEM

NEED FOR ENCOURAGING STUDY OF HUMAN ECOLOGY

By Sir Julian Huxley, F.R.S.

THE world is passing through a population crisis. The total population of the world has been steadily increasing since earliest prehistoric times but the basic total, and its rate of increase has shot up in the last 50 years. The total is now over 2½ billion human beings. The net increase last year was 47 million people and it would be at least 50 million this year.

The compound interest rate of increase reached 1 per cent. only in the present century and it is still going up and, of course, it is fastest in the underdeveloped region where the need for food is greatest. Whatever happens, the world population will be doubled in two generations, and the total will be over five billions in the lifetime of many people of today.

In fact, there is a population explosion going on. And this population explosion is due to what has been called death control—the fact that science has managed to prevent so many people dying either earlier or late, from all sorts of diseases. Meanwhile, the birth rate has not come down. Well, what can science do about this population explosion?

First of all, I think, it is clear, that science cannot solve the population problem by just providing extra food. Some people say, you can make synthetic foods or you can employ new agricultural methods or introduce new crops or bring new areas, desert and jungle areas, under cultivation. Well, this would often be wasteful. Synthetic food, I am sure, is very unpleasant and in any case you cannot do it fast enough to catch up with the rate of increase of people. And, in any case, it cannot go on for ever for purely arithmetical reasons. You may say that science cannot solve the population problem so long as this is regarded as how man can win the race against himself. How man, as a consumer, can beat man as a reproducer.

On the other hand, science can be of the greatest help and service if we look at population in a scientific way as a problem of human ecology. That is, the science of man's relations with his environment, the natural environment provided by the earth and the social environment provided by man's own efforts. Looked at in this way, it is quite clear that, if nothing is done, man will, sooner or later, become the cancer of the planet he inhabits, and not only that, the cancer of his own future.

Science shows that the basic thing is to establish proper relations with our home. That is to say, to ensure the quality of human life and the fullest realisation of possibilities for individuals, and for fullest achievement by individuals and by society. This means that man has got to learn to live in what in biology we call symbiosis, an organic partnership with the earth that he inhabits. He must not erode the resources of his physical environment. He must conserve them, the resources of all sorts, the resources that are to be used and consumed and the resources that are to be enjoyed.

Earth's Resources

Now among resources to be used there are the soil, the forests, minerals, water, water-power and so on, and there are plants and animals, wild and domesticated. And as for resources to be enjoyed, there is wild nature, there is wild life, there is beauty, there is scenery, there is a reasonable amount of solitude and there is space—space of easy access from crowded areas. All this leads to the idea that we have to envisage eventually to an optimum population, or at least not, an unbalanced or runaway increase of population, if you were to achieve anything worthwhile.

A man also must not erode the resources of his social environment. You are beginning to find out that there is a more or less general law, that, above a certain rather low threshold, the greater the density of population per square mile, the less freedom and less convenience there is per head. This is obvious in the overlarge cities of five and ten million inhabitants that are characteristic of our present age. It is also true about overlarge populations in general.

If your population gets too big and too dense, it leads to over-organisation and regimentation, a loss of freedom and loss of democracy. And, on a world scale, increase of population will eventually lead to the erosion of cultural variety—the substitution of drab, uniformity and mechanical efficiency, for the lovely variety that we now still enjoy in large measure, among the few cultures and, indeed, an erosion of human values in general. Thus, I might say that the scientific approach shows that inevitably increasing misery and increasing frustration for an increasing number of human beings will result on a world scale, unless something is done, to slow down population increase. Our grandchildren will be living, if nothing is done, a world, which is much more unpleasant for more people than the present one is. And that is saying a good deal.

Of course, it is also clear that science can palliate some of these difficulties. It can help to grow or make new food. It can help to find or make new sources of energy. It can certainly arrange eventually to get fresh water out of salt water, granted that the expense is no obstacle and, similarly, if expense is no obstacle, it can irrigate distant deserts and cut down forests, that at the moment are unproductive and it can help to provide better distribution. But this is all something only temporary. It is a palliative measure and it will not deal with the basic problem, which is, that, unless something is done, human reproduction will outrun resources.

The ultimate outcome is this, that, somehow or other, death control, which is the great fact of modern world, must be balanced by birth control. It is very encouraging that, already, great countries like India and Japan have population control as part of their official policies. But, still, even within these countries, the results are not fully satisfactory. And even here much more could and should be done.

Spend More On Research

But you have got to be more fundamental; science certainly could help by discovering a cheap and easy method of birth control, some sort of pill, as people would like to call it, which could be taken by mouth and would prevent conception or implantation. Now a good deal of research is going on, mostly encouraged by private bodies, but it is piecemeal and on a relatively small-scale, and so it is slow. We are getting to find out much more than previously we knew, about human reproduction, the details of it, and how to interfere with the process, to control it.

But much more ought to be done. I would say, if one-tenth or 1 per cent. of the money and the scientific brain-power that was delegated to discovering how to make the atom bomb were allocated to study the details of human reproduction and to discover the best way of controlling it, why, we should have the solution at least within ten years. That would be, of course, a temporary solution; then we would have to find a method of persuading Government to implement the method to get the people to take the pill and so on.

In the long term, you will not get a solution to this grave problem of population, except by encouraging human ecology on a large scale, human ecology with reference especially to population. You want to set up all sorts of new institutions, to divert a great body of scientific and social scientific manpower into the study and survey of the problem. You need surveys, you need Planning Boards, Advisory Councils, Research Bodies and so on. After all, India, for instance, has a Biological Survey, it has a Botanical Survey, it has a Geological Survey. We in England have an Agricultural Research Council and a Medical Research Council. It seems to me that we need human ecology surveys. We need population research councils to focus attention and to guide research and the implementation of research in practice.

At the moment, the question of population is usually entrusted to the Ministry of Health. Why should it not be made more important? Why should there not be a Ministry of Population, of Social Development? It seems to me that population is such an urgent and basic problem, not only now, but in the immediate future, that much more attention should be given to it. And above all or perhaps not above all, we need international attention paid to it. Somehow, rather we need the United Nations to sit up and tackle this problem of world population with eventual aim of encouraging a world population policy.

Meanwhile, may I put this final point. I feel that it would pay handsomely in all countries, especially in the so-called underdeveloped countries, where a large bulk, a large proportion of people are underfed and insufficiently provided with education and opportunities for development, to spend far more money and thought on population control than is done at present. Spend money on research, and money on the education of the public to the means for population control, spend money on making and distributing free contraceptives, and giving free instruction all over the country, spend thought on devising financial and social methods of encouraging family limitation, and above all, but again perhaps not above all, but certainly to do this to put across the goal, the ultimate goal of any nation to encourage the quality of life, rather than the quantity of life.

Flood of Babies

I say it would pay handsomely because at the moment, all our efforts, your efforts in this country, and efforts in China, efforts in many other countries to provide better basic living, better standard of living, and better education and more opportunities for people, are always being overtaken by the flood of babies, that we have to feed and educate. You have got so much to catch up with and yet you cannot do so, because you have these new mouths to feed, these new brains to educate; and you have got to find new jobs for these people too. If you were to reduce the increase of population, you would be able to spend more money on financing the new schools and new scientific equipment and new methods of agriculture which so urgently need to be done.

I do not want to be pessimistic about this but I do feel that all countries should really concentrate their minds on seeing what could be done to get over the really ghastly difficulties which are arising, and which will become much greater, arising from the population explosion. And for this science must be applied, because science is not just some kind of magic, but it is a method of dealing with concrete problems, as they arise. I feel that science can be of real service, if its advice is asked and if its advice is followed and if given the men and money to do the research and the surveys which are needed. And I want to emphasise that by science, I do not just mean technical science or I just do not mean only engineering or anything like that; I do not mean pure biology. I do not mean applied biology or agricultural science. I mean science in every aspect, and the scientific spirit, and especially I mean the encouragement of the essential science of human ecology, with special aim of studying population and controlling it.

SCREW INDUSTRY GROWS STEADILY

ENOUGH RAW MATERIAL NOT AVAILABLE

THE wood screw industry in India has been making steady progress. Although the industry was first developed during war-time in the Amritsar area in the Punjab, it subsequently expanded and grew in other parts of the country also, such as U.P., W. Bengal, Bombay and Madras. There are at present 57 units, both big and small, all over the country. The organised manufacturers as sponsored by the Development Wing are only 26. The estimated total production of wood screws in 1958 is of the order of 8.1 million gross, as against no more than 703,000 gross in 1950. Similarly, the production of machine screws has gone up from 160 thousand gross in 1950 to two million in 1957. According to Mr. D. V. Virmani, President, Screw Manufacturers Association the current rate of production appears to be in excess of the demand, but this may prove to be a passing phase in view of the rapid growth in construction activities in the country. In his speech at the annual meeting of the Association held at New Delhi a fortnight ago, Mr. Virmani dealt with the industry's progress and its problems. Although this is a small industry, it is a vital one, for wood screws are indispensable to the economic progress of a country. Accordingly, a reference to the points made by Mr. Virmani will be useful.

The Tariff Commission had estimated the annual rated capacity (on single-shift basis) of the units manufacturing wood screws at 6.9 million gross (3,450 tons) and 13.8 million gross (6,900 tons) on two-shift basis. Mr. Virmani considered this as a very modest estimate as the capacity of ten out of nineteen units on the Central list alone account for 5.76 million gross (2,880 tons). Besides, there are many small units, getting their quota of raw materials from the State Government, which have not been included in the estimate of the Tariff Commission. Mr. Virmani estimated the domestic demand for wood screws at 3,500 tons. He was, therefore, of the view that there was hardly any scope for further expansion of the industry at present. In any case, he urged the Government to register all unlicensed units with the Development Wing so that one could get a precise picture of the capacity and production of screw industry.

The figures given below shows at a glance the industry's trend of production during the last eight years:

(In thousand gross)

1951	...	...	...	...	796.8
1952	...	...	...	...	1.329.6
1953	...	...	...	...	2,571.6
1954	...	...	...	...	5,197.2
1955	...	...	...	...	6,662.4
1956	...	...	...	...	7,502.4
1957	...	...	...	...	8,143.2
1958	(upto	September)		...	7,502.4

The foregoing figures represent the production of 19 units which are on the Central list.

There is no doubt that the demand for screws will grow with the development of the country. The second Plan has laid emphasis on the development of heavy engineering industries, machine building industries and building and construction activities. The planners have also realised the need for procuring a wide range of requirements during the Plan from indigenous sources. This will naturally enhance the scope for development of the screw industry in the years to come. In order to enable the screw industry to keep pace with the growing demand it is imperative that it should be assured of a sufficient and regular supply of steel wire, the principal raw material. Mr. Virmani said that the industry had been getting its requirements of raw materials just sufficient for only one-shift working. He, therefore, wanted the Government to consider how far it would be possible and practicable to allot materials for two-shift working to the industry, as that alone would enable the industry to operate on a sound and economical basis and consolidate its position. He complained that the Indian Steel and Wire Products Ltd., the only indigenous manufacture of steel wire, is not in a position to provide, in time, the industry with wire in sizes and quantities with the specific chemical composition. This factory, according to him, is in a position to supply only 50 per cent. of the industry's requirements of wire. The screw manufacturers had, therefore, no choice but to depend on imports. Here again, the manufacturers were not able to get licenses for sufficient quantities of raw materials. He pointed out that many units were still receiving licences on the basis of their old capacity though they had expanded it. He, therefore, pleaded for an early reassessment of the capacity in all the units engaged in the manufacture of screws.

Another handicap of screw manufacturers was the difficulty in getting import licences. Explaining it, Mr. Virmani observed as follows:

"Recently, the Government has announced their new import policy, according to which the screw manufacturers are required to submit indents for importing steel wire through Sponsoring Authorities to the Iron and Steel Control. This would in effect mean that the Government would import materials on their own account by calling for global tenders and distribute the same to the manufacturers. Such a procedure, I consider, is hardly fair to the screw industry as this would entail tremendous hardship. Firstly, import by Government will entail delay and this would adversely affect the production and employment in the industry. Secondly, the particular quality of steel, with required specific chemical composition and gauges which are highly essential for the manufacture of screws, can hardly be guaranteed through bulk imports. Another difficulty that would arise is that, in case Government do not allow the required quality and quantity of steel wire to the screw industry, even after accepting indents, then the industry will be placed in a very precarious condition. I would, therefore, suggest that screw manufacturers should be allowed to place the indents for their requirements of wire through Government on the producers in foreign countries and open letter of credit in favour of Government."

It is gratifying to hear that, as in the case of a good number of engineering goods, exports of screws also have been going up. The total value of exports of wood screws has increased from no more than Rs. 7,200 in 1957 to Rs. 71,700 in 1958. The leading buyers are in British East Africa and Aden. The reports of the Engineering Export Promotion Council aver that there is good scope for stepping up exports of wood screws, provided the prices are competitive. The biggest competitors are West European countries and China. Mr. Virmani advised the exporters of screws to give a high percentage of Commission over the listed prices to importers. It may be noted that the Reserve Bank of India has permitted the exporters to give the Commission necessary for securing orders from overseas countries.

(Concluded from next column)

poorer frames; in some cases it was found that a few spindles on the frame accounted for as much as 20 per cent. of the yarn breaks. Thus, efficiency of spinning can usually be raised by 10 to 15 per cent. through quality control methods.

"Similarly for weaving, it is usually found that the efficiency of individual weavers varies widely, in some cases as much as 40 to 80 per cent. in the same mill. This knowledge provided management with the information to seek the cause and to take appropriate action. By bringing the efficiency of the weavers to a common high level, overall efficiency in mills has been raised as much as 20 per cent.

"As for control of outgoing product, the inspection is conducted on a small sample of cuts from each day's production, usually 16 out of a mill's daily production of two to three thousand cuts. The sample examined, though not large, provides all the information important for management action. For instance, colour faults are traceable to the original mixing of raw materials, thin places in the fabric to variations in spinning. Armed with this information, mill management can be sure that its attention is directed to those parts of the process that need help.

"Lastly, quality control practices in a jute mill are concerned with the scientific study of the cost of raw materials in relation to the spinning and weaving efficiency obtained from them. A 10 per cent. decrease in the cost of raw materials adds nearly 25 per cent. to the margin between cost and selling price. Hence, the gains on this score can be considered major ones."

This example of how statistical quality control has helped one industry could be multiplied many times in more than 20 different industries. During his stay in India, Dr. Pabst visited more than 100 plants, many of them more than once, and made specific written recommendations in each plant as to how the technique could be applied, or improved if already in operation. These recommendations provided local statistical quality control units with a basis for industry-wide applications.

RAISING PRODUCTIVITY OF INDUSTRIES

VALUE OF STATISTICAL QUALITY CONTROL

IN a number of basic manufacturing plants throughout India, production in 1959 is expected to increase anywhere from 10 to 25 per cent. by means of a new and little-publicised industrial technique which is being applied without an increase in plant or overhead and without large additions to staff. The procedure—known as "statistical quality control"—and its application to Indian industry were explained at U.N. Headquarters by Dr. William R. Pabst, Jr., who has returned from a one-year assignment in this country under the U.N. technical assistance programme.

While in India, Dr. Pabst explained, he helped introduce quality control procedures—which he defines in non-technical terms as a critical examination of the technical aspects of production in order to highlight weak spots—in scores of plants engaged in the manufacture of shoes, textiles, jute, sewing machines, pharmaceuticals, rubber products, cigarettes, plywood, aluminium sheeting and iron and steel castings. In co-operation with the Indian Statistical Institute, he has shown management how to reduce costs, avoid high percentages of scrap and seconds, and increase productivity and product quality. "Quality control methods and techniques have been discussed and talked about in India for a long time," says Dr. Pabst, who was on loan from his post as Chief Statistician with the U.S. Navy Department's Bureau of Ordnance in Washington, D.C. "But, until recently, these techniques have not been used with great success largely due to preoccupation with statistical rather than engineering considerations."

At the request of the Government of India, the United Nations has been aiding that country since 1953, first in gaining recognition of the value of the technique and later in urging use of this new tool of industry in reaching the production goals of its Five-year Plans. As a result of training programmes carried out by U.N. experts in 1953-54, statistical quality control units have been established in major Indian cities under the management of the Indian Statistical Institute.

All recent applications of the technique, according to Dr. Pabst, have much in common: they start essentially with an evaluation of outgoing product quality to determine the actual location of the strategic limitations in the production process. From this final evaluation, control spreads to areas where it is needed most. In some cases, it may be directed to reducing scrap and rework, increasing machine utilisation, or evaluating raw material quality. "The results," Dr. Pabst observed, "seem to be repaying the long effort that Indian industry has made. It is now widely adopting statistical quality control and is scoring effective increases in productivity in both old and new industries."

Dr. Pabst explained how quality control had helped one of India's largest and oldest industries—the jute industry—which, in Calcutta alone, employs thousands of workers in some 105 mills. The industry has been faced with keen competition from the development of competitive products, such as paper bagging for cement. It also suffered from the dislocation of Partition, the jute-growing areas going to Pakistan and the manufacturing plants remaining in India. India, he said, was now raising enough raw jute, although of somewhat inferior character, to supply the raw materials. Foreign criticism of the quality of India's jute exports helped to stimulate the industry, he added, because it dramatised the need for more modern and scientific methods.

Since most mills possess the same characteristics, an overall approach for installation of quality control, after examining several plants, could be laid down in advance. Dr. Pabst explained his point thus: "Quality control in a jute mill can be sub-divided into four main efforts: control of spinning efficiency, control of weaving efficiency, evaluation of outgoing product, and the economical utilisation of raw materials. In the control of spinning efficiency, sampling methods are used to evaluate the relative efficiency of each frame and to investigate further the poorer ones. In one of the mills where this method was applied, 12 of the 65 frames were found to be poor in comparison to the others. Action is then taken to diagnose through statistical means the reasons for the

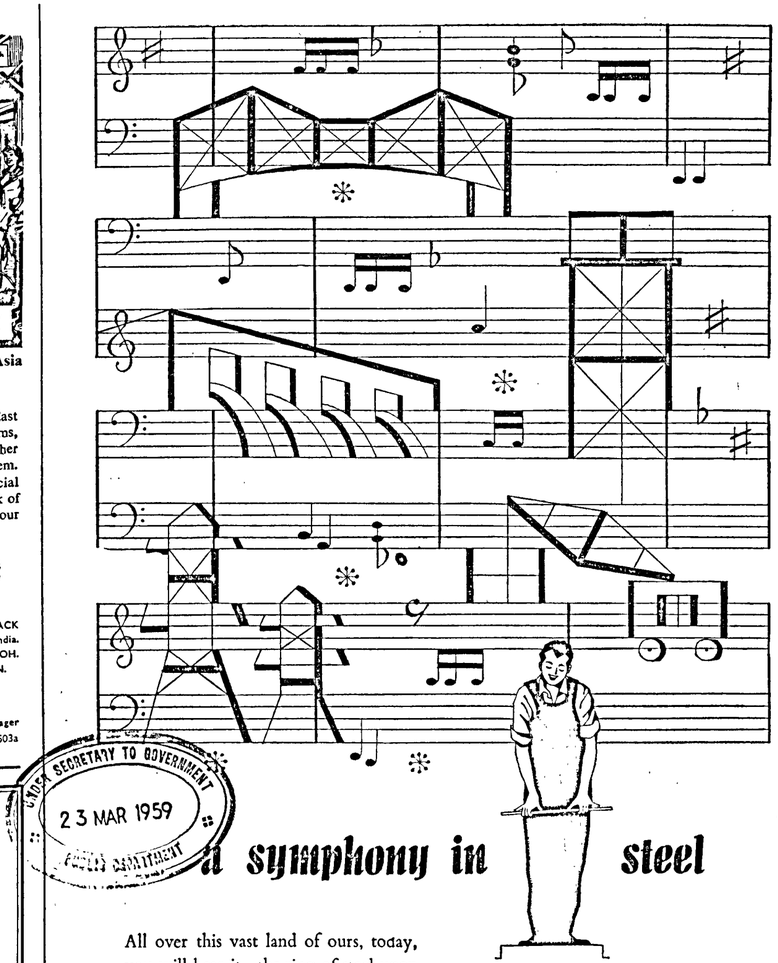
ALL INDUSTRIAL CHEMICALS



All over this vast land of ours, today, you will hear it—the ring of steel upon steel as a mighty nation surges ahead in its quest for industrial prosperity. It is a symphony of stupendous magnitude and Texmaco plays an important part in it. Here at Belgharia, work the Texmaco men and machines, manufacturing steel bridges for spanning the mighty rivers; steel transmission towers for carrying electric power; steel cranes for moving materials, speeding production; steel equipment for hydro electric and irrigation projects— men and machines working in unison playing the symphony in steel.

TEXMACO serves India's basic industries

UNDER SECRETARY TO GOVERNMENT 23 MAR 1959 FINANCE DEPARTMENT

SHARP RISE IN HINDUSTAN LEVER'S PROFIT

DIVIDEND RAISED—LARGE AMOUNTS RETAINED

THE results of the Hindustan Lever Ltd. (Chairman: Mr. S. H. Turner, Bombay), the leading manufacturers of soaps, cosmetics, *vanaspati*, etc., in this country, for the year ended 31st December 1958, show a remarkable all-round improvement as compared with those for 1957. There has been a sharp rise in turnover. Income from other sources has also gone up appreciably. These increases have been more than sufficient to offset the sizable rise in the cost of raw materials and other expenses. Consequently, both gross and net profits have shot up to new high levels. The dividend which had been raised from 12½ per cent. for 1956 to 14 per cent. for 1957 has been stepped up further to 15 per cent. What is noteworthy is that, even after raising the distribution to shareholders, the amount retained in business is more than twice as much as that conserved a year ago.

The gross profit for the year under review at Rs. 363.85 lakhs has jumped up by Rs. 83.22 lakhs or 29.6 per cent. from Rs. 280.63 lakhs for 1957. This compares well with the rise of only Rs. 16.15 lakhs in the latter year when the gross profit increased from Rs. 264.48 lakhs for 1956. The net profit at Rs. 142.42 lakhs also stands substantially higher, as compared with Rs. 115.54 lakhs for the previous year and Rs. 116.28 lakhs earned two years earlier. Indeed, if the rise in the net profit is not commensurate with that in the gross profit, it is due to the sharp rise in the provision for income-tax from Rs. 118.52 lakhs in 1957 to Rs. 172 lakhs. Likewise, the provision for wealth tax has been stepped up from Rs. 4.40 lakhs to Rs. 5.75 lakhs. The amount set apart for depreciation is also higher at Rs. 43.68 lakhs, as against Rs. 42.17 lakhs. Despite the larger amounts provided for taxation and the better dividend distribution, the amount retained in business of Rs. 45.08 lakhs is more than double that (Rs. 22.24 lakhs) in 1957.

The salient features of the Company's working during the past four years are clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	36,72.99	33,19.24	27,40.44	12,11.06
Other income	13.30	9.71	14.45	30.16
Consumption of materials ..	23,86.82	21,97.23	17,72.81	6,71.18
General expenditure	9,35.62	8,51.09	7,17.60	3,56.24
Gross profit	3,63.85	2,80.63	2,64.48	2,13.81
Provision for—				
Depreciation	43.68	42.17	28.32	12.71
Income-tax	1,72.00	1,18.52	1,19.88	1,05.29
Wealth tax	5.75	4.40	..	..
Net profit	1,42.42	1,15.54	1,16.28	95.81
Provision for provident fund and retirement gratuity	13.79	15.32	12.29	6.16
Dividend	83.55 (15%)	77.98 (14%)	69.62* (12½%)	75.00 (37½%)
Retained in business	45.08	22.24	34.36	14.65

* On the increased capital of Rs. 557 lakhs.

Sale proceeds for the year increased from Rs. 33.19 crores in 1957 to Rs. 36.73 crores, representing a rise of Rs. 3.54 crores over the year. A breakup of the year's turnover discloses that soaps and other detergents accounted for (70,894 tons) Rs. 16.24 crores, *vanaspati*, margarine and other edible fats for (74,436 tons) Rs. 17.71 crores, toilet preparations for Rs. 73 lakhs, glycerine and other by-products for Rs. 1.22 crore and groundnut cake for Rs. 83 lakhs. The corresponding figures for 1957 are: Rs. 14.31 crores (64,775 tons), Rs. 16.50 crores (69,672 tons), Rs. 64 lakhs, Rs. 1.07 crore and Rs. 67 lakhs, respectively.

Reviewing the Company's working during the year under review in a statement to shareholders, the Chairman, Mr. S. H. Turner, states thus.

"The steady progress in the sales of the Company's soap products during the year was achieved despite severe competition principally from the small-scale manufacturers. Toilet soaps made good progress. Sales promotion in the rural areas yielded particularly encouraging results. Adverse conditions, in particular, the sharp rise in the price of groundnut oil in the middle of the year, necessitating an increased selling price, coupled with the high price of cereals, faced the industry as a whole, and resulted in it selling less *vanaspati* than in 1957. Despite this, the Company's tonnage increased. The rate of progress in the turnover of toilet preparations continued at much the same rate as in the previous year. The best progress was made by powders and shaving soaps.

"The prices of raw materials were, on an average, higher than in the previous year. In the second half of the year, prices of coconut and mowrah oils rose sharply, the former due to a serious world shortage of copra and the latter because of a poor crop. The price of groundnut oil, our main raw material, was high until late in the year, when it fell following substantial arrivals of seed from the new crop. In response to the request of the Government to foster the crushing of cotonseed, we used 4,386 tons of cottonseed oil in *vanaspati* and soaps in 1958, as compared with 1,031 tons in 1957. In order to overcome transport bottlenecks and to facilitate quick and effective distribution in our expanding markets, particularly in the rural areas, we continued to develop intermediate storage points and to make greater use of road transport. Notwithstanding this, the increase in railway freight in September 1958 still had its impact on the cost of distribution. Exports of *vanaspati* rose from 1,324 tons valued at Rs. 32¼ lakhs in 1957 to 1,602 tons valued at Rs. 38 lakhs in 1958. Although the total sales of glycerine were substantially higher in 1958 than in the previous year, increased demand in India resulted in exports of this by-product dropping from 2,703 tons valued at Rs. 43 lakhs in 1957 to 1,805 tons valued at Rs. 35 lakhs in 1958."

Proceeding, the Chairman states that the major capital project completed during the year was the installation of the synthetic detergent plant at Bombay. The creation of a sulphonation plant in connection with the manufacture of synthetic detergents was started on the same site. A pilot plant for processing peas was manufactured locally and erected in the Ghaziabad factory. Plans for the construction of the new head office in Bombay were completed. The total estimated cost of new capital projects approved during 1958 was Rs. 119 lakhs.

The Company's financial position, as disclosed by its balance-sheet as at 31st December 1958, is impressive. Its paid-up capital of Rs. 557 lakhs, all in ordinary shares of Rs. 10 each, is supplemented by reserves and surplus aggregating Rs. 255.51 lakhs. The current liabilities stand at Rs. 482.05 lakhs and include a provision for taxation at Rs. 162.31 lakhs. The gross block of Rs. 527.61 lakhs stands depreciated at Rs. 361.13 lakhs. The current assets are of the order of Rs. 933.43 lakhs and exceed the current liabilities and the provision for taxation by a very wide margin. Of the current assets, stock-in-trade, including work-in-progress, accounts for Rs. 710.92 lakhs, stores and spare parts for Rs. 46.60 lakhs, sundry debtors for Rs. 91.98 lakhs, loans and advances for Rs. 60.19 lakhs and cash balances for Rs. 22.91 lakhs.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 29.50 *cum-div.* On an *ex-div.* basis, the yield is 5.36 per cent. per annum.

INDIAN OXYGEN'S PROGRESS ENCOURAGING

The Indian Oxygen and Acetylene Company Ltd. is not new to the Indian public. It has been functioning in this country for well over two decades under this name. It, however, came to be familiar with Indian investors only a short while ago, for it was converted into a public limited company only on 16th January 1958. Simultaneously with this change, its name was also altered to Indian Oxygen Ltd. The original company was a wholly-owned subsidiary of the British Oxygen Company Ltd. of London, with its entire paid-up capital of Rs. 2 crores consisting of 2,000,000 ordinary shares of Rs. 10 each being held by the British Company. Out of this, the British Oxygen Company offered 600,000 shares of Rs. 10 each at a premium of Rs. 3.50 per share to the Indian public. The issue was heavily oversubscribed. This showed how keen were investors in this country to participate in the Company's business. Their confidence has been fully justified, for the Company's shares are very popular and are currently being quoted at a premium of 100 per cent. over the issue price.

Prior to offering shares to the public, on 27th December 1957. to be precise, 680,000 ordinary shares of Rs. 10 each were issued by the Company to its parent company in Britain. Of the total issue price of Rs. 68 lakhs, Rs. 29.23 lakhs were towards payment of a loan from the British Company and the balance of Rs. 38.77 lakhs was remitted in cash to Britain. As a result of this operation, the paid-up capital of Indian Oxygen Ltd. came to stand at Rs. 2 crores.

The hope expressed by the Directors of the Company at the time of the issue to the public that the profits for the year ended 30th September 1958 would be sufficient to maintain the dividend on the increased capital at the rate of 10 per cent. paid for the past three years, has now been fully justified by the results achieved. The gross profit for 1957-58 at Rs. 93.20 lakhs is Rs. 12.48 lakhs higher than Rs. 80.72 lakhs for 1956-57. The provision for taxation, inclusive of wealth tax at Rs. 1.40 lakh, is shown at Rs. 30.30 lakhs, as against Rs. 44.02 lakhs set aside in the previous year. The share of wealth tax in the latter amount was Rs. 2.66 lakhs. The relatively lower tax provision for the year under review is explained by the Directors as having been due to the tax relief of Rs. 10.23 lakhs on development rebate and the transfer of Rs. 4.10 lakhs from the tax allowances equalisation reserve. The provision for depreciation takes up Rs. 24.93 lakhs, as against Rs. 21.36 lakhs. The net profit, after the above provisions, at Rs. 37.97 lakhs, is about 2½ times better than that (Rs. 15.34 lakhs) earned in 1956-57.

In accordance with the requirements of the Finance Act, 1958, the Directors have transferred Rs. 13.20 lakhs to development rebate reserve. The proposed dividend of 10 per cent., as stated earlier, is on a higher capital of Rs. 2 crores, so that it takes up Rs. 20 lakhs, as against only Rs. 13.20 lakhs in the previous year. After the above distribution, a sum of Rs. 6.18 lakhs is left over to be carried forward, as against Rs. 1.41 lakh brought in.

It is gratifying to hear that, despite severe import restrictions, the total sales for the year amounted to Rs. 485.91 lakhs, representing an increase of nearly Rs. 68 lakhs or 16 per cent. as compared with sales in 1956-57.

Referring to the Company's schemes of expansion, expenditure incurred and additional finance required for its replacement and expansion programme, the Directors state thus:

"The industrial development plans initiated by the Government of India, and, in particular, the expansion in steel production envisaged by the second Five-year Plan, are expected to give rise to a further very substantial increase in the demand for the Company's products. With this in mind, the Directors drew up a replacement and expansion programme which was taken in hand in 1957 and is planned to be completed in 1960. During the year, manufacture of oxygen and dissolved acetylene and fluxes was made subject to the Industries (Development and Regulation) Act, 1951, and the necessary licences have been obtained. By a recent notification, the Act has been extended to cover, among others, the remaining gases manufactured or proposed to be manufactured by the Company, and steps have been taken to obtain the licences required. Capital expenditure, including capital projects in progress, during the year amounted to Rs. 89.88 lakhs and related mainly to the new electrode factory at Khardah, a new oxygen and dissolved acetylene factory at Burnpur, a new oxygen plant at Bombay and the provision of additional cylinder capacity.

"The financing of the replacement and expansion programme has involved the provision of substantial amounts of foreign exchange for the import of capital goods. Over and above the sum available from the subscription by the British Oxygen Company, Ltd., of the sterling equivalent of Rs. 68 lakhs in the form of share capital, it was estimated that further foreign exchange to the extent of approximately Rs. 75 lakhs would be required for this programme. The Company has, therefore, been negotiating with the Industrial Credit and Investment Corporation of India Ltd. and the Commonwealth Development Finance Company Ltd., London, for foreign exchange loans as follows—an amount in pounds sterling equivalent to U.S. $950,000 from the former and £225,000 from the latter. It is expected that these negotiations will be successfully concluded very shortly. The assistance from the British Oxygen Company, Ltd., in the form of loans is also an important feature of the Company's arrangements for financing the expansion programme."

The paid-up capital of the Company as at 30th September 1958 stands raised from Rs. 1.32 crore to Rs. 2 crores by the issue of 680,000 ordinary shares of Rs. 10 each to the British Oxygen Company Ltd., as already stated. Against this, the reserves and surplus aggregate Rs. 90.94 lakhs. The gross block amounting to Rs. 461.57 lakhs has been written down to a book value of Rs. 275.82 lakhs. These are inclusive of additions during the year of Rs. 119.78 lakhs. Capital projects in progress are shown at Rs. 37.73 lakhs. The current assets aggregate Rs. 289.91 lakhs, against which the current liabilities are of the order of Rs. 312.51 lakhs. Of the latter, unsecured loans from the British Oxygen Company, Ltd., account for Rs. 75 lakhs and special loans from the same company (also unsecured) for Rs. 27.69 lakhs.

The Rs. 10 fully paid-up ordinary shares are currently quoted at Rs. 27.37 *ex-div.*, at which rate the yield is 3.6 per cent. per annum. Such a low yield reflects the confidence of investors in the Company's future.

RESULTS OF MYSORE SUGAR HEARTENING

OUTPUT TOUCHES PEAK

THE year ended 30th June 1958 has turned out to be a period of record achievements for the Mysore Sugar Company Ltd. (Chairman and Managing Director: Mr. B. M. Krishnan, Bangalore). The quantity of sugarcane crushed and the amount of sugar and alcohol produced were the highest in the Company's history. Profits, too, did not lag behind and were considerably marked up. The highly encouraging results for the year under review are in refreshing contrast to the poor performance of the Company during the previous year when, owing to inadequate supply of cane, production of sugar, turnover and profits, all suffered a sharp setback.

The gross profit for 1957-58 at Rs. 35.88 lakhs is more than thrice that (Rs. 11.45 lakhs) for 1956-57, to which level it had fallen from Rs. 19.82 lakhs for 1955-56. The net profit which had dropped from Rs. 9.12 lakhs in 1955-56 to Rs. 4.33 lakhs in the following year, has, likewise, more than trebled to Rs. 13.66 lakhs. It should be noted here that this rise in the net profit is after making a provision of Rs. 15 lakhs for taxation, as against *nil* in the previous year. The provision for depreciation is also slightly higher at Rs. 7.22 lakhs, as against Rs. 7.12 lakhs.

Consequent on the excellent results for the year, the Directors have transferred a sum of Rs. 6.78 lakhs to the various reserves, as against nothing made in the preceding two years. A breakdown analysis of the allocations shows that Rs. 6 lakhs have been credited to the reserve for rehabilitation of plant and machinery, Rs. 49,065 to development rebate reserve and Rs. 28,769 to provision for fluctuation in the value of investments. The amount of contribution towards arrears of employees' gratuity fund has been doubled from Rs. 50,000 to Rs. 1,00,000.

The shareholders must be happy to find that their dividend, which had been consistently maintained at the rate of 20 per cent. for the past eighteen years in succession, has been stepped up to 30 per cent. for the year under review. This consists of the usual dividend of 20 per cent. plus a cash silver jubilee bonus of 10 per cent. free of income-tax. In view of the fact that the additional bonus payment is in commemoration of the Company's silver jubilee, it is not likely that it will be repeated for the coming years, even assuming that the profits will be maintained.

The following comparative table will give an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1958	1957	1956	1955
Sale proceeds (sugar and distillery sections)	3,80.07	2,41.23	2,91.76	N.A.
Other income	25.63	20.57	19.31	
Closing stocks (sugar and distillery including crops-in-progress)	55.54	37.18	67.50	
Expenses	3,88.16	2,20.01	2,97.78	
Gross profit	35.88	11.45	19.82	15.29
Depreciation	7.22	7.12	5.70	5.29
Taxation	15.00	..	5.00	..
Net profit	13.66	4.33	9.12	10.00
Unclaimed dividends paid ..	..	..	0.03	..
To employees' gratuity fund ..	1.00	0.50	5.00	5.02
Transfer to reserves	6.78	..	..	4.36
Dividend	6.54 (D. 20% + B. 10%)	4.36 (D. 20%)	4.36 (D. 20%)	4.36 (D. 20%)
Carry forward	1.44	2.10	2.63	2.90
Sugarcane crushed (in tons) ..	383,814	224,228	347,523	375,548
Sugar produced (in tons) ..	39,520.5	21,631	34,798	35,312
Recovery per cent.	10.29	9.64	10.14	9.4

N.A.= Not available.

It will be seen from the table that sale proceeds of sugar and distillery products have staged a sizable rise of Rs. 138.84 lakhs over those for 1956-57. This increase is in refreshing contrast to the fall of Rs. 50.53 lakhs noted in the latter year. Reflecting the expansion in production and turnover, expenses have also increased from Rs. 2.20 crores to Rs. 3.88 crores.

The Directors state that the year under report was a remarkably good one for the Company. Sugarcane crushing operations in the Company's factory at Mandya commenced on the 1st July 1957 and continued upto the end of February 1958. During this period of 239 actual working days, the mills crushed a record quantity of 383,814 tons of sugarcane and produced 39,520.5 tons of sugar, which is also an all-time record in the history of the Company. There was an improvement in the percentage of sugar recovery which rose to 10.29 per cent. from 9.64 per cent. in the previous year. The distillery section, too, worked satisfactorily with production of alcohol reaching a peak figure of 708,000 gallons in terms of absolute alcohol.

The balance-sheet as at 30th June 1958 discloses a sound financial position. As against a paid-up capital of Rs. 21.79 lakhs in shares of Rs. 10 each, its reserves and surplus aggregate Rs. 94.17 lakhs, of which the general reserve alone accounts for Rs. 62.50 lakhs. The current liabilities stand at Rs. 133.13 lakhs and include a provision of Rs. 30.47 lakhs for taxation. The gross block of Rs. 157.31 lakhs stands well written down at Rs. 61.13 lakhs. Additions during 1957-58 were of the order of Rs. 5.34 lakhs. Capital works in progress account for Rs. 2.04 lakhs. The current assets aggregate Rs. 185.93 lakhs and cover the current liabilities and the provision for taxation by a large margin.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 53 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6 per cent. per annum, free of income-tax.

Notices

THE ANDHRA SUGARS LIMITED
VENKATARAYAPURAM, TANUKU

Locomotives open to Inspection. Closing date—13th April 1959 at 2.30 p.m.

COMPANY MEETINGS AND DIVIDENDS

SIRPUR PAPER MILLS LTD. Annual General Meeting, Somajiguda, Hyderabad-Deccan, 26th March 1959. Dividend. Re. 0.65 per share, payable on or before 25th June 1959. Transfer books remain closed from 20th March to 2nd April 1959, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 26th March 1959. Transfer books remain closed from 19th to 26th March 1959, both days inclusive.

DHANALAKSHMI MILLS LTD. Annual General Meeting, Tirupur, 28th March 1959. Dividend: Rs. 10.00 per share. Transfer books remain closed from 15th to 28th March 1959, both days inclusive.

SITALPORE SUGAR WORKS LTD. Annual General Meeting, Calcutta, 30th March 1959. Dividend: *Nil.* Transfer books remain closed from 10th to 30th March 1959, both days inclusive.

ANAPARAI ESTATES LTD. Annual General Meeting, Balehonnur, Mysore State, 30th March 1959. Dividend: 35 per cent. or Re. 0.70 per share (includes interim dividend of 15 per cent. or Re. 0.30 per share). Transfer books remain closed from 20th to 30th March 1959, both days inclusive.

PARASEA COLLIERIES LTD. Annual General Meeting, Calcutta, 31st March 1959. Dividend: 5 per cent. or Re. 0.50 per share, payable on or after 15th April 1959. Transfer books will remain closed from 23rd to 31st March 1959, both days inclusive.

NATIONAL IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 31st March 1959. Dividend: Re. 0.62 per share. Transfer books will remain closed from 23rd to 31st March 1959, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st March 1959. Dividend: *Nil.* Transfer books remain closed from 17th to 31st March 1959, both days inclusive.

MYSORE SUGAR CO., LTD. Annual General Meeting, Bangalore City, 31st March 1959. Dividend: 30 per cent. or Rs. 3.00 per share (includes silver Jubilee Bonus of 10 per cent. or Re. 1.00 per share), payable on and after 6th April 1959. Transfer books remain closed from 20th to 31st March 1959, both days inclusive.

SARUGAON TEA CO., LTD. Annual General Meeting, Calcutta, 31st March 1959. Transfer books will remain closed from 26th to 31st March 1959, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 14th April 1959. Dividend: Rs. 21.00 per share, payable on and from 30th April 1959. Transfer books remain closed from 21st March to 14th April 1959, both days inclusive.

OUCHTERLONY VALLEY ESTATES (1938) LTD. Annual General Meeting. Kozhikode, 24th April 1959. Dividend: 10 per cent. or Re. 0.20 per share. Transfer books will remain closed from 10th to 24th April 1959, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Annual General Meeting, Calcutta, 27th April 1959. Transfer books will remain closed from 6th to 27th April 1959, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Second interim dividend of 2 per cent. free of income-tax, for the year ending 31st March 1959, payable on or after 14th April 1959.

METHONI TEA CO., LTD. Ad interim dividend of 10 per cent. or Re. 1.00 per share, for the year 1958. Transfer books remain closed from 21st to 30th March 1959, both days inclusive.

GROB TEA CO., LTD. Ad interim dividend of 10 per cent. or Re. 1.00 per 'A' ordinary share and Re. 0.50 per 'B' ordinary share for the year 1958. Transfer books remain closed from 21st to 30th March 1959, both days inclusive.

KILKOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Dividend of 15 per cent. on ordinary shares, for the year ended 31st October 1958. Transfer books will remain closed from 11th to 25th April 1959, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Interim dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 23rd to 31st March 1959, both days inclusive.

JEYPORE SUGAR CO., LTD. Dividend of 6 per cent. or Re. 0.60 per share, for the year ended 30th June 1958. Transfer books remain closed from 19th to 28th March 1959, both days inclusive.

ANDHRA SUGARS LTD. Dividend of 15 per cent. or Re. 1.50 per share, for the year ended 30th September 1958. Transfer books will remain closed from 1st to 15th April 1959, both days inclusive.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. Final dividend of 17½ per cent. or Re. 1.75 per share (this makes a total of 30 per cent. or Rs. 3.00 per share, for the whole year, along with the interim dividend of 12½ per cent. or Re. 1.25 per share), for the year ended 31st December 1958. Transfer books will remain closed from 7th to 13th April 1959, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Interim dividend of 62 nP per share. for the year ending 31st March 1959. Transfer books remain closed from 13th to 26th March 1959, both days inclusive.

UNITED BREWERIES LTD. Interim dividend of Rs. 7.50 per share, for the year ending 31st March 1959. Transfer books will remain closed from 28th to 31st March 1959, both days inclusive.

MADURA MILLS SUFFER LOSS

ANAPARAI ESTATES PAY LOWER DIVIDEND

Madura Mills Co., Ltd.

THE directors of the above Company (Chairman: Mr. M. A. Muthiah Chettiar. Madurai) present the audited accounts of the Company for the year ended 31st December 1958.

Unfortunately the year's working shows a loss of Rs. 55,99,453 (net profit of Rs. 73,610) which is arrived at after providing for depreciation of Rs. 22,05,578 (Rs. 19,66,835) and bonus of Rs. 20,99,554 (Rs. 38,78,003) payable on the profits for the year to 31st December 1957 in accordance with the Industrial Tribunal's Award, against which the directors have appealed to the Supreme Court. An advance of Rs. 7,06,402 (Rs. 32 per head) has been paid subject always to the Supreme Court's findings. No Managers' Commission is payable, nor is any provision for taxation required other than wealth tax paid in respect of 1957. After taking into account the credit balance at profit and loss account from previous years, a net figure of Rs. 49,07,085 (credit of Rs. 33,17,740 from which a dividend of 15 per cent. was paid leaving a surplus to be carried forward of Rs. 6,92,368) has been debited to general reserve, reducing the latter to Rs. 1,20,92,915.

A brief indication of the Company's position was given in the Managers' Circular dated 8th January, 1959. The main factors involved in producing such serious and indeed alarming results were the need to liquidate the heavy stock of unsold yarn (some 24,000 bales) in the early part of the year, the considerable amounts payable in "Lay-off Compensation" (Rs. 10,89,817) when steps were taken to bring production more into line with current demand, coupled with the very large sum involved in effecting a substantial reduction in the Company's surplus labour force through a scheme of voluntary retirement for older employees (Rs. 21,35,415).

During the past ten years the Company has spent some Rs. 123 lakhs on new plant and machinery but such expenditure has been almost entirely for new lines of production as part of the Company's policy of diversifying production. During this long time a multiplicity of competing Labour Unions stood in the way of introducing reasonable workloads, a prerequisite for modernising the Company's main spindleage. In mid 1957 the award of a special Industrial Tribunal went some way towards improving our workloads, but in order to meet Government's and Unions' wishes, labour rendered surplus by the award was absorbed by increasing shift working and therefore output. This tended to coincide with changes in production of composite Mills, impinging on the competitive position of the Company's main consumers, India's handloom weavers, while new spinning units enjoying low wage rates added to the quantities of yarn already pressing on markets. Endeavours to reduce the heavy incidence of the sliding scale cost of living allowance, known as dearness allowance, by a cut in the basis were negatived by Government. January 1958 dearness allowance payable to all manual workers was Rs. 54.37 per head; in December 1958 this figure had risen by Rs. 6.57 to Rs. 60.94, making the month's bill for this item alone Rs. 12,20,632. Strict economy measures coupled with intensified sales campaigns both in India and overseas gradually bore fruit throughout the year, until with the liquidation of stocks and settling down of labour to new workloads a stage was reached whereby at last the Company could take advantage of recent technological advances and put in hand a massive modernisation scheme. Orders have been placed to the extent of Rs. 48 lakhs, others subject to import licences totalling some Rs. 58 lakhs are under negotiation, while the balance of around Rs. 120 lakhs required to complete the scheme at this stage is awaiting the disposal by the National Industrial Development Corporation of the Company's application for a loan of Rs. 125 lakhs. It is hoped modernisation will be completed by end 1960, while progressive improvement in costs is looked for from mid 1959 onwards. Side by side with taking in hand the modernisation scheme, application was also made to Government to permit the Company further to revise workloads to levels more nearly approaching the principal competitors. A Government Enquiry Team has completed its task and is reporting to Government in a short time from now. It is hoped further savings will result.

While the modernisation scheme necessarily plays a large part in building up the Company's profit earning capacity, the expansion of industrial fabric production will continue to have the Management's earnest attention. The directors have confidence that the steps taken and others in course of implementation will restore a reasonable measure of prosperity to the Company.

Anaparai Estates Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Mysore) present the audited accounts of the Company for the year ended 30th June 1958.

The result of the Company's working for the period under review is a profit of Rs. 5,31,342 (Rs. 6,56,550). Depreciation written off on buildings, machinery, etc. amount to Rs. 28.178 (Rs. 24,411), Company's contribution to provident fund Rs. 14,233 (Rs. 4,461) and debenture interest and income-tax payable thereon Rs. 36,283 (Rs. 30,600) leaving a net profit of Rs. 4,52,648 (Rs. 5,97,081). With the amount brought forward from last year of Rs. 50,394 (Rs. 29,165) there is a total amount of Rs. 5,03,042 (Rs. 6,26,246). Out of this provision for agricultural income-tax and Central income-tax absorbs Rs. 1,45,000 (Rs. 2,13,500) the interim dividend of 15 (15) per cent. absorbs Rs. 1,35,881 (Rs. 1,35,882) and the provision for payment of recommended final dividend at 20 (25) per cent. on ordinary shares absorbs Rs. 1,81,176 (Rs. 2,26,470) leaving a balance of Rs. 40,985 (Rs. 50,394) to be carried forward.

Crop: During the year 1957-58 coffee crop obtained was as follows: Arabica=99-7/10 (156-2/5) tons and Robusta=277-2/5 (275-2/5) tons. 47 (6) candies of pepper were harvested.

The average cost of coffee per cwt. stood at Rs. 98.68 as against Rs. 71.88 during the previous year. The higher costs are mainly due to the lower crops realised and also due to the higher costs of wages and amenities to labourers.

As pointed out in the directors' report for the year 1957, the wages to labourers and the cost of medical and other amenities provided for them are going up and consequently, the cost of production shows an upward tendency. The estimates of production of Coffee in India is placed at about 44,000 tons for the year 1958-59 and a much larger crop is expected for the season 1959-60. The consumption in the internal market has not kept pace with the increase in production and hence the Company will be forced to export a major portion of the coffee. The foreign prices of coffee having declined substantially, the price of coffee realised would be lower than the previous years. The only method of offsetting to some extent the decline in prices, is to increase the production and the directors are taking the necessary steps for this purpose, and they have pleasure to inform that the estimated crop for the season 1958-59 stands at more than 8 cwts. per acre.

Sitalpore Sugar Works, Ltd.

The directors of the above Company (Managing Directors: Mr. R. N. Datta and Mr. D. P. Ghosh, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The result for the period shows a gross profit of Rs. 1,12,320 (Rs. 2,57,080) from which has to be deducted depreciation amounting to Rs. 49,807 (Rs. 83,854) and bonus Rs. 49,796 (Rs. 64,306) leaving a balance to be set off against the debit balance in the profit and loss account of Rs. 12,717 (Rs. 1,08,921).

The directors regret to report that due to uneconomic crush better result could not be shown in spite of good recovery of sugar and better average selling price realised during the period under review. Cost of production has increased and is increasing year after year due to rise in the cost of materials and railway freight.

The Company incurred a loss of Rs. 59.520 due to export of sugar under orders from the Government and this amount has been taken into account in arriving at the gross profit shown above. Government imposed price control on sugar from 30th July 1958 and later passed an ordinance (a Bill was passed by the Lok Sabha later) for compulsory export of sugar fixing a quota of 50,000 tons. The Company's factory was allotted a quota of 1,627 bags or 4.477¾ maunds of sugar for which it has suffered a loss already mentioned above. The directors could provide half of the normal depreciation due to meagre profit and lower crush of cane.

Production: Due to unavoidable weather conditions the supply of cane was not adequate during the year under review and the total crush was 17,80,750 (24,33,200) maunds only producing 1,73,517 (2,34,688) maunds of sugar with a recovery of 9.92 (9.65) per cent.

The directors are glad to inform that some machineries bought out of the loan taken from Bihar State Financial Corporation have been set up and they are in operation during the current season. Full effect will however be felt during the next crushing season.

Balrampur Sugar Co., Ltd.

The directors of the above Company (Chairman: Mr. P. L. Saraogi, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The results for the period, after providing for all charges and taking into account earlier provisions no longer required, show a profit of Rs. 5,99,154 (Rs. 4,76,073 after providing taxation) to which has to be added the amount brought forward profit from the previous year of Rs. 57,702 (debit of Rs. 48,371) making a total of Rs. 6,56,856 (Rs. 4,27,702). From this amount has been deducted depreciation of Rs. 1,23,730 (Rs. 1,30,000), rehabilitation reserve Rs. 1,00,000 (Rs. 1,70,000), development rebate reserve Rs. 30,000 (*nil*) and provision for taxation (wealth tax and arrears) Rs. 2,73,711 leaving to credit of profit and loss account a sum of Rs. 1,29.415. Out of the above sum available for disposal, the directors have already paid an interim dividend which will be treated as final dividend for the year ended 30th June. 1958 at 25 (25) nP per share free of income-tax absorbing Rs. 70,000 (Rs. 70,000), leaving a balance to be carried forward to next account of Rs. 59.415 (Rs. 57,702).

During the year under review Balrampur and Tulsipur Factories worked for 148 days and 147 days against 163 days and 222 days in the previous year respectively. The sugarcane crushed by Balrampur Factory was 26,43,391 mds. as compared to 29,98,215 mds. and Tulsipur Factory 28.37,296 mds. as compared to 39,66,299 mds. during the previous season. The recovery was, however, much better at Balrampur 9.78 per cent. against 8.93 per cent. and at Tulsipur 9.83 per cent. against 9.19 per cent. in the preceding year. Comparatively higher recovery has to a certain extent compensated the loss from lower cane crushing. As stated in the last report, the lower crushing is to be attributed to drought in the area.

In the current year a still lower crushing of about 22,00,000 mds. is expected at Balrampur and 19,00,000 mds. is expected at Tulsipur due to the standing crop having been seriously damaged by severe drought in the area. With this fact in view, the directors have thought it prudent to treat the interim dividend declared for the year under review as final dividend, to conserve the resources of the Company.

Investigations for extensions and reconstructions of some of the machines at both the factories have been made and steps are being contemplated for increasing their efficiency in the next season.

In order to earn foreign exchange by exporting Sugar out of India, the Government of India issued an Ordinance viz. Sugar Export Promotion Ordinance 1958 on 27th June 1958 and subsequently, Sugar Export Promotion Act 1958 was passed by the Parliament. Under this Act, the Balrampur Factory was allotted a quota of 2,382 bags and Tulsipur Factory was allotted a quota of 2,569 bags against their production of the season 1957-58.

Further, the Government of India by an order issued on 30th July 1958 under the Sugar (Control) Order 1955 imposed restrictions on the distribution and price of sugar sold by the Sugar Mills in North Bihar, Uttar Pradesh and Punjab. The Company's Factories being situated in Uttar Pradesh are affected by the Control which is still continuing.

The directors regret to report that the application made by the Company for consent to issue bonus shares has not been granted by the Controller of Capital Issues.

Accounts in brief are as under:—

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st May 1958.

The loss for the year after providing for depreciation Rs. 1,98,230 (Rs. 1,37,532), amounts to Rs. 2,94,910 (Rs. 5,76,813) to which has to be added the debit balance brought forward from the previous period of Rs. 5,74,381 (credit of Rs. 34,402), West Bengal Sales Tax relating to previous period Rs. 8,493 (Rs. 12,537) forfeited dividends paid Rs. 38 (Rs. 129) and income-tax in respect of previous period Rs. 11,000 (*nil*). Thus there remains a debit balance of Rs. 8,88,822 (Rs. 6,17,630). From this must be deducted the amount overprovided in liability in respect of previous period written back of Rs. 14,357 (Rs. 8,847), dividends forfeited Rs. 3,275 (*nil*) and refund of managing agents' commission Rs. 25,000 (*nil*) leaving a debit balance of Rs. 8,46,190 (Rs. 5,74,381) to be carried forward.

The figures in brackets relate to the period 11 months ended 31st May 1957.

Jute stocks are shown at cost. Sold stocks of goods have been calculated at contract sale price and goods unsold on 31st May 1958, have been valued at market rates.

In compliance with the working time agreement, Jute Mills in membership of the Indian Jute Mills Association continued to work 48 hours per week throughout the year with 12½ per cent. of the looms sealed. The Company's North Mill remained closed during the period covered by this report and the loom hours were utilised by the South Mill which worked 553 looms on double shift, i.e., 96 hours per week.

Partial modernisation of the sacking weft machinery has been carried out, and an application has been made to the National Industrial Development Corporation Ltd. for a loan of Rs. 15,83,900 to complete the modernisation of the sacking weft and sacking warp machinery.

Savings in labour costs and better working results lead us to believe that improved financial results will be seen in the near future.

During the financial year under review trading conditions continued to be difficult. While the hessian stock position was sound, sacking stocks increased considerably towards the end of the period, and prices were forced down to uneconomic levels by speculators. However, the introduction of minimum prices on 26th February 1958, by the Indian Jute Mills Association arrested the decline.

Azam Jahi Mills Ltd.

The directors of the above Company (Managing Agents: Mr. C. S. Tyabjee, Hyderabad, Andhra Pradesh) present the audited accounts of the Company for the year ended 30th September 1958.

The accounts for the year show a loss of Rs. 388 (profit of Rs. 1,78,275) after crediting a sum of Rs. 1,19,236 (*nil*) received as refund of British India Income Tax relating to previous years and providing a reserve of Rs. 30,000 (*nil*) for development rebate and Rs. 5,000 (Rs. 5,000) for donation to charities. This loss has been deducted from Rs. 6,710 (Rs. 95,435) brought forward from the accounts of the previous year and the balance of Rs. 6,322 (Rs. 6,710 after placing Rs. 15,000 to reserve for investments and paying a dividend of Rs. 3.50 per share absorbing Rs. 2,52,000) is carried over to the next year's account. In the absence of profit, the directors could not recommend any dividend for the year under review nor could they provide for depreciation on assets.

Trading conditions: The Textile Industry as a whole has seen a full year of most uneconomic conditions. The cost structure has risen on account of increase in prices of cotton consumed, colours and chemicals, fuel, etc. The advance in cost had not been accompanied by a corresponding rise in cloth and yarn prices. On the contrary, mills have had to reduce prices with a view to stimulating consumption. There was a marked fall in mill cloth production in the country brought about by putting looms out of commission, by closure of shifts and in certain cases, by complete closure of the mill. The directors are of the opinion that the result of the year's working in the case of the Mill should not be considered unsatisfactory under such adverse conditions.

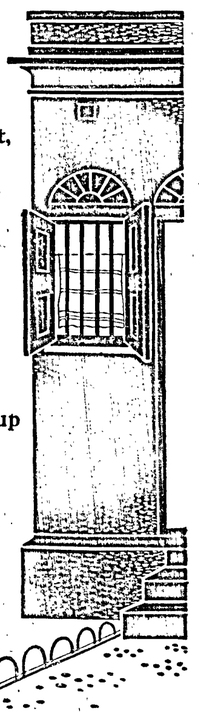
is prepared,
bustle ends,
now the housewife
can relax over her cup
of refreshing tea!



I am Tea

I am the friend of the family

TEA BOARD INDIA

PST 213

THE BANK OF INDIA, LIMITED

(*Concluded from page 458*)

Plan can really succeed and be of benefit to the country is to see that every humanly possible effort is made not to have any unnecessary waste or extravagance and also to see that there is no corruption. If that is not done, the Five-year Plan will be the greatest disaster to the country, instead of being of ultimate benefit to the millions of its population. At a time when India will continue to need foreign assistance to a considerable extent, it is to be hoped that the Government will so formulate their policy as to remove any misgivings abroad and to inspire greater confidence amongst India's creditors. One sure way of creating this confidence is to see that the crores of rupees which have been borrowed will be wisely spent and that India gets full value for its money.

"I regret to have to tell you that Sir Joseph Kay, K.B.E., who had been a Director of the Bank for 37 years, died on 1st October 1958. Sir Joseph was an experienced man of business. He rendered valuable service to the Bank over a long period. Since the close of the year, we also have to mourn the death, on 23rd January last of another Director, Sir Vithal Chandavarkar. Sir Vithal joined our Board only on 12th October 1956, but he brought to our deliberations a mature experience of industry and banking.

"During the year 1958, at the invitation of the Board of Directors, Mr. Jugmohan Prasad Goenka accepted a seat on the Board. Mr. Jugmohan Prasad Goenka is an active partner of the old-established firm in Calcutta of Messrs. Ramdutt Ramkissendass. He is no stranger to the Bank. From 1930 until he joined the Board recently he was a member of our Calcutta Branch Local Committee. At all times, he has been most helpful to us with advice and assistance. We consider that he would be able to confer upon the direction of the Bank's business a considerable breadth of experience. Under the law and the Bank's Articles of Association, he holds office up to the date of this meeting and his election is before you on the agenda today.

"I record with pleasure our appreciation of the help rendered during 1958 by our Local Committees at various centres. I would also express our thanks to our General Manager, Mr. T. R. Lalwani, for his able management of our affairs. I would extend our thanks to the staff who assisted Mr. Lalwani in dealing with the Bank's business during the year."

Note.—This does not purport to be a report of the proceedings of the Annual General Meeting.

Notice

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF The Bombay Dyeing and Manufacturing Company, Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 16th April 1959, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1958.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Mr. H. R. Batlivala who retires by rotation, and being eligible offers himself for re-appointment; and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. H. R. Batlivala who retires by rotation and is eligible for re-appointment, and who is a Director, Officer, Member and an Associate of Messrs. Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."
4. To appoint a Director in the place of Mr. N. M. Wagle who retires by rotation, and being eligible offers himself for re-appointment.
5. To appoint Auditors for the current year and to fix their remuneration.
6. And for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible) the following Resolutions as Special Resolutions:—

   SPECIAL RESOLUTIONS

   I. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Ghia Pallonji & Co., Bombay (who are or may be deemed to be Associates of the Managing Agents, and one of whose partners is a Director of the Company) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of purchases of chemicals and such goods in which they trade or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

   II. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Eastern Cotton Co. (who are or may be deemed to be Associates of the Managing Agents) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of purchases of cotton and/or kapas and such goods in which they trade or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

   III. RESOLVED that the Company hereby approves of a Contract being entered into between the Company and Messrs. Shapoorji Pallonji & Co., Private Ltd. (who are or may be deemed to be Associates of the Managing Agents, and one of whose Directors is a Director of the Company) in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative till one month after the Annual General Meeting of the Company in the year 1962, in respect of any building, or construction work and/or any work of repairs and/or supply of building materials and such goods in which they trade or do business in or may trade or do business in as well as in respect of sales to them by the Company of goods produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other.

Explanatory Statement under Section 173 annexed in respect of the above Resolutions.

The drafts of the Contracts referred to in Special Resolutions Nos. I, II and III are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 a.m. to 1 p.m.

By Order of the Board,
NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 9*th March*, 1959.

Notes.—(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) The Share Transfer Books of the Company will remain closed from Monday the 23rd March 1959, to Thursday the 16th April 1959, both days inclusive.

(c) The Dividend when declared will be made payable at the National and Grindlays Bank Ltd., Bombay, on or after the 27th April 1959, to those members whose names stand on the Register of the Company on the 16th April 1959, and the Dividend Warrants will be duly posted to them.

(d) The Members are requested to notify immediately any change of address to the Company.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

Item No. 3.—Mr. H. R. Batlivala is a Director of the Company, who retires by rotation and is eligible and offers himself for re-appointment. A Special Notice as required under Section 190 and Section 261 of the Companies Act, 1956, has been received from a member proposing the appointment of Mr. H. R. Batlivala as a Director in accordance with the provisions of Section 261. As set out in the Special Notice received by the Company, the reasons which make it necessary to pass a Special Resolution are *inter alia* as under:—

The Managing Agents of the Company, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., are authorised by Articles 99 and 100 respectively of the Articles of Association of the Company to appoint its Governing Director as ex-Officio Director and another person as a Special Director on the Board. Since Mr. H. R. Batlivala is a Director, Officer, Member and an Associate of the Managing Agents, his appointment as a Director of the Company, who retires by rotation, can only be made by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956. Mr. H. R. Batlivala joined the Board of the Company in June 1953 and has been a Director of the Company since then. Mr. Batlivala has been associated with the management of the affairs of the Company since July 1951 as a Director of the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., and has considerable administrative experience and technical knowledge having been actively connected with the textile industry for the last 26 years. As it is in the interests of the Company that the Board should continue to receive the benefit of his experience, advice and guidance, it is desirable that he be re-appointed a Director.

Item No. 6.—Special Resolutions Nos. I, II and III in Item No. 6 above, are for the purposes of approving Contracts being entered into between the Company and Messrs. Ghia Pallonji & Co., Messrs. Eastern Cotton Co. and Messrs. Shapoorji Pallonji & Co. Private Ltd. respectively. Mr. Pallonji Shapoorji Mistry, one of the Directors of the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., as from 23rd July 1958 and also a member of that Company, who is also a Director of the Company, is a partner in the firm of Messrs. Ghia Pallonji & Co., Mr. Mistry is also a Director of Messrs. Shapoorji Pallonji & Co. Private Ltd. Messrs. Eastern Cotton Co. is "an Associate" of the Managing Agents as defined in Section 2(3) (*d*) of the Companies Act, 1956. Messrs. Ghia Pallonji & Co. have been the sole distributors of Messrs. Tata Chemicals Ltd. for several years, and as you may be aware, the products of Messrs. Tata Chemicals Ltd. purchased from Messrs. Ghia Pallonji & Co. have been extensively used by the Company for the last many years. Messrs. Eastern Cotton Co. are dealers in cotton and the Company has made purchases of cotton and/or kapas from them in the past. Messrs. Shapoorji Pallonji & Co. Private Ltd. are reputed building contractors. The Company has purchased and will continue to purchase chemicals from Messrs. Ghia Pallonji & Co., and it may have occasion to purchase cotton and/or kapas from the Eastern Cotton Co., and it may have occasion to entrust building and construction and/or repair work or other similar work to Messrs. Shapoorji Pallonji & Co. Private Ltd. In these circumstances, as required by the Companies

(*Continued on page 477*)

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 18*th March*

There have been no new developments in the short-term money market this week. The demand for funds continues to be good and the supply is scarce. Stringency, therefore, persists. Interest rates are unchanged. Inter-bank call is 3½ per cent. among the big Indian banks and Exchange banks and 3¾ per cent. among the smaller banks. House money at seven days' notice is 3¾ per cent. Deposits for one to three months fetch 3¾ to 3¾ per cent. and those for over three months 4 per cent. With tax payments falling due by the end of this month and with demand for funds for financing trade continuing, the stringency is expected to last at least until the second week of April 1959.

The absence of lenders in the money market and the continued preoccupation of banks with the financing of seasonal trade are fully reflected in the Treasury Bill results for this week. The amount offered at Rs. 2 crores was exactly the same as the amount invited. This suggests that these bills must have been taken up by special sources, presumably the State Bank of India. Nevertheless, the average rate of accepted tenders has gone up further; it was 2.720 per cent. per annum this week as against 2.680 per cent. in the past week and 2.530 per cent. in the week ended 14th February 1959. Undeterred by the progressive rise in the cost of these Bills, the authorities have invited tenders for the same amount for the next week too. They also propose to keep on sale Intermediate Treasury Bills between 18th and 21st March 1959 at an average rate of 2,656 per cent., even though there was no demand for them during the week under review.

The notes in circulation have, according to the Reserve Bank's statement for the week ended 13th March 1959, moved up further by Rs. 7.19 crores, their total being only Rs. 4 crores below Rs. 1,700 crores. As notes held in the Banking Department have also risen by Rs. 2.63 crores, the total notes issued have gone up by nearly Rs. 10 crores to Rs. 1,707 crores. This increase has been balanced by an addition of Rs. 9.98 crores in rupee securities and a negligible fall of Rs. 15 lakhs in rupee coins. There has been no change in the foreign securities held by the Issue Department. But, as the balances held abroad in the Banking Department have gone up by a small sum of Rs. 40 lakhs, the total of our foreign assets is a shade better at Rs. 211.27 crores. The deposits of the Central Government are up by Rs. 14.19 crores, but those of other Governments have gone down by Rs. 1.25 crore. Banks' deposits have improved by Rs. 2.37 crores. Bills payable have fallen by Rs. 3.19 crores. Loans and advances to Governments are higher by Rs. 2.89 crores and so also other loans and advances by as much as Rs. 10.24 crores. Almost the whole of this increase seems to be due to borrowings by banks against their Gilt-edged securities, for the total advances against usance bills have gone up by only Rs. 63 lakhs to a little over Rs. 6 crores. Investments have receded by Rs. 10.22 crores but the holdings of Government Treasury Bills have jumped up by over Rs. 6 crores to Rs. 10.39 crores.

The Scheduled banks' statement for the week ended 6th March 1959 clearly reflects the stringency that prevailed in the money market during that week. Both demand and time deposits have fallen by Rs. 1.83 crore. Borrowings from the Reserve Bank, as well as the State Bank, have gone up by Rs. 4.69 crores and Rs. 2.50 crores respectively. Advances and bills have jumped up by Rs. 11.68 crores. Total cash balances have been depleted by Rs. 9.10 crores, but investments have been raised by Rs. 8.76 crores.

The Gilt-edged market is ruling extremely dull, with hardly any business passing in the loans of the Central Government. The Reserve Bank of India has made no changes in its buying and selling rates. The only loans that have been in request are the 4 per cent. and 4½ per cent. issues of State Governments. But even among these the turnover is not large, as sellers are scarce.

Sterling has been ruling firm. The spot rate in the New York market has gone up from $2.81½-2.81-3/16 to $2.81¼-2.81-5/16; in fact, at one time it saw a high of $2.81⅜. Three months forward has also gained in strength by 5/32c. and so also six months forward by 3/32c., both being at a slight discount under spot. The closing rate for three months was $2.81-5/32-2.81-7/32. It was $2.80-31/32-2.81-1/32 for six months forward. In keeping with the rise in the value of sterling thus, the rupee also has strengthened a bit in terms of U.S. dollar. Banks' buying rate for ready dollars is Rs. 472.50 per $100 and the selling rate is Rs. 475.75 per $100, the corresponding rates a week ago being Rs. 472.75 and Rs. 476.25 respectively.

GOOD GENERAL DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 17*th March*

The total offerings of tea chests at the internal sale held on the 11th inst., amounted to 21,458. The demand was generally keen. Good medium and best categories enjoyed sizable buying support and fetched better prices. Selected teas of orthodox descriptions were sold at a small premium. Legg cut teas were irregular around valuations. Teas of fibrous leaf and end of season description encountered selling and lost up to 4 nP per lb. Some quantities of Darjeeling teas on offer were withdrawn, as demand was slack. Poorer types were sold readily, though at slightly reduced prices. Demand for C.T.C. teas was selective, depending on quality and leaf appearance. Clean leaf mediums were easier by 6 nP. Poorer sorts were also easier.

The latest available quotations in rupees per lb. (exclusive of excise duty) for a few popular varieties of tea are: Medium Dooars Dust 1.78-1.80; Medium Assam Grainy Dust 1.72-1.76; Medium Assam C.T.C. Dust Re. 1.95-2.10; Best Assam C.T.C. Dust 2.60-3.00 (nominal).

Leaf teas on offer aggregated 3,756 chests. Barring the few lines of green teas which were sold readily at prices around valuation, C.T.C. and orthodox grades failed to elicit adequate support and declined by 10 nP to 15 nP per lb.

Export offerings aggregated 68,500 packages. General demand was somewhat good. Clean black exportable fannings were dearer, as were poorer C.T.Cs and stylish whole leaf. Bright orthodox Assam B.O.Ps and O.Fs were well supported, while poorer B.O.Ps were difficult to sell. Good C.T.Cs changed hands at slightly lower rates. Plain and medium shed 4 nP to 8 nP.

Business in export quota was done at 1¾ nP-1¾ nP.

The average price realised at the London tea auctions held recently was 50.16d. per lb., as against 50.28d. in the previous week and 53.62d. in the corresponding week last year. The U.K. tea stocks in London and provincial warehouses during the week ended 6th March were of the order of 170.57 million lbs., as against 171.35 millions in the week preceding it. The total afloat was over 16.78 million lbs.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, 18*th March*

Buoyant conditions prevailed in the bullion market during the week under review. Silver evoked renewed buying support induced by tight supply position, thanks to continued good offtake in the wake of poor arrivals. In sympathy with the white metal and on reports of a decline in floating stocks, gold also ruled strong. The decline in stocks is attributed partly to the virtual absence of contraband gold arrivals and partly to the continued absence of Mysore gold supplies which are being taken up by the Central Government for well-nigh eleven months. The operators noted the Union Deputy Finance Minister's statement in Parliament this week that the scheme to issue gold bonds was still under the consideration of the Ministry. The statement, however, had no effect on the market.

An important event of the week was the imposition of a margin at the rate of Rs. 10 per tola on the bulls under the by-laws which came into force automatically when the *budli* rates reach a particular level. On Tuesday, the *budli* payable by bears (called backwardation, in technical parlance) exceeded As. 8 per tola and thereby attracted the margin as noted above.

In the silver section, March settlement spurted from Rs. 197-14 last week to touch a high of Rs. 199-14 on Monday. After receding to Rs. 198-15 on the same day owing to profit-taking, it recovered gradually to Rs. 199-10 today before finishing at Rs. 199-2. The net gain over the week was Re. 1-4. April settlement moved up from Rs. 197-5 to Rs. 199-15-6 but closed lower at Rs. 199-5. The carry-forward charge in favour of bulls widened further during the week from As. 9 to As. 13.

Ready silver opened the week at Rs. 197-14 and advanced on good buying orders to Rs. 199-10 yesterday. Today, however, it was easy at Rs. 199-5. The daily average arrivals and offtake of silver were 9 bars and 11 bars, respectively. The floating stocks of silver are estimated at 800 bars.

March settlement in gold was well supported, the quotation rallying from Rs. 118-4 to Rs. 119-0-6 before finishing at Rs. 118-14. April settlement recorded a rise of As. 6½ over the week to close at Rs. 118-4 today. The carry-forward charge in favour of bulls yesterday and today was As. 10, as against As. 5½ last week-end.

Ready gold rose from Rs. 118-11 to Rs. 119-5 on Saturday. This was short of the all-time high of Rs. 120-1 recorded on 6th May 1950 by only As. 12. After declining to Rs. 118-12 on Monday, it recovered to Rs. 119-2-6 yesterday. Opening at Rs. 119-2 today, it finished at Rs. 119. The daily average arrivals of gold were 4,500 tolas, while offtake was 4,000 tolas per day. The floating stocks of gold are reported to be about 25,000 tolas.

Ready and forward silver in London were unchanged throughout the week at 79¾d. and 79¾d., respectively. Gold, however, declined from 249s. 4½d. to 249s. 4½d. Silver at New York stood unchanged at 91.375 cents per fine ounce.

The following comparative table shows at a glance the trend of the market during the week under review:

	18-3-59	Highest	Lowest	11-3-59

SETBACK IN COTTON

(From Our Own Correspondent)

BOMBAY, 18*th March*

The cotton futures market, after having ruled distinctly firm during the first two days of the week under review, suffered a sharp setback on Saturday, shedding most of the previous gains. The downward trend gathered momentum in subsequent session and persisted till the close today. The earlier firmness was influenced by strong advices from the spot market. The news that not a single bale of cotton was tendered against the March contract on the 12th inst., the fourth notice day, also imparted strength to the market. The high level of prices, however, attracted liquidation. Reports of credit squeeze being applied to co-operative societies indicating the possibility of large-scale release of cotton stocks held by them, the downward revision of the tendering differences and appeal results which were said to be in favour of sellers, brought forth further selling pressure. Price of both the contracts consequently declined, the decline being more marked in the case of the May contract. The closing rate of the March contract, was, however, higher than last week-end quotation.

I.C.C. Moglai Jarilla March 1959 opened the week higher at Rs. 683.25 and, after rising to Rs. 688 on Friday, declined to Rs. 679.50 yesterday. Commencing at Rs. 680 today, the contract receded to Rs. 677 and closed at that rate. Tenders against the contract on the 16th inst., aggregated 200 bales; total to date: 850 bales.

I.C.C. Moglai Jarilla May 1959 commenced the week's trading at Rs. 679 and, after moving up to Rs. 684.50 the next day, eased to Rs. 674 yesterday. Opening at Rs. 677.25 today, the contract receded to Rs. 673.50 but closed higher at Rs. 674.25.

The trend of prices of the contracts is indicated below:

(In rupees per candy of 784 lbs.)

	18-3-59	*High*	*Low*	11-3-59
I.C.C. Moglai Jarilla March 1959 ...	677	687.50	677	675.50
I.C.C. Moglai Jarilla May 1959 ...	674.25	684.50	673.50	675.50

In the spot section, firm conditions prevailed early in the week. There was keen demand for good quality cotton, especially staple styles. CO2, Digvijay and Kalyan were much sought after and rates hardened. Surti, Vijay, Kala and Wagad also attracted attention. Towards the close of the week, activity slowed down. Price also tended to ease.

The export section was active at the beginning of the week. Brisk inquiries were noted for Bengal *Deshi* but business reported was small.

In the foreign section, mill interest was noted in Sudan and East African varieties. Selected Sudanese styles came in for business. East African Busoga and B.P. 52 changed hands at prices ranging from Rs. 1,070 to Rs. 1,075 and Rs. 1,120 and Rs. 1,125 respectively. Mills were eagerly awaiting the release of a fresh import quota for 30,000 bales of cotton stapling 1-3/16" and above, divided equally between Egyptian and Sudan cotton. Details of this quota are reported to have been finalised. The entire quantity, it is said, will be imported under the textile export incentive scheme.

The latest available spot quotations from Sewri are—in rupees per candy of 784 lbs.—as follows:

Bengal *Deshi* 690; Berar Jarilla 760; Khandesh 830; Vijay 960; Jaydhar 950.

The Karachi cotton market ruled fully steady during the week under review. The expiring March contract received support which was influenced by tender considerations. The brisk buying noticed in the May contract last week tapered off. Nevertheless, values ruled fully steady. N.T.R.G. March improved from Rs. 53-8 last week-end to Rs. 54-6-6. The May contract was quoted at Rs. 56-2. Steady conditions prevailed in the spot section also. Exports of cotton from Karachi from 1st September 1958 to 5th March 1959 aggregated 420,039 bales, as compared with 331,474 bales during the same period last season.

Conditions in the Alexandria cotton futures market remained unchanged. Foreign demand was slack and price fluctuations narrow. Prices would appear to have stabilised round 71 tallaris for the long-staple Karnak contract and 61 tallaris for the medium-staple Ashmouni contracts. Shipment of cotton from 1st September 1958 to 4th March 1959 aggregated 483,573 bales (of 720 lbs. each), as against 364,797 bales during the corresponding period of last season. This comprised: Karnak 58,020 bales. Menufi 275,762 bales, Giza 30 15,769 bales, Dendera 39,299 bales, Ashmouni 88,156 bales and other varieties 6,567 bales. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 71.00; May 71.25. *Ashmouni*: April 61.80; January 61.85.

Cotton futures values in Liverpool scored handsome gains during the week. Commission House and trade support and a fairly large volume of investment buying imparted strength to the market. Both the American and American type contracts commanded higher prices. Sudan contracts ruled quiet and values remained unchanged.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: March-April 22.40; May-June 22.00; July-August 20.40; October-November 19.35. *American Cotton Mixed Growth Contract*: March-April 23.15; May-June 22.40; July-August 22.25; October-November 19.20. *Sudan*: May-June, July-August, September-October 22.00.

The New York cotton futures market ruled easy during the week. Increased hedge pressure and

liquidation by New Orleans operators were not fully absorbed by spot house buying and short covering. Values consequently receded.

The Commodity Credit Corporation sold under the current export sales programme a further quantity of 46,523 bales, making the total sold thus far 2,040,607 bales. The average price accepted for Middling one inch cotton at average location was 28.50 cents per pound, which was 9 points higher than at the previous sale. Registrations under the payment-in-kind programme aggregated 247,008 bales. The total Government-controlled stocks of cotton at present are approximately 7.9 million bales made up of 6.5 million bales in the Government Loan programme and 1.4 million bales of cotton owned by the Commodity Credit Corporation.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-3-59	10-3-59	3-3-59
Spot	35.65	35.70	35.75
March	35.38	35.41	35.59
May	34.46	35.41	35.59
July	32.16	34.63	34.72

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 18*th March*

The yarn market ruled bearish during the week under review. Art silk yarns encountered heavy selling pressure on fears of large arrivals of foreign yarns against licences issued under the Export Promotion Scheme. Consequently, prices suffered a setback. Staple fibre yarns were quiet. There were reports that several local and South Indian mills had offered for sale sizable quantities of 2/40s yarns at reduced prices. Cotton yarns were dull, as demand from powerloom and handloom weavers was at a low ebb.

Cupressa Bamberg art silk yarn (60 x 1) April delivery came in for selling and fell by Rs. 24 to Rs. 1,548. June delivery dropped Rs. 10 to Rs. 1,543. Spot yarns (60 x 1) moved down by 37 nP to Rs. 7.75. 120 Japan, 150 Japan, 120 Italy and 150 Italy shed 6 nP each to Rs. 4.84, Rs. 4.91, Rs. 5 and Rs. 5.19, respectively. Among indigenous yarns, National Rayons 120 bright cones first grade receded by 15 nP to Rs. 4.41. National Rayons 150 bright cones first grade eased by 4 nP to Rs. 4.26.

In the staple fibre yarn section, spot 40 x 2 Citys lost 2 nP to Rs. 3.20. Centurys were dull at Rs. 3.25. Among foreign yarns, Paramounts climbed down by 25 nP to Rs 7.62. Fujis were quoted 9 nP lower at Rs. 8.25. 40 x 2 April delivery, however, gained Rs. 2 to Rs. 631. June delivery gathered a rupee to Rs. 637.

Among cotton yarns, ten counts Moderns were quiet at Rs. 13.37 and Podars at Rs. 12.19. Twenty counts Hinds were unchanged at Rs. 16, as also Moderns at Rs. 16.25 and Seksarias at Rs. 15.50. Among forty counts, Moderns were stagnant at Rs. 26. Minaxis, however, gathered 3 nP to Rs. 25.28. Sixty counts Finlays changed hands at Rs. 65, same as last week. Among eighty counts, Finlays were dull at Rs. 81 and Citys at Rs. 67.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	18-3-59	11-3-59
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bamberg April	1,548	1,572
" June	1,543	1,553
(per case of 200 lbs.)		
60/1 Cupressa Bamberg spot (per lb.)	7.75	8.12
120 Japan (per lb.)	4.84	4.90
150 Japan (per lb.)	4.91	4.97
120 Italy (per lb.)	5.00	5.06
150 Italy (per lb.)	5.19	5.25
Staple fibre yarn—		
40 x 2 April (per case of 200 lbs.)	631.00	629.00
40 x 2 June ... (— Do —)	637.00	636.00
40 x 2 Century (per lb.)	3.25	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	12.19	12.19

40s Minaxi	25.28	25.25
60s Finlay	65.00	65.00
80s City	67.50	67.50

MARGIN IN CASTORSEED

(From Our Own Correspondent)

BOMBAY, 18*th March*

In order to check the pronounced buoyancy in the oilseeds market, the Forward Markets Commission has directed the local Oilseeds Exchange to impose a margin on open 'long' position in castorseed with effect from the 13th inst. The rates of margin, which will be applicable on a slab basis, will be Rs. 15 per candy when the price of hedge contract rules above Rs. 165 per candy; Rs. 30 per candy when the price is above Rs. 175; and Rs. 45 per candy when it is above Rs. 185. The Commission's directive stated that during the delivery period the rate of margin would be Rs. 92.50 per candy if the price ruled above Rs. 185. A similar margin with suitable local adjustments would become operative in the two other recognised castorseed trading centres of Hyderabad and Ahmedabad. The margin considerations do not seem to have made any marked impression on the market, except for a short period. Thus the margin has failed to curb the upward trend in the market.

The groundnut section was particularly buoyant in the face of sustained restricted arrivals of seeds from the terminal centres and continued support given by crushers and *vanaspati* manufacturers. The anxiety of the Government of India to go ahead with the export promotion drive for oilseeds will have, it seems, only a negative effect, in that it will render domestic prices out of parity with world prices. Virtual boom conditions ruled in the groundnut section; the futures contract gained Rs. 6 over the week. May 1959 contract which closed last week at Rs. 184.25 shot up by Rs. 4.50 the following day. Fear of further intervention by the F.M.C. in the groundnut section brought down the prices slightly. But the contract staged a smart recovery subsequently and closed today at a new high of Rs. 190.25. Bold ready advanced from Rs. 37.50 to Rs. 38.50. Oil ex-mill, after moving within a narrow range, closed today at Rs. 20.19, as against Rs. 19.62 last Wednesday.

The castorseed section, despite the margin, witnessed cheerful conditions. In the beginning of the week, the prices registered substantial increase under the leadership of groundnuts. Reports of export business in oil and the favourable technical conditions imparted strength to castorseed and oil. The margin level is far above the current prices and nothing prevents the traders from rigging up the prices, below the margin level of Rs. 165. Castorseed, which closed last week at Rs. 158.37, gained overnight by Rs. 2.50 to touch Rs. 160.62 on Thursday. Later it declined to Rs. 156.87, but recovered to close today at Rs. 158.75. Ready Madras moved between Rs. 30.50 and Rs. 31.12 and wound up the week at Rs. 30.87. Oil B.S.S. advanced from Rs. 16.62 to Rs. 16.81.

Linseed, in sympathy with other oilseeds, made considerable gains. The rise in prices would have been more pronounced, but for increased upcountry selling and lack of good support. There were reports of export business, particularly in linseed cakes. The May contract rose from Rs. 32.81 to Rs. 33.44 on Thursday. It moved irregularly in subsequent sessions and closed today at Rs. 33.37. Bold ready improved by about 37 nP to Rs. 33.00. Similarly, oil hardened from Rs. 16.37 to Rs. 16.81.

The cottonseed section too was distinctly bullish. A trade notice issued by the Joint Chief Controller of Imports in Bombay on the 14th inst. says that the Government of India has decided to release a fresh quota of 10,000 tons of undecorticated cottonseed oilcake for export by all shippers without any restrictions of maximum shipment by an individual shipper for the period March-September 1959. The notice adds that licensing will be done on shipping bills supported by documentary evidence of firm sale contract upto the end of September 1959 or till the ceiling is reached, whichever is earlier. The cottonseed May 1959 contract which closed last week at Rs. 128.25, after moving both ways in a narrow range, toed the line of the other oilseeds, and closed today on a firm note at Rs. 13.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	18-3-1959	11-3-1959	4-3-1959
	Rs.	Rs.	Rs.
Groundnut			
May 1959	190.25	184.25	179.87
Bold ready	38.50	37.50	36.12
Coromandel ready	39.00	37.75	36.50
Khandesh quality	39.00	37.75	36.25
Oil ex-mill ready*	20.10	19.62	18.69
Railway receipts*	19.94	19.25	18.62
Castorseed			
May 1959	158.75	155.37	155.37
Ready Madras	30.87	30.75	30.19
Ready Kanpur	29.44	29.75	29.00
Oil B.S.S.†	16.81	16.62	16.37
Oil commercial†	15.56	15.56	15.37
Linseed			
May 1959	33.37	32.81	32.31
Bold ready	33.00	32.62	32.50
Oil ready†	16.81	16.37	16.19
Cotton seed May 1959	130.50	128.25	126.00
Niger seed	29.50	28.75	28.50
Kardi seed	24.37	23.00	21.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for cwt. and those for oil per quarter.

SUGAR EASY

(From Our Own Correspondents)

BOMBAY, 18*th March*

Sugar prices tended to move down during the week under review, despite good demand from Malabar side and poor arrivals. Reports from North India suggested a fall of 25 nP in the premium charged on ex-factory controlled rates. Arrivals of sugar by rail during the week aggregated no more than 6,430 bags, as against 10,480 bags in the previous week.

Small grain declined by 50 nP to Rs. 109.50 per bag. Medium grain lost a like amount to Rs. 110-Rs. 111. Large grain was unchanged at Rs. 112-Rs. 117.

* * * *

HAPUR, 16*th March*

After ruling steady during the major part of the week, the sugar market turned quiet towards the week-end, owing to lack of buying interest from consuming areas at higher prices. Some more factories in west U.P. have stopped crushing operations. There were apprehensions that the overall sugar production in the current season will be lower as compared with last year and it is understood that the Government has been asked to lower the export quota.

The Muzaffarnagar sugar market ruled steady. Moderate business was done for Punjab, Rajasthan, Gujerat and Saurashtra. Prices eased by about 25 nP per maund. Nevertheless, the quotations were still higher by about Re. 1.25 to Re. 1.75 per maund as compared with the controlled prices fixed by the Government. Most of the factories are expected to stop crushing by the end of this month. The latest prevailing prices are: Sugar crystal spot delivery Khatauli new D29 Rs. 38.75; Shamli D29 Rs. 36.75; Rohana D28 Rs. 38.37; mill delivery Seohara D29 Rs. 37.19; Amroha D29 Rs. 37.44; Bijnore D29 Rs. 37.19; Mansurpur C29 Rs. 38.12.

Sugar prices at Kanpur tended to go up, due to apprehensions regarding a fall in overall production and Government's policy of issuing restricted allotments. Demand from *mofussil* areas was also reported to be better. The latest prevailing prices are: Ex-mill controlled Rs. 36 a maund; spot per bag C29 Basti Rs. 105-8; Gola Rs. 104-4; Burhwal and Waltergunj Rs. 103-4; Hargaon Rs. 103; Lakhimpur, Tulsipur and Balram unstocked Rs. 103.

Khandsari ruled quietly steady. Production has been suspended in most of the crushers, following the call by the provincial body as a protest against the imposition of excise levy. The prevailing prices are: superior dry Rs. 33 to Rs. 36; inferior moist Rs. 29 to Rs. 32 per maund.

Ready *gur* registered sharp gains towards the week-end, due to brisk buying support from east U.P., Punjab, Rajasthan and Gujerat and coupled with stockists' purchases. Arrivals were at an average of 4,000 maunds daily and local stock swelled to 78,000 maunds. Due to prevailing high prices of *gur*, crushers are finding it profitable to purchase cane upto Re. 1.56 per maund. The prevailing prices of *gur* today are: *pansera* Rs. 18.75 to Rs. 19-12; *balti* Rs. 18.75; *shakker* Rs. 18.75 per maund.

Gur improved fractionally after early fall in the Muzaffarnagar market, due to good bull support from Punjab and Gujerat. The latest prevailing prices are: Chaku Rs. 20 to Rs. 22; *ladu* Rs. 20 to Rs. 21; *pansera* Rs. 19.50 to Rs. 20.50; *rusker khurpa* Rs. 14.50; *ladu* Rs. 15; *shakker dara* Rs. 21 to Rs. 22; *masala* Rs. 24 to Rs. 26 per maund.

Sowings for next crop are in full swing and, as *gur* prices have remained high all through the season, an increased acreage is expected.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 18*th March*

Malabar black pepper ruled quiet during the week for want of incentive. Ungarbled at Cochin came down to Rs. 650 and garbled to Rs. 113. May delivery receded to Rs. 117. It is reported that the U.S.A. has been showing keen interest in Malabar black pepper at prices ranging from $0.25 to $0.25½ per lb. C. and F. New York.

Spot in New York, after touching $0.26½, is now quoted at $0.25½. Singapore moved between Str.$86 and Str.$87 for Sarawak black, while Lampong was quoted at $0.25½. Sarawak white, after improving to Str.$165, came down to Str.$163.

The downward trend witnessed in pepper is mainly due to the tight position of the money market and weak holding power of growers.

The future of the market for Malabar black now depends on the demand from the U.S.A. The trade expects that demand is likely to come in the near future, if the present trend of the market is maintained.

Ready Malabar black in Bombay is quoted at Rs. 95 per Bengal maund.

LEAF TEAS STEADY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 13*th March*

Approximately 650,000 lbs. were on offer at the tea sale No. 10, held on Tuesday, the 10th inst. The market opened to a good but somewhat irregular demand. There was only fair enquiry from buyers for low medium and medium teas which were 5 to 10 nP easier. A fair selection of high growns and good medium teas which were offered at this sale fully maintained their recent seasonal improvement in quality. Broken grades under these types sold well and were fully firm. Similar fannings, however, were difficult to sell and these were the weakest feature of the sale. A small selection of tippy teas were offered in the sale and these were slightly easier. Whole leaf teas were steady on last week's rate.

The quotations were: Low medium Re. 1.55 to 1.65; medium Re. 1.75 to 2.15; good medium Rs. 2.35 to 2.85; and quality Rs. 2.90 to 5.15.

The quantity on offer at dust sale E held on Thursday, the 12th inst. was about 600,000 lbs. The quality and appearance of dusts offered fully maintained their recent improvement. There was good general demand for all types, although prices were irregularly 5 nP easier than last.

London Market: Sale of 9th March 1959.—Best liquoring and colourry sorts firm to dearer. Others irregular, with thin plain sorts tending easier.

Sale of 10th March 1959.—Best categories were firm, while others were weaker.

Colombo Market: Sale of 9th March 1959.—Good demand. Selective buying. Prices irregularly lower. Dimbula Dickoya brokens down by 20 to 30 cents. Good mediums lower by 15 to 20 cents. Plainer mediums by 10 to 15 cents and lowgrowns by 5 to 10 cents.

Sale of 10th March 1959.—Strong demand. Useful liquoring highgrown dusts appreciably dearer. All other off-grades firm.

Export Quota.—The market has been rather quiet this week and business has been going through at 1½/1¾ nP. At the time of writing, there is a slightly easier tendency in the market and there are sellers at 1½ nP and buyers at 1¼ nP.

Excise Duty.—We have now received information that the alterations in Zone 3 for the excise duty on tea involves the entire Nilgiri district, with the exception of Gudalur taluk which is already in the No. 1 zone. All teas in the Nilgiri district will from 1st March 1959 pay 8 nP, instead of 10 nP as hitherto.

Forthcoming Auctions.—Sale No. 11 will be held on Tuesday, the 17th inst.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"In sale No. 11, about 800,000 lbs. were offered. Demand was good. Low medium and medium brokens ruled easier by 5 nP. Similar fannings elicited better enquiry. Good medium and best liquorings were irregular and easier, but fannings were still weak. Whole leaf teas were strong."

JUTES FIRM

(From Our Own Correspondent)

CALCUTTA, 17*th March*

The raw jute and jute manufactures markets continued to present a distinctly firm trend during the week under review also and there was a further rise in values of both raw jute and manufactured goods. The bullish fervour of the markets was engendered principally by rumours to the effect that the export duty on raw jute would soon be abolished. The lower output of jute goods in February also imparted some strength to the manufactures section. The production in the month under reference was 83,647 tons, as against 92,077 tons in January. This comprised 39,519 tons sacking, 36,911 tons hessian and 7,217 tons other manufactures.

The draft by-laws prepared by the trade for the regulation of transferable specific delivery contracts in raw jute and jute goods were discussed by the Board of the East India Jute and Hessian Exchange and the representatives of the Indian Jute Mills' Association with the Forward Markets Commission last week-end. The Commission was reported to have generally agreed to the scheme. It may be noted here that the exemption granted to the aforesaid contracts under Section 18(S) of the Forward Contracts (Regulation) Act is due to expire on the 28th inst. During the discussions, Mr. A. S. Rao, Member of the Commission, is said to have emphasised two aspects. One, the by-laws should be finalised well in time before the expiry of the present exemption period. Two, adequate publicity should be given so as to enable all the members of the trade to study the implications of the change-over to regulation and control themselves as members of the Exchange in accordance with the Forward Contracts Act.

Early in the week, trading in jute goods futures market was characterised by good buying in heavy goods by a prominent operator and bear-covering. Consequently, prices moved up. On Saturday, however, the market developed a sagging tendency on reports that stocks of hessian in the U.S. had risen by 24 million lbs. during the month of February. Consequently, prices suffered a setback. Nevertheless, today's closing rates were higher than those at the end of last week. Spot prices followed the trend of futures.

Hessians (40" x 10 oz) May advanced over the week from Rs. 38.50 to Rs. 39.50. B. twills May picked up Rs. 3.05 to Rs. 94.95. Trading in new contract (August 1959) hessian and sacking commenced yesterday. The trend of prices continues to be fully steady. In the ready section, hessians fluctuated between Rs. 38.90 and Rs. 39.40. B. twills registered a rise of Re. 1.20 to Rs. 93.10 on the 14th inst.

In the raw jute market, Assam bottoms March went off the board on the 14th inst., the closing rate being Rs. 21.25, as against Rs. 20.36 on Tuesday last. June delivery spurted from Rs. 21.94 to Rs. 22.48 before finishing at Rs. 21.25. The latest available spot quotations in rupees per maund are: Northern bottoms 20.50; Assam bottoms 21.00; Daisee bottoms 23.00.

READY LINSEED EASY

(Messrs. A. Bradley & Co.)

CALCUTTA, 16*th March*

Although there was no change in the generally firm trend of the linseed market during the major part of the week, a quieter tendency began to set in towards the close. There was a fall in the price of ready goods, with fairly keen sellers, but forward prices were well maintained and there was poor response to improved demand from crushers.

The oil market, in sympathy with seeds prices, declined for near positions, with very few inquiries. Sellers for forward delivery, however, were reserved.

The latest available quotations per maund are: Ready Rs. 25.75; March Rs. 23; April Rs. 24 and May Rs. 23.

HIDES SUPPLY AMPLE

(From Our Own Correspondent)

KANPUR, 16*th March*

During the week under review, the hides and skins supply position was encouraging. The supply of upper grade cows, however, were not as plentiful as that in the previous week. A good volume of buff goods was supplied by Northern U.P. Goat and sheep skins from the local butcheries were also plentiful. The main purchasers were the local tanners.

The latest available quotations are: wet salted cow 1s grade Rs. 410, 2nd grade Rs. 350 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 2 lbs. 1 oz. and 2nd grade 2 lbs. 3 ozs. per rupee; Goat 1st grade Rs. 400 and 2nd grade Rs. 375 per 100 pieces; Sheep Rs. 350 per 100 pieces.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 16*th March*

Quietly steady conditions prevailed in the foodgrains market during the week, due to lean stocks left at the fag-end of the season. Harvesting of peas is in full swing and daily arrivals are gradually increasing. Coarse grains—barley and *bejhar*—will not, however, reach the markete before the end of the current month. The conditions of the standing crop is fairly good, but strong westerly winds during the week have adversely affected the crop in the unirrigated areas. The Union Government has imposed restrictions on the transport of foodgrains to, from or within a five-mile belt all along the border of U.P. with adjoining States and the foodgrains affected are wheat, rice and paddy, maize, *jowar* and *bajra* and their products.

Wheat at Hapur registered slight gains during the week to be quoted on Monday at Rs. 22.75 per maund for average quality, at Rs. 24 to Rs. 25 per maund for farm produce and at Rs. 21 for inferior quality. Arrivals from rural areas are small and supply position continues to be tight, as sales through fair-price shops is insufficient to meet day-to-day requirements. New crop wheat will begin to flow into the markets in a month's time.

Rice continued to rule steady. Export from some other surplus districts of the State has been banned, in order to facilitate procurement operations. The prevailing prices are: *sela basmati* Rs. 32.50; *mainpuri* Rs. 22.25; *raimunia* Rs. 27 per maund.

Gram registered fractional gains during the week, due to firm advices from deficit areas and good demand in the face of poor stocks. Barley and *bejhar* also sought higher levels, as harvesting to begin will still take about a fortnight. Maize improved fractionally, due to good consumer demand in the face of dwindling stocks, while *bajra* was quietly easy, as demand was gradually declining. *Jowar* drifted lower. The week-end prices (in rupees per maund) were: Gram punjabi 23; barley 15; *bejhar* 15.25; maize 16 to 16.50; *bajra* 13 to 15; *jowar* 13 to 15; *guwar* white 14.75.

New peas arrivals into the markets are gradually increasing. Despite this factor, prices improved slightly, due to good outside demand. Local arrivals were at an average of 100 maunds daily, but the quality was poor and damp.

* * * *

India has established a new record in rice production. In 1958-59, 29.7 million tons were produced, the previous best being 28.3 million tons in 1956-57. According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India final estimate of rice for 1958-59 puts the area at 81,590,000 acres and production at 29,721,000 tons. As compared with the figures for 1957-58 of 79,447,000 acres and 24,885,000 tons, the estimates for 1958-59 show an increase of 2,143,000 acres or 2.7 per cent. area and 4,836,000 tons or 19.4 per cent. in production. Also as compared with the average of the preceding five years, there is an increase of 3,591,000 acres, or 4.6 per cent. in area, and 3,145,000 tons, or 11.8 per cent. in production.

The current year's increase in production has been due more to a higher per-acre yield than increase in acreage. The per-acre yield this year is 816 lbs., as against 702 lbs. in 1957-58, thereby showing an increase of over 16 per cent. The average yield per acre of rice in India for the five years ended 1957-58 was 763 lbs. Thus, the current year's yield per acre shows an increase of about 7 per cent. over the quinquennial average.

SURVEY

(*Concluded from page* 443)

estimates for 1958-59. These estimates are based on the assumption that present surcharge of 33⅓ per cent. will be continued.

The capital expenditure for the next year is computed at Rs. 3.19 crores, as against Rs. 2.27 crores (revised) for 1958-59. The various development programmes included in the second Five-year Plan (other than the Marine Oil Terminal) account for a total expenditure of Rs. 1.19 crore, which compares favourably with Rs. 1.14 crore in the current year. The Marine Oil Terminal will, it is estimated, cost about Rs. 46.68 lakhs next year, an increase of Rs. 10 lakhs over that for the current year. Besides, the expenditure to be incurred on miscellaneous capital works will go up from Rs. 77.29 lakhs to Rs. 1.53 crore. The expenditure on the Marine Oil Terminal will be met, as before, by loans from the Government. The balance of the capital expenditure will be financed by the resources of the Port Trust itself, by drawing upon the General Reserve Fund, Renewals and Replacements Fund and Pilotage Depreciation Fund in respect of the share of the replacement costs of certain vessels chargeable to the Pilotage Account. The aggregate withdrawal from the General Reserve Fund, during the current year and the budget year will, we are told, amount to Rs. 2.93 crores and that from the Renewal and Replacements Fund to Rs. 1.61 crore.

NOTICE

(*Concluded from page* 474)

Act, 1956, (and in particular by Sections 314 and 360 thereof) the three Special Resolutions abovementioned are commended for acceptance.

Mr. Neville N. Wadia, Mr. H. R. Batlivala and Mr. Pallonji Shapoorji Mistry are interested in the Contracts referred to in the Special Resolutions aforesaid, being Directors and members of the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Sir Jamsetjee Jejeebhoy, Bart., is interested in the said Resolutions in his capacity as Constituted Attorney of Messrs. Nowrosjee Wadia and Sons (Private) Ltd. In the three Resolutions regarding approval of Contracts with Messrs. Ghia Pallonji & Co., Messrs. Eastern Cotton Co., and Messrs. Shapoorji Pallonji & Co., Private Ltd. respectively, Mr. Pallonji Shapoorji Mistry is also interested in the manner aforesaid.

The drafts of the Contracts referred to in Special Resolutions Nos. I, II and III are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 a.m. to 1 p.m.

By Order of the Board,
NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

The Indian Bank Limited

H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

There are now no fewer than 112 Branches of the Bank functioning not only in India but also in Ceylon and Malaya.

In addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

London Agents: Westminster Bank Limited.
New York Agents: First National City Bank of New York.

** These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which *only 5 per* cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum *rateably* with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

¶ These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

(n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. (A) Participating cumulative. pp—Partly paid.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. § On old Capital.
K—Fort William Jute Co., has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P—Bengal Coal Co., Dividend for 1954 and 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each. 'C'—On increased capital.

TRADE AND THE UNITED STATES

PLAIN SPEAKING BY MR. ECCLES

From Our Own Correspondent

LONDON, 13*th March*

LONDON LETTER

THE figures for U.K. overseas trade in February 1959 are rather worse than a year ago. This followed the pattern which January had began. Taking the two months together, exports were about 3 per cent. lower than in the corresponding period of 1958 and imports were about 1½ per cent. greater. There was an adverse balance of £31 million in February on top of the adverse balance of £49 million in January, (in both cases counting imports on a c.i.f. basis which loads the figure with freight and insurance costs though these are not shown on exports), i.e., a total of £80 million, against the total of £75 million for the first *three months* of 1958.

If one allows for the fact that February was a short month, then the adjusted figures—which give a better picture—for the first two months of this year are as follows:

(In million £s)

	Imports c.i.f.	*Exports* f.o.b.	*Adverse balance*
January	329	279	50
February (adjusted)	321	287	34
Monthly average—January-February	325	283	42
1st quarter, 1958	309	284	25

It is clear that, on this pattern, the favourable balance of last year and the consequent increase in gold and dollars is not going to be repeated on anything like the same scale.

But the picture of trade with the United States is a good deal more encouraging. British exports to the United States totalled £24½ million in February following on £28 million in January, as compared with an average for the first three months of last year of £21½ million; making the adjustment for the short month of February, this means an increase in exports of very nearly 30 per cent. Exports to Canada, on the other hand, are only fractionally higher than a year ago but the figures are only about half those to the United States.

The President of the Board of Trade addressed the American Chamber of Commerce in London on this matter of trade with the United States and complimented both countries on the progress that had been made in developing their mutual trade. But he argued that what had been done was not enough. After all, the total of British exports to the United States for the first two months of this year, although running at record levels, were still only 10 per cent. of the total of British exports. The President dwelt on the theme that industrialist countries ought, if the system of trade between them was sufficiently free, to be able to carry on a very substantial level of business, even more substantial than might exist between high standard and low standard countries. He argued that low standard countries might well develop Communist systems of trade, although he was obscure on whether he meant by that simply a large measure of "ruthless State planning" or an extension of Communist methods into political systems!

The argument of Mr. Eccles was primarily that it was up to the United States and the Commonwealth countries, including the U.K., to show that there is a more efficient and a more humane way to better living than "ruthless State planning." And he was as gently as possible trying to prod the United States into realising that it was no use their preaching the doctrine of maximising trade on a free basis and at the same time reducing for practical purposes that trade to a trickle. Although gentle, some of his phrases came near to being barbed, when he said that certain recent actions by the United States are reducing the sense of economic co-operation between the U.K. and the Commonwealth, on the one side, and America, on the other. The new quotas on lead and zinc imports into America have hit Australia and Canada as have the restrictions on the import of oil. The rejection of a recent British contract by the American Government is another example. And, thirdly, he quoted the recent Conference at Montreal on Civil Aviation navigation aids which was entirely biased by the Americans in favour of using American equipment, although British equipment would have done the job better for world conditions generally. Finally, there is the wool tariff quotas which have hit at British exports into the United States.

There is a tendency in this country to dismantle restrictions on American imports and, since we have broadly exchange problems from which America does not suffer, the Government rightly feels that it has been leaning over much more than has the United States Government to free trade. No Americans who attended that lunch would have been left in any doubt that the British are beginning to feel slightly niggled over this continued and unnecessary toughness of American trade policy.—*All Rights Reserved.*

BANKING

(*Concluded from page* 447)

crores. Savings banks deposits also are higher at Rs. 10.17 crores, as against Rs. 8.53 crores, and current accounts, contingency accounts, etc., at Rs. 15.55 crores, as against Rs. 12.73 crores. Borrowings from banks, which were practicably nothing a year before, appear at Rs. 2.45 crores. These, it may be added in passing, have not been taken into account in working out the ratios of principal assets to deposits. On the assets side, advances at Rs. 40.11 crores show an increase of Rs. 5.12 crores, or 14 per cent. over the year. Of this increase, the share of loans, cash credits, overdrafts, etc., is Rs. 2.91 crores and that of bills discounted and purchased is Rs. 2.21 crores. Since the rise in advances is much less than that in deposits, the credit ratio has moved down further to 59.8 per cent., as against 66.2 per cent. at the close of 1957. A considerably large part of the increase in deposits has found its way into investments which, as a consequence, have expanded by Rs. 14.85 crores to Rs. 26.73 crores. The bulk of the investments is in Government and other trustee securities, aggregating Rs. 24.25 crores. A noteworthy development in regard to investments is the disappearance of capital depreciation. These are now shown "at or below the market rate," for the first time since the end of 1950. There has been a decline of Rs. 2.20 crores in cash balances (including money at call). Owing to this decline, the cash coverage to deposits has receded from 16.5 per cent. to 9.7 per cent.

COTTON

(*Concluded from page* 448)

One of Japan's most pressing problems is what to do in regard to cotton textile exports, particularly in the face of cut-throat competition from Mainland China in the Far Eastern markets. Aggregate exports of cotton yarn and cloth during the first nine months of 1958 were down by 22 per cent. and 14 per cent. respectively but trade in cotton made-up goods was considered to be favourable. It is fairly certain that there will be a significant reduction in cotton consumption in Japan this season, especially if the present rate of curtailment is applied after March. Increased domestic demand is responsible for the slight improvement in India in recent months. Consumption in Hongkong continues to forge ahead and has set new records in the first four months of the season.

Exports of cotton from the U.S. are presently running a little more than half of last season's rate and, unless there is a reversal of the present trend, exports for the full season may not reach even 3 million bales. Aggregate exports from other free world countries may, however, increase, despite the expected decline in total cotton exports. Exports during the first few months of the season were, in several instances, higher than a year ago. It is true that more recently, affected by the continued downward trend in cotton prices and the uncertainty surrounding U.S. export policy, trading in most markets has been less active, but, barring any further deterioration in consumption outlook, trade might improve as soon as the price situation becomes clear.

CLOTH EXPORT TO RHODESIA AND NIGERIA

Exports of Indian mill piecegoods to the three important markets of Nigeria, Rhodesia and Nyasaland in Africa are expected to suffer a distinct setback as a result of the recent upward revision of tariff on imports into these countries. A few weeks ago, the Nigerian Government enhanced the minimum import duty on cloth by 25 per cent. from 8d. (about 33 nP) to 10d. (nearly 56 nP) per square yard, with a corresponding rise in duties on readymade garments also. This move has since been followed by the Federal Government of Rhodesia and Nyasaland, the overall increase in import duty on cloth weighing under 5-1/7 oz. and above 12 oz. being of the order of 50 per cent. per square yard; the revised rates of duties on different varieties are not yet known.

PLANTING

(*Concluded from page* 454)

military and civilian use. This synthetic rubber was also expected to have a strong stabilising effect on natural rubber prices and will allay doubts as to whether the supply of plantation rubber can keep pace with rapidly growing world demands. The rubber company had adopted, and expected to extend the use of, polyisoprene rubber as rapidly as its production would permit, Mr. McGovern said.

Scientists in the companies' tyre development laboratory in Detroit have developed new compounding techniques and a special process for the new synthetic. These shorten the curing time of the new rubber, give it better adhesion and adapt it to normal tyre building operations. As a result, tyres made of the new rubber have more uniform quality than those made with plantation rubber. Initially, polyisoprene truck tyres are being produced in the rubber company's Los Angeles plant in the popular 7.50-20 size. The company will expand production to additional truck tyre sizes, off-the-road tyres, aircraft tyres, white sidewall passenger tyres and other products now; requiring natural rubber as the supply of the new synthetic increases.

Shell Chemical would manufacture and sell the new material under the trade name "Shell Isoprene Rubber," Mr. McCurdy said. It was currently being produced by part-time utilisation of commercial equipment, located at various Shell Chemical and Shell Oil Company installations in the Los Angeles area.

For the present, he said, output would be maintained at a rate averaging five tons a day in order to furnish a supply for U.S. Rubber's current usage and for other customer evaluations, while not interfering unduly with other products regularly made in some of these facilities. As installation of various additions to the plant progresses during the year, the effective capacity was expected to increase to 15,000 to 20,000 tons annually on a steady basis.

Although several companies have announced the synthesis of Polyisoprene in recent years, it has not been produced commercially because of doubt that it could compete commercially with natural rubber. Shell scientists, however, have developed a new chain of production processes which enables the company to compete. The current price of Shell Isoprene Rubber (S.I.R.) is 30 cents per pound f.o.b. Terrance, California, approximately equivalent to that for the better grades of the natural product.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare." William Blake.

UNDER SECRETARY TO GOVERNMENT 28 MAR 1959

VOL. XCVIII. No. 2505 BOMBAY, 28th MARCH 1959 PRICE: Rs. 2

JUTE INDUSTRY RECOVERS

THE jute industry has for long been known as the "sick man" of India's industrial world. It emerged from the Second World War fairly exhausted after doing strenuous defence effort, with most of its machinery worn out. The Partition that preceded Independence imposed more hardship on this industry than on any other. The Indo-Pakistan conflicts, the devaluation of the Indian rupee and the non-devaluation of the Pakistan rupee made matters worse. The Korean war boom gave some respite, but the financial "prosperity" was largely negatived by the heavy export duties that were then levied and unduly prolonged. This handicap, together with shortage of raw jute, encouraged the growth of modern jute mills in Pakistan and, to some extent, in other parts of the world also, thereby substantially reducing the unique status enjoyed by the Indian jute mills. The high cost of raw jute, heavy export duties and the absence of modern machinery undermined the competitive capacity of our jute goods. They gave fillip to the manufacture and use of substitute packaging materials and the adoption of bulk-handling methods in several parts of the world, especially in those advanced countries where labour is scarce and highly expensive. Trade unions in India followed a shortsighted policy in regard to modernisation of mills and had the sympathy, if not the active support, of the State and Central Governments. The result was a vicious circle of high costs, lower profit, and contraction in production. The position was rendered more difficult with the ownership and control of a large number of mills changing hands from foreign to Indian investors. The four years ended 1957, in particular, proved to be a critical period when the industry suffered heavy losses and jute shares were friendless on the stock exchanges, with several mills not being able to pay even their preference dividends. Quite a few mills went into liquidation. The depression that persisted in this industry was so exasperating that many gave up hope. Even a Minister of the Union Government, who is out of office now, was heard to remark in Parliament at one time that, henceforth, the country should not expect much from the jute industry as an earner of foreign exchange.

Against this sombre background, even the subdued note of optimism struck by Mr. J. I. Jamieson, Chairman of the Indian Jute Mills Association, in his speech at the annual general meeting of the Association held at Calcutta on Friday last, sounds refreshing and heartening. The industry has certainly defied the pessimists and nearly overcome the heavy odds that confronted it. Although the injuries it suffered in the past have not been fully healed and financially it is still weak, the industry can at least be said to have turned the corner. That at any rate is the view of Mr. Jamieson, who ought to know. In fact, he said: "I am not unhopeful that we can look forward to a continuance of the more favourable conditions" witnessed in recent months. A similar opinion was expressed a few days ago by Mr. J. D. K. Brown, President of the Bengal Chamber of Commerce and Industry. That many are inclined to agree with the reasoned optimism of these spokesmen of industry is evident from the recovery in the value of jute shares during the past few months, in general, and their buoyancy during the last three weeks in particular.

What is the basis even for this mild optimism? There are quite a few good answers to this poser in Mr. Jamieson's speech. The first one is the better supply of raw jute. All along, shortage of raw materials and the erratic, if not vindictive, policy of Pakistan governing the supply of jute to India was the biggest hurdle of jute mills. This handicap was, of course, being progressively whittled down during the past ten years, but last year it was nearly eliminated, for India had attained "quantitative self-sufficiency." Large stocks of jute are being carried forward into the current year and, if the crop in the coming season turns out to be good again, the jute industry will have another comfortable year in this important respect. Secondly, the industry has made considerable progress in the matter of rationalisation and further progress is being made steadily. Thirdly, the spirit of co-operation among the various units of the industry is being well maintained, as witness the continuance of the Working Time Agreement and the transfer of production and employment from one unit to another. While competition is keen, the industry is well organised to meet it. In the Working Time Agreement, the industry has, to quote Mr. Jamieson, "an instrument which enables us to adjust ourselves rapidly to changing conditions, whether in the pattern of trade or within the industry itself." The Agreement has also helped the industry to carry out rationalisation smoothly. Fourthly, the Government is now fully alive to the problems of the industry and is rendering substantial assistance in popularising jute goods in the principal markets by giving grants for covering a part of the cost of export promotion. Fifthly, labour relations have improved perceptibly and the workers are beginning to appreciate the value of modernisation of mills. In the past year, the loss of man-hours through strikes and lockouts showed, according to the I.J.M.A. Chairman, a further decline as compared with 1957 and was, in fact, the lowest in any year since 1952. Finally, Mr. Jamieson's assessment of the principal hessian and sacking markets shows that the offtake of jute goods during the current year is likely to improve.

These are only the highlights of the picture. But there are also some shadows which cannot be ignored, as they may lengthen themselves again in future, unless suitable remedial measures are taken. The unsold stocks of manufactured goods are still heavy and it remains to be seen whether the decision to seal a further 1½ per cent. of the looms from the beginning of this month would help improve the situation to any appreciable extent. The raw jute economy, too, is not yet completely sound. The self-sufficiency achieved in the 1958-59 season is only in terms of quantity and not quality which is also equally important. There has been a welcome increase in the per acre yield of raw jute. On the basis of the latest crop estimate for the 1958-59 season, the yield per acre is 2.83 bales, as against 2.33 bales in 1957-58, 2.25 bales in 1956-57 and 2.47 bales in 1948-49. Indeed, this is the highest yield on record since Independence, a point which has been ignored in the recent discussions on the drop in the price of raw jute. It must, however, be added that, notwithstanding the improvement in the current year, the yield per acre is very much below what it could be and what is actually obtained in East Pakistan where it has been ranging between 4.48 bales and 3.42 bales during the four-year period 1954-55 to 1957-58. Mr. Jamieson was, therefore, perfectly right in emphasising that quality self-sufficiency also should be the goal and that, in order to reach it, production should be concentrated in the better jute-growing districts by raising the acreage yield in these areas. There will be two additional benefits, if India succeeds in this direction: one, the grower will get a larger return even without a rise in the price of raw jute and two, the land released from jute cultivation can be utilised for growing other crops.

While the I.J.M.A. has been doing commendable work in the sphere of export promotion in active co-operation with the Government and this work seems to have yielded satisfactory results, there has been no significant rise in the value of foreign exchange earned through exports. Last year, although the quantity exported was higher, the value realised was lower. The sum and substance of Mr. Jamieson's estimate of the markets for hessian in the Western Hemisphere is that, though there may be some progress in the months to come, it will be over-optimistic to expect any material increase. So far as sackings are concerned, the prospects for stepping up exports to Australia, South-East Asia and West Asia, including Egypt, are better, but India must make special efforts to induce these countries to buy more of its jute goods by reciprocal trade agreements, as they are short of foreign exchange. This suggestion, which we ourselves made on an earlier occasion, requires to be carefully examined. There are several industrial raw materials, in addition to rice, which India needs and which this region can supply. It is high time the question of stimulating exports of our manufactured goods to this area in exchange for raw materials and food received the attention of the Government. Mr. Jamieson alluded to complaints from overseas buyers about the quality of jute goods. It is deplorable that some mills should make and sell sub-standard goods. This is a very shortsighted policy and those who are guilty of it deserve to be dealt with severely, but this requires the co-operation of the buyers. If the latter take the trouble of giving the I.J.M.A. full details of the defects, instead of lodging complaints of a very general nature, as they are doing at present, we are sure the position could be improved vastly to the mutual benefit of both.

LAW COMMISSION REPORT

THE debate in the Lok Sabha on the Law Ministry's demand for grant was, perhaps, deflected from its main purpose into a discussion of the system of selection of judges. Far too much attention was devoted to the criticism of the system and the Government's consequent defence of it against allegations of political and communal favouritism based on the Law Commission's report. A full-fledged debate on the Commission's report would have been more welcome, for it would have revealed what Parliament, as the sovereign law-making body, thought of the expert Commission's observations on its chief function, namely, law-making. Even so, some notable points were made in the debate. For one thing, the importance of the judiciary

in a country like India, with a written constitution, was generally stressed. Secondly, Parliament, as the source of all law, did well to admit that laws should be simple and well drafted. The Union Law Minister, Mr. A. K. Sen, readily conceded the need for simplification of the laws and indicated that the Government had already taken up the matter by creating a permanent organisation for the regular review of all laws which now prevailed in the country.

There are two factors which serve to explain the growing public interest in law and judicial administration. In the first place, the fact that India has chosen a democratic constitution for itself implies that the laws, made already or yet to be made, should be tested on the touchstone of that Constitution. Democracy implies rule of law. And the public looks to the judiciary to help make the rule of law, enshrined in the Constitution, a living reality. Secondly, there is the equally vital factor of the practical importance of law. It has been computed that about 20 million people are engaged in law suits of one kind or another. This is a fairly substantial proportion of the country's adult population. This proportion is likely to increase in the future, thanks to the growing complexity of the laws and the modern trend indicated by the extension of law to cover a wider sector of human activity and welfare.

Since law has a tendency to multiply itself and popular respect and support for it can come only through adequate appreciation of its meaning and significance to the people's lives, there is a valid case for simplifying its language and improving its draftsmanship. Appropriately enough, the Law Commission attaches considerable importance to this aspect of law-making. It notes that the increased legislative activity and the inevitable growth of subordinate legislation have imposed a heavy burden on the draftsmen. To guard against "ill-conceived and hasty" drafting, it is necessary, according to the Commission, that the legislative programme should be adequately planned in advance, ample instructions given to draftsmen and sufficient time allotted for scrutinising and reshaping the amendments moved and accepted in Parliament. It further suggests the setting up of a permanent commission of full-time members, charged with the duty of periodically revising the enactments in the light of developments in law and for consolidating, co-ordinating and remodelling them in the context of changed conditions and modern legal concepts. An important suggestion it makes is that, since Parliament and the State legislatures cannot devote sufficient time to the detailed scrutiny of legislative proposals, all fresh proposals, unless of emergent nature, should be submitted to the permanent commission for detailed examination and enactment. The adoption of this suggestion will reduce, if not eliminate, the chances of legislative enactments being held *ultra vires* the Constitution by the Courts in the country, and also avoid excessive litigation which is often caused by ill-drafted legislation.

In recent years, there has been a considerable extension of the sphere of delegated legislation. This has, in effect, meant the encroachment of the executive on the rights of the citizen. As Mr. M. C. Setalvad, President of the Indian Commission of Jurists pointed out at the last International Congress of Jurists, held at New Delhi, under the guise of administrative rules and procedure, the official, who is engaged in the furtherance and administration of a policy, himself becomes the judge of the validity of the acts done by the executive. The remedy, according to Mr. Setalvad, lies in the insistence on a system which will enable the validity of an executive act to be tested by a mind free from executive bias. In India, it has sometimes been suggested that administrative courts should be set up on the French model to deal expeditiously with cases arising out of certain laws which are based upon the welfare concept of the State. The advocates of this proposal have pointed out that such a system of administrative courts will bring prompt justice by avoiding the time-consuming process of the normal course of law. An unqualified acceptance of this proposal may conceivably place in the hands of the executive large powers, which, in the absence of right of appeal, will certainly lead to grave miscarriage of justice.

The Commission has, therefore, rightly rejected the system of administrative courts. It, however, admits that, in the modern State, with its complexities and multiplied governmental functions, the delegation of powers of adjudication in the administrative and quasi-judicial matters to administrative tribunals is inevitable. Nevertheless, it points out that, for the purpose of examining the validity of administrative action, it would be derogatory to the citizens' rights to establish a system of administrative courts which would take the place of ordinary courts of law. It adds: "Such a system may no doubt be useful on account of its cheapness, speed, procedural simplicity and availability of special knowledge; nevertheless, in our country, which is influenced by the idea of rule of law, it should not be conceived of as a device to supplant the ordinary courts of law."

Examining the case for the introduction of the French system of administrative courts into India, the Commission points out that the system has its origin in the political and legislative set-up of France. This is a point which has unfortunately been overlooked by the advocates of the proposal in this country. It is well-nigh impossible to transplant the French judicial system to the Indian soil. The Commission notes that the French system is much wider in its sweep than the system prevailing in the U.K. or in the U.S. It adds: "But, as our people have great confidence in the High Court judiciary, it is desirable that the ultimate review of all administrative action should be with the High Courts." Accordingly, the Commission rejects the idea of creating a general administrative body, like the *Conseil d'etat* in France. In effect, it holds that the existing jurisdiction of the Supreme Court and the High Courts which enables them to examine, to a limited extent, the action of administrative bodies, should remain unimpaired.

The suggestion, however, has been made that decisions should be demarcated into judicial and quasi-judicial, on the one hand, and administrative, on the other, and that, against the former, an appeal on facts should lie with an independent tribunal, presided over by a High Court judge and assisted by men with administrative or technical knowledge; a further appeal on questions of law should lie with the High Court, where a separate administrative division may deal with such matters. In the case of administrative decisions, the Commission insists that they should be invariably accompanied by reasons which would enable one to test the validity of the decisions by appropriate writs. The suggested scheme of reform has the merit of reconciling the demand for speed and convenience by advocates of administrative courts with the much wider demand for the retention of an independent judiciary, which would be the final arbiter on legal issues.

In examining the case for the reform of criminal law, the Commission affirms its faith in the cardinal principle of the British judicial system under which an accused is presumed to be innocent, unless the contrary is proved. It, however, makes certain notable suggestions for speeding up the disposal of criminal cases. Thus, it favours the investment of larger powers in the men who occupy the lower grades of the magistracy and popularisation of *panchayat* courts. A suggestion which deserves to be adopted is the exemption of the accused in certain cases from appearance in courts. The Commission notes that enormous time of the courts, witnesses and prosecutors is wasted in the disposal of cases in which accused plead guilty. In such cases, provision should be made to enable the accused to enter a plea of guilty without appearance in court. If the prosecution decides to adopt this procedure, the summons should be issued to the accused along with a statement of the facts of the case, together with the amount of fine which he would have to pay if he pleaded guilty; the accused should be at liberty to remit the fine by money order. This procedure is now adopted for certain offences under the Motor Vehicles Act. There is no reason why it should not be suitably extended to cover certain other cases under the Indian Penal Code.

An independent judiciary must inevitably form part of democratic way of life. Nothing is more calculated to vitiate the independence of the judiciary than the failure to separate the executive from the judiciary. It would, however, appear that, in a large number of States, this reform, which should in fact have come with the attainment of independence, has not been carried out. Urging the implementation of this reform, the Commission observes that it has not led to any serious difficulty in the States where it has been introduced and that the additional cost involved in separation, which is in any case small, should not be allowed to stand in the way of its adoption. It suggests that, if there is any lack of trained personnel, the reform could be introduced in groups of districts year after year, so that the entire State could be covered in a period of three or five years. It is to be hoped that the States, which have not yet separated the judiciary from the executive, will lose no time in implementing this reform. Other suggestions for the reform of the judicial system are the reduction in court fees, the extension of the dual system of original and appellate sides, which prevails in Bombay and Calcutta, to the Supreme Court, the creation of a unified All-India Bar and the division of the Bar into senior advocates and advocates, the former being prevented from drafting notices, pleadings, affidavits and documents. The last recommendation is obviously intended to ensure that the junior counsel are left with sufficient work in the earlier years of their career.

The Commission's plea for a reduction in court fees is based on the valid ground that the administration of justice is one of the primary functions of the State and the general taxpayer should also bear a portion of the burden. This duty is just as fundamental as the State's duty to provide for education or health or sanitation. The Commission rightly observes:

> "But, while we find that all citizens and not only the illiterate or the sick are called upon to meet the charges incurred by the State on these heads, in respect of judicial administration, it is the litigant alone who is being made to pay the entire cost. The injustice to the civil litigant is the graver, because he is being made to bear the expenses of administration of criminal justice which is but an activity of the State for the maintenance of law and order. Civil disputes are also a part of the framework of the social order; to leave them unsettled would promote disorder. No State can, therefore, claim to be immune from the responsibility of providing curative measures or to insist that it would so provide them only on payment of a fee or tax. If the levy of a fee or tax is justified, it should be one of general application and not one imposed on the litigant alone."

An independent judiciary would be an illusory achievement in the absence of efficient personnel at the Bar and on the Bench. The Commission notes that there has been a fall in the efficiency of the Bar and in the quality of new entrants to the profession. This is a deplorable trend which must be arrested before it is too late to remedy the defects. Since the preparation for law as a career begins at the law colleges, it is at the collegiate level that the reform should really begin. It is gratifying to note that the Commission has devoted considerable attention to the problem of legal education. Law teaching, according to the Commission, should be by full-time teachers having outstanding distinction in law and legal research. A person who wishes to practise law should, besides possessing a law degree, complete successfully a professional course in procedural and practical subjects. This will ensure that only men, with an intimate knowledge of legal procedure, enter the legal profession. This is a suggestion which deserves to be carefully examined by the judicial authorities in India. For the wider diffusion of legal knowledge—as distinct from the knowledge that is needed by a lawyer—the Commission advocates diploma courses in law. Since knowledge of law is a valuable academic discipline, especially in a young democracy like India, the universities in this country will perhaps do well to provide for the study of law as an optional subject of study in their degree courses.

On the controversial issue of language of judicial administration, the Commission has expressed the view that the change-over to Hindi should be preceded by preparatory work which it estimates will take at least 25 to 30 years. The Commission emphasises that the change-over will have to wait not only till the ground has been prepared by the compilation of a standard legal lexicon and by the re-enactment of the statute book in Hindi but till large groups of lawyers and judges, proficient in Hindi and Hindi legal phraseology, are available. The Commission has been realistic in the assessment of the magnitude of the problem involved in effecting a change-over to Hindi. Its closely-reasoned case for long and adequate preparation should help modify the views of those who advocate a quick transition to Hindi as the official language. Since the two issues are closely related to each other, it is best that, for some years to come—if not for all time—the importance of English in general, technical and legal education continues to receive the high priority which has been partially lost in recent years and is in danger of being lost entirely.

SETBACK IN SHARES TEMPORARY

OUTLOOK FOR BULLION—L.I.C.'S MISLEADING COMPARISON—REPORT ON MUNNAR STRIKE

TUESDAY, 5 P.M.

MARKET GOSSIP

THIS has been an extremely short working week, on account of holidays for *Jamshedi Naoroz*, *Holi* and Easter. It has, therefore, been necessary for us to go to press 48 hours earlier than usual. Consequently, we had to suspend some of our customary features and curtail the rest. Mr. Nehru has been repeatedly saying that all of us have to work hard, so that more wealth may be created, and that the present generation is condemned to hard labour. But he has done nothing to reduce the number of holidays, of which we have too many, as compared with the highly developed countries, including, perhaps, Russia. It would be a good thing, if, as in Britain, the holidays are lumped together into a week or ten days, so that workers can have rest and recreation at a stretch. For purposes of convenience, this could be staggered regionwise. In addition, there could be five or six holidays in a year to cover the most important national events, such as Independence Day, Republic Day and Mahatma Gandhi's birthday, as well as a few of the indispensable festival days like *Deepavali*, Christmas, New Year and *Id* or *Muharrum*. In this manner, the country could save nine or ten days per annum. Under the Industrial Disputes Act, it may be noted, only eleven paid holidays per year are available to workers in factories, including "working journalists." There is no reason why this should not be made applicable to other workers, too.

• • • •

The post-budget bullish fervour has begun to wane in the share markets, though it is still very strong in bullion and a little less strong in commodities. In shares, fresh buying has flagged. On the contrary, in the leading speculative counters, there has been a sizable amount of profit-taking. There is a general feeling that values have risen too fast since the budget and that the market should consolidate the ground that has been gained before advancing further. With the current fortnightly settlement falling due on the 26th inst. and with the money market tight, the bulls have apparently thought it wise to lighten their commitments. The clash in Tibet between the Chinese Communists and the followers of the Dalai Lama has also been a restraining factor. There is, at the same time, no inclination among the bears to be aggressive and to make a sustained assault. They are resorting to only hit and run tactics in the highly vulnerable counters and are content with the small gains they are able to make thus. In fact, the consensus of opinion in market circles seems to be that, after a readjustment of the technical position, equities will rise again, assuming, of course, that there will be no new adverse factors.

• • • •

The Tibetan rebellion against the Chinese Communists has proved to be a strong bullish factor to silver which has crossed the Rs. 200-mark. Tibet, as readers are aware, is the only important source of fresh supply of silver to the Indian bullion markets. Under a mutual agreement between the Governments of China and India, influx of Tibetan coins into this country has been taking place for some years now. It is estimated that, in 1956 and 1957, a little more than 30 million ounces of silver were imported into India from this source, of which 16 to 17 million ounces are said to be the share of 1957. In 1958, however, there was a marked fall in the arrival of coins from Tibet, as the Chinese authorities began to place restrictions from time to time on their flow into India. The estimated imports of coins in the past year are no more than six million ounces, that is, one-fifth of the total imports in the preceding two years. Evidently, the Chinese were trying to see that more coins were not allowed to go to India than was necessary to pay for the imports of goods from this country. Further, the Chinese found it advantageous to export their silver to London through Hong Kong.

It is too early to say what would be the imports of Tibetan silver this year. Considering the fact that the floating stocks of silver in the market are only small, arrivals of Tibetan coins so far must have been smaller than even in the corresponding period of 1958.

In pushing up the price of silver to well over Rs. 200, the speculators have been proceeding on two assumptions. One, since the Chinese Communists are not so well disposed towards India now as they were, say, two years ago, they may not be very anxious to allow a liberal flow of silver coins into India. Two, the agriculturists this year have fared better than last year and as such the offtake of silver will be greater. There are, however, three other factors that must be taken into account.

First, consumption of silver is highly sensitive to prices and cost of living. If the price of the metal is attractively low, consumption increases; if it is prohibitively high, it falls substantially. Again, if the cost of living goes up, leaving very little money for other purposes, the demand for silver slackens. After averaging at three million to four million ounces per annum in 1953, 1954 and 1955, Indian consumption of silver is estimated to have jumped up to 17½ million ounces in 1956. It was placed lower at 15 million ounces for 1957 and was back to the pre-1956 level in 1958, the estimated figure being 3.25 million ounces. It will be interesting to note, in this connection, that the cost of living in India in 1958 was about 21 per cent. higher than in 1956 and that the price of silver itself fluctuated between Rs. 202-8 and Rs. 178-7, as against Rs. 191 and Rs. 174-4 in 1957, and Rs. 184 and Rs. 168-8 in 1956.

Secondly, the fresh instalment of land reform aiming at large-scale redistribution of land at almost give-away prices will, when implemented, affect the consumption of silver in the rural areas. The bigger agriculturists having more land than the proposed ceiling will lose a part of their landholdings and with that their ability to buy precious metals. The compensation contemplated is only a fraction of the fair market price of the land and the whole move is nothing short of expropriation. The smaller agriculturists, who are either tenants or landless labourers, will be diverting their savings to pay the nominal cost of the land transferred to them from the bigger farmers. Indeed, they may well be mortgaging their savings for the next few years towards the cost of their new acquisition. There is no exaggeration in saying that agriculturists attach greater importance to land and housing than to precious metals. It will be pertinent to recall here that there was a marked fall in the consumption of silver and gold for a few years following the abolition of *zamindaris*.

The third factor to be taken into account is the possibility of the Chinese stepping up the flow of Tibetan coins to India when they find it profitable to do so. Accordingly, if the price of silver were to go up further, that itself might attract more of Chinese and Tibetan silver into India, not to mention a part of the hoards within the country itself.

The price of gold, too, has gone up in sympathy with silver. While the trend of gold consumption is a little steadier than silver, most of the factors mentioned above apply to the yellow metal also. There are, however, two additional factors of a bullish nature for gold. Since May last, the entire gold production in the Kolar mines, amounting to about 480,000 tolas, has been withheld from the market and stored in the vaults of the Reserve Bank of India. There is no reason to feel that the Government of India will ever sell this gold in the open market, because it does not want the people of this country to hoard their savings. Besides, the Government would like to augment its gold reserves to the maximum extent it can. It will have to find in the coming months $50 million worth of gold to pay towards the additional subscription to the I.M.F. One of these days, it may transfer the domestically-mined gold, as well as the contraband gold confiscated by the customs, to its currency reserve. As for the other factor, the Government of India has been trying its best to stop smuggling of gold and has not given up its search for more effective steps in this direction. There have been persistent reports, albeit unverifiable, that it is trying to reach a friendly understanding with the Governments of West Asian countries for the demonetisation of 100-rupee notes that are in circulation there, as a first major offensive against smugglers. It is pointed out that, since no one is allowed to take more than Rs. 70 in the form of currency abroad, as against Rs. 270 before, and since this regulation has been in force for several months now, there is no reason why the 100-rupee notes should be in circulation abroad any more and that, after a specified date, the Government of India will be perfectly justified in refusing to honour such notes presented for encashment by the banks in foreign countries.

• • • •

A fairly detailed summary of the first report of the Life Insurance Corporation of India covering the sixteen-month period ended 31st December 1957 is published on page 515. A close perusal of the report cannot fail to produce the impression that the Corporation has found the temptation to strike a comparison between its performance and that of private insurers to be irresistible. Consequently, one finds comparisons of new business written by the Corporation during the period, premium income, expense ratio and such other facts as are the indices of efficiency of an insurance organisation with those of private insurers. By quoting the new business figures and enumerating the developments initiated during the period against the background of the problems the Corporation had to face, the impression is sought to be conveyed that the Corporation has achieved something spectacular. The keenness to show off a better record than that established by private insurers is certainly welcome and, if maintained, augurs well for the future of life insurance in the country.

But it is doubtful whether, by these comparisons, the Corporation can succeed in creating the impression it wants to, for there can be no fair comparison of a going concern with one that does not exist and of the present with the past. Such a comparison will be misleading and unrealistic. Even if the L.I.C. authorities wanted to make such a comparison, they should have been more comprehensive than they have tried to be. To give an instance, it is pointed out that the overall expense ratio of the L.I.C. for the period is 27.3 per cent. which is lower than the corresponding figure of 31.8 per cent. for all the insurers combined for the year 1955. This latter figure, it must be borne in mind, represents the expense ratio of all the private insurers—good, bad and indifferent as well as large, medium and small. Some of the leading private companies had a much lower expense ratio. The expense ratio of the

STERLING TRIUMPHANT

(From Our Own Correspondent)

LONDON, 21*st March*

LONDON LETTER

THE dollar is still being quoted in London at a fraction under $2.81¼, that is, within half a cent of the official limit. The American gold stock has fallen by $1 million and, though this is trivial in relation to the total American stock, the two pointers indicate the relative weakness of the dollar. On the other hand, the relative strength of sterling has been pushed home by the repayment this week to the International Monetary Fund of $200 million in fulfilment of the commitment made before last Christmas. This $200 million is part of the $561 million drawn by the U.K. from the International Monetary Fund in December 1956 with a commitment for repayment between three and five years ahead. Thus, the U.K. could have postponed any repayment to the end of this calendar year, still keeping within the general principles under which the Fund operates. That the Treasury should have undertaken to make the first repayment nearly a year ahead of time and to make public its intention to repay the balance of $361 million over the years 1960 and 1961 shows how strong the Treasury regards the reserves of this country.

It is important to remember, when assessing the amount of pressure which the pound could, in case of need, withstand, that, in addition to the present reserves, (of which the total repayments to be made to the I.M.F. over the three years 1959-61 represent roughly one-fifth), there has always been a third line to defence, namely, the standby arrangements with the I.M.F. for drawing up to some $740 million which represents rather more than a quarter of the present reserves. Now that this $200 million has been repaid that sum is added to the limit of standby drawings; in other words, the money has been moved from the first line of reserves, which is the gold and dollar stock of the Bank of England, through the second line, which was the actual borrowing from the I.M.F., to the third line of the standby arrangements. Thus, in case of need, the money could be borrowed back, but, equally, the possibility of this being necessary is not considered likely.

Of course, one should not expect that the March figures would show a further increase in the U.K.'s gold and dollar reserves after making a payment of this order, but the thing is not impossible. One reason may be the attractiveness which London has for foreign funds ever since the convertibility move was made at the end of last year. Sterling balances owned by non-sterling countries have been built up to cover day-to-day trade. This is a tribute to the traditional facilities of the City and the cheapness with which these facilities of transferring large sums rapidly can be used. A contributory factor may also be the halt in the drop in commodity prices with the consequent stabilisation of the reserves of sterling countries. The greatest problem facing the Treasury and the Bank is undoubtedly to be able to hold on to these short-term balances without laying themselves open to the possibility of a face-destroying loss of funds.

Finally, so far as "confidence" is concerned, there is the opportune political point that the latest monthly unemployment figures show a drop of 58,000. The Government was able to announce this in reply to an Opposition motion criticising them for a rise in unemployment and, though the total unemployment outstanding is still 550,000 and the improvement is largely seasonal, there is no question but that—coupled with a less good position in most European countries—it contributes to the confidence in the pound.

The Treasury has also this week published a survey of the U.K. balance of payments since the end of the war. The most interesting feature which emerges concerns this country's capital investment abroad. It was Mr. Butler, when he was Chancellor of the Exchequer, who spelt out the figure of £300 million per annum as the annual surplus which this country needed to earn to maintain an adequate overseas investment policy. Over the past three years, the surplus has been not far short of Mr. Butler's figure, but, over the five years 1952-57, when the surplus was of course by no means so large, there was, nevertheless, an overseas investment averaging £200 million per annum. This shows that investment can run ahead of the resources available for it!—*All Rights Reserved.*

EQUITIES REACT

TEXTILES, HOWEVER, FIRM

(From Our Own Correspondents)

BOMBAY, 24th *March*

THIS week's Stock Exchange review covers three days' trading only, in view of the intervening public holidays. During the earlier part of this period, the market ruled firm with a further hardening of equity prices. The volume of business did not, however, show any expansion, as fresh interest was lacking at the prevailing high prices. The undertone, however, remained intact, on news that India had been promised aid to the extent of $250 million during the next twelve months by the World Bank and the five creditor nations—the U.S., the U.K., Japan, West Germany and Canada. Today, however, there was a mild setback in prices on liquidation by bulls on end-of-account consideration. Expectations of higher *budla* charges in the next settlement which would be for a period of three weeks, as also on account of the closure of books by some companies, and reports that this month's steel production in T.I.S.Co. works would be lower also induced operators to reduce their commitments.

In the steel section, Tata Ordinaries advanced early in the week from Rs. 183 to Rs. 184.25, but the trend was soon reversed and the shares touched Rs. 181.25 at the close today. The new shares were marked down by Rs. 2 to Rs. 178.25. After an earlier improvement from Rs. 23.96 to Rs. 24.28, Indian Irons slipped back to Rs. 23.88 and closed at Rs. 23.96.

Textile shares generally ruled firm. Bombay Dyeings were conspicuous with a rise of Re. 1.10 to Rs. 59.80, the highest level touched during the week being Rs. 60.30. Centurys came up to Rs. 481 from Rs. 474.50, but shed part of this gain when they finished today at Rs. 477.50. Kohinoors gained from Rs. 260 to Rs. 264, before reacting sharply to Rs. 254. Finlays were unchanged at Rs. 271, while Gokaks scored an impressive rise of Rs. 7.50 to Rs. 139. Shree Niwas Cottons gained Rs. 2.50 to Rs. 150 and Standards Rs. 4 to Rs. 448. Svadeshis declined by Rs. 3.25 to Rs. 209.50, while Simplex held their own at Rs. 168 and Tata Mills at Rs. 32.75.

Sugar shares were quiet, Belapurs declining from Rs. 290.50 to Rs. 287. Walchandnagars shed Rs. 2.50 to Rs. 288.75 and Phaltans Re. 1.50 to Rs. 155.50. Cement shares maintained a steady front. After moving between Rs. 147.75 and Rs. 145, Associated Cements closed with a gain of Rs. 2 at Rs. 146.75. Digvijays were a fraction better at Rs. 143.25, as also Orissa Cements at Rs. 14.12. Engineering shares suffered a reaction, Alcocks dropping Rs. 6 to Rs. 272. Tata Locomotives fell from a peak of Rs. 186.50 to Rs 182.25. Premier Constructions moved down from Rs. 267.75 to Rs. 258 on reports that the Company's capital reconstruction scheme had been postponed In the mining group, Shivrajpurs ruled weak, shedding Rs. 4.50 to Rs. 97.50. Indian Coppers were, however, unchanged at Rs. 3.98. Shippings were quiet, Scindias suffering a further setback from Rs. 18.60 to Rs. 18.16. Great Easterns dropped 60 nP to Rs. 21.88. Automobiles, too, were subdued, Hindustan Motors losing 12 nP over the week to Rs. 8.96 and Premier Automobiles Rs. 3.25 to Rs. 109.75.

In the miscellaneous section, Bombay Burmahs made further headway early in the week from Rs. 509.50 to Rs. 514, but subsequently receded to Rs. 504.50 at the close. National Rayons closed at Rs. 276.50, after an early rise from Rs. 276.25 to Rs. 279. Gwalior Rayons, however, picked up 68 nP to Rs. 15.68. Tata Oils shed 75 nP to Rs. 49.25, while Tata Chemicals gained 12 nP to Rs. 16.44. Killicks were placed at Rs. 141.50 *ex-div.* (final dividend Rs. 5), as against Rs. 147 *cum-div.* Voltas lost Re. 1.25 to Rs. 156, while Wimcos were unchanged at Rs. 193.50.

• • • •

Calcutta Stock Exchange

CALCUTTA, 23*rd March*

The Calcutta Stock Exchange continued to rule buoyant during the week under review, with equities moving forward further. There was a feeling of optimism engendered by hopes of better working results of companies based on upward trend in output, good prospects of getting external aid and the slight improvement in foreign exchange situation. Firmness of commodities and expectations of large funds being diverted to investment in shares as a hedge against inflation also imparted strength.

The jute section in particular was very active, the persistent buying fervour having been sustained by the hopeful speech delivered by the Chairman of the I.J.M.A. Deltas climbed up by Rs. 12 to Rs. 177. Champdanys rallied from Rs. 127 to Rs. 138. Kinnisons hardened by Rs. 8 to Rs. 198. Agarparas and Anglo-Indias gathered a rupee each to Rs. 12.06 and Rs. 237, respectively. Coal shares also met with fresh support, as the expectation of an increase in the pit-head price of coal in the near future persisted. Bengals spurted by Rs. 5 to Rs. 300, Amalgamated by 81 nP to Rs. 24.56 and East Indias by 50 nP to Rs. 24.50. Among engineerings, Burn and Company improved by Rs. 5 to Rs. 415. Indian Irons put on 20 nP to Rs. 24.12. There was good absorption of several miscellaneous industrials. Rallis Indias rose by a rupee to Rs. 65. Hindustan Motors increased by 66 nP to Rs. 8.94, Aluminium Corporations by 63 nP to Rs. 12.94 and Imperial Tobacco by 38 nP to Rs. 12.25. Tea shares, however, proved an exception and ruled easy. Operators took a somewhat dim view of the prospects for the renewal of the International Agreement on tea.

REFINANCE CORPORATION

The first Directors' report of the Refinance Corporation for Industry Private Ltd. covers a period of a little less than seven months upto the end of December 1958, inasmuch as the Corporation was established only on 5th June 1958. It took nearly three months for the Corporation to attend to essential preliminaries, such as arranging for the issue of share capital, settling the procedure for the provision of refinance to member-banks and entering into agreement with the Government of India for obtaining loans out of U.S. counterpart funds. The Corporation started receiving applications from member-banks for refinance only from September 1958. From the operational point of view, therefore, the report actually covers a period of less than four months.

During this short span of less than four months, the Corporation received seven applications for refinance from four member-banks for an aggregate sum of Rs. 1.98 crore. Of these, six applications for a total sum of Rs. 1.78 crore were sanctioned, as against Rs. 1.83 crore applied for. The remaining application for Rs. 15 lakhs for an industry engaged in manufacturing electrical goods was under consideration. The industry-wise distribution of the loans applied for and sanctioned is as follows:

Industry	Applications received		Applications sanctioned	
	No.	Amount (Rs. lakhs)	No.	Amount (Rs. lakhs)
Ferro-manganese	2	70.00	2	70.00
Cotton Textiles	2	47.00	2	47.00
Cement	1	50.00	1	50.00
Pharmaceuticals	1	16.00	1	11.00
Total ..	6	183.00	6	178.00

No loans were availed of by member-banks during the year under review. Since the close of the year, two more proposals for Rs. 65 lakhs have been sanctioned, bringing the total amount sanctioned to Rs. 2.43 crores. Of this, only a sum of Rs. 20 lakhs has been drawn. "This does not mean," Mr. H. V. R. Iengar, Chairman of the Corporation, explained in his speech at the first annual general meeting of the Corporation held on Monday this week, "that the schemes themselves have not made a start. In most cases, plant and machinery have been either ordered or are in the process of erection, the banks having provided the finance, partly or wholly against sanctioned amounts, from out of their own resources, pending completion of the necessary legal formalities before drawing sums from the Refinance Corporation."

The progress of the Corporation is modest and Mr. Iengar admitted that "it belies the high hopes entertained when the first discussions took place in regard to its setting up some two and a half years ago." This is due, as he himself explained, to the fall in investment activity in the private sector during 1958, which happened to coincide with the initial period of the Corporation's working.

A sum of $55 million (about Rs. 26 crores) has been earmarked out of the U.S. counterpart funds for relending to private enterprise through the Refinance Corporation. Of this sum, the Corporation has borrowed Rs. 5 crores, in the first instance, at the concessional rate of interest of 1 per cent. per annum. The rate of interest charged by the corporation on its refinance loans to member banks is 5 per cent. and that charged by the latter to industrial units is 6.5 per cent. The initial resources of the Corporation amount to Rs. 7.5 crores, made up of a paid-up capital of Rs. 2.5 crores and a loan of Rs. 5 crores. Almost the entire funds at its disposal were invested during the period under review in the form of call and short-term deposits with member-banks. The interest earned on these deposits has so far constituted the Corporation's main source of income. This amounted to Rs. 14.09 lakhs for the period under review. After meeting all expenses, the profit worked out to Rs. 11.27 lakhs, out of which a provision of Rs. 5.81 lakhs has been made for taxation and Rs. 71,734 to write off preliminary expenses. The Corporation has been able to declare a maiden dividend of 4 per cent. per annum, which absorbs Rs. 4.66 lakhs, leaving Rs. 8,393 to be carried forward. Justifying the declaration of a dividend even within the first few months of the Corporation's working, Mr. Iengar said that this was perhaps a necessary incentive to banks for operating in what was virtually a new field, and that it was an incentive of large value.

"Quite a striking disguise, Sitaram, but why hide your handsome features?"

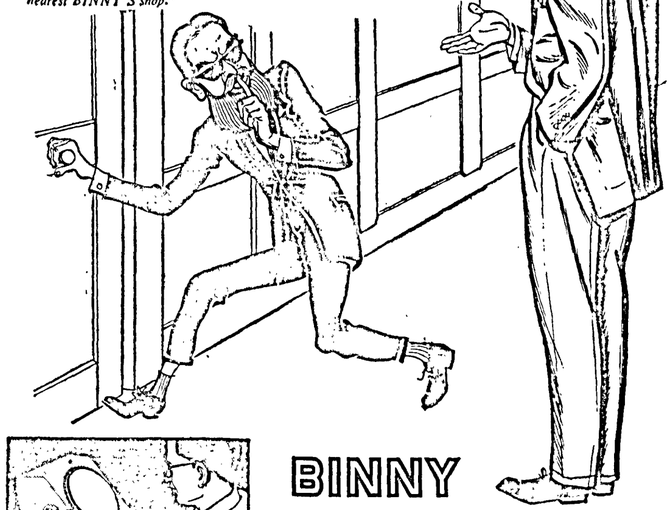
"Shh! This suit, although practically new, looks so disreputable that I would get the sack if the Big Boss recognised me."

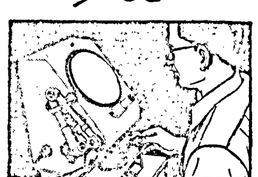
"It is incredible that you didn't think of buying BINNY'S cloth. BINNY'S Quality Control* their production, you know..."

"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"Brother, your words bring hope to me. Let's hurry to the nearest BINNY'S shop."





*This projector magnifies 500 times—reveals every defect lurking in the cotton

The quality of cloth depends to a large extent on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY

—a great name in textiles

BINNY'S *manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:*

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels • Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees Rugs • etc etc

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Managing Agents: Binny & Co. (Madras) Ltd.

NEWS IN BRIEF

THE Direct Taxes Administration Enquiry Committee is expected to submit its report to the Government of India by about September 1959.

The Government of India has decided to enhance its share of subsidy to local bodies for slum clearance schemes from 25 per cent. to 37.5 per cent. of the total outlay on the schemes.

A team of Japanese experts has visited Madras, Mysore, and Kerala, with a view to assessing the scope for the establishment of a rayon pulp factory, with particular reference to bamboo supplies. It is learned that a site may be selected at Mettur, near Salem, Madras, for locating the factory.

The total reserves of crude oil in the various areas of Assam, including Nahorkatiya, Hoogrijan, Moran and Digboi, are estimated at about 42.5 million tons. The Oil and Natural Gas Commission has already started intensified drilling operations in Sibsagar.

A three-member delegation of the Coir Board, led by its Chairman, Mr. T. M. B. Nedungadi, left Bombay last week for a ten-week tour of Europe, the U.K., Canada and the U.S. The object of the delegation is to explore the possibilities of expanding markets for Indian coir and related products.

Raw wool and woollen fabrics are among the items included in the list of exports to the U.S.S.R. and East Germany during 1959, according to India's trade agreements with these countries. The Development Council for Woollen Industry in India has urged the exporters to make use of this opportunity to raise the volume of their wool exports.

The subject of gratuity to sugar mill workers has been included in the terms of reference of the Central Wage Board for Sugar Industry. The Board has prepared a supplementary questionnaire and circulated it for comments among the mills and the workers' unions. The last date for submitting replies is 15th April next.

The Bombay Government proposes to set up 15 more industrial estates in the State during the second Plan period in addition to the existing two estates, one at Rajkot and the other at Kolhapur. Of the estimated total expenditure of Rs. 169.52 lakhs, about Rs. 155.26 lakhs are expected to be received as loans from the Centre.

The production of copper ore in India during 1958 was 411,492 metric tons, as compared with 410,412 metric tons during 1957. The entire production was from Singbhum district of Bihar State. The production of copper metal during the same year was 7,967 metric tons, as against 7,974 metric tons in 1957. The entire quantity produced was fire refined copper.

The Rs. 27-lakh grain silo-*cum*-elevator, the first of its kind in India, was inaugurated at Hapur, Uttar Pradesh, on the 21st inst. The elevator is a gift from the U.S. Technical Co-operation Mission. It is equipped with the most modern mechanism of loading, weighing, cleaning and disinfecting foodgrains and has a capacity to store 10,000 tons of foodgrains.

The average life-span of an Indian has increased by five years during the ten years 1947-57, according to the Secretary, Union Ministry of Health. It is said that there has been a fall of 40 per cent. in the nation's death rate, 30 per cent. in infantile mortality and 60 per cent. in epidemic fevers and near-eradication of plague. In the case of malaria, its incidence and mortality have been reduced by 90 per cent.

An agreement for the avoidance of double taxation between India and West Germany was signed at New Delhi on the 18th inst. The agreement now requires to be ratified, after which it will be effective in India for and from the assessment year beginning from 1st April 1958. The agreement, it will be recalled, was initialled in Bonn in June 1958 during the visit of an Indian tax delegation, which toured several European countries.

The Government of India's team to study the working of steel industry in China and Japan left New Delhi on Wednesday last week. The team, which is led by Mr. K. S. Raghupathi, Deputy Secretary, Ministry of Steel, Mines and Fuel, will stay for three weeks in China during which time they will study the machine building plants in Taiyuan, Shenyang and Shanghai and the working of small blast furnaces in other areas. In Japan, they will stay for a week to study the working of low shaft furnaces and the manufacture of machinery and equipment required for steel plants.

The producers of steel in Japan have decided to negotiate with the Government of India for rights to develop iron ore mines at Bailadila and Rourkela. In an agreement reached between the two countries last March, it was decided that priority should be given to the development of the Rourakela deposits. But the Japanese steel producers now believe that these will not be sufficient for their needs. They expect to import eight million tons of iron ore annually from India in the next seven years, including four million tons from the Bailadila mines. They feel that there is a good market for their finished steel products in the U.S. and are, therefore, anxious to ensure continuity of iron ore supplies.

Agreements covering Rs. 100.90 crores lying to the credit of the U.S. Government on account of the sale of agricultural commodities imported under U.S. Public Laws 480 and 665 were signed at New Delhi on the 18th inst. The major portion of these funds arose out of the P.L.480 agreement signed on 19th August 1956 for the sale of U.S. surplus wheat, rice, cotton, dairy products and tobacco to India against rupee payments. The amounts are being made available to India for meeting the rupee expenditure for the balance of the second Plan period on 14 public sector river valley development projects. The agreements are on a 40-year repayment basis. Of the total sum of Rs. 100.90 crores involved, the loan portion is Rs. 94.96 crores; the balance is a grant.

• • • •

From Abroad

The U.S. Administration has no plans at present to ask the Congress to suspend the current import duty on copper.

A car assembly factory will be built at Umtali in Southern Rhodesia by the British Motor Corporation. The factory is scheduled to go into production by mid-1960.

Rolls-Royce of the U.K. and the Westinghouse Electric Corporation of America are discussing the question of further joint development work on turbo-propeller aircraft engines.

A barter deal has been concluded between Spain and the United Arab Republic, under which the latter country will export about 300,000 kantars of Syrian cotton in exchange for 300,000 tons of Spanish flour.

What is claimed to be the richest ever found oilfield in Yugoslavia has been discovered near Sisak, Croatia. A pipeline is expected to be constructed shortly between the new field and the Sisak refinery.

Exports of tin from China to Western Europe have gone up markedly of late. The total of these exports during the eleven *months* of 1958 was as much as 1,189 tons, as against 340 tons in the whole of 1957.

The President of the Ford Motor Company, U.S., has submitted to the Argentine Government blue-*prints* for a $15 million investment designed to manufacture lorries in Argentina. The investment will be in addition to the assembly plant already operating.

Coal companies in West Germany have agreed to grant their miners a five-day week with effect from 1st May next. Details of the move remain to be settled with the workers' union. One proposal is to substitute five eight-hour shifts weekly for the present six shifts of 7½ hours.

The Japan Atomic Power Generating Company will shortly issue to the British General Electric Company-Simon-Carves group a letter of intent for the import of the 150,000-K.W. Calder Hall type nuclear generator. The total value of the contract is £30 million.

The Soviet Union will stop importing natural rubber in the next seven years, according to Mr. Viktor Fedovov, Deputy Chairman of the Soviet Government Committee for Chemical Industries. The production of synthetic rubber is expected to increase 3.7 times during this period.

The imposition of controls on imports of heavy fuel into the U.S. has been criticised even by the Esso Standard Oil Company. The Company has pointed out that this measure could "leave many consumers with no choice except to curtail activities or to turn to higher cost sources for heat and power."

A new type of dressing capable of taking the clamminess out of clothes made of nylon and similar man-made fibres has been developed by a W. Germany company. The garments impregnated with this dressing will absorb perspiration as readily as those made of cotton or wool. The treatment need not be repeated after every wash.

The State-owned Argentine Oilfields Corporation (Y.P.F.) is contemplating a modification of the terms of price and payment conditions of the oil purchase contract concluded in June last with the U.S.S.R. This contract covers the supply of one million tons of crude oil by the U.S.S.R. at $2.32 per barrel.

A warning that the proposed city tax (½ to 2 cents on each share) on share transfers might force the New York Stock Exchange to move its operations to another State and lead to a loss of several million dollars to the City and State of New York has been given by the President of the Exchange,

PERSONAL

MR. Aubrey Jones, British Minister of Supply, arrived in New Delhi on the 22nd inst. on a ten-day tour of India.

Dr. B. R. Nijhawan, Director, National Metallurgical Laboratory, Jamshedpur, has been elected President of the Indian Institute of Foundrymen.

Mr. P. A. Menon, at present High Commissioner for India in Australia, has been appointed Ambassador of India to Argentina. He will assume charge of this assignment in the autumn.

Sir Gilbert Laithwaite, U.K.'s Permanent Under-Secretary of State for Commonwealth Relations, will visit India from 30th March to 7th April in the course of a two-month tour of Australia, New Zealand, Malaya, Ceylon, India and Pakistan.

Mr. C. H. Bhabha (Central Bank of India), Mr. N. M. Chokshi (Bank of Baroda) and Mr. S. L. Kothari (Bank of Jaipur) have been re-elected Chairman, Deputy Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for the year 1959. The other members of the Committee are: Messrs. T. R. Lalwani (Bank of India), M. R. Ruia (United Commercial Bank), Kamalnayan Bajaj (Punjab National Bank), S. Krishnaswamy Iyengar (Indian Bank), Sanjibon Banerji (United Bank of India), P. V. Gandhi (Devkaran Nanjee Banking Company), F. K. F. Nariman (Union Bank of India), N. K. Karanjia (Central Bank of India) and C. Eknath Kamath (Canara Bank).

Mr. Funston. He considers the tax as totally unsound.

The percentage of persons unemployed in the total working population of Britain declined from 2.8 in February to 2.5 in March, the largest fall for any month since 1947. The number actually unemployed is now put at 550,000, as against 608,000 last month. This notable improvement in employment situation is attributed to a "genuine" revival of demand.

The U.S.S.R. and Iraq have signed a trade and aid agreement, under which Iraq will receive a £40-million loan at 2½ per cent. interest, besides assistance in the establishment of factories to produce machinery, chemicals and food. Soviet experts will be sent to Iraq for making mineral surveys and advise the Government on irrigation, communications, transport, farming and health.

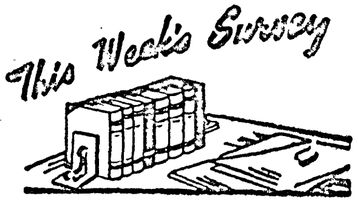
A new chemical compound which is said to provide a barrier for plastics against the harmful effects of ultra-violet light has been developed by the Geigy Company of Rhodes, Middleton, Manchester. The compound, it is claimed, will improve the light fastness of polyvinyl chloride, give polyester glass fibre laminates a better colour retention and clarity, and improve the colour of some grades of polyethylene.

The O.E.E.C. Oil Committee met in Paris recently for a first examination of the French project to bring Saharan gas to Europe through the Sub-Mediterranean pipeline. The Committee is meeting again in June. The project is said to be of considerable importance to France and Algeria, as the provision of a really cheap industrial energy in Algeria depends on the development of markets across the Mediterranean.

A new round-the-world commercial flight record has been claimed by a Britannia 317 airliner of Hunting-Clan Air Transport. It landed at London Airport after flying more than 24,000 miles in 65 hours' flying time—an average of over 370 m.p.h. for the entire journey. The Britannia left London last week with passengers for Hong Kong and completed the world circuit by flying 108 servicemen back from Chiristmas Island.

Industrial production in the U.S. touched a new post-recession peak last month, the general index (base: 1947-48=100) having reached 144. At this level, the index is only one point below the immediate pre-recession peak and three points short of the historic high mark reached in December 1956. The increase in steel output in particular was spectacular; last week's estimated output was at more than 2.6 million tons, representing an operating rate of 92.4 per cent. The appreciable rise in steel output has been encouraged by the continued stockpile operations of consumers.

A swimming pool and a rocket launcher for high-performance aircraft will be among the latest developments on show at the International Plastics Exhibition which opens in London on 17th June. For the first time, the exhibition will be international in character and will include the materials, machinery and finished products of 16 countries. Design will also figure prominently as a subject for discussion at the International Plastics Convention, which coincides with the Exhibition and at which experts from a number of countries will discuss current trends. The countries taking part include most of the European nations, Canada, the U.S. and the U.K.



CLOTH EXPORTS TO U.K.

NO agreement has been reached so far in the negotiations between the British and Indian textile interests about fixing a ceiling on Indian textile exports to the U.K. This was disclosed by Mr. Nityanand Kanungo, Union Minister for Commerce, while replying to a question in the Lok Sabha recently. The Minister said that the Government of India was not directly a party to the negotiations. This statement only served to aggravate the confusion prevailing on this question. Subsequent inquiry shows that the Minister's statement is technically correct, in that an informal understanding reached between the millowners of both the countries does not amount to an agreement.

It will be recalled that, barring some scattered reports appearing in the British Press, the textile interests in India who have been holding discussions with the Lancashire millowners have so far not given any details of these discussions or their results. Some months ago, however, Mr. Kasturbhai Lalbhai, leader of the Indian delegation, did say that an understanding in principle had been reached which Lancashire under which his industry was willing to limit exports voluntarily to a specified figure for a specified period. But he took care not to disclose the figure or the period. Some time later, in November 1958, to be precise, a section of the British Press claimed that India had not only accepted the principle of voluntary limitation on textile exports to Britain but also agreed on the ceiling on exports; the ceiling was 140 million square yards covering grey and finished cloth retained for consumption in the U.K. as well as made-up goods, but excluding yarn. This claim was not denied either by the Lancashire cotton industry or by its Indian confrere. It is in the light of the aforesaid facts that Mr. Kanungo's statement that no agreement has been reached sounded a little odd.

Even before Mr. Kanungo's statement, there were unconfirmed reports that, consequent on Lancashire's agreement with Hong Kong, the Indian millowners had developed second thoughts and did not feel that they were bound by their understanding with Lancashire. The final agreement, signed between the U.K. and Hong Kong on 30th December 1958, has fixed an annual ceiling on cloth exports from Hong Kong to Britain at 164 million yards for three years with effect from 1st February 1959. Many millowners in India feel that the ceiling figure for Hong Kong is much higher than that mentioned during the "understanding" reached between Indian and British textile interests in London. The consensus of opinion among millowners would appear to be as follows:

The Hong Kong textile industry's exports to the U.K. during the preceding two years have not been taken into account. Since the quota for this tiny island is so generously fixed at 164 million square yards, there should be a corresponding upward revision in the ceiling on exports of cotton goods from India.

Some British spokesmen consider this argument a little unrealistic and contend that the quota given to India is far above the level of exports it could actually attain in the coming years. That probably is the reason why Lancashire millowners are willing to talk things over with Indian millowners again. They would presumably agree to raise the quota in favour of India. Being realists, they do not think that Indian mills will be able to compete effectively with Hong Kong. Any suggestion that talks between Lancashire and Indian millowners have broken down is vigorously denied by them.

Whatever may be the nature of the understanding that will ultimately be reached between the textile interests of India and Britain, there is little economic justification for restrictions of this nature on the export of simple manufactured goods from developing countries to developed countries. Britain's move to bind India, Hong Kong and Pakistan for acceptance of the principle of voluntary limitation on exports has already influenced other developed countries to think of entering into similar agreements. A delegation of U.S. textile interests, for instance, recently visited Hong Kong to discuss with the millowners there the question of regulating the outflow of textile goods from Hong Kong to the U.S. The results of the discussions, however, are not yet known. Now comes the news that the millowners of the six Common Market nations in West Europe propose to formulate a common import policy for cotton goods, with the object of persuading the exporting countries in Asia to agree to a voluntary restriction on their shipments of these goods. The relevant Press despatch from London said:

"Representatives of cotton industries in the six-nation European Common Market are expected to agree upon a common policy for restricting imports of cotton goods and cloth from Asian producers, at a meeting in The Hague (Netherlands) on Friday (20th inst.). As tariff protection is insufficient against abnormal competition from Asian exports, representatives will present an agreed policy to the executive body of the Common Market Organisation and press for its official adoption. Europe's cotton industry is in serious difficulties. Dutch cotton textiles are seriously affected by Indonesia importing only about one-tenth of its pre-war quota, as against one-half at the end of the war. Austria's cotton industry is only just able to maintain double-shift working and many operatives are unemployed. Germany's exports of cotton goods were lower in 1958 than in previous years."

Figures are not available to show the extent to which the exports from the Asian countries have been responsible for the "serious" difficulties confronting the cotton industry in the Common Market countries, the U.K. and the U.S. But this much can be said: A move on the part of the industrially advanced countries in the West to impose import quotas on textiles produced by the poor countries in Asia will be in the interest of neither the Asian countries nor themselves. It will only buttress the uneconomic and inefficient manufacturers in both the exporting and importing countries. Many observers in the West itself admit that imposition of import quotas will not solve all Europe's difficulties. To quote the aforesaid despatch: "Cotton is very vulnerable to competition from man-made fibres which are increasing. Additionally, a good deal of the European cotton industry's difficulties could be overcome by closer co-operation, integration and specialisation." This is certainly a correct assessment of the problem. No one will complain if the Western nations succeed in withstanding competition from Asian textile exports through sheer weight of their efficiency. Indeed, such efforts will be widely commended as providing an object lesson to others, especially to the powers-that-be in India which continue to place a premium on uneconomic means of production under varying and various pretexts.

But all this apart, if the Western countries get together and decide to restrict the imports of manufactured goods from Asian, or other underdeveloped, countries for which they possess certain advantages, they will only be pushing these countries to trade more and more with Russia and other communist countries. So, even from the political angle, what Britain and the Common Market countries want to do is unwise. Anyway, the Common Market countries' move should come as an eye-opener to India. The gentlemen's understanding between British and Indian millowners has turned out to be bad precedent. If that understanding is confirmed through fresh negotiations now said to be going on, how can India resist similar requests from other countries Will it not, therefore, be in the interests of this country to call off the talks with Lancashire and get on with the harder but more rewarding task of improving the competitive ability of its cotton mills?

AUTOMOBILE INDUSTRY

If the automobile industry in India has not made the progress one would wish it had, the Government has only to thank itself for that. For its policy in respect of this industry has consistently been one of pressing the brake rather than the accelerator. The policy has also been based on certain misconceptions which have defeated the very object the Government had in view. After eleven years of independence, we now have an industry with half a dozen manufacturing and assembling units having an uneconomically low total turnover of hardly 35,000 vehicles per annum. It is, therefore, not surprising that Mr. Lalchand Hirachand, Chairman of the Premier Automobiles Ltd., Bombay, felt constrained to draw pointed attention to the pitfalls in the Government's policy, towards this vital industry, when he addressed the fourteenth annual general meeting of the Company held at Bombay on the 16th inst. The wearer certainly knows where the shoe pinches and Mr. Hirachand should know where the Government policy acts as a brake on the progress of the industry.

The first misconception of the Government is that a motor car is a luxury. It is not realised that, in a fast-moving world, it has turned out to be a necessity for a very important section of the people, especially in big cities, where it is difficult to rely on public conveyance for quick transport. For Ministers, Government officials, business men and professional people, an automobile has become a "must". But the Government still seems to regard the motor car a luxury and a sign of affluence. The drastic cut in imports of parts and components of passenger cars and the piling of taxes after taxes on them flow from this misconception. It is true that foreign exchange difficulties have necessitated the cut to some extent. But, if the Government had realised sufficiently early that the automobile industry was a basic industry, giving employment to a large number of workers and sustaining a number of other ancillary industries and trades, the industry would have made better progress and reduced its dependence on imports for components and parts.

The second misconception is that the automobile manufacturers object to the Defence Ministry utilising the idle capacity of the Ordnance Factories for the production of army vehicles, because they are afraid of competition. As experience in this country shows, it is not private enterprise which has been averse to competition but the public sector which wants absolute monopoly rights in whatever field it enters. Private enterprise, far from shunning competition, in fact welcomes it as stimulant for healthy growth. Rail transport furnishes the latest evidence of the public sector's intolerance of competition. The mild competition offered by road transport has already created a stir in the Railway Ministry and there have been talks of putting a curb on such transport.

Mr. Hirachand pointed out that the reasons given by the Defence Ministry for its decisions to manufacture M.A.N. trucks at the Ordnance Factories were hardly convincing. The Defence Ministry expected to manufacture 30 per cent. of the components in the first year itself, the same percentage of local content as in the products of Premier Automobiles at present. It could hardly be believed, according to Mr. Hirachand, that the Government is serious when it says this, for to produce 30 per cent. of the components in the first year itself is physically impossible. It is equally hard to understand the logic of the Defence Ministry's claim that the Ordnance Factories can produce their trucks cheaper, with a programme for manufacturing a mere 2,000 trucks and that it will be able to achieve 90 per cent. indigenous production in the fifth year. There are very few industries in which the economies of large-scale production are as marked as in the automobile industry. Mr. Manubhai Shah, Union Minister for Industry, stated in the Lok Sabha in November 1957, that no country with a turnover of less than 100,000 vehicles per year can achieve economic production. Apparently, the Defence Ministry thinks that economic laws do not apply to the public sector in the way it applies to the private sector.

It was unwise, according to Mr. Hirachand, on the part of the Defence Ministry, to utilise the idle capacity of the Ordnance Factories for the production of army vehicles. Giving reasons, he observed:

"The idle capacity of the Ordnance Factories is deliberately provided to meet a critical situation when it becomes necessary all of a sudden to expand production of arms, ammunitions, etc., usually manufactured by these factories. The political situation in the world does not warrant the utilisation of this spare capacity for undertaking the production of army trucks which are already being produced in automobile factories. If, however, Government still feel that they can usefully and without any risk utilise this spare capacity, there are a variety of other items which are still being imported, particularly in the public sector. These could easily be manufactured at the Ordnance Factories. I submit that there is really no need to add a new source of production, rendering the already existing production capacity idle."

Surely, the Government should not look at the issue as a question of prestige but adopt a realistic and rational attitude.

CIVIL AVIATION

An overall increase in the number of miles flown; passengers carried and the quantum of cargo and air mail transported is reflected in the report on civil aviation which forms part of the report of the Ministry of Transport and Communications for the year 1958-59. Facilities for training in civil aviation were augmented and improved. The Civil Aviation Department controlled and maintained 85 aerodromes, including the two at Udaipur and Malda which were opened to air traffic during the year. The important capital works completed during 1958-59 include two hangars at Calcutta and an apron and a taxi track at Bombay. The programme for 1959-60 envisages extension and strengthening of runways at Dum Dum, and construction of runways at Palam for use by jet aircraft, construction of an aerodrome at Behala and development of an all-weather runway at Muzaffarpur.

The authorities will do well to draw up a constructional programme which will fit the aerodromes to play their part in the new jet age which is now here to stay. The point to be borne in mind is that, since the air passenger's time is precious, the period of his detention at airports should be reduced to the minimum and he should be able to reach the centres of his business in the city with least possible delay. It is only the creation of the necessary facilities that will enable Indian airports to retain and improve their status as international airports. This implies that the aerodromes should have adequate provision for customs clearing houses, and that the road connecting an aerodrome and the city which it serves should permit heavy and fast traffic. Calcutta and Bombay are instances in point, for the air passenger has to negotiate a long and difficult road before he arrives in the heart of these cities. It would be no advantage if the time gained in air travel, following the introduction of faster planes, were more than lost on the ground.

The following table gives the miles flown and passengers, freight and mails carried in the last 10 years ended 1958:

Year	Miles flown	Passengers carried	Freight carried (lbs.)	Mails carried (lbs.)
1946 ..	4,520,046	105,251	1,885,724	1,026,403
1947 ..	9,361,673	254,900	5,647,562	1,405,073
1948 ..	12,648,705	341,186	11,974,736	1,582,645
1949 ..	15,098,354	357,415	22,499,679	5,031,059
1950 ..	18,896,139	452,869	80,006,756	8,356,144
1951 ..	19,497,505	449,462	87,065,229	7,181,611

India's civil aviation, as is well known, consists of the Indian Airlines Corporation and the Air-India International Corporation. As on 1st April 1958, the Indian Airlines Corporation had 82 operational aircraft, including 61 Dakotas and 10 Viscounts, besides 16 aircraft in storage including 12 Vikings. The Air-India International Fleet consists of 10 Super Constellations. The Indian Airlines Corporation has established a central training establishment at Hyderabad. The centralisation of training facilities, it is stated, has made it possible to achieve standardisation of flying procedures and practices. To impart training to the junior staff and to co-ordinate training activities as well as to arrange refresher courses, two instructors have been appointed, one each at Delhi and Hyderabad. The Air-India International Corporation has purchased a Redifon 1049 type trainer for training and checking the proficiency of pilots. With the existing link equipment and the Redifon trainer, an average of 400 hours of ground training per month is made possible, thus considerably reducing the actual flight training time and releasing the Corporation's fleet of aircraft for revenue-earning purposes. The civil aviation training centre, Allahabad, comprising flying, aerodrome, engineering and communication schools, with an allied repair and overhaul organisation, continued to provide efficient training facilities. It is gratifying to note that the recommendations of the Committee (Chairman: Mr. K. M. Raha) which reviewed the existing facilities for training and licensing of air pilots are being implemented; the Committee's recommendations which have financial implications are, however, still under consideration. It is to be hoped that the authorities are aware of the importance of providing the best of training facilities to different classes of civil aviation staff, for it is on these facilities that the future of civil aviation in the country depends.

LARGE-SCALE INDUSTRIES

The place that should be assigned to the three different sectors, large, small and cottage industries, in the context of the rapid industrial development of India continues to present a difficult problem for planners. This is a fundamental question which must be discussed dispassionately, without importing into the discussion ideological considerations. A commendable attempt at such an examination has been made by Prof. A. B. Ghosh of the Delhi School of Economics. The results of Mr. Ghosh's study are contained in an interesting brochure just published by the Society for the Propagation of Democratic Thought, Calcutta. A perusal of the brochure will not only dispel the notion that large-scale industries create unemployment in small business but also make one realise the vital role played by these industries in the economic set-up of the country as providers of more employment, better wages to workers and large revenue to the exchequer.

The main theme of Prof. Ghosh is simple and straightforward. It is this. There are vast areas in which both large and small businesses may co-operate with one another. Small industries play a significant role in the advanced industrialised economies. In the U.S., for instance, they contribute about 40 per cent. of the total private national income and more than 33 per cent. of national product, and account for 29 per cent. of employment and 19 per cent. of output. Minute division of labour, specialisation and diversification of industry associated with the use of machines, large and small, simple and complex, create numerous jobs and ever-growing opportunities for employment. Large industry feeds and is, in turn, fed by small industries in numerous fields of a developing economy.

This is a closely-reasoned presentation of the whole issue and should go a long way towards removing the confused thinking on the subject which one finds in India. Equally impressive is the point made out by Prof. Ghosh that high levels of production and low levels of costs can be attained only through large industries. How can the production of, say, iron and steel, or coal or electricity, be efficient, if huge machines are not employed? As Prof. Ghosh has stressed, it is the growth of such basic industries that determine the productivity of all sectors in the economy. And higher productivity in factory establishments inevitably lead to higher earnings by workers. The average annual earning of a factory worker drawing less than Rs. 200 per month during 1957 was as high as Rs. 1,252, whereas the *per capita* income for the country as a whole was Rs. 284 (1956-57) per annum.

Besides paying high wages and salaries, the large-scale industries make substantial contribution to the Government's revenue. The data furnished by Prof. Ghosh show that, whereas since 1940-41, the total assessed income has risen by 335 per cent. and that of companies by 400 per cent., the total income-tax revenue has gone up by 1,100 per cent. and the tax paid by companies by 1,450 per cent. In 1956-57, the income-tax paid by companies was nearly three times and their income assessed nearly 1½ times that of 1946-47. The companies and other concerns have been paying nearly one-half of the total super-tax revenue, the actual figure for 1956-57 being Rs. 48 crores out of Rs. 89 crores.

It will be clear from the foregoing account that large-scale industries have been contributing materially to the economic progress of India and that it is in the larger interest of the country to accelerate the pace of this progress further. One may ask: Does not wealth accumulate and man decay? Does not growing wealth distort the sense of human values? Is there not a conflict between matter and spirit? Such doubts, as Prof. Ghosh says, have exercised men's minds in every age of human history. For the answers to these doubts, one has only to peruse the thought-provoking book *Big Business: A New Era*, written by that famous American, Mr. David E. Lilienthal, whom Prof. Ghosh has done well to quote. Mr. Lilienthal rightly points out that technology and machines have brought the individual the virtues of physical improvement—housing, sanitation, mobility, refrigeration, communication and so on—and that, wherever bigness and the machine have alleviated or eliminated degradation of human spirit, the inner life of man has, to this degree at least, been enriched and enshrined. This is not a philosophic thought but sound economic commonsense.

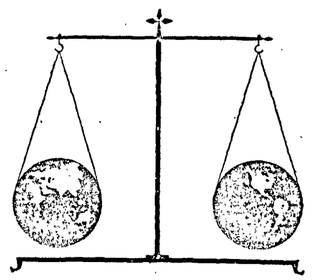
MR. NELSON'S TRIBUTE TO INDIA

A handsome tribute to India for its developmental efforts was paid in London by Mr. H. G. Nelson, Managing Director of the English Electric Company, who toured this country recently. He visited the principal cities and most of the large development projects. He was much impressed by three things which India is doing: its efforts to raise the living standards of its people, to develop industries and to maintain its freedom. Mr. Nelson observed that these objectives were very commendable and that it was essential that the West should recognise this and do everything possible to ensure a continuation of the progress now being made.

The U.K., on its part, has extended its assistance to India in many ways, particularly by raising its investments in this country and providing prompt and sizable assistance for saving the country from foreign exchange crisis. Speaking about the growing Indo-British co-operation, Mr. Nelson observed:

"I was delighted to find the large part British industry is playing in these great projects. On most of the sites I visited, there was much British plant and many British engineers, many of whom were there specially to train Indian operatives and to pass on to them their knowledge and experience. Since India became independent, British business investment has doubled. In recent years, Britain has been providing no less than 60 per cent. of the new non-banking external business investment. I am proud that we have been able to play such a substantial part in helping to solve this problem, and I know that it is Britain's intention to continue this help in the future."

Mr. Nelson made a particular reference to the vital need of technical aid for India and pointed to the value of the association between the older established industries of Britain and new ones being developed in India. Already, a large number of Indians have received training in the U.K., either in Government schemes or through private firms such as the General Electric. Mr. Nelson rightly stressed the necessity for formulating additional training schemes, with a view to meeting the expanding needs of technicians in the development projects in India. He was at pains to show that industrialisation of India would in no way harm the interests of the U.K. As he recognised, it would mean increased purchasing power for the people of India, which would, in turn, lead to increased demand for goods from the West, including the U.K.



In both hemispheres...

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

PROBLEMS OF COMMERCIAL BANKS

MR. C. H. BHABHA PLEADS FOR FAIR DISTRIBUTION OF P.L. 480 FUNDS

ADDRESSING the twelfth annual general meeting of the Indian Banks' Association, held at Bombay on the 20th inst., Mr. C. H. Bhabha, Chairman, made a comprehensive survey of the problems of banks in this country. These included, among others, controls on banking, the privileged position enjoyed by the State Bank of India in the matter of P.L. 480 funds, inter-bank agreement on deposit rates, need for amalgamation of smaller banks with bigger banks, interlocking arrangements with foreign banks, and relations with bank employees. As the issues raised by him are important, we publish below the relevant extracts from his speech:

"Two legislative measures which will have an important bearing on the future of banking in India are on the anvil. I am referring to the Bills to amend the Banking Companies Act and the Companies Act. Both these measures seek to introduce some more legislative obligations in conducting the business of banking. It is true that these two measures do not introduce any new fundamental or radical changes. The fact, however, does remain that the new restraints that are proposed to be imposed are not warranted by any of the present ills that may be existing or likely to exist in the banking system of the country. There is, however, no doubt that they will become a fresh source of burden and irritation to the conduct of banking business in India. As these laws are regarded as a part of planning to which the Government of the country has been committed, we may have to accept them in a spirit of resignation. I am, however, constrained to add that both the Government and the country would benefit immensely in this connection if they were to ponder seriously over the following wise words which the great economist and statesman of West Germany, Dr. Ludwig Eirhard, uttered on an important occasion, viz.

" 'Economic life is not shaped at the draft board, but by human beings, and anybody who thinks he can disregard basic human nature is heading for frustration.'

"From a cursory reading of the statistics of Indian banking, one notices a healthy tendency for progress. The deposit figures of Indian Scheduled banks established a new record in the history of Indian banking when they surpassed the total amount of notes issued. The following table giving particulars of the deposits of Indian and Foreign Scheduled banks gives a picture of the growth and pattern of total deposits in the Indian banking system:—

(In lakhs of rupees)

End of Year	Deposits of Indian Scheduled banks	Deposits of Foreign Scheduled banks
1956 ...	906,78	190,91
1957 ...	1,163,31	205,73
1958 ...	1,376,46	197,16

"Despite this significant increase, it needs to be mentioned that, while the other commercial banks in the country increased their deposits steadily and in conformity with their best efforts, the most phenomenal rise in deposits was that of the State Bank of India. The increase of deposits with Indian banks other than the State Bank of India was on the same steady scale as in the past few years. The big increase in deposits of the State Bank of India has, however, been accounted for largely by the counterpart funds that have accrued since the first Public Law 480 Agreement was signed between America and this country in August 1956 and the two other agreements signed in June and September 1958. These counterpart funds, as provided in these agreements, are computed to amount to approximately Rs. 300 crores. Under these special agreements, these funds remain with the State Bank of India until they are utilised for the specific projects or plans for which they are intended.

Refinance

"A reference was made by me on the last occasion to the formation of the Refinance Corporation. A part of the funds of that Corporation, amounting in the aggregate to about 55 million dollars, has been provided for out of these counterpart funds. Even after this provision, it is obvious that a very huge balance of the counterpart funds will remain with the State Bank of India. As these counterpart funds are deposited with the State Bank at a rate of interest somewhat lower than the competitive market rates for money in the country, they give it an unfair advantage over the other Scheduled banks in India and lead in actual practice to the indirect subsidising of that great nationalised Bank. Surely, the central banking institution of the country could have seen to it that justice was done by distributing equitably these funds as deposits also among other credit institutions of this country.

"As things stand at present, this policy of discrimination on the part of the authorities has naturally led the credit institutions in the country to feel that they are not fairly and properly treated in this matter. I must, therefore, sound a note of warning and say that if credit institutions are to play their proper role in conformity with official directives and policies, such situations should not be allowed to arise. Moreover, for the maintenance of the prestige of a semi-independent authority like the Reserve Bank of India, which holds a very large portion of the share capital of the State Bank of India, it is imperative that the entire benefit of such funds should not be allowed to be monopolised exclusively by the State Bank alone. It should be pointed out that a fair distribution of such funds would create greater confidence, healthier competition and capacity for more devoted service among the component parts of the banking system in India. It is up to the Central Banking Authority to consider the case of all banks in an even spirit and try to accord them the same facilities which are enjoyed by State-owned institutions like the State Bank of India.

"In this context, one must refer to the highly unfair discrimination exercised in favour of the employees of the State Bank of India by permitting the gratuity that may be payable to them to be completely free from any deduction in respect of income-tax. As against that, the gratuity payable to the employees of other banks in the country is made subject to the deduction of income-tax. Surely, this concession given to the employees of the State Bank of India could be extended to all bank employees. I fervently hope that some quick action will be forthcoming in this matter.

Branch Banking

"Another pointer to the headway made by the Indian banks has been the number of branches that have been established during the past year. The report of the Central Board of Directors of the Reserve Bank for the year ended 30th June 1958 stated that the number of offices of Scheduled banks increased during the year by 410 to 3,455. The greatest number of offices opened by any single institution was those of the State Bank of India, which during 1957-58 opened as many as 115 branches compared with 102 in the previous two years put together. This phenomenal increase in the case of the State Bank of India has been according to its policy decision made much earlier. Nevertheless, it cannot be denied that almost 90 per cent. of its new branches were opened at centres where there already existed branches of other commercial banks. Thus, the pioneering effort, initiative and sacrifice of the Indian commercial banks has received a rude shock through the unbalanced expansion of this giant State institution. One may, therefore, be inclined to feel that such expansion on the part of the State institution may lead to many adverse repercussions hereafter in the field of Indian banking. Surely those who stand for a sound banking system in India cannot countenance with equanimity any unfair or aggressive actions from any quarters, howsoever well-backed or supported officially, they may be.

"As is well known, opening of branches in any place by the Scheduled banks of the country needs the prior approval and permission of the Reserve Bank of India. It is presumed that, whilst judging the needs of each area, certain basic or cardinal principles are borne uppermost by the Indian Central Banking Authority. Perhaps, in the context of the great number of branches opened by the State Bank of India in centres already efficiently served by other commercial banks, a useful clarification could be obtained if statistics could be had as to the number of applications for opening branches made by commercial banks and rejected by the Reserve Bank during the last four or five years and of similar applications made by the State Bank of India and refusals given to the same.

An Unhealthy Feature

"During the past year, along with this trend of increase in number of offices and in deposits, the working results of banks would have also been better had it not been for various influences which caused the net profits of most of the banks to be substantially lower than for the year ended December 1957. This unhealthy feature needs to be corrected and a co-operative and constructive approach may prove beneficial to all concerned. I am sure the gravity of this situation will be fully realised by all those who wish Indian banking to contribute substantially in the great national efforts and to maintain its solid position in international banking. All persons who have devoted some time and deep thought for the proper advancement of Indian banking feel that there has not been sufficient consolidation in the banking structure of our country during the last three or four years. Banking being primarily based on credit, needs husbanding of resources for building up internal reserves in order to meet contingencies and eventualities of an unforeseen nature which may arise at any time. For this reason, all reputed bankers consider it the cardinal principle of banking business to set aside sufficient inner reserves in one form or another. From all accounts, such conservation has not been permitted through force of circumstances and through unhealthy trends prevailing in Indian banking. The dangers of such a lapse need not be overemphasised. One way of building up such reserves is considered to be to facilitate it by offering tax concessions as well as legalising such allocations exclusively for meeting situations of difficulties and stresses.

"A significant event of the past year which needs mention was the meetings of the International Bank for Reconstruction and Development, International Finance Corporation and International Monetary Fund, which were held at New Delhi in October. This event brought together all the important captains of Indian banking and attracted the pointed attention of this gathering of reputed international bankers and other prominent figures from industry, trade and commerce to the great economic progress made by this country. Such an opportunity of considering and discussing also banking conditions of this country has proved to be of immense benefit for the future programme of Indian banks. Not only that, but many useful contacts and opportunities of greater participation in international banking presented themselves as a result of this memorable gathering held for the first time in the Indian capital. Undoubtedly, a long way needs to be tread before Indian banking can compare itself with the highly developed banking systems of many of the Western democracies. Given proper and congenial conditions of work as well as due recognition and encouragement from proper quarters, Indian banking will not lag behind others in the fulfilment of its mission in the dynamic growth of India's economy and future plans.

"As has been mentioned earlier, an important landmark in Indian banking during the past year has been the surpassing, for the first time, of the total volume of notes in circulation by the total of the deposits of all Scheduled banks of the country. In the case of the banks other than the State Bank of India, the bulk of the increase in deposits has been under time deposits. Along with that, the demand for funds, for various reasons, including official policies, slackened considerably. The high-priced deposits had their toll on the profit margin of Indian commercial banks. As a natural consequence to that and for ensuring proper and equitable rates in the money market in keeping with the Bank rate and the other co-related circumstances, commercial banks in India entered into an agreement, laying down broad principles of fair money rates to be paid for deposits. In the past, various abortive efforts had been made to have such an Inter-Bank Agreement. The unhealthy feature of artificially high rates paid on short-term money was thus brought to an end. In this, I must pay my special tributes to all the 37 member-banks which accepted the reasonableness of the concept of such an agreement initiated by the Indian Banks' Association and, submerging selfish interests and temporary benefits, came to an understanding, which has already proved beneficial not only for banking in the country, but also for the whole economy of the nation. This wholesome beginning is sure to strengthen the banking structure and facilitate a faster growth of this vital limb of our economy.

Uncharitable Criticisms

"I regret to mention that this Agreement has at times evoked uncharitable criticisms from a few quarters which have not made any attempt to understand and appreciate this arrangement or to find out the benefits of the same. Let me assure the general public that this is no attempt to form either a cartel of banks or to ensure bigger margin of profits for banks. This Inter-Bank Agreement only seeks to provide fair or rational rates for bank deposits. It ensures flexibility according to altered circumstances and conditions of the money market and facilitates credit for our expanding economy on reasonable and beneficial conditions and terms. It is needless for me to remind these critics that, in most of the advanced countries of the world, banking institutions ensure such arrangements either through specified inter-bank agreements of the type now arrived here or through certain healthy conventions, the benefits of which have been experienced by the economic life of nations.

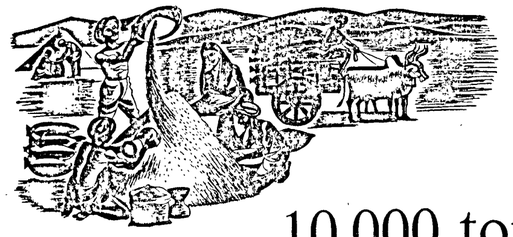
"The shock given to the orthodoxy of British banking during the past year as a result of the new line of activities indulged in by age-old conservative banks and the very open and close association of the Big Five with hire-purchase companies and hire-purchase business have undoubtedly been a notable change in the history of English banking. It is heartening to find that the Old Lady of Threadneedle Street has approved of this new role of banks and openly sanctioned the same. It shows that a good deal of understanding and adjustability has to be forthcoming from responsible quarters before banking can play its dynamic role in the fast changing economy of the world.

Amalgamation

"Likewise, one cannot fail to mention the mergers that have been taking place among banking institutions. In India, too, one of the leading Scheduled banks, through a scheme of amalgamation, took over a comparatively new and smaller banking institution. This trend should be actively encouraged and facilitated. Banking can play its proper and important role only by progressive measures, which should be facilitated through combinations and acquisition of allied interests. The time does not seem to be very distant when Indian banking institutions, through some interlocking shareholding arrangements, will have a tie-up with some of the world-famous banking organisations, for the best benefit of our economy. Of course, the rules, regulations and the laws pertaining to the conduct of banking business as they stand today present an obstacle to any such forward and unorthodox step. However, from a long-term point of view and for the success of the objective of the nation to achieve its economic regeneration as fast as possible, such a collaboration of Indian banks with their counterparts in other advanced countries of the world would have to be blessed officially and also assisted by good and wholesome guidance from responsible quarters.

"In the context of ensuring a sound growth of Indian banking, I would like to refer to a matter which has been causing some doubts in the minds of independent observers both here and abroad. The recent trends of legislation in India seek to vest vast powers in the hands of unconnected quarters for probing into relationships of banks with their customers. I am referring now to the all-important matter of secrecy which is and has been accepted as the very basic pillar of credit institutions. Healthy banking all over the world has recognised the necessity of preserving secrecy regarding the relationships of a bank with its

(Continued on page 528)



10,000 tons of life!

At Hapur, mighty mechanised silos — erected by
LARSEN & TOUBRO LIMITED — store and safeguard vital food grains

INDIA'S annual *losses* of vital food grains run into lakhs of tons — making the cry 'save more food' as urgent as the cry 'grow more food'. And just completed at Hapur, the biggest wholesale wheat market in India, stand huge grain silos of the Central Government — giant granaries that keep 10,000 tons of precious food grains safe from the losses caused by dampness, insects and rodents.

These silos were made from pre-fabricated steel sections supplied by Butler International Company under United States Government aid, and erected by Larsen & Toubro Limited. Facilities provided in this modern installation include equipment for loading, weighing, cleaning, drying, fumigating, packing and discharging grains. Three CATERPILLAR generating sets provide the necessary power for these operations.

Public and private sector alike

India needs many more grain silos... and Larsen & Toubro Limited are now in a position to build silos of RCC construction. This will reduce imported material by about 90%, an important consideration in these days of foreign exchange shortage. Such silos will meet the vital needs of the small private operators as well as big Government projects!

Established in Bombay many years ago, Larsen & Toubro Limited are thus helping to complete the Five Year Plans... to make the country more self-sufficient, the people progressively more prosperous.

I.C.I.C. MAKES SATISFACTORY PROGRESS

ADDITIONAL RESOURCES TO BE RAISED

THERE are several credit institutions in this country to provide finance for industrial enterprises. Of these, the Industrial Credit and Investment Corporation of India Ltd. has carved out for itself a prominent place during the short span of four years of its existence. It has played an important role in the development of industries in the private sector by providing not only loans but also risk capital by direct participation in share capital and by underwriting capital issues. It has also earned the distinction of being the only institution in this country to provide financial assistance in foreign currency.

The Corporation's contribution to industrial development is indicated by the fact that it has, up to the end of December 1958, sanctioned assistance to the tune of Rs. 13.37 crores to as many as 44 companies, well distributed over the country, of which 18 are new undertakings. This is exclusive of Rs. 2 crores sanctioned to 11 applicants since the beginning of 1957 which have been subsequently withdrawn, reduced or not proceeded with by the applicant companies. During 1958, the Corporation received 40 definite applications for financial assistance and over 50 inquiries. The industries covered by such applications and inquiries were, as varied as aluminium and other non-ferrous metals, automobiles, asbestos cement products, cement, cotton textiles, engineering, glass, heavy chemicals, iron and steel, paper, plywood, rubber, sugar, shipping, etc.

Pattern of Assistance

The pattern of financial assistance sanctioned by the Corporation during the year 1958 conformed to that of the previous year, being more or less equally divided between loan operations in rupees and foreign currencies, on the one hand, and underwriting operations and investment in shares or debentures, on the other. During the year, the Corporation sanctioned financial assistance, both in rupee and in foreign currencies, to the tune of Rs. 3 crores to 16 companies. The rupee assistance, in the form of loans, guarantees, underwriting of and direct subscription to ordinary and preference shares and debentures, amounted to Rs. 1.57 crore to 10 companies and foreign currency loans were granted to six companies for an aggregate sum of Rs. 1.43 crore. Applications for assistance to the extent of Rs. 1.27 crore were either withdrawn or not proceeded with by the applicants, including two loans in foreign currency for an equivalent of Rs. 48 lakhs, so that the net amount sanctioned during the year was only Rs. 1.72 crore. This brings the total amount sanctioned up to the end of the year (since the Corporation's inception) to Rs. 13.37 crores, as against Rs. 11.65 crores up to the close of 1957 and Rs. 6.01 crores two years before, distributed as follows:

(Amount in lakhs of Rupees)

Method of Assistance	1958		1957		1956	
	No. of operations	Amount	No. of operations	Amount	No. of operations	Amount
Loans in rupees	11	3,48	9	3,23	10	2,95
Loans in foreign currency	9	3,16	5	2,21	..	..
Underwriting of issues	18	5,50	16	5,35	7	2,38
Direct subscriptions to share capital	14	1,23	11	86	8	68
Total . Rs		13,37		11,65		6,01

It will be noted from the table that the pace of increase in the Corporation's operations sanctioned has been slower in 1958 than that in the previous year. Thus, as against a rise of Rs. 5.64 crores in 1957 in the amount of assistance sanctioned, the increase during 1958 was no more than Rs. 1.72 crore. However, a feature of the year's operations is the further progress made in foreign currency loans. To a certain extent, this trend is explicable, as the Chairman explains in his statement. There are several institutional agencies which specialise in the grant of rupee loans, while the Corporation is the only institution which is in a position to disburse foreign currency loans.

The actual amount disbursed during the year under review was Rs. 2.08 crores, including disbursements in foreign currencies equivalent to Rs. 22 lakhs. This brings the total disbursements up to the end of 1958 (since the inception of the Corporation) to Rs. 6.14 crores and the outstanding commitments at the end of the year to Rs. 3.99 crores. Fourteen applications for over Rs. 5 crores were under examination at the end of the year. It will be noted, in this connection, that, though foreign currency loans to the extent of Rs. 2.21 crores had been sanctioned during 1957, no disbursements had actually been made in that year, while a sum of Rs. 22 lakhs was availed of in 1958. The loans in foreign currency are being made by the Corporation out of the line of credit from the World Bank for $10 million (rupee equivalent Rs. 4.76 crores). Out of this sum, the Corporation's commitments up to the end of 1958 amounted to Rs. 3.16 crores, which leaves a balance of Rs. 1.60 crore. This is likely to be exhausted soon. Negotiations for a new line of credit have been initiated with the World Bank and it is gratifying to hear that the attitude of the Bank is encouraging and helpful.

Risk Capital

The most important aspect of the Corporation's activity is the provision of risk capital to industrial concerns. A substantial part of the assistance sanctioned so far is in the form of underwriting capital issues. During the year under review alone, the Corporation completed six underwriting operations for an aggregate sum of Rs. 2.18 crores, of which it was called upon to take up Rs. 45 lakhs, the balance having been otherwise subscribed either by the public or by the existing shareholders. Till date, the Corporation has completed 16 underwriting operations amounting to Rs. 5 crores, of which it had to take up no more than Rs. 1.78 crore.

The following comparative table gives the outstanding position of the Corporation's loans and investments as at the end of the last three years:

(In lakhs of Rupees)

	As at the close of		
	1958	1957	1956
Loans—			
In Indian currency	1,94.78	1,95 05	53 56
In foreign currency	22 02	..	..
Total outstanding loans ..	2,16.80	1,95.05	53.56
Investments—			
A. Government securities ..	54.56	62.99	4,46.93
Debentures	84.96	85.16	90 20
B. Assistance to industrial concerns—			
Debentures	1,09 13	..	..

Ordinary shares	1,67 69	1,42.52	77 33
Total Investments ..	4,99.01	3,57 03	6,52.58

The operations of the Corporation during 1958 resulted in a gross profit of Rs. 51.85 lakhs which, as compared with that (Rs. 48.36 lakhs) for the previous year, represents an increase of Rs. 3.49 lakhs. It is also Rs. 14.95 lakhs more than that earned in 1956. After providing Rs. 19,621 for depreciation (as against Rs. 18 847 in respect of the previous year) and Rs. 26.43 lakhs for taxation, for which purpose a sum of Rs. 25.10 lakhs had been set aside a year ago, the net profit is only Rs. 2.15 lakhs higher, at Rs. 25.22 lakhs. The Directors have, therefore, been constrained to maintain the dividend at the modest level of 4 per cent., to which level it had been stepped up last year from 3½ per cent., after setting aside Rs. 5 lakhs to the general reserve as in the previous year. With this addition, the total reserves and surplus aggregate no more than Rs. 22.97 lakhs. The Chairman has expressed his concern over the Corporation's "inability to build up adequate reserves, due to present taxation, which are vital to strengthen this Corporation, in order that it may be able to undertake greater risks in the future."

The Corporation foresees increasing demands on it for financial assistance. Its present rupee funds may prove adequate only till the end of the current year. It is, therefore, endeavouring to increase its rupee resources, along with its efforts to raise funds in foreign currency. It has already requested the Government of India to make available to it an additional rupee advance which will be sufficient to carry it through the next two or three years. "This may be made possible," according to the Chairman, "through rupee funds accumulated out of sale of U.S. surplus agricultural commodities and made available with the concurrence of the U.S. Government." It is stated that both the Government of India and the U.S. authorities view the Corporation's needs with sympathy and understanding and it is hoped that the necessary formalities will be concluded shortly. Mr. Mehta has, however, made it clear that it is not the Corporation's intention to depend indefinitely on Government for additional funds as and when required.

The Corporation has been undertaking underwriting operations and the grant of credit facilities in combination with other financial institutions. It is now exploring the possibility of further combined operations with finance corporations, credit institutions and the Life Insurance Corporation, as well as with foreign institutions, such as the I.F.C. and the Commonwealth Development Finance Company. Mr. Mehta takes an optimistic view of the prospects for the private sector and feels that it is growing rapidly enough to require this kind of collective effort.

WORLD BANK LOAN TO FINLAND

The World Bank has granted a loan equivalent to $37 million to provide capital to nine private companies in Finland's pulp and paper industry for expansion and modernisation of their plants. The projects being financed will enable the companies to increase their output of chemical pulp and newsprint, and to maintain the competitive position of these leading Finnish exports in world markets. The net foreign exchange earnings from the new production should amount to the equivalent of about $45 million annually.

Eight private banks are participating in the loan, without the World Bank's guarantee, for a total amount of $2,302,000, representing the first two maturities and part of the third maturity which fall due between 15th August 1962 and 15th August 1963. The loan has been made to the Mortgage Bank of Finland Oy, a subsidiary of the Bank of Finland, established in 1956 as a channel through which long-term foreign loans could be made to Finnish enterprise. The Mortgage Bank will relend the proceeds of the World Bank's loan to the companies carrying out the projects.

Forests play a dominating role in the Finnish economy. Wood products account for 80 per cent. of the country's export earnings and over half of this comes from the pulp and paper industry. Finland is Europe's second largest exporter of pulp and paper and the largest exporter of newsprint and kraft paper and board. It is also a leading exporter of roundwood, plywood and sawn goods. Most of the companies in the industry are integrated producers, manufacturing, in addition to pulp and paper, such items as sawn goods, plywood, chemicals and prefabricated houses.

The industry is planning to increase its productive capacity of chemical pulp by 610,000 tons annually and of newsprint by 240,000 tons, or 25 per cent. and 30 per cent., respectively. At the same time plants will be modernised and storage and power facilities will be expanded, resulting in important savings in fuel, power and transportation costs and in increased operating efficiency. The nine projects for which the Bank's loan was made represent a substantial part of the investment being undertaken; they provide for an increase in the companies' annual productive capacity of chemical pulp by 205,000 tons, and of newsprint by 180,000 tons. Their total cost will be equivalent to about $90 million, or nearly half the new investment to be made by the entire pulp and paper industry over the next few years.

The Bank has now made seven loans totalling $102 million for the expansion of electric power, agriculture and the wood-products industry in Finland. About half the proceeds of earlier loans was used to finance essential imports of equipment and materials for the wood-products industry, including 26 important pulp and paper projects. The latter accounted for the bulk of the additional capacity installed by the industry between 1951 and 1957.

The loan is for a term of 15 years and bears interest of 5¾ per cent., including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation will begin 15th August 1962. The loan is guaranteed by the Government of Finland.

EXEMPTION OF SMALL SAVINGS FROM WEALTH TAX

The position regarding the exemption of small savings securities from wealth tax is as follows:

According to the provisions of clause (xvi) of sub-section (1) read with sub-section (3) of section 5 of the Wealth Tax Act, 1957, no wealth tax is payable by an assessee in respect of the 10-year treasury savings deposit certificates, 15-year annuity certificates, deposits in the post office savings banks, post office cash certificates, post office national savings certificates, post office national plan certificates and the 12-year national plan savings certificates held by him, nor are such assets included in the net wealth of the assessee, provided these securities are held by him for a period of at least six months ending with the relevant valuation date.

The exemption is also allowed in respect of investment made in these securities in the name of wife and/or minor child up to the maximum limit prescribed therefor.

Interest paid on the post office cash certificates, post office national savings certificates, post office national plan certificates, 12-year national plan savings certificates, 10-year treasury savings deposit certificates, deposits in the post office savings banks and monthly payments made on the 15-year annuity certificates is, however, liable to wealth tax, unless the amount is either spent before the valuation date or reinvested in assets eligible for exemption from wealth tax.

PROFIT OF ALLAHABAD BANK SHADE HIGHER

DIVIDEND WELL MAINTAINED

IN refreshing contrast to the general trend of bank earnings, the profit of the Allahabad Bank Ltd. for 1958 has not suffered a setback. On the contrary, it is a shade higher, having gone up to Rs. 13.71 lakhs from Rs. 13.68 lakhs, to which level it had shrunk from Rs. 15.79 lakhs earned in 1956. The profit would have been higher still but for the fact that the "high cost of deposits and increasing establishment expenses have again narrowed the margin of profit on investments and advances."

No allocation has been made out of the profit for the year under review to the staff pension fund, which had received Rs. 1 lakh per annum for some years now. The provision for bonus to staff has, however, been raised from Rs. 6.87 lakhs to Rs. 7.32 lakhs. The distribution on ordinary shares is being maintained at the self-same rate of 18 per cent. per annum, made up of a dividend of 12 per cent. and a bonus of 6 per cent., after paying the usual dividend of 6 per cent. on preference shares.

Thanks to an increase in the Bank's advances, the income from interest and discount has risen by Rs. 39.52 lakhs to Rs. 216.46 lakhs, while commission and exchange has gone up by only Rs. 3.79 lakhs to Rs. 32.24 lakhs. On the expenditure side, the outgo by way of interest paid, at Rs. 123.55 lakhs, is higher by Rs. 34.55 lakhs and establishment and other expenses (at Rs. 110.91 lakhs) by Rs. 9.02 lakhs. It will be interesting to note that, out of an increase of Rs. 80 lakhs in the Bank's gross income during the last three years, establishment and other expenses alone have taken up Rs. 20 lakhs, or 25 per cent., as will be evident from the following table:

(In lakhs of rupees)

The Bank's reserve fund is unchanged at Rs. 1.08 crore, that is, nearly 2.5 times the paid-up capital. The deposits continue to grow, mainly in the higher interest group. Thus, during 1958 alone, the fixed deposits have risen by Rs. 4.93 crores to Rs. 29.51 crores. In the last three years, they have swelled by Rs. 10.58 crores. Savings banks' deposits have gone up by Rs. 41 lakhs to Rs. 5.42 crores during the year under review, while current and other accounts have slightly declined from Rs. 11.17 crores to Rs. 10.39 crores.

Notwithstanding the sizable expansion in deposits, without a corresponding rise in advances, which are higher by only Rs. 1.93 crore, the Bank's borrowings at the year-end show a substantial increase of Rs. 2.17 crores. Loans, cash credits and overdrafts at Rs. 22.77 crores are higher by Rs. 1.88 crore and bills purchased and discounted (Rs. 2.28 crores) by Rs. 5 lakhs. The investments, which are, as usual, shown at below market value, have been strengthened by Rs. 5.89 crores to Rs. 14.67 crores, while cash balances, at Rs. 9.46 crores, are lower by Rs. 1.18 crore. Nevertheless, the total liquid assets have grown by Rs. 4.71 crores and this has raised the coverage to deposits from 47.6 per cent. to 53.3 per cent. It may also be noted that the bulk of the Bank's cash resources are kept in money at call and short notice.

STATE BANK OF HYDERABAD

LIQUID ASSETS STRENGTHENED

THE second full year of working of the State Bank of Hyderabad (that is, the one ended 31st December 1958), after it was reconstituted and taken over by the Reserve Bank of India under the State Bank of Hyderabad Act, 1956, has been less favourable, in that its profit has suffered a shrinkage from Rs. 5.29 lakhs to Rs. 3.50 lakhs, but this is in line with the general trend of bank earnings and not peculiar to this Bank alone. The Directors explain that "the fall in profit is partly due to increase in interest paid on deposits, establishment charges and the cost of guards which is being borne entirely by the Bank from 1st April 1958 and partly due to a drop in income from advances against foodgrains on account of restrictive credit policy followed during the year."

Out of the year's profit, the Directors have transferred Rs. 1 lakh to the reserve fund, as against Rs. 2.94 lakhs set aside a year ago, and have maintained the allocations to the pension fund and gratuity fund at Rs. 75,000 and Rs. 50,000, respectively. The provision for bonus to staff has, however, been raised from Rs. 1.10 lakh to Rs. 1.25 lakh.

The Bank's income from interest and discount has gone up from Rs. 51.64 lakhs to Rs. 55.03 lakhs and that from commission and exchange from Rs. 16.71 lakhs to Rs. 17.11 lakhs. These have been more than offset by the rise of Rs. 1.92 lakh to Rs. 25.43 lakhs in interest paid and of Rs. 3.89 lakhs to Rs. 41.03 lakhs in administrative expenses.

With the transfer of Rs. 1 lakh from the profit for the year under review, the Bank's reserve fund stands, as at the close of the year, at Rs. 26 lakhs or 52 per cent. of the paid-up capital. In line with the general trend, the Bank's deposits have expanded by Rs. 1.50 crore to Rs. 15.27 crores. The rise in deposits would have been more but for the repayment of deposits during the year to the Government of Andhra Pradesh in accordance with the arrangements. A break-up of the deposits shows that the fall in fixed deposits from Rs. 6.35 crores to Rs. 5.74 crores noted in 1957 has to some extent been made good in the year under review, when they grew to Rs. 6.08 crores. There has been a further small rise from Rs. 1.49 crore to Rs. 1.59 crore in savings deposits. Current and other accounts have also gone up from Rs. 6.54 crores to Rs. 7.60 crores, thus reversing the downward trend noted in the previous year.

As against a rise of Rs. 1.50 crore in deposits, the Bank's advances are higher by only Rs. 31 lakhs at Rs. 7.73 crores, thus bringing down the credit ratio from 53.9 per cent. at the end of 1957 to 50.6 per cent. The corresponding ratio as on 31st December 1956 was 66.6 per cent. Following the slackness in advances, thanks to the credit restrictions, the Bank's investments have been strengthened by Rs. 1.72 crore to Rs. 4.83 crores, at which level they constitute 31.6 per cent., as against 22.6 per cent. a year before. Cash balances (including money at call and short notice), too, have gone up by Rs. 30 lakhs to Rs. 4.07 crores. The Bank's investments in Government and other trustee securities, together with the cash balances, provide a coverage to deposits of 58 per cent., as against 49.7 per cent. at the end of 1957.

The remittance of O.S. small coins of the value of I.G. Rs. 63.40 lakhs held in the Bank's cash balance to the mint was completed during the year and, with this, the bulk of the work relating to the cancellation, destruction and disposal of O.S. currency is over. The Bank, however, continues to provide facilities for the conversion of this currency into I.G. currency, subject to the sanction of each application by the Reserve Bank of India.

The Bank continues to function as the agent of the Reserve Bank of India for the management of Government transactions and the custody of the currency chests of the Issue Department of the Reserve Bank of India at the centres where it was handling this work prior to the reorganisation of States. The Bank transacts Government business at 33 centres and holds custody of currency chests at 26 centres. Small coin depots have been established at 26 offices of the Bank. The total amount of remittances issued and encashed during the year under the Reserve Bank of India remittance facilities scheme was Rs. 44.64 crores and Rs. 12.75 crores, respectively.

INDIAN OVERSEAS BANK EARNS LOWER PROFIT

TURNOVER, HOWEVER, EXPANDS

A SETBACK in profit, despite an expansion in turnover, is disclosed by the audited accounts of the Indian Overseas Bank Ltd. for the year ended 31st December 1958. Thus, although the credit portfolio shows an increase of more than Rs. 4 crores over the year, the profit has dropped from the record level of Rs. 32.49 lakhs to Rs. 28.60 lakhs, thereby not only reversing the upward trend noted since 1949 but also wiping out the increase recorded in 1957. This is due to a substantial rise in deposits and increase in interest rates thereon. In consonance with the decline in profit, the provision for taxation has also been reduced from Rs. 16 lakhs to Rs. 12.50 lakhs, while bonus to staff absorbs Rs. 75,000 more at Rs. 4.50 lakhs, evidently due to the opening of nine new branches during the year and the employment of additional staff to man them. The dividend is, however, unchanged at 10 per cent. per annum, but this is again on a higher capital raised by making fresh calls on the new shares issued in September 1957.

The Bank's gross income for the year under review amounts to Rs. 165.38 lakhs, of which income from interest and discount accounts for Rs. 112.32 lakhs (having risen from Rs. 85.38 lakhs earned in 1957) and commission and exchange for Rs. 52.84 lakhs, as compared with Rs. 46.82 lakhs in the previous year. This substantial rise in income has been more than offset by the increase of Rs. 25.24 lakhs in interest paid and of Rs. 10.83 lakhs in expenses. It will be of interest to note that, whereas the deposits of the Bank are less than double those at the end of 1955, the outgo by way of interest paid has more than trebled itself within these three years. This gives an idea of the extent to which interest rates on deposits have risen during this period. Unfortunately, the rate of interest and commission earned has not gone up sufficiently to cover the increase in expenses, as will be seen from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1958	1957	1956	1955
Interest and discount earned ..	1,12.32	85.38	66.30	45.91
Commision and exchange ..	52.84	46.82	48.16	39.80

Cash	4,27.41	3,52.39	2,60.61	2,78.17
Balance sheet total ..	42,70.12	29,01.41	28,73.04	25,72.80
Ratio to deposits of—	%	%	%	%
Advances	55.5	56.9	65.5	62.8
Investments†	36.4	33.3	28.6	27.8
Cash	15.3	17.7	15.8	19.3

† After taking into account investments earmarked against borrowings from other banks.

The rise in expenses (other than interest paid) during 1958 is mainly accounted for by salaries, allowances, etc., which have gone up by Rs. 6.54 lakhs to Rs. 49.06 lakhs.

During the year under review, the Bank made a further call of Rs. 25 per share on the 25 000 new shares issued in 1957, making them Rs. 50 paid-up. This has raised the total paid-up capital from Rs. 56.23 lakhs to Rs. 62.48 lakhs. The reserves, at Rs. 52.37 lakhs, include share premium amounting to Rs. 7.87 lakhs collected on new shares issued in 1941 and in 1947.

The expansion in deposits is shared by all classes; fixed deposits have risen from Rs. 7.99 crores to Rs. 11.88 crores, savings bank deposits from Rs. 3.45 crores to Rs. 3.71 crores and current and other accounts from Rs. 8.40 crores to Rs. 12.35 crores. As against a rise of Rs. 8.09 crores in total deposits, the increase in advances is of the order of only Rs. 4.23 crores, of which loans, cash credits and overdrafts, at Rs. 6.48 crores, account for Rs. 1.74 crore and bills purchased and discounted (at Rs. 9.04 crores) for Rs. 2.49 crores. The investments are, as usual, valued at or below market value. It will be noted from the ratios of principal assets to deposits that the disposition of the Bank's funds is well balanced, with a high degree of liquidity.

IMPROVING COTTON MILLS' POSITION

MR. A. D. SHROFF URGES SPEEDY MODERNISATION

AT no time in the history of the cotton mill industry was the need for modernisation and rationalisation so urgent as it is today. The advantages of low-priced cotton and low-cost labour no longer exist. On the contrary, the cotton mills are caught between a cost inflation, on the one hand, and reduced realisation from sales, on the other. That there is no exaggeration in this statement will be evident from an analysis of the profit and loss accounts and balance-sheets of mills for the past two years. Most of the mills show either sizable losses or only small profits. Such a situation is certainly disquieting and must be set right without further delay, if the industry is to succeed in catering to the expanding domestic requirements of cloth and in weathering the growing competition in the world textile markets. This aspect was impressively brought out by Mr. A. D. Shroff, Chairman of the Central India Spinning, Weaving and Manufacturing Company, Ltd., in his speech at the Company's annual meeting last week. Here is what he said on the competitive position of the industry in the export markets:

"Far from increasing our exports as visualised in the Plan, with a view to earning foreign exchange for the country, we have been experiencing a severe setback. International trade in cotton textiles is fast shrinking. East Africa has trebled its import duty on cotton textiles; Sudan has withdrawn cloth from Open General Licence; Australia has extended the most-favoured-nation treatment to Japan; Canada is still claiming protection for its own industry; and the U.K. is contemplating putting a ceiling on imports of cotton textiles from India, Pakistan and Hong Kong. The latest blow is the emergence of China as a formidable competitor in the world textile markets, especially in the Far East. If we wish to compete on the international plane, we must be prepared to offer better quality goods at much lower price. It has been acknowledged that, for its survival, both in the domestic and foreign markets, the industry must produce better quality of goods at reduced prices, and the only salvation lies in modernisation and rationalisation."

There are two chief impediments to the adoption of this solution, namely, paucity of finance and unhelpful labour attitude, not to speak of defective official policies. Even if the former handicap were somehow overcome, the cotton mill industry would be confronted with the problem of non-co-operation from the labour side. It is necessary to point out that mere modernisation of machinery and equipment in mills will not be of much avail, unless it is accompanied by rationalisation by which is meant, as Mr. Shroff rightly said, fair workloads in the light of new machinery installed and the very comfortable working conditions afforded to labour by way of liberal floor space, effective humidification and improved lighting. "It is high time," to quote Mr. Shroff, "that labour made a realistic appraisal of the situation and understood that it is not an idle threat from the industry that many of the units would close down permanently, if the present state of affairs were allowed to continue any longer... If timely support (from labour) is not forthcoming, the natural outcome will be large-scale unemployment of a permanent nature at a time when planned efforts are being exerted to develop our underdeveloped economy."

The warning sounded by Mr. Shroff is indeed timely and pertinent. It does not require any expert to prove that, so long as the labour cost per unit of production is heavy, the cost of manufacturing cotton textiles is bound to be high. The only effective solution to the problem of reducing the incidence of labour cost lies in the adoption of a three-pronged drive designed to step up productivity of labour—more efficient utilisation of machinery, avoidance of redundant labour and redeployment of workers with a view to distributing more rational workloads. Mr. Shroff drew attention to this aspect and urged a reorientation of the wage policy in respect of textile industry. The reorientation, he says, should be on the following lines:

The authorities should take into account not only the industry's capacity to pay at the time when the awards are made but also the future trend of events.

Factors such as financial needs of the industry for rehabilitation, including provision for repayment of the large sums borrowed for the purpose and the current rates of taxation, should be given due weightage.

Little attention has been paid to the all-important factor of productivity, with the result that the labour cost of the Indian cotton industry is one of the highest in the world today. Where the work-loads are found to be subnormal, they should be allowed to be increased to a normal level without any rise in wages.

No one will grudge giving higher wages to the Indian textile workers or, for that matter, to anyone in the country whose standard of living is below the accepted minimum. But it cannot be disputed, as Mr. Shroff very pertinently remarked, that, in our enthusiasm to achieve the desired standard of life, "we should not take such steps as would have the effect of killing the goose that lays the golden eggs."

While these are the problems confronting the cotton mill industry generally, there are some mills which suffer from locational disadvantages such as those in the Vidarbha and Mahakoshal regions. Mr. Shroff dwelt at length on the conditions of mills in these regions. he observed:

"It is no secret that there has been a consistent deterioration in the position of the industry ever since 1948-49. The magnitude of the losses being incurred during the past two or three years is such that, if this sorry state of affairs is allowed to continue without a check, it is no exaggeration to sound a warning that, within the course of the next two or three years, the entire industry in these regions will be wiped out of existence. Besides its natural concomitant of large-scale unemployment of a permanent nature, loss of cloth production and loss of capital would be inevitable."

Of the peculiar problems facing cotton mills in the aforesaid regions, special mention is made of the following:

1. Most of the units are equipped to produce very little of processed goods, on which there is a greater margin of profit.

2. Conditions of cheap local labour and cheap cotton at source, which were the salient features in the past, accounting for the establishment and growth of textile industry in those regions, no longer exist today.

3. Situated as they are in the interior, these units cannot participate in the export trade of the country on a competitive basis because of the incidence of transport and insurance charges, godown rent, etc.

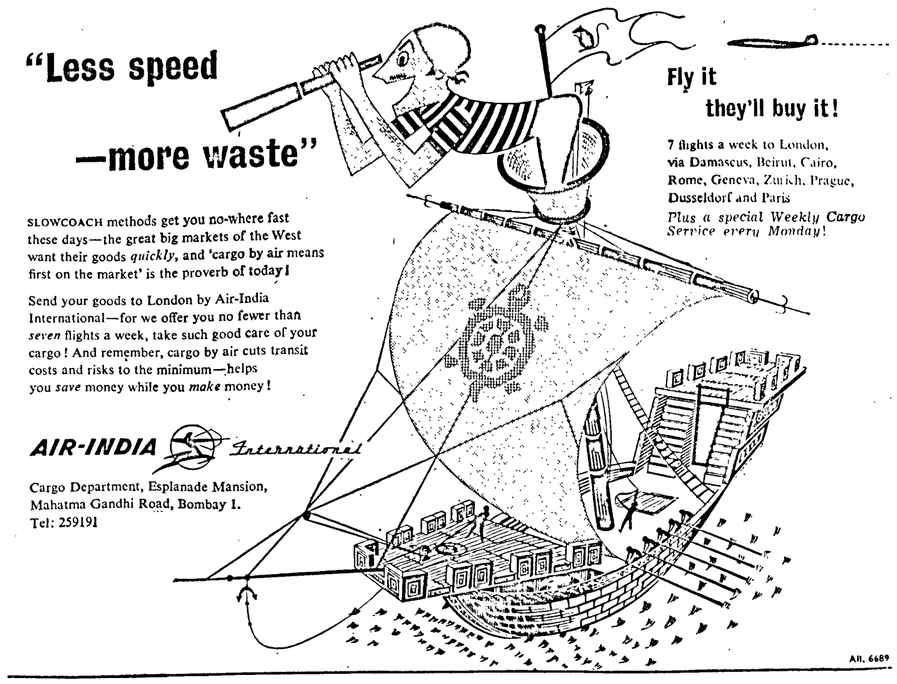
4. Comparative lower productivity of labour.

5. Idle machinery because of high and fluctuating absenteeism.

6. Abnormal increase in the central excise duty on coarse and medium categories, *ad valorem*. Because of the strong consumers' resistance, the increase in excise duty of September 1956 was almost wholly borne by the mills. Whereas the percentage increase in duty on superfines was 10 to 15, on medium cloth, it worked out to as much as 30 to 40 on an average. Besides, in the case of fine and superfine cloth, normally consumed by a class of people who can afford to buy the same even at higher prices, the consumers' resistance was almost negligible.

7. Bottlenecks in rail transport resulting in raw materials, mill stores and finished goods being moved by other means of transport involving additional expenditure and delays. Unlike units of the Industry situated in the port centres, the mills in the Vidarbha and Mahakoshal regions were unable to save any portion of their production from the incidence of excise duty by increasing their exports out of India. In the ultimate analysis, the incidence of increased excise duties has virtually throttled the marginal medium and coarse count units in upcountry centres.

Mr. Shroff struck a note of realism when he said that reduction in the cost of production was the only salvation for the cotton mills and this is possible only by reduction in the price of raw cotton, cost of labour and other manufacturing costs. It may be noted here that cotton and labour charges account for nearly 50 per cent. and 30 per cent., respectively, of the overall cost of producing cloth.



DESTOCKING MOVEMENT IN TEXTILES TO END SOON

WARNING AGAINST LAUNCHING OF NEW FIBRES

From a Special Correspondent

MANCHESTER, *17th March*

FROM all accounts, the cotton and allied industries are not the only ones to be bedevilled by a disinclination among customers to place forward contracts. From one trade to another, the situation must obviously vary, but it is becoming increasingly clear that 1958 will go down in industrial history as a year when buyers as a whole restricted their purchases and reduced their stocks to a level much below what had come to be regarded as normal.

MANCHESTER LETTER

Trade cycles do not always follow the same pattern, although trends can often be forecast by an intelligent use of statistics and keeping a keen watch on historical precedents. By rights, stockbuilding among textile distributors should have followed the running down of supplies which took place on such a considerable scale last year. The lowering of prices after the abandonment of the spinners' regulations on selling rates should have provided a "flash-point." It is still not too late for a revival to take place, but producers can hardly be happy about the existing situation.

To quote a commentator who has lately toured industrial areas in this country to gain first-hand knowledge of the position in numerous and contrasting trades: "The country has found out that it can run more efficiently on a lower level of stocks and stores than it has ever done. Some people think that the level can be still further reduced; others say that, in some industries, stocks have been reduced too much and that the first upturn in production will lead to a rush to refill the pipeline." The assumption of this observer is that the destocking movement will gradually end during the next three or four months in most types of steel and other metals, in textiles, chemicals, timber and general engineering components, etc., but it may take longer to induce users to build up stocks again.

Dwindling Shipments

Those vitally concerned with the textile situation hope that this prophecy proves accurate. It is a long time since the trade had such an extended period of inaction, although, looking back over the past seven years or so, Lancashire seems to have been far more often in the depths than on the heights.

As in other trades, declining exports have been much to blame for the recession. It has been even more difficult to maintain a precarious foothold in shrinking world markets for textiles than in other products. The fault is by no means entirely Lancashire's, despite the criticism levelled against local producers and merchants by individuals who know little of the background involved. Competition has never been keener and, with modern mills rising in many parts of the world which formerly took substantial quantities of British-made fabric, no real gains are likely in the future.

A rebound in industrial activity, such as some observers are suggesting 1959 will provide, would be more than welcome. Much depends on the way raw cotton affairs are handled in the United States and other major producing areas. Without a return of confidence that raw cotton prices will not continue their declining trend, customers will be convinced that their best policy is to hold off and only buy when necessity arises.

Cotton Supplies

British Commonwealth countries, excluding India and Pakistan, but including the Sudan, again produced over 1,000,000 bales of raw cotton in 1957-58 for the seventh season out of eight. Reporting this in its annual survey, the British Cotton Growing Association attributes a fall of nearly 345,000 bales in the total crop to the very steep fall in output of Sakel cotton in the Sudan. This setback was only temporary, the report adds, and future production can be expected to reach previous levels.

If the Sudan crop is excluded, the growth of American types of cotton in all countries showed an increase of 122,500 bales. In Tanganyika, raw cotton supplies achieved a record for the fifth consecutive year, reaching a total output of 175,000 bales. Production from all sources was 1,135,900 bales in the 1957-58 season as against 1,450,100 bales in the previous 12 months.

Liverpool spot quotations for middling American cotton fell from 27.05d. in January 1958 to 23.65d. in the same month a year later. The report comments: "The change from a sellers' to a buyers' market allows the consumer to exercise more discrimination in the choice of raw materials, so it is important that standards of quality should be maintained. World cotton prices continues to overshadow the market for medium staples."

No Compensation Yet

Plans for "streamlining" a smaller Lancashire cotton industry do not include arrangements for compensation for workers who lose their jobs when mills close, Sir Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, one of the three principal cotton unions, has complained. "So far the trade unions have been ignored," he told the annual meeting in Manchester of the North-West T.U.C. Advisory Committee, of which he is Chairman. Sir Alfred said that the Government had indicated it would be sympathetic towards a redundancy scheme and was prepared to make some financial contribution. He observed: "At no stage have they talked about compensation for the workers who become redundant. It has been whispered they would like to see some arrangements made for compensation payments, but there is no section of the industry which has taken this into account in considering redundancy schemes."

A plea by the cotton unions for a £200,000-a-year "hard times kitty" was thrown out by the employers. The Industrial Disputes Tribunal has now passed it back for settlement within the industry.

Sir Alfred warned the conference that compensation was a growing problem. He said:

"It goes much wider than the cotton industry. As techniques in industry develop and new methods and machines are introduced, there will be greater and greater redundancy. It behoves the unions to look at the future and see if measures can be introduced for this liability to be carried by employers. Let us see if we can have something like they have in America—compensation on an industry-wide basis for the man who is going to be displaced, so that he can live decently, at least while he is looking around for another job."

No Miracles Yet

Readers of the daily Press are frequently regaled with stories about so-called new "miracle" fibres. The progress recorded in man-made textiles since the war has indeed been remarkable, but the various fibres which have taken the lead in the synthetic field have their drawbacks, as spinners and weavers well know. Their varying properties are extremely valuable, often in conjunction with the older natural staple, but the fibre which can satisfy the requirements of every individual consumer has yet to be found.

It is safe to say that few mills in Lancashire have not experimented with the latest fibres, many of which have proved eminently satisfactory. This point has been stressed by Mr. W. T. Winterbottom, Chairman of the Rayon Staple Spinners' and Doublers' Association, who defended millowners from such attacks, saying that they were taking a lively interest in all such developments.

There is, however, one point about new fibre development which is not always appreciated. Mr. Winterbottom has coined a word in describing the most important character of any fibre as "spinnerability." Some of the new ones frankly do not have it, he contends. "The expense and dislocation of production which result in a spinning mill when trying to put through a recalcitrant fibre are very great," he told the annual meeting of the Association. "It is most important that fibre producers should realise this and refrain from launching new fibres before they have been perfected to the point where they can be expected to run smoothly."—*All Rights Reserved.*

Raw wool and woollen fabrics are among the items included in the list of exports to the U.S.S.R. and East Germany during 1959, according to India's trade agreements with these countries. The Development Council for Woollen Industry in India has urged the exporters to make use of this opportunity to raise the volume of their wool exports.

MARKETING OF COFFEE

GOVERNMENT'S POLICY UNDER TEST

ENOUGH has been said about coffee in the past few months to indicate that the velvet path trodden by growers is coming to an end and that, from now on, the going will be harder. Coffee is the only commodity marketed by a statutory body in India and what happens to coffee in the next few years will show whether the Government of India, which has taken much of the responsibility for controlling the Coffee Board, is in fact capable of exercising the control not merely wisely but constructively.

It was in 1940 that the coffee industry in India found its traditional market on the Continent of Europe suddenly cut off. The Government of India set up a Coffee Control Board, under an ordinance, and that was the beginning of a unique experiment in the centralised marketing of an agricultural commodity. The scheme for the marketing, the details of operation and regulation of prices were, of course, formulated by the growers themselves, acting through their representatives on the Board, but the Government enabled the Board to function under certain statutory privileges. For instance, it forced all growers to hand over their entire crop to the Board. Without such statutory compulsion, some of the coffee would have found its way into the market, probably bringing their owners a larger income than they had received from the common pool. Further some of the producers of coffee, who had won a special name for their product, had to lose their established position, in order to make the scheme a success. The fact that most of these growers were represented on the Board made things easier for the transition from individual to pooled marketing.

After nearly 18 years of such pooled and regulated marketing, coffee is facing its supreme test by the law of the market. Eighteen years is a long time and many coffee growers have grown up without knowing, and, indeed, indifferent to knowing, what it takes to market their produce. During the last four months, they have been suddenly confronted with a bewildering series of questions on marketing and connected subjects. To ask the growers for ideas on marketing and publicity is similar to asking a paralytic to get up and walk. The coffee grower has been so insulated from the problems of marketing for very nearly two decades that the grower can no longer think clearly on the subject. In fact, the group from which useful comments could be drawn is a small professional one and the group whose views have to be most carefully and critically considered is the growers!

Expert Committee

Last September, the Government of India set up an Expert Committee to inquire into the present methods and organisation of coffee marketing and to recommend measures for improvement. This Committee has been asking growers questions on marketing and it should be nearing the end of its labours. The Committee has come into existence at a critical time in the world coffee situation and in setting it up the Government was probably wiser than it realised at the time.

Coffee is one of the principal commodities of international trade. World production is 3.55 million tons, of which about 3.06 million tons form the exportable surplus. World consumption outside the producing territories is estimated at 2.28 million tons, leaving unabsorbed some 780,000 tons or 13 million bags (of 132.276 lbs. each) out of the estimated 1958-59 crop. During the past three years, world output has been exceeding world absorption by roughly a third and there is enough stock in producing countries to tide over one year without any crop.

About 80 per cent. of the world coffee is produced in the Western hemisphere and the estimated output for the 1958-59 season in that region is 46.5 million bags. Last September, after one year of restricted exports from September 1957 to August 1958, the producers in Latin America came to another agreement extending the restriction scheme by one year. The quantity to be withheld from exports by these countries is 12 million bags or almost 25 per cent. of American production. Brazil alone will retain more than half of it and destroy the lowest grades by using them as fertilisers. What is, however, significant is not the quantity which the American producers are willing to hold back from the market but its effect on prices. In July 1957, Santos No. 4 averaged 47 cents per lb. and Colombian Manizales 64 cents, according to the Foreign Agricultural Service of the U.S. Department of Agriculture. In July 1958, the average for Manizales was 52.8 cents and for Santos No. 4 47 cents. Export restrictions probably eased the price fall to a gentle slide, but they could not altogether stop it. Prices have declined further, following reports of a 6-million bag increase in crop estimates, and current quotations are in the range of 37½ to 44½ cents per lb. At approximately 40 cents, the world price of coffee would reach parity with Indian internal release prices. What then?

Total Control

The Government of India took over total control over coffee policy with the amendments to the Coffee Market Expansion Act in 1955, proposals which were so bitterly contested by producers at the time. One of the fundamentals of Government policy, it was at the time asserted repeatedly, was a low price for the internal market and the priority claim on any existing stock was for the home market. In pursuance of this claim, not only some of the best export coffees were retained in stock, thus complicating coffee financing in 1953 and 1954 but excessive stocks were held in reserve and, above all, releases were made in the internal market at three annas less per point than the minimum guaranteed to the grower.

From October 1952, export of coffee was secondary to satisfying the internal demand and that demand was met at prices below the minimum return guaranteed to the producer. It would probably shatter the equanimity of later-day export enthusiasts to know that, in 1953, when the world price was 770s. per cwt for Indian coffee in Antwerp, about 5,500 tons of exportable surplus was withheld from export. In 1954, the same coffee, which had deteriorated in quality during storage, had to be disposed of at a discount!

If coffee were sold at the internal sales at 3 annas per point less than the Board had agreed to pay the growers, where did the difference come from? The extremely high prices prevailing in the world market brought in a considerable surplus over the minimum guaranteed price. A part of this excess helped to subsidise the consumers of coffee in India. The growers appeared not to mind very much this unusual method of subsidy in reverse, since they were getting an attractive price on their total crop. But that did not mean that the principle of it was any more attractive or sustainable. The test has come.

For a proper appreciation of the coffee problem that is going to unfold itself in the next few years and would undoubtedly lead to a first class controversy, the Government's management of coffee policy should be clearly understood. If internal sales were made at Rs. 160 per cwt. and growers have to be paid a minimum of Rs. 175 for the same coffee, the difference of Rs. 15 per cwt. has to be made good from some source other than the consumers of coffee in India. That source was the foreign market. If the crop were 30,000 tons, 20,000 tons of which were consumed here and 10,000 tons exported, the export price would have to be Rs. 30 higher than the domestic price. If, as a result of the favourable price level, internal consumption went up, the smaller export would have to fetch a progressively higher premium abroad. Since we cannot dictate export prices, this policy of internal subsidy would be sustained only on a favourable export market. It was an extremely short-sighted policy, because exports were most seriously discouraged when it was most advantageous to this country and exports are now most assiduously encouraged when export prices are dropping to parity with internal prices.

Fair Price

Once export prices reach 40 cents per lb.—Santos No. 4 is already quoting under 38 cents per lb.—it is roughly correct to say parity has been reached. The first thing to disappear would, of course, be the present element of subsidy, which, in any case, is a statistical fiction. The second thing that could happen is the tearing away of the protective price guarantee and the return of the growers to facts of life in a coffee surplus world, where the Government holds no magic wand. Logic is, however, with the

MADRAS

(To be submitted to the Shareholders at the Twenty-second Annual General Meeting to be held at the Registered Office of the Company, 151, Mount Road, Madras-2, on Tuesday the 31st March, 1959, at 4-30 p.m.)

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1958

The Directors have pleasure in submitting herewith the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1958, together with the Auditors' Report.

PROFITS AND THEIR DISTRIBUTION

1957		1958
Rs. 32,49,462.73	Net Profit for the year (after providing in full for depreciation in the market value of the Securities as on 31st December).	Rs. 28,59,616.42
Rs. 2,52,286.41	Brought forward from last year	Rs. 2,32,066.64
Rs. 35,01,749.14		Rs. 30,91,683.06

Out of this sum the Directors have made the following appropriations:

Rs. 16,00,000.00	Provision for taxation	Rs. 12,50,000.00
Rs. 7,32,200.00	Transfer to Reserve Fund	Rs. 6,00,000.00
Rs. 3,75,000.00	Provision for Bonus to Staff	Rs. 4,50,000.00
Rs. 27,07,200.00		Rs. 23,00,000.00

1957		1958
Rs. 5,62,482.50	The Directors recommend that the balance be disposed of as under: Payment of dividend at the rate of 10 per cent. per annum free of income-tax.	Rs. 5,88,542.00
Rs. 2,32,066.64	Carry forward to next year	Rs. 2,03,141.06
Rs. 35,01,749.14		Rs. 30,91,683.06

2. The Bank's business continues to show substantial progress. During the year, nine new branches were opened at Ahmedabad, Cuttack, Delhi-Chandni Chowk, Klang, Kottayam, Matunga (Bombay), Palghat, Sowcarpet (Madras) and Vijayawada.

3. In terms of Section 256 of the Companies Act, 1956, Messrs. O. Rm. M. Sp. Sv. M. Meyyappa Chettiar and M. Ct. Pethachi retire and being eligible offer themselves for re-election.

4. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration. Messrs. Suri & Co., the retiring Auditors are eligible for re-appointment.

By Order of the Board,
M. Ct. MUTHIAH,
Chairman.

MADRAS, 23rd February, 1959.

BALANCE SHEET AS AT 31st DECEMBER, 1958.

PLANTING

(Concluded from page 502)

growers, when they claim from the Government a minimum guaranteed price, irrespective of what happens in the export market, because they were denied the full benefit of the export market, when prices were high there—not to speak of selling at a lower price in the home market. The Expert Committee has to devise means whereby the grower is guaranteed a fair price, the consumer is protected against any rise in price and the larger crop is found a ready market. The Government would not be available for a confessional on its past policy; the growers would not think of an existence without a guaranteed minimum price; the consumer has got into the habit of thinking that he is a privileged person in the matter of coffee, although he is fleeced on every other thing he needs for existence. In short, the Expert Committee has been assigned an almost impossible task.

It is possible to read into the Committee's assignment not a solution to marketing a steadily enlarging crop but a solution to the mechanics of moving the crop from the producer's store-house via the curing works to the point of sale. This is a much simpler and easier task, but other questions than efficient movement of a crop begin to loom before the Experts. What if the crop is brought to the point of sale most efficiently and expeditiously and no sale takes place? What is the probable size of that crop? How much of it would be absorbed here and how much of it should find an export market? What are the prospects, say, ten years hence?

Assuming that internal prices are to be fixed to compensate for loss on exports, the rate of subsidy to be worked into the home price is about Rs. 5.50 per cwt. for every 1 cent drop in world price below 40 cents, provided the exportable surplus is equal to the quantity internally absorbed. If internal price is raised and consumption drops either absolutely or relatively, more will be available for export and the element for price support will go up and further depress consumption. At higher levels of support, the impact on internal consumption will be quite severe and out of control of the Board or the Government. The growers have to face up to this fact even if they cannot make a single suggestion as to how to market their coffee.

The Immediate Problem

Coffee is a commodity for the masses—not an article of privileged consumption. If Indian consumption is to reach one pound *per capita*, Indian output will have to be about four times the present quantity. But the immediate problem is that internal consumption is not rising at a rate capable of absorbing the surplus after export. The trend of foreign markets unmistakably points to effective promotional activities. It is here that an objective student of coffee affairs will find himself confronted with not one but a series of amazing paradoxes.

Publicity for market promotion is taken to be so integral a part of commercial practices that there is an easy assumption that producers of a commodity like coffee will be strong and constructive adherents to the idea of propaganda. It is a popular myth that producers of any primary commodity in India recognises the need for such propaganda and are readily prepared to back it up with good money. Their make-up is temperamentally different and the cyclical recognition of publicity is significantly related to an immediate crisis in the market. This recognition will come, not now or so long as the price of coffee is above costs, but when a surplus has accumulated in the warehouses and prices are down and many are facing ruin. In this respect, coffee growers are not different to producers of other primary commodities or even most of the manufacturers in India.

But market promoters in coffee face not one but many hurdles today. It is not enough to convince the coffee growers that a steady fire of propaganda should be maintained even in times of prosperity. Assuming that such an idea gets through the Board, there is nothing to prevent a broad-bladed axe being applied to any propaganda budget by some official in the dark and cavernous depths of the Central Secretariat. That is one familiar way of exercising the enormous powers conferred on the Government under the amended Coffee Act. It is probably wrong to think that officials are capricious or irresponsible. The fact is that very few officials have a better idea of the need for sustained propaganda than the primary producer and, by training and outlook, have a generally dimmer view of such activities. The organisational effect of these various attitudes at different levels is that the propaganda machine within a statutory body is usually treated as a fifth wheel, its movements and signs of life properly restrained by the application of every procedural rule available with the Government and, finally, by starving it of funds.

Closure of Coffee Houses

The closure of coffee houses has attracted considerable notice not so much because a very effective method of publicity is being discarded but because political interest in the staff of the coffee houses became a factor for consideration. Though several leading politicians have become sudden devotees to coffee promotion, their interest lay in the workers not in propaganda for coffee. Was it right to have closed down the coffee houses? Probably it was not, but there is no dogmatic answer to it. What was a wiser course of action for the Board was gradually to introduce other forms of publicity and test each one for effect and then close down the coffee houses if that were necessary. Such a course of action would have involved a larger propaganda budget which nobody was apparently prepared to pay for.

Two years ago, the coffee producers of America decided to increase their levy from 10 cents to 25 cents per bag. The bulk of the revenue from this levy is being devoted to coffee promotion. In the world market, Indian coffee might benefit by the increase in consumption, but its real protection lies in establishing its own personality. Famous Indian district marks once did command recognition and excellent premia in the European markets. With pooled marketing, this disappeared and removed from the grower the incentive for maintaining their premium-fetching characteristics. Can that incentive be returned to the growers without giving up pooled marketing? That is another difficult, if not an impossible, question asked of the Expert Committee.

If the whole question of coffee economics is divided into its three major components, namely, production, moving the produce to the market and finding the consumers to buy what is brought to the market, it is easier to relate the Board's functions to their appropriate spheres at each stage. Apart from certain marginal functions like obtaining controlled supplies for estates and organising research, the Board does little in the sphere of production. The second phase is moving the coffee from the estates to the point of sale. The coffee has to be collected, moved to the curers, weighed in, processing done, samples drawn, accounts kept and warehoused until the buyer at the auctions take delivery. The coffee according to kinds and grades is placed in lots and samples of the lots are forwarded to the auction centres for the participants at the sale to see. The whole procession of the coffee from the grower's estate to the point of delivery is directly the responsibility and function of the Pool agent and curer. The only direct function of the Board is to issue the necessary instructions to the Pool agents or curers as to where the samples are to be exposed, to actually conduct the sales by receiving tenders and to allot to the trade on the basis of tenders received. The complaint is that the Board has enormously overgrown for this limited function. The curers and Pool agents, who intimately understand the processes of marketing, and the trade which is at the receiving end of the Coffee Pool, believe that the Board could simplify the whole procedure, reduce the number of sales centres, throw the auctions open and contract its own size and arrest the influence of Parkinson's Law on its establishment. Since the Board has been created by the Government in its own image, the Expert Committee would find it extremely difficult to act as an iconoclast.

To sum up, the grower does not know, and does not care, how the coffee is sold as long as the Board takes charge of the crop and pays him. So long as the Board does that, everything will go along, without anything beyond occasional grumblings. The trader finds the Board a convenient warehouseman, who will hold enough stock for him at stated prices round the year and who will also create the market where he has to sell. So he carves out his franchise and thereafter goes to sleep within his commercial domain, protected by an unwritten arrangement among the trade. The redistribution of wealth is changing the pattern of the Indian market for consumer goods and that is responsible for the steady expansion of coffee consumption at a rate varying between 4 and 8 per cent. per annum. Till a crisis hits the industry, the pressure necessary for radical and worthwhile changes will be absent. Then it might be too late to do anything sensibly. It is for the Expert Committee to sound the tocsin, even if nobody wakes up.

AUDITORS' REPORT.

We have audited the annexed Balance Sheet of the Indian Overseas Bank, Limited, Madras, as at 31st December, 1958, and the Profit and Loss Account for the year ended that date with the books of accounts at the Central Office and the certified returns received from Branches and we report that:

(a) we have obtained all the information and explanations, which to the best of our knowledge and belief, were necessary for the purpose of our audit, and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank, as at 31st December, 1958, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended that date.

NATIONAL AND GRINDLAYS BANK LIMITED

STATEMENT BY THE CHAIRMAN

COMPETITION FROM INDIGENOUS BANKS GROWING

IN the course of his statement circulated along with the Directors' report and accounts for the year 1958, Mr. J. K. Michie, Chairman of the National and Grindlays Bank Ltd., says that the ever-increasing competition from growing indigenous banks and from new entrants or from both is a feature of banking in the East and in East and Central Africa. Besides, he adds, in none of the territories where the Bank operates were conditions more favourable for bankers during 1958 and in most they were more difficult than in recent times.

The following is the full text of Mr. Michie's statement:

"Having become the National Overseas and Grindlays Bank Limited on 1st January 1958, we were able to shorten the name to National and Grindlays Bank Limited on 1st January last. The first accounts of the integrated banks are, therefore, presented under the new title which I am glad to say is a more popular and a simpler one.

"At the last annual general meeting, I reported verbally the sad and severe loss we had sustained in the sudden death of the then Deputy Chairman, Mr. A. N. Stuart, C.B.E., whose wide knowledge and experience, which he put so freely at the service of the Bank, we greatly miss. We also mourn his loss as a friend. When illness struck him, he was in fact engaged on Bank business and was staying with our Manager in Dar-es-Salaam. Mr. Stuart had been a member of the Board for eighteen years and Deputy Chairman for over eleven years. As many of you will know, his father was a member of the Board and was also Deputy Chairman for a number of years.

"In succession to Mr. Stuart, Mr. E. J. Mackenzie Hay was elected Deputy Chairman. He has been a member of the Board since April 1948, and has all the qualifications for the position.

"At the conclusion of our last annual general meeting, we lost the services of Mr. W. H. Miles and to fill this vacancy we were fortunate in having Mr. Ronald Mann join the Board in April 1958. His wide connections with and experience of business in Ceylon and East Africa will be known to many of you and will be valuable to the Bank. His appointment falls to be confirmed at the annual general meeting.

"With the amalgamation of the two Banks, the calls on the time of the Chairman and the Deputy Chairman naturally increased and it was decided that the best method of meeting this need was to appoint a second Deputy Chairman in the person of Sir Toby Low, who, both by training and by family tradition, is eminently fitted to undertake this wider role.

Profit Lower

"The total of our balance-sheet at £151,491,479 shows a reduction of £10,613,741 on the amalgamated figure for the year 1957. Our net profit is also lower by £55,783 at £371,707, arrived at, as usual, after providing for taxation, for bad and doubtful debts and for other necessary reservations. Two interim dividends of 7½ per cent. have been declared the total distribution, therefore, being unchanged at 15 per cent.

"The reasons for the smaller profit figure are several. One which will be non-recurring is the inescapable expenditure in connection with the amalgamation, which, though limited by all possible means, was still considerable. Then, as will emerge from my remarks on our individual territories, apart from the ever-increasing competition which is a feature of banking in the East and in East and Central Africa —in some cases from growing indigenous banks and in others from new entrants in the field, or from both, in none of our territories were conditions more favourable for bankers and in most they were more difficult than in recent times.

"On the other side of the slate, British Government securities staged a considerable rise during the year and our inner reserves have benefited in consequence. Incidentally, it has been and still is the policy of the bank to meet out of current income depreciation in the values of what can be termed 'local' securities held by branches, but we do not 'write up' such securities should they appreciate but leave the reserve untouched until realisation or maturity.

India

"At this time last year, India was facing a critical balance of payments situation which I am glad to say has been at least temporarily resolved partly by her own exertions and by the aid obtained from the World Bank and various Governments, including our own. There are still hurdles ahead, but I think there is justification for believing they too will be cleared and that, when many of the larger capital projects now being financed come into operation, the present difficulties in this respect will lessen.

"Nevertheless, food production must continue to be the fundamental problem of countries like India, which have both a low average standard of living and a rapidly growing population, and one cannot help being a little doubtful if agriculture gets its fair share of attention *vis-a-vis* industrialisation.

"Because of the international recession in textiles, India's exports of finished goods have fallen to 70 per cent. of the 1957 figure. Jute, too, has had a depressing year, with continuously falling prices. Tea exports, on the other hand, have risen appreciably and the trade benefited in some degree from the difficulties which developed in Ceylon.

"Last year, I commented on the paradox that, in India, money was simultaneously scarce and cheap. Now it is not quite as scarce—but, despite the relative financial situations of the two countries, lending rates remain much on the same level in India as in this country and, of course, they never reached the heights in India which they did here when our Bank rate was at 7 per cent.

"The balance of payments position resulted in a distinct reduction of the amount of overseas business flowing through normal banking channels in 1958 and, in consequence, the exchange side of banking was and still is adversely affected. Indeed, this movement has been accentuated by the methods of purchase followed by the Government of India, as an increasing part of such business is being channelled through the State Bank of India, which, in other circumstances, would be spread over commercial banks in general. The growth of indigenous banking has always appeared to us to be both desirable and inevitable and our hope—until recently justified by events—has been that, though our share of banking would be smaller in percentage, it would not necessarily be so in volume.

Pakistan

"As a means of rectifying the political and economic ills which had beset Pakistan for some time, a proclamation was issued by President Mirza on 7th October, abrogating the constitution and placing the country under Martial Law with the Commander-in-Chief, General Mohammed Ayub Khan, as chief Martial Law Administrator. Two weeks later General Mohammed Ayub Khan succeeded General Mirza as President.

"Very strict measures of currency and other controls have been instituted and the Government claims that already the balance of payments position has improved materially. The Government also proposes to introduce very far-reaching changes in the ownership of land which it is hoped will lead to higher yields of agricultural produce—which since Pakistan became a separate country have undoubtedly been disappointing, particularly in foodgrains.

"Swingeing increases in import duties mainly on what are regarded as luxuries have recently been announced, some of which will particularly affect European residents.

"In January, the State Bank of Pakistan raised its rate from 3 per cent. to 4 per cent., a level which cannot be regarded as too high.

"In common with India, the cotton and jute trades of Pakistan have had a difficult time, although, recently, the jute milling industry which earlier was running into difficulties has enjoyed much better trading conditions. A rising threat to this industry in both countries is the rapidly increasing production of jute in China.

"The Pakistan tea crop was recently estimated to be about 15 per cent. larger than in 1957 and exports reflect this increase.

Ceylon

"The difficulties in regard to port labour which I reported a year ago had a very adverse effect on the economy of the country last year and this was accentuated by the most unfortunate racial riots which broke out in May and which continued for several weeks. Tea and rubber shipments were seriously delayed and markets lost to other producers and, in the first nine months of the year, Ceylon's external reserves dropped by Rs. 56 millions to Rs. 883,300,000. Credit conditions naturally have been tight and banks had to finance stocks of tea, rubber, etc., for much longer periods than usual.

"It is to be hoped that the recent racial animosities will soon be forgotten and that a country so blessed by nature will this year find firm ground both politically and financially.

Burma

"On somewhat parallel lines with Pakistan, the control of Government passed into the hands of the Commander-in-Chief, General Ne Win, late in October of last year, when he took over from the Prime Minister U Nu and formed a new cabinet. Administration was tightened up in many directions. On 13th February, however, General Ne Win tendered his resignation to the President, but, at the time of writing, a successor has not been appointed or a new cabinet formed.

"A year ago, it was expected there would not be much more than 1,200,000 tons of rice and rice products available for export in 1958, but an additional 200,000 tons was found and exports reached 1,400,000 tons, nearly all of which was disposed of on a Government-to-Government basis.

"The surplus available for export this year is estimated at 2,000,000 tons, which would be the highest figure achieved since the war and indicates a reviving interest in production by the cultivators in answer to the better terms they are being offered. About 800,000 tons should be available for disposal through ordinary trading channels and, altogether, the financial prospects of the country are considerably brighter. Fortunately, the Government has also put a stop to capital expenditure on projects which promise no immediate advantage to the economy of the country.

"At 31st December last, foreign exchange reserves showed a rise of over K10 crores since the end of 1957. The difficulties I mentioned last year over remittances of profits, etc., and in respect of overdrafts to foreign controlled companies, I regret, continue.

African Countries

East Africa: "New branches have been opened at Nandi Hills (sub-branch to Eldoret, Kenya), Shinyanga (sub-branch to Mwanza, Tanganyika) and Korogwe (sub-branch to Tanga, Tanganyika).

Kenya: "The Government of Kenya and other public bodies have so far still been unable to float any public loans in London—although a loan of £2,750,000 was raised locally in December—but I understand prospects for entering the London market later in the year are more favourable.

"Monetary conditions have been tight throughout the year and this state of affairs has been aggravated by the declining prices made for coffee, one of Kenya's staple exports. Tea production continues to expand and, a year ago, the acreage had reached 30,000 against the licensed maximum of 70,000 acres—a target it will take many years to achieve at present costs.

Uganda: "In the event, both the main cash crops of the Protectorate did distinctly better than was feared, 351,000 bales of cotton being produced against an estimate of 310,000 bales, while coffee did even better, with a yield of 62,000 tons, against an estimated 45,000 tons.

"In the coming season a record cotton crop of 435,000 bales is expected, while the coffee yield is estimated at 65,000 tons. These figures should ensure a sound economy.

Tanganyika: "After a distinguished Governorship lasting ten years, Sir Edward Twining, G.C.M.G., M.B.E. (as he then was) was succeeded by Sir Richard Turnbull, K.C.M.G., in July last year. Sir Edward has since been awarded a life peerage and his knowledge of East Africa and its problems should be of great value to the House of Lords.

"Sisal prices are a little better than they were a year ago, but are not highly remunerative and some estate owners have been, and are, diversifying by developing tea growing which is a wise policy of spreading the risk.

"The cotton crop in the Lake province reached a record yield of 151,000 bales last year, but, this year, it is expected to be smaller. Coffee areas have suffered as elsewhere from the falling market.

Aden: "Political factors affect the volume of trade passing through Aden and these have not been very stable over the past year.

"A federation of six States has just been agreed to which should help to restore confidence in this area but what is also wanted is a firm understanding between H.M. Government and the Yemen, for it is through Aden that a larger part of the trade of that country passes. Activity in the port continues at a high level.

Somaliland Protectorate: "Rainfall was good last season, with beneficial effects on the export of livestock. The harbour facilities at Berbera are being considerably improved.

Zanzibar: "The inevitable reaction from a record crop of cloves duly happened and the estimated yield for the 1958-59 crop is 5,000 tons, as against the 21,500 tons produced in 1957-58 much of which has still to be digested.

"Ceylon's troubles over shipments of coconut and copra gave Zanzibar an opportunity of entering the Europe market for those commodities of which she took good advantage.

Federation of Rhodesia and Nyasaland: "1958 was not an easy year for banking in the Federation, for it was one of economic adjustment which included the restriction of imports and a continuance of the restriction on lending imposed upon banks. However, proceeds of the tobacco crop realised practically the same figure as the previous year, while, as I write, copper is being sold at around £236 per ton, as against just over £160 a year ago.

"Recently, a local loan of £6½ millions was raised and a loan of £10 millions has just been subscribed in London.

"In consequence of the easier conditions, the Central Bank has lifted its restrictions, governing lending by commercial banks and relaxed certain restrictions on hire purchase transactions. The Central Bank discount rate is unchanged at 4½ per cent.

"During the year, Belmont Sub-Branch (to Bulawayo) and New Highfield Sub-Branch (to Salisbury) were opened.

Liability for Uncalled Capital

"At present, this is 7s. 6d. per £1 share and the fact that there is such a liability undoubtedly narrows the market for your shares and we know has exercised the minds of some of our shareholders.

"The question of arranging for the elimination of this disability and the method to be used has been engaging the attention of the Board and it is their intention to place proposals before you in the near future. However, the Board also consider it right to let you know that, unless a higher level of income eventuates than they now foresee, they would not consider it prudent to recommend any increase in the amount paid out in dividends.

General

"Since I last addressed you, a metamorphosis has happened in the financial affairs and standing of this country and of the pound sterling, bringing with it two outstanding results—the gold and dollar reserves at the end of December had moved up to £1,096 millions which compare with £660 millions to which they fell in September 1957, and the Bank of England rate has fallen to 4 per cent. from 7 per cent. current a year ago.

"That these manifestations of improved economic health spell security is neither the belief of the Chancellor of the Exchequer nor of any unbiased person, but, at the lowest assessment, they mean that we have ridden the storm more successfully than was hoped or feared and that, given no major setbacks in world trade or world politics, we are on the road to better things. What these may be must await, amongst other things, the Budget. As to our own immediate future, we have a sound business and a good and loyal staff to whom we are again beholden. Although, as I have told you, we have difficulties to contend with, some of which are new and unpalatable, I am sure that we shall, as in the past, surmount or adjust ourselves to them."

NOTES:

1. With effect from 1st January, 1959, the name of the Bank was changed to National and Grindlays Bank Limited.
2. There are commitments in respect of Confirmed Credits, Forward Exchange Contracts and Guarantees, including Guarantees to Government Departments in India. Securities to the nominal value of £605,220 (*1957—£591,320*) have been deposited as security for Government and other accounts. There are contingent liabilities on Bills re-discounted amounting to £2,195,008 (*1957—£4,081,253*), of which £1,155,963 has run off at 28th February, 1959.
3. Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £237,000 (*1957—£627,000*).
4. There is a contingent liability relating to uncalled Capital amounting to £132,000 in respect of investments.
5. The rupee in India, Pakistan and Ceylon and the kyat in Burma have been converted into sterling at 1/6d. and the East African shilling and Rhodesian pound at par. Other currencies have been converted at the rates of exchange ruling on 31st December, 1958.
6. The comparative figures at 31st December, 1957, show the position of the Bank immediately after the amalgamation with Grindlays Bank Limited as at that date.

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1958.

LONDON, 3rd March, 1959.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiary dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiary so far as concerns members of National and Grindlays Bank Limited.

THE CHARTERED BANK

ANNUAL STATEMENT OF CHAIRMAN, MR. V. A. GRANTHAM

BURDEN OF DEFERRED PAYMENT CREDIT HEAVY ON INDIA

THE extent of deferred payments, which the Government of India has resorted to, has left a burden, to be shouldered in the years to come, which will leave little margin for additional foreign exchange expenditure during the third Five-year Plan, even after allowing for possible savings on exchange which are likely to accrue when the new steel works and heavy industries, set up under the present Plan, commence operation. This view is expressed by Mr. V. A. Grantham, Chairman of The Chartered Bank, in the course of his annual statement circulated to shareholders with the Directors' report and accounts for the year ended 31st December 1958.

The following is the full text of Mr. Grantham's statement:

"During the months of October and November last year I travelled in India, Pakistan and Ceylon and it was helpful to me, as your Chairman, to be afforded the opportunity of seeing the Bank at work in one of the most important spheres of its oversea activities. On my way home I was able also to visit our branches in Aden. It was evident to me that the business transacted at the branches I visited is sound and profitable and that it is conducted efficiently and economically. I was impressed, too, by the ability and loyalty manifested by the staff of every grade. At places where the branch organisations of The Chartered Bank and The Eastern Bank Ltd. overlap effective measures of co-ordination have already been brought into operation and the staffs of the two institutions are working happily side by side.

"When I was in India I was glad also to have the opportunity of meeting and having discussions with the Chairman and the General Manager of our affiliate, Allahabad Bank Ltd.

Court of Directors

"There have been no changes in the composition of the Court of Directors during the period to which the present report relates. In April last Mr. A. P. Cameron and Mr. N. S. Golder retired from the Board of The Eastern Bank Ltd. and at the end of the year Mr. W. G. Pullen took Mr. Morford's place as a Director of that institution.

General Management

"On 31st December Mr. H. F. Morford retired after serving the Bank for forty-three years, four of them as Chief General Manager. The stockholders will, I am sure, wish to be associated with the Court of Directors in acknowledging, with gratitude, the highly distinguished services he rendered. We congratulate him on the important appointments he has since received which will continue to keep him busy in the City.

"The Court have appointed Mr. W. G. Pullen as Chief General Manager confident that he brings to the highest executive office all the qualities of leadership and professional competence that the position demands.

"Mr. G. A. Leiper has been prompted from Assistant General Manager to Joint General Manager and Mr. A. T. Hobbs, who has served the Bank with distinction in a succession of executive posts in the East, has been appointed an Assistant General Manager.

Irano British Bank

"Our acquisition of the share capital of the Eastern Bank gave us a direct interest in the Middle East and our assessment of the political and economic situation there convinced us that our representation would be incomplete without an interest in Iran. We were pleased, therefore, to have an opportunity of joining with influential Persians in promoting a joint banking venture in their country. The authorised capital of the Irano British Bank is Rials 200 million, of which Rials 100 million have been subscribed and paid up. We have subscribed 8,000 shares of Rials 10,000 each and the Eastern Bank 1,800 shares of a similar denomination, which gives us 49 per cent. of the capital of a bank which has now been registered and granted a banking licence in the above name.

"This Bank will have as its General Manager an officer seconded from our Eastern covenanted staff and it will open for business in Tehran on 10th March 1959 and later in Khorramshahr. It is pleasing to note that the return of British banking interests has been generally welcomed and we hope that this new joint venture bank, by bringing experience and knowledge to the handling of imports and exports, will assist the country in its trade expansion programme.

Representation in Birmingham

"We have felt for some time past that the revolution which has taken place in the United Kingdom export trade since the end of the war necessitated our establishing closer contact with the new exporting industries in the Midlands. It has been decided therefore to appoint a representative of the Bank and its subsidiaries and associates to reside in Birmingham and to set up there an organisation which will facilitate more extensive participation in the financing of exports of Midland manufactures to the Asian markets in which we, The Eastern Bank Ltd. and The Irano British Bank are established. Mr. A. M. R. Currie, until recently our Manager in Indonesia, has been appointed to the post and he will take up his duties during the month of April. It is not proposed, at present, to open a branch of the Bank in Birmingham; the new office will be equipped to impart economic and credit information and to serve as a link between the export trade of the Midlands and Head Office.

Bank's Balance-sheet

"The accounts indicate a further expansion of the Bank's business. The total of our own balance-sheet at £243,118,186 is some £11,500,000 up on last year's figure which was itself a record.

"Current and other accounts show a slight reduction of £2,032,672 which is more than offset by a substantial increase in fixed deposits of £15,994,119. Our acceptances are lower by £2,778,353.

"On the assets side cash in hand at call and at bankers, Government and other securities and bills of exchange show increases of £1,324,674, £10,402,781 and £5,848,798 respectively and evidence a strong degree of liquidity. The ratio of cash and call money to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, is slightly lower at 22.1 per cent. against 22.9 per cent. last year. Advances to customers and other accounts show a contraction of £3,975,323.

"The increase in the net figure for Bank premises and furniture is due to our continued expansion and the modernisation of our properties in the East.

"The consolidated balance-sheet includes the figures of all our wholly owned subsidiaries and the total at £285,430,502 is £13,532,487 higher than last year.

"For the information of stockholders a copy of The Eastern Bank Limited's balance-sheet is appended to my statement.

Consolidated Profit and Loss Account

"The continued upward trend of working costs, especially salaries and wages, in conjunction with a lowering of interest rates during the period under review has resulted in a decrease in our net profits from £1,000,890 in 1957 to £993,590.

"In October last the issued capital of the Bank was increased to £5,000,000 by the capitalisation of £600,000 out of the reserve fund and £400,000 was restored to the reserve fund by a transfer from reserves for contingencies account.

"The Bank paid an interim dividend of 7½ per cent. less income-tax in September last on £4,400,000 capital, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7½ per cent. be paid on the increased capital of £5,000,000 costing £215,625.

"We have allocated £250,000 to Bank premises and furniture and £125,000 and £20,000 respectively to the pension fund and widows' and orphans' fund. We have transferred £150,000 to reserves for contingencies and the balance carried forward is £481,673.

"Two recent events, the extension of sterling convertibility and the inauguration of the European Economic Community or Common Market, are of considerable significance to us in our business as an international bank. It is appropriate, therefore, that I begin my general review to the stockholders by commenting upon them.

"For the first time since before the Second World War sterling earned from commercial transactions by residents outside the sterling area is convertible, without restriction, into gold, U.S. dollars, or any other currency. Other European countries have taken parallel steps in dismantling the formidable array of exchange control regulations established in war-time. That it has proved possible in the case of sterling is a tribute to the efficiency of the stringent measures which were necessary as recently as September 1957, in order to restore confidence in sterling as an international currency and the medium of 40 per cent. of the world's visible trade and a large proportion of its invisible transactions.

"The increased scope of convertibility, by inducing confidence, should encourage the wider use of sterling by countries which are outside the sterling area such as Japan and the Philippines, in our own sphere of operations, and there should be a greater readiness for those countries to accumulate and hold sterling. The Philippines, for example, are amending their monetary laws to allow currency reserves to be so held.

"I have, on previous occasions, stated that it is still insufficiently appreciated that the City of London's oversea earnings in respect of its banking, merchanting and other services comprise a substantial proportion of the United Kingdom's invisible income. Without that invisible income the country would be unable to afford the trade deficit which it habitually runs. Moreover, the City's oversea earnings involve very little expenditure of foreign exchange.

Free Trade Area
